3. "I wish to pay a special tribute to one composer:—I first heard his name a year ago, and his music about three months ago, and read of his personal life and history within the last week. If the reader has not already guessed, I am speaking of Gustav Mahler.

"I was glad that I had read the original text of the *Lieder eines fahrenden Gesellen* before I heard it. The rendition was excellent . . . One passage especially I recall from the final song,—the melodious violins accompanied by the deliberate c and g of the tympani to the words:

'Hat mir niemand Ade gesagt, Ade! Ade! Ade!  
Mein Gesell' war Lieb' und Leide!'  
(None said goodbye to me.  
Goodbye! Goodbye! Goodbye!  
My companions were love and sorrow.)

The incident that occurred at the last University Orchestra concert,—the audience's demand that Mahler's *Lieder eines fahrenden Gesellen* be repeated,—reminded me that such repetitions were a common occurrence in Mahler's day, and under his baton."

4. "Few composers in the 20th Century can boast so distinguished a place as that which Gustav Mahler is now inevitably coming to hold. . . . just as a Brahms symphony represents an extension of the Beethoven symphonic form with many times as much crammed into an equivalent space, so does Mahler represent a later extension of the symphony—in no sense 'better' than Beethoven or Brahms—but presenting, as in the *Resurrection Symphony*, a gigantic unity of musical material which dwarfs practically any other composition.

"The *Adagietto* of the *Fifth Symphony* is an excellent example of the telling effect Mahler could secure with a relatively simple structure. The harp part is as notable for what it does not do as for what it does—a lesser composer would have been tempted to fill in the harmony on it after the fashion of a left hand part in a Chopin nocturne: not so Mahler. One would scarce have believed a rising major seventh could be so poignant, yet the *Urides* of the entire movement is little more than this melodic tendency.

"A composer should be in touch with the literature and materials of his predecessors, and should be able, on the basis of his wide acquaintance with music, to glimpse new means and fields of musical expression and then to lead the art in that direction . . . this Mahler did, never losing touch with his generation, though well in advance of it. In the later Mahler, one finds further growth, though perhaps less easily analyzed. A marked characteristic is the concept of melody as a function of many instruments rather than of a single instrument.

## II

1. "I must admit that up until the time we began rehearsals on the Mahler [*Second*] *Symphony*, I regarded his works only as products of a composer able to write at great length. After becoming more familiar with this masterpiece, I was definitely convinced that, regardless of length, each succeeding measure was something to look forward to with greater and greater expectations."

2. "When Dr. Clapp announced that Mahler's *Second Symphony* was to be rehearsed, I failed to understand or sympathize with the general spirit of enthusiasm of the more experienced performers of the orchestra. It was not until we had played it through once that I began to assume a like attitude. After the fifth or sixth rehearsal Mahler's *Second Symphony* had become my favorite symphony."

3. "Prior to the orchestra's conquest of the Mahler work, I was fairly ignorant of the man, except for a very bare acquaintance with him through reading. From the time of the first rehearsal of the work with our orchestra, however, I was well on my way to conversion. The thing that impressed me with the first readings of the work was its sheer power—the big climaxes, absent in the broadcast and recording versions, were literally spine-tingling.

"After two months of rehearsals the work seemed to have become part of me . . . There is a completely satisfying feeling that accompanies it. In most compositions there seem to be moments of 'lag'; but if there were any such in this Mahler Symphony, I was unable to detect them . . .

"As rehearsals progressed, it was not the powerful passages alone that held my attention, but also the tricky, fascinating third movement . . . A certain passage of the E flat clarinet haunted me wherever I went . . ."

4. "It was more than evident that the students had 'begged the privilege of studying and performing it' [Mahler's *Second Symphony*], for never have I seen any more perfect cooperation and coordination of orchestral and choral forces . . .

"After the final chord had ended, there was a decided pause. The people were in another world; overwhelmed by the power of the music, they had momentarily lost their sense of real, physical realms . . . I believe this pause was the greatest compliment a conductor can be given."

5. "These deadly lashes of power by the percussion section [in the first movement] arose with little warning from a mournful dirge, suggesting to me the possible recollection of past deeds, of power, and of victory: a reminiscence at death. The soft tones of muted violins expressed a lyrical beauty, peace, and comfort. Pathetic oboe

and trumpet suggested the sadness which engulfs the heart in times of failure or loss . . .

"In the second movement we are carried into a smoothly-flowing mood. We dream of Utopias and Shangri-las, of soft-rolling meadows, and 'flowery beds of ease'. Later, a certain pizzicato passage fluffs up our placid clouds with a lively, poking gesture . . .

"Movement three begins with a blast of percussion. Each successive passage, as the movement proceeds, seems to ridicule the preceding one. A solemn, serious strain is followed by a topsy-turvy, nonsensical, clown-like farce, suggesting the interruption of serious thought and action in a lopsided world where nothing can be foreseen, where surprises are constant rather than unusual . . .

"Once again in the last movement we hear the blasting, writhing, and pulling of a great struggle . . . The storm gradually dies . . . The chorus makes its entrance with the Resurrection Hymn; we hear a solo voice, first with the chorus as a background, then taken up by the orchestra . . . The chorus enters a second time, this time sounding even more hymnlike, then the contralto voice which is answered by the chorus with increasing power . . . The two solo voices are blended together in a duet. A crescendo of full orchestra and chorus builds a beautiful and powerful climax . . .

"And so the performance ended with the majority of the listeners filled with enthusiasm for a work previously unknown to them. They felt, as I did, that Mahler has been sadly neglected, and that if common folk have the capacity to make sensible judgments, they are right in saying that Mahler has written a most masterful symphony."

6. "The lovely, dainty movement of the pizzicato strings which gives such a delicate effect that one is carried away in its beauty, the breath-taking passages of the alto soloist where this solo voice soars high above the chorus and orchestra, the marvelous organ-like quality of the lower brass instruments in various passages aided by the contra-bassoon: these will live long in my memory as parts of one of the most wonderful musical works in which I have had the pleasure to participate."

7. "The immensity of the work, its vigorous themes, its great climaxes, the energetic brasses, and finally the union of chorus and orchestra are revelations . . .

"Among the surprises the symphony holds is the opening of the second movement. One hardly expects anything so gentle after the fury of the first . . . In the grand finale there is a sort of incoherent ecstasy so genuine that it requires little more persuasion than that of the music to imagine the heavens already opened, . . . the trumpeters, the summoning angels; and the chorus, the angelic choir."

8. "The ecstatic climax toward the end of the last movement [of the *Second Symphony*] is perhaps the greatest climax in all musical composition. It is as if Mahler realized that true greatness goes beyond the sphere of mortal living, so that he tops the climax by reaching into man's innermost religious self represented through the symbolism of church bells and the angelic singing of a mighty chorus . . .

"In general, Mahler shows himself a master of rhythm and timbre, and he can be delightful as well as powerful. There are even moments of drollery with a touch of dignity. At times he is as refreshing as a cold shower bath; at times he is sensational, but not in the cheap sense of the word, for his ideas are of such magnitude that only occasional sensationalism can bring them out . . ."

9. "The funeral march motif of the first movement, most prominent at its beginning and close, seems to be the basis of the whole. It is as though man, in serious moments, in times of struggle when meanings are clearest, is always aware that men are condemned to death at the hour of their birth. It is not an obvious, but a very profound awareness of death. The second movement represents the other side of man's nature. It shows man in times of day dreaming, in times of peace, and perhaps in times of mature and gentle love. The movement does not seem to deal with things less real, but rather with realities that are smaller and less dramatic . . . The full drama of the symphony culminates in the fifth movement. There the themes of the four previous movements are unified, so much so that I feel that the fifth movement could stand as a separate and valuable work. The dramatic quality of the whole work is great. Unless one refuses to listen to it, he must be drawn into Mahler's vision."

10. "To the writer, Mahler's *Resurrection Symphony* will always be symbolized by an unforgettable brass choir, the balance of which was made complete by the synchronizing blend of the tuba; the brief but expressive trio of violin, 'cello, and flute against the muted background of the tutti; the brilliant showmanship put up by the tympani, drums, and cymbals in the terrific and dynamic build-up from an almost inaudible pianissimo to an almost painful fortissimo that is snapped by the accurate baton at the psychological instant; the great summons in the fifth movement, interrupted only by the staccato lyrics of a lone bird; and the vision conjured up by the dynamic fifth movement of the miraculous assembling of bones spiritual, which seem to take form, rise from their earthly abodes, and join in a great jubilation at their eventual victory over the pestilences, sacrifices, pitfalls, and tragedies of life,—the triumph over the grave, with all bitterness now swept into oblivion by the reward of a joyous reunion."

III

1. "Up until a few weeks ago, what I knew about Mahler had been gained from reading and not from hearing . . . I had come to think of him as a sour, meticulously careful, boresome composer who spent most of his life trying to get the works of Bruckner performed, and in his spare moments dashing off a symphony or two. I don't feel that way any longer, thanks to the University Symphony Orchestra. The *Fourth Symphony* shows that Mahler can be jovial, light-hearted, and possibly a bit mischievous. I think the word gracious, to use only one word, best describes this work . . . To learn what a man's music is about by hearing it is far superior to reading someone else's views on the same music."
2. "Mahler's themes have the distinctiveness which causes one to remember them even after a first hearing only . . ."
3. "Since I have heard the *Fourth Symphony* of Mahler I have relegated a great many other works to the background. Being one of those people who knows little music but who listens always for new ideas of expression, I found many passages in this symphony that I shall never forget . . . If Mahler, like Franck, had written only one symphony—this one—he would have done enough."
4. "It always amazes me how Mahler avoided actual repetition of his themes . . ."
5. "I was a little surprised the first time I heard Mahler's *Fourth*. After hearing the 'mighty *Second*' I expected something more heavy. The *Fourth* proved, however, to be as delightful and captivating as anything could be."
6. "Mahler's *Fourth* had a classic beauty of grace and charm. The fourth movement, especially, was awe inspiring to all who felt the simplicity of a peasant's Divine world."
7. "About the Mahler Symphony. I think Mahler had a close relationship in his mind between symphony and song . . ."
8. "I don't know whether it is the music itself or the inspired orchestration he used that made the *Fourth Symphony* of Mahler one of the high spots in my listening experience . . . Parts of the symphony came as near to pure beauty as anything I have ever heard."
9. "His orchestration, in which many extraordinary and uncanny combinations are used, is nothing less than amazing . . . How a com-

## Chord and Discord

position can contain an unlimited depth of power and yet be fairy-like is hard to fathom, but Mahler does it."

10. "... the Mahler *Fourth Symphony* is one of the most fascinating I have ever played in. The solo passages seem characteristic of the instruments employed. Among them, the most outstanding are those for English horn, bass clarinet, and contra-bassoon . . ."

11. "About three years ago, during the second semester of this course, I wrote a paper on Gustav Mahler which set forth 'conventional' views of this composer. I now write another paper on the same subject, principally to show the futility of judging creative art by one exposure to it.

"I am firmly convinced that the unsympathetic attitude toward Mahler is due to the fact that he has been judged by critics after a few hearings, or even a single hearing of his works. I cite my own experience (a confession!). Three years ago I had heard only those works which were performed in class. Last winter I listened religiously to Erno Rapee's series on Sunday noons; last summer I soaked myself in some of the Mahler recordings and heard *Lieder eines fahrenden Gesellen*; this fall I played in the *Fourth Symphony*. My experience with the *Fourth* further bears out my contention. On first reading I (and other members of the orchestra) agreed that the first movement is divine, the second less so, and the others nothing to write home about. After intensive rehearsal, which brought out not only the fine points but also a clearer realization of the meaning of the work, my opinion changed to one of admiration for the whole symphony. The important point is that Mahler's music is not flash-in-the-pan music; it is music that grows on you. I doubt if any considered judgment can be made of this composer after one, two, three, or even more hearings. And yet people do make such judgments; their views get into print; and the layman becomes anti-Mahler before he gives the man a chance to present his message.

"How many histories of music are sympathetic to Mahler? Practically none. And students read these texts without even hearing the music. I have before me one of the latest monumental histories,—one which I respect in many ways. What do I find? Statements such as these: 'all he could summon was an almost religious sincerity which cannot be challenged by the grandiloquence that often mars his best efforts'; 'the only great thing in these creations is the intention'; 'lack of cohesion and aesthetic unity'; 'nothing could raise this tragic work above a post-Wagnerian theatricalism'; 'his smile is lifeless, his irony bitter, and his humor forced.' Most of these statements are made in connection with a single work, the *Eighth Symphony*. The author mentions *Lied von der Erde*, but I wonder if he ever heard the *Fourth Symphony* or *Lieder eines fahrenden Gesellen*!

## Mahler Medal Award to Erno Rapee

Mayor La Guardia Broadcasts Speech of Presentation over the ABC Network (April 18, 1948).

**T**HIS is the occasion of the first performance of Gustav Mahler's *SYMPHONY OF A THOUSAND*, as his *Eighth Symphony* is called, in New York in twenty-six years. It is called the *SYMPHONY OF A THOUSAND*, because, as you know, there were a full thousand performers on the stage when immortal Mahler himself directed the first performance in Munich on September 12, 1910:

I can think of no better time to present that distinguished conductor, Erno Rapee, with the Mahler Medal on behalf of the Bruckner Society of America.

Mr. Rapee, who had a long and distinguished career in music, prior to his becoming conductor of music for the Radio City Music Hall in 1932, in arranging the performance of Mahler's *Eighth Symphony*, has performed a titanic feat and one which warrants the appreciation that is being expressed to him in the presentation of this medal, which has previously been given to such distinguished musicians as Klemperer, Koussevitzky, Ormandy, O'Connell, Walter, the late Artur Bodanzky, and Ossip Gabrilowitsch. The Mahler Medal is a labor of love by the famous artist, Julio Kilenyi, who has designed medals for Pershing, Thomas Edison and many others.

I want to give New York City a bit of well deserved praise in connection with the performance of the Mahler Symphony, for in addition to the Radio City Music Hall Glee Club, taking part in this performance are the St. Patrick Choristers, the Paulist Choristers, a choir of boys from the New York public schools, and such distinguished soloists as Selma Kaye, Thelma Jurgenson, Dorothy Shawn, and others. All this bears witness to the fact that New York is a city of music lovers, and that this is truly a production in which the people of New York are taking part, both as performers and listeners.

I am glad to know that there are some people in Europe who will be able to hear this performance of the *Eighth Symphony*, coming to them by the free radio of America. I hope that word will get around from them to other music lovers that we, here, seek to preserve their cultural tradition for them until such a time as they can again live and breathe as free men.

ON BEHALF OF THE BRUCKNER SOCIETY . . . I AM HAPPY TO PRESENT THE MAHLER MEDAL OF HONOR TO YOU, MAESTRO RAPEE.

## Premiere of Dumler's *Te Deum*

EUGENE GOOSSENS, Conductor; MACK HARRELL, Soloist;  
Cincinnati Symphony Orchestra and May Festival Chorus  
Cincinnati, May 11, 1946

THE premiere performance of Martin Dumler's setting of the celebrated Latin prose-poem *Te Deum Laudamus*, composed by Bishop Nicetas around 1400 A.D. will close the first half of the program. The compositions of Dumler are not new to festival patrons. In 1935 his *Stabat Mater*, Op. 40 received its world premiere and its success with other compositions performed by the Cincinnati Orchestra justifies the new presentation. Dumler knows liturgical music by actual experience as a choir boy, a choir director, a soloist and a composer of many works for the Catholic Church which have been added to the great store of music which has been accepted as worthy.

His *Te Deum* Op 45 is set for full chorus, orchestra and organ with solo parts for baritone to be sung at this performance by Mack Harrell. It opens with a powerful statement of the principal theme in the brasses accompanied by the full orchestra. The chorus states this theme, first in unison followed by the voices spreading to eight part harmonies, which lead to eight-voice counterpoint accompanied by the complete instrumental ensemble. Throughout the work fine tonal contrasts are made *a cappella* settings for the angelic choirs and soft pianissimos for orchestral parts are played against full, powerful and dynamic climaxes. It finally builds to a triple fugue in which all voices and instruments join in exalted praise with a tremendously powerful close taxing to the utmost every part of the entire ensemble.

HOWARD W. HESS, *Cincinnati Times Star*, May 6, 1946.

After the premiere of Dumler's *Stabat Mater* in the composer's native city of Cincinnati on May 25, 1935, under the inspired leadership of Eugene Goossens, the late George A. Leighton (*Cincinnati Enquirer*) wrote in part: "The management of the Festival Association has much to be proud of, but of nothing more so than having programmed Martin G. Dumler's *Stabat Mater* . . . .<sup>1</sup> As heard last evening and under the inspiration of a superb performance, few will deny its sincerity, scholarly background, adherence to the drama of the text, and the telling power of its final climax. Last evening's presentation resulted in a veritable ovation for the composer." A.

<sup>1</sup> For a complete analysis of Dumler's *Stabat Mater*, see CHORD AND DISCORD, Vol. 1, No. 7.

Walter Kramer (*Musical America*) said: "Dr. Dumler writes with remarkable naturalness, with a sure hand in his choral parts, contrapuntal dexterity and a really admirable feeling for orchestral investiture." *Musical Leader* reported that "in all probability, Music Hall has never been the scene of a similar triumph for a Cincinnati composer." Valeria Adler (*Cincinnati Post*) characterized the work as "arresting and memorable."

On May 11, 1946, eleven years after the successful premiere of *Stabat Mater*, Eugene Goossens conducted a brilliant first performance of Dumler's *Te Deum* at the closing concert of the thirty-sixth Cincinnati May Festival.<sup>2</sup> Mack Harrell whose mellow voice seems especially suited for religious music distinguished himself by his eloquent interpretation of the solo parts. Goossens revealed a thorough understanding of the spiritual message of the work. He carried the orchestra and chorus with him.

Conceived in the grand manner, this choral setting expresses the deeper spiritual implications of the medieval poem. The music underscores the meaning of the words; it expresses the emotions experienced by the human soul—reverence, awe, pathos, tenderness, humility, religious, ecstasy, triumph. There are moments of tranquil lyric beauty, moments of extreme dramatic intensity, many passages of genuine inspiration. A great soul speaks to us in music, the spiritual depth of which can hardly be fathomed at a single hearing without previous preparation. It is music of great sincerity, revealing the composer's profound knowledge of polyphony and supreme skill in orchestration and choral writing. Orchestra and voices blend; the music flows smoothly in spite of the intricate polyphony.

While closer acquaintance with the work will, as is the case with all music of great depth, increase its general appeal, it was quite obvious from the spontaneity of the ovation given the composer that the audience sensed the grandeur and nobility of the work.

ROBERT G. GREY

The premiere of Martin Dumler's *Te Deum* proved that work to be one filled with rich chromatic harmonies, splendid climaxes, complicated polyphonic writing, rich orchestral scoring and judicious use of the organ for special effects . . . .

The baritone solos were the most impressive parts, especially as sung by Mack Harrell. The *Te Deum* closed in a burst of glorious sound with the entire ensemble giving everything it possessed. Dumler is an amazing man with many talents and his *Te Deum* was a powerful expression of a heart filled with p:

HOWARD W. HESS, *Cincinnati Times Star*, May 13, 1946.

<sup>2</sup> For a complete analysis of Dumler's *Te Deum*, see CHORD AND DISCORD, Vol. II, No. 3.

*Chord and Discord*

Participants in the Dumler *Te Deum* were the May Festival Chorus, about a third of the high school group, the orchestra and Mr. Harrell who sang the baritone lines with sonorous vocal quality and excellent diction. The chorus was in fine fettle and so was the orchestra. The climaxes were especially compelling and the appeal of the smooth flow of the music was heightened by careful integration of choral and orchestral ensemble . . . . He (the composer) took several bows from the stage in response to a prolonged ovation.

MARY LEIGHTON, *Cincinnati Enquirer*, May 13, 1946.

## LIST OF BRUCKNER AND MAHLER RECORDINGS (VICTOR)

*Bruckner*

- SYMPHONY NO. 4—M/DM-331  
Saxonian State Orchestra, Karl Böhm, Conductor.  
SYMPHONY NO. 9—M/DM-627  
Munich Philharmonic Orchestra, Siegmund v. Hausegger, Conductor.  
MASS IN E MINOR—M/DM-596  
Aachen Cathedral Choir, T. B. Behmann, Conductor.

*Mahler*

- SYMPHONY NO. 2—M/DM-256  
Minneapolis Symphony, Eugene Ormandy, Conductor; Soloists: Corinne Frank Bowen and Ann O'Malley Gallogly; Twin City Chorus.  
SYMPHONY NO. 9—M/DM-726  
Vienna Philharmonic, Bruno Walter, Conductor.

## LIST OF MAHLER RECORDINGS (COLUMBIA)

- DAS LIED VON DER ERDE—M-300  
Charles Kullman and Kerstin Thorborg; Vienna Philharmonic, Bruno Walter, Conductor.

Carol Brice; Pittsburgh Symphony Orchestra, Fritz Reiner, Conductor.  
SYMPHONY NO. 1—M-460  
Minneapolis Symphony Orchestra, Dimitri Mitropoulos, Conductor.  
SYMPHONY NO. 4—M-560  
New York Philharmonic, Bruno Walter, Conductor.

# List of Performances

SEASON 1941-1942

## BRUCKNER

- IV Oberlin College Orchestra, Kessler, Nov. 18, 1941.  
National Symphony, Washington, Kindler, Jan. 18, 1942.  
Pittsburgh Symphony, Reiner, Feb. 6 and 8, 1942.  
St. Louis Symphony, Golschmann, Jan. 16 and 17, 1942.  
Chicago Orchestra, Stock, Apr. 2 and 3, 1942.  
Illinois Symphony, Adler, Feb. 23, 1942.
- VII Philharmonic Symphony Society of N. Y., Walter, Nov. 13, 14, and 15, 1941.
- IX *Scherzo*. Philharmonic Symphony Society of N. Y. (Stadium Concerts), Kurtz, July 17, 1942.

## MAHLER

- I Cleveland Orchestra, Rodzinski, Jan. 2 and 3, 1942 (Broadcast over CBS, Jan. 10, 1942).  
Essex Symphony, Newark, N. J., Mitropoulos, June 10, 1942.  
University of Michigan Orchestra, Thor Johnson, Jan. 27, 1942.  
Illinois Symphony, Kopp, Dec. 15, 1941.
- II Philharmonic Symphony Society of N. Y., Walter; Westminster Choir, Dr. John Finley Williamson, Director; Soloists: Nadine Connor and Mona Panlee; Jan. 22, 23, and 25, 1942 (the last performance broadcast over CBS).  
State University of Iowa Orchestra, Clapp; State University of Iowa Chorus, Herald Stark, Director; Soloists: Onabelle Ellett and Hazel Chapman; April 22, 1942 (Broadcast over WSUI).
- IV Philharmonic Symphony Society of N. Y., Mitropoulos; Soloist: Mona Panlee; Jan. 7 and 9, 1942.  
*Third and Fourth Movements*. Boston Symphony, Burgin; Soloist: Cleora Wood; Jan. 30 and 31, 1942.
- V *Adagietto*. State University of Iowa Orchestra, Clapp, July 8, 1942 (Broadcast over NBC).
- DAS LIED VON DER ERDE*—Pittsburgh Symphony, Reiner; Soloists: Szantbo and Jagel; Jan. 9 and 10, 1942.  
Minneapolis Symphony, Mitropoulos; Soloists: Knowles and Kullman; Apr. 2, 1942.  
Rochester Philharmonic, Iturbi; Soloists: Eustis and Althouse; Feb. 6, 1942.
- LIEDER EINES FAHRENDEN GESELLEN*—Philharmonic Symphony Society of N. Y. (Stadium Concerts), Smallens; Soloist: McCloaky, July, 1942.  
State University of Iowa Orchestra, Clapp; Soloist: Stark; July 8, 1942 (Broadcast over NBC).

### MAHLER CYCLE (1942)

Radio City Music Hall Orchestra, Erno Rapee, Conductor. (Broadcast by the Blue Network; Mahler VIII shortwaved to Latin America).

Jan. 4 *First Symphony*.

Jan. 11 *Fourth Symphony*—Soloist: Charlotte Boerner.

Jan. 25 *Second Symphony*—Soloists: Edwina Eustis and Selma Kaye; Radio City Glee Club.

Feb. 8 *Third Symphony*—Soloist: Edwina Eustis; Radio City Music Hall Glee Club and Paulist Choir.

Feb. 22 *Fifth Symphony*.

Mar. 8 *Das Lied von der Erde*—Soloists: Edwina Eustis and Jan Peerce.

Mar. 22 *Ninth Symphony*.

Apr. 12 *Eighth Symphony*—Soloists: Selma Kaye, Thelma Jerguson, Edwina Eustis, Dorothy Shawn, Mario Barini, John Harrick, Lawrence Whisonant; Organist: Deszo D'Antalfy; Radio City Music Hall Glee Club; Schola Cantorum, Hugh Ross, Conductor; St. Patrick's Boys Choir, Serafino Bugato, Conductor; Choir of Public School Boys, George H. Gartlan, Conductor; Paulist Choristers, Edward Slattery, Conductor. (The performance was given in the Center Theatre).

### SEASON 1942-1943

#### BEUCKNER

III *Adagio* (Arranged for band by Philip Greeley Clapp). AAF Band, Atlantic City, N. J., WO Robert L. Landers, Conductor, May 23, 1943.

IV St. Louis Symphony, Golschmann, Dec. 18 and 20, 1942.  
Philharmonic Symphony Society of N. Y., Walter, Feb. 4 and 5, 1943.  
Houston Symphony, Hoffman, Apr. 13, 1943.

*Adagio* (Arranged for band by Sgt. A. M. Friedman). AAF Band, Atlantic City, N. J., WO Robert L. Landers, Conductor, June 6, 1943.

VI *Adagio*. NBC Orchestra, Leinsdorf, Broadcast by NBC, Oct. 18, 1942.

TE *DEUM*—Carnegie Institute of Technology, Schenley Park, Pittsburgh; Frank Dorian, Conductor; Soloists: Isabel Munster, Allison Meyer, Raymond Smolover, Jack Manheimer; Organist: James Hunter; Accompanist at rehearsals: Robert Drumm. (Concert in memory of Harold Geoghagan). March 17, 1943.

AAF Band, Atlantic City, N. J., WO Robert L. Landers, Conductor; Soloists: Elizabeth Caradonna, Elsie Mecasie, Opl. Donald Hultgren, Pvt. Stanley Friedman; April 25, 1943.

*OVERTURE IN G MINOR* (Arranged for band by Sgt. A. M. Friedman).  
29th AAF Band, WO Robert L. Landers, Conductor; Broadcast over KLZ, Colorado, Sept. 7, 1943. (First performance by Symphonic Band).

**MAHLER**

- I Philharmonic Symphony Society of N. Y., Walter, Oct. 22, 23, and 25, 1942. (The last performance was broadcast over CBS).  
 Boston Symphony, Burgin, Oct. 6 and 7, 1942.  
 Cincinnati Symphony, Goossens, Jan. 29 and 30, 1943.  
 San Francisco Symphony, Monteux, Feb. 12 and 13, 1943.

III *First Movement*. Boston Symphony, Burgin, Mar. 19 and 20, 1943.

IV State University of Iowa Orchestra, Clapp; Soloist: Mildred Ethel Clapp; Dec. 9, 1942 (Broadcast over WSUI).

National Symphony, Washington, D. C., Kindler; Soloist: Edwina Eustis; Jan. 10, 1943.

V *Adagietto*. Toronto Prom Concert, Rapee; First performance in Toronto; Sept. 30, 1943.

**KINDERTOTENLIEDE**—Eula Beal, Soloist; Shibley Boyer, Accompanist; Evenings on the Roof Series, Los Angeles, Calif., Feb. 12, 1943.

Columbia Broadcasting Symphony, Barlow; Soloist: Mona Paulee; Broadcast by CBS, Mar. 1, 1943.

**LIEDE EINES FAHRENDEN GESELLEN**—New Orleans Symphony Orchestra, Ole Windingstadt, Conductor; Soloist: Suzanne Sten; Mar. 16, 1943.

# Symphonic Chronicle

## 1945-1946

### GUSTAV MAHLER: SECOND SYMPHONY (ANDANTE MODERATO)

*Philharmonic Symphony Society of New York, Alexander Smallens, Conductor; Stadium Concerts, June 25, 1945.*

The Andante Moderato from Mahler's Symphony No. 2 in C Minor, which followed, was new to this reporter and seemed full of space and a certain rural serenity. It possesses some lovely if slightly saccharine, melodies, which one suspects will sound less and less dated as the years pass because of the grand and sensitive formal scheme in which they appear. One memorable moment, beautifully performed, came after a fully scored passage and an ending of a few gentle notes surrounded by stretches of silence. The string section is heard playing the principal theme in a plucked version; and suddenly, for all its size the orchestra becomes a small group of street serenaders.

L. H., *N. Y. Herald Tribune*

### GUSTAV MAHLER: FIRST SYMPHONY

*Philharmonic Symphony Society of N. Y., Artur Rodzinski, Conductor; Oct. 18, 19, 20, and 21, 1945. Two movements were broadcast over CBS on the 21.*

The orchestra played the work exceptionally well. If Dr. Rodzinski took advantage of every sensational effect and climax in the finale, he was only within his rights and the quality of the score which he gave such a sympathetic reading.

There was long applause for this.

OLIN DOWNEY, *N. Y. Times*

They presented two works which are very familiar, and one which while far from unknown, deserves to be more familiar than it is. This was Mahler's first symphony, last played in Carnegie Hall three years ago.

Mahler's D major symphony, written in the composer's late twenties, gives an impression of remarkable youth and freshness in its fifty-sixth year, especially in its first two movements, and, with the possible exception of the reference to a grotesque picture of a hunter's funeral in the third movement, needs no annotations to be understood. There are some prolix measures, these mainly in the finale, but in listening to yesterday's performance one seldom thought of length.

FRANCIS PERKINS,  
*N. Y. Herald-Tribune*

### ANTON BRUCKNER: SEVENTH SYMPHONY

*Cleveland Orchestra, Erich Leinsdorf, Conductor, Severance Hall, Cleveland, October 25 and 27, 1945; Ann Arbor, Mich., Nov. 11, 1945.*

Quite matching the notable performance of this Wagnerian excerpt was the Leinsdorf presentation of the Bruckner Symphony opening the program. His reading of this profound and sometimes labored masterpiece was really superb. And he richly deserved the medal presented him by the Bruckner Association for helping to keep before the public the music of this famous Austrian.

It is tragic right from the start. Its reception when it was first written was favorable, but the composer found the going difficult. As a friend of Wagner's he was the storm center of the then current controversy over Wagner's music. And there's particular Wagnerian flavor in the score for the basses—Director Leinsdorf substituting horns and trombones for the four Wagner tubas Bruckner used.

A ghostly glimmer, a touch of sadness is apparent even in the lighter episodes of this work. The memorial Adagio is touching in its depth of sadness. It reveals, too, flashes of nobility and grandeur.

ELMORE BACON, *Cleveland News*

The Bruckner was the Seventh Symphony in E Major. There are many

beautiful passages in this romantic symphony that are unsurpassed and the orchestral developments of the Austrian composer are masterful. Even though one can quarrel with a certain amount of musical garrulousness the whole effect of Bruckner is of the stunning kind that envelops the hearer in a roseate atmosphere.

In this work, too, Mr. Leinsdorf showed off in top form. The conductor has hit his stride and his definitive beat; deep knowledge of both the score and its import were easily transplanted to a grateful audience.

MILTON WIDDER, *Cleveland Press*

Bruckner's monumental work Leinsdorf took quite in stride. It is magnificent music, as long on intrinsic worth as it is lengthy, and Leinsdorf let it speak for itself with straightforward tempi and due observance of the composer's wishes, which might serve as an object lesson to certain conductors who are overly zealous as "interpreters." If heavily handed in spots and less incisively played than it is in the recording by the Berlin Philharmonic orchestra, under the direction of Jascha Horenstein, the Symphony nevertheless came off, and with a consistency in its address which made for unqualified conviction.

The orchestra was at its very best throughout the piece, with the basses outstanding, due to Bruckner's grateful writing for these instruments.

CARL GEBRING, *Ann Arbor News*

#### GUSTAV MAHLER: NINTH SYMPHONY

*Philharmonic Symphony Society of New York, Bruno Walter, Conductor, New York, Dec. 20 and 21, 1945.*

Mahler's last symphony was heard last night in Carnegie Hall in a gripping reading by Bruno Walter and the Philharmonic Symphony . . . the Mahler Symphony was last night's news, and it was easy to see why.

This is music of power and warm beauty. Mingled here are far flung outcries of rage and a wondrous calm. There is peace, the peace of the grave, and a violent unrest, too. And over it all broods Mahler's defiance of the final blackout.

For Mahler was obsessed with death while penning this titanic score. A note of sharp pessimism creeps into pages, and at times you sense the bitter

pathos of a last farewell. You hear the flapping of wings as the angel of death hovers about.

And yet there are sequences of almost childlike whimsy, of Viennese *Gemuettlichkeit*. In places the orchestra rocks in a frenzy of Austrian dance, and you suspect a sardonic mood of challenge and mockery. Mahler could even laugh in the teeth of death, and he hadn't long to go.

With the final fadeout you felt Gustav Mahler had written a ringing last will and testament. The music seemed to sum up a man's life and philosophy—a great man's, it did not seem possible that Mahler could go further. He had said his last word in glowing symphonic speech.

Just why the Ninth Symphony is a stranger around town puzzles me. The Philharmonic had never rendered it before, and you could count its American performances to date on 10 fingers. The symphony runs a bit long, but duration is nothing to hold against a symphony so long as it can keep going on its own power. And Mahler's Ninth has power, plenty of it.

LOUIS BIANCOLLI,  
*N. Y. World Telegram*

There have been many reasons to be grateful during recent years for the activities of Bruno Walter, and not the least important among his many fine accomplishments have been his ministrations to the music of his life-long friend and mentor, Gustav Mahler. Last night Mr. Walter brought forth the first unfolding by the Philharmonic-Symphony Orchestra of the Austrian composer's Ninth Symphony . . .

The Ninth Symphony of Mahler is, along with the preceding "Lied von der Erde," his most consistently impressive and moving music. In it his preoccupation with death continues. The two slow end movements indeed give us at great length the composer's most intimate thoughts on final things. In the opening *Andante commodo* Mahler depicts the bitterness, the tortured despair and hopelessness of man's inevitable end and he accomplishes his objectives with all the expressive means at his disposal, yet without, as was the case in most of his earlier symphonies, resorting to megalomaniacal orchestral effects or reverting to the sentimentality which has made him so many enemies. In the final *Adagio* he has given up the hopeless struggle against death and resigns himself to its all-answering, all-releasing attri-

butes. It is here that the composer reaches his greatest musical heights and carries there unwaveringly.

The two rapid middle movements, the characteristically bitter-sweet Ländler and the no less individual, self-mocking Rondo Burleske are perhaps the composer's way of reviewing his life, attempting to epitomize therein his love of nature and his contempt for man and his futile strivings before giving himself over to inescapable thoughts of finality.

JEROME D. BOHM,  
N. Y. Herald-Tribune

Considering the amount of nonsense the Philharmonic has played in the thirty-four years since this work was written, it is rather remarkable that the orchestra had not gotten around to it sooner . . .

This is not to say that it is an unsullied masterwork; but there is so much impassioned music in its hour and twenty minutes that unfamiliarity with it leaves a definite gap in one's orientation to music of this century. Even that statement is questionable (as so much about Mahler is) for there is much to support the belief that this is the last stanza of what, according to Ernest Newman's description of Mahler, is "the swan song of Western romanticism," of the nineteenth century variety.

Mahlerians will doubtless wince at a likening of this huge and troubled work to Tchaikovsky's "Pathétique," but the fundamental premise is identical—man's brief moment of being, its insufficiency especially to the artist haunted, as Mahler always was, by things to say and the little time he had in which to say them. Whereas Tchaikovsky strove only for an assuagement of his personal grief (which he felt so deeply that it has become one with the world) Mahler seems to strive for the ultimate eloquence, the world-embracing utterance, and, so far, has only made us aware of his own voice crying in the wilderness of time. There are confessedly broad likenesses, but the fact that Walter made us aware of them is a tribute to the intensity, fervor and superlative enthusiasm he has for this music. Under his urging arm, the Philharmonic played like a great orchestra, with a distinctive kind of tone, a warming kind of personality it attains only on occasions . . .

But the shadow cast by Mahler in the setting sun of his career was long

enough to envelop the hall for this evening at least.

IRVING KOLODIN, N. Y. Sun

### GUSTAV MAHLER: FOURTH SYMPHONY

Philadelphia Orchestra, Bruno Walter, Conductor; Desi Halban, Soloist, Philadelphia, Jan. 4 and 5, 1946; New York, Jan. 3, 1946. A performance of the Fourth was broadcast over CBS.

Bruno Walter inscribed another memory in his Book of Mahler with a stirring reading of the Fourth Symphony at the Philadelphia Orchestra's concert in Carnegie Hall last night. On the same level was the singing of the gifted Viennese soprano, Desi Halban, in the finale solo . . .

When Mr. Walter revived Mahler's Ninth Symphony with the Philharmonic a few weeks ago, many were bowled over by what seemed revelation—revelation of a great beauty lost or ignored.

Others who knew the symphony swore they were hearing it for the first time, that Bruno Walter was giving the massive score fresh glow and a kind of rebirth.

So with last night's Fourth Symphony—possibly the simplest of Mahler's nine symphonies, simplest in its childlike mood of open-eyed whimsy. It seemed fresh from a giant's nursery.

This is an uncanny span, this Fourth of Mahler, bristling with the good things of theme, color and warm feeling. Mahler loved children and he bowed before nature. He knew how to bring both into his symphonic wonderland . . .

Today concertgoers don't form battle-lines the way they once did when a Mahler symphony appears. And to paraphrase a famed quip, the door signs no longer stand for "Exit in case of Mahler."

The public is growingly alert to Mahler's greatness. It is more patient with the one-hour symphonies, less annoyed, possibly even charmed now by the little things that seem unnecessarily there.

LOUIS BIANCOLLI,  
N. Y. World Telegram

Bruno Walter, as guest leader of the Philadelphia Orchestra, gave some of the greatest performances we have ever heard from him last night in Carnegie Hall. He interpreted Brahms, Haydn and Mahler . . . The combina-

tion of such an orchestra with such conducting was fortuitous and memorable . . . Anyone who had not heard the other Mahler symphonies, but had read the extravagant praises and the hearty denunciations visited upon them, would have wondered, listening last night, what on earth all the shooting had been about. The Fourth symphony is mild as a lamb; very folk-like, therefore in Mahler's best melodic vein; pastoral; a reverie, the whole enveloped in the atmosphere of a dream . . .

The pages of the symphony which have the loftiest and most sustained eloquence, as well as the most compact and enchaind thinking, are those of the slow movement, freely in variation form. The theme is present sometimes in its original melodic simplicity, and then there are the counter-themes, such as the song of the oboe, in elegiac mood, over a motive made from a few notes of the original phrase. This is the movement which Mahler told Mr. Walter was inspired "by his vision of the church sepulchre showing the recumbent stone image of the deceased with the arms crossed in eternal sleep . . ." Mr. Walter's interpretation was that of a great master. There was long and enthusiastic applause for the symphony and its interpreter.

OLIN DOWNES, *N. Y. Times*

The blizzard of pros and cons may still whirl over the Mahler symphonies, but I don't think that anyone who heard Bruno Walter's performance of the "Fourth" with the Philadelphia Orchestra last night at Carnegie Hall would deny that this concert was one of the orchestra's best . . .

The picture the audience got of Mr. Walter conducting this symphony must have been a familiar one. Here was Mr. Walter, the devoted Mahlerite, touching every passing phrase and nuance with an affectionate gesture, bringing out every point with the final, revealing stroke. And it was a familiar Philadelphia Orchestra playing under him, an orchestra that can be as sensitive and responsive and as transparent in its tone as a single instrument.

And in the last movement, contributing her bit, and doing it with the simplicity and reserve Mahler's setting of these old Bavarian verses calls for, was Desi Halban, the soprano.

EDWARD O'GORMAN, *N. Y. Post*

The fourth symphony, first played here under Walter Damrosch in 1904, has not been played often in Carnegie Hall, but yet it can be ranked among the most readily appealing of Mahler's symphonies. It has not the frequent proclamateness of some of its companions, and, with the possible exception of parts of the *andante*, it has not the atmosphere of philosophic resignation which appears in the ninth symphony and the "Lied von der Erde." The prevailing atmosphere of this work might be described as one of melodic, imaginative intimacy, and such atmosphere marked the interpretation of the orchestra and was communicated to an intent audience . . .

The Brahms and Haydn works on the program were well performed, but it was Mahler's evening.

FRANCIS E. PERKINS,  
*N. Y. Herald Tribune*

#### GUSTAV MAHLER:

#### LIEDER EINES FAHENDEN GESELLEN

*Pittsburgh Symphony Orchestra, Frits Beiner, Conductor; Carol Brice, Soloist; Pittsburgh, Jan. 25 and 27, 1946.*

The Mahler items are the outpourings of another great composer, whose works during the years ahead are destined to supremacy over many of the so-called modern pieces now enjoying a vogue.

RALPH LEWANDO, *Pittsburgh Press*

New to our audiences were the four songs of Mahler, "Songs of a Wayfarer," as tuneful a cycle as this composer has left us, disclosing his wonderful sympathy for folk ways in his own verses, and his variation from the Wagnerian line. The simple clarity of the orchestra's role is far more economically treated than in subsequent symphonies, the voice not so extravagantly exploited.

J. FRED LISSFELT,  
*Pittsburgh Sun-Telegraph*

Mahler's simplicity and affinity to the earth were never more present than in the Four Songs of a Wandering Wayfarer. Miss Brice, possessing a rich contralto—this is no flimsy mezzo voice—is an ideal interpreter. In character, she has the necessary hollow effects so reminiscent of Marian Anderson. Moreover, she is extremely mu-

sical, and since Mahler's accompaniment is symphonic, she needs to fit into the over-all picture. This she does perfectly. The songs were projected so unaffectedly and yet so expressively that one wonders why they haven't been heard here oftener.

DONALD STEINFIRST,  
*Pittsburgh Post-Gazette*

**ANTON BRUCKNER:  
FOURTH SYMPHONY**

*Cincinnati Symphony, Eugene Goossens, Conductor; Feb. 28 and Mar. 1, 1946.*

Its uncommon treatment of the French horns is so apparent that the nickname for this "No. 4 in E-flat" could easily be the "Horn Symphony." While the entire horn section deserves special praise, the entire orchestra and Goossens merit the highest acclaim . . .

HOWARD HESS, *Times Star*

Mr. Goossens inspired the orchestra to give a superb reading of the Bruckner.

MARY LEIGHTON, *Enquirer*

**ANTON BRUCKNER:  
NINTH SYMPHONY  
(ORIGINAL VERSION)**

*Philharmonic Symphony Society of New York, Bruno Walter, Conductor; Mar. 14, 15, and 17, 1946. The last performance was broadcast over CBS.*

A symphony dedicated to God! Such was Anton Bruckner's Ninth Symphony, rendered in epic style by Bruno Walter and the Philharmonic-Symphony in Carnegie Hall last night . . . as Mr. Walter read it last night, it seemed complete. True, Bruckner made sketches of a Fourth Movement. But the chances are he had said all. The Adagio packs such power that the best Finale was silence.

And even at the end of the Adagio, where the mood grows ghostly and elegiac, you feel Bruckner knew the end was near, that he was breathing his symphonic last, too. Death, you might say, wrote his Finale and the Ninth's.

Mr. Walter's fervid conviction was on every phrase of the gripping score. The first movement ~~was~~ like a Gothic steepie, or maybe just a prayer. The crescendos were what Bruckner meant them to be—moods of exalted piety.

Few other symphonies bristle with such resounding peaks. The climaxes come like proclamations. They make you understand what is meant by Bruckner's being a prophet. His faith was his theme-song, his creed his inspiration.

Of course, Mr. Walter's rendering was of Bruckner's original version, first heard in America in 1934 at a concert of the Philharmonic led by Otto Klemperer.

The revised version made by Ferdinand Loewe as an act of devotion to a revered teacher was long in use. It was later replaced when the native strength of the Bruckner original was revealed in a new edition.

Mr. Walter's reading again showed why Loewe, though meaning well, almost twisted the Bruckner score out of shape and meaning with his orchestral changes.

The Bruckner original stands out in direct force. The speech is simpler, starker than Loewe's revision. The colors are less lush but fiercely expressive.

LOUIS BIANCOLLI,  
*World Telegram*

I may be letting my enthusiasm run away with me, but I think that the inspiration that guided Bruno Walter's pen when he planned last night's Philharmonic-Symphony program, as well as his baton when he conducted it—and this is a matter that is pretty far out of reach of whatever critical praise I can give it—must have come straight from the heavenly choir.

The performance of the Bruckner Symphony, which closed the program, was one of those moving experiences whose success is best measured, I think, by the reluctance of the audience to shatter the last fleeting spell of the music with a sudden burst of applause. There was this moment of spellbound hesitation after the adagio, a movement that soars on that serenely solemn plane for which there is only one descriptive word—Bruckner. And then the applause, and it was an ovation, a demonstration which Mr. Walter and the orchestra, each in his own way, attempted to divert to the other. It was a becoming exhibition of modesty.

EDWARD O'GORMAN, *N. Y. Post*

Bruckner's Ninth Symphony, which Bruno Walter, conducting the Philharmonic Thursday night in Carnegie Hall, played for its first time here since 1934, is a noble work of music.

It is big of sound, long of structure, utterly without vulgarity of thought and deeply expressive. What it is expressive of seems chiefly to be a pure-in-heart devotion to the Viennese symphony . . . Everything about it Thursday night was clear, straight-forward, confident, and this listener, though the three surviving moments of the unfinished piece are long, was not aware, as one is so frequently at performances of this author's work, of being present at a devotional act. Mr. Walter played it as live music, and its effect on the audience seemed to be that of live music. Bruckner's very particular approach to musical composition became thus a fact of life and ceased, at least for the evening, to represent any kind of lost cause.

Whether Bruckner is in the long run a losing cause depends on whether Brahms, who was aiming at the same goal, is a losing cause. Both hoped to continue the Beethoven-style symphony in a worthy and resembling manner. This meant basing structure on thematic development. And thematic development, as a continuity device, had already been pretty thoroughly exhausted by Beethoven. Wagner had also applied it to the opera, with spectacularly beneficial results; but that was about the end of it as a major method. Modernism, as we know it, has prospered most when it has used other methods. The fact that Brahms and Bruckner did not choose to search for a replacement to this exhausted device, but blindly, devotedly sought to make it still more expressive, puts them, with regard to all the music written since 1860, in a technically reactionary position. So be it. Reaction of that high intellectual quality and perfect professional integrity is not easy to laugh off. They used a cumbersome and outmoded system of composition, but they were masters. And Bruckner's Ninth Symphony, incomplete, is a master's masterpiece.

VIRGIL THOMSON,  
N. Y. Herald Tribune

GUSTAV MAHLER:  
*LIEDER EINES FAHRENDEN  
GEBELLEN*

Philharmonic Symphony Society of  
New York; Conductor, Artur Rodzinski;  
Soloist, Marian Anderson; April 4 and  
5, 1946.

Mahler's "Lieder eines fahrenden  
Gesellen" are seldom performed here

with orchestra, although this work of the composer's youth is one of his most ingratiating musical productions, both in its deep emotional appeal and in its use and combination of vocal and instrumental hues. It was sung with notable expressiveness by Miss Anderson.

FRANCIS PERKINS, *Herald Tribune*

GUSTAV MAHLER:  
*ADAGIETTO (FIFTH SYMPHONY)*

Chicago Symphony Orchestra, Hans  
Lange, Conductor; Feb. 28, and March  
1, 1946.

Mr. Lange's entire program was one of the most emotionally appealing of the season, being "music" throughout, instead of proposing problems for the brain of the listener to wrestle with instead of letting his heart have its way. Yet, it bristled with ideas, not the least of which was the demonstration of the worthiness of Gustav Mahler . . . Mr. Lange, last night, avoided any appearance of propagandist. He played one beautiful movement from one symphony, again a Fifth (remember the Fifties of Beethoven, Tchaikowsky and Shostakovich) and let it go at that.

C. J. BULLIET,  
*Chicago Daily News*

This was music of exquisite tenderness, filled with manifold poetic touches, and with poignancy of expression which rose superior to the often naive banality which figured in so much of the Austrian master's melodic writing. The conductor clearly had made a careful study of the score, had sensed its emotional significance and had been able to convey it to his players. The strings sang Mahler's subject matter with beautiful tone and expressiveness.

FELIX BOBOWSKI, *Chicago Sun*

GUSTAV MAHLER:  
*SERENADES (SEVENTH  
SYMPHONY)*

Cleveland Orchestra, Erich Leinsdorf,  
Conductor; Apr. 4 and 6, 1946.

The two Serenades from the Mahler were musical highlights of the program. The beauty and elegance of Mahler has not yet been equalled, and in spite of its repetitions, this half

hour portion of the program was the most satisfying.

MILTON WIDDER, *Cleveland Press*

In the first Serenade with its horn calls and echoes, its bucolic scenes and pastel tints a realistic touch is provided by the tinkle of cowbells. And it was Dr. Rudolph Bingwall, associate conductor, behind the scenes who "tickled the cow" at the proper time.

The second Serenade is not as lengthy and verbose as the first . . . but provides a beautiful lyric line, a stringed whispering of romance which easily could have become schmalzy, but didn't. Sometime we'd like to hear this whole symphony even if it does consume an hour and a quarter.

ELMORE BACON, *Cleveland News*

The audience was given a first hearing of the two Serenades from Mahler's Seventh Symphony . . . The Serenades afforded an interesting, if abbreviated, glimpse into an historically important work and a taste of its pleasantly provincial atmosphere.

The most striking thing about this

leisurely, sentimental music is its utter remoteness from anything associated with the contemporary American scene.

HERBERT ELWELL,  
*Cleveland Plain Dealer*

GUSTAV MAHLER:

## SECOND SERENADE (SEVENTH SYMPHONY)

*Pittsburgh Symphony Orchestra,  
Fritz Keiner, Conductor; April 19 and  
21, 1946.*

The Mahler piece is another exquisite tonal etching of this great composer. In addition to the regular instrumentation it uses a guitar and mandolin. The latter instruments were played with finesse by Frank J. Natale and Gregorto Scalzo, respectively.

Every detail of the work received the devoted attention of conductor and players. The incidental violin solos were played with style and ingratiating tone by Concertmaster Samuel Thaviu.

RALPH LEWANDO, *Pittsburgh Press*

### In Memoriam

Since the last issue of *Chord and Discord* was published, four important champions of the works of Bruckner and Mahler passed away: Frederick Block, Thorvald Otterstroem, Frederick A. Stock, and Erno Rapee.

FREDERICK BLOCK, born in Vienna on August 30, 1899, studied music with the Czech composer Joseph Bohuslav Foerster (Vienna Conservatory) and Dr. Hans Gál (University of Vienna). When Block was twenty-three years old a program of his own compositions was broadcast in his native city. Subsequently his music was performed by the *Vienna Symphony Orchestra*. In 1936 his one act opera, *Samum*, based on a play by Strindberg, was given its first performance in Bratislava, Czechoslovakia, under the direction of Karel Nedbal, Czech composer and conductor. The opera had three performances, one of which was broadcast. By 1941 Block had composed more than forty-two works, including eight operas for which he wrote his own librettos (*Platonow*, *Rauschgold*, *Samum*, *Fiore*, *America*, *Pan*, *Schattenspiel*, and *Esther*). Forced to leave Austria, he arrived in the U. S. in 1940. Here he became music editor for various publishers and wrote music for radio programs and films. He had a part in writing the music for the motion picture *We Are the Marines*. Block's article on Mahler's *Tenth* was published in *Chord and Discord* in December, 1941.

On June 1, 1946, exactly one year after Block's death, WNYC broadcast a memorial concert. The program was made up of music composed by the late Frederick Block.

THORVALD OTTERSTROEM was born in Copenhagen in 1868. He studied music in the Danish capital and later in St. Petersburg, then the capital of Czarist Russia. In 1892 he went to Chicago where he died in 1942. His piano works were introduced by Fannie Bloomfield Zeisler and Rudolph Ganz. Several of his compositions were performed by the Chicago Symphony Orchestra. He was one of the earliest Brucknerites in this country and fought for his cause for many years; he became a member of the Bruckner Society as soon as it was founded and contributed two articles of lasting value to *Chord and Discord*: *A Word to Anti-Brucknerites* and *Bruckner as a Colorist*.

ERNO RAPEE was born in Budapest in 1891. Eighteen years later he was graduated from the Budapest Conservatory. In 1913 he be-

came musical director of the Hungarian Opera Co. of New York. He made guest appearances with various European orchestras. He conducted several U. S. orchestras and was music director for a number of New York theatres. He was general music director for Radio City Music Hall from 1932 to 1945 when he died. Erno Rapee was the first conductor to broadcast a Mahler cycle in the U. S. which included a performance of Mahler's *Eighth*. The Mahler Medal of Honor was presented to him by Mayor La Guardia on behalf of the Bruckner Society of America after the performance of Mahler's *Eighth*. The performance and the Mayor's speech were broadcast by the American Broadcasting Co. over a nation-wide hook-up.

FREDERICK A. STOCK was born in Julich, Rhine Province, Germany, in 1872. He studied at the Cologne Conservatory with Humperdinck, Wuellner, and Jensen. He was a violinist in the Cologne Orchestra. Later he went to Chicago where he became a violinist with the Chicago Symphony. He was made Theodore Thomas's assistant in 1899 and succeeded Thomas as conductor of the Chicago Symphony six years later. Stock gave first performances of a number of American works and carried on the Thomas tradition of catholic taste. He was director of the Musical Art Club and became conductor of the Civic Music Student Orchestra in 1920. He was elected a member of the American Institute of Arts and Letters. Northwestern University conferred the degree, *Mus.D. honoris causa*, on him in 1915. His compositions include a symphonic poem, *Life* (in memory of Thomas); Symphonic Sketches: *The Season*, *Symphonic Variations*; a string quintet and sextet; Psalmodic Rhapsody for solo, chorus, and orchestra.

On March 23, 1939, Dr. Martin G. Dumler, the President of the Bruckner Society, presented the Bruckner Medal of Honor to Stock after a performance of Bruckner's *Ninth*. Dumler had traveled from Cincinnati for the occasion. On Feb. 1, 1940, Stock conducted the first performance of Bruckner's *First* given by a major orchestra in the United States. At the concerts commemorating the 100th anniversary of the birth of Theodore Thomas, Stock included Bruckner's *Ninth* on the program (Jan. 2 and 3, 1936). Throughout his musical career Stock had been an ardent advocate of Bruckner's music; he had also conducted a number of Mahler's works. He was an Honorary Member of the Bruckner Society of America. He died in Chicago in 1942.

### Bruckner-Mahler Record Festival Broadcast over KUOM

July 13, 1946

The Bruckner Society of America  
697 West End Avenue,  
New York, New York

Dear Sirs:

Beginning today at 2 o'clock P.M., Central Standard Time, I am presenting a two-hour concert of music by Bruckner and Mahler. This will be the first in a series of eight such programs which will make up a Bruckner-Mahler Festival. These programs will be presented on records from now until August 31 each Saturday afternoon at 2 o'clock over KUOM, the University of Minnesota Radio Station, 770 kilocycles, 5000 watt power. Following is a list of the works to be included in this series.

#### Works by Bruckner:

- I. Symphony No. 1—*Scherzo*
- II. Symphony No. 2—*Scherzo*
- III. Overture, G minor
- IV. Mass No. 2, E minor
- V. Symphony No. 4, E flat major, ("Romantic")
- VI. Symphony No. 5, B flat major
- VII. Symphony No. 7, E major
- VIII. Symphony No. 9, D minor

#### Works by Mahler:

- I. Das Lied von der Erde
- II. Symphony No. 1, D major
- III. Symphony No. 2, C minor, ("Resurrection")
- IV. Symphony No. 4, G major
- V. Symphony No. 5, C minor—*Adagietto*
- VI. Symphony No. 9, D major
- VII. Songs—"I Breathed A Tender Air" and "Hans und Grete"

I thought that you would appreciate knowing of this survey of these seldom performed works by Bruckner and Mahler.

Yours sincerely,  
PAUL E. BRISBY,  
Music Director—KUOM

## NOTES ON CONTRIBUTORS

**PHILIP GREELEY OLAPP**, a Bostonian by birth, conducted the Cincinnati Symphony Orchestra during Kunwald's illness in 1913. His works include the tone poems *Norge* and *A Song of Youth*, *Symphony in E-Minor* (played by the Boston Symphony), the orchestral prelude *In Summer* (performed by the St. Louis Symphony), *Symphony in E-Flat* (performed by the Boston Symphony), songs, etc. He wrote a number of essays and reviews on Bruckner and Mahler in the *Boston Transcript* and lectured on the works of these composers before professional groups and in the classroom. The performance of Bruckner's *Fourth* was the first performance of a complete Bruckner symphony by a university orchestra in the United States. During the season 1940-1941, Professor Clapp included Bruckner's *Seventh* as well as Mahler's *Lieder eines fahrenden Gesellen* and the *Adagietto* from Mahler's *Fifth* on his programs. In 1942 the State University of Iowa Orchestra under the direction of Philip Greeley Clapp performed Mahler's *II*, *IV*, *Lieder eines fahrenden Gesellen*, and the *Adagietto* (Mahler *V*). He has been head of the Music Department of the State University of Iowa since September, 1919.

**JACK J. DIETHER** was born in Vancouver, B. C., in 1919, and has just emerged from seven years in the Canadian forces. Despite a late start he has been an enthusiastic musical amateur for about ten years. He has had some training in psychology and intends to continue in a new field of psychotherapy.

**MAX GRAF**, renowned Viennese critic, scholar, and musicologist, is the author of *German Music in the 19th Century*, *Music in the Renaissance Period*, and numerous other books and articles. He taught at the Academy of Music, Vienna. His latest volume, *Composer and Critic: Two Hundred Years of Musical Criticism* (published by Norton in the spring of 1946), won widespread acclaim. Graf's *Modern Music* is scheduled for publication in the fall of this year.

**WILLIAM PARKS GRANT** is the pen-name of William P. Grant. He was born in Cleveland in 1910. He holds a Bachelor of Music degree (with honors) from Capitol University, Columbus, Ohio, and a Master of Arts degree from Ohio State University. Mahler was the subject of his Master's thesis. After having taught music in the Ohio public schools and at John Tarleton College, Mr. Grant became the Head of the Music Department at Northeast Junior College of Louisiana State University. He has written a number of articles for *Chord and Discord*. Among his musical compositions are two symphonies, a horn concerto, clarinet concerto, songs, a ballet, etc.

**ROBERT SIMPSON**, born in London, 1921, originally intended to study medicine. After two years of medical studies, Mr. Simpson decided to turn to music. He holds a Bachelor of Music degree from the University of Durham. At the present time he lectures and occasionally teaches in schools. He has composed several orchestral and chamber music works. His article, *Bruckner and the Symphony*, appeared in the February, 1946, issue of *The Music Review*, published in England.

**CURTIS SWANSON** was graduated from the School of Journalism, University of Minnesota in 1941. He became a reporter for the Elmhurst (Ill.) Press. In May, 1942, he joined the Army and was commissioned a second lieutenant in the U. S. Air Forces on November 13, 1943. He recently returned to the U. S. from India.

## Chord and Discord

**WABREN STOREY SMITH**, born in Brookline, Mass., succeeded Olin Downes as Music Editor of the *Boston Post*. His musical compositions include orchestral and chamber music works as well as songs and piano pieces. He became a member of the faculty of Faelten Pianoforte School in Boston after his graduation from that school. He was assistant music critic on the *Boston Transcript*. In 1922 he became teacher of theory and composition at the New England Conservatory.

**WOLFGANG STRESEMANN**, born in Dresden, studied law and music. After practicing law for several years, he decided to devote himself to music. He has written symphonies, songs, chamber music, etc., and has conducted orchestras in New York, Buffalo, and Princeton. He came to the U. S. in 1939 and became a citizen. At the present time he is music critic on the *Staats-Zeitung* in New York.

**HANS TISCHLER**: B.A., Gymnasium 9, Vienna; B.Mus., State Academy of Music, Vienna; Ph.D. Musicology, University of Vienna; Ph.D. Musicology, Yale University; Professor of Music, Head of Music Department, West Virginia Wesleyan College; active member of the American Musicological Society

**LOUISE H. TISCHLER**: B.A., Gymnasium 9, Vienna; B.Mus., State Academy of Music, Vienna; Ph.D. Musicology, University of Vienna; Faculty Member, National Guild of Piano Teachers.

## WITH HAMMER AND COWBELLS

### MAHLER'S SIXTH COMES TO AMERICA

By GABRIEL ENGEL

The prolonged, spontaneous ovation accorded the belated American premiere of Mahler's *Sixth* at each of its three performances (Dec. 11-13, 1947) by the N. Y. Philharmonic under Mitropoulos' brilliant direction, should go a long way toward proving that this sadly neglected work is in reality one of the most vital and appealing of all Mahler's symphonies. Given perhaps less than a dozen times during the two score years of its existence, mostly during Mahler's lifetime (i.e., before 1911), it is not likely that any living American reviewer had ever heard it before. Of course, the premiere at Essen, as well as the performances that followed, had elicited the usual raucous chorus of critical abuse heaped upon any Mahler achievement by a world in which petty jealousies were busy every moment producing fresh axes to grind. Yet even had it been a new work by Beethoven or Brahms it could scarcely have better survived the heavy cross of rejection laid upon it by apologetic extenuations on the part of confessed Mahler devotees. "My time will yet come", Mahler used to say, commenting upon the failure of his contemporaries to understand his works. He meant hostile critics and musicians, no doubt, but so far as the *Sixth* was concerned, he might as well have included most of his friends. Significant in this connection are some words Arnold Schoenberg spoke about Mahler's art:

"In place of many words, it would perhaps be best for me to say, 'I believe firmly and unshakably that Gustav Mahler was one of the greatest of men and artists'. For there are only two possible ways to convince anyone of an artist's quality: the first and better way, to produce his work; the second, which I must now use: to communicate to others one's own faith in that work. . . .

"In reality there is only a single towering goal for which an artist strives: *to express himself!* If he succeeds in that he has won the greatest success an artist may achieve; beside that everything else is minor. Self-expression embraces all: death, resurrection, fate, etc., as well as the lesser, though not unimportant human problems. . . .

"I believe that Mahler simply did not notice that his themes were banal. And, to be sure, for a single reason: *that they are not banal.* I must confess here: I also belonged at first to those who found these themes banal. I believe it important to admit that I was Saul before I became Paul, for it may be deduced therefrom that I too was misled by that *fine sense of discrimination* of which his opponents are so proud. Rather, only now have I come to heed that *fine sense* no longer, since my ever growing impression of the beauty and grandeur of Mahler's work has convinced

## Chord and Discord

me that such judgments arise not from a truly fine sense of discrimination, but on the contrary, from the total lack of ability to discriminate.

"I had found Mahler's themes banal, although the work as a whole had made a great impression upon me. To-day I could no longer maintain such a stand, even with malice. Just think! If those themes were really banal, I could not help find them still more banal to-day than I did at first. Banal means rustic, signifying a retarded state of culture. Such a state of culture does not imply anything bad or false. It merely represents something superseded, obsolete, once-right, but no-longer-true. The peasant behaves not badly, but in an out-dated manner, aping those of a once higher cultural state. Banality, then, implies an out-dated state of manners and outlook, once really the manners and outlook of the more cultured; not banality from the outset, but merely grown to be such when supplanted by the succeeding stratum of cultural progress. But it can never become valid again; once rendered banal, it must remain banal. And when I now declare that I can no longer find these themes banal to-day, I know they could never have been banal; for a banal idea, that is an idea that strikes me as outmoded, trite, can seem to me, upon further acquaintance, only more banal, more trite. Certainly, never more significant. Furthermore, when I keep discovering in this idea, the more I contemplate it, (and this is my experience with Mahler) new facets, fresh beauties, splendors, then there can remain no doubt: the idea is the very opposite of banal. It is not something that has been long since by-passed for reasons that cannot be misunderstood, but rather something the inmost meaning of which has yet to be fathomed, something that was too deep to permit immediate grasp of more than its outer form. And in reality it has gone thus not only with Mahler; almost all the other great composers were subjected to the censure of banality. I need only mention Wagner and Brahms.

"Equally silly is another criticism hurled against Mahler: that his themes are unoriginal. In the first place, just as in art the isolated detail, so in music the theme alone, is not the main thing. For an artwork, like a living organism, emerges an entity. Exactly as with a child, it is not just an arm nor a leg that is first created. Not the themes, but the entire work is the inspiration. Not his is the true gift of invention who creates a good theme but rather his who conceives a whole symphony at once. In the second place, however, Mahler's themes are original. Naturally, one who singles out the first four notes will detect reminiscences, but he is no less ridiculous than one who hunts for original words in an original poem. The theme consists not of a few notes, but of the musical products of these notes. The little structure we call a theme should never be the sole yardstick of the large form of which it is the relatively smallest element. Schopenhauer once remarked that the most unusual things have to be said with the most usual words. That must of necessity be the case with music as well; that the

most unusual things have to be said with the most usual sequences of tone. One is almost tempted to go further: that it is unnecessary for a musical composition to have an original theme. Otherwise Bach's Chorale-Preludes would not be works of art. Yet artworks they certainly are."<sup>1</sup>

To some extent Mahler himself must be held responsible for the timorous pre-disposition of the musical world, conductors as well as music-lovers, toward the *Sixth*. The references to the work's content and complexity in his letters are confused and confusing. In 1904 he wrote to Richard Specht:

"My *Sixth* will pose riddles the solution of which will be possible only to a generation that has already accepted and digested my first five."<sup>2</sup>

The work was then complete in concept, but probably still in rough sketch form.

In a letter to Bruno Walter in the summer of 1906 Mahler, in his usual exuberant, elated manner following the completion of a symphony, scolds him with good-natured impatience for quixotically condemning as unsound one of Wagner's polemics in favor of program-music.

"True, just as in all art, the utmost purity of the means of expression is desirable. When making music one should not seek to paint, describe, etc. Yet whatever the music one creates it cannot help being the complete human—feeling, thinking, breathing, suffering.

"In a word, one who lacks the necessary genius should keep hands off; but he who has it need fear nothing. All this arguing about the exact nature of a work of musical art strikes me as though one, having begotten a child, starts breaking his head afterwards over whether it is really a child, begotten with proper intentions, etc. In short, one has made love and—succeeded: That's that! And if one does not and cannot love, why there just is no child. Again that's that! And if one does and can—well, there is a child. And again that's that!

"My *Sixth* is done. I believe I have succeeded. A thousand times that's that!"

And then came the premiere at Essen, with its hostile critical reception, nothing new to Mahler, who had learned to take rebuffs from the press in his stride. Bravely he wrote to Mengelberg preparing the *Sixth* for its Amsterdam premiere:

<sup>1</sup> *Rede über Mahler*. Translated by Gabriel Engel from excerpts included in a privately printed pamphlet issued by Schoenberg's friends and pupils in celebration of his 60th birthday. The complete text will be included in the collection of Schoenberg's writings to be issued in the fall of 1948 by the Philosophical Library Inc., 15 E. 40th Street, New York, N. Y., under the title, *STYLE AND IDEA*.

<sup>2</sup> This letter, as well as the others that follow, is translated by Gabriel Engel from Mahler's *Briefe*, (Vienna, 1924), by kind permission of Alma Mahler Werfel.

## Chord and Discord

"My *Sixth* appears to be too hard a nut for the tender little teeth of our critics of to-day. Just the same it manages to push its way through the concert halls."

Shortly after this Mahler sent his friend Joseph Reitler, conferring in Paris with the conductor Colonne, who wished to introduce a Mahler symphony there, the following amazing note:

"Under no condition would I advise the *First*. It is very difficult to grasp readily. I would rather recommend the *Sixth* or *Fifth*."

It seemed now that the *Sixth* was not such "a hard nut" to crack, after all.

By then, however, the damage was done. Bogy gossip he had unwittingly helped further by sanctioning dour programmatic allusions to the score, added to the snide remarks of jealous musicians of note concerning the precocious cowbells and hammer and the inanities and insanities of the orchestration, had transformed the symphony's hoped-for laurels into a crown of thorns.

Following the few performances during Mahler's lifetime the *Sixth* remained virtually taboo. Most surprising has been the attitude of Mahler devotees toward this mistakenly neglected work. Paul Bekker, author of a monumental German tome on Mahler's symphonies, published in 1921, may be regarded as the spokesman for the majority of these. He said:

"It would not be right, in order to overcome the antipathy to it inspired by its exceptional content and form, to call for more frequent performances of this symphony as a separate work."

Heard as an entirely separate entity, with a message complete in itself, Mahler's *Sixth* might well persuade the listener that the composer was a pessimist. Yet the same listener hearing the *Fifth* independently, with its enthusiastic message of joy and love of life, could not help concluding by the same logic that Mahler was the very voice of affirmation. The truth, however, is that each of these works, indeed every one of Mahler's symphonies, stresses a different facet of the "complete human" mentioned in his letter to Walter. Man's ever-changing experiences in life exert subtle influences over his spiritual alchemy; they cause changes in his "feeling, thinking, and suffering" which determine his consequent spiritual state.

If I may use the apt contrast of Milton's immortal odes, the tragic *Finale* of the *Sixth*, a veritable Ode to Human Suffering, is but the momentary *Il Penseroso* of an artist, whose inner life was one vast *L'Allegro*, ecstatic with the urge and the felicity for self-expression. Viewed from the first movement's arduous ascent to life's topmost summit, whence the homely echo of cowbells still tinges the transfigured revelation of eternity with mundane limitation, this *Finale* may well reflect Mahler's hopeless struggle to maintain his lofty ideals at the Viennese Opera against the stumbling-blocks set in his path by malicious, powerful opponents, envious of his high artistic authority. For years Mahler suffered under the premonition that this episode would end tragically for him, as it did, though not till

some seasons after its probable prediction in the foreboding hammer blows of the Sixth.

Only absolute belief in their indispensability could have caused Mahler to introduce the hammer and cowbells, scored here for the first time in any symphony. Those who suspect that he might have hit upon such precarious tonal timbres out of a desire for sensational effect, need only be reminded that he would transport a special set of cowbells, constructed according to his own specifications for this work, hundreds of miles to insure accurate rendition of the desired timbre. Mahler's conception of the hammer blow, on the other hand, seems never to have been adequately realized. Paul Bekker, who attended some of the rare early performances, concludes, naively enough, that this failure was perhaps intentional: that it supports the validity of Mahler's symbolism by suggesting MAN's insurmountable limitations, the vanity of his effort even so much as to mirror the voice of Fate. The score calls for "a short, powerful, but dully echoing stroke of unmetallic character." Paul Stefan hints, "Like a falling tree." In a letter dated Aug. 18, 1906, to Mengelberg, in a quandary about the hammer blow, Mahler said:

"Too bad you told me so late just how you felt about the hammer blows. I can make no change now, as I gave my *imprimatur* to the publisher weeks ago. Frankly, I felt just as you do about the matter, but forgot to note the change. Well, let's try it your way in Amsterdam and perhaps it can be appended somehow to the score later."

The original score shows that Mahler did omit the third and most fateful of the hammer blows (as published in the study-score released after the world premiere). However, the published version greatly intensifies the work's sensational appeal. Perhaps this fact will continue to influence the conductors of its rare performances to retain the third stroke. Once heard it cannot be forgotten. Whenever the work is performed listeners will be told about it in advance and they will await it expectantly. It is literally the death blow. Why did Mahler change his mind about mirroring the very stroke of death in tone? Perhaps superstition had something to do with it. Yet artistic integrity actually demanded that it be omitted. The two preceding hammer blows were warnings, premonitions, sufficiently sombre to lend conviction to the description "Tragic". The third, followed by the mourning choir of trombones, involves an almost photographic bit of realism, violating the pure symbolism Mahler really intended, but apparently himself understood clearly only after it was too late to amend the score in press.

Just another word about the cowbells and hammer. At the American premiere, in almost every detail a perfect presentation of the work, these two important symbols, so difficult of realization in accordance with Mahler's intent, might possibly have been improved upon. The cowbells, rather spasmodically sounding, seemed somewhat harsh and over-prominent. The score stresses particularly that the bells be rung "at a distance." As this sound, in particular, tends to produce a disturbing audience-reaction, aside from feeding the hostile critic's penchant for gibes, it should be most meticulously tested before a performance. The greatest feasible distance from

which the bells would be sufficiently perceptible to show that they are related to the score would be the proper distance. As for the right timbre, one would have to unearth Mahler's own specially constructed cowbells to know the exact truth in that regard. The score reveals the unbroken, gently waving line Mahler used for his cowbell notation, indicating that he desired a soft, unbroken tone, but the timbre he fancied may remain a mystery forever. The hammer blow at Carnegie Hall was startling, sharp, and penetrating, in all, surely impressive, yet as a symbol of Fate not overconvincing.

At first, perhaps, some of the hostile scribes were driven by urgent deadlines to snap judgments, the equally ready retraction of which might have involved some sacrifice of authority and pride. With each fresh ovation granted a Mahler Symphony their stand grows more puzzling, almost seeming the expression of a planned, hammer-like attitude already notorious in America in Mahler's lifetime. At any rate, the hammer and cowbells provided their now very banal remarks about Mahler's alleged banality with a grateful point of departure. Gleefully, they rose to an all-time low of superficial condemnation. To them we heartily recommend the telling words of Schoenberg on the nature of banality (with special emphasis on Mahler's art). By his own confession once in agreement with them, this man, one of the foremost creative artists of all time, is not merely a great musician, but a keen esthetician as well. Having survived a half-century of critical buffetings, with his artistic integrity unscathed, he recently viewed with whimsical pardonable irony a belated American Academy of Arts award in recognition of a lasting contribution to art, already realized in great measure just about the time of the world premiere of Mahler's Sixth.

#### FIRST MOVEMENT

Listening to the opening strains one seeks in vain to single out a definite lesser melodic component corresponding to the traditional concept of "first theme." There is here no cadence, no marker for the quick, facile analyst. One is swept along by an impassioned march-like outburst of lyricism, the vehicle of a number of motivating sources. It surges impetuously onward by ramifications rhythmically ever new. Through sixty measures of alternate wide leaps and zig-zag rushes it pursues its breathless way. It is not just a theme; it is a march-song of symphonic scope, an integral creation of the process known to musical rhetoric as "free fantasy". The powerful forward urge of this march is not the expression of restlessness. It mirrors the heroic determination of man's will to surmount all obstacles.

A singular motive, of grim, relentless power gives the first hint of a tragic outcome for all the earth-bound aspiration just presented. A word about the origin and nature of this fateful motive, destined for a paramount role in the symphony, may be of interest. At the end of the opening movement of Mahler's *Second* there occurs a particularly gloomy, brief episode, reflecting the victory of death over life. It involves an instant change of mood from major to minor by the depression of the middle tone of a major triad. The aptness of this harmonic transformation as a symbol of the shadow of death ever-impending over life must have struck Mahler when planning the *Sixth*. No less singular than this fate motive itself is the instrumental dress in which he arrayed its initial appearance. Trumpets and

oboes sound it simultaneously, the former graded from *ff* to *pp*, the latter from *pp* to *ff*, the darkening of the harmony thus being reinforced by a corresponding darkening of orchestral timbre, as the dimmed brilliancy of brass gives way to the increased nasal volume of woodwind. Whether or not one favors such intricacies of dynamics in mingled timbres, this is a characteristic example of the meticulous virtuosity Mahler brought to the scoring of the *Sixth*, that seems worth pointing out. Echoes of the fate-symbol's harmonic change haunt the brief, mysterious chorale that follows, softly chanted by the woodwind. Gradually the air grows more peaceful and cheerful, to greet the advent of the light-hearted song-theme, which seems at first nothing more than the idealized chorus of a Viennese popular song, characterized by short, separated phrases, alternately amorous and lilting.

Ah, the song-theme, into which symphonists have traditionally poured the utmost melodic magic of which they were capable! Yet certainly not so Mahler, especially in this simple, diatonic song-theme. Obviously its chief mission is not of a cantabile nature; it is above all the vehicle for two contrasted motives, destined to high importance in the movement's development. Therefore, the listener should realize that instead of compact themes the exposition of Mahler's *Sixth* is devoted to contrasted moods, presented in freely evolving, song-like structures, the primary aim of which is not to sing, but to convey the motives, the characters in the symphonic drama about to be unfolded. So numerous are they, especially in the opening march, that Mahler, eager to familiarize the listener with these essential particles flashing by with kaleidoscopic swiftness, resorts to the classic device of repetition. In view of the brevity of this exposition and the enhanced comprehension of the ensuing development a second hearing of the many motives would afford, Mahler's demand for such a repetition should not be ignored.

As first heard, but a simple melody clothed in simple harmonies, it returns shortly a transformed creation, impetuous, joyful, resplendent in a luxurious contrapuntal garb of supporting voices. After full, satisfying expression it subsides in a dreamy cadence.

The extended development section falls into four divisions, separated by the strongly contrasted moods which hold successive sway. The first of these exploits a number of varied rhythmical motives drawn from the march, culminating in a new, more impassioned march-melody freely evolved out of those motives. The listener becomes aware of the lessening weight of conflict, the melodic line almost attaining an air of open exultation as it ascends to a more ethereal plane.

"Gradually more sustained," says the score. The violins leap jubilantly upward, to become transfigured in whispered, closely harmonized *tremoli* suggesting the rarefied atmosphere of a lofty summit. Faintly echoing out of the valley below rises the homely sound of cowbells. A choir of eight muted horns and trombones intones the chorale-theme. This passage, a marvel of orchestral color achieved by purely indigenous means, is one of the most felicitous instrumental inspirations of a composer whose pioneering achievements at the threshold of twentieth century economy of instrumental means are still regarded by experts as the supreme models in their field.

The song-theme, hitherto only an occasional, fragmentary apparition in

## Chord and Discord

the development, now flowers into a full-blown, tender melody in the solo flute. Inverted it gains immeasurably in grace and expressiveness. Transmuted by this brightening magic the stormy march re-enters regenerated, now major, strong and confident, bolstered by a powerful orchestral setting. The song-theme, eloquent in the violins, ascends to the brilliant plane of D-Major, where it achieves its fullest, warmest utterance.

Ominously a shadow of the original, dark march-mood looms up in the trombones over aroused, pulsing basses. Alarmed, the entire orchestra falls upon it with full force, "as though bursting in, furious with anger", hints Mahler in the score. In the stirring passage that ensues, Mahler's inexhaustible polyphonic resourcefulness is revealed in the masterful way he marshals the multitude of motives in ever new combinations. The brass now takes charge, dispelling every vestige of the sombre elements that threatened. The song-theme, rising in the trumpets, becomes a veritable hymn of triumph. Unbounded joy fills the air as the movement draws to a close.

### ANDANTE

Mahler decided that the placid *Andante*, third movement in the original score, would serve to better advantage if heard immediately following the dynamic, exciting first movement. Certainly, its marked contrast of spirit affords the listener grateful relaxation. Yet there is a more valid reason for the change. The Scherzo includes dark motives that attain full significance in the Finale. Closer to the latter in content, it is in that respect a preparation for it.

The opening theme of the *Andante*, set in major, and entrusted mainly to the violins, is a tender love-song, of deceptive simplicity, if one passes too lightly over the striking injection of evasive touches of minor in the melodic line. Those more intimately acquainted with Mahler's individual characteristics will appreciate their significance. They know Mahler's irresistible urge to parody and satire, sometimes not even sparing the lugubrious air of a funeral march. Yet the subtle interchange of the theme's major and minor moments is firmly based on the fate-symbol. Early in its unfolding is heard a plaintive motive, aptly set for the oboe, its rocking rhythm much like a lullaby-fragment. This lullaby-motive becomes one of the principal vehicles of the movement, a dream of love, peace, and contentment colored by a profusion of typically Mahlerian instrumental imagery. In a polyphonic setting enriched by ever-varied re-echoings of this motive in strings and woodwind the love-song attains increased ardor, gradually luring the entire orchestra into warm participation. Finally it subsides in a gracious, leisurely cadence amid a rich interplay of imitative voices.

A few measures in minor cast a momentary shadow, quickly dispelled by an exultant outburst of the lullaby-motive in the trumpets, over an impressive hymn-like melody in the horn choir. The mood at this point is closely akin to that of the Finale of the *Fourth*, Mahler's Ode to Heavenly Joy. Cowbells, heard faintly, as from a valley deep below, bear the everyday world's last greeting to the intrepid mountain-climber (the human will) on the lonely lofty summit he has scaled. The very gates of Heaven seem to open before him, revealing indescribable super-earthly splendors. Swiftly the veil is drawn. Yet vestiges of the celestial vision survive in the

violin's ecstatic countermelody as the love-song returns with almost devotional fervor in horn and woodwind. Interpolations of the lullaby-motive enhance the breath-taking beauty of this passage, one of Mahler's most felicitous polyphonic inspirations.

Again the melancholy minor theme, horns and deep strings predominating, yields to the broad-winged countermelody of the violins, awakening the whole orchestra to full-throated, ardent participation in the love-song. The first theme is not heard again. The movement draws to a close along a fine-spun, ever-softer strand of motives, rising and falling like sighing heartbeats in the breast of the lonely one whose yearning evoked the song.

### SCHERZO

The swiftly changing panorama of dance elements, by turns graceful, lumbering, lilting, whirling, presents a weird, shadowy world of rhythmic life gripped by the fantastic spell that sways the Scherzo. A vividly picturesque creation in A-minor, the symphony's reigning key, it is the typical goblin-haunted Mahler scherzo, the proving-ground of an almost uncanny display of tonal wit. Yet it never bursts forth into merry laughter. Instead of humor it offers the wild cachinnation of lurking demons; in place of a smile of cheer, a gargoyle leer. The opening theme (rather, a succession of varied dance-themes) reveals several salient points in common with the march of the first movement, the highly serious mood of which it seems at times openly to parody.

Especially striking is the delicately constructed oboe theme in major, corresponding to the trio section in the classical scherzo. Labeled *Alt-väterisch* (in archaic style) it pretends to evoke a memory of pre-Haydn Austrian folk music, where the oboe was the melody-carrying instrument. Yet even here the unsettled rhythm, alternately 3/8 and 4/8, shows a Mahler not just making, but rather poking fun. Nevertheless, the charm and pseudo-naiveté of this passage are irresistible.

The fate-motive, dormant throughout the Andante, reappears here, adding an ominous element to the fantastic spell. At first it takes the form of a sudden, shattering outburst of trumpets, too brief to dispel the spirit of the dance. At the end, with trumpets muted, it is a descending succession of sardonic, nerve-tingling utterances, lending the close an air of dire foreboding. The scene is now set for the mighty, tragic Finale.

### FINALE

In the Finale the dark elements lowering over the Scherzo burst forth with utmost power to present the fateful solution to life's problem. Hitherto but scattered phenomena, since the content of the earlier movements did not require their planned union, they are now subjected to close integration. The listener becomes aware that all that preceded was a preparation for this titanic welding of forces. The heroic ascent of the mountain-climber (the human will) only to awaken at the summit to the insuperable limitations of the earth-bound mortal; the idyllic invocation to love and peaceful contentment, a fleeting, yearning dream; the diabolic mockery of malicious demons; and over all, the shadow of inevitable Fate, a warning apparition, briefly glimpsed at widely separated moments of portent, foretelling the tragic outcome.

Set in a tremendously magnified sonata-form framework, introduced by an extended *sostenuto* passage 114 measures in length, this Finale is the longest instrumental closing movement in symphonic literature. From the viewpoint of intent, as well as extent, the preliminary *Sostenuto* is a direct offspring of the introduction to Mahler's *First*, that magic spell woven by young genius over a weirdly colored 64-bar organ-point. That initial haunting prelude raised the curtain, not on a single movement, nor just on one symphony, but in fact on that entire enchanted quartet of major works known to the world as Mahler's *Wunderhorn* Symphonies. The introduction to the Finale of the *Sixth*, a grim creation, equally purposeful, more profound, is the eloquent prelude to tragic disclosures. This Finale is unique, even with Mahler, being the only tragic closing movement in all his symphonies. Every other one (the song-cycle *Lied von der Erde* excepted) ends on a major note of dazzling apotheosis.

The Finale's principal divisions are set off by the three much-discussed hammer blows, the first marking the beginning of the development, the second its close, and the third (the blow Mahler afterwards wished to omit) bursting in on the coda's opening phrase. This added formal function enhances the hammer's tragic symbolism, giving it authority over the form of the movement, as well as over its content.

The violins leap aloft in C-minor along an impassioned melodic line as free as the flight of a cadenza. Descending they are overtaken by the fate-motive, blared forth by the horn choir, and forced to enter the symphony's ruling tonality, A-minor, foreordained key to the Finale's gloomiest revelations. In no other Mahler symphony does a single tonality play so significant a role. Clearly, he regarded A-minor as tragedy's own peculiar tonality, for he set it to rule over the opening movement, Scherzo, and Finale.

A fresh motive, beginning with an octave-leap, lugubrious in the tuba, is but an inversion of the first march-motive. Stariled reiterations of an upward-rushing phrase are familiar from the Scherzo. Accentuated march-motives of brighter cast fail to achieve definite major tonality in the horns. Fantastic fragments of themes unite ever more closely in polyphonic embrace, to flower sombrely in a softly muttered, yet "heavily accentuated" (Mahler) funereal chorale in the deeper-toned wind instruments. The march-motives seek thematic integration on a brighter plane, but the fate-motive, masterful in the trumpets, bars the way. Again and again it frustrates them, pointing the way in gradually livelier tempo to the mighty *Allegro Energico* section, the Finale proper.

The first theme, like the march-song of the opening movement, is not a theme in the traditional sense, but rather a theme-group, a larger song-structure of almost spontaneous growth, each succeeding motivated portion of it seeming to issue from the previous one by a sort of dynamic self-evolution. The octave-leap continues prominent in this rhythmic outburst of stormy passion. The fate-motive sounds more threatening than ever in an angry rhythmic variation by trombones. An accentuated melody, product of the octave-leap and the chorale, bravely shakes off the latter's funereal air and mounts by daring leaps and punctuated rhythms to an exultant climax in the trombone choir. In this suddenly brightened atmosphere is born the second theme.

Of combined heroic and lyric cast, the song-theme presents in definite major tonality the aspiring melodic line denied thematic fulfillment by the

fate-motive in the preliminary *Sostenuto*. Horns, then woodwind, deliver its opening phrases, whereupon the violins, warm and sensitive, transmute the rhythmic strain into a song of soaring lyricism. A shadow in minor hovers over the cadence, evoking familiar dire motives. Yet only for moments is the smooth tide of the theme stemmed. It rises again, more impulsive and impassioned than at first, a veritable hymn of joy, luxuriously colored by alternate instrumental groups of varied timbre, the violins contributing to the background a particularly striking series of closely harmonized *tremoli*. The very peak of triumph appears at hand—then suddenly, the first crushing blow! The hammer of Fate has struck. The orchestra recoils, as though paralyzed by the shattering edict. Austere motives of the funereal chorale in diabolic augmentation leap to the foreground, dragging in their wake the terrifying fate-motive.

What now? Panic—but not for long. Presently, the still indomitable will to resistance, mirrored in rapid, driving motives in strings and woodwind amid excited ripples of the harp. A new melody, rich in heartfelt lyricism, brings reassurance in trumpet and horn. In the clash of these elements of darkness and light the principal song-theme reappears, transformed by inversion and clouded in minor. "Everything with rough strength", hints the composer, as swiftly pounding rhythms in woodwind and trumpet and a depressing motive in the basses strive in vain to thwart the song's purpose. They are put to rout by the march-song, which now enters in a "fiery" (Mahler) re-creation, clearing the path for the returning melody of reassurance. Brighter and surer than at first it soars aloft on broad wing, bearing a message of hope. This time its flight is unhampered, attaining completion in an extended melodic line of transfigured lyricism, its cadence evoking further affirmation in an eloquent re-birth of the song-theme itself. Then, at the very threshold of supreme fulfillment, the fateful hammer strikes again. Once more the mighty edict of Fate, but this time unaccompanied by the fate-motive, a psychologically sound omission, tending to enhance the motive's effectiveness later in the *Finale's* tragic climax. Again the struggle of the stricken will to survive, reflected in fleet, panicky runs in the strings.

The trombones, in a broad, powerful, cadenza-like passage, inspired by the octave-leap, parallel the first strains of the preliminary *Sostenuto*. The recapitulation here begun is comprehensive, embracing not only the themes of the *Allegro Energico*, but the introductory *Sostenuto* as well. In no respect a mere repetition, this restatement has the air of thematic consummation. It is a fresh presentation of the principal ideas in new, more impressive instrumental garb, rich in polyphonic revelations of melodic facets hitherto scarcely suggested. Here for the first time the fate-motive is granted full thematic formulation. The octave-leap yields its noblest fruit in a heroic four-part fugato in the brass choir. The melody of reassurance becomes a hymn of triumph in the horns, last and most convincing reflection of the human will to win to the topmost summit.

The violins have just entered upon their final impassioned cadenza, a restatement from the *Sostenuto's* beginning, when the third and last hammer blow falls. Yet the cadenza continues on, descending into the unfathomable depths. There remains only the dark fundament of tonality—A-minor, pedestal for the foreordained triumph of tragedy. Gloom invests

## Chord and Discord

the hushed closing measures, a brief, mournful epilogue, based on the octave-leap, intoned in canon-style by trombones and tuba.

The curtain falls on darkness. Yet there is left not death, but only night, a night that ends a dark chapter in Mahler's vast symphonic autobiography. Further chapters, some brighter than any that have gone before, are yet to come—the new dawn of the *Seventh* and the transfigured choral *Eighth*, "Symphony of a Thousand", aptly called by one of Europe's outstanding composers "the world's greatest *Te Deum*", rounding out Mahler's second symphonic tetralogy, of which the *Sixth*, with its sombre finale-nocturne, constitutes but a dark, yet very great, intermezzo.

### IRENE JESSNER SINGS MAHLER SONGS

Irene Jessner, the well-known Metropolitan Opera lyric soprano, who distinguished herself by her portrayal of such roles as Sieglinde, Elsa, Elizabeth, Chrysothemis, and notably the Marschallin, made her bow as a *Lieder* singer at Town Hall on Nov. 9, 1947. Included on her program of unhackneyed songs were three by Mahler: "*Ich ging mit Lust durch einen gruenen Wald*," "*Scheiden und Meiden*," and "*Ich atmet' einen Lindenduft*." These proved a particularly happy choice with their challenge to the artist's highest capabilities in the interpretive field. Responding to their challenge, Miss Jessner rose to her full artistic stature, projecting their deeply felt moods so vividly that the listener was instantly caught up in their colorful spell. She revealed these songs to be second to none in their richness of psychological nuance, indispensable to the vehicle of the truly great *Lieder* singer.

Representative of the laudatory comments by reviewers after the concert are the following newspaper excerpts. H. C. S. of the N. Y. Sun thought that "she should be heard in recital more often" and commented on the beauty of her voice which is "capable of dynamics ranging from an exquisite pianissimo to a ringing full voice". According to R. L. of the New York Times, she was at her best in the Schubert and Mahler numbers. "Schubert's famous *Der Jungling an der Quelle* was exquisitely done, both for the spirit of the song and in matters of tonal beauty, form, and color, with a beautiful pianissimo in the top of the voice and sometimes an effect of glittering ice. Similar qualities were noticeable in Mahler's *Ich ging mit Lust durch einen gruenen Wald* and *Ich atmet' einen Lindenduft*, given with a delicacy and an elegance most characteristic of the composer." A serious singer aspiring to distinction in the concert field might do well to emulate Miss Jessner in her wise choice of a group of Mahler songs to enhance the poetic wealth and variety of her program offerings.

## BRUCKNER'S SLOW MOVEMENTS

By ROBERT SIMPSON

In his programme-note on Bruckner's Fourth Symphony, Sir Donald Tovey says, "The plan of his *adagios* consists of a broad main theme, and an episode that occurs twice, each return of the main theme displaying more movement in the accompaniment and rising at the last return to a grand climax, followed by a solemn and pathetic die-away coda". It will be found instructive to look for evidence to support this generalisation, considering the slow movements of the symphonies in chronological order. The first and least important is that of the exercise of 1863. It has a broad main theme which is the only really characteristic element in the whole of this F minor symphony; the work cannot have been intended for performance, since in it Bruckner deliberately abates his own individual style, already present in his mind as the Mass in D minor, written down soon afterwards. Although the main theme of the movement faintly prefigures glories to come, the piece as a whole, ternary in plan, is cramped by a stiffly formal middle section. The earliest mature orchestral slow movement is found in Symphony No. 1 in C minor.

There is to be heard all that is finest in early Bruckner. It begins darkly, in an F minorly A flat, with ominous stirrings in the bass, rising slowly twice to threatening outcries. After the second of these the air clears, and in an unambiguous A flat major comes a very soft *chorale*, modulating gradually until it settles on B flat major. In this key there is a beautiful curving melody, joined by equally gracious counterpoints. B flat, however, is not secure in its own right and is very soon revealed as the dominant of E flat, where the melody alights, reaching a broad climax in a remarkably short time. This device of shortening and broadening a design by allowing the second group to commence while the transition is still in progress is derived from Schubert, who often creates wonderful subtleties that are misconstrued as weaknesses by the unwary.

The key remains as, with a change of time, a new idea enters. This, a glorious flow of really Brucknerian melody, in some ways prophetic of the famous *Moderato* in the slow movement of the Seventh Symphony, turns out to be an expansive central section. Many lovely modulations pass before the tranquillity becomes overcast and mysterious flowing semiquavers mask the return of the dark elements. The semiquavers persist to add power to the recapitulation, the *chorale* follows with shadowy new scoring, and then the second theme, starting in E flat and moving to A flat. The music then drifts into a serene *coda* upon which no trace of the original unrest is allowed to creep. The design is thus an unusual blend of ternary and sonata forms, a sonata exposition being followed by a middle section based on new material; not a development section but the first two-thirds of a ternary structure which, instead of completing itself with a restatement of its own, returns to the opening of the exposition. That follows, like a sonata recapitulation, its keys rebalanced, and is joined to a *coda*.

The slow movement of the posthumous symphony in D minor is far less

valuable, though Bruckner was rather harsh in rejecting the symphony, which is well worth hearing. The form of this B flat major piece can be described briefly. First comes a hymn-like tune, somewhat lacking in character. This, with its alternations of strings and wind, establishes the tonic. It modulates towards the dominant, where a second, more graceful theme appears, longer than the first and tonally more free. The flowing scale figures that occupy its latter part then move into D flat, the first theme joining them in the basses below. The same thing occurs in A flat and then phrases from the second theme are used to turn the music back to the tonic. The first subject returns over a *pizzicato* bass. It tends to modulate but is checked by the restatement of the second group in the tonic. That merges into a *coda* and the only further reference to the opening theme is at the end. The movement is therefore in sonata form with a desultory "development". As a whole it lacks a sense of climax, a fault rare in Bruckner, but it certainly does not conform to Tovey's formula.

The *Andante* of the Second Symphony in C minor is of higher calibre. It is one of the earliest examples of a way of composition that gave rise to many later and quite dissimilar masterpieces by Bruckner. The method is based on the very quality that is absent from the *Andante* of the previous symphony; the composer's sense of climax lets him raise vast mountain ranges. This is one of the smaller chains, but it is impressive. A flat major is the main key and in and around it the calm first paragraph remains, eventually coming to rest on the dominant of F minor. Beginning in F minor there sounds a typical soft horn solo against a *pizzicato chorale*, very like some passages in the Fourth and Fifth symphonies. This, as the music soon shows, is not the start of a second group or section, but is a slow link to an immense counter-statement of the opening paragraph, illuminated by counterpoint and making the first climax of the design. The music dies away never having left the environs of A flat, and the *chorale-like* link reappears, this time starting in the supertonic. In character with the spaciousness of the plan as a whole, the *chorale* is now heard twice without losing its essential transitory quality and the final return to the opening is thus rendered more striking by the delay. Decorated by complex rhythmic combinations, the theme begins again in A flat, which has hitherto not been challenged. As it soars towards a great height, there is a magnificent modulation to the bright key of B major, the first fundamental change in the whole movement. The rest of the music after this culmination concerns itself with reinstating A flat in a gentle and moving *coda*. This form would be like Tovey's if there were an extensive "episode". The twice-used horn theme cannot be so regarded since it merely links the three great waves that constitute the main body of the structure. When Bruckner writes a distinct episode it is always in a contrasting key and expands itself on a large scale. That is not the case here.

The Third Symphony in D minor contains one of the grandest of Bruckner's earlier slow movements. It is large and clear-cut, externally simple and internally complex. It bears a Neapolitan relationship to the main key of the symphony, being placed in E flat major. Not enough attention is normally given to the beauty of Bruckner's key-schemes; too often he is said to modulate haphazardly when in fact he is weaving a fine tonal net which spreads further than the average listener can at once perceive. Even at this stage of his career there is a striking though compara-

tively small example of the power in the opening part of this Adagio showing how he can establish a key by exploring wide surrounding areas that Brahms, for instance, would call remote. The majestic main theme soon moves into darker regions, but after rising to two great bursts separated by a soft phrase the music subsides into E flat again in such a manner as to show that the tonic has never been disturbed; all "modulations" have hitherto been mere links in one thread. The first real change of tonal centre is felt with a new theme in a different time and tempo (*Andante quasi allegretto*) ( $\frac{3}{4}$ ). This is the outset of a huge middle section poised, in spite of many other incidental keys, on B flat. The new stream flows richly, anticipating in its harmony the second idea of the Adagio in No. 8, and its counterstatement leads to another thought (*Misterioso*) in G flat, another of Bruckner's beloved suggestions of *chorale* style. This receives separate treatment before giving way to its immediate precursor, which, launched gently in C major beneath smooth semiquavers, gains intensity as it glides from key to key, arriving at a chromatic canon in the strings. The dominant of F flat is then treated as a German sixth and the opening strain returns, this time expanded and developed, accompanied by sweeping string figures (at first *pizzicato*), touched with deliberate quotations from Wagner (to whom the work was dedicated), and at length achieving symmetry by delivering two full bursts of cathedral music, separated by the same soft phrase mentioned at the corresponding point in the first part. To all this is attached a finely held *coda*. Here the scheme is roughly ternary A-B-A; B is naturally less cumulative in effect than A, which is given added force on its second entry. In every detail this movement has true greatness.

Although Tovey is sympathetic to Bruckner, his analysis of the *Andante* of the Fourth Symphony does not seize on what is literally the key point, Bruckner's use of tonality. Had he noted this he would certainly not have remarked, "his all-important episode is as slow as his vast main theme. The result is curious; the thing which is oftenest repeated and always expanded, the vast main theme, is welcomed whenever it returns; while, as Johnson would have said, 'the attention retires' from even a single return of the episode". It is surprising to find this great scholar not noticing that what is at first part of a really gigantic paragraph behaves as an episode only when it is heard again much later. This phenomenon is entirely the outcome of Bruckner's subtle distinction between real modulation and mere passing references to foreign keys.

The character of the movement as a whole is that of a veiled funeral march, with the strange effect that the observer's distance from the dark cortege seems to vary uncannily. At one moment the action is so far off that it might almost be static; at another the hearer is himself in the midst of the procession. Pervading the whole is a sense of dreamlike unreality. The key is C minor and the colossal first section is centred firmly around C, ending in the major. It contains three thematic elements. First there is a plain marching tune with a subdued accompaniment of muted strings. C minor is obscured but not banished when this leads to a most solemn *chorale* that modulates too constantly for any other key to establish itself. Dying away, it is succeeded by the most mysterious idea of all, a *cantilena* of violas, almost still, with the distant tread of remote *pizzicati*. Dimly lit by different key-colourings, it finally settles in C major, which, miraculously

sounds as if its sovereignty had never been in question. Truth is that Bruckner has so far allowed no other key to gain a foothold. One of the grandest aspects of his art is its way of forcing the hearer to enlarge his conceptions of nearly all musical devices. This is not megalomania; it is mastery. It may be averred that this C major is really the dominant of F minor, but it should be remembered that in a minor key the tonic major always sounds as if it might at any moment fall to the subdominant.

The change, through D flat to A flat, that follows this section shows at once how different is the effect of a clean change of key. Starting in A flat, fragments of the first tune are developed with new shapes, building a big climax which subsides on the home dominant, awaiting the restoration of the opening in C minor. At this stage a symmetrical restatement would be clumsy, and Bruckner treats his recapitulation in an individual way. In order that he shall be free to reserve his greatest effort for the *coda* (an unusual balance of force in a slow movement in any case), the composer reverses normal methods. His opening expository part is dominated by one key. It does not move definitely to a new one, as do all sonata expositions. This procedure does not preclude the need for an extensive development, for no sense of form is yet achieved; the music must expand further. Bruckner does not, however, wish his plan to end flatly with a return of the opening; the central development must be balanced by a proportionate *coda* that is to crown the whole with a great climax, which must be prepared if it is not to sound like a mere addition to something already complete.

The surprising solution to the problem is Bruckner's treatment of the necessary restatement as if it were a primitive kind of sonata exposition; its end thus left open, a *coda* grows perforce. The first theme moves out of C minor, the *chorale* is omitted (since it would give the impression of a symmetrical repetition) and the remote viola phrases are heard, grouped this time round D minor-major. This key is very expressive because it has so far been allowed no independence. Only now can this passage be regarded as a true "episode". After this the composer moves with suitable gravity back to C minor for a *coda* which creates a tremendous mass of tone. The subdued end contains oblique references to both the *chorale* and the viola theme. It should now be clear that Tovey's episode (the viola theme), far from being "as slow as the vast main theme" is purposely much slower, and is, each time, a much needed period of repose before a return to action.

In the Fifth Symphony is at last to be found an *Adagio* that Tovey's formula describes, though it is still questionable how far the word "pathetic" is ever applicable to Bruckner's music. "Solemn" it always is, but it is too grand for pathos.

D minor is the key of this great movement, whose proportions are as simple as they are magnificent. The main subject is on an oboe over a *pizzicato* accompaniment that is also used in the *Scherzo* of the symphony. The whole of the first group is quietly devotional, resting eventually in F major. Its rhythms, combining 6/4 with 4/4, have immense potentialities. The second part begins at bar 31 with one of the world's greatest melodies, the purest and noblest Bruckner; it gathers strength as it climbs to a full climax, turning majestically in combination with its own image and with other aspiring phrases. At its height it is poised on the dominant of C, but with a sudden hush the home dominant intervenes.

There now follows an expansion of the other group, in D minor at first, but moving with the aid of swirling quavers through other keys as it becomes sterner in mood, ending with dramatic alternations of pp and ff. It breaks out suddenly and misty harmonies make a beautiful return to the second theme (Tovey's episode), this time in the tonic major. After passing through entirely new developments, it slips into a long-drawn link that brings about the last return of the original material with due mystery. The strings join the woodwind and brass, accompanying them with wave-like semiquavers, and the whole last section resembles some mighty minster nave, full of great sweeping curves of breathtaking grandeur. At the end the light fades into the mystery of the opening. In one important respect, Tovey's description is incomplete. It gives the impression that the "episode" is repeated literally and that it is mainly the "accompaniment" that changes at each appearance of the main theme. In most cases the term "accompaniment" can mislead, though here it is just if it is applied to the activities of the strings during the presence of the first subject.

The next instance needs less description than most, for it perpetuates Bruckner's mastery of sonata structure on the vastest possible scale. Tovey has rightly said of the *Adagio* of the Sixth Symphony, "the slow tempo inspires him to a mastery of the big and supple paragraph that Brahms would have been compelled to praise." Though the key is F major, the beginning is nearer to F minor with its descending minor scale in the bass. The contrasting group starts with a very gracious theme in E major, but soon enters the orthodox dominant, C major, sustaining a climax in that key. From this comes a calm descent to a grave theme in C minor. There is no break at the end of the exposition and the C minor tune drifts into other keys, leading to a deliberate development of the opening subject. The recapitulation is defined by a clearly fixed F minor-major, but the theme expands into a massive *crescendo-diminuendo* in a manner that makes it the logical continuation of the development. The second group is restated with remarkable poise and subtlety, growing this time from the tonic instead of from a remote key and having an entirely new set of modulations besides added beauties in the scoring. There is an optional cut in this passage (from bar 113 to 132 inclusive). Tovey approves of this, but reluctantly; without it Bruckner's exquisite redistribution of keys in the second group is lost. The movement cannot be thus truncated; its exposition is wasted if it is not explained by the restatement. This exposition recalls that in the slow movement of the First Symphony and also has its origin in Schubert. The perfectly shaped coda is as peaceful and strong as the summit of Mount Everest in the sunlight.

The *Adagio* of the Seventh Symphony was not, as is often thought, composed in memory of Wagner. Most of it was finished before Wagner's death, and only the coda is funeral music that can definitely be ascribed to Bruckner's sorrow at that event. The whole elegiac movement is perhaps the most immediately accessible of all Bruckner's compositions. In its key-system it is one of his profoundest essays and can be analysed fully only at greater length than is possible here. (This remark applies also to the slow movements of the last two symphonies). The opening is huge, a sombre train of themes, originating in C sharp minor and creating a climax on the threshold of F sharp minor. After some dark hesitancy, the tonal trend of the first section is explained by the second, the famous and

glorious *Moderato* in F sharp major. In due course it sinks again to C sharp minor. This time there is a slow growth to a very powerful utterance in G major (bar 127), one of the remotest possible keys. This G major behaves momentarily as if it intends to be the dominant of C, but leads instead to A flat major, in which the second group sounds with fresh orchestration. Now A flat is simply G sharp, the home dominant, and consequently the recapitulation of this group acts as an immense dominant preparation for the restoration of the tonic and the main theme. This is a new application of the cardinal principle of restatement. Bruckner rarely restates material to serve mere demands for symmetry. He treats each case as a novel phenomenon. Because he sees the true nature of his material, he is able to use familiar devices to mould it into unfamiliar, living forms.

The main theme now becomes the backbone of an enormous structure, towering high and crowned with a superb climax in C major. This key is directly related to G major, which emphasized the previous somewhat less prominent peak. The whole mighty design is thus integrated at a stroke. All that remains to be executed is the sublime coda. C major itself, like G major before it, is a link in a tonal sequence and moves one step further into D flat major (C sharp major, the tonic major). The rest is music of extraordinary depth. In examining these works it becomes increasingly obvious that Bruckner's "constant modulation" is illusory, for he often circles a single tonal region with many different keys, none of which asserts itself above the others. They are as dancers in a group; one may be momentarily in possession of the stage, but the rest are still performing in support. An iron discipline regulates their movements.

This iron discipline is evident at the beginning of the slow movement of the Eighth Symphony. The key is D flat major. For the first twenty bars D flat (or C sharp) persists in the bass, with the result that its re-emergence at bar 29, after the intervention of remote keys, comes with real assurance. Its grip has not been loosened. It then gives way to the dominant of E major, which is a long-distance preparation for the opening of the second group in that key. Like the *Adagio* in No. 5, this design comes close to Tovey's dictum. It is conceived on a gigantic scale and the main point for remark is the fact that each return of D flat is convincingly driven home as an establishment of the tonic. The sum effect is that the whole vast organism has never really left its roots in that key. The achievement is the more remarkable when one considers that only once is D flat established by dominant preparation. The key relationships are extremely intimate and intricate. E major in which Group II is first heard is, despite its sharps, a dark area beside D flat, being in reality F flat major, and the later resurgence of the same subject matter in the supertonic major, E flat major, has a distinctly brighter effect. As in the *Adagio* of his previous symphony, Bruckner relates the two main climaxes tonally, the first coming at bar 125 with a 6/4 chord of B flat major and the other, the result of one of his greatest passages, at bar 239 with a wonderful 6/4 chord of E flat major. It is also worth noting that E major is given prominence several times; first it comes as the key of the second group (bar 47), then again at bar 119 as a bright contrast to E flat minor, and thirdly with tremendous effect at bar 211, where it is approached suddenly after a vehement preparation on the dominant of A flat. This latter change recalls the so-called

"Recapitulation" in the first movement of No. 7, and is indeed, one of this composer's favourite modulations. Of the sheer majesty of this movement it is impossible to speak, since such music can be described only in its own terms. It is, without doubt, one of the greatest of all symphonic adagios. More than that cannot be said here.

Lastly, what can be said of the movement that now has to end the Ninth Symphony, of the ultimate expression of Bruckner's art and faith? It is a commonplace to state that this Ninth, like Schubert's B minor symphony, is satisfying in its unfinished form, that there is a sense of finality in the slow movement which makes anything else needless. It has even been asserted that Bruckner's death was somehow opportune, that the work was saved from the encumbrance of a *Finale* by a considerate Providence, presumably intensely musical and not given to bothering with Long Works. Had the *Finale* been completed, it would probably have combined the contrapuntal brilliance of that of the Fifth with the massive, granite-like consistency of that of the Eighth. Such a movement would have made all existing theories about the present "completeness" of the Ninth ridiculous and its loss is a matter for deep regret. One must, however, remain thankful that the torso of Bruckner's Ninth Symphony ends with so wonderful a sense of peace, rather than with the fierce *Scherzo* which, like that in the Eighth, is placed second in order.

The opening of the *Adagio* of No. 9 has often been compared with that of *Tristan und Isolde*. No two works could be more dissimilar, in spite of certain surface resemblances. That Wagner influenced Bruckner technically is true, but the Austrian's ethereal music has nothing in common with Wagner's richly, rather aggressively sensuous mode of expression. This plan is far removed from Tovey's formula. It is, as one expects, gigantic, and begins with the usual pair of theme-groups. The first of these evolved from a daring leap of a minor ninth from the dominant of E, and as a whole this section is pervaded by shifting, restless harmonies, reaching a mighty, strange climax, the mysterious echo of which contains a marvellous use of trumpets. As the mood deepens, a slow *chorale* moves towards the second group. The first group, while it is firmly based upon E major, does not parade that key, which nevertheless is a true tonic. Bruckner's well-loved major mediant is the key of Group II, a fine *cantabile*, the last development of the types found in the First and Seventh symphonies. But here there is a new austerity beneath the graceful forms. Bruckner's spirit is now too quiet, too close to the awesome reality of death to find pleasure in warm, emotional utterance as in past years. There is here a soft tension, a waiting for an unknown experience. It is this sense of having been created on a strange threshold that gives the whole movement its uncanny power.

The tonality is deliberately obscured for long stretches of the music by the remarkably bold use of chromaticisms, which are carried far beyond those of any other contemporary composer. It is also notable that all the big crises of the movement are moments of dissonance. On all previous occasions they have been blocks of consonant harmony. This is quite a new element in Bruckner's music, yet more evidence of the constantly expanding, forward-looking nature of his mind. The second group leads to a return of the first, which brings itself to a solemn *tutti* beginning in B minor, but modulating freely. Another quiet passage, full of strictly con-

trolled power, causes a big outburst on the dominant of C, similar to the first high point in the opening paragraph. The mystery is not resolved by the entry, in A flat, of part of the second group, which soon breaks off with dejected echoes on oboe and horn, to be replaced by strenuous developments of chromatic figures from the main theme, interspersed with great *chorale* phrases. At length E major takes control once more. This time Bruckner's manner of design is quite unprecedented. The second theme, greatly augmented, and with an agitated accompaniment, is sung by the first violins in the tonic. Very slowly the agitation and the grandeur increase until the music reaches one of the most stupendous and terrifying culminations in all music, with a discord of truly astounding force. This chord, which was severely diluted by Ferdinand Löwe in his "revision" of the symphony, contains the following notes—E, F sharp, G sharp, A, B sharp, C sharp. The mighty crisis resolves into utter peacefulness and the *coda* that ends the movement quietly is perhaps the profoundest passage Bruckner ever wrote. Not only is it a summing up of the whole *Adagio*, but it can be regarded as a backward glance of the old composer at his entire career, as subtle allusions to themes from earlier works indicate.

The inadequate description of the Bruckner *adagio* by Tovey meets its final repudiation in this movement, in which the second group, or "episode" is used to provide the biggest climax in the piece. It should not be forgotten, however, that Tovey's remark occurred in a concert note, and he himself would, no doubt, have been the first to admit that it was loosely applied. One should therefore not criticize that remarkable thinker on such flimsy grounds. It suffices to be grateful for provocation to pursue the matter further. The above sketches of the music in question must on no account be regarded as analyses. Their failure to deal properly with at least the last two cases is only too clear, but, pending fuller discussion at some later date, it is hoped that they may provide still more provocation for others to pursue the matter further.

---

#### WNYC AND WQXR BROADCAST BRUCKNER AND MAHLER RECORDINGS

Performances of Bruckner and Mahler as well as recordings of their music are being heard on the air with increasing frequency. New York City's Municipal Station, WNYC, and Station WQXR broadcast available Bruckner and Mahler recordings regularly. Both stations deserve special commendation for their contributions to the musical and cultural life of the communities within their radius.

To commemorate the 87th anniversary of Mahler's birth, Station WNYC broadcast Walter's recordings of Mahler's IV and IX on July 7, 1947, while Station WQXR (New York City) devoted its July festival to the music of the Austrian master. The Municipal Station also took cognizance of the 16th anniversary of the founding of The Bruckner Society of America. On January 4, 1947, WNYC broadcast a recording of Bruckner's *Fourth*. Preceding the broadcast the Executive Secretary of the Society gave a five minute talk. During September WNYC broadcast a Bruckner Festival. Recordings of Bruckner's *Fourth*, *Fifth*, *Seventh*, and *Ninth* were played.

## ARNOLD SCHOENBERG'S DEBT TO MAHLER

By DIKA NEWLIN

The superficial observer, unfamiliar with the Viennese musical scene, would be indeed hard put to it, confronted with one of Schoenberg's twelve-tone scores and Mahler's First Symphony, to determine what influence the older composer might have had upon the younger. And yet the influence of Mahler is ever-present in Schoenberg. Indeed, to me, it seems increasingly impossible to understand Schoenberg without understanding Mahler. If the works of Schoenberg are seldom heard and even more seldom understood, it is at least in part because the great tradition of music-making in Vienna—a tradition of which Mahler was among the most outstanding latter-day representatives—has not really been understood.

To one who knows the proud and independent nature of Schoenberg, it is by no means surprising that he did not, at first, succumb to Mahler's influence willingly. He and young Alma Maria Schindler—later to become Alma Mahler—were fellow-pupils of Alexander von Zemlinsky. Often they saw each other at the Sunday evening musical gatherings of Frau Conrat, the friend of Brahms; it was on one of these occasions that Alma asked young Schoenberg if he were going to hear the Vienna Philharmonic's performance of Mahler's Fourth Symphony.<sup>1</sup> "Why should I bother?" replied Schoenberg—or words to that effect. "Mahler already couldn't do anything in his First and I suppose the Fourth is the same, only more so!"

But Schoenberg could not hold out forever against Mahler; fundamentally he did not wish to. His relationship with Mahler seems to be characterized throughout by that curious ambivalence of love and hate which, in a similar way, always characterized the attitude of the Viennese intellectuals towards Vienna.<sup>2</sup> That Mahler should sooner or later exert a profound influence on Schoenberg seems inevitable, given the special position which Mahler occupied in Viennese musical life from 1879 onward. The mighty spiritual influence which the powerful director of the Vienna Court Opera exerted through his performances, not on musical circles alone, but on every aspect of intellectual life, is hardly conceivable to those who did not undergo it during Mahler's regime. Performances of Gluck, Mozart, Weber—and Wagner—became celebrations in a new temple of art. And the young Schoenberg, though his firm grounding in the practice of chamber music prevented him from falling into the epigonous *al fresco* music-making of so many of his contemporaries, was, like his entire generation, under the thrall of Wagner. When he was twenty-five he had heard all Wagner's operas between twenty and thirty times each. *Tristan* was so familiar to him and to his friends that they evolved a game to be played during its performances; the winner was the one who could find

<sup>1</sup> January 12, 1902.

<sup>2</sup> This feeling about Vienna finds characteristic expression, appropriately enough, in a letter from Schoenberg to Mahler wherein Schoenberg uses the highly significant phrase "our hated and loved Vienna."

the most "new melodies" in Wagner's highly plastic inner voices. Elsewhere I have discussed the significance of this highly analytical method of listening for Schoenberg's technique of composition. Does it not also tell us something important about Mahler's technique of conducting?<sup>3</sup> It was not the broader outlines and the most obvious melodies alone that were important to Mahler the conductor; every inner part had to have its own life, its own plastic form. This concern for the clarity of each individual voice, ever-present in Mahler's compositional consciousness as well, led him to exercise the utmost care in the indication of the various dynamic levels in his scores. At one and the same moment, one instrument might be playing *piano*, a second *mezzo forte*, and a third *fortissimo*. (But Schoenberg, though his fine ear would delight in distinguishing Wagner's inner voices in a beautifully articulated Mahler performance, did not like these nervous paroxysms of the most varied simultaneous dynamics on the printed page. He preferred to reduce the dynamics of a given vertical combination to a single common denominator, and to indicate the relative emphasis of the different voices by means of his symbols H- and N- or P and S.)<sup>4</sup>

It was through Arnold Rosé, Mahler's brother-in-law and the concertmaster of the Vienna Philharmonic, that Mahler and Schoenberg first came into friendly contact. Mahler, visiting one of Rosé's rehearsals of *Verklärte Nacht* in 1903, was impressed by what he saw and heard, and realized that young Schoenberg was a force to be reckoned with. Then, Zemlinsky brought Schoenberg to visit the Mahler household, and a rather lopsided friendship, with many ups and downs, developed among the three composers. Mahler regarded "Eisele und Beisele," as he called his two talented juniors, with a mixture of affection and exasperation, while Schoenberg wavered between admiration of Mahler's mastery and irritation at his frequently condescending manner. At one time, Schoenberg was occupying a garret in Vienna and was much disturbed while composing by the constant pealing of church bells which dinned into his eyrie from all sides. He complained about this situation in Mahler's presence, but Mahler responded *sehr von oben herab*, "Oh, that doesn't matter; just put the church bells into your next symphony!" Schoenberg was much annoyed, but bided his time until chance furnished him with the opportunity for the perfect *riposte*. Mahler, about to go away for the summer, remarked that he supposed the birds singing all around his *Komponierhäuschen* would make life miserable for him as usual. Schoenberg promptly retorted, "Well, just put the birds into your next symphony!"<sup>5</sup>

But the casual bickering could not conceal the fact that Schoenberg's relationship with Mahler was becoming even closer and warmer. The friendship was further cemented by Mahler's hiring Zemlinsky to conduct at the Vienna Opera in 1906. It was during the summer of that year that

<sup>3</sup> Of course I am not forgetting that Schoenberg must have heard, in his youth, many Wagner performances which were not under the direction of Mahler. But it is scarcely conceivable that Mahler's dynamic concept of the Wagner scores—which, be it remembered, he insisted upon presenting in their uncut form, as his predecessors had feared to do—can have failed to accentuate the influence of Wagner upon Schoenberg.

<sup>4</sup> *Hauptstimme* and *Nebestimme*: principal and subordinate voices.

<sup>5</sup> Of course Mahler had already done so in his *First* and *Second*!

Schoenberg, who was just finishing his first *Kammersymphonie*, found time to write to Mahler, "Nothing could please me more than your saying that we had come closer together." And, during the following concert-season in Vienna, Mahler found ample opportunity to defend the cause of the younger composer. The famous tale of Mahler's rising up in wrath to quell the opposition on the occasion of the Rosés' première of Schoenberg's First String Quartet in Vienna (February 5, 1907) has been too often told to need further repetition here, but its implications do need further elucidation. Mahler's bold defense of Schoenberg certainly did not mean that he completely understood what Schoenberg was trying to do. In fact, with characteristic intellectual honesty, he admitted that Schoenberg's concept of music often surpassed his comprehension. Of this very First Quartet, he said to Schoenberg, "I'm accustomed to reading thirty-voiced orchestral scores—and the four voices of your Quartet give me at least twice as much trouble!" And, after a performance of the *Kammersymphonie* which he had noisily applauded in defiance of the anti-Schoenberg faction, he frankly said that he did not understand this music; but he had the courage to blame this deficiency on his own ear, not on the unfamiliar sonorities. There is no doubt that his public defense of Schoenberg was, in spite of his private mental reservations, utterly sincere. In Schoenberg he recognized a man of his own kind, an intransigent spirit in whom respect for the noblest traditions of music was combined with the courage to break away from outworn conventions. Schoenberg's well-nigh frightening sincerity and directness inspired in Mahler a confidence which was not dependent on understanding alone, but on the emotional response to a kindred soul. Schoenberg, unavoidably on the defensive in these critical years of his development, yet felt this confidence of Mahler's and responded in kind. In his last letter to Mahler (July 5, 1910) he reveals himself completely under the spell of his mentor; he begs Mahler to pardon him for his one-time contrariness which had so often forced him into contradiction for its own sake. That forgiveness had long since been granted. Mahler, during his last illness, often thought of Schoenberg and begged Alma and her stepfather, Carl Moll, to stand by him always. The fund for the support of young composers which was established as a result of this forethought of Mahler's frequently benefitted Schoenberg. How fitting that this last gesture of Mahler's helping hand should have been reciprocated by Schoenberg's supreme act of devotion, the dedication of the *Harmonielehre* to Mahler's memory!

The friendship between Schoenberg and Mahler is a matter of record; but it is more important for our purposes to assess the specifically musical influences of Mahler on Schoenberg. What are these and where may they be found?

Let us consider first the knotty question of tonality. Schoenberg's identification with the process whereby individualized tonalities are fused into the larger system of "pantonality" (a term which he prefers to the inaccurate "atonality") is universally known. Less well known, perhaps, is the fact that Schoenberg himself credits Mahler with playing a significant part in the preliminary stages of this process. To be specific, it was Mahler who first introduced into the symphony a concept which I have called "progressive tonality." The classical symphony either began and ended in the same key or, if beginning in minor, frequently ended in the parallel major.

## Chord and Discord

Bruckner was quite satisfied with this principle of his forebears;<sup>6</sup> Mahler, however, was not. In the First Symphony he applies his new principle to one movement only. The song-cycle on which the symphony is based, *Lieder eines fahrenden Gesellen*, began in D minor and ended in F minor. Mahler now transfers this idea to the Finale of the symphony, which begins in F minor and ends in D major. But the principle must now be extended to the entire symphony instead of being limited to a single movement. This happens in the Second Symphony, which begins in C minor and ends in E flat major. Of course, this is not a very striking modulation, for the relative major is as closely related to the minor as the classical parallel major would have been. Mahler finds his way to a more radical application of the principle in his succeeding symphonies, with the exception of the Third, Sixth, and Eighth. The Fourth Symphony moves from G major to E major, the Fifth from C sharp minor to D major, the Seventh from B minor to C major, the Ninth from D major to D flat major, and *Das Lied von der Erde* from A minor to C major. Mahler follows the classic pattern of ending a minor symphony in a major key (the tragic Sixth is the only one of his symphonies in which he did not do this). He seems to have a particular fondness for the tonal progression of a half-step from beginning to end of a symphony, a preference which he evinces in the Fifth, Seventh, and Ninth Symphonies. In the Fifth and Seventh Symphonies the half-step is ascending (C<sup>♯</sup>—D, B—C); this ascending motion gives these symphonies a certain forward impulsion which is synonymous with an optimistic approach to life. This impression is strengthened by the fact that in each of these cases the beginning key is minor and the ending key is major, as well as by the busy and energetic tone of the Finales. On the contrary, the descending half-step in the Ninth Symphony (D to D flat) seems to strengthen the feeling of resignation which imbues that work.

What has this to do with Schoenberg's dissolution—or expansion—of tonality? That question is answered if we turn to Schoenberg's Second String Quartet, the first work in which he completely transcends the limits of the tonal system. The significant thing here is that Schoenberg composed the first three movements in clearly defined keys with key-signatures—F sharp minor, D minor, E flat minor—and did not enter the realm of "pan-tonality" until the Finale. Beginning a work of symphonic proportions "tonally" and ending it "atonally" is surely the next step beyond beginning it in one key and ending it in another very distant one. In the preceding paragraph, I indicated that the concept of progressive tonality in Mahler has something to do with expressing the emotional climate, as it were, of each individual symphony. For Mahler, each symphony was a world in itself, which had to be constructed according to its own laws; as this applied to form, it applied to tonal progression also. Now, the progression from "tonality" to "atonality" is closely involved with the emotional content of Schoenberg's Second String Quartet, especially insofar as this is expressed in the text of the last movement. Attention has been drawn before now to the relationship between the idea of the Stefan George poem which Schoenberg chose, "Ich fühle Luft von anderen Planeten," and the concept of a new musical world in which the old laws of tonality are transcended.

<sup>6</sup> Obviously the ending of the Ninth Symphony in a different key is a special case, akin to that of Schubert's *Unfinished*.

This very Second Quartet of Schoenberg's seems to be the meeting-place of a number of different trends, all of which may be traced, in one way or another, to the influence of Mahler. I mentioned the text of the last movement. The use of the soprano voice in the third and fourth movements of this quartet may surely be attributed to the influence of Mahler's symphonies. It was, of course, quite typical of Schoenberg to introduce an innovation instead of slavishly copying the older composer, as some other less independent spirit might have done. Instead of composing another "choral symphony" more or less successfully, Schoenberg chose to introduce the human voice into a new genre, that of the string quartet; thus he continued that tradition of innovation in chamber music which he had begun with his *Verklärte Nacht*, the first symphonic poem for chamber ensemble. He did not, however, repeat this particular experiment a second time, although his preoccupation with the infinite expressive possibilities of the human voice is well known.

In the Second Quartet, there also arises that problem of "quotation" which plays so prominent a role in Mahler's work. All students of Mahler are familiar with his practise of self-quotation, which also extends to the quotation of familiar extraneous motives. (The most famous example of this latter development is the third movement of the First Symphony, with its all-pervasive *Frère Jacques* motive.) What is not always realized is that such quotation, either of one's own work or of other familiar themes, is in its essence *operatic*. Classic instances of this are the citations of *Una cosa rara* and *The Marriage of Figaro* in *Don Giovanni*, and of *Tristan* in *Die Meistersinger*. Every such quotation in an "abstract" work of music represents an expansion into the dramatic field. Hence, when we consider Mahler's lifelong preoccupation with opera—even though he never composed a dramatic work in his maturity—it is by no means surprising that the use of such quotations became basic in his concept of the symphony. From him, this idea passed to his great Viennese successors—both music-dramatists—Schoenberg and Berg (but not to Berg's great co-disciple Webern, whose musical nature was to lead him along paths far removed from opera). Berg used such quotations more often than Schoenberg; we might cite his quotation from *Tristan* in the *Lyric Suite* for string quartet, and his use of the Bach chorale *Es ist genug* in his Violin Concerto, as well as numerous quotations (both from his own works and from others) in his two operas *Wozzeck* and *Lulu*. However, it is Schoenberg's use of such material which primarily concerns us here. The most characteristic example of it is precisely in the Scherzo of the Second Quartet, where *Ach, du lieber Augustin* makes an unexpected appearance. I have always felt that this idea was, at least indirectly, suggested to Schoenberg by a particular movement of Mahler—the above-mentioned third movement of the First Symphony, that very symphony which Schoenberg had long ago considered a prime example of Mahler's incompetence! I have often heard Schoenberg discuss this movement in terms of the deepest admiration; he likes to characterize it as the first consciously wrought expression of irony in music. One might be tempted to apply a similar interpretation, then, to the Scherzo of Schoenberg's quartet—a movement which is, perhaps coincidentally, also in D minor; but the composer specifically repudiates such an interpretation. To Schoenberg, the words "Alles ist hin," so characteristic of the old

Viennese song, were utterly without ironic or satirical intent, but had a real and deep emotional significance.

Finally, in assessing the influence of Mahler upon Schoenberg, we must approach the problem of orchestration. This has two entirely different aspects. On the one hand, Mahler's celebrated Monumental Instrumentation certainly affected the orchestration of Schoenberg's greatest essay in the monumental style, the *Gurre-Lieder*. It is true that the original conception of the *Gurre-Lieder* antedates Schoenberg's conversion to belief in Mahler; on the other hand, the entire period of its instrumentation covers those years when Mahler's influence on Schoenberg was steadily increasing. This monumental orchestral style, whether in Mahler or in Schoenberg, is characterized by a willingness to introduce any and every effect necessary for the complete expression of the musical idea, even if it requires the use of instruments never before heard in a conventional orchestra. In this sense, Mahler's cowbells in the Sixth Symphony are the pendant to Schoenberg's heavy iron chairs in the *Gurre-Lieder*. Thus we see that both Schoenberg and Mahler escape from the limitations of the conventional ready-made large orchestra which must serve for the expression of every sort of idea or emotion. While the monumental orchestra is sometimes considered to be inflexible in its modes of expression, this is obviously not true if it permits the addition of special instruments for special purposes. This process will eventually lead to the creation of a specialized ensemble for each new composition according to its particular musical needs. It is to Schoenberg and his disciples that we owe the most stimulating developments of this idea, which is a logical outgrowth of Mahler's feeling that each symphony is a separate world with its own laws of construction. Nor is Schoenberg's use of chamber-music combinations for this purpose in any sense a repudiation of the Mahlerian tradition—this in spite of the fact that Mahler was not a composer of chamber music in the ordinary sense. Works like the *Kindertotenlieder* certainly have the character of chamber music; and, even in Mahler's most fully orchestrated scores, many passages may be found in which unusual combinations of solo instruments play together with the utmost finesse. It is from the influence of passages such as these, combined with that of such works of Brahms as the Horn Trio and the Clarinet Quintet, that music like Schoenberg's two Chamber Symphonies and Berg's Chamber Concerto is derived.

\* \* \*

Unavoidably, an essay of this character can only scratch the surface of the subject which it purports to discuss. However, if it induces in those readers who already know and love Mahler a new interest in becoming better acquainted with the works of his supreme spiritual disciple Schoenberg, it will have served its purpose.

<sup>1</sup> In connection with this concept of quotation we might also cite Schoenberg's use of the Beethoven victory motif in the *Ode to Napoleon*.

## BRUCKNER AND MAHLER AND TONALITY

By WARREN STOREY SMITH

What was the attitude of Bruckner and of Mahler toward tonality, both as to keys they preferred and their method of employing them? Before attempting to answer the first part of this question, it would be profitable to examine that of certain of their predecessors. Prior to the nineteenth century the choice of keys was governed largely by expediency and by custom. With the advent of Romanticism we encounter definite key-preferences and key-antipathies, often directly traceable to the composer's temperament and personality. Are we to believe that Mozart disliked the key of F-sharp minor because he chose it for only one of the hundreds of movements that he wrote, the Adagio of the Pianoforte Concerto in A major (K. 448)? Probably not. The key was usually avoided at that time, even though Haydn did make use of it in the *Farewell Symphony*.

But how about Chopin's seeming aversion to D major and D minor? His tonal scheme obliged him to use them both in the Preludes, Opus 28. Otherwise, the former turns up only in a single Mazurka, Opus 33, No. 2, and the latter in the insignificant and posthumously-published Polonaise, Opus 71, No. 1.

For these particular keys Schumann had an especial fondness, and Mendelssohn was certainly partial to them. You might sum it up by saying that, whereas Chopin and Liszt inclined toward the richer and darker tonalities, Mendelssohn preferred the clearer and brighter ones; and that Schumann occupied a middle ground. The mere mention of Mendelssohn in this connection suggests the keys of A and E, major and minor: the *Italian* and *Scottish Symphonies*, the *Midsummer-Night's Dream Music*, the Violin Concerto and sundry piano pieces. A psychiatrist would have no difficulty in showing why Felix, the Happy One, avoided the nocturnal key of D-flat, for which both Chopin and Liszt had a natural affection. And now for Bruckner and Mahler.

Of the two, I would say that Mahler had the more pronounced key-affiliations, but the case of Bruckner is by no means uninteresting. When the latter would be portentous he turned instinctively to D minor, the key of Beethoven's Ninth, as witness his own Ninth and Third Symphonies. For Beethoven this was also the key of storm and stress, vide the Piano Sonata, Opus 31, No. 2; while a storm, whether at sea or on land, turned Wagner's thoughts D minor-ward. At first Bruckner favored the keys with fewer sharps and flats; later he courted the richer ones, particularly in his slow movements.

E-flat major was for Beethoven, and later for Strauss, the manly, the heroic key. It is no mere coincidence that this is the key of both the *Eroica* and *Ein Heldenleben*. For Bruckner it spelled romance. To transpose the magical opening of the *Fourth Symphony* would be to thwart entirely the composer's intention.

The significance of E-flat in the music of Mahler is, of course, enormous. To him it stood for nobility, loftiness of utterance, exaltation, triumph

over despair, the victory over death. It is the key of his two greatest climaxes, namely, the concluding pages of the *Second* and *Eighth Symphonies*. It is also the key of the rapturous "Ewiger Wonnebrand" of Pater Seraphicus, wherein the theme of the finale of the *Eighth* is first disclosed. As the key of consolation it sheds, in the idyllic *Andante moderato* of the *Sixth*, almost the only ray of light that falls upon that tragic work. That there is no natural affinity between that key and A minor, the tonality of the other three movements, makes its use here the more striking. Incidentally, in choosing A minor as the key of the *Sixth*, as well as of the despairing first movement of *Das Lied von der Erde*, Mahler aligned himself with the Chopin of the morbid *Second Prelude*.

If E-flat spelled triumph for Mahler, so did D. But the latter sounds for him a brighter, a less solemn note. One need only instance the finales of the *First* and the *Fifth*, though they exult in very different ways. Does it weaken the argument to recall that the infinitely sad opening of the *Ninth* is also in D major? Or to remember that what Bruno Walter called the "radiant Rondo" of the *Seventh* and the end of *The Song of the Earth* are both in C major? I think not. Joy and sorrow are of nearer kin than we are sometimes inclined to believe. Schubert knew this and so did Mahler. Indeed, these two, who had so much in common, who were in so many ways alike, shared the profound knowledge that the major mode could be sadder by far than the minor. You can forget the end of Tchaikovsky's *Pathétique* once you are outside the concert hall; the closing pages of *Das Lied von der Erde* may trouble you for days. If we consider this, for some Mahler's most treasurable page, Schubert's *Am Meer* and the *Dead March* from Handel's *Saul*, we can well believe that no key can be more eloquent of grief than bright C major. Again, in that treasury of sad songs, Schubert's *Winterreise*, the saddest of all, *Das Wirtshaus* and *Die Nebensonnen*, are in major. Nor am I forgetting that *Der Wegweiser* is in G minor.

While on this matter of key preferences, it should be noted that if two of Bruckner's symphonies are in D minor, no less than three of them are in C minor: the *First*, *Second* and *Eighth*. The others are, respectively, in E-flat, B-flat, A and the rarely-encountered E major. The nine of Mahler (ten, if we include *Das Lied von der Erde*) exhibit a wider variety, though we should recognize that the *First* begins and ends in D, that the *Third* begins in D minor and concludes, serenely, in D major and that, as noted above, the *Fifth* ends and the *Ninth* begins in the last-named tonality.

The nineteenth century saw a gradual relaxing and widening of the old concept of key relationship. Haydn and Mozart actually initiated the process, though they respected convention in the matter of their second subjects and side subjects and the respective keys of the several movements, whether in their sonatas, their symphonies or their chamber works. We must not forget, however, that Haydn wrote a piano sonata in E-flat with a middle movement in E, the boldest stroke of the kind until Beethoven turned to that key for the *Largo* of his C minor Piano Concerto.

So far as I am aware, Schubert was the first to use three keys, or rather, three tonal centers in a four-movement symphony, his *Third*, in which the several movements are respectively in B-flat, E-flat, C minor and B-flat. Mahler went him one better. His *Ninth Symphony* has four movements in as many keys, and the five-movement *Fifth* presents this unorthodox

array: C-sharp minor, A minor, D major, F major and D major. Curious relationships are to be encountered in both the *Third* and the *Seventh*. And surely Mahler was the first to begin a symphony in one key and finish it in another. Thus we find the *Second* commencing in C minor and ending in E-flat; the *Fourth* beginning in G major and ending in E; the *Seventh* having an E minor first movement and a C major finale; and the *Ninth* beginning in D and concluding in D-flat. A like procedure in the *Fifth* has just been noted.

The finale of Bruckner's *Eighth Symphony* starts off in F-sharp, though its main tonality is C minor with a C major close. This trick is common with Mahler and might be set down as a personal idiosyncrasy and as his most striking contribution to the widespread disruption of the tonal conventions so characteristic of the twentieth century. We find it in the finale of the *First* (F minor to D major); in that of the *Second* (C minor to E-flat); in the first movement of the *Third* (D minor to F major); in the finale of the *Fourth* (G major to E); in that of the *Sixth* (C minor to A minor); and in the initial movement of the *Seventh* (B minor to E minor).

Beginning with Beethoven, composers broke away from tradition and placed their second subjects in keys other than the dominant and relative major. Here Bruckner occasionally outstripped them all. The *Fourth Symphony* is in E-flat, yet the second theme of its first movement begins in D-flat, in the exposition, and in B major in the recapitulation. In the first movement of the *String Quintet* he went even further. The key is F major and the second subject enters in F-sharp and modulates to C, the expected dominant.

Nevertheless, in the last analysis neither Bruckner nor Mahler can be regarded as tonal anarchists, something that Wagner very definitely was in *Tristan*. They adhered to the classical media, the classical forms, and their breaks with the past were incidental rather than fundamental. We can say of the music of both that it was rooted in the tonal system and that their musical thinking, like that of Brahms and Strauss, was essentially diatonic rather than chromatic. Beyond question, this has helped to give their music its permanency. Tonality and diatonicism are the bedrock of music, let the atonalists protest as they may.

## MAHLER'S FIFTH SYMPHONY

By WOLFGANG STRESEMANN

Mahler's *Fifth* is a masterpiece. Its music is tremendously vital, passionate, and exuberant, traversing the widest possible scope of human emotions. Never again did Mahler take so firm and positive an attitude towards the problems of life; never did he write more optimistic music than in the *Finale* of the *Fifth*. This work surely deserves a permanent place in the repertory of our orchestras. When played by Bruno Walter and the New York Philharmonic Orchestra in 1947 it was received with tumultuous applause. So great was the impression it made everywhere that "Columbia" decided at once to have it recorded by Walter and his orchestra. These recordings, now available, are truly magnificent. They should help greatly to increase the popularity of the work.

The *Fifth* is, indeed, a monumental symphony in every respect. Its five movements, divided into three parts, last more than an hour, each part containing music of the first order, representing a "high spot" in Mahler's creative achievement. Unlike his preceding symphonies, the *Fifth* has no program, yet, like all the others, it is a true expression of his own beliefs. Moreover, it has an enhanced sense of spiritual unity. Prokofiev's remark that his own *Fifth* reflects the "spirit of Man" is equally true of Mahler's composition. There is a great difference between the *Fifth* and the *Fourth*. The latter sings of "Heavenly Joy", while the *Fifth* is, in the best sense of the word, earthbound. It deals with the eternal struggle of mankind against the heavy blows of Fate, mirroring man's titanic defiance of the dark elements and his final victory. In spite of its two big sections in "minor" the *Fifth* is the work of one who believes in himself, who is determined, audacious, and daring. Here, more than ever before, Mahler follows in the path of Beethoven. Therefore, it is not surprising that in this work he adopts Beethoven's symphonic principles to a degree not met with in his former symphonies.

The *Fifth* marks a notable change in Mahler's creative activity. Suddenly, he now turns to "absolute" music. With the unerring instinct of genius he finds a new technique, suitable to this new species of symphonic writing. Compared with its predecessors the *Fifth* is far more polyphonic. It has a greatly expanded development section of increased symphonic scope. In addition, it contains several fugati, as well as a world of contrapuntal phenomena unparalleled in Mahler's earlier symphonies. It is interesting to note that Mahler later changed the entire instrumentation of the *Fifth*, something he never did in any other case, before or afterwards. This is especially astonishing as the composer was (and deservedly) considered one of the greatest experts in orchestral writing. Yet the *Fifth* meant such a bold step into "new territory" that, although successful in realizing the right form, Mahler failed at first to find the right orchestral garb for it.

The symphony begins with a funeral march, which bears the notation "Wie ein Kondukt" (like a funeral procession). Because of its spiritual

significance this funeral march represents a sort of prelude to the symphony. In this first movement Mahler offers a breathtaking, intensely profound vision of a funeral procession, with its fateful atmosphere and all its inherent, but momentarily suppressed grief. The march consists of three parts, of which only the short middle section rises to a passionate lament. The rest of it is "dead", i.e., devoid of open feeling. This "dead" music belongs among Mahler's greatest inspirations. Not only does it afford a graphic picture of the passing of a funeral procession, it symbolizes the (temporary) deadness of the human heart and spirit at the moment when the hammer of fate has struck. How MAN awakens from this state of torpor, how after a long struggle he finds his way back to himself, how soul and heart revive, all this is set forth in the following movements. Though the *Fifth*, as stated before, has no set "program" (music must always follow its own laws) yet throughout the symphony the fundamental idea of human resurrection is clearly perceptible.

The second movement, thematically related to the "prelude" (both forming the first part of the symphony) is marked "Stürmisch bewegt, mit grösster Vehemenz" (stormy, agitated, with utmost vehemence). As though tormented by pain, the music mounts to the utmost peak of violence, reflecting despair, anguish, and terror. This *agitato* phrase is followed by a beautiful cantilene, one of the saddest, most expressive melodies ever written by Mahler. Later there is unfolded a third mood. The knife of despair is blunted, but its wounds unhealed. There remains an empty, ghost-like atmosphere, symbolizing the dawn of a dead morning after the great blow.

The second movement closes in this completely desolated mood. Its coda is one of the most ingenious inspirations of the entire symphony, containing measures unforgettable to one who hears them with keen ear. Yet this dark, despairing movement would not be a true Mahler piece did it not also include a few signs of hope and encouragement. Mahler, optimist with a bleeding heart, has the strength of conviction needed to glimpse the light, even midst the torment of this raging music. When, in the development section (though only for a few bars) as well as near the end of the movement, a chorale-like melody makes its dramatic entrance, it seems as though the clouds suddenly part and the sun breaks through. At this moment the music rises to even greater heights. Yet this brief vision of light must remain a phantom (like the triumphant episodes in the second movement of Beethoven's *Fifth*). The mood of despondency has prevailed too long to be dissipated at once by the advent of the chorale. As the *Fata Morgana*, impressively and movingly set forth, fades away, the music resumes its previous character, this time seeming even more ghostly, shadowy.

The third movement (the second part of the symphony) is a scherzo of huge dimensions, in D-Major, apt tonality for symbolizing strength and vitality. Its unusual length is justified, for it is intended to form an important (correspondingly extended) contrast to the gloomy first part of the symphony. Although it is one of Mahler's favorite *Ländler* type expressions this scherzo is not a *humoresque*, but a forceful piece, loaded with tremendous energy. Like a mighty storm it scatters the darkness of the preceding movements, immediately establishing an atmosphere of vigour and buoyancy. The untamed forces of nature are shown revived in this exuberant music, which spreads a vernal influence with all its wondrously manifold moods. The eternal miracle of rebirth is its great theme. For

such a subject there could be no better form than the dance, symbol of activity and abundant strength. Mahler succeeds here in vitalizing this form to a degree unknown before. Almost unending is the stream of his inventive power and imagination, both resulting in music extremely rich in expressiveness and rhythmic vitality. Its pulse varies. At first it pounds violently; it is equally strong at the end of the movement. Yet between these the beats grow softer and, in the dream-like horn episode, seem to come to a temporary standstill. The way Mahler combines these extreme moods within the framework of a dance, and creates an entire world full of ever-changing colours without abandoning the moving pattern of the  $\frac{3}{4}$  time, shows a greatness of conception as yet unsurpassed. The third movement is an integral part of the symphony, for it is, on the one hand, juxtaposed to the opening section, and it also serves as a bridge to the *Rondo-Finale*, itself preceded by another "prelude", the short *Adagio*.

The fourth movement, scored for strings and harp only, is thematically related to the *Finale*, which follows without pause. This is only logical as there is also a definite spiritual connection between both movements. The great storms have passed. The road to a new life lies open. But before MAN sets foot upon that path (*Rondo-Finale*) he abandons himself to a few moments of blissful rest (*Adagio*). The fourth movement opens with a beautiful, tender melody. However, it is not entirely free from melancholy undertones. A veiled sadness haunts this yearning, soulful music. At first it sings quietly, later rising to ecstasy, but always maintaining a kind of mysterious, transfigured mood, as if man's conscious and subconscious voices were both sounding simultaneously.

In the *Finale*, however, the latter voice has no place. There is nothing left of sufferings and struggles. After a gentle awakening from repose the music moves on, assuming a serene and cheerful character. This movement combines the moods of the *finale* of Beethoven's *Eighth* and Brahms' *Second*. Again Mahler overwhelms the listener with the great vitality of his music, but unlike that of the third movement this vitality is no longer an unrestrained force of nature. It serves a definite purpose. Now the symbol of human optimism, its powerful drive is transformed into open joy and strength. This new purpose is characterized by the extensive *Fugato*-expression which gives the *Rondo-Finale* an immense impetus. At the end of the movement the chorale-like song is heard again, this time no longer a phantom but a triumphant reality. Its reappearance creates a mighty bridge to the first part of the work and one is, therefore, justified (as is done in analyses of Beethoven's *Fifth*) in emphasizing the underlying spiritual idea of the symphony.

Mahler's *Fifth* is a stirring, exciting work, doubly eloquent, as a purely musical witness to the great symphonic stature of Gustav Mahler and as a mighty human and poetic document, mirroring the struggles and sufferings of his life. This symphony is far more than a spiritual self-portrait. It contains a universal message which cannot fail to move anyone not totally indifferent to MAN's life on this earth. Do not blame Mahler for having written another *Per aspera ad astra* symphony. As long as there is music, composers will, again and again, express the longing of mankind to pierce through the darkness and conquer fate. Only to few may it ever again be given to reach the monumental heights of the *Fifth*. Only few may ever be able to match Mahler's tremendous power of conception, or

his noble, genuine exaltation. Our musical era (and the same holds true for our time in general) is not rich in composers of truly outstanding human stature. For that reason we should cherish all the more Gustav Mahler and his music.

### DISCRIMINATING TASTE FOR GOOD MUSIC IN IOWA

From The Des Moines Tribune, Friday, May 9, 1947

Reprinted by permission of the publishers.

(By a Member of The Tribune's Editorial Page Staff.)

It's news when any symphony orchestra tackles Bruckner or Mahler compositions on a program. It's bigger news when a college student orchestra performs them, and it's really something when music patrons in a small midwestern town demand both Bruckner and Mahler on the SAME program!

Yet that's what happened when Simpson college invited the Iowa University symphony orchestra to give a concert in Indianola last Sunday.

#### Recognition

Bruckner and Mahler symphonies still suffer somewhat in this country from the adverse criticism which greeted their first performances. Their length has seemed unforgivable to some conductors and audiences, and the technical difficulties of Mahler's works, at least, have posed problems.

However, most leading musicians and conductors, and Bruno Walter, particularly, regard Bruckner as eligible to be counted among the great "Bs". They know that Mahler's music, heroic in proportions and dramatic in development, entitled him to his proper place among the greatest composers of all time.

They know that the only thing needed to accord both of them the wide recognition they deserve is simply more frequent performance of their compositions.

#### Discrimination

The Indianola audience demonstrated that this is true. It thoroughly enjoyed the university orchestra's splendid performance of Bruckner's Seventh Symphony and the exquisite Adagietto from Mahler's Fifth.

The concert was "news" from beginning to end. For one thing, it didn't include the usual "program pieces" which are often included on concert programs as a sop to indiscriminating musical taste.

The only other offering was Bach's Overture in D Major which, in the manner of Eighteenth century overtures, consists of several movements rather than the single one that is typical of overtures today.

The audience was ideal. The listeners would have satisfied even Toscanini in their quietness, attention and genuine appreciation.

The fact that a program including Bach, Bruckner and Mahler was requested and really "went over" is indeed a tribute to Simpson college with its long tradition of leadership in music, and to its music director, Sven V. Lekberg.

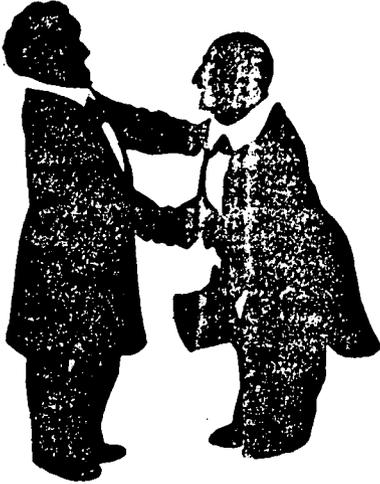

The splendid performance of a program that would have been "heavy" even for a professional orchestra is a tribute to the high standards maintained in the state university's music department and to the outstanding musicianship of the orchestra's conductor, Professor Philip Greeley Clapp.

It seems particularly appropriate that the concert was performed on the first day of National Music week, for it clearly demonstrated that Iowa is in the vanguard of music appreciation and accomplishment.

## BRUCKNER'S SEVENTH

By NEVILLE CARDUS

The following article, which appeared in the February-March 1947 issue of *Hallé*, is reprinted by permission of the author and the publishers, The Hallé Concerts Society, Manchester, England.

ANTON BRUCKNER  
AND "THE MASTER"

It is one of the richest ironies of music that Bruckner should ever have fallen amongst Wagnerians. They used him in the controversy with Brahms; they set him up in a high place; they even altered his orchestrations, making his adagios sound like the Trauermarsch, and his first movement climaxes like the God's entrance into Walhall. He was the simplest and least political man; Mahler found the perfect description of him — "half god, half simpleton." Varied Nature herself could not create two men as unlike as Wagner and Bruckner; Bruckner was unworldly, naive, "God intoxicated," without a hint of sex in his music, not Protean

but always himself. And if he had nothing in common as man or artist with Wagner, so is it a mistake to relate him closely to Beethoven in particular or to the German symphony in general.

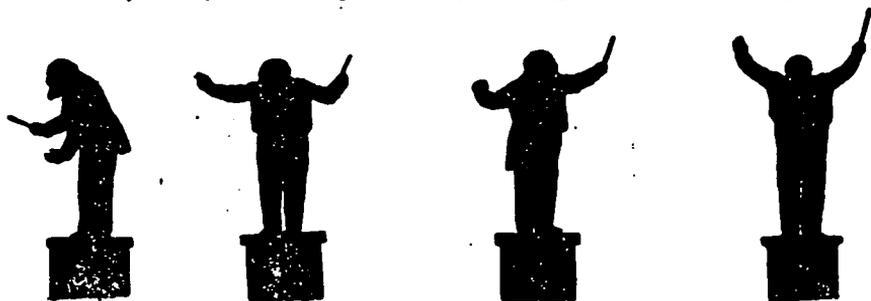

The instrumental symphony came to consummation through Haydn and Mozart. Beethoven fertilised it with drama; and the dénouement was achieved by strength of an heroic conception of man's destiny. He created what the Germans called the *Apotheosen-Finale*. But from the Beethoven conception the classical symphony branched away in two directions: Men-

delsson, Schumann and Brahms gave the stamp and Stimmung of Mitteldeutsch bourgeoisie; after his first symphony, Brahms avoids the "Apotheosis" finale and the "heroic" gesture; the finale to his Fourth is a strictly musical apotheosis. Mendelssohn, Schumann and Brahms each composed German music, and observed the symphonic logic of the great school in which they were nurtured. Bruckner did not grow from this branch. With Schubert was born the Austrian symphony, less academically logical than the German, not heroic but inspired by nature-worship and poetry of heart, and as untrimmed as the *Wienerwald*. To the Schubert symphony (represented by the "Unfinished" and the "C major") Bruckner brought not an abstract ethic of humanity (*Menschlichkeit* is untranslatable, but that is what I mean) but a personally-felt religious note, deep-toned, trustful, and patient. The climax in fact of a Bruckner symphony is the adagio; Bruckner has little to add to his slow movement; his scherzi are genial and psychologically not exactly important; and his finales are too obvious "durchkomponiert," too plainly a matter of music-making—as in the finale of the Seventh symphony

Bruckner is really a curiosity. In Vienna he came to be ranked with the greatest—far above Brahms. Outside Austria he has led a chequered posterity. No Italian could sit through music so un-vocal, no Frenchman could listen for long to music so little of the world of wit and women. He has recently enjoyed a vogue in the Woolworth's Store of music, which is the U.S.A. In England he is invariably dismissed as a "bore," and an "organist" thrown in (Bruckner was indeed a very great organist). "Bruckner," writes Frank Howes in *Full Orchestra*, "may be described as a Wagnerian operating in the sphere of symphony, though his own musical origin was the organ." Bruckner, it is true, frequently uses the orchestra like an organist; he cuts-off suddenly a mass of block-harmonised tone, then you can almost see him pulling out a stop—consider, for example, the middle part of the adagio of the Seventh symphony. The recurrent pauses in a Bruckner symphony, especially during an adagio, are as though born at the organist's fingers and feet; but Bruckner uses them with absolute rightness in the development scheme of the Austrian symphony, which, as I say, is not of a German rigidity of logic. Sense of improvisation, or of a reflectiveness that turns so raptly inward that the outer world and its prosaic consequentiality, is forgotten—here is the unmistakable mark of a Bruckner adagio.

Adagio in music is not merely a term indicating a certain tempo; the word has come to mean a certain kind of musical emotion conveyed in a certain style. If you were to play quickly the adagio of the Ninth symphony

of Beethoven, it would still remain an *adagio* in feeling; a real *adagio* is a meditation along labyrinthine ways; and it must sound with a spaciousness of harmony, and the melody must be broad and unhurried. So, the *adagio* of the Seventh symphony of Bruckner, the greatest I think since the *adagio* of Beethoven's Ninth: it begins in this noble way:

This is not only a noble and symphonic sound; it is a noble idea, expressed with a power not forcible, but simple, even though Bruckner conveys it to us by means of two Wagner tubas, two bass tubas and contrabass tuba and violas.

It runs almost imperceptibly into—

These quotations do not represent separate themes; rather they are sentences in a continuous paragraph, with the suggestion of a pause, the semi-colon. After Bruckner has "stated" a thematic group, he quotes phrases from it and contemplates their significances at his organ. There are devout intakings of breath during the sequential treatment of—

Next, after a modulation naively Brucknerian, comes one of the most seraphic melodies in existence, a song entirely at peace and lost to the world, which goes its ways echoing, in the wood-wind, its own hearteasing cadences:

Such a melody is not only beautiful as music; it contains the quality of a mind unburdened with earthliness. If any mortal man may be said to have held communion with bliss it is here; the music is in a state of grace . . . . From the mundane point of view of composition, I may add that the melody is scored with a perfect feeling for string and wood-wind tone counter-point and responses.

The length of the development-section in a Bruckner symphony has served as the basis of much complaint, but critics have seldom taken the trouble to understand that development-sections in Bruckner are elaborate because of the elaborate and rich nature of his material. Even musicians who belittle Bruckner as a whole are prepared to admit that his themes are magnificent. There are none *more* magnificent. Take the theme that begins the Seventh symphony

and so on, for twenty-one bars. Bruckner certainly does not build from straws or bricks, he handles rocks, and encompasses his symphonic world in one sweeping glance. But the point is generally overlooked that not only are his themes broad and long; more than that, he goes beyond the two complementary and contrasted themes of classical usage and instead, he gives us two theme groups, each group consisting of separate germ-melodies. To refer back to the image I employ above, Bruckner thinks in terms of sustained paragraphs or periods, each sentence a related idea or nuance. Inevitably he needed to widen the scope of the development-section; and many times he is unable to support the heavy wheel of his universe. He is reduced often to "marking time," deluding himself that he is moving from point to point when as a fact he is remaining in the same place, employing sequences,—sentences taken from the organic paragraphs and rendered rather lifeless by this process of fission. None the less, we must realise that the length of a Bruckner movement is not just the consequence of prolixity; he is not deliberately garrulous. There is another aspect of this matter of duration in a symphony not as a rule considered with enough musical or psychological insight.

To object to the duration of a symphony, and of a Bruckner adagio especially, is irrelevant, if no doubt only natural at times. Duration and stature are necessary to the truly symphonic style; you can no more have a short adagio than you can have a Rossini crescendo that goes on for half an hour. If there is a recurrent tedium in a Bruckner adagio, here again is an attribute which is part of the sublime manner. A sleeping sort of grandeur falls over sublimity; only the artist who is always aware of an audience remembers to make points bar by bar. Bruckner was never a

conscious artist; he seldom tried to arrest attention; he composed with no heed of the phenomenal and transient universe.

This music is called "old fashioned" nowadays. Possibly. But perhaps Hindemith, Britten, Stravinsky and Bartok may one day become "old-fashioned," too. Bruckner was advanced enough in 1880 to assimilate technical ideas from Wagner (note that I say "technical ideas"); and Wagner was then as "advanced," to say the least, as any of the present-day experimentalists. Nothing matters except genius. And perhaps greatness of spirit is something even above what is generally understood as "genius."

Mahler was right—"half god, half simpleton." The way to the heart of Bruckner is through love; you must get rid of the idea, so prevalent amongst the young today, that music depends on cleverness or a formulated aesthetic. Bruckner's music was the man himself, the man who was born when Beethoven walked the earth, who died in Vienna, ill at the age of seventy-two, still a rustic by nature. When his Fourth symphony was conducted in Vienna by Richter, Bruckner went round after the performance to the artist's room and shyly gave Richter a four-shilling piece as a tip—a *Trinkgeld*. He was so grateful.

The adagio in the seventh symphony was once supposed to have been written after Bruckner had heard the news of the death of Wagner; but later researches suggest that the movement was nearly finished before Wagner died, and that the coda is really Bruckner's tribute to the composer he always called "The Master." But the approach to the coda is one of the majestic crescendi of all symphonic music, built on rising sequences and the second theme quoted in this essay; the climax is achieved by a stroke on the cymbals which elevates this usually anonymous instrument to a radiant height. It was with this cymbal clash probably in mind that Hugo Wolf uttered his infamous "One cymbal clash in Bruckner is worth all the symphonies of Brahms, with the Serenades thrown in."

The coda begins with brass echoes from Walhall and Wotan, and now like a benediction we hear the ineffable cadences of

Bruckner made the adagio both the musical and psychological apotheosis of the symphony. His scherzi, are redolent of Upper Austria, not grotesque in the Beethoven way, but homely with the *Lokäl* tone. The middle section of the scherzo of the Seventh symphony is a nostalgic memory of little Styrian villages, cosy low-raftered interiors and check tablecloths at noon, and bird-calls and hazy distances. But the great first movement and its magnanimous exposition, and the subsequent adagio have exhausted the underlying imaginative conception; for the rest, Bruckner has to be content with "music," excellent and resourceful enough, but unable all the same to achieve a synthesis of the grandeur that has gone before. The conception of the symphony as a continuous unfolding activity of the imagination, each movement not only a musical form complete in itself, even if under the obligation to go into a context and serve the uses of contrast, but as an act in a drama carrying onward a creative shaping energy—this is a conception that has not troubled many symphonic composers in England,

France and Russia; but Beethoven was awake to the problems presented by such a conception. He wrote no adagio after the Fifth until the Ninth symphony, then he was urged to call in massed voices for the finale. Bruckner left his Ninth symphony unfinished, without a finale. Mahler, a pupil of Bruckner, ended his Ninth, as Tchaikovsky ended his Sixth, with an adagio.

An age very much in a hurry may not wish to stay long enough to absorb Bruckner's secret. It doesn't matter really. And it is not of major importance that Bruckner does not command audiences in every land. Who has heard "Gerontius" in Vienna? How many musicians anywhere know by heart the "Requiem" of Fauré? As a lover of the Wessex novels, I am not a bit dismayed whenever I am told that Thomas Hardy is unknown in Italy, France and Central Europe.

*The foregoing silhouettes are an impression, by an Austrian artist, of HANS RICHTER conducting the Fourth Symphony, in Vienna, and receiving the homage of the Composer.*

## GUSTAV MAHLER AND HUGO WOLF

By DONALD MITCHELL

The following article by Donald Mitchell is printed with the permission of the author and editors of *Mandrake*, a Review of the Arts, published at Wadham College, Oxford.

In Alma Mahler's recently published "Life and Letters of Gustav Mahler"<sup>1</sup> there are some extremely interesting notes on the early friendship of these two composers. The fact that Mahler and Wolf lived together at the beginning of their careers as musicians seems not to be widely known and has attracted little attention. According to Alma Mahler, her husband's version of the affair was this:

"Their friendship went back to their early life, when, with another man called Krzyzanowsky,<sup>2</sup> they shared a room for a few months. They were very poor and, as all three were musicians, extremely sensitive to noise; so when any one of the three had any work on hand, the other two had to tramp the streets. Once Mahler composed a movement of a quartet for a competition while the other two spent the night on a bench in the Ringstrasse.

"Mahler gave lessons; Wolf did not, or only very few. When their money ran out, one of them gave a pupil notice. The plan was to ring the bell, say he was suddenly obliged to go away and request payment for the lessons already given. The ready money provided meals for all three for a day or two. On the other hand, a pupil was lost forever."

Alma Mahler's account throws a revealing light on both Mahler and Wolf as Wagnerians:

"The three friends made their first acquaintance with 'Götterdämmerung' together, and in their passionate excitement they bawled the Gunther-Brunhilde-Hagen trio to such effect that their landlady came up in a fury and gave them notice on the spot. She would not leave the room until they had packed up their scanty belongings, and then she locked the door angrily behind them.

"One day, as they were talking, Wolf got the idea of writing a fairy-tale opera. This was long before Humperdinck and undoubtedly an original inspiration. They considered many themes and finally hit on Rübzahl. Mahler was young and impulsive and he began on the libretto that very night and finished it next day. In all innocence he took it to Wolf for him to see. But Wolf also had made a start and was so put out by Mahler's having stolen a march on him that he threw up the whole idea and

<sup>1</sup> John Murray, 1946. Trans. Basil Creighton.

<sup>2</sup> I have not been able to trace this musician.

never forgave him. Outwardly they remained on friendly terms for some time longer, but they avoided each other's society. Many years later they met on the way to the Festspielhaus at Bayreuth and passed by with a curt: 'Hallo'.<sup>3</sup>

There it appears that the friendship between Mahler and Wolf ended. They both pursued very different paths and their association was never again as close. Mahler must have seen Wolf for the last time in 1897. According to Alma Mahler:

"Soon after Mahler had been made Director of the Vienna Opera, Wolf was announced: and there he stood, lean as a skeleton, with burning eyes, and imperiously demanded the instant production of 'Corregidor'.<sup>4</sup> Mahler, knowing the work and its defects, made the usual evasions: no singers suited to it, etc. Wolf grew obstreperous and Mahler did not like the look of him. He had a special bell within reach for such occasions. He pressed it and his man came in with the prearranged message: 'The Superintendent wishes to see you at once, sir'.

"Wolf found himself alone. He rushed downstairs and along the Ring. His mind gave way; he thought he was the Director and on his way home. When he arrived at Mahler's flat, 2 Auenbruggergasse, he rang the bell; and when the servant opened the door, he shouted at her to let him pass—he was the Director. She slammed the door in his face in terror. Shortly afterwards he was shut up in a lunatic asylum . . ."

Mahler and Wolf are hardly ever spoken of together. In the case of Mahler, our academicians have classed him inseparably with Anton Bruckner (1824-1896). Both wrote nine immense symphonies, both were Austrians, both neo-Wagnerians, both, say the critics, huge bores. Those whom the music-critics have joined together, let no man put asunder! Wolf is tacked on more fittingly to the list of great German *lieder* writers: not that he fits particularly easily as his conception of the song did not include any reference to folk-melody whatsoever.<sup>5</sup>

To hear Mahler and Wolf talked of in the same breath, to hear their music discussed as being sprung from very much the same soil, is a rare

<sup>3</sup> I doubt whether this trivial quarrel over a libretto is the whole explanation. It seems more likely that Wolf disapproved, and was possibly jealous, of Mahler's growing reputation as a conductor and composer. Alma Mahler recounts that Mahler obtained an engagement at Bad Hall when he was eighteen: "Wolf would not accept any job and said arrogantly that he was going to wait until he was made 'God of the Southern Hemisphere'; and he went hungry until his death."

<sup>4</sup> Alma Mahler states that the first performance of "Corregidor" took place on the 12th of February. Unless she means the first performance under Mahler's direction, her statement is inaccurate. The first performance was at Mannheim on the 7th June 1896. As an opera it is hardly a success. Alma Mahler remarks truly that "a series of songs, however beautiful, does not make an opera". In this connection it is interesting and significant to recall Mahler's completion of Weber's sketches for "Die Drei Pintos". I have always thought it a pity that Mahler did not write an original opera.

<sup>5</sup> A good point made by H. C. Colles in the Oxford Hist. of Music Vol. VII. O. U. P. 1934.

occurrence. More important, they shared a common attitude to life and their music is the product of a similar type of musical consciousness. They might well have agreed with Berdyaev that "being is suffering".<sup>6</sup> The realization of this truth, says Berdyaev, "is already a step towards deliverance from suffering, from the bitterness of being. It is salvation through knowledge—self-salvation". Both Mahler and Wolf sought escape from their suffering through music: music was their own kind of self-salvation, and they were men who had suffered deeply and tasted the "bitterness of being".

Mahler and Wolf were brought face to face with suffering in their early years as children. Mahler was born in the small Moravian village of Kalischt in 1860. His father, who was a brutal, domineering man, owned a distillery. The marriage was an unhappy one, complicated by the presence of twelve children. Five of these children died of diphtheria, the sixth, Ernest, died in his twelfth year; Mahler's eldest sister, Leopoldine, after a wretched marriage, died of a tumor on the brain; Otto,<sup>7</sup> his elder brother, a frustrated musician, shot himself in a frenzy of Dostoievskian philosophy, Alois turned forger and had to flee to America. Justine,<sup>8</sup> Mahler's second sister, lived with him until his marriage. She was a neurotic, morbid woman, and Alma Mahler tells how when she was a child ". . . she stuck candles all round the edge of her cot. Then she lay down and firmly believed that she was dead." Such then were some of the fantastic figures that peopled Mahler's youth. Fortunately his talent for music was discovered at an early age and he was sent to Prague to study.

Wolf was also born in 1860, and as he too made his way to Vienna, he was subjected to exactly the same musical influences as was Mahler. He was the fourth son of a prosperous leather-dealer and was born in Windischgrätz in Southern Styria. His father was a competent musician, but in spite of this (or perhaps because of it) he would not hear of his son taking up music as a career. He determined that his child should follow a more settled and safe profession. Until he was fifteen Hugo went from school to school—and in each one he was a disastrous failure. Whatever else was accomplished in these miserable years, at least his proud spirit was not broken. At length his father's resistance collapsed and Hugo went to the Vienna Conservatoire. He lived with an aunt until the worst blow fell in 1877 and he was expelled from the Conservatoire.<sup>9</sup> From then until 1881 he had to endure real poverty and hardship: he left

<sup>6</sup> "Spirit and Reality" Bles, 1939. Berdyaev himself would seem to have a high opinion of music as he writes of "The triumph of music, the greatest of the arts . . ." in "Slavery and Freedom" Bles, 1943.

<sup>7</sup> "His promising younger brother, Otto, of whose musical gifts he thought very highly, shot himself in 1895. Two Symphonies were found in his desk, parts of one of which had been performed. . . . There were a number of songs with orchestra, three books of songs with piano accompaniment . . . while a third symphony was near its completion." Bruno Walter, "Gustav Mahler" Kegan Paul, 1937. It would be interesting to know what these compositions were like.

<sup>8</sup> Bruno Walter, in the preface to his book, speaks of Justine as a "loyal sister".

<sup>9</sup> It appears that Wolf was blamed for some act of indiscipline of which he was not actually guilty.

his aunt's<sup>10</sup> and was dependent on his friends' charity.<sup>11</sup> Wolf never forgot his struggle for existence as a young man.

Vienna, a city with which Mahler and Wolf were much concerned, was a curious place at the end of the nineteenth century and the beginning of the twentieth. Divided, as it was, into factions and warring groups arguing over the merits of the particular composers they championed, Mahler and Wolf had to make their decisions as to which they should support.

Wolf was the more vitriolic of the two and as music-critic of the *Salonblatt*<sup>12</sup> he was able to enthuse over Wagner and Bruckner and rage against Brahms. Mahler and Wolf certainly must have been aroused by Brahms' needlessly rude "boa-constrictor" condemnation of Bruckner. Mahler was inclined to stand aside from these conflicts; he had his own troubles as anti-semitism<sup>13</sup> was already apparent in the opposition he met on attempting to gain public appointments. The position being so confused perhaps it is not surprising that Mahler and Wolf did not appreciate their own common basis. Wolf was certainly no Mahler fanatic and Mahler in later years said to Oscar Fried: "Of Wolf's one thousand songs, I know only three hundred and forty-four. Those three hundred and forty-four I do not like."

Nevertheless, it is time that a companion other than Bruckner<sup>14</sup> was found for Gustav Mahler, and time that Wolf was freed from the comment of "perfect miniaturist" by showing him alongside a great (in every sense of the word) symphonist. The squabbles in Vienna are forgotten, Mahler's stricture<sup>15</sup> on Wolf can be disregarded, and their music considered.

At first sight a Mahler-Wolf comparison seems to be grotesque. Wolf's concentration on the song was as intense as Mahler's on the symphony, and possibly no clearer division than that between the song and the symphony exists for the critical mind. The difference in size of Mahler's and Wolf's compositions can be a considerable obstacle, but it is actually a superficial one. Mahler's forty-odd songs and Wolf's symphonic poem "Penthesilea" are significant deviations from their respective obsessions.

Also to be remembered is Mahler's quite definite interest in the function of the human voice in music. There is not much truth in the stock phrase: "Mahler's symphonies are inflated song-cycles" but there can be no doubt

<sup>10</sup> It was probably at this time that Wolf joined up with Mahler and Krzyzanowsky.

<sup>11</sup> One friend who aided him was Franz Schalk, the conductor. Mahler later assisted Schalk by giving him an engagement at the Opera.

<sup>12</sup> Wolf was appointed in January 1884. Hans Pfitzner, the German composer and a keen Wagnerian, is the only contemporary figure to approach Wolf in sheer critical vehemence.

<sup>13</sup> Strangely enough, Cosima Wagner was one of the foremost exponents of this racial discrimination, in spite of Mahler's magnificent productions of Wagner's operas.

<sup>14</sup> Apart from the fact that Mahler wrote symphonies for large orchestras and that his works take as long to perform as do many of Bruckner's, I fail to see any real connection between the two composers. "Child-like and naive" is a favourite phrase of English critics when describing Mahler's music; the phrase can much more properly be applied to Bruckner. It seems to me that the gulf between, say, "Das Lied von der Erde" and any one of Bruckner's symphonies, early or late, is immense.

<sup>15</sup> In any case, Mahler's verdicts on composers were liable to be disconcerting. He wrote in a letter to his wife in 1904: "Now that I've worked my way through Brahms, I've fallen back on Bruckner again. An odd pair of second-raters."

as to the importance he attached to the voice as an instrument. At certain moments Mahler felt that the introduction of the voice was a necessity if his musical conception was to be realised to the full, and use is made of it (in various forms—choirs, soloists etc.) in the 2nd, 3rd, 4th and 8th Symphonies and *Das Lied von der Erde* (which Mahler specifically entitles a Symphony for Contralto, Tenor and Orchestra). There are the *Kindertotenlieder* and the *Lieder eines fahrenden Gesellen*. Already, by means of this vocal bridge, Mahler can be brought half way to meet Wolf. The Mahler of the enormous Eighth Symphony and its *Veni creator spiritus*<sup>18</sup> does not overshadow the Wolf of:

"Auch kleine Dinge können uns entzücken,  
Auch kleine Dinge können teuer sein."<sup>17</sup>

Yet Wolf could be magniloquent. As H. C. Colles points out: "'Prometheus'<sup>18</sup> is a setting which could only have been made in the Post-Wagnerian era."<sup>19</sup> When heard in its orchestral version, the repeated chords at the opening are as striking as the vigorous theme given to the horns in the first bars of *Das Lied von der Erde*.<sup>20</sup>

It is not suggested that Mahler and Wolf shared any points of style in their music: both of them were too highly original and independent as creators for such similarities to exist. But it is peculiar how some of the very early Wolf songs (published posthumously)<sup>21</sup> have something in common with the early songs of Mahler. There is the same feeling of anguish about them, sorrow at the swift passing of all earthly beauty and the impossibility of achieving permanent happiness. Mahler in "Hans und Grethe"<sup>22</sup> asks:

"Und ist doch der Mai so grün!?"

with extraordinary emotional force, almost as if the wonderful greenness of May was too much for him to bear—Wolf echoes it with his:

"Gesegnet sei das Grün und wer es trägt!"<sup>23</sup>

"Wenn du mich mit den Augen streifst"<sup>24</sup> has the breathless drive of the fourth of Mahler's *Kindertotenlieder*:<sup>25</sup> it may be difficult to imagine the comparison, but mentally orchestrate the Wolf and the task is simplified.

Mahler and Wolf possessed what might seem at first to be a sense of humour; but it is cynicism rather than humour, or a twisted smile nearer

<sup>18</sup> This Symphony was advertised as "The Symphony of a Thousand" owing to the vast forces employed in its performance: Mahler himself called it the "Barnum and Bailey Exhibition".

<sup>17</sup> Book I. No. I. *Italienisches Liederbuch*. (Paul Heyse).

<sup>18</sup> Book II. No. 49. *Goethe Lieder*.

<sup>19</sup> Oxford Hist. of Music Vol. VII.

<sup>24</sup> Book III No. 38. *Ital. Liederbuch*.

<sup>25</sup> "Oft denk' ich, sie sind nur ausgegangen." (Rückert)

tears than laughter. The scherzi of Mahler's Symphonies are packed with this kind of sinister buffoonery. An excellent example of Wolf's mock-Romantic manner is "Selig ihr Blinden"<sup>26</sup> where the words are sung above a descending accompaniment that is much like a bare trombone-part lifted from the finale of Mahler's Second Symphony. If not humourous (and Wolf's "Storchenbotschaft"<sup>27</sup> certainly can qualify for the term, as can Mahler's "Des Antonius von Padua Fischpredigt"<sup>28</sup>) Mahler and Wolf can be gay. They both delighted in landscapes of green fields and blue skies. Wolf could sing happily of the town he wandered through with his lute:

"Ich sing' und spiele, dass die Strasse schallt,  
so manche lauscht—vorüber bin ich bald."<sup>29</sup>

and Mahler:

"Ging heut' Morgen über's Feld,  
Thau noch auf den Gräsern hing,  
Sprach zu mir der lust'ge Fink:  
"Ei, du! Gelt?"  
Guten Morgen! Ei, Gelt? Du!  
Wird's nicht eine schöne Welt?"<sup>30</sup>

Mahler and Wolf had some of the same characteristics. Both were egotistical, abnormally sensitive and nervous, quick to find insults where none were intended. Both could be unbalanced by quite ordinary noises, Wolf by a barking dog or cabmen cracking their whips,<sup>31</sup> Mahler by the mournful lowing of cattle.<sup>32</sup> As types, they were alike: reflections in the same mirror. It happened that Mahler was the public figure with a miraculous command of rhetoric; he was a big man in every sense other than physically. He held important public appointments and wanted to speak for the World: in his own music he tried to embrace the Universe. Wolf was retiring, had no patience with publicity and was not one for making grand statements in the grand manner. His oratory (a legacy from his Wagnerian environment) was persuasive, intimate, and extremely subtle. Wolf wanted nothing to do with the world. "If only," he wrote to Franz Schalk, "I were a shoemaker like the incomparable Sachs. Cobble on week-days and compose on Sundays just for myself and two or three friends."

Neither Mahler nor Wolf were able to compose in long, unbroken stretches. Mahler, torn between his conducting and original scores, could work only in his holidays. Wolf had periods of complete creative sterility which lasted on one occasion for three years.<sup>33</sup> Both died young. Wolf

in 1903, after just over four years in an asylum, Mahler in 1911 of heart-failure. Perhaps it was that Wolf in his exhausted condition felt like Leopardi: "Non posso, non posso piu della vita."<sup>34</sup> Mahler, the public man, had to keep up appearances and died more conventionally if more peacefully. His epitaph is to be found in a song of 1905:

*"Ich bin gestorben dem Welt getümmel  
Und ruh' in einem stillen Gebiet.  
Ich leb' allein in meinem Himmel,  
In meinem Lieben, in meinem Lied."*<sup>35</sup>

Wolf in his:

*"Sterb' ich, so hüllt in Blumen meine Glieder . . ."*<sup>36</sup>

Mahler and Wolf often joined hands in the "lied": but they deserve to be remembered together, not for any chance similarities in their music, but for their profound belief in the tragic attitude to life, which is no easy philosophy to hold. They expressed, in their own personal ways, the same fundamental truth that slowly developed to be the centre of their artistic consciousness and the fountain of their inspiration.

## IN MEMORY OF MAHLER

### MAHLER'S EIGHTH (SYMPHONY OF A THOUSAND)

By LAWRENCE GILMAN

The following article by the late Lawrence Gilman, published by the New York Herald Tribune on May 10, 1931, is reprinted by permission of the Herald Tribune.

Twenty years ago this spring, Gustav Mahler abandoned his arduous and stormy activities as conductor of the Philharmonic Society of New York and returned to Europe, an embittered, a heart-sick, and a dying man. On the 18th of May they buried him in the Grinziger Cemetery at Vienna. Was it to observe the death of the remarkable composer, the singular tone-poet who is still a storm-center of dispute among the musicians of two continents, that Mahler's climactic score, the so-called "Symphony of a Thousand," was chosen for performance as the outstanding event of the Cincinnati Festival that has just been brought to a close under the direction of Eugene Goossens?

Whether by accident or design, this revival of Mahler's Eighth Symphony marks the twentieth anniversary of the composer's death. The choice of the score was a fortunate one. The Eighth Symphony, according to the composer's friend and biographer, Richard Specht, was for Mahler "the complete expression in tones of his own inner vision. He regarded his preceding works as preludes to this great 'Hymn of Love.'" It was not quite his last work. Mahler completed the Eighth Symphony in 1909, and in that year he composed his Ninth and sketched his Tenth Symphonies. The poignant "Lied von der Erde"—perhaps his least uneven production—was written while he was still at work upon the Eighth Symphony.

Mahler, says Richard Specht, "spoke proudly of the Eighth when he called it 'a gift to the people'; and he said this in the glad hope that the work, in contradistinction to his other less accessible symphonies, would win the hearts of all his hearers by a single appeal. The overwhelming impression made by the premiere of the gigantic work under Mahler's own direction, the storm of enthusiasm, as of an immense cry of gratitude, that broke loose at the close of the performance, seemed to be a fulfillment of this hope."

It is gratifying to think that the triumphant premiere which Mr. Specht recalls must have brought deep solace to the self-torturing, hypersensitive, unhappy Mahler. The event took place in the autumn before his death, at Munich (the date was September 12, 1910). "After the performance," wrote Leopold Stokowski, who was present, "the vast audience sprang to its feet, and a scene of such enthusiasm ensued as one sees only once in a lifetime. To those who realized, in part at least, the inner sadness of Mahler's life, there was something infinitely tragic in his figure at that moment of supreme triumph."

It was Mr. Stokowski who introduced the "Symphony of a Thousand" to America in an extraordinary series of performances with the Philadelphia Orchestra which he undertook in the spring of 1916. The work

was produced on March 2, and had a run which, for a mere symphony, was almost equivalent to the triumphant persistence of "The Green Pastures." The Academy of Music was jammed at all the performances. For hours before the doors were opened, a line of intending ticket-buyers stretched around the corner of Locust Street and far up the block along Broad, waiting patiently in the raw spring wind. Even the traffic policemen outside the Academy were excited about the attraction, and spoke of it almost as respectfully as if it had been a prizefight.<sup>1</sup>

In the following month, the Society of the Friends of Music imported Mr. Stokowski with his army of executants to New York and the work was disclosed to this capitol at a memorable concert in the Metropolitan Opera House.

Thus Mahler returned as a conqueror to the country which he had left in sorrow and defeat. That he happened to be dead was merely, of course, a fulfillment of the traditional and familiar destiny of the artist.

It cannot be said that he is generally accepted here at the valuation which is placed upon him as a composer in Central and Northern Europe. But there are many enthusiasts for his music hereabouts, and it is perhaps significant that his most exacting and formidable work should have been selected for revival last week in Cincinnati.<sup>2</sup>

If this is to be viewed as another triumph for Mahler—and doubtless it should be so regarded—it must be said that the triumph has not been won by inexpensive lures, by any deliberate address to the groundlings. The Eighth Symphony is austere and remote in subject (*pace* Mr. Specht): it is an expression, conceived upon the loftiest plane, of a supremely exalted theme. Again one must wonder if it was by chance, or by felicitous design, that Mr. Goossens chose this symphony of Mahler's for performance in the year which marks the hundredth anniversary of Goethe's completion

<sup>1</sup> Concerning the nine performances of Mahler's Eighth in Philadelphia and New York, Mr. Stokowski relates:

When we played Mahler's Eighth Symphony it made an impression on the public unlike anything else I have ever experienced. There seems to be a human quality about this work which so deeply moved the public that the greater part of the listeners were in tears at the end of the performance. This happened at all nine performances we gave; so it was not due to an accidental emotion on one particular date.

In an interview with William Engle, feature writer of the New York World Telegram, Mr. Arthur Judson described the above series of performances as the most memorable mile-stones of his managerial career. Only two performances had been scheduled. Quoting the Telegram of December 19, 1933:

Philadelphia, the first night, was dumfounded. Then it was jubilant. Instead of two performances, ten were given and the town celebrated as though the Athletics had won the pennant. In New York the Friends of Music heeded. They engaged Mr. Judson to bring the production here, and in a special train the huge cast came to storm and conquer the Metropolitan.

<sup>2</sup> We have seldom seen an audience display such enthusiasm as did this audience in Music Hall. We have never felt the claims of Mahler and his disciples to have so much justification. . . .

The writer heard the symphony for the first time . . . He could listen with a clear and unprepared mind to the sheer effect of music and performance, and that effect was overwhelming. . . .

. . . He (Mahler) saw mighty visions and he believed, and there is that in his music—at least when it is presented as it was this evening—that makes fault-finding with detail or measuring with a yardstick seem somewhat petty. . . .

Olin Downes, N. Y. Times, May 7, 1931.

of the Second Part of "Faust": for Mahler in his symphony has essayed nothing less than a musical projection of the Final Scene of "Faust," pre-faced by an elaborate setting of the Latin hymn, "Veni Creator Spiritus."

The composer sought to link his setting of the ancient hymn of Hrabanus Maurus—which Mahler conceived as "a song of yearning, of rapturous devotion, an invocation of the creative spirit, the love that moves the worlds"—with the concluding scene of "Faust," which he viewed as the invocation's answer, issuing from those transfigured apparitions wherein the poet's visions "are made to pass before us as in a glass, and the heavenly wisdom is unfolded in a divine ascent." For Mahler's inner life was a perpetual and agonized interrogation of the *magnum mysterium*: it was his impassioned aim to achieve those states of transported reverie and mystical apprehension wherein the consciousness is disengaged and enfranchised. As Goethe observed of Filippo Neri, Mahler "sought the gift of ecstasy, that hovering of the spirit above the earth"; and there were moments when he achieved the spiritual liberation, this "standing outside oneself in freedom," and became the Pater Ecstasticus of his own enraptured vision.

It could never be said of Mahler, as a foreign writer once amazingly said of Schumann—apparently in praise—that "Schumann, in his music for 'Faust,' does not attempt to compete with the poet, to convince the world that a musician can be 'a thinker'." Mahler had no such contempt of intellectual activity. It seemed to him not impossible that a musician, no less than a poet, could be a thinker without doing irreparable injury to his work. He was not impressed by the singular theory that music may be benefited by purging it of ideas. Indeed, it is precisely its width of reference, its contact with the great intellectual and spiritual currents of the nineteenth century, that gives Mahler's art its prime distinction and interest as a contribution to the music of his time, whatever one may think of the outcome of his attempt—in Rossetti's phrase—to "mix his colors with brains."

It is no affair of the critic's, so far as his function as a suggester of values is concerned, what means an artist elects to use in embodying his conceptions. A good deal of witless comment has been provoked because Mahler in this choral "Symphony of a Thousand" (or symphonic cantata, as you choose) asks for extraordinary forces—for two mixed choruses, a boys' chorus, eight solo voices, and a huge orchestra, comprising a piano, an organ, and—a mandolin: in all, about a thousand performers. The fact is interesting, but irrelevant. The point, since one is discussing not a circus but a work of art, is rather: What has Mahler succeeded in doing with his multitudinous choristers and his eight soloists and his immense orchestra—and his mandolin?

Well, it is indisputable, we think, that he has handled them like a master: with a constructive technique that takes the breath by its surety, its address, its resourcefulness, its imposing command of mass and its fertility in detail. Here is a superb piece of tonal architecture: majestic and harmonious in plan, noble in its amplitude and sweep of line. But what of the stuff within—the spiritual and poetic content of the score, and the character of its musical inspiration?

It must be evident to any sympathetic student or listener that Mahler has been sensitive to the spiritual greatness of Goethe's conception, and that its quality is reflected in certain pages of his score. This music, in its

best moments, has caught something of the unique ecstasy, the mystical passion, the otherworldliness, the ineffable serenity and tenderness, the rapturous exaltation, of the original. Such moments are the speech of Pater Ecstasticus; the line, "Wenn du hehr gebietest," in the speech of Doctor Marianus, with the succeeding interlude and choral passage; and the lines beginning "Neige, neige," of *Una Poenitentium*—especially the music, of exceeding loveliness, to the ecstatic "Er kommt zurück!"

In the non-Goethian First Part of the symphony, the setting of "Veni, Creator Spiritus," one does not easily forget the overwhelming tonal plangency of the *Gloria Patri*.

That the texture of the music is not throughout of this rich and glowing quality is scarcely remarkable. Mahler undertook a venture that would have taxed the genius of Wagner—the one musician who was fully qualified not only to apprehend but to complement the universal mind of Goethe. Would that Wagner had accomplished in his maturity the "Faust" Symphony of which he had dreamt as a young man!

Bayard Taylor reminds us that in Goethe's poem are "Circles within circles, forms which beckon and then disappear; and when we seem to have reached the bottom of the author's meaning, we suspect that there is still something beyond." How, indeed, shall any music save the greatest convey, without numerous haltings and lapses and futilities, Goethe's sublime phantasmagoria, with its transcendent allegory of the mystical interpenetration of Beauty and Divinity? So one need not be surprised to find Mahler stumbling and groping in his music, and writing passages that are empty or dull or commonplace, or even trivial—as when he transforms Goethe's "Mater Gloriosa" into an insipid tonal nonentity who might have stepped from the pages of a cantata by Gounod. There is no need to specify these passages further—they will be identified by those who are most deeply moved by that in the work which is indubitably choice and rare.

It is curious that Bayard Taylor, half a century ago, should have spoken of the closing scene of "Faust" as "a symphony": "an ever-rising and ever-swelling symphony, with its one theme of the accordance of Human and Divine Love"; as, again, "this mystic Symphony of Love." It almost seems as if he had previsioned the tonal possibilities of the poem—possibilities which Mahler, in this symphony of today, has in so large a measure realized and fulfilled. For here, take it all in all, is one of the noblest scores of our time. In it, now and again, are pages unforgettable for their superearthly beauty—inspirations of which their creator might justifiably have said, with the singer of the Odes of Solomon, "So are the wings of the Spirit over my heart, and I have been set on His immortal pinions."

## WHY NO AIR PREMIERE FOR MAHLER'S SIXTH?

Many who read the momentous announcement made by the Philharmonic-Symphony Society of N. Y. late in September, 1947, that Dimitri Mitropoulos would conduct the American premiere of Mahler's *Sixth* in December were undoubtedly cheered by the thought that at last this great symphony, completed forty-two years ago, would be heard by the large American radio audience. What happened later to cause a change of plans is not hard to guess—the Mahler work didn't fit into the music-news-music-news broadcast pattern C.B.S. had established for the Sunday afternoon concerts. Numerous letters were written urging that the work be broadcast, which, incidentally, would have been a world radio premiere, but the Philharmonic-Symphony Society or C.B.S. remained immovable in this respect.<sup>1</sup> At least two writers of radio and music newspaper columns presented the case for the listener. On two successive Sundays Mr. B. H. Haggin, in his column "Music on the Radio" in the *N. Y. Herald Tribune*, gave prominence not only to the fact Mahler No. 6 had not been broadcast but also to the general state of affairs regarding serious music on the major networks. The importance of what he had to say cannot be underestimated and by permission of the *N. Y. Herald Tribune* Mr. Haggin's column of Jan. 4, 1948, is reprinted in full below.

Mr. Jack Diether—whose complaint about the Philharmonic's failure to broadcast Mahler's *Sixth* and other new works I discussed last Sunday—sent me his Oct. 24 column on the subject in "The Malibu (Calif.) Times," which contained some interesting material that I think worth giving here.

Quoting from the Philharmonic brochure for radio listeners the statements "How America's cultural life has grown during the last century! Radio is responsible for the rapidity of the growth in the past few decades," Mr. Diether wrote: "Those who take those remarks to heart . . . occasionally may wonder wistfully how the growth of culture via radio is faring in other lands. For their benefit I would like to summarize the last three months' offerings, in this field, of another country's radio, that of Britain, as gleaned from the B. B. C.'s weekly 'Radio Times.'"

The three months were July, August and September of last summer; and those of us who can recall what the great American networks offered in that period are in a position to appreciate the B. B. C.'s presentation of "a number of inclusive musical series . . . including the complete sets of Haydn's, Scarlatti's and Debussy's piano works, Mozart's violin sonatas and Schubert's and Brahms's

<sup>1</sup> The B.B.C. two weeks later on December 31, 1947, gave Mahler's *Sixth* its radio premiere. Apparently unable to broadcast the concert performance at the time it was given and fully aware of the significance of the symphony, a transcription was made and broadcast! The performance was given by the Orchestra of the Nordwest-deutscher-Rundfunk under Hans Schmidt-Isserstedt. Earlier in the year the B.B.C. broadcast a performance of Mahler's *Ninth* by the same orchestra and conductor.

chamber music played by Szigeti, Fournier, Schnabel, etc.; nine programs of sixteenth and early seventeenth century chamber and vocal music, nine of eighteenth century chamber and orchestral music, twelve programs of modern British music and four song recitals by Lotte Lehmann. Excerpts from four operatic festivals were transmitted, those at Edinburgh, Glyndebourne, Salzburg and Lucerne; and among the operas that were broadcast twice or more in their entirety were Mozart's 'Figaro' and 'Cosi fan Tutte' (four times each . . .), 'Don Giovanni,' Beethoven's 'Fidelio,' Strauss's 'Salome,' 'Elektra' and 'Arabella,' and Einem's 'Danton's Death.'" Also broadcast were the performance of Mahler's "Lied von der Erde" by Bruno Walter and the Vienna Philharmonic in Edinburgh, a performance of Mahler's Ninth Symphony in Hamburg. And "from the other orchestral concerts . . . I will mention only one work, the American composer William Schuman's Piano Concerto, which has never been heard on the American networks."

Turning back to America, Mr. Diether concluded: "The manager of the New York Philharmonic who wrote me that the first American performance of Mahler's Sixth, in December, cannot be broadcast because of its 'unusual length' said more about the true state of American radio than the sweeping words of the Philharmonic's printed brochure. If our radio were really the measure of our cultural growth, as the brochure claims, we would have little cause to be proud of its rapidity."

As a matter of fact one can observe in radio's growth a step backward for almost every step forward. Twenty years ago WOR was broadcasting the New York Philharmonic on Thursday nights and later on Sunday afternoons; a few years afterward it was broadcasting its own Bamberger Little Symphony for an hour on a weekday night and the Perole Quartet for a half-hour on Sundays; still later it broadcast series conducted by Wallenstein; last year its only high-caliber program was the Cleveland Orchestra 11:30 on Mondays; this year it isn't even doing that. C. B. S. took over the Philharmonic from WOR and still broadcasts it; but other programs that it has added—the Budapest Quartet, Egon Petri, and now even Invitation to Music—it has dropped, leaving only Bigg's organ recital early Sunday mornings and Eileen Farrell's vocal hodge-podges late Sunday nights. N. B. C. organized an orchestra for Toscanini which it still maintains at enormous cost, but apparently only to be able to say it maintains an orchestra for Toscanini at enormous cost, for it has shifted the program to the dinner hour on Saturday when people tell me they cannot manage to listen, and some have to hear a rebroadcast of a defective recording late at night when they cannot operate their radios at the necessary volume-level.

All this provides the answer to the talk about the blessings conferred on American music lovers by the American system of commercialized radio. Certainly it gives them performances by the great orchestras and the Metropolitan. But it gives them these all jammed into Saturday and Sunday, except for the Boston Sym-

phony on Tuesday. And it gives them almost nothing beyond these orchestras and the Metropolitan—nothing remotely like the B. B. C.'s coverage of the entire musical literature described by Mr. Diether. Nor do the differences end there. A friend wrote me from Switzerland about the broadcast of Bruno Walter's concert in Lucerne: it was late in starting and there was further delay in the intermission, which led her, after her experiences here, to expect the final work to be cut off before the end. Instead the work was completed and the news program that followed began twenty minutes late. "Could you imagine this happening in New York?" she wrote. What happens here was described by a reader who listened to the Boston Symphony broadcast of Berlioz's "Harold in Italy" recently: as a result of delays in starting and between movements the finale was cut off about half a minute before its conclusion—"final hurried announcements [being] made with the orchestra playing in the background."

On January 4, 1948, the N. Y. Philharmonic broadcast *Jeanne d'Arc au Bucher*, a dramatic oratorio, by Arthur Honegger and Paul Claudel. The broadcast began at 3 and, with comments about the work, ended at 4:20 P. M. It was followed by the usual newscast. The broadcast from London was omitted.

In his article in the N. Y. Herald Tribune, December 28, 1947, Mr. Haggin wrote in part:

Mahler's Sixth Symphony, which was given its first American performance recently by the New York Philharmonic under Mitropoulos, was heard by several thousand people who were able to attend the concert on Thursday, Friday, and Saturday, but not by several million all over the country who are said to listen to the Philharmonic broadcasts on Sunday afternoons.

One such person in Syracuse, N. Y., who wrote the Philharmonic about this, sent me what he rightly called the "stupid answer" which explained that the playing-time of the Mahler symphony, 65 minutes, made it impossible to fit the work into a Sunday broadcast program. The entire broadcast lasts 90 minutes, which is enough to contain a work lasting 65; but the Philharmonic representative was speaking from the point of view of C. B. S.; what the symphony didn't fit into was the style of the broadcast—approximately 45 minutes of music, 10 minutes of intermission with a speaker, and another 30 or 35 minutes of music.

The Philharmonic found a way to broadcast the Honegger work. Lack of time seems to be a lame excuse for the symphonies of Bruckner and Mahler. The Philharmonic or C. B. S. could, if necessary, omit the news casts. Audiences can hear news and commentators on any station several times a day. They hardly need the Philharmonic's news period to keep abreast of the times especially if the newscast deprives them of the opportunity to hear rarely played works.

The question might also be raised as to why a popular program of fam-

iliar music was arranged for the January 25, 1948, Sunday afternoon concert when a performance of the Bruckner *Eighth*, which was played on the concerts of January 22 and 23, and is not often broadcast, would have given the radio audience a welcome change from the customary fare, for Walter's readings of Bruckner's *Eighth* have always been praised highly and received enthusiastically (see pages 56-58 for reviews of the fore-mentioned performance). One month after the *Eighth's* premiere performance in Boston in 1909 it was repeated by request. Many listeners will recall that in January, 1941, the Bruckner *Eighth* was put on the air by the Philharmonic-Symphony Society in response to a telegraphic request sent by interested students at the State University of Iowa when they learned it was not to be broadcast and a different program substituted.

---

### BRUCKNER—MAHLER—SCHOENBERG

By DIKA NEWLIN

ASSISTANT PROFESSOR OF MUSIC, WESTERN MARYLAND COLLEGE

The above new book was published in 1947 by King's Crown Press, a division of Columbia University Press, 2960 Broadway, New York 27, N. Y. The following information concerning it is reprinted with the publisher's permission.

Arnold Schoenberg, on September 13, 1944, achieved in his exile the age of seventy. The year when Huneker could write of the first performance of *Pierrot Lunaire* that it was "the very ecstasy of the hideous" was thirty-two years behind him. Even further behind was the time when a critic yelled "Stop it!" during the first performance of the First String Quartet. Now the moment had come when the possibly greatest living composer could be considered in relation to his musical heritage, and that is what Dika Newlin has done in this book.

The author's thesis is that, contrary to general opinion, Schoenberg does not stand apart from the past but is the present heir of the great Viennese tradition. He is, she demonstrates, in the direct line of that modern phase of the school of Vienna which began with Bruckner and continued with Mahler.

Since the music of all three men is inseparable not only from their heritage but also from the social, religious, and political milieu of the Hapsburg capital, this book becomes a full-scale presentation of the music and personalities of three composers about whom a great deal of controversial opinion has been written. It is an unusually able and well-written work of scholarship, amply illustrated with thematic material.

CONTENTS: Preface. Introduction: The Continuity of Musical Tradition in Vienna; Austrian Convention and Revolt; I. ANTON BRUCKNER—Conservatism and Catholicism—1. The Problem of Bruckner; 2. Backgrounds; 3. Vienna; 4. Symphonic Style; 5. Sources for Bruckner's Theory of Harmony; 6. Church Composer; 7. Chamber Music; Symphonist; II. MAHLER—1. Mahler, Bruckner, and Brahms; 2. Mahler as a Young Man;

3. *Das Klagen Lied*; 4. Literary Influences on Mahler; 5. Lyricist; 6. Opera Director; Symphonist; III. SCHOENBERG AND BEYOND—Decades of Decision—1. 1874-1899; 2. 1900-1907; 3. First Steps in Atonality; 1907-1911; 4. 1911-1915; 5. To the "Twelve-Tone Scale"—and After; 6. Triumph, Catastrophe, Reorientation: 1924-1944. Bibliography. Index.

## REVIEWS

"Miss Newlin's book provides good biographies of the three men. She conveys that authentic sense of the personalities involved which results from a real understanding of the resolution of many apparent contradictions, in the course of each composer's development. She has added new material to the old biographies, particularly in the field of theoretical and esthetic speculation, and she gives a number of illuminating examples of the influence Viennese composers of the 19th and 20th centuries had on one another.

"The great virtue of the book lies in the fact that, because the author is herself a competent composer, she deals with the dynamic elements in each man's work, instead of making a desiccated analysis. . . .

HENRY COWELL, *The Musical Quarterly*

"Dika Newlin's Bruckner, Mahler, Schoenberg is a fine, well written and admirably reasoned piece of work. It can be unreservedly commended to those who admire these masters and even to those who do not. The authoress, herself a pupil of Schoenberg, has a profound knowledge of her subject and communicates it vividly to the reader . . . . As a very positive contribution to the story of three still controversial figures of musical experience, the volume commands wholesale admiration."

*Musical America*

". . . Interesting chapters on the work of Bruckner and Mahler, and those on Miss Newlin's teacher, Schoenberg, are well worth reading and digesting."

FELIX BORÓWSKI, *Chicago Sun*

". . . Her subject is of great contemporary interest and her research worthy of respect."

*Harper's Magazine*

## BRUCKNER'S EIGHTH AND THE REVIEWERS (1948)

### A MAJOR TRIO AND A MINOR DUO

If a vote is ever taken on the season's 10 best symphonic performances, my guess is that Bruno Walter's reading of Bruckner's Eighth Symphony with the Philharmonic-Symphony in Carnegie Hall last night would be up on top.

Anyway, as of now in midseason, it has my vote for a place among the three most gripping performances since last September. I don't think I would surprise anybody by crediting Arturo Toscanini with the two others.

Mr. Walter would doubtless insist on sharing the honor of last night's rendering with the Philharmonic personnel. Certainly the orchestra cooperated beautifully, and the conductor must have felt special pride in finding it completely en rapport on all details. They played like a band of perfect Brucknerites.

For the main impression was of a group of men working by common inspiration towards one goal—the goal of giving one of the world's most unfairly neglected composers the kind of hearing that would compensate for all the ridicule that pursued him while he lived.

The performance made you wonder why this man's music has been slow in gaining headway among public and critics. True, the symphony is long, but during those 72 minutes so many exciting things happen that dissenters ought to be very few in number.

There are stirring moments all through the symphony—episodes of giant conflict and eerie solemnity; moments of sky-blue calm and poetry, and passages of broad symphonic humor that prove that Bruckner could pause amid his cosmic musings for a little homespun spoofing.

On the whole, though, the symphony moves along the higher planes of discourse. One theory is that the last two movements are concerned with the idea of divinity. This claim is plausible enough, considering that Bruckner dedicated his next symphony to God!

Mr. Walter once told me he regarded Bruckner's symphonic world as a complete cosmos—that is, it left nothing to chance or mystery, and answered every question it posed. You felt that last night in the wondrous unity and clarity of the performance.

There were no dark areas anywhere, or, rather, where spans of mystery arose, the light that was Bruckner's own certainly soon spread over them. The doubts were scattered and the simple man—half-peasant and half-beer—was his confident self again.

Mr. Walter must have been happy last night in the assurance that both the orchestra and the audience were with him—the orchestra proving it through its splendid teamwork, and the audience by way of one of the season's most fervent ovations.

LOUIS BIANCOLLI, *N. Y. World-Telegram*

This listener is deeply grateful to Bruno Walter for his uncut performance of Bruckner's Eighth Symphony with the Philharmonic-Symphony

Orchestra in Carnegie Hall last night, a performance which obliterated the unfortunate impression made by Serge Koussevitzky's emasculated version of this work given here earlier in the season with the Boston Symphony Orchestra.

But there was more than gratitude due Mr. Walter for letting us hear every note of this truly sublime creation; it seems strange that over half a century after the completion of this wonderful symphony it should be necessary to call attention anew to its greatness. For there are still many music lovers and musicians who are baffled by Bruckner's architectonics: by his utilization of groups of themes instead of following classical procedure in his corner movements. But the breadth and depth of his ideas made such formal procedure ineluctable.

It is difficult for me to comprehend how a hearing of this stupendous product discoursed as it was last night can fail to bring with it conviction of its timelessness and the purity of its inspiration. Not only the angelic Adagio, but the three remaining movements are the emanations of pure genius. Mr. Walter has interpreted the Eighth Symphony here before with impressive results; but on this occasion his conception was of such surpassing perceptiveness, so inward and so eloquent in turn that it marks a pinnacle in his long and distinguished career. Nor has the Philharmonic ever in my experience played better; the translucent sensuousness of sound which pervaded the performance will linger long in the memory of all who were fortunate enough to be present.

JEROME D. BOHM, *New York Herald Tribune*

For the Eighth symphony towered over everything. It was given without a cut and it lasted seventy-two minutes. Despite its weakness and discrepancies of structure, especially in the final movement, the listener was not dismayed, or impatient, or less than absorbed in the essential grandeur and beauty of the revelation. True, the first movement also has cracks that cannot be eradicated, even when such an inspired interpreter as Mr. Walter is in control. The movement has also a loftiness and a vision that far surpass its technical limitations. There is the supplication, the mystic fervor, the inner conflict of him who cries out, "Lord, I believe. Help Thou mine unbelief." There are the three titanic climaxes which occur in the development of this movement and seem as if they would rend the orchestra in twain.

Of the form of the immensely expanded scherzo Bruckner is completely and unqualifiedly the master. The movement has the smell and savor of the good earth. Its vigor and jocosity give place in the trio to a passage fully worthy, in its tenderness and vision, of Beethoven. Then comes the lyrical slow movement, the movement in which the artist speaks as simply as a child of the sublime. It is in the finale that the symphony again and again falls to the earth, picks itself up, stumbles forward toward the light. It is curious that such weak and redundant writing could be part of the score which includes three of the greatest movements in the literature of the romantic symphony. This weakness is the more striking, and the more touching, because of the conclusion, wherein Bruckner appears to be groping for a summation after the cyclical manner—a summing up of themes previously heard—which lesser composers than he have frequently achieved.

This method, or a hint of it, only emerges in the final pages in which

## Chord and Discord

there is reference back to the opening theme of the first movement, and a final combination, very magnificent, of themes of both the scherzo and adagio—a flash of sheer grandeur, after a chaos of floundering. For all that, with every defect granted or multiplied, the symphony, so magnificently revealed last night, was a thrilling experience.

The orchestra played magnificently. The conductor missed nothing of the composer's thought and its devoted revelation. He laid us all under an obligation which will not be forgotten or lessened as time passes in the memory.

OLIN DOWNES, *The New York Times*

After intermission Mr. Walter and the orchestra returned for the hour-and-a-quarter panorama of Bruckner's Eighth Symphony. Mr. Walter's devotion to Bruckner, which has earned him the medal of the Bruckner Society, is well known. As a matter of fact, conductors in general appear to be fond of Bruckner, possibly fascinated by the mechanics of bringing his elephantine scores to life. Listening to them is something else again. The Eighth Symphony's splendor or orchestral dress is exceeded only by its banality of subject matter; it is like devising a magnificent Florentine tooled binding for the collected works of Edgar A. Guest. At that, the comparison is probably unfair to Mr. Guest; not even he could match Bruckner platitude for platitude.

JOHN BRIGGS, *New York Post* (Copyright 1948)

The notion that a thing said loudly will enforce its truth has an echo in such music as Bruckner's Eighth Symphony which was played by the Philharmonic-Symphony Orchestra under Bruno Walter's direction in Carnegie Hall last night. Like others of this composer's works, it has its felicities, but considering everything it is hard to see how the work as a whole can be taken seriously.

A recent performance by Koussevitzky left the feeling that something more authoritative might add to its meaning. The only mystery that Walter disclosed, however, was how this awkward, well-meaning but essentially second-rate music had survived as long as it has. Sincerity it has, and imposing scoring, but also labored thematic material, sprawling structure and climaxes repeated incessantly. The dignity the score contains was brought out, in a performance of great fidelity.

H. C. S., *New York Sun*

## AMERICAN PREMIERE OF MAHLER'S SIXTH

Mitropoulos Conducts Philharmonic Symphony, New York,  
in Brilliant Performances  
Audience Cheers

The following reviews appeared in the New York papers after the first of three performances given December 11, 12, and 13, 1947.

Co-featured in odd contrast on last night's Philharmonic program in Carnegie Hall were George Gershwin's "Concerto in F," with Oscar Levant as soloist, and the American premiere of Gustav Mahler's Sixth Symphony. Dimitri Mitropoulos conducted.

The one thing in common was the excellent performance. Mr. Mitropoulos added two dazzling readings to his Philharmonic score card, and Mr. Levant re-asserted his claims to being America's chief custodian of the Gershwin legacy.

There comparisons ended. For the Gershwin score is about as close to the Mahler Symphony as Tin Pan Alley is to Kamchatka. But the modern orchestra accommodates all comers, so it was all one world on last night's program.

While there were many ways of viewing the Mahler Symphony last night, there was only one for the Levant-Gershwin episode. The fabulous Oscar made this coiling scroll of the Roaring Twenties live all over again in the moody melody and biting rhythms.

Reaction to Mahler's massive 70-minute span ran all the way from ecstatic accolades to blistering gibes. Most complaints were that the symphony was too long, too loud, and too much of the same thing.

Yet, the symphony was given a strong ovation. Many rose in their seats and shouted "Bravo!" and Mr. Mitropoulos was recalled for repeated bows with the orchestra.

How much of the response should be credited to the performance and how much to the symphony it would be hard to say. Certainly the 41-year-old score packs many orchestral thrills, among them the three-hammer blows of the finale.

There Mahler pictures his future in harsh prophecy, using an actual hammer to accent the personal horror to come. The orchestra shrieks in terrifying tones, and some of the blackest pages in all music follow.

I frankly liked the symphony—the march-like beat of the opening, the pastoral quiet of the slow movement, the odd, zig-zagging rhythms of the Scherzo, and the shattering Judgment Day of the Finale.

Maybe Mahler wrote one or two better symphonies, like the Ninth and "The Song of the Earth;" but the Sixth crams a power of its own in its fierce heartsick moods and tragic foreboding.

And Mahler wasn't wrong in his bleak prediction, for the fatal hammer struck three times, just as he dreaded—his young daughter died; his ideals and hopes as conductor crashed; and he died an untimely death in 1911.

With the grim prophecy fulfilled, life had finally imitated art.

LOUIS BIANCOLLI, N. Y. World-Telegram

## Chord and Discord

This reviewer, who has always considered himself a devout Mahlerite, must confess that a first hearing of his Sixth Symphony performed by the Philharmonic-Symphony Orchestra under Mr. Mitropoulos's direction in Carnegie Hall last night brought with it a temporary defection.

Although dubbed by Mahler himself as "tragic" symphony, this listener could find little in the work which required seventy minutes in traversal to justify this appellation. For all the elaborate symbolism which has been associated with its cow-bells and hammer-blows, the former supposedly suggesting unutterable loneliness, the latter, the ineluctable blows of fate, very little that is genuinely affecting and first-rate musically is to be heard in this expansive product.

In none of his other symphonies is one made so aware of the composer's eclecticism. Some of his ideas come straight out of Schubert, including the principal theme of the first movement of the "Unfinished" Symphony. But not only Schubert but Bruckner and even Richard Strauss enter largely into his thematic scheme and are dealt with at length. Mahler's well known affection for march rhythms is exploited ad infinitum in both the first and last movements with fatiguing results; for the subject matter utilized is incredibly banal.

The best movement is the *Andante moderato*, in which the serenely bucolic scene depicted is peopled by sentimentally inclined beings. There are characteristically ironic touches, too, in the *Scherzo*. But the monumentally conceived finale, which takes twenty-nine minutes to unfold, is Mahler at his most magniloquent and tiresome.

What can be admired unreservedly is the orchestration, which is superb throughout the symphony. Combinations which must have sounded startling when the symphony was first heard in 1906 are still strikingly effective and highly original even today. But despite the truly overwhelming mastery of his technical resources revealed, this is the weakest and most commonplace of Mahler symphonies.

Nothing but praise is due Mr. Mitropoulos for this exhaustive discourse of a highly exacting work, which was conducted without benefit of a score and was fully deserving of the prolonged applause and cheers bestowed upon it by the audience. The reviewer regrets that because of the late hour he was only able to hear a few measures of Mr. Levant's interpretation of Gershwin's Piano Concerto.

JEROME D. BOHM, N. Y. *Herald-Tribune*

The gigantic, 70-minute Sixth Symphony of Mahler was performed for the first time in this country at Carnegie Hall last evening, and the demonstration afterward for Dimitri Mitropoulos and the Philharmonic-Symphony suggested your reviewer was not the only one who found it a profoundly moving experience.

Since earlier and later works of Mahler are known here, the piece merely confirms what we already knew rather than discloses new aspects of the composer. The staggering instrumentation of the Sixth has been matched in other works. Mahler's morbid sensitivity to combinations of instrumental tone has been revealed elsewhere. His preference for emotional impact rather than formal design also has been demonstrated in his "Lied von der Erde," in that unforgettable passage for the tenor—"Dunkel ist das Leben, ist der Tod." And in fact the final movement of the Sixth is

precisely that mood of overpowering melancholy stretched out to thirty minutes' length. Yet Mahler's stylized despair also is music of such beauty that it leaves the listener depressed, but curiously exhilarated. It is a quality to be found in Mahler's contemporaries, in the febrile, introspective writing of Stefan Zweig; it is the expression of a neurotic civilization, an inbred culture that achieved craftsmanship and refinement at the cost of overstrained nerves.

The program ended with George Gershwin's Concerto in F, with Oscar Levant playing the solo part dextrously. I cannot help thinking that the juxtaposition of the two works by so imaginative a musician as Mr. Mitropoulos was not merely a coincidence.

The Concerto is crude, brash, unpolished in almost every attribute in which the Mahler Sixth reveals excellence; but it has an all-important power to touch the hearts and emotions of listeners. The merit of the symphony is mature sophistication; that of the Concerto is youthful energy. Mahler was the magnificent autumn of Viennese music. The musical mathematicians who followed were dry leaves falling from a plant that ceased to flower. It may be that Gershwin is the imperfect, tentative budding of an equally magnificent plant which some of us may live to see in bloom.

JOHN BRIGGS, *N. Y. Post*, (Copyright 1947)

The first performance in America of Mahler's Sixth Symphony was given by Dimitri Mitropoulos and the Philharmonic-Symphony Orchestra last night in Carnegie Hall. This performance brought cheers and long-sustained applause in its wake. Mr. Mitropoulos kept returning to the stage, bowing graciously, at last gesturing to the orchestra to rise and bow with him. And indeed it would be hard to imagine the symphony played more brilliantly, theatrically, as is its due, and with such immense fortissimos that some supersensitive souls were dumbfounded. But the multitude was delighted, and the performance a triumph for composer and conductor.

And what of the symphony, *per se*?

Mahler averred that he detested program music, that an audience must reach its verdict on the basis of its reactions to the music as music, and not because of some story or special meaning connected with it. If we take the Sixth Symphony from this standpoint it is clear that like every one of Mahler's overextended works in the form it is of uneven merit in the different parts. The first movement of the Sixth is weak, banal in its thematic material, repetitious, anything but convincing in its medley of tragic march rhythms and bucolic tones. The best movement is certainly the slow one.

It has pleasant if commonplace and harmonically uninteresting melodies, and a lofty mood. The melodies soar and foliate more continuously and with less sagging in the middle than is usual with Mahler. There are noble effects for horns and answering trumpets, where the music seems to ascend and to unfold like a vision. No doubt that this is one of the finest lyrical movements that Mahler penned.

Musically it is the summit of the symphony. The scherzo affects again the *ländler* style and the peasant accent, with the false innocence that it often pleases this composer to assume, as if he were saying, "See how

naive, how gay, how innocent and pure of heart I, the tragic, the fated one, can be!" This becomes trite and tiresome, and the repetitions onerous.

The finale is three times as long again—incredibly drawn out, inflated, redundant in the way admirably described by Richard Strauss when he said that Mahler "dampened his fortissimos" and "smothered his effects in the last movement." Everything comes in, all the melodies, motives, developments, all the instruments, which are multitudinous. The orchestra includes doubled horns, augmented trumpets, trombones, woodwinds, cowbells and a hammer—fortunately without a sickle, or Mr. Mitropoulos might be in the custody of the FBI at this very moment.

Now it appears, despite Mahler's coyness on the subject, that this symphony has an underlying program, and one that is deeply tragic. This is unfortunate, because the finale sounds very brilliant, indeed triumphant. Undertones of tragedy are lost in the din and the commotion, the hosannas of the brass, the flamboyant melodies that soar from strings, horns and what not, and reach climax upon climax. The audience seemed to feel victorious too. Perhaps they had not read the program book.

Regardless of these constructions, one is constrained to conclude that this is on the whole a patchy, diffuse and uneven symphony, with the customary bombast and inequality between its pretensions and actual ideas. One more symphony by the grandiose Mahler.

The symphony was followed by a work which on the whole has more originality and inventiveness in it. We mean George Gershwin's Concerto for piano and orchestra, played smashingly and with new authority and power by Oscar Levant as soloist. But the concerto seemed to have caught one bad contagion from the symphony. Its whole performance was exaggerated in scale. In the middle movement it missed a large measure of the poetry with which it was invested in more than one performance that we heard from Gershwin himself.

The piece was over-played, over-blown, over-climaxed. Now that the very gifted Mr. Levant has shown his ample mastery of its pianism, let him please give it more intimate and imaginative treatment when next he plays the work and let not Mr. Mitropoulos conduct Gershwin as if he were Mahler.

OLIN DOWNES, *N. Y. Times*

Taking music for granted can be a temptation in a city which has as much of it as New York; but in what other art could the violent contrast of last night's Philharmonic-Symphony Orchestra concert in Carnegie Hall exist side by side? Gustav Mahler, over-driven and introverted; George Gershwin, easy-going and extroverted, each portrayed by a self-likeness as distinctive as a thumbprint.

This audience had the experience of hearing a Mahler symphony—the sixth—which is not merely unfamiliar, as most of his still are, but actually new to this country. Some opinion holds it the weakest of the nine, which might be an explanation; but it is hardly so inferior to the others that no one should have ventured it in the forty-one years since it was written. The oversight, if such it may be called, was rectified by Dimitri Mitropoulos last night.

To one who finds the best of Mahler's symphonic works patchy and insufficiently worked over, only one element of the occasion was truly ab-

sorbing—the consistently magnificent workmanship of Mitropoulos. Phenomenal memories are not new to us; but Mitropoulos left one incredulous of the blueprint he drew for the orchestra with no score in sight. (There was none for the Gershwin, either.)

This symphony has a lovely songful slow movement—and very little else that is not dismally over-written. The finale alone is a twenty-six minute morceau—a time span multiplied by the repetitious elaboration of ideas mostly dreary and second class.

There is scarcely a page that doesn't have its quota of ingenuities, some of them still unique with Mahler, but the totality suggests a completed jig-saw puzzle of an unintelligible design. The ultimate paradox is that the audience received the playing with remarkable enthusiasm.

IRVING KOLODIN, *New York Sun*

That so tremendous a work as Gustav Mahler's Sixth Symphony should have waited 41 years after its European premiere for an American performance is a curious reflection upon the ways of our musical world. This symphony is the autobiography of a great soul; and its subjectivity of style is at once its strength and weakness. Mahler, like Balzac, simply poured himself onto paper, with little regard for academic laws or the emotional reserves of the bourgeoisie.

This is torrential music, filled with the horror of death; the desperate resistance of a creative spirit unwilling to surrender to final oblivion; the struggles of a mind which longs for eternal peace and yet is still torn by doubts. In listening to it, as in listening to the music of Wagner, one either surrenders to the hypnotic spell and understands, or one closes one's ears, and hears only turgid rhetoric instead of the heartbreaking eloquence with which the score is filled.

Purely as an achievement of formal development and orchestration the Sixth Symphony is monumental. The use of cowbells to symbolize the peace of mountain heights, of the celesta, glockenspiel and other coloristic devices never cheapens the work. And the almost unprecedented battery of brass and percussion enables the composer to create a whole new vocabulary of sonority. The exquisite melodic curve of the slow movement and the ghostly trills of the finale represent string writing at its subtlest. And the chorale passages in the deep brass are overwhelmingly majestic. The symphony is tender, savage, capricious, rebellious by turns; almost every human emotion is expressed in this dramatic poem. Yet even the gigantic finale is logically worked out; the length of the work is inevitable, like that of Schubert.

Mr. Mitropoulos conducted magnificently, and the orchestra insisted on his taking the first few bows alone. The tremendous ovation was richly deserved by the conductor, the orchestra—and the music!

ROBERT SABIN, *Musical America*

## MAHLER'S SIXTH

Rare Symphonic Work Impresses Critic in First American Performance

By WARREN STOREY SMITH

The following article appeared in the *Boston Post* on December 21, 1947 and is reprinted by permission of the *Boston Post*.

That we are too familiar with certain important works and woefully ignorant of others was the burden of last week's discourse. The compositions chosen to point the moral were Handel's "Messiah," immediately impending from the Handel and Haydn Society, and Mozart's "Idomeneo," which we get this afternoon, at the Opera House, from the New England Opera Theatre. The point could have been made just as well by citing two symphonies, each their composer's sixth, one of which had just been played here for the hundredth time (speaking in round numbers), while the other was receiving in New York its first American performances. The pieces in question? Tchaikovsky's "Pathetic" and the so-called "Tragic" Symphony of Mahler.

Back in 1933 Dr. Koussevitsky proudly announced his intention of playing the only Mahler Symphony still unknown in this country, but it remained for his one-time protege, Dimitri Mitropoulos, as acting conductor of the New York Philharmonic-Symphony, to turn the trick. Some difficulty with the Symphony's Leipzig publisher was the reason given for Koussevitsky's failure to come across with the threatened premiere. Mitropoulos had his troubles, too, but they were slightly different. Mahler's music is now in the public domain, but it seems that the orchestra parts of the Sixth went up in smoke when Leipzig was bombed. Scores of the work are scarce, but one was forwarded from London and from it the parts were copied. And so, 41 years and six months after the Sixth was first heard, at Essen, the brilliant and indefatigable Greek maestro gave it to the United States. There were three performances, on Dec. 11, 12 and 13, and it was the last of these that your deeply impressed correspondent heard, as one of a Carnegie Hall capacity audience that received the work with cheers and shouts of "Bravo," fully deserved by composer, director and orchestra.

Even in Europe performances of the Mahler Sixth have been few and far between. From the very outset, it was destined to be the black sheep of the Mahler flock. Not because it was weak—it is, in fact, one of the most firmly-knit, most consistently powerful of his creations—but because, unlike its fellows, it bids us not to hope but to despair. There are, of course, relieving episodes: the slow movement is an idyll, serenely beautiful; the second subject of the otherwise somber first movement has sweep and passion; the trio of what may be termed the grimmest of symphonic scherzos, is pleasant, if not exactly gay. But whereas the other eight symphonies and "The Song of the Earth" have their bitter, their sorrowful or their ironic pages, they nevertheless all end in major, whether the mood be one of triumph, elation, calm resignation or blissful contentment. The Sixth alone withholds this ultimate consolation.

"The symphonic gradations and climaxes of the final movement," writes Bruno Walter, Mahler's most devoted disciple, "resemble in their dismal power the towering waves of the ocean that rush at the ship and wreak destruction." Nor does Mahler soften the blow through a merciful brevity, as does Tchaikovsky in the finale of the "Pathetic." On the contrary, this concluding movement lasts close on half an hour, with only a passage here and there to offset the prevailing gloom. Without resorting to hyperbole, you can call it both terrible and terrifying. It has at times a nightmarish quality. Were a contemporary composer possessed of Mahler's remarkable powers, both of musical invention and of orchestration, he might thus paint the darkest side of our unhappy day. The three New York audiences that cheered the symphony could hardly have enjoyed this finale. Enjoy is not the word. Let us rather say that they responded instinctively to something by which a more innocent generation would have been shocked and repelled. In fact, we know that in the past the Sixth has had this very effect.

Like most of the Mahler symphonies, the Sixth calls for a huge orchestra—incidentally, Mr. Mitropoulos conducted it, as he does everything, from memory—and included among the percussion instruments are cowbells, (used with enchanting effect in the *Andante*, as a symbol of loneliness), a "rute" (a sort of a birch brush applied to the bass drum) and a hammer. "Thus Fate knocks at the door," said Beethoven of the opening of his Fifth Symphony. In the Mahler Sixth it strikes us down.

## AN AMERICAN BRUCKNER PREMIERE

### HOOSIERS INTRODUCE FOURTH (ORIGINAL VERSION)

Fort Wayne, Indiana, Jan. 21 and 22, 1948

This week has brought another big achievement by the Ft. Wayne Philharmonic Orchestra of some 80 amateur and semi-professional musicians.

Under the energetic guidance of Director Hans Schwieger, the orchestra won critical acclaim Tuesday and Wednesday with an American premiere of Bruckner's Fourth Symphony in its original unedited version. The two concerts represented not only a big forward stride for the orchestra itself, they also indicated increasing demand by the Philharmonic's audience for more and more substantial music.

"I wouldn't have dared to present the Bruckner two years ago," Mr. Schwieger told me. "We used to do things like 'Carmen' excerpts or Liszt's 'Les Preludes.' Nowadays I'd put them on a pop concert program," he added.

HENRY BUTLER, *The Indianapolis Times*

Awe and reverence were apparent in Mr. Schwieger's conducting as he guided the orchestra and the audience through the massive tonal edifice reared by the devout and simple-hearted Austrian. It was a reading founded on a deep-seated realization of the power and the glory inherent in the music.

In the first movement of his "Fourth" Bruckner meditates now and then on some of the beauties of nature. The "Scherzo" leads the listeners out of the cathedral and lets them disport themselves for a time in the company of hunters and happy Austrian peasants. The greater part of the work, however, is impregnated with profound mysticism. Bruckner's "Fourth" is filled with nobility and loftiness of utterance. It is, to borrow Bruno Walter's apt expression, "a kind of musical Gothicism." Brahms, it is true, called Bruckner a "fraud," and Eduard Hanslick laughed the peasant from Upper Austria to scorn; but there is reason to believe that Brahms knew better, and some scholars are convinced that Hanslick was not completely honest in his diatribes.

The playing of the orchestra was not always accurate, and the tone was sometimes lacking in the sumptuousness which the character of the composition requires. Nevertheless, Mr. Schwieger imbued his reading of the symphony with warmth, sincerity and devotion. His feeling for vitality of rhythm was keen to the highest degree, and his thorough acquaintance with the structure of the work in all its many details kept him from presenting a gnarled and misshapen performance such as is bound to result when a conductor with no insight into Bruckner's way of writing undertakes to expound the Austrian master's scores. It was a memorable performance—memorable because of its dignity and its honesty of purpose, memorable because it made history in Fort Wayne and in the United States. The orchestra has never played better.

WALTER A. HANSEN, *The News-Sentinel* (Fort Wayne)

The Bruckner Symphony dates back to the last century, but has suffered from the lack of appreciation long applied to Bruckner's work in general, a neglect nobody seems to understand when said work is given competent performance in a concert hall.

The premiere American performance was better than competent. The array of part-time musicians led by the energetic Mr. Schwieger played the massive score with an alert sincerity that more than compensated for occasional technical flaws in recreating Bruckner's sprawling, cathedral-like structure. Mr. Schwieger's thoroughly informed, carefully prepared reading disclosed both the composer's heavenly vision and the peasant earth on which his feet were planted. He found vitality and character in music too many authorities heedlessly dismiss as simply inflated. It was a masterful achievement.

The young and willing Fort Wayne Orchestra is founded on lines pioneered by the Indianapolis Symphony in its earlier years under Ferdinand Schaefer. Most of its members are gainfully employed at other occupations—in fact, full time positions in local business and industry, are the inducement. R. H. Wangerin, manager of the orchestra, uses to bring many qualified musicians to Fort Wayne.

CORBIN PATRICK, *The Indianapolis Star*

The greater portion of the evening was dedicated to the work of Anton Bruckner's Fourth (Romantic) Symphony, in E Flat Major. Bruckner was a Nineteenth Century composer and organist. In this decade when the formless music of moderns receives so much acclaim and attention, it was soul-satisfying to hear the music of a long-neglected man—one who might well be worthy of being called the fourth "B."

Bruckner's conception of music is absolute. His form is classic, as opposed to the oversize-orchestras and impressionism of the Strauss school. That Bruckner was a devoted student of that master of instrumentation, orchestration, and harmony—Wagner—was readily felt. The solidity of structure (especially strings), the breadth of tone, the boldness of contrasts, and the variety of coloring were nerve-tingling. Yet it was all subsumed under the framework of the sonata form. This is genius: a composer who binds himself in chains, and then proceeds to caper as an acrobat with a moving counterpoint. The first movement contained a triple counterpoint. Shades of "Die Meistersinger!" Yet of far greater importance is the fact that in this symphony are united intellect and emotion. One knew that this music was created by a person of depth. The themes, so simple, were always bold, and the last movement, militant. To follow the intricacies of the counterpoint demands tremendous concentration. But even without so doing, the deep faith and conviction of Bruckner himself shone forth.

Mr. Schwieger's conducting, and the visible earnestness of the orchestra-members, were effective throughout. Mr. Schwieger never is a time-beater. Nor is he a mere showman—despite his prodigious memory. While details never escape him, he is not a detail-hounder. His aim, and ability, is always to convey. This is because he grasps the inner meaning—intellectual and ideal—of the composer. The orchestra responded well in most instances, especially the strings, winds, and French horns. That Mr. Schwieger had the courage to undertake a premiere—in America—performance of a neglected work shows the possibility of having eclectic tastes without lower-

ing standards. Schumann is credited with saying that his own development began when he got it into his head that there were other countries than Germany in the world. Perhaps Fort Wayne's musical development has begun in earnest, now that we realize that there are other composers than Beethoven, Brahms, and all the other familiar names. For this, thank you, Mr. Schwieger.

ROBERT V. SCHNABEL, *Fort Wayne Journal-Gazette*

## LIST OF BRUCKNER AND MAHLER PERFORMANCES

SEASON 1947-1948

### BRUCKNER:

- II Kansas City Philharmonic Orchestra, Efrem Kurtz, Conductor; Jan. 27 and 28, 1948.
- III New Haven Symphony Orchestra, Paul Hindemith, Conductor; Jan. 12, 1948.
- IV (Original Version) Fort Wayne Philharmonic Orchestra, Hans Schwieger, Conductor; Jan. 21 and 22, 1948.
- VII Pittsburgh Symphony Orchestra, Fritz Reiner, Conductor; Feb. 20 and 22, 1948.
- VIII Boston Symphony Orchestra, Serge Koussevitsky, Conductor; Boston, Nov. 7 and 8, 1947; New York, Nov. 13, 1947; Boston, Dec. 30, 1947. (Last performance broadcast over A.B.C.)  
Cleveland Orchestra, George Szell, Conductor; Dec. 11 and 13, 1947.  
Philharmonic Symphony Society of New York, Bruno Walter, Conductor; Jan. 22 and 23, 1948.
- STRING QUINTETT Little Orchestra Society, Thomas K. Sherman, Conductor; New York, Nov. 3, 1947.  
Friends of Music, San Diego and La Jolla, Calif.
- TE DEUM The Mozart Orchestra, assisted by Henry Street Settlement Music School Chorus, Robert Scholz, Conductor; New York, Mar. 14, 1948.

### MAHLER:

- I Cincinnati Symphony, Thor Johnson, Conductor; Jan. 2 and 3, 1948.  
Kansas City Philharmonic Orchestra, Efrem Kurtz, Conductor.  
Baltimore Symphony Orchestra, Reginald Stewart, Conductor; Oct. 29, 1947.
- II Boston Symphony Orchestra, Leonard Bernstein, Conductor; Harvard and Radcliffe Chorus; Feb. 6 and 7, 1948.  
Cincinnati Symphony, Fritz Busch, Conductor; Cincinnati May Festival.
- IV Kansas City Philharmonic Orchestra, Efrem Kurtz, Conductor; February 1948.  
Indianapolis Symphony Orchestra, Fabien Sevitzyk, Conductor; Eleanor Steber, Soloist; Feb. 28 and 29, 1948.
- LIEDER EINES FAHRENDEN GESELLEN  
Columbus Symphony Orchestra, Izler Solomon, Conductor; Carol Brice, Soloist; Feb. 17, 1948.  
Rochester Philharmonic Symphony Orchestra, Erich Leinsdorf, Conductor; Dorothy Maynor, Soloist; Dec. 4, 1947.
- VI Philharmonic Symphony Society of N. Y., Dimitri Mitropoulos, Conductor; December 11, 12, and 13, 1947.
- VIII Philadelphia Orchestra, Eugene Ormandy, Conductor; December 1948.  
Hollywood Bowl Symphony, Eugene Ormandy, Conductor; Summer, 1948.
- DAS LIED VON DER ERDE  
Cleveland Orchestra, George Szell, Conductor; Nov. 6 and 8, 1947.  
Philharmonic Symphony Society of N. Y., Bruno Walter, Conductor; Jan. 15, 16, and 18, 1948. (Last performance broadcast over C.B.S.)
- KINDERTOTENLIEDER  
Little Symphony Orchestra Society, Thomas K. Sherman, Conductor; Karin Branzell, Soloist; New York, December 1, 1947.

## MAHLER'S FIFTH ON RECORDS

### PROBLEM CHILD

By GABRIEL ENGEL

The following review was published in the *Saturday Review of Literature* November 29, 1947, and is reprinted by permission.

Dazzling orchestral clarity and a spirit of high jubilation are the most striking musical and emotional indices of Mahler's extremely polyphonic "Fifth Symphony," just released by Columbia in this superb recording under Bruno Walter. Listeners acquainted with his earlier symphonies (the "First," "Second," "Fourth," and "Ninth" have been published in fine recordings in this country) may wonder how so sudden and apparently total an upheaval in the composer's human and artistic make-up came about. The explanation of the amazing transparency of the massive orchestration is simple. Fifth in number, the work is, from the viewpoint of orchestral idiom, in fact Mahler's last symphony. The following note dated 1911, written shortly before his death, proves that he brought to the scoring of this "problem-child" of his fantasy, all the technical skill and maturity of artistic judgment he had gathered throughout a busy life's vast symphonic labors.

The "Fifth" is finished. I have been compelled to reorchestrate it completely. I cannot understand how I could have at that time (1902) written so much like a beginner. Clearly the routine I had acquired in the first four symphonies failed me altogether, as if the new message called for a new technique.

Spiritually, the "Fifth" seems only at first a revolutionary Mahler expression. Repeated hearings reveal it to be a closely related sequel to the earlier symphonies—a comparatively gigantic follower, to be sure, but nevertheless a symphony undeniably of the same basic emotional, as well as musical, fibre. The "Fifth" employs no themes transplanted entire from Mahler songs, as do the earlier symphonies. Its method of melodic generation is more elemental. Its principal themes arise out of subtle paraphrases of melodic fragments, dominant motives, borrowed from the Rueckert songs composed by Mahler before the "Fifth."

Structurally, the first movement, the Scherzo, and the stupendous rondo-finale are magnified re-creations of the corresponding sections in the preceding symphonies. Beside this frankly joyous scherzo, which might be called the symphonic apotheosis of the Viennese waltz, the earlier scherzos seem almost miniatures, parodies of joy, qualified by frequent touches of bitter, spiteful irony. Like the "Second," the "Fifth" begins with a funeral march. In the former the entire movement is swayed by the tragic drama of the "Death Celebration." In the "Fifth," however, the funeral march is in the main a serene song of sorrowful resignation, as brief as a prologue, uncomplicated by symphonic development. Culminating in a song based

on a phrase borrowed from one of the "Kindertotenlieder," where it is significantly set to the words "Freudenlicht der Welt" ("joyful light of the world"), it suggests the happy goal to which the work aspires.

The Adagietto separates the scherzo and rondo-finale like an exquisite elfin spirit between giant elemental forces. It is a reverie of loneliness, of world-abandonment. Significantly, its yearning first melody is an unmistakable paraphrase of the famous Mahler-Rueckert song "Ich bin der Welt abhanden gekommen" ("I am become a recluse from the world"). The two possess undeniable kinship of content. Strings and harp are the only instruments used in the Adagietto.

Just as Beethoven, in the finale of the "Eroica," had transformed the normally disjointed variation-form into a mighty framework suited to the weightiest revelations, so Mahler, in this rondo-finale, evolved a mighty integral structure, equal to the fullest symphonic formulation of spiritual triumph. From the chief motivating elements of the preceding movements he constructs two vitally rhythmic themes, not for a mere rondo, but for a rondo-like structure into which he builds a masterful double-fugue on those themes, crowning the whole with a magnificent chorale.

As for the musician who was at once the heart and mind behind this splendid first recording of Mahler's great "Fifth Symphony," Bruno Walter has performed a true labor of love. For him this means more than just another recording. It is his supreme tribute to the loftiest manifestation of his revered master's genius.

---

**UNIVERSITY OF IOWA SYMPHONY ORCHESTRA PERFORMS  
MAHLER'S FIRST UNDER CLAPP'S DIRECTION  
IOWA CITY, IOWA, JULY 16, 1947**

From the first measures through the final surging moments of this arresting composition by one of symphonic literature's most inventive creators, the orchestra noted and made proper mention of each of the varying moods, the tuneful melodies, the attention-holding harmonies, the emphasizing repetitions—and then managed to weld these many musical moments into a cohesive whole that made genuine symphonic sense.

Perhaps the one element above all others that makes of the playing of Mahler compositions such genuine experiences on the University of Iowa campus is that Doctor Clapp somehow manages to transmit to his student-faculty musicians a considerable measure of his own deep love for that composer's works. In other words, the university musicians quite obviously enjoy themselves as they play, and thus enjoying are better able to win the audience's pleasure, too.

RON TALLMAN, *Iowa City Press-Citizen*

Conductor Philip Greeley Clapp can take a deep breath and rest in the knowledge that last night's concert of the summer symphony orchestra held in the main lounge of Iowa Union was a success . . .

Following the intermission, Clapp paced the orchestra through the difficult Mahler Symphony No. 1 in D major. Professor Clapp, is certainly an enthusiastic admirer of Gustav Mahler.

The music was descriptive, gay at times, sorrowful at others. With every change of emotion, the orchestra projected the feeling with a force that held the audience captivated.

DICK DAVIS, *Daily Iowan*

## MAHLER'S SECOND SYMPHONY IN NEW YORK AND BOSTON

BERNSTEIN DEDICATES HIS FIRST PERFORMANCES  
OF RESURRECTION SYMPHONY TO MEMORY  
OF FIORELLO H. LAGUARDIA

City Symphony Orchestra — Conductor: Leonard Bernstein; Soloists: Ellabelle Davis, Soprano, and Nan Merriman, Mezzo-Soprano; Chorus: Schola Cantorum, Hugh Boss, Conductor — City Center of Music and Drama, New York (Sept. 23 and 24, 1947 — Opening Concerts of the Season)

On the afternoon of Sept. 22, 1947, Fiorello H. LaGuardia, the man regarded by many the best mayor New York ever had, was laid to rest. He was esteemed not only by his friends but by his political enemies as well, for his was that rare political genius that had translated ideals into action. He loved people and he loved the finer things of life. A passionate devotee of good music, one of his fondest dreams was the establishment of a great municipal hall where the economically less favored might attend at low cost excellent performances of the masterworks of the realm of music, operatic and symphonic. The City Center of Music and Drama was the realization of that dream. Therefore it was peculiarly fitting for Leonard Bernstein to dedicate his splendid heartfelt reading of Mahler's monumental *Resurrection Symphony* to the memory of the man who had given so much of himself to the spiritual betterment of his fellow citizens, as evidenced by this very temple of music which his dynamic personality had called into being. Here the music lover of modest means might share just such experiences of beauty as this great symphony, a work that had meant so much to Fiorello H. LaGuardia. In his moving, spontaneous prefatory tribute, Mr. Bernstein said:

"We are gathered here tonight largely because of the devotion and foresight of one man. That man is not with us tonight, for he was buried this afternoon. Therefore, although this program has already been dedicated to a great cause, I should like to re-dedicate it—not to the resurrection of his soul, for he does not need that from us. No man who gave and received so much love in his lifetime could possibly need it from us. But rather we should dedicate it to the things he stood for and fought for, along with those two others so recently taken from us, Wendell Willkie and Franklin Roosevelt. Let us dedicate our performance of this great *Resurrection Symphony* of Mahler to the resurrection of our world, that it may become the kind of world he hoped for and struggled for with his very life."

To venture the *Second* of Mahler, a composer still hotly debated thirty-six years after his death, with any but an orchestra of major caliber requires a conductor of more than ordinary courage and ability. But to per-

## Chord and Discord

form this difficult and gigantic work at an opening concert of any but the most seasoned band calls for something beyond the proverbial angel's tread; it demands a kind of daring born of flaming enthusiasm. Clearly such was the *daemon* that swayed the young orchestra led by a young conductor when the New York Symphony began its season with Mahler's *Resurrection Symphony*. Under the circumstances a merely good performance could justly have been a source of keen satisfaction to its participants; the actual stirring performance can be hailed as a major accomplishment. So completely had the youthful leader communicated his enthusiasm to the players, soloists, and chorus that the fiery playing and singing more than compensated for some shortcomings of polished detail. Cold, chiseled perfection would have been a sad exchange, if achieved at the sacrifice of such overwhelming warmth and zeal. The principal rough spots evident at the first performance were ironed out to a great extent when the work was repeated. Mr. Bernstein built up the climaxes with amazingly mature skill; none of the highlights of the work, whether dramatic or lyric, seemed to elude him. He painted its darker moments in especially sombre colors, its message of hope in truly radiant hues. As the strings sang and the music soared this listener realized that *Gustav Mahler—Song Symphonist* was indeed a happy choice for the title of the Mahler biography by Gabriel Engel.

Ellabelle Davis and Nan Merriman proved to be excellent artists. Miss Merriman's singing of *Urlicht* will long be remembered as an outstanding rendition. She had obviously mastered the deepest implications of the text, so tellingly did she convey its meaning to the audience. Beneath her flawless diction, the vibrant warmth of her voice, and her intelligent interpretation the unutterable loneliness of the great soul from which this song sprang found poignantly eloquent tongue.

The gusto of the choral rendition revealed the choir's own pleasurable participation in the music. Its almost hushed entrance, its expectant pronouncement of the passage, "*Bereite Dich*", and of the climactic close (sung rather than shouted), its invariably clear enunciation, these were virtues of achievement reflecting great credit upon Mr. Hugh Ross, distinguished conductor of the Schola Cantorum.

The public, which, in the words of the late William J. Henderson, is the final jury, rose to its feet, cheering and whistling its approval at the end of both performances.

### MAHLER'S RESURRECTION SYMPHONY RETURNS TO BOSTON AFTER THIRTY YEARS

Wins Acclaim of Critics and Audience

Boston Symphony Orchestra—Conductor: Leonard Bernstein; Soloists: Ellabelle Davis, Soprano, and Suzanne Sten, Contralto; Chorus: Harvard Glee Club and Radcliffe Choral Society, G. Wallace Woodworth, Director—Symphony Hall, Boston, Feb. 6 and 7, 1948.

Why it has taken a generation to hear the "Resurrection" Symphony again one may only wonder, considering how many piddling items have turned up in that time. Let us give thanks that we have heard it at long last, for it is a masterpiece of splendor and noble vision and of a scope that can only be called tremendous.

This is characteristic Mahler, full of that composer's painfully sharp

sense of mankind's struggle and aspiration, joy and suffering, and of his unanswerable last question: What is the meaning of Life itself? But the pessimism that overwhelmed Mahler in his later years of the Ninth Symphony and "Das Lied von der Erde" was yet to come when he penned the magnificent and profound pages of the Second Symphony.

He ended it upon a mood of shining hope and reassurance, of eternal life to come after the Last Judgment which his mighty horns, trumpets and trombones so impressively herald. The sense of mystery, so essential a part of Mahler's musical expression, permeates the first movement and most of the scherzo. The "Primal Light" section wherein, on words taken from the verses of "Youth's Magic Horn," man asks for light to guide him, is of a really poignant beauty. As for the majestic finale, that comes as close, I think, to anything one will ever hear in suggesting The Last Trump and the choir of the Heavenly Host.

Yesterday's performance was the finest work I have yet heard from Bernstein, who has caught the spirit and the style of Mahler. He showed he can handle triumphantly the huge apparatus Mahler needed to express himself. Bernstein further achieved a personal and an emotionally overwhelming performance. This was no less than masterly and deserved every cheer and round of handclapping of the noisy ovation which followed the last E-flat major chord.

Miss Davis and Miss Sten sang with absolute beauty of tone and style, and the chorus produced a marvelous pianissimo, thanks to the excellent preparation of G. Wallace Woodworth. The orchestra, especially the hard-driven brass, was magnificent. Very likely this will prove the high point of the Symphony season.

CYRUS DURGIN, *The Boston Globe*

It is difficult to write calmly and impossible to write adequately about what took place at Symphony Hall yesterday afternoon. Before an audience that largely did not know the music or possibly that such a piece existed, Leonard Bernstein restored to the repertory of the Boston Symphony Orchestra the Second or "Resurrection" Symphony of Gustav Mahler, previously heard here at two special concerts under Dr. Muck just 30 years ago. Mr. Bernstein's triumph, and incidentally Mahler's was no less dramatic than the Symphony itself.

It was obvious all along that Mr. Bernstein had orchestra and audience in the hollow of his hand, and the music in his head and in his heart. Through the three purely instrumental movements the spell worked by piece and performance was unbroken. Then Suzanne Sten added her contralto voice to the orchestra and sang, with deep devotion, the "Urlicht" (Primal Light), that is the key and clue to the work, the explanation of that which has gone before and of the tremendous things that are to come.

The finale, which Mahler has directed should follow without pause, has been described as a vast tonal fresco of the Day of Judgment. The orchestra sounds the crack of Doom; there are calls from the horns; there is the tread of the hosts marching to the Judgment Seat. The chorale of the funeral first movement is recalled and measures about to be sung are played by the instruments. The voice of doom is heard again and again and after it those amazing bird-calls, in flute and piccolo, that "symbolize the last living sound of a mortal world about to be dissolved." Then, as

## Chord and Discord

from the other world, the chorus—ah, so softly—intones the words "Aufersteh'n, ja aufersteh'n wirst du, mein Staub" (You will rise again, my dust), and the Symphony begins to move toward its climax.

Yesterday this sublime setting of Klopstock's "Resurrection Ode" was entrusted to the choirs of Harvard and Radcliffe, too few in numbers, because of the restrictions of the stage, but mighty in valor. With the chorus was Ellabelle Davis, to sing the measures for soprano solo, as these particular ears have never heard them, and Miss Sten once more entered the picture, with Mahler's own words, "Believe, my heart, you have lost nothing." All too quickly came the overpowering conclusion, in which the bells peal and the very gates of Heaven are opened. When the audience recovered itself, pandemonium reigned. The emotional storm which had slowly gathered was finally released. And, you can take my word for it, no such excitement has been seen in Symphony Hall in many a year.

WARREN STOREY SMITH, *The Boston Post*

Mr. Bernstein achieved a major triumph yesterday with the performance of Mahler's immense Second Symphony. It was an interpretation that caught fire from the first stormy measures to the glorious finale where the composer unleashes all the musical forces at his command. This achievement was the more remarkable in that, owing to the subscription audience, the stage could not be enlarged, and the augmented orchestra, chorus and soloists had to squeeze in as best they could. It must have been very cramping for the players in the hour and a quarter the Symphony takes, but they did their duty with a will and turned in some superlative playing.

Mahler's genius was a strange one and he did not always succeed in pulling off his grandiose designs. The Second Symphony, however, is uniformly and in the end overwhelmingly successful. It is my feeling that too much is written about Mahler's music in the shape of programs for it. Does it really help us in listening to the third movement to read all about St. Anthony and the fishes and the vulgarity of the world? Something, of course, about "Des Knaben Wunderhorn" and the texts of the last two movements should be noted, but for the rest I found Paul Stefan's program mainly pretentious nonsense. Whereas I enjoyed the music thoroughly and was never bored for one instant.

Some have professed to find the third movement one of the finest things in all Mahler, but the truth is that the whole Symphony abounds in these happy touches. For others the ineffable peace of the fourth movement will have been one of the most moving things in the Symphony. And here, incidentally, the effect was enhanced by the beautiful singing of Suzanne Sten. Mr. Bernstein secured a perfect accompaniment for her, and the result was peculiarly felicitous.

ALEXANDER WILLIAMS, *The Boston Herald*

## "SALOME" AT CITY CENTER

### LASZLO HALASE CONDUCTS MEMORABLE PERFORMANCES

Although *Chord and Discord* devotes its efforts primarily towards promoting increased public interest in the music of Bruckner and Mahler, it has on occasion included articles calling attention to unrelated musical events of outstanding importance and merit. Indubitably of this category was the series of presentations of *SALOME* during the spring and fall seasons of 1947 by the New York City Opera Company at the New York City Center of Music and Drama. Here was an inspired group heroically working on an all too slender budget, yet with results so successful that they might challenge the best achievements of a long established operatic institution of foremost rank.

The critical keynote of this fine production was struck in the spring of 1947 by Mr. Biancolli of the N. Y. World Telegram, who wrote following the first performance: "Anyway, the City Center Troupe has finally hit the operatic jackpot with Strauss' *SALOME*—and one can only applaud its courage and cheer its success."

Appropriately, therefore, the N. Y. City Opera Company opened its fall season on Sept. 25 with the Strauss classic, "one of the toughest scores in the repertory", according to Mr. Biancolli. Again, as in the spring, critics acclaimed the production as important musical news, while audiences cheered—and with good reason. Here, a reality, at last, was that long cherished dream of the late Fiorello H. La Guardia, the dream of providing the people of the City of New York with the opportunity to hear grand opera produced in the grand manner at prices that the less well-to-do music lover could afford.

At a time when truly great performances of opera in America are sadly conceded by some experts to belong to a faded past, productions conceived in so high a spirit of artistic fervor evoke nostalgic memories of that allegedly vanished operatic grandeur. With this *SALOME*, however, we are once again experiencing a truly unified production of one of the most complicated modern masterworks of the singing stage, again realizing that music drama as conceived by Wagner need not languish a mere unattainable ideal. We see again that, almost insurmountable obstacles notwithstanding, so long as the work is given due careful preparation, it can be translated into a living reality, stirring our emotions to their very depths. Undoubtedly the most notable feature of *SALOME*, as presented by the N. Y. City Opera Company, was the complete subordination of each participant to the role in which he or she was cast. Though several of them deserved the rating of "star", yet none assumed the (alas, too familiar) role of a planet trying to outshine the surrounding lesser luminaries.

Among the minor parts, special mention should be made of Norman Scott's movingly beautiful rendition of the lines about Jochanaan: "He is a holy man—He is very gentle. Every day when I bring him food, he thanks me."<sup>1</sup>

William Horne's clear, resonant voice brought out the pathos of the lines of Narraboth, the weak, lovesick, unfortunate Syrian captain. The

<sup>1</sup> "Er ist ein heiliger Mann—Er ist sanft. Jeden Tag den ich ihm zu essen gebe, dankt er mir."

passion in his voice when he sang the passage: "How fair is the Princess Salome this evening."<sup>3</sup> literally rang throughout the hall. Vasso Argyris' portrayal of the same role made Narraboth one of the more important characters of the drama. He sang effectively and acted with great skill. His gradual surrender to the wiles of the young princess, culminating in Narraboth's defiance of the Tetrarch's orders, and his growing expression of despair at Salome's continued efforts to tempt Jochanaan, held the attention of the audience.

Ralph Herbert, the Jokanaan in five performances, uttered his dire predictions and condemnation of the promiscuous Herodias with great power. The clarity of his diction made the words wholly intelligible. He has a beautifully resonant voice. Carlos Alexander as Jokanaan also made the character highly impressive. His acting, singing, and appearance seemed to intensify the Prophet's fanaticism. Substituting for Ralph Herbert on twenty-four hours notice, the twenty-three year old Michael Rhodes, a newcomer to the operatic stage, distinguished himself by his highly intelligent portrayal of Jokanaan. His is a young voice, vigorous, fresh, pleasing. He seemed a somewhat more gentle prophet than the others. Memorable was the religious ecstasy he instilled into the lines: "He is in a boat on the sea of Galilee and is speaking to his disciples. Kneel on the shore of the sea and call unto Him. And call Him by name . . ."<sup>4</sup>

Excellent as it was at the very outset, Frederick Jagel's characterization of the lustful, degenerate, neurotic Herod, possessed by a vague, indefinable fear, a role shot through with every nuance of abnormality, has grown steadily more convincing. Through his artistry the character of Herod takes on the significance the poet intended for it as one of the central figures and prime movers of the tragedy. At his debut on Oct. 30th, Edward Molitore made it evident that he had given a great deal of thought to the role of Herod. The Tetrarch's vain attempt to hide from Herodias his fear of the Prophet ("He said nothing against you. Besides he is a very great prophet."),<sup>5</sup> his alarm at the thought that the dead might return ("What! He raises the dead? . . . I forbid him to do that. It would be terrible if the dead returned.");<sup>6</sup> his nervous delight while watching the dance; his pleas that Salome accept almost anything but the head of Jokanaan as a reward for the dance; his complete sense of frustration and despair as he utters the words: "Let them give her what she asks. She is in truth her mother's child:"<sup>7</sup>—all these were highlights in his excellent characterization of the unsympathetic Herod. Mr. Molitore has a rich voice; his diction is clear for the most part.

Growing familiarity with the role increased the vividness of Terese Gerson's portrayal of the degenerate Queen. Contempt for Herod swayed her whole being. Voicing this scorn seemed to be of greater moment to this Herodias than avenging Jokanaan's condemnation of her. She almost sneered as she addressed these words to Herod: "My daughter and I are

<sup>3</sup> "Wie schön ist die Prinzessin Salome heute Abend."

<sup>4</sup> "Er ist in einem Nachen auf dem See von Galiläa und redet zu seinen Jüngern. Knie nieder am Ufer des Sees, ruf ihn an und rufe ihn beim Namen . . ."

<sup>5</sup> "Er hat nichts gegen dich gesagt. Oberdies ist er ein sehr grosser Prophet."

<sup>6</sup> "Wie, er erweckt die Toten? . . . Ich verbiete ihm, das zu tun. Es wäre schrecklich, wenn die Toten wiederkämen!"

<sup>7</sup> "Man soll ihr geben, was sie verlangt! Sie ist in Wahrheit ihrer Mutter Kind!"

of royal blood. Your father was a camel driver and a thief and a robber to boot."<sup>7</sup> Mary Kreste's characterization of Herodias was wholly convincing. She directed her wrath at Jokanaan. Her determination for revenge never flagged. There was passion in her voice as she urged Salome to insist upon her "pound of flesh." She reveled in her triumph as she told the miserable Herod: "My daughter did the right thing."<sup>8</sup>

The writer does not recall a Salome comparable to Brenda Lewis's. Pleasing to the ear—and, what is so very rare in opera, to the eye as well—this extremely intelligent, superb actress possesses a voice of great beauty, wide range, and extraordinary telling power. To hear a Salome merely sing this difficult part with such ease is an experience rare enough, but to witness, in addition, an exciting interpretation of the Dance of the Seven Veils renders that experience truly unforgettable. Her cajoling of Narraboth into disobeying the Tetrarch's command not to allow anyone to see Jokanaan; the scene with the Prophet; her brooding after Jokanaan spurns her advances (as Pursifal rejects Kundry's); her first seemingly naive request for the head of Jokanaan; her later ferocious demands that Herod live up to his oath; all these dramatic high-spots revealed Miss Lewis as a consummate actress, able to carry her audience with her. She was a naive, yet a cunning, a brooding, neurotically passionate, yet determined Princess of Judea who, despite the sinister, revolting spell in which her soul was hopelessly gripped, did not fail to arouse pity as she sang the words of the epilogue: "The secret of love is greater than the secret of death."<sup>9</sup> Perhaps the suggestion of ultimate redemption in the closing song-like bars of the score is the artist's answer—compassion for even this supreme sinner, finally awakening, though only to the vaguest glimmer, to the enormity of her sin.

The settings designed by H. A. Condell provided an effective background for the sinister plot. Especially impressive were the floating clouds hiding the sickly moon every now and then, creating the impression of a bad omen and lending emphasis to the words at the beginning of the play: "Something terrible will happen."<sup>10</sup>

Leopold Sachse, the stage director, deserves special recognition for the teamwork on the stage—teamwork that lent importance to the drama as drama rather than to the individual singing-actors.

As for the mighty contribution of Laszlo Halasz, artistic director and conductor, it would be difficult indeed to praise too highly his work in unifying the presentation of so exacting a work. His intelligent, emotionally inspired reading of the dramatic score projected its tragic spell with an integrity that seemed to unite stage, orchestra, and listener in one perfect participating experience. His interpretation underlined with ever increasing intensity the sultry, foreboding, tragic atmosphere of the drama, but faintly relieved at the close of the epilogue by the mere suggestion of a motive of redemption.

For the discriminating, rich and poor alike, City Center productions would be a bargain even at considerably higher prices.

<sup>7</sup> "Meine Tochter und ich stammen aus königlichem Blut. Dein Vater war Kameltreiber, dein Vater war ein Dieb und ein Rauber obendrein."

<sup>8</sup> "Meine Tochter hat recht getan."

<sup>9</sup> "Das Geheimnis der Liebe ist grösser als das Geheimnis des Todes."

<sup>10</sup> "Schreckliches wird geschehen."

## SYMPHONIC CHRONICLE

### A RECORD OF CRITICAL AND POPULAR REACTION

#### GUSTAV MAHLER: FIRST SYMPHONY

*Philadelphia Orchestra, Dimitri Mitropoulos, Conductor, (Robin Hood Dell Concerts); July 27, 1946.*

The Mahler Symphony repeated its success of last season. Though some of Mahler's works are adjudged dull, this opus belied its length, in its forthright construction, firmness of melodic line and frequent freshness. Mitropoulos conducted with a keen insight into its musical qualities, and both he and the orchestra won an ovation.

SAMUEL L. SINGER,  
*The Philadelphia Inquirer*

Musically, the most interesting program of the week took place at Robin Hood Dell last night. Dimitri Mitropoulos conducted, with his usual excellence, Schubert's Symphony No. 6, in C Major, and Mahler's first in D Major. Unfortunately, the fact that it was Saturday night kept the attendance down to 3700 for this truly rewarding concert.

It (Mahler's I) is a piece which holds the attention of the listener very closely, without being overly intellectual and without lacking spontaneity. Its seriousness does not exclude sensuous beauty. The second movement, *Kräftig Bewegt*, is particularly attractive; almost light. One welcomes the playing of a work which has all the hallmarks of greatness and is yet so rarely heard.

C. S., *The Philadelphia Record*

Franz Schubert and Gustav Mahler, not often associated on one program, proved verdant pastures of music, where the lyric qualities of each composer, the contemplative passages, and the joyous pulse of life were seized upon by the conductor and communicated with illumination.

There were 3,500 persons on hand to enjoy this music, which was postponed from the regular Wednesday night schedule. They heard the rarely-played Mahler First Symphony in D major, a long work, whose beauties require gifted intuition and a thoughtful, rather than

heavy hand, on the part of the conductor. Following the excursions of Mahler into the pensive realm of fancy, where nature and philosophy mix, was a rewarding experience for the audience.

E. E. S., *The Evening Bulletin*

#### ANTON BRUCKNER: FOURTH SYMPHONY

*Philadelphia Orchestra, Dimitri Mitropoulos, Conductor, (Robin Hood Dell Concerts); August 9, 1946.*

Bruckner composed with a wide sweep, using all choirs of the orchestra freely, particularly the brass, a good instance being the dancing Scherzo. The first movement has simple themes vigorously treated.

SAMUEL L. SINGER,  
*The Philadelphia Inquirer*

This is not the kind of symphony to send you away whistling and it's easy to understand its lack of popular appeal. But it does leave you with a challenge and the desire to hear it again. Under the masterful baton of Dimitri Mitropoulos and the superb playing of the Dell orchestra, it proved an exciting and stimulating experience.

JUNE HERDER,  
*The Philadelphia Record*

As far as Philadelphia is concerned the programming of a Bruckner symphony is an extraordinary event and many have had to form their knowledge and appreciation of this master's accomplishments through available phonographic recordings or occasional radio broadcast from other cities.

It has been said that the length of Bruckner's symphonies militates against their acceptance in the concert repertoire—a specious argument in view of the fact that in the seventh and eighth symphonies of Shostakovich, not to speak of other less-publicized orchestral creations, present-day conductors and audiences have not hesitated to welcome works of an hour or more in duration. In the final analysis, however, it is the worth, rather than the length, of a composition that

should determine its recognition. A piece of great music may consume a long time in performance yet seems short because of its superlative qualities and elements. On the other hand a meretricious work, while only taking a short time to get through, will seem boring and much too long.

For his listing of Bruckner's magnificent fourth symphony at the Dell, Dimitri Mitropoulos is to be heartily thanked. He is one of our American conductors convinced of the high merits of the composer's music and its title to be heard by audiences. . . . From start to finish the symphony's musical content is replete with passages of touching beauty and refreshing force, and each of the four movements supplies its own particular features to stir and delight. In details of construction and orchestration it certifies Bruckner's sure mastery. There are fascinating modulations, remarkably wrought contrapuntal sections, and themes of stunning contours and patterns. To the attentive listener, unfamiliar with the symphony of Bruckner's music, it will come as a revealing and stimulating experience, the strongest kind of argument that we should have more of the same. For those here who already appreciate the grandeur of the symphony, the occasion will offer gratifying compensation for having had to wait so long for a "flesh and blood" performance of the work in this city.

WILLIAM E. SMITH,  
Robin Hood Dell Review

#### ANTON BRUCKNER: EIGHTH SYMPHONY

Boston Symphony Orchestra, Serge Koussevitzky, Conductor; Oct. 11 and 12, 1946.

Two strongly contrasting symphonies, Mendelssohn's "Italian" and the Eighth of Anton Bruckner, make up this week's program by the Boston Symphony Orchestra at Symphony Hall. Serge Koussevitzky chose Bruckner's long and massive work as an observance of the 50th anniversary of the composer's death.

Although composed and revised between 1884 and 1890, Bruckner's Eighth has certain aspects that looked considerably ahead of its time. In it you find the same German continuity and logic you find in Brahms or Beethoven, and you find Wagner to be the origin of much of the instrumentation. Yet there is more

than that: a certain sense of modernity that led to the more sophisticated and involved style of Mahler and others who followed.

The element native to Bruckner, however, was a sense of emotional naiveté, of splendid visions and unworldliness. That element is on every page of the Eighth Symphony. Here, perhaps, is the fact that has kept Bruckner from achieving wide popularity. It very well may be that concert-goers are still confused by the paradox of naive expression set in a complicated and grandiose style, and that it is hard for them to distinguish between Bruckner's highly developed technic and the provincial simplicity of the man himself.

CYRUS DURGIN,  
The Boston Daily Globe

According to how you look at it the monumental Symphony of Bruckner was judiciously curtailed or ruthlessly cut. The performance consumed not much over 50 minutes and the piece should last closer to an hour and a quarter. In the case of the Adagio, always the climax of any Bruckner Symphony, it is a shame to omit a single measure. It is all too heavenly. Yet this is a restless age and rather than have his audience grow fidgety a conductor will use the blue pencil. Nevertheless, we have had to endure the entire opening Adagio of Shostakovich's Eighth Symphony, lasting some 20 minutes; and Bruckner had a great deal more to say and said it a great deal better.

To turn to Bruckner's merits, we have here, as elsewhere, themes of incomparable strength and beauty, wondrous harmonies and magnificent orchestral sonorities. This simple, uncouth man spoke with the voices of Beethoven, Schubert and Wagner, not copying them but paralleling their eloquence with his own. Dr. Koussevitzky gave the Symphony a fervent and devoted reading, one in which the many beauties of the music were fully revealed.

WARREN STOREY SMITH,  
The Boston Post

But the essential nobility and spiritual fervor of the man are what remain in the mind after hearing the Eighth Symphony. These qualities were the more deeply impressed on us by the intense and sympathetic interpretation which Dr. Koussevitzky and the orchestra gave of the score.

ALEXANDER WILLIAMS,  
The Boston Herald

## ANTON BRUCKNER:

## FIFTH SYMPHONY

Chicago Symphony Orchestra, Desire Defauw, Conductor; Nov. 14 and 15, 1946.

The Chicago Symphony Orchestra dedicated its concert at Orchestra Hall last evening to Anton Bruckner, who died half a century ago last month. In order to demonstrate that the composer really had been one of the notable figures of his day—and is even of ours—Desire Defauw, who conducted, revived his Fifth Symphony, which had not been heard in Orchestra Hall for nearly 40 years.

It had been played in Chicago only once before last night and then under the baton of Frederick Stock, who, we believe, did less well with it than his successor, inasmuch as he omitted to provide the extra instruments of brass which Bruckner added to the finale of his work. In any case, the revival of this massive score was a welcome one, for much of it is fine and noble music, sometimes, to be sure, a little long-winded, but fertile with thematic material of high distinction.

The performance was admirably conceived and executed. Whether the conductor's idea of the score was the most exalted Bruckner cannot be declared, but it did achieve great richness of tone and well molded phrasing. The brass passages were handled with impeccable taste, not made too exuberant until the final moments, when the chorale was chanted fortissimo, with all the stops pulled out.

FELIX BOROWSKI,  
The Chicago Sun

It's too bad his (Bruckner's) over-zealous friends have made a cult of Bruckner. The great and superior rival of Brahms deserves to be heard more often on his own merits.

C. J. BULLIET,  
Chicago Daily News

Both strings and winds had a purity of tone that fell happily on the ear, and at the finale when the brass choir spoke from its lofty place, it made you think there might be something to the Bruckner school holding out for the gentle old Austrian's apocalyptic visions.

CLAUDIA CASSIDY,  
Chicago Daily Tribune

## GUSTAV MAHLER:

## FOURTH SYMPHONY

San Antonio Symphony Orchestra. Max Reiter, Conductor; Frances Yeend, Soloist, Dec. 19, 1946. First performance in San Antonio.

The mighty Fourth Symphony by the controversial Bohemian composer, Gustav Mahler, enjoyed an expressive, poetic reading by Reiter and the Symphony. The work is a wondrous poem which is transformed into a vision of heavenly bliss in the third and especially the fourth movement where the poem, "The Heavenly Life," is sung by a soprano soloist.

In the solo part of the Mahler Symphony and two Strauss lieder, "Freundliche Vision" and "Kling," Mozart's "Alleluja" and Marietta's Song from the Korngold opera, "The Dead City," Miss Yeend displayed a rich, well-controlled lyric soprano voice. In the scant time since Miss Yeend's last appearance here with the Symphony—she sang the role of Micaela in the organization's production of "Carmen" last February—her voice seems to have grown in quality and increased in range. This depth and texture were especially noted in the solo part of the Mahler work.

San Antonio Evening News

## GUSTAV MAHLER:

## DAS LIED VON DER ERDE

Dallas Symphony Orchestra. Antal Dorati, Conductor; Set Svanholm and Suzanne Sten, Soloists, Jan. 12 and 13, 1947.

A music and a performance of superlative beauty were heard here Monday night, an occasion which the discerning hearer well may store in memory as one of the significant events of his musical experience.

The music was Gustav Mahler's "Das Lied von der Erde" ("The Song of the Earth"), his last large symphonic work.

In Miss Sten and Svanholm we had two superb artists, vocally and artistically. When have we had a voice as brilliant and compelling as Svanholm's or one so like molten gold as Miss Sten's? Aside from the appeal as gorgeous sound of tone and quality, the service of fine musicianship was devoted to the interpretation of the difficult score, difficult

technically and enormously so emotionally.

"The Song of the Earth" is made up of six movements, allotted three each to the singers, who virtually are a part of the instrumental complex, and uses for text purported German translations of Chinese poems. It was unfortunate that the audience was not supplied with the English version of the text. The text reflected the trend of German intellectualism during the early years of the present century, an inevitable development through pessimism, negation and materialism to disaster of which the first World War was a symbol rather than a cause. Even so, the poetic beauty of the text and its veiled symbolism were ideal stimulus to Mahler's soaring imagination, and the musical texture with which he surrounded it is of exalted beauty, as materialized in a musical complex rich in the magic of inspired uses of instrumental means.

A compelling device is the use of melodic formula A-G-E, which becomes at the end a kind of dematerialized extension of the tonic chord. The brightness of the two middle movements, named "Youth" and "Beauty," with their pentatonic scale formula, led on to the intensity of the final section, "The Farewell," wherein Miss Sten sustained even in inaction the emotional exaltation of the situation.

##### DAS LIED VON DER ERDE

Los Angeles Philharmonic Orchestra, Alfred Wallenstein, Conductor; Set Svanholm and Eula Beal, Soloists, Jan. 16 and 17, 1947.

Gustav Mahler's great song-cycle, "Das Lied von der Erde," occupied the attention of Alfred Wallenstein and the Philharmonic Orchestra last night.

Contralto Eula Beal and tenor Set Svanholm were soloists for the tender and bitter soliloquies from Chinese poetry to which Mahler set the music which many consider his finest. Even those who cannot go all-out for his symphonics have to succumb to its final bitter-sweet moments, whose whispered syl-

lables of resignation and farewell closed his own life.

MILDRED NORTON,  
Los Angeles Daily News

#### GUSTAV MAHLER:

##### LIEDER EINES FAHRENDEN GESELLEN

Cincinnati Symphony Orchestra, Eugene Goossens, Conductor; Donald Dickson, Soloist, Jan. 17 and 18, 1947.

Eugene Goossens returned to the Symphony Concerts Friday afternoon and put on a program of such positive musicianship and such constant interest that it will stand on its own merits and match any other program of the season. Donald Dickson also made a sure place for himself with Cincinnati Symphony patrons by the fine way he interpreted Mahler, Mednikoff, Massenet and Rachmaninoff.

Dickson has a brilliant baritone voice that has the Wagnerian tenor quality in the top notes—which does not mean that his scale was at any time uneven. Dickson had unlimited power and he colored soft tones so that they were exceedingly beautiful. His interpretation of the four songs in the Mahler "Lieder eines fahrenden Gesellen" established him a future favorite. His German was clear and so easily understood that the English translation in the printed programs was unnecessary. Goossens and the orchestra gave him sure support and the audience enjoyed each song so much that they interrupted the cycle with positive applause and called Dickson back to the platform many times.

HOWARD W. HESS,  
The Cincinnati Times-Star

Works of Mahler's youth, between engagements as chorus-master for the Italian opera season in Vienna and director at the Cassel opera house, the song-cycle seems influenced by dramatic association with the stage. Mahler wrote both the words and the music; the tunes were simple and folklike and might appear trivial except for the effective orchestration, which was Mahler's real idiom. . . .

The instrumental coloring is kaleidoscopic, and the orchestra played it so-fashion. The melodic line is simple but emotional, and thus Dickson sang it, his voice well-controlled from a tenor-like G, all the way down to a full-blown A.

JOHN P. RHODES,  
Cincinnati Enquirer

ANTON BRUCKNER:  
NINTH SYMPHONY

Boston Symphony Orchestra, Bruno Walter, Conductor, Jan. 24 and 25, 1947.

Every time a work of Bruckner is performed, and that sadly is not often, the whole question of "Bruckner and Mahler" is brought up again. Those two late romantic composers of the 19th Century are regarded as great by some, and by others as negligible. At any rate, while the music of Bruckner and Mahler is still hotly disputed, the fact remains that Mahler is not frequently performed here, and Bruckner even less so.

The Bruckner Ninth shares with its fellows those typical Brucknerian qualities of remarkable orchestral counterpoint, soaring expression, vast formal scope and towering visions. It is really a great symphony in its facture and in what a noble if naive and peasant soul succeeded in expressing. It is at once austere and intimate, general and personal, passionate and tender as, in the greatest of all paradoxes, great works of art can be.

If the first movement is the most heroic of the three, the closing adagio, rapt and exalted, is the peak and crown of the Symphony. Surely it is true that while the Ninth, from a formal point of view, may be unfinished, no finale could follow the adagio, which was Bruckner's valedictory. Incidentally, Mr. Walter gives us this week not the Ferdinand Loewe edition, but the "Urtext," the original score as Bruckner left it.

As last week, Mr. Walter's conducting is an almost miraculous blend of expression genius, consummate orchestral technic and profound scholarship.

CYRUS DURGIN,  
*The Boston Globe*

The controversy over the two versions of Bruckner's Ninth Symphony is mild compared to the hostilities over Bruckner himself. To his supporters he is a genius of the first order, to his detractors, a gifted but clumsy peasant. Here again, it is useless to join in the fray. If your predilection is for the Bach-Haydn-Mozart line you still cannot deny that Bruckner, for all his debt to Wagner, had individuality and was a master of composition and orchestration. If you belong to the other wing, you will not mind, will indeed revel in, his episodic style, his verbosity, his surcharged emotion.

Regardless of sides, there was no dis-

puting the masterly quality of yesterday's performance, which was as persuasive a statement of Bruckner's case as can be imagined. Dr. Walter left no beauty unrevealed, no climax understated. His success repeated that of last week, with ovations again from audience and orchestra for every number. . . .

L. A. SLOPER,  
*The Christian Science Monitor*

As a community we may be said to enjoy an acquaintance with great music. Some of it, thanks to our present-day habits, has become almost a drug on the market. It was an unusual experience, then—and for a fortunate few a rather crushing and shattering one—to be brought face to face at yesterday's Symphony Concert for the first time in 33 years with one of the greatest things in all music. The work in question, the Ninth Symphony of Bruckner, was restored to us (in its original, unedited form) by Bruno Walter, and no hand would have been worthier for the task.

To give Dr. Koussevitsky his due, he has planned more than once to revive the Bruckner Ninth; but intention is one thing and accomplishment another. Accordingly, to Mr. Walter our deepest gratitude. The three movements of the Symphony which Bruckner left unfinished on his deathbed, and which he desired to dedicate to "the dear God," are not easy to take in at a first hearing. Nor would many yesterday have remembered the three previous performances in Symphony Hall between 1904 and 1914. The advantage lay with those who have been able to familiarize themselves with the work through its recording, while only last year Mr. Walter broadcast it from New York.

The tremendous first movement is a direct descendent of the first movement of Beethoven's Ninth, and Bruckner, alone among subsequent symphonists, was able to wield the thunderbolts of the Jove of Bonn. Will the last trump sound in more awful accents than the chief theme? Yet there are few things in music more beautiful than the group of melodies that bring the needed contrast. Surely no one yesterday could have had any difficulty with the scherzo, which an early critic called the ugliest piece of music ever written, though many may have found the long adagio a hard nut to crack. In this music Bruckner tried to piece the veil which separates us from the Beyond. You may find some of it cryptic, but blind is he who cannot see in it celestial visions. Mr. Walter, who

conducted as a priest before the altar, had his reward, if he so considered it, in the cheers that accompanied his final return to the stage. He had given us a performance that we will not soon forget.

The Boston Post

## GUSTAV MAHLER:

### FIFTH SYMPHONY

*Philharmonic Symphony Society of New York, Bruno Walter, Conductor, Feb. 6 and 7, 1947.*

With a managerial storm bursting over its head, the Philharmonic-Symphony Orchestra went its blithe way in Carnegie Hall last night with a memorable concert led by Bruno Walter.

Except for the usual speculative chit-chat in the lounge at intermission time, the concert moved ahead as if the main thing in music was music and the main people in it the musicians.

Twin-featured on last night's program were Artur Rubinstein's stirring rendering of Chopin's E minor piano concerto and a no less stirring reading of Gustav Mahler's Fifth Symphony.

For both the Mahlerites and Rubinsteinites were in clover last night; whether the two were always one and the same was hard to say. Probably Artur's friends outnumbered Gustav's.

But the ovation following the long-shelved Mahler masterpiece really did every true Mahlerite's heart good last night. This seemed like one of the biggest tributes yet given the music of this lonely and tragic genius.

It is no news that Mahler's case in New York is still an uphill struggle. What is always news is a great performance of one of his symphonies and still greater news, a warm reception.

Opinion, as usual, was divided as to whether this acclaim went to a great symphony or a great conductor. My feeling is that it went to both, with some extra warmth, no doubt, to Mr. Walter.

And Mr. Walter deserved it—first for the courage of rendering so huge and controversial a score; second, for the devoted attention given it. For only a disciple could show the loving care he did.

The man made you feel the importance of the slightest phrase. He seemed to be saying all the time: "Don't fail to notice this and this and this. Everything counts in this music."

I agreed with him last night. I felt more strongly than ever that Mahler was

always giving his best to his music, that he never slurred over a phrase or took short cuts to the grand finales.

Granted the symphony is long; many say it repeats itself, and that what is repeated is often childish and banal. Actually there is less repetition in Mahler than in most classic composers. He is always saying new things.

Maybe he says too many of them, or, as my neighbor remarked last night, maybe "he talks too much." The answer is to hear Mahler more often in readings that overlook nothing in bringing out the power.

Mr. Walter's reading, for instance. More of that kind of performance and Mahler's symphonies would soon become daily concert bread to local fans. . . .

LOUIS BIANCOLLI,  
N. Y. World Telegram

Bruno Walter, the incomparable interpreter of Mahler, chose the Austrian composer's Fifth Symphony to begin his seasonal engagement as guest conductor with the Philharmonic-Symphonic Orchestra in Carnegie Hall last night. It was a triumphant occasion for all concerned: composer, conductor and orchestra, for no performance of any work, no matter how superb, could have elicited the prolonged ovation tendered Mr. Walter and the orchestra, had the music itself not been worthy of the extraordinary discourse accorded it.

All of Mahler's symphonies are difficult to perform, but none probably makes such inordinate demands on the brass choir which is employed in this work for purely expressive objectives to a degree unparalleled in any other symphonic product by a first-rate composer.

Mahler's mastery of his resources reaches a climax in this symphony. His command of the architectonic aspects of his art, his utilization of dissonant counterpoint for emotional intensification reach new heights of accomplishment here, heights hitherto unattained in his earlier symphonies. Since Mahler stubbornly maintained that this C sharp minor symphony had no program it would be both futile and overweening to formulate one for him; but this music surely encompasses a wide gamut of human attributes as it unfolds its lengthy course—the desolation of the funeral march, the anguished despair of the second half of the first movement, the characteristically Mahlerian ironic humor of the scherzo, the touching inwardness of the adagio and the joyous abandon—culminating in

the radiant affirmation of the concluding chorale.

All of these moods were suggested by Mr. Walter in a manner which only he, among living conductors of Mahler's music, can conjure from the intricacies of the printed page. No other interpretative musician has his profound perceptive insight into the azygous creative world of this still often misunderstood composer. Nor could a finer account of this score from the technical and tonal aspects be imagined than that vouchsafed by the Philharmonic last night. Here was a truly miraculous transvaluation into meaningful, unflinching, sensuous sounds of a composer's inmost thoughts.

JEROME D. BOHM,  
*The New York Herald Tribune*

What Mr. Muench did recently at a Philharmonic-Symphony concert for Berlioz of the "Symphonie fantastique" Bruno Walter did last night, on the same podium, in Carnegie Hall, with Mahler's Fifth symphony. The hour-long symphony made the first half of a notable program completed by the performance of Chopin's E minor concerto by a master pianist, Artur Schnabel.

We do not believe that a more eloquent performance of Mahler's immense score than this one could have been given. Its revelation was the result of a lifetime of devotion to music and of a profound inner faith in Mahler's message. We leave aside for the moment estimates of the worth of the symphony itself, in its formidable length, breadth and thickness. The point is that Mr. Walter believes to his last fiber in this symphony; he knows and loves its every note. He conducted with the passion of a crusader, and so struck fire from the orchestra and did everything that interpretive power could do to impose the music upon the audience.

That this achievement was to be was shown instantaneously, with the opening trumpet calls of the "marche funebre." For a great performance, in music or drama or on the forensic platform, reveals itself in the inflection and architecture of the very first phrase. In those preliminary flourishes, which later enter so importantly into the scheme of the entire opening movement, there was felt the inevitable progress and summation of the entire work. . . .

The symphony and the performance were long and roundly applauded.

OLIN DOWNES,  
*The New York Times*

## GUSTAV MAHLER: FOURTH SYMPHONY

*Cleveland Orchestra, Bruno Walter, Conductor; Desi Halban, Soloist, Feb. 20 and 22, 1947. Broadcast over Mutual Broadcasting System on Feb. 22, 1947. Rebroadcast over WOR on Feb. 24, 1947.*

Bruno Walter, distinguished musical advisor of the New York Philharmonic Symphony, Desi Halban, Viennese soprano, and the Cleveland Orchestra thrilled a capacity audience at Severance Hall last night with a gorgeous performance of the Gustav Mahler Fourth Symphony. . . .

Director Walter who knew Mahler in his Vienna days and has written a book in that connection, brings to this Fourth Symphony a sympathy and uncanny expressive art that points its haunting beauty, its occasional peasant jollity, its dramatic episodes and its shifting lights and shadows with a feeling of expectancy and reality that make up for its overlong score. He etched the ever fluid and glowing melodic line with clarity no matter where or how it shifted through the orchestral choirs. And in Miss Halban with her nicely-ranged soprano of fine texture, he had a most artistic collaborator.

ELMORE BACON,  
*The Cleveland News*

Yet one had ample opportunity to taste to the full the typically Viennese character of the music, its effusive up-beats, its warm, leisurely flowing melodies, its wistful humor, and above all its extraordinary scoring, where color demands are so specific that the solo violin in the eerie second movement is asked to play on an E string tuned a tone higher. Miss Halban sang the folkish strophes of the last movement with sensitive and appropriate feeling.

HERBERT ELWELL,  
*The Cleveland Plain Dealer*

. . . The part was rendered with understanding and taste by Desi Halban, an Austrian singer new to Cleveland.

The rest of the Symphony is integrated with this mood of happy simplicity. There are mystical overtones, such as in the second movement, where Death, the mediator of all this bliss, is pictured as a good-natured fiddler who is sure to get his fee in the end.

A somewhat humorous effect is produced by having the fateful fiddle tuned

up a tone, giving a kind of queer stridency. Concertmaster Thaviu did well by this episode.

The work presents the familiar Mahlerian compound of flavors: A German folkiness in the melody, a sugared Viennese harmony and figuration occasionally bordering on the frivolous, a highly individual sophisticated and witty orchestration, and a general atmosphere of mellifluousness.

Nothing could exceed the loving care which Walter devoted to the proper realization of the lines of his revered master. The Symphony's many beauties seemed persuasive under his hands, and the audience manifested an unusual enthusiasm at the end, some of which was also intended for Miss Halban and the orchestra.

ARTHUR LOESSER,  
*The Cleveland Press*

GUSTAV MAHLER:

LIEDER EINES FAHRENDEN  
GESELLEN

Dallas Symphony Orchestra, Antal Dorati, Conductor; Blanche Thebom, Soloist, Feb. 23, 1947.

The easy harmonies and conventionalized sentiments of nineteenth century Romanticism fell on grateful ears Sunday afternoon as an audience of 4,000 persons gathered for the thirteenth subscription concert of the Dallas Symphony Orchestra at Fair Park Auditorium. This audience had been hearing things less dulcet and caressing, to say the least. It was a beautiful, impeccably styled concert that Antal Dorati arranged and still lovelier concert that he delivered. Of no little help were Blanche Thebom, Metropolitan Opera mezzo-soprano, as soloist for Brahms' "Alto Rhapsody" and Mahler's "Lieder eines fahrenden Gesellen" and the Dallas Male Chorus, which participated in the Brahms work.

Miss Thebom sang them with compelling intensity, met their vocal exactions and their emotional contrasts with complete success. The orchestra under Mr. Dorati found Mahler's plangent accompaniment another opportunity for some of the season's best playing.

JOHN ROSENFELD,  
*The Dallas Morning News*

Her performance in the Mahler songs was similarly breathtaking. She imparted color and drama to the composer's laments, sorrowings supposedly stemming from one of Mahler's numerous frustra-

tions in love. Miss Thebom understands about such matters as phrasing and she takes the high and low points of a song with equally expressive ease.

CLAY BAILEY,  
*The Daily Times Herald*

GUSTAV MAHLER:

FIRST SYMPHONY

The Philharmonic-Symphony Society of New York, Efrem Kurtz, Conductor; March 20, 21, and 23, 1947. The last performance was broadcast over CBS.

One of the tests which conductors welcome, if only for the reason that they furnish abundant opportunities for display of batonic skill, are the symphonies of Mahler. Of these the First is one of the best. It is deeply saturated with the folk element which is a sympathetic characteristic of this composer, and it is possibly the least laden with bombast.

Mr. Kurtz approached this music with evident sympathy, especially in the pages which have the unmistakable reflection of nature, and the Hansel and Gretel-like fragments of song.

OLIN DOWNES,  
*The New York Times*

Everything was well performed and at the end of Mahler's First Symphony there was cheering.

Indeed, one is not accustomed to such transparent tonal textures, such clear balances and blends of sound in the rendering of Mahler as Mr. Kurtz produced. The desire to treat this composer as emotionally profound has imposed, I think, a certain obscurity upon even the scored sound of his symphonies. Mr. Kurtz has approached the matter more realistically, though with an obvious love for the music. By loving it and playing it cleanly he has turned the First Symphony from an unconvincing essay in profundity into a thoroughly convincing descriptive piece. This listener, for one, is pleased with the transformation.

What the work is descriptive of we have been forbidden by the composer to guess. So be it. The pastoral style remains unmistakable in the first movement. So does the gypsy night club style in the third (ostensibly a funeral march). Later there is a passage that, whatever its original intent, may have been, would be ideal to accompany a conflagration in the films, with love being reborn out of the ruins.

VIRGIL THOMSON,  
*The New York Herald Tribune*

## Chord and Discord

GUSTAV MAHLER:  
FOURTH SYMPHONY

Boston Symphony Orchestra, Bruno Walter, Conductor; Desi Halban, Soloist, March 21, 22, and 25, 1947. The last performance was broadcast over ABC.

First as disciple, then as a colleague, and an intimate friend of Mahler, Mr. Walter ultimately became the composer's greatest prophet. To him fell the responsibility and honor of first performing, after Mahler's death, "Das Lied von der Erde" and the Ninth Symphony. Without exaggeration, it may be said that everything in the way of profound comprehension and special knowledge of Mahler's musical idiom is possessed, and uniquely so, by Bruno Walter.

As the Fourth is the shortest and the lightest in texture of all nine Mahler symphonies, so it is the most untroubled. The grotesquerie which pervades it is naive and serene rather than demonic. Yet, as in all Mahler, melancholy lies just beneath the surface. And over the whole symphony hovers that nervous restlessness which is expressed by a constant flow of counterpoint, from instrument to instrument of the entire orchestra.

CYRUS DURGIN,  
*The Boston Daily Globe*

Yesterday's concert was memorable for the ingratiating performance of Mahler's 4th Symphony, perhaps the best possible introduction to the works of that composer. Under the expert guidance of Mr. Walter, who is probably the world's leading interpreter of Mahler, the 4th Symphony yesterday could be regarded as an acid test.

Mahler is a composer whose name is too frequently coupled with that of Bruckner. Actually it should be possible to form independent judgments of the music of either composer without having both of them thrown at you like a pair of Siamese twins. This 4th Symphony is one of Mahler's happiest and least troubled creations. Its intimate charm is something very special among musical compositions, and a fine performance of it is something to cherish.

Mr. Walter was fortunate in his choice of a singer, as we were lucky to have him as interpreter of this music. Miss Halban sang the music of the finale simply, gracefully and clearly. As was to be expected under the circumstances it was a performance without exaggera-

tion or parody, in the spirit in which Mahler conceived it.

ALEXANDER WILLIAMS,  
*The Boston Herald*

At the concerts of this week Mr. Walter is playing the Mahler Fourth with Desi Halban as soprano soloist. Previously we had heard the entire symphony but once, in March, 1945, and the last two movements three years before, both times from Richard Burgin. In view of the fact New York has been hearing the work at intervals since 1904, the various conductors of the Boston Symphony may be said to have been singularly remiss, for the Fourth is a masterpiece, though not without flaws.

The trouble with both Bruckner and Mahler is that they never could learn that enough is better than a feast. Even trifling cuts in the first and third movements of the Fourth Symphony would make it a work of unqualified delight, in spite of the fact that the four movements offer little contrast. They are all on the leisurely side, the only measures approaching real excitement occurring in one of the variations in the third. Hearing this division yesterday, as set forth hypnotically by Mr. Walter, there was a temptation to proclaim it the most beautiful slow movement since the Cavatine in Beethoven's B flat-major Quartet. No other among Beethoven's successors had the secret of this quiet intensity, this almost unbearable sweetness. And yet we would not go far astray in calling Mahler the father of the modern symphony; in his disregard of symphonic conventions, in his capriciousness and whimsicality, in the astounding clarity of his orchestration and his "horizontal" writing. In the first movement of the Fourth we find the earliest example of neoclassicism, and that Shostakovich has sat at the feet of Mahler is common knowledge.

Desi Halban was the soloist yesterday in the fourth movement, a setting of a folk poem that depicts a peasant's or a child's naive concept of heaven. Miss Halban has, indeed, the light, floating almost child-like voice that this music requires. Yet some still gratefully recall Cleora Wood's performance of five years ago. At the end of the Symphony yesterday there were cheers for all concerned.

WARREN STOREY SMITH,  
*The Boston Post*

GUSTAV MAHLER:  
FOURTH SYMPHONY

Chicago Symphony Orchestra, Bruno Walter, Conductor; Desi Halban, Soloist, April 11 and 12, 1947.

Mr. Walter gave a superlative reading of the score, and his evident love for and admiration of it clearly was reflected in his influence upon the orchestra. Every detail was so clarified, every nuance so affectionately considered, it would be difficult to imagine a finer interpretation. Withal, only the slow movement impressed this listener as truly great music, and the depth of emotion in it, its eloquent tenderness made listening a joy.

FELIX BOROWSKI,  
The Chicago Sun

Between that and the Strauss you knew the textures and colors of Mahler's Fourth Symphony would be in sympathetic hands. I don't mean Mr. Walter's, of course. He is the supreme master of Mahler in our time. I mean the orchestra's, for that orchestra achieved one of the most remarkable performances I have heard it play, and I have been listening to it for 20 seasons. It was a performance of tenderness, of power, of wit, and it so superbly sustained the line that spans the shifting Mahler moods that if you insisted on calling the symphony long, you could only steal a phrase and make it, too, "the symphony of heavenly length."

Perhaps Mahler's symphonies really are "mystery plays rooted in earth and reaching for heaven." The Fourth is a lovely thing, with glinting brilliance, extraordinary tonal textures, particularly in the second movement where the solo violin is sometimes tuned a note higher than normal tuning (which is why John Weicher used two instruments), and a slow movement of such profoundly moving sadness it must reach to heaven for comfort. So the soprano, who was beautiful Desi Halban, quiet as a good child in white, enters to sing the reassuring song of heavenly bliss from "Des Knaben Wunderhorn," a song which in its way wraps up the whole symphony by singing, "Our conduct, while truly seraphic, with mirth holds voluminous traffic." For this is music for men, which reminds them of angels.

CLAUDIA CASSIDY,  
The Chicago Tribune

ANTON BRUCKNER:  
SEVENTH SYMPHONY

San Francisco Symphony Orchestra, Pierre Monteux, Conductor; May 22, 23, and 24, 1947.

Alfred Hertz used to play the symphonies of Anton Bruckner when he conducted the San Francisco Symphony Orchestra 20 years ago, but, in all probability, none of them had been performed here since that time until yesterday afternoon, when Pierre Monteux directed Bruckner's seventh symphony at the War Memorial Opera House.

It was a welcome revival for many reasons. For one thing, Bruckner reminds you that composers, performers and audiences once had leisure. The modern composer Roy Harris has written a "Time Suite" in which the basic formal element is the minute, and Morton Gould, the well known radio musician, has excused his use of the word "symphonette" (in place of the conventional "sinfonietta") on the ground that, with two syllables less in the title, he can get an extra half-measure into the music. But no one ever held a stop-watch over Anton Bruckner. He was free to develop his ideas as spaciouly and grandly as the architects of those baroque Austrian churches in which his spirit was most at home.

Every work of Bruckner is an act of religious faith, whether or not it is associated with a religious text. To be sure, his symphonies have other positive qualities, too—a sonority, and a kind of provincial heavy-handed force that led Bruckner's biographer, Werner Wolf, to call him a "rustic genius"—but the main thing about this composer is that he was a genuinely serene human being. He knew what it was all about and he knew it was good, and that is something worth clinging to in our more nervous and fearful time. . . .

With Bruckner a symphonic movement is an accumulation of episodes, and there are joints and fissures between. His music unfolds like pages in a diary; you can see where each day's ideas stopped and the next day's began. For this reason people sometimes find Bruckner long-winded. But this long-windedness is not so much a matter of time consumed as of a kind of flaccidity in the organization of the time. Bruckner's seventh symphony is a good deal shorter than Beethoven's ninth, with which Monteux will end the San Francisco Symphony

season next week, and nobody ever complains that Beethoven's ninth is too long.

The performance was big and broad, laid down the huge lines of the piece with appropriate weight, was crisp and clean throughout, and achieved the apocalyptic climax of the slow movement with the true accent of glory.

ALFRED FRANKENSTEIN,  
San Francisco Chronicle

GUSTAV MAHLER:  
SECOND SYMPHONY

New York City Symphony, Leonard Bernstein, Conductor; Schola Cantorum, Hugh Ross, Conductor; Ellabelle Davis, Soprano, Nan Merriman, Contralto, Soloists; Sept. 22 and 24, 1947.

Mr. Bernstein and the City Symphony did full justice—for an orchestra gradually coming up in the world—to the Mahler work. There were two soloists, Ellabelle Davis, soprano, and Nan Merriman, contralto. Besides, the Schola Cantorum, in serried ranks, delivered the choral parts of the last section, where the composer required "the word" to complement his instrumental expression.

In any case, the performance was most musical and finished, and it is to Mr. Bernstein's and his co-workers' credit that it came off as well as it did. Both Miss Davis and Miss Merriman were superb in the delivery of their parts and the chorus sang effectively.

ROBERT BAGAR,  
New York World Telegram

The richly-wrought musical tapestry of Mahler's "Resurrection" Symphony unrolled at the City Center last evening, as Leonard Bernstein led the N. Y. C. Symphony in its first concert of the new season.

As usual, the Mahler proved too much of a very, very good thing. It is too bad that present-day concert practice is to do things complete or not at all. While this custom prevails Mahler will likely remain in the revival category—a big production number undertaken infrequently and with a certain amount of trepidation.

And audiences are the losers thereby, for the "Resurrection" Symphony has moments of seraphic loveliness, and in its maestoso moods it is quite overpowering.

The Bruckner Society (which also interests itself in Mahler) would be horrified, but some irreverent conductor might well revive for Mahler's benefit the cus-

tom that flourished in Beethoven's day, of performing separately the movements of a large work. As musicology it might not be sound, but it could make Mahler a great deal more accessible.

Last evening the orchestra played the work with zeal and devotion. The soloists, Ellabelle Davis, soprano, and Nan Merriman, contralto, performed so prettily one wished they had had more to do. The dry, unresonant properties of the hall, which often make the orchestra sound thin and watery, last night proved admirable for this heavily-scored work, which in more resonant halls (and especially with a violently energetic conductor like Mr. Bernstein) becomes a noisy blur of thick brass and cloudy overtones.

JOHN BRIGGS,  
New York Post (Copyright 1947)

Even for those who do not take the Mahler gospel on faith, this is a work to be heard and re-heard as often as a symphony orchestra, a chorus and two soloists can be marshaled into doing it—which is, approximately, once a decade. It has, in its quieter, more introspective passages, some of the most beautiful music ever written, by Mahler or anyone else; for which the listener must pay the price, in the "epic" pages of the score, of enduring even more of the most bump-tious, empty noise ever contrived.

This is hardly a score to be delivered unembarrassed by a pick-up orchestra (which, essentially, the City Symphony is) and more rehearsals would have smoothed rough spots, improved the blend of sound. But it was a major accomplishment for Bernstein to deliver the work, from beginning to end, with as much articulation and clarity as he managed, and, withal, an insinuating mood at many places. In addition to Miss Merriman's luscious singing, Ellabelle Davis, soprano, and the Schola Cantorum performed affectingly in the last section.

IRVING KOLODIN,  
New York Sun

The New York City Symphony opened its fifth season, and its third under the conductorship of Leonard Bernstein, last night at the New York City Center. The program was dedicated to the resurrection of Palestine, and began with a work by a Palestine composer not previously unknown here.

Mr. Bernstein's interpretation showed a notable understanding of this music; the performance was well integrated and

balanced and expressive. Miss Davis and Miss Merriman sang with pleasing tones and interpretative sympathy; the choristers sang commendably, and at the close the participants avoided an impression of overstraining in striving for culminating climax.

FRANCIS D. PERKINS,  
*New York Herald Tribune*

Mr. Bernstein added that he wished to dedicate it (Mahler's Symphony No. 2) also to the memory of Fiorello H. LaGuardia, who, as Mayor, brought about the organization of the City Center and the New York City Symphony. At the conductor's suggestion the audience rose and stood in silence for a minute before the second half of the concert began. . . .

Mr. Bernstein and the orchestra gave both works expressive performances. In the Mahler, Ellabelle Davis and Nan Merriman contributed artistic solo singing and the chorus of the Schola Cantorum, Hugh Ross, director, did a good job with its share. Mr. Bernstein made the Mahler symphony as dramatic as he could, sometimes dramatizing it excessively. But it was lively, crisp, mettlesome playing.

HOWARD TAUBMAN,  
*The New York Times*

## ANTON BRUCKNER: EIGHTH SYMPHONY

Boston Symphony Orchestra, Serge Koussevitzky, Conductor; Boston, Nov. 7 and 8, 1947, *New York*, Nov. 13, 1947.

Years ago, the mere mention of Bruckner would have brought on a stampede toward the nearest exit. Today the Austrian composer, who has been called half-peasant and half-mystic, is rated by many sound critics as the "Fourth B" of music. Hardly anybody now slips out of the hall between movements. . . .

But the center of gravity—both in weight and quality—was the huge Bruckner symphony last night. Even the half-hearted Brucknerites in the audience had to admit every phrase of the hour-long epic was crammed with high-powered brilliance.

On that point the symphony is almost tailor-made for Mr. Koussevitzky's orchestra. Fortissimos come like cloudbursts and the long stretches of scoring for massed strings bring out the band's

known flair for unctuous speech. And there are plenty of spots for Mr. Koussevitzky's brass units to go to town on all valves.

There may be room for argument as to whether last night's performance snared every potentiality of the score on the poetic side. A few places called for deeper probing, and one or two passages, deceptively naive and childish, were overstressed, almost inviting the charge of banality often brought against Bruckner.

Those were small matters beside the over-all effect of the reading. With his known gift for the dramatic, Mr. Koussevitzky managed to pack excitement into all four movements.

The big moments were worth waiting for in the Eighth Symphony—moments like the blunt, square-toed buffoonery of the Scherzo, the eerie crescendo of the Adagio just before the brasses blare out a lush Wagnerian motif, and the piling sonorities of the finale.

LOUIS BIANCOLLI,  
*New York World-Telegram*

The program was unusual, beginning with the vast Eighth symphony of Anton Bruckner, undoubtedly that composer's greatest work in the classic form. Contrasting with the fundamentally Germanic score were two of the most sophisticated and skillfully organized works of the Frenchman, Maurice Ravel.

These scores called for completely different interpretive approaches. They tested variously the powers of the orchestra, which remains unrivaled for the glow of its tone, its technical precision and finesse and consummate virtuosity which it has attained under its present leader. As a result Bruckner came out differently than he ever had before in the writer's experience, the difference being thrown into the stronger relief by the effect of the Ravel pieces which followed.

For the symphony was not traditional Bruckner. The tempi were mostly faster than those adopted by German conductors; the orchestral tone was lighter in texture and in color more luminous than it was deep and rich in baroque style.

At the same time, in point of rhetoric and sheer orchestral effect, the score never sounded more gorgeous and dramatic. Dr. Koussevitzky, if memory faithfully serves us, made advantageous cuts which remedied the discursiveness of various pages—a defect which can lessen the effect of Bruckner's grandest pas-

rages when they come. It was striking, also, to hear the grand phrases given a suppleness and a sensitiveness of nuance which at moments made one think of Franck. (Indeed there are analogies between the music of the Austrian and the Belgian mystics, both organists, both apostles of the faith.)

And what a symphony! Only the last movement is irremediably weak. The others are all masterpieces. There is the inner drama of the soul that supplicates and cries out in its need, "Lord, I believe; help Thou mine unbelief." The peasant laughter and smack of the soil are in the inimitable scherzo. The slow movement, which is as the vision of John of Patmos, is perhaps the supreme flight of Bruckner's spirit. Then one asks, "Is Dr. Koussevitzky's conception, profoundly felt, that of Bruckner?" and must leave that question, in the light of a new interpretation, for the present unanswered. Let it suffice that the symphony was given a singularly eloquent and effective performance.

OLIN DOWNES,  
*The New York Times*

In these days it probably is necessary to make cuts in the monumental scores of Bruckner, with their long sequences and what Felix Weingartner called "terraced progression." Mr. Koussevitzky accordingly does make cuts in three movements, leaving only the scherzo intact. But why does he find it essential to cut out anything of the kind which, to make a very unoriginal observation, is the finest movement of the four? Surely no audience would grow restive while music of such celestial beauty was going on!

Yesterday's performance was indeed a miracle of orchestral magnificence, with all intricate details, wealth of counterpoint coming out in superlative clarity and detail. As in the Schubert Concerto, everything "sang" all the way. The brass sections, which are the foundation of Bruckner's orchestra, covered themselves with glory—and, probably, exhausted themselves at the same time, for the Austrian composer demanded a lot of hard blowing. The quality of the four "Bayreuth tubas," especially, was rich and poised.

CYRUS DURGIN,  
*The Boston Globe*

## GUSTAV MAHLER: FIRST SYMPHONY

Baltimore Symphony Orchestra, Reginald Stewart, Conductor; October 29, 1947.

By repute, Mahler's work is ever ponderous, abstruse, overlong. But if the audience harbored any such impression, they were soon disabused. The first two movements are pastoral impressionisms of an engaging character, climaxing in the full majesty of high sun.

Focussing the third movement is a supposedly burlesque funeral march, said to lampoon the obsequies of a hunter and scored with appropriate sound and fury, satirically phrased. While the finale, marked "sturmisch bewegt," works up to a fine frenzy of storm and stress.

A trifle long—a modicum repetitious—but all in all, we are hoping that Mr. Stewart will continue the public education along Mahlerian lines. Last night's was a spirited and revealing interpretation and was received with every sign of satisfaction.

HELEN A. F. PENNIMAN,  
*The Baltimore News-Post*

Concluding the concert, the Baltimore Symphony gave Mahler's "Symphony No. 1" a fine performance, achieving mellow tone and varied shading under Mr. Stewart's direction. The first three movements were especially successful.

In Mahler's music, one may find the spirit of the Vienna of Schubert, Beethoven and Haydn, yet it is a Vienna grown old. Perhaps Mahler's scores contain a prophecy of the mood of today, and perhaps that is the reason we may feel closer to him than did his contemporaries.

His "Symphony No. 1" seems to depict the warm colors and atmosphere of the Austrian countryside, yet there are dead leaves on the landscape.

One of his themes suggests a rough peasant dance, yet all is not simply joy. A sinister undercurrent suddenly whips the music into a frenzy.

A waltz brings back the memory of carefree times, but the dances turn to ghosts, and the ballroom floor is covered with dust. Ironically, Mahler builds a funeral march on the folk theme of "Frere Jacques," but this is no funeral for a hero.

There are bird notes, but spring is past; distant hunting calls, but the hunt is over.

WELDON WALLACE,  
*The Sun (Baltimore)*

## ANTON BRUCKNER:

## QUINTET

Little Orchestral Society, Thomas Scherman, Conductor; November 3, 1947.

The great music of the first half of the program was the opening piece, the Bruckner Quintet for strings, scored for chamber orchestra. This score may have its weak places; in the sum it is noble music, chanted rather than merely vibrated by the strings.

OLIN DOWNES,  
*The New York Times*

The Bruckner Quintet for Strings (comprising two viola parts) was played by the full string orchestra, the last movement being omitted for reasons of length. It is a warm and tender work, Bruckner at his sweetest and most continuous. The Adagio is particularly satisfactory, but the whole work is more than agreeably inspired.

VIRGIL THOMSON,  
*New York Herald Tribune*

## GUSTAV MAHLER:

## DAS LIED VON DER ERDE

Cleveland Orchestra, George Szell, Conductor; Set Svanholm, Tenor, and Louise Bernhardt, Contralto, Soloists; November 6 and 7, 1947.

The capacity audience at Severance Hall last night was fairly stunned to silence for a short period following the intensely emotional and dramatic close of the Mahler "Song of the Earth."

Director George Szell and the Cleveland Orchestra had the assistance of Louise Bernhardt, contralto, and Set Svanholm, tenor, in presenting this monumental work. And so emotionally gripping was the finale of the "Abschied" with its haunting "Eternity," a mere whisper at the close, that it was nearly a minute before the pent-up enthusiasm of the big audience could be demonstrated in applause.

Even though "The Song of the Earth" starts out with a drinking song there's death in the shadow of the wine cup. There's a hint of tragedy, too, throughout this symphony of song—a melancholy born of the Chinese philosophy of sorrow permeating the poems Mahler chose for this work. The two soloists, making their Cleveland debuts, were particularly suited to the unfoldment of this great work.

Director Szell brought to this six-part

symphony a keen insight into its depth, its sometimes long drawn out, gorgeously beautiful revelation of the utter futility of things mundane. And he particularly pointed the sweeping phrases of the Mahler message. The Mahler music sometimes rose to Wagnerian heights of splendor. And in the final movement offered a funeral march to end all funeral marches.

Seldom do we hear music as beautiful as the fourth movement, a Song of Beauty, which Miss Bernhardt sang with fine artistry. A mandolin is used in this with the harp and other instruments. Her fine contralto, warm and resonant, brought out all the beauty, too, of the "Lonely One in Autumn" and provided a haunting view of heartache and sorrow in the finale.

The Svanholm tenor, of fine quality and of Wagnerian power, was particularly sensitive in the Youth song and the fifth movement drinking song. Through the Mahler magic the solo parts seem to be merely another voice of the orchestra, outstanding, but still definitely a part of the whole.

ELMORE BACON, *Cleveland News*

The symphony concert conducted by George Szell at Severance Hall last night was especially notable for the presentation of Gustav Mahler's "Das Lied von der Erde," in which the Cleveland Orchestra had the assistance of two excellent artists, Louise Bernhardt, contralto, and Set Svanholm, Metropolitan Opera tenor, first heard here last spring as Lohengrin. The hall was packed with an enthusiastic audience.

Mahler's swan song of romanticism has never sounded more poignantly expressive or more troubling to the spirit. Dripping with sorrow even when it lifts its head and tries to be gay through the tears, it is long in its singing of *Weltschmerz* and autumnal nostalgia. And it begins over again many times after it seems to conclude. Yet who with any soul in him would not wait out the long waits to hear its many heavenly pages?

Beautiful production from Miss Bernhardt's full-bodied contralto gave her part a mellow glow, and she wove it through the mystic tonal web with the most sensitive artistry, rounding her eloquent phrases with complete assimilation of style and content.

The more exuberant portions allotted to Svanholm were sang with robust elan and the virility of true tenor quality, infinitely more attractive than when his voice is amplified. Behind the soaring

## Chord and Discord

voices was an orchestral fabric of wondrously varied nuances, all receiving loving attention and effective projection from Szell and his musicians.

A modified version was used of Stuart Wilson's English translation of the Chinese poems on which the symphony is based. Few of them came through with any clarity, more of them being audible in the contralto than in the tenor part. Skillful as he is, Mahler sometimes covers the voices with too interesting instrumentation, but of course he cannot be blamed for weakness of a translation which must replace "ewig" with a word like "ever."

HERBERT ELWELL,  
Cleveland Plain Dealer

"The Song of the Earth" has an elusive beauty, a mystical quality. Composed in the imminence of death, it seems to view that adventure as a kind of boundary which outlines the joys of life all the more clearly.

The long last movement, sombre and serene, but with many tonal shreds and wisps, ends in effable peace: it is a climax, but of the depths rather than of the heights. This is Mahler's greatest work, many think, and it may be that history will prove it to be one of the great works of its time.

Set Svanholm, tenor, and Louise Bernhardt, contralto, besides evincing thorough vocal competence, sang their parts with thoughtful sympathy. Surely this is the highest commendation that can be given singers in such a work as this. Miss Bernhardt earns a special credit for her sustained effort in the final "Farewell."

The orchestral performance seemed generally admirable; it seemed in the first movement as if Svanholm occasionally had to strain to hold his own against a heavy instrumental background. Possibly the orchestra is often more important than the voice, yet it seems a pity to compromise the distinctness of the words.

ARTHUR LOESSER, Cleveland Press

### GUSTAV MAHLER:

#### KINDERTOTENLIEDER

Little Orchestra Society, Thomas K. Scherman, Conductor; Karin Branzell, Contralto. New York, December 1, 1947.

Mahler's "Kindertotenlieder," familiar to local audiences chiefly through Antony Tudor's ballet "Dark Elegies," are as intense in their sadness as the Schubert work is in its joy. Karin Branzell sang

them, for the most part, beautifully. . . . Myself I find the work touching and musically interesting, as well. It is not musically easy, however. . . .

VIRGIL THOMSON,  
New York Herald Tribune

### GUSTAV MAHLER:

#### FOURTH SYMPHONY

Rochester Philharmonic Orchestra, Erich Leinsdorf, Conductor; Dorothy Maynor, Soloist; December 4, 1947. First performance in Rochester.

So far as this reviewer knows, Gustav Mahler's Symphony No. 4 never has been played in Rochester. One wonders why, after hearing Leinsdorf's comprehending and persuasive interpretation, which opened the program.

Your humble servant is no anti-Mahlerite, but never until last night has he been an enthusiast over the music of the Austrian composer, a controversial figure whose works have aroused either bitter condemnation or violent praise. Here is a symphony which creates no listening problems whatever.

There are no profound utterances, only one glorious song from start to finish, the Viennese flavor present always. The first movement suggests peasant dances, the second is fascinating with imaginative use of the wood-winds and the fiddle tuned a whole tone higher than usual, producing a piercing effect; the third entrancing beautiful in its Schubertian lyricism and simplicity.

It is not a choral symphony in the usual sense, but Mahler, who depended frequently upon voices to express himself, incorporates in the final movement a solo for soprano voice, setting of a poem from "The Youth's Wonder-Horn," this particular one a delightfully naive picture of the joys of Heaven.

Miss Maynor sang this deceptively simple finale with brightness and aliveness of spirit, the balance of voice with orchestra good. Our gratitude to Leinsdorf for this item overflowing with charming melodies and many moments of astounding beauty, with its masterful orchestration.

NORMAN NAIRN,  
Democrat & Chronicle

Erich Leinsdorf knows how to provide novelties, as well as solid classical fare, on his programs, and the spice of variety marked last night's Philharmonic concert in Eastman Theater.

There was provided another effective demonstration of the progress of the orchestra, which played extraordinarily well, while Miss Maynor, the celebrated Negro soprano, sang like a seraph. It was, in a word, an evening of unusual musical interest and beauty, and the large audience made the welkin ring with its applause at the close of the performance, as conductor and soloist were repeatedly recalled to acknowledge the tribute paid by a delighted house.

The feature of the concert was the Fourth Symphony of Gustav Mahler, the curiously controversial Austrian composer and conductor, who has his violent detractors and his equally passionate admirers. Last of the line of Viennese "classical" composers, he completes the Romantic symphony form handed on to him by Schubert and Bruckner. But if acquaintance with Mahler's music was confined to his symphony No. 4, which was first given in Munich in 1902, one would wonder why there has been heaped on him so much extravagant praise and so much bitter condemnation, for this score came to the ear with the gentleness of a Spring zephyr, filled with folk-like airs, and almost constantly, therefore, melodic. Its pastoral quality is persistent, and although it tends to monotony its spirit and mood are that of a reverie.

Much of the symphony is lyrical and there are moments of lofty eloquence, the final movement being featured by the introduction of some verses from "Des Knaben Wunderhorn," which are sung in heavenly fashion by Miss Maynor, the celestial timbre of whose voice has no counterpart on the concert stage. The symphony is too long, yet it is shorter than Mahler's other symphonic works, and its performance was of a calibre to bring out all that is best in the score which Mr. Leinsdorf obviously loves. He conducted it with the utmost concentration and warmth, and the musicians under him, and Miss Maynor, contributed their share to a presentation that stands as a striking success.

A. J. WARNER,  
Rochester Times-Union

#### ANTON BRUCKNER: EIGHTH SYMPHONY

Cleveland Orchestra, George Szell,  
Conductor, December 11 and 13, 1947.

We might imagine the Bruckner Eighth a Germanic Old Man River flowing along, sometimes at ease, sometimes troubled,

sometimes amid towering peaks and hoary crags peopled with the legendary gods, sometimes traversing the gentle fields amid the plain people.

It is true that it is lengthy. But as compensation Bruckner offers music that has a depth, an emotional tension and a gorgeous coloring that few modern writers can produce. The troubled heart of mankind is revealed in the opening dramatic gropings. And the Adagio stands out as a melodic outpouring that is hard to match for sheer beauty.

There are episodes of gay peasant lollings, and brassy Wagnerian blasts from the Brucknerian Valhalla. And in the finale there are places where high climaxes lead one to look for the end, only to find there's more to come. Director Szell and the orchestra deserved the high acclaim they received for a magnificent performance. By the way, only a few short bars were snipped out of the score.

ELMORE BACON, Cleveland News  
The audience showed marked enthusiasms also for Szell's reading of the Bruckner symphony, and with good reason, for here was an interpretation rare in those qualities of relaxation and perspective necessary to hold in focus a work so monumental and so leisurely in its song-like eloquence.

This milestone in musical evolution demands something foreign to modern listening habits. It is without sharp contrasts in movement. It is grandiose, prolix and phenomenally distended. Yet, presented with such mastery and understanding as Szell and the orchestra displayed, the work retained a message for modern ears. One could, in fact, feel at home in the great nobility of its mellow brass choirs and the wonderful peacefulness which could exist only in the spaciousness of its cathedral-like structure.

HERBERT ELWELL,  
Cleveland Plain Dealer

#### GUSTAV MAHLER: FIRST SYMPHONY

Cincinnati Symphony Orchestra, Thor  
Johnson, Conductor; Jan. 2 and 3, 1948.

Mahler's symphonies (as, in fact, do Sibelius's) sometimes keep the listener on tenterhooks—waiting, as it were, to see what comes next. It all depends on the conductor, whether Mahler's moods or his methods of composition are the more apparent. Less adept musicians than Johnson often reveal the skeletal joint-

## Chord and Discord

... in the Austrian composer's works, and by a process of pedantry, manage to make them seem incredibly long.

There were no weighty lengths in Mahler's First Symphony yesterday afternoon (there was one fairly sizeable cut in the last movement, which did not detract from the overall effect). The music was theatrical and good theater—but not stagey. The players caught their cues, dove-tailed and underlined each others' speeches, and avoided any prima donna impulses to steal the show.

The music is handsome, if ever the word applied to music; it is colorful and it is emotional. In fact, there are moments of such sheer beauty that the susceptible listener almost winces with the sensuousness of it all. The first movement yesterday was other-worldly, and at times in the second movement icy fingers trailed down one's spine. The ecstasy of crashing rhythms toward the close made sitting still almost impossible.

JOHN P. RHODES,  
*The Cincinnati Enquirer*

But, whatever the individual opinion of the merits of this first symphony may be, there can be a degree of unanimity in the statement that the orchestra has seldom played better and that the presentation was a labor of love on the part of Mr. Johnson. Perhaps some of the irony purported to be contained in the third movement—the so-called Callot funeral march—was missed; but on the other hand there was sheer beauty and edifying restraint in the second movement and a noble climax in the finale.

J. H. THUMAN,  
*The Cincinnati Times-Star*

### ANTON BRUCKNER: THIRD SYMPHONY

*New Haven Symphony Orchestra, Paul Hindemith, Conductor; Jan. 12, 1948.*

Anton Bruckner's Symphony No. 3 in D Minor, was superbly presented by Mr. Hindemith and the orchestra, the director evidently keenly feeling the Wagnerian influence in the Bruckner work. The unusual parts for the horns were very dramatically revealed in this exposition of a theme in double-rhythm as the composer sought to present the various life impulses controlled by the over-powering Prime Source. There are both the depths and the heights presented, with light and airy dance themes running concurrently with sober themes expressing the sterner side of life... the vivacious third movement contains a gay folk dance which

in turn is followed by the majestic finale, the Allegro movement which sums up the total of Bruckner's interpretation of the complexities of life.

F.R.J., *New Haven Journal-Courier*

### GUSTAV MAHLER: DAS LIED VON DER ERDE

*Philharmonic-Symphony Society of New York, Bruno Walter, Conductor; Kathleen Ferrier, Mezzo-Soprano, Set Svanholm, Tenor, Soloists; Jan. 15, 16, and 18, 1948. (The last performance was broadcast over CBS.)*

A stirring performance of Gustav Mahler's masterpiece, "The Song of the Earth," marked the return of Bruno Walter to the Philharmonic podium in Carnegie Hall last night.

Still, the highlight of the evening was the Mahler reading. There Mr. Walter was on special ground. One felt a personal interest in the score, the concern of a friend and devoted disciple who treasured the memory of Mahler.

This is Mahler's testament of life and death, brimming on one side with a fierce love of life and on the other with the spectacle of vanishing youth and beauty that haunted him all his life.

Mahler was obsessed with the flight of time, and his despair as artist and man was over seizing the glow of the moment and making it last. No composer ever expressed such nostalgia for things passed and passing.

And Mr. Walter knew how to give every nuance its full due of poetry. This was music warm with humanity and helpless protest, and one felt it in every fibre of last night's reading.

Miss Ferrier ought to make a permanent addition to the vocal wing of New York music. The voice is warm and vibrant, easily produced, and capable of rich applications of color. Phrasing and diction both showed a sure grasp of style and content.

Mr. Svanholm's resonant voice sounded even bigger and brighter than it does at the Metropolitan. The full tones came through with the impact needed to heighten the effect of the grim outcries of Mahler's text.

But then they all sang well last night, the soloists in the actual vocal line, the orchestra in making the accompaniment sound like one varicolored voice—and Mr. Walter, whose guideline you could follow like a voice through every phrase.

LOUIS BIANCOLLI,  
*New York World Telegram*

Making his first appearance of the season as conductor of the Philharmonic-Symphony Orchestra at Carnegie Hall last night, Bruno Walter wisely included on his program Mahler's "Lied von der Erde"; for few would dispute the fact that Mr. Walter is incomparably the most discerning interpreter of the Austrian master's music and especially of this work, perhaps the most touching, aside from his Ninth Symphony, of all his symphonic products.

The occasion was further distinguished by the debut here of the young English mezzo-soprano Kathleen Ferrier, who delivered the contralto solos. Miss Ferrier, known here hitherto through London Decca phonograph records, which indicated that much was to be expected of her, proved to be a singer of uncommon ability. Her voice is a fine, voluminous one which has been cultivated with exceptional care. Her scale throughout the range employed was even, and there was no deterioration of quality in the rapid sections of the fourth movement, "Von der Schoenheit," where most singers who attempt this music are troubled by problems of breath control. Miss Ferrier's phrasing was exemplary and her claim to complete artistry rests not alone on the unallied beauty of tonal texture with which she invested her lines but on the unfailing perceptiveness and inwardness which pervaded her conception of this music with its blend of hopeless despair and resignation.

Set Svanholm, who returns to the Metropolitan next week as a matchless Siegfried, sang with the utmost assurance and with flawless musicianship. His tenor voice sounded rather inflexible in the opening "Das Trinklied vom Jammer der Erde" and in "Von der Jugend," but with the fifth section of the work, "Der Trunkene im Fruehling," he achieved greater vocal elasticity and therewith greater musical conviction.

JEROME D. BOHM,  
*The New York Herald Tribune*

Bruno Walter, back from his European triumphs, returned to conduct the Philharmonic-Symphony in Carnegie Hall last evening. Orchestra members rose as a tribute to the first appearance this season by the orchestra's musical chief, which tribute Mr. Walter proceeded to justify by a performance of uncommon excellence.

The principal feature of the evening was Mahler's "Das Lied von der Erde," a work for which Mr. Walter has special affinity, since it was he who conducted

its first performance, in Munich in 1911. Mr. Walter also has led it twice previously with the Philharmonic, in 1934 and 1941.

As performed under Mr. Walter's direction, "Das Lied von der Erde" is an absorbing musical experience, and one which, thanks to Mr. Walter's friendship with the composer, may be regarded as definitive. Like most of Mahler's works, "Das Lied von der Erde" is wonderful to listen to and difficult to write about. The poignant work, rich with exotic overtones of the Orient, and conceived in a sort of exhilaration of despair, seeks to express the inexpressible, and comes very near to succeeding.

JOHN BRIGGS,  
*New York Post (Copyright 1948)*

One's reasons for admiring the "Lied von der Erde" are doubtless generally shared. The lyricism of the poetry has an inspired parallel in the completely lyrical nature of the scoring both for voices and orchestra. Tenor and contralto—last evening the mezzo-soprano, Kathleen Ferrier—carry the burden of the song. But the orchestra also, with its remarkable devices of coloring and of dramatic accentuation, sings its song, and intersperses the final verses for the woman's voice with an interlude which is a "lied" of its own. The very melodic writing needs no translation or commentary to exert its immediate appeal. Sentimental or not, the complete sincerity of the music is unquestionable and affecting.

Saying this, one adds reluctantly that the performance, for one reason or another, began to fall before it was over. This at least was the reaction of one listener who is not a perfect Mahlerite. Was this only due to certain characteristics of the performance? Both soloists were deficient in diction. Svanholm, the tenor, could only shout, in the opening verses, against heavy orchestra, and in this Mr. Walter did not spare him.

But Mr. Svanholm was prevailing hard-voiced and lacking in variety of tone color. Miss Ferrier had but recently emerged from a bad cold. Her voice became freer as she went on. She could not, however, give the full significance to her text and music. Some time before the end was reached "Lied von der Erde" was becoming langweilig, lachrymose, old-fashioned.

OLIN DOWNES,  
*The New York Times*

There was Mahler at the Philharmonic Symphony last night in Carnegie Hall, but no Mahler "problem"; for the work was his "Lied von der Erde," about which virtually all shades of opinion are in agreement. If it is not the greatest music of the century from Central Europe, it is the last great music written there. As delivered by Bruno Walter, with masterful pace and comprehension, it was food for the mind and balm for the spirit.

With texts from "The Chinese Flute" as the unifying factor, Mahler's response to the states of mind expressed by such words as "Sehnsucht" ("Longing"), "Seele" ("soul"), "Leben" "Tod," "Herz" and virtually every other key word of German lyric poetry—down to and including "ewig" ("eternity")—has a cleaner structure and a longer line than anything in his purely orchestral writing. It is doubtful, for all of that, that he ever invented elsewhere the sensitized, compelling and wholly personal ideas that flood this score; but even so, their course is better channeled, a stream straight through from the source to the sea.

It was a great return to the Philharmonic for Walter, who gave this work its world premiere in Vienna thirty-seven years ago, and has lived to see it accepted into the fraternity of the works that endure. The Mahler who said, "My time will come," has, in Walter, a champion who has seen that, for "Das Lied von der Erde," at least, those were words of prophecy, not merely of hope.

IRVING KOLODIN, *New York Sun*

## ANTON BRUCKNER:

### SECOND SYMPHONY

Kansas City Philharmonic Symphony Orchestra, Efreim Kurtz, Conductor; Jan. 27 and 28, 1948. (First performance in Kansas City.)

Not quite the biggest, nor yet by any means the smallest audience of the season, braved the near-zero weather last night to hear the eighth program on the Philharmonic subscription concert schedule. Those who turned out were well rewarded. They heard, most of them for the first time, the great Second Symphony of Anton Bruckner, . . .

The playing of the Bruckner symphony last night was, so far as Conductor Efreim Kurtz has been able to dis-

cover, the second performance of that work in America, although it is something like seventy years old. Its only previous reading in the current records was by the New York Philharmonic in the middle '20s, when Willem Mengelberg, the Dutch conductor, held the post there.

A single hearing of the symphony serves to revive, but not to explain, the mystery of why Bruckner's great orchestral works, so highly esteemed in Austria and Southern Germany, have been so slow to move beyond their native borders. Most of the symphonies are of great length; the Second is perhaps the shortest of the nine. But many others are long, too—Beethoven's Third and Ninth, for example, and the Schubert C major.

Perhaps the Bruckner symphonies seem dull to outlanders. The Second, undoubtedly has its dull spots; but so have most symphonies, if you pick the spots out of their context and quote them singly, as a politician does when quoting from a rival candidate's speech.

Yet throughout the Bruckner symphony last night there were many beautiful episodes. Some of them were not worked out as we are accustomed to hear themes worked out by Brahms or Beethoven; and some were worked to excess, a la Wagner. But the work typical of most carefully-written works in the late romantic period of the nineteenth century, abounded with melodies, beautifully intoned by a master instrumentalist. There is no doubt that Bruckner had almost a Wagnerian ear for sound; almost every phrase is placed in the orchestra to the best effect, and his use of alternating strings and winds, if not highly original, is most effective and agreeable. The symphony is quite long, as modern symphonies go—almost an hour. But leisure was a mark of the composer's age; while the Victorian novelists were writing long novels, the Germans and Austrians were writing long symphonies and operas. Bruckner was guilty, too, but not uniquely so.

Mr. Kurtz gave the symphony the most careful preparation, and emerged with one of the greater reading triumphs of the season. The tempi were always interesting, and the climaxes well planned and executed. The close attention the audience gave to the long slow movement was evidence of interest unusual in an unfamiliar piece of abstract music.

C.H.T., *The Kansas City Times*

## NOTES ON CONTRIBUTORS

**NEVILLE CARDUS**, for many years Music Critic of the *MANCHESTER GUARDIAN*. Author of *Ten Composers* and several other books. His *Autobiography* appeared in September, 1947, and was selected by the Book Society as the Book of the Month. *Remembered Pleasures*, a volume of reminiscences on which Mr. Cardus is now working, is being published in part by HALLÉ in serial form, prior to its complete publication as a book.

**GABRIEL ENGEL** is a graduate of Columbia University. He was a Pulitzer Scholar. He is the author of *The Life of Anton Bruckner and Gustav Mahler, Song-Symphonist*. Since its inception, he has been the Editor of *CHORD AND DISCORD*. He has contributed to the *Encyclopedia of Music and Musicians*.

**DONALD MITCHELL**, born in London, 1925. Educated Dulwich College. In film industry before Army service. Demobilised 1946 and now busy lecturing and school teaching. Editor of the quarterly review *Music-Survey*. Contributor to *Mandrake* (Oxford) and A. L. Bacharach's forthcoming *The Music Masters*. Broadcasts and does research for the B.B.C. Made a particular study of the life and music of Max Reger.

**DIKA NEWLIN**, born in Portland, Oregon, on November 22, 1923, is assistant professor and composer in residence at Western Maryland College, Westminster, Maryland.

While a high school student she composed her *Cradle Song*. It was orchestrated by Vladimir Bakaleinikoff and performed by the Cincinnati Orchestra under his direction on December 28, 1935. Since that time it has received performances by other concert orchestras.

Having entered Michigan State College at the age of twelve, Dika Newlin took a full liberal arts course, majoring in French. In 1938 she began studying with Schoenberg, whose influence aroused her interest in the work of Bruckner and Mahler. She was the first ever to receive a Ph.D. degree in musicology at Columbia University. Her work there was under the direction of Douglas Moore and Paul Henry Lang. Her doctor's thesis, bearing the title "Bruckner-Mahler-Schoenberg", was published by the Kings Crown Press in 1947 and is about to go into a second edition. While at Columbia she continued to study the piano (with Rudolf Serkin, and later with Artur Schnabel) and composition (with Roger Sessions). Her one act opera, *Feathertop*, based on Hawthorne's story of the same name, won the Seidl prize for distinguished accomplishment in the field of the lyric stage. Excerpts from her second full length opera, *The Scarlet Letter*, have been played in concert.

**ROBERT SIMPSON**, born in London, 1921, originally intended to study medicine. After two years of medical studies, Mr. Simpson decided to turn to music. He holds a Bachelor of Music degree from the University of Durham. At the present time he lectures and occasionally teaches in schools. He has composed several orchestral and chamber music works. His article, *Bruckner and the Symphony*, appeared in the February, 1946, issue of *The Music Review*, published in England.

**WARREN STOREY SMITH**, born in Brookline, Mass., succeeded Olin Downes as Music Editor of the *Boston Post*. His musical compositions include orchestral and chamber music works as well as songs and piano pieces. He became a member of the faculty of Faelten Pianoforte School in Boston after his graduation from that school. He was assistant music critic on the *Boston Transcript*. In 1922 he became teacher of theory and composition at the New England Conservatory.

**WOLFGANG STRESEMANN**, born in Dresden, studied law and music. After practicing law for several years, he decided to devote himself to music. He has written symphonies, songs, chamber music, etc., and has conducted orchestras in New York, Buffalo, and Princeton. He came to the U. S. in 1939 and became a citizen. At the present time he is music critic on the *Staats-Zeitung* in New York.

Among American artistic developments of recent years the rebirth of interest in the music of Bruckner and Mahler is second to none in significance. When *The Bruckner Society of America* was founded on January 4, 1931, performances of these two composers by our major musical organizations were not merely rare, but also ineffectual, because American music-lovers had no adequate approach to the proper appreciation of the art of either Bruckner or Mahler. Therefore the Society, having adopted as its chief aim the fulfillment of this void, published the first biographies of these composers in English and issued a magazine, *CHORD AND DISCORD*, devoted almost entirely to discussions of their works.

The Society solicits the cooperation of all who are interested in furthering this aim. Inquiries concerning membership may be directed to Robert G. Grey, Executive Secretary, 697 West End Avenue, New York 25, New York.

# INSTINCT AND REASON IN MUSIC

By Ernest M. Lert

## INTRODUCTORY

One of my students, a highly gifted young composer, agreed with an enigmatic smile when I pointed out the spiritual (not stylistic) affinity of composers like Howard Hanson and Olivier Messiaen with Anton Bruckner. But he dissented violently when I dared to see more future in the evolution of their emotion-born idioms than in the technical experiments of the art-for-art's sake composers. Dissatisfied with the (necessarily sketchy) discussion in class, he wrote in flaming words a touching, well-founded oath of allegiance to music for music's sake. Music, to him, is the product of deliberate objective *workmanship*, isolated from any influence of extra-musical feelings and ideas. He simply hates music on words. Music, to him is "abstract," it is nothing but "the realization of INTRINSIC principles and ideas," as stipulated in Willi Apel's "Harvard Dictionary of Music." Every extrinsic, i.e., not strictly musical, influence leads to Romanticism.

Romanticism, today, is dreaded as a mental disease no self-respecting artist mentions in ideological company. Schumann's "the aesthetics of one art is the aesthetics of all arts" is anathema. So is every hint at the rationalistic Theory of Emotions (*Affektenlehre*) of the recent Enlightenment, and of tone painting, so dear to music from the ancient Greek Sakadas to our own Virgil Thomson. This student spoke for legions of contemporary musicians. Their violent resistance to the excesses of programmatic and hypercarnal music since Berlioz and Wagner is understandable, just as Romanticism was understandable as a reaction against the dictatorial formalism of classicism.

But is the understandable always right?

Does not the whole world of music thrive between the poles of Classicism and Romanticism?

Music-for-music's sake amputates itself from life and isolates itself in a vacuum. Music-for-painting's sake subjects music to rationalistic interpretation and deprives itself of its emotional identity and independence.

The entire evolution of music is one running battle between emotion and reason, between music generated by our irrational instincts, and music fabricated by our calculating reason. Curt Sachs justly calls the two antagonistic categories "pathogenic," born of emotion, and "logogenic," born of ideas. But neither of the two can ever be chemically pure in itself. The most workmanlike music rises to some emotional climax, while the most informal expression of emotions and impressions frames itself within some reasonable style and form.

With Mozart, to whom (operatic) poetry (i.e., reason) was the "obedient daughter of music," the instinct for correct form was so natural and

spontaneous that any interference by his reason would have spoiled its spontaneity. He made his wife Constance read fairy tales to him which occupied his reason, while his instincts jotted whole symphonic movements on the paper. He rarely had to apply corrections.

With Beethoven, however, the power of reason was so demoniacal that with each new work he had to fight a veritable Jacob's wrestling match with the Angel of Reason to win his way to the blessings of the irrational beyond. His sketch books frantically mix musical with worded notes. There are almost no manuscripts of his without profuse and drastic corrections. Quite a few of his works have come down to us in different versions.

Thoughtless commentators brand Richard Strauss a Wagnerian. He was one, theoretically, until he discovered he was a Mozartian. Wagner was logogenic. In his world each motif MEANS something extra-musical, each piece of music TELLS something extra-musical. You cannot understand Wagner without the running comment of your reason. The music of the Mozart-conductor Strauss, from leitmotif to whole operas and symphonies, always expresses some emotion or state of mind in direct terms. You can understand *Der Rosenkavalier* from the first to the last curtain without knowing what its single leitmotives "mean." You feel his *Heldenleben* without a program. You simply participate without thinking about it. The Straussian forms grow as instinctively as Mozart's forms. (Unbelievers read his letters to be converted.)

A similar relationship holds true between Bruckner and Mahler. They, too, are usually coupled together. Yet, the same writers label Bruckner "naive" and Mahler "intellectual". To a certain degree they are right. Bruckner is "naive" as Schiller defines the term: "naive, from *nativus*, which means inborn, natural, a not artificial expression of a childlike or virgin pure mind." To Schiller the highest cultured genius of the classic period, Goethe, was "naive". Bruckner thus is in good company. He never was the simpleton liberal half-wits see in him. "Naive art", to Schiller, is an expression of reality *not* tinged with speculation. Its counterpart is *sentimentalisch* art, which superimposes upon the world of reality idealistic (and therefore intellectual) longing for a more perfect world. Schiller regarded himself as *sentimentalisch*, which lodges Mahler in respectable company too.

Bruckner's world is God's own world, as mirrored in a virgin mind and soul. It is always the WHOLE world, heaven and earth and hell, expressed and heard in one single complex—hence, the complex polyphonic Gothic texture and structure of Bruckner's realistic mysticism in music. Bruckner was all spiritual and spontaneous. His greatness is in his symphonies. They are without words and without programs. His worded music (except that in Latin) has little of the transcendental surge of his wordless compositions and Masses. He was pathogenic.

Mahler was Bruckner's counterpart. He was rationalistic and *sentimentalisch*. His romantic longing for a naive world led him from the artificial naivete of *Des Knaben Wunderhorn* to the gigantic conception of his *Eighth*. From cover to cover this spiritual epic is hatched on words. Naive longing for a visit of the Creative Spirit, as expressed in a medieval prayer-hymn, blends with the intellectual vision of the redemption of

mankind, as it is word-painted at the end of the second part of Goethe's *Faust*. The result is an almost Dantesque manifestation of mysticism. But this mysticism is idealistic, *sentimentalisch*. As in Beethoven's *Fifth*, the very first theme of the symphony, the *Veni Creator Spiritus*, announces IN WORD AND TONE the meaning of the whole work. This motto resounds again and again across both of the gigantic parts until it rears up desperately against the ultimate revelation "the eternal feminine is lifting us upward," at the very end of the whole symphony. Here, an intentionally simple harmonic texture forced into a complex polyphonic structure is the prize of another Jacob-like combat with the same angel Beethoven had to engage. Here, a born rationalist struggles desperately for his place in the irrational mystical Body of God. Mahler was intellectual and idealistic. He was logogenic.

These are the basic contrasts of pathogenic and logogenic musicianship. But how much have both schools, basically, in common?

Both schools created high standards of their peculiar styles and forms. And yet, their individual members are very rarely caught discussing techniques and workmanship.

The pathogenic J. S. Bach wrote didactic music. He prefaced these works with a kind of philosophical program, but he never wrote a book on theory. (His rather academic-minded son Philipp Emanuel did.) Pathogenic Brahms and Joachim tried an exchange of letters on counterpoint, but soon gave up. Pathogenic Bruckner, though a university professor, left no textbook on any theory. Neither did logogenic Haydn and Beethoven. It is not strange that our contemporary composers, in their efforts to isolate music behind an iron curtain of technique, write textbooks. Schoenberg, Hindemith, and Piston are three random examples.

Yet, both parties instinctively exert every possible effort to reach beyond their rational experience, confessing freely that their music springs from their *Weltanschauung*, their spiritual experience, and their theory. But they never try to show us HOW they convert *Weltanschauung* and theory into music.

Perhaps, if we could find out what kind of spiritual experience beyond our rational life makes us sing, dance, and play instruments, we could help our creative musicians tell us more precisely how their music becomes a sounding mirror of their life or experiences. Perhaps a chunk of rudimentary *erlebtes Leben* psychology may advance our experiment.

Let us try to single out a few specific instincts which may arouse emotions that sing.

#### THE SPIRITUAL INSTINCTS

Animals make music. Birds sing, elephants trumpet, dogs bark, horses neigh, bees hum. Animals are not equipped with reason or rational workmanship. They live by instincts only. An instinct is, for our purpose, an irrational urge to do something vital. Thus, since animals make music, MUSIC MUST BE PRIMARILY INSTINCTIVE. What are these instincts which make animals sing and dance? They are seven. Three of them are spiritual: the instincts of ecstasy, symbolization, patternization. Four are physical: the instincts of sex, cruelty, joy of suffering, collectivism.

### A. The Instinct of Ecstasy

When do animals sing? Mostly, when they are excited, particularly at mating time. In excitement we are "out of our (normal) mind", with our reason, partly at least, switched off. The Greeks had for it the word *ekstasis*, "standing outside" one's self. Ecstasy expands our normal frame of mind to an imaginary but clearly felt infinity—we crave to grow different, to worship, to become mentally intoxicated, to sing out "la la la", "hurrah", "hallelujah", and other senseless syllables. Our shouts take melodic shape, our jumps pattern dances. Handclapping and foot-stamping are not powerful enough for our now expanded ego. We evolve rattles and drums, cymbals and bells. Our megaphone-like cupped hands beget trumpets and trombones. Kiss-like pursed lips whistle and soon blow flutes and *chalumeaus*. Singing bows bring forth harps and viols.

In my Oxford Dictionary "ecstasy" hugs the connotation "poetic frenzy". Originally, poetry and music are congenital, they are one.

Music becomes the natural expression of our ecstatic expansion. The aboriginal orchestra grows out of it, all without the benefit of a coolly planning reason.

The initial musical creator is the Instinct of Ecstasy.

### B. The Instinct of Symbolization

What kind of music do animals make in their ecstasy?

The zoologist answers: music of mating and music of anger. With many animals mating call and battle cry are identical. They differ only in intensity. To our practical reason a love call has nothing to do with the sexual act as such, while a battle cry never killed an enemy. Both are senseless wastes of energy.

Yet, are they really? The sexual act, as a bare fact, is something brutal, disgusting, and ludicrous. It is so even to the animal. To overcome this disgust the animal must be "out of its own self", i.e., it needs a high degree of ecstasy. Music provides it. The male mountain cock dances and sings, often for hours, until it arouses the coy female to the right degree of "poetic frenzy." Only at this tremendous climax are both ready for the act itself. It is performed in silence, as an anticlimax. It is over in a few minutes. *Post coitum omne animal triste*.

The song and dance of the male bellbird or mountain cock or certain species of antelope consist of "sexual signals," stylized sounds and movements of the body, which (often very vaguely) suggest the movements of the real sexual act. These "signals" are symbols.

My dictionary defines "symbol" as "an emblem or sign representing something else." A flag is a multicolored piece of cloth. But this cloth represents my country. This symbol is so real and alive in itself that we swear allegiance "to the flag AND (sic) for what it stands." We seal our oath by singing our National Anthem. This anthem, too, is a symbol. Symbols are our worded and wordless musical sounds, from whistling and handclapping to symphonies and musical dramas. According to origin, at least, our instruments are pregnant with symbolism: drums and bugles symbolize war; organs and church bells stand for religion; flutes suggest love and fertility; harps are attributes of the heavenly hosts.

Our changing moods find themselves expressed, i.e., symbolized, in music. The first eight Gregorian modes awoke in medieval man Dignity, Sadness, Firmness, Piety, Joy, Mourning, Sublimity, Narration. Musical expression of our states of mind and emotion have been with us ever since.

Expanding ourselves to the infinite, we understand more easily why, to the Chinese, the five notes of their ancient pentatonic scale could mean Earth, Water, Air, Fire, Wind. We also understand why, in highest ecstasy, Pythagoras, the sober mathematician, could hear the whole Universe sound its Music of the Spheres. The psychologist C. G. Jung says somewhere that a symbol makes no sense, save it be symbolical sense. (That sounds almost like saying: music makes no sense except musical sense.) To the Chinese and medieval man this sense-for-symbol as the highest reality was a kind of sixth sense, placing music between the mathematical sciences and theology, the disciplines of ecstatic abstraction. This sense makes sense only to our feeling, not to our thinking. It is pathogenic.

Whoever, today, is without this sixth sense had better give up trying to UNDERSTAND music.

Perhaps he will have better luck with TONE PAINTING. From the primitive bull-roarer of the jungle, imitating the howling of the wind gods, to the Muspilli, the cataclysm of the world in Wagner's *Dusk of the Gods*, tone painting symbolizes almost everything thinkable and unthinkable. There the *tertium comparationis* helps the rationalist to understand. If the 'cello plays certain low humming runs, I am reminded of something I have heard before in real life. At once my dormant reason awakes and tries to find out what the humming runs on the 'cello recall to me. During this search my emotional participation recedes. When my factual and musical memory flashes: Bumblebee!, I suddenly feel elated. I have found the *tertium comparationis*: the humming of the bee. But from now on my reason remains alert to find out how correctly the 'cello imitates the bee. This interference by my reason infects my emotional participation with logical deductions. I GROW LOGOGENIC.

Only where tone painting is "more the expression of feeling than painting" (Beethoven), i.e., where reason is relegated to the background, can ecstasy enjoy fully the sounding symbols of music. Thus, absolute or abstract music and tone painting or programmatic music are both symbolic expressions. Only the proportion of the emotional and rational substance defines them as pathogenic or logogenic.

The second creator of music is the Instinct of Symbolization.

### C. *The Instinct to Pattern*

Our life runs in pattern like pulsing heartbeat or marching feet, through the rhythm of day and night, of the four seasons, of the cycles of history. Without that unconscious, subconscious and conscious urge to pattern them, the routines of our daily life were impossible. Music is pattern. Between the two notes of the cuckoo call and the gigantic ritual of Bach's *Passion According to St. Matthew*, the pattern of rhythm, scales, chords, motives, themes, phrases, periods, stanzas, and arias, of simple and complicated forms and designs, grows as naturally as snowflakes and redwoods. Whether Handel's hothouse of inspiration produced his *Messiah* in 24 days, or Beethoven's gestation of his Ninth stretched itself over

thirty years, makes no basic difference. Both masterpieces, conceived in ecstasy and symbolization, are born of patternization. If ecstasy is the driving force, while the symbols it begets are the substance of music, the Instinct to Pattern constructs the musical forms.

Our raptures and imaginations are somehow beyond our control. They are irrational. But with the urge to pattern, Reason, the antagonist of Emotion, enters the ring. Reason, the goddess of workmanship, is the defender of the generally accepted patterns of generally accepted traditions. It is her task to consolidate the irrational phantom sounds of our imagination into readable formulas, fit to be sung or played by instruments.

The way from brain to paper is short but hard. To a Mozart, as we have seen, formal workmanship came as naturally as breathing. His first drafts usually were his final drafts, fit for print. Beethoven was different. He was the philosopher musician. His music had to symbolize lofty ideals, where Mozart expressed straight "naive" ideas. Beethoven confessed, "I hear a melody always on an instrument, never in a voice," i.e., never in words. His music, even when tone painting, was "more the expression of feeling than painting." He thought in sounds, not in words or pictures.

Therefore, it was a titanic task to express philosophy by sheer pattern of sounds. We know how he raved at work. Inevitably, at length his struggle exploded the pathogenic pattern. The finale of his last symphony had to burst into words.

Thus, Beethoven, one of the great masters of form, proves that music cannot thrive on abstract form without substance. Workmanship, the obedient daughter of reason, simply will not suffice.

Yet, workmanship is needed to master the tonal material which constructs the musical forms. This material consists of the three Basic Features, basic with the Instinct to Pattern.

The first Basic Feature is REPETITION.

It furnishes the bricks of the construction: the rhythms, scales, motives, themes, chords, phrases, periods, and so on. But already here reason interferes. The endless litanies of primitive men remain as unchangeable as the two notes of the cuckoo call, the monotonous bark of the dog, the brilliant trills of the canary. But with growing consciousness reason opposes identical repetition more and more. Reason drives straight "to the point." Music "goes round and round." Resisting reason's pointed attacks, the instinct to pattern is gradually forced to disguise its irrational repetitions behind rationally altered variations, ranging from insignificant changes of the basic theme, as in heterophony, to such complicated structures of repetition as the fugue. The emotional, spiritual, and mental evolution from the cuckoo call, endlessly repeated, to the Protean versatility of the motto-motif of Beethoven's *Fifth* is tremendous. Yet, this symphony is built up on the two notes of the cuckoo call.

The second Basic Feature, TENSION AND RELAXATION, braces the structures of the bricks. In high tension our heart beats hard and fast; in relaxation its beat softens and slows down. Thus, musical tempo and dynamics originate, literally, in our heart. Systole (tension) and diastole (relaxation) somehow convert themselves into STRONG and WEAK beats. They control the emotional tides of dissonance and consonance, of ac-

celerando and ritardando, of increasing and decreasing volume, of stormy ascents to top notes and exhausted glides to bottom notes. They instigate the ups and downs of varying, inverting, augmenting, diminishing, sequencing, etc., of the thematic material. They thicken up and thin down the orchestration. They contrast and balance fast and slow, tense and relaxing sections and movements.

Again emotion holds reason at bay.

Both (Repetition plus Tension and Relaxation) combine forces to create the third Basic Feature: **FORMALISM**, the code for designing the musical piece as a whole. It is here that workmanship and cool-headed planning finally seem to get the upper hand. The form frames the picture. The frame obeys expediency, while expediency obeys reason primarily.

Yet, even here the rational is based on the irrational. The monotonous, but somehow formally concerted symphony of barking by the village dogs, and the chanted litany of the leader of cavemen at the campfire, answered by short refrains of the whole tribe, are as many wild seedlings of complicated musical forms as the minutely planned religious rituals out of which our oratorios, operas, symphonies, and concerti emerged.

In Formalism, too, reason plays a rather supporting role. The lead is still with the instincts.

THE THREE SPIRITUAL INSTINCTS, INCLUDING THE THREE BASIC FEATURES, ARE BLENDED INTO, AND ACT AS, ONE SINGLE ORGANIC COMPLEX. THE PROPORTION OF PATHOGENIC AND LOGOGENIC GENES IN THE ORIGINAL INSPIRATION AND THE PROPORTION OF THE INDIVIDUAL DOSES OF ECSTASY, SYMBOLIZATION, AND PATTERNIZATION, BLENDED INTO THIS COMPLEX, DETERMINE BOTH STYLE AND FORM OF EACH INDIVIDUAL PIECE OF MUSIC.

That this complex is irrational at its roots is proved by the religious origin of all music. To the rationalist religion is superstition and magic nonsense. But ask him to explain WHY a lullaby lulls a baby to sleep, WHY the military band stirs his heart and feet, WHY boogie-woogie on the factory radio increases production, WHY musical therapy records cures, and WHY he himself loves to dance and hum silly "crooners" at his mate. He will have no reasonable answer. Tell him that lullabies, war dances, working songs, witch-doctor incantations, and love ditties are the primeval ancestors of all our modern music and he will simply laugh at your credulity. Yet, all songs, originally, were magic formulas. The word "charm" (from the Latin: *carmen*, a musical-poetic conjuration) and the word "enchant" from the Latin: *incantare*, hence incantation) are almost synonymous with the word "magic."

Out of such individual magic grew the collective magic of rituals. Sacred and secular rituals are symbolic actions eternalized by rigid traditions. Woe unto him who fell out of step with the sacred routine. Many primitives, including the pre-Platonic Greeks, killed performers who desecrated the magic action by a single sour note or by one faulty dance step.

Magic is the mother of religion, music its father. Sir James Frazer speaks for many anthropologists when he contends that music "CREATES as well as EXPRESSES religious EMOTION (sic)" and that "THE MUSICIAN HAS

DONE HIS PART AS WELL AS THE THINKER (RATIONALIST) AND THE PROPHET (ECSTATIC) IN THE MAKING OF RELIGION."

If music is so vital that it co-creates man's innermost power, his religion, for which he gladly kills and dies, how can music be nothing more than a workmanly form of sounds roving in the vacuum of abstract principles and formulas?

#### THE PHYSICAL INSTINCTS

The Spiritual Instincts develop the elements of style and form in music. The Physical Instincts fill them with the substance of Sex, Cruelty, Joy in Suffering and Collectivism.

WE MUST NEVER FORGET THAT THE SPIRITUAL INSTINCTS INCITE, CONTROL, TRANSFIGURE, AND, AT THE SAME TIME, INTENSIFY THE PHYSICAL INSTINCTS so that sex is transfigured into love, murder is glorified as a patriotic duty, the "can-take-it" bravado of prize fighters and pole sitters grows into heroism and martyrdom, and mob riots are ennobled to spiritual rituals—all with and by music, of course.

##### A. *The Instinct of Sex*

The Brazilian bellbird, singing and dancing his sexual signals to enchant his female, transfigures sex into a primitive kind of love. His mating period is the bird's only opportunity to transport itself beyond its animal semblance. Thus sex virtually becomes the religion of the animal.

The human species, aware that self-perpetuation and mating are inseparable, sanctifies marriage by musical sacraments. Ecstasy sings out that the whole world was begotten by World Parents, that fertility of fields, cattle, and wives is the work of phallic divinities. The primeval, solemn, symbolic cohabitations of Ishtar and Tammuz, Osiris and Isis, Dionysos and the Queen of Athens, Rome's Jupiter and Juno, were performed much like oratorio-opera rituals. Sober Judaism incorporated the sensual Song of Songs in the Old Testament, while ascetic Christianity symbolizes the human soul as the Bride of Christ and sings: "Like a bridegroom Christ rises from his *thalamos* in wedding mood. He walks over the fields of the world." (St. Augustine). The wedding-operas, dedicated to the *Beylager* of the princes of "enlightenment," were sex rituals which survived down to the 19th Century. Spontini and Meyerbeer still wrote Torch Dances. Today's torch songs may be their offspring. Even our juke-box ditties are tinged with the symbols of the divine, like *You Are My Sunshine*, etc.

##### B. *The Instinct of Cruelty*

Cruelty inspires primitive men's religion. There is no religion without a ritual murder at its roots. Thus, the gods equip their faithful with a handy excuse for repeating this murder at its anniversaries when a symbolic equivalent of the god is sacrificed in a musical-dramatic re-enactment of the original killing of the god. Almost all religious cults dramatize our inborn cruelty, ranging from the sacrifice of the Babylonian Thyamat by Marduk down to Bach's *Passion According to St. Matthew* and Honegger's *Jeanne d'Arc on the Pyre*. The Holy Sacrifice of the Mass is the most sublime transfiguration of man's cruelty to God.

Our secular cruelty has less lofty extenuations. At least, each generation runs amuck through a war or a bloody revolution, or both, with patriotism or party doctrines as excuses and battle hymns and brass bands as intoxicants. In peace time, just for the fun of it, we chase poor foxes to death, hunting-horns tooting and tallyhos howling. Bullfights, horseraces, football, prize fights, radio mysteries, blood and dagger opera, all these are soaked in music of some sort.

Music itself, particularly the art-for-art's sake species, forces singers to venture silly coloraturas and unnatural top notes and instrumentalists to breakneck speed in rapid passages. The gentle listener, spellbound, longs for a crack-up of voices or strings.

With clenched fists Bach forces sharp dissonances down our ears. Beethoven ends eight of his nine symphonies with bellicose marches. Stravinsky, in his primevalistic *Rites of Spring*, enacting the sacrifice of a virgin to the gods of fertility, throws savage dissonances, trombone howls, brutal drum blows, and other torturing timbres and sound effects at his audience.

Even our humor is cruel. The late W. C. Fields once remarked, "If it hurts, it's funny. If it don't, it ain't." Everything funny was blasphemous originally. Our pre-Columbian Indians had clown priests (*koymashi*) who, at the climax of a stirring religious ritual, mimicked the sacred act and its music in obscene parody. The Sorbonne of Paris, in 1444, had to banish the sacrilegious Feast of the Ass from the churches. The pranks of the assorted Lords of Misrule of all denominations, all Saturnalian festivals of licentiousness, the ancient Greek's blasphemous satyr play, his musical comedy, the *mimos*, the Roman *fescennine*, the *serventes* of the Troubadours, the French vaudevilles, the English (anti-)masques, the Italian *commedia dell'arte*, the *opera buffa*, the musical comedy, and the insults radio comedians hurl at each other between blaring theme songs, all these are expressions of that mischievous Circe, Cruelty.

There is nothing abstract or workmanlike in inflicting pain.

### C. *The Joy of Suffering (the Instinct of Self-Sacrifice)*

We not only enjoy cruelty against others, but we ourselves love to suffer and are fond of dying. We call our most poignant desires "passions," from the Latin word *passio*, which means "suffering." The joy of suffering is man's religious complement to his sanctified cruelty. We sing, "As He died to make men holy, let us die to make men free," and we mean what we sing. Heroism and martyrdom, too, create music. The Austrian major, Erwin Lessner, while being tortured by the Nazis, thus analyzed his experience (*American Mercury*, September 1942): "The extreme of horror is as hard to describe as the extreme of pleasure or of beauty . . . Had there been a HYMN to express my faith I certainly would have tried to intone it, to defy and taunt the roaring noises all around me. National and religious fanatics have been known to sing on the gallows or the sacrificial pyre. I can understand it . . . I REALIZED THAT PAIN AND PLEASURE MEET IN DELIRIUM." These are the words of a martyr. Lesser mortals whistle in the dark and enjoy a "good cry" at funerals. If there is no dying close relative at hand, the "sob sisters" of soap-and-grand opera must sub-

stitute. Smoke gets in our eyes whenever none-but-the-lonely-heart croons its schmaltz. Bliss-drunk we die with assorted Romeos and Juliets, and Tristans and Isolde. Pathétique (sic) symphonies and appassionata (sic) sonatas, particularly their agonizing slow movements, make us swoon. We enjoy all the cruelties at which we assist as if they were being inflicted on ourselves. The Grace of Tears of the Age of Faith and the tremolo voice of the crooner of the Atomic Age are but different effects issuing from the same cause.

#### D. The Collective Instinct

"Man, by his very nature, is a gregarious animal," says Aristotle. Man, in a mob, loses his self-control and identity. You never start applauding, shouting hurrah, or singing hallelujah when you are all alone. An empty dance floor, theater, concert hall, even an empty church, scares the Casper Milquetoast within us. We need rubbing elbows and moods, the closer the better.

No mob is without music. The frantic chitter of a tree full of sparrows and the silly chatter of a roomful of cocktail socialites is music in the making, too. So are primitive war dances and the shouts of the crowds at ball games. Almost all religious and secular rituals are rhythmic mass-actions. Without the collective instinct there could be neither choral nor orchestral music.

With mobs, craving for excitement (ecstasy), slogans (symbols), conformity (pattern), orgiastic dances (sex), rioting (cruelty), and fighting (cruelty and joy of suffering), the power of these instincts grows in geometrically progressive proportion to the number of participating individuals. Gustave Le Bon proved it.

Again, it is music that whips this amalgam of humanity into action. There is no basic difference between the war whoop of a savage tribe and the shouting choruses of modern political rallies. The St. John and St. Vitus dance epidemics, the spirituals of the Flagellants, the battle songs of the Peasant Wars, the *Carmagnole* and *Marseillaise*, the opera *Masaniello* (igniting the Brussels revolution of 1830), the operatic choruses of Verdi (used as battle hymns by the Italian *Irredenta*), down to Beethoven's *Fifth* whose motto theme spelled "Victory" to the Allies of World War II, all this music was, and is, and will be essential and vital to its religious, social, and political collectives.

Can such music be classified as artifice-for-artifice's sake? Of course, not!

#### CONCLUSION

The purpose of this discussion was to correct two important errors in the esthetics of music prevalent today.

I have tried to show:

1. That music, originally, was not an art for art's sake. It was, and still is, a vital part and function of human life.

2. That vital music is not an arbitrary product fashioned by cerebral workmanship without involving any extra-musical emotion. Music is primarily the expression of extra-musical instincts.

My student admitted spontaneously that he, like any serious, genuine composer, started with imitating a great model before he arrived at his personal idiom of expression. This model, in turn, had started from another model, and so the imitating went on down the line *ad infinitum*. This makes our young composer the offspring of a natural evolution of music as a function of life. When he cared to replace the tabooed word "inspiration" by the more current term "hunch" and the fashionable slogan "subconscious urge," he, without realizing it, gave credit to his extra-musical instincts. His sole mistake lurks in his overestimation of workmanship. This is understandable. The hunch from the subconscious springs up spontaneously without any conscious labor. The transformation of this hunch into notation, however means conscious work. That is why we easily underrate our natural gifts and overrate our not so natural efforts. Edison's inventions also popped up in hunches. But between the happy call *Eureka*, when the creative flash struck, and the finished product of his flash, Edison, too, had to sweat it out. Hence his dictum: "Genius is 10% inspiration and 90% perspiration." But it is just this small 10% that makes up his stroke of genius. With 100% perspiring workmanship you may become a skilful arranger, but never a creator. Perhaps Edison, like Beethoven, needed long hours of sweatshop work, while Mozart created with a minimum of perspiration. Yet, the fugue in the Jupiter Symphony involves as superb an achievement from the viewpoint of workmanship as does Beethoven's *Grosse Fuge*.

This remark is not meant in any way to disparage workmanship. It is but a word of caution against overestimating the labor of reason at the cost of the power of instinct. It is a warning against another mechanization of our natural expression. There is a point where "*Vernunft wird Unsinn*" (where "reason becomes nonsense," Goethe), the exact point where reason seeks to fly without wings of inspiration.

The ivory tower of rationalistic isolation is not a healthy resort for that volatile whim of God and Nature: Music.

---

# MAHLER'S EIGHTH: THE HYMN TO EROS

by Gabriel Engel

## INTRODUCTION

"Eighth Symphony, by Gustav Mahler"! Strangely uncommunicative this ascetic title for Mahler's grandest and (he believed) greatest work. Surely so strikingly individual a composition in two parts (rather than four movements), with underlying poetic text throughout, should bear a more picturesque, more revealing name than "Eighth Symphony"! Remembering Mahler's infuriated cry of protest against all musical commentary one can almost hear behind this baffling title his demoniac, scherzo-like chuckle of satisfaction at the discomfiture of critical nicknamers of his eloquently poetic work. His bitter feud (for such it was in reality) with the reviewers had begun with his very first symphony, a purely orchestral work in the traditional four movements, which he had naively programmed as a *Symphonic Poem in Two Parts*. Exasperated by false interpretations and snide remarks in the press he had finally published the composition some ten years later merely as "First Symphony".

Emil Gutmann, his concert agent in charge of all business arrangements connected with the world premiere of the *Eighth*, said, in a letter about that event written a generation ago for a special "Mahler Issue" of *Die Musik*:

"Characteristically, Mahler forewarned the musical commentators:

'My symphony is not called *Faust Symphony*. It is not a 'Faust Symphony'. In fact, I forbid it any descriptive name.'

It is true that the setting of the closing scene of *Faust* constitutes the major portion of the *Eighth*. Yet evidence exists that Mahler did not in fact intend it to be a "Faust Symphony". His original scheme of the work, according to a manuscript leaf (in the possession of his widow Alma), called for four movements:

- 1) The Latin Hymn: *Veni Creator Spiritus* ("Part One" of the published work).
- 2) An instrumental *Adagio Caritas* (perhaps in the manner of some earlier Mahler slow movement, e.g., that of the *Fourth*).
- 3) A Scherzo.
- 4) (And this seems truly a puzzler) A Hymn: "The Birth of Eros".

That the latter could have been Mahler's own title for the closing scene of *Faust* is at first hard to believe. Yet so devious were his trains of philosophic thought that that might well have been the case.

It is possible, however, that he originally had a different text in mind. If so, one other scene in *Faust* presents itself as a likely alternative. Act II, Scene V, portrays the birth of "Homunculus", whom some Goethe commentators regard as identical with "Eros". Certainly, this scene appears a most grateful vehicle for musical formulation. Among various sea-gods and mythological spirits, the Sirens witness the miracle. Their song, hymning the event, forms the climax of the scene. The Song of the Sirens! How the thought of its realization might have lured Mahler, whose previous symphonies abounded in passages, even whole movements, devoted to the suggestion of the magic, the fantastic, and the unearthly in tone!

"The Hymn to Eros", however, is capable of a more simple, direct explanation. Eros, as Spirit of Universal Love, represents the final, crowning element in the "symphonic principle" adopted by Mahler at the very outset of his creative career, when he placed the mystic, symbolic phrase "*Wie ein Naturlaut*" (Like an Utterance of Nature) at the head of the score of his *First Symphony*.

"That Nature embraces everything that is at once awesome, magnificent, and lovable, nobody seems to grasp. It seems so strange to me that most people, when they mention the word Nature in connection with art, imply only flowers, birds, the fragrance of the woods, etc. No one seems to think of the mighty underlying mystery, the god Dionysos, the great Pan; and just that mystery is the burden of my phrase, *Wie Ein Naturlaut*. That, if anything, is my 'program,' or the secret of my composition" (Mahler was writing this to a prominent critic.) "My music is always the voice of Nature sounding in tone, an idea in reality synonymous with the concept so aptly described by Bülow as 'the symphonic problem.' The validity of any other sort of 'program' I do not recognize, at any rate, not for my work. If I have now and then affixed titles to some movements of my symphonies I intended them only to assist the listener along some general path of fruitful reaction. But if the clarity of the impression I desire to create seems impossible of attainment without the aid of an actual text, I do not hesitate to use the human voice in my symphonies, for music and poetry together are a combination capable of realizing the most mystic conception. Through them the world, Nature as a whole, is released from its profound silence and opens its lips in song."

When mentioning Dionysos and Pan, Mahler might also have added Eros, as the three play virtually identical roles in the pantheistic drama of ancient mythology. That Eros, Spirit of Universal Love, poses the "symphonic problem" in the *Eighth*, just as Dionysos and Pan had done in the earlier symphonies, is further borne out by one or two remarkable letters Mahler wrote Alma in the summer of 1910, while preparing the premiere of the *Eighth*. Needless to say, these letters are of the utmost importance towards a better understanding of the composer's intentions in the work.

"In the discourses of Socrates Plato gives his own philosophy, which, as the misunderstood Platonic love, has influenced thought right down the centuries to the present day. The essence of it is really Goethe's idea: that all love is generative, creative, and that there is a physical and spiritual generation which is the emanation of this Eros. You have it in the last scene of *Faust*, presented symbolically . . . . . In all Plato's writings Socrates is the cask into which he pours his wine. What a man must Socrates have been to have left such a pupil with such an imperishable memory and love! The comparison between him and Christ is an obvious one and has arisen spontaneously in all ages.—The contrasts are due to their respective times and circumstances. There, you have the light of the highest culture, young men, and a 'reporter' of the highest intellectual attainments; here, the darkness of a childish and ingenuous age, and children as the vessels for the most wonderful practical wisdom, which is the product of normal personality, of a direct and intensive contemplation and grasp of facts. In each case, Eros as Creator of the world!"

The next letter presents Mahler's own interpretation of Goethe's *Faust* as a whole, with emphasis on the mystic closing stanza, which the composer viewed as the essence not only of the drama but also of his symphony.

"It is a peculiarity of the interpretation of works of art that the rational element in them (that is, what is soluble by reason) is almost never their true reality, but only a veil which hides their form. But in so far as a soul needs a body (which there is no disputing) an artist is bound to derive the means of creation from the rational world. Whenever he himself is not clear, or rather has not achieved wholeness within himself, the rational overcomes what is spontaneously artistic, and makes an undue claim on the attention. Now *Faust* is in fact a mixture of all this, and as its composition occupied the whole of a long life the stones of which it is built do not match, and have often been left as undressed stone. Hence, one has to approach the poem in various ways and from different sides. —But the chief thing is still the artistic conception, which no mere words can ever explain. Its truth shows a different face to each of us—and a different one to each of us at different ages; just as Beethoven's symphonies are new and different at every hearing and never the same to one person as to another. If I am to try to tell you what my reason at its present stage has to say to these final verses—well, I'll try, but don't know whether I shall succeed. I take those four lines, then, in the closest connection with the preceding ones—as a direct continuation, in one sense, of the lines they follow, and in another sense, as the peak of the whole tremendous pyramid, a world presented and fashioned step by step, in one situation and development after another. All point, at first dimly and then from scene to scene (particularly in the Second Part, where the poet's own powers have matured to match his task) with growing

mastery, to the supreme moment, which though beyond expression, scarcely even to be surmised, touches the very heart of feeling.

"It is all an allegory to convey something which, whatever form it is given, can never be adequately expressed. Only the transitory lends itself to description; but what we feel, surmise but will never reach (or know here as an actual happening) the intransitory behind all appearance, is indescribable. That which draws us by its mystic force, what every created thing, perhaps even the very stones, feels with absolute certainty as the center of its being, what Goethe here (again employing an image) calls the eternal feminine—that is to say, the resting place, the goal, in opposition to the striving and struggling towards the goal (the eternal masculine)—you are quite right in calling the force of love. There are definite representations and names for it. (You have only to think of how a child, an animal, or persons of a lower or higher development live their lives). Goethe himself reveals it stage by stage, on and on, in image after image, more and more clearly as he draws nearer the end: in Faust's impassioned search for Helen, in the Walpurgis night, in the still inchoate Homunculus, through the manifold entelechies of lower and higher degree; he presents and expresses it with a growing clearness and certainty right on to the *mater gloriosa*—the personification of the eternal feminine.

"And so in immediate relation to the final scene, Goethe in person addresses his listeners. He says:

All that is transitory (what I have presented to you here these two evenings) is nothing but images, inadequate, naturally, in their earthly manifestation; but there, freed from the body of earthly inadequacy, they will be actual, and we shall then need no paraphrase, no similitudes or images for them; there is done what here is in vain described for it is indescribable. And what is it? Again I can only reply in imagery and say: The eternal feminine has drawn us on—we have arrived—we are at rest—we possess what on earth we could only strive and struggle for. Christ calls this "eternal blessedness", and I can do no better than employ this beautiful and sufficient mythology—the most complete conception to which at this epoch of humanity it is possible to attain."<sup>1</sup>

Still another letter, written the same month, tells (almost parenthetically, hence without a trace of boasting or exaggeration) the amazingly brief period the completion of the *Eighth* required.

"But you know me by this time. In art as in life I am at the mercy of spontaneity. If I had to compose, not a note would come. Four years ago, on the first of the holidays, I went up to the hut at Maiernigg with the firm resolution of idling the

---

holiday away (I needed to so much that year) and recruiting my strength. On the threshold of my old workshop the *Spiritus Creator* took hold of me and shook me and drove me on for the next eight weeks until my greatest work was done."<sup>2</sup>

It is fascinating to speculate upon the decisive moment of inspiration Mahler referred to when he said, "The *Spiritus Creator* took hold of me". We may assume that "Part One", identical with the first movement of Mahler's original plan, was already finished. Otherwise we are faced with the truly incredible alternative that he wrote the entire symphony in eight weeks. What is more likely than the conclusion that Mahler, deep in his world of "Faust" cogitation, suddenly saw in the closing scene the possibility of combining the remaining three movements into one, uniting them in a single great master variation-form, at once contrast and supplement to the Latin Hymn? Were this in reality the explanation, the *Spiritus Creator* of that moment might well have been the spirit of Beethoven mingling for a sublime instant with that of Mahler. Not only had the latter regarded Beethoven's pantheism as closely akin to his own Nature-symbolism, but Beethoven had in later years also planned a great work in two parts (two separate symphonies, if necessary) "connected and contrasted by a common idea". Even such is Mahler's *Eighth*: two symphonic creations, "organically connected and contrasted by a common idea". Concerning the nature of his projected "Tenth Symphony", which, of course, he never wrote, Beethoven revealed the following hint:

"Adagio Cantique:—Religious song in a symphony in the old modes (*Herr Gott, Dich loben wir,—Alleluja*), either independently or as introductory to a fugue. Possibly the whole second symphony to be thus characterized: the voices entering either in the finale or as early as the Adagio. The orchestral violins, etc., to be increased tenfold for the last movement, the voices to enter one by one. Or the Adagio to be in some way repeated in the last movements. In the Adagio the text to be a Greek mythos (or) Cantique Ecclesiastique. In the Allegro a Bacchus festival".<sup>3</sup>

Perhaps even more significant in this connection (and from the same source) is Beethoven's avowed purpose in these two related works: "To accomplish the reconciliation of the modern and ancient worlds, attempted by Goethe in the second part of 'Faust'." An added word of corroboration appears in Beethoven's "Conversationshefte, 1819": "Socrates and Jesus have always been my model (*Vorbild*)."

## PART ONE

## HYMNUS: VENI, CREATOR SPIRITUS

The poet of Part One, set to the medieval Christian Latin hymn, *Veni Creator Spiritus*, was a bishop named Hrabanus Maurus, who flourished about a thousand years before Goethe. His verses, a chain of epigrams of an ascetic, powerful lyricism, mirror a soul fanatically dedicated to the cause of Faith. Singleness of purpose, determined aspiration, rise like the blocks of a towering cathedral from their adamant symmetry.

To Mahler, however, this hymn represented far more than a fervent apostrophe to the Holy Ghost. He conceived it, symphonically, as the first act of the supreme human drama of spiritual fulfilment through redemption, unattainable on earth. Thus all the voices in this initial movement, whether humble or exultant, are earth-bound. They are raised toward Heaven in unquestioning Faith, a Faith at times pierced with Job-like pain and anxiety, but sometimes so exalted that Heaven itself seems to open before its irresistible power.

For Mahler, mighty dramatic implications, calling for a huge sonata-form canvas, lurked beneath the concentrated Latin verses. He saw them as mere indices of boundless underlying spiritual and emotional treasures, capable of inspiring the very soul of eloquence in tone. The depth and richness of the composer's response to these latent stimuli are the measure of his music's greatness.

The symmetrical stanza-structure proved most felicitous for Mahler's setting, actually dominating its sonata framework. To the first two stanzas he allotted the exposition of the two themes (or theme-groups, if regarded in connection with their subordinate thematic concomitants). The next three and a half stanzas, with their array of varied requests from the Spirit, seemed an ideal text to foster the development of these themes. To the last two stanzas he added a return to the first stanza, using its Invocation as a concise recapitulation, and then crowned the movement with a triumphant "Gloria" as coda.

## 1) EXPOSITION.

Veni, creator spiritus,	Come, Holy Ghost, Creator Blest,
Mentes tuorum visita,	Vouchsafe within our souls to rest;
Imple superna gratia,	Come with Thy grace and heav'nly aid,
Quae tu creasti pectora.	And fill the hearts which Thou hast made.
Qui Paraclitus diceris,	To Thee, the Comforter, we cry,
Donum Dei altissimi,	To Thee, the Gift of God most High,
Fons vivus, ignis, caritas	The Fount of life, the Fire of love,
Et spiritualis unctio.	The soul's Anointing from above.

"Allegro Impetuoso" is the exciting caption at the head of the gigantic

score.<sup>4</sup> Impetuously the double-choir, supported by a tonic fundament firmly set by organ and deep strings, hurls aloft the hymn's jubilant opening invocation: "Veni, veni, Creator Spiritus"

*Allegro Impetuoso*

Ve-ni, Ve-ni, Cre - a - tor Spi-ri-tus

Ecstatic faith, confident of divine audience, is not the sole force swaying this theme. It is also of heroic cast. A restless, irregular metre heightens the impulse of its devotional fervor. Eloquent of spiritual triumph, it is much like the song of the militant medieval worshippers who ventured much for their God. Then sure of reward, they sang to Him their great "Te Deums" of praise. The voices cease abruptly. The theme strikes march-like echoes from the orchestra, the trombones driving a pointed motive straight downward, diatonically. Strange apparition amid all this bold utterance, another motive, of lyric texture, looms in the

	Second Mixed Chorus
	Choir of boys

First performance September 12, 1910, in Munich, under the direction of the composer.

First American performance March 2, 1916, in Philadelphia, under the direction of Leopold Stokowski.

violins. It is also a motive of the Spirit, not as Creator, but as Comforter. Later, in the song-theme-group, its significance will be illuminated by the text.

The complete unfolding of the opening (Invocation) theme occupies but twenty measures in stirring tempo. Yet it involves no less than five varied motives consummately welded into an integral melodic succession. Rather a spontaneous, self-evolving melody than the fruit of skilful artifice, it is perhaps the most felicitous example of Mahler's peculiar motive-welding technique of the opening theme, treating it primarily not as a singer, but as a vehicle for introducing the principal motives to be used in the work.

Immediately upon the heels of the cadence follows another theme, contrasted yet supplementary. Set in the same tonality, it obviously belongs to the first theme-group. It lacks the pointed, decisive character of the opening theme, but it is nevertheless also of heroic cast.

Chorus

*ff* Spi-ri-tus, O Cre-a-tor ve - - - ni Cre - a-tor

The orchestra, hitherto mainly a unison support for the voices, now asserts its independence with increasingly frequent contributions of the motives in varied rhythmic and instrumental combinations. Ever richer and more exciting grows the texture of these motivated threads simultaneously sounded, revealing Mahler's creative fancy in its best role, that of polyphonic magician. Sustained fortissimo succumbs to gentler dynamics as the choir repeats the initial verse in a more restrained manner.

The second verse, "Mentes tuorum visita", is set to fresh contrapuntal arrangements of the motives already introduced. The interval characterizing the "Veni" appeal widens, its leap grows more rapid, inspiring the theme-group's climactic choral outburst on a long, high Ab. The tension is relaxed in a suddenly becalmed atmosphere. The presentation of the Invocation theme-group is finished.

"Very softly, expressively," directs the score, as the solo soprano begins the lyric second theme-group, set in an appropriately mystic tonality (D<sup>b</sup> major). The tempo is altered, "somewhat more restrained, but ever smoothly flowing."

*pp* Im-ple su - per - na gra-ti-a, gra-ti-a, quae

Humble appeal is the dominant spirit of this song-theme section. The fervent tones of the oboe spread an air of yearning as the choir of soloists take up the tender, hopeful melody. Its soft texture is rendered more ethereal at first by the omission of the bass voice. The "Veni" motive enters in gentle guise transformed to fit the new mood. The compassionate motive of the Comforter Spirit, previously sounded only instrumentally, is here given its first meaningful expression through the accompanying text, "Qui Paraclitus diceris".

While the air of tenderness continues to hold sway, the unfolding strains radiate gradually increasing warmth. The solo soprano, soaring upwards, culminates in a powerful cadence on the tonic (Eb). Thereupon the triumphant motives of the Invocation burst forth once more and recapture the foreground. "Veni, veni!" again invokes the double choir, while the exulting soloists surpass them in dazzling resonance. The orchestra adds its mighty voice to the jubilation, trumpets and trombones sounding the "Veni" motive in canon-style. Suddenly a chromatic element looms up in the thematic lines amid hammered rhythms in strings and woodwind. It creates unrest, depressing the "Veni" motive, dragging it chromatically downward. A cloud appears to descend, darkening the bright major mood to minor. Deep bells resound. Muffled rolls grumble in the timpani. Only a gloom-clothed fragment of the "Veni" motive survives in bassoons and violins. Sadly, accompanied by a minor transformation of the Spirit Comforter motive, the choir intones the "Veni" theme.

The choir's melancholy whisper in the darkened (minor) scene tells of man's sudden consciousness of his unworthiness. The discouragement of the moment is accentuated by poignant happenings in the orchestra. Brief cries of pain issue from the piccolo; a solo violin wanders disconsolately through the gloom. Disturbing element in a paean of Faith, the shadow cannot long persist; confidence is restored, as the solo voices repeat the song-theme in the tonic major (Eb). Another hitherto purely instrumental motive of compassion attains textual significance in this moment of pain and sadness.

This trusting prayer for strength to overcome all earthly obstacles constitutes the reassuring close of the song-theme-group. At the phrase "Firmans" the music remains suspended on the dominant, expectantly awaiting developments.

## 2) DEVELOPMENT.

Infirma nostri corporis	Thy light to every thought impart,
Virtute firmans perpeti	And shed Thy love in every heart;
Accende lumen sensibus,	The weakness of our mortal state
Infunde amorem cordibus.	With deathless might invigorate.

Hostem repellas longius  
 Pacemque dones protinus.  
 Ductore sic te praevio  
 Vitemus omne pessimum.

Drive far away our ghostly foe,  
 And Thine abiding peace bestow;  
 If Thou be our preventing Guide,  
 No evil can our steps betide.

Tu septiformis munere  
 Dextrae paternae digitus

The sevenfold gifts of Grace are Thine,  
 O Finger of the Hand Divine.

Per te sciamus da patrem  
 Noscamus atque filium,  
 Te utriusque spiritum  
 Credamus omni tempore.

Make Thou to us the Father known;  
 Teach us the Eternal Son to own  
 And Thee, Whose Name we ever bless,  
 Of Both the Spirit to confess.

The development begins with an orchestral passage rich in typical Mahlerian fantastic touches. "Hastily", urges the score, its restlessness reflected in the irregular metre (5/4). Muted horns sound the Invocation theme inverted. Discordant woodwind and muted trumpets try feverishly to round out a melody in pointed rhythm, but meet with a violent rebuff in plucked strings. The horns present the theme again, now in its original form. The music undergoes numerous rapid metrical changes, including  $\frac{3}{4}$ ,  $\frac{4}{4}$ ,  $\frac{5}{4}$ , and  $\frac{6}{4}$ , in an almost bewildering succession. Brief fragments of the theme fly about among the various instruments, will-o'-the-wisps, too elusive to retain. At length the harmony finds firm ground in a dark tonality (C sharp minor).

"Twice as slowly as before", the Solo Bass launches the development proper, presenting the "Infirma", in a new minor guise.

In-fir-ma, in-fir-ma, nos-tri cor-por-is

The other solo voices join in the appeal, rising abjectly as if out of the depths. They gradually transform the darkly impassioned minor mood to major. "Very tender and restrained", as first glimpsed in this new dawn, is the phrase "Accende lumen", a mere glimmer in its initial appearance. Drawn from the song-theme-group, it is set in a brighter tonality (D major). In the background flutes and violins thankfully breathe, "Gratia". The voices ever softer, die away. The music's pulse diminishes, the scene taking on a dreamy air. Suddenly, electrifying though softly uttered, a significant triple-faced formulation of the "Veni" motive, augmented (broadened) in the trumpets, diminished (shortened) in the horns, doubly diminished in the bassoons.

*Molto marcato*  
 Trumpets

A musical score for three instruments: Trumpets (top staff), Bassoons (middle staff), and Horns (bottom staff). The key signature is C sharp minor. The tempo is *Molto marcato*. The Trumpets part has accents and a *pp* marking. The Bassoons part starts with a *f* dynamic. The Horns part has accents. The music features a complex rhythmic pattern with many eighth and sixteenth notes.

*f* Bassoons

Horns

## Chord and Discord

General jubilation in brilliant E major greets the revelation. "Suddenly very broad and impassioned", directs the score. The Invocation Theme is sounded in one brief pronouncement by the whole orchestra. Then an overwhelming cry of ecstasy, uttered in thunderous unison by double-choir, chorus of boys, and all the soloists: the "Accende Lumen", the Appeal for Light.

Supreme in concept, as well as emotional depth, this is certainly one of the most inspired moments in symphonic literature. The boundless yearning faith latent in the Invocation Theme rises on a titanic unison wave, impelled by the giant leaps of the "Veni" motive. A revelation of elemental power, it is a new theme, yet clearly related to the Invocation Theme by community of melodic and rhythmic characteristics. Such interpolations of new themes in the development are sanctioned by Beethoven's own practice.

The mighty choral unison dissolves. The separated voices spread the wondrous revelation, mingling the "Light" theme with the others. The chorus of boys is now first heard independently. Penetrating in its freshness is their marching song, the basses intoning the Invocation simultaneously deep below.

The air of triumph is heightened by horns and trumpets blaring the "Light" theme, amid powerful chords in strings, woodwind, and organ. At the word "hostem" the music grows harshly militant, the accentuated phrases in the voices shrilling like battle-cries. The forces are gathered for the march upon the goal. The great Fugue (for that is the goal of the development) begins. Various verses of the text, streaming in from all sides, become inextricably mingled, showing that to Mahler at this moment of supreme creative construction the music mattered above all. The polyphonic texture of this complex fugue is crystal clear. As the seven soloists, forming an independent choir, join the two choruses, while the chorus of boys (a fourth group) maintains a *cantus firmus* (thematic backbone) every contrapuntal device is masterfully exploited. The Invocation motive dominates the entire thematic web. Retaining its mastery with the advent of each additional theme, it subjects each one in turn to the formal demands of the fugue structure, never permitting it to mar the jubilant march-spirit swaying the entire episode. Even the lyric "Imple superna"

undergoes rhythmic transformation at the touch of the thematic dictator. A long organ point (22 bars) heralds the close of the fugue, the final unwinding of its involved polyphonic texture. A giant unison choral wave, amid sustained outcries by the solo voices, leads to the recapitulation.

3) RECAPITULATION AND CODA.

Da gratiarum munera	Grant us Thy heavenly joy to know,
Da grandiorum praemia.	Abundant grace on us bestow,
Dissolve litis vincula,	From sin's enslavement give release,
Adstringe pacis foedera.	And knit us in the bond of peace.

Gloria Patri Domino,	Praise we the Father and the Son,
Natoque qui a mortis	And Holy Spirit with Them One:
Surrexit, ac Paraclito	And may the Son on us bestow
In saeculorum saecula.	The gifts that from the Spirit flow.

The Invocation Theme now reappears intact, in its initial form. In retrospect, its jubilation was dimmed by a cloud when the development began. Rekindled by the fiery "Light" theme it was immeasurably strengthened by the sturdy fugue. The theme is here re-born, an expression unshakably convincing as peroration. Following upon the prolonged organ-point it seems something truly new, a promise become fulfilment.

The mystic song-theme does not appear in this "recapitulation", a classical term scarcely appropriate to the individual form Mahler gave this movement. Its plea for Divine Grace would be dramatically false at this point. One last call for Guidance: "Go thou before and lead us, so that we may be victorious over all evil". Then with pure, bell-like tones the chorus of boys sounds the majestic "Gloria".

The supreme splendor of the moment is mirrored in awed murmurs in the orchestra: a whispered roll in the timpani; an upward yearning motive in the horns; an ethereal tremolo in the strings. Like a messenger from Heaven, the Invocation Theme, doubly augmented (broadened) is transformed to a "Gloria" in the high voices of the sopranos.

The "Gloria" mood envelopes all, unites all in its universal embrace. With utmost fervor all the choirs, the soloists, the huge orchestra, now increased by an "isolated" brass choir of four trumpets and three trombones, join in the final, most jubilant hymn of all. The scene is luminous with dazzling splendor as the "Light" theme is enveloped in a "Gloria" halo.

## PART TWO

THE LAST SCENE OF *Faust*, PART TWO

The poet of Part Two is a philosopher as well as a singer. Fanaticism forms no element of Goethe's creed. Life-long philosophical reflection has tempered his Faith with an inner fervor so deep, that next to that of Hrabanus it appears curiously calm. Its calmness, however, is only outward. Tempests of spiritual passion, such as the ancient bishop could not have known, rage beneath the romantic German poet's lyric presentation of mankind's yearning for redemption.

The individual metrical structure of each succeeding episode in this "Faust" scene is the sole surface index of its richly varied emotional life. This irregularity gave Mahler the clue to the most apt form in which to set the scene. Probably in a flash of inspiration, as I have suggested in my introductory remarks, he saw the possibility, not only of uniting three symphonic movements into one, but of integrating them in a single master variation-form.

A soft cymbal crash. Above it a high, sustained tremolo in the violins. Thus begins the purely instrumental Adagio that introduces Part Two. Softly the basses (*pizzicato*) send aloft the Light motive in a mysterious, veiled transformation. (As yet there is but a mere hint of the new key, Eb minor, the exact counterpart of the first movement's dominant tonality.) It is an infinitely distant echo of the triumphant "Gloria" that closed the first movement. Drawn from the same melodic source, but set in a totally new rhythm, the gently melancholy main theme is revealed in the woodwind.

The violin's tremolo persists, the only glimmer of light, until the woodwind's shadowy song is brightened by a chorale-like cadence in the bassoons. The horns seek in vain to foster this moment of cheer. The original mood will not be denied. The minor song resumes its interrupted course, dying out on a gradual descent to the tonic. The song-like theme, upon which, more or less freely, the entire Adagio section will be reared, is finished. The rest will be a series of variations, reflecting changes of mood arising as the music unfolds.

The first four variations, the last of which includes an advance fragment of the Scherzo theme, are instrumental, constituting the most extended purely orchestral portion of the symphony. "Tempo somewhat faster", directs the score at the first of these variations. The horn takes up the theme transforming it to a song of passion. Poignant oboes reinforce the new mood, returning the theme to the heights whence it descended. The violins (tremolo) and basses (*pizzicato*) restore the initial atmosphere as the variation closes.

The change of mood is more marked in the second variation. "Faster", urges score. The theme in the horns is opposed by a savage counter-

melody bristling with impetuous, restless rhythms in the violins.

*Allegro Moderato*

Viol. *ff*

Horn

The indications, *accelerando* and *stringendo*, are eloquent of the powerful forward drive of the music. All strings and woodwind are caught up in the abandon of the violins. Darkness falls over the motive of Light, blared in minor by the brass.

In the third variation violent conflict impends, the impassioned mood being maintained throughout. At length a beam of light: a flute quartet "very, very softly", whispers a forecast of joys to come.

4 Flutes

*ppp*

This lightly tripping, rhythmic song (the fourth variation) not only relieves the tension but gives an advance hint of the Scherzo. The cheery message is brief, the melancholy song-theme quickly replacing it. Descending from woodwind to horn, it brings the instrumental prelude to a close.

The curtain rises (Variation 5). The orchestral background is the same as at the start. As though he were setting a drama or oratorio, Mahler actually retains in the score Goethe's scenic description. The aptness of the composer's simply etched tonal picture may be measured by the poet's fancy. Deep solitude hangs over the fantastic, rugged landscape as the voices begin the wondrous tale of the redemption of "Faust's" soul. "Chorus and Echo" sound antiphonally, as if from different levels. The brief choral utterances in sharply pointed rhythms interrupt each other like real echoes. Their peculiar harmonic setting and rhythm lend ghostly character to the voices and the motives. As the antiphonal choirs are suddenly silenced, the instrumental prelude sounds once more. The chorale now issues from the strings, but still remains unfinished. Beneath the portentous tremolo in the violins the significance of the chorale is at last revealed in a full formulation by the choir of "Holy Anchorites".

The scene grows radiant with the original tonality of the work (E♭ major). The solo voice of the "Pater Ecstaticus" takes up the song in a new impassioned reconstruction (Sixth Variation).

*Sehr leidenschaftlich*

E - wi-ger Won-ne-brand,      glüh - en-des Lie - be -band  
 "Eternal flame of Love,  
 The Universe embracing."<sup>5</sup>

Dazzling in the trumpets, the "Light" motive casts a halo over the ardent melody. In its pure, soaring warmth the Pater Ecstaticus seems to reach out yearningly toward the Ultimate Revelation. The earthly shell, however, still clings, hampering the free progress of the soul on its ascent toward Redemption.

Now with mighty tones, "swelling upward out of the deep level," comes the voice of Pater Profundus. His song is intensely dramatic, a veritable storm of emotion. Yet it is lofty in its imagery, as it hymns Nature's mystic role, symbol of the Divinity. It paraphrases the quicker, agitated elements of the instrumental introduction, pointing their significance in words.

cordibus") now becomes the blissful round of the Chorus of Blessed Boys, "circling about the highest peaks".

*ff* Hän - de ver - schlin - get euch freu - dig zum Ring ver - ein  
 "Clasp hands, and dance your blissful roundelay"—

The musical notation shows a single staff in treble clef with a key signature of three sharps (F#, C#, G#). The melody consists of a series of eighth and quarter notes, starting with a forte (*ff*) dynamic marking. The lyrics are written below the notes.

Happy trills in woodwind and strings fill the air, intensifying the fleet, light-textured character of the duet in 'the women's and boys' voices. As these cease, trumpets and oboes carry on the dancelike refrain. Every instrument, with timbre sufficiently light to permit, joins in the blissful trilling. The whole scene is aglow with supernal light. How skilfully the composer has merged the closing portion of the slow section with the beginning of the Scherzo proper!

The Scherzo, now in full swing, is also cast in the variation mould. For the benefit of the more scholarly minded, willing to invest the necessary effort in following, with the score, the stupendous feat in symphonic construction involved in Mahler's successful application of the variation method to this gigantic triple-movement, I offer below, with the kind permission of the author, Hans Tischler's fine analytic diagram, originally published in "Musicology", April, 1949, in connection with his brilliant, scholarly article entitled: "Musical Form in Gustav Mahler's Works". I believe, with Mr. Tischler, that this is the first analysis of Part Two of the *Eighth* ever published, revealing the paramount role played in it by the variation form.<sup>6</sup>

The music displays Scherzo traits for some 50 measures before the descriptive word "Scherzando" in the score gives official confirmation to the new section's character. Utterly charming in its light, rhythmic lyricism is the "Rose Song" of the younger angels ("a selection of the lightest women's voices", directs the score).

*Scherzando grazioso*  
*p dolce*

Je - ne Ro - sen aus den Hän - den

The musical notation shows a single staff in treble clef with a key signature of two flats (Bb, Eb). The melody consists of a series of quarter and eighth notes, starting with a piano (*p*) dynamic marking. The lyrics are written below the notes.

"Those roses, from such holy hands,"

Set in Eb major, it contains motives drawn from the Invocation theme-group. One of these, originally reflecting conflict with evil spirits, is now eloquent of their conquest through the power of Love, the universal warmth of which is the burden of the "Rose Song". The orchestral tone

<sup>6</sup> "The Second Part of VIII is actually the combination of three movements, namely the usual slow movement of a symphony in variation form, a scherzo, also in variation form, whose theme is exposed in variation No. 4 of the slow movement, and a finale with themes derived from the other two sections, whose

grows more and more ethereal. The happy episode culminates in an outburst of jubilation, the trumpets playing the "Light" theme in the new "Redemption" form it has recently achieved.

Suddenly, a shadow falls over the scene. The swift tempo begins to drag, a depressing motive in fourths reminding one of the end of the Invocation theme-group in Part One. Yet the music, the dark "Infirma" (choral) episode of Part One virtually intact, now takes on a new significance, revealed by the accompanying verses. Sung by the chorus of "more perfect angels", these tell compassionately of the soul of Faust still not wholly purified of earthly taint. Formally, this passage represents an interpolation in the Scherzo, the unfolding of the content (theme) of which has already passed through four variations. "Very ardently", the alto solo brings back the song-theme of Part One, rounding it out completely in a cadence on the tonic. In its former appearance, at the end of the exposition in Part One, it had been left unfinished. The last chasm has been bridged. In a bright melodic reconstruction drawn from the orchestral prelude (Adagio) the chorus of "younger angels"

development is combined with, and in part replaced by, the second section of the scherzo. Several reminiscences from VIII, 1 and a mighty coda further complicate the picture. An approximate analysis would be as follows:

...	N8	N14M3	N18-N21		N24-N32M6		N39

## EXPLANATORY

"N" stands for the rehearsal numbers, identical in all forms of the published score.

"A" stands for "Adagio".

"S" stands for "Scherzo".

"F" stands for "Finale".

"Int" stands for "Interlude".

"s" stands for "Subject".

"M" stands for "Measure".

bids the awakening to new life (return to Scherzo) amid radiantly pealing bells.

*Frisch*

Ich spür' so e - ben ne - belnd um Fel - sen - höh'

"Behold how the advancing Spirit  
Wings His way o'er the misty heights."

For the third and last time the Blessed Boys resume their blissful round, welcoming the newly arrived, redeemed soul into their midst. At first merely "accompanying" (subordinated), then suddenly outstanding in its ecstasy, the song of "Dr. Marianus" (whom many Goethe-experts identify with Faust's soul) issues from the "loftiest, purest cell", hymning the dazzling vision of Heaven.

*Mit voller Stimme, plötzlich hervortretend*

*ff* Hö - chste Herr - scher - in der Welt!

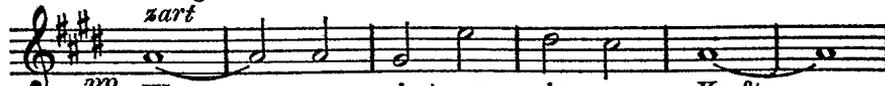

"Empress of the world, Supreme!"

The song, set in the brilliant tonality of E major, is the opening theme of the Finale. Its tremendous devotional fervor receives appropriate harmonic and melodic support in the orchestra. In the solo violin, *molto devoto*, the song becomes a melody of infinite tenderness. "Dr. Marianus", accompanied by a chorus of men, seems to sink into holy contemplation as the song breaks off incomplete on the dominant. Save for the "Light" motive in the horns, only a whisper of harp-like harmonies survives in the orchestra.

The last veil has fallen, revealing Heaven transfigured. Above the ethereal harmonies the solo violin plays a beautiful song (*Adagissimo*) in extremely slow tempo, expressively, yet very softly (with bow near the fingerboard to intensify the melody's sweetness). This deeply spiritual theme heralds the approach of the "Mater Gloriosa". It is a more ecstatic re-creation of the song of "Dr. Marianus" apostrophizing the "Supreme Queen of the Universe".

Choral voices, praying for the female penitents crouched at the feet of the Universal Mother, at first mingle with the orchestral sounds, then achieve independent song in touching phrases.

*Langsam. Schwebend*  
*zart*

*pp* Wer — zer - reisst - aus eig - ner Kraft —

"What mortal has the strength to break  
The chains of all temptations?"

Komm!  
*Sehr langsam*

Komm!

“Come! Come! Ascend to loftier spheres—”

Her compassionate, universe-encompassing single-syllable blessing, “Come”, is echoed by the chorus in an almost toneless whisper. Beyond it only the harmonium continues to sound. Dr. Marianus, first to awaken from ecstatic contemplation, begins a hymn-like prayer. His “tender, but fervent” words and tones, the coda of the poem and the music, herald the solution of the Riddle of Existence to the spellbound assemblage. They disclose the inmost significance of the initial theme of the introduction.

*Sehr gehalten, zart aber innig*

Auf zum Ret-ter-blick, al-le reu-ig Zar-ten

“Up ye penitents,  
Rise to your Salvation—”

The broad-winged melody is taken up by the double choir and Chorus of Boys; its goal is the lofty Gloriosa Theme. Waves of luxurious strings and wood wind harmonies accompany the ascent. The tonality brightens from E $\flat$  to E major. As the Gloriosa melody envelopes chorus and orchestra, all is bathed in dazzling brilliance. A moment of transfiguration, then the choir sinks back to E $\flat$  major to become hushed on the dominant. “Gaze aloft”, echo the horns and woodwind. “Gloria”, intone the trombones (fff). Slowly the scene dissolves amid a shimmer of harp-tones. The Heaven-revealing miracle has taken place.

Devout contemplation follows upon the experience. Muted strings, whispering the tonic chord, open the final song. “Very slowly, mysteriously; a mere breath of sound”, directs the score, as the united choirs disclose the oracular answer to the Great Riddle.

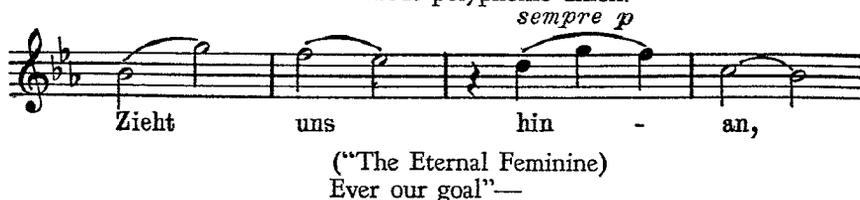

*Chorus mysticus*  
*(Wie ein Hauch)*

*ppp* Al-les Ver-gäng-li-che ist nur ein Gleich-nis

“All things that come and go  
Are merely symbols”—

The introductory theme seems new born, crystal clear at last as symbol

of the transitory. The Gloriosa melody of the omnipotent "Eternal Feminine" dominates it in a felicitous polyphonic union.

"Eternal, eternal", vows the melody ecstatically. The Chorus Mysticus merges all the voices, the supporting orchestral volume mounting to utmost sonority. And now a truly wonderful human touch amid all this supernal glory: one last glimpse of mortal man and his earth-bound yearning: "Trumpets and trombones isolated", as though echoing out of the symphony's Part One in the distant world below, send aloft the broadened Invocation motive. Meanwhile, their heavenly counterparts, the trumpets and trombones in the orchestra, join in the blissful, bell-like instrumental paean surrounding the "Gloria". Thus, in a mystic union of symbols of the mortal and immortal, the gigantic Hymn to Eros comes to an end.

---

### BRUCKNER'S EIGHTH ON RECORDS

Among the many worth-while recordings made available by Deutsche Grammophon, easily the most important is that of Bruckner's Eighth Symphony, hitherto unrecorded, performed by the Hamburg Philharmonic Orchestra under the direction of Eugen Jochum. The dissension in this country between the Brucknerites and the anti-Brucknerites has not lessened. The Austrian master's necessity of a huge canvas for the expression of his ideas is just as great a barrier to the appreciation of his message to some of our commentators as it was to those of a past generation.

Bruckner's architectonical procedure has never seemed anything but ineluctable to me, when the immensity and profundity of his ideational world are properly taken into consideration. And the indisputable fact remains that when the Austrian master's symphonies are played in shortened versions they emerge as emasculated, truly formless monstrosities.

The Eighth Symphony contains some of Bruckner's finest music. The long-spun Adagio is surely one of the sublimest slow movements ever conceived by any composer and the Scherzo too, with its exquisitely tender trio, is among the most extraordinary movements in this form. The corner movements, too, are replete with elevated and deeply affecting pages. Mr. Jochum's discourse is a highly perceptive, admirably integrated one, and the recording is rich and luminous in sound, unsullied by disturbing surface noises.

Jerome D. Bohm, *N.Y. Herald Tribune*

## ALL IN THE FAMILY

by Philip Greeley Clapp

Someone has remarked that an artist has to have artistic as well as biological ancestors, and that, since he can choose his own, he will do well to choose good ones. Inevitably he and his artistic progeny will from time to time show marked "family resemblance" to his forbears, sometimes even to what Mark Twain used to call his "platform ancestors,"—meaning those who might have been hanged on the gallows rather than hung up in the parlor or any other family mausoleum.

In any case, family resemblances, biological or psychological, which attract attention are the ones which recall the best-remembered traits of those ancestors who were most positively alive when they exhibited them; whether a man is conscious or unconscious of emulating or even imitating an ancestor seems less important than whether he thereby becomes more himself or less so. It is no reproach to say, "He has his father's eyes": a man has earned full title to his eyes if he uses them to express his own thoughts, provided he has any and expresses them eloquently. Nobody but a scavenger of "reminiscences" accuses Beethoven of plagiarizing his first *Eroica* theme from Mozart's *Bastien et Bastienne*, though the enterprising "analyst" who first recorded in print what must have been evident to everyone who had heard or read both compositions probably got paid for "discovering" it,—one remembers Brahms's retort to the resemblance of the first measure of his A major sonata to the *Preislied*, "*das bemerkt ja jeder Esel.*" Nevertheless, genealogy is an interesting study psychologically as well as biologically; and, so long as creative artists create personal idioms for themselves rather than brand-new languages, a sympathetic study of "influences" may be enlightening so long as it avoids that pedantry which inebriates but does not cheer.

Our musical genealogists have certainly reached a consensus, too familiar to restate here, as to the musical lineage of Anton Bruckner and every Brucknerian schoolboy knows not only that his great *Te Deum* was performed in 1885 and fairly frequently since, but—and this is more important—has at least a fairly close acquaintance with the actual work itself through study of the score and occasional hearings. Nevertheless, few analysts or biographers give any degree of emphasis to marked stylistic and psychological family resemblances between any passages and sections of this great work to passages and sections in Verdi's *Requiem* (1874), which immediately after its first production became familiar to the musical public all over the world and has remained so. It would be a fascinating and not improbably remunerative project for a historian to try to determine to what extent and in what manner Bruckner may have been acquainted with and influenced by Verdi's work during the

formative period of his own choral-orchestral masterpiece; what is immediately clear to anyone who is fairly familiar with both scores is that the psychology of both composers, the other-worldly and devout Bruckner and the far from other-worldly and hardly conventionally devout Verdi, the one a saintly lay preacher of religion, the other a high-priest of the theater, prompted both masters to express certain cosmic and mystical conceptions tonally in a dramatic idiom which meets and touches again and again. Not improbably an investigator would eventually conclude that there is less probability of a direct influence of Verdi upon Bruckner than of a strong influence of Liszt's *Graner-Messe* (1856) upon both Bruckner and Verdi.

Still more important is the clear fact that Mahler, especially in his Eighth symphony, shows the influence not only of Bruckner's *Te Deum*, but also that of Liszt's *Graner-Messe* and Verdi's *Requiem*, with all three of which he must have been familiar both as a comprehensive student of musical masterpieces and probably as a conductor and production director. However, Mahler's style and individuality are not to be accounted for by adding Liszt and Verdi to such acknowledged influences as Wagner and Bruckner, or further adding Haydn, Mozart, Beethoven, Berlioz, Strauss, and others, or by conveniently classifying him as "eclectic,"—a favorite *cliché* by which critics insinuate that Mahler or any other composer who displays a richer heritage than the faithful disciple of one tutor might show is a burglarious person comparable to Meyerbeer in acquisitiveness and, if a conductor and producer, exceeding him in opportunity. Mahler indeed, like Bach and Wagner for that matter, is "eclectic" in the sense that he employs a rich vocabulary to express a rich ideology, and that both his vocabulary and his ideology, like those of many eminent composers, poets, and philosophers, show family traits derived from a variety of ancestors, most of them honorable. But whereas an "eclectic" vocabulary without much ideology may produce a Meyerbeer, whose style Wagner wittily characterized as "effect without cause," lack of ideology is hardly to be imputed to a poet and philosopher of dynamic imagination and individuality, whether his name be Wagner, Goethe, Michelangelo, or—Mahler. Naturally, time rather than contemporary criticism is to determine how Mahler is finally to be compared with creative masters who preceded him by decades or centuries; but it seems not too early to compare him with the best rather than the least of his contemporaries and to credit him with a rich classic-romantic heritage rather than accuse him of sneak-thievery.

Meanwhile, the discussion of factors in his style is still pertinent so long as his individuality and achievement as a whole excite lively controversy. The reading musical public is told that Mahler's personal acquaintance with such of his contemporaries as Richard Strauss, Gustave Charpentier, and many another proved intellectually fertile both for him and for them; the listening musical public hears some interchange of ideas among them in their compositions, - an interchange as legitimate as it is natural so long as all concerned are broadened and not narrowed, enriched and not overborne. But the public can hardly be expected to

hear what is not performed, and should not be expected to believe without direct verification too much of what is merely told; thus it comes about that music-lovers are often confused by originality until, paradoxically, they can form some conception of the variety of its origins.

Just as no biographer can catalog all the books which may have influenced the thinking of an active-minded writer, life would not be long enough for one investigator to compile all the influences which affected a mind such as that of Gustav Mahler, who apparently read every book and score which he could lay his hands upon, and spent most of his waking hours throughout his adolescent and adult lifetime planning and preparing for performance a huge operatic and symphonic repertory, concurrently snatching enough time to create a series of monumental symphonic compositions, and quite incidentally carrying on memorable conversations with congenial people on every conceivable subject.\* But now and then one may come upon some apparently significant event or document which acts as a catalytic in the process of learning to understand in some degree the mind of a creative man. Just as one may pick up a key on the highway, and find that it unlocks a door or two which one has wished to open, one may find that a particular document seems at least partly to bridge a gap in some as yet incomplete series of logically connected data.

To-day it seems fairly established that at least Beethoven, Wagner, and Bruckner are prepotent ancestors of Mahler, though controversy still rages as to whether Mahler really has established himself in the royal line as more than a black sheep; on the whole the trustees of the estate are readier than they were to welcome him back as at least a prodigal son, and an avuncular-nepotic relationship to Liszt and even Berlioz is quietly acknowledged if not too emphatically approved. But since, even a few years ago, when Mahler and Strauss still seemed "new" to many, the public was more conscious of their differences than of traits in common, to-day, when more and more listeners find, as the two composers themselves found in their lifetime, that their relationship, though far short of identical twinship, was at least cousinly, their admirers seem to regard any family resemblance as scandalous to one or the other rather than as an honor to both. On the other hand, the closeness of Mahler's artistic relationship to Bruckner is now no longer regarded as that of a son to a father; and there are those who find little in common between them except a tendency to write longer symphonies than the musical police are willing to approve. The last-named gentry are disposed not to listen after thirty minutes, even if they ever start; but listeners who were not "born tired" hear in Mahler much which he shares with Bruckner, including a fair amount which he legitimately derived from Bruckner, together with other legitimate "influences," yet, most of all, so vivid and all-

---

\* By sheer luck I found myself, in 1910, in Munich, walking away from the Prinzregenten Theater after a performance of *Salome*, just behind Mahler and Oskar Fried; naturally I trailed them until they found a taxi, and was sorry, like Macbeth, that I had not three ears. What Mahler covered in ten minutes could not have been written out in ten volumes, - or forgotten in thirty-nine years. - P.G.C.

encompassing an expression of his own dynamic personality that people to-day who have heard a fair number of good Mahler performances are ready to enjoy or reject his compositions according as they like or dislike the personality which he reveals in them,—certainly a better criterion than conformity or non-conformity to any pattern or model.

Those who love Mahler best,—and these are usually the ones who love Bruckner best,—still realize that the Mahler psychology is not a simple one, and seek to understand him and his works better and better, leaving “final verdicts” to those sophomores, old and young, who no longer seek truth because they know it already—that is to say, those who do not desire “more light” because they are already dazzled. To people who love Bruckner and Mahler too much to swallow them in one gulp as “Bruckner’n’ Mahler” I address the following paragraphs.—

In 1904 or 1905 Frederick Delius had completed his choral-orchestral *Mass of Life* (published 1907), with text from Nietzsche’s *Also Sprach Zarathustra*. At the time Delius had already received more recognition in Germany than elsewhere, and was devoting more of his attention to German subjects and texts than he did earlier or later. During the same period the Nietzsche cult in Germany had been and still was in full swing; Strauss, always “timely,” had brought out his own *Also Sprach Zarathustra* in 1896, to be followed by *Elektra* in 1909. Delius, during his period of partial preoccupation with German texts and performances of his own works in Germany, continued to live in France, but seems to have been in very close touch with German music and musicians, and the latter seem also to have kept in close touch with him and his works; this is especially true of those German composers who, while proudly claiming Wagner as a prepotent ancestor, were disposed vigorously to strike out for themselves rather than merely repeat and embellish the Wagnerian message and idiom. Full documentation of the relationship of Delius to his German contemporaries is a matter for preparing at least a volume rather than a short essay; but a beginning might be made by a brief review of *prima facie* material to be found in the *Mass of Life*.<sup>\*</sup> This review is, frankly, a series of personal reactions to Delius’s music rather than a technical analysis, and represents direct observation rather than schematic dissection.

\* \* \* \*

Delius’s *Mass of Life* opens, as hymns frequently do, with an affirmation of faith in a creative spirit, and invokes a feeling of cosmic grandeur by immediately employing some standard epic techniques. True, Nietzsche’s text deifies “my Will” where earlier texts praise God the Lord or identify the Holy Spirit with the Creator; but, since Bruckner in his *Te Deum*, Delius in his *Mass of Life*, and Mahler in his setting of the *Veni Creator* all elect to start off *fortissimo* with a rhythmically accentuated tonic pedal as accompaniment to a choral statement of basic thematic material

---

\* References are to the vocal score republished in 1935 by Universal-Edition (Wien-Leipzig), based upon the original edition published in 1907 by Verlag-Harmonie (Berlin).

which begins straightforwardly in the tonic but promptly ramifies into other chords and presently presages other tonalities, anyone who hears any two, let alone all three, of these opening passages immediately experiences a sense of "family resemblance" as to content and style, though, if he has been over-trained in the favorite academic indoor sport of reminiscence-hunting, he may, for lack of quotable thematic motives in the respective first phrases, miss the forest because he cannot immediately identify any one "brown tree in the foreground."

Let a listener continue at the alert for about twelve seconds, when Delius proceeds to introduce into his melodic line a variety of curves and angles, some diatonic and some semi-chromatic, of a type which Bruckner had introduced in moderation into the *Te Deum* and Strauss in profusion into *Also Sprach Zarathustra*, with which Delius can hardly have escaped considerable acquaintance. Later Mahler, who presumably knew his Bruckner and Strauss by heart, and probably was acquainted with the *Mass of Life*, used this type of melodic structure again and again in the *Veni Creator*, with masterly logical development.

On page 4 of the *Mass of Life* Delius suddenly plumps out with a thematic bit which sounds like a decided foretaste of similar material and treatment in *Elektra* (1909); on page 7 and thereafter he goes Bruckner's way rather than Strauss's in developing this material. On page 11 he uses two measures of rather Straussian chords as a transition to a prophecy of what Mahler was going to do later in some of his subsidiary passages, and, on page 14, makes joyful noises of a type which Strauss had already made again and again and which he and Mahler were to make again and again afterwards. On page 19 there is another foretaste of *Elektra*, this time rhythmic; on page 23, over some rather Straussian harmony there are some figured embellishments of a type often to be found in Bruckner; on page 25 Delius uses a solo high trumpet in Mahler's manner (not forgetting Strauss); on page 37, just before the climactic close of Delius's first movement, one measure is peculiarly *Elektrical*.

Delius's short second movement makes almost constant use of a rhythm which Strauss employs later as basic material for *Elektra*'s final dance of purification and most of the earlier passages in *Elektra* which foreshadow it, including *Elektra*'s early apostrophe to the shade of Agamemnon. Delius's third movement, though decidedly "in the family," affords fewer specific items for a hungry reminiscence-hunter to pounce upon; but a decidedly Brucknerian bit of florid embellishment on page 51, some Bruckner bass counterpoint on pages 52 and 53, and a sustained climax (pp. 55 ff.) which could hardly have been conceived by a composer unfamiliar with the advent of Isolde's ship in the third act of *Tristan*,—not to mention the *Tanzlied* in Strauss's *Also Sprach Zarathustra*, whose composer knew his *Tristan* rather well,—at least assure us that Delius, though ever himself, was rarely out of touch with his nearer and dearer relatives. However, on page 81, he does seem to have taken a short vacation in England, bringing back a little melody which resembles the folksongs of the country which gave him physical birth but, only later,

artistic rebirth; on page 85 he perhaps gives notice of his return to the bosom of his adopted family by introducing a bass figure in ascending fifths such as Father Anton loved to use, and this figure, by a series of transmutations, gradually assumes, before the close of the fourth movement on page 92, the familiar aspect of the principal motive of Cousin Richard's *Zarathustra*.

Meticulous "analysis" of Mahler's vocal setting (Symphony III. 1896), Delius's vocal setting (*Mass of Life*, pp. 85-6, with later thematic references), and Strauss's orchestral interpretation (following the climax of the *Tanzlied* in *Zarathustra*) of Nietzsche's text, "O Mensch! Gib Acht!" etc., which in Nietzsche's text accompanies the twelve strokes of the "heavy, humming bell," is a musicological job rather than an artistic study, since the three composers give thematically quite different settings of this important textual fragment, each fitting his individual setting into the broad scheme of his respective tonal epic; after all, if one has to count and measure the trees in a forest one employs a forester rather than a poet for at least the statistical part of the task. Of Delius's fifth movement, which completes Part I. of the *Mass of Life*, one may say that it logically completes for the time being the development of musical and poetic ideas presented in the earlier movements, whose progress throughout Part I. is from dynamic and stormy "yes-saying" to a tranquil and serene ecstasy.

But his tranquil and serene ecstasy is no ultimate Nirvana. Part II. opens with a short orchestral prelude (pp. 104-5) in which the listener is aroused from his dreams of eternity by trombone, horn, and trumpet calls, alternately near and far, which derive their whole aspect in matter and manner from psychologically similar passages in the finale of Mahler's *Resurrection* symphony (1895); Delius then promptly discharges his debt to Mahler, in an immediately following first movement (of Part II. pp. 106-130), which foreshadows, not thematically but psychologically, the mighty passage in Mahler VIII. which begins with the words *Accende lumen sensibus* and continues with Mahler, as with Delius, into the beginning of a grandiose recapitulation of earlier material enriched and fertilized by the new motives and themes.

The end of the first movement of Part II. marks a turning point in the development of the whole composition. The five movements which follow, of which only one is long and two are very short, introduce to be sure an abundance of subsidiary themes which seem new in aspect; but these are not new basic themes and motives. They are, rather, evolutionary developments of the material which Delius has already presented and already richly developed in the earlier movements; in developing them further by generative rather than relatively literal restatement Delius realizes the logical requirement of a complete recapitulation yet still continues to build forward and upward steadily toward a final climax which he reserves until the very end. This climax is not the conventional *fortississimo* rumpus of time-hallowed classic-romantic tradition, but a real climax of serene ecstasy, a peace which passeth the understanding even of Nietzsche: for the least sympathetic reader of that would-be philoso-

phical poet must realize that striving vainly to build a Nirvana on nerves had probably much to do with driving the poor fellow mad.

In sketching the *materia musica* of Delius's setting of selected texts from Nietzsche I have laid more emphasis upon its musical than upon its philosophical ancestry, and gone on into a suggestion of its musical progeny; even so the esthetic significance of the *Mass of Life* is psychological rather than technological. Clearly Delius was not primarily concerned to "set" a condensation of Nietzsche's prose poem to music, but rather to express in tones something which he himself, as poet-philosopher, felt urged to say; equally clearly he himself selected from Nietzsche's book such texts as would serve his own expressive purpose, just as he quite properly selected a part of his musical vocabulary from what must be regarded as his "native" language, - the musical speech of his Wagnerian contemporaries, among whom Bruckner, Strauss, and Mahler are the most important. He in turn clearly influenced Strauss and Mahler in their later compositions, and quite legitimately. Had Delius expressed himself in words rather than tones, he would probably have written in English rather than in German, French, or Esperanto, though he was scholar enough to write in any language which would serve his purpose, and the influence of his reading in many languages would have appeared from time to time in his text.

But to trace prepotent influences in a man's style does not account for his individuality, if he has any. What is still more important is what of himself he expresses in what he has to say; and, while this, too, is not a matter entirely of spontaneous generation but has its own ancestry, whatever in a man's style of expression cannot be traced to one or two prepotent influences contributes more to his aggregate individuality than specific "influences," however marked. This is the moment to point out that what makes the *Mass of Life* true Delius and no *pastiche* of "influences," is the fact that, during the whole composition, the rhapsodic Delius of, for example, *Sea Drift* and the preponderance of his earlier and later compositions is ever present, is always in full command, and even grows measurably. By the same token, the *Mass of Life* becomes in turn a living "influence" not only upon the later works of the composers with whom he had an honest exchange of ideas - both matter and manner - but also upon the later compositions of Delius himself. These later compositions as such are not within the scope of the present essay; but, since Delius's "influence" upon other composers is a part of the study of his musical family history, the fertility of this influence must be accounted for, and can be accounted for only by showing that Delius was a growing individual and not a mere copyist.

Part II. of the *Mass of Life* opens with a quasi-quotation from Mahler's *Resurrection* symphony, as previously stated; and, after page 139, there are some lilting passages in which the Rhinemaidens seem for a while to have joined the by now not inconsiderable ensemble, albeit not too obtrusively. Otherwise, in Part II., there is little to reward the reminiscence-hunter, but more than ever to interest the sympathetic student of Mahler and Strauss, who of course were no copyists either, regardless of what the critical muck-raking squad may say.

The short second movement of Part II. may be described as pretty exclusively *Sea-Drift* Delius; but, with the considerably longer third movement, there occurs a marked foretaste (pp. 135-7) of some of the atmospheric orchestral passages early in the *Faust* portion of Mahler VIII., and later (pp. 152-8) some definite anticipations of *Elektra* and even *Ariadne auf Naxos* (1912). In the prevailing quiet and reflective fourth movement (pp. 164-179) there is a contrasting *forte* section (pp. 171 ff.) in which some *Elektra* rhythms served Delius well at the time, and, apparently, proved helpful to Strauss not long after; some of these are continued in the fifth movement (notably on page 181, and rather markedly for a few measures on page 185).

In the *finale* (pp. 189-90) occurs a passage of some duration which definitely foreshadows the invocation of the Virgin in the *Faust* scene of Mahler VIII.; and, from time to time throughout Part II., there are many passages and episodes, besides the one already noted (pp. 135-7), in which Delius's use of solo voices, especially the baritone, with an interweaving contrapuntal accompaniment anticipate rhythmically and in the texture of the orchestration similarly beautiful and rather similarly treated passages in Mahler's *Faust* scene. Still more noteworthy is Delius's use, during the whole of the *Mass of Life*, but particularly in Part II., of passages for solo voice with colorful "open" delicate accompaniments whose harmonic, contrapuntal, and rhythmic structure and texture, at poignant moments, looks ahead again and again to the structure and texture of the many more similar passages of which Mahler builds the larger portion of *Das Lied von der Erde*; instances are too numerous as well as too varied in detail even to begin a catalog, but the fact remains that these two tone-poets so often reacted alike to similar poetic stimuli as irrefragably to prove not only a common psychology but also a considerable exchange of ideas during the period when they could have been and undoubtedly were acquainted with each other's work.

Other psychological parallelisms too numerous to list in detail but apparently too significant to ignore occur again and again in Delius's propensity to employ certain tonalities at determinative points to "key-note" certain moods and to sustain these tonalities as long as they serve to emphasize the special significance of the idea expressed. Delius can almost be depended upon to use E-flat major wherever Bruckner or Mahler would have used it for expressive purposes, and B major wherever Wagner, Liszt, or Strauss would have used it, and in the same manner, allowing for individual differences; and, of course, there is much parallelism in matters of structure as an aid to expression through unity in variety, such as the employment of thematic motives which, as a formally logical development proceeds, take on the attributes of "leading" motives by association with particular characterizing words in the text, and recapitulations which sum up development rather than merely repeat themes.

And so comes the close and climax of the *Mass of Life*—a broadened and enriched restatement of the text, "*O Mensch! Gib Acht!*" which first appeared in Part I.; then it was sung by men's voices with contralto *obbligato*, this time by baritone solo with full chorus. The ineffable calm

beauty of this final passage, after all the storm and stress with which the work began, achieves a climax of serenity which is much helped by the use of the good old family key of B major,—compare the endings of *Tristan*, Liszt's B minor sonata, and the suggested Nirvana in Strauss's *Zarathustra*; and, at the very close, when Delius sets the final word, "Ewigkeit" to a chord consisting of the tonic triad with the supertonic and submediant added (compare the C major ending of *Das Lied von der Erde*, in which a similar chord forms the harmonic and psychological foundation for reiteration of the word "Ewig . . . ewig"), a devout admirer of the whole royal line may be justified in interrupting his devotions long enough to murmur, with a smile, "all in the family."

And a royal family it is, whose outstanding traits persist and grow from each generation to the next because its members stand on their own feet and use their own brains, though they may have inherited both their feet and their brains from their ancestors instead of trying to contrive them *ex vacuo* or from any of the certified *vacua* that one can buy at the academic drugstore or any other, and though they may have been helped in learning to walk and think by studying and emulating their ablest relatives rather than depending alone upon piecemeal instruction purchased by instalments from the officially licensed dispensaries. As to Delius, the musical public knows his later compositions fairly well, and is familiar with most of the principal compositions of Wagner and Strauss, and an ever-growing portion of the public is increasingly familiar with Bruckner and Mahler; but the *Mass of Life* is definitely less well known, and it seems appropriate to direct attention not only to its place genealogically in the dynasty of which it is a part, but to its own inherent beauty, power, and individuality.

---

#### KILENYI MAHLER MEDAL AWARDED TO RICHARD BURGIN

The Mahler Medal, designed by Julio Kilenyi for the exclusive use of the Bruckner Society of America, Inc., was awarded to Richard Burgin for his efforts to create greater interest in and appreciation of Mahler's music in the U. S. A. On January 30 and 31, 1942, Mr. Burgin performed the third and fourth movements of Mahler's *Fourth*; on October 6 and 7 of that year, he conducted two performances of the *First*. On March 19 and 20, 1943, Mr. Burgin presented the first movement of the *Third* and in December of the same year, *Das Lied von der Erde*. *Das Lied von der Erde* as well as Mahler's *Fourth* under Burgin's direction were broadcast over NBC in March 1945. On November 19, 20, and 21, 1948, Mr. Burgin conducted Mahler's *Fifth* which was received with cheers by the three audiences. After the performance of the *Fifth*, the Kilenyi Mahler medal was presented by Mr. Warren Storey Smith, of the Boston Post, acting on behalf of the Society.

# THE EIGHTH SYMPHONY OF BRUCKNER

An Analysis

by

ROBERT SIMPSON

## I

This analysis, the first reasonably complete one in English to be made from the original score, is intended for those interested enough to obtain the new Hamburg recording of the symphony: these notes will be found helpful towards a closer grasp of the work's very massive structure. They do not, however, claim to be exhaustive; space permits only the most rigid adherence to the subject and any points that do not bear directly on the main outlines, however interesting, have been ruthlessly quashed until it becomes possible to include them in a really detailed treatment of the music. As, alas, the majority of readers will have only the "revised" Universal Edition, the bar-numbers of both versions will be given whenever necessary. The relative merits of the two editions will naturally be discussed as the relevant questions arise.

As the Seventh Symphony is Bruckner's most subtly poised and tonally intricate work, so is this Eighth, the third of his C minor symphonies, the sum of all the more trenchant elements of his style. It in no way covers the same ground as its precursor, nor does it, except in matters of harmonic detail, anticipate the Ninth. Its sweeping dramatic force is unprecedented in Bruckner's music: though there are earlier hints of some of the themes (in Nos. 2, 3, and 4, for instance) and individual movements show stirrings of dark energies, no whole work can be said to foretell the Eighth as, say, Mozart's 25th symphony (K. 185) seems to point to the great G minor, or Beethoven's D minor sonata, Op. 31, No. 2 hints at that in F minor, Op. 57. Bruckner's Eighth is the first full upshot of matters hitherto hidden in undercurrents and only intermittently allowed to erupt.

It is very significant that these forces compel Bruckner in the first movement to a mastery of a newly-expanded sonata style. His normal methods are quite opposed to those of the sonata-symphony, and he usually depends on two fundamental principles, (a) a subtly original view of key as a means to structure and (b) a deliberate and far-sighted spacing of mass and void, climax and anticlimax, sound and silence, treated plastically almost after the manner of a visual artist. These processes are well shown (in different ways) in the Fifth, Seventh, and Ninth symphonies, and the superficial semblances of sonata-shapes that can be construed in these works have often led to serious misunderstandings. When Bruckner so wishes, he can create true sonata style on a huge scale; examples of this

can be found in the first movements of Nos. 4 and 8 and the *Adagio* of No. 6. These are not the only cases, but they are undoubtedly the greatest: besides these and a few other large designs, there are also the remarkably terse and varied *scherzi*, all of which are real sonata movements. Like all true and flexible artists, Bruckner bends method to stylistic or expressive purpose and is consistent in so doing: a fascinating essay could be devoted to the reasons for his choice of structural principles in individual works. Here attention must remain on the Eighth, and for the moment it need only be said that the sonata style of the first movement was inevitably dictated by the turbulent nature of the material.

The main theme is given out in grim disquieting fragments, and is in this unusual for Bruckner, most of whose opening subjects are of a flowing continuous quality, even when (as in No. 1) they happen to be rhythmically energetic: here there are long gaps between the phrases. Other themes (in Nos. 3, 4, and 6) anticipate this characteristic, but none has such pith as this.

Ex. 1

The musical score for Ex. 1 consists of two systems. The first system shows a piano (pp) accompaniment with a treble staff of chords and a bass staff of a rhythmic pattern. Annotations (a) and (b) are placed above the bass staff. The second system continues the piano accompaniment, marked with a crescendo (cresc.) and a mezzo-forte (mf) dynamic. It includes a triplet of eighth notes in the bass staff labeled (c) and ends with 'etc.'.

The tonality is at first obscure, suggesting B flat minor or perhaps D flat, and the mystery is deepened until as late as bar 22, when an expected close in C minor is foiled by the *fortissimo* outburst of the opening F, now felt as the clear subdominant of C. The violent counterstatement reinforces the real tonic, C minor, with the drum, but it is not allowed to close in that key and it softens in the direction of A flat, finally falling on to the home dominant, G major, at bar 51. The appearance of a beautiful new theme insists that the ear accept for the moment G major as an established key.

Ex. 2 (bar 51) (note rhythm derived from Ex. 1 (c))

The musical score for Ex. 2 is for Violin I. It features a melodic line with a dynamic marking of piano (p) and a tempo/style marking of 'breit und ausdrucksvoll'. The score includes triplet markings and a crescendo (cresc.) marking. It ends with 'etc.'.

This contains some of Bruckner's typical "passing keys" and it swells out to an urgent affirmation of the new key (around bar 70). Its second statement (from bar 73) has a different continuation, which moves into the dark region of E flat minor, where a new creeping threat occurs, a theme that must strongly have affected Mahler while he wrote the first movement of his Second Symphony.

Ex. 3 (bar 97)

and that although C minor was strongly thrust forward by the first group, that key was never allowed to form any kind of conclusive cadence. The composer relied on power of suggestion and inference to impress C minor on the mind as the basis of the passage. He now recognises the clamouring fact that a full, sufficiently spacious and unequivocal dominant preparation is the only thing that will replace the home tonic firmly enough to balance and efface the vastly comprehensive establishment of E flat at the end of the exposition. Presumably that is his object as he now settles down to one of his own peculiarly cumulative dominant *crescendi*, with the inversion of Ex. 2 (a) in the violins, punctuated by Ex. 1 (a) deep in the bass at shortening intervals. But Bruckner is not so simple as many would have us believe. Most other composers would have been satisfied to reinstate C minor by an exciting preparation of this kind, with a plain and probably impressive statement of Ex. 1 at the height of the climax, perhaps expanded commensurately and almost certainly chained to the tonic by a pedal, for it is by nature a modulating theme. No doubt to point triumphantly to the essential banality of such a scheme is to be wise after the event, but how, after such an event as Bruckner's actual procedure, can anyone be anything but wise? He allows the dominant preparation to go on for 11 bars, and then the bass (Ex. 1 (a)) starts to rise by semitones, the violins slip weirdly from their pitch and the horns become articulate (bar 212). In five bars the music heaves bewilderingly: then it finds a grip at bar 217 on the dominant of B flat minor and the rising tumult sweeps in Ex. 1 (b) in the bass, augmented and titanic, in precisely the same tonal position as at the start of the symphony, this time combined with a free augmented inversion of Ex. 2 (a) to form a colossal irruption of sound. Three times this mighty combination appears, and at the end of the third there is an abrupt *pianissimo*, with C minor fully established.

What is the real point of this passage? In effect the composer says: "My main subject is a modulating one—it begins on the dominant of B flat minor and moves chromatically to C (Ex. 1 (b)). If I were to recapitulate it in C minor, I would have to do one of two things, (i) I could start it on the note G, whence it would move to D, which could then be treated quite simply as the fifth of the dominant chord, so that it falls naturally by step to C, or (ii) I could flatten out the whole theme into a mere rhythm, so that it would be without any kind of tonal ambiguity and would have plenty of elemental power. Of the two suggestions I would prefer (i), since it is the more musical: but it is unsatisfactory because it fails to ram home what I wanted to show at the outset, that the turn from B flat minor to C is not a full establishment of C minor, in spite of its impressiveness. If I were to shift the theme up a tone, I could without difficulty keep the whole of it within the bounds of C minor, as already argued, but I should lose its most precious attribute, its tonal restlessness. Why not make as if to bring about C minor by dominant preparation and then undermine the whole idea by slipping on to the old dominant of B flat minor, blazing out the theme in its original form (augmented to increase its breadth)? It will then move to its C, which will still demand further confirmation and thus urge me to state the theme in immense steps until

it crashes over upon the dominant of C, leaving no more doubt about the tonality. Three such statements should be enough, the middle one increasing the tension by being a minor third above the first, and the third relieving it by being poised gigantically on the home dominant. I shall thus have made the needed dominant preparation with far more power and incident than if I had been content with my first notion."

This tremendous tripartite passage flings the shadow of C minor across the 53 bars that follow it; when it ceases, a solitary flute is left hovering over a drum pedal on C with faint cavernous sounds of the last four notes of Ex. 1 (b) in the bass; between these extremes the trumpets enter with the bare rhythm of Ex. 1 (b) on the tonic. Thus Bruckner makes a more telling use of this device (that of reducing Ex. 1 (b) to its rhythm) than if he had relied upon it for the previous climax. The bass figure slides into the upper strings and initiates another *crescendo*, curving up into a great wave, through which the trumpet rhythm may still be discerned. The reaction from this is a soft counterstatement of a new form of the main theme in oboe, clarinet and trumpet, with a flickering flute and string *tremolando* accompaniment (the oboe has the very form of Ex. 1 (b) that Bruckner refrained from using in the most obvious place, the form beginning on the note G; here it is carefully hidden for a reason that will appear later in the work). At the end of this the strings burst out with the last phrase (bar 298) much as they did at bar 18, thus confirming the unity of the whole enormous expansion of the first group from bar 224 to 302. During this quieter counterstatement (which contrasts with the loud one of the exposition) there are apparent modulations; they do not affect the issue and are therefore not real and would better be called inflexions.

As before, the expected close in C minor is turned into an alien dominant, which now moves unexpectedly into the familiar region of E flat and a fresh version of Ex. 2. After so spacious a design only a full recapitulation of the second group is possible, and Bruckner, like Schubert, gives it with its thematic material for the most part unchanged, but with quite different key-relationships. By this means he creates symmetry without tautology. At bar 341 Ex. 3 follows in C minor, which key cannot be undermined. The fierce sequel leads directly into the *coda*, where is the grimmest of all Bruckner's climaxes: the rhythm of Ex. 1 cuts clean through the surging mass of the rest of the orchestra and the most startling moment is its sudden isolation on the brass, with nothing but a thunderous drum far below it. At the end comes prostration and collapse, broken wisps of Ex. 1 drifting blackly out. This is the only one of Bruckner's first movements that ends softly: in some ways it is one of the greatest pieces of its type since Beethoven's *Coriolan* overture, with which it shares a certain forbidding defiance, rising to a similarly challenging climax and ending in the same utter darkness. One final point is noticeable; the rhythm of Ex. 1 (a + b) is exactly that of the first figure of Beethoven's Ninth Symphony.

## II

The *Scherzo* is placed second. As with Bruckner's unguarded and perhaps ironic suggestions for a programme for the Fourth Symphony, his description

of this terrific movement as representing the *Deutscher Michel* is obliterated by the music itself. Little analysis is possible here; the *scherzo* proper is a very concise sonata movement with a comparatively reflective development. Its exposition and restatement are anything but reflective. The piece is in C minor and is remarkable for its brilliant use of string *tremolandi*, which give it a keen glitter. The main theme has something of the blunt forthrightness of that of the *Credo* in the E minor Mass, but here the effect is overpoweringly athletic; its cumulative energy suggests the pounding of some unearthly machinery. There are no defined thematic first and second groups, and the exposition ends with a climax in E flat major. The development casts new light on the chief theme, which appears inverted and *legato*, giving rise to much fine woodwind writing. The recapitulation is caused by a settling on the home dominant (over a tonic drum pedal) and the entry of the horn which began the movement. The final sledgehammer climax is thrown into C major by a single change of harmony in the restatement (compare bars 37 and 171).

The slow *Trio* is one of Bruckner's most imaginative things. It is in A flat major, a key whose freshness is enhanced by the fact that it has not been previously established in the symphony. Like the *Scherzo* it is a compressed sonata scheme, the exposition ending in E major without any separable second group. For the first time in his career Bruckner employs harps, which he uses with delicate care. The almost French fastidiousness of the scoring in bars 33-44 should be observed; yet the music is innately Austrian. Like Berlioz, Bruckner has a far more artistic and consistent restraint than his detractors will admit. The recapitulation comes at bar 61 after a very succinctly expressive return through four solemn detached phrases. There is a fine alteration of key-relationships in the restatement and the last gentle restoration of A flat major comes, with perfect rightness, only in the last nine bars.

The *Scherzo* returns complete.

### III

The highest tribute to Bruckner's power of composition need do no more than point out that in so immense a piece as the *Adagio* of this symphony, the effect and coherence of the whole hangs to a considerable extent on a single chord. This chord, moreover, is heard but four times during the full half-hour of the movement. If this assertion seems at first to be an exaggeration, the full movement must be analysed, when it will be found that without this chord, the most important passage (and consequently the whole plan) would lose its thread.

Bruckner puts the slow movement in D flat: like the key of the *Trio*, this has not previously been more than touched upon and is new to the ear. The first theme, over faintly pulsing chords, has a strange air of troubled detachment; its first two phrases are heard in the first ten bars.

Ex. 4

(a) Viol. I 

(b) Viol. I *breit gestrichen*

*p* *cresc* *dim*

Extremely important is the persistent D flat (changing to C sharp) in the bass; it is intended to penetrate the mind, for it causes a compelling harshness, almost coarseness, that characterises the first *fortissimo* chord, underlying a loud aspiring phrase. This is the 6/3 chord of A major, with its root (the third, the C sharp) heavily doubled in the bass. Now the most elementary student of harmony knows that a doubled third, particularly in the bass, results in an unpleasant roughness: one may therefore be pardoned for wondering why Bruckner has been at pains to double and redouble in the lower brass this dangerous note. The answer is that he wants this chord to be peculiarly recognisable without being complex or abstruse, as later events prove.

Ex. 5 (bar 15)

*ff* *5* etc.

The reply to this is a marvellously sonorous string passage, which, joined by the brass, rises to a series of seraphic chords for strings and harp, resting at length on F major (bar 28). As if nothing had happened, the opening D flat harmonies are heard again (the drop of a major third, in this case from F major to D flat, is a favourite sound with Bruckner), and Ex. 4 (a) returns. Before (b) can follow, the harmony changes to B major and once more Ex. 5, with its singular scoring, reasserts itself, this time a tone higher than before. Its noble sequel, duly transposed, ends now on a chord of G major (bar 45). As the F major of bar 28 dropped a major third to D flat, so we expect this G major to fall to E flat: that it does not do so is another important factor in the cogency of the movement as a whole. Instead, an intervening horn leads to a lovely new idea, beginning in E major.

Ex. 6 (bar 47)

Vc.

*mf*

As will be seen, the chief characteristic of this magnificent theme lies in its tonal freedom, its refusal to be bound by any one key: its second statement, starting again from E, moves to B minor instead of the original F minor, and then leads to a glorious tuba solo that sounds grandly from C major into F. This second section of the *Adagio* closes in G flat at bar 81, whence a 14-bar link, composed of expressive woodwind derivatives of Ex. 6, drifts back to D flat and the opening theme. The tonality throughout the second group is made purposely kaleidoscopic because the composer requires that D flat shall be the only key to have firm entrenchment: the effect at the end of the whole *Adagio* is that the tonic has never lost its grip. The very fact that G flat is the home subdominant makes the return to the tonic as inevitable as if it were in a *coda*; the entire mighty structure is fixed upon a rock.

The renewal of the opening material brings about a very slow, widely modulating *crescendo*, based entirely on Ex. 4 (a) and (b). As the dynamics increase, the mood becomes gloomier as if a fruitless search is in progress; the climax is approached with a certain dogged persistence that may not appeal to less patient ears, and it finally expires plaintively after a heavy yet unconvinced attack on a 6/4 chord of B flat (bar 125). *The clinching matter of Ex. 5 is not found.* The real character of this passage may be appreciated only in the light of the whole movement. The falling phrases lead now to the second appearance of Ex. 6 and its train, this time beginning in E flat.

The significance of this E flat is simply in the fact that it is the very key in which the second group might well have begun at bar 47, when the music had paused on a G major chord that had every reason to fall to E flat. If Bruckner defeats expectations, it is usually because he has some long-term reason. If his term is sometimes too long for some listeners, the limiting factor is not his. The second group ensues almost complete: it is surely remarkable that this section, the most serene part of the movement (apart from the *coda*), is tonally the most mobile. The orchestration is now enriched in various ways, the end of the group truncated, and a new wistful continuation forms a fine-drawn link to yet another return of the main theme in the tonic. Now follows the crux of the whole.

As so often with the opening of a Bruckner passage designed to generate the last climax, the theme (Ex. 4) is now accompanied by a movement of semiquavers and a number of more fragmentary embellishments, some of which are extremely telling. The tension begins to grow, and at bar 197 the attention is powerfully caught by a *fortissimo* 6/3 chord of C major, its E thickly and grotesquely reinforced in the bass. At last, we think, comes Ex. 5, for this is unmistakable. But it is merely the beginning of a masterly delaying process and this one chord is repudiated by a quick hush and some rising Brucknerian brass chords. Four bars later comes

another identically balanced 6/3 chord of E, with its G sharp underlined at its root: the tension is doubled when this, too, is silenced by a similar hush and a *crescendo* brings about a crashing, urgent, outburst of Ex. 4 (a). At this point occurs the first of the cuts in the revised edition of the symphony. It is a short one, but important. In the *Urfassung* (and in the available recording) the *ff* statement of Ex. 4 (a) at bar 205 is followed by another sudden *pianissimo*, based on Ex. 4 (b), which seems to be drifting when it is suddenly interrupted by a precipitate assault of Ex. 5, the long-awaited subject, but on a 6/4 (not a 6/3) chord of A flat. The clearer dominant sound of the 6/4 chord suggests that a release is in sight, but it comes too suddenly itself to provide a climax: it therefore gives way to a resumption of the soft derivatives of Ex. 4 (b). In the Universal Edition the first *pianissimo* is cut out, so that the outburst of Ex. 5 is joined directly to the forcible entry of Ex. 4 (a) (letter Q, bar 209 in the U.E.). Its dramatic force is thus drastically reduced and its petering out, which had so much significance in the original, is made to sound like a mere excuse to prolong the movement. This is a clear example of the way in which a cut can actually increase the *longeurs* of a piece of music, defeating its own object. After this point it will be necessary to refer to the bar numbers of both versions.

The *piano* is resumed in E major (Orig. bar 221, U.E. 211) and two more *crescendi*, with growing excitement, bring about the real climax, a hugely expansive augmentation of Ex. 5, on a 6/4 chord of E flat, shifting majestically on to a massive chord of C flat, (Orig. bar 253, U.E. 243). This 6/4 E flat chord bears a clear relation to that of B flat at bar 125, the first climax of the movement, in much the same way as the two big climaxes of the *Adagio* in the Seventh Symphony are tonally related. It should now be quite plain that the whole of this process would be impossible, at least as it stands, without the peculiar constitution of the chord of Ex. 5, and it says much for Bruckner's grasp of detail that so vast a plan can be pivoted on so simple a device. His insight is in his ability to make the ear recognise the sound of a single chord (and an ordinary diatonic one at that) in the midst of a movement of almost unparalleled dimensions, when that chord has not in any way been insisted upon. The fact that he gives it no more than four times in all is evidence of his artistic restraint; how many composers, having hit on such an idea, would not flog it to exhaustion? Having invoked its power of suggestion, it is significant that when he arrives at the climax, he is able to use a much more commonplace 6/4 chord, relying on the theme itself to enforce the point.

To increase the sense of symmetry and release, Ex. 5 is succeeded by its original chorale-like continuation and the soaring string and harp passage is now intensified. After this comes the *coda*, perfect and inimitable in its calm solemnity, essentially a long horn solo that forms a completely new, amazingly broad melody from Ex. 4 (a), with soft asides in the violins. In performance, the horns should be brought out and the strings subdued, or the latter's phrases might easily sound repetitive: they must not be allowed to distract attention from the real *melos*; if they are controlled

(rather more than Jochum insists) their figures are heard in true perspective. The orchestration of this *Adagio* sets a precedent for Bruckner, for in addition to the harps he makes use of three solo violins in unison: these are made to enrich the texture in many imaginative and largely unobtrusive ways. At the last climax there are also two cymbal clashes which, unlike the one in the corresponding place in the Seventh Symphony, are to be found in the original score.

## IV

The monumental *Finale* is the greatest part of the symphony, and its style can be wrongly approached by those who feel that Bruckner lacked the knack of "transition." Such a view can arise only from an uncritical acceptance of Wagner's slick theory that "the art of composition is the art of transition." This is one of the most insidious deposits of the nineteenth-century literary mind and has wrought untold mischief by fostering among young composers a belief that music must be "logical." Now logic and description are the sole preoccupations of language; they are not natural to music and the teaching that will not allow a composer to pass from one element in his design to another without an elaborate substitute for logic is, to say the least, pernicious. Bruckner does not need to argue in his music, for he recognises that the apt placing of solids and spaces is in itself one of the most imposing possibilities of music, especially if it is planned on a great scale.<sup>1</sup> Preconceptions that would prevent this recognition are those of language-fettered minds, such as were all too rife in the last century, minds that cannot imagine anything that is neither arguable nor logically describable. Bruckner's object in a typical *finale* is elemental: an architect moving in and round his newly finished cathedral is in a similar frame of mind and will become active and static by turns. The first three movements of a Bruckner symphony provide a background upon which a wide range of reflections may be cast; they create a world within which another, freer kind of activity is relevant. The *finale* is a synthesis of both quick and slow movements, its contrasting passages of action and complete rest being naturally juxtaposed according to the composer's plastic sense. In such a scheme, Wagner's art of "transition" would as a general method be hopelessly out of place, except where musical movement is needed; then Bruckner shows his mastery of it. Stillness prevails whenever the broader proportions demand it and its very inaction (not stagnation) makes argument futile. As I have suggested elsewhere,<sup>2</sup> the one final answer to the transitionists is that such breaks in the flow could be made beautifully transitional by any block-headed Bachelor of Music. Bruckner in his sixtieth year would have had no trouble in writing some smooth Wagnerian bars to this end. But his aims were different, and should be considered before one hears his most characteristic music with ears attuned to Beethoven and Brahms.

---

<sup>1</sup>In this he may be said to continue the work begun by Giovanni Gabrieli.

<sup>2</sup>*Music Survey*, Vol. II, No. 1, 1949: a review of the B.B.C.'s broadcasts of the Bruckner Symphonies.

First a thunderous paean for brass blazes across a rhythmic string accompaniment.

Ex. 7 (melodic outline, beginning at bar 3)

It modulates in stages until it settles grandly on the key of C, with the following incisive phrase.

Ex. 8 (bar. 32).

Then there is a beautiful descent to a soft, glowing close in C major, the rhythm of the strings fading out at bar 67. Ex. 8 is very important, for it undergoes several unusual transformations during the movement. After a bar's rest, a new *cantabile* theme comes in A flat major; this, one of Bruckner's noblest, is a double idea in which the figure (b) has the more influence on later events.

Ex. 9 (bar 69)

The second phrase, (bar 75) descends by conjunct motion and should be noticed. It gives rise to an expressive string passage which does not appear in the U.E. (Orig. bars 93-8) (in the U.E. this would come between bars 92-93). Further derivatives of this follow in tubas, in sequential fashion, and then a return to Ex. 9, more fully scored, causes a change to the dominant of E flat, through G flat, during which the first four notes of Ex. 9 (b) assume this shape in the bass.

Ex. 10, (Orig. bar, 123, U.E. 117)

The music begins to sound mysterious and after another distinct break, the determined solemn march of a new theme in E flat minor is heard.

Ex. 11, (Orig. bar. 135, U.E. 129)

The connexion between this and Ex. 10 is made plain by the musical context itself. Ex. 11 breaks off suddenly, to be interrupted by another relative of the falling phrase that followed Ex. 9.

Ex. 12, (Orig. bar. 159, U.E. 153)

This is placed momentarily in a remote key and is then accompanied by the crotchet rhythm of Ex. 10. The rhythm is next given to the bass, *legato*, with new matter above it and is suddenly swept away by a powerful *tutti*, which, animated by the crotchet rhythm, adumbrates the rhythmic shape of the main theme, Ex. 7, on the now fixed dominant of E flat, in which key the first stage of the movement is to end. In the original score this *tutti* leads to a fine twenty-bar cadential passage that wheels gently down to E flat major: this was cut and the feeble four bars that exist in the U.E. are the best evidence of the kind of pedantry that was responsible. (Cf. U.E. bars 205-8 with Orig. 211-30. The recording, of course, contains the latter passage.) The enormously long-drawn close in E flat is one of those inimitable and sublimely static parts of the movement: its real spaciousness can be felt when repeated hearing has revealed its relation to the rest of the design. There is another small discrepancy between the two versions: bars 253-8 of the original were compressed into bars 231-2 of the U.E.

The awakening from the intense quiet is very gradual. First, Bruckner muses upon Ex. 12, modulating to G flat, where its inversion begins the bass to a long, reflective *cantilena* (U.E. bar 259, Orig. 285). This becomes impassioned and returns to E flat minor, where motion begins once more with a soft entry of the inversion of Ex. 11. The rhythm of this theme now dominates the movement and brings about a massive statement of Ex. 8 (still in E flat minor), which now has a new familiarity, explained by its melodic similarity to Ex. 12 and its forbears, to which it is now related. Ex. 11 is combined with it. There are three such combinations (the first two separated by a *piano* development of Ex. 11), each a tone above the other, like great granite planes, the third being on the home dominant. Then comes one of Bruckner's most original inspirations, an extensive treatment of Ex. 7, with free and ever more elaborate imitations, a soft, fine web of delicate orchestral sounds: it modulates gradually, sequentially at first, later rising in tension and breaking off on a diminished chord (Orig. bar 406, U.E. 380).

It will be recalled that the last fully scored passage ended on the dominant of C (Letter Z in both scores). As if the shadow of this is

not yet gone, a quiet paragraph (still developing Ex. 7) now starts in C; clearly a serious effort to reinstate the tonic. But the time is not yet ripe for that: the keys begin to shift again, enlivened by manifold products from Ex. 11, ranging as far as A major and G flat major before settling darkly on the dominant of A minor, (at Letter Dd in both scores). Suddenly the trumpets stab out with the repeated F sharps of the start of the *finale* and the possibility of the return of C is again inferred, since this passage was originally the means of fixing the tonic. The main theme now drives forward powerfully through new sequences, finally completing itself in A flat: is this the expected resolution? Not quite; another series of short and urgent upward steps finally reach C major with terrific force (Orig. bar 495, U.E. 469). A threefold *fff* accentuation of this key releases enough energy to drive the music with high impetus for 58 bars, during which it remains rooted in C major-minor, sweeping over one huge apex and halting abruptly at the height of a second. All this is based on Ex. 7 (b). The tonic has once more been asserted.

The last cut-off climax leaves the horns hanging across a gulf, and they float gently over it to reach Ex. 9, which sounds again in its own A flat major: its calm depth is a relief after the immense and complex stretch of music that has passed. Its paragraph follows, with alterations and some enhancements, this time leading to Ex 11 in the tonic, C minor. The next incident is, like most salient happenings in a Bruckner symphony, best grasped in the light of earlier events. When Ex. 11 first appeared it was eventually followed by a forcible formal *tutti*, based on the rhythm of Ex. 7 (Orig. bar 183, U.E. 177). Now the last re-entries of Ex. 9 and 11 have given a sorely needed sense of symmetry to a design already stretched as far as human imagination is able: this symmetrical impression must be confirmed. A statement of the *tutti* just mentioned would undoubtedly serve that purpose in a conventional way, but would hardly be worthy of its adventurous context. What happens is an illustration of the way Bruckner thinks in terms of balanced masses and voids rather than recapitulated themes or sections in the normal sonata style. His first impulse is that a big *tutti* is required (not so big that it endangers the success of the final *coda*, but big enough to counterweigh its distant predecessor). How can this be done without stiffness? Why not both effect this balance and drive home the point of the whole symphony at a blow? And so he hits on the idea of rising to a crisis, at the heart of which shall appear, grimmer than ever, the theme of the first movement: there is his required *tutti*, and there is the supreme question for his *coda* to answer.<sup>3</sup> Thus Ex. 11 is made to grow towards this point, when Ex. 1 (b) grinds terribly into the score in this form: -

---

<sup>3</sup>This is the kind of stroke that distinguishes Bruckner from the type of composer whose weakness is, in Tovey's words, "... where the ghosts of former movements seem to be summoned... to eke out his failing resources."

Ex. 13 (Orig. bar 652, U.E. 614)

A final subtlety of this is that it is the very form of the subject that Bruckner might have used for his first movement *reprise*, the form in which it is most easily kept within C minor's grip: at this moment of the *finale* it is, of course, necessary that the tonic should be solidly founded in preparation for the great *coda*. The composer therefore shows uncanny foresight in reserving this, the most obvious tonal position of his theme, for so cardinal a moment. It will be remembered that its only other occurrence in this form was carefully concealed beneath other counterpoints in the first movement.

After the turmoil has subsided, the final climax is evolved with the greatest possible dignity and grandeur (the *coda* begins at Letter Uu in both editions). As with all Bruckner's final passages it opens in darkness, breathing upon dim fragments of the main theme, passing from key to key as it climbs in a long *crescendo*. The strings persist in smoky quavers that burst into flame as the burning sun touches them. At the last the triumphant affirmation of C major is the complete reply; it contains derivatives of the main subjects of all four movements. The actual end is sudden but tremendous in its finality.

Some comments on the recorded performance will perhaps be expected here. In general Jochum and his Hamburg orchestra give a magnificent account of the symphony, which is beautifully recorded. In some copies the engineers have accidentally cut out bars 321-340 (inclusive) from the first movement, but this has now been rectified. More information about this is given by Mr. Herman Adler in this journal. The only important points for musical criticism concern the conductor's fairly frequent adoption of the rather Wagnerian expression and tempo markings of the 'revised' edition: these are uncharacteristic of Bruckner and nearly always obscure his essential nobility and peacefulness in gushes of romantic emotionalism. This is particularly marked in the frantic *accelerando* that is made to herald the appearance of the first movement theme in the *finale*: there is no such direction in the original score; presumably the conductor was unable to detach himself from the habits formed by long familiarity with the U.E. Since the version being played is the original, it is a pity that the passage is not allowed to sound in all its unhurried strength and inexorability. But one must be deeply grateful to have this gigantic masterpiece on records, and small criticisms are forgotten in the presence of the music itself and its most convincing performance. Here, certainly, is Bruckner's finest complete work, one of the highest significance both in his own work and in the music of his century.

## MAHLER'S THIRD IN IOWA CITY

by Charles L. Eble

In this small university community good fortune in the shape of the State University of Iowa Symphony Orchestra and its conductor, Prof. Philip Greeley Clapp, has enabled the first four symphonies of Mahler to be presented within the space of a few years. One can only hope after hearing the Third Symphony, which has just been performed (May 19, 1948), the practice will continue and the next five will follow, for to one whose familiarity with Mahler started with the Second Symphony, and grew as recordings became available, hearing the Third not only filled the gap between Nos. 2 and 4 but demonstrated anew that Mahler, whose music has been slow in getting before the public, is one of the supreme masters of all time.

Mahler succeeded on a gigantic scale—he was no mere technician, as those critics who so knowingly give him credit for his use of the orchestra would have us believe, but was far beyond what we call skilful and clever. Neither was he a writer of only banal and trite themes as we have been told, but his melodic invention was original and fresh, and, in fact, covers a phenomenal range of expressive character. Furthermore, his handling of material was many sided, ranging from pure simplicity in statement of ideas to intricate and mosaic-like weaving together of separate units, and all laid out with such structural completeness that the climaxes which arise in the course of development reach overwhelming emotional pitches.

When one hears a new work of any composer, the question naturally arises as to where it fits in with the other works. In the case of Mahler, it is useless to attempt to answer this problem as to degree, i.e., whether a work previously unheard is better or not so good as his other compositions. Each work has its own merits and place in our musical life: the frame of mind of a person would lead him on one occasion to seek the joys and delectableness of the Fourth, on another the thoughtfulness, power, and peaceful resignation of the Ninth or perhaps the moving poetry of *Das Lied von der Erde*. Mahler's works all portray in music innumerable experiences of life — not just those sides which are limited to the nice sounding, as is so often the case in music. He covers the entire realm of human existence. He expresses the delights and mysteries of childhood; he captures and puts into music the moments of sorrow, despair, bitterness, and resignation which all human beings feel at one time or another; he paints the tumult of the onrush of the world; he sardonically and playfully likes to make fun of man's follies; he can storm like a demon, yet, and there may be a predominance of the tragic in his music, he never forgets the beautiful, tender, serene moments, those times when "All's right with the world!", and when he does sing of those experiences we surely get a glimpse of that heavenly beauty of which the great poets have sung since the beginning of time.

As to what Mahler sought to express in the Third Symphony he indicated by giving a short title to each movement and these captions appeared on the printed programs at the initial performances. Later Mahler withdrew them and the published score contains no movement labels. For some listeners these suggestive phrases are definitely of help in arousing sympathetic responses to the music; for others they may in no way reflect the reactions enjoyed. Mahler apparently felt the titles weren't absolutely necessary, especially if there was any chance that confusion would result and argument over programmatic implications ensue. In the short descriptions which follow no attempt is made to connect the music with the titles Mahler furnished, but they are listed below for reference. Each listener may accept or reject them as he chooses. I. *Pan Awakes*, II. *What Flowers in the Meadow Told Me*, III. *What the Beasts of the Forest Told Me*, IV. *What Man Told Me*, V. *What the Angels Told Me*, VI. *What God Told Me*. The symphony, in six movements, is divided into two main parts: part one consists of the highly dramatic first movement and part two of the remaining five movements which have varied natures.

The first movement begins with an energetic theme boldly stated by eight horns. This rhythmic and martial pronouncement is followed by a few bars of a different character — mysterious, exploratory, subdued. A short, precise rhythmic figure is sounded softly and kept in motion by the deep brasses and percussion and at alternate bars the bassoons enter inquiringly. This pattern is penetrated by a piercing cry of the trumpets — loud, like a clap of thunder, then dying away. Cellos and basses surge out resolutely in the same spirit as the trumpets. Gradually the atmosphere is intensified; the melodic snatches become more complete, and the forward movement is quickened by diminution. A feeling of awe still pervades. Once again there is silence except for the rhythmic pulsations of a bass drum. An oboe introduces a quaint theme which is taken over and extended by a solo violin. The short, precise rhythmic figure and bassoon counterphrase (now in the cellos and basses) return, and this time a trombone superimposes upon the pattern two loud and arresting sustained tones, separated by a slight pause, and follows these by a free and somewhat rhapsodic treatment of a melodic pattern previously established. This is brought to a conclusion by the juncture of the full body of trombones. The trumpets pierce the atmosphere again, all quiets down and there is set in motion a strong, progressive marching rhythm in which all the material introduced up to this point plus some new matter is used. The pace becomes heightened; a glorious and triumphant processional rises from the integration of the separate fragments which had been only gradually revealed. Steadily moving forward, picking up new force en route, a great climax is reached — we have been swept along so completely that only then does the full impact of what has preceded tear at our being and almost lead us to expect that the final great victory has been achieved. (Few moments have the equal of this.) However, we have only heard, it appears, part of this masterful creation, covered only part of the ground. The intensity lightens, and while the elements which have made up the movement thus far have been what we might call tense, mysterious, martial, and dramatic, now more serene thematic material is introduced—in particular, an extremely

beautiful passage sung first by a horn, repeated in the cellos and then echoed by a clarinet. As this great movement goes on to completion, some of the earlier material is brought before us again. We are reminded of various stages in the development, and with this in mind, we begin to get the full force of what has transpired. The music takes monumental shape. We have now really gained supreme triumph — call it the opening of the heavens or Nature in all her glory, if you wish—and all we can say is:—My God!

The second movement is in the style of a minuet and moves gently and gracefully along, with bright contrasting sections interposed. The charm of this movement is entrancing. There is no rival for its delicate shadings and colorings which paint those moments of fancy and delight that sweep before us, just out of reach. No one but Mahler has done anything like this,

The character of the third movement runs to whimsicality and light banter. In gay, scherzo-like fashion, this part ambles along brilliantly embroidered with a colored tinsel texture (how reminiscent of the polka the syncopated rhythm is!) until a call of a trumpet, sounding through the merriment, brings to a stop the light play which has been the predominant mood of the movement and we hear a posthorn sounding in the distance through a serene violin harmonic screen. This, however, is not just a hunting call, but after a simple call, as if first to gain attention, a peaceful tune is played. Fragments of this melody are caught up by other instruments of the orchestra and there is a short return to the former pleasantries; but the posthorn, now far in the distance, dispels this, the serenity is resumed, and as his notes grow fainter, the trumpet, which had heralded this magic spell, with a fanfare throws the movement back to its initial mood. After a continued development, there is a brief return of the posthorn as before, and the movement ends in the same airy spirit as it began.

The deeply stirring fourth movement is symbolic of man attempting to resolve the mysteries of the world about him. To an accompaniment which reflects the spirit of the text, a contralto sings a few of Nietzsches words — “O Man, give heed — what does the dead of night say? I sleep— I am awakened from a dream! The world is deep, deeper than it seemed in day. O Man, heavy is your woe...” Man’s questioning nature is here revealed and the eternal mystery which the world holds for him. What is life, so full of woe? Where does it lead?

The fifth movement employs a boys’ chorus and a chorus of women’s voices in addition to a contralto soloist. The text Mahler drew from the collection of German folk poetry known as “Des Knaben Wunderhorn.” In the poem three angels sing of the joys of heaven. This joyous account, with the voices of the choirs at times singing the text and at other times only “bimm” and “bamm” to represent the sound of bells, goes gaily on its way and ends in the manner of a jubilee of ringing bells. Mahler later adapted the movement for use as the finale of his Fourth Symphony; among other changes, he dispensed with the two choirs, employed only a soprano soloist, and used a different text from the same collection of poetry.

In the final movement, which is restful and contemplative, tender and soul-gripping, Mahler gives us one vast song from start to finish. The strings begin softly and a gradual building up follows: as more instruments

are added, a more complex and richer treatment of the thematic material becomes possible; the song soars ever higher, and the movement closes magnificently when all forces have joined in the expansion and complete extollment of this hymn-like song.

The work and its great performance brought forth cheers at the end of the concert.

---

#### KILENYI MAHLER MEDAL AWARDED TO ANTAL DORATI

The Mahler Medal, designed by Julio Kilenyi for the exclusive use of the Bruckner Society of America, Inc., was awarded to Antal Dorati for his efforts to create greater interest in and appreciation of Mahler's music in the U. S. A. Mr. Dorati gave the following performances in Dallas, Texas, and in this way helped to familiarize audiences in the Southwest with the music of Gustav Mahler.

*Das Lied von der Erde*, January 12 and 13, 1947;

*Lieder eines fahrenden Gesellen*, February 23, 1947;

*Third Symphony*, November 29, 1947;

*Fourth Symphony*, January 2, 1949.

After the performance of the *Fourth*, Dr. Paul Van Katwijk, Dean of the School of Music at the Southern Methodist University, made the presentation on behalf of the Society. These performances were greeted with great enthusiasm by the audiences.

# AN INTRODUCTION TO BRUCKNER'S MASS IN E MINOR

by Jack Diether

## I

Although Bruckner changed little in his simple personal habits throughout his long life, the musical forms in which he wrote were, I think, influenced by his changing environment to a greater degree than is usually recognized. Thus, his smaller liturgical works were mostly written while he occupied minor church posts, his three mature masses (1864-8) were all written when he was cathedral organist at Linz, and his symphonies, from the *Second* on, after he had made his home in Vienna.

But this is only to say that he consistently turned his imagination to the forms prevalent in his *milieu*. It does not mean that in respect to style and content he wrote what was expected of him. Nothing could be further from that than the eleven great symphonies of 1862-96. Bruckner was, for that matter, as uncompromising in his way as Wagner or Mahler—and this is no less true of the three masses.<sup>1</sup> All of them are thoroughly personal in idiom. The *First* and *Third* are rugged and powerful to a degree unknown in church music since Beethoven; but the *Second*, in E Minor, the "lyrical" of the three, holds a unique place in all music history. I think it is this work above all others that can show us the singly consecrated nature of Bruckner's spirit.

The *Mass in E Minor* was written in the autumn of 1866 in Linz, and first performed in the Cathedral under Bruckner's direction on September 29, 1869, with a dedication to Bruckner's patron, the Bishop Franz Josef Rudigier. It was revived there in 1885 in a new setting revised by the composer, with Bruckner supporting the voices freely at the organ.

There are two editions of the miniature score available, one edited by Josef Woess,<sup>2</sup> the other by Robert Haas and Leopold Nowak.<sup>3</sup> The latter is a reconstruction for the critical edition of the *Deutsche Bruckner-Gesellschaft* of the text revised by Bruckner for the second performance, and dated 1882; the former, according to Gabriel Engel, is based on the earlier version.<sup>4</sup> "As this was mainly a choral work," writes Mr. Engel, "the 'faithful disciples' did not feel called upon to Wagnerize the orchestration." However, so many features seem to have crept into the Woess edition that resemble the Schalkian and Loewenian impurities of the symphonies published under the same imprimatur, that the other edition has a far more authentic ring.

On internal evidence, indeed, it would seem very odd if the present Woess edition represented substantially what was heard in 1869 at Linz.

---

<sup>1</sup>An earlier *Mass in B Flat Minor* belongs to the year 1854, and a number of smaller masses to the even earlier St. Florian period.

<sup>2</sup>Wiener Philharmonischer Verlag, 1924. 100 pages.

<sup>3</sup>Musikwissenschaftlicher Verlag, Leipzig, 1940. 57 pages.

<sup>4</sup>As the two existing recordings, under the direction of T. B. Rehmann and M. Thurn respectively, are both performed from the Woess edition, a recording of the other is now much needed.

For in comparison to the Haas reconstruction of the 1882 version this has a decidedly un-Brucknerish appearance. There are the extra *ritardandi* and *diminuendi* which it seems unlikely that Bruckner would have first added himself and then gratuitously subtracted again. These *ritardandi* are sentimental interruptions of the musical flow to sugar-coat cadences, while the *diminuendi* achieve the tapering off of the brusque and unexpected *fortissimo-pianissimo* contrasts which are so characteristic of the mature composer.

In addition to a number of obvious misprints, there is in the Woess edition also the general scaling down of the brasses, particularly trombones, the wholesale substitution of ties for repeated stresses, and so on. Supposing that most of these things did represent Bruckner's original intentions, it would be most interesting thus to discover that the additions and emendations of the Bruckner editors accidentally corresponded to earlier practices of the composer in instrumentation, which he outgrew in symphonic maturity. Yet it should not be forgotten that the *Mass in E Minor* is contemporaneous with the *First Symphony*, the only numbered symphony he wrote in Linz, antedating the composition of the *Second* in Vienna by six years.

## II

In the *E Minor Mass*, according to Bruckner's custom, the five main sections of the liturgical high mass are represented by no more than six movements, only the *Sanctus* section being divided into two movements. Contrary to the custom of his other masses, however, there are no solo voices in this work. The instruments throughout seem to be kept pretty much in the rôle of accompaniment and enhancement of the voices, inasmuch as the chorus is nowhere silent for more than six consecutive bars. From the second section to the end, however,<sup>5</sup> the orchestra's accompaniment figures and brief solo utterances, like those of the piano in a Schubert or Wolf *Lied*, are of the utmost thematic significance and potency.

An outline of the six movements follows:

1. *Kyrie*. 8-part.<sup>6</sup> *Feierlich* (solemn).  $\frac{4}{4}$ . E minor.
2. *Gloria*. 4-part. *Allegro-Andante-Allegro*.  $\frac{4}{4}$ . C major.
3. *Credo*. 4-part. (a) *Allegro moderato*.  $\frac{3}{4}$ . C major.  
(b) *Adagio-Allegro*.  $\frac{4}{4}$ . F major.  
(c) *Allegro moderato*.  $\frac{3}{4}$ . C major.
4. *Sanctus*. 8-part. *Ruhig* (calm).  $\frac{4}{4}$ . G major.
5. *Benedictus*. 5-part. *Moderato*.  $\frac{4}{4}$ . C major.
6. *Agnus*. 8-part. *Andante*.  $\frac{4}{4}$ . E minor.

<sup>5</sup>The opening *Kyrie* is essentially an *a capella* conception, the instruments merely supporting the voices at the climaxes. The independent treatment of the instruments thereafter, on the other hand, reaches a climax in the "Pleni sunt coeli" of the *Sanctus*, wherein the trombones take up the opening vocal theme in canon (a quotation from Palestrina) against a new theme in the 8-part chorus.

<sup>6</sup>This refers to the number of staves allotted to the chorus in each movement of the score. Actually the chorus subdivides into eight parts in certain passages of every movement.

Within this scheme of classical simplicity, a world of varied harmonic color lies hidden.

It is suggested that the conciseness, the comparatively ascetic means and polyphonic structure of this *Mass*, basically liturgical considerations, indicate a desire to please the purists of Catholic liturgical music, as represented in Vienna by the *Caeciliaverein* under Franz Witt. If so, Bruckner would have needed to write a work, preferably a *capella*, based on principles abstracted by the theorists from Gregorian chant and the harmony and counterpoint of Palestrina—in other words, as bloodless as a work by Fritz Kreisler attempting to emulate the style of 18th century orchestral music. This opinion is amply supported by the history of one of Bruckner's real *a capella* works, the *Tantum ergo*, published under Witt with a cadential ninth "corrected" into an octave (an ecclesiastical precursor of the symphony corrector Loewe).<sup>7</sup>

What Bruckner did produce in his *E Minor Mass* was something unlikely to be appreciated either by the proponents of popular cloying religious sentimentality on the one hand, or of reactionary absolutism on the other—a work dedicated (regardless of its literal dedication), like all his works, to "der liebe Gott" alone, but with God-given farsightedness comparable to that of his last symphonies. It is a "liturgical" work in the fact that it does not conceal the text, but tends to disclose it to an extraordinary degree. There is nowhere to be found the "polytexture" that results from treating two sections of the text simultaneously in separate voices; literally every phrase is taken in sequence. On the other hand it is, no less than his other masses, a dramatic work, interpreting every important phrase, as in a libretto, in terms of the particularized emotion suggested by it alone, rather than striving for a generalized "devotional" or "sacramental" atmosphere suggested by the function of the mass as a whole.

How subtly and profoundly Bruckner has succeeded in dramatizing these particularized meanings of the various sections can be seen from a close study of the music in relation to the text. Indeed the expressive power of this and his other masses has been no better indicated than through the famous words of the afore-mentioned Bishop Rudigier, variously attributed to this and to the *First Mass*: "During that performance I could not pray."

### III

A closer resemblance than to the style of Palestrina might be found by comparing this work to the great baroque masterpieces of the 17th and early 18th centuries, in particular the works of his Austrian predecessors of those periods, which he had much opportunity to study in the libraries of the Austrian music centers. Thus, as his knowledge of these works probably equalled our ignorance of them, one important approach to the study of Bruckner's works for chorus and orchestra is lost to us. Hans

<sup>7</sup>This *Tantum ergo* was Bruckner's first published work, appearing in *Musica Divina* in 1846. Thus the bowdlerization of Bruckner's music, which has prevailed until the 1930's, began before the mid-point of the last century!

Redlich wrote concerning the *E Minor Mass*: "It reveals familiarity not only with Palestrina, but with Lotti, Caldara, Fux, and other Austro-Italian composers of the late baroque period."<sup>8</sup> I imagine a rather minute number of readers would be in a position to verify today, other than in a very general way, the accuracy of this statement, though it does not require a very profound knowledge of the music itself to see something eminently Fuxian in the way Bruckner applied the earlier contrapuntal style to the form of the classic-romantic symphony, just as his Viennese predecessor did to the form of the classical opera.

Dika Newlin aptly refers to the "seventeenth-century soul of Bruckner".<sup>9</sup> In general it might perhaps be said to be the luxuriant multiple harmony and polyphony of their choruses, the boldness and scope of their designs, and the primitive splendor of their orchestral effects, that attracted Bruckner in the later baroque musicians.

It is probably not known whether Bruckner was as familiar with the earlier baroque masters; if he had known them well, he would undoubtedly have been struck by the possibly even greater richness and complexity of their scores, as compared to those of the later period. We can only wonder what might have been the influence on Bruckner of such a score (printed for the first time in our own century) as the Festival Mass written by Orazio Benevoli for the inauguration of the new Salzburg Cathedral in 1628. Hugo Leichtentritt says of it:

As regards the number of its staves, the Benevoli score of 1628 holds the record of all time with fifty-three on each printed page. Neither Wagner's *Goetterdaemmerung*, nor Mahler's so-called *Symphony of a Thousand*, nor Stravinsky's *Sacre du printemps*, Strauss's *Salome*, Schoenberg's *Gurre-Lieder*, nor any other monumental work of the last three centuries, can compete in mass array with the fantastic appearance of this score... Here are manifest the pomp, vastness and boldness of construction, the brilliant virtuosity, and the elaborate decorative art of the baroque style, translated into music on the grandest possible scale.<sup>10</sup>

Even more he would have been struck by a feature which seems to have derived for him through another source (though with his prolonged study of counterpoint and history we cannot be sure), namely, the brilliant sense of chromatic coloring in harmony and modulation, which, in Bruckner, Max Auer compares to "the glow of the glorious colors in Rubens' painting".<sup>11</sup> Here too is the crux of the tonal revolution that supplanted the age of Palestrina. Writing of the early 17th century, Leichtentritt says:

The interest in color effects, in light and shade, in striking transitions from one color to another, in a mixture of various colors, leads the great Italian madrigal composers more and more

---

<sup>8</sup>Anton Bruckner's Choral Music; *The Listener*, London, November 6, 1947.

<sup>9</sup>Bruckner, Mahler, Schoenberg; King's Crown Press, New York, 1947.

<sup>10</sup>Music, History, and Ideas; Harvard Press, 1938, page 118.

<sup>11</sup>Anton Bruckner als Kirchenmusiker; Regensberg, 1927, page 86.

to what we call chromatic harmony, away from the diatonic severity of the medieval church modes that for more than a thousand years had been the unshaken basis of all artistic music.<sup>12</sup>

This interest paled to such a comparative degree during the whole classical period that we are constantly amazed at the chromaticism of some of these scores when they are occasionally revived, as are those of Gabrieli, Gesualdo, Monteverdi, and Marenzio. Of the last named, Leichtentritt writes further:

In his ninth book of madrigals, Luca Marenzio published a wonderful musical setting of Petrarch's famous sonnet, *Solo e pensoso i più deserti campi*, in which we find almost exactly, note for note, the sensational "Erda" harmonies from Richard Wagner's *Rheingold* and *Siegfried*, with their amazing chromatic progressions. Certainly Wagner did not copy Marenzio, of whose existence he very probably knew nothing at all; he discovered for a second time something that had been alive centuries before but had been forgotten in the course of time.<sup>13</sup>

And Wagner is the different source, mentioned above, through which Bruckner seems to have imbibed his enthusiasm for striking chromatic progressions—except wherein, as has been amply illustrated in the pages of this journal since its inception,<sup>14</sup> he himself anticipated some of the actual most characteristic progressions of the German master by a number of years, and is to that extent as worthy to be mentioned in this respect in a history of music and ideas as is Wagner.

#### IV

There is a third important approach to the present work, and perhaps the most significant for us: its anticipation of the media of our own time. The combination of concerted voices with a small ensemble of solo and doubled wind instruments was a conception new to the extended music of the classic-romantic age. Such an ensemble, sharper and more precise in tone than any solo organ could be (from whose general characteristics Bruckner's seems to derive), not cushioned against the voices by yielding string tone, which blended the whole according to established 19th century taste into a more homogeneous fabric, points ahead unmistakably through the later Mahler to our own day, the day of Schoenberg, Hindemith and Stravinsky.

But the most important fact about the use of such an ensemble was the significance of its employment for the expression of the most exalted religious feelings of 19th century man. Here, as in all his sacred work, was a direct contradiction to the growing vacuousness and sentimentality of religious composition of the time, a contradiction perhaps made possible

<sup>12</sup>Op. cit.; page 119.

<sup>13</sup>Op. cit.; page 120

<sup>14</sup>See Th. Otterstroem's *Bruckner as Colorist; Chord and Discord*, vol. 1, no.2. for a comparison of Bruckner in this regard with other 19th century composers.

by the very fact that Bruckner, as an anachronism, could impart to the subject a freshness, vigor and sincerity lacking in his contemporaries. And in this work, his wind ensemble [two oboes, two clarinets and two bassoons,<sup>15</sup> four horns (tuned in pairs throughout), two trumpets and three trombones] produced a jewel-like setting in which his finely cut choral music might stand out in bold relief.

In this respect the *Mass in E Minor* is a precursor of such modern religious works as Stravinsky's *Mass*,<sup>16</sup> which likewise uses a small wind ensemble (two oboes, English horn, two bassoons, two trumpets and three trombones) and his *Symphonie des Psaumes*,<sup>17</sup> which uses only the lower strings as general bass for a large ensemble of wind and percussion. Both of these works are also without solo voices. Bruckner was an anachronism with a future as well as a past.

## V

This combination of elements assigns Bruckner's *E Minor Mass* a special place in the history of musical aesthetics. It is the most individual choral work of the greatest composer of church music in the 19th century after the death of Beethoven. Its harmonic and contrapuntal splendors link it with all that is best in baroque composition, its boldness of textural outline link it with the modern age, and its depth of romantic emotion, expressed with complete originality, bespeaks the progressive spiritual ally of Richard Wagner. There is a place for such a work in our increasingly enlightened musical age, and such is acknowledged by the rapidly growing interest of an international audience.

---

<sup>15</sup>The woodwind is directed in Woess to be doubled again, but not in Haas.

<sup>16</sup>The general effect of this work, however, is said to be *entirely* liturgical rather than dramatic. In comparing these two Masses I am referring solely to the important matter of the medium employed.

<sup>17</sup>The third movement of this work is a setting of the 150th Psalm. Bruckner also wrote, in his full maturity, a setting of this final Psalm of the Vulgate, but this is in a quite different medium, being designed for solo soprano, chorus and orchestra.

---

## KILENYI MAHLER MEDAL AWARDED TO GEORGE SZELL

The Mahler Medal, designed by Julio Kilenyi for the exclusive use of the Bruckner Society of America, Inc., was awarded to George Szell for his efforts to create greater interest in and appreciation of Mahler's music in the U. S. A. Szell performed *Das Lied von der Erde* in Cleveland on November 6 and 7, 1947. He gave the first performances of Mahler's *Ninth* in Cleveland on November 4 and 6, 1948. After the performance of the *Ninth*, Mr. Thomas L. Sidlo made the presentation on behalf of the Society. These performances were greeted with great enthusiasm by the audiences and critics.

## MAHLER EIGHTEEN YEARS AFTERWARD

by Parks Grant

To indulge in reminiscences is always a luxurious form of dissipation, but when they concern the music of Gustav Mahler it can be done with especial gusto.

One of the earliest lessons that I learned in music is that frequency of performance is not necessarily a corollary of greatness, that failure to be numbered among "the fifty pieces" does not prove unworthiness. My curiosity about Mahler was provoked early in my undergraduate days by the statement that Willem Mengelberg considered him the equal or superior of Beethoven. With full knowledge that this was merely one person's opinion rather than a generally-acknowledged fact, I still realized that Mahler must be a composer whom I should hear and know; previously I had assumed him one of the mediocrities which are inevitable in the course of an art. Here was a challenge to make an evaluation for myself—an adventure to be anticipated fervently. Although the name Mahler was familiar to musicians of my acquaintance, the music itself was a *terra incognita*, even to the alert. Superficial ones could mention but a single characteristic of his work, namely unusual length—a description I later discovered by no means always applicable, and one which is quite irrelevant *per se*.

In 1929 I located the miniature score of the *Seventh Symphony* at the public library in Columbus—my home at that time—but found it hard going to conjure up the sounds represented by this jumble of printed symbols, even though an experienced score-reader since my fifteenth year. The general impression was that this music coincided with my expectations in some ways but was considerably at variance in others. Thus, when I had the chance actually to *hear* some Mahler compositions during 1931, the experiences were tremendously satisfying—the consummation of a wish which had gnawed at my musical consciousness for several years. The music I heard was as good an introduction as could be desired: *Symphony No. 2*, the two nocturnes from *Symphony No. 7*, and the *Kindertotenlieder*. My reaction was one which would have designated these works a "missing link" in the stream of the art; it seemed logical and inevitable that music of this kind should exist, that I had been waiting for it, expecting it, even needing it. Although the influence of several other composers could be discerned from time to time,<sup>1</sup> its *sum total* possessed a freshness and unsought originality completely unlike anything I had known previously. And my feeling to this day is that the overall effect, not the minutiae, is the most valid point in judging originality in any composer, since all music is derivative to a greater or lesser extent.

---

<sup>1</sup>Mahler has so often been accused of being derivative, even of outright plagiarism, that it behooves everyone to use caution as to where he imitated others and where others imitated him. When I first heard *Symphony No. 1* I thought the quiet passage in the middle of the third movement was influenced by the final duet in Richard Strauss's *Rosenkavalier*—until I recollected that Strauss's opera had not even been performed at the time Mahler died.

In 1932, while studying for a master's degree in music, it took little pondering to decide on the subject of a thesis. The scores of all the important Mahler compositions were made available to me. Studying them silently I little dreamed that the day would finally come when I would have heard almost all of this music, for at that time the only works which I knew *well* were the *Second Symphony*, the *Kindertotenlieder*, and a few scattered songs; a single hearing of the *Fifth Symphony* and the two movements of the *Seventh* brought to a total my actual auditory experience with Mahler's music. Meager as these qualifications were, I plunged into the necessary research with zest and enthusiasm. Even now I look back on the preparation of my thesis as an adventure rather than a task.

\* \* \* \*

A tally made today reveals a pronounced contrast with the limited experience of 1931 and 1932. I have heard all of Mahler's symphonies and the majority of the songs<sup>2</sup>—a higher percentage of his total output than my aggregate experience with the works of perhaps any other composer.<sup>3</sup>

It is most gratifying to observe the growing general interest in Mahler. To hear one of his themes whistled on the street is no longer a startling experience. The Bruckner Society of America need show no false modesty when credit for this mounting recognition is assigned. In contrast to the deficit formerly endured by recording companies on the handful of Mahler disks they had placed on the market, it is rather well-known today that some firms have found albums of his music financial successes rather than mere prestige items. The playing of his recorded works on broadcasts is a common occurrence.

Mahler "fans" are encountered at various odd times. For instance: the tenants—not musicians—who sub-let our apartment one summer commented, when we returned, on their delight in learning of our enthusiasm for Mahler; revealed that they had discovered a stack of old copies of CHORD AND DISCORD and had particularly been pleased to see the articles I had contributed; that they had regretted our injunction against playing any of the records (including the Mahler recordings)—for we had stipulated all as strictly taboo.

Again: In the course of an organ lesson, a young married woman remarked about the *Ninth Symphony* of Mahler as casually as if mentioning the *Fifth* of Beethoven. To my pleasure I learned that her husband, at that time with the armed services in Germany, was no less a Mahler "fan" than herself. After his return to civilian life my wife and I invited them to an evening of Mahler recordings.

Also: On the elevated one day I observed a passenger engrossed in a miniature score. Even from a distance the tiny booklet had a familiar look—the *Fourth Symphony* of Mahler. I slid along the seat to him and

<sup>2</sup>Those unfamiliar with Mahler's works should be advised that *all* of his mature compositions except the early cantata *Das klagende Lied* fall under one or the other of these two categories. *Das Lied von der Erde* is a hybrid of both.

<sup>3</sup>At this point a profound debt to the radio and phonograph must be acknowledged. Prior to 1947, *Symphony No. 2* was the only major work of Mahler which I had ever heard in an actual performance. I have no patience with those who sneer at "canned music."

broached conversation, which proceeded at a lively rate until the train reached the young man's destination. He explained that he was majoring in piano at the Curtis Institute of Music, that his study of Mahler therefore was not "in the line of duty" but entirely the result of a deep interest. His knowledge of the score was thorough. "This chord," he said, jabbing a finger at a page, "has a truly magical sound." Ardent and specific comment on other passages followed. I often encounter students in my classes—not all of them majoring in music—who reveal close familiarity with one or more Mahler compositions. Once, after a performance of the *Lieder eines fahrenden Gesellen* I was sought out by several whose enthusiasm was intense; one especially commented on the unique sound of the orchestra, which he declared quite unlike anything he had heard before—a repetition of my own impressions during 1931. There is every reason to believe that similar experiences have occurred to many readers.

The interest which I find among casual music-lovers as distinguished from professional musicians is particularly pleasing, for there is good reason to believe that Mahler wanted to have mass appeal rather than to acquire a reputation as a "musician's composer." Where his works were a sealed book even to many of the profession during the late '20's and early '30's, the encountering of a trained musician completely unacquainted with Mahler is today an exceedingly rare occurrence. Approval of the music is by no means universal, but utter lack of experience in it can be attributed nowadays only to superficiality of attitude. There are signs that he is being accepted in his proper historical light: as one of the outstanding "post-Wagnerian" composers, as a bridge into the modern period, as a composer of genuine importance who has suffered unjust neglect in the past.

It is gratifying to note the moderation and the critical attitude of most Mahler devotees. Praise of him usually is temperate rather than extravagant or fanatical. It is my feeling that carefully-weighed estimates will do Mahler's cause more good than the wild-eyed exaggerations of zealots, even when such evaluations fall short of what I feel is the real extent of his worth, as they sometimes do.

\* \* \* \*

Many contemporary composers are more tolerant of Mahler than even a few years ago. They frankly accept him as one whose style, though strikingly individual, now belongs to musical history; a vital contribution, but one to be *studied* nowadays rather than imitated. Different as their music is from Mahler's, they acknowledge that qualities exist in him from which much can be learned. I have heard one prominent teacher of composition extol the last movement of *Symphony No. 4* as a superlative model of writing for voice and orchestra, emphasizing that the singer can be clearly heard at all times without having to struggle against the instruments, yet written in a way that betrays no anxiety or repression on Mahler's part in scoring for the orchestra. He also called attention to the profusion of indications concerning the manner of performance. The minuteness with which Mahler marked his scores may at first glance appear unnecessarily "fussy," but these annotations tellingly reflect his many years of practical experience as a conductor. "These scores abound

in verbal directions," wrote Eric Blom.<sup>4</sup> "To look at their pages is almost like watching Mahler conducting a rehearsal, admonishing and encouraging the orchestra with all kinds of epithets that aptly describe his precise intentions in the briefest and most direct way. The simplest directions . . . . . are often followed by exclamation marks, as though the conductor-composer so vividly imagined the sound of the music that he had to shout through it to make himself understood. No other composer's full scores have so human a look about them as Mahler's."

\* \* \* \*

It is in orchestration that composers can perhaps study Mahler to greatest advantage. The composer of 1949 has long since turned his back on the merely bizarre, cacophonous, outlandish orchestral sounds of which there was such a plethora fifteen or twenty years ago. Transparency, clarity, striking but unhackneyed effects from various instruments are sought today, and the abundance of such in Mahler is well known to all who are familiar with his music. Although the large ensembles for which he often (not always!) scored are no longer in vogue, contemporary writers are at last learning that hugeness of the orchestra is not invariable, nor, where present, the really essential feature of his style.

\* \* \* \*

In a day when a healthy emphasis on contrapuntal structure is the norm, much can be learned from Mahler, whose counterpoint was rarely cut-and-dried or formal,<sup>5</sup> but rather an uncontrived interweaving of many lines, which often emerge seemingly out of nowhere only to be swallowed up later in the restless fabric of sounds, just as an individual appears and disappears when moving in the midst of a large crowd. For determined, thorough-going counterpoint one can always study Bach, but for a type of music in which counterpoint results from the character of the thought itself—rather than the character of the thought resulting from the counterpoint—Mahler's informal, vital, and copious use of the device is a field for profitable study by any serious composer.

\* \* \* \*

As to harmony, we can readily admit that Mahler's musical speech here is a thing past and gone; "modern" harmony, by present standards, is no more to be expected from him than from the late Richard Strauss. Yet it must not be forgotten that Mahler's compositions *in their own day* (the '90's and '00's) were disconcertingly "modern" to the more conservative of the concert-goers.<sup>6</sup> Granting that there is not much which the

<sup>4</sup>In the explanatory booklet accompanying the first issue of the recording of *Das Lied von der Erde*. (Columbia records.)

<sup>5</sup>To illustrate the informal spontaneity of his counterpoint it suffices to point out that fugues and fugatos are almost unknown in his music and canons exceedingly rare. He seems almost unaware of the artifices and clever devices of that element—inversions, cancrizans, etc.

<sup>6</sup>An exceptional passage, but dissonant enough to make Stravinsky and the early Prokofieff sound tame, occurs in *Symphony No. 2*, just before the recapitulation in the first movement. Here we find a chord which I believe is unique even down to the present day: a complete chord of the fifteenth, containing every tone of the C minor scale.

composer of 1949 can learn from him in the way of harmonic novelty, some passages will nevertheless reward close study as examples of pioneering in devices which have since been more fully developed. There are occasional pages which anticipate atonality, while more than one example of polytonality ("bitonality" would perhaps be more accurate) could be cited, especially from *Symphony No. 7*.

A device which is virtually unique in Mahler's music, almost completely unexploited before his time or since, is the simultaneous employment of major triads against melodies in the minor mode. For example, during the course of a sustained CEG triad a melody may move C-Eb-D-C, the chord suggesting C major but the melody C minor. The clash of E natural against E flat occurs not by crudely pounding one against the other but rather by the independent action of two different elements of the texture. This singular device is especially prominent in the *Sixth* and *Seventh Symphonies*. Numerous examples occur in the second movement of the latter, but a more quickly-located instance will be found in the closing measures of *Symphony No. 6*; here an A minor melody is pitted against an A major triad, which later becomes an A minor triad as though yielding to the supremacy of the melody.

Less obvious, but by no means to be overlooked, are the passages which sound conventional when listened to superficially, but which careful analysis proves to be quite the opposite. A good example occurs in the second movement of *Symphony No. 7*. After a picturesque introduction, a gentle march-like theme is announced by the horns. Between the third and fourth measures we encounter a harmonic passage which though tolerably striking is by no means surprising, but of which the utter unconventionality is perceived only after careful study. Another instance is the modulation from C minor to E major which takes place in the first movement of the *Second Symphony* between rehearsal-numbers 2 and 3 (recurring near the end of the movement). It is exquisite but hardly startling, yet one would shrink from having to specify a parallel to it on short notice. Although anyone can invent chords and progressions which are obviously iconoclastic, does it not require the more subtle mind or real genius to devise passages which actually are more original than they appear when just casually heard?

\* \* \* \*

The accusation of "looseness in form" has been recklessly and I fear unjustly hurled against the bulk of Mahler's output. It must be borne in mind that he belongs to a period when form was de-emphasized, perhaps too much so, but looseness of form, even when perhaps a warranted criticism, is not synonymous with meandering; it does not necessarily denote a fragmentary structure nor an incomprehensible hodge-podge. If there is any Mahler composition whatever which is utterly formless, completely wanting in unity, I challenge any man to name it. Perhaps there are some in which a more tightly-knit structure could be imagined, but there are just as many others, if not more, in which the form would satisfy the most exacting; many indeed are truly "cut from a single piece of cloth." Any student can construct a satisfactory ABA or rondo-form, but it requires genuine creative ability to write a movement similar to the

finale of Mahler's *Ninth Symphony*, which goes ever onward with no exact repetition whatever, and yet holds together marvelously well.

Mahler's very philosophy of composition was one which would tend to rule out abstract formal design. His credo was expressed in the words "To me a 'Symphony' means to build a world;" thus if he at times seems to attempt to be all-inclusive within any given work, this stems logically from his belief and intention. If there is any real looseness of form, it is not the result of technical shortcomings but of his aesthetic outlook. That the latter may be open to question is of course quite possible, but aesthetics, like religion or politics, is basically a branch of philosophy, and one in which dogmatic statements tend to loom up as a form of bigotry; hence it appears sound to judge Mahler in relation to success with his avowed intentions rather than in terms of the individual listener's personal philosophy.

Aware that most contemporary composers are more form-conscious than their predecessors of the past century (except Brahms), Mahler can still be studied with profit by those seeking to master one salient trait of contemporary writing which is equally characteristic of him: varied repetition. Long passages of verbatim recapitulation almost *never* occur in Mahler; rather the character of his thought is constantly undergoing change as the music unfolds.

Admitting that brevity is a significant feature of present-day music, my impression concerning the shopworn charge that Mahler's works are "too long" remains today the same that it was eighteen years ago: namely that many of his compositions (especially the songs) are by no means long—quite the contrary,—and that in the cases where unusual length does occur it is the natural outgrowth of the essential nature of the work. If composers of 1949 write more briefly, that is simply one manifestation of the *difference* between the music of Mahler and that of today. I have never encountered a Mahler piece which struck me as padded beyond the demands of its real nature or one which would not lose some of its inherent character if a cut were made. If there is any evidence that he regarded length a virtue in itself, or believed it has the power to dazzle audiences with a hollow show of impressiveness, such evidence has completely escaped my attention. Bach, Handel, Schubert, Franck, and Wagner all indulged in lengthiness on occasion—also, like Mahler, in brevity—yet when they are "long" it does not necessarily follow that they are "long-winded" or "too long." Unusual length does not necessarily mean tediousness. Nothing is so exasperating as to encounter someone whose knowledge of Mahler is restricted to the isolated fact that his works often exceed average duration.

\* \* \* \*

Melodically much of his work will repay a composer's study. Mahler often succeeded in writing melodies which seem emancipated rather than chained down to the chords which accompany them.<sup>7</sup> He has a striking way of wandering all around the note which is the true melodic goal

---

<sup>7</sup>This is written in full cognizance of the fact that numerous passages may be found in Mahler's work where a single harmony is continued for many measures with a melody which is hardly more than an arpeggio of the same chord.

before finally arriving at it. At times his melodies seem to perch on those notes which are least characteristic of the tonality. For instance, in the first movement of *Symphony No. 9* a theme is announced, seven measures before rehearsal-number 3, in which C sharp and G sharp are the most conspicuous tones, yet the tonality is clearly D minor, and the tonic chord of that key underlies the passage. Later, between rehearsal-numbers 11 and 12 (at *Leidenschaftlich*) the same melody, only slightly altered, occurs over the tonic chord of B-flat minor. Devices such as this have exerted influence on more than one contemporary pen; yet his employment of bold wide melodic leaps, in which he has been seldom equaled and probably never exceeded, still lies open for further exploitation by composers if they will but use the device more frequently.

\* \* \* \*

The feature of Mahler's music which in my opinion would least repay study is rhythm. It must be remembered that although composers of the sixteenth century employed this element with amazing ingenuity, their followers in the seventeenth surrendered to ease of notation and performance to such a degree that rhythm became quite stereotyped and conventionalized, while during the eighteenth and nineteenth centuries it stagnated or perhaps even retrogressed. Mahler came at the end of this long period of decline, during the time when composers seemed hardly able to write anything more interesting than four quarter-notes in a measure, and antedates the unshackling of rhythm (mostly by Stravinsky and to some extent by American jazz) from the fetters which had bound it for so many years. That Mahler occasionally sought to break away from the mathematical employment of rhythm is attested by certain memorable passages: in the *Eighth Symphony*, first movement, between 23 and 30; during many sections in the last movement of *Das Lied von der Erde*; in the fourth movement of *Symphony No. 2* during which we find 23 time-signatures in 36 measures; but most of all in the finale of the same work, between rehearsal-numbers 21 and 25, where a most astonishing passage occurs, not only audacious rhythmically but orchestrally as well, but most of all in its astounding general conception. We can admit that as a rule, in common with all of his contemporaries and predecessors, his rhythm is tyrannized by the bar-line, and that he found escape from the four-measure phrase difficult of accomplishment; yet it is undeniable that for his times he runs quite true to form, while the foregoing instances are a few which might be cited as evidence that Mahler was by no means insensitive to rhythm and was aware that its horizons were capable of being broadened. So if rhythm is usually the least interesting feature of his work, the surplus of other elements in which he may be taken as a positive rather than negative model remains of truly impressive bulk, particularly his use of counterpoint and orchestration.

Mahler's love of good-natured satire and his occasional employment of deliberately vulgar effects has rankled some of the ivory-towered aesthetes who believe that music should under no condition descend from the loftily austere, not to say the rarefied. This too is another outgrowth of the already-mentioned philosophy that regards a symphony as a "world"; Mahler affirmed that the homely and the banal deserve a place

in art. Regardless of whether his conviction is right or wrong, the use of musical parody continues with increased frequency down to the present day, and although Mahler cannot be claimed as the inventor of this quality, it seems quite likely that his employment of it has given impetus to the movement and perhaps been the direct influence on some of our contemporaries.

\* \* \* \*

That Mahler has exerted and continues to exert an appreciable influence on contemporary music is almost undeniable, indirect and subtle though it usually be. This is not confined exclusively to composers of the German or Viennese school, for the vestiges of Mahler in the *Sixth* and *Seventh Symphonies* of Shostakovich have been very widely observed, while his influence on Nos. 8 and 9 and the *Piano Concerto* are also discernible even though less apparent. In the second movement of his *Symphony No. 5* the Russian has written a passage the style of which is practically indistinguishable from that of the older man, while the rousing conclusion of the finale can only be termed "pure Mahler." His love of the satirical and the intentionally vulgar perhaps stems directly from his illustrious Viennese predecessor.

Serge Prokofieff is almost the last composer in whom one would expect to observe the influence of Mahler; yet his *Fifth Symphony* discloses traces of it, notably the somewhat ribald theme for woodwinds and horns in the scherzo.

Aaron Copland has called attention to the importance of Mahler and acknowledges personal enthusiasm for his music. The spacious, wide-open effects frequently employed by the contemporary American, as well as the contemplative gentleness of certain moments in his *Appalachian Spring*, *Billy the Kid*, and *Lincoln Portrait*, would hardly be possible without study of the compositions of Mahler. The brightness, precision, and cleanness of more animated passages exemplify familiarity with another facet of his predecessor's methods of orchestration.<sup>8</sup> To many composers today, *vox Copland* means *vox Dei*. In view of his enviable prestige among American colleagues, there is good reason to expect that increased attention will be drawn to Mahler.

In the eighteen years which have elapsed since my initiation into Mahler's music I have had the pleasure of witnessing a slow but nevertheless positive growth of interest in his compositions among musicians and laymen alike, while my own knowledge has continued and matured. I have seen him progress from the ranks of the esoteric to those of the reasonably well-known. I have heard numerous expressions of a wish to hear more of his music.

As to the continuance of this trend in the future, there seems to be no cause for anything but confidence and optimism.

---

<sup>8</sup>It should be stressed that these last three paragraphs point out the *influence* of Mahler; they are emphatically not to be construed as an accusation of plagiarism. A passage in the Shostakovich *Fifth Symphony* seems to my ears an *imitation* of Mahler; the other citations, examples of his *influence*.

## THE SONGS OF ALMA MAHLER

by Warren Storey Smith

More than one composer has been blessed with a musically talented wife who either furthered his cause by performing his music or assisted him in a secretarial capacity. In the first category we could place Schumann, Richard Strauss and MacDowell; and in the second, Bach, Rimsky-Korsakov and Mahler. Both Anna Magdalena Bach and Clara Schumann were composers in their own right; especially Clara, whose songs should be better known. And so was Alma Mahler.

Before discussing Alma's songs and Gustav's attitude toward her composing, which was very different from Robert's feeling about Clara's creative gifts, I might dwell for a moment upon Frau Mahler's influence upon, and expressed opinion of, her husband's music. For information on the matter I have turned to Basil Creighton's translation of her book, *Gustav Mahler, Memories and Letters* (The Viking Press, New York). From the little music of Alma Mahler that is available in print one can readily discern that her musical personality was quite distinct from that of her famous husband. Although the contrary opinion is sometimes expressed, Mahler, a great Wagner conductor, was little influenced by the necromancer of Bayreuth. Again, to run counter to the belief of many, Mahler's music is not erotic, while Alma's in certain instances is exactly that. A frankly sensuous note is sounded in the D-flat melody in the finale of the Mahler *First*, but the influence there—if influence it is—is that of Tchaikovsky, not of Wagner. Again, Mahler's music is predominantly diatonic, while Alma, a true post-Wagnerian, had a chromatic bee in her bonnet. Measures containing no accidentals are rare in her songs.

Anyway, with the knowledge of her musical personality that Alma Maria Schindler-Mahler's nine published songs affords us, it is not in the least surprising that she should have found her fiance's Fourth Symphony unduly naive.

"He brought me his Fourth Symphony one day. I did not, at that time, care for it. I said frankly: 'I feel Haydn has done that better.' He laughed and said I would live to think differently about it. The same day we played it as a duet. I missed a sixteenth note. He laughed and said: 'I make you a present of that sixteenth note. So I would if it had been an eighth, or a quarter. Yes, or the whole—myself.' When we joined my mother, he said to her: 'Mamma, after playing the piano with her, I ask you once again for your daughter's hand.'"

In the making of its immediate successor she played a part. Illness, however, prevented her from attending its first performance, in Cologne. She "lay in bed with a temperature while the Fifth was given its first hearing; the Fifth, which had been my first full participation in his life and work, the whole score of which I had copied, and—more than that—whole lines of which he had left out, because he knew that he could trust blindly to me.

"Early in the year there had been a reading-rehearsal with the Philharmonic, to which I listened unseen from the gallery. I had heard each theme in my head while copying the score, but now I could not hear them at all. Mahler had overscored the percussion instruments and kettle-drums so madly and persistently that little beyond the rhythm was recognizable. I hurried home sobbing aloud. He followed. For a long time I refused to speak. At last I said between my sobs: 'You've written it for percussion and nothing else.' He laughed, and then produced the score. He crossed out all the kettle-drums in red chalk and half the percussion instruments too. He had felt the same thing himself, but my passionate protest turned the scale. The completely altered score is still in my possession."

This was probably sound counsel. There is no evidence that Alma influenced Gustav adversely, but there is reason to believe that Clara Schuman's conservatism had something to do with the fact Robert's music became more orthodox after their marriage. The thought is expressed by Robert Haven Schauffler in his *Florestan* (Henry Holt and Co., New York):

"The Court-city of Dresden was, as we have seen, notoriously prim and reactionary in its musical taste. And when he compared Clara to a 'Dresdner Fräulein', he was fighting to save that original forward-looking individuality of his which had had such free play in the piano music and the songs. However, despite his determined struggles, Clara, from her wedding day on, was at times successful in Mendelssohnizing his music to some slight extent, making it more conventional and less utterly Schumannian."

Robert encouraged Clara to compose, though she was asked not to practice when it interfered with his writing, but Gustav forbade Alma to exercise her creative gift, changing his attitude only when their brief association was drawing to a close. Writes John N. Burk in his admirable biography of Clara (*Clara Schumann*, Random House, New York): "He . . . received from her on the first Christmas Eve of their wedded life three songs of her own, dedicated to him 'with the utmost modesty'. Robert was highly pleased with them, and urged her to collaborate with him in a published collection of settings of Rückert's poems. In a single week of January, 1841, he turned forth nine songs at white heat. Clara could not keep up this pace; she lagged behind with three, which were duly published with the others. They were well made, effective, not without invention — could have held their own proudly with partners from a lesser hand than that of Robert Schumann."

For a rather different picture I turn once more to Alma's *Memories*:

"In one of his last letters he said I might speak to my mother on his behalf, because he wanted to be accepted by her as a son as soon as he got back. However, just before his return to Vienna our first serious quarrel occurred. I happened to say that I could not write any more that day as I had some work to finish, meaning composition, which up to now had taken first place in my life. The idea that anything in the world could be of more importance than writing to him filled him with indignation, and he wrote me a long letter, ending up by forbidding me

ever to compose any more. It was a terrible blow. I spent the night in tears. Early in the morning I went sobbing to my mother, and she was so horrified by his unreasonable demand that, deeply as she loved him, she urged me to break with him. Her unqualified support brought me to my senses. I recovered my calm and confidence and finally wrote him a letter, promising what he wished — and I kept my promise.

"His man was to come for my answer before he would see me again; for, as he had told me in his letter, he would not know where he was until he had had it. In my agitation I went out to meet his messenger. I gave him my letter, but he had brought one for me, and in it Mahler, clearly uneasy about the effect of his earlier letter, was less exacting in his demands. He came that afternoon, happy and confident, and so charming that for the moment there was not a cloud in the sky.

"But there was. I buried my dreams and perhaps it was for the best. It has been my privilege to give my creative gifts another life in minds greater than my own. And yet the iron had entered my soul and the wound has never healed."

We are relieved to know that Mahler's selfish attitude changed, though by that time, the summer of 1910, the penultimate year of the composer's life, his wife's talent could no longer expand. It had in very truth been nipped in the bud.

"One day during this time of emotional upsets I went for a walk with our little girl, Gucki. When we were nearly home again I heard my songs being played and sung. I stopped — I was petrified. My poor forgotten songs. I had dragged them to and fro to the country and back again for ten years, a weary load I could never get rid of. I was overwhelmed with shame and also I was angry; but Mahler came to meet me with such joy in his face that I could not say a word.

"'What have I done?' he said. 'These songs are good—they're excellent. I insist on your working on them and we'll have them published. I shall never be happy until you start composing again. God, how blind and selfish I was in those days.'

"He played them over again and again. I had to sit down then and there—after a ten years' interval—and fill in what was missing. And that was not all; but since he was over-estimating my talent, I suppress all he went on to say in extravagant praise of it."

Some of Fanny Mendelssohn's songs were published under her brother's name and could easily be mistaken for his. The story goes that Queen Victoria once told Mendelssohn that her favorite among his songs was *Italien*. In some embarrassment he had to admit that it was not his but Fanny's. Clara's songs bear a decided family resemblance to Robert's; but, as was suggested above, when we come to the songs of Alma Mahler the parallel no longer holds. Not only were her songs written before their life together began, but Mahler's *Lieder* would be more difficult to imitate stylistically than those of any other major song-writer. At this point it might be observed, as a sort of consolation prize, that at their best, all three of these gifted ladies surpass the men in the case in their less inspired moments.

I have said that Mahler's music is never erotic. He wrote, as Alma put it, but one love song, *Liebst du um Schönheit*, composed especially for her. It is a tepid thing, less ardent by far than Clara Schumann's setting of Rückert's poem, and arguably the poorest of his songs. On the other hand, the most deliberately amorous of Alma's songs, *Laue Sommernacht* (Falke), is the most convincing, seemingly the most spontaneous, if not perhaps the most original and distinctive of the lot.

This pulsing, passionate song, in A major is the third of a set of four published by Universal-Edition. The date of the copyright is 1910, the year in which Mahler decreed that the songs should be published. Without knowledge of its authorship, it might be attributed to Strauss, or Wolf, or possibly to the early Schönberg. It is definitely Tristanesque, notably where the voice swoops down, on the Tristan-chord, on the words "*fiel dein (Licht)*." One thinks immediately of Isolde's torch. These words are repeated *pp*; the voice expires on the chord of the dominant seventh, as does the piano-part in the postlude.

The songs of Gustav Mahler are remarkable for the slender, transparent texture of the accompaniment. Alma has a fondness for big chords, often spanning a tenth, and with the aid of the pedal she will have the whole keyboard sounding at once. The final chord of this song, for example covers five octaves. A mighty fist is needed for the second song of the set, *In meines Vaters Garten*, (Hartleben). In the warm key of A-flat, in 6/8 time, marked *Allegro, Mit freiem Vortrag*, it is a long song, seven pages, with many changes of mood and striking modulations.

A mystical note is sounded in the first one, *Die stille Stadt* (D minor). The text is by Richard Dehmel, whose *Verklärte Nacht* prompted the famous string sextet of Schönberg. It has a grave beauty, a certain Brahmsian quality, and achieves in the final page a haunting loveliness.

Number four, *Bei dir ist es traut* (Rilke), is quiet throughout. The key is D major, and there is just enough harmonic intensity to prevent sameness and tameness. The final song, a setting of Heine's *Ich wandle unter Blumen*, is on the queer side. The poem is vague and so is the music. The latter is in C major and the voice rises slowly and chromatically from *pp* to *ff*, only to end softly on the lower note.

A second set, of four songs, was published by Universal five years later. Here the songs themselves are dated. The first and fourth, *Licht in der Nacht* (Bierbaum) and *Erntelied* (Gustav Falke), are dated 1901, and Alma might have been at work on one or the other of them when Gustav issued his ban on her composing. The others, *Waldseligkeit* (Dehmel) and *Ansturm* (Dehmel), are dated 1911. Alma says that she composed no more after becoming engaged to Gustav. Are we to find that statement contradicted here, or are these a later working out of earlier sketches? Taken as a whole, the set suggests a later date. The idiom is more obscure and there is a pronounced trend toward atonality. The more conventional vein of the first set is found only in the *Erntelied* (D-flat major). Dynamically it is striking. It begins *piano*, the swaying accompaniment marked *Begleitung so undeutlich als möglich*, rises to *ff* and ends on a *ppppp* that would do credit to Verdi or Tchaikovsky.

Both *Licht in der Nacht* (D minor, *Ernst*, 4/4) and *Waldseligkeit* in the same key and time signature and marked *Geheimnisvoll, zart*, might well be Schönberg on the verge of atonalism. The latter has that rare device, a glissando on the black keys. By this time the key has changed to D-flat and the song ends very softly on the tonic triad with added major seventh. The *Ansturm* appeals to me least of all. One senses in it more of contrivance and less of what generally passes for inspiration. It ends on the dominant seventh, while the first song ends on a low dominant, sounded twice under fermatas.

These nine songs are as good as unknown—and if not actually out of print, are certainly hard to come by. They do not deserve this semi-oblivion. Yet it must be admitted that they demand much, taken as a whole, of singer, pianist and listener. Siegfried Wagner once declared that it was a great handicap for a composer to bear the name of Wagner. Poor Alma was in much the same fix.

---

#### AUSTRALIA HEARS MAHLER WORK

The outstanding event of the second half of the season was the first Australian performance of Gustav Mahler's First Symphony. Mr. Goossens has introduced an imposing number of new compositions during the last year, but no other work was as unanimously received as this sixty-year old symphony. The applause after each of the three performances demonstrated unmistakably that the public not only approved of Mr. Goossens' choice, but also that it wished to become more familiar with other works by Mahler.

The interpretation was by no means traditional Viennese Mahler. It was stripped of much of its emotional content and inner pulsation, but Mr. Goossens did not fail to convey the musical substance of the work.

Wolfgang Wagner, MUSICAL AMERICA

## BRUCKNER ON RECORDS

New Recordings and Re-issues

by Herman Adler

Viewed in historic perspective, the regrettable neglect and misunderstanding of Bruckner's music need not alarm us too greatly. Anton Bruckner is neither the first, nor will he be the last great musician to be thus denied recognition by his contemporaries and a good part of the following generation. Let us not forget that the "mediocrity", Johann Sebastian Bach, was accepted by the council of the *Thomas-Kirche* in Leipzig only after the celebrities, Telemann and Graupner, had been found unavailable for the position; that, for almost a century after his death, his music was all but forgotten; and that, even in our own time, the prejudices and misconceptions about Bach's music have not completely died out. Similar cases might be cited *ad infinitum* in music as well as in other arts.

It is commonly believed that the appreciation of Bruckner's music is limited by geographic boundaries, i.e., to the German-speaking world. The relative frequency of performances and the copious Bruckner literature in German would tend to confirm this impression. It is but natural that the Bruckner movement should have started at home, helped, no doubt, by the devoted spadework of such eminent Brucknerites as August Halm, Ernst Kurth, Max Auer, and others in the literary field, as well as the conductors Karl Muck, Otto Klemperer, Bruno Walter, and Karl Böhm. But make no mistake about it: even in Germany and Austria Bruckner has not as yet attained the same degree of popular acclaim that is the unquestioned due of Bach, Haydn, Mozart, and Beethoven. True, since his greatness is generally recognized by those who influence public opinion and by a considerable section of the musical public, it is no longer fashionable to deride him. Unfortunately, we in America have not yet quite outgrown that stage. Finding fault with Bruckner's music has been, and still is, a fetish with many critics. An unthinking public perpetuates these opinions, often without bothering to listen to the music. Countless anecdotes tending to cast ridicule upon the MAN are repeated over and over again. Calling Bruckner a romantic and a Wagnerian did not help clarify the issue any more than did the comparatively recent tendency to link his name with that of Gustav Mahler.

Another reason for the misunderstanding of Bruckner's genius has only come to light during the past twenty years. What we had been hearing before then were not really Bruckner's symphonies as he conceived them, but falsifications of his scores by his well-meaning early interpreters, Franz and Josef Schalk and Ferdinand Löwe. Ardent Wagnerians, these musicians felt that Wagnerization of Bruckner's scores would be the best way to popularize them. The extent to which each symphony was affected by these changes varies as will be shown below.

Rare as public performances of Bruckner's music still are in this country, we have to depend largely on recordings for aural experience, closer study and, last but not least, spreading his message. Yet even the European companies hesitated a long time before they dared to undertake the task of recording complete symphonies and other major works by Bruckner. The long wait, however, had its twofold reward. We now get most of these works as performed in their original and complete form, with the added benefit of modern recording technique essential to the revelation of the full splendor of Bruckner's orchestra.

Of the sets reviewed in the following pages, two are new recordings (Symphonies VII and VIII), one is a pre-war recording made available to American collectors now for the first time (E minor Mass), and one (Symphony V) a re-issue in England of a set once included in the Victor catalogue, and reviewed extensively by Paul Hugo Little in *Chord and Discord*, December, 1941. Three other albums reviewed at that time (Symphonies IV and IX and the Aachen performance of the E minor Mass) continue to be available under the Victor label.

SYMPHONY NO. 5 IN B-FLAT MAJOR (ORIGINAL VERSION)

*Saxonian State Orchestra, Dresden, conducted by Karl Böhm*  
9 - 12" imported H.M.V. records, DB 4486/94.

The music itself defies description in words, just as Bruckner himself defies classification under any of the accepted "schools". Like Bach, Mozart, Beethoven or Shakespeare he is a creative genius, timeless and universal. To my mind, the Fifth Symphony is one of Bruckner's two greatest works (the other one being the Eighth). The subtitle "Tragic Symphony" is a complete misnomer and should not be permitted to gain general currency. August Goellerich who started it took his cue from the circumstances of Bruckner's life rather than from the music itself, a common trend in nineteenth century music interpretation. Bruckner himself referred to it simply as his "contrapuntal masterpiece". Some superficial musicians, for obvious reasons, nicknamed it "Pizzicato Symphony".

It is difficult to decide what to admire most in this work, the amazing contrapuntal craftsmanship, the melodic beauty, the sound of the orchestra, or the unflagging inspiration that fashioned one of the longest symphonies in existence out of one central theme, a feat not accomplished to such perfection since Bach's *Kunst der Fuge*.

The total impression of a Bruckner symphony is one of a perfect unity and integrity rarely encountered among the works of other masters. To become acquainted with it, it is necessary to hear it from beginning to end. Should this be absolutely impossible, I would suggest a hearing of the Finale. To those who think of a finale as the stirring dance-like movement of earlier symphonists this will seem surprising. In this symphony, as in the Eighth, the Finale represents the dramatic and formal climax of the work. There are but two previous instances of this procedure: Mozart's *Jupiter* and Beethoven's *Eroica*.

Prior to the restoration of the original version, in 1937, the Fifth, more than any of the other symphonies, had been the victim of those willful

alterations by Bruckner disciples referred to above. Even casual comparison of the original version with the Eulenburg miniature score will show the most amazing changes in dynamics, cuts of long sections, especially in the Finale, additions of instruments, doubling of some parts, transfers of passages from one instrument to another, and even additions of phrases Bruckner never composed.

The performance under the inspired direction of Dr. Karl Böhm is as fine as one can imagine, and the recording is beautifully clear and resonant. Altogether this is the sort of recorded realization of a masterwork that one dreams about, but seldom gets.

Long absent from the domestic and European catalogues, this splendid set has now happily been restored to the H.M.V. repertory by way of the "Special List". In the light of technical improvements I am happy to say that the recording has lost none of the wonderful qualities noted above, though users of high-fidelity equipment may find it necessary to cut down the treble range somewhat.

SYMPHONY NO. 7 IN E MAJOR

*Concertgebouw Orchestra, Amsterdam, conducted by Eduard van Beinum.  
15 sides, 8 - 12" imported London ffrr records in Album LA 94.*

The Seventh Symphony, completed in 1883, established Bruckner's international fame, and apparently it remained his most popular work (if we can apply this term to any music by Bruckner) even to this day. At any rate, there have been more recordings of this Symphony than of all the others combined.

Perhaps one reason why it was found more acceptable by the master's contemporaries is that, at least in form, it is more clearly the successor to the great symphonies of Beethoven and Schubert than, say, the Fifth or Eighth. But still another thought comes to my mind. The Seventh was published and performed with almost none of the revisions that disfigured the other symphonies, such as the Fifth noted above. Could it be that the public, even in the nineteenth century, had a healthier instinct for genuine greatness in music than the professionals were willing to admit? Perhaps Bruckner's well-intentioned friends defeated their own purpose when, by their revisions, they tried to make these works more palatable to audiences of their time.

The question "original vs. revised score" is a minor one when it comes to performances of the Seventh. With one exception, the differences are of so little consequence that I defy anyone but the most highly trained musicians to notice them in a recorded performance. There are neither cuts nor any other structural alterations in the "revised edition", and the tone of exaggerated self-importance in the foreword to the original score by Dr. Robert Haas (published 1944) seems a bit ludicrous.

Checking of the Eulenburg score against the original score shows that there are slight instrumental changes in the first movement, notably during eight measures following letter E, and lesser ones shortly after letter G and at S and W. I could find no discrepancies worth mentioning in the last two movements.

The real bone of contention in this symphony, however, is the cymbal crash with tympani and triangle in the Adagio (at letter W, record side 9). This was added to the score after its completion by Bruckner upon the advice of his friends, but against his own better judgment, and was thus incorporated in the published editions. I feel that Bruckner's own doubts as to its wisdom were certainly justified. As originally conceived the music speaks eloquently enough, and there is no need to overdramatize this point by the willful intrusion of an effect foreign to the spirit of the whole movement.

The question we have to ask ourselves, then, when judging a performance of the Seventh is not so much "do they play the original score?" but "is the attitude of the conductor and the spirit of the performance in keeping with Bruckner's intentions and ideals?"

Let us take a quick glance at previous recordings and see. The first one to appear was a Polydor-Brunswick set by the Berlin Philharmonic under Jascha Horenstein (ca. 1929). While Polydor deserves credit for thus breaking the ice, and giving the world the first complete Bruckner symphony on records, that version was sadly inadequate, both artistically and technically.

Next came the only American venture in the Bruckner field, a Victor album by the Minneapolis Symphony Orchestra under Eugene Ormandy (1935). At the time I enjoyed listening to that set at a friend's house. Yet, this was the pleasure of hearing a Bruckner symphony at all rather than any particular admiration for the performance. Whatever my feelings were then, I never had any great desire to add it to my collection, much as I wanted to own a Bruckner symphony. Re-hearing it now for comparison, I find ample reasons for my coolness toward Ormandy's performance of 14 years ago. It is a romantic conception in the worst sense, uneven in tempo, with exaggerated dynamics and, in spots, bad intonation or simply poor instrumental playing.

Around 1939 Polydor replaced its outdated version with a new recording by the Berlin Philharmonic, this time under the baton of Carl Schuricht. That set was never imported, but I had the opportunity of hearing it while in Italy. American record collectors did not miss anything. It is a stodgy unimaginative reading suggesting a conductor who is more at home in Brahms than in Bruckner.

Somewhat later Telefunken added several Bruckner symphonies to their catalogue, all conducted by Eugen Jochum. The orchestra in the Seventh is the Vienna Philharmonic. It is a performance with some of the faults I found with Ormandy; in short, one not worthy of the music. Notwithstanding David Hall's statement in *The Record Book*, Jochum does *not* play the original version. What is more, I have never heard a more vehement cymbal crash in my life — a resounding slap in the face of all partisans of the original version.

In addition to this complete recording, Telefunken issued a very fine performance by Wilhelm Furtwängler and the Berlin Philharmonic of the Adagio only. Furtwängler, too, plays the revised edition though the cymbal crash is more subdued.

Among the wartime releases found in the Electrola lists there is a

recording by the Munich Philharmonic under Oswald Kabasta. This set is not available for checking.

Now for the present release. Its most striking feature is the sheer beauty of sound produced by one of the world's great orchestras, mirrored faithfully in the frrr recording. This alone will recommend the set to many collectors who might otherwise not dare to approach a Bruckner symphony. The performance is a model of self-effacement on the part of the conductor. Mr. van Beinum obviously is a musician who believes in letting the music speak for itself rather than subjecting it to his personal whims ("so-called interpretations") or to such distortions as marred the Jochum and Ormandy versions. This in itself is sufficient reason for respect and gratitude, even though this performance falls somewhat short of the masterly readings by such Bruckner specialists as Karl Böhm and Bruno Walter. Like others who did the Seventh, van Beinum does not play the original version, but he treats the controversial cymbal crash with the utmost discretion. Tempi are well chosen, and altogether this performance comes closer to the true Bruckner style than any of its predecessors.

SYMPHONY NO. 8 IN C MINOR (ORIGINAL VERSION)

*Hamburg Philharmonic Orchestra, cond. by Eugen Jochum.*

*21 sides, 11 · 12" imported Deutsche Grammophon records  
in Album DGS—17 (distributed by London Gramophone Corp.)*

Called by some "the crowning achievement of nineteenth century music", the Eighth is another miracle of the creative spirit. Due to its extended scope it is more akin to the Fifth than to any of the other Bruckner symphonies known through recordings.

The work opens in typically Brucknerian fashion, the principal theme growing out of an accompanying figure. This, as August Halm observes, is more like the beginning of music itself than the beginning of an individual work. This device, incidentally, is not one of Bruckner's innovations. Mozart, for example, used it before him in the G minor Symphony.

As in the Ninth, the Scherzo here precedes the Adagio. Its strongly accented rhythm is in contrast to the songful Trio in which the harp appears for the first time, foreshadowing the Adagio. It is the only symphony in which Bruckner uses this instrument.

The Adagio is one of the most sublime movements in all music (also the longest), and surely one of the most difficult to perform well. It is, however, so much part of the whole that to perform it separately would certainly diminish its impressiveness. Yet, it is true that the equally wonderful Adagio of the Seventh has been played, and in one case recorded, by itself without appreciable loss.

The Finale rounds out and sums up the work in festive spirit. Bruckner himself considered it the finest movement he wrote, and its grand design and all-embracing nature are perhaps the most compelling reasons that preclude an isolated hearing of any of the preceding movements.

Bruckner completed the symphony in 1887. Hermann Levi and Josef Schalk, however, considered it unplayable as it stood, and persuaded him

to revise it. The final version was ready in 1890. When published in 1891, the Eighth did not escape the usual "editorial attention". The changes, made in this case by Max von Oberleithner, are not as drastic as those that disfigured the conventional scores of the Fifth and Ninth. Still, they involve various instances of re-instrumentation, a cut of ten measures in the Adagio, and six different cuts, totalling roughly 55 measures, in the Finale.

The existence of two versions in Bruckner's own hand complicated the task of restoring an "original version". By and large this score, published in 1939, is based on Bruckner's second version with some reference to the *Urfassung* (the first).

Due to its recent publication and the intervening war years American concert audiences, as far as I know, have had no opportunity to hear the Eighth in the original version. This recorded performance follows the original score, but—, for no visible or audible reason, Herr Jochum omits twenty measures from the first movement.<sup>1</sup> The cut occurs between sides 3 and 4, and runs from ten measures after R to letter T in the score (all editions).

Depending solely on memory, it seems to me that the Hamburg Philharmonic has deteriorated since the days of Karl Muck and Eugen Papst.

Even so, the orchestra is still a competent one, and Jochum's reading of the Eighth is far superior to his Telefunken version of the Seventh. However, certain details should be pointed out. I feel that a slightly faster tempo could do no harm to the first movement, while I consider Jochum's tempo in the Adagio decidedly too slow. There is a definite feeling of dragging, a danger Bruckner expressly sought to avoid (...*doch nicht schleppend*). Furthermore, the opening theme of the Adagio lacks definition due to Jochum's fatal inability to make the strings play truly detached notes, thus obscuring the rhythmic outline. All too often Jochum doesn't seem to grasp the full significance of certain details or phrases, and, finally, he labors under the misapprehension that *diminuendo* and *ritardando* are one and the same thing.

With all this I don't want to spoil the very considerable pleasure a listener can get out of this set. The Symphony, if left to itself, is magnificently indestructible. And even though Jochum does not show the requisite insight into the music, it is still virtually all there (minus twenty bars) in a lifelike reproduction that will make it easy for the listener versed in Bruckner to penetrate beneath the surface.

MASS NO. 2 IN E MINOR

Hamburg State Opera Choir and Orchestra, conducted by Max Thurn.

5 — 12" records in Capitol-Telefunken Album EEL-2504

or 1 — 12" LP record, Capitol-Telefunken P 8004

The E minor Mass is unique in that it is scored for eight-part chorus

<sup>1</sup>After this article went to press word was received that Jochum made no such cut in the performance when it was originally recorded, but that this error occurred when the recording was transferred from tape to discs in the laboratories of the Deutsche Grammophon Gesellschaft.

and an orchestra of wind instruments only. A very fine performance by the Aachen Cathedral Choir has been in the Victor catalogue for a number of years. About the time when that set first appeared in Germany, Telefunken recorded the same work as given by the chorus and orchestra of the Hamburg Opera. At first sight, performance of a Mass by an opera ensemble might seem strange until it is remembered that, thanks to Karl Muck's conductorship of the Hamburg Philharmonic (1922-1933), that city had become one of the centers of Bruckner activity and enthusiasm. Not many copies of the Telefunken set ever reached this country before the war, and it is only now, under the new Capitol-Telefunken arrangement, that this version will gain wider circulation, and that a comparison between the two is possible.

The most obvious difference is that the Aachen choir is an amateur group with boys in the soprano and alto parts, while the Hamburg group is a highly trained professional chorus. The result is infinitely more polished singing, accurate intonation, and greater flexibility in the case of the Hamburg choir, but greater spontaneity and power on the part of the Aachen group. Both interpretations carry a great deal of conviction. Whereas the Aachen performance stresses the Palestrinian aspects of the score, the Hamburg version is marked by a greater awareness of the Mozartean origins of much of Bruckner's choral writing, and also by a more conscious feeling for the symphonic element in Bruckner. Thus, in a sense, the two versions complement each other. Having owned the Victor album ever since it was issued, I was surprised to find new beauties in the music upon acquaintance with the Telefunken set. These beauties were always there, to be sure, but somehow they did not register until held up against the mirror of a different artistic conception.

As is the case with so many recorded masses, the Gregorian intonations of the opening words of the *Gloria* and *Credo* are omitted in both performances. There is one unfortunate and seemingly unnecessary cut of ten measures in the *Gloria* of the Telefunken version, which actually eliminates two lines of text (*Quoniam tu solus sanctus/Tu solus Dominus*). The Telefunken recording is somewhat more lifelike than the Victor, and the surfaces are very quiet. The LP disc is equal in quality to the 78 set.

This, then, is one case where I cannot advise, but only explain. The choice between two very fine, though different, versions depends on individual taste and preferences. Whatever the ultimate choice, don't fail to give a thorough hearing to the other version. It will add perspective and deepen your pleasure in listening to the set you own.

Now that we have reached the stage where a majority of Bruckner symphonies and one major choral work are available to American record collectors, they will do well to take advantage of this opportunity, thereby not only enriching their own musical experience, but, let us hope, also encouraging the record companies to complete the repertoire of Bruckner's more important works.

# SOME NOTES ON GUSTAV MAHLER (1860-1911)

by Donald Mitchell

## INTRODUCTORY

It is time that we reached some decision about Mahler. Performances, both in the U.S.A. and Great Britain, have been on the increase, although it must be pointed out that this does not necessarily mean that Mahler will be any the more appreciated or understood. All too often, flat (or even ludicrous) performances<sup>1</sup> stand as firmly as any iron curtain between the mind of the listener and the intentions of the composer. This was plainly brought home to me by the gallant effort the BBC Third Programme<sup>2</sup> made in giving us all the nine symphonies. It was a remarkable project which defeated its own admirable purpose by the deplorably low standards of interpretation; if Mahler is not comprehended by the conductor of the orchestra, what chance has the audience? All this has been better said by Robert Simpson elsewhere.<sup>3</sup> I can only recommend his pages for further elaboration of my argument. But when all the faults have been taken into account, musicians and music lovers in general, at least have heard *some* Mahler and can judge the fulminations of certain critics<sup>4</sup> on the evidence of their own ears. All too frequently in the past, the critic has been able to damn Mahler, confident in his knowledge that it was extremely unlikely that the work in question would ever be played, and his arrogant assertion remain unchallenged except by those fortunate enough to be skilled readers of orchestral scores.

## MUSIC AND SOCIETY

But how much do we understand Mahler listening to him, as it were, in an intellectual vacuum, without knowledge of his life, his environment, and more important still, that complex of time, persons, places and period that produced him and made him what he was? A puzzling question that raises an old issue on which the musical purists and their more liberal opponents may join in battle.

The Classical *versus* Romantic formula is no longer satisfactory and indeed cannot itself be explained solely in musical terms. The two sides of that very rough and arbitrary division are too much intermingled and interconnected for any statement of clarity to be made. Where does Mahler

---

<sup>1</sup>Mr. Robert Simpson in the current issue of DISC (No. 9, Winter 1949) speaks of "the casual sight-reading methods of most British orchestras."

<sup>2</sup>The Third Programme is nothing if not thorough; and the *Adagio* from the unfinished Tenth was included and repeated.

<sup>3</sup>See Music Survey Vol. 1, No. 3, 1948 "Mahler and the BBC."

<sup>4</sup>Of course, there are some discerning Mahler critics in this country, notably Wilfrid Mellers and Edward Sackville-West.

stand? The last, fine flower of the Romantics is the claim many put forward. Perhaps—but he does not look well or fit easily into Romantic dress, no more easily than Brahms who was a true Romantic playing at being a Classic. Perhaps it would be more accurate (and yet how startling to some of our learned critics) to discard the Classical/Romantic fixation and see Mahler taking his place in the great German symphonic tradition of Haydn, Mozart, Beethoven, Schubert, and Bruckner: a tradition that would include Brahms along with Schumann and Mendelssohn.

The Classical/Romantic boundary has its uses though if only as a definition which can be improved upon, departed from, even denied completely. At least it implies (i.e., the words "classical" and "romantic" having associations relevant to music and also a wider application to many other human activities) a certain parallel development between the state of society at any given moment and the culture it produces.<sup>5</sup> Music is not explicable in terms of itself alone but in the social order that gives birth to it. Music did not change society: society changed music. Mahler was what his age made him. If we wish to understand fully his music, we must understand the world he lived in. The good critic must be not only a musician, but a historian, a sociologist and psychologist<sup>6</sup> in addition.

#### BIOGRAPHICAL CONSIDERATIONS

Even if we accept the statement that society determines the shape, form and content of music, it is obvious that it is only a half-truth. Large allowances must be made for the genius of the individual composer, and for the more closely personal environment of family and home. The genius is hard—I should say impossible—to explain. Some cases might be made out for the fact that throughout history a political genius has always been thrust forward at just that moment when a man of destiny has been required.<sup>7</sup> In the arts too, each epoch has not been lacking its geniuses who may express the characteristics of the society they live in.<sup>8</sup> But why the mantle of genius should descend upon one particular pair of shoulders, it is quite beyond the capacity of research to discover; and speculation is worthless. In Mahler's case heredity can hardly be seriously considered as an influence of any importance.

His childhood<sup>9</sup> was one of the acutest misery and his attitude to life

---

<sup>5</sup>"The form society assumes at a given moment is reflected in the art of that moment. That art, so closely bound to the life it mirrors, is affected in an analogous way by the crisis through which the contemporary society may be passing." Adolfo Salazar, "Music in our Time," 1948.

<sup>6</sup>It is interesting to note how music criticism has tended to become more and more psychological. Mahler has proved a happy hunting-ground for the musical psychologists, particularly those from his own country.

<sup>7</sup>Many historians would, of course, contest such a theory.

<sup>8</sup>But some periods have lacked geniuses—the Victorian era in England for instance, particularly in music. Obviously, as a society further declines and disintegrates, it is less and less likely to produce any significant culture.

<sup>9</sup>There is ample biographical material available in print.

(one he formed early) was basically tragic and pessimistic.<sup>10</sup> His conversion from the Jewish faith to the Church of Rome was an obvious attempt to achieve a secure belief; an attempt that failed as may be seen from the ninth and last symphony. The Church that had once been the originator and motive force behind so much creative art was already unable to appease the longing and satisfy the doubts of one of its most tormented members. Mahler's effort to find release in Nature, as I have pointed out elsewhere,<sup>11</sup> was equally a failure.

Mahler's search was, fundamentally, for a solution to the difficult art of living;<sup>12</sup> composition was a relief, but did not solve the problem as the music was itself a direct result of it. Take away the problem and the music would have vanished. Already he was beginning to feel the isolation of the artist in a confused and chaotic world. His resignation (*Das Lied von der Erde*) was punctuated by savage outbursts of despair and defiance (the *Rondo Burleske* from the ninth symphony); one man shaking his fist against a social system that he knew was beginning to reject him. But we need not be too astonished at the manner in which the whole fabric of Mahler's personal existence was rent and torn; he was a child of his time, and the time was out of joint.

#### THE CRISIS IN EUROPE

The period 1860-1911 was, historically, a period of flux and change, a period that led eventually to the 1914-1918 crisis and the ensuing cataclysm. There were strong movements toward Nationalism, the unification of Germany and Italy occurred, in Russia some of the intellectual seeds were sown that prepared the revolutionary flowers, everywhere the old order was collapsing;<sup>13</sup> and in spite of a progressive liberalism and a popular democratic movement, there was an equally violent reaction that attempted to support the tottering social structure. Into this almost boiling cauldron Mahler was dropped. It is surely a measure of his greatness that the immersion did not silence him forever.

#### THE CRISIS IN MUSIC

As in so much, Beethoven is the key figure. To understand the tradition Mahler inherited we must look back at the general development of music since the 1840's. If there must be a division between the classical and romantic eras, then Beethoven can be placed neatly between the two. He is the hinge on which the door shuts on Classicism and opens on Romanticism. He was a great enough composer to create order out of disorder, to gather together the characteristics of his age and express them, and yet remain a master craftsman, always a musician and never a political orator. But Beethoven was, as Sydney Harrison has it, "a

<sup>10</sup>See also my "Mahler and Hugo Wolf." *Chord and Discord* Vol. II, No. 5, 1948.

<sup>11</sup>Music Survey, Vol. I, No. 4, "Literature and the Childhood of Music."

<sup>12</sup>As were the novels of Henry James.

<sup>13</sup>Austria especially suffered various constitutional and anatomical changes.

democrat personally and politically" and no one can reasonably doubt that the Choral Symphony, with a text that preached the brotherhood of man, was as much a moral judgment,<sup>14</sup> a social gesture, a tract for the times, as a symphony. Beethoven laid down a challenge to all who followed him, and a burden of humanism difficult for lesser men to shoulder and lesser minds to comprehend.

The great expectations aroused by the events of 1789 were never fulfilled. Reaction set in, popular democracy lost much of its momentum and its energies were dissipated and dispersed. Beethoven's "brotherhood of man" was never achieved either politically or musically. Music is as accurate a textbook as those written by many of our historians, and where society has failed, music has failed too. Almost all music since Beethoven can be summed up in terms of revolt against the tradition he formulated in the Choral Symphony.

*Humanism* is the operative word and music since 1824 can be catalogued in terms of (a) neglect of, (b) revolt against, and (c) evasion of Beethoven's challenge. Many neglected it, Schumann and Mendelssohn evaded it, indulging in a pleasant domesticity; Brahms and Wagner revolted against it. It is important to remember Brahms' signature to the Manifesto of 1860; a reaction<sup>15</sup> which, writes Salazar,<sup>16</sup> "showed a desire to relate itself to an outmoded classical discipline called neoclassicism." Wagner was the more powerful and dangerous revolutionary of the two—if revolutionary be the right word. He was an example of revolution in reverse. As I have said elsewhere,<sup>17</sup> "Wagner's music-dramas were merely another method of refusing to accept the implications of Beethoven's musical challenge. Wagner's experiments with harmony were certainly new and of value, but they were always subordinate to his peculiar ideology which dictated a complete divorce from society." Apart from Bruckner and Mahler, Schubert, in his songs, his chamber-music, and the Great C Major Symphony, is the only post-Beethoven composer who had anything of Beethoven's "social-will" and was able to carry a step further (particularly in his development of the *lied*) the great tradition of which the Choral Symphony was the cornerstone.

It is strange, indeed, that both Mahler and Bruckner who were keen admirers of Wagner, while frequently using his technical innovations, escaped inheriting his ideology, his anti-social philosophy.

Bruckner is, perhaps, a special case as his Catholicism, his faith, played a considerable part in his creative activity, and he dedicated his work to God: a fact which must be borne in mind when estimating his music. Again, he was an excessively simple character although this does not mean that he was not an extremely subtle composer. For Bruckner, the Universal Church as a unity still had meaning, and the "brotherhood of man" was part of Christian doctrine long before Beethoven wrote his

<sup>14</sup>"Music is a moral law." Plato.

<sup>15</sup>It should be remembered that a rebel is as much part of the society against which he rebels, as the individual who conforms.

<sup>16</sup>"Music in our Time," 1948.

<sup>17</sup>Modern Quarterly, Vol. III, No. 4, 1948.

Choral Symphony. Bruckner, therefore, continued an even earlier tradition. He could not, writes Mr. Simpson, "imagine music that was not in some way connected with the mysteries and pieties of his religion."<sup>18</sup>

For Mahler though, the Church could provide little but a stimulus to his imagination, chiefly by way of its ritual and pageantry. The most direct result of the Church's influence is the first movement of the Eighth Symphony with its setting of the medieval Latin hymn of Hrabanus Maurus. Certainly, an optimistic movement, but the subsequent *Das Lied* with its implied pantheism is almost a contradiction of the Eighth, and the Ninth Symphony empty of any kind of consolation.

I have remarked upon the astonishing lack of resemblance between Bruckner, Mahler, and Wagner, for despite an occasional likeness of language<sup>19</sup> the thought behind their speech was entirely different. Obviously, one of the most significant of Beethoven's developments was his expansion of the "slow movement," both technically and philosophically, into the *adagio*, the weightiest, if not the crowning movement of all his symphonies. Any composer after Beethoven, looking back at the *adagio* of the Choral Symphony, must have trembled at the task before him. But Schubert solved the problem, inimitably, in the Great C Major, and Bruckner's *adagios* sound so supremely effortless that they seem as natural as the soaring arches in a cathedral. Mahler, without Bruckner's secure faith, facing the increasing difficulties of an already difficult world, and driven (possibly unconsciously) by all manner of social forces, at least grappled with the problem and made an attempt of great nobility to continue the Beethoven tradition. There are three great slow movements: those of the sixth, ninth, and unfinished tenth symphonies; those of the third and fourth, as might be expected, are immature in comparison. (But the Fourth Symphony is in itself interesting in that it represents one of the first musical fairy-tale worlds written for adults only. Today, it is that uneven genius Walt Disney who caters for this public demand.)

We are often told that Mahler's themes are banal in the extreme, littered with recollections of every composer, living or dead, and that it was only in his orchestral technique that he achieved a personal note. Yet Mahler's music to any discerning ear is instantly recognizable. This fragment, chosen at random from the Ninth Symphony, is completely characteristic:

Tempo I

Vn. I

*pp aber ausdrucksvoll*

Vn. II

<sup>18</sup>Disc, No. 9, 1949.

<sup>19</sup>Of Bruckner, Alfred Einstein has written: "...he had almost as little in common with Wagner.... as he had.... with Brahms." ("Music in the Romantic Era," 1947)

How significant it is that Mahler has divided his theme between the first and second violins, almost as if the division in himself sought a formal expression in his music (the division that existed between himself and the world,<sup>20</sup> and the division and strife in the world outside). Mahler was too much himself to have any direct hints of Beethoven in his work, although there is a curious resemblance between the disintegrating *coda* of the Ninth Symphony's *adagio* and the *adagio* of the Beethoven Sonata Op. 101. And reference to the song *Die Trommel gerühret* (Beethoven's music to *Egmont* Op. 84) plainly shows what must have been the first of that long line of German romantic *lieder* of which Mahler was one of the finest exponents in *Des Knaben Wunderhorn* and *Lieder eines fahrenden Gesellen*. His *Laendler* are direct descendants of the Haydn Minuets and Trios; the trio in Haydn's Symphony No. 88 remarkably foreshadows Mahler's sinister drones and syncopated *sforzandos* in the *Rondo Burlesque* of the Ninth. Mahler not only glances back over his shoulder at Bach and Mozart (possibly the two greatest contrapuntists) but forward as well to that school of neo-classicists (the "Back to Bach movement") typified by Reger and Busoni, and even by Stravinsky in his later periods.

His influence has, indeed, been immense; there is no need to mention the obvious debt such composers as Schönberg and Alban Berg owe him, for they have acknowledged it themselves. In contemporary England, Benjamin Britten's orchestral technique (if nothing else) is largely derived from Mahler, who was not only a great traditionalist but also a great innovator, and the last, I think, of the great symphonists.

No doubt, the music of Schönberg and Berg is decadent, decadent in that it accurately mirrors the decline of a whole system of civilization, the decline of an ideal that had never been put into practice. The seeds of that decadence were, inevitably, in Mahler too, because his world was falling apart. But there was nobility also and some vestiges of a faith, if not in himself, then at least a faith in humanity.

Like Beethoven, Mahler could have pointed in turn to his head and heart and said: "My nobility is *here and here*;"<sup>21</sup> but we have his music as a testament; there is no need for speech.

<sup>20</sup>And, of course, the fact that he had to spend so much time conducting and administering the Opera. It is very much a modern phenomenon that the creative artist is expected to possess many of the qualities associated with the business executive.

<sup>21</sup>See Grove's Dictionary (1879 Edition).

## BRUCKNER AND MAHLER IN AUSTRALIA

by Wolfgang Wagner

As in every other walk of life, in cultural matters too, the Australian public is looking for guidance to England. The general English opinion about merits or demerits of achievements in the realm of Arts and Letters is accepted here without questioning. No one acquainted with the attitude of the majority of English music-critics and writers towards the work of Bruckner and Mahler will therefore be surprised to find that Australian music-lovers had very little opportunity of listening to the music of these two composers prior to the last war. In fact, there were only four performances of symphonies by Bruckner and Mahler up to and including 1940.

This rather disappointing record might appear in a different light when one realizes that about fifty years ago a symphony concert was an unheard-of event in Australia. To-day, thanks to the far-sighted policy of the government controlled Australian Broadcasting Commission (inaugurated in 1932) we have in four of the six States of the Commonwealth full-sized symphony orchestras whose members work on a yearly contract, and similar arrangements are in preparation for the two remaining States. The unavoidable deficits of these orchestras are guaranteed by the respective State Governments, Municipalities, and the Broadcasting Commission.

It was not before August 5, 1937, that a symphony of Gustav Mahler was heard in an Australian concert hall. On that date the late Georg Schneevoigt conducted Mahler's Fifth at the Sydney Town Hall. Incidentally, Schneevoigt was the first non-English conductor of international fame invited to Australia and it speaks highly for his unselfishness and idealism that he seized the opportunity to introduce Mahler to Australian audiences instead of playing the familiar classics. One must admit that the *Fifth*, with the exception of the *Adagietto*, is a difficult work to apprehend for a public listening to a Mahler symphony for the first time and the critique which appeared on the next day in the *Sydney Morning Herald* certainly did not contribute much to a better understanding of Mahler's message. In the familiar tone of English criticism the *Herald's* music expert wrote:

The Mahler symphony proved to be a long work—it lasted an hour—and an uncommonly patchy one. There were many passages of beauty; but except in the *Adagietto* movement, the effect was never sustained. During much of the time the composer seemed to be going through the motions of grief or joy, or frenzy, but conveying nothing but a disturbing noise. His well-known fondness for brass instruments expressed itself in frequent and by no means uncertain terms. This, more than anything else, made the symphony fatiguing. Still, a score which includes such superb

ideas as the Dead March in the first movement, and the tender sincerity of the Adagietto is not likely to be thrust aside.

Bruckner was heard for the first time two years later when George Szell played the *Third* in Melbourne on June 7, 1939, repeating the second and third movements at a popular concert the following day.

The Melbourne *Argus* calls the performance "an emphatic success" and has high praise for Mr. Szell who did everything "to insure symphonic appreciation" of the work.

In 1940 Neville Cardus,\* the music critic of *The Manchester Guardian*, came to Australia, and it is due to his untiring efforts for the cause of Mahler and Bruckner and his deep-rooted understanding of their personalities and ideologies that the public gradually became aware of the two composers' importance in the development of symphonic art.

Shortly after Mr. Cardus' arrival in Sydney the Sydney orchestra, specially augmented for the occasion, gave the first performance of Mahler's *Fourth*, conducted by Antal Dorati. One can assume that many a diehard will have changed his attitude and unfounded prejudice against Mahler when reading the following notice from the authoritative pen of Neville Cardus.

I cannot recall many finer pieces of conducting than Mr. Dorati's, considering that he was dealing with a kind of music which is entirely out of the common symphonic run. The orchestra (unlike one or two of the critics present) declined to lose faith during the apparent 'dullness' of certain sections of the work. Mahler asks for much faith in his *Fourth* Symphony for he glances back on purely personal recollections of youth spent in a world which nowadays is lost in our age of innocence.

It is the shallowest judgment that hears only echoes of other composers here - for example, in the slow movement, where the pizzicato notes of the double basses are superficially the same as the bass notes at the beginning of "Who is Sylvia?". Mahler like Schubert drew melodies out of the air which surrounded him. But the Schubertian freshness has gone—Mahler added his own ache of nostalgia. He was really an exquisite decadent, a singer of swan-songs. Throughout all his music there is to be heard the longing note of his most beautiful and autobiographical song: "Ich bin der Welt abhanden gekommen". This refrain or flavor occurs at the introduction of the second theme on the division of the slow movement.

Mr. Dorati and the strings of the Sydney orchestra were extraordinarily clever in getting the Mahler tensity and color at this point, the proper tone and almost tearful cadence. (Sentimental, of course, but what of that, if the art with which it is done is original and fine?) . . . .

---

\* cf. Chord and Discord, Vol. 2, No. 5, 1948.

Hardly a week later Georg Schneevoigt, re-visiting Australia after his great success in 1937, conducted the *Sixth* Bruckner in Sydney. Mr. Cardus wrote:-

Professor Schneevoigt controlled the famous and difficult decrescendos of the composer with skill; also the equally difficult pauses; Bruckner wrote for the orchestra like an organist, he changes the various instrumental groups into registers, you can almost see him pulling out stops. He shuts off a full tone suddenly; he loves sudden transitions from massed tone to isolated woodwind cadences. His fortissimi are resonant organ swell.

The *Sixth* Symphony lasts some 50 minutes—which is, for Bruckner, not at all lengthy; the *Sixth* Symphony is, we might say, a Bruckner epigram, a mere morsel, tossed off between real working hours. It contains the usual Bruckner adagio. Bruckner was the only composer capable of emulating the Beethoven adagio style of the ninth symphony; other composers have written great slow movements, but there is a certain sublime melodic ease and discursiveness in the true adagio, a mazelike reflectiveness which turns inward. The style is difficult to define; all students of music can distinguish it.

With the majority of players in the Armed Forces, concert activities in Australia for the following four years were on a restricted scale and overseas conductors were unable to visit our shores. Mr. Cardus continued his good work with his weekly broadcast talks called "Enjoyment of Music" during which Australian music lovers became acquainted with many master works never previously performed in this country.

One of these sessions was devoted to Mahler's *Lied von der Erde* in which he used Bruno Walter's beautiful recording with Charles Kullman and Kerstin Thorborg. After the first broadcast of the *Lied von der Erde* Mr. Cardus and the Broadcasting Commission were flooded with letters requesting a repetition and gramophone shops sold the remaining stocks of Walter's recordings within a few days. During his seven years' stay in Australia Mr. Cardus had to repeat this particular broadcast six times. A similar broadcast, dealing with excerpts of Bruckner's *Fourth* and *Seventh*, met with equal success and had to be repeated.

While in Sydney, Mr. Cardus also wrote his essay on Mahler which is incorporated in his illuminating and most successful book "Ten Composers".

Great hopes for further Bruckner and Mahler performances were entertained when Eugene Ormandy arrived here in 1944; but with war conditions still prevailing it was impossible to gather sufficient number of experienced players for a satisfactory performance of a Bruckner or Mahler symphony.

The 1945 season saw the premiere of Bruckner's *Seventh*, conducted by Professor, now Sir, Bernard Heinze. The performance, especially the adagio, left a deep impression and the work was widely acclaimed by the public on the two nights it was played.\* The critics, however, with the

\* In 1945 each concert in Sydney and Melbourne was given twice. Melbourne started with series of three concerts in 1946, and Sydney followed in 1947.

exception of Mr. Cardus, had more words of praise for Mr. Heinze's able conductorship than for the Bruckner symphony.

In the following year the young Czechoslovakian-born conductor Walter Susskind presented a most satisfying and authentic reading of Mahler's *Fourth*. Under the title "Mahler was Triumph for Susskind" Mr. Cardus wrote in the *Sydney Morning Herald*:

As it is possible to go through life and hear the Fourth Symphony of Mahler less than a half a dozen times, I shall devote the bulk of this notice to a discussion of the work and the remarkably sensitive performance.

This music lies far away from the familiar symphonic routine and calls for a rare instrumental delicacy; more important, the feeling behind every note is scarcely to be understood without long saturation in the Mahler psychology and the Austrian background of *Maerchen* legend, the Middle Age spirit of grotesque and the 'Totentanz'; and friend Hain who leads the way to a paradise presented in a sagacious and literal way with the gusto of a peasant's relish for tasty dishes.

In this work Mahler glanced back for the last time on his childhood, said 'good-bye' to the magic wonder-horn, before bracing himself for the spiritual ordeals experienced in his later symphonies.

He himself described the force as "naive and humorous"; But Mahler could not for long remain either naive or humorous. In this song-symphony—for the instruments are also soloists—of the "heavenly joys" he must needs compose a long and supremely beautiful adagio, with variations, in which the Mahler ache for restfulness, which always eluded him, is expressed in an orchestral style as sophisticated and finished as any known to central European music of the 19th century.

In a word, an interpretation of the fourth symphony calls for both simplicity and subtlety of statement, for directness and for nuance . . . .

This movement (adagio) is one of music's divinely inspired treasures. Even the Mahler appoggiatura glides in, and there are many transitions that softly lead us to a more and more hushed loveliness. The string choir at the beginning is quite ineffable . . . .

Dr. Edgar Bainton, the former Director of the Sydney Conservatorium, had included in one of his concerts the *adagietto* from the *Fifth* Mahler; likewise did Professor Heinze at concerts at Melbourne and Adelaide. (Between 1946 and October 1949 the *Adagietto* was played no less than 14 times in all six States of the Commonwealth).

The year 1947 marked a new and important stage in the musical development of Sydney and its orchestra. Reconstructed on a financially sound basis the year before, the orchestra came under the permanent conductorship of Eugene Goossens. To-day, after 2½ years of intensive

collaboration between conductor and players, Mr. Goossens has formed the orchestra into a body which certainly can hold its own with almost every American or European orchestra.

Mr. Goossens did not perform any work by Bruckner or Mahler during his first season in Sydney but conducted the Melbourne orchestra in a competent reading of Bruckner's *Sixth*.

Most encouraging progress was made during the ensuing two years both in Sydney and Melbourne. A complete list of performances will confirm this statement:

1948

Sydney, August, *First Mahler*, conductor Eugene Goossens.

Melbourne, October, *First Mahler*, conductor Paul Klecki.

1949

Melbourne, August, *Fourth Bruckner*, conductor Rafael Kubelik

Sydney, August, *Seventh Bruckner*, conductor Otto Klemperer.

Melbourne, September, *Fourth Mahler*, conductor Otto Klemperer.

Sydney, October, *Seventh Mahler*, conductor Eugene Goossens. In addition there were several performances of the *Adagietto* from Mahler's *Fifth* in five capital cities. (Hobart, Perth, Adelaide, Brisbane, and Melbourne.)

The Press greeted the Australian premiere of the *First Mahler* with headings such as "Splendour in Mahler", "Mahler's Symphony Impressive", and "Fine Playing in Mahler's First Symphony". Mr. Goossens' performance was enthusiastically received and thunderous applause of a most demonstrative character indicated unmistakably the public's desire to hear more of the works of the song-symphonist.

After deploring that it took 56 years for the symphony to reach Australia from Vienna, Kenneth Wilkinson of the *Daily Telegraph* wrote:

Eugene Goossens directed the Sydney Symphony Orchestra in a magnificent performance.

The long introduction with fragments of themes sounding beneath a long-sustained high A for strings, held the mood dramatically in suspense, as though the first movement was about to condense itself out of a musical nebula.

Then, how extraordinarily, how magically, the fresh, human, spring-like quality of the opening theme emerged from these cosmic musings!

Both here and in the following movement, certain melodies have a genial, comfortable swing which marks them as characteristically Viennese.

But the effect, in relation to the general scheme of the symphony, is by no means superficial. For these interludes of gaiety take on an overtone of irony, as though there were romantic episodes remembered in adversity.

The brilliance of Goossens' conducting lay precisely in the way he gave us the full score of these overwhelming changes of mood.

The rhythmic intensity of the third movement, in which the ceremonial funeral march was interrupted by mocking comments and furious dances of despair, was a grand experience.

In the finale, he gave free expression to the Berlioz-like extravagance of feeling, while keeping orchestral discipline on a rein. The whole presentation reached a triumphant climax as seven horns rang out in unison, fortissimo, above the general clamor.

The late A. L. Kelley had this to say in his paper, *The Sun*:-

Fortunately, though not unexpectedly, it was a very fine performance; and this was the more important since in that work are disclosed characteristics that endure through all the developments and elaborations of Mahler's many symphonies that followed.

For Mahler, the orchestra is a singing voice, not a spinner of contrapuntal fabrics, and songs of the open air fall charmingly, almost naively, on the ear, to gather an almost aria-like richness later in the symphony in lines and cadences drawn out beautifully by last night's violins and 'cellos.

In this direct, though spacious work, one feels the composer's immediate response to things felt and seen. There is, as yet, no conscious German (or Austrian) savoring and enjoyment of his emotions.

Mr. Cardus' successor on the *Sydney Morning Herald*, (Mr. Cardus had left Sydney for England the year before), summed up as follows:-

Mahler's proliferating themes, the long strands and sudden ejaculation of musical thought, were woven into a tone texture that was exquisitely transparent. The ideas were worked out with power rather than weight.

Melbourne received the same symphony equally well when the Polish conductor Paul Klecki introduced the work there two months after the Sydney premiere. Here are excerpts from criticisms in the leading papers:-

*Age*:

One of the most thrilling orchestral events heard in Melbourne . . . . This is a work of high character, if not of much geniality, often majestic but never descending to sentimentality.

Its terrific climax at the beginning of the fourth movement seems to rend the universe apart but the composer puts it together again with softly flowing melody and finishes the work with a regeneration of faith that is declamatory and insistent . . . . .

*Herald*:

The work is warm and expansive and we would be the richer for much wider acquaintance with Mahler. . . .

The critic of the Melbourne *Sun* sheds, I cannot refrain from saying, quite a "new" light on Mahler when she writes:-

The work is less a symphony than a series of tone poems strung together by a kind of leading motive, with a long-sustained high note on strings, and scattered cuckoo calls at intervals through the orchestra.

The work occasionally appeared derivative, weakly Beethovenish, and Mahler expressing Dionysian mystery in his "nature" music, often falls short with quite trivial melodies, however charming.

Rafael Kubelik, one of the most popular conductors ever to visit Australia, opened the 1949 series of performances of works by Bruckner and Mahler with a performance of Bruckner's *Fourth* in Melbourne. As so often Bruckner had a not too favorable press. The critic of the Australian musical journal *The Canon* donned the fighting gloves and took his colleagues of the daily papers to task with the following strong words\*:-

Echoes of old battles have woken this month in Melbourne: frayed banners have been held to the air, light ghostly lances have shone in remembered legion. Again as before beauty has been routed from the field, while the loud bray of Philistine revelry in triumph affrights the ear.

This time, we fear, the learned ladies and gentlemen of the press have scored such a brutal victory over the art of music that we may never look for another challenge from this side: music is dead, its seed and impulse and whole strength are dispersed.

After dealing with some adverse criticism of Berlioz *The Canon* continues:-

What are we to do?—we must lock away his works in dungeons and vaults and libraries, until his long silence convinces us that he is no genius at all, but merely a bellowing fool.

He will be in good company there, to be sure: he will find Bruckner, who is an outcast because his music is an experience of the spirit, while the society of our day is devoid of spirit. To a thorough reading of the *Fourth Symphony*, our critics respond thus:—

It tells nothing new, being strongly derivative of Wagner, with brass but not brilliance . . . .

Strongly derivative of Wagner! There are, in truth, strains of Mahler in the *Fourth Symphony*, like gold running through a quartz crystal: but Bruckner needs no gold in the places of his movement, for there is gold beneath his feet.

But this is all past now, this echoed battle which was as a slight stir on the surface of Melbourne's music: the two musicians, convicted of the crime of genius, have been executed: and the victors are complacently awaiting new feasts of Brahms.

When it was announced that the Australian Broadcasting Commission had engaged Otto Klemperer for a series of concerts the steadily growing community of admirers of Bruckner and Mahler anticipated festive days. To be sure, Mr. Klemperer did not disappoint them.

\* At the same concert excerpts from Berlioz' "Romeo & Juliet" were played.

No better account of Mr. Klemperer's decisive victory for the cause of Mahler can be given than by repeating here in full the critique which appeared in the Melbourne *Argus* on September 19, 1949, on his performance of Mahler's *Fourth*:—

A really magnificent performance of the Fourth Symphony of Gustav Mahler by the Victorian Symphony Orchestra brought forth an avalanche of applause and cheering from a packed and most appreciative Town Hall. Melbourne audiences have perceived the greatness of Klemperer from the excellence of his musicianship as evident in his moulding of the orchestra; they have also grown to like him, probably more than any other recent visiting conductor, because of his fine personality and platform humility.

His interpretation of the Mahler Symphony breathed life and beauty from the opening bar, with its colorful, tinkling sleigh bells. The passages for four flutes, including an exceptionally lovely one against a murmuring string background, were very striking in the first movement. The second movement was most effective because of the brilliance of Bertha Jorgenson's handling of the shrill violin solos (on a special instrument tuned a tone higher), and the lilt achieved in the string sections.

The quaint verses from "Des Knaben Wunderhorn" in the last movement were excellently sung by the visiting soprano Elizabeth Schwarzkopf. Her interpretation was particularly pleasing because of her excellent creation of its simple, peasant-like qualities. It is no mean feat for a world-famous singer to express, as satisfyingly as did Miss Schwarzkopf, the naive and charming vision of Heaven as a place of dancing and feasting, with the angels baking the bread and St. Peter benignly looking on.

That this is the last concert Klemperer will conduct in Melbourne this season is news which must be received with considerable sadness by the public and, I feel, the orchestra also.—

The other papers were no less sparing in praising the symphony and the splendid conductorship of Mr. Klemperer. The Melbourne *Advocate* wrote:—

Gustav Mahler was a friend of conductor Otto Klemperer, so it was to be expected that the Symphony No. 4 in G Major would be presented with understanding and appreciation of the peculiar genius of that composer.

Klemperer maintained the unity of structure of this orchestral work which is essential to a complete understanding of the spiritual significance of the music. He gained particularly fine effects from the strings in the first movement of that singing quality that Mahler loved so well. The refrain for voice in the final movement was not of lyrical quality, but rather a continuation of instrumental pattern of melody . . . .

In Sydney Mr. Klemperer conducted a truly magnificent and deeply moving *Seventh* Bruckner. Again Bruckner, though warmly received by the public, did not cut much ice with the music critics. Only one of

them considered it necessary to discuss the work at length; the others dismissed Bruckner with a few lines containing the familiar clichés, "rather ponderous work . . . . . long as it is, prolix as many of its pages often are . . ." or "Its limitations, such as absence of variety in theme and mood, naive repetitiousness . . . . ."

This lack of understanding for Bruckner and his spiritual message evident in these writings, induced the present writer to discuss the problem in *The Canon* under the title "A Plea for Bruckner":

Mr. Klemperer's all-encompassing grasp of the works he performs, his penetration into the spirit of the music, and his ability to impart the intensity of his fierce musical passion to the mind of the orchestra, bridged with ease and authority the wide gap between the works of Strauss and Bruckner. The mysterious stirrings of Strauss's *Tod und Verklärung* were unfolded lavishly, while Bruckner's Seventh Symphony grew into an edifice of solemn magnificence under the hands of this master-builder.

Yet . . . not even Mr. Klemperer's glowing interpretation of Bruckner's symphony, not even the devoted and beautiful playing of the orchestra, could deter the critics of the daily press from treading the well beaten path and handing out the usual clichés. We have been reading these same stock phrases for over fifty years, and one would have thought that Mr. Klemperer's greatness as an interpreter of Bruckner might have produced a more amicable outlook. However, true to tradition, that emphasis was laid on the allegedly weak points of the symphony and its positive points were treated in parenthesis.

Philippics are far from my mind, yet I wish I could command Demosthenes' fire and persuasive power in order to change this traditional disdain of one of the most honest and unassuming men who ever attempted to set his feelings and aspirations to music.

Bruckner composed with the spaciousness and great conception of Baroque architecture and painting. The splendour of the monastery of St. Florian, the imposing line of its facade, the calm of the cloister gardens, the loftiness of the world-famous staircase, the dignified magnificence of the collegiate church with the organ under which Bruckner lies buried . . . All these are reflected in Bruckner's symphonies with equal splendour, loftiness and dignity. And as the eye repeatedly returns to a spot of singular beauty, or of personal appeal, so Bruckner keeps on repeating his sumptuous and soaring themes. Bruckner was a lonely man, and lonely people when they break their silence open their hearts without restraint. Bruckner, moreover, speaks in his music to God and offers thanksgiving for divine inspirations.

Often he loses himself in thought, and we can see him sitting at his organ, improvising, and absorbed in meditation. Suddenly he stops as if waking from a dream; a moment's pause, and the main theme sets in without modulation or change of orchestration; and with harp, string and cymbal he sings the glory of God.

Wagner was Bruckner's idol. With the simple credulity of the Austrian peasant, he adored the Master of Bayreuth. The sombreness of Wagner's brass under a dim string tremolo, and the sonority of his orchestral harmony made a strong appeal to Bruckner, and became the blood-stream of his symphonic work. But instead of blaming him for his Wagnerian flavour, we should realize that his unqualified veneration for Wagner resulted in his greatest achievement in the development of symphonic writing. For it was Bruckner who succeeded in amalgamating within the structural framework of the symphony the classicism of Beethoven and the romanticism of Wagner.

To sum up: piety, hero-worship, and the spirit of St. Florian were Bruckner's credo; music, the expression of his emotional and mental state; simplicity, humility, and serenity, the characteristics of Bruckner, the man. Let us endeavour to change our approach to Bruckner, and let us try to understand a lonely, deeply religious man whose heart poured out music.

Mr. Klemperer's unforgettable performance opened up for us a new vista to the understanding of this composer. Let us follow it: it will be an experience full of beauty and rapture.

A fortnight later Mahler's *Seventh* with its *Nachtmusiken*, resounded in an Australian concert-hall for the first time, some forty years after its premiere in Prague.

The Sydney Symphony Orchestra under the direction of Eugene Goossens gave a convincing reading of this much neglected symphony, described by one Sydney critic as fascinating, by another as fatiguing.

L. B. in the *Sydney Morning Herald*, after calling the performance "remarkably taut, vital and well-disciplined", continues:

While it would be foolish to suggest that this huge 70-minute work had a great popular success, most of last night's audience were prepared to make the resolute effort at concentration that Mahler demands. The effort was handsomely repaid for, even when Mahler does not ensnare the affections, he compels interest.

Mahler's symphonies, in sequence, are the harrowing and tragic case suffering. The fascination of his music is the astonishingly complex man which the music reveals.

Goossens, a Mahlerite by taste if not by constitution, was more than ordinarily equipped to give a vigorous, urgent and moving exposition of this symphony.

The orchestra responded magnificently to his leadership to reveal the symphony as the composer's way to peace-of-mind and pride of spirit through a philosophy which almost accepts the futility of struggling for impossibles. Mahler seems to say, at last, that he has found a way of accepting his own limitations and making the best of them.

This philosophic plan was made remarkably clear in the two end movements; in the adagio with its weight of resignation and the shadows of past despair, and then in the rondo with its candid liberations of spirit.

The three interior movements—a pastoral serenade with incidental cowbells sounding like a penny in a money-box; a ghostly scherzo of demon phantasmagoria; and another serenade of darker mood and unsatisfied romance—filled out the design of the work richly and at great length.

Mr. Wilkinson of the *Daily Telegraph* found "the music a strenuous experience on a hot night" and goes on:

Poor Mahler! In his First Symphony he showed himself capable of dealing directly and imaginatively with the essentials of symphonic form. By the time he had reached the Third he was discoursing naively and charmingly on the basis of German folklore.

But in the Seventh he is wrestling painfully with his own spirit and trying to pack into the score a whole lifetime of emotional and philosophical experience.....

Yet, for all its patchiness and overstress, the Seventh was worth doing and the Sydney Symphony Orchestra set forth its vehement message in outlines of fire.

*Lieder* by Mahler have, of course, frequently been sung by Australian and overseas artists. Miss Dorothy Helmrich, a renowned English soprano and singing teacher, now resident of Sydney, sang the *Lieder eines fahrenden Gesellen* during her Australian tour in 1935 and several times since. Miss Helmrich also included a number of *Wunderhorn-Lieder* in her programs.

The Chamber Music Society, *Musica Viva*, gave a performance of Bruckner's *Quintet* and scored with it such a success that the work had to be repeated at a request concert at the end of the season.

Unfortunately I could not obtain any data regarding performances of Bruckner's choral works, but this article would not be complete without mentioning the frequent broadcasts of the recorded works by both composers. Bruckner's *Fourth*, *Seventh* and the *Overture in G minor* and Mahler's *First*, *Fourth* and *Lied von der Erde* have been played at least ten to fifteen times each during the past three years not only over the network of the Australian Broadcasting Commission but also by several commercial stations. Other works available on wax, as for instance the *Second* and *Ninth* Mahler, were frequently performed too. Bruno Walter's latest recording of Mahler's *Fifth* has not yet reached this country at the time of writing, but when the new set of Bruckner's *Seventh* under van Beinum arrived here 50 sets were sold by one record dealer alone within ten days.

Summing up it can be stated quite confidently that public demand for works by Bruckner and Mahler is steadily growing in this country. Most encouraging is the fact that the intelligentsia among our young people shows more understanding for both composers than the older generation of concertgoers. Mahler with his psychological approach to music and exciting intensity stands nearer to their heart and mind than the more contemplative and romantic devoutness of Bruckner. Mahler's symphonies are for them "Music of our Time"; on Bruckner they look with reverence as a representative of "times gone by."

The Sydney University paper *Honi Soit* closes its notice on Goossens' performance of the *Seventh* Mahler with this significant statement:—

Such performances of rarely heard works, while causing elation and gratitude, tend to cause apprehension concerning the occurrence of further performances. Indeed, until Mahler's works become a recognised part of the concert repertoire this uneasiness will persist.

Words like these cannot be ignored by those in charge of our concert activities for any length of time. There cannot be any doubt that the names of Anton Bruckner and Gustav Mahler will appear with ever increasing frequency on the programs of our orchestras; conductors who undertake to make Australian audiences more familiar with the works of both Masters will earn the gratitude of every open-minded music-lover.

---

#### KILENYI BRUCKNER MEDAL AWARDED TO EFREM KURTZ

The Bruckner Medal, designed by Julio Kilenyi for the exclusive use of the Bruckner Society of America, Inc., was awarded to Efrem Kurtz for his efforts to create greater interest in and appreciation of Bruckner's music in the U. S. A. Mr. Kurtz introduced Bruckner's *Second* to audiences in Kansas City, Missouri, and Houston, Texas. He conducted Bruckner's *Second* in Kansas City (Kansas City Philharmonic Orchestra) on January 27 and 28, 1948, and on December 13 of the same year, the Houston Symphony Orchestra under his direction performed the same work. After the performance of the *Second* in Houston, Dr. F. W. Doty, Dean of the School of Fine Arts of the University of Texas, presented the medal on behalf of the Society.

## THE LENGTH OF MAHLER

By DESMOND SHAWE-TAYLOR

The following article is reprinted with the permission of *The New Statesman & Nation*, London, England. It was published on April 10, 1948.

The feelings aroused by Mahler's music, like those once aroused by the man, are seldom lukewarm; listeners and critics who find no difficulty in arriving at a balanced estimate of Strauss or Elgar are apt to discuss Mahler in terms of unqualified adulation or curt dismissal; the half-way house is untenanted. And yet, on sober reflection, surely the unpopular intermediate view is more plausible—that in Mahler we have a composer of original, brilliant and indeed unique powers, whose work suffers from structural weaknesses and sudden startling lapses of taste: above all, a composer who, even in his happiest vein, seldom knows when to stop. Why then do good musicians fail to arrive at a more objective view? Why must it be all or nothing? Partly because Mahler's compositions for long encountered so much neglect and active hostility that his supporters were bound to see themselves as crusaders, their cause as a cult; and partly because of the intensely personal nature of his vision. As recently as 1930, the late H. C. Colles could pronounce in *The Times* that Mahler "never achieved a distinctly personal idiom," a point of view which now seems almost grotesque—for is there in all music a more sharply individual tang? Once succumb to its fascination, and you find yourself loving the music for its very faults; in quiet retrospect you may feel intellectually convinced of ups and downs, good and bad, but only soak yourself again in these extraordinary scores and detachment begins to vanish; cool judgment is swamped by a resurgence of passionate admiration—or else of exasperation.

Exasperation—and perhaps amusement; for nothing is easier than to poke unsympathetic fun at Mahler, so pretentious, so long-winded, so ultra-German. His absolute artistic integrity, alike as composer and interpreter, that fiery intensity of aim which won him the devotion of so many brilliant young disciples, carried on the reverse side of the medal less amiable characteristics: he was touchy, overbearing, censorious, incessantly didactic. His wife adored him, but her biography is full of episodes which reveal a degree of humourless egotism rare even among artists; it is also rich in comedy. Who but Mahler would have read Kant to his wife during the pangs of childbirth? Who else would have been so ashamed of liking *The Merry Widow* that he must resort to a stratagem in order to discover just how the famous waltz "went"? Is there not a sublime blindness in the curt explanation which he offered to Pfitzner in rejecting for the Vienna Opera the latter's *Rose vom Liebesgarten* (later on he changed his mind): "the whole symbolism incomprehensible, too long, far too long." Mahler complaining of length!

In vain do we search the books and articles of such initiates as Bruno Walter and Egon Wellesz for any discussion of the crucial problem of Mahler's own inordinate length; evidently for them it is no problem at all. But for the poor listener, however serious, however intelligent, working his way last winter (thanks to the munificence of the B.B.C.) through the entire series of nine symphonies, the problem was real enough. Most of these works last over an hour, some nearer two hours; single movements (even purely instrumental ones) cover anything up to 30 or 40 minutes—an immense span of time for the scoreless listener to attend, at the full stretch of his faculties, to a homogeneous stretch of unfamiliar music. Instead of plunging us, shivering and unprepared, into these nine oceans of sound, the B.B.C. ought to have allowed us first to paddle; I mean that they should have played, separately and repeatedly, the many picturesque and attractive shorter movements, then the longer ones, and finally entire symphonies. Heresy? No, it was Nikisch's way, to which Mahler himself is said to have given his blessing.

But these merely practical proposals leave untouched the further question: why did Mahler feel the need to spread himself so enormously? Well, we must begin by allowing for the opulent taste of the day, which encouraged expansion for expansion's sake and accounts also for the lavish scoring (lavish, be it observed; *not* lush). Perhaps, too, the tendency to expand was helped by the accident that Mahler was a "summer composer"—a man breathing, after long schedule-bound months in city and opera-house, the divinely free air of the Austrian mountains, a man to whom it would no more occur to compress his ideas than it occurs to the holiday-maker to curtail his day-long rambles. And then we must realise that these symphonies are not really symphonies at all in the older sense of the word, but so many successive chapters (indeed, volumes) of spiritual autobiography. The listener is haunted by the continual sense of a submerged programme, and learns without surprise that Mahler himself considered all music since Beethoven to be really programme music. Like many composers, he was chary about revealing the programme because of the inevitable tendency of commentators and audiences to concentrate on such "explanations" at the expense of the music itself; but he forgot (or didn't care) that the emotional sequence of a long movement which was so clear to his own mind might prove anything but clear to the clueless listener. A. E. Housman once advised his brother, when writing poetry, always to bear in mind "that man of sorrows, the reader"; but I doubt whether, in the process of composition, the introspective Mahler ever gave much thought to the eventual listener; as for regarding him as "a man of sorrows," why that was surely his own role.

Perhaps the most valuable clue to Mahler's expansiveness is contained in the famous anecdote of his meeting with Sibelius at Helsingfors in 1907. The two leading symphonists fell to discussing the symphony; and Sibelius said that he "admired its severity and style and the profound logic that created an inner connection between all the motifs. Mahler's opinion was just the reverse. 'Nein,'" he said (and one imagines the didactic forefinger confidently raised), "*Nein, die Symphonie muss sein wie die*

*Welt. Sie muss alles umfassen'* ('No, symphony must be like the world. It must embrace everything'). There, in the boundless German passion for the absolute, the comprehensive, the "philosophical," the profound, and in the implied disdain for the virtues of logic, balance and form, lies the answer to our enquiry; perhaps the wonder is that Mahler's symphonies are not longer still. And yet those of Sibelius, despite their strong local accent, seem to open limitless horizons, whereas those of Mahler, the better we know them, focus our attention more and more sharply upon the individual who wrote them, so much so that to the unsympathetic their atmosphere can seem positively claustrophobic. They form the intimate diary of a tortured man of genius; but that the quality is genius, and not (as people used thoughtlessly to say) the superlatively brilliant imitative talent of a great *Kapellmeister*, seems to me about as evident as anything in the world of aesthetics can well be. So to the beginner, and even to the exasperated, one should say: "Patience! The rewards are immense!"

---

#### WNYC AND WQXR BROADCAST BRUCKNER AND MAHLER RECORDINGS

Performances of Bruckner and Mahler as well as recordings of their music are being heard on the air with increasing frequency. New York City's Municipal Station, WNYC, and Station WQXR broadcast available Bruckner and Mahler recordings regularly. Both stations deserve special commendation for their contributions to the musical and cultural life of the communities within their radius.

## BRUCKNER'S EIGHTH IN CHICAGO

by Charles L. Eble

While New Yorkers packed Carnegie Hall to hear a Beethoven cycle program, Chicagoans filled Orchestral Hall to hear the first performance of Bruckner's Eighth Symphony in that city. It is astonishing that this symphony has had so few performances in this country, but the "music lovers" who combined forces to make a Beethoven cycle possible this year are no doubt the same ones who provided an overdose of Brahms last year, and on the whole compel conductors to keep programs popular. No major orchestra in Europe treats its patrons to such a limited repertory as U.S. symphony societies offer. (Of course, in Europe, no city the size of New York, Chicago, Philadelphia, or Boston, would be content with one orchestra.) The situation probably results from the lack of opportunity which audiences have had over a period of years to hear new material often enough to become familiar with it. As a consequence, the musical perspective of the average concert-goer is kept very narrow; while he learned quickly enough about Haydn, Mozart, Beethoven, Schubert, Schumann, Brahms, and Tchaikowsky, with Richard Strauss, Sibelius, Dvorak, Debussy, and Ravel following shortly after, he is unaware of a vast amount of other good music simply because he never gets a chance to hear it. Conductors are partly at fault, too. Each one is anxious to demonstrate that he can really do something with Brahms' First, or any of the other old war-horses. A glance through the programs of one or two conductors of the network symphony orchestras will soon show how they stick to old favorites. Naturally, any conductor is bound to have "favorite" pieces; let him conduct them, once in a while. But the limits of his taste certainly aren't those of a potential audience and to try to make them so is doing an injustice to the other music that has been written and decreasing the possibilities for the future of music. The Beethoven cycle in New York City didn't accomplish anything remarkable. Most people agree that he is here to stay. Besides, his music is certainly performed enough every season to make a complete parade of his genius unnecessary. When one thinks about what new compositions might have been presented during the same period of time without Beethoven's music suffering one bit,—need a Bruckner cycle even be suggested? Bruckner is stiff competition, I'll admit,—such a series didn't help music much.

In Chicago, on the other hand, this particular Bruckner symphony was new to most of the audience and it received a tremendous ovation. Szell and the orchestra had only to reveal this supreme conception to start people wondering why Chicago had had to wait so many years to hear it. No wonder that afterwards one man remarked to his wife that he'd like to hear more Bruckner and less Brahms, or that another kept exclaiming about Bruckner's mastery of orchestration, or a third, too overcome to speak, sat wrapped in awe. Nor is it strange that many people returned to hear the second performance of the work, for experi-

ences of this nature are rare and must be seized when available.

The newspaper criticism of the music and performance may be found on page 170 ff. My own views which follow are not exactly in agreement with them. It has been said that the articles and reviews which have appeared in CHORD AND DISCORD contain "too little of honest, dispassionate appraisal." There is no need to re-open the old argument as to what constitutes a good piece of music; that controversy will go on forever. If Aristotle had written an "Art of Music" we should now probably have an Aristotelian school in music such as exists in literary circles. Fortunately, music has been spared that catastrophe. Critics, as a rule, have generally felt that they had the right and duty to proclaim the shortcomings of the works they examine. Now just what the shortcomings turn out to be are usually what the critic himself doesn't like, and that supposedly is "dispassionate appraisal." There is no such thing as dispassionate criticism and if there were we should have no difficulty in turning out perfect works. The "perfect" compositions, if there are any, are few indeed. Not many composers have escaped reams of critical advice as to how their works should have been written — the 'How It Should Have Been Done' Society is a most charitable organization. I sometimes wonder what the fields of literature and music would be like if all the so-called bad works were thrown out and the remainder revised by critical precepts. For my own part, I'll take the original as the poet or composer conceived it. As for criticism, I rather lean toward what Swinburne said on two different occasions: "I can enjoy and applaud all good work . . . I have never been able to see what should attract men to the profession of criticism but the noble pleasure of praising." "My chief aim, as my chief pleasure, in all such studies as these has been rather to acknowledge and applaud what I found noble and precious than to scrutinize or to stigmatize what I might perceive to be worthless or base."

\* \* \* \*

The first movement of the Symphony begins with a tremolo in the violins which is followed almost immediately with the violas, cellos, and string basses, quietly and with fervour announcing the solemn opening theme—a theme whose character becomes increasingly expressive as the movement unfolds. It discloses itself somewhat reservedly and consists of two almost identical phrases, each rising to a sudden intensity and fading away, creating a feeling of deep mystery. The oboes and clarinets lament its departure by whispering in lingering sighs the ending of the first phrase alternately with the violas and cellos which extend with a slight modification (see below) the opening part of the phrase. A third melodic figure, which completes the first theme group restores a state of calmness and at the end of the cadence the main theme boldly reasserts itself with the help of several more orchestral voices. It demands attention and the theme's rhythmic characteristics become more sharply defined by this emphatic statement. The mood of wonderment is replaced by thoughtful and serious introspection. Thus, with the tone of the movement definitely established in "staid Wisdom's" firm hand, Bruckner, as if to forestall any weightier pronouncements, lets the serenely beautiful second theme sing its reassuring, melancholy strain.

There are two aspects of the first theme group which are of considerable importance and worth noting. The first two phrases (called the opening theme above) are identical rhythmically. The rhythm, an initial plain

 insistent , and crowning , has an identity all of

its own apart from its association with the theme. This pattern, marked by its brevity, simplicity, and graveness, recurs from time to time as a whole or in part—often only the first element—throughout this and the other movements and will be seen to be a dominant structural feature. The second factor also deals with rhythm and concerns the modification of the opening theme already mentioned above. This alteration, rhythmically, is

   —the   is derived, to be sure, from

the rhythm of the opening theme, but the doublet-triplet combination, one of Bruckner's favorite rhythmic patterns, is new. It occurs very frequently during the entire movement—the second theme appropriates it—and many of the most stirring parts of the movement result from the sometimes broadening and sometimes hurrying effects achieved through its employment.

After the two main theme groups are unveiled, Bruckner, in a series of transformations, reveals the uplifting emotional potentialities of the thematic material. When the opening theme returns there is a renewal of the mysterious air of the beginning. Then in an almost completely different mood, in a calm, sustained voice, the solo horn intones the opening theme, an oboe repeats part of it in yet slower measure, and the four Wagner tubas tranquilly add still more color and beauty to this earnest reflection. Later the theme shows itself in great majesty and solemn dignity as the deep-voiced instruments of the orchestra chant it ponderously. In one place the trumpets sound the rhythmic pattern of the opening theme as other parts of the orchestra freely dilate upon and play with melodic bits of the first theme group. This leads to a statement of the theme itself and a reminiscence of the second theme. Slowly the orchestra's forces shape an organ-like chorale of remarkable breadth and piety; at the same time the horns and trumpets decisively pronounce the dominant rhythmic pattern of the first theme, and, after the chorale reaches its zenith and ends, they continue the pattern, gradually becoming softer and ceasing. Two soft rolls on the kettledrums then foretell the movement's close. The violins for the first time sing the opening phrase of the first theme — it is as though the meditative quality they impart to it had to wait until this moment. A clarinet mirrors the same phrase in an inversion. The violins again tenderly indicate the rising and falling melody and the clarinet answers as before. The four note descending phrase — the same figure which the oboes and clarinets longingly clung to at the beginning of the movement—is now passed back and forth first between the first and second violins and then between the second violins and violas. The second violins drop out, and the violas in dark, sombre tones

prolong the end as they repeat the phrase, now shortened to the final three notes, and then, too, stop. This is one of the most beautiful and effective movement endings in all symphonic literature. It is interesting to note, however, that in his earliest sketches for this symphony Bruckner had mapped out a fortissimo close.

A Scherzo, somewhat paradoxical in its nature, follows the first movement. The violins in the first two measures create an eerie and fantastic atmosphere with a shimmering tonal pattern that continues in various forms until the Trio. Sometimes it reaches an almost wild state of agitation and becomes bizarre, at other times it subsides into a background of glittering, fanciful sound. In complete contrast to this wizardry is the thematic material which runs the course of this section. The opening melody saunters drolly forth in a matter of fact manner, entirely unaware of what surrounds it; a second melody is slightly angular and subtly portrays humor and irony; a third has an attitude of pleasant mockery. What Bruckner does with all this once it is introduced must be heard to be appreciated. Sudden changes of color by shifts in orchestration, numerous changes in placement of melodies within the measure to provide unexpected accents, and carefully built climaxes charged with degrees of bellicosity make this main part of the scherzo one of the few great examples in music of the mock-heroic, or, if one prefers not to use that term since Bruckner may not have intended the movement as such, of "homo simplex." The Trio is quiet and pensive. Yet, while the general atmosphere is completely different from the preceding part, the gentle humor is still present and particularly noticeable in the contrapuntal and rhythmic treatment of the melodies. After the Trio the main part of the Scherzo is repeated and this movement ends.

For anyone who loves Bruckner's music each hearing of the Adagio is an emotional experience which transcends any other in the realm of music. On the other hand, someone else (who counts minutes) has remarked that the Adagio of the Eighth Symphony is the longest any composer has ever written—in his mind, a dubious virtue, in others', a supreme triumph. I prefer the latter view, but it must be remembered that Bruckner was not intent upon seeing how long he could make this movement. Rather, he had, shall it be said, a certain vast conception of spiritual values to present and the movement took shape as he expressed the ideas it contains. The form was determined by the thought. All aspects of the movement are in complete concord with each other. This is always the case with Bruckner, even though critics have time and again decreed otherwise. Every movement is cast perfectly for what it has to say and each symphony is the whole of its movements. There is never any of that incongruity which results from thrusting ideas into set molds. If one carefully examines single movements at random, he'll find that Bruckner was a master artist, that all the criticism which has been directed at his works — the continual harping of critics about length, choice of melodic matter, process of development, etc.— is based upon preconceived notions of what a symphony should be like and is not in the least applicable to Bruckner, who wasn't trying to be anyone other than himself. There is no good reason why a composer should feel com-

pelled to strangle himself in a form which is nothing but a strait jacket for him, and, moreover, no true judge should censor him for throwing aside forms unsuitable to his ideas. One must take Bruckner's works as they are and endeavor to understand what Bruckner has to say by listening to his music often. The best in literature bears countless readings and frequently demands careful and repeated study to get to the sense; so with music, (if one will let it).

This Adagio proves the point. All traces of time and of surroundings are lost as the music leads us into spheres of beauty, thought, and feeling new to most of us — new, indeed, even to those who have been accustomed to look to Beethoven's last quartets for the ultimate in music. (No, Beethoven isn't displaced by Bruckner. There is plenty of room for both, and for other composers I need not mention.) The opening is unforgettable. Two measures are used for the strings to set a syncopated harmonic pattern in motion and at the third bar the theme (first violins) hovers over the accompaniment. One is hardly aware that it is a theme until the half-step ascent and return. Then follows the magic of a harmonic change in the accompaniment and the first violins sing on as before, only this time there is a half-step descent and return. This theme is the most important of the first theme group and its recurrence throughout the movement serves as a focal point. Almost of the same importance is the chorale the strings softly play soon afterwards. However, this movement contains so many melodies, their treatment is so varied, and their effect so dependent upon what precedes and follows, that to list them would contribute little to an appreciation of their beauty. One other theme, in any case, must be mentioned, and that is the first one of the second theme group — an eloquent discourse by the cellos. As for the remainder of the movement, we can't get too close, but have to keep our distance, and admire as if from afar. No other such mighty canvas of musical tapestry, integrated in every detail, and sustained in interest steadily progressive in thought and emotion from start to finish, exists. Not a note too long, not a note too short!

The Finale is, in the main, an acclamation of triumph and faith. At the end of the movement the welding together of the principal themes from each of the other movements into one monumental pyramid of sound reveals the organic nature of the work. What has gone before is suddenly seen in retrospect and the whole evolves into a crystallization of emotional experience and thought gradually developed since the opening of the symphony. One can imagine with what assurance and exultation Bruckner must have laid down his pen after writing the last measure of this tonal masterpiece which he knew had come to him through the gifts of God. (The Ninth Symphony, which he humbly dedicated to God, is, no doubt, heartfelt manifestation of his thanks, praise, and homage to his Creator.)

The opening theme of the last movement is majestic and stately. A military air is added by a crisp fanfare in the trumpets as the theme concludes. Immediately the theme is restated, the fanfare once again flashed forth, and a short vigorous march-like theme introduced. Then,

in contrast to the two preceding themes, a reposeful melody is added (Wagner tuba), which completes the first theme group. The next section is slightly slower in tempo, its themes imposing, and its harmonic and contrapuntal structure richly sonorous. There is no return to the first theme group for a considerable time, although the original tempo is resumed for a third set of themes which follows the slow portion. With this contrasting material to work with Bruckner makes of this movement a pageant depicting both worldly glories and celestial radiance. The splendor of some of the themes which reflect what I may call the "renown on earth" pales before the resplendence of heavenly majesty. Often there is a sudden interruption of a theme to present a complete change of atmosphere — usually a particularly lyrical or sublime passage will unexpectedly float into space in the middle of something not at all of that nature. These occasions are especially effective and it is that special difference in character Bruckner sought to show. It is like the brightness from the sun suddenly illuminating a landscape previously darkened by a cloud or a beautiful thought coming to mind practically out of nowhere to enhance something rather ordinary. To those who are bothered by some of Bruckner's unexpected breakings off of themes to show something quite different, this should serve as an explanation. The differences in effects are absolutely necessary to illustrate what he had in mind. "Smooth transitions" would certainly not achieve what Bruckner intended to point out — nothing would be more unsuitable than an attempt to substitute "smooth transitions" here. For that matter, Bruckner was a master of smooth transitions when he wanted them and this whole symphony contains dozens of transitions so beautifully fashioned that one is not aware of them.

As the movement proceeds, two or three small climactic peaks on the way to the summit are gained. We know the last heights are being mounted when a very restful passage (marked *ruhig*) consisting of an ascending figure is begun by the violins. This isn't the only symphony in which Bruckner uses this device, but what a delight it is to recognize it here, even on a first hearing, and to breathe deeply in anticipation of a glorious and powerful conclusion which is sure to develop. In this symphony, however, the top Bruckner scales is far above that which one could believe possible, and we have in effect an amalgamation of the entire work in this *tour de force* of a finale.

It is difficult to account for some of the violent critical reaction against Bruckner, and one can't help but regret all the lies that have been told about his music. Any one of his symphonies could be used to disprove them all. However, with this Eighth Symphony not only can all the adverse criticism be turned to no account, but Bruckner can be shown to possess in the highest degree the great technical skill which enables an artist to rise above it. Surely we can say of Bruckner what Tennyson did of Milton:

"O mighty-mouthed inventor of harmonies,  
O skilled to sing of Time or Eternity,  
God-gifted organ voice....."

## MUSIC OF GUSTAV MAHLER RANKS WITH THE GREATEST

by Louis Biancolli

The following article which appeared in the *N. Y. World Telegram* on Feb. 1, 1947 is reprinted by permission of the *World Telegram* and the author.

Long the forgotten man of music, Gustav Mahler, one of the world's greatest symphonists, is fast making friends in New York. Actually, he was influencing people long before that.

Some of the finest scores of our period show marked traces of Mahler's influence. So many composers have hymned the man's praises in words and music that Mahler is with us more than we realize.

The temptation there is to dub him a composer's composer, as if this man's music is the special property of those in the technical know alone. But this goes wide of the mark.

Gustav Mahler, for all the vast scoring he used, is really a people's composer. More than anything else, Mahler believed in simplicity—in life and art. Children and nature were twin sources of his inspiration.

Long ago budding composers found Mahler's symphonies an untapped vein of suggestion. Here and in Russia and England the younger set scanned his scores for fresh color and technic.

And soon it was found that these half-century-old symphonies were way ahead of their day, were, in fact, very much of our own time in mood and spirit. Shostakovich, for one, saw that early and his whole outlook changed.

Since Mahler's death, the symphonies have had an uphill climb to win wide appeal; not so much in Europe, as here. Unprepared, the public found this odd style hard to take. Applause was scant and people walked out of halls yawning.

The trouble there was the way the symphonies were programmed. Long intervals occurred between performances of the same work. Sometimes 10 or 15 years would go by before a second hearing.

No good music has any chance of sounding friendly in a cold-shoulder deal of that kind. Anything worth listening to is worth listening to repeatedly till the power and beauty are all disclosed.

I know several critics whose response to Mahler was only lukewarm at first—in some cases downright hostile—and then grew fervid with the years. I don't mind admitting I was one of them.

Growing closeness with the music, plus a study of the man's aims and ideals, helped bring the message of Mahler home. Many of us now admit Mahler is way up there beside Brahms.

Of course, no crusade to put a composer over is possible without conductors. Luckily a few have come along with a glowing faith in the master and their work has been like a mission.

Today most American concertgoers are exposed at least once a season to a Mahler symphony. Of course, if they hug the radio, their chances of a bigger quota are better. The situation still can stand improvement.

For the best way to give Mahler his due is keep all nine of his symphonies—plus the "Song of the Earth"—before the public the same way Beethoven's are.

The advantages to Mahler would be obvious, just as the advantages to America's concert public would be obvious to those of us who believe in the work of this tragic genius.

But the gain would be felt by other composers, too, for they would be relieved of much of the excess pressure caused by the limited number of symphonies in the standard repertory.

My feeling is that Brahms, Tschaikowsky and Beethoven, if they could make their sentiments known, would welcome Mahler's nine symphonies as full-time colleagues of their own.

Otherwise, as far as the classical repertory is concerned, the busy B's and their fellows will run the risk of being worked to death on their present overtime schedule.

---

#### BRUCKNER'S *E MINOR* MASS ON RECORDS

The month's offerings in new phonograph record fare are particularly outstanding. Most noteworthy is the advent of Capitol Records, previously a specialist in jazz and popular light classics, into the classical field. This energetic company has garnered many of the famous German Telefunken matrixes and is releasing them domestically. It makes its deserved bid for public recognition with the album of the Bruckner *Mass in E Minor*, [slightly cut] as performed by the Hamburg State Opera Choir and Orchestra under the baton of M. Thurn. The *Mass* is one of Bruckner's greatest works as to cohesion and creative inspiration; moreover, in no other composition does he so eloquently reveal his passionate love for God and man. His use of an orchestra composed only of woodwind and brass and his setting of the choral parts are masterly; their fusion results in one of the most uplifting musical experiences.

PAUL HUGO LITTLE, *Musical Leader*

## THE NINTH SYMPHONY OF ANTON BRUCKNER

This programme note, written by Robert Simpson, was issued by the *Exploratory Concert Society* (with whose permission it is reproduced here) on the occasion of a lecture by Dr. Hans F. Redlich on September 17, 1948, at St. Martin's School of Art, London. The subject was Bruckner's Ninth Symphony, and the event was notable for the first performance in England (on the piano) of the sketches for the unfinished *Finale*, welded into a fragment by Alfred Orel. This was played by Dr. Redlich with the assistance of Mr. Simpson (four hands).

This note deals with a few points of more general scope. Bruckner (1824-1896) is regarded in Central Europe as a first-rank master; here his music is treated with less than due respect, chiefly because its dimensions and style demand more than can be given by the habitual sight-reading methods of most British orchestras. Travesties like that inflicted on the Fourth Symphony by the Halle Orchestra last October are naturally received plaintively by critics who vent their mystified irritation on the composer. Similar effects were caused by the B.B.C.'s recent well meant but sadly maladroit fumbblings among the Mahler symphonies. Accurate judgment of such works depends on frequent good performances, which (under the right conditions) would induce all but the most obdurate minds to recognise the unusual distinction of the music. Repetition is as important as good playing, for even when Bruckner's Second Symphony was finely played by the Hamburg radio orchestra it was not saved from a slick condemnation by a "critic" whose cleverness is evidently enough to exempt him from study.

Bruckner must be approached with a fresh mind. Mechanical notions of symphonic style do not help appreciation of his kind of originality, for though he has nothing to do with with "Classical" symphony, his large designs can be made to show rough semblances of sonata shape. Consequently Brahms, who mastered his own art, is often quoted as Bruckner's superior in matters where there is no ground for fair comparison: the giant scale of the latter's conceptions makes useless the swift play of keys that dominates the work of Beethoven and Brahms. The wide, slow sweep of his thought, though it creates clear symmetries, demands that its hearer should grow up to it. Great harm has been done by the hackneyed cant about the old man's "simplicity" and "naivete": one glance at his head is enough to show that the serene trustfulness of the face is not all. There is the broad, high cranium, a massive and impressive dome, to be observed. The music itself reveals to careful scrutiny that the simple spirit was expressed through an instrument capable of solving the most detailed problem of a new and very difficult art.

In spite of external similarities each Bruckner symphony differs much from its fellows: each has its own way of treating its tonalities, its balancing of mass and void. In all, however, Bruckner wields whole paragraphs as themes, so that his forms fall into well defined sections, like

the plain divisions of churches. Indeed, the music is demonstrably written in terms of cathedral-like acoustics and its periodic pauses are fully effective only in a building that can create awesome dying echoes: this is true also of many of his remarkable endings, where often the full blaze of the orchestra is suddenly cut off. These works need to be played in the right conditions, and if that is thought to be a reprehensible limitation, the same objection must be raised against the masters of Sixteenth Century church music for they, too, wrote in terms of special acoustics conditions. There is no reason why first-rate orchestras should not make regular visits to cathedrals to play Bruckner.

The Ninth Symphony (like Beethoven's in D Minor) is perhaps the most original and far-reaching of his works. The vast first movement is based on a clear plan of *Statement* and *Expanded Counterstatement* with a great Coda added. There are three elements in the colossal Statement. (1) a long slow crescendo, containing several melodic ideas, rises in about 3½ minutes to a terrific unison theme in the full orchestra (in actual effect utterly unlike that in Beethoven's Ninth). (2) is a flowing section, starting in A major, creating its own smaller climax that falls into an intensely quiet, strange link to (3), a more severe paragraph opening in D minor, in mood midway between (1) and (2), moving to a heavy earthbound crisis which clears at the last moment. These three parts are roughly equal in length. Then comes the *Expanded Counter-statement*. (1) comes over a long pedal F and grows in four huge waves to the unison theme, itself magnified into two even larger sweeps, the first enveloped in furious, titanic string passages and the second tramping and heaving towards an almost seismic irruption in F minor. The mood here is not unlike that of Book I in "Paradise Lost". From this slow, gently circling figures drift into (2), which comes as a great relief, and is fused with (3) into a single group, with the intensified end of (3) as its climax. Solemn cavernous cadences then herald the mighty Coda which, using figures omitted from the counterstatement of (1), raises the most awe-inspiring sounds in the piece.

Bruckner's supposed naivete is belied by the Scherzo, harmonically perhaps the boldest essay by anyone at that date (1894). Its blunt fierceness has a fiendish quality which may perhaps represent the composer's view of evil, expressed with the sublime detachment of one who is himself unsoiled; it is thus the more terrifying. The trio, icily compelling and repellent, slips past at a much faster pace.

The Adagio, with its faint allusions to earlier works, is undoubtedly a deep meditation on last things and on past experience, in both the musical and philosophical senses. It begins with two main paragraphs, the first uncertain in key, groping slowly and finding a loud yet mysterious outburst, and the second in A flat, a calmer cantabile passage. After this come wide-ranging developments of the first group, sometimes hushed and sometimes full of power, and always strikingly prophetic of the next century. During this long section there is but one interruption, a return of part of the second group in A flat, attempting to establish a solid tonal centre amid many dissolving elements. In this it fails and the dark

searching recurs until it finds the clouded dominant of E. Then in E major the second theme sounds again, augmented and rearing with immense slowness into the most powerful climax of the whole work. Its summit is a tremendous dissonance (E, F sharp, G sharp, A, B sharp, and C sharp) which so shocked Ferdinand Löwe that he diluted it into something comparatively innocuous: the original version was not published until 1934. Finally there is a serene Coda that shows Bruckner's power in reverse action. His greatest skill lies in his ability to erect towering climaxes: here the tension is slowly eased until the end is as still and broad as a cloudless sky.

The sketches show that the Finale would probably have combined the contrapuntal brilliance of that of the Fifth with the massive granite-like consistency of that of the Eighth. Dr. Redlich will explain, among other things, the connection of some of these sketches with the *Te Deum* of 1884. When Bruckner feared that he would be unable to finish the Ninth, he suggested tentatively that the *Te Deum* might be used as a finale. This has sometimes been done, though its effect is not satisfactory; not only is the style of the Choral work incongruous, but its key, C Major, fails completely to balance the very incisive D minor of the first two movements. It is as if a cupola were placed on Westminster Abbey where that building might well have had a central tower. Fortunately the Adagio, like the slow movement of Schubert's B minor symphony, makes a moving ending and it is at all events better than if the demoniac Scherzo had been placed third in order.

Lack of space forbids much more comment on Bruckner as a symphonist: it must, however, be stressed that most of the charges against him become enfeebled by close knowledge of the actual works themselves; there is lasting absorption to be found in discovering his diverse yet consistent methods of solving his structural problems. Nothing could be more subtle or refined, for example, than his handling of key in the Seventh, more terse (in its way) than his sonata forms in the first movement of the Eighth and the slow movement of the Sixth (he could and did master true sonata form on a very great scale when he wished), or more original than his unprecedented strokes of form in the largely contrapuntal Finale of the Fifth. Any fool can pick holes in a great composer's work: temperamental disaffinity is no excuse for unfair and ill-founded jibes. Listeners willing to measure their own efforts by the composer's will find in Bruckner as much grandeur and beauty as can be uttered by one man in a medium that may be described, more aptly perhaps than any other in music, as architectural. And there is no need to bring to bear a high degree of technical knowledge. Musical persons who can appreciate the experience of sitting in a great cathedral with plenty of time to spare are already half-way to the understanding of Bruckner.

## MAHLER'S EIGHTH CHEERED BY 18,000 IN HOLLYWOOD

*Hollywood Bowl Orchestra, Eugene Ormandy, Conductor; Hugo Strelitzer, Choral Director; Frances Yeend, Olive Mae Beech, Sopranos; Eula Beal, Suzanne Coray, Altos; Charles Kullman, Tenor; Mack Harrell, Baritone; George London, Bass; Greater Los Angeles Chorus (organized by L.A. Bureau of Music, J. Arthur Lewis, Coordinator), Adolph Heller, Ass't. Chorus Director; Boys' Choir, Roger Wagner, Conductor — Ass't. Boys' Choir Directors: Robert Mitchell, Donald Coates, and Bruce Josef. Hollywood Bowl, California, July, 29, 1948.*

The pre-performance ballyhoo for Gustav Mahler's mighty and massive Eighth Symphony, the "Symphony of the Thousand," resulted in a near sellout crowd last night in Hollywood Bowl.

Some 20,000 persons were on hand for the historic and momentous performance which Eugene Ormandy had asked to be presented when he was offered the musical directorship of the Symphonies Under the Stars for the current season.

The presentation was momentous for any number of reasons. In the first place, it was only the fourth time that the Symphony had been presented in this country. Secondly, it was witnessed by the composer's widow, Madame Alma Mahler-Werfel, along with Bruno Walter, one of Mahler's foremost disciples.

For these reasons the presentation was a feather in the cap of the Hollywood Bowl. The vocal and orchestral demands of the production make it well-nigh impossible for a small community to produce. Only in a major and music-loving city can the necessary voices and instrumentalists be found to guarantee a fairly accurate facsimile to what the composer intended.

For example, two adult choruses, a boys' choir, seven soloists and an augmented orchestra were necessary to pour out into the cool night air the majestic thought conceived and executed in mass Germanic music by Mahler. It is doubtful whether at any later time will so many decibels of pure tone pour from the multi-lighted shell as during the finales of the Symphony's two movements.

Never having heard the symphony before, of course, it is a question in my mind as to whether or not the orchestra was out-balanced in the presentation of the whole. Truly it seemed as if the sweeping vocal output would at times swallow the instrumentalists in topheavy utterances. With the vocalists taking up the rear the orchestra was pushed to the front and was forced to play without the benefit of the huge sounding board of the shell.

The Latin hymn, "Veni Creator Spiritus," provides the setting for the shorter first movement of the Symphony, while the second movement,

which is much longer, embodies the theme from the second part of Goethe's "Faust." Consequently, as you might expect, the music runs the gamut of piety, entreaty, adoration, humiliation, supplication and prayer to spiritual transfiguration — brought to stupendous climaxes by an upsurge of swirling effort on the part of singers and musicians.

The intended effect is a little awe-inspiring and totally monumental and for a few heartbeats gives an excuse for the terrific amount of time and practice necessary to co-ordinate the massive group of musicians into a welded whole.

OWEN CALLIN, *L. A. Herald Express*

Hollywood Bowl added immeasurably to its stature last night with a stirring performance of Gustav Mahler's Eighth Symphony, the so-called "Symphony of a Thousand." A near capacity audience of 18,000 persons heard Eugene Ormandy conduct the massive work with forces consisting of two adult choruses, a boys' choir, seven soloists, an augmented orchestra and a brass choir posted above the shell to bring each of the two movements to imposing climaxes. It was only the fourth production the symphony has had in the United States, and the first public performance in 15 years.

The performance was heard by the composer's widow, Alma Mahler-Werfel, to whom the work is dedicated, and by his great friend and disciple, Bruno Walter.

For all its length and gigantic apparatus, Mahler's Eighth Symphony is, perhaps, the most accessible and readily understandable of the composer's nine works in the form with the possible exception of the Fourth. It breathes sometimes an almost overpowering sense of humanity. Its tremendous climaxes surge on such exaltation of the spirit as is known to but few works in the whole range of music, and the tenderness and sense of transfiguration achieved in the long-spun final movement accomplish a sense of radiant serenity that seems to soar on unearthly wings.

The first movement summons the creative spirit of mankind in a setting of the Latin hymn, "Veni, Creator Spiritus." It moves with a sort of Handelian majesty, with the choral and solo forces constantly opposed and rising to wave after wave of enormous exultation. When the offstage brass choir joins the piled-up climax at the end, the effect is like the sounding of the last Judgment.

The second movement has for its text the final scene of the second part of Goethe's "Faust." It is a less closely knit structure than the first, and Mahler has used his forces with almost infinite variety of effect to convey the slow-moving sense of spiritual transfiguration. Some of it has that tortured anguish of soul that is so typical of Mahler's genius, while other sections are of a folklike simplicity and naivete equally characteristic of the author. The chorus is used more sparingly in this movement and the soloists have long passages of songful melody, while the orchestra works over the important themes of the entire work.

The production was a unique and thrilling experience and worth all the enormous effort and expense which went into the undertaking. Mr.

Ormandy marshaled his far-flung forces with superb mastery. The first movement marched inexorably with unrelenting momentum and the huge chorus shouted its proclamations with tremendous impact. The final movement was read with the most sensitive feeling and the poignant orchestral passages displayed the Bowl orchestra at its best.

The seven soloists were fully equal to their arduous tasks. If it is possible to single out the splendid work of Frances Yeend, Eula Beal, Mack Harrell and George London, it is only because they had more grateful opportunities than Olive Mae Beach and Suzanne Coray.

The great chorus and the boys' choir acquitted themselves admirably and testified to the grueling preliminary preparation by Hugo Strelitzer, Adolph Heller and Roger Wagner. It was not a flawless performance but it was a tremendously moving one. It brought one of the most impressive nights of its history to Hollywood Bowl and raised that enterprise to a festival status that should be its permanent order.

ALBERT GOLDBERG, *Los Angeles Times*

Hollywood Bowl was filled, last Thursday night, with the magnificence for which nature framed it.

For the first time west of Chicago, and for one of the few times anywhere, the precious materials were assembled for the stupendous structure in sound which is Mahler's Eighth Symphony.

There was, in Eugene Ormandy, a front rank conductor who saw through the ever inadequate letter of music and perceived the spirit; who was high minded rather than high handed.

There was a coherent, responsive, proficient orchestra, along with seven fine vocal soloists.

Above all, there was the huge choral ensemble, need for which has caused the Mahler work to be called the "Symphony of the Thousand Voices."

The chorus commanded interest because of its sonorous tone, its accuracy of rhythm and pitch, its responsiveness to direction and its fervor for song; and likewise because of the manner in which it came into being.

It had its origin in the community choral groups which the Municipal Bureau of Music started, rather diffidently, about three years ago. Citizens rallied to these choruses with such surprising eagerness and in such large numbers that they have become important community enterprises. From their best singers were recruited the seven or eight hundred vocalists who made up the notable group heard Thursday night.

It is called the Greater Los Angeles Chorus. J Arthur Lewis, coordinator of Bureau of Music activities, trained it, with the help of the many community directors. Roger Wagner trained the Boys' Chorus, aided by Robert Mitchell, Donald Coates and Bruce Josef.

The performance was the flowering of a city's will toward music. It was of, by and for the many, not the few.

The grandeur of the Mahler score has been so widely celebrated that no reaffirmation of it is necessary here. It is a musical avowal of faith in God and in redemption.

The first portion sets the Latin text, "Veni, Creator Spiritus." The second uses the final scene of Part Two of Goethe's "Faust," in which the angels and saints carry to heaven the Faustus who has redeemed himself through "constant striving."

The exaltation of spirit was caught by all the interpreters, and transmitted to an audience of 18,000 who listened throughout in attentiveness rare and even unprecedented among Bowl patrons.

Soloists were Frances Yeend and Olive Mae Beach, sopranos; Eula Beal and Suzanne Coray, contraltos; Charles Kullman, tenor; Mack Harrell, baritone, and George London, bass. They sang beautifully.

Finally, the group of 12 brass instruments, pealing out from a parapet in the finale of each part of the symphony, culminated periods of splendor such as one encounters seldom in a lifetime.

PATTERSON GREENE, *Los Angeles Examiner*

One of the memorable experiences of this or any music season was listening last night in Hollywood Bowl to a profoundly moving performance of Gustav Mahler's Eighth Symphony, the "Symphony of a Thousand."

A crowd of 18,000 thronged to hear it and stayed, when it was over, to cheer Eugene Ormandy, conductor, the expertly trained choruses—two adult groups and a boys' choir—seven soloists, an enlarged orchestra and a brass choir and all the others working behind the scenes who rolled up a staggering total of 69,000 man hours in order to make this performance possible.

There was both a challenge and a reward awaiting these people in the Bowl last night. The challenge was the score itself—a work of almost unbelievable complexity and beauty.

And the reward? Well, those were boxoffice lines jamming Pepper Tree Lane last night, not battlelines, making it difficult to believe what the textbooks tell us—that not all concertgoers were partisans years ago whenever a Mahler symphony was performed. Remember that famous quip about the door sign meaning "Exit in case of Mahler"? The scathing sarcasm of that remark has dissolved into a chuckle in this day when people are increasingly aware of Mahler's greatness.

Mme. Alma Mahler-Werfel, widow of the composer, and Bruno Walter, his personal friend and disciple, were among the special guests last night to hear the first performance of the symphony in this country in 15 years.

The work unfolds first in a setting of the Latin hymn, "Veni, Creator Spiritus," wonderfully compact in its musical structure as it summons the creative forces of man to prepare the way for eternal life. "Burn flame into our senses, Pour love into our hearts" chant the massed choruses. And when the brass choir trumpets the closing measures of this movement, it is a glorious plea for the soul at the bar of last judgment called out by a mighty host of singers.

The second movement takes its text from the final scene of the second part of Goethe's "Faust." There is exaltation in its promise of resurrection, passion in the beauty of its song and the poignancy of its supplication

reflects equally well Mahler's own "reflection of man's painful struggle towards spiritual orientation."

The soloists—Frances Yeend and Olive Mae Beech, sopranos; Eula Beal and Suzanne Coray, contraltos; Charles Kullman, tenor; Mack Harrell, baritone; and George London, bass, were beautifully attuned to their assignments. The great choruses, the boys' choir and the Bowl orchestra acquitted themselves with honor in all respects. And to Hugo Strelitzer, Adolph Heller, and Roger Wagner, goes special praise for their work with the hundreds of singers.

MARGARET HARFORD, *Hollywood Citizen-News*

Hollywood proved last week that quality need not always be in inverse ratio to the adjective "colossal" when Hollywood Bowl featured the first western performance of Gustav Mahler's mighty Eighth Symphony, the so-called "Symphony of a Thousand."

The event provided the high point, musically speaking, of the twenty-seventh summer season of "Symphonies Under the Stars"—a season otherwise without novelty or even much relief from the mainstays of the nineteenth century's romantic repertoire. It seemed as though the hundreds of singers, instrumentalists and organizers had, in this dearth of challenging works, plunged themselves into the vast undertaking with a creative fervor which could not fail to bring a musical re-creation of true greatness.

The scope of the undertaking may be gauged by the fact that the Greater Los Angeles Chorus of 625 voices, recruited through the city's Bureau of Music, had held weekly rehearsals since the first of this year, and by the estimate that almost 70,000 manhours of musical labor had gone into the preparation of the work—not counting the additional time necessitated by the many administrative factors involved.

The magnitude of the undertaking and its excellence was matched by the crowd which attended—some 18,000 persons, almost all of whom were probably unfamiliar with the music, but who were lured by the opportunity of hearing a work of such proportions. Indeed, the public response was such that one wonders at the shortsightedness of the Bowl management and the Los Angeles County Board of Supervisors, which underwrote much of the cost, in arranging neither a repeat performance nor a radiocast performance on the Bowl's Sunday afternoon concert. The additional expense would have been relatively slight, compared with the huge cost for the single performance, and there is no doubt but that the work would have attracted a second large audience.

Certainly a Sunday radiocast would have given far more pleasure to the nation and far more prestige to the Bowl than did the "warmed-over" program of Weber, Dvorak and Ravel, repeated from previous Bowl programs the week before, which Mr. Ormandy led for the air audience. And, fundamentally, it is deplorable that all possible means of enlarging to the utmost the number of hearers should not have been undertaken on behalf of a work so rarely heard because of its performance difficulties.

For this huge musical tapestry testifying to man's faith deserved to be heard by millions rather than by thousands. Though vast, complex, and

somewhat inchoate in its design, the Mahler Eighth Symphony is anything but a remote and ascetic testament. Its orchestral colors are sonorously rich and often high-colored; there are frequently moments in which it is all too obvious that many of our composers for the films have liberally borrowed from this strong-hued palette to a point where Mahler's sweetness of resignation and understanding have crystallized into sugar.

Perhaps the most difficult factor in Mahler's music is the pattern of transitions from choir to choir within the orchestra, from section to section within the chorus, from orchestra to chorus, and from both to the seven soloists and the extra brass choir which, in this case, played from a platform flanking the Bowl's sound-reflecting shell. The conductor who could homogenize these various factors with but four orchestral rehearsals, and one or two with chorus and some of the soloists, would be a leader par excellence. Mr. Ormandy undoubtedly would have benefited had he been given even more orchestra rehearsals, but from the standpoints of sincerity, vitality and aptitude for coordination his interpretation was masterly.

It was no small psychological hurdle to undertake the rehearsals and performance of so distinctive and demanding a work in the presence of the composer's widow (Mme. Alma Mahler-Werfel), to whom the score was dedicated, his close friend and disciple (Bruno Walter), and many of the great composers, conductors and musicologists who make Los Angeles their home, and who made the Bowl a center of their attention and comment during the days preceding the performance.

However, despite Mr. Ormandy's superb interpretation, the ultimate triumph was that of the chorus and its trainers—Dr. Hugo Strelitzer, Adolph Heller, and Roger Wagner. The juvenile exuberance of the 625 who were crammed into the shell behind the orchestra may have given Mr. Ormandy some annoying moments during rehearsals, but they sang beautifully during the performance. Though a trifle short of basses, the balance as a whole was admirable as was the crispness of attack, the almost consistent accuracy of intonation (a hazardously difficult accomplishment in this particular symphony), and the relatively distinct diction by so large a group.

Among the soloists the outstanding was easily Miss Frances Yeend, who sang flawlessly throughout the work. George (Bjoernsen) London, the bass, has a firm, resonant voice, but unfortunately he suffered from over-amplification during the first of the two movements. Mack Harrell, baritone, also seemed better as the evening progressed, a thing which could not be said of Charles Kullman, the tenor. Olive Mae Beach, soprano, and Eula Beal and Suzanne Coray, altos, completed the roster of capable soloists.

At the close there was thunderous applause from the near-capacity audience and from the vast chorus itself.

C. SHARPLESS HICKMAN, *The Christian Science Monitor*

Gustav Mahler's monumental Eighth Symphony packed Hollywood Bowl to full capacity last night, as the work received its first western performance

by Eugene Ormandy and a musical assemblage of more than 1000 artists.

It was a triumphant occasion, and one that reflected great credit on the Bowl for presenting it, on Ormandy for his heroic undertaking, and on the splendidly disciplined soloists, orchestra and three gigantic choruses which performed their extremely difficult tasks both ardently and well.

The choristers, in severe black and white, completely filled the huge shell, which colored lights caused to arch in multiple rainbows above them. It is not easy to dwarf the spectacle of 1000 people massed in the ranks demanded by this work, but for the first time in its history Mahler's famous "Symphony of 1000" was outnumbered by the dramatic spectacle of the nearly 20,000 rapt listeners that extended to the surrounding hills.

Ormandy, fortified this time by a score, proved again that his podium mastery is equal to the most gruelling technical and spiritual demands. The assurance with which he led the various contingents through their roles, moulding the vocal curve adroitly through the most hazardous tempi changes, and keeping both voices and orchestra in perfect balance was an inspiring example of conducting at its finest.

Even aside from its unusual numbers, the Eighth is not an easy work to conduct. Among other things, it has moments when the musical line seems almost to evaporate, leaving a single voice singing frailly in the wake of a shattering ensemble crescendo. To bridge such moments smoothly a conductor needs an unerring sense of the music's underlying unity, a faculty which Ormandy demonstrated with glowing results. The "bravos" which greeted the work's conclusion surely confirmed the wisdom of his request to include this work on his first Bowl season.

The two mixed choruses and boys' choir, recruited months ago through the Bureau of Music and other civic agencies, proved to have been well-disciplined over the months by Dr. Hugo Strelitzer and Adolph Heller. Their attacks were clean, with a sharply dramatic release at the first movement's conclusion, and they sang throughout with fine quality, animation, and regard for the music's text.

The score calls for eight soloists, seven of whom formed the principal heavenly choristers last night. These were sopranos Frances Yeend and Olive Mae Beach; Contraltos Eula Beal and Suzanne Coray; Charles Kullman, tenor; Mack Harrell, baritone, and George London, bass.

Each gave a brilliant account of himself, singing with sensitive phrasing, fine vocal quality and technical assurance music that imposed difficult interval leaps of ninths and elevenths as well as its burden of deep emotional weight. For its part, the greatly augmented orchestra, including the additional brass choir (also augmented) which trumpeted the concluding fanfare to both movements, behaved very well.

The symphony is in two movements, dissimilar in style, yet both recalling the fact that Mahler was not only a sincere musician but an innate showman. The impact of both is equally dramatic, even theatrical, and while the text has a sober religious character, it is clothed in music that is romantic, melodious and sensuous.

The element of contrast is an integral and intensifying part of all art, and the present work is a singular example of this. From beginning to end it abounds in those paradoxes which have divided Mahler audiences into

sharply opposed camps to this day. It is the weaknesses, and not the virtues, of a creative artist which gain him his most militant champions. No one passionately defended Mozart, but the air is still rent with cries from the camps divided over Wagner, Bruckner and Mahler.

Perversely enough, it is the latter's weaknesses as a composer that impel even a critic to emphasize his virtues. But the presence of both these qualities in the present work is the least of its contradictions. Far more significant is the date of its creation, when European culture was crumbling into pessimism on the brink of World War I and musical expression was divided between post-Wagner adherents, Debussian impressionism, and the young Schoenberg's startling new musical geometry.

It is not surprising that Mahler, with the mystical attitude of a medieval ascetic, should have sought philosophical solace in his choice of text for the Eighth Symphony. Nor is it surprising that Mahler, the supreme batonist of his time, should have stated his ascetic philosophy in extravagant orchestral terms requiring 1000 voices for its utterance.

The Eighth Symphony is, in effect, a musical dissertation on the theme which occupied Mahler from early childhood—the mystery of death and resurrection. This was also the chief preoccupation of the Middle Ages, and his choice of the ancient Latin plainchant, "Veni, Creator spiritus," as the motive kernel of his first movement, affirms his temperamental affinity with the past at a time when other composers were impatiently heralding the future.

This attitude was apparent as early as his Second Symphony, but an immense crystallization took place between the Second's young, Werther-like pose of tragedy and the Eighth's mighty crescendos of exultation and faith, which had to be mighty in order for Mahler to hear them above the beating of the wings.

The Eighth, in fact, is not so much a musical expression as an emotional experience translated into the only terms the composer knew, and presented with a melodic directness that frequently borders on the trite. One feels too much; there is too frantic an affirmation of his adopted faith, and an excess of instrumental and vocal voices to match his excess of fervor. For all this, it is refreshing to hear occasionally music that inquires into the mysteries of the universe, in a period when composers are content to tat little musical doilies.

When we come to the question of its form, the Eighth poses more paradoxes. It might equally be called a "symphonic cantata," so vocal is the symphonic basis. In the first movement, the voices are treated in a quasiclassical fashion, in the second operatically. In the melodic fabric, there is again the paradox of a sophisticated orchestral knowledge put to the service of themes scarcely distinguished enough for the exalted strophes they are required to carry.

However, Mahler utilizes them with rare craft, and for all his unorthodox development, he is faithful to his original few themes. Thematic nuggets from the opening "Veni," as well as from the second melody sung by soprano solo and violins, reappear constantly, in varied guises, not only throughout the first, but even in the second movement.

The first is scarcely in strictly classical sonata form, but it retains its relation to it by the manner in which the themes are presented, and by a clearly marked development section—not, as some believe, a double fugal but a highly complex fugal treatment of material. Throughout, there is the same close integration of instrumental and vocal writing, although in the second movement, the soloists have a certain operatic prominence.

In this, wherein the form is subservient to the requirements of Goethe's text from the final scenes of "Faust," Mahler strikes a note of simple songfulness, of almost folklike unpretentiousness. It is true that if one looks, he may find musical references to Parsifal, Aida, Schubert, Strauss and Bruckner, among others. As a conductor, Mahler had to perform so much music by other composers it is not surprising that some of it filtered into his own. But the Eighth Symphony has, with all its faults, moments of high grandeur and deep emotional impact. Those we cannot take from it.

MILDRED NORTON, *Los Angeles Daily News*

#### BRUCKNER'S FIFTH ON RECORDS

Newest among the releases of European recordings of *Bruckner* symphonies is Capitol's issue of the Austrian master's *Fifth Symphony* set forth by the Hamburg Philharmonic Orchestra conducted by Eugene Jochum recorded on two doubled-faced twelve-inch LP's. The symphony is played in its original, unedited version and Mr. Jochum proves again, as he did in his recorded version with the same orchestra of *Bruckner's Eighth Symphony*, that he is one of the few genuinely understanding interpreters of this composer's towering creations. Unfortunately, although the recording leaves little to be desired, considered from the tonal aspect, much of the pleasure in listening to it is marred by the consistently noisy surfaces.

JEROME D. BOHM, *New York Herald-Tribune*

## OVATION FOR MAHLER'S SECOND BY TANGLEWOOD AUDIENCE

*Boston Symphony Orchestra; Chorus (Hugh Ross, Conductor); Ellabelle Davis, Soprano, and Nan Merriman, Contralto, Soloists; Leonard Bernstein, Conductor; Tanglewood, August 1, 1948.*

The "Resurrection" Symphony, in case anyone needs to be reminded, is one of the bigger masterpieces of the 19th century—bigger both in scope and the number of musicians required, and in the vast extent of Mahler's conception. This is music of astounding skill as well, in which a supreme master of the art and science of orchestral writing sought to encompass no less than life, death and the rising of spirits thereafter. This is also music of such depth, power and overwhelming emotional tension that it leaves you in something of a daze.

Mahler had what might be called a lengthy temperament. He was not one to condense his thought, and consequently his scores require both time and receptive attention. The "Resurrection" takes more than an hour and 15 minutes, yet, except for a few early departures, the huge gathering in and outside the music shed listened quietly—although some did burst out with ill-timed applause between some of the movements.

Mr. Bernstein's performance of this work in Boston last Winter was the outstanding event of the season. If it does not turn out to have been the peak of the Berkshire festival, it will not have been due to any faults of his. Yesterday, he repeated his impassioned and musicianly reading. There were some discrepancies, however, that made this performance a little less impressive than the one in Boston.

The chorus, though larger here, did not produce so much resonance as you were entitled to expect, though they did sing the soft entrance—and elsewhere—with round beauty of tone and thorough precision. Of the soloists, Miss Davis excelled in a beautifully voiced and styled performance of the soprano part. Miss Merriman, making her festival debut, sang conscientiously, but her voice had something of a tremolo, the text was sometimes peculiarly pronounced and there was less feeling than there ought to have been.

CYRUS DURGIN, *The Boston Globe*

Mr. Bernstein then took over and led the Boston Symphony and the festival chorus of 250 voices through the varied beauties and excitements of Mahler's Second or "Resurrection" Symphony that he had revived with such signal success in Boston last season. The solo singers this time were Ellabelle Davis, soprano, who sang in the Boston performances, and Nan Merriman, contralto.

It was something to hear and see the demonstration that greeted the symphony in Symphony Hall and since 10,000 people can make more noise than 2,000, speaking in round numbers, the scene in the music shed this afternoon was even more inspiring. The concert was over-long, just short of two hours and a half, but Mahler and his interpreters kept the great audience enthralled. At the end it was again a case of pent-up emotions released.

WARREN STOREY SMITH, *The Boston Post*

Today's audience witnessed the distinguished composer, Darius Milhaud, conducting his own Second Symphony and Leonard Bernstein repeating the impressive Mahler Second which nearly lifted the roof of Symphony Hall last February and the New York City Center a year earlier. Mr. Bernstein's company included Ellabelle Davis and Nan Merriman as the gratifying soloists, and the 200-voice festival chorus evidently trained within an inch of their lives by Hugh Ross. Those who witnessed either of the earlier performances generally allowed that today's was easily the best of the three. Bernstein easily achieved another triumph.

HOWARD WATSON, *The Boston Herald*

---

#### BRUCKNER QUINTET PERFORMED IN NEW YORK

The Stradivarius Society, newly formed under the direction of Gerald Warburg, has announced a series of three chamber music programs, each one to be given twice at the Metropolitan Museum. The Busch Quartet participated in the first pair of concerts, January 10 and 11, and the program included Bruckner's String Quintet.

## AMERICAN PREMIERE OF MAHLER'S TENTH

*Fritz Mahler Conducts Erie Philharmonic in  
First Western Hemisphere Performance*

The following review appeared in the *Erie Dispatch* after the first of two performances given December 6 and 7, 1949.

Much new music has been introduced in past seasons by Fritz Mahler and the Erie Philharmonic Orchestra, but none so important and worthwhile as the Gustav Mahler Symphony No. 10, which had its premiere performance in this hemisphere last night in Strong Vincent Auditorium.

This work, of which only the two movements were completed before Gustav Mahler's death in 1911, is beautiful and deeply moving music.

We hazard the opinion that it will become firmly established in orchestral repertoire on this side of the Atlantic.

This symphony was the major offering in the Philharmonic's third pair of concerts, with the program to be repeated this evening.

\* \* \* \*

Gustav Mahler had projected his final symphony in five movements. He had made preliminary sketches for all five sections, but the harmonies, contrapuntal structure and instrumentation for only the two movements played last night were completed.

The Scherzo, originally intended as the third movement, is a short section distinguished by excellent craftsmanship. It has a restless, almost brooding quality about it, relieved by rather startling contrasts in range and in instrumentation. The closing measures of the Scherzo pack an unbelievably dramatic punch.

The longer section, marked Adagio, is, however, the major portion of the work.

\* \* \* \*

It opens with a unison solo passage for violas which establishes the whole character of the work. The chief melody is one of rather melancholy beauty that haunts the listener long after its final sounding. Really the emotional and intensely dramatic qualities of this movement carry one completely in their sweep.

It is Gustav Mahler's finest writing and indeed ranks high among symphonic writing from the pens of any of the great composers.

Wesley First

## NEW YORK CITY OPERA COMPANY AS A NATIONAL CULTURAL INSTITUTION

In March 1934, CHORD AND DISCORD endorsed a plan for the development of fine arts, a plan originated in the December 1933 issue of *MUSICAL DIGEST*, then edited by Pierre V. Key.

During the La Guardia administration, City Center came into existence through the efforts of the farseeing, cultured mayor and Newbold Morris, thus bringing to realization, at least in part, the plan sponsored by *MUSICAL DIGEST*, namely, "broadening the outlet for employment of musicians (with preference given to American citizens) through increasing the number of major and minor symphony orchestras, local opera enterprises, choral concerts, and miscellaneous concerts of every kind, and encouraging the engaging, in increasing numbers, of American solo instrumentalists and solo singers, as well as ensembles, where their ability to appear in courses of advanced artistic type shall have been amply proven."

There are certainly few American cultural organizations of our day more deserving of support and emulation than the New York City Opera Company, not only for its aims, but also for its accomplishments in raising the level of American musical taste. Quietly, it made its initial bow about six years ago, a fledgling company struggling through its repertory of but three operas with borrowed costumes and scenery. After two seasons a year preceding and following the regular operatic season at the Metropolitan, it entered its twelfth season on September 22, 1949, with a repertory of 33 operas, four stage directors and scenic designers on its able staff, a permanent orchestra and chorus, a staff of distinguished conductors and a roster of over 50 distinguished solo singers. From the very first the company had reaped praise for its artistic integrity, the introduction of fine young talent and the genuine enthusiasm of its audiences, who, starved for this approach to opera, found it available at last and at the low-price policy of the organization's founders. Its repertory includes *Salome*, *Aida*, *Rosenkavalier*, *Carmen*, *Marriage of Figaro*, *Don Giovanni*, *Onegin*, *The Medium*, *Tosca*.

The New York City Opera Company has set a new standard for opera in America. It has developed a formula that calls for well-sung, well-acted, and well-directed performances by young singers who are as pleasant to look at as to hear. Its small financial loss is absorbed by the City Center's other activities, thus giving the public the opportunity to hear for a top price of \$3.00 (tax included) well integrated performances with outstanding soloists, a permanent orchestra, chorus and ballet—all well rehearsed. In its review of *Salome*, CHORD AND DISCORD said: "For the discriminating, rich and poor alike, City Center productions would be a bargain even at considerably higher prices."

Opera starved cities all over the nation are asking for the City Center formula and for help in establishing it. The first out-of-town experiment proved a success. In the fall of 1948, the New York City Opera Company

gave a three-week trial series at the Civic Opera House in Chicago. The invitation came from a group of leading business and professional men headed by Mayor Martin H. Kennelly. The result was a three-year agreement to perform at the Chicago Civic Opera House and the gradual formation of a new Chicago Civic Opera group on the New York City Opera plan. Similar invitations have come from such cities as Milwaukee, St. Louis, Philadelphia, Cleveland, Denver, Rochester, Pittsburgh, and Des Moines.

The New York City Opera Company concentrates on the over-all ensemble performance rather than accenting stars, and equal importance is given to dramatic and musical aspects. Experienced and inexperienced, well-known and nameless artists are welded into a complete production unit. Young artists are given the benefit of thorough preparation in their roles with no cost to themselves. After the opening performance of the 1949 season (*Ariadne*), Mr. Louis Biancolli, (WORLD TELEGRAM) wrote: "Any opera company—large, small, American, European—could learn a few things from last night's acting."

The New York City Opera Company does not adhere to traditional production techniques and routine. It does provide a tremendous amount of staging rehearsal, in which the demands of the drama itself are recognized and married to the music. Scenic concepts further enhance the productions through the use of projection and other modern theatrical techniques. The fusion of these policies has brought about the realization that grand opera can be good theatre and entertainment of the highest order. Virgil Thomson said in the NEW YORK HERALD TRIBUNE: "... it made sense to the eye as well as to the ear..... distinguished production, visual and musical....."

Today, New York's City Center is the goal of America's finest young singers. It is the open sesame to the best operatic doors of the world and has introduced to fame a number of gifted American artists. Other fine singers, with reputations already made in various parts of the world, have joined the New York City Opera Company.

The American composer, as well as the American singer, conductor, and stage technician, is encouraged by the New York City Opera's recognition of native talent and the opportunity for performance at the New York City Center. William Grant Still, noted American composer, saw his first opera (the fourth he has written) produced in the spring of 1949 when the New York Opera Company gave three performances of his *Troubled Island*.

The New York City Opera Company has given the lie to those that believe opera in English just can't be done. *The Marriage of Figaro*, in a sparkling translation by Ruth and Thomas Martin, proved to be one of the hits of the season. Other operas in English included *Amelia Goes to the Ball*, *The Medium*, *Troubled Island*, and the *Love for Three Oranges*, the last named translated from Russian by Victor Seroff.

Conductors and experts in stagecraft find a welcome at the Center where real talent is the only requisite and where big names, race and nationality are unimportant. The operas have been presented in five languages—English, French, German, Italian, and Russian. The members of the company are drawn from four continents. Under the guidance of Laszlo

Halasz, artistic and musical director, the various essentials of each production—stage, costuming, voices, orchestra, ballet, and language—are skillfully blended into an artistic whole. With these ingredients, plus the imagination and cooperation of the directors, the highest standards have been maintained, and large audiences have given their enthusiastic approval to every performance.

City Center is, in short, giving the economically less favored the opportunity to hear operas at prices they can afford and the public is responding wholeheartedly. It has proved it is a boon to gifted, young American singers by starting them on their chosen careers. It has produced operas by American composers, thus encouraging native creative talent. It is pointing the way toward the establishment of opera companies in other cities. These would not only constitute indispensable training grounds for American singers, but would also give employment to local musicians and raise the general cultural level of the communities they serve. Setting up and maintaining numerous opera companies, modeled upon the splendid New York City Opera Company, should be the ultimate goal of all serious American music lovers.

## A MEMORABLE ELEKTRA

*Philharmonic Symphony Orchestra, Dimitri Mitropoulos, Conductor; Carnegie Hall, N. Y., Dec. 22nd, 23rd, and 25th, 1949. (The last performance was broadcast over CBS.)*

Elektra .....	ASTRID VARNAY
Klytemnestra .....	ELENA NIKOLAIDI
Chrysothemis .....	IRENE JESSNER
Aegisthos .....	FREDERICK JAGEL
Orestes .....	HERBERT JANSSEN
Attendant of Orestes .....	MICHAEL RHODES
Four Handmaidens .....	MIRIAM STOCKTON
	EDITH EVANS
	ELINOR WARREN
	BEVERLY DAME

A vivid, successful projection of the difficult score and tragic content of Strauss' *Elektra*, especially in concert form, is impossible without the following three features: a splendid orchestra, intelligent singers with fine, powerful voices, and above all, a conductor who combines deep understanding of the work's poetic message, the inexorability of Greek tragedy, with musicianship of the highest order. All three of these essential factors were eloquently represented in the series of three performances given the work in Carnegie Hall on Dec. 22, 23, and 25, 1949. The roll of participants is listed above.

Mitropoulos interpreted the score with utmost clarity and unerring dramatic instinct. He created teamwork among the singers and between the singers and the orchestra. Just as there is unity in the drama, there was unity in the performance. From the very opening bar one could sense ultimate doom and throughout one felt that the decree of the fates was being carried relentlessly forward to its inevitable cataclysmic end. Hate, fear, scorn, pathos, fierce triumph, tenderness, nostalgia—these were all brought out in a masterful manner by Mitropoulos who conducted without a score.

Each participant contributed his share to what was a well nigh perfect performance. Among the handmaidens Elinor Warren's dark voice and shading deserve special mention. Janssen was particularly moving in the tender passages. Jagel made the most of the few lines assigned to Aegisthos.

The difficulty and importance of Chrysothemis, the least grateful of the three leading parts, are not always sufficiently appreciated. (Unfortunately the second dramatic scene between the two sisters, Elektra and Chrysothemis, was cut.) In their first great scene, Irene Jessner, with a commendable feeling for the underlying dramatic implications, emphasized the fear that possesses Chrysothemis, her love of life, her burning desire to bear children,

her longing for freedom from the prison into which her mother, Klytemnestra, and her stepfather, Aegisthos, the murderers of Agamemnon, Chrysothemis' father, had cast her and Elektra. In the final scene it was clear that to Chrysothemis the death of Klytemnestra and Aegisthos meant freedom to enjoy life.

Highlights in Jessner's outstanding interpretation were: Her whispering to Elektra: "They will throw you into a tower where you will not see the light of the sun or moon—they will do it, I know, I heard it . . . at the door."—the pathos with which she invested the lines: "I cannot like you sit and peer into the darkness. There is fire in my breast . . . ."—the fear in her voice when she sang: "I am so afraid, my knees tremble day and night . . . ."—her anger when she reproached Elektra: "'Tis you who binds me to earth with chains. Were it not for you, they would free us."—her passionate rendering of: "I want to bear children before my body withers . . . ."—the pathos and mystery of: "Our brother is not coming home. We always sit on our perch like caged birds, turn our heads to the left and to the right and no one comes, no brother, no messenger from our brother . . . ."—her joyous dramatic utterance in the final scene when she thinks she is free at last: "Elektra! sister! come with us; oh come with us! It is our brother who is in the house! It is Orestes who has done the deed,"—and her final "Orest" followed by a silence that could almost be heard.

The *vibrato* in her beautiful, dark contralto voice makes Elena Nikolaidi especially fitted for the role of the fear-ridden, conscience-stricken, superstitious queen, Klytemnestra. At no time, whether she was for but a brief moment recalling happier days with her children or trying to hide her fear from her daughter, Elektra, was the listener permitted to forget that fear dominated the very soul of the degenerate queen constantly plagued by bad dreams. Be it added that Nikolaidi's restraint and calm, even in moments of anger and defiance, enhanced the effectiveness of her portrayal.

The almost hollow sound of her voice when she pleaded with the gods: "O, ye gods, why do you oppress me so? Why do you destroy me thus? Why must my strength be gone? Why am I, a living creature, like a barren field and this nettle grows out of me and I do not have the strength to weed it out!"—her excitement and pleasure when Elektra tells her she, Klytemnestra, is a goddess: "Have you heard? have you understood what she says?"—the unearthly beauty of her singing of the nostalgic lines: "It has a familiar sound. It seems as though I had forgotten it long, long ago."—her determination, anger, and fear after her confidantes tell her Elektra doesn't mean what she says: "I don't want to hear anything! What you say is like the breath of Aegisthos."—the mystery in the words: "Where the truth lies, no one knows."—the *cantilena* passage where Klytemnestra says she is willing to listen to anything pleasant, even from her daughter Elektra—her almost despairing joy at the thought that there are rites which will rid her of her dreams—the eerie feeling conveyed by her rendition of: "What is a breath, and still between night and day when I lie there sleepless, something comes creeping over me. 'Tis not a word, 'tis not a pain, it does not oppress me," and the terror in her

voice as she continues: "it does not choke me. 'Tis nothing, not even a goblin, and still it is so terrible that my soul cries out for release,"—the sad fierceness of: "I don't want to dream anymore."—all these were memorable moments in this notable characterization.

Last summer Astrid Varnay thrilled a Stadium Concert audience by her beautiful singing of the temptation and final scenes of *Salome* under the inspired leadership of Fritz Reiner. It remained for her to give the lie to those who still maintain that the role of Elektra must for the most part be shouted, shrieked, or screeched. Varnay actually sang the part, and beautiful singing it was. Judging by the variety of her facial expressions during the performance, one can safely conclude that this extraordinary artist would give a moving performance on the operatic stage, a portrayal that would leave something to the imagination of the discerning listener and at the same time shake the audience to its very depths. From the outset Varnay's Elektra was the prophetess of doom, of hate, of despair, with one all-consuming passion—to avenge the murder of her father, Agamemnon. Yet with all the hate, scorn, contempt, and lust for vengeance in her soul, she could be tender and noble. This high priestess of vengeance aroused pity. She was a truly tragic figure.

Long to be remembered in Varnay's interpretation are: The feeling of utter loneliness and gloom as she sang: "Alone! Woe unto me, all alone,"—the sustained cry: "Agamemnon! Agamemnon!"—the dark color, excellent diction, and almost perfect phrasing of the lines: "It is the hour, our hour, the hour when they slaughtered you, your wife and that one who sleeps in one bed with her, in your royal bed."—the deeply moving supplication: "Agamemnon! Father! I want to see you, do not leave me alone this day. Show yourself to your child, as you did but yesterday, like a shadow in the corner! Father! Agamemnon!"—the expression of horror when she says to her sister: "Thus did father raise his two hands, then the ax fell and tore his flesh."—her contempt as she asks Chrysothemis: "What do you want? Daughter of my mother, Klytemnestra's daughter."—the beauty of tone as she says to Klytemnestra: "You yourself are a goddess" and the scorn in her voice immediately after: "You are just like them!"—the viciously triumphant manner in which she tells her mother that she (Klytemnestra) will dream no more if the right sacrifice falls beneath the ax, with special emphasis on the word *träumst* (dream)—her trembling when she asks Klytemnestra: "Aren't you going to let my brother come home?"—the hate and defiance with which she tells her mother: "You lie! You sent gold so that they would choke him to death."—her highly dramatic exclamation: "I can see it in your eyes, I can tell by your trembling that he (Orestes) is still alive: that day and night you think of nothing else but him: that your heart withers from fear because you know: he is coming."—the scorn and fierce venom in the death sentence she pronounces upon her mother: "Who must bleed? Your own neck,"—the triumphant hate in her description of her vision of Klytemnestra's death agonies at the hands of her own children (this is one of the most powerful passages in music-dramatic literature)—the sharp pain in her utterance when she thinks Orestes is dead: "But I! I! To lie here knowing the child will never return,"—the scorn as she thinks of Klytemnestra and

Aegisthos, "the brood that lives in its lair and eats and drinks and sleeps,"—the scream of joy as she recognizes her brother, Orestes—the trance-like beauty of her rendition of the *cantilena* passage: "Orestes! Orestes! Orestes! No one moves! Let me see your eyes, a vision, a vision given me more beautiful than all dreams! Noble, illusive, sublime countenance, remain with me! Do not vanish into thin air, do not melt away; or if I must perish at once and you appear and come for me: Then I shall die happier than I have lived!"

The Philharmonic Orchestra, the soloists, and, above all, Mr. Mitropoulos covered themselves with glory thrice; it is no wonder that at each performance the audience stamped, cheered, and whistled.

ROBERT G. GREY

---

#### RADIO PREMIERE OF MAHLER'S TENTH

Gustav Mahler's Tenth Symphony was heard for the first time in New York Saturday afternoon [Jan. 21, 1950] in the broadcast over N. B. C. by the Erie Philharmonic Orchestra under Fritz Mahler's direction and, a few hours later, Ernest Bloch's Concerto Symphonique was performed for the first time in this country by the N. B. C. Symphony Orchestra under Ernest Ansermet, with Corinne Lacombe as piano soloist.

Mahler's Tenth Symphony was uncompleted when he died. Although he had expressed a wish that the manuscript be burned, a desire which he, however, had several changes of mind about, his wife permitted a facsimile edition of the manuscript to be published in 1923. Of its five movements which remained in fragmentary form, two were reconstructed by Alban Berg, Ernst Krenek and Franz Schalk, and it is this torso which was performed on Saturday.

Mahler never designated with any certainty the order in which the various movements should be played. How disturbed his mental state was when he penned this work may be seen from the programmatic title, "The Devil Dances With Me," and from the following exclamation written in the score: "Madness, seize me, the accursed! Destroy me, that I may forget my existence! That I may cease to be!"

The movements thought worthy of reconstruction reveal not only Mahler's ironic vein but even more the preoccupation with death which is expressed in so much of his music. The adagio movement has many moving pages, but is on the whole inferior to "Der Abschied" from "Das Lied von der Erde" and the finale of his Ninth Symphony, in which resignation in the face of death is even more affectingly depicted.

Fritz Mahler's interpretation revealed considerable understanding of its contents and the performance gave evidence of careful preparation. His orchestra, a thoroughly competent aggregation of musicians, produces clearly penetrating if not sensuously appealing sounds.

## SYMPHONIC CHRONICLE

### A Record of Critical and Popular Reaction

#### GUSTAV MAHLER: THIRD SYMPHONY

*Dallas Symphony Orchestra, Antal Dorati, Conductor; Dallas Symphony Singers, Public School Choir; Frances DeMond, Contralto; Nov. 29, 1947.*

Evidently 2,700 North Texans considered themselves connoisseurs as they gave over their festive Saturday night to the concert and many came from great distances. "An audience like this for a program like that," was the amazed comment of one out-of-town visitor.

Few orchestral repertoire lists show performances of the Mahler Third during the last generation. A Radio City Music Hall broadcast conducted by Erno Rapee over NBC many years ago is the last we remember. Yet it is an easily assimilable and often exciting work that might be more popular were it not so troublesome to produce and were not the "apparatus" so large. Mr. Dorati had to call out his reserves for an orchestra numbering close to 100.

For the audience it was an effective introduction to the more grandiose Mahler, hitherto known only by last season's "Lied von der Erde." In the big symphonies one finds at last the link between Brahms and the contemporaries, even Rachmaninov, maybe Stravinsky, certainly Sibelius, and Shostakovich, possibly Prokofiev. The Third Symphony, also styled "The Program Symphony" has a story of conversations with past, present, with nature and the angels and with a resolution, a la Beethoven, on the brotherhood of man.

Perhaps it is best to heed Mahler's demurrer that there is no program. The association of the musical content with the scenario, so to speak, is confusing almost to the point of inappropriateness.

Taken, however, as sheer sound, the work is continually winning and exhilarating. One hears the blithest waltzes, the most martial marches, a lush Puccini-like emotionalism, then the gay, the plaintive, the morose. Trumpets and

drums play offstage for new perspectives and in three movements Mahler summons the human voice to augment his "instrumentation," and this instrumentation is among the canniest and most resourceful in music.

The Symphony Singers, made up of public school music teachers, were small, but pure-toned and balanced as we have known them in the past. The boys, massed in the box at the audience's left, tintinnabulated accurately with the chimes. Both groups were trained by Miss Marion Flagg, director of musical education, who somehow broke her foot but not her stride while doing it. Miss DeMond sang her important solos with dark, voluminous tone, broad line, much expression, and was of enormous value to the proceedings.

John Ware, trumpet principal, distinguished himself in taxing solo passages as did Rafael Druian, concertmaster, Emanuel Tivin, oboist, and Forrest Standley, French hornist.

JOHN ROSENFELD,  
*The Dallas Morning News*

#### ANTON BRUCKNER: NINTH SYMPHONY

*Philadelphia Orchestra, Bruno Walter, Conductor; Feb. 27 and 28, 1948. (Broadcast over CBS on Feb. 28, 1948).*

... But for his current concert appearances, the Berlin-born batoneer went even farther than before in assuming his occasional role of symphonic Samaritan in aiding neglected musical works. This time it was on behalf of Anton Bruckner, whose name almost never comes around in the orchestral repertoire these days, that Walter labored lustily and lovingly, presenting the three known and completed movements of that composer's unfamiliar (and perhaps fortunately unfinished) Ninth Symphony.

It certainly required courage in the conductor to offer this more than sub-

stantial Bruckner symphonic serving as the principal feature of his program, in the face of the fact that only one other work in the form by Bruckner has appeared on the orchestra's programs here in nearly a score of years.

Relatively speaking, the Bruckner Ninth—or the three sections of it that were served yesterday — does not seem as banal and bombastic as the Fifth. But its symphonic flatulence seemed more than sufficient to last a long time. And if there is no determined demand for its repetition, that won't be so surprising, despite the expert aid given it by Walter to make it as palatable as possible for the concert customers coming, as it did, after the abiding beauties of Mozart's "Haffner" Symphony, and the Brahms set of "Variations on a Theme of Haydn," as the earlier offerings of the afternoon.

The Bruckner symphony, which calls upon the conductor to serve most of it "slowly" and "solemnly," is fairly overflowing with thematic material and opulent orchestration. But for all the energy and attention it exacts from orchestra and audience, the principal impression it leaves in the memory is one of pretentious impotence, despite Walter's zeal as musical missionary.

LINTON MARTIN,

*The Philadelphia Inquirer*

Anton Bruckner's 45-year old Symphony No. 9 ("Unfinished") had its first performance in this city yesterday afternoon, when Bruno Walter presented the Austrian peasant-composer's final work, at the Philadelphia Orchestra concert.

Mr. Walter made his welcome appearance at the Academy of Music yesterday, and the Orchestra paid this beloved musical figure the unusual tribute of standing and applauding at his entrance.

Mr. Walter, being an apostle of the rarely heard music of Bruckner, programmed the 51-minute incomplete work as the focal point of his concert.

Undeniably an endurance test for modern audiences who are not too well geared to works of such length and vast proportions, the Friday afternoon gathering stuck to its guns (very few went out), and gave Mr. Walter and the Orchestra an ovation after the third and final movement.

Bruckner's symphony which was played in its original version, has enough material for three modern symphonies. It is a work of undoubted nobility, huge in its general structure, with sweeping dramatic vistas which suggest vast landscapes.

Even the scherzo is heroic in quality, as though giants were seen at play (for all we know, Fasolt and Fafner). The last movement — adagio — seems over-long and obscure.

However, even while admitting the hazard of the symphony's great length and seemingly banal passages, it was with a sense of privilege one realized that a symphony of undoubted nobility, sincerity and power — a symphony upon which its composer lavished almost ten years of work — had been heard here for the first time.

Thanks are due to the unflagging devotion of Mr. Walter and to our Orchestra for backing this devotion with the last ounce of its amazing resources.

MAX DE SCHAUENSEE,

*Philadelphia Evening Bulletin*

#### GUSTAV MAHLER: FOURTH SYMPHONY

*Indianapolis Symphony Orchestra, Fabien Sevitzyky, Conductor; Eleanor Steber, Soprano; Feb. 28 and 29, 1948.*

The Mahler Fourth Symphony suffers from Teutonic long-windedness. That's a pity, since the work contains fine musical ideas and is written throughout with the clarity, skill and invariable good taste of a great master.

It is neo-Brahmsian in flavor. But it somehow lacks the vigor and direction of Brahms. And it is apt to leave you with the melancholy reflection that there can be too much of a good thing. Beautiful sounds prolonged beyond customary time-limits can become cloying. The orchestra was at its very best in Mahler....Dr. Sevitzyky conducted the Mahler from memory.....

HENRY BUTLER,  
*Indianapolis Times*

She [Miss Steber] turned to the reflective, bittersweet text of the moody Mahler in the closing moments of the symphony with an equal understanding

of its special demands. The audience was quite captivated. . . . So much of it is banal—and there's so much of it. But there also is glory in this music, beauty that is both exalted and exalting. It rises above its sentimental base to passages of compelling emotional strength and dignity. It is music that deserves to be heard. Dr. Sevitzy gave it a hearing that made the most of its enduring values.

CORBIN PATRICK,  
*Indianapolis Star*

Miss Steber, in fact, was heard to best advantage in the Mahler work. Mahler has never had much success in this country—this was the first time his Fourth Symphony had been played in our town. The reasons for his neglect, as Anis Fuleihan suggested in his program note, are incomprehensible, for this music can scarcely be called complicated in a 20th century that has given itself to all sorts of musical experiments. His music, too, is highly lyric—the Fourth Symphony contains one lovely melody after another.

Mahler's music is like a Vienna slightly decadent. His music never seems symphonic; it seems like vocal music written on a grand scale, but still vocal music. Consequently, the form seems to have the looseness of rhapsody, although it does not actually have the looseness.

Whatever one may think of the music, however, he knows that, by and large, Dr. Sevitzy and the orchestra played Mahler's endless measures with poise and point.

WALTER WHITWORTH,  
*The Indianapolis News*

ANTON BRUCKNER:  
*TE DEUM*

*Rochester Philharmonic Orchestra, Erich Leinsdorf, Conductor; Rochester Oratorio Society, J. Theodore Hollenbach, Conductor; Soloists; Anne McKnight, Rosalind Nadell, Irwin Dillion, James Pease. March 24, 1948.*

It was not to be wondered at that the concert provoked one of the most fervent demonstrations from any Eastman audience in years. The large attendance naturally was gratifying for the

conclusion of the season and the culmination of the Beethoven cycle.

By no means was all the interest centered on the Beethoven Ninth Symphony, for opening the program was the Anton Bruckner "Te Deum," a work of grandeur. . . .

Bruckner's "Te Deum," a work of climactic dynamic power, and one of the great sacred works by the Austrian composer and distinguished organist, is deeply religious in significance. Wholly characteristic of the composer's religious style, it was set forth magnificently, the final pages coming with overwhelming grandeur in its exultant climax.

Dating from 1881, it was revived in 1884. The elevated and stirring work was last given here in 1937 by Herman Genhart conducting the Eastman School Symphony Orchestra and Chorus.

NORMAN NAIRN,  
*Rochester Democrat and Chronicle*

The Silver Anniversary Season of the Rochester Philharmonic Orchestra came to a memorable climax last night in the Eastman Theater when a special concert, devoted to Anton Bruckner's "Te Deum" and Beethoven's Ninth Symphony, was conducted by Erich Leinsdorf.

Bruckner remains the most neglected of symphonic composers, in spite of the magnificence of his music. Although he wrote little in addition to his nine massive symphonies save for a few church works, the most important of which, the "Te Deum," had another eloquent Rochester presentation in the Eastman Theater in 1937 under Dr. Herman Genhart's direction, Bruckner has a place apart in the history of composition. It has been said that the German mystics are the kinsmen of this Austrian more than are the musicians, more than is the "religio-philosophical Beethoven of the Ninth Symphony, from whom he stems."

The listener last night was absorbed in the beauty and the grandeur of the revelation of Bruckner's score, with its great monoliths of tone, with its lofty vision, its mystical fervor, its breadth and depth in form and conception. This was the music of a Titan, speaking of the sublime with utter simplicity.

The orchestra played beautifully, and one felt that the conductor missed nothing of the composer's thought and

its devotional proclamation. So, too, did the chorus, which gave evidence of careful rehearsing on the part of J. Theodore Hollenbach, who prepared it, sing with communicative intensity.

A. J. WARNER,  
*Rochester Times-Union*

GUSTAV MAHLER:  
SECOND SYMPHONY

*Cincinnati Symphony Orchestra, Fritz Busch, Conductor; May Festival Chorus, Sherwood Kains, Conductor; Karin Branzell, Contralto, Shirley Russell, Soprano, Soloists; May 6, 1948.*

After hearing the Second Mahler Symphony, as it was conducted by Fritz Busch at the May Festival concert Thursday afternoon, one can readily understand the enthusiasm of the Mahler cultists. The difficulties and grandiose nature of this composer's ideas militate against his frequent appearance on concert programs. Only when an occasion arises, such as is presented by the Diamond May Festival, are the means available for a satisfying hearing of his work.

It was not necessary to know Mahler's so-called program in order to feel the irresistible effect of his music. Indeed, one feels that the composer wrote to express his inner fancies, and then invented his explanations afterwards. In other words, the form grows out of a composition, rather than vice versa. Thus, whether or not the first movement is a heroic funeral march is immaterial. Each listener felt in himself the abysmal despair of the mood and the passionate outbursts of grief.

The second and third movements have really no connection with what precedes or follows them. The Schubertian flavor of the former charmed the ear, the bitter sarcasm of the latter was unmistakable. They are merely interludes that really interrupt the emotional unity of the symphony. Yet they are indispensable. Otherwise the mounting tension of the finale would be too great to bear. Incidentally they refute those who see in Mahler only a protagonist of a fantastically monumental inspiration.

Dr. Busch has the faculty of absorbing and expressing the underlying characteristics of every work he performs. Under his baton, the Cincinnati Symphony Orchestra, greatly enlarged for

the occasion, sounded like a different instrument, and as climax piled upon exhausting climax, the listeners were left spent at the close, their minds and bodies cleansed by the catharsis of sound.

The chorus sang with admirable quality its message of confidence in the resurrection of the soul, although it may be debatable whether unintelligible German is preferable to an ungratifying, but understandable, English translation. Perhaps, it makes no difference, for clarity of enunciation is not one of the chorus's strong points. Mahler has provided a discreet orchestral background to preserve the a capella character of the entrance of the chorus. In this case, the organ was too predominant.

Karin Branzell and Shirley Russell were the soloists. Seldom, today, does one hear so satisfying a routined artist as Mme. Branzell, whose rich contralto voice lends distinction to every role it caresses. Miss Russell's voice and manner give increasing pleasure with each appearance.

LOUIS JOHN JOHNEN,  
*Cincinnati Times-Star*

Some writers have implored their public to permit themselves to succumb to Mahler's music, and have promised that cool judgment will be swamped by passionate admiration — or else exasperation. There was no question of exasperation at yesterday's performance of the Symphony in C minor. There was no question of length. Dr. Busch achieved such great variety between the five movements that his audience forgot considerations of time and space.

It may be that the composer did extraordinary things like reading chapters from the works of Emanuel Kant to his wife during childbirth. He may have struggled with ideas of "Funeral Pomp" for his living soul in the first movement of his "Resurrection" Symphony. He may have envisioned eerie ballrooms in the second movement, considered the sinful greed of carp and other fish in the third movement, then disregarded civilization altogether to name his fourth movement "Primeval Light." Still, despite these mental tortures and questionings of a confirmed introvert—still, Mahler knew how to write melodies, knew how to exhaust

every orchestral means at his disposal, and to rear musical structures of sound mighty enough to shake the indifference of skeptics.

We dare say a few listeners could leave such a concert as that at Music Hall and systematically find fault with Mahler's symphony, poke fun at his eccentricities, call his music humorless, censure his love for extended development and contrast. At least no one went home with feelings of indifference. Dr. Busch was extravagant with his orchestral resources — six trumpets, six horns, six tympani (sometimes requiring three players), drums, gongs, bells. And a marking of "fff" in the score was sufficient for the conductor to unleash them in full fury. At one time he nearly bent double to enforce the avalanche of sound. He spent these resources lavishly, but not wastefully. Every note counted and had an integral part in the overall effect.

The whole edifice of the auditorium shook with the closing phrases of the "Resurrection" and many eyes streamed tears. And yet, the choral passage had begun so quietly, so reverently. Dr. Busch followed the composer's instructions and kept the singers in their seats for a few minutes to insure the contrast with the trumpeting of doom. The chorus was under his watchful and discriminating control and he played upon it skillfully as Parvin Titus played upon the organ keys at one side of the rostrum.

Mahler may have doubted the appropriateness of his own rondo-like second movement, may have thought it trivial in the inexorable sequence of his symphony. Not so the audience. Cheers, which Dr. Busch stilled momentarily at the close of the first movement, broke forth without restraint after the "andante." The composer would have been pleased at the reception. The choral-like fourth movement brought Karin Branzell, singing the resplendent and majestic plea to be lighted "to eternal bliss." Clear, clean, of excellent timbre for the music, the contralto's voice sang vibrantly and with penetration. It was the same again in the last movement, where Miss Russell's also soared musically above the choral and orchestral mass without being either strident or edgy. It was sumptuous music, sumptuously performed.

JOHN P. RHODES,  
*The Cincinnati Enquirer*

## GUSTAV MAHLER: SEVENTH SYMPHONY

*Boston Symphony Orchestra, Serge Koussevitsky, Conductor, Oct. 15 and 16, 1948.*

All things come in time. Now we have Serge Koussevitsky to thank for the Boston premiere of the Seventh Symphony by Gustav Mahler, at Symphony Hall yesterday afternoon. This second program by the Boston Symphony Orchestra was devoted to two of the six great M's of music, for there was but one other piece: "Pictures at an Exhibition" by Modeste Moussorgsky, in the orchestral version by Ravel.

It would have been something to be present at the first performance of Mahler's Seventh, in Prague in September of 1908. I can imagine that the audience was pretty well baffled. Like most of what Mahler wrote, the Seventh is long and repetitive, and at the same time definitely a "big" work. There is a great deal of the striding, marchlike music he was so fond of, frequent horn and trumpet calls, and all available weight of strings, wind and percussion for an imposing, even grandiloquent finale.

Of the five movements — which take an hour and 20 minutes — the first is a loud and dramatic allegro with a slow introduction; the second and fourth a curious pair of nocturnes, and the fifth a fast rondo which somehow doesn't seem to have the importance a finale ought to have. The third movement I have left for last, because I fancy there is little else like it anywhere in music. Called "shadow-like," it is a scherzo with most unusual tunes, rhythms, accents and scoring. It is a movement restless, uneasy, perhaps foreboding, and really calls for the word "neurotic."

First acquaintance is a poor basis for drawing conclusions, but it seems reasonable to say that the Seventh Symphony is unconventional Mahler. Though full of the external traits: the wayward snatches of melody, the sliding harmonies, the quick changes of pace and rhythm, and above all the wonderful scoring, this is nevertheless relatively impersonal. Unlike the Second, Fifth and Ninth symphonies, and "Das Lied von der Erde," the Seventh avoids the extremes of emotional brooding and exaltation.

Probably there are only a half dozen

orchestras in the world able to play this difficult score adequately. Yesterday's performance was magnificent, with the wind players, hard-pressed practically all the way, giving freely of their glorious best. The score calls for three instruments not usually demanded at Symphony concerts: guitar, mandolin, and cowbells!

It might have been better to preface the Mahler Seventh with a brief overture, and to call intermission after the first movement of the Symphony. An hour and 20 minutes of unbroken active listening is a long time, and, further, even Ravel's brilliant orchestration seemed a little less than scintillating after Mahler. The whole afternoon was one of breath-taking beauty of performance and one of the best examples you could have of Serge Koussevitsky's dazzling prowess as interpretive conductor.

CYRUS DURGIN,  
*Boston Daily Globe*

If any composer has made good in Boston in the last few years it is certainly Gustav Mahler—and he nearly 40 years in his grave.

To be sure we have heard his "Song of the Earth" and his Ninth Symphony from time to time, while various movements from the other symphonies, the Adagietto of the Fifth Symphony, for instance, are occasionally done. Yet two of his symphonies, the Second and Fourth, achieved enormous success on their performances here within the last two seasons. And yesterday the Seventh, never before played here, was received with a cordiality verging on astonishment. Where, the audience seemed to be expressing, has this music been all our lives?

It has been biding its time, like most of this composer's music, waiting for the world to catch up with it. Not that its texture is difficult in the sense that Bartok's is; the listener will find little in Mahler of the dissonant tensions or the astringent melodies of contemporary composers who are, in effect, 40 years ahead of us. What has been needed for the understanding of Mahler is the disenchanting, disillusioned, almost heart-broken point of view of the post-war world. We know now—as Mahler knew in 1908—that everything doesn't fit into neat little boxes; that things aren't all white or all black anymore; that there is no end to con-

flict, to pain, to spiritual and physical misery.

Yet we know—as Mahler knew—that with it exists a world of beauty, of wonderful, joyous things, even of courage and hope. Thus it is that now we can listen to music that offers within its framework everything from vulgarities to sublimities, nursery jingles to military fanfares, jangling cowbells to soaring strings, twangling mandolins to violent bursts on the timpani—and not find it in the least incongruous. On the contrary, if yesterday's audience was any criterion, nothing seemed to make more sense than this neglected work by a neglected composer.

Not all of it, perhaps, for the Seventh Symphony, like the others, is excessively protracted. Mahler, who hated long-windedness in others, was incredibly long-winded himself; this, and his lack of foresight in employing a musical apparatus that might well break any modern orchestra's budget, hasn't helped his cause, either. So, for four movements of this work (all five last well over 70 minutes), the Seventh was a joy.

The first movement was strong, virile, exciting, tumultuous; the second was an altogether delightful pastorello; the third, a nebulous scherzo with a quaint, waltz-like middle section; the fourth, an incredibly beautiful serenade. But either the last movement or the listener's capacity to listen goes all to pieces, and I strongly suspect it is the music. It just doesn't fulfill the work and I don't know why, when you get right down to it, it can't be omitted, for this is no cyclical work but a series of moods strung together.

Neither the orchestra nor Dr. Koussevitsky can be complimented too highly for the performance of this exceedingly complicated work. The orchestra has rehearsed it for two solid weeks; Dr. Koussevitzky has lived with it for months; the performance was not short of spectacular. And it was a thrill to watch Dr. Koussevitzky's leadership, to observe the consummate musicianship of his beat, his cueing, his control and, above all, his inspiration.

As if he feared for the success of the Mahler, he finished with one of his best things, Moussorgsky's "Pictures at an Exhibition," with a view to bringing down the house. Which he did.

RUDOLPH ELIE,  
*The Boston Herald*

Serge Koussevitzky introduced Mahler's Seventh Symphony to Boston yesterday at the second Friday afternoon concert of the season in Symphony Hall. Apparently this was the third performance in the United States of the Symphony in its entirety. Since it requires an hour and a quarter for its performance, there was only one other work on the program: the Mousorgsky - Ravel "Pictures at an Exhibition."

No doubt this performance of the Seventh Symphony will revive temporarily the controversy over Mahler. Except that it has no voice part, the symphony contains practically everything to support opposing opinions.

One thing it does demonstrate: that Mahler was not merely a "song-symphonist." That is, the end movements and the central Scherzo are conceived in instrumental terms and are given roughly symphonic development. Very roughly in fact; for the composer does not readily submit to forms. The themes are not arresting, their treatment is spasmodic, altogether the impression is confirmed that the composer is a willful, undisciplined bundle of emotions, turning hither and thither and never staying put.

Nevertheless, I find the better Mahler in two of those movements, rather than in the two much-advertised *Nachtmusiken*. There is a genuine Mahlerian beauty in the slow middle section of the development of the first movement, and through most of the Scherzo there is originality, a charming wit, a graceful playfulness and a notable resourcefulness in orchestration.

In this Scherzo, for once in Mahler, you never know what is going to happen next, and you are kept on edge to find out as the themes chase one another across the orchestra with perverse pauses and sudden vanishments and unexpected reappearances in another part of the orchestral forest. This movement is great fun.

And in the slow part of the first movement working-out, where references are made to three themes, there are exquisite harmonies, a closely woven contrapuntal texture and a quiet certainty of utterance which leave no doubt of the composer's power.

The *Nachtmusiken* are less fascinating. The first one (second movement), which is in march time, rattles along with little suggestion of a serenade.

The horn call echoed in the distance and the offstage cowbells are not prepared for, so that one gets the impression of a trick. Echoes of this sort are to be found in the scores of Wagner and Berlioz, but there are better placed and built up to.

The other one (fourth movement) uses a mandolin and a guitar appropriately enough, and horn, violin, clarinet and bassoon are employed justly too, but the movement as a whole lacks the grace and the nostalgic charm of a serenade.

As for the Rondo-Finale, it is Mahler at his Tchaikovskyan worst, full of shrieks and bang-bang.

L. A. SLOPER,

*The Christian Science Monitor*

Blessings brighten as they take their flight. Dr. Koussevitzky is beginning this, his last season, at a point above what we had come to regard as the peak of his powers. Or so it seemed on Friday of last week and again yesterday afternoon. The opening program found him and his responsive orchestra glorifying the already familiar. Yesterday they were engaged in disclosing to us an exacting work not a measure of which had been heard before, the 40-year-old Seventh Symphony of Mahler. Also on the program was Ravel's arrangement of Mousorgsky's "Pictures at an Exhibition." Regarding the performance of that particular Koussevitzian war horse, I am in no position to speak, though I can well imagine its excellence. The Mahler was all that I could take in, in one afternoon.

If the Seventh Symphony were a flawless masterpiece we would not have had to wait so long to hear it. On the other hand, did it not possess some qualities it would have continued to remain undisturbed. Actually, its virtues far outweigh its faults. By a curious coincidence Dimitri Mitropoulos has announced for next month the first New York performance of it in 25 years. With yesterday's audience it made a pronounced hit, and it is easy to prophesy that now that we have made its acquaintance we are not going to let it out of our sight for very long.

It has been the practice of conductors in other cities to play not the entire work but the second and fourth of

the five movements, each of which has been given the title of Night music. They are of the utmost charm and attractiveness, even if the first of them is over-long, considering the relatively slender quality of its material. In the other Mahler adds to the orchestra a guitar and a mandolin, and with ravishing effect. Either of them could stand alone, and that in all these years they have managed to escape local performance is something of a mystery.

Between these Serenades comes a Scherzo, marked Shadowlike, hardly less delightful than they are, and played yesterday with a miraculous deftness. But what of the rest? In the first place, the work as a whole scarcely adds up to an organic symphony, in the classical sense. And whereas in the opening movement we find Mahler at his most intense, his most powerful: pregnant themes handled in masterly fashion, a sweeping eloquence, a passionate lyricism; in the Rondo finale his melodic inspiration deserts him. Though he starts off promisingly, it is not long before he is merely marking time; and he ends (to change the metaphor) by pulling himself up by his own bootstraps. There is a brave sound, but the substance is hollow. That still did not discourage yesterday's audience. Koussevitzky received an ovation, and he deserved it.

WARREN STOREY SMITH,  
*The Boston Post*

#### GUSTAV MAHLER: NINTH SYMPHONY

*Cleveland Orchestra, George Szell,  
Conductor, Nov. 4 and 6, 1948.*

It is not surprising that we had to wait until last evening at Severance Hall to hear the Cleveland Orchestra play Mahler's Ninth Symphony. Heretofore we haven't had an orchestra that could give it a virtuosic performance.

George Szell and his symphonists last night, in presenting the Mahler work's premier here, offered a performance that at its dramatically ethereal close left the capacity audience spellbound. And won the director and orchestra ovational applause.

We are grateful to Director Szell for the opportunity to hear the Mahler work. We have heard the Bruno Wal-

ter recording of it. And we prefer the Szell approach to this music. It encompasses a freshness and vigor duly kept within the boundaries of a perfect understanding of the Mahler message.

Mahler wrote this work with death at hand. And in it he sings his farewell to all that is earthly. He grows ironically reminiscent of the empty gaiety and frills of human life and profoundly sad in his leave-taking of the better things of life. It has in it unmistakable references to "Das Lied von der Erde" which he composed a year or so before he penned this work while in the Austrian mountains awaiting death.

This Bohemian—he was born in Kalischt—came to America in 1907 and is credited with having revamped and given new life to the New York Philharmonic Orchestra. This Ninth Symphony reveals all of his mastery of the orchestral form. And that opening theme will be with us for many days—a haunting lovely lilt that we hoped in vain would appear somewhere in that stunningly tense and yet peaceful final farewell to life at the close.

Director Szell's reading of this work was a masterpiece of batonic artistry. Themes began in one choir and half way through shifted to another and another, were carried along with just the right expressive and dynamic values. Throughout, the brass choir was virtuosic in its voicing of the Mahler song.

The waltzes in the second movement with the marvellous French horn trills by Frank Brouk, the solo work by William Hebert with the piccolo, the songful beauty of the strings — all were compelling features that added to the thrills. Director Szell brought out fully the sharp satire of the third movement and all its color and brilliance. And orchestra and director won as demonstrative approbation as we have yet heard on a Thursday night at Severance.

We heard some say they thought the Mahler work too long. And that in some parts of the hall its length led listeners to become restless. They are entitled to their opinion. It is a long work, running about an hour and 20 minutes. But we could find no place in which the interest lagged.

Again thanks, Director Szell, for a musical treat.

ELMORE BACON,  
*The Cleveland News*

It is impossible not to have deep respect for Mahler's genius, and after hearing the reverent and deeply moving performance of Szell and the orchestra, it was easy to understand how many people develop a grand affection for Mahler's music and eagerly want to persuade you that every note of it is pure gold.

Mahler wrote his Ninth in 1909, before the iconoclasm of this harassed century had moved into high gear. He coasted on the momentum of a grand tradition and took a long free ride. Toying with the orchestra as no composer has so leisurely done before or since, he builds it up, breaks it down, and sometimes reduces it to a ghostly shadow of itself in passages like the flute and horn duo toward the end of this symphony's first movement, which ends on an eerie harmonic.

The other-worldly atmosphere of the symphony was marvelously sustained. Its more banal pages, and it has some, were glossed over with indulgent charm. There was rugged contrast in the good-humored peasant dances and in the sardonic Rondo Burleske. The unearthly pathos of the final adagio, with its sober fugato, brought a mysterious hush over the hall that bespoke the most profound human feeling. Without any doubt, this was a great moment in the interpretation of a great symphony. The audience sensed it and rewarded conductor and players with one of the most extended ovations heard in Severance Hall for some time.

HERBERT ELWELL,  
Cleveland Plain Dealer

Mahler's ninth is indeed a remarkable work, one of the most extraordinary we have yet heard, a formidable, late, burgeoning of German genius, in all its romanticism, speculative fervor and extravagance.

An enormous wealth of orchestral sonorities is offered at every turn, as well as of fascinating harmonic circumlocutions. One must remember that this symphony dates from 40 years ago, before the atonalists (i. e., nihilists) began to grind our ears to powder.

There are all sorts of contrasts: In the second movement, in a kind of leisurely waltz rhythm, some vulgar commonplaces come on the heels of some exquisite finesses of harmony and

counterpoint. Occasionally a rich orchestral texture quickly jumps into a thin, piquant interplay of a few solo instruments. At any problematic moment the familiar sweetish Austrian dialect might break out.

To say that this Symphony is of overbearing length is surely not to accuse its superlatively able composer of mere careless garrulity. The excessive duration is an essential product of the impulse which brought the work forth. These German minds—these Wagners, Bruckners, Strausses, Regers—have a lust for the infinite, the bottomless, the impossible. If they did not do something that was too long, or too loud, or too complicated, or too dissonant, or too abstruse, they would feel that they had been sinfully frivolous, had failed to hitch their wagon to a star.

These German egos are not made of ordinary vanities or conceits: They have a cosmic magnitude, they aim to identify themselves with the universe—and sometimes they fall into the abyss.

Mahler's Ninth is magnificent; to me it also seems somewhat monstrous. The endless final adagio had an endless ending; an almost inaudible wisp of sound breathes its last interminably. It was so unbearable that the audience almost forgot to cough.

We are profoundly grateful to Szell for the experience of hearing this rare work. His care and labor, as well as that of the players, in the preparation of this performance were truly wonderful, beyond praise.

ARTHUR LOESSER,  
The Cleveland Press

#### GUSTAV MAHLER: SEVENTH SYMPHONY

*The Philharmonic-Symphony Society of New York, Dimitri Mitropoulos, Conductor, Nov. 11 and 12, 1948.*

The brilliant keyboard style and creative gifts of the French composer Poulenc shared the spotlight with a magnificent rendering of Gustav Mahler's Seventh Symphony, reflecting added glow on the valiant sponsorship of the conductor, Dimitri Mitropoulos, an undiscourageable fighter in the Mahler camp.

The crowd was keyed up by the French music to a taste for quick, epigrammatic wit and gay fluff.

Of course, the Mahler symphony was nothing of the sort. Mahler takes a long time saying what he has to say, and as in one or two of his earlier symphonies, he goes on repeating the same thing for several minutes beyond the expected close. But the performance was well worth a Carnegie visit last night.

The symphony may be long, diffuse and on a lower dramatic plane than some of Mahler's other scores. But the rich fabric of theme and harmony, of subtly enmeshed rhythms, and long-breath melodies more than make up for the moments of monotony. The two "Serenade" movements are dreamy symphonic fantasy.

There was little Mr. Mitropoulos could do to brighten up the over-extended portions, short of outright cutting, which isn't in his conductor's vocabulary. When the music permitted—which was often enough — he gave it real eloquence and power.

LOUIS BIANCOLLI,  
*New York World-Telegram*

Never having heard Mahler's Seventh Symphony before, I regretted greatly about to leave after having heard only about three-fifths of the work which is one of the Austrian master's most extensive. Of the three movements the second and third were the most arresting and most thoroughly characteristic. Both the first of the two movements labeled "Nachtmusik" and the third Scherzo-like movement, are wholly Mahlerian in content with that peculiar admixture of pantheism, Viennese charm and irony, an irony however sometimes not far from tears, which makes this music like that of no other composer.

The opening movement, however, is not among Mahler's most impressive ones. Its restless striving finally bursts forth with an eloquence which is ineffectual because it is with the voice of the Strauss of "Zarathustra" and "Heldenleben" rather than his own that the composer seeks to move us. Mr. Mitropoulos's discourse of these three movements was a telling one, with the orchestra responding splendidly to his desires.

JEROME D. BOHM  
*New York Herald-Tribune*

The evening began with the rousing measures of Mendelssohn's "Ruy Blas" overture, and ended with Mahler's gigantic Seventh Symphony, which Mr. Mitropoulos conducted with the skill and fervor of a proper Mahlerite.

JOHN BRIGGS,  
*New York Post*

Everything on the program, which Mr. Mitropoulos conducted with unflinching gusto, built up to the concerto, which in turn was unfavorable for the Mahler atrocity.

There is little that this writer cares to say on the subject of Mahler's symphony. He does not like it at all. There are those who do like it. They have every right to enjoy the uncut hour and a quarter more or less, that the symphony consumes in performance. It is to our mind bad art, bad esthetic, bad, presumptuous and blatantly vulgar music. There is no need to particularize. Nothing would be gained by it. After three-quarters of an hour of the worst and most pretentious of the Mahler symphonies we found we could not take it, and left the hall. Chacun à son goût.

OLIN DOWNES,  
*New York Times*

If it is of any interest to the Mahlerites, Dimitri Mitropoulos achieved half a conversion in his performance of the master's Seventh Symphony with the Philharmonic Symphony Orchestra in Carnegie Hall last night. I listened with interest, then admiration, then absorption to the first movement; the same words, in reverse order, in the second; interest and admiration without absorption in the third; finally, interest in the fourth, and nothing in the last.

For the fact is that Mahler asks seventy-five minutes of the listener's time in this work, and our expectations are keyed accordingly. Less apocalyptic than most of his scores, it has the familiar crepuscular tinge, the half mournful, half animated themes that are perpetually teetering between major and minor in spirit if not in mode. The first three movements, in fact, I found more consistently expressive and consecutive in musical pattern than most of his others; but, thereafter, it was just

too much of anything, good or bad.

Mahler unquestionably represents a musical problem in which responsive minds of the time must be interested, if not absorbed. It is well, then, that such a workman as Mitropoulos is conscious of the obligation as expressed in his playing last year of the sixth symphony and now, of the seventh. The logic of the situation is all against both Mahler and Mitropoulos; for why, of all composers in history, should he need an hour-plus to express whatever he has to say in a symphony. But it is only by hearing the works that one can implement logic with proof; and there is still the off chance that the weight of evidence will be pro rather than con. There is, in any case, no need for dogmatism; half a dozen hearings in forty years are meager indeed for a work of this scope. We may know more about it in another decade or two, given such zeal as Mitropoulos'.

IRVING KOLODIN,  
*The New York Sun*

ANTON BRUCKNER:  
FOURTH SYMPHONY

*Chicago Symphony Orchestra, Bruno Walter, Conductor, Nov. 18 and 19, 1948.*

Bruno Walter made his final appearance this season as guest conductor at the concert of the Chicago Symphony Orchestra Thursday evening. The music-loving public undoubtedly will agree that his engagement has been one of unalloyed joy and satisfaction, and will hope that he return at a date not too far removed.

The most weighty feature of the concert was Anton Bruckner's "Romantic" Symphony, no stranger to Orchestra Hall in the course of 50 years; but not often played with the mastery, certainly not with the magnificence, which distinguished the performance on this occasion.

Mr. Walter is known as a devoted apostle of the Bruckner cult—and if the Austrian composer's music enjoys a deserved eminence today, it is largely due to his efforts to promote it.

There can be no doubt that the "Romantic" Symphony is music well meriting the conductor's love and admiration, even if the pedestal on which it stands is not as lofty as that on

which Bruckner's Seventh Symphony should be placed. Produced in its revised form 67 years ago, it gives no impression of a score that is sadly dated. This sumptuous majesty that clothes much of the opening and final movements is still potent, and the lush brooding beauty of the slow section not less moving than in the far-off days when Bruckner was regarded by many connoisseurs as a dangerous rival of Johannes Brahms.

Whether the symphony made an enormous triumph for the composer, the conductor or the orchestra, or for all together, it is certain that not often has Orchestra Hall rung with such acclamations as followed the conclusion of the work, and which compelled Mr. Walter to return to the stage again and again in order to acknowledge them.

FELIX BOROWSKI,  
*Chicago Sun-Times*

The transition from the delicacy and refinement of Mozart to the sturdy and powerful Bruckner was accomplished with a remarkably quick change of musical personality. From the standpoint of composition, the symphony ranges from weak to great, but we believe Walter extracted the utmost in meaning from his score. We doubt he has any equals in the interpretation of this symphony.

CHARLES BUCKLEY,  
*Chicago Herald-American*

Bruckner after Mozart is not the interminable after the ineffable, but it might seem so without a Walter to reveal a score as candid as it is mysterious, since it has no secret but faith. In the end it is disappointing, as it reaches for heaven and misses the mountain tops, but the journey opens some vistas no less exhilarating because they are more hinted at than realized.

The performance was deep, rich, and beautiful, with roots and foliage. The horns of the scherzo were something out of a distant dream, but most of all I was fascinated by the slow movement. Here, almost imperceptibly, Walter turned actor. There was a man, or men, walking in that music. By the merest movement of his body that walk was discouraged, reassured, joyous, powerful, resigned. There is something

of the sorcerer in every great conductor. And it is hard on an audience to be less than a sorcerer's apprentice.

CLAUDIA CASSIDY,  
*Chicago Daily Tribune*

Anton Bruckner, though he's been well represented in the symphonic repertoire since before his death more than half a century ago, has still to win a place as a well accepted composer, much less a genuine favorite.

Bruno Walter, conducting the Chicago Symphony Orchestra in its first performance of Bruckner's "Romantic" symphony in more than six years, at Orchestra Hall Thursday evening, gave the Viennese master a reading so clear (with the thoroughly developed first-movement theme sparkling throughout) and so buoyant (even in the funereal andante) that there must have been converts on every side.

There was nothing new or different about Mr. Walter's interpretation; all the Wagnerian influences were plainly apparent, the "hunting scherzo" sounded like nothing but John Peel at the break of day, and climax built upon climax in the fashion that has made this symphony the most popular (in its own restricted fashion) of Bruckner's eight.

But there was crispness and rhythmic melody and everything but brevity in its favor. Even our erratic horns redeemed themselves in part for the havoc they had wrought in last week's Schubert.

Just to make his Bruckner demonstration more effective, Mr. Walter preceded it with two beautifully executed Mozart works—the D major symphony (Köchel 385) and "Eine Kleine Nachtmusik." Perfect as they were, they did not make the post-intermission glory road insuperable for Bruckner.

It was Mr. Walter's last program as guest conductor—the more's the pity.

WILLIAM LEONARD,  
*Chicago Journal of Commerce*

The Bruckner was his 4th Symphony—one of his more popular works, and even at that rarely performed. For because Bruckner's music is not yet widely understood, it is not widely accepted.

This music glows with religious exalta-

tion in its soaring passages for brass choir, but it reminds you (with the sudden folksimplicity of some of its inexhaustible melodies) that this Bruckner was not a hurler of thunderbolts, but a country schoolteacher simple enough to cry with rapture when Wagner allowed him to dedicate a symphony to 'the Master.'

It is this unique combination of the grandiose and the naive that makes his music at first seem fumbling. For with all its massed forces of sound, Bruckner's music does not compel as does a Handel, Beethoven or Wagner. Though it is written on a large scale, it is not epic or universal; and while the listener may expect it (from its late-Romantic manner) to envelop him and convince him, it actually asks him to sympathize and participate.

Dr. Walter's reading of the work was a creation of love, projected with such jealous care, and played by the orchestra with such warmth and skill that it was continually persuasive.

IRVING SABLOSKY,  
*Chicago Daily News*

#### GUSTAV MAHLER: FIFTH SYMPHONY

*Boston Symphony Orchestra, Richard Burgin, Conductor, Nov. 19, 20, and 21, 1948.*

Richard Burgin, again conducting the concerts of the Boston Symphony Orchestra this week, covered himself with glory yesterday afternoon by giving a superb performance of the Fifth Symphony by Gustav Mahler.

After the concert, quite appropriately, he was awarded the Kilenyi Medal of Honor of the Bruckner Society of America, an organization devoted to furthering the music of Bruckner and Mahler. The presentation was made in the artists' room backstage by Warren Storey Smith, an honorary member of the society.

Mahler's Fifth had not been done here since 1940, and it was high time for another hearing. It is an immense and powerful work, characteristically Mahler in the vast complexity of its orchestral writing; full of the warmth, the emotional depth, the occasional grotesquerie of that composer. It also possesses that sub-surface demoniac quality peculiar to Mahler.

The only fault of the score is its length. Upwards of an hour is a lot of music for a listener to absorb; yet those who bring patience and devotion to the hearing of this piece are, in the end, well rewarded.

The words "inspired performance" are reviewer's corn, but there are times when no other terse phrase will do. This was truly an inspired performance, one of tremendous loving care and eloquence. The orchestra sang the adagietto beautifully, and the storminess of the second movement was the ultimate in symphonic drama. The other three movements fared as well.

When it all was over, Symphony Hall rocked with applause and some cheering, in which Mr. Burgin directed that all hands share. And they all deserved it.

CYRUS DURGIN.

*Boston Daily Globe*

Mahler again, this time the Fifth Symphony and a harder nut to crack than the Seventh of recent memorable performance, but a great work nonetheless and a most welcome revival by Richard Burgin.

It is harder to crack because here Mahler was trying his hand at absolute music, music without programmatic significance, and this, in Mahler, is entirely out of character. Mahler could not write "pure" music; it had to be motivated by something of a pictorial or emotional nature, the more personal, the more intimate, the more vivid the better. The classical, the abstract, was completely foreign to him; he was an exposed ganglion writing of death, of child-like visions, of remembered military bands, of summer days, of the Resurrection, of fearful dreams, of inner terrors and fears.

With the Fifth, sometimes (and certainly with aptitude) called the Giant, although it may be perfectly true he had no specific program in mind, a program is unquestionably presented throughout this massive 65-minute work. It keeps getting in the way of the ostensibly absolute fabric of the work; you can hear it in the melancholy horn calls, the anguished intervals of the trumpets, the downward sighs of the cellos. A moment or two of "straight" music, a moment or two of technic or of exploration of instrumental contrasts and textures, and the program returns at

a feverish level only to subside again into the composer's idea of absolute music.

This is, to me, the weakness of this work. It tries to look two ways at once and, despite the tremendous effectiveness of much of it, we are never quite sure which way Mahler is really looking. When he takes us by the hand through the meadows to tell us what the flowers say (as he does in the Third) or through the valley of the shadow (as he does in the Second), we follow in astonishment and wonder. When he tries to lead us by the hand to a funeral procession but chats during it of problems of instrumentation, we are not so readily led but we are, nonetheless, fascinated by both at once.

This, then, as nearly as I can put a finger on it, is the reason the Fifth fails to hold the audience and speak to it as the others do. Another reason is its structure. It begins with a marvelously affecting funeral march followed without pause, by an extended and frantic second movement which is virtually a long development of the funeral march. There follows a scherzo that begins with the wryest of waltz-like themes only to develop into an immense and tortured exploration of the orchestra's tonal resources. Then comes the adagietto, an incredibly reposed mood for string and harp leading directly into a fugal rondo that projects the material of the adagietto on a brilliant and turbulent canvas. All in all, they prove too much of a muchness.

Yet there are moments in this work of sheerest beauty, there is no denying that, and despite its length, it is an exceedingly worthwhile musical experience that yields up its beauties in a direct ratio to the listener's willingness to listen with his head as much as his heart. And it was given a most splendid performance yesterday afternoon by the orchestra under Richard Burgin, whose feeling for Mahler is as intense as his command of the orchestra. Both the first trumpet and the horn dominate this work throughout, and Roger Voison and James Stagliano gave brilliant performances on their instruments.

RUDOLPH ELIE,  
*The Boston Herald*

In furthering the cause of Mahler, Richard Burgin has added to his own

stature. At this week's Symphony Concerts the associate conductor is presenting the Austrian's Fifth Symphony, last heard here in 1940, and never before in Boston has he conducted with such authority, with such communicative eloquence. On previous occasions in the music of Mahler, and of others, Mr. Burgin has no doubt had a complete grasp of the score, but to understand music is one thing, to transmit that understanding to others is something else. And to do it in such a way that not only the orchestra, but the listeners are fired with the conductor's enthusiasm is something else again.

That is exactly what happened yesterday. The Mahler Fifth is a long work, and Mr. Burgin saw fit to restore cuts which Dr. Koussevitzky had made. Yet there was every sign that the audience was absorbed, while at the end it was genuinely excited, rewarding the deserving Burgin with shouts of "bravo," with cheers and stamping.

For these three performances (the symphony will be played again tomorrow afternoon) Mr. Burgin has received the Mahler medal, presented by the Bruckner Society of America. But not for them alone. He has given us the Mahler First, our only hearing of the first movement of the Third, while he introduced to us the Fourth, first through two movements and then as a whole. On another occasion, pinchhitting for Dr. Koussevitzky, he conducted "The Song of the Earth." This medal bears a head of the composer and his prophetic words, "My time will yet come." Long neglected and generally misunderstood, he is triumphantly coming into his own.

The Fifth Symphony is a mighty work designed on a grand scale. The opening funeral march and the stormy movement that follows are thematically related, as are the heavenly Adagietto, for strings and harp, and the glorious Rondo Finale, in the form of a triple fugue, that would alone serve to mark Mahler a master among masters. Between comes one of the most elaborate of orchestral scherzi, its mood and manner typically that of the Austrian dance. It is too much to say that the symphony as a whole is pure gold. There are brief lapses into commonplace in the

first three divisions, but in the last two Mahler redeems himself.

WARREN STOREY SMITH,  
*The Boston Post*

#### GUSTAV MAHLER: SECOND SYMPHONY

*The Philharmonic-Symphony Society of New York, Bruno Walter, Conductor; Westminster Choir, Dr. John Finley Williamson, Director; Nadine Conner, Soprano, Jean Watson, Contralto, Soloists; Dec. 2, 3, and 5, 1948. (The last performance was broadcast over CBS.)*

The devotion of Bruno Walter for his late colleague, friend and mentor, Gustav Mahler, is the reason for some of the best playing that we know today of that composer's works.

This listener may be pardoned his unwillingness to discuss the Mahler Second at length this time, since he has heard it, counting yesterday's performance, three times in the last twelve months, or so. He still feels about the work more or less the same way that he did previously, namely—and in a word—that there is too much of a muchness between the composer's programmatic aims and the creative results. Also, to add still another word, there is between sequences of grandly written music a good deal that answers to the facile and conventional.

In any case, Mr. Walter's sensitive control of his entire forces last evening—the soloists and the choir and the orchestra—was something very special in understanding and musical finish. Those parts of the symphony to which I respond most were indeed enjoyable and the other quite tolerable under such ministrations.

Both Miss Conner and Miss Watson were convincing in their solo singing. The choir delivered its two assignments beautifully.

ROBERT BAGAR,  
*New York World-Telegram*

Last night's Philharmonic-Symphony audience gave Bruno Walter a rousing welcome in Carnegie Hall last evening. Even more important, they stayed to cheer following the performance under Mr. Walter's direction of Mahler's gigantic Second Symphony.

It was a pleasant and well-earned tribute to the conductor, who has spent a great part of his career as selfless propagandist for the works of Mahler. And it was unmistakably a triumph for the composer, even if too belated to afford much satisfaction to the man who has been the recipient of brickbats as well as accolades during his stormy lifetime.

The performance was admirably finished and beautifully executed in every detail. Mr. Walter followed with the utmost fidelity all the composer's instructions, except for the one directing that the first movement be followed by a pause of not less than five minutes. That would be tempting fate even with a Philharmonic audience.

The soloists were Nadine Conner, who sang expressively and with seraphic purity of tone the music for soprano solo, and Jean Watson, who disclosed a rich, full-bodied and well-controlled voice in the contralto part. The Westminster Choir performed with precise ensemble and intonation. Its only flaw was an occasional lack of solidarity in the lowest voice, though it might be questioned whether the deficiency was that of the choir or of Mahler's choral writing. The composer has included in his score a number of notes which do not exist in the human voice.

The closing measures of the work, in which its already heaped-up sonorities are reinforced by organ and full chorus, was an overpowering experience unless you are one of those iconoclasts who are repelled by the nervous, febrile elements in Mahler's scores, alternating between hysterical despondency and equally hysterical exultation. There seems to be no middle ground. One finds Mahler either over-inflated, or overpowering.

JOHN BRIGGS,  
*New York Post*

Mahler's second symphony, however, bulked most largely in the reviewer's memory, even as in the temporal span of the program. That span also left little time for a discussion of the merits and drawbacks of this work, and of Mahler's music in general, but these are time-honored subjects of musical controversy. To hear a Mahler symphony under Mr. Walter's direction, however, is to hear it under the most advantageous auspices, and at least one listener

was conscious of the extent of the work in regard to elapsed time only here and there; mainly aware of the eloquence and inventiveness which mark much of this symphony, less so of the times when the composer's expressive objectives outran his ability to fulfill them.

With the orchestra in fine form, the performance was characterized by entire lucidity at all times, finely graded dynamic outspokenness of orchestral color. Mr. Walter and his musicians fully evoked the varied and contrasted moods of the five movements; the careful planning of the climaxes, with avoidance of premature reaching of maximum sonority, gave them their full climactic effect, and thus the closing measures could be heard with unfatigued ears. It was an interpretation under a conductor who, probably more than any other conductor now in active service, knew what Mahler wished to present to his hearers, and who has the ability to accomplish that effect.

The chorus sang admirably in the finale. Miss Conner, despite some unevenness, sang with an appealing quality of tone, especially in the uppermost notes, and Miss Watson's singing in the last two movements was warm and rich in timbre.

FRANCIS D. PERKINS,  
*New York Herald-Tribune*

Times do change! It is not hard to recall when a conductor would as soon have cut off his right arm as to offer a Mahler symphony to a Sunday audience. Yet, now we find Bruno Walter presenting just such a lengthy and exacting masterpiece, and prefacing it with Brahms' *Schicksalslied*—a gravely beautiful and nobly affecting work, yet not exactly one of the more popular items in the Brahms anthology—to a profoundly stirred and numerous gathering, which received the disclosures with extraordinary manifestations of enthusiasm, culminating, after the Resurrection Symphony, in shouts and cheers. Who shall say that Mahler is not, at long last, coming into his own among us, even despite the recent depressing experience of the Seventh Symphony?

The writer of these lines vividly remembers hearing the Second Symphony in Carnegie Hall under the leadership of Mahler himself. To be sure, he was

not as ripe for it as he became in the course of the years; yet he can vouch for it that the performance, even under the composer's baton, was considerably less eloquent than the grandiose unfoldment of Mr. Walter, Mahler's high priest, who proclaimed like a prophet inspired and with a cumulative effect which left the hearer shaken and unnerved. The audience listened in awe, almost as if it had heard the voice from the burning bush. In Mahler's day there had been dissent and reactions almost akin to mutiny; yet it is only fair to remember that the orchestra today is considerably better than the Philharmonic of those remote days, and that the New York public has acquired a new insight. There is every reason to believe that a few annual performances could make the score a best-seller.

Mahler was perhaps not so far wrong as people have assumed when he declared: "In the future my symphonies will become great popular festivals." They should be just that as long as Bruno Walter is on hand to conduct them. Conceivably the effect of the Resurrection finale could have been even more overwhelming with a larger choral body, assuming such a one could have been accommodated on the crowded platform of Carnegie Hall. Yet, considering the splendor of the interpretations of the role, it would be graceless to make an issue on this point. Whatever Nadine Conner and Jean Watson may have achieved the preceding Thursday (when their achievements were acclaimed as uncommonly fine), one feels that this time the contralto delivered the *Urlicht* movement without all the profundity of feeling and the quality of which the section should diffuse. The hearer obtained the impression that it was over almost disconcertingly soon, and that the singer had merely skimmed the surface of the passage. Mr. Walter had himself revised the English version of the *Wunderhorn* verses; they are more colorful in German.

HERBERT F. PEYSER.

*Musical America*

When Bruno Walter conducted Mahler's Resurrection Symphony in January, 1942, with the Philharmonic-Symphony, it seemed doubtful, to those who were stunned by the overwhelming intensity of that interpretation, whether he or

anyone else would ever quite equal it. But the audience at this concert witnessed another miracle of the same order. For no less a word befits a performance in which every musician, from the humblest chorister and back-desk player to the most prominent soloist, is swept away by the spirit of the music.

One could list a hundred details to illustrate Mr. Walter's all-encompassing grasp of the score. Under the spell of his inspiration, even the piccolo had a soul. In the terrifying outbursts of woodwinds, brasses and drums, in the first and last movements, the tone of that usually inflexible instrument was as poignant as a human scream. And who else evokes from the tympani the sepulchral majesty which Mr. Walter obtains in this "musical fresco of the Day of Judgment?" For once, the off-stage fanfares, symbolizing the calling of the dead, had their true dramatic significance and the pianissimo entrance of the chorus was as ineffably beautiful as it must have sounded in Mahler's musical imagination.

Since Mr. Walter knew exactly what the composer intended, he was able to achieve a flexibility and rightness of tempo such as one seldom encounters in Mahler performances. Anyone who has examined the scores or listened to them analytically will realize what a heartbreaking challenge to conductors their fluctuations of pace can be. Taken too freely, the vast structures fall apart. Taken too strictly, they become rigid, emotionally overtensed, and therefore monotonous. But Mr. Walter was infallible throughout the symphony. Nothing was more impressive than his treatment of the march-like section before the entrance of the chorus, in the last movement. Here, the freedom that characterized the rhythm of the earlier sections disappeared, and Mr. Walter established an inexorable pace that made Mahler's symbolism perfectly clear.

The soloists both sang well, though Miss Watson was more emotionally communicative and more at ease in the music than Miss Conner. The contralto's performance of the *Urlicht* was deeply moving. Incidentally, those who sneer at Mahler's sense of form should examine his masterly expansion of his song, *Des Antonius von Padua Fischpredigt*, into the scherzo of this symphony, which intensifies through its irony the lyric beauty of the succeeding song of

faith, Urlicht.

Both the Schicksalslied and the vocal portions of the Mahler symphony were sung in English. The translation used in the Brahms music was full of sibilant final s's and was otherwise awkward; but the Mahler text came out more fortunately in performance. The concert (Mr. Walter's first of the season) ended with one of the most tumultuous ovations that Carnegie Hall could ever have witnessed.

ROBERT SABIN,  
*Musical America*

Walter's survey of the symphony was masterful. Mahler's music means much to him, and he conducted the work with careful attention to detail, yet with a sweep that did much to draw the purple patches together; and in the last movement one could, as plain as day, visualize Mahler knocking loudly at the gates of Heaven and making an awful row about it. The time is long past for an evaluation of this composer's music, for liking or disliking it is much a matter of one's emotional makeup. Both of the soloists sang beautifully, and the chorus was well trained. As for the diction, the language might as well have been Old Persian. Perhaps it was just as well, considering the literary quality of the text.

HAROLD SCHONBERG,  
*The New York Sun*

Rarely is so highly unified a schedule presented in the course of an orchestral season, or one so consistently lofty in mood. Like the monumental Mahler Second Symphony, Brahms' "Schicksalslied" and, in all likelihood, his "Tragic Overture" are concerned with the human being in the clutches of fate pondering on his destiny. In the "Schicksalslied" there is no solution to the meaning of man's earthly sufferings, but in the Mahler masterpiece the composer expresses his unshakable conviction that the tribulations encountered in this world lead to everlasting happiness in a future life.

This "resurrection" symphony, so-called because of the hymn by Klopstock which forms the climax of the finale and also of the entire opus, is a creation of tremendous power and intensity. It asks immense orchestral re-

sources and reaches great heights of dramatic expressiveness in its mighty initial and closing movements, which are of heroic proportions. It is Dantesque in its metaphysical subject matter, symbolism and dignity, and so wide in its appeal that it was the most often performed of all of its composer's orchestral works before his Eighth Symphony appeared.

The work, which had its last previous hearing in this city by the Philharmonic under Mr. Walter in 1942, opens with a lengthy movement, originally entitled "Totenfeier" ("Funeral Rites"), a vision of the grief and anguish of mankind and of his terror of death and annihilation. The second movement, an Andante, forms the needed contrast, being of a happy character and referring to man's joy in life and nature.

The next two movements are both based on poems from "Des Knaben Wunderhorn." One of these divisions is an orchestral scherzo dealing with the "Fischpredigt" from that collection of lyrics, while the other, "Urlicht," is an alto solo. The "Fischpredigt," which treats of St. Anthony preaching to the fishes, is a pessimistic piece of music and tells in tones of the restlessness resulting from lack of religious convictions.

With the "Urlicht," which expresses firm belief in the hereafter, the symphony is led to its vast culminating movement. The most extensive part of the whole tells of the Day of Judgment, beginning with the preparation for the Resurrection, the marshaling of the dead and lastly, and with overwhelming impressiveness, of the Resurrection itself, when for the first time the chorus enters softly with the Klopstock hymn, which is carried gradually to a jubilant peroration of extreme forcefulness.

The symphony in its entirety is bound together from first to last with the utmost logic and all of the five divisions fall into their places in the architecture of the work with a sense of finality and rightness, the three central movements forming just the right amount of relief to the more potent music of the opening Allegro and the finale.

All of it was very human, moving and impressive as Mr. Walter read it, with his keen understanding of its every measure. His was a performance noteworthy for its sensitivity, searching ima-

gination and conveyance of every fluctuating mood from the most lyric to the most dramatic. Under his guidance, the orchestra, soloists and chorus gave an inspired account of the work, and all of the participants as well as Mr. Walter himself deserve thanks, indeed, for so penetrating an interpretation of a symphony which deserves far more frequent hearings than it has enjoyed hereabouts in the past.

*The New York Times*

ANTON BRUCKNER:  
SEVENTH SYMPHONY

*Buffalo Philharmonic Orchestra, William Steinberg, Conductor; Dec. 7, 1948.*

Bruckner's Seventh, new to Buffalonians, is both a miracle and a disturbance. It sweeps one up in overwhelming majesty and then allows musical meditation to be disturbed by unexpected utterings of hesitation and tempo.

The symphony, of decidedly Austrian form, is fulfilled by the first two movements, the Allegro and the Adagio. The Scherzo is of a different world while the Finale is only a repetition of the earlier themes.

Steinberg and the orchestra were in perfect agreement for the Bruckner. The composer's elaborations and flowing themes were well spoken by all sections of the orchestra, and the sustaining quality of the Adagio was enjoyed.

For a Buffalo performance, the Bruckner was a daring choice. But by measure of the lasting applause that returned to orchestra and conductor, the choice was well justified.

K. G.,

*Buffalo Courier-Express*

Records show that at one of the early performances of Anton Bruckner's Seventh Symphony in New York City in the 1880s one-third of the audience left before it came to an end. Tuesday evening at the first performance here of the work by the Buffalo Philharmonic Orchestra the case was quite otherwise.

The warmth of the applause in Kleinhans Music Hall after the praiseworthy performance of the symphony suggested that Buffalo concert-goers are willing and even eager for new listening experiences. The demonstration also

indicated appreciation of the music for its own sake.

William Steinberg conducted the work with special emphasis on its lyric and rhapsodic qualities, a fact that helped mitigate some of the weakness of the score. The symphony is certainly discursive, repetitious, even laborious at times, but its originality and individuality cannot be denied. It is laid out on a large scale, with most of its considerable thematic material spun out at great length.

Some of the thematic material has a soaring loveliness—the long opening theme of the first movement, for instance—while some is old-fashioned and banal. The Adagio is the most impressive movement. Its depth and poignancy, a blend of naive pathos and imposing solemnity, were well brought out in the performance. The Scherzo, a robust reflection of Bruckner's peasant origin, is the most concise movement.

THEODOLINDA C. BORIS,

*Buffalo Evening News*

ANTON BRUCKNER:  
FOURTH SYMPHONY

*The Philharmonic-Symphony Society of New York, Bruno Walter, Conductor, Dec. 9 and 10, 1948.*

A powerful reading of Bruckner's Fourth Symphony highlighted last night's program of the Philharmonic in Carnegie Hall last night. Bruno Walter directed.

Like Gustav Mahler, whose Second Symphony was featured last week, Anton Bruckner is a kind of adopted symphonic orphan of Mr. Walter. Thanks to him—and a few other podium stalwarts—the Austrian founding, who was called half-sage and half-yokel, now has a home in many of the country's major repertoires.

And just as last week's readings of the Mahler score won hundreds of new adherents, so last night's rendering of the so-called "Romantic" Symphony must have recruited hundreds more in the camp of the long-spurned Austrian.

It was hard to see why Bruckner has been so slow in making repertory headway among local concertgoers. The impact of his genius battered through in mighty surges last night, and the crowd seemed ready to give him right of way on any program.

Some insist it is Mr. Walter's own

genius that makes the difference—that both Mahler and Bruckner are really second-rate composers who sound first-rate only because the conductor happens to be first-rate. Mr. Walter would be the first to deny this.

Listening to last night's reading, one felt the glory of this score was always there and that all it needed to stand revealed was a group of strategically placed conductors with a real faith in Bruckner and a public willing to do the conductor and composer just one small favor—listen.

Last night's subscribers listened all right, listened and liked it. For what they heard was a strangely imposing score, bristling with fascinating effects and warmed over in the adventurous fervor of a simple man who for the moment was lost in a dazzling reverie of knighthood and mystery.

LOUIS BIANCOLLI,  
*New York World-Telegram*

The Haydn Symphony which opened the program was discerningly interpreted, but the most impressive part of the concert for this listener was that given over to the discourse of Bruckner's Fourth Symphony of which he was unfortunately only able to hear the first two movements. But these sufficed to renew the conviction that Mr. Walter remains incomparable as an interpreter of the great Austrian master's music. To hear the sublime slow movement of this symphony unfolded with such profound musical penetration and so luminous a sound texture is an experience not soon to be forgotten.

JEROME L. BOHM,  
*New York Herald-Tribune*

He is also authoritative in Bruckner, but the results achieved in the E-flat ("Romantic") symphony were of a less gratifying sort. Not even the genius of Mr. Walter can make palatable a work which is in reality four vast allegro maestoso movements played one after the other with almost no contrast in mood and content. It is always the same experience when you hear Bruckner. The first fifteen minutes come as a revelation; you are indignant that his music has been so scandalously neglected. After half an hour, when you realize that nothing is going to happen

except more of the same, you are back with the anti-Brucknerites again.

JOHN BRIGGS,  
*New York Post*

The concert, stretching to undue length, ended with a wonderful performance of one of the most enjoyable of all the Bruckner symphonies—the Fourth, the "Romantic"—again the term. How romantic it is! To Wagner is attributed the blame, if it is, for the caption Bruckner applied some years after he had completed it: "A citadel of the Middle Ages. Daybreak, Reveille is sounded from the tower. Knights on proud chargers leap forth. The magic of nature surrounds them."

It is a perfectly good index to the nature of the music, whoever proposed it. The opening is of a ravishing beauty with the horn call that is answered and at once extended by the orchestra. The answering second theme has the inimitable Bruckner contour, with the broad triplet involved. There is very little flagging or groping in this movement, as usually there is in movements of Bruckner symphonies. And there is continuity of thought between the glamorous opening movement and the one, no less beautiful, which follows. For the opening phrase of the 'celli, with the initial interval of the fifth, seems to branch right out from the horn theme that opened the work.

The chorale theme that ensues is, again, one of Bruckner's finest. How nobly and poignantly, a little later on did the violas intone their significant phrases! With what gusto, what elevation, does old Anton sit down and proceed to write music. When interrupted in composition, he could be magnificently disagreeable. But he feared the critic Hanslick as he feared death, and so pressed a thaler upon Hans Richter "for a mug of beer," as thanks for conducting this symphony. It is not as pretentious or weighty as the mighty "Eighth" and the elegiac Ninth, but it is more spontaneous and of a better level of inspiration, than the grander but patchier scores which came later.

The scherzo with the hunting calls is certainly nature and the vibrant forest echoing to the sounds of life. And, quite as with Haydn, there is a trio that is a pearl, for the middle part.

Only in the finale he wrote, does Bruckner fall into his regular pits of repetition, nonsequiturs and sequences that repeat patterns and tread water in hopes of the timely arrival of a new and good idea to relieve the situation.

As a whole, the effect of the symphony was engrossing. It must be accredited to Mr. Walter as well as the composer. Mr. Walter is no modernist in his leanings or sympathies, or in the body of his repertory. We do not think it is either his need or his place to be so.

We are fortunate in having in him the artist who recreates the expressions of a Bruckner or a Mahler—if you like—not only as the composer imagined them, but, so to speak, in the spirit in which the audiences of Bruckner and of Mahler listened to their works. For this is the evocation, not only of a specific score, but of a period. We hear this music with a color, accent and atmosphere which is its complete rejuvenation and revelation of its innermost meaning. Perhaps the time is too near when father will say to son, "You heard the Bruckner 'Romantic'? You don't know what it is. I heard it conducted by Bruno Walter."

OLIN DOWNES,  
*The New York Times*

Bruno Walter did something transcendental—or close to it—as his second program of the season with the Philharmonic-Symphony Orchestra in Carnegie Hall last night. He played a Bruckner symphony, and made it sound terminable (an unfamiliar usage to express the antithesis of one's usual feeling as to those works), logical, even organic. Lest it be supposed that this dissenter has weakened, let it be added that it did not, thereby, seem very much better music.

The symphony was the fourth in E flat, familiarly known (if any one tends to become affectionate about Bruckner) as the "Romantic." This, to an extent, explains Walter's achievement, for it is relatively congenial Bruckner, with much writing for the French horns—an excuse in itself for listening to almost any piece of music—and a nice cyclical use of a recurrent theme. Not the least of Walter's arts was the voicing of his brasses in such a way that the horns were sonorous without overblowing, and the trumpets shone through them lightly,

brilliantly, whenever required.

As a consequence of this loving, learned, close to inspired playing, the nature of Bruckner's limitations was clearer to me than ever before. He was essentially a musical rustic, a thinker whose ideas simply do not wear with ease the orchestral purple in which Bruckner dressed them. Had he, for example, the sense of suitability which was born in Smetana, the self-critical flair for writing a good sonnet where he had a sonnet to say, rather than a poor epic poem, we would have had another composer of quality. As it is, we merely have one of qualities, and qualifications.

IRVING KOLODIN,  
*The New York Sun*

#### ANTON BRUCKNER: SECOND SYMPHONY

*Houston Symphony Orchestra, Efrem Kurtz, Conductor, Dec. 13, 1948.*

The Bruckner Symphony, which opened the program and served us the major work, moved with a sustained drama through four movements of assorted mood and accent, from a masterful opening to celestial caprice, a Wagnerian scherzo, and closed on a note of bravura.

Following the Bruckner, Dr. E. W. Doty, dean of the school of fine arts at the University of Texas, presented the Bruckner Society's medal of honor to Conductor Kurtz for his part in bringing little-heard Bruckner music to the public.

ANN HOLMES,  
*The Houston Chronicle*

The program opened with the Bruckner Symphony No. 2, which was a large achievement for Mr. Kurtz himself. It was, I think, the best account of a major work he has given us. He has a clear and most gratifying affection for this melodious score and his alert perception and feeling resulted in a reading of fine balance and glow. His tempos were commendably free and communicative; his projection of Bruckner's language above any complaint from this source.

Even with the few cuts it sustained, the symphony is prolix and diffuse; its drama is certainly not of the greatest;

but it does put forth the golden mean of moderation with real beauty.

HUBERT ROUSSEL,  
*The Houston Post*

GUSTAV MAHLER:  
*DAS LIED VON DER ERDE*

*National Symphony Orchestra, Hans Kindler, Conductor; Nell Tangeman and Harold Haugh, Soloists; December 15, 1948.*

Dr. Hans Kindler and the *National Symphony Orchestra* last night gave the Wednesday series audience the opportunity to hear one of the most beautiful works in symphonic literature — Mahler's "Song of the Earth."

It was obviously not a popular choice. There were too many unabashed yawns, too much program dropping and feet shuffling. But we are grateful to Dr. Kindler for offering it, even tho he (and more power to him) undoubtedly realized what the general reception would be.

It's hard to understand how anyone could fail to respond to the impressive musicianship of the performers—Dr. Kindler, the orchestra, Nell Tangeman, mezzo-soprano, and Harold Haugh, tenor—if not to the haunting beauty of the still "modern" music. It was one of the memorable events of the music season.

Miss Tangeman in the final song, "The Farewell," brought the work to moving climax. It was a tremendously difficult task that Mahler set for her, but her voice and her musicianship met it superbly.

MILTON BERLINER,  
*The Washington Daily News*

Eight years ago, lacking three months, Dr. Hans Kindler with the *National Symphony*, presented Mahler's "Das Lied von der Erde." Its second performance was given last night in Constitution Hall for the Wednesday subscribers and programmed with the two Gluck numbers as its initial hearing. The vocal parts offered the occasion to hear Nell Tangeman, mezzo-soprano, and Harold Haugh, tenor, as soloists, both of whom are known for their artistic performances in major vocal works.

There is more to "Das Lied von der

Erde" than simply its novelty or the exposition of new elements of construction. It is a personal work reflecting primarily the composer's own poetic sensitiveness and again, the culmination of a creative idea, previously tried out, whereby the vocal and instrumental are integrated into a symphonic pattern. The text is taken from Bethge's collection of Chinese poems of the 8th century which, in spite of delicacy and beauty of thought, are pervaded by a deep melancholy. The six poems used are divided alternately between the two singers.

Mahler's inspiration came from the ideas expressed in the texts and his reaction is from his own national standpoint. Neither the pictures placed before his eyes or the subtleties of emotion as set down by the Chinese poet are so important as his personal translation of them. So that in listening to "Das Lied von der Erde," it is the composer's sentiments released by the words that stand out rather than an attempt to place them in a special atmosphere. The genuineness of his feeling, however, and the particular manner of its expression, are impressive. There is atmosphere, too, in each of the sections, though it is Western and not Eastern.

Considered from this angle, the music is moving at all times. It sinks occasionally to mediocrity and the sentimental especially in the lines of melody which, while pleasing, contain nothing out of the ordinary. When the text deals with the sadness of autumn or the consciousness of finality of death, then the composer steps into the spiritual realm where he discourses forcefully and poignantly. Then the instrumentation is reflective of the words and expressed with communicative simplicity.

The work is dramatic in arrangement and the contrasting quality of the voices brings a strong play of light and shade in mood. The philosophy of the poems is echoed in rich instrumentation, which varies from a monotonous level to a stirring eloquence sometimes reaching the grandiose. By its very unevenness of value, with passages of minor worth followed by arresting creative power, it attains a quality strongly appealing because it is both human and inspired. The interludes between the vocal sections are as significant as that surrounding the songs and mounting in dramatic intent to the climax of "The Farewell."

This concluding poem gave Miss

Tangeman her greatest opportunity for the full display of her vocalism and her musicianship. Her warmly tinted voice is well adapted to portray the sombreness of "Autumn Loneliness" or the pastel effects of "Beauty." Mr. Haugh's feeling for the music was exceptionally fine, although the timbre of his voice is somewhat too veiled for the more robust sentiments assigned the tenor. His singing of "Youth," however, was lovely.

The orchestra was most responsive in color and phrasing to Dr. Kindler's directing in "Das Lied," preceding it with superb playing of the "Overture" to Gluck's "Iphigenia in Aulis" and the Gluck-Mottl "Suite." In the classic numbers, the clarity in attacks, tone and effects was particularly noteworthy and matched by the sonority and flexibility present in the Mahler work. The audience was stirred to enthusiasm and the applause was long and warmly appreciative for the soloists, the conductor and the musicians.

ALICE EVERSMAN,  
*The Evening Star*

Gustav Mahler's "Song of the Earth," revived last night in Constitution Hall by Hans Kindler and the National Symphony, is a work of so much charm and originality that its like is not to be found in all the literature.

Mahler was a Czech. He spent the greater part of his life conducting German opera and symphony. Inevitably he absorbed the prevailing Wagner-Strauss vocabulary and made it so much his own that only a faint accent, so to speak, remains of the original.

That is the composition's first miracle. The second is equally remarkable. The poems which he here has set for mezzo-soprano, tenor and orchestra are of Chinese origin and date from the eighth century.

They hymn a "Drinking Song to Earth's Sorrow," or the "Loneliness of Autumn." They sing of "Youth," "Beauty," "Wine in Spring," and "Parting."

These themes have no value on the stock market, nor do they represent wares that can be purchased in the department stores. Yet they held an audience of modern sophisticates in rapt attention. That, as had been suggested, was the evening's second miracle.

The evening's third miracle was the performance itself. This sought out and exploited all the orchestra's subtler beauties of tone and timbre—the sheen of violins that seemed to use no bows but to evoke the sound with inaudible gesture; the warm romance of horn tone; the clear song of trumpet; the glow of woodwinds.

This is the sort of orchestral virtuosity in which Hans Kindler excels. It derives from insight and imagination and is executed through an expert technical resource such as few conductors develop.

Finally there were the soloists, Nell Tangeman and Harold Haugh, whose function it was to provide vocal obbligati to the orchestra and make them sound like Lieder. So many words in praise of Miss Tangeman's lovely voice and extraordinary interpretative gift have been written in these columns that the present obligatory *da capo* can only seem redundant. She is a most appealing artist.

As for Harold Haugh, he is a notable discovery. How the Met has overlooked this sturdy voice is an item that Billy Rose omitted from his recent catalogue of its managerial and artistic shortcomings.

He is a fine, upstanding figure of a man who can emit with ease and power those stratospheric tones for which tenors are paid high fees. He has voice, presence, musicianship, and sympathy.

GLENN DILLARD GUNN,  
*Times Herald*

#### GUSTAV MAHLER: FOURTH SYMPHONY

Dallas Symphony Orchestra, Antal Dorati, Conductor; Martha Ann Holmes, Soprano; Jan. 2, 1949.

What was really on the audience's mind was given some voice when Dr. Paul van Katwijk, dean of music of Southern Methodist University, came to the stage after the intermission to present Mr. Dorati with a medal awarded by the Bruckner Society of America for services to Gustav Mahler, another composer under the organization's wing.

Dr. Van Katwijk's words had the air of winding up a period of Dallas musical history. He praised Mr. Dorati for development of the orchestra and

declared Dallas' gratitude for "the remarkable range of repertoire" during Dorati's four seasons. This has not only enhanced the musical prestige of Dallas but also is a musical background of immeasurable value.

Mr. Dorati, in his response, was quick to remember that Dr. Van Katwijk had been his predecessor as conductor of the Dallas Symphony (1925-1937). "I am as proud of the hands that passed this medal on to me as I am of the medal itself," he said. "This platform, which is as great a place as any conductor would want to be, is now occupied by a man who did so much to make our Dallas musical tradition. You have before you the past and present of the orchestra, but what really counts is the future. Nobody who has ever been with it can ever dissociate himself.

"It is not often that one gets a medal for just playing music. Usually they give medals for mass murder. But we have survived that ordeal.".....

Mahler's Fourth Symphony was stylishly played and naturally lent itself to Mr. Dorati's meticulous detailing. Although handicapped by her placement against the back wall, Martha Ann Holmes, Wichita Falls soprano, was someone to remember from her delivery of the mystic, poetic phrases of the final movement, music that exacts much physically and musically. Obviously it was the conductor's plan to make her another voice of the orchestra but a position nearer the footlights, among the woodwinds instead of the horns, would have done justice to the purity and security of her tone and to the expressive nuances of her singing. It was, nevertheless, a debut with this orchestra that both singer and audience can cherish.

The Fourth Symphony is still bewildering in its program. Matters of musical weight come forth as cunningly wrought folksong. The soprano solo, which has about the same aim as Debussy's "Blessed Damsel," reduces the stained-glass mysticism to something popular and pleasant but reminding of nothing so much as Wagner's spinning girls in "Flying Dutchman."

It is an easy-to-hear symphony with melodies so sweet that they would cloy without the masterly confection of Mahler. The orchestra played excellently with only nervous horn entrances to mar

the smoothness. Other horn solos were just as often remarkable.

JOHN ROSENFELD,  
*Dallas Morning News*

ANTON BRUCKNER:  
ADAGIO (STRING QUINTET)  
*Boston Symphony Orchestra, Richard Burgin, Conductor, Jan. 4, 1949.*

The movement from Bruckner's String Quintet is among the simplest of his music, with a treatment that is unimpeded by the profusion of extraneous musical ideas that appear in much of the other works. It and the Brahms both were played with the mellow touch of understanding that is the charm of Burgin's art.

B.O.G., *The Boston Herald*

Although originally scored for two violins, two violas, and cello, the Bruckner takes on symphonic dimensions when played by the larger orchestra. It is well-bound in good form. The harmonies reflect the Wagnerian chromaticism. It is a trifle long, perhaps, but interesting throughout.

H.R., *Christian Science Monitor*

The lovely Bruckner movement, which according to a reliable source, had been performed in Cambridge by the Boston Symphony, but not in Symphony Hall, was a further extension of the mood developed by the Brahms. One never quite got over the beauty of the first bars; but the piece is still a wonder of enveloping sound.

JOHN WM. RILEY,  
*Boston Daily Globe*

After intermission, came, for the first time at Symphony Hall, the Adagio from Bruckner's String Quintet..... The profoundly beautiful excerpt from Bruckner, played with appropriately deep feeling, reminded us of how much we are missing where this composer is concerned. The first six symphonies are for us as though they had never existed. The Seventh we have not heard in some time. When Bruno Walter gave us the Ninth two seasons ago it had not been heard here for nearly 30 years. Is Bruckner that unimportant? Hardly.

WARREN STOREY SMITH,  
*The Boston Post*

GUSTAV MAHLER:  
FIRST SYMPHONY

*Los Angeles Philharmonic Orchestra,  
William Steinberg, Conductor, Jan. 15,  
1949.*

If music can melt hearts and loosen purse strings for a worthy cause, Mr. Steinberg's masterly interpretation of Mahler's First Symphony must surely have accomplished its purpose. A few more readings of Mahler like this one, and that much-abused and neglected composer might become as popular as Tchaikowsky.

Mr. Steinberg is obviously a conductor with an innate flair for this music. The problem with Mahler is always to strike a balance between the intimate and the monumental. The problem increases with each symphony that he wrote, and though it is less of a hurdle in the First than in the others, it still requires the utmost sensitiveness on the part of a conductor to co-ordinate the naïvete of the material with the expansiveness of the form.

Mr. Steinberg accomplished this unobtrusively by giving ample spread to all of Mahler's songful melodies, with their exacting variety of dynamic nuance, and never attempting to force them out of their natural place in the larger pattern. But he had an iron fist in a velvet glove for those vast climaxes which Mahler loved as much as he did the artlessness of his folk-like themes, and then the conductor exerted some of that driving dramatic force which makes so powerful a conductor of opera.

An orchestra of excellent musicians, large enough to comply with all of Mahler's rigorous demands of instrumentation, played the work remarkably well and the audience was stirred to cheers at the conclusion.

ALBERT GOLDBERG,  
*Los Angeles Times*

A large audience in Philharmonic Auditorium Saturday night responded to William Steinberg's reading of Mahler's First Symphony in D major with the cheers few conductors merit during any season. Even the men in the orchestra, approximately 100 hand-picked musicians from studio orchestras, gave the dynamic conductor a genuine favorite-son reception.

The Mahler work is music of such

power and warm beauty one wonders why conductors allow it to gather dust on the shelf. Few other symphonies bristle with such resounding peaks. The climaxes come like proclamations and Steinberg let them have their say without forcing them. Everything counted in the massive scheme.

Steinberg's reading was the kind to keep Gustav Mahler in the front ranks of symphonic repertory where he belongs. The composer's place is surer than ever today but Steinbergs and Bruno Walters are needed to help him speak his piece.

MARGARET HARFORD,  
*Hollywood Citizen-News*

A concerto to help provide a rebuilding fund for the war-damaged Hebrew University in Jerusalem found nearly every seat in Philharmonic Auditorium filled Saturday night, and filled, moreover, with listeners who had every reason to rejoice at being present.

William Steinberg had been heard before in the Bowl and in the Shrine, but I do not believe he has heretofore appeared in Philharmonic Auditorium. If so, it is surely a grave oversight on the part of whoever engages our guest conductors for the Philharmonic Orchestra. Such a man could be heard often and to the enrichment of our musical understanding in whatever he performs.

Mahler is regarded with considerable uncertainty by most American concertgoers, and while part of this may be due to a reluctance of our publishing houses to "push" his music as they have that of Tchaikowsky and Sibelius (to name but two arch-romanticists), I think much of it is due also to the fact that we have so few conductors capable of conducting his music.

Mahler was quite possibly not the world's greatest composer, but no one denies he was one of the greatest conductors, and as such he wrote his music for men of strong and inspiring podium stature. It defeats the insecure, the timid, the pedantic. It needs a conductor who can share the moments of exultation, encourage it through its periods of doubt, be stern with its flippancies.

Steinberg, who conducted without a score, held every element in superb balance through the swift dynamic changes, the severely taxed orchestral

voices and the large-scaled but capricious progress of the musical writing. The symphony, originally dubbed the "Titan," was conceived as a symphonic poem in two parts, and the music still reflects the programmatic content Mahler later disavowed. Of its four movements (originally five) there is a spring-like fragrance to the opening violin harmonics and a youthful charm to the Laendler-like scherzo. Mahler's rather mordant wit gleams from the mock funeral march, with its "Frere Jacques" tune in plaintive minor, and Mahler's reluctance to end is also evident in the long and least-integrated final movement.

MILDRED NORTON,  
*Los Angeles Daily News*

GUSTAV MAHLER:  
SECOND SYMPHONY

*San Francisco Symphony, William Steinberg, Conductor; Stanford University Chorus, Harold C. Schmidt, Director; Dorothy Westra, Soprano, Nan Merri-man, Contralto, Soloists; Jan. 27, 28, and 29, 1949.*

Pierre Monteux believed it fitting that a German guest conductor should present a modern German work, and at his press conference early in the season, the San Francisco Symphony director announced William Steinberg would present the Mahler Symphony No. 2.

Consequently, this week's symphony audiences are being treated to an overwhelming musical experience—one that culminated in cheers and a prolonged ovation from last night's audience which first heard Gluck's Overture to "Alceste" and the Haydn Symphony No. 99 played with uncommon clarity and neatness in the matter of ensemble.

The typically Prussian precision which characterized the preceding works and imbued the Haydn with formal grace and definite line (albeit a bit heavy and inflexible), stood Steinberg in good stead when it came to organizing the performance of Mahler's colossal work. It was new to the orchestra, and the singers. The score is difficult, complex and lengthy—the playing time being 1¼ hours. Yet Steinberg conducted it from memory, and the results—technically, musically and emotionally—were so stupendous and awe inspiring that for many listeners it seemed the shortest symphony of the season.

It is impossible to elucidate within the confines of a review the magnitude, the grandeur, the beauty or the dramatic and emotional power of this symphony as it was played last night. It is something which must be experienced. Fortunately, the program will be played again today and tomorrow night. And unless you are one who insists upon knowing any and all literary values which may be musically implied—don't read the story told in the program notes until you get home! Just listen to the music and get its full impact and meaning through your ears.

The work is replete with musical contrasts. One recalls the lilt of the pizzicato section, the stupendous *crescendi*, the frequency and effectiveness of the off-stage brass choirs which kept the players busy going and coming; fine instrumental solo work; the beautiful singing of Nan Merriman in "Primal Light" and again in "The Resurrection" which had Dorothy Westra's excellent soprano and the finely trained Stanford Chorus (Harold C. Schmidt, director) as additional vocal assets to the unforgettable performance which established Steinberg as a much greater symphony conductor than we had previously had reason to believe. His presentation of the Mahler score was truly great.

MARJORY M. FISHER,  
*San Francisco News*

Trumpeters and horn players ducked in and out of the San Francisco Symphony line-up like football players under the free substitution rule. The Opera House was filled to bursting with the blast and clangor of bells and gongs, while vocal soloists and the Stanford University Chorus added shouting to the tumult. For God was in his Heaven and Gustav Mahler called the tune.

Until this week's trio of concerts under the direction of William Steinberg, Mahler's second symphony had not been heard in San Francisco for more than 20 years, and there are two excellent reasons for its long neglect. One is that it requires enormous festival forces and so is not easy or inexpensive to prepare. Another is that, while it is extremely impressive and in spots even inspiring, it does not stand up too well with familiarity.

Its three middle movements, which are relatively light and small in caliber,

are thoroughly sound and perfectly achieved, even if the second and third are by no means well contrasted. Its two long outer movements are both apocalyptic and banal, thinly theatrical, and genuinely moving; after the cast-iron safe of the Mahlerian climax has dropped on your skull for the tenth or doventh time, you really do get the point.

There is something very human and touching about Mahler's letter wherein he defends himself against the possible charge of having plagiarized Beethoven by introducing voices in the finale of this symphony, when throughout the score he helps himself with both hands to Wagner. But this Wagnerian inspiration had positive as well as negative results.

All of Wagner's major works are full of noble nature-music, and this sense of the beauty and wonder of the natural world carries over to Mahler with undiminished power. One of Wagner's minor works, the "Siegfried Idyll," taught a whole generation of subsequent composers how to make the most enchanting use of German folk tunes, and Mahler learned this lesson even more brilliantly than Humperdinck. It is in the rich, elaborate weaving of wide-eyed melodies that Mahler comes close to genius, in the second symphony and everywhere else; the folksong style also had much to do with forming his highly individual, bright, chamber-like orchestration.

Unfortunately Wagner was fascinated with death as well as with nature, and this obsession leads, among his followers, to pretentiousness, over-blown rhetoric and mere noise—things which are by no means absent from Mahler's second symphony. And Wagner is a matter of understatement compared to the later composer in his use of special effects. After all, Wagner demands off-stage brass only once, at the beginning of the third act of "Tristan," but Mahler, having *anschlussed* this device, cannot leave it alone, and so reduces it to the plane of the obvious.

Steinberg's performance was extremely brilliant, authoritative, sonorous and grandiose, and the work of the guests—Dorothy Westra and Nan Merriman as well as the Stanford chorus—was quite as magnificent as that of the orchestra. Special thanks are due Miss Merriman and Miss Westra for not using the grotesque caricature of the texts which

is printed in the score by way of program book.

ALFRED FRANKENSTEIN,  
*San Francisco Chronicle*

On a stage massed with extraordinary orchestral and vocal forces, Mahler's Second Symphony—"The Resurrection"—brought this week's San Francisco Symphony program to a stupendous climax, Thursday night and yesterday afternoon at the Opera House.

William Steinberg conducted a masterly performance. Two audiences burst into lasting ovations when the orchestra, the Stanford University Chorus and soloists Nan Merriman and Dorothy Westra ended the climactic hymn in which Mahler voices his hope in all Eternity.

Every other music lover owes it to himself to hear the Viennese romantic composer's remarkable work in its final repeat tonight. It is colossal in impact and design, lasting seventy-five minutes. Despite its many contradictions, it sums up to a total of compelling genius.

Contradictions lie in all the work's physical, spiritual and musical phrases. That is why people have been arguing pro and con about it ever since its premiere in 1895.

It is deeply, grippingly religious—yet at times it is obviously theatrical. It is grandly inspired—yet not entirely without tedium.

On certain pages, it is as monumental as the Beethoven Ninth Symphony that it so plainly imitates—and then again it is merely bombastic. Its emotionalism sometimes approaches hysteria—and yet every page of it is the work of an artist who wields vast musical resources with the skill and judgment of a scientist.

It is cleancut and original (so much so that it taught a lot to the Richard Strauss of "Heldenleben"). Yet it frequently imitates not only Beethoven, but also Wagner. It is utterly charming in its lilting dance movement. Then again it is clamorous or bitter.

Steinberg's conducting beautifully encompassed virtually every aspect of the music. Or perhaps, in the firm efficient poise and clarity of his conducting, he did overlook some potential "innerness"—emphatic inner heart and savor—that is characteristic of Mahler.

On the other hand, he made Mahler

lyrically fine as well as tempestuous; sardonic as well as idealistic; supple in melody, terrific in accent, mystic in overtones of belief and devotion.

Trained to a "T" by Harold C. Schmidt, the many Stanford student singers lent a superbly impressive sonority and feeling to the choral last movement.

Miss Merriman, New York contralto, and Miss Westra, soprano from the south, also sang with excellent warmth and understanding, though vocal shakiness handicapped Miss Westra in some phrases.

ALEXANDER FRIED,  
*San Francisco Examiner*

ANTON BRUCKNER:  
MASS IN E MINOR

*New England Conservatory Orchestra, Malcolm H. Holmes, Conductor; New England Conservatory Chorus, Lorna Cooke DeVaron, Director; Feb. 16 and 17, 1949.*

In this country the 19th Century Austrian organist and composer is known far better for certain of his nine symphonies than for his churchly choral music, of which he wrote a good deal. Consequently such a rare opportunity as this presents a quite different side of Bruckner's musical nature. He composed the E minor Mass in 1866, when he was 42 and in the year preceding his nervous breakdown. The work was first performed in Linz in 1869.

This is a short setting of the Mass, and very difficult, the vocal writing often proceeding in eight parts and, as the Bruckner analysts long ago pointed out, having an archaic character that goes back to Palestrina. For instruments, Bruckner used only a small number of oboes, clarinets, bassoons, trumpets, horns and trombones. This, too, emphasizes the archaic side in certain pages, although in others it sounds like the massive, chromatic and often brilliant symphonic Bruckner.

But for all its intricacy, its weight and its grandeur, the Mass in E minor is essentially church and not concert music. It does not break out of the liturgical boundaries and take on the vast proportions of a work like the *Missa Solemnis* of Beethoven. This performance is very good, indeed, and last night the chorus—a bit too large

for Jordan Hall—sang superbly, and the small orchestra played with beautiful precision. All hands deserved the highest congratulations. Perhaps this achievement will lead the Conservatory to give us more choral Bruckner in other years.

CYRUS DURGIN,  
*Boston Daily Globe*

This work, dated 1866, is very seldom performed in the United States, being heard most recently in New York in 1936. It is austere in content, liturgical in form—the actual words, Credo, Gloria In Excelsis and Kyrie are not sung by the chorus—and it could be, has been, in fact, sung in church. Unlike the first and third Bruckner masses, which call for solo voices and full orchestra and are definitely operatic in style, the Mass in E minor employs no soloists and the accompaniment is provided by woodwinds and strings alone.

This mass finds Bruckner writing in a generally austere style, the form strictly contrapuntal and the orchestral accompaniment in the 16th century style, the instruments limited in numbers and the strings being altogether absent. There are moments, especially in the Credo, of Beethoven's influence, but the music does not shout upon the mountain tops and is—unlike so much of Bruckner's music—predominantly intellectual and spiritual in quality.

The Conservatory chorus and orchestra performed the work with ability and intelligence, giving careful expression to the architecture of the music composition and its inner sincerity. The attacks were clear and precise and the young musicians were so well drilled that even when Mr. Holmes knocked the score upon the floor, they did not falter in their cues.

ELINOR L. HUGHES,  
*The Boston Herald*

It is a short mass, employing up to eight parts with no solo voices. It is scored for double woodwinds and brass, an instrumentation suggestive of organ sonorities. The writing is influenced by the baroque masses of the seventeenth and eighteenth centuries; and while it has the mood of antiquity, it is not strictly modal nor contrapuntal, although these elements are employed. Much of

the harmony is diatonic and even chromatic. Bruckner took a variety of techniques and plastically combined them in a religious mold.

The Conservatory Orchestra and Chorus gave us far more than a mere reading of the work. Their attacks, releases, dynamics, and diction were of high quality. Their performance was constantly interesting. The Latin was well-pronounced. Much work, well done, has gone into this production.

HAROLD ROGERS,  
*Christian Science Monitor*

A notable premiere took place at Jordan Hall last evening, though the work in question, Bruckner's Second Mass in E minor, is nearly 83 years of age. The participating forces were the Conservatory Chorus, as trained by Lorna Cooke deVaron, and the handful of wind instrument players the score requires, with Malcolm Holmes conducting. Either of the other Masses, the one composed two years before and the other a year or so later, and both unknown hereabouts, would have given us the more familiar Bruckner of the symphonies. They require soloists as well as chorus and the accompaniment is for full orchestra.

This E minor Mass is severe. Bruckner's biographer, Werner Wolff, calls it "almost ascetic." There is masterly contrapuntal writing and a suggestion, though hardly an actual imitation, of the 16th century style. At the time this Mass was written Bruckner had composed only the first, or perhaps part of the first of his nine numbered symphonies. It would be idle, therefore, to seek in it the matured Bruckner of the last three of those gigantic works. In hearing it this one Bruckner enthusiast experienced a slight feeling of disappointment. Possibly knowing what to expect, a second hearing would convey a stronger sense of inspiration than was felt last evening. Frankly, the Mass impressed him to a considerable extent as a mighty exercise in counterpoint rather than as a musical interpretation of the text that would make it comparable to the great Masses of Bruckner's predecessors. It is far from easy music to perform and all concerned must be given much credit for the successful outcome.

WARREN STOREY SMITH,  
*The Boston Post*

GUSTAV MAHLER:  
SECOND SYMPHONY

*Chicago Symphony Orchestra, Fritz Busch, Conductor; Chicago Musical College Chorus, James Baar, Director; Karin Branzell, Contralto, Ellen Faull, Soprano, Soloists; Feb. 17 and 18, 1949.*

At its concert in Orchestra Hall Thursday evening, the Chicago Symphony Orchestra, directed by Fritz Busch, spread itself in more than a figurative sense by performing for the first time here the complete Second Symphony by Gustav Mahler.

The stage was filled to the last inch with the enormous orchestral forces which the score requires, and upon tiers to the right was a large black-robed chorus from the Chicago Musical College and, on either side of the conductor, a soprano and contralto soloist.

That this grandiose interpretation was greatly admired by the listeners—as it should have been—was made evident by the ovation which they gave it when the last tumults of sound came to an end.

Time after time Dr. Busch had to come back to the stage, to bring the soloists forward, and to ask orchestra and chorus to rise, while listeners were clapping and stamping their feet and shouting hosannas that not often have been heard so loud or long continued in this hall.

There can be no doubt that the symphony is an impressive one. Mahler was concerned in it—as he was in various later works—with the dread matter of death and resurrection. In his capacity as conductor he lived in the atmosphere of opera houses, and an instinct for the theatrical side of music was developed in him early.

The first movement, the beginning of which undoubtedly was inspired by Beethoven's Ninth Symphony, is a funeral march of imposing character and large dimensions. The finale, even more striking in its drama, contains the apocalyptic terrors which the composer's skill knew so well how to underline. But also there was redemption at the end.

It would not be Mahler if there were not to be heard somewhere or other in a symphony the child-like naivete which also is so typical of his style. Such a quality gives charm and

a needed contrast to two of the middle movements.

To the performance only the highest praise must be accorded. The work had been thoroughly rehearsed, and the orchestra played magnificently.

James Baar's chorus from the Chicago Musical College sang—from memory—with beautiful effect, and in the fortes with stunning sonority. The contralto solo was expressively sung and with great charm of tone by Karin Branzell, and the slighter soprano part was well done by Ellen Faull.

FELIX BOROWSKI,  
*Chicago Sun-Times*

A music event of importance took place when Fritz Busch, in the closing concerts (Feb. 17-18) of his second engagement this season as guest conductor of the Chicago Symphony, presented the local premiere in its entirety of Mahler's "Resurrection" Symphony. The Chicago Musical College chorus, and soloists Karin Branzell, Swedish contralto, and Ellen Faull, soprano, assisted.

The presentation was an extraordinarily impressive one. There was remarkable unity of spirit and technical precision throughout. The work could not have received a more devoted performance than the one given under Dr. Busch's leadership, with the unanimous response of his men of the orchestra, the beautifully trained chorus, and superior soloists. The conductor returned to the stage many times amid cheers and bravos, and shared honors generously with his ensemble.

DOSHA DOWDY,  
*Musical Courier*

Doubtless the season's most ambitious undertaking, Mahler's "Resurrection" Symphony, completed in 1894, was given its first reading by the Chicago Symphony orchestra Thursday under Fritz Busch's direction. A massive score requiring augmented orchestra, two female soloists, and mixed chorus, it is further weighted by philosophical considerations placed squarely into the tissue of the music by the composer himself, a man of enormous intellect and discipline and at the same time of broad visionary outlook.

Briefly, the five part symphony opens

with a profound reflection on the death of a hero, followed by two interludes which recall (as perhaps upon return from the burial) earlier contentment of the soul, and then, with a reawakening to reality, bring into focus the perplexities of mortal existence. The fourth movement, for solo contralto and orchestra, expresses man's belief that tho he lies in direst need, merciful God will provide him a light that leads to blessed eternity. The concluding movement is drawn from Klopstock's ode, "Resurrection," whose message, a summons to faith, proclaims all living, suffering, and sorrow not to have been in vain.

It is obvious that a symphonic work of such motivation should call for the most elevated performance, for if the true value of the composer's ideas, as embodied in his music, is to be measured, no imperfections of utterance should be allowed to intrude upon the message itself. Further, Mahler's employment of the orchestra is so gigantic in its scale that even if the symphony does not mystify the instrumentalists in its note by note aspect, it must be played in something broader than the simple declarative to give fullest justice to its breadth of idea.

Thursday's performance fell far short of the goal. It was not for lack of love on the conductor's part nor for his insufficient immersion in the score. Mr. Busch, it appeared, was prepared to function on a much higher plane than those around him. But the "Resurrection" symphony, which has a history of frustration in Orchestra hall, needs preparation no visiting conductor can give it by himself. And when basic information on the performance was slow in coming less than two weeks before the concert, it was discovered that important details of organization were untended and confused.

SEYMOUR RAVEN,  
*Chicago Daily Tribune*

Over half a century after Gustav Mahler completed his massive 2d Symphony, Fritz Busch conducted its first Chicago performance in Thursday evening's concert by the Chicago Symphony at Orchestra Hall.

For many years since Mahler's death in 1911 (he was not yet 51) his music was valiantly championed by a few conductors and 'societies,' but scarcely

accepted by the public. However, music has fashions, too; and the last few seasons have seen increasing public sympathy for his work. Judging from last evening's emphatic reception, Mahler's day may be at hand in Chicago.

It is perhaps his way of creating the loftiest thoughts in a manner so directly earthly that has caused some to accuse Mahler of 'vulgarity.' The sincerity of his writing cannot be doubted, however, when one is confronted with the child-like prayer sung by the contralto in this symphony's fourth movement, of that moment in the finale when terror turns to affirmation.

IRVING SABLOSKY,  
*Chicago Daily News*

ANTON BRUCKNER:  
*TE DEUM*

*Kansas City Philharmonic Orchestra, Hans Schwiieger, Conductor; Kansas City University Chorus, Hardin Van Deursen and Wynn York, Directors; Soloists: Brenda Lewis, Soprano, Winifred Heckman, Mezzo-soprano, Brian Sullivan, Tenor, Norman Scott, basso; March 1 and 2, 1949.*

The soloists were Brenda Lewis, soprano; Winifred Heckman, mezzo-soprano; Brian Sullivan, tenor, and Norman Scott, basso. They were heard in the "Te Deum Laudamus" of Anton Bruckner, in the first half of the program, and in the mighty fourth movement of the Beethoven symphony, the No. 9 in D Minor.

All four sang with authority and feeling. There was balance and blend of voices. Mr. Sullivan, singing an especially-important part in the "Te Deum," gave it a flexible, assured reading in a lyric style that had dramatic impact. Mr. Scott, a basso with volume and resonance, gave character, accent and clarity to his part. Miss Lewis, who, like Mr. Sullivan, is an opera figure of importance, has a voice that is rich and clear, plus the asset of musical intuition. Miss Heckman's mezzo part, less in the limelight than the others, rounded out the happy choice of voices.

The chorus, filling a difficult assignment most creditably, was an important factor in the dramatic power and grandeur of the Beethoven and Bruckner music. Its directors, Hardin Van Deursen and Wynn York, came forward at the close with the soloists and Mr. Schwiieger to share the applause.

Bruckner's "Te Deum," which had been heard in Kansas City only once before in recent years, did, in fact, pave the way for the Beethoven that followed. Bruckner, who like Beethoven wrote nine symphonies, devised no choral parts for any of the nine, but the "Te Deum" often is made a concluding choral movement of his Ninth. There was breadth and sublimity in the choral-orchestral reading. It was at this point that the audience gave its first ovation involving several curtain calls before it took time for intermission.

CLYDE NEIBARGER,  
*Kansas City Times*

ANTON BRUCKNER:  
*NINTH SYMPHONY*

*State University of Iowa Symphony Orchestra, Philip Greeley Clapp, Conductor, March 2, 1949.*

Sometimes a great man makes little initial impression on people. Maybe it's the same way with a great symphony.

A case in point is Anton Bruckner's Ninth Symphony, presented to an Iowa City audience the first time Wednesday night by Prof. Philip Greeley Clapp and the University of Iowa symphony orchestra.

There was sharp divergence of opinion among half a dozen concertgoers with whom this writer talked after the program in memorial union.

Some thought the symphony was a thrilling experience and a rare opportunity for music lovers of this community. Others thought it was somewhat tiresome and much too long (one hour).

With due respect to the former view, this listener prefers to take the latter...

Two professional members of the orchestra probably offered an excellent suggestion when they advised this writer to become more Bruckner-wise by listening to the same work repeatedly.

PAUL DE CAMP,  
*Iowa City Press-Citizen*

ANTON BRUCKNER:  
*SEVENTH SYMPHONY*

*Philadelphia Orchestra, Eugene Ormandy, Conductor; Philadelphia, March 5, 1949; Washington, D. C., March 8, 1949; Baltimore, March 9, 1949; New York City, March 15, 1949.*

The rarely played Bruckner found Mr. Ormandy at his best. He brought

out the great dignity of this symphony, a work which brings to mind the words "nobility" and "grandeur." Washington should be grateful to Mr. Ormandy for the chance to hear it, and to the orchestra (special mention for the horns) for the kind of playing that has made it famous.

MILTON BERLINER,  
*The Washington Daily News*

Heading the bill was a gripping account of Bruckner's Seventh Symphony, in which Eugene Ormandy whipped the orchestra into a fine frenzy of tone.

Mr. Ormandy may not be the best Bruckner conductor on hand. No matter how high any conductor climbs up the road to Bruckner's genius, Bruno Walter is still a few jumps ahead. But last night's reading was among Mr. Ormandy's finest in years.

In years to come, he will probably smooth out the few remaining rough spots audible in last night's performance and delve a few more levels into the strange, occult world that was Bruckner's.

He may even decide to run off Bruckner's music in untrimmed glory, leaving it to the power of a great interpretation to carry the audience along the whole length of the four-movement span. That will come.

The performance certainly gained fresh recruits to the cause of the long spurned Austrian symphonist—the pious peasant who somehow mingled rustic naivete and cosmic vision in his testament of tone.

One found himself wondering again why so many years had to go by before conductors were prepared to expose American audiences to this soaring gospel of symphonic faith. Today Bruckner's music would seem to meet anybody's needs.

The finale may be a letdown, but only because even an Anton Bruckner couldn't sustain such inspiration over four movements. Mr. Ormandy's wrapped it all in a warm-spun fabric last night, and the general feeling was that the Philadelphians should do more Bruckner.

LOUIS BIANCOLLI,  
*New York World-Telegram*

There was so much that was fine in Mr. Ormandy's discourse of Bruckner's Seventh Symphony, his principal

offering on his program with the Philadelphia Orchestra in Carnegie Hall last night, that it is all the more to be regretted that he did not have the courage of his convictions to perform this work, one of the greatest in the symphonic literature, in its entirety.

The Austrian master's Seventh Symphony is the least sprawling in form of the nine he composed. Its architectonics are compact and any tampering with them in performance is ineluctably damaging to its formal contours and to the conveyance of its often truly sublime message. This is particularly true of the Adagio movement, a dirge written in premonition of the death of Richard Wagner, and one of Bruckner's most profound, which was arbitrarily shortened by something over a third of its length, a deletion which deprived his listeners of some of the score's most entire development section which was passed over with a sudden, startlingly unprepared cut to the coda which was, of course, in this way robbed of its purpose.

Otherwise, Mr. Ormandy's traversal of the symphony had much to recommend it both as sound and as realization of the music's immanent virtues. The sounds he elicited from his wonderful orchestra were of the utmost sensuousness and translucence; the blending of the strings, woodwinds and brasses was accomplished with almost incredible suavity. The soaring lyricism and inwardness of the opening Allegro moderato and the elegiac atmosphere of the Adagio were suggested with considerable perceptiveness, the contrasting moods of the Scherzo, too, were tellingly conveyed and the finale, although it does not tarry on such consistently high musical levels as the preceding movements, was exhilaratingly disclosed.

JEROME D. BOHM,  
*New York Herald-Tribune*

Earlier in the evening Mr. Ormandy and the orchestra offered Bruckner's Seventh Symphony. The affection of many conductors for the works of Bruckner is something I find difficult to understand. It is possible that they are fascinated by the long, complex, elaborately wrought scores and intrigued by the technical problems of performing them. But the listener may perhaps be

pardoned for finding them longwinded and indigestible. Last evening Mr. Ormandy did some pruning in the Adagio; even so, it was a lot of slow movement. The Seventh Symphony, in fact, is pretty much one long maestoso passage, plodding methodically toward the final double-bar with little contrast of tempo or musical texture. One feels a little stunned at its conclusion; it is like drowning in a sea of counterpoint, with a 50-pound cantus firmus tied about one's ankles.

JOHN BRIGGS,  
*New York Post*

Bruckner's Seventh Symphony was followed by a long demonstration, when groups in the hall remained to applaud and cheer for minutes during the intermission. This endorsement had been fairly earned by the tonal beauty and elevation of mood which distinguished the reading. Seldom have we heard even this orchestra play with more eloquence and color. Again the slow movement, one of the loftiest and sustained in its inspiration that Bruckner achieved, towered over everything. It is Bruckner to the core, Bruckner without dross or hesitation in a single measure, Bruckner ascending to heights denied to any but those of transcendent vision, who created music. Mr. Ormandy illuminated this vision in his performance.

This though he made a substantial cut of measures that would not have palled with such interpretation. The whole reading, whether or not one concluded differently certain of its details, was an outstanding achievement. One could have wished a more rugged accent, a little more of Blakeian grandeur in certain passages. The total effect was absorbing, compelling. That no performance could save the stuttering finale is self-evident. The grand total, where the Seventh, one of Bruckner's greatest symphonies, is concerned, is that of a work that touches the sublime often enough to more than recompense for weaknesses.

OLIN DOWNES,  
*The New York Times*

Thirteen years ago, Eugene Ormandy, when conductor of the Minneapolis Symphony, played Bruckner's "Symphony No. 7" and on that occasion was

presented with the medal of the Bruckner Society of America. Last night he made the "Symphony" the major work on the program of the Philadelphia Orchestra's concert in the special series in Constitution Hall. It was possibly the first hearing of this work locally. . . . . As a champion for many years of Bruckner's music, Mr. Ormandy's reading of his great "Seventh Symphony" was luminous with deep communion of spirit with that of the composer. There is not an earthly sound in this work. Its peculiar cadence is very spiritual and sometimes attains a breathtaking radiance. There is gayety and playfulness for variety and occasionally a winged climax, yet all of this has an unreal quality as though the music resided in another realm.

It produces however, a certain dissatisfaction for the ordinary form is not followed, it is diffused and its even level counteracts many of its most effective moments. The expectancy, according to what is looked for in a symphony, is not always realized. It is as though an adjustment were required to understand fully this much discussed composer's style. Yet it is exceptionally beautiful in the serene exposition of cherished ideas and notably impressive in such portions as the "Adagio." It sings constantly and even when reaching more spirited expression in the "Scherzo" and "Finale," maintains this characteristic. As the composer's devotion to Wagner is well known, his influence was apparent as was that of other composers, at times. A sharper variation in tempo and more pronounced dynamics than those used last night could have underscored the symphony's substance more pointedly but Mr. Ormandy's intention was to disclose the soul of the music and his accomplishment of this was rewarded by an ovation for the conductor.

ALICE EVERSMAN,  
*The Evening Star (Washington)*

An impression of the Bruckner Symphony's lack of musical significance is stimulated by the fact that it always is described as the symphony that uses the Bayreuth tubas in the score. Bruckner boldly borrowed these Wagnerian instruments together with many musical ideas that are easily recognizable. Borrowings prove futile in musical com-

position as a rule, though Brahms did some that were quite successful.

Bruckner's are not and the whole work assumes a somewhat spurious character. It was performed with precision by the Philadelphia virtuosi.

GLENN DILLIARD GUNN,  
*Washington Times-Herald*

Anton Bruckner had the misfortune to become the principal figure in one of the late nineteenth century's most notorious and odorous squabbles. Falling between two such giants as Brahms and Wagner, Bruckner never comes into his rightful acclaim except when given such great performances as last night's. For the Philadelphia men and Ormandy outdid themselves in every way, to make explicit the vast dreams and visions of the truly mystical composer.

The orchestra was supplemented by four "Wagner" tubas, designed by Wagner himself for some of his larger works, and much admired by Bruckner. These blended with the other brass and woodwinds in unusual splendor.

The slow movement of the symphony, a piercing threnody to the dying Wagner, was eloquent to the point of true grief. The scherzo, brilliantly turned out, is empty of ideas, but not of superb attire. It was completely satisfying to hear one of the great Bruckner scores, and in such a reading.

PAUL HUME,  
*The Washington Post*

Given an orchestral evening in which a Bruckner symphony is the memorable occurrence, one of two things may be surmised: (a) it was very well played; (b) there was nothing much else on the program. The impression that lingers from last night's performance of No. 7 in Carnegie Hall by the Philadelphia Orchestra under the direction of Eugene Ormandy was partially conditioned by each factor, but much more by the first than the second.

The fact is that, in sequence to Hindemith's "Mathis der Maler" of his last visit here, Ormandy gave us another exceptional performance in this Bruckner. It perhaps did not brood as much as some Brucknerites would prefer, and there was a sizable cut in

the slow movement to excite the purists further. But Ormandy's treatment made so much of the color and contrast in the score—a bit more, perhaps, than even the composer would recognize—as quite to transfigure the substance of the music. As heard from Ormandy, the slow movement and scherzo are in the realm of masterly; the first and last at least listenable. This adds to a better average for a fifty-minute symphony than most of Bruckner's known to me.

Where so much is good, the temptation arises to puzzle out what is lacking and where—for the work really did come off, as an entity. My latest conclusion, induced by last night's performance, finds Bruckner wanting in the element of plot, or dramatic construction, which dominates the traditional symphony from Beethoven to Brahms. The nine of one and the four of the other—as types—each have a character which is consistently maintained, to some climax of affirmation, or, at least, defiance. Bruckner's seventh resembles a play with a good second act and a confused denouement. It is the saving grace of music, however, that a well-constructed single movement may be enjoyed for itself; and to this pleasure Ormandy contributed mightily with his spacious, beautifully colored adagio and scherzo.

IRVING KOLODIN,  
*The New York Sun*

Bruckner's 50 minute Symphony No. 7 in E major is repetitious and long-winded. The themes and mode of impression are pleasant but inescapably banal. The over-all impression of the music is not uncongenial, but it rarely captures and holds the listener. It is obviously the work of a good man.

MAX DE SCHAUENSEE,  
*Philadelphia Evening Bulletin*

Conducting the Philadelphia Orchestra in Bruckner's "Symphony No. 7" last night at the Lyric Theater, Eugene Ormandy seemed inspired.

His motions bore the force of his entire body as he reacted to the massive phrases. Afterward a smile lighted his face as if the music had elated him.

The orchestra caught this feeling. Its tone had a wonderful ebb and flow,

strength and luster. Bruckner's enormous technical difficulties, especially for brasses, were brilliantly surmounted.

Though one might wish for more of the electricity of Beethoven, the passion of Brahms, it was good to hear this symphony, which holds its place respectably in the Viennese tradition.

Echoes of past grandeur are more evident than present inspiration. Bruckner knew well the language of the symphony, but his speech had more of grammar than metaphor.

His work is more homogeneous than Mahler's, but Bruckner is less adventurous in modulation, less ingenious in contrasting timbres, less inventive than his younger contemporary.

His harmony has less of Dionysus than that of Wagner, one of his idols, although the endings of the first, third and fourth movements of his Seventh suggest the Valkyries.

The Adagio so clearly reflects the kindred movement in Beethoven's Ninth that comparison is unavoidable. Bruckner is not big enough for his model, but this movement contains expressive writing and a fine climax in which orchestral waves shatter against the cymbal.

The Scherzo has a splendid pulse.

Portions of this symphony embody the composer's religious feeling. Certain passages suggest choral Ave Marias translated into orchestral terms.

Some of his symphonic walls, built with such careful masonry, ring hollow, but Bruckner's Seventh has phrases of undeniable power.

WELDON WALLACE,  
*The Sun* (Baltimore)

GUSTAV MAHLER:  
FIRST SYMPHONY

*San Antonio Symphony Orchestra, Max Reiter, Conductor, March 12, 1949.*

Regardless of whether you like Gustav Mahler with all of his sound and fury, you'll probably agree with Conductor Max Reiter it's a good idea to know him.

Still in the rather violent controversial stage, Mahler's music either bowls you over with awe-inspiring admiration or else has you wanting to stuff your ears with cotton.

Happily we can report we saw no ear-stopping when Reiter and the San Antonio Symphony orchestra devoted some 50 minutes to the performance

of Mahler's "Symphony No. 1 in D Major" at municipal auditorium Saturday night.

Mahler was a great one for tearing his hair and, obviously, when he got started, it was hard for him to stop. (His Second Symphony runs about twice as long as the First.)

In getting around to Mahler in the San Antonio Symphony society's thirteenth subscription concert, Reiter was keeping in step with the nation's other major orchestra leaders.

A steadily growing interest has been exhibited in Mahler during the past 10 years. In fact, Reiter has programmed his music several times before.

No mistaking it. A Mahler symphony always is ponderous business and, for the Saturday night performance, Reiter had eight extra players on hand as the score demands.

The audience reacted strongly, as if aware it had listened to something special.

RENWICKE CARY,  
*San Antonio Light*

Gustav Mahler's Symphony No. 1 was particularly enjoyable. After years of neglect, his music has staged a comeback.

The No. 1 has a lot of melody in it, vigor and no little exciting vim. The way Conductor Reiter and the orchestra played it makes one reasonably sure that Mr. Mahler's neglect is over and done with for good.

*San Antonio Express*

ANTON BRUCKNER:  
EIGHTH SYMPHONY

*Chicago Symphony Orchestra, George Szell, Conductor, March 17 and 18, 1949.*

Anton Bruckner's Eighth Symphony, performed by the Chicago Symphony Orchestra at Orchestra Hall Thursday evening, had its first hearing in these parts—47 years after its production at Vienna.

If this seems a lengthy period for a fine work to travel from one metropolis to another, it should be remembered that, because of the bitter enmity of Hanslick, the principal European critic of that day, egged on by the machinations of Brahms, Bruckner's music made slow

progress during his lifetime. Only recently has it evoked the admiration of the world at large.

George Szell, who conducted, had reason to feel that he had brought about an important contribution to the season's music. He had made the score his own, and evidently had devoted earnest preparation to it.

Nor was he mistaken in believing the symphony was a masterpiece, worth an inspiring presentation. In spite of its great length—an hour and a quarter—the Eighth Symphony held listeners' attention throughout. At the end, Mr. Szell had to make several journeys to and from the stage to acknowledge the applause and to ask the orchestra to share it with him.

Great richness of musical idea and of orchestral color abound in this music, which, in one element, at least, resembles Schubert's in its neverfailing flow of melody. But Bruckner's inspiration soared to loftier flights of grandeur than were conceived by his immortal predecessor.

The other movements contained vast stretches of dramatic emotion, great pomps of sound which Mr. Szell and the orchestra made impressive. The performance in general was fine, but a greater familiarity with details of the score would have made it more spontaneous.

FELIX BOROWSKI,  
*Chicago Sun-Times*

The entire pre-intermission was devoted to the long and unevenly rewarding Bruckner "Symphony No. 8, C Minor."

Since the days of Brahms, Bruckner has been a highly controversial composer.

We don't propose to add our two-cents-worth to the argument.

Like the work, the playing was also uneven but preponderantly balanced on the credit side.

Szell's knowledge of the memorized score was authoritative. This composer seems definitely his forte.

CHARLES BUCKLEY,  
*Chicago Herald-American*

There is a cabala about Bruckner's symphonies many of us would like to penetrate more deeply. Had Hans von Bülow made him the "third B" instead of Brahms, a nomination his supporters contend would have been just as plaus-

ible, our worship of catch phrases might have landed him securely in the repertory where he now holds precarious place, alternately made a shrine by his high priests, scorned by his detractors, and cut to gobbets by conductors taking the middle path.

Myself, I am on the side of the high priests, because if you are to know a man's worth, give him a chance to say what he has to say. I don't even object to the shrine, for I have learned most about Bruckner's music from Bruno Walter, who enters into the candor and the mystery of its faith. To speak of the Austrian's symphonies as cathedrals, or as mystery plays reaching toward heaven, is not necessarily the nonsense of attempting to explain one thing in terms of another. Their very reason for being is the greater glory of God. To come alive in performance, to transcend their sometimes baffling length, they must be permitted to share their apocalyptic visions.

Mr. Szell remained nonpartisan. He saw no visions and apparently made no cuts. In his scholarly hands the Eighth Symphony, Bruckner's third in C minor, remained inscrutable, tho the amplitude of the magnificent slow movement became one of the season's treasures in tone. Here, and to a lesser degree in the heaven storming finale, the performance took on an eloquence reminiscent of the orchestra's great days in music and gave me an unwarranted hope that I might discover at last what Bruckner meant when he said that finale was "the meeting of three emperors."

Comparatively, the first and second movements were mathematically set forth, but not to be believed in, and therefore shorn of their major miracle, faith. Which just about gets me back where I started. Working without score for 70 or more taxing minutes, Mr. Szell gave us a scholarly, occasionally eloquent, performance of too long neglected music. He paid us the courtesy of something more to the musical point than the average guest conductor's showpiece. But he left many questions unanswered. Two are particularly tantalizing. Can the fully revealing performance justify Bruno Walter's description of the Symphony as "sublime," and in such performances do those pauses suggest what Brucknerites insist they should suggest—pauses for prayer?

CLAUDIA CASSIDY,  
*Chicago Daily Tribune*

Anton Bruckner's Symphony No. 8 was written 59 years ago, and never was performed in Chicago until Thursday night. It's a work of nobility and ingenuity, rich in thematic resources and masterfully orchestrated, apparently deserving more frequent performance than the statistics in the preceding sentence accord it. Yet I wouldn't want to hear it again in the next fortnight or so. For the fact of the matter is, it is entirely too long, with a finale whose crushing repetitiousness eradicates much of the supreme beauty in the three melodious movements that precede it.

True Bruckner fans won't let a conductor (or a music critic) cut a note of the master's work—and that may be where they do Bruckner more harm than good. For this is a symphony worth hearing more often. Only, the next time I hear it, I want it in a pocket edition.

WILLIAM LEONARD,  
*Chicago Journal of Commerce*

Mr. Szell devoted great care to the reading of the Bruckner work, which received its first Chicago performance at these concerts. The symphony is a masterpiece of inspiration, despite the inevitable criticisms about its length. It is bound together by splendid thematic material, and in it are to be found some of Bruckner's happiest orchestration achievements. Notably in the Scherzo, with its counterbalancing of varying moods for the strings, and in the prodigious Finale, with its inexorable progression towards a joyous and exalted climax, the symphony stands as a monument to the optimistic serenity of its composer's gentle nature. Mr. Szell and the orchestra gave it a magnificent reading.

PAUL H. LITTLE,  
*Musical Leader*

Though the humble and devout Austrian wrote his last completed symphony over a half a century ago, last night's performance was its first in Chicago. The spread of Bruckner's music has been that slow outside his native country.

But the quirks of musical fashion that caused the public to come so reluctantly to his works now seem to have passed. The symphonies are being played with increasing regularity. Neither their length nor their 'apocalyptic' language seem to dismay present audiences.

The 8th Symphony was an impressive and affecting work as it was performed last evening. Perhaps it is overlong; yet there are few of its measures that do not abound in genuine inspiration.

It is almost more a service than a symphony, so pregnant is it with religious feeling. Brooding, almost oppressed at its beginning, it searches, climbs, strives constantly toward some sensed revelation which (though it may momentarily elude) is felt as inevitable and comes to final, stunning realization in the work's conclusion.

Thursday's performance was admirably integrated. The orchestra accomplished some distinguished work in the many passages of imaginatively delicate scoring as well as in the sonorous climaxes, beautifully planned by Szell.

IRVING SABLOSKY,  
*Chicago Daily News*

#### GUSTAV MAHLER: FIRST SYMPHONY

*Minneapolis Symphony Orchestra, Dimitri Mitropoulos. Conductor, March 18, 1949.*

The members of the audience rose to their feet as the Athenian-born maestro appeared on stage at the beginning of the concert and gave him an ovation. And when it was all over, they rose again in a tumultuous tribute to the man who has presided over the orchestra for the past 11½ years. . . . For the big number of the evening he chose the first symphony of Gustav Mahler, a composer for whom he long has had an affinity and who laid the groundwork for much of the modern music.

This symphony, like all of Mahler's, is not to everybody's taste, though gaining adherents. It is complex in texture and mood, it is discursive and loose-jointed, it has moments of breath-taking loveliness, of savage irony, of almost apocalyptic vision and of utter banality, for Mahler's credo was, "The symphony must be like the world; it must embrace everything."

Mitropoulos performed a great feat in keeping every line and every dab of orchestral color clear and free and in giving to the whole tremendous intensity and eloquence.

JOHN H. HARVEY,  
*St. Paul (Minn.) Pioneer Press*

Dimitri Mitropoulos' last appearance here as conductor of the Minneapolis Symphony orchestra was a fond farewell in which he gave us his superlative best in a brilliant program. His special gift was the Mahler First symphony, whose final fanfare of horns and trumpets seemed to voice a dramatic and moving Godspeed to the departing Maestro.

The near-capacity audience—4,700 listeners making the next-to-the-largest Friday night house of the season (surpassed only by Artur Rubinstein's score) rose to its feet at Mitropoulos' entry, and rose again after the resounding conclusion of the Mahler, which drew a salvo of bravos and whistling mixed with tumultuous applause.

The conductor bowed many times, kissed his hand to the audience, and then, apparently deeply affected, returned to the microphone at the side of the stage for a brief word of farewell.

Mahler under Mitropoulos has more impact, more color and contrast and sustained "story interest" than most conductors can give that loose-jointed composer. The First symphony, in last night's interpretation, extracted every drop of pathos, of rage and uproar, of anguish and ringing oratory, that Mahler put into the score... and maybe more.

The work oscillates between homely sentiment and blasting pronouncements, and its curiously episodic procedure demands a steady hand at the helm and an eye (and ear) for the minor and major goals ahead. Mitropoulos kept it under superb control and moved it along with masterly maneuver, rising to great heights in the cataclysmic finale.

JOHN K. SHERMAN,  
*Minneapolis Star*

The twelve-year reign of Dimitri Mitropoulos over the Minneapolis Symphony Orchestra ended Friday night with the final subscription concert of the season. It ended on a note of triumph.

With the final, climactic chords of Mahler's First Symphony and the cheers of the standing crowd, the finish came to an illustrious chapter in the history of music in this area.

The Mahler symphony was an ideal choice to bring an era to an end. Whatever side one takes in the Mahler controversy, he was a complete master

of orchestration and runs practically the whole gamut of musical coloring. Though it lacks a final, saving touch of humanity, the symphony shows a kinship with nature and is a brilliant showpiece exploiting all the resources of the orchestra.

From it Mitropoulos drained the last ounce of color and power, and the orchestra responded with all its energy and will to leave a final imprint of orchestral virtuosity at its height.

ARTHUR B. STOLZ,  
*Minneapolis Tribune*

### GUSTAV MAHLER: SECOND SYMPHONY

*Erie Philharmonic Orchestra, Fritz Mahler, Conductor; Siebenbuegger Mixed Chorus and Erie Symphonic Choir, Obed L. Grender, Director; Elizabeth First, Soprano, Joan Peebles, Contralto, March 22, and 23, 1949.*

Fritz Mahler led the Erie Philharmonic Orchestra, chorus, and soloists through an impressive concert in Strong Vincent Auditorium last night, in a program featuring Gustav Mahler's monumental Second Symphony.

With the exception of the Beethoven Ninth earlier in the season, the orchestra previously had attempted nothing of such gargantuan scope as this—and the results were eminently satisfying...

Constructed on a theme of ceaseless grief, anguish and mental torture in life leading to immortal happiness and a conviction that there is purpose in life, the symphony is of heroic proportions.

There are five movements, of which the first three are purely orchestral and establish the issues concerning life against death.

The fourth section, principally a solo passage for alto voice, sets forth Gustav Mahler's unshakable conviction that there is a hereafter. Based on a poem from "Das Knaben Wunderhorn," this movement is titled "Urlicht"—"Light."

All the instrumental and vocal resources are called on in the finale movement, expressing affirmation of belief in Judgment Day and resurrection.

Apparently feeling the limitation inherent in an orchestra alone, Gustav Mahler in this section turned to the

human voice to help resolve the issues raised earlier in the symphony.

Soprano and alto solos, the chorus and orchestra combine to get across forcefully and powerfully Mahler's message.

Much of the music is overwhelming in its emotional impact. Other sections afford sharp contrast, offering lyric and rhythmic relief to the more heavily emotional overtones elsewhere.

Mr. Mahler, a cousin of the composer, read the work with dignity, imagination, and a perception of the varying moods of the music.

Under his guidance, the orchestra, 125-voice chorus and the two soloists presented a vivid account of the symphony. One wished for the chance to hear music like this more often.

W.F., *The Erie Dispatch*

Erie heard one of its most stirring musical presentations last night in Strong Vincent auditorium as the Erie Philharmonic Orchestra played Gustav Mahler's Second Symphony.

The full orchestra, two vocal soloists, and a combined chorus of more than 100 participated in the symphony.

Powerful, restless music, with a theme wound about life, death and resurrection, the work is one of the loftiest scores presented locally this season. It is not music that even the most bored listener can doze through. If music can be called suspenseful, this Mahler symphony is exactly that.

Conductor Fritz Mahler, a blood relation of the composer, said, "We are one of the first small orchestras to play this work. I feel we did a superlative job, and hope that we may point the way for other groups our size."

A symphony requires special orchestral resources, and the cooperation of a large vocal group. The latter was supplied by two well-trained local choruses, the Symphonic Choir and the Seibenbuerger Singing Society, under the direction of Obed L. Grender.

The symphony's first movement is searching and mysterious, building to a bursting though solemn finale. It is followed by a movement to be played "in quietly flowing movement"—rhythmic and somewhat nostalgic.

In the third movement comes the first contralto solo, sung last night by Joan Peebles, who has appeared with the Philharmonic before; and last are heard the soprano and contralto solos and the complete chorus. Soprano

Elizabeth First, of Erie, was soloist here.

The coordination of voice and instrument in the final movement was the result of careful practice, and developed to be outstanding. The last group carried the work to a towering close that met with enthusiastic applause.

B.M.C., *The Erie, Pa., Daily Times*

### ANTON BRUCKNER: SEVENTH SYMPHONY

*Cleveland Orchestra, George Szell,  
Conductor, March 24 and 26, 1949.*

We attended Cleveland Orchestra concerts twice before when the Bruckner Seventh Symphony was programmed. Last night was the first time we really heard it played. Director Szell and the Cleveland Orchestra thrilled a capacity audience with their performance of it—a superb presentation of a great piece of music. . . .

We are grateful to Director Szell and the orchestra for their giving us such a wonderful insight into the real depth and music art that Anton Bruckner put into his Seventh Symphony.

True it is that Bruckner sometimes walks up and down the same street too many times. Even though scenery on each side is beautiful, the turn at the corner and down the next street could be made more often. However, we did not find the journey too long.

The augmented brasses were gorgeous in the full-throated passages Bruckner gives them. And Director Szell worked master magic in obtaining entrancing dynamic effects. Shimmering strings worked miracles in gossamer gleamings. The cellos in particular sang with heart-warming tone. The adagio, a salute to Wagner, was a profound and searching utterance.

ELMORE BACON,  
*The Cleveland News*

More restrained, but certainly respectful and admiring was the applause which greeted Szell's excellent performance of the Bruckner Symphony in the first half. He conducted the hour-long symphony without score, with masterful control and with the keenest and most affectionate insight into the solemn pages of this lofty score, with its leisurely introspection, its wistful nostalgia and

effulgent brass, reinforced with a quartet of Wagner tubas.

This Bruckner music has a strong appeal for persons who possess some acquaintance with the landscape of southern Austria, for it is bound to this environment as a plant to the soil. It is also bound to the 19th century and to a blind adulation of Wagner in a way that makes it as much a museum piece as it is a study in quaint colloquialism. It reaches some noble heights and mystic depths which give it some claim to universality and perhaps immortality. But these heights and depths were probably more intelligible to our grandparents than they can ever be to us. You either like Bruckner or you do not. For those who do not, he is a little like boiled potatoes without salt.

HERBERT ELWELL,  
*Cleveland Plain Dealer*

The Bruckner symphony was more enjoyable last night than it has been on any previous occasion that it has been given here. Szell took pains to underline its many beauties, and the players responded valiantly. There were exalted, moving moments, especially in the sombre Adagio.

Bruckner has frequent captivating, soaring inspirations, despite his Wagnerian idolatry. But only a few dotting Germans will deny that he as frequently talks of cabbages and kings, and that his works are long psychologically, as well as by the clock.

Nevertheless, a performance such as last night's is well calculated to make new friends for this composer.

ARTHUR LOESSER,  
*The Cleveland Press*

GUSTAV MAHLER:  
SECOND SYMPHONY

*Boston Symphony Orchestra, Leonard Bernstein, Conductor; Harvard Glee Club and Radcliffe Choral Society, G. Wallace Woodworth, Conductor; Adele Addison, Soprano, Nan Merriman, Contralto, Soloists; March 25 and 26, 1949.*

A year ago last February Bernstein made a tremendously favorable impression when he revived the Symphony, which had not been heard here for 30 years. He did it again during last

Summer's Berkshire Festival.

This week's performances are in response to popular request. The work has the program all to itself. There is no intermission, which means a solid hour-and-one-half of music.

As usual, Bernstein does not bother either with the printed score or a baton. This is not a feat, for he has the vast, five movements completely in his head, and his interpretation has that direct, personal quality which indicates thorough assimilation of everything in the score.

Since it always is well to repeat what one believes to be the truth, let it be said here again that this Symphony in C minor is a great and difficult work, full of Mahler's characteristic inward feelings about life and death.

Because Mahler was so complex, and his musical style so inclusive, the nature of the Symphony can range with equal validity from the stormy first movement through the folksongish andante to the eerie scherzo, wonderful contralto solo of the "Primal Light" movement, and imposing choral finale of hope and affirmation.

As conductor Mahler never spared himself, and as composer he never spared those who were to perform his music. The "Resurrection" Symphony makes great demands on an orchestra. Little things went wrong here and there, attributable to the pressure of a terribly hard week of rehearsals for this program and for the pension fund performance of Bach's Mass in B minor to come on Sunday.

But, in the main, the performance was overwhelmingly moving, and drew, at the end, a rousing ovation of applause and cheers.

Both Miss Merriman and Miss Addison have beautiful voices, and Miss Merriman's work was an improvement over that at Tanglewood last summer.

Miss Addison, unfortunately, could not be heard all through her part, though surely her voice is big enough. She ought to sing it louder tonight.

The chorus was small for the quiet, but rich and intense sonority Mahler wanted. But you can get only so many people on the Symphony Hall stage without an extra platform, impossible at subscription concerts.

CYRUS DURGIN,  
*Boston Daily Globe*

For that matter, what a symphony! It was clear enough last year, when Mr. Bernstein re-introduced it to Boston after it had lain silent for 30 years, that this is one of the most feverishly personal works in the symphonic literature. Not that Mahler ever seeks impersonality; on the contrary, where others may bare their emotions but always convey the impression they know just what they're doing, Mahler almost glories in his expiatory self-revelation. And, like those who suddenly realize they have told too much of themselves to a friend, he as quickly turns harsh, as if to withdraw his confession.

In this immense work, one that calls for the fullest instrumentation with organ, chorus and soloists, Mahler tells of death and of life after death. He was to be preoccupied with this theme all his life, but here he tells us so in unmistakable terms. Even if he had not, it is likely that the listener, without knowledge of the program or of the text sung in the closing movements, could not mistake the significance of this music, now naively supplicating, again doubting and wondering; now otherworldly, again hopeful and triumphant.

RUDOLPH ELIE,  
*The Boston Herald*

Last year the Mahler Second was preceded by an unfamiliar Mozart symphony, that in G minor (K. 183). On this occasion the Mahler, which takes about an hour and 25 minutes, without an intermission, to perform, evidently was considered enough. The Friday audience apparently thought it was, for it showed no impatience with the brief program, nothing but delight with the music and the performance. Indeed, it lingered long at the close to cheer everybody concerned.

It is not difficult to understand the enthusiasm. This symphony is emotionally a very powerful stimulant. It has pleasant tunes, Wagnerian harmonies, a depiction of the Day of Judgment and, at the close, a mighty proclamation of resurrection. True, these things are all set forth with Mahler's usual naïveté and bombast, but their power to stir the emotions is undeniable.

The effectiveness of the music owed not a little to Mr. Bernstein. He is a brilliant conductor, who knows this long score by heart and who has complete

command of orchestra, chorus, and soloists. He also has the habit of making visible to the audience the melodic line, rhythms and dynamics of the music. He sways, he dances, he seems to explode with the brasses.

It may be said in his defense that he certainly secures a good performance. But an equally good performance can be obtained with less visualization of the music; in fact, it has been done. In time, no doubt, this young conductor will be content to let the music speak with less choreography.

L. A. SLOPER,  
*The Christian Science Monitor*

Some 16 and a half hours after one Boston audience had shouted itself hoarse at the Opera House, a second acted in like fashion at Symphony Hall. The two occasions were the local premiere of Strauss' "Salome" and the repetition from last season of Mahler's Second Symphony, with Leonard Bernstein again conducting, and the chorus drawn once more from the choirs of Harvard and Radcliffe.

Great was the contrast between these two works, so nearly contemporaneous, and from the hands of composers who were both colleagues and rivals. That both were conductors also had not a little to do with their mastery of the orchestra as an expressive medium. But whereas Strauss, in his setting of the decadent play of Wilde, gives us something close to the absolute zero in human degradation, Mahler, is here concerned with humanity's loftiest aspiration, that for life beyond the grave. Yet so wide is the sphere of art that we can call both music drama and choral symphony masterpieces. Moreover, well known as they are elsewhere, Boston has been a bit slow in catching on to them.

If there is any weakness in the "Resurrection" Symphony it is in the undue length of the instrumental portion of the finale before the so eagerly-awaited chorus appears. Save for some unfortunate beeps in the brass section, the orchestral performance was an eloquent one. Mr. Bernstein loves this music and understands it, nor does he need a score when conducting it. There is not room on the stage of Symphony Hall for both an adequate chorus and the huge orchestra that Mahler requires in order to paint such weighty matters

as death and the Day of Judgment. It did not seem to me that the group of yesterday sang with quite the volume of tone produced by its predecessor. Be that as it may, I am certain that Adele Addison fell way behind Ellabelle Davis in her conveyance of the soprano part. Miss Addison has a light, pretty voice, but something more than that is indicated for these apocalyptic doings. In the matter of size Miss Merriman's voice came closer to filling the bill, but it is possible to sing the wonderful solo that makes the fourth movement with more of fervor, of spiritual elation than was in evidence yesterday.

WARREN STOREY SMITH,  
*The Boston Post*

ANTON BRUCKNER:  
THIRD SYMPHONY

*Boston Civic Symphony, Paul Cherkassky, Conductor, April 21, 1949.*

Bruckner's Third Symphony, for it was this immense work that has not been heard here since 1901, remains a difficult work, filled with ideological rather than idiomatic complexities. Its sound is entirely its own, though it verges more on the Wagnerian texture than anything else, but it is darker, more mystic. The trouble with it—if so sincere and devout a work may be said to have any deficiencies—is that it puts the entire responsibility for the appreciation of it on the listener.

That is to say Bruckner, simple peasant that he was, never achieved sophistication. He believed his music came from God; therefore, it was impossible for him not to put everything that occurred to him into his symphonies. The result is sublimity one minute, a Viennese street tune the next, all woven into an extended tonal canvas almost hymnlike in its simple devotion. Thus the listener must be prepared for all eventualities, must understand the composer's inspiration and be willing to follow it. The listener who does follow it is amply rewarded, and we are to be thankful to Mr. Cherkassky for his courage and conviction in preparing this work; the orchestra did as well by it as any non-professional group could.

RICHARD ELIE,  
*The Boston Herald*

The music of Anton Bruckner, like that of Gustav Mahler, has made its

way slowly in this country. But why this D minor Symphony has remained unheard here for 48 years is really baffling. It is massive, like most of Bruckner, but rather more than his later symphonies, the Third goes back to the Viennese lyricism of Franz Schubert. Like all of Bruckner, the score is admirably orchestrated and every measure "sounds."

This is the "Wagner" Symphony, a product of 1875 and twice later revised, that the awkward and naive country musician dedicated to the master of Bayreuth. (And if you would like to savor the half-pathetic, half-amusing story of how that came about, read Werner Wolff's "Anton Bruckner, Rustic Genius".)

CYRUS DURGIN,  
*Boston Daily Globe*

At last evening's concert Mr. Cherkassky gave us an even more notable revival, that of Bruckner's mighty Third Symphony, unaccountably played here but once before (at a pair of Boston Symphony concerts, under Gericke, in 1901).

You can't keep a good man down. Bruckner has been an infrequent visitor to our concert halls. Yet in this season we have heard at a Tuesday Symphony, with Mr. Burgin conducting, the Adagio from the String Quintet, the Conservatory Chorus introduced to us the E minor Mass; and this afternoon and tomorrow evening Dr. Koussevitzky and his men will perform the Seventh Symphony. Two Bruckner symphonies in the course of as many days is a record indeed.

In most respects the Third Symphony is typical Bruckner. There are themes of majesty, of breathtaking beauty and of charm; and, outside the Scherzo, we find the disjointedness, the episodic quality that we have learned to look for in these works. We must take Bruckner for what he is and not expect him to be that which he is not. The Seventh and Eighth Symphonies reach their climax in their Adagios, and their finales are relatively weak. The Adagio of the Third has its special beauty, but the finale overshadows it. The Scherzo, with its rhythmic suggestion of the great Scherzo of the Ninth and its delicious folksy trio, is a gem. Our indebtedness to Mr. Cherkassky is paralleled by our wonderment that other conductors have overlooked so good a

bet. This is not a work that goes of itself, and conductor and orchestra deserve great credit for their accomplishment with it. The audience applauded after each movement and displayed real enthusiasm at the end of the work.

WARREN STOREY SMITH,  
*The Boston Post*

ANTON BRUCKNER:  
SEVENTH SYMPHONY

*Boston Symphony Orchestra, Serge Koussevitzky, Conductor, April 22 and 23, 1949.*

The flight of time can be a little frightening on occasion, and this is one of them. Here there are only two weeks more of this Boston Symphony season. Then it will be over and Serge Koussevitzky will have departed as music director. The fact was borne in rather heavily at Symphony Hall, yesterday afternoon, as the orchestra gave out with the richness of its wonderful tone, precision and eloquence in a German program devoted to the Seventh Symphony of Bruckner and two Wagner pieces: "A Siegfried Idyll" and the Overture to "Tannhaeuser."

This was one of the afternoons with this glorious instrument that you wish could be preserved forever, held suspended in time, to be savored indefinitely. For while the orchestra will continue on its wonderful way, it will be different without the fiery and poetizing Koussevitzky and his especial qualities of sound and expression.

Bruckner's Seventh Symphony had not been done at these concerts since 1939, almost a full decade. This week Mr. Koussevitzky is playing it in the full length of about an hour, which will delight those willing to be patient over the vast construction and the sculptured beauties of that still debated Austrian of the 19th Century. (By the same token, Bruckner uncut will annoy those unsympathetic to him. No matter!)

It takes such a magnificent orchestra as this to give Bruckner his due, for the involved contrapuntal weavings, the niceties of rhythms and accents, the sweeping melodic phrases and those grandiose bursts of brass constitute virtuosic music. Only thus can it be seen what a technical craftsman he was, how much of a poet in tones, (even though in life an awkward yokel!),

and how much of a really inspired creator.

CYRUS DURGIN,  
*Boston Daily Globe*

No more eloquent evidence in the strange case of musical America versus Anton Bruckner was ever presented for the defense than this awkward Austrian peasant's Seventh Symphony yesterday afternoon in a glowing performance by Dr. Koussevitzky and the orchestra.

A 50-minute work of the utmost elevation of spirit, it finds Bruckner at the summit of his art. In it, for the first time in all his music, the diffident little man, who earned more than his share of scorn in his lifetime, brought together all the diverse elements of his creative powers and moulded them into a unified whole of enormous integrity.

In marked contrast to the Third Symphony, which was given its first performance here in 48 years by Paul Cherkassky and his Civic Symphony on Thursday night, this equally extended work has a certain sophistication. All the Brucknerian characteristics are there: mysticism, religious fervor, a meandering inspiration, naivete, a heavyhanded attempt to follow the timehonored rules and a compulsion to include everything he can think of. So is the characteristic Bruckner "sound," which, with its horn calls, its soaring strings, its chorale-like proclamations in the brass, is a singular blend of Wagner and Dvorak.

In the Seventh, however, there is more clarity of thought, more suavity, more balance and proportion. From time to time, as in the development of the first movement, he reminds you of an old man standing on a corner wondering how to cross the street in the face of the traffic. But this is rare in the Seventh; there is a forward motion, a sense of direction that proves singularly interesting. It also proves, in that quite incredible slow movement, of unearthly beauty. Indeed, I know of few moments in music so rapturous as the appearance of the second theme of the slow movement, or its reappearance in the second violins below an ethereal counterpoint in the high strings.

Dr. Koussevitzky's role in the success this music achieved yesterday, both popular and esthetic, can not be too over-emphasized. Here he displayed every bit of his architectural sense to draw

together, to unify, to inform the music with what might be called trajectory. Bruckner demands this; a skillful presentation of the mere notes means nothing. The re-creator's role is almost equal to that of the creator himself, and in this respect Koussevitzky is matchless.

RUDOLPH ELIE,  
*The Boston Herald*

This symphony is not often performed, though it is received with warm applause whenever it is offered. It was last heard here nearly 10 years ago. Before that it had been played by Dr. Koussevitzky in 1934, when he received the Medal of the Bruckner Society of America, and in 1936. Previously it had remained on the shelves since the days of Dr. Muck.

Yesterday it had the most persuasive performance I have ever heard, for tonal beauty and lyricism. Dr. Koussevitzky and the orchestra seemed to surpass themselves in these two particulars, in which they have always excelled. The cellos set the standard at the very beginning with a marvelously full-throated songfulness, and the rest of the orchestra immediately accepted the challenge.

Thereafter through the first two movements the mellowness and expressiveness were maintained, except when the conductor whipped up the brass too mercilessly at the end of the first climax of the dirge. There the tonal quality was impaired.

If the excellence of the playing seemed less apparent in the last two movements, that may have been because the music itself falls away there in interest. Certainly there was no let-up in Dr. Koussevitzky's demands, nor in the orchestra's response. The final peroration was no less sonorous than the dirge. The performance made us regret still more the impending retirement of the conductor. The applause yesterday had an extra warmth.

L. A. SLOPER,  
*The Christian Science Monitor*

Interpretatively, Dr. Koussevitzky fared better with Bruckner, a much harder composer to handle, than he did with Wagner, though there were fine moments in both the *Idyll* and the *Overture*. He played Wagner for effect, and, if

he did not lose, he did not exactly win.

Bruckner, on the other hand, needs plenty of assistance, and while this or the other Brucknerite might take exception to this or the other detail, the fact remains that the *Symphony*, without cuts, was made consistently pleasurable, and though consuming nearly an hour, it was not a minute too long.

It was interesting to hear the *Seventh*, after having heard the *Third* from the Civic *Symphony* the night before. While the *Third* deserves no such neglect as has been its fate hereabouts, it is easy to see why the *Seventh* is the most popular of them all. It has all of Bruckner's virtues and few of his defects.

The one really weak spot is the faltering development section of the first movement. The common complaint that the finale is mere anticlimax was not in order yesterday. It is, of course, the least memorable of the four movements, lacking the serene beauty of the first, the sublimity of the second, the power of the third. But somehow, as Dr. Koussevitzky played it, you felt it was all right for it to be exactly what it was, that no other type of movement would have served any better. There had been climaxes enough for one hour. Brahms built up his finales by playing down the middle movements. Bruckner chose another course. The *Symphony's* success with yesterday's audience was complete.

WARREN STOREY SMITH,  
*Boston Post*

#### GUSTAV MAHLER: *FIRST SYMPHONY*

*Chicago Symphony Orchestra, Ravinia Park, William Steinberg, Conductor, July 9, 1949.*

The Mahler First symphony was treated lovingly and believably on the occasion of its first Ravinia performance Saturday evening. Conductor William Steinberg and the Chicago Symphony orchestra, by the care and finish and enthusiasm of their presentation, made plain a principal reason for the piece's continuing appeal.

This reason is the symphony's success in conveying something of the extravagance and excitement of the emotional states of youth. It was written by Mahler in his twenties, and it is

more successful than any other major work which comes to mind in depicting a type of life in which rapturous happiness alternates with a despair so black that the pistol can only with difficulty be kept from the temple.

The first two movements, packed with naive, sentimental, and frequently infectious little melodies, took on enormous charm under Mr. Steinberg's hands. The trio of the scherzo had an uncommon graciousness, the exuberant theme of the first movement a wonderful freedom and rhythmic lift.

The third movement, altho grim and inconsolable enough in its basic character, possessed a noteworthy beauty of surface in the orchestra's finished and expert performance. The shouting, derisive final movement was done with a momentum and virtuosity that brought on a big ovation at the end.

The rest of the program was devoted entirely to Mozart. It avoided both excessive delicacy and a too great forthrightness.

EDWARD BARRY,  
*Chicago Daily Tribune*

GUSTAV MAHLER:  
*DAS LIED VON DER ERDE*

*Boston Symphony Orchestra, Serge Koussevitzky, Conductor; Janice Moudry and David Lloyd, Soloists; Tanglewood, Mass., Aug. 6, 1949.*

Special attention focused on the appearance of Janice Moudry, contralto (who is a Koussevitzky discovery), in the Mahler work. Miss Moudry, from all one could gather, is a young woman of comparatively brief experience in professional surroundings such as those provided by the Boston Symphony, et al.

I found her voice to be an especially agreeable one, quite strong and of an unusual dark beauty. Unless my ears deceive me, Miss Moudry is a dramatic soprano, who should be learning roles like *Isolde* and *Bruennhilde*, and so on, rather than the contralto ones in the corresponding operas.

Her companion soloist in the Mahler was David Lloyd, a young tenor who has brought upon himself a good deal of praise for the agreeable and knowing quality of his singing, here and elsewhere.

For all the musicianly attributes shown

by these two young people, it was my impression that neither could quite grasp the full import of the Mahler text, let alone the vocal lines. Furthermore, their particular efforts in the piece were not especially aided by an orchestra that often overwhelmed them entirely.

As a matter of fact, the Mahler, speaking of the whole rendering, fell considerably down from Boston Symphony standards. It did not hold together, or so I thought, although many passages came flowing past the ears with a sensuous beauty.

ROBERT BAGAR,  
*New York World-Telegram*

Last night's program of the Boston Symphony Orchestra was under the direction of Serge Koussevitzky and served to introduce a young contralto, Janice Moudry, endowed with a very fine voice which she uses, in many respects, very ably and cleanly. There is still some work for her to be done in equalizing the ranges, and she is quite evidently not ready to embrace, convincingly, the broad sweep, the ramifications of tenderness and nostalgia, and the poetic content of anything so vast as Mahler's "*Das Lied von der Erde*."

David Lloyd, who performed the tenor part, sang with much more authority where German diction, emotional intensity and musical understanding were concerned. But, unfortunately, he did not have the volume to win out in the ruthless battle almost any singer would have to wage against the stormy orchestral accompaniments that underpin the vocal sections Mahler assigned to the male soloist.

His (Dr. Koussevitzky's) Mahler did not seem too well prepared, and often did not quite coalesce. The second movement of the Mahler was, however, quite affecting and quite beautiful in orchestral sonority.

ARTHUR V. BERGER,  
*New York Herald-Tribune*

ANTON BRUCKNER:  
*FOURTH SYMPHONY*

*Kansas City Philharmonic Orchestra, Hans Schwieger, Conductor, Nov. 1, 1949.*

An unforgettable performance of a great symphony, the Bruckner Fourth,

and the colorful debut of the Nettleton twins, Jeanne and Joanne, duo-pianists, with the Kansas City Philharmonic orchestra, highlighted the second subscription concert last night in the Music Hall.

Then came the Symphony No. 4 in E Flat Major, aptly described as the "Romantic," of Anton Bruckner. It was an hour-long exposition of music in sunny vein where there was no room for gloom, nor space for sermonizing or crusade. Yet the music rose to majestic proportions.

The symphony was essentially a double triumph; first, for the little German schoolmaster who composed it seventy-five years ago; second, for Hans Schwieger, who interpreted it with the masterful hand of an inspired conductor giving his skill and devotion to music he loves.

Just as a matter of logic, then, it follows that the members of the orchestra collectively and individually rose to a higher level of musical attainment. This reviewer was more impressed than he has been by the orchestra in a half dozen seasons. There was a sonority, clear delineation, balance and phrasing that affix a new standard for future performances.

Mr. Schwieger was a dynamic figure, conducting as usual without a score before him, and without a baton. Wide, sweeping gestures to match the power of full orchestra were part of the scene and sound that held the unbroken attention of the audience for an hour.

This was the first time the Bruckner had been played here from the original score. The influence of the organ and of Bruckner's deeply religious nature were reflected in the music, repeatedly but never boringly.

Bruckner delights in massive orchestral effects, florid passages for the horns, the organ-like device of dialogue between sections of the orchestra, and episodes that emerge like a paean of glory. This symphony's third movement, a scherzo, is alive with hunting calls that leave a pleasant memory.

C.B.N., *The Kansas City Times*

#### ANTON BRUCKNER: FOURTH SYMPHONY

Department of Agriculture Symphony Orchestra, Frederick Fall, Conductor; Washington, D.C., Oct. 28, 1949.

The Department of Agriculture Symphony Orchestra gave its first concert

of the season last night in the Thomas Jefferson Memorial Auditorium. The Orchestra and its conductor, Frederick Fall, had the encouragement of a large audience which the rain did not deter from attending. They were rewarded by excellent playing of a program thoughtfully selected and which made no concessions to popular appeal.

Mr. Fall has welded his close to one hundred players into an organization that will soon have every right to a prominent place in the city's musical life. Operating now on a different basis from the group that was disbanded during the war, it includes many musicians of professional standing who bring a finished technical knowledge to the conductor's interpretive requirements. The performance last night was most pliable with a wealth of effect and, above all, with a communicative spirit.

Only a conductor assured of the quality of his musicians, could program the works Mr. Fall chose. His own personal musicianship was felt at every moment and showed in a finely devised reading of three movements of the Bruckner "Symphony No. 4," the "Prelude" to Wagner's "Die Meistersinger," and Barber's "Dover Beach." Soloist in the latter work which was given here for the first time some eight years ago, was James P. Hendrick, baritone.

The pervading lyric character of the "Symphony" has caused it to be called "Romantic" and this appealing quality can be overdone if effort is made to underscore it. Nothing of this kind was to be found in last night's performance. It was allowed to flow naturally and to be all the more impressive because surrounded by vigorous outlines. The dynamics were marked and well graduated, the tempi admirably chosen and never permitted to drag. The violas and cellos made much of the lovely theme given them in the first movement and the songful passages of the "Andante" were excellently negotiated by the violins. The horn and woodwind sections are brought to the fore, the former especially in the "Scherzo," and the difficult assignment was well met. The quality of the Orchestra's ensemble tone is sonorous and warm in tint and only occasionally, in the Bruckner, was there a blemish in intonation.

ALICE EVERSMAN,  
*The Evening Star*

Rain did not keep a large audience from enjoying the second concert by the rejuvenated Department of Agriculture Symphony Orchestra.

Last night in Thomas Jefferson Memorial Auditorium, the orchestra, composed of nearly 90 members, sounded as if it were busting its seams. Their tone could easily fill a hall twice the size of the Jefferson auditorium; their programs are good enough to attract twice as many people as can be seated there.

Frederick Fall, the conductor, is not content to play anything less than the most exacting music. He opened his program with the first three movements of Anton Bruckner's Fourth symphony. He was wise to limit the orchestra to the first three movements, for these alone consume 45 minutes.

Bruckner had much of beauty to say in his symphonies. His difficulty was that, having said it, he could not find enough treatment of his good material to maintain interest. His symphonies rise and fall with each statement of the lyrical and exalted themes which dot them without binding them together.

They are particularly demanding of any orchestra in requiring much long sustained playing from winds, and the utmost precision from the strings. The Agriculture Orchestra has tone of which they can be proud. Their general playing discipline is good. And they often rise to exciting climaxes.

PAUL HUME,  
*Washington Post*

#### GUSTAV MAHLER: FIRST SYMPHONY

*Chicago Symphony Orchestra, Bruno Walter, Conductor, Nov. 3 and 4, 1949.*

The conductor always has been—and still is—one of the notable propagandists for the music by Gustav Mahler. On this occasion he introduced the first of the composer's symphonies—it had not been heard in Orchestra Hall for almost 14 years. Considering the melodiousness of Mahler's works, their rhythmic piquancy and colorful orchestration, it is strange that popularity never has waited upon them, in this country at least.

There are definite suggestions of "program" in the First Symphony, much as Mahler was supposed to despise such a thing; but cuckoo calls, fanfares, the funeral march in the third movement, the

measures which the composer indicated to be played "Mit Parodie," surely meant more than notes alone.

For the performance, only words of honest praise must be accorded. Mr. Walter clearly enjoyed directing this fresh and almost childlike music. Both he and the orchestra deserved the ovation given them.

FELIX BOROWSKI,  
*Chicago Sun-Times*

To the delight of his audience, the program included two Walter specialties—the Mozart "G Minor Symphony" and the Mahler "Symphony No. 1, D Major."

We doubt that any conductor can surpass Walter in the interpretation of Mahler.

His grasp of the score was microscopic and all-inclusive. With a lesser conductor, Mahler often sounds diffuse and conglomerate. With Bruno Walter, the fluidity of mood and variety of material are fused in a performance certain to make you feel that you have heard persuasive pleading of the Mahler case.

Walter achieves drama without bombast, and delicacy without affectation.

Walter reminded one of a great teacher, demonstrating the meaning and beauty of a work of art. The Walter role was incidental. Rare is the conductor who either possesses or successfully simulates selflessness of the Walter type.

CHARLES BUCKLEY,  
*Chicago Herald-American*

It was this symphony that led the young Walter to seek out the composer, for it seemed to him the work of a "musical poet of extravagant imagination," a new Berlioz.

Today, the latter description seems more suitable to the composer of the First Symphony. There is no doubting what he could do with orchestra, tho his poetry no longer speaks to us all. Yet this performance rather took you back to the old "program" often dismissed as a hoax, the one about the hunter's funeral with animals and birds in charge.

There was a fairy tale quality to it, especially in the opening movement, and that extraordinary funeral march, all timbres and tempos converging on

"Frere Jacques," is a little masterpiece of tone. The finale, which sometimes seems to have touched off Shostakovich, builds to a shattering climax, which to my ear is just a climax of sound, not emotion.

CLAUDIA CASSIDY,  
*Chicago Daily Tribune*

Bruno Walter put his friend Gustav Mahler, of whose music he is the foremost interpreter today, to the severest test, at Orchestra Hall Thursday night. He conducted the Chicago Symphony Orchestra in its first performance in fourteen years of the Mahler Symphony No. 1, the first Chicago hearing the ponderous work has had since Leo Kopp conducted the Illinois Symphony Orchestra in it in 1941. What is more, he thrust its redundancies into the formidable test of competition against masterfully played Handel and Mozart, which had preceded it. And, marvelous to report, he caused the Mahler, tedious though it has been on other occasions, to emerge with pungency, charm and depth of expression that enabled it to round out a deeply satisfying evening.

To follow this kind of musical perfection with a symphony written by a troubled young man whose work hasn't won a secure place in the repertoire after half a century was asking Mahler to prove his worth the hard way.

Bruno Walter succeeded in making our orchestra feel the music and project the deeply personal expression of the composer. The schmalz, of the mid-section was appealing, the lack of economy was not offensive, the orchestration sounded masterful, and for the first time in this correspondent's life the symphony seemed scarcely a measure too long, until the verbose finale.

WILLIAM LEONARD,  
*Chicago Journal of Commerce*

GUSTAV MAHLER:  
FIRST SYMPHONY

*Philadelphia Orchestra, Eugene Ormandy, Conductor; Philadelphia, Nov. 4, 5, and 7, 1949; New York, Nov. 8, 1949.*

In Carnegie Hall last night you never would have known it was election night, so quiet and attentive was the large

audience that attended the concert of the Philadelphia Orchestra. Quiet and attentive during performances, that is, because the sounds that followed them were very much more like ovations.

Eugene Ormandy conducted, as usual, and a most impressive job he did with the Bach Chorale "Ach Gott, von Himmel sieh' darein," the Beethoven Piano Concerto No. 3, in C minor, and the Mahler First Symphony.

ROBERT BAGAR,  
*New York World-Telegram*

The First Symphony of Mahler was played for the first time in New York, we believe, by the Philadelphians. It is not Mahler's most pretentious symphony; nor has it the theatrical power of the Second Symphony. But its first movement is perhaps the simplest, the most charming and fanciful that Mahler composed in the symphonic form. The instrumentation is very beautiful. It is more a fantasy than a sonata movement and is atmospheric as well as impressionistic.

The second movement is more obvious and less distinguished. The funeral march in Callot's manner could conceivably have been made more sardonic and less lachrymose in a sentimental way by Mr. Ormandy. Then comes the beating, the pounding, the posturing of the finale, and the awful movements in the quiet melodic parts when one fears that the maddeningly obvious is going to happen, and alas, just that does happen—the most banal cadences, the most spurious theatricalisms, and the narcissistic repetitions of what could and should have been said (if it had to be said at all) in half the time and with half the number of instruments.

Still, by and large, one is disposed to consider this perhaps the best, the simplest, the freshest, with the most of his agreeably "volkstümlich" style, of the symphonies of Gustav Mahler.

OLIN DOWNES,  
*New York Times*

The concert of the Philadelphia Orchestra last night in Carnegie Hall was one of those rare events that needs no qualification. It could be reviewed in one word: superb. . . .

There are many who would not list Mahler's first symphony in the above category. Together with Bruno Walter

and others, I am one of the believers, and if there were dissenters in the audience last night. I'll wager some of them changed their minds.

There were two tumultuous ovations from the audience, who seemed pertinently aware of the calibre of the proceedings; one for Mr. Serkin after he finished the Beethoven, and another for Mr. Ormandy at the conclusion of the 50-minute Mahler work.

So much can be said to describe the immense scope of expression which Mahler (who lived so tragic a life and yet lives so triumphantly through music) encompasses. But the effulgence must be heard, and no reviewer can do more than to wish that every music lover could witness one of his symphonies re-created as the first on this occasion.

HARRIETT JOHNSON,  
*New York Post*

Gustav Mahler's First Symphony has not been played here before by the Philadelphians, but it has had three Philharmonic productions here in the current decade, and, for the music lover who has not yet finally made up his mind about Mahler's music, it is probably the most readily assimilable of the composer's nine works in this form. The sense of length some times associated with Mahler seemed noticeable yesterday only in the finale, which climbs one or two musical hills only to go down again before the ultimate climax. But the work is profusely tuneful, emotionally varied and richly scored, and the richness of the scoring was realized with vividness and opulence in a performance which was also laudable for consistent lucidity at all dynamic levels. The interpretation under Mr. Ormandy also told of an understanding of the expressive implications of the work.

FRANCIS D. PERKINS,  
*New York Herald-Tribune*

The second half of the program was reserved by Mr. Eugene Ormandy for a very exciting and highgeared performance of Gustav Mahler's 50-minute-long Symphony No. 1 in D major. However, the work did not seem long, which means that it engaged one's interest. The audience listened as though deeply engrossed.

Mahler's symphony is a strange work. The themes often sound banal—some of them actually are—but despite this ele-

ment and some passages that could have been shortened and tightened by the composer, the D major is a very original and fascinating work. That is the over-all impression.

MAX DE SCHAUENSEE,  
*The Evening Bulletin*

Of the two major works played last night in Carnegie Hall by Eugene Ormandy and the Philadelphia Orchestra, it was Mahler's First Symphony that called to mind Swift's dictum about wisdom being like a hen whose cackling we must consider and value because it is accompanied with an egg.

In this instance, musical eggs—small ones, considering all the cackling—can be found in two places—the trio of the second movement, one of the loveliest things Mahler ever conceived, and the entire third movement. Mahler is at his best in the latter, where his sardonic mind conceives an ironic idea and pursues it epigrammatically. The movement in some respects is a curious jumble of unexpectedly juxtaposed ideas, but it has consistent emotional continuity, and some technical points that were to lead directly into the music of the future. It is hard to see where the other movements lead to, despite the obvious (and desperate) bucolic qualities of the first, and the frantic, pompous heavings of the finale, which get to be more and more of a bore.

Very possibly the symphony could have been presented under more favorable auspices. In matters of sound and dynamics everything was up to the usual Philadelphia Orchestra level, but interpretively it was small-scaled, if any piece orchestrated for a hundred instruments or so can possibly be described as small-scaled. When he came to a lyrical section, such as the D flat episode of the finale, Ormandy languished away, and his idea of a "poco rit." (small ritard) leaned toward a cosmic slow-down. More strength was needed; the music is lush enough as it is.

HAROLD SCHONBERG,  
*The New York Sun*

#### GUSTAV MAHLER: FOURTH SYMPHONY

*Los Angeles Philharmonic Orchestra,  
Alfred Wallenstein, Conductor, Nov. 17  
and 18, 1949.*

Mahler's Fourth is the most easily assimilable of all of his symphonies,

even though its performance takes the better part of an hour. It poses no philosophical problems and it demands no outsize orchestral apparatus, but it is not easy to play and still more difficult to interpret.

George Szell once said, in trying to make an orchestra understand the problem of Mahler: "He tried to express the woes of the world in the idiom of a Viennese suburb," and though that is an oversimplification it nevertheless neatly sums up the content of the Fourth.

The crux of the work is the deeply felt slow movement, which connects spiritually with that of Beethoven's Ninth, and in Mr. Wallenstein's interpretation this indeed became the center of the symphony in a profoundly moving discourse, one of the most emotional communications we have yet heard from either conductor or orchestra.

Though the playing was of consistently fine quality throughout, the first movement did not quite succeed in tying together all the loosely woven strands, and the diabolic Scherzo was a trifle too polished to project the sardonic intent. Unhappily the length of the program prevented hearing the final movement, with the soprano solo sung by Jean Fenn.

ALBERT GOLDBERG,  
*Los Angeles Times*

Second masterpiece is the Fourth Symphony of Mahler. In this work, the composer loosens the floodgates of a romantic imagination, and lets uninhibited melody and orchestral beauty pour forth.

I cannot find, in this symphony, any of the more sinister implications imputed to it by some commentators. I hear only a revel in the beauties of sound.

The final movement is a setting, for soprano voice, of a poem from "Des Knaben Wunderhorn." It is a child's description of the delights of heaven. Jean Fenn, possessed of a voice of unique radiance and color, sings the measures with a quality of genuine ecstasy, to which she adds wide range, long breath, expert musicianship.

The orchestra members applauded her at the end of the final rehearsal; and when a singer has won the applause

of exacting instrumentalists, her outlook on the future should be serene.

PATTERSON GREENE,  
*Los Angeles Examiner*

Jean Fenn's solo passages in the last movement of Mahler's G major symphony relieved that fulsome work of some of its emotional monotony. She is a thoroughly poised young woman of genuine musical aptitudes.

She sings German as though she had something to say to her audience.

Only in the second movement did the orchestra sound uninspired in certain passages; even here, Mr. Mahler must share the blame.

The peaceful third movement brought some of the loveliest, quiet, sustained passages we have heard from the orchestra.

RAYMOND KENDALL,  
*Los Angeles Mirror*

#### ANTON BRUCKNER: EIGHTH SYMPHONY

*Chicago Symphony Orchestra, Rafael Kubelik, Conductor, Dec. 1 and 2, 1949.*

Only major works were on the program—the work by Honegger, just referred to, and the Eighth Symphony by Anton Bruckner. If this is considered scant fare for an eager audience, it may be stated the last named score was composed in the days when concert goers never could have enough of a good thing, and the symphony endured for 85 minutes.

Bruckner's work is not new here. Last March George Szell, as guest conductor, put it on one of his concerts at Orchestra Hall, and the music was heard with apparent admiration and respect.

This second interpretation unveiled new beauties; for, lengthy as it is, the symphony contains distinction of material—even, occasionally, a certain sublimity—which makes listening a delight. Bruckner was a simple soul, unpossessed of any social graces, but surely a composer by the grace of God.

Mr. Kubelik evidently had made a profound study of the score, and at rehearsals had revealed to players the most effective means of bringing the

composer's message to all.

As in other works, but particularly in Bruckner's, the manner in which crescendos were built up was not the least notable feature of the performance. The warmth of tone in all the movements, the poetic fashion in which phrases were rounded, the tremendous sonority of the climaxes were salient evidences of the conductor's talent and orchestra's skill.

FELIX BOROWSKI,  
*Chicago Sun-Times*

The 35-year-old Kubelik conducted from memory—and we mean from memory. No mere indications of principal melodic lines and changes of tempo and meter. Details of phrasing and nuance were projected with a clarity and subtlety that comes only with most thorough assimilation of the score.

In previous concerts we had some doubt of his ability to make an orchestra play lyrically. But the warmth and brilliance of singing strings in both the Honegger and Bruckner made us realize more than ever the fallibility of estimates made during the "get acquainted" period.

CHARLES BUCKLEY,  
*Chicago Herald-American*

Altho it was more than half a century reaching the repertory, Anton Bruckner's Eighth Symphony has had two interesting performances by the Chicago Symphony orchestra in less than a year. George Szell's last season was scholarly and inscrutable, with a slow movement remembered as one of the season's treasures in tone. Rafael Kubelik's last night was neither profound nor inclined even to hint at the mysterious. It clung to the conviction that this hour and 20 minutes of music made up of about one part beauty to two parts bombast, and it convinced at least one articulate customer in Orchestra hall, for as the last note died he cried not "Amen" but "Bravo!"

Yet my own ears are haunted, perhaps forever, by the Bruckner Eighth I heard in Salzburg last summer from Wilhelm Furtwaengler and the silver tongued brass of the Vienna Philharmonic. This was a masterly performance of a work of faith as remarkable in its way as a baroque cathedral. A great conductor, a great orchestra—mellow brass, idyllic woodwinds, radiant strings,

superb tympani—time flew and I was not even aware of its passing. I knew then what I always had suspected, that the true climax of such a symphony is a spiritual experience, which you must sense in sympathetic understanding even if you can not share its exaltation.

So while I did not underestimate Mr. Kubelik's feat in conducting so sizable a work without score, I did question his wisdom in conducting it without the special knowledge it demands. If you accept the symphony on his own terms, which is to diminish almost to the vanishing point what it possesses by way of mystical stature, the performance remained inferior in terms of a ranking orchestra. Some of the more lyrical interludes were well played, tho the slow movement was not within reaching distance of Furtwaengler's or even Szell's, but the bombast was always ready to pounce on a big moment, and bombast is even more unfortunate when you are having trouble with the brass.

CLAUDIA CASSIDY,  
*Chicago Daily Tribune*

A couple of inches' snowfall and a program offering only Honegger and Bruckner combined to keep a sizable percentage of the Chicago Symphony Orchestra subscribers away from Orchestra Hall, Thursday night. But the evening, Rafael Kubelik's last as guest conductor, was better than its promise. Michigan Boulevard may have been slippery, but it was a delight to the eye with a blanket of snow on the park and a bevy of lighted Christmas trees shining along the curb. And the symphony may have been engaged on unusual ground, but it served up one of the most interesting, as well as one of the most important concerts of the year. Kubelik was a courageous man to tackle this Honegger-Bruckner program, and he brought it off with a skill that added to his stature.

The Bruckner eighth, last of the composer's nine symphonies to reach the orchestra's repertoire, was less disappointing in the overlong finale than it had been when George Szell conducted its first Chicago performance last March, but that may have been because there was less apocalyptic fervor about the first three movements. This massive opus of an hour and 18 minutes' duration is an expression of religious

feeling in which the dominant motif is a groping for an elusive revelation. It should have more spirituality than it was able to muster under the somewhat cautious baton of Mr. Kubelik, who did not pour the instruments' tonal resources into the first three movements.

But if there was insufficient mysticism reflected in the orchestra's traversal of the neglected pages, there was a compensating clarity that gave the lie to the Bruckner detractors who long have claimed the man had no sense of form. This column, bored with the repetitiousness of the lengthy finale last March suggested it would prefer an abridged version of the Bruckner eighth; now I'm certain Bruckner knew his business better than I did, for there is a shapeliness to this romantic epic of mental struggle which would be destroyed by chopping the score up and fitting it together with sections in juxtaposition that never had been intended.

WILLIAM LEONARD,  
*Chicago Journal of Commerce*

Writing on such a scale, it is natural that Bruckner wanted a large orchestra. He used that orchestra with distinctive skill, even sometimes with delicacy.

But there are many times when you wonder whether this expansiveness is an attempted substitute for clarity, and whether these repetitions are offered in place of precision of expression.

The orchestra's young guest conductor, ending his three-week visit, presented the massive work in a sensitively and meticulously planned reading.

He could not yet probe so deeply into Bruckner's meditations (which can be affecting and impressive) as George Szell did when he gave the symphony its first Chicago performance last season.

But he found in it some varied orchestral colorings and some buoyancy of rhythm I do not remember hearing from Szell.

IRVING SABLOSKY,  
*Chicago Daily News*

ANTON BRUCKNER:  
ADAGIO (STRING QUINTET)  
TE DEUM

*Oberlin Musical Union and Oberlin Conservatory Orchestra, Maurice Kessler, Conductor; Beverly Hunziker, Eunice Luccock, Glenn Schnittke, Daniel Harris, Soloists; Dec. 4, 1949.*

Director Kessler presented chorus, or-

chestra, and as soloists, Beverly Hunziker, Eunice Luccock, Glenn Schnittke and Daniel Harris in a gorgeous revelation of the profound and magnificent Bruckner "Te Deum."

ELMORE BACON,  
*Cleveland News*

Like a quiet peaceful valley between two towering mountains was the *Adagio* from Bruckner's *Quintet* played by a selected group of the string section. One needed this note of calm, but it did seem that the composer stretched his material rather long for what he had to say.

There was no uncertainty about Bruckner's setting of the *Te Deum*. An elemental force marked its thunderous opening. The contrast of the chant-like unison of "Tu Rex Gloriam," opening suddenly into full harmonic flowering with the word "Christe" is characteristic of the vividness of this setting. There is a superb sonority in the score of this festal hymn of praise which lost nothing in this performance. Its last division, *In Te, Domine, Speravi*, called forth a glorious, powerful climax that was a fitting conclusion to the evening.

There were bows all around and many recalls for the conductor who once again had brought an Oberlin audience great music, greatly performed.

JAMES H. HALL,  
*The Oberlin News-Tribune*

ANTON BRUCKNER:  
FOURTH SYMPHONY

*San Jose State College Symphony Orchestra, Lyle Downey, Conductor, Dec. 13, 1949.*

A program of extraordinary interest and enormous difficulty was chosen by Dr. Lyle Downey for the opening concert of the season by the San Jose State College Symphony Orchestra. The performance was held in Morris Dailey Auditorium last night before an enthusiastic audience.

Of primary musical importance was the Bruckner Fourth Symphony in E-Flat Major, a long but noble work which is unfortunately not often played in this country.

Strange as it may seem, it appears that never before has an orchestra performed a Bruckner score here, although this earnest Austrian composer, a contemporary of Brahms, wrote as many symphonies as Beethoven, and was one of the giants of the late romantic period. In fact, the only time a Bruckner symphony has been presented in San Francisco, to my knowledge, was in 1937 when Lajos Shuk and the Federal Symphony introduced the Bruckner D Minor.

The inclusion of Bruckner's Fourth Symphony, entirely new to music lovers in this part of the world in spite of its worthwhile standing in musical literature, shows the commendable influence which Dr. Downey's musical conviction begins to exercise upon the college symphony concerts, and we should not be surprised if this influence will be felt in all our other cultural activities.

Bruckner's massive work is thoroughly Teutonic in character, warmly romantic and often devotional in mood. The composer reaches his heights in the more serious portions of the symphony, although we cannot imagine a more unusually conceived "Scherzo" than that of this score. Although occasionally reminiscent of Wagner, Bruckner's music is nevertheless strongly individual and has a kind of native bigness that often expresses Homeric grandeur.

While the symphony taxed the college orchestra's abilities to their utmost limits, the student players gave an unusually fine and sensitive performance of the vast and complex score, indicating much of the beauties inherent in the work. Dr. Downey is to be congratulated upon his courage in tackling the composition and upon the admirable results he was able to achieve—results which, all things considered, must be described as surprisingly good.

MARTA MORGAN,  
San Jose, Cal., Mercury Herald

#### GUSTAV MAHLER: FOURTH SYMPHONY

Kansas City Philharmonic, Hans Schwieger, Conductor; Jennie Tourel, Soloist; Kansas City, Mo., Dec. 13 and 14, 1949.

Dividing the honors in the fifth subscription concert of the Kansas City Philharmonic orchestra last night were the Mahler symphony that opened the program, Jennie Tourel in her vocal outpourings, and the orchestra and Hans

Schwieger, conductor. A large crowd heard the program in the Music Hall.

It took all of them to put this sort of program together in exactly the right proportions. To begin with, the usual musical order was reversed. The symphony, Mahler's No. 4 in G Major, was presented first. This sunny, melody-laden music seemed to fit well at the outset, for it included in its four movements all the elements named above, including the warm, rich mezzo-soprano voice of Miss Tourel.

There was a divided but generally very favorable reaction to the Mahler symphony. For many, it was a first hearing. For others, of course, it was an old favorite. The symphony is not of the erudite, or absolute type, but depends for its appeal on the folk-like main theme and secondary melody and a goodhumored motivation throughout. Because it is easy listening, there may be a temptation to allow attention to lag, particularly in the first movement, which describes the countryside near Vienna. It is rather lengthy.

But Mahler's themes and the animated rhythmic figures that recur again and again contain an elusive charm that ties the four movements together with a musical continuity. The *scherzo* second movement takes a whimsical slant when the concertmaster plays passages on his violin tuned high to simulate the squeaky tone of the medieval-type fiddles.

Though the slow third movement runs to some length, its pastoral quality built on a broad melody introduced by the cellos over plucked chords by the string basses, and passed on to the higher strings, wins many friends for this symphony. The shorter fourth movement, where the human voice is introduced as part of its orchestral color and texture, has a gracious, lilting flavor built upon the old German folk poem, "Des Knaben Wunderhorn." Its opening words, "In the pleasures of heaven we are joyous," set the mood for a medieval kind of mysticism.

Miss Tourel sang the symphony's important and exacting vocal part with fine spirit, in voice of silver purity perfectly suited to the concept. There was a harmony of understanding between singer, conductor and orchestra that was a credit to all. Incidentally, it was her first reading of the part, Mr. Schwieger having asked her to learn it for this occasion.

C.B.N., Kansas City Times

## A MEMORABLE NINTH

*Philharmonic Symphony Society of New York, Bruno Walter, Conductor; Feb. 2 and 3, 1950.*

Each time I hear Bruckner's Ninth Symphony it is with the renewed conviction that it is one of the mightiest of musical creations. That the Austrian master did not live to complete it and it ends with the slow movement is less regrettable than might ordinarily have been true; but this movement is so profound in its message, reaches such sublime heights and ends in such a mood of transfiguration that it is difficult to see how Bruckner could have conceived a finale which would not have seemed superfluous.

The often stupendous pages of the opening movement, its wonderful thematic material throughout and the no less powerful Scherzo with its elfin-like trio contribute to making this the most completely realized, the most deeply moving of his symphonies. Mr. Walter who began his engagement last night as guest-conductor of the Philharmonic, has always been the most zealous and perceptive interpreter of Bruckner's music. But I have never heard him give so exhaustive a discourse of its contents as this one, so fully revelatory of its ideational and spiritual meaning and invested by his fine musicians with such sumptuous sounds and with so flawless an adjustment of dynamic values.

JEROME D. BOHM, N.Y. *Herald-Tribune*

A symphony dedicated to God rang out with thrilling fervor at the Philharmonic concert led by Bruno Walter in Carnegie Hall last night.

Bruckner's Ninth Symphony marked the return to the Philharmonic podium of the world-famous conductor in one of the season's most stupendous performances.

This was the symphony that Bruckner left unfinished: Only three movements were written in one of the bravest races with death ever written in music history.

Knowing he was dying, Bruckner prayed to God to let him live long enough to finish the Ninth Symphony. "If God does not," he remarked, "then He must take the responsibility for its being unfinished."

It is really complete, this giant score, with its three movements that are among the glories of symphonic literature. I can't imagine anything following that Adagio, which is almost the ultimate in human groping.

Mr. Walter brought out all the power and drama of this music, and the wonder was again how a simple, unspoiled peasant like Bruckner, who was half-yokel and half-angel, could write music of such ringing power.

As I listened last night, I felt that the symphonic imagination had gone about as far as it could go in this music. The form and material are joined in holy wedlock, and no music was ever written that was worthier of the Maker to whom it is dedicated.

LOUIS BIANCOLLI, N.Y. *World-Telegram*

## NOTES ON CONTRIBUTORS

HERMAN ADLER traces his love for Bruckner to the influence of August Halm, many of whose lectures on the master's music he attended in early years. His special musical interests, in addition to Bruckner, include Buxtehude, Bach, Mozart, and the revival of the Baroque organ. He was program director of Musicraft Records from 1936 to 1939 and writes reviews for "Just Records," house organ of Elaine Music Shop, New York City.

PHILIP GREELEY CLAPP, American composer, conductor, and teacher, has been head of the Music Department, State University of Iowa, since September, 1919. He has conducted the University Symphony Orchestra in performances of Bruckner's IV, VI, VII, and IX and Mahler's I, II, III, IV, V (*Adagietto*), and *Lieder eines fahrenden Gesellen*.

JACK DIETHER, born in 1919, is a Canadian writer, and student of music and psychology. Since living in southern California, he has taken a turn as radio producer and newspaper columnist, and is at present teacher of music appreciation in Beverly Hills. The Diether's two-year old son, Anton Diether, is named after Bruckner.

CHARLES EBLE, a graduate of the State University of Iowa, is at present an instructor in the English Department, Northwestern University.

GABRIEL ENGEL, a graduate of Columbia University, is the author of *The Life of Anton Bruckner* and *Gustav Mahler, Song Symphonist*. Since its inception, he has been the Editor of CHORD AND DISCORD. He has contributed to the *Encyclopedia of Music and Musicians*.

PARKS GRANT, born in Cleveland, Ohio, in 1910, received his Ph.D. from Eastman School of Music in 1948. His musical compositions include orchestral works, chamber music, vocal music, etc. During the summer of 1949 he was guest at Yaddo, Saratoga Springs, N.Y., for purposes of musical composition. His present position is with Temple University, Philadelphia.

ERNEST M. LERT, Ph.D. Director of, and lecturer on, dramatics and music in Austria, Germany, Switzerland, Italy, France, and South America. Since 1929 in the U.S.A. Author of *Otto Lohse, ein deutscher Kapellmeister*, *Mozart auf dem Theater*, and many articles in magazines and newspapers.

DONALD MITCHELL, born in London, 1925. Educated Dulwich College. In film industry before Army service. Demobilized 1946 and now lecturing and teaching school. Editor of the quarterly review, *Music Survey*. Contributor to *Mandrake* (Oxford) and A. L. Bacharach's *The Music Masters*. Broadcasts and does research for the B.B.C. Made a particular study of the life and music of Max Reger.

ROBERT SIMPSON, born in Leamington, Warwickshire, 1921, originally intended to study medicine. After two years of medical studies, he decided to turn to music. He holds a Bachelor of Music degree from the University of Durham. He has composed several orchestral and chamber music works, and has written extensively on Bruckner. At present he is a Lecturer, University of London, and Director of Music, Exploratory Concert Society, London.

WARREN STOREY SMITH, born in Brookline, Mass., succeeded Olin Downes as Music Editor of the *Boston Post*. His musical compositions include orchestral and chamber music works as well as songs and piano pieces. He became a member of the faculty of Faelten Pianoforte School in Boston after his graduation from that school. He was assistant music critic on the *Boston Transcript*. In 1922 he became teacher of theory and composition at the New England Conservatory.

WOLFGANG WAGNER, born in Czechoslovakia, received his musical education in Berlin, Vienna and Prague. He went to Australia in 1938 and is Sydney Correspondent of MUSICAL AMERICA. In 1948 he joined the staff of the Australian musical journal THE CANON as Associate Editor.

Among American artistic developments of recent years the rebirth of interest in the music of Bruckner and Mahler is second to none in significance. When *The Bruckner Society of America* was founded on January 4, 1931, performances of these two composers by our major musical organizations were not merely rare, but also ineffectual, because American music-lovers had no adequate approach to the proper appreciation of the art of either Bruckner or Mahler. Therefore the Society, having adopted as its chief aim the fulfillment of this void, published the first biographies of these composers in English and issued a magazine, *CHORD AND DISCORD*, devoted almost entirely to discussions of their works.

The Society solicits the cooperation of all who are interested in furthering this aim. Inquiries concerning membership may be directed to Robert G. Grey, Executive Secretary, 697 West End Avenue, New York 25, New York.

## IN MEMORIAM

GABRIEL ENGEL, violinist, composer, musicologist and, in later life, rare book dealer, died suddenly of a heart attack in Vergennes, Vermont, on August 1, 1952. Born in Hungary sixty years ago, when a boy he was brought to New York City where he attended public school and DeWitt Clinton High School. He won a Pulitzer scholarship and received his A.B. degree from Columbia in 1913. Though the late John Erskine encouraged him to devote his talents to writing, he preferred the violin.

In 1920, after having studied with Max Gegna, he made a highly successful debut at Aeolian Hall in New York. His photographic memory enabled him to memorize a given piece of music merely by reading it over once or twice. Two years after his debut, he gave a recital over the radio, then in its infancy. Until he went to Austria in the early thirties to study composition with Ernst Krenek, he devoted his time and efforts to giving concerts and to teaching the violin. Among his compositions are a violin concerto, a quartet, a symphony, *Variations for Piano on an Original Theme*, and musical settings of poems by Tennyson, Willa Cather, Guiney, Heine, Wildgans, and others.

Before going abroad, he had already shown great admiration for the music of Anton Bruckner, an admiration that deepened during his sojourn in Austria where he also became thoroughly familiar with the music of Gustav Mahler. While in Europe he conceived the idea of founding a Bruckner Society in the United States where Bruckner and Mahler were comparatively unknown and frowned upon mainly because of unfamiliarity with their music. After his return to the United States he edited the first issue of *Chord and Discord*. He contributed numerous articles of lasting value to this magazine which he continued to edit until his death.

His writings include *Life of Anton Bruckner and Gustav Mahler—Song Symphonist*, the first biographies in English of these masters. *The International Encyclopedia of Music and Musicians* contains his articles bearing the titles: *Anton Bruckner*, *Gustav Mahler*, and *Violin Playing and Violin Music*.

For the past fifteen years he was a highly respected dealer in rare books. Yet he found time during his last years to make an analysis of Bruckner's nine symphonies.

His tireless efforts in behalf of Bruckner and Mahler will always be remembered and his contribution toward a greater interest in and appreciation of Bruckner and Mahler will continue to influence musical life in our country for a long time to come. For the swelling ranks of those devoted to Bruckner and Mahler, Gabriel Engel has not lived in vain.

**GABRIEL ENGEL**

**1892-1952**

## BRUCKNER AND MAHLER — WHY?

by Herbert Antcliffe

My personal introduction to the works of these two masters was made nearly fifty years ago. In the first instance I read in the *Neue Musik-Zeitung* of Leipzig an article entitled "*Ist Bruckner Formlos?*"—Bruckner up to that time being scarcely known to me even by name. A few years later I listened with mixed delight and awed surprise to what was then generally known as Mahler's "Symphony of a Thousand." Mahler was at that time at the height of his reputation as a conductor and was beginning to win a limited world reputation as a composer. One must admit that to the young student this work was more a technical wonder than a work of artistic importance, but even with this one wondered whether it would not eventually be favourably compared with Beethoven's Ninth.

For a long time after that, in my work as a newspaper critic, I was constantly hearing and reading about the two composers and their work, and studying the scores as they became available. Both in the articles one read and heard in conversations the two names were almost invariably coupled. If Bruckner was mentioned, for instance, the remark about him would immediately be countered by one about Mahler and vice versa, even if no actual comparison was made. Possibly, of course, this association was frequently made by those who had not studied their works merely because it was known that both had composed symphonies of a length and elaboration of texture unknown up to their time. Nevertheless it was also made by many who knew the works of both sufficiently intimately to make intelligent comparisons.

Later, when I became actively interested in the current musical life of the Netherlands, this was still more marked, for I found in Amsterdam and The Hague an even greater worship of these two titans than in Vienna itself, and I was surrounded by crowds of enthusiasts who delighted in drawing my attention to their musical affinity. Right up to the present time this comparison of the works of "the two great Masters" continues, though within the circles of their most fanatical propagandists there is sometimes a division on the question of which is the greater.

That such affinity exists is commonly agreed, so much so that Bruckner Societies in various countries where their works are most familiar and most frequently performed make an important feature of their work the study of the compositions of Mahler. Without suggesting that there is anything wrong in the encouragement of a parallel study of their works my own reaction during the greater part of the last half century has been a constant realization of the different—often widely different—characters not only of the two men but also of their music. While others have compared and pointed out relations and similarities I have myself been more inclined to observe the contrasts and to find differences, aesthetic and technical.

The most important of what may be called the accidental reasons for this almost universal comparison is the fact that Mahler is said to have attended certain lectures by the older man and that he certainly fell under his influence

in his early days so that at one time they became great personal friends. This does not necessarily imply that such influence was an absolute one or that the younger man became a follower or disciple of the other. For a long time this latter condition was supposed by many people to have existed, but as Philip Greeley Clapp has said, "the closeness of Mahler's artistic relationship to Bruckner is now no longer regarded as that of a son to a father; and there are those who find little in common between them except a tendency to write longer symphonies than the musical police are willing to approve."

Probably the truth is somewhere about half way between these two ideas. The question therefore remains: Why should their names be always associated? What are the matters in which one can compare the two and in what matters and manners does such comparison become contrast? For an answer to this we have to consider both their personal lives and circumstances and the contents and character of their music. In fact, with these two probably more than with any other composer who ever lived, the conditions and circumstances of their lives are inseparable from the character of their music.

One of the most obvious things they had in common was their religion. Both were Catholics: Bruckner a "cradle" Catholic, brought up in that Faith from his earliest childhood; Mahler one by conversion. But with this broad statement their similarity of religious faith and principle ends. For Bruckner's belief in the Catholic Church, however well-founded and sincere, was naive and largely emotional. Mahler's on the other hand was intellectual and aesthetic, much of the attraction of his new religion being its music and its ceremonies. In some of his music, most notably in his Eighth Symphony, he endeavoured, and not without success, to combine his Catholicism with a kind of pantheism or paganism. We are not here concerned with the question whether he was a better or a worse Catholic or a better or worse man because of this combination of ideas; the only thing is that it made his music something different from that of Bruckner.

Add to this that Bruckner by upbringing and by choice was a "Church musician," taking a leading part in the production of the works of Church composers from Palestrina to his own contemporaries. Mahler was not a Church musician at all, so that a very important difference in their outlook on music is at once apparent. Mahler was not only neither organist nor choir director, but he apparently wrote no Church music; Bruckner, though a symphonist in every fiber, wrote a considerable amount of music for use in Church.

Charles Buckley speaks of "the sturdy and powerful Bruckner." It would be difficult to apply the former of these two adjectives to Mahler, however powerful he may be. In fact, much of his power was expressed in a manner that was just the reverse of sturdy. One might even say that he was more sentimental than was Bruckner, though both of them had some of this quality. In their personal characters Bruckner was sometimes inclined to be lacrimose; Mahler had more of a tendency to be violent and vituperative.

As sincere artists both had a considerable degree of simplicity in their make-up; but while Bruckner was simple in his life and subtle in his music Mahler had a more complex character but his music, with all its elaborate technic, was often simple and straightforward in its essential expression. The more one hears of the music of Mahler the more one seeks in vain for any subtlety. He loved noise—which he called power—often for its own sake: witness his desire that the "hymn" in the finale of the first symphony, written for seven

horns, should when practicable be "strengthened" by the addition of others. Bruckner has been described as noisy, but this has been when the "improved" versions of his symphonies, by Loewe and von Schalk have been heard. His original orchestrations were decidedly not noisy.

Moreover, Bruckner not only belonged to a decidedly older generation than Mahler (musically one might say three or four generations earlier), but he was in every respect of an older type, besides doing most of his composition at a later lifetime. Not that Mahler remained young. In fact, it is difficult to imagine either of them as young. Perhaps the best description of their respective characters, judged by their music and their general work as we know it, would be to say that with all his naivety Bruckner was old almost from infancy, while Mahler was never (notwithstanding the obvious precocity of *Das Klagende Lied*) otherwise than middle-aged. Worn-out he certainly was when he descended to the pessimism of *Das Lied von der Erde*, but this was a sort of erosion of the spirit that is something different from senility. It is certainly not the expression of "ripe" old age. The oldness of Bruckner, on the other hand, was not only ripe, but rich in its fruition at its best and over-ripe at its worst. Throughout his life Bruckner was by nature a follower and dependent; Mahler, though not always a leader was at least generally independent.

When some years ago (in the London periodical, *The Dominant*, edited by the late Edwin Evans) I described *Das Lied von der Erde* as immoral music I did not necessarily imply that Mahler's other works were also immoral, either in a general or a musical sense. He was not, however, always reliable in this matter, though at his best he rose high in musical morality, even, if one may use the term with regard to music itself, in virtue. That is probably the weakest point of Mahler's musical work; it is not consistent in the characteristics which mark that of the integral and well-controlled artist. Bruckner, though not without his moods and lapses in expressive power, was consistent in his aims, and free from any suggestion of improper expression or search for inspiration from unsuitable sources.

It may well be that much of the difference between the works of the two men arises from the fact that Mahler was a conductor *par le grace de Dieu*, even a great conductor, of both symphony and opera, while Bruckner was scarcely a conductor at all. This is to be seen in many details of their scores and not merely in the historical records of the success of the younger man and the failure of the older one. Bruckner was more conventional in his directions than was Mahler, in which respect, among others, he showed his constant feeling for the organ. Eric Blom, as quoted by Mr. Parks Grant, has said of the scores of Mahler that "they abound in verbal directions. To look at their pages is almost like watching Mahler conducting a rehearsal, admonishing and encouraging the orchestra with all kinds of epithets that aptly describe his precise intentions in the briefest and most direct way. The simplest directions . . . are often followed by exclamation marks, as though the conductor-composer so vividly imagined the sound of the music that he had to shout through it to make himself understood. No other composer's full scores have so human a look about them as Mahler's." To which one might almost add: least of all Bruckner's. An "interpretation" of the works of Mahler is for this reason almost impossible; those of Bruckner almost call for it.

Even in the matter of their originality (not a necessary attribute of great art) they were different, possibly for this same reason. Bruckner the dreamer,

almost the mystic, was the more original in his matter; Mahler the practical man of the world with a complete knowledge of how to appeal to the public being more original in his manner. He used in a striking manner as thematic material popular melodies such as "Frere Jacques" and a number of German popular songs, and quite a considerable amount of his thematic material is reminiscent, without necessarily being copied from, that of his elders. In each case the result was music that could have been written by no-one else.

Had Bruckner been a conductor it is not at all unlikely his works would have been played both as he wrote them and more frequently and with more acceptance by public and profession than was actually the case. He had to allow them to be touched up and revised in a manner that took away from their ethereal beauty but made them more "obvious" and more in the fashion of the day. Mahler, although not above seeking advice, notably on questions of the proper accentuation of both Latin and German words, was above all one who preferred himself to make whatever revisions might seem desirable to his scores. That he regarded such revisions as, in principle, unobjectionable may be seen from a letter he wrote from New York to his friend and disciple, Bruno Walter, in which he said, "I am and always shall be the eternal beginner. And the bit of routine which I have made my own, serves at the best to increase the demands which I make on myself. Therefore I should like to make a new edition of my scores ever five years . . ."

Is this, as has been suggested, the pride that apes humility? Personally I question it; but it is a contrast to the kind of humility which made Bruckner hand over his scores to the tender mercies of younger, and usually less capable, men than himself.

---

#### KILENYI BRUCKNER MEDAL AWARDED TO GEORGE SZELL

In appreciation of his efforts to create a greater interest in Bruckner's music in the United States, the Directors of *The Bruckner Society of America, Inc.*, awarded the Kilenyi Bruckner Medal of Honor to George Szell. Mr. Szell conducted the *Eighth Symphony* in Cleveland on December 11 and 13, 1947, in Chicago on March 17 and 18, 1949, in New York on December 14, 15, and 17, 1950. The Cleveland Orchestra under his direction performed the *Seventh Symphony* on March 24 and 26, 1949, and the *Ninth Symphony* on March 27 and 29, 1952. After the first performance of the *Ninth*, the medal was presented to Mr. Szell by Mr. C. J. Vosburgh, Manager of the Cleveland Orchestra, acting on behalf of the *Society*.

## TWO OF THE BEST

By Winthrop Sargeant

Reprinted by permission. Copyright 1954, *The New Yorker Magazine, Inc.*

The New York debut of the well-known Dutch conductor Eduard van Beinum, which took place Tuesday night of last week at Carnegie Hall, where he appeared with the Philadelphia Orchestra, was, I think, an event of considerable importance. At any rate, it is many years since I have watched the manipulations of a new conductor with comparable excitement or been so certain from what I heard that I was being introduced to the work of a superlative performer in this rather elusive art. Mr. van Beinum evidently combines a meticulous regard for workmanship, such as characterized the conducting of his countryman Willem Mengelberg, with a great deal of dash and fire. The other night, his musical taste, as exhibited in Haydn's Symphony No. 96, was impeccable, and his sense of proportion in dealing with the long lines and accumulating climaxes of Anton Bruckner's difficult Seventh Symphony was masterly. What impressed me most about his conducting, however, was the dynamic energy he appeared to infuse into the most obscure nooks and crannies of the orchestral apparatus. He seemed to be in direct control of more musical detail than any conductor in recent memory except Toscanini. This gave his interpretations a wonderful sensitiveness and pliancy, and produced the impression that conducting an orchestra was to him as intimate a process as molding a handful of clay.

Aside from Mr. van Beinum's remarkable achievements, the main interest of the evening for me lay in the Bruckner symphony, a work that, though relatively popular as symphonies by this composer go, is still so seldom performed here that it is unfamiliar to most concert audiences. For some odd reason, Anton Bruckner, who was born before Beethoven died and was still writing eloquent and profound music in the final decades of the last century, has remained a "controversial" composer, and even at this late date it is fashionable to apologize, as the Philadelphia Orchestra's program notes did the other night, for certain weaknesses his music is supposed to have—notably a tendency toward long-windedness and diffuse structure. As far as I am concerned, this controversy has itself become a tiresome tradition. I find Bruckner neither long-winded nor diffuse. I find him a symphonist of the very noblest stature, quite comparable to Beethoven and Mozart and vastly superior to Brahms. I will admit only that his music is a little difficult to grasp on first hearing, and even for this I think there are good reasons. In order to help elucidate them, I should like to relate an experience I've had with this work, which may prove helpful to anyone interested in understanding it better.

For a number of years, I was about as well acquainted as the average music lover with Bruckner's symphonies. I got from them a vague impression of monumentality, together with a feeling that they were rather repetitious and that their themes were often rather trite. My opportunities for hearing them were so infrequent that I could scarcely tell one from another; they all seemed

very much alike—great slabs of somewhat Wagnerian music, singularly lacking in distinguishing features. I was, however, conscious that there was more in them than at once met the ear, and I was also conscious that the logic of their massive structure, if there was any, eluded me. I determined to find out whether or not I really liked Bruckner, so I bought several phonograph records of the symphonies and began to study them, playing each movement over and over, until I could identify every motive and perceive exactly how it fitted into Bruckner's over-all scheme. This modest research proved a revelation to me. I came to see that in my casual listening to a Bruckner symphony in the concert hall I had been in the position of a man standing near the foot of a colossal statue, able to discern certain interesting details but having no idea whatever of the extent and proportions of the whole. It was necessary to approach the thing from several angles before its total meaning became apparent. Such study might, of course, have been accomplished in the concert hall if I had been able to hear Bruckner's symphonies as often as I am able to hear those of, for example, Beethoven or Brahms. But the once every three years or so that I had the opportunity to hear a repetition of any given Bruckner symphony was not sufficient to produce any real understanding. I am convinced that Bruckner is one of those very rare composers who require repeated hearings to be appreciated. I am also convinced now that he is the towering symphonic figure of the latter half of the nineteenth century, and the successor of Beethoven in the development of his complex art.

On close acquaintance, Bruckner's symphonies reveal a sort of simple lyricism that is far more nearly akin to the music of Schubert than it is to that of his contemporary Richard Wagner. This is coupled with an intricate technique of symphonic development by which he, like Beethoven, builds a gigantic structure out of simple ingredients. His technique of development, in which he contracts, extends, reverses, and inverts his material, is actually very lucid, and is the most absorbing aspect of his work intellectually. Beyond these technical matters, however, lies the poetic and inspirational side of Bruckner—the broad, sweeping themes, the knotty little themes, the themes that are contrapuntal aggregations of themes, the rather baroque climaxes, the magical and highly original touches of orchestral color, the iridescent web of subtly changing chromatic harmonies. No one since Beethoven, to my knowledge, has written slow movements of comparable grandeur, and no one else except Beethoven has written true scherzos of the vigorous, propulsive type. (The scherzos of Schubert and Brahms are merely waltzes or folk songs.) Few composers of any era have been as straightforward in their communication of musical ideas—as willing to place those ideas candidly before the listener without attempting to baffle or impress him with self-conscious feats of style. In this respect, Bruckner is a little like Verdi; what he says is of such immediate consequence that the method of saying it takes second place. But I have still not quite explained why I think Bruckner is one of the greatest of all symphonists. Perhaps the ultimate answer is to be found in the position his music occupies in the scale of emotional values—in the sort of scale, that is, that measures the shades of difference between the epic and the trivial. Here I find Bruckner writing on a plane of the utmost nobility, saying profound and simple things in a profound and simple manner, with a serene, affirmative faith in God and humanity that makes each of his symphonies a deeply moving experience.

(*The New Yorker*, Jan. 30, 1954)

## MAHLER QUOTES MAHLER

By Warren Storey Smith

It might be possible to make an exhaustive inquiry into the instrumental use to which composers have put their works for solo voice. Instances abound in the case of both Schubert and Mahler. Otherwise they are rare, especially if we are to confine our investigations to composers of major stature. An exception that comes readily to mind is the strong and no doubt intentional suggestion of *Immer leiser wird mein Schlummer* in the chief theme of the Andante of Brahms' Second Piano Concerto. Prying analysts have also discovered later in the same movement an allusion to the latter part of the less familiar song, *Todesehnen*. If opera is to be included, one can cite the fact that in the banquet scene in Mozart's *Don Giovanni* the musicians play, among other popular airs of the time, the *Non piu andrai* from Mozart's own *La Nozze di Figaro*.

Two more composers, programmist both, should be mentioned in this connection. In Berlioz's *Symphonie Fantastique* the Largo Introduction to the first movement, and its derivative, the theme of the Beloved One, or *idée fixe*, come from a vocal melody of his boyhood. A similar origin is ascribed to the second subject of the Overture to *Les Francs Juges*. Finally, in the Hero's Works of Peace section of his *Ein Heldenleben*, Strauss quotes a phrase from his song *Traum durch die Dämmerung*. The other citations in this episode are from Strauss' tone poems.<sup>1</sup>

In quite another category would fall the piano transcriptions, or paraphrases, of a composer's own songs. Liszt indulged in this practice<sup>2</sup> and also spent a great deal of time similarly treating the songs and arias of others.

My chief concern here is with Mahler, but before parting with Schubert, I shall mention the instances of his borrowings that are generally recognized as such. In three of them the song has given at least the popular title to the instrumental piece in which it figures, namely, the *Wanderer Fantasy* for piano, the *Trout Quintet* for piano and strings, and *Death and the Maiden*, the String Quartet in D minor. In each of the chamber works one movement takes the form of variations on the song in question. Again, in each of the four sections (or movements) of the Fantasy the thematic material is founded on the motive stated at the beginning of the first, which itself derives from the song, *Der Wanderer*, while the latter is the basis of the slow division.

Three other sets of variations are those of the F major Octet for strings and winds on the air, *Gelagert unter'm hellem Dach der Bäume*, from the early operetta, *Die Freunde von Salamanka*; those on the song, *Sei mir Gegrüsst* in the C major Fantasy for violin and piano; and those in the Introduction and Variations for piano and flute (in E minor, Op. 160) on the song, *Trock'ne Blumen*.

Let me say at this point that the use of a song as the basis for variations

<sup>1</sup> A reference to the opera *Guntram* has been noted but the complete disappearance of that work makes it of little interest to the average concertgoer.

<sup>2</sup> The *Liebesträume* and the *Sonetti del Petrarca*.

was what Mahler distinctly did not do. His only set of variations, those in the third movement of the Fourth Symphony, are on a theme composed for the purpose.

In at least one instance, the Minuet of the String Quartet in A minor, the opening bars of which are taken from the setting of lines from Schiller's *Die Götter Griechenlands*, Schubert did the sort of thing that Mahler did so frequently and that Brahms also did in the movement mentioned above. "The quotation," says J. A. Westrup,<sup>3</sup> "can hardly be accidental; and the melancholy question *Schöne Welt, wo bist du?* chimes in perfectly with Schubert's mood as we know it from his letter to Kupelwieser."

And now for Mahler, whose case immediately becomes somewhat different by reason of the fact that certain of his vocal works that later found their way into his symphonies were originally conceived with orchestral accompaniment, though also available in piano form. These include the *Lieder eines fahrenden Gesellen* (Songs of a Wayfarer), the *Kindertotenlieder* (Songs on the Death of Children) and the song, *Des Antonius von Padua Fischpredigt* (St. Anthony of Padua's Sermon to the Fishes).

The practice that is so closely identified with Mahler began at the very outset of his career as composer. As the *Gesellen* cycle grew out of his unhappy love for Johanne Richter, a singer in the court theatre at Cassel, where he was Kapellmeister from 1883-5, so did the First Symphony grow out of the song cycle. This is a most important point, since, as has been said so often, the spiritual content, the extremely personal message, of the Symphony cannot be fully grasped by anyone unacquainted with the two songs that play so important a part in it. It would be an illuminating, and also helpful, experience for most listeners if a conductor were to place the two works on a program, in the proper chronological sequence. So far as I know, the experiment has never been tried.

In two ways the cycle's second song, *Ging heut' morgen über's Feld*, has influenced the content and construction of the Symphony. The less obvious but more pervading of them is the employment in every movement of the interval of a descending fourth, with which the melody of the song begins. The late Gabriel Engel called this the "nature motif"; more prosaically, Fritz Stiedry terms it a "basic interval." In many cases it is the very notes, D-A. However, in the third and fifth measures of the Introduction to the first movement we hear it as A-E. In measures 7-10 it blossoms into a motive that might be called the motto of the Symphony, though only the first five notes remain unchanged:

This is heard in the preparation for the second subject of the movement and it precedes the reprise of the second subject of the Finale. In the meantime, it had previously been heard, in major, from the seven horns in octaves, in which exultant guise it is used frequently, and almost to the very end of the movement:

<sup>3</sup> *The Music of Schubert*, edited by Gerald Abraham (New York: W. W. Norton & Co., 1947), p. 93.

I do not propose to account for all the fourths in this extended composition, for they are as the sands of the sea. However, I shall take note of certain conspicuous instances of Mahler's deliberate emphasis upon this significant interval. For example, in the thirtieth measure of the Introduction it becomes a frequently-repeated cuckoo-call, identified as such in the score:

Previous and subsequent musical cuckoos, including those of Mahler himself, have sung a descending third.<sup>4</sup>

In the second movement, the chief theme has fourths in both bass and treble, sixteen of them in as many measures of the former and six in the first eight measures of the latter. The third begins with the muted kettledrums pounding away on D-A, a device borrowed from the fourth *Wayfarer* song (see below), and there is scant relief from this persistent figure, whether in the drums or in the strings, in the whole course of the movement:

As for the more extended quotations, the principal section of the first movement proper, a matter of some hundred measures, is based on *Ging heut' morgen*:

Ging heut' mor-gen ü-bers Feld, Tau noch auf den Grä-tern hing,  
Through the field I took my way; dewdrops hung on grass and tree,

The first eight of these are a literal quotation of the vocal melody. The rest of the section consists of a juggling of the motives here involved and of a presentation and rearrangement of certain others in the song.

The other reference to the *Gesellen* cycle occurs in the third movement, the third of the four sections of which are taken up with a literal reproduction, one tone higher, of the last thirty-one measures of the song, *Die zwei*

<sup>4</sup> Paul Stefan refers to "Cuckoo-calls in fourths" in the *Wunderhorn* song *Um schlimme Kinder artig zu machen*. However, this versatile bird also sings seconds, thirds, and sixths.

plus one derived from a song already composed. Writing a new symphony around this Finale—for that is what was actually done in the case of No. 4—was in more senses than one a good idea.

For the Scherzo of the Third, Mahler turned again to a *Wunderhorn* song, *Ablösung in Sommer* (The Changes of Summer). After two introductory measures, he quotes literally the first twenty-two of the song's thirty-seven measures. In the next three the vocal part is altered and in the next three it is abandoned. After that, to make a very complicated matter simple, the song becomes thematic material. We are thus reminded of the treatment of the *Fischpredigt* in No. 2.

The contralto solo of the ensuing movement is outside the scope of this discussion. So too is the next, a choral setting of the *Wunderhorn* poem, *Es sungen drei Engel* (Three Angels Were Singing). Yet having brought the matter up, I will merely say that the extensive passage that reappears in the Fourth's Finale begins at cue no. 3, or on the third measure of page 197 of the full score, in the new Boosey and Hawkes edition. In the first instance, Jesus says to his disciples: "Whenever I look at you I see you cry." As used in the more familiar Finale of the Fourth, the music that had accompanied Peter's reply refers to the culinary delights of Heaven:

Ich hab' ü - ber - tre - ten die zehn Ge - bot.

The ten commandments I have broken.

die Eng - lein die ba - cken das Brot.

the angels bake the bread.

It is only the folksy nature of the music that makes it as suitable to one text as to the other.<sup>6</sup>

In an article that appeared in this publication several years ago Franz Werfel made the statement that the *Fifth*, *Sixth*, and *Seventh Symphonies* have their basis in the *Kindertotenlieder*. As applied to the *Sixth* and *Seventh*, any such kinship is spiritual rather than thematic. However, anyone familiar with the first of these sorrowful songs can hardly escape noting the repeated references in the first movement of the *Fifth* to the motive in the fourteenth full measure of *Nun will die Sonn' so hell aufgeh'n* (Once More the Sun Would Guild the Morn) and that occurs on the words "die Nacht gescheh'n!" The

<sup>6</sup> St. Peter, of course, figures in both texts. "These bars", writes Stefan, "used as a refrain, are exactly the confession of sin . . . from the Third Symphony. Even here a residue of earth; the saints are reflective. But the inhabitants of heaven feast at ease."

most arresting similarity is found at the top of page 39 of the full score:

*a*

die Nacht ge - schek'n.

*b*

Moreover, the four ascending tones that begin, and are prominent in, the next song, *Nun seh' ich wohl, warum so dunkle Flammen* (Ah! Now I know Why oft I Caught You Gazing) also begin the chief melody of the Adagietto:

*a*

*b*

The above motive also appears in the *Ronde-Finale*. There is good reason for thinking that the resemblance between a motive in the fugal section of the latter (part of a counter subject) and the *Wunderhorn* song, *Lob des hohen Verstandes* (Praise of Lofty Intellect) was no mere accident:

*a*

*b*

The inescapable conclusion to be drawn from all this is that, for Mahler, symphonic music was not merely a pattern in tones; it was part and parcel of life, of human experience. In fact, he put himself on record as saying that very thing.

---

### "MUSIC FOR GOD"

We may be thankful, indeed, that few musical historians have made excuses for Bruckner's music on the ground that, after all, it was written by a *naive* man, for such Bruckner has generally been termed. And *naive* when applied to Bruckner has not been limited in meaning to *simple, humble, or unpretentious*, but includes *unlearned* and *lacking in mental acuteness*: in other words, Bruckner has often been made to look like a fool bordering between senility on the one hand and angelicness on the other. Theresa Weiser in her account of Bruckner (*Music for God*, New York: Philosophical Library, 1951) has him at the outset wanting to be an angel and a musician and establishes from the start the type of person Bruckner has so often been painted to be.

Of course, Mrs. Weiser cannot and does not guarantee that all of the things she has going on in Bruckner's mind from time to time actually did go on there, but what mental processes she does show transpiring certainly convey the notion of Bruckner's being extremely naive in all of the word's meanings. And, while *Music for God* covers all of Bruckner's life, there is little change throughout the life from the Bruckner of the early day. One might have expected some change to have taken place—and even if none did take place, the stature of Bruckner as an adult and a great master would have been better portrayed by a slightly different handling of his later life, not so much in what has been included but in the treatment of it.

Mrs. Weiser, however, has great enthusiasm for Bruckner and doesn't let it relax at any moment. For that reason many people will find the Bruckner which Mrs. Weiser fashions pleasantly amusing. And any reader who takes up the book must realize that it is an extremely sincere and personal picture of Bruckner as Mrs. Weiser has come to know him through accounts of his life and her acquaintance with his music.

CHARLES L. EBLE

Mrs. Weiser has conveyed admirably the sincerity and devoutness of this Austrian peasant who became one of the most controversial composers of the nineteenth century. Her story concerns itself more with the romantic episodes and religious conviction than with his compositions, and will be of interest to students and teachers interested in an approach to Bruckner's creative style.

P. H. L., *Musical Leader* (August, 1951)

A LETTER FROM DR. ALBERT SCHWEITZER

Mr Robert G. Gray, Breckman Society  
697 West End Avenue New York 25 N. Y.

Hopital du Dr Schweitzer  
'Lambarené (Gabor)  
Eglise Synodale Française  
Dakar 1952

Lieber Herr Gray

In meinem schweren Leben konnte ich nicht dazu zu arbeiten wie  
ich möchte. Darum kommt meine Antwort auf Ihren lieben Brief vom  
30 Juli 1952 etwas ein Jahr zu spät. Ihnen Sie bitte Nachsicht  
mit mir. Ich freue mich dass Ihre Gesellschaft, die aus Interesse  
für Breckman als Maler in Amerika wirken will, gegründet  
worden ist. Ich habe in meinem Jugend das Aufkommen von Breck-  
man als Malers Kunst erlebt und muss sagen, dass es ein gros-  
ses Erlebnis für mich war. Maler habe ich seine Werke sehr gerne  
sehen er war erschreckt als er mit Septizämie ab ein Jahr Tode

*Erinnerung: Immer dank für die mir Schiffe,  
die im Affenlandungen, die ich nicht zu erhalte,  
Stipendium der angesehenen Eltern, Schwieger*

Gewalt in Amerika und Europa zurückhalten. Was hätte  
er uns noch geschickt. Beide sind einseitig verurteilt. Ihre Kunst  
ist Epitaphmalerei. Eine unentwickelte, gewalttätige Darstellung  
von romantischen Kunst. Und beide grosse Köpfe, jeder in seiner  
Art. Und ich habe den Eindruck, dass unsere Zeit wieder be-  
greifen lernt, was ihre Kunst an Gewalt er trägt er gewaltig-  
keit lernt. Was ich von dem Musikleben in Europa in Amerika  
erfassen heißt diese Hoffnung in mir auflebt. Als diese  
beiden ist ein anderer, Regor, der auch der Welt wie darge-  
schickt werden muss. Ich komme nur noch zu kurzen An-  
haltstellen nach Europa, leider geschuldet ein Sommer. Aber wenn  
ich wieder in der Konzertszeit heimkehre, will ich Breckman als Maler  
hören er wird wieder an ihnen heranschauen. Wenn sie sich erheben  
die heranschauen Anders kann ich das Leben über Musik nicht

MR. ROBERT G. GREY, Bruckner Society  
697 West End Avenue, New York 25, N. Y.

Hopital du Dr. Schweitzer  
Lambaréné (Gabon)  
French Equatorial Africa  
June 1952

DEAR MR. GREY,

My strenuous life keeps me from writing as I would like to. For this reason my reply to your kind letter of July 30, 1951, is about a year late. Please forgive me. I am pleased that your Society, the aim of which is to arouse interest in Bruckner and Mahler in America, has been founded. In my youth I watched Bruckner's and Mahler's music take hold and must say it was a great experience for me. I heard Mahler conduct his works and was stunned when he, suffering from septicemia, returned to Europe from America a doomed man. What gifts might he still have bestowed upon us. Both are spiritually related. Their art is late romanticism. An unexpected, powerful re-birth of romantic art. And both masters, each in his own way. And I am under the impression that our era is once more learning to understand the power and depth and grandeur of their art. What I hear of musical life in Europe and America keeps this hope alive within me. There is another besides these two, Reger, who must again be given to the world. I get to Europe for only short periods, unfortunately in the summer. But if I go home again during the concert season, I am going to hear Bruckner and Mahler and again become intoxicated (*berauschen*) with them. For they are the kind that do intoxicate. I cannot describe the experience of hearing their music in any other way. A thousand thanks for the publications about them which I receive through you.

With warmest greetings,

Devotedly yours,

ALBERT SCHWEITZER

## IN DEFENCE OF BRUCKNER

by Mosco Carner

The following article which appeared in the April 13, 1950, issue of *THE LISTENER* is reprinted with the permission of *THE LISTENER* and the author.

To talk about the symphonic Bruckner with sympathy is often to fall into the role of defending counsel. For Bruckner stands accused of grave offences against what are supposed to be the sacrosanct laws of symphonic writing—laws derived from Beethoven which we are accustomed to apply to everything bearing the title 'symphony'. That there may be different symphonic concepts expressing themselves in new stylistic features, is a fact we incline to forget or to accept only with reluctance. Hence the great number of oblique judgments pronounced not only upon Bruckner but other romantic symphonists. Besides being called a *génie manqué*, what are the more intrinsic accusations against him. Lack of organic structure, awkwardness in the handling of form and orchestra, unsymphonic themes, rambling and repetitiveness, not knowing when to finish and thus producing symphonies of an enormous length (Brahms' 'boa-constrictors'), and so on.

One or two points in this indictment cannot be denied but we may plead certain extenuating circumstances. To begin with, Bruckner came to the symphony late in his career, and he came to it from a sphere hardly appropriate as a preparation for symphonic writing. An organist in a provincial town of Upper Austria, for years writing church music, he was nearly forty when he composed his real 'First' Symphony (D minor). Moreover, up to his move to Vienna in 1868, his opportunities of hearing symphonic music had been few and of little artistic gain to anybody if we are to judge by what we know of musical life in the Upper Austria of the eighteen-fifties. This lack of an early symphonic experience in both the inner and the extrinsic sense may account for Bruckner's shortcomings in technical *savoir faire*. Yet the marvel is that a composer showing apparently so little qualification for a symphonic career should during its course have produced works which are entirely *sui generis*—vast edifices of sound that have often been likened to the structure of a Gothic cathedral. The Bruckner symphonies are laws unto themselves and to apply to them the canon of the 'classical' form is as misguided as it is to measure, say, *Faust* and *War and Peace* by the yardstick of the traditional drama and novel.

Bruckner's conception sprang from psychological roots wholly different from those that fed the symphonic Beethoven and his romantic progenies in Germany: Schumann, Mendelssohn, and Brahms. Bruckner was unintellectual, unliterary, non-speculative and romantically irrational. If he had a predecessor and kindred spirit, it was another Austrian—Schubert. With Schubert a new feeling begins to invade the symphony—a feeling that is stronger than the composer, as often as not driving *him* instead of being coerced by him into the rationale of the Beethovenian form. With Bruckner this impression of an impersonal elemental force dictating character and course of the music becomes perhaps the most striking feature and, at first, a disturbing one. These

'cosmic' explosions and ominous silences before and afterwards—to a mind like Goethe's they would have presented themselves as perhaps the *ne plus ultra* of what he called 'the dæmonic' in art. Bruckner's Goethean 'dæmons' had their habitat in two spheres—religion and nature mysticism. Possessed of a child-like faith and often visited by ecstatic visions, he saw the sole purpose and significance of his creative work in the glorification of his God. With the Catholic saints, his motto was *omnia ad maiorem Dei gloriam* (in his symphonies symbolised by the use of chorales). Linked with this deep-seated emotion was his instinctive closeness to nature, particularly to the majestic and wild grandeur of the Austrian Alps amid which, as a peasant boy and village schoolteacher, he had lived the most impressionable years of his life. With Byron he might have said

I live not in myself, but I become  
Portion of that around me; and to me  
High mountains are a feeling.

Such were the mainsprings of Bruckner's creative mind and they largely conditioned the content and form of his symphonies.

Corresponding to the vast content that had to be poured into them, Bruckner expands the individual movement and expands it to a dimension only once or twice anticipated before him: by the Beethoven of the Ninth and the Schubert of the great C major Symphony. Instead of single themes we now have whole groups and the codetta assumes a thematic significance of its own. Where a theme is stated in full at once—mostly in the slow movements—it has a sweep and breadth nowhere else to be found in the post-Beethoven symphony. Moreover, development is no longer confined to its traditional place in the middle and the coda but invades the rest of the movement.

This ploughing-up of the solid ground of the classical symphony affects also the first subjects. With very few exceptions the first subject is introduced only gradually; it grows before our ears, so to speak, from an embryonic cell which lies embedded in a 'womb' usually formed of mysterious string tremolandi, as in the opening of the Fourth Symphony. The result of this technique is to make the whole movement oscillate, to dissolve it into a motion comparable with the ebb and flow of a tide. And here we come to the characteristic feature that is responsible for creating that impression of a cosmic force of which I spoke before: the enormous tidal waves in which the music surges forward from one section to the other ebbing away into nothingness and mounting again from a mysterious groundswell. Hence the many—perhaps too many—climaxes of the Bruckner symphonies. The rough graph below showing the general curve of the first movement of the Fourth may serve as a typical illustration.

Even in the slow movements where such dynamism would not be expected we notice the same principle only that the cumulative effect is achieved less through the growing density of the thematic-contrapuntal fabric than through variation. Yet the most grandiose expression of such 'climactic' thinking is

to be found in the finale. Beethoven's dramatic conception of the symphony had already led him, in the 'Eroica' and still more in the Fifth and Ninth, to a final apotheosis. With Bruckner it becomes a rule. It is in the last movement where both ideologically and thematically he ties the whole symphony together by reintroducing, toward the end, the first theme of the opening movement and announcing it in glorious fashion on the combined brass. The most impressive example is the coda of the finale of the Fifth Symphony, with its contrapuntal combination of the leading motives from all the four movements to which is added a chorale theme of overpowering grandeur.

Music conceived in such terms demands of the listener a new approach. It also demands a temperament and a mind attuned to it. As Schopenhauer says somewhere: 'With a work of art you must behave as with a *grand seigneur*. Stand before it and wait till it speaks to you'. To some Bruckner may never speak, to others he is full of speech.

---

#### KILENYI MAHLER MEDAL AWARDED TO FRITZ MAHLER

The Mahler Medal, designed by Julio Kilenyi for the exclusive use of *The Bruckner Society of America, Inc.*, was awarded to Fritz Mahler for his efforts to create a greater interest in Gustav Mahler's music in the U. S. A. Mr. Mahler conducted Mahler's *Fourth* on June 15, 1941 (NYA Symphony). The performance was broadcast over WNYC. On March 22 and 23, 1949, the Erie Philharmonic Orchestra under his direction played Mahler's *Second* Symphony for the first time. Mahler's *Tenth* was introduced to American audiences in Erie, Penna., on December 6 and 7, 1949, and on January 21, 1950, the Erie Philharmonic Orchestra under Fritz Mahler's baton gave the radio premiere of this work (broadcast over NBC).

The Erie Philharmonic Orchestra performed the *First* on February 27 and 28, 1951. After the first of these performances, Mayor Clarence K. Pulling, acting on behalf of the Society, presented the Mahler Medal of Honor to Fritz Mahler.

## THE NINTH SYMPHONY OF BRUCKNER

by Charles L. Eble

The closing years of the nineteenth century saw the creation of a work which is slowly coming to be regarded as one of the great peaks of musical achievement of the century. If we look upon the Ninth Symphony of Beethoven as the first great pinnacle and view most of the symphonic works which followed in a lower range not rising near that height, then along this same general level but not by any means dwarfed by the others we encounter the early works of Bruckner. His later symphonies attain a stature equal to their neighbors, but the Eighth looms slightly higher than the others and the Ninth towers far above the rest. Thus, keeping the figurative musical horizon of the century in mind, the two Mt. Everests are the two Ninths, Beethoven's and Bruckner's. At one time, such a proposal would have met strong opposition, but a gradual reassessment has been taking place, and as this Ninth Symphony and others of Bruckner become better known they assume their proper positions in the musical world and the skyline, which we once felt was dominated by the four symphonies of Brahms, becomes even more impressive with some of the Bruckner symphonies. Many critics have finally come to the conclusion that Bruckner can no longer be considered a minor composer, even though for some his music says very little.

With conductors, especially in the United States, Bruckner has seemingly not become particularly fashionable, or to say the least, adequately recognized, and we find very few conductors doing either of the last two great symphonies. Why do our conductors ignore these works? Are the scores unknown? A check of the records reveals that during the last five years the Ninth Symphony of Bruckner was conducted in the United States by three conductors: Walter, Szell, and Clapp. In the concert hall in this country Walter's performance of Bruckner's IX is practically the only one known, and it was his three performances of the Ninth with the Philharmonic Symphony Society of New York in December, 1953, the last one of which was broadcast, which brought this to mind. For those who have had to rely upon the phonograph for a hearing of Bruckner's Ninth, Hausegger's reading was the sole one for a long time; now, Adler's and Horenstein's are available, but still not Walter's, or for that matter, Furtwängler's. Moreover, there are no recordings of Bruckner done by Walter, who has always given memorable performances of his works; there are none, either, done by a U.S. orchestra which can be had now, although Bruckner's Seventh was recorded by the Minneapolis Orchestra under Ormandy and for a long time was the only one on the market. We can only hope for better days, for, such a performance of the Ninth as Walter just gave with the Philharmonic Symphony Society should be made available on records.

Listening to Bruckner's Ninth is always for me a great experience. It is a work reflecting the solemn, fanciful, and serene thoughts of a man whose only adequate means of communication was music and in this last work of his, he sketches for us in simple lines and purity of utterance the richness

of his musical maturity. The means and the manner are as one — what is said assumes a natural form. There is no mystery, no complexity; no pretention, no patter. The great stature the symphony attains is the result of simple statement, as in language, and it is not the rhetorical declamation, startling as it often is, that amazes, but the flow of ideas that builds a rhetoric — melodic conceptions that increasingly overwhelm as the composer molds them into expressions of feeling. The eloquence that speaks is the eloquence of meaning.

This last symphony of Bruckner is not music that courses through one's veins as wine and gives wholly pleasurable sensations. There is the seriousness of a great tragedy about it. It arrests and disturbs one's thoughts. Contrasting moments of darkness and brightness seize and hold one in their grip. Often it hastens forward with a sense of urgency and mounting tension that act upon one the same as the unfolding of a tragedy. Here is music that indeed arouses the unfelt feelings and reveals the unuttered sounds that only great art is capable of doing. And just as great art is created only by those few people who apparently have innate powers of vision, it will not in turn affect everyone. And, in turn, one can't hope to understand or feel what an artist has wrought unless he takes the time to study the masterpiece. The meaning is there for those who will let the artist speak to them; that is, who can, so to speak, live the work. One should not expect to be entertained by works which in their very nature are not entertainment.

Walter's performance of the Bruckner on this occasion was an especially moving revelation of the symphony. He sought to convey that which is beyond the written page and most of the symphony exists in that realm. Surely there is little in all music to compare with the final thirty bars of the Adagio as they softly, sadly, and resignedly leave one with his thoughts.

---

#### KILENYI MAHLER MEDAL AWARDED TO ALFRED WALLENSTEIN

In appreciation of his efforts to create a greater interest in Mahler's music in the United States, the Directors of *The Bruckner Society of America, Inc.*, awarded the Kilenyi Mahler Medal of Honor to Alfred Wallenstein. Wallenstein conducted *Das Lied von der Erde* on January 16 and 17, 1947, in Los Angeles. The Los Angeles Philharmonic Orchestra under his direction played Mahler's *Fourth* on November 17 and 18, 1949. On April 6 and 7, 1950 and on March 22 and 23, 1951, he conducted Mahler's *Second*. During a rehearsal of the *Second* on March 18, 1951, Janice Moudry made the presentation of the medal to Mr. Wallenstein on behalf of the *Society*.

# MAHLER'S EIGHTH BROADCAST BY CBS AT EASTER

by Jack Diether

Orchestra . . . . .	Philharmonic-Symphony Orchestra of New York
Choir I . . . . .	Westminster Choir, John Finley Williamson, Director
Choir II . . . . .	Schola Cantorum, Hugh Ross, Director
Boys' Choir . . . . .	Boys' Chorus from Public School No. 12, Manhattan, Pauline Covner, Teacher
Soprano I ( <i>Magna Peccatrix</i> ) . . . . .	Frances Yeend
Soprano II ( <i>Una poenitentium</i> ) . . . . .	Uta Graf
Soprano ( <i>Mater gloriosa</i> ) . . . . .	Camilla Williams
Alto I ( <i>Mulier Samaritana</i> ) . . . . .	Martha Lipton
Alto II ( <i>Maria Aegyptiaca</i> ) . . . . .	Louise Bernhardt
Tenor ( <i>Doctor Marianus</i> ) . . . . .	Eugene Conley
Baritone ( <i>Pater ecstaticus</i> ) . . . . .	Carlos Alexander
Bass ( <i>Pater profundus</i> ) . . . . .	George London
	Leopold Stokowski, Conductor

The second nation-wide broadcast of Mahler's Eighth Symphony was given from Carnegie Hall on April 9, 1950, under the inspired direction of Leopold Stokowski. The only previous broadcast in America took place exactly eight years before, on April 12, 1942, as the publicly attended climax at the Center Theater, New York, of the incomplete but sole radio festival of Mahler's symphonies in the U. S., with the Radio City Music Hall Symphony, etc., under the late Erno Rapée.

At that time both instrumentation and performance were slightly abridged (the entire instrumental opening of *Part II* was omitted), so the present performance may fairly be called the first introduction of the national audience to the work as a whole, prepared under facilities somewhat approaching those which Mahler intended for it. It is a serious indictment of the American system of broadcasting that this historically important musical event could not be transcribed and repeated once or more, as broadcasts of corresponding significance and unique occurrence customarily are in Britain and elsewhere.

Aside from its evident public success in all three New York performances during the week, I have called the event historically important because, to begin with, it marked the long-awaited return to this work of the conductor who through it gave us 34 years ago the most phenomenally successful production of a Mahler work (tripled to nine performances by public demand) ever heard in this country. If Leopold Stokowski had never achieved the many other spectacular successes associated with his brilliant and unpredictable career, I imagine he would still be remembered with awe as the guiding spirit of that first true introduction of Mahler the symphonist, in his full glory, to the New World. Mahler's international audience has grown enormously since then, yet here in America we have had to wait from March, 1916, to this Easter week of 1950 for another occasion of equal excitement to lovers of his music. During this latter week, for the first time, Mahler the symphonist literally spanned the nation, visually and aurally, for at the same time that the closing strains of the Eighth filled Carnegie Hall in New York, Mahler's other great choral finale was for the first time closing a Philharmonic

season in Los Angeles, in the Second Symphony under Alfred Wallenstein. The coast-to-coast broadcast of the Eighth was the triumphant climax of this first "national Mahler week".

With characteristic Stokowskian boldness, the broadcast was preceded in the concert-hall by the performance of Giovanni Gabrieli's great quarter-hour motet for antiphonal choruses, brass and organ, *In Ecclesiis Benedicite Domino*, and it is unfortunate that this could not have been heard on the air as well. I am convinced that the radio audience would not have been so childish as to regard the Gabrieli as a stick with which to beat Mahler, as some one-track critics of New York could not forbear to do, but rather as a logical predecessor of Mahler's *Veni, Creator Spiritus*, as Mr. Stokowski evidently regards it—two great masters of the baroque style joining hands across three centuries to proclaim the glory of creation in measures of tumultuous joy.

*Allegro impetuoso*—this first indication in the score is the key to the whole interpretation of Mahler's only completely choral conception (apart from the *Frauenchor* of the Third), the *Veni Creator*,<sup>1</sup> and with it Stokowski unlocked its secret and released its true magic. It sounded as Mahler is said to have conceived it, as a spiritual *tour de force*, "all in a breath", so to speak. The opening was like an irrepressible outburst of pure elation, a spiritual excitement unmixed for the only time in Mahler's work with painful feelings, which here are relegated to the brief "*Infirma nostri corporis*" section. The great fugue and reprise, under Stokowski's unfaltering hand, strode past with an extraordinary vocal animation that left the listener breathless with sheer emotional participation. No wonder Stokowski is the conductor for this hymn of praise: either one is "impetuoso" (whether the score says so or not) or one isn't. The word is in a way an index and challenge to the conductor's spiritual vitality. Comparative haste is but its outer manifestation, yet the radically different Stokowskian conception of the main *tempo* is already suggested by comparing his 20-minute reading with other conductors' 25 or more.

The ethereal atmosphere of much of the *Second Part* (wisely sung in the original German) was enhanced by Stokowski's brilliant reading, of which a comparison with the recent notable Hollywood Bowl performance<sup>2</sup> is instructive. The two performances of *Part II* were the same in actual duration, about 55 minutes—yet Ormandy had nowhere the lightness and buoyancy of Stokowski, and the latter nowhere dragged or sprawled as Ormandy did. This is partly explained by the fact that one frequently speeded up where the other slowed down, but not entirely, as Stokowski was somewhat *slower* in part of the E- and B-major sections, where most of Ormandy's sentimental dragging occurred, and faster in the initial E flat minor *Adagio*, where that problem does not arise. It is really a matter of phrasing, whereby passages in the later sections that were actually as slow or slightly slower under Stokowski still sounded more animated. This can only be explained by Stokowski's profound and genuine penetration of the melodic structure. (It is just the reverse of many of Stokowski's and Ormandy's respective interpretations, for instance the opening of *Tod und Verklärung*, which Stokowski sentimentalizes with preposterous slurs where Ormandy positively makes you shiver with his lean ominous *pianissimi*.) Only one passage was curiously

<sup>1</sup> By "completely choral" I mean that here, in contradistinction to the *Second Part* of the symphony, the solo voices are like the *concertino* of a *concerto grosso* for voices wherein solo ensemble and chorus are in continuous interchange or combination.

<sup>2</sup> Cf. *Chord & Discord*, vol. 2, no. 6.

heavier and slower under Stokowski, the second *Chorus of the Younger Angels*, "Ich spuer' soeben", which under Ormandy was the most lilting part of the *Scherzo*; and so I was no little surprised to discover that Mahler had actually marked the beginning of the passage "*etwas gehalten*".

I cannot say how the orchestral balance sounded in the hall, but over the air the instrumental transparency was remarkable, and the necessary feeling of depth and space realised to a considerable degree. Least successful, however, were the sections that should have been most transparent, those from the entry of the harmonium, at "*Dir, der Unberuehrbaren*", to the opening of the *Chorus Mysticus*, and including those ethereal and ever-changing textures of harp, celesta, piano, mandolin and harmonium. Of the special instruments, I felt that the mandolin could have been even more audible. (It is usually completely inaudible, but as Mr. Stokowski is an enlightened champion of electric instruments, why didn't he procure an electric mandolin for this important part?) The harmonium was clearer than usual, but when are we going to hear the clearly defined registrations of harmonium and organ that Mahler so carefully differentiated in the score? It is too bad that these simple effects apparently offer such complete bafflement to engineers who in the *Veni Creator* have kept those great polyphonic forces in such perfect equilibrium.

The solo singers were generally excellent, most notably the basso George London, who has recently distinguished himself in the Vienna recordings of the Haydn Society, and who, like soprano Frances Yeend, also participated in the recent Eighth under Ormandy. But, unfortunately for the broadcast, Mr. Stokowski or the singers felt impelled to dispense for acoustic purposes with virtually every *pianissimo*; so that the very first *dolce* entry of the solo ensemble, "*Imple superna gratia*", for instance, emerged over the air in a blanketing *fortissimo*. The solo verses in *Part II* were more dynamically resilient, and in the case of Mr. London's exposition of the part of the *Pater profundus*, with its accompaniment foreshadowing the Ninth Symphony, offered an especially moving experience. The choruses, like those in the Hollywood Bowl, showed the gratifying effects of obviously loving preparation.

It is a pity that this great performance was not commercially recorded, and if in the fullness of time we should finally be favored with an acceptable recording of the Eighth, by a great chorus and orchestra under Mr. Stokowski's direction, lovers of this music would owe one more debt of gratitude to the long-term perseverance of the some-time virtuoso of the podium (not consciously, I think), and to his manifest seriousness of artistic conscience where this work is concerned. It should be a source of deep envy to the other leading conductors more closely associated with the name of Mahler, that the Eighth has definitely become, in this country, "Stokowski's work".

## TWO STUDIES ON BRUCKNER'S SYMPHONIES

By Egon Wellesz

The following article, which appeared in two different parts in the February 24, 1949, and April 21, 1949, issues of *THE LISTENER*, is reprinted with the permission of *THE LISTENER* and the author.

### THE EARLY SYMPHONIES

It is more than half a century since Anton Bruckner died on October 11, 1896, in Vienna in an annexe of the Imperial Palace called 'The Belvedere', where the Emperor Francis Joseph had placed an apartment at the disposal of the ageing composer. In his native country, in Holland, Switzerland and Germany, the position of Bruckner as a great symphonic composer is firmly established. It is different in this country where up to now there have only been occasional performances of one or other of his nine symphonies. The reason for this refusal of conductors to perform and of the public to listen to Bruckner's symphonies is probably the same as that which for a long time hindered his success in Vienna. Towards the end of the nineteenth century and at the beginning of the twentieth the Brahmsian type of symphonic structure was considered the model of perfection: an elaborate connection of the sections, smooth transitions from one theme to another, were its characteristic features. Bruckner worked in strong contrasts, in abrupt changes from one mood to another. To the two themes of the first movement a third is often added, making necessary a more extended treatment of the sections. The contrapuntal treatment of the themes, particularly in the first and fourth movements, made his symphonies longer than the usual type and demanded greater concentration from the public.

It is not difficult to find an approach to Bruckner's symphonies if he is seen as the legitimate heir and successor of Schubert. He is typically Austrian in his musical idiom, which expresses the beauty of his native country; sumptuously built monasteries on the slopes of hills, surrounded by farms which lead to wide meadow lands and far away, in the background, the chain of the Alps. We must know a little about the man and the surroundings from which he came in order to understand the character of his music: the grandeur of his first themes, always followed by cantilenas in the strings and the woodwind suggesting walks in the country; the dance tunes of his scherzos, the broad melodies of his adagios, which reveal the deep, religious soul of Bruckner; the majestic character of his finales which sometimes culminate in chorales in the brass.

Bruckner was born in a little village in Upper-Austria, in fertile, hilly country through which the Danube runs. It is the country of the Nibelungenlied in which, since 1700, the Prukners lived, a clan of landowners, town-councillors, teachers, innkeepers and peasants. Bruckner himself, born at Ansfelden in 1827, was the son of a teacher and followed the career of his father. It is fascinating to follow Bruckner's development on the one hand from a simple assistant teacher to the position of a cathedral organist at Linz and

finally to that of a teacher of musical theory at the Conservatory in Vienna and lecturer in the University; on the other hand, from the lad who earned his money by playing the fiddle at peasant dances, to the man who only considered that he had finished his studies in composition at the age of thirty-nine. During the last years of his study he had already written an overture and two symphonies, but his shyness prevented him from seeing in them more than 'exercises'.

His First Symphony in C minor was composed in the years 1865-6. It shows all the characteristics of Bruckner's mature style, above all his tendency, which obviously derives from Beethoven, to make the finale the crowning movement of the work.

The Second Symphony, again in C minor, was written in 1871-2. In the meantime Bruckner had been appointed to a professorship at the Vienna Conservatory and had composed a Mass. He also gave concerts on the organ in various towns. On August 2, 1871, Bruckner gave a performance in the Albert Hall, and it was here, in London, that he got the first inspiration for the finale of the symphony. The Second Symphony is structurally much simpler than the First and Bruckner took particular care to distinguish the various sections by pauses which, as one of Bruckner's biographers paradoxically, but rightly, put it, connect, not divide, the sections. It is a pastoral symphony which his friends called the 'Upper-Austrian' symphony.

The Third Symphony in D minor followed quickly in 1873. While Bruckner was occupied with its composition he decided to dedicate his work to Richard Wagner for whom he had a great admiration. After he had finished the score he travelled to Bayreuth in the hope of seeing Wagner and showing him the symphony. Bruckner told his friends about the agonies he suffered until he succeeded in seeing Wagner and in persuading him to glance at the work. Wagner at first made excuses, but finally took the score and asked Bruckner to come back in a few hours. When he returned, Wagner embraced him, expressed his admiration and accepted the dedication. Wagner's interest changed Bruckner's position. The Vienna Philharmonic Orchestra performed the *Wagner-Symphonie* and Bruckner had his first triumph, though the music critics, who were on the side of Brahms, still tried to minimise his importance.

The first movement of the Third Symphony opens with a motive in the trumpet, so characteristic as to be unforgettable. The second theme, in the strings, which has the sweetness of a Schubert melody, sings again of the landscape of Upper Austria. At the end of the development the fanfare in the trumpet is taken up by the full orchestra in unison and instantly transformed into a chorale so that the climax of the movement comes in the middle of it, a daring and very effective innovation. The adagio of the Third Symphony already has all the moving power of Bruckner's later works. There is to my mind no other composer, apart from Beethoven and Schubert, who has written adagios of such deep expression, so free from any human frailty or sentimentality. It is from his adagios that one can best learn to recognise the greatness and noble spirit of Bruckner's symphonies. The scherzo is a quick country dance; its derivation from Schubert's scherzi is obvious. At first hearing the last movement may offer the greatest difficulties, as is always the case with Bruckner. But the tension of the finale is so strong that the hearer is kept under the spell of the composer, who proceeds from climax to climax and ends his work with a triumphant fanfare in D major.

Bruckner's orchestration was challenged by some critics to be too Wagnerian.

Some years ago, however, the publication of the original versions from the manuscripts deposited in the National Library in Vienna revealed substantial divergences between them and the scores from which his works were played. Bruckner's original scoring was, particularly in his first six symphonies, much more on classical than on romantic lines. It was proved by the editors that Bruckner's pupils Schalk and Loewe, later his most devoted interpreters, had persuaded him to make changes and also suggested alterations which he accepted. The publication of the original versions seemed to restore Bruckner's own intention and most conductors have now turned to the new edition. The problem, however, is complicated. Passages in Bruckner's letters clearly show that he agreed wholeheartedly to some of the alterations, e.g. to the introduction by Nikisch of one stroke of the cymbals at the climax of the *adagio* of the Seventh Symphony. Indeed the question becomes more complex the more it is studied, and it will be necessary to return to it in connection with his later symphonies where the changes are particularly far-reaching, especially in the case of the Ninth which was re-scored and edited by Loewe after Bruckner's death.

### THE LAST SYMPHONIES

Bruckner's Seventh, Eighth and Ninth Symphonies are his greatest works. The sketches for the Seventh Symphony date from 1881. In the summer of 1882 Bruckner went to Bayreuth to hear 'Parsifal'. He was frequently the guest of Wagner, who once said in Bruckner's presence: 'I know of only one man who comes near to Beethoven: Bruckner'. After all the years of suffering, and the vicious attacks of the powerful Viennese critic Hanslick, Wagner's words gave Bruckner new confidence. From Bayreuth he went to St. Florian, the Benedictine monastery which was his real home, and here he finished the first movement of his Seventh Symphony in E major. The opening theme in the horn and cello is one of the most inspired themes in the whole of symphonic literature; the more often one hears it the more deeply one is impressed by its miraculous simplicity, its classical beauty. It is immediately repeated by the full orchestra, and followed by the second theme, consisting of a group of shorter motives which are developed and lead to a climax. Suddenly the third theme begins, *pianissimo*. It is a kind of Austrian dance-tune, typical of Bruckner. It is as if he had left the grandeur of the princely monastery to walk through the surrounding hills and meadows. After a short development section the repetition begins with the first theme and leads to a coda dominated by the first bars of the first theme. Never before had Bruckner achieved a first movement as concise and powerful as this one. It is surpassed only by the *adagio* of the same symphony, which Bruckner began three weeks before Wagner's death. In a letter to the conductor Felix Mottl, his former pupil, he wrote: 'One day I came home very sad. I thought that Wagner could not live much longer and the idea of the C sharp minor *adagio* came to me'.

The *adagio* in C sharp minor is written in the classical form of two contrasting themes followed by variations. It is an *Adagio funebre*; what Bruckner meant by this is expressed in the fourth bar of the main theme which is identical with his setting of the words *Non confundar in aeternum* in his 'Te Deum.' This spirit is confirmed by the second theme, a tranquilly flowing cantilena in the violins, and by the powerful climax of the movement in C major with the sustained high G of the trumpet. The sudden modulation to C major is felt

as a relief from a long-sustained tension; it is as if the rays of the sun broke through the clouds. Here in the *adagio* and again in the finale, Bruckner made use of four 'Wagner'-tubas. The solemn sound of these instruments, played by a second group of horn-players, occurs again in the Eighth Symphony and in the *adagio* of the Ninth.

The first performance of the Seventh Symphony was in Leipzig on December 30, 1884. By January 1, 1885, the news had spread all over the musical world that a great new symphonic composer had arisen. Meanwhile Bruckner at the age of sixty had started work on his Eighth Symphony which was finished in 1887. As in the Seventh Symphony he begins the first movement with a *tremolo* on the violins. The first theme is first introduced *pianissimo* in the violas, cello and double-basses, and is repeated *fortissimo* by the full orchestra. It has not the great unbroken line of the main theme of the Seventh Symphony, but it has a more restrained vigour and contains all the potentialities of a symphonic development.

The second movement, the scherzo, is a boisterous peasant dance, most effectively scored, leading to a romantic trio in which Bruckner makes use for the first time of a harp to accompany an expressive melody in the horns. The *adagio* is, again, the most impressive movement of the symphony. Bruckner still keeps to the classical scheme of theme and variations, but combines this with the more extended development usual in sonata-form. The coda of the *adagio* has a quite exceptional beauty of sound; here Bruckner achieved something which fully justifies Wagner's dictum: the *adagio* reaches the heights of Beethoven's *adagios*.

The last movement starts *fortissimo* with a vigorous first theme to which the broad melodic line of the second is in strong contrast. These two groups alternate. At the end of the movement all the main themes of the symphony are combined contrapuntally.

The Eighth Symphony is dedicated to the Emperor Francis Joseph who offered to pay for the engraving of the score. It is hardly believable that after the success of the first performance of the Seventh Symphony Bruckner still had to struggle for acknowledgment in Vienna, and was unable to get any of his symphonies published. But it was impossible for him to overcome Hanslick's enmity and, it must be said, Brahms' undisguised hostility. Brahms once said that he considered Bruckner to be the greatest living symphonic composer, but Bruckner's musical idiom was opposed to his own. Brahms was the representative of North German liberal society. Bruckner was Austrian to the core and a fervent Catholic. The clash between the two diametrically opposed artistic creeds was inevitable and Brahms had the Viennese critics and the conservative musical society on his side. It is no wonder that the hopeless struggle finally undermined Bruckner's health. He fell ill in 1890 and had to give up his professorship at the Conservatory. But the Vienna University honoured him by conferring upon him, on December 7, 1891, the honorary degree of Doctor of Philosophy. Soon after the ceremony, which gave him a new impetus, Bruckner began his Ninth Symphony in D minor on which he worked until his death. In 1894 the third movement, the *adagio*, was finished. In 1895 Bruckner was working on the finale, but his health declined and the last movement remained a fragment.

The first movement begins *misterioso* with a recitative on the eight horns against the tremolo of the strings. It is followed by an agitated passage in the violins. The tension increases. The passage is now taken up by the wood-

wind, and leads to the main theme which is introduced by the full orchestra in unison. This climax is followed by a few bars in a mood of breathless anxiety. Now the second group of themes begins, a most moving, extended section in the strings. The third theme, too, is on an unusual scale; it extends over nearly sixty bars. The length of the first part of the movement necessitates a break with the usual sonata-form. Instead of using the tripartite form Bruckner moulds the development section and the repetition into one and adds a coda dominated by the introductory recitative in the trumpets.

The scherzo is a kind of stylised dance. There is something phantom-like in its obstinate rhythm and its abrupt changes between *pianissimo* and *fortissimo* sections. The character of unreality is maintained in the trio, the only quick one in all Bruckner's symphonies.

The third movement, the *adagio*, begins with a passionate melody in the first violins. We know from the sketches that the melodic and harmonic perfection of the theme was reached only after a hard struggle; Bruckner tried again and again to get his vision on to paper before he finally succeeded. The second theme is a mournful chorale on the horns and tubas which Bruckner called his 'adieu to life'; there is a beauty in this theme which tells of a man whose thoughts no longer belong to this world. Both themes are developed in a group of free variations. The coda closes peacefully in E major. Never before had Bruckner's genius achieved such perfection of structure, such thematic originality, as in his last symphony, and its *adagio* is the most moving end to the symphonic work of a composer whose figure rises unmistakably above his contemporaries.

---

#### KILENYI MAHLER MEDAL AWARDED TO LEONARD BERNSTEIN

In recognition of his efforts to create greater interest in and appreciation of Mahler's music in the United States, the Mahler Medal of Honor, designed by Julio Kilenyi for the exclusive use of *The Bruckner Society of America, Inc.*, was presented to Leonard Bernstein after a performance of Mahler's II at the Koussevitzky Memorial Concert in Tanglewood, Mass., on August 8, 1953. Since the late Dr. Koussevitzky himself had espoused the cause of Mahler's music, the performance of the *Resurrection Symphony* was a fitting tribute to his memory. Acting on behalf of the Society, the presentation was made by Mr. Tucker Keiser of the *Boston Post*.

Mr. Bernstein has given performances of Mahler's II in New York, Boston, Chicago, and Tanglewood.

## A NOTE ON FORM IN MAHLER'S SYMPHONIES

by David Rivier

The charges most frequently leveled at Mahler's symphonies are those of excessive length and looseness of form. The two criticisms are actually one since the length of a work, in terms of clock time, is in itself insignificant except as related to the formal structure of that work. Now, that the Mahler symphonies are extremely long in comparison with most others is undeniable; even the shortest, the First and Fourth, are of great proportions. But simply to call them long (as do so many critics), without reference to their formal design, is pointless. After all, a work like Strauss' *Salome* is also long in terms of clock time, longer than the longest Mahler symphony; the same is true of almost any single act from the Wagner dramas. But these stage pieces are not developed in strict accordance with their musical potential; they follow a dramatic schema which offers both support to and distraction from the musical framework. A symphony, on the other hand, must stand as naked music without benefit of a literary dramatic structure; the listener is called upon to concentrate in a contemplation of pure abstractions. The result is a conventional self-limitation in symphonic writing, as though brevity were indispensable for successful handling of the medium.

It is precisely in his expansive concept of the symphony (in which he departs most from the traditional form) that Mahler's genius asserts itself so clearly. He posed his own problems of design and balance, and each of his symphonies is a solution, for the most part successful. As a result he gave new life to the badly worn sonata form, making it something new though still recognizable (as in the *Veni, creator spiritus!* of the Eighth Symphony). The proportions of his opening movements are immeasurably greater than those of the classic symphony, yet the classic balance remains. To criticize such works for their magnitude (without reference to their similarly richer motivic material) is as absurd as to condemn St. Peter's for being larger than Chartres cathedral, or to suggest that all portraits should be the size of Holbein's Thomas More. It is a truism, but one too frequently forgotten, that for each work of art the form must correspond to its special needs. A model can only serve as a point of departure; literal recreation would be inane. Simply conceive of a contemporary writing a typical Haydn symphony with original themes.

All this may seem unnecessarily elaborate for the simple purpose of denying that the length of a work is a suitable criterion for criticism. Yet these points are precisely what a great many critics overlook; it is still a commonplace to dismiss a Mahler symphony as over-long without further comment.

The same lack of perception is found when these same superficial critics point to weak structure or loose form, particularly in the outer movements (as in the Second and Seventh symphonies). There is, on the contrary, and particularly in these large first and final movements of most of the symphonies, a careful ordering of material, aiming for a complete harmony of overall design with the minutest details. Padding is unknown; all is consequent and

In the Ninth Symphony the whole work seems dominated by the disarmingly simple melody at the beginning:

Apart from being the principal subject of the *Andante comodo* it also dominates all three of the chief ideas of the second movement:

The second of these, in a later version—

—is a foreshadowing of the great melody of the *Adagio*, with a strikingly similar harmonic scheme.

The famous motive of the minor third, also important in the final movement of the *Song of the Earth*, is similarly foreshadowed in the first movement (cf. Ex. 3-b)

The whole Ninth Symphony is a summing up of Mahler's achievement, with its conscious references to the Third and Fifth (in the *Rondo-Burlesk*), and *Ich bin der Welt abhanden gekommen* in the *Andante comodo*. The melody quoted in Example 3 above has its prototype in each of the preceding symphonies, and most notably in the Third in the setting for the words, "Gib Acht! Gib Acht!"

It almost seems that Mahler's entire work was planned in advance on a massive scale, a set of continuing chapters, each related to the others by

subtle interior motivic ideas. The first four symphonies, as has often been remarked, form a tetralogy. The First is a youthful prelude climaxed by a triumphant earthly paradise. In the Second the triumph is one of divine resurrection, as is made clear by the text, while in the Third nature and love on earth provide the philosophical answer. In the Fourth, with its suggestions of parody and nostalgia, it would seem that resurrection is only a child's dream, accepted for its incidental charm instead of revealing truth.

There are no clues to the trilogy of Fifth, Sixth and Seventh, except for the explicit pessimism of the Sixth, in which it may be said that death is seen in its most terrifying aspects. The Fifth and Seventh are both affirmative and joyous, each proceeding tonally upward, from C# minor to D major and from B minor to C major. In the Eighth death leads to a transfiguration, which is in turn modified by the calm resignation of the Song of the Earth and the Ninth and Tenth symphonies. In the Ninth the tonality is recessive, the contrary of the Fifth and Seventh, descending from D to D flat.

We have a right to infer some of these philosophical views from Mahler's music because of his own frequent recourse to the word. The essential thing, however, is that the music can stand as well, or better, without any such non-musical implications. Apart from the power of its natural inspiration, this success is due to the wonderful unity of the entire works, taken as movement, symphony or total life achievement. This is almost a unique phenomenon among composers of the century—Debussy, in his utterly different way, is perhaps the only other example. Richard Strauss is certainly not another, for Strauss too often fails to achieve satisfying form. In *Heldenleben*, for example, the natural development of the music is distorted to fulfill a preconceived program, so that in the section, "The Hero's Works of Peace," the structure disintegrates and the music is acceptable only as literature, a chapter of an epic, or even better, a novel. Musically there is only a series of superficially related fragments. It is also striking how naive Strauss' aims seem in contrast to Mahler's idealism. The preoccupation with death (and Macbeth, Don Juan, Till, Quixote, the Hero, the poet of *Tod und Verklärung* all die) is expressed in terms of imitative, physical effects: the stabbing sword, the choking rope, the expiring breath. The more literary and programmatic Strauss became, the less successful was his orchestral music. Perhaps that is why his progressive decline as a composer in instrumental forms was matched by his ascendancy as a writer of music drama.

Mahler, on the other hand, never surrendered to the appeal of spectacle. The large orchestra, the vocal parts, the giant personnel for the Eighth—these were called upon as legitimate resources to increase the intensity of the purely musical expression—even the cowbells of the Sixth and Seventh Symphonies are intended only as added percussion with no suggestion of Alpine pastures. Herein lies a possible answer to the frequent question: why did Mahler destroy his early operas and never write another? Observing his gradually maturing technique through the songs and symphonies it would seem that he became increasingly reluctant to bend music to the expression of dramatic action or represent his vision of the world through expression with literal significance. If he had conceived of music in different terms his accomplishment might have been less; in handling the symphony he would have failed to produce the splendid structural balance of the later works and instead would simply have given us exercises in formalism, as did Strauss in his last years when he turned to the absolute musical patterns

like the concerto. But Mahler chose the more difficult path of refashioning the traditional forms, achieving balance, not through a superficial conjunction of the classic symphony and his own ideas, but through a subtle (and arduous) evolution from the standards of his contemporaries to his own self-contained unique masterpieces.

---

### IN MEMORIAM

Philip Greeley Clapp, composer, conductor, pianist, educator, and author, for thirty-four years head of the Music Department of the State University of Iowa, died suddenly of a heart ailment on April 9, 1954, in Iowa City. A strong champion of the music of both Bruckner and Mahler, Dr. Clapp, with the University of Iowa Symphony Orchestra, had performed more works of these two composers than any other American conductor. The Fourth, Fifth, Sixth, Seventh, and Ninth symphonies of Bruckner, First, Second, Third, Fourth, Fifth, and Seventh symphonies and *Lieder eines fahrenden Gesellen* of Mahler were all conducted by him at concerts in Iowa City. He had planned to do Bruckner's Eighth during the 1954 summer session. His close acquaintance with the scores of Bruckner and Mahler had revealed to him while still a student the greatness of these two. Before the general public had had a chance to hear many of their works, he had written articles about their music for the *Boston Transcript*, and, in his courses at the University of Iowa, he played their scores on the piano when records were not available. Several articles were written by him especially for CHORD AND DISCORD. For his performances of the works of Bruckner and Mahler, the *Bruckner Society of America, Inc.*, had awarded him both the Bruckner and Mahler medals of honor. His vast erudition, wise, friendly counsel, and musical ideals enriched the lives of the countless people who knew him, and his influence on the musical life of this country will long be a shaping force.

## MINNEAPOLIS AND PITTSBURGH

By Virgil Thomson

Reprinted by permission of the *New York Herald Tribune*.

Traveling westward recently, it was the pleasure of your reporter to hear two of our major regional orchestras in their home cities, Minneapolis and Pittsburgh. Both, by the way, will be playing in New York later this season.

### ANTAL DORATI

The Minneapolis Symphony Orchestra, now playing its fifty-first season, has a long history of sound management and of good musical direction. Eugene Ormandy and Dimitri Mitropoulos have each served there for a decade and more, and both have left behind them unforgotten high standards of music making. Antal Dorati, the present conductor, is a skilled interpreter and a sound trainer. Conducting his orchestra myself, I was impressed by the virtuoso abilities of all the first-desk players, the orchestra's own soloists. Also by the solid schooling of the string sections. This orchestra learns quickly, plays dependably and gives a good sound. Particularly delightful, under Mr. Dorati's hand, were an ever so delicate and poetic reading of Debussy's "Afternoon of a Faun" and a very distinguished performance, at once grandiose and jolly, of Haydn's exquisite Symphony in B flat major, commonly known as No. 98. In the finale of the latter piece the concertmaster, Rafael Druian, did some mighty graceful solo playing, too.

### NOVELTIES

The Pittsburgh Symphony Orchestra, playing last Sunday afternoon under its regular conductor, William Steinberg, provided what happened to be, for this listener, a complete program of novelties. There was Gluck's melodious and nobly animated overture to "Iphigenia in Aulis," a great rarity to any one these days; and it was handled by Mr. Steinberg in the grand manner. There was also Rachmaninoff's Rhapsody on a theme of Paganini, which (believe it or not) I had never heard in concert (and do not care whether I hear again), played by Benno Moiseiwitsch (a pianist whom I look forward to hearing again). The performance was immensely applauded. I found it a little on the machine-gun side, though accurate enough note-wise.

The final novelty was Anton Bruckner's Seventh Symphony, played obviously with love and a deep respect, though it had been cut by about a quarter of an hour down to a running-time of only fifty minutes. And Mr. Steinberg had taken the liberty of substituting four tenor tubas for the two tenor and two bass ones indicated in the score. He had added also for the tutti passages one each of the woodwind instruments and a fourth trumpet, and these would have sounded even richer if he had been able to add extra strings, too. For Bruckner needs an opulent sound, profits from one.

## THE BRUCKNER PEOPLE

Bruckner is a composer whose work has never been popular but which has never lacked the respect of musicians. It has also long been deeply loved by many, and I have always been impressed by the fact that the devotees of this music are likely to be persons of elevated character. One can fail to perceive the grandeur of the music itself, but one can not avoid facing the fact that its lovers are neither knaves nor fools.

Many of them, of course, are of German extraction, particularly Austrian, for the music has an atavistic appeal to the religious feelings of those whose childhood was spent among the churches, at once vastly simple and vastly ornate, of the Austrian Baroque. But its spell goes deeper than that. It has the fascination of the pure in heart; there is no lowness or meanness in it, no irony, no wit, no comment. It has only aspiration and the loyalty of careful workmanship. Almost no other composer has sustained throughout a lifetime an attitude toward his work of such serenity, such elevation. These qualities, unsalted by dramatic objectivity or any flavor of the picturesque, have long seemed a bit pallid to the more spicy musical tastes of the Latin countries. Holland, on the other hand, is the seat of a real Bruckner cult. The seriousness of his music, a seriousness in no way false or pompous, has won, in fact, the admiration everywhere of music lovers who are not pre-conditioned to reject the serious. And the childlike anti-intellectualism of Bruckner's expressive content has no less warded off the enthusiasms of those who can accept the serious only when it is also pretentious.

## BRUCKNER'S SEVENTH

Bruckner's Seventh Symphony contains the whole of Bruckner, his Schubertian melodic spontaneity, his suave and somewhat static harmony, his perfection of contrapuntal flow, his taste for a rich and organ-like use of the brass instruments (he was an organist) and his weakness for vast architectural layouts. Much of the thematic material is strong, very strong. It is a piece worth knowing, whether one is going to love it or not. Mr. Steinberg, who evidently loves it, had lavished on it great care. The precision that is characteristic of all this conductor's work can be sometimes a bit coldly theatrical when not warmed from the heart. The Rachmaninoff Rhapsody had been like that. Not so the Gluck or the Bruckner. These were, as is their nature, noble and grand. And I was glad to note that the Pittsburgh orchestra, which had declined somewhat in discipline and in expressive ability under the long stretch of guest-conductors that followed Fritz Reiner's resignation, is again a major musical instrument.

*(New York Herald Tribune, Dec. 27, 1953)*

## MAHLER'S SYMPHONY IS CHEERED AT LAST

By Louis Biancolli

Reprinted by permission of the *New York World-Telegram and Sun*.

Perhaps the most thrilling aspect of Bruno Walter's reading of Mahler's First Symphony two weeks ago was the spectacular response of the crowd.

Now, it wasn't a capacity audience by any means; this is sad to recall, considering what a magnificent reading it was and how the Philharmonic, for reasons artistic and budgetary, rates a customer in every seat these days.

But that was one honey of an audience in the way it received the Mahler symphony and what Mr. Walter did to it. When you think what an uphill struggle it has been for the music of Mahler, it was good to hear the cheering at that Sunday matinee.

As I listened I thought uneasily of the years it took me to warm up to Mahler. There was some comfort in the knowledge that I wasn't alone in being slow.

A few rows in back of me sat one of the finest pianists of our time, a highly cultured woman with broad musical tastes and a sense of tradition. When I went up to her to shake hands she said, almost challengingly:

"I adore Mahler, and I'm not ashamed to admit it!"

That was before the symphony started. The remark stayed with me till the performance was over and the cheering broke out from all parts of the house.

The lady's statement was symbolic. Mahler is by no means fixed in the current repertory. Conductors like Walter and Mitropoulos and Ormandy and Bernstein have been laboring nobly to entrench him beyond displacement. There is still work ahead.

But when one recalls the bitter hostility there used to be against Mahler's symphonies, the early departures from the concert hall by bored or indignant patrons, the harsh criticism, it is something to witness a collective outburst like that of two Sundays ago.

Just what has it taken to make Mahler more accessible to listeners? The music remains as he wrote it; the performances cannot have improved so drastically. Walter has been conducting Mahler for at least half a century.

The answer would have to take care of still another question: Just what makes a "classic," or, to put it differently, just when does a "classic" become a "classic"?

I suppose we have to assume that the music was worth while from the start. That is, it was largely a matter of making the public aware of this fact. The force, the beauty, the originality, were all there—but they weren't reaching the public.

All artistic masterpieces are that way. If they are bold and different, it takes time for most of us to get behind the boldness and the difference and glimpse the artist and the genius at work. Only repeated hearings can do this in music.

And repeated hearings are possible only if conductors believe in the composer and communicate the courage of their conviction to the public. Grad-

ually the music sinks in and in time, as if spontaneously, the public "discovers" it.

From being a name tacked on to a symphony, the composer now looms as a human being engaged in high artistic endeavor. There is a growing interest in his personal life and the remainder of his musical output.

From year to year this interest grows; the repertory slowly expands to accommodate more and more of the composer's music. Biographical studies begin to appear, and clues to the meaning of his music are hunted everywhere.

The symphony, if such it be, has become "repertory." No conductor can safely ignore it any longer. No orchestra can keep it for long out of its seasonal rounds.

And by the same token no listener can afford to deny himself this new and exciting adventure along the highway of music. A classic is born.

(*New York World-Telegram and Sun*, February 6, 1954)

#### KILENYI BRUCKNER MEDAL AWARDED TO WILLIAM STEINBERG

In appreciation of his efforts to create a greater interest in Bruckner's music in the United States, the Directors of *The Bruckner Society of America, Inc.*, awarded the Kilenyi Bruckner Medal of Honor to William Steinberg. Mr. Steinberg broadcast Bruckner's *Fourth* over a nationwide hookup (NBC Orchestra) on March 4, 1939. On December 7, 1948, he conducted the first Buffalo performance of the *Seventh*.

The Buffalo Philharmonic Orchestra Society under his direction performed the *Fourth* on December 17 and 19, 1950. After the first of these performances, Mr. Frank N. Farrar, President of the Buffalo Orchestra Society, presented the medal on behalf of the *Society*.

## U. S. PREMIERE OF SCHOENBERG'S ERWARTUNG

*Philharmonic Symphony Society of New York, Dimitri Mitropoulos, Conductor; Dorothy Dow, Soloist; Nov. 15, 16, and 18, 1951. (The last performance was broadcast over CBS.)*

Dimitri Mitropoulos has come forward once again with one of those bold strokes of program-making that gives much-needed impetus to local concert activity. He offered last night, in concert form, the first of three performances of Schoenberg's monodrama, "Erwartung," and by this means transported us within the walls of Carnegie Hall to the uncanny world of terror and frustration that was so dear to German Expressionists early in this century and led them to a new idiom capable of conveying spasmodic, unconscious and unusually bitter impulses. In its first American performance, with Dorothy Dow singing the very difficult single role with extraordinary accuracy, this opera of half-hour duration did not have the shock of "modernism" so far as its textures were concerned. These were quite fabulous from the point of view of instrumentation and color, but it was the dramatic conception that was startling. The idea of a woman entering the dark woods for a tryst with her lover and talking to herself in truncated phrases as her expectation ("Erwartung") mounts is in itself rather odd. It is still odder when, after scouring the woods in desperation to find him, she comes upon him lying dead, and continues her monologue, now addressing the corpse in amorous phrases.

Like the music, her thoughts jump abruptly from one matter to another and are full of suggestion. The ominous nocturnal sounds cause her to hear things you are never quite sure are really there. The ideal medium for it, I think, would be a cinema of very advanced technique with one shot dissolving into another and revealing both the hallucinations of the inner mind and the actual frightening occurrences of nature in a forest at night.

The performance under Mr. Mitropoulos was primarily a reminder of the theater possibilities. Since these possibilities go ignored there was every reason for the Philharmonic to present the work in concert. The conductor's incredible ability to execute works of atonal leaning is, moreover, something to take good advantage of. The accuracy of note and rhythm was itself phenomenal, and this goes for Miss Dow's singing, too. When singers and players are more accustomed to this music, we may expect more varied, tenuous and febrile readings, and these should help widen the audience for Schoenberg and his orbit. As it was, the playing was as fine as we may expect today, and the audience showered enthusiastic applause and bravos on it.

ARTHUR BERGER,  
*N. Y. Herald Tribune*

Arnold Schoenberg wrote "Erwartung," a short opera or cantata or, as he called it, a "monodrama," in 1909. At long last, forty-two years later, the piece received its first performance in this country last night, with Dimitri Mitropoulos, an ardent advocate of Schoenberg, conducting the Philharmonic at Carnegie Hall.

Mr. Mitropoulos probably would have got around to this score in time. Since Schoenberg died last July, the conductor seized the opportunity to do the work, certainly one of the composer's major efforts, as a memorial tribute. He could not have paid his respects more devotedly.

"*Erwartung*," which translates into "Expectation," is based on a dramatic—perhaps the more accurate word is literary—idea of Schoenberg's, for whom Marie Pappenheim prepared the actual German text. It tells of a woman who goes out to meet her lover in a forest in the dark of night and who stumbles over his dead body. You never find out what woman, what lover, what forest or what did him in. The eerie night and the woman's strange emotions are the burden of "plot" and music.

You would think that such a shocking situation would induce music that would be shocking, especially from a composer whose music led to wild, hostile demonstrations years ago. But last night's audience did not seem to be disturbed or shaken. It appeared to take Schoenberg in stride. There were some scattered cheers for the performers, but no angry hissing.

This, of course, is not the most radical Schoenberg. Here, the composer has moved away from the Wagnerism of his earliest works into atonalism but not yet into his system of tone rows. The orchestra is used with freedom and boldness; there is striking rhythmic variety and an almost endless palette of shifting, sensitive colors. The woman's voice is not used in the style of *Sprechgesang*, or speech-song, familiar in other Schoenberg works, but the vocal line is free and often oddly spaced.

The work, in sum, is the product of a man of imagination and intellect. After hearing it at a rehearsal as well as at the performance one can say that it contains some wonderfully poetic and moving pages. One suspects also that the phantasmic, agonized world Schoenberg sought to evoke is only partly realized. Or would that be a shortcoming of a listener who cannot attune himself to the doom-laden world of a Central European of the early twentieth century?

Dorothy Dow sang the only role and gave an astonishing performance. The music is brutally cruel, but she sang it with sovereign control and with musicality. She had done the part in Zurich two years ago, and it was evident that she knew it thoroughly.

Her mastery was intellectual and vocal. If she did not give the part the hysterical, neurotic intensity it should probably have, it could be because Miss Dow is too healthy for that sort of thing. No one can pick up the orientation implicit in this work during a sojourn in Europe; it has to be in the blood, and Miss Dow, happily for her, is from Texas.

Mr. Mitropoulos led a performance that was remarkable for its clarity and precision. He did the bidding of Schoenberg's score with heartfelt fidelity. And the orchestra played brilliantly.

H. T.,  
*New York Times*

The strange, eerie, expressionistic work "*Erwartung*" ("Expectation") by Arnold Schoenberg, was given its first performance in this country by the Philharmonic-Symphony under the direction of Dimitri Mitropoulos in Carnegie Hall last evening.

This monodrama, which runs about a half hour, has only one character, a woman who enters the forest at night for a tryst with her lover, only to

stumble over his lifeless body. That role was undertaken last evening by Dorothy Dow, young American soprano who had sung it at its first performance in Switzerland in 1949.

The libretto for this piece, dramatic idea suggested by Schoenberg, was written by Marie Pappenheim.

What an extraordinary piece of musical writing this work truly is, and how accurately it foreshadows the "modern" idioms that were to come! The atonal quality of the sounds, which clash and clash and yet seem not to, is as daring as anything a 35-year-old of this century's first decade could imagine.

The singing the one character has to do is practically continuous. It has a devastating power, all the more so because of its integral affiliation with the rest of the score. None of this, as you may imagine, listens pretty.

In fact, a good deal of it, divorced from its ideational attachments, could be quite repulsive. The art and the imagination of the composer, however, do not long permit such a breaking of the bonds. And, finally, the whole work—voice, music dramatic line—is of purest classical intention and achievement.

Mr. Mitropoulos' performance was stunning in its impact, its glistening perfection, its unwavering aims. The orchestra, I thought, had rarely played better, such was the quality of the tone in all dynamic degrees and in a most difficult score to negotiate.

Reams of praise, too, for the splendid singing of Miss Dow, who, but for her amazing instinct of pitch, might have been in serious trouble. And, in line with tributes, another salute to Mr. Mitropoulos for bringing us this work which, though perhaps it might be more complete in a theater, could scarcely aspire to better treatment anywhere.

ROBERT BAGAR,  
N. Y. World-Telegram & Sun

#### KILENYI MAHLER MEDAL AWARDED TO RAFAEL KUBELIK

The Mahler Medal of Honor, designed by Julio Kilenyi for the exclusive use of *The Bruckner Society of America, Inc.*, was awarded to Rafael Kubelik for his efforts to create a greater interest in Gustav Mahler's music in the United States. On December 7, 8, and 12, 1950, the Chicago Symphony Orchestra under Mr. Kubelik's direction performed the *Fourth Symphony*; on April 5 and 6, 1951, *Das Lied von der Erde*; and on January 3 and 4, 1952, the *First Symphony*. Acting on behalf of the Society, Mr. George A. Kuyper, Manager of the Chicago Symphony Orchestra, presented the medal to Mr. Kubelik on March 1.

## CINCINNATI COLLEGE OF MUSIC HONORS DR. MARTIN G. DUMLER

The Board of Trustees, Director and students of the College of Music last night [May 22, 1951] paid tribute to one of the Trustees, Dr. Martin G. Dumler, with a festival concert on the 50th anniversary of his graduation from the school. The occasion was signalized by a performance of his latest work, a "Missa Glorise Dei," which enlisted the services of a 100-voice chorus and a symphony orchestra of 75 players under the baton of Roland Johnson.

Though not familiar with all of the composer's music, it seemed to me that the Mass crowned Dr. Dumler's other efforts in dignity of conception and ingenuity of melodic perception. Recalling the amplitude, warmth and color of the late romantic period, the composition underlined the Latin text with sincerity and beauty.

Though the work was massive, it was not embarrassed by its richness. Dr. Dumler did not resort to needless repetition of parts of the text, as some composers have done. He used especially the string and brass choirs of the orchestra to advantage, giving both instrumental support and contrast to the dramatic voice line.

There were times when the intensity of sound needed relief, and in one such emergency the composer permitted a solo tenor and soprano to expound the "Sanctus" on a note of simplicity. Perhaps other sections might have been similarly simplified for a variation in mood, to introduce a note of religious awe, for instance, but that is probably a matter of personal taste.

The second portion of the program was devoted to Brahms' "Song of Destiny," again employing the chorus, Mahler's "Songs of a Wayfarer," Margaret Thuenemann appearing as soloist, and Berlioz's "Roman Carnival," for orchestra alone.

We heard this portion of the program in an upstairs studio, where special sound equipment had been installed by the Audio-Engineers Society of Cincinnati, to carry on an experiment in binaural sound projection. Directional microphones had been installed at a distance of 20 feet from the treble and bass section of the orchestra, the sound being piped to two corresponding amplifiers at opposite sides of the studio, each controlled at will by the engineers.

The effect lent a special depth to the performance, the method being similar to that employed some years ago in the motion picture "Fantasia." Useless for recording purposes, we were told, the installation gave superb reproduction to the orchestra under Roland Johnson's able direction and picked no flaws in Miss Thuenemann's singing, which was unusually intelligent and intelligible.

JOHN P. RHODES,  
*The Cincinnati Enquirer*

REMARKS BY THE HONORABLE ALBERT D. CASH,  
MAYOR OF CINCINNATI,  
AT THE  
FESTIVAL CONCERT HONORING MARTIN G. DUMLER,  
MUS. DOC., LL.D.

(May 22, 1951)

If this occasion causes reminiscence, I take refuge in the fact that the nature of the event is such as to cause it. I remember way back in my earlier days at school, one of my professors had a way of stating forceful ideas with a phrase or a quote; and one of them that was literally given to us every day was "A thing of beauty is a joy forever." If I may reach back and draw upon that reminiscence, I think it sets the keynote of this pleasant affair here tonight.

Way back before the turn of the century, a boy came to this institution to study music. It wasn't easy because, in order to study music, he had to provide as well the wherewithal of daily living, and somehow it seems he had joined those two efforts together always. It seems to me he is unique in being a very successful business man, and, all at the same time and in the same personality, a most successful artist; and as for the things he has done of an artistic nature, most of them are associated with this institution in which we are.

I understand that back in the earlier days before we had established the Symphony Orchestra of Cincinnati, he was one of a quartet who participated in musical entertainment given for the benefit of the establishment of that orchestra. He has been a leader and a protector of the arts not only in this community, but especially in this community, for a matter of fifty years since his graduation from the College.

I have seen and I have read long lists of the honors that have been bestowed upon him, the doctorates here and there for his compositions (among them fifteen Masses alone), many of them performed under the batons of leading directors not only in the United States, but in all of Europe.

Now we are accustomed in America (too much so, I think) to honor people who have made great successes in the industrial, commercial, financial world. They have produced trains that go faster and planes that go as fast as sound, and the like. How many of them have been able to produce anything to project their own fine personalities into the distant future of time as distinguished from space? Dr. Dumler has achieved that in a most remarkable degree.

And so I say to you tonight, and on behalf of all Cincinnati, that we express to him on this fiftieth anniversary the very great appreciation which we feel and all Cincinnati owes to him for the renown which he has brought to it in the arts. Now I don't know whether the life of an artist just begins

Phyllis Dunn (left) and Jean Marie Devereaux, seniors at the Cincinnati College of Music, presenting an invitation to Dr. Martin G. Dumler to be guest of honor at a reception following a concert given on the 50th anniversary of Dr. Dumler's graduation from the College of Music, Cincinnati. In the background is a picture of Anton Bruckner presented to the College by Dr. and Mrs. Dumler.

Mayor Vincent Impellitteri receiving the Bruckner medal on June 13, 1951, on behalf of the Municipal Broadcasting System (Station WNYC). Left to right, Seymour N. Siegel, director of Municipal Broadcasting System, Mayor Vincent Impellitteri, Harry Neyer, and Julio Kilenyi.

after fifty years, because I have no way of telling from my own talents; but from everything that I can learn of Dr. Dumler, he is just as active and just as productive not only in music, but with pigments, and that is his recreation after he finishes a day's work.

I'm sure I express the wish of all of you in saying more power to him, long life, and thanks so much for the renown that you have brought to Cincinnati.

---

### KILENYI BRUCKNER MEDAL AWARDED TO STATION WNYC

The Municipal Broadcasting System has for a great number of years devoted its programs mainly to cultural and educational subjects. Its musical offerings under the supervision of the able musical director, Mr. Herman Neuman, are designed to please discriminating audiences. Modern music as well as the classics and so-called controversial works are well represented. Every available Bruckner recording has been on the air at regular intervals, thus enabling listeners of WNYC to become familiar with the music of the Austrian master.

In recognition of its efforts to create a greater interest in and appreciation of Bruckner's music, the Bruckner Medal of Honor, designed by Julio Kilenyi for the exclusive use of *The Bruckner Society of America, Inc.*, was awarded to Station WNYC on June 13, 1951. Mr. Harry Neyer, Secretary of the Society, made the presentation to Mayor Vincent R. Impellitteri who received the medal on behalf of the Station. Mr. Seymour N. Siegel, Director of WNYC, and Mr. Julio Kilenyi, the sculptor, were present.

## BRUCKNER AND MAHLER ON LONG-PLAYING RECORDS

By Paul Hugo Little

When Gustav Mahler uttered his apochryphal remark, "*Meine Zeit wird noch kommen*," he could not have foreseen the marvels of the then embryonic phonograph disc which, in 1948 with Columbia as sponsor, blossomed into what we record enthusiasts today so casually speak of as *lp*. But it is an undeniable fact that, thanks to the  $33\frac{1}{3}$  rpm phonograph record of today, we who admire the music of Mahler and his equally controversial contemporary Anton Bruckner are able to hear all of the major compositions by these two masters of the symphony.

As the noted critic C. G. Burke remarked in the first issue of "High-Fidelity," a publication dealing with audio equipment, something like 1500 long-playing records have been issued since their inception, the equivalent of nearly 7000 "shellac" (78 rpm) records. With this bounty has come a broadening of musical appreciation on the public's part, not only for Mahler and Bruckner, but also for the neglected tonal inventive geniuses of the baroque and the Renaissance eras. Enterprise, enthusiasm, and, commercially speaking, the desire to offer the record buyer the unusual in rivalry with some 50 firms engaged in record production have led to a most sanguine state of affairs for those of us who chafe at the monotony of the average symphony concert's programming.

Of course, we find, as was to be expected, that the smaller independent firms have been more ambitious in seeking out the esoteric and the unfamiliar on *lp* than the major companies. The reason for this is obvious. Without big name soloists and orchestras under contract to them, the independents could hardly expect to compete on an even keel across the record counter with Victor and Columbia. This is a healthy state of affairs, for we have seen scholarly investigations of Haydn (the Haydn Society) and Vivaldi (Period Music Company) and the long-neglected oratorios and cantatas of Handel (the Handel Society, Mercury and WCFM), the four quartets of Schoenberg (Alco), a magnificently ambitious Verdi cycle of all the 27 operas (Cetra-Soria), the Beethoven Quartets and such explorations of early music as Perotinus and Guillaume de Machaut (Concert Hall Society). Fortunately, amid all this, a veritable *embarras de richesse*, even the music of Mahler and Bruckner received generous, long-overdue attention.

After Columbia's brilliant reissues on *lp* from "shellac" of the Mahler First and Fourth symphonies—which, by the way, proved one of the finest facets of long-playing processing, the ability to engineer from tape a better recording than the original matrix—there followed a succession of splendid issues which, to date, provide the devotee as well as the uninitiated with a never-before-offered opportunity to hear the bulk of the creative achievements by these two nineteenth century masters. It is the purpose of this article to offer critical impressions based on performance and reproduction, as a guide to those wishing to add the best Bruckner and Mahler *lps* to their collection.

Let me say at this point that the only true test of reproductive excellence is through the use of audio equipment and that, just as in the days of shellac, the recordmakers' products are far ahead of the average domestic equipment offered the record buyer. A decade ago, RCA-Victor's album of Wagner's Siegfried's Funeral Music and Rhine Journey by Toscanini and the NBC Orchestra attained a frequency cycle-high of 14,000, while the average phonograph or combination gave the listener at best a high of 6000. In the bass the disparity was even more noticeable. This means that a record of fine acoustical quality cannot rightly be judged on the average commercial phonograph. Now both Columbia and Victor have issued three-speed high-fidelity portable players capable of a 12,000 cycle high, and we have such other excellent low-cost hi-fi systems as the Mitchell 3-D and the Kelton "Cambridge," within the budget of every music lover.

With *lp* the problem is even more irksome. Most *lp* collectors have either a three-speed changer in their radio-phonograph or an *lp* player attachment connected through a circuit. In a neighborhood survey I recently made, I found that only one out of every twelve record collectors used equipment capable of realizing the full sound latent in the microgrooves of a long-playing record. This is significant because a record does not sound the same on these three general types of regularly used equipment. The three-speed player has a more powerful cartridge than the attachment and hence allows volume to be turned up for *crescendi* without distortion, while on the attachment full volume is virtually impossible without annoyances, such as "skipping the groove" or pronounced hums and buzzings. Most London *ffrr lps*, for example, have a pronounced "hum" on the attachment when volume is turned up even slightly, because they are made at perhaps the highest frequency rate of any *lp*. Furthermore, there is the problem of needles. The manufacturers, with a few exceptions, have given record enthusiasts no clue as to the best type of needle to use, which is obviously a diamond-point. The dealers themselves know very little about this technical question. As a consequence, many collectors use the same precious metal or sapphire needle an excessively long time, with the danger of gouging the sensitive microgrooves.

A word about the physical conditions under which the following records were played and reviewed. A Magnavox Belvedere model with Columbia Model 102 *lp* attachment with the Q-33 cartridge and a Televex diamond Q-33 needle for one listening; then, a Voice of Vision custom-built audio phonograph with Altec-Lansing speaker, Rek-o-kut turntable, and Pickering tone arm, was purposely used to demonstrate to fellow listeners that accurate reproduction of the full-frequency potential inherent in the modern *lp* is impossible without proper audio equipment. Each record was cleaned with a soft damp cloth before playing, and then a light rubbing of another cloth moistened with a few drops of Walco Stati-Clean applied to eliminate static electricity which produces noise and rumble. And now for the music—a rare and beautiful adventure into the mighty symphonic and choral realms of Anton Bruckner and Gustav Mahler!

\* \* \* \* \*

ANTON BRUCKNER

ZERO SYMPHONY IN D MINOR (NULLTE)

(Posthumous)

Concert Hall Symphony Orchestra; Henk Spruit, Conductor. Concert Hall Society CHS-1142, 12-inch *lp*.

*Performance*

Spruit, a conductor hitherto unknown to us, plays the work *con amore*, thereby conveying all the youthful verve of the music, its lyricism and cheerful triumph. The orchestra is excellent and responds very cleanly to *tempo* indications.

Concert Hall's 1952 issues have embodied a greater trend towards what we call "high fidelity" than any of this enterprising firm's previous releases. Both player attachments and custom-built, high-fidelity equipment can produce good sound from this record without much worry about compensations or over-exaggerated levels. A very good musical as well as engineering achievement.

## FIRST SYMPHONY IN C MINOR

Austria State Orchestra; Dr. Volkmar Andrae, conductor. Masterseal MW-40, 12-inch lp.

*Performance*

Masterseal, a subsidiary of Remington, is to be commended for its painstaking, sympathetic interest in bringing this important composition to the record-buying public. At the very first motive, it is obvious that this initial symphony is no immature work. (Indeed, Bruckner was no less than 42 when he finished it.) Having heard it through again and again, with ever increasing attention to detail, this reviewer can scarcely believe that it is still unperformed by an American orchestra of major stature, especially since it is, for Bruckner at least, a short symphony. Dr. Andrae, according to the abundant and admirably incisive notes of the album, has devoted much of his career to the specialized study of Bruckner's art. Hence his interpretation is not merely expert, but truly *con amore*. The Austria State Orchestra, new to American record buyers, is excellent, the brass section being particularly praiseworthy.

*Reproduction*

Sumptuous, full, life-like tone, even on the home player or attachment—stunning on high-fidelity equipment. Bass and treble are beautifully balanced, without the least distortion. A notable engineering achievement which should convert those diehards who cling to "shellac" as the only suitable productive medium.

## SECOND SYMPHONY IN C MINOR

Linz Bruckner Symphony Orchestra; Ludwig Georg Jochum, conductor. Urania Album 402, two 12-inch lp.

*Performance*

Jochum's feeling for this ardent work is admirable. He conveys equally well the lofty eloquence of the *Andante*, the deft verve of the *scherzo*, the joyous triumph of the *Finale*. The orchestra is excellent, well balanced, the horns particularly fine.

*Reproduction*

Sensationally good, on both attachment and audio equipment. Indeed, Urania's issues are uniformly clear, with good volume processed into the

microgrooves, so that they sound rich and full without excessive distortion on even the small crystal type of pickup.

THIRD SYMPHONY IN D MINOR

Vienna Philharmonic Orchestra, F. Charles Adler, conductor. SPA 30/31, two 12-inch lp.

*Performance and Reproduction*

Indisputably the best existing version of this eloquent music which Bruckner dedicated so rapturously to Richard Wagner. The Concert Hall tapes were sold to Remington (Fekete's reading) in a poor-surfaced, not too well balanced discing. Adler, who has already revealed his admirable abilities as an interpreter of Bruckner and Mahler on lp, gives this symphony a warm, vividly paced reading. Record tone is excellent, surface clean. On the second disc of this album, Mahler's Tenth Symphony is recorded. While the reproduction has less surface noise than the Westminster version, Adler's interpretation does not surpass the sensitive, penetrating attention of the Viennese conductor.

Salzburg Mozarteum Orchestra, Zoltan Fekete, conductor. Concert Hall Society CHS1065, 12-inch lp.

*Performance*

Fekete, who is a director of the orchestra he conducts on this disc, is a well-rounded musician with a catholicity of taste, as is evidenced by his interpretations of Handel, Mozart, and Haydn on the Mercury and Period labels. He brings to this powerful, stirring work that same sensitivity and self-effacement in favor of the composer's intentions, and the result is brilliant, highly communicative reading.

*Reproduction*

On both types of equipment, occasional noisy surfaces (several samples were checked). Bass lows and treble highs are a bit uneven; on an audio machine, compensator will level this defect. Good sound in the main.

Netherlands Philharmonic Orchestra, Walter Goehr, conductor. Concert Hall Society, CHS 1195, 12-inch lp.

*Performance and Reproduction*

Excellent performance and recording in all respects. Goehr's interpretation is virile and poetic.

FOURTH SYMPHONY IN E FLAT MAJOR

Leipzig Gewandhaus Orchestra, Prof. Herman Abendroth, conductor. Urania Album 7012, two 12-inch lp.

Vienna Symphony Orchestra, Otto Klemperer, conductor. Vox PL6930, 12-inch lp.

*Performance*

Klemperer's treatment is much more lyrical, especially in the glorious "Hunting" Scherzo. Abendroth allows his tempi to slacken noticeably in the Andante and the middle portion of the Finale; at times he seems overly

pedantic. As against the superior Klemperer reading, however, the Urania set provides a superior orchestra.

#### *Reproduction*

Both performances use the *Urtext* (original version). The Vox single disc has some strident trebles and muffled climaxes on the attachment, while on the audio equipment used for this review it tracks well and there is good balance though at times a metallic tone quality is evident. Urania's tonal range is much richer and deeper; the orchestra sounds nearer the microphone. Far superior on audio equipment.

#### FIFTH SYMPHONY IN B FLAT MAJOR

Hamburg Philharmonic Orchestra, Eugen Jochum, conductor. Capitol P-8049-50, two 12-inch lp. (Separate albums; no complete album holder for both.)

#### *Performance*

Re-pressed from Telefunken shellac masters on domestic Capitol lps, this is a competent but not, in the main, sufficiently probing interpretation. Yet, Jochum's concept of the first and fourth movements is really fine.

#### *Reproduction*

Much rumble and mechanical feedback on player attachment, not entirely corrected on audio.

#### SIXTH SYMPHONY IN A MAJOR

(112TH and 150TH PSALMS included in album)

Vienna Symphony Orchestra, Henry Swoboda, conductor. Vienna Kammerchor added for the *Psalms*. Westminster WL5055 and 5056, two 12-inch lp.

#### *Performance*

Original edition. Swoboda is more successful with the *Psalms*. The reading of the symphony is uneven, the high point being the *scherzo*. In the *Psalms*, however, we have some of the finest choral work perpetuated on recording; the attack is exceptional, the feeling tremendously stirring.

#### *Reproduction*

Surfaces somewhat gritty. The choral side comes out best of all on both audio and attachment. Treble in the symphony is at times excessive.

Linz Bruckner Symphony Orchestra, L. G. Jochum, conductor. Urania 7041, 12-inch lp.

#### *Performance*

Jochum's reading here reminds us of his vivid, intelligent, and penetrating discourse of the Second Symphony.

#### *Reproduction*

Acoustically, this Urania disc is a magnificently full-bodied achievement. At times woodwinds tend to be shrill in the foreground, but the strings are far more incisive than in the Westminster record. Surfaces too are superior with no noise or grittiness. The "live" tone comes through clearly on player attachment or hi-fi equipment alike.

## SEVENTH SYMPHONY IN E MAJOR

Amsterdam Concertgebouw Orchestra, Eduard Van Beinum, conductor.  
London LL-852/853, two 12-inch lp.

*Performance and Reproduction*

This recently issued version turns out to be the finest of all existing versions, surpassing the older Capitol if only on the basis of sound reproduction and the Böhm version on Vox on the grounds of lyricism and sensitivity. Van Beinum's way with the Scherzo is almost magical. Throughout, a superbly consistent level of musicianship and understanding is attained. (Franck's tone poem "Psyche" occupies a final portion of this album.) Sound, incidentally, is hi-fi!

Vienna Philharmonic Orchestra, Carl Böhm, conductor (recorded concert performance 1944). Vox PL7190, two 12-inch lp.

The magnificent Vienna Philharmonic, even granting a lessening of talent during the war years (Vienna was in Nazi hands in 1944 when this album was made), has much "lung power" (as David Hall so aptly puts it). This is especially true of the sonorous brass climaxes of the first and final movements, as demanding as anything by Strauss or Wagner. In Böhm's reading there is a convincing logic, as well as lyricism and heartfelt sincerity, making it as much a joy to the mind as to the ear.

*Reproduction*

In transferring to lp from the tape made at the time of this performance in the concert hall, Vox engineers have done a very able job. Hi-fi owners will need to lower treble, as in some passages there is a wiriness of tone; in others, the bass needs more emphasis to dissemble the hollow concert hall effect produced. But the clarity of the individual orchestral groupings—and especially the always difficult brass section—is remarkably fine. The surfaces are exceptionally clean.

## EIGHTH SYMPHONY IN C MINOR

Hamburg Philharmonic State Orchestra, Eugen Jochum, conductor. Decca Album DX109 (with TE DEUM), three 12-inch lp.

*Performance*

As David Hall, now classical program director for Mercury Records, says in his *Records: 1950 Edition*, "Its adequate realization calls for a conductor of supreme artistry and understanding, plus an orchestra of unlimited virtuosity, lung power and stamina." I concur heartily. The Hamburg Orchestra does not quite qualify, for all its heroics. Jochum's reading is conscientious, but the grandiose climax of the Finale to which all else was preparation leaves the hearer with the feeling that Jochum has sometimes striven for effect rather than built logically to that overpowering emotional sweep. Still, there are many fine things in the reading.

*Reproduction*

Decca transferred this performance from Deutsche Grammophon shellac discs, with highly praiseworthy engineering skill. The attachment can hold

the full sound, except that bass must be turned down for tutti and crescendos. Superb on audio—even balance, no surface noise or rumble.

#### NINTH SYMPHONY AND OVERTURE IN G MINOR

Vienna Philharmonia Orchestra, F. Charles Adler, conductor. SPA Album discs 24-25, two 12-inch lp.

##### *Performance*

The Brucknerite with his insistence on "Urtext" will censure the use of the Loewe version of this, Bruckner's finest symphony. The realist will accept it for its strikingly vivid interpretation, its rich, full, live recording. Adler conducts with conviction and directness; he does not overemphasize the most tempting sections which many interpreters are wont to draw out for the sake of self-gratification or self-exhibition. A commendable performance. His reading of the youthful Overture is definitive.

##### *Reproduction*

Superbly balanced, with full clarity to all orchestral sections and no distortion anywhere. Smooth, noiseless surfaces.

Pro Musica Symphony Orchestra, Jascha Horenstein, conductor. Vox PL8040, 12-inch lp.

##### *Performance and Recording*

Horenstein's second contribution to recorded Mahler and Bruckner (the Mahler Ninth was his first) is a most excellent one. The orchestra, however, seems slightly smaller than Adler's group on SPA and its attack, particularly in the Scherzo, is not quite so biting. Though we do not have access to the score, we suspect that this version has been slightly cut in order to get it on one 12-inch lp. Reproduction is good, though the SPA discs have more depth.

#### QUINTET IN F

Philharmonic Quartet Group of Vienna. Vox PL6330, 12-inch lp.

##### *Performance*

Beautifully conceived throughout, good attack and clarity. Cellist outstanding.

##### *Reproduction*

Satisfying on attachment; Vox's European items seem engineered more for balance than full-frequency, hence often sound better on lower-frequency equipment. Audio tends to bring out slight surface noise, though not disturbing. In all, an adequate blend of fine musicianship and competent engineering.

#### GREAT MASS NO. 3 IN F MINOR

Vienna State Philharmonia, *Akademie Kammerchor*, Ferdinand Grossmann, conductor; Dorothea Siebert, soprano; Dagmar Herrmann, alto; Erich Majkut, tenor; Otto Wiener, bass. Vox PL7940, 12-inch lp.

##### *Performance*

Vox has made a major contribution to disc literature and also to the enjoyment of Brucknerites throughout the nation by bringing us this the first re-

ording ever made of what is probably one of Bruckner's most ambitious and noble works. That he was able to compose so lofty and eloquent a work speaks volumes for the devout faith and selfless religious idealism which we know characterized his entire life.

Unlike the Second Mass in E Minor, this work utilizes the full resources of a large orchestra, chorus and solo voices. At the very outset of the *Kyrie*, we are impressed by the noble simplicity of Bruckner's writing, an impression that, for all his full-scale effects throughout the Mass, is not dispersed. Even with grandiose resources, Bruckner's directness of speech, his profound faith and humility, move us deeply. The *Gloria* is one of the most deeply joyous utterances he ever achieved, but even this grandeur of feeling is surpassed by the exquisitely tender and reverent *Credo*. In the concluding *Agnus Dei*, the contrapuntal writing and fusion with earlier sections are extraordinarily accomplished; the unity and beauty of this overall structure becomes thereby the more moving and profound.

Ferdinand Grossman's direction is worthy of enthusiastic plaudits. The soloists are admirable in the main, save that the tenor's lighter tones are sometimes forced and the basso occasionally produces a somewhat dry tone at the ends of phrases. The orchestra and chorus give a brilliantly balanced accompaniment, so essential in the necessary fusion of the music.

#### *Reproduction*

Generally very good. The Vox engineers have done extremely well, considering they had to work against a considerable hall resonance which makes for slight distortion at extreme highs or lows. Surfaces are very good and quiet. We should rank this as a definitive recording, which will take some little time to surpass.

#### MASS IN E MINOR

Hamburg State Opera Chorus and Wind Choir of Hamburg Philharmonic Orchestra, Max Thurn, conductor. Capitol P8004, 12-inch lp.

#### *Reproduction*

Originally on shellac discs, and here transferred successfully except for a few climax blurs.

#### TE DEUM

Munich Radio Symphony Orchestra and Chorus, Eugen Jochum, conductor; M. Cunitz, soprano; G. Pitinger, alto; L. Fehenberger, tenor; G. Hann, bass. (Included in Decca Bruckner EIGHTH album).

Salzburg Festival Orchestra and Chorus, Messner, conductor. Festival 101, 10-inch lp.

#### *Reproduction*

The Decca version is far superior, both as regards performance and reproduction. Festival soloists are uneven, chorus blurs at crucial moments, rather prosaic interpretation.

*Chord and Discord*

GUSTAV MAHLER

FIRST SYMPHONY IN D MAJOR

Minneapolis Symphony Orchestra, Dimitri Mitropoulos, conductor. Columbia ML4251, 12-inch lp.

*Performance and Reproduction*

A highly successful lp transfer from shellac discs, improving tonal quality of the earlier set through skilled engineering. Mitropoulos' reading is excellent. One of the earliest lp issues, but also one which holds up remarkably well in comparison with newer issues from every viewpoint.

Symphony Orchestra of Radio Berlin, Ernest Borsamsky, conductor. Urania URLP 7078, 12-inch lp.

*Performance*

Borsamsky, a conductor new to most disc collectors, has a good feeling for this vivid, youthful music. The orchestra is excellent.

*Reproduction*

The laurels go to Urania by a wide margin, since the Columbia lp was engineered from original 78-rpm tapes, and this is a new live discing with 500-cycle turnover frequency. Treble de-emphasis should be set at 13.7 decibels—high-fidelity enthusiasts, please note. Surfaces are splendidly clean, no noise or distortion.

Symphony Orchestra of Radio Berlin, Ernest Borsamsky, conductor. Vanguard Recording Society VRS-436, 12-inch lp.

*Performance and Reproduction*

A duplicate of the Urania disc. This sometimes occurs in the recording field when both firms have access to the same tape. No difference between the discs.

Pro Musica Symphony of Vienna, Jascha Horenstein, conductor. Vox PL8050, 12-inch lp.

*Performance and Reproduction*

Horenstein's reading is slashingly direct and forceful. The reproduction is not quite so full or lifelike as the Urania and Vanguard discs, but eminently satisfactory as to balance.

Pittsburgh Symphony Orchestra, William Steinberg, conductor. Capitol 12-inch lp, P-8224.

*Performance and Reproduction*

This is the latest—and the best—version of Mahler's youthful, impressionistic "Titan Symphony." Steinberg's verve and musical integrity make this reading a memorable listening experience. To this critic's mind, he ranks as one of America's very finest conductors; he plays the classics with absolute fidelity to the score and no annoying mannerisms, yet at the same time his flair for modern music and, above all else, his sheer love for everything he conducts communicates itself to the hearer. The result is dynamic interpretation, whether it be Beethoven or Mahler. Reproduction is magnificent.

## SECOND SYMPHONY IN C MINOR

Vienna Symphony Orchestra, Otto Klemperer, conductor. *Akademie Kammerchor* and *Singverein der Musikfreunde*, with Ilona Steingruber, soprano, and Hilde Rössl-Majdan, alto. VOX PL 7010, two 12-inch lp.

*Performance*

Klemperer's reading is profound and subtle, on a par with his interpretation of *Das Lied von der Erde*. He gives each movement its proper balance and logic in development, with dramatic emphasis on the first and last sections. The Vienna Symphony Orchestra, however, lacks "lung power"; were this the Vienna Philharmonic, the album would be incomparable. The two soloists are excellent; the chorus too is exceptionally good.

*Reproduction*

One of Vox's best engineering achievements, with the exception of shrillness in several important passages on the first side. Collectors who use long-playing attachments will need to tune down the bass, and may lose nuances in the fortissimo passages. On audio equipment a very good balance is obtained, with less of the "hollowness" that was characteristic of so many of Vox's initial lps. Surfaces are very clean.

## THIRD SYMPHONY IN D MINOR

Vienna Philharmonia Orchestra, F. Charles Adler, conductor; Walter Schneiderhan, violin; Eduard Koerner, post horn; Hildegard Roessel-Majdan, alto; Vienna State Opera Chorus; Vienna *Saengerknaben*. SPA Album 20-21-22, three 12-inch lp. (Includes 14 "Youth Songs" sung by Ilona Steingruber, soprano, with the late Herbert Haefner at the piano).

*Performance*

This masterpiece is seldom heard. The reasons are diaphanously clear in a commercially-conscious age—the enormous orchestra, as well as the obvious necessity for extra rehearsals. To these may be added the inordinate length; indeed, when the work does reach a concert hearing, there is usually an intermission after the first movement. The recording of this fabulous work is a great opportunity for all music lovers to familiarize themselves with music which they might otherwise never hear. That it deserves a hearing is obvious merely from listening to the first movement with its mysterious, march-like rhythm, or to the haunting nocturnal fragrance of the fourth movement with its inspired alto solo, or to the finale with its radiant poetry that depicts nature as surely as the youthful "Titan" Symphony.

Adler's direction of all the diversified orchestral and vocal groups is a model of clarity and balance. His insistence on phrasing and subtlety is praiseworthy to the extreme. The soloists acquit themselves nobly. In a word, Bravo!

*Reproduction*

Quite on a par with the interpretation as regards clarity and richness. Even on a home player attachment, the microphone placement for this album has been so fine that one hears every section of the orchestra. Surfaces are clean and noiseless.

*Chord and Discord*

## FOURTH SYMPHONY IN G MAJOR

New York Philharmonic Symphony Orchestra, Bruno Walter, conductor;  
Desi Halban, soprano. Columbia ML4031, 12-inch lp.

*Performance and Reproduction*

Again, as with the First, a superb transfer, enriching the orchestral tone by sheer engineering skill. Bruno Walter's interpretation is incomparable, especially in the beautifully emotional slow movement. Desi Halban's poignant and sympathetic reading of the vocal part is a triumph. An even earlier release than the First. Columbia must be congratulated for the almost infallibly high standards of musical direction and processing which characterize their lp discs. It may be added that both these lps sound well even on the limited range attachment.

Concertgebouw Orchestra; Eduard van Beinum, conductor; Margaret Ritchie, soprano. London LL618, 12-inch lp.

*Performance and Reproduction*

This interpretation highlights superb reproduction and balance, but there is more technique apparent than feeling, despite the very distinctive vocal line of Margaret Ritchie in the finale.

## FIFTH SYMPHONY IN C SHARP MINOR

New York Philharmonic Symphony Orchestra, Bruno Walter, conductor.  
Columbia SL-171, two 12-inch lp. (Includes Eight Songs with Desi Halban and Bruno Walter at the piano).

Vienna State Opera Orchestra, Hermann Scherchen, conductor. Westminster WAL-207, two 12-inch lp. (Includes Tenth Symphony.)

*Performance*

The Columbia release replaces the now discontinued "shellac" version with the same ensemble and conductor; it is a live performance of very moving appeal. Walter's interpretative genius for the scores of Mahler and Bruckner is too well known to require expatiation here. However, as we have two distinct versions to compare, we impartially must say that Walter's reading dwells on the primary lyric aspects of the symphony, whereas Scherchen is more concerned with the drama.

*Reproduction*

Both sets are first-rate, with Columbia having a slight advantage as regards overall balance and breadth. Trebles must be slightly adjusted in the Westminster album to avoid distortion, while bass seems slightly more even in the Westminster version.

## SIXTH SYMPHONY IN A MINOR

Vienna Philharmonic Orchestra, F. Charles Adler, conductor. SPA 59/60, two 12-inch lp.

*Performance and Reproduction*

With this album, Utopia has been reached, disc-wise, by bringing to record lovers throughout the world every symphony by Bruckner and Mahler! It

was hardly by accident that Mahler's "Tragic" was last to win recording; it is tremendously difficult music, calls for a huge orchestra and a conductor who can guide its passions and febrility away from the pitfalls of Tschaikowskian sentimentality. This music is perhaps the most personally, starkly naked soul-expressive score ever penned. Yet how magnificently rewarding it is, in a skillfully interpreted recording such as this. Adler is faithful to the *Urtext*; he does not overplay the dynamics or overstress the poignancy. Reproduction is splendid. An album of which the makers may well be proud.

#### SEVENTH SYMPHONY IN E MINOR ("SONG OF THE NIGHT")

Berlin Radio Symphony Orchestra; Hans Rossbaud, conductor. Urania Album 405, two 12-inch *lps*.

Orchestra of the Vienna State Opera, Hermann Scherchen, conductor. Westminster Album WAL-211, two 12-inch *lps*.

#### *Performance*

Scherchen, as is his wont, goes all out for brilliance, while Rossbaud stresses the lyric aspect of this beautiful work, particularly in the slow movements with Mahler's incredibly effective scoring for guitar and mandolin—which gave the work its subtitle. There is admittedly more fire in the Scherchen interpretation, but Rossbaud's understatement has its own special and very commendable merits in this regard. As for the orchestras, Westminster seems to have slightly the better of it in the matter of solo and ensemble playing. We suggest hearing both and deciding for yourself!

#### *Reproduction*

Both are tremendous engineering achievements — Westminster's having slightly more treble brilliance, Urania's having better balanced base.

#### TENTH SYMPHONY IN F SHARP MAJOR

Vienna State Opera Orchestra, Hermann Scherchen, conductor. Westminster WAL-207, 12-inch *lp* (fourth side of album).

#### *Performance*

Scherchen's living and impeccably honest interpretation of this long neglected work—this is a first time on either 78 or  $33\frac{1}{3}$  *rpm*—ranks as one of the best committed to discs. Not only is this music memorable for the Mahler enthusiast, but also it has a profound beauty and immediate appeal to the lay listener. Only the *Adagio* is performed, taking 23 minutes. In this movement—which has ideas enough for a full symphony—Mahler shows a tremendous advance in expression and a mastery and conciseness of orchestration that prove indisputably what a tragic loss to music was his relatively early death.

#### *Reproduction*

Excellent, more "hall tone" perhaps than in the Fifth Symphony.

#### DES KNABEN WUNDERHORN

Vienna State Opera Orchestra, Felix Prohaska, conductor; Lorna Sydney, mezzo-soprano; Alfred Poell, baritone. Vanguard Recording Society, Inc., Album 412-13, two 12-inch *lp*, boxed, with German and English texts.

*Performance*

This first complete recording of Mahler's youthful, exuberant, and dramatic song cycle is a magnificent one with a few minor flaws that merely point up the distinction of the interpretation. As a whole, Prohaska's handling of the orchestra, his cueing of the singers, might have delighted Mahler himself! The orchestral tone is fiery as well as sumptuous. Miss Sydney is a sincere, thoughtful musician with a voice of just the right darkness. She has the special gift for nuancing and shading essential to this music. Poell is one of the most gifted singers of our day, but unhappily veers off pitch occasionally and wobbles at climactic measures. Yet the sincerity behind his emotional response to the score is beyond challenge.

*Reproduction*

Excellent, even on the small attachment. Microphone placement was exceptionally handled, with many closeups, the intimacy of which is even more striking on audio equipment. Slightly gritty surfaces.

## DAS LIED VON DER ERDE

Vienna Symphony Orchestra, Otto Klemperer, conductor; Elsa Cavelti, mezzo-soprano; Anton Dermota, tenor. Vox PL7000, 12-inch lp.

Vienna Philharmonic Orchestra, Bruno Walter, conductor; Kathleen Ferrier, contralto, Julius Patzak, tenor. London LL-625-6, two 12-inch lp.

*Performance*

Elsa Cavelti's musicianship and feeling for the music are good, and her diction and phrasing are adequate although at times her voice sounds harsh and strained. The pleasant surprise of the performance is Dermota. Rich tone, wonderful communicativeness, no irksome mannerisms in the romantic vein,—a deplorable tendency of too many tenors who essay this work. Klemperer's interpretation is splendid.

*Reproduction*

Better on audio, as on the attachment the trebles and bass must be carefully watched. Orchestral tone somewhat "backgroundish," singers excellently recorded. Good balance, overall, without high frequency output. For all this fine effort, the edition takes second place to London's; Ferrier and Walter interpret the work sublimely and the reproduction is flawless!

## DAS KLAGENDE LIED

Vienna State Opera Orchestra and Vienna Chamber Choir, Zoltan Fekete, conductor; Ilona Steingruber, soprano; Sieglinde Wagner, contralto; Ernst Majkut, tenor. Mercury MG10102, 12-inch lp.

*Performance*

We owe thanks to the musical enthusiasm of David Hall, program director of Mercury Records, for this first-time recording of one of Mahler's most exciting scores. The music abounds in dramatic contrasts, remarkable turns of orchestration and tempi. The performance is a splendid one. The soloists are excellent, particularly the first two named. Fekete's direction shows again his command of nuances and overall balance.

*Reproduction*

The chorus seems somewhat too much in the background. Again we note an occasional wiriness and off-pitch quality, particularly of the brass, pronounced on lp attachment, lessened on high fidelity equipment. It is not likely that another recording of this unusual and neglected masterpiece will be forthcoming in the near future, and as the good qualities of the disc far outweigh its defects, it is to be highly recommended.

## FIVE SONGS FROM RUECKERT

Vienna State Opera Orchestra, Zoltan Fekete, conductor; Ilona Steingruber, soprano. Mercury MG10103, 12-inch lp. (Reverse side contains KINDER-TOTENLIEDER, sung by Vera Rosza, contralto, with same group.)

*Performance*

Ilona Steingruber is one of the best European sopranos, with excellent diction, good tonal control and range, a genuine feeling for what she sings, as was evident in the Vox album of the Mahler "Resurrection" Symphony. Zoltan Fekete, not so well known to American audiences as he deserves, is a musician's musician, with a thorough knowledge of the nuances in the score, a mastery of getting orchestral coloring and effects precisely as he desires. This group of songs, from the exquisite love lyric *Ich atmet' einen linden Duft* to the dramatic *Um Mitternacht*, contains in essence the varied creative qualities of the composer's genius. An admirable achievement, performance-wise.

*Reproduction*

Not, alas, up to the excellence of the performance. Mercury's early foreign tapes suffered from wiriness and inadequate volume. This is especially noticeable on lp attachment, while fidelity equipment, with compensators to eliminate a somewhat excessive bass, gives better results.

## LIEDER EINES FAHRENDEN GESELLEN

Symphony Orchestra of Radio Berlin, Leopold Ludwig, conductor; Josef Metternich, baritone. Urania 7016, 12-inch lp. (Includes KINDERTOTENLIEDER.)

Pittsburgh Symphony Orchestra, Fritz Reiner, conductor; Carol Brice, contralto. Columbia ML4108, 12-inch lp. (Includes Bach SACRED ARIAS.)

*Performance*

Carol Brice's sombre-hued, almost impersonal singing serves the music's introspection better than Metternich's overemphasized romanticism. Moreover, the German tenor's range is often lack-lustre, evidencing strain and improper breath control. Orchestral laurels to Reiner beyond dispute.

*Reproduction*

Sharper "up-close" range on the Urania, which is clean-surfaced and sounds well on both types of equipment. Columbia's version, taken from shellac, is smaller in tonal scope and sometimes fuzzy.

Orchestra, Sir Adrian Boult, Conductor; Blanche Thebom, mezzo-soprano. RCA Victor LM-1203, 12-inch lp. (Reverse side contains Wolf songs.)

*Performance and Reproduction*

Miss Thebom's rich voice and excellent musicianship make this reading an excellent one, but we miss the tragic poignance which Carol Brice was able to accord this wonderful work. Had the latter enjoyed better reproduction, hers would be the best of the three available versions now on lp. Still, the bonus of Wolf songs—considering the parallel of Mahler's and Wolf's careers—gives the Victor disc a slight edge.

KINDERTOTENLIEDER

Symphony Orchestra of Radio Berlin, Rolf Kleinert, conductor; Lorri Lail, mezzo-soprano. Urania 7016.

Vienna Philharmonic Symphony Orchestra, Bruno Walter, conductor; Kathleen Ferrier, contralto. Columbia ML2187, 10-inch lp.

*Performance*

Lorri Lail, new to us in America, is a wonderfully gifted singer, with fine breath-control, expressive range, excellent diction, subtle phrasing. Ferrier's artistry is, as always, impeccable. Actually, it is difficult to make a choice here and only the presence of the superb Vienna ensemble under Walter's inspired baton gives Columbia a slight advantage.

*Reproduction*

Both issues are outstanding, Columbia's a bit more "sharp" on attachment. On audio, the subtleties of orchestral accompaniment show up noticeably in the Columbia lp.

Vienna State Opera Orchestra, Zoltan Fekete, conductor; Vera Rosza, contralto. Mercury MG10103, 12-inch lp. (Reverse contains FIVE SONGS FROM RUCKERT.)

*Performance*

Miss Rosza's range is good and secure, and her intonation and diction first-rate. A sympathetic treatment, with good orchestral accompaniment. Fekete understands subtleties as well as any European conductor.

*Reproduction*

See remarks on FIVE SONGS FROM RUECKERT. On lp attachment, bass must be turned down. Strings annoyingly wiry at times, woodwinds vary on pitch. High fidelity improves balance, though not fully.

San Francisco Symphony Orchestra, Pierre Monteux, conductor; Marian Anderson, contralto. Victor LM 1146, 12-inch lp.

*Performance*

The artistry of Marian Anderson is as impeccable as ever. Monteux's reading of the score is most admirable as may be expected.

*Reproduction*

Excellent, with good balance between voice and orchestra. Very clean surfaces, well modulated tone.

## EARLY SONGS FROM "DES KNABEN WUNDERHORN"

Vienna State Opera Orchestra, Felix Prohaska, conductor; Alfred Poell, baritone; Anny Felbermayer, soprano. Vanguard Recording Society, VRS-421, 12-inch lp.

*Performance*

This disc, a sequel to Vanguard's remarkably fine set VRS-412-3, should make many new Mahler lovers. It contains *Hans und Grete*, *Scheiden und Meiden*, *Frühlingmorgen*, *Es sungen drei Engel*, and *Ich ging mit Lust durch einen grünen Wald* from *Knaben Wunderhorn*, and duplicates the Rückert items offered on the Mercury recording MG-10103. Poell's virile baritone quality is again superlative, as it was in the earlier album. His sympathy and enthusiasm for this highly impressionistic music is at once communicated to the listener. Moreover, the disc marks the recording debut of the young, gifted soprano, Anny Felbermayer, who knows how to convey just the pathos desired in these youthfully nostalgic songs. Once again, Prohaska's feeling for Mahler's music, his tempi and cueing of singers and solo orchestral sections must be highly commended.

*Reproduction*

Topnotch on both high fidelity and ordinary home player attachments. The resonance of Poell's gusty, forthright tones is ably handled by the Vanguard engineers. Surfaces are clean. A brilliant contribution, in all, to the existing lp repertory.

## FOURTEEN SONGS FROM "AUS DER JUGENDZEIT"

Ilona Steingruber, soprano; Herbert Haefner, piano. SPA 20/22.

*Performance*

This reading compares very favorably with that on Vanguard VRS 424 (Powell, Felbermayer) which we did not have opportunity to hear in full. Miss Steingruber has a sympathetic feeling for and understanding of Mahler's music, as she has already demonstrated on discs for other record firms. Here we especially admire her versions of *Hans und Grete* and the exquisite *Aus!* Haefner's piano accompaniment is excellently sensitive to all the nuances. Incidentally, this disc serves as a memoriam to him; a noted conductor in his own right, he was director of the 1952 Vienna summer music festival, died tragically at its conclusion, but fortunately not before he made some memorable recordings, among them Columbia's complete performance of Alban Berg's remarkable modern opera, "Lulu."

*Reproduction*

Very fine, indeed. On other discs featuring piano, SPA's engineers have given us authentic piano sound without distortion or off-pitch flaws; this performance is no exception. The album includes the Mahler Third Symphony, is, therefore, a must for all Mahler enthusiasts, and has the virtue of being

magnificently and artistically done. We emphasize this because many independent firms are occasionally wont to content themselves with routine performances of unusual repertory on the grounds that the uniqueness of the programming suffices. A fallacy!

## EIGHT SONGS

Bruno Walter, piano; Desi Halban, soprano. Columbia SL-171.

*Performance and Reproduction*

A welcome "remake" of Columbia's earlier "shellac" album, which suffered deplorably from poor piano tone and generally "cramped" sound. Here the engineers have balanced voice and piano admirably, illuminating the gifts of both great artists. Miss Halban deserves that adjective for her keenly intuitive understanding of these exquisite songs, the control of diction and tone, the flawless blending with accompaniment.

Those who love and cherish the creations of Bruckner and Mahler owe a vote of thanks to the enterprise of the independent record companies for their protagonism and, in nearly every instance, their high standards of treatment of these magnificent works in performance. When lp first came on the market, it was the tendency of the smaller companies to be content with adequately recorded—yet often slipshod and miscast—performances, simply to get the buyer's attention for the unusual. This is no longer the case. The quality of performance and reproduction to be found in the products of any given independent firm as against those of the "Big Four" holds up well.

---

KILENYI MAHLER MEDAL AWARDED TO  
LEOPOLD STOKOWSKI

On December 15, 1916, Leopold Stokowski, then conductor of the Philadelphia Orchestra, gave the first performance of *Das Lied von der Erde* in the United States. In March of that year, his pioneering spirit had led him to introduce Mahler's *Eighth*, "Symphony of a Thousand", to American audiences in a series of ten performances, nine of which were given in Philadelphia and one in New York. Writing about this occasion fifteen years later in the *New York Herald Tribune*, May 10, 1931, the late Lawrence Gilman remarked, "The work . . . had a run which, for a mere symphony, was equivalent to the triumphant persistence of *The Green Pastures*. The Academy of Music was jammed at all performances. . . . Even the traffic policemen outside the Academy were excited about the attraction, and spoke of it almost as respectfully as if it had been a prizefight." In an interview with William Engle, feature writer of the *New York World Telegram*, Mr. Arthur Judson described this series of performances as the most memorable milestone of his managerial career. Only two performances had been scheduled. "Philadelphia, the first night, was dumfounded. Then it was jubilant. Instead of two performances, ten were given, and the town celebrated as though the Athletics had won the pennant. In New York the *Friends of Music* heeded. They engaged Mr. Judson to bring the production here, and in a

special train the huge cast came to storm and conquer the Metropolitan." (*World Telegram*, December 19, 1933.)

Thirty-three years after the premiere, the Philharmonic Symphony Society of New York gave its first performances of the "Symphony of a Thousand" on April 6, 7, and 9. The conductor was again Leopold Stokowski who throughout his brilliant career has contributed so much toward the education of the music-loving public. The last performance was broadcast over CBS, thus enabling millions instead of thousands to hear a stirring interpretation of this rarely played masterpiece. Cheers from the three Carnegie Hall audiences greeted Dr. Stokowski, the soloists, the orchestra, and the choruses after each presentation of this difficult work. Unfortunately, the recording companies did not record this memorable event.

In belated recognition of his efforts to create a greater interest in and appreciation of Mahler's music in the United States, the directors of the Bruckner Society of America awarded the Mahler medal of honor to Dr. Stokowski. On April 7 the medal was presented to Dr. Stokowski by Mr. Warren Storey Smith of the *Boston Post*, acting on the behalf of the Society.

Mr. Smith made the following remarks:

"Dr. Stokowski, it is my privilege and pleasure to present to you, in the name of the Bruckner Society of America, its Mahler medal of honor. This medal, designed by the American sculptor Julio Kilenyi for the Society's exclusive use, is given to the conductors who have done the most to further the cause of Mahler's music. It was you who in 1916 introduced to America his colossal *Eighth Symphony*, and you have now brought to pass the only subsequent performances by a major orchestra of the East. Because of its manifold exactions, the preparation and conducting of this choral symphony must be considered a labor not only of skill, but of love. You have once more paid it this double tribute."

In accepting the medal, Dr. Stokowski said:

"Thank you, Mr. Smith, and thank you, Bruckner-Mahler Society. I am deeply happy to conduct Mahler's *Eighth* because I regard it one of the greatest creations among the arts of our time. It is, in my opinion, great music, but more than that it has a profound message for everyone."

## SCHOENBERG'S GURRE-LIEDER ON L P

By Jack Diether

Philadelphia Orchestra, Princeton Glee Club, Fortnightly Club and Mendelssohn Club conducted by Leopold Stokowski; Paul Althouse (tenor), Jeannette Vreeland (soprano), Rose Bampton (contralto), Abrasha Robofsky (bass), Robert Betts (tenor), Benjamin de Loache (speaker). Victor M-127 (28 sides); LCT-6012 (4 LP sides).

Chorus and Orchestra of the New Symphony Society of Paris conducted by Rene Leibowitz; Richard Lewis (tenor), Ethel Semser (soprano), Nell Tangeman (mezzo-soprano), John Riley (bass), Ferry Gruber (tenor), Morris Gesell (speaker). Haydn Society 100 (6 LP sides).

Comparing the present *Gurre-Lieder* recordings a section at a time has been an interesting but frustrating experience. Both are so remiss in certain quite different respects that I don't feel that either can be said to give a really adequate idea of this great work.

On the technical side the issue is quite simple. The 1932 Victor recording, both in its original 78 r.p.m. pressing and in the recent LP dubbing, is quite superior to the 1953 Haydn Society recording. In fact the expected qualities are quite reversed. The H.S. is lower in total quality than the average important recording of twenty years ago, the Victor is almost what you look for today in a high-fidelity LP.

The main faults of the H.S. are two. There is a decided lack of presence and fullness in the sound of the orchestra, a general anemia most inappropriate to this work. A reading of the precise orchestration used (requiring over 150 players in all), which is supplied by the Haydn Society in its brochure and advertising, is about the closest the customer can come to a true realization of this Schoenbergian magnificence. Secondly, there is a most eccentric quality in the various dynamic levels. Some phrases sound unnaturally faint, as if held down for artificial contrast, and in a crescendo the full range (which is not great) will suddenly pop out at an arbitrary point, usually too late for the proper climactic effect.

The final chorus is a good index to the over-all qualities of both. In H.S. the orchestra gives far less support to the chorus, and the independent brass part in the final cadence is completely inaudible. Where the orchestra can be heard it is relatively pinched and muffled in sound, and the occasional jumping of dynamic level reaches such a degree of persistence and irregularity here that it sounds as if the amplifier were being short-circuited. The whole thing sounds badly overloaded, yet the volume is much lower than in Victor.

The thinning out of the tone of individual instruments in H.S. is most noticeable in the bassoons in the prelude, and in the brass elsewhere. The latter, magnificent in Victor, often fail to be heard properly in dialogue with the solo voice in H.S. (cf. the trombone at "*Fuer Leut' und Haus*" and the trumpet at "*Doch dereinst beim Auferstehn*"). On the other hand the harps and percussion generally show up better, probably by default. The harps, for instance, are not prominent in either recording, but because in H.S. the entire string and wind sections lack body, effects like the beautiful fast-sweeping arpeggios at the end of Tove's first song are to be heard for the first time. Likewise, the tenor drum at "*Sein Streitross das oft zum Sieg*" (Waldtaube's

song) is not very distinct in H.S., but entirely absent in Victor. Other effects in H.S. like the percussion in the quiet opening of Part 3 do seem due to foresight. But the "several large iron chains" advertised by H.S. are not manifest.

These technical shortcomings are doubly a bitter disappointment since the performance is such a fine one. The problems involved in recording such a long work at a public performance under Stokowski, which did not faze Victor's technicians, were artistically defeating, while in H.S. the opposite is true. Here the artists have prepared and performed their difficult tasks in the recording sessions magnificently, while the recording technicians have not.

The most spectacular default in Stokowski's public presentation is the interpretation of the song of Klaus-Narr, which Robert Betts rendered in a *Sprechgesang* similar to that prescribed for the Speaker in the later section marked "Melodrama." Collectors who have never heard any interpretation but the Stokowski can now, for the first time, hear Klaus sung, as he was intended to be, by Ferry Gruber in H.S. As Leibowitz' tempo is also much slower, one might on first hearing easily fail to recognize the two renditions as the same number. The composer's widow tells me that the use of *Sprechgesang* by Klaus-Narr was not a Stokowskian brainwave, but was necessitated by the sudden illness of the originally scheduled singer. This is surely a unique use for *Sprechgesang*, to fake what cannot be studied. Thus a whole generation of record listeners have lived with this spurious Klaus because of a tenor's laryngitis! Such are the vagaries of recording.

The real Melodrama, which is all the more effective for not being anticipated by the false one, is also better in itself under Leibowitz. Morris Gesell is less hammy than Benjamin de Loache, and his voice is much more pleasant. In fact this seems to be a major difference in the entire choice of the two sets of soloists, that one (the earlier) was chosen for their dramatic qualities, the other for their lyric qualities. In only two cases, I think, did the former choice achieve better results. One is the Bauer; Abrasha Robofsky, it is true, certainly strains his voice more horribly than John Riley, but in the projection of extreme fear I think this is justifiable. The other case is that of Tove. Jeannette Vreeland's rendering of her cruelly high notes is so clear and round that one would not expect to find them easily topped. Ethel Semser comes close, but not quite, and in other respects she is comparatively at a loss, especially in the rapid enunciations and the swinging rhythmic impulse of her second song.

My preference for Leibowitz' Waldemar and Waldtaube is enhanced by the greater latitude accorded them by Leibowitz' tempos, with the exception of "*So tanzen die Engel*," which is rushed and unconvincing. The central number, Waldemar's Curse, could be used to sell the whole H.S. set, for here the orchestral tone and balance is at its peak, as is Richard Lewis' singing form. The all-important general pauses are a little longer, and though he is the more lyric tenor, his attacks following them are more expressive. I think Paul Althouse, on the other hand, has an unpleasant voice; but he uses it well for special dramatic effect, except in his occasional exaggerated scooping and bawling. His most sincere and moving effort is that same "*So tanzen*" slighted by Leibowitz. Lewis' intense *sotto voce* attack on "*Es ist Mitternachtzeit*," though the first word is indistinguishable, enhances the uncanny change of mood there.

Along with the Curse, the most beautifully sustained interpretation under Leibowitz is the song of Waldtaube. The whole section is taken at a uniformly slower tempo, so the final crescendo beginning at "*Wollt' ein Moench*" builds up a most terrifying intensity. I know of nothing in this genre more powerful except the clock scene in *Boris*. Both singers are excellent. The pause before "*Tot ist Tove!*" is twice as long as it is under Stokowski, so on first hearing I instinctively braced myself, somehow expecting Nell Tangeman's attack to be twice as loud as Rose Bampton's. To my most agreeable surprise she attacked it softly instead.

The typography of the Haydn Society's libretto is much larger and more readable than Victor's. Other exclusive H.S. assets include an eight-page essay on the composition by the conductor, and a seven-page essay on Jacobsen's poem and its origins by Allen D. Sapp. The album-cover design by Alvin Eisenman is most attractive. As for the respective record breaks, let's just face the fact that except for the endings of Parts 1 and 2 (which are only five minutes apart) there simply are no satisfactory breaks within the integrated two-hour scope of *Gurre-Lieder*.

Because it is so inordinately difficult to get the right quality and number of players and singers together for a performance of *Gurre-Lieder*, the spoiling of this excellent one by poor recording is a musical tragedy. It will probably require the superior acoustics and technical facilities available in Vienna to reveal this romantic masterpiece adequately on records.

---

#### KILENYI BRUCKNER MEDAL AWARDED TO LYLE DOWNEY

In appreciation of his efforts to create a greater interest in Bruckner's music in the United States, the Bruckner Medal of Honor, designed by Julio Kilenyi for the exclusive use of the Society, was awarded to Lyle Downey, Head of the Music Department, San Jose State College, San Jose, California. The San Jose State College Orchestra under Dr. Downey's direction performed Bruckner's *Fourth* on December 13, 1949, the *Second* on March 6, 1951, and the *Seventh* on March 4, 1952. Dr. Downey plans a Bruckner-Mahler course to be given at San Jose in alternate years. After the performance of the *Seventh*, the medal was presented to Dr. Downey by Dr. Hugh Gillis, Chairman, Fine Arts Division, San Jose State College, acting on behalf of *The Bruckner Society of America*.

# LIST OF BRUCKNER AND MAHLER PERFORMANCES

SEASON 1949-1950

## BRUCKNER

- III The Cleveland Orchestra, George Szell, Conductor; February 2 and 4, 1950.
- IV Kansas City Philharmonic Orchestra, Hans Schwieger, Conductor; November 1 and 2, 1949.
  - U. S. Dept. of Agriculture Symphony Orchestra, Washington, D. C.; Dr. Frederick Fall, Conductor; October 28 and November 4, 1949
  - San Jose State College Symphony Orchestra, San Jose, Calif.; Dr. Lyle W. Downey, Conductor; December 13, 1949.
  - Denver Business Men's Orchestra, Antonia Brico, Conductor; January 19, 1950.
  - The Mozart Orchestra of the Music School of the Henry Street Settlement, New York City; Robert Scholz, Conductor; March 12, 1950.
- VI University of Iowa Symphony Orchestra, Iowa City, Iowa; Philip Greeley Clapp, Conductor; January 25, 1950.
- VII Chicago Symphony Orchestra, Fritz Busch, Conductor; January 26 and 27, 1950.
  - Southern Symphony Orchestra, Columbia, S. C.; Carl Bamberger, Conductor; April 29, 1950.
  - Cincinnati Symphony Orchestra, Cincinnati May Festival, Fritz Busch, Conductor; May 4, 1950.
- VIII Chicago Symphony Orchestra, Rafael Kubelik, Conductor; December 1 and 2, 1949.
- IX Chicago Symphony Orchestra, Bruno Walter, Conductor; February 23 and 24, 1950.

## QUINTET

The Stradivarius Society, New York City; Gerald Warburg, Cellist; January 10 and 11, 1950.  
Coriolan Quartet, Los Angeles, Calif.; March 13, 1950.

## QUINTET (Adagio)

The Oberlin Conservatory Orchestra, Oberlin, Ohio; Maurice Kessler, Conductor; December 4, 1949.

## ECCE SACERDOS MAGNUS

Franklin & Marshall College Glee Club and Chamber Orchestra, William H. Reese, Conductor; Lancaster, Pa., March 4, 1950; Salem Church, Allentown, Pa., March 5, 1950.

## E MINOR MASS

Los Angeles City College Chorus, Dr. Hugo Strelitzer, Conductor; January 13 and 14, 1950.

## MASS IN D

Columbia University Chorus and Chamber Orchestra, McMillin Theater, New York City; Jacob Avshalomoff, Conductor; Soloists: Helen Dautrich, Soprano; Patti Luer, Contralto; Wallace Wagner, Tenor; Everett Anderson, Bass; March 18, 1950.

## TE DEUM

The Oberlin Musical Union and Conservatory Orchestra, Maurice Kessler, Conductor; Soloists: Beverly Hunziker, Soprano; Eunice Luccock, Contralto; Glen Schnittke, Tenor; and Daniel Harris, Bass; December 4, 1949 and April 9, 1950. (The last of these was broadcast over The Mutual Broadcasting System.)

The Mozart Orchestra of the Music School of the Henry Street Settlement, New York City; Robert Scholz, Conductor; April 16, 1950.

## MAHLER

- I Chicago Symphony Orchestra, Bruno Walter, Conductor; November 3 and 4, 1949.

*Chord and Discord*

- Philadelphia Orchestra, Eugene Ormandy, Conductor; Philadelphia, Pa., November 4, 5, and 7, 1949; New York City, November 8, 1949.
- Dallas Symphony Orchestra, Paul Breisach, Conductor; Dallas, Texas, January 16, 1950; Fort Worth, Texas, January 17, 1950.
- Baltimore Symphony Orchestra, Reginald Stewart, Conductor; February 8, 1950.
- Philharmonic Symphony Society of N. Y., Bruno Walter, Conductor; February 9, 10, and 12, 1950.
- National Symphony Orchestra, Washington, D. C.; Dimitri Mitropoulos, Conductor; March 8, 1950.
- Cleveland Orchestra, Bruno Walter, Conductor; March 9 and 11, 1950.
- II Los Angeles Philharmonic Orchestra, Alfred Wallenstein, Conductor; April 6 and 7, 1950.
- Chicago Symphony Orchestra, Ravinia Park, Ill.; William Steinberg, Conductor; Northwestern University summer chorus, George Howerton, Director; Soloists: Alyne Dumas Lee, Soprano; Ruth Slater, Contralto; July 25, 1950.
- III Minneapolis Symphony Orchestra, Antal Dorati, Conductor; Adyline Johnson, Soloist; The Cecilian Singers of Minneapolis, James Aliferis, Director; Choir Boys from St. John the Evangelist Episcopal Church of St. Paul, Minn., C. Wesley Anderson, Choirmaster; February 17, 1950.
- IV Los Angeles Philharmonic Orchestra, Alfred Wallenstein, Conductor; Jean Fenn, Soloist; November 17 and 18, 1949.
- Kansas City Philharmonic Orchestra, Hans Schwieger, Conductor; Jennie Tourel, Soloist; December 13 and 14, 1949.
- San Jose State College Symphony, Dr. Lyle W. Downey, Conductor; March 14, 1950.
- Seattle Symphony Orchestra, Eugene Linden, Conductor; June Beard, Soloist; March 9, 1950.
- V (*Adagietto*) San Antonio Symphony Orchestra, Max Reiter, Conductor; January 28, 1950.
- VII (*Nocturnes*) Buffalo Symphony Orchestra, William Steinberg, Conductor; March 26 and 27, 1950.
- VIII Philharmonic Symphony Society of N. Y., Leopold Stokowski, Conductor; Frances Yeend, Uta Graf, Camilla Williams, Martha Lipton, Louise Bernhardt, Eugene Conley, Carlos Alexander, George London, Soloists; Westminster Choir, John Finley Williamson, Director; Schola Cantorum, Hugh Ross, Director; Boys' Chorus from Public School No. 12 Manhattan, Pauline L. Covner, Teacher; April 6, 7, and 9, 1950. (The last of these was broadcast over CBS).
- IX Chicago Symphony Orchestra, George Szell, Conductor; April 6 and 7, 1950.
- The Festival Symphony Orchestra, Los Angeles, Calif.; Franz Waxman, Conductor; April 28, 1950.
- X Erie Philharmonic Society, Fritz Mahler, Conductor; December 6 and 7, 1949. (First performances in U. S. First broadcast January 21, 1950, over NBC.)
- DAS LIED VON DER ERDE**
- Boston Symphony Orchestra, Richard Burgin, Conductor; Jennie Tourel and Darid Garen, Soloists; April 13 and 14, 1950.
- KINDERTOTENLIEDER**
- Minneapolis Symphony Orchestra, Antal Dorati, Conductor; Marian Anderson, Soloist; March 17, 1950.
- Chicago Symphony Orchestra, Fritz Reiner, Conductor; Kathleen Ferrier, Soloist; March 23 and 24, 1950.
- LIEDER EINES FAHRENDEN GESELLEN**
- San Antonio Symphony Orchestra, Max Reiter, Conductor; Elena Nikolaidi, Soloist; February 4, 1950.
- Indianapolis Symphony Orchestra, Fabien Sevitzky, Conductor; Blanche Thebom, Soloist; February 11 and 12, 1950.
- Cincinnati Symphony Orchestra, Cincinnati May Festival, Fritz Busch, Conductor; Elena Nikolaidi, Soloist; May 3, 1950.

## SEASON 1950-1951

## BRUCKNER

- II San Jose State College Symphony Orchestra, Lyle W. Downey, Conductor; March 6, 1951.
- IV Buffalo Philharmonic Orchestra, William Steinberg, Conductor; December 17 and 19, 1950.  
Cleveland Orchestra, William Steinberg, Guest Conductor; December 21 and 23, 1950.  
San Francisco Symphony Orchestra, Bruno Walter, Guest Conductor; April 5 and 7, 1951.
- VI Chicago Symphony Orchestra, Jan Kubelik, Conductor; March 22 and 23 and April 3, 1951.
- VII Boston Symphony Orchestra, Charles Munch, Conductor; Boston, Mass., December 29 and 30, 1950; New York City, Jan. 25, 1951.

## TE DEUM

Schola Cantorum, New York City; Hugh Ross, Conductor; February 16, 1951.

## MAHLER

- I New Orleans Symphony Orchestra, Massino Freccia, Conductor; November 7, 1950.  
Erie Philharmonic Society, Fritz Mahler, Musical Director; February 27 and 28, 1951.  
Old Timers Orchestra, Local 802, American Federation of Musicians, Metropolitan Museum of Art, New York City; Frieder Weissmann, Conductor; March 31, 1951.
- II Chicago Symphony Orchestra, Ravinia Park, Chicago, Ill.; William Steinberg, Guest Conductor; July 25, 1950.  
Chicago Symphony Orchestra, Leonard Bernstein, Conductor; Alyne Dumas Lee and Ruth Slater, Soloists; Chicago Musical College Chorus and Christian Choral Club, John Baar, Director; January 25 and 26, 1951.  
Los Angeles Philharmonic Orchestra, Alfred Wallenstein, Conductor; Soloists; Phyllis Moffet and Janice Moudry; Roger Wagner Chorale, Roger Wagner, Director; Los Angeles, Calif., March 22 and 23, 1951; Pasadena Civic Auditorium, Pasadena, Calif., March 24, 1951.  
St. Louis Choral Society, Second Baptist Church, St. Louis, Mo.; Walter H. Kappesser, Conductor; Beaumont High School Choir; Bette Brauderick Dew and Barbara Watkins Swift, Soloists; March 28, 1951.  
San Francisco Symphony Orchestra, Bruno Walter, Guest Conductor; Stanford University Chorus, Harold G. Schmidt, Director; Dorothy Warenskjold and Claramae Turner, Soloists; April 12, 13, and 14, 1951.
- IV Cincinnati Symphony Orchestra, Thor Johnson, Conductor; Eleanor Steber, Soloist; October 21 and 22, 1950.  
Cleveland Orchestra, George Szell, Musical Director; Marie Simmelink Kraft, Soloist; Cleveland, Ohio, Nov. 2 and 4, 1950; Ann Arbor, Michigan, November 5, 1950; Toledo, Ohio, November 7, 1950; Oberlin, Ohio, November 28, 1950.
- V Chicago Symphony Orchestra, Rafael Kubelik, Conductor; December 7, 8, and 12, 1950.  
Boston Symphony Orchestra, Richard Burgin, Conductor; March 29 and 30, 1951.
- (*Adagietto*)  
Birmingham Symphony Orchestra, Birmingham, Alabama; Arthur Bennett Lipkin, Conductor; February 13, 1951.
- VII University of Iowa Symphony Orchestra, Iowa City, Iowa; Philip Greeley Clapp, Conductor; March 14, 1951.

## DAS LIED VON DER ERDE

Chicago Symphony Orchestra, Jan Kubelik, Conductor; Soloists: Blanche Thebom and Richard Tucker; April 5 and 6, 1951.

## SONGS OF A WAYFARER

Minneapolis Symphony Orchestra, Antal Dorati, Conductor; Blanche Thebom, Soloist; November 17, 1950.

*Chord and Discord*

Cincinnati College of Music, Roland Johnson, Conductor; Margaret Thuene-  
mann, Soloist; May 22, 1951.

## SONGS

Juilliard School of Music, New York City; Shirley Gatzert, Soprano; Samuel  
Krachmalnick, Pianist; May 2, 1951.

## KINDERTOTENLIEDER

University Methodist Temple, Seattle, Wash.; Johsel Namkuny, Bass; Mrs.  
Leona Wright Buntner, Organist; May 18, 1951.

## SEASON 1951-1952

## BRUCKNER

- IV Chicago Symphony Orchestra, Rafael Kubelik, Conductor; December 20 and  
21, 1951.  
Philadelphia Orchestra, Eugene Ormandy, Conductor; January 4 and 5, 1952.  
Boston Civic Orchestra, Paul Cherkassky, Conductor; February 7, 1952.  
Dallas Symphony Orchestra, Daniel Sternberg, Dean of the School of Music,  
Baylor University, Waco, Texas, Guest Conductor; Dallas, Texas, March  
19, 1952; Waco, Texas, March 20, 1952.
- VI National Symphony Orchestra, Howard Mitchell, Conductor; March 19, 1952.
- VII San Jose State College Orchestra, Lyle W. Downey, Conductor; March 4, 1952.
- VIII Chicago Symphony Orchestra, Bruno Walter, Guest Conductor; January 17  
and 18, 1952.
- IX Philharmonic Symphony Society of N. Y., George Szell, Conductor; December  
27 and 28, 1951.  
Cleveland Orchestra, George Szell, Conductor; March 27 and 29, 1952.
- PSALM NO. 150  
Cincinnati Symphony Orchestra, Cincinnati May Festival, Fritz Stiedry, Con-  
ductor; Festival Chorus; May 9, 1952.

## MAHLER

- I Philharmonic Symphony Society of N. Y., Dimitri Mitropoulos, Conductor;  
October 18, 19, and 21, 1951. (The last of these was broadcast over CBS.)  
Chicago Symphony Orchestra, Rafael Kubelik, Conductor; January 3 and 4,  
1952.  
Pittsburgh Symphony Orchestra, William Steinberg, Conductor; January 4 and  
6, 1952.  
Youth Symphony Orchestra, Meany Hall, Univ. of Washington, Seattle, Wash.;  
Francis Aranyi, Conductor; April 18, 1952.
- Second Movement*  
Youth Symphony Orchestra, Roosevelt High School Auditorium, Seattle,  
Wash.; Francis Aranyi, Conductor; April 22, 1952.
- II Cincinnati Symphony Orchestra, Thor Johnson, Conductor; Soloists: Nell  
Tangeman and Helen Houghham Hamm; Choruses: Cincinnati Conservatory  
of Music, College of Mount St. Joseph-on-the-Ohio, College of Music,  
Georgetown College, Miami University, Orpheus Club and Tri-State Masonic;  
February 8 and 9, 1952.  
Buffalo Philharmonic Orchestra, William Steinberg, Conductor; March 30 and  
April 1, 1952.
- IV Dallas Symphony Orchestra, Bruno Walter, Guest Conductor; November 28,  
1951.  
Detroit Symphony Orchestra, Bruno Walter, Guest Conductor; Nancy Carr,  
Soloist; January 31, 1952.  
Chicago Symphony Orchestra, Bruno Walter, Guest Conductor; Nancy Carr,  
Soloist; February 7 and 8, 1952.  
Minneapolis Symphony Orchestra, Bruno Walter, Guest Conductor; Nancy  
Carr, Soloist; February 22, 1952.
- IX Boston Symphony Orchestra, Richard Burgin, Conductor; February 22 and  
23, 1952.
- DAS LIED VON DER ERDE  
Kansas City Philharmonic Orchestra, Hans Schwieger, Conductor; Soloists:  
Blanche Thebom and Set Svanholm; November 20 and 21, 1951.

Chicago Symphony Orchestra, William Steinberg, Guest Conductor; Soloists: Jennie Tourel and David Lloyd, August 8 and 9, 1952.

**KINDERTOTENLIEDER**

Margaret Thuenemann, Mezzo-Soprano, and Frederic Gahr, Accompanist; Cincinnati College of Music, Cincinnati, Ohio; April 22, 1952.

Philadelphia Orchestra, Eugene Ormandy, Conductor; Marion Anderson, Soloist; April 10, 1952.

**LIEDER EINES FAHRENDEN GESELLEN**

Martial Singher, Baritone, and Paul Ulanowsky, Pianist; Town Hall, New York City; October 17, 1951.

Birmingham Symphony Orchestra, Bennett Lipkin, Conductor; Elena Nikolaidi, Soloist; March 13, 1952.

SEASON 1952-1953

**BRUCKNER**

III Chicago Symphony Orchestra, Rafael Kubelik, Conductor; November 13 and 14, 1952.

IV Chicago Symphony Orchestra, Rafael Kubelik, Conductor; March 26 and 27, 1953.

V University of Iowa Symphony Orchestra, Iowa City, Iowa; Philip Greeley Clapp, Conductor; January 28, 1953.

VII Chicago Symphony Orchestra, Otto Klemperer, Guest Conductor; January 13, 15, and 16, 1953.

Cleveland Orchestra, George Szell, Conductor; March 5 and 7, 1953.

VIII Philharmonic-Symphony Society of New York, Bruno Walter, Conductor; December 25 and 26, 1952.

Cincinnati Symphony Orchestra, Thor Johnson, Conductor; March 20 and 21, 1953.

**IX (Scherzo)**

Air Force Symphony, Washington, D. C.; June 20, 1953.

**F MINOR MASS**

Oberlin Conservatory of Music, Maurice Kessler, Conductor; December 7, 1952.

**TE DEUM**

Philharmonic-Symphony Society of New York, Bruno Walter, Conductor; The Westminster Choir, John Finley Williamson, Director; Frances Yeend, Martha Lipton, David Lloyd, and Mack Harrell, Soloists; March 2, 1953.

**MAHLER**

I University of Michigan Symphony Orchestra, Ann Arbor, Mich.; Wayne Dunlap, Conductor; April 2, 1952.

Indianapolis Symphony Orchestra, Indianapolis, Ind.; Fabien Sevitzyk, Conductor; November 8 and 9, 1952.

Pittsburgh Symphony Orchestra, Pittsburgh, Pa.; William Steinberg, Conductor; February 6 and 8, 1953.

**KILENYI BRUCKNER MEDAL AWARDED TO ROBERT SCHOLZ**

Acting on behalf of the Bruckner Society of America, its Executive Secretary, Robert G. Grey, made the following remarks when on March 12, 1950, he presented the Bruckner medal of honor to Robert Scholz, Conductor of the Mozart Orchestra of the Music School of the Henry Street Settlement, before a performance of Bruckner's *Fourth Symphony*:

"Mr. Scholz, Ladies and Gentlemen: Because Bruckner was a neglected composer, the Bruckner Society was founded in 1931 to encourage performances so that the music-loving public might be able to judge for itself the merits of his works. In the not distant past, whenever a conductor wanted to program a Bruckner symphony, he was advised by the powers that be not to do so, and usually took the advice. On those rare occasions when a conductor did perform a Bruckner symphony in spite of the opposition, a great part of the audience (sometimes one-third), unfamiliar with the music and influenced by previous reviews, walked out and the critics unanimously condemned the work using the old clichés—too long, prolix, formless, bombastic, banal. Recently, we have been hearing more Bruckner. WQXR and our

excellent municipal station WNYC broadcast recordings quite frequently. Recordings were unthinkable a quarter of a century ago. College and music school orchestras have played Bruckner recently at the Juilliard School, Eastman School, Henry Street Settlement Music School, Chicago University, State Teachers College at San Jose, Calif., and the University of Iowa. Our larger orchestras have given performances in the cities of the East, South, Southwest, Middlewest, and Far West. Today's audiences, instead of walking out, applaud and sometimes even cheer.

"Yet, in spite of the favorable reaction of audiences in various cities and of various audiences in the same cities, there still exists some prejudice against Bruckner in influential circles. The only way to overcome prejudice of any kind is by education. Repeated performances are in themselves an education, because they familiarize not only the listeners but also the participants with a given work. For this reason the importance of repeated performances by music school and college orchestras can hardly be over-emphasized. Today's students will be tomorrow's concertgoers, tomorrow's program committees, tomorrow's molders of musical opinion.

"Obviously, the directors of the Henry Street Settlement Music School do not share the waning prejudice against Bruckner, and if some do, they certainly do not interfere with your programs, Mr. Scholz. In 1948 you conducted the *Te Deum* and this year you are including two Bruckner works in a series of only four concerts. For the encouraging attitude of the directors of the Henry Street Settlement Music School and for your enthusiasm, Bruckner admirers are profoundly grateful. In recognition of your efforts to create a greater interest in and appreciation of Bruckner's music in the United States, the executive members of the *Bruckner Society of America* have awarded the Bruckner medal of honor to you. This medal was designed by the American sculptor Julio Kilenyi for the exclusive use of the *Society*. Among its holders are Walter, Klemperer, Koussevitzky, Ormandy, and Rodzinski. As executive secretary of the *Society*, it gives me great pleasure to present it to you, and may I express the hope that you will work in Bruckner's behalf for a long time to come."

## NOTES ON CONTRIBUTORS

HERBERT ANTCLIFFE is an English writer on music and art who has lived for many years in Holland. He has contributed articles on these subjects to the *London Times*, *New York Herald Tribune*, *Musical Quarterly*, *Music and Letters* and many other newspapers and periodicals. He acted as editor of the Netherlands articles in Cobbett's *Cyclopedic Survey of Chamber Music* and is responsible for many articles on Dutch (and other) music in two editions of Grove's *Dictionary of Music and Musicians*. His books include *Art, Religion and Clothes*, *Living Music*, *Short Studies in the Nature of Music* and *Muziek in Europa na Wagner*. He is also the composer of a number of church motets, some of which are published in the United States. He has been honored by Queen Wilhelmina with the Order of Officer of Orange Nassau for his work on behalf of Dutch music and by King George with a pension for his work on behalf of that of his own country.

JACK DIETHER, a Canadian writer resident in California, is now writing a book on Mahler.

PAUL H. LITTLE, who has been associated editor of *Musical Leader* since 1939, writes some 50 weekly community newspaper record review columns in Chicago and suburbs. Mr. Little gives occasional community center record concert-lectures, champions the unfamiliar, and has been a protagonist for the recording of music by Bruckner and Mahler, as well as works by American and other neglected composers.

DAVID RIVIER, M.A., Brown University, writes program notes for Vox recordings.

WARREN STOREY SMITH, born in Brookline, Mass., succeeded Olin Downes as Music Editor of the *Boston Post*. His musical compositions include orchestral and chamber music works as well as songs and piano pieces. He became a member of the faculty of Faelten Pianoforte School in Boston after his graduation from that school. He was assistant music critic on the *Boston Transcript*. In 1922 he became teacher of theory and composition at the New England Conservatory.

Among American artistic developments of recent years the rebirth of interest in the music of Bruckner and Mahler is second to none in significance. When *The Bruckner Society of America* was founded on January 4, 1931, performances of these two composers by our major musical organizations were not merely rare, but also ineffectual, because American music-lovers had no adequate approach to the proper appreciation of the art of either Bruckner or Mahler. Therefore the Society, having adopted as its chief aim the fulfillment of this void, published the first biographies of these composers in English and issued a magazine, *CHORD AND DISCORD*, devoted almost entirely to discussions of their works.

The Society solicits the cooperation of all who are interested in furthering this aim. Inquiries concerning membership may be directed to Robert G. Grey, Executive Secretary, 697 West End Avenue, New York 25, New York.

## BRUCKNER'S THREE GREAT MASSES

by DIKA NEWLIN

It is ironic that Bruckner's Masses—the cornerstone of his art in more senses than one—should today be the stepchildren among his major works, so far as performance is concerned. Few Masses have more sumptuously glorified the essences of Catholicism (at least, so it appears to a non-Catholic), but few churches have the artistic resources to present such music in a worthy fashion, nor is the grandiose orchestral celebration of the Mass, so well known to Vienna since its Classic era (witness Mozart and Haydn!), considered acceptable throughout the Catholic world. Those who may witness the celebration of the three great Bruckner Masses in Vienna's noble *Burghkapelle*, where they are still regularly performed with the participation of members of the Vienna Philharmonic, are fortunate indeed. For those who cannot, however, recordings and concert performances could provide suitable consolation—if they were more numerous. Yet, curiously, while Mozart's *Requiem*, Bach's B minor Mass, Beethoven's *Missa Solemnis* and even Bruckner's own *Te Deum* are welcome if not overfrequent concert guests, the Bruckner Masses have not yet attained this status for American concert audiences. A similar situation exists with regard to recordings. While all of the Bruckner symphonies are now available on LP—some even in several versions—there is no LP recording of the Mass in D<sup>1</sup>, only one presently available of the E minor Mass (Hamburg State Opera Choir and Orchestra, Telefunken 66033—formerly Capitol P 8004), and only one of the F minor Mass (*Akademie-Kammerchor* and “Vienna State Philharmonia”, Vox PL 7940). Even these are not ideal, as will be seen. An anomaly indeed, in an age when record companies both little and big are scraping the bottom of the barrel in an effort to bring novelties from every period of musical history to discs!

The neglect of these three great Masses is unfortunate from several points of view. One can take a purely esthetic standpoint and regret that so many music enthusiasts are not having the opportunity to hear some of the most deeply felt music of the Romantic Period. One can consider the spiritual values of this music, and regret that many people who, perhaps, are turning to mass-production varieties of religious experience for lack of knowing something better, are not being exposed to Bruckner's higher message. Or one can take the point of view of the historian and claim that we do not really understand the great Bruckner symphonies unless we know the Masses which preceded them, and which furnish their spiritual (in some cases, even their thematic) content. We in America are now beginning to accept the symphonies, in some instances even to take them to our hearts—as was proved by the enthusiastic responses to the Vienna Philharmonic's American performances of the Seventh. But perhaps we cannot completely accept them unless we

---

<sup>1</sup> Editor's Note—A recording of this Mass is now available on SPA records, but was released after Miss Newlin had completed this article. Her review of the recording, however, was received in time for inclusion in this issue and will be found on page 117.

accept also the spiritual background from which they sprang. It is this background which we shall find in the Masses. Thus the time seems ripe for those who are already well acquainted with those works to restudy and reappraise them, and for those friends of the symphonies who may not be so familiar with the Masses to make their acquaintance. This brief survey, then, may serve as a reminder and a guide for those who wish to make such a study. It can in no way take the place of the scores themselves or of the much-to-be-wished-for performances and recordings!

### I. Mass in D

The date of composition of this Mass may be fixed by a news report in the *Linzer Zeitung* of February 4, 1864. This notice informed its readers that Bruckner was hard at work on a Mass which was planned for performance at Ischl on August 18 of that year. This date—the Kaiser's birthday—was traditionally honored at Ischl with the celebration of High Mass by the Bishop of Linz. But Bruckner, fighting his way to mastership after his unusually long years of musical apprenticeship, was unable to finish the work in time for the grand occasion. As the manuscript score shows, the complete working-out of the composition consumed the period from July through September. The *Kyrie* was completed on July 4, the *Credo* on September 6, the *Agnus* on September 22, and the *Benedictus* on September 29; we have no dates for the completion of *Gloria* and *Sanctus*. The work then received its first performance at the Linz Cathedral on November 20, 1864.

Comparing this composition with the "School Symphony" (F minor) of 1863, we are immediately struck by the much greater mastery which the Mass displays. This is not surprising, for while Bruckner was a relative newcomer to the symphony, he was long practised in the routines of Catholic church music. Now, spurred on perhaps by his increasing unhappiness in Linz, which led him to search more deeply for musical and spiritual solutions to his problems, he was able to rise above the routine and to create what is generally considered his first full-scale masterwork. Indeed, this great Mass is more than worthy to stand beneath the symbol O.A.M.D.G. (*Omnia ad majorem Dei gloriam*), with which Bruckner humbly headed it—a symbol, indeed, of his whole life.

The *Kyrie* begins with a feature most familiar to us from Bruckner's symphonies—an eleven-measure pedal-point on D, given in repeated quarter-notes in the cellos. As always in Bruckner, this technical device has a deeper emotional meaning. Here it has a sombre effect, as broken fragments of phrases—like interrupted prayers—rise above it in the second violins and violas, poignant with their rising diminished fifths and falling chromatic steps. In the twenty-first measure, the chorus takes up these phrases, at first quietly, then rising to a climax at which we hear a bold counter-phrase of descending octaves in double-dotted rhythm in the trombones. (Such octave patterns were later favorites of Bruckner: cf. the fugue theme from his 150th Psalm (Ex. 1).

#### Ex. 1

Al - les was O - dem hat, Lo - be den Herrni.

They are perhaps descended from the *Kyrie* motif of Haydn's *Nelson Mass* which was well known to Bruckner (Ex. 2). Surging triplets in the strings

Ex. 2

gradually subside as we enter the *Christe* section. Following classical tradition, this portion is introduced by the solo voices, in contrast to the chorus. Rather than introducing new thematic material, these vocal parts utilize the emotional broken phrases already heard in the *Kyrie*, in inversion or transposition and with other slight alterations. Thus the techniques of symphonic development are put to good use; this section, in effect, could be said to resemble the development, elaboration or *Durchführung* section of sonata form, in which the thematic material is led through different harmonic regions. Following this, the text of the *Kyrie* is, of course, recapitulated. The music is recapitulated, too, but in strongly varied fashion—for instance, in the first invocation of this second *Kyrie*, the plaintive diminished fifth is replaced by the powerful upward-leaping octave and accompanied by a highly expressive countermelody in the solo viola. Once more, a great dynamic climax is reached, but the closing invocation of the chorus, followed by a postlude for the strings over a mysterious kettledrum-roll on D (the formal counterpart of the pedal-point at the beginning of the first *Kyrie*), is quiet and subdued. The orchestra, like the choir, ends, not on a D minor triad, but on an empty D octave—thereby skillfully paving the way for the D *major Gloria*.

After the opening intonation by the priest, *Gloria in excelsis Deo*, the choir chimes in with a unison scale-motif which is clearly related to material already heard in the *Kyrie* (Ex. 3). The octave-motif, too, plays a prominent role in

device (although its skillful use bespeaks Bruckner's mastery of the symphonic arts of motivic manipulation) but also expresses the composer's deep feeling for the spiritual unity of the Mass. But we discover even more interesting relationships as this section progresses. At the *Gratias agimus tibi*, a songful motif in flutes and oboes unexpectedly calls to mind themes of Mahler and Berg (Ex. 5). Biographical details would seem to make this more than a coincidence!

Mahler conducted this Mass in Hamburg on March 31, 1891. His fondness for self-quotation, which he shared with Bruckner and Berg, also sometimes

extended to the quotation (conscious or not) of the ideas of others. Is it too farfetched to suppose that in the Ninth Symphony—his swansong if we except the incomplete Tenth—his backward look at his own life might have unconsciously summoned up this musical recollection of a period of youthful striving? As for Berg, his devotion to Mahler's Ninth is well documented (he called the first movement "the most heavenly thing Mahler ever wrote"). And Berg's Violin Concerto, in which this reminiscence is included, was also a farewell to this earth.<sup>1</sup>

It is the *Miserere* which Bruckner is later to quote, first in his "Wagner" Symphony and later, as his "Abschied vom Leben", in the Adagio of the Ninth (Ex. 6). In the latter instance, the quotation is integrated into the fabric

of the movement by being related motivically to the beginning of the subordinate theme (Ex. 7). This is perhaps the most famous example of the intimate

### Ex. 7

Bruckner, Ninth Symphony, Adagio (Haas ed. cue C)

(inversion and diminution)

relationship between Bruckner's symphonies and his Masses; we shall, however, see others.

Like the *Kyrie*, the *Gloria* displays a sonata-like organization, with a recapitulation of the initial march-like theme, and culminates, as do all the *Glorias* of these three great Masses, with an imposing *Amen* fugue, in which many motifs already heard are skillfully interwoven to achieve a grandiose climax. The *Amen* motif itself might be considered a transmutation of the *Miserere* motif—as if the worshippers' plea for mercy had now been Divinely answered

<sup>1</sup> For further details on this odd set of circumstances, see Hans Redlich, *Bruckner and Mahler*, pp. 220-221, and the same author's *Alban Berg*, p. 211.

(Ex. 8). Yet it cannot be sufficiently emphasized that all these elaborate motif

Ex. 8

(a) Transposition of *Miserere* motif to D major

(b) *Amen* theme

developments and contrapuntal intertwinings are not considered by the composer as merits in themselves but—like the much-misunderstood “artifices” of the fifteenth-century Netherlanders—as means to the glorification of God. Bruckner makes this very clear in a letter of April 22, 1893, to his friend Franz Bayer in Steyr, in connection with an excellent performance of this Mass that had recently taken place there. Annoyed by references to technical features, including a pedal-point in the Brahms *Requiem*, which had been dragged into a Steyr review of this performance, he remarked with characteristic bluntness. “I’m no pedal-point pusher—I don’t give a hang for that. Counterpoint isn’t genius, but just a means to an end. And it’s given me plenty of trouble!”<sup>2</sup>

The *Credo* begins, after the priest’s opening *Credo in unum Deum*, in vivid D major Austrian festival-mass style. Again we meet the octave-motif already noted in the *Kyrie* and *Gloria* (Ex. 9). After a vigorous first section, a modula-

Ex. 9

Pa-trem om-ni-po-ten-tem, fac-to-rem coe-li et ter-rae

tion through the ambiguous diminished seventh chord D sharp-F sharp-A-C leads us to the mystical *Adagio* section in F sharp major. Over a gently rocking string background, the solo voices, later to be joined by the chorus, introduce the motif of *Et incarnatus est*. At the critical moment *Et homo factus est*, the same diminished seventh chord, by enharmonic change and re-interpretation, leads to the most distant possible modulation from F sharp major—and we find ourselves in the very “earthly” key of C. The Crucifixion is proclaimed by all voices in unison against a background of massive chords in the winds and brasses, throbbing triplets in the violas, cellos and basses, and rushing sextuplets in the violins—a typical Bruckner orchestral pattern. But it is not until we reach the scene of the Resurrection and Last Judgment that we meet the dramatic symphonist in full force. The beat of the double-basses on A, underscored by the roll of the tympani, underlines a sharply-profiled theme in dotted rhythm which, like so many of Bruckner’s symphonic themes, evolves in

<sup>2</sup> Bruckner, *Gesammelte Briefe (Neue Folge)*, p. 272.

fragmentary fashion. The twenty-eight-measure buildup on A before the eruption of the men's voices in a triumphant A major *Et resurrexit* may well have given valuable hints to Mahler for his Sixth Symphony, which begins in like manner with a beating pedal-point on A and with a vigorous dotted rhythm. In any case, it is a striking example of how the pedal-point may be used for dramatic effect—although Bruckner was even to surpass this in his F minor Mass. The motif *Judicare*, intoned by tenor trombones and chorus tenors, may be related to a melodic shape from the first theme of the Seventh Symphony (Ex. 10) but this is probably more a characteristic Bruckner melody-

## Ex. 10

*Credo*, mm. 177-178

Seventh Symphony, mm. 12-13

(a) (b)

Ju - di - ca - re

type than a deliberate quotation. The Resurrection scene completed, the festal theme of the *Credo*'s opening returns (*Et in spiritum sanctum*) and we are treated to an energetic and vigorous close (without fugue). As always in Bruckner, many textual details are vividly illustrated. A vocal line worthy of the later Viennese Expressionists is given to the basses in a striking passage (Ex. 11).

## Ex. 11

*Credo*, mm. 272-79

*f* Et ex-pe-cto-re-sur-re-cti-o-nem *pp* mor-tu-o-rum.

The *Sanctus*, again in D major, begins quietly, yet majestically. The slowly rising threefold invocations remind us of the rising scales of *Kyrie* and *Gloria*, except that the scale is now broken into fragments instead of being smooth and continuous; and the ubiquitous octave-motif again makes its appearance (Ex. 12). *Pleni sunt coeli*, with its vigorous countermelody in staccato eighth-

## Ex. 12

San - ctus, San - ctus, San - ctus Do-mi-nus

notes in the strings, exhibits the chromatic half-steps of the *Et in terra pax* theme; and *Hosanna* is trumpeted in the fourths which are characteristic of many a Bruckner symphonic theme (cf. Third Symphony, first movement). In the midst of all this tumult the *Benedictus* (in G major, the only use of this

key for a major section of this Mass) is a peaceful, almost pastoral interlude, from which trumpets and trombones are absent until the climax (mm. 62-65). Interesting are the harmonic means whereby Bruckner constructs a "retransition" from G major to the D major with which the reprise of the *Hosanna* begins. This is one of the closest possible modulations, yet he goes "the long way around" and ends his retransition with the surprising triad of C sharp major! The C sharp then becomes a leading-tone to the desired key of D.

It is consistent with Bruckner's concept of symphonic form—still to be fully developed in his symphonies, but here clearly present in the Mass—that the *Agnus Dei* and particularly its final section, the *Dona nobis pacem*, should provide a summation of all that has gone before (Ex. 13). Intermingling

diverse motifs in symphonic (some would say leitmotivic) fashion, the *Dona* rises to an exciting D major climax in which the full chorus and orchestra participate, then subsides to a quiet and humble close with four simple D major triads played by the strings over a soft roll of the timpani.

We have examined this Mass in considerable detail since (as previously indicated) it is the least readily available to the average listener. Let us now survey the remaining two Masses more briefly, yet with attention to their salient points.

## II. Mass in E minor

Like all of Bruckner's major works, the E minor Mass has a somewhat complicated history of revisions. Commissioned by Bruckner's great patron Bishop Rudigier, it was composed during the fall of 1866. Its first version was completed on November 25 of that year. A revision was made in 1869, and this version was conducted by Bruckner in an open-air performance in front of the Linz Cathedral, on September 29, 1869. Of the many subsequent revisions, the 1882 one has been chosen by Robert Haas and Leopold Nowak as the basis of their critical edition (Vol. 13 of the Complete Works). This version, however, is not adhered to in the single recorded performance, which displays an inadmissible cut in the *Gloria* (measure 94 being joined with measure 104 and the important recapitulation at *Quoniam tu solus sanctus* thereby being obscured). There is also disagreement among various versions as to whether a trombone and horn passage of the *Credo* (again just before a recapitulation, at *Et in spiritum sanctum*) should consist of one or two measures. (The critical edition gives two, but the recorded performance gives one.)

The score of this work presents a very different aspect from that of the Mass in D. While the earlier composition utilized a full symphony orchestra including flutes, oboes, clarinets, bassoons, horns and trumpets in pairs, three trombones, timpani and strings, in the E minor Mass we are confronted with a much more restrained orchestral setting—no flutes, but oboes, clarinets and bassoons in pairs, four horns, two trumpets and three trombones. And, in the *Kyrie*, it is even indicated that this accompaniment is not obligatory. What is the meaning of this change? Redlich has attributed it to "the uncertainty of [Bruckner's] relations to the musico-liturgical authorities of the time." Bruckner was fascinated by plainsong and Palestrinian tradition, yet could never truly reconcile himself to the limited viewpoint of the "Cecilians", who desired to return church music to Palestrinian purity and to eliminate the vivid orchestra of the Viennese Classic Mass. While he did essay works in the pure modal *a cappella* style (e.g., the Phrygian *Pange lingua*, 1868, and Lydian *Os justi*, 1879) he was surely happier with the successful compromise between a *cappella* modality and richly orchestrated chromaticism which is achieved in the E minor Mass. Thus, we meet an opening phrase of plainchant-like character, with a Phrygian close, in the *Gloria* (Ex. 14), and a motif directly

### Ex. 14

borrowed from Palestrina's *Missa Brevis* in the *Sanctus* (Ex. 15). On the other

**Ex. 15**

*Sanctus*, opening canon between 1st alto and 1st tenor

hand, the expressive chromaticism of the Mass in D is found in the *Benedictus* (Ex. 16), and the *Kyrie* reproduces the sighing motif of the corresponding

**Ex. 16**

section of the earlier work.

Of course, the opportunities for dramatic display are far fewer in a Mass of this type than in the fully instrumented D and F minor Masses. Thus, the thrilling orchestral interlude between *Passus et sepultus est* and *Et resurrexit*, so prominent a feature of the Mass in D, is here reduced to two rapid measures of empty fifths (F-C) sounded in repeated eighth-notes by clarinets and bassoons before the triumphal entry of tenors and basses with the joyous outcry "Et resurrexit!" on an F major triad. (For further examples of the importance to Bruckner of the throbbing eighth-note rhythm in empty fourths and fifths as a means of expressing energetic and joyous faith, the corresponding passage in the F minor Mass, and the beginning of the *Te Deum*, may be cited.) But the abbreviated interlude seems just as effective in making its point as are the more grandiose Resurrection episodes of the "symphonic" Masses. Some may feel (as was certainly true in Bruckner's day) that the more modest treatment is more truly "churchly" than the showier one. Others will, more objectively, appreciate the merits of both approaches, and may even feel that Bruckner, with his lavish use of the orchestra in the D and F minor Masses, illustrated in his own way the oft-paraphrased saying of Haydn: "When I think of God my heart leaps up with joy—so why shouldn't my music do the same?" The E minor Mass certainly does have sumptuous sonority to offer in spite of its reduced instrumentation—indeed, the division of the choir into eight parts rather than four often seems to replace the missing instruments. Nor is there any weakening of the arts of counterpoint—again we find, at the close of the *Gloria*, a splendid *Amen* fugue, one of whose themes is (surely not by coinci-

dence, considering Bruckner's habits of quotation) a modification of the Kyrie theme from the Mass in D (Ex. 17).

## Ex. 17

(Compare Ex. 13a)

Curiously, it is recounted that Bruckner played the organ at the second Linz performance (sixteen years after the first) of this Mass. Yet, no organ part is included in the score. Perhaps the accompaniment was performed entirely on the organ on this occasion? That would not be an impossible solution, in the case of this particular Mass—and doing so would certainly increase the chances of our being able to hear the work in churches, where, after all, it belongs!

## III. Mass in F Minor

The time of composition of this work, Bruckner's most triumphant essay in the style of the symphonic Mass, overlaps with that of the E minor Mass—hence a certain confusion in their numbering. Wöss, for instance, in his edition of the E minor Mass, gives it the traditional numbering of "No. 2", yet characterizes it as probably the last of the three great Masses to be composed. Redlich also calls the E minor Mass "Bruckner's third mass written during the Linz period." In point of fact, the composition of the F Minor Mass was begun later than that of the E Minor; the writing of its first version consumed nearly a year, from September 14, 1867, to September 9, 1868. The first of many revisions took place in 1872, in preparation for the work's first performance on June 16 of that year at Vienna's *Augustinerkirche*, under the composer's direction. Subsequent revisions occurred in 1876, 1881 and 1883. It is on the 1881 text (the manuscript of which was willed by Bruckner to the Vienna Court Library but, through a curious concatenation of circumstances, turned up missing at the time the provisions of the will were carried out and did not come into the possession of the—by then—National Library till 1922) that Haas' critical edition is based. As in the case of the E Minor Mass, however, the only available recording does not use the preferred text. (The few measures of soprano solo near the end of the *Christe*, mm. 67-70, are excised.)

In this monumental work, which employs the same orchestra as the Mass in D, Bruckner comes even nearer to the ideal of the completely "symphonized" Mass. Deviating from the pattern set in the two other Masses, the words *Gloria in excelsis Deo* and *Credo in unum Deum*, traditionally intoned by the priest, are here instead given full choral and orchestral setting. More, the word *Credo* is recapitulated numerous times with joyous choral interjections, where liturgically it ought not to be, in the very free "fugue" of *Et vitam venturi saeculi*. In consistency with this symphonic nature, the degree of motivic integration is unusually high. The germ-cell of the entire work may be found in

the opening Kyrie motif (Ex. 18). This scale-line, reversed from its descending ("kneeling") motion, makes the triumphant upward-surgings *Gloria* theme and, in diminution, the typically Brucknerian motoric eighth-note figure which accompanies it (Ex. 19). The simple, modally flavored setting of the next

cel - sis De - o.

Strings

text-line, also based on the same scale-span of a fourth, reminds us of the modal setting of these same words in the E minor Mass (Ex. 20). The boldly profiled

## Ex. 20

Et in ter-ra pax ho-mi-ni-bus.

theme of the *Gloria's* fugue (this time based on the full text *In gloria Dei Patris, Amen*, rather than on the simple *Amen*) is made up of several favorite Bruckner motifs: the trenchant octave- and fifth-leaps and the ubiquitous scale-motif, now extended to the range of a seventh. To be noted is also the diminished seventh-leap which introduces a tinge of that chromaticism favored by Bruckner when he was not attempting to be strictly modal (Ex. 21). And

## Ex. 21

In glo-ri-a De-i Pa-tris A-men.

the fourth- and fifth-leap, implicit in the initial scale-motif, take over in the Resurrection scene with a figure, beginning in the violas, gradually spreading through all the strings, and continuing (in variants) through 101 measures, which is the direct ancestor of the *Te Deum*'s blazing opening (Ex. 22). It is

## Ex. 22

(This group of tones is repeated for 18 measures)

cal significance as well as a musical one. The Mass originated at a time when Bruckner was just recovering from a severe nervous breakdown. In fact, it represented his thanks to God for a return to mental and spiritual health. The Second Symphony, too, comes from a period of crisis. Frightened by the negative reception given to his much bolder First Symphony (the "saucy besom") by critics and audiences, he now became increasingly form-conscious, and attempted to follow classical precepts as strictly as possible. In addition to this, he was deeply involved in the many problems caused by his move to Vienna in 1868. What more natural and heartfelt than this simple gesture of the *Kyrie* quotation, by which he figuratively laid his problems both musical and personal at God's feet for resolution?

And who are we to say that this prayer was not answered?

The reader may wish to consult the following printed and recorded versions of Bruckner's Masses which were used in the preparation of this article.

*Messe in D*, herausgegeben von Josef V. Wöss. Vienna, Wiener Philharmonischer Verlag, 1924. (Philharmonia No. 264).

*Messe in E-Moll* (Fassung 1882), vorgelegt von Robert Haas und Leopold Nowak. (Anton Bruckner, *Sämtliche Werke*, 13. Band.) Wiesbaden, Brucknerverlag, 1940.

*Messe in F-Moll* (Originalfassung), vorgelegt von Robert Haas. (Anton Bruckner, *Sämtliche Werke*, 14. Band.) Wiesbaden, Brucknerverlag, 1944.

*Mass in E Minor*. Hamburg State Opera Choir and Orchestra, M. Thurn, conductor. Telefunken 66033.

*Mass in F Minor*. Dorothea Siebert, soprano; Dagmar Herrmann, alto; Erich Majkut, tenor; Otto Wiener, bass; Akademie-Kammerchor and "Vienna State Philharmonia", Ferdinand Grossmann, conductor. Vox PL 7940.

Wiener Philharmonischer Verlag scores may be obtained through Associated Music Publishers, 1 West 47th, New York City 36. The study scores of the Bruckner *Urtexte* may be obtained through C. F. Peters Corporation, 373 Fourth Avenue, New York City 16.

#### KILENYI-BRUCKNER MEDAL AWARDED TO STATION WFMT, CHICAGO

In appreciation of the efforts on the part of its management to create greater interest in and appreciation of the music of Anton Bruckner, Station WFMT, Chicago, Ill., has been awarded the Bruckner Medal of Honor, designed by the eminent sculptor, Julio Kilenyi, for the exclusive use of *The Bruckner Society of America*. Recordings of the Austrian master's works have been included regularly in the monthly programs of the station over a considerable period of time, thus affording a large audience of music lovers an opportunity to become familiar with the works of a composer infrequently performed in the concert hall. In November 1955 all available Bruckner recordings were broadcast.

The presentation was made by Mr. Charles L. Eble, Vice President of the *Society*, on November 6, 1955.

*To the Memory of Marianna Taylor, M. D.*  
(1881-1956)

## THE CREATIVE PROCESS AND MAHLER'S TENTH SYMPHONY

by KLAUS GEORGE ROY

"The most important part of music  
is not in the notes." (Gustav Mahler.)

The present article is to be one of two dealing with the unfinished Tenth Symphony of Mahler. The second will concern itself in technical terms with the details of the creative process as it is demonstrated in the musical score itself: how the sketches of a melody look at first, what stages it goes through, how it appears in full score. What can we learn about a composer's structural concepts when he strikes through a measure here, adds a page there, draws arrows and connecting lines? What are every composer's problems in writing a symphony, and how did Mahler handle them in the Tenth? In short, that article will be a study of interest mainly to the professional musician.

In this inquiry, something else is attempted, and attempted with many misgivings. Its subject is not so much the "direct evidence" of the score but the "circumstantial evidence" of Mahler's life as man and composer. The questions to be asked are not conducive to easy or definitive answers. What is the nature of the creative process in music, as it applies particularly to the Tenth Symphony? How does this work, in turn, illumine the nature of the creative process in general? What are the elements of possible misunderstanding about the often terrifying appearance of the facsimile manuscript?

The author's misgivings are these. He did not see Mahler at work; he must accept much second- or third-hand. He is not a practicing psychiatrist — not even a non-practicing one. The highly complex elements of depth psychology involved here may lead him into theoretical errors; yet he hopes to offer no "half-baked" psychiatric jargon. (That any serious study of the creative process is intimately, perhaps inextricably, related to psychological considerations will be obvious to any reader.) He is not willing to wrestle with the whole phalanx of problems on the basis of his own meager powers, but seeks the assistance of the discerning thought processes of many noted scholars. Yet he is certain to miss many a revealing comment, leave important issues untouched. This writer, let it be admitted, is simply a composer who has been moved by Mahler's music, and has in some ways been influenced by him. He has long been interested in the secrets of the creative process in art, and has written a demonstration piece for his composition classes that tries to illustrate the working methods akin to all composers, major, medium, and minor. He believes that in the Tenth Symphony a number of basic insights can be found. Some of these will strike the musician as commonplace; many of the opinions expressed will be considered as obvious by those who

have also thought along these lines. The author may be accused of arguing a non-existent issue at one point or another. His answer would be that the non-composer tends to misunderstand the relationship of a composer's life with his work; few documents will lead their beholders into so many untenable or at least dubious conclusions as does the facsimile of Mahler's manuscript in this instance. What follows should be mercifully free of dogmatic pronouncements; as Graham Greene puts it in his recent play, "The Potting Shed" — "when you're not sure, you're alive." It means, however, to raise a large number of questions along avenues which concern every person who has wondered about the connection between art and life.

\* \* \*

If you, the reader, have this copy of CHORD AND DISCORD before you, it is likely that you have immediate access also to the December 1941 issue. On page 43 you will find an excellent discussion of the basic facts of Mahler's Tenth Symphony, which you should read first. Written by the Viennese composer Frederick Block, it tells us about the publication of the sketches in 1924, thirteen years after Mahler's death in May, 1911, and describes the amazing and affecting appearance of the manuscripts in their life-like facsimile reproduction. The article mentions the first performance, from a reconstruction by Ernst Krenek (Prague, June 10, 1924), and offers brief but cogent analyses of all five movements. Up to this time, it has been possible to salvage for performance only the first and third movements (*Adagio* and "Purgatorio").

Alma Mahler, the composer's widow, makes clear her feeling in the foreword to the facsimile publication that she considered it her duty, after long vacillation, "to reveal to the world the last thoughts of the master." This step, valuable as it is to us, has reaped for Mrs. Mahler a certain amount of critical head-shaking, if not rebuke. It is quite unlikely that Mahler would have approved such publication; at the same time, it is reported that he gave permission to his wife to do with the sketches whatever she saw fit, should he be unable to complete them.

In a perceptive study, "Some Notes on Mahler's Tenth Symphony" (*The Musical Times*, December 1955, p. 656), the English critic Donald Mitchell writes: "There can be no doubt whatever that publication of the Tenth Symphony's sketches — whether justified or not — revealed with terrible clarity the mental stress and strain under which Mahler was working. The manuscripts are littered with wounded cries and incoherent exclamations. It is from this kind of exposure that I think a fastidious mind must recoil. Some private agonies should be left private and the sketches, I feel, might well have been left on deposit at a library where those with an interest deeper than mere curiosity might have freely consulted them. The third movement of the work is titled 'Purgatorio or Inferno'; and though Mahler afterwards crossed through 'Inferno', and would doubtless have eliminated 'Purgatorio', had the work reached a final stage, the title is indeed appropriate. The state of mind in which the Tenth Symphony was composed must have approximated very closely to a private hell."

For better or for worse, then, we have the sketches. All the exclamations strewn over those pages are exactly and mercilessly translated on the last page of Alma Mahler's book, "Gustav Mahler, Memories and Letters" (New York, Viking Press, 1946). The writer reproduces them here with the keen-

est reluctance, realizing the while that the original document has been in the public domain for more than thirty years:

Third Movement ("Purgatorio"). *Death! Transfiguration!* (page 4.) *Compassion! O God! O God, why hast thou forsaken me?* (page 3). Fourth movement; title page: *The devil leads me in a dance . . . Madness seizes me, Accursed! Demolish me that I may forget my being! that I may cease to exist, that I may . . .* End of movement (muffled drum): *None but you knows what it signifies! Ah! Ah! Ah! Fare thee well, my lyre! Farewell, Farewell, Farewell Ah well — Ah Ah.* Fifth Movement, Finale: *To live for thee! To die for thee! Almschi!* (page 10.) (These words occur again at the close of the movement).

As mentioned earlier, the detailed study of the music's growth from idea to shape, from germ-cell to vast melodic arch, from sketch to score, must be reserved for a later study. The steps used in the reconstructions, in which several composers took part, can there be traced at hand of musical examples. But what must here be said at the outset is of vast importance for this inquiry. A considered glance at the sketches reveals to a musician a fact which descriptions of the publication may not have led him to believe: namely, that with the sole exceptions of the verbal exclamations and indications of an unusual degree of haste, the sketches are perfectly normal working devices on the road to a production of a complex musical score. In fact, the full score of the *Adagio* (the step after the "Particell" or reduced score, which in turn followed the initial sketches) is for the most part clear and even neat; transcribing it into a practical score for performance was nowhere near as difficult as was the labor over the brief third movement. All the ink blots, arrows, connecting lines, angry smudges, etc., have nothing essentially to do with the state of the composer's mind. Most early sketches, moreover, are indecipherable to anyone but their authors. You will find the same true of a sketch by Beethoven — who, however, rarely took the trouble to produce a readable end-product. Mahler would have been the first to laugh at the old joke that composition was made up of 10% inspiration and 90% perspiration. "Revision need not lack spontaneity", writes Brewster Ghiselin in his book, *The Creative Process* (University of California Press, Berkeley and Los Angeles, 1952); "and there would be little use in it if it did." Nor does revision, the creative labor of polishing and perfecting, appear to gain from a lack of mental equilibrium; perhaps the very opposite. What is useful to us when we see a page of first sketches is the same thought that struck John Livingston Lowes when he perused the Note Book of Coleridge: "There, in those bizarre pages, we catch glimpses of the strange and fantastic shapes which haunted the hinterland of Coleridge's brain . . . What the teeming chaos of the Note Book gives us is the charged and electrical atmospheric background of the poet's mind."

The realization that the working method in Mahler's Tenth, however hastened by the awareness of impending death, is essentially a natural and normal one, hardly different from that of his other works — but that the verbal outbursts show every mark of irrationality and extreme disturbance, is an issue to which we must return again and again as we study the problem. But in order to place the problem in its proper context, we should look at the nature of the creative process itself — as Mahler saw it, as others see it, and as it applies to this absorbing composition.

"One does not compose," Mahler once said; "one is composed." The Eng-

lish word 'composed', unfortunately, has a double connotation which the German lacks: "Man komponiert nicht; man wird komponiert." 'Composed', in the alternate meaning, Mahler certainly was not; 'consumed' might be more correct. But the concept that the composer is the acted-upon rather than the acting participant in the creative act (!) is a striking one, shared by virtually all the romantics. Even so "classically" thinking a master as Brahms said, "that which in general is called invention, i. e. the thought, the idea, is simply a higher inspiration for which the artist is not responsible, for which he can take no credit." And Mahler claimed that "the creation and genesis of a work are mystical from beginning to end, since one — himself unconscious — must create something as through outside inspiration. And afterwards he hardly understands how it happened." The contemporary American composer Roger Sessions arrives at an astonishingly similar view: "The composer . . . is not so much conscious of his ideas as possessed by them. Very often he is unaware of his exact processes of thought till he is through with them; extremely often the completed work is incomprehensible to him immediately after it is finished." Paul Hindemith draws our attention to the appropriateness of the German for an idea, an inspiration: "Einfall" — a "dropping-in"; but he warns that this is just the first step for a composer, the mere raw material. Donald Francis Tovey, the great English scholar, would have sharply disagreed with both Brahms and Mahler that the composer can take no credit for his flashes of inspirational insight. As he sees it, and as Hindemith and Stravinsky and most modern masters see it, inspiration is "akin to first-rate athletic form." It comes only to those who are ready to receive it, and while waiting to work for it. (Symposium question to Copland: "Sir, do you wait for inspiration?" "Every day." "But what do you do till it comes?" "I work.") The master composer is conditioned as well as liberated by his skill, by his knowledge of what he has to do. How well Beethoven knew this, the moment he fixed an idea on paper — how many permutations it would have to go through before it reached (for the naive listener) a state of "inspiration"! Any idea, heaven-sent as it may seem, must be recognized, captured, instantly put to work — consciously or subconsciously. Not only that: in the hour of inspired work, the creative genius can call for the kind of theme or rhythm or color he needs: a demigod, he commands the muse to bring him what he wants. To the non-composer, the act seems like rubbing the magic lamp to conjure up the obedient genie. Aladdin, however, had merely luck; the composer must have skill. Every creative artist of some attainments knows the feeling of "things going right", of the pen moving where the mind directs, of the visions falling into focus, the ideas crowding up in a ceaseless flow as if summoned, the solutions coming easily to hand. But often, what sounds most spontaneous may be the hardest worked-for, and few composers worked so hard at their ideas as Mahler: a slave to his vision, he toiled endlessly over his scores, attentive to every detail, never satisfied, much more severe with his work than any critic could be — and all this directed toward the realization of what he conceived as the ideal of perfection.

Mahler the metaphysicist, the indefatigable seeker after the solutions to philosophical and religious problems, seemed to attribute (or wished, as a true romantic, to attribute) to divine inspiration what his preparation, his fabulous acquired skill made it possible for him to accomplish. He proves in this last work — so intimately intertwined with the facts of his personal

life, that what he claimed to be unable to comprehend at its source was as an *artistic* creation the result of the all forces he could bring to bear on it. With *opus ultimum*, the final work of a master, these powers are often raised to a pinnacle of awesome height—be it Bach's unfinished "Art of Fugue" or Mozart's unfinished "Requiem" or Mahler's unfinished "Tenth Symphony."

In his book, *Introduction to the Psychology of Music* (Norman: U. of Oklahoma Press, 1954), Dr. G. Révész demonstrates that these two concepts the "metaphysical" and the "psychological", which are "understood and represented as opposites . . . are by no means contradictory, but really supplement each other." It soon becomes clear that the two are in fact inseparable. Révész quotes Nietzsche's comments on the highly involuntary, tempestuous feelings of inspiration, of power and "divinity", but also quotes him in a remark which characterizes Mahler's working method as it does Beethoven's: "All great men are great workers, indefatigable not only in invention, but also in rejecting, revising and arranging."

Look at the sketches! Behold the amount of conscious labor, the thorough awareness of what was good, what was useful, what was weak—the process of criticism almost instantaneous with the process of invention; in short, the two are indivisible. The very fact that there *are* sketches serves as proof. If it were true that by the metaphysical method of creation "the composer could bring forth musical ideas in more or less final form through the action of his unconscious . . .", then why sketches? Schubert and Mozart very rarely sketched; but these men did the parallel labor in their heads, rather than on paper, and there are many extant examples of their revisions. The working methods of composers differ sharply; the essential mental processes are virtually the same. One may crudely compare the issue with digestion or circulation; however divergent the outward manifestation from one person to another, the actual nature of the function remains the same.

But as we go back to the Tenth Symphony, we can see at once how the most elemental creative experience of the first sketches is already modified, made conscious, in the process of revision, of change, or improvement. Of course, an important alteration in a melody or rhythm is to a real composer also a truly creative act, and often a discovery that affects him as powerfully as did the initial version, if not more so. "Eureka! I have found it!" But the head-work that visibly and promptly takes over in these sketches, sometimes seconds after the flash of inspiration has struck home, must account for the degrees and stages of involvement that the composer's psyche undergoes. This comparative lessening of involvement, until the final product may almost seem strange and foreign to its creator, is well explained by Sessions: "The composer's experience in creating the work is incalculably more intense than any later experience he can have from it; because the finished product is, so to speak, the goal of that experience and not in any sense a repetition of it. He cannot relive the experience without effort which seems quite irrelevant. And yet he is too close to it to detach himself to the extent necessary to see the work objectively, and to allow it to exert its inherent power over him." On the other hand, we have many reports about the intense "re-living" Mahler experienced at times when conducting his own scores, hours which left him emotionally as well as physically exhausted.

With some composers, work of distinct inspiration may take place totally without perspiration, controlled almost entirely by calm and conscious application of enormous talent and skill. J. S. Bach, Haydn, Stravinsky might be

examples. But we know how Mahler (as Beethoven before him, and a majority of the romantics in general) "agonized" over his compositional labors. What Ghiselin writes must be true of him: "The concentration [of the creative state] may be so extreme that the worker may seem to himself or others to be in a trance or some similar hypnotic or somnambulistic state . . . The creative discipline when successful may generate a trance-like state, but one does not throw oneself into a trance in order to create." Indeed not; as Mahler said, in a letter to his wife at the time of this symphony's sketches, "in art as in life I am at the mercy of spontaneity. If I had to compose, not a note would come." (Contrast this with Mrs. Richard Strauss's frequent command to her husband, who tended to indolence: "Richardl, now you go compose.") Yet the trance-like state in which many composers work (hardly realizing to what extent they are really doing brain-work) looks confusing to the beholder, and supplies the music-appreciation specialist with some of his wildest misconceptions. Dr. Susanne Langer, in her superb study, *Philosophy in a New Key* (1942; third edition 1957), deals brilliantly with this problem of stress in artistic creation:

"We find the belief widely disseminated that music is an emotional catharsis, that its essence is self-expression . . . Moreover, it is the opinion of the average sentimental music-lover that all moving and poignant music must translate some personal experience, the longing or ecstasy or despair of the artist's own *vie amoureuse* . . ." What Dr. Langer would answer when confronted with the sketches of the Tenth Symphony, and informed of the undeniable facts of the composer's condition at the time of writing, is probably this: she would first prove that all composers (Mahler included) have written some of their saddest music while feeling most cheerful on the surface, and the other way 'round. Examples are legion. She would then quote Wagner, who wrote: "What music expresses is eternal, infinite and ideal; it does not express the passion, love, or longing of such-and-such an individual on such-and-such an occasion, but passion, love and longing in itself; and this it presents in that unlimited variety of motivations which is the exclusive and particular **characteristic of music**, foreign and inexpressible to any other language." Most important, she would continue with this passage of her own: "Music is not self-expression, but formulation and representation of emotions, moods, mental tensions and resolutions—a 'logical picture' of sentient, responsive life, a source of insight, not a plea for sympathy . . . For what music can actually reflect is only the morphology of feeling . . ." Sessions similarly explains what happens in any great work of art, and surely in music like the Tenth Symphony: "'Emotion' is specific, individual and conscious; music goes deeper than this, to the energies which animate our psychic life and out of these creates a pattern which has an existence, laws, and human significance of its own. It reproduces for us the most intimate essence, the tempo and the energy, of our spiritual being; our tranquility and our restlessness, our animation and our discouragement, our vitality and our weaknesses—all, in fact, of the fine shades of dynamic variation of our inner life. It reproduces these far more directly and more specifically than is possible through any other medium of human communication."

It is for these reasons that the terrifying vision some of us may have of Mahler at work on these sketches—correct though it may outwardly be—obscures the basic issue of what composing is. "Composing," said Beethoven, who could frighten innocent farmers in the fields with his shouting and ges-

ticulations over a musical idea, "is thinking in tones". Dr. Langer reminds us that "sheer self-expression requires no artistic form. A lynching party howling round the gallows-tree, a woman wringing her hands over a sick child, a lover who has just rescued his sweetheart in an accident and stands trembling, sweating, and perhaps laughing or crying with emotion, is giving vent to intense feelings; but such scenes are not occasions for music, least of all for composing."

Some of the psychological data in the pages to follow might seem to contradict this view; they do not. For however intense the personal experience of Mahler was, however close the intertwining of the specific and individual emotion with its artistic representation or reflection, the actual work to be done presupposed the availability of pen and pencil, desk and music paper, a piano and a quiet studio. There was the "occasion for music". There, Mahler could devote himself to transmuting into what Dr. Langer calls "significant form" those experiences which involved him most deeply. Only under those conditions would he have had the clarity of purpose to "com-*pose*", to "put together" such a series of highly intricate polyphonic structures as are presented by the main theme of his *Adagio* — in inversion, in augmentation, in juxtaposition with itself. The intensity of stress, as we shall later try to show, is not necessarily in conflict with the creation of extraordinary and extraordinarily complex music, if — and this is the important qualification — if the working conditions are the right ones for the composer, and the time is ripe for him to utilize them to the full.

*Full comprehension of Mahler's music — as any composer's — can ultimately be gained only by the recognition of lasting artistic values, not by acquaintance with biographical conditions.* There is little artistic use to us today in the reports of Gesualdo's homicidal tendencies, or Haydn's unhappy marriage, even of Beethoven's relationship with his nephew. But in the case of Mahler's Tenth we have not a completed work, a creation signed and sanctioned by its composer, but a document so puzzling that we must look for possible clues to understanding its genesis in the very *vie amoureuse* which Dr. Langer rightly discredits as a general principle of interpretation.

In a stimulating and forthright article in the *Musical Courier* of January, 1949, Harold Schonberg writes this: "Perhaps a point in Mahler understanding has been overlooked by a failure to assess his music in terms of his personal life. It may be that it is a little too close for that, but a good researcher with a thorough knowledge of modern psychiatric theory should be able to draw some interesting conclusions. From accounts of those who knew him . . . Mahler was as magnificently neurotic as any person possibly could be. Somebody should do a book on neuroticism in art; it would clear up many of the aesthetic problems concerning the variations in individual tastes . . ." This writer is, when all is said and done, not only skeptical of the procedure of *assessing* an art work in terms of the artist's life, but he could make no claim to the proper qualifications in writing a study such as Mr. Schonberg proposes. He would recommend a careful re-reading of Thomas Mann's "Dr. Faustus" as one of the most brilliant sources on the subject. There is, however, one recent and fascinating book which is largely devoted to "the case of Mahler". It is "The Haunting Melody", by Dr. Theodore Reik, an early member of Freud's circle (New York, 1953). It is there that we find many keys toward a clarification of the psychic conditions under which the Tenth Symphony came into being.

Mahler was ill. He was doomed to die, and he knew it. Dr. Reik discusses in detail the nature of Mahler's superstitions regarding a "tenth symphony", an ideal and a sacrilege not to be attempted and completed without the intervention of death (Beethoven, Bruckner, etc.) "When he was composing it, he remarked to his wife, 'now the danger is past.'" Clearly, it was not, since his heart disease — first diagnosed in 1908 — fatally aggravated a streptococcus infection and a physical collapse less than a year after the sketches were begun. But the thought of death was nothing new to the composer, as any music-lover acquainted with Mahler's output — from the "Klagende Lied" to the "Lied von der Erde", from the "Lieder eines Fahrenden Gesellen" through the Second Symphony to the "Kindertotenlieder" and the Ninth Symphony — surely recognizes. Reik writes: "Bruno Walter, who was a friend of the composer, states that Mahler's symphonies are conceived 'sub specie mortis'. And now it occurs to us how many of his symphonic movements start with the experience of death and how many end there." No work of his, to be sure, is so clearly marked by the stamp of death as is the Tenth: how could it be otherwise? Yet the listener feels, perhaps, in the completed movements, not at all a macabre grotesqueness but a sense of "other-worldliness", a "Vergeistigung" (spiritualization) that was a new thing even for Mahler. Beethoven's last complete work, the Quartet Op. 135, has a similar visionary quality — wise beyond rhetoric, and therefore brief.

Much has been written about the Austrian-Jewish master's "Weltschmerz," his all-pervading sadness; we need not stress it here. But it is worth recalling that it was Schubert who could say, "unhappiness alone has created the 'Winterreise' . . .", and who wrote in his diary of March 27, 1824: "My works owe their existence to my musical intelligence as well as to my suffering . . ." To paraphrase the Bible — "What some sow in grief, others shall reap in joy." With Bach, with Haydn, with Mozart, even with the later Beethoven, a sense of artistic detachment can be found even in their most deeply affecting moments. This could be true even of Wagner and Bruckner. But with the later romantics, especially Tchaikovsky, Mahler, and the young Schönberg, the last barriers seem to fall; in this hyper-romantic *Gefühlswelt*, that musical reflection and form which would most clearly mirror the personal emotion are freely given. (Even so, the "spiritualization" of the Tenth results in a degree of restraint, of expressive balance, even of brevity, which are most unusual for Mahler.) If we add to this trend toward "Selbstentblössung" ('self-denudation' — the term is Adolph Weissmann's) the nature of Mahler's physical illness, his severe emotional agitation and his foreboding of death, then the conditions under which this masterwork came about are indeed ground for pity.

Pity, also, to him who is virtually destroyed as a man by his very creativeness. "Driven by demoniac powers which demanded perfection and highest achievement, haunted by an inner urge which exacted the greatest, even the impossible, for him, Mahler let life slip by him . . ." (Reik.) And Mahler himself, after being told in 1908 to "take it easy" (!), wrote to Walter, "I cannot do anything but work. I have unlearned all other things in the course of the years. I feel like a morphine addict or a drinker to whom his vice is suddenly forbidden." And in his last year, he sadly admitted, "Ich habe Papier gelebt." ("I have lived paper.") Can we not see what this inescapable fate of life-on-paper, music-paper — the simultaneous glory and terror of the creative genius — did to his marriage? Alma Mahler has explicitly enough —

but not in poor taste — accounted for the nature of their relationship in the summer of 1910, when the sketches of the Tenth Symphony were undertaken. In Dr. Reik's book, we learn details of Mahler's attempts to free himself of this particular burden, to understand and find bases for action. On a single afternoon, probably in August of 1910, he visited Freud, and had with him a long session. There is no doubt that the consultation explained much, however little it could have helped him directly at so late a date in his life. Who could fail to feel the enormous poignancy in the exclamations toward the last pages of the sketches, addressed to Alma (we do not know at what point in the process) — the deep and genuine love he bore her, so terribly disturbed by the intrinsic nature of his creativity? Romain Rolland once wrote, "whoever tries to find the clue to the secret of creation sees with a shock how dearly the genius has to pay for his wonderful conquests. For it costs him an inhuman and boundless effort of the will to satisfy and arrange the angry elements in art so that when he subjugates them at last, he finds himself — bruised and beaten — back in the world of every day." When Mahler was asked, as a boy, what he wanted to become, he said, "a martyr . . ."

Is it correct to say, as Harold Schonberg does, that "the point is that Mahler never worked out his mental doubts and disturbances, all of which were expressed in his music. His scores, then . . . remain creations of the eternal adolescent — adolescent no matter how advanced in years, how seared by experience."? To what extent was the "working-out" accomplished exactly through the music, and through the music only? Could it be that the creative process supplied the ailing master with the very stability that he would otherwise have lacked completely, or should we go further to assume that musical creation was for him the only remaining stability itself? What is the cathartic, curative, therapeutic effect of such work for the composer under such conditions? If not a cure of his problems, did the creation of a great musical edifice, searching and original, allow at least a series of temporary personal resolutions?

The paragraph that follows, from Dr. Frederick Dorian's *The Musical Workshop* (New York: Harper and Brothers, 1947), was not written with the case of Mahler in mind, perhaps; yet the fit seems perfect. Nor is it overly poetic; its truth seems profound. "Sublimated in the art works are the narratives of men . . . Art becomes the artist's true reality and life remains but a sad dream. A merciful muse has shown the artist the way out of his misery: the dark forces of destruction which endanger his psychic existence can be fought through the creative act. A cunning device of nature helps her creatures; it forces tragedy to serve its own victim. Enslaved by his unhappiness, threatened with doom, the artist revolts and sets himself free through work . . . Fanatic concentration of all expressive energies emerges victoriously into lasting works. This is the process of catharsis as the antique thinkers interpreted it. It is the act of purification in which the artist liberates himself from the grip of his emotions and creates pure forms of beauty." Would the psychiatrist call such "escape into work" a "defense mechanism"? And would the "victorious emergence of lasting works due to fanatic concentration of all expressive energies" be to the victor a desperately needed proof of his own competence, as the dictionary would define it? "One is competent who has all the natural powers, physical or mental, to meet the demands of a situation or work."

If Dr. Langer is right — as she surely must be — that the primary object

and purpose of first-rate creative activity is not self-expression but the achievement of "significant form", then we must assume that Mahler (as any humanly sensitive composer) was involved in his Tenth Symphony on several levels at once. The verbal aspects of the score may be 'significant' enough, in a psychiatric sense; but they do not make *art*, since they have no *form*. (Had the composer lived, he might conceivably have searched for poetry that might have expressed in artistic form the wider meanings of his exclamations, and could be used in the symphony with the assistance of voices, as he had so often done before.) Nor do the verbal outbursts, in the final reckoning, add to or take away from the artistic product. This product, the music itself, does have *form*, significantly and magnificently so. Had all the sketches been carried to completion as was the opening *Adagio*, we would as musicians certainly have to regard the symphony as the work of a musically clear-thinking man — and especially so since the music is not merely repetitive or nostalgic, but astoundingly fresh and progressive. But to what extent does a *musically* sane or "normal" production guarantee the authorship of a *personally* sane or normal composer?

We do not really know, and what follows is frankly hypothetical. The psychic basis of artistic creation is still mysterious to us. Perhaps it should be left alone by the researcher, as some feel the atom should have been. We do know that the inner life of the creative artist is of extraordinary complexity, and in a certain sense hovers on the brink of mental disturbance. Thomas Mann, in his "Dr. Faustus" and elsewhere, again and again returns to the idea that genius and illness are inextricably bound up together. Whatever the validity of this concept, it is clear that the musician of overwhelming genius must *sui generis* fall under the classification of "obsessive-compulsive" used in clinical psychology. He must work or perish. (What it cost Mahler to be a "summer composer" only, to forswear artistic creation for his conducting and organizing labors, even in 1910-11!, is frightening to consider; it may explain, in part, the "demonic" nature of his orchestral direction — a substitute creative act.) Theorists believe that the obsessive-compulsive state is for some personalities preliminary to the so-called schizoid state. The term "manic-depressive", often used for artists who are so well described by Goethe's phrase, "himmelhoch jauchzend, zum Tode betrübt" ('exulting to the sky, sad enough to die'), is supposedly a mere description of a series of symptoms, rather than an etiological definition. To our untutored thinking, the creation of music, real music, implies control over and integration of the faculties of the mind. We experience it as such. We can hardly conceive of a schizophrenic state as conducive to any kind of artistic work, least of all a great one. (Is Van Gogh an exception? At one point, we learn, he could *only* paint. Schumann and Wolf could write nothing of substance once their disease had passed a certain stage.) But if we take the term *schizoid* to imply a "split personality", we may be able to divide the extant material in Mahler's sketches into "verbal exclamations — disorder; musical formulation — order."

To the psychiatrist, this apparent "split" in the Tenth Symphony offers an instant diagnosis: a schizoid condition. With that affliction, there are not only emotional disturbances, but also thought disruptions. If you look at the translation of Mahler's outcries, you will find a number of repeated words, some even without the expected punctuation, and at least one sudden breaking-off in the middle of a word: *Dass ich ver* (*that I may dis . . .*)

These are, the writer is told, clear schizoid symptoms. At which point the question will arise for any sensitive music-lover, but is it possible that a person in such a state could produce music of such caliber? Is it not more likely that Mahler relived his emotional experiences when looking over the sketches at a later date, and at that time scrawled in the verbal symbols? Alma Mahler believes that they were all written at the time of the visit to Freud. Is it not reasonable to assume that the affecting "Farewell, my lyre" (which could be taken as addressed to his wife as well as to his art) might have been put on the page when realization of the impending end became inevitable, when the shocking awareness that the symphony would never be finished could no longer be evaded? (Yet compare Beethoven's "Heiligenstadt Testament", written 25 years before his death!) Would not Mahler have completed or at least obliterated some of these outcries, if he had had months to do so? Or did he consider it as somehow dishonest to distort what his "darker regions" had sent to the surface?

Perhaps. We do not and cannot know. But there are a number of data which may clarify for us the possible relation of the rational symbols (the music) with the irrational ones (the words).

On one and the same day, August 27th, 1910, Mahler could write a sensitive love poem to his wife, and also leave her a note in which he begs her to come to his studio earlier the next day to call him in for lunch, as was their custom. "My darling, my lyre, come and exorcise the spirits of darkness, they claw hold of me today, they throw me to the ground. Do not forsake me, my staff, come soon that I may rise up. I lie there and wait, and ask in the silence of my heart whether I can still be saved or whether I am damned." This is more than pure poetry. It was the state of mind of the Tenth Symphony. Who could doubt that Mahler recalled the close of Goethe's *Faust, Part I*, the great play on man's dual nature? "Mephistopheles: 'She is condemned.' Voice from above: 'She is saved.'"

The composer was in desperate anxiety; he fled into work, while fearing its effect on his outward balance. Composing, to some, is like childbirth without anesthesia. But it could be, and this might be the crux of the problem, that Mahler's work, musical creation, was to him the last fortress, his only real defense. There lay his greatest strength, the best organized, the most highly developed part of his torn-asunder personality. We learn that the schizoid may keep a part of his personality intact while all the rest seems to be in a state of collapse or dissolution. And at such time, this most resistant aspect of the mentality may come out with complete clarity, "normally", while words fail. Dr. Reik speaks of the "deep well" from which Mahler's outcries came, and says that in his last compositions "desperate hunger for life and utter weariness, the wish to lose one's consciousness and the last clarity fight one another." Not only does a schizoid state (one which has not yet done irreparable damage to the whole organism) not necessarily inhibit the creative function, but it may supply it with a vision and a skill that are uncanny, "super-normal". There is at least one case on record of a scientist whose technical deductions were at their height of brilliance virtually at the same time as his most violent schizophrenic seizures — when the impetus for solving them, the parallel to pencil and paper, was offered him. Now the musical substance of Mahler's sketches may in a mysterious way even have gained from the stress involved; there are moments of truly apocalyptic power (as the progressions of the brass choir on pages 32-34 of the miniature score),

visions vouchsafed to no man in moments of cool deliberation. Even there, cool — or cooler — thinking must of course have taken over during the work of scoring such an idea. It is mere sentimentality to believe that the elemental heat generated by the visionary lightning-stroke can persist at equal intensity during all the ensuing tasks of the composer-turned-artisan — whatever his basic state of mind.

As early as 1896, Mahler wrote in a letter: "I know that as far as I can shape an inner experience in words, I certainly would not write any music about it. My need to express myself musically and symphonically starts only where the dark emotions begin, at the door leading to the 'other world', the world in which things are not any more separated by time and place . . ." By 1910, the situation seems to have become reversed, or at least extended; it is the words, not only the music, which come from the 'other world'. Could these verbal exclamations have been penned at practically the same time as the most rational musical organization? Could Mahler have put the cry for *Compassion* within an inch of a call for a *ritenuto* in the music? The psychiatrist may say yes. Dr. Eugen Bleuler offers in his book *Dementia Praecox* (published 1911) a series of remarks on differential diagnosis which may be applicable. In speaking of the schizoid, he sees " . . . a clear splitting in the sense that various personality fragments exist side by side in a state of clear orientation . . . Clever and logical ideas alongside entirely senseless deductions . . . Senseless ideas suddenly flare up in contradiction to the rest of the personality . . . The delusions are simple and not elaborated, but in contrast to the simplest reality, occurring in a fully conscious state." And later: "Schizophrenics can be cheerful, anxious, elated and depressed not only in rapid succession, but practically simultaneously."

The symbols of the verbal outbursts in the Tenth, to be sure, are never "senseless deductions", nor do they in fact "contradict the rest of the personality"; however violent and incoherent they appear, they are usually connected in a demonstrable "free association" with the music. One might even look at some of them as extreme examples of "program notes", like the "devil's dance" of the fourth movement, or the outcry about the muffled drum, which is based on a specific experience in New York. But the nature of their appearance on the page is in keeping with Dr. Bleuler's descriptions. The slightly sardonic, folksong-like, almost cheerful character of the "Purgatorio" music (an almost "neo-classical" piece!) seems not in balance with the title, nor quite with the verbal exclamations found in it. These and other instances may be moving on a different level from the music, affiliated yet independent, representing other and less "organized" aspects of the personality. *If the conflict of the sketches can be understood, at least in part, through the hypotheses given, we must remember that what remains to us is the best and essentially the healthiest part of the total pattern — the music.*

If we accept the symphony, particularly the *Adagio* and whatever we can make out of the sketches that had progressed beyond the first thoughts, as a work of genius, of "significant form", we may find a near-flawless answer to the paradox of creation-under-extreme-stress in the words of Dr. Austin DeLauriers, Chief of Psychology at Topeka State Hospital. If we see the problem in that physician's way, we recognize that the verbal expressions of the dying master must not by us be confused with the musical substance that is left to us in the art work: "Music is essential order from within. It is not . . . a haphazard sequence of sounds; its very structure requires that

whatever is expressed be expressed through order and organization. Stated differently, music is a medium which by its very structure allows feelings to be expressed always in a rational way. And the more genuine and authentic the feelings to be expressed in music, the more stringent become its intrinsic requirements of order and organization: its rationality. This cannot be said, it seems to me, of other artistic or activity media; this is a unique quality of music." How incredibly complex and "rational", for instance, is the structural organization of certain music by Schönberg and Berg, "even" at the very moments when the emotional temperature seems to be reaching the boiling point! The issue is the same.

\* \* \*

"There are limits to the investigation of the productive process," writes Dr. Révész. "The hope of being able to comprehend the successive processes of creative work is vain. Many roads lead from the explorable to the inexplorable which are not practicable for our brains and our analytical powers. There is no doubt that the forces which govern original creative work, that lead the productive effort to the top-most peak, that give almost unlimited scope to mental life, cannot be grasped in their multiplicity through observation and introspection . . . No matter how precisely we may be able to follow the long inner preparatory process, how convincingly we may be able to describe the stages of development of a composition, there always remains an unbridgeable cleft between the preparatory process and the original inspiration of value. The connection is established by the *genius* of the artist who, through the happy coincidence of divers circumstances and through the work of the unconscious, supplies the connective link. And it is in this leap—which often surprises the productive artist himself—that the unexpected, the involuntary, lies. Both mental activities (conscious work and spontaneous unconscious inspiration) are operative in composing. The one can never lead to a consummate art-work without the other." Mahler, too, was baffled by this 'leap'. "What is it that thinks in us?", he once asked in a letter, "and what acts in us?"

As his Tenth may demonstrate, even "divers *unhappy* circumstances" may come together in a "happy coincidence", one beneficial at least to the artistic result. But it is important to remind oneself again and again, as Dr. Révész advises, that no investigation of a work, its productive processes and its extant matter, can ever penetrate to certain mysteries. Perhaps their "beauty" lies in their insolubility. No amount of psychological speculation can explain exactly what makes a work of genius as contrasted with a work of competence, even if one can technically account for an unexpectedly large number of details in their comparison. Dr. Langer delivers a sharp warning, which the explorer in musico-psychological currents does well to heed: in her opinion, the psychoanalytic theory of aesthetics, though probably valid, does not throw "any real light on those issues which confront artists and critics and constitute the philosophical problem of art. For the Freudian interpretation, no matter how far it is carried, never offers even the rudest criterion of artistic excellence."

This is not the place to enter into a discussion of quality, of value, of absolute and relative excellence. The effort we spend on searching out the conditions under which Mahler's Tenth was written is justified by the assumption—widely shared, we trust—that the work is worthy of such effort. Were it not so—were it inferior music in the context of the composer's

output, did it show a saddening decline of his powers — then the biographical situations which brought this about would ultimately be more interesting than the music. This is not so. Having gone a certain distance in separating intention from achievement, method from result, cause from effect, surface from essence (essential functions of "kritikos", the critic), *we can only conclude that the superior quality of the artistic achievement has at least a part of its foundation in the extraordinary conditions and the extraordinary febrile processes which saw it come to light.*

It is inconceivable that the music of so hyper-sensitive and "literary" a man as Mahler would not absorb and mirror with uncommon poignancy the events and problems of his "outer life" through the art work born of his "inner life". However successful a career, an artist's life may seem to him to have been a failure; his creation, if it is "great", may prove the opposite. "For their works shall follow after them . . ." We find a kind of reverse demonstration of this in a striking paragraph of Dr. Reik's. Mahler, he writes, "sought for the hidden metaphysical truths behind and beyond the phenomena of this world, for the ideals. He never tired in his search after that transcendental and supernatural secret of the Absolute and did not recognize that the great secret of the transcendental, the miracle of the metaphysical, is that it does not exist." Whether one can agree with so shattering a world-view or not, it may be less a contradiction of it than a new horizon, a positive aspect, to claim that the existence of the great art work means *ipso facto* that the idealistic search was consummated, that the mystical faith was crowned. There is now something where there had been nothing before. That, in art, may be the real miracle.

Not only that. That "something", created on the arduous road toward a goal of perfection which the true creator believes he can never reach, is not only there but it is a *new* thing. Even under the immense stresses which surround the genesis of this work, or perhaps because of them, Mahler's productive fantasy — to use a felicitous phrase of Dr. Révész's — was "like a stream that grows broader and mightier through constant new influxes." Mahler was able to look forward, to free himself of the accumulated burden of what he already knew; always suspicious of "tradition", he was eager to go beyond that of his own style. "Whatever there be of progress in life," writes Henry Miller, "comes not through adaptation but through daring, through obeying the blind urge. 'No daring is fatal,' said René Creval . . . The whole logic of the universe is contained in daring, i. e. in creating from the flimsiest, slenderest supports."

A musical, stylistic, technical discussion of the Tenth Symphony must, as we said, follow at a later date. But the writer wants to share with the reader, at this point, his sense of amazement that Mahler could achieve as a true "Abschied", a farewell, so *progressive* a piece, so marvelous a blend of the old and the new, of the firm foundations and the "slenderest supports". In one way, he seems closer here to the ecstatic spirituality of his mentor, Anton Bruckner, than ever before; the hyper-expressive dross which at moments disfigures some of his later symphonies is stripped away, in favor of a tighter polyphonic structure, a transparent texture, a keen search for the substance and essence of a thematic idea rather than an episodic parade of incompatible "Einfälle". The transfigured final pages of the *Adagio* in the Tenth are paralleled in symphonic music perhaps only by the close of the *Adagio* in Bruckner's Seventh. At the same time, how noticeably influenced was Mah-

ler by some of his young disciple's, Arnold Schönberg's, explorations in the first decade of the 20th century — how near to "atonality" are some of the pages in the *Adagio*! And with what surprise will some of us feel the touch of Mahler's influence (probably quite "unconscious") on the outstanding modern heir of the German tradition — Paul Hindemith, especially in the second and third movements of the "Mathis der Maler" symphony! In the "Purgatorio", we may recognize with a shock of delight the kinship of the Danish master, Carl Nielsen — born but five years after Mahler. Donald Mitchell has well accounted for the remarkable stature of this work when he writes:

"The *Adagio* never falls below Mahler's best level of inspiration, often transcends it, and most clearly and poignantly exposes both his love for a past tradition of romantic beauty and his quite extraordinary willingness to shoulder the responsibility of newer concepts . . . Throughout the movement we find even the most traditional gestures fertilized by new ideas . . . Created under intolerable pressure, the slow movement represents one of Mahler's profoundest excursions into the territory of the twentieth century. He was, after all, something of a paradoxical composer, and it is only fitting, perhaps, that he should have succeeded in writing an almost painfully nostalgic movement very much in touch with a musical future which he did not live to see."

Perhaps it is the final paradox of musical expression — one which reassures us that only truly significant art can prevail against the inexorable passage of time — that as we move further and further away from an intimate awareness of the conditions which helped to give a work its own particular and personal stamp, the most important part of the music remains, after all, in the notes.

Newton Centre, Massachusetts  
July 7, 1957 (Mahler's 97th anniversary)

Recordings: Westminster WAL 207 (*Adagio* only, with Symphony No. 5), Hermann Scherchen conducting the Orchestra of the Vienna State Opera. Notes by Kurt List. — SPA 30-31 (*Adagio and "Purgatorio"*), F. Charles Adler conducting the Vienna Philharmonia Orchestra.

An essay of considerable pertinence to this inquiry — received by this writer too late for inclusion in the discussion — is an article by Rollo Myers in *The Score*, Number 19, March 1957 (London), "Music and Human Personality."

The author also wishes to express his appreciation to his friend Dr. Claus Bahnson of the Psychosomatic Research Unit, Boston University Medical School, for his generous interest and valuable technical advice. Danish-born Dr. Bahnson — who is an outstanding concert pianist as well as a research psychologist — gave freely of his knowledge and experience in musical and clinical psychology. He is not, however, to be held responsible for the possible scientific inaccuracies in this writer's interpretations of psychoanalytic theory.

## BRUCKNER VS. BRAHMS, AND MAHLER VS. STRAUSS: A STUDY IN CONTRASTS

by WARREN STOREY SMITH

Comparisons are not necessarily odious. By recognizing points of difference, as well as of resemblance, we may see more clearly and judge more fairly the individuals or things thus compared. In the present attempt to appraise jointly the two late 19th century symphonists and the two men who, between them, sang the swan song of musical Romanticism, attention will be drawn to both the positive and negative aspects of their creative work, since in order to know what something is, we must at the same time be aware of what it is not.

No one with any real knowledge of either composer could possibly mistake a symphony by Bruckner for one by Brahms—or even a single movement, a single page or, to stretch a point, a single phrase. There are differences of idiom, of texture, of sonority, of pace, and so on. Now since any discussion must start somewhere, this one might as well begin with the treatment that the respective composers have accorded the middle movements. Both intrinsically and in relation to the outer ones, Bruckner makes considerably more of them than does Brahms. It has been said repeatedly that the high point of the typical Bruckner symphony is the slow movement, and Bruckner himself welcomed the fact that he was known as an *Adagio* composer.<sup>1</sup> In the symphonies of Brahms there is only one slow movement marked *Adagio*, that of No. 2, and in the Bruckner nine there is only one that is not so designated, the *Andante* of the Fourth<sup>2</sup>, which, incidentally, is far from being the climax of that particular work.

In his most characteristic slow movements Bruckner was endeavoring to be impressive and portentous in a way that Brahms was not. These *Adagios* attain to a greater sonority, particularly the last three, where the orchestra is reinforced by the Wagner tubas, of which more anon, and they are longer, more elaborately designed than those of the Hamburg master. Except in his Fourth Symphony, where he uses the sonata form without development, Brahms in his slow divisions is satisfied with the A-B-A-Coda form that some theorists, though by no means all, call a First Rondo. Bruckner, on the other hand, will use the full-fledged sonata form or an A-B-A-B-A-Coda design, with development along the way.<sup>3</sup> And as the *Adagio* is the climax of the symphony, so will the movement itself reach a mighty climax, something we certainly do not find in the slow divisions of Brahms.

As far as the scherzo is concerned, while we find a movement bearing the name in every one of the Bruckner symphonies—and the titanic Bruckner scherzo is as characteristic of its creator as the soaring Bruckner *Adagio*—we do not find the term in any symphony of Brahms. The nearest approach to

<sup>1</sup> Boston's Philip Hale liked to describe the great Bruckner *Adagios* as "Apocalyptic".

<sup>2</sup> In the revised version the second movement of No. 2 is marked *Andante*, but the original version, first released in 1938, has *Adagio*. It is Bruckner with whom we are here concerned, not those who tried to improve upon him.

<sup>3</sup> As is often the case in matters of musical analysis, we find different labels affixed to the same movement, the nature of which remains unchanged by these disagreements.

the style occurs in the *Allegro giocoso* of No. 4, which still departs from the traditional pattern by being in duple time and having no trio.<sup>4</sup> Elsewhere, Brahms replaces the scherzo with a graceful intermezzo, the name generally applied to the third movements of the first three symphonies, and that he himself employed to designate the corresponding portion of his G minor Piano Quartet, Op. 25, No. 1.<sup>5</sup> Brahms appears to have played down the middle movements of his symphonies in order to emphasize the importance of the corner ones, although they are relatively more important in the always exceptional No. 4.<sup>6</sup> The heroic vein was native to Bruckner and he tends to employ it throughout a work.

Bruckner has been repeatedly and, as some will have it, mistakenly assailed on the score of formal construction, especially in regard to the outer movements. The controversy is too vast to be gone into here, but this much may be said: Brahms in these same movements better achieves the classical ideal of continuity and momentum. Paul Bekker aptly speaks of Bruckner's "terraced progress."<sup>7</sup> It is without doubt, Brahms's "logical continuity"<sup>8</sup> and the aforesaid momentum, combined with a greater terseness of utterance, that has made him more acceptable than Bruckner to the average concertgoers. If nothing counted but the sheer musical substance, the melody, harmony and orchestration, Bruckner might easily win out. One is reminded of the jibe at Brahms made by an unidentified French critic, quoted by Felix Weingartner: "Il travaille extremement bien avec ses idées qu'il n'a pas."<sup>9</sup> Weingartner himself put the issue this way: "In the strife between the Brahms and Bruckner factions in Vienna I was once asked my opinion of the two men. I replied that I wished that nature had given us one master in whom the characteristics of both composers were united,—the monstrous imagination of Bruckner with the eminent possibilities of Brahms. That would have given once more a great artist."<sup>10</sup>

Not everyone is convinced that Brahms was a successful manipulator of the ideas that he had, or "did not have." Mahler, for example, expressed himself thus in a letter to his wife: "I have gone all through Brahms pretty well by now. All I can say is that he is a puny little dwarf with a very rather narrow chest. . . . You will be astonished when I tell you where I get more completely bogged than anywhere else—in his so-called 'developments.'

"It is very seldom that he can make anything whatever of his themes, beautiful as they often are. Only Beethoven and Wagner could do that."<sup>11</sup>

<sup>4</sup> It thus resembles the second movement of the *Scotch Symphony* of Mendelssohn.

<sup>5</sup> The latter's companion piece, the Piano Quartet in A major, has a Scherzo, as do many of Brahms's other works.

<sup>6</sup> Thus reversing the conditions of the Bruckner Fourth, already noted.

<sup>7</sup> *The Story of the Orchestra*, W. W. Norton & Co., New York, 1936, p. 217.

<sup>8</sup> The logic, of which Bekker speaks, is well exemplified by the closely-woven texture of the initial movements of the First and Second Symphonies. The latter has even been called a "symphony in three notes", less of an exaggeration than it first appears, when we see the uses to which the motto theme, or basic motive, of the first movement has been put, not only in that movement but in the whole work. Much of the transformation to which this three-note figure is subjected is rhythmic, and Brahms's rhythm is much more diversified as well as more intricate than that of his rival. Of the two composers he is the more "intellectual", the more finicking craftsman.

<sup>9</sup> *The Symphony Since Beethoven*, Oliver Ditson Co., Boston, 1904, p. 41.

<sup>10</sup> *Ibid.*, p. 48.

<sup>11</sup> Alma Maria Mahler: *Gustav Mahler: Memories and Letters*, The Viking Press, New York, 1946, p. 205.

Shortly afterwards he wrote: "Now that I've worked my way through Brahms, I've fallen back on Bruckner again. An odd pair of second-raters. The one was 'in the casting ladle' too long, the other not long enough."<sup>12</sup>

It is entertaining, but not always instructive, to read what the great composers had to say about one another. Mahler, for example, was capable of defying the world by rating Leoncavallo's now forgotten *La Boheme* above the masterpiece of Puccini.

Quite possibly it is the lack of speed in Bruckner, more than his discursiveness or his occasional disconnectedness, that makes him difficult to take in this speed-conscious age. Brahms's pulse rate is slower than that of Haydn, Mozart or Beethoven, but even in jest you could hardly say of any Brahms symphony that it contains not one slow movement but two, or even three. Bruckner sometimes, if not always, courted "solemnity" in the corner movements, applying his favorite expression mark, *Feierlich*, both to the Finale of No. 8 and the first movement of No. 9.<sup>13</sup> His scherzos have momentum aplenty, and continuity besides, but he is capable of slowing down in the Trio, as he does in the Seventh and Eighth. The fleet, light-footed Trio of the Scherzo of No. 9 is quite exceptional, unlike anything else in his entire output. It has even been described as French—strange word to use in connection with Bruckner.

Per contra, Cecil Gray, endeavoring to prove that Sibelius was the only post-Beethoven symphonist who really made the grade, accuses Brahms of "a complete lack of that variety of mood and breadth of style which are the prime requisites of symphonic writing—the one quality on account of which all sins may be forgiven. Brahms's movements, however they are labelled, practically all seem to be *andante con moto*; he is incapable of writing either a true *allegro* or an *adagio* movement—above all a *scherzo*. He entirely lacks gaiety, verve, spontaneity, abandon, in default of which a symphony is necessarily incomplete and imperfect."<sup>14</sup> One need not go all the way with the extremely prejudiced British critic, who was frantically trying to build up his own man at the expense of all the others, but evidently some of the distinctions between Brahms and Bruckner that have just been made here are relative rather than actual. The answer is, of course, that most Teutonic music in the second half of the 19th century was on the lethargic side. Look at Wagner!

Gray distinctly had it in for what are generally known as song-symphonists, and there is an amusing irony in the fact that Lazare Saminsky once accused Sibelius of being that very thing.<sup>15</sup> It looks as though the world had not come to any very definite conclusion on this vexed and vexing issue. On the one hand we have Weingartner saying, "I would add that with a very few exceptions a characteristic mark of all symphonic themes is their breadth and their special melodious character,"<sup>16</sup> and, on the other, Gray affirming, apropos of Sibelius: "It is true that most of his themes are short-winded, but that is precisely one of the reasons why he is a great symphonist—it is characteristic of

<sup>12</sup> *Loc. cit.*

<sup>13</sup> No one could put the vexing issue of Bruckner's "fast" movements any better than did his pupil and biographer, Ernst Decsey. Discussing the first movement of the Quintet in *Cobbetts Cyclopedia of Chamber Music* (Oxford University Press, London, 1929, Vol. 1, p. 216), he says that it is "one of those melodious Bruckner Allegros, which are not allegro in the accepted sense, but have rather the character of animated slow movements, corresponding to the composer's own inner rhythm."

<sup>14</sup> *Sibelius*, Oxford University Press, 1934, pp. 192-3.

<sup>15</sup> *Music of Our Day*, Thomas Y. Crowell Co., New York, 1939, p. 197.

<sup>16</sup> *Op. cit.*, p. 78.

practically all of the finest that have been written. And it is precisely the long-winded Teutonic thematic material of the German symphonists of the nineteenth century that prevents them from attaining to the monumentality and concentration of the form &c., which are the hall-mark of the true symphonic creations of the Finnish master."<sup>17</sup> He then continues with the observation on Brahms quoted above. To be sure, he exempts Beethoven from all this, but Beethoven, he assures us, "was no more a typical German than Goethe was."

Some authorities, inclined to draw finer distinctions than the above, have separated the Teutonic symphonists into two groups, the German and the Austrian, placing in the first, Beethoven, Mendelssohn, Schumann, and Brahms<sup>18</sup>, and in the second, Schubert, Bruckner, and Mahler. By and large, the Austrians are more lyrically inclined than their German brethren. Surely Bruckner eclipsed Brahms in melodic invention, as Schubert did Beethoven. Bruckner's strength, like Schubert's, lay in the creation of themes, and that of Brahms, as did Beethoven's, resided in the manipulation of them, as our French critic has suggested. Take what many regard as Bruckner's most winning melody, the initial theme of the Seventh Symphony. Is it not more appealing when it is first heard than it is in the working-out section, or in the reprise, where it is combined with its own inversion? Additional examples might be cited, but the reader who knows his Bruckner, as well as his Brahms, will get the idea.

Bekker, to return to him, makes the point that Brahms's orchestral style approached the chamber music type.<sup>19</sup> He further says: "He chose his orchestral cast as he needed it. Indeed, he would hardly have known what to do with a larger or more colorful apparatus! He neither took the orchestra for granted nor found it an especially interesting form of expression."<sup>20</sup> Brahms's scoring is better thought of today than it was 50 or 60 years ago. In comparison with the rich and brilliant orchestration of Berlioz, Liszt, Wagner, and their imitators, it sounded dull and drab, and was even described as "muddy and hoarse." It now seems an eminently suitable garment in which to clothe the composer's thoughts. We do not hold a Rembrandt in disesteem because it lacks the bright colors of a Renoir. It is nevertheless true that Brahms was relatively indifferent to sound, as such, having an almost Puritanical disdain for the more sensuous side of his art.<sup>21</sup> He more than once composed a work for a certain sound-medium and then blithely transferred it to another.

I have neither the space nor the inclination at this time to delve into the moot question of the original and revised versions of the Bruckner symphonies, made more complex by the fact that Bruckner sometimes did his own revising. The argument has been offered that the well-intentioned Löwe and Schalk succeeded in making Bruckner's orchestration sound too Wagnerian. The fact is that, even as Bruckner intended it, his scoring has a marked kinship with that of the great music dramatist, for whom he had unbounded admiration. His use of the *Bayreuth* tubas inevitably lends to many passages in the last

<sup>17</sup> *Op. cit.*, p. 192.

<sup>18</sup> Strauss would fit in here too.

<sup>19</sup> *Op. cit.*, p. 204.

<sup>20</sup> *Ibid.*, p. 210.

<sup>21</sup> Donald Ferguson attributes the sobriety of Brahms's scoring to his obsession with polyphony (*A History of Musical Thought*, F. S. Crofts & Co., New York, 1939, p. 422). Yet Wagner, Bruckner, Mahler, Strauss and others have managed to write contrapuntally without sacrifice of aural charm.

three symphonies an inescapable suggestion of *The Ring*. We must also acknowledge that his treatment of these instruments was highly individual, and that he sometimes used them more imaginatively than did their inventor.

Quite possibly, some of the difference between Bruckner's orchestra and that of Brahms was due to the fact that the former was an organist and the latter a pianist, with a strong feeling for chamber music. Many have found that Franck's orchestra has an organ-like quality, and so, at times, does Bruckner's. Take, for example, the first phrase of the Adagio of the Seventh, in which the five tubas double the lower strings. The sound is more truly Wagnerian in the transition to the second subject, assigned to the tubas and a French horn. The second theme itself, a section of ravishing beauty, is scored for strings, intermittently reinforced by woodwinds and horns, with a skill that was Bruckner's own. Indeed, the attempt to instance all of the examples of felicitous orchestration in his symphonies (yes, in the original version) would almost mean a complete reproduction.

Brahms also has his moments, such as the Introduction to the Finale of the First Symphony, the end of the retransition to the reprise in the opening movement of No. 2, with its golden-voiced horn, the Coda to this movement, and, in the Adagio, the soft trombones supporting the cellos. These things haunt the memory, as do the return of the chief theme in the Andante of the Third and the flute solo in the Finale of No. 4. But for the most part, we are more conscious in Brahms of the music itself than of its sonorous presentation, the latter being more a matter of utility or suitability than of intrinsic attractiveness. In a symphony this is probably quite as it should be. The Romantic composers have put notions in our heads.

It is his use of the brass, in particular these added tubas, that imparts to Bruckner's orchestra the Wagnerian sound so conspicuously missing from that of Brahms. In No. 7, the work in which they made their symphonic debut, Bruckner's use of these instruments is confined to the Adagio and the Finale. In Nos. 8 and 9 he uses either eight horns or four horns and four tubas in every movement.

From the Third Symphony on he requires three trumpets, as Wagner generally did. The brass choir of eleven that is added to the orchestra at the end of the Fifth was Schalk's idea, but approved by the composer. The original version, now available, does not have it.

Brahms, always conservative in his orchestral demands, never required more than two trumpets, the classical norm. Like Bruckner, he used trombones in every symphony, but in only ten out of a possible sixteen movements, whereas Bruckner used them in every one.<sup>22</sup> Brahms used the ordinary bass tuba, standard equipment for Bruckner, as for Wagner, in the Second Symphony only, but in three of the movements. He used the contrabassoon in every symphony but the Second, though naturally not in every movement, while in the aforementioned Allegro giocoso of the Fourth he has a piccolo, played by the second flutist, and a triangle.

Save for the use of three flutes and contrabassoon in the Fifth, Bruckner adhered to the classical pattern of woodwinds in twos, until he reached the last two symphonies, when, quite appropriately in view of the heavy brass department, he increased them to three. The cymbals and triangle in the Adagio of the Seventh were put there at the suggestion of Nikisch. In the

<sup>22</sup> The reference here is to Symphonies 1-9. In the Andante of the posthumously published Symphony No. 0, in D minor, neither trombones nor trumpets are required.

corresponding section of the Eighth Bruckner used them on his own. And in the Trio of the Scherzo, as well as in the Adagio, he permitted himself the luxury of a harp part.<sup>23</sup> In one respect Bruckner's orchestration was as conventional and as un-Wagnerian as that of Brahms: he never used either the English horn or the bass clarinet.

In mentioning Beethoven, Schubert, and Wagner, I have listed what surely are the principal influences discernible in Bruckner's symphonic writing. Beethoven was for Bruckner and Brahms a common heritage. The former, as suggested above, followed the great exemplar chiefly in the central movements, while the latter reveals his influence mainly in the outer ones. The search for either Schubert or Wagner in the symphonic Brahms is as vain a pursuit as the quest for Schumann in Bruckner. The Austrian master shares with Schubert his gift for melody, his ease in modulation and (the anti-Brucknerite would add) his prolixity.

Bruckner's chromaticism has something in common with Wagner's, although, unlike Franck, he never developed *Tristanitis*: he never submitted to what Lawrence Gilman called "the tyranny of the ascending half-tone progression." The chromaticism of Franck has been dubbed by unfriendly critics both "slithering" and "slimy", disagreeable terms that could never be applied to the music of Bruckner.

As a harmonist, Bruckner, in his own particular way, went even beyond Wagner. In the Scherzo of the Ninth, which some irate critic called "the ugliest piece of music ever written", and again in the opening theme of the Adagio, we cross over into the 20th century. In the case of the latter, the tonality of E major is not really established until the seventh measure, and by altering the

The image displays two systems of musical notation, each consisting of a treble and bass staff joined by a brace. The key signature is E major (three sharps). The first system shows a melodic line in the treble staff with frequent chromatic alterations and a bass staff with block chords and some moving lines. The second system continues this style, with the treble staff featuring a more active melodic line and the bass staff providing harmonic support with chords and occasional single notes.

<sup>23</sup> In each case Bruckner wrote one harp part but suggested that, if possible, three harps be used. The revised score specifies one in the Trio of the Scherzo and three in the Adagio.

pitch of three of them, the first twelve notes of the theme can be transformed into a Schönbergian tone-row.

The Eighth also has its daring passages, notably the out-of-the-key beginnings of the chief themes of the first and last movements, matters fully explained in the masterly analysis of the work by Robert Simpson, in the 1950 issue of *Chord and Discord*.

In respect to tonality, speaking now of the key-relationship between the first and second subjects, Brahms, at least in his symphonies,<sup>24</sup> was a traditionalist, while Bruckner, like Schubert before him, loved to experiment. For example, the Fourth has in its first movement a chief theme in E-flat and a second theme in D-flat, which returns in B. And a most unconventional relationship is found in the Adagio of the much-neglected Sixth, where the first subject is in F and the second in E. Drawing comparisons between Brahms and Bruckner, Virgil Thomson, then writing for the New York *Herald Tribune*, inadvertently referred to the latter as "the younger man". It was a natural enough mistake; the evidence of the music is all that way.

This brief dissertation has been principally concerned with the surface aspects of the works under discussion, with the flesh, one might say, rather than the spirit. It may be remarked that the spirit plainly reflected the personalities of the two men, who had in common only a devotion to the highest ideals of art. On this score it should be noted that both composers resolutely courted absolute music in a day when the descriptive variety was very much the fashion. What little they wrote in the latter vein hardly deserves the name. Brahms's *Tragic Overture* and the early piano ballad, *Edward*, are illustrative music in its most rudimentary form. Nothing but a prevailing mood is conveyed by either title. Bruckner affixed the label *Romantic* to his Fourth Symphony, which, outside the magical opening, is no more romantic than many of the others, and then made an ingenuous attempt to explain the music, which explanation he afterwards repudiated. We can also ignore the foolishness about the *Deutsche Michel*, in connection with the Scherzo of the Eighth. Like Mahler's laboriously contrived program for his First Symphony, these were largely efforts to satisfy public taste. One can even read an Alpine scene into the Introduction to the Finale of the Brahms C minor, but this is not what we mean by program music.

As men, Bruckner and Brahms were conspicuously unlike. The former's upbringing was rural, the latter's urban. Brahms was far more sophisticated, much better read than Bruckner, who is said to have read little besides the Bible. Brahms also read his Bible faithfully, a fact to which his music, choral and vocal, bears abundant testimony. But a wide gulf separates the Upper Austrian Catholic, a man of simple faith, commonly referred to as a mystic, from the North German Protestant, who, when it came to the teachings of the Lutheran

<sup>24</sup> We find an astonishing key scheme in the first movement of the Piano Quintet, matched by Bruckner in the corresponding portion of his Quintet. Another bold stroke on Brahms's part is the recapitulating of the chief theme of the Allegro giocoso of No. 4 a semitone higher, in D-flat instead of C.

church, could accept the spirit but reject the letter.<sup>25</sup> Brahms was fond of the theatre and found in opera, which attracted him as composer no more than it did Bruckner, a means of relaxation. Bruckner's worship of Wagner was a musical matter. The dramas confused him, as they have many another. That Brahms was the more prosperous of the two was due to several factors, the principal ones being that his music was easier to assimilate, then as now, and that he cultivated a greater variety of media, producing such salable items as songs and piano pieces. (Bruckner maintained that he could write songs like those of Brahms but had no desire to do so.) For a final comment, neither man married, but in their attitude toward the opposite sex they differed as widely as they did in other respects.

Allusion has already been made to the Brahms-Bruckner controversy, and while I cannot pursue the matter here,<sup>26</sup> everyone knows that the relations between the two men were far from cordial; and for this their respective followers were partly, and perhaps largely, to blame. Before applying the critical scalpel to Strauss and Mahler, I would like to state that their relations were always friendly, that they were not rivals but colleagues and co-workers, both as composers and conductors. Mahler once wrote to "a prominent critic": "I shall never cease to be grateful to Strauss who has so magnanimously given the impetus to public hearings of my works. Nobody should say that I regard myself as his rival (although I am sorry to say the stupid implication has often been made). Aside from the fact that my music should be looked upon as a monstrosity had not the orchestral achievements of Strauss paved the way for it, I regard it as my greatest joy to have met with a companion fighter and creative artist of his calibre among my contemporaries".<sup>27</sup>

According to Alma, Mahler was wont to remark: "Strauss and I tunnel from opposite sides of the mountain. One day we shall meet."<sup>28</sup> While Strauss had this to say: "In my opinion, Gustav Mahler's work is one of the most interesting products of our modern history of art. Just as I was one of the first to have the privilege of championing his symphonic creations before the public, I consider it to be one of my pleasant duties to obtain for them in future both in word and deed the general recognition which is their pre-eminent desert. The plastic of his orchestration in particular is absolutely exemplary."<sup>29</sup>

The common aim of Mahler and Strauss was the writing of music that *meant* something, the thing that allies them with the Romantic Movement and that separates them from the absolutists and abstractionists of the succeeding generation. As suggested, they went about it in ways that, for the most part, were quite dissimilar. Mahler was a symphonist and song writer, the one published work of his that falls outside these categories being the early choral piece, *Das Klagende Lied*. Strauss was a composer of tone poems and operas, as well as of songs, with a certain addiction to chamber music and concerted music at the two extremes of his long career. His symphonies in D minor and F minor were no more than student exercises in the manner of Brahms, while the *Symphonia*

<sup>25</sup> Walter Niemann tells us that Brahms could take sharp issue with the utterances of the Lutheran clergy: *Brahms*, Alfred A. Knopf, New York, 1929, p. 182.

<sup>26</sup> A full account of the Bruckner-Brahms controversy is found in Werner Wolff's *Anton Bruckner: Rustic Genius*, E. P. Dutton & Co., Inc., New York, 1942.

<sup>27</sup> Gabriel Engel: *Gustav Mahler: Song Symphonist*, The Bruckner Society of America, New York, 1932, p. 88.

<sup>28</sup> *Mahler Letters*, p. 87.

<sup>29</sup> *Richard Strauss: Recollections and Reflections*, Boosey & Hawkes, Ltd., London 1953, p. 78.

*Domestica* and *Ein Alpensymphonie* were merely tone poems on a more extended scale. For the sake of the record it may be added that the long and varied list of his compositions also includes choral pieces, piano pieces and ballets.

Save for *Das Lied von der Erde*, which is a symphony only because he elected to call it that, no one of Mahler's symphonies bears a descriptive title. The name *Titan* (after the novel of Jean Paul) originally bestowed upon the First soon lost general currency, which is a good thing. The wholly appropriate label *Resurrection* is commonly applied to the Second. In much the same way we continue to call the First of Schumann the *Spring* Symphony. In relation to their initial symphonic efforts both Schumann and Mahler followed the same course of action. Each one invented picturesque titles for each of the four movements and then discarded them. Historian Ferguson calls Mendelssohn, Chopin and Schumann "Romantic idealists" and Berlioz and Liszt "Romantic realists." Had he extended that classification into the later Romantic era he could have included Mahler in the first category and Strauss in the second. Strauss was, in fact, far more of a realist than Liszt and, in that respect, the heir of Berlioz. Both the Frenchman and his German successor were given to describing actual events. They expected us to see with our ears.

If we make a slight exception in the case of the Finale of the Second Symphony, with its summoning horns, its suggestion of marching hosts and its bird calls, all adding up to what has been called a gigantic tonal fresco of the Day of Judgment, we can say that there is no *Malerei* in Mahler's instrumental music and only a very small amount of it in the vocal works. Tone painting was not his forte, whereas Strauss once boasted in jest that he could make it clear in orchestral music whether a man was eating with a fork or a spoon. He had an unrivalled skill in descriptive writing,<sup>30</sup> both in his tone poems and in opera, to which, and perhaps wisely, he finally turned.

The "Resurrection" Symphony is as close to genuine program music as Mahler ever got. He called the first movement a *Totenfeier* or Death-Celebration, but was at a loss to provide a convincing explanation for the second and third—the purpose they serve is musical rather than programmatic. We do know that the First Symphony grew out of the *Lieder eines fahrenden Gesellen*, and that the song cycle grew out of a personal experience, thus making an acquaintance with the latter necessary to a full understanding of the former, which can still be enjoyed purely as music. There are many things in the Strauss tone poems that do not make sense merely as music and there is nothing in Mahler of which this may truthfully be said. He told the sharply disagreeing Sibelius that a symphony should be made of the stuff of life, and he has been quoted as saying that for him to write a symphony was to build a world. Of the Sixth he said, "It is the sum of all the suffering I have been compelled to endure at the hands of life." And in the Ninth we find him in a state of spiritual withdrawal from the world, thus recalling, as does *Das Lied von der Erde*, the Beethoven of the last quartets. We might as well realize that while

---

<sup>30</sup> It would still be a mistake to think of the Strauss tone poems as being wholly "descriptive". Besides, much that he described lay in the domain of fancy, of pure emotion, of mental states, even of philosophical speculation, which puts his program music, a few bits of sheer literalism aside, on a much higher plane than most. And while some of his works need a deal of explaining, in others the only important guide to the listener's understanding is the title.

Mahler was not, in the accepted sense, a writer of program music, he wrote very little that is music and nothing more.<sup>31</sup>

What Mahler did subjectively, and quite consistently, Strauss did objectively with, to be sure, an occasional suggestion of subjective feeling. This objective approach took two forms: the representational and the symbolic. The first of these phases found expression in the *Symphonia Domestica*. The tone poem, to repeat what everyone knows, describes a day in the life of the Strauss family. Strauss draws his own likeness in four themes that, respectively, depict him as easy-going (*gemächlich*), dreamy, peevish (*mürrisch*), and fiery. *Intermezzo, Eine bürgerliche Komödie*, with text by Strauss, unfortunately still unknown in this country,<sup>32</sup> is based upon an actual incident. During the composer's absence in Vienna, on a conducting assignment, there arrived at his Garmisch villa a letter, the contents of which caused the inquisitive and quick-tempered Pauline to consult her attorney. Word of these proceedings reached Strauss and, accompanied by a baritone from the Opera, for whom the incriminating missive was actually intended, he returned to Garmisch. The opera ends on a note of joyous reconciliation. The only attempt at disguise consists in the names of the chief protagonists, who become Robert and Christine Storch.

The symbolic approach is found in *Ein Heldenleben* and the opera *Feuersnot*, definitely in the second instance and presumably in the first. I shall take them in the wrong chronological order and begin the discussion with Strauss's own words: "After the failure of *Guntram* I had lost courage to write for the stage. It was then I came across the Flemish legend, *The Quenched Fires of Audenarde*, which gave me the idea of writing, with personal motives, a little intermezzo against the theatre, to wreak vengeance on my dear native town where I, little Richard the third (there is no 'second', Hans von Bülow once said) had just like the great Richard the first thirty years before, had such unpleasant experiences."<sup>33</sup>

Strauss was his own librettist only in *Guntram* and *Intermezzo*, but Ernst von Wolzogen, who wrote the book for *Feuersnot*, followed an outline provided by the composer. The scene is laid in Munich in the "legendary no time" (*fabelhafter Unzeit*). Kunrad, the central figure, to be identified with Strauss in much the same way that Walther von Stolzing was identified with Wagner and, more recently, Palestrina with Pfitzner, takes his fellow citizens to task for their shabby treatment of one Meister Reichardt, who soon receives the name of Wagner. Allusions to him successively draw from the orchestra the Valhalla theme and the Call of the Flying Dutchman. But, says Kunrad, in driving out Wagner you did not get rid of your enemy, for he has reappeared

---

<sup>31</sup> We are reminded of Tchaikovsky, a composer whom Mahler greatly admired. When Taneiev complained that the Fourth Symphony gave the impression of being a symphonic poem to which three other movements had been added, Tchaikovsky wrote in reply: "I should be sorry if symphonies that mean nothing should flow from my pen, consisting solely of a progression of harmonies, rhythms and modulations . . . . . Should not a symphony reveal those wordless urges that hide in the heart, asking earnestly for expression?" And what was true of Tchaikovsky—and Mahler—was equally true of Schumann.

<sup>32</sup> Strauss once declared that it was his favorite among all his works, and he conducted it *con amore*. He also had an especial fondness for the *Domestica*, which is considerably more than the large-scale foolery that its title and certain heavily playful episodes suggest. It is, in point of fact, a paean to domestic felicity, something by which Strauss set great store.

<sup>33</sup> *Op. cit.*, p. 149.

in Strauss, whereupon the orchestra proclaims, in a mighty crescendo, the *Kampfsthema* from *Guntram*.

Since *Feuersnot* seems to have gone the way of its predecessor, albeit less deserving of oblivion, this amusing bit, like the *Guntram* quote in *Ein Heldenleben*, has only an academic interest, save for the light that it throws upon Strauss's mental processes. If *Feuersnot* is a dead letter, the *Heldenleben* is still very much alive, and performances of it continue to bring down upon the composer's head taunts and reproaches. Surely, say these outraged listeners, only a man of overweening conceit could glorify himself in such fashion. Strauss stated at the time that the tone poem, which immediately succeeded *Don Quixote*, was designed as a companion piece to the latter. The Hero, he explained, was not "a single poetical or historical figure, but rather a more general and free ideal of manly heroism—not the heroism to which one can apply an everyday standard of valor, with its material and external rewards, but that heroism which describes the inward battle of life, and which aspires through effort and renunciation towards the elevation of the soul."

This does not sound like the Strauss whom we encounter in the *Domestica*, but Strauss the family man and Strauss the creative artist were two very different people. Anyway, no sooner had the *Heldenleben* appeared than all and sundry declared that the spiteful and stupid Adversaries were the music critics. To strengthen that opinion the composer later added a bit of circumstantial evidence. In *Intermezzo* Frau Storch tells a chance acquaintance that a celebrated critic has called her her husband's "better half", whereupon the orchestra obliges with the first, *scharf und spitzig*, portion of the Adversaries theme. Additional evidence is found in the fact that the section known as The Hero's Works of Peace is a melange of Strauss themes, both from the *Heldenleben* itself and previous compositions. It could be argued, of course, that only in that particular way could he express the idea of creative activity, and that as far as the *Intermezzo* quotation was concerned he was merely acceding to a popular supposition.

Even if we did not know it anyway, the music of Mahler and Strauss, as we have just seen, would proclaim the one a decided introvert and the other something of an extrovert. They were still more alike, outwardly at least, than Brahms and Bruckner. Both were devoted family men and solid citizens, jointly occupied with composing and conducting. As with their two predecessors, we have here a Protestant and a Catholic, the latter reared in the Jewish faith. Mahler was something of a mystic, though of a very different stripe from Bruckner, and there was none of that in Strauss. If his head was sometimes in the clouds, or should have been there to write much of the music that came from his pen, his feet were always planted firmly on the ground. He poses few problems for the character analyst, while Mahler was a mass of contradictions. To attempt a perhaps too facile but nevertheless intriguing generalization, we could say that he was a sophisticated man who sometimes wrote naive music, whereas Bruckner was a naive man who often wrote sophisticated music.

Mahler was afflicted with the then-prevalent Teutonic malady of *Weltschmerz*, to which members of his race were particularly subject—he has been accused of "seeing the worm in every apple". Strauss, the only one of the four composers here under discussion who was not in some way maladjusted, was, actually, well-poised to a degree rare in artists of his stature. He took everything in stride, including a difficult wife, to whom he was greatly devoted. He

was a shrewd business man, inclined to be mercenary, and, more than most, he made serious music pay. Orderly and systematic in his work, he could forget it when his carefully-allotted hours were over and relax in a game of *Skat*, his addiction to which also finds expression in *Intermezzo*. His sense of humor, something that Mahler appears to have lacked, reveals itself, at times almost too aggressively, in his music. The too intense, hard-working Mahler wore himself out in middle life, while Strauss lived serenely on to an uncommonly ripe old age, composing to the last.

To continue, Mahler was at ease with simple and saintly things, as witness the Finale of the Fourth Symphony, and much of the rest of that engaging work. He frequently stated that an artist's deepest and most valuable experiences came to him before adolescence. Strauss was essentially a virtuous man but, by his own admission, he found evil characters easier to depict than good ones. Writing to Hofmannstahl apropos of the *Josefslegende*, on which they were jointly engaged, he said: "The chaste Joseph himself is hardly in my line, and I find it difficult to write music for a character that bores me; a God-fearing Joseph like this I find infernally hard to tackle. However, perhaps I may yet find lurking in some queer ancestral corner of my nature some pious melody that will serve for our good Joseph."<sup>34</sup>

Strauss's music is never as erotic as Wagner's—nor is that of anyone else—but he wrote his full share of love scenes, and many of his songs and most of the best of them are love songs. Mahler's muse, on the other hand, was almost pathologically chaste. His only love song, *Bist du um Schönheit*, is as I maintained in this magazine a few years ago,<sup>35</sup> the poorest that he wrote and far inferior to Clara Schumann's fine setting of the Rückert poem. Strauss found Zerbinetta more to his taste than Ariadne, and the theme of Jokanaan in *Salome* is a serviceable musical tag but hardly an adequate characterization.

In their attitude toward nature Mahler and Strauss differed as widely as they did in so many other matters. Mahler felt a definite kinship with the natural world, a fact to which *The Song of the Earth* bears eloquent testimony, and largely on the strength of this masterpiece he has been called a pantheist. Strauss, when the need arose, painted natural phenomena with his customary graphicness. He too loved the natural world, but there was no mysticism involved.

Several years ago Ernest Newman made the challenging statement that Mahler was "the last noble mind in German music."<sup>36</sup> In the same article, in the London *Sunday Times*, he bade us overlook Mahler's eclecticism, an admonition that would be unnecessary today. While Mahler's style was less strikingly individual than that of many composers, Strauss included, it was unmistakably his own. He was, indeed, one of the most original of music makers, a fact not recognized once, but now patent to all.

Virgil Thomson, to quote him once more, while engaged in a comparison of Strauss and Mahler, to the general advantage of the latter, remarked that their

<sup>34</sup> *Correspondence Between Richard Strauss and Hugo von Hofmannstahl, 1907-1917*, Knopf, p. 193.

<sup>35</sup> Vol. 2, No. 6, p. 77.

<sup>36</sup> In his memoirs, *I Segreti della Giara*, recently issued in English as *Music in My Time* (University of Oklahoma Press, Norman, 1955, p. 92) the late Alfredo Casella called Mahler "one of the noblest musicians I had ever known." Rather oddly for an Italian, Casella was a great Mahler enthusiast and made the piano four-hand arrangement of the Seventh Symphony.

melodic styles were much the same. To be sure, they both favored a diatonic type of melody, although in general Strauss's themes are more chromatic than Mahler's, as is his harmony, and he modulates with greater frequency. Mahler, of course, had his moments of effective, even inspired, chromatic writing, as at the end of the *Urlicht* in the Second Symphony and in the setting of *Alles vergängliche* in the Eighth. And this much is certain: neither one of them would have written a theme such as that from the Bruckner Ninth quoted above. While despite the fact that each was a famed interpreter of *Tristan*, that particular type of chromaticism does not appear in their music any more than it does in Bruckner's.

More than Strauss, Mahler leans toward a folk song idiom and, as was the case with Brahms, many of his melodies might be mistaken for genuine *Volkslieder*. Strauss was enamored of the six-four chord, both melodically and harmonically. The sol-do-re-mi or "How dry I am" figure, with its reversion and its various possibilities for ornamentation, obsessed 19th century (and even earlier) composers as a whole, but Mahler made much more sparing use of this melodic stereotype than did Strauss, who permitted it to become his thematic trade-mark.<sup>37</sup>

Strauss's rhythm was more complex than that of Mahler, in much the same way that the rhythm of Brahms was more complicated, more varied, than that of Bruckner. Nevertheless, in the final pages of *Das Lied von der Erde* Mahler indulges in rhythmic complications of a nature without precedent in that day. It was of this passage that he jokingly said to Bruno Walter, to whom the task of doing so ultimately fell, that he didn't see how it was going to be conducted.<sup>38</sup>

Mahler once admitted that the evaluating of Strauss's music baffled him, since it represented such a mingling of the good and the bad. There have been those who deplored a similar unevenness in Mahler, though since his output, covering some three quarters of a century, was so much greater, there is in actual quantity more of Strauss that fails to give complete satisfaction. Mahler's average was undoubtedly higher. The sifting process of time has barely begun in these two cases, and we are in no position to say what the verdict of posterity will be, although we can make our own surmises.

Certainly, Strauss today enjoys a degree of popularity denied his Bohemian-born contemporary. For one thing, he may be represented on orchestral programs by short or relatively short tone poems instead of by long symphonies, and it is precisely the longer of the tone poems that show signs of a waning popularity. Again, the matter of length has, no doubt, a good deal to do with the fact that, outside the German-speaking countries and Holland, the symphonies of Brahms are played so much more frequently than those of Bruckner. Brahms's popularity is also enhanced by his essays in fields other than the purely orchestral, namely, concerted music, chamber music, choral music, and the aforementioned songs and piano pieces. There are rare performances of the Bruckner Masses and the *Te Deum*, but the people who think of Bruckner at all think of him primarily as a symphonist. It is no wonder that Brahms's name is a household word while Bruckner remains a name—when he is even that—to so many who consider themselves music lovers.

<sup>37</sup> His versatile six-four pattern can express both the passion of Salome and the sanctity of John.

<sup>38</sup> Bruno Walter, *Gustav Mahler*, The Greystone Press, New York, 1941, p. 59.

In the same way there are more approaches to Strauss than to Mahler, who published no operas, concerted pieces or chamber works. Both composers made notable contributions to the lied, and it is possible to find Mahler's the more distinguished of the two, but the warmer, more impassioned songs of Strauss have the edge, so far as both singers and public are concerned.

But there is one respect in which Mahler has, and may continue to have, his revenge: many important contemporary composers have expressed their admiration for his music, and not a few have acknowledged their indebtedness to it, while Strauss is looked upon as a back number, a man of the 19th century, who remained faithful to its ideals and tenets, even though he lived and worked half way through the 20th. It is possible that the classicizing of his style in the final years may work toward a reversal of this opinion, as (and if) the compositions of his *Sturm und Drang* period fall into neglect. He was, of course, a bold, bad man in his day—the boldest in fact—and we find many anticipations of modern methods and devices, such as the polyharmonic chords that proclaim the madness of Don Quixote, the combined keys in *Salome*, as well as the free use of extreme dissonance in that opera and *Elektra*, and the array of unrelated triads that make the Silver Rose motive in *Der Rosenkavalier*. These things and others like them were once the horror of the pedants.

All and sundry will doff their hats to Strauss as a technician. His command of every facet of composition was as easy as it was secure. Above all, he was a superb musical architect who, even in an hour-long tone poem, never let matters get out of hand. We are so prone to think of form in music as classical form that we regard an unconventional structure as formless. According to Ernest Newman, the difficulty is that we confuse form with formalism. Answering the objection that Strauss had discarded the forms to which Brahms had remained faithful, he expended many words in an effort to prove that Strauss had mastered form whereas Brahms had let form master him.<sup>39</sup> In this connection it is pertinent to quote the composer himself: "A perfect work of art", he wrote some nine years before his death, "is achieved only when, as in the case of our great masters, content and form are blended to perfection.

"Our musicologists—I would mention the two greatest names: Friedrich von Hausegger (*Music as Expression*) and Eduard Hanslick (*Music as Form Moving in Sound*)—have given definitions which have since been considered incompatible. This is wrong. These are two mutually complementary forms of musical creation."<sup>40</sup>

To a greater extent than Strauss, Mahler adhered to classical procedure, modifying it to suit his own ends, and generally with complete success. Only rarely with him do we complain of looseness of structure. What chiefly interests your modernist in Mahler, however, is his counterpoint. On many sides you will hear it stated that Mahler's polyphony had definitely the linear quality so much in vogue today, while Strauss, Ernst Krenek suggests, wrote "mostly animated harmony." Mahler's, he goes on to say, "is a new kind of genuine polyphony: all commentators on Mahler, even skeptical ones, agree that therein lies his unique and all-important contribution to the evolution of our contemporary music." A few pages earlier we find: "Strauss appears today clearly as a figure of the faraway 19th century while Mahler's testament constantly

<sup>39</sup> Richard Strauss, John Lane, London and New York, 1908, pp. 53-61.

<sup>40</sup> *Op. cit.*, p. 116.

generates new impulses, its inspiring problematical qualities being by no means exhausted."<sup>41</sup>

More than two decades ago, when Mahler's music was receiving scant attention in this country, Ferguson suggested that Mahler might "prove to be one of the most important links between the nineteenth century and the twentieth." Another and not altogether friendly critic who might be quoted on this point is Alfred Einstein, who wrote: "Mahler, more clearly than any other, stands on the frontier between the old and the new worlds; he displays in tragic intensity the dualism of his time, the exaggerated sentimentality of the romantics and its first repudiation."<sup>42</sup>

Long before the above authorities paid tribute to the special character of Mahler's counterpoint, Philip H. Goepf, program annotator for the Philadelphia Orchestra, 1900-1921, called attention to it in the third volume of a series entitled *Symphonies and Their Meaning*. Shortly after Mahler's death he had the perspicacity to write, in regard to the Fifth Symphony: "In Mahler the most significant sign is a return to a true counterpoint, as against a mere overlaying of themes, that began with Wagner and still persists in Strauss,—an artificial kind of structure that is never conceived as a whole. . . . ."

"We cannot help rejoicing that in a sincere and poetic design of symphony is blended a splendid renaissance of pure counterpoint that shines clear above the modern spurious pretence. The Finale of Mahler's Fifth Symphony is one of the most inspired conceptions of counterpoint in all music. In it is realized the full dream of a revival of the art in all its glorious estate."<sup>43</sup>

When we come to the matter of orchestration, we find that both Mahler and Strauss were, in their diverse ways, past masters of that exacting craft. The story goes that Strauss once said to Artur Bodanzky that Mahler was the only man who could tell him anything about an orchestra. Strauss's orchestration underwent many changes throughout the years, as did that of Mahler, although the latter's years were fewer. Both men had their scores in which they "shot the works", if in a very different way, and both helped to further the development of the modern chamber orchestra. But taking all this into account, we can still say that Mahler's orchestration was more "modern" than that of his colleague. In evidence here is the linear style upon which so much stress has just been laid. Mahler's approach is more soloistic, and it is a well-known fact that his orchestral directions, his instructions and admonitions to the conductor, are the most copious and detailed to be found anywhere. Again, Strauss's brilliant, virtuosic orchestration, even when dictated by the demands of plot or program, seems almost an end in itself. No wonder that Bekker, in the study already referred to, included Strauss in the chapter entitled "The 'Art-for-Art's-Sake' Orchestra."

Many contemporary composers, among them Aaron Copland and Benjamin Britten, have voiced their admiration for Mahler's way of handling the orchestra. I shall content myself with citing the verdict of Casella: "Mahler's scoring is much closer to us than that of Strauss, whose work I had digested too completely when I first studied orchestration."<sup>44</sup> It may be added that Strauss has

<sup>41</sup> Biographical Essay in Walter: Mahler, pp. 206 and 196.

<sup>42</sup> *A Short History of Music*, Knopf, 1937, p. 250.

<sup>43</sup> The three volumes (J. B. Lippincott Co., Philadelphia, 1898-1913) have been combined in one, as *Great Works of Music*, Garden City Publishing Co., Inc., Garden City, Third Series, pp. 243-4.

<sup>44</sup> *Loc. cit.*

at least one follower among the younger men of today. Glenn Gould, the Canadian pianist, whose formidable reputation belies his years, is eager to shine as composer also. Asked to name the masters who had influenced him most, he mentioned Schönberg, Strauss, and Bruckner.<sup>45</sup>

While it is true, as I have said, that Brahms and Strauss are in higher favor in most parts of the world than Bruckner and Mahler, the two last-named are slowly and surely gaining ground. If we had to depend upon the conductors and performers alone, and the audiences to whom they feel that they must cater, at least to a reasonable extent, the situation would not perceptibly change for a long time to come. But in this mechanized day there is an approach to music other than the "live" one. This goes not only for the record buyer, and his name is legion, but also, and perhaps more importantly, for those who listen to the radio stations that specialize in the broadcasting of recorded music. If you are a devotee of either Bruckner or Mahler, even though you live in one of the cities that supports a major symphony orchestra, you can hardly satisfy that craving by attendance at concerts, but you can buy all, or virtually all of both composers' music on records, certainly all that is of any real importance—there is already a great deal of duplication—and you can hear much of it over the air. When enough people have cultivated a taste for and a desire to hear it in actual performance, the conductors will have to do something about it. And when that day comes, the balance of power in the Brahms and Strauss vs. Bruckner and Mahler competition may shift a little, or even a great deal. The real point is that there is plenty of room for all four.

---

CINCINNATI 1956 MAY FESTIVAL  
BRUCKNER'S F MINOR MASS AT OPENING CONCERT

JOSEPH KRIPS, Conductor

The opening concert of the forty-first May Festival appeared on paper to promise a highly stimulating evening of music. . . .

For many persons the Bruckner Mass was the highlight of the evening and possibly of the entire Festival. For one thing, it is the principal representative of the cornerstone works that veteran Festivalgoers adore, the Bach, Beethoven, etc. repertory.

The chorus may glory in it and the audience will be alternately soothed by its soft, mystical themes or bombarded by its vaulting, climactic thunder. That it has many moments of pure, shining inspiration can hardly be denied.

One may dislike Bruckner but his music at its best meets enough of anyone's artistic canons to merit all the special pleading that goes on in its behalf.

---

<sup>45</sup> *Time*, Vol. LXVIII, No. 4, p. 33.

I myself found it memorable in the performance by the chorus and orchestra last night.

One can hardly single out any number of the solo quartet in view of the scarcity of solo singing required by Bruckner. The four soloists were Naomi Farr, Nell Rankin, John Alexander and Kenneth Smith. Certainly they were adequate to the occasion.

ARTHUR DARACK  
*Cincinnati Enquirer*  
May 8, 1956

The subtitle of Mozart's C Major Symphony, brilliantly played by the Cincinnati Symphony Orchestra under May Festival Musical Director Josef Krips — "Jupiter" — may well be the key to the entire 41st May Music Festival. Certainly, the opening concert in the festively decorated temple of great music (Music Hall) was a banquet of sounds fit for the ears of gods. And to complete the Olympian picture, Junoesque, stunning goddess-voiced Inge Borkh sang a scena and aria ("Ah, Perfido!") by the composer who has been called "Olympian" more times than Greece has sacred shrines.

Yet in the end the "pagan" gods and goddesses had to defer to the banners of Christ the King, Whose awesome Sacrifice — in the text of the mass — is devoutly and overwhelmingly "translated" into musical sounds by the genius of Anton Bruckner. I will be very surprised if any other work on this May Festival matches the sublimity, the awesome Godcenteredness of this splendid composition, Bruckner's "Mass in F Minor."

Let us give credit where credit is due. Josef Krips is a festival music director of the (so-called) "old school". Maestro Krips believes that a festival number should be 90 percent perspiration and 10 per cent inspiration. The 10 per cent is assuredly there, and it is of the unalloyed kind. But that 90 per cent pre-festival rehearsal perspiration is what really makes the wheels go 'round. Flashy, sensational, melodramatic podium antics don't make festivals. I haven't a doubt in the world that Bruckner's "Mass in F Minor," in the hands of an unimaginative, careless conductor could be as unwieldy, tedious and merely noisy as a village band. In the hands of a Krips it climbs to the very portals of the heavens. I doff my hat to a conductor who can produce such choral-orchestral sounds. . . .

One could write a book about the "Jupiter" Symphony and the Bruckner "Mass in F Minor" as they were performed — let us say interpreted — Monday night.

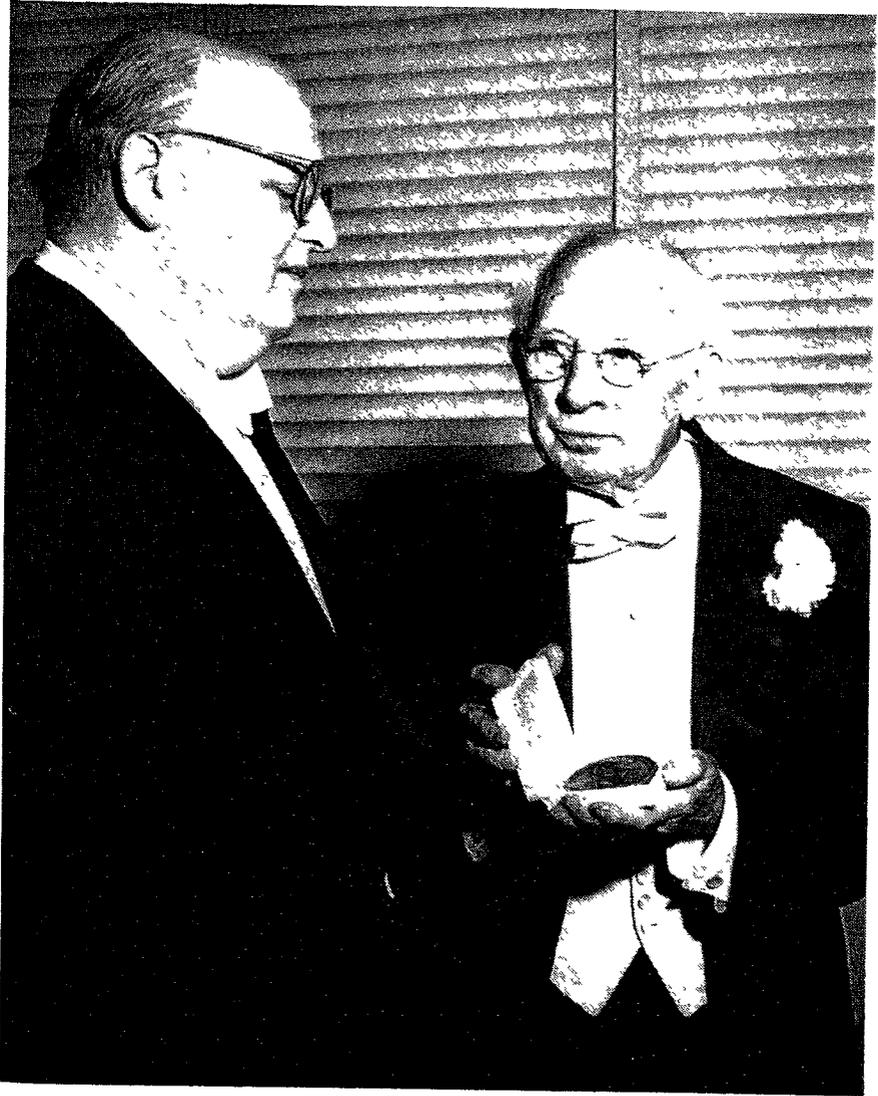

And the Bruckner work, with very good (though very brief) solo "interludes" by Naomi Farr, Nell Rankin, John Alexander and Kenneth Smith was, and I can't say it too often, a revelation to this critic. It is obviously a master-work; but it takes a fine chorus — our own festival chorus — and a fine orchestra — our own Cincinnati Symphony — good soloists and (above all) a maestro who is really a maestro and not merely a pedant or a show-off to perform this Bruckner mass.

HENRY HUMPHREYS

May 8, 1956

### KILENYI-BRUCKNER MEDAL AWARDED TO JOSEF KRIPS

In appreciation of his efforts to create greater interest in the works of Anton Bruckner, the Directors of the Society awarded the Kilenyi-Bruckner Medal of Honor to Josef Krips. Though Mr. Krips had been conducting in the U.S. but a short time, he had already included Bruckner's IV and VIII on programs of the Buffalo Philharmonic Orchestra. Under Mr. Krips' direction these symphonies were also heard in Sydney and Melbourne, Australia, in Montreal and Ottawa, and in Mexico City.

The Bruckner Medal, designed by the eminent sculptor, Julio Kilenyi, for the exclusive use of the Society, was presented to Mr. Krips by Dr. Martin G. Dumler, President of *The Bruckner Society of America*, after the performance of Bruckner's "F Minor Mass" at the Cincinnati May Festival on May 7, 1956.

*Dr. Martin G. Dumler presenting the Kilenyi Bruckner Medal to Joseph Krups  
at the Cincinnati May Festival May 7, 1956*

*Dika Newlin receiving the Kilenyi Mahler Medal from President Fred G. Holloway, Drew University, on November 10, 1957*

## KILENYI MAHLER MEDAL AWARDED TO DR. DIKA NEWLIN

### PRESENTATION SPEECH

PRESIDENT FRED G. HOLLOWAY, DREW UNIVERSITY

Intermission of Drew University Concert, Nov. 10, 1957

*The Bruckner Society of America* has placed upon me a very pleasant responsibility—that of presenting to you the Mahler Medal of Honor. Whenever a member of our faculty is honored, Drew University is also honored. For this reason I am doubly happy to present to you this award on behalf of the *Society*.

In receiving this award you are in the line of many distinguished persons in the world of music. It is my understanding that you are the first musicologist to be the recipient of the Mahler Medal. Because of your interest in the music of Mahler it seems particularly appropriate that this award should be made to you.

We well recognize the saneness of your approach to the newer musical forms. Your volume, "Bruckner, Mahler and Schoenberg", has received wide and deserved attention. The full significance of it is recognized in the fact that it now appears on the Continent in a German edition. The contribution which you have further made in the translations of Schoenberg's "Style and Idea" and of Leibowitz's "Schoenberg and His School" is further evidence of the contribution which you have been making.

I have the greatest satisfaction, therefore, in presenting to you this award on behalf of *The Bruckner Society of America*.

## MAHLER THIRD UNDER MITROPOULOS

by LOUIS BIANCOLLI

The following review is reprinted by permission of the *N. Y. World Telegram*,  
April 13, 1956.

A Gargantua among concert scores, Mahler's Third Symphony measured its giant length in a brilliant performance by Dimitri Mitropoulos and the Philharmonic Symphony in Carnegie Hall last night.

Mr. Mitropoulos' grasp of style and design, plus a strong sense of conviction in the genius of Mahler, made the performance one of the memorable events of the Philharmonic season.

The orchestra, put to a severe test by Mahler's highly individual scoring, honored both the conductor and the composer with a superb technical job, heightened by what seemed more than a borrowed fervor for the music.

This is problematic symphony in more ways than one. Its length alone — almost an hour and a half — would by itself explain why last night's was the first performance here in 34 years.

Besides being long, the symphony is complex, divided in style, and of a philosophical program requiring some attention on the part of the listener before the six movements fall into place with any semblance of coherence.

Mahler had in mind a scheme of reconciliation with the world around him. The theme is a sort of comradeship with the world of nature, the world of man, the world of God. It is the ultimate peace and security of belonging.

There is doubtless much too much of everything in this symphony, though chiefly of time. Yet, for all the overextended pointless repetitions, it is an arresting work, profound and sincere.

One brought away last night a sharp sense of Mahler's love of nature — not even Beethoven exceeded him there — and of his affirmation of life. The symphony ranges far and wide, and much of the ground covered is new and exciting.

Besides an enlarged Philharmonic, Mr. Mitropoulos had the added assistance of Beatrice Krebs, who handled the contralto solos beautifully, and the Westminster Choir, which also rose nobly to Mahler's message.

The following review is reprinted by permission from the *N. Y. World Telegram*,  
April 16, 1956.

Having heard Mahler's Third Symphony yesterday for the second time in four days — and never before that — I should like now to amplify the opinion I expressed Friday.

My review contained a few reservations concerning the length, size, and "seemingly pointless repetitions" of the symphony. On the whole, I thought it a powerful work.

As of yesterday's Philharmonic broadcast, I still think it a powerful work,

but I confess my reservations are a good deal weaker. I found myself revising my opinion upward yesterday.

I believe Mahler's Third — not heard in Carnegie in 34 years — a monument of the concert writing of the last hundred years. If profounder slow movements than the final Adagio exist in that period, outside Mahler, I hereby invite correction.

This enormous score — an hour and a half in length — is more than a symphony. It is almost a set of symphonies within symphonies, a concert by itself, a whole banquet of interrelated solo, choral, orchestra courses.

What an experience it is to live through this music — to follow its evolution of thought, its controlled growth of theme and variation, until its rise and fall and expansion of tone unfold like the limitless wonder of life itself.

Mahler's plan is unlike any other I know of. Even among his own irregular structures, the Third is unique in its contrasts of tension and rest, drama and commonplace, song and symphony, brevity and length.

Often, the music builds to a heady crest of whirling intensity, only to settle abruptly on a humdrum plane of repose. Sometimes, the passage is crowded to bursting; sometimes, it is sparse and hollow and distant.

It is as if Mahler wanted the low and the lofty to be equally accommodated in this symphony, the swift and the slow, the deep and the shallow — life on the run and life as an illusion of arrested motion.

I was glad Dimitri Mitropoulos and the orchestra were given the "bravos" that rang out so smartly over the air from Carnegie yesterday. The maestro was in truly visionary vein, and the men rose to their leader's vision.

He is quite a phenomenon, this master-music-mind from Greece, of uncanny insight and broad and deep as the music he cherishes — the ideal crusader for the genius and gospel of Gustav Mahler.

WHERE THERE'S A WILL, THERE'S A WAY

14 Lilac Dr.  
Rochester 20, N. Y.  
6/3/56

Mr. Robert G. Grey  
697 West End Ave.  
New York, N. Y.

Dear Mr. Grey:

What a great pleasure to hear from you. Mr. Taubman, of the *TIMES* advised us that the Bruckner Society kept a fatherly eye also on the Mahler presentations. But, frankly, until reading your publication *CHORD AND DISCORD*, I didn't realize that Mahler was more than a sidelight with you. I see that you on the other hand have a good deal of your publication devoted to Mahler. So it will be a privilege to tell you the exciting story of our recent production of his 8th Symphony.

It's a privilege, because only at such times do you really sit back and get a picture of what you have been through, what you've accomplished. We are a group with few tangible assets and none of the superstructure which gives and guarantees continuity and security to musical organizations. We do have one high card: one of the most gifted men in the field of oratorio, Theodore Hollenbach. His ability to gather a chorus from the community and train it to a surprisingly high degree of skill is our main strength. For 11 years we have weathered the storms of the box office and have, entirely on our own, managed to stay solvent and continue singing.

This all is not mere rambling, but indicates the background against which the Maestro's request to do the Mahler Symphony of 1000 was made. When he outlined the work to the Board, of which I am chairman and by no means the most timid member, I thought he had gone mad. Here we were, hanging onto a puny bank balance with a drowning man's desperation, having just lost over \$1,000 of it on the Bach *B Minor Mass*, and he wants to do a work calling for three choruses, orchestra of a hundred, brass choir, 8 soloists and Lord knows what else. He sits there with a straight face and says that an unknown gradeschool music teacher will organize and train a choir of 150 boy sopranos from the County Schools; that he will canvass Buffalo and Syracuse for another oratorio chorus to do the second chorus part.

Well, out of pure loyalty to him, I withdrew and reckoned up the necessary budget. \$6,000 it came out. \$6,000, when we had grossed \$2500 on our last concert and had \$1500 in the bank. At this point the disease caught the whole Board. They all lost their senses after hearing the work on discs. They voted unanimously to undertake the work. Like a meteor, I thought, we are going out in a blaze of glory, and told my friends all to be sure to hear the last concert of the Oratorio Society, and cautioned the Maestro to look around for a source of income to replace the little we are able to pay him.

Like most crazy men an aura of confidence and sublime optimism surrounded him. He talked like we would sell out one of the largest concert halls in the

country for an unknown work. He talked as though 150 boys who could actually sing, who would actually give up more than a dozen *Saturday mornings*, could be located and organized. He talked as though another oratorio chorus, 100 miles away, would be willing to give up its own spring concert and train for this work . . . then travel all the way here, completely at its own expense from start to finish (there wasn't a cent budgeted for them). He talked as though the newspapers and radio and TV stations would find it one of the most exciting offerings of the season.

And the amazing thing about it all was that he turned out to be right.

The Monroe County Boys Symphonic Choir took shape. Saturday after Saturday the parents of 150 boys hauled them from all over the County to rehearse in a chorus that would give but one performance. And these parents called the Maestro up repeatedly to ask what he had done to so spellbind their squirrely children. They sang their music almost completely from memory.

The Buffalo Schola Cantorum acted like it was a privilege for them to put half a season and much of their funds into the work.

Our Society was so enthralled by the work that they didn't even mention the fact that there is much less choral work in this than in their customary bill of fare (about half as much to be exact . . . and there has been a standing objection among them to singing anything for 3 or 4 months which was not a real choral work).

The newspapers were bitten by the bug. An example of the publicity given free by them is enclosed.

Two weeks after the tickets went on sale it looked like a sellout, and turned out to be one.

Five days before the performance the Eastman Theatre authorities stated that such a number of people had never before been supported by the Theatre stage, and that they would not permit it to go ahead without a completely different seating platform plus OK's from architects and engineers. (Two years previous a great section of the ceiling had fallen in three hours before a concert, causing tremendous expense and painful public relations, the wounds from which had just healed. They were understandably not anxious for a repetition.) So the final week was a nightmare of scurrying around to make the performance possible.

It was a tremendous success with the public, who gave us all and especially Maestro Hollenbach, a standing ovation.

I am obviously not modest in telling you this story. But I do it for a purpose: the hope that you might be able to pass it on to other organizations who face the same fearful obstacles against the performance of such great works of music. Maybe the story of one group's success in the face of these obstacles will give them some little encouragement.

Your beautiful Mahler Medal of Honor has on it the composer's words, "My Time Will Yet Come". It gives me a great feeling of warmth to realize the courage and daring leadership of Hollenbach has helped make that come true.

Almost none of the 700 of us who learned the 8th Symphony had any real acquaintance with Mahler. I wish I had counted the times people said to me words of thanks for the opening of their eyes to the beauty of Mahler's music. And the 3500 who heard the concert must in some degree have had this same feeling, for Mahler, even in this musical city, gets precious little hearing.

Indicative of the enthusiasm surrounding this discovery of Mahler, a mem-

ber of our chorus, Dr. Leslie Brooker, read every biographical word about the composer, in English and German, he could locate. He also journeyed to New York for a most interesting interview with the composer's widow, Alma Mahler Werfel.

I am now chagrined that I did not show more energy in learning about your Society, because we would have been so happy to invite the principals of your group to come stay with us and hear the work, which, judging from the list of its performances in CHORD AND DISCORD, even you don't have much chance to hear.

Will you allow us to take out a membership in the Society and thus do some little bit toward helping the fine work you are doing?

Cordially,  
 CARL C. STRUEVER JR.  
 Manager and Chairman of the Board  
 ROCHESTER ORATORIO SOCIETY

## GREAT MAHLER SYMPHONY STIRRING AT EASTMAN

by HARVEY SOUTHGATE

The following review is reprinted by permission of *Democrat and Chronicle*, Rochester, N. Y., April 29, 1956.

One of the towering musical creations of all time was presented on the stage of the Eastman Theater last night with a detail and a dimension commensurate with its heroic quality. Purely on the statistical side, the Eighth Symphony of Gustav Mahler is something to strike awe to the listener.

Two choruses each of 300 adult singers, another of 150 boys, eight soloists and a full size symphonic orchestra, with a brass choir for extra measure in the balcony and a part of an organ — all these are united in a mechanical problem to stagger the most ambitious producers.

Last night's audience, which filled almost every seat in the theater, learned that Rochester has a conductor with the ambition and enough depth and breadth of musical resources to do justice to this extraordinary work. Theodore Hollenbach, assembling his forces in the Rochester Oratorio Society early last fall, brought the vision to fulfillment after weeks of steady effort. He called on the excellent Schola Cantorum of Buffalo to assist, trained a boys' choir selected from Monroe County schools, and in the net result, as revealed last night, set a musical landmark in the city. As the audience rose at the end of the performance and thundered its applause, he and all who took part in this "symphony of a thousand" must have felt their efforts were worthwhile.

One does not need to like everything in this long and sometimes unfathomable work to appreciate the vitality and creative power that went into it. Like

most of Mahler's work, it has moments of sagging interest, and its very size sometimes defeats its purpose in making itself clear to the listener. It reaches peaks, however, of breathtaking power, proclamations of spiritual conviction in which one clearly catches the vision which the composer is expressing in his music. There are solo passages of extraordinary beauty, instrumental moments that sound at times like a Wagner opera, at others like lovely folk songs. One would like to hear some of these detached as single melodies — the violin and harp dialogue, the bits for flute and low strings, the charming airs for woodwinds.

Yet the work is primarily for choral and solo voices and the mechanics of keeping all these together with the orchestra and other instruments, of "cueing" first one then another, leave little freedom for the conductor to attend to minute details of expression and shading. It was the more remarkable that Mr. Hollenbach did manage to achieve such excellent cohesion and musical understanding in all sections of the personnel.

The work, which was first performed in 1908, is in two parts. The first, in Latin, built on the ninth century hymn, "Veni, Creator Spiritus," is mainly choral, full voice, and rather repetitious. The second part, in German, based on the final scenes of Goethe's "Faust," has the "sweet" music mentioned and the steadily ascending emotional power that eventually brings in the entire body of sound in a richly sonorous climax.

The solo voices have heavy duty through a large part of the symphony. These without exception last night were ringingly good. They sang out over and above the heavy instrumentation, adding their special parts to the emotional meaning of the music. The soloists were Delores Whyte, soprano; Nancy Cringoli, soprano; Patricia Berlin, contralto; Cherlene Chadwick, contralto; Ray DuVoll, tenor; William DuVall, baritone; Jon Vickers, tenor; Herbert Beattie, bass.

The Oratorio Society and the director are to be congratulated on this noteworthy achievement. It seems too bad if this one performance should also be the last.

#### HORENSTEIN CONDUCTS BRUCKNER AND MAHLER IN CARACAS

On Feb. 8, 1957, Jasha Horenstein conducted the *Orquesta Sinfonica Venezuela* in a performance of Bruckner's *Third*. The following week he conducted Mahler's *Fourth*; Fedora Aleman was the soloist. Neither symphony had been played by the *Orquesta Sinfonica Venezuela* before. Mr. Hornstein is an ardent champion of Bruckner and Mahler. He made the first recording of Bruckner's *Seventh* many years ago. Since that time Vox has released his interpretations of Bruckner's *Eighth* and *Ninth* and Mahler's *First* and *Ninth*.

## TWO LUCKY "SEVENTHS"

by Dika Newlin

Bruckner's Seventh in New York, 1956

Bruckner's most popular symphony reappeared in New York concert halls during the 1956-57 season under rather unusual circumstances. Of special importance was the New York debut of the Vienna Philharmonic under Carl Schuricht, November 7, 1956, in a program half of which was consecrated to this symphony. We are told that Mr. Schuricht was advised in Germany not to perform this work on his American tour, because it would not be appreciated or understood here. How fortunate that this advice was disregarded—that instead the American public was favored with this magnificent orchestra's interpretation of a work that has long been identified with it (in spite of its initial reluctance to play Bruckner's symphonies during his lifetime). And the compliment was more than repaid by the enthusiastic responses of both audiences and critics in communities as different as Boston, Cincinnati, and East Lansing, Mich. (Michigan State University). Oddly, only in New York were most critics rather cool, not to the achievements of orchestra and conductor, but to the symphony itself, for the usually adduced reasons of "excessive length", etc. This historic attitude seems to persist, but did not afflict a majority of the New York audience, judging from the numbers who remained to the end with rapt attention.

Mr. Schuricht has the happy knack of achieving a maximum of musical excitement with a minimum of visible expenditure of physical energy. Thus, a mere flick of the wrist was often sufficient to unleash climaxes of breathtaking power, in music which has plenty of them to offer. His flair for drama was shown by his re-introduction of the controversial cymbal stroke at the high point of the Adagio. Even with full knowledge of the historical arguments against this practise (lucidly outlined by Robert Haas in his preface to the *Internationale Bruckner-Gesellschaft* edition of the work) one felt, in this climactic moment, that it was inevitable. Less praiseworthy (though welcomed by some critics) was the small cut made in the subordinate theme of the Finale, which, without materially reducing the elapsed time of the monumental work, had an adverse effect on its formal balance. However, all reservations were swept away by the tonal splendor of the final E major climax, constructed by a master hand and unfolded by the conductor with all the leisurely development which it demands. The audience's ovation afterwards was spontaneous and warm—and brought forth an unexpected (at least in Carnegie Hall) response from the orchestra: *The Blue Danube* as encore! The shock of the complete change of mood was well nigh physical, yet once one had recovered from the initial surprise one could sit back and enjoy an incomparable performance of the old favorite. Since wartime years when the appearance of this waltz as an encore on Philharmonic concerts played abroad was one of the ways the Viennese had to express their longing for renewed cultural independence, its use on this orchestra's foreign tours has become

traditional. One still finds it surprising, to say the least, after a Bruckner, Beethoven or Brahms symphony—but perhaps Bruckner, no bad hand at fiddling a waltz or *Ländler* himself in younger years, would not have minded too much after all!

We note with pleasure that the Vienna Philharmonic is planning a return engagement to the United States in 1958, and hope that they will once more come bringing Bruckner—and perhaps Mahler? (Schuricht is said to have expressed an interest in performing Mahler's Eighth here.) A concentration on the repertory of the Viennese Classic and late-Romantic masters would, I feel, serve them better on tour than their attempts to perform contemporary Austrian music, for which their performance style, their instruments and the mental attitude of many of the players towards modern works are not well suited.

A very different approach to Bruckner's Seventh was heard in a concert of the student orchestra of the Mannes School of Music, under Carl Bamberger, on December 19, 1956. One did not, of course, expect a Vienna Philharmonic-like perfection from the ambitious group, but the results of the endeavor were surprisingly good and well repaid the three months spent by Mr. Bamberger on training his youthful charges in a taxing program which also included Corelli's *Christmas Concerto* and Richard Strauss' transfigured *Four Last Songs* (interpreted with deep feeling and promising vocalism by Ruth Morris, a student of the school). Somewhat disconcerting were the various liberties taken with the symphony—large cuts in the Adagio and Finale and, most surprising of all (though practised by Bruckner in the Ninth Symphony) the reversal of order of Adagio and Scherzo movements. However, the *Urtext* was followed in such matters as the omission of the cymbals. All in all this was a worthwhile experience not only for the young performers but also for the many interested listeners. We are glad that Mr. Schuricht had the opportunity to direct this group in a rehearsal and thus to find out that young Americans are not so unacquainted with Bruckner as he may perhaps have supposed. But we still await the day when this ever-exciting symphony will become as staple a part of the American symphonic repertory as Brahms' favored four.

---

#### KILENYI BRUCKNER MEDAL AWARDED TO F. CHARLES ADLER

In appreciation of his efforts to create greater interest in and appreciation of Bruckner's music, the Directors of *The Bruckner Society of America, Inc.* awarded the Bruckner Medal of Honor, designed by Julio Kilenyi for the exclusive use of the *Society*, to F. Charles Adler. Mr. Adler conducted Bruckner's rarely played *Third Symphony* in January 1936 and the equally rarely performed *Sixth Symphony* in May 1936 at the Brooklyn Museum in New York City. Recently, he recorded the Third and the Loewe version of the *Ninth*.

It is also of interest to note that he recorded the extremely difficult and rarely heard *Third, Sixth, and Tenth Symphonies* of Gustav Mahler.

## BRUCKNER AND THE CLASSICS

by HERBERT ANTCLIFFE

Between modern composers and their predecessors, there must of necessity be some affinity, both personal and artistic. Otherwise what Sir George Grove aptly called "the apostolic succession" of great composers could not be continued, and, of course, each modern composer has a closer affinity with some individual classical master than with others. In the case of Bruckner it would seem that the closest personal affinity with any individual master is with Haydn, and before looking at Bruckner's musical affinity with others we may well consider this personal affinity between the eighteenth century master and his successor (as a symphonist) in the nineteenth.

Affinities, even although they be clearly recognized, are inevitably difficult to define. Especially is this so when a century or even half a century divides the work of the men between whom such affinities exist. The fact of such separation in time in almost every case leads not only to entirely different circumstances, which necessarily affect the character of the men and their work, but places us in the difficulty of seeing both the men and their work along different vistas, one may say, down different avenues. Yet, if one looks intently and carefully, if, as it were, we adjust our focus, the affinities come out as clearly as their differences.

This is particularly the case with Joseph Haydn and Anton Bruckner. Born almost a century apart, one almost a pure Slav<sup>1</sup>, the other an equally pure Teuton (though this purity has been questioned), there was something in their natures which united them very closely. This may at first sight appear unlikely, if not quite strange, as not only their circumstances but their personalities, which in some matters closely affect such circumstances, were quite different. Haydn was a great traveler for artistic and professional purposes; Bruckner travelled little, although travelling in his days had become much easier than in those of Haydn. Perhaps the most obvious affinity was in their religious faith, for both were devout Catholics and a religious strain ran right through their lives. Both, too, were home loving by nature, with circumstances which hindered this characteristic. Haydn was a servant by profession who from time to time openly defied his masters. Bruckner was in a subordinate position though not officially a servant, and he also opposed his superiors in office from time to time.

The naiveté of these two was the equal of that of Mozart "the boy who never grew up", if it were not greater. Elsewhere, I have described that of Bruckner

---

<sup>1</sup> I am aware that this has been controverted by some high authorities. It may be observed that in spite of a German (Thuringian, not Austrian) teacher, and the influence of Vitali, Vivaldi, and others, the character of Haydn the man and that of much of his music shows some strong Slav influences, and much of what Haydn was able to do for Austrian, or Teutonic, music arose from these influences. And, I may add, to stress my point, it is not the use of the melodies which are assumed to be Croatian, that made this influence, but the essential nature of both the man and his art, that made his music so distinctly Slav (i.e., Yugoslav). Consequently, at least for my present purpose, I prefer to leave my statement as it is.

as "stupendous" and this might be equally applicable to Haydn, though with the latter it did not result in large-scaled works, as it did with Bruckner himself. Had either of them been less naive, they might have given way less to those whom they regarded as their superiors or masters—Haydn to the demands of his employers, Bruckner to those of the men upon whom he was more or less dependent for the performance of his works.

Possibly, this naiveté came to some extent from their common peasant origin, for though neither of them was "of the land" they both came from the peasant class, for both the small workman and tradesman and the village schoolmaster belonged essentially to the same class as the small farmer or even the farm laborer, provided this last was intelligent and, therefore, to some extent self-educated.

In position, of course, Bruckner was nearer to J. S. Bach than he was to Joseph Haydn, and he had something of the same "humility of genius". And in their characters both Bruckner and Bach were sunk entirely in their work, having only such ambition as made them desire and work for perfection in their compositions and in their execution of their own and other men's works. In this matter Bach was somewhat far removed from Bruckner, because he came of a family of more or less great and prominent musicians, while the musical antecedents of Bruckner were neither so striking nor so favorable. They had both a certain degree of self-dependence which made them, while for professional purposes seeking the patronage of highly placed persons, go their own way without much regard for the opinions of princes and nobles unless these were musicians of ability and discernment.

It is interesting to compare the portraits, and, especially, the profiles of these two. Different as they are, there is the same tenacity of purpose, one with the liveliness of the Slav and the other with the sturdiness, almost one is tempted to say the surliness, of the Teuton.

When we turn to the question of Bruckner's purely musical affinities, we are on wider, and possibly vaguer, ground. Of his affinity with the classics at all, with Bach, Haydn, Mozart, and Beethoven, he was, in all probability, himself entirely unconscious and ignorant. Deeply religious Catholic as he was, he had little affinity with the great Church classics, with Palestrina, Josquin des Prez, Victoria, et al.

His contrapuntal feeling was also different from that of Bach. With Haydn he had an affinity of feeling and style. With Mozart an affinity of technic. Time and time again, one feels the spirit of Haydn in the symphonies. In these symphonies we often feel that Mozart also might have conceived this or that phrase or combination, and that had Haydn or Mozart lived a century later, then one or both might have designed the same orchestration as did Bruckner. My own personal feeling is that Haydn might have written Bruckner's Third and Mozart his Eighth.

I am still looking for a conductor (at least in Europe; I do not, unfortunately, know American orchestral life sufficiently) who will make up a program consisting of a Haydn symphony and one by Bruckner. One would even suggest, as a favorable introduction to the works of Bruckner to those who do not know Bruckner's works, say the popular G Major of Haydn and the Third of Bruckner. The emotional relation of these two is sufficiently close to allow them to be played in the same program without any clash or disagreement.

As to the industry of all three, technically, he had more affinity with Mozart

than with Haydn, and there is the outstanding comparison of Mozart's Jupiter and Bruckner's Eighth, both of which are masterpieces of contrapuntal treatment of symphonic form. In person, character, and temperament he was more nearly related to Haydn. As a church organist, of course, his affinity with J. S. Bach was very close, though not in their orchestral works.

A description of the character, that is the musical character, of Haydn by a recent Dutch writer applies to both: "So much expression of seriousness and passion, so many moods of manly strength and intense energy, devout contemplation and hymnodic energy," which unites practically all great composers, but particularly those of a deeply religious character as Bach, Haydn, Mozart, and Bruckner.

Most composers have been also great performers and many of them in their lifetime more famous in this respect than as composers. Bach and Handel, for instance, were both great organists. Their affinities were, as all affinities must be, psychological, though in a more marked way than most. They were also directly spiritual and found expression in their religious faith and feeling. Perhaps, however, the most notable affinity between Haydn particularly, and Mozart to a lesser extent, and Bruckner, was in their naiveté.

In some formal respects the music of Bruckner and Haydn had something in common in the fact that they both were fond of the folksongs of their country and their respective districts, but while Haydn drew on a wide area, Bruckner confined himself chiefly to two or three popular dance forms, of which the chief was the Ländler.

As reformers or pioneers Haydn and Bruckner had this in common; they both took the traditions of their time and developed them along broader and sometimes newer lines. Haydn "the father of the symphony" yet owed much to his teacher C. P. E. Bach, Bruckner owed equally much to Beethoven.

The amount of a man's indebtedness to the past is also shown to some extent by his influence on the future. There is little doubt that Liszt and later Richard Strauss, who were both symphonists and revolutionaries, owed something in the melodic structure of their works to Bruckner, Strauss particularly in his springing themes. Bruckner and Haydn were not revolutionaries. Equally, these earlier masters, notwithstanding their numberless works in other forms, developed the symphonic form, Haydn by following C. P. E. Bach, and also learning from others (including his pupil W. A. Mozart) developed a new form, or new forms for the symphony. Bruckner, by following Beethoven and his predecessors, and learning from Wagner and others, erected not a new form but rather a new species of symphonic structure based entirely on the older ones.

By considering these points and comparing them with others arising from our general study of history, we can see, in the main, that Bruckner owed much, in fact all apart from his own genius, to the classics, and his admiration of the works of Wagner was incidental to this and had comparatively little influence on the works except, alas, when he allowed the Wagnerites to tamper with what he ought to have left alone, even at the cost of having his works shelved for a generation.

## MAHLER AND FREUD

by DONALD MITCHELL

*Note: This is a script, not an article. It was first broadcast in the B.B.C. Third Programme on 28th March, 1955. I have not attempted to alter the text but have replaced the music examples (extracts from recorded performances of Mahler's symphonies) by detailed references to the relevant scores. Readers sufficiently interested may check the passages concerned. The scores used are 'study' editions published by: Messrs. Universal Edition (SI, SIII), Messrs. C. F. Peters (SV), Messrs. Bote and Bock (SVII).*

If I were asked for a single term which described the characteristic flavour of Mahler's music, and had both emotional and technical relevance, I think I should suggest 'tension' as the most appropriate word. It seems to me that when Mahler is expressing this basic tension—translating it into musical technique—he is at both his most characteristic and most inspired. Tension presupposes some kind of conflict between two opposed poles of thought or feeling, and often in Mahler's music we have just this situation exposed. Sometimes, of course, we have music from Mahler, anguished and turbulent, which does not state the conflict but expresses his reaction to it. Here the premises from which the conflict derives are not revealed but suppressed; from the suppression emerges the characteristic tension. Often, however, Mahler does express—or achieve—his tension through vivid contrast, through the juxtaposition of dissimilar moods, themes, harmonic textures—even whole movements. On these occasions, the conflict is exposed; we feel strongly the pull between two propositions which superficially seem to have little in common. The tension which results is typical of his mature art where continually we are confronted with the unexpected. What seems to be reposeful and straightforward suddenly develops into something agitated and complex. This passage from the nocturnal fourth movement of the seventh symphony is characteristic; the guileless serenade atmosphere is surprisingly disrupted, and the level of tension intensified through the dislocation of the prevailing mood. [SVII 4. p. 176. Fig. 211 to 3 bars before Fig. 216.]

This overwhelming tension in Mahler's music has, of course, been noted before, but its function has been little appreciated. Indeed, for the most part, it has been criticized, offered as evidence of his emotional instability, his stylistic inconsistency; the violent contrasts about which so much of Mahler's music pivots have been interpreted as an inability to maintain his inspiration—hence that view of Mahler's art that utter banality mingles with and deflates noble intentions, that dire lapses in taste inexcusably ruin otherwise impeccable conceptions. On a broader view, this misunderstanding of the nature of his tension has led to derogatory contrasts made between the size of his ideas and the size of his symphonies—not to speak of the strong body of opinion that sees the symphonies as inflated songs. Altogether, Mahler's tension at all levels of expression, has been regretted rather than applauded.

If there has been little real understanding of his characteristic tension, there

has been much analysis of it, much of it ill-founded, most of it inadequate. Mahler's conflict—sensed alike by friend and foe—has been explained as the result of his activities tragically split between the tyranny of conducting and the urge to compose. It has been suggested that Mahler was born at the wrong moment, on the tide of a musical fashion that was rapidly running out: his musical efforts to stay the retreating current imposed a strain on his music that it could not withstand. Or there is the art and society viewpoint, that Mahler lived in a disintegrating culture, in the midst of the collapsing Austro-Hungarian empire, and his music therefore faithfully reflects the social tensions of his epoch. Taken to excess, as it has been, this latter analysis almost assumes that history wrote Mahler's symphonies for him; his works become little more than musical commentaries on political events.

Mahler was a man of many talents and many tensions, and it would be rash indeed to suppose that the world in which he lived and his mode of life did not influence his art. Yet it is hard to imagine—it almost goes against plain commonsense—that his music was shaped down to its finest detail by his historical environment. On the contrary, acquaintance with his music and the facts of his inner life suggests that his characteristic tension stems from sources much nearer home, from himself and his early relationship to his family, to his mother especially. His later environment, in the widest sense, may have done nothing to lessen his tension—it may, in fact, have exacerbated it—but it seems likely that the basic tension was a creation of his childhood years, was private and a part of his personality, not public and a part of history, either musical or political.

I may as well say at once that even when one has stumbled on the unconscious forces behind a composer's work, the task of evaluating his music is not suddenly made easy. Music remains good or bad in itself, however far we penetrate a composer's mind. The discussion of a composer's neurosis is only musically relevant in so far as it enables us to see clearly what he did with it in terms of his music. If what may have appeared to be purely arbitrary in the music is shown to spring from deep personal sources, to present a consistent artistic attitude, extended and matured across the years, it may well be that the impression of musical arbitrariness is removed. Certain biographical data may actively assist musical understanding, and since understanding is a necessary stage on the way to evaluation, one can claim that such information is, at the very least, a proper study for musical research.

We are particularly fortunate in the case of Mahler that the kind of information I have in mind comes from a meeting he had in 1910 with none other than Sigmund Freud. The fact that the meeting took place has been known for some time; Mrs. Mahler mentions it in her memoir of her husband and gives a brief account of the interview, based upon what she was told by Mahler.<sup>1</sup> What has come to light recently is Freud's own account of his conversation with Mahler, made by Freud in a personal communication to the psychoanalyst Marie Bonaparte in 1925. Perhaps I may say at this point that it is entirely due to the courtesy and most generous cooperation of Dr. Ernest Jones, Freud's biographer, that I am in possession of this new material.<sup>2</sup>

<sup>1</sup> See Alma Mahler, *Gustav Mahler: Memories and Letters*, London, 1946, pp. 146-7.

<sup>2</sup> See Ernest Jones, *Sigmund Freud: Life and Work*, Vol. II, London, 1955, pp. 88-9. Dr. Jones was good enough to provide me with the material that formed the basis of this broadcast in advance of its publication in the second volume of his immaculate biography. I am happy to pay tribute once more to his generosity.

First a word about the meeting itself. In 1910, Mahler became seriously alarmed about his relationship to his wife. He was advised to consult Freud, wrote, was given an appointment—cancelled it. He cancelled his appointment—significantly—no less than three times. Finally the meeting took place in Leyden, Holland, towards the end of August. The two men met in a hotel, and then, in Dr. Jones' words, "spent four hours strolling through the town and conducting a sort of analysis". The interview over, Freud caught a tram back to the coast, where he was on a holiday, and Mahler returned by night train to the Tyrol.

Apart from what was said, it is impossible not to be intrigued by the very thought of this encounter between two men of exceptional genius. Mahler, of course, was an artist, Freud a scientist. Yet Mahler's incessant seeking after musical truth had something of the selfless passion with which Freud conducted his investigations; and no one, perhaps, either layman or expert, can fail to appreciate the consummate artistry with which Freud expounded his humane science. Perhaps it was this common ground, between psychoanalyst and patient that explains why Mahler, who had never before met with psychoanalysis, surprised Freud by understanding it with remarkable speed. Perhaps Mahler, in his turn, was surprised by Freud's analysis of himself—as partial as it had to be in the peculiar circumstances of the interview. In a letter of 1935 to Theodor Reik, Freud wrote: "In highly interesting expeditions through [Mahler's] life history, we discovered his personal conditions for love, especially his Holy Mary complex (mother fixation)".<sup>3</sup> Mahler, his wife tells us, "refused to acknowledge" this fixation—the denial confirms rather than contradicts Freud's diagnosis—but it seems that the meeting had a positive effect and Mahler's marriage was stabilized for the brief remainder of his life.

It was doubtless during those "highly interesting expeditions through his life history" that Mahler—to quote Dr. Jones—"suddenly said that now he understood why his music had always been prevented from achieving the highest rank through the noblest passages, those inspired by the most profound emotions, being spoilt by the intrusion of some commonplace melody. His father, apparently a brutal person, treated his wife very badly, and when Mahler was a young boy there was a specially painful scene between them. It became quite unbearable to the boy, who rushed away from the house. At that moment, however, a hurdy-gurdy in the street was grinding out the popular Viennese air "Ach, du lieber Augustin". In Mahler's opinion the conjunction of high tragedy and light amusement was from then on inextricably fixed in his mind, and the one mood inevitably brought the other with it".

Mahler's confessions strike me as being of genuine musical significance and relevance. It is not possible to deal in this talk with all the questions they raise. We must overlook, for example, Mahler's estimate of his own achievements, remembering that composers are often the worst judges of their own value—what they value in themselves may not be at all what they are valued for by posterity; moreover, we do not know by what standards Mahler judged his own music. He may even, quite sincerely, have wanted to be another kind of composer altogether. In this context, his own comment on "noblest passages . . . spoilt by the intrusion of some commonplace melody" is of particular interest. Mahler himself seems to have regretted the conflict, to have viewed it as a disability, to agree, almost, with the views of his own critics. I, on the

<sup>3</sup> See Theodor Reik, *The Haunting Melody*, New York, 1953, pp. 342 ff.

contrary, as I have already suggested, regard the inevitably ensuing tension as that main spring motivating his most characteristic and striking contributions to the art of music. But this, I feel, is not the moment to discuss whether Mahler was wrong or right about his own art, whether, in fact, the sublime in his music was fatally undermined by the mundane. I believe he was wrong, that he felt insecure about his music, that in a sense he did not even fully understand it himself. It would certainly not be unnatural for an artist in the grip of a violent tension from which he was unable to escape to curse it rather than to praise it, to imagine that to be rid of it would necessarily be an improvement. I am inclined to share Ernst Krenek's opinion that "it is possible . . . for an innovator not to grasp fully the implication of his venture into the unknown. He may sometimes even be unaware of having opened a new avenue . . .", that "the disconcerting straightforwardness of Mahler"—"his regression to primitive musical substances"—"is a striking foretoken of the great intellectual crisis which with extraordinary sensitivity he felt looming in the oncoming 20th century".<sup>4</sup>

But it is not my purpose this evening to attempt a critical evaluation of specific features of Mahler's music. I only hope to show how frequently in his music, though by very various means, he re-enacted his traumatic childhood experience, how the vivid contrast between high tragedy and low farce, sublimated, disguised and transfigured as it often was, emerged as a leading artistic principle in his music, a principle almost always ironic in intent and execution.

Mahler himself confused the issue by crudely over-simplifying it. It would be easy to point to the parallel between his music and his childhood experience if comedy always relieved tragedy, or a commonplace thought succeeded every noble one. But his music, mercifully, is more interesting than that: the trauma assumes complex shapes. However, in his first symphony, in the slow movement, we have a clear instance of the basic conflict at work. The movement is a sombre funeral march. Mahler's use of a round, "Frère Jacques", as the basis of the march is symptomatic of both his ironic intention and of his ability to make old—even mundane—musical material serve new ends by reversing its established meaning. [SI 3 p. 78. Start of mvt. to Fig. 3.]

Already in the movement's first section, the funeral mood has been interrupted by outbreaks of deliberate parody. In the gloomy recapitulation, the very march itself is juxtaposed with these mundane invasions, not quite hurdy-gurdy music perhaps, but close to it. The result is almost a literal realization of the tragic mood inextricably mingled with the commonplace. [SI 3. p. 89. 2 bars after Fig. 14 to Fig. 17.] Many like examples of this kind of simultaneous expression of seeming opposites could be found in Mahler's early music. As he matured, the gap between his contrasts narrowed. There is a greater degree of thematic and formal integration. One might say that in disciplining his tension, Mahler succeeded in subduing the most strident features of his contrasting materials. The seventh symphony's first movement offers an interesting instance. The movement begins with an exalted, mysterious slow introduction. [SVII 1. p. 1. Start of mvt. to Fig. 3.] This compelling mood is abruptly terminated in a passage in Mahler's favourite march rhythm which bumps us down to earth—a common function of Mahler's march-inspired

<sup>4</sup> See Bruno Walter and Ernst Krenek, *Gustav Mahler*, New York, 1941, pp. 163-4, p. 207.

motives. [SVII 1. p. 5. bar 1 to p. 6, bar 3.] The sudden drop in the level of harmonic tension and the sudden change in the character of the musical invention are, I think, striking. That the march motive grows thematically out of the opening paragraph integrates the contrast but does not lessen its effect. It is rather as if Mahler were expressing the conflict in terms of pure music—demonstrating that even the most far-reaching and profound musical idea can have a commonplace consequent, and one, moreover, which is thematically strictly related. It is, so to speak, still his childhood experience; still the hurdy-gurdy punctures and deflates and makes its ironic comment. But now the experience is lived out at the subtlest artistic level. Even the mundane march motive is occasionally transformed into something sublime. For the most part, however, it ranges the movement as a free agent, as a saboteur, stressing a rough world's impingement upon the eternal. Here, as a final example from this work, the rudely triumphant march cuts across the ecstatic convolutions of the movement's lyrical second subject. [SVII 1. p. 69. 2 bars before Fig. 60 to p. 72, double bar.]

Perhaps the most significant musical consequence of Mahler's childhood trauma was this: that his unhappy experience meant that the hurdy-gurdy—the symbol of the commonplace—assumed a quite new weight. Its music became as charged with emotional tension as the tragic incident to which it was related. The conjunction of high tragedy and the commonplace meant that the commonplace itself, in the right context, could be used as a new means of expression; and here Mahler remarkably foreshadowed a main trend in 20th century art, not only in music, but also in the literary and visual arts. Undoubtedly this discovery of the potentialities of the commonplace vitally influenced Mahler's idiom. The first movement of his third symphony, a movement of massive proportions, 45 minutes long, symphonically elaborated and organized to a high degree of complexity, largely draws its material from the world of the military band, upon marching songs and military signals. These mundane elements derive their tension from the new context in which they are placed. The movement's development is typical. The commonplace is made to sing a new and unprecedented song. [SIII 1. p. 59. Fig. 43 to p. 72, Fig. 51.]

In the third symphony, Mahler, as he had done in the funeral march of the first, obliged the commonplace to serve his own singular purpose—the contrast between means and achieved ends could hardly be stronger. Elsewhere, we have seen how he used the mundane as comment upon nobler conceptions. Mahler, however, was nothing if not thorough in his contradictions, and his attitude to the commonplace itself was often sceptical. In the fifth symphony we see this reverse process in action. The work's scherzo first offers an unblemished, winning, slow waltz. [SV 3. Figures 6 to 7.] But just as the tragic mood aroused its opposite, so too does even this kind of attractive commonplaceness undergo savage transformation. We do not have tragedy, it is true, but ironic comment on the deficiencies of the commonplace, on its musical unreality, on its inability to meet the realities of a tragic world. If the mundane often succeeds the tragic drama, Mahler seems to say, there is no guarantee that the easeful security of the commonplace is anything more than a deceitful fantasy. [SV 3. 11 bars after Fig. 14 to 5 bars after Fig. 17.]

I hope I have shown some of the ways in which Mahler in his music actively and, I believe, fruitfully reacted to that central event of his childhood which I have discussed. There is little doubt to my mind that it played a main role

in the formation of his musical character, in the creation of that tension which is so conspicuous a feature of his art. It was, I think, the basis of his musical conflict and certainly responsible for the remarkable irony of his utterance. If there were another tension of almost equal weight which played a part in determining the nature of his art, I should suggest it was the conflict he witnessed, felt and registered between the old concept of musical beauty and the emerging new. But while not excluding the influence wielded by historical circumstance, I cannot but believe that an analysis of Mahler's personality is the surer guide for those bent on discovering why his genius took the shape it did.

The relationship of psychology to the art of composing has as yet been little investigated. Perhaps, as Hindemith wrote in "A Composer's World", "we are on the verge of entering with our research that innermost field in which the very actions of music take place: the human mind. Thus psychology, supplementing—in due time perhaps replacing—former mathematical, physical and physiological scientiae, will become the science that eventually illuminates the background before which the musical figures move in a state of meaningful clarity".<sup>5</sup>

#### KILENYI-MAHLER MEDAL AWARDED TO WILLIAM STEINBERG

In appreciation of his efforts to create greater interest in the works of Gustav Mahler, the Directors of *The Bruckner Society of America* awarded the Mahler Medal of Honor, designed by the eminent sculptor, Julio Kilenyi, for the exclusive use of the Society, to William Steinberg.

Mr. Steinberg conducted the "Nachtmusiken" from Mahler's VII at a concert broadcast by the NBC Orchestra on November 9, 1940, and a year later included the Nocturnes at a concert by the Buffalo Philharmonic. Mahler's I under his direction was performed by the Los Angeles Philharmonic, Chicago Symphony, and Pittsburgh Symphony; Mahler's II by the San Francisco Symphony, Chicago Symphony, Buffalo Philharmonic, and Pittsburgh Symphony; Mahler's V by the Cleveland Orchestra and Pittsburgh Symphony; "Kindertotenlieder", with Marian Anderson as soloist, by the Pittsburgh Symphony; and "Das Lied von der Erde" by the Chicago Symphony, Los Angeles Philharmonic, and the Pittsburgh Symphony in Pittsburgh, Pa., Hartford, Conn., and New York City.

Acting on behalf of *The Bruckner Society of America*, Mr. Charles Denby, President of the Pittsburgh Symphony, made the presentation of the Mahler medal to Mr. Steinberg after a performance of Mahler's V in Pittsburgh on April 6, 1956.

## ENTR'ACTE WHEN THE SHEEP BLEATS

by ERNEST NEWMAN

Reprinted by permission from *The Sunday Times*, London, Jan. 15, 1956.

Music criticism has never been held in universal esteem, which is hardly surprising, considering how often and how woefully it has blundered. It is too often forgotten, however, that the public must take its share of the general opprobrium, for "the critic" means, in the broader view, not only the professional but the lay deliverer of a verdict on a given work or performance. Everyone these days, in fact, is a "critic" of something or other; and perhaps the time is approaching when no one will listen to anyone else on any subject under the sun because he himself will be too busy talking. It is not for me to say whether that will be a desirable state of affairs or not.

Assuming, however, that professional musical criticism still has some years of bustling life before it, is it not time that we who practise it began to ask what it is that is often wrong with it and, by inference, with us? I make a distinction between "music criticism" and musicology. The latter is concerned with the history of music, the study of periods, styles and so on. By "criticism" I mean what the term has gradually come, in practice, to mean — the giving by all and sundry of good or bad marks to works and composers.

In the last resort this means no more than that the critic is talking about himself *à propos* of someone or something or other; and it is "criticism" in this sense of the term that has brought criticism into dis-repute. The craft is obviously sick, and this being so, is it not time that the craftsmen themselves made an effort to trace the malady to its source?

Surely the first thing to do is for each critic to ask himself frankly in virtue of what faculty within himself he allots praise or blame, gives good marks or bad. Surely to every thoughtful critic there must come a time when he feels it necessary to operate critically on himself, to begin a search for what I have called, in Kantian terminology, a Critique of Criticism, to attempt to discover, if he can, what it is in his own constitution that determines the standards by subconscious reference to which he decides upon his acceptances and rejections, his allotment of good marks or bad. A few literary critics of former days, such as Hennequin and John M. Robertson, have addressed themselves seriously to this problem of self-understanding through self-analysis. It would be well for all of us to try to do so: the results should be instructive.

What we call our critical judgment on a particular occasion is a balance struck by a number of hidden forces within us; the object put before us is instinctively referred by us to a complex of elements in ourselves — temperament, intellect, knowledge, experience and so on — and our final approval or disapproval is the expression, in quantity and quality, of the results of that impact; and there is so little fundamental resemblance between these subtle complexes in different individuals that it is little wonder that each of us has

his own system of "marking" that is only partially valid or quite invalid for others.

For the professional critic the problem is complicated by the frequent necessity of having to deliver himself of a judgment on a big new work, or a new presentation of an old one (such as Wieland Wagner's "Fidelio") immediately after his first contact with it: for few newspapers are much interested in problems of aesthetic, while all have an almost religious reverence for "news." Now when the thoughtful critic begins, on an occasion of this kind, to investigate what is going on within him he is likely to come upon some curious facts. One of them is this, that his attention to the work (or the production) in hand has been curiously intermittent. It is here that I can make it clear to the reader what is meant by the title of this article.

There is a proverb somewhere to the effect that every time the sheep bleats he loses a mouthful of grass. I submit that every conscientious critic, professional or lay, will recognise that his intellectual processes on a "first night" are generally an alternation of bleating and nibbling.

He hears or sees something against which the whole complex of forces within him to which I have referred reacts instinctively in a hostile way. This counter-action he regards as vital, as indeed it is for him; and if he has to do an article on the subject for the next issue of his paper he not only fastens this unfavourable reaction of the moment firmly in his memory but, as likely as not, searches for the ideal verbal expression of it; unconscious of the fact that while he is thus bleating he is losing, perhaps, not merely one but several mouthfuls of grass in the immediate neighborhood; while his colleague in the next seat, not having been moved to bleat just then, is getting the greatest delight out of some first-rate nibbling in the vicinity. And if this sort of thing goes on the whole evening, as it well can do, need the public be surprised if next day or next week it reads two wholly different estimates of the work or the production?

---

#### KILENYI-MAHLER MEDAL AWARDED TO KLAUS PRINGSHEIM

Klaus Pringsheim, for a number of years head of Musashino Academy, is a pupil of Mahler who has shown lifelong devotion to the Austrian master's works. Professor Pringsheim has given Mahler performances whenever an opportunity presented itself. He has conducted all the Mahler symphonies in Japan. In 1955 Professor Pringsheim included Mahler's Fifth on a program in Osaka and in December of the same year he led the orchestra and choruses of Musashino College of Music and the Children's Chorus of Egota Primary School in a performance of Mahler's Eighth in Hibiya Hall, Tokyo. Reviewing the event in *The Mainichi* on December 12, 1955, Mr. Robert Gartier called it "one of the most thrilling occasions that have of late graced the Tokyo concert stage".

In appreciation of his efforts to spread Mahler's message in the Far East, the directors of *The Bruckner Society of America* awarded the Kilenyi-Mahler medal to Professor Pringsheim. The presentation was made on behalf of the *Society* by Mr. Walter Nichols, Field Supervisor of the U. S. Information Service, at a reception held in Tokyo on December 26, 1956, to celebrate the twenty-fifth anniversary of Professor Pringsheim's arrival in Japan.

## BRUCKNER'S *TE DEUM*

The following article was part of the program notes for a concert given in New York by the *Concert Choir* under the direction of Margaret Hillis on March 5th, 1956 and is reprinted by permission of The American Choral Foundation, Inc., and the author.

by Dika Newlin

The Vienna of the 1880's was anything but a bed of roses for Anton Bruckner, that simple, devout worshipper of God and Wagner who had lived in the Imperial City since 1868, yet never felt comfortable amidst its airs and graces—not to mention its artistic intrigues. "That I keep on composing is nothing but pure idealism!" he once despairingly exclaimed; and, indeed, he can hardly be blamed for having said so, under existing circumstances. Bruckner's bugaboo, the dread critic Hanslick (Wagner's Beckmesser) controlled a substantial portion of Vienna's public opinion—at least, that of the "best people"—through his witty and scathing feuilletons and reviews in the *Neue Freie Presse*. While Hanslick was certainly not the caricature of a critic which later generations have made of him—often after having read only a few quotations from his most biased writings about Wagner—it can easily be understood that he did not greatly help the mental state of the sensitive Bruckner by delivering himself of the opinion that this composer's Third ("Wagner") Symphony was "a vision of Beethoven's Ninth keeping company with Wagner's *Walküre* till it was trampled to death by her horse's hooves." Such sentiments were hardly calculated to endear Hanslick to the fierier spirits of the *Akademischer Wagner-Verein*. Fortunately, however, rough treatment did not deter Bruckner from continuing to turn out symphonies, or from submitting them to conductors. His persistence was rewarded when, on February 20, 1881, his *Fourth* ("Romantic") *Symphony* finally achieved—and in Vienna, at that!—the world premiere for which it had waited since 1874. Hans Richter, basically a loyal Wagnerian though a bit too much inclined to blow hot and cold depending on the prevailing winds of the press, conducted the Vienna Philharmonic. We may imagine that he smiled a little during the performance, remembering the rehearsal after which the beaming Bruckner had rushed up to him and pressed a silver *Taler* into his hand, exclaiming, "Here, take this and have a beer on me!" Whether because of or in spite of the beer, the performance was a resounding success. Even the *Neue Freie Presse* had to admit that the rafters rang with applause! As always, Bruckner's deep sense of gratitude turned towards his God. Returning to his former home-town of Linz for Easter, and occupying his old place on the organist's bench of the cathedral, he was inspired to a grandiose improvisation as he preluded before the Easter Sunday services. Many such improvisations by him are lost. The theme of this one, however, remained with him, and from May 10 to 17 he proceeded to sketch a *Te Deum* based upon it. The new work had to be put aside in favor of the even more urgent demands of symphonic creation; so it was not until September 23, 1883, that—the monumental Seventh Symphony completed—Bruckner could resume work on his song of praise. It was finally completed on March 7, 1884.

The influential court conductor Joseph Hellmesberger, who had been encouraging the composition of the *Te Deum* as he was anxious to have it for the *Hofkapelle*, now gently suggested to Bruckner that it would be a nice idea to dedicate it to the Emperor. But Bruckner, never much of a courtier, pleasantly replied that, though he would love to, he was no longer free to do so, since he had already dedicated it "to dear God in gratitude for having survived his sufferings in Vienna." (The title page bears the initials O.A.M.D.G. — *omnia ad majorem Dei Gloriam.*) Perhaps this — and not the long-suffering composer's unwillingness to allow some of his choicest passages (including the luscious tenor solo *Te ergo quaesumus*) to be cut in performance — is the real reason that the *Te Deum* somehow did not turn up in the *Hofkapelle* after all. However, it did not have to wait five years to be heard in Vienna, as Max Auer — one of Bruckner's semi-official biographers, ever ready to defend his hero against slights real and fancied — avers. The ever-faithful *Wagner-Verein* arranged for a performance with two-piano accompaniment, which took place in the small *Musikvereinssaal* on May 8, 1885, under the composer's direction. And a little less than a year later, on January 10, 1886, there came the first performance with orchestra, in one of the *Gesellschaftskonzerte*. Hans Richter, who had in the meantime come under fire from the most ardent Brucknerites for not performing Bruckner oftener, was again at the helm. He must have come through with a convincing performance, as even Hanslick noticed that this work sounded more logical, clear and unified than what he was accustomed to hearing from Bruckner's pen. All other Viennese critics were, for a change, outspokenly enthusiastic. Ludwig Speidel, in the *Fremdenblatt*, even felt that the work should be saved for performances on great state occasions, or after the Emperor's victorious battles! (The handwriting on the wall must not have been very easy to read in 1886.)

But, as has so often happened to Viennese composers, Bruckner had to take his *Te Deum* abroad in order to win for it the kind of success he really wanted. The first performance of the work in Berlin, on May 31, 1891, under Siegfried Ochs, was one which he would never forget. "Never again will I hear my work done like that!" he wrote enthusiastically to the distinguished conductor afterwards. He was, though, to hear the *Te Deum* again — in fact, it was the last of his works that he ever heard. The circumstances were rather curious. In 1895, there was a change in the directorship of the *Gesellschaftskonzerte*. The new conductor, Richard von Perger, was definitely in the camp of the Brahmsians. When he was visiting Brahms one day, the aging master inquired whether he had yet paid a call on Bruckner, too. On receiving a negative reply, Brahms remonstrated, "But you certainly should go and see him; and I think it would be a good idea for you to do one of his choral works this season." Perger must have been rather surprised, but took Brahms' advice seriously enough to program the *Te Deum* on his first concert, January 12, 1896. Paying his duty-visit to Bruckner in order to inform him of this plan, he was coolly received at first, for Bruckner's experience with Hanslick had taught him a salutary caution when dealing with card-carrying Brahmsians! However, on hearing the conductor's plan he warmed up a bit. "Well, now", he responded in his broad upper-Austrian dialect, "you want to do my *Te Deum*, do you? Good! But what about one of the Masses?" Perger suggested that this project would be more suitable for the following season. "Oh God!" sighed Bruckner,

"I'll surely be dead by that time! My poor heart — it's not doing well at all. I have so many troubles — look here, the way they let go at me in a few of the papers, that really hurts. I never did anything to them — why should they have it in for me? Why can't they let me write in peace?" Perger, deeply moved by this scene, was confirmed in his intention of performing the *Te Deum* as soon as possible. The concert took place on January 12 as planned. The emaciated composer, no longer able to walk, was carried to his favorite seat in the first parterre box. There, he listened for the last time to one of his own works — and to the torrent of applause which followed it, as much a tribute to the dying master as to the immortal masterwork. But the belated public recognition in Vienna was, after all, of minor importance in the face of Bruckner's recognition that he had accomplished what he had set out to do in music as in life — to pay tribute to his God with all the single-mindedness of some medieval builder of cathedrals. "When God calls me to Him one day", he is supposed to have said, "and asks me, 'What hast thou done with the talents that I have given thee?' why, then I'll hold up the score of my *Te Deum* before Him, and surely He will judge me mercifully!" That Bruckner could and did mean this literally, in the midst of the skeptical and materialistic age into which he had anachronistically managed to be born, was his sustaining strength. And it is the sustaining strength of this music today, in an age even more skeptical and materialistic.

#### I. *Te Deum laudamus* (C major)

The *Te Deum* begins in a well-nigh barbaric blaze of glory. Against organ-like winds and a vigorous eighth-note background of strings sawing away at empty fifths and fourths (C-G-C) in heaven-storming tumult, the chorus, supported by trumpets, trombones and bass tuba, blares forth its great affirmation of faith, "*Te Deum laudamus! te Dominum confitemur.*" It is one of those massive, monumental, rocklike themes in which one cannot imagine one note changed. Strangely medieval — or strangely modern — is Bruckner's relentless insistence, in these opening bars, on the empty fifths and fourths of the C chord, with no conventionally "colorful" thirds. Gentler harmonies, leading into a chain of subtly varied sequences, are heard with the entrance of the solo voices; a tender duet between soprano and tenor, "*Tibi omnes Angeli*", is soon joined by the alto. Gradually the orchestra — which has been reduced to oboes, clarinets and upper strings during this transparent solo episode — disappears entirely as the three voices, singing of the Cherubim and Seraphim, rise to an F minor chord forte, then subside through one-and-a-half octaves. The full chorus re-enters: quietly at first with two invocations of the "*Sanctus*", then with primitive violence as the climactic "*Sanctus Dominus Deus Sabaoth*" is hammered home. Now Bruckner flings great blocks of harmony about, in bold yet logical juxtaposition. C major collides with B flat major — no formalities of modulation in this incessant cry of praise. Four times "*Pleni sunt coeli et terra*" is proclaimed, the fourth time driving the sopranos up to their high A, the loftiest point they have so far reached. The trumpet theme of the beginning marches relentlessly onward, always partnered by the driving eighth-notes; barbaric accents punctuate the forward surge, even as the drum-beat of the recurrent "*Te*" punctuates the text. The numbers of the Prophets, the armies of the Martyrs, the glorious company of the Apostles are summoned before our eyes in a musical scene that is hardly surpassed in vividness by the

famed "Resurrection" movement of Mahler's Second Symphony. It seems the impact of this perpetual motion cannot possibly continue — but with his sure theatrical sense, just as we might become tired of it Bruckner interrupts it: first with the mystical chords which describe the opening of the kingdom of Heaven to the true believers, then with one of those great "general pauses" by which he likes to herald a change in the musical scenery.

II. *Te ergo quaesumus* (F minor). Indeed, the change of scene is complete. Up till now, we have heard (with few exceptions) music of a harsh and superpersonal grandeur; now, everything is tender, warm, and personal. Accompanied by a pulsing repeated F in the violas with interspersed phrases in the cellos, basses and clarinets, the tenor sings what can only be called a highly emotional aria, embodying the plea of the individual soul for aid and support. The other soloists join him in typically Brucknerian devotional cadences. When the redemption by the Precious Blood is described, we are in the purest Austrian Baroque, illustrated by the festooned and gilded garlands (like those cast from angel to angel in many a baroque decor) of the solo violin. The transcendental mood blends into a simple hymn-like reiteration of "quos redemisti, quos redemisti" by all the soloists.

III. *Aeterna fac* (D minor). The relentless drive of the beginning returns as the words "aeterna fac, cum sanctis tuis" are pounded home again and again by the chorus in savage iteration, almost Stravinsky-like in its rhythmic emphasis. Swooping down from its high point of "gloria", the chorus gradually builds up to a second climax (a process in which Bruckner's favorite sequences play a valuable structural role) and ends in suspense with a half-cadence on the dominant, followed by another general pause.

IV. *Salvum fac* (F minor). There is a slight sense of shock as we are plunged back into F minor (the last preceding chord was an A major triad) and into the tenor's impassioned prayer, almost as if nothing has intervened. This time the exquisite violin solo adorns the words "et benedic". The solo bass implores, "et extolle illos usque in aeternum," plunging down into the abyss of eternity through an octave and a half of c minor and f minor broken chords. A hushed suspense "in eternity" over a G pedal-point — and once more the monumental theme of the *Te Deum's* opening bursts upon us, so fulfilling the demands of textual drama and of musical form. Gradually, then, the initial surge of sound subsides as we hear the gentle plea "miserere nostri Domine", and the thought of "hope in the Lord", about to triumph in the last movement, is foreshadowed.

V. *In te Domine, speravi* (C major). The grandeur of this section is scarcely hinted at by the naive harmonies which the solo quartet (punctuated by a slightly disconcerting "boomp" in the horns) sings in the opening measures. Bruckner, ever the master of contrast, seems here to express the idea of the wide gulf between the simple worshippers and the Supreme Commander whom they obey — a gulf which can yet be bridged by the power of Love. Playing in a deceptively simple manner (at first) with a rising G major line in the sopranos, Bruckner makes it into a model for one of his expressive sequential passages that sometimes lead to unexpected goals. And suddenly we are confronted with the full glory of the words "Non confundar in aeternum," as the whole chorus, supported by strings and brasses, trumpets forth its message in

brilliant B major. In a freely yet logically constructed fugue, new variants of the themes "In te, Domine, speravi" and "Non confundar in aeternum" are now combined and developed with ever-increasing tension. Suddenly the "chorale" theme, that deeply moving memorial to Wagner from the slow movement of Bruckner's Seventh Symphony, appears — first softly intoned by the solo quartet in flat keys, then, with one of Bruckner's stunning enharmonic changes, triumphally proclaimed by the whole chorus and orchestra in B major. This time, however, B major is not the end of the climax, but only its beginning. Relentlessly pushing his voices higher step by step, Bruckner drives through C sharp major, C sharp minor and D minor — up to the high B flat on which the sopranos are impaled over a quivering diminished seventh chord. *Fortississimo*, the voices prolong the suspense a little further as they hammer out "Non confundar in aeternum" one last time before we are swept into the *alla breve* roof-raising C major close — a triumphal orgy of life that will in truth "never be confounded in eternity".

---

#### KILENYI-MAHLER MEDAL AWARDED TO THEODORE HOLLENBACH

Despite the sensational success of Mahler's *Eighth* in Philadelphia and New York in a series of performances by the Philadelphia Orchestra under the direction of Leopold Stokowski in 1916, thirty-four years elapsed before this unique work was heard again on the Atlantic Seaboard. Once more it was Stokowski who conducted, this time the Philharmonic Symphony Orchestra of New York. Though Mahler's prophecy "My time will yet come" is gradually becoming a reality, the *Eighth* Symphony requires forces of such huge proportions that program committees, because of the heavy expenses involved, might hesitate to approve of its performance even if it had been composed by a master whose works are in the standard repertoire and not subjected to the criticisms of some *infallible* critics. It, therefore, requires unusual courage for a conductor of a major orchestra in one of our larger cities to suggest a performance of Mahler's *Eighth*, which the late Lawrence Gilman considered "one of the noblest scores of our time" and which, in the opinion of Leopold Stokowski, is "one of the greatest creations among the arts of our time". According to Dr. Stokowski, "it is great music, but more than that, it has a profound message for everyone".

Only a brave *visionary* with a burning conviction of the greatness of its message would dare propose this work for performance in a city of moderate size where the name Gustav Mahler is hardly known. Yet, this is exactly what Theodore Hollenbach, conductor of the Rochester Oratorio Society, did. Under circumstances which would have discouraged a man of lesser stature, Theodore Hollenbach turned the seemingly impossible into a resounding triumph for his organization and for Mahler. The difficulties he faced and the success of his daring are described in a letter from Carl C. Struever, Jr. on page 54 of this issue.

In appreciation of his efforts to bring about the realization of Mahler's prophecy, the Board of Directors of *The Bruckner Society of America* awarded the Mahler medal to Theodore Hollenbach. Acting on behalf of the Society, Mr. Thomas H. Hanks, Vice President of the Rochester Civic Music Association, made the presentation at a concert given by the Rochester Oratorio Society on April 26th, 1957.

## MAHLER'S SECOND SYMPHONY

by PARKS GRANT

James Huneker once pointed out that the opening of Wagner's *Die Walküre* sounds like that of Schubert's *The Erl-King*. The opening of Mahler's Second or C Minor Symphony is reminiscent of both — though not for long; we quickly become aware that Mahler — not Schubert, Wagner, or a second-hand version of anybody else — is speaking. The cellos and double-basses enter in the second measure with a powerful, declamatory theme which continues for sixteen measures under a constant tremolo G in octaves. During the next fifteen measures the cellos and double-basses repeat this declamatory theme (with a slight change near the beginning) while higher instruments, mostly woodwinds, later violins, claim the center of our attention with another important theme. The restless bass figure persists, however, during quite a few measures to come. The rhythms it has already established, and to a lesser degree its melodic characteristics, dominate much of the entire movement.

The second theme or subordinate subject is presented in E major, harmonically a very distant relative of C minor, key of the first subject. Mahler ever so gently slips from one key to the other. The effect is sheer magic — as delightful as it is unconventional, and represents one of the happiest incidents in a symphony that is replete with them. (See example below.)

End of First Theme

Woodwinds  
Horns and Trumpets

Strings

Cellos and Double-Basses

## Beginning of Second Theme

The musical score is presented in two systems. The first system consists of three staves: the top staff is for Violins and Violas, the middle staff is for Horns, and the bottom staff is a lower register. The key signature is E-flat major (three flats). The first system shows the initial entry of the theme in the strings and horns, with a "Horns sustain" instruction. The second system shows the continuation of the theme with "etc." markings.

Someone has written that the second theme seems to be "suffused with light" as it appears, *pianissimo*, chiefly in strings and horns. The cellos and double-basses meanwhile keep muttering away at a melodically-compressed fragment of the first theme, with its characteristic triplet rhythm. By causing a particle of the first subject to serve as an accompaniment to the second, Mahler insures a subtle and subconscious connection between them on the listener's part; different as the two are in spirit and tonality, they convincingly belong together.

The comparatively short and peaceful second theme moves toward a climax and cadence in E-flat minor. If we have been lulled away into any day-dream, Mahler rudely shatters it with an abrupt loud G-natural, which jars against the just-released G-flat of the E-flat minor triad (E-flat, G-flat, B-flat) on which the theme has just cadenced. The composer's method of bringing us back to the grim business of the first theme (for as will be seen, that is his purpose) is truly a brusque one, but memorable none the less.

It must be borne in mind that in the typical sonata-allegro movement which

forms the first movement of any normal symphony, the section consisting of the two themes (known as the exposition) is almost always enclosed in repeat-signs, though actually the practice of repeating the enclosed material often becomes "a custom more honoured in the breach than the observance." Mahler insures the re-hearing of his two themes by the simple expedient of writing them out again, though it is no mere literal repetition; on the contrary he varies them tremendously. Undoubtedly their growth during the second presentation is his real aim, not merely their restatement.

The first subject in its new form is at first highly compressed, but then continues with fresh material freely derived from that of the first presentation, so the result turns out to be one of expansion rather than abridgement.

Mahler leads to the second subject by way of a quiet connecting passage in G minor over a steadily-moving bass, during part of which two oboes in unison carry a melody with accompaniment by trumpets — just one of the innumerable unexpected but ingenious orchestration-effects which are scattered through all of the composer's works, reflecting his vast experience as an orchestral conductor.

The second presentation of the second theme occurs again in strings and horns, *pianissimo*, but this time more soberly (though not prosaically) in the key of C major, and with no restless bass beneath it. It soon moves however to its former key, E major (the key-signature is just one sharp, but the tonality is clearly E major), and there is much admixture of new and freely-derived material, including the prominent motive first given out by the English horn.

So closely-knit is the structure at this point that it would be well-nigh impossible to lay one's finger on the exact spot where the development-section begins. The writer's nomination of the third measure after rehearsal-figure 9 (see the Kalmus Edition miniature score) is only a personal opinion. As the tension gradually mounts, material derived from the two themes and free extensions of them holds sway in passages of sweeping power. There are a number of memorable moments — one in C-sharp minor featuring wedge-like movement by unison horns and trumpets against two trombones, violas, and cellos; a startling crash from the cymbals unaccompanied, followed by a fortissimo uproar; a gentle, quiet reference to the second theme, starting in the flute over a delightful moving harp figure and continuing in a solo violin; and a brief bit in B major where two trumpets briefly suggest the style of a drinking song.

The energy of the movement seems to disintegrate in a short, tearing passage in E-Flat minor. Then hesitatingly, seeming barely able to drag, the music gradually lifts itself out of its exhaustion. Psychologically — and Mahler nearly always utilizes form at least partially for its psychological as well as architectural possibilities — the composer's intention is to lead to a climax of tremendous violence. As this climax gradually builds there are very brief references to two of the themes which are later destined to be associated with the idea of "resurrection" which forms the triumphant apex of the last or fifth movement. Naturally, only the person already familiar with the symphony

can detect the presence of these all-but-hidden fragments. The violence grows, predominantly in the dark key of E-flat minor, when a sudden downward chromatic scale spills us into C minor. Fortissimo brass and timpani hammer out one of the most dissonant passages in Mahler's writings, by forcefully repeating the dissonant chord

then by banging away at the even more dissonant chord

The tension built up by the latter is almost unbearable, but Mahler quickly resolves it to the tonic chord of C minor (i.e. to C, E-flat, G), and the recapitulation of the two themes is at hand.

Before discussing the recapitulation let us pause to examine the second of these two dissonant chords, which probably stands unique up to the appearance of the modernist movement in music — and very rare even then. It is a complete dominant-thirteenth chord of C minor, built of stacked-up thirds complete to the fifteenth or double octave, and contains every note of the C minor scale. (The famous chord in Beethoven's Ninth Symphony which contains every note in the D minor scale has an effect not nearly so dissonant, due to being widely dispersed, of short duration, and to containing certain tones more weakly scored and hence less prominent than others; that is, Beethoven's chord is very imperfectly balanced — intentionally so, perhaps — while in Mahler's the tones are of equal strength, thus accentuating the dissonance.)

The recapitulation of the first subject is highly abbreviated, compared with either of its hearings in the exposition, but contains all the necessary elements that make it a distinctive musical idea. The already-mentioned magical transition passage again leads from C minor to E major to usher in the recapitulation of the second theme, the statement of which is eloquently lyrical.

By the simple expedient of changing a tremolo E to E-flat, Mahler returns to the original tonality — C minor — for a long coda. It begins very softly and wearily. Almost inaudible references to earlier motives creep in in the violins (at first marked *ppppp*), until during the course of a crescendo and a compensating diminuendo the fabric interweaves many of the already-presented motives in brief or perhaps not-so-brief references. For a moment it looks as though the movement will close in C major, but by again changing an E to E-flat, Mahler converts the C major triad (C, E, G) into a C minor triad (C, E-flat, G), after which a fortissimo downward chromatic scale brings a conclusion suggesting disillusionment.

At the end of the first movement Mahler writes, "Here follows a pause of at least five minutes."

After a long, tense, and stormy opening piece, something unruffled, gently lilting, and reposed is surely in order. The second movement, in A-flat major,  $\frac{3}{8}$  time, marked *andante moderato*, fulfills these needs. Its style at first reminds one of Schubert, yet those who know Mahler's works will agree that it is pure Mahler.

The form is roughly ABABA; that is, a song-form with repeated trio (middle section); but Mahler's well-nigh invariable custom of employing varied repetition, and hence allowing for natural organic growth, produces a form-scheme more accurately described as  $A^1 B^1 A^2 B^2 A^3$ .

The charming A section is first heard in the strings. The B theme, busy with triplets, begins very softly, and too late strives toward a semi-climax that does not quite succeed in crossing the hump. Psychological use of form again! We shall soon discover that Mahler has bigger plans for the B subject in its later appearance.

After a short hesitating passage, the muted violins make the second statement of the A theme while below them half of the cellos (not using mutes), sound an engaging countermelody, thoroughly Mahleresque.

The second statement of the B theme begins loud, bold, and agitated. It is much longer than the earlier appearance, and this time its climax seems to achieve its destiny; it gets over the hurdle it failed to cross before.

Again there is hesitation, and the A section is heard for the final time, beginning quietly in pizzicato strings. The non-sustained character of this portion makes a delectable contrast with what has preceded and with what is to follow. The movement reaches its height of eloquence in a passage where the principal theme is played by the low woodwinds and low muted strings, while above them the divided first violins have a varied form of the countermelody previously allotted to half of the cellos. Some clashes that occur at certain spots between these two melodies are really fairly harsh, yet they pass quite unnoticed due to the inherently logical movement of both melodies as they pursue their separate ways. (See example below.)

Here surely is the "linear counterpoint" so important in the music of Mahler's great contemporary Richard Strauss, not to mention later composers.

The conclusion is dainty and winsome, not without just the faintest hint of gentle humor.

Like Schubert before him, Mahler occasionally used material from one of his songs as the basis for an instrumental work. The third movement of Symphony No. 2 is in large free rondo form and fulfills the function of a scherzo. Much of its material is borrowed from Mahler's song *Des Antonius von Padua Fischpredigt* (St. Anthony of Padua's Fish Sermon), the text of which was drawn from *Des Knaben Wunderhorn* (The Boy's Magic Horn), a noted

anthology of German folk-poems collected by Ludwig Achim von Arnim (1781-1832) and Clemens Maria Brentano (1778-1842). Here deprived of its mocking text, the satire of this third movement was doubtless more apparent to the composer than to anyone else, yet its parodistic spirit is not to be missed.

It opens with some abrupt, short solos on the timpani (incidentally this symphony requires two sets of kettle-drums) which might well be derived from the symphony's opening theme. Running sixteenth-notes in  $\frac{3}{8}$  time make an early appearance and are encountered in nearly every measure. There are passages which burlesque the style of the *Ländler* (a German country dance), grimacing solos for the E-flat clarinet, scattered notes for the strings to be played *col legno* (with the back of the bow), and occasionally a brief piccolo solo. For contrast there is a more sober though equally homely theme in F major.

After a transitional passage for cellos and double-basses under a long-held flute and piccolo octave C, the horns and trumpets announce a short, bold, fanfare-like theme in D major; the just-mentioned connecting material forms a moving bass, and the violins and violas persistently continue with the steady sixteenths. This, like the rest of the middle of the movement, is new material — not taken from the previously-mentioned song. Another transition, featuring flute, solo violin, and pizzicato cellos, and sounding for all the world like something from Bach's pen, leads to a second statement of the short fanfare theme, just as bold as before, but this time in E. A delightfully vulgar though lyrical melody, also in E, is sounded by the first trumpet, accompanied by three other trumpets, both harps, and strings. Mahler loved to write music which was good-naturedly "corny," yet whose very bucolicism is distinguished. After another transition the principal idea returns, sardonic as ever.

About two-thirds of the way through the movement the fanfare-theme returns beginning in C, and now in all seriousness appears a striking message (see example below) of great significance, destined to return with such telling effect at the beginning of the last movement and again at its climax.

The musical score is presented in four staves. The top staff, marked 'gva', features a series of chords in a descending sequence of keys: B-flat major, A-flat major, G major, F major, E-flat major, D major, C major, B-flat major, A-flat major, G major, F major, E-flat major, D major, C major. The second staff contains a melodic line with long, sustained notes, primarily in the lower register. The third and fourth staves provide a rhythmic accompaniment consisting of steady sixteenth-note patterns. The key signature is one flat (B-flat), and the time signature is 3/8.

Things gradually quiet down, and a long transition leads to the final version of the principal theme, the close being practically note-for-note the close of the song on which the movement is based.

The form might be analyzed thus: A<sup>1</sup> B<sup>1</sup> A<sup>2</sup> W C<sup>1</sup> X C<sup>2</sup> D Y A<sup>3</sup> B<sup>2</sup> C<sup>3</sup> Q Z A<sup>4</sup>. In this scheme, W, X, Y, and Z are all transitional passages derived mostly from A, and Q represents the music foreshadowing the fifth movement. The fourth movement follows without pause.

If the third movement is based on a song, the brief fourth part is a song—a deeply moving, placid song in D-flat major for contralto and orchestra. Entitled *Urlicht*, which might be translated "Primordial Light" or "Eternal Light," its text is drawn from *Das Knaben Wunderhorn*. It is by far the shortest of the symphony's five movements. The opening, with its quiet brass instruments, suggests a chorale. With 21 changes of time-signature in the first 35 measures, coupled with a very slow tempo, it seems almost rhythmless; but it is exactly what is needed after the music that has preceded and in light of that which is to follow.

About two-thirds of the way through there is another of Mahler's amazing strokes in orchestration. During a passage in A minor a piccolo plays a high, soft countermelody to the singer's solo, soon joined by a second piccolo a third lower; two solo violins double the two piccolos in the octave below. Only a man who knew the orchestra inside out could have conceived that the ordinarily whistling, shrill piccolo could if necessary sound so delightfully ethereal.

This lovely movement, so charged with mysticism and resignation (as are so many of Mahler's songs) leads without pause into the finale.

The fifth and final movement—one of the longest in any symphony—was beyond question influenced by the finale of Beethoven's Ninth Symphony and has a general plan in common with it: it opens in pessimism, which increases and then reaches a turning-point; optimism then conquers, steadily gains ground, and finally attains a triumphant conclusion.

Long as this part is, only a person who did not know it would be rash enough to brand it "too long." The writer's long-held (though completely unsupported) private opinion is that the finale was originally planned to be even longer—that its form as we know it actually represents a slight condensation.

The uproar of the opening suggests the day of judgment as surely as any music ever can. The quotation already mentioned in conjunction with the third movement (page 81) is powerfully stated. However there is an immediate quieting down and this motive

associated later with the idea of "resurrection" is heard tentatively. (The casual hint of it in the first movement has already received mention. The other theme that was so briefly foreshadowed appears soon.)

In general, it may be said that the first part of the finale consists of a series of comparatively brief and not-closely-connected sections, a bit fragmentary in effect. Several spots stand out in the listener's consciousness, (some of them are not the principal themes, but rather fascinating episodes), namely: (1) A

fanfare-like theme for horns, played not in the orchestra but off-stage so that the sound appears to reach us from a great distance — almost like a barely-recalled memory, or perhaps suggesting a dimly-perceived glimpse into our future. (2) A chain of trills in parallel triads which is strongly suggestive of the style of the French impressionists. In view of the fact that musical Impressionism was barely becoming established at the time this symphony was written (1894), it seems likely that this resemblance is a thought-provoking coincidence rather than imitation. (3) A short but agitated section suggestive of a desperate pressing to overcome some obstacle, but which quickly collapses. The failure is only temporary, for this theme is destined to turn up twice later, once at the beginning of a passage which does indeed lead across the turning-point of the movement, again as a short contralto solo with a text of reassuring tone. (4) A section based on fanfare-like material accompanied by many trills, slow and majestic, yet brilliant.

The next part of the movement brings the first passage of any sustained length. A terrifying crescendo for nothing but percussion instruments — decidedly unusual considering when it was written — suggests the gates of hell opening. The music that follows is a wild march — urgent, desperate, at times hard-bitten, and only occasionally buoyant or confident. Mahler's favorite rhythmic pattern — eighth-note, sixteenth-rest, sixteenth-note — is prominent for the first time in this movement. Sometimes the music suggests an inexorable drive toward an unwelcome fate. The music dissolves in wild collapse; again there is a failure to surmount an obstacle. The above-mentioned agitated theme returns, and this time grows, becomes eager and urgent. It unfolds amid many changes in meter. Meanwhile off-stage there is barely audible fanfare-like material played by two trumpets, triangle, bass drum, and cymbals; it seems to be military music carried to our ears by the wind. The mounting crescendo of the rest of the orchestra swallows it up, and soon a bold fortissimo sweeps us to the grand climax of the movement, at whose peak Mahler states (in a different key) the chord-progression already heard in the third movement and again at the start of the present movement (Example page 81). Here is music that is a climax in every sense — not merely a tremendously loud passage but a genuine turning-point as well. A few quiet measures suggestive of dawn lead to perhaps the most remarkable spot in a symphony truly laden with remarkable spots. It is unique; one can search musical literature in vain for anything else even slightly like it. Trumpets and horns, both off-stage, play fanfares of magical character; in the orchestra there are bird-like twitters from flute and piccolo and underneath occasional rumbles from the bass drum or off-stage timpani. Surely if nature had the gift of composing, the result would sound like this! Mahler has specified that of the four trumpets used, two should be placed to the left, two to the right.

The long-awaited entrance of the chorus follows, in music of solemn, reposed dignity. It will be noticed that both here and twice later, out of the chorus there gradually emerges a solo voice, in this and the following instance the soprano, in a still later passage the contralto. Not unless one consults the score can he say exactly where the soloist is detached from the rest of the chorus. Mahler's effect is fresh, striking, yet simply achieved. The spirit from now on is by turns solemn, hopeful, restful, reassuring, and wildly triumphant; it has been purged of everything bitter, desperate, and frustrating. The listener is swept into one brilliant cadence after another. Toward the end an organ lends its plangent support to the already powerful chorus and

orchestra. The symphony concludes in a blaze of jubilation, the key being E-flat major.

The text employed in the finale is partly by Friedrich Klopstock<sup>1</sup> (1724-1803) (slightly altered by Mahler) and partly by the composer himself. In all fairness it must be said that from a literary standpoint Mahler was no match for Klopstock, one of the great names in German literature, but whose verses extolling the idea of resurrection do not carry as far as Mahler's needs demanded.

It is pertinent to mention that the composer first became interested in this text — indeed first conceived the idea of the symphony itself — when he heard it at the funeral of the great pianist and conductor Hans von Bülow (1830-1894). Thoughts of death were something of an obsession with Mahler (verging on the neurotic at times); hence the thought of another life to come fascinated him as it has many others, for mankind has been intrigued by this idea since the dawn of recorded time.

Some believe the purpose of this symphony is one of "telling a story," in other words, that it is program music. However the composer has left no official hints other than those implied in the texts he has used and the moods he has created. At the time he wrote Symphony No. 2, the symphonic poem was at the height of its popularity, and Mahler was sometimes pressed for explanations of the "meaning" of his work. It is well known that these inquiries annoyed yet somewhat amused him. He even gave out conflicting "stories" on various occasions, there being no better illustration than the first movement of his symphony. On one occasion he described it, rather fittingly, as a "death celebration," but on another he declared it represented a growing seed trying to push its way up through the soil! To say that he made the latter statement in scorn is probably superfluous.

Donald Ferguson states in his *A History of Musical Thought*<sup>2</sup> that Mahler's Second Symphony is the first instance of a genuine five-movement symphony in the history of music. Dr. Ferguson probably means that earlier works which are nominally cast in five parts (such as Beethoven's Sixth Symphony) could perhaps be reasoned as actually being in four, and that what is nominally one of the movements is in reality just an introduction to one of the others, while with the present work there is no getting around the quintuple division — no explaining it away as a structure which "might" be reasoned otherwise than as marked by the composer.

Symphony No. 2 by Gustav Mahler, known as the "Resurrection" Symphony, calls for one of the most elaborate outlays of musical forces of any work.

The mixed chorus and solo soprano appear in the fifth movement only, the solo contralto in the fourth and fifth. The orchestral forces of course include the usual string section — first and second violins, violas, cellos, and double-basses — plus the following woodwind, brass, and percussion instruments:

- 4 flutes, all alternating with piccolos.
- 4 oboes, the third and fourth alternating with English horns.
- E-flat clarinet.

<sup>1</sup> Mahler used the first two of the five stanzas of "Die Auferstehung" (The Resurrection), one of Klopstock's *Geistliche Lieder* (Spiritual Songs) — not one of the *Odes* as is often stated.

<sup>2</sup> Appleton-Century-Crofts, New York, 1935 and 1948.

- 4 clarinets, the third alternating with bass clarinet, the fourth with second E-flat clarinet.
- 4 bassoons, the third and fourth alternating with contrabassoon.
- 10 horns (however Mahler makes provision for performance by only 6).
- 10 trumpets (but provision is made for performance by only 8, or even 6).
- 4 trombones.
- Tuba.
- Organ.
- 2 sets of timpani, plus an additional single drum off-stage.
- 2 bass drums, one off-stage.
- 2 pairs of cymbals, one off-stage.
- 2 gongs, one of (relatively) high pitch, the other low.
- 2 triangles, one off-stage.
- Snare drum (preferably more than one).
- Glockenspiel.
- Bells (Mahler requires that they be steel bars of deep, indefinite, but widely-differentiated pitch).
- Ruthe.
- 2 harps (with two or more players to each part if possible).

Since it is an unusual instrument, it might be well to speak briefly about the Ruthe (also spelled Rute; literally "rod"). Made of many pieces of rat-tan, it looks like a large clothes-brush or a small broom, and is used to play the bass drum (sometimes on the shell of the instrument). It is used only in the third movement, perhaps because the composer had already employed it in the song from which this was derived. Although Mozart wrote for the Ruthe, comparatively few composers have called for it. Mahler also included it in his Third, Sixth, and Seventh Symphonies. As will be gathered from the foregoing, it is not so much an instrument as a special implement used in playing one of the instruments.

---

#### KILENYI-BRUCKNER MEDAL AWARDED TO CARL SCHURICHT

During November and December 1956, the Vienna Philharmonic visited the United States for the first time in its long history. Its conductor, Professor Carl Schuricht, included Bruckner's Seventh on programs in the following cities: Washington, D. C., Nov. 5, 1956; New York City, Nov. 7, 1956; Cincinnati, Ohio, Nov. 13, 1956; Lafayette, Ind., Nov. 16, 1956; East Lansing, Mich., Nov. 19, 1956; Dayton, Ohio, Nov. 23, 1956; and Boston, Mass., Dec. 2, 1956. The Bruckner symphony aroused great enthusiasm among audiences as Bruckner always does on the still all too rare occasions when any of his works is performed.

In recognition of his efforts to create greater interest in and appreciation of this Austrian master in the United States, the Bruckner medal, designed by Julio Kilenyi for the exclusive use of *The Bruckner Society*, was awarded to Professor Schuricht. The presentation of the medal was made by Robert G. Grey, Executive Secretary of the Society, at a reception given in honor of Professor Schuricht at the Mannes College of Music on Dec. 6, 1956.

## BRUCKNER, VIENNA-STYLE

by WINTHROP SARGEANT

Reprinted by permission. Copyright 1956, *The New Yorker Magazine, Inc.*

The great Anton Bruckner was a composer who, in his music, talked very simply and earnestly about very profound things—mostly about faith, love, the beauty of the world as he saw it, and the glory of God. His symphonies do not contain any trace of technical display for its own sake, or of the bitter, passionate critical faculty that lends spice and color to the work of more restless, revolutionary, and egocentric nineteenth-century composers. His musical language is everywhere notable for its vast sincerity. He says what he has to say in the most unabashed and direct terms, pushing his message home with long, leisurely phrases and punctuating these phrases with exclamation points that often strike the over-sophisticated listener as pretty obvious. There is, nevertheless, a certain grandeur in nearly everything he ever wrote—a grandeur of a sort that, to my mind, is matched only in the religious compositions of Johann Sebastian Bach. No one, having once encountered this grandeur, is likely to forget the experience, or to regard Bruckner as anything less than a supreme master of deep musical communication. The trouble is that, in order to encounter it, the listener must have before him a performance as sober and dedicated as the music itself, and such performances, in this age of speed, polish, and superficial brilliance, are by no means frequent.

In its American début at Carnegie Hall on Wednesday evening of last week, the Vienna Philharmonic, under the baton of Carl Schuricht, offered New York concertgoers a performance of this kind. The symphony was Bruckner's Seventh, the most often performed of all his works (if one can use the word "often" in connection with any Bruckner composition), and one that has been done here in the past by various orchestras and maestros of considerable distinction. The fine Viennese ensemble and its courtly seventy-six-year-old conductor succeeded, however, in adding a new dimension to Bruckner interpretation as we know it, and the symphony emerged with a coherence, warmth, and eloquence that very rarely fall to its lot. Perhaps this new dimension was, in part, a result of the painstaking traditions of the orchestra, which is obviously better acquainted with the work of its fellow-Austrian than is any other ensemble on earth. But much of it was also a result of the orchestra's great emotional absorption in its task, and of the contribution of Mr. Schuricht, who has a way of turning himself into the ideal tool of Bruckner's thought. Nowhere did one feel that Mr. Schuricht was hastening or brightening up things by way of apology for Bruckner's leisurely method of expression. As a matter of fact, the opening and closing measures of the first movement were played slower and more deliberately than I had ever heard them played before, and there was an expansive plasticity about the conductor's tempos in general that gave Bruckner's melodic pronouncements the air of unhurried and serene majesty properly belonging to them.

When it comes to the virtues of the Vienna Philharmonic as compared to

those of the numerous other admirable ensembles that have visited us recently, I should say they lie in the direction of exquisite refinement of phraseology and extraordinary mellowness of tone. These virtues showed themselves not only in the Bruckner work but in an early Mozart symphony (K. 181) and in Beethoven's "Egmont" Overture—the items that preceded it on the program. The orchestra's strings, in particular, have luminous sonority and suavity of articulation that are, as far as I am aware, unique, and the rapport among the various choirs—strings, woodwinds, and brasses—is remarkably well balanced and intimate. Where sheer flash and energy are concerned, there are undoubtedly orchestras that surpass this one, but it was pleasant the other night not to be bowled over by mere exuberance, and to find, instead, the sort of mature artistry that makes its appeal through charm and elegance, rather than supercharged virtuosity. In Mr. Schuricht, moreover, the orchestra has a conductor of great sensibility and modest demeanor, whose gestures produce the maximum musical result while remaining visually as unpretentious as possible. Altogether, the evening that their collaboration provided was a continuous delight.

(*The New Yorker*, Nov. 17, 1956)

## WALTER'S FAREWELL

by DIKA NEWLIN

"Was du geschlagen,  
Zu Gott wird es dich tragen!"  
Klopstock, *Auferstehungsode*.

To the initiate, it was really not necessary to read the brief newspaper announcement that Bruno Walter would, after this 1956-57 season, no longer be returning as regular guest conductor of the New York Philharmonic-Symphony. The mere listing of the programs he would conduct, which had been published in September, 1956, was enough to tell the story. Bruckner's Ninth, the composer's heartrending farewell to a world which had not always been kind, coupled with heaven-storming adoration of the "lieben Gott" to Whom this music explicitly, as all his music implicitly, was dedicated: Mahler's Second, also striving passionately towards a God of Whom the composer had sometimes lost sight, but Who is wellnigh visibly present at the symphony's close in the triumphant cry of the chorus: "Die I must, that I may live!" To one who had followed Walter's career for nearly two decades the symbolism of these choices was almost painfully obvious. Yet with all the sadness of such an occasion there was mingled a feeling of satisfaction that Walter had chosen *this* way to say his farewell.

It was a rather subdued audience which gathered on the evening of February 7, 1957, for the first of these farewell concerts. A vivid performance of the overture to *Der Freischütz* and a gentle, mellow interpretation of Schubert's *Unfinished* somehow seemed like a prelude to the real events of the evening. And this feeling proved to be justified; for when, after the intermission, the first, almost inaudible D of the Bruckner symphony began to emerge as though from nowhere, we were plunged into a new world of sound. We have heard Walter conduct this symphony on other occasions, but never as inspiredly; and the Philharmonic really outdid itself in following where he led. The mighty proclamations of the brass choir were not merely flawlessly technically, but truly evocative of the heavenly visions which had inspired their composer. The work of the string section and of the solo winds in the more delicate sections of the fantastic Scherzo and Trio was of exquisite grace and lightness. As for the Adagio, with its touching reminiscences of the themes Bruckner had loved (his own Mass in D and Seventh Symphony, and the Magic Fire Music) and its almost frightening premonitions of what was to come (Mahler's Tenth and even early Schoenberg), Walter extracted every ounce of emotion from its pages. The final bars, in which Bruckner lovingly takes leave of one theme after another like someone taking leave of a beloved place and tenderly touching each object which he knows he will never see again, were quietly breathtaking. The moment of silence before the audience had to relieve its feelings in a heartwarming and lengthy ovation was the truest tribute to this unforgettable human and musical experience.

A rehearing of the Bruckner (this time appropriately preceded by the

*Siegfried Idyll*) on the broadcast of Sunday, February 10, deepened these impressions and whetted the appetite for the feast of Mahler to come in the following week. (Incidentally, heartfelt thanks are due to CBS and the Philharmonic for making possible the full broadcast of a Bruckner and a Mahler symphony on two successive Sundays. It was not ever thus!)

About the following Thursday's performance of Mahler's Second it is hard to write objectively. Quite simply, it was a revelation. From the opening viciously accented tremolo of the *Totenfeier* it was evident that this was going to be an interpretation of uncommon intensity even by Walter's own standards. Nothing which followed changed that impression. We were allowed a little relaxation in the delicate Andante (like a faded charming vignette from our grandfathers' world) but with the Scherzo we were back again on the meaningless treadmill of daily life which Mahler had so aptly depicted in the busy theme of *St. Anthony's Sermon to the Fishes*. The audience might have been tempted into unconventional between-movements applause (which it had already spontaneously given after the Andante) if the composer's intent had not been rigorously fulfilled as, without pause after the Scherzo, statuesque Maureen Forrester rose to sing the deeply moving *Urlicht*. Her voice had the warmth and velvety surface needed to bring out the tenderness of this song—an oasis of beauty in the surrounding apocalyptic wilderness. The violent opening crash of the Finale was as startling as one could wish and from that moment to the entrance of the chorus there was no relaxation of the ever-mounting tension. Episode after episode unfolded with almost scenic vividness, each set forth with a vigor which belied the conductor's eighty years. A visible shock ran through the audience as, at the hair-raising utmost climax of the souls' Judgment Day march, the scarlet-robed Westminster choristers sprang to their feet in unison—their flash of intense color unforgettably accenting the surge of the music. Then an awe-inspiring moment: after the crumbling of the world into nothingness—only a solitary bird-call remaining as a message of life in the midst of the universal devastation—the huge chorus began almost inaudibly to whisper, "Aufersteh'n, ja aufersteh'n." Maria Stader's small silvery voice, which had sounded a little tentative in the Mahler songs (*Wo die schönen Trompeten blasen*, *Ich atmet' einen linden Duft*, and *Ich bin der Welt abhanden gekommen*) of the concert's first half, now soared out gloriously above the choral mass and, in the duets, blended exquisitely with Miss Forrester's richer tones. Slowly and inevitably this "heavenly" scene (a forerunner of the *Faust* finale of the Eighth) rose to its overwhelmingly triumphant climax. Except for the bells which, partly because of unfavorable placement on the stage, did not ring out as brilliantly as one might have wished, and the well-known wheeziness of the Carnegie Hall organ, this climax was in every way the crown of all that preceded it. Not just of this transcendent evening of music, but of a whole career which, like Mahler's symphony, had encompassed sorrow, even catastrophe, to culminate in triumph. So it was both to the music and to its chosen interpreter—hardly separable in this climactic moment—that the audience responded with cheers and tears, calling the beloved conductor back on stage till he would appear no more.

The Sunday afternoon performance was no anticlimax—rather a renewed affirmation of faith (with more security in the playing of some individual brasses and winds than had been manifest on Thursday), received in an exalted spirit by the sold-out house. Once more the triumphal close was cheered to the echo and we were left in happy anticipation of the Columbia

recording which was to result from this series of performances. Alas, this anticipation must be postponed, for we are told that Walter succeeded in completely recording only the fourth and fifth movements of the symphony before his heart attack put a stop to all conducting for the time being. But we may still be allowed to hope that one of the "extraordinary occasions" for which he has promised to return to the Philharmonic may turn out to be another of his monumental Mahler re-creations!

## BRUCKNER AND MAHLER IN THE FIRST DECADE OF LP

by JACK DIETHER

For the millions of music-lovers who read no music, the names of Bruckner and Mahler have become almost exclusively associated, except in the largest musical capitols, with the phonograph. There is nothing quite like the discrepancy between the almost total coverage of their output in the American LP catalogs and their almost total neglect in all but a few of the world's concert halls. Thus the varying merits of the existing recorded versions of their works tend to assume an altogether disproportionate significance in forming popular judgments of the works themselves. Where only one version of a work is available, that work is absolutely at the mercy, for an indefinite time to come, of the immediate circumstances surrounding the recording session. In the previous issue of this journal I had occasion to note how the accident of a certain tenor's laryngitis on a certain date in 1932 resulted in a last-minute adjustment which gave record listeners a distorted picture of Schoenberg's *Gurre-Lieder* that could not be superceded until 1953. Similar accidents have occurred in the presentation of Bruckner and Mahler also, such as the church bells in Ormandy's 1934 recording of the Mahler *Second*, which gave that symphony a ludicrously bitonal ending, the key of D contending with that of E flat! But since what we have on vinylite is, for the vast majority, all there is, a serious consideration of the overall picture is vital. In the following article, only the American manufacturers' names and catalog numbers are listed; most of the same recordings will be found abroad in other identifications.

It is not only the limited scope of recording activity that tends to distort the picture somewhat. There is also the chaotic state of the printed scores and parts themselves. In Bruckner's case, most of the symphonies were known almost up to the present generation only in one amended edition, and the eventual production of a complete critical edition has been attended by some controversies over which of several possible versions represents his truest wishes. In Mahler's case, we still await the appearance of a critical edition, and the interim picture is equally chaotic in a different way. Bruckner's difficulties arose from his susceptibility to the suggestions of well-meaning friends who continually advised him on how to do his work, won his approval of some of their changes, and even went on making them on their own. Mahler, however, made frequent changes prompted mainly by his revolutionary manner of orchestration and his insistence of great clarity of detail, and as long as he lived the publishers, swayed by his commanding presence (and also by his willingness to put up the money himself), were fairly cooperative. But his death left many of his later emendations unengraved, and since then the same old uncorrected plates have continued to be stamped out year after year, to the enormous profit of everyone but the buying and listening public.<sup>1</sup> And so, ironically, the absolutely authentic Mahler revisions have not been printed, while the spurious or doubtful Bruckner revisions have. At the present time

<sup>1</sup> See, e.g., the essay "The Unknown Last Version of Mahler's Fourth Symphony", in Erwin Stein's *Orpheus in New Guises*, Rockliff, London, 1953, page 31.

there are few textual differences in the competing recorded versions of Mahler symphonies compared to those found in the Bruckner.

The ten years of LP recording whose consideration I shall apply to Bruckner and Mahler here can be roughly divided into two halves. The first half was characterized by a rapid expansion of the whole recording industry, and of the recorded classical repertory. It was a time in which almost anything was likely to be recorded, especially if it were a phonographic debut of the work, and standards of artistry and ideal reproduction were for the most part secondary. In Europe tape recorders were often set up in broadcasting studios, to take down and market whatever issued therefrom, and many broadcasts were even pirated off the air, to be sold under fictitious names. There was a time in this era when virtually everything performed in Vienna was automatically taped as potentially marketable.

The second half, extending through the present time, is the reaction to this, a period of consolidation and strong competitiveness, in which by far the major activity has been in duplicating previous recordings and trying to improve on them artistically and technically. In this period an "off-beat" composition is rarely presented for its own sake as before, but rather as a likely vehicle for the artist or the sound engineer, or preferably both. In Bruckner and Mahler, the first period saw the rapid multiple vinyliting of nearly all the principal works of Bruckner, and all the published works of Mahler (culminating in the first appearance of Mahler's *Sixth Symphony* in November, 1953), in recordings of widely varying merit. The second period has seen the gradual deletion of a few of these, and the equally gradual addition of a few more or less superior duplications. This seems fair enough, except that the less popular of their works tend to disappear first and reappear last. At any rate the hectic period in which new Bruckner and Mahler could be expected to appear every month is quite over and done with.

The first Bruckner work to be considered in chronological order is the *Overture* in G minor (1862-3). There are three LP versions, recorded, in order of release, by F. Charles Adler and the Vienna Philharmonia (SPA 24/5), Willem Van Otterloo and the Hague Philharmonic (Epic SC-6006), and Lovro Von Matacic and the Philharmonia Orchestra (of London) (Angel 3548-B or T-35359). Since in each case it is presented as a filler to a 4-sided album, it is quite unlikely that it will be bought for itself alone. It should therefore be sufficient to state that this effective and straightforward work is well presented in each case, with special honors going to Von Matacic for performance and to both SPA and Angel for clarity. In the Von Matacic, note especially the more effective contrast between the slow introduction and the *Allegro*, and the extremely beautiful pianissimo with which the *Allegro* commences. The orchestration is slightly different in this recording, and here the *Overture* also shares a side with the *Scherzo* from the "Nullte" *Symphony* (see below).

The *Mass No. 2* in E minor is available only in an ancient transfer from 78-rpm records (Max Thurn and the Hamburg State Opera Choir and Orchestra, Telefunken 66033), which has been reviewed in detail in *Chord and Discord* by Herman Adler (see Bibliography). A first recording of the original version of 1866 (edited by Haas and Nowak, 1940) is badly needed, as the edited instrumentation of the revised version used above bears all the distinguishing characteristics of Bruckner's later "advisers".<sup>2</sup> The deleted sole

<sup>2</sup> See *Chord and Discord*, 1950, pp. 60-1.

recording of the *Mass No. 3* in F minor (Ferdinand Grossmann and the Vienna State Philharmonic and Choir, Vox PL 7940) was reviewed here by Paul H. Little (see Bibliography). The *Mass No. 1* in D minor is now available on SPA.

The *First Symphony* in C minor makes a stunning single-LP hi-fi vehicle on the Unicorn label (LA-1015), with F. Charles Adler conducting the Vienna Orchestral Society. The pungent chromaticism of this audacious symphony, such as was not heard anywhere in Europe in 1868,<sup>3</sup> has been recaptured by Adler and Unicorn in a really exciting manner. It is performed, with slight modifications, in the revised version of 1891 (published 1893). An earlier deleted LP of this work was by Volkmar Andreae and the Austrian State Orchestra (Masterseal MW-40).

"The *"Nullte"*, or *"Zero"*, or *"Youth"* *Symphony* in D minor, which according to late research is probably preceded by the *First*, has been recorded by Henk Spruit and the Concert Hall Symphony (CHS-1142), and the *Scherzo* therefrom by Lovro Von Matacic and the Philharmonia Orchestra (Angel 3548-B or T-35359). The complete recording is notable for its verve and sparkle, and for Spruit's very persuasive powers. And though the Philharmonia players are more finished executants, it should be noted that Spruit's *Scherzo* is actually the livelier of the two.

The *Second Symphony* in C minor lasts exactly an hour in the early Urania LP (402) by Ludwig Georg Jochum and the Bruckner Orchestra of Linz, but is spread out over two records, a fact naturally to its disadvantage. Another is the thinness of sound of the strings in this orchestra, which have been recorded with considerable distortion in wiry, burbly tone. This is a great shame, for Jochum gives a commendable performance in the Bruckner-Gesellschaft edition (ed. Haas 1938). This edition actually combines features of Bruckner's 1872 and 1876 versions, thus does not correspond to any actual Bruckner autograph;<sup>4</sup> Hans Redlich, however, believes that none of the autographs "represents Bruckner's ultimate intentions".<sup>5</sup> At any rate this version is 135 bars longer than the 1892 revision in which the symphony was formerly published and known, and quite different in orchestration. Thus it was obviously the desire of the Bruckner Orchestra to perform this longer version that led to the necessity of two records, and as an only attempt at this work it is too bad it didn't turn out better.

Of the *Third Symphony* in D minor (dedicated to Wagner), Bruckner produced no less than three different autographs between 1873 and 1877, long before the final heavily edited revisions of his symphonies occurred. The first two were never published, and the first version contained a number of actual quotations from Wagner which Bruckner later expunged. The third (pub. 1878) is the longest, and is the version of which Mahler made his famous piano-duet arrangement. This is the score which recently reappeared in the *Brucknerverlag* (ed. Oeser 1950). The final revision of 1889 (pub. 1890) is 175 bars shorter than this, many passages are completely rewritten or modified, and the orchestration "smoothed out" in the familiar manner. Redlich calls it "labored, artificial and essentially inorganic"<sup>6</sup> compared to

<sup>3</sup> Listen to the magnificent *Scherzo* and try to place it in that decade, even with *Tristan*.

<sup>4</sup> Cf. discussion of the *Eighth Symphony* below.

<sup>5</sup> H. Redlich: *Bruckner and Mahler*, Farrar, Straus & Cudahy, New York, 1955, pages 42 and 86.

<sup>6</sup> *Op. cit.*, p. 88.

the 1878 version, and the structure of the finale especially is a mere shell of itself in this treatment.

Since, however, the three recordings presently available all utilize the 1890 score, Brucknerites may be as astonished as I was to learn that a deleted single LP issued by Allegro-Royale (1579) actually contained the 65-minute 1878 version intact. The recording was technically nothing to boast of, and it was performed by a conductor pseudonymously listed as "Gerd Rubahn". Whoever he may actually be, the gentleman here knows his Bruckner, though some of his *pp*'s were too soft for A-R's rough-and-ready methods to capture. Those unable to hear a copy of this recording have no way at present to compare the two versions. (The anonymous A-R annotator states categorically that the 1890 revision is "the one played today", quite unaware of what he is annotating, which surely shows that one can take nothing for granted.) Currently available are the Viennese recordings of Adler (SPA 30/1), Knappertsbusch (London LL-1044), and Volkmar Andreae (Epic LC-3218). Adler takes 2½ sides, the others two. Of these the Epic is especially recommended here for its incisive spirit and the clean flowing lines of the recording. Deleted recordings of this 1890 version were by Walter Goehr (Concert Hall 1195) and Zoltan Fekete (Remington 199-138, formerly Concert Hall 1065), of which the Goehr was possibly the liveliest of all, with an absolutely breathtaking *Scherzo*.

The *Fourth Symphony* in E flat major ("Romantic") was also composed in several early versions, though in this case they culminated in only one complete extant autograph (pub. 1936 ed. Haas, together with an alternate earlier *Scherzo* and *Finale*). The final revision (pub. 1889) is again a heavily edited and reorchestrated version of this, 105 bars shorter; it is a revision by other hands, to which Bruckner specifically denied his confirmation.<sup>7</sup>

The "Romantic" is currently available in no less than seven LP recordings, besides one previously deleted (Allegro). Four of these use the Haas edition: Paul Van Kempen and the Netherlands Radio Orchestra (Telefunken 66026/7), Herman Abendroth and the Leipzig Symphony (Urania 401), Otto Klemperer and the Vienna Symphony (Vox PL-6930), and Willem Van Otterloo and the Hague Philharmonic (Epic SC-6001). The other three use the revision: Hans Knappertsbusch and the Vienna Philharmonic (London LL-1250/1), Lovro Von Matacic and the Philharmonia Orchestra (Angel 3548-B or T-35359/60), and Wm. Steinberg and the Pittsburgh Symphony (Capitol P-8352). Vox and Capitol are 2-sided recordings, Urania 4-sided, and all the others 3. But in addition to using the shorter version, Steinberg makes a further cut of 60 bars in the reprise of the *Andante*, beginning 3 bars before letter G. Also, the fact that Van Kempen's version is dubbed from a 78-rpm recording brings about his downfall in the *Scherzo*: the 78 side containing the main section was to be repeated after the side containing the *Trio*, but on the LP, unaware of this, Telefunken's engineers have blissfully left the *Trio* high and dry at the end of the record.

The only satisfactory recording of the "original", and therefore the preferred version for most Brucknerites, is Van Otterloo's, a very sensitive reading, and well engineered. Klemperer gives by far the most eccentric interpretation, for in the *Andante* he uses a *solo* viola in place of the *ensemble* violas in both occurrences of the long second subject, entirely altering its

<sup>7</sup> For an excellent, detailed comparison of the editions, see Andrew Porter's review in *The Gramophone*, Sept., 1955.

character. The movement is also too rushed. Abendroth is exceedingly pedantic, and impedes the flow of the *Scherzo* quite ludicrously. That should settle matters in favor of Epic, but there are in fact a couple of things to be said about two of the other versions. Angel and Capitol are both superior, more up-to-date recordings than any of the issues of the "original", and in addition the players of the Philharmonia (Angel) perform exquisitely here. I would call their *Scherzo* about the most virtuoso piece of Bruckner playing I have heard on records. Secondly, Steinberg (Capitol) makes a far more exciting thing, for me, out of the finale than it usually is at more sedate tempi, and the effect is abetted by dramatic timpani sound and agile string work. The Knappertsbusch also has fairly up-to-date sound, but I don't care as much for his work. In short, the situation of the "Romantic" is thoroughly complex and discombobulated, and for the Brucknerite no Utopian answer is forthcoming. The one thing it cannot complain of is neglect. A further recording of the original version is due from Eugen Jochum.

The *Fifth Symphony* in B flat major is the first of three (5, 6 and 9) which were published posthumously in versions differing widely from Bruckner's original autographs, and which revisions must today be considered especially inadmissible by those who care what the composer really intended. And without his participation, the revisers of 5 and 9 especially have really given themselves some rope. As Redlich puts it, the orchestral layout has been radically altered throughout, "with the result that Bruckner's original conception of a terraced, organ-like orchestral sound has had to give way to an orchestration based on Wagner's principle of mixed colors."<sup>8</sup> Of all cuts in Bruckner, the most serious is the virtual disemboweling of the fugal core of the finale of 5 (122 bars).

However, as Donald Mitchell writes in the album notes for the London *Fifth* (LL-1527/8, Knappertsbusch and the Vienna Philharmonic, revised version): "Comparisons of the symphonies in their original and edited versions offer us a significant glimpse into the workings of Bruckner's mind and shed much light on the sonorous ideals of his contemporaries — ideals often at variance with his own." As an *apologia* for presenting the revision of No. 5, this could not be better put, and those willing to expend the extra cash to convince themselves or others how much better the Urania version (239, Gerhard Pflueger and the Leipzig Philharmonic, original score) is in every respect could not do so more effectively than by purchasing the London also. For Pflueger, giving one of the really great Bruckner performances on records, is eloquently convincing at every turn. Knappertsbusch entirely lacks a strong hand in holding this great work together, and in the *Adagio* saunters through a relatively glib reading which should be especially evident on direct comparison. The recording by Urania is also clearer and more forceful, especially in the bass. Urania's album cover is one of their most hideous, but the sight of it still gives me some pleasure by conditioned response to what it contains. A deleted version by Eugen Jochum and the Hamburg Philharmonic (Capitol P-8049/50, repressed from Telefunken 78's) also used the original score, but was handicapped by the leaden pace of the finale that took most of the urgency out of the final chorale.

The *String Quintet* in F major has two recent and excellent recordings, by the Koeckert Quartet and George Schmid, viola (Decca 9796), and by the Vienna Konzerthaus Quartet with Ferdinand Stangler (Vanguard 480). The

<sup>8</sup> *Op cit.*, p. 44.

Vienna recording includes in addition to the regular *Scherzo*, the so-called *Intermezzo* which Bruckner composed to replace it when Josef Hellmesberger prematurely termed it unplayable. The Bavarian players are much more spirited than the Viennese, and the texture of their recording is cleaner too. The latter, though good enough in isolation, sound positively slack and listless on direct comparison along with the score; a major triumph for the Koeckert ensemble. They should now perform the *String Quartet* in C minor, which has never been recorded, but was recently published by the Bruckner-Gesellschaft.

In the Urania recording (7041) of the *Sixth Symphony* in A major recurs the same problem as in the other recording of the Bruckner Symphony of Linz under L. G. Jochum. Here the strings sound so few in number as to seriously distort the music, and their recaptured sound is ugly and wiry. In this case we have beautiful string sound from Westminster for comparison, and one need only play the opening of the *Adagio* to get the full contrast. Also, Urania has missed the two opening bars of the finale. The Westminster, originally a 3-sided issue now repressed on 2 sides with improved sound (WN-18074), is by the Vienna Symphony under Henry Swoboda. The latter, unfortunately, is not in all respects the polished Brucknerite that Jochum is, though both perform the original version (ed. Haas 1935) and make a really exciting thing of it. Though Swoboda's *Scherzo* may be "*Nicht schnell*" as the score directs, I hardly believe this is what Bruckner had in mind. Neither makes much of the fantastic *Trio*.

The *Seventh Symphony* in E major has fared the best on vinylite, with three excellent recordings, of which the two currently available in the U. S. are by Van Beinum and Van Otterloo (3 sides each). Each of these can be heartily endorsed, for both have a broad, firm grasp of this enchanting score. In both performance and recording qualities, however, Van Beinum's has the slight edge, on a scale of excellence set very high. He has the Amsterdam Concertgebouw (London LL-852/3), Van Otterloo the Vienna Symphony (Epic SC-6006). The London sound is more impressive, and so are the players, both of which aspects can be rapidly tested and compared through one easily accessible passage: the quartet of Wagner tubas which open the *Adagio*.

In the *Finale* Van Beinum has one personal idiosyncrasy which comes off quite well: the very retarded opening of the final passage at letter Z. Van Otterloo uses the original version (ed. Haas 1944), Van Beinum the revised (pub. 1885),<sup>9</sup> but in this case the differences of orchestration are neither extensive nor important, and there is no difference in length. The other good but deleted recording was by Carl Boehm and the Vienna Philharmonic (Vox PL-7192). A further recording of the original version is due from Eugen Jochum.

It is well to consider Bruckner's last two major choral works, the *Te Deum* (1881-4) and the *150th Psalm* (1892), together, for as Redlich says, "both works are in the key of brazenly triumphant C major", both are "inspired and indeed carried away by an almost pagan feeling of triumph".<sup>10</sup> However, to call one a Latin and the other a German version of the same text, as Red-

<sup>9</sup> Thus Van Beinum introduces the controversial cymbal clash at the climax of the *Adagio* (letter W), but for all the effect it makes in this recording it might just as well not be there. Herman Adler calls this discreet, but a discreet *fff* cymbal clash is as vile as Tovey's 30-foot pyramid.

<sup>10</sup> *Op. cit.*, pp. 74-5.

lich does, is stretching literary inattentiveness to a ridiculous extreme: the titular lines, "We praise thee, Lord" and "Praise ye the Lord" respectively, are just about all the actual texts have in common. The *Te Deum* is composed for solo quartet, chorus, orchestra and organ *ad lib.*, the *150th Psalm* for the same without the solo voices, excepting a brief soprano solo. One immediately precedes, the other follows, the composition of the *Eighth Symphony*.

The *Te Deum* has been recorded by Eugen Jochum and the Munich Radio Orchestra and Chorus, with Cunitz, Pitzinger, Fehenberger and Hann (Decca DX-109), and by Bruno Walter, the New York Philharmonic Symphony, and Westminster Choir, with Yeend, Lipton, Lloyd and Harrell (Columbia ML-4980). The Jochum version is an object lesson in the advantage of recording with a smaller chorus of extreme flexibility in acoustically live surroundings, rather than with a monolith like the Westminster Choir in spacious but deadening circumstances. Almost everything is clearer and more plastic in the Jochum, and also more dramatic. The Walter soloists are so acoustically remote that they make little effect, and some of their lines are quite indistinguishable. In addition, Walter turns the organic structure of the work almost inside out, making the opening *Allegro* more ponderous and then speeding up the succeeding lyric section. Finally, the Decca sound is quite beautiful and free of Columbia's overloading. A deleted LP by Messner and the Salzberg Festival Orchestra and Chorus (Festival 101) is unlamented.

The *150th Psalm* has only one recording, by Henry Swoboda, with Hilde Ceska and the Vienna Symphony and Chamber Choir (West. WN-18075, formerly WL-5055). The performance is adequate, but the recording doesn't do justice to the contrapuntal rigors of this work, being, in balance, weak on the orchestral side, especially the bass. The *ad libitum* organ is not in evidence. The same record side also contains the *112th Psalm* (another "Praise ye the Lord" psalm) for chorus and orchestra, composed 30 years earlier (1863), and revealing "vividly at a glance", as Gabriel Engel says in the album notes, "Bruckner's growth in artistic stature during the three decades." But again, to describe the underlying texts as "virtually identical in content" may cause misunderstanding in those lacking the enterprise to pick up a Bible and check for themselves, as neither German nor English texts are provided by Westminster. Psalm 112, far from being a wild jubilation, is actually a dissertation on righteousness and charity. In addition to Bruckner's soprano solo in the *150th*, Swoboda chooses to allot certain choral passages to concerted solo voices in both works. Westminster has placed the later Psalm first, presumably for technical reasons. Both of these works now deserve re-recording.

The 1955 Vox recording of the *Eighth Symphony* in C minor is the first to utilize one of the newer post-war editions of the Bruckner-Gesellschaft edited by Leopold Nowak (and in the very year of its publication). In the present work this is significant, for as Joseph Braunstein says in the lucid and extensive album-notes: "Nowak's categorical rejection of the method Haas applied in this particular case, and to the *Second Symphony*, one must add, is a declaration of war against the editorial policy hitherto followed in the Complete Edition." The "method Haas applied" (1939) was actually to use Bruckner's second version of 1890, but to add to it 48 bars derived by Haas himself from Bruckner's first version of 1887, which was a good 150 bars longer than the second, contained a different *Trio*, and differed in a number of

other respects, notably in using only duple rather than triple woodwind. The 48 bars were termed by Haas "organically vital" to the second version.<sup>11</sup> This, according to Nowak (1955), must be considered a Haas compilation rather than a critical edition, for it bears "no true relation to either of the two versions"; the latter are different sources which "according to principles for the working out of critical complete editions, may never be intermingled".

Obviously what is now needed is both the publication and recording of the 1887 version *per se* (the version whose rejection by Hermann Levi brought about a profound shock and serious illness to the composer), as both this and the 1890 version may be considered valid "originals". The latter, incidentally, was published in 1892 with a number of the usual discrepancies and alterations. What we have now, ostensibly, is one recording of the Nowak edition and two of the Haas. The former, as I have said, is by Vox (PL-9682, Jascha Horenstein and the Pro Musica Symphony of Vienna, 4 sides); the others are the Decca (DX-109, Eugen Jochum and the Hamburg Philharmonic State, 5 sides, an early LP transfer from Deutsche Grammophon 78's),<sup>12</sup> and the Epic (SC-6011, Van Beinum and the Concertgebouw, 3 sides).<sup>13</sup>

The Vox set is further significant in being actually the first and only Bruckner recording so far issued in the U.S. whose annotator has really come to grips with the textual problem and discussed it in full. Most often the edition used is not even identified (and many of the identifications made above may not be found elsewhere), nor the fact that there is a textual problem even mentioned. One feels in these cases that the annotator either has not heard the recording of the work he is discussing, or would be none the wiser if he did, since the limits of his interest are defined in a generalized acclamation of Bruckner anyway.<sup>14</sup> Braunstein is a veritable beacon in this murk, whether or not one agrees with his remarkably favorable conclusions regarding the relationship of the defenceless composer to his many eager advisers-after-the-fact. At least they are mentioned! Of those "eminent musicians and distinguished conductors" (but no creators), one nearly killed Bruckner by his solid lack of comprehension of this very *Eighth Symphony*; however, the composer recovered and proceeded to increase the size of the orchestra!

Of the three recordings, my own preference is for Vox-Horenstein in the *Trio* and the *Adagio*, and Epic-Van Beinum in all the faster movements. The latter's more propulsive finale, coupled with a furious onslaught of brass and timpani sound, make it truly exhilarating in the same way I find the finale of Steinberg's *Fourth*. In other respects I prefer the sound quality of the

<sup>11</sup> In the 1950 *Chord and Discord*, Robt. Simpson, trustingly referring in his analysis of the *Eighth* to this edition as an *Urfassung*, found (pp. 50 and 53) 30 of these 48 bars indispensable to Bruckner's design. This may be a tribute to Haas' astuteness or to the hypnotic power of the term *Urfassung*, which in any event has certainly been applied loosely to this publication.

<sup>12</sup> The 10-bar Haas interpolation in the *Adagio* (just before letter Q), which Simpson specifically describes (on p. 50) as included in the Jochum recording, is definitely not in the American Decca pressing of it at least, thus anticipating Nowak.

<sup>13</sup> Even in the 1955 Epic release, though the Nowak score and preface appeared in March of that year, Klaus G. Roy still writes that "the restoration of the original, without cuts or other emendations . . . the '*Urtext*', or pristine version, is the one followed in the present performance."

<sup>14</sup> Naturally the pre-Bruckner-Gesellschaft scores give no information either, since everyone was supposed to assume in those days that there could never be another edition and things were as pristine as they could get.

Vox, which is very beautiful. The harp, making its sole appearance in all Bruckner with a series of upward arpeggios in the *Trio* and the *Adagio*, is given its full effect by Vox. On the other hand we have again Van Beinum's men of the Concertgebouw, quite unmatched in this sort of thing, to further balance the scale. Their Wagner tubas are again the height of artistry. There is really no excuse for any true Brucknerite not to own both of these outstanding sets. Jochum's version is very slow in the *Adagio*, but otherwise is not far from Van Beinum's overall interpretation, which is high praise. Certain specific shortcomings pointed out by Adler (see Bibliography) and Simpson (*Op. cit.*, p. 55) are probably not as decisive as the fact that the recording is technically superceded, and sold in a 3-record set (which, however, includes the magnificent *Te Deum* reviewed above, and which now deserves to be issued separately).

If ever Bruckner's scholarship may be said to have paid off in pure gold, it was in the unearthing of the original score of the *Ninth Symphony* in D minor. This is the one case where the alterations made were eventually taken squarely on the shoulders of the man who made them, and that man was Ferdinand Loewe. After hearing the restored original of the three completed movements in 1934, Lawrence Gilman called the revision (pub. 1904) "an astonishing perversion and distortion of Bruckner's intentions". While the wholesale conventionalizing of contour and orchestration is quite incredible from beginning to end, one can safely say that the emasculated effect of what Loewe does to the climactic chord of the *Adagio* is equal in loathsomeness to the denaturing into a cadence chord of the climactic interruption and scream in old-fashioned concert versions of the *Liebesnacht*. The whole story is now well known, especially in *Chord and Discord*, and may be followed in detail in L. Biancolli's article in the 1946 issue. The irony of the whole pitiful situation, which prevailed for 30 years, is that, as Biancolli points out, "it was probably modesty that restrained Loewe from divulging the changes he had made . . . He regarded the task as a labor of love." At the time of publication in 1904 he even pretended that Bruckner had left the manuscript an incoherent mass which he had been trying in the intervening years to decipher, though Bruckner was known to be fastidiously neat.<sup>15</sup>

Thus we are today in a very fortunate position compared to Brucknerites of only 25 years ago. We are also fortunate in that the Loewe version has been recorded, by SPA, and clearly identified as such, and that it can be directly compared with either of the two recordings of the original version, both also clearly identified. No obscurantism here. The only aspect in which obscurantism does emerge is in the habit of referring to the three completed movements simply as "*Symphony No. 9*", without any qualification to indicate that they were never intended to be a complete work, and indeed cannot be within Bruckner's consistent understanding of what constitutes a symphony, in view of which any pretence that they perform that function in a higher sense is sheer sentimentality. The very ending in a different key is as un-Brucknerian a phenomenon as may be imagined.

The Loewe recording is by Adler and the Vienna Philharmonia (SPA 24/5), the others by Horenstein and the Pro Musica Symphony (Vox PL-8040) and by Eugen Jochum and the Bavarian Radio Orchestra (Decca DX-139). Each is a magnificent performance in its way, and Jochum is to be commend-

<sup>15</sup> Cf. the example after page 100 of H. Redlich, *Op. cit.*

ed on a really integrated reading this time. His very slow *Adagio* (27 minutes against Horenstein's less than 21) is convincingly rendered to the last detail, and to me is not, as some feel, funereal. In other respects, however, Horenstein is sometimes the stronger interpreter, e. g. the first movement coda: It is curious that Jochum's coda should sound comparatively rushed, losing its uncanny inexorability. The Bavarian radio orchestra sounds surprisingly polished,<sup>16</sup> but its string leaders are in fact the commendable Koeckert Quartet (see *String Quintet in F*). Adler does very well, but his *Trio* is impossibly slow, and this is not Loewe's fault, since the direction is "*Schnell*" in both scores. The true contrast with the pounding main section lies not in tempo, but in its gossamer, *Midsummer-Night's-Dream-like* texture. With Adler's beat the Mendelssohn *Scherzo* would sound just as foolish. The Decca recording is the clearest and fullest, but the SPA excels in a few woodwind details. The Vox is also the first Bruckner recording available on commercial monaural tape (Phonotapes PM-125).

A recording of the finale sketch, up to the point of its being broken off, should be undertaken. This manuscript, except for a few bars, is complete in full score as far as the beginning of the coda,<sup>17</sup> thus providing a complete head and torso for Bruckner's largest and possibly finest instrumental movement. Such a recording would help immeasurably to put the *Ninth Symphony* as a whole into a more accurate perspective.

The first work of Mahler to be considered in chronological order is *Das klagende Lied* (1878-1900). This is the only published work by Mahler that has so far never been publicly performed in America, so here is a prime example of what I referred to as a composition entirely at the mercy (as far as most of us are concerned) of a single recording. And the recording in question was made for Mercury (MG-10102) in the earliest days of LP, in rather limiting circumstances. Zoltan Fekete conducts, with Ilona Steingruber, soprano, Sieglinde Wagner, contralto, Ernst Majkut, tenor, the Vienna State Opera Orchestra and Chamber Choir.

Actually, *Das klagende Lied* should be taken seriously by the best of Mahler interpreters, not left to be picked up by anyone who happens to be around. There is some really good choral singing here, but neither the conductor nor soloists pass much beyond the sphere of the tentative, casual and inquiring. There is a persistent lyricism in this work that belies its grisly subject, but this is a positive quality to be studied and developed persuasively. The solo vocal lines include some of the most difficult Mahler ever wrote, and demand the best singers available. For the present I must say that, whatever the reason may be, I have seldom heard so much slightly hoarse *parlando* tone outside of a Blitzstein opera.

Each of the two parts of the cantata is about 20 minutes long, so there is no reason except inertia why this attractive work should not become a natural and popular choice for single-LP recording. The second orchestra off-stage, in a couple of passages, is a problem for recording, and cries out for stereophonic treatment. Here the tape editing is rather obvious and intrusive, and the sound, though fairly spacious and pleasant, could be greatly improved on today.

The 14 *Lieder aus der Jugendzeit* for voice and piano (1883-92) are given

<sup>16</sup> It was even mistaken by Winthrop Sargent (*Saturday Review*, April 27, 1957) for the Berlin Philharmonic.

<sup>17</sup> A curious way Bruckner has with this symphony. Cf. Redlich, *Op. cit.*, p. 105.

complete on one LP side by Ilona Steingruber, soprano, with Herbert Haefner (SPA-20/2), and on two sides by Anny Felbermayer, soprano, and Alfred Poell, baritone, with Viktor Graef (Vanguard 424). The former recording comprised the 6th side of an SPA set containing the *Third Symphony*, which was later superceded by a 4-sided pressing (SPA 70/71) of the symphony alone, thus eliminating the songs from circulation. The Vanguard is superior anyway, though it annoyingly fails to follow the published order of the songs as the SPA did. The alternation of voices is appropriate, as this is just a collection of songs, not a cycle, and Miss Felbermayer and Dr. Poell are exquisite interpreters of them. On this collection as on the later Mahler songs, it should be borne in mind that Dietrich Fischer-Dieskau is undertaking to record them all in time.

Desi Halban, soprano, sings a selection of 8 of the 14 songs, with Bruno Walter (Col. SL-171), a repressing from a 78-rpm set. These interpretations are bettered by the Vanguard artists, and so by far is Columbia's recording in which the piano frequently sounds almost as if it were coming from an adjoining room. On Vanguard 421, four of the songs, with the accompaniments variously orchestrated by Robert Heger and Lothar Windsperger, are sung by Felbermayer, in alternation with the five Rückert songs (see below) sung by Poell, with the Vienna State Opera Orchestra under Felix Prohaska. The record bears the general title "Early Songs from *Des Knaben Wunderhorn* and Last Songs from Rückert", a rather precious idea. What is alternated here is of course two groups of songs in widely differing styles, and the folklike early songs, in their borrowed dress, seriously detract from the introspective mood of the orchestral *Lieder* which Mahler composed in his maturity. They should have been pressed on opposite sides of the record, but it is good to be able to compare some of the individual songs in such disparate versions. Also included on 421 is Josef Woess' arrangement (not credited to him) for soprano and orchestra of the *Wunderhorn* song for contralto, women's chorus, boys' chorus and orchestra from the *Third Symphony* (*Es sungen drei Engel*).

The best conductor of the *Lieder eines fahrenden Gesellen* (1883-5) I have yet heard is Eduard Van Beinum, who has recorded this work twice. The first was made in 1947 with Eugenia Zareska, contralto, and the London Philharmonic on English Decca 78's, and was never transferred to LP; the second was in 1957 with Nan Merriman, mezzo-soprano, and the Concertgebouw (Epic SC-6023). Van Beinum's searching concept of this song-cycle remains intact and immediately identifiable after the ten intervening years. There is, however, a considerable difference in the singers. Zareska's was one of the truly great Mahler interpretations of our day, with a tragic intensity in the lower register and a pure, clear beauty in the upper that was quite unforgettable. Merriman comes nowhere near this, though she benefits immensely from the sure guidance of Van Beinum and gives a splendid account. Epic's sound quality is quite the best that has been produced for this work, revealing every intimate detail of Mahler's iridescent orchestration.

Mahler's text for this "Wayfarer" cycle is of course intended preferably for the male voice, and well up on top of the male versions is Fischer-Dieskau, with the Philharmonia Orchestra under Wilhelm Furtwaengler (HMV ALP-1270), which as this is written is due shortly for American pressing by Angel. This collaboration of the young baritone with the veteran conductor shortly before the latter's death has been preserved in a remarkably fine recording. The version of Norman Foster (baritone) and the Bamberg Symphony under

Horenstein (Vox PL-9100) is also very good, except for some top notes transposed downward by Foster (as permitted by Mahler), but Foster does not stand well in company with Fischer-Dieskau. The deleted LP's by Ludwig Metternich, Carol Brice and Blanche Thebom were not such as to be regretted in view of what we have, and a Flagsted version is also due.

The *First Symphony* (1885-8) has become the most favored of Mahler's works on LP, due to the facts that (1) it is, like the *Fourth*, about standard length for a present-day single record, (2) its style, both lyric and dramatic, is readily accessible in comparison to later works, and (3) it has even become something of a hi-fi war-horse. It is good, therefore, that amid the general clamor to "beat it out" for maximum immediate effect, there has been preserved at least one interpretation with values of a more thoughtful and searching nature. This is the recording of Horenstein and the Pro Musica Orchestra, which unfortunately is at present out of print on disc (Vox PL-8050) in the U.S., but is enjoying a unique position as the first Mahler recording available on monaural tape (Phonotapes PM-114).

The legend "complete recording" inscribed on this version refers to the fact that this is one of the only two out of nine whose conductor observes the expository repeat in the first movement (the other being an otherwise undistinguished performance by the "ubiquitous" "Gerd Rubahn": *Allegro-Royale* 1554). This is structurally a very important repeat, and its observance characteristic of Horenstein's uniquely serious intent, above and beyond the call of duty. However there are no actual cuts in any of the other versions, except for 24 bars inexplicably cut from the coda of the finale in the recording of Paul Kletzki and the Israel Philharmonic (Angel 35180), at an important point of modulation (cues 57 to 59). Horenstein's subtle *pianissimo* effects are especially beautiful, and his ethereal D-flat *cantabile* in the finale demonstrates the exact opposite of Mitropoulos' swollen emotionalism at that point (Entre RL-3120). And Horenstein alone seems to comprehend the timing of the *ritardandi* before the D-major sections of this movement.

Hermann Scherchen (West. 18014) is also excellent in the crucial D-flat section, as is Bruno Walter (Col. SL-218), and these two versions are quite exceptional in their own ways. Walter is inclined to go after the maximum effect of each passage, regardless, so that the overall design and continuity are sometimes choppy. Scherchen, on the other hand, is structure-conscious to the *n*th degree, and not very flexible here. Other competing versions are by Borsansky (Vanguard 436 and Urania C-7080), Kubelik (London LL-1107) and Steinberg (Capitol P-8224), and testify more to the astonishing vigor of this work than to their especial insight. Most of the recordings, as I have hinted, are hi-fi with a vengeance, with Vox the liveliest in sound, and Columbia and Vox the clearest.

In utter contrast to the *entente cordiale* between vinylite and the *First* stands the solitary *Second Symphony* (1888-94) of Otto Klemperer (Vox PL-7012, 4 sides), as dismal an electronic effort as one will find. Vox is scarcely to be blamed for keeping such a wretched thing in the catalog as long as it is without competition, but those who have not otherwise heard this symphony are warned against jumping to any conclusions. The dimensional effects encompassed by this score again cry out for stereophonic treatment, and the final chorus, from the first barely audible entry to the final peroration with organ and deep bells, calls for the utmost in sonic versatility. There

was actually a good deal more of the latter in Victor's 1934 recording (a pioneering effort engineered by Charles O'Connell) than in Vox's 1950 recording, though Ormandy's slick interpretation would not pass in this slightly more enlightened Mahlerian age. Bruno Walter, who is currently engaged in a protracted taping of the *Second* for Columbia, has a far better interpretation than either Ormandy or Klemperer, but is hardly a pioneer in sonic matters either. I had occasion to observe at a recording session how a recalcitrant Westminster Choir paid absolutely no heed to his injunctions, and was shocked to hear the printed instruction "greatest possible number of horns blown very loudly and placed at a great distance" (finale, cue 3) embodied by two horns playing *mezzoforte* behind a closed door. Until the day when someone with the will is given also the wherewithal, I predict a gloomy phonographic future for the *Second Symphony*.

Vanguard 412/3, a 4-sided LP album issued in 1950, contained the two volumes of orchestral songs from *Des Knaben Wunderhorn* composed between 1888 and 1899, plus the two later *Wunderhorn* songs originally published with the *Fünf Lieder nach Rückert* as *Sieben letzte Lieder*, plus *Urlicht* from the *Second Symphony*. These 13 songs were later reissued on two sides (Van. 478) with no loss in sound, as they last only 50 minutes. They are sung alternately by Lorna Sydney, mezzo-soprano, and Alfred Poell, baritone, with the Vienna State Opera Orchestra, under Prohaska. Again Vanguard does not follow the printed sequence of the songs, but this is almost the only disadvantage in a lovely and attractive recording.

Prohaska emphasizes the strongly rhythmic propulsion behind each song with telling effect. Miss Sydney's warm and tender tones infuse with highest art the most hauntingly beautiful of Mahler's songs, *Wo die schönen Trompeten blasen*, a conception so lovely that it can move one to tears in a D-major passage in lilting  $\frac{3}{4}$  time! Dr. Poell gives of his best in the two last and greatest of these songs, *Revelge* and *Der Tamburgs'sell*. He maintains an almost unbearable intensity in the former, seeming to sum up a nightmare of our time, an inexorable, relentless marching into the unknown. In the *Urlicht*, Miss Sydney outsings Hilde Roessel-Majdan in the Klemperer *Second* by maintaining a light buoyant tone of expectancy.

The *Third Symphony* in six movements (1895-6) is even longer than the *Second*, but much easier to handle sonically. The brief interlude with women's and boys' choirs (*Es sungen drei Engel*), once more stereophonic in intent, as is the posthorn solo in the *Scherzando*, offers none of the problems associated with the full-scale chorus in the *Second*. Like Vanguard in the *Knaben Wunderhorn*, SPA, which has alone undertaken to record the *Third*, has utilized the principle of the variably pitched groove to reissue its previous recording on fewer and more compact sides. As mentioned earlier, the 5-sided version (SPA 20/2) has been replaced by the 4-sided (70/1), to the advantage of all concerned. This grand and neglected symphony is performed by F. Charles Adler and the Vienna Philharmonia Orchestra and chorus. As in the *Second*, there is a contralto solo (*O Mensch, gib acht* from Nietzsche's *Also sprach Zarathustra*) which is again sung by Hilde Roessel-Majdan, in a profoundly compelling manner. The players are in close rapport, and recorded with spaciousness and generally admirable balance. The concluding *Adagio* is played very slowly, and sustained better than performances I have heard on the faster side. It is a true *Adagio* in the Beethovenian sense, the responsibility for the full realisation of which falls largely on the sustained

bowing ability of the string players. It is then a moving statement of affirmation and love.

The *Fourth Symphony* (1892-1900), originally called a *Humoreske*, is the lightest in orchestration of any of Mahler's symphonies (notably dispensing with trombones), and along with the *First* is also the shortest. Its four movements are also perfectly balanced on two LP sides, so it is by all odds the most ideal for present-day recording. On the other hand it has few of the hi-fi demonstrational potentialities of the *First*, and to further point up the difference, its finale is a strophic song for soprano which ends with no brass peroration, but dies away in the lower register of the solo harp! This really separates the Mahlerites from the pure unadulterated audiophiles, and naturally makes its appearance a little rarer occasion.

Its spirit is delightfully caught by Van Beinum and the Concertgebouw (London LL-618), aided and abetted by the lively English soprano Margaret Ritchie who sang and gayly embroidered her way through Scherchen's audacious *Messiah*. The qualities of sudden magic and more sudden sarcasm that lurk in the *Fourth* are counterpoised with ease by Van Beinum, where his colleagues tend to stumble or plod by comparison. His first movement is faster in its main tempo, opening a door into a strange magical world. The second Netherlands orchestra to record this work, the Hague Philharmonic (Epic LC-3304), has equally superb musicians, but in Van Otterloo it has not quite the equal of Van Beinum in special finesse. The soprano here, Teresa Stich-Randall, gives a cool, classical shapeliness to her exacting part.

Bruno Walter (Col. ML-4031) outlines the work with loving care, but the New York Philharmonic is not quite as good as the Dutch orchestras, and the recording, an early reissue from '78's, is quite inferior; singer Desi Halban is unfortunately partly inaudible as well. Also technically inferior are a Supraphon import (LPM 51/2) under Sejna (another transfer from '78), and a Royale concoction (1308) under that "person" of apparently many styles who is listed as "Gerd Rubahn". Of greater interest than these, but unfortunately deleted, was the only known example of Mahler himself as a recording artist, playing the *Finale* on the piano, through the medium of the dynamically sensitive Welte piano roll (Col. ML-4295). He seemed to have been rather nervous and emotionally intimidated by the strange mechanism, but this only made more moving and human the preservation of a unique occasion. A new recording of the symphony is due by the Saxon State Orchestra of Dresden under Leopold Ludwig with Anny Schlemm.

The *Fifth Symphony* (1901-2) has been recorded only twice, and the results are so utterly different that I urge all Mahler enthusiasts to acquire both for intensive comparison. The versions are by Walter and the New York Philharmonic Symphony (Col. SL-171), and Scherchen and the Vienna State Opera Orchestra (newly reissued as West. XWN-2220), both occupying three sides. Here Scherchen's architectonic approach really pays dividends, to say nothing of his affinity with and concern for the razorlike distinctness of instrumentation which Mahler always sought above all, beautifully reinforced by Westminster's recording techniques. Walter is more concerned with big effects and telling climaxes, and for me it adds up here to a superabundance from which the real peaks sometimes fail to emerge. The chorale in the second movement, e. g., is just another incident in an overcrowded movement under Walter, but under Scherchen is revealed as a summit achieved by love and tenacity.

Scherchen's *Allegro* passages in the first two movements have been criticized for excessive speed, which completely changes the internal proportions of both movements through the relation between *Allegro* and alternately slower tempi. These new proportions also apply to the work as a whole. Since the opening movements are both shorter in duration, while the *Scherzo* is a little slower, the latter now becomes the longest movement in the symphony (18 minutes). Scherchen begins it in a more relaxed and offhand manner, building it up gradually into a tremendous and quite fathomless work: Mahler's greatest *Scherzo*. Now we can see why Mahler could think of nothing else after the first rehearsal of the *Fifth* in Coblenz. There are some slight differences in the editions used in regard to orchestration. Scherchen pays more careful attention to Mahler's exact markings, with one very mysterious exception. The second movement ends with a blow on the timpani reproduced like a pistol shot that should be the envy of every sound engineer, but for one thing: Mahler marked it "*pianissimo*".

Besides the *Lieder eines fahrenden Gesellen*, the *Kindertotenlieder* cycle (1901-4) is the only Mahler work of which the finest version was never on LP. This is the 1932 Polydor recording of Heinrich Rehkemper (baritone), recorded in Munich with an orchestra under Horenstein, an incredible realization of Mahler's most astonishing lyric creation. The best available version is that of Fischer-Dieskau and the Berlin Philharmonic under Rudolf Kempe (RCA-Victor LM-6050). This fine singer has to reach for effects that lay already under Rehkemper's innately expressive voice, but he reaches with the highest artistry and care. Norman Foster (Vox PL-9100) and Herman Schey (Epic SC-6001) are not comparable, but they keep the repertory of this song cycle on a very high level, and the Hague Philharmonic in the Epic is especially beautiful. Kathleen Ferrier, with the Vienna Philharmonic under Walter, is by far the finest of the women, and gives a haunting rendition. Marian Anderson (RCA-Victor LM-1146) is very ill-at-ease in this work, while deleted versions by Vera Rosza (Mercury 10103) and Lori Lail (Urania 7016) are valiant but unsuccessful attempts from the earlier uninhibited days of LP. Vox, Epic and the newer RCA have all beautifully caught the chamber-like qualities of the score. Flagstad is to be our next interpreter of this cycle.

The *Fünf Lieder nach Rückert* (1901-4) have been represented on LP by two complete recordings and one partial one. The incomplete version is that of Ferrier and the Vienna Philharmonic under Walter (London LL 625/6), which is a pity, for this is the best of the three versions. She sings *Ich atmet einen linden Duft*, *Ich bin der Welt abhanden gekommen*, and *Um Mitternacht*, and omits *Blicke mir nicht in die Lieder* and *Liebst du um Schönheit*. This is the only version which solves the difficult problem of orchestral balance in the climactic stanza of *Um Mitternacht*, so at present it is necessary to own two versions in order to have this brief but significant collection adequately represented. First choice for the complete cycle is Alfred Poell, with the Vienna State under Prohaska (Van. 421). The recording suffers from the interspersing of these *Lieder* with the early songs as discussed above. But the interpretation is a fine one, and the two songs not sung by Ferrier are excellently rendered here. The deleted version by Ilona Steingruber (Mercury 10103) is weak.

The *Sixth Symphony* in A minor (1903-4) is the most difficult of Mahler's purely instrumental works to handle sonically. This is the largest orchestral apparatus he ever used except in support of the chorus, and the percussion

department alone is, as one album annotator puts it, "an orchestra in itself". Percussion, especially in large and varied doses, is the most notoriously difficult of the sections to record satisfactorily, and the two present versions offer no exception to this. Of all recording units, Westminster's engineers seem to be the most aware of the importance of percussive sounds, which being mostly intermittent rather than sustained sounds must often be slightly ahead of the other sections in decibels in order to be distinguished. In its handling of the *Fifth*, which is somewhat preparatory to the *Sixth* in this respect, Westminster showed a keen awareness of this problem, but unfortunately it has not yet entered the lists on behalf of the *Sixth*, and the Epic and SPA versions, though very good, still leave much to be desired in this heroic, tragic work.

In one respect, indeed, I am convinced that the *Sixth* should be approached from an experimental lab viewpoint. I refer to the famous *Hammerschlag*, the mighty blow of fate sounded three times during the long finale, the materialization of which Mahler never solved to his satisfaction in the concert hall, but which is ideally suited to sound-engineering experimentation for recording purposes.<sup>18</sup> "A short, powerful, but hollow blow of non-metallic quality" is the way Mahler expressed it in his mind, and the engineers who have in the past few years produced all manner of fantastic sounds could have a field-day with this — a wonderful opportunity so far missed. I stress this single effect because it is of great structural importance. It should be both louder and quite different from the other percussive climaxes in the finale; then its three occurrences will be landmarks along the way, taking an active part in the unfolding drama. These conductors may simply omit it because it is scored in unison with other percussion, but in so doing they destroy the superstructure.

The rest of the percussion prospers variably in the two recordings, but the more distinct bass line in the SPA, a very important consideration, sets it ahead of its rival. The two conductors, Eduard Flipse (Rotterdam Philharmonic, Epic SC-6012) and F. Charles Adler (Vienna Philharmonia, SPA 59/60), are too alike in their approach to offer much real chance of comparison. This approach is of the stolid type that avoids all extremes of tempo and concentrates on clarity of presentation and outline. The rather slow *Scherzo* common to both pounds its grotesque rhythms unforgettably into the brain, but its intricate system of tempo changes is thrown quite askew by the simple fact that the main section is made just as slow as the "contrasting" *Trio*. Thus, e.g., the indication "*Tempo I subito*" is greeted with no change at all. The lovely *Andante moderato* is quite breathtaking in both versions, but Adler imparts an added tenderness to the principal theme. All the players come through magnificently, especially the Rotterdam. There are slight differences in the editions used. It is hoped that the next recording of the *Sixth* will finally give us the expository repeat in the first movement,<sup>19</sup> but above all the *Hammerschlag*.

The apparatus of the *Seventh Symphony* (1904-5) reverts to the size of the *Fifth*, i. e. it is not exceedingly difficult to record, just extremely. The two versions both appeared in 1952, one by Scherchen and the Vienna State (newly reissued with enhanced sound as West. XWN-2221) and the other by Hans

<sup>18</sup> My idea is of course that the sound should be worked out alone on tape, then added to the recording as the cannon and church bells were to Mercury's "1812". This technique would also benefit some of the typical low bell sounds indicated by Mahler and Wagner, which are below the pitch of most present-day concert bells. They could be made an octave lower on the tape by reducing its speed.

<sup>19</sup> Cf. Gabriel Engel, "With Hammer and Cowbells", *Chord and Discord*, 1948, p. 7.

Rosbaud and the Radio Berlin Symphony (Urania 405). The latter recording bears the symphony's unofficial subtitle "Song of the Night". The performances are quite different, and both interesting as interpretations, but the orchestra under Rosbaud (consistently referred to by Urania as "Rosbaud") is so poor that his apparent intentions don't always come off. I prefer his slower tempo in the wonderful *Adagio* introduction, so unique in its harmonic idiom and its sombre beauty, but it is a difficult tempo to sustain in execution, and here the phrasing is so sloppy that it doesn't succeed. He allows the very first bar to run into the second, utterly destroying the rhythmic impulse, as one may see from the score. The solo brass players struggle to fill their long bars in this opening creditably, but they must have felt naked. This is obviously a radio presentation.

Scherchen keeps the three fast odd-numbered movements all going at a fair clip for better contrast with the two intervening movements (the famous *Nachtmusiken*). In the second movement Rosbaud's tempo is slower, and should achieve a higher degree of slashing sarcasm, yet Scherchen somehow excels in this by phrasing alone. Even more bite would have been in order. But Scherchen's *Andante amoroso* (fourth movement) is simply *too* slow to be amorous or even just lyrical; its flow is exceedingly labored. Rosbaud's mandolinist is to be commended for strumming the long notes instead of plucking them once; this is more idiomatic, and also keeps the melodic line clearer. Scherchen's *Scherzo* is extremely fast, yet he miraculously contrives to make every point more strongly than Rosbaud. In the *Rondo-Finale* Rosbaud makes more effective *ritardandi* than Scherchen, who goes all-out to keep it rolling, and for the most part succeeds brilliantly, though with a couple of ill-fitting joins (most unusual for him).

Westminster's recording is infinitely preferable, yet the Urania should be studied for a greater prominence of the woodwinds which sometimes lets entirely different sounds be heard in this very contrapuntal work (e.g., the gurgling of the low clarinets at the start of the moonlit B-major episode in the first movement). This is Mahler's most sensuously beautiful symphony, and its kaleidoscope of nocturnal sounds is endlessly fascinating. The guitar chords are not distinct enough in either recording to give the serenade its proper rhythmic basis, and in the finale neither solves the problem of balance after the bells come in.

The *Eighth Symphony* in E flat major (1906-7) is a far more difficult proposition sonically than the *Second*, for here the antiphonal double chorus, the eight vocal soloists and the huge orchestra are in constant use or alternation. Furthermore, the basic problems are of depth as well as size, since the texture varies from these heroic proportions to exceedingly chamber-like delicacy, with many small and special sounds like the mandolin and the harmonium. What is needed at the very least is an efficient resonating chamber large enough to hold the thousand or so performers and not much larger, plus an ultra-sensitive microphone to catch every last whisper, plus a relatively unlimited amount of rehearsal time. It can and I believe will be done, but not until the recording industry has to take Mahler as seriously as RCA had to take the problem of producing a Beethoven *Ninth* acceptable to Toscanini. From an artistic standpoint the *Eighth's* antiphonal choruses also make it a logical priority item for stereophonic recording, but here artistic and commercial logic are virtually galaxies apart.<sup>20</sup>

<sup>20</sup> Westminster, pioneering once more, has recently released on duo-track tape "A

Basically what is wrong with the existing recordings is that they both had to be made at public performances, in one case without the conductor even being aware that a recording was in the process! This is the recently deleted version of Scherchen with the Vienna Symphony and choruses (Col. SL-164), whose strident, distorted sound is actually, physically painful to the ears. After this, the second version, quite beautiful in its overall sound, is an intense relief, even though it solves few additional problems of balance and perspective, and lacks indeed just as many essential sounds as the earlier version, though different ones. This is the 1954 Holland Festival recording by Eduard Flipse and the Rotterdam Philharmonic and choruses (Epic SC-6004). Epic provides some extensive and excellent album notes by Henri-Louis de La Grange, very badly proof-read, but does not even list the names of the soloists!

Scherchen's work is rather routine, since this was for all he knew a thoroughly routine occasion, with miserable, badly allocated soloists, one doing double duty. Flipse has a total personnel of 1100, and no less than 11 soloists rather than the minimum of eight called for, all acceptable and several performing magnificently (e.g. Herman Schey as *Pater Ecstaticus* and Gottlob Frick as *Pater Profundus*). Within the limitations of his conception of the work, Flipse gives us a carefully modelled and quite moving rendition. Neither Flipse nor Scherchen give the vital joyous reading that characterized the Stokowski performance of recent memory,<sup>21</sup> and the two major American recording companies, both of whom rejected the opportunity of issuing a recording of this great performance because of the large fees involved, have notably retarded the cause of Mahler thereby, much to their indifference. It could still be issued should the occasion arise.

In midsummer of 1957 appeared, at long last, the first technically adequate recording of Mahler's vocal masterpiece, *Das Lied von der Erde* (1908-9), and, with reservations noted, possibly the finest interpretation of it as well. This recording (Epic SC-6023) is by Van Beinum and the Concertgebouw, with Nan Merriman, mezzo-soprano, and Ernst Haefliger, tenor; it is the fourth time *Das Lied* has appeared on records, but only the second recording currently available.

Let us consider the conductors and orchestras first. Bruno Walter has led the Vienna Philharmonic, both pre- and post-Hitler (1936 and 1952), in *Das Lied*, and Klemperer recorded it with the Vienna Symphony in 1951. The latter (Vox PL-7000) is out of print in the U.S., and the 1936 version (Columbia) has never appeared on LP, though its processing was once begun for the Entré series. Thus the 1952 Walter (London LL-625/6) is Epic's only current competitor. Klemperer took 52 minutes to Walter's 58, and though the result fitted nicely on a single LP, a feeling of hurrying predominated. Now Van Beinum uses a round 60 minutes, and his interpretation, beautifully defined and modelled, is fully the equal of Walter's classic rendition. I personally feel that his more just appreciation of *caesurae*, sardonic contrasts, and other Mahlerian devices makes it even more ideal. Amsterdam possesses a Mahler tradition quite as illustrious as that of Vienna herself, and the musicians of the Concertgebouw seem to live and breathe this music as naturally as they eat and drink. The great orchestral interlude near the end, which Neville Cardus declared to be a dirge which by comparison "makes all other

Stereophonic Study in Double Choruses", featuring German and Italian Baroque music sung by the David Randolph group.

<sup>21</sup> Cf. *Chord and Discord*, 1954. p. 21.

dirges merely so many public ceremonials or State occasions for the expression of a commonplace grief",<sup>22</sup> acquires a perfection of line and structure here that raises it to an almost unbearable intensity.

When we come to the singers, however, the picture is not quite so ideal. In the opening salvo of Oriental pessimistic epicureanism, *Das Trinklied vom Jammer der Erde*, Haefliger does not strain in the too familiar manner for the passionate intensity called for in the score, but he does not quite achieve it, either. Despite some inevitable bawling, Julius Patzak (London) is more compelling. In his two later, more lyrical songs, *Von der Jugend* and *Der Trunkene im Frühling*, Haefliger is quite at home. But it is the performance of Nan Merriman that attaches the most serious reservations to Epic's album. Her singing in the longest (28-minute) section, *Der Abschied*, is far too loud almost throughout, as can be seen by a few simple facts. Of the total of 230 vocal bars in this movement, only 26 are indicated to rise above *piano*, yet Miss Merriman sings *forte* most of the time (including the several passages marked "very tenderly"), usually increasing to *fortissimo* near the top of the staff. At "O sieh, wie eine Silberbarke", the poignant major third between voice and first clarinet is not even perceived. I cannot understand how a man of Van Beinum's sensitivity could permit this, especially in a recording session, as distinct from a public performance, and after beautifully sculptured renditions of her other songs, *Der Einsame im Herbst* and *Von der Schönheit*. *Der Abschied* therefore has yet to be done adequately on LP, for both Kathleen Ferrier (London) and Elsa Cavelti (Vox) share this fault to a considerable degree, only Kerstin Thorborg (Col.) remaining in memory as an indication of what can be accomplished.

On the technical side, there is no contest. The Columbia suffered from concert-performance shortcomings for which Dr. Walter was moved to apologize in the album-notes. The Vox was from that company's undernourished period, especially lacking in bass. On London, an even more unfortunate circumstance attendant on Miss Ferrier's too loud singing in *Der Abschied* was a serious degree of technical distortion on nearly all high notes on side 3, which no re-pressings could remove. At the beginning of the final passage, "Die liebe Erde allüberall", which Mahler pleadingly marked "ppp! Without crescendo. N.B.", and which Miss Ferrier and Miss Merriman both sing *fortissimo*, the ugliness of London's sound is quite unbearable; the Epic engineers have taken it all in their unswerving stride and reproduced this artistic distortion with as perfect fidelity as they have rendered everything else in this ravishing score.

The revered first recording of the *Ninth Symphony*, dramatically timed on January 16, 1938, and thus the last collaboration of Walter and the old Vienna Philharmonic before the *Anschluss*, was briefly available in our LP era on RCA-Victor LCT-6015 (3 sides). Second is the 1952 version of Horenstein and the Vienna Symphony (Vox PL-7602, 4 sides), and lastly the 1955 issue of Paul Kletzki and the Israel Philharmonic (Angel 3526-B and T-35181/2, 3 sides). This score makes extreme virtuoso demands on nearly all the players, and it is the glory of all three versions that the respective musicians are all eminently adequate to it, with the special palm going to the superb Israelites. Not unexpectedly, there is also a slight overall improvement in sound qualities with each successive version, and Angel has done a truly fabulous job

<sup>22</sup> N. Cardus: *Ten Composers*, Jonathan Cape, London, 1945, p. 74.

considering the many difficulties. When it comes to interpretation, however, Angel's double advantage is wiped out by the inadequacies of Kletzki. Regarding the very complex opening movement, an English critic remarked that if one could imagine pursuing the opposite of every piece of advice in Erwin Stein's essay "Organizing the Tempi of Mahler's *Ninth Symphony*",<sup>23</sup> one would have a fair approximation of Kletzki's effort. In the next movement he makes a "convenient" (i.e. painlessly lethal) cut of 115 bars (beginning at *Tempo III*). Such high-handedness is in no sense acceptable to those who have progressed to including the *Ninth* in their experience, and one must therefore turn to Walter and Horenstein.

The former takes 70 minutes, the latter 84. Each movement is a little more broadly conceived by Horenstein, and benefits in clarity thereby. The closing *Adagio*, e.g., begins at exactly the same tempo under both, but Walter speeds up before he has reached the twelfth bar, while Horenstein remains faithful to his chosen tempo throughout, and does not shy away from the frightening admonition "*Adagissimo*" in the coda. Schoenberg once said to me regarding this that Walter feared the audience's impatience, which reminded me of Wagner's advice that if an *Adagio* is in danger, it is better to slow it down than speed it up. Kletzki is also steadier than Walter, and almost redeems his *Adagio*, until he reaches that final page. In the preceding *Rondo-Burlesque*, Walter's faster opening makes a more daemonic initial effect, but again he fails to sustain his tempo. Kletzki's tempo, even faster, is so utterly frenzied from the start that he can make no further acceleration on reaching the final *Presto!* As in the *First Symphony*, Horenstein produces most exquisite *pianissimi* throughout, and he keeps the contrapuntal texture marvelously clear. As Henri de La Grange writes in a Parisian review: "*Je ne saurais assez conseiller aux amateurs la superbe version de Jascha Horenstein.*"<sup>24</sup>

Of Mahler's 5-movement posthumous work, the *Tenth Symphony* (1910),<sup>25</sup> the public at large is as yet familiar only with the two movements edited by Ernst Krenek in 1924 and published and performed in that year. The recently completed contrapuntal filling-out and orchestration of the other three movements by J. H. Wheeler, not yet performed, will offer a new revelation of Mahler's last and richest period, for they are quite unique even in such a fantastic output as Mahler has given the world. Meanwhile we have two recordings of the opening *Adagio* and one of the central *Intermezzo*, which Mahler entitled *Purgatorio*. It is characteristic that neither in the American study score (Associated Music Publishers) nor on either of the recordings is editor Krenek's name inscribed or mentioned, though the album notes make vain pretences at a musicological approach. And, as with the Bruckner *Ninth*, both recordings are simply presented as "*Symphony No. 10*", as if the two movements in the one case and the single movement in the other represented a complete work.

The two movements are performed by Adler and the Vienna Philharmonia (SPA 30/1, 1½ sides), the *Adagio* only by Scherchen and the Vienna State (West. XWN-2220, 1 side). The earlier and superceded limited edition by Franz Schmidt and the Zurich Tonhalle Orchestra (Gramophone Newsreel 101) also contained both movements. There is again considerable difference in tempo. Adler's *Adagio* takes 23½ minutes, Scherchen's 29, and my own

<sup>23</sup> *Op. cit.*, p. 19.

<sup>24</sup> *Disques*, December, 1955.

<sup>25</sup> Cf. *Chord and Discord*, December, 1941, p. 43, and p. 17 of the present issue.

preference is for the latter, for its more contemplative beauty and just contrast. The sound of Mahler's strings, which becomes more luxuriant through complex polyphony than before, is embodied about equally well in both cases by the Viennese players. Westminster captures their fullness even a little better, though one might easily deny that this would be possible on hearing the SPA first: a most excellent pair of recordings. The brass is a little more audible against these wonderful strings in Westminster, the woodwinds in SPA. Adler favors a more stinging *sforzando*. The first trumpet has more trouble with his long high A under Adler. In the brief *Intermezzo*, with its sinister reminder of the "Mill of Life" rhythm from *Das irdische Leben* (*Wunderhorn* song, see Vanguard 478), Adler gives a fine alternately delicate and dynamic reading, except for the last three bars, where the brass does not sound its sudden warning forcefully enough. We shall understand both of these great movements better when we know the others.

## THEIR TIME HAS NOW COME

Webern and Bruckner in New York, November 12, 1957

While not so advertised, the New York concert of the Pittsburgh Symphony under William Steinberg might well have been billed as "The History of the Viennese School in Three Episodes". The juxtaposition of Haydn (*Surprise* Symphony), Webern and Bruckner in a single program was indeed a daring, surely not an uncalculated, enterprise. Its success was attested to by the enthusiastic response of the audience, which might have been larger had a more familiar program been announced, but could scarcely have been more forthcoming in its welcome to the seldom-heard music and to its able performers.

It is ironic that Anton Webern, the "quiet one" of the Schoenberg disciples, who so shunned publicity during his lifetime, should have become the object of such a cult after his death. Interest in his work has become so great as to justify the issuing of a record album of his complete works (Columbia K4L 232) and the reprinting of the scores of most of them (to be had through Associated Music Publishers, 1 West 46th Street, New York City.) Thus Mr. Steinberg's choice of the *Six Pieces for Orchestra*, Op. 6—written in 1910, but only now receiving its first New York performance!—was most astutely timed. (Incidentally, the same pieces will be performed by the New York Philharmonic under Mitropoulos on January 16, 17, and 19, 1958—the last named a broadcast performance.) On the present occasion, we could fully appreciate Webern's musical and spiritual inheritance from Mahler, manifest in his highly individualized use of the instruments of a large and varied orchestra and in his intense expression of moods often deeply pessimistic. The fourth movement (a funeral march) was the high point in this respect. Beginning with almost inaudible sounds in the bass drum, tam-tam and low chimes, it rose inexorably to a shattering climax in winds, brasses and percussion, which left the audience breathless. Here, the implications of certain portions of Mahler's Sixth Symphony seem developed to their fullest extent. It may seem strange to compare Webern's pieces, which last 9 minutes all told to Mahler's symphonic colossus—this simply points up anew that *length* is not the important thing about Mahler! Mr. Steinberg conducted the difficult score with complete devotion, and won for it far more than mere respect.

Following intermission, we were treated to an energetic, dynamic, and ecstatic performance of Bruckner's 8th which showed the orchestra at its very best, particularly in the augmented brass section whose glowing tone was a feast for the ear. If we must make a reservation as to this performance, it is in the matter of *cuts*, with which Mr. Steinberg was generous in the Adagio and Finale. Also, the Finale was taken at an uncommonly fast tempo; this made for a stimulating and exciting interpretation, but detracted from the breadth and dignity which belong to Bruckner's style even in fast movements. Admittedly it is a problem to present this symphony in its entirety and still restrict the concert to a normal length; but I feel this might better be solved by not attempt-

ing to present so many other compositions with it—by preceding it with an overture only, or even allowing it to stand alone. Nonetheless, this was an uplifting performance in which neither the spiritual or the technical difficulties of the music were slighted. Once more friends of Bruckner and Mahler have every reason to be grateful to Mr. Steinberg and to anticipate with pleasure his future program plans.—Dika Newlin.

## MY RECOLLECTIONS OF GUSTAV MAHLER

by KLAUS PRINGSHEIM

While living in my native Germany and in neighboring Austria, I had the privilege of meeting personally some of the great musicians there. The greatest among them, the greatest of his time in my judgment, was Gustav Mahler, the composer and conductor. More than that, he was a great man—a very great man. Whereas his creative work, especially his symphonies, was highly controversial throughout his lifetime—"He deserves two years in jail," was the summary verdict of a Viennese critic after the premiere of his Third Symphony—there could have been none face to face with him who was not fascinated by the penetrating look of his eyes and by the grandeur of his sterling personality.

A man of irresistible willpower, uncompromising to the utmost where music was concerned, but broad-minded and kindhearted (most of his considerable earnings used to go to his less fortunate relatives); a person unprejudiced, unpretentious, and tolerant in all matters of daily life, of simple tastes and habits, yet endowed with an almost childlike capacity for enjoying the trifling pleasures his day—filled with struggle and hard work—yielded; a passionate hater of hypocrisy and insincerity and of all the evils of human society (though with no political inference), ever contemptuous of the self-complacent, self-conceited and easily self-contented mediocrities, unapproachable by flattery or superficial compliment, still most sensitive to sympathetic comprehension of his artistic intentions; a restless thinker, possessed of a keen intellect, and a devout seeker of truth, approaching the problems of eternity with a philosophical mind yet with deeply religious humility—filled with all-embracing love of mankind: such are some features in the picture of the man, Gustav Mahler, as I knew and still see him more than forty years after his death.

No other musician had so profound and lasting an influence on the inner course of my life; to none do I owe so much of what true insight into musical things, beyond mere technical knowledge and understanding, I have perhaps been able to acquire. I was a boy of fifteen, attending middle-school in Munich, Bavaria, when I first saw him as a guest conductor with the "Kaim-Orchester", the program including one movement only of his Second Symphony (for lack of rehearsal time) as well as some music by Berlioz, Beethoven's Fifth, which I have never heard so magnificent, so transporting in performance. After that evening I dreamt, or rather I fancied, it would be my destiny to come under the guidance of this master who seemed to wield some magic power over the orchestra he directed.

However, it took seven years before my dream came true. Meanwhile, I thoroughly familiarized myself with all his symphonic scores so far published and missed no opportunity whatever that might arise to hear them interpreted by him. Eventually, the momentous hour arrived when I was received at his office by him—then the almighty director of the famous Vienna Court Opera—and he granted my request to serve with him as an assistant conductor, an atmosphere of most informal cordiality prevailing throughout the time we were

talking. To describe that very first impression I got of his personality, I have no words.

There was another great moment in my life when, some time later, he offered me his friendship. It occurred on a train from Vienna to some provincial town in Austria where he was to conduct his First Symphony. I had made it a habit to accompany him on such trips. What prompted him so to honor an insignificant young beginner, I have often asked myself in vain. Maybe, the lonely man—lonely in his art—who met with lack of understanding, distrust, and stubborn opposition almost everywhere, appreciated the intense and deeply sincere admiration for his work I manifested on many occasions, and which, indeed, was all I had to offer him. I have no other explanation.

There is no room here to elaborate on what those two years I spent in Vienna in the double role, as it were, of Mahler's friend and disciple meant to me in terms of human experience and musical education. It became my privilege to be admitted as the sole listener to all his rehearsals, even when they were held in his private room, regarded as a kind of sanctuary by the opera personnel—not to speak of the unique object lessons presented time and again by his directing of performances of such works as "Don Giovanni", "Marriage of Figaro", "Fidelio", "Tristan and Isolde", "Iphigenie in Aulis", to mention but a few, none of which I would have failed to attend.

Once, at noon, I happened to meet him at his office when he was just about to leave and he asked me to accompany him on his way home. When we parted in front of his residence, located within walking distance from the opera-house, he proposed that we should make this a daily habit, and so we did, forthwith. On our walks, sometimes resumed in the afternoon and extending over hours, he used to discuss exhaustively any musical problem I would bring up. Indeed, those daily-recurring conversations assumed in my education the importance, but through the immediacy of our personal contacts did much more than fill the place of what conventional lessons in a classroom could possibly have been. And it was on such occasions that the most lovable, most delicate traits of his character revealed themselves. Once, while we were walking on the Kärtnerstrasse, it occurred to him that his young wife, whom he adored, would like to have some of those delicious Viennese toffees; but then after he made the purchase he wouldn't allow me to carry the small package. "Why," he said, "if I happen to let it slip in the mud, that would be just a minor incident; if you did, it would make you feel much embarrassed."

I left Vienna when the incessant intrigues by his enemies had eventually succeeded in getting him ousted from the office he had held for ten years; so came to an inglorious end one of the most brilliant eras in the history of European opera. Still in later years, part of which he used to spend in New York with the Metropolitan Opera and also conducting the concerts of the N. Y. Philharmonic Orchestra, I saw him on several occasions. The last was one of the most triumphant musical events I ever witnessed: the world premiere in Munich, at that time the most anti-Mahlerian among German music centers, of his gigantic Eighth Symphony, generally known under the name—though not given it by the composer—of "Symphony of a Thousand". (In Tokyo it was performed sometime ago under the direction of Kazuo Yamada.) When I was bidding him farewell at the Munich Central Station, he told me of his latest works, still unpublished, the Ninth Symphony and the "Song of the Earth." That they were conceived in a mood somehow portentous of his near

death, he would not say. Nor could I know that this was to be a farewell forever. Half a year later he returned from America a sick man, soon to die in his beloved Vienna at the age of 51, leaving behind him a gap that will never be filled.

---

### PITTSBURGH GROUP RECEIVES OVATION

by LOUIS BIANCOLLI

Reprinted from *New York World-Telegram and Sun*, Nov. 13, 1957.

The visiting Pittsburgh Symphony Orchestra was given a royal reception in Carnegie Hall last night. So was its dynamic and masterly conductor, William Steinberg.

Wherever there was a chance, during the pause between movements or at the end of a performance, warm and spontaneous applause broke out. Any baseball hero would have been proud of Mr. Steinberg's personal acclaim.

The response was all richly deserved. This is a solid and splendid orchestra, versatile in style and technic, and its conductor has imprinted upon it the stamp of his own strong personality.

The program was all Viennese, but scarcely the Vienna of gypsy barons and champagne polkas and moonlight nostalgia; rather the Vienna of Haydn, Anton Webern and Bruckner—three geniuses of widely different quality.

For the Vienna of Haydn's "Surprise" Symphony, Mr. Steinberg evoked the full courtliness and classic strength of the music, an ever-fresh marvel of freedom and design perfectly balanced.

If there was any "surprise" about the Haydn symphony, it was the kind and duration of the music that followed it—six orchestra pieces by the tragically neglected Webern.

These are perhaps the shortest symphonic pieces on record—some lasting scarcely 30 seconds. Yet they are wonders of artistic compression and daring.

Though Webern composed them in 1908, they bear the startling impact and novelty of today in their boldly planned intervals and colors. They pack everything that can be packed into a short space—and more.

From the compact brevity of Webern, the program moved, as if from pent-up energy, into the far-flung terrain of Bruckner's Eighth Symphony, a contrast as startling as it was Viennese.

Still, for what Bruckner set out to say only the wide vistas were possible. Where Webern used the microscope, Bruckner used the telescope.

What a grandly conceived symphony this is—spread out, as it seems, all over creation. It is as much Bruckner's soaring piety, as his artistic inclination, that gives it such vast elbow room.

In Mr. Steinberg's reading, the symphony rang out in true prophetic fervor.

A GAP IS FILLED  
BRUCKNER'S D MINOR MASS IN DISC DEBUT<sup>1</sup>

by DIKA NEWLIN

When I expressed, in my article on *Bruckner's Three Great Masses*<sup>2</sup>, my hope that the omission to record the D minor Mass would soon be rectified, I did not know that my wish would so quickly be fulfilled! Now, for the first time, we have a recording of this great symphonic Mass; simultaneously we may welcome the reactivation of the SPA label from which we have heard little news for some time.

It is not surprising that the man to achieve this notable "first" should be F. Charles Adler, whose services to Bruckner and Mahler should be most familiar to *Chord and Discord* readers. One must admire his continuing devotion to this cause, a devotion which has added a number of worthwhile albums to our record shelves. One cannot, however, claim that in this particular recording he has given us the last word on the D minor Mass. I sometimes noted a certain slovenliness in the ensemble of orchestra ("Vienna Orchestra", presumably members of the *Wiener Symphoniker*) and chorus (unnamed). Patricia Brinton's somewhat shrill soprano, Sonya Dracksler's rich alto, William Blankenship's edgy tenor, and Frederick Guthrie's powerful but often vibrato-marred bass do not form the best possible blend for a solo quartet. The recorded sound is rather rough in comparison with the best available Bruckner recordings. Unfortunately, there has to be a break in the middle of the *Credo* between sides 1 and 2. But, at least, it is made at a harmonically possible place.

The record jacket does not state which version of the Mass Mr. Adler is using. However, I noticed no deviation from the "revised" score.<sup>3</sup> Mr. Adler has previously indicated his preference for the "revised" versions of the symphonies. There are, happily, no cuts.

In spite of its defects, this record is naturally at present a "must" for anyone who wants a complete Bruckner disc collection. Let us hope that, now that the recorded Masses are finally available to us complete, the record-buying public's interest will be sufficient to justify the issuing of a number of competitive recordings of each Mass, as has come to be the case with most of the symphonies. Both Bruckner and the listener can only benefit thereby.

## LIST OF PERFORMANCES

SEASON 1953-1954

### BRUCKNER

- IV San Antonio Symphony Orchestra, Victor Alessandro, Musical Director; San Antonio, Texas, Jan. 23, 1954.
- VII Pittsburgh Symphony Orchestra, William Steinberg, Conductor; Pittsburgh, Pa., Dec. 16 and 20, 1953.  
Philadelphia Orchestra, Eduard Van Beinum, Conductor; Philadelphia, Pa., Jan. 19, 1954.  
Chicago Symphony Orchestra, Bruno Walter, Guest Conductor; Chicago, Ill., Feb. 11 and 12, 1954.
- IX Philharmonic Symphony Orchestra, Bruno Walter, Conductor; New York City, Dec. 24, 25, and 27, 1953.

### E MINOR MASS

Dallas Symphony Orchestra, Walter Hendl, Conductor; The Choral Union of Southern Methodist University of Dallas; Dallas, Texas, March 8, 1954; Fort Worth, Texas, March 9, 1954.

### TE DEUM

New York City College Chorus and Orchestra; Broadcast over WNYC on Feb. 3, 1954.

Summit Community Chorus, Ralph Burrier, Director; Summit, N. J., Dec. 16, 1953.

### *Christus factus est*

New Jersey Choral Society, David Randolph, Director; Morristown, N. J., May 5, 1954.

### MAHLER

- I Philadelphia Orchestra, William Steinberg, Guest Conductor; Philadelphia, Pa., Jan. 1 and 2, 1954.  
Philharmonic Symphony Orchestra, Bruno Walter, Conductor; New York City, Jan. 24, 1954; Broadcast over CBS.  
San Francisco Symphony Orchestra, William Steinberg, Guest Conductor; San Francisco, Calif., Feb. 11, 12, and 13, 1954.  
National Symphony Orchestra, Howard Mitchell, Conductor; Washington, D. C., March 24 and 25, 1954.
- II Hartford Symphony Orchestra, Fritz Mahler, Conductor; Edythe Specker and Rosalind Elias, Soloists; The Connecticut Oratorio Chorale, Herbert A. France, Director; The New Haven Chorale, Alden Hammond, Director; Hartford, Conn., April 14, 1954.
- IV Boston Symphony Orchestra, Richard Burgin, Conductor; Anne English, Soloist; Boston, Mass., March 19 and 20, 1954.
- V University of Iowa Symphony Orchestra, Philip Greeley Clapp, Conductor; Iowa City, Iowa, Dec. 2, 1953.

### *Adagietto*

Birmingham Symphony Orchestra, Arthur Bennett Lipkin, Conductor; Birmingham, Ala., Jan. 20, 1954.

Drew University Chamber Series, Mary Canberg, violin; Dika Newlin, piano; Madison, N. J., Feb. 7, 1954.

- VII (*Three Movements*) Rochester Philharmonic Orchestra, Erich Leinsdorf, Conductor; Rochester, N. Y., Nov. 5, 1953.

- X Boston Symphony Orchestra, Richard Burgin, Conductor; Boston, Mass., Dec. 11, 12, 13, and 15, 1953.

### DAS LIED VON DER ERDE

Pittsburgh Symphony Orchestra, William Steinberg, Conductor; Elsa Cavelti and David Lloyd, Soloists; Pittsburgh, Pa., Jan. 8 and 10, 1954; Hartford, Conn., April 1, 1954; New York City, April 2, 1954.

## SONGS

Chicago Symphony Orchestra, Bruno Walter, Guest Conductor; Hilde Gueden, Soloist; Chicago, Ill., Feb. 11 and 12, 1954.

## SEASON 1954-1955

## BRUCKNER

- IV Boston Civic Symphony, Paul Cherkassky, Conductor; Boston, Mass., Nov. 18, 1954.  
 Winnipeg Symphony Orchestra, Walter Kaufmann, Conductor; Winnipeg, Manitoba, May 5, 1955.  
 Inglewood Symphony Orchestra of L. A., Ernst Gebert, Conductor; Inglewood, Calif., Jan. 23, 1955.
- VI (*Original Version*) New Los Angeles Orchestra, Peter Jona Korn, Conductor; Royce Hall, U.C.L.A., Los Angeles, Calif., June 19, 1955.
- VII Philharmonic Symphony Society, Bruno Walter, Conductor; New York City, Dec. 23 and 24, 1954.  
 Los Angeles Philharmonic Orchestra, Alfred Wallenstein, Conductor; Los Angeles, Calif., Feb. 24 and 25, 1955.  
 San Francisco Symphony, Enrique Jorda, Conductor; San Francisco, Calif., April 14, 15, and 16, 1955.
- VIII Buffalo Philharmonic Orchestra, Josef Krips, Conductor; Buffalo, N. Y., Dec. 12 and 14, 1954.
- IX San Francisco Symphony, Bruno Walter, Conductor; San Francisco, Calif., March 3, 4, and 5, 1955.

## E MINOR MASS

Collegiate Chorale, Ralph Hunter, Conductor; New York City, Dec. 15, 1954.  
 Glee Clubs of Sweet Briar College and Haverford College, Wm. H. Reese, Conductor; Haverford College, Haverford, Pa., April 17, 1955.

## TE DEUM

Seattle Philharmonic and Choral Society, Don Bushnell, Musical Director; The Collegian Choir, Wallace Goleeke, Director; Soloists: Pamela Haas, Soprano; Dorothy West, Alto; Tommy Goleeke, Tenor; Wallace Goleeke, Bass; Seattle, Wash., Feb. 25, 1955.

## PSALM 150

New Los Angeles Orchestra, Carlton Martin, Conductor; Los Angeles Symphonic Choir; Royce Hall, U.C.L.A., Los Angeles, Calif., June 19, 1955.

## MAHLER

- I Concertgebouw Orchestra of Amsterdam, Rafael Kubelik, Conductor; Chicago, Ill., Oct. 31, 1954; New York City, Dec. 3, 1954.  
 Dallas Symphony Orchestra, Walter Hendl, Conductor; Denton, Texas, Nov. 12, 1954; Dallas, Texas, Nov. 15, 1954; Fort Worth, Texas, Nov. 16, 1954.  
 Kansas City Philharmonic Orchestra, Hans Schwieger, Conductor; Kansas City, Mo., Dec. 21 and 22, 1954.
- II Chicago Symphony Orchestra, Bruno Walter, Conductor; Chicago, Ill., Jan. 19 and 20, 1955.  
 National Symphony Orchestra, Howard Mitchell, Conductor; Washington, D. C., April 13, 1955; University of Maryland, College Park, Md., April 14, 1955.
- VI Philharmonic Symphonic Orchestra, Dimitri Mitropoulos, Conductor; New York City, April 7, 8, and 10, 1955. (Air premiere over CBS on April 10.)

## DAS LIED VON DER ERDE

Philadelphia Orchestra, Eugene Ormandy, Conductor; Eunice Alberts and David Lloyd, Soloists; Philadelphia, Pa., Feb. 19, 20, and 21, 1955; New York City, Feb. 22, 1955.  
 Cincinnati Symphony Orchestra, Thor Johnson, Conductor; Carol Smith and David Lloyd, Soloists; Cincinnati, Ohio, Feb. 25 and 26, 1955.

The University Symphony Orchestra, Josef Blatt, Conductor; Arlene Sollenberger and Harold Haugh, Soloists; Ann Arbor, Mich., May 18, 1955.

## KINDERTOTENLIEDER

Dallas Symphony Orchestra, Walter Hendl, Conductor; Soloist, Juanita Teal; Dallas, Texas, Dec. 26, 1954.

Elena Nikolaidi, Contralto, and Paul Ulanowsky, Pianist; Town Hall, New York City, Nov. 7, 1954.

Buffalo Symphony Orchestra, Josef Krips, Conductor; Will Rankin, Soloist; Buffalo, N. Y., March 27 and 29, 1955.

**LIEDER EINER FAHRENDEN GESELLEN**

The Little Orchestra Society, Thomas Scherman, Conductor; Elena Nikolaidi, Soloist; New York City, Oct. 25, 1954.

The Berlin Philharmonic Orchestra, Herbert Von Karajan, Conductor; Carol Brice, Soloist; Chicago, Ill., March 12, 1955.

Birmingham Symphony Orchestra, Arthur Bennett Lipkin, Conductor; Elena Nikolaidi, Soloist; Birmingham, Ala., April 14, 1955.

SEASON 1955-1956

**BRUCKNER**

IV Montreal Symphony Orchestra, Josef Krips, Conductor; Montreal, Ont., Nov. 15 and 17, 1955.

Buffalo Philharmonic Orchestra, Josef Krips, Conductor; Buffalo, N. Y., Dec. 11 and 13, 1955.

Pittsburgh Symphony Orchestra, William Steinberg, Conductor; Pittsburgh, Pa., Feb. 17 and 19, 1956.

Buffalo Symphony Orchestra, Josef Krips, Conductor; Buffalo, N. Y., Feb. 19 and 21, 1956.

Buffalo Symphony Orchestra, Josef Krips, Conductor; Ottawa, Ont., March 12, 1956.

VII University of Michigan Symphony Orchestra, Josef Blatt, Conductor; Ann Arbor, Mich., Nov. 17, 1955.

Denver Symphony Orchestra, Saul Caston, Conductor; Denver, Colo., Nov. 29, 1955.

San Antonio Symphony Orchestra, Victor Alessandro, Conductor; San Antonio, Texas, Dec. 11, 1955.

Chicago Symphony Orchestra, Karl Boehm, Conductor; Chicago, Ill., Feb. 16 and 17, 1956.

**TE DEUM**

Chicago Symphony Orchestra, Fritz Reiner, Conductor; Chicago, Ill., Hilde Gueden, Jennie Tourel, Leopold Simoneau, and Donald Gramm, Soloists; Jan. 19 and 20, 1956.

New York Concert Choir and Orchestra, Margaret Hillis, Conductor; Hilda Gueden, Gloria Sylvia, Harry Jacoby, and Robert Falk, Soloists; Town Hall, New York City, March 5, 1956.

Sacramento Philharmonic Orchestra, Fritz Berens, Conductor; Mary Tudor White, Irene Hooper, Alec Gould, Frank Pursell, Soloists; Sacramento Philharmonic Chorus; Sacramento, Calif., March 8, 1956.

**PRELUDE AND POSTLUDE ARRANGED FOR ORCHESTRA BY GANSTER**

Birmingham Symphony Orchestra, Arthur Bennett Lipkin, Conductor; Mary Lou Robinson, Organist; Birmingham, Ala., March 8, 1956.

**QUARTET IN C MINOR**

La Salle String Quartet at the College of Music Conservatory, Cincinnati, Ohio, April 3, 1956. The American premiere of the Quartet was arranged by Dr. Martin G. Dumler, President of The Bruckner Society.

**F MINOR MASS**

Cincinnati Symphony Orchestra, Josef Krips, Conductor; Naomi Farr, Nell Rankin, John Alexander, Kenneth Smith, Soloists; Cincinnati May Festival Chorus, Cincinnati, Ohio, May 7, 1956.

**E MINOR MASS**

Occidental College Summer Chorale, Allen C. Lannom, Conductor; Los Angeles, Calif., July 27, 1956.

**MAHLER**

I Boston Symphony Orchestra, Richard Burgin, Conductor; Boston, Mass., Oct. 28 and 29, 1955.

- Winnipeg Symphony Orchestra, Walter Kaufmann, Conductor; Winnipeg, Ontario, Canada, Feb. 9, 1956. First performance of a Mahler symphony by Winnipeg Symphony.
- Los Angeles Philharmonic Orchestra, William Steinberg, Guest Conductor, Los Angeles, Calif., Feb. 9 and 10, 1956.
- Los Angeles Philharmonic Orchestra, John Barnett, Conductor; Redlands, Calif., Feb. 13, 1956; Santa Barbara, Calif., Feb. 14, 1956; and San Diego, Calif., Feb. 16, 1956.
- Chicago Symphony Orchestra, Georg Solti, Conductor; Ravinia Park, Chicago, Ill., July 20, 1956.
- Boston Symphony Orchestra, Richard Burgin, Conductor; Tanglewood, Mass., July 30, 1956.
- II Symphony of the Air, Leonard Bernstein, Conductor; Frances Yeend and Martha Lipton, Soloists; Schola Contorum, Hugh Ross, Director; New York City, Nov. 9, 1955.
- Philadelphia Orchestra, Eugene Ormandy, Conductor; Blanche Thebom and Marlys Watters, Soloists; Rutgers University Chorus, Austin Walter, Director; Philadelphia, Pa., Feb. 24 and 25, 1956. Last movement broadcast by CBS March 17, 1956.
- III Philharmonic Symphony Orchestra, Dimitri Mitropoulos, Conductor; Beatrice Krebs, Soloist; Westminster Choir, John Finley Williamson, Conductor; New York City, April 12, 13, and 15, 1956. The final performance was broadcast by CBS.
- IV Baltimore Symphony Orchestra, Peter Herman Adler, Conductor; Helen George, Soloist; Baltimore, Md., Feb. 15, 1956.
- V Kansai Symphony, Klaus Pringsheim, Conductor; Osaka, Japan, Oct. 10, 1955.
- Pittsburgh Symphony Orchestra, William Steinberg, Conductor; Pittsburgh, Pa., April 6 and 8, 1956.
- VIII Musashino College of Music Orchestra; Choir of Musashino College of Music; Pupils of Egota Primary School; Soloists: Kayoko Izaki, Tomoko Sugawara, Reiko Tokuyama, Sopranos; Sachiko Ogura, Setsuko Odano, Altos; Ryoe Kano, Tenor; Seichi Hayakawa, Baritone; Eishi Kawamura, Bass; Klaus Pringsheim, Conductor; Toyko, Dec. 5, 1955.
- Rochester Oratorio Society, Theodore Hollenbach, Conductor; Buffalo Schola Cantorum, Hans Vigeland, Conductor; Guido Male Chorus of Buffalo, N. Y., Herbert W. Beattie, Director; Monroe County Boys' Symphonic Choir, Charles Fowler, Conductor; Dolores Whyte, Nancy Cringoli, Patricia Berlin, Charlene Chadwick, Ray De Voil, William Duvall, Jon Vickers, Herbert Beattie, Soloists; Rochester Philharmonic Orchestra, Theodore Hollenbach, Conductor; Rochester, N. Y., April 28, 1956.
- DAS LIED VON DER ERDE**
- Atlanta Symphony Orchestra, Henry Sopkin, Conductor; Beverly Wolff and David Lloyd, Soloists; Atlanta, Ga., Nov. 22, 1955.
- KINDERTOTENLIEDER**
- Pittsburgh Symphony Orchestra, William Steinberg, Conductor; Marian Anderson, Soloist; Pittsburgh, Pa., Oct. 21 and 23, 1955.

## SEASON 1956-1957

## BRUCKNER

- IV Chicago Symphony Orchestra, Fritz Reiner, Conductor; Chicago, Ill., Nov. 8, and 9, 1956.
- Birmingham Symphony Orchestra, Arthur Bennett Lipkin, Conductor; Birmingham, Ala., Jan. 22, 1957.

- Philadelphia Orchestra, Eugene Ormandy, Conductor; Philadelphia, Feb. 8, 9 and 25, 1957; Baltimore, Feb. 27, 1957; CBS broadcast, March 23, 1957.
- VII Vienna Philharmonic Orchestra, Carl Schuricht, Conductor; Washington, D. C., Nov. 5, 1956; New York City, Nov. 7, 1956; Cincinnati, Ohio, Nov. 13, 1956; Lafayette, Ind., Nov. 16, 1956; East Lansing, Mich., Nov. 19, 1956; Dayton, Ohio, Nov. 23, 1956; Boston, Mass., Dec. 2, 1956.
- Denver Businessmen's Orchestra, Antonia Brico, Conductor; Denver, Colo., Jan. 17, 1957.
- Mannes College of Music Orchestra, Carl Bamberger, Conductor; Dec. 19, 1956.
- IX Philharmonic Symphony Society of N. Y., Bruno Walter, Conductor; Feb. 7, 8, and 10, 1957. The last performance was broadcast over CBS.

**MAHLER**

*Finale (I)* Honolulu Symphony Orchestra, George Barati, Conductor; Youth Concert, Honolulu, Hawaii, Nov. 9, 1956.

- I Honolulu Symphony Orchestra, George Barati, Conductor; Honolulu, Hawaii, Nov. 18 and 20, 1956.

New Orleans Symphony, Alexander Hilsberg, Conductor; New Orleans, La., Nov. 27, 1956.

Chicago Symphony Orchestra, Bruno Walter, Conductor; Chicago, Ill., Jan. 17 and 18, 1957.

- II Philharmonic Symphony Society of N. Y., Bruno Walter, Conductor; Westminster Choir, Dr. John Finley Williamson, Conductor; Maria Stader and Maureen Forerster, Soloists; New York City, Feb. 14, 15, and 17, 1957. The last performance was broadcast over CBS.

- IV Los Angeles Philharmonic Orchestra, Bruno Walter, Conductor; Irmgard Seefried, Soloist; Los Angeles, Calif., Nov. 21 and 23, 1956.

Boston Symphony Orchestra, Richard Burgin, Conductor; Nancy Carr, Soloist; Boston, Mass., Jan. 4 and 5, 1957; Brooklyn, N. Y., Jan. 11, 1957; New York City, Jan. 12, 1957.

*Adagietto (V)* Birmingham Symphony Orchestra, Arthur Bennett Lipkin, Conductor; All Request Program, Birmingham, Ala., March 12, 1957.

**NACHTMUSIKEN (VII)**

Pittsburgh Symphony Orchestra, William Steinberg, Conductor; Pittsburgh, Pa., Nov. 4 and 5, 1956.

**THREE SONGS FOR ORCHESTRA**

Los Angeles Philharmonic Orchestra, Bruno Walter, Conductor; Irmgard Seefried, Soloist; Los Angeles, Calif., Nov. 21 and 23, 1956.

Philharmonic Symphony Society of N. Y., Bruno Walter, Conductor; Maria Stader, Soloist; New York City, Feb. 14 and 15, 1957.

**KINDERTOTENLIEDER**

Hartford Symphony Orchestra, Fritz Mahler, Conductor; Nan Merriman, Soloist; Hartford, Conn., Feb. 13, 1957.

**DAS LIED VON DER ERDE**

Los Angeles Philharmonic Orchestra, Eduard van Beinum, Conductor; Nan Merriman and Walter Fredericks, Soloists; Los Angeles, Calif., Jan. 10 and 11, 1957.

**FIVE SONGS**

Iowa City Civic Music Assoc., Lois Marshall, Soloist; Weldon Kilburn, Pianist; Iowa City, Iowa, March 1, 1957.

Birmingham Music Club, Lois Marshall, Soloist; Weldon Kilburn, Pianist; Birmingham, Ala., March 30, 1957.

**LIEDER EINES FAHRENDEN GESELLEN**

Cedar Rapids Symphony, Henry Denecke, Conductor; Betty Allen, Soloist; Cedar Rapids, Iowa, Jan. 28, 1957.

Philadelphia Orchestra, Thor Johnson, Conductor; Rise Stevens, Soloist; University of Michigan May Festival, Ann Arbor, Mich., May 5, 1957.

## EMPIRE STATE FESTIVAL PRESENTS ELEKTRA

JULY 11, 13, 19, 1957

At City Center, Laszlo Halasz accomplished the seemingly impossible. Few would, perhaps, have been bold enough to stage *Salome* under even more promising circumstances; yet City Center's production of *Salome* with Brenda Lewis in the title role proved to be among the most thrilling performances of this masterpiece in the memory of this writer (See CHORD AND DISCORD 1948 issue).

The Empire State Festival Board demonstrated its pioneering spirit when it sanctioned the production of *Elektra*, one of the most difficult works in the literature of music drama, under Halasz' direction with the young American singer, Virginia Copeland, making her first appearance in the extremely exacting role of Elektra after having been coached by Halasz for several weeks. Previously she had sung the title role in Menotti's *The Saint of Bleacker Street*.

Like *Salome*, *Elektra* requires a conductor, a stage director, and singers of unusual intelligence and insight as well as an excellent orchestra. That these prerequisites had, on the whole, been met and that the singing actors and orchestra had been well rehearsed by the conductor, Laszlo Halasz, and the stage director, Leopold Sachse, was evident from the teamwork on the stage and the playing of the orchestra. It may be noted that each participant looked his or her part and, in general, acted in such a manner as to make each role believable. This may be said of Virginia Copeland, the neurotic Elektra with her feline-like gestures and facial expressions (though at times her movements seemed somewhat mechanical and her gesticulating overdone), of Ellen Faull, the Chrysothemis, the womanly sister of Elektra and Orestes, of Elisabeth Höngen, the corrupt guilt-laden Klytemnestra (mother of Elektra, Orestes, and Chrysothemis), of Orestes and Aegisthus, as well as of those who portrayed minor roles. Among the latter Mary Judd and Marc Flynn deserve special favorable mention.

Virginia Copeland gave a vivid portrayal of the brooding Greek heroine. Ghastly pale, filled with hatred of her mother, thinking only of avenging the murder of her father, Agamemnon, by Klytemnestra and Aegisthus, she, nevertheless, aroused pity on the part of the listener in the moving scenes with Chrysothemis and Orestes. She can sing softly and magnificently as was shown in the passage (among others) where she tells her mother: "you yourself are a goddess, you are like them (the gods)". When, however, the waves of sound surged forth from the orchestra pit, her beautiful voice carried into the audience. Miss Copeland is a singer who should make her mark.

Ellen Faull, already well-known to American audiences, deserves great praise for her interpretation of the timid, human Chrysothemis, who gains sympathy just because of these qualities. Her impassioned plea to Elektra to forego her hatred of their mother so that she and Elektra might be freed from their miserable existence in the servants' quarters of the palace was a highlight of each of the three performances which this writer attended. At the

second performance there was a spontaneous outburst of applause toward the end of the scene. Such outbursts at the wrong time are always very annoying.

The Klytemnestsra of Elisabeth Höngen was by far the most convincing characterization. One could understand practically every word; there were no superfluous gestures; her every movement had meaning. Her plea to Elektra for her help in her predicament: her description of her suffering caused by her fear and her feeling of guilt:\* her expression of malevolent triumph: these were memorable moments in performances that remained on a high level from the opening bars to the end.

Michael Bondon, the Orestes and Marcello Di Giovanni, the Aegisthus, interpreted their respective roles well.

The Symphony of the Air proved itself equal to the great demands made upon it by the extraordinary score. From the first bar to the end of this relentless tragedy its role is as important as the action on the stage. Under Halasz' direction it lived up to the enviable reputation it had established during broadcasts extending over many years. What a pity that radio audiences have been deprived of hearing this outstanding orchestra!

The Empire State Festival Board may look back with pride upon this daring undertaking, which received tremendous ovations from the audience at each performance, and one may hope that it will keep alive its pioneering spirit by repeating *Elektra* and producing such masterpieces as *Salome*, *Otello* and *Boris* in the not too distant future.

ROBERT G. GREY

---

\* "and between day and night when I lie with eyes open, something creeps over me; it is not a mood, it is not a pain, it does not press me, it does not choke me, it is nothing, not even a nightmare, and yet it is so terrible that my soul craves to be hanged and every bone in me cries out for death and yet I live and am not even ill."

STOKOWSKI CONDUCTS CANTICUM SACRUM  
AND CARMINA BURANA

EMPIRE STATE MUSIC FESTIVAL  
ELLENVILLE, NEW YORK

Leopold Stokowski ventured and won again at the Empire State Festival last night. He dared to pit two contrasting choral works against each other, neither known in these hills, and drew the largest crowd of the season through the magic of his name.

He was in his element. He had the Eastern U. S. premiere of Stravinsky's "Canticum Sacrum" to bewilder his audience and Orff's "Carmina Burana" to electrify it. That he did both successfully—with the symphony of the air, three soloists and the American Concert Choir—may be an old story but it is nevertheless stimulating.

Both scores are extraordinary for opposite reasons. The Stravinsky is the product of an ivory-towered attitude, aloof from human contact. The Orff springs from the people and is as earthy as anything could be. The Stravinsky expresses orderliness even when cacophonous. The Orff bubbles with variety and never hesitates to be obvious when the text demands it.

Many other contrasts could be detailed; such as, the workmanship in Stravinsky's counterpoint and the ingenious sensibilities of Orff's rhythms: the sophistication of Stravinsky and the worldliness of Orff. Both looked backwards — Stravinsky to the 14th Century for his canonic technique; Orff to the 13th Century for his texts. Orff appears to have been the more inspired by what he found.

Stravinsky's sacred song in honor of St. Mark is in five parts, punctuated by organ transitions. It uses a tenor and baritone soloist, chorus, and an orchestra minus clarinets, horns, violins, and cellos. It is 12-tone and sparsely orchestrated. Performed twice, it courted admiration for its craftsmanship but left this listener cold.

Orff's secular songs are 20 years young. From its dynamic opening to its brilliant close, "Carmina Burana" vibrated with life and wit and intensity. To hear it with Stokowski was a thrilling experience. The chorus outdid itself and the soloists, Ellen Faull, Rudolf Petrak, and Philip Maero served admirably, while the orchestra was as theatrically brilliant as possible. This concert of the "sublime" to the renegade, of the esoteric to the erotic, turned out to be an artistic triumph, thanks to Stokowski. It will be repeated tomorrow night.

— MILES KASTENDIECK  
New York Journal-American  
July 19, 1957

Opposite poles of contemporary creative practice were juxtaposed at Thursday's concert of the Empire State Music Festival.

The advanced, sophisticated way of Igor Stravinsky and the return to a

kind of rude primitivism as exemplified by Carl Orff were confronted on this program, conducted by Leopold Stokowski. They offered an absorbing contrast in the divergent approaches being taken by composers of our time in an effort to achieve fresh meaningfulness. And, of course, these are only two approaches; there are quite a few others.

Mr. Stravinsky, who at 75 may be justifiably termed an old master, has tried more different approaches than any living composer of his stature. He remains an amazing figure. For in the "Canticum Sacrum," which had its first performance in the East at Thursday's concert, he continues to be eager and youthful in his exploration of compositional devices.

The "Canticum Sacrum," which was written last year for the Venice Festival and which had its American premiere in Los Angeles last month, employs the twelve-tone technique. But Stravinsky could not touch any technique without placing the imprint of his own personality on it. In this work based on a sacred text he has given the serial technique an individual cast. He does not use it throughout the piece. And when he does, his ideas come closer to those of Webern than of any other dodecaphonist.

The writing is spare in texture. Violins, 'cellos, clarinets and horns are dispensed with. The instruments remaining in the orchestra are treated with the greatest economy. A few notes here, a short phrase there, but only rarely massed instrumental blocks. The chorus has impressive sections at the beginning and end, with the latter section employing the material of the former in retrograde motion. The baritone and tenor soloists are woven into the work with subtlety of design.

This nineteen-minute work is difficult to play and difficult to absorb. After conducting the piece, Mr. Stokowski suggested to the audience that in view of the music's complexity, a second hearing might help to make it clearer. He asked whether the listeners would like a repeat performance. The applause encouraged him to go ahead.

After these successive performances a woman was heard to say, "That was a good idea, I liked it better the second time." On the other hand, a young man remarked "It was as bad the second time as the first."

To this listener the "Canticum Sacrum" seemed a significant work. There is a searching expressive content in it. The idiom is austere on the surface, but underneath there is a touching, devotional mood. Mr. Stravinsky seems to reach special heights in his works on religious themes; witness the Symphony of Psalms and the Mass.

Mr. Stokowski conducted both performances with sovereign control and sympathy. The Symphony of the Air played well, and the American Concert Choir did a good job. Philip Maero, baritone, and Rudolf Petak, tenor, sang the difficult solo parts effectively.

In Orff's "Carmina Burana" the soloists were joined by Ellen Faull, soprano, who sang with sensitivity and delicacy of nuance. Mr. Stokowski gave this work with its almost overwhelming emphasis on rhythm a vital colorful performance. But brilliant as it was, it could not conceal the limitations of Orff's musical philosophy.

—HOWARD TAUBMAN  
New York Times

## NOTES ON CONTRIBUTORS

HERBERT ANTCLIFFE is an English writer on music and art who has lived for many years in Holland. He has contributed articles on these subjects to the *London Times*, *New York Herald-Tribune*, *Musical Quarterly*, *Music and Letters* and many other newspapers and periodicals. He acted as editor of the Netherlands articles in Cobbett's *Cyclopedic Survey of Chamber Music* and is responsible for many articles on Dutch (and other) music in two editions of *Grove's Dictionary of Music and Musicians*. His books include *Art, Religion and Clothes*, *Living Music*, *Short Studies in the Nature of Music* and *Muzik in Europa na Wagner*. He also is the composer of a number of church motets, some of which are published in the United States. He has been honored by Queen Wilhelmina with the Order of Officer of Orange Nassau for his work on behalf of Dutch music and by King George with a pension for his work on behalf of that of his own country.

JACK DIETHER lives in New York's Greenwich Village with his ceramicist wife and son (named after Bruckner), writing musical, dramatic and psychological articles and preparing a book on Mahler's works.

PARKS GRANT was born in a suburb of Cleveland in 1910. He has contributed frequently to CHORD AND DISCORD since the issue of March, 1934. At present he is Associate Professor of Music at the University of Mississippi at Oxford, Miss., where he is a fellow-townsmen of William Faulkner, the noted author. Dr. Grant has also taught at Temple University, Louisiana State University, and elsewhere.

He is a composer of note as well as a writer on music. Some indication of his versatility may be gained by pointing out that he is the author of a textbook for classroom teachers in the elementary school, relative to the teaching of music to young children; entitled *Music for Elementary Teachers*, it has been used in over two hundred colleges and universities.

DONALD MITCHELL is a music critic, born in London in 1925. His books include *Benjamin Britten*, co-edited with Hans Keller, 1952; *The Mozart Companion*, co-edited with H. C. Robbins Landon, 1956; *Mozart. A Short Biography*, 1956. At present he is working on the life and works of Mahler and a study of contemporary music. For many years he was London music critic for *The Musical Times*, in addition to contributing criticism to *The Times* and *Daily Telegraph*. He is a busy broadcaster.

DIKA NEWLIN was born in Portland, Oregon, in 1924, and holds a B. A. degree from Michigan State University, M. A. from the University of California, and Ph. D. in musicology from Columbia University (1945). Her work in California included three years of study with Schoenberg. At present Associate Professor of Music at Drew University, Miss Newlin held previous teaching positions at Western Maryland College and Syracuse University. While her greatest enthusiasm is composing, and her compositions have won equal success with her writing, Miss Newlin is best known for her book, *Bruckner-Mahler-Schoenberg*. In addition to this now standard work, she has translated Leibowitz's *Schoenberg and his School* and Schoenberg's *Style and Idea*. She has written for many periodicals including *Musical Quarterly*, *Saturday Review of Literature*, etc.

KLAUS PRINGSHEIM. See pages 114-116.

KLAUS GEORGE ROY was born in Vienna, Austria, in 1924. His early studies in music theory and piano were with the composer Frederick C. Schreiber, who now lives in New York. Mr. Roy came to this country in 1940. A graduate of Boston University and Harvard University with the degrees of Mus.B. and A.M., he was a student of Karl Geiringer in musicology and of Walter Piston in composition. Since 1948 librarian of the Boston University College of Music, he is also a contributing music critic to *The Christian Science Monitor*. Mr. Roy currently teaches courses in music criticism and composition at Boston University and gives radio broadcasts in various series. He is at present working on a book on the music of Walter Piston. Among his more than 70

sets of annotations for long-playing disks, there are several on works by Bruckner: the Fourth, Seventh, and Eighth symphonies. The majority of his compositions are in the media of vocal and chamber music; many of his choral pieces have been published and widely performed, and his first opera was recently premiered on television.

WARREN STOREY SMITH, born in Brookline, Mass., succeeded Olin Downes as Music Editor of the *Boston Post*, now discontinued. He has been a member of the faculty of the New England Conservatory since 1922 where he teaches the history and theory of music.

Among American artistic developments of recent years the rebirth of interest in the music of Bruckner and Mahler is second to none in significance. When *The Bruckner Society of America* was founded on January 4, 1931, performances of these two composers by our major musical organizations were not merely rare, but also ineffectual, because American music-lovers had no adequate approach to the proper appreciation of the art of either Bruckner or Mahler. Therefore the *Society*, having adopted as its chief aim the fulfillment of this void, published the first biographies of these composers in English and issued a magazine, **CHORD AND DISCORD**, devoted almost entirely to discussions of their works.

The *Society* solicits the cooperation of all who are interested in furthering this aim. Inquiries concerning membership may be directed to Robert G. Grey, Executive Secretary, 697 West End Avenue, New York 25, New York.

## IN MEMORIAM

MARTIN G. DUMLER

President of the Bruckner Society of America

Martin G. Dumler was born in Cincinnati on December 22, 1868, less than four years after Lee had surrendered at Appomattox.

His rise in the business world reminds one of a Horatio Alger story. In 1883 he gave up the munificent salary of five dollars a week to become the office boy for the Cincinnati firm, Chatfield & Woods Sack Company, at four dollars a week, because he was promised a better chance of advancement—a promise that was fulfilled and culminated in his election to the presidency of the firm in 1929, the office which he held at the time of his death.

His talents were not confined to business for he was also a painter and a musician. Some of his paintings have been exhibited in museums. Paintings, a number of them his own, hung on the walls of his home and of his office in the modern factory of Chatfield & Woods Sack Co. The idea of building a modern factory originated with Dr. Dumler.

Music was an integral part of his life. For many years he led the choir of St. Francis de Sales Church where he began his musical training as a choir boy. He led the choir for the last time at the Midnight Mass, Christmas 1957, after he had passed his eighty-ninth birthday. The music for the Mass had been composed by him.

Dr. Dumler attended Xavier University in Cincinnati. He received his formal musical education at the College of Music in Cincinnati, where he studied voice, harmony and composition. He was graduated in 1901. To honor a distinguished alumnus on the fiftieth anniversary of his graduation, the College gave a concert devoted entirely to music composed by him.

The Rose F. and Samuel B. Sachs Prize was awarded to him for his *Ballet Scenes* performed by the Cincinnati Symphony during the season 1943-1944.

Although Dr. Dumler composed in various forms, he is best known for his settings to music of religious texts. His *Missa Latreutica* was recommended by the Society of St. Gregory in America as a model of liturgical music for the Roman Catholic Church. His *Stabat Mater* and *Te Deum* were performed at the Cincinnati May Festivals in 1935 and 1946 respectively. After the premiere of the *Stabat Mater*, A. Walter Kramer, *Musical America*, wrote in part:

Dr. Dumler writes with remarkable naturalness, with a sure hand in his choral parts, contrapuntal dexterity, and a really admirable feeling for orchestral investiture.

In the opinion of the late Gabriel Engel, editor of *CHORD AND DISCORD* and contributor to the *Cyclopedia of Music and Musicians*, "the

unqualified success of this extended composition at an important concert performance stamps it as a work of universal art, a significant contribution of our own day to that proud, slender array of thoroughly human super-ritual scores that have found few worthy companions since the great religious compositions of Bruckner."

In May 1946, Mr. Howard W. Hess, *Cincinnati Times Star*, made the following observations:

The premiere of Martin Dumler's *Te Deum* proved that work to be one filled with rich chromatic harmonies, splendid climaxes, complicated polyphonic writing, rich orchestral scoring and judicious use of the organ for special effects. . . .

Dumler is an amazing man with many talents and his *Te Deum* was a powerful expression of a heart filled with praise.

Dr. Dumler's admiration for Bruckner dates from his stay in Vienna when he was twenty-one years old. There he heard Bruckner's music for the first time and became an ardent Brucknerite. His efforts brought about the American premiere of Bruckner's F-Minor Mass in St. Francis de Sales Church on July 15, 1900. Dr. Dumler participated in that performance.

In 1907, Dr. Dumler met Mahler in Vienna. He never forgot a magnificent performance of *Tristan* under Mahler's direction. Furthermore, he developed an interest in Mahler, the composer, and became a champion of Mahler's music in this country when Mahler was still extremely unpopular.

To further the aims of the Bruckner Society of America, an organization founded primarily to create greater interest in and appreciation of the music of Bruckner and Mahler, Dr. Dumler gave unstintingly of himself. Due to his efforts, works by these neglected masters were included in programs of the Cincinnati Symphony and the May Festivals, among them Bruckner's *Third* and *Seventh* symphonies and the *Te Deum* as well as Mahler's *Resurrection* and monumental *Eighth* symphonies. In his capacity as President of the Society, he presented the Bruckner Medals of Honor, designed by Julio Kilenyi for the exclusive use of the Society, to Eugene Goossens, Josef Krips, and the late Fritz Busch in recognition of their work to create a better understanding of the music of the neglected Austrian master. Dr. Dumler's enthusiasm never flagged.

Dr. Dumler was not only a creative artist but also an active member of a number of organizations. He was a member of the Executive Committee of the Society of St. Gregory in America, a member of the Board of Directors of the Cincinnati Musical Festival Association and for a number of years Chairman of its Executive Committee. He was Vice President of the College of Music, a member of the Salmagundi Club, and an active member of the Cincinnati Arts Club.

In 1924, the College of Music bestowed an honorary M. A. degree upon him, ten years later an honorary Mus.D. In 1927, he received an honorary LL.D. from Xavier University.

An outstanding success in the business world, a composer, a painter, a patron of music and art, a respected member of his community and known far beyond its borders, Martin G. Dumler impressed those who knew him with his modesty, his gentleness, his deep religious convictions. He was an outstanding personality.

This issue of *Chord and Discord*  
is dedicated to the memory of  
DR. MARTIN G. DUMLER  
whose activities in and devotion to  
The Bruckner Society of America, Inc.,  
for over a quarter of a century enhanced  
the effectiveness of its work.

## THE CYCLIC PRINCIPLE IN MUSICAL DESIGN, AND THE USE OF IT BY BRUCKNER AND MAHLER

by WARREN STOREY SMITH

In his almost embarrassingly adulatory study of César Franck that master's pupil, disciple, and relentless propagandist, Vincent d'Indy, had this to say of the Violin Sonata of 1886: "From this moment cyclical form, the basis of modern symphonic art was created and consecrated."<sup>1</sup> That a musician of d'Indy's stature and scholarship could have made a pronouncement so palpably false is hardly less astonishing than the fact that so many have been willing to accept it. It only goes to show, as Adolf Hitler said, only he put it somewhat differently, that if a misstatement is sufficiently erroneous it will receive general credence. There is, of course, cyclic treatment in the Sonata, but it is the sort of thing that has to be ferreted out: it does not, so to speak, strike you in the face, as does the literal transference of thematic and melodic material in the D minor Symphony, begun in the same year and completed two years later. Thanks to this bald and obvious instance of movement interrelation — and also to d'Indy — "the cyclic form of Franck" is a catchphrase that has since been on the lips of far too many writers, teachers, and today radio commentators, who no doubt get the idea from the notes on the record envelope. To be sure, a new school of musicology has been showing us that the method in question antedated Franck, and his followers, not by years but by centuries, yet the attribution of it to him still persists.

It was in 1886 that d'Indy himself produced, in what bids fair to be the most enduring of his works, the *Symphony on a French Mountain Air*, for orchestra and piano, in which the chief theme of each movement is a most ingenious variant of the haunting folk tune stated in the Introduction; and there is another cyclic quirk, reference to which will be made later. Now it was the variation, not merely of a theme but of a whole piece or movement, that, to make a poor pun of it, started the cyclic ball rolling. As far back as the fourteenth century we find, in the so-called *Lamento di Tristano* and *La Manfredina*, two "dances" for solo viola, the second of which is a variation of the first, although both are in triple meter.<sup>2</sup> However, in the sixteenth and early seventeenth centuries, there appeared, under various titles, paired dances, the first in slow double meter and the second a faster variant of it in triple. Along with the familiar pavane and galliard<sup>3</sup> came other designations.

---

<sup>1</sup> *César Franck*, John Lane, London and New York, 1910, p. 171.

<sup>2</sup> These dances (and other pieces to be discussed presently) are shown in Arnold Schering's *Geschichte der Musik in Beispielen*, Leipzig, 1931, No. 28.

<sup>3</sup> *Ibid.*, Nos. 91 and 134.

While these duplex compositions were generally written for lute or clavier, Schering shows a Ronde and Saltarello by Tilman Susato for four instruments.<sup>4</sup> Since, in connection with the Bruckner Fifth, I shall be referring to the German *Tanz* and *Nachtanz*, I am calling the reader's attention to a delightful specimen presented by Carl Parrish and John F. Ohl in their *Masterpieces of Music Before 1750*, with the dual names *Der Prinzen-Tanz*; *Proportz*.<sup>5</sup> Incidentally, it takes two measures of the second to make one of the first, as it does in the case of the Bruckner movements.

From the paired dances, which could also be thematically independent, there evolved, quite naturally, the suite of dances; and here too we find the variation idea, whether applying to some or to all of the movements.<sup>6</sup> To look ahead momentarily, Karl Geiringer, in his *Haydn, a Creative Life In Music*,<sup>7</sup> while in the process of discussing the six *Feldpartiten*, composed in the 1780s, quite rightly gives special consideration to the one in B-flat, the second movement of which is based on the old Austrian pilgrims' song, "Chorale St. Antonii," destined to be appropriated by Brahms for his "Haydn" Variations. Dr. Geiringer, who edited the piece in 1932, observes that the four movements are melodically related and that three of them are, in effect, variations on the aforesaid Chorale. He points out that this procedure looks both backward to the old German variation suite, of the seventeenth century, and forward to the "cyclical form," of the nineteenth.

The temptation to linger unduly over these origins is one that I shall sternly resist, contenting myself with the general statement that the principle of unification, integration, or whatever you wish to call it, was also applied by the seventeenth century composers in their canzonas, sonatas, etc. Those who wish to pursue the matter further are herewith referred to *The Harvard Dictionary of Music* by Willi Apel<sup>8</sup> where they are discussed under the respective headings of Cyclic form and Variation; to *The Harvard Anthology of Music*, by Davison and Apel,<sup>9</sup> where they will find an instructive example of the variation canzona; and to *The Sonata in the Baroque Era*, by William S. Newman.<sup>10</sup> The last-named treatise pays considerable attention to the matter of similar beginnings, or incipits, extending for from two to six measures, and this practice was continued to a certain extent by both Bach and Handel.<sup>11</sup>

<sup>11</sup> Compare the *Allemande* and *Anglaise* in Bach's French Suite in B minor, No. 3, and the *Polonaise* and *Minuet* (imitation by inversion) in the E major suite, No. 6. As for Handel, note the pointed resemblance between the *Allemande* and *Courante* in the D minor Suite (No. 4 of the second set) and the more fleeting resemblance between the *Minuet* and *Gavott* in No. 8.

The abundance of cyclical treatment in the Baroque era was countered by a comparative dearth of it in the succeeding Classical period — that is, until we come to Beethoven — though prying eyes will always unearth thematic resemblances, some of them, undoubtedly, fortuitous. There can, however, be no uncertainty regarding Haydn's intent, when in the string quartets Opp. 20, No. 4 and 76, No. 5 he begins two successive movements with the same four notes. And observe in the quartet Op. 50, No. 6, nicknamed "The Frog," the striking similarity between the Trio of the Minuet and the first theme of the Finale.

It was unquestionably the example of Beethoven that prompted his successors to continue in the same direction, and I shall note cases where his cyclic methods were deliberately copied. Many have called attention, in the *Pathétique* Sonata to the identity of the four notes that begin, respectively, the second theme of the first movement and the chief theme of the Rondo; but to trace this motive back to the Introduction, as some have done, seems farfetched. Let us rather pass to the *Sonata Quasi una Fantasia*, Op. 27, No. 1, where the expected final statement of the Rondo theme<sup>12</sup> is replaced by a six-bar reminiscence of the theme of the preceding Adagio. We have here, by the way, an interesting anticipation of Franck's trick, in the Finale of his Symphony, of replacing the second theme, in the recapitulation, with the chief theme of the Allegretto. And in this he was anticipated by d'Indy (see above) in the aforementioned *Symphonie Cevenole*, only the latter uses, not the chief theme of the middle movement, but the second subject.

To return to Beethoven, he tried this interpolation scheme twice more, but not with the idea of replacing a theme with one from an earlier movement. In the Fifth Symphony we are returned, in the course of the Finale, to the second part of the Scherzo (which is generally considered to be derived from the "Fate" theme of the first movement); and in the Sonata, Op. 110, the progress of the final fugue is interrupted by an extensive flashback to the Adagio. These are not just fleeting reminiscences, like the return of a few measures of the chief theme of the first movement of Op. 101, *en route* from the broken-off Adagio to the Finale. Presumably Schumann had this one in mind when he did the same thing in his Piano Concerto.

The threefold reminiscence in the Finale of the Ninth deserves a paragraph to itself, since it was deliberately copied by Berlioz, in his *Harold in Italy*, by Bruckner, in his Fifth Symphony, and also by our friend Franck in his String Quartet. In order to appreciate fully how his imitators handled the situation — and my later concern will be with Berlioz and Bruckner only — it may be well to review Beethoven's procedure, familiar as it is to concert goers and record fans. The dissonant chord with which the movement opens is disgustingly rejected by the cellos and basses, in recitative. To placate them, if that is the word, the composer then proffers fragments of the preceding three movements, which are also turned down, but with diminishing degrees

---

<sup>12</sup> While not labelled Rondo, this Finale is clearly in the sonata-rondo form, with a development section replacing the second subordinate theme.

of disapprobation. Then comes a hint of the "Ode to Joy" tune, upon which the objectors-to-everything else gleefully pounce. It will be seen that of his imitators Bruckner came closer than did Berlioz to copying Beethoven's particular method.

Before parting with Beethoven I must mention the suggestion made by Paul Henry Lang, in his monumental *Music in Western Civilization*,<sup>13</sup> that in the second, third and fourth of the last five quartets we find the cyclic unity applying not merely to movements but to successive works. He finds something of the sort in the three quartets of Opus 59 but not, as in Opp. 130-132, carried to the point of "thematic and rhythmic concordance."

Since I am trying to observe a strict chronology, my next man is Schubert, who in the "Wanderer" Fantasy wrote the first piece of 19th century music to have the chief theme of every movement derived from the same motive. Moreover, the Trio of the Scherzo is plainly taken from the second episode in the first movement. Schubert was not as a rule a theme quoter, but he also did it, and with brilliant success, in the Finale of the E-flat Trio, Op. 100. Writes Robert Haven Schauffler, in his *Franz Schubert; the Ariel of Music*:<sup>14</sup> "The organic incorporation into it of the first theme of the slow movement . . . was a more important pioneer innovation than were the inorganic quotations from previous movements in Beethoven's Fifth and Choral Symphonies." While generally content to let whole themes remain where they originated, Schubert was quite decidedly a motive manipulator. Some have found in the three ascending tones that begin each of his last two symphonies the seeds, not only of their first movements, but of all that follows. The statement has been made that the last quartets are similarly unified, which is a little harder to prove, but it is not difficult to find strong family resemblances: as between the chief themes of the first, third, and fourth movements of the G minor, No. 9, and those of all the movements in its immediate successor. Beyond question there are many who have failed to take Schubert as seriously as he deserves. This "improviser" had a strong sense of organization, observable in all of his major works, if not in quite everything that he wrote.

Reference has already been made to the *Harold* of Berlioz, but in returning to it I am going to treat of it and the *Symphonie Fantastique* simultaneously, since Berlioz himself has done so. In writing about *Harold* he has this to say: "As in the *Symphonie Fantastique*, one principal theme (the first strain of the viola) is reproduced throughout the work, but with this difference, that in the *Symphonie Fantastique* the theme — the *idée fixe* — obtrudes itself obstinately, in scenes wholly foreign to it, whilst *Harold's* strain is superadded to the other orchestral strains, with which it contrasts both in movement and in character, without hindering their development." (We have here the articulate

<sup>13</sup> W. W. Norton, 1941, p. 770.

<sup>14</sup> G. P. Putnam's Sons, New York, 1949, p. 211. The issue is put even more strongly by J. A. Westrup, who says of this Finale: "The one redeeming feature is the quotation of the theme from the slow movement, a reminiscence so beautifully contrived that it makes the rest of the movement seem all the more tawdry." *The Music of Schubert*, Gerald Abraham, ed., Norton, 1947, p. 104.

composer, who saves us the trouble of figuring out such matters for ourselves!) As for the reminiscences in the Finale, not only are they referred to in the double title of that movement, *Orgy of the Brigands: Memories of past scenes*, they are identified in the score and are somewhat more extensive than the corresponding *souvenirs*, as Berlioz terms them, in the Beethoven Ninth and the Bruckner Fifth. Not content with these flashbacks, Berlioz has an extra one just before the close, when two violins and a cello, "in the wings," play very softly a fragment of the "Pilgrims' March." This is immediately overcome by the music of the Orgy, as were all of the reminiscences at the beginning of the movement — that was not the method of Beethoven, nor of Bruckner. The cyclic plan of the *Fantastique* has already been mentioned, namely, the appearance of the *idée fixe*, or theme of the Beloved, in each of the five movements. Having served as the principal subject of the opening one, it forms an integral part of the second and fifth and is significantly quoted in the other two. Sometimes referred to as a *Leitmotiv*, it would be more properly described as a "leading melody"; and in changing its character the way he does, Berlioz steals a march on Liszt, whose own specialty was the ingenious metamorphosis of themes. He may even have put an idea in Wagner's head, but would not permit the latter to repay him. A revolutionist in some respects, he was a timid conservative in others. But without him, music would not have been the same.

Of the three remaining Romantic symphonists — Wagner's immature attempt hardly counts him as one — Mendelssohn is chronologically the first and, cyclically speaking, the least. There are, however, interesting and even prophetic features of the sort in the "Scotch" Symphony. The genuinely expressive Introduction begins, as does the theme above referred to in the *Pathétique* of Beethoven, with the "How dry I am" figure in minor. From it comes the chief theme of the first movement, which, since it is combined with the second subject, is much in evidence throughout the movement, at the end of which the first part of the Introduction returns. This four-note motive, a fact overlooked by most commentators, also begins the chief theme of the scherzo-like second movement. It is given a rest in the Adagio and the Finale-proper; but it is played up in what is sometimes called the independent coda, commonly held to be a reminder of the Introduction. We can add to all this the marked similarity between the second themes of the first and final movements, both of which begin (as does the Introduction) with an ascending fourth. To the last-named we might easily apply the term "basic interval," given by Fritz Stiedry to its omnipresent counterpart in the First Symphony of Mahler.

If our musical mentors would change their slogan and talk about the cyclic form of Schumann it would make more sense; while to say the cyclic form of Schumann and Liszt would be even more accurate — but I am getting ahead of my story. The D minor Symphony, composed in 1841, and actually the second of Schumann's four published works in the form, was put aside for ten years, given an overhauling, chiefly in the matter of orchestration, and presented to the world as No. 4. We must therefore disregard the so-called Second and describe it as Schumann's first, and altogether remarkable, attempt at the

yclic design. In that respect it went far ahead of anything that had been done before and of most that has appeared since. It is, in fact, one of the most closely and cleverly integrated scores ever written. That it has seldom received its due may be attributed to a general lack of regard for its composer in academic circles, where, by the way, Liszt is held in even lower esteem. Apparently intimidated by the unconventional nature of the work, Schumann decided to call it a "Symphonic Fantasy," and on its eventual appearance dubbed it an "Introduction, Allegro, Romanza, Scherzo and Finale in One Movement." As for the cyclic details, the Introduction reappears as the "B" theme in the Romanza and, attractively embellished, as the "C" theme as well. In the latter form, with a subtle rhythmic change, it makes the Trio of the Scherzo, while from its inversion was derived the chief theme of the Scherzo itself. Furthermore, the principal subject of the Allegro, which dominates most of that movement, serves as a bridge between the Scherzo and Finale, the chief theme of which, having the Allegro's main motive in the bass, was first presented in that movement's working-out section! In its successor, which we call No. 2, here is again an introduction that provides material for subsequent use. An initial "motto" is heard in every movement but the Adagio third; and its chief theme, inverted, is prominent in the finale. Another one of the several episodes of which this freely-constructed movement is comprised comes from a motive in the Introduction that also figures in the bridge-passage in the ensuing Allegro.

These are all prophetic touches, especially this matter of thematic inversion, a favorite device of Bruckner, and one by no means ignored by Mahler. And there is one more that must still be noted: at the end of the Piano Quintet the chief theme of the first movement is combined with that of the Finale, a case, says Robert Haven Schauffler,<sup>15</sup> of the serpent biting its own tail. It will bite its tail again in the Bruckner Fifth and Eighth, and as for bringing back the chief theme of the first movement at the end of the work, that then-novel procedure looks forward collectively to the Bruckner Symphonies Nos. 3-8, the Brahms Third, the Tchaikovsky Fifth, the Mahler Seventh and Eighth, and the "New World" Symphony of Dvorak, not to mention the Franck D minor.

If Franck was committed to the cyclic design as a matter of principle, so too was Liszt. Whatever may be thought of the latter's music *qua* music, and widely divergent estimates of it have always existed, it cannot be gainsaid that he was one of the great innovators in the domains of harmony and form, especially the latter. He was the inventor of the symphonic poem, the basic idea of which was that the program should determine the design. But bear in mind that such pieces are necessarily "formless" only in the eyes of those who, to quote Ernest Newman,<sup>16</sup> confuse form with formalism. Liszt's sense of form was, in fact, highly developed, and his reliance on the cyclic principle followed quite naturally. We find this thematically-integrated structure in the Piano So-

<sup>15</sup> *Florestan: The Life and Work of Robert Schumann*, Henry Holt & Co., New York, 1945, p. 474.

<sup>16</sup> *Strauss*, John Lane, 1908, p. 54.

nata and the two Concertos; in the *Dante Symphony*, so far as its two movement scheme permits, and above all, in his masterpiece, *A Faust Symphony in three character pieces (after Goethe): 1. Faust; 2. Gretchen; 3. Mephistopheles.*

Those who deny that this astonishing work is a symphony at all should be reminded that the first movement is in sonata form, a structural routine with which Liszt ordinarily dispenses, probably one reason for the horror with which he is regarded by the pedants. This initial movement presents five themes, four of which reappear tellingly in the second, which presents two themes of its own. Seeing Mephistopheles as "the spirit that denies," Liszt cunningly portrayed him with what might be called "brimstone" versions of the Faust themes (all but one). The first Gretchen theme comes back, but unaltered, since Mephistopheles had no power over her; and it is made the basis of the tenor solo that adorns the final male chorus on Goethe's "Alles Vergänglichliche," an optional ending added three years later (1857) which, unfortunately, is sometimes omitted, both in performance and in records. The real point is that the Finale has, for all practical purposes, no themes of its own,<sup>17</sup> a bold stroke indeed, but anticipated in the First Piano Concerto, the Finale of which flows into new song at the very end. I have seen the statement made, in a supposedly authoritative book of reference, that Saint-Saëns got the idea of his cyclical Third Symphony from Franck. Actually, this work for organ and orchestra preceded the Symphony of Franck, and it is a perfectly safe assumption that both composers were indebted to Liszt in the matter, as they were in their own decidedly Lisztian tone poems. Before parting with Liszt, I should like to suggest that he was essentially a composer's composer, receiving far more respect from the musical creators than from the professors, or the critics.<sup>18</sup>

If Brahms is to be brought into this discussion, now is the time, but there is not much to say. The return of the chief theme of the first movement at the end of the Third Symphony, already noted, is a solitary example of thematic transference. Nevertheless, the Second Symphony is still a well-integrated work by virtue of the continued recurrence, in one form or another, of the three-note "basic motive" with which the piece begins. This is still cyclic construction, but of a more subtle, less obvious type.

With Bruckner, to come at last to him, we find a triple approach to the cyclic design, comprising (a) the literal transference of thematic material, (b) themes derived from the same source motive, and (c) free thematic resemblances that recall the variation canzonas, sonatas, and suites of the Baroque period, an era with which Bruckner is allied in other respects. All of the above procedures may be seen in the Second Symphony, his initial, but extremely interesting, essay in cyclic

<sup>17</sup> The Liszt authority Humphrey Searle has noted the interpolation in the Finale of a brief motive from Liszt's little known "Malediction Concerto" for piano and strings. Only those whose attention had been drawn to it would notice it.

<sup>18</sup> Among his warmest admirers were Debussy and Bartók, the latter maintaining that he had learned more about the actual principles of musical composition from Liszt than from anyone else.

form. It was here that he inaugurated a practice that he never abandoned, namely, the return in the Finale, in one way or another, of the chief theme of the first movement. (Whether he would have continued to do this in the never-composed Finale of No. 9 remains a matter for idle speculation.) The theme in question has a characteristically Brucknerian length of twenty-four measures, only the first four of which concern us here.

At the very outset of the final movement we find this theme, or first two measures of it, in uneven diminution,

a curious foreshadowing of which may be observed in measures 426, *et seq.*, of the first movement.

At measure 280 in the Finale's development section we hear twice the first two bars of the theme above their own diminution,

while 58 measures from the end of the movement we find an identified reminiscence, marked "Tempo des ersten Satzes." Heard are the first four measures of the theme, the last two transposed a minor third upward. And what shall we say of this seeming reference to it in the Finale's tenth through fourteenth measures?

Certain commentators have noticed strong family resemblances between the respective second subjects of the "corner" movements,

and between the theme of the Scherzo and the second part of the Finale's principal section.

Conversely, the only cyclic treatment in No. 3 is the return in the Coda of the Finale — the last 42 measures — of the trumpet theme that begins the first movement, but now transformed to major.

However, in No. 4 the corresponding theme assumes the dual function of "motto" and source motive, and in one form or another is found in all of the movements. It begins with the drop and rise of a fifth, immediately repeated as a sixth, and again as a fifth, and so on, until for forty measures nothing is heard but this "motto" and its various permutations. A further and important feature of the motive is the triple-dotted rhythm, later insisted upon in its own right. Incidentally, this theme and the manner of its accompaniment constitute one of Bruckner's most haunting and more renowned inventions. More than anything else in the work these initial measures justify the title "Romantic," given to the Symphony by the composer himself.

Comes the Andante and we find in its chief theme the same drop and rise of a fifth, repeated once, not many times, as before.

While in the principal subject of the so-called "Hunting" Scherzo, the "characteristic dip," as Sir Donald Tovey calls it,<sup>19</sup> is contracted to a fourth, but the fifth is also heard, and it takes over in the second theme.

<sup>19</sup> *Essays in Musical Analysis*, Oxford University Press, 1939, Vol. II, p. 77.

Both the original "motto" and its offshoot, the hunting fanfares, are conspicuous in the Finale, the latter making their first appearance here in measures 28-40. Shortly afterwards (measures 63-70) the rhythm of the "motto" is forcefully proclaimed by repeated chords in the heavy brass, accompanied by the fanfares; and this combination recurs (measures 79-85). This last is in the transition to the second subject, which melody, curiously reminiscent of the opening of the Andante, is supported by a pizzicato bass that could also be said to derive from the "motto."

At measure 155, following four measures of *ppp*, in true Bruckner fashion, a tremendous passage, that begins the working-out section, combines a variant of the "motto," and later the "motto" unaltered, with the fanfares. This continues until measure 170, when the second subject is developed against the persisting hunting calls. Not until measure 180 do the latter subside. The development continues briefly, the recapitulation follows, and there are no more cyclic features until the second theme reappears (see above). In the Coda (measure 295) and again with *fff* following *ppp*, the fanfares accompany the chief theme of the movement; the former continue for some time, and are then in and out until the end.

The last nine measures give us a final, and most impressive, combination of motto and fanfares. And here is an interesting detail: at my elbow, as I write, are two scores that in the main agree but that differ more or less significantly here and there. One is the Eulenberg pocket score (E.E. 3636), that offers the version used on January 22, 1888, when Richter conducted the Symphony at the Musikvereinsaal, Vienna. The other, dated 1953, is the *Kritische Gesamtausgabe* that pre-

sents the version of 1878-80. In both of these the final measures are all on the tonic chord of E-flat, but in the Eulenberg the "motto" is sounded by trumpets and trombones with no change of pitch in the upper voice, while in the Critical Edition, and, it would seem, more in line with Bruckner's subsequent practice, the melody of the "motto" is heard and repeated in overlap.

Far as Bruckner went in No. 4, he went a great deal further in its successor, one of the most thoroughly integrated of symphonies, whether of its own or any other period. As with the *Romantic*, the cyclic principle is exemplified both in the literal transference of thematic matter and in the free, at times very free, development of germinal motives. Here, for the first and last time, Bruckner availed himself of that once-obligatory structural device, the slow introduction, and he used it, as did Schumann before him, as a source of material, not only for the first movement, but for subsequent ones. "The slow introduction," wrote Gabriel Engel,<sup>20</sup> "occupies only a few measures, yet it presents all the source material out of which the gigantic symphony is to be reared. The rest is a record of amazing economy of means, involving melodic resourcefulness and structural mastery." This, in the argot of the street, is a "tall order," but careful investigation bears it out; there is really nothing of importance in this mighty work, Bruckner's most involved, that cannot be traced back to these fifty pregnant measures.

First to be noted here will be the literal transplantings, and they will be listed in the order in which themes to be transferred first appear. In prefacing his Finale with the same introduction, or part of it, that preceded the first Allegro, Bruckner may be thought to have anticipated in a modest way the Tchaikovsky of the Fifth Symphony, and the Sibelius of the First. But the function of these eight-and-a-half measures (approximately one third of the original Introduction) is not at all what it appears to be. Rather is it the first of a series of reminiscences, the model for which, as with Berlioz, was the Beethoven Ninth. But whereas both Beethoven and Berlioz, in their very different ways, began with a few measures of the Finale proper, Bruckner starts right away with his initial *souvenir* — to use the term favored by Berlioz. Of the two composers, Bruckner most nearly duplicated Beethoven's musico-poetic procedure. However, instead of an expressive recitative, a staccato clarinet,<sup>21</sup> sounding the first motive of the Finale's chief theme (see below), impatiently disposes of each reminiscence. These last include the aforesaid Introduction, the chief theme of the

<sup>20</sup> *The Symphonies of Anton Bruckner*, The Bruckner Society of America, Inc., 1955, p. 37.

<sup>21</sup> It is a trumpet in the revised edition.

that statement made regarding the one now under discussion.<sup>23</sup> Granted that in the 18th century slow introductions were, properly, independent, unconnected with the rest of the work, there were exceptions even then, such as that to Mozart's Symphony No. 39, with scale passages heard again in the bridge-passage, or that to Haydn's Symphony of the Drum Roll (No. 103), the broad theme of which turns up, in diminution, in the development and reappears before the coda, thus setting in two ways a pattern for the "Pathetique" of Beethoven. Throughout his career the last-named composer wrote, at will, introductions of both types. But since his time the preference has always been for introductions that tie in with what follows. For example, that to Schumann's Second Symphony contains motives variously present in every movement but the third, and the part played by the respective introductions to Schumann's own Fourth, and the "Scotch" of Mendelssohn, has already been noted.

To return to the piece in hand, the first of these two germ motives makes its appearance immediately. Cellos and basses, in a pizzicato so characteristic that this has been called a "symphony of pizzicatos," present it alone. It is twice repeated as the other strings gradually steal in above it with what proves to be material for the second theme of the movement.

The image contains two musical staves. The first staff is a bass clef staff with a key signature of one flat (B-flat) and a 4/4 time signature. It contains a rhythmic motif of eighth notes: G2, F2, E2, D2, C2, B1, A1, G1. Below the staff is the marking "Con 8". The second staff is a grand staff (treble and bass clefs) with the same key signature and time signature. The bass clef part continues the eighth-note motif. The treble clef part has a long note on G4, followed by a rest, and then a half note on G4.

This motive gets its big opportunity in the Trio of the Scherzo, where, inverted, it serves as said Trio's chief theme. Accompanying it is a suggestion of the motive in its original form, which is reproduced more faithfully later on. Virtually all of what follows grows out of this bit of free mirroring.

<sup>23</sup> Werner Wolff, *Anton Bruckner*, E. P. Dutton & Co. Inc., New York, 1942, p. 209.

Things seem to be getting really involved when we discover that germ motive "B" is first heard as a bass to a modified version of "A," which it partly resembles.

Four measures later this significant proclamation is heard again in a slightly different form. After this double birth, motive "B" is on its own, and it furnishes much, or, if we are willing to stretch a point, most of the thematic material for the rest of the symphony. Its first important assignment is to provide the chief theme of the first movement, about which so much has already been said.

In its next incarnation it is the chief theme of the Adagio, or rather the counterpoint to the pizzicato theme that had gone on for four measures unaccompanied, to be repeated exactly with the counter-theme. It is the bass theme that, as described above, also begins the Scherzo. Incidentally, when the two parts of the Adagio's double theme, if we can call it that, are seen in combination they seem to be much the same.

Surely it is "B" again that gives us the broad second subject of the Adagio; while there is also a strong suggestion of "A" in the bass.

The upper theme of the Scherzo is a variant (and development) of "B," with its initial leap reversed. It joins the ground-theme earlier than does that of the Adagio — in terms of the former's time signature, three measures earlier.

*Molto vivace*

And the second subject seems to be new light shed on certain things that have gone before.

Much has already been said here about the Finale, and the first theme was quoted, though its genesis remains to be considered. There are two other themes, a lyrical second subject and the chorale theme to which reference has already been made. They are presented here as "a" and "b." In the case of the former, while there is a superficial resemblance throughout, the closest approximation to the second of our source motives seems to come in the lower voice in measure four, actually the first violin part, since the seconds, whom Bruckner likes to favor, carry the melody. In the chorale theme the bass more nearly resembles the source motive than does the melody, though both certainly suggest it.

Regarding the place of these themes in the structural scheme, the first one serves as an episode in the fugue and as the subsidiary theme in the sonata form. The manuscript score favors the sonata design but the revised edition, by means of many excisions, puts the fugue to the fore.

To align the "disturbing, rebellious" chief theme, as Engel characterizes it,<sup>24</sup> with the same germ motive is less easy, though it is quite conceivable that a composer writing variations on a theme would feel entitled to handle the motive in this fashion. There is, moreover, abundant precedent in the previous movements for the octave leap with which the theme begins and which is forthwith repeated in the opposite direction. While the interval does not occur in either of the source

<sup>24</sup> *Op. cit.*, p. 42.

motives, as first presented, it does begin the second one on a later appearance (measure 343 in the Critical edition, from which all of the above references are taken). And at the beginning of the development section of the first movement, and in the four measures preceding it, we find this figure used repeatedly.

It may also be suggested that measures 2-4 of the chief theme of the first movement bear a family resemblance to this motive, though lacking its impertinent character. And as for the octave leaps elsewhere in the first movement, and in the next two, there are enough of them to justify calling it a typical interval of the work as a whole. It even makes three appearances in the examples given above, namely, those of the chief theme of the Adagio and of the chief and subsidiary themes of the Scherzo. Biologically speaking, it is distinctly not a "sport."

After these heroic exertions Bruckner reverted in No. VI to the cyclic simplicity of the Third. There is no thematic transfer other than the recurrence at the work's end of the chief theme of the first movement, preceded by the statement of the rhythmic accompanying figure, which Werner Wolff, who has evidently enjoyed the unusual experience of hearing the work, says is more apparent to the eye than to the ear.<sup>25</sup>

<sup>25</sup> *Op. cit.*, p. 225. Wolff, who may well have conducted the work in Germany says of the Sixth that it "remained a stepchild in public estimation. Bruckner loved it all the more." *Ibid.*, p. 218.

However, on this final appearance, which brings the symphony to a close, the theme, now given to the trombones (it was first played by cellos and basses) is accompanied, not by the above sharply-rhythmed figure but by an eighth note design taken from the finale itself.

If Bruckner had lived long enough to write a finale for his Ninth Symphony, he probably would have introduced in it (preferably at the very end) the chief theme of the first movement, which had been his practice from No. 2 on. In the Seventh a return of the opening theme does occupy the last eight measures of the work. But there is a feature here not found in any of the others: the Finale's chief theme is patently derived from that of the opening Allego. Engel calls it the "lyric initial theme of the symphony arming for battle."<sup>26</sup> After these decidedly similar, if not identical, openings the two themes go their respective ways. Once more we have the variation idea, rather than the literal quote.

No. 8 is more involved than either of its immediate predecessors, if considerably less so than the Fifth. When Engel saw the whole of the latter emanating from the slow introduction, it was possible to agree. His claim that the first phrase of the chief theme of the Eighth consists of the "four motifs" of the symphony<sup>27</sup> is harder to take. At least, he was not considering the cyclic form as I have been endeavoring to present it here.

He points to the intervals of the second and sixth as being respectively representative of the "heroic" and "expressive" features of the work. We may eliminate the 2nd as not being sufficiently striking, but there is a conspicuous emphasis on the 6th. It plays an important part in the second theme of the first movement, the trio of the Scherzo, and the subordinate themes of both the Adagio and the Finale. The stressing of this voluptuous interval, throughout, helps materially in imparting to this Eighth Symphony its highly emotional character. Not even the Seventh can challenge its position as the most expressive of the nine.

<sup>26</sup> *Op. cit.*, p. 55.

<sup>27</sup> *Op. cit.*, p. 63.

More deserving of our consideration, however, is the unique situation regarding this opening theme and its inevitable recurrence in the Finale. It begins unmistakably in B-flat minor, and the home key of C minor is not reached until the seventeenth measure. Even then, the tonic is avoided, and the whole thing starts once more at measure 23. And never in the whole course of the first movement does this remarkable melody actually begin in C minor. In the recapitulation it would seem to do so, to the extent that it is transposed up a second, but the supporting harmony is the dominant seventh of D-flat! If ever the cyclic construction was completely justified it is in the recurrence of this theme, in the long-deferred tonic key, in the coda of the finale. Robert Simpson's excellent analysis in the 1950 issue of *CHORD AND DISCORD*<sup>28</sup> goes into more detail than I propose to do here regarding the belated, and forceful, entry of the initial theme in the key where anyone but Bruckner would have stated it in the first place. And I shall quote him here in regard to the rest of the Coda:

"After the turmoil has subsided, the final climax is evolved with the greatest possible dignity and grandeur (the *coda* begins at Letter Uu in both editions). As with all Bruckner's final passages it opens in darkness, breathing upon dim fragments of the main theme, passing from key to key as it climbs in a long *crescendo*. The strings persist in smoky quavers that burst into flame as the sun touches them. At the last the triumphant affirmation of C major is the complete reply; it contains derivatives of the main subjects of all four movements. The actual end is sudden but tremendous in its finality."

It is true that the chief themes of all four movements are unprecedentedly combined in this stunning close. But I cannot agree with those who pronounce it a contrapuntal *tour de force*, since all the themes, or thematic fragments, have been carefully retailored to fit the tonic chord of C major. Thus it all adds up to little more than a tremendous fanfare.

Unlike Bruckner, Mahler "went cyclic" at the earliest opportunity, and in a relatively big way. By the late '80s (the First Symphony, begun in 1885, was finished three years later) the thing was definitely "in the air," although composers like Tchaikovsky could adopt a take-it-or-leave-it attitude,<sup>29</sup> and we will find that this was true of Mahler also. As noted above, there is a systematic use throughout the First Symphony of the basic interval of the fourth, anticipated by Mendelssohn in his "Scotch." I have dwelt on this matter at some detail in a previous article, "Mahler Quotes Mahler," dealing with his use of his songs in his symphonies.<sup>30</sup> This recurrent fourth aside, the tie-ups in No. 1 are all between the corner movements, and they commence early in the Finale. The beginning of the chief theme, which materializes gradually, was hinted at in the development section of the first move-

<sup>28</sup> Vol. 2, No. 6.

<sup>29</sup> Compare the un-cyclic *Pathétique*, No. 6, with Nos. 4 and 5.

<sup>30</sup> In the 1954 *CHORD AND DISCORD*, Vol. 2, No. 7.

ment, more and more pointedly, until its initial notes assumed their final form.<sup>81</sup>

(a) *D major*

(b) *F minor*

A later section of the long theme is closely allied to the second subject of the first movement, more especially the form it assumes in the development section, where it appears in F minor, the key in which the Finale begins, only to end triumphantly in the Symphony's home key of D major.<sup>82</sup>

(a) *F minor*

(b) *D major*

The development begins by reverting to the Introduction to the first movement, combining the important opening motive, of the descending fourths, with a contraction of the transition motive (whose relevance to the Finale's chief theme has been noted) over a pedal D-flat in four octaves.

Con 8

<sup>81</sup> See pp. 29-32 in the Universal-Boosey and Hawkes pocket score, which contains an elaborate analysis by Fritz Stiedry, already referred to.

<sup>82</sup> Incidentally, the four ascending tones are heard earlier in the first movement, in a passage that connects the Introduction with the chief theme, and in the latter also.

At its culminating point the development unites the chief theme of the finale, in a new form, with the basic interval, which, by the addition of a few notes becomes what Stiedry quite properly terms the principal motive of the whole symphony, fittingly entrusted to seven horns, *ff.*

Having initiated the development, the introduction to the first movement brings it to a close, p. 141. And after recapitulating the Finale's exposition, Mahler performs a like service for that of the first movement — *c.f.* pp. 29-36 and pp. 150-158. Once more the chief theme is united with the principal theme of the work; and yet once more in the Coda, marked *Triumphal*, giving us still another example of a symphony ending very much as it began.

Most, possibly all, of Mahler's symphonies have an underlying poetic idea; but that in the Second can be most clearly and simply stated, namely, death and resurrection. There are five movements, of which only the second, serving a musical rather than a programmatic purpose, plays no part in the "story." It is well known that Mahler had reached an impasse in the Finale, surmounted when he chanced to hear Klopstock's so-called "Resurrection Ode" at the funeral of Hans von Bülow, and decided to use those words, to which he later added some of his own, as a choral conclusion. Since the "Death" movement has its own measures of consolation, it was perfectly logical for Mahler to incorporate some of these in his Finale, and he does, albeit somewhat freely. Since these reminiscences are plentiful, I shall content myself with three quotations: the opening of the second subject and two instrumental fragments from the Finale (and there are vocal ones that would have answered). The last-named are found, respectively, three measures after rehearsal figure 2 and six measures after 37.

Another theme that figures in both of the outside movements, and this becomes a literal transference, is an instrumental chorale, interpolated in the first movement's development section, p. 33. Quoted here is the first half, the second coming after a brief interruption.

Before continuing with its extensive and resourceful use in the Finale, I would like to bring up an interesting point. This has been referred to as a chorale on the *Dies irae*, and it will be seen that the four initial notes are those of the ecclesiastical melody, first employed symphonically by Berlioz (in the *Fantastique*) and used "instrumentally" by many subsequent composers, generally as symbolic of death. What immediately follows in Mahler's fine tune might be sung, but not too effectively, to Thomas of Celano's words, after which the break with the poem is complete. We may only guess at the composer's intention in the matter. Anyway, the chorale makes its reappearance early in the Finale (p. 142), but after eight measures its second section is replaced by an instrumental adumbration of the choral setting of the opening

lines of Klopstock's poem, "Auferstehn" (Rise again).<sup>33</sup> Moreover, this joining of the two melodies is not confined to this particular passage.

On page 58 the chorale comes back in diminution (*c.f.* Berlioz), as the beginning of a long passage, commonly referred to as the march of souls to the Judgment Seat.

This last is an elaborate symphonic development of the chorale, in which the quickened form is sometimes ingeniously combined with the original. The "Auferstehn" theme is also in the picture. In the emotional excitement of all this the interesting musical details are easily overlooked.

To continue, it may be observed that the practice of Liszt is recalled in the way that the Finale serves as a summary of themes from the previous movements. Only the programmatically out-of-step Andante fails of representation here. Intrinsically, the third division, the Scherzo, an orchestral paraphrase of Mahler's ironic song about St. Anthony's unsuccessful attempt to convert the erring fishes, has nothing specifically to do with the Symphony's underlying idea, until, when nearing the end, we are suddenly confronted with a tremendous passage that prefigures the opening of the Finale, in which connection it is accepted as a portrayal of the Crack of Doom. After it has so surprisingly burst in upon the Scherzo, the latter resumes its normal course and ends peacefully. In the Finale itself the initial cataclysm is recalled at the end of all the dreadful business that ultimately yields to a depiction of the Resurrection Morn, with its horn calls and bird songs. Harmonically describable as a chord of the 11th with minor 9th, the Crack of Doom, as anticipated in the Scherzo, was quoted in the article by Parks Grant, to which reference has just been made (in a footnote).

And finally, the end of the alto solo, "Urlicht," that makes the fourth movement and spiritually paves the way for the fifth, is freely reproduced in the latter. Those who are in a position to do so may profitably compare the eight measures following cue figure 6 with their free recurrence on page 199 of the Finale, now a matter of twelve measures, and no longer a solo but a duet for soprano and alto.

A work of manifold delights, the Third Symphony is less closely knit than its two predecessors and lacks their impact. Mahler gave expression in the several movements to what he was "told" by the flowers, the animals of the forest, Man, the Angels, and Love, while the first movement portrayed the advent of summer. A final movement,

<sup>33</sup> Parks Grant reminds us in an article on the Symphony in the 1958 issue of this magazine (Vol. 2, No. 8) that the poem in question is not one of the odes but one of the *Geistliche Lieder*.

Wir ge-nie-ssen die himm - - - li-schen Freu-den, drum

An unusual, if not entirely unprecedented, situation is found in Mahler's Fifth Symphony, that we might hold to be an extension of the cyclic plan, or another arrangement entirely. Schumann, as already noted, would have us believe that the Introduction and four movements of his D minor Symphony were "one movement." And Saint-Saëns in the Third Symphony, also mentioned above, wished us to consider the four movements as two. (For the premiere, of January 9, 1887, he supplied an analysis that stated his desire "to shun in a certain measure the interminable repetitions which are more and more disappearing from instrumental music.") Anyway, Mahler lined up the five movements of No. 5 as three. There is a double system of numbering, in which Roman and Arabic numerals are employed as follows: I comprises 1 and 2, II is 3, and III is 4 and 5. The paired movements are connected thematically, and the Scherzo (No. II-3) enjoys a lonely isolation. The first of each of Saint-Saëns's paired movements was broken off. Mahler did not do that — and no more did Schumann — but he has a different scheme, in respect to the first two divisions, than either of his predecessors. At intervals, the tempo of the second movement reverts to the slower pace of the first, and the themes of the *Trauermarsch* come back, either in development or literally. Furthermore, if the second movement occasionally slows down to the pace of the first, the latter, at one point, assumes the wild character of its successor. The first movement has been called a preface to the whole symphony, and it has also been described as an introduction to the second. Their respective keys, by the way, are C-sharp minor and A minor, and considering the fact that the first movement is approximately the same length as its companion, and that, aside from the themes they share, each movement is complete of itself, this would seem to be using the term "introduction" in a most unorthodox fashion.

It would be more sensible to call the Adagietto, for strings and harp, an introduction to the Rondo-Finale. The indication *attacca* is found here, as it was not found at the end of the March, but again the keys — F major and D major — are not closely related. The short, simple and directly appealing Adagietto, that has been both performed and recorded out of context, is practically an unbroken song, that starts quietly, becomes increasingly impassioned, especially when it gets into the warm key of G-flat, and ends much as it began. Both aspects of the long tune are displayed in the Finale, but the second is overwhelmingly the favored one, both in the exactness and the extent of the quotation. By accident or design, Mahler endowed this expressive melody

with a capacity for momentum. It does not lose character as completely as do most slow themes when speeded-up to fit into fast movements. Be all this as it may, I am refraining here from the use of musical examples. With Mahler's backing I am considering this a different situation entirely.

The Sixth is another "Fate" symphony, after the manner of Beethoven's Fifth and the Fourth and Fifth of Tchaikovsky, in its details now following one or the other precedent and now breaking with them all, the chief difference being that this symphony ends tragically. Fate here has the last word. The indispensable Fate motive is basically the simplest of them all: no more than an A major triad changing to an A minor one in the next measure. An instrumental twist gives it a significance that intrinsically it lacks. The motive, on its first appearance, is attacked simultaneously by trumpets and oboes, the former in diminuendo, the latter in crescendo, thus imparting to the major chord a brighter tint and to the minor chord a darker one. Later on we find other instrumental combinations; nor is this dynamic scheme always preserved. The motive comes in the first movement in the bridge passages connecting the first and second subjects (exposition and recapitulation). As is not the case in the Tchaikovsky Fifth, the ensuing Andante, originally the third movement, goes its placid way undisturbed by it, but it comes twice in the Scherzo, just before the Trio and at the end of the movement. There are several repercussions of it in the Finale, where it comes in G and C, as well as in A. Confined, in the first movement, to the triads in question, it later receives sundry melodic embellishings. Other cyclic features are of less importance. There is, for one thing, a certain kinship between the respective chief themes of the first and last movements.

In the first movement an impressionistic passage, entailing the use of celesta and cowbells,<sup>37</sup> arrives rather startlingly in the development section. Freely transformed, it returns twice in the first half of the Finale.

<sup>37</sup> Along with the hammer found in the Finale, the cowbells are a special feature of No. 6. See Engel's article, "With Hammer and Cowbells," in the 1948 CHORD AND DISCORD, Vol. 2, No. 5.

And the eleventh measure of the Scherzo introduces a figure that is heard repeatedly throughout the movement, in various guises, and comes several times in the Finale.

A more cheerful symphony succeeded this bleak and forbidding tonal document. The Seventh was mentioned above as one of the works in which the chief theme of the first movement returns at, or very near, the end of the Finale. What Mahler did here, however, was to follow the example of Bruckner in certain symphonies and return it earlier in the movement as well. As it happens, this theme and the principal subject of the Rondo-Finale are a good deal alike, and Mahler found it easy to include "a" in a development of "b."

(a)

(b)

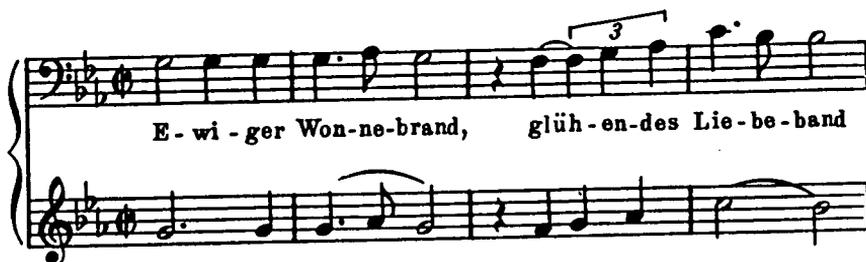

Three measures before cue figure 279, in a passage of great contrapuntal complexity, the Rondo theme, freely treated in D major, holds sway for eight measures, when the first movement theme enters the web, for a few measures, in D minor, accompanied by a variant of one of the Rondo's side themes. At (281) it briefly and freely returns in C-sharp minor, and twelve measures later in C minor. We hear from it again in B-flat minor and then in D-flat, always accompanied by other melodic matter. The key reverts to the movement's main tonality of C, and ten measures before the end of the theme in question comes back, *mit höchster Kraft*, for five measures, and alone in its glory.

It is worthy of note that of the ten completed symphonies of Mahler (one of them being *Das Lied von der Erde*, which by any ordinary standards is not a symphony at all, even though the composer so designated it), only Nos. 1, 4, 6, and 9 have the conventional four movements. The all-choral Eighth has two, although some have despaired in the second an approximation of Adagio, Scherzo and Finale. This properly, is not a "symphony" either, (but what else could Mahler have called it?) and its cyclic features by no means correspond to those discussed thus far, with the possible exception of the beginning once more bringing the end. I am appending two themes from the first

movement, the so-called "Light" theme and the "Gloria," much alike, as may be seen, that return in the second one.

Once introduced, the three ascending tones followed by an upward leap of varying distance, are much in evidence throughout the remainder of the work. We hear them repeatedly in the instrumental introduction to the second movement and shortly afterwards in Mahler's most ardent page, the soaring song of "Pater Ecstaticus," with its richly-textured, harmonically intense instrumental support.

From this evolved the choral setting of Goethe's *Chorus Mysticus* that concludes his *Faust* and the symphonies, wholly or partly, based upon it by Liszt and Mahler, a comparison of whose settings, by the way, is extremely instructive.

As in the "Resurrection" Symphony, when the chorus is done the orchestra has a final word, in this case a return, as noted above, to the mighty Eighth's opening phrase. This, together with a development of it in the manner of the initial chorus, fills the last 45 measures.

The descending fourth, present in three of the five excerpts from the Eighth shown here, is prominent in other Mahler symphonies, notably the First, Second, Third, Fifth and Seventh, in the *Lieder eines fahrenden Gesellen* and *The Song of the Earth* — "in all the pivotal works of Mahler's career as symphonist," wrote David Rivier in his excellent article, "A Note on Form in Mahler's Symphonies," in the 1954 CHORD AND DISCORD.<sup>38</sup> Could we perhaps dub it the "Mahler motive"?

The notes a-g-e, descending, are prominent in the first song of *Das Lied von der Erde*, and the sixth and last ends with their inversion. However, the four movements of No. 9 are inter-related, not by themes and motives, but by the prevalence of the descending second, instances of which were given in notation by Mr. Rivier.<sup>39</sup> And since the Tenth was left unfinished, I shall forbear discussion of it.

Like the composers, I shall now end as I began. The cyclic form is plainly not a development of the last 70-odd years, but they have at least brought it into public notice, and have seen it become a talking point, even a controversial issue. Not so long ago it didn't even have a name, and to discuss it one would have had to describe it. The crux of the matter seems to be that what Franck's predecessors lacked — and what he himself was fortunate enough to have — was a good advertising man.

<sup>38</sup> Vol. 2, No. 7.

<sup>39</sup> *Ibid.*

## MUSIC MOURNS VAN BEINUM AND ADLER

by JACK DIETHER

Two eminent musicians who were also outstanding exponents of the music of Bruckner and Mahler died in 1959: the Netherlands conductor Eduard Van Beinum, and the British-American conductor F. Charles Adler.

Heer Van Beinum was born in Arnhem, Holland, in 1901. He came of a musical family, played both violin and piano, and was a concert artist from the age of 16. He became conductor of the Haarlem Orchestral Society in 1926, and just five years later was appointed second conductor of the esteemed Concertgebouw of Amsterdam, with which he was associated until his death. During the German occupation, however, he was also connected with the underground movement, and was on one occasion saved from arrest at the hands of the Nazis only

through the timely warning of a local police officer, at which time he went into impromptu and temporary hiding. After the war his zeal was enthusiastically rewarded with the first conductorship of the Concertgebouw in succession to Willem Mengelberg.

Throughout his years of leadership he was particularly noted for his musical and democratic reforms, for he was a strong advocate of orchestral teamwork as opposed to autocracy on the podium. (He was affectionately known by his colleagues as "the baton-player.") In 1948-49 he was the conductor of the cooperatively owned London Philharmonic as well, and from 1956 to his death, of the Los Angeles Philharmonic. His double duties in Amsterdam and Los Angeles necessitated frequent polar flights back and forth. He died of a heart ailment on April 13, 1959, in the midst of his colleagues during a rehearsal of Brahms' *First*.

Mr. Adler was born in London in 1889. As a student in Vienna, he was one of a group of young musicians who attended and was permitted to discuss Mahler's rehearsals with him. He graduated from the Munich Royal Academy, and was assistant to Felix Mottl in the Royal Opera there, 1908-11. In 1913 he was appointed first conductor of the Municipal Opera in Duesseldorf, and subsequent conducting posts were held in Berlin, Hamburg, and Vienna. In 1928 he founded the Berlin publishing house, Edition Adler, but lost it when the Nazi regime began and he emigrated to the U.S.A. During his New York years of the thirties and forties he led first the W.P.A. group called the New York Festival Orchestra, and later the New York Chamber Orchestra, whose members were from the Philharmonic. As an example of his lifelong dedication to living composers, he conducted the latter orchestra, in the course of one festival alone (the Saratoga Festival of 1946), in more than forty new compositions. He also received the Kilenyi Bruckner Medal from the Bruckner Society of America in 1958, and the Schoenberg Medal from the International Society for Contemporary Music. Although he kept a home in upstate New York, his later years were spent mainly in Vienna, where he made all of the pioneering recordings by which he is probably best known, and where he died on February 16, 1959.

Lovers of Bruckner and Mahler have special reason to be grateful for the unflagging artistic devotion and integrity of these two musicians, who were both honorary members of the Bruckner Society of America. Few Brucknerites or Mahlerites in this country have had an opportunity to see either of them conduct in person, yet they are known everywhere by their matchless and irreplaceable recordings. Especially treasured by this writer are Van Beinum's recordings of Bruckner's *Seventh* and Mahler's *Fourth*, to say nothing of the superb *Lieder eines fahrenden Gesellen* which he made during his London season, with the Polish contralto Eugenia Zareska as soloist. (It might perhaps be mentioned here in passing that it was Van Beinum and the Concertgebouw who gave the English an example of how to interpret the interludes from Britten's *Peter Grimes*, getting closer to the work than Sir Malcolm Sargent!) He was the first to conduct, shortly before his death (and even prior to its publication), the Mahler *Seventh*

in the new critical edition prepared by the *Internationale Gustav Mahler Gesellschaft*. For us, perhaps no other fact could stress so poignantly his tragic loss at this or indeed any time.

This writer owes to F. Charles Adler his first acquaintance with Mahler's *Sixth*, a fact which would alone hold him in very special memory. Yet this was only typical of Adler's approach — to do without hesitation what needed to be done and was within his means, regardless of popular appeal or acclaim. And so we have, in addition, recordings by him of two of the works which have never been duplicated in the record catalogues to this day, and very likely would not be represented at all without him: Bruckner's *Mass in D Minor* and Mahler's *Third Symphony*. Adler's beautiful *Adagio* from the Mahler *Third* is, like all his best work, truly *de profundis*. And the writer would like to add here a mention of his extremely fine and much underrated rendition of Charles Ives' *Second Symphony*.

## BRUCKNER THE TEACHER

by DIKA NEWLIN

Today, with education more and more in the public eye, it is heartening to realize how many of our great creative figures in contemporary music have chosen to instruct the younger generation in the fundamentals of their art. Schoenberg with his *Harmonielehre* (*Theory of Harmony*), Hindemith with his *Elementary Training for Musicians*, Roger Sessions with his *Harmonic Practice* — and, in the field of piano technique, Bartok with his *Mikrokosmos* — they have not hesitated to stoop and reach out a helping hand to the beginner in these mysteries. In so stooping, they did not lower themselves — rather, they enriched their own knowledge and deepened their own insights. How true are the beautiful words of Schoenberg in the preface to his *Harmonielehre*: "This book I have learned from my pupils." In turn, young people may be grateful for the opportunity to use textbooks by distinguished creators, rather than by dull pedants.

Unfortunately, Anton Bruckner, dedicated teacher though he was, did not choose to document the principles of his teaching in book form. And perhaps it is just as well that he did not do so, for, as his letters attest, when it came to expressing himself with pen in hand he was — to say the least — distinctly more successful with tones than with words. (In this respect, he stands at the opposite pole from Mahler, whose verbal virtuosity is nearly on a par with his mastery of musical materials.) But, thanks to the devotion and interest of a one-time Bruckner pupil, and the coöperation of the *Österreichischer Bundesverlag* (Austria's principal publishing outlet for material of an educational nature), there has been available, since 1950, the next best thing to a genuine textbook by Bruckner.

In 1891, young Ernst Schwanzara, the son of a musical family, entered Bruckner's harmony class at the University of Vienna. He did so with high hopes, for he felt that the work at the University would prove to be more advanced than that which Bruckner offered at the Conservatory. In this, he was disappointed, for Bruckner's lectures were geared to a general audience of modest technical knowledge. However, Schwanzara became so fascinated by Bruckner's personality and method of presenting his materials, and was so appreciative of the opportunity to come into contact with the great man, that — unlike many of the students who freely "cut classes" and took only sketchy notes when they bothered to be present — he attended class regularly and took complete shorthand notes, also copying Bruckner's musical examples in their entirety. Since he had already formed the plan of publishing this material some day, he further checked on the accuracy and completeness of his notes by attending the same classes during the two subsequent academic years 1892-93 and 1893-94. In this manner,

he was able to compile what he claims to be the only complete transcription of Bruckner's University lectures. It is this material which is offered to us in the present book. (Anton Bruckner: *Vorlesungen über Harmonielehre und Kontrapunkt an der Universität Wien*, herausgegeben von Ernst Schwanzara. Vienna, *Österreichischer Bundesverlag*, 1950.)

Schwanzara provides an illuminating, if sometimes polemic, preface dealing with Bruckner's musical studies and the way in which the results of these were utilized in his teaching (with special emphasis on the all-important influence of Simon Sechter), and, most interestingly, with Bruckner's persistent, finally successful efforts to gain an appointment at the University. Here we see Bruckner for the first time in conflict with Eduard Hanslick, who, since 1861, had been Professor of Music History and Aesthetics there. The long struggle to have instruction in harmony and counterpoint legitimized in the University bespeaks a conflict which, alas, has still not altogether disappeared from university life, even in America. Already in 1862, Hanslick had turned down a request for instruction in harmony, counterpoint and composition to be given by Rudolf Weinwurm, a firm friend of Bruckner's and director of the University's *Akademischer Gesangverein*, on the grounds that enough information on these subjects was given in his own lectures on music history and aesthetics; therefore, special courses were not necessary. In 1867, Bruckner, then cathedral organist at Linz, made his first application to the University for a position as teacher of musical composition. Hanslick promptly rejected this application, for he believed that "practical instruction in composition does not properly belong to the University, but rather in a professional school or conservatory." If composition is to be taught at the University, he went on, why not then add teachers of drawing, painting, etching and sculpture? (An American reader accustomed to the broad course offerings of our universities might well think at this point, "Why not, indeed?") A renewed, more detailed application made by Bruckner in 1874 was likewise refused by Hanslick, with the further comment that the composer's personality and complete lack of any scholarly background made him about the least suitable person imaginable for a University position. However, Bruckner was not without friends at court, and it seems that some political pressures must have been brought to bear on Hanslick, for in October, 1875, he wrote tersely, "There is no objection to the appointment of Bruckner as an unpaid teacher of harmony and counterpoint at the Vienna University." Such an appointment was finally made in November, 1875. While this was a considerable moral victory for Bruckner, there was also, of course, an element of disappointment. He had hoped to secure a better-paid position which would free more of his time for his own creative work (an ambition which Hanslick, not surprisingly, resented). Instead, he got an unpaid position which robbed him of even more precious time. But, on the other hand, he gained a new audience of friends and supporters ("many thousands," Schwanzara somewhat hyperbolically exclaims) whose interest in him and in his work helped to brighten his later years.

Bruckner's relationships with his University students were, in gen-

eral, happy ones. He respected their intelligence and idealism, and often confided in them about his intimate plans, not only before or after class, but even in the middle of a lecture. In turn, the students as a whole rewarded him with their respect and affection. A present-day teacher may read with somewhat rueful amusement, though, about certain disciplinary incidents which have a familiar ring. For instance, there was the flirtatious pair who happily whispered together during one of Bruckner's lectures until the understandably annoyed composer ordered the offending young man to get up and change his seat. (The outcome of this was that Bruckner sternly banned young ladies from his class during the following term; however, they were back in the fall.) Then there was the young Conservatory student who insisted on finding a joke in everything Bruckner said, even when the teacher had anything but humor on his mind. This boy was finally publicly reprimanded for his failure to take notes in class, and forced to "rootle" in his pockets until he found some sort of cheap notebook in which to write. Students there and then, it seems, were not so different from students here and now!

Turning now to the actual material which Bruckner covered in his class, we find a systematic method of presentation which still has validity today. Beginning with fundamentals, he explains to his students (the majority of whom, we recall, did not have any professional musical background or ambitions) the structure of the tone, of the interval, of the common chord, and of the scale. Next logically come diatonic progressions in major. Here we find two especially "Brucknerish" features: the extreme emphasis on the importance of fundamental root-progression (learned from Sechter, and later carried on by Schoenberg in his *Harmonielehre*) and the view that the fifth of II in major is "impure" and hence should be treated as a dissonance (a fine distinction which very few theorists make). In succession, triads in root position with their inversions, seventh chords with their inversions, and ninth chords are introduced. Only after this material has been completed do we tackle the progressions of triads with no common tone. Bruckner, like Sechter, feels that this type of progression postulates an imaginary "intermediate root"; in other words, the root-progression, in such a series of chords, is not really, say, D-E, but D-(B)-E. (Something of this feeling carries over into the harmonic theory of Schoenberg; he, too, treats these stepwise or "super-strong" progressions separately from the others.) Preparation and resolution of chords which demand such treatment (e.g., the six-four chord and the seventh chord) is always illustrated with great care by Bruckner, in all chord-positions.

Like many other theorists before and since, Bruckner did not throw his students into the problems of minor keys until he felt that the major had been thoroughly understood. The various fundamental progressions are explored by him in minor with the same thoroughness as in major. Now we are ready for modulations, which Bruckner carefully divides into three species: diatonic (to nearly-related keys by means of a common chord), chromatic (to more distant keys by means of altered chords), and enharmonic (by means of ambiguous, "wandering" chords whose function changes as their spelling is enharmonically changed.) Bruckner was well aware of the useful (and often, in the

nineteenth century, overused) potentialities of one such harmony, the diminished seventh chord. He wittily called it the "Musical Orient Express," because it travelled so rapidly to such far regions. (A bit later, Schoenberg called it the "aspirin harmony, because you take it for everything." Today we might update this to "Miltown harmony," I suppose!) Both Bruckner and Schoenberg were conscious of the potentially destructive nature of such chords and therefore insisted that their use within a tonal setting be controlled with great care.

In successive years of University teaching, Bruckner reduced ever more drastically the amount of time which he devoted to counterpoint in his class. Perhaps he felt that a grasp of more than the essential principles of this art was not essential for students who were not specifically preparing for professional musical careers (unlike the Conservatory students). In any case, we have a compact four printed pages devoted to this subject in Schwanzara's notes. Reference is made to the principles of *cantus firmus* counterpoint (though the traditional "species" are not discussed), to the construction of canons, and to the fugue and its principal sections. In the summer term of 1892, it seems that very few students had followed Bruckner even this far, for Schwanzara recounts that at the last lecture, on July 11, only four were present. But the smallness of their numbers did not diminish their enthusiasm, for they applauded and stamped their feet vigorously (an old European university custom) as Bruckner closed the session by saying, "I wish you all very happy holidays, and beg you to remain as loyal to me as I am to you — and always will be." Let us leave Bruckner the teacher in this mellow mood, as he sits afterwards with Schwanzara in front of the *Blue Cannonball*, in the little sidewalk "garden" surrounded by potted oleanders and ivies, enjoying a few beers and a pleasant chat. It is good to remember him this way and to realize that his moments of heaven-storming inspiration did not deprive him of that human touch without which no teacher is truly great. Thus we are all the more appreciative of Schwanzara's reminiscences, which illumine for us one more facet of an immortal musician and an unforgettable personality.

## CONTAGIOUS INTENSITY: BRUCKNER'S FOURTH IN NEW YORK, NOVEMBER 16, 1959

by KONRAD WOLFF

Two years and four days after their memorable Haydn-Webern-Bruckner concert, William Steinberg and the Pittsburgh Symphony Orchestra returned to Carnegie Hall for an equally memorable, similar, and yet dissimilar program. Similar, because again the concert culminated in the performance of a Bruckner symphony, and also because the two short pieces ("Expressions") by Luigi Nono — which opened the program — recall Webern's spirit. Dissimilar, however, because the Bruckner work this time was not preceded by two other Viennese compositions (cf. Dika Newlin, *CHORD AND DISCORD*, 1958, p. 112). Instead of Haydn's Surprise Symphony, a new work in three movements, "Pittsburgh Symphony," by Paul Hindemith was played — decidedly a no-surprise symphony. The exceptional quality of the performance made listening to this music quite enjoyable, at least during the second movement which contains genuine music-making of the kind associated with his best works. It is hard to understand why, at the very end of the symphony, the tune of "Pittsburgh is a Great Old Town" is introduced in a noisy orchestration.

Despite Webern's influence on Nono, the pieces we heard are also definitely non-Viennese. Their delicate color-scheme, including the specially organized percussion section (described in Frederick Dorian's excellent program notes), suggests Blue Grotto light and remains typically Italian. We received a wholly positive first impression of the pieces, their organic shape, and their evolution from concentration to expansion in the course of the music. To a few sarcastic professionals who were trying to dismiss the compositions with a pun on the composer's name, I can only say that the answer is "yes, yes."

Again, it was the quality of the performance by Steinberg and his orchestra which made it possible to enjoy the music immediately. His way of lifting the baton at the beginning of a piece is typical and almost symbolic of his compelling intensity: he raises it in a tremendous arc, extremely slowly and steadily, so that by the time it arrives overhead the discipline and concentration expressed in the motion have caught orchestra and audience alike.

The impression made by the Bruckner Fourth Symphony on everyone was overwhelming. An exceptional spontaneous ovation acclaimed the performers at the end. It must be assumed that the work itself, 78 years after its first performance, was familiar to many listeners. But the concert drew students and many other young music-lovers and thus certainly became the starting point for a great number of new Bruckner devotees. One music student has overcome a self-conscious crisis through her unprecedented emotional response to Bruckner's music at this concert.

The performance was utterly careful and at the same time flowing. A perfect equilibrium was achieved between the sensuous beauty of the melodic detail (the Schubert heritage in Bruckner) and the solemn architecture of each movement. Steinberg's enjoyment of subtle sonorities never detracted him from the line of the music.

He made two cuts: in the 2nd movement between the letters G and L of the Eulenburg miniature score, and in the Finale between the 4/4 preceding letter P and the pianissimo passage occurring 12 measures before letter S. They did not destroy the effect of the work in performance; possibly they helped it. Yet it is always wrong not to present a score in its entirety. No matter what the effect of the cut, it is not permissible. Arthur Miller has stated the core of the matter in an important recent letter (published in the *New York Times*, Nov. 29, 1959, in which he says: "A fine work is wedded to the time it takes to perform . . . it." He goes on to explain that it is impossible to make a digest "of a real work of art because it is digested in the first place; it is the ultimate distillation of the author's vision by definition." If we permit one mutilation we forfeit our right to protest. By justifying Steinberg's excisions in the Fourth we make it impossible to stop anybody else from doing worse.

However, it was only afterwards that I began to think about this problem. On that Monday night — thanks to the performers — I was simply under the spell of music and of Bruckner.

## BRUCKNER AND MAHLER

by BRUNO WALTER

The following article is reprinted from the November 1940 issue  
of CHORD AND DISCORD.

Throughout its ten years of existence the Bruckner Society of America has striven manfully and efficiently in behalf of Bruckner and Mahler. Therefore, in connection with its decennial retrospect, I gladly respond to its plea for an expression concerning these masters. To combine propaganda for Bruckner and Mahler into a single plan is to express the conviction that the success of the one helps the other's cause, that they belong side by side because of their artistic kinship.

I should not have agreed to write about Bruckner and Mahler did I not regard that little word "and" highly pertinent. Its appropriateness is borne out by Mahler's own words. I often heard him call Bruckner his forerunner, asserting that his own creations followed the trail blazed by his senior master. Of course that was over forty years ago, in the days of Mahler's *Second*, the symphony which, more vividly than all his other works, reveals his affinity with Bruckner. Yet from the *Third Symphony* on, his development was marked by an ever increasing deviation from Bruckner's course. I cannot recall Mahler's making the same remark during later years. Nevertheless, down to his latest works, we meet with occasional features which might be called Brucknerian. Thus it is worth while attaining a clear idea of the nature and degree of their relationship.

Much has been written concerning Bruckner. To the literature on Mahler I myself have contributed a book. Yet (as far as I know) a comparative study of Bruckner and Mahler is still to be made. Therefore I shall attempt in these comments to measure their relationship, to thrash out the features which unite and separate them. We shall find them alike in many important respects, but different, even opposite, in others of not less consequence. We shall find them so related, that understanding the one includes a certain degree of access to the other; yet so different, that affection for the one may seem consistent with total inaccessibility to the other. Certainly, to understand and love both requires a very complex musical disposition and an unusually broad spiritual span.

My comparison cannot limit itself to details of actual musical creation. The spiritual sources of their works, the personalities of both masters, are vital to the theme of our survey, not merely because they are more amenable to words than music itself, but because the light they shed upon the music is indispensable in an essay striving for knowledge. To demonstrate really and clearly the relationships between these composers' works, there is only one way; through per-

formances. Renouncing for once this (to me) most agreeable method, resorting to words, though aware that no bridge leads straight from them to music, I must also seek to approach my subject indirectly. The mystic connection between the inner life of a composer and his music makes it possible to discover his soul in his work. Understanding his heart lays bare an inner path to his music. Hence I hope a discussion of the individualities of both masters will enable me to fill in some of the gaps inevitable to an essay on their works alone.

#### *What Joins Them*

Nine symphonies composed by Bruckner, as well as Mahler, in the course of about thirty years, constitute the chief product of their creative power. The nature of the themes, developments, combinations, is (in keeping with their creator's nature) truly symphonic. Remarkable coincidences in the periodic progress of their work are the decisive step from the *Third* to the *Fourth* and the change of style between the *Fourth* and *Fifth* symphonies. The *Fourth* of each opens a new field of expression scarcely glimpsed in his previous works. A warm, romantic light rises over Bruckner's hitherto heroic tone-world; a tender fairy-tale-like idyll soothes Mahler's tempestuous heart. For both the *Fifth*, with its intensification of the polyphonic style, inaugurates the period of mature mastery. The laconic idiom of restraint, the art of mere suggestion, involving economy of means and form, is not theirs. Only in a number of his songs do we find Mahler's contradictory nature master of this style too. Otherwise both share in common the urge to yield their entire beings symphonically through unrestrained expression in huge dimensions. Their symphonies resemble each other also in the special significance of the finale in the total-architecture.

Broadly spun, essentially diatonic themes and a counterpoint directly joined to the classical tradition characterize both. To be sure, Mahler's later polyphony trod more complex, daring, and highly individual paths. To both (and to them alone) the church chorale comes as naturally as the Austrian *Laendler*. The utmost solemnity and folk-like joviality constitute the opposite poles in both their natures. They are linked with the classicists, the way leads through Schubert. Their association is strengthened, among other things, by the fundamentals of their harmony, their style of cadence and (all their deviations notwithstanding) their fondness for symmetry and regular periodic structure. Even the later Mahler, no matter to what regions his formal and harmonic boldness led him, maintained clear periodic structure and a firm tonal foundation. Both revel in broadly built climaxes, in long sustained tensions, whose release requires overwhelming sonorous dynamics.

In their gay or lyric moments we often meet with a typically Austrian charm recalling Schubert, though in Mahler's case it is frequently mixed with a Bohemian-Moravian flavor. Above all, however, Mahler and Bruckner are (though in different ways) religious beings. An essential part of their musical inspiration wells from this devotional depth. It is a main source of their thematic wealth, swaying an all-important field of expression in their works; it produces the high-water mark of their musical surf. The total idiom of both is devoid of eroticism. Often inclined to pathos, powerful tragedy, and emotional extremes of utterance, they attain climaxes of high ecstasy. Clear sunshine and

blue sky seldom appear in the wholly un-Mediterranean atmosphere of their music. "Romantic" was the name Bruckner gave his *Fourth*. In a related sense we find Mahler's earlier work romantic, aside from his un-Brucknerian diabolism. Yet in the later works of both the romantic note is rarely sounded.

Highly characteristic seems to me one negative manifestation of their relationship. Moved by their tremendous experience of Richard Wagner to an undying faith in his art, they show (aside from a slight influence over Bruckner's instrumentation) no Wagnerian traces in their work, or at most, so few, that the impression of their complete independence is in no wise affected thereby. Their individuality was of so sturdy a nature (astonishing in that epoch of musical history) that despite the open ear, open heart, and unreserved sympathy they lent the Wagnerian siren-song, they did not succumb to it. Of course, being essentially symphonists, they were equal to the threat of the dramatist against their self-determination, for the inspirational sources of their creation, as well as their native urge toward formal construction, differed fundamentally from his. Neither of them felt drawn to the stage, a phenomenon particularly remarkable in the case of Mahler, whose reproductive genius for the opera, expressed through incomparable interpretations, opened new paths in that field, actually instituting a tradition. Two abortive attempts of his early youth are his sole original contributions to the theater. Otherwise he never wrote for the stage, unless we include his arrangement of Weber's "Three Pintos."

Like Bruckner he took root in absolute music, save when he drew his inspiration from poetry, as in his songs. Yet was his work really rooted in absolute music? Is his *First Symphony* (originally named "Titan" after Jean Paul's novel) with its "Funeral March in the manner of Calot," are the *Second* and *Fourth* with their vocal movements, the *Third* with its (later) suppressed sub-titles, genuine symphonic music in the Bruckner sense? Indubitably Mahler's music differs from Bruckner's in the degree of absoluteness intended. It was induced and influenced by more specific imagery, fantasy, and thought than Bruckner's music, which rose from less tangible, darker spiritual depths. But does this really involve an essential difference? Is not Beethoven's *Pastorale*, despite the "Scene at the Brook," "Rustic Festival," and "Storm," absolute symphonic music, its lesser absolute intention notwithstanding.

Let us conjure up the basic process of musical creation. The composer suddenly has a musical idea. Where there existed apparently nothing before, save perhaps a mood, an image, there is, all at once, music. A theme is present, a motive. Now the shaping hand of the composer grasps it, unfolding and guiding its trend. Fresh ideas come streaming in. Whether or not more definite imagery plays a role in the creative process, the decisive factors governing the result remain the "grace" of basic musical creation and the power of symphonic construction. That "grace" and that power were granted Mahler, as well as Bruckner. Therefore, despite the thoughts and visions that influenced his creation, he also took root in absolute music.

After all, do we know whether Bruckner, or for that matter even Mozart, was not visited by imagery and thoughts during the creative process, or, whether many of their ideas, looming up out of the sub-

conscious, did not take turnings over some conscious path, thereby acquiring more vivid coloring and more subjective character? In Goethe's *Elective Affinities* the image of Otilie fills Eduard's eyes during a conjugal meeting with his wife Charlotte, while the latter beholds the captain's image. Though the offspring of this union bore external traces of these wandering visions, it was nevertheless the child of Eduard and Charlotte, sprung from their natural union. Deep mystery surrounds the genesis and pure music may result, despite the influence of extra-musical ideas upon the act of generation. Yet if the composer's intention is really descriptive, i.e., if he makes the music the means of portraying an idea or image, then, of course, he has himself blocked the path to pure music.

To Mahler as well as Bruckner music never was the means of expressing something, but rather the end itself. He never disregarded its inherent principles for the sake of expression. It was the element in which both masters lived, impelled by their nature toward symphonic construction. Mahler's enchanted creative night was filled with violently changing dream-forms; Bruckner's was dominated by a single lofty vision. Since Bruckner (so far as I know) had, until his death in 1896, acquired no acquaintance with Mahler's work, whereas the latter was well versed in Bruckner's art, it remains to be considered whether it was not this influence, acting only upon the younger composer, that aroused the impression of the kinship felt by Mahler himself. Without a certain relationship, however, no influence can be exerted. Moreover, Mahler's individual tonal language reveals no sign of dependence, whether similarity or reminiscence. Yet we find in one of his main works, the *Second*, indications of a deeper, essential kinship and meet with occasional "Bruckner" characteristics down to Mahler's very last creations. Nevertheless he was as little dependent upon Bruckner as Brahms upon Schumann, many of whose "characteristics" haunt the work of Brahms. To both Bruckner-Mahler may be applied the Faust-verdict concerning Byron-Euphorion: to each of them was granted "a song his very own," i.e., originality.

#### *What Divides Them*

Bruckner's nine symphonies are purely instrumental works. Mahler, on the other hand, enlists words and the human voice for his *Second*, *Third*, *Fourth*, and *Eighth*. Besides the symphonies Bruckner composed three *Masses*, the *Te Deum*, the *150th Psalm*, smaller devotional vocal works, and (to my knowledge) two male choruses. Of an entirely different stamp was Mahler's non-symphonic creation. He wrote *Das klagende Lied*, set to his own narrative poem; the four-part song cycle *Lieder eines fahrenden Gesellen*, the words also by himself; songs with piano accompaniment and with verses from *Des Knaben Wunderhorn*; during a later period, orchestral songs set to poems by Rueckert, among them the *Kindertotenlieder* cycle; and finally his most personal confession, *Das Lied von der Erde*, with verses by the Chinese poet Li-Tai-Po. We see Bruckner, therefore, aside from his symphonies, concentrated almost entirely upon sacred texts, while Mahler is inspired by highly varied fields of poetic expression. In his symphonies, *Das Urlicht* from *Des Knaben Wunderhorn* and Klopstock's "Resurrection Ode" furnished him with the solemn affirmative close of his *Second*,

Nietzsche's *Midnight* yielded the questing, foreboding fourth movement and verses from *Des Knaben Wunderhorn* the answering fifth movement of the *Third*. From the same collection Mahler chose a poem of childlike faith to give symbolical expression to his own hope of celestial life. In the *Eighth* the hymn "Veni Creator Spiritus" and the closing scenes of *Faust* constitute his confessions of faith.

Thus the record of his vocal creations is at the same time a clue to the story of his heart. It tells of his struggles toward God, through discovery and renewed quest, through ever higher intuitions and loftier yearnings. Yet over this dominant note, the "Ostinato" of his life, resound many other tones, defined by accompanying verses: Love and death, lansquenet life and a spectral world, the joy of life and its woe, humor and despair, savage defiance and final resignation, all these find individual and convincing expression in his musical eloquence. If I wished to present the difference between the two masters in the shortest imaginable formula, I would say (conscious of the exaggeration of such a summary): at bottom Bruckner's spirit was repose, Mahler's unrest. With Bruckner the most impassioned movement has a foundation of certainty; not even Mahler's inmost depths remain undisturbed. Bruckner's scope of expression is unlimited, though it has but few main subdivisions; with Mahler these are prodigal in number, embracing all lights and shades of a weird diabolism, a humorous buffoonery, even resorting to the eccentric and banal, besides countless expressive nuances ranging from childlike tenderness to chaotic eruption. His heartfelt, folk-like themes are as Mahlerian as his sardonic cacophonies, whose lightning apparitions render all the darker the night of his musical landscape. Mahler's noble peace and solemnity, his lofty transfiguration are the fruits of conquest; with Bruckner they are innate gifts. Bruckner's musical message stems from the sphere of the saints; in Mahler speaks the impassioned prophet. He is ever renewing the battle, ending in mild resignation, while Bruckner's tone-world radiates unshakable, consoling affirmation.

We find, as already stated, the inexhaustible wealth of the Bruckner music spread over a correspondingly boundless, though in itself not highly varied realm of expression, for which the two verbal directions, "feierlich" (solemnly) and "innig" (heartfelt), most often employed by him, almost sufficed, were it not for the richly differentiated *scherzi* that remind us of the wealth of the humoristic external ornaments of impressive Gothic cathedrals. Even Bruckner's orchestra undergoes scarcely any change. With the *Seventh* he adds the Wagnerian tubas, in the *Eighth* the harp, but he does not alter his instrumental methods as such. Beginning with the *Fifth* the character of his harmony and polyphony no longer varies, though (to be sure) it is sufficiently rich and inspired to require no change.

Mahler renewed himself "from head to toe" with each symphony: the *First*, his "Werther," as I once named it; the *Second*, a kind of "Requiem"; the *Third*, which one might be tempted to call a pantheistic hymn; the *Fourth*, a fairy-tale *idyll*. From the *Fifth* to the *Seventh* imagery and ideas yield to absolute-musical intentions. Even though each of these three symphonies has its own individual atmosphere, they stand considerably closer to each other in style and general content

than the widely separated first four. They share in common a musically more complex, polyphonically more profound idiom, richer in combinations, imparting a new, stronger impression of Mahler's varied emotional life. The human voice is the main instrument in the *Eighth*. A magnificent, specifically choral polyphony determines the style of the hymn-like first movement, while in the Faust-scenes the composer adapts his musical idiom to the Goethe-word and the demands of lyric singableness through a sort of simplification. In *Das Lied von der Erde* we meet with still another Mahler, inaugurating a third creative period, with a new manner of composition and orchestration. On this highest plane is born the *Ninth*, the mighty symphonic presentation of the spiritual sphere of *Das Lied von der Erde*. The sketches toward a *Tenth* bring to a sudden end this sharply defined course of creative evolution, the outstanding feature of which was its rich differentiation. This applies also (as already stated) to his instrumentation. An inborn, extremely delicate sense of sound, an ear open to orchestral possibilities lead, at the beck of expression and clarity, to unique mastery over the orchestra. From wealth of color and charm of sound to an objective exposition of his increasingly complex polyphony, this is the path Mahler's orchestral technique, changed and intensified by the increasing demands of each work, had to travel.

Each orchestral song, from the very earliest, reveals an individual instrumental combination, mainly of an amazing economy. The symphonies, with the exception of the *Fourth*, are inhabited by orchestral masses over which an unbounded tonal fantasy holds sway. In contrast to Bruckner he was compelled to struggle ceaselessly for the solution of orchestral problems, increasing with each new work. In this respect he always felt himself, as he complained to me, "a beginner."

The great stress in Bruckner's music rests upon the idea, in Mahler's upon the symphonic elaboration of the idea involving processes of forming and transforming which in the course of years scaled the highest peaks of constructive power. It is characteristic of the difference between the two composers that their opponents attack the form in Bruckner's, the substance in Mahler's work. I can understand these objections to some extent without, however, acquiescing in them. From Schenker comes this charming thought: that "even a little bouquet of flowers requires some order (guiding lines) to make it possible for the eye to encompass it at a glance," i.e., to see it as a bouquet. "Form" is such order, premeditated, organic association, complete, strict unity. Our classic literature contains matchless examples of organic unity. Yet we have art works of undoubtedly highest value (I mention Goethe's *Faust* as the most significant instance) the genesis of which resisted this strict organic unity of form, gaining more in richness thereby than they lost in lucidity. I confess that for many years, despite my love for Bruckner's tonal language and his wonderful melodies, despite my happiness in his inspirations, I felt somewhat confused by his apparent formlessness, his unrestrained, luxurious prodigality. This confusion disappeared as soon as I began performing him. Without difficulty I achieved that identification with his work which is the foundation of every authentic and apparently authentic interpretation. Now, since I have long felt deeply at home in his realm, since his form

no longer seems strange to me, I believe that access to him is open to everyone who approaches him with the awe due a true creator. His super-dimensions, his surrender to every fresh inspiration and new, interesting turning, sometimes not drawn with compelling musical logic from what has gone before, nor united to what follows, his abrupt pauses and resummptions: all this may just as well indicate a defect in constructive power as well as an individual concept of symphony. Even though he may not follow a strictly planned path to his goal, he takes us over ways strewn with abundant riches, affording us views of constantly varying delight.

Mahler's striving for form succeeded in bringing transparent unity to the huge dimensions of his symphonies. His was a conscious effort towards order. All his singularities of mood, his excesses of passions, his outpourings of the heart are seized and united according to a plan dictated by his sovereign sense of form. He once told me that, because of the pressure of time (his duties as director left him only the summer months for composing) he may perhaps not have been, at times, sufficiently critical of the quality of an idea, but that he had never permitted himself the slightest leniency in the matter of form. Yet the objection to his thematic art finds no corroboration in this confession, for that objection refers, as far as I know, only to so-called "banalities," i.e., intentional ironic turns, meant to be humorous and dependent for acceptance or rejection upon the listener's capacity for humor. It is not in these that Mahler perceived a deficient quality. He referred to a few transitional lyrics in later works, which struck him as perhaps not select enough, though they would scarcely disturb anyone's enjoyment of the gigantic whole.

The relative beauty of themes and the value of musical ideas cannot be a subject for discussion. I limit myself to the declaration that, after life-long occupation with his works, Mahler's musical substance seems to me essentially music, powerful and individual throughout, beautiful when he strives for beauty, graceful when he strives for charm, melancholy when for sorrow, etc. In short it was truly the material suited to the rearing of such mighty structures, and worthy of the sublime feelings it served to express: Mahler was, like Bruckner, the bearer of a transcendental mission, a spiritual sage and guide, master of an inspired tonal language enriched and enhanced by himself. The tongues of both had, like that of Isaiah, been touched and consecrated by the fiery coal of the altar of the Lord and the threefold "Sanctus" of the seraphim was the inmost meaning of their message.

#### *The Personalities*

The favor of personal acquaintance with Bruckner was not granted me, but that Vienna, into the musical life of which I entered as a young conductor, was still full of the most lively memories of him. I came in touch with "Bruckner circles," which abundantly supplemented Mahler's narratives of his own Bruckner-experiences. I gathered from reports of pupils and friends of the master, from numerous anecdotes, so vivid a picture of his personality, his atmosphere, his mode of life, his conversation, his habits and eccentricities, that I feel as if I had known him thoroughly. One drastic difference between Bruckner and Mahler struck me even then: no feature in Bruckner's personal make-up re-

flected the greatness and sublimity of his music, while Mahler's person was in full harmony with his work. What a contrast in the very appearance of the two masters! Gustav Mahler's lean figure, his narrow, longish face, the unusually high, sloping forehead beneath jet-black hair, eyes which betrayed the inner flame, the ascetic mouth, his strange, irregular gait — these impressed one as the incarnation of the diabolical conductor Johann Kreisler, the famed musical self-reflecting creation of the poet E. T. A. Hoffmann. Anton Bruckner's short, corpulent, comfortable figure, his quiet, easy manner contrast as strongly as possible with such romantic appearance. But upon the drab body is set the head of a Roman Caesar, which might be described as majestic, were it not for the touch of meekness and shyness about the eyes and mouth, giving the lie to the commanding brow and nose.

As might be expected from their contrasting exteriors the two men themselves differed. Bruckner was a retiring, awkward, childishly naive being, whose almost primitive ingenuousness and simplicity was mixed with a generous portion of rustic cunning. He spoke the unrefined Upper-Austrian dialect of the provincial and remained the countryman in appearance, clothing, speech, and carriage till the end, even though he lived in Vienna, a world-metropolis, for decades. His conversation never betrayed reading, whether literature or poetry, nor any interest in scientific matters. The broad domains of the intellectual did not attract him. Unless music was the topic he turned his conversation to the narrow vicissitudes and happenings of every-day existence. Nevertheless his personality must have been attractive, for almost all reports agree upon the peculiar fascination exerted by his naivete, piety, homely simplicity, and modesty bordering at times on servility, as borne out by many of his letters. I explain this attractive power of his strange personality to myself as due to the radiance of his lofty, godly soul, the splendor of his musical genius glimmering through his unpretending homeliness. If his presence could hardly be felt as "interesting," it was heartwarming, yes, uplifting.

It was entirely otherwise with Mahler, who was as impressive in life as in his works. Wherever he appeared his exciting personality swayed everything. In his presence the most secure became insecure. His fascinating conversation was alive with an amazingly wide culture reflecting a world of intellectual interests and an uncommon capacity for swift, keen thinking and expression. Nothing of importance ever thought, accomplished, or created by man was foreign to him. His philosophically trained mind, his fiery soul grasped and assimilated the rich, nourishing intellectual diet without which so Faustian a being could not exist, yet which could as little satiate or appease him as it had Faust. A firm consciousness of God that knew no wavering filled Bruckner's heart. His deep piety, his faithful Catholicism dominated his life, even though it is rather his work that reveals the true greatness of his faith and his relationship to God. Not only his *Masses*, his *Te Deum*, his devotional choral works, but his symphonies also (and these before all) sprang from this fundamental religious feeling that swayed Bruckner's entire spirit. He did not have to struggle toward God; he believed. Mahler sought God. He searched in himself, in Nature, in the messages of poets and thinkers. He strove for steadfastness while

he swung between assurance and doubt. Midst the thousand-fold, often chaotic impressions of world and life he tried to find the ruling prime thought, the transcendental meaning. From his Faustian urge for knowledge, from his commotion by the misery of life, from his presentiment of ultimate harmony stemmed the spiritual agitation which poured from him in the shape of music. Change characterized Mahler's life; constancy Bruckner's. In a certain sense this is also true of their work. Bruckner sang of his God and for his God, Who ever and unalterably occupied his soul. Mahler struggled toward Him. Not constancy, but change ruled his inner life, hence also his music.

Thus their work and their nature were in many respects akin, in many at variance. Yet both belong to that wide, august circle of friends who never abandon us to languish in grief or solitude, but offer us solace in all pain. Theirs is a precious legacy that for all time belongs to us. Those friends are always present. Their spirits dwell in our book-chests, music-cabinets, in our memory, at our beck and call day and night. Our two masters have long since been received into this circle because they continue the work which the great musicians of the past have left. Great was the difference between the two, as I have shown; but conjure up one and the other is not very distant. Along with Bruckner's music (aside from the described more concrete connections) there vibrates a secret Mahlerian undertone, just as in Mahler's work some intangible element is reminiscent of Bruckner. From this intuition of their transcendental kinship it is clearly permissible to speak of "Bruckner and Mahler"; therefore it is possible that, despite the differences in their natures, despite the very incompatibility of important features of their work, my unqualified and unlimited love can belong to them both.

---

## MAHLER PLAIN

by WINTHROP SARGEANT

The following review which appeared in *The New Yorker* on February 13, 1960, is reprinted by permission; copyright The New Yorker Magazine, Inc., issue of Feb. 13, 1960.

Since we seem to be hearing more of Gustav Mahler's music this season than we have heard in the past ten seasons put together, the lucky admirer of this music can now begin to pick and choose his favorite Mahler interpretations, instead of merely being thankful for the opportunity to hear any Mahler at all. For me, the choice depends not only on emotional factors, which may give a particular conductor a special sympathy with Mahler's moody, nostalgic, and rather pessimistic romanticism, but also on technical ones, which relate to Mahler's very curious methods of scoring and the means that are used to realize them in practical performance. For Mahler's music is not quite like anybody else's, and the art of conducting it makes peculiar demands on the man who holds the baton. It does not "play itself" to the extent that Rachmaninoff's, Wagner's, or even Mozart's does. A conductor cannot wallow in it, sketching in the main outlines and feeling confident that it will come out all right, provided his orchestra is a good one.

There is, as a matter of fact, a singular absence of main outlines, as these exist in more standard types of music. Everything in Mahler's orchestration is in a continuously shifting state. There are melodies in it, but they are not solos for a given instrument; they are melodic sequences that are apt to change color several times during their passage. One of them may start out as, say, an oboe part, continue, with imperceptible joinery, as a part for a lone violin, and wind up as a part for a muted trombone, all without any break in the melodic continuity. There is also, as anybody who has examined a Mahler score knows, an incredible proliferation in his work of what musicians call "dynamic" signs—fortes, pianos, accents, crescendos, diminuendos—all of them indicating precise degrees of loudness and softness, and they do not occur with any unanimity but are played against each other contrapuntally. Loud instruments like trombones and tubas are asked to play very softly while soft instruments like the flute play as loudly as possible; crescendos by one group of instruments are set against diminuendos by another, with the result that the first group shifts almost unnoticeably to a position of prominence, changing the whole color of the passage. This sort of fragmentation, which is unique with Mahler, compares with the conventional techniques of orchestration somewhat as the brush-work of an Impressionist painter compares with that of a Renaissance master, and it is extremely difficult to project in performance, for it demands not only the most microscopic accuracy but a calculated objectivity that would seem to be, and perhaps really is, in conflict with Mahler's always deeply emotional musical content. At any rate, it is quite a trick for a conductor to bring off, and there are many good conductors who are not good Mahler conductors.

George Szell arrived in Carnegie Hall with the Cleveland Orchestra one night last week, and brought off the trick magnificently in Mahler's "Das Lied von der Erde." Every shading of the score was superbly controlled, and yet there was no loss of emotional power and no feeling of self-consciousness about the reading. All the iridescent and chameleonesque writhings of the orchestral fabric were set forth with the utmost exactness and subtlety. Maureen Forrester sang the contralto solos nobly; a new Swiss singer named Ernst Haefliger coped at least adequately with the highly taxing sequences for tenor; and the orchestra itself played brilliantly. Perhaps this is the place to note that in recent years the Cleveland Orchestra has become a serious rival of the "big three" of the Eastern seaboard. It has its own character, which seems obviously dictated by the painstaking and slightly astringent personality of its conductor, and this character is by no means an unwelcome contrast to the lush qualities of the others. The orchestra is, in any case, a superb ensemble and a sensitive and responsive instrument.

## MUSIC: GLOWING MAHLER

by HOWARD TAUBMAN

The following review which appeared in the *New York Times* on February 2, 1960, is reprinted by permission; copyright 1960.

George Szell and the Cleveland Orchestra gave a Carnegie Hall

concert last night that qualifies as one of the season's memorable events. They were abetted by Ernst Haefliger, Swiss tenor, who was making his New York debut, and by Maureen Forrester, Canadian contralto, whose singing was something to treasure in its own right.

The evening began with a buoyant and transparent reading of the Mozart E flat major Symphony, and the rest of it was devoted to a radiant performance of Mahler's "Das Lied von der Erde" (The Song of the Earth). The Clevelanders, like every other orchestra in recent weeks, was paying its respects to Mahler on the centennial of his birth.

This was the first of the visitors' three Carnegie Hall concerts this season, and the fine impression the ensemble has made in the last few years was not only confirmed but also improved. Mr. Szell had his musicians playing with lightness and brilliance, refinement and opulence. The quality and varieties of tone were remarkable, even in these days of splendidly seasoned instruments.

With an orchestra built and trained to his own ideas of discipline and musicianship, Mr. Szell could shape interpretations of perception and depth. The Mozart symphony moved as if airborne. The phrasing had classic proportions but the warm heart that beats under the work's formal garb was never forgotten.

The tribute to Mahler was carried out on an equally high level. "Das Lied von der Erde" is the most satisfying of the composer's major works. His muse was always most thoroughly at home in the song forms, and this is a symphony of songs.

It came after the Eighth Symphony and could have been designated the Ninth. Mahler declined to do so, fearing that the Ninth, so crucial in the careers of predecessors like Beethoven and Bruckner, would signify the end. A Ninth followed several years later. Like "Das Lied von der Erde," it dealt with death and the hope of redemption. But in "Das Lied von der Erde" Mahler achieved his loftiest fusion of matter and manner.

Mr. Szell had every element of the score under control, and his players responded so as to make him proud. There is an abundance of testing moments in this music for all the choirs. The winds played securely and glowingly. The strings were a joy. Rarely do first violins achieve a pianissimo of such shimmering and delicate hues as this group did in the second section.

Mr. Haefliger sang with intelligence and a grasp of style. His voice is a sturdy tenor with its most effective range in the middle. He can shade it smoothly, and he can produce a warm tone in legato passages. His extensive recordings abroad have earned a considerable reputation for him, but a chance at other assignments will be needed to form a fuller judgment.

Miss Forrester, who has made her mark as a soloist, was a majestic interpreter of Mahler. Her singing had the breadth and somber ecstasies of a high priestess communing with unseen spirits. She produced tones of the most delicate subtlety. In the final section, "Der Abschied" (Farewell), she managed high, soft notes that were like floating velvet. There was no suggestion of a performance; only the communication of Mahler's thought and emotion.

A SYMPHONIC TEMPLE  
RANDOM REFLECTIONS ON BRUCKNER'S  
"ONE SYMPHONY"

by HERBERT ANTCLIFFE

It has been said of Anton Bruckner that he was the composer of one symphony, which was divided into eight parts, with a setting of the *Te Deum Laudamus* as a coda. . Literally, of course, this is not true, but there is some element of truth in it. No other composer has ever continued his work as a symphonist with the same regular emotional development.

Not that they are in general structurally or thematically connected. The connection is chiefly, if not entirely, emotional. From the first to the eighth they build up a gradually developed climax — one of the finest climaxes in all music.

Few people will ever have the chance of getting the full effect of that climax; for to get it one must hear the whole series in their regular order and with not too long waits between each of the successive numbers.

He did not start with the naive simplicity of Mozart or even of Beethoven, but the comparative simplicity of his first is equally in contrast with the last as is Beethoven's first with his ninth, or even that between the first of Mozart and the Jupiter.

Perhaps they are an equal example of the condition of *per ardua ad astra* as the works of these two great composers, but they are more single-minded than those of either.

Mozart's symphonies, in spite of their gradual strengthening in expression and technic, and apart from the very debatable suggestion that the three last were an unconscious and unintended autobiography, are in the main *pièces d'occasion*. In other words, they were written as occasion demanded, and not as spontaneous outbursts of emotion. Those of Beethoven were spontaneous and unordered, being explosions of emotion or expressive of his delight in the country, or of admiration or of sheer jollity in the desire to exercise his technic. There is no chain of spiritual emotion linking them together.

A well-known British musician once objected to the music of Bruckner, because it owed so much to that of his predecessors; but which composer has ever been entirely original? And the great composer whom he almost worshipped, J. S. Bach, owed almost more than any one before or after him.

The mere fact of his borrowing phrases or chords from the earlier symphonies to help in building up the later ones had little to do with that continuity. Little, or even nothing, to do with such building up. Such borrowing may sometimes have helped to express the continuity of feeling, but it is in the feeling itself that such continuity exists.

This borrowing, whether from the earlier symphonies and even from some of his earlier purely religious works, is in any case largely a matter of technic and is indulged in to no greater extent than was the case with almost every composer of large works.

To my thinking, Bruckner's symphonies are, as a whole and individually, the most perfect embodiment of religious feeling outside actual religious works such as those of the great masters of the post-Palestrina period — and perhaps some of the Tudor Church music — that exists, and, of course, excepting his own Church compositions. Whether Bruckner was a man who could be described as saintly, in the conventional use of the term, or not, I do not know. That his whole being was impregnated with his consciousness of the immanence of God is obvious.

From these symphonies he built up what has been described as a symphonic temple.

The foundations of that temple were laid, in the first place, in his religious works which were composed for orchestra and not merely for organ. Some preparation, some slight layer of musical and emotional ground was to be found in earlier attempts at purely orchestral writing, but this was scarcely an essential feature of the foundations of his symphonic temple. This temple started with his first symphony and finished with what he did towards his ninth and with the great *Te Deum Laudamus*, itself a truly symphonic work.

Various students of the life and works of Bruckner have remarked on the patience (in spite of occasional outbursts of temper) of the man. This patience is reflected in much, one may almost say, the whole of his work — and particularly in his symphonies — and it may be the mere fact that, although he felt within himself his power as a symphonist, he did not write his first symphony until he was forty years old is one indication of this patience, which was one of the unifying forces in their construction.

Incidentally, moreover, these borrowings are further evidence of his patience. There is no lazy taking over of old material, because it was too much trouble to create new. Each borrowing, for instance from his earlier religious works in the second symphony or from the early symphonies in the later ones, has its definite aim and expression, and, of course, the supreme instance I have already mentioned of this — the placing of the *Te Deum* as a climax to all — is indispensable to the work of erecting the greatest music temple of the Nineteenth Century, a work that has recently been compared by a religious writer in Holland (the musical critic of a Jesuit paper, so probably a Jesuit himself) with Handel's *Messiah* and Bach's *St. Matthew Passion* for its religious force, though that force has as yet to bear its full fruit both in his own country and in others.

I have referred to the comparison between Bruckner's symphonic work and a great temple. With what kind of temple, it may be asked, can it best be compared? Certainly, a Christian temple, but so far as their building is concerned these are many and various alike in their periods and their individual styles. To this question, a colleague has recently provided at least a partial answer. He pointed out that in the great Gothic cathedrals of the past, those which have withstood

age and storm and maltreatment during the centuries, such, for instance, as Notre Dame in Paris or the minsters at Cologne and Durham and York, their very beauty and majesty lies not in the fact that they were designed and built under the supervision of a great single architect, for they were not. Many changes in intention, at least in the matter of detail, took place in the 600 years that it took to build Cologne Cathedral. No, even their unity of conception was intensified by the fact that every layer, even every stone, was carefully chiselled and shaped and decorated before it found its place in the whole work.

This comparison with the work of Bruckner cannot, of course, be applied entirely, for Bruckner himself was both architect and builder, and the whole of his work, as a symphonist, was completed within a space of four decades. The comparison is that just as these great edifices of stone were shaped and decorated in small details carefully shaped and adapted, Bruckner's symphonies were built up diligently out of phrases and passages carefully thought out and actually composed before they were placed in the complete composition. The instances I have mentioned of his borrowings from his earlier works are the most striking instances of this, but not the only ones. The question raised in Austria fifty years ago as to whether Bruckner lacked form can be answered by this. It was all built up patiently of small individual pieces which merely by their relation one to the other make a complete and well-formed entity.

---

#### KILENYI MAHLER MEDAL AWARDED TO DR. HEINZ UNGER

In appreciation of his efforts to create greater interest in the works of Gustav Mahler in Canada, the Board of Directors of The Bruckner Society of America awarded the Kilenyi-Mahler Medal to Dr. Heinz Unger.

Under Dr. Unger's direction, the York Concert Society, Toronto, has performed the following works of Mahler:

- May 26, 1953 3 Songs (Lois Marshall, soloist)
- May 27, 1954 *Kindertotenlieder* (James Milligan, soloist)
- May 15, 1956 *Lieder eines fahrenden Gesellen*  
(Maureen Forrester, soloist)
- April 30, 1957 *Fourth Symphony* (Lois Marshall, soloist)

On Dec. 11, 1954, and Oct. 8, 1956, Mahler's *Fourth* under Dr. Unger's direction was broadcast over CBC.

On Jan. 22, 1958, the Toronto Symphony, Dr. Unger conducting, gave the first performance in Canada of Mahler's *Second*; participants were: Lois Marshall and Claramae Turner, soloists; The Bach-Elgar Choir of Hamilton, John Sidgwick, Director.

Dr. Unger conducted the first performance in Canada of Mahler's *Fifth* on Feb. 25, 1959. After the performance, Dr. Geoffrey Waddington, Chairman of the Canadian Broadcasting Corporation, acting on behalf of The Bruckner Society of America, made the presentation of the Kilenyi-Mahler Medal to Dr. Unger. The performance and the presentation ceremony were broadcast from coast to coast on the CBC trans-Canada network.

## AUF FRÖHLICHES WIEDERSEHEN

The Vienna Philharmonic Returns to New York, 1959

by DIKA NEWLIN

Reviewing the Vienna Philharmonic's New York debut of 1956 for this journal, I wrote: "we . . . hope that they will once more come bringing Bruckner — and perhaps Mahler?" (CHORD AND DISCORD, 1958, p. 59.) My wish for Mahler was not to be gratified by the splendid orchestra's return to New York in November, 1959, as part of its triumphal world tour extending from New Delhi, India, to Montreal, Canada. But we friends of Bruckner can scarcely complain; for, instead, on November 17, it offered a spectacular performance of Bruckner's Eighth under the direction of Herbert von Karajan. Wisely, Mr. von Karajan and the orchestra devoted almost the entire evening to this monumental work, preceding it only with a refined and tasteful performance of Mozart's *Eine kleine Nachtmusik*. Nor was it, this time, followed by any light Viennese encores which might negate its heaven-storming climax; the beloved waltzes and marches without which no Vienna Philharmonic tour would be complete were reserved for the second half of the more "popular" matinee concert on November 19, which also included Mozart's G minor Symphony and Schubert's *Unfinished*.

I have used the word "spectacular" to describe the Bruckner performance. This term is meant to express both its shining merits and its (slight) limitations. To me, the extrovert von Karajan never quite succeeds in bringing to Bruckner that ultimate degree of spiritual absorption in the work which this music demands. Instead, he concentrates on *sound* — and in this respect the performance was supreme. Only when listening to this orchestra can one feel that one is really hearing the sonority (especially in brasses and strings!) which Bruckner himself must have had in mind when composing. The unfolding of the successive climaxes of the *Adagio* displayed an especially fine gradation of dynamic levels and tone-colors. With only the very slight reservation which I have made above, this movement was an ecstatic listening experience; I can only feel sorry for the critic who found it "agonizing" and who praised his seat-neighbor for putting her head on her husband's shoulder and going to sleep! Needless to say, the Finale "brought down the house" and the orchestra could once more have the pleasure of realizing that it is not, after all, so dangerous to play Bruckner in America,<sup>1</sup> as it responded to the enthusiasm of the audience.

After this concert, Howard Taubman wrote in the *New York Times*, "No one will complain if the intervals between calls [of the Vienna Philharmonic] become even shorter." I can only echo this sentiment and close my account of their all-too-short Eastern Seaboard visit with the words of my title: *Auf fröhliches Wiedersehen!*

<sup>1</sup> In fact, sometimes it is dangerous *not* to. Day Thorpe, *Washington Star* critic, quite rightly (in my opinion) scolded the orchestra for playing a miserable piece by the contemporary Austrian composer Theodor Berger in its Washington concert of November 22, instead of doing something by Bruckner, Mahler, or Berg! Indeed, it is most unfortunate that the Bruckner was played in New York and Boston *only*, during the United States portion of the tour.

## IN MEMORIAM

### JULIO KILENYI

Julio Kilenyi (1886-1959) was born in Hungary. Before his departure for Argentina at the age of twenty-one, he had studied in Budapest, Paris, and Berlin. When he was thirty years old, he came to the United States and became a citizen eight years later.

A sculptor of wide renown, he created among others the designs for the William Penn Anniversary Medal, for medals officially awarded to Col. Lindbergh, Thomas A. Edison, President Coolidge, General Pershing, Admiral Byrd, and for medals commemorating the opening of the George Washington Bridge and the Lincoln Tunnel.

Plaques and medals by Kilenyi are exhibited at the Metropolitan Museum of Art, the Cleveland Museum of Art, Boston Fine Arts Museum, Smithsonian Institute, British Museum, Oxford University, The Franklin D. Roosevelt Library, and the Vatican Museum.

Prizes were awarded to him by the Allied Artists of America and the Tenth Olympiad Committee of Los Angeles, among others.

Julio Kilenyi had been active in The Bruckner Society of America for a quarter of a century. At the time of his death, he was an Executive Member, Director, and Vice-President. In 1933 he designed the Bruckner Medal of Honor for the exclusive use of the Society. Two years later, he designed the Mahler Medal of Honor to commemorate the seventy-fifth anniversary of Mahler's birth. This Medal was also made for the Society's exclusive use.

The medals are awarded for outstanding effort to further interest in and appreciation of the music of the two masters. By creating these designs, Julio Kilenyi has made a contribution of lasting value to the Bruckner-Mahler movement.

THE MASS AS CONCERT-PIECE: BRÜCKNER'S E MINOR  
MASS IN NEW YORK, APRIL 12, 1958

by DIKA NEWLIN

In my article on "Bruckner's Three Great Masses" (CHORD AND DISCORD, 1958) I deplored the fact that these magnificent works have not yet found their proper niche in this country, either in the church or in the concert-hall. Therefore, the appearance of the E minor Mass as the final work on an unhackneyed program given by the New Haven Chorale and Instrumental Ensemble (Donald Loach, director) in the beautiful Grace Rainey Rogers Auditorium of the Metropolitan Museum of New York was indeed a welcome addition to the concert life of this season. The concert, which also included Bach's Cantata No. 118, Mozart's rarely heard *Notturmi* (K. 436 and 437) and *Canzonetta* (K. 549), and *A Nuptial Triptych* of psalms by the contemporary American composer David Kraehenbuehl, was one of a series made possible by the Eda K. Loeb Fund.

I was not previously familiar with Mr. Loach's enterprising group, but most of them appeared to be young people—indeed, still in the student stage. Thus, the performances had vitality, but often lacked professional polish. Perhaps in an effort to counteract the all-too-prevalent fault of singing all religious music in a dragged-out, lugubrious fashion, Mr. Loach chose tempi for the Mass which often seemed too rapid, so that Bruckner's noble ideas were slurred over, and important text words swallowed. However, the conductor had a good feeling for the typical Bruckner sonority, which managed to sound fully symphonic even with this small group of winds, brasses and voices.

The musical text followed was closer to the old Wöss edition (as found in Universal-Edition 7534) than to the *Urtext* of the *Bruckner-Gesellschaft* edition. The textual question was not referred to in the program notes. These were, on the whole, carefully prepared by Emanuel Winternitz, curator of musical instruments at the Museum, but his essay on Bruckner certainly contained some debatable statements, such as the following: "For some reason the names of Mahler and Bruckner are always heard together in America. Nothing could be less justified . . . both were Austrians and both wrote nine symphonies . . . but these are the only things they have in common." Readers of CHORD AND DISCORD will doubtless hold a different view!

A pleasing feature of the performance was the use of the Gregorian intonations "Gloria in excelsis Deo" and "Credo in unum Deum," which were not polyphonically set by Bruckner in this Mass, but which must, of course, be present for liturgical completeness and propriety. (They are notably absent from the one LP of the Mass available in 1958.)

We welcome performances such as this, and hope that major choral organizations of professional stature might be inspired thereby to include Bruckner Masses on their programs more frequently.

## MAHLER ON TELEVISION

### BERNSTEIN CONDUCTS YOUNG PEOPLE'S CONCERT

by ROBERT G. GREY

In 1960 New York Philharmonic audiences in Carnegie Hall and radio listeners experienced an event which would have been inconceivable but a few years ago—a Mahler Festival which, according to the Philharmonic's Program Notes, was given to commemorate "the 100th Anniversary of Mahler's birth and the 50th Anniversary of his first season as Music Director of the New York Philharmonic." To Leonard Bernstein, Music Director of the Philharmonic and a devoted admirer of the hitherto controversial composer, Gustav Mahler, the increasing number of Mahlerites owe a debt of gratitude for his share in making the Festival possible and for conducting sixteen of the Festival's thirty six performances. Judging by the size of each audience and the ovation that greeted each of the concerts attended by the writer—ovations such as are not heard too frequently at Carnegie Hall—as well as by the reviews of the majority of the critics, Mahler's prophecy, *My time will yet come*, was finally fulfilled; his time had come.\*

The imaginative Mr. Bernstein took advantage of the Mahler Centennial not merely to educate adult listeners, many of whom had formed their opinions from unfavorable reviews and articles about Mahler published in the distant and recent past, but also to introduce Mahler to the growing generation that had probably not even heard of him. At a Young People's Concert on Jan. 23, 1960 which was taped and televised on WCBS-TV under the dignified sponsorship of the Shell Oil Company, Mr. Bernstein outlined the causes of the conflicts which raged within Mahler's soul and made him compose as he did. To illustrate the conflicts which he found expressed in Mahler's music, Bernstein used the following selections: *Des Antonius von Padua Fischpredigt*, excerpts from *Das Lied*, the *Second*, and the *Fourth*. The soloists were Reri Grist, Helen Raab, and William Lewis. The children listened very attentively; they applauded heartily after each number. The extremely difficult song, *Der Abschied*, which ended the concert in an almost inaudible whisper of sound, brought forth a rousing ovation for all participants, thus proving that difficult, unfamiliar music can be a moving experience for children if presented by an inspired conductor and dedicated educator. No doubt this concert proved to be a revelation and memorable experience for the children in the Hall and for many adults and children who saw the telecast. Reviewing the concert in the *New York Times*, Mr. Eric Salzman called it "one of the best programs of its type that Mr. Bernstein has yet put together," a comment that was richly deserved.

---

\* The writer attended fifteen of the thirty-six Mahler concerts led by Mitropoulos, Bernstein and Walter.

## IN MEMORIAM

ERNST J. M. LERT

Born in Vienna on May 12, 1883, Ernst J. M. Lert absorbed the musical and artistic atmosphere which pervaded that unique center of European culture in the late years of the nineteenth and early years of the twentieth century. At the University of Vienna he studied the history of music under Guido Adler and at an early age came under the influence of Gustav Mahler. When he was but twenty-four years old, Ernst Lert became regisseur and dramaturgist in Breslau; two years later, he was operatic and dramatic director at the new municipal theatre in Freiburg, and at the age of twenty-nine, he was appointed to a similar post in Leipzig, where he worked in the opera with Otto Lohse.

During World War I, which interrupted his career, he served as an officer in the Austrian Army. After the War, he became Director of the Stadttheater in Basle, and in 1920 he was appointed Intendant of the Opera in Frankfurt where he remained for three years. His acceptance of the post of stage director at La Scala marked the next milestone in his brilliant career. There he remained for a number of years, during the golden era of the Toscanini regime. When the legendary maestro came to the United States, Dr. Lert's loyalty to Toscanini, who had become Lert's friend, impelled him to leave La Scala and accept an appointment as one of the stage directors at the Metropolitan Opera House in New York.\* At the time of his death, January 29, 1955, Dr. Lert was a member of the faculties of Peabody Institute and Goucher College (in Baltimore).

A great admirer of Mozart, Dr. Lert wrote a book on the staging of Mozart's operas (*Mozart auf dem Theater*, 1918). As a tribute to Otto Lohse, he wrote a biography of the famous German conductor.

Dr. Lert attended the first meeting of the Bruckner Society held on January 4, 1931, and was active in the Society as an Executive Member and Director until shortly before his death. Furthermore, he contributed articles to CHORD AND DISCORD, articles which revealed him not only as a scholar with a wealth of knowledge in various fields but as a deep thinker as well. His writings and his lectures had something of the grand manner.

Despite his many successful productions and much public acclaim which would have imbued a lesser man with a feeling of self-importance, Ernst Lert remained a modest, shy, and kindly person. His training and his temperament precluded any compromise on his part with artistic principles. As a teacher, his influence certainly extended beyond the grave, and those who knew him intimately are unlikely to forget this brilliant, gentle human being.

---

\*Lert's views concerning the duties and responsibilities of an opera and dramatic director are set forth in his article, *Met-Empsychosis*, published in Vol. I, No. 7 of CHORD AND DISCORD.

## KILENYI BRUCKNER MEDAL AWARDED TO STATION KWFM (MINNEAPOLIS)

Over a period of years, Station KWFM had been broadcasting Bruckner recordings on its monthly programs. During the month of March, 1958, all available Bruckner recordings were included on the programs of this station. At that time, their program book had on its cover the Kilenyi Bruckner Medal of Honor.

In recognition of the efforts of the Station's authorities to familiarize audiences within the radius of the Minneapolis station with the music of the Austrian master, the Directors of The Bruckner Society of America awarded the Kilenyi Bruckner Medal of Honor to Station KWFM. The presentation of the Medal was made on November 15, 1958, to Gerald Hill, President of the Fidelity Broadcasting Company, by Antal Dorati, an Honorary Member of the Society, at the home of Mr. and Mrs. Andre Speyer.

## KILENYI MAHLER MEDAL AWARDED TO JOSEF BLATT

PRESENTATION SPEECH BY EARL V. MOORE, DEAN OF THE SCHOOL OF MUSIC OF THE UNIVERSITY OF MICHIGAN, APRIL 4, 1958, FOLLOWING A PERFORMANCE OF MAHLER'S SECOND SYMPHONY

Ladies and Gentlemen: Before I undertake the pleasant task of presenting the medal, I would like to express to Mr. Blatt, the members of the Orchestra, the Chorus, and the soloists my personal, and I believe, your personal appreciation for the deep impression that this work has made this afternoon. All of you have done the University of Michigan great honor by this performance and I want to congratulate each and every one of you most heartily and to express for myself, the faculty, and for the administration of the University our sincere appreciation for your staying on an afternoon which otherwise might have been part holiday for you. This has been a memorable occasion and I am sure you realize from the response of the audience what an impression your work has made. Thank you, and God bless you.

On behalf of the Bruckner Society of America, I have been invited to present their Medal to our conductor this afternoon. The Bruckner Society of America was established in 1931 for the purpose of promoting interest in, and appreciation of, the compositions of two great and distinguished Austrian composers, Anton Bruckner and Gustav Mahler. In the intervening years many performances of these works have been given by conductors of American orchestras. These conductors have in many cases been honored as our conductor is this afternoon, as recipients of the Bruckner, or the Mahler Medal, depending upon which work was performed. Among this list of conductors are to be found the names of the late Frederick Stock, Dimitri Mitropoulos, Eugene Ormandy, Jan Kubelik, just to name a few. It is a distinguished list. Mr. Blatt, on behalf of the Bruckner Society of America, it is my pleasure to present to you this Medal. On the obverse side (here is where Television would help) you could see, if you were close enough, a very lovely bas-relief of Mr. Mahler, done by an American sculptor especially for the exclusive use of the Bruckner Society. On the reverse side is engraved the name of the recipient; in this case, Josef Blatt, and the date, 1958.

It is with great pleasure and honor to you, Sir, that on behalf of the Bruckner Society, I present you with this Mahler Medal. (Prolonged applause.)

# MAHLER'S KINDERTOTENLIEDER

by PARKS GRANT

Friedrich Rückert (1788-1866) enjoys an envied place among German poets of the Romantic school. He was a contemporary of Eichendorff and Uhland, a junior contemporary of E. T. A. Hoffmann, a senior contemporary of Heine, Mörike, Lenau, Keller, and Storm. He was a youth at the same time that Goethe, Schiller, Jean Paul Richter, and Wieland were at their height.

Rückert, who sometimes used the pen-name Freimund Raimar, is noted not only for his original poems, but also for his translations, having made German versions of important Chinese, Arabian, Persian, and Indian literature. This phase of his activity grows out of his position as a professor of Oriental languages, first at the University of Erlangen, later at the University of Berlin.

The *Kindertotenlieder* (*Songs on the Death of Children*) rank high among his sensitively-written original works. Posthumously published in 1872, these poems are intended as a memorial to two of the poet's children.

Gustav Mahler drew on ten of Rückert's works for the texts of compositions: five independent songs (often called the *Rückert Songs*) and the five-movement song-cycle *Kindertotenlieder* which here claims our attention.

Composed in 1900-1902 and first performed and published in 1905, *Kindertotenlieder* stands in the forefront among Mahler's works, second only to *Das Lied von der Erde*, in the opinion of some musicians. Always tortured with thoughts of death, throughout its composition Mahler was haunted by the fear that his own as-yet-unborn child might not survive infancy. His foreboding was all too accurate, for his little daughter Maria, born shortly after the completion of the *Kindertotenlieder*, died in 1907.

Mahler indicated on the first page of the score that *Kindertotenlieder* should be performed as a unit, without pauses or applause between the individual songs.

No. 1: *NUN WILL DIE SONN' SO HELL AUFGEH'N*  
(NOW THE SUN WOULD RISE SO BRIGHT)

The opening, for oboe and horn, is characteristically Mahleresque. (See Example 1.) The entrance of the voice at the end of measure 4 is like the addition of another instrument rather than the coming-on-stage of a featured "star"—also very typical of the composer.

## Ex. 1

Ex. 1 shows two staves of music. The top staff is for the Oboe, and the bottom staff is for the Horn. Both are in 4/4 time with a key signature of one flat (B-flat). The Oboe part begins with a melodic line of eighth notes, while the Horn part provides a harmonic accompaniment of eighth notes.

The second vocal phrase is memorably eloquent, being the type of passage that is truly thought for the voice. To exemplify this, one need only play it over on the piano, on which it sounds thoroughly undistinguished, and then sing it; even the poorest voice will give it character and will feel its vocal suitability. This phrase is five measures in length, rather than the more conventional four, the slightly amplified size contributing much to its distinction. One should also mention that the harp enters with this same phrase, in a steady eighth-note figure doubled by muted violas. There is no composer whose harp parts sound quite like Mahler's—simple though they are—and this phrase is completely characteristic. (See Example 2.)

## Ex. 2

Ex. 2 shows a vocal line and instrumental accompaniment. The vocal line is in 4/4 time with a key signature of one flat. The lyrics are: "als sei kein Un - glück, kein". The instrumental accompaniment includes Cellos (muted), Horn, Bassoon, and Bass-Clarinet and Harp. The Cello part features a steady eighth-note figure, while the Horn and Bassoon parts provide harmonic support.

Un - glück die Nacht ge - schöhn!

Horn

Bass-Clarinet

Harp

Detailed description: This musical score shows a vocal line at the top with the lyrics 'Un - glück die Nacht ge - schöhn!'. Below it are three staves for instruments: Horn, Bass-Clarinet, and Harp. The Horn part has a melodic line with some grace notes. The Bass-Clarinet and Harp parts are more rhythmic and accompanimental. The key signature has one flat (B-flat), and the time signature is 4/4.

An unexpected and quite delightful touch in orchestration turns up in measure 20 in the form of some repeated tones for the glockenspiel. This instrument, usually associated with light-hearted, dainty, or brilliant passages, contributes an arresting effect in this song of profound anguish. It would occur only to a man who knew the orchestra as exhaustively as did Mahler—who of course was a conductor as well as a composer—to use this instrument in such an unlooked-for fashion. Incidentally the glockenspiel part throughout the song is confined to a single pitch: D.

The music of Example 2 (minus the two grace-notes) recurs with a new text, and leads through an unsettled-sounding passage to the material shown in Example 3. It will be observed that the first violins

Cellos, pizzicato

Detailed description: This musical score is labeled 'Ex. 3'. It features a vocal line with the lyrics 'musst sie ins ew' - - ge'. Below the vocal line are three staves for instruments: First Violins, Harp, and Cellos, pizzicato. The First Violins part has a melodic line. The Harp part has a rhythmic accompaniment. The Cellos, pizzicato part has a rhythmic accompaniment. The key signature has one flat (B-flat), and the time signature is 4/4.

have one melody, the voice a different one, and that the harp has a typical passage in eighth-notes. The sparsity of the texture well illustrates Mahler's ability to get a maximum of effect from a minimum of means—this from a composer who is so often thoughtlessly accused of "megalomania" and extravagance of means!

The orchestra becomes momentarily agitated, but calm is restored through a cannily-written diminuendo and gradual return to the original tempo; the music seems to "dissolve." The material of Example 2, considerably modified and with new words, appears again. The glockenspiel plays the last note in the unusual ending.

No. 2: *NUN SEH' ICH WOHL, WARUM SO DUNKLE FLAMMEN*  
(NOW I SEE WELL WHY SUCH DARK FLAMES)

The second song has an anguished opening, which a change from C

minor to C major at measure 15 does little to relieve. At measure 22 comes another phrase which only Mahler could have written; it is destined to return at measure 54 in a different key and in altered form. (See Example 4.)

Ex. 4

The musical score for Example 4 consists of two systems. The first system features a vocal line on a single staff with the lyrics "Dort ahnt' ich nicht, weil" and a piano accompaniment on a grand staff. The piano part includes parts for Violas (first), Cellos, and Violas (half), with a Harp and Double-Basses playing pizzicato. The second system continues the vocal line with the lyrics "Ne - bel mich um schwam - men ge -" and the piano accompaniment. The score is written in a key with two flats and a common time signature.

There is a brief and restrained outburst at measure 29. At its end, as it is calming down, there is a typically Mahleresque touch when the voice part seems to drop out of sight and the emerging cellos claim our attention. The gradual swallowing-up of one part and overlapping emergence of another, all within the course of a phrase, is typical of the composer and was something of a novel stroke in his day, often bringing about a veritable "counterpoint of tone-colors." A similar effect,

also preceded by a short restrained outburst, occurs just before the quite unconventional end.

It is interesting to note that the passage quoted in Example 4 and its already-mentioned repetition are the only phrases in this song which do not begin with a rising melodic line.

No. 3: WENN DEIN MUETTERLEIN  
(WHEN YOUR DEAR MOTHER)

The third song has about as cheerless an opening as can be imagined; it is given to English horn, bassoon, and pizzicato cellos. Again the entrance of the voice and the whole manner of its participation suggest the role of one of the orchestral instruments rather than a "star" or "soloist." A chamber-music-like mode of thought may be observed in nearly all of Mahler's songs with orchestra.

At the end of measure 24, running to the beginning of measure 33, is the amazing passage found in Example 5. It returns, with different

add Bass-Clarinet

orchestration and text, just before the end of the song. Its effect is that of a single phrase of astounding length, which pushes everything before it. Of course it really subdivides, and it certainly need not be attempted with a single breath, yet so ingenious is its structure that the listener almost holds his breath as it is delivered. Not many passages that are its peer will be found anywhere in musical literature. It is a true masterstroke.

The second half of the song is fairly similar to the first half—about as near to the “strophic” type of song-structure as one will find in Mahler, who always preferred the “through-composed” manner of composition. The end is noteworthy as marking one of the few times Mahler did not conclude a composition on the tonic chord, for the final chord is the dominant.

No. 4: *OFT DENK' ICH, SIE SIND NUR AUSGEGANGEN*  
(OFTEN I THINK THEY'VE ONLY GONE AWAY)

After three songs in slow tempo with little rhythmic drive, the fourth, with its gentle and restful flow, is a welcome change. It is also the only song which opens in the major mode.

Measures 15 through 23 are remarkable for their beginning on the

dominant-eleventh chord and for the typical manner in which the orchestra takes over as the voice drops out, a Mahler characteristic which has already received comment. (See Example 6.) This passage recurs twice later on, both times in modified form. The first of these again uses the orchestra to continue the interrupted voice line and features a delightful bit for a solo violin; the second, which virtually concludes the song, finishes out the phrase after having passed through one of the most exquisite climaxes imaginable.

No. 5: *IN DIESEM WETTER*  
(IN THIS WEATHER)

The last song is about twice the length of any of the others, and easily requires the largest number of instruments in the orchestra.

The agitated opening features growling trills, restless figures, tremolos, stopped horns, and other turbulent effects, including Mahler's typically "wrenched" string passages approached from one or two grace-notes. The stormy mood is well established long before the voice enters, and for the first half the singer is content to let the orchestra carry forward the thought, vocal participation partaking more of declaiming against the orchestra than of a melodic line. Meanwhile Mahler's policy of using varied rather than exact repetition reflects the constantly varied repetition in Rückert's text.

The climax is a true turning-point as well as the loudest passage. It begins at measure 67 with the voice silent, and is quite devoid of the conventional orchestral claptrap typical of such passages. The stormy atmosphere continues as the gong adds its lowering effect to the sustained tones of the deep-pitched instruments; high above there are other sustained sounds for cello harmonics and piccolo; in the middle there are moving parts.

The music gradually calms down, the transition featuring some repeated glockenspiel tones, somewhat as in the first song, except that the tone is now always A rather than D.

A shift from D minor to D major brings a lullaby-like passage of celestial peacefulness. The effect of the second part of this song for all the world suggests the cool clearing of the air after a heavy storm. For a long time only the high-pitched instruments are used. (When the cycle is sung by a man, as it preferably should be, his voice is the lowest-pitched of the musical resources for most of eighteen measures.) There is a continuous eighth-note figure in the second violins, later transferred to the violas. Most of this is doubled by the celesta. There is, however, some difficulty about the part for this instrument, for Mahler apparently had in mind a celesta able to descend an octave lower than the usual instrument, and freely-used tones in this lowest octave (always appearing as a single line of notes) are hence unplayable; so the celesta part of the *Kindertotenlieder* is often simply omitted, though about half of it still lies within the normal range.

Low tones re-enter with the lovely passage shown in Example 7—music which in its very sound suggests the poet's words *sie ruh'n* ("they rest").

The predominantly orchestral thought of the song-cycle receives its final affirmation in the circumstance that the voice is silent during the

Musical score for the first system. The vocal line is in treble clef with a key signature of one sharp (F#) and a 4/4 time signature. The lyrics are "sie ruh'n, sie ruh'n wie". The piano accompaniment consists of a grand staff with treble and bass clefs. The lyrics are distributed across the staves: "Violins, muted" above the treble staff, "Flutes and Clarinets" and "Muted Violas and Celesta" between the staves, "Harp" and "Cellos, pizz." below the bass staff, and "Divided Double-Basses, Horns" and "pizz. Cellos and Harp" below the grand staff.

concluding fifteen measures, which bring the *Kindertotenlieder* to a close of the utmost calm.

In addition to the voice and the usual first violins, second violins, violas, cellos, and double-basses, Mahler's *Kindertotenlieder* is scored for piccolo, 2 flutes, 2 oboes, English horn, 2 clarinets, bass clarinet, 2 bassoons, contrabassoon, 4 horns, timpani, glockenspiel, celesta, gong, and harp. (It will be observed that trumpets, trombones, and tuba are not used.)

## PAUL HINDEMITH AT TOWN HALL

by LOUIS BIANCOLLI

The following article appeared in the *New York World-Telegram and Sun* on February 15, 1959. Reprinted by courtesy *N. Y. World-Telegram and Sun*. Copyright 1959.

One of the great music masters of our time — Paul Hindemith — made a memorable double appearance as composer and conductor at Town Hall yesterday afternoon.

As composer, the German-born modernist, rated among the three most influential innovators of our time, was represented by two striking scores—octet and six madrigals, both billed as first performances in the United States.

On the podium Mr. Hindemith not only proved his own best conductor but perhaps the best conductor Anton Bruckner could have at the moment for his profoundly moving and seldom heard Mass in E Minor.

As performance and program, it was a stirring event from beginning to end. Both the National Artists Chamber Orchestra and the Collegiate Chorale rose nobly to the occasion.

Indeed, it is hard to recall, from the season's abundance, a more firmly knit chamber ensemble than was heard in Mr. Hindemith's brilliant new Octet. The contrasts and balances were just about perfect.

Nor has the season's group singing offered many moments to equal or surpass those achieved by the Collegiate Chorale at the inspiring behest of Mr. Hindemith in his own and Bruckner's music.

The Octet is real music-making — fresh and clean and new. Grounded in assured strength, it roams freely over new and old terrain, attaining a compact and living entity of its own.

One would have thought the madrigal an exhausted and antiquated form. But Mr. Hindemith, ever the explorer, found ways of making the six glowing poems of Josef Weinheber chant new life in their fresh and vital settings. What exuberant power they express!

It was inevitable that the most gripping of the six, "Magic Recipe" — a unique masterpiece of bounding humor and sly thrust — had to be repeated. Mr. Hindemith certainly had a good time doing so, and so did the crowd.

And how this compact, bald little man in his 60s made the Bruckner Mass soar in the solemn majesty of its theme! While the music lasted, it gave Town Hall the spacious illusion of a cathedral.

Anton Bruckner was in his glory yesterday — and so, too, was Paul Hindemith.

## THE ULTIMATE

by WINTHROP SARGEANT

The following article, which appeared in *The New Yorker*, is reprinted by permission. Copyright The New Yorker Magazine, Inc., issue of Nov. 28, 1959.

The performance of Anton Bruckner's Eighth Symphony by the Vienna Philharmonic, under Herbert von Karajan, in Carnegie Hall on Tuesday evening of last week stirred up the sort of excitement I have not encountered at a symphony concert since the days of Toscanini. There was something ultimate about it, which occurs only when a brilliant conductor and a superb orchestra devote themselves to the performance of a towering masterpiece, presenting it in a manner at once flawless, inspired, and authoritative in the highest degree. The audience — a very fashionable one, which might have been expected to show some impatience with the long, leisurely spans of Bruckner's musical thought — was held spellbound throughout the work. The work itself, as Bruckner enthusiasts well know, is perhaps the finest and certainly the most closely knit and most consistently eloquent of all the Austrian master's symphonies. Its sombre, turbulent first movement, its magnificent scherzo, and its resplendent, proclamatory finale could each stand alone as an example of nineteenth-century symphonic writing at the peak of its communicative power. But placed between the scherzo and the finale is a slow movement of such serenity and grandeur that one is tempted to call it the greatest adagio ever penned by a symphonic composer. The superlative is, of course, slightly fatuous; there are other great adagios in the literature of symphonic music, some of them by Bruckner himself, and in any case the word "great" is worn, and hazy in meaning. Still, there should be some way of conveying in words the unique character of this movement, which is not really like any other adagio in existence. It is not an easy movement to grasp at first hearing. To some, it may initially seem a bit repetitious, and I know of quite a number of musicians, as well as critics and laymen, who have not heard it often enough to fit all its relationships together and thus grasp the grand plan of its musical logic. But the plan is there, needing only a few hearings to become manifest, and once it is clearly understood, the movement shows itself to be one of the loftiest statements ever made by the musical mind. In it, Bruckner — as happens frequently in his other works — is carrying on a personal conversation with God, and, even to an unbeliever, what he has to say cannot seem other than noble and basic. Mr. von Karajan conducted the whole symphony with a devotion that was truly hypnotic, and chose his tempos — notably that of the adagio, which is sometimes dragged — with exquisite care for the coherence of Bruckner's musical ideas. The performance was so impressive that Mozart's familiar and beautiful "Eine Kleine Nachtmusik," which opened the program and was done by the orchestra with exemplary finish, seemed trivial by comparison. To me, von Karajan's Eighth will remain one of the most memorable musical experiences of the decade.

## A MAHLER PREMIERE FOR A MAHLER YEAR

by DIKA NEWLIN

It seems strange that Mahler's youthful work *Das klagende Lied* (1880-1898) has only now received its premiere in New York. Yet such was apparently the case when the forces of New York City College's choir, orchestra and band joined to present this composition on May 14, 1960, in the auditorium of the college. This performance was followed by two additional ones on May 15 and 21.

Wisely, the conductor of this event, Fritz Jahoda, showed his awareness of Viennese tradition by preceding the Mahler work with three shorter pieces by Schubert: the delightful *Serenade*, Op. 135, the visionary *Song of the Spirits over the Waters*, and the more conventional, simpler *Psalm 92* (sung in Hebrew). These were pleasant, but the focus of interest (and of the most intensive preparation on the part of the participants) was obviously Mahler. Let it be said at once that the students achieved a remarkable performance. While it would obviously be unfair to single out and criticize individual participants as in professional performances, it can be stated without fear of condescension or of making "undue allowances" that the total impression was an exciting, deeply moving one. The work had clearly been studied with utmost thoroughness—more, its interpretation had that incalculable quality of heartwarming enthusiasm so often found in collegiate performances and sometimes missing from more technically perfect professional ones.

In speaking of a work of a composer's youth, it is fashionable to seek out the "influences" of his forebears. However, in the case of *Das klagende Lied*, the remarkable thing is not that Mahler was influenced by Wagner, but that in so many passages he prophesied his own future works so clearly. One hears page after page foreshadowing the *Second Symphony*, the *Third*—yes, even the *Ninth* and *Das Lied von der Erde*. Thus one might almost say facetiously that *Das klagende Lied* is a kind of anthology of Mahler's later works. Or, better, it is like the seed from which the flowering tree is later to grow—every element necessary is already contained within it. An amazing microcosm!

A large audience at the first performance received the work with every evidence of real enthusiasm, cheering and applauding the young singers and players and their accomplished conductor. As I listened to this reaction, I thought how fine it would be if this work could now move "downtown" there to be heard by even larger and more representative musical circles. In any event, we are grateful to Mr. Jahoda and to all concerned with making this significant premiere a success.

## PITTSBURGH SYMPHONY AT CARNEGIE

by LOUIS BIANCOLLI

The following review, which appeared in the *New York World-Telegram & Sun* on Nov. 17, 1959, is reprinted by courtesy of the *New York World-Telegram & Sun*. Copyright 1959.

A majestic reading of Bruckner's Fourth Symphony crowned the visit of the Pittsburgh Symphony Orchestra at Carnegie Hall last night.

With William Steinberg conducting, the performance was a red-letter event in the campaign to entrench Bruckner in the American repertory. Performance and music surmounted the rest of the program like an Alp.

Coming after two new compositions of something less than heroic stature, the Fourth Symphony seemed the nobler and more eloquent. But let's consider Mr. Steinberg's novelties first.

A New York premiere of Luigi Nono's "Due Espressioni Per Orchestra" opened the program, though from the first few scattered sounds it was hard to say just when the program opened. This was indeed strange music, disconnected, fitful, bare.

Mr. Nono, at 35, is the white hope of Italy's musical left. A "serialist" composer, he is even married to the daughter of Arnold Schoenberg, the founding father of "serial" music. This was a sample of it last night.

Whatever its message, it completely eluded me. Mr. Nono is no fool; neither is Mr. Steinberg, so I assume something of moment went into these "two expressions." What it was I leave to keener minds to grasp and divulge.

If the "Due Espressioni" left me cold, so, for the most part, did Paul Hindemith's well-meant "Pittsburgh Symphony," written in honor of the Bicentennial of the Steel City. But this at least was solid and recognizable music-making.

The attractive side to the symphony is its ingenious interweaving of "Pennsylvania Dutch" folk themes and the final flag-waving finale boomed out by the brasses, "Pittsburgh Is a Great Old Town!"

As compared to Mr. Hindemith's other large scores, the symphony seemed boisterous and overwritten, with little of that groundswell of suspense that so often overtakes a Hindemith movement. But it was obviously a heartfelt gesture to a great city.

For me the concert was the Bruckner Fourth — that and the superlative playing of a great orchestra conducted by a man of prodigious power who deserves even greater recognition than he has so far received.

## KILENYI BRUCKNER MEDAL AWARDED TO SIR JOHN BARBIROLI

In appreciation of his efforts to create greater interest in the works of Anton Bruckner in England and in the United States, the Directors of The Bruckner Society of America have awarded the Kilenyi-Bruckner Medal to Sir John Barbirolli. In 1957, the Hallé Orchestra of Manchester, under the direction of Sir John Barbirolli, performed Bruckner's *Fourth* in Manchester, Bradford and Swansea; the following year the Orchestra performed Bruckner's *Seventh* in Manchester, Sheffield, Bradford, London, and Leeds, as well as in Prague, Warsaw and Linz. While he was guest conductor of the Detroit Symphony, Sir John included Bruckner's *Fourth* on the programs of December 11 and 12, 1958.

The presentation of the medal was made to Sir John by Mr. Harry Neyer, Vice-President of the Society, at the closing concert of the Swansea Festival in Swansea, Wales, on October 17, 1959, at which the Hallé Orchestra performed Bruckner's *Fourth* Symphony under the direction of Sir John.

KILENYI BRUCKNER MEDAL AWARDED TO  
WARREN STOREY SMITH

CITATION READ ON THE OCCASION OF THE PRESENTATION OF THE  
BRUCKNER MEDAL OF HONOR TO WARREN STOREY SMITH ON FRIDAY,  
JANUARY 17, 1958 AT THE NEW ENGLAND CONSERVATORY BY PRESIDENT  
HARRISON KELLER OF THE CONSERVATORY:

There appears now and then in our midst an individual who by some bond of sympathetic understanding recognizes and courageously champions the achievements of his fellow artist to the end that he sheds new and enlivening light on his subject. Such is the case of the service our own Warren Storey Smith has contributed to the appreciation and better understanding of the music of the celebrated composer, Anton Bruckner.

For his penetrating reviews of this music in performance and by his written evaluation of Bruckner's place in the world of music, he has richly earned the Bruckner Medal of Honor which it is now my pleasure to award on behalf of the Bruckner Society of America.

## A PERFORMER'S RIGHTS

by STANLEY POPE

*An apology.*

Since the music of the West broke away from the sheltered existence of the churches and ducal palaces and took its place in the great opera houses and concert halls of the 19th century, the music critics and musicologists, a new company in a new world, have made it their business to judge contemporary tendencies and to educate the man in the street. Their conclusions have been influenced by the aesthetic demands of the times in which they have lived. Often enough their observations make curious reading today. This influence was shared by the performers whose interpretations were also dictated by the same demands. The main characteristics of the great artistic movements have been dependent upon, and the direct outcome of, the total contemporary human experience. The late 19th century approach to the classics would no doubt surprise us today. We have only to read the Reger, Busoni and Mottl editions of Bach to see why many consider them a tortured version of the original. Performers and composers have frequently attempted to rescue great works from obscurity by presenting them in a form more acceptable to their contemporaries, but sooner or later they have had to face the critics of another age. Even the divine Mozart has not been spared for his rescoring of Handel's *Messiah*.

So it was with Bruckner's first interpreters, whose "ameliorations" have since been condemned. The critics of today are justified in disapproving of the extensive changes made by the composer's friends, those who were anxious to make his works known and who were convinced of the lasting value of his creations. But their devotion to the cause did not prevent them from butchering the form and from changing his tone-colours to fall in line with the conventions of the time. If, with or without the consent of the composer, Bruckner's admirers found it necessary so to handle his creations, it is not to be wondered at that Hanslick was quite incapable of appreciating his greatness. He stood too close to him and was blinded by what he knew from his own experience to be great music in the compact symphonic writing of Brahms. But Hanslick was not quite as bitter as he is made out to be, although it must be admitted that whenever he refers to "spiritual, clever and original ideas" or "the bright moments of extraordinary beauty," this is followed by complaints about length, obscurity or exhibitionism. Even the great Brucknerite, Bruno Walter, tells us how he, in spite of knowing and having performed several of Bruckner's symphonies, reached his fiftieth year before the inner life behind the music revealed itself to him.

In our attempts to recapture that all-important atmosphere upon which depends the magic of a perfect performance, it is for us to decide whether, and in how far, we have to attempt an exact reproduction of

what we believe were the fundamental characteristics of the original inception behind the creating mind. The degree to which this can be accomplished will depend upon our ability to recreate, in our imagination, those conditions of which the inspiration was the inevitable outcome.

It is with this in view, in the interests of the music, respecting the composer's apparent intentions and attempting to offer them in a form which may be acceptable to musicians, musicologists and music-lovers alike, that I present an *exposé* which may incite further interest in that which has been the Cinderella of the major symphonies. The A major symphony has, until the most recent times, been unjustifiably neglected. It is a work to the reconstruction of which considerable thought must be given.

I may be accused of advocating artificial means for the attainment of an artistic end. This is not my intention. But it is only after musical situations have been considered from many angles that an interpreter is in a position to "improvise" in performance. I am aware of the shortcomings of such an approach, but if it provokes a new interest in this magnificent work, that end in itself will justify the means.

All references are to the original score as published by the Bruckner-verlag and edited by Robert Haas.

I have considered it superfluous to draw attention to the need for moderation in that which concerns nuances so as to meet the requirements of the particular orchestra and hall for which a performance is being prepared. This refers in the main to *ff* and *fff* in brass and timpani, which must always be made to fit into the organic growth. Symphony No. 6 in A major.

#### I. *Majestoso*.

It must have been one of Bruckner's greatest disappointments that this truly splendid first movement was not played during his lifetime. It is one of his most successful movements. It is concise, well made, and has in it music as romantic as any he wrote. That it was so long neglected is due, perhaps, to the difficulties it presents. This *Majestoso* must not be hurried, for it is typical of Brucknerian growth. It will be found that unless the movement is given "space" one episode will follow the other too rapidly. Of course, a sustained tempo makes greater demands on the orchestral players. It calls for better quality and no shortcomings can be hidden away behind a facade of bristling superficialities.

The notation of this movement is inclined to lead conductors astray in that it reads more quickly than the natural pace of the music. One is reminded of the problem arising from the two versions of Schumann's d minor symphony. In the first version of the year 1841 the theme is written

#### Ex. 1

##### Lebhaft

in the revised version of ten years later

Ex. 2

Lebhaft

Both give their own picture of the correct *Tempo*, where, in fact, the correct *Tempo* lies between the two. As far as the conductor is concerned with Bruckner's work, it is both difficult and undesirable for him to beat two in the bar. Clearly this is the basic rhythm and the composer could scarcely have written 4/4 without disturbing the calm from which the music evolves. However, the conductor would have a hard time getting the accompanying figure together in the orchestra if he were to beat two minims to the bar at  $\text{♩} = 50$ .

The keynote to the tempo of the opening must be found in the first subject itself, and the bows must have enough time to be *breit gezogen* even in the crochet bar. So often this opening is played more quickly with the result that the important rhythm which accompanies the theme never really gets away properly, and we are faced with this sort of thing

Ex. 3

in place of

Ex. 4

There is no need of this with a disciplined orchestra, although one must always be prepared to insist on absolute observance of the rhythm each time it makes its appearance. It is a help if one can make the semi-quaver even shorter than its proper value in order to put a greater edge on this important figure.

Another problem arises with the second subject. This is a melody which, like so many of the composer's tunes, is accompanied by a wealth of melodic passages intertwining and each playing an essential role in the surge of sound upon which the music is borne. Seldom does Bruckner indulge in such complexity. Insufficient "space," once again, leads to confused listening. *Bedeutend langsamer* means circa 40 minims to the minute. The character of the music renders it necessary to conduct four beats in the bar and there will be 80 crochets or 120

triplet-crotchets to the minute. It is always dangerous to insist on matters of technique for in doing so one might well risk destroying the very atmosphere one is so ardently endeavouring to create. The basic rhythm of two in the bar should not be disturbed by over accentuated subdivisions. In spite of this, but bearing it in mind, it may prove useful to the musicians for the conductor to beat six with his right hand and four with his left. This must only be used as a guide, and the beat must be sufficiently varied and flexible so as not to become monotonous.

Although there is no change of tempo indicated between *Bedeutend langsamer* at B and "acceler." at bar 191, it is unlikely that Bruckner thought of letter F in the *Bedeutend langsamer* tempo. For this reason I re-establish the initial tempo of the movement gradually between 95 and F. It is essential not to rush into G but to clear the air by beginning afresh and in a relaxed tempo, slowly building up to the *ff* and from H to I settling down again.

This development grows naturally out of what has gone before and is in itself so short that it might almost read as an appendix to the exposition.

Bars 147-150 1st horn *quasi solo*. Between I and L one must constantly think of the preparation taking place for the wonderful re-appearance of the principal theme now transformed, inverted and adapted, being carried along on the backs of the little quaver triplets. On the rising harmonic progression the strings have an opportunity of showing the extent of their expressive capacity from a seductive *piano* to a broad singing *fortissimo*. It is essential to take plenty of time before the *accelerando*, and also important not to overdo it, so that the initial rhythm makes its appearance evolving naturally out of what has gone before.

At the beginning of the movement it was found necessary to take time in order to create the desired atmosphere. Between M and O the tempo must be so calculated as to enable one to recapture that atmosphere quickly. The flute and oboe must stand out clearly and it may be necessary to have them play a *Deux* at 239 for two bars. It is essential for the upper strings not to cover this figure.

At letter W begins one of Bruckner's most inspired pages, for the Coda to this movement is great music by any standard. Once again it is important to give the music time to speak. In 313 the *piu piano* (from *p* to *pp*) is most important. From X the theme, passing from the horns to the trumpets, should be clearly audible without emerging too greatly from the orchestral background. There is a danger of extending too quickly. This should be borne in mind after Y when the trombones should, at first, give sufficient support without dominating the situation.

## II. *Sehr feierlich*.

The slow broad steps of the opening bars of the second movement, the plaintive counter-melody in the oboe, the quintessent second subject, one short episode reminiscent of a funeral march, another entrancing page recalling *Siegfried*: all these things together with the enormous wealth of tonal variety combine to hold an attentive audience spell-bound.

The movement is hard to reconstruct by reason of the need to give time to such elements as

## Ex. 5

and for the music not to drag in the bars preceding D. This calls for considerable flexibility of tempo. The opening oboe quavers should not be faster than 72 to the minute if they are to preserve their plaintive, restful character. This means that the opening theme in the strings should be at approximately  $\text{♩} = 36$ . The effect must not be of a stodgy march which won't get going. The *Lang gezogen* crochets in the lower strings must lead the way, and the whole phrase must grow continuously from *piano* to *forte* in the fourth bar. The need for economy, in view of the length of the crescendo, makes it advisable to begin *mp* in bar 7 and increase to *mf* in the ninth bar. By the time the *ff* is reached the tempo may have moved to  $\text{♩} = 44$ , but the crochets must nevertheless be broad with a strong expressive accent on each in the *ff* bar. In spite of the increased tempo care must be taken that the figure

## Ex. 6

is not hurried and still contains the characteristics of the opening oboe solo. After A the music must move forward imperceptibly to the second subject, with the slightest suggestion of a *rallentando* in the second half of the bar before B.

The striking contrast between the first and second themes is enhanced by the distant key of E major. This passage, from B, may be played at  $\text{♩} = 60$ , but time must be given to the string players so that they can change their bows comfortably in the second half of the third bar. The *cresc.* continues to the end of that bar and a little moment of repose may be felt necessary by some conductors at the end of the following bar. The exact nuances indicated by the composer should be adhered to, for these are clearly intended to allow certain elements to stand out from the rest of the ensemble. The following *ff* must be played *molto espressivo* and unhurried. *Molto rallentando* from the end of bar 39 bringing the quavers before C to  $\text{♩} = 48$ , will permit full value to be given to the accents and the grouping of the quavers. At C  $\text{♩}$  (crochet) = 48. A slight *ritenuto* may be introduced before *Largo* where the crochet equals 36 to the minute. Imperceptibly this may advance to  $\text{♩} = 50$  at bar 51.

In the martial music at D the rhythmic figure in the timpani *poco marcato*, the crescendo to *forte* at the end of the third bar, the strict

observance of the *pp* in bar 62 and of the semiquaver in the 1st violins at the end of bar 64, together with a sufficiently strong entry (*mf*) where the violas take over from the violins, and the *pp espr.* in the 1st violins at the end of the same bar are all points which help to give relief to this moving little episode. At letter E horn *en solo*, where the violas may be marked in the following manner

## Ex. 7

$\text{♩} = 42$  may be increased to  $\text{♩} = 48$  by bar 81. With the prescribed *ritard sempre* the initial tempo of  $\text{♩} = 36$  is re-established and may be increased from two before H to  $\text{♩} = 48$  by the third bar after H. Inevitably an eye must be kept on balance and Bruckner's *ff* in the trombones must be adapted to suit the situation.

A little time may be taken before I so that we feel an easy transition back to the second subject. Exactly the same procedure should be adopted at 127/129 as at the analogous passage earlier in the movement. Horn I. *quasi solo* at 139 and 140.

In the magical music which follows L time should be taken over the *lang gezogen* quavers and crochets, and again from 153 to M where we arrive at the initial tempo of the movement. Very seldom is sufficient care given, even in its rare performances, to this truly magnificent close. The crescendo in bars 161 and 162 should be permitted to develop to *forte*, and the music should then be allowed to dissolve little by little into nothingness.

### III. Scherzo—*Nicht schnell*.

In this movement there are no problems regarding approach, for the composer's intentions are quite clear and the movement is bounding with features typical of his writing. It is compact and straightforward. The unexpected changes of tonality which are accompanied by characteristic changes of nuance should be sufficiently underlined in performance. The distant chatterings of the various orchestral voices are interrupted from time to time by fanfares of approval from the heavy brass.

$\text{♩} = 92/100$ . The crochet at the end of the figure in the 2nd violins and violas must be long. Wherever this rhythm occurs the quavers must be short and the final crochets long: cf. horns III. IV., tuba and lower strings after bar 11. The trombone quavers after bar 11 should be long but distinctly separated the one from the other. At bar 55 horn II *espr.* At E all quavers in woodwind, horns and trumpets short, as

also in the bass strings. There is a very important crescendo between bars 69 and 73.

The second part of the scherzo (C) begins in the key of the flattened subdominant. This upward harmonic drive to the major key of the mediant—when written in sharps—is a Brucknerian turn at which the composer occasionally steals a glance as if to remind us that it is always round the corner, as at bar 36 in the Trio of this movement, and which has, at other times, an important structural function as in the *Finale* of the 3rd symphony.

The quavers in the Trio should equal approximately the crochets of the Scherzo. In bars 4, 14 and 40 it is important that the quaver is held for its full value. The same thing applies to the dotted crochets in bars 8 and 18. It may be necessary to let cellos and basses play up to *f* (at least *mf*) in bars 4/5 and 14/15 to balance with the horns. Time must be taken for the *piano subito* in the second bar before E, and the magical close at E must be given "space." The crescendo must only be slight and the following *ppp* ethereal. This Trio is full of charm and given due consideration must cast a spell over musicians and audiences alike as we return to the distant opening of the Scherzo.

#### IV. *Finale—Bewegt, doch nicht zu schnell.*

This *Finale* contains music of great beauty. The silvery simplicity of the opening phrases, the second subject, in which we encounter Bruckner in one of his most charming moods, trim and slightly *Ländlerisch*, the fine intermittent passages for brass, the episodes with the dotted quaver element recalling the oboe melody in the slow movement, and the final bar where the opening theme of the first movement is recalled in a blazing fanfare of sound: all these things are in themselves worthy witnesses of their composer's work.

Nevertheless, however fond we may be of Bruckner's music, we should be rendering him a disservice by ignoring the problems brought about, conceivably, by a miscalculation of practical considerations when putting pen to paper. It is our duty to the composer to try and solder into one great movement the elements which, by reason of the great contrast in the rhythmic units, are inclined to follow one another like a selection of incidental ideas. This may be yet another reason for the neglect of the symphony. The greatness of the movement lies in the greatness of its parts and we must weld those parts and bring them together to the best of our ability.

In the first place we have to take into account the vast difference in values between the shortest recurring element in the movement

Ex. 8

and the longest

Ex. 9

It seems an acceptable argument that had the difference between the demisemiquaver and the semiquaver in the former had no significance for the composer he would hardly have been likely to carry out the writing of this figure with such persistence. It would seem desirable, therefore, to choose a tempo at B in which the difference can still be detected.  $J = 88$ . In spite of this slow tempo the movement should not be permitted to plod along. If the tempo has advanced before C, after C the first six bars may be slightly sustained. In those which follow I would suggest an *accel. poco a poco* to  $J = 104$  at D with a *poco rit.* in the bar before D. The persistent quaver movement in the strings is admittedly tiresome. To relieve the monotony of uncovered quavers of this kind I make two slight changes in the text. I change the minim of bar 55 into a semibreve and the crochet of bar 57 into a minim. If the composer had realized the effect of these quavers in many of the modern concert halls, with their scientific perfections and an almost total lack of reverberation, he might well have done the same thing. Often Bruckner may have been led astray by the rolling echoes from the great churches in which he played. A very different thing.

This beautiful section after D develops into a meaningless string of notes if inadequate thought is given to its shape. This may be partly due to the regularly recurring harmonic blocks of four bars. It is this harmonic structure and periodic consistency together with the unvaried crochet movement in the 2nd violins which give this theme some affinity to the chorale. With the crochet at 104 to the minute one still has time to mould the phrases properly and the light counter-melody in the 1st violins can still preserve its freshness. The *staccato* crochets at D should be very short and not precipitated. A little time should be taken over the barline 68/69 so that one phrase can finish (possibly a little *diminuendo* in bar 68) and the next begin without "crushing." This procedure must not become a dodge at every fourth bar, but it might act as a guide when preparing this passage in the study. From F to H the tempo may advance very gradually to  $J = 135$ . Most important are *pp subito* at 105 and G.

In view of the close proximity of Examples 8 and 9 between H and K it would seem permissible so to change the basic tempo as to suit the exigencies of these two elements. It is not necessary, however, to make violent changes, and insofar as they exist they can be made to slide almost imperceptibly one into the other. In itself the indication *breit* over the 1st violin part in bar 133 makes it clear beyond a doubt that the composer did not intend the crochets to be played quickly. But after I once more the element in the woodwind must be carried forward with sufficient *élan*, and the quaver movement in the strings must not be permitted to plod too heavily. At letter K it depends largely on the acoustic of the hall whether a slight pause is to be introduced. In a very

resonant hall the first crochets in the basses may be lost if no break is made.

Between M and Q *Bedeutend langsamer* I suggest that the tempo should be flexible enough for the music not to drag at M ( $J = 72$ ), but that plenty of time be given to expand after N ( $J = 60$ ). We return to  $J = 88$  at Q, but from the second half of 268, where we are no longer bound by the demands of the demisemiquavers, we may relax the tempo little by little and arrive at T  $J = 104$  as before. With this very gradual increase in tempo we are still able to dispose of slight flexibility wherever musical considerations make this expedient. *Langsamer* at 328 should not be exaggerated: circa  $J = 64$ . At V Tempo I and on the second crochet of bar 358 a short pause, beginning with the strings at circa  $J = 72$  and with the *accelerando* increasing the tempo to  $J = 100$ , so that the rhythm in 367 exactly matches that at the beginning of the symphony. After a pause at X strings *al tasto* and *misterioso*. At bar 381 the music must subside and after Y some reserve of forces must still be left in hand so that the horns are clearly audible, and so that the final apotheosis after Z should remain fresh and new and not give the impression of just another fortissimo. When this reference to the first subject of the symphony returns in the trombones, now newly adapted to, and superimposed upon this triumphant blaze of sound, they should come forward *en solo* to bring to a most brilliant conclusion the musical wonders of this lovely A major symphony.

## KILENYI MAHLER MEDAL AWARDED TO DR. HERMAN NEUMANN

Station WNYC has consistently offered its listeners programs of high cultural standards in the realms of music, drama, and literature. The Station is essentially an educational institution in the liberal arts.

Dr. Herman Neumann, its Music Director, has demonstrated outstanding ability in his choice of programs which appeal to audiences of widely differing tastes and help to familiarize listeners with masterpieces too infrequently heard in concert halls. In this way, the broadcast has widened the musical horizon of many a music-lover.

Over a period of years, Dr. Neumann has included one or more works of Mahler on the regular programs of the Municipal Station. In appreciation of his efforts to create greater interest in Mahler's music, the Directors of The Bruckner Society of America have awarded to Dr. Neumann the Kilenyi-Mahler Medal of Honor. The presentation was made by Mr. Harry Neyer, Vice-President of the Society, on May 18, 1959, the forty-eighth anniversary of Mahler's death. For this occasion, Dr. Neumann had chosen to broadcast the *Adagietto* from Mahler's *Fifth* and two Songs from *Lieder eines fahrenden Gesellen*.

## BOSTONIANS AT CARNEGIE. STEINBERG IS CONDUCTOR

by FRANCIS D. PERKINS

The following review which appeared in the *N. Y. Herald Tribune* on Jan. 21, 1960, is reprinted by permission; copyright 1960.

William Steinberg, who had conducted his own Pittsburgh Symphony two months ago at Carnegie Hall, reappeared there yesterday as guest leader of the Boston Symphony Orchestra for the third concert of its New York evening series. He devoted the first half of his program to Haydn's Symphony in E flat, Op. 99, and Richard Strauss' "Tod und Verklaerung," and then contributed to the current observance of Gustav Mahler's centenary with a memorable performance of that composer's Symphony No. 1.

. . . . .

Vividness of color and richness of tone were well suited to the Strauss and Mahler works, while the Bostonians' performance was also marked by lucidity of detail and, when required, ample delicacy; the dynamic shading, as well as the orchestral hues, were finely distinguished as well as generous in range. Hearing these works, both performed seventy years ago, in the same program, gave an interesting opportunity for comparison; "Tod and Verklaerung" seemed to be the more extrovert of the two, although this Mahler symphony is far from emotionally baffling.

Strauss' musical depiction of a dying man's last throes and thoughts was realized with exceptional dramatic conviction; Mr. Steinberg combined notable underlying momentum with the musical impact. The waxing volume of the transfiguration music was maintained with laudable constancy, but this part of the tone poem seemed to need a slightly broader pace. This apotheosis, however, has lost some of its persuasion in the course of time; the Mahler symphony seemed fresher.

Mr. Steinberg and the orchestra presented it with unfailing eloquence in addition to a constantly high external standard of performance, both in the brighter moods of the first two movements and the darker vein of the third. Their interpretation differed in some respects from that given by the Philharmonic under Dimitri Mitropoulos last week, but both testified to their conductors' intent devotion to Mahler's music.

## STEINBERG REVERES MAHLER

by LOUIS BIANCOLLI

The following review which appeared in the *New York World Telegram and Sun* on January 21, 1960, is reprinted by courtesy of the *New York World Telegram and Sun*; copyright 1960.

A powerful and deeply moving performance of Mahler's First Sym-

phony marked the guest appearance of William Steinberg with the Boston Symphony in Carnegie Hall last night.

In majestic breadth and emotional force, the reading was in a class with that of Dimitri Mitropoulos and the Philharmonic two weeks ago. Mr. Steinberg obviously venerates Mahler and seems to have fathomed his depths.

The performance was again the perfect observance of the Viennese master's centennial. It couldn't have happened to a better composer. Nothing was spared to give the symphony a breathing reality.

These are great days for the long-maligned Mahler, and they seem to bring out the best in conductor and orchestra alike. Because of another assignment, I missed the Haydn and Strauss numbers on Mr. Steinberg's program.

To judge by the symphony alone, the orchestra was in exceptionally good form.

### BERNSTEIN LEADS STERN IN BERG WORK

by HARRIETT JOHNSON

The following article which appeared in the *N. Y. Post* on Dec. 6, 1959, is reprinted by permission of the *N. Y. Post*; copyright 1959 N. Y. Post Corporation.

Alban Berg's Violin Concerto was written in memory of a beautiful young girl, Manon Gropius, who died at 18. The poignant work also proved to be his own requiem. Berg completed it in July, 1935, and December 23 he died of a blood infection.

Isaac Stern was the soloist Friday afternoon in the Concerto with Leonard Bernstein conducting the N.Y. Philharmonic at Carnegie Hall.

Its performance induced an added lament: the recurring thought of the tragedy of Berg's early death at 50. His genius was that of the lyrical poet whose thoughts were ever emblazoned by intensity.

Berg's humanity, so apparent in his opera, "Wozzeck," is also alive throughout this concerto. Stern performed it superbly, with luminosity of tone and with sorrowful introspection. Even the snatches of youthful gaiety in it reflect a sadness that Stern caught too.

Manon, the daughter of Gustav Mahler's widow, Alma Mahler Werfel, was loved, according to her mother, by Berg as if she were his own daughter.

The composer was working on his opera, "Lulu," when the news came of her death from infantile paralysis. He stopped working on "Lulu" and turned with unremitting energy to writing Manon's requiem. Usually he mulled over his compositions for years, but he finished the concerto in approximately two months.

In two movements, it is essentially a song-like threnody, built from simple themes into a complicated structure. He weds guilelessness of idea to sophistication of idiom, weaving in a couple of waltzes and a quotation from a Bach Chorale. These, in different ways, relate the subject matter to the source of its inspiration.

The intricate development has the quality of fantasy in its structure, but contains as well an unyielding logic in its form, reminding us of Bartok's style.

Bernstein provided a sensitive collaboration which contributed to the introspection inherent in the Concerto's character.

## BRUCKNER AND SYMPHONIC FORM

by JAMES H. WILCOX

The formal elements of Bruckner's symphonies have been a source of nearly constant controversy since their composition during the last half of the nineteenth century. Perhaps no other composer in the history of music has precipitated such confusion. Attempts to assess the symphonies have been further complicated by the frequent revisions of the music by Bruckner himself as well as by well-meaning friends. However, since the publication of the *Originalfassungen*, based on the autographed scores bequeathed by Bruckner to the National Library in Vienna, this aspect of the controversy has been in large part resolved. Irresponsible editing of the symphonies, which led to the distortion of many movements beyond all formal logic, was corrected, and the movements were restored as far as possible to their original intent. With this edition a re-evaluation of Bruckner's forms may be undertaken.<sup>1</sup>

Friedrich Blume writes that:

Bruckner's contemporaries branded the composer whose harmony and forms had proceeded from the clearest of organizing principles as "chaotic." There was an attempt to ward off the "music of the future" in their inability to understand the large breadth of his symphonies, which were by their measurements, certainly beyond what they were accustomed to assimilate.<sup>2</sup>

The controversy over Bruckner's forms can be further exemplified by the opposing opinions of two Bruckner enthusiasts, the conductor Hermann Levi who laments the state of Bruckner's logic, form and unheard-of recapitulations while the conductor and Bruckner scholar Walter Abendroth considers these same aspects as virtues, calling them "the projection of the symphonic idea into the monumental."<sup>2</sup>

This article purports to show that Bruckner's forms must necessarily be considered on their own terms if they are to be accepted as formal structures worthy of universal recognition. Following a discussion of form in general and Bruckner's approach to form a suggested procedure is given for the analysis of the first movement of the Seventh Symphony, exemplifying a method for the understanding of the inter-related facets of Bruckner's symphonic structures.

"Form is," as Jacques Barzun says, "necessarily, inevitably, the crea-

---

<sup>1</sup> In spite of the fact that there is still much to say in favor of certain revisions it seems logical that the invaluable *Internationale Bruckner-Gesellschaft* edition of each of the symphonies issued by Haas and Orel and continued by Nowak should be accepted as the official version. Only by this somewhat rigorous compromise can there be a united front in presenting Bruckner to the public; in this way the embarrassing confusion, which is unique in music history, can be rectified.

<sup>2</sup> *Die Musik in Geschichte und Gegenwart*, ed. Friedrich Blume, Vol. II, p. 372.

tor's chief concern in any art."<sup>3</sup> "Music exhibits pure form not as an embellishment, but as its very essence."<sup>4</sup> The meaning of the term "form" in music is often indeterminate and will need some definition.<sup>5</sup> Apel points out the distinction between "form in music" and "forms of music."<sup>6</sup> "Form in music" is the order of sound organized according to some intelligent plan, often defying formulation. In this respect form is completely determined by content. Paul Henry Lang calls "forms of music" the schemes which govern the "structure-at-large" of a composition—"recognizable architectonic articulation."<sup>7</sup>

The interdependence of style (form in music) and form (forms of music)<sup>8</sup> is dealt with by Manfred Bukofzer as an interrelationship between internal and external structures:

. . . Structure and texture are functions of the melodic, harmonic, and rhythmic elements, and these in turn assume and exercise different functions in different styles even if their external manifestations be the same. Form, taken in this sense, covers the manifold interrelations of all these aspects, not only the external scheme, but also the principle that governs the inner organization of a particular composition.<sup>9</sup>

The concept of interrelationship refutes the idea of a dichotomy of form and "forms,"<sup>10</sup> in which "form cannot be the object of systematic study."<sup>11</sup> "Unity between internal and external elements of form is an achievement of real artistry . . . one which exacts new types of formal principles."<sup>12</sup>

In an evaluation of Bruckner's symphonic style this correspondence of style and form will necessarily be involved in obtaining an unbiased viewpoint. Dissection of the whole into the various elements of style, structural devices, and their positions in traditional formal schemes, and

<sup>5</sup> Arnold Schoenberg (*Style and Idea*, New York: Philosophical Library, 1950, p. 53) describes the purpose of form in the following quotation: "Form in Music serves to bring about comprehensibility through memorability. Evenness, regularity, symmetry, subdivision, repetition, unity, relationship in rhythm and harmony and even logic—none of these elements produces or even contributes to beauty. But all of them contribute to the organization which makes the presentation of the musical idea intelligible."

<sup>12</sup> Ernst Kurth, *Bruckner* (Berlin: Max Hesses Verlag, 1925), I, 234.

the formal schemes themselves, must be interpreted in relation to their functions in the total structure.

There have been and presumably will be proponents and opponents of Bruckner's first-and-last movement sonata forms as long as musical form remains in the province of absolute and inviolate tradition. If text book patterns are the criteria for judgment, or even if the forms of a few composers are isolated and idealized, a static concept prohibits deviation from these set forms, and results in formal sterility. Barzun says,

One . . . judges the creator's formal power not by reference to some classified plan suitable to another subject, but by measuring the degree to which massive materials have been grasped and held in place by the organizing mind. When the centripetal force of the substance has been overcome, we have Form.<sup>13</sup>

Compromises and compensations are inevitable. In any artistic work the emphasis of one aspect over another presupposes sacrifice of one quality for another. Barzun cites this principle of *Preferable Error*, borrowed from mathematics, in opposition to the "grievous injustice in a critic pounc[ing] upon the sacrificed parts, and exhibit[ing] their purposeful slightness or dullness as an imperfection which a better workman could have avoided."<sup>14</sup>

In the external design of music, repetition and contrast are the twin ingredients of cohesion and movement.<sup>15</sup> Pure repetition is formless; constant change and lack of coherence are equally so. A composition having both continuity and contrast has the intrinsic ingredients of form.

One can no longer say that a form evolves to a state of absolute perfection, from which perfect state deviation or change results in the dissolution of an artistic ideal. This idea of musical evolution has been deplored by W. D. Allen:

. . . The nineteenth-century notions of musical forms as "organism" is a modern pseudo-mystical concept which has done more than anything else to postpone the modern scientific approach to musicology as a study of *style*.<sup>16</sup>

Allen proposes to replace the concept of persistence of "traditional modes of thought" resulting from a "cosmic law of progress" with a less restricting one "explaining change as due to man's creative activities."<sup>17</sup> Thus, for Allen, historical precedent for a formal structure does not necessarily reflect worthiness. As external conditions change, the *Gestalt* no longer conforms to previous configurations. Change in external and internal conditions brings about need for modification of

<sup>17</sup> *Ibid.*

structures. At the same time there is no need to discard completely the worthy structural aspects of the past if they can serve a purpose in modified or even as completely new architectural functions.

Forms have grown out of compositional procedures throughout the history of music. Hans David has broadly summarized the historical concepts of form and style into the varying emphases of style periods. "Up to Bach's time . . . musical form was largely determined by the return of material introduced before. . . . The intricacies of symmetrical and asymmetrical form, based on concrete relations between sections, reached a climax in Bach's work."<sup>18</sup> The classic structures of Haydn and Mozart were built on the relationship of different sections to the whole, the sonata scheme being exemplary. The dynamic concept, analogous to the drama, with "development toward a climax, catastrophe, relaxation, build-up of a victorious coda, etc.," are found in Beethoven, and continued in the music of the Romantics. Modern music has become eclectic in selecting various methods, with "the principle of differentiation regain[ing] the upper hand over forms based on dramatic association."

Bruckner's first and last movements are composed according to a plan quite clearly related to the classical sonata form. How closely the movements conform to the classic scheme, and how the music proceeds within the confines of the plan will determine the validity of the criticisms of his use of this structural plan.

Tovey has said:

Sonata forms themselves arose from those of music-drama, and a sonata style that is not essentially dramatic is nothing. On the other hand, the sonata has its own rate of movement which is not that of the drama. Its forms are based on two principles: first, its rate of movement, and secondly its exposition of key-relations in sharp contrasts on a large scale. Why Bruckner and Reger should have encumbered themselves with these forms is a mystery which must remain unsolved, seeing that they were really suited to neither composer.<sup>19</sup>

It is clear that Tovey's criteria for judgment are well founded in tradition; if adherence to tradition is a prime requisite for a great work then it might be said that Bruckner brought about the dissolution of the sonata and the destruction of an ideal. However, this is true only if Tovey's criteria are also applicable to Bruckner. Hadley Cantril, in discussing the nature of scientific inquiry, has said that the history of

<sup>18</sup> Hans David, "Principles of Form in Use from the Middle Ages to the Present Day," *Bulletin of the American Musicological Society*, June, 1947, p. 9.

<sup>19</sup> Donald Francis Tovey, *The Main Stream of Music and Other Essays*, collected by Hubert Foss (New York: Oxford University Press, 1949), p. 306. Tovey was not, as may be implied from this selection, an anti-Brucknerian. In his essay on the fourth symphony, he says that "it is Bruckner's misfortune that his work is put forward by himself so as to present to us the angle of its relation to sonata form. That very relation is a mistake; but if we are to condemn all art that contains a mistaken principle, I am not sure that *Paradise Lost* is less mistaken than these symphonies of the old Austrian organist. . . . Signs of wear . . . Bruckner will never show; his defects are obvious on first hearing. . . ." (Tovey, *Essays in Musical Analysis* (New York: Oxford University Press, 1935), II, 71-72.

science shows that any science becomes stagnant when those who work within it become complacent about the particular way they have compartmentalized the subject matter of their discipline.<sup>20</sup>

This is equally true in the arts. Thus it is quite impossible to assess Bruckner's sonata plan according to values established in the work of Beethoven. The functions of each are different. Bruckner's use of the sonata did fulfill the purpose of unifying his works, yet this means did not serve as the primary architectural force as it does in the sonata idea to which Tovey refers.

Other critics concur in Tovey's opinions. Each one compares extracts from Bruckner with similar elements in the works of other composers, pointing out Bruckner's lack of success in achieving like results. Extractions and comparisons are important in the observation of a style to show contrasting functions within similar formal outlines, but alone they cannot with certainty establish superiority of one style over another.

Lang describes certain of the symptoms of late nineteenth century music which are applicable to the music of Bruckner and points up the fallacy of trying to fit differing contents into the same mold and arriving at the same results.

The indistinctness of mood and contour of the music of the *fin de siècle*, its groping gestures, caused an asymmetry of musical phraseology which was vaguely akin to free verse. The developing lines are broken, the harmonies like to tarry on the no-man's land between tonalities, and although some central key is never really abandoned, constant chromatic and enharmonic modulations prevent an unequivocal tonal skeleton, a condition again leading to abrupt and broken form.<sup>21</sup>

Herbert Weinstock says that if Bruckner has made any real misjudgment on using forms of the past, it is in "dangerously constru[ing] the sonata forms as epic [and in using them] for ceremonial and prolonged meditative and expository effects rather than for the aspects of drama native to them both through ancestry and by innate structure."<sup>22</sup> Lang also sees in their "epic utterances [an] offense against the essence of symphonic thought, logic and economy."<sup>23</sup> Elements of Bruckner's personal idiom (pauses, tremolos, pedal points, fanfares, etc.) appear, to Lang, as "blood clots in the symphonic vein."<sup>24</sup>

Paul Rosenfeld falls back on the evolutionary theory of musical forms. He sees Bruckner's "achievement as really vaguer than Beethoven's; for the reason that his sense of form remains unevolved."<sup>25</sup>

<sup>20</sup> Hadley Cantril, *The "Why" of Man's Experience* (New York: Macmillan, 1950), p. 5.

<sup>24</sup> *Ibid.*

<sup>25</sup> Paul Rosenfeld, *Musical Chronicle* (New York: Harcourt, Brace, 1923), p. 195.

Hanslick's review of Bruckner's eighth symphony expresses a vituperative reaction against both his form and style.

Interminable, disorganized, and violent, Bruckner's Eighth Symphony stretches out into a hideous length. . . . It is not impossible that the future belongs to this nightmarish *Katzenjammer* style, a future which we therefore do not envy.<sup>26</sup>

In each case criticism of the form is based upon a past standard, which under examination is found not to exist as an entity in its own right but only as an idealized standard. Terms such as: "ancestry, inateness, evolution, etc." are used to express relationships rather than terms which reflect change in changing conditions. The problem of criticizing formal structures demands a careful evaluation of all of the significant aspects of the structure and their manifold interrelationships. Cantril says that a problem must be posed in such a way that "it holds out a chance of explaining away the hindrance in understanding that created the problem, . . . requiring a careful selection of the most relevant variables to use in investigation."<sup>27</sup>

For a real understanding of Bruckner's music it is necessary to re-evaluate the close relationship between the style of his music and the forms of his music. Only on its own merits can it then be fairly judged.

Ernst Krenek has said that "Bruckner's work is expressive of his conviction that the late romantic idiom was susceptible of unlimited evolution on its own terms. . . ." <sup>28</sup> This opinion is furthered by such an eminent musician as Bruno Walter who sees no discrepancy between the content and the form. Rather he has made a re-evaluation of their relationship and placed the emphasis on different aspects:

Strange, that I had to grow almost fifty years before recognizing a genius, who, at about the same age, had begun to create his great works. . . . I had known Bruckner's works for many years without really coming close to them. . . . His form had been unintelligible to me; I had considered it out of proportion, exaggerated, and primitive. To move without restraint within the monumental edifice of Bruckner's work had seemed to be denied me. All at once, a change came over me. I recognized in the melodic substance, in the towering climaxes, and in the emotional world of his symphonies the great soul of their creator, pious and childlike. This stirring recognition, in turn, made me comprehend effortlessly the substance and form of his music. I can hardly express in words the importance Bruckner's work has since gained in my life, to what degree my admiration for the beauty and symphonic power of his music has increased, what ever more richly flowing source of exaltation it has grown to be.<sup>29</sup>

Willi Apel's high regard for Bruckner's symphonies is expressed in the following quotation:<sup>30</sup>

Bruckner's symphonies are musical architecture in the truest sense of the word, not only with regard to their dimensions, but also, and chiefly, to the details of their content. A movement from a Bruckner symphony may well be likened to the towering vault of a Gothic cathedral, with its stained windows each having its own subject, character and colors, but all forming the parts of one great whole. It is with such an idea in his mind that one should approach a symphony by Bruckner. The listener who expects to be carried over in one tremendous and irresistible flow from the beginning to the end will necessarily be disappointed. The one who is prepared for a phenomenon similar to the great waves of the sea, to the chapters of an epic, to the stained windows of a cathedral will be rewarded with visions of beauty and greatness such as are not found anywhere else in music.<sup>31</sup>

It is quite apparent, after considering the preceding opinions for and against Bruckner's music, that it is the particular emphasis toward the composition that will determine the sympathy with which the formal aspects of his symphonies are accepted. Those who base their criticism of Bruckner upon his lack of faithfulness to tradition are then probably justified in their negative view. However, they have failed to evaluate Bruckner's music in the light of the process of its creation and have chosen to emphasize external characteristics, formulating their comparisons from this basis.

No two composers plan a work exactly in the same manner; there are many differences in compositional procedures. A composer's own personal attitude toward the technique of composition will determine the final form of a work, and it is with this particular approach in mind that the work of any composer should be considered. Compositional techniques can be reduced, however, to two basic categories. As discussed by Egon Wellesz:

There are composers who visualize the architecture, conceived in a moment of creative power, and who then become aware gradually of the component parts and turn their attention to details; and then there are composers who first of all conceive a theme, from which they proceed to a second theme, and who then exhaust all the possibilities which the development of the themes suggest.<sup>32</sup>

Composers of the second half of the nineteenth century are inclined

---

<sup>30</sup> While in his early twenties Apel studied at the Freie Schulgemeinde Wickersdorf in Thuringia under August Halm, the director of music at the school and author of a book on Bruckner. The musical life of the school revolved around the music of Bach, Beethoven and Bruckner. Apel acknowledges his indebtedness to Halm whose thoughts he paraphrases in the quotation above.

<sup>31</sup> Willi Apel, "Anton Bruckner," *The American-German Review*, April, 1944, p. 11.

<sup>32</sup> Egon Wellesz, "Anton Bruckner and the Process of Musical Creation," *Musical Quarterly*, XXIV (July, 1938), 270.

to favor the second type. Bruckner's own structures reflect this attitude in their emphasis upon sectionalization. His themes are not of the type adaptable for development in the sense that Beethoven's are; but rather they have a finality which often demands entirely new material for their continuing expansion. When the material of the themes themselves is utilized for expansion by Bruckner, such devices as sequence, motivic and harmonic extension are necessary. To quote Wellesz further: "Such an attitude toward the symphonic material carries with it an entirely new conception of musical architecture."<sup>33</sup> This concept of musical architecture is the one with which the music of Bruckner should be considered. Each movement has a composite unity arising out of the overlapping and superimposition of numerous structural elements. Underlying all of this is the progression of climaxes, described by Apel as the "phenomenon similar to the great waves of the sea." "This is the heart of his style," says Simpson, "and his peculiar symmetries arise from it."<sup>34</sup> The climaxes of the music are not attained as a result of the gradual development of the themes, as in the classical symphony where the climaxes are the result of the thematic process, but rather, as peaks are reached by other means, the themes are revealed for the first time in their full power. If the classical symphony can be compared to a Greek temple in its unity of design and ideal of classic perfection, then it might not seem far-fetched to emphasize Apel's analogy of a Bruckner symphony to a Gothic cathedral.

Bruckner's plan of construction can be visualized in such an analogy: i.e., the superimposition of the many elements, each contributing to the massiveness of the total structure. Paul Henry Lang's phraseology illuminates the close parallel<sup>35</sup> between architecture and music constructed upon this principle.

Gothic architecture is not static in nature, a mere mass at rest; it is the expression of the animated interplay of forces, an active process which takes hold of the entire building.<sup>36</sup>

As in the case of the isorhythmic motet which achieves expansiveness through the manipulation of material over large time areas, Bruckner's similar attitude toward time relationships results in symphonies of "epic" proportions and lengths, symphonies which are truly "monumental," in contrast to the conciseness of a Beethoven symphony.

The return of Gothic elements in baroque music was emphasized in the vogue for internal asymmetry, culminating in the intricate architecture of Bach's polyphony. A comparison of Gothic techniques in Bach and Bruckner could be made to bring out the similarity in architec-

---

<sup>33</sup> *Ibid.*, p. 270.

<sup>34</sup> Robert Simpson, "Bruckner and the Symphony," *Music Review*, VII (1946), 35.

<sup>35</sup> It is interesting to note an additional parallelism between Gothic architecture and the music of Bruckner, that of the intense preoccupation with mysticism and spiritual matters, in violent contrast to the humanistic attitude following the Gothic period, and the trend toward realism surrounding Bruckner.

<sup>36</sup> Lang, *op. cit.*, p. 136.

tural planning<sup>37</sup> in spite of the fact that comparison may seem to be musical sacrilege.<sup>38</sup> It is certainly true that there is a fundamental difference between the manner and rates of movement in the two composers, as well as in the many obvious differences of stylistic principles, the comparison being one of formal attitude only.

The movement of Bach's music is governed by the principle of the "continuous expansion"<sup>39</sup> of material in alternating stable and fluctuating tonal areas, whereas Bruckner's music is based upon a high degree of sectionalization. Bruckner, likewise, alternates stable and unstable tonal areas, but in such a manner that the great span of tonal continuity, which is evident over large areas, is often lost in the diffuseness of the intermediary stages of non-functionalism through which it passes. However, it is in the attitudes toward structural architecture that the comparison is made.

The first movement of Bruckner's Seventh Symphony in E major may be used to exemplify Bruckner's concept of symphonic form in which the multiple superimpositions of the main elements occur: (1) the basic formal plan (in this case the sonata-allegro form with three theme groups), (2) the overall tonal growth, (3) the alternation of stable and fluctuating tonal areas, and (4) the progression of climaxes, as follows:

I. The movement is cast into a sonata-allegro form. The exposition contains three theme groups returning in the same order in the recapitulation. These three groups are arranged in the following order of tonalities:

Theme group:	I	II	III
Exposition:	E	B(bx) <sup>40</sup>	b B
Recapitulation:	E	e(x)	G E

In each case the unstable tonal area of the second group provides contrast for the gradual development of tonal stability.

II. The complete movement can be divided into two main parts, each of which emphasizes the emergence of a single key from a group of different tonal areas. In the first part, after fifty measures poised on E major, the key of B (major and minor) evolves into its final form. The

<sup>37</sup> A massive structure such as the finale of the Bruckner fifth symphony, with a double fugue and chorale, superimposed on the sonata form, is analogous to the baroque superimposition of the ritornello upon the fugue and other compositional types.

<sup>38</sup> Willi Apel in his article on Bruckner in the *American-German Review*, April, 1944, pp. 8-11, speaks with enthusiasm in his comparison of Bach and Bruckner: "In the entire history of music there is only one analogous case" of a great master—one of the very greatest, being unknown to, or misunderstood by the musical public fifty years after his death—"that of Bach and I hasten to add that the analogy holds good not only with regard to the long period of oblivion . . . but also with regard to their artistic significance. . . . It may well be that the world recognition of Bruckner will be just as slow in arriving. But arrive it will, with the inevitability of a natural law."

<sup>39</sup> Bukofzer, *op. cit.*, p. 359.

<sup>40</sup> The lower case "x" denotes expansion of the tonality through areas of non-functionalism. In this case the keys of B and e are tonal poles—points of departure and return.

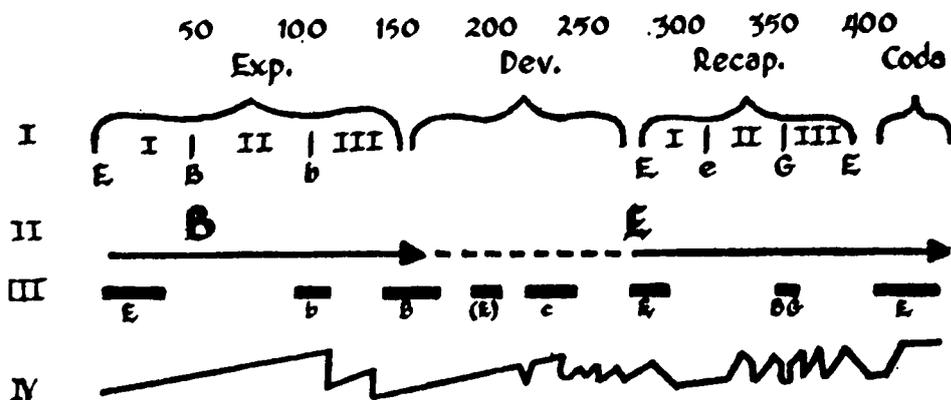

second part, which includes part of the development and all of the recapitulation, gradually reestablishes E major as the home tonality of the movement.<sup>41</sup>

III. The alternation of varying lengths of relatively stable and fluctuating tonalities provides another level of contrast.

IV. Superimposed upon the whole structure is a new and vital function, the rising and falling of an intricate series of climaxes which is not confined to the restrictions imposed by the sectionalizations of the sonata-allegro form and elements of internal structure. In contrast to these latter types of terraced sectionalization is a new type in which each of the waves in the series exhibits dynamic growth to a climax followed by relaxation, throwing the other elements of structure into completely new perspective.

Where one might normally expect a dominant preparation at the end of the development, leading into a strong recapitulation of the first group, there is a series of climactic waves which subside into a pianissimo return of the first subject. By using E major (measure 203) and e minor (measure 219) in the development section, the usual heightened effect of the return to E major is lost. However, by combining the peak of a series of climaxes with the firm establishment of E major as the key of the movement, the conflict of tonalities is finally resolved.

The following chart shows the superimpositions of the four larger structural elements: I. sonata-allegro form, II. emergence of dual tonalities, III. stable vs. unstable key areas, IV. plan of climaxes. Within

this general frame there are, of course, gradations and subtleties of these elements which are in themselves an important aspect of the complete structure. Each element has its own plan, symmetrical in some cases, and in others conscious avoidance of regularity. All of the sonata movements of Bruckner's symphonies adhere to this basic scheme; thus

<sup>41</sup> Robert Simpson has pointed out this concept of tonal emergence in "The Seventh Symphony of Bruckner," *The Music Review*, VIII, 3 (August, 1947), 179.

their similarity in other respects is not surprising. Each movement, however, will have its own character dependent upon the degree of emphasis placed upon each specific element of the formal plan. Other structural features often take on added significance (e.g., the thematic process. In the first movement of the Eighth Symphony, the rhythmic unity of the three theme groups becomes an element of overall unity).

V. In addition to these four main structural aspects there are other elements governing the internal structure, each of which has its own importance in the total interplay of forces.

1. Well-defined sectionalization of thematic units within the theme groups.
2. Phrasing in 4 + 4, 2 + 2, 4 + 2 + 2 + 2 + 1 + 1, etc., alternating with asymmetrical groups (first subject).
3. Terraced orchestration which heavily emphasizes the thematic sectionalization.
4. Sequences of varying types emphasizing the regular periodization.
5. Dovetailing of contrapuntal lines.
6. Areas of tension and relaxation through various traditional methods, the contrast of harmonic rhythms, rhythmic patterns, harmonic formulas, consonance-dissonance treatment, orchestral timbre, etc.
7. The thematic process.

Each structural element has its own function which is not dependent upon historical precedent, but is the result of its own unique role as determined by its position in the interplay of architectural forces. The composite unity of each movement then arises from the overlapping and superimposition of these numerous elements, all coordinated in structures of monumental proportions, truly the "projection of the symphonic idea into the monumental."

## BRUCKNER AND MAHLER IN THE FIRST YEARS OF THE STEREO DISC—JUNE, 1960

by JACK DIETHER

The first issue of this journal, appearing in February, 1932, carried the following item concerning Bruckner and Mahler recordings: "Thus far only a single symphony of Bruckner has made a complete phonograph appearance. This is the Polydor recording of the *Seventh* made by the Berlin Philharmonic under Jascha Horenstein before the days of improved electrical devices for good musical photography. There is, however, a rather fine Parlophone recording of the great *Te Deum* sung by the Bruckner Choir. The Scherzos of the *Third* and *Fourth* are available on H.M.V. records, and that of the *Fourth* played by the Vienna Philharmonic under Clemens Krauss. Mahler's symphonies are completely unrecorded. The best of his music to be had for the phonograph is Polydor's version of the *Kindertotenlieder*, beautifully sung by Heinrich Rehkemper [and likewise conducted by Horenstein]. There exist, also, recordings of some Mahler songs."

To be historically correct, there should be added to this list another Bruckner *Seventh*, and the *Adagio* of the *Eighth*, as well as the good, complete Mahler *Second* of the early 1920s under Oskar Fried. Also, the *Te Deum* mentioned was far from complete. I quote this paragraph nevertheless to remind those who may have forgotten, or never known, that no composers have made more astonishing strides in the world of recordings in a single generation than Bruckner and Mahler. In 1932, only one complete symphony by each had been made. By 1952, *all* the symphonies of both composers (in the case of Mahler, in fact, all his published works) had been recorded once or more. This was the fantastic dream, as I wrote here two years ago,<sup>1</sup> that was realized by the introduction of LP records into the world market. And now we have already a new revolutionary factor in the record scene: the introduction of the stereophonic disc. What does this mean in terms of Bruckner's and Mahler's music specifically? Something a little less initially startling, perhaps, for naturally *anything* would have to be anticlimactic, compared to their first availability to millions. If the LP enabled us, for the first time, to hear and rehear the greater bulk of their music, stereo will simply enable us to hear it better.

I say "will," because this is not invariably so at the present time, due to the wide variance in the current stereophonic techniques, and the equally wide variance in the results achieved. And since everything—good, bad, and indifferent—is dumped almost indiscriminately onto the market, and since a relatively small percentage of buyers consult reliable reviews (still fewer of them, more than one source regularly), there is at present a good deal of public confusion and misgiving con-

---

<sup>1</sup> See bibliography below.

cerning the merits of this innovation. Those who have only sampled it at random, in shops, audio shows, and the homes of friends, will bring forth widely differing reactions, depending on what was sampled and how. There are many people, for instance, who are congenitally unable to appreciate *anything* heard in the context of the noise, bustle, confusion, carnival hawking, and even sonic distortion sometimes encountered in the big audio fairs. Apart from the varying success of the stereo factor *per se*, my chief complaint to this point, in regard to stereo discs, has been the frequency with which the bass response of an original tape has had to be unduly compressed in making the stereo master, owing to the additional vibrational problems involved. When this occurs, it can often be easily detected by comparing the respective monophonic and stereo pressings.<sup>2</sup>

This confusion in respect to stereo I confidently regard as transitional, for I believe that the next few years will inevitably produce a refining and improving of the techniques, just as they did in the case of the LP itself. And let us not forget the initial, conservative opposition of the leading British record journals such as *The Gramophone* to the advent of LP. It was also a dogmatic opposition, for it too was based on very random samplings, or on second-hand reports from America (and for proof of this I need only refer the reader to editorials of that time in *The Gramophone* itself), but largely as a result of it, the British manufacturers were shy to embrace the LP cause for a couple of years after its acceptance in the U.S.A. The stereo revolution, on the contrary, has made its mark with them simultaneously on both sides of the Atlantic, and many who remember the earliest LPs all too vividly will admit that, for all its shortcomings, the stereo disc is being perfected more quickly, though perhaps not, in all cases, less painfully.

Thus, since anything I say about specific works will date much faster than usual, I propose to consider in greater detail the general issues at stake in this stereo revolution. I am thoroughly persuaded that all the principal works of Bruckner and Mahler will soon be available in stereo—in far less time, that is, than the six years it took for them to be done initially on LP. Only two years ago I wrote that a stereo Mahler *Eighth* (the work that stands to benefit most) seemed as remote as the galaxies, yet the change has occurred so swiftly that now the possibility seems far less remote than do the circumstances of 1958! I was writing then in regard to stereo tape sales, a field which in several years had not produced a single Bruckner or Mahler item, and was economically unlikely to do so. The sudden emergence of the stereo disc, on the other hand, has not only liberated the commercial tape market, but has made a stereo *Eighth* in the very near future almost inevitable.

At any rate, the policy of simply adding stereo to the agenda *from this point on*, wherever that may be in a record company's schedule, is

---

<sup>2</sup> In the case of Jochum's Bruckner *Fifth*, it can be seen even more spectacularly by comparing the bass response of the fine German-made stereo pressing (Deutsche Grammophon Gesellschaft SLP-138,005) with that of the shoddy American-made stereo pressing (Decca-D.G.G. SA-7300) made from *the very same tape*, showing that the problem is not inherent, but strictly a matter of local means and individual competence.

already producing some fascinating anomalies in regard to the growth of the stereo catalog. Take the case of Mahler's early cantata, *Das klagende Lied*, for the past several years his only remaining published work never performed in America, a work seldom done even in Europe, and therefore known to the larger public only by a poorish recording made many years ago in Vienna. In the spring of 1959, the work finally received its American première by the Hartford Symphony under Fritz Mahler; and because of this fortunate date, plus the lively interest of the Solomon brothers of Vanguard, the concert première was immediately followed by the recording première in more than passable mono and stereo sound. And so, while we may still lack a stereo *Third*, *Sixth*, *Seventh* and *Eighth* as I pen these words, we do have a stereo *Klagende Lied*! Or in the case of Bruckner, whereas the *Fourth* and *Seventh* have long been the most popular, we happen to have at this moment no stereo *Fourth*, but a stereo *Eighth* and two stereo *Fifths*! It is difficult to make specific predictions, but the inevitable pressures are to go forward, audiowise; and we who have fought so long and hard to bring the wider public to these composers should consider ourselves fortunate that the subjects of our zeal are now indisputably in the vanguard of those forward pressures, immune now to the hostile ghosts of any Krehbiels or Hanslicks.

And why? Why are they among the leading protagonists in this new audio world? Those who regard stereophonic recording as a new fad will not really understand this, but it is part and parcel of a coming-of-age in one aspect of our musical feeling and understanding. It refers to a new and enhanced sense of the physical presence of the musician and the physical reality of his instrument. In the concert hall we tend to take these for granted, and it is a further paradox of our time that perhaps the media which have always seemed to reduce that reality, namely the radio and the phonograph, may now be the means of giving us a keener awareness of it, reviving our interest not only in the special province of electrical acoustics, but in natural concert acoustics as well. Here we obviously draw very close to the musical worlds of Bruckner and Mahler, whose music is concerned with and dependent on the physical and acoustic aspects of music-making to a degree that aligns them, in that sense as in others, more closely with the modern age than with the classical and early romantic eras that spawned them. It anticipates the world of Stravinsky, who in *L'histoire du soldat* insisted, even in a dramatic presentation, on the physical presence of the musicians on the stage, along with the narrator and dancers. It anticipates also the world of jazz, with its brass perorations pointed proudly high in the air instead of demurely toward the ground. Perhaps it anticipates even more recent tendencies, which, *à propos* of New Yorker Henry Brant's multi-directional *Antiphony One*, were well characterized by Louis Biancolli when he remarked: "If 'space music' is to be the music of the future, maybe the logical place for the Philharmonic to move, when move it must, is the Hayden Planetarium."<sup>3</sup>

Let me emphasize that as far as stereo placement is concerned, it is the same for one instrument as for a few or many. This was admirably

<sup>3</sup> The New York World-Telegram, April 2, 1960.

expressed in a recent column by Christie Barter, who wrote; "How, it is argued, can a lone piano sound any better in a two-channel recording played on stereo equipment than it does in a monophonic recording played through two speakers, or even a single speaker? Fact is, it does—not by spreading the piano over the breadth of your living-room wall, but by 'locating' it, giving it a place on that wall, and, as it were, surrounding it with aural working space. The same holds true for small ensembles or three, four, or five players. Indeed one has the added advantage—and pleasure—of being able to follow individual voices more closely, to pick out inner details and thus to assess their relation to a musical whole."<sup>4</sup>

And just as a piano can be "located" in a certain spot on your wall, so an entire orchestra can be "located" within some ideal hall or cathedral seemingly *beyond* your wall<sup>5</sup> as the final chord of a Bruckner symphony reverberates into silence. It is the acoustical effect of an organ chord dying away within that same cathedral that inspired that symphonic ending, and stereo *must* reproduce that effect, or it is indeed only a passing "gimmick." It must do that and a good deal more. It must suggest that the apocalyptic horns and trumpets of Mahler's *Second* are indeed coming from the distant heavens, the cowbells of his *Sixth* and *Seventh* from slopes far below. It must suggest that the great antiphonal blocs into which Bruckner often divides his instrumental choirs, or the great antiphonal vocal choirs of Mahler's *Eighth*, are actually not only occupying, but claiming and conquering, certain defined portions of space, calling upon and responding to each other from those spaces. It must "locate" the antiphonal violin choirs in the later symphonies of both composers, the singer weaving the thread of his discourse through those of the woodwinds in the *Kindertotenlieder*, the many fluted echoes in Bruckner, the agitated colloquies, the humorous asides, and the "cries in the wilderness." All this it must do, and is equipped to do,<sup>6</sup> even if the recording equipment is, at present, far too often mishandled through lack of training and experience.

---

<sup>4</sup> "Disc Data," *Cue*, October 3, 1959.

<sup>5</sup> The property of stereo sound of seeming to come from beyond the actual sources can be most spectacularly tested by means of stereophonic earphones, in which case the *apparent* separation is often hundreds of times the actual separation of the two sources (*i.e.*, the pair of earphones themselves). By alternately putting them on and removing them, the listener gets the illusion of being alternately in the room in which he is actually standing *and in one many times larger*. Monophonic earphones, on the other hand, give no sense of space whatever: merely a sound coming from an undefined "somewhere," as in a telephone call (or, if we were naive savages, from the receiver or earphone itself).

<sup>6</sup> How stereo creates from two sound-sources a graphic illusion of many sources is rather generally known, and too technically involved to go into here. The reader who still doesn't understand it is referred to the numerous articles on the subject in current audio publications. The fact that some record critics still do not, however, understand stereophonic principles any better than the public they are supposed to enlighten is indicated by the recent remark of one who found "too much separation" in a certain stereo record, but added that this could be "easily adjusted" by moving the speakers closer together! Especially recommended for a non-technical presentation from the conductor's viewpoint is "Music and Stereophony" by Ernest Ansermet (*High Fidelity*, March, 1959).

We need only recall the literal reproduction on records of the completely dead acoustics of NBC's notorious Studio 8-H, to realize how far we have now come from the ideals of those days. *There* was the apotheosis of musical sound in the "abstract": disembodied, two-dimensional, mausoleum-like. At the other end, I had better not speak of "concrete" music, or I may get mixed up with something that in France has an entirely different meaning, so let us speak rather of "music in the round"; fleshed-out, three-dimensional, cathedral-like. Perhaps we have arrived at a modernization of the baroque spirit, especially that which is represented by the antiphonal music written to be played at St. Mark's in Venice. Such a spiral trend is suggested by the unprecedented interest shown in music of the baroque today, an interest which I dare predict will be even further increased and enhanced by the stereo revolution in turn. So it is no idle speculation to say that this revolution *must* soon come to grips with possibly the greatest, and certainly the most sonically hazardous, of antiphonal masterpieces—Mahler's *Eighth Symphony*.

Let us now examine what has already been done. As we go to press, the following works of Bruckner are available on stereo discs:

- Symphony No. 5, Critical Edition (Jochum)
- same, Revised Edition (Knappertsbusch)
- Symphony No. 7, Critical Edition (Rosbaud)
- Symphony No. 8, Critical Edition ed. Haas (Von Karajan)
- Apollo March (Goldman)

And the following works of Mahler:

- Das klagende Lied (Fritz Mahler)
- Lieder eines fahrenden Gesellen (Flagstad, West, Ludwig, Forrester)
- Kindertotenlieder (Flagstad, West, Ludwig, Forrester)
- Symphony No. 1 (Boult)
- Symphony No. 2 (Walter, Scherchen)
- Symphony No. 4 (Kletzki, Reiner)
- Symphony No. 5 (Schwarz)
- Das Lied von der Erde (Rosbaud, Reiner)
- Symphony No. 9 (Leopold Ludwig)
- Adagio and Purgatorio of No. 10 (Szell)

Only five Bruckner recordings, nineteen of Mahler! And more than half of Mahler's symphonies already, partly due to the Mahler centenary, but partly too because of the basic upswing in that direction. In Britain, Deryck Cooke was moved to put it even more strongly when he wrote: "It looks very much as if, overnight, Mahler will become a second Tchaikovsky, as far as the public is concerned."<sup>7</sup> This has nothing to do with classifications, of course, in regard to which Mahler can never be a "second" anyone; it refers solely to degrees of acceptance. This is an extraordinary phenomenon by any criteria; and the position of Bruckner is so merely to a lesser degree, though solidly within the picture I have outlined.

Meantime, and especially as this is "the" Mahler year, I shall have to

<sup>7</sup> See bibliography below.

confine my specific comments below to his compositions, and leave the Brucknerite aspect of the stereo picture, in detail, over to a succeeding issue, when I hope there will be much more to discuss; as of now, there is relatively little to add to my previous discography of him, and in fact no outstanding new interpretation, aside from Rosbaud's *Seventh*. But I would like to point out that if, to the implicitly dimensional emphasis in Bruckner, Mahler often adds the explicitly directional and extensional, this is simply a more dramatic application of the spatial pre-occupation to which I referred. Though I am not as fond as some of making endless analogies between the esthetics of Bruckner and Mahler, and believe indeed that the dimensions of the orchestra itself are handled quite differently by them, it seems to me rather manifest that it is, for both, a dimensional thing, as surely as the staging of a drama to a master director. Stereophony is concerned with converting all these acoustic factors into their electronic equivalents.

DAS KLAGENDE LIED, 1880, revised 1898. (Two LP recordings made; both currently available in America, neither in Britain.) Already at the age of nineteen, Mahler was experimenting with offstage instruments. Here their usage has not the symbolic overtones they later conveyed for him; they are employed quite naturalistically in setting the libretto-poem of his cantata (his own libretto, to be sure). Not again until the *Eighth Symphony* did he isolate such a large instrumental ensemble as this—piccolo, flutes, oboes, clarinets, horns, trumpets, and percussion—though most of the intervening works have solo or "special" effects (such as the aforementioned cowbells) in isolation.

I have already mentioned the fortuitous circumstances by which the stereo première of *Das klagende Lied* was also the occasion of its first performance in America. As a matter of fact, the offstaging is about the least convincing aspect of this recording, both in its stereo and monophonic pressings,<sup>8</sup> since the instruments are simply too close-mixed to give any illusion of depth. What stereo can do in seeming to spread a choral body out in a large imaginary space before you is much more dramatically demonstrated. The solo singing is highly preferable to that of the earlier recording—a blessed relief—and Fritz Mahler doesn't miss very much, in this score to which he is evidently sincerely devoted. If the impressive result does not tempt other conductors to try their hands at it, they will be missing a glorious opportunity.

LIEDER AUS DER JUGENDZEIT, 1880-92. (Two complete recordings; one available in America, neither in Britain.) No stereo yet. Out of all the songs that Mahler penned up to his 32nd year, these fourteen alone were chosen by him for publication, and represent his entire published output for voice and piano. The Felbermayer-Poell integral recording extolled in the previous issue<sup>9</sup> is still the standard, and British listeners are urged to import it in preference to the locally

---

<sup>8</sup> Hartford Symphony Orchestra and Chorale conducted by Fritz Mahler, with Margaret Hoswell, Lill Chookasian and Rudolf Petrak. Vanguard disc, 1048 (mono) or 2044 (stereo).

<sup>9</sup> Anny Felbermayer (soprano) and Alfred Poell (baritone), with Viktor Graef (piano). Vanguard disc, 424 (mono).

available pressings of (a) the Halban recording of eight of them, or (b) the Felbermayer rendering of four of them in orchestral transcriptions.

LIEDER AUS "DES KNABEN WUNDERHORN," 1892-9. (One complete recording; available in America only.) One looks forward to hearing these compelling songs and ballads in stereophonic guise, especially the macabre evocations of the great *Revelge*, surpassed by none of Mahler's symphonic marches and Scherzos in its uncanny power and momentum. They have the feel of open spaces about them, whether sparkling with sunlight or imbued with the mystery and longing of night. The Sydney-Poell recording<sup>10</sup> is still a marvel of clarity and strength. The ironic tone of many of the male songs is underplayed in Poell's dry, nasal delivery, and I have recently heard them given in concert with more open satire by singers of both sexes, and most successfully. I especially recommend comparing Miss Sydney's smooth *Antonius von Padua* with that of Christa Ludwig and Gerald Moore ("A Song Recital," Angel 35592). This latter, and the *Rheinlegendchen* on the same record, are the first of these songs to be heard in stereo—but not with orchestra.

LIEDER EINES FAHRENDEN GESELLEN, 1884; KINDER-TOTENLIEDER, 1901-4. (Twelve recordings of *LEFG*; seven available in America, five in Britain. Ten recordings of *K*; nine available in America, four in Britain.) The unflagging popularity of the two cycles in the U.S. is attested by the above statistics. I have placed them together here, not because they really belong that way, but because they are now almost invariably coupled on LPs, and the no less than four stereo versions released in the U.S. are all couplings of them, presented by women singers. The most successful stereo sound of all is on Flagstad's London recording, but unhappily hers is by no means the best interpretation, being rather scoopy and shrill. (*K* is transposed up a minor third.) The past standard is distinguished, including on records, for one or both works, Rehkemper, Schlusnus, Zareska, Ferrier, and Fischer-Dieskau, and some of these are still available here or abroad. As the finest of the present mono-stereo versions, I recommend Christa Ludwig's<sup>11</sup> somewhat over Maureen Forrester's;<sup>12</sup> their *K* cycles are both lovely, but in the *LEFG*, where both have some difficulties, Ludwig is better able to surmount them. The sound, not as exceptional as London's, is still very good.

FUENF LIEDER NACH RUECKERT, 1903. (Two complete recordings; one available in America and Britain.) This is one Mahler opus that has fared rather better piecemeal than otherwise. The Ferrier-Walter recording of three of the five songs is technically as well as artistically the best. In Britain it is still available by itself on a ten-inch

<sup>10</sup> Lorna Sydney (mezzo-soprano) and Alfred Poell (baritone), with the Vienna State Opera Orchestra conducted by Felix Prohaska. Vanguard disc, 478 (mono).

<sup>11</sup> Christa Ludwig (mezzo-soprano), with the Philharmonia Orchestra conducted by Sir Adrian Boult (*LEFG*) and André Vandernoot (*K*). Angel disc, 35776 (mono or stereo); in Britain, Columbia disc 1671.

<sup>12</sup> Maureen Forrester (contralto), with the Boston Symphony conducted by Charles Münch. RCA Victor disc, 2371 (mono or stereo).

disc, but in America it can be acquired only as part of the *Walter Lied von der Erde* album, which has by now been superseded in a number of respects (see below). Another record available only in Britain contains four of the songs beautifully sung by Norman Foster (Pye 30135), but with piano accompaniment by Heinrich Schmidt. Even the one complete recording with orchestra still available, that of Poell (Vanguard 421), is interspersed with the *Jugendzeit* transcriptions mentioned above, in an extremely disconcerting manner. I await the announced D.G.G. recording by Maureen Forrester.

**SYMPHONY NO. 1, 1888.** (Eleven recordings; six available in America, five in Britain.) The very opening page of this *First Symphony* proclaims the depth and breadth of the composer's tonal outlook: the inscription "*Wie ein Naturlaut*" ("Like a natural sound"), the celebrated eight-octave unison for flageoletted strings, the characteristic footnote "for the conductor—the deepest A must be sounded *very distinctly*." And on the succeeding page, three solo trumpets "placed at a very great distance."

For purposes of structural balance and effect, the brief exposition (cues 4 to 12) is to be repeated. Three out of eleven conductors do so: Horenstein, "Rubahn" and Boult. The second of these versions is deleted, and was never a serious contender. The Boult performance is on the sole stereo recording to date, and from a technical point of view there is much to commend it (Everest 3005). Sir Adrian himself shows little affinity for the work, however, apart from the matter of the repeat. (Compare his tempos for the inner movements with those of Horenstein and Walter.) From an over-all point of view, Horenstein's is still the recommended disc.<sup>13</sup>

**SYMPHONY NO. 2, 1894.** (Three recordings; all available in America and in Britain.) The "*Resurrection*" *Symphony* extends the dimensionality of the *First* into cosmic realms. It introduces the last post and reveille (offstage), the military "Fall in!", the "cry in the wilderness," the medieval *Dies Irae*, trumpet sounds approaching from opposite directions, solo voices emerging imperceptibly out of the choral mass, and so on. All of this antedates the antiphonal orchestral experiments of Charles Ives, and similar 20th-century innovations.

There are two stereo versions at present, but a good deal remains to be done. It requires not only the sort of practical experience that comes from years of activity in stereo recording, but also time and thought for experimenting with the immediate surroundings. There is obviously more of the latter in the Scherchen recording<sup>14</sup> than the Walter,<sup>15</sup> and thus a far greater sense of depth and perspective, even though the bal-

---

<sup>13</sup> Pro Musica *Symphony of Vienna* conducted by Jascha Horenstein. Vox Box Set 116, three mono discs, with *Symphony No. 9* (Horenstein, Vienna Symphony) and *Kindertotenlieder* (Norman Foster, Horenstein, Bamberg Symphony).

<sup>14</sup> Vienna State Opera Orchestra and Academy Chorus conducted by Hermann Scherchen, with Mimi Coertse and Lucretia West. Two Westminster discs, 2229 (mono) or 206 (stereo).

<sup>15</sup> New York Philharmonic and Westminster Choir conducted by Bruno Walter, with Emilia Cundari and Maureen Forrester. Two Columbia discs, 256 (mono) or 601 (stereo); in Britain, Philips 3245-6.

ancing of the various forces is sometimes erratic and artificial. Columbia "plays it safe" with microphones everywhere in the old manner, and perspective is thus weakened, even though there is still plenty of channel separation. Walter's performance is even and solid, Scherchen's more incisive and rhythmic, with a rather plodding *Scherzo*, but an inspired finale that leaves Walter's forces at the gate.

SYMPHONY NO. 3, 1896. (One recording; available in America only.) This is one of the most neglected of the great symphonies; the recording picture accurately reflects that of our concert halls. But the Adler recording<sup>16</sup> has endeared the work to many who otherwise might never have heard it, and its admirers have reason to look forward to its blossoming anew in stereo. The all-embracing pantheism of the *Third* has ample room to breathe in Adler's nearly 1 $\frac{3}{4}$ -hour performance; a similar handling in present-day sound could have an overwhelming impact.

SYMPHONY NO. 4, 1900. (Seven recordings; five available in America, four in Britain.) Here we have one stereo version of a Mahler symphony that can be unreservedly recommended for both technical and interpretive qualities. The conductor is Reiner, the soprano is Della Casa, and the engineer is Lewis Layton of RCA Victor.<sup>17</sup> The sprightliness and warm humor of the opening have not been heard to this effect since the memorable (and recently withdrawn in the U.S.) Van Beinum recording first appeared. The sudden though temporary overcloudings which Van Beinum caught so beautifully are quite well approximated too. Kletzki's recent version was superbly played and recorded, but I would have been loath to settle for his second-best interpretation; and now, most opportunely, the new Reiner makes it unnecessary. Despite the *Fourth's* very special "Mahlerisms," I think there may be no better entry into his musical cosmos today than through its "*himmlischen Freuden*." (P.S.: The Kletzki has now been issued in stereo as well, on Angel S-35570, but the enhancement of sound is quite unexciting compared to RCA's.)

SYMPHONY NO. 5, 1902. (Three recordings; all available in America, one in Britain.) The three orchestral "middle" symphonies and the choral *Eighth* are Mahler's most contrapuntal works, and it is essential that the interwoven strands of the texture be kept audible and clear. With his unerring faculty for heterogeneous polyphony, Mahler knows just how to keep its components easily distinguishable. But the balance must be maintained in performance, and since microphonic sensitivity is vastly different from human aural sensitivity, miscalculations may easily run rampant. Stereo can further facilitate the identification of the individual strands, by giving them each their own position in space, if the particular voices are sufficiently audible in the first place.

And so it is with the *Fifth*. Those elements in the distortionless

<sup>16</sup> See the F. Charles Adler discography in this issue.

<sup>17</sup> Chicago Symphony conducted by Fritz Reiner, with Lisa Della Casa. RCA Victor disc, 2364 (mono or stereo).

Everest recording under Schwarz<sup>18</sup> which make a powerful impact in the mono pressing are even more impressive in stereo. This includes everything played by the trombones, for instance, which one soon realizes have never before received their due in this work. In stereo they are alive and "present" to a degree not possible with one speaker and one signal. But there are other sounds, such as the string bass and a good deal of the percussion, whose assertion one accustomed to the Scherchen recording (Westminster 2220) finds lacking. I would still recommend Everest's stereo as giving by far the truest sonic picture of this great work, and its mono pressing as the most agreeable. Taste will differ as to the performances. Most of the contrasts between Scherchen and Walter which I described in 1958 apply alike to Scherchen and Schwarz; I think they are both valid, even though very different views.

**SYMPHONY NO. 6, 1904.** (Two recordings; both available in America, one in Britain.) This is the most sonically demanding of all his works "*für grosses Orchester*" alone. With its distinctive "hammer and cowbells," with its heroic and tragic emphasis, it has not yet been fully conquered on records. How will it fare in stereo? The two mono versions were considered in detail in 1958, and I refer the reader to that discussion.

**SYMPHONY NO. 7, 1905.** (Two recordings; one available in America, neither in Britain.) There is no competitor now to the Scherchen recording (Westminster 2221), so it would be especially pointless to add anything to my 1958 comparison. From its first glowing, mysterious evocation of night, through the *Andante amoroso* for guitar, mandolin, harp, and chamber orchestra, to its final peal of bells proclaiming "joy to the world," this sensuous and beauty-drenched composition so manifestly belongs to the tangible, dimensional approach we are discussing that one can only await the next recording with eager expectations.

**SYMPHONY NO. 8, 1906.** (Two recordings; one available, in America and Britain.) I have already referred to this as the most challenging of all, for the contrapuntal complexities of orchestration are simply compounded by the superimposed complexities of vocal and choral antiphony. Already the chamber-music textures of the last three works are heard within a total ensemble requiring between 750 and 1,000 participants. For recording purposes, this simply means that an ultra-sensitive yet flexible pickup arrangement must be worked out, to catch everything and still maintain perspective and sense of space.

Obviously that cannot be done at public performances like those in which our two recordings so far have been made, especially in "Crystal Palace" barns like the converted exhibition hall at Rotterdam. A properly controlled studio recording would be a tremendously costly affair but it will have to be done before the *Eighth* can be heard properly on records. It is worth noting, however, that a BBC transcription, made in 1959 at Albert Hall under Jascha Horenstein, reveals a good deal more of the orchestration and other details than can be heard in the two LF

---

<sup>18</sup> London Symphony conducted by Rudolf Schwarz. Two Everest discs, 6014 (mono) or 3014 (stereo).

recordings, or in the RCA test-pressing of Stokowski's 1950 performance (never released). Horenstein also gives a better interpretation than either Flipse (Epic 6004) or Scherchen. This happens to be a BBC stereo transcription (the first to be sent to the U.S.), though few people can have heard it in that medium as yet. Even in monophonic guise, it must awaken many to the further hidden beauties of this incomparable score.

DAS LIED VON DER ERDE, 1908. (Five recordings; all available in America, three in Britain.) Unlike the "middle" works, the entire final trilogy of works has already been very agreeably handled in stereo, and in the case of *The Song of the Earth*, in two versions, with a third to follow shortly. The recording under Reiner<sup>19</sup> has the advantage of Forrester and Lewis, and of recording as splendid as that of the *Fourth Symphony*. Reiner is a master of subtle inflection and perfectly judged retards, with a broad, luxuriant sway in passages like the elegiac interlude for the orchestra alone. I have not yet heard the mono version as I write this, but the stereo is magnificent. How pleasant to hear the contralto voice coming from well in the midst of the orchestra, blending with its delicate hues instead of dominating or crushing them as so often in the past! In this work, Forrester is even finer on records than in concert, for here she has no inhibitions about modulating her effortless gradations of tone down to the merest wisp of sound. Nor is Richard Lewis hampered by any necessity to shout beyond his musical means. The orchestra is equally to be congratulated, down to the second horn player who articulates such an eloquent trill at the end of *Von der Schönheit*. A thrilling moment of action is the graphic separation of the orchestral choirs into clearest blocs of tone, at the depiction of the wild stamping and snorting of the horse upon the river bank. Nothing like this is to be heard in the Vox recording,<sup>20</sup> though Rosbaud is a masterful interpreter in his own right, with a deep insight into Mahler's spirit. One factor alone would, I think, rule out the Vox stereo pressing at this juncture: its splitting of the 29-minute *Abschied* onto two discs, while RCA succeeds in recording it brilliantly without interruption, and gets in a Haydn symphony.

SYMPHONY NO. 9, 1909. (Four recordings; three available in America, two in Britain.) Everest has made a first stereo version of the *Ninth*<sup>21</sup> that is easily the equal of its superlative work on the *Fifth*. Ludwig's *Rondo Burleske*, with Everest's help, is about the finest I have heard on records, and his final *Adagio* is excellent. But the first movement lacks the incisiveness and the accentuated tension it ought to have, and the second does not do justice to the tricky contrasts in tempo between waltz and *Ländler* elements. Apart from the matter of stereo,

<sup>19</sup> Chicago Symphony conducted by Fritz Reiner, with Maureen Forrester and Richard Lewis. Two RCA Victor discs, including Haydn's *Symphony No. 88*; 6087 (mono or stereo).

<sup>20</sup> SWDR Orchestra of Baden-Baden conducted by Hans Rosbaud, with Grace Hoffman and Helmut Melchert. Vox disc, 10,910 (mono), or two discs, 10,912 (stereo).

<sup>21</sup> London Symphony conducted by Leopold Ludwig. Two Everest discs, 6050 (mono) or 3050 (stereo).

therefore, the far stronger identification with the work in the Horenstein version<sup>22</sup> is still preferred.

SYMPHONY NO. 10, sketched 1910. (*Adagio* and *Purgatorio*: three recordings; two available, in America only. *Adagio* alone: one recording; available only in America.) The facsimile reproduction of the incomplete manuscript of the *Tenth* has been receiving much attention lately; and since every bar of a perfectly clear five-movement sequence is sketched in, a number of attempts to complete the sketch have been or are being made, including at least four orchestral scores and two piano transcriptions. The first and third movements, initially performed in 1924, and published in 1951 in an anonymously edited score, are becoming increasingly popular, and this has inevitably created wide-spread interest in the remaining movements. In the nature of things, no conceivable presentation of the five movements ever can or should be uncontroversial. But the concurrently popular notion of some who have not studied the original manuscript that the *Adagio* and *Purgatorio*, in the form in which we know them, are strictly "Mahler's," and the others simply aren't, bears little relation to the true facts of the case. If the *Tenth Symphony* is worth bothering about at all, as I strongly believe it is, then it is worth serious consideration as a whole.

The five movements are deeply interconnected, and this has an inescapable bearing on our understanding of the truncated single or two-movement presentation. The second and fifth movements shed light on the *Adagio*, the fourth and fifth movements on the *Purgatorio*, just as Mahler's complete works frequently shed light on each other. Individually they make such a strong impression that one feels that nothing could fortify it more—until further acquaintance produces a further revelation. At any rate, the two movements now recorded are a treasured possession that few who have acquired would willingly consign to oblivion. They are especially beautiful in the stereo reproduction made under Szell,<sup>23</sup> who guides them unerringly through their apocalyptic visions. Scherchen gives the *Adagio* alone (Westminster 2220) a more introspective reading that takes nearly a half hour by itself. What an incredible mind was Mahler's! No spinner of tales, verbal or musical, is more missed than he who simply departs while weaving one as fascinating as this.

---

<sup>22</sup> See footnote 13.

<sup>23</sup> Cleveland Orchestra conducted by George Szell. Epic disc, including Walton's *Partita for Orchestra*, 3568 (mono) or 1024 (stereo).

## HINDEMITH LEADS HIS CELLO CONCERTO

by HARRIETT JOHNSON

The following review which appeared in the *N. Y. Post* on Feb. 28, 1960, is reprinted by permission of the *N. Y. Post*; copyright New York Post Corp. 1960.

Paul Hindemith's energy is proverbial and at 64 he shows no sign of its diminishing. His vitality as conductor and composer were demonstrated at the N. Y. Philharmonic's concert Friday afternoon in Carnegie Hall where he conducted his own Violoncello Concerto with Aldo Parisot as soloist, Anton Bruckner's Seventh Symphony, and the Overture to Cherubini's "Medea."

Given a chance, he could have illustrated his mastery in many other facets of his craft, being one of the most versatile musicians alive.

Hindemith stands among the few composers who are able to conduct their own works as well as anybody else can. This ability, which he has demonstrated on many occasions, probably stems from the fact that he is skilled as a performer on many instruments.

At 20, he became concertmaster of the opera orchestra in Frankfort and later attained eminence as a violist with the Amar-Hindemith Quartet and as soloist with symphonic ensembles. He knows his orchestra from the inside.

"Playing, playing, always the practical," he remarked in a *N. Y. Times* interview a year ago.

The Cello Concerto dates from 1940, his only work in the form scored for full orchestra. Previously he had composed a piece for cello and a chamber orchestra of ten solo instruments which he called Kammermusic No. 3.

Of its three movements, the first is the most difficult to grasp upon initial hearing. Its content is less readily accessible, less personal, though it offers no listening problems through its dissonance or formal structure.

The ingratiating second movement opens with a pensive melody accompanied by plucked strings. This moves fluidly into a speedier barcarolle section that literally enchants the ear with its lilt. Eventually the reflection of the first movement returns, but this time it is supported by the triplets of the second section as accompaniment. The smooth subtlety with which Hindemith fuses his materials in this movement pays tribute to his consummate craftsmanship.

The March *Finale* is as sturdy as its short, stocky maker. The contrasting middle section, the *Trio*, built on a tune adapted from a melody

composed by Amalia, sister of Frederick the Great, offered a jaunty charm.

Hindemith's orchestration for this part proved most ingenious. The woodwinds played very softly and were accompanied by a subdued percussion battery including the tinkle of the glockenspiel.

Bruckner's Symphony, which reflects his profound religious faith, brought the concert to a conclusion. Its spiritual strength and glowing affirmation are made articulate at several points through the composer's use of the brass, and Hindemith blended this choir magnificently with the rest of the ensemble. The sound was splendid without ever becoming too bold.

His interpretation, throughout, showed a perceptive understanding of the work's essential nobility.

As a conductor he is more thorough and business-like than dynamic. But his extraordinary musicianship and comprehension of all aspects of the score made this listener strongly conscious of Bruckner's forthright power.

---

## GUEST CONDUCTOR

Paul Hindemith Leads the Philharmonic

by HOWARD TAUBMAN

The following review which appeared in the *N. Y. Times* on Feb. 27, 1960, is reprinted by permission; copyright 1960.

As one of the distinguished composers of our time, Paul Hindemith might have chosen only his own music in his first appearance as guest conductor with the New York Philharmonic. But the measure of his stature as an artist was that he elected to make Bruckner's Seventh Symphony the big work of his program at Carnegie Hall yesterday afternoon.

It is regrettable that Mr. Hindemith modestly selected only one of his pieces. The 'Cello Concerto, which he wrote in 1940, does not represent him at the summit of his powers. It has agreeable moments and was played tastefully by Aldo Parisot, the soloist, but a major Hindemith score should have occupied a place of honor.

But how can one argue with a guest conductor if he wishes to lead Bruckner? By selecting the Austrian's Seventh, Mr. Hindemith was expressing his high regard for the composer. And he brought a sense of commitment to his task.

Mr. Hindemith makes no pretense of being a heaven-storming wielder of the baton. However, as a man of wide-ranging musical interests, he has spent a good deal of time performing and in recent years has turned increasingly to conducting. His ideas of the works he undertakes are personal, and he conveys them with energy but without fuss.

Mr. Hindemith conducted like a man whose concern was with style rather than refinements of tone. His assumption, one suspects, was that the Philharmonic is a mature, experienced ensemble and that it can be relied upon to do its duty. Furthermore, a conductor in a week's guest

appearance can rarely place his imprint on the sound and texture of an orchestra.

The result was interpretations that reflected Mr. Hindemith's views of the music even if they lacked the final fillip of polish. Cherubini's "Medea" Overture was taken at a broad pace and emerged with sturdy, dramatic force, but there is more warmth and intensity in it.

The Bruckner also unfolded deliberately and affectionately, but here too one wanted more fervor. There were places where Mr. Hindemith let his augmented brass section overbalance the other choirs, but this possibly was intentional to stress the grandeur in the composer's design.

The concerto, written largely in the summer Mr. Hindemith spent on the staff at Tanglewood, reveals him in a relaxed, congenial mood. The most fetching movement, the second, not only is put together ingeniously but also has unexpected sweetness. It is framed by the busy first and the lively march-like third.

Mr. Hindemith reduced the string contingent for the concerto. He was eager for felicitous balances and as the conductor he could indulge the composer. He also made every effort to give the soloist full scope. In the second and third movements, where there is opportunity for sustained song and virtuosity, Mr. Parisot played expertly.

Mr. Hindemith's rank as a musician entitles him to another visit with the Philharmonic, but the next time it should be a Hindemith program. His best works are not played so often that he can afford to pass them by.

---

### GUSTAV MAHLER SOCIETY IN JAPAN

On September 14, 1959, a Gustav Mahler Society was formed as a branch of the *Internationale Mahler Gesellschaft of Vienna*.

Its aims are to create greater appreciation and understanding of Mahler's music as well as of his personality. To accomplish this end, the Society will encourage performances of Mahler's works as well as publication of articles in newspapers and musical magazines. Hidemaro Konoye is President of the Japanese Mahler Society and Klaus Pringsheim its Vice-President. Professor Pringsheim was awarded the Mahler Medal of Honor by The Bruckner Society of America (see CHORD AND DISCORD, Vol. 2, No. 8).

## GUSTAV MAHLER: THE EARLY YEARS

by DONALD MITCHELL

London: Rockliff; New York: Macmillan Co., [1958].

The following book review by DIKA NEWLIN is reprinted from *Notes* for March 1959 by permission of Music Library Association.

Styles in Mahler biographies change, it seems. From the rhapsodic appreciations written during, or shortly after, Mahler's life (Stefan, Specht, Bekker) through the later studies of his work as part of the Viennese musical tradition (my *Bruckner—Mahler—Schoenberg*, Redlich's *Bruckner and Mahler*) we have now arrived at the semi-documentary biography which seeks to resolve problems arising from conflicting factual statements in previous works, and to establish as accurately as possible the conditions of the composer's existence. Be it said at once that Donald Mitchell has made an extremely valuable contribution by giving us so detailed a study of this kind devoted to Mahler's early years — that is, to the very period which, because so few of his compositions from that time survive, has understandably received the least attention in previous biographies. Thus, the limitation to 1860-1880 is, in one sense, the book's great strength. Of course, in dealing with this period the author's opportunities to discuss musical problems are necessarily limited; let us hope that he will indeed be able to write the continuation of this work which his preface conditionally promises, and thus to give us a more satisfying sense of his approach to Mahler's music itself.

The first three chapters describe the periods 1860-1875 (birth to entrance into the Vienna Conservatory), 1875-1878 (completion of the Conservatory course), and 1878-1880 (completion of *Das klagende Lied*, Mahler's first surviving large-scale work). A final chapter briefly analyzes the early works, including not only *Das klagende Lied* and the first volume of *Lieder und Gesänge*, but also several unpublished items. This is a peculiarly frustrating period for the biographer, since many of Mahler's juvenilia were either deliberately destroyed by their author or accidentally lost. However, Mitchell does the best he can under the circumstances — in fact, he sometimes overdoes things a bit in his zeal to extend the list of works. Thus, for 1875 we find the listing, "Compositions for piano?" (The question mark — single, double, triple, or quadruple — is a disconcertingly frequent feature of this list.) The puzzling entry is then explained: "Stefan tells us that at Mahler's first interview with Epstein, the latter 'invited the young unknown to play something either of his own or otherwise' (my italics). This remark reminds us of Mahler's statement that he composed industriously from his very early years onwards; it was an obvious step to take along some of his own 'works' upon the momentous occasion of his visit to Vienna in 1875." But the second-hand evidence of Stefan (at

best an imprecise mind) is surely insufficient to admit these supposed piano pieces to the canon of Mahler's works.

Mitchell has taken great pains to establish many small biographical points which were previously obscure. His conscientiousness in this regard is generally praiseworthy. However, it is surprising to read a reference to Jacques Callot's "famous painting, *Des Jägers Leichenbegängnis*." Callot never painted such a picture, for he was an engraver, not a painter. Mahler refers to the picture in question (the partial inspiration for the funeral march in his First Symphony) as "after Callot," not as an original Callot creation. (May not the designation *Die Fantasiestücke in Callot's Manier*, applied by E. T. A. Hoffmann to some of his fantastic tales, also have influenced Mahler at this point?)

In spite of such minor flaws, this book ought to remain a standard reference work in its field for some time to come. The upcoming Mahler centennial (1960) should inspire many individuals and libraries to acquire so important an addition to the still scantily furnished shelf of worthwhile literature about Mahler in English.

#### KILENYI BRUCKNER MEDAL AWARDED TO STATION WEFM CHICAGO

Station WEFM has included recordings of Bruckner and Mahler works in its programs over a number of years. In appreciation of its contribution toward creating greater interest in and understanding of the music of these masters, the Directors of The Bruckner Society of America awarded the Bruckner Medal to Station WEFM. The Medal was designed by the well-known sculptor, the late Julio Kilenyi, for the exclusive use of the Society. The presentation was made on March 11, 1960, by Charles L. Eble, Vice-President of the Bruckner Society.

## CONVERSATION PIECE: MAHLER AND BEYOND

by DIKA NEWLIN

The following article written for *Notes on the Programs* for the Jan. 14, 15, 16 and 17, 1960, concerts of the New York Philharmonic at which Mahler's *Tenth* was performed under the direction of Dimitri Mitropoulos, is reprinted by permission.

After Mahler's death, but before the nature of his partially completed *Tenth* Symphony had been revealed to the world, Arnold Schoenberg wrote: "We shall know as little about what his *Tenth* (for which, as also in the case of Beethoven, sketches exist) would have said as we know about Beethoven's or Bruckner's. It seems that the *Ninth* is a limit. He who wants to go beyond it must pass away. It seems as if something might be imparted to us in the *Tenth* which we ought not yet to know, for which we are not yet ready. Those who have written a *Ninth* stood too near to the hereafter. Perhaps the riddles of this world would be solved, if one of those who knew them were to write a *Tenth*. And that probably is not to take place."

Reading this passage today, we are struck by the way in which Schoenberg, without knowing the *Tenth* or even realizing that Mahler had been able to complete as much of it as he did, accurately forecast the visionary, prophetic quality which it possesses. For in the *Tenth*, Mahler does indeed seem to impart a message for which his immediate contemporaries were certainly "not yet ready." It remained for a younger generation to catch the meaning of his work and life, and, inspired by it, to undertake a venture which would change the face of music in the 20th century.

The vision begins with the mysterious recitative of the unaccompanied violas which opens the work, and which keeps returning in ever-varying forms. What is this strangely haunting melody trying to tell us? I shall not have the audacity to put a possible "spiritual message" of this music into words. If Mahler had wanted that, he—almost as great an artist in words as in tones—would have been quite capable of writing these words himself. But, as he wrote at another point of the score in which a little incident meaningful only to him and to his wife is described, "*Nur du weisst, was es bedeutet.*" "Only you know what it means"—many such "messages" of Mahler's music should be left wordless, for us to read between the lines. However, if we look at the melody in question with a more coldly analytical eye, we notice certain technical features which help us to account for its effect. While the nominal key of the movement is F-sharp major, here tonality seems to be floating, suspended. The F sharp, while it does appear several times in the course of the long melodic line, is not treated more importantly than any other note. And, as the melody unfolds, we hear every one of the 12 notes of the chromatic scale with the exception of C and E flat (which then, as one might expect, take on special importance in the viola recitative's next appearance). This kind of concern for the inclu-

sion of the "chromatic total" within a theme was to lead, eventually, to the systematic treatment of the 12 tones in what we know today as "12-tone technique," "dodecaphony," or, more broadly, "serial technique." It is no accident that Schoenberg, spending important years of his life in a Viennese ambiance dominated by the spiritual influence of Mahler, was the first to see the logical consequences of this kind of thematic building, and to elevate the consistent and consequent use of the 12 tones to a principle. It is no accident, either, that Schoenberg's disciples, Alban Berg and Anton Webern, younger during the time of Mahler's domination of the Viennese musical scene and hence perhaps even more deeply influenced by him in their varying ways, in turn took this principle and utilized it in most personal fashion. Today, each of us may experience at every turn in our listening to contemporary music how its working-out has, in one way or another, affected the consciousness of all kinds of composers, from Stravinsky who now says, ". . . a masterpiece is more likely to happen to the composer with the most highly developed language. This language is serial at present . . ." (Craft, *Conversations with Igor Stravinsky*) to the most advanced "electronic" composers whose motto would seem to be, "Life Begins With Webern."

When the restless viola recitative resolves into the movement's principal F-sharp major theme—wide-flung in the first violins, richly harmonized by the other strings and the trombones—we again seem to hear "prophecies" of much later music. The great melodic leaps of a ninth, a tenth, or more, which almost unbearably intensify the expressiveness of this theme—much as the distortions of certain contemporary art-works labelled "expressionistic" force our attention to concentrate itself upon those features the artist considers really important—suggest the "jagged" lines to be found in the music of Schoenberg and Berg. To name but one example, the tortured yet beautiful melodies so often to be found in the solo part of Berg's Violin Concerto could scarcely have existed without this kind of forerunner.

I cannot resist citing one more example of musical "prophecy," especially because it so completely contradicts a popular idea about Mahler. Many listeners are accustomed to think of him chiefly in terms of his magnificent mass-effects, where every available orchestral and vocal resource is employed in order to overwhelm the hearer with sheer splendor of sound (the closes of his Second and Eighth Symphonies are the finest examples). Most are probably less aware of those passages in which, on the contrary, he uses the *minimum* of means in order to produce a shattering effect. I call to your attention the remarkable measures of this *Adagio* in which only first violins and second violins are playing, in a dynamic range of *p* to *ppp*—no crescendo! Beginning far apart, the two voices come closer and closer together until they clash against each other (for a moment only) at the highly dissonant interval of a minor second. Then, they pull apart once more—the first violins descending rapidly while the second violins rise slowly—until they are separated by a span of over two octaves. The breathless tension has to give—and does, in one of Mahler's most glorious "explosions" of sound, with harp and strings rushing up and down, a pulsating background to the sonorous chords of winds and brass. The

whole amazing episode lasts but a few moments, yet—or perhaps for that very reason—its impact is unforgettable. And in those measures where the violins alone are playing the minimum of notes with the maximum of effect, we already seem to hear the attenuated, subtle music of Webern, who could, according to Schoenberg, express “a novel in a sigh”—not to mention that of his many latter-day imitators who often succeed quite well in capturing his manner, if not always (unfortunately) his matter!

Thus the influence of Mahler, both directly and indirectly, on some of our most important contemporaries is plainly to be seen. What it may mean in the future, we may speculate, but are not yet privileged to know. Again, Schoenberg has said it best, in his Mahler essay:

“The genius lights the way, and we strive to follow. Do we really strive enough? Are we not bound too much to the present?”

We shall follow, for we must. Whether we want to or not. It draws us upward.

We must follow.”

---

## PORTRAIT PLAQUE OF DR. MARTIN G. DUMLER PRESENTED TO NEW YORK UNIVERSITY

The Bruckner Society of America presented a plaque honoring its late president, Dr. Martin G. Dumler, to New York University on December 16, 1958. The memorial ceremony took place at 11 a. m. in New York University's Music Library in the University's Main Building at Washington Square.

Robert G. Grey, Executive Secretary-Treasurer of the Society, presented the plaque to Dr. Ernest Hettich, Director of the University's libraries. The University also received a complete file of the Society's periodical publication, *CHORD AND DISCORD*, and Gabriel Engel's two monographs, *The Symphonies of Anton Bruckner* and *Gustav Mahler, Song-Symphonist*.

The bronze plaque, which bears Dr. Dumler's likeness, was designed by painter-sculptor Wilma Prezzi. It will hang in the Music Library.

## CONVERSATION PIECE: WHY A MAHLER FESTIVAL?

by HOWARD SHANET

The following article which appeared in the *Notes on the Programs* for performances of Mahler's *Fourth* by the New York Philharmonic conducted by Leonard Bernstein on Jan. 28, 29, 30 and 31, 1960, is reprinted by permission of the N. Y. Philharmonic and the author.

The official reason for the Philharmonic's nine-program Mahler Festival is to commemorate "the 100th Anniversary of Mahler's birth and the 50th Anniversary of his first season as Music Director" of this Orchestra. Now this might be adequate justification for a single commemorative concert, but it is obvious that a major symphony orchestra does not devote the principal part of nine different programs to one composer without more deep-rooted reasons than an anniversary celebration for one of its former directors. In other words, his music would have to be interesting enough in itself to warrant so much attention. We can therefore rephrase the rhetorical question in the title of this Conversation Piece, "Why a Mahler Festival?", to ask (less economically perhaps, but more accurately):

"What is so special about Mahler? Why is it that half a century after his death his public continues to grow and even the most sophisticated listeners find his music more and more intriguing, while the compositions of many of his turn-of-the-century colleagues seem embarrassingly dated?"

In answering this composite question, we will do well to avoid subjective opinions. Although Mahler is accepted much more generally today than ever before, he still remains to some extent a controversial figure. There are passionate supporters and cold detractors. When a conductor a number of years ago chose to cut something from the impressive or excessive length (depending on the point of view) of one of the symphonies, he touched off a heated exchange of letters to the *Times*.

Perhaps this can be explained partially by the fact that Mahler was, in a sense, an extremist, carrying the characteristic tendencies of the late 19th century to their utmost logical extensions, and, like all extremists, appearing either a saint or a devil according to the spectator's attitude. Where one sees grandeur, another sees only grandiloquence. Where one finds that thematic simplicity which is "the last thing learned," another finds naiveté or even banality.

It may help us to escape such controversies if, in analyzing why Mahler's music survives so well in an age when its style is not even considered to be in good taste, we itemize a few of the contributing factors with objectivity and formality:

1. *Mahler's symphonies contain a surprising number of modern elements, imbedded in the old-fashioned romantic ones—and precisely those modern elements that have been adopted by the composers of the*

"New Viennese" school (Schoenberg, Berg, Webern, and their successors). Here is a short table which isolates some of the Mahlerian traits and suggests their derivatives in the newer music:

MAHLER	NEW VIENNESE SCHOOL
Wide melodic leaps	The straining lines of Schoenberg and Berg
Themes made up of short motifs	The abbreviated style of Webern (in which attention is focused on single notes or tiny phrases)
"Chamber-music" subtleties demanded of each player in the huge orchestra	The hypersensitive performance requirements of the pointillists, with their dots and wisps of sounds
Kaleidoscopic orchestration, which may move through half a dozen different parts of the orchestra in the course of a single melody	The <i>Klangfarbenmelodie</i> (tone-color-melody) of Schoenberg and Webern, in which a musical phrase is pieced together like a mosaic from tiny fragments, each contributed by an instrument of a different tone-color
Emotionality, expressive of inner experiences	Emotionality, "expressionistic" (i.e., expressive of inner experiences without concern for conventional standards of propriety or beauty)
Morbid and sometimes superstitious preoccupation with death and other tragic matters	Morbid and sometimes superstitious preoccupation with death and other tragic matters

These relationships have encouraged certain of the new composers and their sympathizers to champion Mahler's music. The modern characteristics are much more evident in Mahler's late works, from the Fifth Symphony on, and especially in the Ninth and Tenth Symphonies, but traces of them can already be detected even in the Fourth Symphony. Mahler never set foot in the promised land; but it is clear that, from the heights of his last compositions, he already was granted a glimpse of it.

2. *Mahler's technical perfection in all branches of musical composition* impresses all sensitive listeners, even those not sympathetic to his style. For a full appreciation of his mastery, however, one must constantly remember that the huge scale on which he chooses to work affects the significance of each detail; a chord, a rhythm, a bit of orchestration cannot be judged by the standards of the classic masters (except perhaps those of the late Beethoven, who had performed very similar experiments) but must be understood in the context of its own musical world. In the field of musical form, for example, it is futile to look for the conciseness of a Haydn sonata form in the first movement of Mahler's Fourth Symphony; it does have a kind of sonata form but it has been so skillfully loosened at the joints that its lovely pastoral relaxation would be completely spoiled by any attempt to tighten it up. Similarly, in the Fifth Symphony it is a misunderstanding to criticize the last digression before the end as an error in form; it is a last luxurious drawing of breath, carefully planned, and taken in full confidence

that the inevitable ending will wait for it—in short it is the structural equivalent of one of Beethoven's grand codas. Mahler shows remarkable originality not only in form, but in harmony, phrasing, development of material, and especially in counterpoint and orchestration. Conductors know that Mahler is one of the few composers whose orchestra parts need not be adjusted for proper balance; the adjustments are already written into the parts, with such painstaking solicitude for every detail of performance as only a labor of devotion to an artistic aim could accomplish.

3. *Mahler's artistic integrity and his total dedication to his art* make it impossible to suspect his sincerity, even when he seems to be sentimental or bombastic. He communicates a selfless, spiritual impression to his public. When he presents the huge orchestral apparatus of one of his symphonies (the Fourth is the most modest of them, and its orchestra is by no means small), we know that he is not trying to be sensational or to make an effect; he is employing all the experience of a great conductor and a sensitive musician, and all the musical resources of which he can conceive, in a kind of musico-religious service. Mahler never sought popularity. Indeed, he was so strict as a conductor that he was said sometimes to have been in bodily danger from those toward whom he had been too severe.

4. *Mahler's symphonies have a unique poignancy, which derives from what might be called a musical "montage" technique:* starting with musical fragments that are familiar and even old-fashioned (children's songs and marches, folk tunes and dances, bird songs and bugle calls), he puts them all together, *but without adding any story or program to connect them with each other.* That is precisely why they are so touching—no longer allowed their old meanings, they seem to be trying to say something to us, "something which trembles precariously on the brink of conscious understanding." This method was already in evidence in the First Symphony and it is still present in the Tenth.

Of course there may be additional explanations for the fact that Mahler's music continues to grow in popularity, but the four listed here must take an important place in any accounting.

## N. Y. CRITICS REVIEW THE MAHLER FESTIVAL BY THE NEW YORK PHILHARMONIC

Commemorating the 100th Anniversary of Mahler's birth and the 50th  
Anniversary of his first season as Music Director of  
the New York Philharmonic.

<i>Dates</i>	<i>Work</i>	<i>Conductor</i>

### MAGNIFICENT MAHLER CYCLE

by MILES KASTENDIECK

The following review which appeared in *The Christian Science Monitor*, Boston on April 23, 1960, is reprinted by permission; copyright 1960.

One of the highlights of the Philharmonic season has been its tribute to Gustav Mahler in commemoration of the 100th anniversary of his birth. It has spanned nine weeks of programs and has marked considerable increase in public interest. Succeeding audiences have been attracted not only by Mahler's orchestration but also by the spiritual content of his music.

No finer termination of the cycle could have occurred than Bruno Walter's current performances of "Das Lied von der Erde." He has given the premiere in Munich on Nov. 20, 1911; and his close association with Mahler brought an understanding no other conductor has been able to impart quite so warmly. Just as "Das Lied von der Erde" could be considered the consummation of Mahler's work, so these performances have had a similar character. Other conductors have given memorable performances of Mahler this season (George Szell and the Cleveland Orchestra with this work in particular), but only Mr. Walter has conveyed the personal quality inherent in its composition.

The dark quality of Maureen Forrester's contralto and her interpretative insight proved just right for this work. Richard Lewis sang the gayer songs attractively. The musicians played with full awareness of the symphonic character of the work so that it became a special privilege to hear it.

Thus a great conductor ended the festival which another great conductor had begun, none other than Dimitri Mitropoulos. The latter showed strong affinity for the Fifth Symphony, with which the festival

was launched. He followed a personal inspiration of introducing an intermission between movements to temper whatever impatience people might have with the length of the symphonies. He felt no injustice was done; indeed, he looked upon the movements as similar to acts of a play. Thus the intermission between the third and fourth movements made possible a fuller appreciation of the latter part after 45 minutes of listening to the first.

That Mahler's music is graphic became clearer in this first program. Unlike other composers he conveys a stream of musical consciousness that personifies immediate experience. This may be on the level of common man, or akin to nature, or a craving for spiritual experience. Whatever the category, it may well be that through his symphonies Mahler freed music for the 20th century much more strategically than has been generally recognized.

A magnificent performance of the First Symphony one week later confirmed the stream-of-consciousness impression. Only one movement of Mahler's Tenth Symphony constituted the third program, but its beauty dominated the concert unmistakably.

Mr. Mitropoulos ended his part of the Mahler festival with a performance of the highly individual Ninth Symphony, which can still baffle a listener a half century after its creation. That Mahler reached out into the 20th century almost as he reached out toward death makes this music an extraordinary experience. Its significance lies perhaps in the poetic understanding with which he achieved serenity.

The performance of the Ninth remains a landmark in the cycle. It was Mr. Mitropoulos's crowning achievement in interpretation, one to be equaled only when Mr. Walter conducted "Das Lied von der Erde."

Leonard Bernstein took up the cause of Mahler thereafter with the Fourth Symphony. The simplicity and serenity of this work can readily draw more people to appreciate Mahler's music. Mr. Bernstein proved a worthy interpreter. The fresh, pure voice of Reri Grist and her child-like artistry brought the final movement completely into focus.

In the sixth program Jennie Tourel sang a group of songs which immediately revealed them as the key to Mahler's symphonic thought. Next came the "Kindertotenlieder" and finally the Second Symphony.

While Mr. Bernstein may not have conducted memorable performances of all these works, he showed a sure grasp of the Mahler idiom and succeeded well in promoting the cause. He deserves special credit for setting up the festival, participating in it himself, and calling upon two great interpreters to carry out the most formidable assignments in the cycle.

The over-all result should be a reevaluation of Mahler's music apart from what people generally read about it in books on music. Listening 50 years after Mahler's passing, people may find his music coming into its own as he once predicted it might after a half century had passed.

Concurrent with the anniversary of his birth came the further recognition of the 50th anniversary of Mahler's first appearances as conductor of the Philharmonic. His first season as musical director was important not only for his accomplishments as an interpreter and orchestra builder, but also in terms of increased activity and of programs arranged in chronological sequence. Mahler also took the Philharmonic

on its first tour. Thus his contribution in New York adds further luster to this commemorative year.

## MITROPOULOS BRINGS OUT MAHLER'S BEST

by MILES KASTENDIECK

The following review which appeared in the *N. Y. Journal American* on January 2, 1960, is reprinted by permission; copyright 1960.

If Mahler's music is played as understandingly throughout the Philharmonic's current cycle as the Fifth Symphony was in Carnegie Hall yesterday afternoon, these concerts will be memorable moments for Mahler and for the Philharmonic. The New Year began auspiciously.

It fell to Dimitri Mitropoulos to open this cycle commemorating the 100th anniversary of Mahler's birth and the 50th anniversary of the composer-conductor's first season as the Philharmonic's musical director.

Mitropoulos was most welcome not only as guest conductor but also as an outstanding interpreter of Mahler, for whose music he obviously has strong affinity.

The Fifth Symphony proved an excellent choice to begin the cycle. It challenges the music lover as it challenged Mahler himself. In this centennial observation it calls for a reevaluation of Mahler's music on its own terms, not on those already set forth in print especially by Mahler's detractors. There is little wonder that he once wished that he could "give the first performances of my symphonies 50 years after my death."

With Mitropoulos to present the Fifth, however, he had no reason to worry. A magnificent performance, revealing the content of the music as well as its ingenious orchestration, disclosed Mahler in the fullness of his powers.

From the trumpet call in the first measures to the brilliant outburst of its final coda, the symphony offers much in an hour and a quarter for ready acceptance in this "age of the common man."

Fortunately, Mitropoulos called an intermission between the third and fourth movements to make the work more easily assimilated. This made possible a fuller appreciation of the adagio and the finale after 45 minutes of listening to the other three movements.

Incidentally the theme of the adagio reminded the listener that it bore the stamp of individuality characteristic of Mahler's melodic harmonizing. Detected in the funeral march of the First, it is simply confirmed here.

Some might note that the slow movement has reminiscent stretches of Wagner's "Tristan" and that the lively pages of the finale recall the last scene of his "Die Meistersinger," but these matters do not cloud the Mahler idiom which gives his music its own hallmark. Of that more could be said if space permitted.

Suffice to say that the composer's ingenuity in writing codas shone forth at the end of each movement yesterday, so painstakingly did Mitropoulos fashion them. This is graphic music. With Mitropoulos and the musicians responding to his feeling for it, the stream of musical

consciousness that personifies Mahler had its moments of glorification. The concert began with an enlightening performance of Beethoven's Grand Fugue, Opus 138. It is an extraordinarily anticipatory work and proved an excellent foil for Mahler. And if Beethoven was "the man who freed music in the 19th century," then perhaps Mahler freed music in the 20th.

At a critical turning point, the Fifth of Mahler may hold a strategic position just as it did for the composer.

## MAHLER MEMORIAL

by WINTHROP SARGEANT

The following review which appeared in *The New Yorker* on Jan. 9, 1960, is reprinted by permission; copyright The New Yorker Magazine, Inc., issue of Jan 9, 1960.

Last week, the New York Philharmonic embarked on what seems to me the most interesting venture of its current season—a Mahler Festival, during which at least five of that great and comparatively neglected composer's symphonies are to be presented on consecutive programs. The reason for undertaking this project at this particular time is, according to the program announcements, that Gustav Mahler was born just a hundred years ago, and that just fifty years ago he made his first appearance as music director of the Philharmonic. We are getting pretty close, however, to the fiftieth anniversary of an event that is of greater historic importance than either of these: the death of Mahler, in 1911, which was also the death of the grand style of symphonic writing, since Mahler was the last of that long string of Central European composers who made the symphony into one of the supreme monuments of musical literature, and the last to write in an idiom that was at once original and expressive. His most noted contemporaries, Richard Strauss and Claude Debussy, had abandoned the symphony for the illustrative symphonic poem, and the former attained his greatest triumphs in the field of opera rather than in the field of abstract music. The Finn Jean Sibelius continued for a few years writing symphonies of a rather specialized character, which partook of the nature of heroic landscape, and which seem lately to have fallen somewhat out of fashion. In Central Europe, however, decadence set in almost immediately.

The year of Mahlers' death, as it happens, was a fateful one for symphonic music. It was in 1911 that Schoenberg wrote his first essays in atonality, starting a trend toward sterile formalism that in half a century has eventuated in nothing of much interest to the concertgoing public. Thus, where the symphony as a monumental form is concerned, Mahler seems to have been the last of the giants. None of the subsequent symphonists have spoken with comparable authority, majesty, tenderness, and eloquence, and many of the best—notably Shostakovich—have paid him the tribute of imitating him. Whether the art of symphonic composition will ever rise again to the level of communicative vigor where Mahler left it is an open question, bedevilled by considerations of tradition, style, and the habits and demands not only of composers but of audiences as well. If it ever does, though, I think the

process will consist of cutting back through the tricks and mathematical formulas of most later music and starting again where Mahler left off with that combination of inspired melodic ideas and large-scale dramatic structure which constitutes the true symphony.

The work chosen to inaugurate the Philharmonic's Mahler Festival was the Fifth Symphony, an immense affair, which one can study a great length without exhausting its manifold subtleties. I shall not attempt to analyze these here. The symphony's total effect is one of deep nobility, and it was obviously deeply felt by the audience. All the characteristics of Mahler's style—the uncanny originality of his orchestration, the almost religious sincerity of his musical thought, the love of nostalgic pseudo-folk melodies, which are woven into the most sophisticated of musical contexts, and the mysterious world of fantasy reflecting the era of Sigmund Freud—are to be found in it. Its loveliest movement in the conventional sense—and certainly its most easily accessible one—is the scherzo, one of those magical Mahler waltz episodes in which gaiety appears strangely mixed with the profoundest sense of human tragedy. Dimitri Mitropoulos, who, I think, is one of the finest of contemporary Mahler conductors, performed the work magnificently, carefully balancing all the devious and iridescent components of the score and choosing tempos with particular adroitness. The Mahler symphony was preceded on the program by Beethoven's Grand Fugue in B Flat Major, which I still found a singularly ugly work, though Mr. Mitropoulos presented it with the utmost clarity

---

## MITROPOULOS TRIUMPHS AT CARNEGIE HALL

by LOUIS BIANCOLLI

The following article which appeared in the *New York World Telegram and Sun* on Jan. 9, 1960, is reprinted by courtesy *New York World Telegram and Sun*; copyright 1960.

The privilege of hearing Dimitri Mitropoulos conduct was again profoundly appreciated by the Philharmonic patrons at the second program of the Mahler Festival in Carnegie Hall yesterday afternoon and Thursday night.

If possible, Mr. Mitropoulos gave an even more overpowering reading of the First Symphony than he had of the Fifth last week. But this may be only because this week's performance had the impact of immediacy. It is closer to me as I write, therefore more vivid and shattering.

Again, the behavior of the crowd was a treat in itself for Mahlerites who for years bemoaned the neglect and apathy that threatened his survival. This was a completely absorbed audience, spiritually and artistically involved in the experience.

And what an experience these geniuses—Mitropoulos and Mahler—made of it! There was, of course, the ever-fascinating music, oscillating between the repose of nature and a savage tumult of spirit. But there was the performance, too!

Mr. Mitropoulos seemed to stake everything he believed in and cher

ished on it. Not only was he utterly identified with the music, but for the moment with every member of the orchestra, too. The result was a perfect union of ideals that had the quality of creation compounded.

The symphony never seemed so alive and timely. The transition from the mock-funereal calm of the third movement to the explosive crash of the finale was staggering. Those who didn't know it was coming looked at one another in awe.

Technically, the performance was as perfect as anything heard so far this season. Whatever it takes to reach the ultimate in bringing the cold print of music to living reality, Mr. Mitropoulos and the Philharmonic mobilized together for the First Symphony.

The reaction of the crowd was again proof that Mahler, at long last, is being taken on his own terms, not those of Brahms, Strauss, Wagner, or Tchaikowsky. Mahler thought, felt, lived passionately, and his music is the image of the man.

He made no bones about his obsessions of death and disease, about shattered illusions, and the endless search for solace of spirit. He found refuge in nature and the bright laughter of children. The brevity of life haunted him—and the Unknown.

The First Symphony begins in the bosom of nature, as if spring were slowly stirring to life; it ends on a triumphant note. In between are the acid mockery of a Death March and a wild tumult of soul that are "all we need of hell."

There are few places in music that match the frenzied turbulence of the first part of the Finale. What Mr. Mitropoulos and the Philharmonic contrived between them at that point is as much as may be humanly expected of a conductor and an orchestra.

Also on the bill was a brilliant performance by Gina Bachauer of the robust and rousing Piano Concerto of Arthur Bliss. But the program really belonged to Mahler, Mr. Mitropoulos and the Philharmonic. Together they made symphonic history.

## MITROPOULOS LEADS MAHLER'S "FIRST"

by HARRIETT JOHNSON

The following article which appeared in the *New York Post* on January 10, 1960, is reprinted by permission of the *New York Post*; copyright 1960 New York Post Corporation.

Gustav Mahler originally subtitled his First Symphony, "Titan." The description can as well describe his status as a composer for this turbulent man was a symphonic giant.

His Symphony No. 1, performed Friday afternoon by the N. Y. Philharmonic at Carnegie Hall, is extraordinary in many ways, but especially because it stamps the breadth and individuality of his style far more than the "firsts" of many other composers.

There is a violence in Mahler which is reflected by the adverse reactions to his music on the part of a minority of listeners. The following has happened at many concerts:

Audiences like the one Friday, sit enthralled through works which take far longer to complete than most symphonies. The "First," comparatively short, takes 50 minutes.

They applaud wildly and long. But a few diffidents, including some critics, feel differently. These latter fume at this enthusiastic response, and rush quickly to inform their readers that they are "misled."

I remember observing one set of Carnegie Hall listeners overpowered by a magnificent performance of the Mahler "Second" with Ormandy and the Philadelphians. They cheered for over ten minutes at the concert's conclusion, but meanwhile some writers were busy maligning the proceedings and diatribes appeared in some of the next day's papers.

Mahler, though, not only survives but gains followers the more his music becomes known through recordings and performances. Sheer musical vitality such as his will override temporary fences just as powerful rivers break weak dams.

Mahler has also benefited in the immediate past by being performed by many conductors of major status. Mitropoulos, Walter, Ormandy, Steinberg and Bernstein—all ardent protagonists of his genius—are a few.

The Philharmonic's present "Mahler Festival" honors not only the 100th anniversary of his birth, July 7, 1860, but also the 50th anniversary of his debut as the Philharmonic's musical director.

Mahler was a firebrand, both as composer and conductor, and for two seasons, from 1909 to 1911, was at the helm of the Philharmonic.

Though he later withdrew the word "Titan" from his "First," he wrote a sympathetic Berlin critic, Max Marschalk, in 1896, that there was "some justification for the title."

The Symphony uses for a portion of its themes, ideas taken from his Song Cycle, "Songs of a Wandering Journeyman," and at the head of the introduction to the first movement are the words, "Like the Voices of Nature."

The ironic third movement, a ghostly parody which takes as its point of departure an engraving by Jacques Callot, "The Huntsman's Funeral," is an eerie incantation, highly imaginative and evocative.

Basically a pessimist, Mahler's affirmative genius triumphs over his skepticism and disillusion in almost all of his works. There is exaltation and total glory at the end of the First's "Stormily Agitated" Finale.

Mitropoulos conducted the work from memory with the impassioned inspiration of a master who comprehends the whole and who can richly communicate it.

## MAHLER'S "TENTH"

by HARRIET JOHNSON

The following review which appeared in the *New York Post* on January 17, 1960, is reprinted by permission of the *New York Post*; copyright 1960 New York Post Corporation.

He (Mitropoulos) conducted the 25-minute "Andante" from memory in a manner which contributed intensely to an overwhelming ex-

perience.

In this Tenth Symphony, as Dika Newlin points out in the program notes, Mahler was an inspired prophet. With the spectre of his own death dogging him, he wrote a movement replete with tragic grandeur, foreshadowing in its idiom much that was to come.

He reaches his climaxes through a series of excruciating dissonances which are awesome in their inevitability. As he builds toward them, he succeeds in achieving a transfigured magnificence in the manner of a Greek tragedy inexorably moving to its terrible doom.

Mahler was expressing the ultimate dark fate of everyone in this score and yet his genius miraculously tolled the bell with glory.

### MAHLER'S TENTH

New York Philharmonic, Dimitri Mitropoulos, Conductor

by FRANCIS D. PERKINS

The following review which appeared in the *N. Y. Herald Tribune* on January 16, 1960, is reprinted by permission; copyright 1960.

The New York Philharmonic continued its serial observance of Gustav Mahler's centenary yesterday afternoon, when it played the first movement of his unfinished Tenth Symphony under Dimitri Mitropoulos' direction.

The first movement of Mahler's incompleted last symphony was played here by the Philharmonic under Mr. Mitropoulos two seasons ago, and by the Boston Symphony earlier this season. In itself it does not give an impression of incompleteness; its prevailing mood is one of lyric meditation, sometimes serene with an undertone of resignation and sometimes suggesting an implication of past tragedy. While it again seemed slightly too extensive, it has a sincerity and eloquence which were fully reflected in this laudably wrought and emotionally revealing performance under Mr. Mitropoulos, who used Ernst Krenek's edition of the score.

### MITROPOULOS CONDUCTS MAHLER'S NINTH

by LOUIS BIANCOLLI

The following review which appeared in the *N. Y. World Telegram and Sun* on January 23, 1960, is reprinted by courtesy of the *New York World Telegram and Sun*; copyright 1960.

Any season that features a performance of Mahler's last complete symphony like that of Dimitri Mitropoulos and the Philharmonic yesterday may be pardonably known—at least among Mahlerites—as the Season of the Ninth.

To judge by the rapt behavior and capacity size of the crowd, the Mahlerites are definitely on the increase; indeed, there would seem, as of these commemorative weeks, to be very little line of demarcation between them and Philharmonic patrons in general.

Thursday night and yesterday afternoon were special occasions in a special centennial observance of the Viennese master. If the Ninth

Symphony, being both great music and relatively unfamiliar music, big news, Mr. Mitropoulos made it still bigger news.

Frankly, it was so long since I had last heard this gigantic score, had forgotten what extraordinary power and diversity were contained in it. The first movement is still a stickler in contrast and conflict of attitude, but what a gripping experience the whole symphony is!

As Mr. Mitropoulos himself explained, the symphony is a unified spiritual experience, ideally heard without interruption. But he recognized its great length and the necessity of breaking it up into two halves divided by an intermission.

Accordingly, the audience was given the first two movements, preceded by Anton Webern's strangely fascinating "Passacaglia." After the intermission came the Rondo Burlesque and the Adagio Finale.

One could feel the need of a break. Webern's early "Passacaglia," with its mysterious feelers toward the future, and the two Mahler movements almost made a concert in themselves. Both the spirit and the flesh needed a recess.

Still in his early 20s when he wrote the "Passacaglia," Webern was already a marked man for the atonal millennium ahead. There are no to Brahms, Wagner and Mahler and the standard jingle of keys, but the rebel's profile, to quote Howard Shanet, is already perceptible.

The performance was a revelation—of the eager young mind and heart of Webern and of the extraordinary power of Mr. Mitropoulos to identify himself with another man's music like a second creator.

Mr. Mitropoulos gave it all the urgency of a drama from life. No one has so profoundly fathomed the meaning of Mahler. The symphony bulked as an intensely personal document, compelling in every shading of its message. But it was magnificent music-making, too.

At Mr. Mitropoulos' behest, the orchestra outdid itself in rhythmic vitality, diversified color, and a truly enchanted euphony of tones. Something of the conductor's missionary fervor gripped the whole orchestra, and, in turn, the whole Carnegie audience.

## MITROPOULOS EXCELS

by MILES KASTENDIECK

The following review which appeared in the *N. Y. Journal American* on January 23, 1960, is reprinted by permission; copyright 1960.

Dimitri Mitropoulos played Mahler's highly individual Ninth Symphony with the Philharmonic in Carnegie Hall yesterday afternoon. The occasion became memorable for his noble interpretation as well as for the rare opportunity to hear a living performance of this work.

Fifty years have not dimmed the modernity of this music. The listener still has to work into it along with the composer. A half century has made it more accessible, but the first movement still can baffle the listener. Mahler has reached out into the Twentieth Century almost as he reached out toward death which preoccupied his mind.

Even someone who did not know how this subject dominated his thought could sense the nature of his contemplative mood.

The extraordinary aspect of the symphony is Mahler's way of sharing his experience with the listener. Perhaps this stream of conscious-

ness explains the apparent discursive nature of the music: He has purposely worked it out this way.

In this sense, Mahler proclaims the emotional power of music as more significant than the intellectual discipline of musical thought.

Those who accept this premise, enjoy their Mahler; those who do not, complain of the length of such a work and of its lack of focus. Yet the Ninth emerges at the end into an expression of serenity quite beneficent. The finale adagio dissolves Mahler's problem because he has worked beyond it into poetic understanding.

As to how this work must have influenced composers like Shostakovich and Samuel Barber, much might be disclosed. Written in 1910, the Ninth Symphony forecasts the trend of contemporary music quite graphically. Its spiritual influence, however, remained in suspended animation for about 30 years.

Only just before World War II did contemporary composers return to conveying meaning in the sense that Mahler meant to do.

That Mr. Mitropoulos understands all this became evident in his grasp of all four movements, but particularly in the andante and the adagio. The "Miracle" of the finale illumined the whole performance, especially after the mockery written into the middle movements.

As Mr. Mitropoulos' "Farewell" at the end of his guest conducting, this performance will stand as a landmark in the Mahler cycle as well as in the 100th anniversary of Mahler's birth.

Webern's Passacaglia, Opus 1, written just before Mahler undertook his symphony, also prophesied the course of things to come as the century advanced. It proved to be a timely forecast of why audiences would grow skeptical of music in the next few decades.

## MITROPOULOS CONDUCTS MAHLER'S NINTH

by WINTHROP SARGEANT

The following article which appeared in *The New Yorker* is reprinted by permission; copyright The New Yorker Magazine, Inc., issue of Jan. 30, 1960.

In Carnegie Hall last week, the New York Philharmonic continued its Gustav Mahler festival by presenting his Ninth Symphony, under the particularly sympathetic baton of Dimitri Mitropoulos. To those who, like me, have been agitating for many years (often against the most determined critical opposition) for the recognition of this great Expressionist master, the festival is turning out to be an event of major historical consequence, and the public response to it has, on the whole, been astonishingly enthusiastic—astonishingly because Mahler, like his forerunner and teacher Anton Bruckner, is among the very few composers who require repeated hearing to reveal all the depth and subtlety of their music. Though these two composers have a similarity of approach to the art of symphonic writing, evident in their love of monumentality and in their profound seriousness and sincerity, there is a world of difference between their temperaments. Bruckner—the greater of the two, to my mind—was a serene classicist, whose work is notable for its lofty affirmations; Mahler was a child of the late-nineteenth century, a questioner, a neurotic, a conveyor of personal emotions

ranging from the most delicate to the most extravagant. He was also the exponent of a peculiarly tragic outlook, and there is about all his work a feeling for humanity combined with passionate protest that recalls the outlook of such comparably unhappy geniuses as Goya, van Gogh, and Dostoevski. The Ninth Symphony is certainly one of Mahler's finest. It is possible to point out certain of its technical features, like his unique way of handling the orchestra as a single instrument—what he writes for it is completely untranslatable into other terms; a piano transcription of this symphony would be altogether meaningless—that seem to open up a whole new concept of orchestral composition. But the concept has been adopted by no subsequent composer of major stature, and though Mahler has been widely imitated, by everybody from Berg and Webern to Shostakovich, none of the imitations have had the insistent eloquence of the original idiom. Such matters of technique, however, constitute only one facet of Mahler's musical thought. The other facets—the intensity of his dramatic feeling, the nobility of his sense of grand design, the typically Austrian bittersweet emotionalism, which reminds one somewhat of Richard Strauss, though in Mahler it is subtler and more genuinely tragic—all add up to something found only in the supreme examples of the late romantic style. Once the Philharmonic has finished paying its respects to Mahler, I strongly urge that it think about a festival devoted to Bruckner. Both of these neglected composers are, it seems to me, among the six or seven giants of symphonic music, and neither of them is as yet well known to American audiences.

---

## MAHLER'S FOURTH ACCLAIMED

by LOUIS BIANCOLLI

The following review which appeared in the *N. Y. World Telegram and Sun* on Jan. 30, 1960, is reprinted by courtesy of the *N. Y. World Telegram and Sun*; copyright 1960.

Returning to the Philharmonic podium, Leonard Bernstein continued the centennial observance of Gustav Mahler's birth with a memorable reading of the Fourth Symphony in Carnegie Hall, yesterday.

The Fourth gives us Mahler in a mood of childlike whimsy and delicacy. The spiritual storms are behind and ahead. Here all is pastoral charm and relaxation, and in the Andante a profound mystic beauty—as of a vision.

The Philharmonic's Mahler Festival has been a kind of symphonic autobiography heard in installments. Each symphony depicts some phase or crisis of Mahler's life. Mostly, it has been dark, tormented drama. In the Fourth the sun shines.

Few things in music have the irresistible simplicity of the finale—a simplicity touched by the sublime. The orchestra is an enchanted web as the soprano pictures the child's idea of heaven. There is no parody or condescension, only a cloudless joy.

Mr. Bernstein applied infinite care and tenderness to a performance

worthy to follow in the wake of Dimitri Mitropoulos's Mahler interpretations of the past few weeks. The accompaniment in the Finale was exquisitely right.

Moreover, he was blessed with an ideal soloist in the young and beautiful Reri Grist. In angelic voice and spirit she was the answer to Mahler's prayer for a soprano whose heart and soul were open to grace.

The Scherzo movement of Mahler's Fourth features a first violin tuned a whole tone higher. This explains why concert-master John Corigliano kept rising and switching violins. It sounded like macabre spoofing. Mr. Corigliano was quite the amiable wizard.

## BERNSTEIN ABETS MAHLER

by MILES KASTENDIECK

The following review which appeared in the *N. Y. Journal American* on Jan. 30, 1960, is reprinted by permission; copyright 1960.

Leonard Bernstein took over the Philharmonic's Mahler Cycle in Carnegie Hall yesterday afternoon. In offering the Fourth Symphony, he was presenting one of the most beautiful and accessible of Mahler's creations.

Though it crystallizes in the final movement with the songs of innocence for the soprano solo, the simplicity and serenity of the other three movements convey a state of mind not found elsewhere in his music.

It is this state of mind with which more and more people are finding some affinity these days, otherwise Mahler's music would not be gaining more adherents. The Fourth Symphony exerts persuasive powers, none more compelling than the subjective evolution a listener experiences as the performance unfolds.

Mr. Bernstein experienced it too as he worked into the third movement and drew from this and the finale warmth of feeling waiting to be tapped. He had emoted a bit during the first two movements and exaggerated those sections that Mahler's detractors call banal. The music certainly strikes a sympathetic vibration in him.

This performance qualified him as a worthy interpreter of Mahler's music. His attention to detail now needs only the mellowing influence of years to place him among the noted performers of this highly individual composer.

Singing the songs of the last movement, Reri Grist brought just the right quality of freshness and purity of voice to convey their mood. Her interpretation tended to be too naturally childlike and her voice too lightweight to do them full justice, but the blend of soloist and orchestra created its own brand of magic at this performance.

## MAHLER'S FOURTH

Bernstein Back After 4-Week Absence

by HOWARD TAUBMAN

The following review which appeared in the *N. Y. Times* on January 30, 1960, is reprinted by permission; copyright 1960.

Leonard Bernstein was back on the podium with the New York Phil-

harmonic at Carnegie Hall yesterday afternoon. In his four-week absence the music of Mahler had been the main business of the orchestra. Upon his return Mahler remained a principal item on the program.

This week it was the Fourth Symphony, which is Mahler in a relaxed and accessible mood. It is difficult to believe that this work could precipitate such strong feelings that people would come to blows. Yet that is what happened in Vienna in 1902. Evidently the battle lines on the worth of Mahler's music formed early. His symphonies still generate powerful partisan emotions.

The Fourth is designed for "small orchestra." In Mahler's terms it is "small," but in fact it is the full-sized modern apparatus. There is also a solo in the final movement, which was sung by Reri Grist, young American soprano.

The essential material of the symphony is folk-like. As usual, the composer needs plenty of time—an hour—to deal with it. There are pleasant tunes along the way—the bouncy, earthy ones reminiscent of Haydn in the first movement; the reference to the Austrian reveille—known as the "kleiner Appell"; the violin solo in the Scherzo, which was once called "demoniac" and which now seems tame.

All of this material, which has its roots in the Austrian soil, is scored with enormous gusto and resource, but it cannot support so large an edifice. Only in the third movement does one encounter music worthy of the orchestral machinery. Here Mahler writes with depth and individuality, but even here he goes on too long.

Nevertheless this is the hand of a master. One is touched by Bruno Walter's recollection that Mahler said of this movement that he saw a "vision of a tombstone on which was carved an image of the departed with folded arms, in eternal sleep." The agony to be found in some of the other symphonies is absent. Mr. Walter's suggestion of "a dream of heaven" is not irrelevant.

Mr. Bernstein and the Philharmonic gave a rich, lyrical performance of the symphony. The balances were neat, the tempos were well judged, the tone glowed and sang. The innocent dramatic effects were brought out without excess. In the rhapsodic slow movement the strings were especially eloquent.

Mrs. Grist sang the naive music of the last movement with accuracy and grace. Her light lyric soprano, with its transparent texture and natural sweetness, is particularly suited to the nature of the music. Her refinement and taste as a singer are unmistakable. She should go far

---

## MAHLER SINGS

by MILES KASTENDIECK

The following review which appeared in the *N. Y. Journal American* on February 6, 1960, is reprinted by permission; copyright 1960.

Since "Mahler's songs are the key to his symphonic thought," their appearance on the sixth program of the Philharmonic's Mahler cycle

had significance in Carnegie Hall yesterday afternoon. With Jennie Tourel to sing them, they not only became the highlight of the concert but also saved it. . . . Miss Tourel's artistry and Leonard Bernstein's teamwork with the orchestra were most happily combined.

The Philharmonic performed "Um Mitternacht" for the first time and included "Das irdische Leben" for the second time in its history. Even "Ich atmet' einen linden Duft" and "Ich bin der Welt abhanden gekommen" had been heard only twice before. Their beauty caught instant attention, especially the last mentioned. Added insight into Mahler's orchestral skill could be detected in the accompaniments.

## JENNIE TOUREL SINGS FOUR MAHLER SONGS

by FRANCIS D. PERKINS

The following review which appeared in the N. Y. *Herald Tribune* on February 6, 1960, is reprinted by permission; copyright 1960.

Mahler's songs, especially when heard with orchestra, reflect the strong points of his music and none of its liabilities; the four performed in this program are particularly memorable for their realization of the essential atmosphere of their texts, in musical contour and in the use and blending of vocal and instrumental hues. Miss Tourel was an ideal soloist; the color and timbre of her voice were the partners of her sensitive musicianship in conveying fine emotional details as well as the prevailing senses of withdrawn meditation or poignance, and the orchestral playing was also sensitive and evocative.

## MISS TOUREL HAILED AS FILL-IN

by LOUIS BIANCOLLI

The following review which appeared in the N. Y. *World Telegram and Sun* on February 13, 1960, is reprinted by courtesy of the N. Y. *World Telegram and Sun*; copyright 1960.

If nominations were in order for the Woman of the Year in Music, mine would go to Jennie Tourel for her heroic act of musical and artistic stamina at yesterday's Philharmonic concert at Carnegie Hall.

With no rehearsal other than a brief keyboard session with Leonard Bernstein at her apartment an hour before concert time, the accomplished French mezzo-soprano appeared as soloist in Mahler's difficult song-sequence, "Kindertotenlieder."

The emergency was caused by the sudden illness of the French baritone, Gerard Souzay. Word reached Mr. Bernstein at noon during rehearsal in Carnegie Hall. Immediately he thought of the plucky little lady. Miss Tourel agreed to fill in.

This wasn't an easy decision. The songs, concerned with the death of children, are among Mahler's most demanding in poetic mood and dynamics, and Miss Tourel, as it turned out, hadn't sung them in ten years; only a first-class musician and artist would even consider the challenge.

That, of course, is what Miss Tourel has proved herself to be again and again in the past—but never so much as yesterday afternoon.

Here was a truly remarkable instance of courage—but a highly artistic experience too.

Mr. Bernstein, in announcing the substitution, referred to Miss Tourel as "our staunch friend." At his words, "I think she's a hero!" the crowd expressed clamorous agreement. Miss Tourel proceeded to show why he thought so.

The one indulgence sought by Miss Tourel, other than a certain subdued caution in places, was the use of the score. Even so, it was a prodigious feat of memory and assurance—after ten years! She has again brought distinction to the Mahler Festival.

It so happened I caught a little of Mr. Souzay's singing at the preview concert the night before. I must confess he sounded pretty good to me.

## TOUREL REPLACES SOUZAY IN MAHLER

by HARRIETT JOHNSON

The following review which appeared in the *N. Y. Post* on Feb. 14, 1960, is reprinted by permission of the *N. Y. Post*; copyright New York Post Corp. 1960.

Jennie Tourel may well go down in history as the only distaff singer ever to be called a hero by her conductor.

This was the way Leonard Bernstein described Miss Tourel when he announced her unscheduled appearance Friday afternoon with the N. Y. Philharmonic in Carnegie Hall, as soloist in Gustav Mahler's "Kindertotenlieder."

On two hours notice, she had agreed to replace the indisposed French baritone, Gerard Souzay, as soloist in Mahler's song cycle "Kindertotenlieder." Souzay had sung the preview concert Thursday night and, despite a cold, had intended to perform the remaining three week-end concerts. Friday morning, however, his sore throat took a rapid turn for the worse. At noon the doctor announced that he would not be well enough to appear.

Though Miss Tourel hadn't sung the "Kindertotenlieder" for ten years, she went on, having had only a short piano rehearsal with Bernstein an hour before the program began. She will continue as soloist for the Saturday and Sunday performances.

This is the second time this season that the mezzo-soprano has substituted for an ailing colleague. Before Christmas she pinch hit for Betty Allen in Bach's "Magnificat."

The tender sorrow of the "Kindertotenlieder," five songs which lament death of children, is better delineated by a baritone or contralto but Miss Tourel's rare artistry rose above the limitations of her voice.

Her interpretations were sensitive, and subtly colored. While her voice lacked substance in the low register, she replaced richness of sound by richness of feeling.

Mahler understandably dramatized the lower range in the songs, because of their subject matter. The five poignant poems by Friedrich of Rueckert were inspired by the poet's personal loss of his own child. Mahler himself conducted the only previous performance of the songs.

by the Philharmonic in January, 1910. The baritone, Ludwig Wuellner, was the soloist, indicating the composer's own preference for a male voice to recreate the cycle.

## BERNSTEIN BRILLIANT CONDUCTING MAHLER

by LOUIS BIANCOLLI

The following review which appeared in the *New York World Telegram and Sun* on February 20, 1960, is reprinted by courtesy of the *N. Y. World Telegram and Sun*; copyright 1960.

Gustav Mahler continued to be the main topic of interest at yesterday's Philharmonic concert in Carnegie Hall. The specific subject this time was the Second Symphony.

Known as the "Resurrection" symphony because of its choral vision of the after-life, the Second has long been an eloquent testimonial of Leonard Bernstein's powers as conductor and Mahlerite.

Yesterday he outdid himself in re-creating the moods and intensities of this giant score. This is a gruelling and treacherous assignment, bristling with potential hazards of omission and commission.

There was only conviction and eloquence—a painstaking attention to detail and a grasp of over-all contour and implication. Plus, of course, that involvement of the spirit without which Mahler is just another composer.

What poignant and personal music this is—with its frenzied explosions of terror and despair, its momentary whimsies of fantasy, its groping out of darkness to the effulgent light beyond.

Both Regina Resnik and Phyllis Curtin were excellent in the contralto and soprano solos, each an artist of supreme sensitivity, and the Rutgers University choir rose nobly to the exultant assurance of the finale.

## THE PHILHARMONIC PLAYS MAHLER'S SECOND

Bernstein Conducts at Carnegie Hall

by HOWARD TAUBMAN

The following review which appeared in the *N. Y. Times* on Feb. 20, 1960, is reprinted by permission; copyright 1960.

The principal part of the New York Philharmonic's Mahler Festival is being completed this week with the performance of the Second Symphony. There remains only "Das Lied von der Erde" to be conducted by Bruno Walter in mid-April, which should be a generous dividend.

Leonard Bernstein brought intense concentration and dramatic power to his interpretation of the Second Symphony at Carnegie Hall yesterday afternoon. The Philharmonic was in excellent form; its tone ranged from shimmering transparency to proclamatory grandeur. The soloists, Regina Resnik and Phyllis Curtin, sang affectingly, and the Rutgers University Choir was a credit to its director, F. Austin Walter.

Mahler's subject, as in most of his other big works, is immense. It is nothing less than the tragedy of human life, which he finds bearable only because he sees a hope of immortality. The work ends with a vision of resurrection.

To cover this tremendous theme, Mahler found he needed almost an hour and one-half. He filled his symphonic framework with consuming passion and tremendous devotion. This was, like so many of his musical documents, a baring of the soul. "You are battered to the ground with clubs," he once said of this symphony, according to Mr. Walter "and then lifted to the heights on angels' wings."

For a dedicated Mahlerite the symphony is a journey from hell to heaven. Even to one who listens to it without a long immersion in the Viennese ambiance the work is moving in its gravity and innocence. There are places, however, particularly at the conclusion, with its celestial choring, by orchestra and singers, when the effect is ornate rather than pure. This is not to impugn Mahler's sincerity; there was never any doubt of it. Can it be that the fault lies in the use of similar musical ideas and grand apparatuses by too many calculating note-spinners to trivial purposes?

Like most conductors, Mr. Bernstein is fond of leading Mahler's music, and he sympathizes with its size and dramatic gestures. His reading emphasized the violent contrasts and built up the climaxes with shattering impact. One has heard performances that do not drive the big moments so hard, but Mr. Bernstein's approach had its validity.

It held the audience spellbound. There was spontaneous applause at the end of the movements. Only a scattering of women left before the final movement and its dream of resurrection. Such attention during an eighty-seven-minute symphony was an impressive tribute to Mahler and the performers.

---

## WALTER, PHILHARMONIC END MAHLER CENTENNIAL

by LOUIS BIANCOLLI

The following review which appeared in the *New York World Telegram and Sun* on April 16, 1960, is reprinted by courtesy of the *N. Y. World Telegram and Sun*:

As fitting culmination to the Philharmonic's Mahler Festival, Bruno Walter conducted a moving performance of "The Song of the Earth" in Carnegie Hall yesterday afternoon.

The society could not have completed its brilliant observance of the 100th anniversary of Mahler's birth in more memorable fashion. As dean of Mahlerites, Mr. Walter conducted the work with the authority of a prophet.

It was Mr. Walter who first performed Mahler's masterpiece four short months after the untimely death of 51 of the man he revered as mentor and master, no less than as friend.

Thus, close to a half century of crusading fervor and devotion went into yesterday's reading. Philharmonic patrons were indeed privileged to share the mellow bounty of this unique dedication.

At 83 Bruno Walter was still pleading the cause of a genius who was maligned and misunderstood in his own day, pleading it yesterday with unutterable tenderness.

Even in a season of exceptionally fine performances of Mahler's symphonies, Mr. Walter's interpretation had a quality of its own—a personal kinship that allowed him to see a little more deeply into his friend's bruised spirit.

As one listened, one could not help thinking of the man behind the music, the Mahler who not so long before had lost a beloved child and was himself doomed by the chance diagnosis of a heart specialist.

Mr. Walter did not minimize the passages of frenzied escape and desolation that make "The Song of the Earth" an awesome experience. But he emphasized the stoic valor of the music and its final compelling calm.

There was no mistaking the image of Mahler as man and musician that hovered in the background of Mr. Walter's reading. It was an image of profound sensitivity to the rapture and horror of life, but of a brave serenity too.

The final impression was far more intimate and subjective than usual. To Mr. Walter "The Song of the Earth" is perhaps the most personal utterance in the whole range of music.

That was how it sounded yesterday in the performance of the orchestra—every note and phrase carefully spun in nerve-like web of living tone. And it was in that image and conception that Maureen Forrester and Richard Lewis sang their solos.

These soliloquies are among the greatest songs ever written, achieving at times a sublime impact of truth and beauty. Once more Miss Forrester proved herself a singer who also is an artist and a visionary.

This has been Gustav Mahler's first real season in New York. It was about time. Let's not wait for another centennial.

### OFFER FINE MAHLER OPUS

The following review which appeared in the *New York Journal American* on April 16, 1960, is reprinted by permission; copyright 1960.

by MILES KASTENDIECK

Bruno Walter has come to end the Philharmonic's Mahler Festival with performances of "Das Lied von der Erde." It is quite fitting that he should do so since he conducted its premiere in Munich on Nov. 20, 1911. Hearing it again under his direction in Carnegie Hall yesterday afternoon in the autumn of his association with it became a special privilege as well as a memorable experience.

Just as Mahler poured his heart into its creation, so Mr. Walter let the mellowness of his wisdom and understanding work through the performance.

A sense of consummation pervaded it, so much so that the ovation that came at the end broke a spell woven from the emotional impact of the music.

The vitality which Mr. Walter injected into the performance belied his years. The insight and depth of feeling did not. These are the contributions of maturity to musical performance that age can bring.

It was the warmth of humanity that colored this interpretation.

Since the music represents Mahler in his most personal utterance, perhaps the finest artistry in interpretation must yield to the magic of communicative power. This is what made the performance of Schubert's "Unfinished" symphony the essence of romanticism at the beginning of the concert and what gave the Mahler its unique beauty.

The fact that the Philharmonic musicians and Mr. Walter were in perfect rapport calls attention to how beautifully they played. It is weeks since the strings have had such mellow tone, while the woodwinds, especially the melancholic oboe, and the brass were obviously alive to the significance of the occasion.

Mr. Walter conducted with full awareness of the symphonic nature of the work and the orchestra collaborated accordingly.

Both soloists caught the spirit of the music and Mr. Walter's interpretation. Maureen Forrester has the warm contralto to give her songs the right inflection. That she sang them beautifully almost goes without saying. Her singing of the farewell lingers plaintively in the memory.

Richard Lewis sang the gayer songs infectiously. His voice sounded a bit light against the full orchestra sound, but he matched its bounce.

With "Das Lied von der Erde" the Mahler Festival reached its natural end. The gap between the last program conducted by Leonard Bernstein and Mr. Walter's appearance was considerable, but it has not dimmed the vividness of the whole series of programs, begun so felicitously by Dimitri Mitropoulos.

The festival has become the highlight of the Philharmonic season, and Mahler has gained stature because of it. Mr. Walter's "Benediction" comes as the crowning touch of distinction.

## LANDMARK FOR PHILHARMONIC

### Bruno Walter Leads Mahler's "Das Lied"

by HOWARD TAUBMAN

The following review which appeared in the *New York Times* on April 16, 1960, is reprinted by permission; copyright 1960.

Because he will be 83 in September, Bruno Walter is reluctant to undertake exhausting assignments. He agreed to appear with the New York Philharmonic this season only when a special arrangement was made for him to conduct two concerts of this week's series of four and two next week.

The Philharmonic may congratulate itself that it took the trouble to juggle its schedule for Mr. Walter. He directed a performance of Mahler's "Das Lied von der Erde" ("The Song of the Earth") at Carnegie Hall yesterday that will long remain a landmark in the orchestra's history. If you are near a radio tonight, be sure to listen to this interpretation on the Philharmonic broadcast over the Columbia Broadcasting System.

There was no sign in Mr. Walter's step, bearing or concentration on the podium that he was burdened by his years. In his conducting of Schubert's "Unfinished" Symphony as well as the Mahler work he was in full command of his forces. Unlike some elderly conductors, he did not rush tempos to prove how energetic he was.

His conceptions had a fine, balanced mellowness. The Schubert symphony unfolded with a sense of glowing inevitability—spacious in song and generous in feeling. The Mahler work had nobility of design and shattering simplicity and probity of emotion.

Mr. Walter, who was a close associate of Mahler, conducted the première of "Das Lied von der Erde" in Munich in 1911. He has never lost faith in Mahler or his music, and his approach to this work reinforces one's own conviction that it is the composer's masterpiece.

Here form and content are perfectly joined. The song is at the heart of the work, and the subject—the beauty, sorrow and fragility of life and the longing for some sort of immortality—was Mahler's deepest and abiding concern.

Although the poems are from the Chinese, the piece is apt for Good Friday. In the final lines of the concluding poem, "Farewell," there is a tender invocation to the lovely earth and to the new spring. As the contralto's voice dies away on the words "ewig," (ever), there is the ineffable yearning for resurrection.

Mr. Walter's interpretation was full of wonderful, sensitive details, all of which fell into place in a masterly reading. Here were grace, strength, intensity and at the end a touching humility of spirit.

Maureen Forrester, who was the soloist in this work with the Cleveland Orchestra earlier this season, again gave an unforgettable performance. Her contralto was pure, full and molded with an artist's appreciation of nuance. Richard Lewis, the tenor, shuttled between mezza voce and outbursts of tone in a disaffecting way, though he had a grasp of Mahler's style.

After tonight's repetition Mr. Walter will conduct this program again next Thursday evening and on Sunday afternoon, April 24. It is good to have him back even on these limited terms. He gives the Philharmonic's Mahler's centennial observance a glorious climax.

## THE MAHLER FESTIVAL IN NEW YORK, 1960

by DIKA NEWLIN

As recently as ten years ago, it would have been unthinkable for the New York Philharmonic to devote thirty-six concerts of a single season to the glorification of Mahler's music. Then, one was grateful for *one* Mahler symphony during the course of a season! (From that particular year—1949-50—Stokowski's incandescent interpretation of Mahler's Eighth will remain long in memory.) In the event, the commemoration of the Mahler Centennial offered by the Philharmonic turned out to be a festival which need fear no comparison with the "Mahler Year" celebrations of the Old World—including that held in the place of so many of Mahler's sufferings and triumphs, his "hated and loved" Vienna. For this, we are thankful to all those of the Philharmonic directorship and management who were farsighted enough to make this unique series of concerts possible, as well as to the many devoted participants. That all of these Mahler programs were carried nationwide by CBS Radio was an incalculable contribution to the appreciation and understanding of Mahler's music throughout our land.

Other visiting orchestras, too, paid due tribute to the centennial occasion, and the Philharmonic did not neglect to offer a Bruckner symphony as an interesting pendant to eight weeks of concentration on Mahler. Of these events, we shall speak in their proper place, but first consideration must be given to the Philharmonic cycle. Three different conductors shared the responsibilities in this festival; thus, it fell logically into three sections, each dominated by a particular conductor's approach to the kaleidoscopic personality of the composer. Therefore, I shall subdivide this review in the same fashion.

### I. Mitropoulos

To him fell the honor of opening the Mahler cycle; indeed, New York must have been the first city to offer a Mahler commemorative program in 1960, as both New Year's Eve and New Year's Day were marked by performances of the Fifth Symphony. Here, the typical dramatic intensity of Mitropoulos' approach found congenial material (except in the tender *Adagietto*). While the orchestra did not seem completely adjusted to the Mahler style as yet, there was magnificent achievements in the performances—the splendid horn solo of James Chambers, in the Scherzo, must be especially singled out for praise. In this symphony (as, later, in the Ninth) Mitropoulos introduced an intermission—in this case, after the Scherzo. This is, of course, a controversial procedure. The conductor himself feels that the refreshment of a brief break enhances the receptivity of the listener (especially of one who may be less accustomed to Mahler's length) and also rests the orchestra. It should be noted that Mahler himself sometimes called for intermissions in his music (notably after the first movement of his Second Symphony—a request which is usually *not* complied with and was

also not observed in this season's performances). On the other hand, many listeners felt that the emotional continuity of the performance was seriously disrupted by such an intermission. Perhaps the best solution would be to avoid an overlong and taxing program by performing the longer Mahler symphonies alone, without other works during the course of the evening. Then, an intermission would not seem necessary.

The week following this auspicious debut of the Mahler season, Mitropoulos brought us his well-known interpretation of the First Symphony, in a performance which strongly conveyed its youthful energy as well as its moments of bitter irony and black despair. Praiseworthy was the conductor's fidelity to the composer's text (this in contrast to Steinberg's badly cut performance of the same symphony with the Boston orchestra; see below). However, the greatest proofs of his understanding of Mahler were still to come. On January 14-17, we experienced his performance of the slow movement of the unfinished Tenth Symphony. This time, the Scherzo "Purgatorio," which Mitropoulos had included in previous performances of this work, was omitted. Well that it was so, for this Adagio is so complete within itself that the *Purgatorio*, effective though it is, always seems to produce a sense of anticlimax afterwards. Schoenberg often used to say to his pupils: "You have not suffered enough. You must suffer." Here, the conductor who knows what suffering is put his knowledge at the service of this music which speaks of the "last things" in an unprecedented way—the result attained (if it did not transcend) the limits of the bearable. This experience was not easy to take, but, by those who underwent and understood it, it will never be forgotten.

On the final program of this first section of the Mahler Cycle, a change was undertaken in the originally announced list of compositions. Instead of the *Nachtmusiken* from Mahler's Seventh Symphony, we had the *Passacaglia*, Op. 1, of Anton Webern. This change proved wise, for it helped to make clear the intimate relationship between the music of Mahler and the productions of his spiritual disciples, the "Neo-Viennese School." While Webern's *Passacaglia* is nominally in D minor, its tonality is highly expanded, its theme almost a "tone-row." In like manner, Mahler's Ninth Symphony, with which this concert closed, shows a most extended and "progressive" concept of tonality. Each of its four movements is in a different key (D major, C major, A minor, D flat major). Here again Mitropoulos was dealing with moods for which he has a special affinity. His *Ländler* tempo in the second movement seemed demonically driven—the differentiations among the three distinct tempos which Mahler requests in this movement were, thus, not as clear as in the interpretation by Bruno Walter. But the Finale, that transfigured song of farewell, was utterly convincing and moving—a fit farewell of Mitropoulos to the Philharmonic for this season.

## II. Bernstein

One notes with pleasure the increasing affinity of this multi-faceted artist for the music of Mahler. Without his urging, the festival as we had it might well not have taken place. As is well known, his special flair is for the dramatic, the spectacular. Thus it is not surprising that a number of dramatic incidents occurred during his portion of the cycle.

One such incident could not have been foreseen—the sudden illness of Gerard Souzay, which forced Jennie Tourel (who had joined the orchestra the previous week in three of Mahler's finely wrought Rückert songs, "Ich atmet' einen Lindenduft," "Ich bin der Welt abhanden gekommen," and "Um Mitternacht," as well as in the poignant *Wunderhorn* song "Das irdische Leben") to substitute at the last moment in three out of the four performances of the *Kindertotenlieder*. As a result, the presentation of this exquisite song-cycle was not as perfectly blended or well-balanced as it might have been. But it was still an indispensable part of this concert series, for the symphonies of Mahler are not to be understood without his songs. Unfortunately, the concert in which it appeared was not one of the better-organized examples of program-making. The first half of the concert consisted of two piano concertos, while the *Kindertotenlieder* were followed by Tchaikowsky's *Capriccio Italien*, of all things! This problem of the *program setting* in which Mahler works should appear is a very important one—solved, I felt, in only two of the programs offered: the Webern-Mahler concert of Mitropoulos and the Schubert-Mahler combination chosen by Bruno Walter.

Bernstein's symphonic contributions to the cycle were two: the Fourth and the Second. In the Fourth, he followed Mahler's indications with considerable care (though not always) and succeeded with many of the delicate and sensitive effects this symphony calls for. Young Reri Grist, making her debut with the Philharmonic on this occasion, sang the solo in the last movement most charmingly. The performance of the Second (abetted by the Rutgers University Choir, Phyllis Curtin, and Regina Resnik) was beyond doubt the *loudest* I have ever heard and certainly showed Bernstein's flair for extracting the utmost from a climax. (Incidentally, comparing the effect of this work on the radio and in the hall reminded me anew how very important *physical presence* is to the full effectiveness of this music.) However, his concept will have even more to offer when he comes to follow the dynamic and tempo indications of Mahler himself (particularly numerous in this work) with greater exactness. Miscalculations in this respect can produce untoward results—as happened, for instance, at the performance of February 20, where an exaggerated *ritardando* before the recapitulation in the first movement caused audience misunderstanding and a disconcerting flurry of applause. It is no discredit to Bernstein to say that this performance will not efface the memory of Walter's unforgettable Second of 1957 (still to be enjoyed, incidentally, on Columbia Records). But one could rejoice at the opportunity once more to experience the sheer physical impact of the great work in the great hall.

### III. Bruno Walter

After an interruption of two months, the resumption of the Mahler Festival at the Easter season was eagerly awaited. Walter's return, after his "farewell" to the Philharmonic three years earlier, would be in itself an event—but his return with just this work, *Das Lied von der Erde*, which he had been the first to bring to sounding life and with which he had been identified for so many years—this was something

not to be missed. With pleasure I noted, alongside the customary subscription audience on Good Friday, the many students, some of whom had made special trips from distant parts of the country or had curtailed holidays at home in order to be present on this occasion. And what they heard did not disappoint them. Jay Harrison has quite rightly commented that what Walter does with *Das Lied von der Erde* is no longer a performance in the conventional sense. I could not agree more. It often seemed as if the conductor were carrying on an intimate dialogue with the composer himself—one in which listeners were almost intruders. This uniquely personal aspect of Walter's approach to the music has, it seems to me, intensified over the years. Contrary to the opinion of some, it is no impertinence (in any sense of the word) to mention Walter's advanced age in this connection. What more natural than that, as a result of it, he should feel an over-growing kinship with Mahler's bittersweet celebration of the beauties of life and his grief—yet resignation—at the approaching parting? All of this came to our ears in the Walter performances and we were grateful for "such sweet sorrow."

Over the years we remember so many great soloists who have joined with Walter in the presentation of this work. There was the young Charles Kullman, for example, who gave what I still consider his greatest performance in Walter's first recording of *Das Lied*, and the memorable Kathleen Ferrier, whose last performance of the work in Vienna in 1952—a performance already overshadowed by the wings of death—has happily been retained for posterity on a later recording. This time, the soloists were Maureen Forrester and Richard Lewis. Of the two, Miss Forrester proved the more outstanding, for her rich voice seems perfectly suited to the demands of Mahler's vocal lines, while Mr. Lewis' voice (which I have previously admired in his moving interpretation of the role of Waldemar in Schoenberg's *Gurre-Lieder*) this time did not seem powerful enough to ring out as it should in, for instance, "Das Trinklied vom Jammer der Erde." Nonetheless, each singer made a worthy and noble contribution to the whole, but it was Walter's towering achievement in coordinating every element of the great work with complete sympathy and understanding which was most appreciated by the large audiences.

A word ought also to be said about the performance of Schubert's "Unfinished" Symphony which preceded the *Lied* in all the programs. It proved anew that we should abandon the use of that word "Unfinished"—for what else *could* come after the transfigured E major of the slow movement? Walter's interpretation made this most clear, and thereby showed us Schubert as a forerunner of Mahler's "progressive tonality." That this romanticist *par excellence* completely projected the work's lyricism goes without saying.

Everything that has been said about the above series of Walter performances ought to be intensified tenfold in describing the final concert of the cycle, on April 24. Every soloist and orchestral player seemed especially aware of the festal nature of this culminating occasion and gave of his or her utmost, while the complete concentration and response of the audience were indeed heartwarming. As for the contribution of Walter, it was quite simply beyond words—only a

deeply respectful silence could give this unique experience the necessary resonance within us. I heard one listener say to another afterwards, "It was as if God had spoken." How better could one describe the utter inevitability of the fusion of interpreter and work in this performance—something rarely achieved with such perfection in our time or in any time.

## AN AFTERWORD

In speaking of New York's Mahler Festival, we should not forget to mention—as previously stated—the contributions of visiting orchestras. I was unfortunately unable to hear the Cleveland Orchestra's performance of *Das Lied* under Szell with soloists Forrester and Haeffliger on February 1. The Boston Symphony's performance of the First, under William Steinberg, was given not only in New York but also in the orchestra's home city (from which it was broadcast—unfortunately at the same time as the New York Philharmonic's broadcast of the same work! perhaps the first time, in this country at least, that this particular conflict has happened in the case of Mahler) and in Newark, N. J. The last-named performance, which I heard, was apparently the first hearing of the work in that city—possibly the first Mahler performance there ever. It was enthusiastically received by both press and public. The performance was vigorous and firm and the orchestra sounded fine, but I could not help being unhappy about Steinberg's continuing practice of making drastic cuts in the Bruckner and Mahler works which he performs.

Finally, the performance of Bruckner's Seventh by the Philharmonic under guest conductor Paul Hindemith was most welcome and appropriate after the two months of Mahler which had immediately preceded it. I believe that this was the first performance of the work by a major orchestra in this city since that given by the Vienna Philharmonic under Schuricht in 1956. Thus it was inevitably compared with that earlier performance. While the beautiful work was more exciting and authentic in sound as played by the Vienna ensemble, Hindemith brought much loving care to the performance and showed great fidelity to Bruckner's original intent (he did *not* make any cuts, which Schuricht had done). It is notable that this was the third Bruckner symphony to be played in New York this season, the Eighth and the Fourth having preceded it (see reviews in this issue). Perhaps this suggests a trend; in view of the interest with which those performances were received, the time might be ripe for the New York Philharmonic to consider a cycle of Bruckner's works.

Now the Mahler cycle is over, but—let us hope—not soon to be forgotten. Let us hope, too, that it does not remain merely a one-time spectacular event, but that it has served a second and even more important purpose—that of opening the established repertory, not only of the New York Philharmonic but of all of our major orchestras, to Mahler's music on a regular, not an exceptional, basis. That this seems, indeed, to be happening is perhaps the greatest joy and most lasting contribution of the Mahler Year.

## LIST OF PERFORMANCES

SEASON 1957-1958

### BRUCKNER

- IV Los Angeles Philharmonic Orchestra, Bruno Walter, Conductor; Los Angeles, Calif., Apr. 3 and 4, 1958.
- VII Los Angeles Philharmonic Orchestra, Eduard van Beinum, Conductor; Los Angeles, Calif., Jan. 16 and 17, 1958.  
Boston Symphony Orchestra, Charles Munch, Conductor; Boston, Mass., Feb. 7 and 8, 1958. (The latter performance was broadcast — Station WQXR, N. Y. C.) Washington, D. C., Feb. 13, 1958; New York, Feb. 15, 1958.
- VIII Pittsburgh Symphony, William Steinberg, Conductor; Pittsburgh, Penna., Nov. 8 and 10, 1957; Reading, Penna., Nov. 11, 1957; New York, Nov. 12, 1957.
- IX Cleveland Symphony Orchestra, George Szell, Conductor; Cleveland, Ohio, Nov. 7 and 9, 1957; Ann Arbor, Mich., Nov. 10, 1957.
- Mass in E-Minor*  
New Haven Chorale and Instrumental Ensemble, Donald G. Loach, Conductor; Grace Rainey Rogers Auditorium, Metropolitan Museum of Art (Eda K. Loeb Fund Concerts), New York City, April 12, 1958.
- Te Deum*  
Baylor University Symphony Orchestra and Oratorio Chorus, Daniel Sternberg, Conductor; Albert Da Costa, Valorie Goodall, Margaret Williams and David Ford, Soloists; Waco, Texas, Oct. 11, 1957.  
Pittsburgh Symphony Orchestra, William Steinberg, Conductor; Pittsburgh, Penna., Oct. 18 and 20, 1957.  
Fresno Philharmonic Association, Haig Yaghjian, Conductor; Lois Utterbach, Harriet Aloojian, Paul F. Anderson and Benjamin F. Lippold, Soloists; Fresno, California, Nov. 7, 1957.

### MAHLER

- II Toronto Symphony Orchestra, Heinz Unger, Conductor; with Bach-Elgar Choir of Hamilton, John Sidgwick, Dir., and Lois Marshall and Claramae Turner, Soloists; Toronto, Canada, Jan. 22, 1958 (First Performance in Canada).
- Michigan University Symphony Orchestra and Chorus, Josef Blatt, Conductor; Alice Dutcher and Janet Ast, Soloists; Ann Arbor, Mich., Apr. 4, 1958 (All participants were students — First Performance in Ann Arbor).
- Pittsburgh Symphony Orchestra, William Steinberg, Conductor; Pittsburgh, Penna., April 18 and 20, 1958.
- University of Iowa Symphony, James Dixon, Conductor; University Chorus, Herald Stark, Conductor; Leslie Eitzen and Lillian Chookasian, Soloists; Iowa City, Iowa, May 14, 1958.
