Vol. 1, No. 1

## NEW SYMPHONIC HORIZONS

That distinguished sage among American music critics, Mr. W. J. Henderson, can perhaps still remember that gloomy day more than forty-five years ago, when the New York Philharmonic, under Theodore Thomas, first played Bruckner's Seventh Symphony. Concerning that occasion Mr. Krehbiel, young Henderson's senior colleague and the acknowledged head of the critical profession, perceiving the opposing fury with which the press greeted the gigantic work, rose (like Hans Sachs after the "Meistersinger" have scornfully rejected Walther's first song) and said in mingled admonition and prophecy:

*"It is neither wise nor just to pronounce condemnation on an artwork in so superficial and flippant a manner as nearly all the New York newspapers did on this occasion; but bearing in mind a score of marvelous things in the symphony, notably several moments that approach grandeur in the slow movement, and remembering that that is not always the highest type of beauty which is obvious at a glance, we are yet constrained to say that for the present the work is a failure. It may be beautiful in twenty-five years; it is not beautiful now."*

Just what the prerequisites of symphonic "beauty" were in those days is eloquently hinted at in the following excerpt from Mr. Krehbiel's representative review of the first American performance of Bruckner's *Romantic Symphony* the following year:

"With the exception of the Scherzo (representative of a hunt) none of the movements shows the form of the classic or even of the modern symphony, as followed by Brahms, Rubinstein, and Raff, and certainly still less that of Schumann, who was the most representative of romantic symphonists."

Thus Bruckner's symphony was not even a symphony, because its outlines did not correspond to certain prescribed measurements on the yardstick without which no true critic of the "Eighties" would lend a first symphonic performance his attention.

Almost a generation later Gustav Mahler came to America to take charge of the New York Philharmonic Orchestra. Mr. Krehbiel, as famous as ever in his realm, was official author of the organization's program notes. In the course of the season, 1909-10, Mahler's First Symphony, having battled its Odyssean way to European recognition through a score of years, was to receive its first American hearing. Imagine Mr. Krehbiel's dismay in December when the scheduled day arrived without any prefatory explanations by the composer. His repeated requests for an outline analysis had met with firm refusal. Gustav Mahler was apparently convinced that the intrusion of any traditional notions on a first symphonic hearing was a false practice that must be abolished. Half apologetically Mr. Krehbiel introduced the work to the audience as follows:

"In deference to the wish of Mr. Mahler, the annotator of the Philharmonic Society's programmes refrains from even an outline analysis of the symphony which is performing for the first time in New York on this occasion, as also from an attempt to suggest what might be or has been set forth as its possible poetical, dramatic or emotional contents. Mr. Mahler's conviction, frequently expressed publicly as well as privately, is that *it is a hindrance to appreciation to read an analysis which with the help of musical examples lays bare the contents and structure of a composition while it is playing.* All interest and attention should be concentrated on the music itself. 'At a concert', he says, 'one should listen, not look,—use the ears, not the eyes'.

"All writings about music, even those of musicians themselves, he holds to be injurious to musical enjoyment."

In short, the "twenty-five year" period Mr. Krehbiel had mentioned in that early review of Bruckner's "Seventh" was over; but American musical criticism was still "tradition-bound". It seemed unable to listen to a new work of art without holding it up to the light of Beethoven, Wagner, Brahms and others during the initial hearing.\* Since then another score of years has passed, and that shell of pedantry at last shows signs of giving way. Man realizes more clearly each day that it is not the degree with which a new work clings to the form of accepted masterpieces that determines its worth. The younger master may have learned much from the older; but the very essence of his "mastery" is his individual message which finding all traditional means of construction inadequate must often create its own form and vocabulary.

Last year was the beginning of a period in American symphonic appreciation which some critics have aptly called the "Bruckner Renaissance." The young Mr. Henderson of the day of Krehbiel glory had himself become a sage of New York music critics. The founding of the Bruckner Society of America in January had been succeeded only two months later by the almost incredible decision of Mr. Toscanini that Bruckner was really worthwhile. To prove this the great conductor chose the very symphony which the "Philharmonic" programs had banned for forty-five years! His four successive performances of the "Seventh" early in March made musical history in this country. And Mr. Toscanini's "resurrection" of the work was characterized as follows by Lawrence Gilman of the "Herald Tribune":

"There are, of course, intepreters who can expound with eloquence an esthetic gospel in which they have no faith. Mr. Toscanini is not among them. Sincerity is one of the roots of his power and persuasiveness as an artist. Hearing him in his disclosure of page after page of the music's nobler contents, one knew that the completeness of the revelation was the index of an apostolic fervor and conviction."

And Mr. Henderson of the "Sun" prefaced his account of the occasion as follows:

"Arturo Toscanini presented at the Philharmonic Symphony Society concert in Carnegie Hall last evening a program of two symphonies, Bruckner's seventh and Beethoven's fifth. The return of Bruckner to the stage of the Philharmonic is due at least in part to the devotion of his admirers in this city, who have formed a society for the propagation of the faith. The movement is entirely proper. Even Wagner required the aid of Wagner societies to spread the gospel of his art.

\*In 1924, after many seasons of torture at the hands of critics, the *Friends of Music* actually resorted to the desperate step of barring them from their concerts.

"Conductors hesitate to produce the symphonies of Bruckner because of their inordinate length and because the name and significance of the composer are unknown to all but a few music-lovers. A society of Brucknerites can doubtless accomplish much toward bringing the works of the composer to public notice."

The year marked the thirty-fifth anniversary of Bruckner's death, and the new impetus to the cause of his music was already heralded in January when the Chicago Symphony Orchestra under Mr. Stock performed the "Ninth". By May this body of musicians had given that difficult work six hearings in various cities. Mr. Stock had also given the "Seventh" twice in April, a month after Toscanini's triumphant quartet of performances. The summer had brought the "Romantic" under Mr. van Hoogstraten on the "New York Stadium Concerts Series". Autumn arrived with its unforgettable contribution by the Friends of Music under Mr. Bodanzky, of Bruckner's sacred masterpiece, the "F Minor Mass". Almost legendary in its proximity to this was the sudden death of its chief patroness, Mrs. Lanier, head of that fine choral organization (now disbanded) and Honorary Chairman of the Bruckner Society. Winter was not without its encouragement, for the "Romantic" symphony was given in Portland, Oregon, under that loyal Brucknerite, Mr. van Hoogstraten.

However, it is not the intention of the Bruckner Society to confine its efforts to the furtherance of the Bruckner cause in this country. It is doing its utmost also to increase the frequency of Mahler performances. Of these 1931 showed a flattering number, clearly in excess of American precedent. The great symphonic song-cycle, "Das Lied von der Erde", given by Dr. Koussevitzky in Boston at the close of 1930 was but a prelude to his many presentations of its instrumental companion-piece, the much neglected "Ninth Symphony", during the past year. The difficult and deeply moving work was heard for the first time in America on October 16th, 1931, in Boston. Dr. Koussevitzky's fifth performance of it since that day occurred on January 9th, 1932, in New York. Last March Mr. Reiner, conducting the Cincinnati Symphony Orchestra, gave Mahler's Seventh. At the celebrated May Festival in the same city the mighty Eighth, the "Symphony of a Thousand", repeated its infallibly triumphant impression on an American audience, recalling the success of the performances Mr. Stokowski had given it some years before. The celebrated conductor of the Philadelphia Symphony Orchestra has made the following statement concerning the "Symphony of a Thousand":

"When we played Mahler's Eighth Symphony it made an impression on the public unlike anything else I have ever experienced. There seemed to be a human quality in this work which so deeply moved the public that the greater part of the listeners were in tears at the end of the performance. This happened at all of the nine performances we gave; so it was not due to an accidental condition on one particular date."

The present year promises increased attention to Bruckner and Mahler on the part of the leading orchestral conductors. These sterling musicians have whole-heartedly endorsed the aims of the Bruckner Society of America and are much elated over the prospect at last offered them of being allowed to program the works of these masters by request rather than by stealth. Bruckner's *Te Deum*, *E Minor Mass*, the

*Third* and *Eighth* Symphonies, the solitary *Quintet* are only some of the works definitely slated for production in the near future. Mahler's *Lied von der Erde* and the *Sixth* (Tragic), two of his deepest compositions, have also been announced.

One of the most significant musical events of 1932 will be the American premiere of Arnold Schoenberg's *Gurrelieder*, composed thirty years ago. With the tremendously rich color effects drawn from its numerous orchestral membership, of which the voices of eight flutes and ten horns singing parts allotted them by one of the greatest orchestral masters of all time is only a hint, this work is perhaps the culmination of the penchant for massed lyric instrumentation so characteristic of nineteenth century music after *Tristan*. It is, however, a product of Schoenberg's early, pre-revolutionary days, and no doubt the unsurpassable richness of its orchestral idiom convinced its composer that he must resort to a thoroughly new mode of expression if he expected to make a real contribution to musical art. Much of the music he has written since then has been hailed by experts as epoch-making and prophetic of the path of development musical art will take during the next half-century. Perhaps the fact that Schoenberg has dedicated his rather recent *Quintet for Brass* to his little grandson, the "Bubi Arnold", is not without its intended significance that this unsuspecting child is to arrive at manhood when the world will be ready to listen appreciatively to the work inscribed to him.

Which takes us back to that gloomy premiere of Bruckner's Seventh Symphony almost half a century ago, when Mr. Krehbiel alone, of all the reviewers, sounded that broad, oracular note of tolerance which is perhaps the wisest sort of criticism of a totally new and earnest artwork.

GABRIEL ENGEL

### MARTIN G. DUMLER

On January 31, 1932, Dr. Martin G. Dumler, M. M., of Cincinnati, Ohio, was elected Honorary Chairman of the Bruckner Society of America. For many years a prominent American composer of sacred music and at present Vice-President of the College of Music of Cincinnati, Dr. Dumler is deeply devoted to Bruckner's art. His regard for that master's music dates back to 1889 when he first heard some of Bruckner's works performed in Vienna. Ever since that time he has left no stone unturned in his efforts to bring about American performances of Bruckner. He not only did much to bring about the first American performance of Bruckner's F Minor Mass, which took place in St. Francis de Sales Church, Cincinnati, on July 15, 1900, but actually took part as one of the singers. In 1907 he became personally acquainted with Gustav Mahler, in whose genius he has been a firm believer ever since. As a member of the Board of Directors of the Cincinnati May Festival Association he made the suggestion last year which led to the inclusion of Mahler's *Symphony of a Thousand* on the Festival program.

The Executive Committee of the Bruckner Society of America wishes to express to Dr. Dumler its appreciation of his acceptance of the Honorary Chairmanship left vacant by the late Mrs. Lanier.

Of all our greatest composers I doubt if any one ever had as sad a fate as Anton Bruckner. Others have suffered during their lifetime, as for example, Schubert; but he died young and his works won universal recognition shortly after his death. Mozart, who had his triumphs when he was a child, fared badly when he had matured and become the greatest of all composers. He too died young and soon after was accorded his rightful place among the immortals. But Bruckner lived to the ripe old age of 72; he composed nine gigantic symphonies—several of which he never heard; and now—35 years after his death—his works are still partly unknown outside of Germany and Austria. When on rare occasions one of his symphonies is performed in England or America, the papers in these countries rehash all the old stupid phrases which were hurled at him by the Viennese papers during his lifetime.

In speaking of Bruckner it is unavoidable to mention the conditions which prevailed in Vienna during his lifetime. The musical world there was divided into two hostile camps. The real battle was not over Bruckner, but over Wagner and his 'chromatic' music. It is perhaps necessary to remark that a new era had commenced. As the system of the ecclesiastical modes had once been superseded by our diatonic modes, to find expression in all the composers since Bach (inclusive), so this system was now superseded by the new 'chromatic' system. Not that the chromatic scale was something new; but now each note in the chromatic scale was harmonized, and diatonic suspensions became chromatic. This was as daring in those days as attempts at atonality and polytonality are in ours. The innovators were Wagner, Liszt, and Bruckner; but each one worked in his own field. Wagner devoted himself to the stage, Liszt to the piano and the orchestra in the works which he called *Symphonic Poems*, while Bruckner devoted his efforts exclusively to the classical form of the symphony, the realm of purely instrumental music.

In destructive criticisms of his symphonies we are told that Bruckner's form is incoherent, loose-jointed. Just exactly what this means no one of these takes the trouble to tell us, for obvious reasons. The orthodox sonata-form demanded four movements—Allegro, Adagio, Menuet and Allegro. Mozart had already taken some liberties with this form. In the A Major sonata for piano he begins with a slow variation movement. In his violin sonatas there are several irregularities of this kind. He even has a sonata in two movements. Beethoven also changed the original sonata-form in several of his works. In opus 26 he starts (like Mozart) with a slow variation movement. He composed four sonatas with only two parts each. Yet no one has criticised him or Mozart for violating any form. But when Bruckner does something for which there is no precedent in strict orthodox frame-work, at once a tremendous howl arises. "He is formless!" I have studied and played all his nine symphonies, and I fail to see a single musical statement of which he has not given a formal accounting. He prefers at times to come to a complete pause, and then starts a new theme. This is decidedly to his taste, but not to the taste of his critics, who insist, *one theme must flow directly into another*. Well, in the seventh he shows he can accomplish such a transition. On rare occasions he does bring in material which is irrelevant; but in instruction books on orthodox form we are told that in the development group (modulatory group) it is permissible to insert a period which is 'free phantasy', something of the nature of improvisation. Beethoven

has done this in the first movement of the *Eroica* and it is one of the most beautiful moments in the whole symphony. But when Bruckner does it he is just formless.

He has been accused of taking his harmonies from Wagner. 'It sounds like Wagner' is the usual stupid objection. One never meets the objector face to face; he is safely entrenched in his newspaper office. It would only be necessary to ask the question: 'And will you please show me in the score just what sounds like Wagner and where Wagner has said the same thing?' . . . and the critic would be 'out of luck'.

It stands to reason that there is bound to be some similarity between works of different composers who are using the same idiom. One can find these similarities ad infinitum in the works of Mozart and Beethoven; yet only a stupid person would assert that Beethoven had copied Mozart. The works of the Russian composers Balakirew, Borodin, Glazounow, Rimsky-Korsakoff, Kalinnikow are similar in so far as these composers all use the same idiom. The same is the case with the French composers. They are all graciously accorded the privilege of using the idiom of their time . . . except Bruckner. He must not do such a thing; all his harmonies belong to Wagner. For example: there is a very common chord—Dominant Ninth chord in minor; when this chord is inverted symmetrically it becomes less common; it then becomes the Ninth chord on the seventh degree of the minor scale. Bruckner used this chord in his D minor Mass composed in 1863; and this was very inconsiderate of him; he should have known that Wagner was going to invent this chord and use it in "*Goetterdaemmerung*" in 1876.

His orchestra is the same as Brahms'—but he knows better how to use it. He has been accused of stealing Wagner's orchestration. But he does not use Wagner's English Horn nor his Bass-clarinette. He does use the Tuba, constructed for Wagner's 'Ring'. And why not, if it suited his purpose? Other composers have used every available resource without being criticised! Franck was censored for introducing the English horn into the symphony, but his critics are now laughed at.

We are told that Bruckner's themes are unimportant. Just when is a theme unimportant? Does any one know? I don't. I have asked several musicians and not one of them seems to know. But the critic knows. Then this conclusion is obvious, if he knows an unimportant theme he also knows when one is important. It is a shame that he is withholding this knowledge from the world. Our text-books give us no directions about how to construct important themes, nor how to avoid constructing unimportant ones. What a boon it would be to composers if the critic would only share his knowledge with them! Then we would have nothing but themes of importance!

It is not the theme that counts, but what the composers do with it. I suppose no one will dispute the importance of the theme in the Fifth symphony of Beethoven; yet this theme is—strictly speaking—not by Beethoven. In its inverted form it is found in a fugue by Bach, and Bach states that it is taken from Legrenzi—an old forgotten composer, who lived in Italy (1625-60) years before Bach was born. Legrenzi did nothing important with it; neither did Bach. It remained for Beethoven to mould a worth-while composition out of it. But if the theme per se is important, Legrenzi should have the credit and not Beethoven—an argument which would justly be considered quite idiotic except

when applied to Bruckner. In this case any argument is taken at "par value" without investigation. While speaking of themes it may not be amiss to mention that Bruckner has been ridiculed for using the theme of *Isolde's Love Death* in his Sixth symphony. I am not in a position to say what prompted Bruckner to use this theme. I shall refer to a similar instance in the E-flat major sonata for violin and piano by Richard Strauss. In the slow movement the piano has in the last bars the theme from the slow movement of Beethoven's *Sonata Pathétique*, Opus 13. I have been told that he did this to pay homage to Beethoven. Why is it not possible to accord Bruckner the same privilege and let him pay homage to his admired Wagner? One thing in Bruckner's favor which cannot be said for Strauss. The *Isolde* theme is not Wagner's invention; it was used by four composers before Wagner ever thought of it. It is found in a composition by Heinrich Schutz: *Historia des Sterbens and Leidens* (1550); Pergolesi: *Stabat Mater* (No. 12); Bach,\* *W. CL. I, B minor Prelude*; Gluck: *Orpheus*.

\*The Well-tempered Clavichord, part I.

Bruckner introduced the Chorale into the symphony. It is quite understandable that this should appeal to him. Having been associated with religious institutions most of his life, he found in the solemnity of the Chorale a welcome contrast to his other utterance. In his treatment of it one might guess that his prototype was the elaborate chorale-prelude of Bach.

It is impossible to weigh justly a Bruckner symphony after one or two hearings. It would have taken many years for Beethoven to attain public appreciation if Liszt had not made propaganda for him through his piano arrangements of the symphonies. It would likewise have taken many years for Wagner to be appreciated if there had not been piano scores of his operas. Bruckner had the further disadvantage of not having composed anything besides his symphonies, his string-quintette and his choral music, which might bring his name to the public's notice,—no piano-music, nor other instrumental solo-music,—no songs. To realize the significance and beauty of his music one must study it beforehand in miniature score and in arrangements for piano two hands, four hands, or for two pianos four-hands. In this way the music-lover may get to know this deep music intimately and thoroughly, and be able to follow all its details, when at rare, but let us hope, ever increasing occasions, our orchestras present Bruckner's symphonies.

TH. OTTERSTROEM—Chicago

### BRUCKNER'S "ROMANTIC" IN PORTLAND, ORE.

The Society has received the following communication from Dr. Willem van Hoogstraten, conductor of the Portland Symphony Orchestra:

On Dec. 14th we performed Bruckner's *Fourth*. The orchestra from rehearsal to rehearsal grew more and more into the spirit of the music and finally played it with deep devotion and enthusiasm. I can honestly say that the symphony was well received by the audience. I thoroughly believe in the sincerity of my audience here, and as Bruckner's music is intensely sincere, it will only be a matter of time before this symphony becomes popular in the real sense of the word. Very likely we will play it again next season.

## ROMANTIC MASS OR SACRED SYMPHONY?

The beautiful and brilliant but rather unliturgical atmosphere of devotion in the masses of Haydn, Mozart and Schubert brought about a striving for simplification and purification of church music in Central Europe during the first half of the nineteenth century. In the hands of secular musical pedants possessed at best of third-rate inspiration, however, the planned reform resulted in so thorough an abasement of the artistic standard that had been set heaven-high centuries before by Palestrina that only the touch of a devoted genius could restore the music of the ritual to its pristine dignity and glory. No mere imitation of the manner of the old Italian church master could have been a convincing, regenerating expression of faith after the middle of the nineteenth century. When Bruckner's Great Mass in D minor resounded for the first time in the cathedral at Linz in 1864, the effect was so overwhelming that not only was Bishop Rudigier "unable to pray", but the leading critic hailed the work as epoch-making and fearlessly compared its religious power with the great mysticism of Palestrina's music.

This mass and the two in E and F minor that succeeded it mark the maturity of that long period of years the younger Bruckner devoted almost exclusively to the composition of sacred music. So fine are these three works that if he had composed nothing else his reputation as a creator of liturgical music would have been supreme. But standing at the very threshold of his nine giant symphonic creations these masses are not only significant through their positive status as great church music, but also through their implied revelation of that transitional era of "storm and stress" in Bruckner's life which closed only when he turned definitely from the chiseled perfection of his "masses" to the rugged, worldly and dramatic struggles of symphonies that clamored for existence.

The 1860's constituted a "Golden Decade" in musical annals if there ever was such a decade; for three of the greatest musical premieres in history occurred within those years. "Tristan," "Meistersinger" and "Rheingold," a mighty trinity of tone-poetry, added their combined romantic spell to a world of art already intoxicated with the rich emotional beverage of "Lohengrin" and "Tannhaeuser," and, mirabile dictu! the naive, devout, unliterary Bruckner, the modest church composer, was the "reiner Tor" chosen by Fate to take up the whole burden of symphonic beauty and vitality pulsating in the scores of these music-dramas, and make it the vehicle of a more spiritual revelation issuing anew from the deep spring of absolute music. The metamorphosis from the composer of masses to the symphonies was for years a bewildering one. Titanic struggles of the soul are waged in that most earnest of all "first symphonies, the "kecke Besehl," composed by Bruckner before the completion of his last "great mass". Just before writing his first mass he had experienced his thrilling introduction to Wagner's music when the opera conductor, Otto Kitzler, analyzed for him the wonders of the "Tannhaeuser" score. From that time the symphonic urge became ever stronger in Bruckner, even thrusting itself upon the music of the "masses" to a degree utterly disconcerting to most secular authorities, who could see in the powerful, romantic fervor of these new works only an elaborate, profane statement of faith that rendered them utterly unfit for ritual use. Since then sixty years have passed and the tremendous evolution

of musical idiom has not only opened the cathedrals of Central Europe to Bruckner, Mozart and Schubert, but the "mass" itself has attained the status of a great and free symphonic form in which tremendous tone-poetical works have been recently composed. These present, on the one hand, no peril to the liturgy, for they are concert "masses", while on the other hand they are for the world new bulwarks of optimism and faith resting on no rigorously phrased "credo", but rather striving toward the spiritual heights sounded in Mahler's "Symphony of a Thousand".

Curiously enough, it is not Bruckner's great "concert" mass in F minor, but his first Mass in D Minor composed in the very blaze of that first Wagnerian revelation, that forecasts most eloquently the free, realistic expression characteristic of the "concert" mass of to-day. The mass in D is studded with romantic touches anticipatory of Wagner. A year before "Tristan", its "Kyrie" opens with the leading phrase of the "Liebestod", to receive thoroughly dramatic treatment at that time with precedent only in Beethoven's "Missa Solemnis". Before the "Kyrie" is over there occurs a moment of religious ecstasy while the very phrase sounds that is to accompany the "descent of the dove" in "Parsifal" twenty years later. The "Agnus" begins with the "spear-motiv" from the "Ring". The "Et resurrexit" is introduced with a highly realistic symphonic passage of twenty-eight bars in which the prominence given kettle-drum and contrabass lends a grim, dramatic coloring Bruckner never again dared to exploit except in his symphonies. The "Benedictus" is a veritable pastoral "symphonic poem". It is no wonder that no less a judge of artistic quality in music than Gustav Mahler chose this "liturgical" mass in preference to the later ones in E and F for "concert" performance at Hamburg in 1893. Bruckner himself was completely aware of the symphonic leanings of the work, for many of his symphonies, even the latest ones, make use of thematic material presented here for the first time, and perhaps most prophetic fact of all, the closing portion of the mass, like the Bruckner symphonic finales, gathers together the earlier threads of the work, thus achieving the convincing unity of a form completely rounded out. This "cyclic" form, perfected by Bruckner in his symphonies was also adopted by the next symphonist, Mahler, who lent it enhanced significance through a wealth of psychological details characteristic of the artwork of our own time.

The second mass, in E minor, a strictly liturgical setting, is practically an a capella work for eight mixed voices; for the unique instrumental accompaniment of wood-wind (without flutes) and brass is marked as "not indispensable". The rich choral writing, recalling the glory of Palestrina, is nevertheless full of typical "Bruckner" enharmonic touches to be met with later in his symphonies. The consummate mastery of musically sonorous dissonance in the score reaches its climax in the second "Miserere" where all seven tones of the diatonic scale seem to combine naturally to form a tower of orderly sound, according to the critic Goehler, "perhaps the most magnificent harmony that has ever been penned."

The last mass, in F Minor, though composed as a "concert" mass, is unanimously rated on account of its irreproachable union of all the characteristics necessary to a perfect setting of the sacred text, as the best of the three. The "Benedictus", an adagio of "Beethoven" depth,

forecasts the spirit of the mighty slow movements of the symphonies to come. Perhaps the complete triumph of his work as an expression of faith, as well as the limitations put upon symphonic utterance by church forms led Bruckner to the broader, freer fields of the symphony. Not until he had finished his Seventh symphony did he return to serious contemplation of sacred music, and then the "Te Deum" he wrote, often called the greatest "Te Deum" of all, bore eloquent witness of the tremendous spiritual growth he had achieved in the world of absolute music.

MRS. WOODS BECKMAN, Altoona, Pa.

### FRANZ SCHALK

With the passing of Franz Schalk last September the Bruckner cause in Europe suffered the loss of one of its mightiest bulwarks. To him as to no other conductor had all devotees of Bruckner come to look for the most inspiring interpretations of the master's symphonies. The executive brilliancy that commenced almost four decades ago with that soul-stirring premiere of the *Fifth* at Graz acquired ever greater spiritual quality with the years until the mere mention of Schalk's "Bruckner" was a sound full of wonderful magic significance for the lover of symphonic music. Perhaps the highest token of the boundless regard and gratitude of the European Brucknerites towards him was the dignity of the Honorary Presidency of the *Internationale Bruckner Gesellschaft* to which the unanimous wish of that organization's membership had elected him.

And now there remains only a single one of that stalwart band of giants of the baton who in their early career swore lifelong fidelity to the art of the great master the privilege of a personal friendship with whom gracious Fate had accorded them. The celebrated Dr. Karl Muck, whose record of major performances of Bruckner's symphonies began over forty years ago, was the only logical successor to the post of honor left vacant by the recent death of Franz Schalk. It is the fervent hope of all that Dr. Muck be granted many years in which to lend his distinguished services towards furthering the transcendental art of Bruckner.

### BRUNO WALTER

On January 31, 1932, Bruno Walter was elected Honorary Member of the Bruckner Society of America. On the one hand, from earliest youth one of Gustav Mahler's dearest friends, and later his chosen disciple, on the other hand, unhesitatingly named by the dying Schalk as the man best fitted to take over his abandoned baton, Bruno Walter is the living embodiment of the broad musicianship absolutely indispensable to one who is to carry the banner of the greater symphony on into the future. In Europe today he possesses the enviable reputation of being not only an ideal Mozart conductor and a Mahler interpreter equalled by none except Mengelberg, but also (and this is a recognition only lately granted him) one of the ablest of the world's Bruckner conductors.

### MEDALS OF HONOR

The Executive Committee of the "Society" has prepared special medals for presentation to the following conductors for their distinguished contribution toward the advancement of popular appreciation of the works of Bruckner and Mahler in America.

Bruckner Medals: to Willem van Hoogstraten, Frederick A. Stock, Arturo Toscanini.

Mahler Medals: to Artur Bodanzky and Serge Koussevitzky.

Villeneuve du Lemane  
Jan. 6th, 1932

Dear Mr. Grey,

I accept, with pleasure, honorary membership in your Bruckner Society and I thank you for electing me. I admire profoundly the composer of these monumental symphonies, who of all the great musicians of the nineteenth century was in his art (if not in his character) nearest akin to Beethoven.

I beg to be excused from writing an article for your Journal. I am taken up with duties which require all my time.

Please be assured of my most sympathetic attitude,

Romain Rolland

### BRUCKNER'S THIRD (WAGNER) AND EIGHTH SYMPHONIES IN BOSTON

According to press reports, the Boston Symphony Orchestra under the direction of Dr. Serge Koussevitzky will perform these two works this season. The *Third* will be a "first time". The *Eighth* was played in Boston under Koussevitzky's direction two years ago.

### BRUCKNER'S STRING QUINTET IN CHICAGO

Before the musical season 1931-1932 is over, Bruckner's String Quintet, his sole contribution to chamber music, and a work which is universally regarded as being on a par with his symphonies, will have had its first hearing in Chicago. The pioneering spirit which has at last placed this great "minor symphony" on the program of a well known musical organization of that city is a credit to the Chicago String Quartet, which has undertaken to perform this rarely heard Bruckner masterpiece.

### BRUCKNER'S E MINOR MASS

Two American performances of this second of Bruckner's three monumental settings of the *Missa Solemnis* are scheduled for the near future. One of these will take place in Altoona, Pa., under the direction of Rev. Father Joseph A. Hauber. The performance was to have taken place last November but was postponed because of the inauguration of the Cathedral.

The other performance, which was also postponed, will be given in St. Henry's Roman Catholic Church, Bayonne, N. J., under the direction of the noted American composer and musicologist, Mr. James P. Dunn, whose lecture on Bruckner's Masses at the Roerich Museum last October proved a valuable preface to the unforgettable performance of the *F Minor Mass* by the "Friends of Music".

## MAHLER'S MUSICAL LANGUAGE

Most recently a newspaper critic in a moment of revelation following a performance of Mahler's "Ninth" in New York remarked that it was a great pity so little had been written about the composer's individual treatment of the orchestra. This reviewer suddenly realized, as too few music-lovers do, that the content of a symphony is so inextricably interwoven with the peculiarities of its orchestral idiom that some acquaintance with these determining characteristics is absolutely necessary to any adequate comprehension of the work as a whole.

Even Mahler's closest friends, people of high musical culture, were frequently amazed by the utter strangeness of his attitude toward the art. He would stand outside the grounds of a country fair completely fascinated by the babel of tones issuing simultaneously from human throats, hurdy-gurdies, carousels and a brass band. In the confusion of these many tunes accidentally mingled, he claimed, lay the essence of true polyphony, which is an ensemble of independent voices, each singing in the manner best suited to it.

In the light of this Mahler's symphony orchestra is really a community of independent soloists ideally cast, who perform in some wordless drama of absolute music various roles created for them by a serious composer whose freedom of expression recognizes no limitation save that imposed by the great, utterly human soul of true art. Paradoxical as it may sound, Mahler's scores, thoroughly modern though they be, are as transparent and simple as those of Mozart. There is in his music a total absence of that prevalent vice, the padding of parts to obtain increased fulness or richness of orchestral sound. Where other composers instinctively surround dissonant voices with soothing harmonic accompaniments Mahler resorts to the extreme of ascetic scoring, intentionally laying bare pointedly discordant parts by the exclusion of all others. In melodic polyphony alone lay the heart of music for him; and in order to keep as close as possible to it he unhesitatingly braved the perils to his popularity involved in the many unpleasant surprises of his "discordant" scores for the average ear. Not that harmony as a basic influence is absent from his music. It is present, but its importance is enormously reduced by the incessant claims of the intricate melodic web upon the listener's attention. Mahler asks us not to hear vertically, as harmonies are written, but horizontally, as the lines of themes progress.

And these are great themes, suited to the colossal structure of the forms he chose. Great themes, though perhaps not in the same, simple, pure, austere sense characterizing the immortal themes of the classic symphonists of the past; but songlike themes of broad and daring outline, themes unprecedentedly rich in fantasy, and completely free from the restraining shackles of triads grouped according to age-old formulas of melodic construction. Above all Mahler is the "song" symphonist. His most intricate polyphony only reflects to what degree his soul is a "singing" soul, thoroughly saturated with melody. When he conducted an orchestra even the heavy-voiced tuba was compelled to "sing". To obtain enhanced songlike eloquence Mahler almost revolutionized the symphonic idiom of each instrument.

He exploited each instrument not merely for the clearest musical effect of which it was capable, but even more for its most striking emotional accents, thus endowing the orchestral language with a psychological power it had never possessed before. The prodigious profusion of his unexpected usages in instrumentation was the strange feature that accounted in a great measure for the public's misunderstanding of his music.

Solo flutes which the habit of masters had made the vehicles of sweet melodies were now suddenly heard sounding ethereally, totally bereft of expression, as if issuing out of infinite distances. The brilliant little E-flat clarinet, newly abducted by Mahler from the military band, now invaded the proud precincts of the symphony orchestra and was heard to burst forth in mockery, grotesque to the point of scurrility. Owing to the parodistic gifts of this reclaimed instrument not even the gloomy atmosphere of a funeral march would be safe from an interruption of ribald merriment. The spell of most tender moments would be rudely broken by an instrumental sneer. The oboe, no longer the accustomed high-pitched voice of poignantly sweet pathos, was now heard singing comfortably in its natural, middle register. The bassoon, suddenly become most eloquent of repressed pain, would cry out, most convincing in its highest tones. The contrabassoon would have a coarse grotesque remark to make all alone.

The horn (in the treatment of which most authorities agree Mahler was the greatest master of all time) had never had so much to say. To the noble level of expressiveness it had attained in Bruckner's hands Mahler added a new power, enabling it by means of dying echoes to carry smoothly an idea already exploited into a changed musical atmosphere. Sometimes a solo horn would issue with overwhelming effect from a whole chorus of horns among which it had been concealed; or singing in its deepest tones it would lend a passage an air of tragic gloom. In Mahler's resourceful use of the horn every register seemed possessed of a different psychological significance.

Those short, sharp, fanfaresque trumpet 'motives' so characteristic of Wagner and so effectively transplanted by Bruckner into the symphony attain new life with Mahler; but either disappearing gently in a soft cadence, or singing bravely on, they soar with ever increasing intensity and breadth to a powerful dynamic climax, to be finally crowned with the triumphant din of massed brass and percussion. Or where usage had led to the belief that the intensification of a melodic line was the peculiar task of many instruments in unison, Mahler would save the clarity of this line from the covering danger of massed voices by asking a single trumpet to take up the theme with intense passion. Above a sombre rhythm powerfully marked by a chorus of trombones over percussion he would set a solitary trombone to pour out grief in noble, poignant recitative. Never had such significance been given the percussion group as Mahler gave it. His mastery of this section was doubtless a heritage of the fascination with which he had in infant days listened to the martial strains issuing from the Iglau\* barracks. Often he would even combine various percussion instruments, giving them amazing contrapuntal treatment, much as though they were true solo instruments.

\*The town in Bohemia where Mahler spent his childhood years.

"Tradition is slovenly" was his oft-repeated motto. He rejected every stereotyped means of obtaining a desired effect; and it was often the utter originality of his solution to an instrumental problem which while carrying richer meaning was yet regarded by the misunderstanding listener, fed on conventional combinations, as merely grotesque. In this intensified and clarified musical idiom, however, there was nothing actually revolutionary. It signified nothing more than that the inevitable development of the orchestral language had been sent forward a whole generation by the genius of one man.

His great mastery of the "color" possibilities of each instrument kept Mahler, the absolute symphonist, thoroughly modern in a musical world gone "program" made. With this ability he could afford to stand aside from those who blindly risked the sacrifice of musical content to the sensational effect of trick instrumental combinations. There was no emotion he could not give clear expression without abandoning a pure, "linear" method as essentially legitimate as that of Bach. Through orderly contrapuntal "line" scored in his eloquent idiom, he achieved "color", and yet retained that transparent clarity of expression which in the higher orchestral world has become synonymous with the name Mahler.

So striking and vital was the originality of his method that it speedily evoked a "school" of emulators but little concerned with the real content of his symphonies. A generation went by; meanwhile the latest offspring of major music came into existence, the "chamber-symphony", over whose many exclusively solo voices the "lineo-coloristic" method of Mahler holds paternal sway. And above this spirit hovers that of the Wagner of the "Siegfried Idyll", the accidental forerunner of all this "modernism", whispering, "Create something new, children,—always something new."

—GABRIEL ENGEL

#### MAHLER'S FOURTH IN LOS ANGELES

The Los Angeles Philharmonic Orchestra under the direction of Dr. Artur Rodzinski performed Mahler's Fourth on December 31st and January 1st. These were the first performances of this symphony in Los Angeles.

#### MAHLER'S FIFTH IN NEW YORK

The Philharmonic Symphony Society will perform Mahler's Fifth under the direction of Bruno Walter on February 11, 12, 13, and 14th. The last of these performances will be broadcast over the Columbia chain.

#### MAHLER'S SIXTH IN BOSTON

According to press reports, the Boston Symphony will perform Mahler's Sixth in Boston this season. The performance will be under Dr. Koussevitzky's direction.

"GUSTAV MAHLER in my estimation belongs on a par with the greatest masters of symphonic art. He is not yet fully accorded the appreciation which is his due. Twenty years have passed since his death, and we can better understand this remarkable man who was able to sing with profound and pathetic accents the final song of the romantic era, using a technic—both contrapuntal and orchestral—which was thirty years in advance of his time. Once Mahler's significance is grasped, the world will make light of his apparent weaknesses, his banalities, his longeurs. To make his art better known should be the desire of every artist."

### PAPER TRUMPETS

A mere glance through the files of newspaper musical criticism of the past two generations is sufficient to suggest the suspicion that those countless, formidable columns of ink are the very barriers which have retarded the recognition of the greatest and most serious works of musical art by the general public. Quotations would be odious, and are even unnecessary, for the vicious cause of this condition is to-day in America as powerful as it was in Europe in the heyday of the notorious Hanslick. The modern metropolitan newspaper is a stupendous financial investment the success of which is entirely dependent upon the numbers of its readers. The success of every "columnist" is obviously reflected in the size of his following. Naturally, the better the musical critic can adapt the flow of his utterance to the pulse of the average reader the more popular he will be. Thus arises the great temptation to enrich the report of a concert with pointed, clever remarks the aim of which is clearly to bring about the greatest possible number of chuckles rather than to help the layman along the true path of artistic progress. The critic as popular entertainer is no doubt very dear to the cause of large newspaper circulation. Because such a writer generally knows much more about music than those who read his effusions with delight, these dependent multitudes feel highly gratified that so witty an authority is of the same mind as they. The fame of the critic waxes greater; it goes to his head, and he becomes still more entertaining. Meanwhile, serious art, the subject of popular pleasantries, is brought almost to a standstill.

Bruckner is daily becoming a less fruitful subject for this entertaining school of newspaper "criticism". Mahler has for two decades served as chosen sacrifice upon the altar of the columnist's cleverness. Schoenberg and others are already marked to follow when the name of Mahler is no longer conducive to the generation of wholesale snickers.

The music critic is entrusted with a tremendous responsibility. It is in his power to hasten or to retard musical progress. Let him, therefore, lay aside personal vanity and other ulterior considerations which may prevent him from assuming in a thoroughly honest and dignified manner the lofty role of the public's chosen judge of a new art-work. There are three essential factors involved in musical progress, the composer, the critic and the public. The critic must stand squarely and midway between the other two. If he caters he is not only pernicious to progress but he shirks a sacred responsibility.

# SIDES AND ASIDES

## SEVENTH SYMPHONY, ANTON BRUCKNER

*New York, March 4, 6, 7, 8, 1931; Philharmonic Symphony Society of New York; conductor, Arturo Toscanini. The last performance was broadcast over a nation-wide chain.*

*"The Friends of Bruckner—an increasingly numerous clan—should derive considerable comfort from Mr. Toscanini's indorsement of the work, since he accorded to it a performance of surpassing eloquence—a performance which must surely have dispelled the doubts of many as to the salience and significance of this music. The applause at the conclusion of the symphony was earnest and prolonged, and though no doubt it was intended in part for Mr. Toscanini and the players of the Philharmonic Symphony Orchestra, much of it certainly was a tribute to Bruckner." . . .*

—EDWARD CUSHING, Brooklyn Eagle

*"The symphonies of Bruckner can never be called masterpieces. They are fragments of masterpieces, so tremendous that the colossal unfinished achievement, part of it towering to the skies, other parts supine in the scaffolding and rubbish that lie about the base, stir us as many a finished work of art cannot. - - -*

It would, therefore, be well if audiences could know more than they do of Bruckner's symphonies. - - -

The eighth Symphony is superior to the Seventh and probably the greatest of the Bruckner symphonies. The Fifth is a work of peculiar originality and vastness. *The opportunity to know Bruckner more intimately than we can as programs are now constituted would be welcome, because the pure gold of his genius is worth hunting through much rough slag and ore."*

—OLIN DOWNES, N. Y. Times

*"Yet often he was able, if not to shapen or to enter the inner chamber of Blake's 'palace of wisdom', at least to behold the incredible turrets shining in the evening light. For a few he was, and is, at his most rewardingly characteristic, one who knew the secret of a strangely exalted discourse. Sometimes, rapt and transfigured, he saw visions and dreamed dreams; and we know that for Bruckner, then, some ineffable beauty flamed and sank and flamed again across the night."*

—LAWRENCE GILMAN, N. Y. Herald-Tribune

*"This work shows, particularly in the two middle movements, so much individuality, beauty and genius that it is difficult to understand how mere prejudice could have kept it so long from the music-lovers of the metropolis. - - -*

*In his handling of the 'brass', particularly horn, tuba and trumpet, Bruckner surpassed his chosen master, Wagner. The splendor and majesty of expression he attains in the overwhelming 'fff' of the funereal second movement and in the final passage of the first and last movements, alone assure him a place among the immortals."*

—JOACHIM H. MEYER, N. Y. Staatszeitung und Herold

N. B. All italics in the course of this entire pamphlet are our own. (The Editor)

"At last Arturo Toscanini has consented to conduct Bruckner with as result a signal triumph for both the living batonist and the dead and gone composer.

The revelation took place in Carnegie Hall last evening at the concert of the Philharmonic Symphony Society, and a huge audience received it with close attention and heartfelt applause. - - -

In fact, Mr. Toscanini's reading of the finale solved the problems of that difficult section as no other has done within my experience. It moved at his behest with the jubilant majesty of the stars in their courses."

—PITTS SANBORN, New York World-Telegram

## ... SEVENTH SYMPHONY, GUSTAV MAHLER ...

*Cincinnati, March 6, 1931; Cincinnati Symphony Orchestra; Conductor, Fritz Reiner.*

"Enthusiasm was too general and appreciation too convincingly demonstrated to be argued down. - - -

Also it may be said that what might have seemed to be temerity in programming such a colossal composition in reality became an instance of courageous conviction on the conductor's part and a mighty compliment to his audience. - - -

No program is needed because the music is absolutely tangible. It is a stupendous example of inspired workmanship, healthy genius of expression and artistic maturity. *It covers a gamut of moods, and excites a range of emotions quite bewildering in extent.* - - -

Mostly, Mahler is a modern romanticist, but here and there his music is prophetic of the day which we are living in. He uses classic forms and every needed known device in treatment of material. *And with all his classic structure, romantic nature and overwhelming technique of manipulation, he has reached into what even to us who survive him is the far distant future."*

—GEORGE A. LEIGHTON, Cincinnati Enquirer

## NINTH SYMPHONY, ANTON BRUCKNER

*Chicago, Pittsburgh, Ann Arbor, Milwaukee, Evanston; Feb.-May, 1931; Chicago Symphony Orchestra; Conductor, Frederick A. Stock.*

"Into the Ninth Symphony (styled the *Unfinished* as it lacks the final movement) the versatile Stock imbued a mysticism, religious fervor, and grandeur, that gave the loveliness of its simplicities new importance and renewed interest. His interpretive understanding gave significance to a composer whose works have been too long misunderstood. - - -

After the riotous regime of ultra modernity and atonality in the realm of music, the works of not only Bruckner, but also those of Mahler should at last come into their own."

—RALPH LEWANDO, Pittsburgh Post

"It was Pittsburgh's first hearing of Bruckner.

In his ninth symphony one is awed by the grandeur of the score. Bruckner knew his counterpoint and polyphony and he crams his movements with thematic and color riches.

It was an impressive work, and despite its length, we would like to hear it again next year."

—HARVEY GAUL, Pittsburgh Post Gazette

# EIGHTH SYMPHONY (SYMPHONY OF A THOUSAND)

GUSTAV MAHLER

*Cincinnati, May 6, 1931 (May Festival); Cincinnati Symphony Orchestra; Conductor, Eugene Goossens.*

"It is gratifying to think that the triumphant premiere which Mr. Specht recalls must have brought deep solace to the self-torturing, hypersensitive, unhappy Mahler. The event took place in the autumn before his death, at Munich (the date was September 12, 1910). 'After the performance', wrote Leopold Stokowski, who was present, 'the vast audience sprang to its feet, and a scene of such enthusiasm ensued as one sees only once in a lifetime. To those who realized, in part at least, the inner sadness of Mahler's life, there was something infinitely tragic in his figure at that moment of supreme triumph'.

It was Mr. Stokowski who introduced the *Symphony of a Thousand* to America in an extraordinary series of performances with the Philadelphia Orchestra which he undertook in the spring of 1916. The work was produced on March 2, and had a run which, for a mere symphony, was almost equivalent to the triumphant persistence of *The Green Pastures*. - - -

In the following month, the *Society of the Friends of Music* imported Mr. Stokowski with his army of executants to New York, and the work was disclosed to this capital at a memorable concert in the Metropolitan Opera House. - - -

It is curious that Bayard Taylor, half a century ago, should have spoken of the closing scene of *Faust* as 'a symphony': an ever-rising and ever-swelling symphony, with its one theme of the accordance of Human and Divine Love; as (again) 'this mystic Symphony of Love'. It almost seems as if he had previsioned the tonal possibilities of the poem—possibilities which Mahler, in this symphony of today, has in so large a measure realized and fulfilled. For here, take it all in all, is one of the noblest scores of our time. In it, now and again, are pages unforgettable for their superearthy beauty—inspirations of which their creator might justifiably have said, with the singer of the Odes of Solomon, 'So are the wings of the Spirit over my heart, and I have been set on His immortal pinions.' '\*

—LAWRENCE GILMAN, N. Y. Herald Tribune

\*Jan. 24th, 1932. Although the interim shows no performance of Mahler's "Eighth", since the one recorded above, Mr. Gilman sounds a violent discord in an "aside" about this monumental work in today's issue of the N. Y. Herald Tribune. The occasion is an article introducing Mahler's Fifth Symphony; the cause, we must confess, beyond our comprehension.

We quote the puzzling passage:

"That vein (peasant humor) is native to him, genuine and unforced and individual. But Mahler in his pseudo-apocalyptic vein: Mahler as Lucifer, as Prometheus, as Faust, as the Angel Gabriel, as Deity, assisting at the birth of worlds and the resurrection of mankind, is, for the most part, a bore and an affliction.

"The writer heard the symphony for the first time. He could listen with a clear and unprepared mind to the sheer effect of music and performance, and that effect was overwhelming. - - -

We do not say that it is the purest musical material. Technically it is a tour de force. . . But if Mahler is sometimes forced to substitute

straw for bricks in the first part of his symphony, he is such a master of his structure and his feeling is so true and tremendous that criticism in the listener is overwhelmed if it is not entirely silenced. And this is no more than just to the composer, for Mahler is not to be judged entirely as other men who write music. . . He saw mighty visions and he believed, and there is that in his music—at least when it is presented as it was this evening—that makes fault-finding with detail or measuring with a yardstick seem somewhat petty.”

—OLIN DOWNES, N. Y. Times

#### FOURTH SYMPHONY (ROMANTIC) ANTON BRUCKNER

*New York, July 12, 1931 (Stadium Concerts Series); Philharmonic Symphony Society of N. Y.; Conductor, Willem van Hoogstraten.*

*“The symphony, last heard here at the Stadium three years ago, improves upon acquaintance. . . There is often an ingratiating melodiousness, especially in the slow movement, where we are reminded of Schumann’s D minor symphony; the scherzo has a marked freshness and elan; passages where the brass instruments intone sonorously have an impressive dignity of the type found in Bruckner’s seventh and eighth symphonies to a greater degree.”*

—FRANCIS D. PERKINS, N. Y. Herald Tribune

*“Bruckner now seems destined to become an integral part of our musical life, as he long has been in Germany and Austria.*

Last evening the Stadium was to have been treated to him again, but if the weather forbade, at least the Philharmonic Symphony made the Great Hall of the City College ring to the tune of the Austrian’s fourth, or “Romantic” symphony, while a considerable congregation of displaced Stadiumites listened with unmistakable interest.

Mr. van Hoogstraten is a Bruckner enthusiast, and he directed the symphony with cherishing care and tremendous vigor. The charge has been brought against Bruckner that in the intervals between fine episodes he goes irretrievably dull. *Well, I defy anyone to recall a dull moment in the symphony last evening—and that is a feather in the cap of Mr. van Hoogstraten as well as a tribute to the composer.”*

—PITTS SANBORN, N. Y. World-Telegram

#### NINTH SYMPHONY, GUSTAV MAHLER (FIRST TIME IN AMERICA)

*Boston, Oct. 16, 17 and Nov. 9, 1931; Boston Symphony Orchestra; Conductor, Dr. Serge Koussevitzky.*

*“A strange figure in the symphonic field, not one to be slighted, much less wholly admired; not one to be ignored; a man of great moments, but, as Rossini said of Wagner’s ‘Tannhaeuser’, of dreadful half-hours. And how often is Mahler trivial when he thought he was important. - - - The performance was remarkable. The enthusiastic audience recalled Dr. Koussevitzky two or three times.”*

—PHILIP HALE, Boston Herald

One might write also of Mahler's marvelous pertinent orchestral technic, of the perfection with which all his projected effects 'come off'; of the economy of his writing in the face of the great length of his works—of the idiom, the flavor, which defines Mahler as specifically as that of Strauss defines Strauss or of Debussy defines Debussy; of the advanced musical thinking which places the symphony at least a decade ahead of its day. Suffice it to say that detractors eager to note 'influences' in this symphony—and not too sure of their musical history—all too easily find in it supposed traces of works which did not see the light of day until a later date!"

A. H. MEYER, Boston Evening Transcript

"Unmistakably and from end to end it is a superb technical achievement—often the germinating *motives* are brief and simple. - - -

What does he not do with them, more particularly in the first and the second movements! The modernists are lions for counterpoint, expert practitioners withal. Yet the youngest of them sits in admiration and amaze before 'old' Mahler's polyphony. He has outdone them all, and a generation ago."

—H. T. PARKER, Boston Evening Transcript

"It impressed one hearing it for the first time as a masterpiece deserving a permanent place in the repertory, and frequent performance. What is more significant, the audience, few of whom can have heard it before, applauded with a warmth seldom bestowed here on unfamiliar music. - - -

One can only repeat that yesterday's performance, an unusually eloquent and sympathetic one, proved that Mahler is a genius to be classed with Brahms, possibly in some ways above him."

—P. H., Boston Globe

"To Dr. Koussevitzky, then, our full gratitude for having given us first in 'The Song of the Earth', and now in the Ninth Symphony, the two works of Mahler's maturity and prime, in which he sounded a note unheard in music since Beethoven wrote his last sonatas and quartets. Like Beethoven, Mahler in his later years found in composition an escape from the world of reality, become increasingly distasteful to him. Like Beethoven he achieved at times a spiritual calm, a clarity of spiritual vision, beyond the usual human experience; like him could express it in terms of tone.

This mood of spiritual ecstasy, so different from the sensuous mysticism of Franck and of Wagner's 'Parsifal', finds voice in the last division of 'The Song of the Earth' and in the sublime Adagio that concludes the Ninth Symphony."

—WARREN STOREY SMITH, Boston Post

## MISSA SOLEMNIS IN F MINOR, ANTON BRUCKNER

New York, Oct. 25, 1931; Society of the Friends of Music; Conductor, Artur Bodanzky.

"A cause to advance, an issue to contest, is precious to certain people. And now there is hot-to-do about Anton Bruckner, whose Mass in F minor was performed for the first time in this city by the Friends of Music, Arthur Bodanzky conductor, yesterday afternoon in the Metropolitan Opera House. - - -

He (Bruckner) was a composer only half articulate. He had ideas of sufficient value to float imperfect scores, and some of these ideas are so great that they keep his music alive, if not violently kicking, and cause its inclusion from time to time on concert programs. - - -

But the net value of the mass is, in our belief, exaggerated, and one performance is sufficient for some seasons to come."

—OLIN DOWNES, N. Y. Times

"The Bruckner Mass is a concert work. It is romantic, unchurchly, uncatholic and was certainly never intended for use in a sanctuary. - - -

But on the whole the mass justified the claims of Brucknerites. It is certainly one of the highest flights of the composer. Stylistically it is coherent and its melodic character and formal evolution are so simple, and even naive at times, as to make it quickly comprehensible to the listener. It is an art work in which intellectual power is singularly wanting, but which wins by its clear revelation of a humble and pious soul."

—WILLIAM J. HENDERSON, N. Y. Sun

"Yesterday's carefully prepared performance proved a powerfully convincing presentation of the lofty musical and spiritual qualities of the F minor Mass, and unless all indications are deceptive, the 'Friends of Music' should include the work in their regular repertoire. - - -

In the fervor of its utterance, in the broad, bold outlines of its musical framework, in the masterly handling of its themes (the rearing of a monumental structure out of small 'motiv'-like fragments) in its enduring outlook upon life (a veritable peak of romanticism) the F-minor Mass reveals most colorfully the supreme church musician, who hid deep in his simple soul a world of lofty thoughts."

—JOACHIM H. MEYER, N. Y. Staatszeitung und Herold

"It is quite short, taking only sixty-five or seventy minutes to perform, and is obviously designed for liturgical performance, in a church, as part of religious services, rather than as a concert work. It is relatively unpretentious; the choral writing is not particularly elaborate; few, if any chances for extended vocal display are offered the soloists; the orchestration is less rich than in the composer's later music. - - -

With melody of a Germanic, romantic type, the music gives a clear expression of Bruckner's religious faith—thorough, convinced, unquestioning and, in this case, optimistic; a serene devotion, often tender, sometimes jubilant."

—FRANCIS D. PERKINS, N. Y. Herald Tribune

"After devoting a great deal of attention to Bach, Beethoven and Brahms, not to mention Gustav Mahler, the Friends of Music, at their initial concert of the season at the Metropolitan Opera House yesterday, got around to Anton Bruckner . . .

And it is safe to say that few of the recent attempts to endear the music of this simple, devout Austrian to the local public are likelier to bear fruit than this first performance in New York of the Mass in F minor. - - -

The Mass, which is neither long nor in any of its parts exceedingly elaborate, is of a singularly sustained inspiration."

—PITTS SANBORN, N. Y. World-Telegram

"FOR US this ponderous Mass was uninspired and uninspiring. It never soared, though it strove bravely and persistently to do so. It beat its wings, but couldn't leave the ground. - - -

The work unquestionably has some beautiful details, both in the choral writing and in the orchestra; but it has also monotony of color, and though it contains at least two ingenious examples of fugal writing, it quite generally fails to contrast successfully the several choirs when contrast would dispel this monotony. Beyond question it carries the conviction of Bruckner's sincerity. But, it plods emotionally, and its religiosity has little of 'lift.' "

—OSCAR THOMPSON, N. Y. Evening Post

### NINTH SYMPHONY, GUSTAV MAHLER

*New York, Nov. 19, 1931, Jan. 9, 1932. Boston Symphony Orchestra; Conductor, Dr. Serge Koussevitzky.*

"How does it happen, then, that we have waited 22 years (the Ninth Symphony was completed in 1909) to hear one of his most important works? Echo answers. He has never had, in this city, an enthusiastic press, and for this reason, it may be, as well as for others more practical, conductors have been reluctant to perform it. As for the public, given the chance, it might express a preference for Mahler's music."

—EDWARD CUSHING, Brooklyn Daily Eagle

"Mahler's Ninth Symphony, which opened the concert, was interpreted with an eloquence, a conviction, a richness of color which may well have given the music fictitious significance. - - -

Mahler's symphony, played for the first time here, is too long."

—OLIN DOWNES, N. Y. Times

"But length in music is after all, a relative thing. *Die Meistersinger* is almost twice as long as *Thais*; but not everyone would believe it without a stopwatch.—Mahler's instrumental demands in this score are considerable, but they are not exorbitant, and any one of our major orchestras could have met them without turning any grayer than usual the hair of of the trustees.—It should be added to the repertoire of other symphonic bodies, and it should be heard again; for it is a remarkable score".

.....LAWRENCE GILMAN, N. Y. Herald Tribune

"Mahler's musical relationship to Bruckner, his prodigious prolixity, his occasional flights into the empyrean of beauty, all have made him an object of adoration and the victim of misplaced propaganda among the confraternity of Brucknerites and their sympathizers. But enormous plans, ponderous masses of structure and openly exhaustive effort do not make compositions great. Schubert's *Erlkoenig*\* is a more unassailable masterpiece than any of Mahler's symphonies.—That the symphony was worth hearing is beyond question."

—W. J. HENDERSON, N. Y. Sun

\*Editor's Note:—Perhaps, after all, history does repeat itself. We take the liberty to remind Mr. Henderson that when the *Erlkoenig* made its bow in New York the *American Musical Journal* of May, 1835 greeted the Schubert masterpiece with the following tirade:

"*The violation of all harmony, although the modern school may defend its absolute correctness, is here, in our thinking, misplaced; the discord is too piercing for the ear. We might overlook it in a chorus of devils a la Weber, but in this instance it is not to be endured. This is a song of the Rosalie species certainly, but far very far, its inferior; nor do we think that Charles E. Horn, with his excellent taste and his beautiful touch of the pianoforte, could reconcile us to this monstrum horrendum which we, however, strongly recommend as a beautiful specimen of modulation, a good pianoforte lesson, and a useful exercise for the voice.*"

"Only violent antipathy or prejudice could have prevented an earlier hearing of this symphonic swan-song (as it proved to be) for the tenth symphony is a mere fragment.—Koussevitzky's performance of this emotional and certainly sincere work helped much to remove that prejudice. The apparently genuine enthusiasm of the audience must have been balm to Koussevitzky's pioneering heart."

—MUSICAL COURIER, November 28, 1931

"To Serge Koussevitzky and the splendid Boston Symphony Orchestra all gratitude for this unforgettable performance!—From a purely musical viewpoint Mahler's last symphony is one of the most significant products of all symphonic creation, and that despite numerous weak spots, the result of an over-attention to detail detrimental to the firm maintenance of the major structural outlines. The manner in which the composer raises the opening movement out of thematic particles to a mighty edifice is one of the greatest examples of symphonic construction. Those distant, alluring horn calls, reminiscent of the 'Nachtmusiken' of the 'Seventh', sound here once again.—In wealth of coloring this, as well as the other movements, reveals the tone-sorcerer, who with the exception of Richard Strauss, is without equal in modern music."

—JOACHIM MEYER, N. Y. Staats-Zeitung und Herold

*(Translated by the editor.)*

"The music grows in intensity, eventually to die away in one of the finest expressions of that ineffable loneliness and yearning which was inseparable from the tortured spirit of Mahler.—As the music faded into the silence of eternity, the high receding violins spoke of the ultimate consolation which is complete surcease from pain, from thought; the last sleep which is our inalienable birthright.—The symphony is scored for an enormous orchestra, scored with the utter mastery that was Mahler's, and technically the Bostonians performed it magnificently."

—PITTS SANBORN, N. Y. World-Telegram

"Prune it down until nothing is left save Mahler's musical ideas and the amount of development that they are worth, and the Ninth Symphony would last about twenty minutes.—Some day, some real friend of Mahler's will do just that . . . take a pruning knife and reduce his works to the length that they would have been if the composer had not stretched them out of shape; and then the great Mahler war will be over."

—DEEMS TAYLOR, N. Y. American

"The playing was so fine as almost to win over some of us who have grown weary of the efforts of successive conductors to acclimatize Mahler to our soil.—But the bad seemed to us not as bad and the indifferent not as indifferent as in some of the other symphonies.—Though not a great work, this is one to give pleasure. Its liabilities include its length."

—OSCAR THOMPSON, N. Y. Evening Post

### MAHLER'S NINTH (SECOND N. Y. PERFORMANCE)

"Too little has been written in appreciation of Mahler's superb instrumentation; of its eschewing of filling-in effects such as often clutter up the scores of Strauss and of his great skill in saying much with little means. Although he calls for a huge orchestra, he is sparing in its use. Polytonality may be traced here to its original source and his poignant use of dissonance is that of a master.—After the profound utterances of Mahler, Ravel's pretty work seemed doubly trivial."

—JEROME D. BOHM, N. Y. Herald Tribune

"Musicians welcomed a second hearing made possible by the matinee, and there were many standing in a crowded house.—First and last the triumph was Mahler's."

—W. B. CHASE, N. Y. Times

"The work made a far better impression on the present reviewer than when it was done in New York last November by the same orchestra and conductor. The audience, too, seemed deeply interested last week and gave eloquent applause to the music and its vivid and colorful performance."

—MUSICAL COURIER, January 16, 1932

## PHONOGRAPH-RECORDINGS

Thus far only a single symphony of Bruckner has made a complete phonograph appearance. This is the Polydor recording of the Seventh made by the Berlin Philharmonic under Jascha Horenstein before the days of improved electrical devices for good musical photography. There is, however, a rather fine Parlophone recording of the great "Te Deum" sung by the Bruckner Choir. The Scherzos of the Third and Fourth are available on H. M. V. records, that of the Fourth played by the Vienna Philharmonic under Clemens Krauss.

Mahler's symphonies are completely unrecorded. The best of his music to be had for the phonograph is Polydor's version of the "Kindertotenlieder", beautifully sung by Heinrich Rehkemper. There exist, also, recordings of some Mahler songs.\*

Good phonograph recordings furnish perhaps the most effective means of popularizing music, but unfortunately, the exclusively commercial basis upon which outstanding companies venture upon the publication of records still restricts phonographic versions of Bruckner and Mahler symphonies to mere hopes for the future. How immediate this future of realization will be depends wholly upon the frequency with which these symphonies are performed by major musical organizations; for their overwhelming impression upon the audiences has been repeatedly demonstrated beyond all doubt.

## WELCOME CONCESSIONS

Urged by complaints from several musical organizations who found the performance rights of Bruckner and Mahler symphonies prohibitively expensive, the Society communicated directly with the Universal Verlag, publishers, of Vienna. Shortly after this the following gratifying announcement was made by the Associated Music Publishers, American representatives of the European establishment:

Charges for rights of performance of Bruckner's works have been removed.

Charges for rights of performance of Mahler's works have been reduced fifty percent.

Charges for rental of Bruckner material have been reduced fifty percent.

Members of the Bruckner Society are entitled to a reduction of twenty-five per cent from the list price of miniature scores and piano arrangements of Bruckner and Mahler works. These can be obtained by writing to the Associated Music Publishers, 25 West 45th Street, New York."

\*Records mentioned above are obtainable at The Gramophone Shop, 18 East 48th Street, N. Y.

# THE LIFE OF ANTON BRUCKNER

## A Monograph

By GABRIEL ENGEL

"This hand book is invaluable to the program maker or musicologist who desires to know something of the man who is said to have written the world's finest 'Te Deum'."

—Harvey Gaul, Pittsburgh Post Gazette.

"It is a sympathetic and convincing tale—well told. Not padded out with unnecessary details but giving the essentials forcefully yet not unduly controversial."

—Karleton Hackett, Chicago Post.

"Not enough is known in America or in English writing about the life of Bruckner, and this first attempt to cover the subject—is therefore most welcome, for it tells the main facts about the much misunderstood master's studies, struggles, tendencies, disappointments, and triumphs. The interesting quartet, Bruckner-Wagner-Hanslick-Brahms, come in for discussion of their association, also there are arresting passages about Muck, Mahler, Nikisch, all of them pupils of the composer who had the courage to oppose Hanslick and the simplicity to dedicate a symphony to God. A reading of Gabriel Engel's sympathetic tribute is well worth while."

—Leonard Liebling, Musical Courier

"This small volume gives a picture of the composer and an estimate of his work in clear precise language. The last chapter 'The Symphony of the Future' is of special interest."

—Joachim Meyer, Staats-Zeitung und Herold

"A convenient and timely monograph."

—Pitts Sanborn, N. Y. World-Telegram

"This monograph . . . tells in an entertaining fashion its story of the composer's long struggle for recognition and makes out an impressive case for him as the successor of Beethoven."

—Warren Storey Smith, Boston Post

The monograph can be obtained through Mr. Robert G. Grey, Secretary, 222 West 83rd Street, N. Y., or through the Roerich Press, 103rd Street and Riverside Drive, N. Y., N. Y. (Price 50 cents plus 5 cents postage.)

(In Preparation)

GUSTAV MAHLER

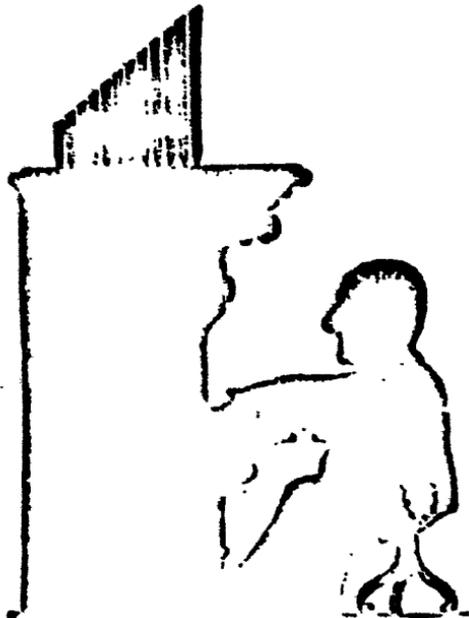

By GABRIEL ENGEL

### From the Author's Preface:

"This biography is not an unqualified eulogy. It is the first life of Mahler written by one who cannot boast a more or less intimate personal acquaintance with him. It is, nevertheless, the first account of his life based on his collected letters, the recent publication of which has at last made available material proving him to have been a far more human and fascinating figure than the halos of sentiment cast over him by ultra-partisan German biographers will admit.—Mahler's compositions receive much the same treatment in these pages as other incidents in his life; for he lived his works, and nothing was more abhorrent to him than the guide-book explanations and programmatic rhapsodies which constitute the rather rambling method of the biographies by his countrymen.—The book is necessarily short; for it is a first word from a new point of view; yet it is no mere chronicle of dates and facts intended to preface an aesthetic discussion of the thousand and one details of nine colossal symphonies. It is primarily and almost entirely a narrative."

## GUSTAV MAHLER—SONG SYMPHONIST

By GABRIEL ENGEL

Gabriel Engel's biographical sketch of Gustav Mahler is an illuminating study of this controversial figure in music. The first book on the subject that has appeared in English . . . a valuable beginning and another practical evidence of the activity and devotion to artistic ideals of the Bruckner Society.

—KARLETON HACKETT, *Chicago Evening Post*

The book shows Mahler, as the author himself says in the preface, to be "a more human and fascinating figure than the halos of sentiment cast over him by his German biographers will admit." The book is also the first on the subject to be written in the English language. Nevertheless it shows Mahler in a new light both from the musical and the human angles. As such, it is a valuable addition, especially to English-speaking persons, to the Mahler literature.

—S. L. LACIAR, *Philadelphia Public Ledger*

The present volume, like its predecessor (*The Life of Anton Bruckner*) entertainingly presents historical facts and critical opinions concerning a composer of whom the ordinary concert-goer knows all too little. Towards Mahler as toward Bruckner Mr. Engel is sympathetic but not idolatrous.

—WARREN STOREY SMITH, *Boston Post*

### From the Author's Preface:

"This biography is not an unqualified eulogy. It is the first life of Mahler written by one who cannot boast a more or less intimate personal acquaintance with him. It is, nevertheless, the first account of his life based on his collected letters, the recent publication of which has at last made available material proving him to have been a far more human and fascinating figure than the halos of sentiment cast over him by ultra-partisan German biographers will admit.—Mahler's compositions receive much the same treatment in these pages as other incidents in his life; for he lived his works, and nothing was more abhorrent to him than the guide-book explanations and programmatic rhapsodies which constitute the rather rambling method of the biographies by his countrymen.—The book is necessarily short; for it is a first word from a new point of view; yet it is no mere chronicle of dates and facts intended to preface an aesthetic discussion of the thousand and one details of nine colossal symphonies. It is primarily and almost entirely a narrative."

## THE AMERICAN SYMPHONIC RENAISSANCE

Though not as hard pressed as the operatic, the concert world is also deeply troubled with conflicting economic and esthetic interests. An unusually conservative summer at the New York Stadium played a fitting prelude to the bombshell of discord sounded by the Philadelphia Orchestral Association just before the present season began. The air still rings with the echoes of that organization's amazing announcement of a new (and allegedly necessary) policy of musical conservatism, alarming because of its bearing upon the artistic ideals and plans of one of America's most inspiring guides of musical progress. The amusing phases of this announcement at once found vivid portrayal in that droll cartoon of words by Mr. Downes of the New York Times headed "Orchestral Market. Sharp Decline in Modern Issues," an article listing the box-office values of the composers as so many securities in a Stock Exchange report. Yet Mr. Downes, as well as all the other musical critics, felt that beneath the surface the prospect presented in Philadelphia was too serious to be dismissed with mere raillery.

A quarter of a century ago Gustav Mahler, embittered by the hopeless conflict between artistic achievement and grudging subsidy at the musical capitals of Europe, determined to retire to private life in order to devote himself entirely to composition. A poor man, and yet a lover of material comforts, he accepted a glittering offer from musically "backward" America knowing he might there speedily earn with his baton the money necessary to the realization of his wish. In those days the leading musicians of Europe still regarded the United States as a fabulously wealthy country inhabited by morons and savages willing occasionally to exchange some of their facile gold for a portion of musical culture.

In the course of his American activities, first, as musical director at the Metropolitan Opera House, and then as reorganizer and conductor of the New York Philharmonic Society, he instinctively analyzed all the features, material as well as spiritual, involved in our musical problems and describing these with enthusiasm in a letter to incredulous Willem Mengelberg (1908) he concluded regretfully:

"But if I were young and still had the energy which I gave unstintingly to Vienna for ten years, perhaps it would be possible to create here the condition which appeared to us at home an unattainable ideal, the exclusion of every commercial consideration from matters pertaining to art—for those in authority here are honest and their resources unlimited."

Though Mahler died three years later, a martyr to this "unattainable" ideal, his words soon proved prophetic utterance, for young Mahler disciples, filled with an almost fanatic missionary zeal, settled here soon after and battled hard to raise our musical standards to the lofty level the deceased genius had found unattainable in Europe. Some

of these, devoid of the great personal magnetism necessary to the success of an absolute ruler in any field, eventually abandoned their increasingly unpopular efforts at progressive reform for a safer conservatism. But outstanding among the few who staunchly bore to convincing realization that claim of Gustav Mahler so incredibly flattering to America was Leopold Stokowski, the man now asked to curb the brilliant universality of his programs. And most curiously of all, this occurs at a moment when Mr. Stokowski deserves the laurel more than ever before; for many Philadelphians point proudly to their city as the musical capital of America.

In times like these one readily lends sympathetic ear to every tale of fiscal woe. But granted that the "drawing power" of composers has been carefully estimated, even "scientific" tables have been found to exclude subtle essentials the neglect of which ultimately proved the tabulation unfortunate.

Most great music sounded disconcertingly "modern" to its contemporaries. The incredibly stupid criticisms that invariably greeted the earliest performances of masterpieces prove how puzzling these were to the original listeners. No one knows this better than Mr. Stokowski. Consequently, the announcement of conservatism by the Philadelphia Orchestral Association finds him undaunted, nay, even prepared to redouble his efforts to keep the gates wide open for the music of the present and future.\* "Modern" music perhaps never sounded as "debatable" as it does to-day. But the condition should not arouse a spirit of mourning; for it is the inevitable result of a gradual, normal esthetic development through centuries, and, viewed historically, it indicates real progress. The chronicle follows.

Long before the tone-poem and the symphony and their humbler formal ancestors there flourished a "golden age" of art. The products of painting, sculpture, poetry, and music never possessed such unquestioned authenticity as they did in those days of the universal "rebirth" of culture. Mystic superstitions and stern temporal powers swayed mankind, and the screaming slogans of democracy had not as yet been displayed to the light of the sun. Faith in the ultimate benevolence of a Supreme Power was an instinctive factor in human character, and the religious rites that constituted its external manifestation were at the same time the dominant inspiration of creative expression. The profound mysticism in music that culminated in Catholic Palestrina was as vital to the souls of the millions of worshipers as it was to the ritual voicing their faith. Composers of that age were not obsessed with the urge to create tonal masterworks bristling with individuality. They simply wrote music to fulfil the terms of a contract which required them week after week to provide something new for the services at their cathedral. There was no applause, there were no critics nor estheticians; nor was there any need of them under such felicitous artistic conditions; for musical "supply and demand" (these are "economic" days!) were in perfect accord. And as for immortality, some of those liturgical compositions of old, at first merely regarded as consummately fitted to their

\*In a statement published in the N. Y. Herald Tribune, Oct. 9, 1932, Mr. Stokowski said:

"At this moment we are entering a period of upbuilding in every phase of life, meeting new conditions with new methods. The coming new music will be part of this. . . .

"If the classicists will remember that new genius will surely arise in the future, just as it did in the past, and if the modernists will remember that Bach, Mozart, Beethoven, Schubert, Brahms, Wagner were all modernists in their days, we can all combine in a spirit of tolerance and open-mindedness."

inspirational purpose, kept attaining occasional repetition far beyond the age of naive faith that had brought them forth. The people of subsequent generations found them possessed of tremendous extra-ritual appeal. Music-lovers, musicians, theorists, and estheticians have never ceased to admire them, and thus they have made their infallible way down the centuries, continuing to impart their human and poetic message with undiminished effect even in our own day of sophisticated scepticism.

In the course of the festive Baroque period that followed bewilderment overtook those anxious to make composition continue to answer a practical purpose. The wings of musical art spread far beyond the range of the altar. Numerous "forms," suited to as many tastes, became the vehicles of serious musical expression. The esthetician, a new species of musical sage concerned less with the technical than the spiritual features of music, sprang into sudden prominence. These pioneer critics at once began to speak of art for art's sake, an aim totally unintelligible to the music-makers preceding Bach. The urge for "self-expression" now harassed many outstanding composers, and the unmistakably personal character of much of Haydn's music is evidence of the conflict that raged in the soul of the world's first symphonist, although his art was heavily mortgaged by the superficial demands of the jewelled lords and ladies of the Rococo.

The germs of this inclination towards subjective expression took much stronger root in Mozart, the outer tragedy of whose life clearly reflected his refusal, if not inability, to cater to the narrow musical wants of the gay nobility. Yet this was in those last pre-revolutionary days the sole practical aim for art, comparable, at least from the economic point-of-view, to the demands of the church upon the old masters.

Beethoven, resigned to technical apprenticeship in his first two symphonies, was suddenly electrified by the current of democratic idealism that swept over Europe from France. Out of the spiritual flames kindled by the universal heroics at Paris came the soul of the *Eroica Symphony*. But even as Beethoven bitterly erased the name of his mistaken genius of democracy, Napoleon, from the dedication of this work, he realized that the all-embracing democracy he had thought to address was but a figment of his imagination. There followed five symphonies of great poetic stature, marvels of structure and melodic inspiration, but not until the *Ninth*, with its titanic "Ode to Joy," did he again succeed in striking so universal a note as that of the *Eroica*. And this despite the fact that it was only an imagined audience of a united mankind that he had aimed to address. This tremendous yearning for an ideal democracy was clearly the truest and most vivid subjective expression of which he was capable. Were such a world as Beethoven longed for possible, musical art might have an aim as objective as it had in the days of the early church composers.

The subjective note so profoundly sounded by Beethoven became an integral feature of the gospel of all subsequent symphonic expression. It underlies the finest passages in Brahms whose individual contribution consists in an eloquent tonal portrayal of the eternal *Sehnsucht* invoked by the unattainable beauty of a world of romance. Bruckner's *Adagios*, born of a soul singularly rich in faith, brought to the symphony a mystic power that could have been the personal expression of no other great composer since Bach. Mahler, torn between faith and doubt, love of life and fear of death, misery and happiness, poured into his symphonies the chaos of feeling inspired by such travail of the soul.

Thus the serious music of our own day, apparently abounding in trivial idiosyncrasies, is really the normal result of a steady advance along the path of subjective expression. There is nothing deplorable in the fact that art seems to have lost touch with the esthetic requirements of Tom, Dick, and Harry. If this rift appears to be growing wider it is because the taste of the masses is being undermined by an unprecedentedly powerful array of superficial music. Perhaps the world is even to be congratulated that serious music still has some audience in an age almost hopelessly infested with such low forms of tonal entertainment as characterize the picture-palaces, the broadcast programs, and the so-called "musical" shows. But popular taste is actually no lower than it was over a hundred years ago when Beethoven felt obliged to serve up his great newly completed *Missa Solemnis* to a reluctant public that would listen to it only a few moments at a time between pretty arias by Rossini.

What, then, has been the trouble with the general run of programs in this country? Certainly, the dramatic appeal of Wagner is still a powerful drawing-card. Ours is a nation on a titanic scale. Tremendous occasions suit it and even fascinate it. Beethoven's *Ninth*, with its colossal chorus, never fails to lure thousands of listeners. The American premiere of Mahler's *Symphony of a Thousand* by the Philadelphia Orchestra under the direction of Leopold Stokowski (1916) was a brilliant succession of nine performances before audiences the huge numbers of which are usually met with at prize-fights rather than concerts.<sup>1</sup> Bruno Walter is as fine a psychologist as he is a true progressive artist when he announces performances (during this season of "depression") of such subjective masterworks as the rarely heard *Fifth* of Bruckner and the gigantic *Resurrection Symphony* of Mahler.<sup>2</sup> Arturo Toscanini, whose sudden resolve to play Bruckner's *Seventh* last year must have come as a shock to anti-Brucknerites,<sup>3</sup> announces that he will play that composer's *Romantic Symphony* early this season. In Boston Dr. Koussevitsky recently gave what was perhaps the world premiere of the complete, unadulterated *Eighth Symphony* of Bruckner. He has announced for this season the first performance in America of Mahler's most problematical

<sup>1</sup> The most recent American performance of the *Symphony of a Thousand* took place in Cincinnati, in May, 1931. Olin Downes of the New York Times, who was present, wrote concerning it as follows:

"We have seldom seen an audience display such enthusiasm as did the audience in Music Hall last night. We have never felt the claims of Mahler and his disciples to have so much justification.—The writer heard the symphony for the first time.—He could listen with a clear and unprepared mind to the sheer effect of music and performance and that effect was overwhelming."  
New York Times, May 7, 1931.

<sup>2</sup> Commenting on the most recent performance of Mahler's *Fifth* in America, Pitts Sanborn wrote in the World-Telegram of Feb. 12, 1932:

"It was not inevitable, however, that the audience should stay to cheer the symphony. Yet this is exactly what happened. After the stupendous performance of the Rondo Finale, the handclapping and the cheers constituted an ovation which it was easy to see was directed toward both Mahler and Mr. Walter, to say nothing of the admirable orchestra."

<sup>3</sup> "There are, of course, interpreters who can expound with eloquence an esthetic gospel in which they have no faith. Mr. Toscanini is not among them. Sincerity is one of the roots of his power and persuasiveness as an artist. Hearing him in his disclosure of page after page of the music's nobler contents one knew that the completeness of the revelation was the index of an apostolic fervor and conviction."

—LAWRENCE GILMAN, *New York Herald Tribune*, March 5, 1931.

Concerning Bruckner's *Seventh*, after Mr. Toscanini's four successive performances: "It is further testimony to an inextinguishable demand for Bruckner that an hour-long symphony, without cuts, by a composer who remains outside the pale of the generally sanctioned and approved, has been heard and acclaimed by a modern audience."

—OLIN DOWNES, *Symphonic Broadcasts*, p. 249.

work, the *Sixth Symphony*, known as the Tragic. In addition he also will do Bruckner's *Romantic*. Dr. Frank Laird Waller has also chosen for his season's contribution to the cause of symphonic progress the *Romantic* of Bruckner; in addition, he will perform the *Fourth* of Mahler. Mr. Gabrilowitsch joins the triumphal procession with Bruckner's *Seventh* and Mahler's *Titan* (the *First*).

Let the American scene resound with these profound Old World strains. If they arouse vivid controversy, let us welcome it, for that is but a sure index of the vitality of an artwork. Were not such recent American premieres as Mahler's *Ninth*,<sup>1</sup> and Schoenberg's *Gurrelieder*<sup>2</sup> among the most fascinating of our musical experiences? Small wonder that the serious music composed since 1910 strikes such dismay in the hearts of most sincere American music-lovers. The arterial course of symphonic progress was almost totally hidden from general view by the sudden glare of a world of shallow "tone-poetry" that was inaugurated in the Nineties. But now at last the greatest conductors are striving in concert to fill the long musical hiatus which was then created. Not only Bruckner and Mahler, but the neglected Sibelius as well is arousing widespread critical approval. No, great symphonic accomplishment did not cease with the works of Brahms. Let us no longer be lulled to sleep by the opiate effect of an almost exclusive diet of tried and true (but alas! overtried) strains of familiar classics.

—R. G. GREY.

## AMERICAN BRUCKNER AND MAHLER PERFORMANCES

### BRUCKNER

{1932-1933}

- IV Boston Symphony Orchestra; Serge Koussevitzky, Conductor.  
Los Angeles Philharmonic; Artur Rodzinski, Conductor.  
Milwaukee Philharmonic; Frank Laird Waller, Conductor.  
Philharmonic Symphony Society of N. Y.; Arturo Toscanini, Conductor. (Sunday performance will be broadcast.)
- V Philharmonic Symphony Society of N. Y.; Bruno Walter, Conductor.
- VII Detroit Symphony Orchestra; Ossip Gabrilowitsch, Conductor.
- VIII Chicago Symphony Orchestra; Frederick A. Stock, Conductor.  
Choral Works—Columbia University Chorus; under the direction of Prof. Lowell Beveridge.

### MAHLER

- I Detroit Symphony Orchestra; Ossip Gabrilowitsch, Conductor.
- II Philharmonic Symphony Society of N. Y.; Bruno Walter, Conductor.  
Soloists: Jeanette Vreeland and Sigrid Onegin.  
Chorus: Schola Cantorum, Hugh Ross, Conductor.
- IV Milwaukee Philharmonic; Frank Laird Waller, Conductor.
- VI Boston Symphony Orchestra; Serge Koussevitzky, Conductor. (American Premiere)

<sup>1</sup> Said H. T. Parker, reviewing Dr. Koussevitzky's superb performance of Mahler's *Ninth*:

"No one, accustomed to the performance of music in concert halls, might doubt the intense absorption of the audience in this *Ninth Symphony*, even through a first movement twenty-five minutes long. As its listening was eloquent so also was its final applause. Both testified to engrossed minds and stirred hearts, while the pause of silence, momentary though it was, between the sounding of the last note and the outpouring of the first plaudits, was as a return from the vision by which most had been holden.

—*Boston Evening Transcript*, Nov. 10, 1931.

<sup>2</sup> See the reviews of this performance on p. 16 of this issue.

## BRUCKNER AND THE NEW GENERATION

ON the evening of December 30, 1884, when the ghost of the recently deceased Wagner still haunted all musical thought, young Arthur Nikisch raised his baton in the famous, tradition-bound Gewandhaus at Leipzig and for the first time wove about the hearts of music-lovers the irresistible spell of the chorus of deep-toned tubas singing that sombre song of premonition now universally known as the *Adagio* of Bruckner's *Seventh Symphony*. Tremendously impressive as these strains were from a purely human viewpoint (the sole permanent index of the worth of an artwork) the open worship of the great music-dramatist their programming professed spread an ominous Wagnerian veil over the Austrian symphonist's German debut which a whole subsequent generation of Bayreuth-sprung Brucknerites, through a strange mixture of intent and inability, failed to lift.

Shortly after this Music-director Levi, of *Parsifal* renown, presented the entire *Seventh Symphony* in Munich midst the wildest Wagnerian enthusiasm, a splendid performance, no doubt, but an occasion the musical significance of which was all but lost in the turmoil of renewed hostilities between Wagnerian conductors and anti-Wagnerian critics. Indeed, not even the entire destructive artillery of the Hanslickian "bad press" that was now suddenly turned upon the innocent, unsuspecting Bruckner proved as perplexing to his reputation as the fanatic support of the multitude of his new-found friends flaunting the banner "Wagner ueber alles!" Rudely awakened from a long, resigned obscurity the shy composer was compelled by these misunderstanding adherents to don a glittering crown. But even as they hailed him "The Wagner of the Symphony" the echo of their triumphant outburst was flung back at him by the jeering chorus of the critics, "Yes, indeed, the Wagner of the Symphony!" And Bruckner's crown became a crown of thorns.

In the whole vast score of this symphony the anti-Wagnerians could find but a few stray bars of genuine music, a passage or two in the *Adagio*. The rest, they said, was pure, unadulterated Wagner. Of symphonic form there was to them no evidence save, perhaps, the boisterous but obviously constructed *Scherzo*. "A Wagner of the Symphony, to be sure!" "Hurrah!" shouted the warlike men of Bayreuth accepting the challenge, "Long live Bruckner, the Wagner of the Symphony!" And Bruckner, trembling between naive pride and apprehension, continued his simple life of industry and prayer, and began to write his sublime *Ninth Symphony*, dedicated to "His Dear God."

One or two music-lovers, above these bitter post-Wagnerian dissensions, soon perceived the great injustice being done the individual accomplishment of a genius and desperately called critical attention to the profound and sustained beauties of all the Bruckner *Adagios*; for all the Bruckner symphonies were now being unfolded in rapid succession to thousands of curious German music-lovers desirous of hearing the new "Wagnerian" symphonies. "Yes, you are right," agreed the critics, smiling significantly, "It would really be unjust to overlook the relative superiority of these *Adagios*. But it is by this very contrast to the slow sections of Bruckner's work that the inferiority of those colossal hoaxes, his opening movements and finales, in short, the bulk of his 'symphonies' is proven beyond question. Yes," they concluded, "Bruckner is an 'adagio-composer', but he is certainly no symphonist." And upon this self-

imposed reef of logic the few truly appreciative Brucknerites of those days, unable to attain a correct perspective of their idol's essentially coherent giant forms, saw their dream of setting him up as Beethoven's legitimate successor shattered.

The years passed by, and curiously enough, though this Wagnerian shadow continued to obscure the general understanding of his work, Bruckner's fame spread throughout the world of music. Yet these steadily increasing performances of his symphonies occurred almost without exception midst Wagnerian propaganda and under Wagnerian batons. On December 18, 1892, Hanslick who had with consistent stupidity just stubbed his toe once more (this time upon the formidable apparition of the young Richard Strauss) stumbled out of the hallowed precincts of the Musikverein in Vienna during the premiere of Bruckner's *Eighth Symphony* a completely baffled and discredited music-critic. But even his *Apologia*, published the following day, confessing his inability to judge Bruckner's work impartially, was heard much as the voice of a muted trumpet at twilight sounding "Taps" for the senile order of anti-Wagnerians.

It is doubtful whether there was ever greater need of a sane, competent analysis of musical accomplishment than in those early days of universal Bruckner agitation and misunderstanding. If August Goellerich, the brilliant man of music and letters designated by the symphonist as official biographer in 1891, had completed his projected Bruckner record at that time, it is more than likely that a permanent seal of damnation would have been placed upon that great life-work considered by many to-day as the world's richest symphonic heritage. For Goellerich was preeminently a Wagnerian, reared in the school of Liszt. It was a happy whim of fate that transformed the author into a music-director, a disciple of Bruckner pledged to the gigantic task of introducing all of the composer's works to his native district of Upper Austria. Twenty years of Goellerich's life were consumed ere this pledge was fulfilled, twenty years during which the "official" biography of Bruckner languished in the shape of masses of documents, letters, musical manuscript, and desultory penciled notes. Then the director put down his baton and reached for his pen; but it was too late. The World War was already raging and the fate of all culture seemed to hang in the balance.

Meanwhile German audiences that were being stirred by Bruckner's symphonies as by no others had grown weary of waiting for the authorized book that was to reveal to them once for all the soul behind this deep music. At length in 1905, nine years after Bruckner's death, when Ferdinand Loewe's performance of the "unfinished" *Ninth Symphony* had shown music-lovers the utter magnificence of this simple composer, whose life-work unto the very last note was an uninterrupted ascent toward the sublime, the first attempt at a full-length account of his life was published.\* This book by Rudolf Louis, was in many ways a splendid biography, but clearly the work of a Wagnerian and a Liszt devotee, inevitably reflecting the traditional misconception under which Bruckner had been named "the Wagner of the Symphony."

Disappointingly inadequate, hence increasingly rare efforts had been made in the Eighties to familiarize America and England with Bruckner's music. How our critics of those days, unaccustomed to such sturdy musical fare, had fallen into the natural error of decrying Bruckner's gigantic forms as formless and his dome-like dynamic curves as mere

\*Rudolf Louis: Anton Bruckner; Muenchen, 1905.

noise, has been indicated in the article, "New Symphonic Horizons," in the first issue of "Chord and Discord." The appearance of Louis' book with its apparent evasions upon the score of the composer's originality must have been the occasion of critical complacency here and in England, for in its pages lay apparently authoritative foundation for the relentless depreciation of Bruckner by the American and British press. A whole generation has passed since then. Our newspaper reviewers have grown decidedly more friendly towards these long symphonies which seem, like huge spiritual tractors, to have surmounted the obstacles placed in their way by miscomprehending years. In German Europe many masterly books have supplanted the timid, compromising chapters of Louis, books that have at last pierced to the very marrow of Bruckner's gigantic first sections and finales.<sup>1</sup> These keen analyses have revealed them as perfect units built on the emancipated sonata-form of the opening movement of the *Eroica*, rendered still broader to house the huge, elemental conceptions of a composer for whom a symphony must, like that mightiest of books, be all-embracing, beginning "In the beginning," so that it may tower up and up, as the soul carried aloft through sheer faith, to God, the Ultimate Source.<sup>2</sup> This phase of the Bruckner revelation has recently been made the basis of a fine German novel called "The Divine Finale."<sup>3</sup>

Shortly after Bruckner's death an Austrian youth of seventeen named Max Auer, who had never heard a note of the composer's music, happened to be present at one of the many memorial concerts given in those days in honor of Bruckner and listened in delighted amazement to a fine performance of the *Romantic Symphony*, that most popular of the composer's major works. Seeking to learn more about a symphonist whose very first impression upon him was one of overwhelming greatness he made the disappointing discovery that a pamphlet of a few pages giving but the most meager data of Bruckner's career was the sole available information about him.<sup>4</sup> But even this scant knowledge proved sufficient to enthrall his interest permanently, for it revealed Bruckner as not only a fellow-Austrian but one who had been born and raised in Auer's own home region. St. Florian and Linz and numerous more obscure places of paramount significance in Bruckner's life were almost as familiar to Auer as his own little home town of Voecklabruck. "So great a man should have a comprehensive biography written about him," thought the youth. "Why should not I, his countryman, be the one to write it?" Further inquiry revealed that Bruckner's sister Rosalie was actually a resident of Voecklabruck, being the wife of the garden-supply dealer Hueber, whose store was only a few doors away from Auer's own home. In that little house and garden where Bruckner had spent many peaceful vacation weeks much of the *Eighth Symphony* had been sketched, and not so very long ago! Perhaps some of these original sketches were still lying about somewhere in the home of those simple people who little dreamed what greatness had dwelt among them! Auer hastened over to Hueber's store to make inquiries. His suspicion at once proved accurate. A single glance at the heap of letters, documents, and musical pencilings lying on the bench by the huge oven revealed the heartrending

<sup>1</sup>August Halm: *Die Symphonie Anton Bruckners*; Muenchen, 1914.

Alfred Orel: *Anton Bruckner*; Wien, 1925.

Ernst Kurth: *Bruckner*; Leipzig, 1925.

<sup>2</sup>Erich Schwesbch: *Bruckner*.

<sup>3</sup>Herbert Hiebsch: *Das goettliche Finale*.

<sup>4</sup>Franz Brunner: *Anton Bruckner*, Linz, 1895.

fact that the remnants of a veritable treasure-trove of knowledge about the composer were still being used by the ignorant storekeeper as mere wrapping-paper. Horrified, Auer gathered the remaining precious papers up reverently and paid Hueber a considerable sum of money for them and any others of a similar nature that might still be found scattered about the place.

Max Auer soon became a school-teacher and found ample opportunity to wander about from town to town in the Bruckner country, Upper Austria. He came upon little churches where the composer had not only played the organ in his early years but had actually left the original manuscripts of many of his occasional secular compositions. He met old people who could still recall the amazing feats of musicianship of "that young school-teacher, Bruckner." Everywhere Auer was on the alert for all possible written and oral information that might add to his knowledge of the composer. He applied himself intensively to the study of musical theory that he might be better able to cope with the more technical problems connected with the subject that had become the major interest of his life. It must be remembered from the outset that Auer was a music-loving country-boy completely unaware of the tremendous wars of artistic creed being waged in the musical capitals of the world. His boyhood approach toward Bruckner was the purely human response of one individual soul to the irresistible appeal of another. Totally unhampered by Wagnerian prejudices, Auer was perhaps the first genuine Brucknerite in the world.

In the course of his search for Bruckner material he was told that Goellerich, then music-director at Linz, had been working for years upon the "authorized life" of Bruckner. Immediately Auer communicated with the noted musicologist, generously offering to place at his disposal all the data he had collected. A firm friendship thus sprang up between the two, an attachment based on a community of purpose that proved a lifelong bond. For a score of years they sifted out together all the evidence relating to Bruckner and his work. When the timid Louis biography was published Auer was extremely disappointed and became impatient to expose once for all the injurious fallacy that persisted in branding the symphonist as a Wagnerian offshoot. Smarting under the conviction of this injustice he impulsively penned a brief biography bristling with the facts Goellerich and he had collected; but Auer was unknown and his revelation was the unvarnished truth of the inspired research worker, a clear-cut structure of frank detail couched in the simple, unassuming language every layman could understand. How could such a work hope to supplant the stylistically glittering and theoretically learned discourse of a famous exponent of musical esthetics? Therefore fifteen years passed before any publisher was willing to assume the necessary financial risk.<sup>1</sup>

The book as at last published by the Amalthea Verlag of Vienna was an instant success. Here, for the first time, in charming, friendly form, and beaming with fine illustrations, lay the entire story of that life of unparalleled industry and devotion so long misunderstood. Here at last was a vivid portrayal of the Anton Bruckner of fact, the man whose utterly peaceful mode of life, like that of the great Bach, was the only possible setting for those wordless symphonic dramas of the

<sup>1</sup>Max Auer: Anton Bruckner, Wien, 1923.

Max Auer: *Leben und Werk Anton Bruckners*; Amalthea Verlag, Wien, 1932 (This is a revised and enlarged edition much richer in the number of photographic and musical illustrations than the edition of 1923, which has been long out of print.)

aspiring soul which undiscerning judges had for over half a century stupidly confounded with the theatrical, textually and tonally sensuous dramas of Richard Wagner.

The Goellerich undertaking was pending thirty years when sombre fate intervened leaving its fulfilment to Auer's sole efforts. The thorough inventory he now made of his deceased friend's manuscript revealed that only a few of the earliest chapters were actually finished. Nevertheless the first part of the work promptly went to press, appearing the same year (1922) as a fitting memorial tribute to the man who had planned the whole biography.<sup>1</sup>

This volume with its accurate reproductions of the earliest extant compositions of Bruckner, most significant of which are perhaps the remarkable organ-preludes of the twelve year old boy, sounded the keynote of the unusual biography. It was clearly to be a source-work, a Bruckner archive, in which the composer's own music and letters would form the bulk of the catalogue of information. This first book, then, told and sang the Bruckner legend from his birth to his twenty-first year, sweeping aside in benevolent triumph all the comments that had been made about the period by previous writers.

Four years of incessant labor were necessary for the completion of the second part of the work.<sup>2</sup> This was issued in two volumes, a text-volume and a separate collection of Bruckner's compositions and sketches during the St. Florian period (1845-1855). Outstanding among the hitherto unknown music here revealed was a fine facsimile reproduction of the seventy-five page score of the early *Missa Solemnis* in B flat minor.

Another four years passed and the third part, also in two volumes, was published.<sup>3</sup> This embraced the riper revelations of Bruckner's sojourn at Linz and laid bare the fertile and individual character of his pre-symphonic church music, showing that in his secular compositions during many years of preparation lay the real sources of his later symphonic expression. Meanwhile two profound works on Bruckner by famous musical experts had appeared to mark the centennial of the composer's birth. These books, one by Alfred Orel,<sup>4</sup> the other by Ernst Kurth,<sup>4</sup> supplemented the epoch-making work of August Halm<sup>4</sup> published eleven years before to lift once for all the Wagnerian veil that had so long obscured the individual significance of the symphonist. Kurth's approach to the subject was that of the modern psychologist of music, Orel's that of the consummate technical analyst. Beside the conclusions of these two scientists of tone the Goellerich-Auer books, with their wealth of documentary evidence, assumed paramount importance.

The fourth and final portion of the great biography, embracing practically all of Bruckner's career as symphonist and a documentary history of his bitter struggles in Vienna, is now in preparation. When it is issued Bruckner, the artist and the man, will stand before the world completely revealed and Max Auer's lofty dream of a life-time will have been realized.

To be sure, all this literature exists at present in German alone. But at last a beginning has been made in English, though necessarily a modest one. The Bruckner Society of America, regarding the pro-

<sup>3</sup>August Goellerich—Max Auer: Anton Bruckner, III Band; Same as above, (Part One, Text; Part Two, Illustrations.) Band II is also in two volumes.

<sup>4</sup>Previously described.

pagation of Bruckner literature in English as one of its chief aims, has issued a monograph which tells in simple language the story of his life.<sup>1</sup> It proposes in the near future to publish another concise work devoted exclusively to an account and analysis of the Bruckner symphonies. Our critics are unanimously agreed that literature in English on Bruckner is timely and necessary. The steadily decreasing crew of scoffers and doubters has been retreating for some time. With the formidable assistance of such supreme executants as Dr. Koussevitzky, Mr. Toscanini, and Mr. Walter the retreat must soon become a rout. The real, irresistible Anton Bruckner is definitely conquering the American world of music.

—GABRIEL ENGEL

### THE FIRST UPPER AUSTRIAN BRUCKNER FESTIVAL

ON May 5, 1932, the ancient, colorful little monastery town of Sankt Florian, a significant landmark in musical topography because of the decade Bruckner had lived there as teacher and organist, suddenly sprang into Austrian newspaper headlines. The grand occasion, attended even by the President of Austria, was the high-point of the *First Upper Austrian Bruckner Festival*, a week of Bruckner performances centering about the official dedication of the rebuilt monastery organ which the composer had loved so deeply all his life and beneath which, at his own request, he now rests in Eternity.

The restoration of this famous old "king of instruments" was the happy inspiration of Max Auer, leading spirit of the International Bruckner Society. The huge sum of money, \$20,000, required for the work was literally scraped together bit by bit over a period of years, and being the collective contribution of thousands of impoverished music-lovers (for even European music-lovers are generally poor) this example of self-sacrificing devotion is one of mankind's highest tributes to the memory of a great musician.

The Festival inaugurated by a fine performance of Bruckner's *F Minor Mass* on May 1, in the cathedral of the near-by city of Linz, was almost exclusively devoted to the composer's sacred music, for Bruckner was during his long sojourn at Sankt Florian a church composer, scarcely even dreaming of the symphonic creations which were later destined to spread his fame throughout the world. Yet the one symphonic evening, May 4, that formed part of the austere celebration, did not bear the character of interpolation, for its program consisted of the *Nullte* (Symphony No. 0) and the *First*, both composed during the early years Bruckner devoted primarily to the composition of his Masses.

The outstanding performances of the Festival, both concert and ritual, were the three great masses, in D, E, and F minor, the famous *Te Deum*, and the two early symphonies already mentioned. The chief conductors, Siegmund v. Hausegger, Prof. Berberich, music-directors Wolfsgrubner and Keldorfer, and Choir-masters Franz Xaver Mueller and the Rev. Plohberger were naturally proud of this opportunity to offer their distinguished services towards the success of the Festival, the inspirational qualities and artistic beauties of which none of those who had the good fortune to be present will ever forget.

**EXPLANATORY NOTE:** The content of an artwork is definitely beyond the scope of tabulation. It is possible, nevertheless, to suggest by some such classification as the above whether a composer is technically progressive or regressive. The orchestration of Brahms, for example, is notoriously conservative, exhibiting comparatively few passages of outstandingly individual instrumental color, though these few are beyond question of transcendental beauty. Brahms was, like the great classic symphonists, primarily concerned with the musical ideas in his works. None of his four symphonies employ a greater orchestra than do the later symphonies of Beethoven. Bruckner, content at first with the same limited apparatus, soon felt that his type of symphonic structure called for a larger group of woodwind and brass instruments. His more mature symphonies are scored for a "threefold" balance of woodwind and brass. The more modern penchant for numerous solo passages, eloquently predicted by Berlioz in his *Fantastique*, found its first more recent expression in Mahler's

First, the prodigally rich coloring of which won the highest admiration of the younger Richard Strauss. The latter's contribution to orchestral technique, an increased wealth of instrumental harmony and color, found its ultimate expression in the tremendous score of the opera *Elektra*. The symphony orchestra, having constantly borrowed from its more dramatic and colorful sister, the operatic orchestra, had by this time attained a "fourfold" balance of woodwind and brass in addition to the acquisition of a great contingent of percussion instruments hitherto practically unheard of in such a connection. Mahler's *Eighth* and Schoenberg's *Gurrelieder* are striking examples of this development. The enormous progress in the technique of orchestral color in the course of a single generation is amply accounted for by the fact that four such great masters as Mahler, Strauss, Schoenberg, and Stravinsky are practically contemporaneous figures in musical history.

## SYMPHONIC CHRONICLE

A Record of Critical and Popular Reaction

---

### GUSTAV MAHLER—FOURTH SYMPHONY

*Los Angeles Philharmonic, Artur Rodzinski, Conductor; Zaruhi Elmassian, Soloist. Los Angeles, California, Dec. 31, 1931; Jan. 1, 1932.*

The Mahler Symphony No. 4 in G Major followed and its varied mood, which swept from chaos to the very height of melodic and harmonic beauty, proved a great attraction and it must be acknowledged that it was Rodzinski's genius which opened it out into dazzling beauty.

Miss Zaruhi Elmassian, whose clear and resonant soprano voice readily adapted itself to the instrumentation shared the triumphant burst of applause which greeted the closing measures.

—CARL BRONSON, *Los Angeles Express Herald*

Strange work the Mahler Symphony. Great simplicity, almost a folk song quality characterizes much of its melody. Naïve indeed is the jingling of the harness bells which appears early and toward the close of the symphony. Quaint is the orchestral treatment of the second movement with its delicate waltz-like rhythm.

The dynamics that one usually finds at the close of a work are concentrated briefly at the end of the quiet third section, and ultimately comes a sort of wistfully apocalyptic close, with the voice part, essaying its glimpse of another world.

—EDWIN SCHALLERT, *Los Angeles Times*

Rarely has Mahler been played; Artur Rodzinski last night gave this symphony the finest reading I have yet heard . . . It is pure music and contains within it all the genius that Mahler had. Its naive thematic expression reflects the creator.

—DAVID SOKOL, *Los Angeles Record*

---

### GUSTAV MAHLER—FIFTH SYMPHONY

*Philharmonic Symphony Society of New York; Bruno Walter, Conductor; New York, Feb. 11, 12, 13, 14 (last performance broadcast).*

The rhythmically ominous Funeral March with its overwhelming fanfare of trumpets, the savage section in A minor, in which a bound Prometheus seems to be fighting on a storm-lashed rock to break his chains, the felicitous *Scherzo* furnishing its soothing rustic *Laendler* with a delightful companion, a waltz melody that anticipates the *Rosenkavalier*—all these reveal the resourceful and imaginative musician. In the art of applying the most telling instrumental colors, in the alchemy of uniting independent tone elements, Gustav Mahler finds his equal in Richard Strauss alone.

—JOACHIM H. MEYER, *N. Y. Staats-Zeitung*

The symphony itself opened its heart to us as never before. The second movement (*Stuermisch bewegt*) follows the initial funeral march as with the torment of irreparable loss, and the memory of grief haunts the vigorous measures of the laendlerish scherzo that comes after.

Where outside of the andante of the slow movement in Beethoven's ninth symphony is the serenity of a longing too deep and sacred for an earthly fulfilment expressed as it is here in Mahler's adagietto? . . .

The listening to this symphony as expounded by Bruno Walter has stood forth among the few compensating privileges of a singularly cheerless music season. All honor unto Mr. Walter for not passing it by in the interest of the facile plaudits that he can always capture with the over-driven symphonies of Beethoven and of Brahms.

Mr. Walter deserves our heartfelt gratitude for his zealous and able interpretation of Mahler's fifth symphony, which must have won Mahler not a few converts.

—PITTS SANBORN, *New York World-Telegram*

### ANTON BRUCKNER—QUINTET

*Chicago String Quartet. Messrs. Felber, Reiners, Lehnhoff, Du Moulin, Dolejsi; Chicago, April 17, 1932.*

The Chicago String Quartet closed their season of six concerts in the theatre of the Chicago Woman's Club yesterday afternoon, playing to a sold-out house . . .

Yesterday they did their solemn duty by that much misunderstood Viennese master, Anton Bruckner, presenting the F major quintet.

—GLENN DILLARD GUNN, *Chicago Herald*

Bruckner bears with him the embarrassment of conscious rectitude, high artistic purpose and a blameless life. He had no "experiences," and so was free to concentrate all of his energies on his music. He took his time to it, with no sense of haste and the solemn determination to squeeze the last drop of juice from each musical thought.

—KARLETON HACKETT, *Chicago Evening Post*

But beautiful music it is throughout. The slow movement reaches in sublimity the slow movements in the symphonies; in this particular field Bruckner is the master of all masters—none excepted. Such depth and pathos has been reached only by him.

The performance was fine in the two first movements (the slow movement was played as second part); the Scherzo and the Finale would have gained by a little more preparation. But we are grateful to the five excellent musicians who gave us an opportunity to listen to this masterpiece.

TH. OTTERSTROEM, Chicago, April 19, 1932

It is radiant with moods and there is the most vigorous and stimulating range of thought . . .

I have never heard the Chicago String Quartet play so well as in the bracing first movement or the glamorous second . . .

It is a beautiful work, and it should be played frequently though it is a difficult one . . .

—EUGENE STINSON, *Chicago Daily News*

## ARNOLD SCHOENBERG—GURRELIEDER

*Cantata in four parts, for five vocal soloists, three four-part male choruses, one eight-part mixed chorus, a speaker, and augmented orchestra.*

*Leopold Stokowski, Conductor; Paul Althouse, Tenor; Jeanette Vreeland, Soprano; Rose Bampton, Contralto; Abrasha Robofsky, Bass; Robert Betts, Tenor; Benjamin de Loache, Reciter.*

*The Princeton Glee Club, Alexander Russell, Conductor; The Fortnightly Club, Henry Gordon Thunder, Conductor; The Mendelssohn Club, Bruce Carey, Conductor; The Philadelphia Symphony Orchestra, Philadelphia, April 8, 9, 11, 1932. {One performance broadcast\*}*

*Leopold Stokowski, Conductor; {Same cast of assisting artists as in Philadelphia performances, April 8-11} New York, April 20, 1932.*

It is tremendous, almost beyond conception . . .

Nowhere, save in Philadelphia, where are pooled the genius of Stokowski, the forces of an adventuresome opera company and a spirit to take the bull by the horns and experiment, would this undertaking have been possible. Nowhere else could it have met with such dynamic success.

—HENRY C. BECK, *Philadelphia Record*

At the close Mr. Stokowski was called repeatedly to the stage to acknowledge the applause which he shared with the soloists, choruses and members of the Orchestra . . .

The orchestration of the composition is all Schoenberg's own. It is always rich, but never noisy, and it shows an immense appreciation for the various instruments of the orchestra and their respective colors. These are combined in an innumerable variety.

—SAMUEL L. LACIAR, *Philadelphia Public Ledger*

Such glowing, glamorous beauty of tone, such rapturous richness of musical material, such spacious sweep of design, have not marked any premiere performance here in a long, long time. Indeed, it is a question whether such sustained ecstasy of emotion made musical, such poetic fervor of effect and sheer lavish loveliness have been so potently combined since the death of Richard Wagner.

—LINTON MARTIN, *Philadelphia Inquirer*

The instrumental texture of the *Gurrelieder* has, one must grant, unique clarity and iridescence; as sound, this score is often supremely beautiful; light and color play through it, gleam upon its surface—and lead, in the end, to satiety of the ear . . .

—EDWARD CUSHING, *Brooklyn Daily Eagle*

This performance, received with much enthusiasm by an audience that packed the theatre, required enormous forces . . .

The music is extremely sincere and it contains the technical germs of the later Schoenberg. There is a sensuous feeling which the later Schoenberg has completely abjured . . .

—OLIN DOWNES, *New York Times*

\*The importance of broadcasting as a cultural influence cannot be overestimated. During the concert and opera season millions of people, whose homes are far from any musical center, will have the opportunity of catching out of the air splendid performances of the best music, as played by the best orchestras in the U. S. This occasional glimpse into the magic realm of true musical art will undoubtedly prove for many thousands an effective antidote to the regular scharine diet of musical poison that forms the bulk of the daily broadcast programs.

The more salient question is whether the composer has voiced the moods of his drama so that they communicate themselves to the music lover. The question can be answered with a general affirmative.

For one thing, there is much glowing lyricism in the score . . .

On the whole the writer found the work more impressive last evening than when he heard it at the first performance in Philadelphia.

—W. J. HENDERSON, N. Y. *Sun*

Its idiom has nothing to do with its significance; nor has any idiom. That is a relative matter. It is the essence of the music that should concern us.

The music is eloquent, warm, throbbing, musical dramatic writing, set in a glamorous orchestral investiture rivalled by but few works in the literature. The long phrases that characterize the love of King Waldemar and his Tove are still potent in their exalted beauty; the magic of orchestral glow, such as we find here, as we do in Wagner, Strauss and a few others, can make us glad, as can but few productions of the latest music makers . . .

—A. WALTER KRAMER, *Musical America*

Schoenberg remains always the musician of admirable self-discipline; he works with a palette of colors radiating sheer beauty, plasticity, and joy in song. His melody is clothed in a splendidly flowing robe of harmony; his thematic, or rather, leitmotivated material, in the parts of Waldemar and Tove, is eloquent witness of a creative power . . . which, all in all, would stamp any 26 year old composer—be his name Schoenberg or anything else—as a genius!

—JOACHIM H. MEYER, *New York Staats-Zeitung*

## LEOPOLD STOKOWSKI ON THE GURRELIEDER

In a special communication to the Bruckner Society following the premiere reported above, Mr. Stokowski said:

“Since hearing the first performance of *Gurrelieder* in Vienna I have been studying the score whenever I had leisure. Last summer I studied it thoroughly. All of last season I was rehearsing it with the choruses, solo singers and in the final period with the orchestra. We gave three performances in Philadelphia and one in New York. These are some of my impressions:

“*Gurrelieder* is remarkable for the steady evolutionary growth in style within itself. While the early part is extremely simple there are moments which foreshadow the later organic growth. This is most noticeable in the song of *Waldtaube*. In the second part sung by Waldemar is increased condensation and concentration of style. The growth reaches its highest development in *Des Sommerwindes Wilde Jagd* in which the mature development of Schoenberg today is clearly fore-shadowed. His musical life has been a slow unfolding of an organism complete in unity and design. *Gurrelieder* promises what later he has achieved. The creative power of the song of *Waldtaube* and *Des Sommerwindes Wilde Jagd* is incontestable.”

## ANTON BRUCKNER—EIGHTH SYMPHONY

*Boston Symphony Orchestra, Serge Koussevitzky, Conductor. Boston Mass., April 22, 23, 1932.*

Through page upon page the long adagio coils and uncoils, ultimately and ever mounting heavenward. Four themes engender it into hymn-like instrumental song; reiteration enforces it; deeper and deeper sonorities enrich it, or a more shimmering texture gilds it as with an halo. Presently the heavens open and Bruckner—the mysticism of the Roman church pulsing within him—beholds and sounds the joys of Paradise. A thousand times at St. Florian's or in Linz Cathedral he has played the Sanctus upon his organ. Now the host of the redeemed are singing it apocalyptically. Of a sudden the hymn stays, and stills. And God said: "Let there be peace." And there was peace . . . It is by his deepest fervors, his spellbound visions, his celestial felicities, and the music he made of them, that Bruckner should be judged—to stand unique, thus far, among the diviners who have written black notes upon white paper ruled in staves . . .

As the Bostonian elect, fifty years ago gradually accustomed themselves to Wagner and to Brahms, as within much nearer time, they have yielded inch by inch to Stravinsky, so now they must reconcile themselves to occasional Bruckner or Mahler at characteristic, insistent, but not unprofitable, lengths. For no two composers, up and down the world, have conductors fought more manfully. Now at last, in Europe and in America, this persistence is prevailing . . .

In New York, Boston and Chicago, reviewers oftener than lay listeners have been the antagonists. Now, more accustomed, audiences are hearing for themselves.

—H. T. P., *Boston Evening Transcript* \*

Its merit is to have caught something of the nobility of mood, the selfless devotion to music for its own sake that is Beethoven's rarest gift.

—P. R., *Boston Globe*

In response to the urgings of certain ardent Brucknerites who, with some right on their side, asked for all or nothing, Dr. Koussevitzky presented at yesterday's Symphony Concert an uncut version of the Austrian master's Eighth Symphony . . .

There is enough music, whether regarded vertically or horizontally, in Bruckner's Eighth, a symphony vast both in scope and in content, to fill a concert . . .

Is there any finale of any symphony that would not come as anti-climax after that solemn and sublime Adagio, to which Dr. Koussevitzky, yesterday, restored measures unjustly excised in the performance of three years ago?

—WARREN STORBY SMITH, *Boston Post*

\*This performance of Bruckner's *Eighth* was perhaps the world premiere of the original, uncut version of the great symphony. Mr. Parker, of the Boston Transcript, moved by the eloquence of the music's complete version, addressed the Bruckner Society as follows:

"I wish that in one of your publications you might make the point that Mahler's and Bruckner's symphonies should be played without cuts. That is . . . the length is one of the characteristic qualities essential to the composer's style, necessary to the expression of his thought and feeling."

## ANTON BRUCKNER—FOURTH {Romantic} SYMPHONY

*Boston Symphony Orchestra; conductor, Dr. Serge Koussevitzky; Boston, Oct. 14 and 15, 1932.*

Being an organist become composer and tone-poet, Bruckner loves pedal-points and the even flow of the melodic stream. In neither did the string choir fail him; while it was as swift as he would speed it through the so-called "Hunting Scherzo." In his Fourth Symphony, besides, Bruckner is unusually susceptible and fanciful with the wind choir. In flawless tone it gave him what he asked, even when in the slow movement the imitation of a singing bird in the forest momentarily, and childishly, delights him. Throughout the orchestra excelled itself as fused and plastic ensemble, quick to every sonority that sang in the composer's ear and heart. . . . For the hour the simple composer had found his prophet in the sophisticated conductor. The applause at the end testified as much. . . . This fourth Symphony harked back to an earlier Bruckner than we usually hear; tapped him in fresh veins; reminded us that he was romantic before he was apocalyptic; that he could transfuse into music sensations from the world without as well as visions from the soul within.

—H.T.P., *Boston Evening Transcript*, Oct. 15, 1932

Not without reason has the work been dubbed "Romantic." The call of the hunting horn is a dominant motive. There are rich harmonies from the brasses as well as strings. The orchestration is, on the whole, much lighter than is customary in a Bruckner score, but by its transparency is none the less charming.

—MOSES SMITH, *The Boston American*, Oct. 15, 1932

In the later Bruckner symphonies, the outstanding movements are always the second and the third. Such Adagios and Scherzos had been written by no other composer since Beethoven. In the Symphony of yesterday, the first and last movements—and particularly the latter, with its chief theme that none of Bruckner's contemporaries could possibly have imagined—are the strongest . . . Dr. Koussevitzky conducted this Symphony with understanding and enthusiasm, and the applause at the end, which returned him to the platform until he bade the players rise and bow, proved that his efforts had not been in vain.

—WARREN STOREY SMITH, *Boston Post*, Oct. 15, 1932

## BRUCKNER AND MAHLER IN JAPAN

Japan heard its first Bruckner on April 24, 1931, when the Takaraduka Symphony Society of Kobe performed the *Romantic* under the direction of Joseph Laska. Mahler's *Kindertotenlieder* were presented by the same organization on May 18, 1929. Last season Mahler's *Fifth*, conducted by Pringsheim, was enthusiastically applauded by the music-lovers of Tokio.

## BRUCKNER AS COLORIST\*

The term *color*, as here used, means *modulation*. Modulation is a transition from one *key* to another. As there are but twelve distinct keys in music (*major* and *minor* of the same degree being merely locally altered forms of the same key) the composer has a choice of eleven different modulations from any given key.

In the music of pre-Bach times the domination of inflexible *church-modes* rendered modulation practically impossible. With the advent of our *major* and *minor modes* new possibilities appeared, and finally, at the fervent, prophetic recommendation of Bach, the compromise of the *tempered scale* was universally adopted, throwing wide open the doors of the twelve keys that had hitherto been like so many cells in a prison of harmony.

Naturally, at the beginning of the new era masters ventured only a few of the newly emancipated eleven modulations, confining themselves for the most part to convenient and safe transitions, viz., to the *dominant*, *subdominant*, and the *relative* major or minor keys. Not even the average Bach fugue (*Well-tempered Clavichord*) shows modulation beyond these narrow confines. In the music of Mozart and Beethoven the increasing tendency towards a complete freedom of key-choice is revealed. Thus, for example, in the opening movement of Beethoven's *Sonata, op. 53*, the first and second *subjects* are in the relation of C major to E major, instead of the traditional C major to G major (*tonic* to *dominant*). Since most subsequent masters freely admitted that their individual contributions toward the spiritual and technical advancement of music were firmly rooted in one or other of the various revolutionary accomplishments of Beethoven, some analysis of the significance of the above more daring modulation will perhaps prove helpful towards the plotting of a line indicating the progress of freedom in the application of harmonic colors by more recent composers.

Outstandingly characteristic of Beethoven was a craving for intense contrast. He found the traditional modulation to the dominant pale and unsatisfying. When he chose the transition from C to E he may be said to have leaped over that first dominant G, over *its* dominant D, and over the next dominant A, coming to rest only upon reaching the fourth

\**Editor's Note:* The eminent American musical theorist who in *A Word to Anti-Brucknerites*, published in the first issue of *Chord and Discord*, exploded a number of antiquated fallacies prejudicial to a fair, impartial view of Bruckner as a symphonist proceeds to show in an original piece of constructive analysis that it was Bruckner who developed to its ultimate richness the urge towards harmonic contrast which marks one of the most important advances of Beethoven over his predecessors.

"There is noticeable after Beethoven," claims he, "a constantly increasing freedom in the application of *key variety* and *contrast* by progressive composers, particularly by Wagner, Liszt, and Bruckner. The use of chromatically altered chords excepted, this phase of musical technique is about the only one in which there seems to have been a development since Beethoven's time. Rhythm and meter have not developed; our double-and-triple time and our four-and-three-measure period grew out of the unmeasured time of a 1000 years ago. When composers change the time in every measure or every other measure they do not contribute anything new, but simply revert to the unmeasured Gregorian Chant.

"It is hard to think of any development in polyphony after compositions in 20 parts by Okcghem (Ockenheim: 1415-1513) and in 40 parts by Tallys (1525-1585).

"A further development of the sonata-form used by Beethoven has been attempted (the symphonic poem, the tone-poem) but opinions are still divided concerning this 'improvement'.

"If we are considering progress in music, it must be in regard to coloring and chord elements. As painting of the last generation differs from 'the old masters' in the use of all twelve colors in the spectrum, so music of the last three generations shows a constant expansion towards the use of all twelve keys."

dominant, E. This step, then, was a sudden transition to the dominant of the *fourth power*, if we may be permitted so mathematical a terminology.

In the following brief table of the comparative variety of modulations employed by the leading symphonists particular emphasis is laid upon the contrast between any two adjacent keys. If a composition follows the *circle of fifths* (C-G-D-A. etc.) it produces all twelve colors, but obviously only a single contrast, that of a *fifth*. If it progresses from one "color" to another chromatically (C-D flat, D-E flat, etc.) all twelve colors appear, but again with only one contrast, that of the *minor second* (or *augmented prime*). In both cases we have the deadly affliction of the *sequence*, which has been so disastrous to many composers and composers *in spe*. It is possible, without repeating any color or contrast, to arrange all twelve colors in such a manner that all eleven contrasts appear; the writer of these lines has found 7708 different arrangements. But that is a problem in *permutation and combination* and does not belong here. We are concerned with Bruckner and the color-technique in his symphonies; for this reason only symphonic movements of other composers are included in the following classification.

Two lines of numbers are presented in each instance. The lower line shows the mere distance of each new key in the music from the initial key, as measured in half tones. The upper line shows the contrast between any two adjacent keys. Thus if 0 (zero) is C, F will be 5, A 9, E 4, etc.; if it is D-flat, G-flat will be 5, B-flat 9, F 4, etc. The contrasts are

are  $\frac{5 \quad 4 \quad 7}{0 \quad 5 \quad 9 \quad 4}$  (The direction of the motion is, of course, always up.)

The list to the right includes the colors not employed in the work analyzed.

Mozart: *G minor Symphony*, first movement:

2	3	5	7	8	9	10	11	1	4	6	
<hr/>								<hr/>			
0	3	5	7	8	9	10	11	1	2	4	6

Beethoven: *Ninth Symphony*, first movement:

1	4	5	7	8	9	11	2	3	6	10	
<hr/>							<hr/>				
0	1	3	5	7	8	9	10	2	4	6	11

Brahms: *C minor Symphony*, first movement:

1	2	5	6	7	8	9	11	3	4	10	
<hr/>								<hr/>			
0	1	3	5	6	7	8	10	11	2	4	9

Bruckner: *Romantic Symphony (IV)*, first half of first movement:

1	2	3	4	5	6	7	8	9	10	11	<i>complete</i>	
<hr/>												
0	1	2	3	4	5	6	7	8	9	10	11	<i>complete</i>

This analysis is, of course, only technical; but it may be relevant in this connection to quote Wagner: "Technique is the ever evolving property of all artists since the very existence of art; it has to be reckoned with, mastered, and absorbed. That which technique is to express can certainly not be learned." Nor can it be discussed. No one knows why a work is great or insignificant, beautiful or ugly, important or unimportant, interesting or tedious. All such statements are results of individual reactions and as such beyond dispute. But a technical analysis shows whether a composer is progressive or regressive. In the matter of colorful symphonic music Bruckner was certainly ahead of all the composers of his time.

TH. OTTERSTROM.

## EUROPEAN ECHOES

### VIENNA

Ernst Krenek, whose monumental setting of Goethe's *Triumph of Sensibility* most critics considered the high-point of the *Tenth International Music Festival* held in Vienna last summer, may well be regarded as an exponent of the longing of the younger generation of composers to destroy the popular impression that sets up a yawning chasm between modern creative effort and the accomplishment of the masters of the past. In the course of an interview with the present correspondent, Mr. Krenek emphasizing the false notion which he considers the root of all this misapprehension, exclaimed, "There is no such thing as modern music. There is only good or bad music."

Included in the program of the ten-day festival was a visit to the "graves of honor" at the Zentral Friedhof, where simultaneous homage was paid the memory of Haydn, Mozart, Beethoven, Schubert, Bruckner, and Mahler.

The evening of June 21 was devoted to a Popular Concert of works by Schoenberg, Alban Berg, and Mahler, whose *Second Symphony* achieved the triumph that is its just due.

---

A musical event not without a measure of romance was the presentation in Vienna, on July 19, of Gustav Mahler's unfinished *Tenth Symphony*, under the direction of his nephew, Fritz Mahler. This young conductor, already internationally noted for his masterly interpretations of both the Bruckner and Mahler symphonies, which he has made his special province, was the ideal choice for the honor of this, the first broadcasting of the song-symphonist's last legacy to the world's music lovers. The orchestral score of two movements of the symphony was prepared for performance by Ernst Krenek. The complete original sketches were published in a limited, facsimile edition by Mrs. Mahler about ten years ago under the auspices of the Paul Zsolnay Verlag of Vienna.

In Vienna it has become customary to broadcast complete Bruckner and Mahler cycles direct from the Rundfunk building. This fact alone is sufficient evidence that the city traditionally known as "the city of music" still leads the world in the idealistic quality of its audience of general music-lovers. New Yorkers will doubtless regard as a joke the assertion that numbers of Viennese men of business upon arriving home from work will sit by their loud-speaker with a little Bruckner or Mahler orchestral score in hand and listen with great delight to the broadcasting of this deep, serious music.

Recently the student orchestra of the New Viennese Conservatory under the direction of Prof. Nilius gave a fine performance of Mahler's *Resurrection Symphony* (the *Second*) thus proving the still preeminent quality of Austrian musical pedagogy.

---

### MUNICH

This has been an unusually rich Bruckner season for Muenchen. The complete cycle of the composer's works begun last winter was continued before capacity audiences from all parts of German Europe. On January 7, the fourth Bruckner evening brought the *Wagner and Romantic* symphonies under the capable direction of Prof. Heinrich Laber, a native product of Munich whose fame as a Bruckner interpreter is al-

ready international. Concerning the performance the *Bayrische Staatszeitung* said, "Prof. Laber's mastery of these two great works is no mere reflection of a consummate knowledge of the orchestral technique involved; his is that deeper knowledge, the revelation imparted only to the soul inspired by apostolic conviction. One feels that he loves Bruckner's music. One hears it with every bar he conducts. It has become a part of him."

---

On February 23 and 25, respectively, Munich heard the canceled *Nullte* in D Minor and the *Linzer Studiensymphonie* in F minor interpreted by Prof. Franz Moissl of Klosterneuburg, Austria. These two less-favored sisters of the brilliant "nine" require the most sympathetic treatment in order to display their genuine, profound Bruckner quality. Prof. Moissl, editor of the *Bruckner Blaetter* from its inception, and for many years the leading spirit of that famous periodical of sacred music, *Musica Divina*, is, because of his great devotion to Bruckner and his supreme knowledge of church music, eminently fitted to interpret these "study" symphonies of the composer written while he was still under the austere influence of almost exclusively liturgical composition. The thunderous applause and the huge laurel wreath which were tendered Prof. Moissl at the close of the second performance were eloquent witness that this modest, great musician, much as the shy, aging Bruckner fifty years before him, was at length to be brought forth from his long obscurity to a deserved international fame.

---

On February 28 occurred the first performance, before a small audience of invited guests, of the original version of Bruckner's *Ninth*, the unfinished masterpiece which the composer's foremost disciples had for forty years regretfully regarded as the product of a failing genius. The emancipation of the orchestral language that characterized the music of the opening decades of this century has revealed that Bruckner in his closing years anticipated many of the delicate nuances of instrumental color which, though thoroughly sanctioned in our own day, must have appeared feeble and erroneous to the musical experts of over a generation ago. The private hearing, under the distinguished direction of Siegmund von Hausegger, was repeated on April 2.

---

## BERLIN

Two special concerts to celebrate the *Fiftieth Jubilee* of the Berlin Philharmonic brought "stunning" performances of Bruckner's *Seventh* and Beethoven's *Ninth*, according to Mr. Herbert F. Peyser, the well known American critic. Writes Mr. Peyser in the *New York Times*, May 22nd, 1932:

"But when one hears Furtwaengler conduct Bruckner and Beethoven as he did on these occasions the temptation is strong to forget or to condone any 'derailment' of the sort and to exclaim as Dean Swift once did to a singer in the 'Messiah,' 'For this be all thy sins forgiven!'"

Herr Furtwaengler also gave performances of Bruckner's *Ninth* and Mahler's *Fourth*.

Otto Klemperer, apostle of modernism, surprised Berlin last year with a sudden change of musical diet. Bruckner was prominent among the classics he presented.

The first of four concerts given by the *Friends of Music* under the direction of Dr. Unger was devoted entirely to works of Mahler.

## A NEW ERA IN PHONOGRAPH RECORDING

**I**N the recent amazing improvements in the devices for electrical phonograph recording the forces that have so long striven in vain to spread the neglected gospel of symphonic music have undoubtedly gained their most powerful ally. Studio recording of great modern scores, owing partly to the tremendous numbers of the personnel usually involved, and partly to the peculiar acoustic problems presented by the intricate polyphonic web of most of this music, was always either impossible or highly unsatisfactory. But now a new era has set in. The concert-hall has become the studio. The actual performance under the master's baton before the breathlessly expectant thousands of listeners is the music caught and perpetuated upon the records. Every up-to-date gramophone shop is a treasure-house of beautifully bound volumes of these records of the world's famous symphonies as actually interpreted before music-lovers and critics by the best conductors and finest orchestras in the world.

Perhaps the greatest triumph as yet achieved in this new era of recording is the recently published volume of fourteen double-faced records comprising the American premiere performance of Arnold Schoenberg's *Gurrelieder* under Leopold Stokowski at Philadelphia on April 8. The unparalleled enthusiasm that greeted this performance is reported on page 16 of this issue in the very words of leading critics who were present. All the apostolic fervor which Mr. Stokowski instilled into the hearts of his army of assisting executants upon this momentous musical occasion radiates forth from these incomparable records that have photographed for mankind for all time an ideal interpretation of this titanic landmark of serious modern music.

---

### SOME IMPORTANT RECORDINGS

#### BRUCKNER

- Seventh Symphony; Berlin Philharmonic, Jascha Horenstein, Conductor; Polydor.
- Te Deum; Bruckner Choir; Parlophone.
- Scherzo, Third Symphony; Wiener Sinfonie Orchester, Anton Konrath, Conductor; H.M.V.
- Scherzo, Fourth Symphony; Wiener Philharmoniker, Clemens Krauss, Conductor; H.M.V.

#### MAHLER

- Kindertotenlieder; Heinrich Rehkemper; Polydor.
- Ich bin der Welt abhanden gekommen—Urlicht  
Mme. Charles Cahier with the Berlin State Opera Orchestra, Selmar Meyrowitz, Conductor; Ultraphone.
- Der Tambourgesell — Rheinlegendchen  
Heinrich Schlusnus with the Berlin State Opera Orchestra; Herman Weigert, Conductor; Polydor.
- Adagietto, Fifth Symphony; Concertgebouw Orchestra, Willem Mengelberg, Conductor; Columbia.

#### WOLF

- Songs sung by Elena Gerhardt; these excellent records were sponsored by the Hugo Wolf Society; H. M. V.

#### SCHOENBERG

- Gurrelieder (See article A New Era in Phonograph Recording.)

All records listed here can be obtained at the Gramophone Shop, 18 East 48th St., New York.

# THE LIFE OF ANTON BRUCKNER

By GABRIEL ENGEL

"This hand book is invaluable to the program maker or musicologist who desires to know something of the man who is said to have written the world's finest 'Te Deum'."

—HARVEY GAUL, *Pittsburgh Post Gazette*

"It is a sympathetic and convincing tale—well told. Not padded out with unnecessary details but giving the essentials forcefully yet not unduly controversial."

—KARLETON HACKETT, *Chicago Post*

"A reading of Gabriel Engel's sympathetic tribute is well worth while."

—LEONARD LIEBLING, *Musical Courier*

"This small volume gives a picture of the composer and an estimate of his work in clear precise language. The last chapter 'The Symphony of the Future' is of special interest."

—JOACHIM MEYER, *Staats-Zeitung und Herold*

"A convenient and timely monograph."

—PITTS SANBORN, *N. Y. World-Telegram*

"This monograph . . . tells in an entertaining fashion its story of the composer's long struggle for recognition and makes out an impressive case for him as the successor of Beethoven."

—WARREN STORRY SMITH, *Boston Post*

(Price, 50 cents plus 5 cents postage)

## BACK TO ROMANTICISM!

"Back to romanticism!" The slogan requires some qualification, for despite all modern revolutionary tendencies romanticism has never departed from art, and especially from music. All art is inextricably interwoven with romance. Yes, more than that: art and romance are basically identical conceptions. Even the one who merely takes pleasure in art experiences "romantically," so to speak, the intensity of this "romantic" experience, of course, differing with the individual. In one completely taken up with business and every-day cares the spirit of romanticism lies dormant. The more readily a man responds to the voices of his inner being the more vivid is his romantic experience. The last human being will be the last romanticist.

In music romanticism is the art of the spiritual recluse. Without inner solitude, in my opinion, there can be no art and, particularly, no music. Gustav Mahler, whose *Song of the Earth* stirs the hearts of the people more every day, was one of the world's great lonely souls. Out of his solitude he created those immortal works in which that romantic-*daemonic* nature of his, so completely severed from the outer world, finds overwhelming expression.

There is, in contra-distinction to this manner of creating out of the inmost soul, another, the inspiration of which is the reality of everyday life. This kind of creation might be compared to a photographic plate and is not art in the higher sense of the word. It is necessary therefore to differentiate between two kinds of musical art, the work of the spiritual recluse, a contribution offering something new and unknown to the world, and the work of the mere tonal chronicler or photographer of everyday experience. Some composers, unaware that they are at heart romanticists, and some, who are romanticists against their will, labor under the delusion that they are musical photographers of reality, but the apparent drabness of their achievement is elevated to the higher plane of art by their imaginative power and individuality. Igor Stravinsky, dubbed a foe of romanticism, a thoroughly creative being who considers himself anything but a romanticist, betrays romantic traits in many of his works. I need only mention his *Sacre du Printemps*, that ecstatic hymn to the primal power of nature.

How a purely commonplace incident may be metamorphosed into romance by the creative artist is evident from the following example. The *cudgel-scene* in Wagner's *Meistersinger* is a realistic, musical setting of an extremely ordinary happening. Yet the delicate humor of the composer raises the whole incident to a higher sphere. Thus everything

can be a subject for musical art if it is made—"inexact."<sup>1</sup> There is, in music, no such thing as "exactness," a term that has aroused so much controversy. I demand "exactness" from an architect, for I want to live in a house, pray in a church, etc. But music fulfils no such "exact" need—how then is exactness to be associated with it? Music is, was, and will remain a confession of the soul! The more individual, unworldly, and solitary a soul is, the more timeless the music created out of it. From the soul alone come the loftier revelations in their purest form, as the composer knows, and only the composer! In this respect every true artist is of necessity a romanticist.

One often hears the claim that many a musical work of decidedly romantic character has dated. This view neglects the fact that in such cases it is not the romantic nature of the music but its lack of vitality that is to blame. Weber, for instance, was a confessed romanticist. He always emphasized this disposition of his, which of course harmonized with the artistic atmosphere of his age. His music possesses the lasting charm characteristic of a genuinely creative being alone. The perishable element of his *Oberon*, that woe-begotten creation of a deathly sick man who composed an opera for London in order to keep his family from starving, is not to be found in the extremely fine musical setting but in the defective web of the text. His *Freischuetz*, on the other hand, is, thanks to its superior libretto, still much alive today, as are all romantic works of perfection. Verdi, whom many for a time wished to set up as the spiritual opposite of Wagner, is also to a great degree a romanticist. To prove this I need only mention the unforgettable nature-painting of the fourth act of *Rigoletto*, the enchantment of the Egyptian night in the Nile-act of *Aida*, or the poetic scene of the elves in *Falstaff*.

Thus we see that all music that was the expression of genuine, vivid experience remains timeless and is still convincing today. Take, for instance, the music of Mendelssohn, that composer banned as a "mere romanticist." His wonderful *Midsummer-Night's Dream* music is still as radiantly enchanting as ever with all its wealth of color. If a musical work has lost its appeal the reason is not its romantic character but some real deficiency such as may be found even in some of the compositions of the greatest masters.

There is apparent in the audiences of today an inclination towards true art, towards the genuine things in music. Adverse criticism has sought in vain to strike a death-blow at romanticism, but it is destined to survive because the heart of man is ever the same and will not be suppressed.<sup>2</sup>

—BRUNO WALTER

<sup>1</sup>The original German words "sachlich," "unsachlich," and "Sachlichkeit" possess a connotational nuance (when connected with music) that makes an ideal translation impossible.

<sup>2</sup>Translated by the Editor and published with the kind permission of the *N. Y. Staats-Zeitung und Herold*. (Zurueck zur Romantik, Staats-Zeitung und Herold, d. 4. Dez. 1932.)

## THE NEW AUDIENCE

Although our method of musical training has been and still is rather conservative the growing generation is being given more and more opportunity of hearing modern as well as so-called "accepted" masterpieces. One need only call particular attention to the broadcasts of the concerts of the Philadelphia Orchestra, of the Philharmonic Symphony Society of New York, of the Boston Symphony Orchestra, and of the Metropolitan Opera Company. In addition children and adults throughout the U. S. are being given the opportunity to hear broadcasts of the Damrosch Music Appreciation Hour and Schelling's Children's Concerts.

As usually happens when progressive suggestions are made, the ultra-reactionaries, unmindful that they may have been championing composers who in their day were not included in the "non-debatable" category, protested vigorously when that apostle of progress in music, Leopold Stokowski, suggested that listening in on the Philadelphia Orchestra concerts be made part of the curriculum of our schools. According to the conservatives children should hear only masterpieces "tried and true." They lose sight of the fact that only yesterday Wagner, Brahms, and Strauss would have been kept from the delicate ears of these helpless children. Just what is good music? How do they, or how could any masterpiece originally considered mere cacophony have become "tried and true" if the opponents of progress in music had succeeded in silencing the pioneers?

Certainly the awe-inspiring score, *Elektra*, could not have created a furor in Philadelphia when it was given a memorable performance under Fritz Reiner in October, 1932, nor could it have drawn large crowds in New York the following season (six performances have already been given at the Metropolitan at this writing) had the original verdict of the press been sustained by modern audiences and modern reviewers.<sup>1</sup>

The immediate triumph of this "monstrum horrendum" brought forth speculation as to the reasons for this complete change of attitude. No one reason seems to explain the phenomenon. The movies, radio-broadcasts of symphonic concerts, the unforgettable *Elektra* of Gertrude Kappel, the advances made in the study of psychology, the fact that the "intelligentsia" has shown great interest in Eugene O'Neill's psycho-analytic plays, especially in "Mourning becomes Electra," all these factors doubtless contributed towards making the production of Strauss' *Elektra* the unusual success that it was.

The attendance of movies and plays well produced has made the intelligentsia more critical of staging, just as hearing concerts and Wagner productions has resulted in the rejection of inferior musical offerings. The production of *Elektra* was generally acclaimed for its musical excellence owing, in great part, to the zeal of Artur Bodanzky, and criticized

---

<sup>1</sup>For precisely fifteen minutes by the watch the audience, in slowly diminishing numbers, cheered and called the principal artists to the stage. . . . It is probably accurate to say that no one dreamed of such a reception of Strauss' formidable opera.

because of its inferior staging.<sup>1</sup>

Influences similar to those that developed a new audience for the opera (an audience critical of the really musical side of performances, an audience that does not hail the leather-lunged tenor or the bejeweled prima donna, an audience that is attracted by a notable cast but displays more interest in the "Gesamteindruck" (teamwork) than in individual accomplishment)—the influences of the radio, of the gramophone with its recording of the so-called "accepted" masterpieces and of modern music, and the inclusion on concert programs of modern and ultra-modern music, have made concert-goers more critical not only of the quality of performances but of the programs themselves. One reads complaints of the all too frequent repetition of the accepted classics and of the dearth of performances of less familiar music. One reads of the growing demand for Bruckner, Mahler, and Sibelius, and cannot underestimate the growing interest in the works of neglected masters even at the popular Stadium Concerts in New York City.<sup>2</sup> Since that time the number of Bruckner and Mahler performances has not only increased noticeably but even met with enthusiastic receptions by different audiences in the same city and by audiences of different cities. How these composers are gradually coming into their own here was described in the November issue of *Chord and Discord* ("The American Renaissance.")

Since that issue went to press a number of additional performances has been given, all of which left no doubt as to the receptive attitude of the audiences. It is encouraging indeed to find that reviewers are abandoning the mincing attitude that used to stress the "shortcomings" of Bruckner and are gradually emphasizing the monumental virtues of his works.

As Mr. Oscar Thompson said very aptly of *Elektra*: "Time has shown that its virtues amply justify repertory," time will show that the virtues of Bruckner as well as Mahler will justify their inclusion in the standard repertoire of every important American symphonic organization just as they are included in the repertoires of the important symphonic organizations of many countries of Europe.

Mr. Gabrilowitsch's performance of Mahler's *First* in Detroit last October met with a cordial reception from the audience. When Bruckner's *Romantic* was performed in Milwaukee under the direction of Dr. Frank Laird Waller the reception was such that an encore was given.

<sup>1</sup>Staging does not seem to have been one of the outstanding accomplishments of the Metropolitan even during Mahler's regime twenty-five years ago. One wonders why the effort, time, and money expended upon the lavish production of *Saalko* in recent years were not directed toward improving the staging of Wagner, for example. In Jan. 1908, Gustav Mahler, hoping to induce Prof. Alfred Roller to become the Stage Director, wrote:

"The gentlemen here are planning to appoint the present manager of the Scala (G. Gatti-Casazza) manager of the Metropolitan Opera and to engage the much praised conductor Toscanini for Italian opera, leaving me in charge of German opera. . . .

"I have proved most thoroughly to them that the stage here needs a new master more than anything else and that I know only one who by means of his art and personality can 'pull the wagon out of the mud.' At the same time (and I have proved this) it is essential that this person be given complete charge of the stage and everything connected with it. . . . Here they respect only one thing—the ability and the will to do things. . . ."

[Gustav Mahler Briefe—Copyright—Paul Zsolnay Verlag.]

<sup>2</sup>Two years ago the press reported that the names of these composers appeared on the Request Ballot Programs more frequently than heretofore. The reason is obvious. Conductors had begun once more to give their audiences the opportunity of hearing a Bruckner or a Mahler work on rare occasions.

An unforgettable reading of the same symphony in New York under the baton of Arturo Toscanini was hailed with enthusiasm.<sup>1</sup> Bruckner's *Fifth*, which received its first Cincinnati performance under the direction of Eugene Goossens in December, excited the audience to a veritable storm of applause. It is revelative of the attitude that has been fostered towards Bruckner here since the Eighties to read the concluding sentence of Mr. Leighton's excellent review of this performance:

"Let no one stay away through fear of Bruckner."

Apparently the music-lovers of Cincinnati took his advice, for according to Dr. Sidney C. Durst, Director of the College of Music of Cincinnati, the audience manifested unbounded enthusiasm. Earlier in the season Boston audiences had made known in unmistakable terms their approval of Bruckner.

One of the most important contributions to the Bruckner movement was the series of performances of Bruckner's "Choral" (V) Symphony. There were four performances of the *Fifth* under the direction of Bruno Walter. The last of these was broadcast over the Columbia Chain thus increasing the actual listeners by untold numbers.<sup>2</sup>

While Walter was conducting the first two performances of the *Fifth*, Frederick A. Stock paid tribute to Bruckner and Wagner by performing the *Third Symphony* dedicated to the "Master of Bayreuth." In Chicago the audiences as well as the critics gave the work a highly satisfactory reception.<sup>3</sup>

As was pointed out above, students also are taking an interest in Bruckner. A concert in Newark, N. J., by the Newark Sinfonietta, conductor Armand Balendonck, given under the auspices of the N. J. State Normal School, included Bruckner's *Quintet* and the *Adagio* from Mahler's *Fifth* and aroused great interest among the music-lovers of that city.<sup>4</sup>

All indications point toward a new audience, growing in size with every season. "The rise and growth of such an audience led Pitts Sanborn to write after a memorable performance of *Tristan* at the Metropolitan: "The character, size, and enthusiasm of the audience bore witness to the practical wisdom of offering such a performance," while Olin Downes wrote, "The accepted dictum that 'Tristan and Isolde' could never under any circumstances become a popular opera suffered a shock. For the fuss the audience made, it might have been Aida."

Let opera impresarios bear in mind that the music-loving public's taste is changing, that it can discriminate, that well-performed Wagner, and *Elektra*, and the like are popular attractions. Let conductors and managers keep in mind that classics are repeated too often and that Bruckner and Mahler are coming into their own.

—ROBERT G. GREY

<sup>1</sup>"The concert was well attended and the applause, particularly after Bruckner, long and enthusiastic."  
—HUBBARD HUTCHINSON, *New York Times*.

<sup>2</sup>After the first performance Hubbard Hutchinson of the *New York Times* wrote: "The control that subdued the beginnings of the final crescendo and made possible the blaze of power which ended it and which brought a burst of applause and 'bravos' from a large audience was masterly."

<sup>3</sup>Dr. Stock should take courage from the reaction of last night's audience and play us more Bruckner. Nobody found it too long or too solemn  
—GLENN DILLARD GUNN—*Chicago Herald Examiner*.

<sup>4</sup>The adagio—is the most informal, the most eloquent in the work and ranks with the more admirable in the chamber music form. It was played with a feeling for its harmonic structure and melodic contents and a technical smoothness that incited plaudits.  
—*Newark Evening News*.

## MUSIC BECOMES ELEKTRA

The painful attack of squeamishness suffered by our native esthetic spirit two decades ago upon the occasion of the American premiere of Richard Strauss' *Elektra* resulted in the placing of a ban upon that great music-drama which was not lifted until about a year ago.\*

Among the influences that instilled into some enterprising Philadelphian music-lovers the courage to venture a revival that struck most critics as foolhardy the astonishing success of Eugene O'Neill's inspired modern paraphrase of the sombre Greek masterpiece should not be underestimated. After this purely dramatic triumph of the so-termed revolting and gruesome, there could no longer be any doubt as to the feasibility of von Hofmannsthal's dreaded libretto. Thus despite the uncontestedly classic status of Strauss' orchestral contributions in our own day the primary problematical feature that cast a pall over the hope of popularizing this most gloomy of tonal artworks in our country was undoubtedly musical.

And no wonder; for in the tremendously gripping and even terrifying music that holds uninterrupted sway over the listener's emotions throughout the breathless tonal suspense that is the score of *Elektra*, a strange orchestral idiom finds its highest utterance. This is that language of unadulterated music-dramatic effect one seeks in vain in all the romantic, dramatic magnificence of Wagner's epic scores. This vast difference between the two mighty Richards of the stage goes a long way towards explaining the stupendous recent triumph of *Elektra*, a laurel that could have been granted only an art-work of striking originality. What then is the nature of this tonal language, so telling and yet so different? The key to it lies in a few passages of the earlier *Salome* in which human passion and suffering already attain consummate expression by means of insistent, almost unmusical hammerings and pulsations in the contrasted colorings of the various instrumental families. Two generations before *Salome* Hector Berlioz, that great pioneer of orchestral effect, prophesied by occasional usage the vast range of emotional suspense yet to be translated into the vocabulary of instrumentation. A slight trace of a kindred revelation is evident in the operatic scores of Weber; but the real source (just as is the real source of all that is purely emotional in modern music) is to be found in Beethoven. The "prime genitor" of all this tonal passion is the revolutionary outburst of tone that begins the *Finale* of the *Ninth Symphony*. Yet this view by no means explains all the music of *Elektra*. The problem of sustaining by orchestral effect the undiminished suspense of an extended dramatic poem of such sombreness is one that could have been solved so consummately by perhaps no other composer in musical history. Strauss himself, having completed the huge labor of inspiration, must have wondered at the achievement.

---

\*In his illuminating review of the Metropolitan Opera House performance Mr. Lawrence Gilman of the *N. Y. Herald-Tribune* recalls the reception of the masterpiece when it was first produced here in 1910 at the Manhattan Opera House. Writes Mr. Gilman in part:

This, we were told, was no lyrico-dramatic setting of the theme immortalized by Sophocles, Euripides, and Aeschylus—it was not, in short, an opera at all. It was a shambles, a chancel-house, an insane asylum shrieking through the bars of a lunatic score. Impassioned sermons were preached to us concerning the alleged brutality, violence, and ignoble horror of von Hofmannsthal's libretto and upon the shocking enormity of Strauss's score, its wilful infraction of every established law of musical procedure.

He must have realized that by this means of orchestral contrast no more could be achieved, for all his subsequent scores for the stage reveal a complete departure from the method of *Elektra*. The sudden change of musical religion displayed by Schoenberg after that Everest of orchestral romanticism, the *Gurrelieder*, is an example of a similar upheaval in the soul of a creative artist.

After all this generalization about the orchestral idiom of *Elektra*, the writer may be pardoned at least one brief attempt at specification, although he knows that the perusal of a "score" analysis is no fascinating prospect for the layman.

*Elektra's* cry of recognition, "Orest!" bursts upon a moment of complete orchestral silence. Her surprise is immediately echoed by the whole woodwind choir against a sombre background of lugubrious resonance in the string basses. The skilful contrast of a briefly uttered gasp of normal feminine coloring by the high-pitched voices of the flutes only enhances the breathless suspense of the moment. The scoring of the passage that now follows is the ultimate of Straussian virtuosity in instrumentation, the steady and telling application of orchestral contrasts not so much to mirror as to intensify the vital play of human passion in the lines of the poem, an achievement which, upon the whole, a mathematical survey of method can thoroughly illuminate only for the trained musician, though it be as well the nearest approach to an accurate accounting for the effect of the music upon the unsophisticated listener. There are felt coursing simultaneously two mighty lines of melody, veritable arteries of tone horizontally bound. Along the upper melodic line sound the combined voices of two oboes, an E-flat clarinet, two bassethorns, a bassclarinet, two horns, joined after a measure or two by all the strings, while four clarinets and two trumpets provide the rich harmonic background. Beneath this already highly sonorous tonal structure there sounds simultaneously another equally resonant, an independent melodic web realized by three trombones singing in harmony against the feverishly pulsating background of a motive alternately uttered by six horns singing high and an answering hammering chorus of deep-toned instruments (two bassoons, a contrabassoon, a contrabass trombone, a contrabass tuba and the string basses).

It was suspected by many, so well versed in the Wagnerian music-drama that they were blind and deaf to any other possible means of tonal expression for the modern stage, that Strauss' espousal of a purely melodic method in *Rosenkavalier*, *Ariadne*, etc., was tantamount to a personal confession by the composer that the score of *Elektra* was but a "charnel-house" of sensational artistic lies, a clever noise intended to cover his inability to assume the purple robe of the composer of *Goetterdaemmerung*.

But the steadily growing tumult of popular approval that has greeted successive recent performances of *Elektra* at the Metropolitan seems to have added another striking instance to the unending list of stupidities sponsored by yesterday's critics and estheticians in judging the real masterpieces of their own generation. The verdict of the critics has always been hampered by necessary haste, but fortunately the process of enlightenment constantly at work upon the general public brings about a certain though often a very belated rectification.

## THE TURN TO BRUCKNER

Strange as it seems, in both Boston and New York, to the elder generation of reviewers and listeners, a new audience is now hearing the symphonies of Bruckner, hearing them without prepossession or prejudice, seemingly receiving pleasure from them. Frequenters of the *Symphony Concerts* know by heart the signs of boredom or distaste—the recurring rustle through the auditorium, the reading of the program-book page by page, the wandering eyes, the vacant faces, the waning attention. Not one was conspicuous when Dr. Koussevitzky revived the *Fourth Symphony* last Friday afternoon; while on Saturday evening composer, conductor and orchestra held the audience intent. On both occasions applause answered generally and warmly. The two performances, last spring, of Bruckner's longer, more exacting, more uneven, *Eighth Symphony*, brought no less interested and cordial response. In New York, Mr. Toscanini and the Philharmonic Society were as fortunate with the *Seventh*; while within a few weeks they will set out the *Fourth* as well.

At the beginnings of Bruckner in America, as some like to believe, his symphonies displeased reviewers more than they did lay listeners. Soon the scribes—and a few Pharisees—evolved a formula for discourse about them. It arrayed at length the composer's limitations and weaknesses. It noted less spaciouly, with a certain air of weariness, the signal and highly individual qualities that offset them. It implied, and usually asserted, that he and all his works were dull. Whatever the symphony in hand, this formula returned. There was no attempt to examine each one as a separate entity with its own particular quality. By dint of repetition upon hearers with little discernment and less courage of their own, the formula gradually prevailed as the verdict of American audiences upon Bruckner.

Pause ensued during which conductors next to never ventured his symphonies. Then the present return to them—by Dr. Koussevitzky and Mr. Toscanini annually in Boston, and New York; by Mr. Stokowski and Mr. Stock more occasionally in Philadelphia and Chicago. Forthwith, a new generation that knew nothing of the old reviewing formula, and shared none of the prejudices it had bred, listened to Bruckner for himself; heard each proffered symphony according to its kind and degree, usually took pleasure in it.<sup>1</sup> Enlightened and persevering conductors have not kept in vain their faith in Bruckner. In Boston and in New York in these nineteen-thirties, he has, decidedly, a present and a future—the “old crowd” (as the young amiably call it) to the contrary notwithstanding.<sup>2</sup>

—H. T. PARKER, *Boston Transcript*, November 17, 1932.

<sup>1</sup>The Columbia Spectator, a student publication in a review by A. W. Hepner praising Bruckner's *Fifth Symphony* as well as its performance under the direction of Bruno Walter asks, “Why not allow New York conductors to give them (the audiences) more music of this type, music which is monumental, which has something to say, and which is just as enjoyable as the usual routine of Beethoven's nine, and Brahms' four, symphonies?”

N.B. The above is significant because it reveals the attitude of the younger generation.

<sup>2</sup>And now the four recent epoch-making performances of Bruckner's *Fifth Symphony* by the N. Y. Philharmonic under Bruno Walter seem to have overcome even the opposition of the “old crowd” mentioned by Mr. Parker.

## A NOTE ON DEMOCRATIZATION

Lately the hue and cry about depression has penetrated into the high places of American musical art, wreaking particularly sad havoc in the realm of opera. When the society of the *Friends of Music* dissolved last season, although the regrettable event was not directly due to unfavorable economic conditions, the sudden revelation that even so fine an institution had owed its life-blood to the almost unaided bounty of a single individual showed as vividly as the handwriting on the wall that the financial foundation upon which so many other of our leading musical organizations rested was far from stable.

The growing uneasiness inspired by last season's ominous crop of deficits was all too soon transformed to open fear when more than one nabob who had in better times proudly played the role of Maecenas suddenly withdrew his indispensable support and two distinguished operatic organizations lapsed into gloomy silence. For a time even the world-famous "Golden Horseshoe" threatened to be veiled in darkness, until a desperate compromise between the artists and the business management of the Metropolitan made it possible to promise music-lovers at least a curtailed season of performances for 1932-1933. Naturally, the whole distressing contingency aroused much indignation and a general longing among the mentors of the opera to vest the burden of financial responsibility in the numerous though modest, but certainly less treacherous private budgets of the general public. Last fall, upon being pressed for some definite statement concerning the plans of the Metropolitan, Mr. Artur Bodanzky, fresh from his annual European summer vacation, exclaimed:

"You tell me that both the Philadelphia Opera and the Chicago Civic Opera have had their support of a few financial backers withdrawn. This is not like your real America, but it is decidedly like those who use opera for their own social ends.

"I had no intention of discussing the finances of the Metropolitan Opera Company. But you have brought it up, so, perhaps, it is well. I say that it was the artists of the Metropolitan that saved this distinctly great American institution from going to the wall last winter.

"Yes, there is a plan afoot here. It is to take the Metropolitan Opera out of the hands of the wealthy few and put it in the hands of the appreciative public."

Whether the Metropolitan, hampered as it is by dependence upon a traditionally exclusive patronage, will be able to realize this rather Utopian dream, remains to be seen. Perhaps nothing but a fresh, vigorous and courageous beginning can bring about the desired millennium. At last such a start has been made though not in the snobbish, opulent East. Even at this moment of national woe municipal control of music has entered our country at the Golden Gate. To San Francisco goes the honor of having taken the step which may prove to be the most far-reaching in American musical history. In order to raise the six million dollars required for the creation and maintenance of the magnificent architectural and artistic venture the city floated an issue of four millions in bonds and has, in addition, pledged itself to an annual outlay of \$65,000 towards the maintenance of the institution. *Tosca*, a fine inaugural performance, was broadcast on a nationwide hook-up, October 15, 1932.

## BRUCKNER'S NEGLECTED FIRST

Unless the immutable annals of art lie it will be the mournful lot of the ghosts of the day's musical Caesars to behold the scenes of their too facile earthly glories through ever-thickening clouds of obscurity. As that great wit among critics, Mr. Ernest Newman, has remarked, good and bad composers differ in one respect, that it takes the former a long while to be discovered and the latter a long while to be found out. Of the latter, then, the less said contemporaneously the better, for that species literally bestrides the shores of the Seven Seas (though it be for only a short season) like a Colossus, proudly effulgent in the smugness thrust upon it by a race congenitally incapable of identifying the rare portion of true gold that is to be its own contribution to the treasury of human culture.

It is far more comforting and profitable to consider the good though it can be perceived but afterwards. There lived once a man named Bach, whose *St. Matthew Passion*, after an initial modest performance under the composer's own direction, had to wait a century for a second hearing. More recently a certain Cesar Franck, having with superhuman perseverance fashioned one great work after another while his fellow-men seemed not to care, finally arrived unobserved at the threshold of his grave, still smiling wistfully, as though in response to life's grimly whispered jest, "Enter here and become immortal."

Of this patient, mighty company, too, is Anton Bruckner, whom Fate never even permitted to hear that magnificent *Fifth Symphony* of his, the spiritual power of which has at length after a steady critical opposition lasting over half a century succeeded in silencing the last remnant of an army of traditional scoffers in this country. "It is high time," this was in substance the significant confession of Mr. Olin Downes on January 25, during the few minutes of nation-wide radio spokesman-ship allowed him just before the fourth successive performance of the symphony under Mr. Walter, "It is high time for the American critical tribunal, face to face with an artwork of such overwhelming sincerity as this to abandon the unreceptive attitude it has steadily maintained towards Bruckner and own up that he was undoubtedly one of the greatest composers of the post-Wagnerian era."

The man who upon a first hearing unhesitatingly subscribed to the grandeur of Mahler's *Symphony of a Thousand* and has repeatedly regretted that conductors have chosen to do Bruckner's *Seventh* in preference to his stupendous *Eighth* would have at once selected as his favorites, had he lived in Beethoven's time, the *Third*, the *Fifth*, and the last of that master's immortal nine. Yet Mr. Downes must have been misinformed concerning the place generally granted Bruckner's *Fifth* among the composer's symphonies, for it is classed by European experts not with or beneath his *Seventh* but side-by-side with those other two masterpieces of subjective symphonic expression, his *Eighth* and *Ninth*. The critic of the *New York Times* may well feel gratified, for he has reserved his praise for nothing less than the best.

There remains now but one Bruckner symphony which America has never heard and this is a work which, from the point-of-view of depth, is a worthy forerunner of the composer's three greatest symphonies. Already seventy years have elapsed since its completion.\* Now that the critical frown upon Bruckner has lifted and that at a moment when the symphonic repertoire thirsts perhaps more than ever before for additional serious works of real significance, may we not reasonably ask how much longer we must wait before being given an opportunity to hear this important composition?

—G. E.

---

\*The First Symphony, for which many experts claim the proud status of "the most remarkable of all first symphonies."

---

### FREDERICK A. STOCK AWARDED BRUCKNER MEDAL

After the performance of the *Third Symphony*, Dr. Martin G. Dumler, Honorary Chairman of the Bruckner Society, presented a medal to Dr. Stock in appreciation of the conductor's championship of Bruckner's music. Dr. Dumler expressed the hope that Bruckner's music will be presented more frequently in Chicago.

---

### AN RCA VICTOR COMPANY MESSAGE

"We are determined to give to our public the best of modern music as well as standard works and it is very encouraging to know that we have the sympathy and interest of such people as yourself and your Society to whom we must, of course, look for support in this policy.

"We are indeed considering Bruckner and Mahler and if the opportunity offers we expect to do some recording of their works this winter.

Yours very truly,

CHARLES O'CONNELL,

*Record and Recording Div.*

---

### SOME IMPORTANT RECORDINGS

#### BRUCKNER

- Seventh Symphony; Berlin Philharmonic, Jascha Horenstein, Conductor; Polydor.
- Te Deum; Bruckner Choir; Parlophone.
- Scherzo, Third Symphony; Wiener Sinfonie Orchester, Anton Konrath, Conductor; H.M.V.
- Scherzo, Fourth Symphony; Wiener Philharmoniker, Clemens Krauss, Conductor; H.M.V.

#### MAHLER

- Kindertotenlieder; Heinrich Rehkemper; Polydor.
  - Ich bin der Welt abhanden gekommen—Urlicht  
Mme. Charles Cahier with the Berlin State Opera Orchestra, Selmar Meyrowitz, Conductor; Ultraphone.
  - Der Tambourgesell—Rheinlegendchen  
Heinrich Schlusnus with the Berlin State Opera Orchestra; Herman Weigert, Conductor; Polydor.
  - Adagietto, Fifth Symphony; Concertgebouw Orchestra, Willem Mengelberg, Conductor; Columbia.
- 

All records listed here can be obtained at the Gramophone Shop, 18 East 48th St., New York.

## TOSCANINI AND BRUCKNER

I doubt very much whether any other conductor devotes as much reflection, as much meditation, and as much intensity of feeling to the study of a work as does Toscanini. I am sure that none is as indefatigable in the search for spiritual as well as material perfection. He not only assimilates in his phenomenal memory the whole complicated musical structure, elaborated by the composer with so much care; he analyses the work and sifts it through his clarifying imagination with an insatiable interest for details and an unflagging progress towards an ideal. Toscanini's method of study is simple enough. He reads the score away from the piano, often, at night, in bed. Then, again, he spends hours at the keyboard, playing the music from orchestral score, and with consummate ease. While he is very short-sighted, he has no difficulty whatever in reading the smallest script once he has put on his pince-nez. He doesn't even bend forward conspicuously in order to bring his eyes close to the page. That he should find it irksome, at times, to read at sight some of the high-towering modern scores, is hardly surprising. In that respect he is surely no exception. I have heard other musicians complain that one ought to have some perpendicular mode of locomotion for travelling up and down such musical sky-scrappers. For how can you, when your eyes, say, are on the level with the lowest staff, see simultaneously the notes on the highest staff, about two feet above your head? During these periods of study Toscanini is completely wrapped up in the particular music under scrutiny. There is a very noticeable difference, however, in his manner of approaching works that do not appeal to his taste and works that kindle his interest. In the former case, as I have often heard the maestro tell, he postpones his study until the eleventh hour. In the latter case he is eager to begin immediately, and once he has started he can hardly tear himself away from the work.

It is inspiring to witness Toscanini's enthusiasm, his almost pathetic consecration to the interests of the composer. Repeatedly, during his preparation both of the Seventh and the Romantic Symphony, I had the privilege of hearing him play from the score. And I never saw him dedicate his well-nigh clair-voyant interpretative powers to any music with more ardor. Tirelessly he sought for ways and means—perhaps through slight modifications of tempo or dynamics, perhaps through stress of emphasis or accent—that might make the composer's message more clear, more trenchant, more effective. And how his face would light up when he had discovered a way of achieving the desired result.

Toscanini may introduce a slight revision in the score, adopting under certain conditions a most conservatively considered cut or amending slightly the instrumental web. This he does rarely, however, and only when he has convinced himself beyond all hesitation that he is realizing thereby more nearly the composer's intentions.

I seem to have wandered far afield from the Fourth Symphony of Bruckner. That he liked the work greatly he left no doubt while playing this or that page for me from the Partitur with an enthusiasm evidenced in every fibre of his body. While I was fully aware that he had taken a liking for Bruckner since he decided to perform with his great American Orchestra the Seventh Symphony I was surprised to find him more en-

amored, apparently, of the Romantic than of the later work. He as much as admitted, at any rate, that he found fewer weak spots in the orchestration. Personally I hope that Toscanini's enthusiasm for Bruckner will increase with every one of his works he makes his own. It is interesting to note that he not only was conducting the Fourth Symphony for the first time in his life when he produced it here, but that he had never before heard the work played by any one else.

—MAX SMITH\*

\*This is a special communication addressed to *Chord and Discord* by the well-known critic, Mr. Max Smith, after the recent performances of Bruckner's Romantic Symphony by the New York Philharmonic under the famous Italian conductor. Mr. Smith is a close friend of Toscanini and his representative in America. It was Mr. Smith who, at the request of Mr. Clarence H. Mackay, persuaded Toscanini to become conductor of the Philharmonic Symphony Society of New York.

## The Wagner Memorial Parsifal

Amfortas.....	Friedrich Schorr	1st Esquire.....	Helen Gleason
Titulel.....	Siegfried Tappolet	2d Esquire.....	Philine Falco
Gurnemanz.....	Ludwig Hofmann	3d Esquire.....	Marek Windheim
Parsifal.....	Lauritz Melchior	4th Esquire.....	Max Altglass
Klingsor.....	Gustav Schuetzendorf	Solo Flower Maidens: Nina Morgana, Philine Falco, Dorothea Flexner, Editha Fleischer, Phradie Wells, Henrietta Wake- field.	
Kundry.....	Frida Leider	Conductor, Artur Bodanzky.	
A Voice.....	Rose Bampton		
1st Knight of the Grail...Angelo Bada			
2nd Knight of the Grail..Louis D'Angelo			

The performance given by the Metropolitan Opera Association under the auspices of the Southern Women's Educational Alliance proved to be a memorable occasion, a wholly appropriate tribute to the Bayreuth Master, who died fifty years ago (Feb. 13, 1883.)

There was no applause except at the end of the second act when the curtains parted and a bust of Wagner was revealed on the stage. The audience, said to have been the largest of the season, rose, thus showing its respect for one of the most remarkable figures in the history of music and its allied arts.

The restoration of all cuts revealed more than ever before the grandeur, the nobility of the *Buehnenweihfestspiel*, and proved conclusively the desirability of presenting this work in its entirety on all occasions. Leider proved to be a magnificent Kundry. Schorr gave a moving interpretation of the suffering king, Amfortas. The Gurnemanz of Hofmann had great dignity and simplicity. Melchior's Parsifal is well known for its poignancy in the first two acts and for its nobility in the last. Schuetzendorf emphasized the villainy of Klingsor.

All the principal as well as the minor roles were well sung and acted. A word of praise is to be said for the stage director, Hanns Niedecken-Gebhard, and for Mr. Bodanzky whose slow and deliberate tempi so immeasurably enhanced the majestic and noble qualities of the unique score.

—R. G. G.

## SYMPHONIC CHRONICLE

### *A Record of Critical and Popular Reaction*

---

#### ANTON BRUCKNER—4th {ROMANTIC} SYMPHONY

*New York Philharmonic Symphony Society, Arturo Toscanini, Conductor; New York, Nov. 24th and 25th, 1932.*

Although Mr. Toscanini excels in attaining an orchestral power of utterance in the cosmic sweep of Beethoven's symphonies and in Wagner's majestic scores of heroic legend, the harmonic fullness and glowing, shimmering volume of sound which came from his splendid band last night had a character which identified this composer most eloquently as a man of original ideas and individual ways.

—H. BECKETT, *New York Evening Post*.

The composer himself called it *Romantic Symphony* and by that name laid bare its real character in one broad stroke. The "romance" is that of the German woods, with the deep spell of which the tone-poet merges himself, and the intimate moods of which he, as a true poet, reveals in wondrous music.

Beneath the delicately discriminating hand of the conductor there arose that succession of exalted moods in the opening section, the poet's worship of the woods, his delight in the green beauty of nature, his awe before the boundless wizardry of creation!

A mournful, lofty strain begins the second movement. Here hope and sadness sound alternately, until the voices of the violas are raised in a heartfelt song of consolation. Such strength of faith as lies in this deep *motiv* is to be rarely met with in the themes of any composer since Bach.

—A. HAAG, *New York Staats-Zeitung*.

Bruckner's symphony showed throughout the scrupulous care with which Mr. Toscanini habitually prepares his performances; the numerous beauties of detail in execution which always delight a corner of the listener's mind, no matter how strongly its centre is swept by the emotional stream emanating from the orchestra as a whole. . . . Behind such details, however, shone the rich and changing fire of the performance as a whole, the flaming brasses lifting the finale to its tremendous *crescendi* (the brass section deserves special mention for its handling of Bruckner's great demands); the tenderness and delicacy of the *andante*.

—HUBBARD HUTCHINSON, *New York Times*.

What with two of the season's new singers emerging at the Metropolitan Opera House and Mr. Toscanini conducting Bruckner's fourth symphony at Carnegie Hall, this watcher of the skies was faced last evening with a difficult dilemma, which he conquered by hearing them all. . . . The fourth, or "Romantic" symphony, has been called a "Woodland Symphony," and it was in the woodland spirit that Mr. Toscanini

read it. The Philharmonic-Symphony players executed their director's will with a well nigh miraculous perfection. The result, for one listener, being that throughout this work (which Mr. Toscanini cut scarcely at all) he lived in a forest of enchantment. This performance will stand out as one of the unforgettable events of the present musical year.

—PITTS SANBORN, *New York World-Telegram*.

The Bruckner work was played with fine clearness, the themes and developments woven into a mighty musical pattern. The brasses, an important choir in the composition, spelled perfection, their climaxes a blazing sound, and playing also the difficult and intricate passages of the scherzo movement with unclouded tone and technical precision. Toscanini's contribution was a devoted and illuminative interpretation.

—*Musical Courier* (Dec. 3, 1932)

---

## ANTON BRUCKNER—FIFTH SYMPHONY

*Cincinnati Symphony Orchestra; Eugene Goossens, Conductor; Cincinnati, December 1st and 2nd, 1932.*

Listening to such composers as Bruckner and Mahler one cannot help a feeling of inadequacy of comprehension. It surely is not just to pass lightly over such colossal labors as theirs, to admit ennui or disinterest and ascribe blame offhand to the creators who strove with such earnestness and idealism and spent so many years in stupendous preparation, and this in spite of little encouragement and small material gain. . . .

And, as with the B-flat Symphony last evening, the final emotion is thrillingly uplifting; the final judgment that of imposing grandeur and attainment; the final thought a reverence for a true artist, a great art creator, a perfect workman and an inconceivably capacious intellect.

The performance of the symphony was one of the major achievements in the history of the Cincinnati Symphony Orchestra. Eugene Goossens seemed to have found in the music a reflection of some of his aesthetic sensibilities and predominant intellectuality, for nothing he has given us in the past, and most of it has been fine, has approached in breadth of concept, in perfection of detail, in completeness of comprehension and authority his presentation of this work. . . . Let no one stay away through fear of Bruckner.

—GEORGE A. LEIGHTON, *Cincinnati Enquirer*.

That Cincinnati audiences are appreciative of good music was proved by the reception accorded the symphony, one never before heard here. . . . There is nobility, grandeur in it and rugged beauty. . . . The word which best describes it is found in the excellent program notes, "Gothic."

—LILLIAN TYLER PLOGSTEDT, *The Cincinnati Post*.

It was a red letter day in the annals of musical Cincinnati when on December 1 and 2 the first performance of the noble Bruckner Fifth Symphony was given.

The Symphony Orchestra under its gifted conductor, Eugene Goossens, had worked long and hard, and was more than rewarded by the enthusiasm of the audience. From the first note until the last, the symphony was listened to with reverent, yet breathless attention, and to the great joy of the Bruckner enthusiasts this was manifested at both the evening and the afternoon performances. Needless to say, these audiences are quite different in type, as they usually are in each of our cities that possess a symphony orchestra, and that the Fifth Symphony should produce the identical effect on each audience is certainly an attestation of its greatness.

The opening Adagio produces in the hearer feelings of the utmost solemnity which, succeeded by the powerful octaves and the noble chorale, prepares one for the tragic theme of the Allegro. The gentle pizzicato second theme, the cantabile in the first violins, with the graceful woodwind arpeggios and the succeeding climax, fill one with a musical satisfaction that is added to by the intellectual satisfaction of the marvelous development and the glorious and jubilant close of the whole movement, which leave the musician and layman alike with the feeling of intense joy.

As do all Bruckner's slow movements, the Adagio leaves one speechless with awe. Its beauty is eternal.

The Scherzo is a great surprise in its use of the material of the Adagio, and the ensuing mood in waltz time cheers and amazes one with its consummate mastery of counterpoint. To a trained contrapuntist the last movement is a sheer joy. The colossal ability shown in the science of music is without precedent since the days of J. S. Bach. To the lover of music for music's sake only the tremendous climax is absolutely overwhelming and has few parallels for immensity, intensity, and exaltation of spirit.

As I said before, it was a red letter day in the annals of musical Cincinnati. —SIDNEY C. DURST, *Director College of Music of Cincinnati*.

## ANTON BRUCKNER—THIRD {WAGNER} SYMPHONY ARNOLD SCHOENBERG—LIED DER WALDTAUBE

*Chicago Symphony Orchestra, Frederick A. Stock, Conductor; Jeanette Vreeland, Soloist; January 12th, 13th, 1933.*

The great symphonist, Bruckner, was represented by his most monumental and impressive D Minor. What can a mere reviewer say of such a work? It is so rich in orchestral coloring, so profoundly erudite without the dryness of pedantry, its four movements a succession of inspired invention, that no word or panegyric can do justice to its greatness. Does not Bruckner deserve rank among the immortals?

—HERMAN DEVRIES, *Chicago American*.

Chicago heard only the Song of the Wood-Dove, which, as interpreted by Dr. Stock and as sung by Miss Vreeland, made such a deep impression as to make one wish that this entire composition might be given in its entirety, if not by the Chicago orchestra at Orchestra Hall, at least during the World's Fair.

—RENE DEVRIES, *Musical Courier*.

The Symphony, now fifty-nine years old, came to modern ears as a reaffirmation of the beauty and nobility of the art of tones. It is a majestic page, filled with a superb sonority, but filled also with a gentle sweetness of spirit-worthy, almost, of Schubert. . .

This Symphony is a masterpiece even to the intimate, almost devout, adagio. The first division is one of the most virile expressions in the literature. The scherzo has both fantasy and charm. The finale is a pageant of melody and of orchestral effect. Nor is it possible to expend too many superlatives in praise of the performance.

—GLENN DILLARD GUNN, *Chicago Herald and Examiner*.

The scherzo and the finale came out best. The upshot was to make one believe that if one accepts Schubert's tenth symphony—and I for one do not see how this can be avoided—then Bruckner is on undebatable ground so far as the model for his lengthy reveries is concerned.

—EUGENE STINSON, *Daily News*.

---

## ANTON BRUCKNER—QUINTET

*The Newark Sinfonietta, Armand Balendonck, Conductor, January 14, 1933.*

It was indeed a daring thing to combine such weighty things as Bruckner, Mahler and Brahms on the one program and cultured Newarkers owe a debt of gratitude to him for enabling them to hear this music. . . .

As for the audience—it listened with apparently serious attention for nearly two and one half hours to the weighty program and accorded it generous applause.

In conclusion one may say that the general result was such as to warrant the hope that the affairs of the Newark Symphony Orchestra will so shape themselves as to enable Mr. Balendonck to bring to a practical fruition the plan he has privately expressed to the writer of performing in Newark one of the symphonies of Bruckner.

—JAMES P. DUNN.

This Quintet, composed in the year 1879, is Bruckner's sole contribution to chamber-music and proves him through its perfection, a master of an artform he resorted to but once. Though some of his ideas and his treatment of some parts of the forms involved betray his thoroughly symphonic character, these impressions do not violate the essentially five-voiced nature of the work, for the composer created here keeping in mind the limited carrying-power of a quintet of strings but exploiting to the ultimate all the expressive qualities of the five instruments at his disposal. The work abounds in colorful, highly romantic melodies, and as these shine forth from among the finely woven polyphonic web, often a continuous star-like glitter seems to issue from the shimmer of tone—an effect which Bruckner knew well how to use in contrast with splendid chord effects.

Mr. Balendonck conducted the difficult work with a feeling for plasticity of form and with a verve that revealed him as a thorough Bruckner interpreter.

—A. HAAG, *New York Staats-Zeitung*

## ANTON BRUCKNER—FIFTH SYMPHONY

*Philharmonic Symphony Society of New York, Bruno Walter, Conductor; January 12, 13, 14, 15, 1933. {The last of these performances was broadcast over the Columbia chain}.*

One is grateful to Mr. Walter for reviving the B-flat Symphony of Bruckner. Though all but the first of Bruckner's nine published symphonies have been played in New York, our concert-goers do not hear them as often as they should.

Bruckner—the complete symphonic Bruckner—deserves to be better known. One of the most remarkable composers of the nineteenth century, he has never in this country received his due. . . .

How deep is his feeling, how piercing his vision of supermundane things. How lofty a beauty he could summon to his measures; how blazing a splendor touches the pinnacles of certain towering movements in his scores! Much of his music remains a *compendium maleficarum* for the censorious musical purist. Yet how easy it is to forget that fact when we listen to such things as the Dirge in the Seventh Symphony, the slow movement of the Eighth, the seraphic final Adagio of the Ninth—music of a valedictory tenderness, of a beauty transfigured and serene; music that searches the very heart of loveliness. . . .

There are moments when the curtains part, and we find ourselves confronted by an astonishing world of beauty, vast and inexplicable and mysterious, that fades and reappears and fades again, echoing with a strange murmur of revelation.

—LAWRENCE GILMAN, *New York Herald Tribune*

Such music, however, should not be permitted to lie in prolonged slumber. Certainly it ought to be preserved in these barren times and offered periodically for the consideration of concert audiences. It is worth hundreds of the more cunningly planned and industriously published works of some contemporaneous writers. Mr. Walter deserves commendation for resurrecting the score and for bestowing upon it the sincere and sympathetic study which was evidenced in last evening's excellent performance.

—W. J. HENDERSON, *New York Sun*

The slow movement is as fine as the first is glorious. This might be the windows or the fine painting and carving added to the frame of steel and stone. The Philharmonic strings played to full perfection, acquiring a mellow tone in the andante. The scherzo, too, added to the integrity of the structure. One moment it jumped. The next it danced almost in the tempo of a valse. The rhythm of the tympani announced the return of the jumping scherzo. . . .

It is a shame that the work of so fine a composer must suffer from lack of presentation. . . .

Why doesn't New York's musical audience lose some of that pseudo-sophistication and not only demand the popular works? Why not allow their conductors to give them more music of this type, music which is monumental, which has something to say, and which is just as enjoyable as the usual routine of Beethoven's nine and Brahms' four symphonies.

—A. W. HEPNER, *The Columbia Spectator* (Columbia University)

The suppleness of the strings as they developed the adagio's principal theme, and the contrapuntal clarity of the woodwinds, were characteristic of his thoughtful and sensitive reading; the control that subdued the beginnings of the final crescendo and made possible the blaze of power which ended it, and which brought a burst of applause and "bravos" from a large audience, was masterly. —H. HUTCHINSON, *New York Times*

This symphony is not only the "most contrapuntally brilliant" of Bruckner's nine, but otherwise one of the most impressive. . . .

Wilhelm Gericke introduced it to America at a concert of the Boston Symphony Orchestra in Boston on December 27, 1901. Joseph Stransky led the Philharmonic in the first New York performance on December 14, 1911. He repeated the work six seasons later. . . .

Indisputably this symphony stands in the front rank of Bruckner's compositions. In the second adagio the composer walks with rapt gaze in the region of his superearthy visions. The scherzo is a magnificent affair. The finale, which in spite of the counterpoint should hardly be spoken of as "fugued," is another superb fabric of sound.

Yesterday the auxiliary brasses, joining in the Parsifallian chorale, closed the work in a glorious outburst of golden tone.

The audience in its enthusiasm, not only applauded but cheered—a heartening record for Bruckner in our incredulous city.

—PITTS SANBORN, *New York World-Telegram*, January 16, 1933

Bruckner partisans had every reason to be joyful at last night's concert of the New York Philharmonic-Symphony in Carnegie Hall. Bruno Walter, altogether in the vein, gave the Fifth—or "Tragic"—or "Pizzicato"—Symphony the most stirring and revelatory performance of any Bruckner symphony within the experience of the reviewer. The same conductor had made much the same impression with this work at the last Salzburg festival, where his forces were the Vienna Philharmonic. Last night's performance was even finer in its sonorities, particularly those of the brass. . . .

There are broad, expressive, singing themes in the "Tragic" Symphony that go a reasonable distance toward justification of the Bavarian and Austrian conception of Bruckner as primarily a melodist.

—OSCAR THOMPSON, *New York Evening Post*, January 13, 1933.

But one such theme as the broad unisonous string melody of the Adagio is worth a multitude of the starved and torturous works that have passed for symphonies in Central Europe since Bruckner laid down his pen. —OSCAR THOMPSON, *New York Evening Post*, January 16, 1933.

To Bruno Walter all gratitude for his signal pioneer service in the cause of Anton Bruckner. The applause of the audience was unanimous and spontaneous—not least owing to the splendid playing of the orchestra which responded with faultless quality to the wishes of its German conductor.

Bruckner himself never heard this B-flat Major Symphony. It was first performed while he was still alive (in Graz, in 1894, Franz Schalk conducting). New York heard it for the first time in 1911, under Josef Stransky. Since then it languished in almost total obscurity. According to press reports the work achieved a great success recently in Cincinnati under Eugene Goossens.

This success was confirmed yesterday. I consider the "Choral" or "Faith" Symphony, purely from the point-of-view of a felicitous expression of Bruckner's philosophy of life, the most significant symphonic work of the composer. Despite its length its structure is so irreproachably firm and yet so full of artistic variety, its thematic ideas of such individual power, its orchestral coloring and its spiritual "program" so rich, vital, and soulful, that this B-flat Major Symphony, thus blessed by the noblest genius, is destined for immortality.

It is necessary always to keep in mind the fact that the great tone-technician Bruckner is in all his compositions the "musician of faith." Many like to compare him with Johannes Brahms, but with little foundation. Yet a parallel between the respective views of life of the two composers may perhaps be drawn with some profit. Brahms—the great moulder, completely master of his feelings, the Protestant, who exercises an inexorable self-discipline, whose creations, despite all Viennese influence, are reflections of the severe northern German landscape! On the other hand—Bruckner, a child of sunny upper Austria reared among Baroque surroundings, a strict, deeply devout Catholic, who accepts joy and sorrow as his appropriate lot by the grant of Fate, and kneeling humbly before his God gives his soul up to the rich bounty of spiritual adventures out of which he shapes his resonant "choral" symphonies. How the man Bruckner, neglected, scorned, and condemned by poverty to a life of material want and worry, could have despite all his trials clung fast to hope and faith—that must remain forever a miracle of human fortitude and confidence.

It is to this spiritual phenomenon that the master gives overwhelming expression in the B-flat Major Symphony. The eighth-notes of the bass in the slow introduction to the first movement seem almost to be the beating of his own heart. (They make their appearance again later in the *Scherzo* and in the gigantic *Finale*). Then with gradually unfolding strength and clarity of tonal imagery there emerges as though out of an uncertainty of doubt a mighty theme, the rich content and coloring of which reveal the master of form whose unbounded exultation is the natural expression of a romantic-religious spirit. Then that splendidly swinging melodic line of the *Adagio*, that movement of a deep impressiveness almost without parallel, yet one containing no protest but (in its significant change to D major) humbly accepting every vicissitude. The rhythmic *Scherzo*, the strong pulsation of which attains a more restrained metamorphosis in the *Trio*, is a revelation of pastoral beauty. The titanic *Finale*, in which the composer, using a huge, boulder-like theme sprung from octave-leaps, builds upon a "Battle Fugue" (for so

it has been called) a "Double-Fugue of Victory" radiant with confidence to crown the work with a jubilant song of faith, a chorale of deep devotion—this movement brings to a close one of the mightiest of symphonic creations.

The performance was flawless. Bruno Walter infused into the thrilling orchestral experience such plasticity, rhythmic vitality, and dynamic mastery as could come only from one possessed of the inmost understanding of this great music.

—JOACHIM H. MEYER, N. Y. *Staats-Zeitung*.

N.B. Translated from the German by the Editor, and published with the kind permission of the *New York Staats-Zeitung*. This review appeared in German in the issue of January 13, 1932. The following, a brief excerpt of Mr. Meyer's review of the fourth successive performance of the symphony, appeared in the *Staats-Zeitung* on January 16, 1932.

If a more gripping and convincing performance than that of last Thursday were possible (Cf. above) it was realized yesterday under Mr. Walter's magic wand. Above all there must be mentioned in this connection the broad, melodic flow of the second movement with its deep impressiveness and the *Finale* with its impetuous ascent to the mighty "choral" climax.

Tumultuous applause rewarded the conductor and his splendid orchestra.

—JOACHIM H. MEYER, N. Y. *Staats Zeitung*.

## A PARTIAL LIST OF BRUCKNER—MAHLER—REGER PERFORMANCES IN EUROPE {1932-1933}

### Basel

- Oct. 29 Mahler—3 Songs
- Feb. 11 Mahler IV
- Feb. 25 Bruckner III  
Conductor, Felix Weingartner

### Berlin

- Mar. 20 Mahler IV  
Conductor, Bruno Walter

### Bochum

- Nov. 3 Bruckner IX (original version)
- Feb. 2 Reger—Symphonic Variations for violin and orchestra  
Bruckner VIII  
Conductor, Leopold Reichwein

### Dortmund

- Dec. 12 Bruckner IV
- Oct. 17 Reger—Mozart Variationen
- Nov. 28 Mahler IV

1933

- Apr. 3 The second Westphalian Bruckner Festival will begin on this date. Among other Bruckner works to be announced, the original version of the Ninth, a Mass and the Te Deum will be performed during the Festival.

### Duisburg-Hamborn

- Nov. 14 Mahler Songs and Symphony II  
Conductor, Paul Scheinpflug
- May 8 Reger—Boecklin—Suite  
Conductor, Hermann Abendroth
- June 12 Mahler—Lieder eines fahrenden Gesellen  
Conductor, Karl Koethke

*Gera*

- Oct. 3 Bruckner IV  
 Nov. 18 Reger—Boecklin Suite  
 Conductor, Heinrich Laber

*Hagen*

- Dec. 1 Bruckner V  
 Conductor, Weisbach

*Hannover*

- Jan. 9 Bruckner VIII  
 Conductor, Rudolf Krasselt

*Kiel*

- Nov. 14 Reger—Hymnus der Liebe; Beethoven Variationen  
 Feb. 20 Bruckner III  
 Conductor, Fritz Stein

*Karlsruhe*

- Nov. 9 Mahler—Lied von der Erde  
 Nov. 30 Bruckner VII  
 Apr. 26 Bruckner VIII  
 Conductor, Josef Krips

*Köln*

- Oct. 24-25 Bruckner VII  
 Mar. 7 Mahler VIII  
 Apr. 3 Bruckner VI  
 Conductor, Hermann Abendroth

*Krefeld*

- Jan. 14 Bruckner VII  
 Conductor, Dr. Walther Meyer-Giesow

*Leipzig*

- Dec. 1 Bruckner IX (original version)  
 Mahler—Lieder eines fahrenden Gesellen  
 15 Mahler I  
 Conductor, Bruno Walter

*Salzburg*

The international Bruckner Festival is scheduled for the week of August 8th—August 15. Two orchestral concerts conducted by Siegmund v. Hausegger will include the *First Symphony* (Linz version) and the *Third Symphony* to commemorate the fiftieth anniversary of Wagner's death. Otto Klemperer is expected to conduct the *Eighth Symphony*. The Quintet will be performed and Bruckner's *Masses* and *Requiem* will be sung. *Jedermann* and *Figaro* are included in the Salzburg program.

*Stockholm*

- Oct. 26 Bach-Mahler Suite  
 Bruckner I  
 Conductor, Vaclav Talich  
 Jan. 11 Bruckner IX (original version)  
 Conductor, Hans Weisbach  
 Feb. 22 Bruckner VII  
 Conductor, Eugen Jochum  
 Apr. 5 Bruckner III  
 Conductor, Vaclav Talich

*Stuttgart*

- Jan. 16 Bruckner IV  
 Conductor, Carl Leonhardt  
 30 Bruckner VII  
 Conductor, Eugen Jochum  
 Mar. 13 Reger—Symphonischer Prolog  
 Conductor, Fritz Busch

*Weinheim near Frankfurt*

The third Bruckner Festival of Baden will be held in Weinheim from May 3 to May 5.

*Wiesbaden*

- Nov. 11 Bruckner IX (original version)  
 Mar. 24 Bruckner VIII and Te Deum  
 Conductor, Carl Schuricht

## AN EMINENT BRUCKNERITE

There arrived recently in America Mr. F. C. Adler, a noted German conductor, whose favorite field of interpretive activity for a quarter of a century has been the music of Bruckner. During the years immediately following the revolution in Germany Mr. Adler conducted with tremendous success several Bruckner symphonic cycles in Munich, thus helping immeasurably to pave the way for the great Bruckner enthusiasm which eventually resulted in the choice of that city as the scene of the First International Bruckner Festival. It was no mean accomplishment that popularized a "Bruckner Abend" concert program, a whole evening devoted to Bruckner, just as tradition has stamped with approval the Wagner or the Beethoven "Abend." It would be hard to imagine a richer and fuller musical experience than the following offering:

### BRUCKNER ABEND

*150th Psalm*

*IX Symphony*

*Te Deum*

and such programs are typical among the long array of concerts offered the German music-lovers by Mr. Adler. The progressive idealism that revealed itself in such devotion to Bruckner could not resist the appeal of Mahler and Schoenberg, two more recent giants of deathless romanticism. Among Mr. Adler's proud achievements in the cause of serious music are to be found Mahler's dreaded *Sixth Symphony* (The Tragic) which no conductor has as yet dared to produce in America and that titanic cantata, Schoenberg's *Gurrelieder*, only recently given its New World premiere by the enterprising Mr. Stokowski.

During the past few years Mr. Adler has occupied a prominent position in the German music-publishing world. In this capacity he has been particularly kind to unknown and little known composers, among them also some Americans. The opera *Caponsacchi*, by the American composer Richard Hageman, one of the few Americans whose work has ever been presented on the German operatic stage, is one of Mr. Adler's publications.

It is to be hoped that some outstanding American symphonic organization will offer Mr. Adler an opportunity as guest-conductor to interpret some of the lesser known symphonies of Bruckner and Mahler for us and to renew with us the rich musical laurels he won through a long and active career as musical director in Germany.

—G. E.

---

## MAHLER IN ESTHONIA

The brilliant young Bruckner and Mahler interpreter, Fritz Mahler, continues steadily to add to his laurels as a conductor of high ideals and great enterprise. His triumphant path as guest-conductor in many European cities brought him to Esthonia on January 20, when he performed Mahler's *Fourth* at Reval. Although it was the first Mahler music ever played in Esthonia, the audience expressed its enjoyment in unmistakable terms, applauding the fine work of the young guest-conductor with much enthusiasm.

## THE SYMPHONIES OF ANTON BRUCKNER

In the near future the Bruckner Society will issue the first book in English on Bruckner's symphonies. The work comes from the pen of Gabriel Engel, the author of "The Life of Anton Bruckner" and "Gustav Mahler, Song-Symphonist," both of which treatises have met with flattering attention from critics and music-lovers. The new book will be adorned with a series of six full-page illustrations of famous conductors of Bruckner premieres by the greatest of Austrian silhouette artists, Hans Schliessmann, an immortal specimen of whose genius is the "Bruckner at the Organ" printed on the cover of *Chord and Discord*.

The following excerpt from the author's preface reveals the general nature of the work:

Thanks to the devotion and perseverance of such great conductors as Koussevitzky, Stock, Toscanini, and Walter there is no longer a critic of standing in our country who through the revelation of some of Bruckner's music has not become aware of the towering genius of that long-neglected Austrian symphonist. Never has the American music-lover known a greater need for information concerning the work and character of a great composer, yet the whole Bruckner literature in English is contained in a single, slender brochure on his life. Among the rather formidable array of recent books about Bruckner in German there are two, large sections of which are devoted to masterly analyses of his music. The first, by Ernst Kurth, abounds in fascinating psychological remarks often throwing more light on the mental processes of the author than of the composer. The second, by Alfred Orel, reveals too noticeably for the average music-lover the huge store of technical knowledge its author employs for the illumination of Bruckner's symphonic achievement. Two decades ago August Halm wrote his epoch-making analysis of Bruckner's symphonies, paving the way for all subsequent books on the subject. But much new material has been unearthed since then, all of which is presented in documentary form in that definitive source-work on Bruckner in seven volumes by August Goellerich—Max Auer.

No mere translation of any of the above-mentioned books can answer our immediate need, though no language without a translation of the monumental Auer biography of the master will ever be able to boast an adequate Bruckner literature. Powerful music the individual character of which refuses persistently to unfold when conducted in the accepted classical manner so necessary to Beethoven, or the romantic, temperamental manner required by Wagner, must be illuminated from a fresh point-of-view. Therefore, only a straightforward, objective exposition of the facts involved in Bruckner's symphonic contribution and in that of no other composer can claim general attention in America to-day. A concise presentation of such facts is the aim of this present treatise.

October 1933

## THE KILENYI BRUCKNER MEDAL

(REPRODUCED ON THE FRONT COVER)

RECENTLY, a distinguished member of the Bruckner Society, the American sculptor, Mr. Julio Kilenyi of New York, wishing to give formal expression to his great love for the master's music, designed an exclusive Medal of Honor displaying his own conception of Bruckner's features. A photograph of this design was immediately sent to Austria where leading members of the I.B.G. (International Bruckner Society) hailed it as the most impressive portrait of the master that has as yet appeared. So delighted was Prof. Max Auer with it that he at once requested permission to include it among the illustrations in the fourth volume of the monumental Goellerich-Auer biography of Bruckner then in the press.

The hearty European welcome accorded this initial American contribution to the iconography of the great symphonist should be a source of deep gratification not only to our native Bruckner enthusiasts but also to all American lovers of the plastic arts. Mr. Kilenyi's triumphant solution of a difficult problem in this by-path of music follows a long line of sculptural successes in more wordly, more glamorous walks. Among his many creations are the designs for exclusive medals officially awarded to Colonel Lindbergh, Admiral Byrd, Thomas A. Edison, General Pershing, President Coolidge, and many other outstanding figures in the cultural, industrial, and political life of this country. Perhaps the most distinguished among his recent designs is the William Penn Anniversary Medal, replicas of which were presented to their Majesties, King George and Queen Mary of England, and Queen Wilhelmina of Holland.

This year (1933-1934) for the first time, the Bruckner Society will be able to present its own Medal of Honor, the one designed by Mr. Kilenyi for that exclusive purpose. It will be awarded during the current musical season to Arturo Toscanini and Bruno Walter of the New York Philharmonic, Dr. Serge Koussevitzky of the Boston Symphony, Dr. Frederick Stock of the Chicago Symphony, and Dr. Martin G. Dumler of Cincinnati, Honorary Chairman of the Society.

When asked for the source of his Bruckner inspiration, Mr. Kilenyi made the following interesting reply:

"Listening to Bruckner's music has always seemed to me like reading Dante's poetry. There is in the work of these two great geniuses the same grand spirit. It is this conception that I sought to portray on the Society's new, exclusive Medal of Honor. It only requires a single glance to discover the Danteque expression of my Bruckner."

## SYMPHONIC FORECASTS

"It is easy to prophesy: compare the present with the past—and you have the future"—Busoni

In the heyday of tonal romanticism, when most music-lovers still considered the *Eroica* and the *Ninth* the most incoherent of Beethoven's symphonies, there came by recommendation to the home of the world-famous Robert Schumann a modest, blond-haired youth of twenty, who shyly asked the master's permission to play for him some original compositions. The great man stared wonderingly at this queer, provincial-looking apparition (for Johannes Brahms was still a total stranger to the world) but good-naturedly agreed to listen. Barely had the unknown begun to play when the consummate artistry of his performance at the piano was evident; but brilliancy of execution was no surprising attainment in that house. Only the music mattered, yet what music that was! Irresistibly drawn to the fresh voice of this new-born melodic beauty Schumann bade the youth play on and on. Finally, he embraced him in an ecstasy of enthusiasm and sat down to write his astonishing article *Neue Bahnen*,\* announcing to the world that the real Messiah of music had at last arrived.

Exactly eighty years have gone by since then and for the vast majority of music-lovers Schumann's prophecy seems to have been richly fulfilled by the numerous beautiful works Brahms afterwards composed. Whether the actual significance of his symphonic contribution has been exaggerated (as is claimed by a small though steadily increasing group of discerning European judges) is of no consequence to the present discussion, for in America Brahms is still unconditionally regarded as Beethoven's legitimate successor. To a few the undeniable discrepancy between the revolutionary spirit of the greatest Beethoven symphonies and the comparative conservatism of Brahms' four seems to furnish sufficient proof of the ultimate untenability of such a classification. But two and two may not always make four in extra-mathematical fields, where subtle coefficients beyond the ken of man dominate inexplicable results; wherefore art has ever been a futile ground for logical polemics. Granted that Brahms was, so far as methods go, even ultra-conservative, is it not a fact that the mighty Bach was slighted by his contemporaries because of his refusal to join in the new homophonic movement that

---

\**Neue Zeitschrift fuer Musik*, Oct. 1853.

later produced a Haydn, a Mozart, and culminated in the work of Beethoven? The banner of revolution was often unfurled in the range of musical history, but when the smoke of ensuing conflict cleared away the only surviving signs of the upheaval were to be seen resolutely fixed in the art's main line of progress. Revolution in music has been of importance only in so far as it has affected the evolution of the art. The nature of this evolution is no more one of pure chronology than it is of mathematics, else the beauties of Shakespeare's poetry had been surpassed by the lesser lines of a hundred thousand poets since.

Schumann did not live to hear the Brahms symphonies the coming of which he had anticipated from the youth's early piano sonatas. Had he survived to reaffirm or retract his prophecy his later statement would perhaps have proven a revelation to the world. But as it is we may only guess at the probable nature of an opinion the formulation of which Fate forbade. We have Schumann's own symphonies and we know from his diary how frenzied was his constant search for the new, beautiful melody which he believed alone represented the basis of any real musical contribution. How much he loved the *Eroica* and the *Ninth* we learn from his frequent tributes to these masterpieces. In the light of his own symphonic style, however, it cannot be granted that he fully comprehended the spiritual greatness of Beethoven's most gigantic inspirations. Thematic originality and beauty were never Beethoven's primary musical worries. For him originality was made of different stuff. Schumann, whose themes are of superlative and instantly convincing beauty, nevertheless does not rank with the great symphonists; yet Beethoven, whose *Eroica* towers up out of comparatively commonplace thematic material, is not for that reason a second-rate symphonic figure. What, then, is that elusive quality, the true symphonic character?

Just as cathedrals and skyscrapers must be built of sterner stuff than mansions and villas, so those super-structures of the tonal world, symphonies, may attain their proper stature and enduring form only when reared upon thematic foundations of most utter simplicity and rugged strength. It is in the magnificence and firmness of this tonal architecture that the imaginative and spiritual powers of the symphonic composer are revealed. His failure to grasp this deeper, though less colorful truth inseparably connected with the greater symphonic conception was the defect that dwarfed Schumann's musical genius, making the loftiest and most sustained flights in the art impossible for him. He sought and found beauty, as it were, by illusive moonlight, but never saw it in the glory of its noon-day power.

For a clear statement of the source and nature of true originality in creative work it is perhaps permissible to leave for a moment the tortured field of musical esthetics. The eminent literary critic, Van Wyck Brooks, has pronounced a definition that may well be applied to any branch of creative endeavor:

"True originality is not so much freshness of talent as a capacity to survive and surmount experience, after having met and accumulated it, which implies a slow growth and powerfully moulded intention."

Certainly "slow growth" and "powerfully moulded intention" cannot be denied an artist who, like Brahms, waited until the riper years of middle age before venturing to give to the world his first large symphonic work. If the future ever finds a flaw in the caliber of that work its revised judgment will rest upon the validity of an apparent paradox latent in the sentence with which Mr. Brooks prefixes his definition:

"The writers who succeed ultimately in differentiating themselves most from the mass, in attaining a point-of-view all their own, are those who have served the longest apprenticeship; their early works are usually timid, tentative, imitative, and scarcely to be distinguished from others of the same school and tradition."

Bach's earlier works are clever echoes of the accomplishments of a former century. The younger Mozart appeared so devoid of originality that the eminent contemporary critic, Dr. Burney, unhesitatingly included in his book of musical travels the following striking verdict:

"He is one further instance of early fruits being more extraordinary than excellent."\*

The Mozartian and Haydnesque character of Beethoven's pre-Eroica work is common knowledge. Wagner's outstanding achievements also have their long prelude of apprenticeship. Even the once breath-taking originality of Strauss' symphonic poems has its cautious forebears in traditionally formed longer works. In the light of these facts one may be pardoned for wondering what Schumann, who thought he heard the symphony of his dreams in young Brahms' piano sonatas, may have said had he lived to see the day that not only hailed the real symphonies of his protege but practically shelved his own.

In one of the most significant declarations among the speeches that marked the numerous recent Brahms centennial celebrations Dr. Wilhelm Furtwaengler unwisely emphasized Brahms' genius in polemic terms that not only failed to do justice to the master's true greatness but attempted to reflect discredit upon all the progressive composers since Beethoven on the ground that they had intentionally resorted to unprecedented forms and means of expression.

"Brahms," said he, "was the last musician who brought before the world the universal significance of German music."

Could Dr. Furtwaengler have witnessed the enthusiasm with which Bruno Walter's repeated performances of Bruckner's *Fifth* and Mahler's *Fifth* symphonies, to say nothing of Stokowski's performances of Schoenberg's *Gurrelieder* and Berg's *Wozzeck* were greeted in America last year he might not have wielded his "iron broom" so sweepingly.

"Brahms," he continued, "saw clearly that eternal progress as the aim of music (as of all art) is an illusion.—He showed that so far as he was concerned there were other things to do than to seek the boundless expansion of the materials of the art.—With a classically schooled reserve he used in his orchestration no valved instruments, none of the Wagnerian innovations."

A noble sentiment, indeed, but as this has also been a season of Wagner celebrations, not only do the great music-dramatist's "innovations" deserve some respect, but so, too, does his honest appeal in behalf of "eternal progress" to the younger generation of composers, "Create something new, children, always something new." It is possible that Dr. Furtwaengler's speech is a posthumous echo of that troubled past to which the arch-guardian of artistic purity, Dr. Hanslick, bade a regretful adieu forever thirty years ago, when with trembling, senile fingers he wrote, "I must now admit that the future belongs to the younger generation." But Dr. Furtwaengler's word, a muted trumpet-call out of the 'Eighties, still carries weight with many and may even attain the status of a slogan in the artistic "house-cleaning" that is part of the weird political program of the "Third Reich."

\**The Present State of Music in Germany, etc.*, vol. II, page 325.

Only a single assertion of his, an axiom of art, almost a childish platitude, is beyond argument:

"The true art is present only when music and soul, soul and music are one and inseparable."

And that is the point at which Bruno Walter began his summary of the nature and function of the art in the article entitled "Back to Romanticism!" (published in the previous issue of *Chord and Discord*). Mr. Walter wisely refrained from entering upon problems of musical technique. Spiritual solitude, according to him, is the touchstone of true musical art. Thus for him, too, Brahms is unquestionably one of the elect; but not the last. Life and romanticism are inseparable, for the last human being will be the last romanticist.

"Gustav Mahler, whose *Song of the Earth* stirs the hearts of the people more every day, was one of the world's great lonely souls.—Igor Stravinsky, dubbed a foe of romanticism, who considers himself anything but a romanticist, nevertheless reveals romantic traits in many of his works. I need only mention his *Sacré du Printemps*, that ecstatic hymn to the primal power of nature."

Even the once dreaded Schoenberg, of whose art the most famous German music-lexicon\* says, "Thank God, it is still generally unknown," is not forbidden a place in the sun by Mr. Walter's standard of judgment. The great war against "atonality" has proven to be no more than a tilt with a wind-mill. Schoenberg has openly scorned the word "atonal" as a false label. "The only true description," says he, "of my style of writing music is *composition with twelve totally independent tones.*" His early experiences with great forms (*Gurrelieder, Pelleas*) had convinced him that he could say nothing more in music without throwing off the age-old shackles forced upon musical grammar by the inevitably recurring cadences of dominant and tonic harmony.

It was a brave step he took, requiring a martyr's courage; but the most astute creative musicians did not delay taking the amazing road he indicated towards a new freedom. Just as in the case of the Wagnerian *motif* two generations before, many would-be composers plunged into an orgy of futile works in the "new style," thereby bringing upon the innocent head of the innovator a tremendous storm of abuse. Asked for a statement concerning the "school" that had sprung up about him, he said:

"A composer is under no obligation to write either in the *tonal* or the so-called *atonal* manner. His duty is merely to write or not to write music. He must not question the manner, but only compose according to his own ability. He who has something real to say will do so, regardless of any question of tonality or atonality. Those who have nothing to say, but make a practice of exploiting every possibility of the musical language, may go on erecting their score-towers of noise. They may even succeed for a time in discrediting us (the "school"), for they know just how to win the numerous ears that are constantly attuned to the reception of the sham and the repudiation of the genuine. We must address ourselves to the same ears primarily for reasons of acoustics, because an empty concert hall is less resonant than one filled with empty-headed listeners." †

\*Riemann's Musik-Lexikon.

† The last clause contains an untranslatable play on words. The original German is "Weil ein wirklich leerer Konzertsaal noch weniger klingt als einer, der voller Leerer ist." The stark reality of the bitter conditions that underlie this pun is only too vividly revealed by the message of Mr. Willi Reich of Vienna, introducing the "Arbeitstagung" at Strassburg (August 6-17, 1933) a series of concerts programming music from Mahler to the youngest of the younger generation. Many important premieres took place during these concerts, attended only by composers, conductors, performers and critics. The program announced that the festival was to be a musical contribution by musicians for musicians.

Such bitterness is easily excusable in a genius. Mr. Schoenberg may rest assured that at least so far as America is concerned the outlook for the future of his artwork is no longer as hopeless as it was. He has an able and dauntless champion in Mr. Stokowski, who loves nothing better than to perform the most subtle and difficult scores provided he is convinced of their importance. It was he who first gave us Mahler's *Symphony of a Thousand*, Schoenberg's *Gurrelieder*, and that prominent Schoenberg disciple's (Alban Berg) epoch-making music-drama *Wozzeck*.

It is of particular interest in connection with the confused journalistic reception accorded *Wozzeck* to contemplate the riddle of the music critic's congenital inability to identify an accepted principle in a new guise. Naturally, the first accusation Mr. Berg had to face was that of "ragged, formless musical construction". With commendable patience he pointed out the fact that with a faithfulness perhaps without precedent since Mozart the musical settings of the many scenes in his opera are built upon frameworks of traditional form. For instance (Act II, Scene I) what seems to the critic an incoherent rhapsody is in reality a set of variations built in free style on a sequence of three chords, the whole scene being virtually given the unity of an independent composition by the logical interpolation of the stanzas and refrains of a hunting-song to furnish the folklike character demanded by the text. The allegedly aimless patchwork in the following scene ("characteristic of the method of the atonalists") is nothing other than a fantasy and fugue (triple) in which the themes are introduced in regular order, but make their original appearance in harmonic settings, gradually casting off this guise to take their purely contrapuntal roles in the real fugue that follows; and so on, Mr. Berg showing that the "formal weakness" of the work is clearly a misnomer due to snap judgment or inability on the critic's part to recognize *sonata*, or *scherzo*, or *rondo* form save in its archaic, elementary condition. Of course, if Dr. Furtwaengler's scorn of "eternal progress" in art is justified *Wozzeck*, which seems to-day to bristle with innovations, should be done away with as though it were a poisonous snake. But the artist who was able to sever himself so completely from the humdrum of the every-day world as to discover the inmost soul of rhythm and build stirring tonal structures on solid principles while placing complete emphasis on purely rhythmic thematic material (to cite just one example, Act 3, Scene 3) may still meet with a welcome on musical Olympus as conceived by Mr. Walter.

There is, however, a group of younger composers (those who find themselves voluntarily or involuntarily, arrayed under the banner of *Sachlichkeit*)\* which meets with Mr. Walter's distinct disapproval. They seem to him fundamentally at variance with art in its highest sense. But perhaps the inexorable quest of reality which is inevitably characteristic of their work is essentially the machine-age expression of the very quality of romanticism which Mr. Walter fails to see in it. It is too early to pass judgment on the artistic contribution of the last and the present decade.

Paul Hindemith, born in 1895, and Ernst Krenek and Kurt Weill, both born in 1900, seem to be the leading figures of the younger generation. Young as they are they have all (and years ago) made their mark, producing numerous works that have been crowned with artistic and popular

---

\*Practically untranslatable; "exactness" gives only a partial conception of the principle involved. See "Back to Romanticism" in *Chord and Discord*, No. 3.

success. They are engaged upon a very frenzy of composition, primarily for the musical stage. Such fidelity to external form as Mr. Berg claims for *Wozzeck* is not one of their primary considerations. It seems to them that musical art has wandered too far from the main road of life, thereby losing its spontaneity.

Kurt Weill, whose two-act opera, *Der Jasager*, was recently performed here for the first time,\* goes back over Wagner to Mozart for his guiding principle. In that classic master's orchestral works he finds that varied, pulsating life which he claims but few composers since Mozart have been able to incorporate in their work for the musical stage.\*\* He says that it is not the plastic form but the vital temperament of Mozart's symphonies which furnished us with the proper cue for regenerating the music-drama; that one might take the opening or closing movement of a Mozart symphony and make it the accompanying background of a real music-drama.

The gifted, versatile, clear-sighted Ernst Krenek gives fascinating, though startling, utterance to an artistic creed which at first sight appears to be the very negation of art:

"There is no such thing as *modern* music; there can be only good or bad music.—Art is not nearly so important a consideration as the world has been persuaded to believe. The composer who places art at the pinnacle of his creed will, in my humble opinion, accomplish nothing. *Vivere necesse est, artem facere non*, I say. Let us live and look life squarely in the face and we shall at once have art without knowing how it came.—Art must always issue like a stream out of the exuberance of life; then it will be true and beyond all questioning."

At bottom there is no offence against the soul of art in these words, for they mean nothing but a claim that spontaneity is the prime quality of real music. Who will say no?

Thanks to the enthusiastic partisanship of men like Koussevitzky, Stock, Stokowski, Toscanini, and Walter, the causes of neglected musical giants like Bruckner, Mahler, and Schoenberg have been and will continue to be advanced in America. To such conductors a composer's race, creed, and politics, questions that have of late once more assumed unfortunate prominence in the musical circles of Central Europe, will not be allowed to influence any decision concerning the inclusion of his work on American symphonic programs. The squeamish warning of self-constituted guardians of American artistic purity that there has been no real symphonic music since Brahms falls daily on fewer ears. We have seen the magic musical colors of Debussy and the mystic harmonic architecture of Scriabin; we have experienced the thrill of Stravinsky's melodic dissections; we see the logic of Schoenberg's espousal of "twelve-toned composition", now that we have at last heard his great farewell to the past, the *Gurrelieder*. In all these, Dr. Furtwaengler notwithstanding, we recognize solid contributions towards the twentieth century musical message that still awaits consummate utterance. Many of the younger composers, working independently, are already using the best features of all the so-called "modern" styles as if they were an integral part of the grammar and vocabulary of the new generation.

\* The Playhouse, April 27, 1933; the cast was made up of children from the Music School of the Henry Street Settlement, New York City.

\*\*He mentions Beethoven's *Fidelio*, declaring the prison-aria of Florestan a superb instance of human, life-like quality in operatic music. Weber, Bizet, and Strauss, he claims, owe their success to their understanding of this quality. Wagner, with his superhuman characters and scenes, was compelled to create his own form to give them successful expression.

†Wagner's *Das Judenbium in der Musik* caused a deplorable upheaval during the 'Sixties and 'Seventies of the past century.

Some authorities claim that Paul Hindemith whose work embraces in a natural, simple manner all the virtues of the various innovators and yet reveals a strikingly vital individuality, is the long-awaited great assimilator.\* The brilliancy of his music reminds them of the meteor-like appearance of the young Richard Strauss on the musical horizon in the Nineties. Of course, no one can tell, as yet. But at least we are receptive and we know that our conductors are not only fine musicians, but also true artists, ready to give a hearing to any music old or new, so long as it be of genuine consequence.

## CONCERNING BEETHOVEN'S TRUE SUCCESSOR

In a recent communication to the Bruckner Society Dr. Frederick Stock, famous conductor of the Chicago Symphony Orchestra, said:

"I have always regarded Bruckner as the logical successor of Beethoven in the realm of the Symphony, rather than Brahms, who belongs with the Romanticists, and as such is the true successor of Schubert, Schumann, and Mendelssohn.

To Bruckner belong the qualities of superior craftsmanship, broader vision and great profundity of thought, as expressed especially in the adagios of his Symphonies. His nine symphonies will come to be ranked with those of Beethoven, whose *Eroica*, *Fifth* and *Ninth* will always remain the corner stones of symphonic literature. Bruckner's conception of the symphony after Beethoven is of the same gigantic grandeur. One has only to study the theme development of the first and last movements of his symphonies to realize this. His adagios are expressions of a heroic nature, the works of a man whose thoughts traveled along monumental lines. His scherzos are inimitable for their brightness and harmony. While Brahms had the greater mastery of form and design in a more concrete and well-condensed fashion, yet Bruckner's conception of the symphonic structure is that of the titanic Beethoven. His day is yet to come."

---

## THOMAS MANN ON BRUCKNER AND MAHLER

Upon being asked to write an article for *Chord and Discord*, the great German novelist, Thomas Mann, replied:

"I have heard with the liveliest interest about the work of the American Bruckner Society. Urgent literary labors do not permit me at present to formulate my ideas concerning Bruckner and Mahler, two composers for whom I have the deepest regard. I accept with pleasure your offer of Honorary Membership and wish to thank you for the honor you thereby show me."

---

\*Hindemith's charming cantata, *We Built a City*, first given here with great success in 1931 by the children of the Music School of the Henry Street Settlement, New York City, was once more performed by them on April 27, 1933, at the Playhouse. After the American premiere Henry Beckett said, "With clear enunciation and a sure pitch, these boys and girls sang a long sequence of phrases, never faltering at the odds and unfamiliar intervals of Hindemith." May not this critical pronouncement be interpreted as a recognition of the naturalness and spontaneity possible in the dreaded "new style"?

## BRUCKNER'S NINTH: THE ORIGINAL VERSION\*

When Anton Bruckner died, on Oct. 11, 1896, music-lovers knew that his last legacy to the world, a *Ninth Symphony*, was still incomplete. Even in the narrow circles of his most intimate friends the opinion prevailed that this work, in the shape the composer had left it, was fated to perpetual silence; that even the very sections he had finished were, most likely, "unplayable." They were convinced that his many years of illness had brought about not only a complete physical collapse, but also a corresponding decline in his mental and spiritual powers. All the greater, therefore, was their astonishment when it was finally announced that a world premiere of this posthumous "unfinished" symphony was to take place under the direction of that prince of Bruckner disciples, Ferdinand Loewe. This sensational performance, (Feb. 11, 1903) seven years after the master's death, was rendered unforgettable to all who heard it by the inspired playing of the *Wiener Konzertverein* orchestra, which Loewe's zeal had converted into a body of "Bruckner specialists."

After that first delightful surprise, the unexpected spiritual power of the work, discerning listeners began to notice frequent details in the music which seemed inexplicable in the light of Bruckner's well-known frank and sturdy symphonic character. When the *Scherzo* leaped lightly forth, all a-glitter with typically French *esprit*, the audience was reminded of the scintillating manner of Berlioz' instrumentation. In the minds of many there arose some such questions as these: Where are those abrupt, Bruckneresque transitions between the passages? Why do the various phrases end in gentle expirations? In short, whence comes this general finesse, this smooth polish into the work of a composer universally noted for his rugged individuality?

An explanation, though only half the truth, was quickly forthcoming. It was announced that the three movements performed had been composed by Bruckner before he was in the grip of his fatal malady, but not a word was uttered of the revision to which the score had been subjected by Ferdinand Loewe, a revision sufficiently drastic to deserve the label "arrangement"! As a youth Loewe has been of much assistance to the master in the preparation of his symphonies for a final, correct edition, and though, a mere conservatory student, he could have had but limited orchestral experience, he did not hesitate to suggest modifications in the scoring that struck him as possible improvements. Then, the master good-naturedly listened to him, called him "Berlioz," and left the instrumentations as he himself had written it.

The manuscript of the *Ninth Symphony*, having been entrusted by Bruckner into the keeping of a non-Viennese friend, did not find its way back to the city until several years after the master's death. When Loewe saw it, he concluded that the final process of revision must take place in the case of this work also, even though there was no longer a Bruckner to supervise it.

It was, doubtless, Loewe's modesty that kept him from making public the fact that he had made radical changes in the score. Therefore,

---

\*Translated from the German by the Editor, with the kind permission of the publishers, Gustav Bosse Verlag. This article originally appeared in the *Zeitschrift fuer Musik*, October, 1932.

his version of the symphony must be looked upon as a labor of love. At any rate, it was a task so expertly and effectively performed, that the work soon made its triumphant way, unquestioned, through all the great concert-halls in the world, and was greeted for almost thirty years as an original work of Bruckner's.

The recent publication of the ninth volume of the *Kritische Gesamtausgabe*\* of Bruckner's works, edited by Robert Haas and Alfred Orel and promoted by the *Internationale Bruckner Gesellschaft*, under the sponsorship of the Viennese National Library, has at last lifted the veil, revealing the master's original score to the public. Encouraged by this event the I.B.G. (named above) brought about at the *Tonhalle* in Munich (April 2, 1932) a special, semi-private performance of both the "Loewe" and the original versions, in order to determine, from the comparative impressions made by the two, whether the original was sufficiently practicable to warrant publication of its orchestral parts. This unique concert, played by the Philharmonic Orchestra of Munich under the inspired baton of that eminent Brucknerite, Siegmund von Hausegger, led to the unanimous conclusion that so far from being "unplayable," the original far surpassed the "Loewe" version by the splendor of its orchestral coloring and the power of its dynamic contrasts; that the two versions differed so vastly in spirit that they might be said to belong to "different worlds". After this triumph of the original version the Executive Committee of the I.B.G. decided to urge the immediate publication of the "parts" by the firm of Benno Filsner,\*\* Augsburg, and informed the public of its resolve by the following communication:

With all due respect to the great services rendered by Ferdinand Loewe, who, actuated by a spirit of sincere loyalty, made such changes in the work as he deemed absolutely prerequisite to its public performance, the Committee resolves that, because of the new conception of the true individuality of Bruckner's tonal language that has come into existence during the thirty year interim, and the overwhelming impression made by the original version at its first performance, the Ninth Symphony, in the exact form in which it was left by the master, should no longer be kept from the musical world."

With the release of the "parts" Bruckner's *Ninth* became available in two versions, either one of which conductors are now at liberty to perform. Should they still prefer to do the "Loewe" version it is their duty to indicate this fact on the concert-program. The first public performance of the symphony in its original form took place at the International Bruckner Festival held at Vienna last fall. To the Viennese Philharmonic Orchestra and the baton of Clemens Krauss fell the honor of the premiere.

As Alfred Orel goes into painstaking detail to point out,† the "original version" is no mere bundle of sketchy fragments, but the permanent, definitive result of numerous careful studies and revisions by Bruckner himself. As early as the summer of 1887, immediately after finishing his work upon the instrumentation of the *Eighth*, Bruckner plunged into the composition of the *Ninth*, at the time actually carrying the orchestral setting of the first movement as far as the end of the second

\*Literally, "Critical Complete Edition."

\*\*The original publishers of the *Kritische Gesamtausgabe* of Bruckner's works. The continuation of this magnificent venture has been recently taken over by the I.B.G.

†See the reviser's note, "Kritische Gesamtausgabe," Vol. IX. Comprehension of this fact is necessary to a proper understanding of the sonata form as used by Bruckner in his symphonies.

*Themengruppe* (Theme-group)\*. Then came an interval of three years during which he was occupied with the revision of the *Eighth* and the *First*. On Feb. 18, 1891, he resumed work on the *Ninth*, finishing the scoring of the opening movement on Oct. 14, 1892 and its final revision a year later on Oct. 23, 1893. In the meantime he had completed the *Scherzo* on Feb. 27, 1893, although it did not attain permanent form before added revisions that lasted until Feb. 15, 1894. The *Adagio* was finished on Oct. 31, 1894, also after much revision.

In view of the revelation imparted by these sketches and experimental scores published in the ninth volume of the *Gesamtausgabe* (even a "complete edition" presenting all the composer's studies for a work is without precedent) the three movements of the symphony, just as they were left by Bruckner, must be unconditionally regarded and respected as his final intention.

Loewe went decidedly too far in his revision of the work. His sweeping alterations in dynamics reveal his greatest failure to grasp the individuality of the master. He almost nullified Bruckner's favorite practice of creating sudden dynamic contrasts (that peculiarity that proves his affinity with the organ) by introducing mild graduations of tone volume. Thus he rendered the rugged master "fit for the salon," so to speak. Loewe muted the brass frequently, not realizing how much freshness of coloring it lost thereby. In fact all the dynamics he altered sound more genuine in the original version.

Often, where Loewe prescribed "diminuendo," Bruckner achieved the effect more subtly, purely by means of instrumentation, e.g., in the next to the last bar of the *Adagio* theme, where he suddenly silenced the brass while the strings continued *fortissimo*, an early example of orchestral *decrecendo* as it is often practiced by the composers of our day.

Loewe also made numerous changes in phrasing. In his revised indications of tempo a particularly striking example contrary to the master's spirit is the omission of the *Ritardando* called for by Bruckner in the second part of the main theme (the third bar after D)† at the ascending passage of 16th notes. This results in the total disappearance of the effect Bruckner desired, a sort of Promethean "scaling of the heights". The absence of any tempo-modification in the *Trio* is eloquent of the wishes of the master, and the *Scherzo* seems to recover its correct, rather moderate speed through the original instrumentation.

It is impossible, in the narrow confines of this article, to enumerate the changes Loewe made, especially in the *Scherzo*. He transferred entire string passages to the wood-wind, and vice versa. The answer to the principal *Scherzo* theme, that comes showering down out of the violins, is performed in the original version by the violas and cellos, but is given by Loewe to the cellos and bassoons (the ninth bar). At the tempo in which it has been generally taken this passage cannot be clearly articulated *staccato*, but at a slower rate it sounds perfectly clear. The correct tempo of the *Scherzo* depends, therefore, upon the greatest speed at which this passage may be played *staccato* with absolute clarity. Moreover,

---

\*The traditional terminology of symphonic analysis, i.e., *first theme, episode, transition, second theme*, etc., must, in the case of Bruckner, undergo a modification corresponding to the change he introduced in the sonata-form. *A group of themes*, all different, and yet logically evolving one out of the other, takes the place of the more artificial arrangement of theme, episode and transition.

†The letters refer to the Loewe version.

the chords sustained by the woodwind for many bars at the beginning of the *Scherzo*, absent in the Loewe version, serve to give the movement a calmer character. We feel compelled to agree with Alexander Berrische when he says in his fine review\* following the premiere of the original version:

“The change Loewe wrought in the *Scherzo*, which in the Bruckner version belongs to an entirely different sphere of sound and expression, is incredible. Loewe arranged the piece most cleverly, with a view to giving it a pleasant, winning air, and it is his revisions alone that gave rise to the generally uttered opinions endowing the *Scherzo* of the *Ninth* with an elfin, “midsummernight’s dream” atmosphere and the false synthetic quality of a combined Mendelssohn, Berlioz, and Bruckner. Now such notions are gone forever, and we may bid them good-bye, well consoled. The real Bruckner *Scherzo* may be without any sugared *esprit*, but it stands firm, on sturdy legs, planted on the composer’s native soil of Upper Austria.”

Among the multitude of Loewe’s instrumental changes two outstanding instances should not be omitted here. He cast out the chord passage in eighth notes in the woodwind (six bars before J, first movement), and he substituted violas and cellos for the original tubas in the chords four bars before E in the *Adagio*.

He made changes even in the form of the work, e.g., a four bar “cut” just before the *Trio*, at the end of the first section of the *Scherzo*.

Finally, he actually interpolated some passages of his own composition; e.g., in the first movement, two bars before Q, he filled in a rest with a *motif* of his own for the oboes and clarinets.

The most radical change, for some reason, perhaps, justifiable in those days, but no longer intelligible to us, was the one he made at the last tremendous climax of the main theme in the *Adagio* (Q-R). He resolved into a pure E major chord the mighty discord in the first bar, a simultaneous sounding of the tones E, #F, #G, A, B, and C, as clear as it is resonant because of the chord’s wide-open position, yet representing one of the most daring ventures in 19th century harmony. In the Loewe version no trace remains of this titanic dissonance save a feeble, passing #F in the figure with which the strings join the placating E major chord. That the master intentionally introduced this “cacophony” is clear from the A, #F, #G sounding throughout the bar in the woodwind eighth-note figure and the very same combination of tones in the thirty-second-note figure of the violins in the original version.

In this final conflict before the moment of “death and transfiguration” Bruckner, with this single harmony, sees far ahead into the future. In its significant position, a last farewell, this mighty chord is certainly more than a mere example of the extraordinary artistic possibilities of “cacophony”.

May this real *Ninth Symphony* of Bruckner receive the universal recognition it so richly deserves!

—PROF. MAX AUER.

## TONERL TURNS COMPOSER

Tonerl\* at ten was the "complete schoolmaster" in miniature. After a trying forenoon with his upper-class charges "Herr Lehrer" Bruckner,\*\* sole teacher in the secluded Austrian village Ansfelden, would gladly turn over the dreaded rod of inculcation to his precocious son. Sudden illness having once compelled him to resort to this emergency measure he remembered with great satisfaction the flattering reports of how the earnest Tonerl had instilled a proper respect for academic order in the afternoon class of rustic tots. Father Bruckner felt exceedingly proud at the prospect of passing a cherished pedagogical heritage on to his son. It was his dearest wish that the village classroom dynasty founded by his own father Joseph more than half a century before should survive.

He took for granted the marked musical talent displayed by Tonerl. His own father had also been very musical; else how could he have filled the teacher's post, one of the indispensable qualifications for which was the ability to play the organ well? According to the Bruckner household tradition the first steps in music practically preceded the first step out of the cradle. Therefore it did not strike him as amazing that Tonerl could play the violin intelligibly at four and that at an age when other boys were just beginning to spell he could sit confidently at the church organ on Sunday morning and furnish an adequate musical setting for the simple Catholic ritual of the village.

But now and then that gifted Bruckner cousin Johann Baptist Weiss, schoolmaster of the neighboring village Hoersching, a man whom Tonerl regarded with great awe because he was conceded by all to be the best musician in Upper Austria, would come to Ansfelden for a brief visit. Fascinated by what seemed at first glance just another sample of the genus child prodigy he would make the boy play and improvise for him while he pondered upon the problem of his talent. The careful judgment of Weiss once spoken proved prophetic, for he finally announced to the incredulous father his firm conviction that God had placed far greater emphasis upon Tonerl's musical than his pedagogical bent. He begged that the boy be given into his personal care for thorough musical training. Eventually his plea was granted and one day the eleven year old Anton Bruckner, with all his worldly possessions slung over his shoulder, went trudging through the woods in the direction of Hoersching, to receive his first taste of the drab world of Thorough-bass.

There was nothing of the pedant about Weiss. Indeed, there seems to have been a complete lack of routine to his method of initiating a pupil into the mysteries of musical theory. He applauded and encouraged young Bruckner's favorite practice of improvising upon the organ, believing that the wings of fancy must be permitted unhampered flight in earliest years. Meanwhile the rules of musical grammar, universally considered inexorable laws in those days, were given only secondary attention by the tone-king of Hoersching.† A set of four short organ

---

\*Diminutive for "Anton" in Austrian dialect.

\*\*Literally, "Mr. Teacher Bruckner," the polite "Herr" being always prefixed to vocational titles in German.

†There is in existence a neatly written note-book of the "rules of thorough-bass" as they were taught the boy Bruckner, but this manuscript, judging by the well-developed penmanship it displays, was most likely written during Bruckner's "choir-boy days" at St. Florian.

preludes,\* composed and written down by the boy some time during the year and a half he spent in the village, furnishes the sole remaining documentary evidence of the nature of his studies there.

The opening bars\*\* of the very first of these pieces contain flagrant errors that even a Tom, Dick, or Harry would not make after a few lessons in elementary harmony. (Bars 1-4).

Despite so dubious a beginning the prelude launches at once upon a broad, smooth, though stereotyped, path of song. (Bars 4-12)

Out of this unassuming strain there now leaps a brief, characteristically pompous *motif*, its harmonically varied restatements insistently suggesting the symphonic nature in embryo. (Bars 13-27)

In the development of this naively vigorous passage a surprising climax is attained in a series of tonal subtleties technically called "enharmonic changes," (Bars 20-27) phenomena hardly attributable under any technical nomenclature to a boy almost totally ignorant of musical grammar, hence better interpreted, because of their spontaneous origin, as the first signs of an innate leaning towards mystic expression.†

Truly remarkable is the section immediately following. Bravely striking a fundamental tone (♭E) foreign to the key of the whole piece the young composer bursts forth into the first "organ point" of his career. In other words, he picks up a fragment of his theme and sends it spinning gracefully across the musical landscape. Its sustained flight is a perfect chain of brief, symmetrical curves. The constant tone in the bass seems to him (according to a statement he made in later years) an ideal vantage point, commanding the whole musical horizon (Bars 28-39)

It is particularly interesting to note that the path of this first Bruckner "organ point" does not end with a return to the initial tonic or dominant. Contrary to traditional usage it does not end, but goes on to find an unexpected outlet through another "enharmonic change", (♯D to ♭E (Bars 38-39). Issuing from so unsophisticated a pen as this unschooled boy's such an evasion may not be construed as evidence of a desire for mere novelty. The Bruckner symphonies are packed with parallel instances that point unmistakably to this source expression of childhood days. If this prelude shows nothing more it reveals an individual, deeply rooted musical instinct already striving for powerful expression.

\*The original manuscript of these preludes is preserved in the archives of the church at Hoersching. They have been published in their entirety in the first volume of the monumental Goellerich-Auer biography of Bruckner, pp.97-102. The revised and enlarged edition of Auer's one-volume *Leben und Werk Anton Bruckners* just issued by the Musikwissenschaftlicher Verlag, Wien, publishes for the first time an additional *Praeludium in ♭E Major*, particularly interesting because of its enharmonic and its florid character. (See the appendix of musical illustrations, No. 1)

\*\*The editor regrets not having as yet obtained permission from the publishers to quote the actual music of this first Bruckner composition. Those sufficiently interested in the *Prelude* are referred to pp. 97-98 in vol. I of the Goellerich-Auer biography of Bruckner.

†It is that sterling musicologist of the Encyclopedia Britannica, Mr. Tovey, who calls a fine enharmonic change a "sublime mystery." What phrase can more appropriately describe the grandeur of the numerous mystic harmonic changes in Bruckner's greatest adagios (those of the Seventh, Eighth, and Ninth Symphonies)? Therefore it seems only natural to trace the source of this tonal mysticism back to these earliest extant Bruckner compositions, the juvenile organ preludes.

It was young Bruckner's great fortune to find in his cousin, Weiss, a genuine artistic personality rather than an excellent drill-master. The comparatively recent publication of a Mass\* by Weiss proves him to have been a church composer of marked individuality, one whose work radiates the very same romantic-devotional spirit that the symphonic world now concedes as Bruckner's own.

That inspired English essayist, Arthur Machen, once said that human beings add nothing to their store of experience after eighteen. Out of the vivid spiritual adventures of youth spring tremendous aspirations towards self-expression the realization of which must wait for the consummate perspective of riper years. Weiss revealed to his pupil visions of an austere splendor the memory of which no later influence ever dimmed! To the twelve year old boy the appeal of Weiss' romantic-religious music proved far more vivid and lasting than that of immeasurably greater classics by Haydn and Mozart which also formed part of the sacred repertoire at Hoersching. Had not the mature Bruckner himself fervently avowed his spiritual indebtedness to this man it would be necessary to cite but a characteristic phrase or two from Weiss' *Requiem* to show how the very soul of the teacher was absorbed by his pupil. †

Tragic fate did much to intensify and render permanent the deep impression made upon the boy by Weiss' *Requiem*. Four years after the premature death of his father had terminated young Bruckner's short period of study at Hoersching he became a village teacher. He was then seventeen. Season after season he struggled on in this humble capacity, compulsory drudgery and utter poverty veiling in growing hopelessness the great longing for artistic accomplishment with which the idealist Weiss had imbued him. In this gloomy condition he suddenly heard the terrible tidings of his cousin's suicide. The poor, unworldly creature had innocently accepted from a villainous relative the responsibility of a church fund from which a large sum had been embezzled. Insane with terror at the sight of a policeman approaching his cottage one morning he fled to the graveyard and killed himself.

Bruckner tried repeatedly, but in vain, to induce the church authorities to entrust to his keeping the skull of the ill-starred musician whom he so revered. Half a century later, in the agony of the symphonist's last illness, the pitiful memory of Weiss was as vivid as ever in his consciousness. Even upon his death-bed the aged Bruckner did not forget to write his periodical request to the church authorities at Hoersching that mass be said for the repose of his unfortunate cousin's soul.

Bruckner's *Ninth Symphony* begins as though it would whisper the mournful mystery of life's last lullaby. But like a stroke of lightning, a blinding vision of the "Day of Wrath," its dreadful glory heralded by a tremendous choir of brass in full harmony, suddenly transforms this dirge of the earth into a mighty prophecy of immortality. It is Tonerl's last and highest tribute to his cousin, the supreme spiritual revelation of Weiss' *Requiem* inseparably united with Bruckner's own farewell message to the world.

---

\*Requiem in bE, Hoersching, 1904.

†When an advance copy of this *Requiem* (still without the composer's name) was placed before Prof. Heinrich Wottawa, one of Bruckner's favorite pupils, he declared it to be an arly work of Bruckner's.

## SYMPHONIC POEM OR SYMPHONY? (MAHLER'S *FIRST*)

Gustav Mahler was in his youth an omnivorous reader of the romantic literature of early nineteenth century Germany. He was particularly fascinated by "thrillers," such as the weird tales of E. T. A. Hoffmann, the great continental forerunner of our own prince of story-tellers, Edgar Allan Poe. Yet his early letters and compositions seem to indicate that none of his pre-symphonic reading made a more powerful impression upon him than Jean Paul's\* ponderous fusion of drollery, sentiment, and erudition, *Titan*. Originally published in 1800, and bearing (to meet the popular demand of that day) the deceiving subtitle *A Romance*, it long survived the vast bulk of contemporaneous exotic literature, attaining a certain vogue even in England and America as late as the 'Sixties.\*\* Thus in Mahler's boyhood days the book was regarded as a minor universal classic.

For a period of ten years, between its obscure world premiere at Budapest in 1889 and its publication in 1899, Mahler's *First Symphony* was known to the music-world as *Titan: A Symphonic Poem in Two Sections*. It was under that nomenclature that Richard Strauss had it performed at the Tonkuenstlerfest at Weimar in 1894. When the futile war between the adherents of *absolute* and *program* music broke out in fresh bitterness and confusion after this performance Mahler fled precipitately from the camp of the programites exclaiming that he had been completely misunderstood; that there was in reality no *program* or story connected with his music. Subsequently ample corroboration of his protest appeared in permanent form, for the printed score of the work revealed a symphony in the traditional four movements, definitely giving the lie to that initial mystifying description "symphonic poem".

In 1909, as the world-famous conductor of the *New York Philharmonic*, Mahler decided to introduce this symphony to America. The noted critic, Krehbiel, who was the program annotator upon that occasion, knowing well that the composer was violently opposed to all literary props for his music, nevertheless did not hesitate to lay open an old wound by asking him for the "story" of the symphony. The flat refusal which met his repeated requests was readily interpreted by the critic as a personal slight.† The merest acquaintance with the facts of Mahler's life would have shown Krehbiel that every decision he made in questions of art was actuated only by unswerving devotion to his ideals. The tragic sequel to the petty aggravations heaped upon the composer thereafter by the critic and other Americans who would not understand him reflected only too clearly his thoroughly martyr-like character, for realizing the shattered condition of his health, Mahler might have prolonged his life by assuming the mask of amiability which a superficial world demands even of its great geniuses. The heart-rending *Heiligenstaedter Testament* of Beethoven is one of the most overwhelming arraignment of this

---

\*Jean Paul Friedrich Richter.

\*\*An English translation by Charles T. Brooks appeared in 1862.

†Krehbiel included the following statement among the "regretful" remarks he printed in the program: "All writings about music, even those of musicians themselves, he (Mahler) holds to be injurious to musical enjoyment."

phase of life's cruelty. Mahler's reply to the world was stoical silence, a proud stillness no less eloquent than the profound silence he imposed upon those who contritely accompanied his coffin to the grave.

Almost a quarter of a century has gone by since the American premiere of Mahler's *Titan Symphony*. It has been performed here several times since, once even at the Stadium Concerts under Mr. Van Hoogstraten. Its first fair test for the new generation, under irreproachable conditions, will take place early this season when the world's foremost Mahler disciple, Bruno Walter, will give it several successive hearings at Carnegie Hall, the superb New York Philharmonic orchestra assisting.

The critics will once more search the records in vain for descriptions of underlying meanings. Mahler's numerous European commentators, religiously adhering to the wishes of the composer, have avoided attaching any importance to the book *Titan* in connection with the *First Symphony*, as though the deed were tantamount to blasphemy. At the peril of a breach of good taste, the present writer, although he fully agrees with the composer that a serious work should be first heard only for its poetic, emotional quality, ventures to suggest that no one desirous of fathoming the soul of this symphony can afford to ignore Jean Paul's *Titan*. A single passage, typical of the rhapsodical character that dominates the more than one thousand closely printed pages of the book, will suffice to show that affinity between the *Romance* and the *Symphony* which Mahler so long affirmed and never completely denied.\*

"—My winged skiff glided lightly through green rosy splendor and through soft, musical murmuring of a long flower-fragrance, into an immense radiant morning-land.

"What a broad, bright, enchanted Eden! A clear, glad morning sun, with no tears of night, expanded with an encircling rose-wreath, looked toward me and rose no higher. Up and down sparkled the meadows, bright with morning dew. 'Love's tears of joy lie down below there,' sang the hermits overhead on the long, sweeping worlds, 'and we, too, will shed them.' I flew to the shore, where honey bloomed, while on the other bloomed wine; and as I went, my gayly decorated little skiff, with broad flowers puffed out for sails, followed, dancing after me over the waves. I went into high blooming woods, where noon and night dwelt side by side, and into green vales full of flower-twilights, and up sunny heights, where blue days dwelt, and flew down again into the blooming skiff, and it floated on, deep in wave-lightnings, over precious stones, into the spring, to the rosy sun. All moved eastward, the breezes and the waves, and the butterflies and the flowers, which had wings, and the worlds overhead; and their giants sang down, 'We fondly look downward,—we fondly glide downward, to the land of love, to the golden land.'

"Then I saw my face in the waves, and it was a virgin's full of high rapture and love. And the brook flowed with me, now through wheat-fields; now through a little, fragrant night, through which the sun was seen behind sparkling glow-worms; now through a twilight, wherein warbled a golden nightingale. Now the sun arched the tears of joy into a rainbow, and I sailed through, and behind me they sank down again, burning like dew. I drew nearer to the sun, and he wore already the harvest-wreath. 'It is already noon' sang the hermits over my head.

---

\*The following passage is taken from the translation by Brooks, vol. II, pp. 169 ff. The translator chose his phraseology with a view to retaining the flavor of the original.

"Slowly, as bees over honey-pastures, swam the thronging clouds in the dark blue, over the divine region. From the mountain-ridge a milky-way arched over, which sank into the sun. Bright lands unrolled themselves. Harps of light, strung with rays, rang in the fire; a triling of three thunders agitated the land. A ringing storm-rain of dew and radiance filled with glitter the wide Eden; it dissolved in drops, like a sweeping ecstasy. Pastoral songs floated through the pure blue air, and a few lingering, rosy clouds danced out of the tempest after the tones. Then the near morning-sun looked faintly out of a pale lily-garland, and the hermits sang up there, 'O Bliss, O Bliss! the evening blooms!' There was stillness and twilight. The worlds held themselves in silence round the sun, and encircled him with their fair giants, resembling the human form, but higher and holier. As on the earth the noble form of man creeps downward by the dark mirror-chain of animal life, so did it, overhead there, mount up along a line of pure, bright, free gods, sent from God. The worlds touched the sun, and dissolved upon it; the sun, too, fell to pieces, in order to flow down into the land of love, and became a sea of radiance. Then the fair gods and the fair goddesses stretched out their arms towards each other, and touched each other, trembling for love; but, like vibrating strings, they disappeared from sight in their blissful trembling, and their being became only an invisible melody; and the tones sang to each other, 'I am with thee, and am with God'; and others sang, 'The sun was with God.'

"Then the golden fields glistened with innumerable tears of joy, which had fallen during the invisible embrace; eternity grew still, and the breezes slept, and only the lingering, rosy light of the dissolved sun softly stirred the flowers.

"I was alone, looked round, and my lonely heart longed dyingly for a death. Then the white world with the veil passed slowly up the milky-way; like a soft moon, it still glimmered a little; then it sank down from heaven upon the holy land, and melted away upon the ground; only the high veil remained, then the veil withdrew itself into the ether, and an exalted, godlike virgin, great as the other goddesses, stood upon the earth and in heaven. All rosy radiance of the swimming sun collected in her, and she burned in a robe of evening-red. All invisible voices addressed her, and asked, 'Who is the Father of men, and their Mother, and their Brother, and their Sister, and their Lover, and their Beloved, and their Friend?' The virgin lifted steadfastly her blue eye, and said, 'It is God!'"

Too much time and space has been devoted to speculating upon Mahler the prophet, the philosopher, the student of life. All this artificially induced cogitation has proven detrimental to the general understanding of Mahler's music. Even Paul Bekker in concluding his monumental task, that first comprehensive book on Mahler's symphonies,\* wonders whether Mahler the artist was not a victim of extra-musical influences that should not have been permitted to intrude upon his musical expression. That the instrumental portions of his work are interrupted now and then by texts rendered by singing voices is insufficient foundation for this doubt; for if these texts seem to some analysts to be didactic, or evangelistic, or what not, let it not be forgotten that Beethoven's *Hymn to Joy*, any symphonist's eternal license to use voices and

---

\*Gustav Mahler's *Sinfonien*, Berlin, 1921.

verses in his work, is in essence nothing less than an ecstatic sermon to all humanity.

For those, however, who will not take their Mahler without a dose of "philosophy," the *Titan* of Jean Paul offers the opportunity for a Gargantuan satiety. Several generations ago a French critic described the book as follows:

"It is a poem, a romance; a psychological resume, a satire, an elegy, a drama, a fantasy; having for theme and text the enigma of civilization.

"How is it to end, this civilization which exaggerates alike intellectual and industrial power at the expense of the life of the soul,—wholly factitious, theatrical,—intoxicating, consuming itself with pleasure, seeking everywhere new enjoyments,—exploring all the secrets of nature, without being able to penetrate the first causes, the secrets of God,—what will be the fate of these generations' supersaturated with romances, dramas, journals, with science, ambition, with vehement aspirations after the unknown and impossible? . . .

"In augmenting the sum of its desires, will it augment the sum of its happiness? Is it not going to increase immensely its capacity of suffering?

"Will it not be the giant that scales heaven—

"And that falls crushed to death?

"Titan!"

### GABRILOWITSCH ON BRUCKNER AND MAHLER

The following is a letter addressed to the Secretary of the Bruckner Society by Ossip Gabrilowitsch, the renowned conductor of the Detroit Symphony Orchestra:

"The symphonies of Mahler and Bruckner are among the most important contributions to symphonic literature of the last sixty years. It is a fact much to be deplored that these epoch-making compositions have so far found so little popularity and general understanding in America where, as a rule, the public is so receptive and open-minded toward new important musical compositions.

"The Bruckner Society of America is doing a great service in helping to popularize the compositions of the above named two masters of the symphony. There are already indications that our audiences are beginning to realize the true value of these works.

"I wish the Bruckner Society the greatest and speediest success in the excellent work it has undertaken."

### MAHLER'S SIXTH AT LAST!

American music-lovers who have long yearned in vain for an opportunity to hear the dreaded *Sixth (Tragic) Symphony* of Mahler are due for a pleasant surprise this season, according to a communication just addressed to the Bruckner Society by Dr. Serge Koussevitzky. It seems now that the man who gave us our first chance to experience the greatness of Mahler's *Ninth*, two season's ago, is seriously preparing to give the composer's *Sixth* its sadly belated American premiere. In this case, certainly, better late than never. Much credit is due this true artist, the dauntless leader of the Boston Symphony Orchestra, whose continued espousal of the cause of neglected and *tabu* masterworks has won for him a preeminent position among the symphonic conductors of our country.

## NEW LIGHT ON MAHLER

On June 4, 1933, *Das Neue Wiener Journal* published a hitherto unknown letter written by Gustav Mahler from Toblach in 1905 to his wife, Alma Maria, at that time convalescing at Levico. The communication, of especial importance because of the interesting light it casts upon the composer's philosophy of life, reads as follows:  
My Almscherl:

Yesterday your dear letter did not come until the afternoon (I always go in person to fetch the second mail) and I was getting really worried.

Your moods (this time induced by a dream) seem to me easily explicable, for *I myself* have been subject to them a thousand times. This confession may amaze you, but it may at the same time serve to reassure you, and perhaps even give you the clue to your own self.

Humanity (yes, all existence) is perpetually creative. In every phase of life the creative process goes unconsciously on, being the very essence of corporeal existence. When the creative power fails dissolution follows, and life must await re-creation in some new form.

On that plane of life, to which beings of a higher order belong, creation (which in the case of most, naturally, means mere reproduction) is not unconscious. It is psychologically complex, involving a distinct consciousness of the *ego* and making exacting demands upon the inner or moral being. Hence all the restlessness and discontent to which higher beings are subject. There are only brief moments in the life of a genius when these inner demands are fulfilled, while long periods of unfulfilment burden his consciousness with the weight of impossible longing and vain striving. It is this endless, and truly painful striving that dominates and shapes the life of these few.

Perhaps you will now guess or know my views on the external productions of man: that they are but his fleeting, mortal expressions. Only what he makes of himself, what he becomes through ceaseless living and striving, is permanent. In this sense, my dear Almschi, you already possess all that is necessary for the development of soul and character. And you still have a long life before you. Employ more and more these inner powers of yours (as you certainly do!). Make as much spiritual beauty and strength *a part of yourself* as possible. (None of us can do more than this—and none but the elect.) Grow spiritually, cultivate beauty and goodness, and always keep growing (for such is the nature of true creation) and be convinced, just as I have always preached to you, that whatsoever we leave behind us at the end is only skin, shell, etc. The *Meistersinger*, the *Ninth*, *Faust*, all are only cast-off shells! No more, if regarded basically, than our bodies!

Of course, I do not mean to say that creative work is superfluous. It is necessary for human beings as a means of attaining inner growth and *joy*, this being also a true sign of health and creative power. Nor must this "creation" take the form of musical composition. How often have I seen you attain that joyful mood so well known to me! Most recently, down there in the Prater. . . . Above all, regain your health, and then creation will come of itself, in one form or another—and joy.

The piano came yesterday from Boesendorfer, a magnificent, brand new grand. You will be happy when you see it. I have moved down to the ground floor where I now find it wonderfully mild. Yesterday I

wrote to Fraenkel, Credit Lyonnais! Is the address correct? I have not ventured into the "little house" as yet. It is always so exciting for me to take it over that I have not as yet found the strength to do so.

A thousand greetings, my Almschi.

Gustav.

I shall tell you more about Gucki soon.

In a recent number of the Viennese newspaper "Der Tag" Dr. Alfred Rosenzweig published through the courtesy of Mrs. Alma Maria Mahler, a sketch revealing Mahler's initial conception of the *Eighth Symphony*. The sketch, a single leaf in the handwriting of the master, presents Mahler's original plan of the work, and is dated August 1906. In the upper right hand corner appears the following:

1. *Veni Creator*
2. *Caritas*
3. *Weihnachtsspiele mit dem Kindlein (Scherzo)*  
(Christmas Games with the Little Child)
4. *Schoepfung durch Eros (Hymne)*  
(Creation through Eros)

One may conclude from this that Mahler at first wished to give the symphony the traditional four movements. On the twenty-lined musical page there are five three and four-staved "systems." Of these the first presents the beginning of a slow movement in B-minor (either from the *Caritas* or the introduction to the *Veni Creator*.) On the other lines one recognizes the famous main theme of the first movement (in #F-major) together with sketches of some of its contrapuntal possibilities. This manuscript, so extremely important for all Mahler research, bears the following dedication by the composer to his wife:

"8. *Symphony—Aug. 1906—the first inspiration—  
preserved for my Almschl—spiritus creator.*"

—WILLI REICH, Vienna

## "23"—A VIENNESE MUSICAL MAGAZINE

With its first issue for the season 1933-1934, "23", the most progressive monthly musical magazine published in Europe enters its third year of existence. It is a periodical devoted entirely to contributions (hitherto anonymous) by leading critics, composers, and musical aestheticians of the younger generation. Published in Vienna, now, perhaps more than ever before the continental music centre, it has clung fast to its unbiased ideal, the presentation of authoritative musical opinion totally free from commercial, political, and racial prejudice. The name of the editor, Mr. Willi Reich of Vienna, the only concrete clue we have to the personnel conducting the destinies of this magazine, is one commanding great respect among the circle of Europe's outstanding music-critics. *Chord and Discord* owes to the generous cooperation of Mr. Reich the important article in the present issue entitled "New Light on Mahler." Mr. Reich was one of the leading spirits responsible for that remarkable series of concerts "for musicians by musicians" given at Strassburg last August (See Footnote on page 4). "23" has grown to be a real power in the musical life of the Austrian capital. It accepts no advertisements, for obvious reasons inseparably connected with its policy. Every musical library desirous of giving its readers an unprejudiced view of the progress of the art in troubled Europe should subscribe to it. Subscriptions may be addressed to Willi Reich, Wien I, Hohenstaufen gasse 10, Austria.

## MAHLER'S SECOND: A VERDICT OF 1933

*Editor's Note:* The author of this article is nineteen years old, but it is not his youth alone that authorizes him to speak for the coming generation. As a student of Columbia University he was music-critic of the college daily, *The Spectator*, in which he gave constant expression to the broad point-of-view characteristic of the "new audience" which he addresses and for which he speaks. He is a rising musician, thoroughly familiar with the orchestral language and the problems of musical esthetics. He lectures frequently on musical subjects and is already well known in New York for his contributions to general musical appreciation for children.

Twenty-nine years ago Dr. Walter Damrosch introduced the music of Gustav Mahler to America with a performance of the *Fourth Symphony*, in New York. At that time the members of the press launched an attack upon the work, damning and condemning it from every conceivable angle. This over-impulsive initial reaction towards Mahler seems to have made an unforgettable impression upon most of the reviewers of that day, for many a year went by before he was granted an unprejudiced hearing. At each American premiere of his works thereafter (until this writing only the *Sixth Symphony*, the unfinished *Tenth* and *Das Klagende Lied* have not been performed here) most of the critics echoed the notices which appeared in 1904, instead of re-weighing those snap judgments in the only true balance, the evidence of the scores themselves. The indomitable devotion of Dr. Koussevitzky and Mr. Walter has done much to change all this, though even to-day one cannot help wondering at times whether some of the critics have not succumbed completely to the temptation of rehashing the vociferous damnations of their forerunners rather than go to the trouble of forming their own, unbiased, first-hand conclusions concerning this most abused and misunderstood of all giant symphonists.

This unsatisfactory state of affairs, we submit, has existed entirely too long. America is no longer in its musical infancy. We of the new musical generation reject the dogmas of the antiquated theorists to the effect that poetry and grandeur cannot exist except in the accepted forms established by Bach, Haydn, Mozart, Beethoven, and Brahms. It must be kept in mind that these dogmas are curiously reminiscent of similar stereotyped ideas which permeated the early critical reactions to Wagner and Strauss. Such irrelevant terms (characteristic of the symphonic language in the straight-laced days of Krehbiel) as *excessive length*, *banality*, *lack of originality* and *bombast* still hold favored places in the lexicon of our musical reviewers. Even the most rabid of anti-Mahlerite critics now admit that the almost complete suppression of Mahler's music that was in effect until most recently, has denied us the enjoyment of much that is magnificent in modern musical literature.

Lately a new generation of critics, conductors, and audiences has come to the front in America with the result that there has been a Mahler revival in the larger cities of the nation. In New York City, Bruno Walter conducted the *Fifth Symphony* in 1932 and the *Second Symphony* early this year. The grand ovation given him by the audience after the performance of the mighty *Second* announced in no uncertain language the triumph scored by Mahler in spite of his entrenched antagonists. What caused so complete an about-face in the attitude of the listeners? It was the verdict of a new generation, an audience which, for the most part, heard the music unbiased, an audience completely unhampered by predisposed worries as to symphonic idiom, texture, form, and structure. It listened with open mind and ear, allowing the music to speak for itself.

This writer is unfamiliar with the *Fifth Symphony*, but can speak of the *Second* with some authority, having made a close study of the score after becoming fascinated by it upon a first hearing. This symphony is replete with passages reflecting profundity of contemplation, passages which (as he has since learned, through the medium of recordings,) are truly characteristic of Mahler. The *Second Symphony* concerns a "death-celebration" and according to Gabriel Engel in his book, "Gustav Mahler—Song Symphonist," the music queries, "Why has the hero lived and suffered? Is death life's most magnificent step towards fulfilment?" Following this first contemplation of death, the composer narrates certain episodes in the life of the hero, and when he feels that a sufficient number of his deeds have been recounted, he returns to his previous cogitation of Death and the Hereafter, concluding the symphony with a jubilant *Resurrection Chorus*.

To me the second movement, *Andante Moderato*, seems the most ingenious part of the symphony. It opens with a theme quite Haydn-like in character, appearing in the musical dress of the eighteenth century. Yet, scarcely has one realized this fact, when Mahler has whisked the theme into a dress more properly becoming that of a young debutante of the present day. But no sooner has he done this, when with the turn of the conductor's wand the music appears again in the bustle and hoop of the charming court days of old. Then another lightning change occurs, this time again revealing the theme in an entirely different setting. In this manner Mahler takes a single theme and as if by magic transfers it from one design to another, in the very ears of the listener, so to speak.

A more realistic episode is described in the third section of the symphony. Here Mahler has set the music to the text of *St. Anthony's Sermon To The Fishes*, a fragment from *Des Knaben Wunderhorn*. Perhaps St. Anthony himself is the dead hero and the movement not just an allegory. Whatever the case may be, it aptly portrays the commonness and vulgarity of the ignorant. The hero attempts to address the rabble in noble language, but must soon disgustedly admit defeat. The "poor fish" resist all attempts to teach them. They seem to be perfectly satisfied with their misery and ignorance.

The addition of the human voice to the fourth and fifth movements adds greatly to the grandeur of the work. The prayer, contralto solo, to the "Urlicht" prepares the way for the fifth movement with its proclamation of the judgment day and the final resurrection of the hero's soul, sung by the chorus. Thus having blazed the way aloft, Mahler ascends to the mountain top. The resurrection music bursts forth, swelling into a paean celebrating the omnipotence of the Almighty.

From the point-of-view of symphonic architecture, as well as content, this work is a tremendous achievement. Its inner girders of steel are supplemented by a beautiful exterior design, rich with warm colorings. Some of New York's music-critics have intimated in their reviews that Mahler was preoccupied chiefly with the fine exterior, but that internally the music was weak and pretentious. One musical pundit even went so far as to call the symphony "soap-box oratory." But to the unsophisticated listener the foundation of the work is no less mighty than the superstructure is gorgeous. Its content is Mahler's profound conception; its exterior his extraordinary skill.

Musical thought as deep and powerful as Mahler's could not fail to find noble and gigantic expression in the hands of so superb a craftsman. In spite of its super-worldly character, this symphony sings with a sincerity which moves the heart. It breathes eloquence throughout, whether in

the fortissimo passages for full ensemble or pianissimo passages for woodwinds. Such expression cannot be branded as grandiloquent. It embraces the great human elements of understanding and pity.

We, (the new audience) have now met this master-builder and want to hear more and more of his works performed. Our foremost conductors have long desired a majority of such listeners as we are in the concert-hall. To them we say, "On to new, broader fields. Never mind the gray-beards, their day is done. The new musical generation is heart and soul behind your endeavors to give Mahler, Bruckner, Schoenberg, and any other composers of such calibre a fair hearing."

—ARTHUR WALLACE HEPNER

### SOME IMPORTANT PERFORMANCES

{1933-1934}

Bruckner: VII Symphony; Boston Symphony; Dr. Serge Koussevitzky, conductor

VIII Symphony; New York Philharmonic Society; Bruno Walter, conductor. (One performance will be broadcast over a nation-wide chain.)

Mahler: I Symphony; New York Philharmonic; Bruno Walter. (One performance will be broadcast.)

VI Symphony (American Premiere); Boston Symphony; Dr. Serge Koussevitzky; or

IX Symphony if the orchestral "parts" of the *Sixth (Tragic)* Symphony, are not available.

Arturo Toscanini's great interest in the original version of Bruckner's *Ninth* has aroused much expectation concerning the possibility of attending the American Premiere of that mighty symphony under his famous baton in the near future.

### FIRST AMERICAN PERFORMANCES OF BRUCKNER

#### SYMPHONIES

I—Unperformed.

II—Philadelphia, 1902 (Fritz Scheel) Chicago, February 20, 1903 (Thomas)

III—New York, December 6, 1885 (Anton Seidl)

## THE COMPLETE BRUCKNERITE

*Max Auer: Leben und Werk Anton Bruckners; Intern. Bruckner Gesellschaft. Wissenschaftlicher Verlag, Wien, 1933.*

With the approach of the centennial of Bruckner's birth in 1924 a tremendous interest in the details of his life and work sprang up among the music-lovers of Austria and Germany. Besides the biographies of the composer by Rudolf Louis and Franz Graeflinger, both of which passing years had stamped as inaccurate, there existed at the moment no comprehensive objective record of Bruckner and his achievement either for the student or the layman. Ernst Decsey's fine Bruckner book was clearly the enthusiastic expression of a poet's love for the master's music, but as a first word for the layman unfamiliar with the circumstances of the symphonist's life it was characterized by the disadvantages inevitably involved in a rambling, rhapsodical, literary manner.

Therefore, the publication of Professor Max Auer's straightforward, richly illustrated one-volume book on the subject by the Amalthea Verlag of Vienna in 1923 was particularly timely. The swiftness with which the original edition was absorbed by the music-lovers and libraries of the whole world was ample proof of this fact. The next year or two brought a great number of new books on Bruckner, ranging from deep, monumental studies by Ernst Kurth and Alfred Orel to the succinct, synoptical accounts by Karl Grunsky and Georg Graener. All these treatises were destined to yield in one respect or another to the definitive, authorized biography of Bruckner the materials for which August Goellerich had begun to gather as early as 1891. To-day the final two parts of this gigantic work which will be complete in seven volumes, (four volumes of text, three of music) are in the press. The actual preparation of the whole work has been in the hands of Professor Auer, for at the death of Goellerich only the first volume was ready for publication.

The past decade has added immeasurably to the world's understanding of Bruckner. Music-lovers, musicians, and estheticians are now co-operating whole-heartedly in the effort to bring about the universal love and recognition that is due Bruckner's great contribution to the spiritual treasury of mankind. Because of this change in the general attitude of the world towards the great symphonist, Professor Auer has decided that the time is again ripe for the issue of his comprehensive, objective one-volume account, now long out of print. The revised edition, enlarged to a text portion of 478 pages and a musical supplement of 86 pages, contains in addition to the contents of the original edition all the hitherto unknown information of importance revealed in the gigantic Goellerich-Auer work, reproduces in full, for the first time anywhere, a boyhood organ-prelude of the master, and records the world's organized cult of Bruckner until the present day, not even omitting the humble part played in the general cause by America's own Bruckner Society and this very journal, *Chord and Discord*.

Every general library and every serious music-lover with a working knowledge of the German language should own a copy of this attractive book.

## BRUCKNERIAD: A SYMPHONIC ODYSSEY

### I. ALLEGRO: STORM AND STRESS

1864—Anton Bruckner, organist, forty years old, and residing in the Upper Austrian provincial city of Linz, composes his first major work, the *Mass in D Minor*. Through his young orchestration-teacher, Otto Kitzler, conductor at the Linz theatre, he has come to know something of the fiery style of Richard Wagner, the master of the so-called "New Order" (Neue Richtung) in music, but this acquaintance is still restricted to the score of *Tannhaeuser*. In fact Bruckner's enthusiasm for Wagner's music is so limited at this stage that Kitzler urges him in vain to attend a Wagner performance during a sojourn in Vienna.

1865—Bruckner begins to compose his *First Symphony, C Minor*, in reality his third attempt in the great instrumental form. The marked "Storm-and-Stress" character of this work reflects clearly the tremendous inner struggle that is raging in Bruckner's soul at this time, compelling him to seek the opinion of the highest musical authority in the world.

Armed with the still incomplete score of his new symphony he travels to Munich, Europe's musical storm centre and finds the city in the throes of the preparation for the greatest artistic event of the century, the world-premiere of *Tristan*. He introduces himself to Buelow, then only thirty-five, and still unembittered and approachable.

Describing this incident in later years to his biographer, August Goellerich, Bruckner said:

Buelow examined my *C Minor Symphony* with great interest, giving alternate expression to his admiration of its beautiful ideas (as he styled them) and to his astonishment at the daring craftsmanship it displayed. "How splendid!" he exclaimed at one passage, and "What daring!" at another. At a certain particularly bold trombone passage he suddenly called out. "Ha, this is dramatic!" I said, "It's nothing out of the ordinary". Later I introduced myself to the master (Richard Wagner) who proved unusually kind and friendly towards me, seeming to take a liking to me at once. When Buelow told him about my symphony the master also asked to see it, but I did not have the courage to show it to him. Why, I could not even bring myself to sit down in his presence, at first, but he was reassuringly congenial and invited me to join his circle every evening. And so it went during the whole two weeks I remained there, waiting for the postponed *Tristan* performance. When, at the expiration of this time, Frau Schnorr (*Isolde*) was still ailing, I decided to return to Linz, although Wagner urged me to stay and wait. Somewhat later the premiere of *Tristan* did take place, but I could not obtain permission to return to Munich before the third performance. Wagner was very glad to see me and thanked me personally for having come again, but I did not dare show him any composition of mine even then.

1866—Bruckner finishes the *First Symphony* and composes his second great mass (*E Minor*). Overwork, discouragement due to continued neglect, his first unhappy love-affair, and the general hopelessness of the outlook for his artistic future bring about a total nervous collapse.

1867—On the verge of threatening insanity he is sent to Bad Kreuzen in the care of a priest. Thankful for his rescue from a horrible fate he composes his third, last, and greatest mass (*F Minor*).

1868—Filled with new hope he takes up cheerfully his duties as conductor of the "Frohsinn" singing society of Linz. Planning to make an approaching Festival Concert of the organization a sensational success he suggests that the Committee appeal to Richard Wagner for an original composition suited to their needs. He encloses a note of his own with the official request. Wagner answers Bruckner as follows:

I address myself to you, both to convey my thanks for your very friendly note and to ask you to tell the gentlemen of the "Frohsinn" how glad their warm message of encouragement has made me. I should be very happy indeed to accede to their request for an appropriate composition of mine for male chorus, but, as you must realize, a work of such a nature is scarcely to be found among my compositions. Still, after thinking the matter over, since you mention a Festival Concert with an assisting orchestra and female chorus, I believe I can offer you something that will be quite to the point. It is the closing section of my latest dramatic work, *Die Meistersinger*.

This is a Bass Solo, very grateful, without being really difficult, and requires, in addition, the full chorus and orchestra. Write to Fr. Schott, Mainz, for a copy of the piano arrangement, two acts of which are now ready, with the third soon to follow. Most likely, the engraving of the orchestral score of the Third Act is also sufficiently far advanced to make it possible for you to get hold of a proof copy of the section you will need. If not, ask Choir-Master Hans Richter of the Munich Court Theatre to obtain a copy for you.

The section I mean begins with the words "Verachtet mir die Meister nicht." ("Scorn not the masters".) Please announce to the executive committee of the "Frohsinn" that I accept with much pleasure the Honorary Membership to which they have elected me and shall look forward with real interest to any further communication from the Society. With most sincere, friendly regards, I remain,

Faithfully,  
Richard Wagner.

Munich, Jan. 31, 1868.

Thus it came about that the world-premiere of the last scene of *Meistersinger* took place at a rustic festival in Upper Austria, under Anton Bruckner's baton.

1868—Bruckner's *First Symphony* receives its first performance, at the Redoutensaal, Linz, the composer conducting, May 9. Encouraged by this success, but convinced that his future progress requires a wider sphere of artistic activity, he plans to secure a position as organist or conductor in some musical capital. Good friends use their influence in his behalf in Vienna. His secret longing is to live and work in Munich, the city of Wagner, the center of the "New Order," of which he (Bruckner) feels himself a part. He appeals to Buelow for help:

Please forgive me, Baron, for annoying you with a humble plea now, when every moment must be as precious as gold to Your Excellency. I am compelled to do this because of most urgent circumstances.

I have been fortunate enough to achieve fame as an organist in my country. In Vienna people say I am the best organist in Austria. As a pupil of Sechter I have a certificate conferring upon me the right to teach in conservatories. I have composed several Grand Masses, the first of which was given in the Court Chapel at Vienna with such great success that a second performance was at once ordered by the imperial authority.

Your Excellency showed me the graciousness, a few years ago, of looking over some parts of my *C Minor Symphony*. Would you now be so kind as to answer this question of mine in strict confidence? Should my merit be overlooked in my own country (for I cannot stay in Linz forever) would it not be possible for me, through your own and Mr. Wagner's influence, to be granted an audience by the King, so that by playing for His Majesty I may gain his consideration for a position as Court Organist or Assistant Conductor, either in the church or the theatre, I do not care which, so long as I receive a somewhat more generous remuneration than I do at present? Or would this be impossible just now? Mr. von (sic!) Wagner who recently wrote so encouragingly to me would, I am sure, do anything he could to help me. Please tell him about this letter and let me know what he thinks, in addition to your own personal reaction. And if the plan should be possible, how great an annual

salary may I hope for? I await your answer with the utmost suspense. I beg you most earnestly to keep this inquiry of mine a deep secret, and particularly not to breathe a word of it to anyone from Vienna.

Will the third and last performance (*Meisteringer*) take place on the twenty-ninth of this month? If it is at all possible I shall go to Munich to hear the grand work in the company of my magnificent friend and hero, Wagner. I send you my congratulations and deepest respect. I await your gracious answer.

Anton Bruckner.

Linz, June 20, 1868.

Had Buelow and Wagner immediately sent Bruckner a favorable reply, not only would the symphonist have been forever lost to Austria, but the entire character of his art would probably have taken the wildly revolutionary path blazed by his *First Symphony*. Vienna spoke promptly and two weeks after the above letter Bruckner was appointed Professor of Harmony, Counterpoint, and the Organ at the famous conservatory in that city. For several years he yielded to the misguided, though friendly, advice of Eduard Hanslick, arch-critic, and Court Conductor Herbeck, who urged him to concentrate upon a career as organ virtuoso, telling him that if he must compose he should do so "sanely," practically, in short, conservatively. Bruckner heeded them, with the result that he was enabled to celebrate triumphs as a virtuoso in Nancy and Paris in 1869, and in London, at several concerts at the Albert Hall and the Crystal Palace, in 1871. In this "sane" mood he began his *Second Symphony*, a work spiritually inferior to his *First*. The high priests of music in Vienna now looked upon him with real respect. Even the coveted gates of the Viennese Philharmonic Society, that anti-Wagnerian bulwark of conservatism, were thrown open to him. His *F Minor Mass* had already been performed at the Augustinerkirche, and the long, gradual, but safe road to academic laurels that spelled wordly success as surely as it boded extinction to his genius seemed to beckon. He sensed this and in his perplexity clung desperately to his ideal of freedom of artistic expression as he saw it embodied in the brilliant music-dramas of Wagner. The progress of this inner conflict inevitably brought him into open schism with the Viennese forces of conservatism. Hanslick's report of the *F Minor Mass* already contains a hint of the unpopularity that was soon to engulf the name of Bruckner:

Bruckner's *F Minor Mass* commands attention because of its artistic counterpoint and fine fugal technique, as well as its numerous passages of individual beauty. In style and conception (aside from its gigantic dimensions and its great technical difficulties) it points to the *Missa Solemnis* as its model and reveals the powerful influence of Richard Wagner.

—Eduard Hanslick, *Neue Freie Presse*, June 29, 1871.

Although the very name of Wagner had by that time become anathema to all Viennese musicians, Bruckner was too naive and honest to be able long to conceal the spirit of utter worship which he harbored toward the master. Only during his vacation days at Linz had he hitherto dared to give free rein to his true feelings. An incident related by one of the members of the "Froshinn" clearly shows that the opinion of Wagner in musical matters had never ceased to be the supreme one for Bruckner. The time was the summer of 1871:

On one occasion Bruckner, being also bound for Kremsmuenster, where we were to give a concert in the garden of the "Kaiser Max," made the trip by carriage with us, for there was as yet no railroad along that stretch. Suddenly, during an intermission, he threw off his coat, and asking Choir-master Weissgaerber to take care of it for him, disappeared. When the program was over and it was time to think of returning home there was still no Bruckner to be seen. Knowing that he wished to remain there for a day or two as guest of the monastery we handed his coat over to a servant of that institution and went to the market-place where our carriages stood. Just as we were about to start off Bruckner came running up in his shirt-sleeves and, his face beaming with happiness, asked us to follow

him into Fuxjaeger's Tavern. There he climbed upon a table and in a voice shaking with emotion read out to us a letter that had just arrived from Richard Wagner, in which the master praised highly an original composition Bruckner had sent him. Everyone present shouted with joy and crowded about Bruckner to catch a glimpse of Wagner's handwriting.

Bruckner finished his *Second Symphony* in 1872 and, without waiting for a performance or criticism, launched upon a new symphony, a work which he determined to imbue with the unhampered, heroic spirit of the "New Order." With the sweeping power of this resolve he recaptured the flaming manner of his *First Symphony* and brought to it the added wisdom and mastery he had gained during the six year interim of struggle and study. As the score began to unfold beneath his pen he found inner peace and happiness, for he knew that in these pages the strength of his message was no longer marred by the doubts that beclouded the violent "Storm-and-Stress" of his *First Symphony*.

## II. ADAGIO: PER ASPERA

During his vacation in August and September of the following year he made his choice and determined to cast his lot openly with the "new school." With his *Second* and *Third* symphonies under his arm he went to Bayreuth, not merely to get Wagner's opinion of these works but to secure his public approval and support as a symphonist of significance. His highest hope was to obtain consent to dedicate a symphony to the "master of all masters," as Bruckner called Wagner. The details of this meeting with Wagner remained throughout Bruckner's life the proudest of his memories and he never tired of relating them. Like a child he continued to harp upon the fact, so incredibly wonderful to him, that the "divine genius" had declared a Bruckner symphony worthy of being coupled with his name. Any one of a great number of letters might be cited to present Bruckner's version of the story, but perhaps the one he wrote to Baron Hans von Wolzogen of Bayreuth in Sept. 1884 is the most characteristic:

It was sometime about the beginning of 1873 (for the Crown Prince Frederick was just then at Bayreuth) that I asked the master's permission to lay before him the score of my *Second* and *Third* symphonies. He complained of the press of time (theatre construction, etc.) saying that it was not only impossible for him to examine my music at that moment, but that he could not even give the score of the *Ring* any attention. I said, "Master, I know I have no right to deprive you of even a quarter of an hour, but I thought that for you an instant's glance would be sufficient to grasp the quality of my work. Then he tapped me on the shoulder and said, "Well, then, come on in." We entered the *salon* together and he opened the *Second Symphony*. "Yes, yes," he remarked, glancing through it hastily, and I could see that it seemed too tame to him (for they had at first succeeded in intimidating me at Vienna.) Then he began to look at the *Third* (in D Minor) and at once exclaimed, "Look! Look! Now, this is surprising!" and so he went carefully through the whole opening passage (he particularly remarked the trumpeter theme). Then he said, "Leave this score here; I want to look through it more thoroughly after dinner." (It was twelve o'clock.) "Shall I tell him now?" thought I and Wagner, sensing my hesitation, gazed inquiringly at me. Then with pounding heart, and trembling voice I said, "Master, there is something on my heart which I hardly dare to tell!" and he said quickly, "Out with it! Don't be afraid! You know how much I think of you." Thereupon I revealed my longing, adding that I wished permission for the dedication only if the master was really willing to grant it, for I feared above all to cast any unworthy reflection upon his sacred name. He replied, "Come and see me at Wahnfried at five this evening. Meanwhile I shall have examined your *D Minor Symphony* carefully and we shall then be able to decide this matter." At five sharp I entered Wahnfried and the master of all masters hurried forward to greet me, embracing me, while he exclaimed, "Dear friend, the dedication is truly appropriate; you have given me great joy with this symphony." For two and a half hours thereafter I had the happiness of sitting beside him while he spoke of the musical conditions in Vienna and continuously

served me with beer.\* Then he led me into the garden and showed me his grave!—I left Bayreuth the next day, and he wished me a pleasant journey, reminding me, "Remember, where the trumpet sounds the theme!"\*\*

During the years that followed, in Vienna and in Bayreuth, he would often ask me, "Has the symphony been performed? It must be performed. It must be performed."

In 1882, when he was already suffering from severe illness, he once took my hand, saying, "Don't worry. I myself will perform the symphony and all your works." Moved, I could only exclaim, "O master!" Then he asked, "Have you heard *Parsifal*? How do you like it?" And then, while he still held my hand, I knelt before him and pressing it to my lips, said, "O master, I worship you!" Then he said, "Be calm, Bruckner," and a moment later, "Good-night," and he left me. On the following day he sat behind me during the *Parsifal* performance and scolded me for applauding too loud.

The touching incident and the little humorous one that formed the latter part of this letter take us far ahead of our main story; yet they are of importance because they describe the last occasion upon which these two great figures ever met on earth. Wagner died shortly after, leaving to his zealous disciples the fulfilment of his promise to secure universal recognition for Bruckner's art.

In the meanwhile Bruckner, wildly happy because of Wagner's acceptance of the dedication, turned his gaze homeward toward beautiful Vienna, where he fully believed his star to be in the ascendant. He little dreamed that this moment of happiness was the prelude to thirteen years of a martyrdom of scorn and neglect such as have rarely if ever embittered the lives of any other great men in the history of art; and the grand dark climax of this ordeal was to be the premiere of this very *Wagner Symphony*, the saddest and most amazing first performance of a great work on record. But that is also some years ahead of our story.

Only a month after Bruckner's return from Bayreuth occurred one of the happiest events of his life, the initial performance of his *Second Symphony*. The executant orchestra was the mighty Viennese Philharmonic, perhaps the best instrumental organization in the world at that time. Bruckner conducted in person. Once more the critic Hanslick sang his praises of the rising Austrian composer, though he did not forget to inject a reminder of his previous warning against the evil Wagnerian influence perceptible in the work. Bruckner's own impression of the reception given the *Second Symphony* may be gathered from a letter he wrote to his old comrades of the "Froshinn" a few days afterwards in answer to the proud congratulations they had sent him upon his great success.

I am very grateful for your loyal interest in my progress. It makes me all the happier to feel, as one of you, that I have not disgraced the name of the Society. The highest tribute of all, completely unknown to the audience, was paid me after the concert, in the great reception-hall where the members of the Philharmonic Orchestra, who had played like gods, waited to give me an ovation which mere words cannot describe. It will remain the most memorable day of my life as an artist!

Shortly after this concert Hanslick must have heard about the new symphony Bruckner had dedicated to Wagner. In the next months Bruckner was given ample opportunity to know that any further progress for him in Vienna must be made against the hopeless odds of the same avalanche of opposition that the heroic Wagner was facing. The Vien-

\*For a detailed account of this humorous episode see *The Life of Anton Bruckner*, by Gabriel Engel, pp. 22-23.

\*\*Engel's *Wagner Kalendar* (the page devoted to Aug. 20) is a facsimile of Bruckner's question in his own handwriting, *Wo die Trompete das Thema beginnt?* and Wagner's signed answer, also in his own handwriting, *Ja, Ja! Herzlichste Gruesse*. This card is one of the most highly treasured possessions of the Wagner Verein in Vienna.

nese press, the Philharmonic, the Conservatory, these were obstacles such as seemed to lend only greater glory and invincibility to the supreme music-dramatist's conquering advance, but to the shy, helpless Bruckner they meant heart-breaking oblivion for many a year.

Bruckner, unaware of the new dark undercurrent that was forming, now reviewed his professional career and, modestly enough, concluded that he would be justified in seeking material promotion. In addition to the miserably paid professorship at the Conservatory which had lured him to Vienna six years previously, he had attained two subordinate positions the significance of which was practically limited to their mere titles. One was the post of Associate Organist of the Court Chapel, the other, that of Assistant Teacher of Piano and Organ at the St. Anna Training School for Female Teachers. "Why not a chair for Harmony and Counterpoint at the University?" thought he, and sat down to write his application therefor to no other than—Prof. Hanslick. Sorry, old man, answered the academician, but we have no such post. Bruckner, undaunted, wrote another application, proving that in such times and in such a city, when and where music was of vital consequence, there should be such a chair. No, answered Hanslick, coldly, the language and grammar of music are the business, not of a university but a conservatory. Still failing to understand, Bruckner wrote again, eliciting the same curt reply. Then he began to "smell a rat." He made a fourth application through another channel, but eventually this also arrived at the arch-critic's desk for final judgment. Prof. Hanslick's impatient cocidal to this document clearly transcends the impersonal dignity which alone befits an official comment:

I find in this application no facts that call for a revision of my previous views respecting this matter. *There is, furthermore, no evidence present that Mr. Bruckner has ever produced striking results as a teacher of composition.* (May 15, 1874)

Nevertheless, Bruckner persisted and made three further attempts, at length securing the desired appointment over Hanslick's head, thereby adding to the critic's store of anti-Wagnerian wrath against him an element of purely Bruckneresque texture. This long series of applications stretched over a period of almost two years, beginning early in 1874 and continuing until Bruckner's appointment as Lecturer on Harmony and Counterpoint at the University of Vienna on Nov. 18, 1875. He delivered his first lecture there on Nov. 25.

A view of the bare facts presented above might well lead those unacquainted with the more private details of Bruckner's life during this period to conclude that he was, after all, only a stubborn meddler, a nuisance. It is perhaps just, therefore, in this connection, to cite an illuminating letter written by Bruckner to his friend Moritz von Mayfeld on Jan. 12, 1875. Ever since his return from Bayreuth over a year before this Bruckner has been "turning heaven and earth" to bring about a performance of the new *Wagner Symphony*.

He seems, in this letter, to feel that the whole world is against him and does not even hesitate to name Brahms as a personal enemy.

My *Fourth Symphony* is finished. I have thoroughly revised my *Wagner Symphony*. Wagner's conductor, Hans Richter, was recently in Vienna and related in several circles how enthusiastically Wagner speaks of the work. But they will not perform it. Dessoff rehearsed it during the vacation, and even sent for me (for the sake of appearances). Later, breaking the promise he had made early in October, he told me that he was sorry, but the program was full. Some of the musicians of the Philharmonic, unsuspecting, still believe that my symphony is to be given. It seems that Brahms has banned my *Second Symphony*

in Leipzig. Richter, it is said, would like to perform the *Wagner Symphony* in Budapest. The injury that Hanslick has done me may be seen in the old "Press" of Dec. 25.

Even Herbeck says that I should try to get some help from Wagner in person. I have only my position at the Conservatory, on which it is impossible to live. I had to draw an advance of 700 florins in September or starve. No one wants to help me. Stremayr makes promises—but does nothing. Fortunately, a few foreigners have come to study with me—otherwise I should be compelled to turn beggar.

Just a little more patience, please: I have implored all the leading piano-teachers to recommend lessons to me, but beyond a lesson or two in theory I have received nothing. You will now realize how serious my plight has become. I would gladly settle abroad if I were only assured an existence. Whither shall I turn? Nothing could have induced me to come to Vienna if I had only had a hint of what was to come. It would be easy for my enemies to force me out of the Conservatory. I am really surprised that they have not yet done so. Students of the University and Conservatory, and even the menials are highly indignant over the treatment I am receiving. My life has been robbed of every joy—through pure malice. How gladly would I return to my old place as organist at Linz! If I had only gone to England then!

Filled with despair, and meeting with scorn or indifference wherever he turns, Bruckner nevertheless submits his *Wagner Symphony* to the Philharmonic again, for he cannot believe that the organization which was formerly so friendly towards him has abandoned him completely. The note accompanying the score is dated Aug. 1, 1875:

Although I finished my *Fourth Symphony* some months ago, I have not yet experienced the happiness (with the exception of my *C minor Symphony*, so kindly performed by the Philharmonic) of having any of my works produced in Vienna. Therefore I take the liberty of submitting to the honorable Committee of the Philharmonic one of these, a symphony dedicated to the great tone-poet Richard Wagner in 1873 and highly praised by him. I beg that this work, surely not the most insignificant of present-day compositions, a fact perhaps best attested by the judgments of Liszt and Wagner, be included in the list of symphonies to be performed by the Philharmonic during the coming winter season, 1875-6. Should the Committee so desire, I am willing to have the symphony divided into two sections, to be given on two separate occasions.

Had not Bruckner already made bitter personal enemies of most of the musical powers in Vienna his naive emphasis of the praise of Liszt and Wagner would have sufficed to destroy any chance he might have had to secure the cooperation of the Philharmonic. Two more seasons passed during which his sole consolation was in a handful of brilliant students and young adherents, among whom was the sixteen-year old Gustav Mahler. This young genius revealed his homage towards Bruckner's art by making a piano arrangement of the *Wagner Symphony*, the first ever to be published. (A copy of this arrangement is to-day a genuine musical rarity.)

In 1876 Bruckner attended the premiere of the *Ring* at Bayreuth, but in the tremendous excitement of the Festival there was no moment left for the consideration of so humble a matter as a Bruckner symphony. The following year Conductor Herbeck, who had always cherished a high regard for Bruckner's talents, determined to do his utmost to bring to an end the malicious neglect of so fine an artist by his own countrymen. He suddenly announced, to the amazement of all, that he himself would produce the *Wagner Symphony*. Bruckner now took heart once more, even looking about for added performances that might follow this promised one. To a Berlin critic, Wilhelm Tappert, who had expressed an encouraging interest in his work, he wrote:

My *Wagner Symphony* (second revision) is complete, and Herbeck will perform it on Dec. 16, at the Musikverein Concert. If I can attract the interest of Director Bilsse, I should, with your permission, like to send this symphony to you. There would still be time for you to use it, if you should care to do so. Our Philharmonic is absolutely antagonistic to the "New Order" in music. I shall never again submit any of my works to them, for they have repeatedly rejected my offerings.

How Hans Richter can remain on the best terms with Wagner's bitterest opponents is truly a wonder to me. Alas, I have also come to know him as the arch-liar he is. Only recently have many of Wagner's statements become clear to me. I implore you not to be turned against me by the many malicious statements being made about me.

Two weeks after this letter was written, when Bruckner was just beginning to taste the joys of promised victory, the newly rising sun of his career was cruelly blotted out by a momentary whim of Fate. Herbeck died suddenly on Oct. 28, leaving to the unhappy composer the bitter choice of once more shelving the *Wagner Symphony* or conducting it himself, for no conductor in Vienna would have dared to step into the perilous breach left by the brave Herbeck.

In sheer desperation Bruckner refused to abandon this last opportunity of performing the work, although success was now hopeless. The concert took place on Dec. 16 before a fashionable Viennese audience of gay music-lovers. The symphony, allotted the last place on a long program, began so late that many listeners were already thinking of leaving the concert-hall.

The details of the fiasco that ensued were so unforgettably tragic that the laurel wreath which a few of his faithful students pressed into his hands as he fled from the hall may have well seemed to Bruckner the "crown of thorns" an Austrian poet has called it in a fine, recently published novelette.\* This little book of scarcely thirty pages presents a realistic and sympathetic conception of the aged symphonist's last day on earth. The dying master has just managed to totter back into his room from the garden whither he has stolen from his bed while his faithful old servant Kathi was not watching. A confusion of fantastic shapes dances before his feverish gaze. He grasps convulsively at them and seizes one, when his vision clears suddenly, revealing clutched in his hand the laurel wreath of the *Wagner Symphony* premiere. He recognizes it at once. His thoughts fly swiftly back to the distant past. He experiences all over again the vivid spiritual adventures of that torturing hour almost twenty years before.

### III. SCHERZO: BRUCKNER PREMIERE!

—RUDOLF LIST

A great hall illuminated by brilliant chandeliers. In the loges the glitter of countless jewels; the air is heavy with the mingled scent of rich perfumes. Anton Bruckner is about to grasp the baton. He meets the eye of one of the violinists, leering diabolically at him. From the direction of the flutists malicious chuckles grate upon his ear.

A lady in the first loge stares at him with contempt. What on earth can a creature like this Bruckner possibly know? Once a rustic tutor. To-day, by the grace of Herbeck and the churchlings, professor at the Conservatory. Thank heavens, we shall have to stand for no more from Herbeck. That "progressive" spirit actually thought he had unearthed a new Schubert. "Look, Egon," inclining coquettishly toward her neighbor, "This Bruckner, with his funny frock-coat, looks like a misplaced village waiter! How clumsily he holds the stick! He's simply awful! An ordinary peasant lout! Smoked ham, with dumplings and

\*Rudolf List: *Kleine Brucknernovelle*; Buchhandlung Ludwig Auer, Wien, 1933. Price, 1 Mark. Section III of the present article is a translation of pp. 11-19 of this novelette, published in *Chord and Discord* by kind permission of the copyright owners. The translation is by the Editor.

cabbage, personified! Gehring certainly hit the nail on the head when he called Bruckner a super-ass."

These remarks rise to Anton Bruckner's ear above the murmur of the audience, as though coming through a thin wall. It seems to him as though all the voices behind him are echoing the insults; some in the suave tones of polished elegance.

He struggles to collect himself, leaning heavily against the conductor's desk, like a drunkard at bay against the creatures of his delirium. If only Herbeck were still alive! Then he, Anton Bruckner, composer, would have been spared the ordeal of this evening. "Harmonizing", as Kathi always called it, yes, that was his sphere, but to stand and conduct before such an audience. . .

Or if only Richard Wagner were present, so that he might hear the "Third", the dedication of which he had accepted in so friendly a manner! Then those jealous defamers, those Hanslickians, would have to be mighty careful.

But he stands here now alone among hundreds, utterly alone, like a helpless organist at a gigantic organ, all the stops of which rebel against his touch. Well, there is no help for it; it is not God's will that Anton Bruckner be spared even this hour of bitter trial.

During the opening bars, with their buzzing figures in the violas, he is still filled with the despair of the moment. But as the solo trumpet, a voice from heaven, sounds the revelation of the first theme in sustained, soft tones, he once more feels firm ground beneath his feet and the breath of God enveloping him. He remembers that his faith in his mission must not be shaken; despite all pain, he must continue to serve, dispelling sorrows and timid repressions. A mysterious smile plays upon his lips.

Will Hanslick and the other gentlemen of the press write again to-morrow about his "insatiable rhetoric" and his "total wreck of a form"? Now, would it not be a fine thing if Anton Bruckner cared an iota what the critics said?

The master forces his thoughts downward towards reality. His whole attention is on the music. Upon its aspiration to pierce the veil of Eternal Splendor. How inevitably some obstacle, mundane and bitter, keeps hindering the ascent to the stars! Counter-theme in unison; earthly oppressiveness and pain, torturing doubts, treacherous seductions. Sin in ambush everywhere. Even in his own turbulent blood. Often he has felt it, boiling and pounding furiously. Again and again. . . .

Then one must be strong and pray. *Sursum corda!* To lose heart means defeat. The fanfares of faith must overwhelm the voice of every weakness. Always think of the cathedrals where the lamps of God are alight and mighty columns stretch toward heaven. They blossom aloft on the chiseled chorus of the brass-choir ascending in *bG* major. Day and night glow the lamps of the Lord, shedding their eternal, divine illumination. Life is a battle, not a dream. And you must often go weary to sleep before you have gained the ultimate victory. Deem it enough, if you may take the least touch of the divine essence with you into your night, that you may not have to wake on the morrow to the unmitigated solitude of mortal loneliness.

The master pauses. The first movement is over. In the foremost seats of the parquet and in the loges the listeners have risen. They rush from the hall, gesticulating vehemently.

Anton Bruckner follows them with his eyes as though his most loyal and last friends are now deserting him. The first three rows and

almost all the loges are empty. Slowly he attains full realization of the truth he had at first only vaguely suspected. People have made a scene of their departure. They want to show the management of the *Friends of Music* concerts that such a thing as a Bruckner symphony desecrates the program.

He asks himself in torment which part of the first movement they may be regarded as a violation of traditional form. Then he again sees malicious grins on the faces of the violinists; he hears a discontented murmuring in the audience. He must not pause any longer. He gives the signal for the *Andante*.

♩E major. Remembering Wagner's wish Bruckner conducts the main theme with great breadth of feeling. The orchestra obeys him against its will. The strings, spiteful, commence to hurry.

Not until the sweet *pianissimo* resignation of the ensuing triplet-figure whispers its secret credo into his ear do his silent anger and the utter forlornness of his troubled heart melt away. What does it matter, even though all conspire against him? That one, who understands him completely, means more than all the others together. In the moment of deepest resignation this thought uplifts him to a new triumph: the master has approved the symphony; the unapproachably great and exalted master! If such a man is scorned, Bruckner, too, is content to be reviled. As the master, so his vassal.

The violas sing a blessed consolation. Anton Bruckner bids the string-melodies blissfully fold their hands in devout harmony before a holy *mysterioso*. Out of mighty fanfares of jubilation issues the breath of humanity falling asleep in God.

The hall becomes a yawning emptiness. Even before the close of the second movement many of the people have risen and stolen quietly forth. In the standing-room parquet an excited argument is taking place. It must be young Mahler again, scolding one of the Brahmsians.

At Windhaag the people had run out of the little church just as they fled the concert to-day. Too free a fantasy! Yes, that had always been his trouble. Once it was the master-wagoner Krempelmeier (God forgive him!), to-day it is the high and mighty Hanslick, who condemns him for it.

In the depth of his moody meditations he has almost forgotten about the *Scherzo*. The people—if there are still any left in the hall; he is really afraid to turn and see—must begin to believe that Anton Bruckner has succumbed to his own monotony and tiresomeness.

In the *Scherzo* all his troubles are forgotten. Now he is once more back in Windhaag. It was such a fine little village! After all, what difference does all this chatter about his music make to him? Anton Bruckner makes music entirely for himself.

Heigh-ho, now the village-girls are dancing. His yellow-haired Theresa is there, too. A mighty pretty girl, far prettier than any of these rouged ladies who have come to the concert out of sheer curiosity.

Look out there! Theresa is again dancing with Bertl Gueltbauer. But Toni Bruckner must fiddle away for all he's worth when things are as jolly as this; no time for him to join in. How he would love to have a dance now! Especially with Theresa Bergner; as pretty as a picture, she is; just made for kissing. Careful there, Toni; yielding to temptation is always a sin. The deed is easy, atonement hard.

Stop! the first violin is playing much too fast. Franz, you—Bruckner, where do you think you are? This is not a village-dance at Windhaag. . . .

The first violins are forging perilously ahead. Now they are all together again. So, it seems, the feet of the "gentlemen musicians" are not entirely immune to the rhythm of the country *Laendler*. Just now, for instance, that went pretty well, the peasant's joyous yell. But O, those birds—it's too bad—I fear they don't dare sing out; I guess, they are only sparrows from the Viennese City Park, after all. A little more freshness wouldn't do their voices any harm.

And now comes the *Trio*: not much can be expected from that. A flirtation as conducted by the "gentlemen musicians" can hardly be in the same dialect in which "one of us" makes love to Theresa by the little brook... Oh yes, Theresa was really in love with him. But Bertl was always more masterful and won her consent. Those were unforgettable days in Windhaag: Dirt-shoveling, fiddling, organ-playing; but there's an end to everything.

At the last bar of the *Trio* a shameful tear glistens in Anton Bruckner's eye. What a disgrace it will be if anyone notices it and the papers tomorrow write: Anton Bruckner felt humiliated and broke down when he perceived that his symphony is worthless. Swiftly, then, he raises the baton and gives a hurried signal to begin the *Finale*.

The musicians gaze at him with frank astonishment, but follow his impatient bidding. Let him, since he asks for it, have that great joy: when he turns around at the end what a sight he will see! There are scarcely ten people left in the hall.

During a swift *pianissimo* passage in the violins Anton Bruckner furtively wipes a tear out of the corner of his eye with a knuckle of his left hand. Only not to despair! Even though the calamity of total misunderstanding burst in upon him on a rising *crescendo* with the force of a tempest, it cannot crush him who stands resigned before his God. He can, with complete confidence, defy all opposition, hidden or open, with a *fortissimo* of trumpets and trombones.

Yet life will always be a paradox: wedding-dance and funeral, cradle-song and burial wreath are like hands inextricably intertwined. Of one flesh, one blood, one heart-beat, and yet not similar. And while the violins play a polka at a dance, there across the road in the graveyard the musicians blow a solemn parting chorale. Both must hurry. Pleasure is impatient and sorrow cannot wait. And many a time it has happened that in the same hour an infant draws its first breath of air upon arriving at this pleasure garden of a world, its mother sighs her last and closes her eyes forever upon a dark, earthly journey.

It would all be a strangely childish and meaningless game if there were not spread above it the canopy of heaven, the cathedral of faith and trust, the mighty arch of which, curving downward in simultaneous splendor and humility, sheds over mortals an infinite compassion.

Anton Bruckner fights the battle to an end. He holds in his hand the sword of a soldier of God: a St. Michael clad in the bronze of austere chords and rhythms; in the invincible steel-like advance of the first theme, Victory, in the D-major miracle of divine salvation.

Anton Bruckner, beneath the spell of heavenly bliss, stands listening to voices issuing out of Eternity. When he awakes to reality, the musicians have gone. The hall yawns cruelly at him, one vast mocking grin. The master takes up his score and stumbles out.

Outside in the dimness of a passage his "gentlemen pupils" are waiting to give him the laurel wreath of thorns.

## IV. FINALE: AD ASTRA

For seven years after this premiere the composer Bruckner remained practically hidden from a world convinced by the unanimous voice of a critical cabal that his work was an insignificant, plagiaristic echo of the mighty revolutionary music-dramatist. The merciless Hanslick's review of the *Wagner Symphony* sounded the dictatorial keynote for the other Viennese critics:

I could not make head or tail of the "gigantic" symphony. While listening I had a vision in which the *Ninth* of Beethoven became too friendly with Wagner's Valkyr maidens only to be trampled under the hoofs of their horses. I do not wish by this opinion of mine to hurt the feelings of the composer, for whom I really have the greatest regard.

The cup of misery he was thus compelled to accept could not poison a spirit so strong in faith as Bruckner's. Regardless of all scorn and neglect he went on composing and revising. He reshaped his *Fourth* and *Fifth*, finished his *Sixth* and *Seventh*, each work riper and grander than the preceding one. He was well advanced in the composition of his *Eighth*, the "Crown of Nineteenth Century Music" (as the great conductor Hermann Levi called it) when, like an angel, world-fame suddenly made its radiant appearance before his aging, humble eyes.

With a baton flaming with zeal and enthusiasm his young disciple Arthur Nikisch, in a single hour of inspiration, blazed the way for Bruckner into the hearts of European music-lovers forever. It was the memorable premiere of the *Seventh Symphony*, with its irresistibly appealing *Adagio* of premonition, begun in the mournful moment when the composer realized that he might never again see his great friend Wagner alive. The death of Wagner shortly afterwards had stamped this music as real prophecy, and all who heard it could feel that into the melancholy revelation Bruckner had poured the spiritual beauty of the deep, true friendship he had cherished through all the years for the departed "master of all masters."

Concerning this unforgettable premiere in the famous Gewandhaus at Leipzig on Dec. 30, 1884, I quote a paragraph from my own "Life of Anton Bruckner":

As the last note died away there was enacted a scene of unparalleled enthusiasm, the applause lasting fully fifteen minutes. Then Bruckner appeared on the stage dressed in his simple manner and bowed repeatedly in answer to the unexpected ovation. The following day one of the Leipzig critics said: "One could see from the trembling of his lips and the sparkling moisture in his eyes how difficult it was for the old gentleman to suppress the deep emotion he felt. His homely, honest countenance beamed with a warm inner happiness such as can appear only on the face of one who is too goodhearted to give way to bitterness even under the pressure of most crushing circumstances. Having heard his music and now seeing him in person we asked ourselves in amazement, 'How is it possible that he could remain so long unknown to us?'"

Shortly after this the symphony achieved a still greater triumph in Munich under the baton of that great Wagnerian, Hermann Levi. And still the childlike Bruckner was afraid of Vienna. When the Philharmonic Committee seemed inclined to perform the famous symphony he actually prepared an injunction to prevent such a performance, for he believed that Hanslick could, with a mere stroke of his pen, nullify the recognition that had come to him from Germany. Reassured by the suave Hans Richter, who wished to join the long list of conductors who had scored successes with the work, he finally agreed to risk a Viennese premiere. The concert took place in March, 1886, and proved very painful to Bruckner's enemies, giving them a powerful hint of the complete surrender in which they would soon be compelled to join. Hanslick, quite pettishly, wrote of the performance:

Certainly, it is without precedent that a composer should be called to the stage four or five times after each section of a symphony. Personally, I must confess myself incapable of an unbiased judgment of Bruckner's symphony, for it is so thoroughly unpleasant to me that it strikes me as being merely bombastic, sickly, and destructive.

Bruckner continued to harbor misgivings as to the relentless opposition of the anti-Wagnerites. On June 16, 1886, he wrote to his friend W. Zinne of Hamburg:

Such aggravating statements have come to my ears concerning Hanslick and Brahms, that I would rather be silent about the whole matter, but my heart is full of worry. Hanslick influences two other critics to slander me. They try every possible means of cooling Hans Richter's enthusiasm for me, for they know only too well Richter's fear of the press.

On Feb. 13, 1887, Baron v. Wolzogen received the following plaintive note from Bruckner:

Buclow is saying terrible things about me, just as he does about Berlioz, Liszt, and still more about Wagner himself. He says that Brahms alone has brought him the true musical revelation!!! etc. In company with Hanslick he will do me great harm. Hans Richter has surrendered to Hanslick's influence and once more everything is as dark as it used to be in Vienna.

And later, also to Wolzogen:

What a puzzling stand for Hans Richter to take! Only two weeks ago he declared before witnesses that I am a crazy musician without any sense of form and called the Brahms *Third* the new *Eroica* (of course, to curry favor with Hanslick.)

By 1890 Bruckner's suspicion and fear seem to have grown into an obsession. To Wolzogen again:

The Brahms cult here has taken an incredible turn—and with Hans Richter in the front rank!! He declares that the "new music" has no justification in the concert-hall and fears (because of Hanslick) to program any of my works.

His fears proved unfounded, for on Dec. 21, 1890 the Philharmonic under Richter gave both the original and the second versions of the *Wagner Symphony* on a single program! Next day, the Philharmonic received the following note from Bruckner:

Kindly permit me to convey to you my heartfelt gratitude and deep admiration for your highly poetic and extremely artistic performance of my *Third Symphony*. I wish particularly to thank Dr. Hans Richter and all the distinguished artists who assisted him with such sincere enthusiasm.

Long live the honorable gentlemen of the Philharmonic!

And to Wolzogen he wrote:

On the twenty-first of this month my *Third Symphony* met with a success such as is without precedent in the concerts of the Philharmonic. I was called to the stage twelve times. I was so moved that after the concert I wept, along with Wolf and Schalk. Only one was missing to complete my happiness—the indescribably great One who so generously conferred upon me the distinction of accepting the dedication of the symphony. Could this great One have been there to say to me, "Now, Bruckner, I am satisfied"—ah, what happiness would have been mine! Then I would have wept, indeed!

## MAHLER'S ART: A NEW SURVEY

The esthetic history of no generation is without its record of the failure of some great creative artist to attain general recognition. It would be consoling, indeed, to believe that this melancholy phenomenon has invariably been due to honest popular misunderstanding. Time, relentless exhumers of suppressed, sordid facts, eventually reveals the far darker cause that has often brought about the tragic neglect of true greatness by its contemporaries. Although too varied and subtle for any sweeping definition applicable to the whole range of art, this cause, in the realm of music, at least, seems almost always to have worn the face of organized hostile critical propaganda sprung from the personal antipathy of some arch-critic toward an isolated composer. A host of American music-lovers still remembers clearly the virulent campaign of the New York critic Krehbiel against Gustav Mahler; and the poisonous Krehbiel episode was but the American version of numerous sworn critical enmities the unpopular fanatic Mahler had attracted in the musical capitals of Europe before setting out to seek a more sympathetic and just hearing in the New World.

Throughout his life beyond the pale of the "accepted", Mahler's artwork persists to-day, twenty-three years after his death, a matter of heated controversy. In many ways it seems strange that his achievement should still be problematical. There is about his music nothing of a forbidding austerity or baffling crypticism. In fact, to the utterly modern-minded Mahler appears too obvious, for the idiom of his music is almost totally free from such startling tonal deviations as lend a sensational character to the contributions of most of our own day's "modernists", the so-called *atonalists* or the exponents of the quarter-tone dialect. Even a generation ago his music, though somewhat off the beaten track, was by no means the strangest of the age, for those ultra-exotics, Debussy and Skriabin, were among his contemporaries.

To many musicians, particularly those of a passing order, Mahler is still the insignificant author of extremely long, tedious, complicated, bombastic, over-scored works. Daniel Gregory Mason makes the following nonchalant remark in his little book on appreciation, *From Song to Symphony* (p. 227):

It (Strauss' *Alpine Symphony*) and all the heavy music of Mahler, Reger, and others of which it is typical, in which the overfed body has suffocated the soul, reminds us of the ironical advice of Flaubert to a young architect: "If you do not know how to build the Parthenon, pile up the Pyramids."

Yet it is said that Bruno Walter (who studied with Mahler) and Mengelberg consider him one of the greatest composers who have ever lived. Such extreme verdicts, of course, prove nothing, but the mere fact that men of Walter's and Mengelberg's eminence should sponsor so high an estimate is at least a just cause for investigating the case of Mahler with care.

Perhaps the paramount hindrance to the universal recognition of Mahler is his almost constant use of an augmented orchestra. A single performance of his supreme masterpiece, *The Symphony of a Thousand*, is so expensive a project that it is regarded, at least during this box-office-controlled regime, impossible except as the crowning attraction of a grand music festival. It is largely because of this financial consideration

that the musical "powers-that-be" regard a composer's demand for an unusually large number of performers as the unpardonable sin. Influenced by those opposed to gigantic symphonies for economic reasons, the average music-lover believes that the composers of such works labor under an exaggerated conception of their own importance. Although the universal trend of our impoverished day is towards the small chamber symphony, it seems necessary to brand such a superficial view of the augmented orchestra as detrimental to the free progress of musical art. Numerous "accepted" tall-scored works by Strauss, Stravinsky, and others serve as eloquent warning in this matter. At any rate the notion is wholly unfounded in the case of Mahler's prodigal orchestral technique. Any analysis of his great scores with a view to adequate simplification for the traditional orchestral group would at once reveal that excessive tonal volume, i.e., noisy impressiveness, is never one of his aims and that deeper motives calling for unusual instrumental combinations indispensable to his message underlie every instance of his alleged transgressions beyond the normal orchestral confines. If a symphony is scored for an augmented body of performers it does not necessarily follow that the entire group will always, or even often be used simultaneously; nor does it necessarily follow that such a work will contain a larger percentage of fortissimo passages than a Mozart symphony.

Another charge, that of "excessive length", has also prejudiced many against Mahler. His shortest symphony, the *Fourth*, is forty-five minutes long. The longer ones are twice that length, or more. Some music-lovers, without having heard a single one of these symphonies, nevertheless do not hesitate to pass "blanket" judgment upon all of them, saying, "They are too long." Yet the same people will sit through an opera or oratorio of twice that length without flinching. They forget that symphonies also have their individual content and that in a true artwork this content is the chief determinant of the form. Symphonic messages vary tremendously in depth, in intensity, in scope, etc., and cannot be subjected to arbitrary chronometric limitation. Beethoven himself, when he made the *Eroica* twice as long as his *First Symphony*, became the prophet of this truth.

When Bruno Walter gave Mahler's *Fifth* in New York in 1932, although some of the audience left before it was completed, others remained after the conclusion cheering and applauding loudly. Mahler's works usually make a deep impression on audiences. Leopold Stokowski relates the following about the *Eighth Symphony*, which he produced in 1916 for a run of nine performances in Philadelphia and New York:

When we played Mahler's Eighth Symphony it made an impression on the public, unlike anything else I have ever experienced. There seems to be a human quality about this work which so deeply moved the public that the greater part of the listeners were in tears at the end of the performance. This happened at all nine performances we gave; so it was not due to an accidental condition on one particular date.

The Philadelphia "Public Ledger" for March 3, 1916, (the day after the American premiere) read:

Every one of the thousands in the great building was standing, whistling, cheering, and applauding, when Leopold Stokowski, his collar wilted, his right arm weary, but smiling his boyish smile, finally turned to the audience in the Academy of Music last night.

Accounts further relate that the applause was so tremendous that it could be heard inside buildings across the street. Then we also read of the tremendous success of this work at its world premiere in Munich on September 12, 1910 and that of *Das Lied von der Erde* under

Bruno Walter a few months after Mahler's death, in 1911. It hardly seems likely that such approving public reactions should be inspired by music "in which the overfed body has suffocated the soul."\*

With the exception of some immature student works, Mahler's creative work falls within two forms, the symphony and the song, excepting that much-revised cantata, originally conceived as an opera, *Das Klagende Lied*. He wrote eleven symphonies, including the unfinished *Tenth Symphony* and *Das Lied von der Erde*, which many might consider a song-cycle, although the composer subtitled it "A Symphony". The songs may be conveniently catalogued in groups, of which *Lieder und Gesaenge aus der Jugendzeit* are with piano, while the others are with orchestra, namely *Lieder eines fahrenden Gesellen*, *Songs from Des Knaben Wunderhorn*, *Kindertotenlieder*, *Seven Last Songs* (including the *Five Songs after Rueckert*), and, if we are so to consider it, *Das Lied von der Erde*.

Mahler regarded these songs as the keynote to his symphonies. He frequently quotes themes from his songs in the symphonies or uses them as the bases of symphonic movements. In this respect he reveals some kinship with Schubert, who used *The Trout* and *Death and the Maiden* as the bases of movements of chamber-music compositions, while *The Wanderer* found its way into a long *Fantasia* for piano.

The charges advanced against Mahler, as deduced from his symphonies, fall to pieces at once, if applied to his songs. Those who decry against his large orchestras should examine *Ich atmet' einen Linden Duft*, one of the Rueckert songs, a mere wisp of a song, containing but 36 measures and scored only for one flute, one oboe, one clarinet, two bassoons, three horns, harp, celesta, first violins, and violas, in addition to the voice. Those who fear his long fortissimos will search this song in vain for a dynamic indication greater than piano. They will also find the long pianissimo passage which closes *Das Lied von der Erde* very interesting. Those who find Mahler soulless should hear the anguished beauty of the *Kindertotenlieder* and those who find him dry should hear *Rheinlegendchen*, one of the *Wunderhorn* songs—if it is "music in which the overfed body has suffocated the soul," then a Strauss waltz must be the very essence of pedantry! There is an individual quality about the music of Mahler, an individuality not of conscious eccentricity, but of sincerity and genuineness. It is free from all that is stilted or done merely to conform with set standards. There is a quality in his musical texture which is alive and a clearness of outline and keenness in his instrumentation which appeal instantly.

His music, essentially built on the tradition of Beethoven and Wagner, announces not the beginning of a new school but the conclusion of an old one in its fullest richness and maturity. It is the music of unashamed Romanticism—Romanticism of the philosophical, introspective type that is not too blase to be concerned with the great problems of life and of the soul.

\*In a recent interview with William Engle, feature-writer of the *N. Y. World-Telegram*, our business-czar of serious music, Arthur Judson, described his series of performances of the *Symphony of a Thousand* as the most memorable mile-stone of his managerial career. Only two performances had been scheduled. Quoting the *World-Telegram* of Dec. 19, 1933:

"Philadelphia, the first night, was dumfounded. Then it was jubilant. Instead of two performances, ten were given, and the town celebrated as though the Athletics had won the pennant. In New York the Friends of Music heeded. They engaged Mr. Judson to bring the production here, and in a special train the huge cast came, to storm and conquer the Metropolitan."

A person hearing a Mahler composition for the first time might describe it as sounding like the music of Richard Strauss with the mood of Cesar Franck. Its melody, harmony, and counterpoint might remind one of Strauss in numerous respects—the frequency with which both alternate very involved passages with those of folk-song simplicity is especially outstanding—yet Mahler reaches a height of spiritual exaltation which the ultra-worldly Strauss never even hints at attaining, not even in *Death and Transfiguration*. The comparison with Franck is only one of mood, the pouring forth of the inmost thoughts of a lonely soul, for the extreme chromaticism of the great Belgian's expression is not present.

Mahler's music is religious in the broadest and best sense—religious rather than merely churchly, pious, or ecclesiastical; it is the music of the sincere philosophical meditator rather than that of the professional clergyman.

One feels that Mahler has opened up his soul completely in his music. Where Bach is austere, where Beethoven makes us feel inferior to him, where Brahms, despite his more intimate moments, remains sternly aloof from us, where Franck is too far gone in his own meditations to be aware of us, where Debussy merely suggests and hints at what he means, Mahler takes us completely into his confidence, he speaks directly to our hearts and pours forth his inmost thoughts, but without indulging in the hysterical emotional instability of a Tschaikowsky. There is something extremely human about Mahler's music. We realize he is no super-man, no saint, but merely an ordinary person just like ourselves, and with all our own weaknesses and our own problems. He is one of the most human of all composers; yet for all his openness, he cannot be accused of a lack of restraint.

The most powerful influence in Mahler's music is probably that of the German folk-song. One feels, even in his most complicated passages, that the folk-song is immediately behind him, and frequently it comes forth boldly into the light. Although a complicated loftiness continuously alternates with the extreme simplicity emanating from this, it is, very likely, this folk-song quality which imbues Mahler's music with a home-like, natural feeling. Many of the songs from *Des Knaben Wunderhorn* (not to mention numerous other instances), might as well be folk-songs, yet apparently Mahler uses a real folk-song but once—the old French tune *Frere Jaques*, which, somewhat altered and transposed to minor, is the opening theme of the slow movement in the *First Symphony*.

Mahler was a passionate lover of nature and he has not hesitated to incorporate this love into his compositions. The beginning of the *First Symphony* bears the direction: "Like the voice of Nature" (*Wie Ein Naturlaut*). Woodwind figures are often labelled: "Like bird-voices". (*Wie Vogelstimmen*). These are not merely clever imitations; they are essentially musical, not illustrative, though their resemblance to the songs of birds is unmistakable. A very fascinating passage occurs in the finale of his *Second Symphony*, just before the chorus enters. Here the flute and piccolo, twittering like birds, alternate with fanfarelike passages of distant trumpets, the whole accompanied only by the soft roar of the bass drum or timpani. Surely, if nature had a voice and could speak, it would sound like this!

Mahler clearly traces his ancestry from Beethoven. Like Beethoven, he is essentially an optimist, in spite of the tragic interruptions which

continually steal into his music. Like the Beethoven of the last quartets and of the *Ninth Symphony*, he is concerned with the trials and ultimate triumphs of the soul.

The German chorale has an important influence on Mahler. Its sturdy simplicity and dignity appeal to him. He uses it in a mood of triumph or of hopeful faith, as at the end of the *First Symphony*, or the *Second Symphony*, beginning of the fourth movement (marked "Choralmaessig") and the fifth movement after 10, or the *Sixth Symphony*, finale, at 106. (These numbers refer to the small "student" scores.)

Schubert seems to have exerted a strong influence over him. Mahler's straightforwardness often reminds one of Schubert's boyish simplicity. Certain curves in his melodies and the way he combines two melodies simultaneously in such a natural manner immediately suggest Schubert.

Since he was a post-Wagnerian and a great Wagner enthusiast, it is not surprising that Mahler should feel the influence of the great music-dramatist. His music is built on the epic scale on which Wagner built. There is also a certain similarity in the way in which the two composers produce great climaxes and cause them to subside. Besides, like Wagner, Mahler does not surprise us with sudden crashes of the full orchestra such as characterize Beethoven. Yet he cannot be accused of imitating Wagner; he shows a thorough comprehension of Wagner's technical contribution, but does not resemble him spiritually. The deciding point of contrast between the two is the marked folk-song influence in Mahler, an influence toward which Wagner was very indifferent, the oboe theme in the *Siegfried Idyll* notwithstanding.

With Brahms, on the other hand, Mahler shares this love of the folk-song, and reveals, besides, a general nobility and elevation of style not unlike those underlying the greatest works of the North-German genius.

Some mention of the kinship between Mahler and Richard Strauss has already been made. Although the latter was really the younger, born in 1864, while Mahler was born in 1860, Strauss, successful from the start, early attained classic status in the world of music. Mahler resembles him in his orchestral technique, and, as pointed out before, in some ways in his music. Yet Strauss is essentially a composer of "program" music, a realist, while Mahler is essentially a composer of "absolute" music, a dreamer, and an idealist. They differ chiefly in mood.

Whether Mahler "programmed" his symphonies or not has been the source of some disagreement. We have it upon the final authority of the composer himself that he did not desire any "program" other than the phrase *Wie Ein Naturlaut* which he said was the secret of his composition. It is said that he even disapproved of thematic analyses and program-notes, saying one should listen only for the general effect of a composition at a first hearing and, should he find it sufficiently arresting, then study it intensively. Richard Specht, in his thematic analysis of the *Ninth Symphony*, says it was written at Mahler's request, in order to have an authorized version, but adds that Mahler disapproved of the practice in general. It is quite clear that Mahler is trying to impart some message in all his symphonies, but it is done in a manner essentially musical, not illustrative. He clearly expresses the longings and conflicts that trouble the human soul. He inherits his method from the Beethoven of the *Eroica*, the *Fifth*, the *Ninth*, and the final quartets and piano sonatas. Much as a Haydn symphony voices cheerfulness, a Mahler symphony

expresses contemplation or triumph. As for a detailed story, with definite action in the manner of Strauss or Berlioz, it has none. The sung texts which Mahler introduces at times furnish the sole "program" clues of an extra-musical character to be found in his symphonies.

We read comments such as the following about Mahler's symphonies:

His symphonies all aim to express some definite thought, such as pessimism finding its cure in simple faith, love of nature leading to a high idea of Pantheism, or doubt clearing in the joys of immortality. (H. J. Baltzell: *History of Music*, pp. 469-70).

His *Second Symphony* is entitled *Ein Sommertorgens-Traum* (A Summer-Morning's Dream) and expresses a pessimism that finds its cure in simple faith. The first movement depicts despair that is hardly consoled by the beauties of nature, rejects all dreams of future glory and is untouched as yet by the religious contemplation hinted at in the closing choral. Then comes an idyllic movement ending with the same unsatisfied struggles. The third movement shows the hero seeking the haunts of men, and becoming disgusted with their eternal, restless bickering. (Elson: *Modern Composers of Europe*, pp. 35-36)

Much of this seems like sheer nonsense. It would be difficult to fit the above description of the first three movements into the music. To begin with, the *Second Symphony* is practically officially nicknamed the *Resurrection Symphony*, this title being derived from the text of the choral finale. Mahler himself called the first movement *Totenfeier* (Death-celebration) but even this is not particularly illustrative. One might as well try to attach colorful names to the movements of the symphonies of Mozart, Haydn (except such as the *Clock*) Beethoven (except the *Pastorale*), Brahms, Schubert, Schumann, Franck, Elgar, or Sibelius.

Mr. Elson analyzes the *Third Symphony*, which he calls *Naturleben* (*Nature-life*) on pp. 36-37 of the same book as follows:

This time the work portrays a pantheistic idea of the exaltation of nature and life. The first movement, wholly separate in idea from the others, again represents the search for a satisfactory solution of this world's life. Then follows a delightful minuet and a charming scherzando, bubbling over with the joy of nature.

It is doubtful whether the composer would have approved of Mr. Elson's analyses. Mahler's "program" is impersonal, a succession of emotional moods, not a succession of dramatic events; he uses moods as the dramatist uses characters.

It is not untrue that Mahler originally sponsored "programs" for some of his symphonies, but he later rejected them unconditionally. He invented some hastily in response to public demand, for it must be remembered the symphonic "poem" was the rage in those days. He had his *First Symphony* played at its premiere under the name *Titan: Symphonic Poem in Two Parts*. This much, at least, can be said with certainty: even if Mahler did "program" his symphonies, we can get complete enjoyment from them without knowing a single thing about the "programs".

—WILLIAM PARKS GRANT

## MAHLER IN ENGLAND

The distinguishing feature of the recent music festival at Sheffield was the performance of Mahler's *Eighth*, the *Symphony of a Thousand*, by the London Philharmonic, under the direction of Sir Henry Wood. Basil Maine, reporting the event for *Musical America* (Dec. 10) wrote in part:

This boy's choir, collected from the city schools, sang, not with the timid tone of Elijah's youth looking for a sign of rain, but as if this were the opportunity of a lifetime. As Sir Henry had told the boys at the rehearsals, they will probably never have the chance to repeat their experience, even if they grow to be solo singers or choristers. In England, for several reasons, we have heard very little of Mahler. . . . Yet I, for one, would not have missed the Sheffield Choir's performance of Mahler's *Eighth*.

The eminent English music-critic, Ernest Newman, reporting a radio performance of Mahler's *Fourth* in Liverpool under the direction of Robert Heger, finally subscribes to the claim, persistently advanced for many years by continental musical authorities, that the music of Berlioz, or Brahms, or Sibelius, each calls for an individual type of listening independent of the traditional attitude universally assumed towards the older classics. His reaction to Mahler's art, summarized in the *London Times*, Dec. 17, 1933, is as follows:

Orthodox criticism can easily make deadly play with his faults; but when the debit side has thus been set forth, there surely remains, on the other side, much that is worthy not only of our disinterested study but of our profound admiration. . . . Place yourself at Mahler's point-of-view in the No. 4, instead of at the point of Beethoven, Brahms, or Wagner, and you see the work for what it is—the accurate and fascinating record of purely personal experiences in a purely personal idiom.

### IMPROMPTU ON A PAPER TRUMPET

Where was Mr. Julian Seaman on the evening of Jan. 27, or (for that matter) on the afternoon of Jan. 28? Mr. and Mrs. Music-Lover, who attended the Philharmonic concerts on those dates, would give a lot to know. And why was Mr. Seaman's face so red on Jan. 29? Because of Mr. Toscanini's overwhelming Bruckner interpretation the day before? Mr. Seaman must be convinced by now that the music he mistook for Bruckner's *Romantic Symphony* was Mirrorly a Seamanphony Erroroica.

*Moral*.—A slight "crack" in the *Mirror* may prove a "bad break," indeed.

### TOSCANINI OVERTAKES SEAMAN

The performance of Bruckner's *Fourth (Romantic) Symphony*, which Mr. Seaman so amazingly anticipated in the enigmatic review referred to above, actually took place a week later, on Feb. 3, 1934. Concerning this hearing of the work Mr. Pitts Sanborn wrote as follows in the *World-Telegram*, Feb. 5, 1934.

Local Brucknerites will be sadly put out if Mr. Toscanini should fail to repeat later on Bruckner's *Romantic Symphony*, which he led with such excellent effect at the Students' Concert of the Philharmonic-Symphony Society Saturday night in Carnegie Hall. Perhaps he will see fit to include it in one of his Thursday-Friday programs after the Beethoven symphonies have all been disposed of.

### BRUCKNER IN ENGLAND

*British Broadcasting Corporation Orchestra, London, England; Conductor, Dr. Adrian Boult; December, 1933.*

"Bruckner has never found a stronger response here than he has in America but it must be said that the public has had precious little opportunity of taking him to its heart. The few sporadic performances we have had have been so promptly 'written down' by the critics that any budding enthusiasm has been promptly nipped. All the more merit is due to Dr. Adrian Boult and the B. B. C. Orchestra for a truly beautiful performance of the unfinished *Ninth* symphony. And if applause is any indication at all this performance ought to go a long way toward breaking down the barriers."

—CESAR SAERCHINGER, *Musical Courier*.

## MUSICAL VIENNA TO-DAY

For several generations there has dwelt such magic in the word "Vienna" that the mere sound of it has been sufficient to awaken in most minds delightful reveries and associations, emotional reactions sprung from the deep grandeur of the classics of Haydn, Mozart, and Beethoven, which originated there, or from the pure, soothing romance of Schubert's melodies, or, perhaps, from the light, rhythmic enchantment of the waltz-world of Johann Strauss. These colorful spells have held uninterrupted sway over the vast multitude of general music-lovers to whom the superearthly legendary atmosphere that works of genius acquire only long after their creators have passed away seems absolutely prerequisite to an unconditional surrender to their wizardry.

There are, however, many lovers of the art who, either having personally visited Vienna in recent years or having, by means of current published reports, carefully followed the course of musical progress in the Danube city, will have supplemented these more mellow, universal associations with a fresh conception sprung from modern tonal influences more or less grippingly experienced. To such music-lovers an accurate "bird's-eye" view of the rather confused artistic pageant representing Vienna as a musical city of to-day will, no doubt, be quite welcome. To these in particular the following remarks are dedicated.

Before the actual musical panorama of present-day Vienna may be unrolled it is necessary to contemplate the career of a distinguished artistic personality, one (alas!) long departed from us, but one, who wielded so powerful an influence over the musical development of the city a generation ago, that his ideals and accomplishments alone can provide us with the proper point-of-view for a clear understanding and estimate of Vienna's unaltered position as the leading musical city of continental Europe. I refer, of course, to Gustav Mahler.

Mahler, who was the first composer since Bruckner and Brahms to devote himself to the great classic instrumental form, the symphony, came to Vienna not in a creative but in an executive musical capacity. He was appointed Director of the Imperial Opera House in 1897 and, during the ten years of his tenure at that institution, brought about epoch-making operatic reforms. He was the first to imbue the policy of a regular repertoire opera company with the artistic ideals which Richard Wagner had realized in his perfect music-drama performances at the Bayreuth Festival Theatre. Together with Alfred Roller, who remains to this very day scenic director at the Viennese Opera, Gustav Mahler strove to attain a perfect union of the essential elements of the musical score and its stage-setting and demonstrated the practicability of this ideal by amazing reincarnations of chosen German music-dramatic masterpieces from Gluck to Wagner. Although circumstances made it impossible for him to carry out his entire gigantic plan the series of model performances he brought about at the Viennese Opera proved a permanent contribution, the artistic brilliancy of which continues to radiate from the lofty offerings of that stage to this day.

Parallel with his executive activity at the Opera went Mahler's private achievements as a creative musician. During the years between 1897 and 1907 he composed five of his colossal symphonies, from the *Fourth* to the *Eighth*, inclusive. To shape these monumental works the scant vacation days from the Opera had, naturally, to suffice. The inner conflict between the tremendous urge in him for this subjective expression and that other responsibility which he held sacred, the perfect performance of the works of others, grew constantly more intense, finally culminating in the real cause of his withdrawal from the Opera, an event which he survived by only three years. His farewell message, addressed to the artists of the Opera in Dec. 1907, is a significant spiritual document, the following excerpt from which will be found especially pertinent to the present topic.

"Instead of the complete fulfilment, of which I had dreamed, I leave behind me the mere fragment of achievement which is man's fated limitation. It is not for me to say what my efforts have come to mean to those for whom they were intended. Yet at such a moment as this I feel that I may say: My purpose was sincere; my aim was high, though not invariably crowned with success, for no one is so hopelessly handicapped by material obstacles as the executant artist. But I have always offered up my entire being to the cause, never placing personal comfort and inclination before duty. Therefore, I felt I could honestly demand of you the same complete self-surrender. During heated moments of busy striving none of us could escape entirely aggravations and personal wounds. But whenever real success attended our labors we forgot all pain and fatigue, feeling ourselves sufficiently repaid by the solution of a difficult problem, even though we received no special material reward therefor. Thus we have all truly gone forward and, with us, the standards of the institution to which our efforts were dedicated."

The deep artistic sincerity behind these words furnishes a hint of the thoroughly human quality that was a fundamental trait of Mahler's being. Such was the personality which the artists of the following generation adopted as their guiding spirit, as the ethical foundation of their creative work.

A few years after Mahler's death came the Great War. While it raged the most sanguine artistic hope of Vienna was to maintain and bequeath unimpaired to the coming age the high standards of the Mahler period. The Opera persisted as the musical focal point of the city. When, in November 1918, Richard Strauss and Franz Schalk took charge of the institution, its artistic condition was of the utmost brilliancy. Then there came into existence the first series of those model performances of the Strauss operas in the quality of which Vienna leads the world to this very day. Even Clemens Krauss, present director of the Opera, seems veritably predestined to the interpretation of Strauss' works and was therefore recently entrusted with the world premiere of the master's latest opera, *Arabella*.

Not only has Vienna maintained and repeatedly proven to the world of to-day its right to the title, *The Opera City*, but it has attained a still wider artistic significance through the tremendous impetus it has recently given to creative music. That world-wide revolt against the traditional ties of tonality, a movement the origin of which is inseparably associated

with the name of the Viennese Arnold Schoenberg, has continued since its birth, about 1908, to draw its nourishment from Vienna. So overwhelming, so convincing have the tenets of this musical creed proven that no serious composer of to-day is completely free from Schoenberg's influence, although the most important creative musicians have always succeeded in subordinating this influence to their own individuality. Schoenberg himself has long since left Vienna, but his outstanding pupils, Anton Webern and Alban Berg, live and work here, passing the master's message on to the younger generation. Although the appreciation of the esoteric compositions of Webern is still restricted to a small circle of friends, this artist's position as radio-conductor and choir-master gives his talents an opportunity for wider expression. His model performances of classical and modern choral and orchestral works tend to reveal him as the legitimate heir to Mahler's art of conducting.—Alban Berg devotes himself exclusively to composition and teaching. Of the Schoenberg circle he is the one who clings most closely to the canons of tradition, consciously accepting them and clothing them in modern garb. Many features of his orchestral language are clearly anticipated in the last works of Gustav Mahler, particularly in the *Ninth Symphony*. In 1930 Alban Berg's *Wozzeck* achieved the greatest triumph any radically modern work for the musical stage has ever attained at the Vienna Opera. Besides, Berg's music has been signally honored abroad time and time again, and therefore he may well be considered the most representative artistic personality of Vienna to-day.

Of particularly eminent gifts among the younger Viennese composers is Ernst Krenek, whose musical and literary versatility has aroused favorable notice far beyond the Austrian confines. Since the popular success of his opera, *Jonny Spielt Auf*, his creative work has been marked by constantly increasing depth and spiritual power. His latest music-drama, *Karl V*, which will have its premiere at the Viennese Opera next winter, closes with an apotheosis of the cultural mission of Austria, an especially timely bit of symbolism. Although actuated by a strong sense of national consciousness, Krenek has always subordinated his Austrianism to the broader human quality which dominates his life as an artist.

While the above-named musicians represent the newer, more striking phase of the art's progress in Vienna, the city has long been the chosen residence of many less radical composers, who abide devotedly by the traditional canons of the art, striving in their own conservative way to increase the musical treasury of mankind. Preeminent among these are Franz Schmidt and Julius Bittner. The work of Schmidt is distinguished by great technical mastery and deep earnestness, while Bittner has earned for himself the title "creator of the folk-opera." Joseph Marx and Erich Wolfgang Korngold have given us music of subtle harmonic richness. The latter has, unfortunately, fallen short of the supreme promise of his "wonder-child" days, having apparently descended almost exclusively to the composition of operettas.

On the subject of "Operetta" a single remark should suffice, for this form has come to be universally regarded as a kind of Viennese export. Since it has of late lost much of its original spontaneity, its exponents have striven desperately (but in vain) to cover up this fatal defect by over-generous applications of "tricks of the trade," thereby

achieving only a sham pompousness. The leaders among the operetta-composers living in Vienna are Franz Lehar, Oskar Strauss, and Emmerich Kalman. Ralph Benatzky, engaged in this field of composition abroad, is also a Viennese.

The high-lights of Vienna's concert life are the instrumental performances given by the Philharmonic (an orchestra consisting of musicians of the Opera) and the choral concerts of the perennially famous *Society of the Friends of Music*. The male choruses (the *Schubertbund*, the *Maennergesangverein*, and the *Saengerknaben*) have often borne to foreign countries eloquent testimony of Vienna's musical quality. Many eminent singers and virtuosi, and a host of instrumental and choral organizations of more or less local fame lend such a vivid and abundant variety to the city's musical life that it seems in this respect wholly unique among the world's capitals. On many winter evenings important concerts are given simultaneously in from six to eight different halls. Numerous conservatories of high standing attend to the shaping of Vienna's young musical talents, who are spurred on to their utmost efforts by the lure and the excitement of the many international competitions for rich prizes still held annually in the city.

Serious musical research is also being constantly encouraged and conducted at Vienna. The faculty of musical science at the university has appointed Prof. Heinrich Lachs to succeed the world-famous scholar, Guido Adler. Prof. Eugen Wellesz, a composer of great prominence, is an international authority on Byzantine music, as well.

Another striking feature of Viennese musical life is the tremendous activity of its musical commentators in print. The abundance of this journalistic expression reflects the importance which the people of the city attach to their histrionic and musical events. Unhappily, most of the generous space allotted the music-reviewers by the newspapers is devoted to glittering witticisms rather than to serious, enlightening music-criticism, thus often resulting in fierce ink-duels that fill the air with bitter personalities. Yet even this evil has its illuminating significance, for does it not help to prove how important to the Viennese soul are all discussions of art—and, particularly, of music?

—WILLI REICH

*A radio address delivered at Strassburg, October 30, 1933; English translation by Gabriel Engel.*

### BRUCKNER'S FIRST IN JAPAN

Bruckner's *First*, a work for which leading European Bruckner authorities make the lofty claim that it rivals the master's greatest symphonies as a powerful expression of his individuality, still remains unperformed in this country, though seventy years have elapsed since its composition. Music-lovers and symphonic conductors of America may be interested to know that this work was recently given its Japanese premiere by the Takaradzuka Symphony Society of Kobe, under the direction of Josef Laska, Nov. 22, 1933. To which of our own conductors will fall the honor of giving the American premiere of this important symphony, and how soon?

## MOZART AS A MUSIC DRAMATIST

About twenty-five years ago Gustav Mahler, fresh from an epoch-making decade as absolute artistic director at the Viennese Imperial Opera, cast an omniscient eye upon the troubled affairs of the Metropolitan Opera House and said, "There is needed here, above all, a central authority, with unconditional powers to shape each presentation, for without such a master the perfect union of text, music, and their stage-setting is out of the question." The man he recommended for this post (which by the way, has never existed in New York) was Alfred Roller, his own Viennese artistic director, a man whose continued association with the Vienna opera to this very day goes a long way to explain the uninterrupted operatic supremacy of the Danube city.

Last April, "Mephisto" of *Musical America*, remonstrating with a disgruntled correspondent who complained bitterly of the inadequate stage-management perennially at work at the Metropolitan, mentioned one or two men who had made notable contributions towards the improvement of that institution's discredited "stage" reputation. The first name he advanced was that of Ernst Lert, a stage-director unforgettably associated, in the minds of opera-goers of recent years, with exquisite performances of such works as *Sadko* and *Le Prezioso Ridicole*. Why, in the course of two seasons, an artist clearly capable of consummate achievements in his field, should have staged so few works in a manner worthy of his quality, is a mystery which will be cleared up only when someone completely "in the know" back-stage at the Metropolitan will have the courage to reveal the details of a system which the smoky rumors of many a year have branded as a "factory."

With the echoes of the enthusiasm recently aroused by a broadcast performance of *Don Giovanni* still ringing in the ear, one begins to wonder whether fine Mozart opera would not prove a greater esthetic satisfaction than shabby versions of Richard Strauss. This country has never experienced the true greatness of Mozart as a music dramatist. Those who have seen Mozart operas at Vienna will need no proof of this statement. They may ask, however, whether a Mozart series could be given here without artistic standards similar to those by means of which Gustav Mahler awakened apathetic Viennese opera-goers to esthetic delights beyond their dreams. To one familiar with the details of Mahler's career it seems that a very pertinent parallel might be drawn between the operatic conditions of New York to-day and the Vienna which Gustav Mahler found in 1897. Should the violent methods which he used during his early campaign of rehabilitating the Imperial Opera become effective here there might be seen an amazing eruption of executives, directors, and "stars" out of the Metropolitan. But all that is only imagination. It is Mozart about whom we set out to talk.

The dramatic revitalization of Mozart for the sophisticated world of our day is a mighty difficult problem involving a thousand and one psychological subtleties beyond the ken of most operatic stage-managers. Perhaps the supreme authority on the subject "Mozart as a Music Dramatist" is Ernst Lert, whose monumental book "Mozart in the Theatre" (German) is still generally considered the last word on the topic. Had this man been given free rein to do so, he surely could have made a permanent contribution to the American opera-lover's appreciation of Mozart.

Salzburg, beautiful shrine of the world's Mozart cult, strives to maintain for posterity every ideal necessary to the consummate performance of the master's works, both for the operatic and the concert stage. More than ever before, the art of Mozart is to-day the guiding principle of outstanding composers for the stage. Therefore, no serious young composer, conductor, or singer with operatic aspirations should leave any stone unturned in an effort to attend the entire Salzburg Summer Festival Series. Particularly for lovers of Mozart it is the world's supreme master school.

We note with pleasure that among the huge galaxy of authorities on every phase of Mozart's art summoned to Salzburg to take charge of the coming series of summer courses there are:

—Bruno Walter, greatest of all Mozart interpreters, who will conduct a series of Mozart operas;

—Dr. Ernst Lert, of La Scala Milano, who will lecture on "Mozart as a Music-Dramatist";

—Marie Gutheil Schoder, of the Vienna State Opera, who will give a general course in "Opera Dramatics".

The complete, definitive prospectus of the courses to be given at Salzburg in the summer of 1934 is now ready for distribution and may be obtained from any of the following sources:

The Theatrical Seminary: N. Y. School of the Theatre, 139 W. 56th St., N. Y. C.

The Institute of International Education, 2 W. 45th St., N. Y. C.  
Salzburg Mozarteum Academy, Mozarteum, Salzburg, Austria.

### FRANK THIESS ON BRUCKNER AND MAHLER

The internationally famous German novelist Frank Thiess, in a letter accepting with thanks his election to Honorary Membership in the Bruckner Society of America, makes the following interesting summary of his views concerning the significance of Bruckner and Mahler. These illuminating views, published some years ago in great detail in the brilliant chapter of Mr. Thiess' *Gesicht des Jahrhundert*s devoted to music, will be translated in full in the next issue of *Chord and Discord*.

No composer since Bach has penetrated as deeply as Bruckner that zone of the human soul which is the dwelling-place of man's religious feeling, the feeling that he is dependent upon lofty forces beyond the control of mortal reason and will-power. Thus the message of Bruckner's music may be grasped not through a mere comprehension of his artistic capabilities but only through a realization of the depth to which he was moved by the elemental forces of life. In his own day, when religion had suddenly taken on an extremely problematical character and rational influences were universally arrayed against it to attain, if possible, an unconditional negation of faith, the work of Bruckner represents a complete philosophy of the inner life, of a loftiness far beyond the range of words, a spiritual revelation impossible to any language but that of music.

Mahler seems to me a true spokesman of the passing age, our own epoch of hopeless unrest and spiritual disintegration. His contrast to Bruckner lies in his choice of text, the problem-wracked soul of modern humanity, its countless contradictions, its tragic solitude and terror. He offers us no consolation; he does not uplift us, as Bruckner does, with revelations of Eternity, but he shows us with unparalleled clarity and relentlessness the true features of our own earth-bound faces.

### JAKOB WASSERMANN ON BRUCKNER AND MAHLER

The following brief letter addressed to the Bruckner Society of America by the late German novelist Jakob Wassermann not long before his decease must take its place as a significant human document of a generation in which the disrupting influence of chaotic economic and racial elements has invaded even the absolute domain of musical art.

In these few simple words of the great artist who in the *Goose-man* gave the world one of its rarest treasures of musical fiction the age-old artistic honesty of the whole race of which Wassermann was throughout his fruitful career a fervent spiritual leader seems to find eloquent expression.

Because of the complete solitude in which I have been living for many years I am too far removed from musical happenings to be able to send you an extended article on the subject of the present significance of Bruckner and Mahler. Besides, as I am myself only in a very limited sense an excruciating musician, I do not feel that I am the one who should write such an article. I should, however, like to say that Bruckner's music makes a deeper impression upon me than Mahler's, and naturally so, for Bruckner's was the more original and universal genius. His true importance is still far from having attained the recognition that is its just due. His individuality is still obscured by the shadow of Wagner, just as Mahler's by the shadow of Bruckner. Perhaps several decades must go by before it will be possible definitely to classify two such great artists.

I accept with gratitude the offer of Honorary Membership in your society.

### THE KILENYI BRUCKNER MEDAL AWARDS

On the evening of Dec. 4, 1933, at the Harvard Club, New York City, Bruno Walter was the guest of honor of the famous Musicians' Club, *The Bohemians*, at their regular monthly gathering. Rising in response to the ovation tendered him by these foremost representatives of the American world of music, he exhorted all true artists to strive as they had never before to combat the darkness that seems to be settling down upon every cultural phase of life by steeping their souls completely in the light of their artistic ideals.

Under the irresistible spell of his fervent, simple appeal one forgot for the moment the purely social nature of the occasion, almost believing oneself listening to the high-priest of some sacred cult voicing the formula of its ritual.

To one familiar with the details of Anton Bruckner's struggle with adversity, the doctrine of spiritual salvation through whole-souled devotion to the eternal beauty of art seemed particularly appropriate, for one of the outstanding events on the evening's program was the official presentation to Bruno Walter of the exclusive Bruckner Medal of Honor recently designed by the noted sculptor, Julio Kilenyi, for the Bruckner Society of America. The warmly appreciative attitude towards the great Austrian symphonist given unmistakable expression by the President of the *Bohemians*, Rubin Goldmark, in the course of his presentation address did honor not only to Anton Bruckner and Bruno Walter, but also to the progressive spirit of our dean of American composers, revealing him as desirous of communicating to this large body of his distinguished colleagues (among whom there must have been more than one anti-Bruckner irreconcilable of the "old order") that the art of Bruckner, so far from being a thing of the past, is still very much alive, promising to become a significant addition to the spiritual treasury of the generations to come in America.

The Kilenyi Bruckner medal (reproduced on the front cover of *Chord and Discord*) has also been awarded to one American and two Austrian musicians, whose course in life, though not illuminated by the world-wide brilliancy attending the career of an idolized symphony conductor, is, because of its quality of deep, unswerving devotion to the Bruckner cause, deserving of signal notice. These musicians are:

DR. MARTIN G. DUMLER, of Cincinnati, noted American composer of sacred music; Honorary Chariman of the Bruckner Society of America; Vice President of the College of Music, Cincinnati.

PROF. MAX AUER, of Voecklabruck, Austria: co-author of the monumental Goellerich-Auer biography of Bruckner; author of *The Life and Work of Anton Bruckner*, Vienna, 1933, the sole detailed book on Bruckner for the layman; (this book exists only in German); founder and Honorary President of the Internationale Bruckner Gesellschaft.

PROF. FRANZ MOISSL, of Klosterneuburg (near Vienna); organist; editor of the *Bruckner Blaetter* and *Musica Divina*; Bruckner conductor of widespread European reputation; a founder of the Internationale Bruckner Gesellschaft.

## SYMPHONIC CHRONICLE

### *A Record of Critical and Popular Reaction.*

#### GUSTAV MAHLER— SECOND SYMPHONY

*Philharmonic Symphony Society of New York, Bruno Walter, Conductor—Assisting Artists: Jeanette Vreeland, Sigrid Onegin and the Chorus of the Schola Cantorum of New York (Hugh Ross, Conductor); February 23, 24, 1933.*

Last evening's performance was one of uncommon authority and eloquence. Mr. Walter stood in a peculiarly close relation to Mahler. He was his friend, his confidant; and he has been, since the composer's death, one of his most convinced, attached, and persuasive apostles. Like his colleague, Mr. Mengelberg, Mr. Walter reveres this music. For him it is compact of greatness and revelation; and this unquestioning, unflinching devotion imparted extraordinary fervor and a touching quality of almost priestly exaltation to Mr. Walter's disclosure of the work.

—LAWRENCE GILMAN, *New York Herald Tribune*

Reverting to Mr. Walter's communication, we learn how the symphony develops itself. "The first movement," explains the conductor, "is a funeral march for the death of a hero; the second, an idyll from the life of the man. The third movement is uncanny, partly humorous, partly diabolical. It is a symphonic evolution of the song from the medieval source-book, 'Des Knaben Wunderhorn,' of St. Anthony of Padua's sermon to the fishes. The worse types of man, allegorically revealed in fish, are musically portrayed."

Mahler was always struggling upward toward the stars. He sought to pierce the heavens and read the secrets of eternity. . . . There are pages of extraordinary beauty in this score, pages which no music lover would wish to neglect. . . .

The audience last night was most attentive and applauded long and vigorously when the symphony was finished.

—W. J. HENDERSON, *New York Sun*

For this program one listener at least was profoundly grateful. Mr. Walter was a disciple and associate of Mahler, and, as in the case of Willem Mengelberg, when we learn about Mahler from him we receive authoritative information.

Of the Mahler symphonies, the second (in C minor) certainly has not been overworked here. . . .

Performed as it was last night, under the commanding leadership of a man who comprehends it and believes in it, the score arrests and holds your attention.

—PITTS SANBORN, *N. Y. World Telegram*

For the reviewer the third movement, considered alone, may well rank with the "Queen Mab" Scherzo of Berlioz and the "Midsummer Night's Dream" Scherzo of Mendelssohn.

The performance was one of unusual excellence. . . . The orchestra played with beautiful tone and a rare measure of refinement. Miss Vreeland and Mme. Onegin achieved their solos commendably and the chorus met the exactions of music full of dynamic contrasts richly and well.

—OSCAR THOMPSON, *N. Y. Evening Post*

#### GUSTAV MAHLER— SEVENTH SYMPHONY

*Chicago Symphony Orchestra, Frederick A. Stock, Conductor; March 2, 3, 1933.*

Those intervals of pure joy come to us with the hearing of the exquisite second serenade—a creation that is absolutely a masterpiece. Here, there, and everywhere there are pages and pages of delicately wrought beauty, of charm and sensitive feeling for grace and harmony.

The orchestra played magnificently, and Mr. Stock conducted with the reverential care of the devotee.

—HERMAN DEVRIES, *Chicago American*

Mahler's genius was revolutionary. He struck out in a new artistic direction, despite a lingering, backward glance toward the "Meistersinger" of Richard Wagner. But there are no Wagnerian reminiscences in the first movement of the seventh symphony. Rather there is a harsh, aggressive, irrepressible individuality that challenges the world with a new, a different message.

The themes, with their angular progressions, are like no other melodies. The harmonies, though conforming, fundamentally, to the established idiom of the nineteenth century, so torture the incidental and passing dis-

sonance that the effect often approximates the polytonality of the present. . . .

One ends by being charmed, delighted, and stimulated by this work, though America has been slow to accept it. I hope Doctor Stock repeats it.

—GLENN DILLARD GUNN, *Chicago Herald & Examiner*

Mr. Stock went back a decade for the principal orchestral number by reviving Gustav Mahler's Seventh Symphony, a spacious, skillful work, written in so leisurely a manner that the composer was able to put five movements into it, instead of the conventional four. It has its reminiscent moments, but it works out well, and the audience liked it.

—EDWARD MOORE, *Chicago Tribune*

### ARNOLD SCHOENBERG —PIERROT LUNAIRE

*Under the auspices of the League of Composers; Phila. Orchestra, Leopold Stokowski, Conductor; Assisting Artist, Mina Hager; N. Y., Apr. 16, 1933.*

The listener found both the work and its presentation tremendously impressive. The way in which the expressionist Schoenberg succeeds in shaping and painting a series of mood-pictures with an almost incredible economy of means cannot fail to arouse and hold our admiration and respect for that art of his which will yield to no compromise. "Pierrot Lunaire" is a magnificent example of polyphonic construction, a masterwork of contrapuntal skill, in which all standards of value must be made to conform to its micro-cosmic scale. The melodic lines of the music are extremely free, the coloring strikingly vivid, the rhythms tense and vital, the entire harmonic picture being dominated by an extraordinary spell which renders direct esthetic participation impossible. Consequently, we must enjoy this unusual work about the moon-struck "Pierrot" who sees phantoms under the night-sky, has delusions, and becomes the voluntary prey to waking-dreams, at a certain distance, without the sympathy that comes only from personal participation, and yet with a suspense which strives to span the chasm between our power of comprehension and the extraordinary phenomena of strange worlds.

Mina Hager fulfilled splendidly the lofty demands Schoenberg makes upon the soloist with the *Sprechstimme* and Mr. Stokowski muted the instrumental background down to that chamber-musical level at which, despite all the softening of shades, every detail of the structure was revealed with chiseled clarity.

—JOACHIM H. MEYER, *N. Y. Staats-Zeitung*.

### GUSTAV MAHLER— FIRST SYMPHONY

*Philharmonic Symphony Society of New York, Bruno Walter, Conductor; October 12, 13, 14, 15, 1933. (The last of these performances was broadcast over the Columbia chain).*

Mr. Walter's performance was a triumph of the conductor's art, ability to penetrate

to the deepest and subtlest thought of the composer, to transmit his own comprehension and enthusiasm to the men and to inspire an audience. It is seldom that Mahler has had such justice done him here, and a large gathering showed its pleasure.

—OLIN DOWNES, *New York Times*

As a texture of sound, the score is often delightful. Its great quality is its sincerity. In the first movement, especially, there is much that beguiles by reason of its naivete and freshness and simplicity, its candor and sweetness that suggest at times the thought of Schubert, yet are indisputably Mahler's own, original and self-sprung, stamped with his signature and image. The childlike and ingenuous directness, the lyric charm of many pages, are irresistible. The homely tenderness, the folk-like humor, the long, nostalgic reveries, the poignant brooding of the music at its best—these qualities are not easily to be forgotten.

—LAWRENCE GILMAN, *New York Herald Tribune*

The Mahler detractors are unceasingly busy. . . .

At one time I, too, in less mature judgment, denied Mahler any outstanding worth at all, except that he had mastered a method of clever and colorful orchestration. I feel that I have come to see more than that in Mahler.

—LEONARD LIEBLING, *Musical Courier*

Individual champions, as well as Mahler Societies, made the ideals and purposes of Mahler clear to those objectors who had looked upon him as being devoid of originality, and something of a deliberate sensationalist. Many eloquent and even poignant pages came to be recognized justly in his symphonic output. His strong subjectivity is now correctly admitted to be the logical expression of a mentality so independent and intellectually imaginative.

—LEONARD LIEBLING, *New York American*

The first movement . . . is certainly the most concise and solid in structure. It also reveals most clearly the dual nature of the composer Mahler; for where could one find (without engaging in futile arguments) so compelling an instance of a wintry gray mood into which the occasional entrance of a few elemental harmonies, dictated by a romantic nature, appears almost discordant? The second movement is possessed of a splendid Laendler-like character. Here the great gifts of Mahler, who so loved to draw from the wells of folk-like sentiment, find their most felicitous expression. The third movement is truly a masterpiece—once entitled "A Funeral March after the Manner of Callot." It is based on a well-known picture in an old south-German book of children's fairy tales, *The Hunter's Burial*. Mr. Walter, with the utmost concentration upon the exactness of every dynamic detail, clothed this movement with such intensity and so much tonal expressiveness that it alone made certain the success

of his reading of the D Major Symphony. The orchestra was in the best of form and received its just share of the evening's honors.

—JOACHIM H. MEYER, *N. Y. Staats-Zeitung*.

The performance suggested that this symphony, given a fair chance, might vie in popularity with the later symphonies of Tchaikowsky. In the first two movements there is, besides expert orchestration, page after page of a melodious and lucent naturalness.

The "solemn and measured" third movement, despite its funereal character and its touch of irony, likewise makes a compelling appeal to the ears. And in the stormy finale there is real splendor. Admirably performed, it stirred the audience to an enthusiasm easy to understand.

—PITTS SANBORN, *N. Y. World-Telegram*

### ANTON BRUCKNER— EIGHTH SYMPHONY

*Philharmonic Symphony Society of New York, Bruno Walter, Conductor; October 26, 27, 29, 1933. (The last of these performances was broadcast over the Columbia chain.)*

To the many to whom Bruckner is still a problematic composer, whose symphonies are barren tonal deserts with but sparsely sowed oases, this symphony should provide material for a conclusive proof of the Austrian's right to be classed with the immortals of music. Notwithstanding its length, it is so closely knit that no a measure can be eliminated reparably, even as the music dramas of Richard Wagner are mutilated by excisions.

Most critical encomiums have expended themselves on the adagio movement and certainly its pages seek their peer in symphonic literature. But the challenging and haunting first movement, the highly original scherzo with its poetic trio and broadly conceived, grandiose finale, are master creations.

Mr. Walter is to be felicitated on presenting this symphony in its entirety.

—J. D. BORN, *New York Herald Tribune*

In spite of its external difficulties the *C Minor Symphony* should be played more often. And not only because of its celebrated *Adagio*, justly regarded as the summit of achievement in the realm of symphonic slow movements.

If any one of the nine Bruckner symphonies is destined to silence the stupid chatter of certain would-be authorities concerning "the naivete and crudity of the man and composer Anton Bruckner," it is this gigantic *C Minor Symphony*. Here there speaks to us not the unreflective, hyper-spontaneous musician of other works, the fanatic of childish faith, who gives free rein to a fantasy of epic range, sacrificing therefor the firm framework of his symphonic structure. Here are none of those passages of inadequate consistency to support the sweeping allegation that forms the major premise of the Anti-Brucknerite's well-worn syllogism. In the *C Minor Symphony* a master of symphonic form has reared a sublime

temple of classic beauty, at the altars of which a poet, a mortal purified by sufferings, offers up his gratitude to the Almighty in a rhapsody of supreme jubilation.

—JOACHIM H. MEYER, *N. Y. Staats-Zeitung*.

The adagio, as Lawrence Gilman remarks in his illuminating program note, "some would put at the head of all adagios 'by reason of its solemnity, nobility and elevated thought,'" to which one might add "sheer musical beauty."

An early commentator on this movement declared that it was meant to suggest "the all-loving Father of Mankind in His measureless wealth of mercy." Be that as it may, the adagio is one of the most exalted and majestically beautiful of symphonic movements.

This implies no undervaluation of the opening allegro or of the scherzo, supposed to depict the "German Michel," the "plain, honest, much-enduring (but slow) German"—a scherzo that is interrupted by a trio of singular loveliness.

—PITTS SANBORN, *New York World-Telegram*

### ARNOLD SCHOENBERG CONCERT

*Assisting Artists—Nadia Reisenberg, Ruth Rodgers, Rita Sebastian, Edna Sheppard, and the Pro Arte Quartet (A. Onnow, G. Prevost, L. Halleux, R. Maas) N. Y., Nov. 11, 1933.*

*Program: Third String Quartet, Opus 30; Four Songs, Opus 6; Three Piano pieces, opus 11; Klaviersuecke, Opus 33; Second String Quartet, Opus 10*

Arnold Schoenberg, for a quarter of a century a storm centre in Austria, Germany and other portions of Europe, had the probably unique experience, last night in the Town Hall, of being present at performances of his music when it was not hissed. In fact, he faced a friendly, attentive and extremely appreciative audience.

Mr. Schoenberg had reason to thank the League. The League of Modern Composers, and Mrs. Elizabeth Sprague Coolidge, were responsible for the very appreciative reception last night of the Third String Quartet, which opened the program.

So presented, before an audience especially prepared for the hearing, the work has a remarkable success. The logic of the musical thought and its closely knit development were never more strongly felt. The listener followed intently and curiously the unfoldments of the ideas. Richly or acridly dissonant as the case might be, the music was obviously possessed of an inner pressure of logic and life. Yes: there were even seconds when the uninitiate might take pleasure in melodic moods and harmonic color. This applied particularly to the *Intermezzo* and the *Finale*. The compactness of this writing does not limit the free play of the ideas. Whether this will be great music for a later day who shall say?

—OLIN DOWNES, *New York Times*

Rita Sebastian, contralto, sang them (four songs from Op. 6) with straightforward delivery, with beauty of voice and artistic taste and made a definite success of all four. They were Traumbleben, Verlassen, Ghase! and Der Wanderer. Edna Sheppard played the difficult piano parts, a task masterfully executed.

The Second String Quartet, Op. 10, in which the composer calls for a soprano voice in the third and fourth sections, was another magnificent achievement by the Pro Arte players. Here the idiom is more apparent for the hearer and there was a fine response on the audience's part. . . .

The poems Litanei and Entrueckung which Schoenberg has set for his quartet are by Stefan George, a contemporary German poet of no mean gifts. Schoenberg has found music of superb expression for their mood, lifting them to an enduring place. . . .

The occasion was one which will go down in musical history as one of vital importance, the public recognition by our city's musicians and music lovers of him, whom we must call the greatest modernist of them all.

—A. WALTER KRAMER, *Musical America*

Extended discussion of this music must await an occasion more leisurely than this; in general, it may be said that the program presented an interesting juxtaposition of various aspects of Schoenberg's music—neo-romanticism in the second quartet, whose last two movements Mr. Gilman described as "of haunting beauty, in the acidulated 'Tristan' manner of the younger Schoenberg," when the "League" first gave this work here in 1924; the sharply contrasted piano pieces of Op. 33 in which the later Schoenbergian treatment of short and varying interested themes characteristic of the third quartet makes its appearance; romanticism in the songs, these mainly dark in color, with moments of ingratiating beauty.

—FRANCIS D. PERKINS, *New York Herald Tribune*

### ANTON BRUCKNER— NINTH SYMPHONY

*Performed by the Chicago Symphony Orchestra under the direction of Frederick A. Stock, November 16 and 17, 1933.*

Everything that Bruckner wrote is animated by a friendly and modest spirit, and at times the ninth symphony has moments of genuine beauty and inspiration.

—HERMAN DEVRIES, *Chicago American*

Yet this, too (the Adagio) is noble music and it may be that its creator will eventually win a place with Brahms and Franck. Or it may be that he came too late upon the field and that his music will be forgotten before it has been truly known. This were a pity, or so it seems to me, for I find the music attractive in a fantastic way, and the figure of the composer both wistful and tragic, qualities that are reflected in his song.

—GLENN DILLARD GUNN,  
*Chicago Herald and Examiner*

The Bruckner symphony brought great satisfaction to Mr. Stock's audience, though considering the enormous amount of applause that was heedlessly misspent during the day I am not sure the satisfaction was well earned.

—EUGENE STINSON, *Chicago Daily News*

### HUGO WOLF— DER CORREGIDOR (EXCERPTS)

*Philharmonic Symphony Society of New York, Bruno Walter, Conductor; Assisting Artists: Grete Strueckgold and Gustav Schuetzendorf. Nov. 26, 1933.*

One has heard it said that "Der Corregidor," as a stage-piece, is not always theatrically effective. That may be so. But it does not seem an adequate reason for excluding the work from the repertoire of our principal lyric theatre, the Metropolitan, in view of the extraordinary musical quality of Wolf's opera, the sheer loveliness and poetry and humor and tenderness that well from almost every page of this enamoring score.

We are perhaps inclined to forget that a considerable number of operas that are exceedingly lively members of the standard repertoire maintain their hold upon the affection of their audiences almost wholly by reason of their musical appeal, and with little regard for their dramatic effectiveness. If an opera were always to be kept from the stage because there are parts of it which are not "good theater," the slaughter of masterpieces would be appalling. Among the casualties would be, for example, no less a composition than "Tristan and Isolde": for how often have we heard it said that the second act of that rather popular work is "poor theater?" I do not happen to share this view.

But even if this score were less genuinely dramatic in the pulse and contour of the music than it is, "Der Corregidor" would still clamor for production on the stage of the Metropolitan by reason of the beauty and power and fascination of the music. Here, again and again, is Hugo Wolf at his most moving and memorable. This is for the most part, music of rare imaginative vividness, of a beauty that takes one by the throat, a charm and grace and poetry that enchant the ear and the mind. It is the score of an artist to whom intellectual and spiritual distinction and expressiveness and truth of style were second nature—the score of a master.

—LAWRENCE GILMAN, *New York Herald Tribune*

Both during and after his lifetime, Wolf suffered from grievous public neglect of his music. His colleagues and the critics also were divided in their estimates of his worth, although some of the opposition was due to the fact that he allied himself with the Wagner-Bruckner faction and thereby drew upon himself the wrath of the powerful penwielder, Hanslick, and his vengeful adherents.

Lovely music, melodious, graceful, characteristic, and witty, is dressed by Wolf in

orchestration of rich and resourceful kind. In "Der Corregidor" he shows himself to be as original and masterful as he is in his songs.

—LEONARD LIEBLING, *New York American*

For this music, judging by the pages heard yesterday, deserves a better fate than neglect; it is music of great tenderness, humor and passion. It is a work of indubitable creative power.

The remaining four excerpts, two of which were entirely orchestral, bring the Corregidor more actively into the proceedings. The music by turns is maliciously humorous, stormy, mocking and violent. The orchestra speaks with fullness and rich variety, maintaining always clarity of presentation. The audience responded to the performance with the warmth it merited. If the Metropolitan Opera is in search of a novelty for next season, it could not do any better than mount this long-neglected opera of an authentic genius.

—H.T., *The New York Times*

### GUSTAV MAHLER— FIRST SYMPHONY

*The Civic Symphony Orchestra, Denver, Colorado; Conductor, Horace E. Tureman; December 5, 1933.*

Mahler's First Symphony was a feature of the second concert given by the Civic Symphony, Horace E. Tureman conducting. An element of uncertainty in the first movement was redeemed by the good work done in the last two movements, the orchestra giving a telling performance of the closing portion.

—JOHN C. KENDEL, *Musical America*

### GUSTAV MAHLER— NINTH SYMPHONY

*Boston Symphony Orchestra; Dr. Serge Koussevitzky, Conductor; Boston, December 8th and 9th, 1933.*

The weariness of a man longing for peace can be felt throughout the first movement and the concluding adagio. Indeed, the muted brasses sigh out under the strings, shortly after the beginning of the andante, a motive that strikingly recalls the composer's musings at the end of "The Song of the Earth," upon a pleasant land beyond death where "the distant skies are shining blue, eternally." Even the obstreperous rollicking of the scherzo, upon a country dance tune is soon interrupted by black melancholy. . . .

Yet like Wagner when he wrote "Tristan," Mahler the artist was able to preserve sufficient balance to express himself clearly.

—C.W.D., *The Boston Globe*

But in "The Song of the Earth" and this Ninth Symphony, as Dr. Koussevitzky and the orchestra have played them to us, Mahler wears another and less debatable aspect. In

these later pieces he is concerned with the expression of more personal and intimate feeling, of the obsessions that pursued his final years. Then were the coming of death, our mortal end in oblivion, ever upon him. They might soothe his imagination; yet did they fester upon it. In those last days he would scorn life and the ways of men; mock janglingly at them. Yet never could he put them altogether by for more mystical or cosmic visions.

Judge as the hearer may of his expression of these broodings that consumed him, compared with many a composer of our day, sterile, routined, dryly cerebrating, Mahler at least had something to express and more or less potently expressed it.

—H.T.P., *Boston Evening Transcript*

A fourth hearing of Mahler's Symphony naturally made for clearer appraisal of this remarkable work. The most moving and impressive portion of the symphony seemed yesterday to be, not the final Adagio that would wrest from the grave its secrets, but the opening Andante, which even more in its resignations than in its protests is music of a heart-shaking, heart-breaking sadness. The Scherzo, with its rustic gaiety and vigor, pleased as before.

Again it was easy to be stirred by the ironical third movement that is said to have expressed Mahler's aversion to the futile hurly-burly of New York City, where the Symphony was sketched, . . .

While thanking Dr. Koussevitzky for the opportunity once more to hear this Ninth Symphony, is it out of place to suggest that there are five completed symphonies of Mahler that Boston does not know, and others that it has not heard in years?

—WARREN STOREY SMITH, *Boston Post*

### ANTON BRUCKNER QUINTET (ADAGIO)

*New York Philharmonic, Hans Lange, Conductor; Feb. 8, 9, 11, 1934 (broadcast over Columbia Chain.)*

Another instance of Hans Lange's ability to dig up new and unfamiliar works was last evening's program of the Philharmonic-Symphony Society at Carnegie Hall. . . .

The unfamiliar was represented by the Adagio from Bruckner's Quintet in F Major, played augmentatively by the string section. . .

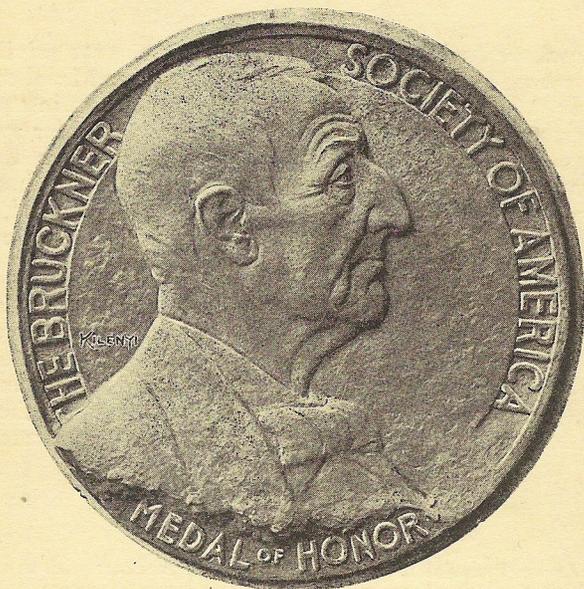

A surprising tonal balance that brought out in marked relief the melodic voices against passing note progressions, featured the Bruckner piece. Its mood is intensely emotional, and approaches a religious fervor. The audience found it particularly to its liking.

—R. C. B., *N. Y. World-Telegram*

## SYMPHONIC NEW DEAL

Lest Symphonies be never more  
Than Nine—  
And Four.

On August 1, 1934, the well-known musical commentator, Samuel Chotzinoff, having attended a performance of Brahms' *Fourth Symphony* the previous evening, said in the *New York Post*:

I must be getting old and cynical, for this symphony of Brahms no longer thrills me as completely as it used to do in those faraway days when the "exit in case of Brahms" joke went the rounds. I wonder if one outgrows Brahms as one outgrows Whitman and Stravinsky! Or is it that one can feel impatience with masterpieces just as one can be impatient with people one loves.

That the self-searching reaction of this critic is not a solitary spiritual deviation of the day is amply attested by a frank, sweeping statement recently issued by the Directors of that most liberal-minded of American artistic organizations, the Philadelphia Orchestra Association:

Musical works which drew large audiences in past years no longer seem to interest the public.

Thus with a single sentence of startling implications the problem of symphonic program regeneration, so long ignored by our major musical committees, at last gained official recognition. Unfortunately, the Philadelphians proposed no solution. That they could see only an impasse directly ahead on a straight symphonic path was revealed by their next sentence:

Modern works of real merit have not been produced in sufficient numbers to make an interesting and adequate repertoire.

For many a year outstanding American musical organizations, regarding symphonic program reform commercially no less perilous than artistically necessary, have resorted to "passing the buck" in this dilemma by nursing the bogey of popular superstition long hovering over the dark epithet "modern". The relentless exploitation of this weakness of the average American music-lover has been marked by an array of bitter innuendo, the melancholy victims of which have been not so much the staunch band of so-called "modernists" as the laymen desirous of becoming acquainted with the great symphonic works that have been given to the world during the past half-century.

The term "modern" in a musical connection has ever raised a sinister chimera. It must be definitely unmasked and discredited, once for all. Ernst Krenek, one of the most brilliant minds among the younger creative musicians, sweeps it aside with impatient contempt. "There is no such thing as modern music," says he. "There is only good or bad music."

Despite his long years of thoughtful activity, W. J. Henderson, one of the few real sages of American music-criticism, does not seem to have arrived at a lucid conception of the puzzling word. Yet, whatever unpleasant note it may strike in the ear of a musicologist so out of sympathy with artistic iconoclasts, one amazing thing seems sure—that Mr. Henderson no longer regards Arnold Schoenberg as a "modernist", a destroyer of traditions. In the course of an eloquent, though perhaps premature, dirge over musical "modernism", which he seriously believes to have "come and gone" in utter futility, he says:

There is considerable propaganda in explanation and aid of the new school. This is particularly true of New York, and also in a smaller degree of Boston. Many persons believe that the latter city must be now the home of the cultivation of the new thought because Arnold Schoenberg is teaching there. But it should never be forgotten that Mr. Schoenberg requires of his pupils a solid grounding in the principles of music as formulated in the works of the fathers. He does not permit them to make attempts to build without foundations.

Thus the time has arrived for loyal Schoenberg adherents to enter his name for recognition as a classicist. They should seize the rare opportunity with joy, reserving for their intimate circle a hearty chuckle over the following anecdote so well known to them. Immediately upon the master's arrival in this country one of his favorite pupils, the young American composer Weiss, showed him examples of the work of our serious younger creative musicians. Glancing over the scores with an omniscient eye Schoenberg suddenly exclaimed with paternal pride, "But, child," (this is only a translation, of course) "This is wonderful! They are all writing atonally here!"

Just what did the Philadelphia Orchestra Association mean when it used the word "modern" in the announcement previously quoted? Probably, we shall never know, for it chose in the face of the "Big Bad Wolf" to give its undivided attention to box-office troubles. To stem any further ebb in the tide of its alarmingly diminishing patronage this enterprising group decided to venture boldly into a field of music whose appeal to the senses of Tom, Dick, and Harry is not restricted to the ear.

Instead of its traditional thirty-week season of symphony concerts it announced a plan embracing twenty weeks of concerts and ten weeks of opera. It is to be sincerely hoped that so progressive an organization will find in this drastic change of policy a solution of, at least, its financial worries. If its sacrifice of that measure of artistic sincerity inevitably imperilled in the presentation of the standard operatic repertoire should prove to have been in vain it will become a source of deep regret to many a serious music lover that the Philadelphia band did not resort to the S.O.S. expedient lately adopted by the New York Philharmonic Society, for the services of Mr. Stokowski's orchestra in behalf of artistic progress in this country during the past decade have been second to those of no other.\*

## II

At the same time the directors of the *New York Philharmonic*, although no longer able to ignore completely the handwriting on the wall so clearly read, if not fearlessly interpreted, by Mr. Chotzinoff and the Philadelphians, made public their dogged determination to continue along the old

\*When this article was already in the press the Philadelphia Orchestra Association announced definitely the operas and dates for thirty of their projected series of stage performances. The list, gratifyingly free from all that might be considered cheap, embraces three performances of each of the following: *Tristan*, *Carmen*, *Rosenkavalier*, *Hansel and Gretel*, *Boris Godunoff*, *Iphigenia in Aulis*, *Falstaff*, *Pelleas et Melisande*, *Meistersinger*.

beaten path. The essentially unaltered nature of their future program policy may be readily foreseen from their latest findings, announced as follows in their prospectus for the 93d season:

—That the largest portion of the public is in favor of having little but the classic masterpieces, that a considerable body of subscribers, particularly of the younger generation, wished to hear the most important works of contemporary composers; and that a small but growing group demanded the opportunity to know what America is producing musically.

Obviously these findings do not tell the whole truth. If the directors of the *Philharmonic* believe that the generous fund they recently acquired through their humble appeal to the public-at-large is a token of the enthusiastic general approval of their traditional program policy, they may, at the expiration of the period of grace now granted them, come to the painful realization that a 75% (or larger) repayment in the worn currency of the traditional three B's was inadequate to effect the renewal of a similar credit.

Among the vast radio audience that has gratefully absorbed the past season's *Philharmonic* broadcasts the "younger generation" (so mentioned by the directors) is already complaining bitterly that, instead of the most significant serious works of recent symphonic literature, it is being given practically nothing but ornate, clever novelties of an essentially salon-nature. Something must be done about this lest the voice of so considerable a dissatisfied group become loud enough to threaten the very life of the orchestra generally believed to be the finest in the country.\*

Passing time has made the successful obviation of this impending danger comparatively easy for the *Philharmonic*. It need not plunge into an orgy of either the most recent European or American compositions in order to appease the rising hunger of this insistent minority group. It is now possible to effect a compromise satisfactory to all groups, an agreement centering about a revised and more accurate definition of the term "classic".

Since Toscanini and Walter are again to bear the brunt of presenting the "classics", they must be heartily encouraged in pursuing more freely the inclination they have more recently shown to interpret the term "classic" in its broader rather than its traditional, narrower sense. Now that the days of "exit in case of Bruckner or Mahler" are safely past, a fact revealed by *Chord and Discord* during the past three years, through the wholesale citation of favorable critical and public reaction to these masters, it seems no longer presumptuous to remind our two greatest conductors of the days, not so long ago, when the grim joke was "exit in case of Brahms."

---

\*From Columbus, Ohio, one of the "younger generation" appeals to us as follows:

"If you have any influence with Bruno Walter, and he performs "Das Lied von der Erde" with the Philharmonic this winter, PLEASE ask him to play it on one of the Sunday radio concerts. You can't imagine what the radio and phonograph mean to us out here in the "sticks". There have been but three symphony concerts per season in Columbus for the past two seasons, and next season will be no better. Except for Scriabine's "Poem of Ecstasy", everything played was well out of the "debatable" category. The London String Quartet will be here this winter for the first chamber-music concert since early in 1930. Opera, except a local amateur company, is the same. Bruckner, Mahler, Reger, Hindemith, Pfitzner, Berg, Krenek, Toch, Schoenberg, Miaskovsky, Medtner, Markevitch, Shostakovich, Honegger, Milhaud, Holst, Vaughan Williams, Bax, Elgar, Delius, de Falla, Casella, Malipiero, Sibelius, and of course all the radical Americans are only names (or almost such) here in Columbus. New Yorkers sometimes complain about the slimness of their fare there, but it is a feast compared with what we have."

Only a paragraph is necessary to outline the new situation. Last season Mr. Liebling of *Musical Courier*, having heard Walter's reading of Mahler's *First*, confessed that he could see a great deal more in that music than ever before. Mr. Sanborn of the *World-Telegram* predicted for it a popularity as great as Tschaiakowsky's. After Walter's performance of Bruckner's *Fifth*, Mr. Downes of the *Times* said over the radio: "It is high time for us to own up that we have, perhaps, not been sufficiently impartial in our judgment of Bruckner and that he was undoubtedly one of the greatest composers of the post-Wagnerian era." About Mahler's *Ninth*, technically the most revolutionary of all his symphonies, Mr. Gilman of the *Tribune* wrote: "It should be added to the repertoire of other symphonic bodies, and it should be heard again, for it is a remarkable score." And after hearing Bruckner's *Fifth* he said: "Bruckner—the complete symphonic Bruckner—deserves to be better known. One of the most remarkable composers of the nineteenth century, he has never in this country received his due." To review similarly in these pages the new, more friendly attitude of practically every American critic of importance toward Bruckner and Mahler would be purely repetitious, but the significance of this changed attitude cannot be overestimated by the leading symphonic conductors in an effort to give renewed vitality to their programs. Bruckner wrote eleven symphonies, nine of them (I-IX) among the greatest in the whole range of music. In Europe outstanding conductors like Nikisch and Loewe have (in less troubled days) even made it a practice to produce them in complete cycles, showing how one vast symphonic conception developed through nine colossal statements, soaring ever higher on increasingly broader wing, until its flight embraced a veritable tonal cosmos.

On the other hand, Mahler completed nine symphonies and two movements of a tenth, in addition to the immortal *Song of the Earth*. Thus these two masters alone have left twenty-two important symphonic works, scarcely half of which have been granted even an occasional hearing during the past decade, and some of which have yet to be given even a premiere in this country. Not only would serious attention to these two neglected symphonic giants conform to a broader interpretation of the term "classic" (for they are undeniably regarded as classic in Europe) but the Philharmonic's two distinguished exponents of the "classics" would thereby be given the opportunity to repair the huge breach that narrow, tradition-bound programming through a whole generation has effected between the average American music-lover's sadly isolated concepts of "classic" and "modern" music.

The recent American triumphs of *Elektra* and *Wozzeck* reveal clearly how much greater progress our music-dramatic appreciation has made than our symphonic in the past generation. The reason, of course, is Wagner. The step from *Goetterdaemmerung* to *Elektra* was not too wide; nor was the one from *Rosenkavalier* to the not extremely radical *Wozzeck*.

Yet the American concert-goer seems totally ignorant of the fact that the field of the symphony after Beethoven shows a progress in scope and language in no way inferior to that of its more lurid neighbor, the music-drama. Lacking a thorough acquaintance with these contributions he cannot listen intelligently to a later Bruckner symphony, to any Mahler symphony, to say nothing of the music of a Von Webern, issuing as it does, out of the very essence of Mahler's most mature art, the language of his *Ninth Symphony*.

Mr. Toscanini, Mr. Walter, and Directors of the Philharmonic, there is no time like the present. Yours is the grand opportunity for a vast, ideal accomplishment. Begin at the beginning. Let American music-lovers hear the *First* of Bruckner (composed in 1864 and still unperformed in our country) for the prophetic trumpets of this symphony sound an unforgettable forecast of the approach of that bogus bogey of "modernism", Schoenberg's maligned twelve-toned scale, but here an utterance of a contextual pertinence and naturalness that will set many a serious music-lover to wondering whether he has not been too hasty in joining the chorus condemning "modern" composers *en masse*. Then give them the *Second*, the *Third*, and then once more that incomparable Toscanini reading of the *Fourth*, which will take on added lustre from the clarifying influence of its younger symphonic sisters previously presented in order for the first time. And so on, including the dreaded *Sixth* and shedding new light upon the already popular *Seventh*, at the American premiere of which the eminent critic Krehbiel said fifty years ago, "next to this symphony *Tristan* sounds as simple as a Haydn symphony." Then, having heard Toscanini's sublime readings of this very work, our concertgoer will have a hint of the pall of musical ignorance that has lain over America for half a century, for Krehbiel, far from being unlearned or prejudiced, was the only critic (Europeans included) of the Eighties to sense the vast world separating the musical language of Wagner and Bruckner. Moreover, the sincerity of his judgment is beyond reproach, for unable to grasp fully the beauties beneath the (then still) complex externals, he nevertheless admitted that the work might be considered beautiful twenty-five years later.

### III

So great has been the rift between German music and that of all other countries since Wagner that any number of performances of Debussy, or Skriabin, or Stravinsky (to name only those three) will not help in the slightest to bring a Von Webern's individual message any closer to us.

It was a comparatively easy matter to popularize the symphonies of Brahms in this country, for the technical material with which that master worked was practically identical with that used by Beethoven a half-century before. No one knows better than Schoenberg himself how far beyond the grasp of the common ear of the 1930's is his present musical language. Though for him it is the only possible means of expression, he urges it upon none of his disciples. Thus there is a world of difference in the degree of the so-styled "modernism" of his two most prominent disciples, Berg and Von Webern. Measured by present Schoenbergian standards Berg is distinctly conservative, a fact requiring no further proof than the tremendous triumphs of his masterpiece *Wozzeck* within a decade of its composition. Von Webern, on the other hand, has as yet only a handful of followers even in his own country because his epigrammatic style of expression represents perhaps the utmost economy of means and the most intense concentration of emotion as yet achieved in music.

It must be kept in mind that the course of musical development is ever immutable, a progress from master to master. Schoenberg's *Gurrelieder*, performed here for the first time thirty years after its composition, achieved a facile triumph, for the art of Wagner and Strauss, its direct

technical forbears, had become the property of every American music-lover in the interim. Yet an earlier Schoenberg masterpiece, the *Tristan*-saturated *Verklärte Nacht*, performed before the listeners had been sufficiently prepared to grasp it, was "hissed and booed" as though it had been merely so much noise. In the light of this, with Schoenberg's later works rarely performed and then only in a humble obscurity reminiscent of the catacomb-services of the early Christians, one need hardly hesitate to declare that Mr. Henderson's compassionate phrase, "the almost legendary Schoenberg", implies too hasty a judgment.

Just what is the significance of all this to America? The answer requires only a casual backward glance along our symphonic programs of the past forty years. Of the giant symphonists since Beethoven only Brahms seems to have achieved "classic" status with us. In short, we have been led to believe that only four truly great symphonies were written in over a hundred years. For the rest we have been fed an endless array of "symphonic poems" with alluring titles and colorful romances and told to see how well the music fitted them. How great a hoax was thus perpetrated upon us who were thereby robbed of almost all desire to listen to any new larger symphonic work without a story may be now gathered for the first time from an astonishing, supremely authoritative document most recently penned.

This is a Strauss letter, soon to be published, in which the composer at last places himself squarely in the ranks of the creators of absolute music. Through its clear statement the acknowledged Grand Master of program music removes the mask of his dazzling, early years and smilingly introduces himself in the incredible role in which he wishes to be remembered. "But what of those colorful tales of Don Juan, Don Quixote, Till Eulenspiegel, etc?" the befuddled music-lover will naturally inquire. Strauss only shrugs his shoulders and answers, "You made me do it. My music would not have sounded intelligible to you without those stories. But now they are unnecessary." What will be the place of Strauss as a composer of absolute music? Will his fame persist and belie the old adage, "Easy come, easy go?"

To return for a moment to the Nineties, we have seen how the neglect of more recent gigantic symphonies may be in a large measure attributed to the overwhelming success of the program "fad" in all its pretty, extra-musical ramifications. When this Straussism (if we may still mention his name in such a connection) took the world of music by storm the Bruckner symphonies (though for the most part composed many years before) were just beginning to gain a real foothold in Europe. Brahms' symphonies, written in the dialect of an earlier generation, were almost instant "classics" and hence safe from obstruction by a "fad" diametrically opposed to the traditional symphonic form. How desperate a struggle was subsequently waged by not only the Bruckner adherents, but (naturally, more so) by those of Mahler, who was actually modeling his mighty artwork on the allegedly outmoded framework of Beethoven in the very teeth of the all-conquering programmatic fad, will make a fascinating tale for American music-lovers. Nor will their desire to hear it be long in finding voice, for these two mightiest of latter-day symphonists seem at last to be coming into their own in this land of ours, which has until now, like no other country on earth, been the constant and abject prey of artistic fadism.

## IV

The history of music presents at least one outstandingly pertinent analogy to the case of Bruckner and Mahler and their espousal of an "old fashioned" form. It is none other than the case of Bach, whose undaunted loyalty to the allegedly outmoded "polyphonic school" in the face of the new homophonic cult universally adopted in his day resulted in delaying for a whole century the world's recognition of his greatness.

Just before Bach died the symphony was born. The following generation revealed no polyphonic master. It is easy to trace the growing urge of Mozart and Beethoven towards a more liberal use of polyphony in their symphonies. The finale of Mozart's last symphony is a giant fugue. Beethoven's *Ode to Joy* is anything but homophonic. It is common knowledge that Schubert had just begun to study polyphony with Sechter when Fate rudely cut the precious thread of his tender years. The culmination of this polyphonic urge of the great symphonists was in Bruckner, whose pre-symphonic studies, from his first *Preludes* to his *First Symphony*, lasted almost thirty years. His environment, Austrian like Schubert's, found simple and beautiful melodic expression in the *Laendler*, so rich in *Sehnsucht*, that mixed wine of laughter and tears. His worship of Beethoven led him to carry on in the cosmic style first sounded in the former's *Ninth*. His worship of Wagner purely as a musician guided him to an orchestral language of tremendous dramatic power and yet one totally free from merely theatrical characteristics. Last (but not least) the giant naive soul within him caused him to build huge structures on simple foundations out of the most elemental materials imaginable, structures which he often delighted in crowning with towers of polyphony, not mere Babels (as even Brahms is said to have considered them) but towers which, shaped by his tireless, unerring skill, ascend ever higher until they seem to pierce the very heavens.

The passing of the Nineteenth Century revealed that the grand symphonic tradition was to be carried on into the Twentieth. Gustav Mahler, at first almost lured from his idealism by the applause so generously bestowed by the world upon artists who catered to it, soon became a fanatic devotee of the pure symphonic cult and, taking his cue from Beethoven's last *Finale*, fashioned the most gigantic symphony of all, *The Symphony of a Thousand*.

It is impossible, even for the best critic, to be a prophet of infallible judgment. Yet he should intuitively know that it is wrong to condemn, purely on the ground of its unfamiliar dialect, a new serious artwork, the human and poetic qualities of which have made an overwhelming impression upon an audience of laymen. The titanic blunders of this type made by the arch-critic Hanslick during the Nineteenth Century, his sweeping damnation of the art of Wagner, Bruckner, and Strauss, should serve as eternal warnings to all musical commentators who lean too hard upon the inevitably unstable canons of artistic beauty codified by a previous generation. When Mr. Henderson proudly quotes his eminent English colleague Mr. Newman to show at the expense of *Wozzeck* that they are in perfect accord in rejecting the formal contributions of the so-called modernists, he forgets that Englishmen have been granted, if possible, even less opportunity than Americans to keep pace with the main stream of musical progress. It is far too soon for any one to pass judgment on *Wozzeck*, to say nothing of the abused modernism

of which it is only a conservative expression. We do know, however, that it is one of the most powerful and successful music-dramatic works of the day. If American and English critics must hold court over unfamiliar music, the time has come for them to call for a thorough and impartial hearing on the case of Bruckner and Mahler, whose contributions, now grown formally conservative, can no longer suffer under the handicaps that beset serious music written in a still strange dialect.

Instead of speculating upon such hopeless futilities as "Why No Great American Composers?" let our leading critics lift their voices in unison to tell this country's music-lovers that they are lagging full fifty years behind the vital stream of music, a half-century unprecedentedly rich in symphonic masters, to mention only Bruckner, Mahler, and Schoenberg. When they have helped to guide them along this path of still strange wonders, they will have accomplished the first real step towards producing a truly great musical contribution by a native-born American.

—GABRIEL ENGEL.

---

### AMERICA GAINS FAMOUS FOREIGN MUSIC-CRITIC

Serious music-lovers of this country will greet with enthusiasm the recent announcement made by the *New York Staats-Zeitung*, that it has secured for its chief music-critic the celebrated Paul Bekker, author of world-famous German books on Beethoven, Wagner, Mahler, and the modern symphony. This progressive and energetic German-American newspaper is to be heartily congratulated upon having thus added to its able rostrum one of the most powerful and original minds in the entire realm of musical esthetics. How comprehensive and authoritative a voice America will gain by this happy transaction may be readily gathered from the additional facts that Mr. Bekker has not been merely a writer of books on musical subjects, but has also had wide experience in the more practical fields of the art, having been General Manager of the State Opera House in Kassel and Wiesbaden and music-critic of the *Frankfurter Zeitung*.

*Chord and Discord* will endeavor to obtain permission to reprint in English some of the most important utterances to be made by Mr. Bekker concerning music in America.

FROM THE PAINTING BY DR. M. G. DUMLER, MUS.D.

" . . . how one vast symphonic conception developed through nine colossal statements soaring ever higher on increasingly broader wing, until its flight embraced a veritable tonal cosmos" (*See page 4*).

## MAHLER'S *LIED VON DER ERDE*

### I.

Gustav Mahler's *Das Lied von der Erde* is one of the really unique pieces in the literature of music. "Unique" refers not only to the actual music itself, but also to the composition's classification as to type. Written as it is for two solo voices and orchestra and set to texts from Hans Bethge's *Die Chinesische Floete*, it could well be called a song-cycle. Yet its symphonic length and breadth and the ever-present importance of the orchestra tend to lead one, on second thought, to consider it a symphony—a symphony with vocal solos. This classification is strengthened by the facts that Mahler had already used soloists (without chorus) in previous symphonic movements and that he himself subtitled the work *Eine Symphonie*. On the other hand, he assigned it no number in the ranks of his other symphonies. Furthermore, no previous symphony of his uses soloists entirely without chorus in all movements, nor are any set exclusively to texts by one poet. Those who study Mahler's music closely will come to realize that there is an appreciable difference between his symphony style and his song style; yet both characteristics can be found inseparably united in *Das Lied von der Erde*.

This discovered, we probably have the clue to its real classification, which is that it cannot be put into any of the conventional categories, that it is a hybrid—a cross between a symphony and a song-cycle. There are a few pieces of music which cannot be classified, labeled, and pigeon-holed; Mahler's *Das Lied von der Erde* is one of them.

All of Mahler's mature works except the early *Das Klagende Lied* fall under the heading of either the symphony or the song (or both). In contrapuntal wealth, in breadth, depth, and power, and in variety in handling the orchestra, the symphonies are superior, while the songs have the advantage in refinement, clarity of form, conciseness, economy of means, and delicate workmanship. Therefore, if *Das Lied von der Erde* is a hybrid of both these forms, is it not natural to deduce that it should contain the best work of its composer? The greatest authorities usually regard either it or the *Eighth Symphony* as the composer's masterpiece. Even some of those who criticize Mahler most harshly will speak well of *Das Lied von der Erde*, just as even the severest critics of Debussy and Elgar will sometimes make an exception in the case of *Pelleas and Melisande* and of *The Dream of Gerontius*.

If we go to that old reliable musical reference work, Grove's *Dictionary of Music*, we find *Das Lied* evaluated thus:

The change from the blustering of the 8th symphony to the fine perceptions of this set of songs is noteworthy. The scoring has often an almost Latin delicacy. Mahler's position as a composer will rest more certainly on these songs and on the 9th symphony than on all the remainder of his work, even including the 8th symphony.

Scott Goddard, who contributed the article on Mahler for Grove's, makes clear in another passage his high regard for *Das Lied von der Erde* (and incidentally, also for the *Ninth Symphony*.)

### II.

Mahler wrote *Das Lied von der Erde* when he was at the height of his powers. It represents the beginning of the third and greatest period of his writing, the second period having culminated in the great *Eighth Symphony* (called *The Symphony of a Thousand*). After *Das Lied*, Mahler wrote only one more complete work, the *Ninth Symphony*.

"At the height of his power"; yes, but emotionally thoroughly

disillusioned—such also was Mahler when he wrote *Das Lied von der Erde*. Severely buffeted about by life and convinced of the futility of his hope of becoming sufficiently independent financially to lay aside the baton and devote all his time to composition, Mahler had by now become thoroughly passive and resigned. Realizing he was "lost to the world", as the text of one of his previous songs expressed it\*, he found consoling escape from reality in his musical creations alone. In *Das Lied von der Erde*, especially in the second and last movements, he gave full expression to this utter spiritual solitude.

The text Mahler used, as has already been said, is taken from *The Chinese Flute*, by Hans Bethge. These poems are re-creations in German (rather than German translations) of Chinese poems written by Li-Tai-Po and other eighth century Chinese poets.

*Das Lied von der Erde* contains six movements (or songs, if you prefer), entitled *Drinking-Song of the Earth's Sorrow*, *The Lonely One in Autumn*, *Of Youth*, *Of Beauty*, *The Drunkard in the Spring*, and *The Farewell*. Of these, the first, the third, and fifth employ a tenor soloist, while the second, fourth, and sixth use a contralto, though a foot-note permits the optional substitution of a baritone for the contralto.

### III.

The opening movement, *Das Trinklied vom Jammer der Erde*, is pessimistic, its philosophy being "eat, drink, and be merry, for to-morrow we die". Three times appears the line: *Dunkel ist das Leben, ist der Tod*, (Dark is life, dark is death), and it dispels all gaiety at each repetition. These words, with the opening theme for four horns, seem to be the *idée fixe* of the whole song. Pessimistic though this song may be, there is no sorrow or grief in it; rather it is heroic and ironic, at times almost defiant.

When one studies the orchestral score of *Das Lied von der Erde*, probably the first thing he notices in *Der Einsame im Herbst* is the wandering figure in eighth-notes carried by the muted first violins through such a large portion of the song. This continually moving figure suggests a longing which, though not intense, is none the less deep and never attains satisfaction. Promise of fulfilment is given in the beautiful passage:

Ich komm' zu dir, traute Ruhestaette!  
Ja, gib mir Ruh, ich hab' Erquickung not!

but it does not reach actual fulfilment, the movement ending in the lonely sorrow in which it began. That peculiar nostalgic sensation of the approaching end of something beautiful, over which we would linger much longer if we could, the feeling we associate with autumn, is one which we have experienced before in music, as well as in life, in such things as the second movement of Franck's *D-minor Symphony*, the third movement of Brahms' *Third Symphony*, in the Rhine-Maidens' Scene in *Goetterdaemmerung*, in certain moments in Chopin, in Schubert, and in Schumann, but in *Der Einsame im Herbst* Mahler has given us the most heart-felt picture of them all.

The next three movements present the other side of life's picture, though only the temporary, unusual, and deceptive side. All are short, lively, jolly, and sometimes rather saucy. The music of *Von der Jugend* skips about gaily in its youthful, carefree manner, but it lacks the genuine ring of true joy—it is only a false joy, a mirage destined to dissolve,

\**Ich bin der Welt abhanden gekommen*, one of Mahler's five masterly songs to texts by Rueckert.

leaving only disillusionment.

*Von der Schoenheit* also contains some of the naive, folk-like quality which marks so much of Mahler's work, but which becomes less and less frequent as his work advances. Beginning and ending daintily, almost ethereally, this song nevertheless reaches a stirring climax, in which the plucking of a mandolin rings forth cheerily.

That artificial joy which comes from the flowing bowl is depicted in *Der Trunkene im Fruehling*. Though outwardly cheerful there runs beneath this song a current of irony which emphasizes the futility of artificially-stimulated gaiety.

The final movement, *Der Abschied*, is closely akin to the second. It is much longer than any of the three preceding songs and sounds the final and predominant note of the whole work. Like *Der Einsame im Herbst*, its mood is that of weariness, loneliness, and resignation, but it ends with a note of hope—joy in the eternal Spring of the earth—the only true consolation possible. Some of the most notable features of this song are its ominous, cheerless opening, the passages in which the time-signature is temporarily abandoned while the voice continues in free time—Mahler's nearest approach to the stilted recitative—the striking descending eighth-note motive in thirds (usually appearing in horns or wood-winds) which is repeated over and over in many forms during a long section of the song, and last, the ethereal long *pianissimo* at the end, which seems to soar away from all earthly care, its long, broad phrases giving final relief from trouble. The very end is lingering and long-drawn-out and seems to go on and on forever in the mind, even after the music has died away into silence. Those critics who take Mahler to task in accusations of over-scoring and too-prolonged *fortissimos* should not overlook this unforgettable ending.

#### IV.

Technically, *Das Lied von der Erde* reveals on every page that masterly writing which is stamped on all of Mahler's work. The essence of his method lies in the individual manner of movement he gives each voice of the texture. Consequently, the effect of his music lies in the combination of all the simultaneously-sounding voices, rather than in the beauty of a prominent melody in its relation to a purely subsidiary accompaniment, as is true of the average composer. Mahler's music cannot be analyzed as melody, countermelody, harmonic accompaniment, and bass; it is something finer than such an obvious device, for with Mahler, all voices are important and indispensable to the effect of the whole.

The logical way in which his individual voices proceed, with apparently very little regard for the equally logical movement of other voices is truly fascinating. The learned eye may detect occasional clashes and peculiar interrelations, but so naturally do they occur that they do not strike the ear as clashes, in fact, do not even appear dissonant. This type of voice-movement, most idiomatically representative of Mahler, finds no more typical and interesting expression in all his music than it does in the opening of *Der Einsame im Herbst*. To give a single instance, at one point we find the voice ascending the melodic minor scale, with the sixth and seventh degrees raised, while the oboe descends the melodic minor scale, in which the sixth and seventh degrees are natural. The two voices cross on the sixth degree of the scale, the singer having the raised sixth degree (B-natural—the key is D-minor) against the natural sixth degree (B-flat) in the oboe. Yet if we follow the music horizontally,

rather than vertically, the ear does not notice or take offense at this sharp dissonance, which would be very stinging if introduced suddenly, or isolated from a natural melodic progression.

*Das Lied von der Erde* is also in no way deficient in representing its composer's mastery of the orchestra. Mahler never conventionalized his scoring or resorted to stock formulas or constant repetition of "sure-fire recipes" for effectiveness. One can never accuse him of using orchestration as a means for the display of virtuosity on the part of the performers, of effects calculated to surprise, dazzle, or shock the hearers, or of striving for the merely brilliant, eccentric, or sensational. What a contrast he thus presents to the Rimsky-Korsakoff-Strauss-Ravel-Respighi-Stravinsky methods of orchestration!

An excellent discussion of Mahler's handling of the orchestra may be found in an article by Winthrop Sargeant in *Musical America* for March 25, 1934. In it Mr. Sargeant says:

It is, indeed, difficult to think of Mahler's orchestration as a separately definable aspect of his technique of composition. He thought so completely in terms of the orchestra that, for him, to orchestrate was to compose, and to compose was to orchestrate. . . . He is one of the few composers of the last hundred years in whose orchestral work the influence of the piano keyboard is not felt. When he writes for strings, he writes parts that are conceived for strings alone—not parts that are merely possible on stringed instruments. When he writes an oboe or a clarinet passage it is the very spirit of the oboe or clarinet that he invokes, not its potentialities for showy technical passages.

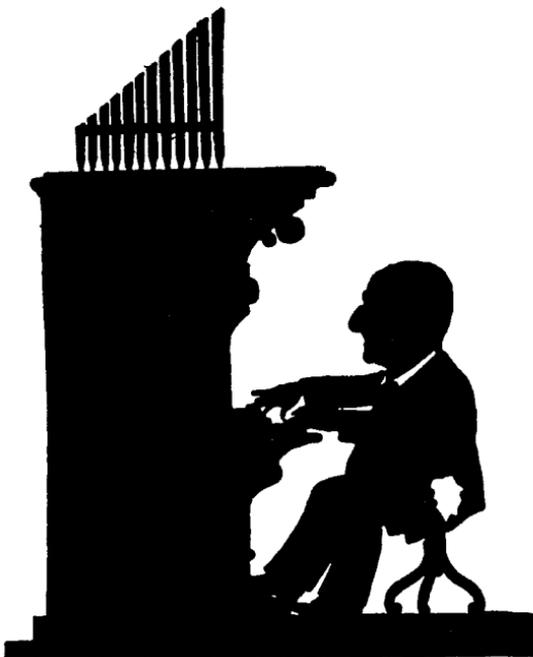

Mr. Sargeant emphasizes that Mahler's most distinguishing trait in handling the orchestra is that of setting off instruments against each other, rather than combining them. And herein lies the secret of the complete individuality and the fresh originality of the very *sound* of Mahler's orchestra. Mr. Sargeant also makes a feature of the use of dynamic contrasts between various voices, such as the appearing into prominence and receding into the background of first one instrument and then another and the employment of a *diminuendo* in one voice occurring simultaneously with a *crescendo* in another voice. We might add that Mahler also frequently has similar dynamic contrasts between two instruments playing in unison on the same voice. To this contrast of dynamics Mr. Sargeant gives the appropriate name of *contrapuntal dynamics*, and remarks:

The iridescent interplay of tone-color thus achieved permits of an infinite gradation of subtle nuances.

When Mr. Sargeant wants to give an example of the maximum of effect achieved with the minimum of means, it is the opening of *Der Abschied* that he most appropriately quotes. But that is only one instance. Many others can be found in *Das Lied von der Erde*, which would have supplied an equally good example, and a host of others from other works of the composer. However, if one wanted to study as good an example of Mahler's use of the orchestra as is possible to find within the covers of only one of his works, it is *Das Lied von der Erde* which could probably be most highly recommended.

In any aspect from which one studies it, *Das Lied von der Erde* remains one of the high-lights, perhaps the masterpiece, of Mahler's career. As said at the beginning, it is one of the unique works of musical literature. A weak, slavish imitation of it is conceivable, but a genuine, vital second *Das Lied von der Erde* is an unimaginable thing. Nothing really like it has ever appeared before or since. It belongs to that precious group of musical creations of which each is a law unto itself and entirely different from any other piece of music.

—WILLIAM PARKS GRANT.

### THE AMERICAN PREMIERE OF BRUCKNER'S *NINTH* {Original Version}

Otto Klemperer, the distinguished conductor whose unswerving artistic idealism metropolitan music-lovers remember as the source of fine, courageous pioneer performances of Bruckner's *Seventh* and *Eighth* during seasons immediately preceding the American Bruckner Renaissance, will renew his efforts in behalf of the Austrian master's music when he directs the N. Y. Philharmonic in the first New World presentation of the original version of Bruckner's *Ninth*. This premiere offering is to feature his programs of the week beginning Oct. 11.

European Brucknerites, having already had the opportunity of hearing this recently published original version of the *Ninth* performed by some of the most authoritative of the world's Bruckner interpreters, among them Klemperer and Walter, seem to be of the general opinion that it is, in effect, a "new" symphony, in many of its essential features an expression the very opposite of the now almost maligned "Loewe" version. Whether or not this view is the result of exaggerated enthusiasm, perhaps pardonable in the light of the artistic importance of the score's belated publication, is a matter for those thoroughly familiar with the long accepted "Loewe" version to determine for themselves. This "Farewell" Symphony of Bruckner, though never as popular here as the *Fourth* or *Seventh*, has not suffered the almost total neglect that has been the sad lot of Bruckner's other symphonies in America. There will be some here capable of judging to what extent Bruckner's foremost disciple, Loewe, was misled by his zeal in behalf of the master and, far more important, capable of deciding whether or not this is, in effect, a Bruckner symphony which American music-lovers have not yet heard.

Mr. Klemperer's earnest devotion to the art of Bruckner needs no other proof than the record of his past year's activities, which include performances of the *Fifth* at Leipzig, the *Ninth* (original version) in Vienna, and two performances of the *Fourth* at Los Angeles. In the light of his world-wide fame as a symphonic conductor serious music-lovers may well anticipate a thrilling revelation from Mr. Klemperer's approaching readings of Bruckner's *Ninth*.

## BRUCKNER'S NINTH (THE ORIGINAL VERSION)

It is not altogether an idle play of fancy to imagine what Bruckner might have said could the splendid first volume of his *Complete Works*\* have been placed into his own hands. His instant reaction would surely have been bewildered amazement. "How on earth did you come to single *me* out for so great an honor?" he would have exclaimed. "Why, don't you know, not even Master von Mozart, nor Master von Beethoven, to say nothing of Master von Haydn, was so honored in his own life-time!"

And yet there lies a deep significance in the circumstance that the modest master of Ansfelden has been honored so soon after his death with a "critical complete edition", for the adjective "critical" signifies, not fault-finding pedantry, but that deeper sympathetic scholarship inseparable from fidelity to the real truth.

The especial importance of the volume just published (the Ninth Volume of the *Complete Works*) in which Prof. Alfred Orel presents the *Ninth Symphony* together with all of Bruckner's sketches for it, supplemented by an exhaustive introductory treatise on the entire subject, seems to me twofold. First, through it the technical details governing public performances of the work are, once for all, definitely established. Second, through its linking of all of Bruckner's plans and sketches for the symphony it affords a view of a great composer's workshop such as has been hitherto presented but once in musical history (in the sketch-books of Beethoven) and, even in that case, in a less comprehensive manner.

The first task of the editor was necessarily to fix definitely the dates of the composition of the various sections of the symphony. To the accomplishment of this aim Orel has applied himself with a truly uncanny devotion to accuracy, using a penetrative method involving the very analysis of the different kinds of paper Bruckner used in preparing the original manuscript, and making it possible to trace clearly the development of the *Ninth Symphony* through its six separate versions! Thus we see how naturally, how organically Bruckner's creative work attained completion, resembling in its course of evolution the growth of a tree, marked by a fresh ring each year.

Correcting all the Bruckner biographers Orel succeeds in setting the date of the beginning of the master's work on the *Ninth* as far back as Sept. 21, 1887. Then he also establishes the fact that Bruckner was engaged upon the *Finale* until his death. He concludes, therefore, that the spiritual world revealed in this symphony is identical with Bruckner's own during his last ten years of life.

His discussion of the sketches and plans is characterized by the same accuracy. Every single phrase, whether adopted or rejected by Bruckner in preparing the final version, is carefully analyzed and given its logical place in the whole scheme of the work. Of extraordinary value is Orel's presentation of a sketch of the unfinished *Finale* in a skeletal four-staved score, which, reaching to the beginning of the *coda*, affords a view of the total structure as planned by the composer. Unfortunately, the actual close, that portion always treated by Bruckner as a grand summation and, hence, probably the most important passage in the symphony, must remain an eternal mystery.

---

\*See Page 23.

One glance at this mighty torso of a *Finale* is enough to convince us that the practice (alas, so frequently carried out by conductors) of using the *Te Deum* in place of a *Finale* corresponds in no respect to the composer's true intention, for this fine choral work shows no relationship to the thematic world unforgettably established in the three completed movements of the symphony. Concerning this fact Orel remarks most strikingly: "Bruckner's clear intent to conclude the *Ninth Symphony* with a gigantic instrumental *Finale* proves the utter futility of any attempt to establish a spiritual connection between it and the *Te Deum*, an attempt so frequently made by conductors, despite the insuperable period of a decade separating the conception of the two works in the mind of the composer. Furthermore, the *Adagio* of the symphony, the involuntary conclusion left the world by Bruckner, attains symbolic significance through the realization that the inexorable grip of Fate wrested the pen from the aged master's hand almost at the very moment in which he would have sealed the work with a completed, formal *Allegro-Finale*."

Finally, in justice to the original version of the *Ninth*, here published for the first time, we feel compelled to comment briefly upon the so-called "Loewe Version", the only shape in which the work was known to the world during the thirty-five years following Bruckner's death. Loewe's changes apply, for the most part, to the instrumentation, his version differing in this respect from the original in almost every bar. As Orel pointed out in a recent lecture at the University of Vienna, Loewe, actuated solely by devoted zeal, sought to render more acceptable to the ears of his contemporaries the general tonal ruggedness of the symphony as left by the master. To accomplish this end he boldly translated into the luxurious massed orchestral language of Wagner the economical group-instrumental effects clearly intended by Bruckner, who seems in this symphony to have anticipated the most modern attitude towards the problem of instrumental expression. For example, Loewe changed a passage, the effect of which in the original, was based upon the contrast of alternating string and woodwind, in such a manner that the thematic material involved would be sounded simultaneously by both these groups, with the result that the tonal color-contrast intended by Bruckner disappeared completely.

In view of these facts, proving absolutely the right of the original version to public performance, not out of sentimental piety, but rather, out of artistic necessity, it seems amazing that a master conductor such as Volkmer Andreas of Zuerich could recently have said that the "Loewe Version" was infinitely superior to the original and that the work would be better served as heretofore, by presentation in Loewe's revision rather than in its original shape. It may be taken for granted that at the time he made such a remark Mr. Andreas had not yet seen Prof. Orel's analysis and that he would now no longer deny the preeminent rights of the original version.

Thus the very first of the symphonic volumes published as part of the *Complete Works* has already exerted in many respects a clarifying and disentangling influence. Further important revelations pertaining to the life and work of Anton Bruckner may well be expected from the remaining volumes of this monumental publication, the speedy appearance of which should be fervently hoped for by all serious music-lovers.

## SYMPHONIC CHRONICLE

### *A Record of Critical and Popular Reaction*

#### ARNOLD SCHOENBERG—

##### PELLEAS AND MELISANDE

*Boston Symphony Orchestra, Arnold Schoenberg, Conductor; March 16, 1934. (The performance was broadcast).*

All this, the strong form, the association of themes with characters, the fitting of programmatic scenes into the formal scheme, is a leaf out of the Straussian book. Unlike Strauss is the absence of realistic or descriptive treatment. Even Debussy has his glistening harp glissando, where the ring drops into the well. Not a hint of such realism creeps into Schoenberg's score. Like Schoenberg and none other, the composer would have this a psychological study. Thoughts and inward feelings furnish the background for the different points of action rather than naturalistic settings. The work begins with *Fate*, not with husband or wife or lover. A tragic mood envelopes all three. No other tone poem is so introspective, would equally render the inwardness of its program.

—A. H. M., *Boston Evening Transcript*

Nothing more radically different from Debussy's musical thought processes could easily be imagined than the Schoenbergian idiom.

The representation of even some of the salient points in Maeterlinck's drama has in this case resulted in a work that is, for most people, too long. However, some one once wisely remarked that "terse and aphoristic methods are for older men". One can readily understand the affection that Mr. Schoenberg has for this piece and his desire to play it. It speaks so thoroughly to him of that period in life when one's destiny is still unrealized. It expresses richly the impressions of a sensitive and searching mind; and it reflects the musical language and environment in which Schoenberg found himself at that time...

Schoenberg is an unaffected, direct and sincere artist. He received an ovation from audience and orchestra yesterday, and he received it almost impersonally. When will Boston hear his *Gurrelieder*, or works of more recent date?

—George S. McManus, *Boston Herald*

To call so masterly a score as that of this tone-poem after Maeterlinck's play a work of apprenticeship suggests a misuse of that term, but surely there is little of what we have come to consider the essential Schoenberg in this rich-sounding, mellifluous, over-long and over-elaborate score. There is, of course, a prodigious display of contrapuntal skill but the polyphonic complexities of the later Schoenberg are of a different order, quite without the fatness and turgidity that marks this *Pelleas and Melisande*...

But that the tone-poem gave pleasure

yesterday was indicated by the applause that returned the distinguished guest several times to the platform.

—Warren Storey Smith, *Boston Post*

In spite of its derivative qualities, *Pelleas* is an imaginative music, a gorgeous contrapuntal fabric, glowing with a multitude of orchestral colors. Where Debussy was content with nebulous suggestion of the fascinating tale of *Pelleas*, Golaud, and the pathetic *Melisande* in dim, gray *Allemonde*, Schoenberg told his version in detail. Graphic even naive, depiction—such as the trombone glissando and descending chromatic scales tremolo, for the violins—prevails throughout. The better parts are of course those where the beginnings of an individual style are perceived. Yet, curiously, Schoenberg employed the Wagnerian and Straussian styles as if they were natural to him! *Pelleas* is not merely a dilute compound of those masters of 19th Century Romanticism.

—*Boston Globe*

#### ANTON BRUCKNER—

##### SEVENTH SYMPHONY

*Anton Bruckner—Seventh Symphony, Minneapolis Symphony Orchestra, Eugene Ormandy, Conductor; Minneapolis, April 6, 1934.*

*Mr. Ormandy's message to the Bruckner Society (March 12, 1934):*

I have finally decided to play the Bruckner *Seventh* at our concert of April 6th, presenting it without cuts. Before the performance, I plan to speak to the audience of Bruckner's life, mentioning the influence of Wagner and other composers on one of the greatest geniuses of all times.

Friday's concert by the Symphony Orchestra at Northrop auditorium brought, as its main feature, the *Seventh Symphony* by Bruckner, which has not been played by the organization since its performance 25 years ago under Emil Oberhoffer...

It is interesting to see this composer is coming more and more into the light of public survey, nearly 40 years after his death...

The climax of importance in the *Seventh Symphony*, generally conceded to be the peak of his effort, occurs in the transcendently beautiful slow movement, which was conceived in a prophetic apprehension of Wagner's death (which occurred a year later), and dedicated to him. It rises to sublime heights, to veritably apocalyptic splendors, and then subsides into a mood of lamentation that is consistently moving...

It was altogether a concert to absorb with all the powers of the head and the heart.

—Frances Boardman,  
*The Saint Paul Pioneer Press*

One unprogrammed feature of the program was Ormandy's plea for a better understanding and appreciation of and for Bruckner. This was made immediately before the interpretation of the symphony and doubtless had considerable effect in moulding opinion, or of persuading opinion to be tolerant.

It is many years since I heard a Bruckner symphony and it is my opinion that we might with advantage have enjoyed, or otherwise, more of these great masterpieces. It is also my opinion that Bruckner needs no apologist; his works speak for themselves, as Ormandy said, and they speak a language easily understood, and that should mean something in these days of aimless philandering with strange musical gods.

He may have been uncouth and uneducated, he was nevertheless a poet, very much of a philosopher, a master who handled his orchestral tools with powerful effect.

This ought not to be a passing fancy, a spasmodic effort to make Bruckner better known to us. I hope Ormandy will bring more of his symphonies for our delectation.

—James Davis,  
*The Minneapolis Tribune*

It was a most wonderful performance, which aroused much enthusiasm for the work, its composer, the orchestra and its splendid conductor.

In Mr. Ormandy's excellent remarks there was but one little fault to find and that was he, like all Bruckner commentators, stressed too much his peasant origin. There was no trace of the peasant in this superb work of marvelous imaginativeness and exquisite nobility of art.

Bruckner is famous for his beautiful slow movements, and slow music naturally abounds even outside of the adagio of his Seventh because the whole work is a monument to the genius of Richard Wagner, whom Bruckner had correctly realized as on the brink of the grave when he saw him for the last time in Bayreuth. It is chiefly held in a reminiscing spirit and key. The initial allegro is "moderate" to a very great extent and even the wonderfully swaying and cheerful trio of the scherzo is slow in an otherwise very fast movement.

—Victor Nilsson,  
*The Minneapolis Journal*

## GUSTAV MAHLER— SECOND SYMPHONY {Excerpt}

*Philadelphia Symphony Orchestra, Fritz Reiner, Conductor; Robin Hood Dell (open air) Philadelphia, August 11, 1934 (Broadcast)*

There could be no more convincing evidence of the growing popularity and universal appeal of Mahler's music than the choice of this charming musico-autobiographical *idyll* for a summer evening's open-air program. This melodious movement is without a doubt the most popular portion of all Mahler's

symphonies and, with the possible exception of the colorful nocturnes in the *Seventh*, Mr. Reiner could have selected no music by this great too long neglected composer equally suited to the character of such a concert.

The sustained applause that followed the performance was the final proof of the practicability, even for popular purposes, of this composer's music, for a whole generation shunned with dread by the average American music-lover under the spell of a hostile, relentless critical propaganda.

Over the radio the performance was preceded by a brief explanatory announcement, the speaker quoting from the book on Mahler recently published by the Bruckner Society.

—Gabriel Engel

## HUGO WOLF— PROMETHEUS

## MARTIN LOEFFLER— EVOCATION

*Boston Symphony Orchestra, Serge Koussevitzky, Conductor; Assisting Artists: David Blair McClosky and the Cecelia Society Chorus; Boston, February 23, 24, 1934. (The second performance was broadcast).*

...Another hearing brought forth new evidence of the grace and loveliness, the exquisite taste and subtle instrumentation of this work, composed for the dedication of Severance Hall, home of the Cleveland Symphony orchestra . . .

It might indeed be well for some of the so-called modernists to take time off from their labors and spend a few moments in consideration of the Loeffler composition. In it there is beauty and the expression of clear musical thought. In it also a full modern orchestra is used. Yet originality is obtained without the use of fantastic instrumentation, polyphony, or atonality. To not a few of the "advanced" schools that would be considered nearly an impossibility.

—W. T. C. Jr., *Boston Traveler*

Hugo Wolf wrote this setting of Prometheus in 1889, barely two months before he passed his 29th birthday. A year later he transcribed this setting for the orchestra. Above a tumultuous orchestra the solo voice lifts Prometheus' fearless reproach to Zeus and the gods. Wolf mirrored in his music the febrile emotion revealed in Goethe's poetic account of Prometheus' defiance which led to the Titan's bondage upon the mountain. The style is not only reminiscent but strongly suggestive of Richard Wagner. Yet not a superfluous measure is present; at the very beginning Wolf, with his genius for succinct expression, set the general mood, and following Prometheus' final words of scorn, concluded the work simply with but two marvelously apt staccato chords . . .

Mr. Loeffler appeared on the stage and received what amounted to phenomenal ap-

plause for a Friday afternoon audience, at the conclusion of his exquisitely scored *Evocation*. This composer of an elder generation has long been justly admired for the aristocratic dignity and taste of his music, and for his polished craftsmanship.

—C. W. D., *The Boston Globe*

Few pieces, newly come from the composer's hand, better deserved the speedy repetition that *Evocation* now enjoyed. Mr. Loeffler has reached the age at which men who have given their life to an art or a profession cast about to see what creditable baggage they may leave behind them. When his eye lights upon *Pagan Poem*, *St. Francis's Canticle of the Sun* and this *Evocation*, he need have no repinings. . .

As it was, there was only to renew admiration for the range of Mr. Loeffler's expressive means; for the sensibility with which he chooses them; for the fine hand and the distinctive imagination with which he adapts them to his ends. This *Evocation* is a music in which to the listening ear there is neither technical shortcoming nor technical flaw; to which the veriest pedant for structure and progress may not raise valid objection. For the form, the subject-matter and the course, the invention and the emotion, are of one body and one impression. From them,

once the ferment of the beginning is stilled and the dark has brightened, emerges the antique beauty clear and serene, measured and chiselled, unalloyed, unlabored, touching every receiving sense, flowing deep into mind and spirit. And at the end there are calm and illumination and the passing of a vision. The whole is work of rarified imagination through a controlling mind. For the while such purpose and such accomplishment come seldom into music or any other of the expressive arts. It lays spell upon us who are privileged to know it. So far the end has crowned Mr. Loeffler's work.

—H. T. P., *Boston Evening Transcript*

Also was this *Evocation* good to hear again on its own account. This music has both warmth and serenity; its melodies have a gracious contour. The instrumentation, with its striking use of vibraphone and saxophones, is uncommonly rich and lustrous. As are the pigments on his palette to a painter, so are the timbres of the orchestra to Mr. Loeffler, who assort and blends them with an exceeding fastidiousness. And Dr. Koussevitzky's orchestra yesterday yielded him each last refinement of tone.

—WARREN STOREY SMITH, *Boston Post*

---

## MAHLER'S FIRST IN ENGLAND

*The London Philharmonic; Conductor, Dr. Heinz Unger; Queen's Hall, London, April 16, 1934.*

Mahler's No. 1 Symphony is an attractive work, quite the most popular of Mahler's "little lot," and its attractiveness was considerably enhanced by Dr. Unger's treatment. As the work is everything in turn, so Dr. Unger was in his turn everything to its many facts. The result was a brilliant performance, which may result in more curiosity in Mahler and his symphonics than has so far been shown in England.—*Star*, 17th April, 1934.

Dr. Unger opened his programme with Mahler's Symphony in D which he conducted from memory. Mahler's music is still *sub judice* in this country, but his music only needs interpretations such as that given last night for it to be as popular here as it is in Austria and Holland. How superlatively skilful he was!

—*Sheffield Telegraph*.

He chose the First Symphony of Mahler of which he gave a performance which made one oblivious of its length, which, with an audience only half converted to Mahler, is a feat. The elasticity of his tempo made the folk-song element peculiarly vital. The much discussed and sometimes abused third movement was vividly mysterious and the rustic Landler very effective. Above all the Pastoral effect of the opening was convincingly rendered.

*Eastern Daily Press*, Norwich, 18th April, 1934.

He boldly elected to begin with Mahler, who is not by any means a popular composer in this country, but he secured so vivid and animated a performance of his First Symphony that our audience was won.

—EDWIN EVANS in *The Daily Mail*, 17th April, 1934.

## BRUCKNER APPRECIATION—VIA RADIO!

During the past ten years there has been no one more prominent among Brucknerites in Germany than Felix Maria Gatz. It was he who founded that largest of all Bruckner groups, the *Berliner Bruckner Bund*, an organization so influential in the world of German music that it could command a generous annual subsidy from the government. Thus it was possible for this group even to launch a *Bruckner Symphony Orchestra* and a large *Bruckner Choir* of its own, dedicated chiefly to the performance of the Austrian master's works. In the course of almost a decade it succeeded in presenting before the music-lovers of Berlin many complete cycles of Bruckner's symphonies, masses, and most important minor orchestral and choral compositions. But the artistic ideals of Prof. Gatz, music director of the *Bund*, were too progressive to be confined to the propagation of a single composer's works, so that the programs of his performances included a liberal number of major compositions by more modern masters such as Mahler and Schoenberg.

Consequently, the advent of the new regime, universally styled the Third Reich, left the organization without the official financial support that had become necessary for its continuation, with the result that Prof. Gatz began to seek a new, more promising field in which to carry the Bruckner banner on to a complete and permanent triumph. Naturally he turned his attention to the New World where he knew that a Bruckner Renaissance was in process and happily accepted the post of Professor of Musical Esthetics at Duquesne University, Pittsburgh.

The enthusiasm and energy with which he set to work immediately upon his arrival in Pittsburgh this fall may be readily gathered from the following astonishing facts.:

(1) He has been engaged for a series of twenty weekly radio talks on Bruckner, which he is illustrating not only by playing musical excerpts on the piano, but by performing whole sections of the Bruckner symphonies with the assistance of a chamber-symphony group.

(2) He has persuaded the Pittsburgh Board of Education to institute among the public schools a prize essay contest the subject matter for which is to be drawn from his radio talks on Bruckner.

Prof. Gatz is to be heartily congratulated upon having so quickly paved a way for the difficult and (in this country, at least) unprecedented appeal of the Bruckner cause directly to the hearts of the younger generation. Lovers of the art of Bruckner throughout the world should watch with great interest the progress of the Bruckner movement in Pittsburgh, for one might almost say that a paramount artistic ideal is on trial there, the successful introduction of which would silence forever the tongue of many a skeptical scoffer. The sincerest thanks and best wishes of all serious American music-lovers to you, Prof. Gatz. *Chord and Discord* will gladly communicate to the world of music the details of the glorious adventure in musical ideals into which you have so courageously and whole-heartedly hurled yourself.

## INTERNATIONAL BRUCKNERIANA

Sept. 4, 1934, the 110th anniversary of Bruckner's birth, found Central Europe still tortured with the grim, unstable political and economic conditions that have played particularly sad havoc with the universal ideals underlying the realm of art. Nevertheless, the staunch band of Austrians that has triumphantly carried the Bruckner banner far beyond its own border, into Germany, France, Holland, Belgium, even furnishing the original impetus to the foundation of the Bruckner Society of America in 1931, undauntedly prepared special concerts and Bruckner Festivals in many European cities to mark the important day.

### AACHEN {Rhineland}

Perhaps most memorable of these was the *Fourth International Bruckner Festival* held at Aachen, famous old imperial city of the Rhineland. The symphonic programs of the festival, conducted by Dr. Peter Raabe and Prof. Franz Moissl (guest-conductor) included the canceled *Symphony No. 0* (the *Nullte*) the *First* (the world premiere of the original version,) and the *Ninth*, a first hearing of the original version at Aachen. An appropriate festive note was struck when a brass choir ushered in the opening program with fanfares on Bruckner themes, arranged by Vinzenz Goller. One of the morning programs included a liturgical presentation of the *E-Minor Mass* in the famous cathedral of Charlemagne, followed by a performance of the *String Quintet*. Sept. 4, Bruckner's birthday, was devoted to a general meeting of the *Internationale Bruckner Gesellschaft*, the speakers being Prof. Max Auer, president, and Prof. Fritz Grueninger.

### FREIBURG {Breisgau}

A great Bruckner Festival took place also in Freiburg (Breisgau) and was introduced by fanfares sounded from the church-tower on the evening preceding the first day. Five Bruckner symphonies and several of the master's less known minor orchestral compositions were performed in the course of this festival. In the mighty Cathedral the *Mass in D Minor* was given a liturgical presentation. The conductors for the Festival were Franz Kowitschny and Prof. Franz Moissl (guest-conductor.)

### LINZ {Upper Austria}

The city of Linz in Upper Austria, in which Bruckner lived and worked for many years, is planning a Bruckner Festival for the summer of 1935. Sankt Florian, the neighboring monastery, beneath the great organ of which the master's sarcophagus rests at his own request, is to be the scene of part of the festival. Although a tremendous sum was expended by the I.B.G. upon the thorough restoration of the famous old organ at Sankt Florian, the completion of the work revealed a considerable deficit, the heavy burden of which falls upon the *Bruckner Bund* of Upper Austria. The proceeds of the projected Linz Festival will be used towards the liquidation of this debt.

### HOLLAND

Under the able and energetic leadership of Jan Coverts, noted Dutch music-critic and author of the first book on Bruckner in the Dutch language, the Bruckner Society of Holland has succeeded in arousing lively interest in the master's works among the music-lovers of that

country. Especially prominent among the Dutch Bruckner enthusiasts are Dr. Rudolf Mengelberg, manager of the Concertgebouw, Eduard van Beynum and Anthon van der Horst (conductors), Eduard and Jan Coverts, in all, a group of writers whose influence is much enhanced by regular critical activity. There have been about 200 performances of Bruckner symphonies in Holland during the last twenty years. Willem Mengelberg, though primarily a Mahler devotee, has already performed Bruckner 35 times in Holland. Eduard van Beynum, second conductor of the Concertgebouw, has made one of his principal aims the general recognition of Bruckner's genius by the Dutch people.

—FRANZ MOISSL

---

### A KILENYI MAHLER EXCLUSIVE MEDAL OF HONOR!

Julio Kilenyi, noted creator of the universally admired Exclusive Medal of Honor which the Bruckner Society of America awards annually as its highest mark of recognition to those great leaders in the world of music who accomplish the most toward spreading the general knowledge and esteem of Bruckner's art among Americans, has announced his intention to produce a similar Mahler insignia in the near future.

The problem with which this inspired sculptor is now faced is, if possible, even more difficult than that which he so successfully solved in his conception of Bruckner.

Although the portraiture of old age with its dangerous tendency to emphasize physical and spiritual decay, had invariably cast the shadow of failure over the conceptions of Bruckner by foreign sculptors, Mr. Kilenyi unhesitatingly chose to use the same baffling theme as the only logical one for his medal. During two years he strove repeatedly, but in vain, to reveal the giant soul beneath the disfiguring wrinkles. Often he felt tempted to abandon once for all the disappointing venture. And then, suddenly, came the revelation—Bruckner and Dante! Twin souls, if there ever were such! Quickly he set to work and now it required only moments to reveal what two years of sporadic groping had failed to achieve—the spiritual deathlessness transfiguring the moribund body.

## THE COMPLETE WORKS OF ANTON BRUCKNER

To fix a musical masterwork permanently in the mind of posterity frequent representative performances alone will not suffice. The publication of a faultlessly printed edition from which conductors and music-students may gather the one authentic text is also indispensable. All the great composers since Palestrina have been honored with reverently prepared comprehensive editions of their works. The demand for such an edition of Bruckner, constantly growing during the years since his death, has become so insistent of late as to sweep aside all further doubt as to the timeliness of such a publication.

Rarely, if ever, has the demand for an authoritative edition had as much foundation as in the case of Bruckner. The musical scholar, when occupying himself with the master's work, whether for the purpose of pure research or for the preparation of a public performance, has hitherto always been faced by many perplexing problems arising out of the countless errors and ambiguities of the existing printed editions, problems that could be solved only by a process almost impossible to everyone, actual reference to the original manuscripts. The bitter criticism that has resulted is readily imaginable. This unsatisfactory condition can be corrected only by a new, truly critical edition of all of Bruckner's works.

The Viennese National Library, to which Bruckner willed the original manuscripts of all his major compositions, regards as its sacred duty not only the care of this precious legacy as such, but also the responsibility for the perfect accuracy of the printed editions of all these works. Therefore this famous institution has eagerly joined hands with the *Internationale Bruckner Gesellschaft*, the chief aim of which has, from the outset, been the sponsorship of an authoritative edition of the compositions of Bruckner. As practical expression of this ideal partnership, the present publishing firm (*Musikwissenschaftlicher Verlag*) has been formed.

Not only will this critical edition of the complete works of Bruckner present the authentic texts, based upon a most accurate comparison with the original manuscripts, but it will even go beyond the scope hitherto considered sufficient for the complete edition of any master's works by making public all the composer's various versions and revisions of each work, omitting not even the sketches for these works, which constitute a veritable treasury of new information indispensable to the thorough understanding of the master's art. The complete project will be supplemented by two volumes embracing miscellaneous important sketches and all the extant documents of biographical significance, such as letters, diaries, etc.

The world of music eagerly awaits this great publication. It will be the supreme Bruckner monument, but far more, a permanent artistic heritage for posterity, a mighty artwork in an authoritative and dignified form.

### NEW BRUCKNER SCORES

The original version of Bruckner's *First*, given its world premiere at the Aachen Festival, Sept. 4, will soon be published by the *Musikwissenschaftlicher Verlag* of the I.B.G. (Wien I, Teinfaltstrasse 7). The preparation of this score was the work of Dr. Robert Haas, Professor of Music at the University of Vienna.

**"MY TIME WILL YET COME"**

**THE KILENYI MAHLER MEDAL**

---

This year marks the seventy-fifth anniversary of the birth of Gustav Mahler. Next year will be the twenty-fifth anniversary of his death.

This splendid Exclusive Medal of Honor by the internationally famous American sculptor, Julio Kilenyi, is the Bruckner Society's proud contribution to American recognition of the Mahler significance of the years 1935 and 1936.

The new Mahler Medal of Honor will be awarded annually to the conductor who accomplished most during the preceding musical season towards furthering the general appreciation of Mahler's art in the United States.

## MET-EMPSYCHOSIS FROM IMPRESARIO TO DIRECTOR

Nobody will deny that Mr. Gatti-Casazza's twenty-seven years' general-management of the Metropolitan raised American opera production to a high level.

Permit me: I am this nobody.

The crisis which has so long gripped the American singing-stage is being discussed with ever growing intensity in our newspapers and musical journals. The example set by the Met, where the most experienced impresario, the most lavishly paid conductor, the most highly publicized star, the most bombastic scenic artist, the most stylistically affected choir-master, and the most saccharine-sweet ballet-mistress have each performed his or her part with such outstanding excellence that the opera house has literally rung with the claque's salvos of applause, richly confirmed by subsequent showers of press clippings singing their praises of the prowess of individual participants—all this shows conclusively that just because of these many uncoordinated virtues, an evening of opera may make upon an audience the impression of a variety show rather than of a thoroughly unified dramatic experience. Both press and public feel ever more clearly the need of an authoritative influence capable of exerting the inexorable "high pressure" that will weld all these separate factors into that ideal unity of music, action, staging, and scenic decoration, which has been the universal aim of the singing-stage ever since the production of the first Florentine operas more than three hundred years ago.

The critic, failing to find upon the large advance poster any name, the bearer of which may be held responsible for the absence of that desired unity, timidly asks the press-agent of the Met about this mysterious personage. The press-agent meets his question with an evasive smile. Of course, there is a man present at the opera-house who is intended to answer the critic's description, but he has been placed in an impossible position. Mr. Gatti had bought the name of this man in Europe because it was one of the "proprieties" for a great opera-house also to boast a famous dramatic director. He had entered the name of this man in an obscure corner of each opera program as responsible for the production, even though he had not granted him a single rehearsal for nineteen out of twenty such performances.

The man (and his colleagues) whose authority in leading European opera-houses was at least on a par with that of Mr. Gatti and his favorite conductors (yes, usually beyond it) was here permitted no say in the

choice of singers, dancers, conductors, or scenic artists for "his" production. Yet he was required to render the most complicated opera fit for public performance within ten or twelve hours (three or four rehearsals) while his colleagues of the speaking-stage were being granted at least seventy rehearsal-hours for the preparation of the simplest play. Thus came about that incredible phenomenon: the most celebrated pioneers of operatic production in Europe "broke down" at the Met.

Some of these agreed to the prostitution of their names with a smile, content to draw their munificent weekly check. Others rebelled and were peremptorily dismissed. How could the press-agent tell the critic that the man, whose duty it was to make each performance a unified artwork, stood powerless before the anti-artistic excesses of conductors, prima-donnas, choir-directors, ballet-mistresses, and decorators, because the impresario was assiduously busy preventing men, who had themselves been general-managers of opera-houses, from attaining any real authority at the Met? The press-agent knew too well that neither the impresario nor the conductors, nor the stars, to say nothing of the others, would countenance the transfer of any of their precious lines of praise to the credit of the "stage-manager." (What a stupid title, after all, that is!) Yet whenever the critic was displeased with something, whether it had to do with the orchestra, or the chorus, or the ballet, or the so-called "stage-business" of the stars, then, yes, only then, because someone had to be the scape-goat, the unfortunate "stage-director" was brought into the lime-light.

It is merely a new application of the old Agrippa-fable: the limbs, the visible, tangible parts of the body, still feel they can get along without the invisible mind, the spirit (which controls the body). They are not aware that, bereft of the domination of the mind, they cannot achieve coordination; that they must appear idiotic, even functioning in a self-destructive manner.

Such is the condition to which the operatic theatre of America has sunk.

The audience and critic of the legitimate theatre know better that a theatrical production requires a brain both to inspire and control the stars and other artists participating in the play. They call this dominating mind the Director. Even the movie fans have learned to discriminate clearly between the productions of a King Vidor and an Ernst Lubitsch. This is because the general-managers of the legitimate theatres and the movies give their directors not only full authority over all the phases of drama and picture production but also full credit in the eyes of public and press. The symbol of this recognition is the appearance of the director's name conspicuously printed on all the programs. His authority is also emphasized in the contracts of the stars, and this feature of the agreement is strictly adhered to.

In short, *the director is the dictator of the production.*

In the field of opera, with the exception of a single feature, the capabilities of a director parallel exactly those of the director of a play or a movie. The sole difference springs from one added qualification he must possess in order to fulfill the far more complex and difficult demands of his work. He must also be a thorough musician. Thus the operatic director must be a potential conductor, scene-painter, singer, ballet-master, and choir-master, all rolled into one. Yet he must not only represent a successful blend of these several faculties, but he must also be able to place this harmonious complex of talent

completely at the service of its sovereign, the dramatic requirements of the opera. To most people such a storehouse of innate abilities and acquired culture in the person of a single human being may seem next to impossible. Beyond a doubt, it is very rare. Yet the evolution of the opera in Germany and Russia has shown that it is not only possible, but perfectly natural and felicitous.

Just what are the duties and powers of such a director?

A young Ph.D., I found myself at 24 operatic and dramatic director at the newly-erected 2,000,000 Mark municipal theatre of Freiburg in Germany. This little city of less than 100,000 inhabitants voted its theatre (this was before the Great War!) an annual subsidy of M600,000. (To give Americans a clear idea of what this meant: if New York had a municipal opera-house it would, proportionately, have to subsidize it to the extent of \$15,000,000 per annum.)

"Article Four" of my contract with the city of Freiburg was brief and unequivocal, reading: "The said official is to be in sole charge of the repertoire, the stage-direction, the engagement and casting of players and singers; he is also to be in charge of all the various activities involved in the preparation and performance of each work."

Although this contract conferred a jurisdiction of unusual scope even for a German artistic institution, it was representative in its main feature, the revelation of the director's position as one of unquestionable authority. It was the unifying influence of this supreme office that raised the German opera-house to the highest place in the realm of the singing-stage. (Moscow merely followed the example set by Vienna and Munich.)

Since opera, according to the early Florentines, and Gluck, Mozart, Verdi, Wagner, etc., is primarily a dramatic artwork rendered more intensely expressive by the emotional power of appropriate music, it is wholly logical, and in agreement with the conception of those masters that the one responsible for the entire production should be the dramatic director. Until Wagner's time the conductor was scarcely more than the leading fiddler. The librettist, the author of the histrionic share of the opera, was the real master and creator of the production.

Thus it is a foregone conclusion that the director should have the right, as a creative artist, to select in person the material from which he must shape his artwork. He chooses the operas he will produce, not from a merely musical viewpoint, but also with an eye to their dramatic effectiveness. He alone solves the "fate-problem" of each production: *the casting*. This means only the right to engage for each opera the conductor with the best equipment for realizing musically the director's *vision* of the work, the scenic artist with the temperament corresponding to its style, and the actor-singers with the individuality closest to the drama's various roles. Responsible for the composite success of the production, the director will naturally "cast" his artists in such a manner as to produce the best possible united result. His success is the success of the production as a whole. His duty, in a word, is to secure the logical integrity of the performance. Therefore he (and not the conductor) must have charge of the whole work of dramaturgical organization. If "cuts" are to be made, they must be made, above all, with an eye to dramatic integrity, a point-of-view totally foreign to conductors. (Proof: the traditional "cuts," made by conductors, transformed music-dramatic masterpieces such as *Così Fan Tutte* and *Rigoletto* into stupid freaks of opera. Even Mahler, when he arranged Weber's

*Three Pintos*, was as helpless as an amateur in his treatment of **the** libretto.)

With the actors he has himself chosen and trained, the **director** may hold as many rehearsals as necessary to render an opera ready for public presentation. In consultation with the conductor, he may **also** share in shaping the music-dramatic interpretation. It is for the **director** to determine the size, distribution, and application of the chorus. It is for him to breathe dramatic life into the chorus. Since the **dance** is also an integral part of the drama, the ballet-master must be **guided** by the director's sovereign dramatic conception. The **director alone** must decide upon the scenery, for he is supreme over the little world in which the entire dramatic action is to take place. He **sketches the** plans for the scenery and selects the painter or architect best **fitted to** realize these sketches in stage pictures, costumes, and props, just **as a** conscientious master-builder executes faithfully the ideas of **the one** for whom he is to erect a particular building. Since the **lighting effects** constitute an inseparable feature of the action, bringing certain **groups** out into bold relief, while obscuring others, these also must be **dictated** by the director alone.

(Quite a job, eh?)

Thus it is easy to understand why most conductors and impresarios resist as long as they can the engagement by their opera-house of a **man** possessing such wide dramatic jurisdiction. If forced to endure **his** presence, they do their utmost to curb his powers at every opportunity. Perhaps it is only human for them to treat him in this manner. **Yet** to the truly great conductor artistic integrity is more important **than** personal ambition and popular applause. As a matter of fact **such** conductors have always demanded a competent dramatic director to give visual life to the drama they themselves experience so **overwhelmingly** in tone alone. Mahler engaged Roller. When Toscanini **undertook** the artistic direction of La Scala in 1921, he immediately **summoned** the most able directors he knew, giving them the widest powers in their sphere of action.

In 1907, when Gatti-Casazza entered upon his office of **General-Manager** of the Metropolitan Opera Company, his very first move **was** a colossal programmatic gesture. He engaged the two truly **greatest** operatic conductors of the age, Gustav Mahler and Arturo Toscanini.

In those days Toscanini was just attaining his full artistic **stature**. Italian by birth, cosmopolitan by genius, an artist fanatically **faithful** to the composer and his score, he is today, as ever, a thorough **classicist** of music-dramatic interpretation. With uncanny clarity of vision **he** presents an opera just as the author conceived it, inexorably **subordinating**, first himself, and then all the participants to that prime conception. To him the entire artwork is the complete, totalitarian, **objective** realization of the author's vision.

When he arrived in New York, Gustav Mahler was at the **height** of his career. He had just resigned the general-management of **the** Viennese Imperial Opera, which he had raised in ten years from **an** institution of petty pomp to the most revolutionary artistic theatre of Europe. For him also, as for Toscanini, the integral artwork **was the** goal of operatic production. Yet in the attainment of this aim, **felt** Mahler, the work of the author was not to be the sole guide. In **contrast** to Toscanini he was subjective, an interpretive artist of his **time**, a romanticist. He expounded an artwork with the heart, brain, and

nervous system of the twentieth century, in short, out of the time-bound environment into which Providence had cast him.

When Mahler and Toscanini began their engagement in New York, there were still no professional, creative operatic-directors. The conductor and the stage-manager performed the little work of that genre that was then considered necessary. Toscanini, a veritable torrent of music, struggled with bitter despair to achieve the true visual realization. Though he instinctively knew the truth when presented before him, he himself could not create it upon the stage. He was too much a musician for such an achievement.

Not even the mighty Wagner had been able to realize his scenic visions at Bayreuth, where the works to be produced were in every detail his own. He fell prey to uncertainty, changing the "stage-business" from one day to the next, until his own confusion led to confusion among the actors. Finally, in desperation, he called upon an obscure ballet-master from Dessau to help him out of his trouble. Nature itself seems to have decreed that the more powerfully a human is gripped by the musical vision of a dramatic master-work, the weaker grows his grasp upon the many links constituting the logical chain of its dramatic action.

Toscanini experienced this and became nervous, violent, and tyrannical. In vain the diplomatic Mr. Gatti sought to lure his friend to some artistic compromise. It came to pass very suddenly at a rehearsal of *Boris Godunow*; Toscanini, with a last backward glance of utter despair, fled the Metropolitan forever.

Mahler, continually on the alert analyzing, understood this artistic problem better than the impulsive Toscanini. He had even stated in writing, "that the musician lives only inwardly and therefore possesses but little capability of grasping the outer world." For this reason, while director of the Vienna Opera he had relied upon the painter, Alfred Roller, for the visual realization of the integral artwork. Arriving at the Met he immediately felt the need of once more having Roller as collaborator. Mahler to Roller:

Owing to the absolute incompetence and dishonesty of those who have for many years past had full control of its artistic and financial destinies (I refer to the directors, stage-managers, decorators, etc., a group consisting almost entirely of Europeans) the Metropolitan is in an extremely sad state.

The audience and all those whose will the operatic artist must take into account (not least among these factors being the Board of Directors, mostly multi-millionaires) are somewhat spoiled through having been hoodwinked; yet in contrast to our own audience and Board at Vienna, they are still unspoiled, hungry for new expression, and to the highest degree, anxious to learn. . . .

But now for the crux of the matter!

I have convinced the gentlemen of the Board (particularly the one with most authority among them) that the stage here needs, above all, a new master, and that I know of only one who, both as artist and man, has the qualifications necessary to pull the Metropolitan wagon out of the ditch. At the same time necessity demands (and I am still busy convincing them from this angle) that the stage and everything connected with it should be unconditionally subjected to the authority of this man. In short, they are to create here a position just like the one I have always felt you occupied in Vienna. I could write much more in this vein, but believe the following hints will suffice.

You will find here abundant wealth and the best society—no intrigue—no red-tape—in a word, the finest field of activity that I could wish for you. Could I personally take over the direction of the Metropolitan I would not waste a moment writing this; but since you will have to deal with a total stranger (the Italian from the Scala or someone else) I must warn you to be on your guard. Above all should the interview between you and Mr. Cortenet reach the actual discussion of an official contract be sure to insist upon authority that will leave you complete freedom of action in all matters pertaining to the stage—at least, a position equal to the one you have in Vienna.

When Mahler engaged this painter as his "chief-stage-manager" his mind was functioning much as had Wagner's before him. In reality, the painter as stage-manager is equivalent to the ballet-master as stage manager. Both feel music as "sounding form" (a literal translation of Hanslick's famous phrase "toenende Form") just as a musician would feel it. Both translate it, to the best of their ability, into "visual form," i.e., rhythmically motivated gestures. The productions of the Mahler-Roller collaboration at the Viennese Opera far excelled all previous operatic productions. Those two succeeded in blending sound and scene into a striking semblance of unity. Yet it remained at its best a twin-conception, lacking the deciding, unifying influence: one controlling mind that could have united the flowing music and motionless scenery by means of that main-artery of dramatic life, *action*. That for which Toscanini had instinctively called, though in vain; that which Mahler mistakenly thought he had found in Roller, was this mind, known here as the Dramatic Director, in Europe as the *Oberregisseur*.

The influence of Mahler's operatic reforms upon Germany was evidenced by the rise of the Dramatic Director in Central Europe. Occasionally, this man was the general-manager of the stage. The outstanding directors of the German singing-stage were not impresarios but artists. They were directors of experience, particularly in the legitimate theatre, their work in staging the plays of Shakespeare and Ibsen proving an ideal preparation for producing the music-dramas of Wagner and Verdi, if (if!) they happened also to be good musicians. They represented that controlling mind, that harmonious complex of talents that could successfully cope with the problem of music-dramatic unification.

In 1907, had Mr. Gatti been such a director he would have engaged Alfred Roller or some other capable artist to execute his conceptions of scenic decoration. Then, just as the German operatic directors did, he would have placed himself at the head of his "company" and undertaken to shape each artwork in his repertoire according to his own visual conception. In such a case both Mahler and Toscanini would have served him gladly and faithfully.

Mr. Gatti, however, was an impresario.

The managerial "Board" of the Met suddenly experienced an attack of "cold feet" when the question of Roller's engagement once more became a topic of serious discussion. Mahler to Roller:

Things here have suddenly taken a turn which I cannot as yet fully grasp. Only this much is clear to me: somebody seems to have upset all my plans. The hostility towards my proposition has become particularly noticeable ever since Cottenet's visit to Vienna. What happened there? Has he seen you? To whom else has he spoken? I have not been able thus far to find out anything about the whole matter, which in itself seems good cause for suspicion. I now feel a marked coolness in the attitude of the Board towards me.

Mahler was disappointed. He lost faith in his American mission. He resigned.

The futile experiment with Toscanini and Mahler over, Mr. Gatti turned back with extreme relief to the "good old" operatic routine. The heavens beamed once more, full of "stars," who could now not only give full vent here to the artistic vices for which Europe, thanks to the revelations of Toscanini and Mahler, had sharply disciplined them, but could even win through these very excesses high press-praise and a plethora of dollars. Mr. Gatti now engaged as his orchestral leaders those typical "second conductors" who kiss the prima donna's hand and, smiling sweetly, help sustain the famous tenor's most ab-

struse florid displays until they "ring the bell," to the boisterous applause of the topmost gallery. To such mediocre talents he even sacrificed the only real conductor still at the Met: the Mahler-pupil, Artur Bodanzky.

Meanwhile the Met watched with jealous eye that no opposition arise to contest its sovereign monopoly. When Arthur Hammerstein suddenly began to produce operas at the "Manhattan" in so arresting a manner as to "show up" the truly sad artistic conditions at the Met as compared with his more vital productions, adapted to American needs, the Met, strangely enough, felt no urge to profit by his splendid example. It is rumored that Hammerstein, for a monetary consideration of not less than seven figures, agreed to desist from opera entirely, thus rescuing the Met from dangerous competition. Again the Met sighed with relief, turned over on its other side, and yawned, "Here I lie midst all that's mine; let—me—sleep!"

Lofty skyscrapers, emblems of a new order, sprang up all about the Met and far beyond it. Nearly thirty years of the greatest world-wide, moral, artistic, political, economic, and spiritual upheavals passed it by. The Met slumbered on. A new generation, hungry for new life, beat at its gates, crying for the artistic expression of its own mighty impulses and ideas. The Met, fast asleep, heard it not. The new generation turned to Ziegfeld. Today the Met still lies sleeping, just as it did when Toscanini and Mahler left it. At that time some of its features bore at least the semblance of life. The De Reszkes were, somehow, representative of that time, the expression of a country completely dependent upon operatic importations from Europe. Today, however, that age and its manner are dead and buried. Even our most sentimental old "uncles and aunts" would be extremely disappointed if Emma Calve and Enrico Caruso returned just as they were. Victoriana have only museum-interest for today. Thanks to the Metropolitan Opera Company and its General Manager, present-day American operatic production, "from coast to coast," is just a museum of operatic art that has-been—a museum of operatic masks and shades.

Quod Erat Demonstrandum . . .

Will things be different, now that Mr. Gatti has left the sinking ship? Will the Board prove that Mr. Gatti was in reality solely responsible for the sere artistic standards of the Met, or that, after all, he merely carried out the wishes of the Board, even though they were contrary to his personal convictions? Mr. Johnson has already been obliged to promise that he, as General Manager, will continue along the lines so long and so unwaveringly pursued by his predecessor, Mr. Gatti. Alas, Mr. Johnson is saddled with a still narrower Board of vigilants to watch every step he takes. He will have to reckon with many a thick strand of Met polity which will resist to the last hair's breadth any attempt to effect their attenuation. He will find that by the mere engagement of young American singers nothing more decisive will be accomplished than by the importation of a revolving stage to mimic the superficially clever tricks of Berlin snob-directors. The logic and psychology of the American, qualified by his individual temperament and his unique spiritual and economic background, are fundamentally different from those of the European. This is a paramount truth, which only the "guest" virtuoso, who brings with him his foreign bag of tricks, and the chronic snob, who talks of transplanting Bayreuth, Salzburg, and La Scala on American soil, fail to grasp. For the man who

can feel the living pulse of his surroundings because he instinctively understands them, neither spaghetti nor Salzburger Nockerl taste genuine on Broadway. Let the American singer study his art according to the Italian method, if he will. Still he cannot study *Carmen* in Paris, the *Ring* in Berlin, *Aida* in Milan, and *Rosenkavalier* in Vienna without producing a hopelessly amateurish hash of styles in New York. Broadway adapts to the atmosphere of Broadway every play that hails from overseas. Even Shakespeare is subjected to adaptation nowadays, because the inviolate originals are no longer suited to the living stage. Verdi's operas, "germanized" by Franz Werfel, experienced a new renaissance in Germany through that dramatic transformation. New Yorkers remember how the Russians "russified" *Carmen* to suit their own needs. For my part, I can imagine a production of Wagner's *Ring* so burningly vital to the American spirit as to offer successful competition in this respect even to the Odets and O'Neills. Yes, a *Ring* completely in the American spirit. I can also imagine (nay, I feel sure) that a production of "Figaro's Wedding," adapted to and inspired by the American spirit, would finally furnish American composers with that elusive inspiration which they have never been able to get from the falsified operatic imports of the Met.

Robust American common sense can do nothing with the weary romanticism of the Old World. If Dame Opera is ever to play a vital part in the development of American culture, she must, like every immigrant, be cast into the melting-pot to suffer a complete alchemical re-birth. Any other process, the attempt to cover her wrinkles with the mask of false youth included, is just as hopeless as the attempt to cure a deadly cancer by the application of cosmetics.

—ERNST LERT

(Tr. by Gabriel Engel)

### ANTONIA BRICO PERFORMS BRUCKNER'S ROMANTIC

Hats off, Brucknerites, to Antonia Brico, gallant conductress of the New York Women's Symphony Orchestra! Of the summer echoes of last season's Bruckner activity those that emanated from the enchanting sway of her baton were not only the most amazing but also the most joyful. Twice in rapid succession, despite the most trying handicaps a conductor ever had to face, Miss Brico "did and dared" for an ideal cause in which she believed implicitly. Concerning the first of her two performances of the *Romantic* with the New York Civic Orchestra at the Museum of Natural History and City College, Mr. Charles C. Fite, who was present, has kindly written us the following report:

I have just heard a performance of the Bruckner Symphony No. 4, given by the New York Civic Orchestra, Antonia Brico conducting. It received at her hands an eloquent and dramatic reading, and the audience was quick to recognize and respond to the sincere enthusiasm of the conductor for this magnificent work. Having attended the rehearsals I can attest to the many difficulties she encountered in bringing the symphony before the audience of the New York Civic Orchestra.

For over a year now she has been endeavoring to overcome this many-sided opposition to the works of Bruckner, for whom she has an especial sympathy and understanding, as she studied conducting for many years in Bayreuth, with Dr. Karl Muck, whose authority on the works of Bruckner need scarcely be mentioned.

To achieve, in the face of persistent opposition, such a signal success with this work of genius deserves, I think, recognition from those who have at heart the interest of spreading the gospel of Bruckner. Many musicians of taste and discrimination who heard the performance this afternoon share my opinion with me.

## THE GRAND *TE DEUM*\*

After composing his F-minor Mass in 1867, Bruckner could no longer resist the beckoning allurements of the larger purely instrumental forms and devoted himself almost exclusively to the creation of gigantic symphonies. Many years passed, years so full of bitter disappointment, that only the firm faith so convincingly voiced in the "Credo" of that mass sustained him from an abject surrender to the trials heaped upon him by inscrutable Circumstance.

Symphony after symphony issued from his inspired pen, mighty works of apostolic fervor, that brought him not a single farthing of material reward but a superabundance of scorn, works which no one cared to play and, with but one exception, the Third (*Wagner*) Symphony, no one even dared to publish.

In 1884, sixty years old, still obscure, and hardly even dreaming that world-wide recognition was already hovering over his humble threshold, he wrote with characteristic brevity, "My *Seventh Symphony* is finished, and also a grand *Te Deum*." The whole musical cosmos now knows how he was whirled to the dizzy heights of fame on the wings of that same *Seventh Symphony* ere the year was out. The *Te Deum* that lay finished beside that score bore the significant inscription, O.A.M.D.G., *omnia ad majorem Dei gloriam*. Bruckner, the veritable Job of music, ecstatic in his praise of God! And then, like a miracle from Above, the boon of sudden fame!

Another ten years passed. The *Eighth Symphony*, hailed as the "crown of nineteenth century music," had been given to the world. Finally, the Ninth, unfinished and yet strangely complete, a Farewell symphony dedicated in advance, as the evening prayer of a trusting child, to "Dear God." Here was the ultimate proof that Anton Bruckner's unswerving faith had been to his art all that the most dauntless courage could ever be to a valiant fighter.

As though it were truly blessed and inviolate, Bruckner's great song of gratitude, often called the world's finest *Te Deum*, was his only work destined to triumph without critical hostility. When one considers the endless procession of performances given it in the musical centres of German Europe one stands aghast at the intensity of the Viennese prejudice that compelled Bruckner to confine its initial Austrian hearing to a small group of friends. So marked, indeed, was this prejudice that the composer could see only enemies in the personnel of the Viennese orchestras and consequently had the accompaniment played not by an orchestra, but by two of his devoted pupils who had arranged the score for piano, four hands. Yet developments soon showed that for once Bruckner need not have feared animosity. Before so overwhelmingly sincere a message as this even the habitually caustic tongue of that most rabid anti-Brucknerite, the conductor von Bülow, could utter no bitter criticism. Von Bülow actually praised the *Te Deum* highly and urged prominent conductors to include it in their repertoire.

The fine tribute paid it by Gustav Mahler upon the occasion of its premiere at Hamburg on April 15th, 1892, must have been typical of the welcome given this sacred classic throughout Europe. We quote it in part

---

\*Marking the Japanese premiere performance of Bruckner's *Te Deum* in Osaka, Jan. 26, 1935, by the Takarazuka Symphony Society, Jos. Laska conducting.

because Mahler understood the artist in Bruckner perhaps better than anyone else, and because he was, in addition, himself a great composer and one of the world's most eminent conductors:

Revered Master!

I am happy that I may at last tell you this: I have performed one of your works. Yesterday (Good Friday) I conducted your splendid and mighty *Te Deum*. Singers, orchestra, and audience alike were overwhelmed by the nobility and perfection of your conceptions. The performance itself closed with that phenomenon which I regard as the highest tribute that can be paid a work of musical art. The audience remained seated, silent and motionless, and not until the conductor and participants rose to leave their places did the storm of applause break loose.

The most memorable performance of the *Te Deum* took place on January 12th, 1896, at Vienna. A few moments before the first note sounded a wheel-chair was rolled into the concert hall. In it reclined an old, broken man, his emaciated countenance already touched by the sombre fingers of imminent dissolution. It was the aged Bruckner. Then as the glorious strains of his score rose towards Heaven his lips, framed in a transfigured smile, tremblingly followed each sacred syllable. Yes, this music was his own contribution to the greater glory of God! This and that other, his Ninth Symphony, almost finished, the whole essence of his life as a mortal.

—GABRIEL ENGEL.

## Friend of Toscanini

Most of those who had the good fortune to encounter the irresistible sincerity and personal charm of the late Max Smith were not surprised to know that a deep friendship had sprung up between him and Toscanini. They recognized that the striking modesty characterizing all his expressions of opinion on matters of art was but the index of a true knowledge, tempered by the consciousness that human wisdom is inevitably limited.

Yet, to Toscanini, Max Smith must have meant far more than the sum of such qualities. Completely understood by none, the thirst of genius for sympathetic companionship is as difficult to appease as it is insatiable. There have always been mortals for whom this yearning never found fulfilment. Those (and alas! they are almost all of us) for whom devotion to greatness is too closely akin to an alienating sense of awe, can never comprehend that phase of Anton Bruckner's communion with God that found in the Eternal Father alone the possibility of a supreme companionship midst utter human solitude. To them is only granted the beautiful result of this amazing companionship of the spirit, those warm, lofty strains of the Bruckner adagios that recount so eloquently the miraculous moments during which the naive symphonist traversed super-earthly highways hand in hand with his Friend, "der liebe Gott."

Max Smith experienced fully this transcendental quality in Bruckner's art. It was in great measure through him that his friend Toscanini was won to that effort to transmit the Bruckner revelation which led to the most soul-stirring readings of Bruckner's *Seventh* and *Romantic* symphonies music-lovers have ever heard.

Whenever Toscanini plays Bruckner he will remember his departed American friend to whom Bruckner meant so much—and each such performance will become a towering monument to the memory of Max Smith.

## BRUCKNER'S *SIXTH*\*

The amazing neglect of Bruckner's First and Sixth Symphonies by the music world of the last half-century clearly proves the accuracy of the composer's own estimate of these two works. The first, which he described as "daring," has been very rarely performed in Europe and never in America; the sixth, which he called "the most daring," has suffered a neglect almost as complete.

Although there was a solitary performance of the two short and simple middle movements of the sixth during Bruckner's lifetime the event was anything but a tribute to a gigantic creative artist. The flat rejection of the stupendous first and last movements by the friendly conductor, Jahn, only served to emphasize the fact that the composer's descriptive phrase, "most daring," actually meant "reserved for the future."

Three years after Bruckner's death occurred the pioneer unveiling of the work as an integral symphony. Gustav Mahler performed it in Vienna, only to discover that the time had not yet come for the world to grasp its still strange beauties. When Josef Strakosky gave the symphony its American premiere in 1912 the result was even more discouraging.

Since then Bruckner's greatest symphonies, the seventh, eighth and ninth, have won magnificent triumphs in this country and opened a gateway to the proper appreciation of the sixth which, in many respects, is an indispensable prelude to its mighty followers.

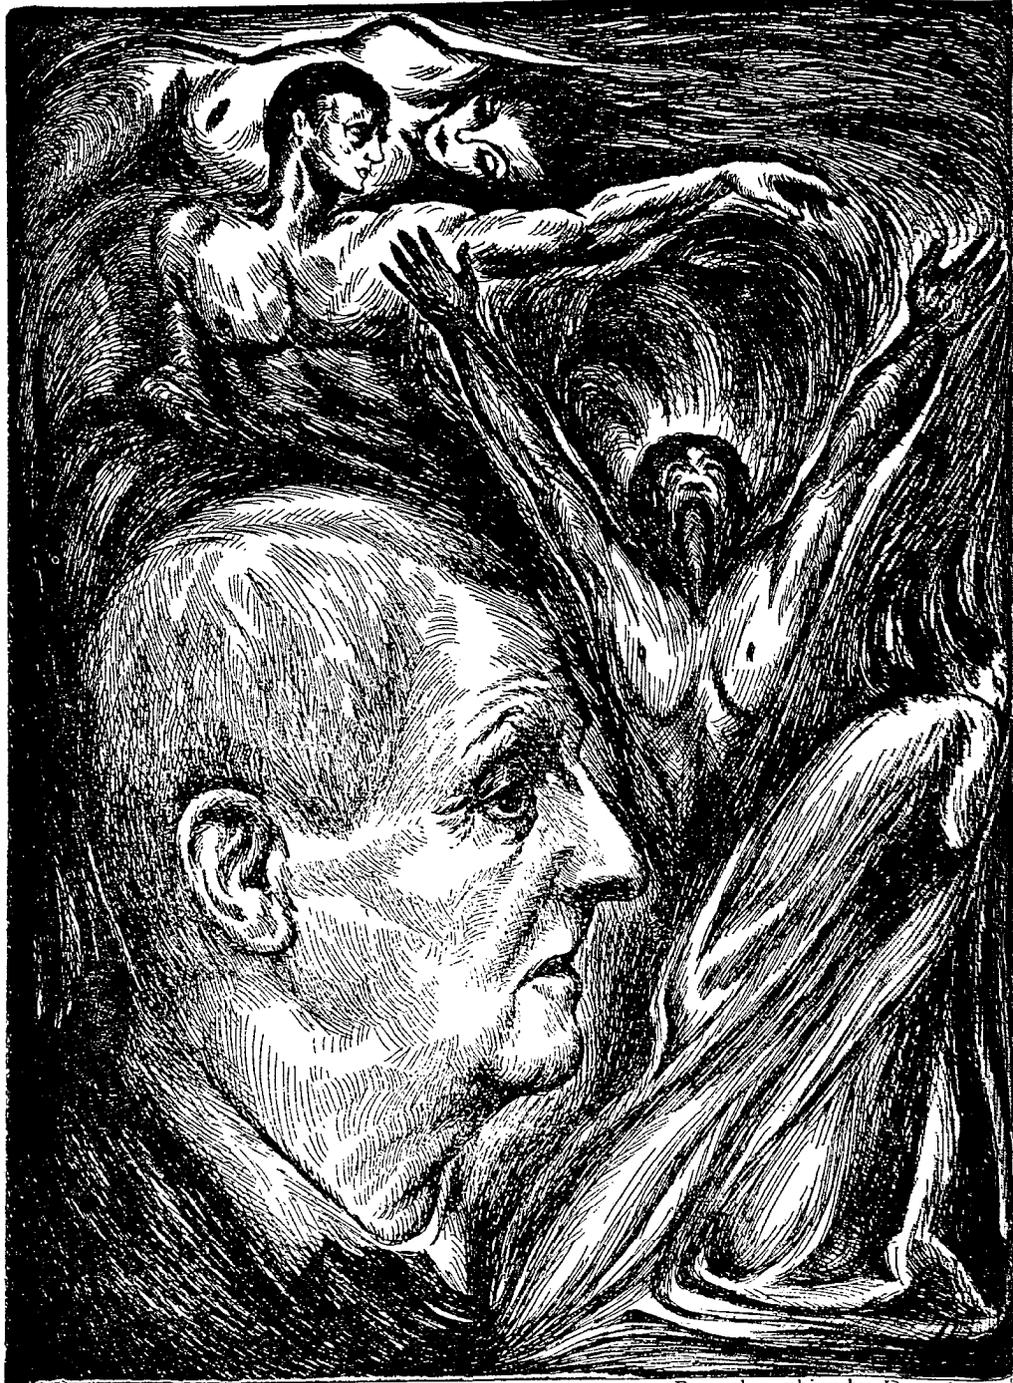

In this symphony, for the first time since Beethoven, the themes and motives of each movement are evolved out of one central idea, probably inspired by an Austrian military signal (the Retreat), and every theme and motive that succeeds it is logically derived from it.

Hitherto all symphonies had conformed to a striking artistic hindrance, inherent in that tradition-bound conception of symphonic structure which demanded a recapitulation of the themes introduced in the opening section of the first movement. As early as his Fourth Symphony (the Romantic) Bruckner showed a desire to cast aside these traditional chains. A mere repetition of previously stated ideas after their possibilities had already been thoroughly developed struck him as absurd and contrary to the highest ideals of art. Axiomatic though it may seem today, it required the supreme courage and conviction of a great reformer to bring to a successful issue the introduction of a principle so revolutionary at the time of its inception. In acclaiming his eighth and ninth symphonies the world has by now unquestionably indorsed this Bruckner contribution to musical culture, but it still seems necessary for lovers of the art to realize that the original manifesto of the new symphonic principle is to be found in the almost totally unknown sixth symphony.

The usual detailed program analysis as a preface to a first hearing of this symphony would only handicap the mind of the listener. He should surrender his emotions freely and entirely to the music, for it requires not explanation but sincere spiritual communion. As Donald Francis Tovey urges in his recently published analysis of this symphony, "Listen to it with reverence; for the composer meant what he said, and he is speaking of sacred things."

---

From the etching by Francis Coradai

### BRUCKNER STUDY: *DAS KECKE BESERL*

The American artist, Francis Coradai, is a great music-lover, whose excellent portraits of noted living musicians have earned him wide-spread recognition as "the artist of the musicians." The present *Bruckner Study* is one of a comprehensive series, "Great Composers and Their Work". Mr. Coradai is a symbolist. He has made the symbolism of his Bruckner etching particularly pertinent to *Das kecke Beserl* (the First Symphony) the detailed explanation of which is the task of the following article.

## BRUCKNER STUDY: *DAS KECKE BESERL*

When fame suddenly came to brighten Bruckner's last years celebrated conductors began clamoring for his still unknown earliest works. Bruckner then took down from its dusty shelf the score of his *First Symphony* and showed it to that popular orchestral leader, Hans Richter. The latter, expecting to see a fresh sample of typical Bruckner tonal magnificence, scanned it with growing wonder, casting incredulous glances back and forth from the great composer to this music he had once composed. At length unable to contain his surprise and delight Richter exclaimed, "Professor, you must have been madly in love when you wrote this symphony!"

"Yes, I was always madly in love in those days," sighed Bruckner, swayed by an irresistible tide of bitter-sweet memories.

Love and Bruckner! How incompatible the combination must seem to those who know him only through the soaring splendor of his later symphonies! They may, in too hasty judgment, brand the *First* as immature, basing their verdict on the very qualities which lend the work marked individuality. Yet immaturity is the one criticism that can be confidently dismissed in the estimate of any of Bruckner's nine numbered symphonies. He wrote no symphonies before he had completely mastered all the technical and formal requirements of symphonic expression. When he suppressed his two earliest attempts in the grand orchestral form, he did so only because he considered them spiritually unworthy of rank among his nine mature symphonies. Bruckner's own attitude towards the *First* as an authentic personal expression is beyond doubt, for the dedication of this work to the University of Vienna was his proud, grateful reply upon being awarded the honorary doctor's degree, a distinction which he (naively enough) deemed the crowning honor of his career.

The *First* will present no mystifying features to those thoroughly familiar with the incidents of Bruckner's life immediately surrounding the origin of that symphony. When Richter characterized it in effect as a love-symphony, he at once saw revealed a totally new vista of Bruckner's spiritual life. Eager to be the first to present this to the world he hurriedly thrust the score under his arm and was making off with it, when Bruckner exclaimed in alarm, "But, Mr. Conductor, *the fresh young girlie* has to be polished first!" (No English translation can hope to do justice to the original homely Upper-Austrian slang, *Das kecke Beserl*, which became henceforth the universally accepted nickname of the *First Symphony*).

Did Bruckner in uttering this curious phrase (with his characteristically whimsical humor) refer only to the fact that this work was his youngest legitimate symphonic offspring? All the experts concede the nickname an apt description of the opening theme, claiming that circumstance as the origin of the phrase itself in Bruckner's mind. Having gone so far, is it necessary to stop, for fear lest the sacred principles of absolute music be violated? In accordance with the tenets of post-classical symphonic analysis this portrait of an exasperating, yet charming, young female, may logically be regarded as the principal text or topic of the whole work. It is not improbable that the habitually laconic composer compressed within these five homely syllables the emotional essence of a fascinating chapter of autobiography, a series of incidents, which he might well

have wished hidden from the world, and yet which, as romantic memories, he had been unable to keep from welling up out of the depths of his soul in the shape of tone. Thus it came about that the *First Symphony* sang the saga of Anton Bruckner, the frustrated lover, and yet, through renunciation, the great hero. The acceptance of this explanation of the symphony's meaning is advisable not only because of the ample corroboration it finds in Bruckner's experiences, but also because it will accomplish much towards allaying the wonder how so uniquely daring and human a work could spring from the soul of a man still thought to be a species of musical ostrich, his head deep in the dust of contrapuntal analysis.

## II

At least five of the purely occasional Bruckner compositions preceding *Das kecke Besehl* were dedicated to women. Nevertheless the man who practiced the organ and piano thirteen hours a day and submitted seventeen bookfuls of exercises for a single lesson in theory had had no time for an all-absorbing affair of the heart. His long years of study over Bruckner suddenly saw himself with terror as a man well on towards middle age and utterly alone in an unfriendly world. Faced with such a realization so shy a creature must have cast many a longing glance back towards the humble security he had enjoyed during the ten preceding years at the monastery of St. Florian.

As he now worked upon his *Mass in D Minor*, his first serious attempt at independent expression, he felt that retreat was impossible. He had, after many bitter years of inner conflict, become convinced that music was the calling for which Providence had intended him. The thought that he had done all that was humanly possible to prepare himself for that service was comforting. Even in his earliest years as organist at the monastery he had had a premonition that his musical mission was not to find fulfilment in the creation of sacred works. With irrepressible longing he dreamed of the greater world without. Deep beneath the monk-like exterior of the man there slumbered an adventurous soul. Now and then it would awake at the touch of some tale of daring and he would furtively plan to seek his fortune in far-off countries. Sometimes even America seemed to beckon to him, saying, "Come. The road to success is not as difficult here as in your beloved native Austria."

Harassed by petty worries he saw in his loneliness the worst enemy to his peace of mind. The man who had fancied himself in love with almost every pretty face he had gazed upon now began earnestly looking about him for the ideal help-mate to share his troubles. Everyone knew that Bruckner was contemplating marriage when he suddenly transformed the bachelor disorder of his humble rooms to the tell-tale neatness of a snug little home with complete kitchen equipment. Had they known that he had been compelled to borrow on his modest insurance policy the sum required for this transformation, they would have been doubly sure.

Love of woman in the devastatingly passionate sense characteristic of a Wagner was an emotional upheaval totally beyond the pale of Bruckner's comprehension. To him the bond of matrimony was holy in the deepest sense. The sympathetic smiles of the fair sex had always seemed intensely pleasant to him, but had hitherto elicited no more serious response from him than the devotional gift of a prayer-book or the fluttering dedication of a *Staendchen*.

When he left St. Florian to take up his abode in the neighboring

provincial city of Linz, his position as organist (*cantor*) made him the logical substitute in the parish school whenever the ailing principal was too sick to attend. Thus the shy church-musician came face to face with the rising belles of the town, to find the charm of their blue eyes and blond hair highly disturbing from an every-day ex-cathedral viewpoint.

As these girls blossomed into the courtship stage a year or two later the lonely Bruckner's increasingly frequent presence at social gatherings and dances would call forth an exchange of knowing smiles and pointed glances among the townsfolk. He was well beyond the age deemed suitable for a proper match; he was strikingly eccentric in dress and manner; yet out of a natural mischievousness (or was it only good-natured courtesy?) some of the prettiest maidens encouraged him by repeatedly accepting him as dancing partner. One of these, a certain Rosa von Dierger, led him on mercilessly, until she knew he was just about to propose. Then she cruelly informed him that her hand had already been promised to a likely young druggist. Bitterly the disappointed Bruckner wrote to his dearest friend *Weinwurm*, a musician in Vienna:

I am terribly discouraged and sad. False world! Worthless baggage! But you too must have come to know it as such.

Much to the amusement of his acquaintances in Linz he was unable to hide his indignation at having been "cast aside for a mere salve-smearer," as he contemptuously expressed it.

His heart was not broken, however, for he at once succumbed to the siren voice of his comely alto soloist, Marie Gaertner. For weeks he pursued her, blushing at every turn like a youth in the throes of calf-love. At length unable longer to guard his "secret" (of course, it was the talk of the town) he determined to confide in her. He would woo her as a great musician, a heroic figure; then the success of his suit would be certain. Accordingly, he invited Marie and some of her girl friends to a special recital at the cathedral during which he would reveal his marvellous gift of improvisation. Sensing a lark they tripped tittering into church. Bruckner had already begun playing and was completely absorbed in the vast world of his musical fantasy. Bach and Beethoven alone before him had possessed such powers of improvisation. Theme after theme emerged and grew to tremendous stature beneath his inspired touch. Now it was a song which, beginning as a mere breath of ethereal sweetness, flowered into the warm melancholy of a song of unutterable yearning; and now it was a triumphant blare of trumpets such as might accompany the storming of a citadel, rather than the capture of a maiden's heart. Finally came the last cadence and, as it died away, the organist, exhausted, groped forth into stark wakefulness, like a somnambulist shaking off the weird, subconscious spell which had gripped him. But where now were the cries of enthusiasm and admiration for which he had so earnestly striven? Not a sound greeted his ear. The girls, frightened or bored (he never knew which) had fled quietly, leaving him alone with his fantasy.

No doubt Marie was sufficiently musical to appreciate and admire Bruckner's superb accomplishments as an organist. Already at this time, according to subsequent reports of concert appearances he made in England and France, he was probably without a peer among the church-musicians of Europe. Yet in the eyes of this young girl no artistic virtues could erase the hopeless stigma of Bruckner's personal eccentricity. Refusing him as gently as she could she must have thought, "How can a girl marry a man whose very genius seems to betray him to the ridicule of his acquaintances?"

The laughter he aroused was not always confined to his abnormal conduct in moments of complete absorption. Had he been wise enough to maintain a more dignified air in his every-day associations with the fair sex he might have attained the complacency of a comfortable marriage in Linz. It is fortunate for art that he unwittingly acted the clown in the company of girls, for those supreme last symphonic adagios, very apothecoses of human loneliness would have been impossible of realization for any save a soul transfigured by a lifetime of combined social and sexual frustration.

Misled, perhaps, by the well-meant advice of boastful younger acquaintances he came to sound the depths of futility in his desperate efforts to win the esteem of almost any young girl. Most of his piano pupils were about sixteen. One of these, Emma Thaner, years after Bruckner had passed away, was asked by his biographer Goellerich to relate some outstanding impressions she still retained of him. She said:

Love played many a prank upon him. I believe he was in love with every one of his girl pupils who had passed her sixteenth year, though it was the dark-eyed, black-haired ones whom he preferred above the others. . . .

I can still see him before me, telling about his experiences and enlivening his stories with expressive gestures, while he would cast frequent side-long glances towards a large mirror. He loved to talk about his "conquests" (as he called them) which were in reality only his pursuit of this or that girl (she might have been a servant-girl for all he cared, so long as she was pretty). How happy he was when at a turning of the way, his "victim" would finally bend her head nervously in answer to his effusively "polite" greeting, giving him (as he called it) "a smile full of meaning." Invariably he would end these stories in a voice raised to an exultant pitch, exclaiming triumphantly, "I'm a regular devil, I am! A regular devil!" Then he would gaze at himself in the mirror with frank admiration.\*

The pathos of this childlike, Platonic soul feverishly masquerading as a Casanova is beyond words. Clearly, at this stage of his life Bruckner was not only helpless in his interpretation of the values of every-day life (particularly those connected with the fair sex) but exhibited even less sense of balance, if possible, in evaluating his own inner self. Thus he represented the human embodiment of complete spiritual bewilderment.

Years later, when he would purposely choose for his symphonic workshop a household in which there dwelt at least one attractive young female, he had once more regained the comparative composure of his pre-Linzian years. Then he understood that woman for him was merely that subtle influence which could shed fresh light and warmth over his symphonic labors in moments when his unalterable solitude became too cold and lonely to bear. Before the peace of such self-understanding came to him he had experienced fully the tragedy of unrequited love and enforced renunciation. The long, rapidly changing line of his imagined sweethearts reveals him, much as Beethoven had been before him, a man of inextinguishable longing for love, of no charm for woman, of insufficient wile to offset this handicap, and hence a man fated to a life-long, tortured celibacy.

At the time he was contemplating the composition of his *First Symphony* Bruckner was psychologically ready for the one outstanding amorous experience of his life. The coincidence that this came to him during the colorful days surrounding the world-premiere of *Tristan* only brings out in stronger relief the chasm that separated his soul from that of Wagner. He experienced nothing that can even remotely be compared to a love like *Tristan's* for *Isolde* or, for that matter, Richard's for Mathilde. Instead of the concentrated intensity of one tragic affair

---

\*Goellerich—Auer: *Anton Bruckner*, Part III, Vol. 1; Gustav Bosse Verlag, Regensburg, Germany.

Bruckner had a dozen or more of successive minor disappointments culminating in one last unforgettable seizure of unrequited love. Though he buried forever beneath the laconic record of this affair all serious hope of the ideal union of his longing, he drew from it an inspiration no less important for his future work than Mathilde had proven for Wagner's. After the finale, opening movement, and scherzo of his *First* lay completed, a vivid record of his desperate effort to achieve a spiritual triumph over a thousand and one petty outward frustrations, he wrote his first great *Adagio* under the spell of the deepest love for woman of which he was capable, the love he felt for the pretty seventeen-year-old Josefine Lang.

Since no Bruckner biographer has hitherto seen fit to stress the possible influence this series of amorous adventures exerted upon his *First Symphony* and, perhaps his whole symphonic stature, it will be for the reader to judge, after having followed the few incidents described above, whether they may not be logically linked with the *First* and that curious nickname, *das kecke Beserl*, which Bruckner involuntarily allowed to escape his lips at the moment the impetuous Hans Richter put the score of the symphony under his arm.

### III

It was a genius, embittered and yet strangely impregnated by what he considered the deceitfulness of "that baggage", the world, who turned again to his art for consolation. In the grip of the most turbulently conflicting emotions he sensed that the austerity of a religious work would be an impossible achievement. Why not try a symphony again? Swiftly, as though evoked by the very thought, theme after theme sprang into being in his fantasy; themes of tremendously contrasted character, ranging from the most hateful anger to the most tender affection, from the most rugged heroic power to the most delicately lilting charm; themes which so clearly mirrored incidents deeply engraved upon his consciousness that he knew they had literally sprung, not from his mind, but from those experiences themselves. One by one (he seemed to himself only the passive medium of the whole phenomenon) he set them down on paper, while an inner voice said to him, "This is the essence of your own symphony, drawn from the deepest recesses of your soul. It is already finished and you need only write it down."

As he studied the themes a fresh revelation of the utmost significance dawned upon him. He saw that each one was not only a concise song in itself, but that it bristled with an irresistible urge towards increased fulfilment. Its constituting motives, its dominating rhythm, its individual harmonic characteristics, all demanded free progress along a great symphonic line. This line he knew was the spine of the whole symphony to be. Now he could clearly hear the opening theme sounding its onward path straight to the point of departure, at which a fresh theme sprang up, ready to carry the growing message forward with renewed vitality. This, then, was the true symphonic revelation: no mere statement of themes, but an actual gathering of the symphonic forces. How inevitable seemed now to him the grim conflict joined by a host of hurtling thematic fragments in the process of development! Even the moment of silence marking the end of a movement was to be a climax rich in suspense! What if a movement was finished? The themes must go on and on, radiating the increased power of the original message, producing in their career a thousand and one generations of melody all born of that single initial melody, just as the universe was born of the thought "In the

beginning". Yes, the themes must go ever onward, to be united again only in that ultimate melodic fulfilment attained at the triumphant close of the whole symphony.

Ernest Newman, in that remarkable little book, *The Unconscious Beethoven*, has shown how that first rough, one-staved sketch of the *Eroica* places beyond controversy the conclusion that Beethoven's symphonic inspiration was not a composite of ideas which occurred to him piece-meal, to be eventually welded together by mere skill. The amazing truth is that the whole structure of the composition (Mr. Newman used only the "exposition section" of the opening movement for his illustration) embracing the various themes, their junction through motivated particles, their contrasts of every nature, in short, the whole work practically down to its minutest details, was an integral inspiration. Only such a comprehensive inspiration could have ensured the symphony that unfalteringly poetic quality that sets it high above all questioning from a formal viewpoint. The content, the original inspiration, determined the form in every respect. Comparison with other symphonies revealed it as revolutionary. Hence appreciation was long withheld from it.

Richter was not the only conductor who immediately recognized the fascinatingly individual quality of *Das kecke Besehl*. Levi, of *Parsifal* renown, also was enchanted by it and wished to perform it at once. Knowing Bruckner's penchant for revision before permitting a public performance of any of his works, Levi feared for the integrity of this earliest, almost un-Bruckner-like symphony. He entreated Bruckner "not to change a note, for it is all good just as it stands." He need not have feared, however. The different versions of many of his works that Bruckner left the world reveal that he made no changes affecting the initial conception of any of them, for a symphony was to him truly an integral artwork.

### Our Younger Musicians to Study Bruckner and Mahler

One of the most convincing signs of the steady growth of American Bruckner and Mahler appreciation is the surprising announcement recently made by Leon Barzin, the enterprising conductor of the National Orchestral Association, that he will include two Bruckner and three Mahler symphonies in his rehearsal repertoire this season. The fact that this fine organization of the most serious and talented younger musicians of our country is regarded much as a preparatory school for the leading American symphony orchestras tends to stress the important role Bruckner and Mahler are to play on the programs of the major musical organizations in the United States.

## MAHLER'S SECOND

### I. AN INTERPRETIVE NOTE

Much, perhaps too much, commentary has been published concerning Mahler's *Second Symphony*, three movements of which, because of the poetic texts with which they are intimately associated, need no spiritual analysis whatsoever. One of these, the *Scherzo*, that electrifying tonal embodiment of the most bitter cynicism, that veritable orgy of ugly grimaces at the apparent spiritual worthlessness of mankind, is fortunately permitted to unfold the terrible scroll of its sermon unaided by an actual verbal accompaniment. Hence, for a full appreciation of the significance of this movement, a previous acquaintance with one of Mahler's songs, *The Fish-Sermon of St. Anthony*, is necessary. The music of this song is literally transplanted into the wonderfully diabolical *Scherzo* of the *Resurrection Symphony*. No analysis of the whole work can claim validity without citing at least some portions of the text of that song in connection with this purely instrumental *Scherzo*. The stupendous choral *Finale* and the naive song of prophecy which precedes it require no explanation beyond the texts to which they are set.

Upon the first two movements alone need additional light from without be cast. The second, simple in structure and of the purest melodic character from beginning to end, is amazing only because of the undeniable individuality it maintains midst an unwavering sweetness utterly opposed to all that the world of music has come to regard as of authentically Mahler-quality. To find the explanation of this phenomenon one need only follow the composer's own comprehensive hint, "I have lived my works. Those who know me will understand them."

Vienna, the wonder-city that had been the center of his boyhood dreams, to become in his subsequent student years at the conservatory and university the blissful realization of those dreams, represented the one great happy adventure young Mahler had had with the outer world. Hence, this *Idyll*, which is the tonal expression of that experience, is marked by none of that pain-wracked loneliness which characterizes the bulk of Mahler's music. It exhales that cheerful, life-loving atmosphere which found infinitely charming expression at the hands of all the great masters of music whom good fortune had cast under the magic spell of Vienna. What could Vienna of the Eighties have meant to a young and unsophisticated creative musical genius? The naive contentment of Haydn, the tender, ethereal grace of Mozart, the unquenchable goblin laughter of Beethoven, the nostalgic yearning of Schubert, the vivid, healthy pulse of Johann Strauss, the soaring optimistic song of Bruckner, the deep, restrained pathos of Brahms. Young Mahler's soul thrilled to all these musical wonders, absorbing them as the very essence of Vienna. They were inseparably part of him when he merged them all into a new, integral creation. Such is the subtle alchemy of this perfect *Idyll*.

Few are aware that Mahler ever tried his hand at poetry. The handful of verses of his that survive indicate a technical proficiency that could have come only from considerable practice. Perhaps, on the whole, literature has lost nothing by the shyness which caused Mahler to suppress practically all of his efforts at literary expression. Yet for a closer understanding of his music, still so enigmatical to many, his ventures into verse might have proven highly illuminating. Fortunately,

one short extant poem, composed during the period when he was planning his *Resurrection Symphony*, seems to throw some light upon the colossal first movement, the only direct clue to the dark, ominous character of which is the one phrase, "*Death-Celebration*." The poem speaks for itself, as well as for the frame of mind in which the symphony was conceived.

The night looks softly down from distances  
 Eternal with her thousand golden eyes,  
 And weary mortals shut their eyes in sleep  
 To know once more some happiness forgotten.  
 See you the silent, gloomy wanderer?  
 Abandoned is the path he takes and lonely,  
 Unmarked for distance or direction;  
 And oh! no star illuminates his way,  
 A way so long, so far from guardian spirits,  
 And voices versed in soft deceit sound, luring,  
 'When will this long and futile journey end?  
 Will not the wanderer rest from all his suffering?'  
 The Sphinx stares grimly, ominous with question,  
 Her stony, blank gray eyes tell nothing,—nothing.  
 No single, saving sign, no ray of light—  
 And if I solve it not—my life must pay.

## II. "MY TIME WILL YET COME"

When Mahler finished his *First Symphony* he wrote to his dearest friend:

You alone will understand it, because you know me. To others it will sound strange.  
 That was half a century ago.

After a recent performance of the work by the N. Y. Philharmonic under Bruno Walter one of the foremost American critics said:

At one time I, too, in less mature judgment, denied Mahler any outstanding worth at all, except that he had mastered a method of colorful orchestration. I feel that I have come to see more than that in Mahler.

Upon the same occasion another critic predicted for the *First Symphony* a popularity rivalling that of Tschaikowsky's *Pathétique*.

Mahler went on to compose symphony after symphony, and as his individuality attained more and more vivid expression the misunderstanding of his listeners increased. Twenty years after his *First* he completed his *Sixth Symphony*, that gloomy composition generally known as the *Tragic*. One of his friends, shocked by the extreme bitterness which swayed this work to its ultimate echo, asked him reproachfully, "How could a man as kind-hearted as you have written a symphony so full of bitterness?"

Mahler replied, "It is the sum of all the suffering I have had to endure at the hands of life."

Yet, of all his symphonies, this is the only one that ends on a note of pessimism. Even that tempest of spiritual pain, *Das Lied von der Erde*, subsides midst a rainbow of hope, the promise of eternal rebirth.

The *Ninth*, the last completed symphony Mahler left the world, is a deep, soul-stirring paean of faith, such as most would associate only with that great symphonic voice of unshakable affirmation, Anton Bruckner.

Because Mahler was one of the world's foremost conductors hosts of music-lovers admired him, but, almost without exception, these greeted his creative efforts with pitying bewilderment. Mahler, understanding their failure to understand him, smiled wistfully and said, "My time will yet come."

He did not live to share the instant triumph of *Das Lied von der Erde*, a victory confirmed by every subsequent performance given the work down to this very day. Since his death the progress of most of his music in the public esteem has been slow but sure, bearing out his own patient prophecy in that famous laconic utterance of confidence, "My time will yet come."

Yet in the case of one of his symphonies, the *Second*, that prophecy was never pertinent. From the very first hearing given this stupendous choral work (Richard Strauss himself conducted the premiere at Hamburg in 1895) each performance has lent it added lustre until its unfailing human appeal has stamped it as an undeniable classic of the symphonic repertoire. Curiously enough, this *Second* is spiritually Mahler's first symphony, conceived and planned several years before he began to write his real *First Symphony*. Thus it is in every way the true "open sesame" to the understanding of all his works.

July 7, 1935, marked the seventy-fifth anniversary of Mahler's birth. Serious American music-lovers of the future will be proud to know that the highest tribute paid this great, still neglected Austrian composer upon the occasion of this anniversary must be credited to the American business organization which ventured to make and publish at considerable expense a magnificent recording of this entire colossal symphony.

In the name of the present generation of American music-lovers, The Bruckner Society of America wishes herewith to confess a mighty debt of gratitude to the Victor Company for this first infallible opportunity to obtain at private leisure a thorough introduction to the symphonic achievement of Gustav Mahler, certainly one of the richest artistic legacies of all time.

—GABRIEL ENGEL

## THE KILENYI MAHLER MEDAL AWARDS

In recognition of their distinguished services in furthering the general appreciation of Mahler's art in the United States, Artur Bodanzky, Ossip Gabrilowitsch, Otto Klemperer, Dr. Serge Koussevitzky, William Mengelberg, and Bruno Walter will be awarded the new Exclusive Mahler Medal of Honor.

## PERFORMANCES ANNOUNCED FOR SEASON 1935-1936

- Bruckner's *Eighth*: N. Y. Philharmonic, Otto Klemperer, Nov. 14, 15.  
 Boston Symphony, Serge Koussevitzky (no date set as yet).
- Mahler's *Second*: N. Y. Philharmonic, Klemperer, Dec. 12, 13, 15  
 Cleveland Symphony, Rodzinski, (No date).
- Mahler's *Fourth*: Cleveland Symphony, Rodzinski, (No date)
- Mahler's *Fifth* or *Ninth*: Boston Symphony, Koussevitzky, (No date)

## PROPHETS, SCRIBES, AND PHARISEES

The sad lapses abounding in practically every new, "popular" book about music still go unchallenged in most of the magazine and newspaper columns devoted to the review of such publications. Therefore even so cautious a rebuke as that of Peter Bowdoin in the *Herald-Tribune* book-section (Sept. 22, 1935) seems a welcome forecast of more honest days to come. Weighing the relative virtues and shortcomings of Theodore M. Finney's recent *History of Music*, Mr. Bowdoin remarks:

There are, however, errors in the matter of emphasis. For instance, neither Rossini, nor Bruckner is accorded anything like adequate treatment, and the paragraph devoted to Gustav Mahler is somewhat misleading.

The frequent practice of coupling famous names in the history of musical art has produced results ranging from the highly felicitous to the painfully ridiculous. To illustrate the first type, Lawrence Gilman, in a nation-wide broadcast last season, linked the names of Bach, Beethoven, and Bruckner as those of the three who had attained the most universal musical expression of human faith. As for the second type, Mr. Bowdoin is doubtless familiar with that incredible marriage of names that occurred somewhat over a century ago at the world premiere of Beethoven's *Missa Solemnis*, when some of the most popular arias of Rossini were sandwiched in between sections of the *Missa* to circumvent the impatience of the musical public.

There is little doubt as to how the serious music-lover of to-day will receive Mr. Bowdoin's impulsive concatenation of names cited above. The sudden appearance of Rossini's name much as that of a new "senior member" in an already well-known symphonic "partnership" is, perhaps, purely accidental. Yet were it not so it would mark the reviewer as a friend of Bruckner and Mahler anxious to deliver a careful thrust in behalf of their art. Had he omitted the name of Rossini (or any similarly towering genius neglected by Mr. Finney) he might have been compelled to face the jibes of those of his colleagues who still regard the mere united mention of Bruckner and Mahler in a spirit of homage as the flaunting of a despicable musical banner. Certainly, Mr. Bowdoin's arraignment of the "single paragraph" devoted to Gustav Mahler as "misleading" is a miracle of drollery, impossible of any other interpretation.

"But why pick on Mr. Finney? Who is *he*, anyhow?" some may ask. To them we make reply, "Big or small, Peter Bowdoin tackles them, one and all." In proof of which the following:

John Erskine, one of the greatest American music educators since Helen of Troy, has just put his stamp of approval upon a species of imported *Musical Companion*, after diplomatically editing it into a condition of at least no mean proportions. Abbreviated by Prof. Erskine to a mere 548 pages, this *Musical Companion* devotes only a single sentence to Bruckner's art, blotting it out, so to speak, with one contemptuous flourish of the pen. What has Mr. Bowdoin to say of this sweeping *Musical Companion*? Well, here is the keynote of his review. (*Herald Tribune*, Books, Oct. 20).

This work presents in an engaging manner a great deal of information usually to be had from text books. Unfortunately, a generous share of misinformation is also offered.

Then follows an arraignment of various phases of narrowness and ignorance exhibited by some of the *Companion's* contributors, in the course of which the well-known Edward J. Dent, author of a section

devoted to the opera is subjected to an unfavorable comparison with Donald Francis Tovey. In this manner, the name of a truly illustrious British musical authority, conspicuous because of his complete absence from Prof. Erskine's symphony in high tea, is injected into the discussion. Irresistibly there looms up the thought that, with the exception of Olga Samaroff Stokowski's chapter on music in the United States, Mr. Tovey could have undertaken single-handed a far more authoritative treatment of every topic presented in the *Companion*. Then, however, we would have been deprived of Prof. Erskine's painstaking and "engaging" work of edition, ("a deed of mercy", Mr. Bowdoin calls it.)

Mr. Harrison's (one of the seven British contributors) contempt for Liszt as a symphonist, his sweeping dismissal of Bruckner's symphonies, his unwise remarks about the symphonies of Chausson and d'Indy are other examples of an unfortunate insularity.

And that is not all, but enough to cause us to wonder whether, this being, after all, a bitterly serious discussion, we are not attaching too much importance to so amusing *A Musical Companion*.

Fortunately all the neglect and opprobrium of present-day text-book musical historians writing in English is amply compensated by the rich recognition accorded Bruckner's art in the recently published *Essays in Musical Analysis* by Donald Francis Tovey.† Every word concerning music uttered by this man, accepted by such authorities as Lawrence Gilman and Ernest Newman as the supreme music-critical English voice, must carry tremendous weight. For this reason the fifteen pages of almost unqualified praise which he devotes to Bruckner's art represent the highest literary recognition the master has as yet gained outside of Austria and Germany.

Alas, America can boast no Donald Francis Tovey. The comparatively uncultivated soil of the New World can hardly be expected to produce such a phenomenon of encyclopedic musical attainments as is this remarkable man, equally pre-eminent as conductor, theorist, esthetician, and educator. Our professional musical educators thus far can lay but little claim to having advanced the art materially among us. Fascinating volumes of psychology might be written to explain their failure in this regard, but nothing, we fear, that would adequately exonerate them. That the art has not stagnated altogether in America is because there have always been among our men of affairs progressive music-lovers prepared to serve the cause of artistic progress even to the point of self-sacrifice. Men and women, of deeds rather than words, these have nevertheless undertaken now and then to transmit their fervor to others by means of the printed word. It is the few books by such pioneers of art (and not the futile texts penned or edited by our learned fossils) that have proven our only truthful literary contributions to musical progress. The martyred Harriet Lanier's *Musical Verities* is a heart-rending record of a true artistic pioneer's career of self-sacrifice in the cause of musical progress. Every serious music-lover of America should read this book with reverence.

Harriet Lanier is no longer among us; but the pioneer soul is eternal. Such a soul is Charles O'Connell, whose recent *Book of the Symphony*\* is the open sesame to a world of good music long hampered on its way to American hearts by sniping professors, whose notion of true homage

†Donald Francis Tovey: *Essays in Musical Analysis* (2 vols.) Oxford University Press, London, 1935.

\*Charles O'Connell: *The Victor Book of the Symphony* [with a foreword by Leopold Stokowski] Simon and Schuster, New York, 1935.

to Beethoven is to turn his art into bullets for use against the artistic progress of his successors.

Before discussing his significant *Book of the Symphony*, just a word about Charles O'Connell, the man of deeds. Serious music-lovers of this country owe him a debt of eternal gratitude because he was mainly instrumental in bringing about the long awaited publication of complete phonographic recordings of the symphonies of Bruckner and Mahler. The praise due him in this connection is all the greater, since his efforts in behalf of these neglected symphonic giants have been so magnificently successful in a decade still resounding with heated propaganda for and against their compositions.

It is a great joy at last to be able to report complete recordings of Bruckner's *Seventh* and Mahler's *Second*, both by the Minneapolis Symphony Orchestra under Eugene Ormandy. (See *Symphonic Chronicle*.)

Although only the Mahler work has been released as yet, we may confidently anticipate from its unsurpassed brilliancy that the Bruckner recording will prove not only a real joy to those relatively few Americans, who have long known and loved Bruckner's music, but also a decisive revelation to those, less adequately acquainted, who still hesitate in granting the master a triumphal entry into musical Valhalla.

In Mr. O'Connell's *Book of the Symphony* Bruckner has been honored with a biography, a full-page portrait, and a sympathetic, though necessarily brief analysis of the *Romantic Symphony*. Yet to the serious music-lover this book is far more than a witness of the final lifting of "recording" barriers against Bruckner and Mahler. It embraces lucid, concise analyses not only of the older symphonic classics, but also of the most important contributions to the orchestral repertoire since Beethoven. These analyses include Berlioz' *Symphonie Fantastique*, Wagner's *Siegfried Idyll*, Bruckner's *Romantic Symphony*, Brahms' *First Symphony*, Schoenberg's *Gurrelieder*, Strauss' *Heldenleben*, Mahler's *Das Lied von der Erde*, Debussy's *Afternoon of a Faun*, Stravinsky's *Sacre du Printemps*, and Holst's *Planets*, all of them contributions of the utmost importance to the development of the modern symphonic language. No masterpiece, even though less epoch-making, has been forgotten by Mr. O'Connell.

Therefore this book seems to us the true "musical companion." Leopold Stokowski, one of America's foremost champions of musical progress, in describing Mr. O'Connell's *Book of the Symphony*, has, perhaps unintentionally, revealed just what a "musical companion", worthy of such a title, should be.

In simple language it gives the technical background of symphonic music so that even an inexperienced music lover can understand and enjoy it. In reading it his mind and emotions will be stimulated so that his pleasure in listening to the music afterwards will be greater.

The parts of this book which tell of the imaginative and poetic side of music are in themselves a kind of music expressed through words.

One has the impression that the author feels that music is chiefly a thing of sensuous pleasure and that no matter how great or small may be the technical knowledge of the hearer music should be enjoyed through the senses and the imagination.

Except in purely program music the book does not paint pictures or tell stories about music but aims to suggest images and lines of thought that will give the music lover a point of departure for his own imaginative flight.

This book is equally interesting and illuminating to the professional musician and to the music lover who has not yet had the opportunity of studying the nature of music technically but whose pleasure in listening to music will be increased if his imagination and emotions are prepared and stimulated by someone who approaches music as directly and yet as profoundly as Charles O'Connell.

Mr. O'Connell's brief presentation of Bruckner begins confidently,

"Anton Bruckner, one of the most important composers of the last hundred years." His estimate of Mahler, colored by the "Mahler debatability" prevailing to-day, ends honestly with the following statement: "In spite of public receptivity, conductors as a rule have neglected Mahler's works until comparatively recent months; and we must half-sadly, half-hopefully join in his own frequent and confident declaration: *Meine Zeit wird noch kommen* (My time will yet come.) There are indications that his time is imminent." Musical historians, who can devote only a page or two to these symphonic giants, should profit by this fair and dignified attitude of Mr. O'Connell. Recognition such as he gives Bruckner and Mahler is the least that is compatible with the esteem their works are steadily gaining among most serious music-lovers.

Historians, the scope of whose work permits more detailed attention to Bruckner, may well take their key-note from the fifteen pages of appreciation devoted by that great musical authority, Donald Francis Tovey, to a discussion of Bruckner's most and least known works, the *Fourth* and *Sixth* symphonies. Mr. Tovey continually emphasizes the element of critical prejudice that has hindered the general understanding of Bruckner's art. To those who object to the composer's manner of orchestration he says: "The scores bristle (as Weingartner says) with abnormalities, but the quintessence of orchestral quality is manifest in every line. Nothing is more astonishing than the way in which *naïvetés* that look on paper (and sound on the pianoforte) as if they really 'will never do', become augustly romantic in the orchestra if their execution is not hurried. We must clear our minds of other wrong points of view than mere prejudices if we are to understand Bruckner." Concerning Bruckner's dreaded, yet almost totally unknown *Sixth* he says, after reiterating the warning relative to prejudice and wrong point of view, "If we treat this symphony as a kind of music we have never heard before, I have no doubt that its high quality will strike us at every moment."

—GABRIEL ENGEL

## A MESSAGE FROM BRUNO WALTER

How much the absence of Bruno Walter from the rostrum of Philharmonic conductors this season has probably cost lovers of the art of Bruckner and Mahler in America is vividly suggested beneath the lines of the following message to the Bruckner Society from that great disciple of those two symphonic masters.

First of all there was a Bruckner Festival in Linz on July 27, at which I performed the *Fourth* and *Ninth*. On Aug. 18, during the *Salzburger Festspiele* I performed the *Fourth* of Bruckner. Further, I began my concerts in Amsterdam on Oct. 3 with Bruckner's *Fourth* and repeated it at Haarlem, Oct. 8, The Hague, Oct. 12, Amsterdam (*Volkskonzert*) Oct. 13. On Oct. 20 I conducted Mahler's *First* at Amsterdam. I shall also perform it at Winterthur (Switzerland) on Jan. 29. In February, date still open, I shall perform Mahler's *Ninth* at Amsterdam. I shall do Bruckner's *Ninth* and the *Te Deum* in Vienna (Philharmonic Concert). There I shall also conduct a Mahler Festival in recognition of the twenty-fifth anniversary of his death, doing the *Second* on April 26, the *Egbert* on May 15 and 16, and *Das Lied von der Erde* on May 24.

These are the dates fixed until now; maybe, there will be more.

Dear Mr. Walter, we hope there will be more, yes, many, many more. Yet had we only as much as you have recounted, we should consider ourselves lucky indeed. A happy sojourn to you in the Old World—and may we have you with us again next season!

MARTIN G. DUMLER

Long respected as that of one of America's foremost composers of sacred music, the name of Martin G. Dumler has suddenly attained world fame through the triumphant headlines and reviews devoted to the premiere of his *Stabat Mater* at the recent historic May Music Festival in Cincinnati (May 25, 1935). The unqualified success of this extended sacred composition at an important concert performance stamps it as a work of universal art, a significant contribution of our own day to that proud, slender array of thoroughly human, super-ritual scores that have found but few worthy companions since the great religious compositions of Bruckner.

## DUMLER'S STABAT MATER

The "Stabat Mater" is perhaps the most human as well as one of the most famous of medieval sacred poems. The poet, Jacopone da Todi (-1306), compressed within its few brief stanzas the very essence of the universal Christian creed of his age. It is not the grim tragedy of the Crucifixion nor the awesome vision of Judgment Day that dominates the emotional quality of the text. These, presented in a single phrase, become in reality mere details of religious symbolism. The poet's central theme is the Mother and her sorrows. The pathos of her plight is the inspiration of the tender lyricism with which he has filled most of the stanzas.

Eloquent witnesses of the permanence and inexhaustibility of the poem's human message are the elaborate musical settings of the Stabat Mater by outstanding composers of every generation. The composer of the present setting, actuated by the directness characteristic of our own day, has purposely chosen for each stanza the simplest and most concise musical form suited to the unhampered expression of the poet's words. He has avoided any attempt to enhance by undue expansion or realistic exaggeration tremendous dramatic features latent in the text and has assured a predominantly lyric quality to his composition by allotting four of its ten sections to each of the four solo singers, respectively. His instrumental introductions and interludes never exceed the few measures absolutely necessary to a satisfactory knitting of the swiftly changing imagery of the text.

The first four stanzas may be regarded as a unit. They contain all of the poem that is narrative. The third stanza, purely lyric, is a skilful interpolation by the poet.

The interruption by this inner note softens the cruel pain of the incident being described and dictates to the composer the only logical setting for the entire narrative section of the poem, a mystic one.

Thus a mere whisper in the deepest strings announces the beginning of the story. Seven times in succession (religious tradition speaks of the Seven Sorrows of the Mother) with increasing intensity, sounds the insistently gloomy theme:

Adagio lamentoso

Bass Clar  
Violas

The half of Vc & Basses

ppp

Above its first repetition, softly lamenting, rise the mingled voices of the violas and bass clarinet. A chorale of dark timbre emerging from this culminates in an impressive climax at the sixth recurrence of the *ostinato*, the sombre tones of the horns and trombones dominating. As the scene of infinite sorrow sinks into the background the chorus, unaccompanied, very softly begins the opening stanza.

Occasional dramatic outbursts in the orchestra show that the deep emotionalism of the tale is beyond the power of human restraint, but these are always brief, being almost immediately stilled to preserve intact the general mystic spell. Thus, for a moment only, the following sharp motive in the horns suggests realistically in the first stanza the pain caused by the piercing sword:

The second stanza (chorus) is a benediction of the sorrowing Mother. The agitated pulsation which the music gradually attains reflects the effect of her inconsolable sadness upon humanity. Thus the way is prepared for the poet's fervent, lyric apostrophe to the Mother (third stanza, Soprano Solo). The word "tanto" marks a moment of great dramatic intensity. The horns in unison burst forth from the harmonic grandeur of the full orchestra to intone a motive so prophetic and austere as almost completely to shatter the lyric mood;

yet before another word has been sung the ominous cloud begins to pass. A single sustained tone (violins, trumpets and horns) suffices to restore an atmosphere of tender melancholy.

The grim details of her Son's sufferings fill the fourth stanza. Above an orchestral background rich in dark motives, the chorus sings a sturdy melody in clear canon style. So natural and appropriate is the device in this case, however, that the technical skill involved in no wise distracts the listener's attention from the poetic message underlying the music. When the last lingering word "spiritum" dies away, the orchestral background has once more become veiled and mystic. A long sustained tone in the low woodwind, motivated fragments in the horns, whispered mutterings in the timpani, suddenly silenced strings, such are the composer's means of restoring mysticism at the close of this extremely agitated stanza.

Stanzas 5, 6, and 7 form the second unit. The dominating characteristic of this group is lyric. The music of stanza 5 is so steeped in the transfigured quality of the text that only the characteristic orchestral background identifies it as an inseparable portion of the *Stabat Mater*. There is a striking contrast between the simple, tuneful melody sung by the solo tenor voice and the subtle, ceaselessly undulating melodic line used in the orchestral accompaniment.

The sixth stanza (chorus) knits closely the three cardinal elements of the poem, the Mother's sorrow, the Son's suffering, and humanity's boundless sympathy. The music is at first in the major mode, radiant and calm; then after a skillful interlude consisting of an insistent, brief motive (horn) it becomes rhythmically agitated and darker (minor). The rising tide of agitation culminates in a sorrowful, sustained burst of tone in the full orchestra. Sudden silence follows. Then, as though from an infinite distance, the chorus, unaccompanied, whisperingly re-echoes the last line of the text.

Thus, masterfully, without superficial artifice, is restored the initial radiant atmosphere of the music.

The brief melody of yearning sadness, with which the horns introduce the seventh stanza (Bass Solo) serves as principal motive for the orchestral accompaniment.

Alternating between horn and trombone, it is heard again and again, surrounded each time by new, subordinate ideas and instrumental colors. Increasingly impressive with each recurrence, it attains particularly deep significance at the very end, sounded by muted trombones above a subdued roll of the timpani. Meanwhile a softly wailing motive, already established, continues in the strings, lending a touch of realism to an otherwise mystic scene of restrained melancholy.

Stanzas 8, 9, and 10 form the third and last main section of the composition. They are dominated by a great religious ecstasy, the faith in immortality and the vision of Paradise. In the eighth stanza (Solo Quartette) like irresistible rays of light suddenly penetrating the heavy gloom that can no longer imprison them, an upward-leaping motive of two tones is sharply uttered in rapid succession by horns, bassoons, clarinets, and oboes, over a sustained bass in the organ. Then follows a simple chorale, ideally suited to the ecstatic text, foretelling the ultimate glory of the soul.

The harp, the light, liquid tone of which dominates the instrumental background of the ninth stanza (Alto Solo) strengthens the new note of spiritual elevation sounded in the preceding chorale. Characteristic phrases, which were expressions of sadness in previous stanzas, become transformed, in the course of this song, to gracious heralds of the miracle of salvation.

The tenth stanza (Soli and Chorus) is the poem's sublime final revelation. Here, perhaps more than in any other stanza, the composer has shown his consummate grasp of the spiritual dimensions of the Stabat

Mater. He has refrained from the traditional "art" method of matching the text, image for image, or color for color. He has chosen instead an unassuming setting, steadily increasing in mystic intensity as it rises, from a stately and solemn introduction in the low brass,

Maestoso

Trb's & Tuba *f*

over skillfully merged fugues and chorales, to an ecstatic song of Paradise.

The work closes with the distant, veiled jubilations of cherubim voices re-echoing mankind's fervent "Amen" unto all Eternity.

| <p>8. Virgo virginum praeclara,<br/>Mihi jam non sis amara,<br/>Fac me tecum plangere:<br/>Fac ut portem Christi mortem,<br/>Passionis fac consortem,<br/>At plagas recolere.</p>     | <p>Virgin of all virgins blest!<br/>Listen to my fond request:<br/>Let me share thy grief divine:<br/>Let me, to my latest breath,<br/>In my body bear the death<br/>Of that dying Son of thine.</p>                                   |
| <p>9. Fac me plagis vulnerari,<br/>Fac me Cruce inebriari,<br/>Et cruore Filii.<br/>Flammis ne urar succensus,<br/>Per te, Virgo, sim defensus<br/>In die judicii.</p>                | <p>Wounded with His every wound,<br/>Steep my soul till it hath swooned<br/>In His very Blood away:<br/>Be to me, O Virgin, nigh,<br/>Lest in flames I burn and die,<br/>In that awful Judgment Day.</p>                               |
| <p>10. Christe, cum sit hinc exire,<br/>Da per Matrem me venire<br/>Ad palmam victoriae.<br/>Quando corpus morietur<br/>Fac ut animae donetur<br/>Paradis gloria. Amen.</p>           | <p>Christ, when Thou shalt call me hence,<br/>Be Thy Mother my defence,<br/>Be Thy Cross my victory:<br/>While my body here decays,<br/>May my soul Thy goodness praise,<br/>Safe in Paradise with Thee. Amen.</p>                     |

## SYMPHONIC CHRONICLE

### *A Record of Critical and Popular Reaction*

ANTON BRUCKNER—

#### NINTH SYMPHONY

{Original Version, Amer. Premiere}

*Philharmonic Symphony Society of New York, Otto Klemperer, Conductor; New York, October 11, 12, 13, 14, 1934. The last performance was broadcast over the entire Columbia network.*

Mr. Klemperer presented only two symphonies last night. The first was the Ninth of Bruckner in its original version; the second was the Fifth of Beethoven. With both of these works he made a powerful impression.

Whatever Loewe's alterations may have been, it cannot be said that the effect of the *Ninth Symphony*, as a symphony, is so very different from what we know. The principal revelations were Mr. Klemperer's. The slow movement, as it now stands, is the climax of the unfinished work and must surely rank as one of the greatest of all Bruckner adagios. There are only two that approach it in greatness. They are the slow movements of the *Seventh* and *Eighth* symphonies.

—OLIN DOWNES, *New York Times*

Mr. Klemperer should receive the gratitude of all music-lovers for his devoted and eloquent performance at last night's Philharmonic-Symphony concert of Bruckner's seldom heard Symphony No. 9, that symphony which is sometimes known as the 'Unfinished.'

...Hearing Bruckner's symphonies we realize how deep his feeling can be, how lofty a beauty he could summon to his measures, how blazing a splendor touches the pinnacles of certain towering movements in his symphonies. He holds and stirs us in a way peculiar to himself when we listen to such things as the *Dirge* in the *Seventh Symphony*, the slow movement of the *Eighth*, the closing pages of the *Adagio* of the *Ninth*, which we heard last evening—music of a valedictory tenderness, full of the sense of reconciliation and appeasement, tranquil, not of this world; music that searches the very heart of beauty.

This is not the place to go into technical detail concerning Loewe's unauthorized, injudicious, and impertinent editing of Bruckner's score—an exposition which may better await the space and leisure of next Sunday's column. But those who best know the symphony must have been struck last night by an added intensification, an uncompromising forthrightness of musical speech, a power and abrupt directness which they had not observed in it before—with good reason, for the well meaning Loewe had not seen fit to let us hear them.

Thus restored and justified, the Symphony seems more than ever to be, at its best, one of the noblest musical legacies of the nineteenth century. The heroic and passionate first move-

ment with its tremendous chief theme; the irresistible Scherzo; the haunting, subliminal *Adagio*—these are such pages as only Bruckner could have imagined and set down.

Especially in the mythical close of the great *Adagio*, with its musing, consolatory tenderness, one felt again that Bruckner had come close to entering the inner chamber of that "Palace of Wisdom" known to William Blake, or at least that he had beheld the distant turrets shining in the evening light.

—LAWRENCE GILMAN, *N. Y. Herald-Tribune*

...The scherzo, freed from Berlioz decoration, has a rugged strength and moments of genuine beauty. The *adagio*, with which the work was left uncompleted, is a movement of worth and it brings the symphony to a lingering and memorable close. One wonders what could have followed fittingly, albeit Bruckner himself wrote at least one much more beautiful slow movement.

Mr. Klemperer did the composer valuable service in producing his music as he wrote it. We have a deeper respect for Bruckner after hearing the magnificent performance of last night. The orchestra covered itself with glory. Its tone was gorgeous and in balance and clarity it left nothing to be desired. All the Bruckner symphonies should be heard. Repetition is the best test of their worth.

—W. J. HENDERSON, *The New York Sun*

Thanks to Mr. Klemperer, we have had Bruckner's ninth symphony in its original edition. There used to be a legend that Bruckner was a stodgy composer, and it requires a convincing musician like Mr. Klemperer to illuminate the streaks of genius in Bruckner's music. Who started the local propaganda against Bruckner—or why—I don't know. But some of the most effective pamphleteering ever done hereabouts has been issued by the Bruckner Society of America, whose journal, *Chord and Discord*, will interest you in Bruckner and persuade you to hear his works, free from bias of every kind.

Cleared of misguided revisions by enthusiastic but apparently dumb apostles, Bruckner's ninth symphony proved its claim to a place in the live repertoire. I don't think that Bruckner is an acquired taste, because the great passages are eloquent and the draggy episodes are obvious. His music isn't a mathematical enigma, and even at a first hearing, it's not difficult to decide whether you wish to take it or leave it. When it's projected as brilliantly as it was by Mr. Klemperer and The Philharmonic-Symphony, it's easier to take than to leave.

—ROBERT A. SIMON, *The New Yorker*

We Brucknerites were treated to high festivities in Carnegie Hall last evening. That pro-

phet and apostle of the Viennese symphonist, Otto Klemperer, directed the Philharmonic-Symphony orchestra in a performance of Bruckner's unfinished symphony, No. 9, which will not be forgotten by any sensitive listener.

It seems, however, that more ado than necessary has been made over Loewe's emendations; that far from overlaying with plush Bruckner's austere measures his actual changes were relatively few and unimportant.

Be that as it may, the three complete movements in whatever version constitute an eminently impressive work. The scherzo is one of the most individual of symphonic movements, as the adagio is one of the most exalted. —PITTS SANBORN, *World-Telegram*

The Philharmonic played the extremely difficult music superbly, dividing the honors equally with Mr. Klemperer, who is demonstrating with every occasion of closer acquaintance that he is a distinguished baton leader.

The Bruckner was received last night by a large audience with hearty approval. It is sonorous and impressive.

—HENRIETTE WEBER, *Evening Journal*

## ANTON BRUCKNER— SEVENTH SYMPHONY

*Boston Symphony Orchestra, Dr. Serge Koussevitzky, conductor; Boston, October 26th and 27th, 1934.*

Dr. Koussevitzky's performance breathed an almost apostolic fervor, but that after all is a characteristic of every interpretation of a strongly willed conductor, and one of Dr. Koussevitzky's foremost traits. He is eminently to be commended for presenting this symphony, and all others of Bruckner that he may choose. It is especially desirable to hear occasionally the music of composers whose rank is contended. And that of Bruckner is debated even 40 years after his death.

—C. W. D., *The Boston Globe*

Since Dr. Serge Koussevitzky became conductor of the Boston Symphony Orchestra he has placed on its programs the Fourth and the Eighth Symphonies of Bruckner. He once proposed the Ninth, but withdrew it. At the head of the list of compositions for the third pair of Symphony Hall concerts of the season (Oct. 26-27) stood Bruckner's Seventh, in E major, unheard in Boston since the legendary days of Dr. Muck.

At all events, the performance of Bruckner's Symphony in E major brought the first really spontaneous applause of the season from the Friday afternoon audience at Symphony Hall. And not solely, let us believe, because of the sonorous peroration. For there was much to give pleasure in the performance of the first two movements, which contain the finest pages of the score. They are marked by worthy material, imaginative development, a firm construction, rich and colorful harmonies and a superb sonority.

The Scherzo and the Finale are less impressive. But you can't always have the pure metal, as we had been reminded a week before, by the latter part of the "Eroica". And if Wagner could write the Ride of the Valkyries, why should not Bruckner be permitted the Scherzo and the Finale of this symphony, with their heavy-footed gayety?

It should be recognized, though, that the Friends of Bruckner owe a heavy debt of thanks to conductor and orchestra for their presentation, which was remarkable for its beauty of tone and for its exquisitely subtle expressiveness. —S. L. SLOPER, *Christian Science Monitor*

At yesterday's matinee concert of the Boston Symphony Orchestra the same audience which, on two previous occasions, had "sat on its hands" (in the pungent backstage expression), now applauded Dr. Koussevitzky and the orchestra with the greatest enthusiasm.

According to these signs, which will certainly be repeated with greater vividness tonight, Dr. Koussevitzky now need have no further hesitation about presenting more Bruckner. . . The worst of the struggle is over. For now the audience is, as the advertisements would say, Bruckner-conscious. What is more, the audience likes the feeling!

By general agreement, and by the evidence of one's ears, the best of the symphony is the slow movement. Here is music of such tremendous spiritual and emotional power that it may be compared not only with the "Ring" of Wagner, Bruckner's idol, but also with the greatest slow movements of Beethoven. Throughout the slow movement of the Bruckner symphony, indeed, one's thoughts recurred to the slow movement of the Beethoven Ninth Symphony as the only suitable comparison. The themes have nobility and dignity as well as beauty. They are heartfelt; but the composer does not slop over. The movement has astonishing breadth, which a slow pace should accentuate in performance.

. . . The total net impression of the symphony was one of spiritual and emotional uplift.

The performance as has been suggested, was usually true to Bruckner's intention. It was one of the greater and more noble achievements of Dr. Koussevitzky and his magnificent orchestra.

—MOSES SMITH, *Boston Evening Transcript*

Forty-eight years ago the Seventh Symphony of Anton Bruckner virtually emptied the old Music Hall. Yesterday afternoon at Symphony Hall it provoked the heartiest applause of the current season of the Symphony concerts.

. . . As a melodist Bruckner ranks high. In the first subject of the first movement he is heir to Schubert. In the great themes of the solemn Adagio, one of the topmost summits of symphonic music, he recalls the profundities and the spiritual calms of Beethoven (as well as certain harmonic and orchestral idioms of his idol Wagner), and in the Scherzo, one of the few that have carried on the tradition estab-

lished by the master of Bonn, we think again of all three composers. Yet through it all Bruckner is himself. The music is his. None of it is actually reminiscent.

...Not even Wagner himself contrived more beautiful sonorities for the multiplied brass than did Bruckner in his Adagio; and yesterday Dr. Koussevitzky and his orchestra evoked in this movement sounds of surpassing beauty.

—WARREN STOREY SMITH, *Boston Post*

## GUSTAV MAHLER—

### DAS LIED VON DER ERDE

*Philharmonic Symphony Society of New York, Bruno Walter, Conductor; Maria Olszewska and Frederick Jagel, soloists. New York, December 20, 21, 1934.*

The world has not yet arrived at a clear understanding of Mahler's works, let alone a just verdict of their worth. Therefore we should be thankful to be reminded by even an occasional performance that Mahler lived, still persists, and will survive beyond the present artistic confusion.

*Das Lied von der Erde* is especially valid as such a reminder. It is a work of masterly caliber, from the point-of-view of structure as well as content, not wavering even in its minutest detail. Its consummate union of text and score renders it particularly accessible even to the listener to whom Mahler's tone-world is still strange. Thus it assumes an unusual place in the literature of music, its message and effect transcending the boundaries of the merely musical.

Just as the essence of Beethoven's *Ninth*, aside from all purely musical values, is highest enthusiasm, so that of *Das Lied von der Erde* is most intense spiritual pain—pain caused not by sorrow or disillusion, but by a boundless human sympathy, by an excessive love of the world, by an overwhelming realization that all life is moribund! Transfigured by this quality of compassion, the work scales the barriers of the mundane, becoming a veritable greeting to the Hereafter, a mystic paean to the glory of eternal rebirth.

It is a work which moves us more deeply at each new hearing. Bruno Walter knows well how to reveal it in all its unique beauty. He has grasped that tenderness, that air of doleful meditation, that transcendental grace, and that impetuous passion, which are the peculiar qualities of this soul-piercing score—a score, one might say, written in blood. He has made himself in this instance so wholly one with the composer that his reading inevitably evokes the conviction of authenticity.

—PAUL BEKKER, *N. Y. Staats-Zeitung*  
(Translated by Gabriel Engel)

<sup>1</sup> It was the orchestra, last evening, that spoke the bitter and poignant and renunciatory thoughts of Mahler; and it was Bruno Walter who shaped and colored and released their utterance. Thus heard, the passion and the beauty of the music, its delicate fantasy, its

secret ecstasies and insuperable grief, and, at the last, its mystical, assuaging peace, were often overmastering.

It is odd to find adult human beings still refusing contact with imaginative expressions of intellectual and spiritual traits which they cannot, as good citizens and conscientious taxpayers, indorse or enjoy. Yet such music as this of Mahler's brings us inescapably face to face with the conclusion that there is no profit in bothering with works of art at all unless you are able and willing to project yourself into another mental world than your own: to see life and destiny from the standpoint of a temperament that may be fundamentally alien to everything that you believe in and esteem; to lend and steep yourself until you understand and know and feel.

This music of Mahler's poses such a problem. It gives us the quintessence of a difficult and baffling nature. For Mahler was one of those introvert and solitary dreamers whose voice comes to us today from what we take to be a vanished world, irrecoverable, increasingly remote, steeped in the pathos of distance. And yet, inexplicably enough, that world is not really either lost or irrecoverable; it is all about us still, in many spirits and imaginations. Our problem—when those who are native to that world are rare and sensitive artists—is to know and understand them as they try with desperation, and often with resulting beauty and rarest genius, to find their peace among the mysteries of existence.

—LAWRENCE GILMAN, *N. Y. Herald-Tribune*

Mahler's "Lied von der Erde" is a setting for tenor, contralto and orchestra of six texts which he took from Hans Bethge's "Chinesische Floete," a collection of adaptations of old Chinese poems. Mahler further altered them to "express one predominating idea—withdrawal from the world." "Dark is life, is death" is the refrain of the first poem; "I seek rest for my lonely heart," one reads in the last; and the work is an embodiment in tone of this sickness at heart which was Mahler's—an embodiment in music of poignant beauty and, withal, of great continence and distinction.

Mr. Walter, who conducted the premiere in 1911, achieved a superb performance from the orchestra.

—B. H. HAGGIN, *Brooklyn Daily Eagle*

Such a program was ideal for the broodingly imaginative Mahler. . . . The "Lied" has charming pastoral moods, lyrical ecstasy, moments of deep richness, of tender pity and resignation. The orchestration is of rare appeal and richness. This music cannot fail to move the sensitive listener.

—LEONARD LIEBLING, *N. Y. American*

There is in his music a vividness of almost morbid imagery, written in an unforced modern vein, and, as Mahler himself summed it up, it expresses one distinct thought—that of withdrawal from the world. Visions of an end of mortal life stalk ineluctably through the pages of the score, which is divided into six

sections, each being musical portraits of old Chinese poems selected by Mahler . . .

Maria Olszewska sang her three poems in a clear, expressive voice and Frederick Jaegel's sound dramatic tones fitted well into the text. The audience received all artists, not excluding pianist-conductor Bruno Walter, with deep enthusiasm.  
—*New York Post*

In the song "Of Beauty" and still more in the "Farewell", Mahler surpassed himself and made music of compelling power and eloquence. . . . That the composition would be well performed last evening was a foregone conclusion. It has long been dear to Mr. Walter's heart. He had at his command an admirable orchestra and two good solo singers in Mme. Olszewska, contralto, and Frederick Jaegel, a tenor who has of late shown growth in artistic stature.

Yet, last evening's performance of the "Lied", which, in spite of its dimensions, often has the intimate quality of chamber music, even surpassed the earlier ones in its sensitive and searching beauty.

Mr. Walter, a disciple of Mahler, conducted the "world premiere" at Munich on November 10, 1911 and he conducted it again last evening with, so to say, the intelligence of love. The orchestra, for its part, played with an excellence that included a rare finesse.  
—PITTS SANBORN, N. Y. *World-Telegram*

## GUSTAV MAHLER— SECOND SYMPHONY

*Minneapolis Symphony, Eugene Ormandy, conductor, assisted by Symphony Chorus, Rupert Sircam, director. Soloists: Ann O'Malley Gallogly, contralto; Corinne Frank Bowen, soprano. Minneapolis, December 7, 1934, Jan. 2 and 13, 1935. (The last of the performances was broadcast over the Columbia network.)*

A magnificent performance of the *Second Symphony* by Gustav Mahler aroused an unusually large Friday night audience at Northrop auditorium to delighted enthusiasm.

As he did on one previous occasion—the performance last spring of Bruckner's *Seventh Symphony*—Mr. Ormandy prefaced Friday's presentation with a brief, eloquent and distinctly helpful commentary on the composer and his work. He threw real light on Mahler's extraordinary sensitiveness, and on his passionate musical honesty, relating these characteristics to the nature of his composition.

The unfolding of this work is strangely eloquent as a historical document. How amazingly the world of music changed between the advent of Beethoven's great choral symphony, and the making of this one by Mahler—and largely because of the single fact that Richard Wagner had lived! But viewed with insight, it discloses far more than musical evolution: it is a panorama of Vienna in the Nineteenth century, that alembic in which all the arts, and all the facts of a complex social scene, achieved distillation into an indescribable but unmistakable blend.

In the music you hear not only the sumptuous measures written by a man used to the sophistications of great opera houses and concert stages; you hear, too, the poignant simplicity of folk-singing, and the endearing strains of the Laendler, those deliberate triple-time dances of rural Austria which were sublimated, in urban surroundings, into the inimitable Viennese waltz.—FRANCES BOARDMAN  
*The Saint Paul Pioneer Press*

The most stately and convincing section of the whole symphony is the opening of the fourth movement with the contralto solo, superbly sung by Mrs. Ann O'Malley Gallogly, establishing a mood that, quiet as it happens to be, contains a splendor reaching up into ethereal heights. The choral effects were achieved beautifully, the cohesion of thought is noteworthy, the whole expounded with a richness of harmonic beauty that gave it both dignity and nobility.

There was everything in the last movement that touches the heart or head of man. We heard the trampling of warring legions, sections that recalled the call of the hunter; pastoral scenes intermingled with a quiet religious ecstacy.

—JAMES DAVIES, *The Minneapolis Tribune*

The first "pop" of the year brought a repetition of Mahler's *Second Symphony* . . . A novel experience for the audience was that of suppressing its usual coughs and sneezes so that the work could be recorded from actual performance, which was successfully done.

—JOHN K. SHERMAN, *Musical America*

## ANTON BRUCKNER— SIXTH SYMPHONY

*Cincinnati Symphony Orchestra, Eugene Goossens, Conductor—Cincinnati, Jan. 11, 12, 1935.*

The opening number was the Bruckner symphony No. 6, in A major, exquisitely interpreted and played, and said to be the first complete performance in Cincinnati.

—M. D., *Musical Courier*

How much the Bruckner A-Major symphony affected the receipts cannot be estimated, but the writer feels sure it was materially responsible for the presence of many . . .

The work was played extremely well and owes much of the interest it evoked to the spirited, scholarly, and polished interpretation given it by Eugene Goossens.

—GEORGE A. LEIGHTON, *The Enquirer*

Perhaps the most noteworthy achievement of the day was Mr. Goossens' reading of the Bruckner Symphony which has not been presented here before. Certain judicious cuts reduced the playing time of the work without destroying any of its merit and its enthusiastic reception by its audiences owed much to the spirited, sensitive and warmly understanding and colorful interpretation which Mr. Goossens accorded it.—S.T. WILSON, *Musical America*

The stubborn history of Bruckner's cheerful Sixth Symphony, played in Cincinnati yesterday for the first time over fifty years after its completion, merely accords with the treatment given to all of that master's works, not only during his lifetime but since his death. A typical Austrian, he could not help feeling that conditions, so far as they affected the performance of his symphonies, were hopeless, but not serious.

Unlike a number of Bruckner's symphonies, the Sixth, owing to its moderate length, does not tend to tire the average listener by its diffuseness and abundance of material. This symphony, called by Bruckner his most daring, exhibits his tendency to create a co-ordination between the several movements and to throw back the center of interest to the later ones. In doing so he produces a cumulative effect extending to the closing measures of the finale. To Mr. Goossens belongs high praise for his reading, which brought out all of the color and simplicity of this expanse of tone. Upon hearing a symphony by a neglected composer of the stature of Bruckner, one is tempted to wonder whether he would receive public acceptance if he were played as often as his contemporary, Brahms, for example.

—FREDERICK YEISER, *Cincinnati Times Star*

#### ANTON BRUCKNER— SEVENTH SYMPHONY

*Philharmonic Symphony Society of New York, Arturo Toscanini, Conductor; New York, January 24, 25, 26, 27, 1935. (Last performance broadcast over Columbia Network).*

This symphony, previously performed here by Toscanini in recent years, is the work that paved the way for Bruckner's world-fame. It is, of all his symphonies, the richest in tonal beauty; the spell of its sensuous magic is the most overwhelming. All that is peculiarly Bruckner-like is here revealed in perfectly disciplined balance. The *adagio*, associated with the death of Richard Wagner, will continue to sound as long as mankind has ears with which to hear.

Toscanini's love for this particular Bruckner symphony is not hard to understand in the light of the inspiring response its wondrous Austrian melody evoked in the soul of the Italian genius of musical interpretation.

Time did not permit the critic to hear *Salome's Dance* and the Respighi transcription. Yet he must confess; even granted sufficient time he would not have stayed to listen. There are impressions which one should not permit to be disturbed. To such impressions belongs the splendor of this Bruckner performance by Toscanini.

PAUL BEKKER, *N. Y. Staats-Zeitung*  
(Translated by Gabriel Engel)

If anyone doubted the growing ability of the American musical public to take punishment in the form of the heaviest symphonic stuff, he might consider with awe the increasing ap-

petite for Bruckner. They take it, they like it. When Otto Klemperer played Bruckner with the Philharmonic in the fall, it was liked; when he played it with the Philadelphia last week, it was liked; and when Maestro Toscanini opened his first concert of the season with Bruckner's Seventh Symphony, that was not only liked, but loved. The performance, of course, was nerve-tingling. All the variations of color and quality and volume without which Bruckner (or anything else) is soporific came out in the minuteness of perfection that Maestro lavishes on everything. Under this magic, the Bruckner took on power and expressiveness; its big crescendos were glorious. But it was in the long, usually insufferable passages of vague discursiveness in woodwinds that the symphony came alive. Here the instruments were utterly conversational in quality, and one followed them, accordingly, with closest attention.

—MARCIA DAVENPORT, *The Stage, Mar. 1935*

The effect of last night's performance was not confined to the peaks of the symphony. Mr. Toscanini made it extraordinarily cohesive and gave it an almost unbroken arch, even in the finale.

. . . Grandeur, an indescribable, flooding beauty characterized the performance as a whole. In moments, when the brass nearly blew through the velvet of the tone, it was expressive of a prophetic force if not frenzy.

The net result of the performance was one that brought the most indifferent or even antagonistic strangely near to Bruckner . . .

Mr. Toscanini has repeatedly played Bruckner's Seventh here, but where sheer feeling and revelations are concerned, he does not seem before to have equaled the mood and power of this reading.

—OLIN DOWNES, *The New York Times*

The unapproachable Toscanini has returned and last night he conducted the Philharmonic-Symphony Orchestra in one of those extraordinary performances which will never be forgotten by music-lovers of this fortunate generation so long as they have life and memory. Hale and vigorous and poised, the great musician achieved again that incredible completeness of realization to which he has accustomed us.

And there was the subtler and profounder miracle that was wrought in the great Dirge of Bruckner's symphony, wherein the composer paid his tribute to the memory of Wagner. As Mr. Toscanini played last night this valedictory *Adagio*, one could not doubt that both the elegy and the elegist wore for him the spiritual image of that grief and tenderness and exaltation which this music speaks.

Sitting before such miracles, one thought of Goethe's profound and searching words, that "everything perfect of its kind must go beyond its kind—it must be something else, incomparable".

—LAWRENCE GILMAN, *N. Y. Herald-Tribune*

There ensued a revelation of such impelling genius that even I, who confess a dissension in the opinion that Bruckner's music is immortal, was persuaded to an irresistible acclaim of its immensity. The Seventh symphony (E major) which had always seemed so repetitious and verbose, save in the majestic and poignant Adagio attained such ennobling and heroic proportions under Mr. Toscanini as to confound the most analytical of commentators.

—JULIAN SEAMAN, *Daily Mirror*

It is a monumental symphony, a little large in its architectural spans for an audience that lives in skyscrapers and prefers cocktails to the more philosophical beverages of the Teutons, a symphony that requires its listeners to follow its leisurely, profound and unaffected utterances with attention and imagination. It is not music for the "tired business man," or his carefully marcelled wife, and that may explain some of the coldness, in spite of the glamor of a Toscanini interpretation, with which the fashionable Thursday-nighters received it.

—WINTHROP SARGEANT, *Brooklyn Daily Eagle*

Those of us who are always eager for a broadening of the local symphonic repertory and who, in particular, would like to see Bruckner's music established beyond ill-considered question and cavil, owe a big debt of gratitude this season to Otto Klemperer and Arturo Toscanini—to Mr. Klemperer for giving us the Bruckner ninth in October, and to Mr. Toscanini for giving us the Bruckner seventh at the four concerts he has conducted so far this season for the Philharmonic-Symphony.

To dwell at this late date on all that Mr. Toscanini brings to the interpretation of a symphony by Bruckner or all that the orchestra gives him in response would be an impertinence even if it were a possibility. Suffice it that his most essential qualification is his acute and unflinching sense of design.

Bruckner does possess structure, though he is no obvious and tight constructionist of the Brahms type. That, however, is a fact which eludes inferior conductors, though luckily it does not elude men of the musical imagination and keen discernment of a Toscanini or a Klemperer.

When Mr. Toscanini discovers for us the splendors of the Seventh Symphony, we learn how far afield, for instance, has strayed that gentle Brahmin of London, Mr. H. C. Colles, who likens Bruckner's music to "an organist's improvisation".

—PITTS SANBORN, *World Telegram*

## ANTON BRUCKNER— FIFTH SYMPHONY

## GUSTAV MAHLER— KINDERTOTENLIEDER

*Philadelphia Orchestra, Otto Klemperer, Conductor; Karin Branzell, Soloist; New York, January 29, 1935.*

An unforgettable experience: fully a quarter of a century ago; the intimate, smaller hall of the Berlin Kuenstlerhaus; Mahler himself at the piano; Johannes Meschaert singing; nothing but compositions of Mahler, among them the *Kindertotenlieder*. There has never been a greater master of the art of song than Meschaert. None of his successors is even even nearly comparable to him. And yet his voice was the least significant thing about his artistry, or perhaps, it had become so merged with the spiritual that the listener completely forgot its corporeal origin.

Yesterday Karin Branzell sang the *Kindertotenlieder*. She sang; that was the first mistake. To sing songs does not mean to produce rich tones. It means to declaim texts; to declaim them with so insatiable, so fanatic an intensity that the words assume tone-wings and begin to sway in musical sound.

Second mistake: the *Kindertotenlieder* must be sung by a deep male voice. It is not alone the context of these songs that makes their performance by the voice of a woman irritating. Their very instrumentation calls for a man's voice—the sound of a female voice is unavoidably obscured by the orchestral background, if the conductor is faithful to the dynamics of the score . . . That Klemperer would handle its wealth of instrumental subtlety with the keenest and most sympathetic understanding, was a foregone conclusion. His reading was exemplary in the shaping not only of each phrase, but also of the broad melodic lines so characteristic of Mahler's music.

Klemperer deserves signal praise for braving the peril to his American popularity by his performances of Bruckner and Mahler. Both these masters are still (more or less) step-children of our audiences. It is not easy to understand why this should be so, for they are in reality the least difficult of composers to grasp, being free from all artificiality and intricacy.

It merely signifies that the enigmatic phenomenon characterizing progress of the art in Europe is being re-enacted here. Sincerity and simplicity have always been the last to win recognition. Therefore it is all the more necessary to keep spreading their precious gospel tirelessly and unceasingly, in eloquent and accurate revelations.

—PAUL BEKKER, *N. Y. Staats-Zeitung*  
(Translated by Gabriel Engel)

The subject of the tonal discourse was the Bruckner Fifth Symphony, which contains many of the greatest of this composer's pages. The symphony was given a performance probably unsurpassable by Mr. Klemperer, who previously, with the Philharmonic-Symphony Orchestra, had given a memorable reading of Bruckner's Ninth.

Mr. Klemperer showed that he had in his soul the unworldliness which is so rare and essential for Bruckner's interpretation. He thought aloud with the composer, spoke with Bruckner's voice as though this were his own

native speech, conducted the orchestra, from memory, with an authority so complete and an understanding so vivid and profound that against all odds, and for long movements, he carried his audience with him.

—OLIN DOWNES, *N. Y. Times*

Mahler himself conducted their ("Kindertotenlieder") first performance here a quarter century ago when he was leader of the Philharmonic, and the singular Ludwig Wullner sang the voice parts. On that occasion the program carried, as it did last night, this note copied from the flyleaf of the score: "These five songs are conceived as a unit, an indivisible whole, and their continuity at a performance should be preserved by the prohibition of interruptions of any kind—applause, for instance—at the end of a number."

The composer's wishes were observed last night. But it is not easy to imagine that any concertgoer could hear unmoved these songs of elegiac and sad sincerity—music torn from the depths of a dread and sorrow that were not less grievous for being felt through the imagination.

—LAWRENCE GILMAN, *N. Y. Herald-Tribune*

Mahler set Ruckert's verses while in fear of the death of a little daughter.

Mme. Branzell sang the songs with persuasive sincerity and with much vocal art. She put so much of herself into her singing that she moved the audience to long continued applause. Mr. Klemperer conducted the cycle with all the enthusiasm of an ardent Mahlerite and generally with good effect.

—W. J. HENDERSON, *New York Sun*

A finer delivery of Mahler's touching song cycle than that given by Miss Branzell we have never heard. To those beautiful settings of Ruckert's poems she brought not only beauty of voice and style, but a true penetration of their spiritual nature. Her great art won her repeated recalls at the conclusion of the cycle. Mr. Klemperer's exposition of the orchestral part was as perfect in its way as was Miss Branzell's singing.

—A., *Musical America*

An unofficial Bruckner festival got under way when Mr. Toscanini returned to us, for following his four performances of Bruckner's Seventh Symphony, we had the Fifth Symphony directed by Mr. Klemperer in his newest guise—that of visiting conductor with the Philadelphia Orchestra. Undoubtedly there'll be more Bruckner as the winter proceeds, and it looks like a big year for the Brucknerians.

In spite of Mr. Toscanini's miracles with the seventh symphony and the cheers which rewarded Mr. Klemperer's peroration of the fifth, Bruckner still has to be sold to many auditors. I used to listen to the warnings of people who told me that Bruckner was dull as ditch-water and approximately as deep. Then I read the scholarly and intelligent (the adjectives are not necessarily synonymous)

screeds of the Bruckner Society and became convinced that if I didn't care for Bruckner's music, the fault wasn't Bruckner's.

Mahler, who seems to be a sort of vice-president on the Bruckner ticket, also appeared on Mr. Klemperer's program when Mme. Branzell sang the "Kindertotenlieder." The eminent contralto was in fine voice and has become fashionably slim. She sang her texts with charming restraint, and Mr. Klemperer contributed his astonishing gifts to the orchestral music.

—ROBERT A. SIMON, *The New Yorker*

It was remarked that two composers who are still looked at somewhat askance in this country, despite the support of specially organized societies, Mahler and Bruckner, actually figured in the same program, taking up the greater part of it.

Mr. Klemperer, with his devotion to Bruckner's music, his sympathetic insight into its peculiarities, and his sovereign sense of style, read the symphony with authority, obtaining from the orchestra a masterly execution.

The great audience, irresistibly stirred by the blare of the auxiliary brasses of the concluding pages, applauded the performance heartily.

The *Kindertotenlieder* represent Mahler at his tenderest and most appealing.

—P.S., *N. Y. World-Telegram*

Performances of "Kindertotenlieder" and Bruckner's Fifth were given in Philadelphia. The Philadelphia Bulletin wrote, January 26, 1935, as follows:

The Bruckner symphony, given an analytical and illuminative reading by the German conductor and splendidly played under his direction, provided thrills in the working out of its intricate and complicated construction, with profuse instrumentation which most of the time is on a large and imposing scale. There are many tonal contrasts with much use of the pizzicato in various instruments and choirs. . . . The finale, with horns, trumpets and trombones lined up on an elevation at the back, was vociferous and thrilling and roused yesterday's audience to enthusiastic applause at the tumultuous conclusion of the performance.

## ANTON BRUCKNER— FOURTH SYMPHONY

*Chicago Symphony Orchestra, Frederick A. Stock, conductor; Chicago, March 7, 8, 1935.*

The highlight of the evening was the Bruckner Romantic Symphony, not often heard in Orchestra Hall and yet very much worth while, for we found a great deal in it to admire. There are very few dull moments and upon repetition we are sure we shall find even more beauties to extol.

Last night's performance reacquainted us with the art of Bruckner—the much-discussed

—for his partisans believe in him so strongly; yet every one is not wedded to his music. We enjoyed hearing his symphony and since it met much favor with the public it is safe to predict that it will be heard again on the programs at some future time.

—HERMAN DEVRIBS, *Chicago American*

The conductor had earlier achieved a success with Bruckner's Fourth Symphony, and the long drawn melodies and colorful Wagnerian orchestration were found to have a direct popular appeal. The orchestra arose to acknowledge the continued applause.

—M. M., *Musical America*

It was Anton Bruckner's Fourth Symphony, otherwise known as the "Romantic", revived after a silence of nineteen years. In fact this was only the third time that it had ever appeared on these programs.

Bruckner's was a manner of composition that would seem almost to have disappeared from the earth, leisurely, calm, spacious, taking little thought to dramatic climax and much to what the composer considered musical fitness. That there were a few instances with reminders of Wagner's music in them showed his artistic sympathies, though his personal tendencies ran in another direction. It, too, was another interesting performance.

—EDWARD MOORE, *Chicago Tribune*

I realize that for the present, at least, I am a person to whom Bruckner's idiom is a foreign one. It is not that his music is difficult to follow, but that it is difficult to penetrate. I can enjoy his panoramic view and I can be stirred by the colossal passages of the first movement, or by the beautifully made theme that opens the andante. The ingeniousness of the trio in the scherzo is agreeable, and other signs of Bruckner's highly complicated naivete are enjoyable, just as his honesty is admirable and just as the spaciousness of his thought must be respected . . .

Nevertheless I should not like to miss hearing it whenever Mr. Stock plays it, and especially whenever he plays it so magnificently as he did last night.

—EUGENE STINSON, *Chicago News*

## GUSTAV MAHLER— SECOND SYMPHONY

*Philadelphia Orchestra, Eugene Ormandy, Conductor; Assisting Artists: Agnes Davis, Kathryn Meisle, Strawbridge and Clothier Chorus. Philadelphia, March 8 and 9, 1935.*

Written elaborately, as it is, with many profuse and powerful effects, the symphony is noticeable for the prevalence of melody, the dissonance that might have been expected from its composer being seldom conspicuous. Intended to picture the death of a hero, the opening denotes his struggle, with some impressive (funeral) march passages and a chorale that is greatly emphasized in the last movement, and throughout there is contrast of the

melodic and the dramatic, often with impressively telling effect.

A real "tune" introduces the second part, or movement—*andante moderato*—with some charming measures for 'cellos and pizzicati strings. The third, the scherzo of the work, is followed without interruption by "Primal Light", in which the contralto has the first solo passage, an alluring melody to a text from old German folk-poetry. This was very expressively sung by Miss Meisle, in warm and beautifully rich, smoothly-flowing tones.

Mr. Ormandy was called out several times, to enthusiastic rounds of applause, and while he sought, by means of gesture and arm-extending, to include musicians, soloists and chorus in reception of the ovation, quite evident was the fact that he was being personally congratulated for his most comprehensive, illuminating and notably effective conducting of the performance.

—*The Evening Bulletin*, Philadelphia

The gigantic finale, the longest movement of the work and the one in which the resurrection and final triumph are portrayed, opens with a wildly surging section in scherzo form in the full orchestra, which is followed by the chorale from the first movement, but much clearer here than at the beginning. Trumpets and horns off stage sound the Great Summons, and the chorus enters almost unaccompanied, one of the most beautiful effects of the entire work. There are soprano and contralto solos with chorus and a fine duet between the solo voices, all of which were splendidly done by Miss Davis and Miss Meisle. The close is a song of triumph by the chorus, and the work ends with pealing of bells and jubilant music in the orchestra.

Mr. Ormandy conducted the work without score, a huge task in itself, and had evidently made a very careful study of all the details of the symphony, as every cue was given to orchestra and singers and the dynamics carefully indicated. The Strawbridge and Clothier Chorus sang very well, showing a good quality of tone and admirable balance, especially in the softer passages. The audience was enthusiastic and recalled conductor and soloists many times at the close of the concert.

—SAMUEL L. LACIAR, *Evening Ledger*

## GUSTAV MAHLER— SECOND SYMPHONY

*Los Angeles Philharmonic, Otto Klemperer, Conductor; Los Angeles, May 24, 25, 1935. Chorus, Los Angeles Oratorio Society; Soloists, Blythe Taylor Burns, Soprano; Clemence Gifford, Contralto.*

The Philharmonic brought its sixteenth season to a close in Shrine Auditorium on May 24 and 25 amid applause for Otto Klemperer and the orchestra.

The last pair of concerts was eventful in that Mahler's] much-praised and much-maligned *Second Symphony* was given its first Los Angeles performance. The performance had many

points of high merit. Of the five movements far the best result was achieved in the slow and unsophisticated second.

The Saturday night series ended the week previously, when Schoenberg's *Suite in Old Style* for string orchestra was given its first local performance. The composer was present and bowed his acknowledgment from the stage.

—HAL D. CRAIN, *Musical America*

### MARTIN G. DUMLER—

#### STABAT MATER {Premiere}

*Cincinnati Symphony, May Festival Chorus, Eugene Goossens, Conductor; Assisting Artists: Helen Jepson, Kathryn Meisle, Richard Crooks, Keith Falkner; Cincinnati, May 25, 1935.*

Earlier in the evening the chorus presented him (Goossens) a wreath along with many floral tributes for Martin G. Dumler, who was called to the stage after the world premiere of his arresting and memorable "Stabat Mater".

The Dumler work served to present for the first time during this Festival the gorgeous voice of Kathryn Meisle. Exceptionally fine were the other soloists, Helen Jepson, Richard Crooks, and Keith Falkner, while chorus and orchestra were quick to respond to Mr. Goossens' baton during the performance of this work of a native Cincinnati.

—VALERIA ADLER, *Cincinnati Post*

It was gratifying to hear this work and to be sincerely justified in pronouncing it worthy in every way of the acclaim it received.

It is reverential, sympathetic and thoroughly musical throughout, with attractive orchestration, and is so arranged in sections as to admit the performance of separate units at different occasions.

Although essentially Church music, Dr. Dumler's work expresses the human side of this great historical picture with a vividness that is readily to be understood. It is inspirational and thoughtful, at the same time affording pleasure in hearing.

—*Cincinnati Fine Arts Journal*

The management of the Festival Association has much to be proud of, but of nothing more so than having programmed Martin G. Dumler's *Stabat Mater*, one of the two works presented at the evening concert.

As heard last evening and under the inspiration of a superb performance, few will deny its sincerity, scholarly background, adherence to the drama of the text, and the telling power of its final climax. Last evening's presentation resulted in a veritable ovation for the composer. He was recalled to the stage; the audience rose in recognition of both the composition and its creator; there were presentations of flowers and wreaths, and a prolonged ovation.

—GEORGE A. LEIGHTON, *The Enquirer*

Dr. Martin G. Dumler, a composer of decided originality and distinguished musical understanding, chooses the field of ecclesiastical music for his compositions. His "Stabat Mater" is very reverent, very sympathetic and finely musical. It follows closely the vibrant words of the ancient hymn furnishing the text, combining with the serious, sacred character of the music an inspired manner of treating the subject.—The orchestration, amply sustaining and not too florid, is admirable. Dr. Dumler received an enthusiastic ovation which brought him to the platform.

—NINA PUGH SMITH, *Times Star*

Dr. Dumler writes with remarkable naturalness, with a sure hand in his choral parts, contrapuntal dexterity and a really admirable feeling for orchestral investiture. . . . The finale, *Christe cum sis hinc exire*, for solo voices and chorus, with its well managed fugal writing, the composer builds to a stupendous climax on a series of *Amens* in the solo parts, against sustained chords in chorus, orchestra and organ, concluding on a fortissimo F Sharp Major chord.

—A. WALTER KRAMER, *Musical America*

In all probability, Music Hall has never been the scene of a similar triumph for a Cincinnati composer. The applause was deafening, and audience, orchestra and chorus all rose to do honor to a man to whom music is life and who was reaping the fruits of his years of labor.

This "Stabat Mater" is built more on the order of the Gregorian chant—a touch of the medieval—from which it glides to the percussion and amplitude of the modern orchestra and vocal consonance. Melodic and majestic in its unfolding, it leads to climactic effects that show a masterly musical mind. The work was given a splendid performance.

—*Musical Leader*

### MEMBERSHIP IN THE BRUCKNER SOCIETY OF AMERICA.

Regular membership, including *Chord and Discard*, the official journal, and all publications of the Society, two dollars per annum. Remittances may be addressed to R. G. Grey, Secretary, 685 West End Ave., N.Y.C.

# The Complete Works of ANTON BRUCKNER

---

## PLAN OF THE EDITION

- Volumes 1-9: Symphonies I-IX \*(I, VI, IX)  
10: Symphony in F Minor; Symphony in D Minor  
11: Early Orchestral Works  
    The String Quintet  
    Smaller Instrumental Compositions  
12: Mass in D Minor  
13: Mass in E Minor  
14: Mass in F Minor  
\*15: Requiem;  
    Mass in  $\sharp$ B Minor  
16: Psalms; Magnificat; Te Deum  
17: Smaller Sacred Compositions I  
18: Smaller Sacred Compositions II  
19: Secular Vocal Compositions I  
20: Secular Vocal Compositions II  
21: Biographical Documents I  
22: Biographical Documents II

\*Already published; for information concerning subscription for the entire set or purchase of separate volumes communicate with Gabriel Engel, 136 West 75th Street, New York City.

## THE LIFE OF ANTON BRUCKNER

This monograph . . . tells in an entertaining fashion its story of the composer's long struggle for recognition and makes out an impressive case for him as the successor of Beethoven.

—WARREN STOREY SMITH, *Boston Post*.

(Price, 50 cents plus 5 cents postage.)

---

## GUSTAV MAHLER: SONG-SYMPHONIST

It is perhaps the best life of Mahler extant . . . The reading public owes a debt of gratitude to the Bruckner Society for issuing this comprehensive brochure; it tells all that is necessary and it is informative.

—HARVEY GAUL, *Pittsburgh Post Gazette*.

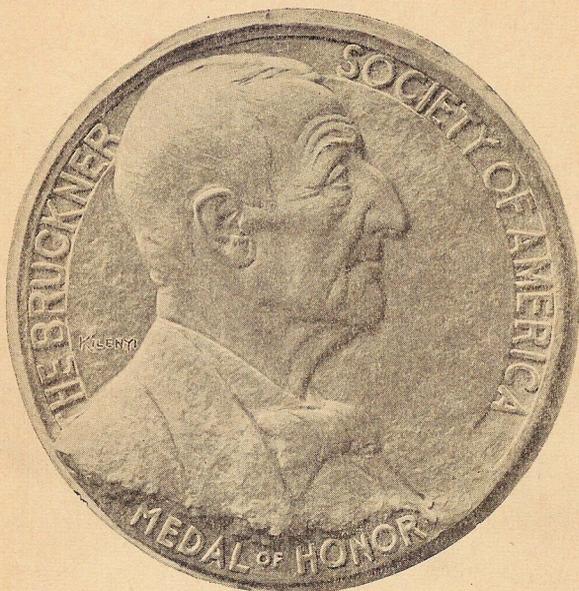

(Price \$1.00 plus 6 cents postage.)

## PROMETHEUS UNBOUND

### I. THE LIBERATION OF ANTON BRUCKNER

On March 1, 1936, a distinguished audience, the elite of German and Austrian music-lovers, sat in the historic concert-hall of the Gewandhaus at Leipzig eagerly awaiting the world premiere of Bruckner's *Fourth (Romantic) Symphony* in the original version. That they were thoroughly familiar with the symphony in a form which Europe's tonal experts had long hailed as faultless may be taken for granted. It was one of the two major works of the master which, by virtue of frequency and regularity of performance through the years, have come closest to achieving a permanent place in the world's standard symphonic repertoire. Naturally, therefore, many in the audience questioned the wisdom of burdening the rising, but still struggling cause of Bruckner's art with a fresh basis for controversy, particularly over a work which had already attained universal esteem.

Nevertheless Hans Weisbach, the conductor of this advertised "first performance anywhere", confidently launched into a series of prefatory remarks, explaining the cause and aim of the performance about to be given. Knowing he was addressing a multitude of musical scholars he did not hesitate to engage in a technical discussion, the detailed citation of which, however, would be out-of-place in this brief report. The gist of his remarks was: "I assure you you are about to experience an amazing revelation. To prepare you for it I shall first have the orchestra play for you alternately three representative excerpts as they appear in each of the versions. I need hardly call your attention to such matters as deliberate omissions in the current version (one of them 48 measures long) which impair the formal coherence of the symphony as originally conceived by Bruckner; nor innumerable changes in dynamics which lessen its elemental power; nor mincing, asthmatic phrasing-marks which rob it of much melodic breadth; nor false tempo and metronomic indications which further distort its general character; nor even the suppression of many subordinate thematic particles which the misguided, though well-intentioned "editors" of Bruckner's day deemed contrapuntally too rugged and disturbing for the public's ear. A greater injustice than any of these has been done Bruckner's art by the Wagnerian veil which was cast over his original musical idiom half a century ago. As you listen to Bruckner's own version of the *Romantic Symphony* you will mark the complete absence of those Wagnerian characteristics or mannerisms so noticeable in the adulterated version the world has long accepted as Bruckner's own."

Then turning to the orchestra this conductor began the strange, fragmentary prelude he had proposed. His listeners followed every note with rapt attention, carefully comparing the new with the old. Thus even before the performance of the symphony as a whole they gathered from the numerous, fresh, vital beauties of these fragments that they were about to experience the first true revelation of a great masterpiece which they had hitherto known only in a skillfully garbled version. In that audience there were Bruckner enthusiasts who had devoted many years of their lives to the construction and publication of careful analyses of the master's music. To them this restored *Fourth Symphony* meant that all prevailing judgments based on the old version would have to be reweighed and often replaced with new ones. Clearly, two generations of Bruckner disciples had connived to suppress a host of facts indispensable to a truthful estimate of the work. The disconcerting result was that every commentary upon it already published would have to be stamped with a confession of futility: "This analysis is not based upon Bruckner's own version of the symphony."

To bring home to American music-lovers the full significance of this amazing, new development a single instance will suffice. No less an authority than Donald Francis Tovey, brilliant author of the recently published *Essays in Musical Analysis*, was victimized by the traditional, accepted version of Bruckner's *Fourth*. His sympathetic analysis of the symphony in its garbled form reveals him as an enthusiastic admirer of Bruckner's noble musical conceptions and of the grandeur of his symphonic architecture. Yet the marked Wagnerian orchestral idiom of that version prompted Mr. Tovey to recommend Bruckner's symphonies to those who, bored by an eternally fixed Wagnerian concert-fare consisting of a few "bleeding chunks" torn from the body of the music-dramas, would welcome a whole symphony so consummately conceived in the Wagnerian idiom that the mighty man of Bayreuth might credibly and creditably have signed his name to it. The knowledge that so eminent a musical authority as Mr. Tovey qualifies his praise of Bruckner only because of this disturbing presence of the Wagnerian orchestral manner, should gladden the heart of every Bruckner devotee, for that sole adverse criticism may now be dismissed once for all with the falsified, Wagnerized musical text upon which it is based.

The titanic musical spirit of Bruckner, a veritable "Prometheus Bound," tortured by the chains which have so long imprisoned it, is free at last. There is some comfort in the thought that its sufferings have not been in vain, for they have furnished the world of music with facts that prove beyond further argument that the composer's orchestral technique is not a mere supplementary factor coloring his symphonic creation, but an integral portion of the very conception of the symphony itself.

## II. BRUCKNER'S ORCHESTRAL LANGUAGE

Music-lovers have been led to believe that Bruckner knew practically nothing about instrumentation before he entered upon his study of musical theory under the young Wagnerian enthusiast, Otto Kitzler. The fact that Bruckner, then almost forty years old, had been assiduously engaged upon various forms of composition for not less than twenty-five years should have long ere this aroused lively doubt as to

the validity of such a conclusion. A glance at the list of his creative efforts previous to his studies with Kitzler reveals no less than fifteen compositions in which various combinations of instruments are employed. It is to be expected that this music, chronologically considered, should show a steady growth in the composer's mastery of instrumental technique. The surprising thing about it is the strangeness of its idiom for the day in which it was written. Its precocious roughnesses, (grammatical defects, when viewed in the light of the meticulous, rather stereotyped orchestral art of the early post-Beethovenian period) could not have struck Kitzler, the passionate admirer of the stupendous Tannhaeuser and Lohengrin scores, as pitifully helpless. We know from Kitzler's own report that he had initiated Bruckner into these earlier Wagnerian orchestral mysteries and then persuaded him to apply his new knowledge to the composition of a symphony, only to find the result puzzlingly disappointing. It did not occur to Kitzler that the failure of the Wagnerian idiom to inspire Bruckner may have been due to a fundamental trait in the Austrian's genius diametrically opposed to the prodigious heaping up of rich instrumental colors that characterized the productions of the great music-dramatist. Kitzler was not only German-born; his musical education was wholly German. His career, swiftly carrying him from city to city in the most impressionable years of his life, converted him into a thorough cosmopolitan. How could such a mentor have understood the inclinations or possibilities of Bruckner, the unsophisticated, rugged, pious Upper Austrian provincial, whose genius hailed from a totally different world of the spirit?

Had Kitzler understood Schubert as well as he did Wagner he might have had some clue to Bruckner's soul. Yet even that knowledge would have helped him to but a partial realization of the deep, tranquil splendors of tonal affirmation which were the roots of Bruckner's still unsuspected symphonic power. Bruckner's musical heritage coincided with Schubert's in every respect universally regarded as native to the soil of upper Austria. An inexhaustible fund of spontaneous melody and a predilection for colorful, elusive harmony mark the musical expression of both these Austrian masters. Schubert, however, truly Viennese, always remained predominantly lyric. The literary background was the constant source and motive power of Schubert's inspiration, proving him the complete romanticist. The poetic text, which lent Schubert's genius wings, was the very influence which kept Bruckner's absolute-musical genius chained to earth until his fortieth year. The paramount determinant of Bruckner's expression is something even more elemental, more primitive than the well of pure emotion from which Schubert drew his countless measures of unprecedented charm. Homophony, which attained its first spring through Haydn, its early summer blossom through Mozart, and its full bloom through Beethoven, still filled the garden of music tended by the early romanticists who followed, conjuring it to fresh, luxurious hues, by a thousand and one subtleties of formal trimming and cross-plantation.

Sechter, the contrapuntal master to whom Schubert turned in the last weeks of his short life, has told us how that young genius, already the creator of great symphonies, hoped to achieve deeper, loftier expression through an intensive study of the polyphonic art almost scornfully neglected by the classic masters before him. A mastery of the externals of polyphony is possible in early years. Bach and Wagner both

knew their counterpoint thoroughly at eighteen, but a *Kunst der Fuge* or a *Meistersinger Prelude*, creations that rose not out of the grammar but rather out of the poetry of polyphony, is a fruition that can attend maturity alone. Bach's genius, absolute-musical, attained its perfect flower in the concentrated poetry of a fugue-sequence; the mastersinger Wagner's music-dramatic genius is crystallized in the many-voiced, yet wordless ballad narrative eloquently related in his romantic *Prelude*.

When Bruckner wrote his inane trial symphony at Kitzler's request he was already a master of the poetry of polyphony in the field of devotional music. An examination of the score of his *Mass in Bb Minor*, composed ten years earlier, proves this. The peculiarly unbalanced orchestra he employed for this work was contrary to the ideal which the instrumentation of his day had set itself. The luxuriously blended orchestral tone, evoked by the homophonic heritage which was still the melodic ideal, never had a place in Bruckner's musical visions. A combination of instruments which included 2 trumpets and 3 trombones, and yet lacked clarinets and horns, seemed to him natural and desirable for that first of his major works. Only a careful study of the use to which he put this extraordinary group will reveal that it was not a helpless tyro but an artist with definite purpose who penned this unusual score. Bruckner was all the more the true artist because he did not lean on tradition for even this initial "detail" of the work. The score is virtually bare of *tutti* passages, for the massed application of so motley an orchestral gathering would obviously have proved disastrous. This alone shows that the composer was aware of the unprecedented nature of his own musical idiom. Many of his early church compositions (*Mass*, 1846; *Aequale*, 1847; *Requiem*, 1848; *114th Psalm*, 1852; *Vor Arnet's Grab*, 1854; *Libera*, 1854; *Cantata, Auf Brueder*, 1854) employ groups of three trombones or horns in brief, antiphonal outbursts, the like of which is not to be found in the instrumentation of the masters since Bach's time. Something of this technique of sounding instruments alternately in contrasted family units rather than in sonorously massed harmony, survived in the pre-classical suites of the 17th century Italian masters, to sound a last, brilliant echo in the alternate *tutti* and concertant passages of the orchestral concertos of Bach and Handel. To grasp this style in its full flourish, however, it is necessary to go back to the prodigally varied choral accomplishments of the age of Giovanni Gabrieli, great Venetian contemporary of Palestrina. Of Gabrieli's art Ambros speaks as follows in his monumental *History of Music*, "His fascination consists in the magic play of contrasted, opposing choral groups which he assembles alternately from the high and low voices. He differed from Palestrina as the consummate draughtsman differs from the enchanting colorist."

That is also the fundamental difference between Wagner's and Bruckner's orchestral languages. The former heaps up almost stupefying effects of instrumental color, the latter applies his orchestral resources with a rigid, almost austere economy, foreshadowing the twentieth century ideal of instrumentation which despises as "bad art" a mere doubling of instruments detrimental to the straightforward clarity of a melodic line. In this one great variance between the technical methods of the two masters lies the key to the mystery of the garbling of Bruckner's original versions by his Wagnerian-minded disciples. Their motives cannot be questioned. They loved Bruckner, "not wisely, but too well." Although they realized the beauty and grandeur of his musical

ideas, they failed completely to grasp the prophetic, inviolable truth of his method of expression. It remains only for the musical historian to discover whether Bruckner, a very sick, old man, with no thought left for anything but his God and his unfinished *Ninth Symphony*, was completely unaware of the rather furtive activities of Loewe and Schalk "in his behalf", or whether knowing just what was going on, the master decided it would be best to let the matter rest and trust to the future to set it right. Certainly, it was not out of vanity that he willed his original manuscripts to the Viennese National Library. Was it not his unspoken wish that that great institution should at the proper time publish all his work as he had actually conceived it? Can anyone at this date question the value of such publication to the cause of art?

—GABRIEL ENGEL

---

### BRUCKNER'S *MASS IN E MINOR* (AMERICAN PREMIERE)

Several prominent church musicians in this country had been planning during the past few seasons to perform Bruckner's great *Mass in E Minor*. Seventy years had passed since its composition. Yet America had never heard it. Its performance was one of the dearest wishes of the late James P. Dunn, brilliant American composer and musical director.

The unusual difficulties of this *Mass* demanded long and careful preparation. They required not only a fine choir and soloists, but above all a leader who was both a thorough musician and a firm believer in the greatness of Bruckner's sacred music. Such a leader was James P. Dunn, whose dream of producing the *Mass in E Minor* untimely death rendered forever impossible of realization.

Such a leader, too, is Raymond Nold, musical director of the musically famous Church of Saint Mary the Virgin in New York City. To the first-rate singers of his church the difficulties of Bruckner's score were comparatively simple to master. Thus it came about, as a joyful surprise, that the *Mass in E Minor* was given at the Church of Saint Mary the Virgin, Jan. 12, 1936. It was a historic occasion, the significance of which was re-echoed when the work was sung again at the same church on April 26.

Meanwhile Bruckner's *First Mass* (in D Minor) in some respects the most impressive of all his sacred compositions, still awaits its first hearing in America. Will Mr. Nold, whose interest in Bruckner's church music finally brought about the performance of the *Mass in E Minor*, soon also add this most neglected of the world's great masses to the distinguished repertoire of the Church of Saint Mary the Virgin?

## MUSIC, MAHLER, AND MYSTICISM

### I. THE BASIC NATURE OF MUSIC

Before I begin to speak of Gustav Mahler and his work I shall have to dispel several prevailing illusions which education and environment have rendered an almost integral part of our general mental make-up.

First: the illusion that music is an art, if art is, as Webster's Standard Dictionary will have it, "the power or quality of perceiving and transcribing the beautiful or esthetic in nature".

The nightingale makes music, beautiful music; yet we can hardly imagine it as "perceiving and transcribing" anything, for it will sing in a covered cage—yes, it will go on singing even though blinded.

Primitive Australian negroes make music, singing with abandon and playing their crude instruments. Ask these uncultivated musicians whether they are "transcribing the beautiful or esthetic" by means of melodic or rhythmic sounds; they will not even know what you mean. Ask them why they sing and play at all; they will answer (as the Hopi Indians actually did) "We don't know".

Indeed, do we, intellectual products of an enlightened civilization, really know why we make music? Can we explain exactly why we sing in church, why we intone the national anthem when the flag goes by, why we feel the urge to dance when the jazzband strikes up? No, we can no more fathom the mysterious prime source of music than the nightingale, for music-making is with us no less the expression of an unknown urge than it is with the feathered warbler.

Therefore music, its very origin beyond our knowledge, cannot be an art at all. The expert, however, insists that it is an art, because it obeys the "eternal and universal laws of beauty and esthetics." Answering him I say, "The laws to which you refer are anything but eternal and universal. To the Chinese, who were already saturated with a highly developed and complicated system of civilization when the forefathers of Richard Wagner were still cavemen, the music of that great composer sounds barbarous. On the other hand, to us, comparatively immature offspring of the younger Western civilization, the music of the Chinese sounds undeveloped and dull. These so-called laws of yours, then, are not really universal. —Are they eternal? The laws of harmony, counterpoint, the eight-measure period, sonata-form, etc., were evolved artificially not more than a mere two or three hundred years ago and have been subject to continuous change during every generation since. —Now what of esthetics? This 'science or theory of the beautiful in taste and art' (as Webster's puts it) is no science at all. It is a round-game, like bridge. Laws? Why, the real musician creates his work as spontaneously as the nightingale sings its songs, or as the Australian Negro creates his song-and-dance symphony of drums and shouts. The process involves no rules, neither eternal nor universal".

Another illusion that cramps our musical outlook is the notion that the nightingale or the Australian Negro or (to approach our own state) an Irish or Czechoslovakian peasant has a simple, uncomplicated mind, while a great scientist or a big-business "dictator" has a manifold, complicated brain. If anything, just the contrary is true. We, highly civilized folk, brought up in and limited by that drab gaoler of the imagin-

ation known as "common sense" and "pure reason"—we are growing ever more simple and uncomplicated mentally. Modern ethnology has proved that primitive man, like the animal, is very complicated—in fact, complex. Actual experience, the memory of the past, dreams and illusions, are an ever present, tangible vivid reality to the primitive. We representatives of a single-tracked rationalism are virtually incapable of realizing so rich a complex of mental imagery as the "savage" possesses.

Therefore it is difficult for us to appreciate the presence of such a complex in the musical expression of the primitives. Textbooks on musical history teach us that the music of the primitives is strictly homophonous, presenting only a single melody at a time, without any harmonic accompaniment. This view is, to say the least, inaccurate. Some of you will perhaps remember the record of the Javanese Gamelang-Orchestra which I played for you during a former lecture to illustrate a phase of the psychology of polyphony. The so-called "melody" was the smallest item in that symphony of bells; yet what a tempest of varied rhythms raged about the "melody!" Its intricacies seemed to us the frenzied expression of madness.

Yes, madness—that is just what the primitive complexity of mind appears to us. The madman's mind does not distinguish between dream reality, between memory and present experience. These are one indivisible unit to him—and so they are to the creative artist, too, particularly to the musician. Thus our convenient concept of the "simple savage" is only another mistaken illusion.

Still another illusion under which we labor is: that songs, especially folk-songs, were engendered by words or poems. "Hurrah!" is a primitive song. Do you know what "Hurrah" means? If you think so, try to explain it by exact definition; you will see how helpless our language is when it attempts to clarify the confusion of urges that produce the outburst "Hurrah!" Nevertheless you are sure that you can realize the complex of feelings, thoughts, and urges that find such expression. The two meaningless syllables "Hur-rah" represent the whole complex. This definition, advanced by the noted psychologist Jung, may help us to understand it: "A symbol is the best possible expression or formula of a relatively unknown fact, which however is perceived as existent. The cross is a symbol if it is the evident expression of an unknown and inexplicable, mystical or transcendental, i.e., psychological, fact."

The *symbol* stands for a complex, which cannot be explained but which can be expressed, either visibly, by an image, or audibly, by sounds. Cross and churchbells are related symbols.

"Hurrah", the symbol, is "Hurrah", the music.

The song of the nightingale is the symbolic expression of the complex of its feelings. The calls, shouts, and even the wordless songs of the primitives have such significance. These symbols existed as sounds before words or word-producing thoughts were born.

The first words ever pronounced still denoted vague complexes: hurrah, alas, God, love, kill, etc. Later words of symbolic import became current (sweetheart, flower, moon, sun, sea, earth) preserving their symbolic character to this very day.

The primitives would mingle such words with the meaningless syllables, such as *lalala* or *hurrah*, which they shouted in the course of their singing.

As time went on other words related to the same complex became associated with the original word, but incoherent words with symbolic meaning have never ceased to characterize these complexes. Thus the folksongs of the whole world are pregnant with meaning, even though they are deficient in logic and grammar. They are not the product of concentrated thoughts, but rather the expression of expansive feelings.

If you will grant that the complex of mind, emotion, and urge may be identified by the term "soul", you will find Schiller's poetic definition highly illuminating and precise:

"*Spricht die Seele, so spricht, ach, schon die Seele nicht mehr*". (If the soul speaks, then it is—alas—no longer the soul that speaks)—only mere intellect.

If music speaks, i.e., if it tries to communicate ideas, descriptions, or anything of extra-musical nature, then it can no longer be pure music.

To sum up, then: music is basically not an art, but an expression of a primeval urge. There are no general rules for making music. Basically, it is not linear melody, expressive of linear thought, but rather (as the expression of a multifarious complex) an apparently lawless compact of rhythms and melodies. If it evokes verbal interpolations, these are incoherent words, having no intellectual, but merely a symbolic, meaning.

## II. RATIONALISM vs. MYSTICISM

Now you may ask: "How and why did our Western music attain its linearity, as revealed in the work of Gluck, Mozart, and Beethoven, and—what has all this chatter of yours to do with Gustav Mahler, anyhow?"

First, to explain those phenomena, Gluck and Mozart.

Our European forefathers had minds as complex as those of the primitives. In fact, during the Middle Ages this complex mind constructed the tremendously complex Gothic cathedrals; it experienced the complex vision of eternity in Dante's *Divine Comedy*; it created the irrefutable philosophy of omnipresence as expounded by Meister Eckhardt. The man of the Middle Ages felt that he was an integral part of nature, of the universe, and of eternity, centered in God, the Omnipresent, of Whom man is an essential expression (*unio mystica*). To him, too, as to God Himself, the past and the present, dreams and ideas, were an actual, living experience, tangible and evident by itself.

This multifarious composition of mind expressed itself in a multifarious music. The polyphonic organ and the many-voiced sacred choruses were the final product of this music based on the folksongs, which also were originally polyphonic.

Yet again we must correct a prevalent misconception: that of the simplicity of the original European folk-songs. Our knowledge of the European continent in the early Middle Ages comes to us through Roman descriptions alone. In their colonies the Romans educated the population

in the essentials of Roman mentality. That was the cultural aim of the ancient, traditional Greco-Roman mental training, as it had been summed up in that terribly mechanistic system of behaviorism by Aristotle. Yes, Aristotle, the "father of logic", was the school-tyrant who disrupted our coherence with the universe and eternity; who cramped our transcendental powers, our breadth of vision, our emotions and our faith. For almost two thousand years the civilized world submitted to his tyranny. Our music was only an incidental victim in the holocaust of cultural reconstruction. In Greek the word "monotonous" means single-tuned, and that is exactly the way Greek music sounds. Just as Aristotle sought to train the civilized mind to think only a single thought at a time, so Greco-Roman music sought to express only a single feeling, using but one tune at a time. This is called "homophony", single-tuned music, the contrary of polyphony, many-tuned music.

The European continent surrendered to that utterly simple, logical system. Only the Britons (though they were also Roman provincials) and the Scandinavian tribes did not. Among them, during the Middle Ages, the original polyphonic folksong survived. Their singers kept improvising counter-tunes to the standard melodies. Later the Italians, very significantly, called this process counterpoint: *contra punto alla mente*, counterpoint according to the mind. To Victor Lederer and Guido Adler, both contemporaries, compatriots, and friends of Mahler, must go the credit for the discovery of these important facts. They proved that this folksong-polyphony was brought over to the continent by the bards, minstrels, and trouveres, making it possible for the European to give vent to his inborn feeling in the manner of his original, i.e., aboriginal, polyphonic mind.

Dunstable, Ockenheim, Josquin de Pres, Adrian Willaert are the expression of that Gothic mind. They pave the way for the great Orlando Lasso and Palestrina. These in turn press onward and upward toward that gigantic mystic, J. S. Bach.

A hundred years before Bach was born, European music had come to a fresh crisis. As early as the 14th century there spread from Italy a new wave of rational liberalism. Again the profound *unio mystica* of man, nature, and God succumbed to a sober, dreary matter-of-factness tantamount to a rebirth of the Greek mentality. The mystics were supplanted by the Protestants—Dante by Macchiavelli, Palestrina by Monteverdi. Aristotle became the fad more than he had ever been before. Rationalism prepared the scientific age. Common-sense was once more the reigning tyrant. The decline of the Western world began.

The European mind, confined now to thinking and feeling in terms of logic, of matter-of-factness, became single-tracked. As it might think of only one thing and feel but one thing at a time, insubordinate feelings and thoughts, which threatened to interfere with the one painstakingly isolated, legitimate thought, were inexorably subordinated, becoming a mere psychological accompaniment.

This reborn single-tracked mentality had to be expressed by a correspondingly single-tracked music. Thus a new species of homophony, an offspring of polyphony, arose in Florence. One melody only was permitted to sing. The other melodies were turned into tonal freaks, called chords and harmonies.

Monsieur Jean Philippe Rameau reduced these freaks to a system "according to their natural principles."

That happened in 1722.

Thus our "eternal" and "natural" musical system (staunchly defended by the rationalists today) is hardly more than 200 years old.

Progress marched on with seven-league boots. By mistake Grand Opera was invented (it is still a mistake in this Year of Grace, 1936.) It was Grand Opera that established the sovereignty of homophony in music.

There were no complex characters then, either in life or on the stage. A human being was good or bad, haughty or humble, strong or weak, harsh or soft, but nothing more. Naturally, the music composed to fit such characters was linear, i.e., one-tracked.

But, Nature, driven out with a pitchfork, will return again.

The French Revolution, which marked the climax of rationalism, proclaimed Reason as the world's sole ruling divinity. Yet before that arrogant proclamation was made, Hume in England and Herder in Germany had already undermined the fundamentals of rationalism and paved the way for modern psychology. Even some of the Encyclopedists, bulwarks of orthodox rationalism, honestly admitted that the human soul was not as simple as reason would have it. Courageous poets began to bask in the light of Shakespeare, that portrayer *par excellence* of complex humanity.

In music Gluck and Mozart ventured to penetrate unprobed regions of the human soul. Thus the subconscious, officially "discovered" (so to speak) about a hundred and thirty years later, already attained musical expression when the world was still gripped by the most sturdy rationalism.

Nature continued to battle the drab pitchforks of the rationalists. The light of science grew ever brighter. Science was, as it is today, and will be tomorrow, the broadening influence that restores to man's mind its mystic union with God and Nature.

Our own age (I mean the period after the World War) is anti-rationalistic. If my interpretation is correct, we have grown mystic-minded again. Communism, Fascism, Nazism, and Zionism are transcendental tendencies, like occultism, theosophy, astrology, parapsychology, and other complex superstitions. It is very significant, for instance, that medicine today uses methods (exercises, breathing, massage, diets, vitamins, hormones, etc.) which the witchdoctors of the aborigines have been using instinctively for centuries. The miracles of higher mathematics, the x-ray, radio, radium, electricity, the theory of relativity—all these are as many proofs of the teachings of the wise men of the Middle Ages as they are refutations of the humdrum platitudes of the outspoken rationalists. Enlightened by the modern research of Frazer, Levy-Bruehl, Boas, Frobenius, etc., into the occult powers of the so-called primitive mind, we envy the "savages" their rich complex of mental power. We are even proud if that clown of modern science, the psychoanalyst, reveals the presence of some funny complex in our mental make-up.

The truth is, we have become complex again! ! !

Julius Caesar and Napoleon (two arch-rationalists) won worldwide admiration because they were able to dictate five or six letters at once. Our respect for this attainment of the two great leaders vanishes im-

mediately when we consider how many thoughts and feelings go whirling through the brain and heart of a New York girl as she drives her car down Sixth Avenue.

Gears, gas, steering-wheel, cars right, cars left, cars in front, cars behind (seen through the mirror) pillars, traffic lights, traffic police signalling, pedestrians everywhere; vanity-mirror, lipstick, conversation with the boy friend, consulting the watch, fear of being late—and as though that were not enough, she turns on the radio, loosing a fresh host of concepts; jazzband, tango, chorus-melody, symbolic words with double-meanings in connection with the boy friend and herself; vision of another boy friend; of dancing to the same song, of petting with a stranger; vision of the lighted dance-floor and the dinner table, smell of cocktail and chicken liver; the rhythmic urge of the tango against the rhythm of the motor, counterpoint of rhythms on the street, etc., etc.

After all, Julius Caesar and Napoleon dictated their letters in the safety of their offices, while the girl, if she loses control for one second only, may crash to death—and she knows that, also—subconsciously.

### III. MAHLER THE MYSTIC

Now we come to Gustav Mahler.

The development of our music from Gluck and Mozart to Richard Wagner and Debussy paralleled the scientific enrichment of our mind during the Nineteenth Century. The difference between "*Ob vieni, non tardar* in *Figaro* and *Isoldes Liebestod* is only a difference of degree and not of pedigree. The basis of Wagner's and Debussy's music is still linear. It is still the rationalistic stylization of the dominant thought and feeling, subordinating side-thoughts and secondary feelings.

But the rebirth of the mentality of the Middle Ages was already imminent. The German Romanticists, Schopenhauer and Hartmann, reopened the way for it through their philosophy. Dostojewsky painstakingly portrayed the complex and the complexity of the eternally primitive Russian. The growing interest in the exploration of national and racial folklore did the rest. A new world outlook, a new view of nature had come to mankind. He had experienced a new expansion of the soul into the omnipresence of God.

It happened at that time, that a boy of six, living in the small town of Kalischt in Moravia, was asked, "What would you like to be when you grow up?" The boy did not answer, "A soldier", or "A trolley car conductor", or "A physician," or even "A musician". He bluntly said, "A martyr".

This unusual boy was Gustav Mahler. Though a Jew by birth, the child was clearly Catholic-minded, because to be a martyr means to die for mankind and attain the complete mystic union with God. It means the absorption of the limited individual into the infinite universe.

Strange desire for a little Jewish boy, was it not? Yet not so strange in Moravia. There the soil is saturated with mysticism. To you in America, Moravians mean merely the sect of the United Brethren, those descendants of Protestant pilgrims who left their native country as martyrs to their religious conviction—but I know their inmost nature.

I led a company of them during the war. They were outwardly just simple people, but in reality their mental background was tremendously broad. Their folksongs and their folk tales are no less great than the more widely known songs and tales of Russia. Their thoughts and their deeds embrace the universe. To them even the petty military service in the Austrian army had the meaning of a great human communion. My boys, Czechoslovakians as well as Germans, were martyrs. They knew they were and they were glad of it.

Like New York, Vienna is a melting pot of races and nations. In Vienna the restlessness of Western civilization blends with the fatalistic quietism of the Near East.

It was in Vienna that Mahler's personality developed. He was, to be sure, a director and conductor of Grand Opera. His destiny, however, was not the singing stage, but pure, *absolute* music. Thus he felt compelled to convert his very first opera, *Das klagende Lied*, into a symphony. Its universal meaning swept aside the narrow limits and conventions of the stage.

The stage wants matter-of-factness, a story, clearly developed according to the rules patterning the material conflicts of individual life. *The Barber of Seville* has such a story (no less than *Parsifal*.) If operas have some general or universal revelation to make they do so by showing an individual as the representative of the general. Tristan and Isolde are individual representatives of sensuous love in general. Figaro (in *Marriage of Figaro*) is the representative of the witty proletarian fighting serfdom. To Mahler, the mystic, the individual meant little. He longed to express humanity itself directly.

To him music was not the expression of an individual, but the general expression of omnipresent humanity, incorporeal, yet charged with primeval dynamics. His transcendental dreams were not suited to the stage at all. How, for instance, could a solitary trumpeter or a French-horn player, in theatrical costume and make-up, midst some poorly individualized theatrical scenery, sound the *grosse Appell*, the fanfare of Supreme Judgment, without appearing ridiculous? How could an operatic chorus in costume and make-up represent, with its clumsy antics, all humanity arising from the tomb? The mere thought of such a caricature makes one shiver.

Where the whole universe is the stage, no painted background can replace the infinity of our imagination.

Yet a theatrical producer, whom Reinhardt's glory deprives of sleep, may object to Mahler's use of military signals, implying that Mahler thought in terms of individualized symbols, "soldiers of life", in short, outspoken dramatic characters.

Go slowly, Mr. Producer.

Mahler used military signals to express the universal roll-call of humanity. He did more. Like Beethoven he used the martial march rhythm as the symbol of ever progressing humanity. Mahler's military signals and marches are of anything but an individualizing nature.

That brings us to the core of our problem.

The painter of the Middle Ages (and even of the Renaissance) portrayed the characters of the Bible in the costumes and features of his own

times. His complex mind experienced both past and dreams as real and ever present. The "Green Pastures", a modern product of a similar mentality, portrays the characters of the Bible (even "the Lawd") as modern American Negroes of Harlem.

Mahler did exactly the same thing when portraying mankind itself. He was a mystic. As a mystic he felt past and present, illusions and facts, this world and the next world, as a present unity. He, like the mediaeval painters and sculptors, could express this unity only by using his own personal experience.

"The real mystic is a *real* realist," remarked a highly cultured lady of New York recently, in speaking of Meister Eckhardt and Jacob Boehme.

Mahler photographed life, or the essence of life, as it really is, bare and crude, just as he experienced it. At the same time he enlarged that photograph to its utmost transcendental complexity.

He grew up near the military barracks. Consequently the whole world became a kind of military barracks to him, with all humanity as its infinite army. It is this army that marches so realistically to battle in the mighty Finale of the Resurrection Symphony. Beneath this complexity of battle is felt the mystic urge towards universal martyrdom. In Bruckner's symphonies the military march may even have a chorale background. It is logical that after the battle God should sound His roll-call in military style. It is logical that the busy life of mankind should be expressed in the rustic waltz (*Laendler*) of the Moravian peasants, with a background suggestive of the great Pan, to symbolize all nature. The music achieves increased grandeur through its gigantic orchestral demands, especially through its consummately varied and powerful use of the percussion, most primitive of instrumental families.

Mahler is in no respect a beautifier. He takes his photographs, but will not retouch them. Thus in his work vulgar prototypes are expressed by vulgar music. That these vulgar bits are sometimes exaggerated through orchestral magnification is not his fault. He is no artist; he is a savage giving expression to his complex experience. Sincere music is not a beauty parlor for ugly experiences. Furthermore, the bitter sarcasm with which Mahler reveals all mankind as marching along in military rank and file or merrily tripping about a dance-floor as broad as the universe does not render his photographic enlargements more palatable to squeamish estheticians. Such courageous expression of actual life may be the result of Mahler's intense study of Dostojewsky, the comprehensive analyst of the mystic depths in human life. From him also comes that amazing technical daring reborn in Mahler's reckless treatment of the prevailing laws of harmony and counterpoint. Today Mahler's musical idiom sounds quite tame and conservative to some of us, but I remember, as a boy, having been thrilled by his harmonic daring. To describe this freedom as the first manifestation of our new, modern mentality seems entirely just to me. The sincere, though cruel, confession that the essence of our Austrian life is in reality not the much heralded *Gemuetlichkeit*, as embodied in elegant, light-hearted musical comedy, but rather the tragic struggle of an ingenuous nation against the hardships of mental serfdom—this confession set our minds free. There is an interesting little story which circulates among our young musicians. During a "social" at Schoenberg's Mahler, in the course of a conversation with young Anton Webern, alluded to Dostojewsky. Webern, beyond

his depth, frankly confessed, "I fear, I'm not up to that as yet". Mahler turned to Schoenberg harshly: "Schoenberg, what's the matter with you, teaching these boys harmony and counterpoint, instead of giving them Dostojewsky and more Dostojewsky". Apparently Schoenberg has not read Dostojewsky to this very day—but the younger musicians of Vienna have. Karl Kraus, the philosopher, has done much for them, also. Yet sarcasm and irony and their transcendental projection, so prevalent in Dostojewsky, were not exclusively Mahler's personal hobby. They are a feature and experience all Austrians have in common.

Where else in the world can you find a popular song such as this? "Sell my clothes, I'm riding up to heaven", or "I'll tear a chunk out of the world and throw it in her face," or "There will always be wine, but I'll be no more; there will always be pretty girls, but we'll be here no more, hollohero". Where else can one imagine a drunken night-club singer, having fallen into a pit, in which there are heaped up corpses, victims of the plague, and having slept quietly all night, waking up in the morning, crawling out of the pest-hole, and composing the immortal folksong: "O du lieber Augustin"? Where else could that have happened but in Vienna? Mahler's life in his symphonies is a genuine product of that selfsame temperament.

Yet Mahler, a product rather of the intellectual metropolis Vienna than of the country Austria, was very intellectual too.

Bruckner, a veritable reincarnation of medieval monkhood, was an Upper Austrian peasant in both his life and his music. His mystical faith was the naive faith and the ingenuous transcendentalism that had passed down to him through innumerable generations. The Catholicism of Mahler, the Jewish convert, was more militant, alert, enthusiastic, and fanatical. Bruckner never could have conceived humanity as an ever marching army and the Last Judgment as God's own court-martial, concepts which Mahler embodied in his *Second Symphony*. Bruckner could never have combined God's own anthem, *Veni creator spiritus*, with a rather theatrical, though profound, apotheosis of Goethe's *Faust*, as Mahler did in his *Eighth Symphony*.

Bruckner would have shrunk from the reckless buoyancy which makes the Transfiguration in Mahler's mystic experience so extremely human and realistic. Mahler's affinity with Dostojewsky, who transposed the divine character of Jesus Christ into the petty frame of semi-modern society in his *Idiot*, is striking.

Hear how realistically he portrays the human soul, dreaming, like a child, of Eternity! *Roeschen* as soul is a perfect nature-symbol. The faith that sways the soul is almost a childish stubbornness. In the infinite distance beams the "little lamp" of eternal life. We glimpse God the Father and His Judgment Angel. The song is a vision of the Milky Way.

Here is music not as art but as nature in its role as the mystic background of life. The so-called laws of esthetics are invalid here. The words are disconnected utterances, mere symbols, not a means toward intellectual understanding. Here the polyphony of the primeval folksong becomes the polyphony of our technical age, which is mentally primitive, like the Middle Ages.

## IV. MAHLER'S SIGNIFICANCE TO AMERICAN MUSIC

I am not sure whether Mahler as a composer will ever be popular with the matinee-audiences of Carnegie Hall, but of this, I am sure.

If young American composers must study some foreign composer in order to create American music, then that European should be Gustav Mahler.

I have already hinted at the resemblance of the melting-pot, Vienna, to the melting-pot, New York. Despite our Protestant majority and the strong Jewish element in our American musical life, the Mystic mind is a predominant feature of "God's own country", as America is significantly called. I, at least, have found in no other country of the world so many who were inclined to mysticism, often without even being aware of it. I have found many here, who know Meister Eckhardt and Jacob Boehme better than Europeans, even Germans, usually do. In no other country is the word "background", a keyword of transcendentalism, as prevalent as here. Nevertheless, the American is a scion of extreme realism and common sense. He has even the courage to disregard esthetics and to be as vulgar and as sentimental as he pleases. Inspired by the immensity of his country he creates immense cathedrals of science, skyscrapers, and Boulder Dams, the Gothic art of today. Here again he touches the transcendental, as Mahler does in his gigantic symphonies.

The only music America has created thus far is her dance-music and her folksongs. The fact that both are polyphonic in nature is highly pertinent to this discussion of Mahler. Dance-music and polyphonic folk-songs constitute the thematic fundamentals of Mahler's music.

Why toy with analogies when we have facts to present? When WABC asked the radio-audience to vote for the symphonic composer they liked best, Anton Bruckner was well up among the favorites. Beethoven and Wagner are nationally advertised, like Sunkist Oranges or General Motors, but the humble Bruckner—exclude the few who read the publications of the Bruckner Society, and almost nobody knows of him. Compared with the performances given Beethoven and Brahms those granted Bruckner are very, very few in number—far fewer in fact, than the number to which he seems entitled by public vote. Yes, Bruckner already has his following in this country, a following of staunch conviction.

As to Mahler, most scorned and neglected of our step-children, how would the American audience vote, were he performed even as often as Bruckner? Mahler, mystic and realist, friend and disciple of Bruckner, had much in common with the genius of his spiritual teacher. Yet Mahler is easier to understand. He is closer than Bruckner to the American spirit, with its complex of crowded life, skyscrapers, motoring, and Nature-worship.

To young American composers for whom the study of Brahms, Debussy, Casella, and Strawinsky has failed to prove the touchstone of individual creative inspiration, I would say:

"Study Mahler. You will be amazed by his affinity with your own ideas and your own mentality. Study his principles and his methods. Study him carefully and critically. Then put his scores aside. Forget him—and be YOURSELF."

—ERNST LERT

## BRUCKNER'S MUSICAL WORLD

I was singularly privileged ten years ago with an opportunity to voice my faith in Bruckner before a distinguished assemblage of Austrian and German music-lovers gathered about the master's reopened tomb at St. Florian. The faith I then professed has grown deeper, if possible, during the intervening years, which I have spent in the constant study of Bruckner's mighty symphonies—faith in their unrivalled musical splendor.

We, who revere the art of Bruckner, also believe implicitly in the genius and significance of Wagner and Brahms, his two great contemporaries. We believe that to each of the three belongs a place of immeasurable historic and esthetic importance in the musical development of the nineteenth century. Yet Bruckner means something more to us than either Wagner or Brahms. For us his music is something entirely apart, a purer music than that of those two masters, who so overshadowed his art during the years in which he produced his greatest symphonies. We believe that Bruckner's music represents not only the culmination of all musical expression in the latter half of the nineteenth century, but also the purest embodiment of the very spirit of music, a tonal incarnation of a loftiness matched by the last quartets of Beethoven and Bach's noblest works alone. We believe that his symphonies are of millennial, not to say eternal, scope; that they will never age with the flight of years, but (like Plato's Dialogues) retain their freshness as long as mankind survives.

"The nature of a man's philosophy depends upon his own nature", said Fichte. The nature of a composer's works also depends upon his own nature. What then was the nature of this man Bruckner?

Much that smacks of the grotesque has been said about him. Some ask us to believe that he was indeed a great composer, but at the same time just a simple creature like the peasant or the typical village school-master of his native upper Austria; that Bruckner the man was like the countless thousands of his rustic compatriots; that, in short, every provincial Upper Austrian was essentially a "Bruckner", the master himself differing from the country school-master not in quality, but rather in the quantitative degree to which he possessed the outstanding traits of this widespread "Bruckner" type. To this very day one may hear the people of the Linz-St. Florian district talk of "our Toni". The familiarity certainly proves their affection, but it reveals no less surely a complete ignorance of Bruckner's artistic caliber.

It is inconceivable that anyone may be a great composer and yet, in all other respects, just an every-day, average human. Surely, artist and man are not to be differentiated nor separated from each other in so nonchalant a manner. Particularly false, when applied to Bruckner, is this legend of the great musician, who was just an ordinary sort of man—that is, unless by "man" we refer to the way he acted in company, or the clothes he wore, rather than to his attitude to the world in which he lived, to the cosmos surrounding it, and to the metaphysical or eternal lying beyond.

What sort of man, then, was Bruckner? All who knew him were impressed with his deep piety. Piety, in its deepest sense, is the conviction that there exists a super-earthly Power in the face of which all that

is merely earthly becomes as naught, and yet that there is some mystic link between this spiritual Power and what is merely of the earth. The ability to envision and realize this Power from the Beyond in the Here is the kernel of piety. Let it not be thought that this piety, this gift of super-earthly vision, is an everyday occurrence. It is far more than a theory-propped affirmation of some creed-bound phenomenon. It predicates that the soul of the truly pious being must burn inextinguishably with faith in a reality beyond that of the senses. It demands soul, phantasy, the ability to universalize, a boundless sense of coherence, an unerring gift for discerning essentials. This piety requires, above all, greatness of soul. Perhaps spiritual greatness may also arise from other sources, but there can be no doubt that that soul is truly great which can trace step for step the path from reality to super-reality. This piety alone suffices to prove its possessor a being far above the ordinary. Bruckner's was such piety; he was a great being, even outside his music.

A philosopher is one who can formulate his relationship to the world in systematic thought, one who can translate his world-feeling into world-concepts. The philosopher, however, does not stand alone in his possession of a world-outlook. Bruckner was no philosopher. Yet he had an outlook upon the world so consummate that philosophers might well have envied him for it. Perhaps I should not say that Bruckner *had* such an outlook, but rather, that he personified it, for what is a man if he is not his outlook upon things? Bruckner's view was that of the mystic, for whom the earthly world is a mere shadow.

A man's attitude towards music and the world are inseparable. What he demands of music depends upon how he regards the cosmos and God. Much like the mystic's view of the world, there is a view of music which will not permit intrusion upon the art by the realm of things, of happenings, or of experiences of the ego. Such was Bruckner's outlook upon music. He had no so-called philosophy or esthetics of music, a dialectical presentation of the essence of the art. Nevertheless the basic secret of music was known to him—the secret that the tonal realm is one apart from all that which is describable as nature or soul, matters that may be, more or less adequately, clarified by verbal concepts. Bruckner knew the secret of the basic autonomy of music without having been able to formulate it in the manner of an esthetician. Yet since he never expressed this knowledge in so many words, how may we affirm with certainty that he possessed it? Should we deduce his musical views from his tonal creations, we would only be going about in a *circulus vitiosus*. There is, happily, a better means of ascertaining what he understood by music and what he expected of it—his decades of unceasing musical study. No one to-day will dare to say that such study was necessary for him because he was insufficiently gifted musically. If music had meant for him merely the art of representing nature or personal experiences in tone, he would have dispensed with the bulk of that long period of "preparatory" study (it lasted more than thirty years) which, naturally, struck misunderstanding observers as grotesque, if not actually pathological in character. He need only have studied nature and the soul before venturing upon symphonic composition. It was not nature in tone, but rather the very nature of music that he sought to fathom, as he analyzed again and again, with infinite care and patience, every known principle of harmony and counterpoint. However superfluous these protracted studies may seem to have been, Bruckner's zeal in their pursuit,

once stupidly attributed to the "village organist's" feeling of inferiority, reveals one thing: his belief in the impersonality, autonomy, and complete self-sufficiency of music.

Just as the composer's attitude towards music is closely akin to his view of the world, so the nature of his musical creation depends upon his musical outlook. Of course, the prime prerequisite for musical creation is the possession of a musical creative gift, without which even the soundest outlook upon the art will avail one but little in the actual creation of valid tonal works. On the other hand it is possible for the gifted composer to create good music, even though his musical outlook be false and unsound. Many a composer, who has given expression to a faulty musical esthetics, has nevertheless instinctively taken the correct road in his musical creation. Wagner's splendid *Walkure* score came into existence despite its composer's false tonal esthetics, musical views which he later altered. When a highly gifted composer also possesses a sound view of the nature, purport, and aim of music, as Bruckner did, he cannot fail to produce eminently musical music. To be sure, all music is musical, absolute, autonomous—the bad as well as the good, the music reflecting a faulty as well as that reflecting a sound musical outlook. Indeed nothing but music can take place during the unfolding of any music. Yet the purely musical quality of different compositions will necessarily vary in degree. Just as there are distinguishable different degrees of reality, so is it possible to differentiate between varying degrees of musical quality as represented in the comparative musical autonomy of various compositions. All music is autonomous, absolute, but some music is more absolute, more autonomous than other music. Bruckner's music has always been regarded as particularly "unliterary", and what, in the final analysis, can the term "unliterary" music signify but autonomous music? Even Bruckner's outspoken enemies, who opposed his symphonies out of honest misunderstanding, felt that here was a composer who drew so little upon the things and feelings of this world for his inspiration, that those who listened to his music from any "literary", i.e., extra-musical viewpoint whatsoever, found themselves completely at a loss for even the most general literary (programmatic) background that might throw light upon the music's content. Thus when those who believed themselves enthusiasts for Bruckner's art, actually strove to circulate such extra-musical explanations to sanction their fealty to the master in the eyes of a sceptical musical world, they did his cause more harm than good. They loved him, to be sure, but understood him perhaps even less than his enemies, who denied and persecuted him openly for a reason which, however cruel, was founded in truth. The reason was this: Bruckner's music was, as every unprejudiced hearer could clearly feel, literally overflowing with sheer music, that is, with absolute-musical content, and hence was but music, with no significance beyond itself.

Among all musical creations, which reflect, as they must, varying degrees of absoluteness, the great symphonies of Bruckner belong to the most absolute which the sway of the spirit of music over the mind has ever produced. Bruckner's music is unalloyed music incarnate.

Still this music is at the same time the expression of the man Bruckner, though not in the sense that it reflects or portrays his personal feelings, as if the composer had sought by means of it to reveal himself and his soul. The man Bruckner does find expression in his music, an ex-

pression unwilling, one which could not have been conjured up by conscious purpose. The soul of the man Bruckner rested securely on a plane beyond the earthly. It was upon that plane that his entire will and being were focused. Therefore music meant to him a realm apart, an independent world of impersonal spirituality. That such was his view of music and that his music was indeed an expression of that world, these truths constitute the revelation of his individual personality, a personality wholly impersonal, beyond the personal. Only such an individuality could have been the source of music so wholly impersonal, so supremely autonomous as the symphonies of Anton Bruckner.

—FELIX M. GATZ

## THE MESSAGE OF BRUCKNER'S SYMPHONIES

*(A tribute delivered by Felix M. Gatz at St. Florian, July 1926)*

"When I am no more, tell the world of my suffering and persecution," Bruckner once said.

Why was Bruckner persecuted?

Because he was, more than we others, just a stranger, a visitor on earth. His whole being was rooted in the cosmic, the transcendental. He was, in the deepest sense, a mystic.

Every mystic is inevitably a hermit amongst men. He beholds the earth with the eyes of one who dwells in the Absolute.

This great loneliness of the mystic was intensified in Bruckner's case, because he was born into a completely unmystical age. That age could not but feel that he was a protest against it—a living denunciation of it.

Yet Bruckner's age was, in the light of some of its foremost representatives, one of romanticism.

Bruckner was no romanticist, however. All romanticism, gripped by a yearning for the infinite, gazes into the boundless Distance; but Bruckner's entire being was actually rooted there. He was at home in the Absolute, just as we, every-day beings, are at home in earthly surroundings. Compared with Bruckner's world even the romanticism of his age was earthly.

Furthermore, his age was intoxicated with its visions of beauty.

Bruckner's tonal visions are not merely of great beauty. There is inherent in their beauty a religious, ethical force as well.

His age was predominantly materialistic. It did not believe in the soul. It would not even countenance the possibility of existence in the Spirit. Nevertheless Bruckner the mystic proclaimed the reality of the soul. He believed in it implicitly.

Bruckner was a mystic—and there is a deep community between mysticism and music. For mysticism, as for music, the substantial world is non-existent. When Bruckner proclaimed the reality of the Spirit, he did not endeavor to shape this belief in the language of tone, in the manner of so many other composers, who pretend to the musical portrayal

of extra-musical concepts. He proclaimed the world of the Spirit, by merely setting his tonal visions before us. These visions, lacking any extra-musical content whatsoever and baffling all attempts to discover such content, constitute Bruckner's direct testimony to the existence of a spiritual world.

Bruckner purged music of the mundane essence with which it had been adulterated by a materialistic age.

Unlike Wagner, who proclaimed his mission to the world in daring manifestos, Bruckner was too unconscious an instrument of the Spirit to have been able to frame in words the revelation which was his to impart.

Those who opposed him out of hostility to his art naturally did not dare arraign the pre-eminently spiritual quality of his music—hence their intense hatred of this being who was loftier than the age in which he was destined to play his transcendental role.

At last our own age, rebelling against the false sovereignty of materialism and positivism, is slowly beginning to glimpse Bruckner's mystic, superearthly world.

Here in St. Florian the master spent his years of boyhood and youth. Here he labored through the years in which youth ripened to manhood.

St. Florian was to him a Holy Grail. As its envoy he went forth into the world beyond the monastery. During many decades of bitter striving he would often return to St. Florian, seeking peace and consolation. And when his mission on earth had been fulfilled, he was brought back, at his own wish, to this place to find eternal rest, as befitted a devout member of the sacred band of St. Florian.

Few musicians have lived a life so completely identified with their artistry as Bruckner's. He lived in music alone; music was the expression of his great, universal, mystic-religious, transcendental world-experience. Only those, who understand that experience, may grasp the full significance of Bruckner's art. Therefore, let us strive ever more earnestly to fathom that realm of the Spirit, the world of Bruckner's revelation.

That such a world really exists—that is the message of his great symphonies.

---

### DR. FELIX GATZ TO LECTURE ON BRUCKNER

During the current season Dr. Felix Gatz, noted Bruckner conductor, will deliver a series of lectures on Bruckner under the auspices of the Guild for Musicians. For further information address Erminie Kahn, The Guild for Musicians, Steinway Hall, 113 W. 57 St., N. Y. C.

## THE CONCERT MASS

The ascent of the soul *per aspera ad astra*, the spiritual theme of the symphony since Beethoven's *Fifth*, had attained its utmost grandeur in the first eight symphonies of Bruckner. Yet not until Fate abruptly tore the pen from Bruckner's fingers as he was working upon a fourth movement for his *Ninth Symphony* was the world granted the opportunity of hearing how satisfyingly complete a symphony could sound even though it closed with a deeply sustained, slow movement. Later Mahler, realizing its splendid, unhackneyed *Finale* possibilities, adopted the *Adagio* character for the closing movement of his *Ninth Symphony*. Because of its unmistakably soaring optimism we justly call such a *Finale* an *Adagio of Affirmation*.

We know that the Mass, the first extended form perfected in the history of music, inspired great composers to their highest achievement centuries before the symphony came into existence. The exalted triumph of the spirit which marks the close of the *Mass* is the prototype of the symphonic *Adagio of Affirmation*. When Bruckner's *Ninth* and Mahler's *Ninth* shall have attained the classic status promised by their deep impression upon every audience thus far, the close kinship they reveal between the greatest of sacred and worldly musical forms is destined to bring the *Mass* into a symphonic prominence resulting in the immeasurable enrichment of the concert repertoire. The marked trend of present-day humanity towards mysticism already suggests the feasibility of such a revolution in symphonic practice. Why restrict universal devotional masterpieces (such as Bach's *B Minor Mass*, Beethoven's *Missa Solemnis*, and Brahms' *Requiem*) to a single, post-seasonal or Holy Day performance each year? Why keep the doors of the concert-hall inexorably closed to new sacred works of imposing, symphonic stature? Time and again the world's greatest composers have shown that sacred texts may also be poems inspiring the creation of giant choral symphonies. In our own day the triumph of Dumler's *Stabat Mater* (at the last Cincinnati May Music Festival) revealed the fact that even jazz-infested America has something of major caliber to offer the world in the field of devotional music.

Dumler is a unique, significant figure in American serious composition. Master of the language of the huge, modern symphony orchestra, he has chosen the larger, sacred musical forms (particularly the *Mass*) as his vehicles of expression. The success of his great *Stabat Mater* has already aroused wide interest in his other works, among which the *Mass of the Triumphant Cross*, conceived in the symphonic idiom and intended for concert performance, especially deserves the attention of all lovers of serious music.

---

### THE KILENYI MEDAL AWARDS (1935-1936)

In recognition of their distinguished services in furthering the general appreciation of Bruckner's and Mahler's art in the United States the following conductors have been awarded the Kilenyi Exclusive Medal of Honor for the season 1935-1936:

The Bruckner Medal: Koussevitzky, Klemperer, Ormandy, O'Connell.

The Mahler Medal: Bodanzky, Gabilowitsch, Koussevitzky, Mengelberg, Walter.

## THE BRUCKNER FESTIVAL IN LINZ

(*British Comment*)

Our English attitude to Bruckner is a curious one: he has been condemned and dismissed almost without a hearing. Few of the most experienced concert-goers have heard more than three of his symphonies, yet on that little evidence the English public as a whole has dubbed him a long-winded bore and steadfastly refused to give him a further hearing. The musical man in the street has, by some unaccountable whim, lumped Bruckner together with Mahler into a sort of "Cavalleria" and "Pagliacci" partnership and two great and entirely dissimilar Austrian masters are banished as one tedious bore from our concert halls. Our attitude is unjustified and presumptuous in the extreme: quite apart from the intrinsic worth of the music as such it stubbornly disregards the opinions of many of the greatest musicians of the last sixty years. . . .

Is it likely, we must ask ourselves, that the opinion of all these men of knowledge, discernment, and experience who have studied Bruckner's symphonies is wrong, and that a few casual English concert-goers who have heard isolated and perhaps inadequate performances of two or three of the symphonies are right? The experience of hearing six of Bruckner's major works and several minor ones within five days has proved convincingly enough that he is almost grotesquely underestimated in England. The time has come when not only England but the musical world as a whole must hear and judge Bruckner anew.

*Bruckner in England*, W. L.  
THE MANCHESTER GUARDIAN WEEKLY,  
August 14, 1936.

The Bruckner Festival at Linz last week was a decisive experience for most of those who came to Austria doubting Bruckner, and a triumphant celebration for those who were already Brucknerians. Here, in Upper Austria, is the setting for Bruckner's music, here that atmosphere of leisure and composure without which his works cannot be fully appreciated. . . .

Piety, baroque splendour, rusticity, are qualities inherent in Bruckner's music; such was his environment. His love for a festive volume of sound was encouraged by the glorious effect of the *organo pleno* at St. Florian. But Bruckner's music is magnificent in a deeper sense. He is great because his symphonic conceptions are the mightiest since Beethoven—even though one may subscribe to Hugo Wolf's searching criticism that Bruckner's relation to Beethoven is that of Grabbe to Shakespeare—and because his music has often an ecstasy that Brahms, for instance, never approached.

*A Memorable Experience*,  
WILLIAM GLOCK, *The Observer*, (London)  
July 26, 1936.

---

### Performances Announced for Season 1936-1937

Koussevitzky: Mahler's *Das Lied von der Erde*, Bruckner's *Eighth*, Mahler's *Fifth*.

Ormandy: Bruckner's *Seventh*, Mahler's *Lieder eines Fahrenden Gesellen*, the *Adagio* from Mahler's *Fifth*.

## THE CASE FOR BRUCKNER AND MAHLER

Tried by a former generation for alleged insubordination against the "laws of music", particularly for repeated, felonious assaults upon the venerable form of the symphony, Bruckner and Mahler were found guilty after a swift, superficial hearing and virtually banished from the concert-hall. Finally the scattered Brucknerites of a new generation, having found united expression in the Bruckner Society of America, clamored for an adequate re-hearing of the evidence in the case before a new, unbiased jury, the serious music-lovers of today. They insisted that even the summations (reviews) by the critics of the past were, at best, those of prosecutors; *that, therefore, only the case against Bruckner and Mahler had been presented before sentence was passed.*

In the retrial of Bruckner and Mahler by the present generation of music-lovers, a new verdict depends not so much upon any fresh evidence that has been presented, but rather upon the weight of unwavering corroboration by a formidable array of new, unimpeachable witnesses re-interpreting the old facts (the scores of the symphonies). The evidence for Bruckner and Mahler at the present hearing consists of the interpretations given their symphonies by such witnesses as Bodanzky, Goossens, Klemperer, Koussevitzky, Lange, Leschke, Mitropoulos, Ormandy, Rodzinski, Stock, Stokowski, Toscanini, van Hoogstraten, and Walter. The new, favorable, often enthusiastic summations are the published utterances of practically every critic of importance in the United-States. The public is the jury. Its reactions, expressed by applause, are also reported in the words of the critics.

Thus the following brief excerpts from reviews by outstanding musical commentators constitute a faithful record of the popular and critical reception accorded the works of both Bruckner and Mahler at each performance by a major American symphonic organization during the past five years. Such a record should go far to prove that our serious music-lovers are now prepared to give the entire life-work of these two giant symphonists an unprejudiced, consecutive hearing. Time and again, after fine performances of this or that individual symphony by Bruckner or Mahler, important critics of our day have said, "This symphony should be heard more often." Finally Mr. Sanborn, of the N. Y. World-Telegram, has come into the open, the first American commentator to champion a complete Bruckner cycle. His valiant appeal in this connection is part of the present record.

Chronologically, our Bruckner excerpts begin with the memorable series of performances of Bruckner's *Seventh* by the N. Y. Philharmonic under Toscanini in March, 1931, shortly after the Bruckner Society of America was founded. It seems particularly fitting and significant that the Bruckner Renaissance in America should have been ushered in under the baton of the most illustrious conductor of our generation. The fervent espousal of the master's long neglected cause by Mr. Toscanini, a cause to which the supreme maestro has added a most arresting contribution with each succeeding season, will always be remembered as one of the real milestones on the path of American musical progress during the first half of the Twentieth Century.

For Mahler our record harks back to the prophetic series of performances of the *Symphony of a Thousand* in Philadelphia and New York under Stokowski almost twenty years ago. The conductor's own description

of the public's reception of this gigantic work is cited here. Important milestones in Bruckner and Mahler progress in America are the recent RCA Victor phonograph recordings of Bruckner's *Seventh* and Mahler's *Second* as performed by the Minneapolis Symphony Orchestra under that brilliant young Bruckner-Mahler enthusiast, Eugene Ormandy.

## THE CASE FOR ANTON BRUCKNER

### I. THE PUBLIC'S VERDICT

#### F MINOR MASS (Bodanzky, Leschke.)

And it is safe to say that few of the recent attempts to endear the music of this simple, devout Austrian to the local public are likelier to bear fruit than this first performance in New York of the Mass in F Minor . . .

—PITTS SANBORN, *N. Y. World-Telegram*, October 26, 1931.

The Mass certainly left a deep and lasting impression on the audience; the genuine spontaneous applause was proof of it.

—HERMANN GENSS, *A Henry F. Budde Publication*, February 7, 1936, San Francisco.

The San Francisco Symphony, the Municipal Chorus, and four soloists, with Hans Leschke conducting, presented the Bruckner Mass in F Minor at the third municipal concert, January 28th, at the Civic Auditorium to a large and enthusiastic audience.

—*Musical West*, February 1936

#### THIRD SYMPHONY (Stock.)

Dr. Stock should take courage from the reaction of last night's audience and play us more Bruckner.

—GLENN DILLARD GUNN, *Chicago Herald Examiner*, January 13, 1933.

#### FOURTH SYMPHONY

(van Hoogstraten, Koussevitzky, Rodzinski, Stock, Toscanini.)

. . . While a considerable congregation of displaced Stadiumites listened with unmistakable interest.

—PITTS SANBORN, *N. Y. World-Telegram*, July 13, 1931.

The applause at the end testified as much.

—H. T. PARKER, *Boston Evening Transcript*, October 15, 1932.

The concert was well attended and the applause, particularly after Bruckner, long and enthusiastic.

—HUBBARD HUTCHINSON, *N. Y. Times*, November 25, 1932.

The orchestra rose to acknowledge the continued applause.

—M. M., *Musical America*, March 15, 1935

. . . since it met much favor with the public, it is safe to predict that it will be heard again on programs at some future time.

—HERMAN DEVRIES, *Chicago American*, March 8, 1935

#### FIFTH SYMPHONY

(Goossens, Klemperer, Walter.)

That Cincinnati audiences are appreciative of good music was proved by the reception accorded the symphony, one never before heard here.

—LILLIAN TYLER FLAGSTEDT, *Cincinnati Post*, December 2, 1932

The control that subdued the beginnings of the final crescendo and made possible the blaze of power which ended it and which brought a burst of applause and "bravos" from a large audience was masterly.

—HUBBARD HUTCHINSON, *N. Y. Times*, January 13, 1933

The audience in its enthusiasm, not only applauded but cheered—a heartening record for Bruckner in our incredulous city.

—PITTS SANBORN, *N. Y. World-Telegram*, January 16, 1933

Tumultuous applause rewarded the conductor and his splendid orchestra.

—JOACHIM H. MEYER, *N. Y. Staats Zeitung u. Herald*, January 16, 1933.

The finale with horns, trumpets and trombones lined up on an elevation at the back, was vociferous and roused yesterday's audience to enthusiastic applause.

—*Philadelphia Bulletin*, January 26, 1935

Mr. Klemperer . . . conducted the orchestra from memory, with an authority so complete and an understanding so vivid and profound that against all odds, and for long movements, he carried his audience with him.

—OLIN DOWNES, *N. Y. Times*, January 30, 1935

The great audience, irresistibly stirred by the blaze of the auxiliary brasses of the concluding pages, applauded the performance heartily.

—PITTS SANBORN, *N. Y. World-Telegram*, January 30, 1935

#### SIXTH SYMPHONY (Goossens.)

How much the Bruckner A Major Symphony affected the receipts cannot be estimated, but the writer feels sure it was materially responsible for the presence of many.

—GEORGE A. LEIGHTON, *Cincinnati Enquirer*, January 12, 1935

... its enthusiastic reception by its audiences owed much to the spirited, sensitive and warmly understanding interpretation which Mr. Goossens accorded it.

—S. T. WILSON, *Musical America*, January 25, 1935

#### SEVENTH SYMPHONY

(Klemperer, Koussevitzky, Ormandy, Toscanini.)

The applause at the conclusion of the symphony was earnest and prolonged and, though no doubt it was intended in part for Mr. Toscanini and the players of the Philharmonic Symphony Orchestra, much of it certainly was a tribute to Bruckner.

—EDWARD CUSHING, *B'klyn Daily Eagle*, March 5, 1931.

It is further testimony to an inextinguishable demand for Bruckner that an hour-long symphony, without cuts, by a composer who remains outside the pale of the generally sanctioned and approved, has been heard and acclaimed by a modern audience.

—OLIN DOWNES, *Symphonic Broadcasts*

It was a most wonderful performance, which aroused much enthusiasm for the work, its composer, the orchestra, and its splendid conductor.

—VICTOR NILSSON, *The Minneapolis Journal*, April 7, 1934

At all events the performance of Bruckner's Symphony in E Major brought the first really spontaneous applause from the Friday afternoon audience at Symphony Hall.

—L. L. SLOPER, *Christian Science Monitor*, Oct. 27, 1934

Forty-eight years ago the Seventh Symphony of Anton Bruckner virtually emptied the old Music Hall. Yesterday afternoon it provoked the heartiest applause of the current season of the Symphony concerts.

—WARREN STOREY SMITH, *Boston Post*, October 27, 1934

When Otto Klemperer played Bruckner with the Philharmonic in the fall it was liked; when he played it with the Philadelphia last week it was liked; and when Maestro Toscanini opened his first concert with Bruckner's Seventh Symphony, that was not only liked but loved.

—MARCIA DAVENPORT, *The Stage*, March 1935

Bruckner's music has not always had so cordial a reception from the public as was given by the audience yesterday.

—ALEXANDER WILLIAMS, *Boston Herald*, March 7 1936

But the interpretation was such that at the end there was long applause, a special demonstration of approval of the playing, and, without doubt, of Bruckner. This was tribute to Mr. Koussevitzky's courage in selecting the work and the eloquence of

its presentation. The audience of this concert was a very large one, and its pleasure was manifest.

—OLIN DOWNES, *New York Times*, March 15 1936

The large audience applauded the symphony heartily.

—P. S., *World-Telegram*, March 14 1936

It is recorded that when Bruckner's seventh symphony was first played here, in November, 1886, one-third of the audience left the hall before it reached its eventual end. Yesterday the case was quite different, the warmth of the demonstration at the end of the work suggesting that a good many concert goers have come to appreciate the beauties of this work.

—FRANCIS D. PERKINS, *N. Y. Herald Tribune*, March 15 1936

#### EIGHTH SYMPHONY

(Klemperer, Koussevitzky, Walter.)

For no two composers, up and down the world have conductors fought more manfully. Now at last, in Europe and in America, this persistence is prevailing. In New York, Boston and Chicago, reviewers oftener than lay listeners have been the antagonists. Now, more accustomed, audiences are hearing for themselves.

—H. T. PARKER, *Boston Evening Transcript*, April 23, 1932

The orchestra played throughout with memorable eloquence; and the audience manifested its appreciation of the chance to hear on one program two of the outstanding symphonic utterances of the 19th century.

—*Herald Tribune*, November 15, 1935

For all that, the audience was sensible last night of a significant artistic experience.

—OLIN DOWNES, *New York Times*, November 15, 1935

The audience was a large one and applauded Mr. Klemperer fervently after both compositions.

—WINTHROP SARGEANT, *B'klyn Daily Eagle*, November 15, 1935

NINTH SYMPHONY (Klemperer, Stock.)

(a) Loewe version; (b) Original version

(a) The Bruckner symphony brought great satisfaction to Mr. Stock's audience

—EUGENE STINSON, *Chicago Daily News*, Nov. 17, 1933

(b) With both of these works (Beethoven's Fifth and Bruckner's Ninth) he made a powerful impression.

—OLIN DOWNES, *New York Times*, Oct. 12, 1934

(b) The Bruckner was received last night by a large audience with hearty approval.

—HENRIETTE WEBER, *Evening Journal*, October 12, 1934

(a) Striking evidence of the city's artistic growth was to be discovered last night in Orchestra Hall when the gathering assembled to honor the memory of Theodore Thomas received the "unfinished" symphony of Bruckner with cheers and shouting.  
—GLENN DILLARD GUNN, *Chicago Examiner*, Jan. 3, 1936

#### QUINTET (Balendonck, Lange.)

As for the audience—it listened with apparently serious attention for nearly

two and one half hours to the weighty program and accorded it generous applause.

—JAMES P. DUNN, January 15, 1933

It was played with great care for its harmonic structure and melodic contents and a technical smoothness that incited plaudits.

—*Newark Evening News*, January 15, 1933

The audience found it (Adagio) particularly to its liking.

—R. C. B., *World-Telegram*, February 9, 1934

## II. THE CRITIC'S SUMMATION

### F MINOR MASS

(Friends of Music, Bodanzky)

(San Francisco Municipal Chorus & Symphony, Leschke.)

Yesterday's carefully prepared performance proved a powerfully convincing presentation of the lofty musical and spiritual qualities of the F Minor Mass, and unless all indications are deceptive, the "Friends of Music" should include the work in their regular repertoire.

—JOACHIM H. MEYER, *N. Y. Staats Zeitung u. Herald*, Oct. 26, 1931

But on the whole the Mass justified the claims of the Brucknerites.

—W. J. HENDERSON, *New York Sun*, Oct. 26, 1931

Bruckner's Mass should be repeated in the not distant future and before a much larger audience. Its beauty and its many distinctive qualities make one hope Pierre Monteux may permit us to hear a Bruckner symphony before the year is out.

—MARJORIE M. FISHER, *San Francisco News Chronicle*, Jan. 29, 1936

I am sure that we will hear more of Bruckner's compositions in the future, especially his symphonies. . . .

—HERMANN GENSS, *A Henry F. Budde Publication*, Feb. 7, 1936

This first presentation was accomplished with so much musical intelligence and the response to its beauties was so complete we feel sure it will be repeated in the future—we might well say we hope soon.

—*Musical West*, February 1936

### THIRD SYMPHONY (Stock.)

Does not Bruckner deserve to rank among the immortals?

—HERMAN DEVRIES, *Chicago American*, January 13, 1933

### FOURTH SYMPHONY

(van Hoogstraten, Koussevitzky, Rodzinski, Stock, Toscanini.)

The Symphony . . . improves upon acquaintance.

—FRANCIS PERKINS, *Herald Tribune*, July 13, 1931

Bruckner now seems destined to become an integral part of our musical life.

—PITTS SANBORN, *World-Telegram*, July 13, 1931

There are very few dull moments and upon repetition we are sure that we shall find even more beauties to extol.

—HERMAN DEVRIES, *Chicago American*, March, 1935

Nevertheless I should not like to miss hearing it whenever Mr. Stock plays it . . .

—EUGENE STINSON, *Chicago News*, March 8, 1935

### FIFTH SYMPHONY

(Goossens, Klemperer, Walter.)

Let no one stay away through fear of Bruckner.

—GEORGE A. LEIGHTON, *Cincinnati Enquirer*, December 2, 1932

Bruckner—the complete symphonic Bruckner—deserves to be better known. One of the most remarkable composers of the nineteenth century, he has never in this country received his due. . . .

—LAWRENCE GILMAN, *Herald Tribune*, January 13, 1933

Such music, however, should not be permitted to lie in prolonged slumber. Certainly it ought to be preserved in these barren times and offered periodically for the consideration of concert audiences.

—W. J. HENDERSON, *New York Sun*, January 13, 1933

But one such theme as the broad, unisonous melody of the Adagio is worth a multitude of the starved and tortuous works that have passed for symphonies in Central Europe since Bruckner laid down his pen.

—OSCAR THOMPSON, *New York Evening Post*, January 16, 1933

### SIXTH SYMPHONY (Goossens.)

Upon hearing a symphony by a neglected composer of the stature of Bruckner, one is tempted to wonder whether he would receive public acceptance if he were played as often as his contemporary Brahms, for example.

—FREDERICK YEISER, *Cincinnati Times Star*, January 25, 1935

## SEVENTH SYMPHONY

(Klemperer, Koussevitzky, Ormandy, Toscanini.)

It would be well, therefore, if audiences could know more than they do of Bruckner's symphonies.

—OLIN DOWNES, *New York Times*,  
March 5, 1931

It is many years since I heard a Bruckner symphony and it is my opinion that we might with advantage have enjoyed, or otherwise, more of these great masterpieces.

—JAMES DAVIES, *Minneapolis Tribune*,  
April 7, 1934

It is interesting to see this composer coming more and more into the light of public survey, nearly forty years after his death.

—FRANCES BOARDMAN, *St. Paul Pioneer Press*,  
April 7, 1934

He is eminently to be commended for presenting this symphony, and all others of Bruckner that he may choose.

—CYRUS W. DURGIN, *Boston Globe*,  
October 27, 1934

According to these signs . . . Dr. Koussevitzky need have no further hesitation about presenting Bruckner.

—MOSES SMITH, *Boston Evening Transcript*,  
October 27, 1934

Those of us who are always eager for a broadening of the local symphonic repertoire and who, in particular, would like to see Bruckner's music established beyond ill-considered question and cavil, owe a big debt of gratitude this season to Otto Klemperer and Arturo Toscanini.

—PITTS SANBORN, *World-Telegram*,  
January 25, 1935

The work is so filled with beauty that it should be played at the Bowl this summer and again to an audience familiar with its greatness next season.

—ISABEL MORSE JONES, *Los Angeles Times*,  
March, 1936

## EIGHTH SYMPHONY

(Klemperer, Koussevitzky, Walter.)

To the many to whom Bruckner is still a problematic composer whose symphonies are barren tonal deserts with but sparsely sowed oases, this symphony should provide material for conclusive proof of the Austrian's right to be classed with the immortals of music.

—J. D. BOHM, *N. Y. Herald Tribune*,  
October 27, 1933

If anyone of the nine Bruckner symphonies is destined to silence the stupid chatter of certain would-be authorities concerning "the naivete and crudity of the man and composer, Anton Bruckner" it is this gigantic C. Minor Symphony.

—J. H. MEYER, *New York Staats-Zeitung*,  
October 27, 1933

This symphony should be heard oftener.

—PITTS SANBORN, *World-Telegram*,  
November 15, 1935

## NINTH SYMPHONY (Klemperer, Stock.)

(a) Loewe version; (b) original version

(a) After the riotous regime of ultra modernity and atonality in the realm of music, the works of not only Bruckner, but also those of Mahler should at last come into their own.

—RALPH LEWANDO, *Pittsburgh Post*

(b) Thus restored and justified, the Symphony seems more than ever to be one of the noblest musical legacies of the 19th century.

—LAWRENCE GILMAN, *Herald Tribune*,  
October 13, 1934

(b) We have deeper respect for Bruckner after hearing the magnificent performance of last night . . . All the Bruckner symphonies should be repeated. Repetition is the best test of their worth.

—W. J. HENDERSON, *N. Y. Sun*, Oct. 12, 1934

## QUINTET (Chicago String Quartet.)

It is a beautiful work, and it should be played frequently though it is a difficult one.

—EUGENE STINSON, *Chicago Daily News*,  
April 18, 1932

## WHY NOT A BRUCKNER CYCLE?

Bruckner is no longer the bugaboo of local audiences he once was. A distinct Bruckner following is even in the making, and that is as it should be. In Central Europe, Bruckner's place as a symphonist is taken as much for granted as Schubert's or Brahms'! What we need here is more such Bruckner performances as Mr. Klemperer has favored us with.

And these performances ought not to be limited to the Fourth (Romantic) Seventh, Eighth, and Ninth Symphonies which have become relatively familiar to our public. Bruckner's First Symphony has yet to be played in America. Certainly we should hear it, if only for historical reasons. Then there are the neglected Second, Third, Fifth and Sixth.

I should be the last man to plead for an all-Bruckner symphonic program. Beethoven himself suffers from that dire test. But I would gladly advocate a Bruckner cycle, under the direction of a sympathetic and competent conductor, offering a chronological view of the nine symphonies, combined in varied programs with appropriate music by other composers.

Then we might escape forever from the shadow of the cold shoulder Brahms turned on Bruckner—"These gigantic snakes of symphonies . . . And Bruckner's work

immortal—or even symphonies at all! It is enough to make one laugh!" Thus wrote Brahms to Richard Specht. We can afford to forgive Brahms these words for the very works' sake, but we can ill afford to share his opinion.

—PITTS SANBORN, *World-Telegram*,  
November 4, 1934

Indeed, New York might profitably be treated to a cycle of Bruckner's symphonies (only one to a program, however) a musical gift of which we stand much more in need than we do of another Beethoven or Brahms cycle.

—PITTS SANBORN, *World-Telegram*,  
November 15, 1935

## THE CASE FOR GUSTAV MAHLER

### I. THE PUBLIC'S VERDICT

#### FIRST SYMPHONY

(Mitropoulos, Stock, Unger, Walter.)

. . . and a large gathering showed its pleasure.

—OLIN DOWNES, *New York Times*,  
October 13, 1933

. . . admirably performed it stirred the audience to an enthusiasm easy to understand.

—PITTS SANBORN, *World-Telegram*,  
October 13, 1933

. . . but he secured so vivid and animated a performance of his First Symphony that our audience was won.

—EDWARD EVANS, *The Daily Mail*  
(London) April 17, 1934

There was no lack of enthusiasm in the audience at yesterday afternoon's concert by the Boston Symphony Orchestra. Conducting his second and final program here, Dimitri Mitropoulos had scarcely brought the first movement of the opening number of the concert, the First Symphony of Mahler, to an end when the audience broke into an appreciable round of applause—sufficient to induce the conductor to bow acknowledgement. The same procedure was repeated after the Scherzo. Upraised arms and a shortened pause prevented a recurrence after the slow movement. But when the last movement had run its stormy course there was a prolonged demonstration, in which some cheers and foot-stamping were audible amid the hand-clapping, and which lasted long enough to bring the conductor back to the stage no less than four times.

—MOSES SMITH, *Boston Evening Transcript*,  
February 1 1936

And this tumult and shouting came upon the heels of a symphony of the too-long disparaged Gustav Mahler, the First, in D major.

—WARREN STOREY SMITH, *Boston Post*,  
February 1 1936

This symphony had been discovered for Boston by Pierre Monteux in 1923; since then it has been permitted to gather figurative dust in the library of Symphony Hall. Yesterday, quite surprisingly, it proved a vehicle in which Mr. Mitropoulos could ride to an unequivocal success with his audience,

a triumph which must be shared by composer and conductor.

—WARREN STOREY SMITH, *Boston Post*,  
February 1 1936

A Mahler symphony is not exactly the best vehicle with which to make a popular sensation, but the superb performance of the first symphony proved the reverse.

—ALEXANDER WILLIAMS, *Boston Herald*,  
February 1, 1936

Our boasted musical progress probably has some basis in fact. The Mahler symphony, which has had but one previous hearing and has been gathering dust on the shelves of the orchestra's library for twenty-four years, could not have pleased the last generation of Symphony patrons as much as it did those gathered last night in Orchestra Hall.

—GLENN DILLARD GUNN, *Chicago Examiner*,  
March 6 1936

The great warmth with which he was applauded by many in the audience after the symphony had in it too, I am convinced, a generous admiration for the work itself.

—EUGENE STINSON, *Chicago News*,  
March 6 1936

#### SECOND (RESURRECTION SYMPHONY)

(Klemperer, Ormandy, Rodzinski, Walter)

The audience last night was most attentive and applauded long and vigorously when the symphony was finished.

—W. J. HENDERSON, *New York Sun*,  
February 24, 1933

A magnificent performance of the Second Symphony by Gustav Mahler aroused an unusually large Friday night audience at Northrup auditorium to delighted enthusiasm.

—FRANCES BOARDMAN, *St. Paul Pioneer Press*,  
Dec. 8 1934

Mr. Ormandy was called out several times to enthusiastic rounds of applause.

—*The Evening Bulletin*, Philadelphia,  
March 9, 1935

The audience was enthusiastic and recalled conductor and soloists many times at the close of the concert.

—SAMUEL L. LACIAR, *Phila. Evening Ledger*,  
March 9 1935

It shook the audience, and resulted in a prolonged demonstration before anyone left the hall.

—OLIN DOWNES, *New York Times*,  
December 13, 1935

Mahler's Second Symphony may still be considered difficult and ponderous music in some quarters but there was no doubt of its spontaneous effect on its hearers last night.

—WINTHROP SARGEANT, *B'klyn Daily Eagle*,  
Dec. 13, 1935

There was an ovation at the end of the performance.

—*New York Times*, December 16, 1935

An enthusiastic audience gave conductor and participants many curtain calls as evidence of its liking for the Mahler work and its presentation.

—E. B., *Cleveland News*, January 3, 1936

#### FOURTH SYMPHONY (Rodzinski)

Miss Zaruhi Elmastian . . . shared the triumphant burst of applause which greeted the closing measures.

—CARL BRONSON, *Los Angeles Express Herald*,  
January 1, 1932

#### FIFTH SYMPHONY (Walter)

It was not inevitable, however, that the audience should stay to cheer the symphony. Yet this is exactly what happened.

—PITTS SANBORN, *World-Telegram*,  
February 12, 1932

The audience applauded with greatest enthusiasm.

—JOACHIM H. MEYER, *N. Y. Staats Zeitung*,  
February 12, 1932

#### SEVENTH SYMPHONY (Reiner, Stock.)

Enthusiasm was too general and appreciation too convincingly demonstrated to be argued down. . . .

—GEORGE A. LEIGHTON, *Cincinnati Enquirer*,  
March 7, 1931

. . . and the audience liked it.

—EDWARD MOORE, *Chicago Tribune*,  
March 3, 1933

#### EIGHTH SYMPHONY

(Stokowski, 1916; Goossens, 1931)

We have seldom seen an audience display such enthusiasm as did the audience in Music Hall last night.

—OLIN DOWNES, *N. Y. Times*, May 7, 1931  
(Cincinnati May Festival)

The work had a run (Philadelphia, 1916) which for a mere symphony, was equivalent to the triumphant persistence of *The Green Pastures*. The Academy of Music was jammed at all performances. For hours before the doors were opened, a line of intending ticket buyers stretched around the corner of Locust Street and far up the block along Broad, waiting patiently in the raw spring wind. Even the traffic policemen outside the

Academy were excited about the attraction and spoke of it almost as respectfully as if it had been a prize fight.

In the following month, The Society of Friends of Music imported Mr. Stokowski with his army of excutants to New York and the work was disclosed to this capital at a memorable concert in the Metropolitan Opera House.

—LAWRENCE GILMAN, *Herald Tribune*,  
May 10, 1931

The first performance of Mahler's Eighth (Symphony of a Thousand) was given under Mahler's direction in Munich on September 12, 1910.

Wrote Leopold Stokowski who was present:

After the performance the vast audience sprang to its feet, and a scene of such enthusiasm ensued as one sees only once in a lifetime. To those who realized, in part at least, the inner sadness of Mahler's life, there was something infinitely tragic in his figure at that moment of supreme triumph.

Concerning the nine performances of Mahler's Eighth in Philadelphia and New York, Mr. Stokowski relates:

When we played Mahler's Eighth Symphony it made an impression on the public unlike anything else I have ever experienced. There seems to be a human quality about this work which so deeply moved the public that the greater part of the listeners were in tears at the end of the performance. This happened at all nine performances we gave; so it was not due to an accidental emotion on one particular date.

In an interview with William Engle, feature writer of the New York World Telegram, Mr. Arthur Judson described the above series of performances as the most memorable mile-stone of his managerial career. Only two performances had been scheduled. Quoting the Telegram of December 19, 1933:

Philadelphia, the first night, was dumfounded. Then it was jubilant. Instead of two performances, ten were given and the town celebrated as though the Athletics had won the pennant. In New York the Friends of Music heeded. They engaged Mr. Judson to bring the production here, and in a special train the huge cast came to storm and conquer the Metropolitan.

#### NINTH SYMPHONY (Koussevitzky)

The enthusiastic audience recalled Dr. Koussevitzky two or three times.

—PHILIP HALB, *Boston Herald*,  
October 17, 1931

No one, accustomed to the performance of music in concert halls, might doubt the tense absorption of the audience . . . As its listening was eloquent, so was its final applause.

—H. T. PARKER, *Boston Evening Transcript*, October 17, 1931

What is more significant, the audience, few of whom can have heard it before, applauded with a warmth seldom bestowed here on an unfamiliar work.

—P. R., *Boston Globe*, October 17, 1931

A Friday afternoon audience found as little room for apathy as did that of Saturday evening; with equal enthusiasm both received this first American performance of Mahler's last symphony.

—A. H. MEYER, *Musical America*, October 25, 1931

This symphony has given many a music lover hereabouts an entirely new view of Mahler . . . The shining faces, the enthusiastic comment in the halls, were proof last evening, if proof were needed, beyond that of the upswelling applause itself.

—A. H. MEYER, *Boston Evening Transcript*, Nov. 10, 1931

As for the public, given the chance, it might express a preference for Mahler.

—EDWARD CUSHING, *Brooklyn Daily Eagle*, Nov. 20, 1931

And the public bestowed upon Gustav Mahler's swan-song, the conductor, and his players the enthusiastic applause which was deserved.

—JOACHIM H. MEYER, *N. Y. Staats Zeitung*, November 20, 1931

The apparently genuine enthusiasm of the audience must have been balm to Koussevitzky's pioneering heart.

—MUSICAL COURIER, *November 28, 1931*

Musicians welcomed a second hearing . . . and many were standing in the crowded house . . . First and last the triumph was Mahler's.

—W. B. CHASE, *New York Times*, January 10, 1932

The audience, too, seemed deeply interested and gave eloquent applause to the music and its vivid and colorful performance.

—*Musical Courier*, January 16, 1932

Perhaps this did not entirely save the movement, but it made an audience listen with respect amounting to homage, and it showed what an orchestra like the Boston Symphony, dominated by a lofty interpretive conception, could do.

—OLIN DOWNES, *New York Times*, April 3, 1936

Some of the audience were evidently pleased, for there was a good deal of applause.

—ALEXANDER WILLIAMS, *Boston Herald*, March 28 1936

. . . and this adagio made new friends for the music of Mahler.

—ROBERT A. SIMON, *The New Yorker*, April 11, 1936

#### DAS LIED VON DER ERDE (Koussevitzky, Walter)

The audience was deeply impressed.

—PHILIP HALE, *Boston Herald*, Dec. 27, 1930

The tension of those final words and sounds over, applause came. Not tentatively but in volume. Of bowing and acknowledgments there seemed no end until all on the platform were on their feet.

—A. H. MEYER, *Boston Evening Transcript*, December 27, 1930

The audience received all artists, not excluding the pianist-conductor Bruno Walter, with deep enthusiasm.

—*New York Post*, December 21, 1934

The audience expressed its approval of the performance in no uncertain manner.

—W. J. HENDERSON, *N. Y. Sun*, Dec. 21, 1934

#### KINDERTOTENLIEDER (Klemperer)

To these beautiful settings of Rueckert's poems she (Mme. Branzell) brought not only beauty of voice and style, but a true penetration of their spiritual nature. Her great art won her repeated calls at the conclusion of the cycle.

—A., *Musical America*, February 15, 1935

She put so much of herself into her singing that she moved the audience to long applause. Mr. Klemperer conducted the cycle with all the enthusiasm of an ardent Mahlerite. . . .

—W. J. HENDERSON, *N. Y. Sun*, Jan. 30, 1935

## II. THE CRITIC'S SUMMATION

### FIRST SYMPHONY

(Mitropoulos, Stock, Unger, Walter)

The homely tenderness, the folk-like humor, the long, nostalgic reveries, the poignant brooding of the music at its best—these qualities are not easily to be forgotten.

—LAWRENCE GILMAN, *Herald Tribune*, October 13, 1933

At one time, I too, in less mature judgment, denied Mahler any outstanding worth at all, except that he had mastered a method of clever and colorful orchestration. I feel that I have come to see more than that in Mahler.

—LEONARD LIEBLING, *Musical Courier*, October 21, 1933

The performance suggested that this symphony, given a fair chance, might vie in popularity with the later symphonies of Tschaikowsky.

—PITTS SANBORN, *World-Telegram*,  
October 13, 1933

Mahler's music is still *sub judice* in this country, but his music only needs interpretations such as that given last night for it to be as popular here as it is in Austria and Holland.

—*Sheffield Telegraph* (England), April 17, 1934

The result was a brilliant performance which may result in more curiosity in Mahler and his symphonies than has so far been shown in England.

—*Star*, (London) April 17, 1934

It has begun to justify the faith that musicians have had in it. And it needs but more frequent performances in order that the popular regard toward it continue to rise.

—MOSES SMITH, *Boston Evening Transcript*,  
February 1, 1936

Stock was in his most enthusiastic mood and made of the symphony something so vital and colorful as to wish for a repetition of the Mahler D Major symphony at some time not too far distant.

—HERMAN DEVRIES, *Chicago American*,  
March 6, 1936

#### SECOND (RESURRECTION) SYMPHONY (Klemperer, Ormandy, Rodzinski, Walter)

Last night this tone picture was irresistible.

—OLIN DOWNES, *New York Times*,  
December 13, 1935

The Resurrection symphony is a musical epic that seems destined to achieve a permanent place in the repertoire of great symphonic literature.

—WINTHROP SARGBANT, *Brooklyn Daily Eagle*,  
December 13, 1935

All of us who are interested in a wholesome extension of the symphonic repertory and at the same time in seeing justice done to the works of an important composer at whom many New Yorkers still look askance . . . are bound to be deeply grateful to the Philharmonic Symphony and Otto Klemperer for such a performance of Mahler's Second Symphony . . .

—PITTS SANBORN, *World-Telegram*,  
December 13, 1935

#### FIFTH SYMPHONY (Walter)

In the art of applying the most telling instrumental colors, in the alchemy of uniting independent tone colors, Gustav Mahler finds his equal in Richard Strauss alone.

—JOACHIM H. MEYER, *N. Y. Staats Zeitung*,  
Feb. 12, 1932

All honor to Mr. Walter for not passing it by in the interest of the facile plaudits that he can always capture with the over-driven symphonies of Beethoven and of Brahms.

—PITTS SANBORN, *N. Y. World-Telegram*,  
Feb. 12, 1932

#### SEVENTH SYMPHONY (Reiner, Stock.)

One ends by being charmed, delighted and stimulated by his work, though America has been slow to accept it. I hope Doctor Stock repeats it.

—GLENN DILLARD GUNN, *Chicago Herald and Examiner*, March 3, 1933

#### EIGHTH SYMPHONY

(Stokowski, 1916; Goossens, 1931)

The writer heard the symphony for the first time. He could listen with a clear and unprepared mind to the sheer effect of the music and performance and that effect was overwhelming . . . He (Mahler) saw mighty visions and he believed, and there is that in his music . . . that makes fault-finding with detail or measuring with a yardstick seem somewhat petty.

—OLIN DOWNES, *New York Times*,  
May 7, 1931

For here, take it all in all, is one of the noblest scores of our time. In it, now and again, are pages of unforgettable beauty—inspirations of which their creator might justifiably have said, with the singer of the Odes of Solomon, "So are the wings of spirit over my heart, and I have been set on His immortal pinions."

—LAWRENCE GILMAN, *Herald Tribune*,  
May 10, 1931

#### NINTH SYMPHONY (Koussevitzky)

It impressed one hearing it for the first time as a masterpiece deserving a permanent place in the repertory and frequent performances . . . One can only repeat that yesterday's performance . . . proved that Mahler is a genius to be classed with Brahms, possibly in some ways above him.

—P. R., *Boston Globe*, Oct. 17, 1931

This Adagio found its way so deeply into the consciousness of hearers that even after an intermission, so exquisite a gem as Wagner's Siegfried Idyll seemed commonplace and ordinary in comparison.

—A. H. MEYER, *Musical America*,  
October 25, 1931

To Doctor Koussevitzky, then, our full gratitude for having given us in The Song of the Earth and now in the Ninth Symphony, the two works of Mahler's maturity and prime, in which he sounded a note unheard since Beethoven wrote his last sonatas and quartets.

—WARREN STOREY SMITH, *Boston Post*,  
October 17, 1931

But length is a relative thing. Die Meister-singer is almost twice as long as Thais, but not everyone would believe it without a stopwatch . . . Mahler's instrumental demands in this score are not exorbitant and anyone of our major orchestras could have met them without turning any grayer than usual the hair of the trustees . . . It should be added to the repertoire of other symphonic bodies, and it should be heard again; for it is a remarkable score.

—LAWRENCE GILMAN, *N. Y. Herald Tribune*, Nov. 20, 1931

Too little has been written of Mahler's superb instrumentation; of its eschewing of filling-in effects such as often clutter up the scores of Strauss . . . After the profound utterances of Mahler, Ravel's pretty work seemed doubly trivial.

—JEROME D. BOHM, *N. Y. Herald Tribune*, January 10, 1932

While thanking Doctor Koussevitzky for the opportunity once more to hear this Ninth Symphony, is it out of place to suggest that there are five completed symphonies of Mahler that Boston does not know and others that it has not heard in years?

—WARREN STOREY SMITH, *Boston Post*, December 9, 1933

#### DAS LIED VON DER ERDE (Koussevitzky, Walter)

It was in December—two years ago—that Doctor Koussevitzky introduced Mahler's Das Lied von der Erde to Boston. In accordance with his wise custom, a work once introduced, remains not on the shelves to gather dust but is brought forth for repeated

hearings. And again at the close of 1930 a December audience was the gainer.

—A. H. MEYER, *Boston Evening Transcript*, Dec. 27, 1930

Just as the essence of Beethoven's Ninth, aside from all purely musical values, is highest enthusiasm, so that of Das Lied von der Erde is most intense spiritual pain . . . It is a work that moves us more deeply at each new hearing.

—PAUL BEKKER, *N. Y. Staats Zeitung*, December 21, 1934

Thus heard, the passion and the beauty of the music, its delicate fantasy, its secret ecstasies, and insuperable grief and, at the last, its mystical assuaging piece, were often overmastering.

—LAWRENCE GILMAN, *Herald Tribune*, December 21, 1934

#### KINDERTOTENLIEDER (Klemperer)

Both these masters (Bruckner and Mahler) are still step children of our audiences . . . It merely signifies that the enigmatic phenomenon characterizing progress of the art in Europe is being reenacted here. Sincerity and simplicity have always been the last to win recognition. Therefore it is all the more necessary to keep spreading their precious gospel tirelessly and unceasingly, in eloquent and accurate revelations.

—PAUL BEKKER, *N. Y. Staats Zeitung*, January 30, 1935

But it is not easy to imagine that any concertgoer could hear unmoved these songs of elegiac and sad sincerity. . . .

—LAWRENCE GILMAN, *Herald Tribune*, January 30, 1935

### BODANZKY PAYS TRIBUTE TO MAHLER

It must have been a great joy to America's outstanding Wagnerian interpreter, Artur Bodanzky, to conduct the picked band of instrumentalists which NBC placed at his disposal on Oct. 8 last. Mr. Bodanzky's exacting position with the Metropolitan Opera Company has rarely afforded him the opportunity to perform music independent of the singing stage. A devoted Mahler disciple, he longed to pay tribute to the memory of his beloved master, especially during the present season, marking the twenty-fifth anniversary of the symphonist's death. It was the fervor of Bodanzky's sincere Mahler worship which those wonderful strings sang when he led them through the simple, heartfelt measures of the *Adagio* from the *Fifth Symphony*. The studio applause which greeted both this excerpt and another less familiar Mahler fragment, the final movement of the *Fourth Symphony (The Ode to Heavenly Joy)* the solo voice rendered with unforgettable eloquence by Helen Traubel, was no less enthusiastic than that evoked by the universally familiar Wagnerian pieces which made up the remainder of the program.

## SYMPHONIC CHRONICLE

### *A Record of Critical and Popular Reaction*

#### ANTON BRUCKNER— EIGHTH SYMPHONY

*Philharmonic-Symphony Society of New York; Otto Klemperer, conductor; New York, Nov. 14, 15, 1935.*

Last night in Carnegie Hall Otto Klemperer led the Philharmonic-Symphony Orchestra in a memorable performance of Bruckner's Eighth Symphony.

. . . The mystical slow movements and wild scherzi seldom fail us. Some rank the slow movement of the Seventh above the corresponding section of any of the others. Others estimate the symphony heard last night as the greatest of the nine. Mr. Klemperer's performance might have revived this argument rather than settled it, for he interpreted the music with such color and rapt vision and communicative emotion that for the moment, whatever individual preference might have been, the Eighth Symphony towered as Bruckner's masterpiece.

—OLIN DOWNES, *New York Times*

As a result, the symphony made a deep impression. Especially in the great Adagio, one of the longest slow movements in existence, the solemnity and profound expressiveness of the music achieved their maximum effect.

The orchestra played throughout with memorable beauty and eloquence; and the audience manifested its appreciation of the chance to hear in one program two (Bruckner's Eighth and Beethoven's Seventh) of the outstanding symphonic utterances of the nineteenth century.

—*New York Herald Tribune*

Bruckner, far more than Brahms, continued the classical conception of the symphony as a monumental work consisting of the development of short, simple melodic motives. His symphonies, like Beethoven's in this respect, are more remarkable for their architectural sweep than for the intrinsic appeal or interest of their thematic material. The Eighth Symphony is no exception to this rule. Despite its enormous length, its themes are direct and concise statements, very dry and impersonal by comparison with the sensuous, emotional Lied-melodies of Brahms and the late Romantic symphonists. The significance of the work lies in the tremendous texture that has been woven from these slight ingredients. The similarities of developmental method in this work and in the Seventh of Beethoven were striking to those who looked for them last night. Both symphonies are masterpieces of structure.

The audience was a large one and applauded Mr. Klemperer fervently after both compositions.

—WINTHROP SARGEANT, *B'klyn Daily Eagle*

Of Mr. Klemperer's concerts here this autumn, last evening's was easily the most successful. He had works to deal with for which he evidently felt abundant affection, and they rewarded him by bringing out his best qualities as conductor.

The performance of the Bruckner Eighth was one to treasure in the memory. Of Bruckner's nine symphonies the Eighth is perhaps the most ingratiating. There are in particular the rustic humors of the scherzo and the splendid sonorities of the finale. And between these the scraphic adagio chants its superearthly tidings.

—PITTS SANBORN, *World-Telegram*

#### GUSTAV MAHLER— SECOND SYMPHONY

*Philharmonic Symphony Society of New York, Otto Klemperer, conductor; assisting artists, Suzanne Fisher, soprano, Enid Szantbo, contralto, Schola Cantorum, Hugh Ross, conductor; New York, December 12, 13, 15 (The last of these performances was broadcast over the Columbia Network).*

A performance of Mahler's "Resurrection" symphony, which was sheer tonal drama, overwhelming in its intensity and sweep of vision, was given by Otto Klemperer, conductor of the New York Philharmonic-Symphony Orchestra, the chorus of the Schola Cantorum, and Susanne Fisher and Enid Szantbo, solo singers, last night in Carnegie Hall. This performance, above all the performance of the colossal finale, revealed Mahler, as it did Mr. Klemperer, in a new light. It shook the audience, and resulted in a prolonged demonstration before any one left the hall.

. . . The purpose of the symphony has been fully explained: Mahler's conception of the struggles and the needs, the terrors and supplications of the human soul; of the careless and perpetual dance of life (second movement); of the incurable frivolity and aimlessness of the crowd (third movement); of the dread summons to the quick and the dead; the calls through space and time; the procession of those who pass before the Judgment Seat; and rest and transfigurations, to salvos of orchestral and choral tone. Last night this tone picture was irresistible.

. . . This performance was one of the historic musical occasions that will not be forgotten and will always appear significant in the musical annals of the city.

—OLIN DOWNES, *New York Times*

All of us are interested in a wholesome extension of the symphonic repertory and at the same time in seeing justice done to the works of an important composer at whom many New Yorkers still look askance—in other words, the late Gustav Mahler—are bound to be deeply grateful to the Philharmonic-Symphony Society and Otto Klemperer for such a performance of Mahler's Second Symphony, in C Minor, as was offered in Carnegie Hall last evening.

Here the Mahler symphonies are still rarities and still caviar to the general public, so the presentation of one of them by a first-rate orchestra, under the direction of a capable conductor who understands and sympathizes with these works, is an event of prime artistic importance.

Last evening's performance of the "Resurrection" symphony was one of the most magnificent ever accorded any work here or elsewhere. Mr. Klemperer obviously concentrated his best abilities on the task of conducting it, and there was more in his contribution than searching knowledge, infectious enthusiasm, triumphant energy and complete technical mastery.

In view of the extraordinary quality of the performance I have no intention of embarking on even a few words of reappraisal of the symphony itself, more than to reaffirm my belief that it is worthy of such exalted treatment.

The Philharmonic-Symphony men gave Mr. Klemperer whole-heartedly what he asked of them; the chorus of the Schola Cantorum fairly outdid itself in the apocalyptic pages of the finale, and there were interesting soloists.

—PITTS SANBORN, N. Y. *World-Telegram*

Mahler's gigantic "Resurrection" symphony, the second in C minor, had last night in Carnegie Hall what was certainly one of its finest performances within the memory of many a New York Mahlerite. . . . From the start of the initial allegro to the final pealing union of chorus, orchestra and organ, the tremendous work was held to a logical plan of dramatic, thematic and dynamic evolution that clarified its intricacies and provided an extraordinarily lucid delineation of the composer's message.

About the handling of detail there was also much to be admired. The remarkable iridescent instrumentation of the scherzo, which arises from the chameleon-like interplay of contrapuntal tone colors and dynamic shadings, was projected with great sensitiveness. And the apocalyptic vision of the last two movements gained greatly from the beautifully subdued entrance of the chorus, the finely adjusted role of the off-stage orchestra, and many other such elements of interpretation. . . .

Very fittingly this monumental expression of Mahler's mystical genius, which in itself is a sufficiently taxing experience for one evening, was allowed to stand alone on the program. Its effect was indeed such that the addition of anything else would have seemed an irrelevancy. The "Resurrection" symphony is a musical epic that seems destined to achieve a permanent place in the repertoire of great symphonic literature.

—WINTHROP SARGEANT, *B'klyn Daily Eagle*

### ANTON BRUCKNER— NINTH SYMPHONY

*Chicago Symphony Orchestra, Frederick A. Stock, conductor, Chicago, January 2 and 3, 1936. (Concerts in memory of the 100th anniversary of the birth of Theodore Thomas.)*

The elegiac beauty of the symphony's slow movement fits it admirably for its central place in the scheme of the commemorative concert.

Both the Bruckner and the Strauss are excellent examples of the way the Thomas tradition has been carried on by his successor.

—EDWARD BARRY, *Tribune* January 3, 1936

To return to the Bruckner Symphony, we found anew great beauty in the first and second movements, nobility and much melodic flow in the last movement. The scherzo is a delightful fantastic and the wedlock of oboe and clarinet were so charmingly phrased, suggesting ancient woodland sprites and elves, coursing over hill and forest playing their reeds in whimsical strains.

—HERMAN DEVRIES, *American*, January 3, 1936

Striking evidence of the city's artistic growth was to be discovered last night in Orchestra Hall when the gathering, assembled to do honor to the memory of Theodore Thomas, received the "unfinished" symphony of Bruckner with cheers and shouting. Thirty-two years ago it was first heard in America under the baton of Thomas, and some wag among the critics remarked, "Bruckner may not have finished his ninth symphony but what there was of it quite finished the listeners."

The musical public of three decades ago is regarded today as having demonstrated great patience in its pursuit of culture. Yet Bruckner was too much for them. The public of today is reputed to lack endurance when faced with lengthy works. But the symphony their fathers rejected they accepted with enthusiasm.

Now a recognized masterpiece, this great work is one of the mighty tonal edifices that perpetuate Vienna's fame as the center and source of the greatest music Europe produced during the nineteenth century. Its splendors have revealed themselves slowly to a world bedazzled by a Wagnerian idiom of which Bruckner was himself a profound admirer.

The slow movement of this symphony bears witness to this admiration. Its first theme is a veritable wedding of *Isolde* and *Parsifal*. But there are other themes in this section that bear no quotation marks, while the brazen splendors of the final climax have a spiritual significance quite other than that attached by Wagner to the same ideas.

The Scherzo is, of course, a new page in music, a revelation of beauty quite unvisioned by other masters. It is at once sardonic and angelic, old and young, disillusioned and aspiring; and these spiritual contrasts achieve a bewildering wealth of melodic imagery set in a harmonic scheme that often anticipates the impressionists in its delicacy and as often rivals the classicists in its power.

How does it happen that Bruckner has no musical descendants? No one has followed the paths he blazed. Yet they seem to lead to regions of the mind and soul that are infinitely alluring.

The performance was worthy of the work. Stock used the limitless and flawless technical resource at his command to achieve orchestral colors and proportions of astonishing beauty. Just as a study in orchestral effect, he made this reading a textbook of possibilities tried and untried.

As a re-creative artist, endowed with the imagination to penetrate to the heart of this amazing score, to discover its somber drama so strangely shot through with romance, to follow it from tragedy to transfiguration, he again showed himself the genius needing but the challenge of such a page to lift him above the facility of a routine that has perfected every means within the scope of his art.

—GLENN DILLARD GUNN, *Chicago Examiner*

### GUSTAV MAHLER— SECOND SYMPHONY

*Cleveland Orchestra, Artur Rodzinski, Conductor; Assisting Artists: Alma Babb, Nevada van der Veer, Cleveland Philharmonic Chorus; Griffith J. Jones, conductor. January 2, 4, 1936. (first performance in Cleveland).*

Dr. Artur Rodzinski and the Cleveland Orchestra are to be congratulated for presenting the Gustav Mahler Second Symphony at Severance Hall as they did last night.

Why such a beautiful, interesting and monumental work has not been given here before probably is no mystery. For one thing it is devilishly difficult.

But now we have heard this much discussed music, a magnificent performance of it, too.

Mahler lived in the heart of Vienna for many years and it is declared by some that the structure of this work really is a panorama of Vienna of the nineteenth century. And while there is waltz time in it, there is no hint of the Straussian lilt.

The first three movements, entirely orchestral, are wide contrasts in musical expression. The dirges and march rhythms of the first, with here and there swift surges of triumph, are sharply different from the leisurely *andante* with its dance tunes and its exquisite *pizzicato* passages. The scherzo, set forth in three-part time, presents St. Anthony's sermon to the fishes.

The contralto solo is embodied in the fourth movement, Mme. Van Der Veer meeting the requirements of the difficult passages with fine artistry. The fifth movement, following without pause, brought into play the chorus as well as the beautiful voice of Miss Babb. She sang with much feeling and with fine effect.

The two voices and the chorus, with the orchestra and organ in the last movement, built up a climax that was inspiring and thrilling. The chorus, trained by Griffith J. Jones sang beautifully the ethereal muted passages. It was powerful and effective in the tumultuous climax, with the surging impulses of the orchestra added to the chiming of bells and the peal of the organ. The horn passages with the echoing brasses off-stage were artistically done.

An enthusiastic audience gave conductor and participants many curtain calls as evidence of its liking for the Mahler work and its presentation.

—E. B., *Cleveland News*

Five movements make up this symphony. The last movement, in the Beethoven Ninth Symphony manner, demands a huge chorus and two soloists, a soprano and a contralto. Six French horns, six trumpets, and an inflated battery of percussion, added to the customary orchestra, sing the epic grandeurs of this unique composer.

Why Mahler must be explained is, however, beyond our comprehension. This symphony is clear as crystal. All you have to do is to settle down for an hour and three-quarters of grandiose music-making. Having made up your mind to that, you can watch the panorama of all Nineteenth Century mid-European music pass before you.

It was no inconsiderable task to perform the work and we are glad to have had it in Cleveland. Mahler once said, "My time will come." Has it? This reviewer is unable to say. But, by all means, hear this symphony. It will be performed again tomorrow afternoon and should be part of your musical experience.

—DENOR LEBDY, *Cleveland Press*

### ANTON BRUCKNER— SEVENTH SYMPHONY

*Minneapolis Symphony Orchestra, Eugene Ormandy, conductor. January 17, 1936.*

For this manifestation of zeal, as well as for the recorded performance of the work, Mr. Ormandy was presented on this occasion

with the medal of the Bruckner Society of America, bestowal being made in a brief and particularly happy speech by Elbert L. Carpenter, President of the Orchestral Association of Minneapolis, Inc. In responding, Mr. Ormandy paid special tribute to his colleagues of the orchestra.

The performance on this occasion deserved all that could be said in praise. At least one listener felt that if the composer had always been so appreciatively, clearly and dramatically dealt with by conductors, there might perhaps have been no need of organizations to promote his popularity.

—FRANCES BOARDMAN,  
*The Saint Paul Pioneer Press*

Bruckner's Seventh Symphony filled the whole of the first part of the program and filled it with distinction.

Eugene Ormandy has shown himself a safe and sane champion of Bruckner; both in his public and private life he has stoutly maintained Bruckner's right to a place side by side with the immortals among the symphonists. It was this that caused him a year or so ago to make the Bruckner record that caused so much favorable comment abroad.

No matter what we may think of the symphony heard Friday night there comes pealing out of it the spirit of a man who in spite of misfortunes and neglect, retained a wonderfully optimistic view of life.

—JAMES DAVIES, *The Minneapolis Tribune*

The performance of Bruckner's mighty symphony No. 7 in E Major filled the first half of the program and was now once more heard in breathless silence in an interpretation on every hand superior to the ones previously heard here. It revealed the work in all its serene and truthful beauty. What is the use bringing so many reservations and exceptions to light whenever a new musical genius is rising to full recognition? As for instance Bruckner's peasant origin. Was there not once upon a time a shepherd king named David who must have been a peasant also and who yet through his lyrical outpourings won undying fame and who organized the world's first gigantic ensemble of musical instruments? He was like David in his humility of self confessions and in his ardor of praising the Divinity eternal with harps, strings and cymbals.

—VICTOR NILSSON, *The Minneapolis Journal*

It was an interpretation of great breadth and dignity, of felicitous detail and of marvelously plastic response to the baton in every measure. If anything could win over skeptics to the Bruckner faith, a form of worship which already has many loyal parishioners, this interpretation could do so.

—JOHN R. SHERMAN, *The Minneapolis Star*

## ANTON BRUCKNER— F MINOR MASS

*San Francisco Orchestra and San Francisco Municipal Chorus, Hans Leschke, conductor; Soloists: Esther Green, Radiana Pazmor, Raymond Marlowe, Everett Foster; Uda Waldrop, Organist. Third Municipal Concert, San Francisco, January 28, 1936.*

Bruckner's Mass in F minor which Dr. Hans Leschke introduced to San Franciscans last night is unquestionably the most grateful of any of the compositions in this form yet presented on one of our concert stages.

The presentation in the Exposition Auditorium called to our attention not only the beauty of the music, but the excellent work Dr. Leschke has done with the Municipal Chorus.

The Bruckner score is one of tremendous beauty, melodically and harmonically.

—MARJORY M. FISHER, *San Francisco News*

A Kyrie and Gloria of severe plainness lead up to a grandiose climax in a Credo of almost unparalleled depth, power, fervor and glory, and the solid nobility of the short Sanctus and Agnus Dei brings the whole to a just and perfect conclusion.

There are no superfluous notes.

—ALFRED FRANKENSTEIN, *San Francisco News Chronicle*

Anton Bruckner's gigantic Mass was magnificently performed by Dr. Hans Leschke with the Municipal Chorus and the San Francisco Symphony Orchestra. It took a long time to make us acquainted with Bruckner, and Dr. Leschke deserves the full credit for this introduction . . . Dr. Leschke united all the beauties of this colossal work, the contrapuntal intricacies, the dynamic changes, the climaxes of this majestic Musicocosmos to a most impressive efficacy with perfect understanding of this music.

—HERMANN GENSS,  
*Henry F. Budde Publication*

A towering work, conceived in the loftiest musical mood, the mass is a complete union of orchestra, chorus and solo parts. In true religious significance it is not meant that one part predominate over another, except at brief and rare intervals perhaps, when a solo voice proclaims a phrase which is immediately taken up by the chorus as a whole. At times some may have felt the orchestra drowned all else, but a careful analysis of its musical importance justified the volume. The orchestral structure must be heard to understand the full beauty of the work, even if the instrumental part be a succession of broken octaves, insistent, strident even, or ascending and descending scales.

—*Musical West, February, 1936*

## GUSTAV MAHLER— FIRST SYMPHONY

*Boston Symphony Orchestra, Dimitri Mitropoulos, Conductor, January 31 and February 1, 1936. The last performance was broadcast over the National Broadcasting Company chain.*

The fact that enjoyment of this music is becoming more widespread indicates that if the listener will hear it sympathetically instead of challengingly, the style makes its effect.

The opening movement of the First Symphony, for example, may have seemed too unvaried from moment to moment. Yet when the movement had run its course the listener realized how entranced he had been, as by a fairy-tale heard in childhood.

It speaks in its own right, and it speaks convincingly.

Especially when it is as beautifully played as it was yesterday, when the orchestra was at the top of its bent and the conductor assisted the musicians by giving them free rein. There was the greatest clarity in the presentation under Mr. Mitropoulos's hands; and the listener was forcefully reminded that Mahler is not necessarily obscure. The horns have rarely sounded more hauntingly beautiful than in the music of the first movement, previously mentioned.

—MOSES SMITH, *Boston Evening Transcript*

There is the passion for nature, beautifully and hauntingly expressed in the first movement, and in the Scherzo the attempt to seek forgetfulness in the pleasures of the folk. The third movement brings the bitter irony, the contempt for the tawdriness of life, and here as later Mahler writes tawdry music when it suits his purpose. In the Finale comes the note of victory, here couched in terms of grandiosity rather than of grandeur, perhaps, but uplifting all the same as Mr. Mitropoulos lent it his own fires.

In the demonstration which followed the men in the orchestra joined in the applause.

—WARREN STOREY SMITH, *Boston Post*

## ANTON BRUCKNER— SEVENTH SYMPHONY

*Boston Symphony Orchestra, Serge Koussevitzky, Conductor; Boston, March 6, 7, 1936; Brooklyn, March 13; New York, March 14. (The performance given in Boston March 7 was broadcast over the National Broadcasting Co. chain.)*

If the opening measures of Anton Bruckner's E Major symphony, played by Dr. Koussevitzky and the Boston Symphony Orchestra yesterday afternoon in Carnegie Hall, had only served to emphasize the rich and luminous tone-quality of the strings, the performance would have been worth the journey. But this was not the only page of the symphony, or the only orchestral effect, to ravish the ears. The whole com-

position was given tonal glory by the orchestra, which has no peer today for homogeneity and balance of tone, and distinction and finish of style.

—OLIN DOWNES, *N. Y. Times*

Both as to magnitude and substance, it made the rest of the program appear puny by contrast.

Anyone who attempts to express a moderate opinion of Bruckner these days must expect to be grievously assaulted. By the devout Brucknerites he is considered a scoundrel, and in the eyes of the Bruckner-haters he is at best a fool. For Bruckner is still a "cause," an artist whose music is not yet accepted without reservation. Where Wagner is concerned, all sorts of qualifications may be stated calmly. For Wagner is no longer a cause. But most people are either ferociously for or viciously against Bruckner.

What sensitive person even today who professes fair-mindedness could hear such a grandiose score as the Seventh Symphony and not be impressed by Bruckner's impassioned striving?

—C. W. D., *The Boston Globe*

But the nobly eloquent adagio makes up for much of these shortcomings; its depth and poignancy of musical utterance, its rare blend of pathos and solemn, imposing dignity were generally realized in yesterday's praiseworthy interpretation.

—FRANCIS D. PERKINS, *N. Y. Herald Tribune*

Mr. Koussevitzky elected to open his program with Bruckner's Seventh Symphony, to which he brought not only the tonal beauties of his orchestra, but his own instinct for recognizing and giving suitable prominence to every strand of melody in a composition.

—P. S., *N. Y. World-Telegram*

Dr. Koussevitzky yesterday seemed to come yet nearer to the heart of the music than he did a year ago.

Ideally, this symphony and the Eighth as well should form a whole concert; there is music enough, both in quality and in quantity, and there might well be an intermission after the second movement.

—WARREN STOREY SMITH, *Boston Post*

Yesterday the Seventh Symphony made a deep impression, whether because of the intrinsic loveliness of much of the music or because of the superb performance by the orchestra would be hard to say.

The performance yesterday, under Dr. Koussevitzky, was remarkable even for this orchestra. The score was adhered to faithfully. The music sounded with incomparable richness and poetic feeling. Dr. Koussevitzky has done a splendid piece of work in the interpretation of this symphony.

—ALEXANDER WILLIAMS, *Boston Herald*

### GUSTAV MAHLER—LIEDER EINES FAHRENDEN GESELLEN

*Minneapolis Symphony Orchestra, Eugene Ormandy, Conductor; Soloist, Nelson Eddy. March 6, 1936.*

Furthermore we may say that at no time has Mr. Ormandy given finer artistic support to a visiting artist than he gave the young singer who rendered the "Songs of a Wayfarer" by Mahler, and two arias by Mozart and Meyerbeer.

—JAMES DAVIS, *The Minneapolis Tribune*

His first selections were "Songs of a Wayfarer" by Gustav Mahler and they were on the program in commemoration of the twenty-fifth anniversary of the composer's death.

The orchestra played them superbly and Mr. Eddy's rich voice, his easy way of singing, were equally good. The songs were written by Mahler when he was 24 years old and a rejected suitor. Beautiful, sad songs in German, Mr. Eddy made them the best things on his afternoon program.

These songs, so lacking in cloying sentimentality, but so sharp with sentiment were an excellent choice for a concert with the orchestra.

—KATHRYN GORMAN,  
*The Saint Paul Pioneer Press*

It is understood the song cycle "Lieder eines fahrenden Gesellen," by Mahler, was as new to the soloist as it was to the orchestra and the audience, but he found just the right folkwise tone for it, which depicts Mahler's own unhappy love in a manner as close to the folk as is most of his musical output. The rough and ready effects were not unconscious with the singer. He meant them like that and they were properly there, with the naivete of a man of the people who communicates with nature in general, but especially with the birds and flowers about the aching soreness of his heart. Mr. Ormandy and the orchestra gave a splendid accompaniment.

—VICTOR NILSSON, *The Minneapolis Journal*

Nelson Eddy, the magnetic soloist, was again sincere and modest in all his artistic work, but added security gave from the beginning an assurance that brought him closer to his task as well as to his audience. This was noticeable at once in his handling of the "Lieder eines fahrenden Gesellen." His understanding of this music of underlying folk sentiment had fresher naivete and carried deeper conviction.

—VICTOR NILSSON, *The Minneapolis Journal*

The cycle itself is a romantically melancholy retrospect on a love affair that soured, richly orchestrated, vividly descriptive.

—JOHN K. SHERMAN, *The Minneapolis Star*

### ANTON BRUCKNER— SEVENTH SYMPHONY

*Los Angeles Philharmonic Orchestra, Otto Klemperer, conductor (Two performances during March, 1936.)*

It was an occasion . . . another sold-out house with the audience keenly aware of the music values offered. The program was the deeply reverent and very long Seventh Symphony by Anton Bruckner and the soloist played the Brahms second concerto in B-flat major. Both soloist and conductor had unusual ovations.

Klemperer was obviously enjoying the sensation of conducting the Bruckner symphony for the first time in Los Angeles. It required extra men in the wood-wind and brass sections and herculean playing from the strings. The effect was that of a gigantic organ, exactly the result Bruckner expected.

It was given a tonal magnificence with great restraint. It was apparent that Klemperer was on ground sacred to him.

It is not often that a conductor and a composer so belong to each other as Klemperer to Bruckner.

—ISABEL MORSE JONES, *Los Angeles Times*

### GUSTAV MAHLER— NINTH SYMPHONY

*Boston Symphony Orchestra, Serge Koussevitzky, Conductor; March 27, 28, 1936. The last performance was broadcast over the National Broadcasting Company chain; Finale Adagio, N. Y. April 2, 1936.*

In the adagio of the Ninth Symphony, conducted with profound sympathy by Mr. Koussevitzky, and played with glowing and transparent tonal texture by the superb orchestra, Mahler attains in the concluding measures the inexpressible peace he so fervently has desired. But the music which preceded the ineffable last page of the score is imbued with a longing for happiness so poignantly expressed that one feels that a being so sensitive could only find relief in just such a tonal Nirvana as he has finally created for himself.

—JEROME D. BOHM, *N. Y. Herald-Tribune*

A greater interpretive problem was the slow movement of Mahler's Ninth Symphony—music which so imperatively requires the understanding and re-creative attitude of the conductor. The movement is too long and has its weakness, but the thought is noble and its expression of a touching pathos. Dr. Koussevitzky conducted as if he were communicating alone with Mahler's spirit.

—OLIN DOWNES, *N. Y. Times*

Someone said that Mahler was a sixth-rate brain with a first-rate technic of composition. The remark was as cruel as it was flippant, misleading and superficial. . . . The chances are Mahler has no parallel in musical history; he was a man buffeted by life, always with a thought of the release that death would bring. In the Ninth Symphony this pre-occupation is the dominating mood. "Morbid, unhealthy," the casual concert-goer would say. Yet that probably is not the case. Mahler's attitude was one that only a few mortals ever thoroughly understand; most of us think too much of the goodness of life. But he appeared to find in death all the peace, the beauty that he considered life to have denied him. What is more, so puissant were his gifts as an imaginative artist, he sublimated his attitude to ineffable exaltation. The first and last movements of the Ninth Symphony so overwhelming, so confident of what lies beyond the setting sun, leave one with neither the heart nor the words to attempt so futile a thing as description. As Lawrence Gilman said of "Tristan and Isolde," this is no longer music but experience.

—C. W. D., *Boston Globe*

There may be pretty little theoretical debates about the practice of playing a single movement from a symphony, but the adagio stood on its own convincingly. When it ended, there was a moment of silence. The professional Mahlerites will argue that the audience was still because it was under a spell; the Mahler maulers may suggest that the gathering didn't applaud because it didn't know that the piece was over. Whatever the reason for the hush, the performance was one of the season's best quarter-hours.

—ROBERT A. SIMON, *The New Yorker*

Throughout his composing career he wrote, if not for the elect, at least for the initiated, for those who were prepared to meet him half-way and heed the spirit of his music as well as the letter of it. For him a symphony was not merely a matter of tonal design; it was the musical record of a spiritual experience, and the spiritual experience thus recorded was in its essentials always the same. Like many another artist in the pre-war period, Mahler was oppressed by the tragedy of human existence; and he ended, as did Beethoven before him, in seeking an escape from the world of reality.

For those, who have the ear, or perhaps the will to hear, this nobly sorrowful symphony may make an appeal unparalleled by that of any music other than the works it most resembles, the final quartets of Beethoven.

WARREN STOREY SMITH, *Boston Post*.

Whether the performance of the movement would have satisfied the connoisseurs of Mahler and Mahler-conducting I do not

know, but to me it seemed like a superb piece of work on the part of conductor and orchestra.

—B. H. HAGGIN, *Brooklyn Daily Eagle*

## GUSTAV MAHLER— FIRST SYMPHONY

*Chicago Symphony Orchestra, Frederick A. Stock, conductor. Chicago, March 5, 6, 26, 1936.*

Twenty-five years have elapsed since the Chicago Symphony Orchestra performed the Mahler First Symphony—just why this charming and melodious piece of character writing has been allowed to repose in the archives of the librarian is a question that only Meister Stock could answer satisfactorily. However, we are grateful for its revival.

The first movement was reminiscent exactly of the title intended to represent "The Awakening of Nature at Early Dawn;" the second, the Scherzo continues its harmonious and graceful journey through the field, coming at last to the hunter, being taken to his grave by the beasts of the forest, and is fascinatingly orchestrated to follow the quasi sad and jovial burial of the hunter by his intended victims.

The last movement, not so inspired as its predecessors, nevertheless reveals Mahler, even at the age of 28 when he conceived his Symphony in D Major, a composer of striking talent and absolute originality.

—HERMAN DEVRIES, *Chicago American*

Mahler, writing an ode to youth, caught and sustained a mood of anticipation and of eagerness. If he made his musical ideas simple, that effect derived from their folk-song quality. He turned to his native Bohemia for much of his melodic material, which is not new, to be sure. But it is new to write a humorous slow movement, which he did with consummate skill, caricaturing the fugue, quite gently and genially, and parading as solo instrument many orchestral voices that rarely emerge from the ensemble.

The success of the ancient novelty was not decided until the storm and stress of the finale was resolved into a long Chopin-like melody, the one obviously sentimental moment which the composer permitted himself. This captured the sympathies of the audience, and the foyer echoed with their praise during the intermission.

—GLENN DILLARD GUNN, *Chicago Examiner*

Nevertheless it was right for Mr. Stock to revive a symphony which has so much that is evocative and so much that is provocative. . . . And those of us to whom his music does not speak with immediate vindication may yet be drawn into the fold of Mahlerism if Mr. Stock continues with so much fidelity and zeal to point out the brilliance of his devices and suppress their unemotional monotony.

—EUGENE STINSON, *Chicago News*

BRUCKNER'S FOURTH

BRUCKNER'S EIGHTH

THE CONDUCTOR GUSTAV MAHLER

A PSYCHOLOGICAL STUDY

BY ERNST J. M. LERT

SYMPHONIC CHRONICLE

---

January 1938

**"MY TIME WILL YET COME"**

**THE KILENYI MAHLER MEDAL**

---

1935 was the seventy-fifth anniversary of the birth of Gustav Mahler. 1936 marked the twenty-fifth anniversary of his death.

This splendid Exclusive Medal of Honor by the internationally famous American sculptor, Julio Kilenyi, is the Bruckner Society's proud contribution to American recognition of the Mahler significance of the years 1935 and 1936.

The Mahler Medal of Honor will be awarded annually to the conductor who accomplished most during the preceding musical season towards furthering the general appreciation of Mahler's art in the United States.

### BRUCKNER'S FOURTH: THE ROMANTIC SYMPHONY

You are about to hear the original version of Anton Bruckner's *Fourth Symphony*, commonly known as the Romantic. It was composed in Bruckner's fiftieth year and is the first of an unbroken line of six major works dominated by a joyful mood. To grasp the spiritual content of this series of happy symphonies a knowledge of the events in Bruckner's life surrounding the conception of the Romantic is necessary, for that symphony marks the sudden turning-point from darkness to light in the master's artwork. Following upon the compositions which preceded it the Romantic is like the sun bursting forth from the clouds after a long stretch of stormy weather.

At first glance there seems to be no logical explanation of this sweeping change in the composer's world outlook. The fact that Bruckner created only joyful works during the ten years of bitter privation shows how little outer things affected his artistic expression. Perhaps the "storm and stress" that raged in the younger Bruckner's soul, desperately battling for unhampered expression, gave way to spiritual calm with the passing years. Yet that does not tell all.

The *Third Symphony* begins with an air of impending tragedy and lays bare an epic of inner strife unparalleled for earnestness save by Beethoven's *Eroica* and *Ninth*. It closes, like those symphonies, in a hymn of triumph. In this convincing victory lies the first clue to the abrupt change that took place in Bruckner's tempest-torn soul just before composing his next symphony, the *Romantic*.

For the moment he himself became the hero who had triumphed in the symphony just completed. Aroused from a long, sullen lethargy, he exclaimed, "Must I continue to endure with bowed head the scorn of a world which does not and will not heed my message? No. I shall go to the master of all masters, Wagner himself, and ask him to accept the dedication of my new symphony. Then the scoffers will be silenced." None but the ingenuous Bruckner could have ventured upon that remarkable pilgrimage to Bayreuth in 1873, when Wagner was so busy with his plans for the Festival Theatre that he had no time even for the score of his own "Ring". Whatever the details of that meeting, it is common knowledge that the *Third Symphony* was accorded the highest praise by Wagner. That was the proudest moment in

Bruckner's life. He never tired of telling how much beer Wagner and he consumed as they discussed the score (I fear, Bruckner drank far more than his share) and how, afterwards, the master of all masters, (as he always referred to Wagner) in a burst of jolly good fellowship, took him out in the garden and showed him his grave.

Thus it was a regenerated, supremely happy Bruckner who returned to Vienna. The scoffers were not silenced, but the scorn of all the rest now seemed as nothing before the wonderful fact of Wagner's recognition! Joyfully Bruckner plunged once more into composition, oblivious of the jeers of his colleagues at the Conservatory, who pointed meaningfully at the trash-basket whenever his huge symphonies were mentioned. They sensed that for some reason Bruckner was now applying himself with greater enthusiasm than ever to musical creation. Teasingly, they would ask him, "Come, now, Bruckner, look at the way you're neglecting yourself. Why don't you get married?" Whereupon feigning the utmost terror he would reply, "But, dear friends, I have no time now. I must finish my *Fourth Symphony!*"

Many years after he had finished the original version of the work, when its premiere was at last being planned, a friend said to him, "Bruckner, I know you must have had some story in mind when you wrote this symphony. It is so vividly descriptive. Come, tell us about it." "Well, let's see," said Bruckner, obligingly, "Perhaps you're right. The first movement is a scene out of the days of chivalry. You know, knights and such things. The second is a rustic love scene. A peasant lad makes love to his sweetheart, but she scorns him. The third movement is a hunt interrupted by a village dance, and the last—the Finale—really, I'm sorry, but I've forgotten just what it was about." In reality Bruckner, who knew and cared nothing about literature, was the most purely musical of all composers. To him a symphony must stand or fall on its merits as sheer music. There is no more need of reading a story background into Bruckner's *Romantic* than into Beethoven's *Pastorale*. Both these works and their various movements bear authorized titles suggesting literary props, but the composer in each case urged extreme caution in drawing any literal analogy between the music and the scenes or events which inspired it.

What reasonably certain comment may then be made upon the *Romantic Symphony*? We may safely say it is a symphony of Nature; that the scenes which inspired it were the charming valleys, luxurious woods, and towering mountain ranges of the composer's own Upper Austria, the region actually called "Bruckner Land" to-day. The first movement is radiant with the rich colors of Bruckner's native landscape on a bright summer day. The music is all sunshine translated into melody, harmony, and rhythm. One senses the rustling of leaves and the singing of birds, but the score resorts to no realistic device beyond the unassuming precedent set by Beethoven in the immortal "Brook Scene" of the *Pastorale*.

In the second movement we find the composer in the very heart of the woods. Under the spell of its deep solitude he gives himself up to meditation and wistfully reviews the past. In the mournfully amorous melody which keeps returning after brief interruptions of elusive, coquettish nature, one can almost visualize the rustic love scene

Bruckner mentioned half in jest when describing this movement. He himself is the unhappy peasant lad, the victim of the maiden's scorn. A gently persistent march rhythm relieves the gloomy burden of this reminiscence and lends the entire movement a striking air of abandon. The sum of its significance is, "Yes, it seemed very tragic at the time, but it was only a passing cloud, after all."

The third part commonly known as the "Hunting Scherzo," is just that. Bruckner described it as a hunt interrupted by a village dance, but it is the very spirit of medieval chivalry we hear rejoicing in glorious sport, during the sway of the march rhythm in the opening section. The interruption reveals not a mere village dance but the very essence of that irresistible triple-pulsation peculiar to the Austrian soil, the *Laendler*, the rhythmic source of the waltz.

The last movement, the inspiration for which Bruckner himself could not recall, begins like the last act of a drama. The plot is at its climax. Over an ominous muttering in the strings, suggesting clouds, there is heard a whirling phrase, like the rushing of the wind. Elements of darkness and storm gather, threatening to dispel the happy mood of the foregoing section. They too prove to be only passing clouds, for presently they give way to sunshine and a clear view of the beautiful landscape that was momentarily obscured. The symphony ends as it began on a note of unmistakable joy.

---

#### MAHLER'S SECOND and the KINDERTOTENLIEDER

Gustav Mahler's symphonies and songs abound in passages reflecting a great spiritual loneliness, in moments crying out with a tortured world suffering, and in moods ominous, grim, and austere, evoking visions of Death and the Hereafter. Haunted throughout life by the fear of death, the composer regarded the mystery beyond as a terrifying specter, from whose fearful spell mankind must be freed. Almost frantically he sought to unmask Death, to identify it as merely a miraculous instant in eternal life, as the soul's transition from mortality to immortality. It is the feelings aroused by such metaphysical contemplation that Mahler kept constantly translating into tonal moods.

It was just as natural for Mahler at 42 to compose the mystic, gloomy song-sequence, *Kindertotenlieder*, as it had been for him at 23 to conceive that mighty, wordless drama of the Hereafter, known as the *Resurrection Symphony*. Paraphrased, the title, *Kindertotenlieder*, means songs inspired by the premonition of death hovering over children, in this case, the composer's own first-born child. When the little Maria Anna died soon afterwards at the age of four, Mahler told his friends in great sorrow, "Under the agony of fear that this was destined to come I wrote the *Kindertotenlieder*." Yet these songs are more than the anguished expressions of a father's fears concerning his child's life. They reveal the creative artist Mahler as a ghost-seer, the victim of somnambulism, and reflect to a still more intensified degree the spiritual perplexity and pain which sway the opening movement of the *Resurrection Symphony*. In the symphony all this suffering is finally allayed, appearing transfigured in the halo of eternal glory surrounding the vision of Resurrection; but the weirdly ethereal, piercing sweetness with which the *Kindertotenlieder* closes transcends all

pathos. A farewell whispered to the soul of his dead baby by a broken-hearted father is beyond all consolation. Strangely, perhaps, the five songs which constitute this sequence are not depressing. They have in rich measure that moving, ennobling quality which true beauty invariably possesses, however sad and hopeless the yearning with which the artist has clothed it. As art their appeal is unailing, because they are the sincere expression of a soul-shattering experience vividly realized in the composer's imagination. For Mahler himself they served as auto-biographical confessions which he felt compelled to set down in tone, although to do so meant self-torture hardly less painful than the very occurrence of his child's death afterwards proved. To understand the death-haunted Mahler of the *Kindertotenlieder* one must turn back to the death-fearing Mahler of the *Resurrection Symphony*.

From early youth he had steeped himself in the study of Oriental Philosophy, occultism, and religion. He was intensely concerned with the speculation of those ultimate questions, "What is the life of man? To what end is all his world-suffering? Is it but a colossal joke played upon mortals by Fate?" To the solution of these questions the young composer dedicated his entire soul. Thus the *Resurrection Symphony* begins at the brink of the grave, with a veritable hiss, invoking man's fear of death. The whole first movement is at once a titanic Dance of Death and a retrospect of life's joys and sorrows, longings and despairs. Its frequent outbursts of terror are all the more vivid, being the natural expression of a sensationally inclined mind, nourished upon the fantastic tales of Hoffman, the great German forerunner of our own genius of the grotesque, Edgar Allan Poe.

Many well-authenticated anecdotes are current proving the important role terrors of the imagination played in the life of young Mahler. To relate just one of these: One night, after a triumphal premiere at the opera, he sat in his study for hours, engaged upon a highly exacting problem in orchestration, the musical portrayal of birds and woods voicing the miracle of nature. At last, completely exhausted, he lifted his tired eyes from the intricate web of written notes. His wandering gaze rested upon wreaths of flowers and trophies heaped in profusion upon the table in the center of the room. Slowly an uncanny feeling crept over him. In vain he sought to fix his uneasy gaze once more upon the score before him. Some mysterious influence drew his eyes irresistibly to the table, the appearance of which had suddenly undergone a complete change. He now saw it surrounded by weirdly flickering candles! And in the middle, among the wreaths, lay a human form! A corpse! And its features were his own! With a cry of horror he rushed from the room.

To return to the *Resurrection Symphony*, with a reminder of young Mahler's intense interest in Oriental philosophy and religion; the powerful contrasts of mood which sway the opening movement may very well mirror the struggle that the powers of light and darkness are constantly waging for the soul of man. The movement ends on a note of spiritual exhaustion, the soul's questions concerning the meaning of life still unanswered. In the brief, simple, charming interlude that follows, the listener is introduced to a very human spirit, Mahler the dreamer, the true son of Austria, more particularly, of Vienna, the

city of Johann Strauss. The music is sheer melody throughout. It is directly sprung from the minuet and waltz and takes the place of a long, slow, second movement, which clearly would have been tedious, following upon a first movement as serious and extended as that of the *Resurrection Symphony*.

The third movement, corresponding to the traditional symphonic scherzo, reveals Mahler in a highly satirical mood. It was a frequent practice with him to transplant complete themes from his own songs into his symphonies. The main musical ideas of this particular scherzo are borrowed from a song the text of which ridicules equally the spiritual instability of mankind and the futility of all attempts to uplift mortals to a state of perfection on earth. The question of the significance and purpose of life still remains unanswered at the close of the scherzo. The fourth and fifth movements, in which the singing voices share the chief role with the instruments of the orchestra, present in word and tone the final solution of the problem. Transfigured visions of the Milky Way and the Last Judgment lead to the revelation of Eternal Life after death. Mahler himself searched for years for the most effective means of portraying in music the Resurrection of all humanity. The actual inspiration finally came to him when he heard the choir singing at the funeral services of the great conductor, Von Buelow. The text of that chorus became the foundation of Mahler's own Resurrection text. The overwhelming grandeur of the symphony's conclusion witnesses the fervor and sincerity of Mahler's faith in life both on earth and in the Hereafter.

As the composer desired that the five songs of the *Kindertotenlieder* never be presented except as an unbroken sequence, they will be so given this evening. They will be followed by the lighter second and third movements of the *Resurrection Symphony*, the former of which, a charming, sunny interlude, has often been performed by great orchestras independently of the symphony.

---

#### Performances Announced for Season 1937—1938

- Boston Symphony, Mahler's *Fifth*. (Serge Koussevitzky, Conductor.)  
 Boston Symphony: Bruckner's *Seventh*. (Serge Koussevitzky, Conductor.)  
 Cleveland Symphony: Bruckner's *Seventh*. (Artur Rodzinski, Conductor.)  
 Chicago Symphony: Wolf—Prelude and Entr'acte, from *Der Corregidor*, Italian Serenade, Songs with Orchestra. Symphonic Poem, *Penthesilea*.  
 Mahler—Andante and Scherzo from Symphony No. 1, D Major, *Lieder eines fahrenden Gesellen*, Rondo from Symphony No. 7 in E Minor. (Frederick Stock, Conductor. Soloist: Kerstin Thorborg.)  
 Cincinnati Symphony: Mahler's *Sixth*. (Eugene Goossens, Conductor.)  
 Illinois Symphony: Mahler—*Lieder eines fahrenden Gesellen*, (Sonia Sharnova, Soloist; Albert Goldberg, Conductor.)  
 Los Angeles Philharmonic: Mahler's *Second*. (Otto Klemperer, Conductor.)  
 Philadelphia Orchestra: Bruckner's *Fifth* or *Seventh*. (Eugene Ormandy, Cond.)  
 Philadelphia Orchestra: Mahler—*Das Lied von der Erde*. (Eugene Ormandy, Conductor. Soloists: Enid Szanthe and Charles Kullman.)  
 Swedish Choral Club: Bruckner's *Te Deum*. (Harry T. Carlson, Conductor.)

## BRUCKNER'S EIGHTH SYMPHONY

By John N. Burk

This article is reprinted by permission of the author and the Boston Symphony Orchestra. It appeared in the Program Notes of the Boston Symphony Orchestra of April 16th and 17th, 1937.

This symphony, begun in 1884 and finished in revision in 1890, was first performed by the Philharmonic Orchestra in Vienna, December 18, 1892, Hans Richter conducting. The symphony had its first performance in this country by the Boston Symphony Orchestra, Max Fiedler conductor, March 12, 1909. There was a second performance "by request" in the following month (April 24). The symphony was revived by Serge Koussevitzky on March 22, 1929, and again performed April 22, 1932.

It is scored for three flutes, three oboes, three clarinets, three bassoons and contrabassoon, eight horns (four interchangeable with tenor and bass tubas), three trumpets, three trombones, contrabass tuba, timpani, triangle, cymbals, three harps and strings.

The symphony is dedicated to "His imperial and royal apostolic Majesty Francis Joseph I, Emperor of Austria and apostolic King of Hungary".

WHEN he reached the age of sixty, Anton Bruckner's seven symphonies, into which he had put the heart's blood of a lifetime, had had scant attention—scant performance or none at all. At the end of 1884 (December 30), the Seventh Symphony was brought out by Artur Nikisch at the Leipzig Gewandhaus. The symphony made a sensation, was performed in German and Austrian cities, and further afield. At last Bruckner found himself famous. The Brahms camp, which had heretofore scarcely deigned to notice the satellite of Wagner who presumed to write symphonies of Wagnerian lengths, now honored Bruckner with their open hostility.

In the same year of the success of the Seventh (1885), Bruckner was at work upon his Eighth (which occupied him in the years 1884-86). He rewrote it in the winter of 1889-90.\* The Eighth Symphony had its first performance in Vienna, December 18, 1892, by the Philharmonic Orchestra which, until the advent of the Seventh Symphony, had carefully excluded Bruckner from its programmes. Hans Richter conducted. The success of the symphony was such, even in this Brahms stronghold, that even the ferocious Eduard Hanslick, while denouncing the music in the terms fully expected of him, was compelled to acknowledge it a popular triumph. "How was the symphony received? Boisterous rejoicing, waving of handkerchiefs from those standing, innumerable recalls, laurel wreaths, etc." Hanslick pointedly strode from the hall before the *Finale*. Another critic called it "The masterpiece of the Bruckner style." Hugo Wolf wrote: "The work renders all criticism futile; the *Adagio* is absolutely incomparable." And Kalbeck of the opposite clan, henchman and destined biographer of Brahms, was forced to admit Bruckner "a master of instrumentation" whose symphony was "worthy of its sole position on the programme."

---

\*The Eighth Symphony does not bring up the problem of authenticity in revision about which so much has lately been written in Central Europe. The "improvements" in orchestration by Bruckner's pupil, the conductor Ferdinand Löwe, apply particularly to the Fifth and Ninth Symphonies. The revision of the Eighth seems to have been Bruckner's own.

The Bruckner who had been an unknown in Vienna for so many years became a public figure, a celebrity whom one pointed out on the streets. But Bruckner never acquired city ways. He never changed his manner of dress nor lost his provincial accent. To the end he was a true son of the small Austrian village of Ansfelden. The following description of his quarters and daily routine in Vienna is taken from the monograph of Gabriel Engel:

"He lived in a small, simple apartment of two rooms and kitchen which were kept in order by an old faithful servant, Kathi, who for twenty years had spent a few hours each day attending to the bachelor's household. In the blue-walled room where he worked stood his old grand piano, a harmonium, a little table and some chairs. The floor and most of the furniture were littered with music. On the walls hung a large photograph and an oil painting of himself. From this room a door led to his bedroom, the walls of which were covered with pictures of his 'beloved Masters.' On the floor stood a bust of himself which he was pleased to show his friends, who relate that he would place his hand upon its brow, smile wistfully, and say: 'Good chap!' Against the wall stood an English brass bed presented to him by his pupils. This he called 'My Luxury.' At home he would go dressed even more comfortably than on the street, merely donning a loose coat if a guest was announced. Kathi knew exactly at what hours guests were welcome. If the Master was composing, no one was permitted to disturb him. At other times he went in person to meet the caller at the door.

"Bruckner worked, as a rule, only in the morning; but sometimes he would get up during the night to write down an idea that had suddenly occurred to him. Possessing no lamp, he did this night work by the light of two wax candles; but if Kathi saw traces of these in the morning he scolded him severely, warning him to be more careful about his health. When she insisted that he compose only in the daytime, he would say contemptuously: 'What do you know about such things? I have to compose whenever an idea comes to me.'

"Sometimes, other answers failing him, he tried naively to impress her with his importance, crying: 'Do you know whom you are talking to? I am Bruckner!' 'And I am Kathi,' she retorted; and that was the end of the argument. After his death, she said of him: 'He was rude, but good!'"

---

The following description of the Eighth Symphony was written by Alfred H. Meyer for the *Boston Transcript*:

"Bruckner has sometimes been accused of formlessness. In reality no criticism could be wider of the mark. His handling of form is merely different from that of symphonists like Beethoven. Witness the course of this symphony in C minor. A single note, sustained through several measures, serves as introduction. Basses sing the first theme. It comes in low register, at first hesitatingly, then in full melodic contour. It is gloomy, forbidding, of the essence of tragedy. There are several repetitions, there is some development. Then the second theme emerges. It is in G major, a typically Brucknerian theme. Its first motif com-

prises two quarter-notes followed by a triplet of three quarters, a formula which Bruckner especially liked. This theme is the brightest in the symphony—a theme of cheerfulness tinged with sentiment. Bruckner uses it persistently in this first movement, often in inversion. That is, in descending form, whereas originally it is chiefly ascending. An important subdivision of the theme occurs considerably later in horns followed by wood winds over a *pizzicato* bass in triplets. Cheerfulness has now gone out of the mood, which is one of quiet solemnity. The development treats these themes by every known contrapuntal and rhythmical device, mainly in the order in which they originally occur, with a repetition of suggestions of the first theme near the end, to lead into the recapitulation. The recapitulation is much less a direct repetition of themes than is the custom of the classical composers. The first theme is now introduced in high wood winds, where at first it entered in low basses. Not only is the register changed, but it is now heard also in inversion. And it comes not in the direct forthright form of the beginning, but in a more developed state. Further, there is less obvious preparation for the second theme, which enters in a solo trumpet, '*ausdrucksvoll*' (expressively).

"In the symphonies before the Eighth, Bruckner followed his first movement with an *Adagio*. In the Eighth and the Ninth a *Scherzo* succeeds. The gloom at the end of the first movement is too deep to permit a slow movement to come next. Rightly or wrongly the appellation '*Der deutsche Michel*' has come to be associated with this *Scherzo*.\* To translate the phrase into 'The German Michael' is to lose all its significance. It represents the naive stupidity, the ponderous and thick-headed humor which one associates with country bumpkins. The theme of the principal division of the *Scherzo* well deserves the label '*Der deutsche Michel*', for its blunt, awkward, square-toed, or better square-headedness. But it is cast against a background of fantastic and almost fairy-like delicacy. It receives due portion of repetition and development. Of the Trio Bruckner is reported to have said, '*Der deutsche Michel träumt ins Land hinaus*'—'The German Michael dreams (or would it be better under the circumstances to translate "*träumt*" by "stumbles".) his way into the country.' The theme, at first in the strings, is beautifully lyrical. The *Scherzo* is then literally repeated.

"The *Adagio* is one of the longest slow movements in existence, and one of the most lovely. One can best understand it by remembering that it consists of three separate developments, each more extended and more climactic than the preceding, of the two themes of the movement. The first theme is of exceedingly long breath, haunting, pleading, in character. It is introduced by the first violins. The

---

\*Among the many "interpretations" laid upon the symphony by the analysts, with references to "The Æschylean Prometheus," "The all-loving Father of mankind," etc., was the characterization of the *Scherzo* as typical of "The German Michael." "*Der deutsche Michel*" is the plain, honest, lumbering peasant type of Germany. Hanslick saw a breach here in the armor of Brucknerian enthusiasm and wrote: "If a critic had spoken this blasphemy, he would probably have been stoned to death by Bruckner's disciples; but the composer himself gave this name, the German Michael, to the *Scherzo*, as may be read in black and white in the programme." These were unfair tactics. Bruckner gave no clue whatsoever in his published score. (Ed.)

second theme is sung by 'cellos, as if in answer to the pleading of the first. It too is wondrously lyric. Near the height of the third development, brasses intone the 'Siegfried *motiv*' from Wagner's 'Ring.' The coda is given to the first theme.

"The *Finale* is grandiose, a culmination in the truest sense. The figure with which it begins (suggestive of galloping horses) continues throughout the long, warlike first theme. A second theme is in part lyric, in part choral-like and churchly in mood. The development is exceedingly complex contrapuntally, with the choral *motiv* frequently heard throughout. The recapitulation makes a powerful entry with the first theme, while the second enters as a *fugato*. The main climax of the whole work comes in the coda, which is begun by trombones proclaiming the first theme of the Symphony against the trumpets with the theme of the *Scherzo*, and ends at the last with a combination of the main themes of the four different movements in a triumphal C major."

---

## GOELLERICH-AUER BRUCKNER BIOGRAPHY COMPLETED

Just thirty years ago Max Auer wrote the first skeletal version of his Bruckner biography. It was merely a hasty, brief gathering of the outstanding facts in Bruckner's career, calculated to fill the gap in the still sparse Bruckner literature then available to the layman. It was written in the language of the average human being, little interested in the technical verbiage of the usual musical *vademecum* of the day, drily compiled for the avid music-student.

The death of August Goellerich some fifteen years ago left the whole treasury of Bruckner documents he had amassed in the course of a life-time to his friend and collaborator, Max Auer. The latter had long since vowed to devote his whole life-work to the shaping of an exhaustive and authoritative account of Bruckner's life and work, based upon the incontrovertible evidence of these documents.

As volume after volume of this Bruckner treasury made its appearance in beautifully printed and bound format, the world of music expressed its amazed delight and hoped nothing would occur to interrupt Max Auer's inspired work of authorship and editing.

The fourth and final part of this monumental Bruckner biography has at last been published.\* Heavily documented as its predecessors, written for layman and scholar alike, and containing a host of musical illustrations, it offers a wealth of fact, analysis, and anecdote, which will undoubtedly be for many years to come a rich source for anyone engaged in Bruckner research. As a special feature, of particularly timely interest, the final volume contains a chapter which records the progress of the Bruckner movement outside Austria practically to the present day. Beyond all question, the biography, Max Auer's life-work, is a great and lasting contribution to the literature of music.

This biography is published by Gustav Bosse Verlag, Regensburg, Germany.

## THE CONDUCTOR GUSTAV MAHLER

A Psychological Study by Dr. Ernst J. M. Lert

No attempt (as far as I know) has yet been made at a scientific analysis of orchestral conducting in the light of modern psychology. There are, to be sure, textbooks on conducting, but they teach only the technicalities of the profession. There are also histories of conducting, but they are, in the main, mere records of the development of those technicalities. As for the numerous biographies of outstanding conductors—these are hardly more than fictional life-stories, records of triumphs and struggles, eulogies or arraignments of the individual art of their subjects, achieved by citations from newspaper criticisms, edited and colored by the personal bias of the biographer. In short, there exists no scientifically reliable description of the artistic nature of any conductor's work.

Almost twenty years ago, in the course of a short biography, I tried to trace the development of the personality of a typical operatic conductor.\* This juvenile attempt, however, stopped at the point where the real task should have begun: the psychological analysis of conducting in general and of Lohse's in particular.

I shall now try to make up for that omission of long ago by analyzing Gustav Mahler's art of conducting.

Some will ask, "Why Gustav Mahler? Why not Toscanini or Stokowski?" Gustav Mahler the conductor is unknown to the present generation, for he left no gramophone records of any of his interpretations, while Toscanini and Stokowski are still here to testify to the relative accuracy of any analysis of their conducting art.

True; yet while Toscanini and Stokowski are with us, Mahler, the conductor, stands aloof in the distance, a safer historical subject, because he is free from the distortions of partisanship still inevitable with the other two. Besides, Mahler's published correspondence is a fund of evidence, a veritable revelation of his approach toward music. His compositions, his method of scoring are incontrovertible facts illuminating his mentality as conductor. Finally, and perhaps most important and intriguing of all, Mahler's career as a conductor reached its peak just when the European mentality was passing through the crisis between Victorian bourgeois-individualism and twentieth century mass-mindedness.

Philosophically, Mahler was an idealist in the days when Schiller's individualistic idealism was being supplanted by Hegel's and his school's absolute idealism, that world outlook which later degenerated into a collectivistic dogmatism out of which, in turn, sprang all the pseudo-philosophic "isms". Therefore, Specht's elaboration on the following anecdote is, at best, a sorry joke indeed. At the close of a concert featuring Mahler's *Third* Symphony, Richard Strauss, who had conducted, said jestingly, "During the first movement I had a vision of interminable battalions of workers marching in the (socialistic) May-Parade at the Prater." Quite obtusely Specht adds, he is sure that Mahler, had he

\*Otto Lohse ein Deutscher Kapellmeister (Leipzig, Breitkopf und Haertel, 1918)

heard this Straussian *bon-mot*, would have exclaimed: "That's it! I didn't know it myself until this moment, but that's it!" (Strange! Because the printed score of this first movement bears the programmatic title: "Pan awakens, summer marches in.")

What a hopeless misconception on the part of Specht to imply that Mahler hi-jacked Marxist music from the Kurt Weills and Hanns Eislers before they were born. He has literally made "Capital" of the Absolute. That Mahler the idealist should have portrayed in tone masses of proletarians marching for higher wages and shorter hours is simply unthinkable. Mahler's marches (like Beethoven's) celebrate the progress of no man-made factors. In his music it is only the march itself that marches. To Mahler, whose entire boyhood was spent in the atmosphere of a military barracks, the march pulsation was a general human expression, to use his own favorite term, a "sound of nature"—*Naturlaut* (Letters 215). "It cannot be denied", he wrote, "that our music involves the 'purely human' (all that belongs to it, including 'Thinking') (sic!) . . . . If we wish to make music, we must not think of painting, poetic imagery, description. By making music one expresses only the integral (i. e. the feeling, thinking, breathing, suffering) human being (Letters 277). To him music is beyond all that is matter-of-fact. "The realm of music starts where the dark, shadowy feelings assume full sway, at the threshold of that 'other world', where things are no longer bounded by time and space" (Letters 187). So thought the mind that called Schopenhauer's explanation of music (as expressing "the essence of all things") the best definition of music (Letters 126); the mind which contended that the musician lives "inwardly" (Letters 202) with little interest for and capacity of understanding the outside-world. (Mahler unconsciously proved the truth of this when he traveled through Italy without visiting museums and cathedrals (Letters 482).

A musician standing at the borderline between two civilizations, he is compelled to admit programmatic tendencies in modern music: "There is no modern music since Beethoven which has not an inner program," says he (Letters 296), but proceeds at once to separate himself from the tone-painters and describers. "You are right in saying that my music eventually arrives at a program as the ultimate revelation of a dominating conception, while with Richard Strauss such a program is presented at the outset as a given task to be performed . . . . In evolving a major musical conception I always come to the point where I have to reach for the 'Word' as the *indispensable bearer of my musical ideas* (Letters 228).

This is a blank affirmation of Mahler's conception of music both as spiritual and rhetorical. According to him, music does not imitate, it tells; it evokes no reality, but expressing the world beyond our senses, only the idea of reality.

Corroborating my description of Mahler as a mystic\* the recent Mahler book by Bruno Walter tells us that his favorite readings were Lotze's *Mikrokosmos*, Fechner's *Zend Avesta* and *Nanna, oder das Seelenleben der Pflanzen*, Eduard von Hartmann's *Philosophy of the Unconscious*, and the philosophical poems of the mystic Angelus Silesius: philosophers all, and, if not outspoken mystics, with a decided inclination

\*Chord and Discord, December 1936.

toward mysticism. Mahler studied these authors to confirm his own painful experiences of the double personality of the limited man and the limitless artist.

It is his rhetorical conception of music which makes him feel so close to Siegfried Lipiner, a Viennese dramatist. Lipiner treated great mythical subjects (Adam, Hippolytos) as transcendental philosophies personified. His characters are not lifelike individuals. They are impersonal megaphones declaiming high sounding commonplaces, packing involved ideas into skeleton-formulas, much like Wagner's philosophic libretto-slogans. Lipiner, also a case of borderline-crisis between Victorian Romanticism and modern mass-ideology, anticipated the manner of the collectivistic expressionists, while remaining philosophically the enlightened individualist. His practice, as dramatist, of expanding the individual to a universal symbol brought him into close kinship with Mahler; his skeleton-language literally crying out for fulfillment through flesh and blood, or through music, was thoroughly Mahlerian. "My dear Siegfried", Mahler wrote to him (Letters 283), "You are really creating music. Nobody will ever understand you better than the musician, and I may add, particularly myself! Sometimes it strikes me as almost absurd how akin my own 'music' is to yours."

An important admission!

Mahler confesses his rhetorical conception of music as an expression paralleling transcendental poetry achieved by simple, sloganlike formulas. In fact, for his texts Mahler not only used, but himself produced such poetry as evidenced both by his adoption of humble folklore verse from the *Wunderhorn*, and by the creation of such lines as his own (*Vater, sieh an die Wunden mein: Kein Wesen lass verloren sein*—Letters 161). In the *Eighth* Symphony his treatment of the mighty medieval hymn: *Veni Creator Spiritus* and the transfiguration passage from *Faust* evidence the workings of this rhetorical conception on an exalted plane.

Mahler's abstract idealism in life and music has been demonstrated.

## II.

"But Mahler was attacked for his stark realism as conductor and composer", objects my honored opponent.

"The real mystic is the real realist", I answer with the New York lady of a former article of mine.\* Unfortunately the superficial textbook-and-magazine-philosophers fail to realize that the "idea of reality" includes "reality" as an object to be spiritualized and this process of spiritualizing is a mental struggle of stirring passion. Mahler's despotism, his sudden angers, his terrible nervousness, his unbearable sarcasm, his fanatical insistence on the accurate execution of all his intentions, his (apparent) absentmindedness, his insatiable greed for correcting and improving,—all these personal features of the musician,

---

\**Chord and Discord*, December 1936.

which so often contradicted the soft hearted man, are but symptoms of his enforced struggle to project ephemeral reality into the timeless form of the idea. He himself relates the following significant instance:

Taking part in the funeral services for Buelow he hears the chorus sing "*Auferstehen, ja auferstehen*" (*Arise, yea, arise*). These words move him profoundly; he has found the finale for his *Second Symphony*, that finale which expresses the resurrection of all flesh on Judgment Day. This personal experience at the obsequies of an acquaintance (Buelow was nothing more to Mahler) combines with his ever-present childhood impressions of marches and military signals, and they become, through his subtle alchemy, abstracted and magnified into the "Great Roll-Call" and the tremendous Resurrection chorus of all humanity.

As modern directors of Shakespearean plays, heedless of the clock of time, produce *Julius Caesar* in modern costumes and uniforms; as Connelly, in *The Green Pastures*, merely expressed the Bible in terms and characters of New York's Harlem of today, so Mahler, the first modern artist to conceive humanity as an army marching to its destiny, Resurrection, midst the fanfare of military trumpets, read into Beethoven's *Ninth* the mass-minded orchestral message of spiritual propaganda for the super-national unification of humanity. Reality and ideology: in every fiber of his being the typical Austrian, he was a traditional individualist, yet he claimed New York, the world-core of modern standardized collectivism as his "spiritual homestead" (Letters 393).

Another proof of his spiritual world outlook is the almost complete absence of romance in his life. We know that many conductors virtually live on the sex-appeal they exercise on their audience and on the female singers. In Mahler's case we know of but one romance during his entire career as conductor prior to his marriage. That lone love incident occurred in his early twenties and so disrupted his inner life that he fought down and overcame the sensual impulses it evoked as though they had been his worst enemies. He married rather late to remain a one-woman-man to the end of his life. Thus the boy who wanted to become a martyr lived up to his idealism until he died. As was his life so is his music—never sensual, and even so was his conducting.

Beside that of other famous conductors, whose spiritual life oscillates between their scores and friendly bridge, *skat* or *tarock*-tables, Mahler's mental education seems to have excelled by far the usual learning of professional musicians. Nevertheless he reveals himself exclusively the musician to the uttermost boundaries of his rather considerable learning. His letters show an almost complete absence of humor, much as the letters of Wagner (but unlike those of Buelow or Reger). He expresses his thoughts by means of keen formulas tinged with sentiment and, often, with violent sarcasm. Whatever the subject of his commentary, he always returns to the two integral problems of his personality: the double life of the musician and the problem of expressing a given reality by music (*program in absolute music*). Yet he fails consistently to find any solution, or, at least, any new or convincing solution.

Furthermore, his life and his letters betray the notoriously poor taste characteristic of musicians in all matters outside of music. He

himself admits that the musician has no appreciation of the visible world. Strangely enough even in the world of the audible Mahler is not highly discriminating. It is very significant that he speaks of Halevy's *La Juive* as "a wonderful, sublime work; I number it among the loftiest ever created."

### III:

Although idealism is a permanent feature with Mahler, the expression of this *Weltanschauung* (world outlook) is anything but permanent. Like most idealistic artists he shows no striking, deviating development. *Das klagende Lied* and *Das Lied von der Erde* are, from conception to orchestration, unmistakable expressions of the same mentality through the same style. Mahler's development is one of expansion, of increasing depth, refinement, and differentiation, without any accompanying material change or growth in his artistic personality. Beethoven started in the Haydn style, and Wagner in the Meyerbeer manner, but Mahler the composer started as Mahler.

So too was it with Mahler the conductor. His conception of the works he interpreted was the same, from Olmuetz (1882) to New York (1907). It was not the matter, but only the manner of expressing them that changed as he matured.

Mahler connoisseurs will shake their heads and point to Mahler's violent, often grotesque movements of baton, hand, head, feet, body, and eyes during his early years, in contrast to his statuesque, almost affected-looking immobility towards the end of his career. It is true that Mahler (when I, as a little boy, saw him conduct at Vienna) made upon me the weird impression of a frenzied gnome. He frightened and fascinated me at the same time. Yet many years after, when he conducted the premiere of his *Sixth Symphony* (perhaps the most typically Mahlerian of all his works) his statuesque immobility before the huge orchestra, even when it exploded into an indescribable turmoil of temperament and despair, created just the same uncanny impression, nay, an even more frightening one, because a single impulsive movement of his hand or head would have relieved the almost unbearable tension. That immobility of his was anything but calmness. Frau Mahler relates how at Essen, at the general-rehearsal of the same symphony, Mahler "ran up and down in his dressing-room, irrepressible sobs literally bursting from his lips" (Letters 13).

That external change (his abandonment of the baton-waving manner) has no counterpart in any inner development. Mahler was at first little understood by the orchestra because he did not "beat" the trodden path of tradition. Any given aggregation of performers, prior to a proper grasp of his style, had to be trained to the intensity of polyphonic thought and expression which was Mahler's orchestral ideal. Mahler too had to find the proper technique for his new polyphonic method of handling an orchestra. Gradually the orchestras grew accustomed to this new style. Eventually he found that he could eliminate most motion as superfluous and concentrate on that subtle *fluidum* which establishes a deeper communion between leader and his men than any amount of waving and signaling.

"But Mahler did change continually!" I hear many object. "Why, he even changed his own works!" Well let us see what Mahler has to

say for himself on that score. He writes to Bruno Walter from New York, 1909 (Letters 417): "Just as I want my scores edited anew every fifth year, so I require fresh preparation each time for conducting the scores of other composers. My only solace is that I REALLY NEVER HAD TO ABANDON MY WAY FOR A NEW ONE, BUT WAS ALWAYS IMPELLED TO CONTINUE ON ALONG THE OLD PATH."

The "changes" he made never affected the meaning of a work, they served only to intensify, to clarify that meaning for the immediate environment by means of the particular group of players on a given occasion and in accordance with that relentlessly evolving spirit of change which we call the "march of time".

#### IV.

"The essence of every reproduction is exactness", Mahler used to say in his crisp, slogan-like manner, apparently contradicting another favorite expression of his: "The best music is not written in the notes." Yet a reconciliation between these two apparently clashing ideas is not out of the question. A subtle, invisible band joins them inseparably. That uniting psychological force is the conception of the artwork by its conductor-interpreter.

Since our understanding of the words or works of others depends entirely on the sum of our inborn individuality and our private fund of acquired experience, we cannot grasp their "exact" meaning. We can only understand them as our own mind receives them. This personally-tinted understanding of a thing is, in fact, our "conception" of it. Not only does our personal color qualify the "view-point" with which we regard a work, but so do impulsive changes we unconsciously inflict upon the original by our own individuality.

To the interpreting artist the Re-Production of a work is "correct", if all the written notes and marks of the author are reproduced literally. This process is, after all, merely technical; and it can be, is being, and always has been done by every technically reliable artisan, for

"He has the parts well in hand,"

But

"Alas, without the spiritual band."

This "spiritual band" is the sole key to the inner meaning of the original, that "best music not written in the notes" which even the utmost of sheer technical prowess cannot conjure forth in sound. This imponderable quintessence of an artwork achieves revelation through that power of mental assimilation possessed only by one able to switch off his own ego completely in order to merge it with the ego dominating the work itself. Furthermore, an intense power on this part of this new, assimilated self is required for the expression of this quintessence through the actual orchestral re-production. The most amazing example of such genius and power in the world today is Arturo Toscanini. Yet Toscanini is a realist by nature, mentality, and education. His intuition functions exactly like that of a great scientist; his power of re-producing an artwork is the very instinctiveness of nature itself. In short, he possesses the supreme faculty of *Einfühlung*, i. e., of so merging his own ego with the object of his attention that his own life becomes one with the life of that object. However, the madman who identifies him-

self with Napoleon, and Toscanini, who assimilates his spirit to Verdi's *Requiem* so that Verdi's own spirit seems to interpret his work, are certainly two opposite poles, although they revolve on the same axis.

Though the power of such identification of work and interpreter was not natural to Gustav Mahler, he often came quite close to it. He once wrote to Bruno Walter: "In a word: one who does not have **genius**, should keep away from the work; but whoever has it needn't be afraid of anything . . . . Any prattling back and forth about the matter strikes me as if one, who has made a baby, racks his brain afterwards over the question whether it is really a baby and whether it was produced with the right intentions, etc. The thing is simple. He just loved and—could. Period. And if one doesn't love and can't, why, no baby comes of it. Period again. As one is and can—so the child will be. Once again: Period!" (Letters 277).

## V.

The idealist is, by nature, a split-personality. Therefore, that happy fusion of work and interpretation, which is the prerogative of the objective, naive, realistic artist Toscanini, was denied to Mahler the idealist.\*

Mahler himself throws considerable light upon this matter in the following synthesis of cited extracts.

"What is it that thinks within us? And what is it that acts within us?" (Letters 415.)

"Why do I believe that I am free while I am imprisoned by the walls of my character as in a cell?" (Walter, p. 90.)

"I experience strange things with all of my works while conducting them. Wondering curiosity, as poignant as a burning sensation, takes hold of me. What is that world which mirrors such sounds and shapes? **BUT ONLY WHILE I AM CONDUCTING!** For afterwards, it is all extinguished suddenly; (otherwise, one could hardly resume living). This strange reality of visions, which suddenly melts away like the chimera of a dream, is the deepest cause of the split-life of an artist. Condemned to a twofold existence, woe to him if life and dream become confused. for then he must answer terribly for the laws of the one world in the other." (Letters 419)

This discord between man and artist, this eternal struggle between reality and the idea of reality is the bitter legacy of transgressing idealism.

Here is the key to Mahler's individual conception of music. Here is his contradictory position between a world which has been and a world to come. Here is the intuition which made his interpretation, even of the old classics, point to the future.

And not to a happy future. He foresaw the breakdown of our civilization—through the all-too-comprehensive realization of absolute idealism; hence his fundamental sarcasm, perhaps the most striking feature of the man and the musician. "Why did you live? Why did you suffer? Is all this nothing but a gross, terrible **JEST?** We must solve these problems in some way, if we are to continue living—even if we shall only continue dying." (Letters 189.)

\*Notwithstanding the great progress of modern psychology, the best psychological explanation of the difference between the realistic and idealistic artist is still Schiller's study, "On Naive and Sentimental Poetry."

Not only did this outlook on a world, present and future, express itself in his own music, but he also imposed it on whatever music he conducted. Its constant theme was the conflict between two worlds, a tragic struggle, in which triumph meant the attainment of the "other world, where things are no longer bounded by time and space," in short, the world where the *unio mystica* is a fact.

This is the goal toward which all his symphonies strive. No less appropriately, he might also be called the *finale-conductor* because everything he conducted was subjected to a dominating *Finale-concept*. Everything else in the world itself was subordinated to that idea. Take his production of Mozart's *Nozze di Figaro*. Some great French *bon-motier* said of the play by Beaumarchais: "*Voilà, c'est la révolution qui marche.*" Mahler revealed in Mozart's *opera buffa* the bitter social arraignments of Schiller's *Kabale und Liebe*. From the sarcastic, devilish hurry of the overture he continuously built up to the slow movement of the finale, where pure humanity opened yearning eyes for a moment only to be eclipsed again by the commonplace of the noisy *stretta-finale*, implying that the old order will go on and on. The central idea of rebellion was ever present. All the *sforzati*, sudden *ff* and *pp*, all the apparently sweet melodies with their bitter underlying meaning, were aimed at that climax. Specht (p. 95), describing Mahler's reading of this work, only mentions how the little wedding-march seemed irritated by "accents of stinging painfulness", played against the "dark background of a silent crowd of people behind the iron garden-fence, while two big bowls of sinister red fire lit up the wedding-ceremony". Actually, Mahler even reinterpolated the original trial in court and composed biting *secco-recitatives* for it, to point out the modern revolutionary trend of Mozart's work.

To him the *demiourgos* was in everything. Since he was convinced that the central idea created the artwork according to an architectural plan (*blueprint*), everything had to be subordinated to that idea. To Mahler there could be no independent episodes in an art-work. His was this Fascist ideology half a century before Fascism; everything functions only as a cog in the machine of the artwork's microcosm.

His absolute unity of idea and execution, his despotic insistence on architectonic structure, his *finale-conducting* were but the natural consequences of the split-personality of the idealist striving and struggling for final amalgamation.

The clash of reality and idea is the very core of dramatics. Mahler the musician dramatized everything he conducted. Yet the factors of his dramatizations were never personified. He never portrayed the struggle of petty humans, but only of ideas. Impersonal abstracts alone clashed in the world of his creation.

## VI.

What were the technical means employed by Mahler during a performance to transmit to an orchestra his complicated conception of a musical composition?

Analyzing a conductor's art from a technical viewpoint means testing it for the following:

His sense of rhythm, his sense of tempo, his dynamics, his agogics, his reading of harmony and counterpoint, his treatment of orchestration.

Rhythm is music in its most primitive state. When the impish, impious Buelow, punning on the Bible and Goethe, exclaimed: "In the beginning there was Rhythm", he unwittingly uttered a scientific truth, amply corroborated in our own day: viz., that the first musical expression of animal and man is purely rhythmic. The drum is the earliest musical instrument; the dance is the very backbone of music. Rhythm retains its natural, pristine correctness so long as it is the pulse of music performed by a coordinated group of musicians. The moment an appointed leader superimposes his individual rhythmic conception upon the group's collective (almost instinctive) sense of rhythm, there arise discrepancies in the styles of performance. Rhythm now becomes a problem. As early as the sixteenth century critics protested against the "arbitrary rhythmical movements" of the conductors. The sense of rhythm is inborn. It may be subtilized, but it cannot be acquired.

Toscanini brought a copy of his recording of Mozart's symphony in D major (Koechel 385) to Italy and played it for his colleagues. The first movement of the symphony finishes in the middle of a record, leaving no indication as to the exact moment the second section will begin. Involuntarily the Maestro, who had been beating the time during this record, with the close of the first movement, gave the up-beat for the second section on the very dot it actually began. This showed that for Toscanini the pause between the two movements had an exact rhythmical value. At a concert this pause cannot be observed faithfully because of the disturbing conditions in the reactions of the audience. In the enforced calm of the recording laboratory, however, it can be so observed. Originally measured before a living orchestra, this pause was reproduced in exact facsimile by the same conductor, although he now beat the time to a mere mechanical instrument—the gramophone.

Toscanini is, of course, an extreme example of rhythmical sensitiveness matched by few human beings. Yet his case shows that there exist natural laws of rhythm, still awaiting adequate scientific clarification, although they function unerringly in the subconscious of exceptional musicians and music-lovers.

I can recall striking instances of Mahler's rhythmical logic.

Pauses emphasized by *Fermatas*, technical marks of prolongation, separate the three fanfaresque chords which begin the overture to *The Magic Flute*. When Mahler finished the first chord, the ensuing pause was so long that I looked up from my score to find out why the conductor did not continue. Just then he attacked the second chord. Now came a pause that seemed still longer. When the third chord finally sounded the audience had grasped the idea Mahler wished to convey: the solemnity of the "trumpet"-call. He was the herald whose pronouncement awaited the reaction of his listeners. "Compose your thoughts for this message!" Thus Mahler established the central-idea of the Realm of Sarastro.

When, after the fugue, the same three chords returned, Mahler made the pauses even longer than before. That was quite logical and natural; for the mind, having been swept along with the tide of the *Allegro*, was now in a turmoil and needed still more time to recompose itself. Out of this breathlessness the central-idea must emerge again, more impressive and clear than at first. Its solemnity must be revealed on a still higher level.

A similar rhythmical presentation of an idea by Mahler during his early years (Leipzig) has been transmitted by Max Steinitzer (Stefan, page 43). "It was something to remember, the way he took the first four measures of the great Leonore-Overture (No. 3). In the most simple manner each one of the descending octaves became a moment of increasing import for us, until finally the low F-sharp lay revealed in its majestic, calm immobility."

These few instances (I could have cited many more) suffice to show how Mahler made rhythm a primary spiritual element of his interpretations. Rhythm to him was not the natural pulse-beat of a composition but rather the rhetorical accentuation of the evolving content of the work. His was a logical, perhaps a psychological, but certainly not an instinctive treatment of rhythm. Therefore the rhythmic element was a highly subtle matter for him. It would oscillate between rigid strictness and reckless daring. It was dominated by thematic considerations alone. Even beneath an apparent rigidity there was a world of almost imperceptible degrees of pulsation that was in open disagreement with the normal rhythmic beat of the music, sacrificing that to intensify the music's underlying spiritual content. He treated rhythm in the works of Wagner and Beethoven just as he did in his own symphonies: with freedom and flexibility, introducing startling accents and irregular melodic scansions.

In a word, Mahler's reading of rhythm was primarily rhetorical, not uniformly measured. He unhesitatingly disobeyed the letter of a score in this respect so that he might be more faithful to its spirit.

## VII.

*Tempi!* The first disputed and still the most debatable of all the characteristics of conducting. "He takes all the tempi. wrong!" is the commonest criticism one conductor whispers to you about another, implying that the so-called *right tempo* is the *sine qua non* of all correct interpretation.

When is the tempo *right*?

The great Monteverdi, in the preface to his eighth book of Madrigals (1683) distinguishes between two different species of tempo; the tempo "della mano" (of the hand) and the tempo "dell 'affetto dell' animo" (affected by the mind). By this delphic distinction Monteverdi means the tempo beaten by the hand of the conductor as opposed to that produced by the effect of the music upon the performers. To him the latter is the only right tempo, for he adds, somewhat maliciously, that it "operates without anyone beating time", meaning that the right tempo does not need a conductor.

Yet there can be no scientifically demonstrated *right tempo* just as there is no set, objectively correct interpretation. There is only a subjectively right tempo, i. e., the tempo which is *right* for one particular conductor.

We have a very precise, scientifically accurate device for fixing the right tempo: Maelzel's metronome. It is over a hundred years old. It stands on every piano; composers have used and still use it freely and frequently to indicate the exact tempo they want. However, musicians and especially conductors don't pay much attention to it. Even those who haven't read Beethoven's letters will cite Beethoven's dictum on

the metronome the moment you mention it to them: "It (the metronome) is a stupidity; you must FEEL the *tempi*!"

That's just what Monteverdi said in 1638 A. D.—and what Sibelius said (to Rodzinski) in 1937 A. D.

Yet subjective feeling is an unreliable means of achieving correctness of tempo, unless . . .

The late Max Smith devoted the last years of his life to a study of Toscanini's conducting-art. Smith assisted at all the Maestro's rehearsals and performances and, stopwatch in hand, measured carefully the minutes, seconds, and split-seconds Toscanini required for performing certain compositions. He timed at least twenty different performances of the *Eroica* and of Debussy's *La Mer* and found that Toscanini's readings of the same compositions on various occasions never differed in the slightest in this respect.

The late Otto Lohse used to look at his watch before giving the first upbeat and after the last note of an opera-act. His various timings of the same act of an opera, including the first act of *Götterdämmerung* and the last act of *Meistersinger*, never varied more than a few seconds.

Yet the majority of conductors, when sounded upon this very stability of tempo, will scornfully sweep the question aside, insisting that they are not metronomes, but free artists, conducting only according to the dictates of their heart and mood.

Nevertheless it is just stability that sets off the creative artist (even as interpreter) from the arbitrary gipsy. Toscanini illustrated this axiom once for all when he said, "I can't understand arbitrary changes in anything which is evident. If I study and restudy a work until I have attained a clear vision of it, then that vision becomes final. It cannot be altered thereafter." He meant that that conception could never entertain any essential, organic changes, such as revisions in tempo. What IS the real essence of any artwork? It is its integrity crystallized in the unalterable impression: Thus it is; so it must be; it cannot be otherwise. One may not alter the smile of Mona Lisa, nor the inscription on the door to Dante's *Inferno*, nor the prelude to *Tristan und Isolde*, nor for that matter, Toscanini's reading of Beethoven's *Pastorale*. A work of art (and conducting also has to be such a work) is irrevocably fixed, if it is really a work of art.

Though innumerable books, booklets, and articles have been written on Mahler, there never was, unfortunately, a Max Smith with his stopwatch to report whether Mahler subscribed to that rather amateurish notion of the artist being swept along by his momentary whims, or whether his tempi were as unchanging as his general conception of a composition, for the steady integrity of his tempi is the test of the artistic integrity of a conductor.

We have only a few rather contradictory, documents pertaining to this subject. There is, for instance, a mythical letter (unpublished and anonymous\*) supposedly written by a member of the Vienna Philharmonic

\*It seems to be the common fate of great revolutionary musicians to find biographers who overflow with praise and orthodox zeal, but who lack reliability, scientific seriousness, and sincerity of research. Neither of Richard Wagner nor of Mahler have we biographical works which can be compared with Wyczewa and Saint Foix on Mozart or with Kurth on Bruckner. The Stefans, Spechts, etc., are fanatical fighters against anybody who dares the slightest criticism of their idols, but they themselves do nothing of real importance to explain these idols.

Orchestra after Mahler's first performance of *Lohengrin* at the Vienna *Hofoper*. The writer asserts that he had played *Lohengrin* under Wagner's own direction and claims that, since that time, Mahler's was the first conductor with the *Right tempi*. He stresses especially Mahler's conception of the prelude, which he took just as slowly as Wagner himself, and the prelude to the third act, which he led in genuinely *Furioso* manner. In short, his conducting was Wagnerian, because Mahler "knew how to modify the tempi" to conform with Wagner's intentions.

If that letter is authentic it is a revelation. If it is apocryphal, i. e., trumped up to defend the conductor against the criticisms of the profession, it is still more eloquent, for then it proves that Mahler was inclined to slow up the slow tempi and speed up the swifter ones. A very primitive and crude statement, perhaps, but it hits the nail on the head. It implies that in order to bring out the central ideas as clearly as possible, Mahler accentuated every detail of contrast as sharply as possible, and especially contrasts of tempo. The Romantic tradition in music was all for the transitional evasion of violences; it doted on so-called medium-tempi and standardized, unobtrusive contrasts. Into that atmosphere of old-time Viennese mellowness Mahler crashed like a bomb-shell. Even at Hamburg, some years before, when he took over some concerts for von Buelow (who was quite a violent dramatizer himself) the orchestra rebelled against Mahler's tempi (Letters 136) just as they rebelled anywhere against his scorn of the classical tradition (Letters 102), against his habit of acceleration (Letters 477).

Furthermore, our letter implies that Mahler used to "modify" the tempo. That again (along with our disclosures concerning Mahler's rhythmic) means that he subordinated the tempo to the central idea of the composition. Thus, according to Steinitzer (Stefan p. 43), he began the *terzetto* of the dying Commendatore (in *Don Giovanni*) in a rather fast tempo, but immediately started to slow down very gradually and steadily, until the few bars of the postlude resulted in an "Adagio of the most moving effect." I remember this gradually expiring music well, because it was the first time that an operatic death-scene did not make a ridiculous impression on me, for I really had the feeling of the inexorable (steadily retarding!) approach of Death. Steinitzer does not mention that this effect was achieved in the first place by the reluctantly drumming monotony with which Leporello stammered his fast-beating counter-melody.

We see by this little instance how the general idea, in this case the concept of the dying father, modified the interpretation. Mahler's modifications consist not only in the striking *pp* Steinitzer notes relative to beginning of the *Allegro* of the third *Leonore*, but also in the slow beginning of that movement and its subsequent acceleration. Here we have the *finale-conductor* again, introducing the spiritual significance of architecture into his interpretation.

## VIII.

His highly individual employment of dynamics was one of the features by which one could single out Mahler's conducting.

An examination of the dynamics in Mahler's orchestral works reveals most interesting data concerning the orchestral language in vogue during the period of transition from Romanticism (Wagner, Strauss) to modern realism and expressionism (Alban Berg, Stra-

winsky). Such a study, moreover, throws particular light on Mahler's style as a conductor.

Mahler was so sensitive dynamically, that he himself rehearsed *Le Nozze di Figaro* (one of his most carefully prepared standard performances at the Vienna *Hofoper*) with orchestra and complete stage personnel throughout six successive general-rehearsals, when he brought that production to Salzburg. And why? Only because he wished to accommodate the opera perfectly to the acoustics of the Salzburg theatre.

The conductor's (Mahler's) treatment of dynamics was also subordinated to the demands of rhetoric.

In Mahler's time the outstanding style of dramatic interpretation on the legitimate stage was that for which Max Reinhardt (inspired by Stanislawski's *Russian Art Theatre*) was held responsible. It consisted in a rather fervid naturalism expressed through exaggerated declamation, exploiting all the possibilities of dynamics, from the hushed whisper to the stentorian shout in opposition to the pleasant transitions favored by tradition. The audience was to be taken by surprise. It was not characters, part of real, unobtrusive Nature, who acted the drama, but mere ideas personified, overstated by actors who were forced to be "symbols". As Mahler puts it (Letters 281) "all that is material must be dissolved into form; a higher realm of phenomena where types are individualities."

It is in keeping with such principles that Mahler reproaches the singer cast as Ortrud (*Lohengrin*) for having been too "loud" during her first scene with Elsa. "That was not the right tone for the hypocritical Ortrud with her mysterious behavior, her assumed meekness" (Letters 155). It made no difference to Mahler that Elsa would see through Ortrud's too obvious dissimulation. What mattered to him was that Ortrud be established as a regular villainess regardless of logic and psychology. (Logic and psychology were, and still are, despised by the idealists of expressionism.) I remember that scene very well: it was my first *Lohengrin*. In order to stress his idea of an innocent, sweet Elsa as contrasted with a saccharine, yet dangerous Ortrud, Mahler exaggerated all the musical marks Wagner wrote into this scene, the little *crescendi* and *dim.*, the sudden *sfz* and *pp*. Thus he created a magnificent suspense; he led up to the outburst "*Entweihete Götter*" in a way, that caused the audience to applaud that invocation if only to relieve its own tension; then he literally drenched the following scene, Ortrud's poisoning of Elsa's confidence, with the colors of a thrilling mystery-play. I could not help the feeling of overemphasis, unnatural declamation, cheap obviousness. *Lohengrin*, which (musically and dramatically) borders perilously on bad taste, attained with Mahler a strange flavor of artistic perfection through ham-acting singers and a ham-declaming orchestra. He engineered the dreamy prelude, from the *pppp*, (not the original *pp*) up to the *ff* of the brasses in such a way, that these brasses, instead of portraying the climax of an organic growth (usually one of Mahler's strong points) exploded like a sudden onslaught of blunt reality. Speidel, Vienna's most renowned dramatic critic, described this effect as "magical" (*zauberhaft*), while I remember only a harsh awakening from a dream. Yet the Wagnerian idea, the "program," was carried out; the Holy Grail descended to "earth," to be sure, but in this

case it reached "earth" with a crash. What was Mahler's reason? At the very end of the opera one knew it. There the *motif* returned again, austereley elevated, *fff* instead of the original *f*. The outburst in the prelude had been but a foreboding of this final touch. The linking central idea stood out above all. The effect was striking, a real delight to every intelligent theatregoer.

However, in the theatre and in the concert-hall I don't want to be "intelligent".

Mahler doted on dynamic contrasts. That anecdote concerning the premiere of his *First Symphony* is significant of Mahler's sudden dynamic assaults.\* He loved the "drastic treatment of the orchestra", (Stefan, p. 65), claiming that Beethoven favored it. When he edited Beethoven's *Ninth*, he intensified the markings, freely reinforcing or muting sound effects. In fact, such was his general practice.

One of his instructions given to the conductor of his *Second Symphony*, portrays, perhaps better than anything else, the theatrical nature of Mahler's dynamics.

He writes (Letters 316): "The audience is raised to the highest tension by the fanfares of the trumpets; now the mystical sound of the human voices (which may enter *ppp*, as if out of the remote distance) must come as a surprise. I suggest that the chorus (which has been seated until this point) remain seated, and rise only with the E-flat major '*Mit Flügeln, die ich mir errungen.*' I have found this to be an infallibly astonishing effect."

## IX.

By the term *agogics* we mean not only "the process and the result of modifying strict tempo to bring out the full expression of a phrase" (*tempo rubato*) (Pratt). We include within the limits of that term also any details of execution pertaining to the expressiveness of an interpretation.

In this connection the conductor-composer speaks best for himself in a letter full of good advice to a beginner in composition (Letters 191): "You are still too intent on 'sound and color'! That is a defect of all talented beginners doing creative work today. I know of a similar stage in my own development . . . Mood-music (*Stimmungsmusik*) is a dangerous foundation (*Boden*). Take my advice, for these things are no different than they were. Aim at THEMES clear and plastic, which may be readily recognized in any transformation or development whatever; next, at abundant variety, heightened by the clear contrasting of opposing themes, but above all, rendered interesting by the unfailingly logical development of the *central idea*. With you all this still seems confused. Furthermore: you must get rid of the pianist in you! Yours is not a setting for orchestra, but one conceived for the piano, and then somehow translated into the orchestral language. I too suffered from the same trouble. Today we all originate from the piano, while the old masters came from the violin and from singing."

You see? "Sound and color" are not Mahler's primary concern. He finds the expression of "moods" dangerous. Plasticity (which means distinctness) and the "logical development of the central idea" are his

\*At the *attacca* introducing the last movement, a dignified lady, shocked by the violence of the "attack," dropped her handbag, spilling its contents on the floor. (Letters 477)

leading principles. Therefore you will find no sweet sentimentality in Mahler's interpretation. The "soulful" *vibrato*, the sensual devices are alien to his ascetic intellectuality. He prefers to oppose phrases of "genuine contrast" against each other. He does not want the orchestral score approached from the pianist's viewpoint, for he regards pianistic phrasing (especially that instrument's wealth of *rubati* and *gruppetti*) as anti-logical, knowing it to spring from the chordal nature of the piano, a basic trait at variance with the melodic, singing quality of the orchestra.

Mahler would say to his orchestra: "I breathe every breath with you" (Letters 156). In other words he formulated even the small details of agogical expression in the rhetorical way, ever intent on the content of the single phrase, the meaning, to which the sound and color were to be subordinated.

## X.

He was a "linear musician," one who reads the orchestral score horizontally, perceiving melodies, as opposed to one who reads "vertically," concentrating on the harmonies.

"There is no harmony; there is only counterpoint" is an utterance legend ascribes to him (Stefan, p. 94). He proved this principle when he was a youngster, when he arranged Bruckner's *Third Symphony* for piano for four hands. He followed the orchestral score faithfully, striving "particularly hard to render the single voices in the characteristic range of the instruments, even though such practice sacrificed facile and convenient rendering on the piano" (Stefan, p. 29).

Mahler experienced music thematically, not harmonically. To him "accompaniment" did not exist. Every part of the orchestra expressed itself independently. It was Mahler who first showed that even second violins of Verdi were not monotonous *fillers-in*, giving them thought, life, and importance of their own. If Mozart is called the savior of the woodwinds (especially of the clarinet), Mahler justly may be called the savior of the *middle voices* (the *filling-in parts*) of the orchestra. His jest on his own style of composing also applies to his style of conducting when he quotes an imaginary critic and writes: "My musicians play without paying the slightest attention to each other and my chaotic and bestial nature reveals itself in all its vile nakedness" (Letters 220).

Listening to Mahler's music today we regard it as comparatively tame and harmonious. Yet in his own interpretation it sounded anything but simple. Similarly he made Beethoven and Wagner anything but the mellow classics they had seemed before him. We must remember that Schoenberg and his school were born out of the performances of *Tristan und Isolde* conducted by Mahler, for his *Tristan* often sounded like that modern *atonality* it actually created. Mahler's daring in leading of discordant parts against each other, regardless of traditional harmonic and esthetic tenets, created the revolution we call "modern music". The central idea, Day vs. Night, manifested itself by clash and discord, even during moments of the most peaceful transfiguration. Only the design counted, never the color. Today Mahler's polyphonic conducting does not appear revolutionary at all since almost every conductor born east of Munich calls himself a "pupil" of Mahler, though he never gave

a single lesson in conducting during his entire career. Result: the orchestras execute faithfully the most extravagant stupidities of their conductors.

The *Vienna Philharmonic* of 1900 was a band calculated to inspire fear in a conductor. "Suppose I did come to Vienna," wrote Mahler (Letter 102) "What tortures would I not have to undergo there with my manner of handling things musical? If I were only to attempt teaching my conception of a Beethoven Symphony to the famous Richter-trained *Philharmonicum* I would at once find myself in the midst of the most disgusting squabbles. That was my experience even here (at Hamburg), though, thanks to the support of Brahms and Buelow, I occupy here a position of unquestioned authority."

## XI.

Mahler was the father of that huge orchestra of our period of mass-minded superlatives that has to be furnished every conductor who has even a modicum of self-esteem. They can't perform with less than the now accepted 20-20-16-10-10 proportion of strings. Mahler transplanted his own magnified orchestral conception to the classics, particularly to Beethoven. He explained his principal notions of orchestral treatment when he justified his retouching of Beethoven's *Ninth*. In an announcement to the public he said:

"The unsatisfactory condition of the brass instruments at that time (Beethoven) rendered impracticable certain sequences of sound necessary to the undisturbed maintenance of the melodic line. It was that defect which gradually brought about the perfection of those instruments. Failure to utilize these improvements in order to achieve as fine a performance of Beethoven's works as possible would be a crime.

"The ancient device of multiplying (*Verfielfachung*) the string instruments eventually resulted in a corresponding increase of the wind instruments in order to attain a balancing reinforcement of certain parts without the slightest emendation of the orchestral voices. It can be demonstrated by means of the orchestral score . . . that the conductor was concerned only with following Beethoven's intentions to the smallest detail. Though he refused to be hampered by 'Tradition' in this regard, he wished neither to sacrifice the slightest intention of the master nor to permit such an intention to be lost in an overwhelming concordance of sounds" (Stefan, p. 66).

By "concordance of sounds" Mahler meant the result of the traditional practice of conducting Beethoven from the melodic-harmonic viewpoint, for he knew Beethoven as one who created not in harmony, but in counterpoint. Therefore (in his edition of Beethoven's *Ninth*) to balance the preponderance of the strings, he doubled the woodwinds, he added a third and fourth pair of French horns, and in the last movement a third and fourth trumpet. In 1900 such an innovation was attacked as a sacrilege; today it is a common practice.

Mahler dethroned the first violins from their ancient absolute sovereignty over the orchestra. The hitherto apathetic state of the second violins and violas was elevated to one of equality with the first violins and cellos respectively. The ascetic Mahler did away with the constant,

sweetish *vibratos*, with the sensuality and pompous glamour of the string section. The *Vienna Philharmonic*, glorying in the popularity of their emotional soarings, the sensuous, almost gypsy-like sobbing of their strings, resented being banished from the golden Viennese heart to the limbo of the Mahlerian transcendent brain, but the rich *Schmalz* they lost was amply compensated by a proportionate gain in deliberate, impressive delivery. Never before and never since Mahler did they play the prelude to *Lohengrin*, the *Adagio* of Beethoven's *Ninth*, the transfiguration music of Bruckner's *Fifth* with such unearthly, breathtaking spirituality. Mahler wanted singing passages in the strings played with the whole length of the bow, to contrast them with the short figures gasped at the frog or tittered at the point. He reveled in the higher positions of the violin G and D strings without indulging in the sentimentality natural to such fingerings. His *secco* of short, hard chords played by the whole section had the reckless, despotic dryness of a volley of gunfire; his tremolo was insidious rather than weird, for it sounded completely dematerialized. In general (if I may be permitted the comparison) Mahler's treatment of the string section had something of the intellectual style, the severe chastity of the Busch-Quartet's playing today; not much sex-appeal, but lots of logic.

It was through Mahler that the woodwind-section attained the importance it enjoys in all good orchestras today. He tempered the different colors of the various instruments to organ-like equality. When (especially in his beloved Beethoven) the different woodwinds alternated *concertante*, you never felt a break in color unless it was intentionally so marked, to achieve contrast. He even trained the single instruments to make imperceptible transitions from one position to the other. On the other hand, he exaggerated the tonal differences between those positions, if the dramatic expression so required. He made the naturally dark low register of the flute or clarinet sound almost black and urged the high register to shrillness. (Note the "vulgar" use of the C and the higher E-flat clarinets in his own symphonies.)

Often in unisons of strings and winds (flutes with violins or cellos and double-basses with bassoons) he forced the weaker winds to dominate the strings, even by doubling the winds, if necessary.

Mahler's pet hobbies in the orchestra, however, were the brass and percussion. (He grew up near the military barracks in Moravia.) The French horns, the group which tradition made transitional from the woodwinds to the brasses, were (strange enough for a basically Romantic musician) the most indifferent group to Mahler.\* I can't remember any particular feature of his treatment of them.

---

\*EDITOR'S NOTE.—"The horn (in the treatment of which authorities agree Mahler was one of the greatest masters of all time) had never had so important a role. To the noble level of expressiveness it had attained in Bruckner's hands Mahler added a new power, enabling it by means of dying echoes to carry smoothly an idea already exploited into a changed musical atmosphere. Sometimes a solo horn would issue with overwhelming effect from a whole chorus of horns among which it had been concealed, or singing in its deepest tones it would lend a passage the air of tragic gloom. In Mahler's resourceful use of the horn every register seemed possessed of a different psychological significance." Gabriel Engel, *Gustav Mahler—Song Symphonist*.

The trumpets and trombones, especially the trumpets, were his chief concern. These are the instruments most often mentioned in his letters. What he denied to his strings, he gave to his trumpets: sensuality, sweetness, even sexuality. This is one of the ironical "twists" in his musical nature. His exultant, solo-like projection of the climactic trumpet-passage in the second *Finale* of *Aida* still rings in my memory. It yelled like a joyous animal while the violins sounded restrained. The disciple of the wonderful Austrian military bands became a master in blending the brasses. They also were never mere accompaniment, "padding" of the highlights of a composition. Theirs were dramatic functions throughout. Somehow I always had the impression, when Mahler made the brasses enter, that they seemed to have already been playing, though they were certainly silent until that moment; or, with typically Mahlerian contrast, they came in as a sudden surprise. To them too he gave what he denied to the strings; sensuality, even a certain *vibrato* to the trombones and particularly to the Bayreuth Tubas, whenever they sobbed out their theme. Again, for contrast's sake, he had a certain way of getting a *secco* from his trombones that made you shiver: that hard, short *sfz*, almost like barking. He featured short but violent *crescendi* exaggerating them as in rearing *glissandi* (e. g., in the prelude to *The Flying Dutchman*). He blended woodwinds and brasses to a unity of sound never realized before. It is no idle praise of his conducting to assert that even specialists could not differentiate between woodwinds and brasses in the "offstage" passages of the cemetery-scene in *Don Giovanni*.

His percussion-battery shows equally the influence of his military boyhood surroundings. All his symphonies employ a large battery, culminating in the *Sixth*, where he used an especially constructed gigantic drum (an entire bull-hide stretched over a huge square sounding-board, beaten by a gigantic wooden hammer). This instrument really sounded like "fate pounding at the door", a programmatic nuance which Beethoven had been content to express with a modest kettle-drum. Mahler's percussion declaimed heavily. Glitter and despair, roughness and delicacy, literally ran amok in his percussion. He showed marked differences in his handling of timpani and bassdrums, *piatti* and *tamtam*. Their rhythm was always dominating; the entrance of the battery had somewhat the effect of outstanding solo-work.

## XII.

The conductor Mahler, consistent idealist by temperament and mentality, built up his reproductions (interpretations) on a rhetorical development of the central idea of a work to its final climax and exit (*the finale conductor*). All tectonic features (rhythm, tempo, dynamics, agogics, polyphony, orchestration) were subordinated to the archi-tectonic structure and had no independent significance. Mahler's rhythms were rhetorically accentuated, his tempi dramatically modified, his dynamics and agogics histrionically declaimed, his reading multi-voiced, contrapuntal rather than harmonic, his emphasis one of design rather than color; in short, interpretations which individualized the orchestral parts, making them carriers of integral, yet interdependent ideas.

The net result of such conducting was an unabashed intellectualism\* vehemently presented, almost placarded, by clairvoyant brainwaves.

Beethoven's dictum: "Music must beat fire from a man's mind", is often quoted, seldom felt, and rarely grasped in its ultimate meaning. Yet it was fully realized by Mahler the conductor.

With the *Vienna Philharmonic Orchestra*, Mahler performed 77 concert-works. Twenty five of them were by Beethoven.

---

\*In our times of rugged collectivism and instinctivism, the nomenclature "intellectual" is regarded as an insult equaled only by that of "individualist." Therefore, we must bear in mind that in Mahler's time brains and personality were the most honored property of man.

#### THE KILENYI MAHLER MEDAL AWARDED TO OTTO KLEMPERER

In appreciation of his efforts to create a greater interest in and appreciation of Mahler's music in this country, the Kilenyi Mahler Medal of Honor was awarded to Otto Klemperer after a performance of *Das Lied von der Erde* in Los Angeles. The presentation was made by Mr. Gurney Newlin, Vice-President of the Southern California Symphony Association.

---

#### LIEDER EINES FAHRENDEN GESELLEN, ANDANTE AND SCHERZO FROM SYMPHONY No. 1. RONDO FROM SYMPHONY No. 7 UNDER STOCK'S DIRECTION WITH THORBORG AS SOLOIST.

Kerstin Thorborg sang Mahler's *Lieder eines fahrenden Gesellen* at Orchestra Hall last night. She was in superb voice: she had provided herself with music that glowed with orchestral color; and she added, particularly in *Ich hab' ein glühend Messer* and *Die zwei blauen Augen* telling highlights of her own that gave a new significance to this tone picture. Not only enthusiastic salvos of applause but many cheers greeted her when she concluded the cycle. It made one realize that the steadfast efforts of Dr. Stock to bring Mahler to the hearts of Chicago concert-goers have not been in vain.

The slow movement and the scherzo from Mahler's *First Symphony* were played with delightful finish and effect. A listener would be dour indeed who could resist the contrapuntal meanderings of *Frere Jacques!* But the palm of this memorable Wolf-Mahler evening must go to Dr. Stock's rendition of the Rondo from Mahler's *Seventh!* Under his baton it became a thing of stirring climaxes. It waked the imagination. One might easily vision the victor at the portals of eternity suddenly saluting the distant battlefield of life now agleam with pennants of conquest and glory and reverberating with the clamor of a bell of triumph!

MARY R. RYAN

---

#### LIEDER EINES FAHRENDEN GESELLEN ON WABC

Mahler's *Lieder eines fahrenden Gesellen* sung by Fritz Lechner on May 4th was broadcast over WABC. Mr. Lechner sang the cycle with feeling and intelligence.

## THE VERDICT OF THE PUBLIC

The December 1936 issue of *Chord and Discord* contained an article entitled *The Case for Bruckner and Mahler*, a resume of public and critical reaction to all the Bruckner and Mahler symphonies that have been performed since the end of 1930. Certainly the receptions accorded Bruckner and Mahler performances in various cities should leave no doubt in the minds of program committees and program makers as to the growing interest in these composers.

Since our *resume* was published there have been more performances of Bruckner and Mahler at which listeners have continued to express their approval. Miss Isabelle Workman Evans (*Buffalo Courier Express*) reports that Bruckner's *Third*, Shuk conducting, was received "with much enthusiasm" and, according to Mr. Alfred Metzger, the same symphony under Shuk's direction was heard by one of the largest audiences that had attended the Federal symphony programs in San Francisco. In Rochester, according to Mr. S. C. Sabin (*Democrat and Chronicle*), "the audience was enthusiastic throughout the evening" (Bruckner's *Te Deum* was on the program and Genhart conducted). In Minneapolis "the audience approved of it heartily" (Bruckner's *Fourth* as conducted by Harrison), according to Mr. Victor Nilsson (*Progress Register*). Mr. Warren Storey Smith (*Boston Post*) tells us that "Koussevitzky's signal success with Bruckner's Seventh Symphony last season was yesterday repeated with the Eighth, and the answering applause was almost as hearty and long continued." Bruckner's *Fourth* was heard by one of the largest audiences that had gathered in the Brooklyn Museum last season and the applause was spontaneous and long continued. (Plotnikoff conducted.)

The music of Mahler too, has continued to stir audiences. Unmistakable evidence of this enthusiasm manifested itself in Boston last October after a performance of Mahler's *Fifth* followed by Wagner excerpts, under the direction of Koussevitzky, the conductor whose pioneering spirit has won him a place in American musical life which will outlive the memory of conductors who have been content to feed little but the accepted *war horses* to their audiences. Said Mr. Williams of the Boston Herald whose admiration for Mahler's *Fifth* can hardly classify him as a pro-Mahler fanatic: "Mahler's Fifth Symphony had an amazingly cordial reception from yesterday afternoon's audience. This was a good sign first because it floated the rather lop-sided genius of Mahler for once on an even keel and, second, because it was a credit to the attentive powers of the audience. You cannot call the Friday afternoon public stuffy—and there used to be regrettable sneers on that head—if it is going to take Mahler to its bosom . . . . Unpredictably enough yesterday's hero was Mahler." And Mr. Durgin's comment (*Globe*) concerning the audience reads as follows: "Word that the hall was sold out, received before the concert began, suggested that Wagner more than Mahler was responsible. Yet the cordiality with which the Fifth Symphony was received tempts one to revise his opinion. There was spontaneous applause after the Scherzo and the slow movement; at the end the audience applauded with more than customary warmth and there were a few cries of 'Bravo!' Mr. Warren Storey Smith of the Post calls the performance of Mahler's *Fifth* a momentous re-

vival and thinks that "this well-named 'Giant' Symphony deserves by reason of its intrinsic greatness and of its reception by yesterday's audience, to remain in the active repertory, to which Dr. Koussevitzky has at length restored it in a performance which proved a triumph for both composer and conductor." Mr. Bruno David Ussher wrote in the *Symphony Magazine* of the Los Angeles Philharmonic: "Gustav Mahler's simple and profound second symphony is programmed for this pair (Nov. 24 and 26, 1937) in response to numerous requests. Given here first May 24 and 25, 1935, the musical and symbolic immensity of this work, often couched in almost naively folksong-like idiom resulted in a continuous demand for another hearing. After Koussevitzky conducted *Das Lied von der Erde* in New York, Mr. Winthrop Sargeant reported in the *N. Y. American* that "the audience showed its approval of the work in unmistakable terms." According to Mr. Olin Downes (*Times*), Tibbett "was long and warmly applauded for this performance" (*Lieder eines fahrenden Gesellen*, Ormandy conducting). Miss Mildred Norton (*Evening News*) reported that in Los Angeles *Das Lied von der Erde*, Klemperer conducting, "met with a royal reception," while "not only enthusiastic salvos of applause but many cheers greeted her (Thorborg) when she concluded the cycle" (*Lieder eines fahrenden Gesellen*, Stock conducting the Chicago Symphony), according to Miss Mary R. Ryan.

In the *N. Y. American* (Nov. 29, 1936) Mr. Winthrop Sargeant summed up the general attitude towards Bruckner and Mahler. He said in part:

"I have yet to witness a Mahler performance that was not well attended. The people, who religiously rise and leave the hall in the middle of every Bruckner symphony, are an insignificant minority, and one usually feels that they are acting on principle rather than on any spontaneous impulse. All the recent performances that I have heard have been at least reasonable successes, from the standpoint of box office and applause. Yet the superstition remains deeply rooted that Bruckner and Mahler must be fed to the public, if at all, in very small doses. And the large body of concert-goers has had so little chance to hear them that it retains only a hazy impression of either master.

"The suggestion has been made in some quarters (Mr. Pitts Sanborn made the suggestion) that a complete Bruckner cycle be held. Why not indeed? . . . Even for those who are hopelessly anti-Bruckner and anti-Mahler a complete hearing of their works would have one advantage. It would silence once for all that annoyingly pertinent argument of the Bruckner-and-Mahlerite, that you can't claim to dislike music you haven't heard."

Judging by the reactions of audiences to Bruckner and Mahler performances, these composers offer a real opportunity to broaden the standard repertoire. In Europe Bruckner and Mahler festivals are not uncommon. Festivals are not expected here, as yet. All that can be hoped for is that Bruckner and Mahler be given a *fair* hearing in concert halls and on the air, that Brucknerites and Mahlerites be given some consideration. The public is the jury, as the late W. J. Henderson declared, and the public has expressed its verdict in no uncertain terms.

## BRUCKNER AND MAHLER RECORDINGS ON WQXR AND WNYC

Last spring Mr. Eddy Brown, the progressive musical director of the Interstate Broadcasting Co., suggested that the Bruckner Society cooperate in arranging a Bruckner-Mahler Radio Festival over WQXR. As a result Mr. Gabriel Engel gave several radio talks on Bruckner and Mahler and the Interstate Broadcasting Co. sent out thousands of copies of the following introduction (prepared by Mr. Engel) to supplement its regular monthly programs.

### ANTON BRUCKNER

Picture a charming, old Upper Austrian village that has been slumbering for centuries not far beyond the walls of a stately monastery, still more ancient. Immediately surrounding it on every side, like an emerald setting, deep woods; in the distance the snow-capped Alps of Bavaria; the soil and atmosphere everywhere rich in mystic folk-lore and blessed with an inexhaustible fund of folksong unsurpassed for melodious wizardry. Sum up these wonders of environment—peace, faith, nature, romance, grandeur, mysticism—and you have the subtle alchemy which Providence applied to the nurture of Anton Bruckner's genius. In the sum of those ingredients is hidden the only reliable key to the profound message of Bruckner's symphonies. They are the word symbols of the powerful influences which swayed his soul from infancy until, a man close to middle age (if we must reckon biblically) Bruckner shyly ventured forth beyond the sheltering borders of his native Eden countryside to bring to an outer world convulsed with strife and skepticism his symphonies of assuagement and affirmation.

These symphonies were nine in number. Viewed as we have suggested they clearly mirror the trials of the soul midst its earthly environment. The *First Symphony* reflects the tremendous inner struggles of a spirit that would transcend all, though confined by the narrowest of barriers. The *Second* is a quest for consolation, a soothing reaction from the preceding tempest of unrest and futile aspiration. It sings the lure and charm of the contented Upper Austrian countryside. The *Third* is again a tocsin of revolt, urging the spirit to loftier flights. The *Fourth* is a shining Pastoral, a romantic song of Nature. The *Fifth* is the triumphant Faith-song of the unconquerable soul, revelling in the full glory of its power. The genius has at length gained the summit of the mountains and, like Zarathustra, beholds the whole cosmos revealed in a flame of universal Love. From now on, all is affirmation and gladness. The *Sixth* sings the goodness of mortal existence as a whole. The *Seventh* is an Ode to Heavenly Joy, a Te Deum for all the preceding revelations. The *Eighth* is the colossal auto-biography of human genius, the Titan overcoming all opposition. The *Ninth* is the composer's "Farewell" from the world and his exultant greeting to the Hereafter, actually attained in the midst of his last symphony's still unfinished song.

Bruckner's *Fourth* Symphony is the earliest of which a complete recording exists. This work has been more or less aptly nicknamed the *Romantic*, for it is primarily a symphony of Nature, its background the charming valleys, luxurious woods, and towering mountain ranges of Upper Austria. Compared with his first three symphonies, the *Fourth* is like the sunrise of a new day after a long stretch of stormy weather. It is the first of an uninterrupted line of four joyous symphonies conceived in the major mode. The *Seventh Symphony*, which has also been recorded in its entirety, is the last of this happy line. When Bruckner finished it he was a man of sixty, spiritually at the zenith of his power. No wonder that for

sheer melodic beauty, for pure joy in music, the *Seventh* is unexcelled. On this account it has become one of the most popular of Bruckner's symphonies.

### GUSTAV MAHLER

When Mahler finished his *First Symphony* he wrote to his dearest friend:

You alone will understand it, because you know me. To others it will sound strange.

That was half a century ago.

After a recent performance of the work by the N. Y. Philharmonic under Bruno Walter one of the foremost American critics said:

At one time I, too, in less mature judgment, denied Mahler any outstanding worth at all, except that he had mastered a method of colorful orchestration. I feel that I have come to see more than that in Mahler.

Upon the same occasion another critic predicted for the *First Symphony* a popularity rivalling that of Tschaiakowsky's *Pathetique*.

Mahler went on to compose symphony after symphony, and as his individuality attained more and more vivid expression the misunderstanding of his listeners increased. Twenty years after his *First* he completed his *Sixth Symphony*, that gloomy composition generally known as the *Tragic*. One of his friends, shocked by the extreme bitterness which swayed this work to its ultimate echo, asked him reproachfully, "How could a man as kind-hearted as you have written a symphony so full of bitterness?"

Mahler replied, "It is the sum of all the suffering I have had to endure at the hands of life."

Yet, of all his symphonies, this is the only one that ends on a note of pessimism. Even that tempest of spiritual pain, *Das Lied von der Erde*, subsides midst a rainbow of hope, the promise of eternal rebirth.

The *Ninth*, the last completed symphony Mahler left the world, is a deep, soul-stirring paean of faith, such as most would associate with that great symphonic voice of unshakable affirmation, Anton Bruckner.

Because Mahler was one of the world's foremost conductors hosts of music-lovers admired him, but, almost without exception, these greeted his creative efforts with pitying bewilderment. Mahler, understanding their failure to understand him, smiled wistfully and said, "My time will yet come."

He did not live to share the instant triumph of *Das Lied von der Erde*, a victory confirmed by every subsequent performance given the work down to this very day. Since his death the progress of most of his music in the public esteem has been slow but sure, bearing out his own patient prophecy in that famous laconic utterance of confidence, "My time will yet come."

Still in the case of the only one of his symphonies as yet recorded, the *Second*, or *Resurrection Symphony*, that prophecy was never pertinent. From the very first hearing given this stupendous choral work (Richard Strauss himself conducted the premiere at Hamburg in 1895) each performance has lent it added lustre until its unflinching human appeal has stamped it as an undeniable classic of the symphonic repertoire. Curiously enough, this *Second* is spiritually Mahler's first symphony, conceived and planned several years before he began to write his real *First Symphony*. Thus it is in every way the true "open sesame" to the understanding of all his works.

Few are aware that Mahler ever tried his hand at poetry. Shyness caused him to suppress practically all his verses. Fortunately, one of the short poems written during the period when he was planning his *Resurrection Symphony*, has survived.

It seems to throw some light upon the first movement, the only authorized clue to the dark, ominous character of which is the one phrase, "Death-Celebration."

The night looks softly down from distances  
Eternal with her thousand golden eyes,  
And weary mortals shut their eyes in sleep  
To know once more some happiness forgotten.

See you the silent gloomy wanderer?  
Abandoned is the path he takes and lonely,  
Unmarked for distance or direction;  
And oh! no star illuminates his way,  
A way so long, so far from guardian spirits,  
And voices versed in soft deceit sound, luring,  
When will this long and futile journey end?  
Will not the wanderer rest from all his suffering?

The Sphinx stares grimly, ominous with question,  
Her stony, blank gray eyes tell nothing,—nothing.  
No single, saving sign, no ray of light—  
And if I solve it not—my life must pay.

Resurrection and eternal life, triumphantly envisioned in the colossal closing chorus, represent the composer's solution of the enigma of existence.

Every available Bruckner and Mahler recording was broadcast during March and again in November. Various recordings of works of these composers were included on the programs of WQXR every month by Mr. Douglas MacKinnon, Musical Commentator of this station. As a supplement to its October programs, WQXR again sent out thousands of copies of the introduction, which also contained announcements of free lectures to be sponsored by the Society in cooperation with the New York Public Library and the Music Club of Hunter College during the season 1937/38.

Soon after the Interstate Broadcasting Co. had demonstrated its pioneering spirit, another station, WNYC., fell in line. Through the cooperation of Dr. Seymour N. Segal and Mr. Henry Neumann thousands of copies of the introduction printed above were sent out by the municipal station with its quarterly programs in April and October. Mr. Engel gave short talks on Bruckner's *Fourth* and *Seventh* and Mahler's *Second* and *Kindertotenlieder* preceding the broadcasts of the recordings of these works. Broadcasts of recordings of Bruckner's *Fourth* (Victor) and *Seventh* (Victor), Mahler's *Second* (Victor) and *Das Lied von der Erde* (Columbia) may be heard on both stations (WQXR and WNYC) from time to time. No doubt other recordings of Bruckner and Mahler works will be heard over these stations as soon as Victor or Columbia releases them.

---

#### BRUCKNER'S FOURTH BY THE WPA

The Brooklyn Symphony Orchestra under the direction of Eugene Plotnikoff performed Bruckner's *Fourth* before one of the largest audiences that had gathered in the Brooklyn Museum last season, according to an announcement made by the commentator over Station WNYC. If spontaneous and enthusiastic applause is the means used by an audience to show its approval, then one must wonder why the work has not been repeated, especially in view of the satisfactory attendance.

## NEW RECORDINGS

*Das Lied von der Erde*, the recording of which was advocated by Mr. Lawrence Gilman several years ago, has recently been released by Columbia. According to Mr. Aaron Stein of the *N. Y. Post* "what must have been one of the memorable concert hall experiences of our time has been impressed on records with extraordinary success . . . For the Mahler cult, whose devotion is notorious, these records will, of course, be a must. They should, however, receive wider attention than that . . . It is in every sense a perpetuation of an epochal musical event."

"With a long and wide ranging list of recordings behind him (Walter), for sweep and effect that never lapse," writes Mr. Compton Parkham of the *N. Y. Times*, "he has not done anything so impressive as this for the gramophone."

---

The RCA Victor Co., the first of the gramophone companies to release recordings of complete Bruckner and Mahler symphonies in this country, has presented to the American music loving public a first recording of the original version of Bruckner's *Fourth Symphony*. Mr. Jerome D. Bohm of the *Herald Tribune* writes: "Since I am a devout Brucknerite, I cannot but feel that the great Austrian's formal shortcomings have been greatly exaggerated and I do not propose to defend him since I do not feel that he needs defending. Bruckner's utterances in the *Romantic* symphony are profoundly moving and will undoubtedly stir the world long after the last anti-Brucknerite has joined his forefathers. Anyone who can listen to the mysterious, unearthly strains of its opening pages or to the dirge-like andante without being deeply affected, is merely insensitive to the message of one of the most spiritual of all composers. The interpretation here transmitted to the discs is for the most part felicitous and veracious . . . ."

---

## AVAILABLE RECORDINGS

### BRUCKNER

SYMPHONY No. 3 IN D MINOR—Scherzo

By Vienna Sym. Orch. Victor.

SYMPHONY No. 4 IN E FLAT MAJOR ("Romantic")

Saxonian State Orchestra, cond. by Karl Böhm. Victor.

SYMPHONY No. 7

By Eugene Ormandy and Minn. Sym. Orch. Victor Album.

SCHERZO FROM THE POSTHUMOUS "YOUTH SYMPHONY"

By Berlin State Orch. Victor.

### MAHLER

SYMPHONY No. 2 C MINOR

By Eugene Ormandy—Minneapolis Symphony Orch. Victor Album.

DAS LIED VON DER ERDE

Bruno Walter, conductor; Vienna Philharmonic. Soloists: Kerstin Thorborg and Charles Kullman. Columbia Album.

KINDERTOTENLIEDER

Heinrich Rehkemper, Soloist. Polydor Album.

## SYMPHONIC CHRONICLE

### A Record of Critical and Popular Reaction

#### GUSTAV MAHLER— DAS LIED VON DER ERDE

*Boston Symphony Orchestra, Serge Koussevitzky, conductor; assisting artists, Maria Ranzow and Paul Alt-house, Nov. 6 and 7, 1936.*

. . . No score exists in modern music to parallel the qualities of this spiritual testament of an artist who conceived it toward the end of his days—when life had become for him a heavy burden and a mocking presence. For this reason it really ought not to share a concert program with anything else. Small wonder that a superb performance of Mozart's work yesterday afternoon was almost obliterated in memory by the searing intensities of Mahler's music . . . .

. . . Many another poet has written of these things. But Mahler's treatment of them, with music of indescribable emotional depth resulted in a lonely masterpiece in which are inextricably mingled poetry, music and philosophic thought. Such intimate speaking from a full heart is not for those who merely "enjoy" music; they will be unmoved by "The Song of the Earth", and they will not have the slightest understanding of it. Without extravagant claim, this masterpiece may be said to be felt rather than heard, since Mahler concerned himself less with art than with life itself. Full realization of what "The Song of the Earth" meant to the composer is possible only when one has a notion of the troubled heart of Mahler, whose idealistic dreams were cruelly wounded by the rougher side of his experience . . . .

—C. W. D., *Boston Globe*

. . . It is one of the finest tributes that can be paid to Mahler's music to say that none but Mahler could have written it. There are reminiscences of other composers, but they are few and unimportant. We are only beginning to realize, I think, how original a composer Mahler was. His originality is exhibited in his formal schemes, obviously; in his melodic line and his harmonic vocabulary; above all, in the color of his instrumentation. The individuality of Mahler is reflected in his influence on other composers; an influence which, far from being negligible, is in some respects the mainspring of the whole Viennese school of Schoenberg . . . .

. . . Yesterday's performance was glorious. Dr. Koussevitzky was in one of his best elements. (It is strange, not that he should present the music of Mahler as often as he does but that he does not include it even more frequently on his programs.) His orchestra was with him at every stage in a presentation that seemed exceptionally well prepared . . . .

—MOSES SMITH,  
*Boston Evening Transcript.*

Within the space of five weeks the current season of Symphony Concerts has yielded two "occasions"; first, the double anniversary performance of Liszt's "Faust" Symphony, and now a repetition of Mahler's "Song of the Earth", 25 years almost to a day after the first performance of it in Vienna. And by the word "occasion" something much more than mere ceremonial and observance is intended.

Two pieces made the programme which Dr. Koussevitzky offered yesterday and will repeat this evening, Mozart's Symphony in C major, No. 34, an early yet delightful work, and the symphony, if it may be so styled, of Mahler. Yet it is only when there is a need to review the concert as a whole that the symphony of Mozart comes even to mind, so overwhelming was the impression made by the music of Mahler and by the performance of it at the hands of Dr. Koussevitzky and his orchestra . . . .

—WARREN STOREY SMITH, *Boston Post*

#### GUSTAV MAHLER— LIEDER EINES FAHRENDEN GESELLEN

*Philadelphia Orchestra, Eugene Ormandy, conductor; Enid Szanthy. Soloist December 16, 1936.*

. . . Mahler's songs are delicately molded and call for an interpretative style which can command a variety of expression without suggesting complication. No singer who has sung them in recent seasons has met the requirements as brilliantly as Miss Szanthy met them last night. The soloist's manner and method suggested simplicity itself, but the effect embraced all the subtleties of Mahler's musical and poetic expression.

—HENRY PLEASANTS, *Philadelphia Evening Bulletin.*

... These qualities were best shown in the four "Songs of a Wayfarer" of Gustav Mahler, works which are among the most difficult in the repertoire to make effective. Mme. Szanthe did so, however, and her style of singing varied with the emotional content of each number as expressed in the music, the text and the instrumentation.

As Mahler wrote the words himself, there is unusual unity between them and the music, a point of which Mme. Szanthe made the most. Mr. Ormandy gave her a sympathetic accompaniment.

SAMUEL LACIAR,  
*Philadelphia Evening Ledger.*

### ANTON BRUCKNER— THIRD SYMPHONY

*Buffalo Philharmonic, Lajos Shuk, conductor. January 8, 1937.*

... The program claimed this as the first local performance of any Bruckner symphony. This virile work is a powerful expression of an imaginative mind and a profound spirit. The first two movements are particularly strong, with their lyric thematic material and talented orchestration. The audience received the Bruckner opus with much enthusiasm . . .

—ISABELLE WORKMAN EVANS,  
*Buffalo Courier Express.*

... This Third has dramatic force especially in the first and last movements, and it can boast a wide-awake Scherzo . . .

—EDWARD DURNEY, *Buffalo News.*

... The Scherzo has a compelling rhythm, and the last movement presents some beautiful lyric phrases. The texture is closely wrought and there is adept scoring, the fresh strong color of the wind instruments being often and effectively used.

The presentation of the work was very enjoyable, arousing great applause for Mr. Shuk and his players . . .

—MARY M. HOWARD, *Buffalo Times*

### ANTON BRUCKNER— TE DEUM

*Eastman School Orchestra, Paul White, conductor; Eastman School chorus, Herman H. Genhart, conductor; soloists Hazel Gravel, Lodema Legg, Sidney Carlson, Kenneth Spencer, Janina Gorecka; Rochester, N. Y., Jan. 21, 1937.*

... Five sections of Bruckner's Te Deum came as music entirely new to Rochester audiences. The music appeal is conceived with sincerity to the text,

with fine form in writing for both chorus, orchestra and ensemble. It has dramatic fervor. The solo quartet adds some of the most appealing performance to the whole. Last night's quartet sang well. Sidney Carlson, its tenor, was an asset to success. And the chorus, obedient to its conductor, met the climax and effects realized by sharp contrasts to give its work dramatic significance . . .

... The audience of last night was enthusiastic throughout the evening.

—STEWART C. SABIN, *Democrat and Chronicle*

### ANTON BRUCKNER— FOURTH SYMPHONY

*Minneapolis Symphony, Guy Fraser Harrison, conductor. Feb. 11, 1937.*

... Nor could we find any trace of the Wagnerian influences we hear so much about when this composer's works are discussed. There were in nearly every movement evidences of a passion for tones in the brass; these, however, were by no means in the Wagner idiom; they are distinctly individual, sonorous, and through them some of the finest effects of the evening were achieved . . .

—JAMES DAVIES, *Minneapolis Tribune*

... Quite unproblematic also is the music of Bruckner's Fourth Symphony. The orchestration and the harmonic structure are as uncomplicated as the content is simple and sincere. Combining intelligent clarity and freshness of feeling in his reading, the conductor interpreted aptly the atmosphere of the first movement, with its simple themes recalling the clear bugle calls of Alpine regions, and its quiet breath of an organ choral leading to the ending in a blaze of brass.

For the pensive tunes of the slow movement, tinged with a resigned sadness, the conductor showed a sympathetic understanding, calling out rich sonorities from the orchestra . . .

—JOHANN STORJOHANN EGILSRUD,  
*Journal*

... The symphony was the Bruckner Fourth, in E flat, called the "Romantic." Some seem to wonder how it has won this surname. They have probably never been at Mondsee where when the symphony was written poet and peasant rubbed shoulders with emperors and queens and roused by the nature beauty and mystery of Alps and lake imagination ruled. Strindberg there lived through an excruciating act of his

second matrimonial drama leading up to his "Inferno." In such a nature it comes natural for great simple souls to write Bruckner symphonies or Andersen fairy tales, and as in this case, with both allegros and slow movement filled with wonderful horn music, and the scherzo echoes some hunting party with an old laendler of Kuhreigen harmonies for trio. A very fine interpretation was given of the Bruckner E Major and the audience approved of it heartily, not least for the very beautifully made viola music in the andante...

—VICTOR NILSSON, *Progress Register*

### GUSTAV MAHLER—

#### DAS LIED VON DER ERDE

*Boston Symphony Orchestra, Serge Koussevitzky, conductor; soloist, Maria Ranzow and Paul Althouse; New York, Febr. 12 and 13, 1937.*

... As one listened to Mr. Koussevitzky and his great orchestra traverse the pages of Mahler's poignantly moving score, the conviction grew that this was perhaps the most enduring music in its genre created by any composer since Wagner. This is especially true of the concluding movement, "Abschied", which, with its ineffably tender breathing of the word "Ewig," at the close, is unforgettablely touching.

Again the impression was renewed that the school of polytonal composers stems directly from Mahler. Here, in "Das Lied von der Erde", one finds the origin of the procedure of juxtaposing horizontally conflicting melodies regardless of the harmonic acerbities resulting. And here, too, the hearer will discover the sources of the newest type of instrumentation.

The interpretation by Mr. Koussevitzky and his players was often affecting and always satisfying tonally. One has heard certain portions of the work set forth with greater inwardness, but the silence of the audience before bursting into applause at the conclusion bespoke the integrity of the conception . . . . .

—JEROME D. BOHM, *Herald Tribune*

... "Das Lied von der Erde," which, if memory serves, has not been given in Carnegie Hall since Bruno Walter's performance of it with the Philharmonic-Symphony Society some four years ago, is a work that suffers from undue neglect here. Its six sections contain many pages of poetic loveliness; music that rises up in glorious tumult, following as it does the mercurial lines of Hans Bethge, upon which it is based...

An audience of good size and great enthusiasm attended.

—R. C. B., *N. Y. World Telegram*

Gustav Mahler's profoundly touching "symphony" entitled "The Song of the Earth," for tenor, contralto and orchestra, was presented with reverence and passion last night at Carnegie Hall by the Boston Symphony Orchestra under Serge Koussevitzky. The soloists were Paul Althouse and Maria Ranzow, whose voice has a quality peculiarly effective for her poetic role in this work . . . . .

—H. B., *New York Post*

Last night in Carnegie Hall, Serge Koussevitzky and the Boston Symphony Orchestra provided New York with its first hearing this season of a work by Gustav Mahler. The work was one of the most ingratiating of the great romantic master's compositions, "Das Lied von der Erde." . . . . .

... "Das Lied von der Erde," or "The Song of the Earth," represents the intimate rather than the heroic Mahler. It is a work of pastel shades and delicate moods. And yet its message is one of poignant emotion expressed in fantastic and imaginative terms. For those who have learned to appreciate its subtle mysticism, it remains a product unique in the whole repertoire of symphonic music. Without question it should be accorded its place among the most profound and beautiful musical works that have graced our century . . . The large audience showed its approval of the work in unmistakable terms . . . . .

—WINTRHOP SARGEANT, *N.Y. American*

### GUSTAV MAHLER—

#### FOURTH SYMPHONY

*Chicago Symphony Orchestra, Frederick A. Stock, conductor; Claire Dux, soloist. Feb. 25—26, 1937.*

... Aside from her "Morgen" (of which more anon) Mme. Dux's most remarkable interpretative gesture of the evening was a performance of that astonishing bit of whimsey which Mahler wrote into the finale of his fourth symphony. "Brightly, and with childlike expression," commanded the composer. Bright and childlike was the singer's delivery, with a seraphic innocence which is implicit in the words of the song (a list of heaven's gustatory delights—meat, wine, bread, vegetables, fruit—preceded and followed by tributes to the mirth and gayety of the place).

... Frederick Stock made much of the, curious Mahler symphony, keeping the performance light and transparent and emphasizing the attractive naivete of the themes. The capricious twists which the composer succeeds in introducing into these straightforward themes help make the symphony absorbingly interesting, at least . . .

—EDWARD BARRY, *Chicago Tribune*

... Her participation as soloist accomplished the addition to the repertoire of two works of great interest and occasioned a revival of one of the most entertaining and least symphonic of all symphonies. This light-hearted work is the fourth of the series left the world by Gustav Mahler, and the cues to its quaint psychology are many. It glorifies the folk-songs of Moravia, which are German as often as they are Bohemian. Not that the intriguing themes which Mahler has employed are quotations. Rather they are idealizations, fascinating in their originality, their humor, occasionally in their nobility, and always by reason of their unexpected rhythms and the soft and varied luster of the orchestral setting . . .

—GLENN DILLARD GUNN,  
*Chicago Herald and Examiner*

... The symphony is one of Mahler's most beautiful and straightforward works, although in it his skill continues inventive to an almost distracting degree. Nevertheless, the score does breathe the German love of nature and the German love of a warmth of inner contentment, and it proceeds so intensely that the quietness with which he sets the folk-song text in the final movement comes with a felicity of restraint and simplicity that leaves one breathless at the gentleness of his touch . . .

—EUGENE STINSON, *Chicago Daily News*

### GUSTAV MAHLER— LIEDER EINES FAHRENDEN GESELLEN

*Philadelphia Orchestra, Eugene Ormandy, conductor; Lawrence Tibbett, soloist, New York, March 9. Philadelphia, March 12, 13, 16.*

... The Mahler songs were very welcome and the singer most successful in the second and third . . .

... Mr. Tibbett was long and warmly applauded for this performance . . .

—OLIN DOWNES, *New York Times*

... Mr. Tibbett's share in last night's proceedings was of an engrossing nature. He had chosen for his initial

number Mahler's song-cycle, the "Lieder eines fahrenden Gesellen"—music less often heard here today than formerly . . .

... In his First Symphony, begun at this period, Mahler used themes from two of the songs.

The real Mahler is indeed disclosed in these songs—not only in the exquisite and characteristic scoring, but in the whole texture of the music. In nothing else that he wrote does the best of him shine forth as it does in the second of the songs, "Ging heute Morgen über's Feld"—that enchanting evocation of the loveliness of the morning earth, with only man's immitigable grief to mar it.

It was in this song that Mr. Tibbett last night was most persuasive (though he sang all four with obvious devotion) . . .

—LAWRENCE GILMAN, *Herald Tribune*

... The four songs of this group communicated a personal message, for they were written after the unhappy ending of a love affair. They have a directness and simplicity of utterance which makes them singularly touching . . .

These songs possess an unaffected spirit and their sincerity breathes vitality into them. Mr. Tibbett sang them very well, indeed, despite one or two bits of uncertain tone production. His interpretation was well planned and his delivery was marked by fine restraint and a noteworthy dignity . . .

—W. J. HENDERSON, *New York Sun*

... The four songs, patterned to a certain extent on folk-song lines, represent Mahler in his happiest mood. The melodies of two of them have served also as material for his First Symphony, where their genial, naive lines contribute to a vaster structure. Here in the cycle their treatment is simple enough, and yet imbued with that strange melancholy that is part and parcel of everything Mahler wrote . . .

—WINTHROP SARGEANT, *N.Y. American*

... The outstanding number of the concert, from the point of view of performance and high artistry, was Mr. Tibbett's rendition of the four songs with orchestral accompaniment forming Gustav Mahler's "Songs of a Wayfarer." . . .

... The songs are extremely difficult to make effective, requiring a very considerable amount of dramatic ability as well as great singing in actual voice production, in its color and in dramatic feeling, even in facial expression.

Mr. Tibbett left nothing to be desired. Each of the four, all radically different in character, was a masterpiece and was so recognized by the audience, which gave him a tremendous reception at the close . . . .

—SAMUEL L. LACIAR, *Evening Public Ledger*

. . . The songs are as much orchestral as vocal, and the melodic line is often dependent on the orchestral commentary for the full projection of the mood. The delicately fashioned commentary was most expressively played by Mr. Ormandy and the orchestra . . .

—*Evening Bulletin*

### GUSTAV MAHLER— DAS LIED VON DER ERDE

*Los Angeles Philharmonic, Otto Klemperer, conductor; Hertha Glatz and John Heinz, soloists. March 18 and 19, 1937.*

Last night's capacity audience in attendance at the Philharmonic Auditorium to hear the excellent program offered at the regular symphony pair of the Philharmonic Orchestra, was held overtime for the ceremony of presenting Dr. Otto Klemperer, the popular conductor, with a Mahler Medal of Honor, from the American Bruckner Society, an organization which is interesting itself in the proper performance of both the Bruckner and the Mahler works. Gurney Newlin made the presentation . . . .

. . . The music is intricately beautiful, abounding in short melodic turns that carry the feelings from one thrill to another unceasingly. Momentarily it is the first violin that voices its impulse, then it is the oboe, then the brasses and finally every instrument has seemed to have added its own individual word. . . .

. . . The orchestra personnel from first to last deserved the acclaim that it received from the audience and Dr. Klemperer has never given a work with more careful and ingenious feeling. Being somewhat of a mystic himself, he made Mahler's last composition a page of real life, creating a spell in the beginning which he held until the last note . . . .

—CARL BRONSON, *Herald and Express*

Bach and Mahler made a distinguished program for the Philharmonic Orchestra led by Otto Klemperer at the Auditorium last night . . . .

. . . The presentation of the Mahler Medal of Honor to Klemperer from the American Bruckner Society was made after the performance. Mr. Gurney Newlin, vice-president of the Southern California Symphony Association, made a brief speech followed by an audience demonstration . . . .

. . . The mystic symbolism of the poet's welcome of eternal rest has been used by Gustav Mahler to inspire transcendent music in "The Song of the Earth." The "songs"—there are six settings to the word of Chinese poets, Li Tai-Po, Tschang-Si, Mong-Kao-Jen and Wang-Wei, in German from Bethge's anthology—are as baffling as life . . .

—ISABEL MORSE JONES, *Times*

Before an almost capacity audience, Otto Klemperer presented Gustav Mahler's "Song of the Earth" for the first time in Los Angeles at Philharmonic Auditorium last night . . . .

. . . While the vocal score follows an individual line, the orchestra is never merely an accompaniment. It affiliates with the singers, whose voices become in reality like another instrument . . . .

—FLORENCE LAWRENCE, *Examiner*

The gently festive air that hovered over Philharmonic auditorium last night reached a climax at the conclusion of the program when Otto Klemperer, conductor par excellence of the Philharmonic orchestra, was honored with the Kilenyi Mahler medal by the Bruckner Society of America . . . .

. . . The tribute came opportunely, the orchestra having just completed the Los Angeles premiere of the Bohemian composer's "Song of the Earth," which met with a royal reception . . . .

—MILDRED NORTON, *Evening News*

### ANTON BRUCKNER— EIGHTH SYMPHONY

*Boston Symphony Orchestra, Serge Koussevitzky, conductor. April 16 and 17, 1937.*

. . . To lead up to these charming numbers we had Bruckner's Eighth Symphony, the one that extracted unwilling recognition from the boorish Hanslick, who could hear nothing in music but Brahms, hated Wagner and, to his sorrow, sat as a model for Beckmesser.

It is a glorious symphony, with such

"heavenly lengths" as Schumann admired in Schubert. It lasts for more than an hour, but it is so full of sheer loveliness that I fancy only a minority of the audience would have wished it shorter . . . .

. . . Bruckner loved the orchestra and our Boston strings plainly love him, for they put an ecstasy into the master's music that revealed them at their best, and I do not think the world can show any better. There are noble raptures for brass which, risking a contradiction in terms, may be called golden sonorities. That Adagio is an inspired composition and the Finale, ending in "the great C major of our life", is Olympian . . . .

—REDFERN MASON, *Evening Transcript*

. . . Dr. Koussevitzky's signal success with Bruckner's Seventh Symphony last season was yesterday repeated with the Eighth, and the answering applause, to turn from the performance to its reception, was almost as hearty and long continued . . . .

. . . The later Bruckner is the most tremendous symphonic music we have in spirit as well as in dimensions and volume. Before it the listener may well

feel dwarfed and crushed, as men are over-awed and humbled by certain things in the natural world . . . .

. . . Now that the Seventh and Eighth Symphonies have been so magnificently restored to us surely the long-neglected Ninth should have its turn . . . .

—WARREN STOREY SMITH, *Post*

### GUSTAV MAHLER— ADAGIETTO, FIFTH SYMPHONY

*WPA Orchestra, N. Y., Fritz Mahler, conductor. July 18, 1937.*

A nephew paid tribute to his uncle from the conductor's stand of the Federal Symphony Orchestra at the Theater of Music last evening. Fritz Mahler, leading the WPA orchestra for the first time, included in his initial program the adagio for strings and harp from Gustav Mahler's Fifth Symphony.

Needless to say Mr. Mahler, who had made his local bow at the Hippodrome last season, directed his uncle's music with reverence and devotion. One of the finest things ever penned by the Viennese composer, the adagio came off in a wealth of sustained expressiveness.

—L. B., *New York World Telegram*

### BRUCKNER'S THIRD BY WPA

Lajos Shuk, the energetic progressive conductor, recently introduced Bruckner's *Third* to San Francisco concert-goers with great success. According to Mr. Alfred Metzger, the audience was one of the largest that had attended the Federal symphony programs. Miss Marjorie Fischer reported that the symphony was "of primary musical interest, a truly magnificent work which Alfred Hertz wanted to present here years ago with the San Francisco Symphony but could not do because of the high royalty fee charged at that time." Mr. Charles Poore thought that the work has "a kind of native bigness that often expresses Homeric grandeur." Mr. Fried opined that "the work was as impressive and as baffling as Bruckner always is."

### BRUCKNER AND MAHLER ON WOR

Alfred Wallenstein, whose hour and half hour-long broadcasts have caused considerable favorable comment, has included the *Adagio* from Bruckner's *Quintet* on several of his programs and more recently he broadcast the *Adagietto* from Mahler's *Fifth Symphony*. The fine readings given both excerpts must cause Brucknerites and Mahlerites to hope that Mr. Wallenstein will not only repeat them occasionally, but that he will enlarge the Bruckner and Mahler repertoire.

### BRUCKNER'S TE DEUM IN CINCINNATI

Bruckner's *Te Deum* was performed in Cincinnati during the May Festival. Beethoven's *Missa Solemnis* preceded the Bruckner opus. Beethoven's *Mass* was broadcast, but the *Te Deum* could not be heard by the invisible audience. Mr. Eugene Goossens conducted.

## GUSTAV MAHLER: SONG-SYMPHONIST

By GABRIEL ENGEL

It is perhaps the best life of Mahler extant... The reading public owes a debt of gratitude to the Bruckner Society for issuing this comprehensive brochure; it tells all that is necessary and it is informative.

"MY TIME WILL YET COME"

THE KILENYI MAHLER MEDAL

1935 was the seventy-fifth anniversary of the birth of Gustav Mahler. 1936 marked the twenty-fifth anniversary of his death.

This splendid Exclusive Medal of Honor by the internationally famous American sculptor, Julio Kilenyi, is the Bruckner Society's proud contribution to American recognition of the Mahler significance of the years 1935 and 1936.

The Mahler Medal of Honor will be awarded annually to the conductor who accomplished most during the preceding musical season towards furthering the general appreciation of Mahler's art in the United States.

## The Symphonies of Anton Bruckner

BY GABRIEL ENGEL

I - IV

### Introduction

**B**RUCKNER'S *First Symphony* is the awakening cry of the long dormant spirit of a giant symphonist. Though he was already forty at the time of its composition, the unbridled enthusiasm of an ambitious first opus infuses the work with convincing sincerity. Bruckner's *Mass in D Minor*, composed a year earlier, proved him not only a master in the field of ritual music, but already an adept orchestrator with strikingly progressive tendencies. The resourceful instrumental idiom revealed in the 28-bar prelude to the *Et Resurrexit* in that work is an eloquent symphonic prophecy. Though the fact that this consummately orchestrated *Mass* originated during the days of Bruckner's first acquaintance with Wagner's music is no mere coincidence, examination of over a dozen Bruckner compositions penned in the course of the two preceding decades reveals that the dominant features of the orchestral language of his entire symphonic cycle (I refer to the recently published, original, unadulterated versions) were firmly rooted in his own fantasy. He was from the outset a linear orchestrator, a tonal draughtsman; Wagner was primarily a colorist, whose chief instrumental contribution was the magnification of the classic (Beethoven) orchestra to the heroic proportions demanded by epic stage conceptions. Therefore Bruckner's orchestral debt, if any, to Wagner is limited to those moments when he employs the full complement of instruments in sonorously blended harmony. The rest is pure Bruckner, whose ideal of orchestral tone prescribed the rigid economy of instrumental volume and coloring indispensable to the clear framing of a fundamentally polyphonic message.

In the days when Wagner was still a young, struggling, provincial conductor who had written but one remarkable work, *The Flying Dutchman*, Bruckner was already tirelessly busy with the composition of sacred music, unconsciously laying down the idiomatic foundations for his symphonic labors to come, at the time mere dreams, hopes, and resolves, quickened by rare, reverential hearings of Beethoven and Schubert symphonies. Noting the vivid effect of unprepared changes of tonal-

ity in these masters he ventured a more liberal use of that principle, framing in a new key each progressive link of a sequential passage. His predecessors, regarding sequences much as melodic steps in a single scale, had deemed it necessary to adhere strictly to one tonality lest the harmonic unity of the passage be imperilled. Bruckner's symphonies abound in sequences marked by rapid changes in tonality (most often, ascending by half-steps). This alone accounts for the fact that the first movement of such a work as the *Romantic* exploits every possible color of tonality even before the close of the exposition section (See Th. Otterstroem: *Bruckner As Colorist*, C. & D., No. 2).

Appreciating the harmonic richness of abrupt mood contrast in Schubert's lightning transformations from major to minor, and vice versa, Bruckner exploited the possibilities of this device, further enriching it by the addition of a world of enharmonic nuances, prophesied, but scarcely explored, by his short-lived "romantic" countryman.

Interpreting all musical idiom in the light of the only tonal dialect with which he was thoroughly conversant, he recreated the charming melodic cadences of Haydn and Mozart in the "Amens" of his sacred music, lending them increased depth and interest by the introduction of frank dissonances. So daring did these "Amens" of Bruckner seem to his original publishers that they "corrected" them for public consumption, as may readily be seen by comparison with the original manuscripts which still display Bruckner's scorned "mistakes" in this regard. The "general pauses" (G.P.) which his contemporaries found so disturbing in his symphonies also had their spiritual origin in church music, paralleling the punctuation of choral responses and recitative intonations in the ritual. The slow movement of Bruckner's *Romantic Symphony* is an amazing instance of an extended movement largely reared along this unusual melodic principle.

Many other melodic and harmonic principles outstandingly characteristic of Bruckner's symphonic idiom were nurtured in his early church music. Adequate analysis of these would fill a large volume. More than mere mention of one or two is beyond the scope of the present article. Particularly noteworthy is the impassioned effect of sudden sixth and octave leaps in Bruckner's melodies, spreading an air of fervent aspiration when ascending, one of prayerful humility when descending, literally mirroring the act of a penitent sinking to his knees in worship. From his church music also Bruckner drew those step-wise, parallel progressions of the outer voices in their gradual, irresistible rise to a climax; those moments of full major tonic grandeur bursting dazzlingly out of fortissimo unisons; those broad-winged melodic flights in sixths above sustained organ points; even that most typical rhythmic characteristic of his, the division of a measure in broad double-rhythm into "two plus three-note" phrases, or vice versa. (An eloquent example of this device is to be found in the second motive of the opening theme-group of the *Romantic*.)

## I. SYMPHONY

His *First Symphony*, often called *Storm and Stress*, reflects a powerful conflict between the individual message of a symphonic genius and the traditional means at his disposal for its expression. The opening theme, springing softly, but recklessly, out of its harmonic source, the stubbornly punctuated tonic bass which begins the work, is a striking idea, the characteristic nature of which caused Bruckner to name it *Das Kecke Beserl* (The Saucy Maid). This naive phrase has been the accepted nickname of the symphony ever since. The theme itself, marked by simple, spontaneous song, rugged rhythm, and sharply defined orchestral setting, at once evidences Bruckner's inventive genius. There can be no cadence for so impatient a motive. Ignoring the traditional point of rest at the eighth measure it pushes tauntingly on, gathering momentum for swift flight, and speedily rears itself to a towering climax. In the forceful, self-evolving progress of this very first theme is revealed the dominating principle of Bruckner's method of symphonic melody-treatment, aptly called by experts "dynamic evolution."

Upon the attainment of this summit of power, firmly established by a brief heroic episode, a series of stirring fanfares over a swiftly moving, blustering motive in the basses, customary full-throated repetition of the theme would be an anticlimax. The three motives already sounded constitute the first theme-group and become the chief driving forces of the whole movement. A subtle interlude, drawn from the opening theme, descends like a narrow mountain-path winding down to a sunny Upper Austrian valley. In this calmer atmosphere is born the second theme, a song of ardent love in the violins above a transformed fragment of *Laendler* melody. The artist who conceived this vision of beauty is clearly the same who penned the celebrated *Zizibe* double-theme of the *Romantic Symphony* a decade later.

Supplementing the two contrasted themes or theme-groups already set forth, Bruckner now introduces a third subject, the most striking of all. In after years the mere mention of the symphonist's name would cause Wagner to exclaim, "Bruckner, the trumpet!" Wagner, the Shakespeare of character portraiture in tone, recognized at once the heroic nature of Bruckner's soul in the trumpet-theme of the *Third Symphony*. In later symphonies Bruckner, a being of superior spiritual poise and deeper introspective powers, was to substitute for this heroic third theme a hymn of indomitable faith. Yet in old age's retrospect, referring to the allegedly un-Bruckner-like quality of the *First Symphony*, he would confess, "I was always in love in those days." Hence it was natural that the love-theme in that work should be followed by a daring trumpet theme, brilliantly heralded by an exultant march motive.

In all respects, save its careful observance of smooth transitions between contrasted passages, this first movement suggests the chief features of Bruckner's individual symphonic style. The development section, de-

spite a brevity sprung from anxious subservience to the traditional notion of "correct form," sets forth such an abundance of thematic detail that the listener readily believes that here is but a synopsis of an extended tale of adventure, similar to those told in lavish detail in the far longer corresponding sections of the later symphonies. Even in this first essay Bruckner glimpses the recapitulation as more than a mere re-statement of the original themes. In his greatest symphonies the return of the themes will have a new, revolutionary significance as the actual climax of the development section. Already here they follow as a logical sequel surprisingly fresh in their wealth of accompanying thematic detail. Like a skilful novelist, reserving his most telling utterance till the last, Bruckner purposely denies the end of this initial opening movement conclusive character. The "story" of the symphony is far from ended, having but reached a moment of suspense, during which it must remain poised until the turbulent air is calmed for the profound, soul-searching revelation of the coming *Adagio*.

The *Adagio Composer*, some scornfully called him twenty years later, when instant world recognition greeted the premiere of the slow movement of his *Seventh* at Leipzig. The nickname clung and lost its jeering connotation. They might, with justification, have so named him even with the *Adagio* of the *First*, for here, at the very outset, Bruckner, in despair at the unhappy outcome of his life's chief love episode, poured out his sorrows in the sustained melodic language of which he thenceforth became one of the world's greatest masters. Not even beside his celebrated last *Adagios* does this initial slow-pulsed expression pale. Far more than the other three movements of the *First* it was an expression impelled by inner necessity, a fervent prayer for solace, rising out of the abject confession of the sufferings of a stricken soul. Its noble message is the wresting of ultimate spiritual triumph from deep, personal tragedy. Traditional *Adagio* form, employing two contrasted song-themes, is eminently suited to the framing of such a message. Hence Bruckner was faced with no structural problem in the composition of this movement. From the yearning song of consolation, which follows upon the gloomy first subject, issues a melody of naive joy, the spontaneous charm and light-heartedness of which caused one of the earliest Bruckner critics to speak of him as a "modern Mozart."

The *Scherzo* reveals Bruckner a master of the concise form quickened and perfected by Beethoven. A rugged, boisterous unison-passage climaxes the first portion. Hearing the graceful, purely Austrian themes, particularly that of the *Trio*, we at once recognize the composer as a countryman of Schubert.

The very first stern notes of the *Finale*, thundered forth by the full orchestra, blot out completely the happy scene of the dance. They are an ominous reminder that the path to victory, barely glimpsed in the heroics of the opening movement, is beset with a world of hostile elements still to be conquered. As in the first movement, here also, three

contrasted themes are presented. Brief, sharply defined, these are highly felicitous motives for Bruckner's predominately contrapuntal style of development. The long delayed return to the tonic key (following the abrupt advent of the powerful closing hymn of triumph) may be regarded by classically-minded listeners as a formal defect. In later years Bruckner himself was amazed at the revolutionary nature of this sudden daring conclusion set down in a moment of sweeping inspiration. Reminiscing he said, "I didn't care a hang what anybody would say; I composed just as I wanted to."

## II. SYMPHONY

During the interval of six years separating the creation of Bruckner's first two symphonies occurred the most radical inner and outer changes of his career. A shy provincial by nature, he nevertheless ventured in a moment of desperate resolve to cast his lot with the shrewd "go-getters" who constituted the bulk of Vienna's musical aristocracy. Naively he sought as organ virtuoso to gain the applause and riches usually denied to all musicians save master pianists and fiddlers. It was at London, whither one of his pathetic concert tours had taken him in the summer of 1871, that he began his *Second*. His very choice of key (C minor, the same as that of the *First*) evidences the spontaneity of the new symphony's origin. Here too (as in the former work) he showed the integrity of his conception by setting down the *Finale* before any of the other movements, as he explained, "lest there be a let-down from my inspiration at its highest intensity." He knew instinctively that faultless logic and perfect unity in symphonic form depend upon the careful planning and rearing of the four-movement structure to the convincing, triumphant climax best reserved for the closing portion of the *Finale*. Although, technically considered, the *Second* was destined to be a clearer, surer expression than its predecessor, it proved, all in all, a work of inferior power and emotional appeal. The reason for this is perhaps best given in Bruckner's own words: "They (the Viennese musicians and critics) had scared me so, that I actually feared to be myself in that symphony." "They" had pronounced the score of the *First* too difficult to play, the thematic material too free, the instrumental and dynamic contrasts too violent. Overawed by the consensus of opposing critical opinion, Bruckner, for the first and only time in his life, persuaded himself to cater. The resulting symphony, a clear-cut, plastic creation, certainly improved his standing in the Viennese musical world, but damaged his self-respect. When, after its successful premiere under his own direction, he showed the score to Wagner at Bayreuth, the mighty music-dramatist merely brushed it aside with an eloquent grunt and steeped himself in the far more interesting revelations of the *Third*, which Bruckner had by that time also completed.

Yet the Viennese criticism of his preceding works proved helpful in some respects. The opening and closing movements of the *Second* mark

the birth of those broad-winged, song-like first themes which became typical of Bruckner's subsequent symphonic style. These are themes of a centralized power, bearing within them the seeds from which springs the entire musical life of the movement in which they appear.

The orchestration, far simpler than that of the *First*, is easier to perform, but in place of smooth, transitory passages within the movements, Bruckner hit upon the almost childish device of full pauses. Struck by this feature one of the Philharmonic musicians, during a rehearsal, remarked contemptuously, "This ought to be called the *Rest Symphony*." The nickname caught on at once, to become a permanent chuckle among the invectives heaped upon him by his enemies. Naively Bruckner sought to defend these prominent pauses, arguing, "Whenever I have something new and momentous to say, I just have to stop to catch my breath." "Grand Pauses" occur occasionally in his subsequent symphonies, but they are never due to the demands of external form; they are inevitable results of inner, contextual necessity. Never again did Bruckner permit external influences to determine any structural feature of his symphonies. When he prepared the final, definitive version of the *Second* he did away with almost a score of the offending pauses. The work as now performed no longer includes them.

The *Adagio* is a radiant song of inner communion. Appropriately, the ecstatic *Benedictus* theme of the *F Minor Mass*, in symphonic garb, marks the most eloquent moment of this section, devoted to the soul's contemplation of superearthy things.

The *Scherzo* and *Trio*, a robust idealized dance in triple-rhythm followed by a graceful *Laendler*-like song sprung from the very heart of Bruckner's rustic homeland, caused his delighted adherents to call the symphony the "Upper-Austrian." Bruckner was an instinctive master of the *Scherzo*-form, finding it a ready, perfect vehicle for the expression of some of his life's most vivid experiences, the landscape, the songs, and folk-dances of his native country-side.

The *Finale*, its somewhat unusual combination of sonata and rondo form sprung from the composer's desire to develop each of his themes, represents a distinct formal advance over the corresponding section of the *First*. In place of the rather stereotyped, generally excited *Finale*-character practised by his symphonic predecessors Bruckner, grasping the prophecy of Beethoven's *Fifth*, introduces a clear, intentional relationship between the thematic material of the opening and closing movements, a kind of symphonic summing-up, immeasurably strengthening the unity of the entire work. How well Bruckner realized the value of this innovation is witnessed by the increased care with which he effected similar summations in his subsequent symphonies. This fact alone should suffice to confound those of his critics who, while granting him almost every other symphonic virtue, insist that he lacked the intellect indispensable to the convincingly logical shaping of a huge symphonic labor.

Throughout the composition of the *Second* the mood of his then recently completed *F Minor Mass* was still strong upon him. Most dramatically, after an extended passage in the *Finale* marked by violent, exhausting conflict, the orchestra is suddenly hushed, and like the very voice of Faith (for Bruckner devoutly believed Faith the soul's only hope of eternal salvation), the *Kyrie* theme of the Mass is heard sounding the promise of surcease from earthly trial and tribulation.

### III. SYMPHONY

So great an abyss of mastery and power divides the *Second* from the *Third* that one is involuntarily reminded of an analogous difference between Beethoven's *Second* and *Third* (*Eroica*). Predominately heroic too is Bruckner's *Third*, commonly called the *Wagner Symphony* because the music-dramatist, having singled it out for signal praise, had accepted its dedication to himself, saying "I know of only one symphonist worthy to be called Beethoven's successor, and his name is Bruckner."

Perhaps it was Beethoven's *Ninth* that Bruckner had in mind when he chose for his new work not only the key D minor but also a stern, majestically descending theme in double-rhythm issuing out of a background quickened by cosmic murmurings in the strings. Yet never before had the opening theme of a symphony been sounded by a solo trumpet. No wonder Wagner felt at once, when confronted with this striking symphonic beginning, that a new, significant voice had arisen in the field of absolute music! The origin of the soul of man, destined to heroic adventure, seems to be portrayed in this awe-inspiring theme emerging mysteriously out of vast, ominous space, as though it sang that mightiest of all earthly mysteries, first given expression through the gospel phrase, "In the Beginning. . ."

Not until the whole epic plot of the work has been unfolded and the heroic soul has emerged victorious on the final reutterance of the opening theme midst the fullest imaginable glory of massed instruments, does one realize how masterfully Bruckner planned every detail of this symphony before setting down a single note. A true mystic, for him this theme was to mirror the origin and end of all. It was to govern every episode of the gigantic drama performing through four movements, attaining apotheosis in its final expression, a veritable revelation of the Prime Source framed in the utmost auditory majesty.

In this symphony, as in all that followed, the opening and closing movements must be regarded as logical sequels, indispensable and supplementary to each other. Conflict, triumph, and apotheosis constitute their content, while invincible faith, supporting the heroic soul through its every trial, cloaks the whole in the spirit of affirmation which foreordains the ultimate victory. Hence the first movement closes, as does that of Beethoven's *Ninth*, in the midst of conflict. There must follow interludes setting forth the communion of the soul with God (*Adagio*) and a retrospect of the joys of existence (*Scherzo*). As the opening move-

ment ends, the central theme, at first sounded mysteriously out of infinite distances, has but arrived at the center of the battle-scene, to stand revealed as a mighty warrior fully armed for the decisive fray still to come.

The *Adagio* of the *Third* is the first of Bruckner's celebrated, long slow movements. In place of the tragic bitterness characterizing the *Adagio* of the *First* and the mystic, contemplative quality dominating that of the *Second*, this *Adagio* is swayed by an air of soaring, unquestioning faith. The devout Bruckner is naturally most eloquent in such sustained expressions of affirmation, for his inner life was a constant exposition of the tale of indomitable faith and optimism set forth in his *Adagios*. The extended length, yet unimpaired formal perfection, of his last three and greatest slow movements proves that this experience of faith became for him an ever more fruitful source of revelation of that higher, mystic world transcending all earthly pain and struggle.

The *Adagio* of the *Third* begins with a deep, noble song of communion, rising like a prayer uttered by one worshipping on bended knee. The answering theme, a consoling melody, is like a message of recognition and encouragement from Above. A third theme, like a hymn of gratitude for this divine reassurance, completes the exposition of the movement's simple, yet inevitable, devotional content. The melodic and harmonic magnificence of the ensuing development section reflects the decades which Bruckner spent in the baroque splendor of ancient cathedral surroundings. More overwhelming with each symphony grows this air of grandeur, suggestive of the mighty, domelike structures of the Houses of God which nurtured and mirrored Bruckner's sole spiritual aspiration.

The *Scherzo* is full of Bruckner's typically naive humor and laughter. Childlike, straight from the heart, it differs from Beethoven's subtler humor, qualified by frequent, ominous shadows sprung from inward bitterness. Beethoven's is the dauntless, sometimes even desperate laughter of a mighty warrior doomed to solitude, but confident in his own, unaided strength. The *Scherzo* of Bruckner's *Third* is an idealized happy dance that takes place in some higher realm, beyond every darkening cloud. The *Trio* is full of the life and sunshine drawn from the musical sources of his childhood, the Upper-Austrian folksong.

The *Finale* is a stirring record of elemental conflict on a scale so gigantic that it dwarfs any attempt at verbal description. Perhaps Milton, no longer hampered by outer limitations of sight, viewed some such conflict when he conjured up the inner vision of the primal decisive battle between the Spirits of Good and Evil.

The remarkable nature of the second (song) theme deserves comment, for it represents one of the most individual of Bruckner's symphonic devices. Over a *chorale* softly intoned by horns and trumpets is heard a graceful, lilting, polka-melody played by strings. When questioned by his biographer Goellerich, during an evening's stroll through

the streets of Vienna concerning the paradoxical nature of this "double-theme," Bruckner answered pointing to an open window of a house they were just passing, "From the mansion opposite comes the sound of dance-music and merrymaking, while here on this side lies a man on his deathbed. Such is life. That's what I had in mind when I wrote the theme you ask about."

While Bruckner's *First Symphony* retains, in all essential respects, classic lines and dimensions, examination of the score of the *Third* reveals a form broadened far beyond the utmost dimensions of the sonata structure employed by Beethoven. The soundness of the factor accounting for this magnification is attested by its integral origin, for it springs from the very nature of the themes themselves. In place of the classicist's brief contrasted themes, skilfully bridged by an episodic interlude, Bruckner sets forth in straightforward fashion three independent theme-groups, each consisting of well-contrasted motivated portions. It may be claimed that this practice is prophesied in Schubert's sonata-form, but it is really the manner in which Bruckner develops his themes in the *Third* that results in the unprecedented length of the opening and closing movements, for here, for the first time, he grants each motivated particle the full expression which its thoroughly individual nature justly demands. The resultant huge development section acquires convincing unity through the skill with which the separate paragraphs are reared aloft as on the rungs of a ladder towards a towering climax, doubly surprising and impressive because it proves to be the recapitulation itself!

There exist three versions of the *Third*. The score of the original version (1874) is more than forty pages longer than that of the final version (1889). When submitting the latter for performance Bruckner wrote, "This is incomparably better than the original version, with which I no longer want to have anything to do." Yet the original was the version which aroused Wagner's unbounded enthusiasm, causing him to say, "The three B's of music are Bach, Beethoven, and Bruckner."

#### IV. SYMPHONY

The fact that Bruckner regarded the word *Romantic* an apt description of his *Fourth Symphony* may mislead many to regard him as a romanticist of the stamp of Weber or Schumann. In reality, he was even less a romanticist than Beethoven who warned against a too literal story-background interpretation of the *Pastorale*, his lone symphonic venture beyond the strict borders of absolute music. Although a festive *Scherzo* and a "Storm" *Finale* are present in both the *Pastorale* and the *Romantic*, these are only marks of an external community not reflecting the fundamental dissimilarity of the underlying messages in these works. Beethoven's conception of nature and man views them as separate entities, the former a species of recreation, a source of spiritual refreshment for the latter. Bruckner's conception presupposes a mystic,

inseparable union of the two. In his *Romantic* there is heard not the echo of the joys of nature in the soul of man, but rather the voice of Nature itself, whose lips seem to open in hymnlike gratitude as the horn sounds the opening theme midst an ecstatic tremolo in the strings.

Perhaps no composer has given this message clearer verbal shape than Gustav Mahler whose innate mysticism stamped him as a fervent Catholic long before his formal conversion to that creed. The devout Bruckner might have shrunk in horror from the pantheism inherent in Mahler's pronouncement concerning the living soul of nature as merged with that of man, but essentially it was the same as his own. Mahler said: "That Nature embraces all that is at once awesome, magnificent, and lovable, nobody seems to grasp. It seems so strange to me that most people, when considering Nature in connection with Art, imply only flowers, birds, woods, etc. No one seems to think of the mighty underlying mystery, the god Dionysos, the great Pan."

In the opening movement of the *Romantic* the hymnlike aura spread by the initial theme-group persists midst the bird-calls characterizing the second theme. This perhaps most famous of Bruckner's numerous double-themes is an ideal mirroring of the fulfilled yearning of man's soul for union with nature.

So plastic is the formal structure of this movement, so natural and inevitable each passage from beginning to end, that one readily understands why the *Romantic* has been the most popular with music-lovers for over half a century. Bruckner himself came to regard it as the ideal introduction to his gigantic later symphonies. It seems almost superfluous to warn listeners not to give too serious credence to Bruckner's own explanation of the content of the *Romantic*. The tones in which the symphony is set are far too vast and deep for any such naive picturing as, "A city of the Middle Ages—Daybreak—Reveille is sounded from the tower—the gates open—knights on proud chargers leap forth—the magic of nature surrounds them." Clearly this is all childish afterthought on the part of a man whose creativeness was purely musical, whose acquaintance with literature was limited to Gospel and the prayer book.

Particularly in the *Finale* is revealed the superficial inadequacy of the descriptive term *Romantic* for this work. The ominous conflict with which it begins has an import far deeper than the too obvious explanation, "the woods in the grip of a storm." It suggests rather the final struggle by which the spirit, beset with earthly fears, overcomes all obstacles on the path to eternal contentment.

The *Andante*, as always with Bruckner, presents life with all its pain and suffering viewed by the soul with its unconquerable faith in ultimate good. Bruckner's genius for instrumentation unerringly selects the voices of the violas for a telling role in this section. The final promise of spiritual surcease is expressed in a lofty revelation midst nobly mounting utterances by the trombones.

# The Impersonation of Hans Sachs

BY FRIEDRICH SCHORR

(A lecture with musical illustrations by Mr. Schorr, delivered at the University of California at Los Angeles, October 31, 1938.)

**T**HIS privilege of a closer artistic acquaintance with my Los Angeles friends seems to me all the more delightful because it also provides me with an opportunity to present before you briefly my own purely personal view, drawn from long years of professional experience, concerning the most important of all problems that confront the artist of the singing stage: How should such an artist approach the task of portraying a character so convincingly that the figure he represents upon the stage prove not merely credible, but of such lively interest as to leave a lasting impression with his audience?

I should like to emphasize at the outset that I speak to you, not from the viewpoint of the musical historian, scientist, or critic; it is my intention only to introduce you to the workshop of a serious, conscientious singer intrusted with the embodiment of an important role.

I hope I have chosen an appropriate vehicle for my remarks, in view of the impending performances of the *Meistersinger*, by selecting the impersonation of Hans Sachs. Hans Sachs, that wonderful being, radiant with genuinely human greatness, concerning whom Wagner said in a letter to Mathilde Wesendonck: "Sachs will capture your heart; you will fall in love with him."

First of all, the artist must determine whether the character he is to portray is historical or imaginary. If the former, he must study the historical background, familiarize himself with the recorded events and customs of the period involved.

As to the *Meistersinger* he must know:

German Master-song sprang up directly in the wake of departing German *Minnesong* and attained its culmination in Hans Sachs.

The singing trials usually took place at the Church of St. Katherine and consisted mainly in the presentation of sacred songs sprung from the ritual. At a table hidden by a curtain sat so-called *Markers*, often four in number, whose duty it was to judge according to the *Tabulatur* (code) which embraced all the rules of the Master-song: whether the text of the poem deviated from scripture, whether both rhythm and rhyme were faultless; whether the melodies displayed any objectionable features, such as turns and flourishes drawn from other *Weisen* (Song-forms). If the man seated on the *Singestuhl* was found wanting, he was declared "outsung and undone." The singers consisted of masters and apprentices. Anyone who passed the test by singing creditably his own musical setting of a text he had himself composed was declared a *Master*. One who merely had a fine voice and skilful delivery was granted the title *Singer*. The melodies themselves frequently resembled

the psalmodic chanting prevalent in the churches and were for the most part dry and monotonous although the use of decorative flourishes was permitted.

To grasp the personal note of the composer and poet the serious artist must strive his utmost to heed the intentions of the authors, to follow as faithfully as possible the sequence of their thoughts.

The present instance involves a poet-composer who set forth in detail his profoundly individual conception of the art of singing and prescribed definite fundamental principles for the art of singing German opera.

Richard Wagner himself furnished the artists with the best possible directions for a successful character portrayal as he had intended it.

He demanded expressly: The singer must learn to speak beautifully and correctly.

The singer who is unable to recite the lines of his role with the proper expression, as indicated by the poet, will be equally unable to sing them as the composer intended them to sound.

He demanded unconditional clarity of articulation, failing which, drama as well as music, the word as well as the melody, remain unintelligible.

Wagner stated explicitly: "In my opera there exists no difference between so-called 'declaimed' and 'sung' phrases; on the contrary, my declamation is equivalent to song; my song to declamation; and the definite cessation of 'song,' followed by the customary entrance of 'recitative,' with the conventional differentiation of two varied styles of singing, has no place in my art."

On the very occasion of the rehearsals for the world premiere of the *Meistersinger* Wagner labored most strenuously with his artists in this direction.

To his supreme satisfaction, at the first performance, singers and chorus had become thoroughly conversant with the dialogue as such, through continuous practice, with the result that it came to them as easily and naturally as every-day language. The artists, who previously, at the thought, "Now I must sing," would fall into a veritable spasm of false pathos, here found themselves merely continuing with the dialogue in a lively, most natural manner.

To do full justice to the role of Hans Sachs, one must memorize the part without the music, not in the style of a mechanical repetition of the lines, but in the most expressive, histrionic manner possible.

These basic studies are necessary in order to grasp the dominant traits of the role, to raise them into clear relief, thus giving the portrayal solid, well-defined character.

The experience and knowledge gained from these purely histrionic efforts are the indispensable preliminary aids to the proper mastery of the musical role itself.

**This** latter study is a never-ending process, even for the singer who has sung and performed the role hundreds of times (or better still) has sung, performed, and lived it, particularly, for one who has striven to portray this role of Sachs so tellingly, that those about him virtually regard the world through the eyes of Sachs.

During the conception of the second act of his "poem" Wagner wrote Peter Cornelius: "I can make no further progress without a friendly soul close by, and such a soul my Hans Sachs represents for me. A merely reasoning, philosophizing, resigned Hans Sachs is not worth the effort, but only an intimate, friendly being, a universally accessible Sachs; and the singer who is to sing Hans Sachs, must be able to reveal most clearly to his public that the peace and power of Hans Sachs is the repose of a genius on the loftiest human plane. By no means is he ever to personify that every-day type of good-soul that is doomed to remain an every-day character; his must be a peace and power, completely separated from the individual *Ego*. Such is the soul the artist must lay bare in the *Fliedermonolog*."

Sachs must here afford an insight into his inmost heart and soul. And the words:

"I feel it, yet I cannot understand it;  
Nor keep it in my mind, nor yet forget it.  
And though I grasp it wholly, yet I cannot gauge it."

These words constitute the true keynote for the portrayal of Hans Sachs.

Within the soul of Sachs the entire drama of the *Meistersinger* unfolds itself, and Sachs, despite his kindness and sunny humor, remains in essence a tragic figure.

Yet whenever this humor breaks through, it does so in a clever, witty, but always dignified form. With pure merriment he treats Beckmesser ironically for his sarcastic, scornful criticism of Sachs as artisan and poet. The very epithets advanced against him by Beckmesser in violent temper are used by Sachs with such evident superiority of thought and wit that Beckmesser is rendered helpless with desperation and finally changes from aggressor to petitioner.

The Sachs of history married twice and was eighty-one years old when he died. Hans Sachs in the opera does not marry a second time; far more, mindful of King Mark's fate, he renounces worldly happiness with painful resignation, as he speaks these sage words of an aging man:

"My child, I know a sorry tale of Tristan  
And Isolde. Hans Sachs was wise and would have  
Naught of King Mark's happiness.  
'Twas time, I found the right one,  
Or in the end I too had met disaster."

Here the singer must have the gift of reenacting before your eyes how Hans Sachs, despite the pain of his renunciation, is swayed by greatness

of soul and unselfishness and reveals with open serenity that his inner spirit is a veritable shrine of peace.

The summit of his interpretation is attained by the singer in the *Wahnmonolog*. Here Sachs voices a revelation of peace and power, worldly wisdom, and love, and a humor that issues from the deepest experience of life. He muses over the world and its problems; over the self-delusion of mankind; over the illusion that seems to hover above all human endeavor. With sunny humor he reviews the *Pruegel* (flogging) scene which created such an uproar in normally peaceful Nuernberg and he voices his determination to supplant hatred and stupidity with all that is best for Nuernberg and for those who love it.

The purpose of my remarks to-day was to familiarize you with my conception of the unrivalled, unique, stage-figure of Hans Sachs as I have definitely established and shaped it for myself through long years of effort. Yet I should like once more to emphasize briefly, that the world of Hans Sachs is one turned completely towards within. It is a world purely of the spirit and all its conflict takes place within the soul. A blending of sunny cheerfulness, deep intuition, peaceful world-renunciation—a wondrous noble creation—such is for me Hans Sachs of the *Meistersinger*.

#### PITTS SANBORN ON MAHLER

Under the title of "Neglected Composers Offered by Visitors" the eminent critic, Mr. Pitts Sanborn, wrote in the *World-Telegram* on March 12, 1938:

There is no denying that the name of Mahler remains a bugaboo in New York. How wrong such an attitude is can be easily seen. The concert repertory cannot consist of the C minor symphony of Beethoven and the C minor symphony of Brahms, repeated ad infinitum. Other works have to be performed whether they measure up to the stature of those two compositions or not. Mahler was incontestably one of the most important composers of the late nineteenth century and early twentieth. He left ten symphonies (the last unfinished), as well as the symphonic "Das Lied von der Erde."

As I have said once and again for years, we have an inalienable right to become acquainted with those symphonies before we reject them. Nevertheless, when Mahler himself conducted in New York he scarcely dared put a work of his own on any of his programs, and when much later that high priest of Mahler, Willem Mengelberg, conducted here, there was a chorus of objections whenever he had the temerity to list his divinity.

Doubtless, Mr. Bodanzky, Bruno Walter, and still others have met with the same discouraging response. Yet, at least enough has been done by conductorial champions of Mahler to diminish the taboo on the First Symphony and to obtain something like a following for "Das Lied von der Erde."

And now comes a confession, damaging or not, of my own. I am by no means a Mahlerite, as far as my personal taste goes, but I do like enough of his music, and still feel sufficient curiosity about music of his that I have not come to like, to continue to urge the frequent performance of his works. Not until we know them well, to repeat, shall we be in a position to reject. Consequently, all praise to Mr. Ormandy for recently giving us "Das Lied von der Erde" again and to Mr. Koussevitzky for bringing forward the neglected Fifth Symphony.

# Mahler's Use of the Orchestra

BY WILLIAM PARKS GRANT

## I

**W**HEN different instruments sound the same tone they produce different tone-colors, a phenomenon explained by the presence or absence or by the comparative intensity of the various overtones of the tone (fundamental) being sounded. This vital element of tone-coloring has a great effect on the character or expressive power of the actual tones themselves, just as the same man makes a far different impression on us when he is faultlessly attired in evening clothes than he does when carelessly dressed in mud-stained overalls.

Therefore, not only the actual tones themselves, but also the orchestration or dress in which these appear, must be inspired, if we are to have first-class orchestral music. One of the most admirable qualities of Gustav Mahler's music is the unfailing inspiration governing his choice of tone-color. It is only natural that Mahler should have thought directly in the medium of the orchestra, for his long years of experience as conductor gained him an acquaintance with the inmost character of the various instruments such as few composers have had before or since.

Mozart's orchestration impresses us by its crystal clearness, like a cool mountain lake; Wagner's and Tschaikowsky's impress us by their gorgeous glow; Rimsky-Korsakoff's by its brilliance; Richard Strauss's by its reckless, surging richness; Sibelius's by its stark bleakness and its rigid asceticism. More than one person's outstanding early impression of Mahler's music is the great originality and freshness of the actual *sound* of it. His orchestration is clear, keen, definite, and of razor-like sharpness. Sometimes it is thick and heavy in effect, but almost never is there an element of blur, muddiness, or stale shrillness to it. It can be rich and full at times; weird, goblin-like, and grotesque at other times; and magical, other-worldly, and gently unexpected at still other times. It sounds as though Mahler had never learned anything about orchestration from other composers, but had invented an entirely original and marvelously effective means of writing for orchestra which was peculiar to him only. One feels as if he had studied the instruments themselves rather than the orchestral scores of previous composers, and had then set out to write for orchestra as though it were being done for the first time in the history of the world.

Yet we know that he did study other people's scores. We know that he was considerably influenced by the orchestration of Wagner and Bruckner. "Berlioz is recalled by Mahler's daring to bring the bizarre and grotesque within the scope of music in order to attain the ultimate in keenness of expression. No one, perhaps, had taught him so much about instrumentation as the ingenious Frenchman."<sup>1</sup> The truth of the matter

<sup>1</sup> *Gustav Mahler*, by Bruno Walter, translated by James Galston, page 92. (Kegan Paul, Trench, Trubner & Co., Ltd., 1937.)

seems to be that with a good and varied background of study of others' scores, Mahler was still enough of a genius to avoid imitating them and to blaze a few new trails of his own without forcing himself to be merely eccentric or semi-amateurishly "original."

But orchestration can be overdone: *tone-color* can become the chief source of interest, with the *tones* themselves (that is, the music itself) of secondary importance. Music of this type will become tiresome quickly. To illustrate: Let us assume that we have a melody which is very uninteresting when played by a piano, or by a Hammond organ with a purposely dull tone-color concoction. If we should have the same melody played by a clarinet in its low register, by a cello, or by an English horn, the melody would easily hold our attention better, but what would be the source of this increased interest? Not the melody itself, but the *tone-color*! If we would repeat this melody several times, the effect of the beautiful tone-color would soon wear off, and the melody would again quickly pall. But if we assume that we have a really interesting melody, performing it in a dull tone-color would not make it boring; performing it in a beautiful tone-color would make it extremely beautiful, but when, on frequent repetition, the loveliness of this tone-color would wear off, the melody would not bore us, because it would have real meat in it. A truly charming woman, though dressed in rags, will interest us, but an insipid woman gorgeously dressed will quickly become a bore after our attention has left her clothes and has centered on *her*. With Bach, the *music itself* is everything, the tone-color almost nothing. One can hardly mention "orchestration" in connection with his name. Schumann and Brahms are noted for a poor use of the orchestra, yet their music holds up because it is intrinsically interesting. Sir Charles V. Stanford, in his book on musical composition, says that just as the true test of a good picture is to photograph it and deprive it of its color to see if it is genuinely interesting, the true test of a piece of orchestral music is to reduce it to the plain black-and-white of the piano, and if it is really interesting then, it is of genuine merit. Stanford points out that when treated thus, Wagner's music loses very little of its interest, but Berlioz's loses almost everything. Mozart, Beethoven, and Schubert also stress the *music* itself: orchestration with them is not the chief interest. But can we say the same of Rimsky-Korsakoff? of Ravel? of Respighi? of all of Debussy? Transcribing their orchestral music to the piano will not make it entirely vapid, but there may be some rather dubious stretches. But with all due respect to these great men, quite often we feel that it is the orchestra and not the actual *music itself* which occupied most of their attention.

With perhaps a few exceptions, we feel that Mahler's regard for orchestration was the proper, healthy one—as a means to an end, not as an end in itself. Showy display passages, brilliance for its own sake, attempts to be spectacular, eccentric, sensational, or to shock the conservative are not part of his equipment. They were foreign to his na-

ture. From what we can learn of him, he seems to have been the type who could easily detect superficiality. Although his orchestration is very unconventional, its peculiarities were born out of the necessity of what he was trying to say, and not for their own sake . . . G. W. Chadwick has said of Mahler:

For all his enormous orchestral technique, in which he was surpassed by no one, it seems to me that he never lowered himself to mere decorative effects. All his combinations, no matter how complicated, were the immediate outgrowth of his musical idea.<sup>2</sup>

To quote another opinion, Paul Draper has said:

There is no composer of our time who thought his music so clearly in the medium of the orchestra as did Mahler—the orchestra was his only form of musical expression.<sup>2</sup>

This is a most accurate statement, for Mahler's entire output (save fourteen early songs with piano) is for the orchestra, with or without solo voice or chorus. He really writes *music for the orchestra*, not merely music which can be played by an orchestra if convenient. Herein lies the difference between his work and that of the average composer. Analysis of the typical orchestral page of the average composer's score will usually show that the material consists of a melody, possibly a counter-melody, a bass, and filler harmony, entrusted perhaps to violins, woodwinds, cellos and double-basses, and four horns respectively. This layout is perfectly effective, but it is a stock device; anybody can orchestrate this way. The four horns will be seen to be merely harmonizing and uniting the work of the other sections, the parts being of no real interest in themselves, and, although it would bring disastrous results if they were omitted, they are not heard consciously by the auditors. These horns are only filler material—dead wood—intended merely to give thickness and fullness. Now a glance down almost any page of a Mahler score will reveal that each *voice* is *doing something vital* and *essential* to the total effect. True, he has big unisons of many instruments; it is not uncommon to find four flutes, three oboes, and three clarinets all playing the same notes, but that voice, in itself, is *essential*; it *does something*. This is due to the fact that Mahler's music is primarily *contrapuntal* in nature. But it must not be imagined that every note of Mahler's texture is part of a melody. He uses holding-notes very freely, but one always hears them consciously, and they are a *vital* part of the texture even though stationary. Sustained harmony is not uncommon in the middle of his ensemble, but it is not used because he can think of nothing else to do. Sustained harmony is commonest in his earlier compositions; it gradually tends to disappear in the later works. As for the large unisons, especially of woodwinds, they are necessary to maintain proper balance. Furthermore—and this is important—the

<sup>2</sup> *Gustav Mahler, the Composer, the Conductor, and the Man*. A symposium. (Published by the Society of the Friends of Music, New York.)

effect of several wood-winds (or brasses), even of the same type, playing in unison, is quite different from that of a solo instrument, just as a section of violins differs from a solo violin. All of this produces not only mere mathematical balance of instruments but also—when contrasted with single instruments on a part—greater *variety* in tone-color, a possibility which is of great importance and one which critics often overlook. . . . Purely decorative effects or fancy embroidery, whether prominent or subdued, are foreign to his music. His style of orchestration is nourishing meat, not whipped cream. It is really economical, rather than recklessly extravagant. . . .

A feature of Mahler's writing for orchestra which will be noticed after careful study is that he rarely if ever has long, prominent, formal solos for the various instruments—solos comparable to the clarinet solo in Rachmaninoff's *Second Symphony*, third movement, the viola solo in Sibelius's *En Saga*, or the horn solo in Mendelssohn's *Midsummer Night's Dream* nocturne. The contrapuntal nature of his music makes such solos well-nigh impossible. Solos of this type are most at home in strictly homophonic music.

## II

In his songs with orchestra, Mahler makes an even finer use of his orchestra than in his symphonies, though in a somewhat different way. Whereas in the symphonies the orchestra is frequently employed for mass usage, in his songs (except possibly *Das Lied von der Erde*) it is used in a manner suggestive of chamber-music more frequently than it is in the symphonies. In the orchestral songs we do not so often find many instruments massed together in unison—a device which has a tendency to cause thickness and the blotting-out of the individuality of each instrument—instead the instruments sing their own parts freely and unhampered. Each instrument stands out more individually and more colorfully. When a part is played by more than one instrument, this doubling seems to be done for real reasons (tone-color), rather than merely for the sake of maintaining the proper orchestral balance. After all, the best use of mixed tone-colors is that of contrast with pure (undoubled) tone-colors. Even the most critical cannot complain of Mahler's huge orchestra (of which more anon) in the songs, for its proportions are very reasonable. This is possibly but surely not entirely a necessity in order to preserve the proper balance between orchestra and voice. Except in *Das Lied von der Erde* the string sections could be a half or a third the number needed for the symphonies.

Every note seems to count for a definite purpose in Mahler's songs; everything seems alive. The sparseness often approaches that of chamber-music. Paul Rosenfeld's statement, "All the instruments of his orchestra sound"<sup>3</sup> applies most forcibly to the songs. Egon Wellesz said the following about Schönberg:

<sup>3</sup> *Modern Tendencies in Music*, by Paul Rosenfeld, page 20. (Caxton Institute, New York.)

Schönberg, however, always remained true to the chamber-music style, even in his big orchestral works. He seeks to give each voice its own melodic outline, and he is able to express himself best whenever he can build on the polyphony of the string quartet.<sup>4</sup>

The same is equally true of Mahler. Bruno Walter has said of Mahler's use of the orchestra in his songs:

The songs with orchestra accompaniment contain perhaps the most sublime achievements of his orchestral ability and are exemplary for the ideally-shaded sound-relations between singing voice and orchestra. . . . The master of instrumentation devoted especially loving care to his efforts to produce the most exquisite effects with the modest accompanying orchestra. . . . Altogether, the diversity and wealth of contrasts in the songs of Mahler give us an impressive idea of the riches of his nature, which, in his symphonies, reach imposing dimensions.<sup>5</sup>

One might justly attack the use of the word *accompanying* in the above statement. Mahler's songs are not for *voice with orchestra accompaniment*, but for *voice and orchestra*, or perhaps it would be better to say for *orchestra, one of the members of which is a voice*. Never does the voice completely dominate the entire song or indulge in pure display passages. The orchestra is really part of the picture, not merely the frame-work. Yet he does not go to the opposite extreme: writing for *orchestra with vocal accompaniment*. Also, the writing for the voice is always vocal in idiom; Mahler does not write instrumentally for the singer, nor does he make it necessary for the singer to have to shout to be heard above all the instruments. The voice is purely *one of the group*, often presenting one of several concurrent melodies of equal importance. Much more might be written on Mahler's use of voices if it were entirely in place here. But it is more a subject for another article.

### III

Probably everyone knows that Mahler often required a large number of instruments in his compositions. (Quite a few know nothing else about him.) Now to some people it seems a terrible sin for a composer to demand an augmented orchestra, particularly if the composition in question happened to be written during the nineteenth century or in the early 1900's. (When Stravinsky very justifiably requires a big orchestra for *Le Sacre du Printemps*, that is perfectly all right, of course; to such critics Stravinsky is probably above criticism of any kind.) Mahler's frequent demand for large orchestras is a serious indictment against him, if we are to listen to the sneers of certain people. They think that he was suffering from megalomania, a passion for being colossal for its own sake, and point to the length of his compositions as the clinching argument. The student of Mahler could easily show that the length of

<sup>4</sup> *Arnold Schönberg*, by Egon Wellesz, translated by W. H. Kerridge, page 11. (J. M. Dent & Sons, London.)

<sup>5</sup> *Gustav Mahler*, by Bruno Walter, pages 98-99.

the master's works is not for its own sake, but is organically essential to the very nature of his compositions. (This point also could be discussed at greater length elsewhere.) Composers do not arbitrarily determine the size of the orchestra they use; it is inseparably bound up with the nature of the very music itself. Various styles of music require different styles of orchestration. To re-score Mahler's *Eighth Symphony* for the average-sized orchestra would be impossible; those who criticize the size of Mahler's ensemble should try it and be convinced. Mozart wrote for comparatively few instruments because his musical ideas could not be properly expressed otherwise. Imagine how a Mozart symphony would sound if re-scored for the ensemble employed by Wagner in *The Ring*—or how *The Ring* would sound if re-scored for the orchestra used in the *G Minor Symphony*! . . . It is obvious that the larger a group of instruments one writes for, the greater will be the contrast between very soft and very loud, and the greater will be the variety of tone-colors one can achieve. The ethereal effect of four-part harmony played by nothing but flutes is of course impossible if one is scoring for fewer than four flutes—to cite but one example out of many that could be mentioned. If Mahler worshipped mere bigness for its own sake, why did he score the superbly beautiful *adagietto* of the *Fifth Symphony* for only the strings and harp? Why did he omit the violins and violas from *Der Tambour'sell*? Why did he omit all the strings from *Um Mitternacht*? Why did he score the *Fourth Symphony* for just the average orchestra minus trombones and tuba and why did he use such small orchestras in his songs, which in the case of *Ich atmet' einen Linden Duft* (which incidentally is only thirty-six measures in length) consists of only flute, oboe, clarinet, two bassoons, three horns, harp, celesta, a single section of violins, and violas, plus the voice? Just because a composition requires a large group of instruments does not automatically mean that it is overscored, nor that it will contain more frequent loud passages than the average orchestral composition.<sup>6</sup>

Let us now give a little attention to some of the typical land-marks by which we can distinguish a Mahler score. One of the most interesting devices Mahler uses (surely based on his experience) is rather difficult to describe. We might say it consists of adding extra instruments at certain high-lights in the course of a theme. And frequently when a theme begins with several "pick-up notes" (up-beat) there will be more instruments assigned to this anacrusis than to the rest of the theme. This device is much commoner in the symphonies than in the songs.

Frequently we find a single melodic line played by several instruments in unison, but in different idioms; for example, strings playing *tremolo* while the wood-winds trill on the same notes, or rapid wood-

<sup>6</sup> A few compositions by non-German composers requiring orchestras rivaling Mahler's in size are *Le Sacre du Printemps* by Stravinsky, *The Poem of Ecstasy* and *Prometheus* by Scriabine, *Overture to Dylan* by Joseph Holbrooke, *The Planets* by Gustav Holst, *Requiem Mass* and *Symphonie Funèbre et Triomphale* by Berlioz, and *The Pines of Rome* by Respighi.

wind *arpeggios* while the strings play the same notes in chords across the strings.

Mahler often requires a *crescendo* from some instruments while others are performing a *diminuendo*; sometimes both sets of instruments are playing in unison. Dynamic contrasts between several melodic lines are indeed a feature of his music. First one instrument and then another appears prominently and then recedes into the background, but without ceasing to play.<sup>7</sup>

He loves to have the brass attack a soft chord with a stinging *sforzando* and then cause this chord to *crescendo* powerfully in a manner that "lifts the listener out of his seat." . . . (The foregoing are some of the most characteristic of his traits. Others, of course, could be mentioned.)

#### IV

When one begins a study of Mahler's use of the individual instruments one approaches a truly fascinating subject. One meets old friends in unexpected but delightful new rôles. . . . In *Um Mitternacht*, a song of deep mysticism and introspection, the usually heavy-voiced tuba goes down several scales softly with a most unusual but excellent effect. . . . Listen to the striking use of the usually jolly glockenspiel in the anguished first number of the *Kindertotenlieder*. . . . In the middle of the fourth movement (*Urlicht*) of the *Second Symphony*, the customarily squealing piccolo plays a high, soft, ethereal melody, and is presently joined by another piccolo playing a third lower with even finer effect. . . . In the last movement of the same symphony there is a terrifying *crescendo* for nothing but percussion instruments. Truly the gates of Hell open here! . . . And again in the middle of the third movement of this symphony a trumpet, with the bell raised high and accompanied by three other trumpets, plays a sentimental and somewhat vulgar solo which is truly delightful. . . . One feels in each of these instances how inevitably *right* is the usage of the instruments and how refreshingly novel and spontaneous is the effect.

Mahler's restraint in using the harp is noteworthy, yet where he does use it, the effect is admirable. He shows much interest in its low notes. . . . Solo violins, violas, cellos, and even double-basses are common. In the second movement of the *Fourth Symphony* there is an important obligato part for a solo violin tuned a whole-step higher than usual. He loves the *spiccato* or *saltando* (springing bow) effect in the strings. *Portamentos* are frequently indicated; wisely so, for if left to individual discretion there may be no discretion. An extremely common device is the use of drawing the bows across all the strings, forming a chord. Here Mahler doesn't seem to want these chords to supply har-

<sup>7</sup> Winthrop Sargeant appropriately calls this device *contrapuntal dynamics* in his very interesting paper on Mahler's use of the orchestra which appeared in the March 25, 1934 issue of *Musical America*. It was one of a group of two articles on Mahler which Mr. Sargeant wrote for that magazine.

mony, but rather for the slash and force they give to the highest note of the chord. He uses the *col legno* (playing with the back of the bow) rather frequently and sometimes in the most unexpected places. Muted strings are extremely common; to Mahler it is just as natural for a string instrument to have the mute as to be without it. Muted brass and stopped horns are not uncommon. . . . Highly effective passages played off-stage by trumpets (also horns) are not hard to find. Flutter-tonguing is common with wood-winds and brasses. Trumpet, horn, oboe, English horn, and clarinet are often asked to play with the bell of the instrument raised high. His extreme fondness for the trumpet is said to date from his early boyhood spent in a neighborhood close to military barracks. . . . This is also said to cause his liking for the percussion instruments. Triangle, cymbals, and gong often enter with charming effect at unexpected places. Examples of muffled snare-drum and timpani can be found. He often requires the cymbals to be fastened to the top of the bass drum and both instruments to be then played by the same performer. This makes quite a difference in the tone of the cymbals, but he surely desires it.<sup>8</sup> . . . He uses the E-flat clarinet freely (sometimes two of them) usually for brilliance, strength on high notes, parody, or humor. He also uses the C clarinet often. One of the most surprising traits of his use of clarinets is that he apparently differentiates between the tone-color of the two standard clarinets—those in B-flat and A—for he sometimes uses the former in keys with many sharps and the latter in keys with many flats, instead of the reverse, as the instruments are adapted to be used, when difference in tone-color desire can be the only explanation possible (See *Fifth Symphony*, second movement, at 17).

There was some discussion in CHORD AND DISCORD for January, 1938 concerning Mahler's treatment of the horn. It must be noted that Dr. Ernst J. M. Lert, who thought Mahler indifferent to the horn and his treatment of it undistinguished, was primarily thinking of Mahler's conducting of the works of others, and only secondarily of his usage in his own works. The present writer feels that Mahler wrote very intelligently and idiomatically for the horn, even in difficult passages. He seems to have known all its resources, including the use of its low notes. There is a prominent horn obligato in the third movement of the *Fifth Symphony*.

There is one instrument, however, which he doesn't understand thoroughly, and that is the organ. He knows where to use it and he knows its character and effect, but he doesn't know how to notate it. (In this respect he is not alone among composers.) He writes passages which go below the range of manuals and pedals alike. He apparently did not understand what couplers are, or what 8 ft., 4 ft., and 16 ft. mean. He seems to have written the *sounds* he wants the organ to produce, rather than the *keys* to be pressed. Directions as to registration are very

<sup>8</sup> This therefore makes him not subject to Berlioz's biting criticism of this method in his *Treatise of Modern Instrumentation and Orchestration*.

meager. But a man who understood all other instruments so well can be forgiven this fault. After all, the organ is very complicated and not much like any other instrument.

Concerning the unusual instruments Mahler employed, one might best put them in a list.

INSTRUMENT	USED IN
Mandolin . . . . .	7th <i>Symph.</i> , 4th mov't. 8th <i>Symph.</i> , 2nd mov't. <i>Das Lied v. d. Erde</i> , 4th & 6th mov'ts.
Guitar . . . . .	7th <i>Symph.</i> , 4th mov't.
Piano . . . . .	8th <i>Symph.</i> <i>Um Mitternacht</i> .
Harmonium . . . . .	8th <i>Symph.</i> , 2nd mov't.
Organ . . . . .	2nd <i>Symph.</i> , finale. 8th <i>Symph.</i>
Harness-Bells . . . . .	4th <i>Symph.</i>
Cow-Bells . . . . .	6th <i>Symph.</i> 7th <i>Symph.</i>
Ruthe (or Rute) . . . . .	2nd <i>Symph.</i> , 3rd mov't. <i>Des Antonius von Padua Fischpredigt</i> . 3rd <i>Symph.</i> , 2nd mov't. 6th <i>Symph.</i> , finale. 7th <i>Symph.</i> , finale.
Hammer . . . . .	6th <i>Symph.</i> , finale.
Tenor-Horn in B-flat . . . . .	7th <i>Symph.</i> , 1st mov't.
Post-Horn in B-flat . . . . .	3rd <i>Symph.</i> , 3rd mov't.
Flügel-Horns ( <i>ad lib.</i> ) off-stage	<i>Das Klagende Lied</i> .
Flutes in D-flat ( <i>ad lib.</i> ) off-stage	<i>Das Klagende Lied</i> .
Oboe d'Amore . . . . .	<i>Um Mitternacht</i> .

It might be explained that the *ruthe* (literally, "rod") is a bundle of rushes or ratan, fastened together so as to resemble a small broom or a large clothes-brush, which is used to play the bass drum. There seems to be some uncertainty about the *tenor-horn*. Paul Bekker, on page 225 of *The Story of the Orchestra*, refers to it as a keyed-bugle, but surely he is mistaken. Cecil Forsyth, in *Orchestration*, says *tenor-horn* is the German equivalent of our baritone-horn, surely a more likely explanation. . . . As to such semi-unusual instruments as the celesta, tubular bells, xylophone, glockenspiel, E-flat and D clarinets, castanets, tambourine, etc., it might suffice to say that Mahler used them rather often. Perhaps it would not be too far off the subject to mention that a boys' chorus appears in the *Third Symphony*, fifth movement (Bell chorus), and in the *Eighth Symphony*.

Mahler always tried to get the utmost in range out of his instruments. He writes low notes for the piccolo, flute, oboe, English horn, clarinet, bassoon, trombone, and celesta which are not found on the types of

these instruments common to this country, or at least not on all of them. Except for a piccolo solo in the third movement of *Lieder eines fahrenden Gesellen* and flute solos in the last movement of the *Fourth Symphony* and second movement of the *Seventh Symphony*, none of these low notes occurs in solos without provision for its possible absence. Instances of the writing of low F and F-sharp below the low G (lowest note) of the violins can be found. Almost invariably these notes are written in parentheses and they are always doubled by some other instrument. Never are the violins asked to tune down their G-string. Richard Strauss has also used such notes without allowing provision for tuning down the string and has remarked that perhaps some day a way will be found to make them playable. Mahler probably thought the same.

Before closing, it might be worth while to cite a few of Mahler's favorite combinations of instruments. The bitter-sweet clash of oboe and horn (which do not blend) playing different parts is highly characteristic of him. The unison of flutes, oboes, and clarinets has already been mentioned. Unisons of harp and muted strings, celesta and muted strings, or harp and clarinets may be found in more than one happy example. An especially interesting combination is that of oboes and trumpets with the former playing the melody and the latter accompanying.

The above are just a few suggestions. Almost any page of this master's scores will reveal something original and worthy of attention in the way of orchestration. Mahler's scores are not for the beginner in orchestration, but they are admirable for the advanced student, while the young composer will find them a splendid guide for more things than just orchestration.

#### CLEVELAND ORCHESTRA UNDER RODZINSKI BROADCASTS

BRUCKNER'S *SEVENTH* (NBC) MARCH 16, 1938

For the first time in two years a complete Bruckner symphony was put on the air over a major network. Bruckner's *Seventh*, performed by the Cleveland Orchestra, was broadcast over the network of the National Broadcasting Company on March 16th. For this performance admirers of Bruckner are grateful to the Cleveland Orchestra and its brilliant conductor and hope it will be less than two years before another complete Bruckner symphony is heard on the air.

The eminent critic, Mr. Pitts Sanborn, advocated a Bruckner cycle (one symphony to a program) several years ago. Mr. Lawrence Gilman wrote that the complete symphonic Bruckner has never received his due in this country. The late William J. Henderson thought that repetition of Bruckner's symphonies is the best test of their worth. Mr. Olin Downes expressed the opinion that it would be well if audiences could know more than they do of Bruckner's symphonies. Audiences of various cities—New York, Boston, Chicago, Cincinnati, Philadelphia, Denver, Minneapolis, San Francisco—expressed their approval of Bruckner performances during the past few years by means of enthusiastic applause—an attitude quite different from that of years ago when Bruckner's music virtually emptied the concert-hall. Reviewers have advocated repetition, the only means of familiarizing the music-loving public with unfamiliar works.

Would it not be a good idea for conductors to offer their concert and radio audiences Bruckner-Wagner and Bruckner-Beethoven programs, thus combining the familiar with the unfamiliar until audiences learn to know Bruckner's music sufficiently well to want to hear it for its own sake?

## Bruckner and Mahler

### *Their Spiritual Message*

BY MARY R. RYAN

POETRY, so replete with apt similes, does proffer, on occasions, comparisons of a fantastic nature. Likewise, in the prose of life, we find ourselves now and then placing in juxtaposition persons or events which, on the surface, appear to be wholly at variance. I admit in these opening lines, therefore, that my gesture in bringing into even slight relationship two of the world's greatest and most masculine of composers with X- and Y-, feminine both and musicians not at all, is somewhat gauche. The fact remains, however, that these women in certain respects remind me always of Bruckner and Mahler.

With X- I will deal first. She lives in the West. Mountains rise about her home; close by are valley gardens and rocky cups of shining water. It is an environment which weaves itself into her longest memories. Familiarity, however, has not blinded her to the grandeurs which she possesses, and her joy is apparent when she undertakes to share them with those many guests who pass her way. Yet that joy has nothing in it which is exclamatory. It wells up and overflows quietly — so quietly in truth that its force is not rightly measured at once; nor is, perhaps, the depth of that undramatic thankfulness with which she admits that when there was need to tread the cruel trails against two far hills, invariably "strength for climbing them" was granted her.

X- has an individual fashion of bidding her friends farewell with gifts. And that one most prized, is, I think, "peace of spirit." Long after more tangible treasure has been destroyed, this lingers!

Now, when I leave the music of Anton Bruckner, I feel again an identical tranquillity. For the genius of St. Florian possessed, too, from his childhood, gardens and hills and stretches of flashing water. Very early, his inward gaze had rested upon a blossoming spot in Nazareth where an angel bent to the Virgin Mary and said: "Hail, the Lord is with thee"; he looked up to the hills of Bethlehem across which the glow of a Star had fallen. On one hand he could glimpse Mount Tabor of the Transfiguration; on the other the Lake of Genesareth; and there beyond was Golgatha, Cross-crowned, with a garden below where Christ walked on the morn of Resurrection. All these were Bruckner's Catholic heritage and he guarded them well.

Every mortal must stumble at times along the way of suffering. Bruckner's lot was the common one, of course. But in his major works, we hear constantly a pedal note of grateful confidence underlying pain; and where pain is not, dominating chords of lofty happiness are. In that countryside which his soul owned, he found the gift which he offers us without stint — peace of spirit.

Y- lives a thousand miles distant from X-. But she, too, has her cloud-kissing hills, a blue lake and gardens of wild flowers. She has acquired these, however, only in maturity. Her first steps echoed in the canyons of a city. Each day the stream she watched was that of dusty trucks and clanging street cars. And hour upon hour the roar and flame of giant industries were in her ears. Now, with four decades behind her, for portions of each year she roams her own acres of high land. Equally with X-, she loves the natural beauties about her; equally she rejoices in tendering them to her visitors. But her reaction to loveliness acquired so late reflects itself not in serenity, but in an enthusiasm characterized by sharp fluctuations and darkened by sudden moods of somberness. Cedars and white sails against the horizon, gulls and wood moths, wind in the birches and roses marching up a hillside make for alternating showers of lyric or ejaculatory comment. But from the beacon fires of a sunset she may turn to brood over the stock market report. The city has not released its grip upon her. One bids her adieu with emotions compounded of exaltation and unrest. X-'s gift of peace is not hers to bestow!

Gustav Mahler, like Y-, owned first but the tumult of the city—spiritually speaking. His parents, Jews by birth, were actually free thinkers by preference. Thus for their son they provided no definite religious anchorage during his formative years. We observe him, a highly sensitive soul, inclining soon towards an ideal of rare perfection. "I would like to be a martyr," he declared as a small lad. Others have expressed that wish before and since—and reached their goal. But the path was indicated to these. For Mahler there was no direction suggested.

Eventually he set out upon the highroad of music. But this was traversed unendingly by lanes resounding with the clamors of discouragement, misunderstandings, setbacks and biting criticism. He knew well that his soul must seek escape from the noise of the world. And many gates he passed through only to discover himself in a fog of philosophies. When he was thirty-five his searchings led him finally to the green valleys, the sunny waters and the high hills of Faith that his friend Bruckner had so long cherished. And when in 1895, in solemn ceremony, he uttered the Credo of a Roman Catholic, these became his own as well.

Yet, like Y-, the fever of all that had gone before was not swift to disappear. In the brief years remaining for him, he was unable to fashion an armor that was fully adequate to protect him against the lances of his generation. Commentators indicate also that he placed his holdings of Faith in jeopardy; and almost certainly, if he toyed with the doctrine of pantheism, he lost title to his Catholicism. A rather illuminating illustration of opposing sentiments in him is to be noted in his first outline for the *Eighth Symphony*. The initial movement is motivated apparently by one of the great hymns of the Church—the "Veni Creator"; the final and crowning movement revolves around the pagan deity, Eros and

**creation.** That the order of his conception—from God, the everlasting Light to a figure in the dusk of mythology—is out of line with the spirit of those who habitually utter a “Credo in unum Deum” goes without saying.

However, above the din of all his inward conflicts, he lifts his voice from time to time to reverently glorify that Light, which having sought in hope, he found in a garden where Bruckner walked. Therein lies the exaltation which listeners extract from his music. But his melancholy, his acute sensitiveness, his divergencies of thought press down upon us, too; and in the midst of an inspired moment, the shadow of these will induce, not an added peace, but rather a restlessness, a waiting for a cadence that is not sounded.

Maritain, the French philosopher, has written: “Music . . . has this peculiarity that symbolizing by sound the very movements of the soul—*cantare amantis est*—when it produces emotion it produces precisely what it symbolizes. But such production is not its object any more than a representation or description of the emotions. The emotions which it evokes in the soul by sound or rhythm are the matter by which it ought to give us the experienced joy of a spiritual form, of a transcendent order, of the brilliance of being.”<sup>1</sup>

Surely in the majestic strains of victory, in the grave moments of prayer which are to be discovered in the music of Bruckner and Mahler, the splendor of the indestructible and immortal soul shines in an unforgettable radiance!

#### HENDRIK WILLEM VAN LOON ON BRUCKNER, MAHLER, AND WOLF

During the latter years of Brahms' life there were three other great composers in Vienna whose works suffered a similar fate, who had to wait a long time for recognition. The first of them, Hugo Wolf, gave us a series of songs of rare beauty, for he knew how to identify the music with the words as no one else had been able to do since Schubert. The second of these was Anton Bruckner, who spent his many days on this planet fulfilling his task in a simple and sincere but somewhat ponderous way. The third was Gustav Mahler, whom we still remember over here from the days when he conducted the New York Philharmonic Orchestra and who was almost the complete opposite of the embittered Wolf (who realized his own genius as a composer but had to make a living as a musical critic) and the deeply religious Bruckner.

All three of them were finally able to get their works performed. The last two lived to see the day when their symphonies appeared regularly on the programs of all philharmonic societies. But as in the case of

<sup>1</sup> *Art and Scholasticism* . . . Jacques Maritain. (Charles Scribner's Sons.)

Brahms, they were obliged to exercise patience and to bide their time. If the public was slow in coming up to them, that was undoubtedly very unfortunate, but for the public, not for them. Even the humble Bruckner knew that what he had to offer was good. Let the audiences come and get it or do without.

Hendrik van Loon. *The Arts*, page 625, published by Simon & Shuster, New York.

### PITTS SANBORN ADVOCATES BRUCKNER CYCLE

In the article bearing the title "Music of Bruckner Would Enrich Season" (*World Telegram* March 26, 1938) the eminent critic, Mr. Pitts Sanborn wrote in part as follows:

... In recent years it has seemed as though the local taboo on Bruckner's music had been removed at last. Conductors of the first rank have directed his works here and not seldom. Arturo Toscanini, Willem Mengelberg, Artur Bodanzky, Leopold Stokowski, Bruno Walter, and Otto Klemperer have all done their mighty bit for Bruckner. Even the summer festivities at the Lewishon Stadium have testified to his importance. On the part of the public growing appreciation and pleasure had been clearly manifest. And now comes this slump!

I might say at this point that the slump, like every misfortune, has a concomitant advantage. We are spared performances that might be misrepresentations. Bruckner has by no means become so secure in this country that a clumsy, bungling exposition would fail to militate against the growing favor and lead unbelievers to exclaim, "I told you so!"

There are admittedly structural weaknesses in his symphonic works that pose problems for even the most accomplished interpreters. Great masters of design like a Toscanini and a Mengelberg have actually discovered bone and sinew hidden from the ordinary observer, and the conductors schooled in the old Viennese tradition have known how to emphasize the authentic Viennese quality in these works and even to bring out the kinship of Bruckner to so great and typical a Viennese as Schubert—a relation that is usually overlooked in the traditional preoccupation with the kinship of Bruckner to Wagner.

Therefore, while deploring the current slump in Bruckner, let us beware lest his reputation fall into the wrong hands, for many a conductor of respectable ability in the domain of Beethoven and Brahms is without vocation, or at any rate training, when it comes to Bruckner.

Nevertheless, though we must be content to bide our time till Bruckner can be reintroduced here under proper auspices, it is not amiss to point out that when the moment arrives the concert repertory could be varied and enriched through a Bruckner cycle, as in the case of the season's Sibelius cycles.

It is really imperative that some competent and courageous conductor should display the nine Bruckner symphonies in their order. Only four of them are at all familiar here now, and there is grave doubt whether the first has ever been played in this country at all. . . .

### ATTITUDE TOWARD COMPOSERS CHANGES

BY WARREN STOREY SMITH

Reprinted from an article in the *Boston Post*, January 23, 1938.

To this department has come a copy of the latest issue of CHORD AND DISCORD, the magazine published once a year, or oftener, by the Bruckner Society of America, Inc. The "discord," or critical disapproval of Bruckner and of Mahler, whom the society also champions, is largely confined to the title. Not that there is any present dearth of that commodity, although there is every sign of a more tolerant and understanding attitude on the part of the music reviewers, but the purpose of the magazine, or one of

its purposes, is to show as well as to encourage the trend toward these composers on the part of conductors, critics and audiences.

Long continued critical condemnation, turning gradually into enthusiastic approval, has been the fate of more than one composer. It is, in fact, the surest mark of value. The inconsequential composer does not have whole mountains of abuse heaped upon him — he doesn't get the chance.

On one page of CHORD AND DISCORD is to be found a list of performances of symphonies or of parts of symphonies and of smaller works by Mahler and Bruckner announced for the season of 1937-38 by seven American orchestras and one choral society. Included here are three full symphonies by each composer. The Boston Symphony Orchestra is down for Mahler's Fifth, already played, and for Bruckner's Seventh.

Considering how formidable, by comparison, a list of proposed performances of symphonies by Brahms and Tchaikovsky would seem, it may be wondered why conductors are still so leery of Bruckner and Mahler, particularly when the symphonic repertory is in such urgent need of replenishing. If the public were hostile, or even disinterested, this hesitancy would be easy enough to explain; but by many signs such is not the case. The critics still put up something of a fight; for years in New York the unanimous anti-Mahler sentiment suggested a cabal. But that is another story.

Take, for example, recent experience in Boston. Measured by the volume of applause and by the number of recalls for the conductor, Dr. Koussevitzky has scored some of his most conspicuous successes with Bruckner's Seventh and Eighth Symphonies and with Mahler's Fifth, while the visiting Mr. Mitropoulos earned his greatest triumph with the latter's First two years ago. That Mahler's "Song of the Earth" and Ninth Symphony, actually finer works, have received less outward acclaim may easily be laid to their common possession of a long-drawn-out pianissimo conclusion, the antithesis of what is known as an applause trap. To go further back, Bruckner's Seventh and Eighth and Mahler's Fifth have all been repeated here in the same season by popular request.

That which happens in one city probably happens in another; by evidence of the testimony quoted in CHORD AND DISCORD it most decidedly does.

#### LIEDER EINES FAHRENDEN GESELLEN BY WPA

On the evening of December 4, 1937, Miss Eells sang *Lieder eines fahrenden Gesellen* at a concert by the New York Civic Orchestra. The orchestra, under the direction of Edgar Schenkman acquitted itself creditably. The audience seemed to enjoy the songs. Miss Hariette Eells was recalled twice.

#### TUREMAN PERFORMS BRUCKNER'S *FOURTH* AT DENVER, COLORADO.

The Denver Civic Orchestra under the direction of Horace E. Tureman performed Bruckner's *Fourth Symphony* on January 23rd, 1938. The performance stirred the audience.

#### ANNOUNCEMENT

THE ASSOCIATED MUSIC PUBLISHERS, INC., 25 West 45th Street, New York City, announce that the conductor's scores and performing parts of the symphonies of Anton Bruckner, which were hitherto for rent only, are now for sale. The prices are:

Symphonies No. 1, 2, 4, 6: Score \$10.00; Parts \$25.00; Strings each \$1.20.

Symphony No. 7: Score \$9.00; Parts \$30.00; Strings each \$1.20.

Symphony No. 8: Score \$15.00; Parts \$35.00; Strings each \$1.60.

Symphonies No. 3, 5, 9: Score \$12.00; Parts \$35.00; Strings \$1.60.

Overture G minor: Score \$4.00; Parts \$6.00; Strings each \$ .40; Andante: Score \$4.00; Parts \$6.00; Strings each \$ .30.

STOCK BROADCASTS MOVEMENTS FROM MAHLER'S SYMPHONY  
NO. 1 OVER WGN JANUARY 29, 1938

On Saturday night, January 29th the Chicago Symphony under the direction of Frederick A. Stock performed the *Andante* and *Scherzo* from Mahler's *First Symphony* at a popular concert. Judging by the enthusiastic applause Mr. Stock need not hesitate to include additional movements, or perhaps even a whole symphony of Mahler on these programs.

BRUCKNER'S *FOURTH* UNDER BRICO

The Bay Region Symphony Orchestra performed Bruckner's *Fourth* in San Francisco on August 16th and in Oakland three days later. On both occasions there were sold out houses and attentive and appreciative audiences. This was the first performance of Bruckner's *Fourth* in San Francisco.

KINDERTOTENLIEDER BY FEDERAL SYMPHONY ORCHESTRA

Hertha Glatz sang *Kindertotenlieder* at a concert by the Federal Symphony Orchestra under the direction of Fritz Mahler in New York City on May 15th. Miss Glatz revealed a thorough understanding of the spirit of the text and succeeded in communicating its message to her audience. There was much applause for the soloist and for the orchestra.

HALASZ CONDUCTS *FINALE* OF MAHLER'S *FOURTH*

The Greenwich Orchestra under the direction of Laszlo Halasz, performed the *finale* of Mahler's *Fourth* at the Federal Music Theatre on September 7th before an enthusiastic audience. Kate Ettlinger was the soloist.

Wrote Mr. Francis D. Perkins of the *Herald Tribune*:

"... Mahler's fourth symphony was first played here in a New York Symphony concert under Walter Damrosch in March, 1904, but nearly fourteen years have elapsed since its last New York performance by the Society of the Friends of Music under Artur Bodanzky in November, 1924, although, in regard to its temporal dimensions and the requirements of the score, it is one of the least exacting of Mahler's works in this form. The finale, with a wealth of melody of an unsophisticated Austrian flavor, is well suited to a separate performance, although it might have been worth while to add a note pointing out that the text is that of an old German folksong describing a somewhat festive heaven. . ."

THE KILENYI MAHLER MEDAL AWARDED TO EUGENE ORMANDY

In appreciation of his efforts to create a greater interest in and appreciation of Mahler's music in this country, the Mahler Medal of Honor, designed by Julio Kilenyi for the exclusive use of the Society, was awarded to Eugene Ormandy after a performance of *Das Lied von der Erde* in Philadelphia, on January 29, 1938. Dr. Harl McDonald, Head of the Department of Music of the University of Pennsylvania and a member of the Board of Directors of the Philadelphia Orchestra Association, made the presentation on behalf of the Society.

BRUCKNER AND MAHLER ON WNYC AND WQXR

The local stations, WNYC and WQXR, thanks to the catholic taste of their musical directors (Messrs. Eddy Brown and Douglas MacKinnon—WQXR, and Dr. S. N. Siegel and Mr. H. Neumann—WNYC), have been broadcasting the available recordings of Bruckner's and Mahler's works throughout the year. A feature of especial interest and merit was the 15-minute able discussion of *Das Lied von der Erde* by Mr. Neumann over WNYC on February 13, 1938. Charles F. Adler gave an interesting talk on Bruckner over WQXR on July 8, 1938. This station broadcast recordings of Bruckner's *Ninth* in December, 1938.

## RECORDINGS

*Das Lied von der Erde*—Vienna Philharmonic Symphony, Bruno Walter, Conductor; Soloists, Charles Kullmann and Kerstin Thorborg.

It was a courageous undertaking of Columbia to present, for the first time on records, the complete symphony, which though a masterwork, is by a composer still far from popular or enjoying the wide appreciation he deserves. . . .

The playing, under Walter's ministrations, is beautiful at every stage. . . .

The soloists (Kullmann and Thorborg) were happily chosen. . . .

There remains Mahler's great score with a last movement that is the ultimate in resignation and pessimism as expressed in the language of tone. It is not a popular work: so much the worse for people who will not listen so that they may make "contact" with a noble poet. I have no inclination to discuss the so-called controversial question of Mahler, a subject for which I have no patience. I can but testify that for me "Das Lied von der Erde" is a musical monument that grows in size each time I hear it; and if other people cannot see it the loss is theirs.

MOSES SMITH, *Boston Evening Transcript*, December 14, 1937-

LIEDER EINES FAHRENDEN GESELLEN SUNG BY HARRIET EELLS  
AT TOWN HALL

. . . The "Lieder eines fahrenden Gesellen" are incompletely realized when heard with piano accompaniment, rather than with the orchestra, but yet, considering how seldom they are sung, were to be welcomed in this guise. If some of the subtle emotional hues here and in the Loeffler group were not fully set forth, Miss Eells was successful in setting much of their expressive significance, and especially in conveying the poignant contrasts of feeling in one of Mahler's most treasurable contributions. . . .

. . . There was a good-sized and applause audience.

F. D. P., *Herald Tribune*

STOCK PERFORMS BRUCKNER'S *THIRD* FEBRUARY 24, 1938

Bruckner's *Third* was featured on last evening's program; and it was so well received—Dr. Stock had two enthusiastic recalls after its performance—that this commentator believes that it reflects the changing attitude of Chicago music-lovers toward the genius of St. Florian. Years ago Bruckner performances virtually emptied concert halls. And most certainly the cordial and sincere reception which the *Third Symphony* won yesterday should gratify its conductor whose faith in the greatness of the work has been evidenced on previous occasions.

The power and sweep of the first movement as the orchestra played it will not soon be forgotten. The solemn second movement with its exquisite counterpoint was done very much *con amore*; and the scherzo might well be programmed: "Life is good!" The finale, notable for its melodic and contrapuntal effects and for the sheer "lift" and grandeur of its progression exhibited the orchestra in its finest light. We will hope for a repetition of this symphony next season.

MARY R. RYAN

HARRY T. CARLSON CONDUCTS BRUCKNER'S *TE DEUM* PERFORMED  
BY SWEDISH CHORAL CLUB IN CHICAGO, APRIL 27th, 1938

"Te Deum laudamus: te Dominum confitemur. Te aeternum Patrem omnis terra veneratur." As the majestic music which Bruckner set to this ancient hymn of the Church burst forth in Orchestra Hall last evening, one could sense the lifting of hearts of both singers and auditors alike in praise and thanksgiving to the Eternal Father. It was an experience this commentator will never forget.

Harry T. Carlson, the brilliant conductor of the Swedish Choral Society (the membership of which is two hundred and twenty) offered three religious works new to Chicago in his latest program. One of these was a unique oratorio by R. Nathaniel Dett—"The Ordering of Moses." The other two were the *Te Deums* of Bruckner and Kodaly. All three compositions demanded much in the way of technique from chorus and soloists, much of interpretive power on the part of the conductor. And thunder-

ous applause from the audience, as well as astonishingly unanimous commendation from critics testified to the quality of the entire performance.

The idea of offering the public two *Te Deums* was novel. Both works are rich in tonal color, with Kodaly highlighting his orchestration with some striking uses of dissonance. But there is a glory in the music of the older Bruckner that glows by the sheer force of the human voice alone.

A vivid contrast was provided in the two endings of the *Te Deums*. The Kodaly version might be designated as "feminine," for we hear the "In te Domine speravi: non confundar in aeternum" (with soprano soloist against a subdued chorus) as something ethereal. The "masculine" finale is Bruckner's; here, as the shadows are closing in he still prays with full and ringing strength: "In Thee, O Lord, have I trusted; let me never be confounded."

May these two colossal hymns find many conductors in the seasons to come!

#### STOCK PERFORMS EXCERPTS FROM MAHLER'S *FIRST* NOVEMBER 3, 1938

For a second time in twelve months, Dr. Stock offered to Chicago last evening the hunter's funeral procession and the scherzo from Mahler's first symphony. His devotion to the Mahler cause won in this instance a phenomenal reward: for at the conclusion of the *Frere Jacques* movement, an audience which has the habit of holding sternly to the convention of silence between the pauses of a symphonic work broke into spontaneous applause. And justly was the rule disregarded. For the great conductor of the Chicago Symphony Orchestra presented this music in what might be termed etchings of incredible beauty. With subtle skill his needle traced the plate of sound. No single shadow was overlooked; and every infinitesimal line of light was captured. As a result, the finished products belong in the folio of treasured art. Following such a performance of the "youthful Mahler" Chicago concert-goers glance ahead with awakened interest to Stock's presentation in January of *Das Lied von der Erde*.

MARY R. RYAN

#### NEW HONORARY MEMBERS

Charles Kullmann, Dimitri Mitropoulos, and Enid Szanthy were elected Honorary Members of the Society at a meeting of the Executive Members held November 30, 1938.

Mr. Mitropoulos performed Mahler's *First* in Boston (broadcast) and Minneapolis, and Mahler's *Fourth* in Minneapolis.

Miss Szanthy and Mr. Kullmann were the soloists in New York and Philadelphia performances of *Das Lied von der Erde*.

### GUSTAV MAHLER: ANDANTE, SECOND SYMPHONY

*Stadium concerts, N. Y., Fritz Reiner, conductor; July 21, 1937.*

The easygoing, genial andante from Mahler's symphony in C minor is one of the more readily assimilable parts of the work and was cordially received by the evening's good-sized audience in a polished performance. There are probably other movements in Mahler's symphonies which are suitable for separate performance and could be considered for Stadium programs.

F. D. P., *N. Y. Herald Tribune*

The conductor deserves special commendation for giving the Mahler excerpt a hearing.

*New York World Telegram*

### GUSTAV MAHLER: FIFTH SYMPHONY

*Boston Symphony Orchestra, Serge Koussevitzky, conductor, Boston, October 22 and 23, 1937; N. Y., March 10, 1938.*

Revival of Gustav Mahler's Fifth Symphony yesterday afternoon was, from a purely musical point of view, the first "notable event" of the new Boston Symphony season. . . .

Word that the hall was sold out, received before the concert began, suggested that Wagner more than Mahler was responsible. Yet the cordiality with which the Fifth Symphony was received tempts one to revise his opinion. There was spontaneous applause after the scherzo and the slow movement; at the end the audience applauded with more than customary warmth, and there were a few cries of "Bravo"! . . .

In a sense the concert ascended Olympus with Mahler and dwelled on the summit with Wagner. There is perhaps no more disputable or fascinating creative personality in modern music than that of Gustav Mahler. He aspired to write gigantic masterpieces illumined by soaring visions. He rivaled Richard Strauss in his command of writing bril-

liant polyphony for large orchestra. Not only did he absorb the technic of the masters, whose music he conducted, but he possessed an original voice of his own, a voice particularly conspicuous when Mahler's mind was occupied with fantasy or with sorrow and thought of death. . . .

C. W. D., *Boston Globe*

The opening of the Funeral March, the first movement, might have been as innocuous as the Mendelssohn Song without Words which it resembles. Instead, it has enormous power and majesty before a dozen measures have elapsed. Through all the storm and stress of the movement that majesty somehow is never sacrificed. The second movement and the extraordinary scherzo both have a kind of excitement that no other composer has yet quite attained. Nothing in the Symphony better illustrates the artist than the Adagietto, fourth movement, wherein, with an enormous orchestra at his disposal, Mahler limits the instrumentation to strings and harp, because he is an economical craftsman and because, as it seems, any addition would have robbed the music of its characteristic beauty. The last movement is a miracle within a miracle. The musician may admire here, as in the case of the scherzo, the wonderful polyphonic web. The layman is bound to be moved by the music's elemental force.

Mahler was not mistaken in regarding this Symphony as a new departure in his art. Even today it sounds new. . . .

MOSES SMITH, *Boston Evening Transcript*

A momentous revival, that of the Fifth Symphony of Mahler, took place at Symphony Hall yesterday afternoon. Unheard at the Symphony Concerts since 1914, this well-named "Giant" Symphony deserves, both by reason of its intrinsic greatness and of its reception by yesterday's audience, to remain in the active repertory, to which Dr. Koussevitzky has at length restored it in a performance which proved a triumph for both composer and conductor. . . .

The crux of the matter seems to be that Mahler's music cannot always be listened to just as music; and some will not, or cannot, hear music in any other

way. "It was humanity revealed," once wrote a former member of our orchestra, Allan Lincoln Langley, of his own gradual conversion to the Mahler cause, "with no lies, no extenuations, no hypocrisy, no omissions. Beauty shown out fully as often as it does in human affairs; banality was there to torture, and disappoint and to corrode. It was all in the music—one felt Mahler a kinship to the oracular confessor, Walt Whitman: 'I am the man—I suffered, I was there.'"

After so overpowering and exciting an experience as that offered by this Symphony and its almost unbelievably vivid and compelling projection at the hands of Dr. Koussevitzky and his men, any other music, even that of Wagner himself, might easily come as an anti-climax. And it was Wagner who yesterday occupied this unenviable place. . . .

WARREN STOREY SMITH, *Boston Post*

Mahler's Fifth Symphony had an amazingly cordial reception from yesterday afternoon's audience. This was a good sign first because it floated the rather lop-sided genius of Mahler for once on an even keel and, second, because it was a credit to the attentive powers of the audience. You cannot call the Friday-afternoon public stuffy—and there used to be regrettable sneers on that head—if it is going to take Mahler to its bosom. For still another reason was the sincere applause a good sign, in that it was recognition of the extraordinary and successful efforts of the orchestra and Dr. Koussevitzky to give the Symphony a faithful and inspired performance.

When this is said, we must return to our first point: an opinion of the merits of this symphony and of Mahler as a composer. No doubt the works of Mahler might have stood a better chance of success if it had not been for the persistent camp of devoted admirers, who could see nothing wrong with their idol. On the other hand the symphonies might have suffered complete neglect if it had not been for their propaganda. . . .

. . . Unpredictably enough, yesterday's hero was Mahler.

ALEXANDER WILLIAMS, *Boston Herald*

. . . It is tumult of sound, and lordly splendor. Its power lies in its tone-painting.

This is so, at least of the first movement, with the solemn prelude of trumpets which usher in the funeral march, with its heavy tread and wild lamentations. The scherzo is professedly

demonic, but more in the vein of piquant orchestral effects and moods of the dance. The most exalted pages are undoubtedly those rapt measures which precede the finale, when a vast tonal design draws all its parts together and welds them into a monumental conclusion.

The thunderous, clamoring symphony served that glowing, shimmering thing, the Boston Symphony Orchestra, to display anew its splendors. . . .

OLIN DOWNES, *N. Y. Times*

. . . That B-flat minor passage in the first movement where the music breaks in upon the measured, decorous tread of the Funeral March like a wild and shattering outburst of uncontrollable anguish is one of the most veracious things that Mahler ever wrote; and the Rondo Finale is a brilliant and exhilarating tour de force. . . .

. . . As for Mr. Koussevitzky, he has seldom put to his credit in New York a more eloquent and masterly performance of any work.

LAWRENCE GILMAN, *Herald Tribune*

In a way that seems both naive and out of date a New York audience still fights shy of Gustav Mahler. In Carnegie Hall last evening Serge Koussevitzky had the temerity to devote the first half of the Boston Symphony Orchestra's concert to Mahler's Fifth Symphony, in C-sharp minor, and in the intervals the usual questions were asked: "How do you like Mahler?"

Well, this symphony was completed in 1902 and introduced to New York (by the Boston Symphony Orchestra, as it happens, in Carnegie Hall, Wilhelm Gericke conducting) on February 15, 1906. By this time both it and its composer might be taken somewhat for granted, even as we take Beethoven and Brahms. . . .

What is more to the point from the popular angle, however, is the unmistakable tunefulness that prevails in much of this symphony. Such is the case in the opening funeral march and, differently, in the dance measures of the scherzo. The ensuing Adagietto, scored only for strings and harp, is a delicate, expressive lyric interlude of melodious tranquillity that nobody could fail to find beguiling, and the Rondo-Finale abounds in tune from the initiatory moment when horn and bassoon and oboe contend for primacy on to the end.

All told, Mahler-fear seems now a bit grotesque.

PITTS SANBORN, *World Telegram*

## HUGO WOLF:

PRELUDE AND ENTR'ACTE, FROM  
*DER CORREGIDOR*, ITALIAN SERE-  
NADE, SONGS WITH ORCHESTRA,  
SYMPHONIC POEM, *PENTHESILEA*.

## GUSTAV MAHLER:

ANDANTE AND SCHERZO FROM  
SYMPHONY NO. I, D MAJOR, *LIEDER  
EINES FAHRENDEN GESELLEN*,  
RONDO FROM SYMPHONY NO. 7, E  
MINOR.

*Chicago Symphony Orchestra, Fred-  
rick Stock, Conductor; Soloist: Kerstin  
Thorborg, November 11 and 12, 1937.*

Mr. Stock's program was confined to the two composers from whose work Mme. Thorborg sang. Both of them had a personal gift for song writing and Wolf had a predominant one, for his taste in poetry was that of a poet and the sensitiveness of his nature was alive to the slightest turning of a mood. But above all he could set a story within its proper frame, and the delightful picturesque quality of his writing, together with a command of the orchestra which has both elegance and power, was fully testified in Mr. Stock's performance of music from "The Corregidor," the Italian Serenade (in which Clarence Evans' viola figured delightfully) and "Penthesilea," but on one occasion played previously by the Symphony and that thirty-four years ago.

If Wolf's brilliant music sounded comfortably nonmodernistic, Mr. Stock took care that Mahler should sound neither too elaborate nor too morose. The interesting scheme of playing the third and the second movements from the sylvan first symphony as an introduction to the "Journeyman" cycle was most happy. We found Mahler's eccentricity in its most appealing aspect, the pedantry completely overborne by the naivete and the immense orchestral palette sparingly and episodically used for the delight of an ear not too ponderously admonished with a "message."

And even with the rondo from the seventh symphony, where the full orchestra artillery is continually in use, Mr. Stock's system of offering us details from Gargantuan panoramas rather than a single panorama in entirety, gave us a new and refreshing glimpse of a man laborious in his thinking but brilliant in his discourse. It was one of Mr. Stock's "big" programs, and Wolf's elasticity and

Mr. Stock's emphasis upon Mahler's vast but childishly eager imagination kept us at very high pitch of purest pleasure.

EUGENE STINSON, *Chicago Daily News*

## GUSTAV MAHLER:

## FIRST SYMPHONY

*Minneapolis Symphony Orchestra, Dimitri Mitropoulos, Conductor. Minneapolis, January 28, 1938.*

The naive, romantic harmonies from the highlands of the old Dual Empire are sounded forth again and again, while cuckoos, hunting-horns and other familiar features of a rococo countryside are offered in a rich variety of orchestral sonorities, only to be dramatically overwhelmed, now and again, by weird, almost sinister, cataclysmic bursts of sound.

Another set of associations is inevitably evoked: the racial and geographical heterogeneity of that same empire. For the Laendler, triple-time bucolic cousin of the waltz, which Mahler loves so to recall in much of his music, has to retire, now and then, in favor of the kolo-dance rhythms from the Balkan regions which, in Mahler's time, also bowed to the Hapsburgs. This juxtaposition of East and West is no small factor in contributing the powerfully exotic color of this particular symphony. . . .

FRANCES BOARDMAN, *Pioneer Press*

. . . He gave a first performance of the first Mahler symphony Friday night in Northrup auditorium that will be remembered a long time. . . .

In this symphony there is abundance of beauty spots; they are scattered through each movement with lavish disregard of anything but the composer's desire to pour out of his heart the things that were filling it and make them the possession of others. That is one reason why this reviewer found so great pleasure in listening to this music.

Structurally this is a symphony but it is not carried through on conventional lines. If Mahler felt a sudden impulse he would and did leave stranded high and dry a previous theme that had attracted his attention, to open his heart to a new emotion or impulse. This is clearly in evidence throughout the score, for parts in juxtaposition to one another have little or no relationship to one another thematically.

This might be proclaimed a weakness. It is in the truth the great glory of the work, for he gives us new revelations of

the workings of his mind and heart. There are currents and cross currents of emotion that intercept each other, mingle together and it is expected they will give birth to something at least remotely similar. It all depends on the wayward mood of the composer whether this happens or not. . . .

He was admittedly a great conductor, a better than passable song writer and we are constrained to believe that under the direction of a master conductor like Mitropoulos his symphonies could win their way into favor and he would be universally regarded as a great composer. . . . JAMES DAVIES, *Tribune*

Even Mahler himself, were he able to look down from some celestial sphere among the immortals, would undoubtedly have been amazed at the exuberance of the ovation given his long and taxing First Symphony last night in Northrop auditorium at its first performance in Minneapolis. . . . Still I believe I kept enough objectivity of judgment to observe that the symphony is a gigantic musical conception. It is a super-world, in which the mystical, the lyrical, and the dramatic cohabit with the naive, and the obvious and the ponderous. And yet, strangely enough, each quality seems to gain vitality from the presence of the rest. For instance, the mystical, trance-like mood of the sustained opening was intensified by the naive cuckoo call which accentuated it, and the most romantic lyrical utterances were closely associated with the pondering realism of a sturdy, obvious peasant-dance. The truly dramatic and tragic implication in the heavy, sinister tread of the main theme of the Third movement was also actually heightened by being based on a homely folk-tune suggesting the familiar round "Frere Jacques." . . .

JOHAN STORJOHANN EGILSRUD, *Journal*

. . . The symphony was the Mahler No. I in D major, played here for the first time. I have always been allergic to Mahler, and my story always has been that Mahler simply wasn't my man, that his music never took me any place. But I believe that many of the anti-Mahler camp will agree with me that Mitropoulos brought us die-hards nearer to liking and enjoying Mahler than any other conductor has done before.

One thing must be said at the outset: Mitropoulos gave the work a lucidity, a sensitiveness and strength which brought out all that was in Mahler, and maybe a

little more. The performance was full of felicitous detail, wrought with the affectionate and scrupulous care of a zealot. It was obvious that Mitropoulos gave his heart and his mind to the work, and only a bullheaded listener could refuse to respond in kind. . . .

JOHN K. SHERMAN, *Minneapolis Star*

GUSTAV MAHLER:

*DAS LIED VON DER ERDE*

*Philadelphia Orchestra, Eugene Ormandy, Conductor; Soloists, Enid Szanthe and Charles Kullmann. Philadelphia, January 28-29, 1938; New York, February 15, 1938.*

At tonight's Philadelphia Orchestra concert in the Academy of Music, Eugene Ormandy will be presented with the Gustav Mahler Medal, awarded annually to the conductor accomplishing most to further appreciation of that composer's music in this country.

The presentation will be made by Dr. Harl McDonald on behalf of the Bruckner Society of America preceding a performance of Mahler's "Das Lied von der Erde" (*The Song of the Earth*).

Yesterday's regular Friday afternoon audience heard a fine performance of "Das Lied" without benefit of ceremony, but with much enthusiasm.

The work, considered one of the composer's finest expressions, is described as "a symphony for tenor contralto and orchestra." It was written in 1908 and had its American premiere here under Leopold Stokowski in December, 1916.

The six songs in the score are based on old Chinese poems translated into German by Hans Bethge. The subjects are mostly cosmic and autumnal—"The Drinking Song of Earth's Sorrow," "The Lonely One in Autumn," "The Farewell"—with slighter and more vernal interludes such as "Of Youth" and "The Intoxicated One in Spring."

The score contains music of much sensitivity and melancholy grace expressed in the style of later German romanticism. "Das Lied," is the work of a composer whose lyric gift is, perhaps, greater than his dramatic powers, but none the less has many pages of nostalgic tenderness and searching introspective beauty.

Yesterday's tenor and contralto soloists, Charles Kullmann and Enid Szanthe, both brought fine gifts of artistic understanding and vocal excellence to their assignments. Miss Szanthe, especially, disclosed a voice of noble quality.

Ormandy's reading was eloquent, his support of the soloists noteworthy for its sympathy and control. . . .

. . . The audience was enthusiastic at all stages and Ormandy was recalled for repeated acknowledgments both after the symphony and the "Lied."

EDWIN H. SCHLOSS, *Philadelphia Record*

. . . Both works ("Das Lied von der Erde" and Mozart's "Haffner" Symphony), in ways admirably contrasted, made an exceptional impression upon the audience. . . .

The performance of "Lied von der Erde," with two excellent soloists, was exceptionally communicative of the moods of the music. And the music is very much mood—more mood than original sound. But it is simple, and it is very deeply felt. This was communicated last night in a way which caused one commentator to modify his earlier opinions of the composition. . . .

The dramatic arrangement of the work is striking and singularly effective; a bright-voiced tenor, who sings passionately, recklessly, sardonically of the illusions of life at its flood; and a dark-voiced contralto, the tone and mood autumnal, with murmuring, dun-colored instrumentation, until the moment of the last wild and sensuous outburst, the farewell to the dear earth and its blossoms. The instrumentation is wonderfully reflective of the verse; the voice parts are written with much felicity for the expressive purpose involved; above all, there is the essential and irresistible simplicity of expression which communicates so directly and probes to centers of experience and feeling.

Mr. Kullmann has a true understanding of this music, and treated his text significantly, singing it with a fine warmth and vividness of color, and a wealth of suggestive detail. Miss Szanthe performed with equal earnestness and conviction, and a voice suited by its very nature to the music. There is evidently good reason why "Lied von der Erde" remains on concert programs. The performance placed the listeners under an indebtedness to those who so conveyed the composer's meaning.

OLIN DOWNES, *N. Y. Times*

Mr. Ormandy's major offering at the sixth New York concert of the Philadelphia Orchestra was a great and remarkable work that has never, as it seems to some of us, been justly valued—possibly because it is music that is remote in

mood and impulse from that which is typical of our day. . . .

Yes, the "Lied von der Erde" is no novelty. It has often been set before us. But have we heard it? One may wonder. For its content is elusive and arcane; it has nothing in common with the tempo of today. It is music infinitely lonely, tragical, remote; and for some of us it is among the most affecting utterances in the tonal poetry of the last half century: at once a profoundly moving testament and a beautiful and poignant work of art. . . .

This music, with its profound and passionate introspection, its disclosure of a lofty and susceptible nature wrought upon by the inscrutable mystery and cruelty of existence, is the voice of an essentially solitary spirit, lonely and introverted and unabsolved. An ill man, Mahler became mindful of his end, as Bruno Walter tells us. Like the wounded Prince Andrei in Tolstoi's "War and Peace," he had begun to dissociate himself from life: and his "Lied von der Erde," in Spinoza's phrase, is a creation *sub specie mortis*. It is not so much a Song of the Earth as a Song of the Predestined. Mahler saw the things of earth falling behind him, losing their contour and their relevance. But though he still stretched forth his hands to hold them, nevertheless the Farewell of the closing movement, with the contralto voice murmuring its reiterated "Ewig . . . ewig," below the unresolved suspension of the flute and oboe, is music touched with a fathomless tranquillity, a mystical, assuaging peace; so that we remember the enigmatical saying of Thoreau: "Only the convalescent raises the veil of Nature . . . There is more day to dawn."

. . . I cannot recall a more deeply comprehending, more beautifully sensitive, or more affecting performance of this music than Miss Szanthe achieved last night. Her delivery of the repeated "Ewig" at the end—in the color of the long-held notes, in the dying close against the celesta's soft arpeggios—seemed to speak from that inaccessible sanctuary in which Mahler's lonely spirit dwelt, and gave us the quintessence of all that he had tried to tell us.

LAWRENCE GILMAN, *Herald Tribune*

. . . Mahler's great opus has earned a place in the sun for the appeal of its musical substance; the excellence of its orchestration, and the charm and engaging qualities that are contained in the parts for the singers.

Miss Szantho's numbers were given with the opulence and artistry that have heretofore marked her offerings in concert and recital. Of particular merit was "Der Abschied," a profound and moving number admirably proclaimed and dictioned.

Mr. Kullmann sang his share with fine intonation and appropriate feeling for the music and the text. Both singers received enthusiastic applause. The orchestral background was performed with the musicianship and blending of the choirs; the firm, smooth attack and dramatic meaning that did ample credit to the composer's intent. . . .

GRENA BENNETT, *N. Y. American and Journal*

GUSTAV MAHLER:  
WUNDERHORN SONGS

*Chicago Symphony Orchestra, Frederick A. Stock, Conductor; Ria Ginster, Soloist; February 23, 1938.*

. . . Mme. Ginster knows her Mahler. She can project the sweet naivete of "Rhine Legend" in a dewy and enchanting manner and deal most competently, too, with such brimingly passionate things as the same composer's "Liebst du um Schönheit." She knows how to follow each turn of the lyrics, and succeeds in giving a listener the impression of direct, fervent, sincere singing. . . .

EDWARD BARRY, *Chicago Tribune*

. . . Following the intermission, Mme. Ginster sang a group of too-seldom heard songs of Gustav Mahler's musical creation. With beautifully couched, gently commanding address, she revealed the sunlit, moody poetry and quaint imagery of the Mahler lieder. Dr. Stock and the orchestra fashioned the intricate, gay orchestral accompaniment with deft control, while Mme. Ginster floated unbelievably delicate and high-flown melody above the engaging instrumental conversation. . . .

. . . This reading, as well as the performance of the other listed numbers on the program, brought loud and appreciative applause from the crowded hall. . . .  
JANET GUNN, *Chicago Herald & Examiner*

ANTON BRUCKNER:  
THIRD SYMPHONY

*Chicago Symphony, Frederick A. Stock, Conductor; Chicago, February 24-25, 1938.*

. . . Mr. Stock and his men gave the

Bruckner Third Symphony a presentation full of lyrically lovely effects. The sweet, introspective passages, in which the work is so rich, found in these searching strings and phenomenally well blown horns the tone colorings which Anton Bruckner must have fondly imagined, yet never heard with fleshy ear. . . .

EDWARD BARRY, *Chicago Tribune*

. . . Mr. Stock had placed the concerto ideally, after a performance of the Bruckner D minor symphony; this was but its fourth performance here, the last preceding one having been five years ago. The third symphony, with all the proclamatory richness of its brass, with all of Bruckner's innocent liking for melodic beauty and with his invariable hint somewhere or other of the pastoral, is neither so simple nor so cheerful as it sounds. It is freighted with contrapuntal riches and behind its endearing frankness there is the watchful ear of learning. . . . All that is majestic in the symphony, all that is impressive or gay and all that is human Mr. Stock brought to a pellucid surface in a performance of towering energy and unerring insight. . . .

EUGENE STINSON, *Chicago Daily News*

GUSTAV MAHLER:  
FOURTH SYMPHONY

*Minneapolis Symphony, Dimitri Mitropoulos, Conductor; Irene Opava, Soloist, Minneapolis, March 11, 1938.*

It would be well if our audiences knew more about the Mahler symphonies. Mitropoulos has had the courage to play two of them this season, the fourth at the Friday night concert and we have wondered why the prejudices of our friends have prevented them from enjoying two of the most enjoyable musical treats of the present season.

The fourth, that we heard Friday night, may be classified as one pleases, the fact remains that it possesses qualities that would intrigue anybody with the scantiest love of melody in his soul. . . .

He was one of the most famous conductors that ever lived and knew as well as any man what was demanded for the building of a symphony. He had another point of view, however, instead of the usual Allegro, Andante, Scherzo and another Allegro he went his own way and produced the fourth symphony that we heard at the concert in Northrop auditorium Friday night. We are rather inclined to believe the natural expression

of his emotions might be followed profitably by other writers of symphonies.

It is quite evident that from the opening bars he felt he had something of importance to say and he proceeds on his way with an eloquence that should have convinced the doubting Thomases amongst us.

It is full of broad lines of melody and that in itself in these days of constructive guesswork condemns him; but they are melodies so beautifully linked together, so euphonic in their relationships, so full of the joy of life that one is compelled to a feeling that perhaps after all a symphony need not be a musical problem or a series of emotional experiences, it may be the simple expression of a heart that is overflowing with conceptions of beauty.

This at any rate is the feeling the fourth symphony engendered and it is one that most nearly represents the reactions of the audience that listened to it Friday night. How much Mitropoulos was responsible for this I am not prepared to say; that his leadership was in a great measure responsible for it we will admit; but it was because he had sounded the depths and emerged with the musical truth according to Mahler imbedded in his own consciousness.

The soprano solo in the last movement was sung by Irene Opava, wife of our first flutist, who, in her first appearance before a Minneapolis audience, showed not merely a voice of fine quality, she also made clear that she was a vocal artist of distinct ability. She sang simply, without exaggeration, yet giving with charming emphasis everything that the words and music suggested. . . .

JAMES DAVIES, *Morning Tribune*

. . . Mahler was infinitely beguiled by dance rhythms, and infinitely clever in displaying them in orchestral dress. Be his own, or any one's else explanation what it may, I can only feel that the first movement of this symphony is something that should be danced by the most beautiful and responsive ballet troupe obtainable—it simply cries for further materialization of color and graceful motion.

For sheer beauty, the third movement is perhaps the best. . . .

FRANCES BOARDMAN, *Pioneer Press*

There were many ovations at the symphony concert last night in Northrop auditorium. The orchestra and Mitropoulos received an ovation at the close of

the Fourth Mahler symphony; Irene Opava, the soprano who sang the solo part in the symphony, met with a storm of applause. . . .

Both soloists fully deserved the support and ovations given them. Using her limpid, expressive voice with unforced simplicity, Mrs. Opava fitted the melodic patterns of the solo parts carefully into the pattern of the Mahler symphony. The reed-like quality of her voice blended perfectly into the orchestral texture. Not a large voice, it had, nevertheless exceptional carrying quality, and it served as a highly expressive and flexible instrument for a born artist. . . .

If Mahler could be interpreted so well as he was last night by Mitropoulos, there would be no need of a Mahler society to create an interest in the composer. . . .

. . . The orchestration was usually rich and natural. Such efforts as the use of a violin tuned sharp for a humorous purpose, or strange timbres like a fat tuba tone in duet with a thin violin tone, or violent combinations of shrill picolos, oboes, and clarinet—these effects only added spice and variety to the orchestration. And a sense of abundance of ideas and of beauty overshadowed all shortcomings. . . .

JOHAN STORJOHANN EGILSRUD,  
*Minneapolis Journal*

. . . It was the third movement—long, lovely and long—that impressed upon me, last night, the need of a city charter amendment which would restrict the number of Mahler symphonies to one (1) per season. But when the fourth movement came, and Irene Opava's poised and clear-toned soprano solo wove itself into the fascinating instrumental texture, I began to think Mahler was right and I was wrong.

At any rate, the work was given last night an expansive, affectionate interpretation that virtually baffled criticism. It is a sweet-spirited symphony—benign, childishly joyful, droll, piquant. The orchestral colors are especially luscious, are combined into all sorts of curious blends. The second movement, which was like a musicalized episode from Grimm, was weird and had a kind of smirking good nature. The third, it must be admitted, was more like a filibuster than a mere symphony component, but the finale, I repeat, was something of which you could gladly say, "All is forgiven." . . .

JOHN K. SHERMAN, *Minneapolis Star*

ANTON BRUCKNER:  
TE DEUM

*Swedish Choral Club; Harry T. Carlson, Conductor. Stanley Martin, Organist. Soloists: Thelma von Eisenhauer, May Barron, Robert Long, Mark Love, Chicago, April 27, 1938.*

. . . Bruckner, the mighty, has written a Te Deum massive and alive with religious fervor, imposing strenuous demands upon the singers, both as to tonal sonority and requiring vocalists with unlimited range. This happy combination was found in the Swedish Choral Club, who lifted their voices heavenwards with inspired devotion and colossal magnitude. . . .

. . . To Thelma von Eisenhauer, soprano; May Barron, alto; Robert Long, tenor and Mark Love, basso, must go unstinted praise, likewise to the chorus and its extremely capable leader, are addressed commendation for their splendid contribution to a program unusually taxing and musically important.

HERMAN DEVRIES, *Chicago American*

The Swedish Choral Club's first Chicago performance of the Te Deums of Bruckner and of Kodaly, plus that of Dett's "The Ordering of Moses," given at Orchestra Hall Wednesday evening, in its substance greatly enriched our knowledge of recent choral literature and in its execution brought the season to one of its peaks, gave new hope of life to choral singing in Chicago and generally echoed back to Mr. Stock's performance of Mahler's "Symphony of a Thousand" in the Auditorium a score of years ago.

Bruckner's Te Deum, "angelically heroic," concentrated in texture, heartfelt in spirit and of a thrilling and dynamic intensity, is no doubt the most

reverent musical masterpiece (unless his masses be included) since the oratorios of Bach.

Its scope was sufficient for Bruckner to have wished it used as the finale to his uncompleted ninth symphony, and as such a finale it would be quite comparable in depth and significance and beauty to that of Beethoven's ninth symphony. . . .

Harry T. Carlson, conducting, must be congratulated upon his initiative and taste in combining three scores of such monumental import, and for having a chorus more than sufficient to their merciless demands. It was a more exhausting performance than would have been the mass or the Passion of Bach. The club gave the best choral performance I have ever heard, furthermore one that was unforgettably pure and brilliant in tone, just as it was inexhaustible in power and in freshness.

. . . There was an enormous house and enormous applause.

EUGENE STINSON, *Daily News*

LIST OF PERFORMANCES 1938-1939

BRUCKNER

- First* — Brooklyn Civic Orchestra (Kosok).  
*Fourth* — Cleveland Orchestra (Rodzinski).  
*Seventh* — Los Angeles Philharmonic (Klemperer).  
*Seventh* — Philadelphia Orchestra (Ormandy).  
*Seventh* — Chicago Symphony Orchestra (Stock).  
*Eighth* — Boston Symphony (Koussevitzky).

MAHLER

- First (Excerpts)* — Chicago Symphony Orchestra (Stock).  
*Fifth and Ninth* — Minneapolis Symphony (Mitropoulos).  
*Das Lied von der Erde* — Chicago Symphony (Stock).  
*Ninth* — Boston Symphony (Koussevitzky).  
*First or Fifth* — Cleveland Symphony (Rodzinski).

## The Life of Anton Bruckner

BY GABRIEL ENGEL

LIKE Franz Schubert, Anton Bruckner springs from a line of Austrian schoolmasters. In the pleasantly situated village of Ansfelden, not far from the town of Linz, Bruckner's grandfather Joseph and his father Anton had both devoted their lives to the drab duties of rustic pedagogy, at that time still considered a hereditary occupation among provincials. Hence the arrival on earth of Anton himself on September 4, 1824, meant in the normal course of things merely a fresh candidate for the abundant miseries of schoolmastership.

As early as his fourth year the tiny "Tonerl," like Haydn a century before him, showed his undeniable musical bent, for even then he could bring forth intelligible music from a little fiddle and (to quote an old Ansfelder's naive characterization of these first signs of composer's fancy) "could often be heard humming or whistling unknown tunes."

With the dawn of schooling the child showed a hearty dislike for all classroom activities, except the "Singstunde," an hour which seemed for him filled with irresistible enchantment. Of course, he received many a whipping for his backwardness in all extra-musical studies.

As tradition demanded of the village school-teacher, Father Bruckner had also to play the organ in church, and it is doubtless owing to his efforts that Anton at ten knew enough about the organ to attract the attention of a good musician in a nearby village. Under this man Weiss, a cousin of the family, the boy then earnestly studied musical theory and organ-playing for two years. Remarkably enough, the organ preludes he composed during that period exhibit a freedom of expression which deserted him all through his subsequent decades of theoretical study not to return again unimpaired until his years of maturity as a symphonist.

The death of his father in 1837, leaving eleven children (Anton being the eldest) rendered it imperative for his mother to accept the refuge offered the gifted boy as *Saengerknabe* in the sacred music school of St. Florian. The four impressionable years he spent there learning how to play the organ, piano, and violin, and mastering the elements of musical theory doubtless stamped his entire character, musical and otherwise,

with a fervent piety which no later influence ever dimmed. Even when the conflict of suffering and passion rages highest in his monumental symphonic first and last movements, a sudden naive appeal direct to heaven through austere trombone chorales points back to the influence of those early years of unquestioning devotion and zeal at St. Florian.

Yet at this time the idea of music as a life-work seems hardly to have entered the boy's mind. His father had been a schoolmaster; he too must become one. To further this aim he added to his arduous music courses private studies in academic subjects, finally gaining admission to the teachers' preparatory school at Linz.

Though even a brief ten months spent in learning what a pious child must not be taught proved trying to so human a soul as young Bruckner, he passed his examination for a position at seventeen and set out for the first scene of his teaching career, the world-forsaken mountain-village of Windhaag. Here, as assistant village teacher and organist, he was to receive the munificent monthly wage of two gulden (less than eighty cents). Additional attractive features of his work were that he must help in the field during "spare" time and breakfast with the maid servant.

In spite of these crushing handicaps the youth seems not to have been altogether unhappy, for he found the village-folk friendly. An especial joy was the folk-life and dancing, with its opportunity for a new, fascinating kind of music making. In this pleasant life the youth gladly joined, playing the fiddle at dances and absorbing those rustic, rhythmic strains which the Midas-touch of his genius later turned into incomparably vital and humorous symphonic scherzos.

The ancient calm of the village church services was frequently interrupted by the new organist whose marked leaning towards dramatic harmonies was irrepressible. His experience with the startled villagers in this respect was much like that of the great Bach himself, who was once officially reproved for his fantastic modulATORY interpolations during the ritual music.

Yet Bruckner's innate musicianship must have dawned even upon the ignorant villagers, for this word has come down about it direct from the lips of an old Ansfelder, "Yes, that fellow Bruckner was a devilish fine musician!" Then, as an afterthought, in the light of a teacher's unhappy lot, "I wouldn't let any son of mine become a teacher. No, sir! Much better be a cobbler!"

One day Bruckner, who was absent-minded, forgot to attend to some menial chore in the field and for punishment he was transferred to the still smaller village of Kronsdorf.

The teacher's demotion proved the musician's promotion, however, for the little "nest" lay only an hour distant from two historic towns, Enns and Steyr. The latter was noted for its fine organ and soon became the object of the youth's frequent pilgrimages. In Enns, moreover, lived the celebrated organist von Zanetti, a fine musician, who now became Bruckner's new master of theory. All his compositions during

this period bear the modest character of occasional church music. Completely humbled in the face of superior knowledge the zealous student was content to obey implicitly the so-called laws of music. Infinite thoroughness, the sole path to perfection, became an obsession with him. Trustingly he allowed the incredibly long veil of years of academic self-suppression to fall over his genius.

Meanwhile he had been preparing himself for the final examination for a regular schoolmaster's license. At length, in May 1845, he passed the test, and experienced the good fortune of an immediate appointment to St. Florian, the happy haven of his earlier youth.

The texts and dedications "to the beautiful days of young love" of several of his songs and piano pieces in those days tell us that Bruckner met his first "flame," young Antonie Werner, soon after his appointment as teacher at St. Florian. Yet sentiment was but shortlived in the heart of this youth whose insatiable yearning for musical knowledge swept aside all other considerations. At this time, too, there began to unfold that magnificent gift of his for free improvisation on the organ, the gift with which he in later years held audiences spellbound, even as Beethoven and Bach had done before him.

In 1851 the post of organist at St. Florian was declared vacant and Bruckner, who had for some time been occupying it as substitute, was officially appointed thereto. By then he had reached the comparatively affluent state of eighty gulden per year, plus free rent, and one of his dearest wishes had at last been realized: he was master of the finest organ in the world. Determined to become a virtuoso of the keyboard he made it a habit to practice ten hours a day on the piano and three hours on the organ.

At St. Florian in 1849, he composed his Requiem in D-minor, the only early work deserving classification with his mature accomplishments.

Desiring to obtain a license to teach in "main schools" he continued his academic studies, stressing Latin, and in 1855 successfully passed that examination as well.

In 1853 he had made his first trip to Vienna in the hope of laying the ghost of doubt that would ever loom up in his soul as to the lifework he had chosen. This doubt had even led him to consider giving up music altogether, for he once applied for a clerical position in Linz, claiming in his letter that he had been preparing himself for several years for such a vocation. Fortunately, wise counsel induced him to forget such thoughts and to apply himself anew to theoretical studies. From this decision date his amazing years of self-imposed confinement in the contrapuntal chains forged by the famous Viennese musical grammarian, Simon Sechter. There is this to say for the almost incomprehensible devotion of the superannuated schoolboy Anton to his text-book lessons, that only such hard prescribed work could dispel the torturing doubts which lurked grimly at the threshold of his consciousness.

In January, 1856, having been persuaded to take part in an open competition for the vacant post of organist at the Cathedral in Linz, he easily carried off the honors, astonishing all by his incredible powers of improvisation on given themes.

During the first few of the twelve years he served as organist in Linz, Bruckner made practically no efforts at original composition, burying himself heart and soul in the contrapuntal problems heaped upon him by the pedantic Sechter. During the periods of Advent and Lent, the Cathedral organ being silent, Bishop Rudigier, who greatly admired Bruckner's genius, permitted him to go to Vienna to pursue (in person) the studies which throughout the year had to be left to the uncertain benefits of a correspondence course.

One may get some inkling of the stupendous physical and mental labor involved in "studying," as Bruckner interpreted the term, if one believes the evidence advanced by eye-witnesses, who assert that the piles of written musical exercises in the "student's" room reached from the floor to the keyboard of his piano. For those who think this incredible there is the written word of the unimpeachable Sechter himself to the following effect. Upon receiving from Bruckner in a single instalment seventeen bookfuls of written exercises, he warned him against "too great an intellectual strain," and lest his admonition be taken in ill part by the student, the teacher added the comforting, indubitable assurance: "I believe I never had a more serious pupil than you."

Eloquent of Bruckner's Herculean labors in the realm of musical grammar and rhetoric during those years is the list of examinations to which he insisted upon subjecting himself (after typical Bruckneresque preparation). After two years of work, on July 10, 1858, he passed Sechter's test in Harmony and Thorough-bass. Of the text-book he studied (now a treasured museum possession) not a single leaf remained attached to the binding. Then on August 12, 1859, he passed Elementary Counterpoint; April 3, 1860, Advanced Counterpoint; March 26, 1861, Canon and Fugue. Thereupon he remarked, "I feel like a dog which has just broken out of his chains."

Now came the crowning trial of all, one without which he could not be sure of himself. He begged for permission to submit his fund of accomplishments to the judgment of the highest musical tribunal in Europe, a commission consisting of Vienna's five recognized Solons of musical law (today all turned to names or less than names). The request was granted and Bruckner accorded the grace of choosing the scene of "combat."

Such final tests of "maturity," not uncommon in Vienna, were usually of a somewhat stereotyped nature, but in the case of this extraordinary candidate the occasion assumed an epic cast.

Bruckner had chosen for the scene of his grand trial the interior of the Piaristen-Kirche. Had Wagner been present, he might have been reminded of the examination of Walter by the Meistersinger, which he

was even then planning. The customary short theme was written down by one judge and submitted to the others for approval; but one of these maliciously doubled it in length, at once changing a mere test of scholarship to a challenge of mastery.

The slip of paper was then passed down to the expectant candidate seated at the organ. For some moments he regarded it earnestly, while the judges, misinterpreting the cause of delay, smiled knowingly.

Suddenly, however, Bruckner began, first playing a mere introduction composed of fragments of the given theme, gradually leading to the required fugue itself. Then was heard a fugue — not such a fugue as might be expected from an academic graduate, but a living contrapuntal Philippic, which pealed forth ever more majestic to strike the astonished ears of the foxy judicial quintet with the authoritative splendor of a lion's voice bursting forth from the jungle.

"He should examine us!" exclaimed one judge enthusiastically. "If I knew a tenth of what he knows, I'd be happy!"

Then, being asked to improvise freely on the organ, Bruckner exhibited so fine a fantasy that the same judge cried: "And we're asked to test him? Why, he knows more than all of us together!"

This man's name was Herbeck, and he was from that moment Bruckner's greatest musical friend. Unfortunately he died too soon to be of much help to the struggling composer.

Of great advantage to Bruckner during his Linzian years was the opportunity afforded him for the first time to try his hand at "worldly" music, for church-music had monopolized his attention ever since his earliest boyhood.

The choral society "Frohsinn" chose him as director in 1860. Through this association, on May 12, 1861, Bruckner made his first concert appearance as composer with an "Ave Maria" for seven voices.

He struck up a friendship with the young conductor at the theatre and was appalled at the realization that all his earnest years of academic study were mere child's play beside the practical musical craftsmanship of this brilliant young exponent of the "modern" school. Eagerly he gave himself into the care of this new teacher, Otto Kitzler. From the revealing analysis of Beethoven's sonatas, Kitzler led his enthusiastic disciple to the study of instrumentation, introducing him to the beauties of the *Tannhaeuser* score. Here Bruckner was given his first glimpse of a new world of music, the very existence of which he had scarcely suspected. In 1863, finally convinced that he was ready to face the musical world alone, he took leave of Kitzler and the last of his long years of preparation.

Those years are perhaps unique in the annals of mortal genius, at least in those of Western civilization. The naive modesty of a great artist already within sight of middle age burying himself more desperately than any schoolboy in the mass of antiquated musical dogma prescribed by a "Dr. Syntax" would be at once labelled in these psycho-

analytic days as a sample of the workings of an inferiority complex. But Bruckner's had been a church-life, his language a church idiom, and in the light of this, is it illogical to claim that his particular preparation had to differ from that of other symphonists as the architecture of a cathedral differs from that of a palace or villa?

In short, without those drab years of study mistakenly termed "be-lated," the tremendous symphonic formal concepts of Bruckner might never have been realized.

Of significance in the contemplation of his spiritual affinity to Wagner is the fact that an Overture in G-minor (composed by Bruckner in 1863) closes with the still unknown "Feuerzauber," not that either master plagiarized the other, but that the caprice of nature which set two such gigantic figures side by side in the same generation must not be ignored. It is truly a cause for human gratitude that sublime accident granted the one the faculty it denied the other. Epic as is the expression of both these Titans, Wagner's helplessness in the field of the symphony is as notorious as Bruckner's in that of the music drama. The future will simply have to regard the two composers as kindred in spirit, but supplementary in achievement.

The music of *Tannhaeuser* sang into Bruckner's ears a veritable proclamation of independence. Thus, Wagner, whom he had as yet never seen, set him free at a mere spiritual touch, spurring him to unrestrained self-expression. With the very first effort of this new-born Bruckner, the glorious Mass in D, the world was endowed with an initial major work surpassed in depth and brilliancy perhaps by no other in the entire range of music. Inspired by *Tannhaeuser*, if you will, yet sounding not the slightest echo of its strains, the Mass abounds in fine passages, unjustly dubbed Wagnerian, for they could not as yet have had any prototype. The opening *Adagio*, built up on the theme of the *Liebestod* (a year before the first performance of *Tristan*), the music accompanying the settling down of the dove at the end of *Parsifal* (nineteen years before the first performance), the "Fall of the Gods" and the "Spear-motive" from the *Ring* (twelve years before Bayreuth), these anticipatory touches should, in justice, be viewed, not as Wagnerisms, but rather as forerunners of the new epic spirit that was just rising in music.

The composition of this masterpiece took only three months. After the first performance, in the Cathedral at Linz, November 20, 1864, the Bishop Rudigier was heard to remark: "During that mass I could not pray." Indeed, so profound was the impression the work made, that it was given a "concert" performance by general request shortly after, achieving a veritable triumph. Bruckner's success was proudly reported in the Viennese papers, for it was good publicity for the "home" conservatory of which he had been "one of the best pupils."

Elated by his success Bruckner at once began working on his first symphony. That year (1865) May 15 had been set aside in Munich for the greatest musical event of the century, the initial performance of

*Tristan*. Naturally, Bruckner made the trip to the Bavarian capital and when, owing to the illness of Isolde (Frau Schnorr), the event was postponed till the tenth of June, he decided to await the great day in the city. There he had the fortune to be presented to Wagner himself, who at once took a liking to the serious, honest Austrian, inviting him to spend many an evening in the famous Wagnerian "circle." Von Buelow became Bruckner's first confidant when the latter shyly showed the great pianist the first three movements of his growing symphony. Von Buelow was so astonished at the splendor and freshness of the ideas in this new score that he could not refrain from communicating his enthusiasm to the great Richard, much to Bruckner's embarrassment, for when Wagner asked in person to see the symphony, so great was the awe in which the younger composer stood of the "Master of all Masters" that he could not summon up the courage to show it to him. He shrank from such a step as though it had been a sacrilege. So naive was his hero-worship of the master that he could not even be induced to sit down in Wagner's presence. No wonder, then, that after the *Tristan* performance Wagner became for Bruckner a veritable religion. Yet for this faith the younger man was condemned to suffer such abuse as has fallen to the lot of no other in the annals of art. He was to write nine mighty symphonies, *ad majorem Dei gloriam*, for from man he was destined to receive not reward, but neglect, scorn, and spiritual abuse beyond measure.

On April 14, 1866, Bruckner's first symphony was complete, ready to announce to a skeptical world that the supreme instrumental form had not culminated in Beethoven. True enough, it was from the immortal *Fifth* of Beethoven, that Parnassus of musical classicism, that this new master drew the spiritual motto for all his symphonic efforts. Each of his symphonies might be described as an ascent *per aspera ad astra*. Through the logical order of the four movements he unfolded the panorama of the trials of the human soul as hero. Beginning with (first movement) the drama of inner conflict, then (*adagio*) returning from the prayerful communion with God to the (*scherzo*) joys of life in nature, at length (*finale*) with unconquerable energy and determination entering upon the battle with the world, culminating in the final triumph over all opposition, he laid down the permanent spiritual foundation for all his symphonic labors.

That the first performance of this symphony, 1868, technically the most difficult that had as yet come into existence, was not a total failure, is scarcely short of a miracle, for the best string and brass sections the town of Linz could provide faced the allegedly "impossible" score almost hopelessly. Yet Bruckner conducted the numerous rehearsals with such desperate zeal that the result was at least musical enough to call forth respectful comment from the critics, though they could have gleaned but the scantiest notion of the true significance of the work from such a performance.

Even the noted critic Hanslick, on the strength of this favorable report, congratulated the Viennese conservatory, hinting approvingly at a rumor that its faculty was soon to be augmented by so valuable an acquisition as Bruckner.

The rumor came true, though only after long, long hesitation on Bruckner's part. He feared to give up his modest but secure post in Linz for a miserably underpaid and insecure chair in theory at the noted music school of the capital, but his friends, understanding his timidity and realizing the tremendous artistic advantages of the proffered position, urged him to accept it. At length, after Bishop Rudigier assured Bruckner that the organ at the Cathedral in Linz would always be waiting for him, he decided to risk the chance. The date upon which he officially assumed his title of professor was July 6, 1868.

Just about this time, in his forty-third year, he was made the unhappy victim of a great spiritual shock. The parents of the seventeen-year-old Josephine Lang with whom the composer had fallen in love refused him the girl's hand because of his age. In Bruckner's many cases of platonic affection for young girls (this continued till his seventieth year) there is enticing food for the modern psychologist's or psychoanalyst's formulations.

Now began for Bruckner a slow and cruel martyrdom. His very first Viennese attempt, the newly composed Mass in F-minor, was refused a hearing on the ground that it was "unsingable." After this two new symphonic attempts were suppressed by the nerve-racked composer himself with the bitter comment: "They are no good; I dare not write down a really decent theme."

Discouraged, he decided to stop composing for a while and set out on a concert tour through France. The newspaper reports of this series of recitals were so jubilant that Europe soon rang with the name of Bruckner, "the greatest organist of his time."

Returning to Austria, in better spirits, he experienced "the most glorious day of his life" when his Mass in E-minor (composed in 1866) was given its initial hearing (Linz, 1869) midst unqualified enthusiasm.

The astonishing reports from France about Bruckner's organ-improvisations had so aroused the curiosity of many Englishmen that the virtuoso was offered fifty pounds for twelve recitals in London to be given within a week! Out of this "munificent" fee he was expected to pay his own travelling expenses!

Nevertheless August 2, 1871, found Bruckner seated at a London organ dutifully improvising on the appropriate theme "God save the King." Phlegmatic John Bull, quite impressed by the grandeur of these improvisations, nevertheless remarked judiciously that the performer showed his weakness in a Mendelssohn sonata, as had been expected. After one of these recitals a London lady advised Bruckner through an interpreter to learn English before his next visit to Britain. He never visited England again.

Back in Vienna he doffed the hated mask of virtuoso and determined at his own cost to give the shelved F-minor Mass the hearing he felt sure it deserved. The performance took place in June, 1872. He had hired the world-famous Philharmonic orchestra for the occasion at a cost of three hundred gulden (eight months' wages to the Professor of Counterpoint) but the favorable report of the famous Hanslick about the work (though he declared it reminded him in spots of Wagner and Beethoven) was alone worth the price. Could Hanslick, Wagner's most powerful and bitter opponent, only have dreamed that the simple Bruckner was destined to receive at the hands of the great music-dramatist the heavy legacy of critical abuse he had gathered through two score years of stormy travel from Dresden to Bayreuth! Bruckner, only two years before this (1869), humbly as any music student, had sat with rapt attention at the feet of Hanslick, then lecturer on "Musical History" at the Viennese conservatory.

Meanwhile, during his London experience, he had launched upon a new symphony, determined to make it from the viewpoint of technical playability totally acceptable to the easy-going world of musicians and critics among whom fate had cast his lot. Conviction would not let him abandon the titanic skeletal structure of his *First*, the symphonic "wagon" to which he had "hitched his star." After long pondering he hit upon the unusual idea of punctuating the longer movements of the work with general pauses in the whole orchestra. This striking device at once caught the knowing ears of the musicians during the rehearsals for the first performance and resulted in the fabrication of the sarcastic nickname, "Rest Symphony," by which the work was thereafter known in Vienna. The description "Upper-Austrian," later applied by the noted Bruckner biographer Goellerich, is far more appropriate, for the opening and closing movements, and particularly the *scherzo*, are thoroughly saturated with the atmosphere and song of Bruckner's rustic "home country" surroundings. Upon being once more refused an official hearing for his new work on the ground of "unplayability," Bruckner again dipped deep into his yawning pockets and invited Vienna to hear his *Second Symphony* to the tune of four hundred and five gulden literally borrowed on a "pound of flesh." Speidel, a prominent critic, had the honesty to say in his report of the occasion: "It is no common mortal who speaks to us in this music. Here is a composer whose very shoe-laces his numerous enemies are not fit to tie." Hanslick, still no outspoken Bruckner opponent, expressed discomfort at the titanic dimensions of the work, and lauded the "masterly manner" in which the orchestra played the "unplayable" score. (October 26, 1873.)

Although Brahms, whose *First Symphony* was still uncompleted, had nevertheless been firmly seated on the world's symphonic throne (for had he not been crowned by all critics as Beethoven's heir?) court-conductor Herbeck could not refrain from making the following remark to Bruckner after hearing this work: "I assure you if Brahms were capable

of writing such a symphony the concert-hall would rock with applause."

Bruckner did not enter upon these huge personal expenses because of a thirst for public applause. That the joys of symphonic creation were sufficient spiritual exaltation for him, is clear from the zeal with which he began work upon his *Third* at the very moment his *Second* was unconditionally rejected by the Vienna Philharmonic. In the production of this new score he gave up all thought of mollifying friend and foe, who alike had complained about the length and difficulty of his previous orchestral efforts. The heroic defiance that stalks proudly through every movement of this work, making it sound much like a huge declaration of independence, has caused many to label it "another *Eroica*," implying a definite community between Beethoven and Bruckner.

That it was Bruckner's original intention to make this *Third* a "Wagner" symphony is clear from the actual note-for-note quotations from the already widely discussed *Ring*. He had apparently, by now, summoned up the courage to go to Wagner and ask him for his artistic approval. Fortunately his arrival at Bayreuth, armed with his last two symphonies, caught the Master of Wahnfried in most friendly humor. Bruckner's own description of his emotions as Wagner examined the scores is eloquent: "I was just like a schoolboy watching his teacher correct his note-book. Every word of comment seemed like a red mark on the page. At last I managed to stammer forth the hope that he would accept the dedication of one of the symphonies, for that was the only and also the highest recognition I wanted from the world." Wagner's answer, one of the few happy moments in Bruckner's tragic life, is surely recorded by the angels. "Dear friend, the dedication would be truly appropriate; this work of yours gives me the greatest pleasure."

After that, Bruckner went on, "We discussed musical conditions in Vienna, drank beer, and then he led me into the garden and showed me his gravel!" They apparently spent a most delightful afternoon together. On the authority of the famous sculptor Kietz, who was present part of the time, we have it that a most amusing sequel developed on the two following days. Bruckner had had not only some, but in fact so much beer, the hospitable Wagner continually filling his mug and urging him to empty it (for a whole barrel had been ordered for the occasion), that the next morning found the Austrian quite muddled and at a loss which of the two symphonies the master had preferred. Ashamed to return to Wagner, he sought out the sculptor and appealed to him for help in this dilemma, but the latter, highly amused, pretended not to have paid attention to the discussion, saying he had heard some talk about D-minor and a trumpet. Now in the sculptor's own words, "Bruckner suddenly threw his arms about me, kissed me, and cried, 'Thank you, dear Mr. Councillor (I don't know to this day how I came by the title) thank you! I know it's the one in D-minor the Master has accepted! Oh, how happy I am that I know which it is!'" Next day, however, he was once more doubtful, for he sent the following message to Wagner on a slip of blue

paper (now a treasured museum possession): "Symphony in D-minor in which the trumpet introduces the theme. A. Bruckner." The same leaf came back to him promptly with the following addition: "Yes, yes! Hearty greetings! Wagner." Thus came Bruckner's *Third* to bear the name *Wagner Symphony*. Whenever Wagner heard Bruckner's name mentioned thereafter, he would exclaim, "Ah! Yes, the trumpet."

The report of this incident with its clear implication of Wagner's regard for Bruckner's genius proved the death-knell for whatever chance the symphonist may still have had for Viennese recognition during the Hanslick regime. Up to that moment his work had been neglected mainly because the musicians of the city had little ear for such "modern" harmony and dramatic orchestration, but the leaps and bounds Wagner's music-dramas and Liszt's Symphonic Poems were making in the world of art had brought about a complete revolution in musical taste. The new era was one of bitter personal hatreds between musicians and critics of two opposing factions. No political enemies have ever used more poisonous epithets than the Wagnerites against the Anti-Wagnerites and vice-versa. A lion for punishment, both taking and giving, Wagner could easily weather the storm of unspeakable abuse, but away from his scores and classes Bruckner was a mere child so simple and shy that the merciless critical boycott of his works, which now followed, all but crushed his spirit. It was inconceivable to him that human beings could be as cruel as Hanslick and his snarling myrmidons were to him, merely because he had gained Wagner's friendship and recognition. His only solace was that he had become reconciled to composing work after work without the encouraging incentive of public hearings.

The *Fourth*, already in the making at this time and bearing the title *Romantic*, was finished November 22, 1874. Although the description *Romantic* is no less fitting than that of *Pastorale* in the case of Beethoven's *Sixth*, there seems little doubt that the detailed "program" or symphonic plot communicated to his circle of friends by Bruckner was a postanalysis influenced by no other than Wagner, who had even published a rather fantastic pictorial description of Beethoven's *Ninth*. It is at any rate silly to dilly-dally over the fitness of its details, for the *Romantic* has so clear and effective a tale to tell that it has become the favorite vehicle for the introduction of Bruckner to a new audience. That the composer did not regard the "program" seriously is evident from his remark concerning the Finale: "And in the last movement," said he, "I've forgotten completely what picture I had in mind." Yet the work possesses an unmistakable unity hitherto without precedent in absolute music, for all four parts spring from the main theme in the first movement. So logical and masterly is the development of this theme in the course of the work that the climax is not reached until the closing portion of the Finale, making the *Romantic* symphony from the point of view of perfection of form perhaps the last word that has yet been spoken by man.

At this time, thanks to the zeal of his enemies his material condition had become almost hopeless. To quote from one of his letters, January 12, 1875: "I have only my place at the Conservatory, on the income of which it is impossible to exist. I have been compelled to borrow money over and over again or accept the alternative of starvation. No one offers to help me. The Minister of Education makes promises, but does nothing. If it weren't for the few foreigners who are studying with me, I should have to turn beggar. Had I even dreamed that such terrible things would happen to me no earthly power could have induced me to come to Vienna. Oh, how happy I'd be to return to my old position in Linz!"

The Viennese musical "powers that be" had conspired to make life unbearable for the avowed Wagnerite. One of the highest officials at the conservatory, in answer to an appeal by Bruckner, gave him the following generous advice: "It's high time you threw your symphonies into the trash-basket. It would be much wiser for you to earn money by making piano arrangements of the compositions of others." The same man, with equally kind intent, went so far as to say, "Bruckner can't play the organ at all."

The warlike Wagner's arrival in Vienna in the spring of 1875 drew more hostile attention to the timid symphonist. Of course, it did him more harm than good. The music-dramatist's reiterated praise of Bruckner's work was like a signal for the Viennese authorities to redouble the cruelty of their method of torture. Dessoff, conductor of the Philharmonic, promised to perform the *Wagner Symphony*, invited Bruckner to several rehearsals, and suddenly (after two months of preparation) declared he could not find room for it on a program. Later the orchestra took hold of it again, but rejected it finally (only a single musician opposing the move) as "absolutely unplayable."

Just as the persecuted Wagner set to work on his *Meistersinger*, pouring his sufferings out through the lips of Hans Sachs, Bruckner plunged into the tragic depths of his *Fifth*. Only in the construction of his colossal symphonies was he able to play the hero against fate. Over two years in the process of composition the *Tragic* symphony was compelled to wait eighteen years for its first hearing. That was not to be in Vienna, nor was Bruckner ever to hear the work at all.

In 1876 Wagner invited him to the inaugural *Ring* performances at Bayreuth and the two giant musicians once more discussed the *Wagner Symphony*. Perhaps as a direct result of this conference Bruckner now set about simplifying the condemned score and again appealed to the Philharmonic for a hearing. The prompt refusal then given his request must have convinced even him that a relentless hostility due to Wagner's praise made his cause impossible so far as that organization was concerned. Into this spiritual state of almost total eclipse there suddenly broke a ray of light. Herbeck, old friend of sunnier days, conductor of the fine, though less-famed, orchestra of the *Society of the Friends of*

*Music*, became so disgusted with the unjust persecution that he determined to brave the wrath of critics and musicians by espousing the Bruckner cause. Hardly had he announced the first step of his campaign, a production of the tabu *Wagner Symphony*, when he died. Had not, at this juncture, an influential government representative named Goellerich (father of the noted Bruckner biographer) stepped into the breach, the *Third Symphony* would have been taken off the Herbeck program and the unhappy composer, poisoned with a cup of misery worthy of a Job, would probably have gone mad.

The performance itself which took place December 16, 1877, was one of the saddest in the history of music. Since no conductor dared to wield the baton upon the occasion, Bruckner himself was compelled to direct the orchestra. Early in the course of the symphony, Director Hellmesberger, spokesman of the conservatory, burst out laughing. Promptly another "director" followed suit. Upon this the apish students joined in. Then, of course, the public began to giggle. Soon some people rose and left the hall, indignant that the cause of music had been offered so great an insult as the performance of a Bruckner work in Vienna, the sacred musical metropolis. When the symphony came to an end there were hardly ten people left in the parquet. The few faithful occupants of the "standing room," a handful of Bruckner-pupils, among them Gustav Mahler, rushed down to the heartbroken master, from whom even the musicians of the orchestra had fled, and attempted in vain to cheer him with consoling words. At this moment an angel approached, in the guise of the music publisher Rättig, described the symphony as wonderful, and declared himself ready to risk the expense of publishing it. Under such a black sky was the *Wagner Symphony* given to the world.

To return to the Viennese critics for whose Wagner-gobbling appetite it had been a gala evening, the director Hanslick (intending it, of course, only as a joke) for once told the absolute truth, namely, that he "could not understand the gigantic symphony." He said there had come to him, while listening, "a vision in which Beethoven's *Ninth* had ventured to accost the Valkyr maidens, only to be crushed under their horses' feet." As a sarcastic climax he added that he "did not wish by his words to hurt the feelings of the composer, whom he really held in great esteem."

A little before this time, through the good graces of the previously mentioned Goellerich, the University of Vienna had announced the creation of a "chair" of music and the inclusion of harmony and counterpoint in the regular curriculum. Despite the firm opposition of Hanslick, Bruckner, who had ten years before appealed to the faculty that some such step be taken in his behalf, was now appointed lecturer. From the opening address, April 30, 1876, which was attended by so great a number of students that the occasion might well be compared to the first of Schiller's lectures at Jena, the younger generation embraced the Bruckner cause enthusiastically. To the academic subjects taught by

Bruckner, with Goethe's words as motto: "Gray is every theory, Green alone life's golden tree," were added those glorious improvisations for which he was so noted and the inspiring message of which endeared him to the hearts of his "Gaudeamuses," as he lovingly called his students. The open enmity of Hanslick towards their beloved professor gradually assumed for them the proportions of a political issue and a life problem. In the years to come the Bruckner cause in Vienna was to attain such strength through the loyalty of these University students that the combined enmity of critics and musicians would have to bow before it in the dust. This was actually realized ten years later, when the Philharmonic was finally compelled, owing to the force of public opinion, to program the already world-famous *Seventh Symphony* (1886).

As the result of the frigid reception accorded the *Wagner Symphony* Bruckner spent the next two years (1878-80) in a radical revision of the instrumentation of the *Second*, *Fourth*, and *Fifth* symphonies, including the composition of a totally new movement, the now famous *Hunting Scherzo*, for the *Fourth* or *Romantic*. However, the changes he made in the scores are not of the nature of compromises between the artist and the world, for the themes of the symphonies remained unaltered, only unnecessary rhythmic and technical complications being abandoned.

To this interval also belongs the composition of the *Quintet* for strings, Bruckner's sole contribution to chamber-music, but a work so deep and mighty that those who have heard it proclaim that in the whole range of chamber music only the last Beethoven string-quartets attain such spiritual heights. The *Quintet* was composed by the *symphonist* Bruckner and has the sweep and grandeur of his best symphonic creations.

The interval of rest from major composition saw him frequently attending the many colorful formal dances of Vienna. It seems psychologically consistent that one whose mind was always engaged in tragic inner conflicts should seek recreation in the halls of festivity and laughter. Bruckner had always been fond of dancing.

A severe attack of "nerves," doubtless due to overwork, drove him to seek relief in Switzerland during the summer of 1880. In August of that vacation period he visited the Passion Play at Oberammergau and fell head over heels in love with one of the "daughters of Jerusalem," the seventeen-year-old Marie Bartl. He waited for her at the stage-door, obtained an introduction, and escorted her home. After spending that evening and most of the next day in the Bartl family circle he arrived at a temporary understanding which left the love affair on a confidential basis. There followed a lively exchange of letters between him and Marie, lasting a year, but the time came when the girl no longer answered him. Thus the now fifty-six-year-old lover found himself again refused entrance into the halls of matrimony. One is here involuntarily reminded of the love of the thirty-seven-year-old Beethoven for the

fourteen-year-old Therese Malfatti, though nowadays we have ceased to gasp at such things. The solitary silent remnant of this romance of Bruckner's is a photograph of his bearing the inscription: "To my dearest friend, Marie Bartl."

In these gloomy days when, following the deplorable fiasco of the *Wagner Symphony*, no one in Vienna dared or cared to lift a hand in favor of the *Romantic* and *Tragic* symphonies, now long finished and still unperformed, a malady affecting his feet compelled Bruckner to take to his bed. There, in spite of depressing circumstances, he summoned up the spiritual strength to work on his *Sixth Symphony*. As if his misfortunes had merely been trials sent from Above to prove his faith, while Bruckner was still busy with the last movement of the new work, Hans Richter, the Wagner disciple, visited him and was so struck with the beauties of the dormant *Romantic Symphony* that he at once programmed it and invited the composer to a rehearsal. Richter's own words describing the occasion reveal Bruckner's naive character: "When the symphony was over," he related, "Bruckner came to me, his face beaming with enthusiasm and joy. I felt him press a coin into my hand. 'Take this,' he said, 'and drink a glass of beer to my health.'" Richter, of course, accepted the coin, a Maria Theresa thaler, and wore it on his watch-chain ever after. The premiere of the *Fourth* took place on February 20, 1881 and proved a real triumph for Bruckner, who was compelled to take many bows after each movement. On the same program, however, the symphonic poem, the "Singer's curse" by Buelow, met with utter failure. Buelow, now a deserter from the Wagner camp, and turned to a staunch Brahmsian could not contain his jealousy and asked sarcastically, referring to the successful symphony: "Is that German music?" From Buelow, at any rate, the most devoted of Wagnerians could expect no praise. In time the insults Bruckner had to endure from that source grew vile beyond description. Even seven years later, with musical Germany at the composer's feet, Buelow still stood by the sinking ship, saying: "Bruckner's symphonies are the anti-musical ravings of a half-wit." At last in 1891, the patient composer experienced the gratification of hearing that Buelow had finally relented and was promoting Bruckner's *Te Deum* as a splendid work well worthy of public performance.

In July, 1882, he made a flying trip to Bayreuth to hear the opening performance of *Parsifal*. To him these few days were a beautiful idyll. He would stroll along the road with a black frock-coat on his arm, ready to don it hastily should Wagner come along by chance. It made no difference to him that people said this was an unnecessary act of homage. Sometimes he would stop at "Wahnfried" and gaze at its windows long and reverently. Mornings he would visit Wagner. The Master would come out to greet him, offering him the hand of the little Eva, while he said laughingly: "Mr. Bruckner, your bride!" Then Wagner would deplore the disappointing state of contemporary music, exclaim-

ing: "I know of only one who may be compared to Beethoven — and he is Bruckner!" One evening, grasping the Austrian's hand, the aged Master cried: "Rest assured, I myself shall produce *the* symphony [meaning the *Wagner*] and all your works." "Oh, Master!" was all Bruckner could answer. Then the question: "Have you already heard *Parsifal*? How did you like it?" Bruckner sank upon his knees, pressing Wagner's hand to his lips, and murmuring: "Oh, Master, I worship you!" Wagner was deeply moved. When they bade each other good night that evening, it was the last greeting they ever exchanged on earth, for the call of Valhalla for the "Master of all Masters," as Bruckner called him, was soon to sound. This is the premonition that took hold of the younger composer, then already deep in the creation of his *Seventh Symphony*. No more majestic tribute to the greatness of one mortal has ever been paid by another than in that glorious, soaring *Adagio of Premonition*. It is an appeal direct to the soul of the mighty music-dramatist, spoken in its own dialect, consummately mastered by a kindred soul.

The death of Wagner was a stupendous blow to the whole musical world and especially so to Bruckner. The latter, now approaching his sixtieth birthday, was still humble Prof. Anton Bruckner to the world about him. The field of musical fame, suddenly deprived of its solitary gigantic tenant, seemed to yawn for a new Titan. The psychological moment was at hand.

On the twenty-ninth of December, 1884, Hugo Wolf wrote: "Bruckner? Bruckner? Who is he? Where does he live? What does he do? Such questions are asked by people who regularly attend the concerts in Vienna." The Viennese were destined to the shame of soon being taught by Germany the greatness they had been ignoring in their midst for a score of years.

When on December 30, 1884, young Arthur Nikisch, Bruckner pupil, gave the *Seventh Symphony* its first hearing in no less modest a hall than the celebrated Gewandhaus at Leipzig, it was as if a divine Voice had burst forth from total darkness crying, "Let there be light!" As the last note ceased there was enacted a scene of unparalleled enthusiasm, the applause lasting fully fifteen minutes. Bruckner appeared on the stage dressed in his simple manner and bowed repeatedly in answer to the unexpected ovation. One of the critics present spoke of him as follows: "One could see from the trembling of his lips and the sparkling moisture in his eyes how difficult it was for the old gentleman to suppress his deep emotion. His homely but honest countenance beamed with a warm inner happiness such as can appear only on the face of one who is too goodhearted to succumb to bitterness even under the pressure of most disheartening circumstances. Having heard his work and now seeing him in person we asked ourselves in amazement, 'How is it possible that you could remain so long unknown to us?'"

On New Year's Day, 1885, the whole world knew that a great sym-

phonic composer whom snobbish Vienna had for years held bound and gagged was at last free to deliver his message to all mankind.

The performance of the *Seventh Symphony* in Munich under Hermann Levi proved an even greater triumph. The conductor called it the "wonder work," avowing its interpretation was the crowning point of his artistic career. Perhaps Levi, famous Wagnerian chieftan as he was, intended to annihilate Brahms with a word when he also added, "It is the most significant symphonic work since 1827."

Into the performance at Karlsruhe (the work was now making its meteoric way through all Germany), Felix Mottl, gifted Bruckner pupil, threw so much spiritual fire that even the white-haired Liszt, sitting among the distinguished audience, became from that moment a staunch Brucknerite. This conversion was all the more remarkable since the great pianist had long remained cold to Bruckner's music, although he had been for two score years one of the chief marshals of the Wagner camp. Liszt as a Wagnerian had secretly nursed the notion that the Liszt Symphonic Poems could never be properly understood by the people until they had learned to appreciate his son-in-law's music dramas.

Despite the recognition of the whole of Germany, Vienna and the Philharmonic continued to maintain a dogged aloofness. Still fearful, Bruckner anticipated any possible desire on the part of the famous orchestra to play his work by entering a formal protest against such a move, on the ground that "the hostility of the Viennese critics could only prove dangerous to my still young triumphs in Germany."

For diplomatic reasons, no doubt, the *Quintet* was now given, for the first time in its entirety, by the Hellmesberger aggregation. One of the most prominent reviewers wrote about it as follows: "We cannot compare it with any other *Quintet* in this generation. It stands absolutely alone in its field." Even Kalbeck, Brahms' biographer and one of Bruckner's bitterest enemies, said: "Its *Adagio* radiates light in a thousand delicate shades — the reflection of a vision of the seventh heaven."

Apparently the dawn of recognition was at hand, even in Vienna. Yet the conspirators were determined to die hard. Another critic, on the same occasion, after paving the way by admitting that the *Quintet* was perhaps the deepest and richest thing of its kind, warned the public on ethical grounds against Bruckner as "the greatest living musical peril, a sort of tonal Anti-christ." His argument follows: "The violent nature of the man is not written on his face — for his expression indicates at most the small soul of the every-day *Kapellmeister*. Yet he composes nothing but high treason, revolution, and murder. His work is absolutely devoid of art or reason. Perhaps, some day, a devil and an angel will fight for his soul. His music has the fragrance of heavenly roses, but it is poisonous with the sulphurs of hell."

Meanwhile, for the benefit of his Viennese friends, whom he did not wish to disappoint, the composer personally prepared the initial per-

formance of his recently finished *Te Deum*. This, a semi-private affair, took place in a small concert-hall. Two pianos were used in the absence of an impartial orchestra.

Suddenly Germany and Holland began clamoring for other Bruckner compositions, but only the *Wagner Symphony* had appeared in print. That work had even penetrated to America where the noted Wagner disciple, Anton Seidl, had given it a hearing at the Metropolitan Opera House, December 6, 1885. When Bruckner heard about the favorable report in the New York *Tribune*, he was as happy as a child, and exclaimed: "Now even America says I'm not bad. Isn't that just rich?"

These successes, however, did not turn his head. He was far from ready to rest on his laurels. During the summer of 1884 he began work upon a new symphony. His sister, in whose house in the little town of Voecklabruck he was vacationing, says he would show her a stack of music-paper covered with pencil marks, saying that these scribblings would become another symphony. In order to be able to set down undisturbed the ideas that came to him during frequent walks in the surrounding woods, he rented a room with a piano in a house nearby, "just for composing."

When he heard that the owner of this house had a young and pretty daughter, he said, "I'm glad. Now I'm sure I'll be able to compose here." Every day he would bring this girl, a Miss Hartmann, a bouquet of flowers. The presence of the younger fair sex seems to have been always a source of happiness to the composer. He was then over sixty years old.

At this time, like Balboa when he first stood upon the hill overlooking the mystic expanse of the Pacific, Bruckner stood at last in the halo of his belated and hard-earned fame looking back with calm melancholy upon the bitter trials of his artistic career. Beneath this retrospective spell his *Eighth Symphony* unfolded itself. As a colossal structure of spiritual autobiography in tone it is a sequel to his *Fifth* or *Tragic Symphony*, which it excels in depth of expression. It has been called the "crown of nineteenth century music." It is useless to attempt to give any idea of it in words, but its message in brief is: (*First movement*) how the artist, a mere human, like Prometheus, steals the sacred fire from heaven and, daring to bring the divine essence to earth, is condemned to suffer for his temerity. (*Scherzo*) how his deed is greeted with scorn and ridicule by his fellow-men, and he finds solace only in the beauty of nature. (*Adagio*) reveals the secret of his creative power, communion with the Supreme Source. (*Finale*) the battle all truth must fight on earth before it attains recognition and the final victory and crowning of the artist.

In Bruckner's physical appearance at this time there was no hint of senility. He was a little above the average in height, but an inclination to corpulency made him appear shorter. His physiognomy, huge-nosed and smooth-shaven as he was, was that of a Roman emperor, but from

his blue eyes beamed only kindness and childish faith. He wore unusually wide white collars, in order to leave his neck perfectly free. His black, loose-hanging clothes were obviously intended to be, above all, comfortable. He had even left instructions for a roomy coffin. The only thing about his attire suggestive of the artist was the loosely arranged bow-tie he always wore. About the fit and shape of his shoes he was, according to his shoe-maker, more particular than the most exactly elegant member of the fair sex. As he would hurry along the street swinging a soft black hat, which he hardly ever put on, a colored handkerchief could always be seen protruding from his coat-pocket.

In the summer of 1886 he arrived in Bayreuth just in time to attend the funeral of Liszt. As Bruckner sat at the organ improvising a "Funeral Oration" in his own language out of themes of *Parsifal*, it was as if he were saluting the passing of that golden age of nineteenth-century music, which had endowed the world with the titanic contribution known as the art of Wagner. Now he was leader of the glorious cause, its highest living creative exponent, but he stood alone, he and his symphonies, while the enemy still held the field in great numbers.

The *Seventh Symphony* continued making new conquests. Cologne, Graz, Chicago, New York, and Amsterdam paid tribute to its greatness. When it reached Hamburg the aged teacher of Brahms said it was the greatest symphony of modern times. Brahms, however, continued to shrug his shoulders, and remarked: "In the case of Bruckner one needn't use the word 'Symphony'; it's enough to talk of a kind of 'fake' which will be forgotten in a few years."

Then young Karl Muck, Bruckner pupil, came to Graz with the same symphony, and following upon this really Austrian triumph, Vienna was compelled at last to capitulate, much to the annoyance of the Hanslick coalition. Hans Richter conducted the hostile "King of Orchestras" on March 21, 1886. The *Seventh Symphony*, after hunting for the "blue bird" all over the world, had come home at last to bring happiness to the "prophet in his own country." Hanslick's review the following day was a sort of brief *apologia pro vita sua*. "It is certainly without precedent," complained he, "that a composer be called to the stage four or five times after each movement of a symphony. To tell the truth the music of Bruckner so rubs me the wrong way that I'm hardly in a position to give an impartial view of it. I consider it unnatural, blown up, unwholesome, and ruinous." Kalbeck, his *aide-de-camp*, picked on Richter for having shown personal homage to Bruckner and alleged that it was done purely for popular effect. Concerning the music itself he said: "It comes from the Nibelungen and goes to the devil!" Dompke, another member of Hanslick's staff snarled: "Bruckner writes like a drunkard." Richter, at the banquet of the *Wagner-Verein* held to celebrate the occasion, declared that many members of the Philharmonic orchestra had changed their minds about Bruckner and that there would be no difficulty about producing his works in Vienna from that

time on. As a matter of fact, the next symphony, the *Eighth*, was introduced to the world by the Philharmonic. Heroic Richter now carried the banner into the British Isles, in spite of Brahms' reproofing warning, "You surely are not going to perform Bruckner in England!"

The triumphant journey of the *Seventh* continued, Budapest, Dresden, and London next being conquered. To be sure, Berlin, in the hands of the Brahms marshals, Buelow and Joachim, only gave it a timid welcome. A prominent writer said of the occasion: "It was like offering a roast to a table of mules." Another said: "I considered Brahms a great symphonist until to-day, but how the little 'Doctor' seemed to shrink when he was programmed beside this giant, as was the case in this concert!"

It was still impossible for Bruckner to find publishers for his colossal work. Time after time his manuscripts were called for by different firms, but always returned to him with regretful apologies. Then suddenly, New York through Anton Seidl threatened to publish the *Romantic*, whereupon Hermann Levi for the second time made a collection of the required sum in Munich and thus saved Europe from the imminent disgrace.

In the autumn of 1889 personal friends of Bruckner and Brahms, hoping to end the quarrel between the two masters, agreed to bring them together in a Viennese restaurant. Bruckner, quite amicable, had arrived early and had already had two or three portions of Nudel-soup before Brahms put in an appearance. "Stiff and cold they faced each other across the table," related one of those present. It was an uncomfortable situation and the well-meaning conspirators were highly disappointed. Finally Brahms broke the silence and called for the bill-of-fare. With a forced display of good-nature he cried out: "Now let's see what there is to eat!" He glanced along the list of courses, suddenly looked up, and ordered: "Waiter, bring me smoked ham and dumplings!" Instantly Bruckner joined in, crying, "That's it, Doctor! Smoked ham and dumplings. At least that's something on which we can agree!" The effect of this remark was instantaneous. Everybody shook with laughter. The ice was broken and the remainder of the evening proved to be friendly and jolly.

A real understanding between the two was, of course, impossible. It was a case of temperaments diametrically opposed, conceptions of art basically at variance, in short, an apt illustration of Kipling's phrase "And the twain shall never meet."

Bruckner explained the situation thus: "He is Brahms (hats off!); I am Bruckner; I like my works better. He who wants to be soothed by music will become attached to Brahms; but whoever wants to be carried away by music will find but little satisfaction in his work." Brahms himself had declared before joining the Hanslick camp: "Bruckner is the greatest symphonist of the age."

Once after listening to a Bruckner symphony Brahms approached the

composer, saying: "I hope you won't feel hurt about it, but I really can't make out what you are trying to get at with your compositions." "Never mind, Doctor," answered Bruckner, "that's perfectly all right. I feel just the same way about your things."

In 1890, warned by repeated attacks of laryngitis and general nervousness, he begged leave to spend a year free from conservatory duty. His request was granted, but with no pay. He now drew the long-dormant *First Symphony* from its dusty shelf and set to work polishing it. Several years before, Hans Richter, happening to be present when two of Bruckner's pupils played a four-hand arrangement of the work, in his enthusiasm snatched up the orchestral score and wanted to run off with it, when Bruckner called out anxiously, "But the ragamuffin has to be cleaned first!" From that time the *First Symphony* was known in Bruckner circles as the "Ragamuffin"—an apt nomenclature, indeed, when one remembers the impudence of the opening bars.

Hermann Levi, already familiar with it, was particularly worried that the aging master might make radical changes in the process of revision and wrote to him: "The *First* is wonderful! It must be printed and performed—but please don't change it too much—it is all good just as it stands, even the instrumentation. Please, please, not too much retouching." An eloquent tribute to the genius of the early Bruckner is this verdict from the lips of the greatest of Wagnerian conductors and certainly one of the finest musicians of his time.

During these vacation days the master would review with longing the happy days before his Viennese trials began. Wondering what had become of the pretty Josephine Lang with whom he had fallen in love twenty-five years before, he decided to look her up. She had married long before and he was delighted to find in her beautiful fourteen-year-old daughter the living replica of her mother whom he had loved so long ago. Kissing the girl, he called her: "My darling substitute." In her company all reckoning of time past or present was lost for him and his heart beat once more as swiftly as the vacation moments flew by.

On December 21, 1890, the first and second printed versions of the *Wagner Symphony* were performed consecutively in Vienna. Hanslick admitted that here and there four or eight bars of exceptional and original beauty might be heard, but that the bulk of the work was "chaos." One wonders whether the man was really so old-fashioned that he could only read confusion out of the super-order which the world now knows as Bruckner's symphonic form, as vast and as centripetal as a great empire.

About Hanslick there seems ever to be popping up a ghost of doubt, "Was the man, after all, sincere?" If so, he certainly deserved the immortality Wagner gave him in the figure of Beckmesser. It is good for us to keep in mind that Beckmesser or Hanslick, the stubborn reactionary, is an eternal type to be found in every generation and in every field of activity.

On the above occasion the critic Helm, long faithful Hanslick assistant, left the opposition and stepped over to Bruckner's side beating his breasts for his past sins. The valiant Kalbeck still stood firm and incorrigible. He offered this recipe in lieu of criticism: "Stand the *Allegro* of Beethoven's *Ninth* on its head and see the *Finale* of this Bruckner Symphony tumble out."

Vienna was by then thoroughly convinced of Bruckner's quality. A group of wealthy Austrians met to take financial measures necessary to free the composer from his arduous academic duties. Though pride at first led him to misunderstand the motive for this, the master soon realized that nothing but regard for his genius had prompted it and gratefully accepted the offer, deeply moved. Thus he was set free to do with the last five years of his life as he wished. His new found leisure permitting, he would often make trips to Germany to hear his works performed.

\*                     \*                     \*

Once a chambermaid in a Berlin hotel pressed a note into his hand on his departure for Vienna, in which she expressed great concern for the bodily welfare of her "dear Mr. Bruckner." Naturally, he responded at once, but insisted (this was a matter of principle with him) upon being introduced to the girl's parents. With them an understanding was quickly arrived at and a lively correspondence entered upon, until Bruckner, despite the admonition of his horrified friends, had made up his mind to marry the girl. He insisted, however, that she be converted to Catholicism and this proved in the end the only stumbling block to one of the most curious matches on record. Fortunately, the girl would not sacrifice her faith even for the privilege of nursing her "beloved Mr. Bruckner." He was seventy-one years old when this adventure with Ida Buhz, the solicitous maid, came to an end.

Then there was also his "affair" with the young and pretty Minna Reischl. Add to a pair of roguish eyes a thoroughly musical nature and it is easy to see why the aged lover lost his heart to this girl. She, of course, must have been merely amusing herself at Bruckner's expense, because when she went as far as to bring the composer home to her parents, these sensible people of the world at once awakened him out of his December dream. When he came to Linz shortly after, his acquaintances guessing the truth, teased him, saying: "Aha! So you have been out marrying again!" With Minna, however, who afterwards married a wealthy manufacturer, Bruckner remained very friendly until the end.

In the autumn of 1891 he was created "Honorary Doctor" of the University of Vienna, a distinction which gave the ingenuous composer much happiness. Not long before this he had received from the emperor Franz Joseph an insignia of which he was inordinately proud and which he was very fond of displaying, much as a child will a new toy. This weakness of his for glitter, a characteristic as a rule incompatible with

true greatness, is yet easily to be reconciled with his childishness and the long years spent in a land where titles and decorations were regarded as the highest marks of honor.

The summer of 1893 saw him the central figure at the Bayreuth *Festspiele*. His arrival was enthusiastically greeted by a host of musicians and music-lovers. In the confusion of welcome the trunk containing the sketches of the *Ninth Symphony* disappeared, but after many anxious hours it was located at the police-station, to the composer's great relief. Daily he made his pilgrimage to the grave of the "Master of all Masters." The critic Marsop, once an enemy of his, says he saw Bruckner approach Wagner's grave reverently, fold his hands and pray with such fervor that the tears literally streamed down his face. Perhaps, Bruckner already felt that this visit to Wahnfried might be his last.

In the consciousness of the more enlightened Viennese his name now occupied a place beside the great masters who had lived in the "city of music," and as he passed along the street, voices could be heard whispering with awe: "There goes Anton Bruckner!"

He lived in a small, simple apartment of two rooms and kitchen, tended by an old faithful servant, Kathi, who for twenty years had spent a few hours each day caring for the bachelor's household. In the blue-walled room where he worked stood his old grand piano, a harmonium, a little table, and some chairs. The floor and most of the furniture were littered with music. On the walls hung a large photograph and an oil painting of himself. From this room a door led to his bedroom, the walls of which were covered with pictures of his "beloved Masters." On the floor stood a bust of himself which he was pleased to show his friends, who relate that he would place his hand upon its brow, smile wistfully, and say: "Good chap!" Against the wall stood an English brass bed presented to him by his pupils. This he called "My one luxury." At home he would go dressed even more comfortably than on the street, merely donning a loose coat whenever a guest was announced. Kathi knew exactly at what hours guests were welcome. If the master was composing no one was permitted to disturb him. At other times he went in person to meet the caller at the door.

Bruckner worked, as a rule, only in the morning, but sometimes he would get up during the night to write down an idea that had suddenly come to him. Possessing no lamp, he did this night work by the light of two wax candles. When the faithful Kathi saw traces of these in the morning she scolded him severely, warning him to be more careful about his health. When she insisted that he compose only in the daytime, he would say contemptuously: "What do you know about such things? I have to compose whenever an idea comes to me."

Sometimes, other answers failing him, he tried naively to impress her with his importance, crying: "Do you know whom you are talking to? I am Bruckner!" "And I am Kathi," she retorted and that was the end of the argument. After his death she said of him: "He was rude, but good!"

On the eighteenth of December, 1892, occurred the most impressive performance of his career, when the Philharmonic played his *Eighth Symphony*. Realizing the unprecedented depth of this work, a profundity which only movements of the most colossal proportions could cope with, Bruckner had been much worried concerning the welcome it would receive from the public. The performance, however, was superb and aroused the greatest enthusiasm. Just before the *Finale* the exasperated Hanslick rose to take his leave and received an ovation such as only the consummate villain of the play is given upon a particularly effective exit.

Bruckner's condition at this time was already causing his doctors much concern and it was only owing to the extreme importance of the occasion that they permitted him to be present.

At the close of the symphony, which had been the sole number on the program, the applause was tremendous and threatened never to end. Bruckner, after countless bows to the audience, turned and bowed to the famous orchestra which had at last been won over to his side. It was a true triumph, the first unqualified victory he had ever gained in Vienna. The critics called it the "crown of nineteenth century music," "the masterpiece of the Bruckner style." Hugo Wolf wrote: "The work renders all criticism futile; the *Adagio* is absolutely incomparable." Even the "holdout," Kalbeck, at last admitted, "Bruckner is a master of instrumentation," and "the symphony is worthy of its sole position on the program."

Bruckner was most unhappy that increasing illness often made it impossible for him to hear his own works, the performances of which were becoming ever more frequent. He had been put on a strict diet. "Even my favorite Pilsner beer is forbidden me," he complained to his former teacher Kitzler. His badly swollen feet rendered organplaying out of the question and he had to remain in bed most of the time. Nevertheless it was this same suffering Bruckner who wrote the rollicking *Scherzo* of the *Ninth Symphony*, perhaps the most vital of all his lighter movements.

The end of 1893 saw such an improvement in his condition that he was even permitted a trip to Berlin. This change for the better was, alas, only temporary, for the following days brought such an enduring relapse that he could not attend the first performance of his *Fifth Symphony* in Graz, under that young eagle of the baton, Franz Schalk, April 8, 1894. A devoted pupil of Bruckner, Schalk had fervently embraced the enormously difficult undertaking of love involved in the study and production of this mighty work, with its irresistibly inspiring climax. Only the presence of the ailing master was lacking to render the occasion as happy as it was musically important.

During the summer Bruckner was sufficiently recovered to return to the rustic surroundings of his earlier years, but his seventieth birthday was celebrated quietly, by order of the Viennese doctor who had ac-

accompanied him. Telegrams of congratulation and best wishes streamed into the little town of Steyr from all corners of the earth. Articles about him and his work appeared in all the newspapers. The people of Linz bestowed on him the key of the city; he was elected honorary member of countless musical organizations. In short, not a single sign of esteem the earth might show its kings of tone was now withheld from the ailing genius. The glory he had richly earned twenty years before now came to him when the greatest joy he could reveal at the realization of his universal recognition was a wistful smile in which life-long spiritual pain lurked behind the ghost of a belated happiness.

Unexpectedly, what seemed a swift recovery, in the fall of 1894, found him once more ascending the platform at the university to resume his lectures on musical theory. Only a few such days of grace were granted his shattered body by relentless Fate, for two weeks later he stood for the last time before his beloved students. From then on his health declined steadily and even his mental condition suffered from erratic spells. He was compelled to abandon his *Ninth Symphony* at the close of the third movement, an *Adagio* which, he told friends, was the most beautiful he had ever composed. From sketches found among his posthumous effects we know it had been his intention to add to this glorious work a purely instrumental *finale*, perhaps in the manner of the closing portion of his *Tragic Symphony*.

Yet, little though he realized it, when the last note of this *Adagio* dies out there is no expectation unfulfilled. It is as if he has confessed all, poured out his very soul in this music, so that the work he despaired of ever finishing, the work he died thinking incomplete, now strikes the listener as a perfect symphony-unit needing no prescribed *finale*.

On January 12, 1896, he heard his *Te Deum*, its performance in Vienna having been recommended by no other than Brahms himself, who at last seems to have changed his attitude towards the man he had opposed for years. This was the last time Bruckner ever heard one of his own works. The very last music he listened to in public was Wagner's *Liebesmahl der Apostel*. It was much like a musical farewell-greeting from the Master he had esteemed above all others in his lifetime. During the summer of that year Bayreuth was prepared for the worst, for a strong rumor was afoot that Bruckner was dying. Yet his gigantic vitality outlived the season. Not till October 11 did the dreaded moment come. It was a Sunday. In the morning he had occupied himself with the sketches for the *Finale* of the *Ninth Symphony*. There seemed nothing alarming about his condition. At three in the afternoon he suddenly complained of feeling cold and asked for a cup of tea. A friend who was with him helped him to bed, but no sooner did he appear comfortable, when he breathed once or twice heavily and all was over.

At the burial service Ferdinand Loewe conducted the *Adagio* of the *Seventh Symphony*. Hugo Wolf was refused entry into the church on the ground that he was not a member of any of the "Societies" partici-

pating. Brahms, a very sick old man, stood outside the gate, but refused to enter. Someone heard him mutter sadly: "It will be my turn soon," and then he sighed and went wearily home.

In accordance with Bruckner's implicit wish his remains were taken to St. Florian where they lie buried under the mighty organ that had been his best friend and into the golden majesty of which he had on innumerable occasions poured the troubled confessions of his tragic life.

NBC ORCHESTRA UNDER STEINBERG BROADCASTS BRUCKNER'S  
FOURTH (MARCH 4, 1939)

... What distinguished the occasion was the inclusion of a Bruckner symphony — the *Romantic* — for the first time in an NBC Symphony program. Mr. Steinberg led it with authority and sympathy, and the men responded alertly to his wishes. . . .

LOUIS BIANCOLLI, *New York World Telegram*

... Mr. Steinberg brought not only enthusiasm but unusual insight to his interpretation. One would say that he wrang from the symphony all that was best in it, and that Bruckner was fortunate in this representation. The tempi seemed to one who is not an admirer of this symphony admirably chosen, and fortunately not dragged. Some have taken the opening movement, for example, more slowly. It gains much by the energy that the brisker pace imparts, and it is to be added that within the frame of the prevailing tempo Mr. Steinberg established all the appropriate varieties of movement and of dynamics. . . .

If the first movement is the strongest of the four that make this Bruckner symphony, there are other places which must be harder to convey to an audience, as the slow movement. The different movements and their interpretive demands made clear the knowledge, the temperament and sincerity of this leader. . . .

The audience was very appreciative of Mr. Steinberg's efforts. The impression is that the players of the orchestra also held him in esteem.

OLIN DOWNES, *New York Times*

... This was the first time that any music by Bruckner has figured in these concerts. . . .

Mr. Steinberg, who made his debut in this series in the closing concert last spring, disclosed himself in this performance as a conductor thoroughly versed in his technique, with authority and imagination, and able to obtain a convincing realization of his interpretive wishes in the performance by the orchestra, which was characterized by laudable clarity, expressive power, tonal mass and imposing sonority. Warm applause followed the symphony. . . . A group of shorter pieces closed a program warmly applauded by an audience of very good size.

FRANCIS D. PERKINS, *New York Herald Tribune*

Bruckner's *Romantic* Symphony—No. 4 in E flat major—can have had few more admirably conceived and executed performances than which occupied almost an hour of Saturday night's concert by the NBC Symphony. . . .

The interpretation and the playing of the symphony yielded every ostent of conviction. Mr. Steinberg was a fiery evangelist for the Bruckner gospel. He got warmth of tone as he got virtuosity from the players. The brasses built their successive climaxes stirringly. In the intensity of the performance was no sacrifice of clarity. . . .

## The "Peace Conference of Amsterdam"

### *Holland Honors Mahler and Mengelberg*

(The following article is Chapter 9 of "An American Musician's Story" by Olga Samaroff-Stokowski, published by W. W. Norton & Co. Inc., N. Y., 1939. The Bruckner Society of America, Inc., wishes to express its appreciation to the author and publishers for permission to publish this chapter.)

THE formal engraved invitations to the Amsterdam Mahler Festival in 1920 were imposing. The programs of the concerts which festival guests were invited to attend strongly suggested inevitable musical indigestion. The whole thing had an official tinge that led experienced and wary musicians to suspect a possible overdose of social entertainment which, however pleasant in itself, might prove to be taxing in addition to the extensive musical program. Nevertheless, when Mrs. James Lanier urged me to accept the invitation and to join her in making the journey, I decided to go.

The Mahler Festival was a celebration of Willem Mengelberg's twenty-fifth anniversary as orchestral conductor in Holland. In the course of that quarter of a century he had won the gratitude of the entire country and occupied a secure place as the leading figure in its musical life.

It was rumored that the first plan to celebrate his twenty-fifth anniversary was the proposed gift of a hundred thousand gulden to be raised by popular subscription. When Mengelberg was sounded out with regard to this possibility, he promptly said that he would much rather organize a Mahler festival on a grand scale and perform all the important works of the Viennese master in a series of concerts to which musicians from all over the world would be invited.

If this rumor is true — and the source from which I learned it seems reliable — no orchestral conductor ever gave a more striking proof of devotion to the music of a composer in whom he believed.

Throughout his career as conductor, Mengelberg had been the steadfast champion of the music of two contemporary composers — Richard Strauss and Gustav Mahler. He performed their works when they were still the objects of hot controversy or derision. He continued to repeat these works until they had a large public following in Holland. His decision to organize a Mahler festival was the logical climax of an important part of his life's work.

Mahler was dead. His fame as a composer was growing, but he still needed champions. Richard Strauss had already won his niche in the hall of fame, but many still denied such a place to Mahler. This was partly the result of enmities he had incurred in life, but the memory of his extraordinary personality was fresh in the minds of those who had known and revered him as a man.

The years during which Mahler was conductor of the New York Philharmonic do not form a very creditable page in the musical history of

the city. Doubtless he was irascible and difficult, but he was a great man, and New York never gave him his due.

He had not been long in America when the Charles Steinways invited me to meet him and his wife at dinner. I was so excited over the prospect that I arrived a full half-hour too soon. Mrs. Steinway greeted me with the words:

"I am seating you beside Mahler at table tonight, but do not expect him to speak. He cannot be made to talk at dinner parties."

Mr. Steinway gallantly murmured something to the effect that "Olga ought to be able to draw him out," but Mrs. Steinway was not disposed to flattery. She reaffirmed her conviction that Mahler would remain silent, and she added mischievously, "If my husband is right and you *do* make him talk, I will give you five dollars."

I responded to the challenge, but when Mahler arrived my courage sank. There was something so remote about him at first glance that I could scarcely imagine his taking part in any ordinary conversation. When we sat down to dinner, he never even glanced at me. Oysters on the half-shell received his undivided attention. He did not seem quite so much interested in the soup, however, so during that course I ventured a timid introductory remark. Without looking up he said: "*Ja*," and then relapsed into silence.

I racked my brains for a provocative subject of conversation, but nothing I could find in the animal, vegetable or mineral kingdom elicited any response. Mrs. Steinway began to look distinctly triumphant.

Finally, I remembered that before dinner, when Mahler appeared to be utterly oblivious of everybody present, he had taken *The Brothers Karamazoff* off the bookshelf and turned over the pages as though searching for a special passage. I decided that the Dostoyevsky masterpiece was this drowning woman's last straw. But I also knew that if I did not succeed in establishing a controversial basis of conversation, I would merely get another "*Ja*." So I boldly asked him if he did not consider *The Brothers Karamazoff* a much-overrated book.

"Not at all," said Mahler fiercely, putting down his knife and fork. "You ask that because you do not understand it." He thereupon launched into a long discourse on the subject of Russian psychology and Dostoyevsky's supreme understanding of it, while I settled down to the enjoyment of my dinner (and my triumph!), only throwing in an occasional provocative question when Mahler paused to eat a mouthful.

The signals exchanged between me and the Steinways must have mystified anybody who saw them. Mr. Steinway kept looking at his watch and lifting his glass to me. He teased his wife unmercifully when Mahler followed me out into the drawing-room and spent the rest of the evening looking for passages in *The Brothers Karamazoff* with which to illustrate his points and complete my conversion. I have often wondered what would have happened if he had known we were discussing one of my favorite books.

Before I left, my crestfallen hostess presented me with six crisp new dollar bills. She felt that five would not be enough in view of the length of the conversation!

Playing a concerto with the Philharmonic under Mahler's direction was a privilege I repeatedly enjoyed. The first time I was soloist in one of his concerts on tour was in New Haven. By that time he and I had become good friends, and I had conceived a great liking for his lovely wife who was one of the most beautiful women I have ever seen. She was not with him on this particular occasion and he felt the need of company at supper after the concert. I had lured my dear friend Miss Dehon to accompany me to New Haven. It sometimes amused her to "go on the road" when I played in cities near New York. When Mahler asked us both for supper she pleaded fatigue and went back to the hotel. Probably she had visions of shop talk in German, for Mahler spoke very little English, so she deserted me.

Being in a university town, Mahler expected to find gay cafés filled with students in multicolored caps. When we had searched in vain for something more enticing than a corner drug store, and our hotel had refused to serve what we wanted at such a late hour, his dismay was pathetic.

"*Was für eine Stadt!*", he murmured bitterly. "What kind of students do they have here? No wine, no songs, and not yet midnight!"

It did not seem to comfort him at all when I assured him that Yale students did sing at other times and had pretty much what they wanted to drink on occasions. . . .

He only shook his head. The night-life of New Haven was evidently a great disillusionment to him, and he remained pessimistic about the *joie de vivre* of the American university student.

The only thing I could suggest was to take refuge in the hotel sitting-room I shared with Miss Dehon. I knew she usually kept something in the way of nourishment on hand in case we should be hungry before going to bed. We found her still up and, thanks to her, we feasted on milk and crackers as we talked far into the wee small hours. Mahler's taciturnity was reserved for strangers and social functions. When he was at his ease with friends he was a brilliant conversationalist with a somewhat mordant wit.

It later proved to be fortunate that Miss Dehon and Mahler made friends that night in New Haven over the milk and crackers. When his health began to fail before his final departure from America he lay in bed for weeks at the Netherlands Hotel, weary from his struggles with people and conditions he could not understand, and hurt by the hostility of the New York press. As his strength waned and he sensed that the end might not be far distant, he strove desperately to finish his last symphony, sitting up in bed with his manuscript before him and looking like the ghost of his former self.

He always disliked American hotel food and during these trying

weeks it was almost impossible to induce him to take any nourishment. His wife, beside herself with anxiety, told me about this and I repeated it to Miss Dehon who had inquired about his condition. After that Miss Dehon constantly sent him soup and dainty dishes prepared by her own splendid Swedish cook. I frequently acted as messenger and brought him these things. They helped to sustain him until he left for Europe, where death overtook him.

It is perhaps as well that he did not live to witness the horror of war. Mahler was an idealist and he would have suffered mentally and emotionally more than most men. But I feel convinced that he would have rejoiced to know that the first big festival of his works would also be the first international meeting of musicians after the war. It was a Parisian journalist who baptized the Mahler Festival "The Peace Conference of Amsterdam."

A letter to my father describes the festival better than I could from memory.

Dearest Father,

The first day of the festival has made me glad I came. In one sense I was glad before today, because Harriet Lanier has proved to be a most delightful traveling companion. Some of my New York friends thought I was crazy to share a cabin with her on the boat. She has the reputation of being a fire-eater, and I will admit that Harriet loves a good fight more than most people. But she is really an enchanting person. She looks like a French marquise, exquisite, delicate and always marvelously dressed. Her pugnacity invariably strikes me as comical because it is so foreign to everything about her. Imagine a Tanagra figurine shaking its fist and you can understand what I mean. Perhaps I cannot take her pugnacity seriously and that is the reason why we get on so well. Her house in New York is a gathering place for musicians and artists of all kinds. When one crosses the threshold, one is in France. Everything in the house — except her valuable collection of *Chinoiserie* — is French, even to the monograms on her lovely bed-linen which I particularly enjoy when I stop with her. When I visit her I usually take my breakfast on a tray beside her own bed, for nothing amuses me more than to watch her open her mail. Then it is that Harriet, looking like a piece of Dresden china with the lace frills of a boudoir cap shaking as she gets excited, waxes pugnacious if somebody in a letter or a concert review dares to criticize anything about her "Friends of Music" or Bodanzky.

She has really done a wonderful piece of work in creating the Friends of Music. It is modeled on the historic Friends of Music in Vienna and Bodanzky makes wonderful programs that enable us to hear music nobody else in New York attempts to perform. He and Harriet pay not the slightest attention to popular taste. They continue to perform caviar programs — unfamiliar music, rarely heard compositions, anything in which they take an artistic interest. Their subscription concerts have won a high place in New York musical life and their audiences are the best — in quality if not in numbers — in the city.

Of course, there is a deficit. Harriet either raises the money or pays it herself. She is wonderfully generous.

The only thing she cannot endure is criticism of the people and things she believes in. She would make a marvelous dictator. She would abolish free speech at once, I am sure, and free thought if she could.

If anybody dares to suggest that Bodanzky is not the greatest living conductor, war is declared at once. After some adverse reviews in the newspapers she tried to keep the New York critics out of the concerts of the Friends of Music, but somebody managed to pour oil on the troubled waters — luckily for Bodanzky.

She seems to have arrived at some sort of inner compromise by which she will permit herself to enjoy Mengelberg's conducting during the Mahler Festival without feeling it is disloyal to Bodanzky. But, really, it is such fun being with her on this trip, and she has been so considerate and charming that I spend my life writing postcards to the people who predicted we would not be on speaking terms by the end of the ocean voyage.

We found great bunches of tulips, sent by the festival committee and Mengelberg, in our hotel rooms. Bottenheim immediately came to inquire whether he could do anything for us. Bottenheim is Mengelberg's personal manager and his devotion to his conductor is quite as passionate as Harriet's adherence to Bodanzky. Every time Harriet and Bottenheim are together, I tremble lest they drift into an argument about the relative merits of their respective idols. It would surely end in bloodshed. Fortunately they will both be too busy and too preoccupied during the Mahler Festival for such an encounter.

Bottenheim is in his element these days. He beams and radiates enthusiasm as more and more distinguished guests arrive and give him more and more trouble. He is indefatigable in looking after people, and seems to enjoy working over a mass of details that would reduce any ordinary mortal to a state of despair.

I asked Mengelberg for permission to attend his morning rehearsals with the orchestra. I wanted to hear the relatively unfamiliar Mahler works more than once. He sent me a card that would serve as a general "open sesame," and I got myself up very early yesterday morning. Flat boats loaded with flowers floated on the canals and I enjoyed the walk to the *Koncertgebouw-Hall*. The *Koncertebouw Orchestra* has suffered less from the war than others, and is probably the best in Europe today.

Mengelberg arrived at rehearsal in the same kind of brown velveteen jacket he wore in the green room after conducting *Philharmonic* concerts in New York. I got out the orchestral score with which I had fortified myself and was all prepared for study and enjoyment when, alack, Mengelberg began to harangue the orchestra in Dutch. He talked and talked. It was a veritable torrent of Dutch. I, of course, understood nothing. Mengelberg had rehearsed the orchestra so much before the festival that he now only needed to remind the players of certain things. I heard very little music during the morning — just a few stray passages that needed polishing. In future I am going to sleep late!

Mengelberg has the reputation of talking more at rehearsal than most.

conductors, and he sometimes says very droll things. One of his orchestra men told me the following story:

During the rehearsal of the *Liebestod* from *Tristan*, he rapped sharply on his desk and exclaimed, "Gentlemen, gentlemen, wake up! We are performing the music of *Tristan und Isolde* and you are playing like married men!"

When we reached the hall for the opening concert of the festival last night, it seemed as though all the flowers I had ever seen on the canal barges in the morning had been massed on the stage. There was a perfect riot of color and the floral decorations created a most appropriate atmosphere of festivity.

The Prince Consort was there to represent Queen Wilhelmina, and he and his suite provided another colorful note with their uniforms and orders. Every few minutes some internationally famous musician would enter the hall. The composer Arnold Schönberg arrived, followed by a group of pale young men. We were told they were his pupils. So might a philosopher in ancient Greece have wandered about with his disciples.

Casella, the modern Italian composer, sat near us, and Schnabel and his wife were across the aisle. I cannot begin to list all the musicians who are here, but it was quite dramatic when Florent Schmitt, the Parisian composer (who in spite of his German-sounding name is very French), and Abendroth, the German conductor from Cologne, met in Mengelberg's dressing-room and shook hands for the first time since 1914.

If all the performances are as good as those in the first concert, the festival will be a rare musical experience.

In retrospect certain musical impressions of the Mahler Festival stand forth very clearly in my memory, the most vivid being *Das Lied von der Erde*, with Cahier's wonderful singing of the contralto part; the *Kindertotenlieder*; the Second Symphony and, above all, the Eighth Symphony. The performance of the latter reminded us vividly of the first American performances of the work under Stokowski's direction in Philadelphia in 1915. When we hurriedly left Munich at the outbreak of the World War in 1914, taking with us no personal belongings beyond what we could carry in knapsacks, Stokowski carried the huge score of Mahler's Eighth Symphony under his arm all the way to Philadelphia. He encountered great difficulties in producing the work because a considerable sum had to be raised to underwrite the performances. Once more the Boks came to the rescue. The enlarged orchestra, the huge chorus, children's chorus and soloists were very costly. Stokowski would only undertake it if he could have sufficient rehearsals. The organization of this "Symphony of a Thousand," calling upon the largest instrumental and vocal forces employed in any symphony, the building of a stand to accommodate nearly eight hundred singers, and endless incidental details involved an enormous amount of work besides the expense.

Such musical enterprises are easier in Europe than in America because people are more docile and disciplined. In Philadelphia the chorus members taken from every walk of life seemed to have a veritable

army of relations who stormed the stage door and tried to get into the hall during rehearsals. The doorman — who was generally known as "the Czar" — eventually became so fierce that it was all the musicians themselves could do to get in.

We had eleven sold-out performances in Philadelphia. Trainloads of New Yorkers came over to hear the symphony, and I spent weeks organizing what was needed for their comfort and entertainment. An additional performance at the Metropolitan Opera House in New York was given under the auspices of the Friends of Music. Harriet Lanier and I reminisced for hours after hearing the Eighth Symphony in Amsterdam, and agreed that nothing could ever obliterate the impression made upon us by the first performance in Philadelphia. The opening phrase, "Veni Creator Spiritus," which we then heard for the first time had literally left us breathless. It was a memorable experience. In Amsterdam I had the kind of enjoyment which comes from being familiar with every note of the score.

It was very clever of Mengelberg to organize morning concerts of modern chamber music during the festival, on days between big Mahler concerts. They provided variety and contrast. Some of the musicians who were guests of the festival thereby took an active part in the proceedings, and the composers of the different European countries had their first chance — since the war — to come together in an intimate way and compare notes, so to speak.

Mengelberg asked me to play the Piano and Violin Sonata of Richard Strauss with the violinist Alexander Schmuller. Although the extreme modernists even then rejected Strauss's music as antiquated, Mengelberg was determined to have a Strauss work on the programs. In these chamber music concerts, and in the conversations and discussions that went on during the Mahler Festival, one was made aware that the World War formed a great divide between musical life as we knew it before 1914 and the new post-war period. Barriers were down musically as well as morally. Freedom from rules was just as dear to the musical composer of 1920 as freedom from convention was to young radicals of the period, who snatched recklessly at the joy of life in a sort of revolt against the suffering into which the world had been plunged by the war.

The only thing that aroused my indignation in Amsterdam was the tendency of some of the so-called "modern" composers to try to pull the great masters of the past off their pedestals. Neither the piling up of simultaneous semitones nor the Schönbergian building of chords on fourths worried me in the least, but when I heard conversations in which the speakers scoffed at Beethoven, Brahms and Wagner, my ire was aroused. Today one inevitably begins to compare modern achievements with those of the giants of the past, sometimes belittled by "modernists" of the post-war experimental era, and the result is not exactly favorable to the scoffers — at least that is the way most musicians feel in 1939. Undoubtedly we have been through a transitional period and we are still

too close to it to form lasting convictions that have any value. It will probably have its importance in musical history, but we can point to very few modern masterpieces of any real significance.

One rabid "modernist" was standing beside me in Amsterdam just before I went on the stage to play the Strauss Piano and Violin Sonata. He asked me how I had liked the preceding number. It had been an atonal piece of unrelieved cacophony and I was forced to admit that I had not greatly enjoyed it. He then said very sarcastically: "Never mind, you will now have a great success in E flat!" It was evident that he considered a composition in a fixed tonality as beneath contempt. These experiences interested me because I have always had a lively artistic curiosity and much more receptivity for the new than most musicians of my generation. I am also optimistic about the future. The day is near when we shall have become accustomed to the strange new harmonic idiom of the twentieth century. The period of experimentation is nearing its close and soon composers will begin to express themselves without attaching undue importance to mere innovation.

During the entire Amsterdam festival I had a strong feeling that Mahler closed a great period. For this reason the festival was truly significant, quite apart from Mengelberg's jubilee, and as the first important international musical event after the war it also deserved to be called, at least in a musical sense, "The Peace Conference of Amsterdam."

#### DAS LIED VON DER ERDE IN CHICAGO, STOCK CONDUCTING

JANUARY 10, 12, AND 13, 1939

Those who contend that the mood of a composition is never precisely definable and that one single piece of music (for example) may *equally* represent emotions of solemn joy or pangs of tragic grief should listen to Mahler's *Das Lied von der Erde* and ask themselves whether four of its six movements could express anything but stark pain. The two delicate landscapes which Mahler offers us in this great symphony might conceivably bear titles other than those they own (though surely an atmosphere of the Orient cannot be ignored as one studies them); but across the other pages of this work, the composer has written with tone, "Suffering" beyond chance of misinterpretation. Here a man who has sounded many black depths of life becomes autobiographical. But in a larger sense he describes the hurt that touches, at some time, all hearts. And it is only in his final acceptance of suffering that he loses contact with many who listen to *Das Lied von der Erde*. For, alas! no animating surge of hope crowns that acquiescence. He but dreams "of the luminous blue of distant space!"

The orchestra was at the height of its form last night and Dr. Stock gave a masterly reading of the score. The soloists, Enid Szanthy and Charles Kullmann proved themselves artists sensitive to the Mahler idiom and they as well as Dr. Stock received many salvos of applause from the audience.

MARY R. RYAN

#### RCA VICTOR RECORDINGS

Bruckner's *Ninth* and Mahler's *Ninth* will be available in record form. Bruckner's *Ninth* will probably be available in January. No date for the release of the recording of Mahler's *Ninth* under the direction of Bruno Walter has as yet been set.

## Mahler—Last of the Romantics

BY WINTHROP SARGEANT

TO future historians of music the year 1911 is likely to loom as a very important turning point. To contemporary observers it probably seemed much like any other year. Several great musical figures—among them Richard Strauss and Debussy were enjoying their hey-day. Never before had world-wide intellectual ferment seemed to promise more for the future of art. Never before had there been so many composers, so many skilled executants, such teeming musical audiences. But as we look back at it from the perspective of nearly thirty years, 1911 seems to mark, more definitely than any other date, the end of the great romantic period of music, and the beginning of something else. That year a great drought seemed to dry up the creative source of the romantic movement. People went on composing, but the work of those composers who were big enough to set styles and lead movements, underwent a sudden and strangely unanimous change.

Before 1911 Richard Strauss had turned out one vital composition after another, reaching a peak of creative achievement in *Elektra* (1909). In 1911 he finished *Rosenkavalier*. Since then Strauss has continued to write, but little of what he has written has the sweep, or originality, of his earlier work. It was in 1911 that Sibelius, after three lyric, full-blooded symphonies, produced his bare, enigmatic fourth. The weight and importance of his later work are still to be determined by posterity. By 1911 the best of Debussy's work had already been done. In 1911 Arnold Schönberg finished the last work of his post-Wagnerian romantic style (*Gurre-Lieder*) and plunged thereafter into the dry, abstract mathematics of atonality. In 1911 Igor Stravinsky dropped the conventions of the great classical-romantic musical language, and wrote his boisterous Russo-Parisian ballet *Petrouchka*. Stravinsky was to become more famous, but whether he was ever to write better music is a question. Today, despite manifestos, credos, theories, and all sorts of aesthetic propaganda, it is becoming more and more doubtful, sad as it is to admit it, whether any music of overwhelming importance has been written since that time.

Just why the particular year 1911 should have rung down the curtain on a whole phase of music, and musical philosophy, is hard to understand. But it is evident, if one considers the changing currents of European thought during the whole period from 1900 on, that music was bound to be deeply affected somewhere along the line, and that the effects were likely to disturb the very core of romantic mysticism which had given nineteenth-century music its enormous vitality. As the heroic conception of life was replaced by the realistic, the metaphysical by the scientific, it is natural that composers should begin to regard their art with changed eyes. When the philosophy of materialism was applied to

music, music became purely a matter of substances, combinations, geometric patterns, abstract architecture, aural sensations. And some musicians began seriously to write purely cerebral or purely sensual music, and to explain their own, and other people's music as purely and simply a matter of ingenious combinations of sound. Whether, in accepting this view, they did not throw overboard much that could have given their own work value, is still for future musical audiences to decide. But in applying the materialistic yardstick to the great musical masterpieces of the past they overlooked the very factor that, in the last analysis, made those masterpieces great. True, the abstract architecture of great music makes an impressive study for those interested in technique. But far transcending this in importance is the message that all this architecture was built to convey. For, if we take the word religion in its broadest possible sense, the greatest masterpieces of European music from Bach to Strauss were all essentially religious poems, written in a complex, but widely understood, language of sound.

It was, of course, only a coincidence that Gustav Mahler died precisely in the fateful year 1911. But the coincidence had a certain amount of poetic justice about it. Mahler was, in a curiously inevitable way, the last of the romantics. Strauss' romanticism was always well mixed with a slightly cynical strain. It was often sexual rather than religious. And it was turned off abruptly in what seemed the prime of his creative life. As a romantic, Schönberg hardly got a start. Stravinsky was anti-romantic from the first. Sibelius will, I suspect, be placed ultimately as a sort of symphonic landscapist, a somewhat less important figure than present-day Sibelians think him. For Mahler alone, of that generation, it was permitted to reach full stature while the romantic attitude still survived as a potent source of musical inspiration.

Mahler's peculiar position as the last fully-formed link in a dying tradition goes a long way, I think, toward explaining that troubled, poignant, yet grandiose quality which has made him difficult for some music-lovers to understand. For his music not only expresses the fervor of romanticism; it is permeated as well by a gloomy premonition of the approaching death of the romantic world-view. Technically Mahler was a symphonist of what the late Paul Bekker has aptly described as the Austrian (as distinct from the German) school. His structural methods were descended from the large, simple, linear, melodic style of Bruckner, a style that was Schubert's before it was Bruckner's, and Haydn's before it was Schubert's. To this extent Mahler was a traditionalist. But here the similarity between Bruckner and Mahler ceases. Bruckner's romanticism was serene and unquestioning, the product of a world that was spiritually at peace. Mahler's is already troubled by a changing conception of life. His methods, his equipment are those of the grand manner. But Mahler himself is an intellectually restless man of the twentieth century. What to the relatively simple Bruckner was a self-evident truth, is to the complex and doubting Mahler, a receding vision, a

vision which only a passionate profession of faith will keep alive. Hence, the strenuous "will to believe," the atmosphere of "eternal seeking," the sense of something escaped and forever lost, that permeate so much of his music.

In religion Mahler was an eclectic, instinctively religious as are all real musicians, but too sophisticated and cosmopolitan to accept any religious creed in its primitive form. When asked about his religion he once replied, "I am a musician, that covers everything." His broad, philosophical attitude toward religion made him sympathetic at the same time to the purely doctrinal fervor of Klopstock, the romantic mysticism of Goethe, the negative, and quite un-Christian, poetic passion of Nietzsche, and the pastel-shaded nostalgia of Li-Tai-Po. It also gave him his intense respect for the writings of Dostoievsky, a respect that was so great that it led Richard Specht to consider Dostoievsky one of the most important influences in Mahler's intellectual life. Specht, in his biography, quotes an interesting anecdote from Paul Stefan — about Mahler and Schönberg sitting one day in a park in Vienna chatting with a group of students. Mahler after holding forth at length about his favorite subject, Dostoievsky, was surprised to learn that none of the younger men had even heard of the great Russian novelist. "But Schönberg," he expostulated, "What's the idea? Let the young people who study with you read Dostoievsky too. That is more important than counterpoint!" The episode, which occurred comparatively late in Mahler's life, shows that he was still as concerned as ever about the novelist who had influenced his earliest symphonies.

The religious, ritualistic subject matter of such works as the *Second* and *Eighth Symphonies* is thus the product of no simple, unquestioning piety, but of a complex, sophisticated twentieth-century mind. Mahler still retained some of the strong sap of the romantic movement. But he was troubled by the illusory quality that romanticism was assuming in the twentieth-century world in which he lived. He himself stated that the only valuable experiences in an artist's life are those that occur before puberty. In Mahler's time the world of magic, of the fairy-tale, of the supernatural, of mythical symbols, was already becoming foreign to the adult mind. And that world, upon which nearly every great composer or poet of the past had drawn for his inspiration, remained real, or perceptible, only to the imaginatively unfettered minds of children. The composer, who is the purest and most imaginative kind of poet, was being forced to draw most of the poetic juice of his art from childhood memories. Mahler's preoccupation with children's jingles, folk-like tunes, grotesque military themes, hobgoblin atmospheres, the *Knaben Wunderhorn*, his often deliberately naive religious imagery, were all, I think, symptoms of this struggle to recreate a remembered world far richer in poetic values than the machine-age adult's humdrum world of reality.

It is also, I think, this feeling of the slipping-away of the romantic

view that gives so many of Mahler's works that deeply nostalgic, poignant sense of something forever receding, or lost. I am thinking more particularly of such things as the song *Ich bin der Welt abhanden gekommen*, and *Der Abschied* from *Das Lied von der Erde*. No composer in the whole history of music has expressed, as Mahler has, the loneliness of the individual human soul peering out at eternity.

In the sense that much of his music reflects states of mind and even sometimes describes concrete ideas, Mahler was a "literary" composer. And nothing, it seems to me, is more absurd than the attitude of listeners who approach a Mahler symphony in the abstract without even bothering to find out the ideas and symbols that Mahler himself associated with it. Nor does it seem to me that being a "literary" composer is being a lesser composer. Nearly all the great composers from Berlioz on, and many before him, were "literary" composers. There are those, of course, who prefer to think of the *Ring des Niebelungen* as abstract music, with a troublesome and incomprehensible libretto about vague and unimportant mythological beings. There are those who enjoy Bach's *B Minor Mass* and pretend that its connection with Christian ritual is irrelevant. But such people, I think, are eating the frosting and missing the cake. There is, in reality, very little important music that is purely "absolute."

When audiences understand more about the ideas behind Mahler's symphonies, I think they will find him, not only a great symphonist, but one of the most interesting minds, one of the most imaginative artists, of the early twentieth century. Mahler, in his time, like Mozart in his, used music to express the most poignant poetic experiences of contemporary humanity. If Mahler's poetry is more remote, less fluent, harder to get at, it is at least partly because poets in Mahler's day had to dig deep into the subconscious for their poetry.

#### SEVITZKY BROADCASTS MAHLER *ADAGIETTO*

In a program broadcast by the Indianapolis Symphony Orchestra on February 15th, Fabien Sevitzy conducted the *Adagietto* from Mahler's *Fifth* with an understanding that must have given much pleasure to his radio audience.

#### THIEDE CONDUCTS BRUCKNER'S *FOURTH* (FEDERAL SYMPHONY OF MASS.)

A reader reports:

"The Federal Symphony Orchestra of Massachusetts conducted by Alexander Thiede, formerly assistant concert-master for Stokowski in Philadelphia, performed Bruckner's *Fourth* Symphony in Boston on May 14, 1939. There has been noticeable improvement in the orchestra under Mr. Thiede; he was fortunate in having an excellent horn section. The cuts used by Wilhelm Gericke, made by Bruckner himself, were adopted for this performance. Mr. Thiede's reading was inspired. He knew the score thoroughly and his beat was precise and sure."

# Bruckner's Symphonic Tetralogy (IV-VII)

BY GABRIEL ENGEL

## INTRODUCTION

PERHAPS the first fact that strikes one in considering Bruckner's Symphonies Nos. IV-VII is their uniformity of mode. That these are his only symphonies in major keys (there were seven in minor, including his two preliminary efforts) renders an apparent coincidence merely more curious. Even the fact that the *Quintet* and *Te Deum* (the sole non-symphonic compositions of the decade occupied by the Symphonies IV-VII) are also in major, while the three Masses (all written during the preceding decade), are in minor, may be dismissed as purely accidental. Yet the present writer, moved by Bruckner's naive claim that in setting down his symphonies he was the mere tool of an irresistible inner Voice, decided to examine the scores themselves to determine whether the four symphonies in major are not linked by some definite inner community hitherto unsuspected.

It is general knowledge that most of the thematic life of the Bruckner symphonies radiates from the principal or central theme-groups of the opening movement. Placed side by side, the central themes of the four symphonies in major are readily seen to be of one family. They possess in common vital melodic characteristics distinguishing the central theme of no other Bruckner symphony. Might not these four then have been the product of a single sustained inspiration whose complete unfolding required expression in four successive integral creations?

The long chain of dark-tinged compositions preceding the *Fourth* (there were nine of these including the Overture in G Minor) makes the radiant sunrise which begins that symphony all the more amazing. It is literally the sunrise in Bruckner's soul, suddenly liberated from a stubborn, sullen spell beneath a gloomy sky. He had striven in vain to dispel that gloom. A highly significant fragment of a *Symphony in B-flat Major* penned before his *Second* tells of that effort. Clearly forecasting the *Fifth* in thematic content, this cast-off symphonic scrap not only shows Bruckner's early yearning for a jubilant, major Muse, but also reveals in embryo the very song he felt himself destined to sing.

When just a graduate pupil, though already approaching middle age, he had his first view of Wagner's new orchestral language. It proved so powerful a revelation that he composed his highly original *First Symphony* and First Mass in the resulting burst of inspiration. Yet that had only partially freed his voice. When he had finished his dramatic *Third Symphony*, he plucked up the courage to bring it to Wagner in person, then head-over-heels in his *Ring* plans at Bayreuth. The great man's annoyance quickly changed to genuine interest when he was finally persuaded to open the score. Careful examination led to warm expressions

of praise by Wagner. He would be delighted to accept the dedication of so fine a symphony. Yes, he would even produce it himself. This generous gesture proved a galvanizing touch to the discouraged symphonist. In the overwhelming flood of elation that resulted all the pent-up bitterness of the preceding years disappeared.

The *Fourth Symphony* appears to have been a direct sequel to the joyful upheaval that took place in Bruckner's spirit upon that occasion. The sunrise of Nature that opens the *Romantic* is truly the sunrise in Bruckner's soul. It is at the same time a fervent paean of gratitude for his new-found spiritual freedom and an infinitely broadened human perspective.

#### FOURTH SYMPHONY (ROMANTIC)

Toward the close of his arduous career Bruckner, at length become famous, was awarded an honorary degree by the University of Vienna. He was puzzled by the Greek word "Melipoeos" inscribed upon his diploma to designate the particular nature of his excellence. Scholars whom he asked to interpret the term were divided between "tone-poet" and "tone-craftsman." Bruckner preferred the latter, though more prosaic translation, insisting that the former smacked too much of "program" music.

It is likely that the few touches of realism (bird-calls, wood-murmurs, etc.) in the *Romantic* were influenced by the sensational apparition of Liszt's symphonic "poems" in the concert world. Yet Bruckner was not a romanticist of the stamp of Weber or Schumann. In reality, he was even less a romanticist than Beethoven who warned against a too literal story-background interpretation of the *Pastorale*, his lone symphonic venture beyond the strict borders of absolute music. Although a festive *Scherzo* and a "Storm" *Finale* are present in both the *Pastorale* and the *Romantic*, these are only marks of an external community not reflecting the fundamental dissimilarity of the underlying messages in these works. Beethoven's conception of nature and man views them as separate entities, the former a species of recreation, a source of spiritual refreshment for the latter. In Bruckner's *Romantic*, however, there is heard not the echo of the joys of Nature reflected in the soul of man, but rather the voice of Nature itself. As the solo horn sounds the opening theme midst an ecstatic tremolo in the strings, it seems as though the very lips of Nature open in fervent, hymn-like song.

This utterly simple melody, created out of a single interval (a fifth) is one of the most expressive of Bruckner's many superb melodic inspirations. Veiled in deep mystery by the distant murmur of strange, supporting harmonies, it breathes the grandeur of a majestic *adagio*. The veil lifts as new voices (woodwind, strings) take up the theme in imitative dialogue. With broad pulse unaltered, it attains a summit of sonority, generating fresh motivation as it rises. This ascent, portrayed in gracious melody, framed in an unusual rhythm (alternate groups of two

plus three quarter-notes) forms the second portion of the opening theme-group. Quickened by successive recurrences of this rhythm (generally called "Bruckner Rhythm" because it plays so prominent a role in his symphonies) the pulse of the music speedily approaches true *Allegro* character. There ensues a veritable burst of jubilation midst a wealth of melodic fragments in "Bruckner Rhythm," rising and falling as though sounded antiphonally from heaven above and earth below. The whole universe seems to glory in this sunrise! Re-echoing at increasing distances the music subsides, merging with the cosmic mists whence it first issued. Thus, without a trace of welding, are joined into a perfect thematic unit three distinct melodic conceptions. There is about this theme-group a magnificent spontaneity of unfolding beside which the mincing, obviously clever thematic carpentry of more often performed masters pales. Poetically alone is the achievement of this unity simple to grasp. The spiritual message underlying the entire theme-group is like an unbroken spell. Even when the last echoes of the theme-group have died away there persists a hymn-like aura, which surrounds the new theme, the song of the birds. This *Zizibee* (titmouse) love-duet, one of the most famous of Bruckner's numerous double-themes, may also be regarded as an apt mirroring of the yearning of man's soul for union with Nature.

So plastic is the structure of the entire movement, so natural and inevitable the advent of each fresh idea, that one readily understands why the *Romantic* has been the most popular Bruckner symphony with music-lovers for over half a century. The composer himself, perceiving its unusually felicitous union of clear-cut form and simple, ingratiating melody, came to regard it as the ideal introduction to his gigantic later symphonies. Poetically, at least, it is the actual introduction to the three symphonies which followed, exploring and exploiting thoroughly the spiritual and cosmic depths merely glimpsed in a swift, brilliant revelation in the *Romantic*.

The *Andante*, as usual with Bruckner, presents a typical adventure of the spirit on earth, involving ever-present pain and suffering. A song of unrequited love, one of the most wistful of symphonic slow movements, it remains nevertheless fundamentally an expression of affirmation. Even the most inconsolable melancholy of the opening theme, eloquently voiced by the cellos, is interrupted by a motive of hope and surcease, whispered by the violins. Bruckner's genius for instrumentation unerringly selects the poignant voices of the violas for a telling role in this section. The final, irrefutable promise of contentment is expressed in a lofty revelation midst nobly mounting utterances by the trombones.

Strikingly descriptive is the *Scherzo*, with its stirring fanfares of hunting horns. The irresistibly rhythmic *Trio* is an idealized Upper-Austrian peasant dance, fragrant with delicate harmonic turns, carried out in the subtle spirit known before Bruckner to Schubert alone. This *Scherzo*, the second composed for the *Romantic*, was doubtless substituted for

the original in order to strengthen the romantic atmosphere of the entire work. It is certainly a delightful creation, perfect in every detail. The fitness of its interpolation has been universally acknowledged.

It seems almost superfluous to warn listeners not to give too literal attention to Bruckner's own explanation of the content of the *Romantic*. The tones in which the symphony is set are far too vast and deep for any such naive picturing as: "A citadel of the Middle Ages — Daybreak — Reveille is sounded from the tower — The gates open — Knights on proud chargers leap forth — The magic of nature surrounds them." Surely this is all childish after-thought on the part of a man whose creativeness was purely musical, whose acquaintance with literature was limited to Gospel and the prayer book.

Particularly in the *Finale*, framed in elaborate sonata-structure, is revealed the superficial inadequacy of the description "Romantic" for this work. The ominous conflict with which it begins has an import far deeper than the too obvious explanation, "The woods in the grip of a storm." It suggests rather the decisive struggle in which the spirit, beset with earthly fears, overcomes all obstacles on the path to eternal contentment.

Bruckner's *Romantic* is a symphony of Nature — Nature as viewed by a true mystic. Perhaps no composer has given this concept of Nature clearer verbal shape than the Bruckner disciple Gustav Mahler, whose innate mysticism stamped him as a fervent Catholic long before his formal conversion to that creed. The devout Bruckner might have shrunk in horror from Mahler's pantheistic doctrine of the spiritual union of Nature with Man, but essentially it was the same as his own.

Mahler said: "That Nature embraces all that is at once awesome, magnificent, and lovable, nobody seems to grasp. It seems so strange to me that most people, when considering Nature in connection with Art, imply only flowers, birds, woods, etc. No one seems to think of the mighty underlying mystery, the god Dionysos, the great Pan."

#### FIFTH SYMPHONY (TRAGIC)

The first notes of Bruckner's *Fifth* are played by plucked strings; the second theme is introduced in the same instrumental color. In fact, plucked strings play a notable part in so many salient moments of the work that it was nicknamed the "Pizzicato" Symphony. Many know it as the "Church" or "Faith" Symphony because of its abundance of "Chorale" fragments. Bruckner sometimes called it the "Fantastic," but fearful of programmatic misinterpretation, preferred to speak of it merely as his "contrapuntal masterpiece." Perhaps no name describes the symphony more aptly than the "Tragic," proposed by Goellerich, the composer's authorized biographer.

Better acquainted than anyone else with the circumstances surrounding the origin and execution of the work he was able to penetrate beyond such externals as style and color to its spiritual roots. He saw the

*Fifth* as the deeply personal expression of a genius doomed to utter loneliness by the scorn and neglect of a misunderstanding world. Neither the *Third* nor the *Fourth* had succeeded in obtaining a hearing. The only performances of Bruckner's earlier works were those advertised as "Bruckner, conducting," meaning to most, "Stay away; Bruckner, the silly ass, is paying to hear his own dull twaddle." Goellerich realized also the abject misery into which protracted celibacy had plunged the physically unattractive Bruckner. The victim of a long series of pitiful jiltings, he was already past fifty. Goellerich refused to be misled by the unrestrained rejoicing that climaxed the *Finale* of the *Fifth*. He knew that in art, as in life, the deepest tragic undertones often lurk beneath the most extravagant jubilation. He caught in the *Adagio* the true spiritual keynote of the work. Its brooding main theme was the despairing utterance of abandoned genius. Through the mighty blare of triumph trumpeted forth by redoubled brass in the *Finale* he saw the transfigured image of the man who found the strength to wrest peace from his agonized soul through renunciation.

In the *Fifth* the characteristics generally regarded as typical of Bruckner's symphonic style find their most convincing expression. Far more than any of his other symphonies it is a polyphonic work, the composer's proud description, "my contrapuntal masterpiece," testifying to the extraordinary care with which he had fashioned its many-voiced strains.

Double-themes previously employed by Bruckner as separated incidents of only local significance assume in this work a progressive, cyclic role. Thus from the first and second theme-groups in the opening movement he has drawn two sharply contrasted motives and united them to form the remarkable double-theme which begins the *Adagio*. The pulse of the upper melody (four-four) conflicts with that of the lower one (six-four). The result is more than a mere bit of subtle rhythmic counterpoint; it is an unforgettable tonal portrait of spiritual desolation. In the *Scherzo* the two motives part once more, each assuming the leading role in one of the two divisions of the movement. In the *Finale* they are welded together again, inseparable at last in the framework ideally suited to the exploitation of the double-theme — the double-fugue.

The principal motives of the *Fifth* haunted Bruckner many years before he felt his mastery of their possibilities equal to their symphonic shaping. A manuscript fragment of a *B-flat Symphony* sketched in the fall of 1869 reveals in essence the pizzicato introduction to the first two theme-groups and a main theme with the same rhythmic contour as that of the *Fifth*, not to mention the downward octave-leap which is perhaps the most striking characteristic of the *Finale*.

The *Fifth* begins on a note of almost hushed awe, like the mystic invocation to a Muse too lofty for more familiar hailing. The listener senses at once that he is about to experience a mighty adventure of the spirit. This concise *adagio* introduction, the only one in all the Bruck-

ner symphonies, is an integral portion of the symphony because it presents the very origin of the main ideas to be exploited. They are heard in the process of creation: tone, to rhythm, to harmony, to melody. The mysterious measured plucking of the basses intensifies the initial air of spiritual uncertainty portrayed by the other strings as they grope upward one by one towards the light. The interruption by a softly uttered chorale fragment is the first glimpse of the only path leading to that Light — Faith.

At first hardly more than an element of devotional coloring it assumes firm thematic shape in a reinforced repetition. Like a halo it hovers over the sturdy motive which immediately takes form beneath it. Issuing out of the main theme of the *Romantic* this majestic, march-like fragment ascends step-wise, its merged romantic-religious flavor suggesting some heroic figure, perhaps the Knight of the Grail, Bruckner's favorite legendary figure. The same motive inverted opens the *Allegro*, whose purpose is to present the scene of conflict between the opposing forces introduced in the *Adagio*. Their hostile banners are unfurled in an elemental outburst of defiance, a characteristic motive formed by two violent octave-leaps, framed in a zigzag line, suggestive of some ominous, irresistible force. The slow introduction occupies only a few measures, yet presents all the source material out of which the gigantic symphony is to be reared. The rest is a record of amazing economy of means, involving almost incredible melodic resourcefulness and structural mastery. The themes of the exposition section of the first movement are in every detail subtle derivations from the motives already presented.

No other great composer since Bach had steeped himself to such a degree in the language of polyphony. The classicists, denied more than a fragmentary acquaintance with the works of Bach (most of which were then unpublished) were wary of injecting more than an occasional brief polyphonic passage into their predominately homophonic symphonies. The wonderful polyphonic *Finale* of Mozart's *Jupiter* is an exception which only strengthens this assertion. True, Wagner had made a special, intensive study of polyphonic problems before proceeding to set *Die Meistersinger* to music. His unerring sense for appropriate dramatic color told him that an effective tonal portrayal of the atmosphere of Hans Sachs' day must be rich in polyphonic color. Yet when the tone-poet of the *Romantic* turned to the composition of his "contrapuntal masterpiece" he brought to it a lifelong devotion to polyphonic expression. So sure was his grasp of the intricacies of contrapuntal dialect that he had become famous for his ability to improvise masterly fugues, and even double-fugues on the organ. The language of polyphony, which he had cultivated with tireless devotion, had virtually become his musical mother-tongue. To other nineteenth-century composers it was an antiquated "study" language, necessary mainly for cultural purposes; to

him it was a living language, capable of expressing a world of vivid emotion.

The heroic source motive already mentioned made its appearance in the opening *Adagio* in major guise. Inverted and quickened, but still in the brighter mode, it was the first to enter the scene of conflict represented by the initial *Allegro*. Transformed into minor it next assumes the dominant voice in the melancholy double-theme of the slow movement. In the *Scherzo* it is reborn, though still in minor. Appearing now as a carefree, lilting melody, it records the lifting of the veil of gloom from the hero's soul. Its final incarnation as the triumphant climax of the *Finale* has already been discussed. This cyclic use of a central motive as the dominating theme of a work in many movements is the realization in symphonic form of one of the principal ideals of the polyphonic era. Common usage in the Masses of Palestrina's time, it expired in the *Suites* of the later seventeenth- and early eighteenth-century composers, to be suddenly revitalized, with a significance greater than it had ever had, in the *Fifth* of Beethoven. Bruckner's unbounded love for that symphony may well have produced in him the longing to emulate its doctrine of thematic evolution. Yet his extensive experience with sacred musical usage before composing his symphonies accounts sufficiently for his cyclic employment of the same source motive in the main theme of each movement. This practice, already noticeable in his *First*, becomes more striking and purposeful with each symphony. Yet even in the *Romantic* it is still a more or less exact recurrence of the same melodic idea at the beginning of each movement, linking all four with a readily identifiable bond of unity. In Bruckner's *Fifth*, however, the idea has been resolved into its melodic, rhythmic, and harmonic elements, which prove far more fertile and pliable material for cyclic use.

The song of earthly sorrow which begins the *Adagio* of the *Fifth* is aptly framed in the poignant tones of the oboe. A lyric interpolation in keeping with the earnest dramatic burden of the entire work, triumph over suffering through renunciation, it yields gradually to strains of increasing hope. Brighter and brighter grows the light surrounding the uplifted spirit. Finally the very gates of heaven seem to open as the golden voice of the trumpet sounds its radiant message of indomitable Faith, scattering the last cloud of doubt.

In his conception of the *Finale* as the scene of highest dramatic intensification Bruckner went beyond his forerunners, endowing the symphony with the crowning stamp of formal integrity. They had been content (doubtless, believed it necessary) to let the opening movement bear the brunt of dramatic emphasis. In their eyes an extended symphonic close, with involved content, framed in the most massive form, would impose upon the patience of the listener already fatigued with concentration on the previous movements. Beethoven's *Fifth* is the outstanding exception to this convenient practice by the classic masters. An

ardent student of the inmost wonders of that symphony Bruckner was convinced from the outset that the *Finale* should present the resumption and successful termination of the spiritual conflict entered upon in the opening *Allegro*. The carefree, dance-character with which the classicists had infused their *Finales* seemed to him ineffectual settings of *Scherzo* moods in pseudo-*Finale* garb. He strove to make the *Finale* the most dramatic and majestic section of the symphony. It must scale summits of power loftier than any attained in the previous movements, a goal of supreme spiritual triumph, resolving and clarifying all that had gone before. This Bruckner *Finale*-conception, already impressively formulated in the *Third*, bore its most splendid fruit in the *Fifth*.

The *Finale* of the *Fifth* is the vehicle of Bruckner's deepest and most dramatic expression, equalled in power perhaps by the last movement of his *Eighth* alone. Beginning with a brief introductory retrospect, somewhat in the manner of the last movement of Beethoven's *Ninth*, it soon plunges into the herculean accomplishment still necessary to the final resolution of the conflict. These are the two opposing forces, originally heralded in the opening *Adagio* introduction, now making their final decisive appearance: one, a disturbing, rebellious influence, characterized by octave-leaps and a rough, sharply pointed rhythm; the other, a sturdy chorale, infinitely more heroic in this last transformation than in its original guise in the opening *Adagio*. Each in turn is the subject of a fugue, the unfolding of which suggests a tale of tremendous spiritual struggles, revealing the Soul (as hero) gathering added strength with the advent of each fresh subsidiary theme. At length the tide of conflict is turned, the goal of all this striving glimpsed. In hushed awe the Soul pauses suddenly before the dazzling revelation. Out of the silence rise golden voices singing the song of eternal promise. At first sounded in impressive grandeur by the brass it is softly re-echoed in accents of deep devotion by the strings. Thus on a note of unshakable affirmation begins the celebrated double-fugue, presenting the final inseparable union of the conflicting themes.

#### SIXTH SYMPHONY (PHILOSOPHIC)

The *Fourth* and *Fifth* were still unperformed. The *Third*, conducted by Bruckner himself, had proved a pitiful fiasco. Loneliness, increasing illness, and financial trouble filled the composer's cup of misery to overflowing. He realized that in work alone could he find consolation and the courage to carry on. The cheerfulness dominating the first movement of the *Sixth*, largely written during a long period of painful sickness, is eloquent of the philosophic resignation that had taken possession of Bruckner's soul. In content this movement is definitely related to the *Romantic*. It too is steeped in the glory of the cosmos, but to this reformulation of the message of the union of Man and Nature Bruckner has brought a more human quality. The vast spiritual wealth amassed in the *Fifth* has yielded interest in a calmer, more disciplined touch. The

sunrise in the *Romantic* is more radiant with ecstasy, but that in the *Sixth* has a deeper, more individual magic. It is shot through with delicately varied instrumental and dynamic shades and subtle melodic, harmonic, and rhythmic nuances.

Bruckner regarded this symphony as his most daring and original expression. It abounds in phrases framed in "Bruckner Rhythm." The very opening notes, struck off by the violins in sharp staccato, present this rhythm in lively form as a pulsating background for the main theme. The latter, drawn softly from the deep strings, begins like a sighing question concerning the ultimate mysteries of existence. The first component of this theme, borrowed from the main theme of the *Romantic*, suggests a definite community of content between these two symphonies. When the next theme-group is introduced by a doleful strain in square rhythm over a plucked accompaniment in triple-rhythm cited from the *Adagio* of the *Fifth* we know also that the *Sixth* is to be a philosophic sequel to the intensely dramatic struggles of the spirit portrayed in the preceding symphony. The air of gloom surrounding the opening bars of this song-theme is but the shadow of a momentary reminiscence, swiftly dispelled by the cheery sway of the gracious melody which bursts from it.

Even the third theme-group, a pounding unison passage in "Bruckner Rhythm," bristling with warlike inclination, vainly searches every plane of tonality for a scene of conflict, only to succumb to the lure of the calm, richly harmonized episode terminating the exposition. This air of peace, firmly maintained throughout the statement of the themes, continues to dominate the development section, devoted to a eulogy of the wonders of Nature. Familiar song-themes rise on ever-broadening wings, the tide of melody surging irresistibly upward toward a climax. The sophisticated concert-goer, on the alert for some subtle bridge leading to the recapitulation, suddenly realizes that he is in the midst of the restatement. Yet nothing abrupt has occurred. In the opening movement of this work, for the first time in symphonic literature, the climax of the development and the beginning of the recapitulation coincide. That this remarkably effective innovation in sonata-form was no mere flying chip in Bruckner's workshop is convincingly proven by its increasingly successful reappearance in his subsequent symphonies.

The slow movement begins with a yearning love-song, the bright counterpart of the melancholy *Ständchen* presented in the corresponding section of the *Romantic* and intensified to utter gloom in the *Fifth*. A brief shadow crosses the sunny path of this three-voiced melody when the oboe intrudes its counterpoint of plaintive sighs. A mournful phrase in the horns threatens to revive some painful memory of unrequited love (Bruckner's life abounded with instances); but the new-found spiritual power, philosophic resignation, easily turns aside all imminent bitterness. The second theme is a soaring, untroubled love-song. The central portion of the movement is occupied with a resourceful contra-

puntal exploitation of the opening theme, its varied restatements resulting in a subtle mingling of rondo and sonata form.

The magic play of elfin spirits characterizes the strikingly impressionistic *Scherzo*, the first of a series of Bruckner *scherzi* to portray the witchery of Pan interwoven with the very roots of Nature. The *Trio* unfolds a fresh aspect of this extraordinary gayety. The woodwind advances fragments of melody based on the opening theme of the *Allegro*, while mischievous harmonic interruptions issue from plucked strings or horn groups in sharply punctuated rhythm.

The comparatively calm atmosphere prevailing over the *Finale* is doubtless accountable to a considerable degree for the extreme rarity of performances granted this symphony. Yet the absence of conflict in the closing movement is consistent with artistic integrity. Since the opening movement advanced no conflict, the *Finale* has none to resolve. Lacking the dramatic character of other Bruckner closing sections it remains nevertheless a *Finale* conforming in essential respects to the accepted meaning of the term. All its thematic factors (and there is an unusually rich store of these—fanfare, chorale, march, and song) move swiftly and smoothly along as though controlled by some mysterious inductive power. Drawn together at last, they become merged into the jubilant reentry of the opening theme of the symphony. Thus, in a convincing Q.E.D., is complete fulfilment attained.

#### SEVENTH SYMPHONY (LYRIC)

The long, soaring song-theme which opens the *Seventh* is without parallel in Bruckner's symphonies. Yet it is closely related to the main theme of the *Romantic* in harmonic and instrumental color (string tremolo on the tonic). The voice of the horn also introduces this later utterance. The melodic line in both cases is dominated by the same notes (*sol* and *do*). The scope of the later theme, however, is far wider. For the source of its additional melodic elements one need but examine the opening bars of the *Fifth* and *Sixth*. There is present in these a graceful turn similar to the one at the apex of the later theme. In short, the broad-winged melody at the beginning of the *Seventh* sums up the chief thematic elements of the three preceding symphonies, integrating them in a new, final expression of unforgettable beauty.

Beauty of song is the ideal proclaimed at the outset and unwaveringly maintained throughout the *Seventh*. Its extreme popularity (equal to that of the briefer *Romantic*) is directly due to the natural, sustained flow of its melodies. Its huge proportions result from the use of larger thematic structures in place of the concise motivated blocks characterizing the three earlier works of the tetralogy. Particularly because of this is its structure likely to be misunderstood by those who cling too firmly to the antiquated "tenets" of sonata-form. Fortunately, an orderly array of beautiful ideas, possessing all the vital characteristics necessary to the maintenance of interest in an extended orchestral composition

(abundant melodic, harmonic, rhythmic, instrumental, and dynamic variety), will always prevail over any objections that may be raised against such a work from a purely academic viewpoint. Hugo Wolf's enthusiastic recognition of Bruckner's genius rested mainly upon his admiration of the first three movements of the *Seventh*. Years elapsed before he acknowledged the last movement worthy of the others. His long failure to admit the structural integrity of the *Finale* merely reflected the usual reluctance of one revolutionary genius to estimate the accomplishment of another without a standard yardstick.

The successful employment of longer, singing themes represents the very fulfilment of Bruckner's dynamic principle of thematic construction, involving the complete subjugation of form to content. The first theme, a homophonic composite of three ideas, is like an invocation to Song. The second, predominately polyphonic, is a more mobile melody, its peacefulness disturbed only by restless fundamental harmonies. Spinning itself out in little rhythmic turns it evades cadence repeatedly. Not even a complete restatement in inversion alters the innate restlessness of this "Wanderer" theme. The third theme-group consists of two contrasted melodies, one a sharply rhythmic idea of satirical cast, the other a yearning concept of pastoral flavor.

Of all these themes only the satirical one is a really hostile element, hindering the undisputed sway of song in the development. In that section the appearance of the opening-theme exclusively in inverted form is a subtle piece of artistry. It saves the exact restatement of the theme for the recapitulation, where it appears completely fresh. Again, as in the *Sixth*, the climax of the development and the return of the main theme coincide, the superior thematic freshness just mentioned rendering this phenomenon in the case of the *Seventh* more effective.

For the reappearance of the main theme in his *Adagio* Bruckner adopted the general features of the classical variation form as broadened by Beethoven. He abandoned as unsuited to his message the uniformly floreate passages widely cultivated by his forerunners in varying their slow themes. He believed these to be, even when most charming and felicitous, artistically hampered by the too obvious display of technical skill which produced them. To forestall any possible sacrifice of artistic integrity on this score he injected a touch of sonata-form into his *Adagios* through the interpolation of concise passages of thematic development. For his source material he used elements of themes already presented. These "borrowed" fragments he re-created into delightfully fresh melodic shape by a fascinating process scarcely glimpsed by the classicists — that species of unhampered development known to students of sonata-form as "free fantasy."

The gigantic, earnest *Adagio* of the *Seventh* is universally famous as a "funeral ode" in honor of Wagner whose death occurred while Bruckner was still at work upon that movement. Bruckner asserted that a sudden foreboding of his great friend's imminent death was the inspiration

for this *Adagio*. The inexpressibly mournful opening theme, set for a choir of Bayreuth tubas, eloquently corroborates his claim. Yet the actual "funeral music" (according to Bruckner himself) does not begin until close to the end of the long movement, where it is ushered in by a jarring cymbal crash. "At this point," said Bruckner, "the shocking news of the master's death reached me."

Two broad-winged songs (rather than themes) totally contrasted in mood, alternately sway the entire musical content of this *Adagio*. The first, the funeral theme, progresses from stately solemnity to majestic affirmation on the impressive three-chord "Resurrection" motive from the *Te Deum*. The development of this motive becomes the climactic event in the movement. Climbing steadily from plane to plane, the spread of its wings constantly broadening, it becomes a mighty universal "Credo" sweeping aloft to the very gates of heaven. The second theme is a radiant melody sung by the Cherubim, its unique combination of simple charm and soaring nobility a worthy complement to its austere companion. That these melodies alone (the *Adagio* was first performed separately) possessed sufficient magic to make Bruckner world-famous at a single hearing describes them more aptly than might whole volumes of analysis. Some experts venture the claim that in the *Seventh* the *Adagio*, not the *Finale*, is the focal movement. This unstudied view may well have been fostered by those who nicknamed Bruckner the "Adagio Composer."

After this contemplation of Eternity the *Scherzo* comes like a rude awakening to earthly things. The opening theme, a bit of bizarre realism for Bruckner, sounds its drab Reveille, a melodic paraphrase of the crowing of the cock. In a moment all is feverish motion; constantly increasing, the agitation results in a wild dance-orgy. The *Trio* is an idealized, nostalgic *Laendler*-melody, eloquent of Bruckner's yearning love for his Upper-Austrian homeland.

A majestic dome-like structure is the *Finale*, the very order of its themes suggesting an arch. The opening theme is a martial concept, literally the lyric initial theme of the symphony arming for battle. Martial rhythm underlies even the prayerful chorale-theme that follows. One of the world's most famous conductors, mistaking Bruckner's intentional subordination of the chorale for ineffectual instrumentation, rescored the melodic line for brass, whereupon at least one leading American critic (this was almost a decade ago) insisted that the symphony had been made to sound better than Bruckner had written it. A "third" theme, in reality the opening theme at last fully armed, completes the array of spiritual forces involved in the conflict about to take place. The development section, involving the most resourceful manipulation of this given material from gentle playfulness to titanic grandeur, is a miracle of inspired artistry.

## SOPHIE KARST SINGS MAHLER SONGS OVER WNYC

On February 17, 1939, Sophie Karst sang a group of songs by the much neglected composer, Gustav Mahler. The program consisted of *Lieder aus der Jugendzeit* and two of the *Wunderhorn Lieder*. The singer revealed a beautiful voice, and interpreted the songs in such a manner as to leave the listener with the hope for other Mahler programs. She was ably assisted at the piano by Herman Neuman.

## STOCK AWARDED KILENYI BRUCKNER MEDAL OF HONOR

After a performance of Bruckner's *Ninth* in Chicago on March 23, the Bruckner Medal of Honor was presented to Frederick A. Stock by Dr. Martin G. Dumler of Cincinnati, President of the Society, in recognition of Stock's long continued efforts to create a greater interest in and appreciation of Bruckner's music. Dr. Stock is one of the oldest Bruckner pioneers in this country. According to Mr. Eugene Stinson of the *Chicago Daily News*, "this was the 25th occasion on which Mr. Stock had listed for performance one of the six Bruckner symphonies known to Chicago."

## RODZINSKI AWARDED KILENYI BRUCKNER MEDAL OF HONOR

After a performance of Bruckner's *Eighth* in Cleveland on March 16th, the Bruckner Medal of Honor was presented to Artur Rodzinski by Adella Prentiss Hughes, Vice President of the Musical Arts Association, on behalf of the Bruckner Society of America, Inc., in recognition of his efforts to create a greater interest in and appreciation of Bruckner's music in this country. Dr. Rodzinski gave the first Cleveland performance of Bruckner's *Seventh* last season and introduced the *Eighth* to Cleveland audiences this season. The Cleveland Orchestra under Rodzinski's direction broadcast the *Seventh* over an NBC hook-up in March 1938.

GUSTAV MAHLER — EXCERPTS FROM *THIRD SYMPHONY*

*University Symphony and University Girls' Glee Club, Conducted by Thor Johnson, in Hill Auditorium, Ann Arbor, January 23, 1939.*

... The climax of last night's concert was as overwhelming as it was surprising. Few people in the audience had ever before heard any of the music of Gustav Mahler's *Third Symphony*, and the performance of the fifth and sixth movements from this tremendous work brought to all a musical experience so fresh and so powerful that "Why have we not heard this before?" was upon every tongue. Tumultuous and sustained applause left no further doubt as to the heartiness of Mahler's Ann Arbor reception, and repeated demands for more will no doubt lead to a performance of the *Symphony* in its entirety sometime in the future.

And, even as concerns the two movements already heard, such a performance would be most welcome, because the parts can not really find their true effect save as a part of the whole. While the fifth movement, with its pealing bells and exultant voices singing *Des Knaben Wunderhorn*, was utterly charming by reason of its tunefulness and the freshness of its orchestral coloring, it still lacked the stature it would have attained had it come as a scherzo-like contrast after the meditative, *gedankenvoll* alto solo of the preceding movement.

As it was, it remained for the final movement to sweep one aloft to regions truly sublime. Such infinite peace as that of which the movement at first discourses could flow only from the soul of the profoundest of philosophers; and when at the end this peace rises to triumph and exaltation, one knows that it is something more than flesh and blood speaking, speaking with a passion beyond and above that of mere men. Mahler himself is but the prophet, his colossal orchestra but the voice, of that universal force, that cosmic soul, which is Nature. As Wagner immortalized in sound the passions of men and women, gods and goddesses, Mahler here apotheosizes in music the vital spirit of the universe.

WILLIAM J. LICHTENWANGER, *University of Michigan and Michigan Daily, Ann Arbor, Michigan*

NBC ORCHESTRA UNDER WALTER BROADCASTS MAHLER'S *FIRST*

(APRIL 8, 1939)

. . . Still, the symphony is sufficiently intelligible without the programmatic hints other than those which a listener can derive from the music itself, and offers many measures of freshness and charm especially in the first movement, and in the sturdy *ländler* rhythms of the third. It is true that Mahler's copious melodic invention does not express itself in all the themes with equal distinction, and that impressions of lengthiness are noticeable at times, mainly in the finale. . . . Nevertheless, despite certain drawbacks, this is a disarming work.

Mr. Walter, who was a close friend of Mahler, directed an interpretation marked by insight and persuasive eloquence, as well as the customary high standards of performance which mark this orchestra's work, and was ardently applauded by the large studio audience. . . .

FRANCIS D. PERKINS, *New York Herald Tribune*

. . . The symphony written when the composer was twenty-eight, ranges curiously over widely scattered realms of feeling, which in some instances are incongruously patched together, in others welded with strikingly dramatic effectiveness. The first two movements reveal clearly the Brucknerian influence in the folkish quality of the themes, in their square cut, diatonic mould. A simple response to nature motivates the entire first movement, while a pictorial quality, evident throughout the work, is here pointed by frequent imitations of bird calls and the pastoral tranquility that predominates. . . .

. . . This is obviously an imperfect work of a youthful hand. But it is useless to deny the prophecies of genius in its abundant vitality, its power and eloquence, its genuine compulsion. Discounting its glaring inconsistencies, its frequent naïvete, its frequent reminiscences of Bruckner, Wagner and Tchaikovsky, it is, after all, the music of a man who had something to say.

G. G., *New York Times*

. . . It is a work that contains many elements of popularity, in spite of a diffuse and over-long finale. The performance as directed by Mr. Walter, a veritable disciple of Mahler, was a masterpiece of understanding sympathy and eloquence in which the orchestra followed the conductor with exemplary care.

PITTS SANBORN, *New York World Telegram*

## GUSTAV MAHLER: SONG SYMPHONIST

BY GABRIEL ENGEL

It is perhaps the best life of Mahler extant. . . . The reading public owes a debt of gratitude to the Bruckner Society for issuing this comprehensive brochure; it tells all that is necessary and it is informative.

HARVEY GAUL, *Pittsburgh Post Gazette*

(Price \$1.00 plus 6 cents postage)

## LIST OF PERFORMANCES—SEASON 1939-1940

## BRUCKNER

*Seventh Symphony*—Boston Symphony (Koussevitzky) October; Philharmonic Symphony Society of N. Y. (Barbirolli) December; Kansas City Philharmonic (Krueger); St. Louis Symphony (Golschmann).

*Fifth or Seventh Symphony*—Philadelphia Orchestra (Ormandy).

## MAHLER

*Adagietto (Fifth Symphony)*—Philharmonic Symphony Society of N. Y. (Barbirolli).

*Das Lied von der Erde*—Boston Symphony (Koussevitzky).

*Second Symphony*—Cincinnati Symphony (Goossens).

*Ninth Symphony (Finale)*—Boston Symphony (Koussevitzky).

*Kindertotenlieder*—Zighera Chamber Orchestra.

## *A Record of Critical and Popular Reaction*

GUSTAV MAHLER  
SECOND SYMPHONY—  
SECOND MOVEMENT

*Pittsburgh Symphony Orchestra, Fritz Reiner, Conductor. December 9, 1938.*

... We owe Mr. Reiner a debt of thanks for giving the first time in Pittsburgh part of a work of Gustav Mahler, one of the titans of musical art whose contributions to orchestral literature were way ahead of their time and are only beginning to be recognized for their true worth. The piece played on this occasion was the second movement of the Second Symphony.

This beautiful extract of one of the greatest symphonies ever penned refutes the accusation that Mahler's music is dull. Here is lovely music, full of inspiration and exquisite form, that leader and orchestra projected in a way that evoked demonstrations of approbation. We hope that this morsel of Mahler is but the forerunner of performance of this entire Second Symphony and others of this composer's impressive output. We should like to listen to a cycle of Mahler works similar to that of Beethoven being given here this year. . . .

RALPH LEWANDO, *Pittsburgh Press*

By far the most interesting feature of last night's Pittsburgh Orchestra concert in Syria Mosque was the audience. It was a lengthy program, one that might become tedious to the best listener; yet those thousands of music lovers sat enrapt and were enthusiastic to the end.

Fritz Reiner is bringing us up to date. We heard one movement from a Mahler symphony, the Andante from his Second Symphony composed some fifty years ago, the first fragment of such a work to be played here, although Mahler himself played for us thirty years ago.

For those who know Mahler songs, the charm of this andante is no surprise. . . .

J. FRED LISSFELT,  
*Pittsburgh Sun-Telegraph*

GUSTAV MAHLER:  
DAS LIED VON DER ERDE

*Chicago Symphony Orchestra, Frederick A. Stock, Conductor. Soloists: Enid Szanlho and Charles Kullmann. January 10, 12 and 13, 1939.*

... He worked furiously away in that summer of 1908 and succeeded in creating an authentic masterpiece. The music's message is one of darkness and despair, but this darkness and despair are expressed so well that the resulting product becomes something superlatively fine. Mahler at the time (only three years before his death) had mastered the technical side of his art as few men have done. He knew how to bend both voices and instruments to the expression of countless subtleties of feeling.

In the passages of rueful gayety his methods are as successful as in the more doleful sequences. The gayety is made to seem full of thoughtfulness, as though a man in the middle of a headlong reel should occupy his mind with speculations as to whether he would ever live to dance another one.

The performance had intensity and directness. . . . Mr. Stock conducted with a fine feeling for the idiom of the difficult music. . . .

EDWARD BARRY, *Chicago Tribune*

... Dr. Felix Borowski, eminent musician and program annotator, tells us that Mahler was a sick, depressed man—suffering from a heart ailment, later fatal—when he wrote this music. Burdened with a broken heart, Mahler reflected an embittered, hopeless spirit in his outlook on life, and found his personal views echoed in the fatalistic utterance of century-old Chinese poetry. He used them as the basis of a freely-styled symphony to point in pathos of sound the forlorn, nostalgic meaning of the words as they too lived more beautifully in chanted, intoned lyricism of song.

In mirroring his morose views on man's finite existence, Mahler has per-

versely achieved immortality himself, it seems to me! . . . For with exquisite sensitivity—he reflects so many thoughtful moods, not always brooding, but generally foreboding.

JANET GUNN, *Chicago Herald Examiner*

. . . Mr. Stock's purpose has not been to give the work a casual and isolated hearing; he plans to keep it a recurrent item in the orchestra's repertoire.

And that is good news. Mahlerites consider it the composer's masterpiece; certainly it is a peculiarly personal work and a peculiarly successful one. . . .

"Das Lied von der Erde" was composed at the end of Mahler's days; it has its moments of gigantic energy and projection but it is a score in which everything is fundamentally at peace and in which Mahler's genuine love of the orchestra moves freely, boldly and beautifully in an exceedingly rich and evocative instrumentation. The work invites repose of spirit and its performance on Tuesday was both vocally and orchestrally superb and fitting. . . .

EUGENE STINSON, *Chicago Daily News*  
1/11/39

. . . The aim of Chinese poetry is to suggest sentiment in the vivid and concentrated glimpse of small human activities. The most Chinese aspect of Mahler's score is that he, too, holding fast to the literal, writes music that gives off vivid and concentrated glimpses of small orchestral activities.

For the texts are the paramount reality of "Das Lied von der Erde." The music strikes their mood and gives their incidents illustration, but the charm of the score as a whole is its suggestion of evanescence, its minute use of a large orchestra and its wonderful use of graphically conceived material for the sake of suggesting a vague, haunting and unwordable nostalgia in which the heart yearns to find the substance of its own longing.

This is music which invites affection even before one has completely grasped it and in which, with its insistent recurrence of motifs, and its distinct suggestion of a perfect timing and a perfect proportion, it seems well worth while to lose oneself, as Mahler himself may very likely have done.

EUGENE STINSON, *Chicago Daily News*  
1/13/39

GUSTAV MAHLER:  
*LIEDER EINES FAHREN DEN  
GESELLEN*  
HUGO WOLF—FIVE SONGS

*Zighera Chamber Orchestra, Bernard Zighera, Conductor; Cleora Wood, Soloist. Boston, January 18, 1939.*

. . . It may well be that in such smaller forms as those of the "Lieder eines fahrenden Gesellen" and the "Lied von der Erde" (itself a cycle of songs rather than a symphonic unit) Mahler's enormous talent found more satisfactory expression than in the pretentious and sometimes blatantly pompous symphonies. A delightful intimacy of expressive vocal line, a charming transparency of orchestral texture, an aptness and economy of instrumental color make these songs exceptionally well suited to chamber-orchestra performance. . . .

STEPHEN SOMERVILLE, *Christian Science Monitor*

. . . The finest by all odds of this music was the "Songs of a Wayfarer" by that still much-debated figure of a generation ago—Gustav Mahler. . . .

While a good deal of tonal archeology now goes on with forgotten composers before Bach, listening experience in the case of Mahler is hard to come by because his works are badly and unjustly neglected. A neat commentary on our state of musical civilization! "The Songs of a Wayfarer," written when he was about twenty-three and stimulated by a brief love affair, seem to be lyric masterpieces and show that Mahler even at twenty-three was already a master of orchestration who had developed a style of his own.

The melodic naivete of these four songs came unmistakably, as others have said before, from Mahler's love of folk-song. This quality stands in contrast to the technical complexity and sophistication which he must have possessed when quite young. To Mr. Zighera, who conducted most sympathetically, and to Miss Wood for her beautiful singing is offered the heartfelt gratitude of at least one listener. . . .

. . . A large audience applauded most cordially.

C. W. DURGIN, *Boston Globe*

. . . It was particularly interesting to listen to these familiar Wolf Lieder with

first rate orchestral accompaniment. Neither "Gebot" nor "Verborgenheit," perhaps, gains by the transcription; but how much more vital are the lively songs, like "Er ist's" and "Ich hab' in Penna," and how effective is the woodwind in "Auf ein altes Bild!" Here the orchestra points Wolf's ideas.

To those who have sometimes groaned under the weight and tedium of Mahler's symphonies the earlier "Lieder eines fahrenden Gesellen" must have come as a welcome surprise. They are extraordinarily lovely and passionate songs, without the depth that Wolf commanded in his finest creations but well worth more than the very rare hearings that they receive. Miss Wood was at her best in these and well deserved the applause that she received. . . .

ALEXANDER W. WILLIAMS, *Boston Herald*

Thanks to Cleora Wood's singing of Mahler's "Songs of a Travelling Journeyman," an inspired performance of inspired music, the concert of the Zighera Chamber Orchestra at Jordan Hall last evening, which might otherwise have gone the agreeable way of such events, became an important occasion. These songs with orchestra, two of which found their way into Mahler's "First Symphony," were written when that much misunderstood composer was but twenty-three and, although their harmonic idiom is simple indeed, as compared with that of "The Song of the Earth," they are still very much alive today; and there is in them the poignancy that is Mahler's own.

Last sung here at a pair of Symphony Concerts in 1915, these songs, if memory serves, made not the impression then they did last evening. Credit for this significant accomplishment goes not only to the singer but to the orchestra of Symphony men and to Mr. Zighera, who here displayed unsuspected eloquence as conductor. Not before has he given us music which required of him the degree of sympathy and understanding so necessary in the interpretation of this dramatic and highly personal music. . . .

. . . There was the usual socially distinguished audience, and from it Miss Wood received something of an ovation after the songs of Mahler.

WARREN STOREY SMITH, *Boston Post*

. . . But one would not have parted easily with the other vocal-instrumental selection, Mahler's "Lieder eines Fahren-

den Gesellen." . . . It was rather the intrinsic music that engrossed the listener, music of a poignancy, simplicity of statement and wonderful command of the orchestral medium that set Mahler apart from almost every other composer in the history of music. The mood of resignation, in depicting which Mahler was so great a master, is in these four songs, as in "Das Lied von der Erde" and some of the symphonies. . . .

A distinguished audience that filled most of the seats in Jordan Hall applauded the performers, particularly Miss Wood with gusto.

MOSES SMITH, *Boston Evening Transcript*

#### ANTON BRUCKNER: SECOND SYMPHONY

*Cincinnati Symphony Orchestra, Eugene Goossens, Conductor. January 20 and 21, 1939. (First Performance of Bruckner's SECOND in Cincinnati.)*

. . . His failure to take hold outside of Austria and Germany may be explained in several ways. Prejudice had as much to do with it as anything. . . .

In any event, it has been a long time on its way to Cincinnati—more than sixty-five years, in fact. Judging by the way this genial work sounds at these concerts, I see no reason why it should not appeal to concert audiences.

Bruckner poured some of his choicest melodies into the mill when he ground out this symphony, and he put a variety of color into the scoring. More than that he was brief—for him, that is. The symphony, with the cut sanctioned by the composer and the short one made by Eugene Goossens, the conductor, for this performance, does not run much longer than thirty-five minutes. . . .

Bruckner's Second Symphony is lyrical in character, made up as it is for the most part of song and dance tunes. Evidently the composer was enjoying life at the time when he wrote it. The slow movement, an andante, instead of being infused with pain as many of his adagios are, sounds like a prayer and closes quietly with a blessing—the Benedictus from his Mass in F-minor. His South German nationality crops out in portions of the first and last movements, but conspicuously in the Landler-like scherzo.

When a musical scholar like Donald Francis Tovey makes the statement that Bruckner's symphonies always begin with

"Rheingold" harmonic breaths and end with "Goetterdaemmerung" climaxes I feel that he has tossed off a neat phrase but in doing so has libeled Bruckner.

In the Second Symphony, at any rate, Wagnerisms make themselves rather scarce. All of the commentators of course pounce upon Rieni's prayer *motiv* which may be heard in the first movement. There is little else except possibly the fortissimo passage at the end of the slow movement. The influence, if any, comes from Franz Schubert, I would say. Listen to the second theme of the first movement.

If the Vienna Philharmonic musicians found the symphony unplayable, the members of the Cincinnati Orchestra do not. As a matter of fact they manage it with almost as much fluency and smoothness as something that has been long in their repertory. . . .

FREDERICK YEISER, *Cincinnati Enquirer*

The last few days have found me in feverish communion with the available literature on the life and music of the Austrian composer, Anton Bruckner. This to prepare myself for my initial contact with his C-minor Symphony and fortify myself for this notice which I had approached with considerable trepidation. I read of controversies: as to who really composed Bruckner symphonies, Bruckner or his pupils; I read with misgiving of his length, his peculiarly Germanic appeal, his mysticism, his profound religious approach, his laborious mannerisms and pedantic technicalities, his fragmentary construction; I read that some considered him the equal of Brahms and others a bore equal to none. I read and my step was heavy as I climbed to my seat in Music Hall Friday afternoon for the Cincinnati premiere of this work, Eugene Goossens conducting and Martin Dumler, president of the Bruckner Society of America, on hand to see that his master got a square deal.

Consider then my surprised delight to find the confused and ponderous observations above fade in the pleasures of a composition which struck me as only mildly scholastic, as calmly religious, not passionate or profound, as genial and serene, as melodious and not too exciting in its orchestration and above all not "intellectual" in its content. Mr. Goossens made two generous deletions in the last movement and he cut the "grand pauses" to a single beat, thus materially

shortening this work which is one of Bruckner's shortest symphonies to begin with. Mr. Dumler looked pleased; so did the audience and even so casual a Brucknerite as myself was immediately impressed by the organ-like beauty of the slow movement. . . .

GROVERMAN BLAKE, *Cincinnati Times Star*

### ANTON BRUCKNER: THIRD SYMPHONY

*Indianapolis Symphony, Ferdinand Schaefer, Conductor. First time in Indianapolis February 3 and 4, 1939.*

. . . The Bruckner symphony is a masterpiece of such strength and beauty that we can only wonder why it is seldom heard. Finely planned on a magnificent scale, heroic in concept and deeply religious in mood, it is at once a mighty drama of life and a fervent profession of faith. Its style, once too novel for the comfort of a conservative audience, is still striking but no longer daring enough to disturb the idealistic impressions it so eloquently conveys. It is music with a stirring appeal to the emotions, as well as a challenge to the listening mind. It is uplifting music and great. The adagio is a glowing gem, the finale an arch of triumph. The orchestra's task, then, was considerable and it responded to the admirable simplicity and directness of Mr. Schaefer's conducting with a warm, expressive reading. Mr. Schaefer's spry, sparse gestures elicited the lustrous qualities of tone for which the young orchestra is already celebrated. . . .

CORBIN PATRICK, *Indianapolis Star*

. . . Many a time it happens that the works of great composers are neglected because the works are not worthy of the effort it takes to play them. That unkind charge can not be placed against the music on this week-end's concerts, however. . . .

Bruckner has been almost entirely neglected hereabouts so that his name is far better known among local concertgoers than any of his music. The Third Symphony is characteristic of a certain period of his career for it is intensely melodic, although the melody is not "sung" in the traditional manner, and it is intensely romantic. . . .

WALTER WHITWORTH, *Indianapolis News*

ANTON BRUCKNER:  
EIGHTH SYMPHONY

*Boston Symphony Orchestra, Serge Koussevitzky, Conductor. Boston, February 4 and 5; New York, February 10, 1939.*

... The combination proved very successful at yesterday's concert. Bruckner appears to be making his way with Boston audiences. No doubt the propaganda for him has had its effect; but without question his music has a strong direct appeal to many listeners. It is not difficult to understand why it should, especially at this period of enthusiasm for Wagner, who was Bruckner's chief admiration. Many of Bruckner's themes are salient, his writing is clear and his structures solid. In this Eighth Symphony there are some lovely pages, particularly in the Adagio. . . .

The performance yesterday may well have made new converts to the Bruckner fold. It was magnificent in its sonority and its expressiveness. It is doubtful if anywhere else in the world so fine a report of Bruckner's symphony could be made today. . . .

L. A. S., *Christian Science Monitor*,  
Boston

... The Boston conductor has been one of the apostles of the Brucknerian (as of the Mahlerian) tradition, and both he and the music are beginning to reap just reward. At yesterday's concert the Symphony, which, even after liberal cutting, consumed more than an hour of exhausting attention, was followed by a long round of applause and even cheers — rare phenomenon from a matinee audience. . . .

These objections, like others, are familiar. In the end, perhaps it is the very quality of naivete that constituted the essence of Bruckner's genius. For it was accompanied, fortunately, by a grandeur of imagination rarely encountered in the history of music. A man with such an imagination had to work not only with big themes but also — as a corollary with widespreading movements. Certainly the adagio, for example, has inordinate length. But if Bruckner had attempted to compress his ideas into a movement of more usual proportions he would have missed fire. Again it was possible to observe that length and huge orchestra and grandiose expression were the neces-

sary implications of the man's thoughts. MOSES SMITH, *Boston Evening Transcript*

... Already Dr. Koussevitzky has restored the Austrian symphonist to the place he once held. It is now his opportunity to make that position stronger even than before. By token of the aforementioned enthusiasm yesterday and of the applause that greeted the more easily assimilated Seventh Symphony, when it was last played under Dr. Koussevitzky's direction, Boston is eager for the particular emotional, spiritual and musical experience that a Bruckner Symphony can provide.

With Bruckner there are three stumbling blocks: the Symphonies are long; they achieve real momentum only in the always masterly Scherzos, the greatest since those of Beethoven, and there is likely to be a want of continuity. Nevertheless, these objections do not seem to weigh very heavily with our audiences — even the chief objection, that of length.

Despite much-to-be-regretted cuts, particularly in the Adagio, the Eighth Symphony consumed yesterday over an hour. In this restless, nervous age we are supposedly impatient of operatic and symphonic longuers. But it does not seem to work that way. The public dotes on Wagner and, when given a chance, it rises to Mahler and Bruckner, as the audience rose yesterday to the latter's Eighth and last season to the former's Fifth.

And why? Because in these works there is a notable depth and richness, an earnestness and elevation, a wealth of moving melody, of satisfying harmony and of glowing, resplendent sonorities — things in which the music of our own day is, as a rule, sadly lacking.

If there ever was a time when the world needed art as a means of escape, that time is here and now. And escape is something which Hindemith and Stravinsky and their swarm of imitators hardly offer us. They give us, instead, what we already feel, not what we wish we felt. . . .

WARREN STOREY SMITH, *Boston Post*

... Bruckner unquestionably had the strongest of emotional inspirations in writing this symphony, with its long and moving adagio. That is the core and meaning of the piece, and the first movement, scherzo and grandiose finale do but surround and encase it. If the

adagio, then, does not move you, be assured that the symphony as a whole does not contain much meaning for your ears.

With yesterday's splendid performance and Dr. Koussevitzky's persuasive interpretation one would have to be fantastically out of the mood not to sense the power of the Eighth Symphony. Bruckner's faults are not inherent flaws, not abscesses of the soul; they lie on the surface and should not fend us off from the music. . . .

ALEXANDER WILLIAMS, *Boston Herald*

. . . The playing left nothing to be desired. In gorgeous tone, nuance, climactic building up, sustained balance it was gripping from the first chord. The serenely eloquent adagio was superbly unfolded. . . .

L. B., *New York World Telegram*

The deeds of the Boston Symphony Orchestra and its builder and leader, Dr. Serge Koussevitzky, grow with the doing, if not with the telling. To the sensational effect, now historic, which this conductor and orchestra achieved when they played the Eighth Bruckner Symphony last Friday night is to be added the record of the performances yesterday of an adorable symphony of Mozart; the repetition from an earlier New York program of Hindemith's "Symphonic Dances"; the performance of Ernest Bloch's "Schelemo." . . . We now maintain that Dr. Koussevitzky owes his New York audiences at least two other repetitions. One is of the delicious humor of Prokofieff's children's tale of "Peter and the Wolf," with Richard Hale as Narrator. The other is of the Bruckner Eighth Symphony.

OLIN DOWNES, *New York Times*

No doubt as much to his own surprise as to that of any member of the audience, Serge Koussevitzky enjoyed a remarkable success last night in Carnegie Hall with the playing of the Bruckner Eighth Symphony by the Boston Symphony Orchestra. It might even be whispered that the conductor had thought seriously of revising the evening's music by substituting a Haydn symphony and Scriabin's "Poem of Ecstasy" for the mammoth work (an intention conveyed by a slip in the program-book). But when the concert began it was with the Bruckner Symphony, whose last notes, an hour later, were followed by a prolonged demonstration.

It was reasonable to attribute some of this enthusiasm to the extraordinary response of the players to the vivifying direction of Mr. Koussevitzky, which was of an intensity and concentration to animate the musical equivalent of an Egyptian mummy. Nor could it be overlooked that in preparing the work for performance, Mr. Koussevitzky had cut close to twenty minutes from its various movements, presumably pages of repetition and prolixity.

In any case, it was an hour of Bruckner to which the audience listened and responded. Mr. Koussevitzky's treatment of the work gave it an impression of unity and cohesiveness that is not usually granted to works by this composer. There was genuine eloquence and rapt musical beauty in the adagio, where Bruckner's head was truly among the stars, and a boldness of utterance in the finale that might usher in the crack of doom. Some doubts remain about the first movement, which becomes entwined in its own complexities at several points, but in consideration of the fresh impact of the work as a whole, it might be well to rest the case of Bruckner, until further evidence of this relevance is presented. . . .

IRVING KOLODIN, *New York Sun*

. . . Last night the Eighth lasted over an hour. If Brahms and Beethoven symphonies are considered as tonal canvases, the Bruckner C minor demands comparison with the mural. It is a thing of vast proportions and deep perspectives. Its huge framework contains structures of rhythms and color, a variety of technical resources, an amplitude and intensity of musical expression that are so far beyond the scale of nineteenth-century symphonic form as almost to seem unrelated to its precursor. . . .

. . . The interpreter's task is to adjust those emotional torrents to the ears and minds of mere mortals, who are limited by reason and reality to credible degrees of ecstasy. He must do this by viewing the work from a high perspective, and by shaping its musical thought into a natural growth. It was thus that Dr. Koussevitzky led us, almost by the hand, to rarefied heights that revealed the symphony to its farthest horizons. For his accomplishment he was rewarded by the acclaim of a rapt and deeply moved audience.

It was music and music-making that almost dwarfed the succeeding perform-

ance of the Mussorgsky-Ravel "Pictures at an Exhibition" to mere virtuosity.

G. G. *New York Times*

. . . The eighth symphony has the drawbacks customarily associated with Bruckner's work in this form, such as length, occasional iterativeness, and unevenness of inspiration. But on repeated hearings these become of less consequence; there is largeness of style and vision as well as temporal length, persuasively sincere eloquence, whose most convincing expression is in the great *adagio* with its meditative lyric depth, tenderness and the moving grandeur of its climaxes. . . .

FRANCIS D. PERKINS, *New York Herald Tribune*

ANTON BRUCKNER:  
FOURTH SYMPHONY

*The Bridgeport Federal Symphony, Fritz Mahler, Conductor; February 23, 1939.*

. . . The composition exhibited a variety of emotional effects and musical patterns; soft, mournful tones blending with hushed staccatoes. From gentle, misting music, the melody grew to pelting rains of sound-storm. There seemed to be a continuous see-saw of lyricism and solemnity. With distinct artistry, Mahler built up a series of climactic moments of dramatic intensity.

The piece, made up of sustaining, buoyant sound patterns, was well chosen to hold an audience. A variety of moods mingled gaiety, spring passion, and solemn ceremony. The fine coordination of the musicians, and their unity with the conductor were remarkable. At the end of the composition, the audience applauded with enthusiasm. . . .

*Bridgeport Telegram*

ANTON BRUCKNER:  
EIGHTH SYMPHONY

*Cleveland Orchestra, Artur Rodzinski, Conductor. March 16 and 18, 1939.*

Dr. Artur Rodzinski received a medal last evening at Severance Hall for directing the Cleveland Orchestra in a first performance here of the Anton Bruckner Eighth Symphony.

And Dr. Rodzinski deserved it. We mean that in the right sense. There are

some, undoubtedly, who might suggest that the audience should have a medal, too. But we do not agree with them.

We found the Bruckner music tremendously interesting, gorgeous at times, dramatic, full of conflict and contrast. It is the outpouring of a master of orchestration. And Dr. Rodzinski and the symphonists—the maestro quite visibly indisposed—gave it a virtuosic performance. . . .

ELMORE BACON, *Cleveland News*

. . . The fact that the symphony is about fifty years old and that it never before had been presented in Cleveland is another indication of the difficulty that Bruckner's music has had in gaining recognition.

Yesterday's performance ought to win Bruckner numerous new friends. As the final notes of the restless, somber first movement died away, it was easy to feel that one was in the presence of a spirit of no common rate. In the long *adagio* the composer combines a Schubertian sweetness and a Wagnerian magniloquence to convey a remarkable impression of calm and exaltation.

Perhaps my as yet unconsecrated ears will be pardoned for having a few reserves as to the last movement. Though I carefully followed every note of the performance with the score, it was impossible to overcome a feeling of undue discursiveness and discontinuity.

The performance showed off the extraordinary accomplishments of the Cleveland Orchestra. If any special praise is to be bestowed it would be upon the brass players for their fine work in their long and taxing parts. All credit to Messrs. Puletz, Davidson and Dittert and their respective sections; also to the players of the so-called tuben, the special, low horns which both Bruckner and Wagner often specify for their scores.

Bruckner's music is now the beneficiary of an active propaganda. At the close of the symphony, Adella Prentiss Hughes, vice president of the Musical Arts Association, addressed the conductor. Speaking in behalf of the Bruckner Society of America, she said: "In the absence of our acting president, Mr. Lewis B. Williams, I now have the privilege and the pleasure of presenting to you the medal of the Bruckner Society of America, which has enrolled the name of Artur Rodzinski among the illustrious conductors who are so well serving its cause." . . .

ARTHUR LOESSER, *Cleveland Press*

... So much adverse criticism has been written concerning Bruckner that the uninitiated will turn away without giving a hearing. It is well to add that many who have written in such manner have not heard enough of him to be able to judge sensibly. Although we may be able to detect influences of Wagner, Beethoven or Schubert, his music is highly individual. There is an exaltation in the spirit of his scores which grows out of his intense religious convictions, approaching at times a feeling of mysticism. His symphonic writings are pure music, untouched by programmatic influences of his time.

A powerful characteristic of Bruckner's music is his simulation of organ registration and effective use of the wind instruments; and the chorale treatment, which forms such an important thematic part, is a direct outgrowth of his religious root. . . .

At the close of the concert Dr. Rodzinski was presented the medal of honor of the Bruckner Society of America in recognition of his efforts to create a greater interest in and appreciation of the music of Anton Bruckner in America. The presentation of the four-inch bronze medal was made by Adella Prentiss Hughes, vice president of the Musical Arts Association, in the absence of Lewis B. Williams, acting president.

STEWART MATTER, *Cleveland Plain Dealer*

#### ANTON BRUCKNER: NINTH SYMPHONY

*Chicago Symphony Orchestra, Frederick A. Stock, Conductor; March 23, 24, 1939.*

... The serious Bruckner was never more serious than in this last work—especially in the slow movement with which it now ends. The performance last evening did justice to the urgency and nobility of his thought. The music was long of line and possessed of an austere beauty of texture. . . .

EDWARD BARRY, *Chicago Tribune*

... The symphony chosen for the occasion was the Bruckner Number Nine D Minor (unfinished), a work of considerable length and profundity, albeit its too obvious ponderosity, except for the Scherzo which is a gem of imaginative beauty, in its striking percussive effects. To the

three big B's in the symphonic world should be added the names of Anton Bruckner and Hector Berlioz. Stock whipped his men into the finest shape to regale us with this considerably important Bruckner work, and permitted Dr. Martin G. Dumler of Cincinnati to confer another honor upon our chief, in recognition of his efforts to foster the Bruckner music in the United States. A medal, which Stock can add to his decorations, was handed to him by the president of the Bruckner Society of America.

HERMAN DEVRIES, *Chicago American*

... This was the twenty-fifth occasion on which Mr. Stock had listed for performance one of the six Bruckner symphonies known to Chicago. The ninth has been most frequently performed of all; this was its eleventh listing. Its rotund and majestic beauties are clearly recognized; the extravagance of its thematic invention is accepted as having a necessary part in the work of a composer whose mind was extraordinarily simple, sought nevertheless for amplitude and never lost touch with beauty. The bigness of the score must delight Mr. Stock, who played it with magnificent breadth, intensity and eloquence.

His power as an expositor of Bruckner's music has been equalled by his determination to make public the works of a master whom many feel to be unjustly neglected. . . .

EUGENE STINSON, *Daily News, Chicago*

#### GUSTAV MAHLER: EIGHTH SYMPHONY

*Cincinnati Symphony Orchestra and Festival Chorus, Eugene Goossens, Conductor. Soloists: Helene Kessing, Hilda Burke, Josephine Antoine, Lillian Knowles, Elizabeth Brown, William Hain, Julius Huehn, Norman Gordon. Cincinnati, May 3, 1939.*

... This monumental work, which draws upon all the powers of contrast found in a mixed chorus, as boys' choir, an octet of soloists, an augmented orchestra, organ and piano, contains some of the greatset climaxes known in choral literature. . . .

... The prelude to the last chorus, which makes use of the treble register instruments, is indeed an inspiration and

effectively introduces the thrilling close. Mahler's "Eighth" is a sublime work of art.

HOWARD W. HESS, *Cincinnati Times-Star*

One of the oldest musical institutions in the country is Cincinnati's May Festival, which this year enjoyed the attention of a nationwide audience when the Columbia Broadcasting Symphony presented a representative portion of one of its most interesting programs (WABC).

Research would disclose, no doubt, that there is scarcely a representative choral work that has not been offered in Cincinnati long before it has earned a place in the regular concert-hall repertory. On this occasion (Wednesday evening) the work was Gustav Mahler's eighth symphony, a profound and moving score which is virtually unknown here. Certainly it would be an adornment of the World's Fair musical festival if such a performance, already rehearsed and ready for presentation, could be imported. But it does not seem that such attractions will be available.

Whether or not Eugene Goossens is known in his native England as a Mahler conductor (a species of leader as specialized, so we are told, as a Berlioz or a Bruckner conductor) his broadcast performance was incisive, comprehending and communicative. The orchestral playing and the choral singing were thoroughly good, and he was also fortunate in having such excellent soloists as Lillian Knowles, William Hain, Julius Huehn and Norman Cordon.

IRVING KOLODIN, *The Sun (New York)*

... Following the intermission a performance of the Mahler symphony was given that was nothing short of stupendous. . . .

To Mr. Goossens belongs the major meed of praise; for, to conduct two such difficult works successfully, and with such a degree of artistry, demands musicianship of high degree. The orchestra gave excellent support, and this concert will doubtless prove to be one of the highlights of the entire festival.

LILLIAN T. PLOGSTEDT, *Cincinnati Post*

... Like most of the other of Mahler's symphonies, this one is cumulative in its effects and the final fulfillment of the original appeal does not take place until the last bars of the rhapsodic second part. But it is the first movement which

governs the other and contains in the great double fugue the most powerful if not the most moving section in the work.

At short range, however, I find that I was most taken by the way in which Mahler managed to keep the music soaring high toward the end of the "Faust" scene until it could finally go no higher. Then after a gradual descent came the entrance of the ecstatic chorus, beginning "All things of mundane worth."

Mahler was a marvelous architect, and he designed his symphony symmetrically and logically. That much Eugene Goossens's firmly balanced direction made clear beyond any doubt.

He whipped the first movement along at a good energetic pace which kept the chorus and soloists on the jump. At this pace big double fugue mounted to a hair-raising climax. The members of the chorus once more came through magnificently.

Mahler gave one of the most beautiful of all the solos to the baritone in the second part. Here Julius Huehn again rose to the occasion. Another grateful solo fell to William Hain, who followed suit. Norman Cordon, well known in Cincinnati as an opera singer, made much of the stubborn bass solo. Hilda Burke, Josephine Antoine, Lillian Knowles, Elizabeth Brown, and Helene Kessing also took care of their assignments most competently. All in all, a memorable performance.

FREDERICK YEISER, *The Enquirer, Cincinnati*

#### ANTON BRUCKNER: SEVENTH SYMPHONY

*Boston Symphony Orchestra, Serge Koussevitzky, Conductor, October 20-21, 1939.*

... We in Boston are indebted to Dr. Koussevitzky for comparatively frequent performances of two or three symphonies each by Bruckner and Mahler. . . .

Lyrical, harmonically, and in its brave orchestration, the Bruckner Seventh is great music. Bruckner was inspired; he had noble visions. Proof exists in the distinguished nature of his themes. . . . When the sheer living beauty of his music is considered, however, strict analysis is shown up as whiskered pedantry. . . .

C. W. D., *Boston Globe*

. . . Not yet can one write of a Bruckner performance without mention of the music itself, so baffling is the combination of strength and weakness that these extraordinary symphonies present. But this much may be said: if the Finale of the Seventh comes as an anticlimax, after the Adagio, it is difficult to imagine a movement that would not have made that unfortunate impression. The Scherzo, one of the few really superlative scherzi since Beethoven, is perfectly in place as foil to the preceding movements. . . . Dr. Koussevitzky's reading of the first movement was masterly to a degree, while, throughout, the ear was ravished by the orchestral sound. Here was the wonderful Bruckner brass at its finest.

WARREN STOREY SMITH, *Boston Post*

GUSTAV MAHLER:  
*ADAGIETTO (FIFTH SYMPHONY)*

*Philharmonic Symphony Society of New York, John Barbirolli, Conducting. October 26-27, 1939.*

The Mahler piece, a soaringly eloquent meditation streaked with melancholy, came in for sensitive treatment. The audience's warm response should encourage Mr. Barbirolli to carry on his explorations in Mahler territory.

L. B., *New York World-Telegram*

Glowingly played by strings and harp, the Mahler symphonic segment had about the substance—and the sentiment—of a Strauss song much extended.

OSCAR THOMPSON, *The New York Sun*

FRITZ MAHLER BROADCASTS *ADAGIETTO* FROM MAHLER'S *FIFTH*

On February 5, 1939, the Philadelphia Federal Symphony Orchestra under the direction of Fritz Mahler performed the *Adagietto* from Mahler's *Fifth* Symphony. On February 6th Mr. Mahler broadcast the Mahler excerpts over Station KYW, Philadelphia.

December 10, 1939

Mr. Robert G. Grey  
New York City

Dear Mr. Grey:

For the past two years I have taken a serious interest in the music of Anton Bruckner and Gustav Mahler. I have tried to foster this interest both by hearing as often as possible their works performed at concerts or on the few recordings that are available to us. Unfortunately, I find that such great music as these two composers left us is heard all too infrequently. I must be content for the present with listening to the *Fourth* and *Seventh Symphonies* of Bruckner, *Das Lied von der Erde* and the *Second Symphony* of Mahler. Recently the Boston Orchestra performed Bruckner's *Eighth Symphony*, and just this last week they played the last movement of Mahler's *Ninth*. You are probably well aware of how few hearings this beautiful, but neglected, music is given.

To most people Bruckner and Mahler are merely names. To others, the fact that a symphony lasts over an hour scares them away. However, others who have sat through an hour or more, and have opened their ears to these long compositions, are always impressed. Yesterday the audience, when hearing the closing strains of the "Adagio" of Mahler's *Ninth*, was so affected that all coughing was suspended and not a person could be heard moving in his seat. Naturally there were a certain number of people who after the performance, despite the fact that they were tremendously moved, resumed their stuffy attitude and decried the movement as long and trying to create an effect of seriousness which music cannot arrive at. Now, it is foolish to try to find fault with a piece of music which has almost hypnotized you. Nor would it be fair to say that either Bruckner or Mahler wrote faultless music. What I am aiming at is to prove that both Bruckner and Mahler are so despicable to some people merely because past generations found fault with them. I feel sure that more frequent hearings will gradually cause a great change in attitude.

Of course, it is obvious that there are difficulties in trying to give a symphonic programme, if one number is to last more than an hour. Most people have not got the patience to sit through a Wagnerian music-drama. Yet, when they have done it once, they never again complain that it is long. I am a staunch admirer of Wagner—that's what made me open my ears to Bruckner—and I am fully aware of the long, and almost drawn-out second act of *Die Walkuere*. But there is real music in that act. If something is long and has little music of note in it, then we have reason for leaving it aside. This criticism has been leveled at Bruckner, and unfairly. I defy anybody to tell me that any of the four movements of either the *Fourth*, *Seventh*, or *Eighth Symphonies* of Bruckner lack what we call music. People today tend to play up the faults of music to such an extent that they are inclined to overlook the virtues. Most music on first hearing fails to leave a real favorable impression. Two years ago, for the first time, I heard Sibelius's *Seventh Symphony*. It bored me so much that I said I never would hear it again. About six months later I had the occasion to listen to it again. It was a real musical treat. The trouble is that most people don't take the trouble to hear a composition a second time if they didn't like it at first. That's the main reason why the public is still so cold to the works of Mahler and Bruckner.

But there is one good way of remedying the situation and of making possible more hearings of this neglected music. And the conductors, one and all, are coming around to realize that it is the best solution possible. They have come to the conclusion that it is too taxing for the people to hear the hour-long symphonies of Bruckner. So they take one or two movements from a symphony and present it or them at a concert. The movement may last ten or twenty minutes and is easily digestible. I know the majority of the public will be impressed to such an extent that they will have the curiosity to listen to the rest of the symphony.

After all, consider the popularity of some operas today. How often do singers choose arias from operas and present them on radio programmes. The people are attracted by these songs and wait for the day when they shall be able to see the rest of that opera. The same situation is the case with many a symphony—the *Second Movement* of the Tschaiakowsky *Fifth* and the first movement of the Beethoven *Fifth*, just to mention a couple of examples. I know that the same success would result if we would be allowed to hear "selections" from Bruckner or Mahler symphonies. Barbirolli seems to have realized the situation; that explains the *Adagietto* of the Mahler *Fifth*. The same goes for the *Adagio* from the Mahler *Ninth* played by the Boston Orchestra.

I am very anxious to spread interest in the works of Mahler and Bruckner. I am trying to get the younger people to listen to these neglected masterpieces, and I only wish the day were near at hand when we could look forward to the musical season with the assurance that both Bruckner and Mahler would be given the hearings they deserve.

Sincerely yours,  
HOWARD MENDEL  
Cambridge, Mass.

*o-o-o-o-o*

#### MAHLERIANA

A particularly notable addition to The Bruckner Society's collection of Mahleriana is an impressive bust of the great symphonist by Victor Frisch, acquired through the generosity of Mrs. Artur Bodanzky, widow of the celebrated conductor of the Metropolitan Opera House. To Bodanzky, a devoted Mahler disciple, this image of his master had been a constant source of inspiration throughout the years. As Honorary Member of The Bruckner Society, he would surely have approved the presentation of his cherished Mahler bust to the American organization, one of whose chief aims is spreading the gospel of Mahler's art.

#### ST. LOUIS PREMIERE OF BRUCKNER'S *SEVENTH*

The first performance of Bruckner's *Seventh* in St. Louis, and incidentally the first symphony by the Austrian master given in that city in twenty-seven years, took place on Dec. 1 and 2, 1939, Vladimir Golschmann conducting the St. Louis Symphony Orchestra in a truly enjoyable interpretation. Contrary to the usual expectation of audiences, which have never listened to Bruckner before, not much cared to listen because of prejudicial warnings as to length and dullness, the concert-goers of St. Louis were most pleasantly surprised with the extreme melodiousness of the work. Mr. Golschmann must have felt much encouraged in his praiseworthy efforts to popularize Bruckner's symphonic art. It is to be hoped that as a result of this successful Bruckner revival in that city other symphonies by him will be given in St. Louis in the near future.

Copies of CHORD AND DISCORD are available in the principal public and university libraries in the United States.

"MY TIME WILL YET COME"

THE KILENYI MAHLER MEDAL

1935 was the seventy-fifth anniversary of the birth of Gustav Mahler. 1936 marked the twenty-fifth anniversary of his death.

This splendid Exclusive Medal of Honor by the internationally famous American sculptor, Julio Kilenyi, is the Bruckner Society's proud contribution to American recognition of the Mahler significance of the years 1935 and 1936.

The Mahler Medal of Honor is awarded to conductors who accomplish most towards furthering the general appreciation of Mahler's art in the United States.

Copyright by THE BRUCKNER SOCIETY OF AMERICA, INC., 1940.

AMONG American artistic developments of recent years the rebirth of interest in the music of Bruckner and Mahler is second to none in significance. When *The Bruckner Society of America* was founded on January 4, 1931, performances of these two composers by our major musical organizations were not merely rare, but also ineffectual, because American music-lovers had no adequate approach to the proper appreciation of the art of either Bruckner or Mahler. Therefore the *Society*, having adopted as its chief aim the fulfillment of this void, published the first biographies of these composers in English and issued a magazine, *CHORD AND DISCORD*, devoted almost entirely to discussions of their works. This periodical, distributed *gratis*, is now on file in every important public and university library in the United States. Thus the everyday music-lover's interest in Bruckner and Mahler grew by leaps and bounds. For the first time candidates for degrees in music and philosophy chose Bruckner and Mahler as subjects for their theses. Encouraged by these signs, outstanding conductors now gladly programmed (as often as they could) the symphonies which they had formerly presented almost furtively, if ever, as though offering forbidden fruits. In recognition of their achievements *The Bruckner Society of America* awarded them exclusive medals of honor designed by the noted American sculptor, Julio Kilenyi. Recently the RCA Victor has published recordings of complete Bruckner and Mahler symphonies. The *Society* may now point with pride to the fine progress initiated through its organized efforts.

The first Honorary Chairman of the *Bruckner Society of America* was Harriet Bishop Lanier. As President and guiding spirit of the original *Society of the Friends of Music* she applied herself in Bruckner's behalf, bringing about a performance (the first in New York) of the master's *F Minor Mass* by that organization under the direction of that outstanding Mahler disciple, Artur Bodanzky. The performance of Mahler's *Das Lied von der Erde*, however, also scheduled by her for that season (1931-1932), was destined never to take place. She died suddenly and with her passed the *Friends of Music*, that splendid, unique body that had for many years heroically and effectively served the cause of little-known, much-neglected serious music in America.

After the death of Mrs. Lanier, Dr. Martin G. Dumler of Cincinnati, widely esteemed for his liturgical compositions, was elected Honorary Chairman and then President of the *Bruckner Society*. A life-long Bruck-

ner enthusiast, his pioneering efforts had resulted in the first American hearing of Bruckner's *F Minor Mass* as far back as July 15, 1900. In fact, Dr. Dumler himself participated as one of the singers upon that occasion. Throughout the ensuing years he devoted much of his time towards furthering the appreciation of Bruckner's music in this country. Mahler he knew personally, and he paid deepest homage from the outset to the Bohemian's genius in the fields of conducting and composition. It was largely through his instrumentality that Mahler's stupendous *Symphony of a Thousand* attained performance during the Cincinnati *May Festivals* of 1931 and 1939 under the direction of Eugene Goossens.

#### LIST OF SCHEDULED PERFORMANCES — Season 1940-41

##### BRUCKNER

*Fourth Symphony* — St. Louis Symphony, Golschmann conducting.

*Eighth Symphony* — Philharmonic Symphony Society of N. Y., Walter conducting; Boston Symphony, Koussevitzky conducting.

##### MAHLER

*Second (Resurrection) Symphony* — Boston Symphony, Koussevitzky conducting.

*Das Lied von der Erde* — Philharmonic Symphony Society of N. Y., Walter conducting; Cleveland Symphony, Rodzinski conducting.

*Kindertotenlieder* — Philadelphia Orchestra, Ormandy conducting; Enid Szan-  
tho, soloist. Philadelphia, Baltimore, Washington.

#### NOTES ON CONTRIBUTORS

PHILIP GREELEY CLAPP — See page 12.

GABRIEL ENGEL is a graduate of Columbia University. He was a Pulitzer Scholar. He is the author of *The Life of Anton Bruckner* and *Gustav Mahler, Song-Symphonist*. Since its inception, he has been the Editor of CHORD AND DISCORD. He has contributed to the *Encyclopedia of Music and Musicians*.

WILLIAM PARKS GRANT was born in Cleveland, Ohio, in 1910. He has a Bachelor of Music degree (with honors) from Capitol University, Columbus, Ohio, and a Master of Arts degree from Ohio State University, 1933. Mahler was the subject of his Master's Thesis. He has written articles for *Musical Courier*, *Musical Record*, *The Etude*, and CHORD AND DISCORD. He has taught in the public schools of Ohio, and is at present in the Music Department of John Tarleton Agricultural College, Stephenville, Texas. Among his compositions are a ballet, a symphony, a song-cycle, a symphonic poem, piano pieces, etc.

WARREN STOREY SMITH, born in Brookline, Massachusetts, is Music Editor of the *Boston Post*. He succeeded Olin Downes. Mr. Smith's musical compositions include orchestral and chamber music works as well as songs and piano pieces. He became a member of the faculty of Faelten Pianoforte School in Boston after his graduation from that school. He was assistant critic on the *Boston Transcript*. In 1922 he became teacher of theory and composition at the New England Conservatory.

BRUNO WALTER, the world-famous conductor, is noted for his Bruckner and Mahler interpretations. He is a disciple of Gustav Mahler. During his career he has conducted at Cologne, Hamburg, Pressburg, Berlin, London, Leipzig, Paris, New York, Los Angeles, etc. He was one of the leading conductors at the Salzburg Festivals.

Copies of CHORD AND DISCORD are available in the principal public and university libraries in the United States.

## Bruckner and Mahler

BY BRUNO WALTER

THROUGHOUT its ten years of existence the Bruckner Society of America has striven manfully and efficiently in behalf of Bruckner and Mahler. Therefore, in connection with its decennial retrospect, I gladly respond to its plea for an expression concerning these masters. To combine propaganda for Bruckner and Mahler into a single plan is to express the conviction that the success of the one helps the other's cause, that they belong side by side because of their artistic kinship.

I should not have agreed to write about Bruckner *and* Mahler did I not regard that little word "and" highly pertinent. Its appropriateness is borne out by Mahler's own words. I often heard him call Bruckner his forerunner, asserting that his own creations followed the trail blazed by his senior master. Of course that was over forty years ago, in the days of Mahler's *Second*, the symphony which, more vividly than all his other works, reveals his affinity with Bruckner. Yet from the *Third Symphony* on, his development was marked by an ever increasing deviation from Bruckner's course. I cannot recall Mahler making the same remark during later years. Nevertheless, down to his latest works, we meet with occasional features which might be called Brucknerian. Thus it is worth while attaining a clear idea of the nature and degree of their relationship.

Much has been written concerning Bruckner. To the literature on Mahler I myself have contributed a book. Yet (as far as I know) a comparative study of Bruckner and Mahler is still to be made. Therefore I shall attempt in these comments to measure their relationship, to thrash out the features which unite and separate them. We shall find them alike in many important respects, but different, even opposite, in others of not less consequence. We shall find them so related, that understanding the one includes a certain degree of access to the other; yet so different, that affection for the one may seem consistent with total inaccessibility to the other. Certainly, to understand and love both requires a very complex musical disposition and an unusually broad spiritual span.

My comparison cannot limit itself to details of actual musical crea-

tion. The spiritual sources of their works, the personalities of both masters, are vital to the theme of our survey, not merely because they are more amenable to words than music itself, but because the light they shed upon the music is indispensable in an essay striving for knowledge. To demonstrate really and clearly the relationships between these composers' works, there is only one way; through performances. Renouncing for once this (to me) most agreeable method, resorting to words, though aware that no bridge leads straight from them to music, I must also seek to approach my subject indirectly. The mystic connection between the inner life of a composer and his music makes it possible to discover his soul in his work. Understanding his heart lays bare an inner path to his music. Hence I hope a discussion of the individualities of both masters will enable me to fill in some of the gaps inevitable to an essay on their works alone.

#### WHAT JOINS THEM

Nine symphonies composed by Bruckner, as well as Mahler, in the course of about thirty years, constitute the chief product of their creative power. The nature of the themes, developments, combinations, is (in keeping with their creator's nature) truly symphonic. Remarkable coincidences in the periodic progress of their work are the decisive step from the *Third* to the *Fourth* and the change of style between the *Fourth* and *Fifth* symphonies. The *Fourth* of each opens a new field of expression scarcely glimpsed in his previous works. A warm, romantic light rises over Bruckner's hitherto heroic tone-world; a tender fairy-tale-like idyll soothes Mahler's tempestuous heart. For both the *Fifth*, with its intensification of the polyphonic style, inaugurates the period of mature mastery. The laconic idiom of restraint, the art of mere suggestion, involving economy of means and form, is not theirs. Only in a number of his songs do we find Mahler's contradictory nature master of this style too. Otherwise both share in common the urge to yield their entire beings symphonically through unrestrained expression in huge dimensions. Their symphonies resemble each other also in the special significance of the finale in the total-architecture.

Broadly spun, essentially diatonic themes and a counterpoint directly joined to the classical tradition characterize both. To be sure, Mahler's later polyphony trod more complex, daring, and highly individual paths. To both (and to them alone) the church chorale comes as naturally as the Austrian *Laendler*. The utmost solemnity and folk-like joviality constitute the opposite poles in both their natures. They are linked with the classicists, the way leads through Schubert. Their association is strengthened, among other things, by the fundamentals of their harmony, their style of cadence and (all their deviations notwithstanding) their fondness for symmetry and regular periodic structure. Even the later Mahler, no matter to what regions his formal and harmonic boldness led him, maintained clear periodic structure and a firm

tonal foundation. Both revel in broadly built climaxes, in long sustained tensions, whose release requires overwhelming sonorous dynamics.

In their gay or lyric moments we often meet with a typically Austrian charm recalling Schubert, though in Mahler's case it is frequently mixed with a Bohemian-Moravian flavor. Above all, however, Mahler and Bruckner are (though in different ways) religious beings. An essential part of their musical inspiration wells from this devotional depth. It is a main source of their thematic wealth, swaying an all-important field of expression in their works; it produces the high-water mark of their musical surf. The tonal idiom of both is devoid of eroticism. Often inclined to pathos, powerful tragedy, and emotional extremes of utterance, they attain climaxes of high ecstasy. Clear sunshine and blue sky seldom appear in the wholly un-Mediterranean atmosphere of their music. "Romantic" was the name Bruckner gave his *Fourth*. In a related sense we find Mahler's earlier work romantic, aside from his un-Brucknerian diabolism. Yet in the later works of both the romantic note is rarely sounded.

Highly characteristic seems to me one negative manifestation of their relationship. Moved by their tremendous experience of Richard Wagner to an undying faith in his art, they show (aside from a slight influence over Bruckner's instrumentation) no Wagnerian traces in their work, or at most, so few, that the impression of their complete independence is in no wise affected thereby. Their individuality was of so sturdy a nature (astonishing in that epoch of musical history) that despite the open ear, open heart, and unreserved sympathy they lent the Wagnerian siren-song, they did not succumb to it. Of course, being essentially symphonists, they were equal to the threat of the dramatist against their self-termination, for the inspirational sources of their creation, as well as their native urge toward formal construction, differed fundamentally from his. Neither of them felt drawn to the stage, a phenomenon particularly remarkable in the case of Mahler, whose reproductive genius for the opera, expressed through incomparable interpretations, opened new paths in that field, actually instituting a tradition. Two abortive attempts of his early youth are his sole original contributions to the theater. Otherwise he never wrote for the stage, unless we include his arrangement of Weber's "Three Pintos."

Like Bruckner he took root in absolute music, save when he drew his inspiration from poetry, as in his songs. Yet was his work really rooted in absolute music? Is his *First Symphony* (originally named "Titan" after Jean Paul's novel) with its "Funeral March in the manner of Calot," are the *Second* and *Fourth* with their vocal movements, the *Third* with its (later) suppressed sub-titles, genuine symphonic music in the Bruckner sense? Indubitably Mahler's music differs from Bruckner's in the degree of absoluteness intended. It was induced and influenced by more specific imagery, fantasy, and thought than Bruckner's music, which rose from less tangible, darker spiritual depths. But does this

really involve an essential difference? Is not Beethoven's *Pastorale*, despite the "Scene at the Brook," "Rustic Festival," and "Storm," absolute symphonic music, its lesser absolute intention notwithstanding?

Let us conjure up the basic process of musical creation. The composer suddenly has a musical idea. Where there existed apparently nothing before, save perhaps a mood, an image, there is, all at once, music. A theme is present, a motive. Now the shaping hand of the composer grasps it, unfolding and guiding its trend. Fresh ideas come streaming in. Whether or not more definite imagery plays a role in the creative process, the decisive factors governing the result remain the "grace" of basic musical creation and the power of symphonic construction. That "grace" and that power were granted Mahler, as well as Bruckner. Therefore, despite the thoughts and visions that influenced his creation, he also took root in absolute music.

After all, do we know whether Bruckner, or for that matter even Mozart was not visited by imagery and thoughts during the creative process, or, whether many of their ideas, looming up out of the subconscious, did not take turnings over some conscious path, thereby acquiring more vivid coloring and more subjective character? In Goethe's *Elective Affinities* the image of Otilie fills Eduard's eyes during a conjugal meeting with his wife Charlotte, while the latter beholds the captain's image. Though the offspring of this union bore external traces of these wandering visions, it was nevertheless the child of Eduard and Charlotte, sprung from their natural union. Deep mystery surrounds the genesis and pure music may result, despite the influence of extra-musical ideas upon the act of generation. Yet if the composer's intention is really descriptive, i.e., if he makes the music the means of portraying an idea or image, then, of course, he has himself blocked the path to pure music.

To Mahler as well as Bruckner music never was the means of expressing something, but rather the end itself. He never disregarded its inherent principles for the sake of expression. It was the element in which both masters lived, impelled by their nature toward symphonic construction. Mahler's enchanted creative night was filled with violently changing dream-forms; Bruckner's was dominated by a single lofty vision. Since Bruckner (so far as I know) had, until his death in 1896, acquired no acquaintance with Mahler's work, whereas the latter was well versed in Bruckner's art, it remains to be considered whether it was not this influence, acting only upon the younger composer, that aroused the impression of the kinship felt by Mahler himself. Without a certain relationship, however, no influence can be exerted. Moreover, Mahler's individual tonal language reveals no sign of dependence, whether similarity or reminiscence. Yet we find in one of his main works, the *Second*, indications of a deeper, essential kinship and meet with occasional "Bruckner" characteristics down to Mahler's very last creations. Nevertheless he was as little dependent upon Bruckner as Brahms upon Schu-

mann, many of whose "characteristics" haunt the work of Brahms. To both Bruckner-Mahler may be applied the Faust-verdict concerning Byron-Euphorion: to each of them was granted "a song his very own," i.e., originality.

#### WHAT DIVIDES THEM

Bruckner's nine symphonies are purely instrumental works. Mahler, on the other hand, enlists words and the human voice for his *Second*, *Third*, *Fourth*, and *Eighth*. Besides the symphonies Bruckner composed three *Masses*, the *Te Deum*, the *150th Psalm*, smaller devotional vocal works, and (to my knowledge) two male choruses. Of an entirely different stamp was Mahler's non-symphonic creation. He wrote *Das Klagende Lied*, set to his own narrative poem; the four-part song cycle *Lieder eines fahrenden Gesellen*, the words also by himself; songs with piano accompaniment and with verses from *Des Knaben Wunderhorn*; during a later period, orchestral songs set to poems by Rueckert, among them the *Kindertotenlieder* cycle; and finally his most personal confession, *Das Lied von der Erde*, with verses by the Chinese poet Li-Tai-Po. We see Bruckner, therefore, aside from his symphonies, concentrated almost entirely upon sacred texts, while Mahler is inspired by highly varied fields of poetic expression. In his symphonies, *Das Urlicht* from *Des Knaben Wunderhorn* and Klopstock's "Resurrection Ode" furnished him with the solemn affirmative close of his *Second*, Nietzsche's *Midnight* yielded the questing, foreboding fourth movement and verses from *Des Knaben Wunderhorn* the answering fifth movement of the *Third*. From the same collection Mahler chose a poem of child-like faith to give symbolical expression to his own hope of celestial life. In the *Eighth* the hymn "Veni Creator Spiritus" and the closing scenes of *Faust* constitute his confessions of faith.

Thus the record of his vocal creations is at the same time a clue to the story of his heart. It tells of his struggles toward God, through discovery and renewed quest, through ever higher intuitions and loftier yearnings. Yet over this dominant note, the "Ostinato" of his life, resound many other tones, defined by accompanying verses: Love and death, lansquenet life and a spectral world, the joy of life and its woe, humor and despair, savage defiance and final resignation, all these find individual and convincing expression in his musical eloquence. If I wished to present the difference between the two masters in the shortest imaginable formula, I would say (conscious of the exaggeration of such a summary): at bottom Bruckner's spirit was repose, Mahler's unrest. With Bruckner the most impassioned movement has a foundation of certainty; not even Mahler's inmost depths remain undisturbed. Bruckner's scope of expression is unlimited, though it has but few main subdivisions; with Mahler these are prodigal in number, embracing all lights and shades of a weird diabolism, a humorous buffoonery, even resorting to the eccentric and banal, besides countless expressive nuances ranging

from childlike tenderness to chaotic eruption. His heartfelt, folk-like themes are as Mahlerian as his sardonic cacophonies, whose lightning apparitions render all the darker the night of his musical landscape. Mahler's noble peace and solemnity, his lofty transfiguration are the fruits of conquest; with Bruckner they are innate gifts. Bruckner's musical message stems from the sphere of the saints; in Mahler speaks the impassioned prophet. He is ever renewing the battle, ending in mild resignation, while Bruckner's tone-world radiates unshakable, consoling affirmation.

We find, as already stated, the inexhaustible wealth of the Bruckner music spread over a correspondingly boundless, though in itself not highly varied realm of expression, for which the two verbal directions, "feierlich" (solemnly) and "innig" (heartfelt), most often employed by him, almost sufficed, were it not for the richly differentiated *scherzi* that remind us of the wealth of the humoristic external ornaments of impressive Gothic cathedrals. Even Bruckner's orchestra undergoes scarcely any change. With the *Seventh* he adds the Wagnerian tubas, in the *Eighth* the harp, but he does not alter his instrumental methods as such. Beginning with the *Fifth* the character of his harmony and polyphony no longer varies, though (to be sure) it is sufficiently rich and inspired to require no change.

Mahler renewed himself "from head to toe" with each symphony: the *First*, his "Werther," as I once named it; the *Second*, a kind of "Requiem"; the *Third*, which one might be tempted to call a pantheistic hymn; the *Fourth*, a fairy-tale *idyll*. From the *Fifth* to the *Seventh* imagery and ideas yield to absolute-musical intentions. Even though each of these three symphonies has its own individual atmosphere, they stand considerably closer to each other in style and general content than the widely separated first four. They share in common a musically more complex, polyphonically more profound idiom, richer in combinations, imparting a new, stronger impression of Mahler's varied emotional life. The human voice is the main instrument in the *Eighth*. A magnificent, specifically choral polyphony determines the style of the hymn-like first movement, while in the Faust-scenes the composer adapts his musical idiom to the Goethe-word and the demands of lyric singableness through a sort of simplification. In *Das Lied von der Erde* we meet with still another Mahler, inaugurating a third creative period, with a new manner of composition and orchestration. On this highest plane is born the *Ninth*, the mighty symphonic presentation of the spiritual sphere of *Das Lied von der Erde*. The sketches toward a *Tenth* bring to a sudden end this sharply defined course of creative evolution, the outstanding feature of which was its rich differentiation. This applies also (as already stated) to his instrumentation. An inborn, extremely delicate sense of sound, an ear open to orchestral possibilities lead, at the beck of expression and clarity, to unique mastery over the orchestra. From wealth of color and charm of sound to an objective exposition of his in-

creasingly complex polyphony, this is the path Mahler's orchestral technique, changed and intensified by the increasing demands of each work, had to travel.

Each orchestral song, from the very earliest, reveals an individual instrumental combination, mainly of an amazing economy. The symphonies, with the exception of the *Fourth*, are inhabited by orchestral masses over which an unbounded tonal fantasy holds sway. In contrast to Bruckner he was compelled to struggle ceaselessly for the solution of orchestral problems, increasing with each new work. In this respect he always felt himself, as he complained to me, "a beginner."

The great stress in Bruckner's music rests upon the idea, in Mahler's upon the symphonic elaboration of the idea involving processes of forming and transforming which in the course of years scaled the highest peaks of constructive power. It is characteristic of the difference between the two composers that their opponents attack the form in Bruckner's, the substance in Mahler's work. I can understand these objections to some extent without, however, acquiescing in them. From Schenker comes this charming thought: that "even a little bouquet of flowers requires some order (guiding lines) to make it possible for the eye to encompass it at a glance," i.e., to see it as a bouquet. "Form" is such order, premeditated, organic association, complete, strict unity. Our classic literature contains matchless examples of organic unity. Yet we have art works of undoubtedly highest value (I mention Goethe's *Faust* as the most significant instance) the genesis of which resisted this strict organic unity of form, gaining more in richness thereby than they lost in lucidity. I confess that for many years, despite my love for Bruckner's tonal language and his wonderful melodies, despite my happiness in his inspirations, I felt somewhat confused by his apparent formlessness, his unrestrained, luxurious prodigality. This confusion disappeared as soon as I began performing him. Without difficulty I achieved that identification with his work which is the foundation of every authentic and apparently authentic interpretation. Now, since I have long felt deeply at home in his realm, since his form no longer seems strange to me, I believe that access to him is open to everyone who approaches him with the awe due a true creator. His super-dimensions, his surrender to every fresh inspiration and new, interesting turning, sometimes not drawn with compelling musical logic from what has gone before, nor united to what follows, his abrupt pauses and resumptions: all this may just as well indicate a defect in constructive power as an individual concept of symphony. Even though he may not follow a strictly planned path to his goal, he takes us over ways strewn with abundant riches, affording us views of constantly varying delight.

Mahler's striving for form succeeded in bringing transparent unity to the huge dimensions of his symphonies. His was a conscious effort towards order. All his singularities of mood, his excesses of passions, his outpourings of the heart are seized and united according to a plan dic-

tated by his sovereign sense of form. He once told me that, because of the pressure of time (his duties as director left him only the summer months for composing) he may perhaps not have been, at times, sufficiently critical of the quality of an idea, but that he had never permitted himself the slightest leniency in the matter of form. Yet the objection to his thematic art finds no corroboration in this confession, for that objection refers, as far as I know, only to so-called "banalities," i.e., intentional ironic turns, meant to be humorous and dependent for acceptance or rejection upon the listener's capacity for humor. It is not in these that Mahler perceived a deficient quality. He referred to a few transitional lyrics in later works, which struck him as perhaps not select enough, though they would scarcely disturb anyone's enjoyment of the gigantic whole.

The relative beauty of themes and the value of musical ideas cannot be a subject for discussion. I limit myself to the declaration that, after life-long occupation with his works, Mahler's musical substance seems to me essentially music, powerful and individual throughout, beautiful when he strives for beauty, graceful when he strives for charm, melancholy when for sorrow, etc. In short it was truly the material suited to the rearing of such mighty structures, and worthy of the sublime feelings it served to express. Mahler was, like Bruckner, the bearer of a transcendental mission, a spiritual sage and guide, master of an inspired tonal language enriched and enhanced by himself. The tongues of both had, like that of Isaiah, been touched and consecrated by the fiery coal of the altar of the Lord and the threefold "Sanctus" of the seraphim was the inmost meaning of their message.

### *THE PERSONALITIES*

The favor of personal acquaintance with Bruckner was not granted me, but that Vienna, into the musical life of which I entered as a young conductor, was still full of the most lively memories of him. I came in touch with "Bruckner circles," which abundantly supplemented Mahler's narratives of his own Bruckner-experiences. I gathered from reports of pupils and friends of the master, from numerous anecdotes, so vivid a picture of his personality, his atmosphere, his mode of life, his conversation, his habits and eccentricities, that I feel as if I had known him thoroughly. One drastic difference between Bruckner and Mahler struck me even then: no feature in Bruckner's personal make-up reflected the greatness and sublimity of his music, while Mahler's person was in full harmony with his work. What a contrast in the very appearance of the two masters! Gustav Mahler's lean figure, his narrow, longish face, the unusually high, sloping forehead beneath jet-black hair, eyes which betrayed the inner flame, the ascetic mouth, his strange, irregular gait — these impressed one as the incarnation of the diabolical conductor Johann Kreisler, the famed musical self-reflecting creation of the poet E. T. A. Hoffmann. Anton Bruckner's short, corpulent, com-

fortable figure, his quiet, easy manner contrast as strongly as possible with such romantic appearance. But upon the drab body is set the head of a Roman Caesar, which might be described as majestic, were it not for the touch of meekness and shyness about the eyes and mouth, giving the lie to the commanding brow and nose.

As might be expected from their contrasting exteriors the two men themselves differed. Bruckner was a retiring, awkward, childishly naive being, whose almost primitive ingenuousness and simplicity was mixed with a generous portion of rustic cunning. He spoke the unrefined Upper-Austrian dialect of the provincial and remained the countryman in appearance, clothing, speech, and carriage till the end, even though he lived in Vienna, a world-metropolis, for decades. His conversation never betrayed reading, whether literature or poetry, nor any interest in scientific matters. The broad domains of the intellectual did not attract him. Unless music was the topic he turned his conversation to the narrow vicissitudes and happenings of every-day existence. Nevertheless his personality must have been attractive, for almost all reports agree upon the peculiar fascination exerted by his naivete, piety, homely simplicity, and modesty, bordering at times on servility, as borne out by many of his letters. I explain this attractive power of his strange personality to myself as due to the radiance of his lofty, godly soul, the splendor of his musical genius glimmering through his unpretending homeliness. If his presence could hardly be felt as "interesting," it was heartwarming, yes, uplifting.

It was entirely otherwise with Mahler, who was as impressive in life as in his works. Wherever he appeared his exciting personality swayed everything. In his presence the most secure became insecure. His fascinating conversation was alive with an amazingly wide culture reflecting a world of intellectual interests and an uncommon capacity for swift, keen thinking and expression. Nothing of importance ever thought, accomplished, or created by man was foreign to him. His philosophically trained mind, his fiery soul grasped and assimilated the rich, nourishing intellectual diet without which so Faustian a being could not exist, yet which could as little satiate or appease him as it had Faust. A firm consciousness of God that knew no wavering filled Bruckner's heart. His deep piety, his faithful Catholicism dominated his life, even though it is rather his work that reveals the true greatness of his faith and his relationship to God. Not only his *Masses*, his *Te Deum*, his devotional choral works, but his symphonies also (and these before all) sprang from this fundamental religious feeling that swayed Bruckner's entire spirit. He did not have to struggle toward God; he believed. Mahler sought God. He searched in himself, in Nature, in the messages of poets and thinkers. He strove for steadfastness while he swung between assurance and doubt. Midst the thousand-fold, often chaotic impressions of world and life he tried to find the ruling prime thought, the transcendental meaning. From his Faustian urge for knowledge,

from his commotion by the misery of life, from his presentiment of ultimate harmony stemmed the spiritual agitation which poured from him in the shape of music. Change characterized Mahler's life; constancy Bruckner's. In a certain sense this is also true of their work. Bruckner sang of his God and for his God, Who ever and unalterably occupied his soul. Mahler struggled toward Him. Not constancy, but change ruled his inner life, hence also his music.

Thus their work and their nature were in many respects akin, in many at variance. Yet both belong to that wide, august circle of friends who never abandon us to languish in grief or solitude, but offer us solace in all pain. Theirs is a precious legacy that for all time belongs to us. Those friends are always present. Their spirits dwell in our book-chests, music-cabinets, in our memory, at our beck and call day and night. Our two masters have long since been received into this circle because they continue the work which the great musicians of the past have left. Great was the difference between the two, as I have shown; but conjure up one and the other is not very distant. Along with Bruckner's music (aside from the described more concrete connections) there vibrates a secret Mahlerian undertone, just as in Mahler's work some intangible element is reminiscent of Bruckner. From this intuition of their transcendental kinship it is clearly permissible to speak of "Bruckner and Mahler"; therefore it is possible that, despite the differences in their natures, despite the very incompatibility of important features of their work, my unqualified and unlimited love can belong to them both.

PHILIP GREELEY CLAPP AWARDED KILENYI  
BRUCKNER MEDAL OF HONOR

After a performance of Bruckner's *Romantic* by the State University of Iowa Orchestra, Iowa City, Iowa, under the direction of Philip Greeley Clapp on February 28, the Kilenyi Bruckner Medal of Honor was presented to Professor Clapp, Head of the Music Department, by Dr. Earl E. Harper, Director of Fine Arts, on behalf of the Society in recognition of Clapp's long continued effort to create a greater interest in and appreciation of Bruckner's music in the U. S. A. Clapp, a Bostonian by birth, conducted the Cincinnati Symphony Orchestra during Kunwald's illness in 1913. His works include the tone poems *Norge* and *A Song of Youth*, Symphony in E Minor (played by the Boston Symphony) the orchestral prelude *In Summer* (performed by the St. Louis Symphony), Symphony in E Flat (performed by the Boston Symphony) songs, etc. He wrote a number of essays and reviews on Bruckner and Mahler in the *Boston Transcript* and lectured on the works of these composers before professional groups and in the classroom. The performance of Bruckner's *Fourth* was the first performance of a complete Bruckner symphony by a university orchestra in the U. S. This season Professor Clapp plans to include Bruckner's *Seventh* and possibly the *Fifth* as well as Mahler's *Lieder eines fahrenden Gesellen* on his programs.

LIEDER EINES FAHRENDEN GESELLEN IN DENVER

According to John C. Kendel (*Musical America*, issue of May 10, 1940) Mahler's *Lieder eines fahrenden Gesellen* "made a distinct impression on the audience." Suzanne Sten was the soloist and Fritz Mahler the guest conductor of the Denver Symphony Orchestra.

## Why Mahler, Too?

BY WARREN STOREY SMITH

TWENTY years or so ago there was, generally speaking, no such musical figure as Bruckner'n'Mahler, the bicephalous composer of formidable symphonies, variously regarded with dislike, indifference and high esteem. The pairing of composers seems to be an ineradicable human or, perhaps, critical instinct. But at the close of the nineteenth century and in the first decades of the twentieth such pairing was commonly not of Bruckner and Mahler but of Brahms and Bruckner and of Mahler and Strauss. The north German was linked with the Austrian, his unwilling rival in the Vienna of the eighties and nineties, and the Bohemian with the Bavarian, as one of the outstanding representatives of the then new German school.

In his *The Symphony Since Beethoven* Felix Weingartner thus grouped them. He suggested that if Brahms and Bruckner could have been rolled into one we would have had once more a "great composer." And appraising Mahler and Strauss he was decidedly more sympathetic toward the former. In 1897 he had conducted a partial premiere (three movements out of seven) of Mahler's *Third Symphony*. Shortly afterwards he wrote, in the first edition of his twice-revised brochure: "Mahler's most striking characteristic is the remarkable breadth of his themes. . . . Another very favorable characteristic of Mahler is the thoroughly musical nature of his compositions, in spite of the programmes which he gives. He is a musician through and through." And he adds, "In many ways he is like his teacher,<sup>1</sup> Bruckner, only he understands better how to work with his themes and how to build up his movements" (translated by Carl Ambruster). In the light of modern critical opinion all that Weingartner has to say on Brahms and Bruckner, Mahler and Strauss is worth reading. His disparaging attitude toward Brahms was, however, considerably modified in the third edition of his work (1909).

But why the present situation? How has it come to pass that Bruckner and Mahler now need championing, while propaganda for Brahms and Strauss would be a quite superfluous endeavor? Undoubtedly, if Bruckner's far more formidable, more radical symphonies had been accepted as readily as those of his younger contemporary, it still might be "Brahms and Bruckner." And if the symphonies of Mahler had made their way as speedily as the tone poems of Strauss, these two composers would still be the Haydn and Mozart or Bach and Handel of the early twentieth century.

Brahms, as we all know, would never have labored in Bruckner's behalf, since he had scant respect for him as composer. Strauss, on the other hand, was one of the earliest supporters of Mahler. Yet regardless of the attitudes, wishes and intentions of the two men, Brahms has proved to

<sup>1</sup> Mahler, though a disciple of Bruckner, was never his pupil.

be Bruckner's worst enemy and Strauss has impeded a cause that, personally, he was only too glad to further. If the less perplexing symphonies of Brahms had not been ready at hand to fill a needed place in the repertory, those of Bruckner would certainly have been more eagerly investigated. And, as Leigh Henry has pointed out, the brilliant talent of Strauss blinded the world to what seemed the more sober radiance of Mahler. Furthermore, both Brahms and Strauss enjoyed the advantage of a greater terseness of utterance, and hence of an easier assimilability. Even in Strauss versus Strauss, brevity has been of assistance. We hear more *Don Juans* than *Don Quixotes* or *Domesticas*, more *Tod und Verkarungs* than *Heldenlebens*, and it is certainly arguable that this preference is not wholly a matter of relative merit.

And so Brahms and Mahler failed to gain ground as rapidly as their rivals, while the first World War tended to increase this disparity. In this country, of course, all four were classed as modern German composers and therefore dropped for a time from the current symphonic repertory. Brahms was the first to be restored to it and Strauss soon regained his former position, but for some time little attempt was made to rescue Bruckner and Mahler from the temporary oblivion into which they had fallen, a state of affairs partly attributable to the persistent hostility and obscurantism of certain reviewers.

In the case of the Boston Symphony Orchestra, to cite one example, Mahler's music was brought back to the repertory considerably earlier than that of Bruckner. Pierre Monteux — of all conductors — introduced Mahler's *First Symphony* to Boston in 1923, while Bruckner was not returned to Symphony Hall until six years later, when Serge Koussevitzky revived the *Eighth Symphony*, which had slumbered on the library shelves since 1909. The last few years have gone a long way to place both composers in the position they rightfully should occupy in American musical life, even though conductors and audiences still stand in need of considerable persuasion if the former are to be rescued from their inertia and timidity and the latter from their apathy and prejudice. No doubt, because of efforts already made, critical antagonism has perceptibly waned.

Thus there are plenty of superficial reasons for a Bruckner-and-Mahler society in this country. Nevertheless, the fact still remains that the two composers have more points of difference than of similarity. It is perfectly possible to hold to the one and despise the other, even though it is equally possible to like or dislike them both.

Assuming the resemblances arising from a common musical ancestry and the fact that Mahler was, in a sense, the heir of Bruckner, what have the symphonies of Bruckner and Mahler in common, outside their general largeness of design and the prevalence in both of long-spun, song-like, diatonic themes? About as much, or as little, as the men themselves. Mahler wrote self-consciously; Bruckner, instinctively. Mahler's music variously reflects his philosophic attitude toward life, his *Weltschmerz*,

pessimism and sardonic irony, his avowed escapism in the recollections of his childhood. Even his religious mysticism was something wholly distinct from Bruckner's childlike faith. In one sense or another, Mahler's instrumental music was almost always programmatic, however much he may have tried to throw the listener off the scent by asking him to hear it as music *per se*. Bruckner, on the other hand, wrote with almost no external preoccupation. His own "poetic" interpretations of his music, as in the case of the *Romantic Symphony*, the *Adagio* of the *Seventh* or the *Scherzo* of the *Eighth* were in the nature of afterthoughts, and not always especially happy ones. When Mahler uses thematic material from his songs, it is with a far more literal intent than was the case with Bruckner's symphonic borrowings from his sacred choral music in the *Adagios* of the *Second* and *Seventh*. Incidentally, in the matter of form Bruckner, for all his minor irregularities, was, as compared with Mahler, a hidebound traditionalist. Like Mozart, he was the product of one century, while Mahler, like Beethoven, straddled two.

It might even be said that in their divergence in the matter of the programme Mahler is calculated to repel the absolutist and Bruckner to attract him, that Mahler makes his greatest appeal to the listener who is only too willing to line music up with human experience. Just now that tends perhaps to narrow his audience, since abstract music is again very much in the saddle. Your neo-classicist will have much in common with Bruckner, though he may shrink from his very uncontemporary lushness and magnificence. For Bruckner's symphonies are quite as general in their implications as those of Brahms, or Schubert's *C-major*, and far more so than Beethoven's *Eroica*, *Fifth*, *Pastorale* and *Ninth*.

It was these last-named works, however, that were Mahler's points of departure. We hear the *Pastorale* in the opening of the *First Symphony* and parts of the *Third*, which was also nature music; the funeral march in the *Eroica* finds many echoes in Mahler. And of Beethoven's innovations in regard to the use of voices in the *Ninth* Mahler made the most, carrying that essentially unsymphonic procedure farther than it had ever been carried before or probably will ever be carried again. In his *Second*, *Third*, *Fourth* and *Eighth Symphonies* we find voices; solo, choral or both. Moreover, if Bruckner had written *Das Lied von der Erde* — and we can as easily imagine him writing *Pierrot Lunaire*, *Wozzeck*, or *Elektra* — would he have thought to call the work a symphony?

The man of the world and the peasant, the cosmopolite and the provincial, the man of intellect and wide reading and the man who, though lettered, was still far from learned, the man of family ties and the celibate (even though an unwilling celibate) could not in the very nature of things write the same sort of music. There is in reality no such composer as Bruckner'n'Mahler. In fact, only the English-speaking countries have ever imagined that there was.

RCA VICTOR RECORDING  
BRUCKNER'S NINTH

The Austrian composer's symphonies are too seldom played in this country, and the publication of this particular symphony, in many ways his greatest, should do much to dispel the opinion still disseminated by those who refuse to recognize Bruckner's genius, that his symphonies are formless monstrosities, merely because their architectonics differ from those of Beethoven's or Brahms's.

There is unfortunately not sufficient space at my disposal to expatiate on the structural aspect of Bruckner's symphonies. This has been done in masterly fashion by Ernst Kurth in his *Bruckner*, a two-volume book of 1,350 pages, in which the ninth symphony alone is analyzed in a chapter seventy-six pages in length. The author calls attention to the Gothic character of the first movement with its stupendous principal unison theme, a theme which Lawrence Gilman in a conversation with me once admitted he considered to be the most wonderful ever conceived by any composer. The other-worldly, mysterious mood of the opening pages, which culminate in the unfolding of this cataclysmic D minor subject, are no whit inferior in inspiration to the opening pages of Beethoven's ninth symphony. However Bruckner's world was a totally different one from the German master's. He was first and last a mystic with a vision which permitted him to reveal sublimities which have led Tovey to compare his creations with "Paradise Lost."

The scherzo of the ninth symphony has been described by Kretschmar as the most "sinister, gruesome scherzo in the symphonic literature." Ernest Bloch told me long ago that he was convinced that it was the most magnificent movement of its kind, and that any composer could have been proud to affix his signature thereto. It is in the final adagio movement, however, that the symphony reaches its apex. Those commentators who can only see in Bruckner a Wagner epigone would do well to peruse Kurth's book. In reference to the opening theme of this adagio, he calls attention to the basic differences in the harmonization of Bruckner's theme from that of the "Tristan" motive from which some claim it derives. There is nothing in Bruckner's chords of the erotic intensity immanent in "Tristan"; they are on the contrary oppressive and stifling; they enmesh the melody in an anguished hold. There could have been no fourth movement to this symphony, for in this adagio we have the utterances of a man who has left all earthly thoughts behind him and has turned his gaze to celestial spheres. To have attempted a finale, with its inevitable mood of resurgence would have been unthinkable. Bruckner has taken his farewell from the world which treated him so shamefully in tones which radiate a peace which transcends any known to ordinary mortals.

JEROME D. BOHM, *Herald Tribune*

. . . The availability of the original score has roused a certain curiosity about the Austrian master; but since critical discussion and public apathy still continue in a dubious knowledge of the music itself, the present excellent recording is doubly welcome.

Bruckner is long-winded, pompous, magniloquent. Agreed: but so is Wagner. . . .

. . . In the last analysis, this is not the work of a symphonist in the Beethoven sense of the word; but Bruckner is one of the great voices of the nineteenth century, and his music cannot be brushed aside by an epithet or a yawn.

GAMA GILBERT, *New York Times*

The most interesting recent release is that, by Victor, of Bruckner's Ninth Symphony in D minor, played by the Munich Philharmonic Orchestra under Siegmund von Hausegger. . . .

There had been some talk that Bruckner was failing in his later years, but the symphony as it stands is fully as inspired as his other works. . . .

It consists of a first movement, with a long introduction, a scherzo and trio and an adagio and it is recorded on seven disks (fourteen sides). "Bruckner at his best" should be the verdict on hearing it. His scherzos are always good and this is no exception. The adagio has that nobility and simplicity which are endearing qualities of the composer. The Ninth Symphony (Loewe version) was last played by the Boston Symphony in 1914, and we should lose no more time in hearing the original. Mr. Koussevitzky, with his wonderful ear for orchestral sonorities, would have a field day with this work.

ALEXANDER WILLIAMS, *Boston Herald*

## Some Americans Discover Bruckner and Mahler

BY PHILIP GREELEY CLAPP

NEW music faces peculiar risks. An author, a painter, a sculptor may communicate his ideas directly to his public; even a playwright may publish his play as a book "which he who runs may read." The composer of new music is for some time at the mercy of conductors and executants, who may vary considerably in skill but who vary little in relying upon habit rather than study in rehearsing new material. The public itself, though also habit-bound to a considerable extent, is more subject to moments of spontaneous appreciation than professional performers, whose power of sympathetic response often becomes calloused by long hours daily of grinding out rehearsals and concerts; but your musical layman is too well aware of his own naivete to relish being caught in the act of openly admiring the wrong thing, and thus is disposed to keep his real opinions about a new piece to himself pending a verdict from the critics, whose capacity for musical enjoyment is even more jaded than that of professional players.

One might suppose that, since nobody could make a living by performing music or discussing it unless someone else had first provided some music to perform and discuss, a composer's status with performers, critics, and managers would be as honorable, if not as that of a mother in a maternity hospital, at least as that of a father. Actually it is not even that of a charity patient. True, the musical middlemen cannot get along without compositions to perform and discuss; but the concert repertory is already large, and they can get along quite well without your new piece or mine. The composer seeking a hearing for a new composition thus finds himself in the position of a beggar, and, if the new work is a symphony or otherwise demands time and care to rehearse and perform, he may be treated as if he had demanded a dinner when he should have whined for a cup of coffee.

Conductors, executants, and managers are not wholly to blame for this. The composer has lived with his work from conception to completion, and to him it seems clear and fairly important; to those upon whom he must depend for performance it is quite unfamiliar and consequently none too clear, while its importance has still to be demonstrated. The conductor must prepare a full programme well in a limited time, and may even then displease his public; the executants must work extra hard on unfamiliar material, and may even then displease the conductor; the manager must keep deficits within the limit of his guarantor's devotion to civic uplift. Early rehearsals often go badly, and composers have been known to be touchy. In the end "the profession" comes to feel toward composers as the early American settlers felt toward the Indians, that the only good ones are dead.

Composers, however, are a stubborn breed. Even to complete a score demands that the composer must have won many victories over himself, and the man who conquers himself is at least partly qualified to fight for his convictions. He will undoubtedly have to do so, inasmuch as what seems essential to him in shaping the individuality of his composition may seem irrelevant and objectionable to persons who hastily judge him not by what he is trying to do and say but by the measure of his conformity to what others have done and said. It is by no means true that composers are always right and their advisors always wrong; nevertheless it is true that competent composers have ruined more scores by taking advice than by rejecting it — for example, Beethoven would not yield a jot in any of his symphonies, but weakened many passages in *Fidelio* because his inexperience in the theater led him to accept the counsel of “practical” men, as the score of *Leonore* will attest; and who can fail to prefer the recently restored originals of some of Bruckner’s symphonies to the versions which his kind friends previously made available to the world? True, the composer of today’s novelty is probably no Beethoven or Bruckner, and may not even be fully competent; the best he can do is to compose as well as he can and gamble on what he finds within himself rather than upon what benevolent or malevolent people try to put into him. After all, a marksman may or may not hit his target, but his chances are at least better if he aims at it; even a dead shot has to learn by practice, while ordinarily good marksmen develop their less eminent skill by the same means.

If a composer is so fortunate as to secure a hearing, what is the chance that his work is really heard? — Even if the conductor has not noticed that there are chords of C major on pages nineteen and twenty-seven of a sixty-page score and triumphantly made a cut from the former to the latter, and even if the performance is eloquent as well as faithful, the public inevitably can derive only a vague impression from a single hearing. A book may be reread, an art gallery or a play revisited; a musical novelty is usually performed once and then let severely alone for a long time. Before the public has even a second chance to hear a composition it will have been reviewed, usually without enthusiasm, by a reviewer who himself has heard it only once — or perhaps less than once in America, where reviewers sometimes have to review two or more simultaneous concerts. It is a brave concert-goer indeed who will openly defend a composition which a critic has disparaged either by censure or condescension. What chance then has a composer or a composition in the face of perfunctory performance and reviews?

If history is evidence, he has a remarkably good chance. Most of Beethoven’s symphonies were first performed by inferior orchestras as items of interminable programmes in poorly lighted and heated halls without ventilation before very mixed audiences, and after the slaughter was over the critics made mincemeat of the *corpus delicti*, yet somehow they managed to survive. One is forced to conclude that vigorous music

has about it something provocative which draws people back to it, if only for the satisfaction of redemonstrating how bad it is. Inevitably, since good music improves upon acquaintance, it is more important to assure that it is performed from time to time than to assure perfection in the first performance. A typical orchestra and audience are likely to include between them at least a few discerning individuals who discriminate in some measure between a work and its presentation, and sooner or later some one of these is likely to concern himself to present adequately a composition which seems to him to possess merits which a garbled performance may have belied. Furthermore, the composer is probably helped rather than hindered in communicating at least a part of his musical ideas to the general public by the fact that a majority of this same public consists not of "experts" seeking to classify everything within hearing but of laymen seeking musical enjoyment; to the latter even a masterpiece, unless it is very familiar, affords an alternation of attractive and perplexing passages rather than uninterrupted delight, so a novelty may fare as well as an unfamiliar classic with this large element in any audience provided it includes some striking themes or motives and some impressive climaxes.

True, your layman is susceptible to prestige suggestion, and will tolerate fewer perplexities in the compositions of Jones than in those of an acknowledged master whom he is supposed to admire; and this type of prejudice extends to such phases as the sense of duty which impels most European laymen to reject all contemporary work by foreigners, and Americans to reject everything native. However, there are innocent tricks of the trade by which even these prejudices may be offset: for example, the composer may be present and take a bow at the production of his novelty. This is highly effective, even though some of the personalities thus exhibited might be less enjoyable at close range. Many concertgoers who could not have borne twenty-four consecutive hours in the apartment under Beethoven's, and could not have finished a half-hour's conversation with him except by leaving the room or getting thrown out, must have sensed his fundamental nobility when they saw and heard him play or conduct, even while they pitied him for his deafness and smiled at his eccentricities. In the end his presence at the performance of his works undoubtedly served to make many a casual listener remember the compositions themselves more vividly, and not a little more favorably.

Undoubtedly the fact that Bruckner and Mahler were known personalities in the communities which first heard their symphonies had much to do with keeping the latter before the public. The symphonies themselves were relatively long and difficult, involving a great deal of rehearsal time, and some of them involved the expense of extra executants and instruments not commonly used in symphonic instrumentation. The critics did not fail to point out these obvious unconventionalities, the more since they were as obviously befuddled to record the con-

tent of what they were supposed to have heard as any medical student hearing a man's heart and lungs through a stethoscope for the first time. A vocational psychologist of today might have hesitated to exhibit either personality as possessing any sure popular appeal, for Bruckner impressed many people as quaintly rustic and Mahler as cantankerous. That power and individuality which a few friends of each knew he possessed nevertheless communicated itself to the intuitive faculties of the general public, most of whom knew these men only by sight, much sooner than to the majority of those who were supposed to be well acquainted with them professionally, with the inevitable result that both men had a considerable following among the laity long before any professional colleague dared openly to admit merit in their music. Controversy still raged concerning them in their own land as long as they lived, and after they died; but this controversy, even while they were still living, did not "dispose" of them but rather "established" them — their music is still performed, and their personalities are still more vividly remembered than those of many more recent men whose vogue exemplifies the maxim, "Easy come, easy go."

If in Europe the difficulty of winning the public to appreciate a style of symphony unfamiliar because really new was partly offset by identifying the new style with personalities vivid if unconventional, in America the new style has had to gain ground more slowly because the personalities in question were not at first real to most of the musical public. Bruckner never visited America. Mahler made two visits here as a conductor; but circumstances too familiar to the readers of CHORD AND DISCORD to be retold here finished his American career before it was fairly started. First impressions of these composers, so far as the older generation of American concertgoers is concerned, are necessarily derived from certain dutiful and labored presentations of their symphonies back in the days when every American symphony orchestra had a German conductor of the pre-Wagnerian outlook. All honor to these usually ultra-conservative but artistically conscientious conductors of an earlier day that they risked their positions by giving Bruckner and Mahler at all; the fact remains that these early performances were infrequent and often dull, and thereby made few friends for Bruckner and Mahler. The generation of conductors represented by Karl Muck and Frederick Stock, on the other hand, have given eloquent performances of symphonies by both composers, and to these must be added Mahler's few performances of his own works while in this country, together with Leopold Stokowski's highly successful series of performances of Mahler's *Eighth*; but the critics and the public had already been prejudiced against the whole style by earlier and less able presentations, and the expense of augmenting orchestras for the large instrumentation demanded by some of the works was too great to permit frequent performances, with the result that a few years proved too short a time to build up a Bruckner-Mahler public before the first World War for a while di-

rected American attention elsewhere. After the War most American orchestras were directed by conductors trained in France, Italy, or Russia, and few of these at first undertook to add Bruckner or Mahler to their repertory or ours; it is a pleasure to recognize as exceptions the fine Bruckner and Mahler performances which Bruno Walter and Frederick Stock continued to present from time to time.

Meanwhile a new generation of concertgoers sits in our symphony halls, and a majority of these younger music-lovers would seem to be little acquainted with Bruckner and Mahler, or to respond but coolly to performances of works by these composers which now occur more frequently as the younger conductors have added these composers to their repertory. What chance is there that an enthusiastic Bruckner-Mahler public may develop here? The only possible answer must be in terms of opportunity for young music-lovers to become well acquainted with the works of these composers by listening to the works themselves rather than to what hostile critics or elderly concertgoers say against them. In this connection the experience of some young Americans, one born in a city with a symphony orchestra and the others several hundred miles from any musical center, may be interesting and could be typical.

John Doe was born during the late eighties in an eastern city which was justly proud of its symphony orchestra. Older members of his family were season-ticket holders, and John heard occasional concerts even while he was a very little fellow; at fifteen he was promoted to the proud status of a season-ticket holder in his own right. For years the quiet old gentleman who sat in front of him followed the programme score in hand, and John's parents told him that this same old gentleman had loaned his large collection of scores to the public library for reference. John learned to read scores, first by looking over the old gentleman's shoulder while the orchestra played, and then by going to the library and poring over the scores more slowly; later, when he could read scores fluently, he went to the library as soon as the programmes were announced and studied them before their performance. John's family were diffident about addressing the old gentleman, as he was a rather prominent personage; but the old gentleman recognized John at the library, and gave him plentiful encouragement and helpful suggestions. When John became a season-ticket holder he could already read a score like a book.

During John's first complete season the orchestra played Bruckner's *Ninth Symphony*. The performance may have been more than a bit dry, but the excellent programme notes were quite the contrary. John's inborn love of music combined with his pride in being so grown-up as to possess a season-ticket to make him the most receptive of listeners, and the statement of the programme notes that Bruckner had been misunderstood both for his music and for his devotion to Wagner, whom John already admired, made John a Bruckner enthusiast on the spot. His elders and betters said he would get over it, but he never did: certainly the elo-

quent performances of Bruckner which he later heard under Muck, Fiedler, Nikisch, Loewe, Schillings, Mengelberg, Toscanini, Stock, Walter, and many others were not calculated to cure him!

At about the time of his first exposure to Bruckner John read a review of European composers then contemporary, in which Mahler was favorably compared to Richard Strauss. John had heard a good deal of Strauss and had greatly enjoyed his music, but he had heard or read no Mahler. Fortunately the library loan collection included Mahler's *Second Symphony*, the monumental and dynamic quality of which was self-evident even without a performance; John did not physically hear the work until several years later, but he practically committed it to memory within a few months of his first glimpse of the score. When the donor of the scores discovered this, he added several more Mahler symphonies to his collection, and John was soon closely familiar with them. Two or three years later the orchestra performed Mahler's *Fifth*, with what effect upon John the reader may imagine. As the family purse could hardly finance musical pilgrimages to New York, John had to miss hearing Mahler as a conductor in this country, but later he heard him in Europe direct a number of general programmes as only he could direct, and finally he heard both the initial performances under Mahler's own baton of the colossal *Eighth*. I am afraid that John even today is as incurable a Mahler as a Bruckner addict.

In due course John found himself in charge of the music department of a Middle Western state university, and, again in due course, after developing certain other musical fields which had to be built up first, saw his way clear to broaden the scope of an already meritorious student orchestra. The student members came from very different environments from that which had enabled John to attend symphony concerts and study scores during his childhood and adolescence; in most of the communities from which these students came to the university symphony orchestras were not only out of sight and hearing, but totally out of mind, as witness the fact that few of these students had even availed themselves of the opportunity to listen to symphony concerts by radio. That this was due to lack of direction rather than lack of interest was soon demonstrated by the enthusiasm with which the really musical contingent in the student body responded to whatever musical opportunities were offered by the University. Moreover, the interest in high school bands which had followed the first World War as a matter of course had in certain of the large high schools grown into an interest in school and community orchestras; and, while most of these orchestras were wary of attempting entire symphonies even from the earlier masters, and certainly were not even talking about Bruckner and Mahler, girls and boys often came to the University with four years of fairly good fundamental routining in a pretty respectable orchestral repertory, and a good proportion of these had sufficient natural curiosity and technical foundation to study with enthusiasm and success

the standard symphonic literature from Haydn and Mozart to Brahms and Tschaikowsky.

In survey courses John had played whole Bruckner and Mahler symphonies to successive classes whose members had responded to these much-abused composers with an enthusiasm which suggested that Bruckner and Mahler today need not be difficult to hear unless prejudice derived from critical readings makes them so. By coincidence the score and parts of Bruckner's *Fourth Symphony* proved to be quickly available at a moment when many of the orchestra members were studying Bruckner in one of the survey classes; a good phonographic recording had become available shortly before this, and there had been good radio performances within the year by two leading orchestras. The moment seemed propitious to "read Bruckner's *Fourth* for practice"; and the reading went so well that, not long after, an orchestra consisting of half-a-dozen faculty members and more than ninety students presented the work in a public concert. The audience was no less enthusiastic than the performers: it should be stated here that this audience, mostly local and non-professional, had become intelligently and attentively familiar with the usual classical literature at performances by the University Symphony Orchestra and with a considerable body of modern symphonic material through annual visits of a fine professional orchestra, but had not been so preoccupied with musical affairs elsewhere as to commit the natural error of reading reviews of metropolitan concerts. Many of these lay enthusiasts listened regularly to the NBC and Philharmonic-Symphony broadcasts as well; but musical interest in the community was wholesomely individual and unorganized, with notable freedom from "study programmes" and other such second-hand attempts to learn music by garbling and gabbling. In short, a lay audience pretty well acquainted with Haydn, Mozart, Beethoven, Schubert, Schumann, Berlioz, Liszt, Wagner, Brahms, Tschaikowsky, and Franck, and not unacquainted with Bach and Handel on the one hand and Strauss, Debussy, Ravel, and Sibelius on the other, but quite innocent of the supposed critical "authority" of Hanslick and later pontiffs, found Bruckner's *Fourth Symphony* delightful, and a few months afterward responded warmly to his *Quintet* for strings. The inquiry is now to be heard from these same students and their public, "When will the Orchestra play some Mahler?"

And why not? — Bruckner and Mahler are logical successors of earlier masters, just as these in turn took what their predecessors left them and added their own individual contributions in terms of personality and outlook. Shakespeare to the contrary, there is probably no ethical reason why an unmusical person should concern himself with music at all; but the man who has "music in his soul" will do well to nourish his spirit by listening to what the composers have to say to him rather than to the chatter with which uncreative men try to explain and evaluate it. We justly ridicule certain governments for demanding that music shall

express political ideas, yet we permit ourselves to be bullied into supposing that it must exemplify esthetic canons, which are themselves too often only the expression of professional politics. The experience of John and his pupils at least shows that Bruckner, and probably Mahler, may awaken a spontaneous and valid response among people whose only "preparation" is that of listening to other fine music, without prior critical or academic mortification of the flesh and spirit of the sort commonly considered indispensable among the would-be elite. There seems no reason why other American music-lovers might not come honestly by a love for Bruckner and Mahler by similarly direct means — get them played by students and their teachers without the formality of critical baptism.

Of course, to state that playing and hearing a composer rather than reading about him may lead a group to appreciate him does not imply that there are no difficulties in getting acquainted with Bruckner and Mahler. For instance, there is the undoubted fact that their symphonies are longer than average. If a man feels that his own time is too valuable to devote from fifty to ninety minutes consecutively to one work by one composer, after all he has his own life to live and his own time-table to draw up and follow if he can; the chances are that, if he likes music well enough to listen to it attentively, and listens to it attentively enough to like it, he will enjoy a long symphony every now and then — as witness the recent "discovery" of Schubert's *C-major Symphony* by our public. What is most important to the layman is that he shall not try to improve his musical digestion by dosing himself with critical poison. Even so, the factor of actual rehearsal time may be formidable in the sight of a professional conductor with from six to eight hours available in which to prepare one, two, or even three full programmes; all the more reason, then, why part at least of the performances of works by our two exponents of "heavenly length" should be entrusted to such amateurs as have the time and devotion to expend in working up a good performance.

Quite clearly the economic question of extra players is more easily answered in the amateur than the professional world. In pre-War Germany and Austria extra players of good skill were usually available from the nearest army post at a very nominal fee; today in America the extra players must be paid full rates, which nobody begrudges them if they get the engagement — unfortunately it is usually simpler to play something else, in which case Bruckner and Mahler are not played and the extra men are no better off than ever. Competent amateurs may not be plentiful; but, if they are available, compositions for large orchestras may be played without pecuniary bankruptcy, at least.

Technical difficulty is not a great stumbling-block in Bruckner to an orchestra, whether professional or amateur, which has developed sufficient skill to play the Wagner preludes well. True, Bruckner often forgets that he has not an organ at his disposal, and demands of wind-players a capacity and control of breath which many amateurs cannot

develop in such scanty time for individual practice as most of them can command; "John" reports that he found it helpful to include in his orchestra a few extra wind players, not for promiscuous and noisy doubling, but to relieve the solo players altogether in ordinary *tutti* and to double with them in a few of the more overpowering climaxes. With a little help of this kind conservatively administered, players in an orchestra will find Bruckner's technical idiom not unlike that of Beethoven, Schubert, and Wagner, while the conductor will find that Bruckner "comes out" with clarity and orchestral balance considerably more readily than Brahms and certain others whose difficulties players have gladly mastered by sustained hard work.

Mahler, on the other hand, often does demand virtuoso technical powers of his players, and, in addition, demands the full exercise of these powers during the entire duration of symphonies long enough to occupy an entire programme. In the nature of things an amateur player of whatever skill has some other occupation which takes most of his time, and thus cannot devote long hours consecutively to instrumental practice; it would be much easier to find a group of amateurs who could work up and play separately each passage in a Mahler symphony than to find a group every member of which could physically carry the entire work through consecutively without getting fagged below the threshold of efficiency, simply because most of them would not be hardened by long individual practice to the point of playing at the absolute top of their bent for ninety minutes running. "John" has not yet produced a Mahler symphony with amateurs, but he has a plan. — When most of his wind players had just completed a week's trip with the University Band in which they played three concerts daily, he took advantage of their temporary condition of athletic prowess to present a two-hour programme drawn from Wagner's *Ring*. In the future he hopes to capitalize some similar opportunity in terms of one or two movements of a Mahler symphony, preferably in a year when relatively few of the principal players are due to graduate; the year following might be the auspicious moment for the entire symphony, with the advantage that some of it would have already been carefully rehearsed at the time of the first venture. Before presenting any Mahler symphony in whole or in part John plans to present some of the songs with orchestra as an introduction to Mahler's style for both orchestra and audience.

As the world is going now, the chances are that we in America must depend more and more upon ourselves to prepare and perform the music which we wish to hear. It is even possible that the world must depend upon us for a while to keep the best music of the past two centuries in actual performance anywhere. Even if this last is not the case, it is surely not too much to say that European music during recent years has tended decidedly toward the expression of disillusionment and despair under a thin defensive veneer of indifference and nonchalance; let no man blame artists who have had to endure recent living conditions

abroad if they find themselves unable or indisposed to sing the aspirations and ideals of a brighter day, yet those aspirations and ideals are as needful as ever and must be sung and sung again. That young Americans are performing the greater music of a more hopeful era because they enjoy it and thrive on it is a phenomenon too precious to be neglected, and that their instinctive and uncorrupted response to what is high and noble extends to Bruckner and Mahler is but added evidence that now is a good time to adjourn preaching, for practice has begun.

#### WNYC AND WQXR BROADCASTS

One of the noteworthy features of the WQXR broadcasts of Bruckner was the performance of Bruckner's *Quintet (Adagio)* by the Vienna Chamber Orchestra (Carl Bamberger, Conductor) on March 15th. Recordings of Bruckner and Mahler works were broadcast regularly by both stations. In February the Municipal Station put all available Bruckner and Mahler recordings on the air.

#### SEVITZKY BROADCASTS BRUCKNER'S "TE DEUM"

On March 20, the Indianapolis Symphony, the Indianapolis Symphonic Choir, and soloists (Fabien Sevitzky conducting) broadcast Bruckner's *Te Deum* over C. B. S. This was the second broadcast of this work over the Columbia Broadcasting System. The orchestra, chorus, and soloists acquitted themselves well under the authoritative leadership of Sevitzky. Additional broadcasts of Bruckner's music would certainly be welcome.

#### KINDERTOTENLIEDER PRESENTED BY CONVERSE CLUB CHAMBER ORCHESTRA, BOSTON, MASS.

(Stanley Hassell, Conductor; Evelyn M. Duncanson, Soloist; May 9, 1940)

. . . The "Kindertotenlieder" (which may be translated as "Songs on the Death of Children") were composed in 1902, inspired by verses of the poet Rueckert. As he wrote his five songs Mahler reportedly was obsessed with the thought that his own first child might die young, which actually occurred before five years had passed.

A first hearing of music so tenderly wrought, yet in an idiom of much complexity, can give one only a notion of its beauty. One's first impression is of sheer loveliness of sound, the combination of soprano and unusual orchestral tint — especially of the woodwind instruments — which Mahler favored.

Mr. Hassell must be complimented upon his enterprise in preparing music of extreme difficulty that demands a skilled and well-rehearsed orchestra and a singer of utmost musicianship.

JORDAN HALL, *Boston Globe*

"Better late than never" might well be said of the performance by the Converse Club, at Jordan Hall last evening, of Mahler's "Kindertotenlieder," freely translated as "Songs on the Death of Children," composed nearly 40 years ago and never before heard in Boston, though Dr. Koussevitzky once privately threatened a performance and Bernard Zighera actually announced one for last winter. As explained in these columns last Sunday, the performance by the Zighera Chamber Orchestra went by the board because the only available score was in use in New York at the time.

The singer last evening was Evelyn Duncanson, soprano, and of her, as of Mr. Hassell and his orchestra, it may be said that she brought to her task earnestness and devotion. . . . We are, however, greatly indebted to Mr. Hassell for Boston's introduction to a singularly moving work and one without precise parallel anywhere.

WARREN STOREY SMITH, *Boston Post*

# Mahler as a Potential Public Favorite

BY WILLIAM PARKS GRANT

## I.

ONE of the conspicuous musical developments of the past decade has been the emergence of the music of Sibelius from obscurity to what might be termed popularity (in the best sense of the word) and with it a corresponding favorable critical re-valuation as to its importance. In 1930 the Sibelius repertory was fairly well confined to *Valse Triste*, *Finlandia*, and the piano *Romance in D-flat*, none of which are very important or characteristic of their composer. About that time the writer heard a perfectly competent professor of music history hold up Sibelius as an example of a composer who had "died," as far as importance of output was concerned, many years previously, along with Richard Strauss and Stravinsky, of whom his opinion is still generally the accepted one.

About 1931 appeared the first of the long series of phonograph recordings of Sibelius works, originally sponsored by the Finnish Government, later continued by the Sibelius Society. The public and critical reception of these recordings was more than favorable; soon Sibelius's name became a common one on concert programmes.<sup>1</sup> Although Olin Downes and Cecil Gray<sup>2</sup> had long since called attention to the importance and neglect of the Finnish master, it was now admitted generally that he had surely been badly undervalued and the music-world set in to make up for lost time. Sibelius rapidly passed Stravinsky, Richard Strauss, and the late Maurice Ravel as the name most frequently mentioned as "the greatest living composer." His symphonies were accepted on an equal footing with those of Mozart, Beethoven, and Brahms. Thus Sibelius has had the satisfaction of living long enough to see himself become a "classic," and, although the Sibelius repertory still has not been thoroughly explored, quite a number of his works are now frequently heard on our concert programmes. A cynic might observe that he has become so well known that even the newspapers, the Hollywood glamour-merchants, and *The Saturday Evening Post* know who he is. During the recent Russian-Finnish War his *Finlandia* was sometimes used as a signature-piece for radio news-bulletins (with little thought of the then-existing neutrality regulations), and news items about him often appeared in the daily papers.

<sup>1</sup> Although whisperings about conductors who "cannot read an orchestral score" are doubtless false, it is none the less pertinent to note how frequently the first recording of certain compositions has led to epidemics of performances of those pieces throughout the country. But it would be stubborn and foolish for a conductor to refuse to use recordings in studying new pieces.

<sup>2</sup> See *A Survey of Contemporary Music* (1924), pages 184 to 193.

## II.

How can we account for this sudden rise in favor and importance? Two reasons suggest themselves.

*First:* Sibelius's music was made *available*. Beethoven and Mozart would not be the favorites they are today if artists restricted themselves to but half-a-dozen of their works and performed these only on rare occasions. The older readers can remember how Brahms, Wagner, Debussy, and Richard Strauss surmounted public and critical indifference and hostility because performers who had faith in them *insisted* on programming their works.<sup>3</sup> Furthermore, Sibelius's works were made available in that form which permits many hearings and adequate familiarity — namely, phonograph records. This is surely the "acid-test," and these compositions wore well.

*Second:* In 1930 extreme dissonance was the most conspicuous feature of modern music. The ultra-moderns considered the increasing use of dissonance synonymous with originality, the use of a common triad hopelessly old-fashioned. A music-world weary of dissonance heartily welcomed this music which was so thoroughly individual, yet not merely eccentric, different, but not painful to the ears, enigmatic, yes, but understandable eventually. It was seen that the axiom that the path of musical progress and originality was the path of more and more dissonance was a false notion, that esoteric music could quite possibly be the work of a self-conscious charlatan, rather than "a new soul-experience" or "the music of the future." The very thing the world had wanted was found right under its nose, for Sibelius's name had long been familiar. Today, partly due to the Sibelius influence, extreme dissonance is decidedly "dated."

## III.

If the music of Sibelius can achieve such a conspicuous rise in favor, the music of Mahler is capable of a similar accomplishment. It could quite possibly even eclipse the music of Sibelius in popularity because it is much easier to understand. The music of Sibelius is by no means easy of approach; it is stark, bleak, cold, ascetic, and enigmatic. But the music of Mahler is warm, rich, tender, poetic, friendly, human, and open. He takes us into his confidence; we get acquainted with him quickly. Sibelius is something of a "composer's composer"; he writes primarily for himself, like Beethoven in his later works. Mahler strove to make his music easy to understand for the layman of little musical experience and in this writer's opinion, succeeded, though it should by no means be inferred that his music is shallow. Surely, if Sibelius can become such a favorite, Mahler can at least equal him.

Paradoxically the music of Sibelius, who is considered a nationalistic composer, is much farther from the folk-song than the music of Mahler,

<sup>3</sup> Even as late as 1910 a Wagner opera with Toscanini conducting brought but a poorly-filled house at the Metropolitan. If Toscanini were to conduct *Tristan and Isolde* at the "Met" today, standing-room would be sold out well in advance.

who is looked upon as an international and eclectic composer. Taken as a whole, Sibelius's output contains more than a few compositions of trivial value — most of them fortunately obscure; Mahler's output is more uniform in value, for there are no skeletons in the Mahler closet. Sibelius is doubtless more thoroughly original, as very little of his mature music shows the influence of another composer; yet Mahler, despite frequent evidences of the influence of Wagner, Beethoven, Bruckner, Schubert, and numerous others, still leaves the final impression — which is what counts — of being different from anything one has ever heard, for his music is unconventional, zestful, and refreshing, even though it is by no means modern.<sup>4</sup> It is, however, an important — though neglected — link between the Wagnerian school and certain modern schools. It is quite possible that the neglect of Mahler has increased the difficulty of our approach to the music of Schönberg and his followers.

The question may next be asked: "If Mahler's compositions were given more frequent performances, can we be positive that they would increase in public favor?" Of course, no one can say definitely, but we do know that before the Reign of Force became dominant in Europe, Mahler's popularity made excellent progress in Austria, Czechoslovakia, and Holland, due to frequent performances. That he has never had an adequate hearing in most other countries is admitted even by his critics. So it is entirely possible that some day a Mahler performance may no longer be an unusual event.

In these times of strife and turmoil, it seems only natural that music of an escape-from-reality type will be more and more in demand. One of the composers whose music is best suited to supply such a demand is Mahler. Good examples of compositions of his which are steeped in such a mood are the *Second Symphony* and the exquisite song *Ich bin der Welt abhanden gekommen*.

A hesitating conductor might point out the length of Mahler's symphonies and the large number of instruments they require and shake his head. But length has not interfered with the popularity of Beethoven's *Ninth Symphony*, Wagner's operas, Handel's *The Messiah*, or Bach's *Passions* and *B-minor Mass*. Several fairly recent best-selling novels were conspicuous because of their length; one, made into a film lasting four hours, is being shown to crowded houses. Eugene O'Neill has written some nine-act plays which have been quite successful. No, contrary to common opinion, this is not entirely an age of brevity, but even if it were, Mahler's songs, which are not at all long, would be as much favorites as those of Schubert or Brahms, if given a fair chance.

The size of Mahler's orchestras is considerably more of a bogey-man, at least in a country not yet fully recovered from the depression and

<sup>4</sup> It was worthwhile to point out here that *any* music, no matter how old, which is individual and unconventional, is always viewed with favor by the enthusiasts for modern music. Much of Bach's music was far ahead of his time; hence his ever increasing importance.

where a deficit is the normal result of the orchestra season. There are two answers to this. The first is that if the demand existed strongly enough, the large resources could be supplied. Wagner's *Ring* and Strauss's *Der Rosenkavalier* are favorites in the opera-house, even though the demands are large. The second answer may be found again in Mahler's songs, all of which call for a small orchestra. Whimsical, humorous, naive, tragic, introspective, and mystic by turns, most of these lovely works were originally written with orchestral accompaniment rather than piano, as is the case with almost all other songs. How often when a fine guest artist sings *Lieder* at an orchestra concert we realize that the accompaniment, originally for piano, sounds clumsy or unidiomatic when transcribed for orchestra. For such occasions Mahler's songs, woven so perfectly and so inevitably for voice and orchestra, would surely fill a real need.

#### HOWARD BARLOW BROADCASTS BRUCKNER'S *NINTH*

On June 9, The Columbia Symphony Orchestra under the direction of Howard Barlow broadcast Bruckner's *Ninth* over the Columbia chain. Mr. Barlow's reading did justice to Bruckner's last symphony. Those who heard the performance probably wonder why Mr. Barlow had not broadcast a symphony by this master before, for his interpretation proved beyond any doubt that one doesn't have to be known as a world famed Bruckner specialist to catch the spirit of this devout composer's music.

#### STATE UNIVERSITY OF IOWA ORCHESTRA PERFORMS BRUCKNER'S *FOURTH* (February 28, 1940)

It is our privilege to report today that Doctor Clapp and his musicians brought us Anton Bruckner's Symphony No. 4 with such warmth of tonal expression, with such understanding and interest in their music that the large audience was able to glory in the beauty, the color and the inventiveness of the composer's score rather than to become restive as might easily have been the case with so lengthy a work.

If nothing more, Doctor Clapp revealed by the performance how well he has trained his musicians, and also he disclosed how completely he has brought to them an understanding of and appreciation for the work of Bruckner, a composer who certainly should be heard frequently regardless of how long his compositions may be.

RON TALLMAN, *Iowa City, Iowa, Press-Citizen*

. . . After the intermission came the seldom heard Fourth Symphony of Anton Bruckner, subtitled "Romantic." It took more than a little courage for Dr. Clapp, the orchestra's conductor, to program a Bruckner symphony, and especially to program it for a non-professional orchestra. Bruckner is easy for neither player nor listener and, while the "Romantic" is not Bruckner at his intellectual peak or most difficult, it is, nevertheless, an excellent work with which to begin an acquaintance with him.

It is not my purpose to give a detailed analysis of the "Romantic" movement by movement. Suffice it to say that the four movements of the symphony are linked together by a subtle transformation of the theme stated by the horns at the opening of the first movement. The horn call was used to suggest the pastoral, the military, the hunt, the dramatic.

And to Dr. Philip Greeley Clapp, who has labored so long in the service of Bruckner and in the developing of an orchestra which can turn out so excellent a performance of a Bruckner symphony, especial thanks.

THOMAS SCHIERREBECK, *The Daily Iowan*

# Triumph and Farewell: Bruckner's *Eighth* and *Ninth*

BY GABRIEL ENGEL

## THE EIGHTH

THE resourceful generation of fresh thematic life out of a few given motivated sources; the exploitation of such cumulative content through a vital polyphonic idiom; the logical federation of a whole vast symphonic structure, culminating in a grandiose climax, the welding of the principal themes of all four movements into a single choir of triumph — these are some of the salient features which, already familiar in earlier Bruckner symphonies, attain supreme representation in the *Eighth*. In this symphony, at last, is unfolded in full grandeur the sublime Christian epic of human suffering, humility, and transfiguration through Faith that had been the gist of Bruckner's symphonic problem from the outset. Not the somewhat theatrical *Third*, not even the *Fifth*, that mighty, austere utterance of his middle years had pierced so deeply into his soul for its roots. The tragic implications of the *Fifth* were mere passing clouds beneath the radiant sun that shone steadfastly over Bruckner's tetralogy in major keys. The portentous opening movement of the *Eighth* ushers in a change in his spiritual world no less drastic than the sudden sunrise of the *Romantic*. The *Fourth* seems literally to have sprung from Bruckner's ecstatic happiness in Wagner's recognition; the *Eighth*, conceived immediately after Wagner's death, is an eloquent witness of the grim impress made upon Bruckner's spirit by that event. The rude shock of the cymbal clash climaxing the "Adagio of Premonition" in the *Seventh* was more than Bruckner's realistic record of the moment of his great friend's passing; it was also the herald of a rude awakening in his own creative world, a dawn less rosy, but affording a closer, more human view of life.

Three score years had passed him by. Neglected and obscure he suddenly felt himself more alone than ever before. Yet he was remarkably robust despite his sixty years. More than ever he was impelled by the urge for symphonic creation. The contemplation of Death, looming before him like a grim spectre, and the realization of abject solitude, conjuring up the panorama of a life-long struggle against adversity, determined the tragic, introspective content of his new symphony. C-minor, the key of Beethoven's own "Fate" Symphony, the key which Bruckner himself had adopted for his *First* and *Second*, beckoned to him out of the dim past with the promise of new, more significant revelations. Even the pointed rhythmic contours of the main theme of the *First* seemed once more to bristle with life unbounded, clamoring for expression. Thus reaching back to this initial work and gathering up in the course

of retrospect the essential wealth of all the intervening symphonies, Bruckner consciously made his *Eighth* an intensely personal expression, almost his spiritual autobiography in tone.

The tragic caste and unusual length of the opening section made inadvisable the traditional juxtaposition of a correspondingly grave, extended slow movement. Faced with the same problem in his *Ninth* Beethoven had interposed a fleet, stirring *Scherzo*, thus not only relieving the spiritual tension aroused by the first movement, but also freshening the listener's mind for the further weighty revelations of the slow movement to follow. Therefore Bruckner also decided to accord his *Scherzo* second place in this symphony.

The first movement in its original form was completed in the latter part of 1884 in Vienna. Before continuing on to the *Scherzo*, Bruckner experienced a miracle. The *Adagio* of the *Seventh*, given its premiere at Leipzig on December 30, was hailed by experts as a symphonic masterpiece. At once the elderly, shy professor of counterpoint became the most discussed figure in the realm of serious music. He had long since reconciled himself to a life of obscurity, sighing, "Surely I am the most incurable idealist to go on composing at all." Nevertheless his happiness in this wholly unexpected world-fame was unbounded. He re-experienced this brilliant triumph over long prevalent adversities in the fictitious person of the typical Upper-Austrian rustic "Michel," whom he subsequently named as the hero of the *Scherzo* of the *Eighth*.

Most, if not all, of the naive "Michel" story, was a mere afterthought, much as the narrative background Bruckner attributed to the *Romantic*. The original manuscript at the point of the first entry of the "Michel" motive bears the notation "Almeroth." Carl Almeroth, a lovable, genial Upper-Austrian provincial, was one of Bruckner's dearest friends. A native of the charming little town of Steyr, where Bruckner composed the *Scherzo* and later movements of the *Eighth*, he (and not the symbolic "Michel") was the character the composer intended to embody in this lumbering, sturdy, good-natured motive. Doubtless it occurred to Bruckner afterwards that Almeroth's nature was typically Austrian. Thereupon he evolved the rest of the "Michel" background for the symphony, carrying some of the incidents over into the *Finale*. As a valid commentary on the Promethean happenings mirrored in the score it is certainly inadequate. Not unless one is willing to concede Bruckner that peculiarly Mahlerian trait of symbolism is the miraculous transformation of "Michel" to "St. Michael," allegedly celebrated in the closing triumph of the symphony, in the least plausible.

Letters Bruckner wrote to the critic Helm and the conductor Weingartner years after the work was finished are the chief authorities for the details of the "Michel" legend. Said Bruckner to the former with special reference to the *Scherzo*, "My Michel typifies the Austrian folk-spirit, the idealistic dreamer, not the German spirit, which is pure *Scherz* [jest]." Thus unconsciously, perhaps, Bruckner made his "Michel" a

self-portrait. During the years (six in all) he spent in shaping and re-shaping the symphony the figure of "Michel" virtually came alive for him. If the setting of any passage containing the "Michel" motive proved particularly troublesome he would exclaim in vexation, "Look out, Michel! Better not annoy me too much!"

A representative portion of Bruckner's commentary on the *Scherzo* follows. "Michel, pulling his cap down over his ears, presents his head, crying, 'Punch away! I can stand it.'—Wearied by the shower of buffets he would like to sleep, but recurring blows keep him awake. He swings about him desperately, scattering his enemies, and emerges victorious through his persistence.—[Trio] Michel dreams of the country—He longs for his sweetheart—He prays—Sighing, he wakes to rude reality."

In the *Finale*: "Michel, from a place of concealment, steals a view of the pomp and ceremony [The meeting of the emperors]—He is pursued and captured by Cossacks—The trombones begin a funeral chorale for him—He squirms away and, chuckling, disappears high up in the flutes."

The absence of reference to "Michel" in Bruckner's remarks concerning the first and slow movements is added proof of the synthetic nature of the whole legend. One is reminded of his inability to "remember" the imagery underlying the *Finale* of the *Romantic*. Many poetic commentaries, some perhaps even contradictory, might be adduced to "illuminate" the content of the *Eighth*. So vast is its scope that cosmic imagery alone may conjure up an even remotely adequate verbal parallel. Like Beethoven's *Eroica* it defies and beggars explanation. It stems from the inmost depths of absolute music, the arcana of which no verbal abracadabra may pierce.

The very identity of the tonic is veiled as the opening theme is first presented in lightly sketched outline against a mystic background of string-tremolo tinged with sustained horn-tone. What a strange, yet masterly theme this is! Occupying scarce three full measures in animated tempo, it consists of the four source motives of the symphony, one of them the mere rhythmic pattern formed by the union of the other three. This rhythmic profile, closely akin to that of the unison outburst at the beginning of Beethoven's *Ninth*, at once commands the centre of attention. Set forth in relief through a series of uninterrupted recurrences it is the vehicle upon which the three tonal motives grope upward through modulations to the light of definite tonality. Since all the thematic life of the symphony is drawn from these motives, they are eminently worthy of analysis. They are (a) Two tones a second apart. This interval dominates the heroic passages. (b) Two tones a sixth apart. This interval, notably prominent in Bruckner's most heartfelt inspirations, governs those particularly expressive moments of the *Trio (Scherzo)*, *Adagio*, and *Finale* given over to songs of yearning. (c) A lyric group of five closely-knit tones, the chief melodic element of the first theme-group and the source of numerous subsequent passages

filled with tender ecstasy. The first movement, *Adagio*, and *Finale* close with this motive. (d) The rhythmic framing of *a*, *b*, and *c*, already described. To the relentless persistence of this grim motive is due in great measure the deeply tragic undertone of the opening movement. Especially impressive is its appearance as pure rhythm (on a monotone in the brass) at the last climax of this section, the passage Bruckner aptly named "Death's Annunciation."

The lyric motive (*c*), at first the sole melodic phrase, at once spreads its wings. Inverted and augmented it bursts into flight, preparing the atmosphere for the "Bruckner Rhythm" (that irregular combination of two plus three quarter-beats particularly characterizing many of Bruckner's thematic ideas after the *Romantic*). Descending in a stream of impassioned phrases this first predominately melodic expression of the symphony resolves in a graceful cadence midst imitative echoes (woodwind) bearing the motive's original rhythmic contour.

The mode of thematic structure in this opening group, aside from the vastly richer motivated sources of the later work, is essentially that of the *Romantic*, a steadily rising edifice of uniform theme-blocks. Furthermore, this process in the *Eighth* goes on in a highly dramatic atmosphere. Levi, the great conductor who pronounced this work "the crown of nineteenth century music," was the first to recognize the perfect centralization of the gigantic framework embracing a world of subtle and delicate details of construction. Wellesz, an unexcelled authority of our own day, choosing the opening theme-group of the *Romantic* and Brahms' *Third*, has shown the superior sensitivity of Bruckner's symphonic creative process over that of his German contemporary. How much greater a disparity could he have shown between them had he chosen Bruckner's immeasurably more masterly *Eighth*!

In the *Romantic* the advent of "Bruckner Rhythm" is sudden, spontaneous. In the *Eighth* it is heralded in advance. We glimpse its profile in the course of the opening theme-group. When it emerges full-blown, shaping the pure lyricism of the second group (song-group), it calls for no intellectual readjustment on the listener's part. The preparation, however, was not of the traditional "bridge" variety, but a new sort of process, resulting from the self-evolving dynamism inherent in the motive *c*.

The second theme-group is a song of ardent aspiration, its nobility precluding all eroticism. Anxious questions rising from the strings receive only partially reassuring answers in the less impassioned woodwind voices. Lingering sighs of doubt, skilfully drawn from an inversion of the song-theme, are stilled by the air of trust and solace spread by a fresh melodic structure previously unheard. Thus the intellectual factors swaying the first theme-group have been balanced by their emotional counterparts dominating the second.

There is an additional feature in the human make-up which determines man's heroic nature: the will — the spiritual force that makes

for human tragedy or triumph, depending on the degree in which its possession invokes resistance to adverse, destructive influences. This heroic element is the ruling quality of the third theme-group. A restless, staccato counterpoint in the strings provides the background for an increasingly animated interchange between horns and woodwind. Energetic motives, derived from the preceding theme-groups, enhance the power of the ensuing string-unison, striving upward toward a great climax by chromatic stages. Another striking motive, a broad downward-leaping seventh in trumpets and woodwind, adds to the growing agitation. Trumpet fanfares, obvious heralds of heroism are merely corroborative proof of the militant nature of this last group, bringing the exposition of the themes to a stirring conclusion.

The development section presents the titanic conflict of the three main factors: the mind, the heart, the will. The logical unfolding of such a struggle involves a climax of inextricably united elements, rendering ineffectual a traditional recapitulation of separate theme-groups. The air of suspense, mounting steadily through the violent encounters unfolded during the extended development, is maintained unabated throughout the recapitulation. Not until the last climax, at the very threshold of the *Coda*, is there a moment of relief, and then only a sombre one, described by the composer as the "ticking of the clock of Death." This intensification of suspense until the end is a formal doctrine already effectively formulated in earlier Bruckner symphonies, but never so convincingly as in the *Eighth*.

Two summits stand out along the rising skyline of the development. The first, the product of united thematic elements of the first two theme-groups, is finally scaled by means of a grandiose combination of these elements in inversion and augmentation. The second, attained just before the *Coda*, is that realistically dramatic moment which Bruckner in a new moment of foreboding, happily not realized until more than a decade later, described as his own "Death's Annunciation." The stark profile of the opening theme, grimly bereft of all musical quality save pulse, is a vivid tonal portrayal of the inexorable pounding of Fate upon Life's door. What avails it to continue the despairing struggle against a force beside which the united strainings (development section) of mind (first theme-group), heart (second theme-group) and will (third theme-group) sink to pigmied insignificance? The *Coda*, an epilogue of utter resignation, presents a sudden contrast, intensifying the tragic implications underlying the whole movement.

The *Scherzo*, like all these lighter, fleeter-footed Bruckner movements in triple-rhythm, presents no formal problem. In a mystic atmosphere of whispered-string-tremoli pierced by horn-tone, the celebrated "Michel" motive (already discussed) lumbers good-humoredly into the changed, rustic foreground. Inverted the motive becomes still more droll. "Michel is sleepy," explained Bruckner. A delicious bit of instrumental realism is the stinging effect of plucked strings combined with humming, bee-

like horn-tones, portraying the rude manner in which "Michel's" sleep is disturbed by unpleasant outer influences. The *Trio*, in double rhythm (two-four) is to some extent "Michel's" *Traumerei*, filled with his daydreams of his rustic homeland. Is it not Bruckner's own dream of longing, reaching back from the imprisoning huddle of the metropolis, the home forced upon him by circumstances, to the wooded, mountainous freedom of his native Upper Austria? Fragments of yearning, folk-like strains, conjure up passing visions of the scenes of his childhood. The occasional arpeggiated voice of the harp, most rarely heard in Bruckner's orchestral family, intensifies the nostalgia of "Michel's" daydreams.

Three motives combine to produce the opening theme of the *Adagio*, the wonderful movement which arose, said Bruckner, "from looking too deep into the eyes of a girl." The first, a long-drawn sigh, reflecting yearning, and the second, a broad, diatonic descent, reflecting devout humility, form a question answered by the third, an upward mounting broken major-triad, bright with the promise of splendors about to be revealed. This sublime slow movement, the longest in symphonic literature, rises to unprecedented heights of devotional ecstasy over which the celestial voice of the harp hovers like a halo.

Upon a syncopated background of softly pulsing strings over a tonic organ-point of twenty measures, is unfolded the heartfelt initial melody. So naturally have familiar motivated elements been fused into this new melodic line that their presence, readily identifiable, nevertheless makes the impression of complete spontaneity. Out of an atmosphere of restrained melancholy, the latent depth of its pathos betrayed alone by the impassioned accents of the violin G-string's upper range, the prayerful theme mounts steadily, merging with the vision of splendor (referred to as the third motive). There follows now a song of fervent gratitude, a most natural supplement of the foregoing melody. Unmistakable in their inmost Brucknerian quality are the hymnlike fragments of chorale characterizing this passage. Ecstatic harp tones radiate from its melodic summit.

In the second theme-group the impassioned yearning and the devotional fervor dominating the two themes of the preceding group, respectively, are fused into an ardent song of hopeful longing. Against a background literally trembling with portentous expectation (string-tremoli) the full tuba choir proclaims the promise of Eternity. Again a hymnlike utterance, a resetting of the first part of this group, is the soul's grateful response to the message from Above. A brief interlude in triple rhythm prepares the scene for the return of the initial theme.

The restatement of themes already set forth, inevitable to symphonic form, is nowhere a severer test of the composer's resourcefulness than in the *Adagio*. Here, where the spirit of song must hold undisputed sway, the license that is the spice of the development section in sonata form is out of place. Certainly an atmosphere of deep contemplation and communion is ill-suited to the swift dramatic changes common to symphonic

first and last movements. Yet the necessary restatement of themes in the *Adagio* (in the manner of the classicists), the most skilful, elaborate ornamentation notwithstanding, involves some sacrifice of content to formal convenience. This was one of the vital weaknesses of traditional symphonic structure to the betterment of which Bruckner earnestly applied himself from the outset. No further evidence of his success in this respect is needed than the fact that his three last *Adagios*, the most extended slow movements in existence, nevertheless maintain the listener's interest so well throughout that they are universally recognized as great masterpieces. How Bruckner was able to accomplish this mighty feat can hardly be explained by emphasizing the richly varied motivation of his broad-winged themes. To point to the life-long, unswerving devotion to the grammar and poetry of polyphony that made it possible for him to recombine and reshape motives into thematic structures of constantly fresh interest is to advance a fact which, however, fails to pierce the essential truth, the inscrutable working of genius itself.

In the first restatement of the opening theme the bright, answering portion is intentionally omitted. The motives of yearning are reared to a tremendous climax, as though the whole cosmos were appealing for salvation. A world of subtle polyphonic detail is heralded by the echoing horn that follows closely upon the main melodic line. Reshaped and recombined the already familiar motives attain richer significance, revealing glimpses of loftier summits yet to be scaled by the indomitable spirit.

For the final restatement, embodying the triumph of the spirit, is reserved the thorough exploitation of the motive of splendor, thus far intentionally omitted. Here the horn fanfare of the first movement is reborn in a more heroic guise, unmistakably reminiscent of the Siegfried-theme. Bruckner explained this as a tribute to his great friend Wagner, as yet scarcely cold in his grave. The very Heavens seem to open to the overwhelming climax ushered in by this remarkable passage. The *Coda*, reminiscent of the beginning, presents for the last time the initial sighing motive over a sustained organ-point on the tonic. Gone, however, is the fleeting shadow of doubt that darkened the motive's first appearance. Yet the movement ends upon a note of devout humility. Resigned, but swayed by unshakable faith in Eternity, the glories of which it has beheld in revelation, it awaits the great release, the fateful signal of the "Clock of Death."

The unlimited thematic richness of the *Finale* shows that Bruckner had steeped his soul in the motivated life of this symphony more intensely than in any preceding work. In the increased subtlety and resourcefulness of its melodic derivations from the central motives already extensively exploited in the foregoing sections it is truly the crowning movement of the symphony. Bruckner did not merely compose the *Eighth* — he lived it. An inkling of the inspired abandon with which he set down this *Finale* may be gathered from the ejaculation "Hallelu-

jah!" written in his hand at the point of climax in the manuscript marked by the simultaneous entry of the main themes of all four movements.

Some of the "Michel" storied implications of the *Finale* have already been mentioned. Even Bruckner must have realized that the transplanting of his jolly legendary character into this scene of political pomp (the meeting of Franz Josef and the Czar at Olmütz) was stretching plausibility a bit too far. Nevertheless he naively conceals "Michel" where he may view the grand ceremony. Is not this "Michel" in reality the new Bruckner — as childlike as ever, but now a world-famous musician, a public figure in Austria, proudly bearing the decoration of the emperor's own order? His worship of rank and pomp can only be understood as closely akin to his devout participation in every detail of the church ritual. The emperor was to him a temporal symbol of divinity.

The harmonic foundation of the opening bars has a transitional effect, qualifying the abrupt change from *Adagio* to *Finale* character. Motives of a warlike nature serve as the backbone of the first theme-group. Prominent among these is a regular, rhythmic stamping, like the clatter of horses' hoofs suggesting the approach of squadrons of cavalry. Impressive instrumental coloring, horns, trombones, and tubas dominating, reflects the pomp of the occasion. Jubilant fanfares herald the great triumph now in sight. The "Michel" motive, wide-awake and armed for battle, is welded to the rest, lending the thematic scene freshness and jollity.

The second or song-group, rich in chorale fragments, is characterized by an air of prayerful devotion. This religious fervor is of a more impassioned nature than that of the chorale passages of the *Adagio*. It has a more rapid tempo and a vital supporting melodic line formed by a familiar motive descending inverted. The expressive voices of the solo horn and the violins in low register lend it increased pathos.

The third theme-group presents a remarkable paradoxical combination of underlying significances. Gracious melodies filled with the promise of peace spread reassuring wings over the disturbing burden of a martial rhythm in the strings. "A weak spot," some might say, "Remember, Bruckner was an organist." One is reminded of another example of "weak" instrumentation in the *Finale* of the *Seventh* which a great conductor of our own day "improved" by the transmutation of gut to brass. There has never been an orchestral master who could speak with greater authority than Bruckner on the most appropriate tonal setting of devotional subtleties. His "weak" scoring was dictated by an unerring instinct for the true instrumental color and an abhorrence of mere effect. Perhaps the conductors who tampered with Bruckner's scores half a century ago should not be judged too unkindly. In the theatrical shadow of Wagner most became Wagnerian. Bruckner, whose unique originality none could understand, they clothed in Wagnerian garb. It is high time the practice were condemned.

The contrapuntal skill with which the development is reared to an overwhelming climax, the simultaneous union of the principal themes of all four movements, beggars description. Heroic, warlike settings of familiar themes plunge the section into mighty conflict. The din of battle mounts, subsides, and mounts again to greater heights of fury. One moment we seem to be in the very midst of battle, next we catch its echoes from the distance. Chorale fragments are hurled into the breach to maintain unimpaired the heroic spirit. All depends on its ultimate triumph. The most impressive passage of the movement is the *Coda*, the overwhelming record of that triumph. A last powerful, austere presentation of the opening theme in the trombones; an equally heroic last appearance of the "Michel" motive in broad augmentation in the trumpets; and the tonal stage for the great triumph is set. The gloom of the initial key, C-minor, has been transformed (as in that other great symphony of Fate, Beethoven's *Fifth*) to the bright splendor of C-major. Now in the utmost imaginable splendor resounds the consummately welded choir of the symphony's four principal themes, a veritable apotheosis of Bruckner's polyphonic genius, rivalling in fitness that inspired march-Finale of Beethoven's *Fifth*, the inevitable peroration of the symphony's supreme homophonic master.

#### THE NINTH (FAREWELL)

During the five years he devoted to the composition and revision of the *Eighth* Bruckner enjoyed unusually robust health. It was not until his sixty-fifth year, the time of his first sketches toward a *Ninth*, that the chronic trend of a dropsic condition, the dread ailment which had carried Beethoven off at the summit of his creative power, evoked the foreboding that his days were numbered.

Thereafter his existence was swayed by a single longing: to be spared just long enough to finish his *Ninth*. With the inexorable advance of the disease this longing turned to prayerful obsession, in the despairing grip of which even his awe-inspired humility towards God underwent a singular transformation. The physician who regularly attended him at the Belvedere Palace (a belated, ironic luxury which the emperor had granted him near the end) has communicated some impression of the doomed man's religious attitude. Wrote Dr. Heller, "Often, I found him on his knees in profound prayer. As it was strictly forbidden to interrupt him under these circumstances I was compelled to listen to the most curious extempore interpolations in the traditional text. He would suddenly exclaim, 'Dear God, let me get well soon; you see I need my health to finish the *Ninth*.' A fervent, triple Amen and a number of resounding thwacks with both hands upon his calves announced the conclusion of his touching appeal."

The faith which plays a paramount role in the spiritual content of the *Ninth* is beyond formal creed and ritual. Its essence is a direct kinship between man and God. Being of a universal nature it requires a

universal medium of expression. This alone explains the almost total absence in the *Ninth* of Bruckner's characteristic chorale idiom.

Far more apt a name for this symphony is "Farewell" than "Unfinished," for when the last note of the *Adagio* has died away there remains no expectation of further revelations to come. Those familiar with this close only in the Wagnerized "Loewe" version may regard such a view sceptically. There Bruckner's intention has undergone a drastic change echoing the end of *Parsifal*, its air of resignation suggesting a sinking back to earth. In the original manuscript Bruckner's *Adagio* is marked by no such descent. Ascending ever higher it merges in an ecstasy of affirmation with Eternity. Though the futile, tortured strivings of his last hours to formulate a suitable *Finale* show that Bruckner himself considered the symphony unfinished, posterity has come to view its three movements as a consummate framework for one of the noblest, most inspiring revelations in tone.

The very opening bars present a synopsis of the symphony's content. Brooding contemplation of the ultimate mystery, Death and the Hereafter, is suggested in this celebrated passage. Like a solemn chant is the initial motive, softly intoned by a choir of eight horns against a portentous background (tremolo). The grimness of its sombre rhythm is accentuated by hollow, choked trumpet-tones. Its mournful pathos midst austere majesty suggests man's last backward glance from the threshold of the Unknown. One terrifying instant of perplexity, and then the parting soul leaps aloft to meet the dazzling revelation of Eternity. Words cannot describe the splendor here attained by the horns, which have burst their unison fetters to form a golden halo of harmony. Descending they sound like jubilant angel voices bearing a wondrous message down to earth. Their cadence is the spreading of its gracious burden over all mankind. Such is the mystic underlying significance of this richly motivated introduction to the first theme-group. Yet the presentation of these motives has achieved a symphonic purpose far more important than the mere formulation of a musical passage, however beautiful. It has released the elemental forces from which the main theme is to evolve.

The breathless pause at this point is a vivid record of personal reaction, the reaction of one who has beheld a miracle and is completely overwhelmed. As sometimes in a poem a fresh stanza will issue from an echo of the preceding verse, so the transfigured cadence of the opening passage lingers on in the episode that follows. Enharmonic transformations on ascending planes of tone and volume reflect the growth of tremendous tension in the face of a new, awe-inspiring disclosure. Downward leaping octave-intervals and descending groups of three quarter-notes anticipate the dominant features of the approaching theme. An ominous roll in the timpani intensifies the air of agitation. The thundering unison that bursts forth with cosmic power from the summit of this dynamic interlude suggests the very Voice of the Almighty. Was not this

the Voice of the trumpet-theme of the *Third*, speaking in the same key and rhythm, though subdued and diminished by infinite distance? Yet there It was but the Herald of a miracle to come. Here It is the Revelation Itself. Thematically it consists of two parts, a gigantic descent by octave-leaps and a broad, diatonic return aloft, gradually accelerated. The whole cosmos trembles with the irresistible force of its reverberations (timpani-roll), while plucked strings sound waning fragments of familiar motives, gradually releasing the overwhelming tension.

Out of one of these fragments, a descending sixth, is born the song-theme introducing the second group, a prayerful melody in the violins, unmistakably Brucknerian in the pure spirituality of its yearning. A gracefully encircling figure enhances its charm and expressiveness. Like the corresponding song-theme of the *Seventh* it is supplemented by an inversion of itself. Directed aloft it now points the way to a summit of jubilant ecstasy, the goal of the entire prodigally polyphonic song-group.

The character of the third theme-group is without precedent in Bruckner's symphonies. Hitherto it had been the vehicle of heroic elements, destined to sustain the conflict during the development. In the *Ninth*, however, the third theme begins on a note of infinite world-weariness, a longing for ultimate peace so overwhelming that it seems to span the whole universe. Though it culminates in a song of lofty aspiration, its kinship to the main theme of the song-group is not a close one, despite a slight physical similarity due to a community of motivated sources. Spiritually the later theme is a more impassioned expression. It might even be described as a broad paraphrase of the former, conceived in free fantasy. Thus on a note of high optimism the exposition is brought to a close.

The development presents a thorough exploitation of the themes and their motives on a gigantic scale. Its plan, like that in the opening movement of the *Eighth*, is an ascent over a gradually rising range of mountain-tops to a supreme summit. Darkness, the gloom of the earthbound, hovers over the first of these peaks. Occasional glimpses of radiance caught through the clouds intensify, by contrast, the dominant gloom. The motives employed are exclusively those of the introduction to the first theme-group.

In the next paragraph the grand unison theme of the first theme-group is the center of attention. It now becomes the material for a huge tonal structure, skilfully enriched with all the resources of the polyphonic master. The austerity of this passage is enhanced by the persistent reappearance of the gloomy opening motive in march-like guise. In the overwhelming climax attained by the exploitation of these elements the formal recapitulation is outstripped and absorbed. No formal consideration can hinder the onward and upward sweep of this dynamic, self-evolving expression. There is no let-up until that barrier-like moment of supreme tension, necessitating an abrupt pause. "For breath,"

explained Bruckner. Yet these full pauses of his at such moments are so inevitable, that this laconic explanation, true enough as far as it goes, must be regarded, along with the rest of his "explanations," as but an infinitesimal formulation of a cosmic underlying truth. The awe-inspired melodic fragments which first venture to open their timid lips after this pause, like those in the opening theme-group, reflect the tremendous impressiveness attained in the foregoing passage. Thematically there is in the augmented triplets a marked resemblance to certain parts of the *Adagio* of the *Fifth*. Actually they are directly derived from the unison-theme in the first theme-group. Not before the re-entry of the song-group does the listener become conscious of the identity between the climax of the development and the recapitulation of the first theme-group, already accomplished. From the shadow of the third theme's world-weariness issues the *Coda*, the most austere passage of the whole movement. The mournful, brooding initial motive and the startling upward-leap that followed it constitute this last paragraph's thematic bases. Increasingly terrifying in its grimness, it abandons the soul at the threshold of the Unknown.

[As in the *Eighth* (and for the same reason) Bruckner placed the *Scherzo* second among the movements of the *Ninth*.]

What could be more eloquent of his spiritual fortitude than this last *Scherzo*, created in a moribund atmosphere of searing physical pain? It is from every viewpoint his most vital expression in the lighter vein, surpassing all his earlier *Scherzi* in rhythmic variety, harmonic charm, instrumental color, and perfection of welding.

"When they hear that," chuckled Bruckner, "they won't know what to make of it; but by that time I'll be in my grave." He referred to the daring features with which the movement literally bristles. The heated arguments aroused among experts by the very opening harmony proved the accuracy of his forecast. Some claimed that it was derived from the celebrated harmonic outburst at the beginning of *Tristan*. Others insisted that it was a new discovery, *sui generis* in the grammar of tonal combination. Certainly none doubted the originality of its effect, framed in the unique rhythm that made it the veritable echo of Bruckner's gleeful laughter of anticipation. The source of this rhythm is in the opening theme-group of the symphony, where it appears as a supporting element in the trumpets during the grand unison theme. Its cachinnation dominates the entire movement, even the *Trio* section. There it acquires a new, taunting significance through inversion. It runs a mad, cross-country chase over every nuance of the *Scherzo*-mood from elfin playfulness to robust jollity. Alluring "Laendler" fragments burst from the spirited dance, imparting to it a distinct Upper-Austrian, folk-like flavor.

The *Trio* is a nimble, airy sequel, exploiting in lightning tempo an inverted portion of the opening scherzo-theme. A brief, witty, motive (that of the laughing rhythm inverted) dogs the heels of this whirling

creation, teasing it mercilessly as it seeks to retard its giddy flight. Irresistibly mischievous also are the singular supporting harmonies and the vivid instrumental coloring, plucked strings and solo flute venturing fleet arpeggiated interpolations. Even midst this carefree, rhythmic abandon there is a moment for pure song. A nostalgic memory of youthful bliss forever vanished finds expression in a melody of ardent yearning poignantly framed in the sorrowing voice of the oboe. The traditional return of the *Scherzo* portion rounds out the movement.

The *Adagio*, in some respects the most human as well as the most austere of Bruckner's slow movements, opens with a motive of infinite yearning midst utter loneliness. In the impassioned voices of the violins this motive, a rising minor ninth sinking back chromatically into a descending octave, seems the very essence of melancholy pathos. It suggests the weary, earth-bound soul, poised before its flight into the Unknown, putting the ultimate question, "Is Death the end?" Brooding sighs issue from its perplexed cadence, ascending insistently toward the light of Revelation. They culminate in a radiant E-major tonic harmony, a glimpse of the splendor of the Hereafter.

Portentous implications latent in the opening motives are stressed in the further exposition of this first theme-group. Terrifying in its austerity is the climax, a veritable apotheosis of the interval of the ninth. A series of boundlessly poignant outcries by the horns is answered by savagely blaring trumpet-fanfares against an orchestral background seething with agitation. This passage was significantly described by Bruckner as the "Motive of Fate." It is the symphony's most impressive embodiment of the startling upward-leap in the horns at the beginning of the first movement. There the span was but an octave, stern and inscrutable in its sharply rhythmic framework and unmixed instrumental coloring. Raised to a ninth, its eloquence enhanced by polyphonic setting, it plays an outstanding role in the thematic life of the *Adagio*. In major guise it is the exalted chorus of Fate beckoning from the gateway of Ineffable Glory.

A natural sequel to this is the ensuing, noble, placid melody which Bruckner named the "Farewell from Life." Its gravity is accentuated by a portentous roll in the timpani and a tremolo in the deepest strings. Austere chains of harmonized sixths in horns and tubas betray its unmistakable Brucknerian character. One beautiful theme follows the other in this sustained song theme-group, spreading burdens of wondrous solace, faith, and gratitude. The degree of pure lyric ecstasy here attained is matched only in the soaring section of the *Adagio* of the *Seventh*. In its sustained character, however, the singing quality of this last *Adagio* is supreme.

Until his last hour on earth Bruckner worked desperately over his futile sketches towards the *Finale*, which he was destined to abandon, a mere sphinxlike fragment. The quavering, incoherent pen-strokes on his note-paper near the end (the present writer is the proud possessor of

one of these precious pages) are eloquent of the unconquerable determination which still swayed his soul when his body had almost ceased to live and even his mind was fast merging with the super-earthly haze of mortal dissolution. Scattered words from the Lord's Prayer, decipherable among the pathetic scrawl, indicate the unshakable faith of the man in whose life and work the power of prayer had played so important a part.

Hugo Wolf was one of the last to see him alive. Though the faithful "Kathi" (Bruckner's house-keeper) told him at the door that the master was no longer rational, he begged permission to look at him once again. He tip-toed gently to the half-open door of the sick-chamber. In a simple bed, deep among a heap of pillows, lay Anton Bruckner. His face was extremely pale, his features shrunken, his lips transfigured by a smile. His gaze was fixed immovably upon the blanket which he struck rhythmically with his fearfully emaciated right hand, as though he were with his outstretched forefinger beating time to a music he alone could hear. Perhaps it was the *Finale*, which the master, already severed from all that was earthly, was taking with him to Eternity.

The American sculptor Kilenyi, when designing his celebrated Bruckner medal, was moved by the spiritual kinship between Dante and the composer to endow his conception of Bruckner's features with Dante-esque character. Surely the writer may be pardoned if he carries this analogy into the realm of poetry by applying to Bruckner a portion of Michael Angelo's sonnet-tribute to Dante.

"Into the dark abyss he made his way;  
Both nether worlds he saw, and in the night  
Of his great soul beheld God's splendor bright,  
And gave to us on earth true light of day:  
Star of supremest worth with its clear ray,  
Heaven's secrets he revealed to us through our dim sight,  
And had for guerdon what the base world's spite  
Oft gives to souls that noblest grace display."

MAHLER'S *ADAGIETTO* PERFORMED BY NEW YORK  
UNIVERSITY ORCHESTRA (December 19, 1938)

I am sure you will be interested to know that the rather youthful members of our orchestra played the *Adagietto* with the utmost fervor and intensity, and that their audience was apparently deeply stirred by their rendition.

MARTIN BERNSTEIN, Associate Professor, *New York University*

GOLSCHMANN ON BRUCKNER

. . . After the enthusiastic response of our public both Friday and Saturday, it is difficult to understand why Bruckner is not played more often. If there was a surprise for the public, it was to discover that the supposedly very "severe" Bruckner could be so enjoyable, even at first hearing. December 5, 1939.

VLADIMIR GOLSCHMANN, Conductor, *St. Louis Symphony Orchestra.*

## Overtones

### BRUCKNER SYMPHONIES GETTING MORE ATTENTION

*Barbirolli and Eugene Ormandy Especially to be Congratulated*

BY PITTS SANBORN

The following article appeared in the New York *World-Telegram* on February 3, 1940.

Just as MacDowell's music for the piano has come in hereabouts for a sudden revival this winter, so have Bruckner's symphonies. For years Bruckner seemed to be winning the local battle against prejudice. Willem Mengelberg, Leopold Stokowski, Bruno Walter, Otto Klemperer, Arturo Toscanini were prominent conductors who led his symphonies here. Then came a lapse.

Lately however, both John Barbirolli and Eugene Ormandy have turned their attention to the eccentric Viennese composer of symphonies attaining the sanctified number of nine, and be it stated at once that Mr. Barbirolli won a particularly long feather for his conductorial cap by his sympathetic handling of the Seventh of them in its integrity.

Mr. Ormandy in the case of the Bruckner Fifth, in B-flat, a performance that to my regret I was unable to hear, did some editing. A note in the program of the visiting Philadelphia Orchestra outlined this phase:

"Mr. Ormandy plays the Fifth Symphony from a score which is, in a way, of his own editing. After Bruckner completed the work he allowed two of his followers, Franz Schalk and Ferdinand Loewe, to revise it. He was, indeed, too good-natured to say 'No' to quite drastic changes. That edition was eventually published and it is the one commonly used.

"But Bruckner, before his death [Note well, not after!], expressed a preference for his own unedited score. The original version, a few years ago, was issued by the Bruckner Society of Vienna. Mr. Ormandy has compared the two and has, for this performance, retained some of the Schalk-Loewe amendments and made various orchestral adjustments of his own where they seemed best to serve the purposes of Bruckner."

Now, the editing of Bruckner's scores is doubtless a question that only a specialist can treat of with complete authority, but, for the sake of the vast number who are not intimately acquainted with them, it may be pointed out that Bruckner, throughout much of his career, at any rate, seemed not only to acquiesce in such editing as Schalk, Loewe and Nikisch did, but actually to welcome it. As conductors those men steadily championed his works, and Schalk and Loewe, at least, had been among his devoted pupils at the Vienna Conservatory.

What, however, is more important for us than matters of pedantry

and purism is the fact that symphonic conductors in America are turning once more to Bruckner. There is something curiously anachronistic about any prejudice that lingers against his symphonies on the part of American audiences. In Austria and Germany they have been for decades as securely established as the symphonies of Beethoven and Brahms, and it seems positively comical that anybody at this date should regard them as caviar.

Naturally it is permissible to dislike one or all of them. Aphthorp used to cite a Boston man who declared he was "born hating Weber," and I have heard a man in our own town, perhaps with an echo of the Bostonian asseveration, say that he was "born hating Chopin."

And if you want more, consider in what terms Tschaikowsky in his day and Sibelius more recently have paid their respects to Wagner. Didn't Tschaikowsky observe that a ballet by Delibes was worth far more than *Der Ring des Nibelungen*?

In a letter to Mme. von Meck he speaks of the Delibes ballet *Sylvia*: "I knew it before from the piano arrangement, but in the wonderful performance of the Vienna Orchestra it completely charmed me, especially the first part. My own *Lake of Swans* is simply trash in comparison with *Sylvia*. In short, I have known nothing in the last few years that has charmed me so much except *Carmen*. Perhaps Russia and the rest of Europe will soon have a new word to say. But in Germany music is positively on the decline, and Wagner is a great representative of the decadence."

Thus, that a few persons may honestly dislike Bruckner is no excuse for assuming an ineradicable prejudice in the majority. As a matter of fact, what the majority needs to arrive at a real appreciation of Bruckner is a greater number of adequate performances. Then he will probably be accepted as frankly and freely as are Schubert and his artistic foeman, Brahms. It is positively grotesque that in the United States anyone should even think of Bruckner as a musical (or unmusical) freak.

Mr. Ormandy deserves particular thanks for setting Bruckner's Fifth before us, edited or unedited. The symphonies we are usually invited to hear are the Fourth, Seventh, Eighth and Ninth, to the neglect of the others. The Ormandy example should be followed of dipping into a neglected shoal. And, be it remarked, that to the best knowledge and belief of the present writer Bruckner's First Symphony has never so far been performed in this country at all!

NOTE: The first performances of Bruckner's *First* by a major orchestra in the United States were given by the Chicago Symphony under the direction of Frederick A. Stock on February 1 and 2, 1940.

## WALTER SEES BRUCKNER AS A PROPHET

BY LOUIS BIANCOLLI

The following is part of an article published in the New York *World-Telegram* on February 10, 1940.

Mr. Walter agrees with those who call Bruckner The Fourth B. He believes in the power and uniqueness of his genius. He regards Bruckner as a prophet, a seer. He has defended him eloquently in four languages.

Tonight he takes over the NBC Symphony Orchestra for five concerts. On his program is the Romantic Symphony, No. 4, of Bruckner. Listening to Mr. Walter on Bruckner and art is post-graduate work in higher thinking. All the writer did was listen and learn the other day at the Dorset.

Mr. Walter said that Bruckner was the rare combination of peasant and prophet, that in so far as he belongs to the earth he is a peasant and in so far as he belongs to the spirit he is a prophet. Reconciling this duality in art was Bruckner's great problem.

He had to find for himself the organic form into which the dimensions of his personality would fit. For that reason we are obliged to adjust ourselves to a new form in art, a form capable of holding the enormous range of Bruckner's humanity. Which explains why it takes time and effort, years of reverent study and communion with the essence of Bruckner, for a conductor to reach full understanding.

“Bruckner is very near to my heart,” Mr. Walter said; “it took us a long time to get acquainted with each other. In fact, I can say that I began to feel at home in Bruckner only after my fiftieth year. I may add that each year I get closer to him.

“I derive personal excitement in conducting a Bruckner symphony. More than excitement; it is a kind of fulfilment. On the contrary, it does not exactly excite me. It is a sort of affirmation of so very much that is in me.”

He said Bruckner's music rests on a rock-bottom security, a childlike piety and assurance of the will of God. This made him a prophet. Inspiration gave Bruckner the language to speak his prophecy. As with every prophet, the power to feel the message and the power to speak it went hand in hand.

Mr. Walter does not regard Wagner as a prophet. Beethoven he does, in another sense. For him the great “cosmoses” in music are Bach, Beethoven, Wagner, like Shakespeare and Michelangelo in other fields. Mozart, who is also close to his heart, he calls “a saint in music.”

“People think of me as a kind of specialist in Mozart,” Mr. Walter said; “I reject that. I am just a musician. Yet in a very special way

Mozart is very dear to me. I mean his miraculous capacity to say incredibly much with incredibly small means."

He confessed he "shrinks" from the use of comparatives and superlatives in art. He refuses to regard geniuses as "greater" or "greatest." One genius can never be the measure of another, according to him. Every genius creates his own yardstick and measures himself by it.

"The question, 'What is genius?' can be answered as follows," he believes: "A creative power of such wide range that it creates a standard or criterion of its own. I might go further. With the greatest of creative minds even the individual masterpiece cannot be used as the measure of another creation of the same mind. We must not judge Wilhelm Meister by Faust or vice versa.

"The reason is that the genius is forever renewing himself. This is the determining factor. When some people expressed disappointment in the Pastoral symphony, Beethoven asked angrily, 'Did they expect another C minor? This is something entirely new.'

"One test in distinguishing talent from genius is this great and varied productivity. Each work seems a new step, a renewal of the artist, a second birth."

After the creative impulse Mr. Walter feels that it is given only to the genius to work out the original inspiration, but the impression left by the completed work of art must be one of "painless effortlessness." He is fond of quoting Nietzsche, who observed of Carmen that it was "music without sweat."

"Schiller once said that the gods put sweat before perfection," Mr. Walter recalled; "that is true. Effort and industry must go into art. But we must not feel it. The finished product must be graceful, free, natural, complete, without trace of labor. We must not see the beads of perspiration. Such is art."

## REACHING FOR THE STARS

BY NORA WALN

The following is taken from Nora Waln's novel, *Reaching for the Stars*, and is published here by permission of the author and of Little, Brown & Co.

The Friends of Music had their own Singverein, an amateur choir of high artistic standard which was started in 1858; also a music school of which Hugo Wolf, Gustav Mahler, Joseph Joachim, Hans Richter, and Arthur Nikisch were pupils. Anton Bruckner was one of the teachers. The aim of the Gesellschaft der Musikfreunde from the day of its foundation was to make music on a grand scale. The friends of music, gathered in Vienna from every German land; made every concert while we were there an event.

The Philharmonic Orchestra gave us beautiful music. The "Musica

Viva" and "Ravag" are not forgotten. There was so much that is memorable that twenty volumes would be needed to tell about it adequately. The concerts that return most often to my mind are the following: "Missa Solennis," conducted by Toscanini; a performance of a symphonic poem, "Penthesilea," written by Hugo Wolf when he was twenty-three, given by the Gesellschaft der Musikfreunde under the baton of Kabasta; the Philharmonic, led by Klemperer, first violinist Herr Rose, playing Bruckner's Fifth Symphony; and that triumph of Walter and orchestra with Gustav Mahler's magnificent composition beginning with a funeral march and ending with a joyous rondo.

In Vienna I heard such music as I had never heard before, and can never hope to hear again. This was the music at the German sunset of that day of European civilization which was called at its dawn "the Renaissance"; was known at its high noon as "the age of reason"; and moved to its twilight through "the liberal experiment." Night had fallen on Germany when we arrived there. We reached Austria while the sun was yet coloring the clouds with brilliant light.

In music, in architecture, and in the spirit of the people living there, Vienna fulfilled my dreams.

In the realm of mind and spirit, Germany was a garden of the earth. For a hundred and fifty years the stars sang to these people. Armed strife, famine, and pestilence followed in the wake of their Reformation; but when dogmatic rigidity gave way to the practice of Christian love, Johann Sebastian Bach was born to them, gifted with pious genius to distill from their pain lessons in tolerance and compassion. Beethoven composed eternal symphonies while Napoleon conquered and lost in the material world. When Disraeli was busy adding "Empress of India" to the Queen of England's titles, Liszt was arranging a choir score for Herder's "Prometheus." And through one of their number, a German-Jew, they were given *Das Lied von der Erde*—the saddest, most beautiful music with which heaven has ever blessed mankind.

## SUGGESTION TO BOSTON SYMPHONY

*Why Not Excerpts of Unknown Bruckner, Mahler Works?*

BY WARREN STOREY SMITH

This article is a reprint from the *Boston Post* of December 3, 1939.

Those few supporters of a seemingly forlorn cause, who believe that Gustav Mahler is the most unjustly neglected of symphonists, will receive with mixed emotions the announcement that Dr. Koussevitzky will conduct at this week's Symphony Concerts the Adagio-finale from that composer's Ninth Symphony. Surely a quarter-loaf is better than none, but why is Mahler treated in a way that Brahms or Tchaikovsky would not be treated by any conductor of a symphony orchestra today?

Is it because they wrote better symphonies? In the opinion of this reviewer, they did not; but they had the sense to write shorter ones. Mahler's music possesses all the elements of popularity, save a comfortable terseness.

However, one must always be grateful for small favors, and since Dr. Koussevitzky is in a mood to play Mahler in fragments, here are some suggestions. The Second Symphony, unheard here since 1918, is a long and elaborate work, requiring in the Finale a large chorus and enlarged orchestra. The Symphony as a whole would have to be done, as Dr. Muck did it, at a special concert, but the Andante and Scherzo, two of the most delectable movements in symphonic literature, might well be performed by themselves. Mr. Stock in Chicago has been known to play the two central movements from the Seventh Symphony, a work wholly unknown here; and it would be better by far to hear the Third and Fourth piecemeal than never to hear them at all.

Again, if Mahler in sections, why not Bruckner also, since his symphonies, too, run to inordinate lengths? In Holland last summer your correspondent heard that master's Second which has not been played in Boston, although it dates back to the early '70s. The two middle movements, an Adagio of great beauty and a charming Scherzo, could easily be separated from their context, if the whole Symphony seemed impracticable in this land of impatient listeners. And any move to freshen the fast staling and constantly narrowing standard repertory should be welcomed.

#### BRUCKNER'S *TE DEUM* AT OBERLIN

One of the oldest singing societies in northern Ohio, the Oberlin Conservatory Musical Union, joined forces with the Oberlin Conservatory Orchestra last night at Finney Chapel for a concert under the direction of Prof. Maurice Kessler. Nearly 300 student musicians participated in the program, which featured a performance of the rarely heard "*Te Deum Laudamus*" of Anton Bruckner.

Here is a work of large scale and serious import which should be better known here, and probably would be, had not Bruckner's talent been somewhat eclipsed by the greater brilliance of Wagner and Brahms. Bruckner's religious and dramatic impulses seem to run parallel with the result that the more devotional this work becomes the more intense and vivid are its climaxes. The great "*In te, Domine speravi*" works up to one of the most powerful conclusions any work of this sort could have, and probably represents Bruckner at his best.

But if the music itself was a revelation of Bruckner's genius, the manner in which it was performed was also a revelation of the unusual competence of this group of students and of Kessler's ability as a conductor. I was prepared to find excellent musicianship in his work and sincere penetration of the music at hand. But that he could so completely communicate his mature conceptions with this student material came as a total surprise. Not only did he carry the group with him in a fluent, balanced and well-proportioned interpretation, but he obtained some dynamic shading that professionals could be proud of.

The Bruckner work came last on the program. Preceding it were the Bach Cantata based on Luther's chorale, "*Ein feste Burg ist unser Gott*," and the Adagio from Bruckner's string quintet. The cantata began with a brass choir playing the chorale from the balcony in the rear of the hall. The orchestra is blessed with an unusually

large number of cellos and basses for a school organization, and this gives it gratifying solidity.

Vocal soloists were Janet Enycart and Jane Ann Edwards, sopranos; Margaret Tobias, alto; Frank Numbers, tenor; Richard Atkins and Arthur Wyman, baritones. Among the instrumentalists who did outstanding work were Robert Koff, violin; Dorothy Mudge, cello; Margaret Ruby, English horn; Gordon Jones, cemballo, and Leo Holden, organist.

HERBERT ELWELL, *Cleveland Plain Dealer*, December 11, 1939.

MY DEAR MR. GREY:

January 18, 1940.

This work as well as the Adagio from the Quintet convinced my audience completely of what I had said many times concerning Bruckner and I am going to conduct more of his works in the near future. Following our performance and specifically reflecting upon the Adagio, Dr. Ernest H. Wilkins, President of Oberlin College, wrote the enclosed poem and dedicated it to me. I think it would be appropriate to have it appear in the next number of Chord and Discord, and with this in mind, I have Dr. Wilkins' approval and his permission to send it to you.

I wish that I could tell you of the enthusiasm of my students in the Chorus and Orchestra, of their complete cooperation in this performance, of their sincerity and seriousness in helping me towards the realization of my ideal. It was an experience I shall never forget, as long as I live.

Sincerely yours, MAURICE KESSLER

Note: *Te Deum* and the *Adagio* from Bruckner's *Quintet* were performed under the direction of Mr. Maurice Kessler, at Oberlin College, on December 10, 1939.

#### THERE SHALL BE PEACE

There is a light that is but darkness vanished;  
 There is a song released when storm is o'er;  
 There is a joy that follows sorrow banished,  
 As death recedes and life is life once more.  
 Yet light's true fullness is in noontide splendour,  
 Beauty aglow, truth wondrously revealed;  
 The richest melody, now strong, now tender,  
 Only the overflowing heart can yield;  
 There is a joy that surges from the treasure  
 Of joy found possible beyond belief,  
 Beyond the bounds of all contrasting measure,  
 Beyond the memory of ancient grief.  
 There is a peace that is but the cessation  
 Of the crashing carnage of insatiate war,  
 That is but in war's absence — every nation  
 Holding it's breath lest all be as before.  
 There shall be peace, all casual peace transcending,  
 Radiant with love and resolute for right,  
 Creative, world-encircling, never ending:  
 There shall be peace of joy and song and light.

Written after the performance of the Adagio of Bruckner's *String Quintet* by Dr. Ernest H. Wilkins, President Oberlin College, Oberlin, Ohio, and dedicated to Maurice Kessler.

#### BRUCKNER QUINTET IN CINCINNATI

On January 7, 1940, the Bruckner *Quintet* was performed at a private musicale at the home of Mrs. Helen V. B. Wurlitzer. The Bruckner Society of America Inc. believes this to have been the first performance of the *Quintet* in Cincinnati. The performance was one that revealed a thorough understanding of the work on the part of the artists: Leo Brand, I violin; Ernst Pack, II violin; Herman J. G. Goehlich, I viola; August Loendlin, II viola; Arthur Bowne, Cello. For an encore Bruckner's *Intermezzo* was played by the same group.

NBC ORCHESTRA, WALTER CONDUCTING, BROADCAST  
BRUCKNER'S *FOURTH* (February 10, 1940)

... The slow section, with its funeral rhythms, is vaguely reminiscent of Beethoven's "Eroica," as the second subject of the opening movement is reminiscent of an important theme in Schubert's B-flat piano trio. On the whole the spirit of Schubert hovers over Bruckner, even to the influence of the former's fondness for "heavenly length," and the structural looseness of his essays in sonata form. In orchestration Bruckner cannot escape, indeed he embraces, the influence of Wagner.

Mr. Walter's reading of the "Romantic" was one that compelled one's interest throughout. It was justly paced, it exploited to the full the breadth and beauty of the themes, and in the final brassy apotheosis it achieved a radiant and majestic climax. The orchestra played superbly, the horns in particular.

SAMUEL CHOTZINOFF, *New York Post*

... These were fortunate choices. Mr. Walter knows well the traditions and the psychological characteristics of these two symphonies, which stem from the Austrian territory and Austrian spirit of earlier days at the same time that they reflect the powerful individualities of their respective composers. And Mr. Walter and his orchestra appeared rarely in the vein.

The glory of the "romantic" symphony is the first movement, so long drawn out, yet packed with inspiration and of a glowing richness of musical imagery and indeed, it is "romantic"! The opening horn calls are in themselves an evocation of the romantic. Their reappearance in the later pages of the first movement and the way in which they haunt the composer's mind in fashioning certain of the motives of both the second and last parts of the work, do much to hold the entire symphony together and to give it the prevalence of mood which is implied by its popular sub-title.

... Walter was warmly welcomed by the visible audience in the studio H-8 and no doubt that welcome was echoed millions-fold by the multitudes who listened in.

OLIN DOWNES, *New York Times*

... However, the warmth of Mr. Walter's response to this gargantuan work, his feeling for the fortunate tempo in each of its four movements, gave one the impression that it was the most assimilable of his symphonies. Its themes almost aroused the pleasure of recognition as they came back, and in the intimacies of the slow movement, a conviction that the composer was actually a poet as well as aspiring to be philosopher.

IRVING KOLODIN, *New York Sun*

... The "Romantic" symphony, like the other works in this form from this still debated pen is generous in its length and not economical in its structure and its use of thematic material, but this rehearing suggested that the length is a matter of largeness of scale and thought as well as of temporal extent.

... The immanent spirit of the performance, its color and justly wrought proportion of the tone of the various participating choirs, tempi which contributed to the realization of the expressive moods of the work, were among the elements which contributed to the convincing nature of this interpretation. The music was throughout vividly revealed, in its measures of extensive lyricism, in the atmosphere of the scherzo, with its inevitable suggestions of the hunt, or in the imposing proclamation of the unison fortissimi of the brass choir.

... There was a warm ovation for the conductor after the eighteenth century work and a still more extensive one after the Bruckner symphony.

FRANCIS D. PERKINS, *New York Herald Tribune*

Bruno Walter's first appearance of the season as conductor of the NBC Symphony Orchestra's Saturday night broadcast was an outstanding feature of the week end.

Mr. Walter's program comprised two numbers, the D major Symphony, B. & H. 86, of Haydn and Bruckner's Fourth Symphony (Romantic). Though the Haydn work was read with understanding and sympathy, the great experience of the evening was the performance of the Bruckner.

For once there could be question of structural weaknesses and unmeaning repetitions. For once the listener could realize completely that Bruckner's purpose and idiom

are so distinctly his own that to attempt to estimate his work by the rules that apply, for instance, to his arch-enemy Brahms, is inept and futile.

Mr. Walter's whole heart and soul were in his exposition of the symphony, and so transporting, so other-worldly, was the result that one felt impelled to exclaim "There is only Bruckner and Bruno Walter is his prophet!"

PITTS SANBORN, *New York World-Telegram*

#### GUSTAV MAHLER — *LIEDER EINES FAHRENDEN GESELLEN*

*Zighera Chamber Orchestra, Bernard Zighera, Conductor: Cleora Wood, Soloist. Boston, January 8, 1940.*

... Another high point of the concert was the co-operation of the Boston soprano, Cleora Wood and Mr. Zighera in Gustav Mahler's "Lieder eines fahrenden Gesellen." The first song, which contrasts the feelings of the rejected lover with the merry wedding music which sounds between his despairing comments, was dramatic in its effect. But the initial gaiety of "Ging heut morgen ueber's Feld" and the tragic accents of "Die zwei blauen Augen" were most sensitively and movingly conveyed by both Miss Wood and Mr. Zighera. As usual Miss Wood sang meticulously with clear tone and high pianissimi that were of rare beauty. But the care she expended on voice production by no means prevented her interpretations from being charged with emotion.

EDWARD DOWNES, *Boston Evening Transcript*

... To the writer, the high point came in the cycle "Lieder eines fahrenden Gesellen" ("Songs of a Wayfarer") by Gustav Mahler. The soloist for these was the Boston soprano Cleora Wood, whose singing of them a year ago is still fresh in memory.

Mahler's originality of writing for orchestra, and his talents for contrasting voice and instruments are a distinctive characteristic of this early work. Even more important is the sheer beauty of the Mahlerian melody. So perfectly does Mme. Wood sing the music and interpret the text, it seems almost as if the songs might have been written for her.

JORDAN HALL, *Boston Globe*

... When Miss Wood first sang the Mahler songs with this group, we felt that she had penetrated to the core of both text and music. Last night she confirmed earlier impressions of her artistic approach to them. There was dramatic feeling for the text of Nos. 3 and 4 which made their performance outstanding. The audience gave Miss Wood, Mr. Zighera, and the orchestra an ovation.

*Christian Science Monitor*

... Mahler's pre-symphonic music shares sincerity with his longer works and has in addition great charm. The "Songs of a Wayfarer" are perfect examples of late romanticism, the kind of vocal music that found its highest expression in Hugo Wolf. In these Miss Wood was the admirable soloist and took the role of the love-sick wanderer in her stride.

ALEXANDER WILLIAMS, *Boston Herald*

#### PREMIERE OF BRUCKNER'S *FIRST* IN CHICAGO UNDER STOCK'S DIRECTION

*February 1 and 2, 1940*

More years ago than I care to estimate, I heard my first Bruckner symphony. I have forgotten which one it was. But I do recall perfectly that it was offered by the Chicago Symphony Orchestra as simply as though it were a work of Beethoven or Brahms. The elements of greatness were in it — it needed no fanfare of sensational publicity.

Through the intervening years an identical policy in the presentation of Bruckner's works has prevailed. It has resulted in a slow but thorough shaping of the attitude of music lovers towards the genius of St. Florian. In this first week of February 1940, we of Chicago may at last acknowledge fairly that we not only sense the splendor of Bruckner's *First Symphony* (heard under Dr. Stock's spirited direction for the first time in this city) but that we look forward with anticipation to future reappearances of Bruckner compositions on the programs of the Orchestra. In other words, we know now beyond peradventure, that we really like Bruckner.

MARY R. RYAN

UNIVERSITY OF MICHIGAN SYMPHONY PERFORMS  
BRUCKNER'S SEVENTH (ADAGIO)

(January 21, 1940, Hill Auditorium, Ann Arbor. Thor Johnson, Conductor)

The first performance of the day, so far as Ann Arbor is concerned, was that of the majestic slow movement from Anton Bruckner's Seventh Symphony. This movement, sometimes spoken of as funeral music, is lofty and dignified, noble and uncompromising in its treatment of sorrow. There is nothing in it of the pessimism or self-indulgent grief of the dirge; the calmness and yearning of the opening theme, the wistfulness of the lyrical second theme, are based on hope, not on resignation. The splendid sonorities which Bruckner achieves through his rich use of the low brass, alternating with the strings, are the more distinctive for the half-diatonic, half-chromatic mellowness of their coloring.

By its very breadth and spaciousness this music can easily appear dragged-out and repetitious. Mr. Johnson's conception very properly took account of the movement as a whole; he was careful to keep the music flowing, to treat it dynamically rather than to dawdle and sentimentalize over every phrase and every section. The magnificent C major climax was approached with ever-increasing intensity and overwhelmingly achieved, after which the sombre majesty of the concluding measures formed a beautifully satisfying conclusion. The response of the audience was spontaneously enthusiastic and gave evidence of a strong interest in future Bruckner performances.

WILLIAM LICHTENWANGER, Music Editor, *Ann Arbor Daily News, Michigan*

JOHN CHARLES THOMAS SINGS *LIEDER EINES FAHRENDEN GESELLEN*

. . . With Mr. Carroll Hollister as accompanist, Mr. Thomas sang songs by Schubert, Brahms, Mahler and Wolf. Though one may have wondered at the absence of Schumann from this good company Mr. Thomas sang Mahler's "Lieder eines fahrenden Gesellen" so well that one did not mind the substitution of the still controversial symphonist for the undisputed master of German song. Richard Strauss, too, might have contributed a song or two to yesterday's list. But since the afternoon was Mr. Thomas' and not this reviewer's it behooves us to take what we can get and inquire rather into the baritone's art than his choice of material. . . .

SAMUEL CHOTZINOFF, *New York Post*, February 26, 1940.

AN INTERVIEW WITH BRUNO WALTER

The following is a portion of an article which appeared in the *New York Herald Tribune* on March 31, 1940:

One of his major offerings next winter will be Gustav Mahler's "Das Lied von der Erde," which he presented with the Philharmonic in December 1934. His programs also can be expected to include at least one symphony by Anton Bruckner of whose music Mr. Walter has long been regarded as one of the foremost interpreters. When he first came here, he recalled, in the early '20s he found that Bruckner was kind of a bogey for the general public. In the meantime, however, he has noticed a steady growth in the appreciation of the Austrian composer's music. When he conducted the fourth symphony in this season's first program with the N. B. C. Symphony Orchestra on Feb. 10, he received a remarkable amount of enthusiastic letters from radio listeners throughout the country.

Mr. Walter remembered a similar steady growth in the general appreciation of Bruckner's music in the composer's own country. A like development marked his own attitude toward Bruckner, whose interpreter, he thought, must grow old in order to gain a complete understanding of his work. "As a young man," said the conductor, "I could not get near to him. I was deeply attracted by his inspiration, but puzzled by his form. My relation to Bruckner has steadily grown; it becomes more and more close every day." He commented eloquently on the tranquility of mind expressed in Bruckner's vast musical form; his following of an inner vision rather than thinking of nervous people. He is a composer who stands solidly on his own feet, not seeking out audiences, but saying, as it were, "You must come to me."

He does not favor cutting Bruckner's symphonies, feeling that such omissions are

injurious to their form; that complete performances seem actually shorter than those abridged to save a few minutes. The interviewer recalled a similar impression made upon him by Maurice Evans's uncut production of "Hamlet." Mr. Walter also favored the composer's original versions over those edited by Ferdinand Loewe and Franz Schalk. In the adagio of the seventh symphony the original score has no percussion instruments, giving it a distinctly organlike character, but the revisers added a "criminal beat of cymbals." In the ninth symphony Loewe regarded several measures of silence merely as so much empty space, and wrote in some music.

#### BRUCKNER'S *QUINTET* AT FINE ARTS FESTIVAL

(UNIVERSITY OF IOWA) July 17, 1940

Music held the stage at the memorial union Tuesday evening for the third successive night of the fine arts festival as faculty and student musicians presented a well-balanced and enthusiastically received program of chamber music.

The Bruckner quintet, played by Prof. Arnold Small and David Robertson, violins, Otto Jelinek and Mrs. Julia Mueller, violas, and Prof. Hans Koelbel, cello, is a sometimes vigorous, sometimes melancholy and always interesting work. In the hands of these artists its well-rounded melodies sang out brilliantly and in the moments of its less melodious portions, the musicians played with an understanding and capability that evaded the discordant aspect which the music so easily might have acquired.

Particularly appreciative was the playing of Professor Small, who handled the diversified first violin part with true artistry, giving to the music the brightness, the highlighted eminence that it required.

RON TALLMAN, *Iowa City, Iowa, Press-Citizen*

#### BRUCKNER CHRONOLOGY

- 1824: Born, Sept. 4, Ansfelden, Upper Austria.
- 1835-7: First systematic musical instruction (harmony and organ-playing) under J. B. Weiss, at Hoersching.
- 1837-40: Choir-boy at St. Florian.
- 1841-5: Village-schoolmaster's assistant at Windhag and Kronsdorf.
- 1845-56: Teacher at St. Florian.
- 1851: Appointed organist at St. Florian Monastery.
- 1855-61: Studied counterpoint under Simon Sechter.
- 1856-68: Cathedral organist at Linz.
- 1861-3: Studied form and instrumentation under Otto Kitzler.
- 1865: Attended world-premiere of *Tristan* (Munich); beginning of friendship with Wagner.
- 1868: Appointed professor of harmony, counterpoint, and organ-playing at Conservatory of Vienna; made Vienna permanent residence.
- 1869: Concertized in Paris and Nancy as organ virtuoso.
- 1871: Concertized in London.
- 1875: Appointed lecturer in harmony and counterpoint at University of Vienna.
- 1876: Attended world premiere of *Ring* at Bayreuth.
- 1882: Attended world premiere of *Parsifal* at Bayreuth.
- 1886: Decorated by the Emperor with the medal of the "Franz-Josef Order."
- 1890: Retired from academic duties with honorary pension.
- 1891: Granted honorary doctor's degree by University of Vienna.
- 1896: Died, Oct. 11, Vienna; burial, St. Florian.

## BRUCKNER'S PRINCIPAL COMPOSITIONS

- Symphony No. 0* (D Minor) 1862-4  
*Overture* (G Minor);  
 "Study Symphony" (F Minor) 1863  
*I Mass* (D Minor) 1864  
*I Symphony* (C Minor) 1865-6  
*II Mass* (E Minor) 1866  
*III Mass* (F Minor) 1867-8  
*II Symphony* (C Minor) 1871-2  
*III Symphony* (D Minor) 1872 (First version)  
*IV Symphony* (E-flat Major) 1874 (First version)  
*V Symphony* (B-flat Major) 1875 (First version)  
*Quintet* (F Major) 1879  
*VI Symphony* (A Major) 1879-81  
*VII Symphony* (E Major) 1881-3  
*Te Deum* (C Major) 1883-4  
*VIII Symphony* (C Minor) 1884-6 (First version)  
*IX Symphony* (D Minor) 1891-4  
*150th Psalm*, 1892.

RADIO CITY MUSIC HALL (ERNO RAPEE, CONDUCTOR; JAN PEERCE,  
 SOLOIST) BROADCASTS *LIEDER EINES FAHRENDEN GESELLEN*

On March 10 Mahler's *Lieder eines fahrenden Gesellen* were sung by Jan Peerce and broadcast over a nationwide hook-up by the National Broadcasting Co. Mr. Peerce revealed a thorough understanding of the song cycle. His diction was, as always, exceptionally clear, which, though of great importance, is not one of the distinguishing characteristics of too many singers. Peerce succeeded in communicating the mood of each song to his listeners. The performance gave additional evidence not only of the singer's fine voice but the none too common attribute — intelligence. The orchestral portion was well done. Perhaps Mr. Rapee will include Mahler songs on his Sunday programs from time to time.

ADAGIO (Bruckner's *Quintet*) BROADCAST OVER WOR,  
 WALLENSTEIN CONDUCTING

On September 17, 1940, *Symphonic Strings* under the direction of Alfred Wallenstein broadcast the slow movement of Bruckner's *Quintet* over Station WOR. This was not the first time that Mr. Wallenstein conducted this excerpt. The rendition was so beautiful that music lovers — especially Brucknerites — cannot help but hope that Mr. Wallenstein will see fit to shorten the intervals between broadcasts of excerpts from Bruckner's works.

# Symphonic Chronicle

## *A Record of Critical and Popular Reaction*

### ANTON BRUCKNER: SEVENTH SYMPHONY

*St. Louis Symphony Orchestra, Vladimir Golschmann, Conductor. First performances in St. Louis, December 1 and 2, 1939.*

... It was a first performance in St. Louis—although no one could say why. Bruckner's avowed Wagnerism means no more than that he knew drama was at the heart of the symphony. If Wagner's music dramas are "visualized symphony" this is "eye-blinded drama." An old story in music. All symphonists know that fact.

Not for more than twenty years has St. Louis heard any Bruckner. Mr. Golschmann's presentation might have been precluded, reasonably, by Mendelssohn's comment on his revival of Bach. What happened was that we were introduced, not to a Wagnerian, but to a Schubertian world. . . .

Out of life flow these melodies. Bruckner may be what you will, but the melodies are compelling. They make you share his strange visions, his mysticism. Frankly, he happens to be verbose, as other romantics—Wagner, Schumann, Beethoven, even. He is "long" or "long winded" to our modern ears, which have made us, more than any people of historic record, the slaves of time. No matter. Although a European and a Catholic, he is far closer in spiritual and imaginative kinship to our American Walt Whitman than to Wagner. Just as musically he is much closer to Schubert's C minor than to any of Wagner's works. . . . *Globe Democrat*

... Mr. Golschmann's chief contribution of the day was the first presentation here, in the fifty-five years of its existence, of Bruckner's Symphony No. 7 in E major. This proved a valuable addition to the repertoire and was played with the requisite sonority and drive.

Bruckner, who was a great composer who needed an editor, has been the subject of the most frenzied worship by a small but militant group of devotees. They maintain that he is the most neglected of great men, with the possible exception of Mahler. However that may be, his music is rich in invention and occasionally quite splendid in effect. . . .

*Star Times*

### GUSTAV MAHLER—FINALE: NINTH SYMPHONY

*Boston Symphony Orchestra, Serge Koussevitzky, Conductor. December 8 and 9, 1939.*

... There are two sides to the question of performing isolated movements from symphonies; as a general practice it is not to be recommended. Few would pass by the pleasure of listening to the great Schubert Symphony, yet could not that masterpiece, presented at the Symphony concerts only last April, have been postponed so that all of Mahler's Ninth might be played?

Mahler's music cannot be discussed logically or calmly. Either you are emotionally stirred or you are bored. Though divorced from its context, the sublime finale made its effect yesterday. A spiritual affinity exists between the Ninth Symphony and Mahler's later, perhaps greatest composition, "The Song of the Earth." Each is "other-worldly," the voiced emotion of a tired man who welcomed an end of life, music of a transcendental radiance akin in more respects than that of mood to the last quartets and piano sonatas of Beethoven. . . .

*C. W. D., Boston Globe*

... Mahler is said to have had premonitions of his rapidly approaching end when at work on his Ninth Symphony and it is true that the finale of the work is steeped in a mysticism that might easily indicate a pre-occupation with another world which, to him, was becoming increasingly real. . . . He (Koussevitzky) directed the flow of Mahler's melodic inspiration with a passion and an insight that communicated the composer's vision to the audience. It was particularly in the ethereal closing pages of the work, where Mahler's music has become almost disembodied thought, that Koussevitzky cast a spell upon his listeners from which they were loathe to waken. . . .

*E. D., Boston Transcript*

... Since Schubert's Symphony was played at Symphony Hall no longer ago than last April and is very well known besides, and since Mahler's Symphony (as a whole or in part) had not been heard

here since the spring of 1936 and is a work that richly deserves to be better known, it would seem to have been the part of logic and reason to play the whole of this Symphony and one movement of Schubert's. But that is not how things are arranged nowadays. The pieces that are already most familiar receive the most performances. As someone has paraphrased the Biblical injunction: "that that has gets."

It could be further argued that, although the Mahler Finale stands isolating better than would the other three movements, it is not, all things considered, the most effective of the four. Like the last movement of Mahler's "Song of the Earth," this Adagio is a farewell to life, written when the composer knew that his days were numbered. Also like parts of "The Song of the Earth," it voices a mood otherwise unknown to symphonic music and sends one to the last quartets of Beethoven for analogy in any other field of music. . . .

WARREN STOREY SMITH, *Boston Post*

ANTON BRUCKNER:  
SEVENTH SYMPHONY

*Philharmonic Symphony Society of N. Y., John Barbirolli, Conductor, January 10 and 12, 1940.*

Of the tripartite program offered by the Philharmonic-Symphony in Carnegie Hall last evening, though the second number was Beethoven's C major piano concerto with Sergei Rachmaninoff as the soloist, the paramount and unforgettable feature happened to be the Seventh Symphony of Anton Bruckner.

It was good to hear this magnificent work at all—Bruckner is again becoming a rarity in New York—and it was better still to hear it so excellently performed. John Barbirolli conducted as though he loved the symphony and his whole heart were in his task. He caught and transmitted the big design of the work, its heroic sweep and grandeur. Would that he might now do for us Bruckner's Eighth!

Listeners not especially familiar with the Seventh were perhaps surprised to observe that the Scherzo with its haunting F major Trio, is hardly less engrossing an achievement than the famous Adagio that precedes it.

And they may also have been surprised to detect a brief resemblance in the Adagio to a passage in the opera *Thais*.

Yet it is exceedingly improbable that Massenet, though writing in the next decade, had any acquaintance with this symphony.

PITTS SANBORN, *World Telegram*

ANTON BRUCKNER:  
FIRST SYMPHONY

*Chicago Symphony Orchestra, Frederick A. Stock, Conductor, February 1 and 2, 1940.*

NOTE: *This was the first performance of this symphony in Chicago and by a major orchestra in the U. S. The first performance was given by the Brooklyn Civic Orchestra in Brooklyn, N. Y., under the direction of P. Kosok. Nov. 12, 1938.*

A major symphonic work three-quarters of a century old received its first Chicago performance only last evening. The work is Anton Bruckner's first symphony. The performers were Frederick Stock and the Chicago Symphony Orchestra, the place, Orchestra Hall.

Splendor of orchestral dress and wealth of idea are the symphony's outstanding characteristics. As in his more familiar works, Bruckner here does wonders with the brass choir, achieving a mystical religious quality by the simple grandeur with which he makes these instruments speak.

Yet the themes themselves, so far as we can consider them independent of their beautiful vesture, are provocative enough to free Bruckner from the suspicion that he was using an extraordinary knowledge of instrumentation to conceal poverty of melodic invention. There is a soaring, ecstatic quality in the adagio's first subject and a bucolic vigor in the theme of the scherzo.

EDWARD BARRY, *Chicago Tribune*

Mr. Stock and the Chicago Symphony added Bruckner's first symphony to their repertoire with the concerts of Thursday evening and Friday afternoon.

The work was written in the composer's forties and revised when he was sixty-five. There is nothing in it that is immature, uncertain or heterogeneous and one thing that the performance made clear was how little, for all Mr. Stock's diligence, we really know Bruckner in America, or in Chicago, where America knows him best.

The C minor symphony is bold, of large design and simple design, in the typical Bruckner manner. It is also beautiful in Bruckner's intimate and original way.

What is unfamiliar in it is not what is new, for all that is new in it is characteristic of the composer as we know him in his later symphonies. What is truly unfamiliar is what Bruckner has to say, for unquestionably music was personal discourse with him.

The simplicity of Bruckner's structural sense permitted him an elaborateness of procedure which at first acquaintance seems both labored and precious. These qualities were foreign to his nature and they must be foreign to his music. He was, after all, a teacher, and technicalities were his daily bread. If he did not compose like a professor at least he could not help thinking like one, and the erudition of his style in large part sprang from a graciousness in a soul that knew no disguise.

The first symphony, then, has Bruckner's typical breadth, insistence and deliberateness of spacing combined with energy of statement. Its thematic material constantly reaches to a chromatic excess or else resorts to invigorating octaves. Its instrumentation is resplendent without being showy. Everything it contains is noble; all its workmanship is masterly.

In essence it remains aloof; Bruckner has said exactly what he meant to say, and as I say his cast of thought makes the telling intimate, yet what he tells is wholly impersonal, in the manner of a sage or a visionary.

Mr. Stock gave a magnificent performance of the work and it was received with the greatest admiration and interest. . . .

EUGENE STINSON, *Chicago Daily News*

. . . Like most works of import, the Bruckner "First Symphony" needs frequent hearing before one can thoroughly grasp its inner meaning and the magnitude of its musical value. Frederick Stock made it possible for us to appreciate the noble beauties and harmonies so soulful and so filled with melodies that grow with greater glow shadowed by gray draperies that open to disclose multicolors that even gloom cannot hide. . . .

HERMAN DEVRIES, *Herald American*

#### GUSTAV MAHLER: FIFTH SYMPHONY

*Boston Symphony Orchestra, Serge Koussevitzky, Conductor, Boston, March 1 and 2, 1940.*

If the Fifth Symphony of Gustav Mahler has a few more such cordial receptions as

it enjoyed at the Boston Symphony concert yesterday afternoon it will cease to be "debatable" music. As this reviewer observed the last time it was heard here, just about two years ago, "Little by little the music of Mahler makes its way." Even those who are less than whole-souled Mahlerians could hardly begrudge the popular success yesterday of both score and interpretation.

An odd fact about listening to Mahler is that the more you hear the less you are pre-occupied by what first seems to be the "banality" of his melodies, the square-cut rhythms and the thundering sonorities he obtained from a very large orchestra. As you become acquainted with Mahler, dominating impressions are first wonder at the complex mind which produced so involved, so technically difficult a music, then admiration and affection for the noble cast of his romantic imagination. And after a while even the exhausting concentration demanded is less and less a matter of effort.

Mahler was perhaps the last creative artist whose spirit was shaped by the visionary ideals of the nineteenth century (a period, incidentally, that has taken many an undeserved hard word): his music can be grasped only through understanding of those ideals. If you seek merely for technical skill, impersonal correctness, mastery of form, for sophistication or cleverness in Mahler, bewilderment and disappointment are your inevitable reward.

Only when one has some idea of the emotional side of Mahler is it possible to recognize his sense of grotesquerie was not clumsy humor, that his long-drawn slow movements, his lush melodies and intricate harmonies were not a manifestation of pompousness. All these were simply the natural way of expression for a son of the nineteenth century whose heart was as full of warmth as his mind dwelt upon beauty. Mahler had, of course, his weaknesses, most conspicuously the length at which he wrote.

Yesterday's performance was a marvel of romantic fervor. Perhaps Mr. Koussevitzky dragged the adagio; what did that matter in the total effect? The orchestra served both Mahler and Koussevitzky well; count the performance an event of the season. When, by the way, are we to hear again "The Song of the Earth," Mahler's greatest masterpiece?

C. W. D., *Boston Globe*

. . . Certainly the Fifth Symphony, by which he was represented yesterday, par-

takes of the grandiloquence that characterized both "Ein Heldenleben" and the "Symphonia Domestica" of Strauss, between which it stood in point of composition. Through the Eighth Symphony this tendency toward bigness was to progress, until in that so-called "Symphony of a Thousand," expansion of means could hardly go farther. Yet it was Mahler himself who, in "The Song of the Earth" and the Ninth Symphony, started the reaction against what Henry T. Finck used to deride as Jumboism in music.

A true child of its time, then, is this "Giant" Symphony, which starts in the gloom of C-sharp minor and ends in the brightness of D major, a key that with Mahler was always synonymous with exuberance of spirit. Now that music has gone as far from this largeness of utterance as it conceivably could, witness Stravinsky's "Card Game," as the *reductio ad absurdum* of the contrary tendency; audiences might either be repelled or attracted by it. Judging from the reception accorded yesterday's performance, as well as the two others under Dr. Koussevitzky's direction, it is decidedly a case of attraction.

WARREN STOREY SMITH, *Boston Post*

#### ANTON BRUCKNER: FIFTH SYMPHONY

*Philadelphia Orchestra, Eugene Ormandy, Conductor. Philadelphia, January 5-6, 1940; New York, January 23, 1940.*

. . . Mr. Ormandy erred in the first place by placing the symphony last on his program, following the intermission, and prefacing it with two of his own transcriptions of Bach's chorale-preludes, "O Mensch, bewein' dein Suede gross" and "Wachet auf, ruft uns die Stimme," and with Brahms's first piano concerto in D minor. The religious nature of Bach's music and the slow moving pace of two movements of the Brahms concerto already satisfied the audience's desire for profound music, so that by the time the Bruckner symphony emerged, with its devotional atmosphere, the mind was too fatigued to absorb it fully, even in the abbreviated form in which it was vouchsafed.

That Mr. Ormandy should have erred thus is all the more to be regretted, since he disclosed a genuine sympathy with the Brucknerian idiom and achieved some moving, if all too fleeting, moments in his conception. The orchestra played su-

perly investing the music with consistent tonal richness and glowing transparency of texture.

. . . Mr. Serkin was received with great warmth by the sizeable audience, the greater part of which remained to applaud liberally after the Bruckner Symphony.

JEROME D. BOHM, *Herald-Tribune*

An interestingly devised program by Eugene Ormandy gave a prominent place to the Fifth Symphony of Anton Bruckner at the concert of the Philadelphia Orchestra in Carnegie Hall last evening. And a most welcome bit of programme it was, for Bruckner goes altogether too long with scant attention from our leading symphonic batonists.

The version of the work used by Mr. Ormandy was the result of the collaborative revising efforts of himself plus those of Schalk and Loewe, and because the symphony is of exceeding length Mr. Ormandy found it wise to omit certain repetitions.

The piece abounds in the beauty of speech. Though it is shot through with sudden contrasts, so much so that at times it seems almost episodic in nature, the marvelous juxtaposition of thematic ideas, steeped as they are in brave and expressive phraseology, is not the least rewarding of its many arresting features.

Niemann tells us that this is a symphony based on a "program of religious significance, manifested by his (Bruckner's) choice of chorales for thematic material." Perhaps so, but that would not fully explain the wealth of purely human emotions turbulently striving and straining for utterance in the complex pattern of the composition.

A sympathetic performance was the portion of the large gathering in the auditorium last evening. There may have been moments of rhythmic indecision—strange doings for such an ensemble as the Philadelphians—but the general results spoke well for frequent hearings. . . .

Applause was the order of the evening.

R. C. B., *World Telegram*

To play Bruckner requires a certain amount of courage; . . . For some reason conductors are fond of playing them (Bruckner's Symphonies). . . .

Of course, Bruckner is sometimes genius, else he would not have survived this long. The trouble with his flashes of inspiration is that one is so enchanted

with the momentary beauty and rightness of his music that one is apt to blame oneself for doubting the long, uninspired stretches, the childish reiteration, the blattancy, the unaccountable sallies, the pedestrian, pretentious ideas.

Mr. Ormandy judiciously pruned the Fifth Symphony, but the matter goes deeper than mere curtailment. However, it seems hardly possible that so many conductors are wrong about Bruckner, and the next performance of one of his symphonies will find this reviewer again

a doubter anxious and eager to be turned into a believer.

SAMUEL CHOTZINOFF, *N. Y. Post*

. . . Mr. Ormandy made cuts, omitting some repeats, and this perhaps would be disturbing to lovers of the composer. But on the credit side was a spacious, eloquent performance. Mr. Ormandy appears to believe in Bruckner and directs him accordingly. The orchestra responded with brilliant playing.

HOWARD TAUBMAN, *New York Times*

## Their Time Shall Come

BY PHILIP GREELEY CLAPP

IN the days when our leading orchestras used to present Bruckner and Mahler respectively on the First and Second Five-Year Plan — that is to say, every five years a Bruckner symphony was played but not repeated and a Mahler symphony announced but not played — an elderly pew-holder in one of our symphonic World's Series was suddenly asked for her verdict upon the local *première* of Bruckner's *Ninth Symphony*. Her reply, given with every appearance of the righteous indignation which the occasion demanded, was "Why! I never heard anything like it before!"

Undoubtedly the good lady was mistaken. Bruckner himself was of course incapable of slavishly imitating the classics and at the same time totally breaking away from them; the allegation that he did so emanates solely from the critics, to whom such miracles are a mere matter of routine. Bruckner no more lacked artistic ancestry than any other good composer, and indeed was at no pains to conceal the identity of some decidedly eminent forebears: this very *Ninth* exhibits several instances of marked family resemblance to another *Ninth* in the same key by an earlier composer of such established repute that the proudest and the humblest may dare to admire him publicly.

The point in quoting the dear old lady's dictum is not that it might have been true, but that it was succinct. In eight words she summarized completely and clearly a full half of all that thousands of reviewers have been able to say against Bruckner in mountains of reports, essays, brochures, and tomes. The other half had already been said for them in the greatest of Shakespeare's plays by the character probably most congenial to them — Polonius's "Too long! Too long!"

Nowadays, when Bruckner and even Mahler are semi-occasionally performed and hemidemisemi-occasionally repeated, a growing contingent among our concert-goers persists in applauding these composers with apparent enthusiasm and in asking to hear more of them. Since with these composers as with not a few of their predecessors this growth in response and sympathy clearly emanates from the lay public rather than from the critics, the more maternal of the latter are fussing about like the hen which hatched ducklings, while their more pontifical brethren are inveighing against the legitimacy of all musical enjoyment born without benefit of clergy.

To attempt to explain all this by concluding that the public has become educated for Bruckner and Mahler is as false as it is flamboyant. Who is thus educating the public? Those conductors who persist in preparing and performing eloquently the few presentations which we are permitted to hear fully deserve to be honored as educators no less than as artists, but Polonius and Company see to it that these presentations are

too infrequent to assure real familiarity with the style and works of these men. Praise is due also to those manufacturers who have enabled us to hear many of these symphonies in phonographic recordings, and to such agencies as the Carnegie Foundation for including some of these recordings in their donations to schools. The schools themselves, even those which pride themselves on the representative character of their courses in "appreciation" (horrid word!), have in the aggregate showed themselves very backward in presenting Bruckner and Mahler to their students, possibly because few Americans who are old enough to teach have had opportunity to enjoy adequate personal experience of either composer, and can find little in the literature of reference which would be likely to promote friendly understanding. Certainly the critical bloc has done little to encourage sympathetic study of this music: the rank and file of the reviewers are content to know that "Simon says thumbs down," while the critical bloc-heads still employ the oracular utterances of our anonymous dear old lady and Shakespeare's familiar male granny respectively as the first and second theme-songs in the exposition, development, and recapitulation of their perennial hymn of hate.

In spite of this, Bruckner and Mahler, though as yet not "standard repertory," are in a position to say, with Mark Twain, "Reports of my death are greatly exaggerated"; and their music, which for long has been summarily dismissed by our musical censors as abstruse and repellent, is now feared by these same censors as insidiously seductive music. Awestruck as we may be at the spectacle of our guardians and protectors fighting to save us from music which at one and the same time is innocuously futile, dull, dreary, unintelligible, interminable, and yet so full of popular appeal as to constitute an esthetic if not a social menace, we should reserve our highest faculties of wonder, love and praise—or holy horror if that is our diathesis—for the climatic discovery that these musical termites have already penetrated and are undermining the temple itself; in a word, that Bruckner and Mahler have "wormed" their way into favor of a considerable number of professional musicians who a few years ago were reviling their names. True, not all of these have publicly declared themselves; but it is evident, that many who not long ago were openly and loudly attacking these composers now secretly enjoy them, and may even be suspected, like Nicodemus, of nocturnal converse with their new Messiahs—probably by studying their scores, since nowadays one occasionally meets a musician who seems to have some knowledge of the symphonies themselves.

Historically there is nothing new if a composer whose works require time, effort, expense, and interpretative acumen to prepare for performance is at first neglected, then misunderstood as a result of controversy in which the critics befuddle themselves and most of the public, and eventually receives his first tardy recognition from that element among the laity which naively forms its first impressions of new music by listening to it instead of reading about it. This cycle is typical, even though

the individual case histories differ in detail. Much of Bach's music was neglected as long as Bruckner's and Mahler's. Beethoven enjoyed some recognition during his lifetime; to-day his symphonies, a few of his overtures and concertos, the early string quartets, half a dozen piano sonatas, and one violin sonata—which last is still listened to as music in spite of Tolstoi's silly novel—are so much in demand that performers do not even bother to keep up practicing the later quartets, the *Missa Solemnis*, and much else which is just as fine but much more difficult to play. Haydn and Mozart are known by and admired for only a few of their masterpieces. Wagner was accepted by the public before he was even half-approved by the critics. The situation of Berlioz and Liszt closely parallels that of Bruckner and Mahler; almost universally disapproved of by the critics, the public has never had opportunity to become familiar with the greatest works of these composers. Tschaiikowsky has long been a popular favorite, and is critically accepted, but not approved. With Brahms the tables were turned, but with little better result; he was critically approved before he was even half-enjoyed by the laity, which now demands constant repetition of his symphonies, but expresses no curiosity whatever concerning his chamber-music and other important works.

There is nothing astonishing or scandalous in the fact that new works of art have to find a public before becoming known and loved by the public, but it is scandalous that "experts" should try to make a scandal of every natural and wholesome element in the entire process of artistic creation and communication. If nobody had ever composed a symphony, or if nobody wanted to hear a symphony except its composer, clearly there would be no livelihood for symphonic analysts and apologists. As it is, "he who can does; he who cannot teaches." A considerable army of inkfish who, like Pudd'nhead Wilson, seem to believe that "to do good is noble, but to show others how is nobler and less trouble," is at hand to demonstrate that composition takes so little brains, and appreciation so much, that no decent member of society should undertake either except under the guidance of an expert whose principal qualifications seem to be total incapacity either to compose music or enjoy it. From these wise-aces we learn, contrary to the evidence of our senses and our sense, that there are but three B's in music and must never be a fourth; that Schubert's development sections are poor because his themes are too melodious; that Berlioz's *Scene in the Country* cannot possibly be based upon Beethoven's *Scene by the Brook* because the essence of romanticism is total repudiation of classicism; that Wagner's chromatics are so plentiful because of his excessive interest in the ladies rather than because of his legitimate interest in treating improved wind instruments as flexibly as Mozart had already treated the strings—one wonders why we are not concurrently told that Bach wrote the *Well-Tempered Clavier* solely to annoy those school-girls who "don't like sharps"; that Brahms' chromatics, *per contra*, are quite all right because he wrote nineteenth-century horn and trumpet parts in an eighteenth-century notation—and

much else designed ostensibly to help the layman but actually to deliver him into the hands of the critical profiteer. If the notion that evaluation must precede perception seems to place the cart before the horse, the advantage seems to be that under this dispensation neither the horse nor the passengers are likely to get anywhere faster than their custodians can follow them.

The real crux of the matter is that it is not so easy to analyze the urge which prompts and directs musical communication as it is to analyze the forms which this communication assumes. It is thus tempting to persons of the kibitzer temperament to analyze what they can, and then to deny the importance if not the very existence of the many things in heaven and earth undreamed of in their philosophy—or even dreamed of and feared. After all, the expounder of musical faiths is situated not unlike the father confessor in *Gentle Alice Brown*; if his parishioners behave themselves, how can the priest make a living? So long as the urge to compose music is irresistible in some people and the impulse to listen to it is persistent in others, and so long as neither phenomenon is scientifically understood by anybody, any glib person who can analyze a minor factor in the process of communication may offer the part for the whole and successfully pose as an authoritative interpreter of esoteric mysteries if he can but keep his victims mystified. This he usually does by exploiting the natural modesty of the practitioner and the learner, who are usually only too painfully aware of their own fallibility; by arrogating to himself a spurious “authority” based upon superior powers of observation which he does not possess, supplemented by profound study which he has not performed, a charlatan may set himself up as prophet and sage before people who acknowledge him great because he makes them feel small.

The composer is perhaps less frequently deceived by this sort of thing than the layman, because he knows from practical experience of musical composition that the “analyst” does not know what he is talking about;—one recalls Bruckner’s comment on Hanslick—“He really understands Brahms as little as he understands me.” But, unless a composer has studied and practiced literary as well as musical composition, he cannot say as much for his compositions in words as they can say for themselves in tones, and is wise not to venture into the enemy’s country unless he is well supplied with verbal as well as tonal ammunition. Even if, like Wagner and Schumann, a composer has a good supply of verbal ammunition and plenty of target-practice in using it, the chances are against his verbal strategy being as adroit as his musical strategy, as the most devoted admirers of these two masters must reluctantly admit. Meanwhile the critic’s mechanized invasion of the composer’s country may not actually exterminate the composer, but it often does hinder his communicating with his public by keeping the latter in a state of intimidation sufficient to the critic’s purposes. Unless a composer is as lucky as Brahms in finding a critical sponsor who is willing to overlook his real merits

in order to use him in musical politics, he is likely to starve or be obliged to snatch time for composition from the pre-occupations of some extraneous form of livelihood almost as hazardous: Bruckner lived by teaching counterpoint and playing the organ, Mahler by conducting, and Wagner by borrowing money and forgetting to return it—to name but three composers who found it necessary to devote more than one life to their real ideals, and even then, like the Apostle Paul, to “die daily.”

The lay music-lover, on the other hand, seems a much better “prospect” for critical exploitation. Since he has no experience at composing, he can easily be persuaded that composers perpetrate symphonies by some process of automatic writing without knowing what they are doing, and might then foist them in a half-baked condition upon suffering humanity, were not critics at hand to compel them to spruce up their atrocities to conform with approved practice. When these same critics proceed to tell the layman that he needs to study, which is probably true, he is again easily persuaded that cultivated musical laymen are those who have learned to listen to music by learning not to listen to it but to the people who “know the answers.” Even the fact that most critical evaluations seem little more than devaluations, may fail to awaken his healthy suspicions, since he has been taught to distrust his own naive enthusiasms as being insufficiently “discriminating” to admit him to that elite coterie to which every good democrat aspires. Even if he sometimes wonders why the only good composers are long since dead it will probably be some time before he discovers that only dead composers may be depended upon not to write something new and upsetting. The critical Gestapo will certainly not tell him this, but instead will tell him that good music is that which stands the test of repeated hearings—a pretty instance of the devil quoting Scripture; for repeated hearing is indeed the test of such good music as is heard repeatedly, but not of that which the censors permit to be heard seldom or not at all.

History records plenty of cases in which the critics have chased an art into prolonged doldrums by sincere or pretended attempts to maintain or elevate standards by rationalizing inflexible criteria and imposing censorship upon creation and communication. That art is in healthiest condition whose lay adherents are not too ready to sell their birthright of independent perception for a mass of critical *potage du jour*, and that study of art is most to be encouraged which offers laymen the opportunity to develop their natural powers of perception by direct observation and enjoyment of works of art, leaving what they think about it very largely to their individual capacity for thinking. In view of the marked propensity of many people to think very little or even hardly at all, this may seem to be a dangerous program; the point is that direct contact with works of art is more likely to set people thinking than exposure to a body of doctrine, simply because art is dynamic to anyone who enjoys it, while dogma is narcotic to devotee and sceptic alike. Besides, the point is not whether art or dogma can make everybody think—we know already

that no agency can do that! The point is that people who are thoughtful by nature are encouraged by expression to develop their thoughts, whereas repression tends partly or wholly to arrest such development. To object that the thoughtful layman does not express himself in art but lazily depends upon the artist to do it for him is a mere quibble; true, if he relies upon critics to think for him they will require him to refrain from thinking for himself, but if he avails himself of the artist's powers to express his thoughts better than he can express them for himself he does so only by living himself into the artist's presentation—a very different mental process indeed from that of merely trying to memorize a series of assertions. Even so lowly a work of art as a dance-tune, if it is a good one, is dynamic enough to make a man want to move his feet; a symphony, if it is a good one, stirs higher faculties in the realm of thought and feeling. There is no question, of course of "thought" in the sense of syllogistic reasoning—even though design, including tonal design, has the logic of form, or of "feeling" in the sense of sentimental emotional wallowing—such absurdities need not be discussed here; but the motivation and achievement of a happy and useful life demand an integration of sound thinking and warm feeling which music seems to nourish and help to sustain in many people. At least, the growing lay demand for and response to the music of two composers whom some "serious musicians" still regard as altogether too serious suggests that the critical priesthood has underestimated the extent and intensity among the laity of a musical appetite for something more than mere polite entertainment.

This is by no means to argue that "the public" is always right and "the critics" always wrong. Individuals differ among themselves, and even the same individual differs from day to day. In easy times plenty of otherwise thoroughly decent people underexercise their psyches just as they underexercise their bodies, and, even if they escape becoming permanently too soft or too hard in a world where trivial possessions and experiences may be had for the taking, they do for the time being drift into the habit of seldom exerting their brains outside of business affairs and of asking little more to occupy their time than an abundance of often inconsequential amusement. When life seems secure and pleasant, a man need not be a very bad fellow to adopt the view-point, "Give me the luxuries and I will manage without the necessities": if he happens to be musical he may be quite sincere and hearty in his enjoyment of really good music provided he is familiar with it and provided its mood seems prevailingly cheerful, with or without an occasional pathetic touch, just for variety; but while he is in this easy-going mood he will probably find tragedy disturbing and prolonged earnestness a bore, and though he will feel cheated if a concert fails to afford a few strong climaxes to give him a "thrill," he will quite probably welcome these merely as casual turns in a colorful miscellany, and miss them altogether if they occur as denouement which he has been too inattentive to follow.

In times of stress, on the other hand, naturally thoughtful people who may have seemed easy-going in easy times suddenly prove themselves sound at the core by resuming the neglected practice of serious reflection, while others who may have previously shown no symptoms of thinking at all suddenly become thoughtful almost over-night. Some of these of course become disillusioned and embittered, and turn to cheap and trivial amusements for "escape"; but others discover in themselves a craving for spiritual sustenance of which they have not been conscious in easier days, and some of these seek and find it in what for brevity may be called the "music of aspiration." People who formerly considered their time too valuable to sit through the *C-major Symphony* of Schubert\* find a longer time not too much to devote to Bruckner's spiritual vision and Mahler's dramatic heroism in a world where the need of both has suddenly become plain to plain people. Mahler is reported to have said, "My time will come"; one wonders whether his active and powerful mind discerned that this "time" would be a time of such stress as to call out the best in many men to counteract the worst in others.

It remains to be seen whether this spontaneous public demand for spiritually sustaining music is good only "for the duration of the emergency." The First World War disclosed that music may be a powerful agency for sustaining the morale of soldiers, just as doctors have long recognized its therapeutic value with invalids. Is music merely a sick man's diet? The "unmusical" would have it so, and the custodians of the "standard musical repertory" would at least like to relegate "Bruckner 'n Mahler" to this category; but is there much more in such objections than an envious desire to deprive others of enjoyment which the objector cannot share? The fact that more people are thoughtful nowadays than in easier times is no evidence that thinking should be reserved for emergencies; the fact that many a sick man has to build up his health on a diet of meat and vegetables is not evidence that when he is well he should go back to "pie and pizen." Some people are thoughtful, some eat wholesome food, some commune with the finest art, some even live decent lives at times when the only compulsion is from within. Perhaps in reality they add no cubits to their stature by taking thought; perhaps, on the contrary, "the Kingdom of Heaven are these." At least those of us who for the better part of a lifetime have found Bruckner and Mahler true guides, philosophers, and friends in sunshine and shadow may be pardoned for being a bit sanguine over the realization that at last a lot of apparently good people are getting acquainted with them and are "coming back for more."

\* If music is of good quality, it seems to me that the question of its length must be answered by each listener individually in terms of the value of his time to himself. As a young fellow, I was once refused an interview with a Personage on the ground that his time was worth ten dollars a minute. Later I saw him waste two hundred dollars at this rate watching a dog-fight. As my own time was then worth about thirty cents an hour, I could of course afford the whole spectacle. I am better paid now—but not so highly that I cannot afford time for long symphonies.—P.G.C.

## WILL MINNEAPOLIS BE MAHLER MUSIC CAPITAL?

By CURTIS SWANSON

Reprinted from *The Minnesota Daily*, the official newspaper of University of Minnesota

Students who attend today's *Union Listening Hour*\* have an opportunity denied many people in the world today—the chance to listen to Mahler's music. In an article in the current *New Republic*, Otis Ferguson emphasizes the fact that one of the most unfortunate results of the "cultural blackout" of Europe, is the banning of Mahler's music in German-dominated countries.

Like Mendelssohn, Mahler was a Jew, and all his compositions have come under the Nazi axe. His nine symphonies and his monumental *Song of the Earth*, which is being played today, are no longer heard in the European concert halls. The two great centers of Mahler music were cities which have become "ghost towns" of Nazi Europe, Vienna and Amsterdam.

Ironically, the performance of Mahler's music has encountered almost as great opposition in America. His music has perhaps aroused more heated controversy than that of any other modern composer. The Bruckner Society is the most militant of all musical organizations; its aim is to propagate and fight for greater appreciation of Bruckner's and Mahler's music.

One of the most enthusiastic of all Mahlerites is our own Dimitri Mitropoulos, who was presented with the annually awarded medal of the *Society* last winter. In an impromptu speech at one of the concerts, he suggested that he would play much more of this composer's music, if the "front office" were more interested. A recording by the Minneapolis Symphony Orchestra of Mahler's *First Symphony* will be released shortly. The highlight of next year's season will be the first Minneapolis performance of the *Song of the Earth*.

Bruno Walter, who again will conduct a concert here next year, is another great exponent of Mahler in this country. He knew Mahler personally, studied under him, and introduced many of his compositions. Eugene Ormandy also received the *Society's* medal while conductor of the *Minneapolis Orchestra*. If the interest which has been shown in past years continues, it may be that Minneapolis will become the unofficial Mahler capital—an inland Salzburg or Bayreuth of musical America.

\* Refers to a University program of recorded music.

## NYA SYMPHONY (FRITZ MAHLER, CONDUCTOR)

BROADCASTS MAHLER'S *FOURTH* OVER WNYC

On June 15th, the NYA Orchestra under the direction of Fritz Mahler performed Mahler's *Fourth*. Miss Willa Stewart sang the soprano solo and Moses Smith of the Columbia Phonograph Co. was the commentator. Weather conditions were very bad; much static prevented listeners-in from really hearing the performance on their radios.

More frequent performances of Mahler by NYA orchestras would certainly be welcome. Mr. Mahler has on several occasions included songs and excerpts from Gustav Mahler's symphonies on his programs. One wonders why NYA orchestras do not play works by Bruckner and Mahler more frequently. In this connection it is not out of place to remind program-makers that insistent applause at concerts given by the State University of Iowa Orchestra caused Prof. Philip Greeley Clapp, its conductor, to repeat *Lieder eines fahrenden Gesellen* and the *Adagietto* from Mahler's *Fifth* and that a performance of Bruckner's *Fourth* was so successful in 1940 that the same orchestra under Clapp's direction included Bruckner's *Seventh* on its 1941 programs. That symphony too stirred the Iowa City audience as did Stock's performance of Bruckner's *Third* at Cornell College, Mt. Vernon, Iowa. Further proof of the interest in Bruckner and Mahler on the part of the growing generation, unaffected by prejudice aroused against these composers because of hostile criticism of bygone days, is the formation of a Bruckner-Mahler study club at the University of Minnesota. It is not only college students that are responding to Bruckner's and Mahler's music. *Subscription audiences of different cities* are expressing their approval by vigorous applause and occasional shouting which is ascribed in certain quarters to Brucknerites and Mahlerites. Radio audiences, too, are apparently making their wishes felt, for it was because of the many requests by the radio audience that Bruno Walter put Bruckner's *Eighth* on the air last fall.

## Bruckner's *String Quintet*

BY GABRIEL ENGEL

COMPOSED during the earlier half of 1879 Bruckner's *Quintet for Strings*, scored for two violins, two violas, and cello, represents his sole contribution to the literature of chamber-music. It was written at the request of Director Josef Hellmesberger of the Viennese Conservatory, who told Bruckner that he wished for his celebrated "quartet-evenings" the unique privilege of introducing to the world a piece of chamber-music by one hitherto known only as the composer of gigantic symphonies. Unaware of the hypocrisy behind this "flattery" the ingenious Bruckner plunged happily into this, for him, unusual task and after several months finished it. Evening after evening passed by to find the promised performance of the *Quintet* postponed "until next time," on the ground that Hellmesberger's "fingers pained him." Finally the truth dawned on Bruckner. It was merely a repetition of his sad symphonic experiences with the ruling Viennese musical circle. The members of the Hellmesberger quartet would have nothing to do with this fresh display of Bruckner's scorned huge-dimensional style. In their opinion, just as his symphonies were not real symphonies, this so-called *Quintet* was not real chamber-music. They would be laughed at by the initiate in the Viennese "holy of holies" of true chamber-music, if they programmed such a monstrosity. At length the promised performance was canceled. The *Quintet* was first performed in 1880 in Cologne. It was first heard in Vienna in 1881, semi-privately, during a meeting of the "Academic Wagner Society." In 1885, when musical Europe was ringing with Bruckner's name, the Hellmesberger group valiantly performed the *Quintet* they had openly rejected years before.

Bruckner long sought in vain to find a publisher for the work. Hans Richter, a sincere though rather timid admirer of Bruckner's genius, took the manuscript with him to London. He returned not only without word of publication or performance, but also without the manuscript! When growing fame rendered publication of Bruckner's works comparatively easy, the master, having neglected to make a duplicate copy of the *Quintet*, wrote to Richter demanding the return of the manuscript. When it arrived Bruckner discovered with dismay that the *Intermezzo* (the second movement) was missing. A feverish correspondence with London proved unavailing. The *Intermezzo* had disappeared! Bruckner was left no other choice than to publish in its place a *Scherzo* which he had written, also at Hellmesberger's request, after the *Quintet* was completed. In 1891 the missing *Intermezzo* turned up in the possession of one of Richter's acquaintances. A waif, it languished in silence until 1904, when it also received its first hearing during a meeting of the Viennese Wagner Society.

*FIRST MOVEMENT: F-MAJOR (GEMAESSIGT)*

The principal melody of the opening theme-group enters at once over a tonic organ-point. A genuinely romantic idea in triple rhythm, it is introduced softly in the first violin. Of the light, lyric texture native to chamber-musical expression, it has, nevertheless, the broadly soaring melodic line of Bruckner's symphonic cantabile passages. An important element of the theme, a regularly ascending broken-chord, assumes an individual role in the cello. In a resolute, staccato transformation it becomes the rhythmic and harmonic backbone of an ardent supplementary theme in the first violin. The cadence of this melody, a brief, characteristic motif, is the source of the vigorous rhythmic life in the ensuing passage. Its dramatic possibilities are gradually revealed by the different instruments, at first alternately, then in combinations of increasing strength, attaining a powerful climax in a peculiarly Brucknerian unison utterance.

The song theme-group begins with a fragrant melody of delicate texture in the bright, ethereal tonality of F-sharp major. A rather unusual harmonic phenomenon for classic sonata form, this chromatic rise, in place of the traditional dominant change, is nevertheless amply sanctioned by Schubert. In reality Bruckner has merely delayed the entry of the dominant to achieve increased richness of harmonic color. Skilfully he leads the song theme-group over paths of unflinching fresh harmonic interest, until the expected haven has been reached. The statement of the themes closes in the dominant (C-major).

The short development section is devoted almost exclusively to the exploitation of the thematic material in the first group. The song theme-group is represented only by fragmentary particles in subordinated settings. The first violin, somewhat in the manner of improvisation, sounds the key-note of the preliminary portion. One by one the other instruments add their voices in the same free solo style. Then they begin to unite in various combinations suited to the changing contrapuntal texture of a Brucknerian development section. Component elements of the themes attain individual significance, appearing and reappearing in different guises, inverted, augmented, or diminished. A warm, comforting melody in the first violin counteracts the restlessness evoked by the exploitation of conflicting motifs. Elements of the principal theme provide material for a powerful dynamic climax. After a "general pause" the first violin sounds the opening theme in its original form, giving the impression that the recapitulation has set in, but suddenly the second viola inverts the theme. The absence of fundamental harmonies lends this resetting of familiar ideas fresh interest. New contrapuntal life arises in an imitative conversation in the violins. Finally, the first violin, in an impassioned *Cadenza* "ad libitum," leads to the real recapitulation. Here too, as in Bruckner's symphonies, a moment of high suspense marks the transition between two main divisions of a movement in sonata form.

The recapitulation, in no sense a repetition of familiar ideas, almost at once strikes out along paths of fresh revelation. A triplet figure, drawn from the opening bar of the principal theme, attains special significance, dominating the background of that theme's restatement. The other themes of the first group undergo similarly novel reshaping, a richer contrapuntal texture lending this final setting an air of fulfilment. The song-group is reintroduced in subtle tonal surroundings, enriched by enharmonic coloring.

The hand of the symphonic master is clearly evident in the structure of the summary (*Coda*). All the principal ideas are arrayed side by side and finally resolved into the tonic triad. The movement closes jubilantly with an organ-point on the tonic.

## II. SCHERZO D-MINOR (SCHNELL)

Totally unlike Bruckner's hardy symphonic *Scherzi* in its airy, refined texture, this movement also shows the composer's keen grasp of the essential difference between symphonic and chamber-music. Yet this *Scherzo* too is a dance of unmistakable Upper-Austrian flavor.

The outstanding thematic line, given to the second violin throughout the opening portion, is a curious, winding melody in *Laendler* rhythm. Above it the first violin softly plays a charming counter-theme, playfully lilted. Cello and violas mark the triple rhythm, at the same time filling out the rich harmonic texture. Most unusual phenomena in Bruckner's melodic world are the occasional syncopations appearing here. Both themes are then inverted in the violas, the music acquiring increased harmonic and contrapuntal subtlety through a more detailed execution. The complex content of this passage caused Bruckner to call for a slower tempo: "almost andante," he said in a letter. The form, as always in Bruckner *Scherzi*, is simple A-B-A, the original themes now returning to bring the *Scherzo* portion to a close.

The *Trio*, a slower, more graceful, and sunnier expression, also of *Laendler* character, traces its descent directly from Papa Haydn. The flourishes of the second violin are literally haunted by the spirit of the "father of chamber music." This delicate melodic line and the broader one it surrounds are both unmistakable sequels of the principal theme of the *Scherzo*, which also consists of two contrasted melodies. Yet how different are the two themes in effect! The remainder of the *Trio* is occupied with a more detailed discussion of the thematic elements already presented. Not even amid involved contrapuntal surroundings is the light, cheerful character of the music impaired.

## THIRD MOVEMENT: $\flat$ G MAJOR (ADAGIO)

Of truly symphonic breadth is the opening theme of the *Adagio*, introduced in the first violin. Beginning softly it soars gradually aloft on stately wings, with increasing ardor, and then descends in graceful me-

lodic curves to become the mere whispered confession of a noble soul's yearning. To find another melody of such depth and purity one would have to go to Bruckner's greatest symphonic *Adagios*. A series of prayerful sighs, drawn from a motif near the end of this theme, lead to impassioned outcries. Meanwhile the source-motif of all this longing appears inverted in the second viola.

Very softly a regular unison pulsation on *F* in the violins and second viola, almost like a living heart-beat, introduces a new brighter mood. A wonderful melody radiant with hope and confidence is sung by the first viola, while the pulsation gains strength in rich harmonies. The total absence of any supporting bass gives this moving, "tenor" theme a lofty, visionary quality. As the cello takes it up, the first violin enriches the restatement with brief, persuasive phrases of individual melodic shape.

An inversion of the opening measures of the first theme, drawn from the end of the "tenor" theme, leads to a full restatement of the former by the first violin, in an atmosphere vibrant with the pulsing accompaniment of all the other instruments. The reappearance of the principal theme at this point might lead the listener to expect a rondo form in the ensuing course of the movement. There follows, however, an exploitation of fragments of the opening theme, in the manner of a development section in sonata form. Inverted and reshaped these reveal the innate relationship of the first and "tenor" themes. The latter's origin in the inversion of the opening phrase of the former is made clear. Other features in common, of too subtle a technical nature for the present analysis, are also made apparent in the mingling of fragments of both themes. This union of similar and contrasted elements is one of the essential features of Bruckner's individual principle of thematic development.

A new, comparatively rapid, descending figure lends dramatic character to the development's unfolding. Assuming increased importance, it becomes a duet in the violas, as they clothe with the soft splendor of a benediction the farewell reappearance of the "tenor" theme in the first violin. The *Adagio* closes at the threshold of a wonderful dream. Ineffable peace hovers over the last phrase, an expressive echo of the above ornate motif.

#### *FINALE: F-MAJOR (LEBHAF BEWEGT)*

A *Finale* in the true sense of the word is the closing movement, for it can be completely grasped only in the light of the preceding sections. A lively staccato motif in the second violin, over an organ-point of distant tonality, dominates the opening. The first theme-group is devoted to the restoration of the central tonality of the entire work (*F*). Yet even the most unsophisticated ear need not shrink from the complexity implied, for it is not the dry grammar, but rather the poetry of harmony that sways this pursuit of tonality. Its unsettled character lends the entire passage an air of suspense, like the preparation for some significant disclosure. In

Bruckner's symphonies such passages culminate in gigantic unison outbursts. Here the excitement subsides into a mere whisper, followed by a "general pause."

The second or "song" theme-group, slower than the first, is dominated by a swinging, *Laendler*-like figure, drawn from the *Scherzo*. This regular rhythm, given to the first viola, furnishes a firm basis for the somewhat rhapsodic melody which the first violin sings above it. The song-theme of the opening movement is clearly the source of this unusual melody. More technically considered, the two also reveal similar harmonic character. The *Laendler*-figure, broadening the span of its swing, acquires the boldness and measured sweep usually associated with fugue-themes. As the cello takes it up with strokes of full power it seems as though a fugue were really beginning. This impression is confirmed by the answer in the dominant (first viola). However, it proves to be only the herald of the highly contrapuntal development section, presenting the final decisive conflict of the work. A brief triplet motif, introduced in the second violin as a companion to the "fugue" theme, is derived from the opening phrase of the whole work. It becomes the outstanding thematic element of the development, in the course of which motifs of the song theme, as well as a prominent figure in the *Adagio*, are also exploited. The inspired contrapuntal artistry of this development beggars description. In the natural, apparently unlabored style of his polyphonic idiom, even when it is most involved, Bruckner is a nineteenth-century Bach. Yet the overwhelming effect of this *Quintet-Finale* is the result of no combination of devices, however masterly their execution. Here also, as in Bruckner's symphonies, the gradual unfolding of the spirit's indomitable rise towards ultimate triumph in the face of a world of obstacles is the underlying concept. Bruckner revelled in such passages. In the rearing of tremendous climaxes involving the utmost polyphonic skill he felt himself a supreme hero. Perhaps this unshakable confidence in his artistic power played an important role in his huge symphonic summations.

The song-theme is the first melodic integration that may be definitely identified in the recapitulation. It reappears in a richer setting, the logical result of the development. A melodious fragment of the opening theme of the *Finale* is prominent in the *Coda*. The work closes jubilantly, as it began yearningly, with an organ-point on the tonic.

#### BRUCKNER AND MAHLER AT OBERLIN AND ANN ARBOR

Bruckner's *Romantic* and *F-minor Mass* will be heard at Oberlin College under the direction of Maurice P. Kessler. Mahler's *First* and Bruckner's *Third* will be performed at the University of Michigan. Thor Johnson will conduct.

## BRUCKNER'S REQUIEM IN D-MINOR

Central Methodist Church, Detroit, Michigan, May 25, 1941. University of Michigan Little Symphony, Thor Johnson, Conductor.

Bruckner's *D-minor Requiem* was presented in Detroit, on May 25, 1941, by the Chancel Choir and the University of Michigan Little Symphony, Thor Johnson conducting. Although this was the first hearing ever given the work in that city, it was so successful that it will be given there again on May 24, 1942, the same chorus, soloists and orchestra participating.

## EFREM KURTZ CONDUCTS SCHERZO OF BRUCKNER'S NINTH AND OVERTURE AT STADIUM CONCERTS, NEW YORK, July 21 and 23, 1941

... The Bruckner *Scherzo*, new to these concerts, is a pleasing addition to the repertoire; its lightness and grace has a certain suggestion of the Mendelssohn of the *Midsummer Night's Dream* music.

... The Austrian contribution, new to this series, was an overture composed by Anton Bruckner in 1863 which had to wait forty-eight years for its Viennese premiere. It is more distinguished for the skill shown in its construction and scoring than for saliency of its musical ideas, although it is interesting in its exhibition of influences which were later absorbed into Bruckner's essentially individual style. There are some hints of Wagner, more of later Germanic classicism and early Germanic romanticism, and a few touches which foreshadow the fully developed Bruckneresque idiom.

FRANCES D. PERKINS, *New York Herald Tribune*

## BRUCKNER'S FIFTH

*Saxonian State Orchestra, Karl Boehm, Conductor. Victor Recording*

With the publication of the performance by the Saxonian State Orchestra under Karl Boehm's direction of Bruckner's *Fifth Symphony in B-flat* in its original version Victor has performed an invaluable service to the music world. For the first time on this side of the ocean it is now possible to hear this superb work exactly as the composer conceived it. Not only have important pages of the *Finale* been omitted in the scores available until the recent publication of the complete critical edition of the master's works in Vienna, but as in Bruckner's other symphonies, numerous changes in the instrumentation, many of which alter entirely the sound of many portions of the music, may now be heard as they were intended to emerge by the composer.

There is unfortunately not sufficient space at my disposal this time of the year to expatiate on the wonders Bruckner has wrought here. It must suffice to state that the *Fifth Symphony* contains some of his most sublime and moving music; the product of the greatest mystic whose medium was the tonal sphere. Karl Boehm is a devout, understanding expounder of Bruckner and his interpretation realizes the composer's desires unerringly, and the fine playing of his Dresden musicians is faithfully captured and conveyed in this excellent recording.

JEROME D. BOHM, *New York Herald Tribune*, May 25, 1941

## KILENYI BRUCKNER MEDAL AWARDED TO GOOSSENS

To familiarize Cincinnati audiences with the music of Bruckner, Eugene Goossens performed the Austrian master's *Fifth* in 1932, the *Sixth* (first time in Cincinnati) in 1935, the *Second* in 1939, and the *Third* (first Cincinnati performance) in 1940. In appreciation of his efforts to create a greater interest in and appreciation of Bruckner, the Bruckner Medal of Honor, designed by Julio Kilenyi for the exclusive use of the *Society*, was awarded to the conductor of the Cincinnati Symphony. The presentation was made by Dr. Martin G. Dumler, President of the Bruckner Society of America on November 8, 1940 after a performance of Bruckner's *Third*. According to Frederick Yeiser of the *Enquirer*, "Dr. Dumler likewise expressed his satisfaction over the great performance. In accepting the award with deepest thanks, Mr. Goossens paid honor to his colleagues of the Cincinnati Symphony Orchestra and their admirable handling of the score."

## The Symphonic Problem in Mahler's Works

BY DR. HANS TISCHLER

GUSTAV Mahler's symphonies bear a strongly individual mark. In spite of all influences and similarities (as, for instance, those that connect him with Anton Bruckner) they show several entirely new features. These innovations are not wantonly adopted, however. Every intelligent listener feels at once that Mahler needed them to express his ideas and that it is in the latter the real novelty lies.

Each of Mahler's symphonies is a drama of general ideas or principles, not of describable actions. Even where a text is added they remain essentially absolute music, for Mahler chose words that express general ideas only. Occasional descriptive phrases are purely circumstantial to those ideas, not purpose in themselves.

The dramatic idea must necessarily show itself in a series of technical features. These will be our problem and we shall discuss them presently. To be sure, some of Mahler's forerunners had already conceived the symphony as the conveyor of dramatic ideas, though never in Mahler's strict sense. Therefore a brief preliminary survey of the symphony as a music drama should be helpful.

In Haydn's and Mozart's symphonies no leading ideas are detectable. These works are generally accepted as pure or absolute music, expressing general moods only. In them the first movement is the carrier of the main mood, while the other sections, conventionally drawn from the suite-form, are merely appended. The germ of the ensuing development lay in those works where the last movement attained greater length and musical weight, showing the growing feeling for the importance of the concluding movement. An early example is Mozart's *C-major Symphony* (K. 551). Yet the first movement, here also, is the outstanding carrier of emotion, the last section being rather playful, abstract (or pure) music.

Beethoven tackled this problem with full consciousness, with the result that his last movements directly counterbalance the first ones. The two middle movements, however, are mostly detached in mood. The slow movement of the *Eroica* and the middle movements of the *Fifth* alone take definite part in a dramatic action attributable to the symphony as a whole. In the *Eroica*, moreover, only the first two movements form a dramatic sequence. (The *Sixth* with its definite program stands outside our problem.)

All the different types of the symphony, current up to our time, either originate with, or are handed down by, Beethoven. These are: (1) the program symphony (*Sixth*); (2) the symphony with an inner dramatic program (*Third* and *Fifth*); (3) the one with an inner epic program

(*Seventh*) which, in recognition of this fact, Wagner called "the Apotheosis of the Dance"; (4) the symphony of the suite type, with all its movements musically important (Nos. I, II, IV, and VIII); (5) the choral symphony (*Ninth*), which belongs to the second type also. The further development of the second type, the symphony with an inner dramatic program, is alone vital to our present discussion.

Schumann, essentially an epic genius, tried hard to weld his symphonies into dramatic units. The outer movements of his *Rhenish Symphony* (No. 3) seem to form a dramatic sequence, interrupted by the idyllic middle movements. In his *Fourth* he adopted the technique of the cyclic form, using the same themes in different movements. In this way he succeeded in clarifying the dramatic action, interrupted only by the idyllic *Romance*. Franck used the same device in his symphony which, nevertheless, still belongs to the suite type. We also would class Tchaikovsky's and Dvorák's symphonies in this category, despite their many dramatic moments scattered through single movements. Brahms' *Third* shows the same construction as Schumann's *Fourth*: the first, third, and fourth movements express the same dramatic, rather tragic idea, while the idyllic second section brings some relief, a species of structure already encountered in Beethoven's *Fifth*. Brahms' *First* goes one great step farther. The last movement is the dramatic triumph (as in Beethoven's *Fifth*). It solves the tension of the preceding movements, all of which have taken part in the action, depicting different aspects of the conflict. Their effect has been a constant brightening of the symphonic scene apart from the introduction to the final movement, which surmounts the last impediment before *dramatis persona* is victorious.

A new conception of the symphony was that of Anton Bruckner. All his nine symphonies follow one scheme; the first and final movements are the arena of the tragic conflict. (In his *First* this conflict is so violent that his art can scarcely cope with it.) The two middle movements are almost invariably a religious *Adagio* and a *Scherzo*. Detached from the drama presented in the outer movements (perhaps with one exception, the *Fifth*) they do not even aim at relieving the dramatic tension.

Such then was the historical situation when Mahler began his work as a musical dramatist. All his symphonies belong to the type with an inner dramatic program. Only once (in the *Eighth*) is this program apparently converted into an outer one by a thorough-going text. Only once it becomes an epic program (in the *Song of the Earth*, which also is, in reality, a symphony). Mahler's dramatic instinct does not permit a pause of action in his symphonies. There are no interludes inserted, except for the *Adagietto* in the *Fifth* where the tension of the other movements is so great that there was no other way of providing the necessary relief. The *Sixth (Tragic)* is completely overwhelming because the tension remains unrelieved throughout. In most cases, however, Mahler endows the action in the middle movements with a certain relief-bringing quality. The constant use of such movements is characteristic of Mahler, though

he was not the first to use them (see, for example, the third movement of Brahms's *Third*).

With Mahler the symphonic drama becomes so varied, that he is compelled to use the human voice to convey the various distinct ideas clearly to the listener. The fact that Mahler found it necessary to introduce texts in five out of eleven symphonies and to use music otherwise connected with texts in two more of them is added vindication of the following analysis of his music as dramatic in quality.

Let us now recount in order the various dramatic actions of Mahler's symphonies:

In the *First* we cannot but imagine a youth full of optimism, tackling the world. His buoyant strength meets with some hindrances in the second movement; his first great disillusionment is shown in the third. Almost insurmountable reverses, leading to dramatic conflicts in the fourth, are finally overcome triumphantly.

The *Second* shows the harder side of life, its conflicts (first movement) its irony and futility (third movement), the outcry for another, better world (fourth movement), the tragedy of solitude and enmity (last movement). Least represented is the beautiful aspect of life (second movement) and even this small part is not left undisturbed. Only the hope for the next world brightens this gloomy picture and words were indeed necessary to express this idea adequately.

The *Third*, despite the apparently epic character of its second part (movements 2-6 inclusive) is a true drama in which the conflicts are overcome in the first part so that the two following movements may be given over to beauty and gaiety. Human tragedy reasserts itself (fourth movement) only to give way to a more sublimated joy (fifth) and beauty (sixth) indicating the road that leads away from the earthly life to a heavenly one.

The *Fourth* supplements the idea of the second part of the *Third*. From earthly gaiety (first movement) the picture changes to one of more sombre, ironical hue (second movement) to be brightened once more by heavenly beauty (third movement) and joy (fourth movement). The tragic quality of the first part of the *Third* is absent here, leaving the impression of a comedy.

The following three symphonies abandon the idea of the next world. The place of action is this world only, with its grim reality.

The *Fifth*: Mourning and pain (first movement) fighting and wounds (second) irony and shadowy insecurity, coupled with a forced gaiety (third) relieved by the interlude (fourth). The fifth movement concludes the work more cheerfully, describing daily work and haste, still the best phases of ordinary human existence.

The *Sixth* again reflects harsh conflicts in all but the second movement, even that section being a rather painful, wound-scarred episode. The hero definitely succumbs to Fate in the last movement.

The *Seventh* seems to depict a hero who launches himself upon the ad-

venture of life fortified by the will to succeed (first movement). He experiences moments of pleasure (second and fourth movements) but sees the irony and sham of these (third movement). Finally he takes up the fight cheerfully and steadfastly (fifth). Outspoken, sharp conflicts are absent in this work. The mood is rather that of braving life as cheerfully as possible.

This combative, hopeful spirit is maintained in the first part of the *Eighth*. Its second part reverts to the transcendental solution of all problems. Mankind is the hero of this drama. At first dumbfounded in the face of the miracle of eternal hope, he attains manifold expression of its joy, to be finally redeemed by it.

The epic quality of the *Song of the Earth* is self-evident from its texts. A spirit of resignation, rather than of action, as called for in a drama, pervades this great work.

The *Ninth*, the nearest to pure music Mahler ever wrote, does not lend itself easily to an explanation. Yet there is no doubt that it is dramatic. The first movement seems to express the desire for beauty, happiness, and peace which cannot be achieved because of the disharmonies of life. The second makes the best of life, pretending to be cheerful. In the third the hero takes up the fight. Moods of shrieking irony, futility, and success follow each other. In the fourth the longing for beauty alternates with moments of sheer disillusionment.

The *Tenth (Unfinished)* follows the same line. Yearning for beauty and peace (first), forced gaiety (second), bitter irony (third), forced gaiety and diabolical sarcasm (fourth), and longing for peace and redemption, mingled with more fruitless conflict (fifth).

For all these pictures Mahler uses only six distinct types of movements, most of them not his invention. They are, however, absolutely personal in style and use. These types are the following: (Roman and Arabic numerals indicate symphonies and movements, respectively).

- a) Song movements: I: 3, II: 2, II: 4, III: 2, III: 4, III: 5, IV: 4, V: 4, the second part of VIII: 2, *Song of the Earth*: 2, 3, 4, 5.
- b) Characteristic pieces: II: 3, III: 3, IV: 2, Trio of VI: 3, VII: 3, X: 3. Mixtures of (a) and (b): VII: 2, VII: 4.
- c) Dance movements: I: 2, V: 3, VI: 3, IX: 2, X: 2, X: 4.
- d) Outer movements: I: 4, II: 1, II: 5, III: 1, IV: 1, V: 1, V: 2, V: 5, VI: 1, VI: 4, VII: 1, VII: 5, VIII: 1, IX: 3, X: 5. Mixtures of (a) and (d): I: 1, third part of VIII: 2, *Song of the Earth*: 1.
- e) Slow middle movements: IV: 3, VI: 2, First part of VIII: 2.
- f) Slow outer movements: IX: 1, X: 1. Mixtures of (e) and (f): III: 6, *Song of the Earth*: 6, IX: 4.

These groups of movements, considered from a harmonic-contrapuntal viewpoint, have quite distinct features, which may be summarized as follows: (The grouping parallels the one immediately above).

a) Here the harmonic motion is very slow. The fundamental chords are strongly emphasized, often in long-sustained organ-points of the tonic or tonic plus fifth. For the most part polar tonality prevails, tonic and dominant alternating without other chords, much as in folk music.

b) Alternation of major and minor is one of the main features in these movements. So are many mixtures of major and minor. Frequent unsolved chromatic bynotes and frequent use of the harmonic full-tone step downward are also characteristic.

c) This group shows simple harmonic development; modulations are mostly effected by direct leap into the new key. The fundamentals are strongly stressed, the motion of the fundamental chords much quickened. From V: 3 on, these pieces become highly contrapuntal and use wide melodic leaps, sharp disharmonies resulting from these two features. Passages in parallel 4ths, 5ths, 7ths and 9ths, not governed by a strong bass, are very frequent.

d) Here we find a further accumulation of occasional disharmonies, resulting from poly-melodicism (a type of counterpoint very characteristic of Mahler), and leading to polytonal structures as well as to chords in 4ths (VII: 1, VII: 5, VIII: 1). The tonality may be suspended either through the possibility of assigning passages to two or three different keys, or through total absence of tonality. Very frequently organ-points are used to counterbalance these features otherwise difficult to absorb.

e) These movements show many of the characteristics of (a), but possess, in addition, a large measure of romantic chromaticism in melody and bass. Significant use is made of the expressive turn (perhaps a legacy from Bruckner).

f) This group shows many of the characteristics of (d) and (e) only still more complicated. The motion of the harmonies is slow. Polar, as well as suspended tonality and polytonality are frequently used.

The moods of these six categories are very much unified, except for (a) and (e), which serve a variety of moods. (b) is employed for either a pleasant, quiet type of gaiety or humor with a dash of irony. (c) expresses in most cases a forced gaiety, marked by bitter sarcasm. (d) retains the features of the carrier of the main part of the drama: conflict, heroism, surrender or victory. (f) depicts the longing for rest, beauty, a better world.

From the viewpoint of musical form this grouping also remains valid. (a) and (e) use all types of small, simple forms. (b) and (c) are almost exclusively composed in *alternativo* forms, smaller and larger rondos, often with an admixture of sonata elements. (d) shows only large sonata forms or the most complicated rondo forms, two of which (V: 1, VII: 5) are strongly mixed with sonata elements, the third (IX: 3) being Mahler's only rondo with two *alternativos*. (f) uses (except for *Song of the Earth*: 6, apparently because of its song character) the most peculiar symphonic form: double variation, i.e., alternating variations on two themes. These variations bear a strong resemblance to sonata developments.

We see that the proper conflict form is still the sonata form. Yet the blending of sonata features with the rondo and variation forms renders these two also capable of depicting conflicts, though, to be sure, with some modifications. The rondo adds some cheer to the drama. The double variation form, applied only to slow outer movements, elevates the conflicts from the physical to the mental plane, reflecting the longing for or frustration of rest, beauty, or redemption.

The dramatic conception of the symphony led Mahler also to the significant use of certain keys. If we understand this significance several important moments at once become clear to us. The keys of A-, D- and E-minor signify a grey, nebulous, nervous, instable mood, usually preceding a great conflict or its solution. The characteristic key of conflict is, above all others, F-minor, but occasionally C-minor is also employed. B-flat and E-flat minor express depressing gravity, sometimes despair. The ultimate solution, transcendental redemption, is usually set in E-major, sometimes also in B- or E-flat major. D-major is used for a corresponding optimism relating to this world. For example, the development and crisis key of F-minor in the last movements of the *First* and *Second Symphonies* shows us that these movements are in reality further developments of their respective first movements. Generally speaking the keys of the movements serve as indicators of their dominant moods. Thus the classic scheme of keys in the symphonic cycle, as well as within the movements, is abandoned, although an occasional similarity occurs by accident. The arrangement of movements, also highly individual, is adapted anew to each work. The old suite-symphony is entirely discarded and so is its purely musical schematism. The problem of the distribution of weight is solved individually in each symphony.

The *Symphonies* I, II, VI, VIII, and the *Song of the Earth* show a more or less level construction toward the *Finale*, despite the total difference of their dramatic solutions. The *Symphonies* III and IV show a pyramid-like form, tapering away by refining the issue in a straight line. The *Fifth* finds its peak in the third movement, bow-like, while the *Seventh* has its weight equally distributed in the outer movements, the lowest point, reached in the third movement, forming an inverted bow. In the *Ninth* the material weight lies in the two middle movements, the inner weight in the outer ones. The *Tenth* was probably similar in plan, but the fifth movement is too incomplete to permit an adequate judgment.

Comparing these constructions with the key-schemes of the respective works we find that all those symphonies which are built in a straight line show a key-scheme not far removed from the classic. All of them are among Mahler's more popular works, except for the *Sixth*, the extreme tension in which is wholly unrelieved throughout. The other works take distinctly new paths in structure and key-scheme and are less popular.

This does not mean that the more popular symphonies show no new features. Their emotional scheme, as reflected by their key-scheme (see

above), is sufficiently similar to that of the classic symphonies to make them more easily absorbable.

To sum up: the basis of Mahler's symphonies is the drama of human life and struggle in its various aspects and phases. The insertion of vocal movements (solo and chorus); the augmentation of the number of movements (five in *Symphonies* II, V, VII, X and six in III and in the *Song of the Earth*); the amalgamation of three movements, all of which are completely executed, in VIII: 2; the adoption of serenades and dance movements into the symphony with a quite new, dramatic intent; the many new features in harmony and counterpoint (also instrumentation which, however, could not be considered here): all these features have the single purpose: to intensify and represent as faithfully as possible the dramatic ideas conveyed to us by symphonic music.

This conception of the symphony seems to be its last important development up to the present, unless Shostakovich's works prove to have added some new ideas to the form. Sibelius' symphonies are epic, like Brahms' *Second* and *Fourth*, most of Schumann's, Mendelssohn's, Borodin's and other Russians, as well as those by Delius and Elgar. The few scattered symphonic works of Schreker, Williams, Schoenberg and others do not as yet show a unified trend.

#### MAHLER'S NINTH SYMPHONY

*Vienna Philharmonic, Bruno Walter, Conductor. Victor Recording*

The performance by the Vienna Philharmonic in Vienna of Mahler's *Ninth Symphony* under the direction of Bruno Walter on January 16, 1938, was transferred to the disks and has been published by Victor and forms one of the most important contributions to recorded literature. This work is the Austrian composer's crowning achievement; a creation of towering greatness, which has none of those defects so disturbing even to his most ardent admirers; those too frequent juxtapositions in his earlier symphonies of treasurable ideas with others so trite that one wonders how a composer of Mahler's caliber could have put them down on paper.

Following but a year after the completion in *Das Lied von der Erde*, the *Ninth Symphony* is a continuation of the elegiac mood which pervades its predecessor. But it is purely instrumental. No use is made of the human voice as in *Das Lied von der Erde*. Its four movements do not follow the conventional sonata form, the possibilities of which Mahler had exhausted in the gigantic *Eighth* "Symphony of a Thousand." The end movements are both slow, the first an extensive *Andante*, the last broadly conceived *Adagio*. Two quick movements, a *Scherzo* and a *Rondo* "X Burleske," come between. The treatment of key relationships between the four movements is free. The first is in D-major; the second in C-major, the third in A-minor, the *Finale* in the distant tonality of D-flat.

In his instrumentation Mahler pursues an entirely different course than Strauss. Every instrument is exploited for its individual tonal characteristics. No attempt is made to combine instrumental timbres for sensuous purposes, nor are harmonic or dynamic objectives the first considerations. The greatest agility and flexibility are demanded of the brasses.

Although Mahler has cast aside the formalistic principles implicit in the classic sonata form does this not mean that he has brushed all architectonics aside, as some of his detractors would have us believe. For despite the previously unheard of, fantastic nature of the musical structure he has employed, its seemingly improvisational con-

tours are united by an order dictated by inner compulsion. Because the scheme is not that adhered to by Haydn, Mozart, Beethoven and Brahms, does not make it inept and illogical. Its demands on the listener's attentions are perhaps stricter. It is so much easier to follow familiar paths than to tread newer ones.

How much the modernists owe to Mahler is nowhere more strikingly illustrated than in the wildly ironic pages of the *Scherzo* and *Rondo*, where the relentlessly clashing polyphony and instrumental timbres point the way to Stravinsky and Hindemith.

But it is on none of these external attributes that Mahler depends for his overwhelming appeal to the emotions. Here even more than in *Das Lied von der Erde* he has discoursed on death; on its bitterness and consolation, in tones such as no other composer has used before or after him.

Bruno Walter's close association with Mahler and his profound sympathy with his music are too well known to require discussion here. His interpretation reveals the most intimate knowledge of the score and the discerning touch of an imaginative and ardent musician. The Vienna Philharmonic carries out his desires zealously and the recording as such is excellent, even down to an occasionally heard auditor's cough.

JEROME D. BOHM, *New York Herald Tribune*, January 12, 1941

The big news this month is the Victor recording of Mahler's *Ninth Symphony*. Bruno Walter and the Vienna Philharmonic were taken down on wax direct from a performance given in Vienna on January 16, 1938. Thus the lengthy composition enters the record lists, and all Mahlerites should be overwrought with joy.

Of course, the moment you mention Mahler you get all sorts of reactions, ranging from sheer ecstasy to snarled disdain. He has his followers and he also has his pursuers, so to speak. No middle lane, if you please, it's one or the other.

This watcher of the musical skies is of the pro persuasion. Mahler has been maligned just about enough. It's time now to evaluate his works as works and not as pegs on which to hang psychoanalytical stuff concerning his character.

This symphony is a big creation. It requires a conductor of big imagination, of big technic and, not the least important, of probing intellect. It just won't pan out for the puny boys.

In this recorded performance things do pan out, for the simple reason that Bruno Walter has long been a staunch devotee of Mahler. As a matter of fact, this composition was given its world première in 1912 in Vienna, under Walter's direction. No better auspices for a disc presentation of it could be imagined than the present ones.

Aside from all the quibble and babble, which most of the anti-Mahler stuff is, truthfully, the recording is magnificent. Since it was done at an actual concert, you will hear a few coughs, by no means discreet. And one objection might be raised against the unnatural cutting, which leaves some important phrases right in the air for a spell to be picked up on the other side or on another disc. Otherwise you will find this a great experience.

ROBERT BAGAR, *World Telegram*, January 18, 1941

### STOCK CONDUCTS BRUCKNER'S *THIRD*

Bruckner's *Third Symphony* was programmed by the Chicago Symphony Orchestra on February 20 and 21, Dr. Frederick Stock conducting. For this listener, no previous rendition of a Bruckner score approaches in beauty the present February performance. The solemn splendor of the opening movement was a fitting prelude for a *Finale* that swept over Orchestra Hall in surging exaltation. Against the tenderness and mystery stressed in the *Adagio* was set the *Scherzo*, its gaiety touched with magic.

The hour of this symphony is one long to remember. Dr. Stock's deeply sympathetic reading of the work coupled with a sincerity of performance by the men of the orchestra brought forth long continued applause from the audience. We will hope to hear the *Third* again next season.

MARY R. RYAN

NOTE: Dr. Stock conducted Bruckner's *Third* at the Cornell College Music Festival, Mt. Vernon, Iowa. A letter to the *Society* about this performance reads in part: "It was a real thrill to hear this work, and I have never heard a performance applauded so enthusiastically."

## Bruckner's *Eighth Symphony* A Profusion of Great Music

BY PITTS SANBORN

The following article was published in the *New York World Telegram* on Jan. 18, 1941

ONCE more the subject of Anton Bruckner is up for discussion. Bruno Walter, one of the chief champions of Bruckner's music, began his present guest engagement with the Philharmonic Symphony by placing the Austrian composer's *Eighth Symphony* on his initial program (Thursday evening, repeated yesterday afternoon) and will lead it yet again at the matinee of Sunday, the twenty-sixth. Thus New York is given the opportunity to hear three times in a fortnight this monumental work interpreted by a man who through experience and temperament is ordained to reveal its greatness.

Last but not one (the unfinished *Ninth*) of Bruckner's symphonies, this *Eighth in C-minor* was composed between 1885 and 1890. Hans Richter gave it its first performance on December 18, 1892, at a Philharmonic concert in Vienna. Hanslick, sworn enemy of Bruckner, had, in reviewing the work, to admit its success with the public! "How was the new symphony received? Boisterous rejoicing, waving of handkerchiefs from those standing, innumerable recalls, laurel wreaths."

The symphony was not played in the United States till Max Fiedler brought it out at a concert of the Boston Symphony Orchestra in Boston on March 13, 1909. It was repeated "by request" at a concert of the same orchestra in Boston on the April 24 following. Meanwhile Fiedler and the Boston orchestra had brought the work to New York and presented it in Carnegie Hall on March 18. After that performance a local reviewer wrote:

"In this symphony one hears the real Bruckner, not the crabbed, half-ludicrous pedant who boasted that he was doing for the symphony what Wagner had done for the opera, and then matched Beethoven by putting forth his symphonic message in nine installments.

### LANGUAGE OF THE IMMORTALS

"The Bruckner of the *Eighth Symphony* dwells upon the heights and speaks the language of the immortals. In melodic invention, in structure, in orchestral treatment, in sustained interest this symphony is far removed from the symphonies of Bruckner heard here before. Of the garrulous, the pedantic, the unimportant, the tiresome, there is little in the work; of genuine music, great music, a wonderful profusion.

"Take the Scherzo. Call it, if you will, 'the German Michael,' the merry-making clodhopper. But what vigor, swing, strength are in it, what hearty humor! And the trio has the caressing warmth of sunlight falling peacefully upon the peasants' dance.

"Then comes the *Adagio*, said to be the longest symphonic *adagio* in existence, and by some (Mr. Fiedler among others) the greatest. Music of such lofty inspiration cannot seem long, and even after this sublime *Adagio* the *Finale* is not an anti-climax, but a true culmination in its thrilling immensities of sound."

The *Eighth Symphony* is dedicated to "His Imperial and Royal Apostolic Majesty Francis Joseph I, Emperor of Austria and Apostolic King of Hungary, etc., in deepest reverence." The scoring, which stresses particularly the brass, calls for this orchestra; three flutes, three oboes, three clarinets, three bassoons (one interchangeable with double bassoon), eight horns (horns 5-8 interchangeable with tenor and bass tubas), three trumpets, three trombones, contrabass tuba, kettledrums, triangle, cymbals, three harps and the usual strings.

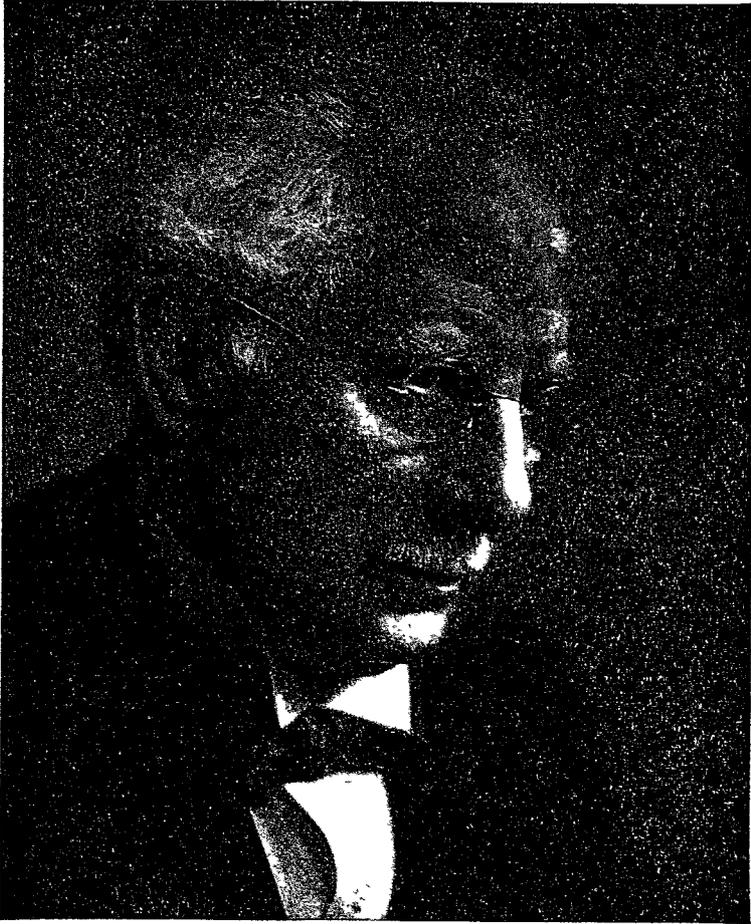

### PROMETHEUS OR FAUST?

When the symphony was first played, it seems, there was a descriptive program from the pen of some worshipful follower. Here the "Aeschylean Prometheus" was discovered in the first subject of the first movement and part of this movement was called "the greatest loneliness and silence." The *Scherzo* was dubbed "Der deutsche Michel" (The German Michael). "Michel" has been defined figuratively as "yokel, boor, clodhopper." This same annotator discovered in the *Scherzo* "the deeds and sufferings of Prometheus reduced in the way of parody to the smallest proportions."

Hanslick made the following comment: "If a critic had spoken this blasphemy he would probably have been stoned to death by Bruckner's disciples; but the composer himself gave this name, The German Michael, to the *Scherzo*, as may be read in black and white in the program." Nevertheless, the published score is without a motto.

The *Adagio*, according to the worshipful authority, portrayed "the all-loving Father of mankind in his measureless wealth of mercy." The *Finale* depicted "heroism in the sense of the Divine," the trumpet calls being "the announcers of eternal salvation, heralds of the idea of divinity." It has been alleged, however, that the beginning of this *Finale* was suggested to Bruckner by the meeting of the three emperors!

The published score of the symphony gives no indication that Bruckner had in mind any program or argument. Still, Johannes Reichert, analyzing the work for the symphony concert of the Royal Orchestra of Dresden of December 13, 1907, refers to Josef Schalk's "Vision of Prometheus Bound" in the first movement and himself finds in the music something of Prometheus or of Faust.

MARTIN G. DUMLER, Mus. Doc., LL.D.

**L**ONG respected as that of one of America's foremost composers of sacred music, the name of Martin G. Dumler suddenly attained world fame through the triumphant reviews devoted to the première of his *Stabat Mater* at the Cincinnati May Music Festival in 1935. That signal success was confirmed at many subsequent performances, stamping this composition as a work of universal art, a significant contribution of our own day to that proud, slender array of thoroughly human, super-ritual scores that have found but few worthy companions since the great devotional compositions of Bruckner.

# Te Deum Laudamus

|                                                                              |                                                                                                  |
|------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------|
| Te Deum Laudamus: * te Dominum confitemur.                                   | We praise Thee, O God: we acknowledge Thee to be the Lord.                                       |
| Te aeternum Patrem * omnis terra veneratur.                                  | Thee, the eternal Father, all the earth doth worship.                                            |
| Tibi omnes Angeli, * tibi coeli, et universae potestates:                    | To Thee all the Angels, to Thee the Heavens, and all the Powers therein:                         |
| Tibi Cherubim et Seraphim, * incessabili voce proclamant:                    | To Thee the Cherubim and Seraphim with unceasing voice cry aloud:                                |
| Sanctus, * Sanctus, * Sanctus * Dominus Deus Sabaoth.                        | Holy, Holy, Holy Lord God of Sabaoth.                                                            |
| Pleni sunt coeli et terra * majestatis gloriae tuae.                         | The heavens and this earth are full of the majesty of Thy glory.                                 |
| Te gloriosus * Apostolorum chorus,                                           | Thee, the glorious choir of the Apostles,                                                        |
| Te Prophetarum * laudabilis numerus,                                         | Thee, the admirable company of the Prophets,                                                     |
| Te Martyrum candidatus * laudat exercitus.                                   | Thee, the white-robed army of Martyrs doth praise.                                               |
| Te per orbem terrarum * sancta confitetur Ecclesia,                          | Thee, the Holy Church throughout the world doth confess,                                         |
| Patrem * immensae majestatis,                                                | The Father of infinite majesty,                                                                  |
| Venerandum tuum verum * et unicum Filium,                                    | Thine adorable, true and only Son,                                                               |
| Sanctum quoque * Paraclitum Spiritum.                                        | Also the Holy Ghost, the Comforter.                                                              |
| Tu Rex gloriae * Christe.                                                    | Thou, O Christ, art the King of Glory.                                                           |
| Tu Patris * sempiternus es Filius.                                           | Thou art the everlasting Son of the Father                                                       |
| Tu ad liberandum suscepturus hominem: * non horruisti Virginis uterum.       | Thou didst not abhor the Virgin's womb, when Thou tookest upon Thee human nature to deliver man. |
| Tu devicto mortis aculeo: * aperuisti credentibus regna coelorum.            | When Thou hadst overcome the sting of death, Thou didst open to believers the kingdom of heaven. |
| Tu ad dexteram Dei sedes, * in gloria Patris.                                | Thou sittest at the right hand of God, in the glory of the Father.                               |
| Judex crederis * esse venturus.                                              | Thou, we believe, art the Judge to come.                                                         |
| Te ergo quaesumus, tuis famulis subveni: * quos pretioso sanguine redemisti. | We beseech Thee, therefore, help Thy servants whom Thou hast redeemed with Thy Precious Blood.   |
| Aeterna fac cum sanctis tuis * in gloria numerari.                           | Make them to be numbered with Thy Saints, in glory everlasting.                                  |
| Salvum fac populum tuum Domine, * et benedic haereditati tuae.               | Save Thy people, O Lord, and bless Thine inheritance.                                            |
| Et rege eos, * et extolle illos usque in aeternum.                           | And rule them, and exalt them forever.                                                           |
| Per singulos dies * benedicimus te.                                          | Day by day, we bless Thee.                                                                       |
| Et laudamus nomen tuum in saeculum * et in saeculum saeculi.                 | And we praise Thy Name forever; yea forever and ever.                                            |
| Dignare Domine die isto * sine peccato nos custodire.                        | Vouchsafe, O Lord, this day, to keep us without sin.                                             |
| Miserere nostri Domine: * miserere nostri.                                   | Have mercy on us, O Lord; have mercy on us.                                                      |
| Fiat misericordia tua Domine super nos, * quemadmodum speravimus in te.      | Let Thy mercy, O Lord, be upon us; even as we have hoped in Thee.                                |
| In te Domine speravi: * non confundar in aeternum.                           | In Thee, O Lord, have I hoped: let me not be confounded forever.                                 |

## New Directions in Sacred Music (II):\* Dumler's *Te Deum*

### FOREWORD

THE celebrated Latin prose-poem *Te Deum Laudamus*, composed by Bishop Nicetas about the beginning of the fifth century A.D., is the product of a remarkable fusion of scattered biblical elements. Passages drawn from the Old and New Testaments, Psalms, Prophets, Gospels, and Epistles are so harmoniously blended in this hymn that it possesses the unity, vitality, and individual power of a great original poem. The pre-Gregorian character of the first portion of the traditional chant-version indicates that it was a favorite Christian song even before it was incorporated in the Roman Liturgy. Passing centuries, confirming this ancient popularity, hailed the *Te Deum* as the noblest and most inspiring of all sacred hymns.

Its fiery verses present the loftiest unveiling of Heaven's mysteries. They breathe the ineffable tenderness of the dying Redeemer's love. They illumine the whole universe with their brilliancy, flashing from Earth's Praise of God to Heaven's ecstatic shouts of adoring Cherubim and Seraphim. In jubilant trumpet-tones they proclaim the triumph of the spirit over Death and Hell. They stir man's emotions as do the verses of no later hymns, appealing not to his sentiment, but rather to his will to strive and endure. One readily believes that the *Te Deum* was the favorite hymn of the early missionaries, those men of unconquerable faith and determination, who made great ventures for God and confidently expected great rewards from Him.

Since the polyphonic era the *Te Deum* has been the occasional vehicle of elaborate choral settings suited to the pomp of special public festivals of Praise and Thanksgiving. Handel's famous *Dettingen Te Deum* is an example of such a setting, somewhat in the manner of an oratorio. The ultra-spectacular setting by Berlioz might well be called the "Te Deum of a Thousand" because of the huge numbers of participants it demands. These two, as well as some others in the grand manner, are doubtless memorable, but they are not primarily concerned with the deeper spiritual implications of the text.

A more convincing solution was furnished by Bruckner, who was not merely a highly gifted composer, but also a thoroughly devout being, who had made the mastery of every thematic nuance of the ancient chant one of the principal tasks of his artistic career. His *Te Deum*, characterized by inspired melodic re-creation in the Gregorian spirit, is therefore

\* The present is the second contribution in this field that has appeared in CHORD AND DISCORD. The first, an analysis of Dumler's *Stabat Mater*, was published in Vol. I, No. 7, upon the occasion of the successful première of that composition at the Cincinnati May Music Festival in 1935.

an epoch-making work in the realm of sacred music. Truly revolutionary also is his employment of leading motifs throughout, achieving a dramatic vitality and artistic unity unparalleled in previous settings. The world has yet to realize that Bruckner's application of the motif-principle to devotional music embodies a contribution only less significant than his revitalization of the dormant symphonic structure during the latter half of the past century.

Dumler's *Te Deum*, an elaborate festival-setting for baritone solo, mixed chorus, and orchestra, is a work by a gifted, progressive American, who has skilfully availed himself of the vast advantages of unified motivation in the composition of larger devotional settings. For the thematic elements of his *Te Deum* he has gone to the prime source itself, the ancient *Te Deum* chant-setting. A recognized master of modern orchestral idiom, he has brought to the scoring of his *Te Deum* every instrumental resource of present-day musical art appropriate to the spirit of a devotional festival celebration.

### TE DEUM LAUDAMUS

#### Chorus

A mighty unison outburst of the brass, resounding twice in succession, heralds the opening of a great spiritual festival. The proclamation, a brief theme of elemental simplicity, sweeps majestically aloft, suggesting the voice of Faith summoning all the Faithful of Heaven and Earth. This is the source-theme of the Lord's praise. Set like a resplendent jewel within its octave framework is the aspiring motif of Praise. As the orches-

tral introduction draws to a close a shadow suddenly falls over the stately harmonies, enveloping them in a darker majesty. Far more than a cadence, this is a forecast of earnest revelations also to be unfolded.

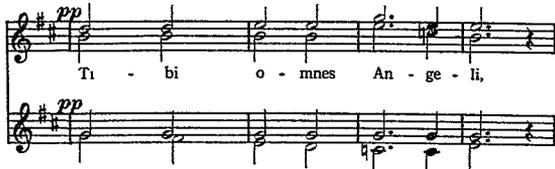

The full chorus, starting in unison, thunders forth the first verse of the text, raising the motif of Praise to ecstatic heights, as the voices separate into eight parts in a blaze of harmonic glory. Significantly the melody at-

tains an exalted climax at "confitemur," as though the dome of Heaven itself had been pierced by the invincible power of man's Faith.

"Dominum," embodying the concept of God as the Lord, is set to the inverted motif of Praise, which now gains new prominence, dominating the brief instrumental interlude that follows. A gracious counter-theme,

touched with the noble lyricism inherent in singing horn-tones, prepares the softer aura surrounding the second verse. Its burden is reverence and humility, the worship of God the Father its subject. The motif of God as the Lord, broadened in the deep brass, confirms the benevolent metamorphosis. A world of compassion lies latent beneath this verse's minor cadence. Lyric fragments in English horn and flute characterize the transition to a new radiant mood and tonality. Heaven itself is the scene

of the next verse, sung by an Angel choir. The absence of bass and tenor voices intensifies the disembodied quality of this ethereal hymn.

A yearning counter-melody in low, muted brass evokes increasingly impassioned utterance, "Cherubim and Seraphim" reinforcing the chorus. The brief motif hitherto associated with the concepts of God as the Lord and the Father undergoes a fresh transformation. Assuming vivid rhythmic character it attains full melodic integration in the dramatic orchestral interlude that follows. The subject of a poignant contrapuntal exchange between trombones and tuba it rears itself to a powerful climax on the dominant, accompanied by a string tremolo of the utmost fervor. The very gates of Heaven fly open, revealing the inef-

fable splendor of the *Tersanctus*: "Holy, Holy, Holy: Lord God of Sabaoth." All that has gone before was but a prelude to this ultimate apostrophe. Unbounded jubilation sways the orchestra as chimes, joyfully pealing, add their golden voices to the sublime festival of Praise and Thanksgiving.

The *Pleni Sunt* sums up triumphantly in a single verse the worship of Earth and the Angelic choirs separately proclaimed in the foregoing verses. The musical setting emphasizes the unity of this concept, contrasting it sharply with the varied context underlying the previous verses. A single theme now becomes the sole material for a large tonal structure. Twelve uninterrupted recurrences of this theme, set forth in fugue style amid steadily increasing harmonic, contrapuntal, and orchestral rich-

ness, mirror the gradual assembly of all the Hosts of Heaven and Earth. The gradual increase of choral and instrumental volume symbolizes the concept of "Heaven and Earth filling with God's glory." The polyphonic framework attains full stature at the sixth entry of the theme, retaining this six-part character amid constantly varying harmonic and orchestral surroundings until the coda.

An echo of the glorious *Tersanctus* survives in the brief orchestral introduction, as harp and bell tones accompany a reflective, slow-pulsed embodiment of the motif of Praise. Presented thrice in imitation by the strings, it foretells the contrapuntal nature of the structure to be evolved. The theme itself, a soaring melody of deep, religious sentiment based on this motif, is first sounded by the bass voices. Its dome-like char-

acter at the word "coeli" ("heavens") is an especially felicitous melodic detail. The closing tones of the theme do not form a cadence; rather they ascend majestically to greet the entry of the tenor voices in a new tonality. This process continues throughout twelve recurrences of the theme, suggesting a victorious ascent *ad astra*. Unfailing harmonic and instrumental variety lends each restatement an air of complete novelty.

The *Coda* is a jubilant outburst of dazzling brilliancy. Proclaiming "the majesty of God's Glory" it radiates a choral and instrumental splendor paralleling that of the *Tersanctus*, to which it is related by community of motivation.

The chorus of the Apostles, Prophets, and Martyrs embodies the Lord's Praise by the Church upon Earth. Appropriately the theme, a free re-creation in the spirit of the ancient chant, begins with a phrase sung in unison by tenors and basses. "Laudabilis" reflects the sublime spirit of

the Prophets, the motif of Praise becoming prominent in full harmony. Subtle too is the setting of the "White-robed host of Martyrs," involving the earnest, rhythmic minor motif (first applied to the Cherubim) in a major transformation.

Amid the radiance shed by this promise the whole chorus unites in

harmonic splendor to voice the Praise of the Church upon Earth. "Sancta," set to the motif of Praise, implies the lofty status of the Church as the House of the Lord. Portentous strokes of the gong emphasize this significant implication, the violins weaving above it a glittering filigree, delicate and gracious, even as the corresponding violin figure throughout the opening chorus was vigorous and jubilant.

A sweeping transition by three trumpets in harmony over a sustained fundament unites the separate concepts of Praise by Apostles, Prophets, and Martyrs into one supreme choral apostrophe to the "Father." This union is symbolized in the unison setting of "Patrem." Eight-part harmony enhances the impressiveness at "immensae." Dramatic suspense sways this whole passage, increasing until the final chord, the surprising dominant character of which intensifies the air of expectancy.

The effectiveness of the tender lyric interlude that follows is increased by its strong contrast to the dramatic grandeur immediately preceding. Reverent pathos underlies the expressive duet by oboe and flute introducing this new mood, so different from all that has gone before. It

heralds a totally new concept. In its subdued atmosphere is set the first verse in which the Son is mentioned. At "Sanctum quoque" the air of restrained sorrow becomes especially poignant. Thereafter the words re-echo mystically in a two-part canon sung by sopranos and altos. A strik-

san - ctum quo - que Pa - rá - cli - tum Spí - ri - tum.

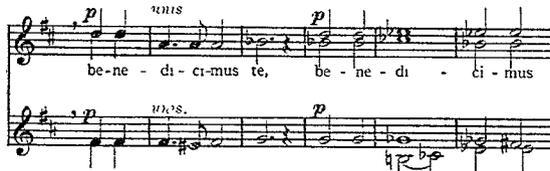

san - ctum quo - que Pa - rá - cli - tum, san - ctum

ing example of subtle dramatic motivation is the exclusive employment of the motif of Praise as a thematic element throughout this passage. Taken up by the orchestra it is borne into brighter harmonic surroundings. Now the verse is reframed in accents of Hopefulness. Growing rhythmic majesty characterizes the orchestra, as the motif of Praise, in a powerful chorale formulation, strides firmly onward to a crowning summary. With the proclamation of the Son as the "King of Glory" the chorus attains a stirring climax, the motivation revealing that the Glory of the Son is one with the Glory of the Father. Thus the broad descending third, previously applied to "Patrem," achieves an overwhelming triumph at "Tu Rex gloriae, Christe."

Highly dramatic is the sudden tenderness of "Benedicimus te" ("We bless Thee"). The gradual thinning out of the voices until only sopranos and altos sound ethereally against a transparent orchestral background

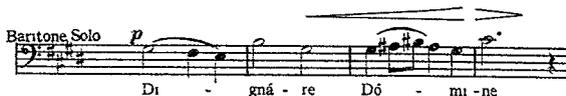

symbolizes the ascent of Earth's blessing to Heaven. A majestic chorale, "In saeculum saeculi" ("Forever and ever") by full chorus and orchestra, brings the second section of the *Te Deum* to an impressive close. The motif of Praise is outstanding as the last word scales the summit of sonority.

### DIGNARE DOMINE DIE ISTO

#### *Baritone Solo and Male Chorus*

The *Te Deum* attains its most moving lyric expression in the baritone solo setting of "Dignare, Domine" ("Vouchsafe, O Lord") which begins the closing section. The full power of devotional pathos is here suggested amid tremendous emotional restraint, the sinner's cry for Divine mercy dominating the verses.

Muted strings tenderly reawaken a motif prominent in the prayerful "Te ergo quaesumus," weaving it into a gracious transition to a more ethereal tonality. The major setting of the baritone song endows the introductory "Miserere" atmosphere with the spiritual strength indispensable to the true *Te Deum* character. Hopeful aspiration, rather than resignation, is inherent in the reverent opening phrase.

As "miserere" is first sounded there is no spiritual surrender, but only the exalted entreaty of a soul fortified by Faith. The motif of Praise, prominent throughout, attains particular significance in the baritone's final pronouncement of "Domine." This solo closes on a note of hopeful yearning, blessed by repeated reassurances in the orchestra. A gracious motif, first sounded in the initial introduction like a Benediction, becomes the chief thematic element.

The choral interlude ("Miserere") which follows is even more restrained, its melancholy tendency relieved by the motif of Benediction, predominant in the orchestral background. Preceding the choral utterance of each verse, this motif not only determines the character of the entire passage, but also anticipates the outspoken embodiment of hopeful

expectation as the solo baritone once more takes up the prayer voicing the devout longing of all humanity. The orchestra adds immeasurable lyric richness, singing a sustained, individual song, rather than an accompaniment. Nobly eloquent is the vocal setting of "super nos" to the motif of Praise, climaxing the thrice repeated supplication "Domine." "Speravimus," characterized by bold intervals, reflects the spiritual strength of the Faithful, confident "of His mercy, even as we have hoped in Thee." The establishment of this hope of the Faithful, which was the goal of the baritone solo, evokes mystic confirmation in a brief choral epilogue, rich in enharmonic quality. The motif of Benediction re-echoes in the orchestra as this predominantly lyric section comes to an end.

The ultimate triumph of the individual soul is the inspiring message underlying the final verse, the only one particularly concerned with Man's personal hope and belief in Immortality. "In Thee, O Lord, have I hoped: let me not be confounded forever." The thoroughly human implications of this verse are spiritual fortitude and courage to endure all the vicissitudes and to combat all obstacles in the path toward the Supreme Goal. Invincible Faith in Divine mercy is the infallible key to these virtues without which the ascent to Eternal Glory is impossible of attainment. Symphonic *Finale*-character dominates the dramatic orchestral introduction. Pulse and tempo are swift. A powerful, rhythmic motif, bristling with pent-up vitality, becomes the subject of an agitated

contrapuntal discussion rapidly involving the full orchestra. The broad span of its gradual rise to a tremendous climax of excitement makes this a thoroughly symphonic episode. The summit of dramatic force is marked by eight repetitions of the motif on the dominant, every instrument straining to its utmost power. A portentous stroke of the gong

*fff*

Segue

silences the commotion in the timpani. The motif of strife gradually subsides into a mere fragment in woodwind and muted trumpets over incomplete harp chords.

Softly the first tenors sing the entire text of the final verse. Based on

the vigorous rhythmic and melodic elements of the symphonic passage just presented, it reveals unmistakable fugue-theme characteristics. It is answered by the basses, the tenors adding an appropriate counterpoint. As the second tenors enter with the next statement the first tenors introduce a counterpoint of striking individuality, while the string basses and contrabassoon set forth, at the same time, another theme of independent contour. Thus the polyphonic structure suddenly assumes the character of a triple-fugue. Yet the consummate technical skill brought to the solution of this difficult formal problem is at no time unduly conspicuous in the increasingly complex, but effortless presentation of the joint themes. A gradual growth in choral stature culminates in the highest polyphonic richness in six parts at the tenth entry of the three themes. Unbounded variety is inherent in the many different choral combinations. Remarkable is the comparatively restrained tonal volume prescribed by the composer almost throughout this whole intricate polymelodic web. His aim is partly to preserve utmost thematic clarity, but far more to withhold the supreme climax for an overwhelming hymnlike summation, at once the *Coda* of the fugue and of the entire *Te Deum*.

"In te Domine speravi": the whole thesaurus of Faith and its underlying mysticism is compressed into these few words. Yet the Faith is that of

the individual spirit. Hence an atmosphere of rich romanticism emanates from the series of ecstatic harmonies which burst forth in unrestrained fervor from the full chorus. The chromaticism of the melodic line points back to a phrase in the initial orchestral introduction, the full significance of which was reserved for this crowning revelation. The unsymmetrical proportions of the successive groups clearly reflect the prime motivating source, the rugged metre of the ancient chant. Strokes of the gong lend added impressiveness to the orchestral background, all the instruments participating. Chimes, joyfully pealing, enhance the jubilation as the festival *Te Deum* draws to an end. The final phrase, "in aeternum," ascends on a sustained formulation of the motif of Praise.

WHEELER BECKETT PERFORMS *ANDANTE* (MAHLER'S *SECOND*)

Boston, January 15, 1941

The *Andante* from Mahler's *Second Symphony* was a notable item of the Youth Symphony concert presented yesterday afternoon by seventy members of the Boston Symphony Orchestra. Wheeler Beckett conducted. Almost anything of Mahler is welcome to a segment of the local public, because that composer is certainly far from overplayed here. Especially is it true of the *Second Symphony*, a work unheard in Boston since 1918. Dr. Koussevitzky announced a revival of the symphony for this season, but has reportedly abandoned the project.

Utterly charming in a folk-song manner is the *Andante*, and beautifully scored as well. Perhaps the average high school youngster doesn't know much about Mahler, but the 2000 odd at Symphony Hall yesterday seemed to find this lighter side of him agreeable. For letting it be heard, we are indebted to Mr. Beckett.

CYRUS W. DURGIN, *Boston Globe*

. . . The significant factor of the entire afternoon was the inclusion on the program of the *Andante* from Mahler's *Second Symphony*. It is well to acquaint these young listeners with the music of Mahler and allow them to judge for themselves in the future whether or not they will wish to hear the music of this much-neglected composer. For, after all, these young people will comprise the audiences of tomorrow. If the compositions of Mahler are played from time to time, they may become as well liked as are those of the popular composers of today.

HARRIET KAPLAN, *Boston Transcript*

Within the somewhat narrow scope afforded by his Youth Concerts, Wheeler Beckett manages to cover a lot of ground in his programmes. Occasionally he even puts one over on Dr. Koussevitzky, beating the latter yesterday afternoon to at least a partial revival of the great *Second Symphony* of Mahler, unheard here in its entirety since the original Symphony Hall performances under Dr. Muck in 1918. It was announced last autumn that Dr. Koussevitzky would bring this epic work to performance this season, with the Cecilia Society Chorus assisting in the *Finale*, but that promising plan has been abandoned.

Yesterday Mr. Beckett chose the second of the five movements, the delectable *Andante moderato* which supplies, in highly sublimated form, the folk-dance element without which no Mahler symphony is complete. He did not have the whole of Mahler's huge orchestra at his disposal and he may be said to have played the movement a shade more slowly than was necessary, thus taking some of the lilt out of the rhythm. These minor objections aside, the music was a delight to hear and served to remind us afresh of how much we may be missing, in spite of the assiduity of conductors, of the really important music of the past.

WARREN STOREY SMITH, *Boston Post*

## GUSTAV MAHLER — A FINAL TRIBUTE

By FRED JACKSON

NOTE: The following article appeared in the *Minnesota Daily* on June 4, 1941. Mr. Jackson is the Music Editor of the *Daily*.

This is a request column about the much-discussed Gustav Mahler. It is written with pleasure because Mahler is my favorite composer.

I once asked a musician how he liked Mahler's *First*. He immediately professed great hatred for the work. Later, however, he admitted that he had never heard it; he knew it was no good, because it was Mahler. When he finally heard the work he confessed that he liked it very much.

Perhaps that is not typical of the attitude toward Mahler, but it is indicative. It is fashionable among certain musical groups to dislike Mahler's music.

Several years ago I was induced to hear a performance of Mahler's *Second Symphony*. Nobody had warned me of any boredom. The symphony lasted an hour and a half, but it was far from boring. I think I could still find a seat in Northrop that has marks on it where I grasped it during the climaxes. I have been a booster for Mahler ever since.

I cannot argue the greatness of Mahler's music. To me it is among the most thrilling music ever composed. Nor is it the warbling bird-calls and the sounds of the far-off trumpet that won me. It is the inner freshness and charm, the weight and power, the melodic line that thrilled me.

Mahler was undisputedly one of the greatest conductors that ever lived. That, however, does not increase the value of his music today and cannot be admitted as evidence. On the other hand, Mahler was a great contrapuntalist and a consummate master of orchestration. As such he should be studied thoroughly.

If his works were heard and studied carefully, there would undoubtedly be a greater appreciation of his music. The popular reception of his works would be at hand—the kind of reception Mahler had in mind when he said, "My time will yet come."

BRUNO WALTER ON BRUCKNER'S *EIGHTH*

In an interview with Bruno Walter (*N. Y. Times*, Jan. 12, 1941) Ross Parmenter writes:

Mr. Walter believes that this symphony and others by Bruckner will ultimately prevail with the public.

"I believe in it because it is so sublime" he said. "It has all the qualities that can conquer hearts. The trouble is its duration. But you cannot cut a work. I never cut. I think the composer knows much better than I do the form and organic cohesion of his work and I do not subject him to my demands or even to the demands of the public."

## OVERHEARD AT ORCHESTRA HALL, CHICAGO

Young musician (about eighteen) apparently striving to persuade himself that the door to fame is not yet closed to him, speaks to a drowsy friend, "See this fellow Delius here on the program. Well, you know I've read all kinds of lives of musicians and except for him and a guy by the name of Bruckner they all started to be great when they were five or about that. But now this Bruckner—he was old; about twenty-seven. He did kind of heavy things; but, gee, they're swell!"

(And so, good Anton, from your place in Heaven take due notice and make a prayer for him and all other aged stragglers along the highway of music!)

MARY R. RYAN

## Bruckner's *Fourth* and *Seventh*

BY PHILIP GREELEY CLAPP

### SYMPHONY NO. 4 (*ROMANTIC*) IN E-FLAT MAJOR

ANTON Bruckner was the eldest child among eleven in the family of a hard-working and underpaid village schoolmaster. He was educated — perhaps it were better to say that he was trained — in the monastery of St. Florian in preparation for a similar career. In his time and neighborhood the village schoolmaster was expected to teach a simple array of subjects, to serve as organist in the village church, and to work in the fields at least during the plowing and harvesting seasons, all for a stipend of about eighty cents per month with certain perquisites in the matter of food and shelter paid not in cash but in goods. The existence of an excellent organist in the monastery early gave a tangible focus to musical pre-occupations in the mind of young Bruckner which in his native environment might never have found any other outlet. By dint of hard work and great frugality he somehow managed to amass a tiny sum which enabled him to seek musical instruction in Vienna at an age of thirty (when most musicians are already completing their formal training and making at least a beginning of their professional activity.). Rustic and uncouth in personality he was at first the butt of ridicule from an examining committee consisting of five musical scholars of Vienna; but it was asserted that, when the examiners had set before him what they had hoped would be an impossibly difficult subject for the improvisation of a fugue on the organ, his performance was so masterly that the most skeptically hostile of the examiners remarked "He should be teaching us."

By dint of grim determination and the acceptance of at first such poor financial rewards as he could get by any sort of service, no matter how humble, Bruckner managed to remain in Vienna for the rest of his life; although eventually he occupied teaching positions of considerable honor, he never was adequately paid, and undoubtedly the most comfortable material circumstances he ever enjoyed were after his retirement, when royalty was interested to assure him a modest living and comfortable quarters in which to continue his composition. His career in this field was a prolonged struggle for even partial recognition under extraordinarily adverse conditions. The musical taste of Vienna when Bruckner's first compositions reached performance was practically dictated by Eduard Hanslick, the leading opponent of Wagner, an opponent armed with a pen as vitriolic as Wagner's own. Wagner's new type of opera, the music drama, was unwelcome to Hanslick in any case; this innate incompatibility of Hanslick's temperament with Wagner's style was undoubtedly aggravated by the fact that Wagner had snubbed Hanslick socially. Hanslick wrote reviews, pamphlets, and finally an entire book to prove

that Wagner's compositions could not properly be defined as music at all; Wagner retaliated by critically rationalizing the notion that the symphony as an art form ended with Beethoven, and lampooned Hanslick in *Die Meistersinger* by making the pedantic and self-seeking Beckmesser (the comic villain of the piece) criticize the poet-hero in phrases borrowed from Hanslick and pointed up in the text by quotation marks. Hanslick was obliged to produce a post-Beethoven symphonist to refute Wagner and conveniently "discovered" the youthful Brahms, whom he praised no more than he deserved, but in whose music he unfortunately found Hanslickian qualities which nobody but Hanslick has ever found there. The Wagnerites in Vienna of course had to find a rival contemporary symphonist, and in turn conveniently "discovered" Bruckner, whose admiration for Wagner extended to the point of at times paying him the sincerest form of flattery. That Bruckner remained himself and his style his own in spite of critical controversy and professional politics seemed to escape observation by both parties and by the neutrals, if there were any in Vienna at the time. Certain peasant-like traits in Bruckner's appearance, manners, and speech were cried down by his detractors as evidence of intellectual sub-normality, and cried up by his admirers as evidence of unworldly purity of thought and practice. Nobody seems to have paid much attention to any traits in his compositions except their unusual length, which still distresses American reviewers whose time is supposedly more valuable than that of mere music-lovers.

Probably Bruckner was the sanest individual connected with the controversy. On one occasion, when someone asked him how he could bear Hanslick's disparagement of his works and praise of Brahms', Bruckner remarked "He does not really understand Brahms any better than he understands me." On another occasion, when some peacemakers had tried to bring Bruckner and Brahms together at a meal and when matters were not going well because Brahms would not talk, the peacemakers eventually in desperation induced Brahms to order a tasty luncheon from the bill of fare, whereupon Bruckner, duplicating the order, remarked with a smile "At least Dr. Brahms and I can agree about that."

Bruckner's *Romantic Symphony* is the only one to which he himself appended a descriptive title, although such titles have been suggested for his other symphonies by those who appreciate his genius; there is always a strong element of dramatic and poetic characterization in Bruckner, though this expressive content remains generalized and is never attached to a particular drama or poem, so far as may be attested by any definite information which has yet come to light. Bruckner's rather homely attempts in colloquial speech to name or classify this poetic content are not always happy. He seems to have had a considerable knack of epigram in conversation, but was emphatically not a literary man, and his verbal accounts of his own symphonies to friends and questioners often impose a greater burden upon a simple analogy than it can carry. For example, his statement that the *Finale* of his *Eighth Symphony* was "like a meeting of

three emperors" taken in connection with the cosmically grand music of the *Finale* itself, indicates to us much less concerning the music itself than concerning Bruckner's apparently exalted opinion of emperors in general. As to the *Romantic Symphony* it should be enough to say that anyone who is responsive both to music and to the influence of such scenes of beauty in nature as surround Vienna need be at no loss to understand Bruckner's own characterization of the work as "romantic."

With the gradual passage of time, eloquent performances of Bruckner's compositions under such conductors as Richter, Muck, Nikisch, Loewe, Schalk, Mahler, Walter, Toscanini, and many others, first in Europe and more recently in this country, have won a steadily growing Bruckner public, in the face of the critical opposition by reviewers who still complain about the length of Bruckner's symphonies as their immediate predecessors complained that Brahms was dry and formal, and their predecessors in turn that Wagner was discordant and noisy—not to mention, of course, those bright lights of the Golden Age who found Beethoven's later works little but the ravings of a deaf madman. Often that which is new is hard to grasp until it is familiar; often, too, the music-loving public has merely the inertia of habit to overcome and is hospitable to new ideas earlier than those experts whose inertia has crystallized into critical codes and artistic creeds.

#### SYMPHONY NO. 7 IN E-MAJOR

Bruckner began the composition of his *Seventh Symphony* in September, 1881, and finished it in September, 1883. Richard Wagner, whom Bruckner idolized and even from time to time imitated as a composer, died in February, 1883. In the second and fourth movements of this symphony Bruckner adds to the usual symphonic instrumentation a quartet of small tubas similar to those introduced by Wagner to the operatic world in the four music dramas of the *Ring* cycle; moreover, the second movement of the symphony is of solemn character, appropriate to the funeral of a hero.

Out of this chain of events there arose, following the first performance of this work in 1884, one of those controversies which illustrate how critics make a living—sometimes even at the cost of preventing composers from making a living. When this symphony was first produced the legend was circulated that the second movement represents Bruckner's memorial tribute to his hero, Wagner. After Bruckner's friends had capitalized this story as a bit of publicity to secure further performances and favorable reception of the symphony, some unkind reviewer published ostensibly authentic information that Bruckner had completed the second movement during 1882. Bruckner, who was not very worldly-wise in matters concerning publicity, and whose social and financial status had been seriously affected by the hostility of Hanslick and other critics of the violently anti-Wagnerian school, allowed himself to be cornered by an interviewer and tried to wriggle out of the difficulty by

admitting that he had finished the second movement while Wagner was still alive, but that he was seriously worried about his health at the time. Critics hostile to Bruckner made the most out of this naive remark and succeeded for many years in diverting to this controversy that public attention which might better have been bestowed upon the symphony itself.

To-day the controversy, though amusing enough, seems unimportant; the symphony, on the other hand, has joined the illustrious company of such works as Franck's *Symphony in D-minor*, Tchaikowsky's *Pathétique*, and other compositions of the period which have been declared dead and officially buried—usually several times—but which somehow seem not only to be able to stand on their own feet but to get about quite a bit. All of Bruckner's symphonies, irrespective of the inclusion or non-inclusion of special tuba quartets, are a tribute to Wagner, in the sense that most of Brahms is a tribute to Beethoven, and much of Beethoven a tribute to Mozart; after all, a composer can not get along without ancestors, but at least he may choose his musical ancestors for himself, and will be wise to choose good ones.

As to the quartet of tubas, nobody before Bruckner except Wagner had used them, and there is no doubt at all that their effectiveness in the *Ring* impelled Bruckner to introduce them into symphonic music; but he uses them in a manner quite his own, and very different from Wagner's. Apparently, with Bruckner, the tubas proved habit-forming, for he uses them again in his *Eighth* and *Ninth Symphonies*, and no critic has ever flicked an eyelash—or earlash, or tonguelash—over these later appearances; perhaps the critical gentry considered it decorous for Bruckner to use extra tubas after Wagner's death but not before—or perhaps their attacks on the *Seventh Symphony* exhausted their power of thinking! At all events it has been the curious fortune of the present commentator to hear one performance of this symphony with the tubas left out; the only possible conclusion after such a hearing is that Bruckner "knew his tubas,"—and also his symphonic onions.

#### STEINBERG BROADCASTS NACHTMUSIKEN FROM MAHLER SEVENTH

On November 9, 1940 the NBC Orchestra under the direction of Hans Wilhelm Steinberg broadcast the two serenades from Mahler's *Seventh Symphony*. Judging by the enthusiastic reception accorded this music by the audience, one wonders why these movements are not heard more frequently in concert halls and on the air. The playing of the orchestra revealed the brilliant qualities of its conductor to whom Mahler admirers are indebted for his excellent interpretation of these Mahler excerpts. Incidentally it may be noted that Steinberg does not lack courage:—in 1938 he devoted his only broadcast to a brilliant reading of Bruckner's *Fourth* which charmed the audience to a high pitch of enthusiasm.

## Mahler's *Tenth*

BY FREDERICK BLOCK

MAHLER'S last years were constantly tortured by the thought that his symphonic creative career, like Beethoven's and Bruckner's, was fated to end with his *Ninth*. He divined a deep, inscrutable law underlying the life and work of man, both humble and great, and Fate confirmed his mystic foreboding. Desperately he sought to break the spell and entered upon the composition of a *Tenth*, but sudden death forbade him to finish it.

Not until 1924, about thirteen years after his death, was the general public informed of the existence of the sketches towards a *Tenth Symphony*. Then Mrs. Alma Maria Mahler, his widow, decided to publish the sketches in facsimile form. That project, executed under the sponsorship of the publisher Paul Zsolnay by the Viennese Society of Graphic Industry, is not only an exact facsimile of Mahler's handwriting; it even presents a faithful reproduction of the original paper and the portfolio.

A first perusal of this facsimile-reproduction will give even the well-trained musician an impression of confusion and helplessness. Mahler's writing, characterized by the convulsiveness and ecstasy of creation, is occasionally very difficult to decipher. The connecting threads in the sketches are highly elusive at the outset. It requires most intense concentration and deepest study to achieve some understanding of this grand symphonic structure. Once that is attained the overwhelming musical and spiritual beauties of the gigantic work reveal themselves like a miracle unveiled.

This symphony, conceived in five movements, has for its opening and closing sections two huge, slow movements, the intervening sections consisting of two *Scherzi* separated by a *Purgatorio*, in the manner of an *Intermezzo*. The sketches are partly notations in the form of so-called "particells," partly two or three-staved settings of the melodic and contrapuntal lines. All five movements are complete in preliminary sketched shape, affording a clear view of the spiritual content of the work. Unfortunately, many gaps occur in the harmonic and contrapuntal execution and definite indications of the planned instrumentation are present only in the first two movements. Moreover, one must concede that the work, owing to Mahler's high artistic conscientiousness doubtless would have undergone manifold changes and revisions before completion. It is nevertheless a source of deep thankfulness for one who reveres Mahler's genius to be able to study and love this posthumous work of the master even in its incomplete state.

Shortly after publication of the facsimile edition the first movement and the so-called *Purgatorio* were performed in European concert-halls. The Viennese composer Ernst Krenek (now living in America) had pre-

pared the score of those two movements from Mahler's instrumental sketches, adding some touches of his own wherever deemed indispensable to intelligible performance. The second, fourth, and fifth movements were still withheld from the public. After long, wearying labor the present writer succeeded in establishing these three movements in a feasible four-hand piano arrangement, with some instrumental indications. That version has remained unpublished, in fact is known only to a limited circle of musicians.

I should now like to venture upon a brief description of the various movements of the *Tenth Symphony*, with the forewarning, however, that even the slightest programmatic or fanciful connotation is far from my intention. Mahler was an "absolute" musician, in no way addicted to a preconceived "program." The ideas of his works were not the product of intellectual combining processes; they sprang from the vital flood of his emotions: If, in the course of the following description, I avail myself of abstract or concrete terminology, I do so with reference only to the emotional content of the work.

**First Movement: *Adagio***—In contrast to the classical symphony, in which the opening section is, as a rule, in quick tempo, Mahler begins some of his symphonies (V, VII, and IX) with a slow movement. This choice of form may be attributable to his painful, melancholy world-outlook. The *Tenth*, perhaps more than his preceding works, is filled with deepest sorrow and despair. It is a farewell from life, a final reckoning, set down in the very shadow of death. The first movement begins with an unharmonized solo-song in the violas. Increasingly gripping as it ascends, this melody, unfolded in the form of an arc, becomes at its highest point an overwhelming outcry of despair. A sinking motif of grief, constantly recurring in various shapes in the first, third, fourth, and fifth movements, is the emotional motto of the entire work.

**The Second Movement: First *Scherzo***—The rustic jollity of this movement is distorted by a hobgoblin quality, due to a continuous altering rhythm and metre. Only the *Trio* section, of specific Austrian melodic cast, has a somewhat calmer effect, even though the unusually wide melodic intervals are evidence of a persistent spiritual lability.

**The Third Movement, entitled *Purgatorio*** by Mahler, displays in spite of its performing-indication *Allegro Moderato*, a hasty, tortured restlessness. Here also sorrow, despair, suffering, the shadow of death are constant factors. As already mentioned, this movement is intended as an *Intermezzo* between the two *Scherzi*.

**The Fourth Movement: Second *Scherzo***—Mahler wrote the following words at the head of this section: "The devil dances with me! Madness, seize me! Destroy me, that I may forget that I am! That I may cease to be!" Three-quarter time. A dance. Yet a dance which grips the listener with horror. Harsh harmonies—melodies dominated by grotesque, farcical leaps and sarcastic banalities. The drive of haunted elements becomes an infernal orgy. At the end everything is shattered asunder. A

muffled drum-beat closes the movement. (According to Mahler's widow, this muffled drum-beat had its source in reality. In 1907, while Mahler was living in New York, he observed from his hotel window the funeral procession of a fireman who had died in the line of duty. The sole funeral music was the slow, steady beat of a muffled drum. Mahler was moved to tears by the expressive power of this sound.)

The Fifth Movement: *Andante*—This begins with the same muffled drum-beat that closed the preceding movement. At first suggestive of a funeral procession. Motivated material drawn from the *Purgatorio*. Sorrowful song, broad-winged melodies. After a great climax a lively middle portion is introduced. The spooky elements of the *Purgatorio* and the fourth movement are again at large. Once more the outcry of utmost despair, as in the first movement. Also a reminiscence of the solo song of the violas. The grieving motif, which I described as the emotional motto of the entire work, is heard in ever growing intensity. With this ends the memory of life. Now follows a yearning, transfigured song to Heaven. Melodies of eternal beauty commingle in cosmic polyphony. Heaven opens. A last, calm cadence of the motif of grief, this time like a sigh. Death.

I trust I have presented some idea of Mahler's *Tenth Symphony* in the brief space permitted this analysis. It is a work which, to be sure, did not attain complete formal shape. Its spiritual intensities, however, live and will survive as a powerful artistic influence.

#### SYMPHONY No. 2 IN C-MINOR BY MAHLER

BY JACK DIETHER

Note: On April 26, 1941, Mahler recordings were broadcast for the first time in Vancouver, B. C. These notes were spoken by Mr. Alan Thompson, a British organist and radio announcer.

Gustav Mahler, the most-publicized operatic conductor of his day, was born of Jewish parents in 1860 in Kalischt, Moravia, and died in Vienna on May 18, 1911. He was a tyrannical perfectionist, impossible to satisfy, and drove his artists and technicians at whip-end, rehearsing them far into the night when necessary. Before he died he raised the artistic standard of the Vienna Opera House to a height it has never attained before or since, and made its name ring triumphantly around the world, but he never wrote an opera for it. During his few cherished vacations his demon of energy drove him to compose voluminous song-cycles with orchestra, and complicated symphonies requiring so many players that some of them are practicable for performance only at very large music festivals.

The present recording was made in 1935 at a public concert at the University of Minnesota, with Corinne Frank Bowen, soprano, Ann O'Malley Gallogly, contralto, the Twin Cities Mixed Chorus under the direction of Rupert Circon, and the Minneapolis Symphony Orchestra, considerably augmented, the whole under the conductorship of Eugene Ormandy. Like Mendelssohn's *Reformation Symphony*, this *Resurrection Symphony*, as it is called, alternates mystic and religious proceedings with tuneful peasant music—*Parsifal* and the *Bartered Bride*, so to speak. Most of the religious feeling revolves, like that of Berlioz' *Fantastic Symphony*, about a paraphrase on the great liturgical chant *Dies Irae*, although in this case it is hardly more than a suggestion of the melody of the chant, transferred to the idiom of the German chorale. The concept of Judgment Day and the Great Recall is further represented in the music by

various military signals, such as the "flam" or "fall in," "retreat," "last post" and "reveille," for Mahler conceives humanity symbolically as an ever-marching army, and the Day of Reckoning as "God's Own Court-martial." The Bohemian peasant ingredients are based in part upon themes from earlier settings by the composer of poems from the well-known German folk-song collection, "The Youth's Magic Horn."

The first movement, which Mahler once referred to in conversation as a "Death-Celebration," is of all his early works most reminiscent of Wagner. (The later works are reminiscent of no one.) It begins, as a critic has expressed it, "at the brink of the grave, with a veritable hiss." The second subject, a long, rhapsodical singing melody, short scraps of which are used throughout the rest of the symphony in Wagnerian "leit-motiv" fashion, is associated with the idea of human suffering and passion. It is heard in its entirety but once. During the development of these themes the *Dies Irae* chorale casts its fateful shadow over them and raises them to hysterical heights of terror.

The second movement is a charming country dance. The flowing, Haydnesque tune which opens it and the later, more modern melody in counterpoint with it are in perfect contrast with the essentially dotted, trochaic rhythm of the first movement. This is one of Mahler's few unqualifiedly cheerful moments.

The third movement is based on the themes of one of Mahler's songs from "The Youth's Magic Horn," entitled "St. Antony of Padua's Sermon to the Fishes." This is the same St. Antony of the Haydn chorale upon which Brahms built his famous Variations. In this legend the people of Padua are represented allegorically by divers fishes, whom the good man exhorts in vain to a better way of life, even though, to quote the poem, "no sermon seemed ever to fishes so clever." These slippery beings are quite willing, it seems, to "lift up their features like sensible creatures, their Gods to determine through Antony's sermon," but they will have it distinctly understood that such things as sermons have nothing whatever to do with their normal pursuits. The song is entirely humorous, but in the present adaptation for orchestra a grimmer note is introduced near the end with the appearance of one of the Judgment Day themes, howling banefully above the General Dance. The movement is exceptional for its continuously flowing style, there being actually no cadences or semi-cadences until the last note. The interlude before the *Finale*\* is a contralto solo with accompaniment for small orchestra, sung to words from another Magic Horn poem, "Primordial Light." It laments the fact that "man lies in deepest woe" on earth, and expresses a simple, childlike trust that "the dear God will send a little candle to light the way into a blessed, eternal life." The *Finale* bursts in on this with the full fury of the Day of Atonement. The chorale theme returns, solemn and portentous, and suddenly a chill, the deadly chill of outer space, descends on the music. The Gates of Hell swing open, all humanity rises from the dead, and to the beat of the chorale theme transformed into a stirring military march, files past in military order to the Great Court-martial. As they disappear in the distance the music reminds us again of the human suffering and want they experienced on earth, as expressed in the first movement. A horn, off-stage, sounds the last post followed by reveille, the universal symbol of resurrection, familiar in Armistice ceremonies. Distant trumpet fanfares are answered by bird-like flute calls on the stage, with a soft roar on the kettledrum, dimensional effects that seem to span the gap between heaven and earth, and then the chorus enters mysteriously and unaccompanied, with the words of Klopstock's Song of Resurrection, "Thou wilt rise again, my dust, after a short rest. The Lord of the Harvest will gather thee up into the immortal life." But later doubts and fears steal in again, and the soloists sing, terror-stricken at first, but with increasing reassurance, "Believest, my heart, O believest thou that all is not lost. Thou wert not born only for suffering; prepare now to live."—and the chorus reaffirms with unshaken tone, "For that which is born into the world shall pass away; and that which hath passed away shall be born anew in the Kingdom of Heaven. Thou wilt rise again, my heart, in an instant, and thy beats will draw thee on to God." The spiritual victory thus expressed and confirmed was something which Mahler had to rewin time after time throughout his life, for he never freed his mind permanently from the pathological horror conveyed in this and other works. Structurally, this *Finale* is, by the way, in pure sonata form, the entire choral section comprising the *Coda*, although this most extensive of all codas is almost in the nature of a sonata within a sonata.

\* N.B.: (The third, fourth and fifth movements should be played without a break.)

## Mahler's *First*

BY GABRIEL ENGEL

WHEN Mahler committed his *First Symphony* to print in 1898, ten years had elapsed since the work had been completed. The published version differed from the original, first performed at Budapest in 1889, in at least one important respect. It did not include the slow movement referred to in early programs as "Mosaic: A Chapter of Flowers." The removal of this section (originally the second) left a composition in four movements essentially in accord with traditional symphonic form. Mahler had hitherto always programmed the work as a "Symphonic Poem, in Two Parts," even giving it a definite name (*Titan*) and adding a description of its inner content. This "guide" was, of course, an afterthought, at best only superficially pertinent to the music's real significance. The controversy it aroused among critics and music-lovers proved to Mahler that, for his music at least, literary "props" would be more misleading than helpful. Therefore he published the work merely as *Symphony No. 1, in D-major*. The sole verbal clue to the content in the printed score is the phrase "Wie ein Naturlaut" (*Like the Voice of Nature*) at the head of the introduction to the opening movement.

Added proof of Mahler's firm resolve to let the music speak for itself is contained in the following notice in the program of the first American performance of the symphony, which took place in 1909 under his own direction:

"In deference to the wish of Mr. Mahler, the annotator of the Philharmonic Symphony's programmes refrains from even an outline analysis of the symphony which is performing for the first time in New York on this occasion, as also from an attempt to suggest what might be or has been set forth as its possible poetical, dramatic or emotional contents."

*FIRST MOVEMENT: D-major, 4/4 (Langsam, nicht schleppend)*

"Like the voice of Nature," is the composer's hint to the interpreter, as a weird, long unison *a* begins to weave its mystic spell over the slow introduction's sixty-odd measures. Harmonics in every register of the strings combine to produce the disembodied tone-quality of this persistent note. It dominates all, even technically; for it is the dominant of the symphony's main tonality. It is one of the most sustained and ingenious organ-points in the whole range of music. What concept of Nature is this, the musical suggestion of which is swayed by so extraordinary a tone? Fortunately Mahler himself has told us in one of his letters.

"That Nature includes all, being at once awesome, magnificent, and lovable, no one seems to grasp. It seems so strange to me that most people, when mentioning Nature in connection with art, imply only flowers, birds, the fragrance of the woods, etc. No one seems to think of the

mighty underlying mystery, the god Dionysos, the great Pan; and just that mystery is the burden of my phrase 'Like the voice of Nature.' That, if anything, is my 'program,' the secret of my composition. My music is the voice of Nature sounding in tone."

Against this unison a phrase of two slow notes, a descending fourth apart, appears softly in the woodwind. Destined to be the principal source-motif of the symphony it may justly be called the "nature motif." As it strives toward thematic integration, at first in minor, this motif evokes a series of antiphonal fanfares in woodwind and brass, which are reechoed by a trumpet "in the distance." Assuming more definite rhythmic character, pointed and sharp, it becomes the voice of a cuckoo calling. In this magic, shadowy atmosphere a dreamy, yearning melody is heard in the horns. Mingled bird-calls and fanfares are greeted by sudden shrill reiterations of the "nature motif." A brief, winding, chromatic figure rears its head out of the muted basses. A subdued growl of timpani foretells its ominous future. The "nature motif," reinforced by numerous imitations in the woodwind, descends upon the lugubrious intruder, which retreats and vanishes. The music's pace gradually quickens. The air grows electric with suspense as these elements, symbolizing a world of latent emotional life, pass by in preliminary review. At last even the fundamental dominant sheds its long-lived unison garb. It too succumbs to the "nature motif," which emerges into the free air and bursts into unfettered song.

Before the symphony was published the introduction (analyzed above) had been referred to in the programs as "the awakening of nature in the early morning." The song-like, soaring melody that springs from the "nature motif" is the principal theme of the first movement. Its tempo twice as fast as that of the introduction, is qualified by the admonition, "not to hurry." Comparison shows it to be identical with the principal melody of the second of the *Songs of a Wayfarer*, composed just before the *First Symphony*. In fact, virtually all the melodic life of the opening movement (with the exception of the introduction) is rooted in that song. The process involved in this apparent transfer, however, is something far different from the wordless re-setting of a song score. The deepest implications of the term "song-symphonist" (used by the writer as the title of his Mahler biography) are here at stake. Song and symphonic movement are both expressions of the one spiritual experience. Yet the former is the mere embryo, containing only the essence of growth; the latter presents the fullest fruition of that essence. Beyond the words of the song Mahler hid a vast panorama of intensely personal experience. It is this secret world which he reveals in the first movement of the symphony, baring and exploiting fully a number of emotional nuances permitted only momentary, skeletal embodiment in the song.

"Spring" was the designation the old program notes gave the strains which now follow. Young Nature is the reveler in this unbroken stream of carefree melody. It not only sings, it dances, leaps, and spins about in

an ecstasy of budding life. Impatient violins snatch the melodic thread from the heavier-timbered cellos and rush it aloft to the dominant. There they pounce upon a fresh, joyous theme, while the "nature motif" sounds on every hand, smooth in the woodwind, plucked in strings and harp. The main theme, reborn in this brighter tonality, proves a richer, jollier expression. It is now a two-part canon, cellos pursuing woodwind in close imitation. Violins join the merry company in a sprightly, staccato figure interspersed with sudden upward leaps, like exclamations of joy. The tempo is now considerably accelerated. Theme and answer combine, enhancing the power of the approaching climax. Full-throated horn-tones emphasize the dominance of the "nature theme" over the full orchestra. A brief epilogue, corresponding to the traditional *Codetta*, marks the conclusion of the statement of themes. The mood of happy abandon subsides amid lively reiterations of the "nature motif" and a melodious fragment suggesting a bird-call. Once only, as in the introduction, a fleeting shadow, in the guise of the ominous bass motif, threatens the happy course of the thematic exposition, but it is again banished by the "nature motif."

Whither now? The "Voice of Nature" (the weird unison, harmonic *a*) pierces the stillness, inspiring a new suspense. Under its mystic, creative spell the development section begins to unfold. The bird-call, increasingly prominent in the flute, lends this mood a gentler lyricism than that of the introduction. A plaintive motif, hitherto unheard, issues like a sigh from the cellos. Cast in the minor mode it represents the first melancholy melodic element in the symphony. Its repetition, in recitative style, evokes correspondingly moody utterances in horns and flutes. A brief, upward-winding motif, drawn from the dark-tinged chromatic bass motif, makes its appearance in the harp. No longer chromatic nor depressed by heavy instrumental timbre it becomes the element of enlightenment, gradually lifting the minor veil that has descended over the music. The restoration of the major mood attains almost the air of a ritual as the trombones, hitherto silent, celebrate the new dawning with tones of mystic significance. The "nature motif" in the horns softly hymns the rebirth of joyous song. Beneath the happy spell of bird-calls the motif first heard in the cello as a questioning sigh is metamorphosed into a song of gratitude. Oboe and violin add individual melodies, endowing the passage with a spontaneous polyphony, an early example of that polymelodicism destined to become most characteristic of Mahler's style of expression.

This display of thematic prodigality is accompanied by a corresponding growth in harmonic richness, the joyous complex of melodies throwing off the shackles hitherto limiting the symphony to neighboring tonalities. The gradual subordination of the brass marks the increased subtlety of the instrumentation at this period. Strings and woodwind sway the orchestral setting, achieving variety largely through delicately contrasted dynamics. A shadow, which not even the vision of hope could

dispel, hovers over this forced restraint. In the violins the song-theme, newly derived from the sighing motif, takes on the troubled aspect of its root form. The threatening chromatic motif in the basses reappears as its counter-melody. The unfolding of this darker mood is climaxed by muted trumpet fanfares.

The brass, thus revived, acquires gradual ascendancy, its power clearing the way for a more triumphant return of the bright major mood. Hitherto but a vision of promise glimpsed through a veil, it now becomes full realization, as the "nature theme," in tonic major brilliance, resounds in full-throated horn and trombone tones. The song-theme follows, jubilant in the trumpet. The "nature theme," irrepressibly bold and strong in its restatement, becomes a veritable proclamation of victory in the brass. This grand triumph might be identified as the recapitulation by those who wish to apply the conventional symphonic yardstick to the form of the movement as a whole. The *Coda*, which follows upon the final jubilant return of the "nature theme," involves a supplementary exploitation of the "nature motif," the outstanding elemental symbol, not only of the movement just presented, but also of the three sections yet to come.

*SECOND MOVEMENT: A-major, 3/4 (Kraeftig bewegt)*

The "nature motif" is clothed with fresh, energetic significance, as it introduces a powerful, stamping utterance in triple rhythm. An invitation to the dance, it evokes a series of joyful octave-leaps in the violins. These motifs form the harmonious background of the opening theme, a spirited, almost heroic melody, closer to the classic minuet than to the scherzo. Thus three individual melodic lines, in a typically Mahlerian combination, are heard simultaneously. The theme itself is a composite structure of five distinct melodic elements:

- 1) A martial motif (perhaps a reminiscence of childhood days spent in the vicinity of the military barracks of Iglau).
- 2) The "nature motif."
- 3) A fragment of the "nature theme" (drawn from the second of the *Wayfarer* songs) here presented in rapid, staccato style.
- 4) A nimble, rollicking, downward-spinning figure.
- 5) A brief, spontaneous sequel to the preceding figure. Entering at a point where a full cadence would normally occur, this adds new life to the melodic line.

Rhythmic exploitation of familiar motifs is the outstanding aim of the first portion of the movement. Yet it differs essentially from the far fleeter Beethoven *Scherzo* (also devoted to the rhythmic exploitation of motifs) not only in its comparatively moderate tempo, but in its extended thematic sentences. In the course of the dance some of the components of the principal theme attain independent melodic integration. One of the most subtle and charming of these presents a merging of the "nature

motif" with the octave-leap, originally an element of the theme's harmonic background.

The *Trio in F-minor*, "somewhat slower," is a *Laendler*, its warm sentiment intensified by the glides which the violins are expressly asked to apply to the gently swinging opening bars. Alternately wistful and playful, it hovers between a smile and a tear, embracing a world of specifically Austrian charm. The "nature motif" is also present in this fragrant melodic atmosphere, dominated by strings and woodwind. Suddenly heard in the horns it becomes the accented fundament of a lilting melodic line in trumpets and flutes. Four distinct, singing themes are heard in the course of this richly melodic idyl. A horn-call, entering softly upon hushed string-murmurs, prepares the scene for the return of the boisterous, initial dance mood. Recapitulated in somewhat abbreviated form it brings the movement to a rhythmically and orchestrally powerful close. In early programs Mahler had sought to catch the spirit of this buoyant music in the striking phrase, "Under full sail." In the published score he prescribed "a considerable pause" between this and the following section, showing that he had not ceased to regard the symphony (like the "symphonic poem") as a work in two parts.

*THIRD MOVEMENT: D-minor, 4/4 (Feierlich und gemessen)*

"Solemn and measured, without dragging," is the composer's hint to the performer concerning this bizarre movement. Apparently it was this section to which he referred in a letter to an intimate friend immediately after he had completed the symphony. "You are the only one," he wrote, "to whom nothing in the work will seem strange. The rest will have something to wonder about." In the beginning he hoped to make the ironic and sardonic features of this movement intelligible to listeners through the following detailed description:

"The hunter's funeral procession: a dead march in the manner of Callot [Jacques Callot, a seventeenth-century French artist]. The composer found the external source of inspiration in the burlesque picture of the hunter's funeral procession in an old book of fairy tales known to all children in South Germany. The animals of the forest escort the dead forester's coffin to the grave. Hares carry flags; a band of gypsy musicians, accompanied by cats, frogs, crows, all making music, and deer, foxes, and other four-footed and feathered creatures of the woods, leads the procession in farcical postures."

Muffled drums, beating the tonic and dominant alternately, present the "nature motif" in a sombre metamorphosis. They define the rhythm of the "funeral procession" and become the harmonic foundation for the opening theme. The string basses, muttering strangely in their topmost register, become the haunted singsong of hex-voices, as they introduce the nursery tune "Brother Jacob," known to all the world under various titles. Lugubriously a bassoon takes up the song in canon style, inaugurating a series of similar imitative interruptions in cello, tuba, and

clarinet. The complex polyphony thus set in motion is rendered all the more unusual by the incongruity between its naive subject matter and the gloomy, monotonous manner of its exposition. A curious counter-melody, set off in sharp relief by cutting tones of the oboe, seeks for a moment to interrupt the incantation, as it gradually weaves its spell over the entire orchestra. This brief solo oboe passage opens the door to that world of sardonic expression which music-lovers have come to regard as especially Mahlerian.

The composer himself has definitely labeled the ensuing passage "Parody." It is dominated by the shrill-toned, little E-flat clarinet, here granted its first symphonic reincarnation since Berlioz. Sentimental folk-song melodies of native Bohemian flavor are arrayed for parodistic treatment. Turkish cymbals alternate with bass drum to mark the quickened pulse of this passage, lending it garish instrumental coloring. Shrill, pain-filled outcries in the violins heighten the contrast between the grotesqueness of this mood and the gloom of the preceding one. Finally only a wisp of folk-song survives, like a lamenting echo in violins and oboe, evoking the return to the lugubrious canon theme in the form of a brief epilogue.

A soft monotone in the woodwind, syncopated in low register, leads to the next passage, a slower melody in G-major, swayed by a dreamy, more hopeful mood. "Very simply," is the composer's hint to the performer, "In the manner of a folksong." The harp, characterizing the accompaniment through this portion, enhances its ingenuous quality. Muted violins alternate with flute and oboe in presenting the component phrases of this song. Its history has a significant place in Mahler's early melodic fantasy. In its original form it was one of his earliest "Wunderhorn" settings (*Songs of Youth, Part I*). In its next incarnation it became the last of the *Songs of a Wayfarer*, where its solution in major anticipated the present symphonic concept of world-pain momentarily relieved in a dream.

The canon theme returns, still more mysterious in a new, distant tonality (E-flat minor). The harp, still outstanding, supports the rhythm in the muffled drum. A bit of folk-song, hitherto unheard, is sounded by the trumpets, to become the principal fresh melodic feature of this passage. A brief, ironic fragment, with a jarring, cymbal-struck rhythm, evokes an insistent, grotesque motif, literally beaten from the violins with the wood of the bow (*col legno*). The harp joins horns and bassoon in the gloomy canon theme, bits of folk-song in strings and woodwind dogging its course until the close. The movement ends amid waning reiterations of the "nature motif."

*FOURTH MOVEMENT: F-minor, 2/2 (Stuermisch Bewegt)*

"*Tempestuously lively*," hints the composer, characterizing the *Finale*. In the "symphonic poem" he had entitled it *Dall' Inferno al Paradiso*, with the tempo indication (then also Italian) *allegro furioso*. He had de-

scribed the content as: "the abrupt outburst of doubt from a deeply wounded heart." The opening is a highly realistic storm-scene, beginning with a terrific din, as of thunder and lightning immediately overhead. The electrifying shrillness of this passage is heightened by the added participation of "at least" two E-flat clarinets in an already huge orchestra. The violins zigzag about in frightened *Cadenzas*, as the mighty hostile power, whose very existence was hitherto perceptible only in the leering malevolence of the bizarre "funeral march," hurls itself into the foreground in a burst of thunder. F-minor is the new, ominous tonality. The titanic quality of this beginning epitomizes the tremendous sweep of the movement, preparing the foundation for its huge proportions. Three main divisions are noticeable along its extended course, this fact alone linking it with the presentation-development-recapitulation style of traditional sonata form.

The impetuous first theme consists of two supplementary march motifs, blared forth with full power by the brass. It attains wide exploitation at once, holding exclusive sway through more than 170 successive measures. A brief, rapid, descending chromatic figure enhances the air of agitation, the progressive degrees of which are suggested by the composer's hints to the performer. These vary from the original, "with stormy motion," to "with energy," and finally "with great savagery." The unusually extended theme is a composite of numerous source-motifs, prevalent since the first movement. Here they are welded into a single comprehensive melody in brass and woodwind, the violins spinning over it a swift, breathless line, much in the manner of a *moto perpetuo*. At the climax the violins finally succumb to the broadly rhythmic spell of the march-theme and the tempest subsides, as though spent by its own fury. At length only the descending chromatic motif survives, just perceptible in the brass. Tenderly the violins take it up, inverted, leading to a brighter, more peaceful tonal plane (D-flat major).

"Very songfully," is the composer's hint concerning the following passage, a soaring song of love in the violins, contrasted with the foregoing section as light with darkness. It is swayed by a passionate yearning, the fervor of which pours forth in an unbroken melodic stream defying even the slightest cadence through nearly fifty measures. A singular song-theme indeed, it surrenders itself completely in a solitary, exhaustive revelation, never to reappear except in occasional, fragmentary form. Cello and horn melodiously confirm the fulfilment of the song-theme's message.

The ominous chromatic motif (from the introduction of the symphony) winds slowly upward in the cello, reawakening the hostile motifs in the tempestuous opening of the *Finale*. The atmosphere, transformed to minor again, literally bristles with agitation. Fragments of familiar themes attain new melodic shape and are swept along into the seething crucible, to be transmuted into creatures of the one dominating rhythmic element. The opening march-motif, thrusting resolutely upward, at

last prevails over the disturbing chromatic motif. The mood changes to major again, as though a rainbow of promise suddenly appeared over a tempest-tossed scene. Horns and woodwind alternately intone the "nature motif" in broad, march-like unison, transforming it into a chorale of promise. This new metamorphosis recalls its original appearance in the introduction, amid bird-calls and distant, mystic fanfares. Yearning fragments of the broad song-theme join the reminiscence. Rather lyric than descriptive, the music's yearning subsides in repeated, long-drawn sighs, accompanied by a threatening roll in the kettle-drums. In the original storm-tonality (F-minor) the hostile forces strive once more to produce chaos, only to be irresistibly merged with a tremendous outburst of fanfares. The threshold of supreme triumph has been won. In a glorious outburst of harmony the brass sounds forth the nature-theme, a grand hymn of complete fulfilment. This has been the goal of the entire work: the apotheosis from mystic minor to triumphal major. Seven horns lend added impressiveness to the scene as the symphony draws to a close.

Since this article was written Columbia has released an excellent recording of Mahler's *First* (Minneapolis Symphony Orchestra, Dimitri Mitropoulos conducting).

*~~~~~*

#### BRUCKNER'S *FOURTH* AT UNIVERSITY OF IOWA SUMMER FESTIVAL—PHILIP GREELEY CLAPP CONDUCTING

. . . The music of Anton Bruckner again returned to the memorial union in all its stirring beauty, and new creations by two University of Iowa graduates, Ralph Dale Miller and Robert O. Barkley, thrilled the audience by the soundness of their conception as much as by that element of discovery engendered by the first hearing of something new.

It is difficult, if not impossible, to recall having heard another orchestral concert as well-programmed or as tellingly executed as was this one, which found the university musicians making the most of their music in a professionally deft performance.

. . . If for no other reason, Thursday evening's concert was memorable to me in that it afforded a rehearing of Bruckner's great, melodic *Symphony No. 4* and even emphasized the thrill that came from the first impression of several years ago.

It is a lengthy work (some call length a "fault" of Bruckner), yet in its length there is a sustaining interest which lends an aspect to its performance of hearing a story fully told, not merely sketched.

Some of musical literature's grander passages are contained in its four movements and there are ensemble effects that bring thrills not often realized. Much of its beauties Bruckner has assigned to the horns, and under the beautifully paced direction of Doctor Clapp, the university French horn section came up with a performance that certainly made the most of the haunting melodies, the stirring fanfares they were privileged to play.

. . . As I listened there were several things I meant to dwell upon in today's comments . . . but these things became but minor as Doctor Clapp's musicians once more regained confidence and played through the third and fourth movements with an alacrity that made this Bruckner Symphony, at least as presented on this occasion, my favorite symphonic work. . . .

RON TALLMAN, *Iowa City, Ia., Press-Citizen, July 18, 1941*

## Bruckner on Records

BY PAUL HUGO LITTLE

ALTHOUGH many leading conductors in America have become protagonists for the symphonies of Anton Bruckner in recent years the case for the Upper-Austrian master must still be pressed largely through the medium of recordings. This circumstance should not, however, be construed too dolefully by Brucknerites. Recent musical history has shown conclusively that the release of recordings of unfamiliar works has effected a wholesale conversion of American music-lovers. Especially true is this of the Sibelius symphonies, Mahler's *Das Lied von der Erde*, and Schönberg's *Gurre-Lieder*, not to mention a number of other important serious compositions of the present century. Furthermore, one of the most effective means of spreading the message of unfamiliar music is the radio program featuring presentations of recorded works.

The principal Bruckner works now available in recorded form are the *Fourth*, *Fifth*, *Seventh*, and *Ninth* Symphonies and the Mass in E-Minor.\*

For the benefit of those readers of CHORD AND DISCORD who may not be familiar with all these releases, I should like to offer brief comments on both the recordings and their interpretations.†

### MASS IN E-MINOR

*Victor Album M-596; the Aachen Cathedral Choir with the Wind  
Players of the State Orchestra conducted by T. B. Rehmann*

The exact date of the completion of the *E-minor Mass* is not known. Several movements, including the *Credo*, *Sanctus*, and *Agnus*, were finished in the autumn of 1866. The rest must have been completed in the summer of 1869, for the whole work was first performed at Linz on September 30, 1869, on the occasion of the consecration of a votive chapel of the new Cathedral which was then just being built. Bruckner conducted the work himself and fate granted him "one of the happiest days of my life," for the generous Bishop Rudigier, his devoted patron, not only expressed his unstinted praise of the solemn and beautiful Mass, but bestowed upon its composer an unexpected reward of 200 florins.

\* Lack of space rules out more detailed consideration of several other recordings, mainly of a fragmentary nature. These include the pre-symphonic *Overture in G-Minor*, excerpts from the *Te Deum* and the *Scherzi* of the *First*, *Second*, *Third* and *Nullte* symphonies.

† I should like to suggest, also, that every reader write to Columbia and Victor urging them to record the first three symphonies in their entirety, as well as the *Sixth* and *Eighth*. Record societies in the past have issued Delius, Bax, and Sibelius albums for a minority group, provided, of course, that the group was large enough to offset performance fees and recording costs. I am certain that the readers of this publication, if they expressed a united appeal, would obtain results which casual and sporadic efforts have thus far been unable to achieve.

From a technical standpoint, this Mass betrays the predominately symphonic leanings of its composer. While the liturgical text, of course, determines the essential character and form of the music, Bruckner moulded his vocal parts largely according to instrumental principles. In this respect, therefore, we may consider the *E-minor Mass* a "symphonic Mass," a respectable, though more modest follower of its gigantic forerunner, Beethoven's *Missa Solemnis*.

The scoring of the work, perhaps unique in the literature of church music, demands our attention. It is written for a mixed choir, usually divided into six to eight parts. The supporting orchestra, only intermittently employed, consists merely of double woodwinds (without flutes) and brass. Some critics have suggested that this unusual instrumental grouping was due to the limited acoustics of the chapel in which the work was first performed. Perhaps Bruckner's early training as an organist suggests a still better reason: namely, the attempts to achieve an organ-like quality in the orchestral accompaniment.

The music though deeply devout is not austere, its richly romantic melody and harmony keeping it thoroughly human throughout. The ritual text is for Bruckner a medium for universal expression. The solemn *Kyrie*, announced by female voices and then developed, is repeated by the male choir, the two groups later combining in an overwhelming climax. Then follows the jubilation of the *Gloria* section, its main theme cast in an old church "mode" against the instrumental background. The recapitulation of the first section, beginning with the words *Quoniam tu solus*, closes with a short double-fugue, noteworthy for its bold orchestral treatment.

The *Credo* is tremendously powerful and impressive. For grandeur, incisiveness, and poignant contrasts, it ranks as one of the finest liturgical creations by any composer. The first theme, announced in unison by the whole choir, seems to have been derived from a Gregorian chant. Stark simplicity and elemental power in music could hardly be better expressed than through such a medium. This vigorously devout passage is offset by a new section with a poetical theme, one of Bruckner's most exquisite lyrical inspirations. The *Et resurrexit* enters with dramatic suddenness; the main theme from the *Gloria* returning leads to the great climax of the Mass.

The *Sanctus* is serene, the eloquent voice of Bruckner's sublime, unwavering faith. The polyphony of its theme bears an affinity to the main theme of the *Kyrie*. Each of the eight voices seems to pursue an independent course of its own; yet the whole is held together by a central tonality. The climax of this flow is reached on the words *Hosanna Deus Sabaoth*, when Bruckner unexpectedly changes from polyphonic to plain chordal writing, a most effective contrast.

The *Benedictus* is the most intimate and introspective of the six sections, the orchestra participating more actively in its assumption of independent thematic material. The *Agnus* takes us back to the mood of the

beginning of the Mass. Bold part-writing and harmonic clashes characterize it as a worthy finale to a magnificently conceived work.

The recording is deserving of the highest praise. Not only is Rehm's interpretation one of utmost fidelity to Bruckner's devout intentions, but the singing is truly superlative. The reproduction of the discs also merits applause. This album and that of Bruckner's *Ninth Symphony* (by Hausegger) are my favorites, not only because of the music, but because of the recording excellence in each instance.

#### FOURTH (ROMANTIC) SYMPHONY

*Victor Album M-331; the Saxonian State Orchestra under Karl Böhm*

The first fact about this recording of interest to Brucknerites is that it is a faithful presentation of the original score. Even a few years ago, when I was not so fond of Bruckner's music as I now am, I considered cuts, prompted by whatever intention, unjustified and high-handed. I remembered too many great works spoiled by the revisions of well-meaning composers and conductors. Unquestionably many of the sins attributed by the public and the critics to Bruckner himself were the results of just such "improving" transcriptions.

This recording was made from the *Originalfassung* (original version), first performed in Germany in 1936 and later the same year in London by the Royal Philharmonic Society. Doctor Karl Böhm conducted both performances. The publication of this original score, as with the *Eighth* and *Ninth* compels a reevaluation not only of Bruckner's orchestral works, but of his whole stature as an individual composer.

The first movement (*Bewegt, nicht zu schnell*) opens magically, over *pianissimo* string tremoli, a solo horn playing the theme, which is soon taken over by the woodwinds with the horns in imitation. Clever and impressive modulations lead shortly to a subsidiary subject. The mixed rhythms, characteristic of Bruckner, especially in the *Third* and *Eighth Symphonies*, give evidence of great creative energy.

A long-held horn tone leads to the second subject, twofold in its dimensions, a lyrical melody in the violas and a gayer subject in the violins, known as the "Zizibe" theme. The working out of the rest of the movement reveals that the genius of Bruckner consists in his handling of theme-groups rather than isolated themes, a principle which achieved its fullest realization in the *Ninth*. The climax of the development section is the statement of the chief subject amplified to the proportions of a towering chorale. A similar climax occurs at the *Coda*.

The second movement (*Andante quasi Allegretto*) reflects a melancholy mood, sometimes almost funereal in character. Over a rhythmic figure introduced in the opening measures, cellos play a broad, elegiac melody with a short pendant figure, the numerous appearances of which in varied instrumental guise, characterize the whole movement. The second subject, sung by the violas against a rich background of plucked

strings, is of exquisite, gossamer-like texture. After this subject come three counter-melodies of lyrical grace, all woven about the principal theme (in the horn). The movement closes on a note of yearning.

The third movement (*Scherzo-Bewegt*, B-flat major) is so tuneful, colorful, and plastic, that any comment on its content seems superfluous. Four years after Bruckner had completed the symphony (1874), he revised it, cutting out the original *scherzo* in favor of this popular "Hunting Scherzo." Who can forget its leaping, delightful figure for the horns, or its deliciously bucolic *Laendler Trio*? . . .

The *Finale* (*Bewegt, doch nicht zu schnell*, E-flat) begins on a long-sustained fundamental tone (a pedal point on B-flat held for about forty bars). Over this the germ of the main theme is proclaimed, rising quickly in pitch, speed, and intensity. The second subject is drawn from the material of the slow movement, its development an exciting adventure in still uncharted possibilities of the main theme of the work.

The recording is splendid, though some years old.

#### FIFTH SYMPHONY IN B-FLAT MAJOR

*Victor Album M-770 and M-771: Saxonian State Orchestra conducted by Karl Böhm*

The *Fifth* or "Tragic," as it has been named by Goellerich, Bruckner's faithful biographer, marks a distinct departure from the first four symphonies. Although, in the two symphonies immediately preceding, Bruckner had shown a tremendous advance in maturity of conception it is in the *Fifth* that we first meet with the full revelation of his simple and devout creed, of his unswerving faith in the ultimate victory of the soul of man over the obstacles of the temporal world.

The spiritual background of this work, set down in his fifty-first year, was anything but joyous. It took shape in the very midst of a long period of heart-breaking frustrations intensified by general critical vilification and public scorn. His private misfortunes have been too often dwelt upon to need amplification here. Completed in 1878, the *Fifth* had to wait for a hearing until 1894, when it was performed at Graz under the direction of Franz Schalk, the brilliant Bruckner disciple largely responsible for the adulterated first published version. He disregarded the composer's intentions with respect to a host of instrumental details, even making cuts in the *Scherzo* and the *Finale*. In addition to drastic detailed changes we find in the last movement deletions in no fewer than five different places, totalling 270 bars, the recapitulation alone being shortened by 68 bars. To be sure, Bruckner himself had recognized the possibility of a cut in the final movement; but in order to preserve the sonata-form structure he had specified the suppression of the double-fugue, if necessary, rather than the shortening of any other portion. In the first published version both the double-fugue and the recapitulation suffered.

Whether or not Bruckner sanctioned such changes merely as a neces-

sary compromise to get his music played, these deletions have themselves been deleted in this recording, thanks to the vigilant editorship of Robert Haas and Alfred Orel under the sponsorship of the *Musikwissenschaftlicher Verlag* of Vienna. Now at last we may hear the *Fifth* as Bruckner actually conceived it.

The symphony opens with an *Adagio*, plucked strings providing a vital background for a series of sonorous suspensions. The resonance and warmth of this music quite balance any impression of austere aloofness which might be inferred from the classical severity of the contrapuntal writing. After this terse, meaningful introduction the full orchestra proclaims a noble, march-like theme, which alternates with a chorale solidly orchestrated for woodwinds and brass. Two interwoven motives now follow, presented in Bruckner's characteristic manner, subject and counter-subject sounding simultaneously. Thus prepared the main theme appears, at first inverted, perhaps suggesting a militant spirit, direct and defiant opposition. The second or song theme-group, ushered in by plucked strings, is slower than the established *Allegro* tempo of the first theme. Its principal feature is a typically Brucknerian melody whose individual loveliness consists largely of a curious, almost homely rhythm and a sensitive chromatic structure. The remainder of the movement is a superb example of Bruckner's contrapuntal mastery, his resourceful melodic weaving and interweaving.

The second movement (*Adagio*), for all its great and majestic length, is in the traditional, simple A-B-A-B-A form. It opens (as did the first movement) with a plucked string background. Indeed, the prevalence of this *pizzicato* figure throughout the work won for it the popular, though quite irrelevant name of the "Pizzicato Symphony." Over this figure we hear a quiet, ingenuously simple melody whose charm increases as we give it our attention. The entire sixth record side is devoted to the first section, wherein this melody falls. The second main subject appears at the opening of the seventh record side which, in turn, is occupied entirely with the elaboration of this second portion of the music. The first theme, or "A," returns at the opening of the eighth record side. The second, or "B," is brought back before the end of the record, to continue through the ninth side. The final side, which marks the completion of Album M-770, closes with the return of the opening *pizzicato* and the "A" melody. Melancholy, contemplative, this music is Bruckner at his best. It is dominated by a subdued intensity, the like of which we do not find again in Bruckner's work until the marvelous *Adagio-Finale* of the *Ninth*.

The *Scherzo* and *Trio* which comprise the third movement are hardly less melancholy, despite the quickened tempo (*molto vivace*, with occasional deviations, in the *Scherzo* and *Allegretto* in the *Trio*). Knowing Bruckner's carefree spirit as revealed in the *Scherzi* of his first four symphonies and not having heard this *Fifth Symphony* before, I was unprepared for the expression of wistful and half-hearted gayety which this

*Scherzo* conveys. Indeed, the *Trio*, to my untrained ear, is a veritable prophecy of the *Weltschmerz* Mahler afterwards so poignantly felt. The pathos in the measured cadences of this *Laendler* reflects Bruckner's personal sufferings during the period in which he penned this music. Perhaps no other symphonic movement by this gifted master affords one a clearer insight into the emotional life of the man.

Yet this note of tragedy (for tragedy it is in essence) is quickly dispelled with the opening bars of the *Finale*. After a short introduction, in the manner of retrospect, the conflicting subjects that first came to us in the opening *Adagio* commingle in resolute combat, one ironic almost, the other a reassuring chorale, each becoming in turn the basis for a fugue. The climax of the movement and the whole work is the triumphant double-fugue, the proclamation of victory following the battle waged around each of these themes. Indescribably impressive is this double-mailed giant of the contrapuntal world. Students who have the old edition are especially urged to compare this portion with the original version as presented in its entirety on these records. The welding of all the themes portrays the restoration of Bruckner's unshakable faith. Out of the despair of mind Bruckner's genius has forged an invincible sword of affirmation.

#### SEVENTH SYMPHONY IN E-MAJOR

· *Victor Album M-276; the Minneapolis Symphony Orchestra under Eugene Ormandy*

The *E-major Symphony*, composed between 1881 and 1883, was published in 1885 and dedicated to Ludwig of Bavaria, the royal friend and patron of Wagner. Arthur Nikisch gave it its first performance in 1884 in Leipzig and Americans first heard it in Chicago under Theodore Thomas two years later.

This "Lyric" Symphony, as it has been called, rivals the *Romantic* in general popularity. Yet it has been subjected to the same sort of academic criticism as those Bruckner symphonies still less favored by general approval. "Beautiful in spots, but not sufficiently cohesive," etc., etc.

In this work, inspired by the spirit of song, Bruckner abandons the cosmic principle of preparing the scene for the opening theme. The first theme, sounded at once, is given out by the cellos, reinforced successively by horns, violas, and clarinet against a tremolo accompaniment of the violins. It is later restated in fuller orchestration, with a climax that falls away to make place for its thematic successor. The development section, part way through the second record side, is noteworthy for its adroit inversion of the themes, as well as its prodigal display of rhythmic variety. The recapitulation, beginning near the middle of the third record side, rises to a powerful climax through a tremendous *crescendo*, bringing the movement to a close. We need no "program," other than the term "lyric," to evaluate this warm and radiant music. Bruckner is here as much the song-symphonist as Mahler ever was.

The second movement is especially eloquent of this singing quality. Dominated by deep religious feeling it is literally a symphonic hymn on a grand scale. Marked *Adagio, sehr feierlich and langsam*, it opens unforgettably, with a deep, simple, mournful melody uttered by a quartet of "Bayreuth" tubas. This instrumental coloring was intended as a tribute to Wagner, whose death, occurring in the course of the *Adagio's* composition, has come to be regarded as the prime influence in its shaping. On the sixth record side there is set forth a contrasting song of consolation, warm, soaring, almost passionate in its yearning hopefulness. One of the longest adagios, it unfolds in ever sustained beauty and nobility, ascending to its most majestic climax in a passage for brasses on the tenth record side. Out of this horns emerge, closing the movement with a phrase which recalls the opening subject.

The third movement, a *Scherzo* in A-minor, is jolly music of the world and the ingenuous heart. Once again we are in the midst of those exquisite Brucknerian moments of happiness and eternal youth, vivid with ecstatic strings and irrepressible trumpet calls. A superlatively tender melody, one of the loveliest in the entire symphony, is the one on which the contemplative *Trio* is based. Near the middle of the twelfth side the rhythmic violin figure once more ushers in the first portion of the *Scherzo*, ending the movement. The interpretation by Ormandy is excellent, making the recording a highly desirable one, despite a slight coarseness in the record surfaces, somewhat impairing the full delicacy of tone.

The *Finale* offers a first subject related to that with which the opening movement began. Presented by the first violins, it leads, after much working over, to a hymn-like melody, stated by the strings with a plucked accompaniment, colored by occasional interjections of brass and woodwinds. Two-thirds through the thirteenth record side a powerful outburst for full orchestra marks the start of the development section. Following a *tutti fortissimo* (all the instruments combined) near the end of the fourteenth side, occurs a surprising recapitulation, introduced unexpectedly by the second subject. Finally the opening subject is proclaimed, maintaining its dominance till the end of the symphony.

#### NINTH (UNFINISHED) SYMPHONY

*Victor Album M-627; the Munich Philharmonic Orchestra under  
Siegmond von Hausegger*

One of RCA-Victor's greatest achievements in recent years is this Bruckner album, superb both as to interpretation and recording. It is particularly deserving of every Brucknerite's heartfelt gratitude for its presentation of the original score, completely shorn of the sham and insincerity of numberless "improving" details interpolated by misunderstanding, though well-meaning Bruckner disciples of a half-century ago.

Of exceptional interest in this final work is Bruckner's masterly appli-

cation of the thematic principle developed throughout his career, that of joint-themes, or theme-groups, as they are generally called. The composer intends no isolated subjects, but rather a cluster of related themes, unified in purpose and supplementary in structure. This principle was by no means a Bruckner innovation. His contribution was merely the logical expansion of a principle already employed in elementary form by Haydn and Mozart, who made frequent use of related thematic groups in their symphonies, concertos, and quartets. The Opus 3, No. 5 Quartet of Haydn, for instance, has four distinct melodies forming the second theme (or theme-group) of the first movement.

From the beginning of Bruckner's *Ninth* we listen to music of a fervently devout nature, motivated by the peaceful resignation of a man who does not fear death, who is uplifted by his enduring faith. The opening subject, simple, slow-moving, of great breadth and dignity, is given out by eight horns in unison over a tremolo in the strings, developed into a more widely spaced, upward leading horn call. An expressive, chromatic melody in the violins follows. A tremolo in the strings enhances the fervor of this utterance, which culminates in a climax of tremendous power and austerity, the full orchestra participating. The second side is occupied by a new theme-group presenting three important subjects, completing the exposition of the thematic material out of which the rest of the movement is evolved.

The *Scherzo*, diabolical, youthfully energetic, is a tremendous spiritual achievement. That it is the most vital of all the *Scherzi* created by so great a master of the form as Bruckner proves the greatness of the soul that could attain such exuberant expression despite the burden of mortal pain and advanced years.

The *Adagio*, truly a *Finale of Affirmation*, needs no explanation. It offers a universal message of faith and resignation; not *Weltschmerz*, nor again, romantic *Sehnsucht*, but a *Heiliger Dankgesang*, a devout song of gratitude as in the Beethoven *A-minor Quartet*. Hausegger's interpretation of this heart-moving music is worthy of the most glowing praise. The entire recording is a gem of reproductive excellence.

All in all, the record companies have done well by Bruckner, as far as they have gone. In almost every instance the selections chosen have been given exceptional readings and reproduction. The *Sixth* and *Eighth Symphonies*, the *Te Deum*, and the *Quintet* should be recorded at once. The first three symphonies (particularly the *Third*) also deserve recording. Very likely, because the average listener finds the earlier Bruckner works more understandable, these may achieve waxing before the later, more significant works mentioned.

## Mahler on Records

BY WILLIAM PARKS GRANT

THE number of Mahler records is not bountiful, but it is slowly growing. To date four major works—two complete symphonies, the *Kindertotenlieder*, and *Das Lied von der Erde*—are available (with a fifth rumored in preparation)\* as well as a number of shorter works.

Three of the major compositions, as well as one or two shorter ones, were recorded at actual concert performances. Although such recordings on the whole are inferior to studio performances, all those here fortunately are quite satisfactory as regards fidelity. It should be kept in mind that the necessary "breaks" between record-sides in recordings made at public concerts have to be done without a temporary stop in the performance, as is done in studio-made recordings, and these "breaks" are sometimes made at poor places. Of course, occasional coughing and other disturbances are unavoidable.

On the whole, the performing artists on all the records are excellent. Attention is especially drawn to the recordings made by Bruno Walter, who was a pupil of Mahler, and who is acknowledged the finest—or at least one of the two finest—conductors of his music.

In view of the magnitude of the adverse criticism often directed toward Mahler's works, records, with their opportunity for infinite rehearsing, afford a far more accurate basis for evaluation of his music than is possible in any concert or radio performance. Hence their importance and hence this list.

### SYMPHONY NO. 2 IN C-MINOR ("RESURRECTION")

1. (Complete) Performed by the Minneapolis Symphony Orchestra, Corinne Frank Bowen (soprano), Ann O'Malley Gallogly (contralto), and Twin City Symphony Chorus, conducted by Eugene Ormandy. (Sung in German.) Recorded at an actual concert in Minneapolis, January 6, 1935. *Victor Album set 256*. (22 12-inch record-sides).
2. *Fourth Movement ("Urlicht") only*. Sung by Mme. Charles-Cahier (contralto) with Berlin State Opera Orchestra, conducted by Selmar Meyrowitz. (Sung in German.) *Ultraphone record E-288*. (1 12-inch record-side) (REVERSE SIDE: Mahler: *Ich bin der Welt abhanden gekommen*.—Mme. Charles-Cahier and Berlin State Opera Orchestra).

\* Since this article was written Columbia has released an excellent recording of Mahler's *First* (Minneapolis Symphony Orchestra, Dimitri Mitropoulos conducting).

This thrilling and varied work is one of the most frequently played of the master's symphonies. The recording, though nearly seven years old, still sounds fine. In its day it marked a new "high" in actual-performance recordings.

Mme. Charles-Cahier sings beautifully in her isolated recording of the fourth movement, but the record is marred by the use of flutes instead of piccolos on an important passage where Mahler has written most unexpectedly and strikingly for two piccolos. Also, in order to get the movement on one record-side, the tempo is taken just a bit too fast. The recording is not recent, but it is satisfactory. I believe this disk is no longer on the market.

SYMPHONY NO. 5—FOURTH MOVEMENT  
(*ADAGIETTO*) ONLY

1. Played by the Vienna Philharmonic Orchestra, conducted by Bruno Walter. *Victor record* 12319. (2 12-inch record-sides.)
2. Played by the Amsterdam Concertgebouw Orchestra, conducted by Willem Mengelberg. *Decca record* 25011. (2 12-inch record-sides.)

The two High Priests of Mahler match batons in one of the shortest and loveliest—as well as most popular—of the master's symphony movements, which he scored for strings and harp only. The interpretations are quite similar, and excellent; there is little to choose between them, or between the fine playing of the two orchestras. But as to recording, the Decca disk must take a definite, though respectable, second place, as it is a number of years older than the fairly recent Victor disk.

This movement affords a splendid introduction to Mahler's music for those who are unacquainted with it.

SYMPHONY NO. 9

Played by the Vienna Philharmonic Orchestra, conducted by Bruno Walter. Recorded at an actual performance in Vienna, January 16, 1938. *Victor album set* 726. (20 12-inch record-sides.)

The master's last complete work (part of it written in this country) is by turns despondent, bitter, cynical, tender, thoughtful, and distorted. Walter's reading is of course authoritative, and his orchestra plays very well, the silky quality of its strings being most grateful to the ear, notably in the last movement, in which they predominate. The recording is beautiful and smooth throughout and the "breaks" between sides are, on the whole, well managed. Attention should be drawn to the date of the recording—only two months before the Nazi "liberation" of Austria, which put an end to the Vienna Philharmonic Orchestra, drove Walter

into exile, and placed Mahler's music on the blacklist. This recording is indeed a monument to the happy days of liberalism and progress which now seem so remote.

#### DAS LIED VON DER ERDE (*THE SONG OF THE EARTH*)

(Complete) Performed by the Vienna Philharmonic Orchestra, with Charles Kullman (tenor) and Kerstin Thorborg (contralto), conducted by Bruno Walter. (Sung in German). Recorded at an actual concert in Vienna, May 24, 1936. *Columbia album set 300.* (14 12-inch record-sides.)

This hybrid of symphony and song-cycle is usually considered Mahler's greatest work. It is indeed an unforgettably lovely piece of music, the direct outpouring of the master's inmost feelings. Walter, of course, does a magnificent job, and his soloists are fully his equal. Save some occasional poor intonation, the work of the orchestra is close to perfection.

*Das Lied von der Erde* is heartily recommended to all lovers of music, whether already interested in Mahler or not.

#### KINDERTOTENLIEDER (*SONGS ON THE DEATH OF CHILDREN*)

Sung by Heinrich Rehkemper (baritone) with orchestra. (Sung in German.) *Polydor records 66693-66694-66695 or Polydor-Decca records CA8027-CA8028-CA8029.* (6 12-inch record-sides.)

This five-movement song-cycle is one of the master's most beautiful and moving compositions. Rehkemper's performance is about as near perfection as could be imagined. The unnamed conductor is equally good and deserves mention on the labels. With the exception of the first horn-player, who "bubbles" more than a few notes, the orchestra—also anonymous—plays very well.

This recording was made in 1928, but the fidelity is surprisingly good even today; it could easily pass for the work of three or four years later than its actual date.

#### HANS UND GRETE (*HANSEL AND GRETEL*)

Sung by Suzanne Sten (mezzo-soprano) with Leo Taubman (piano). (Sung in German.) *Columbia record 17241-D.* (1 10-inch record-side.) (REVERSE SIDE: Mahler: *Ich atmet' einen Linden Duft*—Suzanne Sten and piano.)

This charming song is one of fourteen which Mahler originally wrote for voice and piano, collectively called *Lieder und Gesänge aus der Jugendzeit*. Interpretation, performance, and recording are very good.

## WER HAT DIES LIEDLEIN ERDACHT?

(WHO COMPOSED THIS SONG?)

1. Sung by Elisabeth Schumann (soprano) with George Reeves (piano). (Sung in German.) (*Gramophone record E 555*. (1½ 10-inch record-side). (ON SAME SIDE: Mozart: *Warnung*; REVERSE SIDE: Attributed to Mozart: *Cradle Song*—Elisabeth Schumann with piano.)
2. Sung by Lulu Mysz-Gmeiner (contralto) with piano. (Sung in German.) (*Polydor record 23106 or English Decca record P05105*. (1 10-inch record-side.) REVERSE SIDE: Tschaiakowsky: *A Ballroom Meeting*—Mysz-Gmeiner and piano.)

This sprightly little song is one of Mahler's numerous settings of folk-poems from the famous anthology *Des Knaben Wunderhorn*. Unfortunately both recordings were made with piano instead of with orchestra, as Mahler wrote them. I have not had an opportunity to hear the Mysz-Gmeiner record, but the Schumann disk is quite satisfactory in all respects.

## RHEINLEGENDCHEN (LEGEND OF THE RHINE)

Sung by Heinrich Schlusnus (baritone) with Berlin State Opera Orchestra, conducted by Hermann Weigert. (Sung in German.) *Polydor record 95469 or Polydor-Decca record CA8082*. (1 12-inch record-side) (REVERSE SIDE: Mahler: *Der Tamboursg'ssell*—Schlusnus and orchestra.)

Another of the *Wunderhorn* songs, *Rheinlegendchen* is delightfully gay and of folk-song simplicity. Schlusnus sings it excellently, being in unusually good voice. The orchestra work leaves nothing to be desired. This disk was made in 1931 and is up to the best standards of that year.

## DER TAMBOURSG'SSELL (THE DRUMMER-BOY)

Sung by Heinrich Schlusnus (baritone) with the Berlin State Opera Orchestra, conducted by Hermann Weigert. (Sung in German.) *Polydor record 95469 or Polydor-Decca record CA8082*. (1 12-inch record-side.) (REVERSE SIDE: Mahler: *Rheinlegendchen*—Schlusnus and orchestra.)

Schlusnus gives a stirring performance of this German *Danny Deever*. A few instruments are missing from the orchestra, notably the second English horn. This is a 1931 recording. *Der Tamboursg'ssell* and the songs listed below are all from *Seven Last Songs*.

ICH ATMET' EINEN LINDEN DUFT  
(I BREATHED THE SCENT OF LINDEN)

1. Sung by Charles Kullman (tenor) with orchestra conducted by Dr. Malcolm Sargent. (Sung in English.) *Columbia record* DB1303, from *Columbia History of Music by Ear and Eye, Volume 5*. (1 10-inch record-side.) (REVERSE SIDE: Schönberg; Nos. 5 and 12 of *The Book of the Hanging Gardens*—Erica Storm [soprano] and Mosco Carner [piano].)
2. Sung by Suzanne Sten (mezzo-soprano) with Leo Taubman (piano). (Sung in German). *Columbia record* 17241-D. (1 10-inch record-side.) (REVERSE SIDE: Mahler: *Hans und Grete*—Suzanne Sten and piano.)

This lovely song is tender, almost ethereal. It is advisable to own both these recordings, as neither is quite satisfactory, for Kullman's is sung in English and in the high-voice version, which contains a few changes in instrumentation as compared with the Philharmonic miniature score, which prints the version for low-voice; while Sten's is with piano, instead of orchestra (as Mahler wrote it) and the piano's lack of sustaining power shows up badly. Miss Sten's interpretation is slightly superior to Mr. Kullman's. Both are well recorded.

ICH BIN DER WELT ABHANDEN GEKOMMEN  
(I AM LOST TO THE WORLD)

1. Sung by Kerstin Thorborg (contralto) with Vienna Philharmonic Orchestra, conducted by Bruno Walter. (Sung in German.) Recorded at an actual concert in Vienna, May 24, 1936. *Columbia record* 4201-M. (2 10-inch record-sides.)
2. Sung by Mme. Charles-Cahier (contralto) with the Berlin State Opera Orchestra, conducted by Selmar Meyrowitz. (Sung in German.) *Ultraphone record* E-288. (1 12-inch record-side.) (REVERSE SIDE: Mahler: *Second Symphony—Fourth Movement* ("Urlicht")—Mme. Charles-Cahier and orchestra.)

The mystic song of resignation is the quintessence of Mahler's experience and thought. The Thorborg disk was made at the same time as the *Lied von der Erde* recording, and the "break" between record-sides occurs right in the midst of a phrase. For all Thorborg's luscious voice, the American-born Mme. Charles-Cahier (one of the greatest Mahler singers) has a slight edge on interpretation. She is also matched with better orchestral playing. But in recording, the considerably newer Thorborg disk takes a definite lead. Also the Cahier disk seems to be no longer available.

UM MITTERNACHT (*AT MIDNIGHT*)

Sung by Mevrouw A. Noordewier-Reddingius (soprano) with Anthon van der Horst (organ.) (Sung in German.) *English Columbia record D-14001. (2 10-inch record-sides.)*

Another composition steeped in mysticism and spirituality. Here again we lack the orchestra (without strings) for which Mahler conceived the song, but the use of organ, rather than piano, is a wise substitution in view of the sustained character of the music. The arrangement for organ, probably made by the organist himself, is well done, and Mevr. Noordewier-Reddingius's singing is completely satisfactory. Although by no means a recent disk, the recording is clear and adequate.

## LIEDER EINES FAHRENDEN GESELLEN

*Iowa University Symphony Orchestra, Philip Greeley Clapp, Conductor; Herald Stark, Soloist. University of Iowa, Iowa City, May 14, 1941. (First Performance in Iowa.)*

... The Mahler cycle, *Songs of a Wayfarer*, is an arresting one. Its music is romantic in nature, but has a broadness of conception, a melodic importance that brings it well above the plane of mere sentiment. It is music, too, that calls for a fine tenor voice if it be fully effective. This Professor Stark brought to the performance.

This second offering of Mahler music this season served to emphasize the desire for more of the music of this composer and if Doctor Clapp but heeds the wishes expressed in the tremendous applause following Professor Stark's singing we should be hearing some.

Professor Stark, in response to the great applause, repeated the entire cycle as an encore and again brought forth a stormy response.

RON TALLMAN, *Iowa City Press-Citizen*

## ADAGIETTO (MAHLER'S FIFTH)

*University of Iowa Symphony Orchestra, Philip Greeley Clapp, Conductor. Iowa City, February 26, 1941. Chamber Symphony Orchestra of University of Iowa, Washington, Iowa, May 5, 1941. Philip Greeley Clapp, Conductor (First Performances in Iowa).*

... To Professor Clapp go congratulations for his fine job of instruction—as witnessed by the Mahler number last night. For strings and harp, the tones from those instruments seemed to be lifted out rather than pushed. The effect left one breathless and it was evident that Professor Clapp has a deep understanding and sympathy for Mahler.

In response to persistent applause, Professor Clapp returned to the podium to break this season's no-encore precedent, by playing again, Mahler's *Adagietto*. If anything, this playing was better than the first.

ROBERT RUTENBECK, *Daily Iowan*

## TRIBUTE TO MEMORY OF PITTS SANBORN

BY DEEMS TAYLOR

Deems Taylor, eminent music critic, composer, author, music consultant and intermission commentator for the New York Philharmonic Symphony, was long a friend and associate of the late Pitts Sanborn. The article printed in the *New York World-Telegram* on March 15, 1941, in which he recalls with appreciation his acquaintance with the former critic of the *World-Telegram*, was part of his intermission talk at the Philharmonic Symphony concert on March 16, 1941.

I SHOULD like to say a word in passing, to pay a brief tribute to the memory of an old friend—an old friend of yours and mine: Pitts Sanborn, the music critic of the *New York World-Telegram* and the program annotator of the Philharmonic Symphony concerts since the fall of 1939. He died here suddenly last week at the age of 61. At the time of his death he was the dean of the New York music critics, having covered concerts and operas for 36 consecutive seasons. He began his critical career in 1905, with the *New York Globe*, a few years after his graduation from Harvard, and retained his post under several editorial dynasties and absorptions of one paper by another.

It's hard—for me, at least—to think of Pitts Sanborn as anything so venerable as a dean. When I started as music critic of the old *New York World*, twenty years ago, Pitts was decidedly one of the junior members of the critical fraternity. It's true that, even then, he had been on the job for sixteen years, but that didn't alter the fact that he was a mere child compared with Henry Krehbiel, of the *Tribune*, who was rounding out his fortieth season as a critic; Henry Finck, of the *Post*; Richard Aldrich, of the *Times*, and W. J. Henderson, of the *Sun*, every one of whom had service stripes aggregating thirty-five years or more. As for the rest—Paul Morris, of the *Telegram*; Frank Warren, of the *Evening World*; Katherine Spaeth, of the *Evening Mail*, and Bill Murray, of the *Brooklyn Eagle*—they were decidedly in the sub-deb class, with little more than ten years apiece to their credit. I, with no years to my credit, was in a special, one-man kindergarten class of my own.

Those of you who have read his program notes have no need to be reminded that he wrote with grace, skill and authority. In addition to his daily criticism he turned out a book of poems, two novels, and the recently published *Metropolitan Book of the Opera*. His particular field was opera—especially Mozart, for whose works he had an abiding enthusiasm. His other passion was good cooking. I still remember a historic luncheon that we had together in Paris, eighteen years ago—a luncheon that began at 12:30 and ended at a quarter to five. Those of us who knew him will not soon forget his low, beautifully modulated voice, his dangerous wit and his admiration for tall prima donnas.

In the four years that we worked together I got to know him very well. Ours was one of those curious warm, yet almost completely im-

personal friendships that exist between men who see each other every working day, yet never out of working hours. I think he liked me. I know I liked him. He was a scholar and a gentleman. A great many people will miss him.

DEEMS TAYLOR

Admirers of Bruckner and Mahler will be among those who will miss him. While most of Mr. Sanborn's New York colleagues were either unfriendly toward the music of Bruckner and Mahler or at best wrote "Yes, but" reviews, Mr. Sanborn did not hesitate to advocate Bruckner cycles as musical gifts "of which we stand much more in need than we do of another Beethoven or Brahms cycle," and after a Mahler performance under Koussevitzky's direction Mr. Sanborn wrote: "By this time it (Mahler's *Fifth*) and its composer might be taken somewhat for granted, even as we take Beethoven and Brahms. . . . All told Mahler-fear seems now a bit grotesque." Surely he had the courage of his convictions. CHORD AND DISCORD has quoted him not only in "Symphonic Chronicle" but has reprinted entire articles by this gentleman and scholar.

ROBERT G. GREY

SCHERZO (BRUCKNER SEVENTH) AT YOUTH CONCERT UNDER  
DIRECTION OF WHEELER BECKETT (NOV. 6, 1940)

. . . And if one movement of a symphony is a little like a detail of a painting or a quarter of a statue, there is enough meat and substance, energy and charm in this, one of the few really great *Scherzos* since Beethoven, to carry it as a separate piece. By every sign the audience was stirred and pleased, and by this courageous gesture, Mr. Beckett has probably made a couple of thousand Bruckner converts.

WARREN STOREY SMITH, *Boston Post*

SUGGESTIONS TO DR. KOUSSEVITZKY

. . . Pre-season promises are not always fulfilled. We were to have received revivals of Berlioz' *Romeo and Juliet Symphony*, Mahler's *Second* and Schumann's *Third* and actually got the more familiar matter of their *Fantastique*, *Ninth* and *Fourth*, respectively. By way of compensation, these were among the best performances of the year. Few could have missed the threatened performance of Tchaikovsky's *Manfred Symphony*, but the revival of his *Second* by Mr. Stravinsky made man wonder why that diverting piece had gone so long unheard here. We did not get Bruckner's *Eighth*, either, but there are other symphonies of his that we stood in more need of hearing, for example, the *Fifth* and *Ninth*, both of which are now recorded by the Victor Company.

WARREN STOREY SMITH, *Boston Post*

. . . Our only suggestion on the basis of surveying the past season's repertory would be a further broadening of the base. Certain works, like Mahler's *Ninth Symphony*, have helped this aspect, but the revival of such music should be extended. For example, there is Bruckner's *Ninth Symphony* in the original version. Then there are a quantity of scores that have only been played once, and many of them merit another hearing. Of course there are some that should never have been given in the first place, but there must be a dozen or more that are unwarrantably gathering dust on the library shelf.

ALEXANDER WILLIAMS, *Boston Herald*

## EDITORIAL

**D**ESPITE the curious allegation by some reviewers that Bruckner and Mahler partisans are chiefly responsible for the vociferous applause accorded the works of these composers by subscription audiences in various cities at various times, the fact remains that the popularity of their music has increased steadily with the growing number of performances. Furthermore it cannot reasonably be maintained that this show of enthusiasm is intended merely for the conductors. Too many different conductors have stirred audiences with their readings of Bruckner and Mahler symphonies to make any such assertions more than examples of wishful thinking on the part of prejudiced reviewers. Nor can it justly be claimed that a conductor is able to make a Bruckner or Mahler work sound better than it is. Otherwise it might be said with equal plausibility, for instance, that Toscanini makes Wagner's music sound better than it is or that Furtwaengler made Brahms' symphonies sound better than they are—which is, of course, utter nonsense.

Years ago audiences left the hall almost en masse during performances of Bruckner and Mahler. Today they stay and applaud; sometimes they even cheer, sour comments by some of our "deadline scribes" notwithstanding. Granted, according to so-called rules and regulations, Bruckner and Mahler should not become popular. By the same yardstick Beethoven should have been relegated to the scrap heap over a hundred years ago. Just as the untutored music-lover of old, having been given the opportunity of repeated hearings by conductors who had the courage of their convictions, decided that the music of Beethoven, Wagner and others—originally scorned by critics—was not monstrous, commonplace, banal, long-winded, and boring, the average music-lover of our own day is clearly making up his mind that Bruckner and Mahler are well worth hearing.

The broadcast of Bruckner's Eighth under Bruno Walter's direction over CBS was decided upon because of a flood of requests from every sec-

tion of the American radio audience. Especially significant is the fact that the youth of our country is displaying a lively interest in Bruckner and Mahler. In the van of this promising revival are our colleges. Thus, for example, the University of Iowa Orchestra, under the able direction of Professor Philip Greeley Clapp, has recently performed two Bruckner symphonies and Mahler's *Lieder eines fahrenden Gesellen*. At the University of Minnesota a "record club" is being formed, largely for the purpose of studying Bruckner and Mahler by means of recordings. Performances of Bruckner and Mahler are being planned at Ann Arbor by Thor Johnson, conductor of the University of Michigan Orchestra, and at Oberlin College by Maurice P. Kessler. These are surely eloquent evidence of the fine progress made by the Bruckner-Mahler movement.

During the past season Bruno Walter, Dimitri Mitropoulos, Frederick A. Stock, Serge Koussevitzky, Eugene Goossens, Artur Rodzinski, Eugene Ormandy, Hans Kindler, all conductors of major orchestras, have enriched their programs by the addition of a Bruckner or Mahler work. The New York City Municipal Station and WQXR have continued their familiar policy of regular Bruckner and Mahler recorded broadcasts. Stations in other cities are also taking advantage of the opportunity to present these masters in recordings. Thus the every-day music-lover, handicapped neither by too great a knowledge of musical "rules" nor by the opinions of the learned scribes, will judge for himself as he has always done — and with this thought in mind Brucknerites and Mahlerites can face the future with confidence.

# Symphonic Chronicle

## *A Record of Critical and Popular Reaction*

GUSTAV MAHLER:  
*FIRST SYMPHONY*

*Minneapolis Symphony, Dimitri Mitropoulos, Conductor. November 1, 1940, Opening Concert of the Season.*

By a process of centripetal force that swept together the wealth and diversity of resources in the Austro-Hungarian empire, Vienna became the nineteenth-century music capital of the world, and almost without exception the Mahler symphonies are so many microcosmic reflections of these resources. There was the commingling of Magyar, Slavic and Teutonic temperaments, with overtones from Byzantium, not far away; there were splendors of church and state perhaps never surpassed. Too, there were the sharp contrasts afforded by a society based on an ancient caste system.

Gustav Mahler caught all these elements, and translating them with almost fabulous skill into orchestral terms, he produced music of great richness. Again and again you hear the horns of hunters on princely estates, and the naive, wistfully sweet peasant songs from Alpine regions, or from the southern Adriatic coast; you hear Gypsy tunes, and the *Laendler*, danced by country people. Then the music grows sophisticated and urban—then, perhaps, ecclesiastical.

FRANCES BOARDMAN, *St. Paul Pioneer Press*

Mahler once said, "There are no bad orchestras; there are only bad conductors," and we get the force of that remark if we consider what some conductors might have done with that program. The virtuosity of our conductor was a triumph. The orchestra played as we have come to expect and take for granted alert and responding to every wish of Mitropoulos.

Anyone who is under the impression that Mahler's symphonies are "dry" (the old cry) has never heard Mitropoulos conduct one of them. . . . Mitropoulos, supremely sure in his conception of great music, shared all the beauties of melodic line to the technical musician. Everyone can readily enjoy Mahler's picturesque ideas and the manner in which he singles

out the instruments to create the ideas. Like Strauss, his characterizations are often violent.

GRACE DAVIES, *Minneapolis Times-Tribune*

It was however when he turned to Mahler's gigantic *First Symphony*, at the close of the concert, that Mitropoulos exerted his greatest skill and revealed his true stature as a musician. For the work, almost monstrous in its dimensions, is of a romantic, vitalistic, and problematic nature, crowded with ideas, contrasts, parodies and sublime melodies—and it demands of the interpreter, great plasticity of temperament, emotional promptness and versatility. That the many episodes, the dry passages, and the dull stretches in this otherwise richly human music were made interesting and yet simple, is a commentary on the power of the conductor, that the inspired moments and the great climaxes reached superb heights is a proof of his genius.

JOHAN S. EGILSRUD, *Minneapolis Morning Tribune*

The performance was remarkable in color and subtlety, in tenderness and drama. Mitropoulos and the men responded many times to insistent applause. It's a real achievement to get an audience cheering and whistling for Mahler.

JOHN K. SHERMAN, *Minneapolis Star Journal*

GUSTAV MAHLER:  
*DAS LIED VON DER ERDE*

*Cleveland Orchestra, Artur Rodzinski, Conductor; Soloists: Enid Szantho and Charles Kullmann. Cleveland, November 7 and 8, 1940.*

Mahler's *Song of the Earth*—a music drama of humanity—was given a magnificent performance by Dr. Artur Rodzinski, the Cleveland Orchestra, Enid Szantho, contralto, and Charles Kullmann at Severance Hall last night.

And there was real appreciation, though subdued, for their thrilling presentation of this marvellous work. The soloists were eminently fitted for their

parts. Both are familiar to Clevelanders through their opera appearances here.

. . . Boris Goldovsky, in a bit of curtain speech, explained that the first five poems represented scenes in the world which Mahler was loath to give up. And there was much drinking, love, youth and bitterness, especially drinking. The vocal parts are made to fit into the orchestral pattern with remarkable ingenuity.

While the Mahler music portrays Chinese poems, there are only a few touches of the Oriental in it. And Mahler successfully sums up in the farewell episode his longing for life, his regret at breaking his earthly ties and his fantastic vision of a ghostly future. We have heard others of his works but nothing as striking, dramatic and gripping as this. There is a dramatic intensity even in the feeling of suppression that pervades much of the score.

ELMORE BACON, *The Cleveland News*

There can be little disagreement about this work being Mahler at his best, and this is perhaps because it remains essentially lyric. Its theme, described as "withdrawal from life," comes closer to being love of life intensified by the thought of leaving it. The post-Wagnerian dreamer here seems to be clinging passionately to a dying spark, nursing it affectionately and effusively with sweet melancholy, waiting ecstatically for the miracle which never happens.

Vienna-bred, he goes to a Chinese poet for his texts and emerges with something neither Chinese nor purely Occidental. It is music both opaque and warm, naively human yet extravagantly exalted. It dwells somewhere, and with some uncertainty, between hypochondria and celestial magic. But whether immortal or not, it is a personal expression of rare, subtle intimacy, marvelously sustained yet variegated in mood.

HERBERT ELWELL, *The Cleveland Plain Dealer*

. . . The human voices are indeed the vehicle of the poetic thought, but most of the music is in the orchestra. Thus the sub-title "symphony" is justified.

We had been told that the work is an expression of the composer's sense of his own approaching death. Yet the first impression left by the earlier numbers of the cycle is one of extraordinary mellifluousness. Euphoneous, sophisticated harmony, delicate variegation of tonal tints charm the ear, belie the restless pessimism of the opening "Drinking Song of Earthly Woe" and tinge the sadness of

the following "Lonely One in Autumn" with sweetness.

The next number: "Of Youth," is a most attractive Chinesely spiced pleasantry of which Mr. Kullmann made good all the points.

But it is the sixth and last number which represents the work's ultimate import; it is a long elegy called "The Farewell." In it a mood of resignation and withdrawal is sustained for nearly as long a time as it required for all the other numbers combined.

After the droop and fade of such an end it is understandable that the audience would hardly be impelled to express its appreciation by a large amount of noisy applause.

It was clear, however, that people were much impressed with the *Song of the Earth's* beauties and were conscious of having experienced the emanation of a great musical personality. It is to be hoped that we will sooner or later have the opportunity of hearing all of Mahler's symphonic works here.

ARTHUR LOESSER, *The Cleveland Press*

#### GUSTAV MAHLER: LIEDER EINES FAHRENDEN GESELLEN

*Minneapolis Symphony Orchestra, Dimitri Mitropoulos, Conductor; Soloist: John Charles Thomas. November 29, 1940.*

. . . The genius of Mahler, most often associated with orchestral composition, expressed itself with true success also in songs, as witness *Das Lied von der Erde*, the settings of verse from *Des Knaben Wunderhorn*, the vocal interpolations in the choral symphony, and the ones most immediately under discussion. So there was eminent appropriateness in the presentation gracefully made to Mr. Mitropoulos by Mr. Thomas, of the Bruckner Society's medal for distinguished service in giving public hearings of music by Mahler, who is coupled by the society with the composer whose name it bears.

FRANCES BOARDMAN, *The Saint Paul Pioneer Press*

. . . This medal is an award for achievement in both Bruckner and Mahler music. The audience was deeply moved by the simple and eloquent way in which Mr. Mitropoulos told them why he had "neglected" Mahler symphonies and that he craves a greater honor than the medal—it will be the knowledge some day, that his audience appreciates a Mahler

symphony (although of heavenly length) and enjoys it.

GRACE DAVIES, *The Minneapolis Times-Tribune*

At moments like this music lovers have an opportunity to express their appreciation of the musical inspiration Mitropoulos gives with such generosity throughout the year—and last night they showed this by giving him ovation after ovation.

As baritone John Charles Thomas and Mitropoulos joined in evoking Mahler's *Songs of a Wayfarer*, the music breathed forth the tender anguish of young, disappointed love and a lyrical beauty of nature, expressed through tunes of folk-song simplicity.

By his unforced, poised singing that even seemed to verge on under-statement, Mr. Thomas blended the vibrant timber of his voice with the weaving of the orchestra into an expressive whole.

JOHAN S. EGIJSRUD, *Minneapolis Morning Tribune*

... Mr. Thomas' stature as an artist increases with the years. He not only possesses one of the finest-tempered baritones extant but he uses it with a taste and precision which finds every shade and inflection, and avoids every excess and mannerism.

Thus in the *Songs of a Wayfarer* he drew forth with sure skill the lyricism and dolor of Mahler's story of unrequited love and did it with seeming effortless-ness, an almost casual mastery.

JOHN K. SHERMAN, *Minneapolis Star Journal*

#### GUSTAV MAHLER: FIRST SYMPHONY

*Philharmonic Symphony Society of New York, Dimitri Mitropoulos conducting, January 8, 10 and 12. The last performance was broadcast over the Columbia Broadcasting System.*

The *First Symphony* of Mahler is as Austrian as a dish of Salzburger Nockerl. This music could have originated only on the banks of the Danube. In it, Mahler reveals some of those idiomatic touches which lend his music its unmistakable physiognomy. Beethoven's individuality does not peer forth nearly so strong in his *First Symphony* as does Mahler's personality in his earliest symphonic creation. And the distance traversed by both

composers, in nine symphonies is of comparable greatness. The Mahler of the *Ninth Symphony* would not have been guilty of the sentimental triviality which mars the *Finale* of his *First Symphony*. But there is much in its first three movements that both charms and arrests; music both naive in the best sense, and ironic as only Mahler could be, Mr. Mitropoulos realized in his interpretation many of the composer's desires; in the grandiosely conceived closing peroration his native intensity found its fullest expression.

JEROME D. BOHM, *Herald Tribune*

... The uncommon symphony which occasioned these arresting occurrences was, of course, the first of Mahler, which promises to become as much a sensation of the conductor's leaving as the Strauss "Domestica" was of his coming. There have been fine performances of Mahler here in the past, but it is doubtful that any combined so eloquent a feeling for the composer's idiom with so great a capacity for making the orchestra articulate. Here the frustrations in the writing were not blemishes of the score, but inherent elements of its personality, all-too-human accentuations of its intensity and pathos.

Mr. Mitropoulos's plan of presentation was not as wide a variation of the composer's purpose as it might seem, for Mahler specified at least five minutes' pause before the slow movement. Certainly the more Schubertian-than-Schubert slow movement, with its musing tragedy and uneasy irony, gained by the freshness of the listener's attention after the pause. This is an altogether individual creation, as much a revelation of the composer's tortured self-doubts as the over-insistent, fustian peroration in the *Finale*. Mr. Mitropoulos conducted as one delivering a revelation from on high, and the orchestra played with stunning virtuosity, earning full title to the prolonged applause that followed.

... However, the evening belonged to Mahler and Mitropoulos.

IRVING KOLODIN, *New York Sun*

... The most ponderable achievement of the evening was the Mahler symphony, which merits more frequent performance. Written in the composer's twenties, it is encompassed with an amazing mastery of the orchestral apparatus. Its themes are simple and song-like, and the form is not swollen, as it becomes in later Mahler symphonies. Though there are pages of the irony and fury that become more

deep-seated and agitated later on, the work also has a pastoral feeling. It is as if a profoundly simple nature has not yet been lacerated into cries of unutterable grief. Mahler, certainly in this symphony, is anything but forbidding.

HOWARD TAUBMAN, *New York Times*

GUSTAV MAHLER:

*DAS LIED VON DER ERDE*

*Philharmonic Symphony Society of New York, Bruno Walter, Conductor; Soloists: Kerstin Thorborg and Charles Kullmann. January 23 and 24, 1941.*

. . . It is a work, with orchestra, for singers. And it may well prove to be Mahler's greatest inspiration. Its mood is irresistible — this song for the passing of all warm, ardent, tender things, this most poignant lament of mortality.

Whether, when all is said and done, the listener, escaped from its spell, is willing to accept as part of his artistic, personal and emotional creed this music, drunk with pessimism and self-pity, and whether that music will long outlast the age and the culture that produced it is another matter. Last night it completely conquered.

The great effect was gained by the conviction, the authority, the imagination of the conductor. The composer's sincerity and passionate feeling were in his interpretation. Nothing in the score was missed; many a detail customarily passed over was revealed with special significance. It is hard to think of Mahler more convincingly presented.

The audience was a large one; it took every opportunity of expressing its enthusiasm.

OLIN DOWNES, *New York Times*

. . . Into *Das Lied von der Erde* Mahler distilled the quintessence of his genius and no one could expound this song of the earth in six poems from the Chinese with a more sensitive comprehension, a finer and deeper eloquence than Mr. Walter. Orchestrally the performance was of a punctilious thoroughness and a memorable beauty.

PITTS SANBORN, *New York World Telegram*

In the melancholy resignation of his last years, when a weakened heart would not permit him to continue his tramps about the Austrian countryside, Gustav Mahler composed his *Lied von der Erde*. In his gloom, he poured out his feeling to

Bruno Walter, the man who, he said, understood him as no other. It was Walter who conducted the first performance of this so-called song symphony, but when that event took place in Munich in November, 1911, Mahler had been dead for six months.

Last night, as on two occasions six years ago, New York Philharmonic Symphony subscribers were privileged to hear *Das Lied von der Erde* conducted by Mahler's dearest friend and the man who first disclosed the work to the world. Mr. Walter outdid himself and his fervor and devotion for the music of his old idol obtained from the orchestra a magnificent performance. There was personal conviction in every bar. Likewise, in clarity and tonal quality the achievement was an altogether remarkable one.

OSCAR THOMPSON, *New York Sun*

GUSTAV MAHLER:

*DAS LIED VON DER ERDE*

*National Symphony Orchestra, Hans Kindler, Conductor; Soloists: Suzanne Sten and Hardesty Johnson. Washington, D. C., March 12, 1941.*

. . . Wherever commentators got the idea that *The Song of the Earth* is a cry of despair and a proclamation of pessimism remains a mystery. This remarkable work breathes a poignant sadness, it is true, yet its spiritual motivation is not hopelessness but the gentle grief with which the composer regarded the transitory beauty of earthly life. It is an expression of a common human experience when one contemplates the inexorable movement of time.

RAY C. B. BROWN, *Washington Post*

The National Symphony Orchestra set another landmark in its history last evening with the performance of Mahler's *Das Lied von der Erde* at its special series concert in Constitution Hall.

As soloists in this monumental work — or rather as collaborators, for the orchestra and voices are closely interwoven — were Suzanne Sten, mezzo-soprano, and Hardesty Johnson, tenor, both of whose performances were outstanding.

In spite of a knowledge of the basic intention of the work, there is a depth and mystery in its expression that permeates each of the sections. It is melancholy music with a sadness beyond words, yet through it runs a poetic utterance of great spiritual beauty which combines

the philosophy of the East with the more hopeful conviction of the West. The Eastern touch is recognizable in the lovely tenor solo. "Of Youth," while in the first number, "The Drinking Song of Earthly Woe," the vocal part, also for the tenor, is reminiscent of Wagner. The opening phrases of the final song, "The Farewell," for alto, create an atmosphere found in "Boris Godounov."

This is not to say that the music is at any time "borrowed," for its originality is impressive. With great richness of tonal effect and with grace and elegance at times, the contrast between the poignant beauty of youth and springtime and the inevitable passing of these things in the autumn of life is sharply defined. The emotion of the work never abates and its strength as given out by a remarkable union of music with the words is overwhelming.

ALICE EVERSMAN, *Evening Star*

Last night's all-German program by the National Symphony Orchestra proved less formidable than had been anticipated.

It offered a novelty by the saddest of modern Germans which turned out to have much poetic charm, far less pessimism than has been ascribed to it by solemn commentators, and a happy simplicity of structure which came clearly through the many orchestral complications.

That does not alter the fact that it is a difficult score, one demanding much refinement, and a highly developed sensibility to subtle orchestral values, qualifications possessed by Kindler in brilliant measure. He gave it a splendid reading and the National Symphony distinguished itself in the precision and sympathy with which it realized his intentions.

GLENN DILLARD GUNN, *Times Herald*

GUSTAV MAHLER:  
KINDERTOTENLIEDER

*Philadelphia Orchestra, Eugene Ormandy, Conductor; Enid Szanitho, Soloist, Philadelphia, October 19 and 20, 1940.*

... All were sung by Mme. Szanitho with full regard for the sorrow of both words and music, although the magnificent orchestral accompaniments, strikingly original, are as important as the voice.

SAMUEL L. LACIAR,  
*Evening Public Ledger*

Mahler was represented again yesterday, this time by the touching *Kindertotenlieder*, the set of five songs composed at the turn of the century to texts penned by Friedrich Rueckert upon the death of his two children. When Mahler's own daughter died in 1906 he is said to have exclaimed, "Under the agony of fear that this was destined to occur, I wrote the *Kindertotenlieder*."

That this may well have been so is plausible, not only because of Mahler's chronically melancholy turn of mind but also by the texts he chose from the hundred or so that Rueckert wrote on the subject. They are texts colored by reminiscences of the children as they had been in life, and where Rueckert expressed sadness tempered by precious memories Mahler has expressed the feeling of a joy made exquisite to the point of pain by the knowledge of its perishability.

HENRY PLEASANTS, *Evening Bulletin*

ANTON BRUCKNER:  
THIRD SYMPHONY

*Cincinnati Symphony Orchestra, Eugene Goossens, Conductor. November 8 and 9, 1940. (First performances in Cincinnati.)*

Yet, Bruckner achieved absolute mastery over certain forms. No one since Beethoven has written more characteristic scherzos. Take the one in the *Third Symphony*, which is being played at these concerts as a typical example. It happens to be one of his most famous, this "scherzo on one tone," as it is called. The rustic, shirt-sleeved movement has no proper theme, only motives over the ground tone of D. This tone does escape long enough to execute a droll little Viennese waltz—or *Laendler*, if you like. The trio is only a shade more tuneful. Here, I may add, it is the harmonic modulations which lend such a charming effect. The movement, in fact, almost constitutes a tour de force.

Bruckner's piety manifests itself elsewhere in the symphony, chiefly in the second movement, much of which has about it an air of ecclesiasticism, of St. Florian, no doubt. Incongruously enough, one senses the Wagnerian influence, in externals at least, in this movement. (Remember, the symphony is dedicated to him.) I don't mean the reference, probably unconscious, to *Tristan* just before the first change of time, but a num-

ber of other places, strongly chromatic. Bruckner, the organist, can be heard at the quiet close of the movement.

In spite of the Wagnerian influences and dedication, Bruckner did not forego entirely the precepts of some of his Viennese predecessors. The first movement of the *Third Symphony* combines some features of both the *Ninth* and the *Pastorale* symphonies of Beethoven, with now and then subdued echoes of Franz Schubert, whom Bruckner resembles somewhat in spirit. But having been a great musician in his own right and unique as an individual, Bruckner most resembles himself.

FREDERICK YEISER, *Cincinnati Enquirer*

The symphony concert played yesterday afternoon by the Cincinnati Symphony Orchestra, Eugene Goossens directing, marked one more step toward an appreciation of Anton Bruckner, which has been long delayed. He was a contemporary of both Wagner and Brahms, but they outstripped him in achieving popularity. In a way, his nature was akin to that of Brahms in its deep religious faith. But it was more a mystical faith, one of the kind that makes of its possessor a great being, but which takes longer to win recognition.

The symphony was the *Third*, in D-minor, which we believe has not been played here before. There is a wealth of thematic material in the work, which keeps one busily engaged in following its development. The powerful and richly orchestrated first movement is succeeded by an exquisite, devotional *Andante*. The *Scherzo* and *Finale* have in common, themes that are almost dance-like, but the work ends with a majestic pronouncement of the great opening theme of the symphony, this time in a major key, like unto great triumph of the soul.

It was superbly played and at its conclusion, Dr. Martin G. Dumler, president of the Bruckner Society of America, stepped to the stage and with a few well-chosen words, presented Mr. Goossens with the Kilenyi Bruckner Medal in recognition of his sincere efforts to advance the recognition of Bruckner in this country. Mr. Goossens, who did not until yesterday know that this honor was to be bestowed upon him, accepted in his usual felicitous manner, according high praise to the musicians for their excellent performance.

LILLIAN TYLER PLOGSTEDT, *Cincinnati Post*

GUSTAV MAHLER:  
*FIRST SYMPHONY*

*Los Angeles Philharmonic Orchestra, Bruno Walter, Conductor. Los Angeles, California, December 19-20, 1940.*

Music appreciation locally seemed to have reached its peak last night at Philharmonic Auditorium when a capacity audience stood up and cheered a parting salute to Conductor Bruno Walter until the usually dignified symphony-lovers' hands were sore and their voices were hoarse and the honored director looked the weariness that he felt after a superhuman presentation of the Gustav Mahler *Symphony No. 1 in D-major*.

The serenity, gloom and vehemence of the mighty musical genius, Mahler, had been relegated to the concluding place on the program, which had begun with rippling Mozart and moved into the short and terse musical pictures of Erich Korngold, whose music had invaded the Shakespearean realms of intimate depiction and had upheld the human impulses as the bard of Avon worded them.

Mahler's great vehicle of tone toyed with the lesser things of life, such as feathered songsters, rabbits, dead huntsmen, and the ironic tone-pictures of folktales, grotesque dead marches, emphasized with high explosives in the percussions, dawns, sunsets and nature's babblings in general, and long drawn out monotones in the second violins that transported themselves from choir to choir of instrumentation, but never ceased their relentless wail.

With the grimly ironic the jovial rollicked, and the furious swept and just when a sudden calm would release and relax the tension, a tremendous groundswell of volume would heave up with volcanic fury. The massive, though lightly written score held every instrumentalist of the orchestra keyed to his greatest absorption and breathless anticipation and Dr. Walter directing from memory, held the mighty suspension, even during the rests and silences.

The fervent conductor knew just what to ask for and his hands moved gracefully in intertwinings of an expression which seemed borne to his hands from another world. The much-too-long symphony seemed to fly through the unflagging interest Walter inspired. He was making history for the great Philharmonic Orchestra. He was leaving behind him an unforgettable hour of transcendental

revelation, abnormal and yet aimed directly at the human heart and he had hit his mark. Then came the extraordinary demonstration.

CARL BRONSON, *Evening Express Herald*

Playing that was passionate, eager, purposeful and as near orchestral perfection as true artists will ever admit, took place at the Philharmonic concert last night. The auditorium was filled.

Gustav Mahler's *First Symphony* is not his most profound, naturally. The genius of this work lies in his ability to take a theme any other would pass by as commonplace and make romantic poetry of it. That is, the poetry was uppermost when Bruno Walter pointed it out with his magic baton. The program of spring, the mosaic of life, the funeral of a dead huntsman and the titanic stretto of the *Finale* were realized in full measure but always the music was made important and the program often forgotten.

The tremendous climax of the fourth movement brought the audience to its feet. They stood and cheered and applauded until the lights were flashed to bid them stop.

ISABEL MORSE JONES, *Times*

. . . Mahler's *Symphony No. 1 in D-minor* completed the program and at its conclusion the conductor was again the center of enthusiastic calls of approval, and long continued applause.

FLORENCE LAWRENCE, *Examiner*

Gustav Mahler's more than half a century old *First Symphony* scored a new victory last night for the Austrian composer at the third Philharmonic Orchestra concert in Philharmonic Auditorium. The work had not been heard since introduced in 1928 by Prof. George Schneevogt, then conducting the orchestra.

Yesterday's also was a victory for conductor Bruno Walter and, alas, his leaving, for the present only, one hopes. Walter and the orchestra were given ardent assurances of appreciation.

Of course the climax of the concert came with the *D-major Symphony* by Gustav Mahler. It is time the works of this typically Austrian successor to Franz Schubert were heard here with some completeness. Moreover, Bruno Walter, together with Otto Klemperer, ranks foremost among the exponents of this composer.

. . . Walter and the orchestra produced much of the spirit, if not always the letter,

of Mahler's complicated and romantically extravagant *D-major Symphony*.

Most popular, if one chooses among the four movements, will always be the second movement, in Austrian *Laendler* style. In material and treatment this section portends the paler colored third movement of the *Second Symphony*.

BRUNO DAVID USSIER, *News*

#### ANTON BRUCKNER: EIGHTH SYMPHONY

*Philharmonic Symphony Society of New York, Bruno Walter, Conductor. January 16, 17 and 26. The final performance was broadcast over the Columbia Broadcasting System in response to a telegraphic request from the State University of Iowa. The telegram contained several hundred signatures.*

. . . The continuing controversy about this and other Bruckner symphonies will not be settled by mere repetition of old critical observations having to do with the composer's lack of self-criticism in his choice and elaboration of themes; his way of building on weak ideas as lengthily and as confidently as on much better ones; his lapses of structure and his habit of defeating or minimizing climaxes by preceding and following them with others of much the same kind. Even those who find many of the basic ideas trite and trivial, as compared to others that are lofty and personal, cannot be deaf to the splendid sonorities that move in a processional across the symphonic stage. On both sides of the issue, it is a matter of "Yes, but ——" Under the circumstances, it is sufficient to praise the performance as vital, fervid and elaborated with skill, affection and care.

*Musical America*

. . . His return to the senior instrumental organization is a highly welcome event, judging by the prevailingly high standard of performance observed by the orchestra and the expressive intensity it brought to the interpretation of the great symphony in C-minor. It may be questioned whether any conductor now in active service has a closer understanding of Bruckner's music than Mr. Walter, whether any one surpasses him in his ability to reveal both the expressive resources and the form and structure of the Austrian composer's major works.

In an interview last winter, Mr. Walter said he began to feel at home with Bruckner only after his fiftieth year, and it is

quite natural that many music lovers who may hear the *Eighth Symphony* on an average once in every four years or so, may be somewhat lingering in taking it to heart.

. . . As to whether Bruckner waxes occasionally prolix, whether he repeats himself to some extent, or whether this is part of a logically integrated vast form needing further hearings for full comprehension, this commentator must submit an undecided, while open-minded opinion.

The interpretation itself was magnificent in its tonal textures and colors, its dynamic subtleties and contrasts, its sense of complete and devoted revelation under its communicatively inspiring leader. The strings sang warmly and lyrically; the pronouncements of the brass were stately and imposing. The playing as a whole was on a level which the orchestra has achieved but infrequently in recent seasons.

The audience was not one of the season's largest, but this could be attributed to exceptionally dissuasive weather, and there was no lack of volume in the closing ovation.

FRANCIS D. PERKINS, *Herald Tribune*

#### ANTON BRUCKNER: *THIRD SYMPHONY*

*Chicago Symphony Orchestra, Frederick A. Stock, Conductor. February 20 and 21, 1941.*

. . . The program's other principal item was Bruckner's beautiful *Third Symphony*, which contains some of its composer's finest ideas and is not marred by the excessive length of some of his later works. Here the Bruckner mysticism, intense though it is, never becomes unmanageable. And it is relieved by the lovely merriment of that theme in F-sharp major in the last movement.

EDWARD BARRY, *Chicago Tribune*

#### GÜSTAV MAHLER: *NINTH SYMPHONY*

*Boston Symphony Orchestra, Serge Koussevitzky, Conductor. Boston, February 28 and March 1, 1941; New York, March 13, 1941.*

If there were more performances of Mahler's symphonies like the one given yesterday afternoon of his *Ninth* by Koussevitzky and the Boston Symphony, the

opposition to that unfortunate composer would melt with amazing speed.

. . . An orchestra, to do justice to his scores, must be either a rare group of virtuosi, or must have the familiarity with and love of his idiom, which may be presupposed in the case of the former Vienna Philharmonic. Fortunately in Boston we have a conductor and an orchestra bountifully equal to these demands.

One is reminded of Nietzsche's malicious comment on Wagner whom he called the most impolite of geniuses, because he insists on his point — he insists until one despairs, he insists until one ends by believing him! Yet in spite of its obvious faults, the *Ninth Symphony* remains a deeply moving and illuminating work.

. . . It was the closing *Adagio* that was the glory of the performance as it is the crown of the work.

EDWARD DOWNES, *Boston Evening Transcript*

. . . Every performance of a Mahler symphony is fresh occasion for argument. Such music by this composer as we are offered here from time to time seems to increase in public favor. But progress is slow and Mahler performances are still comparatively rare.

The *Ninth Symphony*, then, is music of most intimate spiritual and emotional revelation. The first movement is stormy and conflicting, a certain jangling irony leers from the second and third. In the fourth Mahler seems to welcome, as did Beethoven in not dissimilar slow movements of his last two string quartets, Death as the bringer of peace.

. . . Mahler is dead and so is his way of writing music. But one ventures to salute the *Ninth Symphony* as extraordinary art, which has a way of outliving its own time.

How much easier it would be to describe the magnificence of yesterday's performance, if one had not many times before, piled up superlatives in speaking of the Boston Symphony. Again the tone was gorgeous, the technical details almost incredibly perfect, the interpretation of Mr. Koussevitzky of astonishing eloquence.

CYRUS W. DURGIN, *Boston Daily Globe*

In the early days of symphony concerts in America it was the custom to provide vocal selections from Donizetti or Rossini between the movements of a Beethoven symphony.

From an ideal standpoint it would be far better to play the Mahler symphony alone. Without cut it would make quite enough music for an afternoon or an evening. There might also be an intermission between the second and third movements, a procedure suggested by the composer in the case of his *First Symphony* and carried out the other evening in New York by Mr. Mitropoulos and the Philharmonic Society.

. . . In this symphony and in the symphony alone, one encounters a piece of instrumental music that actually goes on from where the later Beethoven left off. It is no more everybody's music than are Beethoven's last quartets. None the less, there was no small enthusiasm for it yesterday. There was even applause between the movements and two recalls for the conductor at the end.

WARREN STOREY SMITH, *Boston Post*

. . . Mr. Koussevitzky's performance was one of the most fervid devotion. The playing was superb and the reception of such warmth that the conductor summoned his players to their feet.

OSCAR THOMPSON, *New York Sun*

Gustav Mahler is to Richard Strauss as Bach to Handel or Debussy to Ravel. All such pairs of contemporaries have a common background of style and material that gives to their extremely divergent temperaments the ability to define and to enclose an epoch as the heads and tails of a coin define and enclose between them the content of it.

Mahler's music is the more introspective. It is meditative, viscerally-emotional, all about himself. Strauss's is declamatory, objective, descriptive of everything in the world but himself. Mahler's has the power of attracting fanatical devotion to itself and to the personality of its author. Strauss's gives a ripsnorting good time to all without provoking the slightest curiosity anywhere about its author's

private life. Mahler wrote as if the material of Viennese music itself were so bound up with his own soul that only by integrating the two in a practically marital union could a work be created that would be a valid expression of either. Strauss wrote his pieces very much as a theatrical producer cooks up a show.

And yet the musical material and technique of the two are almost identical. Their themes might have been written by either, so characteristically do they consist of descending appoggiaturas and upward skips of the sixth. The two have an equal freedom of modulation and the same habit of playing their chromatics wild, not limiting the use of these to modulatory or to melodic purposes but throwing them in anywhere they feel like it for any reason whatsoever.

Both orchestrate, of course, with a sure hand and with wide resources of imagination and fancy. Mahler's orchestra, however, is the more elegant of the two by far, as is likewise his harmonic and contrapuntal fabric. His concentration on personal sincerity gave him an integrated manner of expressing himself, at his best, that is stylistically more noble than anything Strauss, with all his barnstorming brilliance, ever achieved. The Strauss heavy doublings and unashamed usage of mere orchestral hubbub belong to a less refined and a less responsible order of musical expression. Mahler keeps his colors clean, and he never writes a middle part that hasn't in itself some intensity of expression and some musical grace.

The *Ninth Symphony* is considered by most Mahler devotees to be the finest of his works, though *Das Lied von der Erde* has worshippers and so have the *Kinder-totenlieder*.

It is indeed beautifully made, as well as beautifully thought. It is utterly German and Viennese and strangely not so at the same time.

VIRGIL THOMPSON, *New York Herald Tribune*

## KILENYI MAHLER MEDAL AWARDED TO MITROPOULOS

The Mahler Medal of Honor, designed by Julio Kilenyi for the exclusive use of the Bruckner Society of America, was awarded to DIMITRI MITROPOULOS in recognition of his efforts to create a greater interest in and appreciation of the music of Mahler in the United States. The Medal was presented to Mr. Mitropoulos on behalf of the Society on November 29 by Mr. John Charles Thomas after a performance in Minneapolis of *Lieder eines fahrenden Gesellen*. Mr. Thomas was the soloist on this occasion.

While guest conductor of the Boston Symphony several years ago, Mitropoulos performed Mahler's *First*. One of these performances was broadcast by the National Broadcasting Co. During his first season in Minneapolis, he conducted the *First* and *Fourth* of Mahler. His opening concert this season included Mahler's *First*.

While guest conductor of the *Philharmonic Symphony Society of New York*, he gave three performances of Mahler's *First*, one of which was broadcast by the Columbia Broadcasting System.

CIVIC ORCHESTRA, CHICAGO (HANS LANGE CONDUCTING),  
PERFORMS THREE MOVEMENTS OF MAHLER'S *SECOND*

A notable performance of three movements of Mahler's *Second Symphony* occurred on January 19 in Chicago. On that date the Civic Orchestra, under the direction of Hans Lange, played the work. There is reason for particular comment on the inclusion of the symphony in the initial program of the Orchestra this season since it underscores the fact that Dr. Stock and Mr. Lange, the distinguished conductors of the Chicago Symphony Orchestra, believe in inculcating an interest in Mahler very early in the training years of these young people who will be the symphony orchestra artists of tomorrow.

It was my good fortune to watch the Civic Orchestra rehearse the *Second*; and it was obvious indeed that the players thoroughly enjoyed it. Mr. Lange has a great gift for awakening enthusiasm among those who wait on the beat of his baton; and the spirit with which he attacked the work was reflected in the manner in which the young men and women of the orchestra executed their portions of the score.

The performance on the nineteenth was received with much applause on the part of the large audience which filled Orchestra Hall. Naturally there was some unevenness in the work of the players for they have not yet acquired the polish of experienced musicians. But the outstanding fact is that they have given so early in their careers a creditable display of their ability to play and like a Mahler symphony.

MARY R. RYAN

BRUCKNER'S *SEVENTH* AT UNIVERSITY OF IOWA UNDER THE  
DIRECTION OF PHILIP GREELEY CLAPP (January 23, 1941)

. . . In this grand work, composer, performers and listeners were brought together in close harmony by the magic wand of Professor Clapp.

To discuss this composition by movements would be like taking a circle apart to examine each segment—it destroys the whole. The four movements, *Allegro*, *Adagio*, *Scherzo* and *Finale*, are bound together by the organ-like tones of a magnificent brass ensemble, which Bruckner strengthened by the addition of four Wagner tubas or baritones.

Almost spiritual in its passion, the symphony weaves a delicate curtain of violin melody over the unceasing and increasing power of the monumental brass background. The theme, first stated by the horns, was echoed and reechoed by each section of the orchestra until it reached a climax which fairly rocked the main lounge last night.

A word might be said here in regard to the *Adagio* movement which has provoked much controversy as to its origin. If Bruckner wrote it as a tribute to Wagner or if he didn't, why must there be controversy?

The only manner in which it has affected the work is to keep it in the shadow of pseudo-critical suspicion, until Bruckner, innocently enough, is now a touchy subject among conductors. After last night's reception, it seems that the Iowa audience is willing to accept Bruckner as a great composer and not a subject for debate.

ROBERT RUTENBECK, *Daily Iowan*

## MAHLER'S FIRST SYMPHONY

Minneapolis Symphony Orchestra, Dimitri Mitropoulos, Conductor.  
Columbia Recording.

Recordings of Mahler's symphonies are gradually increasing. The latest addition to the list is Columbia's publication of Dimitri Mitropoulos's performance of the *First Symphony in D-major* with the Minneapolis Symphony Orchestra. Bruno Walter in his discerning book on Mahler has dubbed this product of Mahler's youth, the composer's Werther. For in it he has expressed the spiritual avowals and struggles of these difficult years. The fiery and expansive opening movement and the powerful *Scherzo* with its ingratiating *Trio* are less remarkable than the third movement, the Funeral March in the manner of Caillot. Here and in the tragic *Finale* Mahler struck a new note in music. The bitter, impudent irony of this Funeral March is purely Mahlerian, as are the frenzied passion and elemental struggles of the *Finale*. Mr. Mitropoulos's interpretation is vital and understanding although some of the inwardness of Mahler's conception escapes him. The orchestra plays well and the recording as such is excellent.

JEROME D. BOHM, *New York Herald Tribune*

The *First Symphony* has none of the bitterness and resignation of *Das Lied von der Erde*. It is a symphony of song, from the first measure wherein a long pedal-point on A sounds and the woodwinds and trumpets begin their distant fanfares over the mysterious unison strings, to the titanic climax of the *Finale*. It is the best possible introduction to the creative genius of a composer whose greatness outshone the petty besmirchings of his contemporaries. The interpretation and the technical reproduction rank among Columbia's very best.

PAUL HUGO LITTLE, *Musical Leader*

## NOTES ON CONTRIBUTORS

FREDERICK BLOCK was born in Vienna in 1899. He received his musical education under Professor J. B. Foerster (Conservatory Vienna) and Professor Dr. Hans Gal (University of Vienna). He had great success in Europe with performances of chamber-music and orchestral works, and an outstanding success with the opera *Samum*. Forced to leave Austria, he arrived here in the summer of 1940. He is at present working on his eighth opera. A suite for string orchestra has been performed over the Columbia Broadcasting System.

PHILIP GREELEY CLAPP, a Bostonian by birth, conducted the Cincinnati Symphony Orchestra during Kunwald's illness in 1913. His works include the tone poems *Norge* and *A Song of Youth, Symphony in E-Minor* (played by the Boston Symphony), the orchestral prelude *In Summer* (performed by the St. Louis Symphony), *Symphony in E-Flat* (performed by the Boston Symphony), songs, etc. He wrote a number of essays and reviews on Bruckner and Mahler in the *Boston Transcript* and lectured on the works of these composers before professional groups and in the classroom. The performance of Bruckner's *Fourth* was the first performance of a complete Bruckner symphony by a university orchestra in the United States. During the season 1940-1941, Professor Clapp included Bruckner's *Seventh* as well as Mahler's *Lieder eines fahrenden Gesellen* and the *Adagietto* from Mahler's *Fifth* on his programs.

GABRIEL ENGEL is a graduate of Columbia University. He was a Pulitzer Scholar. He is the author of *The Life of Anton Bruckner* and *Gustav Mahler, Song-Symphonist*. Since its inception, he has been the Editor of CHORD AND DISCORD. He has contributed to the *Encyclopedia of Music and Musicians*.

WILLIAM PARKS GRANT was born in Cleveland, Ohio, in 1910. He has a Bachelor of Music degree (with honors) from Capitol University, Columbus, Ohio, and a Master of Arts degree from Ohio State University, 1933. Mahler was the subject of his Master's Thesis. He has written articles for *Musical Courier*, *Musical Record*, *The Etude*, and CHORD AND DISCORD. He has taught in the public schools of Ohio, and is at present in the Music Department of John Tarleton Agricultural College, Stephenville, Texas. Among his compositions are a ballet, a symphony, a song-cycle, a symphonic poem, piano pieces, etc. One of his compositions won first prize in a contest recently sponsored by the Texas Federation of Women's Clubs.

PAUL HUGO LITTLE, twenty-six, was graduated from Northwestern University in June, 1937, with the degree of Bachelor of Science in Journalism and is at present a laboratory technician at the Acme Steel Company of Chicago. He was editor of *The Tatler*, a monthly Chicago magazine in the style of *The New Yorker*, between February and August, 1940. His writing of a record column for this magazine brought him to the attention of the RCA-Victor Company, for whom he became a free lance publicity agent last winter. He now writes record review columns for some ten community newspapers in and around Chicago and is columnist and reviewer for *Musical Leader*.

HANS TISCHLER, Ph.D. in musicology from University of Vienna, 1937. (Thesis: *Harmony in Gustav Mahler's Works*.) He is also a graduate of the Vienna Academy of Music where he studied piano, composition, and conducting. During the past few years, he has been teaching and lecturing in the United States. At the present time, he is doing graduate work in musicology at Yale University for an additional Ph.D.

## Lest We Forget

By PHILIP GREELEY CLAPP

IT is hardly time as yet to speak of "familiar" and "unfamiliar" Bruckner, for Bruckner is not even now a "repertory composer," as some of his contemporaries are. But it is no longer true in this country that symphony audiences have no acquaintance with Bruckner. Most habitual concert-goers have some personal memory of the six Bruckner symphonies (Numbers 3, 4, 5, 7, 8, and 9) which have now been played a number of times by the principal symphony orchestras; and since, though the number of these performances has not been large, they have usually been under the batons of conductors thoroughly in sympathy with Bruckner's music and thoroughly versed in presenting it, the works have been so presented as to leave an indelible impression upon practically all music-lovers as may have escaped or resisted previous indoctrination against them.

As to indoctrination against Bruckner, one might advise that it be administered chiefly to people young enough in spirit to be still growing, at least partly, by a process of healthy revolt against "critical authority." When I, for one, was just old enough to have begun reading scores, but not considered old enough to attend symphony concerts, a program-book from a symphony concert fell into my hands in which the analyst, after quoting page after page of commentary adverse to Bruckner in general and his *Fifth Symphony* in particular, supposedly to aid the subscribers in listening intelligently to their first hearing of that work, wound up with a list of the instrumentation and the remark, "in the present performance the extra brass choir in the climax will be omitted." Even a schoolboy could and did infer that a climax thus shorn of the power intended by the composer might be somewhat disappointing.\* Burning with chivalrous indignation, I repaired forthwith to the music room of the public library, satisfied myself that the work itself was as fine as usually are those compositions which benumb what little reason critics are politely assumed to possess (it might have been of Bruckner that a reviewer wrote probably truthfully if somewhat hastily, "he disturbs my piece of mind"), and launched my career as a Bruckner crusader there and then. My crusade soon extended to studying the other scores of Bruckner then available, then to waiting for opportunities to hear the symphonies performed (the waits were long in those days), to

\* Be it remembered I did not even hear the performance, and had not the slightest idea of the fact that Bruckner in his original score did not call for the extra brass choir. My sense of outrage sprang solely from the statement in the program book that something apparently called for by the composer would be omitted. P.G.O.

## Chord and Discord

writing for and about Bruckner's music, and eventually even to performing some of it.

But I have so far waited in vain to hear actual physical performances of Bruckner's *First*, *Second*, and *Sixth* symphonies, though I have studied them in score for years. Undoubtedly they have been performed here and there,—mostly "there" rather than here, I am afraid,—but even an incorrigible Brucknerite would be hard put to it to find where and when in time to "make" the performance punctually: for example, in 1909 I missed the *Sixth* in a Loewe performance at Munich because the Kaiser was travelling in the opposite direction and my train waited for his; in 1910 Loewe omitted it from his programs when I was "on hand"; then I believe he resumed giving it after I had returned to Boston, which was a fairly Bruckner-proof city until Karl Muck in 1913 was accused by certain critics of investing the *Seventh* and *Ninth* with "a unity" (whatever that is) which they did not actually possess. This is not to say that Boston had not previously been exposed to Bruckner, but rather to garbled Bruckner; and, as is usual when a work is cut, truncated Bruckner really does seem too long, just as the head and limbs of a large man would seem monstrous if transferred to a child's torso.

Perhaps one reason why one never hears Bruckner's *First*, *Second*, and *Sixth* symphonies is because they do not closely resemble the other six; other composers, from Mozart to Tchaikovski and Dvorak, have suffered from writing too many good works which were not all alike,—I remember one of my students who reported that "Liszt wrote twelve symphonic poems, which are usually called *Les Preludes*" (needless to say, I got that little matter cleared up!). At all events, a brief reminder as to the content and beauty of the three "unfamiliar" Bruckner symphonies can do no harm among Brucknerites; and, if this should excite some conductor to present them, might in the end not injure even our critically chaperoned public.

*The First Symphony (in C Minor)*. A composer is pretty sure to put into his first symphony all he knows,—perhaps more. If he is so exuberant as to rush into performance and print with his actual first essay in the form, he may produce an uneven work, and yet atone for lack of integration by passages of superior charm or power. If, on the other hand, he is severely self-critical, he is likely to sketch or commence several symphonies, and even technically complete one or more, before giving to the world a "first" symphony which is "first" only in that it is the earliest symphony to embody mastery developed by long practice. In such a "first" symphony the composer gives little evidence of immaturity except that he still tries to get into it everything worth while that he has ever thought of, as if he feared his "first" symphony might be his last.

Bruckner's *First* is of this latter type, as for that matter is the (official) first symphony of his (official) "rival," Brahms. Neither composer was ever quite so solemn again, except when expressing

thoughts more intrinsically solemn than the completion of one's first symphony,—for example, the creation of the world, the Judgment Day, or the glory of God; but each work embodies richly some of the best musical ideas of its composer, and each displays masterly command in the development, though later works of both composers show equal mastery associated with greater ease.

For later works Bruckner conceived some themes mightier than any in the *First*, but in no other work does he present so many themes of dramatic-dynamic promise, and in developing them he fulfills every promise and every implied obligation; for he had not yet learned to end a work, as he ends some of his later symphonies, with the even more glowing promise of eternity in a better world. Like Beethoven in early and middle life, Bruckner states an unmistakable first theme and then follows with anywhere from two to a dozen second themes (in the first movement of the *First Symphony* one may find as many as six if one descends to mere census-taking); of course the one *cantilena* among them is the true second theme in relation to which the others combine to offer a rich setting,—call them “transitions,” “conclusions,” or what you will,—their actual function being that of correlating isolated tranquil and lyrical melody to the prevailing storm and stress of the movement as a whole. The “development section” as such is brief, but so free in applying the principle of variation as to constitute something of a pitfall for such conductors as are not perceptive in detecting “a unity”, etc. Unlike the corresponding division in many of the later symphonies, the restatement here continues the development; so, while all the themes of the exposition reappear, they assume new aspects, sequences, and combinations, proceeding logically to a climactic coda which foreshadows some of the mighty codas of the later symphonies. A word of caution here to potential producers may not be impertinent: the principle of variation in development is in this movement so vividly applied that a performer or interpreter might miss the logic of the whole for the fascination of what he might inadvertently take to be a series of colorful episodes,—and certainly we have often enough been told that Bruckner is “episodic.” My only “authority” for the organic unity of the movement is forty-five years' study of the score.

The *Adagio* opens with a brooding introduction. The principal theme is not immediately after stated in full, but is evolved gradually, as in certain of the later slow movements of Beethoven (if theoretical certification of respectability is also necessary, one may drag in Professor Lambinet's characterization of d'Indy's *Istar* as an “inductive symphony”). In contrast, the subsidiary middle theme is stated simply and lyrically, and then developed to a considerable extent. A return to the principal theme with even more mystery than at first leads to a poignant climax and a serenely tranquil ending.

The *Scherzo* is typical of the composer and an excellent example of its type,—rough vigor in the main body of the movement, a *gemust-*

## Chord and Discord

lich trio not without its suggestion of *Laendler* rhythm, and a return of the main division; but, for once, this return is not literal, as the principal theme returns at first softly before working back to its original rough vigor, and ends in the major instead of the minor. There are in fact so few literal restatements in this symphony, and so many in the later ones, that one must wonder to what extent Bruckner may have been swerved from his natural bent by the importunities of friends and enemies bent upon making a respectable musician out of him.

The *Finale*, though it includes many contrasts in dynamics and orchestral texture, with occasional modifications of pace, nevertheless seems to move forward with relentless energy and determination from its tragic-heroic beginning to its triumphant close. In mood it is akin to Beethoven in his *C-minor Symphony*,—or even to Winston Churchill in his rallying speeches to his people during the War; no promise of easy victory, but an exhortation to fight the good fight, and the assurance that only by doing so may right triumph. It is a fitting close and climax to a highly serious and vigorous work which should be part of the musical diet at least of those who live some of the time in a man's world.

*The Second Symphony (in C Minor)*. Commentators sympathetic to Bruckner (and there are such people) have an anxious habit of explaining that though the *Second* is in the same key as the *First* it is not a repetition, since Bruckner withheld an intervening symphony which he deemed not up to the standard which he had set for himself,—not a conclusive reason, by the way, but interesting as evidence that a composer (or his friends for him) is expected to apologize for quite irrelevant coincidences. One hopes at least that Bruckner kept his discarded symphony on a safe shelf and used some portions of it later where they would serve. Meanwhile, the whole conception of his *Second* differs sufficiently from that of his *First* to have permitted him to work on both at once, had he chosen to do so. In the aggregate the themes of the *Second* are as ingratiating as those of the *First* are sternly tragic; and, while his development of this material in the two symphonies is readily enough the work of the same man, it is not in the same vein.

The first movement opens with a sighing theme which soon leads to a tranquil and lyrical second theme proper, which in turn passes into an extended supplementary theme which, after considerable development at the time, dies away into a gentle and melodious conclusion. The development is based chiefly upon the supplementary theme described above, which in both style and treatment foreshadow a somewhat similar theme and treatment in the *Eighth*. All the themes are recapitulated in order, but with important changes in instrumentation and working out. The coda is typically stormy. Until this coda, which is marked *sehr schnell*, the prevailing tempo has been indicated as *Moderato*; but it would be well to treat this pretty

flexibly in performance, following the clear moods of the respective themes and divisions.

The slow movement is an *Andante*, with the sub-direction *feierlich, etwas bewegt*, which seems to impose upon the conductor an obligation to preserve dignity but keep moving. The songful principal theme is simply presented, then immediately followed by the germ of a contrasting theme. Each theme in turn is elaborated by a variation; the principal theme is then broadly and richly developed, leading to a tranquil and beautiful coda.

The *Scherzo*, as in the *First Symphony*, is a typical Bruckner scherzo with its rugged main division, tranquil trio, and full return of the main division; but the thematic material is quite different from that of the scherzo in the *First*,—the main division is less like a dance, the trio this time is lacy and ethereal, and the return of the main division is followed by a coda.

The *Finale* is at first agitated rather than heroic, though soon the storms are unleashed. Two quiet episodes afford contrast. All the themes are copiously developed and combined. The climax is of triumphant character.

Altogether this symphony, though rich in power, is less dynamic than the *First*, but more abounding in charm. Of more than passing interest to "The Compleat Brucknerite" (assuming that such a being is at least more readily to be found than a white blackbird) is a considerable series of detailed anticipations of the *Eighth Symphony*; but, remarkably enough, these themes and motives—and even technical minutiae of their development—never seem to foreshadow the basic content and mood-sequence of the later work. One would be interested to know how far Bruckner later was conscious of using the same vocabulary for quite different expressive purposes. In any case, neither work robs the other of a scintilla of individuality, and the *Second* should be heard for its own sake.

The *Sixth Symphony* (in A Major). Although Bruckner in his *Sixth Symphony* employs many of the familiar motives and devices of the Bruckner idiom, the full symphonic text into which he combines them somehow produces a different total effect from that of any of his other eight symphonies, and isolates it as a work at once atypical yet quintessential of its composer. Thus the "motto" which opens the first movement, and from which the complete first theme is developed without haste is Bruckner and none else in matter and manner, and the mirror-counterpoint, counter-rhythmic interweaving of parts, and figurations by diminution which follow are all characteristic of a "well-remembered voice." So are the great octave passages in which strings and brasses combine a motive and its elaboration concurrently, and the prolonged *diminuendo* with which the exposition attains a tranquil conclusion. The development and re-statement are a logical continuation, and are relatively short as compared with the long exposition, though not so short as to deny ample

## Chord and Discord

time to prepare and attain a climactic coda. In all the movement there is nothing but characteristic Bruckner, if we pay attention to detail alone; but the total effect is still atypical, apparently because Bruckner has surpassed himself in his own eloquence and inventiveness and in the mastery and fertility of his own devices, and still further because he has sustained more consistently a prevailing mood in this first movement than in almost any other of his works. This mood is serene and sunny, with almost vernal beauty, freshness, and fragrance (all the Hanslicks with which a mysterious Providence may chasten us cannot convince me that some music has not vernal fragrance,—though not nearly enough has it!). Even the wondrously beautiful opening movement of the *Seventh* does not surpass it.

The *Adagio* is full of the solemn beauty of a better world which touches ours only at moments of the highest happiness and serenity; miraculously Bruckner achieves this suggestion by continuing what I have called his tonal suggestion of vernal fragrance, which accompanies even the most majestic and lofty passages of this poignantly beautiful movement. Two contrasting themes, one majestic, the other tender, enter in turn, growing and developing from the moments of their entries, rise to a glowing climax, and subside to a quietly ecstatic close.

The *Scherzo* is utterly different from any scherzo in the other eight symphonies of Bruckner. Most of the others are boisterous, some fiery, some like a rough dance, all livelier than the scherzo of the *Sixth* which enters *pianissimo*, *ruhig bewegt* (*etwas gemessen*). In this shadowy, almost ghost-like *Scherzo* are many foretastes of the still more shadowy and ghost-like scherzo of Mahler's *Seventh Symphony*; it is not to be wondered at that the younger man should be influenced by a work which he profoundly admired and openly advocated, but it is remarkable that Bruckner should have anticipated Mahler in a vein more characteristic of Mahler's always volatile and sometimes macabre fancies than of Bruckner's own simpler and less nervous imagination. The trio again is quite different from other Bruckner scherzo-trios: it is whimsical, almost elfin, with a tricky recurrent fanfare of horns so Puckish as once more to recall the elusive humors of springtime.

If the *Scherzo* has already introduced shadowy moods in contrast with the prevailing sunniness of the earlier movements, the opening of the *Finale* and much of the development alternate between suggestions of gathering and breaking storm,—one must of course disavow any "programmatic" implications: simply a series of movements in a symphony are to be somehow described, and somehow the vocabulary of poetry is or seems less cluttered up with technicalities and bald assumptions than the jargon of the analysts. Perhaps even I aggravate my sin by accusing the latter of "bald assumptions," for some of their assumptions seem decidedly long-haired. But to refer to a passage as "warm" rather than as "containing ample

vibrations of the upper partials" seems more descriptive; besides, until one can photograph the sound-waves one cannot verify whether the upper or lower partials are ample in the given case, and one cannot even photograph the sound-waves until an orchestra plays the piece, as we wish one would. At all events, the *Finale* is alternately *x*, *y*, and *z* from the beginning throughout an extensive development involving at least four main themes with plentiful subsidiary themes and motives (respectably wrapped up, however, as a "first theme group" and "second theme group" and handled with considerable regard for the sonata form); and, until an irrefragably scientific terminology can be verified beyond mere self-assertion, I shall with regard to this particular composition designate *x* as "shadowy," *y* as "stormy," and *z* as "contrastingly tranquil." The coda returns at last to A major, and I venture to assert (on my own responsibility, of course) that it is climactic and triumphant; moreover, as a matter of sheer objective fact, this ending is based upon and dominated by a return of the opening "motto" theme of the first movement, thus automatically obligating even the structural abstractionists to acknowledge "a unity" in the symphony as a whole.

On the principle that "Nature abhors an absolute," I have for years tried to resist the temptation to regard the *Sixth* as the most beautiful and finest of Bruckner's nine symphonies; but it is certainly the most individual and seems to me to sustain itself at the highest level of expressive eloquence which he ever attained. This is not to say that he never attained these heights in other compositions, but only that in this work it seems to me that he sustains himself at his highest level throughout. As to points of contact with his other symphonies,—for, whether one understands or even enjoys a work, one simply must correctly classify it,—the *Sixth* shares certain moods and their expression with the better-known *Seventh*, and a good number of devices of theme and treatment with both the *Fifth* and the *Seventh*,—and rather fewer with the other symphonies, though all are clearly enough the work of the same composer. Nevertheless, the *Sixth* somehow stands alone; it is transcendently beautiful: we should be allowed to hear it.

#### KILENYI BRUCKNER MEDAL AWARDED TO MAURICE P. KESSLER

The Bruckner Medal of Honor, designed by Julio Kilenyi for the exclusive use of the Bruckner Society of America, was presented to Maurice P. Kessler of Oberlin College after a performance of Bruckner's *Romantic* on November 18, 1941, in recognition of his efforts to create a greater interest in and appreciation of Bruckner's music in the United States. The presentation was made in behalf of the Society by Dr. Ernest H. Wilkins, President of Oberlin College.

*Bruckner's F Minor Mass* was sung May 3rd, and the *Te Deum* and *Adagio* from *Bruckner's String Quintet* were performed at Oberlin during the past three years.

## Anton Bruckner: Simpleton or Mystic?

By GEOFFREY SHARP

The following article which appeared in the February, 1942, issue of *The Music Review* is printed by permission of the author and the publishers, W. Heffer and Sons Ltd., Cambridge, England.

WHETHER we agree with Sören Kierkegaard that "genius, like thunder, always comes up against the wind" is unimportant. Restricting the issue to an exclusively musical sphere and equating the wind to public reaction, there is ample material to lend very considerable support to the *dictum*. The financial difficulties of Mozart, Schubert and Wolf: the domestic troubles of Beethoven, Berlioz, Schumann and Delius: the executive millstones that perpetually hampered Mahler and Busoni—it is as idle to dismiss all these hindrances as trivial as it would be to suggest that the lives of the musical (or any other) *canaille* inevitably proceed smoothly and evenly towards their ultimate nadir of puny insignificance. It may be objected that Haydn, Mendelssohn and Sibelius afford notable exceptions—the first-named is in fact one of the exceptions that prove the rule—but it did not need more than an overdose of gentility to steal Mendelssohn's thunder, while inspiring evidence of Sibelius' struggle with and mastery of refractory elements is to be found in the Fourth Symphony and *The Bard*, and in the Seventh Symphony and *Tapiola*: two pairs of complementary works.

Before investigating the results of Anton Bruckner's creative work on these lines we may as well give a brief outline of the essentially simple facts of his life, and then try to form some estimate of his character.

He was born at Ansfelden in Upper Austria on September 4th, 1824, two and a half years before the death of Beethoven. His father and grandfather were both village schoolmasters, and the composer himself was originally destined for this career which would include the practice of church and school music. After his father's death in 1837 Bruckner went to the *Volkschule* in the little village of St. Florian, where he was taught music by Kattinger, the organist of the Institute, by the principal choirmaster Schäffler, and by Gruber. In 1840 he went to a so-called *Präparandenschule* in Linz, and in 1841 became a pupil-teacher at Windhaag on the Malsch: two years later he obtained appointments at Kronsdorf, Ems and Steyr. In 1845 he became assistant teacher in St. Florian, and after three more years succeeded Kattinger as organist. It was not until he was thirty-two that he became organist of the cathedral at Linz and thus finally forsook teaching for music. Even now he spent several weeks of

every year in Vienna studying theory under Sechter, and after 1861 transferred his attention to modern composition under the guidance of Otto Kitzler. His provincial period ended with the first performance of his C minor Symphony in Linz on 9th May, 1868, and the composition of his *Masses* in F minor and E minor.

Through the influence of Johann Herbeck, director of the *Gesellschaft der Musikfreunde*, Bruckner was appointed teacher of theory and organ at the *Conservatoire* in Vienna, and took up his new post in the autumn. Three years later he became a professor, and in 1875 undertook a lectureship in theory at the University. His work in Vienna, where he took service in the court chapel and became vice-librarian and second singing teacher to the choristers, was only interrupted by visits to Bayreuth and other German towns where his works were performed: and especially by a journey to Nancy and Paris in 1869 for a series of organ recitals, and to the London Exhibition in 1871, where his remarkable organ playing excited a great deal of attention when he gave five concerts at the Crystal Palace. Otherwise his life was given up to creative work, and in 1891 he resigned his post and went to live in apartments in a wing of the Belvedere granted to him by the Emperor Franz Josef. Such are the bare facts of his life. He died in Vienna on 11th October, 1896.<sup>1</sup>

From his fortieth year onwards Bruckner composed three *Masses*, a *Te Deum* and nine Symphonies, and, though there are other smaller works, it is upon these that his claim to greatness lies. As an aid in estimating this quality a few remarks on the composer's character and general disposition will not come amiss.

Amusing anecdotes of doubtful relevance have done much to establish a wrong impression of Bruckner's personality and outlook, and though we may smile at his tipping Richter a *thaler* for conducting the Fourth Symphony or showing apparently genuine excitement when a practical joker sent him a telegram that the Bulgarians had elected him as their king and were clamouring for his presence, we should not therefore assume that the man was an inherent and incorrigible simpleton. Fundamentally he was a simple soul, but in the elemental, not the derogatory sense. Bruckner spent many years of his life in subordinate positions, and this undoubtedly told its tale in the trend of his social behaviour. He did not shine in the witty conversations of Viennese artistic circles and may have traded upon his supposed simplicity to avoid becoming entangled in discussions which meant nothing to him. He had in fact a mordant tongue, and Decsey, in his biography of Wolf,<sup>2</sup> throws some incidental light upon Bruckner's character. A comparatively unknown poet came to listen to Bruckner's setting of his text for men's chorus and ventured to object to several verbal repetitions in the piece.

<sup>1</sup> For this brief summary the writer is indebted to *Grove's Dictionary of Music and Musicians*, 3rd Edn., Macmillan, 1929.

<sup>2</sup> *Hugo Wolf*, Ernst Decsey. Leipzig and Berlin, 1903-6.

## Chord and Discord

Bruckner retorted: "*Was, Wiederholungen? . . . hätten S' mehr g'dickt!*" It is also illuminating to find that when Weingartner complained that the last movement of the Eighth Symphony was too long, Bruckner in a letter advised him to shorten it considerably for the performance as "it might be too long and is of value only for later times", thus implying his conviction that posterity would some day grant him full recognition.<sup>3</sup>

The Simpleton of the Unexpected Isles, perhaps!

For some people Bruckner's religious beliefs provide a stumbling-block. No composer, with the exception of César Franck, has ever been so securely fettered to the organ-loft, and it needs a competent musician to realize that much of Bruckner's music is *organic* in direct proportion to its exclusion of the amateurish faults so often to be found in the inane outpourings of conscientious organists who feel a catastrophic urge for what they euphemistically fancy to be composition. Prejudice against the organ seems to act as a catalyst to prejudices against a presumed religious personality: and a narrow preciosity is assumed where none exists. The dedication of his last Symphony to God is unsophisticated, but does not constitute a crime, and Bruckner is only putting into words what every sincere and genuine artist accepts in some form or other as the basic justification of his own work. He was certainly a devout catholic, but catholicism in this context is not a restricting influence, nor does one have to conform to any narrow religious creed to be able to appreciate either the manifest beauties or the more subtle implications of Bruckner's novel but cogent symphonic style.

He had cultivated no veneer of petty sarcasm or caustic devilment arising from an inner sense of frustration or resentment of public indifference, yet he was by no means insensible to recognition and claimed, typically, on the strength of his Crystal Palace recitals, that in England he was really understood.

We must accept him as a psychological phenomenon. In mundane affairs he was consistently naïve and extraordinarily insensitive to the random vagaries and kaleidoscopic facets of everyday existence. The following bare delineation of the nature of his music will have served its purpose if it suggests that there is another side to the man and that the insight and imagination shown by his sense of form, feeling for orchestral colour and instinctively towering gradation of climaxes,<sup>4</sup> provide indubitable proof of his musical genius.

The two full-page quotations here appended from the fourth movement of the Fifth Symphony and the second of the Ninth should

<sup>3</sup> These two anecdotes are quoted from Albert Macaulay's "Hugo Wolf and Anton Bruckner". *The Musical Quarterly*, July, 1924.

<sup>4</sup> The conductor Oswald Kabasta, well known for the extremes of dynamic contrast in which he indulges, has somewhat naturally adopted Bruckner's symphonies as one of his enthusiasms.

SPECIMEN PAGE FROM THE FIFTH SYMPHONY: FOURTH MOVEMENT

ff *Forc.* (*con. cresc. p. forte*)  
Lobshoff (H.)

The image displays a page of musical notation for the fourth movement of the Fifth Symphony. The score is arranged in a standard orchestral format with multiple staves. At the top, the tempo and dynamics are indicated as 'ff Forc. (con. cresc. p. forte)' and the editor's name 'Lobshoff (H.)' is noted. The instruments represented include Violins I and II, Violas, Cellos, Double Basses, Flutes, Oboes, Clarinets, Bassoons, Horns, Trumpets, Trombones, and Percussion (Tuba, Snare, Cymbals, and Tom-toms). The notation is dense, featuring complex rhythmic patterns and dynamic markings. A specific correction is highlighted in red ink on the Percussion staff, with the annotation '(Bass C)' written below it. The page is numbered '56' at the bottom center.

The corrections shown in red are those of the Critical Edition

NINTH SYMPHONY: RETURN FROM TRIO TO SCHERZO-REPEAT

This image shows a page of musical notation for the Ninth Symphony, specifically the section titled "RETURN FROM TRIO TO SCHERZO-REPEAT". The score is arranged in three systems, each containing multiple staves for different instruments. The notation includes various musical symbols such as notes, rests, and dynamic markings. The first system features a large red correction at the beginning, consisting of several measures of music. The second system includes markings for "Tutti" and "Dolce". The third system includes markings for "Allegro" and "Pizz.". The score is densely packed with musical notation, and the red corrections are clearly visible at the start of the first system.

The corrections shown in red are those of the Critical Edition

give some indication of the extensive discrepancies that are to be found between the earlier "edited" versions and the new edition of the Complete Works of Bruckner.\* Dr. Egon Welles has recently shed some light on this subject, and the following extract states clearly the position that led to the production of a new Critical Edition.

On July 14th, 1892, Bruckner . . . signed a contract with the firm of Jos. Eberle & Co., of Vienna, for his First, Second, Fifth and Sixth Symphonies. . . . In as much as Eberle & Co. were chiefly a music-engraving firm and did not handle sales of publications, these works of Bruckner's were delivered to and put on sale by the firm of C. Haslinger. . . . A few years later they were transferred from Eberle & Co. to that firm's successors, Waldheim-Eberle, also of Vienna, from whom Universal Edition took over the rights on June 21st, 1910.

Bruckner's Third Symphony and the *Te Deum* were first brought out by Th. Böttig of Vienna. By an agreement dated July 13th, 1901, Universal Edition acquired a joint sales right for these works by which they could list them in their catalogue and offer them for sale. When the Böttig Press was bought out by Schlesinger-Lienau of Berlin, Universal Edition still retained these sales rights, and then in 1909 obtained from C. Haslinger of the Vienna branch of Schlesinger-Lienau the entire rights for these works as well as for the Eighth Symphony which had been published previously by Haslinger.

Bruckner's Fifth and Seventh symphonies were published by the firm of A. Guttman in Vienna. Universal Edition eventually came into possession of these works also when they purchased the entire business of the Guttman firm.

Between 1924 and 1927 all these scores appeared in an edition revised by Joseph von Wöss, which had been made according to the parts and scores in the archives of the Wiener Konzertverein, bearing the indications for performance of Ferdinand Löwa.<sup>6</sup>

It is not surprising in view of this general post that spurious versions, incorporating unauthorized or at least unimaginative editorial glosses, became accepted as genuine Bruckner. This is not

\* Anton Bruckner. *Sämtliche Werke. Kritische Gesamtausgabe im Auftrage der Generaldirektion der Nationalbibliothek und der Internationalen Bruckner-Gesellschaft*, edited by Robert Haas and Alfred Orel, Musikwissenschaftlicher Verlag der Internationalen Bruckner-Gesellschaft, Vienna and Leipzig. At the time of writing the following full orchestral scores are available in the Critical Edition: First Symphony (Lina Edn.), Second, Fourth, Fifth, Sixth and Ninth Symphonies, the D minor *Requiem* (1849) and the *Missa Solemnis* in B (1854). No volumes have reached England since August, 1938, and although Furtwängler has already performed the Eighth Symphony from the *Urfassung*, the score is still apparently unpublished. There are miniature scores of the First, Fourth, Fifth, Sixth and Ninth Symphonies, and of the D minor *Requiem*. The writer is indebted to Paul Hirsch for bibliographical assistance and for the opportunity of consulting the extant volumes of this Critical Edition.

<sup>6</sup> "Anton Bruckner and the Process of Musical Creation". Egon Welles. *The Musical Quarterly*, July, 1938. Dr. Welles expresses his thanks to the management of the Universal Edition for permitting him to examine the contracts dealing with Bruckner's Symphonies, thus enabling him to state clearly these complicated contractual relations.

to imply that there was any unscrupulous exploitation by musical pirates, except in one particular sense—the Wagnerian sense; and even so the editors Josef and Franz Schalk and Ferdinand Löwe have this to be said for them—that they meant well. Through these associates and perhaps also Hugo Wolf, Bruckner became to some extent the dupe of an all-consuming and very distorted Wagnerian perspective; an illusion that to have any permanent value a symphony must include as many *Tristanesque* *longueurs* and *Götterdämmerung* climaxes as possible. Quite probably Bruckner himself was no more than half convinced of the wisdom of this, but unfortunately where he only doubted he acquiesced! Apart from what we may call the inner circle of fervent admirers, few musicians can have had the opportunity of acquainting themselves with Bruckner's original manuscripts, and the majority must have depended upon the piano versions of these well-meaning editors for such enlightenment as could be derived therefrom. However that may be, it is extremely unlikely that many would be able to recreate the vitally glowing effects of Bruckner's orchestration from any pianoforte reduction by whomsoever it was made. In this respect conditions have lately improved, and *Ur-Bruckner* is now being made available for the satisfaction of the curious.

Fully twenty pages of Wellesz's article are relevant here (see note 6), and give a clear and concise account of the differences between the Critical and the earlier editions. A reading of this analysis together with a study of the scores will do much to dispel the traditional misconception of Bruckner's music as being composed of bleeding chunks of pseudo-Wagnerian butcher's meat strung together by means of the dramatic hiatus—wittily paraphrased by a well-known scholar in the words—"I pause for a reply".

A systematic study of the works would be out of place in an essay of this kind, but one or two salient characteristics may be dealt with appropriately.

Bruckner's finest music is consistent in this respect, that it demands prolonged concentration and a receptive frame of mind accompanied by a constantly vigilant and sensitive imagination. Let us examine the first paragraph of the Fourth Symphony as an illustration.

The first phase, shown in short score in example 3, has been described as one of the most magical openings in all symphonic literature, and as if to clinch this opinion, Wellesz has compared it with the arrogant, striding gesture that gives Brahms' Symphony in F its initial impetus. In this work Bruckner magically creates the strangely tense aura of mystery that inevitably permeates the music of genius and envelops the imaginative listener who in this instance may be forgiven if he feels that a mystic purposefulness is more evident than any romantic nostalgia.

To the writer at least many passages in this Fourth Symphony

3 *Bewegt doch nicht zu schnell*  
Horn Solo

and much of the Ninth tend to emphasize, in this new Critical Edition, Bruckner's mystic expression of deliberate striving, at the expense of the frequently turgid romanticism that exuded from so many pages of the earlier scores: but not from the opening sweep of the Seventh Symphony where even in the *ersatz* edition Bruckner has most successfully poured new musical wine of matchless quality into the old tonic-dominant bottle. To quote Wellesz again:

... the beginning of the *Allegro Moderato* in the Finale of the Fifth Symphony is scored in the Universal Edition for one clarinet, *forte*:

4 1 Cl.

In the revised score one flute, one oboe and two clarinets are employed *piano*. The sound of the former is shrill and almost grotesque, while that of the latter is excellent.

5 1 Fl.  
1 Ob.  
2 Cl.

In addition the long pause is abandoned and the connection with the following theme is effected by means of a *tremolo* which, although almost imperceptible, nevertheless fills in the empty gap.

It would require too much space to mention all the changes in orchestration in detail. Whoever is interested can easily investigate them himself. . . . The alterations were made chiefly . . .

- (1) to lighten the masses of tone,
- (2) to strengthen the voices carrying the melody,
- (3) to support the strings by wood-wind instruments, and
- (4) to soften the brass.

It should be unnecessary to postulate any such defence as this; but the present régime in Germany has made a political gambit of the Critical Edition and, as we know only too well, what the politician says is not evidence. In addition, as Professor Deutsch has pointed out, other composers may be more deserving of scholarly research than Bruckner—Haydn for instance. But these minor irritations should not make us ungrateful for the work which is now being done on the Bruckner scores and which in any case would have had to be done in due course.

A few hours spent browsing among the various volumes combined with concentrated listening to a representative selection of the gramophone records listed at the end of this article—but only on a *really first-class* reproducer—should do much to elucidate the complex nature of Bruckner's genius which is most clearly evident in his choral music. His E minor Mass is as individual as Verdi's *Requiem* or Delius' *A Mass of Life*, neither of which it resembles any more than they resemble each other.

This should be enough "writing on the wall" to convince the reader that Bruckner was no simpleton at least in his dealings with the higher values of life; his mysticism is latent on page after page of his most inspired music—in itself an irrefutable indication of the depth of his elephantine genius: a depth to which the Critical Edition is adding lucidity.

### Appendix

#### THE RECORDS

(Note.—Only the more important complete recordings are listed here. Others, mostly older and inferior, can be found in *The Gramophone Shop Encyclopedia of Recorded Music*.)

*Symphony No. 4 in E flat major. (The Romantia).\**

The Dresden State Opera Orchestra conducted by Karl Böhm.  
His Master's Voice DB 4450-57.

*Symphony No. 5 in E flat major.*

The Dresden State Opera Orchestra conducted by Karl Böhm.  
His Master's Voice DB 4486-94.

*Symphony No. 5 in E flat major.*

The Hamburg Philharmonic State Orchestra conducted by Eugen Jochum.  
Telefunken E 2672-80.

*Symphony No. 9 in D minor.*

The Munich Philharmonic Orchestra conducted by Siegmund von Hausegger.  
His Master's Voice DB 4515-21.

The above are all made from the new Critical Edition.

\* Withdrawn from Catalogue on 31st October, 1939.

## The Music of Anton Bruckner

By WOLFGANG STRESEMANN

FIFTY years have passed since the death of Anton Bruckner, but he still is one of the most disputed figures in the musical world. In Central Europe Bruckner has won a definite victory and is now recognized as one of the great men in music. Yet his symphonies receive scant attention in America, Britain, and the Latin countries. Everywhere, however, one encounters a basic misunderstanding of the character of his music. Partly because of this, Bruckner's work is not yet fully accepted outside the German speaking nations. Bruckner's great admiration for Wagner, the use of the Wagnerian tuba in some of his symphonies, and a few harmonic similarities with Wagner's music have caused many people to view Bruckner as a sort of "Wagner of the symphony" and, accordingly, to regard his music as of a romantic-dramatic character. In addition, that most unfortunate struggle in the later years of the nineteenth century between the Brahmsian and Wagnerian factions still haunts the minds of many, affecting even the present day verdict concerning Bruckner's music. Finally, a great deal of confusion was created by two of his disciples who revised some of his symphonies, reorchestrating them in part to make them sound as much as possible like Wagnerian music. For about forty years only these misleading versions were performed or published. Not until ten years ago did it become possible to gain access to these scores in their original form, the sole key to an understanding of the real Bruckner.

In a way, Bruckner was born into a wrong era. When he wrote his symphonies the romantic period was at its peak. About half a century before, Beethoven had composed his *Eroica*. With this work he introduced a new element into music—MAN himself as an individual, his personal joy and sorrow. The door to the romantic age was flung wide open by this bold, revolutionary step. A new epoch in music had begun. All the composers after Beethoven followed the romantic path. Even at the beginning of the twentieth century we find in the symphonic "self-portraits" of Gustav Mahler an extreme expression of this same romantic spirit. In line with the new trend the nineteenth century became the time of the great musical "personalities". Whereas before then a composer's work and personality had been held strictly apart, now they became an ever increasing organic unity, naturally, bringing the composer's personality more into the foreground. Therefore, composers of the nineteenth century like Beethoven, Liszt, Wagner, and others appear to us far more striking personalities than, for example, Bach, Mozart, or Haydn. The romantic

tide of that era was so powerful that one simply could not conceive of a different musical idiom. Even older music was looked upon with the prejudice of the romantic age. This alone explains the complete misconception of "Papa Haydn" and his allegedly gay, naïve music. Bach too suffered considerably in the same way from the many arrangements and editions of his music during the nineteenth century, all tending to "sweeten" its character. It was only natural, therefore, that any composer born into the nineteenth century should at once be considered a romanticist. This is exactly what happened to Bruckner.

This juxtaposition was absolutely erroneous. Even as a personality Bruckner was entirely different from his famous, often quite "glamorous" musical contemporaries. In contrast to them he was by no means a fascinating figure. He never outgrew his lowly origin and remained humble and modest throughout his life. His language was awkward, his general education below the average; his life passed for the most part monotonously, scarcely colored by any extraordinary events. Nothing in the intellectual field could arouse his interest. Yet his naïve, almost childish simplicity left people deeply touched. Some of those who knew Bruckner intimately may well have thought of the words of the Bible: "Except ye be converted, and become as little children, ye shall not enter the kingdom of heaven."

This heavenly kingdom—apart from his music—was Bruckner's only concern. He was by nature a deeply religious man. Filled with the thought of God he looked to the Creator with a child-like faith. The most familiar book to him was the Bible, for his whole life was devoted to God and the Church. For some time Bruckner gave lectures on musical theory. Max Graf, one of the last living persons who attended them, tells a most striking story in his memoirs. During one of Bruckner's lectures the Angelus sounded from a nearby church. Hearing the little bell Bruckner interrupted his talk, knelt down, and began to pray while his peasant-like face with its innumerable wrinkles became transfigured into that of a saint. Graf says that he stopped smiling when he saw Bruckner's humble and blissful face. Then should we smile when we are told that Bruckner dedicated his last symphony to God? This dedication was wholly in conformity with his life so largely devoted to God. With his *Ninth Symphony* Bruckner had hoped to crown his entire musical work. To God he owed everything. Therefore, as a naïve, child-like person whose relation to God is of a personal nature, he did not hesitate to dedicate his symphony to God Himself. Bruckner's faith in Him was unshakable. It was the foundation-stone of his life and it was the foundation and basic content of his music as well.

Bruckner's music has nothing to do with the Romanticism of the composers of his own day. They concerned themselves chiefly with the "earthly" doings of mankind, subjects about which Bruckner had very little to say. He never could have written the *Hymn to Joy* or the

sombre beginning of Brahms' *Fourth Symphony*. His thoughts were concentrated upon a world beyond our earth. Nothing mundane could have inspired his highest creative power. The ideals of the French Revolution that exalted Beethoven, the glory of a German national theatre which aroused Wagner's enthusiasm—these meant nothing to Bruckner. On earth he found scarcely anything worth striving for. His goal was the realm of God and the road that would lead to it. His mind was turned toward eternity and so was his music. Bruckner's fervent faith, his simple, yet profound relation to God are deeply reflected in his music. Only in a purely formal respect may one class Bruckner as a "Romanticist". There is, to be sure, a distinct connection between his work and personality. Yet this is merely an outward similarity. In contrast to the Romanticists whose predominant interest was in things human, Bruckner's chief concern was with the world Beyond. All his longings, strivings, and occasional fears were for it alone. This transcendental world and the thought of it form the essential substance of Bruckner's music. The "Beyond" as Revelation as well as the ultimate goal of mankind is the "main theme" of his symphonic work. It is so great a theme that Bruckner could never consider abandoning it or substituting another for it. This is the reason why all his symphonies have the same general form, mood, and visionary power. All of them deal chiefly with that remote, invisible world, which sways the pious thoughts of every religious human being.

Because of its individual context and its visionary element the music of Bruckner is of epic character. Its great climaxes have no dramatic significance in a Wagnerian sense. They may be compared, not with wild falls plunging from steep heights into an abyss, but rather with a majestic stream that gradually extends its course. All of Bruckner's music, even his *Scherzi*, are dominated by that great inner tranquility and assured firmness that correspond with his unswerving faith. Bruckner's music also lacks the Wagnerian sensuousness. Its sound, which derives from the organ, is of rather austere character. Rarely does he mix the various orchestral colors in the manner of a Wagner or a Strauss. Bruckner, the organist, works with the three main "registers" of the orchestra by placing them opposite each other simultaneously or by using them one after the other antiphonally. In this way he achieves a harder, more ascetic sound, differing distinctly from the smoother, more polished resonance injected into his works by his well-intentioned but misguided disciples. Again, in contrast to Wagner, there is no brilliancy in Bruckner's music. It does not aim at sound effects of "worldly" beauty or splendor; an inward mood always prevails, even when the full sound of the entire orchestra is employed. This inwardness is the very means by which Bruckner enables us to glimpse that distant, transfigured world of which his music sings again and again.

Almost every Bruckner symphony starts with a *pianissimo Tremolo* of the strings, a mystic sound which at once lifts the veil of the

## Chord and Discord

"other" world. This is fully revealed to us at the entrance of the main theme which sometimes suggests a vision of the Infinite, evoked by the celestial sound that seems to emanate from the quiet, but awe-inspiring beginning of a Bruckner symphony. In contrast to the main theme-group the second theme-group—the substance of which has marked community with the music of the slow movement—possesses a lyrical, song-like character. Yet it is not earthly love that Bruckner tries to portray; his lyricism expresses the yearning of men towards the transcendental world, depicts the hope for eternity. Not infrequently it seems as though the very voice of heavenly love were audible in this music. The third part of the first movement is generally of rhythmic character, largely corresponding with the *Scherzo* of the symphony. It is like a symbol of eternally moving cosmic forces, the emblem of divine creative power. The *Finale* is always a summing up of the preceding three movements. In its glorious *coda*, which usually brings back the main theme, Heaven itself appears to have opened its doors to assert and to confirm the stolid faith in God and the Church with which Bruckner was imbued.

This apparent division of Bruckner's music into three parts (the last movement does not communicate a new message) suggests a parallel to the doctrine of the Christian Church. It is not impossible that the pious Bruckner who would dedicate a symphony to God was—consciously or subconsciously—influenced by the dogma of the Trinity. The power of God, the love of Jesus Christ, and the Descent of the Holy Spirit might well have served as a general triple motive for such a man's music. However, a specific "program" can never be the ultimate aim of any interpretation of absolute music. Besides, the total creative work of the great masters—and this holds true for Bruckner also, in spite of the comparatively large homogeneity of his symphonies—is far too diversified to be done full justice with a few "programmatic" explanations. But they may be helpful towards a clearer conception of the basic character of such music. In the case of Bruckner, there cannot be any doubt: his is chiefly transcendental music that sings of the world of God and of the path that leads to Heaven.

This "celestial" basic character of Bruckner's music is linked with another element that forms a rather important contrast to it. It is that native Austrian tone to be found in all of Bruckner's symphonies, especially in the trio-sections of his *Scherzi*. This more "worldly" sound, drawn from Austrian folkmusic, reveals a distinct affinity with the music of Schubert. With these interspersed bits of his own native song Bruckner introduces moments of beauty, relaxing in their serenity. A joyful mood sways a number of tender *Laendler* reminiscences and graceful, song-like melodies. This music, of lighter texture, presents the easiest access to Bruckner's symphonic work. We hear it more frequently in his earlier symphonies. Sometimes (e.g. in the *Fourth*) its color mingles with that of the "main theme".

In his later works, however, this Austrian color becomes increasingly rare, surviving in his *Ninth* in only a few brief moments in the *Scherzo*. The music of this symphony is almost completely devoted to that "dark kingdom" on the threshold of which Bruckner himself stood when he composed his unfinished masterpiece.

In its most sublime moments Bruckner's music reveals a divine vision. Its fervent expression often reminds us of that of a prophet who preaches of God and the road to Heaven. Though Bruckner does not become excited as do the Prophets of the Bible, the inner power of his voice, like that of a seer, and the sacred tone of his music permit comparison with the utterance of a prophet. If we regard his symphonies from this viewpoint we shall understand much better their form, their many climaxes, and especially their numerous *Luftpausen* (stops) which, at first, may create a strange impression. Those who assert that Bruckner did not master musical form make the mistake of measuring his music with the same yardstick they would apply to a Beethoven or a Brahms symphony. The music of those two masters is primarily of a dramatic-human nature, whereas Bruckner's transcendental world removes his music automatically from the dramatic sphere, endowing it with definite epic character. In view of this predominant other-worldly content of his music Bruckner could not adhere too closely to the traditional form of the classics. He had to create a new and larger framework which would be adequate to the vastness of his "theme". As the epic masterpieces of literature are always extended, so are the epic symphonies of Bruckner. The message of a prophet does not communicate itself in a short and well-polished speech. Time is but relative to one filled with a divine vision, through whom God Himself seems to speak. Moreover, such a vision will raise him to the greatest heights, where, however, he cannot abide for long. The same is true of Bruckner. His music soars to the most magnificent climaxes, but it must fall back—sometimes quite suddenly—into nothingness, only that it may rise anew to higher and higher points until the last and greatest climax of all has been attained. Even before the final great climax, the listener must at times have felt that no greater heights could be reached. At such moments Bruckner himself seems to sink to his knees, overwhelmed by the divine voice that appears to unfold itself. Those who grasp the true nature of his music cannot help sharing in these awe-inspired pauses, during which Bruckner appears for the moment choked with reverence and unable to go on. Bruckner, the pious man, feels the presence of God and trembles. He has ascended heights immeasurable, heights beyond human power to maintain. He has to start afresh once more. This is the explanation of many of those breaks or *Luftpausen* which have been so often misunderstood. Naturally music must, above all, follow its own laws. But no one who has made a serious study of Bruckner's works without judging them from the Beethoven-Brahms angle can deny Bruckner's mastery of form. To avoid confusion in this regard

it is necessary to understand the true character of Bruckner's music and the form which necessarily resulted from it. In this connection we should always be aware that there is a "prophetic language" in music too and that was the language of Anton Bruckner.

Some of the movements of his symphonies bear the word "Solemnly" (*Feierlich*) to mark the character and tempo of the music. *Feierlich* in the German language does not only indicate a certain breadth and weight; it also implies a contrast to the every-day character. Bruckner's music, certainly, is not every-day music. On the contrary, it seeks to lead men away from the commonplace of the "every-day" and to lift their thoughts to a different, loftier plane. It does not address itself to the human intellect, nor does it primarily turn to the human heart; its message is destined for the soul, for that which is immortal in the human. Therefore, it appeals to that which is most sublime in man. Only those who are open or try to render themselves open to such an appeal will be able to appreciate Bruckner's music. A Bruckner symphony means a "solemn hour" (*Feierstunde*) in music. One should prepare oneself for it just as one prepares for any other solemn event. Not that it will be necessary to put on solemn garb; but the capability of responding to such an appeal is an indispensable pre-requisite for entrance into Bruckner's musical world.

One may call Bruckner's music a bridge to God. It sings of a world that will never cease to stir mankind as long as there remains a human soul. Therefore, Bruckner's music is *au fond* timeless, like its "main theme". The eternal values inherent in this great and noble music may not be grasped at once; but these values will reveal themselves with ever growing clarity as one listens receptively again and again to its message. Until this very day an accurate new picture of Bruckner has been hampered by the prejudices of the nineteenth century. Much that has been written and said about him even by his adherents betrays a fundamental misunderstanding of his work. Only by shaking off the misconception that Bruckner's music is of an earthly character, like that of Wagner and the Romanticists, can we find access to the true Bruckner. A great ethic force sways his music. It is an inexhaustible source of comfort for the soul. Its prophetic voice is a powerful summons to prepare for that heavenly kingdom promised to the faithful. Never was such utterance more timely than in our own day, a day so sadly in need of increased ethic strength and moral firmness. Mankind today is in the midst of a great moral decline. Unless it is content to sink ever deeper into the spiritual morass into which it has blundered, if it longs to rise again, it must—apart from striving for the new—adhere to the great creative achievements of the past. One of these is the music of Anton Bruckner.

## Schubert and Bruckner: A Comparison

By LOUISE H. and HANS TISCHLER

At first glance these two Austrian masters seem to have very little in common. Schubert is the great exponent of the song, Bruckner the composer of gigantic symphonies. Schubert was 31 when he died, leaving behind a mature life's work, while Bruckner at the same age had not even started to compose. When Schubert died in Vienna in 1828, Bruckner was four years old and lived in a small town in Upper Austria where Schubert's name was not to be known for years to come.

However, on comparing their biographies we discover a number of parallel features which establish important relationships between the two men, relationships which are corroborated by careful listening to their music. Both composers come from families of school teachers. Both were trained to be school teachers themselves, their duties as such including music instruction. Both, moreover, received training in church schools as choir boys. It may be only a coincidence that Bruckner applied unsuccessfully for the position of second conductor at the Imperial Court Orchestra at Vienna in 1877, a position vainly sought by Schubert some fifty years earlier. But it is no accident that Bruckner as a grown man chose for his teacher in music theory Simon Sechter, the very man under whom Schubert had planned to study shortly before his death. Both Schubert and Bruckner recognized their needs and turned to the same teacher for a remedy.

Schubert's greatness was not widely recognized until long after his death. Yet small circles of music lovers formed here and there to cultivate his music. One of them, in Steyr, Upper Austria, was often visited by Bruckner in 1843. There he first met and fell in love with Schubert's songs and chamber music. Through his work as church organist Bruckner also became gradually familiar with Schubert's masses, which at first influenced his own efforts in this field. And then, probably on his frequent trips to Vienna where he studied composition while holding a position as organist at Linz, he had occasion to hear Schubert's greatest symphonies, those in *C Major* and *B Minor*, which were first performed there in 1859 and 1865 respectively. Bruckner's love for Schubert's music differed from the complete reverence and admiration he felt for Beethoven and Wagner. He consciously strove to emulate and even to imitate them at times, but in Schubert he sensed a kinship which expresses itself in his works without conscious effort. We shall try to uncover these similarities in the following three phases—form, harmony, and thematic material.

## Chord and Discord

Obviously the "heavenly length" which Schumann attributed to Schubert's *C Major Symphony* is still more applicable to Bruckner's works, a circumstance which continues to militate against their popularity. This length, also encountered in Schubert's other cyclical works, such as sonatas, chamber music, etc., is, however, merely a symptom of the two masters' approach to the sonata form. The classical symphony, as cultivated by Haydn, Mozart, Beethoven, and their 19th-century successors down to Dvorak, was composed with a view toward a satisfactory balance of the structure and the cohesion of the parts. The themes were chosen for their usefulness in the development section; bridges were carefully prepared to lead to keys necessitated by a predetermined tonality scheme. Smooth transitions, economy, a certain objective reserve toward the material characterize these works. Quite otherwise with Schubert and Bruckner. Evidently they revel in the beauty of their music. A pleasing motif will be repeated several times or numerous motives will follow each other in an impetuous development, regardless of any rules of the craft. The fullest and best sounding harmonies are employed, whether or not they conform to any tonality scheme. A new section may start in any key or may abruptly return to one conforming to a classical scheme. The clear-cut theme of the classical style is replaced by long-spun melodies or motif-groups and developments. Cohesion and economy give way to a rhapsodic succession of richly worked-out separate units.

Within the sonata movement the second theme, especially, treated in this way by both Schubert and Bruckner, contrasts much more strongly with the first theme than in the classical symphony. Greatly enlarged, it becomes a motif-group, an independent section that is often longer than the first theme. While the latter is still conceived along classical lines by Schubert, Bruckner gives it melodic development that usually leads from simple interval motives to a heroic climax.

Clearly, since such motif-groups are separate evolving units rather than concretely stated themes, bridges between the first and second themes are out of place. The motif-groups follow each other directly. A single tone, such as in Schubert's VIII, 1<sup>1</sup> or in Bruckner's IV, 1, may serve as a connection; or with Bruckner a general pause will often intervene.<sup>2</sup> Such pauses also occur in symphonies of the classical school. There, however, they are preceded by a thematic and harmonic bridge and have therefore the effect of complete relaxation, while here they are laden with tension, for they interrupt the flow

<sup>1</sup> The Roman numeral stands for the symphony, the Arabic for the movement.

<sup>2</sup> Numerous examples for the connecting tone come to mind: e.g., in Schubert's VII, 1; VIII, 2; *Trio in B-flat*, 1; *Quintet in C*, 1; *Wanderer Fantasy*, 1; and in Bruckner's *String Quintet*, 1; IV, 1; VI, 4. The intervening pause, very characteristic for Bruckner, can be found at least once in Schubert, namely in VII, 4.

entirely, since there is no connection between the tonalities before and after the pause. These pauses are employed by Bruckner also at other important places (e.g., at the beginning and end of the development or between groups of the development). When somebody called his *Second Symphony* the "symphony of pauses", he explained their meaning as follows: "Look", he said, "when I am about to say something important, I have to take a deep breath first."

These pauses have still another aspect. It is well known that early romanticism is in part characterized by the flourishing of the short piece, the musical aphorism, such as Schubert's *Impromptus*, Mendelssohn's, Chopin's, Schumann's, and Brahms' piano pieces, etc. On the other hand, the tendency toward colossal dimensions—the later Beethoven, Berlioz, Liszt, Wagner—that also manifests itself in Bruckner and his successors, Mahler, the early Schoenberg, etc., is more characteristic of the later romanticists. Bruckner by means of the pauses succeeded in combining both traits, stringing together, as it were, several smaller units which then assume a larger unity—or at times fail to do so. This trait therefore proves again that Bruckner roots in early romanticism.

At times this element of severance prompted Bruckner to use, as a counter-agent, one theme in several movements of a symphony,<sup>3</sup> a technique first employed by Schubert.<sup>4</sup> But it is, of course, difficult to decide whether Bruckner was directly influenced by Schubert in this usage, since Mendelssohn, Schumann, Liszt, Berlioz, and others also applied this device before him. With another feature, however, Bruckner appears to follow Schubert's *Seventh*, namely with the slow introduction to his *Fifth*, which—in contrast to the classical introduction—is thematically part of the main section. Similarly, the introductory phrase of Schubert's *Seventh* sways the entire first movement. This technique seems to originate in the dramatic overture, such as Beethoven's *Egmont*, and may also have reached Bruckner by way of Liszt's symphonic poems. In the symphony this, as well as the previously discussed feature, came to full fruition a few years later in César Franck's *D Minor Symphony*.

In spite of the great evolution of harmony in the fifty years that intervened between Schubert's and Bruckner's active periods, and despite the inevitable general dissimilarity of their harmonic styles, there still exist surprisingly many parallels between the two masters in this respect. Some of them stem from their inner kinship, others

<sup>3</sup> By this we do not allude to the introduction of V, 4 which imitates that of the *Finale* of Beethoven's *Ninth*. Much more substantial is the taking up of the themes of IV, 1 and IV, 3 in IV, 4, while IV, 1 and IV, 2 start with the same motif; or the use of the same accompaniment motif in V, 2 and V, 3. The essential equality of the first themes of VII, 1 and VII, 4, related to one another as rhythmic variations, is another instance. In VIII, 4 all main themes of the preceding movements reappear.

<sup>4</sup> For example, in the first and last movements of the *Wanderer Fantasy* or in the second and fourth movements of the *Trio in E-flat*.

again were apparently taken over, whether knowingly or not, from the earlier master by his admiring follower—all quite apart from general romantic characteristics of harmonic technique.

Schubert was the first great master to venture into the field extensively, even earlier than the aging Beethoven who was still rather self-conscious in this regard. One outstanding Schubert characteristic is the frequent contrasting of major and minor chords on the same tonic as well as the oscillation between such tonalities, as in the use of the Neapolitan sixth, major-minor and minor-major.<sup>5</sup> Another group of effects is extracted by Schubert from the use of extra-tonal mediant relationships that enable him to contrast distantly related tonalities without transition. Not only are they used as means of immediate contrast, but they assume the ascendancy over the dominant relationships of the classicists in the overall tonal construction as well as, frequently, even in the cadence.<sup>6</sup> Such mediant relationships are also extended to form sequences (for instance, in Schubert's VII, 1 where the return to the restatement modulates from a-flat to e and e, or in Bruckner's VIII, 4 where the continuation of the first theme in the restatement shifts from A-flat to B to D to F to A to C). Such tonality shifts are often effected by means of an intervening augmented six-five or double augmented four-three chord, chords that both composers favor strongly.

As already mentioned, extra-tonal mediant relationships also play an important role in the tonal arrangement of greater form parts within movements. Here the previously discussed method of holding a single tone as a means of transition from one section to the next receives its harmonic explanation. It is almost always used to connect mediants. The larger form parts, notably the first and second themes of the sonata form, were preferably brought into dominant relations by the classicists, and the second dominant was used as a connecting link. Wherever Schubert and Bruckner adhere to the traditional tonality scheme, they no longer need the second dominant, for by means of the single tone they are able to reach the dominant from four mediant-related keys, a circumstance that permits them considerable freedom in handling the conclusion of the first of two

<sup>5</sup> Among innumerable examples there come to mind the songs: *Gute Nacht* ("Good Night")—Bruckner's declared favorite, according to his biographer and friend, Goellerich—and *Frühlingstraum* ("Spring Dream")—Nos. 1 and 11 of *Winterreise*; others are *Eifersucht und Stolz* ("Jealousy and Pride"), *Die böse Farbe* ("The Painful Color"), and *Trock'ne Blumen* ("Dried Flowers")—Nos. 15, 17, and 18 of *Die schöne Müllerin*; *Der Tod und das Mädchen* ("Death and the Maiden")—op. 7, 3—and *Geheimes* ("Secret")—op. 14, 2; *Quartet in G*, 1; *Quintet in C*, 1; VII, 3 *Trio*. We meet the same predilection in Bruckner's works: e.g., in IV, 2 between the first and second themes in the restatement; VII, 1 the transition from the second theme to the epilogue in the statement; VIII, 2 (*Trio*); *F Minor Mass*, beginning of the *Credo*.

<sup>6</sup> Here are just a few of many examples of immediately contrasting mediants: (a) in Schubert—VII, 4, second theme; VIII, 2, second theme; *Quartet in G*, 3 *Trio*; and (b) in Bruckner—IV, 4, first and second themes; V, 1, first and second themes; VII, 2, second statement of the second theme.

connected sections. Moreover, both masters frequently replace the dominant relationships themselves by mediant.<sup>7</sup>

Many more similarities between the harmonic techniques of Bruckner and Schubert can be cited. But it is very difficult to decide whether each instance is due to direct influence. It seems more logical to assume that Wagner's development of earlier devices and the general trend are responsible for these similarities. It is sufficient to point out the definite kinship of the two men in their feeling toward harmony as an independent agent of expression, equally as important as melody or rhythm. This feeling leads them to enrich the single chord by means of alterations and chord passages by means of major-minor and mediant relationships and to enlarge the modulatory possibilities, thereby expanding their compositions.

The relationship between Schubert and Bruckner is perhaps most clearly manifest in their thematic material. Romantic composers generally hark back to or develop national melodic material, and since both masters were Austrians many affinities can be explained by their cultural proximity. In addition, we find some thematic similarities that reveal their personal kinship in mood and conception. Schubert and Bruckner were not the first to employ folk-melodies. The classicists had done so, and even masters before them. But while they used folk melodies almost exclusively for occasional entertainment, such as dances, marches, divertimenti, etc., Schubert first employed them extensively in art-music.

The easy-going sociability for which Austrians are known finds its musical expression in a broadly flowing, rhythmically uncomplicated melody that is most easily adaptable to the second theme of a sonata movement or to the trio-section of a scherzo. Bruckner uses this type of melody as a contrast to and relief from his otherwise gigantically proportioned monumental themes; Schubert employs it especially in chamber music where he can give himself over to unnumbered singing. Very characteristic of Austrian folk-music and Alpine yodelling is the repeated alternation between the melodic intervals of a sixth and seventh from the same tone, with an underlying alternation of tonic and dominant seventh chords.<sup>8</sup> Of folklore origin also is a certain type of tone repetition in the accompaniment that occurs, for

<sup>7</sup> In his first movements Bruckner is conservative in this respect, whereas Schubert uses such relationships between the first and second themes in the first movements of the *Trio in E-flat*, *Quintet in C*, *Piano Sonata in B-flat*, *Wanderer Fantasy*, etc. Otherwise we find Bruckner employing mediant relationships between the first and second themes in the *String Quintet*, 8; II, 4; III, 4; V, 4; VIII, 3; IX, 3; and between the *Scherzo* and *Trio in IX*, 2.

<sup>8</sup> Some examples in Schubert's works are the second themes in *Trio in B-flat*, 1; *Trio in E-flat*, 2; *Quartet in a*, 1; *Oolet*, 1 and 2; the third theme in *Trio in E-flat*, 4; the trio-sections in *Trio in E-flat*, 3; *Quartet in G*, 3. In Bruckner we find this melodic-harmonic motif in the second themes in the posthumous *Symphony in d*, 1; 1, 1; II, 1; II, 4; III, 1; III, 4; IV, 1; IV, 4; VI, 4; VII, 1; IX, 1; the third themes of VII, 1 and IX, 1; the first themes of V, 3; V, 4; VI, 4; and in the trio-sections of II, 3; III, 3; and IV, 3.

## Chord and Discord

example, in the trio-section of Schubert's *Quartet in G*, 3 and in the second theme-group of Bruckner's IV, 4. Another influence of folk-music apparently prompted both composers to introduce lyrical themes almost always with a brief passage from the accompaniment. The frequent practice among folk-musicians of extemporizing several melodies simultaneously may be reflected in the invention of many double themes by both masters, i.e., such themes as consist of two separate melodic strains, contrapuntally joined. Such themes usually include other folk-inspired traits as well.<sup>9</sup>

Let us return from relationships based on the common background to those of a personal character. One of the outstanding characteristics of Bruckner's themes is their evolution from a *tremolo* or other form of murmuring figure.<sup>10</sup> They gradually gain in rhythmic and melodic intensity, growing louder at the same time. While this technique, as a whole, goes back to Beethoven's *Ninth* rather than to Schubert, the *tremolo* introduction may well have been suggested to Bruckner by the latter also.<sup>11</sup> Among Bruckner's melodic peculiarities there is the expression-laden turn, such as in the second thematic complexes of VII, 1 and VII, 4. This turn also figures prominently at the beginning of Schubert's *Quintet in C* and in the trio-section of the same work. This trio-section, furthermore, displays the dotted rhythm followed by the passionately expressive descending quarter notes and the cadence formula with the trill, both favored by Bruckner. Another favorite figure consists of a dotted eighth-note, followed by two thirty-second-notes and two eighth-notes descending stepwise from a level one or two tones higher than the first tone; the last note may also turn back upward or repeat the preceding note. This figure occurs, for example, at the beginning of the second theme-group in Bruckner's IV, 4 as well as at the beginning of the *Finales* of Schubert's *Quartet in a* and *Quintet in C*. A further close resemblance occurs in the return to the restatement in the *Trio in E-flat*, 1. It foreshadows Bruckner's preoccupation with motif inversion and, besides, is melodically related to the *Scherzo* of Bruckner's *Ninth*. Many more such similarities can be found, as between any two given masters. But the ones mentioned are so obvious and individual that they give further proof of the direct community between Bruckner and Schubert.

In our comparison we have limited ourselves to those areas in which similarities between our two composers occur, namely form, harmony, and thematic material and construction. In other areas, such as instrumentation, counterpoint, rhythm, and expression, no similarities

<sup>9</sup> Examples are found in the second themes in Schubert's *Quintet in C*, 4; *Quartet in a*, 1; *Quartet in B-flat*, 2; *Trio in E-flat*, 2; and the trio-section of the *Trio in E-flat*, 3. Most of Bruckner's second theme-groups employ such themes.

<sup>10</sup> For instance, the beginnings of the posthumous *Symphony in d*; III; IV; VII; VIII; and IX.

<sup>11</sup> Schubert used it, for example, at the beginnings of VIII, 1; the posthumous *Quartet Movement in a*; and *Octet*, 6.

or only unimportant ones can be discovered. In instrumentation and expression similarities are obviously out of the question, as the lapse of fifty years within which Wagner revolutionized both obviates any close resemblances. On the other hand, it is exactly in the free symphonic counterpoint and in rhythm that Bruckner's personal style resides, and so we find here dissimilarities or outright contrasts between the styles of the two composers. Bruckner's technique of motif inversion, simultaneous development of a motif in both original and inverted form, fugato, pseudo-canon, double themes, and interlacing, pseudo-contrapuntal completion of a melody by two instrument groups sets his style far apart from Schubert's essentially homophonic style, in spite of some points of comparison. The same is true of Bruckner's rhythmic characteristics, such as the combination of duole and triplet or the frequent starting-in of a theme with a rest, although a like inclination toward dotted rhythms can be detected in both masters.

It is clear therefore that Bruckner, who died fifty years ago, on October 11, 1896, within a few months of Schubert's hundredth birthday anniversary (he was born January 31, 1797), was not an imitator or epigone of the latter. Indeed the most obvious style characteristics of the two men differ greatly, so much that we often tend to overlook the fundamental kinship of their conceptions, symptoms of which we have traced in the preceding pages.

#### KILENYI MAHLER MEDAL AWARDED TO PHILIP GREELEY CLAPP

In a belated recognition of his constant efforts to create a greater interest in and appreciation of Mahler's music in the U. S. A., The Bruckner Society of America has awarded the Mahler Medal of Honor to Professor Philip Greeley Clapp of the State University of Iowa. Since 1911, Professor Clapp has written and lectured on Mahler. His programs at Iowa University included the *Adagietto* from Mahler's *Fifth* and *Lieder eines fahrenden Gesellen*. On April 22, 1942, Professor Clapp conducted Mahler's *Resurrection Symphony*. The concerts of the University Symphony Orchestra are broadcast over WSUI.

*Lieder eines fahrenden Gesellen* and the *Adagietto* from Mahler's *Fifth* were on the program of the opening concert of the fourth Fine Arts Festival of the State University of Iowa (July 8, 1942). Professor Herald Stark was the soloist and Professor Clapp conducted. The Mahler portion of the concert was broadcast over NBC on July 18, 1942. On this occasion, Mr. Earl E. Harper presented the Medal to Professor Clapp on behalf of the Society.

## Thoughts on Bruckner's *E Minor Mass*

By ROBERT SIMPSON

ONE of the commonest errors of musical criticism assumes that conciseness and shortness are synonymous qualities. Performances of Bruckner and Mahler symphonies have caused this mistake to be made more often, perhaps, than those of any other music. A definition of concision must include the statement that the word implies use of minimum resources needed to gain maximum efficiency in reaching the goal in view. Obviously, an Egyptian Pyramid is, in this sense, a concise art-form. Yet it is by no means a miniature. It is time intelligent lovers of music forsook the prevalent desire for brevity and what is known as "the power of understatement". The greatness of Sibelius rests not in his "understatement", but in the sheer adequacy of his expression for his own profound purposes. In art, understatement is failure, as also is overstatement. There can be a place only for sufficiency.

Bruckner's *E minor Mass*, however, is one of those works which shows a terseness which might lead the average critic to suspect hidden virtues in the symphonies. This, it is to be hoped, might help him to understand those masterpieces. His faith in his critical sense will be a little shaken if he encounters so economical a work by the proverbially extravagant Bruckner, and he will perhaps wonder if, after all, the few productions of Bruckner in England in the last ten years—some of them bad—were evidence enough for the almost wholesale British condemnation of this composer as a symphonist.\* These creditable reactions, however, are not likely to take place, for he will most probably express his regret that a man who could show such mastery in a Mass should have failed so dismally in his symphonies. What he will almost certainly not grasp at one hearing is that the *E minor Mass* contains the seeds of Bruckner's symphonic form, which later developed with equal terseness ideas themselves as large as a whole movement of the Mass. A very clear case can be examined in a comparison of the *Sanctus* of this work with the first group of themes in the *Ninth Symphony*. Though mood and colouring are very different in the Symphony, it is obvious that the *Sanctus* is itself a similar structure, and, had Bruckner conceived its idea later in life, he might well have decided to treat it as an element in a vaster design and have followed it up adequately. It is, of course, satisfying in itself but embodies the type of thought shown at the beginning of

\* This is not intended as an aspersion upon the fine performances of Bruckner No. 4 and Mahler No. 5 which the skill of Dr. Heins Unger has recently succeeded in wringing from the London Philharmonic Orchestra.

Beethoven's *Ninth Symphony*. Bruckner expands the growth from a mysterious opening to a mighty climax so that it suffices for a whole movement. His symphonies are great works because in them he has found a way of absorbing such a process into one far more immense, which is, nevertheless, a wonderfully concise method of handling gigantic material. It is hoped that these remarks will not be construed as an attempt to show that Bruckner's symphonies are superior to those of Beethoven.

The more obvious sparseness of this *Mass* will, therefore, make it an excellent introduction to the work of Bruckner for those whose appreciation of musical time-scales is limited to that of Beethoven, Brahms, and most other Nineteenth Century composers. It was written between the years 1868-9, and, although it is called No. 2, is really the last of Bruckner's three *Masses*. In style it departs markedly from the path followed by the other two, which expand the type handed down to Bruckner through Mozart and Schubert. The masses of these two latter masters have their style rooted in that of the theatre and express themselves in language derived from the common stock of Eighteenth Century stage composers. This is not to deny their obvious impressiveness and sincerity, though it implies that they are far from liturgical in effect. The salutary influence of Bach gives the first two *Masses* of Bruckner (Nos. 1 and 3) a rather more devotional character than those of his forerunners in Vienna and his love of chorale-like themes ensures that a church shall be the ideal setting for their performance. But the roots of the style which sustains the *Mass in E minor* reach further back into musical history. There is an austerity and mystical aloofness in the composer's mind suggestive of the loftiness and purity of the music of the Sixteenth Century. Palestrina is behind the marvelous opening of the *Kyrie*. The whole of the first movement of this *Mass* can be sung *a cappella* with great effect, for the accompanying horn and trombone parts are optional, simply doubling the voices here and there. If the choir is of high quality the omission of these brass passages results in greater beauty of sound. The form of the movement is very simple, falling naturally into the ternary shape suggested by the order of the words. The first part is very plain in character, rising out of an awed hush as did so many of Bruckner's later symphonic movements; it is based mainly on the initial phrase of quiet chords floating over a tonic pedal. The *Christe eleison* which forms the middle section is more active and modulates, animated by a double counterpoint, into new keys. As is to be expected, this part is more ethereal and achieves a climax by increasing the complexity of its texture as well as the volume of its sound, coming to a grand pause on the home dominant. The words and material (*Kyrie eleison*) of the first part are resumed, but with more intensity than before, and a figure used earlier to lead to the *Christe* is developed more extensively. After a great outburst of plain chords, the music falls slowly to rest in a long and deeply felt cadence.

Throughout this work it will be noticed that Bruckner's handling of cadences is extraordinarily fine. Those at the conclusions of the *Sanctus* and *Benedictus* are wonderful examples. A master of climax of Bruckner's calibre is bound to have a keen sense of the possibilities inherent in cadential passages, and it is not surprising to find him at his finest when ending such a creation as the first movement of the *Sixth Symphony* or the *Finale* of the *Eighth*. This *Kyrie* contains in its finish the germ of the tremendous skill and poise with which he descends from the final crises of some of his greatest slow movements, those, for instance, in the last three Symphonies.

The *Gloria* is set in the submediant key, C major. "*Gloria in excelsis Deo*" is omitted from the text and should certainly be intoned before the start of the movement. The best effect would be secured if the plain-chant were sung by the male voices. They would then be answered by the women's singing of "*et in terra pax*". Unlike the *Kyrie*, this piece has an independent accompaniment, which persists throughout the *Mass*. Bruckner is always completely happy when treating combined instruments and voices, and it is part of the austerity of his scheme that he has in this work eliminated the strings of the orchestra. Also there are no drums, and the result is often organ-like.

The first theme is fresh and joyous and is supported by a very important undulating figure on bassoons, pervading on various instruments the whole of the first and third sections of the *Gloria*. Bruckner shows himself master of the art of setting words to music when it becomes apparent that in the course of a single far-flung melody he contrives a whole series of different ideas, illustrating aptly the successive thoughts in the text. Melody is the chief element in this *Mass*, and, like Schubert, Bruckner relies on it almost always. The opening sentence of the music of the *Gloria* is an example of a well-knit melodic phrase containing four surprisingly contrasted moods. Except for two short imitative episodes, the whole of the stirring first part is harmonic rather than contrapuntal in idiom, as befits its dramatic tendencies. The central portion begins with a change to a slower tempo and the entry of a most expressive theme for four horns, introducing the words, "*qui tollis peccata mundi*". These are sung to a telling phrase which, on its second appearance, produces one of Bruckner's best first-period modulations. The change is from A minor to A flat major; the mood becomes one of hope, engendered by "*suscipe deprecationem nostram*". Another beautiful change of key occurs at the return of the subject-matter of the first section. Perhaps this is managed even more finely than that just mentioned. The shift is from E major (reached as the dominant A minor) to the original tonic, C major, and is effected subtly by allowing the undulating bassoon figure to slip magically on to the subdominant of C, and to reach C major, not through its dominant but through a chord of D minor. The modulation is all the more wonderful for the fact

that the voices enter with the innocent first theme at the prelude moment of the transformation. The words here are "*Quoniam tu solus sanctus*". The rest of the text is set to bold music similar in character to the first section, interrupted by one more rich modulation from G major to F sharp major to illuminate the name, "*Jesu Christe*". Bruckner seems to possess Schubert's secret of accomplishing such sudden changes without hindering the flow of the music. The *Coda* is a colossal double fugue (*Amen*) on two subjects of great audacity and power. The choral writing is extremely daring and, though it occurs in one of Bruckner's early works, surpasses in this respect any comparable passage in Wagner. It is perhaps worthy of note that Bruckner at this time knew very little of Wagner's work. As a small point of interest, the two bars (170-1) are strangely prophetic of Rachmaninoff's famous *C sharp minor Prelude*. The fugue finally coalesces into massed harmony and the movement ends with symphonic weight and preciseness.

The *Credo* should also be preceded by the plain-chant for the same reasons as shown in the *Gloria*. The setting of the Creed is a notoriously difficult task. Its first half, dealing with the most mystical aspects of Christianity, presents no musical problem. But the remainder concerns itself with controversial dogma embarrassing to any sincere composer. There are two ways of dealing with the matter. Since the words cannot suggest appropriate music, they must either be illuminated (i.e. framed), or they must somehow be covered. Bach adopts the former method and Beethoven the latter. Bach composes the most gracious music he can imagine, but Beethoven drowns the awkward words with mighty shouts of "*Credo! Credo!*". Bruckner combines elements of both methods. His music, being a free recapitulation of the first section, has little connection with the text. In that he is like Bach. His affinity to Beethoven is seen in the fact that although his choir does not shout "*Credo!*", it fits the Nicene Creed to exultant themes originally associated with the word.

The first theme of the *Credo* is an impressive figure foreshadowing the terrific *Scherzo* of his *Eighth Symphony*. The movement is an *allegro* of great strength and conviction, maintaining its full force through the whole of its initial section. The middle part begins when a note of mystery intervenes and the text, "*et incarnatus est*", is expressed in a profoundly moving slow fragment, containing more of Bruckner's finest modulations. This, with the *Crucifixus*, is treated with remarkable insight and simplicity. The whole passage, ending with "*et sepultus est*", affords another superb instance of Bruckner's skill in illustrating a varied text within the scope of a single melodic structure. The music in the score from *D* to *G* is a long-drawn, finely shaped melody, subtly formed, both in itself and in the disposition of its accompaniment. Yet each constituent phrase is perfectly fitted to its attendant words. There can be no doubt that Bruckner, had he so wished, could have made a mark as a song-writer, though it is

fortunate that he threw his whole energy into great works. The only existing songs by him are early and unrepresentative, but who knows how he might have developed in this field? His student *Symphony in F minor* gives no indication of the vast achievements of his later years.

After solemn descending chords on trombones, gently portraying the burial, Bruckner turns to the Resurrection. He captures the mystery as well as the drama of the situation. The outburst is not sudden but is prepared by soft throbbing chords (clarinets and bassoons) as of new life rising from the depths into which the trombones have just descended. The blaze, once kindled, is sustained. Solemnity and some apprehension are felt following the words, "*cum gloria*", and, as if the last word had invoked it, the opening figure of the *Gloria* attends the word "*judicare*", with its wave-like accompaniment. The tension aroused by this incident generates a big climax and leads to the resumption of the first material. The last words of the Nicene Creed, "*et vitam venturi saeculi. Amen*", are the inspiration of a wonderful final cadence, containing a new treatment of the main theme.

The *Sanctus* which follows is perhaps the crown of the work. Bruckner is here heard as a great contrapuntist. As has already been noted, this piece is a continuous growth to a single climax. The influence of Sixteenth Century polyphony is evident in the fact that until the culmination in block chords the accompaniment consists of mere doublings of the voices by unobtrusive wind instruments, and the chorus would find little difficulty in singing the passage without support. The lines are very diatonic and easy to auralise, though the performance of the music needs so much staying power that the help of the instruments is necessary for the building of the *crescendo*. The movement opens in four parts, with a close canon between Alto I and Tenor I concealed behind other flowing lines. The canon is then taken up by Soprano I and Bass I, followed by Alto II and Bass II, and finally, Tenor II and Soprano II. Meanwhile the other parts float and drift freely round the canon, *semper crescendo*, with celestial effect. The highest ecstasy is attained in the magnificent homophonic climax, the grandeur of which is hardly surpassed by the finest of his later symphonic passages. A characteristic touch is the quiet woodwind chord remaining after the last shout has died away. Bruckner thinks instinctively in terms of cathedral acoustics, and the endings of his movements are nearly always abrupt if played in unresonant buildings. Though not printed in the score, the awesome dying echoes of the last chord are an essential part of many a massive Bruckner *Coda*. He is one of the few composers whose style is conceived in terms of special acoustic conditions. Indeed, there can be little doubt that he is the only great master of this type since the Sixteenth Century.

The *Credo* and *Sanctus* are the central pinnacle of the *Mass*. The rest forms a kind of appendix. The supreme mysteries awe the composer into more subdued thought, and the *Benedictus* is more introspective than any other part of the work. In some ways it is similar

to the second groups of themes occurring in many of the first and last movements of Bruckner's symphonies, and it is interesting to see how he follows the *Sanctus* (so like one of his symphonic openings) by music of this character. The piece is very concentrated in its use of themes and falls into a modified sonata shape, unusual in a Mass. Its key is C major, and the chromatic horn figure with which it opens may be regarded as its first subject. "*In nomine Domini*" is set to a delicate chanting phrase which modulates to the dominant, in which the first theme recurs. The development is soon reached with a change to A minor and the introduction of new material. Gradually the mood becomes more mysterious, while the woodwinds weave independent figures into the texture. When A flat major has been entered, the horn figure appears deep below the surface, increasing the sense of awe. The restatement removes the cloud and the music brightens into a glorious *Coda*, "*Hosanna in excelsis!*". It is difficult to choose between this *Benedictus* and the sublime setting of the *F minor Mass* (No. 3). That is as remarkable for its breadth as this is for its conciseness. In the *Mass in F minor*, the final *Hosanna* is expanded into a short but powerful *allegro* movement, coming at the end of a slow one of considerable dimensions.

The loftiness of the last part of this work is beyond praise. The *Agnus Dei* is planned in a way that is simple to grasp, but difficult to describe. Towering chordal structures are reared on the words "*miserere nobis*" until the whole world might be crying out. These mighty passages are, again, obviously calculated for the vastness of a cathedral. The wonderful moment of prostration after the second of these outcries is perhaps the deepest utterance in the whole *Mass*. But the sheer loveliness of the last three pages (*Dona nobis pacem*) lingers in the mind longest. Bruckner connects this section with the *Kyrie* by referring to a figure from it. This enriches an accompaniment of extraordinary beauty, and the *Mass* ends in devout and childlike peace.

After the completion of this work Bruckner's excursions into choral compositions were few. Chief of these are the *Te Deum* and the setting of *Psalm 150*, both terse works of enormous power, showing that had he given his full attention to choral music he would certainly have become one of the very greatest masters in this medium. Indeed, it cannot be asserted with any confidence that this is not already the case, and there can be little doubt that his *Masses* place him among the most important composers of Nineteenth Century religious music. When Bruckner's music becomes the subject of a fashionable vogue, this contention will be held by many who understand little of his true stature, or of the reasons for the success of his cause. Those who study Bruckner are those who love him best.

# Bruckner's Ninth Symphony

By LOUIS BIANCOLLI

Reprinted by permission from the Program Notes of The Philharmonic Symphony Society of New York (Mar. 14, 15, and 17, 1946). The program notes of the Philharmonic are compiled by ROBERT BAGAR and LOUIS BIANCOLLI.

A SYMPHONY dedicated to God! Such, at any rate, is the legend handed down about Bruckner's farewell symphony. According to the story, Bruckner, who died while working on the final bars of the *Adagio*, intended to inscribe the symphony "to the dear Lord." "I have done my duty on earth," said Bruckner to a caller shortly after his seventieth birthday. "I have accomplished what I could, and my only wish is to be allowed to finish my *Ninth Symphony*. Three movements are almost complete. The *Adagio* is nearly finished. There remains only the *Finale*. "I trust Death will not deprive me of my pen." He prayed nightly to God for time to complete it. "If He refuses, then He must take the responsibility for its incompleteness," he remarked.

Despite attacks of dropsy and a dangerous heart condition, Bruckner worked feverishly at his symphony. But he died without finishing it. For some years it was thought Bruckner left sections of the work in an imperfect state. However, the publication of the ninth volume of a critical edition of Bruckner's works in the early thirties proved that the three movements of the *Ninth Symphony*, as the composer left them, "must be unconditionally regarded and respected as his final intention."

Moreover, it developed that Bruckner had also been engaged for some time on sketches of an *Allegro-Finale*. Professor Orel, who edited the ninth volume of Bruckner's works, included a sketch of this unfinished *Finale* which reveal Bruckner's main outlines of form and structure up to the beginning of the *Coda*. Unfortunately, there is no hint anywhere of how the symphony was to end. In the words of Willi Reich: "That portion always treated by Bruckner as a grand summation and, hence, probably the most important passage in the symphony, must remain an eternal mystery."

Reich, in an article appearing in "Chord and Discord"—the magazine of The Bruckner Society of America—now assailed the frequent practice of using Bruckner's *Te Deum* as a choral finale to the *Ninth Symphony*. "One glance at this mighty torso of a *Finale*," he stated, "is enough to convince us that the practice . . . corresponds in no respect to the composer's true intention, for this final choral work shows no relationship to the thematic world unforgettably established in the three completed movements of the symphony."

This conclusion coincided with Professor Orel's own contention in the first published version of Bruckner's original score:—"Bruckner's clear intent to conclude the *Ninth Symphony* with a gigantic instrumental *Finale* proves the utter futility of any attempt to establish a spiritual connection between it and the *Te Deum*—an attempt so frequently made by conductors, despite the insuperable period of a decade separating the conception of the two works in the mind of the composer. Furthermore, the *Adagio* of the *Symphony* . . . attains symbolic significance through the realization that the inexorable grip of Fate wrested the pen from the aged master's hand almost at the very moment in which he would have sealed the work with a completed, formal *Allegro-Finale*."

The appearance of this authentic edition of Bruckner's *Ninth* caused something of a stir in musical circles because of the so-called "Loewe Version" long in use. For years it had been supposed that Bruckner's manuscript had been left in a highly unsatisfactory state, that thanks to Bruckner's faithful disciple, Ferdinand Loewe, a rough and garbled manuscript had been rendered playable through a polished arrangement. There had been a sensational premiere of Loewe's version on February 11, 1903, in Vienna, under his own direction. Many Brucknerites, who had not even suspected the existence of this posthumous work, were astounded by the revelation. This, incidentally, occurred seven years after the master's death. In 1904 Loewe published the edited score. Some years after the Vienna premiere, doubts began to arise among Bruckner scholars about Loewe's emendations. Drastic, uncalled-for changes of orchestration were suspected, and glaring instances of unBrucknerlike transitions were noted.

"Listeners began to notice frequent details in the music which seemed inexplicable in the light of Bruckner's frank and sturdy symphonic character," wrote Max Auer in the "*Zeitschrift für Musik*" (later quoted by "Chord and Discord"). "When the *Scherzo* leaped lightly forth, all-aglitter with typically French *esprit*, the audience was reminded of the scintillating manner of Berlioz's instrumentation. In the minds of many there arose some such questions as these: Where are those abrupt, Bruckneresque transitions between the passages? Why do the various phrases end in gentle exhalations? In short, whence comes this odd finesse, this smooth polish, into the work of a composer universally noted for his rugged individuality?"

The answer was provided by two important events. One was the *Kritische Gesamtausgabe* of Bruckner's music, sponsored by the *Bruckner Gesellschaft*. The other was a semi-private performance—also sponsored by the *Bruckner Gesellschaft*—at the *Tonhalle* in Munich on April 2, 1932, of both the "Loewe Version" and the original. The conclusion was unanimous:—"So far from being unplayable, the original version far surpassed the 'Loewe Version' by the splendor of its orchestral coloring and the power of its dynamic contrasts. The two versions differed so vastly in spirit that they might be said to

belong to different worlds." Thus Bruckner's *Ninth Symphony* became available to the world in two widely opposed versions. It should be pointed out that Professor Orel arrived at his thesis of Bruckner's own "definitive" version only after an arduous study of all the detailed revisions made by the composer. He established that three movements of the *Ninth Symphony* were the final stage in a long process of evolution. As evidence Professor Orel traced the Symphony's slow growth through six separate versions!

There was never any question of Loewe's good intentions in all this. Actually, it was regarded by the less embattled Brucknerites as a case of misplaced zeal. Professor Orel himself stressed this in a subsequent lecture at the University of Vienna. Loewe, he affirmed, had been actuated solely by the desire of a devoted friend and disciple "to render more acceptable to the ears of his contemporaries the general tonal ruggedness of this symphony as left by the master" (Willi Reich). Ironically, it was probably modesty that restrained Loewe from divulging the changes he had made in Bruckner's orchestration. He regarded the task as a labor of love. And despite growing critical suspicion, his version stood for thirty years as a standard repertory score. Such as it was, he had rendered a service somewhat parallel to Rimsky-Korsakoff's in editing *Boris Godounoff*.

When Otto Klemperer and the New York Philharmonic-Symphony Society offered the American premiere of the restored original version in Carnegie Hall on October 11, 1934, Lawrence Gilman called it a "consecrational disclosure." With several others he then concluded that the Loewe version, with which the music world had been familiar, was an "astonishing perversion and distortion of Bruckner's intentions." He now spoke of Loewe's edition as "unauthorized, injudicious, and impertinent." Students who followed the performance with the old score, he ventured, "must have noticed the instances in which not only Loewe the tonal chiseller, but Loewe the superfluous decorator, was put to rout, and something native and strong and unmistakably Brucknerian restored to the structure of the score."

Continuing, Mr. Gilman wrote:—"They must have noticed here the omission of an excrescent woodwind phrase or kettledrum solo, there the restoration of significant chord passages, or the felicitous substitution of violas for bassoon, or the assumption by tubas, with magical effect, of a passage given inexplicably to muted 'cellos and violas, or the alteration of dynamics and tempo marks. Above all, they must have listened incredulously to the climax of the *Adagio* as Bruckner actually wrote it, a passage exalted from banality to greatness merely by the simple and honest process of letting it sound as its creator intended."

This point about the *Adagio* was dwelt on at greater length in Gilman's Sunday article in the New York Herald-Tribune two days later:—"If the student will turn to page 136, bar 3, of Loewe's edition of the orchestral score in the Universal Ed. (page 186, bar 1, of

the Eulenburg miniature score) he will find that Bruckner apparently builds the climax of the movement at this point upon a fortissimo proclamation of the main theme by the trombones, tuba, string basses, and bassoons under a simple chord of E major sustained and reiterated by woodwind, horns, tubas, and a repeated figure of the violins—a sonorous but hardly distinguished treatment of the subject.

“But one has only to examine Bruckner’s original score (page 180, bar 1) to see at once that what Bruckner said and clearly intended to say at this point was something utterly different from what Loewe has represented him as saying. As Bruckner wrote the passage, the mighty theme in the basses, with its upward leap of a tenth, is heard against an audacious and magnificent dissonance formed by the simultaneous sounding and reiteration (in the woodwind, violins, and upper brass) of the notes E, F sharp, G sharp, A, B, and C. The effect is unforgettable—an inspiration of sheer genius that, at a stroke, alters the passage from rather empty rhetoric to poignant eloquence.

“But Loewe seems to have been shocked by it. He preferred something smoother and more decorous. So he sandpapered Bruckner’s superb dissonance, removed offending notes from the chord, and turned it into an orthodox E major, retaining only the passing and innocuous F sharp in the violin figure. Thus manicured and made harmoniously presentable, the passage might have been composed by Mendelssohn himself in one of his more daring moments.”

Another example of Loewe’s tampering with the original occurs in the first movement, page 41, bar 4-5. There Bruckner pauses on a seventh chord. The orchestra is silent for a bar and a half. Like nature, Loewe apparently abhorred a vacuum, the result being that the silence was filled with a phrase of his own for oboe and clarinet. As a rule Loewe’s changes were in the instrumentation, but these bristle on every page of the score. Loewe, it was suggested, was evidently resolved to translate Bruckner’s economy into Wagner’s luxury. For Bruckner’s scoring almost foreshadows modern technic in expressive instrumentation. In one place Bruckner achieves a contrast by dividing a theme between strings and woodwind. Loewe joined the instruments in a combined statement of the theme, thus destroying the intended color effect.

Theodore Thomas conducted the American premiere of Bruckner’s *Ninth Symphony* at a concert of the Chicago Orchestra on February 20, 1904, only a year after the Viennese premiere. Karl Muck first directed it in Boston on November 1, 1907, bringing it to New York a few days later, on November 7. There has naturally been speculation as to whether Bruckner deliberately chose the key of D minor with Beethoven’s own *Ninth Symphony* in mind. Bruckner anticipated this. “It grieves me,” he once remarked to his friend August Goellerich, “to have conceived the theme of the *Ninth* in D minor. People will say: ‘Obviously Bruckner’s *Ninth* must be in the same key as Beethoven’s *Ninth*.’ But I cannot discard or transpose the theme, because

it appeals to me just the way it is and it looks well in D minor." The former practice of adding the *Te Deum* as a choral finale only strengthened the analogy in people's minds.

The three movements are marked as follows: I. *Feierlich* ("Solemn"), D minor, 2/2; II. *Scherzo, Bewegt, lebhaft* ("Mosso vivace"), D minor, 3/4; III. *Adagio, Sehr langsam, feierlich*, E major, 4/4.

The First Movement is unorthodox in structure. Each of the four major themes is built up to a resounding outburst. After some prefatory material, the spacious first theme rings out boldly in D minor from the top of a crescendo. The second theme, slower and more lyrical, is brought in by the first and second violins in A major, ending in a C major phrase. Violins and violas presently take up the third theme, and then expound a fourth theme, which is an extension of the third. There is a *crescendo*, mounting to a shattering climax, and soon the second main section of the movement—free fantasia and review—begins. The chief theme dominates the *Coda*. There a motive from the introduction is heard too.

The Second Movement, substantially a classical *Scherzo with Trio*, is broadly worked out. The main theme first appears, *pizzicato*, among the strings. This is freely elaborated at some length, after which the *Trio* (F-sharp major, 3/8), faster than other interludes of this kind, begins. Two themes, one for strings, *spiccato*, the other, *etwas ruhiger* ("somewhat quieter"), for strings and oboes, are developed in the *Trio*, and the *Scherzo* proper returns.

The *Adagio* is substantially in sonata form. The first theme is given out by the violins. "This deeply earnest theme," said Gilman, "with its upward step of a minor ninth, is characteristically Brucknerian, though the wraiths of Liszt and Wagner do unmistakably peer out at us through the bars." Later the second theme is introduced in broad style by the first and second violins. Its key is A flat major. There is detailed development of both themes. The pace sharpens as a last Bruckner crescendo gets under way. The orchestra recalls the first theme *fortissimo*, and there is sudden peace, ghostly and elegiac. "The flickering violins and the dark-tinged tubas," wrote Werner Wolff, "convey the picture of the deeply absorbed composer writing the last pages with a trembling hand. This time Bruckner tells us a story—the story of his end."

#### SACHS FUND PRIZE AWARDED TO MARTIN G. DUMLER

Dr. Martin G. Dumler, President of the Bruckner Society of America, received the Rosa F. and Samuel B. Sachs Fund prize in recognition of his orchestral work, *Four Ballet Scenes*, first performed by the Cincinnati Symphony on March 10 and 11, 1944. Presentation of the award was made on December 11, 1944, by Mayor James Garfield Stewart on behalf of the Cincinnati Institute of Fine Arts. Since 1929 the Sachs prize has been awarded annually to a Cincinnati resident for outstanding achievement.

## A Non-Academic Approach to Bruckner's Eighth and Ninth

By PHILIP GREELEY CLAPP

WITH tons of Bruckner exegeses reposing on library shelves affording sustenance chiefly to bookworms,—and, of those, even, more of the legless than the two-legged species,—the only justification for new commentary on such comparatively well-known works as the *Eighth* and *Ninth* Symphonies is the hope of clearing a way for budding Brucknerites to approach the works themselves directly without having first to choose which of many clamorously competing guides they shall engage to lead them there in the course of time or eternity. Even such an attempt to appeal from commentators drunk to the composer sober has its risks: like “wars to end war,” further commentary designed to allay controversy may exacerbate it, or may do little more than exemplify Mark Twain’s maxim, “I hate explanations; they mix things up so.” But, just as sometimes it is possible to settle a will and probate an estate after some of the more contentious legatees relinquish time in this world for eternity somewhere—anywhere—else, it may be helpful at a time when the most violent of Bruckner’s antagonists lie mouldering in the grave to exorcise such of their souls as seem to keep marching on.

Sound advice to any music-lover seeking first acquaintance with Bruckner or any other composer is to hear some of his music as sympathetically as one can, go away and let it sink in a bit, and then go back either to hear it again, hear some other of his compositions, or, better yet, do both. Since Bruckner performances are still not frequent, this may seem hard to do in his case; but since some excellent presentations of his works have now been recorded, it is not so difficult as it used to be. It might be wise, however, for a person who would like to “make friends” with Bruckner to hear an actual performance first, and then have recourse to the phonograph only when he craves a rehearing; for the phonograph, in spite of great improvements during our time, is still better in reminding one of what one has really heard than in forecasting what one may expect to hear.

To ensure “sympathetic” hearing as early as possible, the novice—or, for that matter, the expert—had probably better “approach” any new work by listening for what it seems to express. Much of the tumult and shouting of the form-versus-expression controversy seems to have died down; even the most isolationistic “structuralists” seem no longer to insist very emphatically that the only road to mu-

## Chord and Discord

sical salvation is devout belief in the doctrine that art is a dualistic universe in which form plays the role of God and expression of Satan. To-day everyone who thinks about esthetic matters at all realizes that without structure and form expression cannot even stand up, let alone live and function; but few believe any longer that the pattern of such a structure, whether derived from postulated eternal laws or merely the fashion of a period, can alone or chiefly determine whether the expressive content of a work of art is legitimate or indeed whether there is any real content at all. Certainly composers behave as if they were more interested to communicate expressive tonal ideas than to prove the assertion: for example, Bach's *Art of Fugue*, Wagner's music-dramas, and other masterpieces in which the composer voluntarily selects and follows a plan of some intricacy and precision, and seems bent on proving the merits of his plan, still do not prove that the plan is so excellent as to assure any duffer of producing masterpieces by following it, but rather that such a plan may help to full expression a composer with something vital to express if he is qualified to master his forms rather than be mastered by them. A tonal structure without expressive content is nothing more than a technical exercise, regardless whether a Hanon honestly so entitles it or a Cherubini speciously tries to palm it off as a fugue or overture on devotees so gullible as to accept his certified chalk for authentic cheese.

Any composer, then,—Bach, Bruckner, or Bennett,—writes a piece which expresses something in what psychologists call the "affective" category, and presents it in a "form" which makes it intelligible to those who enjoy such affective stimulation through tonal patterns; whether this form be a "small form," adapted to present a single and relatively simple bit of expression, or a "large form" designed to develop one or more such items to a considerable extent, the logic of the "form" is chiefly functional and derived from the expressive content itself, with the aid, to be sure, of past experience and practice. Whether or not the expressive content of a particular piece of music has previously been treated artistically in another medium,—such as a poem, story, drama, picture, statue, architectural structure, etc.—and even whether the composer mentions the fact if it has, is of only contributory significance in a world where some element of familiarity enables most people to grasp a new experience more readily by relating it to former experiences; the fundamentally important thing is that any musical composition, whether or not it has or acknowledges any extra-musical associations or analogies, stands or falls on the musical beauty of its content and presentation; and this is determined in the end by the so-called "test of time,"—i.e., repeated hearing by people who respond to musical stimulation.

Unfortunately, composers in practical life are far from sure of their day in court. If a composition is not heard the "test of time" cannot be applied; if it is heard once and then neglected it is little better off. To make it heard the composer may have to overcome

inertia and preoccupation in a series of performers, only to be blocked presently by persons who make a living for themselves by selling critical prejudices to the public. In Bach's time nobody seemed to care whether a bit of expression entered music by a literary association or not; but woe to that composer, even Bach, who used new patterns or even used old ones differently from his predecessors. To-day Bennett can be enjoyed by people who enjoy light musical entertainment, but cannot even get "serious" musicians to listen to him at all without employing propaganda designed to prove that his graceful and piquant pieces are more serious and symphonic than they really are or even should be.

As contrasted with the eighteenth and the twentieth centuries, the nineteenth was a period during which music critics and theorists were making a barnacle-like living by attaching themselves to powerful craft in the musical seas (incidentally, thereby considerably impeding the progress even of their hosts), devouring whatever life might come their way. Not Bruckner alone, but any composer of the time, could not be judged artistically on his expressive content and the appropriateness of his formal presentation: he must choose between allying himself politically for self-preservation either with a majority party led by Hanslick or a minority party whose divided leadership embraced the amiable Ambros whom many liked but to whom nobody paid much attention and the belligerent Wagner who could compel attention but made thousands of enemies and very few friends. Bruckner, who loved music but had no stomach for intrigue decided to live in Vienna, which proved less musical and more political than he had conceived it. Vienna was musicopolitically dominated by Hanslick, whose critical philosophy, so far as one can deduce from his published writings, rested as unshakably as the Delphic tripod on the following "three-point support": (1) music cannot express anything except "sounding animated forms" (i.e. tonal patterns); (2) composers should therefore conform in practice to this doctrine and to such procedure as tradition and St. Hanslick have hallowed; (3) composers who attempt anything more must be hunted from the music-marts with as much inquisitorial paraphernalia as may at the moment appeal to St. Hanslick as good if not always strictly clean sport, and the composer's offense in attempting to express anything is only aggravated if he proves he can get away with it, as Wagner, Bruckner, Wolf, and Mahler were able to do,—unless, like Brahms, the offender can be bought over into the Hanslickian chapel, in which case he may compose as expressively as Brahms did so long as he keeps up his Calvinistic protestations of faith. Hanslick's three main tenets would seem to be a sufficiently unholy trinity to found a cult upon; but Dr. Max Graf, who had ample opportunity to observe Hanslick in action, has recently added the following enlightening psychological data: Hanslick, among other things, suffered from two concurrent and vigorous if not strictly consistent factors of personal taste;—a

preference for light operetta and dance music of the Viennese type over all other types of music, and the ambition to be recognized as the most scholarly musician of time and eternity. Naturally, many of Hanslick's contemporaries heartily disagreed with him, and some made bold to dispute him publicly; but as he had both more venom and gift-o'-gab than any of them except Wagner, and had the advantage over Wagner of never having composed anything that anybody would listen to, Hanslick had things his own way long enough to prevent any composer except those who might come to terms with him—as Brahms did—from finding in Vienna either a fair forum or even an adequate livelihood.

Bruckner's forthright and eloquent expression thus received in Vienna the type of warm welcome which telling the truth might be expected to receive in a community where nearly everybody has settled down, either from preference or under pressure, to "always saying the proper thing,"—and he fared little better in employing such forms as were logical settings for his expression, because, at that time in Vienna, "mastery of form" officially consisted in treating musical ideas not as Beethoven treated them, but as Hanslick said Beethoven treated them. The fact that some of Bruckner's *melodic ideas* (as distinguished from formal treatment) showed here and there a Beethoven influence, much as anyone who wears his own face instead of having it done over at a fashionable beauty-parlor will occasionally show some characteristic of one or more of his legitimate ancestors, did not help matters at all; these could be—and were—derided as padding out with Beethoven's ideas when Bruckner ran dry, or even twisted into evidence that Bruckner was presumptuously trying to compete with Beethoven in that master's hallowed domain. Little help for Bruckner, furthermore, from those who paid only lip-homage to Hanslick and who really despised and even detested him was to be expected or proved to be forth-coming, since people who are weak enough to be intimidated commonly lose no love for those who display more courage than themselves; only a few whose subjugation was less than complete because their manhood was at least more than average rallied to Bruckner's side on the principle that it is better to die for one's convictions than to live without them.

Bruckner himself kept out of the controversy as much as he could, and with quiet dignity went his own way pretty consistently; now and then even he could not continue to suffer fools gladly. The recent publication of his symphonies without the "improvements" which he was more or less forced to make has been discussed elsewhere and stands where he who runs may read; at least we now know what he intended, and find that this was practically always better than what he had to concede to his friends' view of what would be more "reasonable," "practical," "discreet," and even "politic."

But there is still some confusion as to where he stood regarding "programs." In his day music was held to be either "absolute" or

"program" music, and only two views as to "form-versus-expression" had any standing: one view held that only "absolute" music rigorously following "the" sonata form had any merit whatever (I say "the" sonata form, since no follower of Beethoven was permitted even Beethoven's freedom of outline and treatment); the other, that the foregoing type was the best because the "purest" music, but extended sufferance (though not suffrage!) to "program" music and allowed some slight formal liberties in treatment only when "necessitated" by the exigencies of description. Naturally a composer who did not care to allege a "poetic basis" to justify every slightest manifestation of originality was under considerable temptation to deny any expressive content whatever in any work which even approached symphonic structure; and in playing this sort of game Bruckner was habitually as poker-faced as Brahms himself. But now and then Bruckner could be nagged into "explaining" his works in terms which brought the extremists of both "absolute" and "program" music down upon his devoted head; so we find him from time to time excoriating those who sought to attach "programs" to his symphonies and then suggesting "programs" which made his friends rend their garments and hide their faces.

Bruckner's apologists usually point out that one and the same man is usually not expert in both tonal and verbal expression, which may be true enough in general. But Bruckner's salty wit and wisdom as reported needs no apology. If it is true that he made the concurrent dependence and independence of a subject and its counterpoint graphic to a presumably stupid and pedantic (or perhaps merely over-semantic) pupil by comparing the combination to a man and his dog strolling together, there is no occasion to smile at his naïveté, though every reason to enjoy the adroitness of his parable. In spite of all tub-thumping to the contrary, a valid epigram is more graphic than a technical abstract, and may show profounder analysis as well as a more understandable synthesis. However, we should be wise to remember that Bruckner as a teacher had formed the parable habit, and not insist upon taking some of his brief exegeses of his music too literally.

Thus when, in contrasting the *Scherzo* of his *Eighth Symphony* with the first movement, Bruckner sketchily remarks, "the German Michael," we should not blush for him as having attempted or intended such a naturalistic portrait in tones of the clumsy or sound-hearted peasant of picture and caricature as Strauss might have drawn (and drawn well), but should realize (as the music tells us, anyway) that this *Scherzo* turns for the moment from the tragic-heroic vein of the first movement to something homelier and even a bit quaint, but still valiant and sturdy. Likewise when Bruckner, in connection with the *Finale*, makes some reference to a meeting of three emperors with their armies which he had witnessed, we should not worry lest his whole *Finale* were conceived as some sort of mere movie-sound-sequence

of a big parade; rather the actual scene which Bruckner witnessed may well have stirred him more than it would have stirred us, who have been brought up to regard emperors and their armies as a more or less unholy show rather than a holy one,—the important factor is that in his music Bruckner expressed magnificence with reverence and awe, but fortunately never dragged in any emperors except conversationally. What starts a composer on a train of musical development may be casually interesting, but where it takes him—or he it—is what really matters: Chopin told George Sand that the opening of his *F minor Fantasy* was suggested by a dream of her marching about the house at night accompanied by her daughters, but he did not tell her that the stormy main body of the piece describes her boxing the children's ears and knocking the furniture about (capable as she may have been of these indoor sports), and only a pedantic fool would feel logically committed to such a conclusion.

In plain fact music may or may not attempt close description (if it does so, and succeeds, it has to stand or fall on its musical coherence no less than if its expression is general rather than specific), but its patterns are drawn from tonal and rhythmic patterns in nature,—except, perhaps, that atonal patterns have to smuggle in some extra rhythmic reserves to come to life at all. Darwin and Spencer recorded some shrewd preliminary observations in this matter, but never finished what they began, and their vogue passed before anyone else undertook to complete the investigation. So far as I know, the first, last, and best such report is Jules Combarieu's *Les rapports de la musique et de la poésie*; but this is now out of print, apparently because the price of his admission to the French Academy was his *La musique: ses lois, son évolution*, which has been translated into all languages and is largely a sort of retraction in Hanslickian terms.—One wonders if, like Galileo, Combarieu ever murmured, "Nevertheless it *does* move." At all events, music moves; and, in employing both inflections and rhythms which we have experienced, recalls our experience and becomes "expressive." Even Hanslick had to admit, "Music does not reproduce emotions but rather the *dynamics* of emotion," to which one might retort, "Give me the 'dynamics' of a feeling and I shall feel it."—I recall one evening when a professor of ethics and a sportsman dropped in simultaneously for a call, and could not find any common interest to talk about until I played them a piece which both requested; at the close the philosopher remarked, "All the best music is ethical," while the sportsman's comment was, "That's like a drink of whiskey to me." Undoubtedly each was stirred by the "dynamics" of his favorite stimulus, and responded to a "lift" in terms of pleasurable intoxication, if you will.

Thus, if a composer writes, say, a developed series of such expressions of the dynamics of emotion and tells us, "I am telling the story of Tristan and Isolde," we are pretty likely to respond as he asks, provided he does not stray into inappropriate or neutral tonal pat-

terns. If on the other hand he asks us to associate his patterns and treatment with no specific story or pictorial image we are pretty sure to recognize some coherent development of mood and feeling which, even if we do not name it—and, after all, why should one label every-thing before daring to relive some sequence of one's response to life?—we still find "expressive." If his patterns and their development, however, are not congruous the work seems incoherent and thus "in-expressive"; then we may still amuse ourselves by playing the game of "structural analysis," which with most people seems not to go much further than counting the x's in an otherwise uninteresting address, though adepts may actually get so far as parsing some of the grammar and rhetoric.

Unfortunately a composer is at the mercy of his performers, who may play the notes in time and tune (Hanslick says this is all that is necessary with really good music—was he thinking of his pet waltzes and operettas? If so, so far as abstinence from "expression" is concerned, he was like the drunkard who says, "I can take it or let it alone!"), but miss all suggestion of connected mood and development. The hearer's plight is then sad, and sadder yet if he falls back for help upon commentators who would have him look for first and second themes (first themes usually come first, but second themes have a nasty way of not coming second), or (more recently) for certain graceful themes which may be regarded as Freudian symbols of the attractive girls whom Bruckner liked to look at but who didn't care to look long at him, or presumptuous imitations of Beethoven and servile imitations of Wagner, or even for German Michaels and splendiferous emperors,—all depending upon whether Simon says thumbs up or thumbs down or resorts to some other kind of simony, including Simple Simony. A commentator, like the Scriptural horse, is "a vain thing for safety." We have been warned that only extreme adepts can "make anything" out of the formidable *Eighth* and *Ninth* symphonies of Bruckner. I offer the following as the merely personal response of one for whom familiarity with Bruckner has bred love and admiration; also with the further understanding that some of the terms which I may use are not scientific and semantic but poetic and figurative,—for instance, by the term "Titan" I do not mean some physiological giant whose objective existence I have superstitiously taken for granted, but have borrowed a term from poetic ideology to embody an allegorical conception of manhood developed beyond the statistical norm of what we call (no less allegorically, by the way!) "the man in the street."

*Eighth Symphony*.—First movement: A Titan in tragic-heroic struggles. *Scherzo* (and trio): scherzo, homely, even quaint, but sturdy and valiant; trio, tender yet strong in repose. *Adagio*: a man alone with his God. *Finale*: an Apocalyptic vision of the cosmos at the Last Day.

*Ninth Symphony*.—First movement: solemn thoughts on man and

destiny (since anyone who has heard Beethoven's *Ninth* even once must notice "family likenesses" in the two first movements, one may point out that there is little basis for a critical scandal in two thoughtful men thinking about some of the same fundamental things and expressing their thoughts with some agreement). *Scherzo* (and trio): the dance of nature, now rudely forceful, again ethereal and elusive. Slow movement: Bruckners' swan-song; at the end the now gentle old man is very near to the angels,

#### KILENYI MAHLER MEDAL AWARDED TO HANS KINDLER

Justice Owen J. Roberts makes presentation on behalf of  
The Bruckner Society of America.

The Mahler Medal, designed by Julio Kilenyi for the exclusive use of the Bruckner Society of America, Inc., was awarded to Hans Kindler for his efforts to create greater interest in and appreciation of Mahler's music in the U. S. A. Kindler introduced *Das Lied von der Erde* and the *Fourth Symphony* to Washingtonians (March 21, 1941 and January 10, 1943). On February 8 and 9, 1944, the *National Symphony Orchestra* under Kindler's direction performed Mahler's *Fourth* in Baltimore and Washington. On February 9, 1944 Associate Supreme Court Justice Owen J. Roberts presented the Medal to Kindler on behalf of the Bruckner Society following the Washington performance of the *Fourth* which was greeted with great enthusiasm by the audience.

#### KILENYI MAHLER MEDAL AWARDED TO MOSES SMITH

The Mahler Medal of Honor, designed by Julio Kilenyi for the exclusive use of the Bruckner Society of America, was awarded to Moses Smith of the Columbia Phonograph Co. in appreciation of his efforts to create a greater interest in and appreciation of Mahler's music in the United States. Bostonians will remember Mr. Smith's excellent reviews of Mahler performances in the *Boston Evening Transcript*. The recording and release of the *Mahler First*, conducted by Mitropoulos—the first studio recording of a complete Mahler symphony in this country—was due in great part to Mr. Smith's indefatigable work.

# Gustav Mahler

By FRANZ WEBFEL

The following essay by the late Franz Werfel, world renowned author, was read over the ABC Network as an introduction to the radio Mahler cycle conducted by the late Erno Rapcs in 1942.

**G**USTAV MAHLER was born in a little town in Bohemia. Melodic are the very whisperings of Bohemia's groves and meadows, the murmuring of its fertile fields and streams, and song accompanies the women at their work. This song remained ever the primal song in Mahler's heart and lives in his symphonies in the ever recurring voices of Bohemia—even the horn and trumpet signals of the soldiers in the barracks to which he so often listened as a child.

As a boy Gustav Mahler was sent to Vienna to study music at the Imperial Conservatory. Now he became acquainted with a landscape which, though new, had familiar features. All the world knows the greatness, the uniqueness, the bitter-sweetness of the melody of Vienna and the Austrian land from the works of Haydn, Mozart, and Schubert. Young Mahler drank in this Austrian melody and in his soul it blended with the Bohemian in a sublime unison.

No composer is more completely absorbed in nature than Gustav Mahler. In all his nine symphonies he reveals its mysterious and patent force, from the bud to the flower, and from wastrel profusion to decay; and again and again death. The very symphonic form, the origin and the development of the themes seem to repeat the fate of organic matter. Mahler's music has no program, but it is poetic music, full of imagery, metaphors, crises. Its eternal fundament is wondrous and pitiless nature. And in the center of all stands Man. The words of the Alto-Solo in the Second Symphony express how Mahler regards Man:

“O red rose sweet  
Man lies in direst need.”

Mahler's music is tragic music. Truly, Man does lie in direst need. He yearns to fill the short span of his life between waking and sleeping with superficial enjoyment. A dark law, however, forbids him this easy path. Fight he must, tired and weak in body and spirit though he be. Hide as cunningly as he may, the struggle will always find him. This titanic effort to which man is condemned is portrayed in many movements of Mahler's symphonies.

The foundation of this symphonic world is nature. And in the center of all stands Man. But above him spreads God's heaven. Gustav Mahler's music is not only tragic but also mystic music. It points ever

## Chord and Discord

aloft. Though Man lies in direst need, God will place a little light in his hand that will lead him into Eternal Life; this is the promise of that Alto-Solo. This little light, which is the hopeful and believing soul itself, pervades the highest moments in these works. That is why their tragic quality is never depressive but comforting and uplifting.

Gustav Mahler's life is an explanation and verification of his music. He rose out of the most confining circumstances. When eighteen he was already conductor at a small theatre. Then for years he worked in the provinces until finally through his talent and energy he rose at thirty-seven to the all-powerful post of Director of the Imperial Opera at Vienna, in the face of the most embittered opposition. His activity there meant a reformation of the entire musical life. Ten years later he came to New York as one of the greatest and most celebrated conductors of his time. He died at the age of fifty. His activity as conductor and operatic director might well have filled another's life to the brim. While others rested he created his great work, the nine mighty symphonies and many Lieder cycles, works which today speak ever more forcibly to us. Thus, in the short pauses, which his duties allowed him, he became the last of that line of great men, which begins with Haydn and culminates in Beethoven.

### LIEDEE EINES FAHRENDEN GESELLEN SUNG BY KARIN BRANZELL (Juilliard School of Music, N. Y., July 17, 1945—Broadcast over WNYO)

Karin Branzell, the noted contralto, who in her prime left the Metropolitan where she had acquired an enviable reputation, especially for her portrayal of Wagnerian roles, evoked thunderous applause from an audience at the Juilliard School of Music as a result of her fine rendition of *Lieder eines fahrenden Gesellen*. Mme. Branzell, who had sung the cycle at a recital given earlier in the season, again gave evidence of her thorough understanding of Mahler's message and once more showed the unusual combination of a luscious voice and a very high degree of intelligence. Local radio listeners were afforded the opportunity of hearing an excellent program beautifully interpreted and owe a debt of gratitude to the Municipal Station, WNYC, for this rare treat.

## Gustav Mahler the Mystic

By MAX GRAF

The following article, a chapter from *Modern Music: Music and Composers of the Twentieth Century* by Max Graf, to be published in September, 1916, by the Philosophical Library, Inc., 15 East 40th Street, New York, N. Y., is printed by permission of the author and the publishers.

WHEN Gustav Mahler conducted his *First Symphony* in Vienna and the symphonic poems of Richard Strauss were still new I asked Mahler what he thought of Strauss. He replied: "He and I are like two miners who sink their shafts into the same mountain from two different sides."

The mountain he meant was the "magic mountain" of romanticism. Without Bruckner and Berlioz, without Wagner and Liszt the Mahler orchestra is unthinkable. All of Mahler's songs are set to lyrics of romantic poets. He was so powerfully influenced by the anthology *Des Knaben Wunderhorn*, master store-house of romantic fantasy, that the lyrics in the *Lieder eines fahrenden Gesellen* (*Songs of a Wandering Journeyman*), which he wrote himself, might easily be taken for poems from that collection. Their folklike tone, all that is dark, intimate, and naive in their verses, are reborn in his own lyrics.

The theme of his first cantata, *Das Klagende Lied*, is a romantic folk-tale. Like all romanticists Mahler longs for the simple sincerity of folk-tunes as they are sung by young girls promenading in village streets of a summer evening, with glow-worms in their hair and love in their hearts. To Gustav Mahler, as to all romantic artists, music is a mysterious language from Beyond. It resounds in nature, in woods and meadows, in heaven and earth. Tone for him has symbolic meaning.

Compared with Mahler, Richard Strauss seems naive. The musician Strauss is a narrator, a delineator who portrays reality. The perceptive faculty holds unbroken sway throughout his art work. The intellectual sources of his inspiration made many friends for him—among them a poet like Hugo von Hoffmannsthal, a stage producer like Max Reinhardt.

His friend, the composer Alexander Ritter, spurred him on to compose program-music. The basis of Strauss' creation is the true South-German appreciation of music and color. It surrounded him everywhere in Bavaria. The churches of Munich are elaborate structures in baroque style, filled with golden altars, marble saints, trumpet-music. In the Bavarian hamlets the white walls of rustic houses are adorned with frescos; flower-pots decorate the windows. Not

## Chord and Discord

far from Garmisch, where Strauss built his home, lies Oberammergau, for over three centuries the scene of the celebrated Passion Play as presented by Bavarian peasants, with a wood-carver portraying Jesus.

This Bavarian delight in colors and bright figures is perpetuated in Richard Strauss. His love of Baroque is also a Bavarian heritage. Since 1652, the year in which the Bavarian Prince Ferdinand Maria married an Italian, Adelheid von Savoyen, the splendor of Baroque flowed across Alpine passes down to Munich. Venetian artists executed the *décor* at Bavarian court festivities. Near Saint Salvador in Munich an Italian opera house was built. The printers in Munich printed Italian books. Italian architects built Jesuit churches in Munich, while in the village square the priests presented theatrical plays with singing angels and a divine tribunal.

This, then, was the Bavarian baroque upon which the art of Richard Strauss fed; nor was it wholly in jest that he told me: "I first realized in Italy that my *Elektra* is really an Italian opera." With *Ariadne auf Naxos* Strauss is transformed into a full-fledged Italian opera-composer, coloratura arias and all.

Inextricably interwoven with Mahler the musician is Mahler the thinker who ponders over the problems of world, heaven, God, death, and resurrection. His mental striving takes tonal shape. His inner struggles, paralleling those experienced by Dostoevski, Tolstoi, and Strindberg, are soul-searing battles with the inmost self. Nothing could be more alien to Mahler than the Straussian concept of the world as scarcely more than a colorful web of superficial phenomena. Worldly phenomena are but symbols for Mahler, pointing the way to a Beyond. Unlike Richard Strauss, Gustav Mahler never composed songs because he wanted to make music, because he enjoyed singing, or because he wished to portray soulful moods in melody. His songs are the seed out of which the symphonies grow; symphonies are expanded songs. Both ask and answer the same tormenting questions. The songs are sketches toward symphonies, sometimes appearing in the symphonies themselves to help illuminate their significance.

At the start of every symphonic group by Gustav Mahler one finds a song-cycle. Mahler's *First Symphony* grew out of the youthful experience of *Lieder eines fahrenden Gesellen*; the *Second*, *Third*, and *Fourth* symphonies out of the songs of *Knaben Wunderhorn*. In the *Fifth*, *Sixth*, and *Seventh* symphonies fragments of the melodies of *Kindertotenlieder* assume dominant roles.

Most of the songs had genuine orchestral timbre from their very inception. Of the forty-four published songs by Mahler the majority are provided with an orchestral background, while the song cycle *Das Lied von der Erde* was actually described as a "symphony" by Mahler.

Not only is the tonal plane of the songs symphonic, but song and

symphony are spiritual kin, as big world and small world, presentiment and fulfillment, initial step and ultimate goal.

Mahler's symphonies themselves, all closely associated with one another, are again a unit. The *Fourth* was originally meant to be the *Finale* of the *Third* from which it became separated as a child from its mother. All his symphonies contained the same mental conflicts, the same solutions to the problems that oppressed him.

Typical symbols and ideas keep re-appearing in all the symphonies. Anyone acquainted with the theories of Freud knows the meaning of such symbols. They are sound-forms of psychical complexes arising from the depths of unconscious emotional life.

One of these symbols is the funeral march that haunts the songs and symphonies with muffled drum beat. Another is the trumpet-signal which, in the form of *Reveille* or the *Great Roll-Call*, arouses the dead. Still another is a convulsed contortion in the music, suggesting sudden fright. It breaks the blissful spell in the *First* and *Fourth*. Yet another symbol is the *Laendler* dance, representing banal pleasure, earthly comfort. This vivid symbolism dominates all Mahler's artwork.

Irresistibly Mahler is drawn to the same problems of life that confront Oedipus as he faces the Sphinx. Among these the problem of death had special significance for him from the outset. Thus the *First Symphony* also contains its section devoted to thoughts about death. As the dirge takes its sneering, grotesque way through the third movement, the soul stands by weeping.

Mahler's *Second* was devoted entirely to the question of life and death, the terrors of the Last Judgment, and the eternal bliss of resurrection. It is his mystery play of the Hereafter out of which the song of the bird of death resounds. In the third movement of the *Fourth Symphony* Death plays a harsh song on his violin. The *Fifth* begins with dismal forebodings of death, while the *Lied von der Erde* is filled with them. In the *Tenth Symphony* Mahler actually wrestles with Death who has come for him. Beneath the third movement of this astounding unfinished score he has written: "Death! Procl! (probably: Proclamation)." At another point: "God, O God, Why hast Thou forsaken me!", and several bars later, "Thy Will be done!"

Even greater emotional stress enters into the fourth movement where one may read: "The devil dances with me. Madness grips me, accursed one! Destroy me, that I may forget that I am! That I may cease to be, that I may forget."

The ten symphonies composed by Gustav Mahler between the years 1885 and 1911, the year of his death, record his emotional conflicts, his development, his struggle with the dark forces of his being, his ascent from Hades to Heaven, and his fall from Heaven to Hell.

Mahler remained always the unredeemed soul. In the *Finale* of the *Third Symphony* the planets revolve around the sun, Divine Love

## Chord and Discord

sways the universe, and the fighting spirit wins eternal bliss. Yet the naive child's heaven of the *Fourth* that follows is but a temporary *intermezzo* of light. Truly Mahler is the Ahasueric soul that plunges into the night and ensuing despair of the *Fifth*, *Sixth*, and *Seventh*. Having but glimpsed God he again stands in solitude.

An ominous trumpet blare, heralding a gloomy funeral march, starts the cycle of the *Fifth*, *Sixth*, and *Seventh* symphonies. No God, no angel sings to Mahler here. Gargoyle faces grin at him. Then again follows elevation to the realm of light in the *Eighth Symphony*, with its jubilant choruses and hymns of Divine Love. The "sparklet"—a term used by the mystics to denote the human soul—is drawn up to the great Source-light whence it had but strayed.

In the *Ninth Symphony*, however, Mahler again conjures up dark shadows that dance, mock, and threaten. There is something tragic in this striving for exaltation, for light and Divine Love. Gustav Mahler never found permanent peace and eternal bliss as did others who went in quest of God.

Not even in nature did Mahler find peace. He felt the beauty of nature keenly and portrayed it accordingly. In his *First Symphony* he gave a wonderful description of meadows in the sunlight and the singing of the birds. His *Third* contains fascinating pictures from the world of plants and animals. In the *Lied von der Erde* he sings of beautiful young girls dancing and strong young men riding wild horses.

Yet there was to Mahler also something sinister in nature. In a conversation he described how "the blue sky suddenly becomes dreadful" and how "on the most beautiful day in the sun-flooded forest one is often seized by an uncanny terror". As a child Mahler could often be found sitting on a tree stump, staring into space as though spellbound. He once explained to a friend that "life sometimes loses all meaning and seems a ghastly mockery from which one would turn away nauseated".

In a similar manner the Gothic world of the Middle Ages sensed nature as a diabolical spectre. Just as from the cathedrals of the 13th century animal-like demonic waterspouts burst forth, so from Mahler's symphonic scenery dragons seem suddenly to emerge.

Mahler's relation to nature is never naive. To him nature is a stepping-stone along the path to God, gaining its deepest significance from the Ultimate Goal. Thus he pictured, in his *Third Symphony*, the path of evolution from rigid, immobile substance to flowers, animals, angels, and God.

All of Mahler's great symphonies are mystery plays in symphonic form. Their structure parallels the staging of spiritual plays in the Middle Ages: Hell at the bottom, above that the earth, and at the top, heaven. In the finale of the *Third*, in the *Fourth*, and in the *Eighth* Mahler described Heaven: shining, gay, transfigured with light, vibrant with ringing bells, singing angels, and trumpet fan-

fares. According to his own written directions, the "Heavenly Choirs" of the *Eighth* "should no longer be human voices, but planets and stars revolving in their orbits" (From a Mahler letter dated 1906).

He was a cosmic soul, like the philosopher Spinoza, for whom God represented all being, all nature, all thinking. But the way to God leads through the burning thorn-bush of pain; in the portrayal of such a holocaust of the soul Mahler reveals himself a real modern, afflicted with all the hysteria of our troubled age. This lends his music that extraordinary emotional tension which even his purely musical genius seems at times unable to master. He then tends towards excess, becoming spasmodic, heaping media upon media: three massed choirs in the *Eighth* above a gigantic orchestra; the final scene of Goethe's *Faust* over a Latin medieval hymn. The orchestra assumes huge proportions, this giant orchestra itself being overpowered by a massed group of wind-instruments pealing forth chorales.

In the midst of such music, portraying a nerve-wracked Faust, there occur moments of ecstatic rapture, as in the *Adagio* of the *Fifth Symphony*. The gigantic tableau of the *Third* is followed by the delicate miniature of the *Fourth*, the massive jubilation of the *Eighth* by the chamber-music of *Lied von der Erde*: a Japanese engraving after a colossal fresco.

The tragic composer, tossed about between extreme gentleness and ecstatic vision, lacks moderation and intrinsic balance. From Mahler's inner struggles there is born only exaltation and despondency, no contented repose, no lasting peace. The point of utmost despair is attained in the *Sixth*, where life, almost wholly abandoned, seems but a distant memory. Night consumes all previous existence. Fate swoops down, hammering cosmic blows that shatter everything. The percussion instruments in this symphony are frightening noises of the night. In the midst of this universal terror stands man; no, he walks, he marches, he beats the drum; nothing daunts him; he sinks into abysses, but he continues marching until, finally, at the end of the symphony, he collapses—a most unusual ending for Gustav Mahler, who generally knows only triumph. Or is this truly the end for the solitary fighter?

The following symphony, the *Seventh*, presenting the next scene in Mahler's huge symphonic drama of man, provides the answer. At the start of this work the prone man raises himself up. His collapse was merely an episode that proved how heavy were Mahler's spiritual and emotional conflicts; he escapes from them and ascends to the C-Major dithyramb of the *Finale*, in which all the bells celebrate a victory which, however, turns out to be transitory.

Gustav Mahler belongs to the restive, tragic fighters of the 19th century beginning with Lord Byron and ending with August Strindberg, whose proud foreheads bear the mark of the unredeemed. As an intellectual personality he is as great as he is individual. Al-

ready at the age of twenty-five, when he composed his *First Symphony*, he was entirely himself. The blissful abandon of the first movement of this symphony, the *Laendler* gayety of the second section, the scornful parody and the harshness of the third, and the struggles of the *Finale* are Mahler. Never before had similar music been written. Like the Bible it begins with Paradise, the fall of man, and the expulsion from the Garden. Like the Prophets it ends with a trumpet-sermon on the Glory of God.

## II.

Prophet, philosopher, and mystic that he was, Mahler's approach to music was purely spiritual. It is not the musical impulse in Mahler that creates the decisive talent for expressing himself in musical forms; rather it is the need of unburdening himself and of finding his way from the night of life to the light of heaven. A brother of Mahler's had perished by his own hand. He had lost his way in the gloominess of life. Gustav Mahler himself succeeded in shaping the afflictions of his soul into works of art, thereby liberating himself.

An artistic personality of this nature belongs to romanticism. It was a romantic poet, Th. A. Hoffmann, who invented the figure of Conductor Kreisler, the demonic musician who is obsessed by his art, who regards reality, people, and society as banalities.

Gustav Mahler was the Conductor Kreisler come to life. When, as director of the Vienna Opera, he would cross the streets with hair flying, hat in hand, or go storming up the narrow winding stairs to his rehearsal room, or (and then more so than ever) when he sat at the conductor's stand in the Opera, a glowing, flickering flame, he made one feel that Conductor Kreisler had really stepped out of Hoffmann's pages.

As a composer, too, he was a Conductor Kreisler, a mystic, like all romantic philosophers, to whom world, nature, man were merely manifestations of God. Again like the romantic philosophers Mahler saw in the real world only an allegory. His scenic descriptions are symbolic, unlike those in the symphonic poems of Richard Strauss, which are realistic. In Gustav Mahler's *Sixth Symphony* there is the sound of cowbells just as in the *Finale* of Strauss' *Heldenleben*. Yet while they are real bells for Richard Strauss, bells such as he could hear every morning on opening the windows of his study, to Mahler they are symbolic sounds. They represent the last earthly note to reach the wanderer making the ascent; they are symbols of distance and solitude.

The cuckoo that sounds its call in Mahler's *First Symphony* is not a realistic cuckoo which, like every other cuckoo in the world, and like the cuckoo in Beethoven's *Pastorale*, calls in thirds. Mahler's cuckoo calls in fourths, a symbolic cuckoo. In Mahler's music military marches and funeral marches are all symbolic rhythms, while

the sound of the hammer in the *Seventh Symphony* is a symbolic one. The *Laendler* and waltzes in his *scherzos* are not dance music, but parables of animal love of life. All sounds and rhythms, all worldly phenomena have only spiritual meaning for Gustav Mahler. To him nature is nothing real or concrete, but just a plane of sojourn for the soul on its path to God.

Gustav Mahler carried forward the development of the classical symphony-form and the romantic orchestra from a spiritual rather than from a purely musical viewpoint.

The classical symphony-form had been like a consonant harmony, its four movements standing at the same level. With Mahler, who fights his way upwards, the symphony achieves gradation. The classical equilibrium of the four movements is shattered even in Mahler's *First Symphony*. The gay first two movements are but a prelude, the parodistic third movement an intermezzo, and all three are just a preparation for the *Finale*; a tremendously expanding section representing the sum and substance, the gathering of all the significant forces of the whole symphony.

The *Second* and *Third* symphonies are constructed in terraces, like the minarets in ancient Babylon. "My work forms a musical poem that embraces every stage of development in a step-by-step gradation. It begins with inanimate nature and progresses until it reaches the ultimate goal—love". Thus did Mahler himself describe his *Third Symphony* in a letter.

The spiritual energy with which Mahler erected these structures that aspire from earth to heaven is extraordinary. He got the inspiration for such forms from Anton Bruckner, particularly from the latter's *Fifth Symphony*; with the fugues of the final movement this symphony works itself upwards to the glory of the *choral finale*; or rather, it prays its way upwards. Yet, Mahler's accomplishment with these inspirations is his own personal creation. His symphonies, in their ascent, become an allegory for his titanism.

For these tonal structures Mahler, like his contemporary Richard Strauss, increased the number and variety of instruments of the romantic orchestra to immense proportions. However, this increased scope of instrumental coloring had a different significance for him than for Richard Strauss. Strauss enlarged the romantic orchestra because he needed new paint tubes for his pictures. It was materialistic pleasure in glory and splendor that augmented the orchestra of Strauss' symphonic poems to massive proportions. The new colors were to serve as festive decorations in the manner Richard Strauss so greatly loved. As he sat composing in his Viennese study beneath a colored wooden ceiling transplanted from an Italian *palazzo* he was surrounded by costly paintings and Greek statuettes.

Mahler's orchestra does not owe its existence to mere enjoyment of color, but rather to his cosmic aspiration. "I am the universe resounding," wrote Mahler after composing his *Eighth Symphony*.

## Chord and Discord

"Imagine the whole universe singing as it revolves." Mahler's use of the chamber-orchestra in his *Lied von der Erde* has similar significance. It is supposed to reproduce the gentle voices of the universe, the drifting of autumnal mists, the plaintive voices of birds, the quiet of twilight.

A number of years after Mahler's *Lied von der Erde* (composed in 1908) Richard Strauss employed a similar chamber-orchestra in his *Ariadne auf Naxos*. But here it was an artistic intelligence that shaped the fine, silken tones. In Mahler's music it is always the spirit that creates the tones; in the music of Strauss it is the desire for sensuous effect.

Employing tones as symbols, as Mahler does, is romanticism. Mahler is more deeply involved in romanticism than Richard Strauss. His point of departure is the poetry of the romanticists, the songs from *Knaben Wunderhorn*, and the Jean Paul novel *Flegeljahre*, that had already inspired Schumann.

His *Eighth Symphony*, too, is dominated by the spirit of romance; the Latin hymn "Veni Creator Spiritus" is a medieval poem discovered by the romanticists, while the ending of the Goethe-like "Faust" epic is genuine romantic poesy, inspired by the frescos in the Gothic cemetery at Pisa. The *Lied von der Erde* takes its text from Chinese poems by Li-Tai-Po, poetry of the Far East first translated and imitated by the romanticists.

Romantic also are Mahler's nature scenes, the animated and spirited universe, nature as symbolism; also his mysticism, his heaven, his earth, his hell. Romantic is the figure of Death scraping his shrill violin, as in a picture by Boecklin, or, potion in hand, riding a black horse, as in a painting by Franz Stuck. The type of artist Mahler represents is the romantic, differing from the type of Richard Strauss by virtue of ecstatic enthusiasm, fanaticism, and conflict with the world. Gustav Mahler is the supreme anti-realist among the artists of the 20th century.

A visionary like the Prophets of old, Mahler carries over into the modern, scientific age the heritage of spiritual visions. He is a true artistic product of a generation in which the greatest novelist, Dostoevski, was an epileptic, Strindberg a paranoiac, and Mussorgsky a drunkard. His nervous system was the sensitive nervous system of the era of Charcot, Liebau, and Freud. Dark childhood memories oppress him, haunting all his works. The trumpet-signals, the funeral marches, as well as many other characteristic features of his symphonies are such childhood memories. Sinister faces frighten him. While composing *Klagendes Lied* he saw his double coming through the wall of his room, and while writing the funeral march for his *Second Symphony* he literally beheld himself laid out beneath flowers and wreaths. We find in his music hysterically convulsed moments. Terror suddenly cries out. Tortured nerves groan.

He was a deeply suffering man like Blaise Pascal in the 17th cen-

ture. Above his symphonies he could have placed the Pascal phrase: "Car enfin qu'est-ce que l'homme dans la nature? Un néant à l'égard de l'infini, un tout à l'égard du néant, un milieu entre rien et tout". (What then is man in Nature? Naught when compared with the infinite, all when compared with naught; a half-creature midway between naught and all).

Pascal's belief that love belongs to a higher order than knowledge was also Mahler's tenet. The emotional conflicts of man aspiring toward the light were touchingly described by Pascal in his *Pensees*; in Mahler's symphonies they are reborn as music.

In listening to Gustav Mahler's music one realizes that the mechanical civilization of the 20th century, with all its technical magnificence, lacked something essential to the satisfaction of a more profound nature. At one of the greatest moments in Mahler's creation the dark voice of an angel starts singing:

Ich bin von Gott und will wieder zu Gott!  
Der liebe Gott wird mir ein Lichtchen geben,  
Wird leuchten mir bis in das ewig, selig Leben.

(I am from God; will return to God; Dear God will give me a little light; will light my way to blissful, eternal life).

So profound an artist-nature could never have been content with a colorful external life as experienced by Richard Strauss. "Man lies in abject need, man's lot is mortal agony," was Mahler's belief, and the *Third Symphony* proclaims with Nietzsche's words: *O Mensch gib acht! Die Welt ist tief und tiefer, als der Tag gedacht.* (Mortal, beware! The world is deep, yea deeper than day suspects.)

With the utmost spiritual energy Gustav Mahler sought the path to light, to universal love, and to God in his music. Often he compared his struggles with Jacob's battle with the angel. No musical expression seemed to him strong enough to symbolize these struggles. The directions in his scores accumulate: "With greatest fury"; "as though lashed"; "erupting violently"; "trumpets to blow with up-turned bell." The shrill little E-flat clarinet literally shrieks in his symphonies.

Sometimes purely musical power seems to him incapable of expressing his titanic intentions. Then the heaped-up orchestral voices become theatrical, Meyerbeer-like—a glaring pageant midst trumpet fanfares and pealing bells.

Monumental music, such as Mahler's symphonies, will always have to build with the hewn stones of triad music, just as temples will always rest upon pillars and columns. Yet Mahler's counterpoint, forestalling the harmonic union of the various musical voices, lets them go their several ways side by side. This many-voiced web (polyphony), hovering about the triad structure, does not, however, elude its dominance completely. Mahler used to tell how, as a child in the forest of Iglau, he would listen to the woods sounding in many voices,

## *Chord and Discord*

to the songs of the birds mingling with the rustling of the leaves and the storm sounding its melody amid the noises of the forest. It is this cosmos of nature that he sought through polyphony to translate into tone.

"From different sides must come the themes", he said. In the *Third Symphony* man marches straight through the conflicting sounds of the world, through its noisy and vulgar music, for that too has its own way to go. In *Lied von der Erde* a five-tone scale forms the nucleus from which all the melodies grow. A "tone figure", a crystal composed of five tones, forms the centre of all the tone patterns, as in the later works of Schoenberg. While Richard Strauss expanded the harmonic range with his naturalism, Mahler enlarged it with his spiritual fire and intellectual daring.

In the modern materialistic world, which at the turn of the century excelled in scientific research, in industry and commerce, Gustav Mahler was a herald of moral and ethical values.

The most eminent sculptor of this age, Rodin, perpetuated Mahler's features in many bronze busts, revealing the noble head of a thinker, a fighter, a man looking up.

### KILENYI-MAHLER MEDAL AWARDED TO FRITZ REINER

In March 1931, Fritz Reiner conducted Mahler's *Seventh* in Cincinnati. He performed the second movement of Mahler's *Second* in New York, Philadelphia, and Pittsburgh. On January 9 and 10, 1942, Reiner conducted *Das Lied von der Erde* in Pittsburgh. On March 9 and 11, 1945, he introduced Pittsburgh audiences to Mahler's *Fourth*. In recognition of his efforts to create a greater interest in and appreciation of Mahler's music, the Directors of the *Society* awarded the Kilenyi-Mahler Medal of Honor to him. The presentation was made on March 9, 1945, by Glendinning Keeble, Director of the College of Fine Arts of Carnegie Institute of Technology, acting on behalf of the *Society*.

## Some Mahlerian Misconceptions

By WARREN STOREY SMITH

IF to be great, as Emerson suggested, is to be misunderstood, then the manifold misunderstandings in regard to Gustav Mahler may be counted among the multiplying signs of his importance. First and most ill-founded of all was the assumption that he was a conductor with a mistaken ambition to shine also as a composer. This once-prevalent belief has now virtually disappeared. The fact that his music continues to be played and to be hotly discussed is sufficient answer to that one. Mere *Kapellmeistermusik* exhibits no such vitality. Rather does it perish with its creator.

A corollary of this canard that seems also to be on its way out is the notion that Mahler's music is lacking in physiognomy. Even the composer's admirers once bade us overlook his eclecticism as something relatively unimportant. It is now becoming increasingly apparent that he was one of the most personal of music-makers. And not only in his final phase, as represented by *Das Lied von der Erde* and the *Ninth Symphony*. We may recognize the essential Mahler in such early utterances as the *Lieder eines fahrenden Gesellen* and the *First Symphony*, which partly stemmed from that song cycle.

There are five important aspects of Mahler's many-sided musical personality and the *First Symphony* contains them all: a homely, folksy strain; a vein of pessimism and despair; a fondness for the grotesque, the bizarre; a fervid lyricism, which in earlier works does not always escape sentimentality, but which is sublimated in *Das Lied von der Erde*; and a preference for the *Laendler* type of Scherzo. These elements in his style may be variously traced back to his childish delight in the songs and dances of the people (not to mention military marches), to Schubert, to Berlioz, to Schumann, and to Bruckner, with whom he has but little in common, despite the frequent linking of their names. But to discern the sources of a composer's style is not necessarily to dismiss him as a mere epigone or even as an eclectic. Such things may be completely absorbed and fused into a single, if complex idiom, as they were in Mahler's case. That he had a style readily identifiable if not always easy to describe in technical terms is shown by the fact that critics of today are forever detecting *Mahlerisms* in contemporary works. A case in point is Shostakovitch, and not only because he revived the hour-long (and longer) symphony. If you wish to see a borrowing more unabashed than anything in Mahler, compare the opening of the finale of the Russian's *Fifth* with the announcement of the chief theme of the finale of the other's *First*.

## Chord and Discord

Even when these misapprehensions are disposed of, Mahler's claim to recognition as a major symphonic composer is often disputed on the ground that the trend of his mind was lyric rather than symphonic in the more exacting sense of the word.

Warmly appreciative is the analytical essay by Eric Blom that accompanied the first release of the Columbia recording of *Das Lied von der Erde*. For this particular work Mr. Blom displays unbounded admiration. In contra-distinction to Ernst Krenek, who accords that place to the *Ninth Symphony* and to Egon Wellesz, who prefers the *Eighth*, Mr. Blom (and he is not alone in this respect) holds that *Das Lied von der Erde* is beyond any doubt Mahler's masterpiece. His argument is that Mahler, like Schubert, was a born song-writer who tried also to write symphonies. In this role, like Schubert before him, he was not entirely unsuccessful. But however eloquent the result, the symphonies were achieved under a fundamental handicap, the aforesaid lyric bent. In *Das Lied von der Erde* this obstacle was removed. Mahler was here in his rightful and proper sphere. The underlying purpose of the symphony was lyrical and the symphonic dressing serves to lift the composition to a higher plane than that of pure song.

Now this contention is not so easily disposed of as the others, though there are many who do not agree. Mahler had, of course, a pronounced lyric gift. He has left us some charming songs, still but a handful in comparison with those of Brahms, Wolf or Strauss. Distinctly the best of them are those for which he provided an orchestral accompaniment. And these by their very nature are quite as symphonic as they are lyric. Wholly symphonic in character, on the other hand, are the choral portions of his symphonies: the finale of the *Second*, the entire *Eighth* and even the finale of the *Fourth*, outwardly no more than a soprano solo with orchestral background.

As far as Schubert is concerned, he was no contrapuntist and was well aware of the fact, and planned at some time to remedy this deficiency. Mahler, on the contrary, was a contrapuntist born. It has been pointed out that he was the first to restore the pure polyphony of the Middle Ages and the first later German composer to free himself from the tyranny of the bass. Often a bold and original harmonist, he nevertheless thought polyphonically rather than harmonically and was therefore the true forerunner of the linear contrapuntists of the 20th century. Undoubtedly, it was this aspect of his art which earned him the admiration of Schoenberg and his school.

In this connection it is pertinent to quote from the recently-published *Memories and Letters*, written and compiled by his widow, Alma Mahler (the Viking Press): "He worked at white heat all the summer on songs for orchestra, with Hans Bethge's Chinese poems as the text [*Das Lied von der Erde*]. The scope of the composition grew as he worked. He linked up the separate poems and composed interludes, and so found himself drawn more and more to his true

musical form—the symphony. When this was clear, the composition rapidly took shape and was completed sooner than he expected." So perhaps instead of saying that Mahler was a song-symphonist, and thus playing into the hands of a critic such as Cecil Gray\*, to whom that term is anathema, let us rather say that he was a symphonic song-writer. That the *Lieder eines fahrenden Gesellen*, for instance, are symphonic in character is fully proven when parts of No. 1 and No. 4 turn up in the *First Symphony*.

Next to be disposed of is the theory that Mahler was congenitally addicted to mass effects, to swollen sonorities, choral and orchestral. No more unfortunate appellation was ever devised than the term "The Symphony of a Thousand." That the *Eighth Symphony* was designed and actually requires that many performers is an impression so widely circulated that few will be found to question it at all. Nevertheless, nothing could be farther from the truth, as an examination of the score will readily disclose. If a thousand singers and instrumentalists have been engaged in a performance of the *Eighth* the same is true of Handel's *Messiah*. Allowing sixty-five for the string section, one hundred and twenty players could meet the basic orchestral requirements of the score, and Mahler does not specify how many choristers are needed. He merely suggests that, if there is to be a large chorus and a large string section, the first of each of the woodwinds is to be doubled, and he would prefer to have two piccolos and two E-flat clarinets. The latest American performance of the *Eighth*, that given under the direction of the late Erno Rapee at New York's Center Theatre in 1942, enlisted an orchestra of a hundred and a chorus of three hundred, and while more singers and players would not have been amiss, the effect was by no means unsatisfactory. To be sure, in this symphony and also in the *Second*, Mahler "shot the works," but so did Beethoven in the *Ninth*, when he threw into the finale all the available resources of his day. We should not forget that Mahler's *Fourth* was the first symphony since Mendelssohn to dispense with trombones. Only four horns are required for the *Ninth Symphony* and *Das Lied von der Erde*, and much of the orchestration of the latter is notable for its delicacy and transparency. Save when he desires a mass effect, Mahler turned his back upon the lush doublings of Wagner and Strauss and the predominant characteristic of his scoring is the isolation of the instruments. In passage after passage we are actively conscious of each and every one of them. It is another sign of Mahler's tendency to run to extremes that he should have given us such things as the *Eighth Symphony* and the finale of the *Second* and also have pointed the way in his *Fahrenden Gesellen* songs and the *Kindertotenlieder* to the chamber

\* In his *Music of Our Day* (Thomas Y. Crowell) Lazare Saminsky calls Sibelius a "song-symphonist," the very thing which Mr. Gray has emphatically protested that he is not!

orchestra of our own day. In the matter of obtaining a maximum of effect with a minimum of means he is still unrivalled.

There is another "misconception" that I might mention, though it comes closer to being a difference of opinion or the possession of a different standard of values. If you require consistency of style and a more or less uniform level of achievement, as found for example in Brahms, then Mahler is not your man. People do not adore one symphony of Brahms and detest another, yet there are those who feel almost that strongly regarding certain works of Mahler. It is also possible to have violent likes and dislikes among the music dramas of Wagner. The *Ring* operas, *Meistersinger*, *Tristan*, and *Parsifal* are quite dissimilar in style, though all are recognizably Wagnerian. When two motives from *Tristan* are quoted in the third act of *Die Meistersinger* we are transported forthwith to another tonal and emotional world.

For the true Mahlerite, as for the perfect Wagnerite, everything goes. The real fascination of Mahler lies in his protean variety, even in the flat contradictions of his personality, such as his extreme sophistication and equally pronounced naïvete, his bitter pessimism and his bland optimism, his ability to be both simple and grandiose. It has not been given to many to portray with equal vividness the pleasures of Heaven and the pangs of Hell. Mahler is able to convince you that each place is his special province.

An even greater stumbling block for many is what Krenek calls the "disconcerting straightforwardness" of Mahler. They do not credit him with having used obvious thematic material purposely or with having resorted deliberately to outright vulgarity. They assume that he was a commonplace or blatant, as the case might be, because he lacked the taste to be otherwise. As an Austrian he had, of course, a fondness for simple melody, the folksy strain to which I have already alluded. He also harbored two unconventional convictions, viz., that the symphony should be for all, not for the select few, and that it should contain the whole of life, the tawdry as well as the beautiful. In the passage in the third movement of his *First*, marked "Mit Parodie", he directs that the cymbals be attached to the bass drum and played by one performer because this vulgarity was exactly what he wanted. This was the meanness and the cheapness of life from which in the ensuing Trio, lifted bodily from the fourth of the *Gesellen* songs, he was to find solace under the friendly linden tree. This is not program music in the accepted sense; neither is it "absolute" music. Many listeners are either caught off guard by this paradox or, while aware that in Mahler you must read between the lines, are still unwilling to make the effort preferring to fall back upon those symphonists who give them no such problems with which to wrestle. A complex man, a complex composer. Someday, no doubt, the whole world will get him straight. Then will we really see the fulfillment of his prophecy "My time will come."

# Mahler's Eighth Symphony

By PAUL STEFAN

The following essay written by the late Dr. Paul Stefan, eminent Viennese Musicologist, was read over the ABO Network on April 5, 1942 before the broadcast of the *Eighth* conducted by the late Erno Rapce.

THE question has often been asked why Mahler wrote for such large orchestras, augmented by human voices, and more specifically, why he wrote the *Eighth Symphony* for a huge group of performers that includes an orchestra, two choruses, a large children's choir, and seven soloists as well as a brass choir and grand organ. The answer may be found partly in the fact that Mahler lived in the heroic period at the latter part of the nineteenth century and the beginning of the twentieth. It was an epoch dominated by the great figure of Wagner whose monumental poetic dramas demanded ever greater and greater material resources for their performance. It was in that epoch Mahler lived and composed.

Another reason for the unusual requirements of the *Eighth Symphony* is to be found in the purpose Mahler had in writing it. He had tremendous visions, whose meaning, he felt, was of overwhelming urgency and importance to all mankind. He had confessed his faith in immortality in his *Second Symphony*. He felt a strong impulse to reaffirm that faith fifteen years later. These fifteen years had been a period of happy married life and great artistic triumphs. During this time Mahler had grown in emotional stature and in his deep conviction that there is an existence beyond our material life. In his desire to express the almost inexpressible, he had to have recourse to a huge personnel of interpreters.

One is inclined to ask what it was that Mahler longed to proclaim through his music in the *Eighth Symphony*.

We think it was the secret of love, love that is creative, love that is god-like. In the first half of the *Eighth Symphony* Mahler evokes the spirit of creation and the spirit of eternal love, using the words of an old Latin hymn to express this life-giving spirit.

The second half of the symphony reveals the miracles wrought by love. For the expression of this miracle, sung by human voices, Mahler chose the utterance of Goethe in the final scene of *Faust*. Although Faust became the victim of human temptation, he never lost his love for other human beings, and for his work. Throughout all his errors and misfortunes he carried within himself the strength of spirit he gained through the love of woman. Because of this love he was accepted into heaven.

Mahler had completed the symphony in a frenzy of creative energy

## Chord and Discord

in 1906, and he fell ill shortly after that, perhaps as a result of the strenuous labor the symphony entailed. Certainly his later works, such as *Das Lied von der Erde* and the *Ninth Symphony* do not convey the impression of over-powering and undiminished strength that is displayed in the *Eighth Symphony*.

This work was considered impossible to perform because of the difficulty of the music and the large number of performers it required. Mahler was inclined to believe that this opinion of his symphony was correct, and he had more or less given up all hope of hearing it. When he returned from New York where he had conducted at the Metropolitan, and went to Munich, he found that rehearsals for the first performance of his gigantic symphony were already in progress. Despite his failing health he threw himself into the excitement of the last rehearsals with a frenzy which dominated all the participants.

When he conducted the first performance and received an unheard of ovation, he felt that he was successful in proclaiming his love for the eternal and believed that his work on earth was done. The symphony lasted an hour and a half, but the cheering and tumult that followed the performance did not die away for a half hour following the concert. It was the greatest and last triumph of his life.

### KILENYI BRUCKNER MEDAL PRESENTED TO ERICH LEINS DORF

In appreciation of his efforts to create a greater interest in and appreciation of Bruckner's music in the United States, the Directors of the *Society* awarded the Kilenyi Bruckner Medal of Honor to Erich Leinsdorf. Leinsdorf broadcast the *Adagio* of Bruckner's *Fourth* over NBC on October 18, 1942. On April 12th and 15th, 1945, he conducted first performances of the *Fourth* in Cleveland. Recordings were broadcast by Mutual. The presentation of the medal on behalf of the *Society* was made by Ralph S. Schmidt, Vice President of the Cleveland Institute of Music, after a performance of Bruckner's *Seventh* in Cleveland on October 28th, 1945.

# Mahler and Dostoevski

By CURTIS SWANSON

AMONG the spiritual ancestors of Gustav Mahler, none holds a more important place than Dostoevski. The philosophical system constructed by the great Russian was a potent factor in the development of Mahler's spiritual vision and a knowledge of it is essential to a clear understanding of the composer's *Weltanschauung*. Mahler himself testified to the importance of Dostoevski and this influence is recounted by many of his followers and students. The greatest testimonial, however, lies in Mahler's creative works themselves—they speak with a most eloquent voice of the influence exerted by the novelist. Unique, utterly original as they are, they sing of the spiritual kinship of the composer and the writer.

What is this system which the Russian has fashioned? The attempt to answer this question has formed the chief task of many thinkers and is the subject of scores of scholarly studies. The scope of a short article, of course, is insufficient for an adequate description, as the reader well knows. However, with a full realization of the limitations involved, it may be useful to point out two of the most basic theses of Dostoevski's philosophy, for they apply with particular significance to the Mahler-Dostoevski relationship. They are, briefly:

1. Man's nature is characterized by a fundamental duality and contradiction.
2. Only through suffering can man become free.

Dostoevski removed the mask from human life and laid bare the inward and secret springs which lead to the overt acts of man. With uncanny insight he probed the hidden motives of the human soul, and in these subterranean channels of human activity, Dostoevski fathomed the real man. Here he discovered that man is essentially a turbulent, contradictory being. As Berdyaev says, "Dostoevski's anthropology shows human nature to be in the highest degree dynamic. Immobility is only a surface characteristic; the veil of custom and the harmony of the soul hide whirling storms, with which alone he was concerned, and he went down into these gloomy depths and unsealed a fountain of light, light more authentic than that which shines on the untroubled surface. Man's stormy restlessness is due to the polarity of his nature, to the shock of colliding contraries."<sup>1</sup>

Mahler, by his very nature, could not fail to be attracted by this unique conception of man. He displayed many of the characteristics of this duality and expressed them in his work. "It will ever remain

<sup>1</sup> Nicholas Berdyaev: *Dostoevski, An Interpretation*; Sheed and Ward, New York, 1934; p. 57.

## Chord and Discord

a secret of nature," says Bruno Walter of Mahler, "how it could have created and made capable of living a man with such violent inner conflicts, and how it could have kneaded into a fundamentally sound and vital constitution so much of energy and intellectual acuteness, so much of serenity and self-sufficient quietness and, at the same time, so much of gloomy irritability, of danger from out of threatening depths, and, lastly, so much of whimsical humor."<sup>2</sup> Again, Walter says that "such was his nature that, because of its inconstancy, he was unable to hold conquered spiritual positions."<sup>3</sup>

How often we see this duality expressed in Mahler's music. Listening to one of his symphonies, we hear, alternately, sounds of the most earthly, often vulgar sort, only to be succeeded by music, the sheer radiance and ethereal beauty of which is unexcelled in symphonic literature.

The first and second movements of the *First Symphony* are models of youthful exuberance, vigor, and charm. Yet in the Funeral March and again in the *finale*, we see abject despair and gloom, heightened by sardonic humor. In the end, however, the forceful triumph of Mahler's spirit dominates the thrilling climax. And, again, what greater contrast could be found than that between the diabolic *scherzo* of the *Second* and the glorious fifth movement? Or between the amusing strains of *Der Trunkene im Frühling* and the ethereal *Der Abschied in Das Lied von der Erde*? The instances are numerous—the above-mentioned are only typical.

This leads to the second of Dostoevski's theses, that only through suffering can man become free, which is essentially a religious doctrine. Dostoevski's conception of human destiny involved a long, tortuous journey which man must take. On the way he is beset by evil, trouble, suffering, despair and, perhaps most significantly, by doubt. Dostoevski, perhaps the foremost theologian of the last century, and a firm supporter of the Orthodox church, was at the same time moved by the most compelling kind of doubt and skepticism. He has presented the case for humanitarian and socialistic opposition to the Christian virtues in a most convincing and persuasive manner. The central book of *The Brothers Karamazov, Pro and Contra*, which includes the unforgettable *Grand Inquisitor* chapter, is a devastating attack on the religious position which we associate with Dostoevski himself. In fact, the writer had difficulty in persuading his publisher that the words of Ivan Karamazov were not his own and that the Christian doctrine would be adequately defended in the following section, *The Russian Monk*. That Dostoevski could wax so eloquent in attacking his own position is another example, perhaps the most striking, of the power of his conflicting ideals.

The famous conversation at the inn between Ivan and Alyosha, which constitutes the main part of *Pro and Contra*, is described by

<sup>2</sup> Bruno Walter: *Gustav Mahler*; The Greystone Press, New York, 1941; p. 132.

<sup>3</sup> *ibid.* p. 129.

Walter as "a fundamental expression of all that I have called Mahler's world-sorrow."<sup>4</sup> Mahler was painfully aware of the evil and suffering that is so much a part of our worldly existence. Man's inhumanity to man, the tragic fate that sets brother against brother, these were for him, as for Dostoevski, a barrier against an unclouded faith. The apparent inconsistency between an all-merciful Deity and the endless suffering inflicted on mankind, has nowhere been so poignantly depicted as in the conversation between the Karamazov brothers. Ivan, the skeptic, the man crushed by the rank injustice of the world-order, raises the question which is eternally asked by the humanitarians: "If there is a God, how can these things be?"

Addressing Alyosha, the religious novice garbed in monastic dress, Ivan recounts the most awful kind of earthly suffering—the pain of little children. He gives the most gruesome examples. Alyosha hears of the Russian child who was thrown to the wild dogs for some petty offense, of the Turkish soldiers' pastime of tossing an infant in the air and then catching it on the point of a bayonet—all before the mother's eyes. Then Ivan asks, "Can you understand why a little creature, who can't even understand what's done to her, should beat her aching heart with her tiny fist in the dark and the cold, and weep her meek unresentful tears to dear, kind God to protect her? Do you understand that, friend and brother, you pious and humble novice? Do you understand why this infamy must be and is permitted? Without it, I am told, man could not have existed on earth, for he could not have known good and evil. Why should he know that diabolical good and evil when it costs so much? Why, the whole world of knowledge is not worth that child's prayer to 'dear, kind God.'"

That such an utterance could have come from a writer who later espoused a contrary point of view is a tribute to the triumph of Christian values in Dostoevski. For in his considered and final answer, it is by means of this suffering and tribulation that man approaches God.

It is small wonder that Mahler found in Dostoevski a kindred soul. The same doubts that beset the writer perplexed the composer; the "world-sorrow" of Dostoevski was essentially the same as that which moved Mahler. Happily, both men uttered a reassuring message of love—a love of God and of the world. What more convincing testimony to the triumph of life over death, of the power of God over the forces of darkness, is to be found in all artistic creation, than in Mahler's *Second*, whose triumphant *finale* proclaims the eternal message of hope: "You will arise straightway, my heart, resurrected and wing your pulsing way aloft to God." Happily, too, we find a love of this world, of "the dear earth," expressed so movingly in *Das Lied von der Erde*. Lovers of Mahler's music, who have been enchanted by the beauty of *Der Abschied*, with its picture of an eternally new and verdant earth, may find a similar portrayal by Dostoevski and will not miss

<sup>4</sup> *ibid.* p. 139.

*Chord and Discord*

the significance of it, found in one of the best passages in *The Brothers Karamazov*.

Alyosha, alone in the midst of an ethereally beautiful night, is pictured in an unforgettable scene. "The vault of heaven, full of soft, shining stars, stretched vast and fathomless above him. The Milky Way ran in two pale streams from the zenith to the horizon. The fresh, motionless, still night enfolded the earth. The white towers and golden domes of the cathedral gleamed out against the sapphire sky. The gorgeous autumn flowers, in the beds round the house, were slumbering till morning. The silence of earth seemed to melt into the silence of the heavens. The mystery of earth was one with the mystery of the stars . . . .

"Alyosha stood, gazed, and suddenly threw himself on the ground. He did not know why he embraced it. He could not have told why he longed so irresistibly to kiss it, to kiss it all. But he kissed it weeping, sobbing and watering it with his tears, and vowed passionately to love it, to love it forever and ever."

I have also been helped by reading several articles in issues of *Chord and Discord* and by correspondence with Bruno Walter.

## Mahler's Music in Wartime Britain

By JACK DIETHEB

Spring, 1945

IT was an English critic, Henry Boys, who pointed out that Mahler, standing on the threshold of modern music and looking both backward and forward, was the one vital link between the new and the old, without some knowledge of whom a deeper understanding of twentieth century music is incomplete.<sup>1</sup> This sense of historical justice is typical of English appreciation, as is the recent observation of Ralph Hill:

"At the time that Mahler was producing his major works we in Britain were under the spell of Brahms and Strauss, and had no time for yet another new German composer. Then Mahler died and the first world war came, which ruled out any possibility of putting his music on the British musical map. Finally, after the war there was a violent reaction against the 'monumental' in music and only works of this kind by established composers of the past were tolerated. Thus circumstances from the beginning were against Mahler's music being given a fair trial here."<sup>2</sup>

It is well to add that even the established composers' big works often needed special reinforcement when the age of orchestral economy inevitably set in, for to Mahler's misfortune this occurred in a shorter space of time after his death than it would have taken to become assimilated internationally. To the directorial mind only popular demand could justify additional provision, not Mahler's creative demand. And how, in this vicious circle, could the public know that his demand to be taken on his own extravagant terms was motivated by an impulse worthier than that of egomania, as some critics facetiously suggested?

The second world war was even less respectful of creative considerations. In 1940 the devastation of London closed most of its concert halls and broke up many orchestras. Those able to continue became wandering bands perpetually en route from province to province with a skeleton standard repertory. Rehearsals became almost non-existent. Two years later the destruction of Queens Hall left many musicians without even their instruments. Traveling expenses were barely covered by the intakes even of packed provincial halls. Scant accommodation, little sleep, and great strain impaired playing efficiency all

<sup>1</sup> Booklet issued by the Gramophone Co., Ltd., London, with HMV recording of Mahler's *Ninth*.

<sup>2</sup> Mahler and Sibelius—BBC *Radio Times*.

around. The orchestras of the north carried on fairly steadily, and gradually London again received its own players. From 1942 each successive season was bigger, and nearer to the pre-war standard in execution. But even today few conductors can count on more than one rehearsal; engagements are subject to every unforeseen difficulty, and the budget is tyrant over all.

"Fair trial"! If one great German composer was unable to get a fair trial before this upheaval took place, what chance had he now? Yet the astounding fact remains that Mahler has made great strides here since 1939. For if physical limitations have never been more severe, popular interest has never been greater. The existent recordings of his works are even more treasured, and fantastic prices are quoted for them in record trade columns. His name appears in discussions of modern music in ever widening connotations, and most often by composers who acknowledge their indebtedness. His songs are vigorously encored on numerous occasions, and audience polls show them to be among the most popular items in the whole song repertory.

Simultaneously with the publication, in the midst of this war, of his symphonic scores for the first time outside German-speaking countries, the leading British music critic Ernest Newman devoted four weekly leading articles in the *Sunday Times* to a high appraisal of his work. Owing to the demand for more material by the smaller orchestras several individual Mahler movements—those smaller ones which are better able to bear such treatment—have been arranged for reduced orchestra, published and widely dispersed in this form.

These are a few of the events that have helped to span the formidable gulf between our musical public and this musical art of just thirty years ago. It indicates an undeniable flare-up of an "infatuation" which has been but smouldering during these years; but what does it indicate for the future? Let us not be over-confident, but examine the present status of each of his works individually:

*Symphony No. 1:* Has not been performed here in complete form in wartime. Second and third movements published separately by Boosey & Hawkes in 1942 (arranged for reduced orchestra by Erwin Stein), and widely performed under the names *Laendler* and *Marcia funebre* respectively. American Columbia recording so far unknown in this country.

*No. 2:* Not performed in complete form in wartime. Second movement published separately by Boosey & Hawkes in 1942 (arranged for reduced orchestra by Erwin Stein), and very widely performed under the name *Andante pastorale*. Anatole Fistoulari and the London Philharmonic have given over a hundred performances of this movement in London and on tour. (This thin-end-of-the-wedge approach is much favored by British conductors.) American Victor recording of the symphony was in British

catalog from 1939 to 1941 only, has never been widely known, and is no longer manufactured here.

*No. 3:* Never performed completely in this country. The first full performance, to be given in April, 1945, by Sidney Beer and the National Symphony, was cancelled owing to organizational difficulties. Second movement published separately by Boosey & Hawkes in 1942 (arranged for reduced orchestra by Benjamin Britten), and widely performed under the name *Menuetto*.

*No. 4:* Frequently performed throughout the country by various conductors, usually with the soprano solo in an English translation. Very popular.

*No. 5:* Never performed completely in this country. The little *Adagietto* for strings and harp has been available in both recordings continually since their release, and has been frequently performed throughout the country.

*No. 6:* Never performed in this country or America.

*No. 7:* Never performed completely in this country, nor any part in war.

*No. 8:* Produced in Queens Hall shortly before the war; never performed since.

*No. 9:* Not performed in wartime. The recording by Bruno Walter was sponsored in 1938 by advance private subscription from this country, and despite limited distribution by HMV, this recording has maintained an enormous reputation throughout the war, and is the focal point of all British Mahler criticism. The records have been frequently played by the BBC.

*No. 10:* Never performed in this country or America.

*Das Lied von der Erde:* Very highly regarded here. The recording by Bruno Walter was sponsored by British enthusiasts in 1936. Although this has never been a general English Columbia release, it has been widely dispersed here. (The records have not, apart from the orchestral interlude from the *Abschied*, been played on the BBC during the war because of the unfortunate ban on the use of German texts imposed on it for the duration.) Boosey & Hawkes published a new vocal score by Erwin Stein in 1942, in a translation by Stewart Wilson. Among the conductors who have undertaken to produce the work in wartime despite stringent rehearsal limitations are Sidney Beer, Sir Adrian Boult, Malcolm Sargent, Guy Warrack, and the late Sir Henry Wood. (Of these Mr. Beer also undertook to have it sung in the original.)

## Chord and Discord

*Das klagende Lied*: Never performed in this country or America.

*Lieder eines fahrenden Gesellen*, *Kindertotenlieder*, and some *Wunderhorn-Lieder* have been frequently performed at Wigmore Hall, Fyvie Hall and the National Gallery, London, with piano accompaniment. (At the Gallery there have been, in different seasons, three presentations of the *Fahrenden Gesellen* alone.) The German recording of the *Kindertotenlieder* is still available in the Decca print; and Anthony Tudor's ballet *Dark Elegies*, with this music as accompaniment, is still in the standard repertory of the Ballets Rambert, for whom it was originally devised, although it has not always been possible during the war to use the original orchestral version.

This summary will serve to indicate that, as elsewhere, the public evaluation of Mahler's total significance through his larger output is by no means possible in Britain today. (In spite of this there are a few otherwise intelligent musical writers here who are ready to declare categorically that the 1920 complete Mahler festival in Amsterdam was of no importance.) It should also be noted that the two most familiar works in Britain are complementary in temperament, though alike in musical texture, which is of Mahler's more delicate order. The charm and subtlety of the *Fourth Symphony* undoubtedly has a special appeal for that considerable British public which is deeply influenced by the proximity of French culture (though it could scarcely be said that the brilliant and characteristic humor which pervades much of his other music has gained it the appreciation it deserves no less on that count). And *Das Lied von der Erde* has a special place in the English conscience that is not easily described. Possibly it is the exquisite poetry more than the music itself that is the original attractive force (to lovers of the earthy pessimism of A. E. Housman, for instance, and the tragic Shakespeare), and if so it is fortunate indeed, for it has a revealing application to his general aesthetic much wider than this single work, as will be seen by comparing some of his early letters, written thirty years before, in his earliest manhood. If this is a back-door, so to speak, to the purely musical value of Mahler's unique gift, let it not be underrated.

This, then, is the problem that has been so rudely exposed to the jagged edge of war. In such circumstances, what should be attempted, and what not? Controversy has newly arisen over just how much interpretive shortcoming such unfamiliar works can bear. This was precipitated by Mr. Newman's recent remark that the above-mentioned production of the *Eighth Symphony* was "a mistake that did the Mahler cause more harm than good."

The fact is that Mr. Newman is probably confusing the "Mahler cause" with his own sensibilities, which is by no means discreditable in a critic, whose chief business is to criticise, not to defend causes. A merely mediocre performance (which can unfortunately no longer

always be avoided even in the classics) would undoubtedly do his aesthetic sense more harm than good, since Mr. Newman can at any time with the help of a score produce a much better effect from his own imagination, but would not necessarily prevent a natural response to the merit of the music itself at a first hearing. No performance of Shakespeare, though it do no more (and no less) than deal faithfully with the lines, can prevent a little of Shakespeare's genius from showing through; and music will certainly not in any case appeal to people without a minimum of independent imagination. Interpretive discrimination follows on, through the comparison of separate experiences. Those who possess a deeper insight into Mahler's creative impulse may well doubt that the world can obtain a like understanding through the medium of interpreters not possessed of that insight. But neither is it demonstrable that perfect understanding can be achieved short of the advent of a perfect society, and there is sufficient evidence that Mahler did not desire his work to remain in a spiritual vacuum in the meantime.

### Spring, 1946

With the restoration of peace, and the renewed continental interest, even amid the desolation, in Mahler's work and spirit, the manifestations of interest in England have taken their first tangible form in the premiere of one of the five remaining symphonies hitherto unperformed in Britain. Last October 20 the *Fifth Symphony* was conducted by Dr. Heinz Unger at the Stoll Theatre with the London Philharmonic. The performance was preceded by a fuller rehearsal time (ten hours) than has been accorded by this orchestra to any single work since 1939. Because of the expense, and the handicap of having only one performance, a financial success was not possible; nevertheless the enthusiastic ovation given to the musicians at the end lasted nearly ten minutes. Finally, it is significant to note that the long-awaited translation of the full-length biography of the composer by Alma Mahler-Werfel was made not in America, but in London.

### KILENYI MAHLER MEDAL AWARDED TO ARTUR BODZINSKI

The Mahler Medal, designed by Julio Kilenyi for the exclusive use of the Bruckner Society of America, Inc., was awarded to Artur Bodzinski for his efforts to create greater interest in and appreciation of Mahler's music in the U. S. A. Bodzinski introduced the *Resurrection Symphony* to Clevelanders on January 2 and 4, 1936. On January 2 and 3, 1942, he conducted Mahler's *First* in Cleveland and on January 10, it was broadcast over CBS.

Mr. Charles Triller, Vice-President and Treasurer of the Philharmonic Symphony Society of New York, presented the Medal to Bodzinski on behalf of the Bruckner Society, following the last of four successive performances of the *Resurrection Symphony*, which were greeted by cheers from the audience. The last of these was broadcast over CBS on December 5, 1943.

## Mahler's First and Fourth on Records

By WILLIAM PARKSGBANT

“**L**IKE a sound of nature” (*Wie ein Naturlaut*)—such is the designation printed at the beginning of the *First Symphony* of Gustav Mahler, who once stated that these three words were the clue not only to *Symphony No. 1*, but to all his music.

Throughout seven octaves the strings sustain the note A (six of the notes being harmonics) against which the woodwinds hesitatingly present melodic fragments, the most prominent consisting of several downward skips of a fourth, a theme that becomes so significant in the last movement. (It is important to mention that the figure of the descending fourth appears prominently in every movement of this symphony; it is indeed a “generative motive,” a device loved by Beethoven and Franck.) Almost inaudible fanfares by off-stage trumpets and a gentle rising figure in the low strings lead to the appearance of the principal subject, beginning in the cellos. This theme is taken from Mahler's song-cycle *Lieder eines fahrenden Gesellen*, written a few years previously, which is closely connected with the *First Symphony*. Like Schubert, Mahler occasionally re-employed a song melody in a larger composition.

This bright and jaunty theme is enclosed in repeat signs—a practice Mahler very rarely employed—so this repetition surely ought to be observed in the interest of good formal balance, although such is not the case in the recording to be discussed below. There is a return to the slower tempo and hesitating manner of the introduction; we observe a long-sustained and very soft low F in the tuba and double-basses, after which the horns lead the way to an extended return of the cheerful mood presented earlier. Jubilant fanfares in the brass and some lusty banging on the timpani bring the first movement to a bold and reckless conclusion.

The care-free mood continues into the sturdy *scherzo* that forms the second movement. The principal section suggests the mood of a drinking-song, with a middle part in the style of an old-fashioned Austrian waltz, or *Laendler*. The form is ABA. It is a delightful movement—one that would win any but a prejudiced listener to a liking for Mahler's music.

In a composer whose love of folk-music was highly pronounced and who often wrote themes which were of folk-song simplicity or imitations of popular style, it may seem strange that there is, to the best of this writer's knowledge, only one actual folk-melody quotation, and the third (slow) movement of the *First Symphony* happens to be that lone example. Mahler here takes the old French round *Frère*

*Jacques*, disguises it slightly and puts it into the minor mode, and, keeping its canonic character, uses it as the principal theme of a sardonic funeral march movement. It is well-known that the idea for this occurred to the composer on seeing a satirical picture called "The Hunter's Burial" by Callot; it showed the coffin of a hunter being carried through a forest, followed by various animals in grotesque and mock-mournful attitudes. The opening of the movement is simply but uniquely scored—for muted solo double-bass accompanied by muffled timpani occupied with the interval of the fourth. After the round has been presented a new theme in gypsy style follows, intermingled with a theme reminiscent of the efforts of "The Podunk Center Silver Cornet Band," with the two E-flat clarinets and *col legno*\* strings prominent, marked *mit Parodie*. Mahler believed that the homely and the bucolic had their place in serious art, and had an unashamed fondness for what the American 'teen-ager calls the "corny." Indeed this occasional recourse to the deliberately and half-satirically banal is probably one of the traits that cause Mahler to be heartily disliked by some musicians, particularly the hyper-esthetes who refuse to dwell anywhere in the world of music save in an ivory tower. But Mozart (*A Musical Joke*), Haydn, Beethoven (*Sixth Symphony, A-Minor Quartet*), Stravinsky, Copland, Shostakovich, Prokofieff, Walter Piston, Wagner (*Die Meistersinger*), Milhaud, William Walton, and others have preceded or followed him in this practice, so Mahler alone should not be criticized for it. Soon the mood becomes eloquently earnest, and in another quotation from *Lieder eines fahrenden Gesellen*, beginning in muted violins and continued by the oboe, we have one of the loveliest moments in all music. When this heavenly passage dies away we return to the mock funeral-march based on *Frère Jacques*. The country band reappears, shriller than ever, with a sudden doubling of the tempo which causes the most sober of us to laugh aloud. The gypsy theme is also recalled. The music dies away in a reminiscence of the opening.

The last and longest movement of this symphony begins with a startling cymbal crash, followed by wild and stormy uproar in the whole orchestra. The key is the unexpected one of F-minor. Some semblance of order comes with the appearance of an energetic, march-like theme—principal subject of the movement. Yet the tempest is barely kept under control and breaks out of bounds here and there throughout the movement. But there is genuine quiet in the form of a fine lyric theme, the only one in all of Mahler's music that seems to hint that he might have been a bit influenced by the style of Tchaikowsky. There are also occasional references to the introduction of the first movement. Twice when wild disorder is at its very height we are abruptly and triumphantly thrown into the bright key of D-major. The theme based on a series of descending skips of the

*Chord and Discord*

fourth, hesitatingly suggested in the opening of the first movement and elsewhere appears in this key forcefully presented by the seven\* horns. (Those of us who have been tortured at vocal recitals by an abominable ditty called *I Love Life* will at once realize that if Mahler has been accused of unconscious plagiarism it is equally true that he has been the victim of it.) Other striking passages are one which recalls the ringing of bells and another containing unabashed imitation of the sounds of nature. Jubilant fanfares and references to previous themes, especially that of the series of descending fourths, bring the movement to a conclusion of the utmost brilliance and energy. It is not surprising in view of this ending that the *First Symphony* has been nicknamed "Titan." It is also pertinent to note that at the first performance of this work, Mahler, in response to public taste, called it a symphonic poem and gave the last movement the name *From Inferno to Paradise*.

The recording of the *First Symphony* appeared late in 1941—to late for inclusion in a review of all then-existing Mahler recordings which I prepared for the December 1941 issue of CHORD AND DISCORD, though an editor's foot-note drew attention to the release and the same issue contained a very complete and scholarly analysis of the composition by that erudite Mahler authority, Gabriel Engel. The records were made by the Minneapolis Symphony Orchestra conducted by Dimitri Mitropoulos, issued as Columbia album No. 469 (six 12-inch double-faced records). This maestro has frequently performed the *First Symphony*, and his forceful, compelling manner of interpretation has aroused many audiences to the most enthusiastic ovation. As to the playing of the orchestra, except for a rather noticeable slip by a trombone in side 10, it would be hard to find any fault whatever. Listen to the precision of the horns at the beginning of side 3, the excellent string tone, and the lovely wistfulness of the oboe in the middle of side 7. The Minneapolis Orchestra, under Mr. Mitropoulos, is indeed a wonderfully precise, disciplined organization.

To complete the pleasantness of the picture, the Columbia recording engineers did a fine job of capturing the performance in wax. Reproduction is highly realistic, with minute details coming through clearly and with no stinting of the fortissimos or "boosting" of the pianissimos. Notice the remoteness of the off-stage trumpets near the beginning and the lusty, uninhibited pounding of the timpani at the close of the first movement—both infallible signs of good recording. The only fault one can think of to mention—and it seems downright picayunish to bring it up—is probably the fault of the players rather

\* Two additional horns *ad libitum* near the close of the symphony may increase the actual number of these instruments to nine.

than of the recording engineers, but it is true that an occasional pianissimo cymbal and triangle note cannot be heard. This remark may give some idea of the wonderful fidelity with which innumerable other small details do reproduce, especially when the records are played on a really good machine. Except for some scratching in the second half of side 7, the surfaces of my set are smooth and quiet. Occasionally in the stress of heavy climaxes I have known the needle to jump or repeat grooves, but the fact that this occurs only occasionally would seem to indicate that the fault may have been with the individual needle. I have heard these records on four different phonographs of varying quality and the reproduction is excellent on all of them, though naturally best on the bigger machines.

The "breaks" between the record sides are all made at appropriate places, except that between sides 6 and 7, which is abrupt, to say the least.

Although the second and fourth movements both begin about half-way through a record-side, dividing ridges have been thoughtfully provided, enabling us to play these movements separately with no guess-work as to where to lower the needle.

The recording of the *First Symphony* can be unhesitatingly recommended to both the confirmed Mahlerite and those to whom his music is unfamiliar.

From its beginning in flutes and sleigh-bells to its hushed conclusion in double-basses and harp, the *Fourth Symphony* in G-Major is a cheery work; the orchestra smiles and the sun shines in nearly every measure. Though not without occasional grotesque and satirical passages, there is none of the despondency and hopeless pessimism of *Das Lied von der Erde* or of the bitter grimacing, distortion, and ennui of certain passages of the *Ninth Symphony*.

*Symphony No. 4* is the most lightly-scored of the composer's orchestral compositions, as it requires no trombones or tuba. The occasional use of sleigh-bells gives the orchestra a crisp, bright color here and there.

According to the notes on the album containing the recording of this symphony, discussed below, Mahler wanted to recreate in this work something of the spirit of Haydn. One might add that the spirit of Mozart and Schubert is also observable in this archaism.

In the opening of the first movement already described, Mahler creates a distinctive effect which appears frequently in this section and in the *fnals* as well. The overall mood of the movement is one of good nature and well-being, or one might say of Viennese *Gesamtheitlichkeit*. But there are some powerful climaxes and not infrequent grotesque, fantastic passages—some of the "nocturnal" element of Mahler's music so often subjected to comment in Bruno Walter's

## Chord and Discord

book on the composer; the second movement brings even more of such a mood. One of the most striking passages in the first movement is a high flute theme appearing half-way through side 2 of the recording—a melody which because of its pentatonic character will suggest the Indian to any American listener, though there seems to be no evidence that Mahler had the red man in mind when writing this work. Once heard, this passage is never forgotten.

The second movement is in the style of a *Laendler*, but much of it seems unreal and almost ghostly, like the dream of a dance, rather than the real thing. It is delightful music, representing the *scherzo* of the conventional symphony. A few words would not be amiss regarding the prominent passages for solo violin. The concertmaster is required to provide himself with two violins, one to be tuned a whole step higher than usual (that is, to F-sharp, B, E, A), the other in the normal manner (E, A, D, G). The passages written with the former (unconventional) tuning are notated as fingered, rather than as they sound; i.e., this solo violin is written as a transposing instrument. The effect of the unique tuning is to give the instrument a thin, rather shrill tone, reminiscent of that of a child's-size violin, or the instrument of some country fiddler; it is probably the latter which Mahler intended to suggest.

The third or slow movement—longest section of the work—is dominated by a thoughtful, rather dreamy mood; it is Mahler in deep meditation, though not in sorrow. There are several quicker passages, however, some bordering on the style of a *scherzo*, once suggestive of the minuet, occasionally with touches of good-natured satire. Those who are familiar with the composer's *Second Symphony* will observe a spot in which he comes very close to making a quotation from it. Near the end there is a sudden *fortissimo* outburst from the full orchestra, with wild trumpet fanfares and brief quotations from other movements (including the one to come)—a momentary vision of the Day of Judgment. The very conclusion of the movement is quiet, however; it ends on a dominant triad, leaving the way open for the immediate beginning of the fourth movement (*finale*).

The last movement is really a song for soprano voice with orchestra, the title of which in English is: *We Enjoy the Pleasures of Heaven*. Those who are familiar with Mahler's practices know that several of his songs occur as movements in symphonies. The text comes from the famous anthology of German folk-poems, *Des Knaben Wunderhorn*, to which Mahler turned for use in his songs on more than one occasion. It is a child's description of heaven, dwelling particularly on the good things to eat that are to be had there—a delightful poem, almost incredibly naïve. Each stanza is introduced by a passage derived from the very first few measures of the symphony—those that were originally scored for flutes and sleigh-bells; here the orchestra is fuller. Each stanza closes with a striking series of slow chords in parallel motion—a passage quoted literally from the *Third Symphony*,

if I am not mistaken. Near the end there is a modulation to E-major, and the symphony concludes quietly in that remote key.

Mahler's *Symphony No. 4* has been recorded very recently by the New York Philharmonic-Symphony Orchestra under the direction of Bruno Walter with Desi Halban as soprano soloist, issued as Columbia album No. 589; six double-faced 12-inch records. It hardly seems necessary to comment on Walter's interpretation of the score, since he is acknowledged the greatest of Mahler conductors and his readings regarded as completely authoritative. The playing of the orchestra is magnificent in every way, thinking of the players individually or collectively. Those whose acquaintance with the Philharmonic is limited to its broadcasts will be glad to know that the orchestra sounds better on these records than on the air, being gratefully free from the frequent harsh tone that characterizes its radio performances. Desi Halban is one of the great Mahler singers, so we need not waste space in saying that her part of the performance leaves nothing to be desired. The slightly boyish quality of her voice is all to the good in this whimsical fourth movement—surely one of the really unique conclusions to any symphony.

The Columbia recording engineers, though not reliable in every recording, have done in this case a piece of work that no one could criticize in any way. Yet Philip L. Miller, reviewing this album in that Bible of the record-collector, *The American Record Guide* (formerly *The American Music Lover*), remarks that listening to the records reminds him of inspecting the music under a microscope; that the wealth of details comes out almost *too* well. The details are as clear as anyone could wish, but I am afraid I cannot agree with Mr. Miller's inference that the broad general effect is sacrificed for clarity of detail. As is frequent with records, these sound better after several playings than the first time. I have heard this set on three machines, of varying quality, and the effect is good on all, though naturally not as good on the cheap record-player attached to a radio as on the splendid two-unit machine found in the Carnegie Music Set at the College where I teach. The surfaces of the records in my album are very good.

The program-notes on the album-cover are informative, and the German text and English translation of the fourth movement poem, which are provided, will be appreciated by all who own these records.

The "breaks" between the various record-sides all occur at appropriate places.

## Mahler and the Student Critic

THE following comments are excerpts from papers written by students in Professor Philip Greeley Clapp's classes in Music Appreciation at the State University of Iowa. This course is a comprehensive survey of music presented as a two-year course and broadcast over the radio station of the University. Eight or nine meetings of this course are devoted to the music of Mahler every other year. In the spring of 1941 the Second Symphony and The Song of the Earth were presented on the phonograph and the Third, Fifth, and Sixth Symphonies were played on the piano by Professor Clapp from the orchestral score. Some of the students may have heard one or two Mahler works on phonograph or piano in one of the Summer Session classes in Music Appreciation. Besides class presentations and the availability of the Carnegie collection of phonograph records, the faculty and students have given concert performances of the Adagietto from the Fifth Symphony (February 26, 1941 and July 8, 1942), Songs of a Wayfarer, Professor Herald Stark, soloist (May 14, 1941 and July 8, 1942), the Second Symphony (April 22, 1942), and the Fourth Symphony (December 9, 1942). The first group of excerpts are from the assignment of May 16, 1941, the second from the assignment of April 27, 1942, and the third from the assignment of December 16, 1942:

### I

1. "The greatest surprise awaiting me was the discovery that the symphonies of Gustav Mahler were not only good, but great. I had been taught that Mahler was of fleeting importance in the world of great music . . . a bad imitator of Wagner, long-winded, and infinitely dull. And subject to the common pitfall into which a student slips, I accepted the word of my former teacher, and quickly dismissed Gustav Mahler as unimportant. Today, however, I humbly acknowledge my stupidity and gratefully join the ranks of the followers of Mahler.

"One task of a composer is to express himself in his medium so that all who listen will feel themselves as one with the music. They will feel with him, happiness, tragedy, gaiety, sorrow. They want to be moved to the heights or depths to which he carries them . . . Mahler has succeeded in making me understand his music, and he has carried me along with him in changing moods and emotions. More than that, I do not ask of any composer."

2. "The *Songs of a Wayfarer* stirred me almost to a state of ecstasy by their loveliness, their grace, and their yearning and haunting

charm. My introduction to Gustav Mahler has opened a new vista to me in the field of music. It is music which one longs to hear over and over again."
