- Los Angeles Philharmonic, William Steinberg, Conductor; Hollywood Bowl, Los Angeles, Calif., July 22, 1958.
- IV Cincinnati Symphony, Thor Johnson, Conductor; Louise Nippert, Soloist; Cincinnati, Ohio, Nov. 29 and 30, 1957.
- V Seattle Symphony Orchestra, Milton Katims, Conductor; Seattle, Wash., March 10 and 11, 1958 (First performance by this orchestra).
- VII (2nd, 3rd and 4th movements) Los Angeles Philharmonic, Erich Leinsdorf, Conductor; Los Angeles, Calif., Mar. 6, 7, and 8, 1958.  
Rochester Philharmonic, Erich Leinsdorf, Conductor; Rochester, N. Y., Mar. 20, 1958.
- VII. (Two Nocturnes) Cleveland Symphony Orchestra, William Steinberg, Conductor; Cleveland, Ohio, Dec. 5 and 7, 1957.

## List of Performances

14

- X New York Philharmonic Orchestra, Dimitri Mitropoulos, Conductor; New York City, Mar. 13, 14 and 16, 1958. (The last performance was broadcast over Station WCBS.) First Performance in New York City.
- Das Lied von der Erde*  
Chicago Symphony Orchestra, Fritz Reiner, Conductor; Christa Ludwig and Richard Lewis, Soloists; Chicago, Ill., Feb. 20, 21 and 25, 1958.  
Manhattan Orchestra, Jonel Perlea, Conductor; Herta Glaz and John Scamford, Soloists; New York City, Apr. 29, 1958.
- Kindertotenlieder*  
Drew University Concert, Evangeline Bicknell, Contralto, Dika Newell, Piano, Drew University, Madison, N. J., Mar. 23, 1958.
- Lieder eines fahrenden Gesellen*  
Birmingham Symphony, Arthur Bennet Lipkin, Conductor, Hugh Thompson, Soloist, Birmingham, Ala., Nov. 5, 1957.  
University of Syracuse Symphony, Louis Krasner, Conductor, Carol M. Dougall, Soloist; Syracuse, N. Y., Apr. 20, 1958.  
Chicago Symphony Orchestra, Georg Solti, Conductor; Nell Rankin, Soloist; Ravinia Park, Chicago, Ill., July 31, 1958.
- Songs  
Toronto Symphony, Heinz Unger, Conductor, Toronto, Can., Jan. 22, 1958, as follows:  
*Ich atmet' einen Linden Duft*  
Mary Simmons, Soloist  
*Ich bin der Welt abhanden gekommen*  
Claramae Turner, Soloist  
*Um Mitternacht*  
Mary Simmons, Soloist  
City College, 1958 Spring Concert Series, Howard Fried, Soloist, New York, Apr. 17, 1958.

### SEASON 1958-1959

#### BRUCKNER

- III Chicago Symphony Orchestra, Fritz Reiner, Conductor; Chicago, Ill., Mar. 12 and 13, 1959.
- IV University of New Mexico Orchestra, Kurt Frederick, Conductor; Albuquerque, New Mexico, Nov. 16, 1958.  
Detroit Symphony Orchestra, Sir John Barbirolli, Conductor; Detroit, Mich., Dec. 11 and 12, 1958.  
York Concert Society, Heinz Unger, Conductor; Toronto, Ont., Canada, April 21, 1959.
- V Los Angeles Philharmonic Orchestra, Eugen Jochum, Conductor; Los Angeles, Calif., Nov. 26 and 28, 1958.
- VI Pittsburgh Symphony Orchestra, William Steinberg, Conductor; Pittsburgh, Pa., Dec. 12 and 14, 1958; Ann Arbor, Mich., Feb. 26, 1959.
- VII Rochester Orchestra, Josef Krips, Conductor; Rochester, N. Y., Nov. 1958.  
Dayton Philharmonic Orchestra, Paul Katz, Conductor; Dayton, Ohio, April 1, 1959.
- VIII Concerts Symphoniques, Josef Krips, Conductor; Montreal, Quebec, Canada, Feb. 25 and 26, 1959.
- IX Philadelphia Orchestra, Eugene Ormandy, Conductor; Philadelphia, Pa., Jan. 30 and 31, 1958.
- Graduale (Christus Factus Est)* The Oberlin College-Choir, Robert Fountain, Conductor; New York City, March 28, 1959.
- Te Deum* Riverside Church Ministry of Music, Richard Weagly, Director; Riverside Church, New York City, April 19, 1959.
- Ave Maria Virga Jesse* St. John's University Symphony and Chorus and College of St. Benedict Chorus, Gerhard Track, Conductor; Collegeville, Minn., May 10 and 11, 1959.
- Mass in E Minor* National Artists Chamber Orchestra and Collegiate Chorus, Paul Hindemith, Conductor; Town Hall, New York City, Feb. 1959.

Colby College Choir (of Maine), New York City, March 23, 1959.

St. John's University Symphony and Men's Chorus and the College of St. Benedict Chorus, Gerhard Track, Conductor; Colledgeville, Minn., May 10 and 11, 1959.

*Prelude and Fugue* Riverside Church Ministry of Music, Richard Weagly, Director; Frederick L. Swann, Organist; Riverside Church, New York City, April 19, 1959.

## MAHLER

- I Los Angeles Philharmonic Orchestra, Josef Krips, Conductor; Los Angeles, Calif., Feb. 5 and 6, 1959.  
 Inglewood Symphony Orchestra, Ernst Gebert, Conductor; Inglewood, Calif., March 22, 1959.  
 Rochester Philharmonic Orchestra, Theodore Bloomfield, Conductor, Rochester, N. Y., Apr. 16, 1959.  
 Iowa State University Symphony Orchestra, James Dixon, Conductor; Iowa City, Iowa, May 20, 1959.
- II Toledo Orchestra with Toledo Choral Society and Toledo Opera Workshop Chorus, Joseph Hawthorne, Conductor; Mildred Reiley and Marilyn Krimm, Soloists; Toledo, Ohio, March 4, 1959.  
 Hallé Orchestra, Sir John Barbirolli, Conductor; Victoria Elliott and Eugenia Zaresca, Soloists; Manchester, England, March 11 and 12, 1959.
- IV Birmingham Symphony Orchestra, Arthur Bennett Lipkin, Conductor; Phyllis Curtin, Soloist; Birmingham, Ala., Dec. 2, 1958; Alabama College, Montevallo, Ala., Dec. 3, 1958.  
 Chicago Symphony Orchestra, Fritz Reiner, Conductor; Lisa Della Casa, Soloist; Chicago, Ill., Dec. 4 and 5, 1958.  
 Pittsburgh Symphony Orchestra, William Steinberg, Conductor; Pittsburgh, Pa., April 10 and 12, 1959.
- V York Concert Society with the Toronto Symphony Orchestra, Dr. Heinz Unger, Conductor; Toronto, Ont., Canada, Feb. 23, 1959 (First performance in Canada — broadcast from Coast to Coast).  
 (*Adagietto*) Inglewood Symphony Orchestra, Ernst Gebert, Conductor; Inglewood, Calif., Mar. 22, 1959.  
 (*Adagietto* arranged by Dika Newlin) Riverside Church Ministry of Music, Richard Weagly, Director, Riverside Church; Mary Canberg, Violinist, Lucille Lawrence, Harpist, and Frederick L. Swann, Organist; New York City, April 19, 1959.
- Das Lied von der Erde* Portland Symphony Orchestra, Theodore Bloomfield, Conductor; Portland, Oregon, Nov. 17, 1958.

## SEASON 1959-1960

## BRUCKNER

- II Montclair State College Orchestra, Emil Kahn, Conductor; Montclair, N. J., April 20, 1960.
- IV Pittsburgh Symphony Orchestra, William Steinberg, Conductor; Pittsburgh Pa., Nov. 6 and Nov. 8, 1959. New York City, Nov. 16, 1959.  
 Pennsylvania State University, State College, Pa., Nov. 22, 1959.
- V Boston Symphony Orchestra, Richard Burgin, Conductor; Boston, Mass., Dec. 24 and 26, 1959.
- VII Cincinnati Symphony Orchestra, Max Rudolf, Conductor; Cincinnati, Ohio, Nov. 6 and 7, 1959.  
 New York Philharmonic, Paul Hindemith, Conductor; New York City, Feb. 25, 26, 27 and 28, 1960.  
 Detroit Symphony Orchestra, Paul Paray, Conductor; Detroit, Mich., March 18 and 19, 1960.  
 Dallas Symphony Orchestra, Paul Kletzki, Conductor; Dallas, Texas, March 21, 1960.
- VIII Vienna Philharmonic Orchestra, Herbert von Karajan, Conductor; New York City, Nov. 17, 1959; Boston, Mass., Nov. 18, 1959.
- IX Los Angeles Philharmonic Orchestra, Bruno Walter, Conductor; Los Angeles, Calif., Nov. 12 and 13, 1959.

University of Michigan Symphony Orchestra, Joseph Blatt, Conductor; University of Michigan, School of Music, Ann Arbor, Mich., Apr. 15, 1960.

*Te Deum*

Detroit Symphony Orchestra with Worcester, Mass., Festival Chorus, Dr. Charles Lee, Conductor (Orchestra prepared by Paul Paray), at 100th Anniversary of Worcester Music Festival, Oct. 22, 1959.

Louisiana State University Symphony Orchestra, Chorus and Choir, Peter Paul Fuchs, Conductor; Baton Rouge, La., Jan. 10, 1960. Katherine L. Hansen, Cecilia Ward, Dallas Draper, Dan Scholz, Soloists; George Walter, Organist.

## Motets

*Os justi*

Student Madrigal Choir of the University of Muenster, Herma Kramm, Director; Town Hall, N. Y., Oct. 1, 1959.

*Offertorium (Afferentur)**Ecce Sacerdos Magnus*

Columbia University Chorus, Mark Siebert, Conductor; St. Paul's Chapel, New York City, Dec. 5, 1959.

Roosevelt University Chorus, Robert Reuter, Conductor (Chicago Musical College), Rudolph Ganz Concert Hall, Chicago, Ill., Dec. 11, 1959.

## MAHLER

I New York Philharmonic, Dimitri Mitropoulos, Conductor; New York City, Jan. 7, 8, 9 and 10, 1960.

Chicago Symphony, Igor Markevitch, Conductor; Chicago, Ill., Jan. 14 and 15, 1960.

Boston Symphony Orchestra, William Steinberg, Conductor; Boston, Mass., Jan. 8 and 9, 1960; Newark, N. J., Jan. 19, 1960; New York City, Jan. 20, 1960.

Symphony Society of San Antonio, Victor Alessandro, Conductor; San Antonio, Texas, Jan. 30, 1960.

Philadelphia Orchestra, William Smith, Conductor; Philadelphia, Penna., Feb. 19 and 20, 1960; Baltimore, Md., Feb. 24, 1960.

CBC Symphony, Heinz Unger, Conductor; Broadcast by CBC, April 15, 1960.

II New York Philharmonic with Rutgers University Chorus, under direction of F. Austin Walter, Leonard Bernstein, Conductor; New York City, Feb. 18, 19, 20 and 21, 1960, Phyllis Curtin and Regina Resnik, Soloists.

Boston Symphony Orchestra, Richard Burgin, Conductor; Boston, Mass., Feb. 26 and 27, 1960; Nancy Carr and Eunice Alberts, Soloists, Chorus Pro Musica, Alfred Nash Patterson, Conductor.

New England Conservatory Orchestra and Chorus, Lorna Cooke de Varon, Director; Valerie Fauteux and Jeanne Grealish, Soloists; James Dixon, Conductor; Boston, Mass., May 18, 1960.

Festival Symphony and Los Angeles Symphony Chorus (Carlton Martin, Director); Shirley Verret-Carter and Evena Chillingdrian, Soloists; Franz Waxman, Conductor; Royce Hall, UCLA, June 13, 1960; an address by Joseph Schildkraut paid tribute to Mahler.

IV New York Philharmonic, Leonard Bernstein, Conductor; New York City, Jan. 28, 29, 30 and 31, 1960; Reri Grist, Soloist.

University of New Mexico Orchestra, Kurt Frederick, Conductor; Albuquerque, New Mexico, March 13, 1960, Jane Snow, Soloist. (First performance of a complete Mahler Symphony in New Mexico.

Des Moines Symphony Orchestra, Frank Noyes, Conductor; Jane Schleicher, Soloist; Des Moines, Iowa, May 1, 1960.

V Detroit Symphony Orchestra, Paul Paray, Conductor; Detroit, Mich., Nov. 12, 1959.

New York Philharmonic, Dimitri Mitropoulos, Conductor; New York City, Dec. 31, 1959, Jan. 1, 2 and 3, 1960.

*Adagietto only*

Inglewood Symphony Orchestra, Ernst Gebert, Conductor; Inglewood, Calif., March 27, 1960.

- IX New York Philharmonic, Dimitri Mitropoulos, Conductor; New York City, Jan. 21, 22, 23 and 24, 1960.  
Chicago Symphony Orchestra, Sir John Barbirolli, Conductor; Chicago, Ill., Mar. 3, 4 and 8, 1960.
- X New York Philharmonic, Dimitri Mitropoulos, Conductor; New York City, Jan. 14, 15, 16 and 17, 1960.  
Cincinnati Symphony Orchestra, Max Rudolf, Conductor; Cincinnati, Ohio, Jan. 22 and 23, 1960.  
Boston Symphony, Charles Munch, Conductor; Boston, Mass., Dec. 4 and 5, 1959; New York City, Dec. 19, 1959.  
Hartford Symphony, Fritz Mahler, Conductor; Hartford, Conn., Feb. 3, 1960.

*Kindertotenlieder*

- Brooklyn Philharmonic, Siegfried Landau, Conductor; Brooklyn, N. Y., Nov. 7, 1959, Mary McMurray, Soloist.  
Northwestern University Chamber Orchestra, Thor Johnson, Conductor; Evanston, Ill., Dec. 2, 1959, Lillian Chookasian, Soloist.  
University of Wisconsin Chamber Orchestra, Thor Johnson, Conductor; Milwaukee, Wis., Feb. 7, 1960, Lillian Chookasian, Soloist.  
New York Philharmonic, Leonard Bernstein, Conductor; New York City, Feb. 11, 12, 13 and 14, 1960, Gerard Souzay, Soloist, Feb. 11; Jennie Tourel, Soloist, Feb. 12, 13 and 14.  
Drew University Mahler Centennial Celebration, March 13, 1960, Annajean Brown, Contralto, Dika Newlin, Pianist.  
Inglewood Symphony Orchestra, Ernst Gebert, Conductor; Inglewood, Calif., March 27, 1960, Eva Gustavson, Soloist.  
Mannes College Orchestra, Carl Bamberger, Conductor; Gladys Kriese, Soloist; New York, May 17, 1960.

*Lieder eines fahrenden Gesellen*

- Honolulu Symphony Orchestra, George Barati, Conductor; Honolulu, Hawaii, Oct. 11 and 13, 1959, Eva Gustavson, Soloist.  
Brooklyn Philharmonic, Siegfried Landau, Conductor; Brooklyn Academy of Music, Brooklyn, N. Y., Nov. 7, 1959, Mary McMurray, Soloist.  
Drew University Mahler Centennial Celebration, March 13, 1960, Annajean Brown, Contralto, Dika Newlin, Pianist.

*Das Lied von der Erde*

- Pittsburgh Symphony Orchestra, William Steinberg, Conductor; Pittsburgh, Pa., Oct. 16 and 18, 1959, Lucretia West and Richard Cassilly, Soloists.  
Chicago Symphony, Fritz Reiner, Conductor; Chicago, Ill., Nov. 5 and 6, 1959, Maureen Forrester and Richard Lewis, Soloists.  
Cleveland Orchestra, George Szell, Conductor; Cleveland, Ohio, Jan. 28 and 30, 1960, and New York City, Feb. 1, 1960, Maureen Forrester and Ernst Haefliger, Soloists.  
York Concert Society and Toronto Symphony Orchestra, Heinz Unger, Conductor; Toronto, Canada, Feb. 24, 1960, Elena Nikolaidi and David Lloyd, Soloists.  
New York Philharmonic, Bruno Walter, Conductor; New York City, Apr. 15, 16, 21 and 24, 1960, Maureen Forrester and Richard Lewis, Soloists.

*Songs*

- Honolulu Symphony Orchestra, George Barati, Conductor; Honolulu, Hawaii, Oct. 30, 1959, Ellie Mao, Soloist.  
Sigma Alpha Iota Musicale, Annajean Brown, Contralto, and Allan van Zoeren, Organist, at West Park Presbyterian Church, 86th Street and Amsterdam Avenue, New York City, Dec. 1, 1959.  
University of New Mexico, Dept. of Music, Recital at New Mexico Union Theatre, Albuquerque, New Mexico, Dec. 15, 1959, James Bratcher accompanied by George Robert.  
New York Philharmonic, Leonard Bernstein, Conductor; New York City, Feb. 4, 5, 6 and 7, 1960; Jennie Tourel, Soloist.  
Drew University Mahler Centennial Celebration, Madison, New Jersey, March 13, 1960, Annajean Brown, Contralto, Dika Newlin, Pianist.

*Das klagende Lied*

Hartford Symphony, Fritz Mahler, Conductor; Hartford Symphony Chorale, Edgar Wassilieff, Assistant Director; Margaret Howell, Lilli Chookasian, Rudolph Petrark, Soloists; Hartford, Conn., March 11, 1959.  
 City College of New York Chorus, Orchestra and Band, Fritz Jahoda, Conductor; (Jerome K. Aronow Concert Hall), New York City, May 14, 15, and 31, 1960, Rose Rosett, Joan Sheller, and Constantine Cassolas, Soloists (1st New York Performance).

## MISS NIKOLAIDI SINGS MAHLER AT TOWN HALL

by LOUIS BIANCOLLI

The following article appeared in the N. Y. *World-Telegram and Sun* on December 1, 1958. Reprinted by courtesy N. Y. *World-Telegram and Sun*. Copyright 1958.

There were no misgivings or reservations about the Greek singer who came bearing gifts to Town Hall last night. Her name is Elena Nikolaidi.

The last time I heard this gifted contralto, in 1954, I was almost dismayed at what had happened to a beautiful voice. The tones had taken on that fatal hooting sound and dropped further and further back.

Last night Miss Nikolaidi was a completely new singer. The voice had shaken off whatever it was that had inhibited it. The tones emerged with velvety beauty and there wasn't a hint of strain anywhere along the line.

What's more, in the interim Miss Nikolaidi has grown immeasurably as an artist. A new confidence marked her readings, also a new poetic breadth and humanity. Elena Nikolaidi is again one of the most exciting contraltos in the field.

Hearing her sing Mahler's profoundly moving song-cycle, "Die Lieder eines Fahrenden Gesellen," one knew Miss Nikolaidi was an extraordinary singer and interpreter.

Few song-sequences achieve such an intensity of mood as Mahler's four-part threnody about a lost love. The gamut ranges from pained restraint to impassioned grief, ending in the long-sought calm of the final measures.

Miss Nikolaidi seemed completely to identify herself with the mood of the music and poetry. Rarely have music and mood so beautifully fused with a singer's voice and personality.

One could single out for special praise such elements as tone production, phrasing, coloring and diction. This was an instant instead where one heard them all as a unit, harmonized, inseparably, into that heightened vision of life that is art.

Miss Nikolaidi was quite the charmer in other numbers by Vivaldi, Handel, Schubert, Mozart and Strauss, but I shall always remember last night's concert for the way she gave new glow to the music of Gustav Mahler.

She could do so because she has somehow, somewhere, acquired a new glow herself. It was in her voice, in her style, in her very appearance. Even Paul Ulanowsky, the accompanist, seemed to bask in its radiance.

## WOZZECK REVISITED

by DIKA NEWLIN

The sensational Metropolitan production of *Wozzeck* during the 1958-59 season (see below, pp. 158-162) must have caused many admirers of this work to return to its Columbia recording (SL-118), and induced many who had not heard it before to follow up a new interest by acquainting themselves with the discs. I shall not attempt to make a detailed comparison of the record album with the stage performance. This would be unfair, if not impossible; for the circumstances under which the work was done were so vastly different in the two instances that such comparisons would be, on the whole, unprofitable indeed. Dimitri Mitropoulos, with his typical artistic courage, set himself one of the most difficult challenges in the repertory when he essayed to do this work (whose phantasmagorically rapid scene-changes add so greatly to its effectiveness) at the New York Philharmonic in concert form in 1951. The degree of his success is measured by the fervor of his devotion to this music. Those who attended the Philharmonic performances were swept away by the incandescence of his interpretation, which seemed to overcome almost insuperable odds. There were very few rehearsals indeed in comparison with what was possible at the Met (even there, they were perhaps insufficient) and the listener who follows the score in detail will notice the results of this in many inaccuracies of notes. But, paradoxically, this does not disturb the overall effect, for here was — and is — one of the spiritually "truest" performances of *Wozzeck* you will ever hear.

We may point with pride to the fact that this performance was truly "made in America." The lead roles are taken by two of our most intelligent and musical American singers, Mack Harrell and Eileen Farrell. Harrell performs the difficult part of *Wozzeck* with great sensitivity, and Farrell really "packs a wallop" as Marie when she lets her big gorgeous voice roll. Effective work in the grotesque character roles is done by Joseph Mordino and Frederick Jagel. Edwina Eustis, the sole "holdover" from *Wozzeck's* first American performances under Stokowski, gives the brief role of Margret the kind of toughness, yet tenderness that it needs.

This performance, unlike that of the Met, is done in the original German. While much may be said on both sides of this ever-vexed question in the opera house, on the balance I find that the vocal lines of *Wozzeck* sound best in their original language. Berg's all-important speech-melody is so perfectly geared to the German language that it does not seem quite to "fit" in English. Also, when, as at the Met, many of the important roles are taken by foreign singers who cannot enunciate English intelligibly, the advantages of singing the work in English are dubious and the disadvantages begin to prevail. Unfortu-

nately, the record album does not include a complete translation, but only a summary of the action of each scene. For greatest enjoyment, I would suggest that the non-German-speaking listener secure a copy of the English libretto, which may be had (according to *Opera News* of March 9, 1959) from Charles B. Allen, Metropolitan Opera Association, 147 West 39th Street, New York City 18, for \$1.00 including mailing service charge.

A final pleasing note is that this album was (and as far as I know still is) sold for the benefit of the Philharmonic's Pension Fund. A fine thought, and one (I feel) especially in keeping with the human compassion so intensely expressed in this work.

In brief, this recorded *Wozzeck* is one which, after eight years, still continues to give pleasure, and which is not likely to be supplanted in a hurry. Those who feel disappointed that *Wozzeck* will not be back at the Met until 1960-61 can console themselves very satisfactorily with these records in the interim. We are grateful to Columbia Records, Mitropoulos and the Philharmonic for this unique testament of a historic experience.

## MET'S BIG RISK IS OUR BIG GAIN

by PAUL HENRY LANG

The following article which appeared in the *N. Y. Herald Tribune* on March 15, 1959, is reprinted by permission.

The recurring question asked by many persons at the memorable performance of "Wozzeck" at the Metropolitan Opera on March 5 was: "Isn't Mr. Bing taking an awful risk?" Now let us see what this question covers and what the risk is that Mr. Bing is taking. The first integral performance of "Wozzeck" at the Berlin Opera in 1925, Erich Kleiber conducting, scored a tremendous success that made Alban Berg's name famous overnight. In subsequent years most major opera houses eagerly produced the already famous opera, and there were some stirrings even in this country. In 1931 Stokowski brought a Philadelphia company to the Met for a one-night stand, the City Center played "Wozzeck" in 1952, and Mitropoulos conducted a concert performance. But all this was tentative; only a regular company of the Met's caliber and resources can do justice to this difficult score. Still, it took a long generation before a general manager with courage and convictions was willing to take the "awful risk."

Why is "Wozzeck" so risky? It certainly is good and absorbing theater, the music is powerful and evocative, the new production has an excellent cast, first class staging, the conductor is among the best operatic maestros in the world, and finally, the Met has the large and brilliant orchestra without which this work cannot be adequately presented. The audience at the "premiere" was unstinting in its expression of approval, and so were the critics.

It is because our operatic culture is backward, artificial, limited, and unsupported. Had it not been for the enlightened generosity of Francis Goelet (who also helped with Samuel Barber's "Vanessa") this production would have been impossible. There are other friendly donors,

and their assistance is not deprecated, for we must have all manner of operas, even "La Gioconda," but no theatre that acquiesces in a comfortable and safe repertory ever earns the epithet "great."

The lack of variety and of a progressive repertory is far more pronounced in opera than in any other kind of music, therefore the Met subscribers' tastes are rather arrested, even stereotyped. The one-generation-lag which is about the rule in instrumental music does not apply to opera. Stravinsky's "Sacre" is a near-classic in Carnegie Hall, his "Rake's Progress" a failure at the Met. As a matter of fact, even Verdi's "Falstaff," or Beethoven's "Fidelio" are risk items and a Handel opera is unthinkable. Right now two dozen opera houses are producing Handel operas in Germany!

These are the sad facts of operatic life in New York which explain why a work such as "Wozzeck," which is in a direct line of development from Wagner, and with a little experience perfectly accessible to most of us, is thought of as being an extremely hazardous undertaking for all except avant gardists and musicologists.

But aside from this deplorable situation, there are some specific reasons that contribute to the creation of the risk atmosphere. The initiated — and even more the would-be experts — speak with bated breath about the hair raising innovations and unusual musical devices employed in this opera, immediately scaring the wits out of the innocent opera-goer.

They suggest that the musical texture of "Wozzeck" is based on unheard of revolutionary devices handled with the most abstract and abstruse learning. Actually, there is nothing in "Wozzeck" that does not stem from practices well known to earlier composers.

Take the "speech-song." Those who heard Karl Doench's Beckmesser in "Die Meistersinger" will realize that Berg's speech song is but a more general application of the same principle that Wagner used with such good effect. And what about the secco recitative? The "unstable idiom" mentioned by one commentator is fully present — and greatly relished — in "Tristan"; the average music teacher will come a cropper right in the Prelude when he tries to nail down its main tonality. The "advanced harmonies" found in "Wozzeck" represent the last consequences of the "Tristan" ecstasy combined with the expressive possibilities of "atonality."

Now about those formidable "abstract forms" supposedly never before attempted in opera. Did not Purcell compose a most moving aria based on one of those "rigid passacaglias"? And did not Verdi write fugues in "Macbeth" and "Falstaff"? There is a most subtly complicated fugue with a chorale *cantus firmus* in "The Magic Flute," and innumerable other instances of "abstract construction." There is no opera without "construction," and some "easy" ones are incredibly complex in their structure.

By mysteriously referring to all these "difficulties" Berg's adherents promote the scare and the risk. "Wozzeck" is undoubtedly the outstanding operatic work of recent decades, and once experienced without preconceived prejudice no one can shake it off. It is not the learning that makes it great, but the suggestive force of the dramatic expression, the deep compassion and humanity it conveys.

It is great because it is elemental and yet refined, theatrical yet truly operatic, dependent of the word yet autonomous, psychological yet symbolic, affective yet constructive. All this is not just a set of contradictions, for the various poles are brought together in a magnificent synthesis.

This is the risk Mr. Bing is taking — and it is worth taking. Yet it may turn out not to be a bad risk at all. Mr. Boehm was engaged in 1953 to conduct two or three performances of "Wozzeck" in Buenos Aires — he had to stay for ten. I am confident that public reaction will be similarly favorable in New York, and will justify the risk capital Messrs. Bing and Goelet put into this venture.

## BERG'S POWERFUL WOZZECK FINALLY MOVES INTO THE MET

by LOUIS BIANCOLLI

The following review which appeared in the *New York World-Telegram and Sun* on March 6, 1959, is reprinted by courtesy of the *New York World-Telegram and Sun*; copyright 1959.

Toughest of the problem children of modern opera, Alban Berg's savagely dissonant "Wozzeck" finally crashed the Metropolitan Opera repertory last night.

With this costly and sedulously prepared production, manager Rudolf Bing carried out a vow he made when he first took over the Metropolitan—that some day, somehow, this Viennese bombshell would be staged by his company.

Bombshell it is, all right. The proverbial classical peace of the house was thoroughly shattered by the wild, stabbing fortissimos and cacophonies of an orchestra that seemed to have gone completely berserk.

Yet, no self-respecting opera company with worldwide prestige could indefinitely postpone facing "Wozzeck." Credit Mr. Bing with an act of combined faith and courage. The production is a personal triumph for him.

Even more was it a personal and artistic triumph for the conductor, Karl Boehm. Here was conviction of an inspiring kind, along with a technical authority of enormous range.

Quite rightly, the audience singled out Mr. Boehm for its most emphatic and prolonged applause. I have heard only one superior interpretation of "Wozzeck" — that of Dimitri Mitropoulos with the Philharmonic eight years ago.

A great deal of hard work and dedication have gone into this production. Rehearsals ran on endlessly. Orchestra and singers were worn to a frazzle. But the care and discipline have paid off. The performance, as such, is beyond reproach.

Whether it was a smart idea to do "Wozzeck" in English is something else again. I would have preferred the biting and snarling German text, especially since much of the English was incomprehensible against the raucous volcano of Berg's orchestra.

Also, for all the attractions of the staging, I would have welcomed a darker and more gruesome atmosphere. This "Wozzeck," after all,

is the psychopathic ward of modern opera. An air of malignity and madness haunts every part of it.

I found myself actually resenting the interference of everything that stood between me and the orchestra. That is where the searing and unsettling power of this opera is — in the dense jungle of raw, shrieking nerves.

They were all good last night — Eleanor Steber, Hermann Uhde (Wozzeck), Paul Franke, Karl Doench, Kurt Baum. But the combination of polyglot English and the weird ululations of Berg's speech-melody was a little hard on my system.

And what an exhausting, emotional experience the whole opera is! This poor underdog of a Wozzeck, guinea-pig, misfit and cuckold, is pushed around by everybody, till he kills his mistress and drowns trying to retrieve his knife.

If Berg wanted to get across the postwar decay and despair of the '20s, he certainly did so in the slithering scales and jagged shudders with which he portrays the malign forces that make a plaything of Wozzeck.

It is a masterpiece? Possibly. A gigantic fierceness is at work in this fabric. It tears through flesh and spirit. Possibly it is also something of a misfit, like Wozzeck himself. I was by turns bored, irritated, exalted — finally limp.

The last scene of the orphaned boy, skipping off on a hobby-horse after being told of his mother's death, was shattering, last night. "Wozzeck" is no picnic — either to watch or to hear. It is a frightening litany of disintegration and hopelessness.

It took courage for the Metropolitan to grapple with this monstrous and nerve-jangling score. It almost defies mastery because it has no parallel. Right now I could use "Rigoletto" or "Pagliacci" as a tranquilizer.

## WOZZECK CONQUERS THE MET

by DIKA NEWLIN

Poor Johann Christian Woyzeck, the visionary nineteenth-century murderer whose sad case inspired the unfinished play *Woyzeck* by the brilliant scientist-dramatist Georg Büchner (1813-1837), would have been amazed indeed could he have returned to life in 1959 to see his story reenacted in the lush Victorian surroundings of New York's old "Met," before elegantly dressed "society" audiences. The incongruity is piquant — but there is more to the story than this, for there is a deeper meaning to the simple soldier's unexpected victory over circumstances in which he might have been expected to go down to ignominious defeat. The real-life Woyzeck and the stage Wozzeck came to bitter ends; but the triumph of the opera *Wozzeck* will not be soon forgotten.

Early in his career at the Met, Rudolf Bing had expressed his great interest in Berg's masterwork, and his desire to perform it here. Many were skeptical, for, while the opera had caused great excitement when first performed in this country by Leopold Stokowski in 1931, and had subsequently enjoyed successful performances at the New York City

Center and (in concert form) by the New York Philharmonic under Mitropoulos, it was felt that the Metropolitan audience, which has notoriously never turned out in large numbers for contemporary operas, would not support such a venture. At first, these fears seemed justified, for the announcement of the work's première on March 5, 1959 — a Metropolitan Opera Guild-sponsored benefit (for the Production Fund) at raised prices — brought forth but a modest advance sale. In fact, on the first night, while the house seemed well-filled, it is said that a larger-than-usual proportion of the audience were invited guests of the management. (Nevertheless, the Guild reported final net proceeds of \$5,071.38 — a gratifying sum, though smaller than that yielded by most of their benefits.)

But then, the magic of Berg's warm, compassionate setting of the stark and sordid tale began to work. One could already see the process beginning to take effect during the first performance. The first, episodic act, in which the personalities who are to have a decisive effect on *Wozzeck's* life and death are introduced to us in a series of "character-pieces," still caused puzzlement. The buzz of conversation was heard during the symphonic interludes (not immediately grasped as being an integral part of the whole structure) as listeners were prodded into agitation by a style and subject-matter to which they were unaccustomed. Gradually, however, as the new vocabulary became more familiar and as the drama grew in intensity (rising, as Artur Schnabel once put it, "from the bourgeois to the transcendental"), the audience was first gripped, then overwhelmed. During the heart-tearing final scenes there was a silence such as is rarely experienced in so large a gathering. The following ovation was all the more thunderous as hearers made their emotional response known in no uncertain terms. Many wandered out of the opera house almost in a daze, leaving behind them all manner of personal possessions. (An amusing sidelight on the evening's adventures was furnished by Francis Robinson, assistant manager, who later reported that the Metropolitan switchboard had, on the morning following the performance, received the largest number of calls about lost articles in its history!) And this fascinating pattern of audience-reaction was not merely première excitement, but was repeated at subsequent performances as well.

The Metropolitan management must have awaited the "morning-after" criticisms with some anxiety, for, while the warm response within the opera house had been exciting and gratifying, a bad press could kill the success of future performances. It is pleasing to report that — as documented elsewhere in this issue — the critics played their part in the proceedings with the same integrity that all connected with the performance had displayed. Paul Henry Lang and other staff members of the *New York Herald Tribune* must be singled out for special praise. Lang's glowing review was featured on the front page of the *Tribune* for March 6. Subsequent issues contained editorials (both on the main editorial page and on the Sunday music page), miscellaneous news items, letters to the editor (both pro- and anti-*Wozzeck*), and rather extensive reviews of cast changes in the production. All of this sparked discussion of *Wozzeck* in many circles where its very name might otherwise have been unfamiliar. Word-of-mouth played

its part, too, with the result that the last three performances (which had been preceded by a nationwide broadcast over the CBS Network on March 14) took place before sold-out houses. Thus the way was paved for the much-to-be-desired continuance of *Wozzeck* in the Metropolitan repertory. As Lang rightly points out, "'Wozzeck' should become one of the prides and showpieces of the Met's repertory; nothing less is acceptable if we consider ourselves a mature musical nation." At the present moment, a return of *Wozzeck* in the 1959-60 season is not planned, but its hoped-for revival in the season following may be all the more eagerly anticipated.

All that has been said elsewhere of the merits of this production deserves confirmation here. The pitiful, futile hero could not have been better impersonated than by Hermann Uhde, whose musical accuracy was also impressive. (Problems of intonation, both in normal singing and in speech-song, are so great in this work that I have never heard any performance in which they were perfectly resolved.) Two different enactments of the tragic role of Marie each had special qualities to offer. Eleanor Steber presented her as a coarse, blowzy slattern, past her first youth but still trying to hang on to the illusion of it in her exaggerated hip-swinging gestures. Her singing was powerful, often rather rough in sound, as befitted such an interpretation. Brenda Lewis offered a more physically appealing picture; her voice seemed smaller, but also more refined in its production. We could imagine her as a Marie who, under happier circumstances, might have led quite a different life. Of the character actors, Paul Franke (Captain) and Karl Doench (Doctor) deserve special mention. Franke gave an unforgettable portrayal of the half-hysterical Captain, while Doench was a "natural" for the role of the "Mad Scientist." (His thick German accent, through which about one word in ten of the English translation managed to filter, merely enhanced this impression.) Karl Boehm, often identified with a restrained, academic approach to the music he conducts, here showed that he knows how to let himself go when the music demands it. However, this "letting-go" never implied any relaxation of his control over the proceedings on the stage and in the pit; we were aware throughout of the careful preparation (with an exceptionally large number of rehearsals by Metropolitan standards) which had made possible so unified and integrated a performance. The stark, bleak and realistic sets of Caspar Neher, with their predominant pale grays and faded browns, were wonderfully well suited to the occasion. Such realism would have been very much to the taste of Berg, who vigorously rejected the idea of fashionably "abstract" staging of the cruelly real work. To me, the most visually impressive scene was that shattering final episode in which the ring-around-the-rosy-playing, raggedy children hear the news of Marie's death and happily dash off to see her body sprawled by the pond — all except her little boy who does not grasp what has happened and hops aimlessly on his hobby-horse for a few moments before leaving the stage. But the curtain does not fall immediately, and we are faced with the vacant stage. A glaring, bleak light illumines the empty, barren square of the drab little German provincial town, with its dreary dun-colored houses. Simple — but almost unbearably painful, just because of its understatement.

And, by the way, the skill and speed with which the scenes were changed (under the most difficult of circumstances, for the old Met boasts no revolving stage) calls for particular recognition — and received it in the enthusiastic "bravos" of the audience when, unconventionally, the scene-shifters took their bows on opening night along with the other participants.

The taut organization of this musical drama, in which Berg made masterly use of forms usually associated with instrumental music in order to project situation and character with the greatest possible intensity, has been so often described that we need not repeat this formal analysis. In fact, it would be rather pointless, for, as Berg himself used to say, in the dramatic sweep of the work the listener is ultimately (or should be) unaware of all these passacaglias, fugues, suites, sonatas, and what-have-you; they are rather the composer's concern than the hearer's. Instead, I should like to emphasize a factor which may be of more especial interest to readers of this journal: the close stylistic relationship of Berg to Mahler, which is possibly more clearly audible to us today than it was to Berg's own contemporaries. Thus the dedication of *Wozzeck* to Alma Mahler (who, incidentally, lauded the Met's production as the greatest she had ever seen and heard) becomes not merely thanks for generously proffered help but a perceptive tribute to one who was the living link to Berg's spiritual master. Space permits mentioning but a few of the factors which surely owe something to Mahler's inspiration:

1) *Parody*. The dissonant Military March of Act I/2, the distorted dance music (heard by *Wozzeck* as if in a nightmare) of Act II/4, and the demented Polka of Act III/3 definitely belong in this category. (See the parody Gypsy music of Mahler's First Symphony, third movement, and the devastating satires in the second and third movements of his Ninth.)

2) *Pity*. In the few passages where Berg allows himself to comment subjectively upon the fate of his characters (notably the final great D minor interlude before the closing scene) we are seized by the emotion of overwhelming world-pity, as Mahler so often expressed it in dealing with the fates of his symphonic heroes. (This is *not* mere self-pity, as it has been frequently misinterpreted.)

3) *Special Orchestral Effects*. An uninitiated listener to *Wozzeck* commented, "Why does Berg need that huge orchestra when so much of the time only a relatively few of his instruments are playing at once?" Of course, this is exactly the orchestral technique of Mahler (especially the later Mahler) who, contrary to popular belief, is not always overwhelming us with masses of sound, but needs his vast orchestral resources in order to be able to select exactly the sounds which he requires for a particular moment. Like Mahler, Berg is a past master of the hair-raising orchestral effect for the special formal or dramatic purpose. I shall cite but one example — and what an example: the great orchestral crescendo on a single note, B, after the death of Marie. Beginning with a single horn *pppp* and successively introducing the solo violin, the bass clarinet, the first violin section, the four other clarinets, the solo viola with three horns, the solo cello, the four oboes,

the second violins, the four trumpets, the three bassoons with the bass tuba, the four trombones with the viola section, the cello section, and the contrabasses — all entering *pppp* and gradually unfolding their utmost dynamic capacities — this crescendo, subtly balanced on the printed page, has in the opera house a shattering physical impact unlike anything else in music. Thus Berg, like every true "follower" of the Neo-Viennese School (and unlike their pallid imitators), shows the quality of his "followership" by assimilating that which he has learned from his masters into something deeply original, personal, real and human. That is why *Wozzeck* conquered the Met — and why it will continue to be heard in every opera house of world standard where the heritage of Western music is truly respected.

### KILENYI MAHLER MEDAL AWARDED TO NEW YORK PHILHARMONIC

During the past quarter of a century the New York Philharmonic has included on its programs not only the better known works by the Bohemian-born master, Gustav Mahler, viz. Symphonies I, II, IV and *Das Lied von der Erde* under the direction of Walter, Klemperer, and Mitropoulos but less familiar works, Symphonies V and IX under Walter's direction, Symphonies III, VI, and VII under Mitropoulos' direction, and the *Eighth* under Stokowski's direction. These works were heard not only by audiences in the concert hall but by unseen audiences throughout the country over the Columbia Broadcasting System.

The year 1960 marks the hundredth anniversary of Mahler's birth and the fiftieth anniversary of his debut as conductor of the Philharmonic. In celebration of these milestones in the history of music and in the annals of the Philharmonic Orchestra, the following Mahler works were performed by the Philharmonic during the season 1959/60:

Symphonies I, V, IX and X conducted by MITROPOULOS

Symphonies II, IV, a group of Songs (Tourel, soloist), *Kindertotenlieder* (Souzay, soloist for first performance, Tourel, soloist for subsequent performances due to Mr. Souzay's illness) conducted by BERNSTEIN

*Das Lied von der Erde* (Forrester and Lewis, soloists, conducted by WALTER

Each work was given four times. Saturday night performances were broadcast over CBS.

In appreciation of its contribution in arousing greater interest in the music of Gustav Mahler, the Directors of The Bruckner Society of America awarded to the New York Philharmonic the Mahler Medal, designed by the distinguished sculptor, the late Julio Kilenyi, for the exclusive use of the Society. In a brief ceremony held in the Green Room at Carnegie Hall after the final concert of the Mahler Festival on April 24, 1960, at which *Das Lied von der Erde* was performed (Bruno Walter conducting), Mr. David M. Keiser, President of the New York Philharmonic, accepted the Medal on behalf of the Philharmonic from Mr. Harry Neyer, Vice-President of the Bruckner Society.

## NOTES ON CONTRIBUTORS

HERBERT ANTCLIFFE is an English writer on music and art who has lived for many years in Holland. He has contributed articles on these subjects to the *London Times*, *New York Herald-Tribune*, *Musical Quarterly*, *Music and Letters* and many other newspapers and periodicals. He acted as editor of the Netherlands articles in Cobbett's *Cyclopedic Survey of Chamber Music* and is responsible for many articles on Dutch (and other) music in two editions of Grove's *Dictionary of Music and Musicians*. He is the composer of a number of church motets, some of which are published in the United States. He has been honored by Queen Wilhelmina with the Order of Officer of Orange Nassau for his work on behalf of Dutch music and by King George with a pension for his work on behalf of that of his own country.

JACK DIETHER is a contributing editor of *Musical America* and a reviewer for *The American Record Guide*. His article "Mahler and Psychoanalysis" recently appeared in the quarterly journal *Psychoanalysis and the Psychoanalytic Review*.

PARKS GRANT has contributed frequently to CHORD AND DISCORD since the issue of March, 1934. At present he is Associate Professor of Music at the University of Mississippi at Oxford, Mississippi. He is a composer of note as well as a writer on music.

DIKA NEWLIN holds degrees from Michigan State University, University of California, and Columbia University. Her work in California included three years of study with Schoenberg. At present Miss Newlin is Professor of Music at Drew University. While her greatest enthusiasm is composing, and her compositions have won equal success with her writing, Miss Newlin is best known for her book, *Bruckner-Mahler-Schoenberg*. She has translated Leibowitz's *Schoenberg and his School* and Schoenberg's *Style and Idea*. She has written for many periodicals.

STANLEY POPE, born in London in 1916, was educated at the Conservatoire in Vienna and studied with Richard Stöhr. Later he studied with the Swiss composer, Frank Martin. His associations with Felix Weingartner and later with Paul Kletzki in Switzerland, as also with Carl Schuricht, with whom he worked as assistant, played an important role in his musical outlook. In his early thirties he had already established his reputation conducting in Paris, Vienna, Copenhagen and many other European cities. Since 1952 he has been artistic director of the Symphonia Concerts in London.

BRUNO WALTER, the world famous conductor, is noted for his Bruckner and Mahler interpretations. He is a disciple of Gustav Mahler. During his career he has conducted in Cologne, Hamburg, Pressburg, Berlin, London, Leipzig, Paris, New York, Vienna, Munich, Los Angeles, Salzburg, etc. He is the author of *Gustav Mahler and Theme and Variations*.

WARREN STOREY SMITH, born in Brookline, Mass., succeeded Olin Downes as Music Editor of the *Boston Post*, now discontinued. He has been a member of the faculty of the New England Conservatory since 1922 where he teaches the history and theory of music.

JAMES H. WILCOX was born in Bolton, England, in 1916, and received his education at the University of Wisconsin (Milwaukee), Northwestern University, Eastman School of Music, and Florida State University, where he studied composition under Ernst Dohnanyi. His doctoral dissertation was on the symphonies of Anton Bruckner. He is at present professor of theory and horn at Southeastern Louisiana College.

KONRAD WOLFF was born in Berlin in 1907. He studied piano with Willy Bardas, Bruno Eisner, and Artur Schnabel. In 1941 he came to this country and from 1942 to 1950 he was Assistant Musical Director of the New Friends of Music. Since 1956 he has been teaching at Drew University, Madison, New Jersey.

Among American artistic developments of recent years the rebirth of interest in the music of Bruckner and Mahler is second to none in significance. When *The Bruckner Society of America* was founded on January 4, 1931, performances of these two composers by our major musical organizations were not merely rare, but also ineffectual, because American music-lovers had no adequate approach to the proper appreciation of the art of either Bruckner or Mahler. Therefore the *Society*, having adopted as its chief aim the fulfillment of this void, published the first biographies of these composers in English and issued a magazine, **CHORD AND DISCORD**, devoted almost entirely to discussions of their works.

The *Society* solicits the cooperation of all who are interested in furthering this aim. Inquiries concerning membership may be directed to Robert G. Grey, President, 697 West End Avenue, New York 25, New York.

and  
BRUNO WALTER

ROBERT G. GREY  
1895 - 1962

## IN MEMORIAM

ROBERT G. GREY

President of the Bruckner Society of America, Inc.

Secretary and Treasurer — 1933-1962

The Bruckner Society of America, Inc., has lost in the passing of Robert G. Grey its guiding spirit for the past thirty years — the man who envisioned the need of an organization to help acquaint the American public with the music of Bruckner and Mahler. Mr. Grey's belief that the music of these two masters, if heard, would belie the dictums of the critics in the United States, impelled him to keep the Society alive and to spend much of his time to seeing that CHORD AND DISCORD got published, to encouraging conductors and orchestral societies to perform Bruckner and Mahler, and to attending to the countless details that would insure the success of the Society's aims. What the Society has accomplished Mr. Grey knew from the beginning was possible and indeed inevitable. His own great enthusiasm for music he was able to impart to friends and strangers alike through a remarkable gift as teacher which he possessed, and his influence in this respect is felt daily by a countless number of people. In addition to his profound and comprehensive knowledge of the works of Bruckner and Mahler, he was an expert in the field of opera and an accomplished pianist. He did not confine his interest in music to certain areas or composers but was a person of broad musical tastes. This willingness to let all music speak to him was reflected equally in his regard for his fellowmen, to all of whom he was ever kind and generous. Success was his in the business world, but for him what meant most was what he succeeded in doing for Bruckner and Mahler. His life was unselfish service to others.

# THE FACTS CONCERNING MAHLER'S TENTH SYMPHONY

by DERYCK COOKE

(*Editor's note:* On May 6, 1963, the author of this essay received the following letter from Gustav Mahler's widow:

*"Dear Mr. Cooke—Mr. Harold Byrns visited me here in New York. Today [April 28] he read me your excellent articles on Mahler's Tenth Symphony and your equally authoritative score. Afterwards I expressed my desire to finally listen to the London B.B.C. tape. I was so moved by this performance that I immediately asked Mr. Byrns to play the work a second time. I then realized that the time had arrived when I must reconsider my previous decision not to permit performances of this work. I have now decided once and for all to give you full permission to go ahead with performances in any part of the world. I enclose copy of my letter of even date to B.B.C. Sincerely yours, Alma Maria Mahler.*

Thus the controversial ban which led CHORD AND DISCORD to request the succeeding pages from Messrs. Cooke and Diether, and which were submitted earlier in the year, has been resolved. In view of the coming performances of Mr. Cooke's newly completed (1963) performing version, the public première of which is even now being scheduled by the B.B.C., and the further critical exchanges which are bound to follow, we believe that Mr. Cooke's own analysis of the Mahler sketch will be of enhanced interest to our readers, along with its preliminary background material and press comments.)

## *Foreword by* JACK DIETHER:

On December 19, 1960, the British Broadcasting Corporation transmitted a 100-minute "program about Mahler's Tenth Symphony," in which all but about six or eight minutes of its five sketched movements were performed by the Philharmonia Orchestra under Berthold Goldschmidt, in a realisation of the manuscript sketch made by the young British composer and musicologist Deryck Cooke. During the actual performance, which lasted about 65 minutes, Mr. Cooke stood by and indicated how many bars were being omitted at each of five points in the two *Scherzi* (movements 2 and 4), and also announced the complete first, third and fifth movements. The performance itself was preceded by a 35-minute illustrated talk by Mr. Cooke on the problems of his realisation. The first and third movements (*Adagio* and *Purgatorio*) of the Tenth are, of course, already widely known in an anonymous realisation, both in score (Associated Music Publishers) and in public performance and recording. The B.B.C. broadcast was the only public, professional *five-movement* performance of the symphony of which the BRUCKNER SOCIETY OF AMERICA has any record at present. The broadcast was repeated by transcription on Christmas Eve. A week or two later, the B.B.C. received a letter from Mme. Alma Mahler-Werfel stating that her permission for the broadcast had been in error, and requesting that it be withdrawn. Accordingly the program, already

listed by the B.B.C. overseas transcription service as available to radio stations abroad, was immediately withdrawn from circulation, and has not been heard in the United States except by individuals with tapings of the original broadcast. Mrs. Mahler, who of course did not hear it herself, has further stated that she can no longer allow "further changes to this unfinished work."

Because of the widespread interest evoked by these events, Mr. Cooke was asked to submit an article about the Tenth Symphony to CHORD AND DISCORD. He decided to write not about his own realisation, but to write a musical analysis of the unfinished manuscript itself, as it stands in Mahler's own hand (as much of it, that is, as has been published in the facsimile edition, Paul Zsolnay Verlag, 1924, which was the only direct source-material for his task), so that readers might judge for themselves as to its artistic coherency. And since permission to quote musical examples from the manuscript might not be forthcoming in the United States, he has endeavored to make his analysis wholly *without* quotation. I for one believe that he has done a brilliant job. Further, since I have been active for about twenty years in promoting the realisation of this work, believing it to be potentially Mahler's greatest, and indispensable to a full understanding of the composer, I was asked to write this foreword to Mr. Cooke's analysis, in order to sketch in the background to the current situation *vis à vis* the Tenth Symphony.

As Mr. Cooke states, the first advocate of realising the Tenth *in toto*, after the posthumous publication of the manuscript, was the great Mahler biographer Richard Specht, who discussed the sketches with Mrs. Mahler in a spirit of lively interest. He was a fiery advocate, who later wrote and spoke of the "false piety" of those who revered the letter of Mahler's unrealised work, while allowing the spirit to lie silent and unrecognized. He reports that Mrs. Mahler was undecided, and that both of them consulted with leading musicians over how much of the symphony might be performable in a practical edition. Finally Ernst Krenek, then 24 years old and living in Vienna, agreed to prepare for performance the first and third movements only. His score of these two movements, after being checked for errors by Alban Berg and Franz Schalk, was submitted to and hand-copied by Universal Edition, then performed in Vienna under Schalk, and a few months later in Prague under Alexander Zemlinsky. The movements were never published at that time, and by the time they were finally committed to print more than 25 years later, many things had happened to the Universal copy scores for which Mr. Krenek takes no responsibility.

A few years ago, seeking to refresh his memory by re-examining his own original score, Krenek visited Universal in Vienna for that purpose. He learned that all the original material pertaining to the *Adagio* and *Purgatorio* had been turned over to A.M.P. in New York, the present copyright owners. Mr. Krenek and I subsequently visited the A.M.P. archives together and examined them at length. They consisted chiefly of three copy scores, none of them in Krenek's hand. His own score was not to be found. In each of the copy scores in turn, three different handwritings in ink could be discerned. The notes and markings in the first handwriting, obviously that of a professional copyist, Mr. Krenek believes to correspond more or less to his own original

scoring, in the *Adagio* at least. To these are added further instrumentation and markings in great number in both of the other two hand-writings. Some of the additions are written in indelible pencil and traced over in purple ink, and on one copy is found the following inscription (in German), in the same indelible pencil: "Score arranged by A. Zemlinsky." All of these additions have found their way into the published A.M.P. score, without acknowledgment. There are also various other conductors' markings in red and blue pencil, none of which have been incorporated. Nothing more is known. However, I have been in correspondence with a musician, the former violinist E. P. Stekel, now director of a conservatory in Grenoble, who played first violin in both the Vienna and Prague premieres, and was a friend and pupil of Franz Schalk. Mr. Stekel advises me that Schalk definitely made additions to the score for the Vienna performance, and that in view of my report he feels certain that the *two* sets of additional markings and instrumentation, as published, were the work of Schalk and Zemlinsky respectively.

In addition to the fact that the substantial augmentation of Mahler's manuscript is not acknowledged in the A.M.P. score, there is another circumstance adding to the confusion: a footnote in the score reading "Marks in parenthesis are not Mahler's." These parenthesized markings, relatively few and unimportant, are the contribution of A.M.P.'s own editor, Otto Jokl, who compared one of the copy scores (he declares that he never knew there were two others) with Mahler's manuscript, nevertheless retaining all the additions in ink. He did not differentiate these from Mahler's own marks and notes, but parenthesized his own slight additions and restorations. The logical implication of the unfortunate footnote is, of course, that all marks *not* in parenthesis are Mahler's, which is far from true. An equally unfortunate obscurantism is the universal custom of referring to this music (after the A.M.P. score itself) simply as "Symphony No. 10 by Mahler," rather than two touched-up movements therefrom. I stress all this because the same people who object to the idea of a realisation of the whole symphony, offered with full acknowledgment of the source and extent of the realisation, frequently raise no objection to such an inaccurate presentation of the two-movement extract as "Mahler's Tenth," simply because it is a *fait accompli*, or because it is "traditional" and accepted. Truly, as Mahler observed, "Tradition is slovenly." And I might add that Deryck Cooke further intends to publish, in the near future, a list of the many *disparities* which he finds in the A.M.P. score even with Mahler's sketch—actual errors, quite apart from the anonymous additions, which editor Jokl evidently did *not* perceive in checking his copy score against the facsimile prior to publication.

Prior readers of CHORD AND DISCORD will remember the article on the Tenth by the late Frederick Block, published in the December, 1941 issue, as well as an extensive article by Klaus George Roy in the 1958 issue, entitled *The Creative Process and Mahler's Tenth Symphony*. The former was my own introduction to an awareness of the Tenth as an entity. Mr. Block had prepared a four-hand piano edition of the three unperformed movements. I did not see Mr. Block's likewise unpublished and unperformed score until after the war. But after reading

his article I looked up the Mahler facsimile, and the following year, full of youthful war optimism, dispatched a letter from my Canadian Air Force post to Dmitri Shostakovich, urging him to realise the symphony in orchestral form. I received a warm but regretful reply, and I continued to discuss the matter with other musicians and composers. In 1948 one of these with whom I corresponded, my British colleague Joe Wheeler, gradually undertook to realise the whole work orchestrally, substantially completing it by 1954. Then living in the Los Angeles area, I showed the score to Mrs. Mahler, who expressed her gratification and offered practical suggestions for propagating it. About 1949 she had also talked to Arnold Schönberg, in my presence, about realising the work. Mr. Wheeler has had his score performed by student musicians in England, partly under his own direction. I have since seen another full realisation by the American Clinton Carpenter, part of still another by the German Hans Wollschläger, and have heard reports of other realisations in Italy and Argentina. There are probably more, since the more that is known about Mahler the more interest is aroused by the existence of this mature, rough-hewn masterpiece.

The genesis of Deryck Cooke's contribution, though unique in circumstance, seems to typify the way the symphony seizes and grips the imagination of all who come to it with an open mind. The B.B.C. had requested a centenary brochure to accompany its comprehensive Mahler cycle of 1960; and the conscientious Mr. Cooke, author of *The Language of Music* (Oxford Paperback), felt he had come up against an "enigma," a "blank wall," when he came to writing an account of Mahler's final work, and that he could not complete the brochure to his satisfaction until he had made a thorough study of the manuscript. This he did by copying out the whole score in his own hand, to clarify the structure in his mind. Out of this came the suggestion that the B.B.C. complete its Mahler cycle with an illustrated lecture on the Tenth by himself—an idea which gradually evolved from that of a lecture into a near-performance on workshop principles, as more and more of the texture demanded to be filled in once he had started on it. The interesting thing is that Cooke knew nothing of the other existing realisations at the time, or for many months thereafter, nor did I know of the B.B.C. project until after its completion. The gaps in Cooke's realisation in two of the five movements resulted, he now declares, from an unwillingness to go the whole way and admit to himself that this was no longer a musicological experiment, but an act of re-creation with demands of its own. So much so, in fact, that subsequent to the broadcast he did go ahead and fill in those final gaps, even though he knew that Mrs. Mahler's ban prevented any further performance on the air or in concert. As a real musician he had no choice but to do so—not for any conceivable audience, but simply for himself.

I am certain that the present unresolved situation regarding the Tenth will resolve itself naturally in time. Contradictions will be sifted and weighed. Though Mrs. Mahler's present change of mind over the question of realisation is inexplicable to me in view of our many past conversations, I would not wish to question anything so personal. It may well be that the wisest thing Mrs. Mahler ever did was to present the Tenth to the world through the photographic facsimile of Mahler's

own hand, thus quite eliminating, in the final analysis, any ultimate confusion over what is Mahler's and what is not when the music is placed in the public domain. And this wise act was surely done in the full knowledge that such an original source-material would soon enough be necessary. Now, with the growing acceptance of the *Adagio* and *Purgatorio*, the cat is half out of the bag; it can't very well be put back in, or left in that position forever. The situation is inherently unstable. The Internationale Mahler-Gesellschaft in Vienna has announced its intention of putting the precise manuscript into clear music type (with alternatives for conjectural notes and markings, it is to be hoped), and this will inspire an even wider circle of enthusiasts. The time may come when the pioneer B.B.C. "workshop" broadcast of 1960 will be considered only a first glimmering of the comprehensive Tenth—but let us look at what has already been said by professional critics on the scene! For in total darkness, even a glimmering may come as a blinding revelation.

In the B.B.C. broadcast, the most profound effect was made by the great final movement in which the whole musico-dramatic scheme is rounded out, despite the fact that there is not a bar of full score in Mahler's manuscript for the fourth or fifth movements. (The main sketch consists of the following: four-staved "short score"—movements 1, 3, 4 and 5; full score—movements 1, 2, and 28 bars of 3.) It was the fact that, of the three movements publicly revealed for the first time, the two *Scherzi*, with considerable gaps left in them, were largely ignored by the commentators in favor of the complete finale, which finally persuaded Cooke that a continuous performance of the symphony from first bar to last—however much a particular bar had to be harmonically, contrapuntally, or instrumentally realised—was the only legitimate way to present the Tenth to the public as a Mahler conception. The listener must "see" it as a whole, like a piece of sculpture, but with a full understanding of what in the *detail* is Mahler's and what had to be added only for the sake of comprehensibility. Of the established presentation of the *Adagio* and *Purgatorio* as "Mahler's Tenth Symphony," Cooke has said elsewhere: "Imagine trying to understand the significance of Mahler's Fifth Symphony, for example, if one only knew the opening funeral march in C sharp minor and the *Adagietto* in F. No, it was obvious that the Tenth Symphony could only communicate its true meaning if experienced as a whole." It is the purpose of the ensuing analysis to indicate precisely to what extent it is already a whole in the manuscript.

I might add that in the summer of 1962 I participated in a 50-minute panel discussion of the Tenth Symphony on radio station WBAI in New York. It was presented, in lieu of the forbidden B.B.C. transcription, as the culmination of WBAI's own complete recorded Mahler cycle. The other panelists were Fritz Mahler and Felix Greissle, and it developed more or less into a three-way debate, with Mr. Mahler roughly in the center. The WBAI producer of the whole cycle, Jerry Bruck, moderated the discussion, and asked the listeners for their opinions. Of the many letters received, only one was not wholeheartedly in favor of realisation *in toto*, and that one was undecided. Finally, before quoting from the press notices of the original B.B.C. broadcast below, I should

like to quote from a letter by John Gutman, Assistant Manager of the Metropolitan Opera, as published in the *New York Times* on September 23, 1962. While in London that summer, Mr. Gutman had heard a tape of the broadcast, which he described as "a fascinating experience." Referring to Alan Rich's column of August 26, in which Mr. Rich mentioned the Tenth controversy among other Mahler matters, Mr. Gutman said: ". . . The score as now established by Mr. Cooke is surely worth a hearing, and I, therefore, very much regret that Mrs. Mahler so far has not permitted the playing of this tape in this country. I know that the ever-increasing admirers of the symphonic works of Gustav Mahler in this country would be enormously interested if this tape could be presented on one of our more culturally inclined stations, and I think that to deprive them of this opportunity would be a grave and rather unjustifiable mistake." For my part, I think the other versions I have studied are no less worthy of a hearing.

*Extracts from the Press Comments*

*Donald Mitchell, London Daily Telegraph, Dec. 20, 1960:*

One of the most eagerly awaited events of the Mahler centenary has been the "première" of the Tenth Symphony promised by the B.B.C. Deryck Cooke's immensely skilful realisations of some of Mahler's sketches were heard on the Third Programme last night in a performance by the Philharmonia Orchestra under Berthold Goldschmidt. When Mahler died in 1911 he left his last work unfinished. Until last night only two movements, the opening *Adagio* and pivotal third movement, the brief *Purgatorio*, had existed in a practical performing edition of by no means unchallengeable authenticity.

What Mr. Cooke has done—a feat which puts us all in his debt—is to reconstruct sufficient music from the symphony's two Scherzos to give one a clear idea of their character, and to realise the finale in its entirety. He has also tidied up the texts of the two movements already published. His devoted labours, of which Mr. Goldschmidt and the orchestra were enthusiastic and convincing exponents, meant that for the first time the shape and substance of the whole work was made clear.

The great *Adagio* and first *Scherzo*, a *Laendler*-like movement of notable rhythmic irregularity, form the first part of the symphony. Part II opens with the *Purgatorio*, continues with the second *Scherzo*, which clearly recalls the *Trinklied* of *Das Lied*, and concludes with an extensive finale in which the massive dissonance from the *Adagio* returns—a master-stroke which it was quite extraordinarily thrilling to experience in its context. Mr. Cooke's brilliant detective work leaves us in little doubt that Mahler's premature death deprived us of yet another of this remarkable composer's searching explorations of a new world of sound and feeling.

One can be sure of that, while still wondering, with no little sense of loss, what Mahler's final version of the symphony would have been like. I cannot believe, for example, that much of the work would not have been richer in contrapuntal textures than Mr. Cooke's realisations suggest. This was a tantalizing, because so substantial, glimpse of the last thoughts of a great composer.

Colin Mason, *Manchester Guardian*, Dec. 21, 1960:

. . . Mr. Cooke stressed the point that Mahler's sketch was only a first draft, but the form of the work would almost certainly have remained much as it was here—expansive but strong, with one of those characteristic flashbacks in the last movement by means of which Mahler succeeds as if by magic in holding his vast forms together. There is splendid and often beautiful material in all five movements, and the end of the fourth movement and the introduction to the fifth (if Mr. Cooke's orchestral realisation can be believed) are among Mahler's finest and most amazing inventions. We can well imagine what excitement there might have been in the missing working-out sections of the two Scherzos. But if we have not gained a new symphony for the repertoire, we have cause to be grateful for this fascinating oral glimpse of a might-have-been, which all devout Mahlerians, if they are wise, will have preserved on their tape recorders.

William Mann, *London Times*, Dec. 20, 1960:

. . . Listeners heard not a complete symphony, nor a presumptuous completion of Mahler's intentions. This must be emphasized. Sometimes the conjectural, basic solution was audibly too primitive; the simple Johann Strauss accompaniment to the waltz-trio of the fourth movement, for example. Mr. Cooke played an open hand, bidding the orchestra play exactly what Mahler wrote, and the more spare the texture, the more Mahlerian the music sounded. He has piously left gaps that he is unwilling to fill in (though the manuscript may look no less communicative in these passages), but he has made it possible for us all to hear the resolution of Mahler's symphonic soul-searching.

The Tenth Symphony begins with the questing, anguished *Adagio* that is often played; but the succeeding movements work out a cure for Mahler's spiritual ailment, the condition of human existence, until in the finale he finds not the optimistic and hollow acceptance of the Fifth and Seventh symphonies, nor the vaguely passive resignation in regret of the Ninth Symphony or *The Song of the Earth*, but a strong, self-won victory over transitory pain. The movement is hardly begun before the flute exhales a melody whose appeal is tougher and more self-reliant than anything of Mahler in similar vein; this melody grows until the coda (how much more it would have grown if Mahler had tended it to its final blossoming), when the music sinks into a profound sleep only to be snapped by the soaring of what is surely the soul to heights of purest bliss. By giving this supremely moving movement, alone, to the world, Mr. Cooke and the B.B.C. have surely made as great a contribution as any to Mahler's centenary. Unfinished it must be accounted, but it deserves to be played so, again and again.

Ernest Bradbury, *Yorkshire Post*, Dec. 20, 1960:

. . . Mr. Cooke had in no sense "completed" the symphony, and had not in fact composed any of the music. Rather, using Mahler's many clues concerning the orchestration, had he brought into orchestral sound what was in the composer's mind, adding at most a few conjectural notes, chords and harmonies. The sketches were appallingly difficult to decipher—very rough notes, bearing evidence of great haste, and cov-

ered with anguished comments. In the margin of the fourth movement he had written "The devil is dancing this with me; madness take me and destroy me." Elsewhere, "O God, why hast thou forsaken me?", and again, "Thy will be done."

Last night's performance was a thrilling experience. The two great movements are the first (fully composed and almost fully scored by Mahler) and the last (almost fully composed, with the score realised conjecturally from four-stave notation). These contain some gorgeous—and some quite new—Mahlerian sounds. In between are the short movement headed *Purgatorio*, lasting only four minutes, which is flanked by two Scherzos (the second of these, movement 4, was not so named by Mahler) from which extracts were given. The largest gap was in Scherzo I, a matter of 160 bars between the second and third extracts.

Historically the realisation is of extreme importance, for, as Mr. Cooke has said, we have wronged Mahler hitherto by "regarding the heartbroken finale of the Ninth as his final comment on life." The beautiful ending of the Tenth Symphony is, rather, resigned and at peace, "a benediction, not a valediction"; and one can only agree with Mr. Cooke, while also congratulating him on a stupendous achievement, that the Tenth Symphony, far from being a pathetic, fragmentary product of failing powers, is "the near-realisation of a final, spiritually victorious masterpiece."

*Dr. Egon Wellesz, Austrian Musical News (Oesterreichische Musikzeitschrift), April, 1961 (trans. by J. D.):*

. . . We knew Cooke as the author of an unusual book, *The Language of Music*, and knew of his admiration for Mahler; but we did not know he had made so thorough a study of Mahler that he could undertake such a huge task. It was a hazardous undertaking, but it succeeded, and the performance under conductor Berthold Goldschmidt, whose advice Cooke had sought out, was a moving experience. It proved how justified was the trouble Deryck Cooke had taken to bring all five movements of the symphony to a hearing, and how right the music directors of the B.B.C. were to bring the work to a totality from the sketches. It seems idle to me to raise the question whether such a reconstruction is artistically justified. The facsimile edition has provided the means of realising the sketches of the Tenth Symphony, and now the actual performance of this last work of Gustav Mahler has, at the very least, acquainted us with a creation of unexpected greatness.

*Desmond Shawe-Taylor, London Sunday Times, December 25, 1960:*

Our public celebrations of the Gustav Mahler centenary may not have competed in brilliance with the cycle mounted by the New York Philharmonic, who could call on the services of such eminent Mahlerians as Bruno Walter, Leonard Bernstein and the late Dimitri Mitropoulos. On the other hand, the B.B.C. has risen nobly to the occasion, performing in the course of 1960 every published composition by the Austrian master, and crowning this achievement last Monday by a large-scale "realisation" of the work that he did not live to complete: the hitherto mysterious and widely misunderstood Tenth Symphony. . . .

This symphony has so far existed in two forms: a facsimile portfolio

of sketches (1924) and an anonymously edited printing (1951) of two of the five movements. Thanks to the kindness of a colleague, I was able to follow both rehearsal and performance from the facsimile manuscript, and could thus form some conception both of the inherent difficulty of the task and of the amazing fidelity and sure-footedness with which it has been carried through. The whole thing *sounded* like Mahler, and at least one movement—the extended finale, which is as long as the opening *Adagio*—proved to be Mahler of the finest quality, reaching a serenity and transfiguration of spirit such as the tortured composer had not previously attained.

I am inclined to think that this last movement, even though scored and put in order by another hand, may come to rank among the very greatest things that Mahler has left us. The long, consolatory flute melody near the beginning, the fever and fret of the central section, the startling recurrence of the climactic dissonance from the *Adagio*, and the transcendent conclusion—all these are welded into a substantial and entirely convincing whole.

How, it may be asked, could anything so shapely and so firm emerge from a composer's early draft? The answer may be that Mahler's sketches are very unlike those of Beethoven. Those who know them best tell us that, although he would tinker for ever at the orchestration, he tended to fix the formal outline of a work once and for all at quite an early stage.

Whether or not that is generally true, it is hard to believe that the composer would have made many structural changes in this deeply moving finale, even though he would doubtless have enriched its texture and added to its contrapuntal interest. We owe much to the B.B.C. and to Mr. Cooke for putting us in the way of so enthralling an experience: an experience that cannot too soon be repeated.

#### *Deryck Cooke's analysis:*

In view of various misleading statements which have been made concerning Mahler's Tenth Symphony, and the confusion that has arisen from them, it may be of value to set forth clearly the facts of the matter.

It was Mahler's custom to sketch a symphony one summer and elaborate it in full score the next; he sketched the Tenth in the summer of 1910, but since he died in May the following year, the work was never completed. Thus the Tenth Symphony—in the sense of Mahler's final definitive score, which would have no doubt been ready for publication by 1912—is forever lost to us; all we possess is the sketch.

This much is known to all lovers of Mahler's music, and there are those for whom that is all there is to be said. They maintain that, since Mahler did not live to complete the symphony, it does not exist as a work of art in any sense; they regard the sketch as a tragic might-have-been and a mere musicological curiosity, and they wish it to remain so. Some make an exception in the case of the opening *Adagio* movement,

believing that it was brought near enough to completion to be performed, with a very minimum of editing, as a genuine piece of Mahler; but any attempt to make a performing version of the whole sketch, they tell us, is at best a misguided folly, at worst a sacrilege.

This view must command respect, in so far as it is based on the crucial and indisputable fact that exactly what Mahler's final score of the work would have been like is beyond all conjecture. But unfortunately some of those who hold it have supported it by denying or obscuring other crucial and indisputable facts, which offer a sound basis for the opposite viewpoint—the viewpoint of those who advocate making a performing version of the sketch. It is these facts that I wish to establish here.

(1) Mahler did not, as is still too widely stated, express any final wish that the manuscript should be destroyed. The statement that he did so was made by Richard Specht in his official biography of the composer (1913); but in 1924, Mrs. Mahler allowed the manuscript to be published in facsimile, and the first and third of its five movements to be performed in edited form; and the following year, Specht, in the 17th edition of his book, wrote an appendix, with Mrs. Mahler's sanction, in which he categorically withdrew his statement, and firmly advocated the completion of the work by someone conversant with Mahler's method and style.

(2) Schoenberg's remarks about the "unknowable" Tenth Symphony, reprinted in his book *Style and Idea*, cannot be invoked as arguments against making a performing version of the sketch, since they were not based on an intimate knowledge of the manuscript. Indeed, Schoenberg can never at any time have made an intensive study of the manuscript or, being the man of integrity that he was, he would have retracted the remarks about it in *Style and Idea*, since they are utterly misleading in the impression they give of an inscrutable enigma.

(3) The manuscript is in no sense an inscrutable enigma. It can only be regarded as such by those who have not made themselves absolutely familiar with it in every detail by copying it out for themselves. Despite the apparently chaotic calligraphy, its supposed indecipherability has been vastly exaggerated. It is true that, in the case of occasional isolated notes, which are either illegible or manifest slips by Mahler in his notation, one is forced back on a conjectural reading; but in the case of something like 95 per cent of the manuscript, there can be no argument as to what Mahler set down, and indeed most of it can be written out by a good copyist, familiar with Mahler's calligraphy, who is prepared to make the necessary effort of concentration.

(4) All suggestions that the manuscript is fragmentary are quite false. The word "sketches," so often used to describe it, is only justifiable in that there is a separate sketch for each of the five movements (two of the opening Adagio—short score and full score), and some isolated alternative sketch-pages of odd passages and sections. But the word is utterly misleading when it is used to convey an impression of separate fragments, the assembling and ordering of which is a matter of conjecture. Each of the five main folders contains a comprehensive sketch of a movement, with the pages clearly numbered. The order of

these movements is clear from Mahler's final blue-pencil marking on each folder—I, II, III, IV, and V; and this order is in any case self-evident from the internal tonal and structural progression of the whole.

(5) Even in the case of each separate movement, any use of the word "sketch" to imply something improvisatory and inchoate is misleading. Each sketch is a full-length, bar-by-bar laying down of an entirely intelligible and significant form, in which there are no lacunae, except perhaps one tiny one near the end of the fourth movement. As Richard Specht said in the appendix to the 17th edition of his biography, Mahler himself described the manuscript as a work already fully-prepared in *the sketch*; and indeed it is a comprehensive full-length sketch (1949 bars) of a five-movement symphony in F sharp, with every main idea fully-formed in melody and entirely intelligible in harmony, and with bar-by-bar thematic continuity from beginning to end. The sketch makes perfect sense as a continuous symphonic structure; so accuracy demands that we should describe the manuscript, not as "*sketches* for the Tenth Symphony" but—with Mahler—as "*the sketch* of the Tenth Symphony."

(6) The Tenth Symphony does actually exist, then, as a musical work, in the basic sense of a significant and integrated structure. That Mahler would have modified this structure in detail is certain; but that he would have recast it wholesale cannot be imagined. Whatever may be lacking in textural detail—especially in the second movement—the sketch as it stands can be analysed as a symphony quite as meaningfully as any of Mahler's completed works; and analysis reveals a form as rich and complex and closely integrated as any Mahler conceived. The brochure which Richard Specht wrote as a companion to the publication of the facsimile in 1924 offers a broad descriptive analysis which, apart from numerous misreadings, due no doubt to insufficiently prolonged study of the manuscript, provides as comprehensive an account of the work as could be made of a complete symphony. I would also refer the reader to my own summary thematic analysis (in music-type) in *The Musical Times* of June, 1961, which indicates the main strands of the phenomenally intricate web of thematic cross-references and cyclic development from movement to movement; again the analysis gives the impression of dealing with a completed work. Neither Specht's nor my own analysis would have been possible if the Tenth were not complete in its whole essential thematic-harmonic-formal structure.

(7) This structure presents an emotional and psychological statement as intelligible as those of Mahler's other symphonies. The "message" of the symphony is clear, and is of the utmost significance in that this was Mahler's last work—complementing *Das Lied von der Erde* and the Ninth Symphony as the final panel of his great posthumous last-period trilogy, and throwing crucial light on everything that went before. The final resolution of Mahler's lifelong spiritual conflict is not to be found in the Ninth Symphony, but in the quite different Tenth. The following description may give an idea of the work's crucial importance to our full understanding of Mahler as man and artist: it should be studied in conjunction with the facsimile.

SYMPHONY NO. 10 IN F SHARP MAJOR

I. ADAGIO. Full score, 275 bars, almost all 4/4. F sharp major-

minor-major. Like the opening *Andante comodo* of the Ninth Symphony, but less desperately, this movement presents a sombre introspective conflict between two opposed ideas. These are: (1) the introductory *Andante* motto-theme for unaccompanied unison violas (bars 1-15)—a disconsolate, homeless, searching melody, of shifting tonality, moving from B minor to D minor (the latter notated enharmonically); and (2) the main *Adagio* theme in F sharp major (bars 16-19)—a passionate, large-spanned violin melody over rich harmonies for lower strings and trombones, which forges onwards yearningly, repeated in inverted and normal forms, through acute tonal disruptions. At bar 31, after a threefold statement of the *Adagio* theme, the *Andante* theme returns, transformed into a melancholy f sharp minor violin melody with sparse string texture, generating more anxious material (bar 34) and taking in a quicker, troubled version of the *Adagio* theme itself (bar 36); but at bar 38 it returns in its original unaccompanied viola motto-theme form, even more unsettled in tonality, to lead back to a resumption of the *Adagio* theme.

This is the whole main pattern of the movement: the *Adagio* keeps launching off in F sharp major, confidently, only to give way to the melancholy F sharp minor melody; and the original motto-theme keeps coming back like a dark unanswered question. In spite of the glorious F sharp major outburst of the *Adagio* theme (from bar 58), and the ascendancy of the anxious elements, first in B flat minor (from bar 91) and then in A minor and other keys (from bar 112), no resolution is reached. But eventually the latent tension of the movement suddenly erupts in a dramatic and unexpected outburst—a great organ-like sequence of chords in A flat minor for brass, with sweeping arpeggiando for strings and harp (bars 194-99), followed by a sustained fortissimo nine-note dissonance for full orchestra, with a high trumpet A piercing through it (bars 203-08). As in the opening movement of the Ninth Symphony, but in a different way, the climax brings dissolution: at bar 213, the music moves into F sharp major, not to resume the *Adagio* theme, but for an extended coda, woven of regretful reminiscences of it and its former opponent, which mingle together in bitter-sweet resignation.

This first movement, it should be noted, initiates the motto-rhythm of the symphony ♩|♩. , which is present in both of its main themes, and permeates the movement.

II. SCHERZO, Allegro. Full score, 523 bars,\* with various time-signatures, F sharp minor-major. This big Scherzo movement complements the big opening *Adagio*, being in the same key, proportionate in weight, and contradictory in mood. It consists of a main scherzo-section

---

\*The numbering may vary, to a few bars, according as one interprets the sketch. Notes for guidance: (1) I count bar 44 (which is 4/2) as two bars of 2/2—bars 44 and 45. (2) Note the extra insert-bar after bar 53. (3) I take bar 163 as nullified by the single-line correction above the violins in the next bar, and divide this corrected line into three bars of 3/4—bars 163, 164, 165. (4) Bar 271 is only one bar: Mahler has deleted the line indicating an extra bar. (5) The bar after bar 307—the last on the page—is deleted; bar 308 is the first on the next page. (6) Note bar 434, crushed in between bars 433 and 435.

with two trio-sections, the material of all three sections gradually mingling together in free development.

A. Main Scherzo section, F sharp minor (bars 1-59)—fierce bustling music, mainly for strings and brass, with a nervous tautness due to constantly changing time-signatures, but full of a bold extrovert strength of spirit. Its brief C sharp minor introduction for horns and oboes (bars 1-4) presents the symphony's motto-rhythm ♩|♩ which will permeate the movement; the main theme (from bar 4) makes much use of a falling octave, which will also play a large part in the fourth movement (a second scherzo). Statement (bars 1-22) and more forcible restatement (23-42) are followed by a brief extension (from bar 43) rising to a crashing climax (bar 55) which dies down swiftly. In bars 60-75, a brief transition dispels this mood with lighter treatment of the same material, switching through B flat, E and G, to F.

B. First Trio, F major (bars 76-130). At the same tempo, still with changing time-signatures, the original fierce material is transformed into gay pastoral music in F major, featuring oboe, woodwind and horns, which is still permeated with the motto-rhythm. After the statement (76-96) and modified restatement (97-110), there is a brief string version in A (111-116), before the last woodwind statement in F (117-130).

A. Varied restatement and development of Scherzo material, F sharp minor (bars 131-165). Restatement of the fierce Scherzo material (131-141) is interrupted by more genial development in A flat and D (142-151), but resumes in F sharp minor (from bar 152), reaching a new unisono climax (bar 158), which subsides swiftly into E flat (163-165).

C. Second Trio, E flat major (bars 166-246). The mood changes completely, as the restlessly changing time-signatures and short, clear-cut motives give way to an easily flowing 3/4—a rolling waltz-rhythm in the bass, supporting a warmly affectionate *Ländler* melody for violins. This melody is first cousin to the main Adagio theme of the opening movement, and appears, like that theme, in normal and inverted forms. (Although Mahler indicated no change in tempo, he would doubtless have marked this section with some such word as "gemächlicher"; compare his "Etwas ruhiger" at figure 6 in the Scherzo of the Fifth Symphony.) The *Ländler* melody, mainly for strings (166-186), gives way to a secondary theme, a slightly melancholy "hurdy-gurdy" type of tune for oboe and other woodwind (187-202); then the *Ländler* melody is restated in E flat and developed (from bar 203), the secondary idea breaking in a more grotesque form for a brief restatement in E flat minor (235-246).

AB. Varied restatement of Scherzo material, F sharp minor, taking in development of First Trio, in other keys (bars 247-300). The fierce restatement of the Scherzo material in F sharp minor (247-54) is interrupted by cheerful development of the first Trio, in E flat and other keys (255-69), but resumes in F sharp minor (269-79), only to be interrupted again by the same material, now in D (280-94). At bar 295, the motive of the *Ländler* theme of the second Trio enters repeat-

edly, broadly augmented, with normal and inverted forms in combination, generating a climax.

C. Varied restatement of Second Trio, D major (bars 301-66). The Ländler motive swells out in sonorous augmentation on the horns, in 3/4, beginning a richly glowing restatement in D major of the Second Trio, slightly modified and developed. The secondary theme does not recur in its original melancholy form, but cuts in towards the end, as before, for a brief restatement in D minor (348-59).

BC. Continuation of development of First Trio, fused with elements of Second Trio, F major and C major (bars 367-416). With a return of the changing time-signatures, the cheerful material of the second Trio is developed by brass and strings in F (367-76), taking in a quicker version of the Ländler motive in C (377-86) and in F again (387-408). From bar 408, the tonality begins to shift, as the second Trio's material starts to change back into that of the fierce Scherzo section, and there is a growth of tension towards a climax (408-16).

AC. Slower, more lyrical episode, developing materials of Scherzo and second Trio, F sharp major (bars 416-44). For the second time, the mood changes completely: as in the Rondo-Burleske of the Ninth Symphony, the vociferous music abruptly gives way to a passage of deep yearning lyricism in the original key of the symphony. (Again, Mahler indicated no change of tempo, but he would doubtless have added some direction; compare the "Etwas gehalten" in the passage of the Ninth Symphony just mentioned—third movement, after figure 36). It is at bar 416 that the agitation of the previous section is dispelled and broken off abruptly, when the trumpet breaks in with a transfigured, radiant version of one of the spiky Scherzo motives, in F sharp major, over sustained trombone chords. This is in a calm 4/4; then (bar 424), in a smooth alternation of 4/4 with 3/4, moving more and more towards a pure 3/4, solo horn and strings muse tenderly on the Ländler theme, augmented, making its relationship to the opening movement's main *Adagio* theme more apparent than ever, especially since the key is now the same. This section reaches a passionate climax and breaks off abruptly at bar 444.

ABC. Bringing together of main elements of Scherzo and both Trios, various keys, moving back towards F sharp major (bars 445-92). Abruptly, turning to B flat, resuming the original lively tempo (Mahler would no doubt have marked "Tempo I" here) and going back to the changing time-signatures, the music continues with the gay development of the First Trio material, taking in the augmented Ländler motive (445-58). It moves back to F sharp major (459-69), away to D major (470-78), and back to F sharp once more (at bar 479)—F sharp *minor* this time. In this key the cheerful second Trio elements change back to the fierce Scherzo material and work up to a tense climax, while the augmented Ländler motive is heard at the same time in a Neapolitan G major on horns (486-90).

BC. Coda, being an apotheosis of the two trio themes, F sharp major (bars 493-523). The movement, so robustly confident in essence, culminates logically in a blaze of vital energy. Minor switches abruptly to major, and over a dominant pedal, the augmented Ländler motive rises excitedly on horns and trumpets (493-503), leading to a trium-

phant march-like statement of the first Trio material (504-11). This rises to a further climax—a brilliant outburst of the second Trio's original main oboe theme on trumpets, wind and violins (from 511), which is joined by the horns, whooping out the augmented Ländler motive (515-21); and the movement ends with a sudden bang, in the same jubilantly affirmative mood as the Scherzo of the Fifth Symphony.

The folder of this movement, incidentally, is marked "2. Scherzo-Finale"; and it seems most likely that Mahler originally intended a symphony in two movements. Indeed, in view of the close relationship between the Adagio and Ländler themes, and the fact that the yearning of the Adagio theme finds release in the Scherzo's final jubilant transformation of the augmented Ländler motive, the two movements form a unified whole, like the first and second movements of the Fifth Symphony. Wherefore it would seem that the Adagio and Scherzo combine to form Part 1 of the Tenth Symphony, and that the other three movements, abandoning F sharp and only returning to it in the closing pages of the Finale, form Part 2.

III. PURGATORIO, *Allegretto moderato*. Short score, 170 bars of 2/4,\* with full score of the first 28 bars, B flat minor. This short movement, a *moto perpetuo* mainly of great delicacy, is the motivic and emotional source of the two large-scale movements which follow: like *Von der Jugend* in *Das Lied von der Erde*, it follows a simple A-B-A pattern.

A. Main section, B. flat minor and major (bars 1-63).

1. Introduction, *Allegretto moderato*, setting up a sixteenth-note *moto perpetuo* (bars 1-6); and troubled B flat minor theme, *Nicht zu schnell*, for violins, looking back to the anxious material of the B flat minor section of the opening movement. Statement (6-14) and restatement (14-22), followed by the two opening phrases of the theme, striking in like a refrain (22-24), as they will do throughout the movement.

2. Hopeful B flat major theme, *Etwas fließend*, for oboe (24-32), rounded off with the refrain (32-34).

3. Even brighter B flat major theme, for flute (34-40), rounded off with the refrain (40-41). Themes 1, 2, and 3, and the refrain, are permeated with the motto-rhythm ♩|♩.

4. Second B flat minor theme, much darker than the first, for bassoons and basses. The statement (41-52) is joined by the refrain (48-50), and the restatement (52-63) is likewise (59-61).

B. Central section, development in D minor and major (bars 64-121), introducing a new theme. In contrast with the main section, the development is violent. After fierce treatment of theme 1 in D minor (64-69) and of 2 in D major (69-81), followed by the refrain (81-83), the new D minor theme enters—a brooding six-note motive, extended (83-89). Refrain again (89-91), then the new theme recurs, more intensely (91-95). New development of theme 1 in bars 96-106 leads to a great tragic outburst of the new theme (106-109), followed by an even

---

\*Bar-numbering: (1) note the indication of three inserted bars after bar 76. (2) note the indication for expanding bar 99 into two bars—99 and 100. (3) note the Da Capo at bar 125—repeat bars 6-34 as bars 125-53, then return to page 3 (bars 154-70).

more tremendous one (112-114). Then the development of theme 1 dies away in D minor, spectrally (115-121).

A. Curtailed restatement of main section, B flat minor and major (bars 122-170). The music switches abruptly from D minor to B flat minor, and after a shortened restatement of the introduction (122-25), Mahler indicates a *da capo* of themes 1 (125-41) and 2 (143-151), with their refrains. Then theme 3 is written out in slightly modified form, *sempre diminuendo* (153-67). The movement is dying away radiantly in B flat major with the hopeful flute theme, when a momentary upheaval provides an eerie conclusion, with the refrain darkly in the bass (167-70).

It should be noted that theme 1 of this movement is made up of short agitated motives, of which three are important. There are two three-note ones, both to the motto-rhythm: B flat, D flat, B flat (bars 13-14), to be called W; and C, D flat, B flat (bars 23-24, short score), to be called X. The other is a seven-note one (bars 10-11), to be called Y. These, together with the tragic six-note theme of the central section (to be called Z), are used pervasively in the last two movements.

IV. MOVEMENT WITHOUT TITLE. Short score, 580 bars of 3/4,\* E minor moving to D minor. Although this movement has neither title nor tempo marking, it is clearly a fierce main *Allegro pesante* in the lamenting vein of the *Trinklied* of *Das Lied von der Erde*, conflicting with seductive waltz material. Again there is a main scherzo section and two trios, and the materials of all three sections mingle in free development; and all these elements are pervaded with the motto-rhythm  $\surd \downarrow$  and the three-note motive X, which formed the refrain of the Purgatorio and ended that movement.

A. Main Scherzo section, E minor (bars 1-115)—wild tragic music in Mahler's demonic vein, permeated with the three-note Purgatorio motive X to the motto-rhythm and to another rhythm  $\downarrow \cdot \downarrow \downarrow$  (both rhythms pervade the whole movement).

A brief introduction (1-5) presents a grim motto of three sustained chords, descending by octaves, for wind, horns, and trombones respectively. The first chord is subdominant (an A minor secondary seventh), the second dominant (the dominant seventh of B minor); the third establishes the movement's main tonality with a 6/3 of E minor. This already adumbrates the tonal conflict of the whole movement between a tendency to fall despairingly towards the subdominant side (A minor, and further to D minor), and a struggle to move positively into the

\*Bar-numbering: Page I: after bar 14, a bar is deleted. Page II: after bar 106, I have ignored the possible insert marked by Mahler with a query, as I believe it indicates a contemplated alteration in the structure. Page III: I take the first two bars of the upper line, and the four bars of the lower—bars 115-22; the single up-beat beginning the next page belongs to bar 122. Page IV: bar 144, ringed for possible deletion by Mahler, is reinstated by the word "bleibt," and remains; after bar 158, I take the next bar as deleted. Page V: after bar 235, two bars are deleted. Page VI: at bar 307, note the extra bar. Page VIII: after bar 379, the rest of the page is deleted. Page IX: after bar 398, eight bars are deleted. Page Xa: after bar 506, one bar is deleted; after bar 508, one bar is deleted; then follow bars 509, 510, 511, 512 (deleted but reinstated with the word "bleibt"), and 513, the last bar of page Xa. Page Xb: after bar 515, a bar is deleted.

dominant, B major—a conflict which is finally lost. Against the first chord is thrown the falling octave of the second movement, against the second the Purgatorio motive X, both of which form the basis of the main theme.

1. Violent, high-soaring main theme, E minor (5-11), developed to a climax (11-25), and extending by a secondary idea in the subdominant, A minor (24-41), which brings back the motto-chords with full force (41-45) and a new working up of the main theme, in E major, to the first big climax (45-57).

2. Transitional theme, beginning stormily in E minor (56-64), but changing to graceful waltz-like material in E major (64-72); this leads to a melancholy waltz-tune of the "hurdy-gurdy" type in G minor in bars 73-83 (cf. the secondary theme of the E flat Ländler Trio of the second movement); but the stormy theme bursts in again in E minor with a new continuation (83-98), which works towards a climax.

3. The approach to the climax is a new idea in its own right—a fiercely lamenting passage which will recur throughout as a refrain (99-107). This brings the whole continuous non-stop Scherzo section to a tremendous climax (107-114), into which the motto-chords enter with overpowering force (111-115) to herald a new section.

The climax subsides on to a curiously laconic link-passage, based on the Purgatorio motive X, which will recur: it modulates to C major, the relative of the subdominant A minor (115-22).

B. First Trio, C major (bars 123-66)—seductive waltz-music derived from augmented lyrical variants of the Purgatorio motive X.

1. Quiet, sentimental main waltz-tune, C major (123-37), with varied restatement (138-44).

2. Secondary idea, C major (145-52)—characteristic waltz-material of the gay, leaping, syncopated kind.

3. A confident, dashing theme bursts in, C major, and leads back to E minor (152-66).

A. Varied restatement and development of Scherzo material (in conjunction with that of the first Trio), basically E minor (166-247). First the waltz-tune B1 is developed in the stern mood and key of the Scherzo material, E minor (166-73), the motto-chords striking in powerfully (170-74) to initiate this whole new section; and A1 itself is developed passionately, in E minor (174-84). Then the waltz-tune B1 returns to be treated lamentingly in the subdominant A minor, touching shadowily on that key's own subdominant, D minor (184-201); this passage, shot through with the Purgatorio motive X, is almost a direct quotation from the *Trinklied* of *Das Lied von der Erde* (see that movement, bars 69-75). It merges into the lamenting refrain A3 in A minor (202-10), which now takes in the Purgatorio motive X and reaches an unexpected climax—a broadly joyful one in A minor's relative C major (210-18), which will also recur. After this, the waltz-tune B1 be-appears in its original form for a brief hushed reference (219-25), but is swept away by the return of E minor and ferocious development of the Scherzo theme A1 (226-43). This eventually calms down, and the laconic linking passage returns (243-47), marking the entry to the next section by modulating to A major.

B. Varied restatement of the First Trio, A major (bars 248-90). The waltz-tune B1 is now restated joyfully (248-260); but though the key is the bright A major, it is still on the subdominant side of E minor. It is followed by B2, adorned with a new lilting treatment of the Purgatorio motive X (261-68), which soon works up to the former broadly joyful climax (269-77). The restatement then picks up B2 again quietly (278-86), but this soon leads to the laconic link-passage (287-90), which marks the appearance of a new section, by modulating from A major to C major (still the subdominant side of E minor). This time, however, the link-passage is developed briefly into a completely new idea, a quiet wistful episode in C major, consisting of statement (291-300) and restatement (301-11); this whole passage acts as an independent interlude prefacing the new main section, which it introduces by modulating back to A major.

C. Second Trio, A major (bars 311-80). This Second Trio is in fact based on a version of the dashing theme of the first trio, B3: it is stated powerfully (311-35), then restated and developed with passionate intensity (336-80). The music is hectically joyful for the most part, and works up to a great jubilant climax; but the subdominant key of A major still holds the field, and the climax runs inevitably into the first A minor harmony at the three motto chords, which turn the music savagely back to E minor. This initiates the final restatement of Scherzo and First Trio, in which the two sections are split in two and spliced into one another, so to speak.

A. Beginning of restatement of Scherzo, E minor (380-410). After the introductory motto chords (380-84), only the main scherzo theme A1 is recapitulated, in contracted form (384-99), before the laconic link-passage breaks in and modulates to B major (399-410).

B. Beginning of restatement of First Trio, B major (411-44). At last the movement has counteracted its fatal subdominant tendency by placing the joyful first trio in the bright key of the dominant major. The main waltz-tune is restated—a slightly modified repetition of its former A major restatement (411-24, cf. 248-60), followed by the lilting idea (425-32, cf. 261-68), which works up to the broadly joyful climax (433-44). But this time the climax is shot through with fierce dissonance, and it subsides into a shadowy and anxious transitional passage in B minor (445-452), based on the Purgatorio motive X.

A. Conclusion of restatement of Scherzo, B minor (bars 452-87). The dominant key is still maintained, though it has darkened from major to minor. This section is an almost literal repetition, in B minor, of the original scherzo section from the beginning of the "hurdy-gurdy" theme of A2 (cf. 73-107): the "hurdy-gurdy" theme itself (452-63), the "stormy" theme (463-78), and the "lamenting" refrain (479-87). This time, however, the lamenting refrain reaches the broadly joyful climax in its original form, in the relative major, exactly as in the first restatement of the scherzo (487-95, cf. 202-18). But the relative major is now inevitably D major, a less bright key than either A major or B major, and doubly subdominant of E minor.

B. Conclusion of restatement of First Trio, D major (496-506). The joyful climax initiates an overlapping repetition of the end of the

first restatement of the trio (cf. bars 269-286): the climax itself, as mentioned (487-95) and the leaping waltz-material B2 (496-506).

CODA, D minor (bars 506-580). Following the repetition of bars 269-86, the joyful climax should now strike in—and it does, but in an awesomely distorted form, as a doom-like outburst in D minor (506-17), taking in Purgatorio motive X. With this abrupt switch from major to minor, the conflict is fatally decided: the movement has been pinned down irrevocably in the double subdominant minor of D. The fury dies down (518-21), as the final stage arrives. The movement retreats into the distance with an empty and shadowy transformation of the leaping waltz-material B2 in D minor, which becomes more and more ghostly, and gradually disintegrates completely. The coda consists of statement (522-29), restatement (530-27), third statement (538-50), and finally a mere phantom of the waltz rhythm, dying away on percussion alone (551-80). The last solitary note is the deathly thud of a *fortissimo* stroke on completely muffled drum.

The tonal conflict of this movement is the main crux of the symphony. The actual outcome was a despairing fall from E minor to the double-subdominant minor (D minor, via A minor)—and D minor was the key of the tragic central section of the Purgatorio. But the exact equivalent in the opposite, optimistic direction would have led through the dominant major of B (which the waltz theme B1 actually reached) to the double dominant major, F sharp—the true key of the symphony. This is the hard journey which the finale has to travel, and it has to start from the opposite pole—the double subdominant D minor to which the fourth movement has retreated.

V. FINALE. Short score, 401 bars, mainly 4/4 or 2/2,\* D minor moving to F sharp major.

SLOW INTRODUCTION, basically D minor (bars 1-84). There is no tempo marking, but the music is obviously slow.

A. First section, D minor (bars 1-29). The *fortissimo* stroke on muffled drum that ended the fourth movement is the first sound to be heard. Then, with constantly changing time-signatures (as in the second movement), and in D minor (the tragic key of the central section of the Purgatorio, to which the fourth movement retreated), three of the Purgatorio motives are given out slowly and lugubriously in the depths: the seven-note Y (2-3 and 5-6), the three-note W (8 and 10), and the six-note Z (11-14). This material is given a statement (1-15)

---

\*Bar-numbering: Page 1: the fragmentary looking bar after bar 25 must be counted—bar 26; the bar after bar 44 must not be counted—Mahler ringed it for possible deletion, and did not reinstate it with the word "bleibt." Page 2: at bars 58-59, despite the one-bar indication of the lower staves, I count the two bars of the upper ones; and bar 78 I count as two bars—78 and 79 (see the inserted seven-note motive). Page 3: at bar 130, note that there are three bars to the end of the page—130, 131, 132. Page 4: at bar 144, there are two bars after the double bar to end the line—144, 145. Page 6: after bar 243, the page is deleted except for the last six bars—244-249. Page 7: the bar after bar 274 must be counted—bar 275; on the next line, there are 9 bars to the double bar—276-84; at bar 288, the extra bar line is deleted—only one bar; after bar 299, the rest of page 7 is deleted; continue on the page 8 which begins with a B flat major chord (this replaces the other page 8) and then take pages 9 and 10, ignoring the superseded page which is not numbered.

and a restatement (16-27). The progress of the music is painful, and continually broken off by loud muffled drum strokes. But at bar 27, a rising seventh on the horn, repeated, initiates a more yearning form of the motive Z, which introduces the next stage.

B. Central section, D major and B major, 4/4 (bars 29-72).

1. The rising seventh is taken up by the flute, to begin a long 16-bar melody of hushed, unearthly serenity, over harmonies of utter stillness, opening in D minor but immediately switching to D major (29-45). This melody, which is partly a reshaping of the "hurdy-gurdy" theme of section A2 in the fourth movement, also makes calm use of Z, and ends with a melting modulation to B major.

2. The violins enter, *ppp*, with a hopeful flowing melody in B major, which has an important counter-melody in the inner parts, with rising and falling intervals (44-58).

3. During this melody, at the point where it rises up to switch momentarily into E flat major, a solemn chordal motive enters beneath it, consisting of two serene statements of the remaining Purgatorio motive X (53-54).

1. The music is retracing the steps of the fourth movement, from D minor, through D major, back to B major; now it turns to D major again to repeat the last stage more clinchingly. The serene flute theme B1 returns for a modified restatement, growing in strength and sonority, and modulates in a more forceful way to B major (58-66).

4. The rising seventh takes over, beginning a new soaring theme which rises immediately to a great paean-like climax (66-72).

A. Return of first section, B minor and D minor (72-84). The soaring theme is cut off brutally by a loud muffled drum-stroke and the menacing return of the Purgatorio motives of the first section; these, despite the theme's attempt to continue, turn the music back the opposite way, from B major, through B minor, to D minor. The move to regain the symphony's main key of F sharp major, via B major, has failed, and the introduction ends darkly, in the depths.

ALLEGRO MODERATO, 2/2, D minor (85-268). The struggle has to begin all over again, from D minor.

A. First section, D minor (85-185): this consists of persistent alternation between the main allegro theme and various versions of the six-note motive Z.

1. Main allegro theme, D minor (85-98)—a swift, agitated, darting idea, in a desperate, cynical mood akin to that of the Rondo-Burleske of the Ninth Symphony, but continually marked *sempre piano*. It is made up of short motives—all quick versions of the Purgatorio motives W, Y and Z, as used in the introduction's first section. The theme is stated (87-94) and restated (95-98).

2. Contrasting theme, shifting tonality (98-104)—a sardonically jaunty version of the six-note motive Z, still *piano*.

1. Return of main theme, D minor, with new extension, working up to a climax (104-20).

2. The contrasting theme this time is the transformation of Z back to its original tragic Purgatorio form, presenting an exact quotation of the two great passionate *fortissimo* climax-statements of it in the Purgatorio's D minor central section (120-127, cf. Purgatorio, 106-114).

1. Return of main theme, *piano again*, with another new extension, working up to a different climax (127-45).

2. The contrasting theme now takes the form of a big jubilant *fortissimo* version of the jaunty transformation of Z—a theme of great romantic warmth in D major (145-53), with a stormy extension moving back to D minor (153-61).

1. Brief ferocious reference to main theme, D minor (161-63).

2. The contrasting theme returns, beginning in its jaunty version and continuing in the romantic one, D major (163-71). It is developed in agitation, working up to a big climax (171-175).

3. Climax of whole first section—an unexpected one, since it presents an almost exact quotation from the fourth movement of the lamenting refrain with motive X (176-80) going straight over into the broad joyful climax (180-86), *fortissimo*, in the relative major of F. (Cf. fourth movement, bars 202-16 and 479-93: the two four-bar phrases of the lamenting refrain as in the fourth movement are presented simultaneously in the finale version.) The aptness of the fourth movement's joyful climax here is that it reveals itself in this new context as a version of Z.

B. Central section, mainly F major and B major (186-251). In F major (a semitone below the symphony's goal of F sharp major), the introduction's rising seventh is heard (187-89), and as before it initiates the yearning version of Z (189-92), and the serene theme B1 from the introduction's central section. But in the swift 2/2 *allegro* tempo (which Mahler would only have moderated slightly, one feels, with something like "*Etwas gehalten*"), this theme has to strive hard to establish itself at all. Opposed and halted each time by the cynical main *allegro* theme, and forced into tonal disruptions, it can only present its first two phrases, and these are full of agitation; nevertheless it holds tenaciously to the key of F major. After a statement (191-99) and restatement (199-209), an agitated extension (209-13) brings a further restatement (213-25), which calms the music down, and dispels the hostile *allegro* theme by modulating to the much-desired key of B major. (Here Mahler might well have indicated a further slackening of the tempo, towards that of the introduction's central section.) A calm, hushed reference to motive Z in its most positive form (226-29) brings a final restatement of the serene theme B1—still two phrases, but now as serene as at first, and with the added nobility of soft trumpet tone (230-36). The movement has once more reached B major on its way back to F sharp; but now a brief tranquil extension (236-239) switches to A flat, and the introduction's solemn chordal motive B3 enters, with its original fragment of B2 above it (240-43). And from this tonal no-man's-land the motive falls sadly by the Neapolitan modulation to G minor (244-45); and the Allegro breaks in again fiercely. It works up to a climax (246-49), and in spite of an attempt to hold to D major at least (250-51), the tonality is jerked back forcibly to D minor, for a return of the Allegro's first section. (Mahler might well have indicated a gradual increase of tempo here, back to Tempo I for the return of the *Allegro*.)

A. Restatement of first section, D minor (251-68)—much curtailed, owing to a shattering dramatic interruption.

1. Main allegro theme, D minor, *piano*, presented as on its second appearance (251-61, cf. 104-20).

2. Contrasting theme, jaunty version, as on its first appearance (261-67, cf. 98-104). With incredible suddenness it works up to a tremendous and unexpected climax.

RETURN OF FIRST MOVEMENT MOTTO-THEME AND CLIMAX, shifting tonality (268-99). The climax is a fortissimo dominant ninth on G, and while the trumpet holds on to its high A, the violins descend from an octave higher with the second segment of the viola motto-theme of the symphony's opening (268-75, cf. first movement, 188-93). As they die away, the trumpet still holds to its high A, and the sustained *fortissimo* nine-note dissonance of the first movement enters, the trumpet note piercing through it; this time, however, against the dissonance two of the Purgatorio motives are thrown, in their finale *allegro* version—the grotesque three-note W, and the ferocious seven-note Y, which attempts to reimpose the key of D minor (bars 276-84, cf. first movement, 203-208). Then, with the trumpet still holding its high A fortissimo, the horns strike in powerfully with a practically literal quotation of the first movement's viola motto-theme as it opened the symphony (285-99, cf. first movement, 1-15). While this proceeds *diminuendo*, the trumpet descends from its high A in two-part counterpoint similar to that between first and second violin in bars 184-93 of the first movement.

The tonal direction of this last passage is, of course, that of the symphony's opening motto-theme—B minor to D minor; and this may be taken as some indication of the extent to which Mahler had worked out the overall form of the symphony. *The whole tonal crux of the work—the fourth movement's retreat through B minor to D minor, and the finale's difficulty in breaking out of D minor into B major on its way back to F sharp—is already contained in embryo in the motto-theme which opens the symphony and introduces the F sharp major Adagio theme.* It is, in fact, the finale's inability to leave D minor that has brought back the first movement's eruptive climax and motto-theme: the symphony has regressed to its original unresolved tension and its dark unanswered question.

As trumpet and horn die away, *pianissimo*, the motto-theme has brought us to D minor as it did originally, but it has pointed a way to the solution of the finale's problem: there is now an implication of F sharp major, since that key generally followed the motto-theme in the first movement.

But the finale does not go immediately into F sharp major; that was the first movement's too-easy and precarious answer to the original question. The music switches calmly to a new key—B flat major, the hopeful key of the major themes in the Purgatorio. (The tempo has also returned to the 4/4 of the introduction's central section: Mahler wrote "4/4" just before the dissonant chord, and this whole section will naturally be in the tempo of the equivalent passage in the first movement.)

RESTATEMENT OF INTRODUCTION, CENTRAL SECTION, MODIFIED, B flat major moving to F sharp (299-374). The

first section of the introduction is not restated: the finale has now left the dark key of D minor, and the grim D minor versions of the Purgatorio motives, so intensively exploited in the Allegro, once and for all.

B2. The serene theme B1 does not enter immediately: it is to the hopeful violin melody B2 that the music turns first, to begin a long passage of great quietude and serenity. A brief gentle reference to this theme, in B flat (299-304) leads to a more solemn and noble treatment of it in the same key, which exploits the rising and falling intervals of its original counter-melody rather than the flowing theme itself (304-15). At the end of this, the music melts, through a breath-taking modulation, into F sharp major. At last, almost without realizing it, the symphony has found its way home to its true key: where passion and violent struggle have failed, calm meditation and hope have succeeded. It is fascinating to note that in Mahler's final version, the symphony did not return to F sharp at all, but ended in the B flat of the hopeful Purgatorio themes (see his rejected page 8, and the single unnumbered page). After the horn and trumpet counterpoint, the present B flat major passage did not follow: the music switched to B flat, but began immediately in that key the present F sharp major conclusion to the symphony. There can be no doubt that the addition of the B flat transitional passage, the modulation to F sharp, and the transposition into that key of the whole last section, was a conclusive master-stroke.

With the return home, passion returns, more sure of itself. B2 (the counter-melody still) is taken up in F sharp in a new version with soaring and sweeping intervals (316-23), but the passion is as yet subdued, in a soft dynamic.

B1. Quietly, tenderly, the serene theme B1 now takes over, also in F sharp (324-31), and then a brief return to the counter-melody of B1 (331-35) makes another glorious modulation, up a semitone into G major: this assured semitonal elevation of the symphony's main key counterbalances the semitonal failure to rise to it in the Allegro's F major central section.

B4. In G major, the soaring theme of the introduction's climax returns (335-40), but now devoid of all struggle, as full of peace as the G major music of the *Poco Adagio* of the Fourth Symphony.

B2. Still in G major, still softly, the hopeful violin melody B2 now steals in its original flowing form (340-47), and rises up as before, ready to introduce the solemn chordal motive.

B3. As B2 reaches the heights, it switches key, as it did at first, but quite differently, magically, back to F sharp major, for the solemn chordal motive to strike in with a new nobility and majesty (348-49). A passionate reference to the counter-melody of B2 flares up and dies down (350-52), and the final stage is at hand.

B1. The serene theme B1 has been the real protagonist of the finale, being the first to raise the movement out of its dark D minor despair, and the temporary dispeller of the cynical Allegro material; and now it comes fully into its own to bring the symphony to its ultimate climax. It is given out in F sharp major by "all the violins, *fortissimo*, big tone" (Mahler's marking), in two tremendously passionate affirmations, corresponding to the two statements in the introduction: statement (353-61,

cf. introduction 29-36), and, after a surging reference to B2 (361-65), restatement (365-74, cf. introduction 58-66). At the end of the latter, the passion ebbs, and the music returns to the rising passage of B2, in a dissolving A major/F sharp major *diminuendo*.

CODA, F sharp major (374-401). The symphony ends in a mood of transfigured serenity quite different from the bitter-sweet resignation of the endings of *Das Lied von der Erde* and the Ninth Symphony. As B2 continues in the upper part, there are ethereal references to the rising seventh and the solemn chordal motive, the latter continuing after B2 has died away (374-93). Then the rising seventh is heard low down, dying away (393-95); but it suddenly, unexpectedly, leaps up as a great rising twelfth, swelling out to *fortissimo*; the upper note is held tenaciously with full power, then in a long *diminuendo*, and finally the phrase descends stepwise, completing the six-note motive Z to form a final benedictory cadence. The effect is of a great sigh of contentment at finding peace at last.

---

This description, despite its length, is only an outline, from which a thousand significant cross-relationships have had to be omitted. Those interested may pursue for themselves the myriad transformations of the four main Purgatorio motives during the last two movements, hardly a bar of which is free from one or other of them; and also the implications of such features as the fact that the opening motto theme of the symphony begins with the thematic pattern of the Purgatorio motive X, and the Scherzo's opening germ-motive with that of its opposite number Y.

Nevertheless, the above should be sufficient proof that the Tenth Symphony does exist, in the sketch, as a musical work of art, in the sense of a continuous, integrated symphonic structure, fully intelligible in its whole essential thematic, harmonic, tonal and formal argument. It is this crucial and indisputable fact that impels those who advocate, with Richard Specht, that a performing version of the sketch should be made.

But let us be absolutely clear that what we advocate is in fact simply this—a *performing version of the sketch*—and not a "completion" of the Tenth Symphony. No-one in his right senses can imagine that the work can be completed for Mahler, as Mahler himself would have completed it, for the following reasons.

(1) Here and there, owing to Mahler's hasty calligraphy, it is difficult, if not impossible, to establish exactly what Mahler wrote, or intended to write.

(2) Even allowing that these dubious features represent only a small proportion of the whole, a conjectural reading of which cannot affect the general purpose of the work, the manuscript is still only a comprehensive sketch, the bar-to-bar layout of which still awaited final revision.

(3) Even allowing that this revision of detail would not have changed the overall form of the work in any crucial way, there are sections in the second, fourth and fifth movements where continuity is preserved by only a single thematic line, without accompanying texture.

(4) Even allowing that most of these sections represent either exact or almost exact recapitulations of material exposed earlier, and can therefore be filled out with material already provided by Mahler himself, there are still a few short passages in the second movement where the texture has to be completed conjecturally, if the music is to make any genuine impact.\*

(5) Even allowing that these short passages again represent a small proportion of the whole, a conjectural filling-out of which cannot affect the general purport of the work, the texture of the second, fourth and fifth movements lacks in many places the wealth and perfection of detail characteristic of Mahler's completed scores.

(6) Even allowing that this is still, after all, a matter of detail rather than of essence, it is still necessary to complete the orchestration of the second movement, and to provide the whole orchestration of the last two, from the few significant hints scattered here and there by Mahler.

For these reasons, it is undeniable that a "completion" of the Tenth Symphony is impossible. But on the other hand, it is not at all impossible to produce a performing version of the sketch, which shall allow Mahler's whole tremendous (if unperfected) conception to speak out clearly. Admittedly, to make the sketch as it stands performable, it is necessary to provide a certain amount of conjectural addition to the texture, and a large amount of conjectural orchestration; but these elements, in comparison with Mahler's own "fully-prepared" thematic, harmonic, tonal and formal argument, sink to the level of the subsidiary, and in performance would be so dwarfed by it as to be barely perceptible.

It can be argued, of course, that the result would be artistically unacceptable, since it would not be a definitive, perfected, fully-achieved work of art. The answer to this is that we are dealing here with a unique case: rather than lament the loss of Mahler's own final definitive score of the Tenth Symphony, we should rather rejoice in what fate has so incredibly spared us—the full-length, continuous, entirely intelligible sketch of the whole five-movement structure. And we should do all in our power to make this structure capable of being experienced as living sound.

All true lovers of Mahler's music should ask themselves, with the utmost seriousness, the following question. Is Mahler's final symphonic masterpiece, so essential to our understanding of his life's work, to be lost to us simply because, lacking his own perfect end-product, we refuse to accept it in the form of its whole main essence, made audible through some subsidiary assistance by another hand?

---

\*The problem of these passages might be solved if the short score of the second movement were forthcoming. Mahler always made a short score of his movements, and worked from them to his full score; we have the full score of the second movement, but the short score has apparently disappeared.

## BRUCKNER'S THREE STYLES

By WARREN STOREY SMITH

If the history of music had been included in his studies, that convenient figure of speech, "every schoolboy," could tell you right away that the creative work of certain composers can be readily divided into three styles, or periods, identifiable as the largely derivative, the individual and wholly assured, and the advanced or prophetic (the last-named often possessing overtones of the mystical or other-worldly). First used in connection with Beethoven, this ordering applies quite as well in the case of Wagner, and almost as well in that of Verdi. The difficulty with the great Italian has been the locating of the third period: did it begin with *Aida*, as some will have it, or (more logically) with *Otello*? Alfred Einstein favored here not three periods but four, placing in the second only *Rigoletto*, *Il Trovatore* and *La Traviata*, with *Otello* and *Falstaff* still constituting the fourth.<sup>1</sup>

Such changes of style are generally gradual, hence the presence of transitional works, in which the new manner is suggested but not wholly captured, as, in Beethoven's case, the Quartets Opp. 74 and 95, and the Sonatas Opp. 81a and 90. To his own subsequent great satisfaction, Wagner bridged the gulf between *Rienzi* and *Der Fliegende Holländer* in one enormous leap. We are inclined to think that he went as abruptly from *Lohengrin* to *Das Rheingold*, but that would be to overlook the long period of cerebration, of preparing himself, and the public, for the new direction his art was to take. There was even a transitional work, of a sort, namely, *Siegfrieds Tod*, begun immediately after the completion of *Lohengrin*. The text, as customary with Wagner, was written first, and a fraction of the music was composed. This projected "grand heroic opera" was destined to emerge, a quarter century later, as *Götterdämmerung*, fourth music drama of the *Ring* cycle.

We must also bear in mind that some media are more demanding than others. Beethoven and Bruckner "found" themselves more readily as composers of sonatas and masses, respectively, than they did as symphonists. Again, a counterpart of Bruckner's awakening at the hands of Otto Kitzler, plus the latter's performances of *Tannhäuser* (see below), presents itself in Strauss's conversion to program music, through the persuadings of Alexander Ritter, which also made a different man of him.

Short-lived composers hardly invite such compartmentizing, something particularly true of Mendelssohn and Chopin, both of whom wrote characteristically in their teens. Indeed, on the strength of the Overture to *A Midsummer Night's Dream*, written at the tender age of seventeen,

---

<sup>1</sup> *Music in the Romantic Era* (New York: W. W. Norton & Co., Inc., 1947) p. 274.

Mendelssohn may be said to have owed less to maturity than any other of the great composers.

As for Brahms, his third period, to the extent that he had one, might almost be said to have come first! Although Bruckner had the longer life-span, his Viennese rival, because of his earlier start, had the more extensive period of significant creative activity. Yet his output, stylistically, was far more consistent and uniform. Born to mastery, he could still acquire the ripeness of experience, as witness the widely separated versions of the B major Trio, Op. 8.<sup>2</sup> After a modest fling at unabashed romanticism, he kept his gaze turned resolutely backward, with an occasional stolen glance at greener pastures. The handsome way in which this reactionary attitude paid off presents us with a nice esthetic issue, upon which has hinged, and will continue to hinge, the relative status of these two composers.

Including Bruckner among the three-period boys is, I admit, an unconventional and, possibly, unprecedented gesture. Most sufficiently informed persons would unhesitatingly accept the notion of two distinct phases of the Bruckner output, neatly separated by the aforementioned discovery of Wagner, at the age of forty-one. As Erwin Doernberg has expressed it in his admirable study, *The Life and Symphonies of Anton Bruckner*: "In middle life and after long years of painstaking study of musical theory, Bruckner became from one moment to the next a great composer."<sup>3</sup> I am still strongly inclined to set the last three symphonies apart from the rest—most certainly the Ninth, with its harmonic intimations of the twentieth century (Scherzo and Adagio). With No. 7 there came a marked enrichment of Bruckner's style, harmonically and orchestrally, furthered in the latter department by the enlargement of resources, something for which the inclusion of Wagner's own "Bayreuth" tubas was in large measure responsible. There is also a harp in the final movements of No. 8 and other details that need not be gone into here. These three symphonies possess, beyond question, a grandeur and a depth of expression that definitely places them in a category of their own.<sup>4</sup>

There comes to mind in this connection Lawrence Gilman's article, "The Master of the Grand Style," written for the program book of the New York Philharmonic and widely reprinted. The following excerpt seems plainly to have been inspired by the music of this final phase:<sup>5</sup>

" . . . Sometimes, rapt and transfigured, he saw visions and dreamed dreams as colossal, as grandiose, as awful in lonely splendor, as those

<sup>2</sup> Completed in 1854, when Brahms was twenty-one, it was rewritten, all but the Scherzo, to its own great advantage, in 1891.

<sup>3</sup> (London: Barrie and Rockcliffe, 1960) p. 18.

<sup>4</sup> While such was not the case, this setting apart of Bruckner's last three symphonies could well have been prompted by H. F. Redlich, who draws such a dividing line in his *Bruckner and Mahler* (London: J. M. Dent and Sons, Ltd.; New York: Farrar, Straus and Cudahy, Inc., 1955). Dr. Redlich gives further endorsement to the point of view expressed here by finding a stylistic similarity between Bruckner's last period and that of Beethoven, (p. 97).

<sup>5</sup> Included here, along with lesser pieces of a religious character, must be the *Te Deum* that Bruckner thought might serve as Finale for the unfinished Ninth and that has sometimes supplanted that need—if need it be. Many feel that, as in the case of the "Unfinished" Symphony of Schubert, the torso makes a wholly satisfactory entity.

of William Blake. At his greatest he is both poet and seer, looking at us with fathomless grave eyes, speaking soberly of incredible things, or uttering magnificence like a Hebrew prophet; or rolling up the Heavens like a scroll. This is the treasurable Bruckner, the musician whom his admirers insist upon remembering—the mystic rhapsodist, hierophant, whose speech was transfigured, whose imaginative tone was penetrated, as Swinburne said of Baudelaire, with the suggestion of indescribable wonders, echoing with the strange murmur of revelation."<sup>6</sup>

This, I am afraid, is the sort of thing that has helped to condition the form and color of the Bruckner image, or Bruckner stereotype, of which more will be said. But the point may be raised immediately as to whether this is the only aspect of Bruckner we should "treasure," since there is so much in his music capable of affording enjoyment, and even deep satisfaction, to which these raptures hardly apply. If Beethoven, rather than Bruckner, had inspired Gilman's fine frenzies, we would find the likeliest provocation in that master's own third period; in certain pages of the last quartets and sonatas, of the Ninth Symphony, or the *Missa Solemnis*. There is still much else in Beethoven that we can "treasure," and similar observations might be made in the case of other composers. As has been well said, we do not disesteem Monadnock because it is not Monte Rosa.

The above reasoning would establish 1863 and 1881 as the years in which Bruckner began new chapters in his composing career. If these premises are accepted, this is accurate for historical purposes. However, establishing the boundaries of Bruckner's creative work is not the real object of this paper. Rather is it offered as a survey and comparative estimate of the nine symphonies, with the intention of pointing out stylistic differences and individual characteristics in a series of works that too frequently have been pronounced "all alike." With this end in view I am inserting a dividing line between the symphonies Nos. 1 and 2, both of which belong properly in my second period, together with the unpublished one in F minor and the D minor Symphony, No. 0.<sup>7</sup> I have Doernberg's support here, to the extent that he calls No. 1 a "forma-

---

<sup>6</sup> By an impassioned exegesis, again to quote Doernberg, Bruckner was roused to anger, asking the perpetrator of this "pompous nonsense," "Why on earth, if he felt in the mood for 'making poems,' he must drag in his symphonies?" (*Op. cit.*, p. 23). It is altogether reasonable to suppose that Bruckner, like any other important maker of "absolute" music, regarded himself as primarily a composer, not a preacher or a story teller, albeit most of the commentators will not have it thus. He had his inward promptings, of course, and there were the usual external stimuli, often acknowledged, such as the chickadee that suggested the counterpoint to the second theme in the first movement of No. 4; or the festivities, close by a house of mourning, that were directly responsible for the gay second subject of the Finale on No. 3, with its chorale-like substratum; or the cock crow that gave us the trumpet theme in the Scherzo of No. 7. It is said, furthermore, that the famous initial theme of this Seventh Symphony came to Bruckner in a dream, played, not by cellos and horn, but by a viola! So much for "inspiration."

<sup>7</sup> This Symphony, also called "Nullte," is variously said to have preceded No. 1; to have followed it; to have been begun before and finished after it; and to have been written before, and revised and partly rewritten after it. The piece is not without merit, but since Bruckner in later years dismissed it as "only an attempt," it is not included in the present discussion.

tive" work and pronounces the Second "Bruckner's first symphonic masterpiece."<sup>8</sup>

Arbitrarily again, I am not including the Sixth in the second period, but am characterizing it as "transitional." It is a baffling work that has been but rarely performed and that has both its admirers and detractors. Bruckner considered it his "boldest." It has a richness of treatment and of texture that set it apart from its predecessors. Its Scherzo is *sui generis*. Its Adagio, rightly termed by Nickisch one of Bruckner's "most beautiful" movements, seems to belong with those of the next three symphonies. Nevertheless, these have a mastery and a certainty of touch, a profundity, a high eloquence, an epic quality, that this "Cinderella among symphonies," as it has been called, cannot rightly claim. The analogy between it and other transitional works mentioned above seems clear, at least to the writer.

To get back to No. 1, this youthful<sup>9</sup> and engaging composition differs conspicuously from its companions, which is not to say that it is entirely devoid of Brucknerian characteristics. However, these are overshadowed by the abundance of material that does not disclose either the composer's personality, as we have come to know it, or his general habits of composition, but even runs counter to them. We are made aware of its strong individuality at the very outset. All of the Bruckner symphonies, save No. 5, begin with an ostinato of some kind, that precedes for a moment the chief theme and then supports or otherwise accompanies it. But the reiterated chords in the bass, a C minor triad sans fifth, that set the First Symphony in motion, are not vague, like their later counterparts, but strongly propulsive. If most of the symphonies begin in a fashion that may be described as reflective, or contemplative, the beginning of this one is high-spirited, even rambunctious, the degree of rambunctiousness conditioned by the conductor, who can, at will, sharpen the rhythm and emphasize the many accented dissonances. Incidentally, we are also apprised of the reason for the nickname that has become inseparable from this vigorous, buoyant work. The story back of it, which has been told more than once, is this: the great Hans Richter, finally impelled to investigate some of Bruckner's earlier symphonies, leafed through the manuscript of this No. 1 and, as his interest grew, suddenly exclaimed, "Why, Professor, you must have been madly in love when you wrote this." "I was always madly in love in those days," the composer replied, and then retrieving the manuscript, added, "But *Das Kecke Beserl* must first be polished."<sup>10</sup>

<sup>8</sup> One of the unfortunate consequences of the prevalent impression that there is such a thing as a *Bruckner Symphony* is that a reviewer who has put together a Bruckner critique, probably prompted by one of these better known "third period" works, may then use it, with the necessary changes in numbering, keys, etc., for any Bruckner symphony that comes his way. In such a case, the discrepancy between what has been heard and what has been said about it can be very marked.

<sup>9</sup> Bruckner was actually forty-one when he composed this first of his three symphonies in C minor. But, artistically, his was a case of arrested development, and the term "youthful" properly applies.

<sup>10</sup> This expression, Viennese argot, has been variously translated "fresh young girlie," "bold young girl," "saucy little besom," etc.; while Doernberg, with a resultant confusion in the matter of sex, contributes "impudent urchin." (*Op. cit.*,

The composer's biographer and unremitting champion, Gabriel Engel, called the beautiful, and wholly typical, second subject a "love song." The phrase "wholly typical" refers not only to the character of the chief melody but also to the fact that it is supported by eloquent counterpoint. This concept of a double theme is characteristic of most of Bruckner's second subjects (in the corner movements); *Gesangsperioden* was the composer's apt designation for them. The rest of the material in this movement is in keeping with the exuberant beginning; and mention should be made of the insistent thirty-second note figures, in the violins, that accompany the martial third theme (omitted from the recapitulation, probably because of the important part it plays in the development). Notes of such small denomination seldom appear in Bruckner's music, even in his slow movements. Here they contribute the sort of excitement that is generally confined to the scherzos. The Finale has, in its own way, plenty of get-up-and-go, with the relaxation of a second theme, and a rousing trumpet theme at the end. The Scherzo, to which I am coming presently, bears out the energetic character of the work, leaving only the Adagio to remind us of the calmer, more deliberate Bruckner.

Yet this very Adagio is different. It does not begin with full-throated song—quite the contrary. While the key is finally established as A-flat major, this curious opening is in F minor, with free chromaticism and frequent modulations and a prevailing sense of brooding, almost of groping. Having no counterpart in this respect in the works that follow, this movement has been likened to Bruckner's famous organ improvisations; and that, as he himself said, was not the way he composed. Anyway, the more familiar Bruckner enters with the second theme, and to this succeeds, in E-flat major, with a change of meter to 3/4, a gracious melody that has been found, by some, to suggest the alluring F-sharp major section in the Adagio of the Seventh. The Finale of the latter had already been hinted at in the chief theme of this No. 1, and a third foreshadowing will be noted in the Scherzo. Spiritually, of course, the two works are widely separated.

We are safe in saying that this Scherzo is all Bruckner. It is a vigorous peasant dance, like those in both the Seventh and the Eighth, and the aforesaid specific resemblance comes in some weighty descending scales. The Trio, the theme of which has been described by Engel as "purely Austrian,"<sup>11</sup> has a flavor all its own. For this feature of the symphony, often regarded as mere "filler," Bruckner had a special affection. No two of them are alike, and a parade of all nine would present striking evidence of the resourcefulness that has so often been denied him. The Scherzos themselves are also strongly individual, and this combined Scherzo and Trio is, like the Adagio, one department where Bruckner's success is not questioned, even by the most captious critics.

It is possible to wish that in this, his liveliest symphony, Bruckner had managed to preserve the same general mood and pace throughout the

---

p. 48). He certainly would not lend his support to the theory that Bruckner was identifying the Symphony with the particular damsel upon whom his interest had settled at the time of its composition.

<sup>11</sup> *The Symphonies of Anton Bruckner* (New York: The Bruckner Society of America, Inc., 1955) p. 9.

first and last movements. But that was not his way: second subjects should really sing. In other words, he had the romanticist's love of, and desire for, contrast between the various sections of the movement. (Even the romanticists did not always strive for it, to mention as typical, but by no means solitary, example, the "Italian" Symphony of Mendelssohn.)<sup>12</sup>

The wholly familiar Bruckner almost makes an appearance in No. 2, his failure to do so resulting, not from an uncharacteristic ebullience but from a rare degree of conformity to accepted standards of symphonic behavior and propriety. Both of the middle movements are his, in this case, though neither is an advance copy of any of its successors. They have, like all of these slow movements and scherzos, a distinct individuality. The conformity aforesaid is felt in the outer movements, which exhibit, to an extent most unusual for Bruckner, such things as continuity, logic, and momentum.

An overall logic is imparted to this delightful and unaccountably neglected work by the use of the cyclic form, something that is also true of No. 4 and, conspicuously so, of No. 5. These matters have been discussed in full detail in the writer's article, "The Cyclic Principle in Musical Design and Its Use by Bruckner and Mahler," in the 1960 issue of this magazine. Before some reader rises to ask, "How about the pauses?", I hasten to say that their existence is well known to me. There is in both of the corner movements an employment of the general rest that immediately earned for the work the sobriquet of *Pausensymphonie*. These occur chiefly at the end of bridge passages, and discreet conductors have been known to minimize or even eliminate them. In any event, their seriousness has been exaggerated.<sup>13</sup> And while on this issue, I should mention a more noticeable loss of motion in the Finale, brought about by a double reference to the Kyrie of the Mass in F minor,<sup>14</sup> achieved, like a similar interruption in the Finale of No. 3, not by a change of pace but by the use of whole notes. Also, while on the matter of the Finale, I might observe that the second subject, related to that of the first movement, although songlike, does not languish, and that everything else, including the rousing Coda, moves right along. Indeed, the measures filled with either eighths or sixteenths in the first movement produce an unwonted activity, while the material that opens both exposition and recapitulation in the Finale impart a most unBruckner-like suggestion of the *perpetuum mobile*. How, we might well ask, did Bruckner get that way? A further thing to be noted in connection with these outer movements is the fact that both begin and continue for several measures (26 in one case, 11 in the other) in the treble register, although, in the interests of strictest accuracy, it should be admitted that

<sup>12</sup> In No. 7's first movement the chief theme is more truly lyrical than the subordinate one. While hardly pronounced, the contrast is still there.

<sup>13</sup> The composer explained these hiatuses by saying that when he had something of importance to communicate, he was wont to stop and take a breath.

<sup>14</sup> This quotation, like the reference to the Benedictus of the same F minor Mass in the Adagio, is a touching reminder of a bit of personal history. It was the composing of this third and most significant of his Masses that so materially assisted Bruckner in his recovery from the nervous collapse brought on by the harsh critical reception of the First Symphony.

in the former instance a horn thrice lightly touches the C below middle C! Figuratively speaking, the organ-playing Bruckner, as orchestrator, did not often remove his feet from the pedals.

To return to the entire central divisions of the work, the Adagio (*Feierlich, etwas bewegt*) is characterized by a blissful serenity, the word "beatific" suiting it exactly. There is an eloquent climax, but this slow movement does not storm high heaven, as do some of the later ones. Whatever may have been Gilman's feelings about it, this movement is for me one of Bruckner's most "treasurable" pages.

The Scherzo, a rather wild affair, with a delicious Trio, is thematically related to the Finale. Because of all this integration, the three livelier movements are more "of a piece" than is usually the case, and not merely with Bruckner. In fact, this No. 2 is a standing rebuke to those who maintain that Bruckner could not write an "organic" symphony. To pursue this general line of inquiry, the chief theme of the first movement is both thematic and melodic. Most of Bruckner's themes move mainly by chord skips; this one is largely of the stepwise variety, and much of it is semitonal. Prominent in both the first and last movements, and even due for quotation in No. 5, is the exordial motive, A-flat, G, F-sharp, G, an embroidering of the Dominant of C minor. And that brings up yet another of the many arresting details in which No. 2 abounds. In the Finale the transition to the second subject ends decisively on the dominant seventh of D-flat, whereupon the aforesaid "song theme" enters, a mile from home, in the key of A major! Even the earlier Bruckner had a bold concept of tonality, one of the things that relates him to Schubert, as well as to Wagner—the latter a composer with whom the Third Symphony has strong ties.

If you knew Bruckner at all well, you would recognize him immediately on your initial encounter with this No. 3. If you knew the Bruckner Ninth, you might well be reminded of that and, incidentally, of yet another D minor Symphony, the Ninth of Beethoven, from which the two of Bruckner so obviously descended. Your first clue to this triple identity would be the mysterious background, your second the boldly rhetorical chief theme, in this case the famed trumpet tune that so delighted Wagner, and thus brought about the work's dedication to the music dramatist.

Doernberg finds in No. 3 the first instance of Bruckner's monumentality, while Werner Wolff credits it with grandeur.<sup>15</sup> Both qualities are essentially Brucknerian, but here they are suggested rather than fully realized. This is still a second period work, bearing somewhat the same relation to No. 9 that *Der Fliegende Holländer*, also recalled in the opening measures, bears to *Götterdämmerung*. This symphony is franker, fresher, freer, terser than the later ones. And, to venture a Celticism, it is not topheavy in the middle. Like its two predecessors, and at least some of its successors, it progresses steadily from first to last; it does not reach a high point and taper off.

There is in this attractive composition a ceremonial, at times almost a festal, air. Portions of it are even gay. Mention has been made, in a

---

<sup>15</sup> *Anton Bruckner Rustic Genius*, (New York: E. P. Dutton & Co., Inc., 1942) p. 194.

footnote, of the dance-like tune that serves the Finale as second subject and of its interesting origin. In the Scherzo we find the greatest degree of speed attained in this department, Brucknerwise. It might almost be called vertiginous. Moreover, the delightful, characteristically Upper Austrian, Trio has no proper counterpart until we reach the corresponding portion of the First Symphony of Mahler.

As a sort of forerunner of the "polka" theme in the Finale, not in character but in sheer melodiousness, is the second theme of the first movement, a gracious tune that would be more fittingly described as charming rather than beautiful. "Winning" would suit it very well. Finally, the Adagio, often spoken of as the first of the great ones, has true breadth, with a suggestion of the solemnity we meet with later on, and an imposing climax. However, to register a purely personal opinion, it is less original than the Adagio of No. 2. The chief theme has its quota of nobility but it is not pure Bruckner. Since Beethoven was suggested in the first movement, we might continue the analogy and call this particular theme Beethovenish.

If this article is partly, if not primarily, a plea for the proper recognition of certain unjustly neglected works of Bruckner, No. 4, officially known as the "Romantic," needs no such assistance. More than one commentator has referred to it as the most popular of them all, an assertion of questionable accuracy, since in this country, at least, the one most widely and most frequently played has long been No. 7. Alfred Einstein went on record in his *A Short History of Music*<sup>16</sup> as saying that since Bruckner made "pure sound" the basis of his symphonies (a contention with which not everyone would agree) No. 4 must be considered his "most harmonious," as it relies almost wholly on that particular factor. I have a notion that the fanciful program, extracted with some difficulty from the composer, with its medieval imagery, its horn-blowing hunters who take time out for lunch (Scherzo and Trio) has helped, by imparting to the Symphony a less formidable aspect than that of some of the others. The first movement, although a bit cloying and somewhat static, has undeniable appeal, and the "Hunting Scherzo," for which I do not particularly care, is generally liked. The *Andante*, in the minor mode and a bit on the somber side, is by no means unagreeable, and the Finale tops matters off effectively.

However spurious the program,<sup>17</sup> this Symphony can also be cited as one that quite distinctly goes counter to the fairly prevalent theory, promulgated by the Brucknerites themselves, that every one of the symphonies is directly concerned with the trials and triumphs of the soul. While gratifying to certain temperaments, an all-inclusive interpretation such as this has long stood in the way of a proper evaluation of the Bruckner output. In conclusion, mention may again be made of the fact that the use of the cyclic design has made the Fourth Symphony one of

---

<sup>16</sup> New York: Alfred A. Knopf, 1937, p. 239.

<sup>17</sup> Bruckner, like Mahler later on, was often called upon to explain his music for the benefit of a public that required such adventitious aids for the full enjoyment of instrumental music. In his case also was the pressure exerted upon him by his disciples who, as members of the avant-garde, were supposed to tolerate only program music and music drama.

the most closely knit of them all, although, as suggested above, Bruckner went much further in this direction in No. 2 and in No. 4's immediate successor.

Why, one may well ask, did Bruckner biographer Goellerich, and those who took their cue from him, call the splendid Fifth Symphony the "Tragic"?<sup>18</sup> Who ever heard of a "Tragic" symphony in the cheerful key of B-flat major? The paired middle movements, of which more presently, are, to be sure, in D minor, but virtually all of the subsidiary material is in major, and both end in major. Moreover, if Bruckner had intended the chief theme of the Adagio to be a "song of earthly sorrow" would he have been willing, as we shall see, to make light of this universal grief in the ensuing Scherzo? This unfortunate word "tragic" has even been applied specifically to the chief theme of the first movement; "trenchant" would suit it better. In any case, "Tragic" symphonies are supposed to register despair and frustration, and this one ends gloriously on a note of victory. Dika Newlin paid this ending the highest possible compliment when she wrote in her excellent study, *Bruckner-Mahler-Schönberg*: "it may fairly be said that the Finale of the Fifth Symphony represents the summit of Bruckner's symphonic composition up to this time—in fact, perhaps, of all his work, for never again did he crown a symphony with a gigantic double fugue."<sup>19</sup>

Greatness is a treacherous word in criticism—it will be recalled that Paderewski was once described as a great pianist who was not a good one—and I shall content myself with the statement that the Fifth is of the bigger Bruckner. It is also in certain respects the most remarkable of them all. The composer called it his contrapuntal masterpiece, and the aforementioned conclusion of the Finale, in which the chief theme of the first movement is thrown into the melee, along with the two subjects of the fugue, is an astonishing example of polyphonic writing. With equal accuracy he could have dubbed it his structural masterpiece. That the slow introduction to the first movement has been found to contain the thematic kernels of the entire symphony bespeaks not only rare skill in motive manipulation but also a remarkable economy of means—and this on the part of a composer who is supposed to have been consistently profligate in this direction.

The uniquely associated Adagio and Scherzo, with the latter entering the picture as a speeded-up version of the former, present us with a situation the significance of which seems to have escaped most of the commentators. Miss Newlin, at least, puts her finger squarely on it. For a parallel we must go to the variation suite of the seventeenth century or, as Miss Newlin suggests, even further back, to the *Tanz und Nachtanz*, or the paired Pavane and Galliard.<sup>20</sup> That of the Adagio is, in part, a double theme and in the Scherzo's third measure a new counter theme appears. The contrasting material is distinctive in each case and the Scherzo has its customary Trio, the first of three that are not in the conventional triple meter, the others being those in the Sixth and Eighth

---

<sup>18</sup> Bruckner himself suggested "Fantastic," but the piece does not need a title. If any Bruckner symphony is musically self-sufficient, this is the one.

<sup>19</sup> New York: Kings Crown Press, 1947, p. 99.

<sup>20</sup> *Ibid.*, p. 94.

Symphonies. Anyway, since the all-important initial theme recurs frequently in both movements, the effect is something akin to that of hearing a gigantic rondo that changes pace in the middle. If Brahms had thought of anything so radical there would have been a tremendous to-do, comparable to the fuss made over his reviving of the Passacaglia for the purposes of his Fourth Symphony. Poor Bruckner is looked upon as an unworldly dreamer, whose music may provide food for the spirit but could hardly be expected to nourish the mind.

Mention has been made of the peculiar place occupied by No. 6. In it Bruckner is seen reaching out toward a new and richer style that he was soon to make fully his own; but there is much that seems tentative and experimental. The first movement has a rhythmic originality that Redlich calls the symphony's "greatest asset."<sup>21</sup> My choice for this distinction would be the fine Adagio, the excellence of which has already been noted. What seems to be lacking in the first movement, and even more in the last, is a sense of urgency. Engel, who suggests that in the typical Bruckner symphony the first movement advances a conflict that is resolved in the Finale, shrewdly observes that in this case there is no conflict to resolve,<sup>22</sup> while Redlich finds this Finale "patchy and inconclusive" and charges it with resorting "more than any other movement of Bruckner's to material exploited by him to the full elsewhere."<sup>23</sup>

The Scherzo and Trio, collectively referred to earlier as *sui generis*, have, in truth, no real counterpoint in Bruckner, nor, for that matter, anywhere else. Regarding the former, I am appropriating Engel's word "elfin." With its unusual time signature of 4/8, this Scherzo is fanciful to a degree. And if it is elfin, the Trio is elfin plus.

Our problematic and provocative Sixth has had its champions, among them Doernberg and Sir Donald Tovey. Curious about the work, which, along with No. 1, I have never heard in actual performance (and with little expectation in either case of so doing) I once asked Bruno Walter why he never programmed that and another symphony then unknown to me, the Seventh of Mahler. The reason he advanced was that they were "weak" (albeit his quarrel with the Mahler seemed to be confined with the Finale), and since he regarded himself as a propagandist for both composers, he was not going to play deliberately into the hands of the opposition. Perhaps what Herbert F. Peyser said of Weber's *Euryanthe* might apply to the Bruckner Sixth: that it is one of those "hapless masterpieces that cannot live and cannot die."

And now we have reached the "third period," with a consideration of which this discussion began. There is a near-temptation, after reviewing the entire scene, to make the rash pronouncement that Bruckner, while progressing as a tone poet, had regressed as a symphonist. The holder of so questionable a position could be easily dislodged. To be sure, any qualified observer would unhesitatingly assert that these final symphonies overtop their predecessors in both eloquence and stature. There is still the disturbing thought that the things most frequently objected to in Bruckner's case are here more, rather than less, in evidence. One might

<sup>21</sup> *Op. cit.*, p. 95.

<sup>22</sup> *Op. cit.*, p. 49.

<sup>23</sup> *Op. cit.*, p. 96.

adduce the lengths and longueurs, the "terraced" progress, the occasional use of themes unsuited to development (such as the aforementioned initial melody of No. 7), the turning of Allegros and Finales into "animated slow movements," and the exalting of the Adagio to a point where it dwarfs its surroundings.

Regarding these last works Werner Wolff expresses himself as follows: "It would be a mistake to attribute superiority to any of the last three symphonies, which hold a special rank among all Bruckner's works. But as far as its structural perfection is concerned, all of the critics have agreed that the Eighth is a surprising achievement."<sup>24</sup> It does indeed contain the most significant detail in all Bruckner, yes, in all symphonic music, namely, the off-key beginning of the chief theme of the first movement that ultimately finds its proper tonal bearings in the Coda of the last one. Fancy Brahms thinking of that!

The chief difficulty with the Eighth is, in the last analysis, a matter of human frailty on the part of listeners, especially in this restless age: eighty-odd minutes of music, mostly in slow tempo, can prove, as the saying goes, too much of a good thing. Yet what is to be done about it? Cutting, although often resorted to, is *not* the answer. Koussevitzky in his Boston days was partial to this symphony, but with his own liberal and wholly arbitrary excisions.<sup>25</sup> Piqued by a certain reviewer's complainings, he buttonholed the objector at a Symphony Hall gathering and assured him that [in abandoning the Adagio's development section in its fifteenth measure and ignoring the first twenty-six measures of the recapitulation] he had "done the composer a service." And on boasting that he had cut out eight minutes, he was promptly assured that he had sacrificed some of the most beautiful music ever written.

All things considered, Bruckner's life work could hardly have come to a more fitting conclusion than that provided by the unapproachable Adagio of the Ninth, which combines sublimity with an astonishing harmonic boldness and freedom. And that the aging master could still spring surprises is demonstrated by the most un-Brucknerlike page he ever wrote, the fleet, light-footed Trio of the demonic Scherzo that has frequently invoked comparisons with the "Queen Mab" Scherzo of Berlioz. Bruckner and Berlioz! Could a more unlikely pair be found?<sup>26</sup>

The time-honored custom in Bruckner's case has been to see the music in terms of the man. But if, for some impossible reason, we had to discover the man from a study of his scores, we would find ourselves con-

<sup>24</sup> *Op. cit.*, p. 124.

<sup>25</sup> After the barrage of protests provoked by his initial presentation of the work, he did, just for once, comply with an uncut version.

<sup>26</sup> Miss Newlin, who brought a singularly fresh point of view to her study of Bruckner, Mahler, and Schönberg, rose beautifully to the opportunity provided by this Trio, saying in conclusion: "But it does convince us that Bruckner, even in his last years, possessed greater versatility than he is often credited with, and it is important for us to know this in making a fair estimate of his merits as a symphonist." (*Op. cit.*, p. 96). Incidentally, the volant main section of the aforesaid Trio is not only Gallic touch: The contrasting measures offer a curious foretaste of Impressionism, with a specific suggestion of the magic-haunted opening of Dukas's *L'Apprenti Sorcier*, as yet unwritten. Werner Wolff (*Op. cit.*, p. 250) notes that the "subsidiary melody . . . has tone colors we do not see in Bruckner's other scores." Indeed, it has: colors both harmonic and orchestral.

fronted with a better-rounded personality than the one that is commonly accepted and that spells "Bruckner" in the minds of friends and foes alike. Actually, it is a dangerous and deceptive practice to confuse the creator of a work of art with his creation, successfully as it may work out in some instances. How, for example, are we to reconcile the domestic and thoroughly domesticated Strauss and *Salome* and *Elektra*? Obviously, a man can be one thing and his art quite another. It is all a matter of the degree of subjectivity, or objectivity, in the approach. And this is a treacherous terrain for the outsider. Nevertheless, we can say with considerable confidence that with Bruckner the subjective has been overstressed.

As a postscript to all this, I am ending with an admission of the difficulties encountered in the search for a proper title, since the issue was large enough to defy pigeonholing. Considered at one time or another were "Taking a Fresh Look at Bruckner," "Brucknerian Bugaboos," "The Bruckner Stereotype," and even "The Other Bruckner," with a subtitle "Bruckner for the Man Who Doesn't Like Bruckner." Whatever the label, the intent has been the same: to draw attention to a fact that long ago should have been self-evident, namely, that Bruckner was not a man with one idea (or obsession), one trick of speech, one turn of phrase, but, despite the recurrence of certain mannerisms, certain manifestations of an unusual personality and training, a composer of resourcefulness and versatility, who, to reiterate the basic contention of this paper, should be judged by his total output, not by an overstressed segment of it.

### KILENYI MAHLER MEDAL AWARDED TO DONALD MITCHELL

Donald Mitchell is well known in Great Britain and beyond its borders for his extensive writings on Mahler. He was an editor of *Music Survey*, London music critic for the *Musical Times*, and a contributor of musical criticism to *The Times*. He has often written articles for CHORD AND DISCORD. Since 1959 he has been on the music staff of the *Daily Telegraph*. He is the author of *Gustav Mahler—The Early Years*, the first detailed account of his childhood and student years which contains analyses of his early works. On May 11, 1961, Mr. Mitchell addressed the Royal Musical Association on the subject: *Gustav Mahler: Prospect and Retrospect*.<sup>1</sup>

In recognition of his efforts to create greater interest in and appreciation of Mahler's music, the Directors of the *Bruckner Society of America* awarded to Donald Mitchell the Mahler medal designed by the late Julio Kilenyi for the exclusive use of the *Society*.

# THE TREND TOWARDS THE FOLKLIKE, NATIONALISM, AND THEIR EXPRESSION BY MAHLER AND HIS CONTEMPORARIES IN THE LIED

by EDWARD F. KRAVITT

The trend towards the folklike was one of the most important movements in the Late Romantic Period (c. 1890-c. 1920), not only in Germany and Austria, but also in Europe as a whole. At its height, it influenced more individuals than did any other trend of the time. It strongly affected all types of music—from the popular to the most sophisticated. And it stimulated considerable scholarly research. Indeed, more societies and periodicals devoted to the study of folk art existed in Germany and Austria at this time than at any time before or since.

To be sure, composers in central Europe were interested in the folklike throughout the entire era of greater Romanticism. But this interest was greatly intensified towards the end of the era—after 1890. Nationalism was the catalytic agent responsible. And nationalism had strongly affected cultural life even before 1890. Indeed, it had stimulated the rise of schools of music in areas of Europe that were musically dormant, e.g., Russia, Bohemia. And it had inspired composers in countries in the mainstream of musical life, France, Italy, and Germany, to cultivate an indigenous musical style and to free themselves from all traces of foreign influence. But after 1890, nationalism became so potent that it profoundly affected all areas of political and artistic thought.<sup>1</sup> It reached its high point at about the time of the First World War.

That the trend towards the folklike is actually an expression of nationalism will become evident during the course of this article. For the present, one example should suffice: in Germany and Austria in the early 1890's, most newly performed successful operas were veristic imports from Italy. The German patriot, grieved by this fact, actually regarded the importation of Italian operas as an invasion. To his satisfaction, the "invasion" was partially stemmed three years later by the premier of Humperdinck's *Haensel und Gretel*, a work he considered thoroughly Germanic: for it is saturated, he thought, with *Volkslieder* (folksongs).<sup>2</sup> And the *Volkslied*, to any romantic nationalist, is the

---

<sup>1</sup> The historian, Carlton Hayes, considered 1880 as the beginning of a period when the liberal nationalism of the earlier 19th century (1815-1880) was supplanted by an illiberal type which became intense and chauvinistic, a nationalism that affected all European countries especially Germany. For a detailed study of nationalism by Hayes see *Essays on Nationalism* (New York, 1926).

<sup>2</sup> Actually Humperdinck used only three folk tunes in this fairy tale opera. Yet he captured the spirit of the folksong so convincingly in his score that his audience was led to believe the work was filled with them.

most intrinsic expression of the German spirit.<sup>3</sup> Therefore, he attributed the resounding success of *Haensel und Gretel* to its Germanic spirit in general and to its *Volkslieder* in particular. These, he asserted, had immediately captured the hearts of the German people. And their application by Humperdinck in an opera, his interpretation continued, provided German composers with a "new" operatic genre, the "folk opera," a medium through which they hoped to find no end for self-expression. This discovery animated their sagging spirit. It stimulated them also to turn to their national heritage for musical inspiration. As a consequence of these "facts," the patriot celebrated the success of *Haensel und Gretel* not so much as a musical triumph but as a nationalist victory.

A study of the *Jugendbewegung* (the German youth movement) of the early 20th century provides a striking example of the impact of the trend upon the masses. Vigorously active, the movement stimulated the publication of periodicals and collections of folk music. Moreover, it affected the development of the concert lied, and in its later stages, it helped to arouse interest in the polyphonic music of the Baroque and Renaissance and even to cultivate *Gemeinschaftsmusik* and *Gebrauchsmusik*. At its core was a veneration of the folk and their art.

A general description of the *Jugendbewegung* is difficult to provide. For the aims and attitudes of its members changed frequently during its relatively short life span. During its first period (1901-1907), when it was called the first *Wandervogel*, the movement had no definite organization or goals. Protest against the artificiality of life in the great cities, against sophistication, and even against the discipline of teachers and parents were ideals that united the youth. They sought to escape these "evils" by a flight into the open outdoors—into nature. "They wished . . . to live in the health and beauty of natural surroundings, [to build] a culture for themselves that they could contrast with that of city and town life from which they were fleeing."<sup>4</sup>

The movement was wildly romantic, during its first stage. Its members, students for the most part, called themselves *Bacchanten*. They identified themselves with medieval wandering scholars. They dressed and behaved like travelling artisans. Each new-comer was festively enrolled in the *Scholarenbuch* by an *Oberbacchant*, a leader. Although music was important in the movement at this time, it played no specific role.

During its second period (ca. 1908-1913)—the second *Wandervogel*—the movement solidified, lost some of its wildly romantic character,

---

<sup>3</sup> The thinking of most Germans about folk art, from the days of Herder to those of Nietzsche, was steeped in what we may refer to as romantic metaphysics—romantic because it was characterized by an idealization of the "folk," and metaphysical because the folksong was considered in terms of the *soul* and [*Geist*] *spirit* of a people. Herder, for instance, conceived the *Volkslied* as the true voice of the people. Nietzsche called it "the musical mirror of the world . . . the original melody." (*The Birth of the Tragedy*, Modern Library Edition, p. 198).

<sup>4</sup> Hilmar Hoekner, *Die Musik in der deutschen Jugendbewegung* (Wolfenbüttel, 1927), p. 5. This book is an excellent study of the German Youth Movement, the musical aspect in particular.

and established definite goals. With its membership then at 25,000, and with a monthly publication called *Wandervogel*, the movement became an important cultural force. Its philosophy was still deeply romantic. In fact, it seemed as if the youth had accepted Rousseau's ideas as their own, merely adopting them to suit the German climate of the late Romantic Period. "In his wanderings from lamenting mountains and valleys," wrote Hans Breuer, one of the leaders, ". . . the *Wandervogel* will gradually find his primeval ties in the holy company of nature, ties which were torn during the passage of time. The tree which was ripped from its native soil will grow new roots. Mankind, who has sprung from the womb of nature, will gradually find his primeval relatives again. He understands their language and he will again become natural."<sup>5</sup>

The *Wandervogel* sought these roots not only in nature, but also in the German peasant. Because he had lived close to the soil, the peasant, they thought, had retained his primeval ties. And his songs represented to the youth the most genuine link to their lost heritage: for these lieder had survived the decaying influence of time. Determined to learn genuine folksongs only, the youth sat at the peasant's feet, collecting and venerating everything he sang. In fact, they considered their sacred duty the protection of his priceless heritage of folksongs from "contamination" by city "hits."

Trenchantly nationalistic, they "believed that widespread singing of the folksong would lead to a spiritual rebirth of the German people." Like most romantics, they regarded the folksong as the most genuine expression of the German soul: "In the *Volkslied* there lives the pulse of our entire German history."<sup>6</sup>

In typically romantic fashion, they sought to achieve a unity between their experience of nature and the poetic content of a folksong. Thus, marching songs were to be sung only on a hike. And lieder about leave-taking were reserved for departure into nature. The folksong was also a prime medium through which the youth gave direct expression to a given mood or situation. To illustrate: after a group had reached the top of a mountain and discovered a beautiful view, "one of its members began to sing 'O Vaterland, wie bist du schoen.'" Gradually all joined in. Then another stood up and removed his hat."<sup>7</sup>

To supply the youth with music for their marches and campfires, Breuer published, in 1909, his large collection of folksongs, the *Zupfgeigenhansl*. Its success was impressive. The first edition was almost immediately exhausted. By 1913, 100,000 copies were sold. Over a million were bought since. Its great popularity sparked members to issue other anthologies of folksongs. Fritz Joede, himself, published over thirty.

Owing to its strong appeal to the youth, the *Volkslied* became the center of the movement, during this period. "That which the *Wander-*

<sup>5</sup> *Ibid.*, p. 44. This quotation was drawn by Hoeckner from Hans Breuer, "Wandervogel und Volkslied." *Wandervogel*, IV (1910), p. 81ff.

<sup>6</sup> Both quotations are from Hoeckner, *Jugendbewegung*, p. 187 and p. 213 respectively. The second is from the Breuer article cited in footnote 5.

<sup>7</sup> Hoeckner, *Jugendbewegung*, p. 42, footnote 1.

*vogel* is searching for in and out-of-doors," wrote Hans Breuer, "is written in the folksong. One can truly say: the *Volkslied* is the most complete expression of the *Wandervogel* ideal." Interest in the folksong was, indeed, intense. "Nowhere in recent times was the folksong sung so passionately and with such enthusiasm as by the *Wandervogel*."<sup>8</sup>

Besides intoxicating its adherents with a love for the folksong, the trend exerted still another important influence: it induced its followers to accept simplicity as an artistic ideal. In addition to being considered an intrinsic expression of a nation's soul, the folksong was regarded also as a symbol of musical and poetic simplicity. The *Wandervogel* expressed this particular influence by singing their songs to plain, uncomplicated accompaniment. Skillful playing was actually frowned upon as being artificial and sophisticated. The guitar was the standard instrument. And the youth merely strummed upon it.

Simplicity, however, was anything but a goal of the great majority of contemporary musicians. Consequently, the critic, Max Vancsa, noted in 1903, in the *Neue musikalische Presse* (p. 310), that "the existence of the trend towards the folklike seems especially curious when one realizes how far the technique of modern music has developed from the naive—from folklike simplicity."

The strongest monition against complexity in music came from the highest law of the land, the German Kaiser. Wilhelm II concentrated his criticism upon the choral music of his time. He condemned it for not being genuinely Germanic, by which he meant—it was not folklike enough. Moreover, he considered it too complex. Thus, he created in 1903 two commissions of outstanding professors and practical musicians to arrange *Volkslieder* and *volkstümlicher Lieder* for male chorus. These men were urged:

not merely to imitate the character and nature of the folk in their songs and thereby to create the folklike character only superficially, but to capture the essential traits of the songs of the folk, their directness, their truth, simplicity, unpretentiousness, intimacy, and to imprint . . . such a spirit deeply in the music so that the folk would understand and gladly embrace these songs as their own.<sup>9</sup>

Music critics, influenced in part by the kaiser's proclamation, attacked the concert lied of the time for being over-sophisticated. The voice-part, they complained, rarely carries an easily singable melody. On the contrary, it is usually unmelodic and highly declaimed. Armin Knab, an outstanding composer of lieder, thought that the vocal line functions like a thin thread that is pulled inorganically up and down through a piano-part that is thick and conceived orchestrally. And the piano-part,

<sup>8</sup> *Ibid.*, see pp. 44 and 26, respectively.

<sup>9</sup> *Volksliederbuch für Männerchor*, Editor, Rochus Freiherr von Liliencron. 2 Vols. Leipzig [1906?], Max Bruch, Humperdinck, Richard Strauss, and Ludwig Thuille were among the more than forty artists of the commission. Works by the masters—Schubert, Mendelssohn, Schumann, Wagner et. al.—arranged for male chorus, are also to be found in the *Volksliederbuch*.

they generalized, instead of being an accompaniment, often plays the dominant role. In short, the genre is so complex that it can be rendered only by highly trained artists and appreciated only by a small and select public. Therefore, the concert lied must be reformed. And this goal, they argued, could be achieved only if composers chose as their model the prototype of the lied—the folksong.

Yet, the concert lied was being zealously cultivated early in our century. According to Fritz Joede, who later bemoaned the fact in verse, a defenseless public was being drowned by them:

Mountains of music are being turned out today  
symphonies and potpourris  
oratorios, operas, operettas and salon music  
and dance music, dance music a flood of it  
and lieder, lieder, still more  
a deluge  
and all for voice and piano. . . .<sup>10</sup>

To achieve simplicity in the field of the lied, the Berlin weekly—*Die Woche*—waged a battle that was, indeed, valiant. Called to campaign by their kaiser's proclamation against sophistication in the arts, their manner of attack is noteworthy. They planned to arouse the public's interest in 1903 to the neglect of the *volkstümliches* (folklike) *Lied* by organizing a contest. This contest was surprisingly successful; it involved a large number of participants, measured the interest of the public in the genre, and prompted consideration of it by outstanding composers and singers. Furthermore, the contest stimulated other contests and provided, in its statement of purpose, a clear-cut criticism of the contemporaneous concert lied as well as a description of the modern *volkstümliches Lied*.

The immediate purpose of the contest was to stimulate composers to write *volkstümliche Lieder*. These would serve not only as models for the further cultivation of the genre but also as music for the home. "The art of making music in the home (*Hausmusik*)," the contest-committee pointed out, "is all but lost. Today, *Hausmusik* . . . like the *Volkslied*, is being suffocated by the fashionable popular song, on the one hand, and by the excessive growth of concert life, on the other." The Late Romantic composer has not provided the amateur with simple music as had composers who lived a hundred years before him, e.g., Johann A. P. Schulz with his *Lieder beim Klavier zu singen*. *Hausmusik* must again be cultivated: "It is the fertile soil in which the folk-song grows."<sup>11</sup>

The *Woche* offered several reasons to account for the lack of interest by contemporaries in the *volkstümliches Lied*. The composer was neglecting this genre because he had a condescending attitude towards it. "He does not understand its merits nor the difficulties involved in writ-

<sup>10</sup> Hans Joachim Moser, *Das deutsche Lied seit Mozart* (Berlin and Zurich, 1937), p. 348.

<sup>11</sup> Both quotes were drawn from the short foreword written by the editors, Joseph Joachim, Carl Krebs, and Humperdinck of *Im Volkston, Moderne Preislieder*, Vol. 1, (Berlin, 1903). See also "Im Volkston," *Die Woche*, XV (1903), p. 643.

ing simple songs. In fact, he is actually afraid of being simple for fear of being accused of triviality." The response of the public was similar. It, too, "had lost its ability to be naive and to appreciate the naive." Why, it may be asked? Because "everywhere one demands apparatuses that are too large. Everywhere great demands are being placed on the capacity of the performer. . . ." Instead of cultivating the *volkstümliches Lied*, "the concert song with orchestral accompaniment is receiving most of the attention today." In short, "the music of our time has become overgrown and overcomplicated. It is now caught in its own decline."<sup>12</sup>

The committee members hoped to correct these evils. Their aim was to prove to the public that first-rate lieder can be attractive, contemporary in style, and still be simple. To acquire a body of such songs, they planned first to request outstanding composers to write them. The collection, published by *Die Woche* under the title, *Im Volkston, Moderne Preislieder* (Vol. 1), consists of thirty lieder by men such as Eugen d'Albert, Leo Blech, Humperdinck, Kienzl, Pfitzner, Schillings, Thuille, Siegfried Wagner, and Herman [sic] Zumpe.

To induce the general public to compose *volkstümliche Lieder*, their next step, thirty prizes were offered—one for each prize song. The chief traits of the prize song were enumerated by the committee members in their statements of purpose as well as in the rules of the contest. These traits may be summarized as follows:

The songs submitted must be folklike and yet cast in a musical idiom that is contemporary. They must be no longer than fifty measures and hitherto unpublished. The melody must be completely vocal, simple enough to be sung upon one hearing, and not dependent in any manner upon the piano-part. The accompaniment should be as unsophisticated as possible.

Contestants were cautioned not to imitate the genuine folksong and thereby to create spurious examples, but to capture only its spirit. Two lieder, written by Herman Zumpe, were presented as samples.

The judges were professional musicians: Humperdinck, Carl Krebs, Eduard Lassen, Felix Schmidt, and Ludwig Thuille. Each winner was awarded 100 marks and the prize songs were published in a volume called: *Im Volkston, moderne Preislieder, Vol. II*, a special publication of *Die Woche*. Three big additional prizes of 3000, 2000, and 1000 marks, considerable sums for the time, were awarded to composers of the three best of the thirty songs. The three were selected not by professional musicians but, significantly enough, by the public. Was not the "folk" the best judge of what is folklike?—a bit of sentiment that sounds like an echo of the *Wandervogel* philosophy and of the Kaiser's proclamation. At any rate, by inviting the public to participate in the voting, the committee hoped to arouse widespread interest.

The entries reached 8859. After the prizes were awarded the *Woche* decided to select, from those songs already submitted, thirty additional ones, songs that are first-rate but, for certain reasons, not in the class

<sup>12</sup> Heinrich Neumann, "Im Volkston," *Die Woche*, XVII (1903), pp. 731-732.

of the first thirty. These were published in a third volume. The public was invited again to participate—this time to select the best from all ninety songs. The same high prizes were offered. A total of 53,915 votes were cast. And more than 120,000 copies of the three were sold.

Even if the editors undertook the contest as a shrewd business venture, its effect upon the *volkstümliches Lied* cannot be disregarded. "Great artists," *Die Woche* announced on February 27, 1904, "who have for a long time neglected the *volkstümliches Lied*, are now including at least some examples in their recitals or giving complete programs of them."

Composers active about 1900 were also swept along by the trend towards the folklike. They responded to it by writing not individual *volkstümliche Lieder* but sets of them. And in doing this, they showed mutual influence: they used the same titles for certain cycles, based others on poetry similar in subject matter, or drew words from the same sources. For instance, several men—Alexander Ritter,<sup>13</sup> Richard Strauss, Richard Trunk, and Reger—applied the title *Schlichte Weisen* to cycles of lieder based on miscellaneous "folklike" poetry. Reger, incidentally, began the composition of his *Schlichte Weisen* in 1903—the year of the kaiser's proclamation, *Die Woche* contest, and the premier of *Haensel und Gretel*. And Max von Schillings, Conrad An-sorge, Joseph Haas, and Wilhelm Kienzl all entitled their sets of songs, based on texts that glorify the peasant, *Ernte Lieder*.

The composition of poetry from *Des Knaben Wunderhorn* presents an unusual example of mutual influence. Throughout the 19th century composers paid little attention to this rich source, published by Arnim and Brentano in 1806. Curiously enough, after 1906, one hundred years after its publication, composers began to flock to it. Of course, *Wunderhorn* texts had been set before that year. Mahler composed his before 1892. And in 1903, Humperdinck, d'Albert, and Thuille selected *Wunderhorn* verse when writing songs for the *Woche*—for the special volume contributed by outstanding composers. But after 1906, so many musicians turned to this poetry that Georg Goehler, a lied composer and propagandist in Mahler's behalf concluded: "It has now become fashionable to compose *Wunderhorn Lieder*."<sup>14</sup> Indeed, Schoenberg, Strauss, Graener, Knab, Kienzl, Haas, Joseph Weismann, Walter Courvoisier, and Hermann Zilcher are among others who "suddenly" discovered this collection of folk poetry.

Certain scholars credit Mahler with being practically the first composer to discover the *Knaben Wunderhorn*.

. . . neither Schubert, nor Beethoven, nor Mendelssohn, nor

---

<sup>13</sup> The *Schlichte Weisen* by Alexander Ritter (1833-1896) was the forerunner, by many years, of the *Schlichte Weisen* by the other composers mentioned. Ritter probably influenced Strauss to write his set, since Ritter was, for a time, Strauss' mentor.

<sup>14</sup> Georg Göhler, "Gustav Mahlers Lieder," *Kunstwart und Kulturwart*, XXIV (1910), p. 146.

Schumann seems to have paid the slightest heed to this rich treasure of lyricism accessible to all of them.<sup>15</sup>

But Mendelssohn and Schumann did set a number of its poems. And Hans Redlich singles out only Thibaut as not having overlooked this wonderful collection:

It is hard to understand that this glorious anthology should have remained neglected by most German composers (J. Thibaut—Heidelberg, 1810—was an exception) until a young Moravian Jew discovered its qualities in the 1880's.<sup>16</sup>

But Friedrich Silcher set some of its texts early in the 19th century, not to mention Mendelssohn and Schumann, and Brahms also drew several times from the collection late in the same century.<sup>17</sup> Furthermore, Mahler was not the only Late Romantic to concentrate upon the *Knaben Wunderhorn* about 1900. Theodor Streicher created his artistic settings of its poetry at about the same time that Mahler did. And Mahler heard them while they were still in manuscript. Indeed, Streicher once asked Mahler:

"I should like very much to play you some compositions of mine." "To what words?" Mahler asked. "*Knabe Wunderhorn*," he [Streicher] replied.<sup>18</sup>

Though certainly not among the first to set the *Knabe Wunderhorn*, Mahler was, indeed, the first to focus the attention of his contemporaries upon it through his masterful settings of some of its poetry.

Yet Mahler's nationalistic contemporaries condemned rather than praised him for setting these German folk lyrics. They complained that for racial reasons a Jew could never provide these poems with genuinely Germanic music—the only kind appropriate for them. For a composer, according to their thinking, will inevitably express in his music his own racial heritage. Such reasoning, saturated with romantic metaphysics (see fn 3), assumes the presence in each nation of a spirit (*Geist*), one that is transmitted to its own members only. And this spirit is expressed by each member directly in his art. Therefore, Mahler, it followed, could not help revealing his Hebrew heritage in his lieder. The critic, Rudolf Louis, came to such a conclusion about

<sup>16</sup> Hans F. Redlich, *Bruckner and Mahler* (London and New York, 1935), p. 142.

<sup>17</sup> By Mendelssohn, see for instance, *Jagdlied* (Op. 84, no. 3) and, probably, *Lieblingsplätzchen* (Op. 99, no. 3); by Schumann, e.g., *Das Käuzlein* (Op. 79, no. 10), *Marienwürmchen* (Op. 79, no. 13), *Jäger Wohlgenut* (Op. 91, no. 2); by Brahms, e.g., *Der Ueberläufer* (Op. 48, no. 2), *Liebesklage des Mädchen* (Op. 48, no. 3); *Rosmarin* (Op. 62, no. 1) etc. etc.

<sup>18</sup> Alma Mahler, *Gustav Mahler: Memories and Letters*, translated from the German by Basil Creighton (London, 1946), pp. 68-69. The year this occasion took place is not certain. Alma Mahler entered the event in her diary under 1905, Winter. But the meeting between the composers (Schoenberg, Zemlinsky, and Klaus Pringsheim were also present) occurred not during a winter, but during a summer's night when Mahler was at Maiernigg. At any rate, Streicher (1874-1940), the composer's daughter assured me, began to set *Wunderhorn* text long before this occasion—while he was still in his teens.

Mahler's art: "It speaks a musical German . . . but with the accent, inflections, and, above all, the gestures of the East, of the ever-so-eastern Asiatic Jews."<sup>19</sup> This statement is not necessarily an example of anti-semitism, though a case against Louis can easily be made. Even Paul Rosenfeld argued that racial reasons prevented Mahler, or, for that matter, any other non-German, from writing music that is intrinsically Germanic.<sup>20</sup> Louis' statement is simply evidence of the flamboyant nationalism of the time. It serves as another illustration of how close in the minds of the Late Romantic, folk art and nationalism were linked. Suffice it to say, the conclusions of the nationalists about the "folk" and their art, e.g., that of Louis, were not drawn from scientific investigation but rather from fanciful and sentimental notions about them.

Regardless of the judgment of these nationalists, the folklike for Mahler was a prime source of inspiration, especially during his youth. Nearly all the lieder and symphonies he wrote before 1901 betray its influence. Although some contemporaries, e.g., Reger, wrote more *volkstümliche Lieder*, they did not cultivate the genre as intensively or for as long a time as Mahler did. And they paid it little heed when Mahler cultivated it vigorously, a time before the kaiser and the *Woche* called attention to its neglect.

Mahler found the most direct expression of the folklike in the lied. Interestingly enough, he created a folklike style in certain movements of his early four symphonies, among other ways, by quoting in them extensive passages from his lieder. Indeed, these four are known as "Wunderhorn Symphonies." They derive much of their melodic material from his *Wunderhorn Lieder*.

Although critics have concentrated upon that which, in the Mahler lied, is individual and subjective, they have not also carefully analysed its folk element. This is a mistake! For the creation of folklike simplicity was a main aim of Mahler. Otherwise he would never have impatiently interrupted a technical analysis by a critic of his *Schildwache Nachtlied* with the words: "Oh, dominant be hanged! Approach these things naively as they are meant to be."<sup>21</sup> Furthermore, the presence of a folklike idiom in songs like *Zu Strassburg auf der Schanz* is the chief factor that distinguishes them as a genre from the great mass of contemporaneous concert lieder. For the majority of these concert lieder, though also subjective, is certainly not folklike.

The folklike in Mahler's "volkstümliche Lieder" has a ring of authenticity. Even a cursory analysis, as the present one, should indicate that these lieder contain elements that are genuinely folklike. In the first place, the composer captured in nearly each song the distinctive character of specific categories of the folksong, e.g., the *Tanzlied* (a dancelike folksong) and the *Soldatenlied* (songs of soldiers). As many as five of the *Zwölf Gesänge aus "Des Knaben Wunderhorn"* are idealized *Tanz-*

<sup>19</sup> Rudolf Louis, *Die deutsche Musik der Gegenwart* (Munich and Leipzig, 1909), p. 182.

<sup>20</sup> Paul Rosenfeld, *Musical Portraits* (New York, 1920), esp. p. 207ff.

<sup>21</sup> Ernst Decsey, "Stunden mit Mahler," *Die Musik*, XI (1911), pp. 144-145.

lieder.<sup>22</sup> And dancelike passages appear in three others in this set.

Some of Mahler's lieder are actually saturated with the spirit of the *Ländler*. *Hans und Grethe*, his earliest published song, is a good example. Laendlerlike, for instance, is its melodic line with its wide leaps and its series of eight measure phrases. These leaps, sixths (X) and octaves (Z), occur as portamento upbeats. They are evident not only in the accompaniment—particularly in the instrumental interludes—but even in the vocal line. Also reminiscent of this Austrian dance is the main motive of the song, a rustic, robust figure that falls heavily upon the first beat (Y). It permeates the accompaniment and appears even in the vocal line, where, in measures 38-39, it splits *Ringel* into two disjunct syllables. Clumsy dissonances such as are frequently heard in

Ex. 1 Mahler: *Hans und Grethe*; measures 53-58.

village music are present in the instrumental interludes—the clash of a tonic drone with dominant harmony (see measures 2 and 4 above). And the folklike refrain *Juchel Juchel* adds its flavor to the total pastoral quality. *Hans und Grethe* is, indeed, a fine *Tanzlied*. Moreover, it paints a convincing picture of peasants in the dance.

Surprisingly enough, Mahler did not focus attention upon the folk dance, e.g., the laendler, in the titles of his *Tanzlieder*. And their texts rarely refer directly to the dance. Some are satirical, while others are humorous, or discuss love. Playing directions such as *mit heiterem behagen* (*Wer hat dies Liedlein erdacht*) and *Gemächlich* (*Rheinlegendchen*) only hint at the folk dance present in them. Rather than calling attention to the folk dance, Mahler, it seems, actually avoided all specific verbal references to it. For *Hans und Grethe* formerly had the simple title of *Maitanz im Grünen*, one that is typical of a *Tanzlied*. And its performance indication was changed from *Zeitmass eines Ländlers* to *Im gemächlichen Walzertempo*.<sup>23</sup> And *Rheinlegendchen*

<sup>22</sup> See *Verlorne Müh!*, *Wer hat dies Liedlein erdacht?*, *Des Antonius von Padua Fischpredigt*, *Rheinlegendchen*, and *Lob des hohen Verstands*.

<sup>23</sup> The direction "gemächliches Walzertempo" is immediately open to the suspicion that Mahler actually had a laendler and not a waltz in mind. The tempo of the typical waltz at about 1880 would have been too fast for *Hans und Grethe*. By inserting the qualifying adjective "gemächliches," Mahler guided the performer to the tempo of the typical laendler. See Donald Mitchell, *Gustav Mahler: The Early Years* (London, 1958), pp. 204ff for further discussion of this song.

had been named *Tanzreime*. A possible reason why he made these particular changes will be given presently. Regardless of the reason, the changes do not disguise the dance that pervades these *lieder*. Though the dance in them is idealized, as are the mazurkas of Chopin—it is, nevertheless, present. Thus, we may consider these songs, *Tanzlieder*.

The *Soldatenlied* was for Mahler a major stimulus. It often served the composer as a "model." Thus, several of his *lieder* may be regarded as actual essays in this genre: *Zu Strassburg auf der Schanz* and *Tambourg'sel*, for example.

That Mahler was greatly interested in the *Soldatenlied* is not surprising. Nationalism stimulated the composition and widespread singing of the *Soldatenlied*. Furthermore, the *Soldatenlied* has always been a very popular type of folksong. To these reasons, one may add Mahler's own personal ones: he was fascinated by military music. Its vigorous rhythm was all but irresistible to him. His liking for military music goes back to his early youth. He is said to have hidden himself, as a boy, in a barracks just to hear trumpet calls. Such military signals decorate many of his *Soldatenlieder*. They give them a ring of authenticity.

With few exceptions, the texts Mahler selected for his *Soldatenlieder* concern the grim aspects of military life—the execution of a soldier or the horrors of war. *Revelge*, for example, depicts the soldier as a human automaton, one who marches knowingly, and deliberately to his death: "Ich muss marchieren bis in Tod!"

The melodies Mahler provides for these songs are similar to those of typical *Soldatenlieder*. They are simple, vigorous, and military in character. Triadic scaffolding, rather than chromatic weaving, characterize them. This structure is apparent especially in the many trumpet calls in the instrumental part. Recurring melodic figures, such as the group of five notes (♩ ♪ ♪ ♪ ♩) which closes nearly every phrase of the *Tambourg'sell*, help to create the intended simplicity. Formally these songs are the strictest of his folklike songs. This fact is striking when one studies songs in which military music is present only in certain sections. These, in contrast to the other sections, are generally treated with greater strictness.

The rhythm of Mahler's *Soldatenlieder* is a heavy tramping march tempo. Short, clipped, dotted rhythms, figures with staccatos (♩ ♩ ♩) or with forceful repeated-note patterns make these songs rhythmically exciting. And their pulse is more alive than even their "models." A comparison of the rhythmic pattern of Mahler's *Zu Strassburg auf der Schanz* with the folksong, *Le Deserteur*, the song that probably inspired Mahler to write his lied, clearly indicates a vigorous pulse in the first and weaker ones in the second.

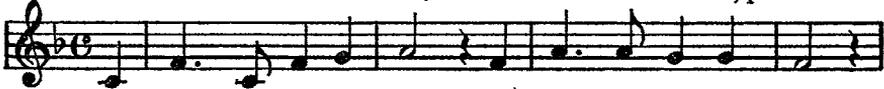

Ex. 2a Mahler: *Zu Strassburg auf der Schanz*; m. 5-6.

*In gemessenem Marsch tempo*

Zu Strass-burg auf der Schanz, da ging mein Trau-ern an!

Ex. 2b *Le Deserteur*: Erk-Böhme, *Deutscher Liederhort*, III, p. 261.

Zu Strass-burg auf der Schanz, da' fing mein Unglück an,

And Mahler's performance directions, *Im gemessenem Marschtempo, äusserst rhythmisch*, and *streng im Takt* makes explicit his aim for a strict tempo with a crisp and energetic pulse.

On the other hand, Mahler occasionally sought to produce the effect of unmeasured, free, or irregular rhythm. He did this in certain passages of his folklike songs to achieve, in performance, a "natural" type of singing, one that is characteristic of the untutored singer. Performance of this type occurs when, for example, a peasant who, singing while at work, pauses in his song, modifies his tempo, or sustains, at will, this or that note. Such a result occurs in the last of his *Lieder eines fahrenden Gesellen*. By inserting a measure of 5/4 directly after three consecutive phrases (eight bars) in quadruple time, Mahler adds an "extra" pulse to the bar. This sudden change of time signature creates on the fourth beat (see X in the example below) an unexpected pause. Its effect is that of the wayfarer momentarily interrupting his song.

Ex. 3 Mahler: *Lieder eines fahrenden Gesellen*, No. 4; m. 7-9

al-ler-lieb-sten Platz! O Augen blau wa-rum habt

Even the manner in which Mahler set folk poetry contributes to the folklike quality of his lieder. He knew that in order to create a convincing *volkstümliches Lied* he must try to bring the words and the music into the same type of union found in the typical folksong—a marriage in which one partner, the music, dominates the other. Therefore, unlike most of his contemporaries, he approached the composition of the lied via the music. In fact, his attention, while setting a text, was absorbed by purely musical considerations. Consequently, he did not exercise special care to parallel the metre of the poetry in the rhythm of his vocal line. To be specific: he often applied rhythmic patterns, melo-

dic sequences, or figures associated with the dance or the march or phrases of text. Then, too, he would call for a regularity of musical stresses which produces a tripping and jiggling rhythm, a metre not present in each line of poetry thus set. And he often juxtaposed two groups of time values such as eighths and sixteenths instead of assigning the longer and shorter values to the words according to their relative importance in the central meaning of the poem. And examples of incorrect accentuation of individual words are not infrequent.

In contrast to Mahler, most Late Romantics believed that the lied composer should approach the composition of a song via the poem. He should derive the rhythm of his voice-part from the metre of the poetry. Indeed, composers with acute literary acumen actually sought devices that would serve as musical equivalents for rhyme, punctuation, and poetic metrics. And they used a huge variety of time values to differentiate the words of a poem according to their relative importance in its central meaning. Some went still further. They tried to create a vocal line that in performance would give the impression of being a good recitation of poetry.<sup>24</sup>

These literary-minded contemporaries severely criticized Mahler for his manner of setting a text. Some concluded that he simply did not know how to declaim a poem correctly. What they did not understand is that Mahler was opposed, for several reasons, to the use in his folk-like lieder of declamatory vocal writing: to begin with, the folksong, his model, his point of departure as a composer, is rarely declaimed, but, to the contrary, filled with examples of poor declamation—jiggling rhythms and incorrect accentuation of words. Such "clumsy" treatment of text lends the folksong its distinctive charm. Declamatory vocal writing, on the other hand, is a sophisticated form of art and thus not the ideal vehicle with which to express the folklike. Then, too, Mahler had a strong distaste for declamation in general, a distaste he did not hesitate in an interview to disclose:

[Mahler] answered [my questions] furiously. . . . "I demand a theme, development of the theme, thematic manipulation, song, not de-cla-ma-tion!" and with each syllable he hit the back of his hand in his palm. I had the feeling he was about to explode.<sup>25</sup>

It would be incorrect for still another reason to assert that Mahler lacked literary acumen. He had himself written several fine specimens of folklike poetry, e.g., his *Lieder eines fahrenden Gesellen*.<sup>26</sup>

<sup>24</sup> On this subject see, by the present writer, "The Influence of Theatrical Declamation on Composers of the Late Romantic Lied," *Acta Musicologica*, XXXIV (1962), and *The Late Romantic Lied: Performance, the Literary Approach, and the Naturalistic Movement*, Doctoral Dissertation, New York University, 1960.

<sup>25</sup> Decsey, *Mahler*, p. 144.

<sup>26</sup> Although Mahler claimed to have written the poetry of the *fahrenden Gesellen*, Egon Pamer, among others, noted that the text of the first song—*Wenn mein Schatz Hochzeit macht*—is similar, almost word for word, to certain folk poetry. See his "Gustav Mahlers Lieder," *Studien zur Musikwissenschaft*, XVI (1929), pp. 120ff. For still other variants of the folk poetry Pamer cited see Alfred Müller, *Volkslieder aus dem Erzgebirge* (Annaberg, 1883), p. 135, no. 31 and Georg Heeger and

Egon Pamer discovered fragments from folk tunes in two other lieder by Mahler. And he noticed a similarity between the melodic contour of certain passages of several lieder by Mahler and several folksongs with the same titles.<sup>27</sup>

How is one to account for the presence in these lieder by Mahler of fragments from folksongs? Many explanations may be offered. Let us examine some of these: Mahler quoted the fragments in question to imbue his lieder with a genuine folkish quality; Mahler adapted or arranged folksongs, shaping the originals to suit his taste, and called the results his original *volkstümliche Lieder*.

No significant published evidence exists to support these arguments. To be sure, corroboration may yet be found since research in Mahleriana is filled with lacunae. But discovery of such evidence, in view of our knowledge of Mahler's personality, attitudes, aesthetics, is unlikely. In the first place, Mahler relegated the folksong to a lower artistic level than the art song. He regarded it as a natural product and an imperfect one at that. Editorial revisions certainly could not transform the natural product into a work of art. On the contrary, they would kill its "naturalness."

But far more important: Mahler's main artistic objective was to create original works. And in so doing, he wished to leave his strong personal imprint upon them. This objective is implicit in Mahler's aesthetics and explicit in this statement: "Despite the simplicity and folkishness of [*Rheinlegendchen*], the composition is highly individual, especially in the harmonization which the public will not understand. . . . And yet, the melody is as natural as one can be."<sup>28</sup>

In other words, Mahler wanted his public to concentrate upon the individuality of his *volkstümliche Lieder* and not upon their folk element. This attitude explains why he did not draw attention in the titles and playing directions to the specific folk element in *Hans und Gretle* and in the other lieder mentioned above. Their folkishness, in any case, is self-evident. It does not need to be spelled-out. And the older Mahler grew, the stronger his aim for self-expression became. His treatment of the folklike in his later symphonies, written when his expressionistic tendencies came to the fore, is more individual even than his treatment of it in these songs.

We may therefore conclude that Mahler, whose urge for self-expression was so strong, and whose idealism and honesty were beyond question, is not likely to have arranged or adapted folksongs and to have called the results "highly original." Nor would such an imaginative composer find it necessary to quote phrases from *Volkslieder* merely to flavor his songs with the folklike.

A more likely explanation is that Mahler was influenced, subconsciously, by the folksong. The fact that he knew a huge number of *Volkslieder*—he knew well over 200 when he was but six years old—gives rise to the explanation that many of them may have been stored in

<sup>27</sup> Pamer, *Mahlers Lieder*, XVI (1929), p. 123 and Pamer, *op. cit.*, XVII (1930), p. 111.

<sup>28</sup> Natalie Bauer-Lechner, *Erinnerungen an Gustav Mahler* (Vienna, 1923), p. 12.

his subconscious. A phrase from one of those hidden in his mental store-house could have, in several ways, influenced his musical thought. The phrase may have become a germinal idea for Mahler, one that he developed and expanded or reshaped unconsciously in his own individual manner. As noted, Mahler regarded the folksong as a point of departure, a model, a stimulus that helped him to release his own creative impulses. Or it may have permeated his musical thought during the actual process of composition without the composer's awareness. Or it could have sprung to his conscious mind as he set the words of a folk poem with which it had long been associated in his mind. The fact that Pamer discovered melodic similarity only between lieder by Mahler and folk songs based on the same text strengthens the last-named possibility.

Besides calling for explanations, the presence in the Mahler lied of folksong fragments prompts two queries:

How many more lieder by Mahler incorporate snatches from folksongs?

Perhaps the folksong variants Pamer examined were not the ones Mahler knew. The ones he sang, if these could be uncovered, may resemble his lieder much closer. They may resemble not just an isolated phrase by extensive passages of his songs.

These queries are, admittedly, mere conjectures! Even discussion of them is contingent upon evidence furnished through research. Of course, basic research is necessary to support any of the explanations provided above. One conclusion may, however, be drawn from Pamer's discovery without further research: the fact that the phrases of *Volklieder* he discovered do not seem out-of-place in the Mahler melodic line—on the contrary, they are stylistically similar to Mahler's own phrases—attests to the intrinsic folkishness of his *Volkstümliche Lieder*.

Interestingly enough, Mahler's attitude towards expression in music of the folklike was shared by his German contemporaries: Humperdinck, Strauss, Schillings, Pfitzner, and Reger. All were nationalistic. All were swept along by the trend towards the folklike. And all strove for individuality. They chose to express the folklike not primarily by quoting, imitating, or arranging genuine folksongs, but with original music, i.e., in terms of their own individuality. This reason explains why Humperdinck, for one, used but three folksongs in his "folk opera," *Haensel und Gretel*.

Although the influence of the trend upon Mahler's generation was strong, it was actually intensified throughout Europe during the next generation, the time of Stravinsky, Bartok, Armin Knab, and Vaughan Williams. In their youth and early maturity, these men quoted the folksong more frequently, regarded it with greater respect, or examined it more objectively than did most of their immediate predecessors. As an example of the last-named, one might recall that Bartok, unlike Liszt or Brahms, sought carefully to distinguish genuine folk music from spurious examples of it. Furthermore, ethnomusicologists began at this time the difficult task of clearing the romantic mist from their subject so that it could be viewed with scientific scrutiny.

The second influence of the trend—that of inducing composers to simplify their styles in order to express the folklike—affected the development of music still more profoundly. It induced composers of Mahler's generation to aim at simplicity, *per se*. Some of them, e.g., Reger, turned towards the *volkstümliches Lied* as a means through which they hoped to achieve this end. Conrad Ansoerge, who composed his *Ernte Lieder* for the reason given, called these songs "the simplest and most popular of my lieder."<sup>29</sup> And, as the influence of the trend increased, composers sought further to simplify their styles. These efforts eventually brought about a reaction in them, especially in those of Stravinsky's generation, to the complexity of Late Romantic music. They became antagonistic towards the sophisticated transcription of reality of the naturalists,<sup>30</sup> the color intoxication of the impressionists, and the uncontrolled subjectivity of the early expressionists. In short, they wanted to discard the heavy and elaborate armour of Late Romanticism. Viewed in this light, the trend towards the folklike, at its height, played a prime role in the transition from the old towards the new, the change from romanticism to modernism. Its role in stimulating composers to destroy late romanticism and to create modernism was vital.

---

<sup>29</sup> Ansoerge's *Ernte Lieder*, Op. 18, texts by Franz Evers, were written, interestingly enough in 1903.

<sup>30</sup> On naturalism see the present writer's, "The Impact of Naturalism on Music and upon the other Arts during the Romantic Era," *The British Journal of Aesthetics*, publication expected in 1963.

## KILENYI BRUCKNER MEDAL AWARDED TO PAUL HINDEMITH

In appreciation of his efforts to create a greater interest in the works of Anton Bruckner, the Directors of the Bruckner Society of America, Inc., awarded the Kilenyi-Bruckner medal to the distinguished composer, Paul Hindemith. In recent years Prof. Hindemith has devoted an increased amount of time to conducting and almost always he has included a Bruckner work in his program.

The presentation of the medal was made by Mr. Charles L. Eble, President of the Society, at an informal reception sponsored by the Chicago Symphony Orchestra, Seymour Raven, manager, following a performance by the Chicago Symphony Orchestra of Bruckner's Seventh Symphony under the direction of Prof. Hindemith on March 29, 1963.

# THE SEVENTH SYMPHONY OF BRUCKNER

## AN ANALYSIS

By ROBERT SIMPSON

The following article is a new and revised version of an article which appeared in the *Music Review*, published in England in August 1947.

What follows is a description of the musical processes of one of Bruckner's greatest and subtlest works, from point to point, without recourse to *a priori* concepts. Bruckner has often been criticized by those whose inattention and reliance on pre-conceived ideas of sonata form have misled them into a superficial impression that the music is a clumsy attempt at conformity by a composer who has no real discipline. One of the main traps for the unsuspecting, routinized critic is the fact that Bruckner's music can show such superficial semblances. The first movement of this work, for example, looks on paper as if it is a crudely shaped sonata movement; as such it has been frequently subjected to criticism that is, as we shall see, empty. The true analysis of such a movement must be conducted (a) with a completely accurate ear for tonalities and the ability to relate tonal experiences over large stretches of music and (b) with freedom from conventional formal concepts. In fact, only one movement in this symphony (the Scherzo) is in true sonata form, and the other three are evolved along entirely individual lines, through the natural functioning of tonality and the apt spacing of calm and climax; such designs can be described only from point to point in the hope that the reader will follow the process without the aid of impossible diagrams and misleading ground-plans. This is not as difficult as it might seem, since Bruckner's methods are so clear that it is surprising that they have been so often misunderstood.

### First Movement: *Allegro moderato*

Bruckner's habit of beginning with string *tremolandi* has often been noted, sometimes in blame. It is actually no more remarkable than the fact that out of the twenty-nine movements in Brahms' symphonies and concerti, no less than fourteen end with the same type of woodwind chord, occasionally combined with strings (*arco* or *pizzicato*). The openings of Bruckner's symphonies are as similar as the doorways of nine different cathedrals. In this case the entrance leads to a very lofty and light interior.

#### Ex.1 *Allegro moderato*

Vic

*mf* (a)

The first staff shows a melodic line with a slur over the first four notes and a bracket labeled '(b)' under the last two notes. The dynamic marking *poco a poco cresc.* is placed below the staff. The second staff continues the melodic line with a slur over the first four notes. The third staff continues the melodic line with a slur over the first four notes and the dynamic marking *dim.* below the staff.

It is noteworthy that this long phrase modulates to the dominant before slipping back to the tonic for a fully scored counterstatement, in which the original tendency is checked by a beautiful cloudy elongation that finally settles on the dominant (note the distinction between "in" and "on" the dominant). The expected E major is, however, replaced by yet another attempt by the key of B to control the path of the music. Oboe and clarinet, supported by soft horns and trumpet, treat, with a new theme, the dominant as a key.

Ex. 2 (bar 51)

The first staff is for Oboe and Clarinet (Ob. & Cl.) and begins with a piano (*p*) dynamic. The second staff is for Trumpet and Horns (Tr. & Hns.) and begins with a mezzo-forte (*mf*) dynamic. Both staves show a melodic line with a slur over the first four notes and a bracket under the last two notes.

As the quotation shows, B major becomes B minor and in the following bar loses its slender foothold. For 18 bars the music drifts deliberately through a sequence of remote keys, reaching B major again at bar 69. That tonality is not yet secure (a 6/4 chord) and is this time carried on the crest of a wave into its flat supertonic region, C major. The phrase of Ex. 2 now has a new ending which becomes absorbed in a short but lovely triple counterpoint.

## Ex. 3 (bar 81) Leading parts only

*mf*

*pp* etc.

The Neapolitan C major falls easily back into B major (bar 89), which now shows a confidence that is not undermined by the "passing keys" into which it moves almost at once. These occupy 10 bars, and at bar 103 the iron grip of a deep pedal F sharp settles the firm entrenchment of the dominant, toward which a giant *crescendo* sweeps. Throughout this process Ex. 2 has prevailed. The first big climax of the symphony comes with a sudden hush and a rhythmic new theme in B minor.

## Ex. 4 bar 123

VI.

*pp*

Passing through F sharp minor, D major and minor, and G flat major (= F sharp major), this rises quickly to a massive brass fanfare, afterwards closing gently in B major. The passage starting with Ex. 4 should not be thought a new section or "third subject." It is simply the release of tension caused by the victory of B, and provides a welcome change of movement. The purposes served by this passage and by its return later in the design are entirely dissimilar. Outward resemblances such as the change from tonic to dominant must not deafen the listener to the fact that this kind of behaviour is not characteristic of sonata style. The slow emergence of one key from a host of others is a new phenomenon in the field of symphony. It is commonly supposed that Bruckner's restatements are conventional and redundant gestures. That view ignores the truth that recapitulation is a prime element in any large-scale musical form, whether its motion is sonata-like or not. The rest of this movement will be heard to reinstate E major by a method

similar to but longer than that which has just evolved B major. Tovey's assertion that Bruckner was helplessly fettered to useless sonata formulae breaks down when it is understood that elements a lesser master might have made into a clumsy development, restatement, and *Coda*, are here welded into a single organic structure, the natural result of the crisis created by the opening section.

Two horns augment the closing notes of the last group (163) and a clarinet plays peacefully an inversion of Ex. 1 (a) in B major. An oboe freely imitates it while trombones provide gentle support. After a flute echo of figures from the Ex. 4 paragraph, the mode becomes minor with another entry of the clarinet-oboe-trombones combination. This time the flute hints at the dominant of A flat, but a solemn inversion of Ex. 2 follows in D minor on cellos. This breaks off and is heard again high in the violins in E minor, at present not recognizable as the tonic minor. It ceases at the same point as before and is resumed by the cellos in F sharp minor, whence it grows into a grandly sustained *cantabile* with a trend towards E minor. F sharp is soon shown to have been a super-tonic key. Very definite emphasis is laid on E minor by the abrupt and quiet interruption of Ex. 4 in that key, on a solo flute with its mirror image in the basses (219). Violins join with a new counterpoint. E minor is then contradicted quickly by A minor, D major, D minor, C major, B flat major and A flat major. A drop to *ppp* finds the music waiting expectantly on the dominant of C. One beat's silence is broken by a tremendous outburst in C minor, Ex. 1 (a) being treated by free imitation all over the orchestra. For 16 bars this irruption lasts. When it subsides C minor is in firm control.

Here is a crucial point that shows plainly the difference between sonata principles and those obeyed by Bruckner, who is now approaching the moment usually construed as a sonata restatement. The invasion by C minor has a lasting effect. It postpones indefinitely the return of home rule. Were Bruckner writing a sonata movement he would now need a very long and thorough preparation for the recapitulation, which would come dramatically and with all the force of a long delayed and well planned uprising. In Bruckner's countries events do not turn on quick revolutions. His Underground Movements work subtly and surely, gaining control with gradual persuasion.

The storm calms but there is no change of key. The first theme is given in C minor with euphonious echoes in the woodwind and a gracious counterpoint in the first violins, and it then modulates to the dominant of D (257). In D minor the same thought recurs, now turning in the direction of A flat. Here there is a *crescendo*, but the expected A flat major is magically supplanted by the full E major, when the whole of Ex. 1 is stated for the first time since the outset (281). E major is now appreciable as the tonic because of Bruckner's strategic handling of E minor before the big C minor passage. But its position is not yet firm. The intervention of C minor has given Bruckner the reason for a startlingly beautiful change of key and has greatly increased the prospects of the movement as a whole.

Above the main theme floats its own inversion, and its second half is enriched by swelling trumpets, a sound of such splendid majesty as

Bruckner rarely surpassed elsewhere. As before there is a shift towards the dominant. This time it causes the biggest crisis of the movement. The integrity of the design is now at stake, since the B minor-major tendency has to be curbed.

The end of the theme drifts into dark mysterious modulations in which flute, basses and clarinet are heard through high *tremolandi*. The tonal balance is thus tilted entirely in the opposite direction, so that Ex. 2 must needs sound in an E minor that feels like the dominant minor of A minor. Its first 16 bars, newly scored, make the same passing modulation as before. From bar 335 (E major 6/3) two successive waves rise strongly to the very threshold of B major (362). This challenge of B major is so insistent that were Bruckner to state the group of Ex. 4 in E minor at this point it would certainly seem to be in the subdominant minor of B. That group originally acted as the climax of a process. There is no question of that as it now cuts in quietly and purposefully in G major. Through C major, E flat and G flat, it passes to A major (375), and A is the key of its remainder. Before the paragraph can finish, there is a sudden *pianissimo* drop on to a low E, clearly the dominant of A (391). The composer is now in the position to exploit the natural tonic-dominant bent of his main theme. Most symphonists, had they reached this stage, might have been content to give the theme literally, allowing it to turn automatically from A to E. Not so Bruckner, who makes the hitherto rarely heard figure (b) from Ex. 1 sweep in a grand arch over a dominant (E) pedal that eventually turns into a tonic. Ex. 1 (a) is so reserved for the final climax, which rears itself nobly in E major, fully established for the first time since the beginning.

In spite of superficial visual resemblances, it should now be plain that this method of construction has little in common with sonata style. This plan is divisible into two main parts only, the first fostering a slow evolution of B minor and major out of a start that is not so much in E major as delicately poised on that key, and the second seeing the subtle resurgence of the true tonic, not without opposition from the pretender. When themes or thematic groups are restated their functions are changed in ways that would not be possible in sonata schemes. Ex. 1 becomes absorbed almost imperceptibly into a long process beginning at bar 189. Ex. 2, which at first was the means of setting up B major, later causes the final attempt of that key to regain its sway. Its original victorious outburst, Ex. 4, eventually defeats it by a sudden entry in G major and a modulation to A. Sir Donald Tovey wrote, "It is Bruckner's misfortune that his work is put forward by himself so as to present to us the angle of its relation to sonata form." The misfortune is not Bruckner's. It attends those who are fooled by chance semblances.

### Second Movement: *Adagio*

Bruckner's slow movements always commence with two contrasting groups of material in contrasting keys. Thereafter each design is differently and unpredictably shaped. This one is in C sharp minor, a key which the first movement, with all its range of tonality, avoids. The opening is a mighty paragraph containing, among others, the following three important elements.

Ex. 5 *Sehr feierlich und langsam*

Vlas & Tubas  
*p* *cresc. sempre* *dim.*

## Ex. 6 (bar 4)

*mf* *cresc. sempre* *Sehr markiert* etc.

Ex. 7 (bar 13)  
VI. 1

*p* *cresc.* *p*

Though the start is in C sharp minor the tonality during this passage moves slowly towards F sharp minor, a big climax being poised upon the frontier of that region. The *tutti* breaks off and a *diminuendo* leads solemnly to the second half of the expository opening section, settled happily in F sharp major with a change of time and pace and a new theme of remarkable beauty.

## Ex. 8 (bar 37)

*dim.* etc.

This soaring, heavenly episode secures the state of F sharp major. As it closes the light fades, giving way to the funereal strains of Ex. 5, again in C sharp minor. The ninth bar of the theme (85) becomes deflected into F sharp, and as if thoughts of past joys evoke deep longing, slow rising developments of Ex. 5 (a) and its inversion move towards a crisis, heralded by urgent trumpet calls and reached at bar 101 with a striking turn to C major. This has a bearing on later events. With a softening of tone Ex. 6 follows in the new key, scored with moving effect for flute and strings. More rising sequences involve a *crescendo* to the dominant of G. The expected G major is foiled by a statement of the whole of Ex. 6 (114) beginning in E flat and leading naturally to A flat. There follows a massive and typical Brucknerian *crescendo* based on successive steps in which Ex. 6 (a) appears in different keys and on different choirs of instruments. By way of A flat major, E major, F

major, and F sharp major the long-delayed G major is attained in what is so far the weightiest climax of the movement (127). G major, which seems to be the final stage in the sequence of keys initiated by E major at bar 121, now dies away, revealing itself as the dominant of C. The suggestion of C, however, is but momentary, and the surprising entry of Ex. 8 in A flat major shows that G major is not the end of the tonal chain. This theme has here a darker colouring and is half concealed beneath a lovely new counterpoint (133). It is soon clear that A flat major is simply G sharp major, the home dominant, from which impressive cloudy modulations and hesitations drift into C sharp minor.

This return of Ex. 8 in A flat, besides being a satisfying and necessary recapitulation, is therefore also a gigantic dominant preparation for the resumption of the tonic. Bruckner rarely repeats ideas for the purpose of mere symmetry, but makes them perform organic functions in living forms. His practice in the first movement is here carried further. He might well have given another statement of Ex. 6 (a) in A flat at bar 128 or thereabouts, moved immediately to C sharp minor and written a complete (or slightly curtailed) restatement of the expository section (Exs. 5 to 8 inclusive), its keys redistributed, leading to a Coda. The ungainliness of such a scheme is obvious and is the sort of composition for which Bruckner is usually blamed by cursory critics. But, as will presently be shown, a further repetition of Ex. 6 (a) in A flat would, apart from its redundancy, ruin the still larger plan in Bruckner's mind.

C sharp minor brings back the great main theme surrounded by flowing string figures. The complete Ex. 6 follows and is the outset of one of Bruckner's most magnificent *crescendi*. Very slowly Ex. 6 (a) grows into an awesome climax. Again a sequence of keys is employed, one even more striking than before. From bar 164 onward it runs as follows: F minor to A flat, F sharp minor to B flat; G sharp minor to A major, D flat to E flat, and B major to the dominant of C sharp. Here the tension is immense. The G sharps in the bass change to A flats, and with a thrilling shock, the stupendous climax suddenly streams out in a shining C major.

It will be remembered that the previous high point in G major (127) showed signs of leading to C, but was prevented from so doing by Ex. 8 in A flat. The present higher peak stands in brilliantly clear relation to the other, as also to the still earlier emphasis on C major (191). But the final revelation is to come. As the G major *tutti* was followed by a soft A flat major, so this in C major shows itself in a similar light, and its quiet reaction is in D flat major (C sharp). The sublime lingering end of the movement is threefold. First, major turns to minor with a noble utterance of the tubas and horns, based on Ex. 6 (a), cavernous and grand. Then follows Ex. 7, not heard since its first statement, now no longer aspiring but ethereal and remote, floating high above a wonderful intermittent bass C sharp (*pizzicato*). Last, Ex. 5 (a) emerges for the first time in the tonic major.

### Third Movement: *Scherzo* and *Trio*

The *Scherzo* is in A minor. This key, touched but once in the first movement and not at all in the *Adagio*, comes with powerful effect.

Significantly, the two other important keys in the third movement have previously had little prominence. C minor, in which the first stage of the *Scherzo* ends, has not been heard since its huge outburst in the *Allegro moderato*, and F major, the key of the *Trio*, has hitherto been noticed only as an unobtrusive member of a few short key sequences. The freshness of the *Trio* is, moreover, made doubly sure by the strict exclusion of F major from the *Scherzo*, of which the succinct start states its complete thematic matter.

## Ex. 9

*Sehr schnell*

(a)

*pp*

(b)

*p*

(e)

(d)

*mf*

*dim.*

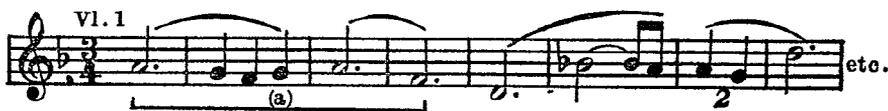

(e)

At bar 29 there is a quick shift to D flat, the first of a series of kaleidoscopic changes lasting for 24 bars. Then the dominant of C minor is reached (53) and after some preparation C minor itself drives home a very massive climax. The absence of distinct first and second groups does not prevent this section from being an extremely terse sonata exposition. The development shows more swift modulations, beginning softly in A flat with (a) and followed by (d). A repetition of this in G flat leads to inversions of (b) in A major, C sharp major, and E minor, the two latter keys being enmeshed in a *stretto* by contrary motion. The strings are meanwhile busy with derivatives of (a). Next come treatments of (d) and its companion (e). Both these ideas become quite

changed in character, passing through many modulations, inversions, and contrapuntal combinations before entering D flat, whence the trumpeting figure (b), in *stretto* with its own inversion, careers to the home dominant. The first horn and subsequently a trumpet display a free diminution of (b) (bar 165). The recapitulation, coming after a hush (185), is regular. Its first move is to B flat instead of D flat, and the final climax thus fixes A minor. Bruckner will concede a regular re-statement only in a short piece. This *Scherzo*, with all its breadth, variety and unity, fills no more than four minutes. The relentless use of 4-bar rhythms is responsible for the hammering power of most of Bruckner's *Scherzi*, which are at least as strong as any since Beethoven.

The slower *Trio* is not, as is so often stated, lyrical. The true lyric has strophic regularity. It confines itself; it is a miniature. The term has been much misused by musicians, who normally apply it to anything with graceful melodic outlines. This *Trio* is binary in form since its first part is incomplete, starting in F after some introductory drum taps and ending with a delightful surprise in D major. The second part is begun by an inversion of Ex. 10 (a). Bruckner is very economical, rarely

Ex. 10

leaving this phrase, and treating it with delicate resource. The return to F major finds the original melody soaring to a climax before finishing gently with flowing flute figures. The *Scherzo* is repeated in full.

Fourth Movement: *Bewegt, doch nicht schnell*

This blends solemnity and humour in festive grandeur. It is unique in form and difficult to describe in spite of the directness of its address. The same subtlety of tonal organization is evident here. As in the first movement, the main theme foreshadows by its modulation the key-system to follow:

This moves almost at once, as shown, from E to the key a major third higher, A flat. The next bar (10) cancels this by asserting E minor, whereupon the theme begins again in the dominant, B major. It now modulates with another *crescendo* to B flat (19), whence it starts once

more. Then come two more steps to major mediants, B flat to D major and D to F sharp major, leading to a bold progression which, rising, hits the dominant of G flat (F sharp). Before the music can settle there it subsides on to the dominant of F (33). Instead of F major (or minor), however, there is a richly modulating chorale, commencing in A flat major and thus consolidating the first change from E to A flat.

Ex. 12 (bar 35)

Ex. 13 (bar 51)

Though this chorale seems to modulate casually, it is centred on A flat, which is soon confirmed by Ex. 13 in a return through the dominant of F. (It is, of course, possible, though not easy, to fix a key without recourse to its own dominant.) The resumption of Ex. 12 occasions a small rise in temperature which falls to the dominant of A. At this the first *tutti* of the *Finale* bursts out in A minor with the following Herculean derivative of Ex. 11 (a).

Ex. 14 (bar 93)

A recurrence of this a semitone higher initiates a fully scored paragraph that strides through F minor, B flat minor, A minor, and the dominant of D minor, culminating in two powerful brass fanfares on the successive dominants of G and A flat. It appears as if this cardinal stage will end with a climax in A flat. Ex. 11 (b) does enter in that key, but its very nature forces it to rise to its major mediant, C major. After a short-lived effort by A flat to retake control (117-127), the music dies away mysteriously in a C major which is not entirely free from its earlier associations as the dominant of F (refer back to bar 33). Ex. 11 (b) is changed into a new figure.

Ex. 15 (bar 133)

At present the three most important keys asserted have been (i) the tonic, E major, (ii) A flat major, and (iii) C major. They are clearly

related as a series of major mediants. Bruckner immediately illuminates this relationship by giving a soft free augmentation of Ex. 15 in A flat and repeating it at once in E major (147-162). The threads are being drawn more closely. Of the three keys A flat has been most emphatic, E major least. The tonic and its environs are now entered. At bar 163, in the subdominant minor, there is a humorously simple inversion of Ex. 11 ending in A major and overlapping with an equally playful inverted diminution of the chorale, whose second phrase is placed on the home dominant. Then Ex. 11 appears in E major in *stretto* by contrary motion, threaded by a quaver counterpoint. A straining towards A flat is checked by a *crescendo* and a second tremendous *tutti* on Ex. 14 makes a forcible entrance in the dominant minor. The counterstatement of its first phrase lands on the border of A flat, for which the influence of the tonic now proves too strong. Its E flat becomes D sharp and the rest of the *fortissimo* stalks gigantically around home territories, crashing into a terrific unison on the dominant of E (the notation here is in flats, but does not deceive the ear). There is a silent pause.

The echoes of the Titanic sound have hardly died when the chorale begins quietly in C major. The melody is so shaped that this time its second phrase modulates smoothly to F major. Strictly, the third phrase would follow on the dominant of G, but it continues in F, thus emphasizing the original habit of C major to behave as the dominant of F. This tiny point made, the theme becomes its old modulating self again and Ex. 13 falls into the homely subdominant region of A major (over a pedal E). Slight tension is created by the intervention of the dominants of F and A flat, but they are repudiated by Ex. 11 (b) in A major. This is the start of what would be a mighty *Coda* if this amazing movement were divisible into sections. The theme, on the edge of F sharp, is crowned by the brass. It emerges, travelling in the direction of A flat and is swept up by another great *tutti*, driving towards the submediant. At bar 267 there is a phrase in E major, reminiscent of the Fourth Symphony. After a blazing contrapuntal combination in C sharp major there is a quick drop to *pp* and Ex. 11 jumps out in the tonic, now unmistakable. As at first it rushes to A flat, the brass crowning it again; it re-starts for the first and only time in A flat major, modulating this time to G (this corresponds to the move from B major to B flat in bars 11 to 19). The orchestra is wonderfully vivid as the theme flashes in many brilliant shapes towards the home dominant. The astonishing mass of tone ceases abruptly as that region is gained, and then the main theme, merging with Ex. 1 (a), resounds in the vast spaces of E major as, with glorious fanfares, it rings the final majestic climax.

This analysis may perhaps indicate the futility of expecting the music of Bruckner to react to the same tests as that of Brahms and most other nineteenth century symphonists. That error was made by a most intelligent critic, the late H. C. Colles in a discussion of the subject in the Oxford History of Music. There the opening movement of this work was dissected and found to be the lamentable result of Bruckner's ignorance of Brahms' principles of composition. Although Bruckner and Brahms did not understand each other in Vienna, it may well be that in the Elysian regions where, doubtless, all are friends, they are both laughing at the absurd rivalry that once separated them.

## BRUCKNER-MAHLER-WOLF ON AUSTRIAN POSTAGE STAMPS

By J. POSELL

Philatelists, especially topicalists, have long been aware of the existence of postage stamps honoring Austria's composers Anton Bruckner and Hugo Wolf. Now at long last, Austria has also finally issued a stamp commemorating the 100th anniversary of the birth of Gustav Mahler. While the history of the postage stamp as we know it today goes back to 1840 when the famous "penny black" was issued in Great Britain, the first issue of postage stamps devoted to musicians appeared in 1922 when Austria issued a beautiful set of seven engraved stamps picturing composers. These were Haydn, Mozart, Beethoven, Schubert, Johann Strauss, Hugo Wolf and Bruckner. To Austria, then, must go the credit for considering music of equal importance to royalty, battle scenes, railroads, heads of state, allegorical figures, etc., which were practically the only subjects used before that time on the stamps of most countries.

Since that date, almost all countries have issued stamps honoring their composers, conductors, instrumentalists, national anthems, music festivals, operas, national conservatories, etc. The list of world known musical figures existing today on postage stamps is very imposing and includes practically every well known composer (and some not so well known) of almost every country.

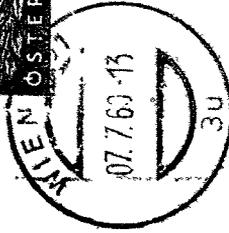

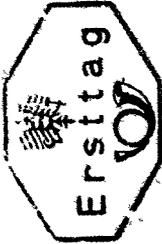

The collector of "music on stamps" has long awaited a Mahler stamp, as he was one of the few major composers who has long been philatelically neglected (another is Johannes Brahms) and it is gratifying finally to see a beautiful Mahler likeness on another Austrian stamp marking an appropriate anniversary.

The following illustrations include the original Bruckner and Wolf stamps of 1922 plus a special Bruckner stamp, issued in 1949, marking the 125th anniversary of his birth, and a special issue of 1953 for Hugo Wolf, marking the 50th anniversary of his death. Stamps and covers illustrated are from the collection of the author.

# THE EXPRESSIVE CONTENT OF MAHLER'S NINTH

## AN INTERPRETATION

by JACK DIETHER

The *Ninth Symphony* of Mahler is one of the most heartrending utterances in all music. And the more knowingly one sets it in relation to the composer's life and his other music, the more eloquent it becomes. For then what seems implicit in the music from early acquaintance becomes explicit—as explicit and articulate as instrumental sounds can well be, and at the same time, more emotionally compelling than mere words could ever be.

Explaining his recourse to vocal passages in his early symphonies (*II, III and IV*), Mahler said that he often arrived at a point in a symphonic work where he must use the word as bearer of the idea, just as Beethoven had done once in his career. After the *Fourth Symphony*, however, Mahler no longer alternated vocal and wholly instrumental movements within the same work, though his earliest outline for his *Eighth Symphony* envisioned one more instance of it.<sup>1</sup> Thus, aside from the choral *Eighth* and *Das Lied von der Erde* (subtitled *A Symphony for Tenor, Alto and Orchestra*), we have, after *IV*, five symphonies conceived instrumentally throughout (*V, VI, VII, IX*, and the fully sketched *X*).

Nevertheless, if we examine Mahler's works integrally we begin to see that it was not really the principle of "the word as bearer of the idea" which he abandoned in these later symphonies, but rather the direct and literal method of applying it. Sometimes, in the early period, Mahler would take a previously composed song and simply place it *within* a symphony, as, in the *Fourth*, he did the song *Das himmlische Leben* which he had composed and published some eight years earlier. This method he abandoned thereafter. Sometimes, however, he would simply quote a song in the orchestra, either at length (*Des Antonius von Padua Fischpredigt* in *II*, and *Abloesung im Sommer* in *III*), or in brief. It is the latter method—the brief or elliptical quotation—which he retained to the end as best suiting the free-fantasy potential of symphonic composition. The "message" is implied rather than stated, and so the more direct *emotional* meaning which music can impart is totally freed from the original verbal inspiration, while at the same time the latter is explicitly acknowledged. The subtlety and pervasiveness of this process in Mahler go far beyond the deliberate instrumental use of vocal material by Schubert and other composers.

---

<sup>1</sup> In place of the instrumental *Adagio* movement planned for the *Eighth*, we have simply the instrumental prelude to Part II, after which the *Adagio* section continues with solo male voices and chorus. See *Mahler's Eighth: the Hymn to Eros* by Gabriel Engel, Introduction, pp. 12-16, CHORD AND DISCORD, 1950.

Sometimes, indeed, the "quotations" may be so subtle that one can not be sure whether they are conscious or not. But familiarity usually imparts to them a greater significance than mere characteristic turns of phrase, or musical handwriting. Mahler's "stream of consciousness" appears too total and enveloping, too pregnant with connotation, to be merely fortuitous. The following cadence figure from the opening song of the *Kindertotenlieder* cycle, for example—

Ex. 1

might seem just such a Mahleresque turn of phrase. But it turns up again in exactly that form only once: in the first movement of the *Fifth Symphony* (ten bars before cue 15). Therefore its use in precisely that place cannot well be considered accidental. And as the movement is actually a dirge, the explicit emotional connection is apparent. Adding to its potency is the fact that it occurs only in the recapitulation, not at the same place in the exposition—as if it were a spontaneously improvised extension of the previous cadence. Sometimes a figure quoted from a song is not a vocal phrase itself, but part of the accompaniment. Still the verbal association retains its potency. An example of this is a cadence for the oboe which occurs at the midpoint of *Urlicht*:

Ex. 2

Its appearance in the cellos, in the first movement of the *Third Symphony* (nine bars before cue 62) is inexpressibly moving and meaningful. And again it is used to give a special meaning to the reprise of the movement, as differentiated from the exposition.<sup>2</sup> Such a classical device goes back, of course, to the oboe cadenza in the reprise of the first movement of Beethoven's *Fifth Symphony* and earlier. I think it was, essentially, Mahler's innovation to combine this device with that of the connotative self-quotation.

Thus Mahler, instead of continuing to introduce the actual voice into the symphony as "bearer of the idea," tends increasingly to rely solely on thematic allusion to the idea.<sup>3</sup> His vehement objection to "program symphonies" was due, I believe, to the inherent crudity of such elaborate methods of literary conceptualization in music, to say nothing of even cruder extra-musical depiction. Instinctively Mahler recognized that the true life of musical creation is largely subconscious. The inner creative mind is "sparked" by ideas from without, but works in ways

<sup>2</sup> Since *Urlicht* itself became part of the *Second Symphony*, this is one of several thematic connections between the *Second* and the *Third*.

<sup>3</sup> For other pointed examples of thematic self-quotation, see Warren Storey Smith's *Mahler Quotes Mahler*, CHORD AND DISCORD, 1954.

only dimly perceived by the rational mind of its own creator. In Mahler's case, the sparks—verbal images, signals, *etc.*—are significant clues to what stirs us within, and help us to understand both the music and the man. By searching out such clues and tracing them in their protean guises, I hope to provide a little more insight into his last completed work.

Throughout the instrumental works of Mahler's "middle" period (V, VI and VII) we hear increasingly subtle but pregnant interconnections between symphony and song, symphony and symphony. Whether they are actually conscious or not does not, as I hope I have indicated, really matter very much. And when we come to the final period (1907-1911), those years which Mahler spent in the actual shadow of death, we find a richer allusiveness than ever, spanning by reference the whole of Mahler's creative life. Was it deliberate or not that the motor rhythm of *Das irdische Leben*, composed before 1892, turns up in the 1910 sketch for the *Purgatorio* movement of the *Tenth Symphony*? Mahler has not told us, but it could make little difference to those experiencing the eerie thrill of recognition which the allusion provides. We recognize the rhythm of the "Mill of Life" which accompanies the ballad of child starvation, and we feel, perhaps without verbalizing it, as Gloucester in *King Lear* did when he uttered his great lines:

As flies to wanton boys, are we to the gods;  
They kill us for their sport.

We feel the macrocosm within the microcosm—"infinity in a grain of sand." Perhaps, in the cosmic view of our planet, all mankind is allegorically a child starving in the midst of plenty. Even when there is little that can be identified as being in positive quotation marks, that weird feeling of *quasi*-conceptual relatedness persists and becomes ever more profound. And so the more we know of Mahler's music, and of Mahler himself, the more overwhelmingly "articulate" the instrumental *Ninth* and *Tenth* symphonies become.

In the *Tenth* we have in addition those anguished outcries which Mahler wrote on the manuscript during the fateful summer of 1910. They are, to be sure, *post facto*, but we still have to take into consideration Mahler's uncanny instinct of self-prophecy. No doubt the conscious understandings implanted in his mind that summer in his analytic session with Sigmund Freud were already instinctively anticipated. In connection with the *Ninth* the verbalizations are scarcer and more formal, but they are also less demonstrably *post facto*. We have, for example, the dedication of the *Rondo-Burleske* (third movement) in the manuscript "to my brothers in Apollo." A little closer to the outcries of the *Tenth*, but much clearer, is the exclamation in the first sketch, over a return of the main theme in the first movement (four bars before cue 8): "O vanished days of youth! O scattered love!" Bruno Walter declares that the title of the last canto of *Das Lied von der Erde*—*Der Abschied* ("parting" or "farewell")—"might have been used as a heading for the *Ninth*," though he finds the two works to be "without musical connection."<sup>4</sup> Certainly they are without connection of the kind that exists be-

<sup>4</sup> *Gustav Mahler*, trans. James Galston, Greystone Press, New York, 1941, p. 124.

tween *Antonius* and the *Scherzo* of the *Second*; but not without connection of the subtle, allusive kind to which I am referring. And is not the latter kind of connection the more moving and eloquent?

I must emphasize, however, that for the very reason that music is such an exact purveyor of the language of the emotions, our verbalizations of its expressive (not literary) content must of necessity be less so. Also, I hope no one is more aware than I that it is possible in such verbalizations to misconstrue the inner meaning altogether, or fail to convey one's own insights adequately to the reader. I shall utilize every associative clue to the best of my ability, with the proviso that inherently this is my own subjective interpretation, not necessarily better than other different ones. Obviously it is not the kind of thing that can be proven in a court of law. It is simply an intuitive extrapolation based on 25 years' study of Mahler's music and letters, including a searching examination of that which interests me most: his changing *and* his unchanging methods of working in symphony and song, and the symbolic language inherent in both. I certainly intend to continue probing deeper into the *Ninth*, and since the work is virtually inexhaustible, no doubt I shall come to consider some of what I say here to be naive, tentative or clumsy. I can only hope that I have nowhere missed the logical thread altogether. I agree completely with what Mahler said about "literary" programs. Since the true symbolic meaning of music is disguised, it *cannot* be wholly known to the conscious mind even of its creator. On the other hand, I entirely disagree with Stravinsky's well-known dictum that music is inherently incapable of expressing anything. On the contrary: I believe that music is inherently incapable of *not* expressing anything. In the long run, we shall know it better by knowing ourselves.

#### FIRST MOVEMENT (ANDANTE COMODO IN D MAJOR)

If the gesture of "farewell" in *Das Lied von der Erde* may be epitomized in a few notes, it is surely to be found in the setting of the key word from the final lines—"ewig, ewig" ("ever, ever"):

#### Ex. 3

The musical notation consists of two staves in G major (one sharp). The first staff is in 4/4 time and contains the notes: G4 (quarter), A4 (quarter), B4 (quarter), C5 (quarter), D5 (quarter), E5 (quarter), F#5 (quarter), G5 (quarter). The lyrics below are: all ü - - - ber - all. The second staff continues with: G5 (quarter), F#5 (quarter), E5 (quarter), D5 (quarter), C5 (quarter), B4 (quarter), A4 (quarter), G4 (quarter). The lyrics below are: und e - - - wig, e - wig. There is a dynamic marking 'sf' above the first note of the second staff and an 'x' above the last note of the second staff.

Indeed this is a common enough musical conceit. Immediately one may notice, for instance, the strong resemblance of this idea to the use of the "Lebewohl" figure in Beethoven's *Piano Sonata*, Op. 81a. But the latter part, the "ewig" figure, is immediately elaborated into a variant of what I regard as one of Mahler's chief motto-figures, variously employed in nearly all his symphonies from the *Second* on,—

Ex. 4

blau - en licht die Fer - nen

then repeated very simply in the lower octave, under a further variant delicately scored for violins, harp, mandolin, and celesta:

Ex. 5

e - - - wig, e - wig

Again a cadence figure; but the most memorable cadence of all, as repeatedly begun by the singer and completed hereafter by the orchestra, the celebrated tonic chord with added sixth which so haunted Alban Berg persisting for no fewer than 74 final bars—the perfect musical depiction of eternity:

Ex. 6

Fl. Ob. Hn. z etc.

e - - wig, e - - wig

Trbs.

But the really striking thing about this figure is that, in addition to being a cadence figure, it is repeatedly used to *begin* the vocal phrases of *Der Abschied*, including the recitatives (though in a different part of the scale and in the minor mode, in the latter cases). This endows the vocal music with that feeling of finality, even in its highest passion, which first attracted Mahler to the Oriental poetry itself at that time. The end is foreshadowed by the beginning, as in this final stanza itself, which begins:

Ex. 7

Die lie - be Er de all ü - ber - all

It is Mahler's farewell to "the beloved earth." And when we see that the association of this figure with eternity is already foreshadowed in the opening *Trinklied* ("The sky is forever blue, and the earth will long stand firm")—

Ex. 8

Das Fir - ma - ment blaut e - wig, und die  
Er - de wird lan - ge fest steh'n

we begin to realize that this complex permeates the entire work in even subtler ways. Grant that, and it soon becomes evident that the same complex underlies the *Ninth Symphony* too. The *Ninth* begins, in fact, by sketching in almost impressionistically, over a new funereal tread, the same harmony with which *Das Lied* ended.

Ex. 9

Cellos  
Harp  
p Horn >

Nothing could be sparser than that. It goes beyond Berg, and suggests already the ultimate textural economy of a Webern. But without touching as yet the tonic D, it already outlines the third, fifth and sixth tones which are so prominent in *Example 6* above. Indeed, the two figures marked *z* differ melodically only in that the last two notes are in the former case sounded simultaneously, in the latter consecutively.

The next figure, at the fourth bar, does introduce the D tone, but continues to stress the fifth and sixth by means of an "echo," which alternates with a little shuddering figure in the violas:

Ex. 10

(muted) Horn  
(open) Violas  
f pp  
6 6

As the tonic D is finally established in the bass at the seventh bar, the violins begin to intone a melody that seems to grow out of a still-sounding echo of the contralto's "ewig":

Ex. 11

And again, as in the final verse of *Das Lied*, this melody which begins with a falling tone from the mediant reaches a falling cadence in the second of its two clauses:

Ex. 12

Once more this falling cadence complex, either completed—

Ex. 13

or uncompleted—

Ex. 14

is used repeatedly in the symphony to begin themes as well as end them. And this is one of the principal, specific reasons why, as Bruno Walter says, "*Der Abschied* might have been used as a heading for the *Ninth*."<sup>5</sup> At the very end of the long first movement, all that has been painfully constructed will disintegrate again, until nothing remains but that single falling second with which *Ex. 11* begins, slowly fading away in the oboe.

Pitted against this falling-cadence complex in D major, with its feeling of gentle nostalgia and resignation, is music of restless, passionate longing in D minor:

<sup>5</sup> *Op. cit.*, p. 124. Paralleling this falling tone is the falling tonality that encompasses the whole work, which will be discussed.

## Ex. 15

Mahler juxtaposes the two moods directly in one of his tonic major-minor confrontations. No sooner has the cadence figure shown in *Ex. 12* been sounded than the violas repeat the "ewig" figure twice more without its resolution, as though reluctant to let it go after all. As the key-signature suddenly changes, the second horn echoes it in the minor with further variation, and the heavy brass sounds the D-minor triad as a dark foundation to the rising chromatic theme that begins in *Ex. 15*:

## Ex. 16

Musical notation for Ex. 16, showing parts for Violas, Horn, Vins. II, and Brass. The notation includes dynamics *p*, *mf*, and *f*. The Violas part is in G major, the Horn part is in G minor, and the Brass part is in D minor. The Vins. II part is in G major.

This is essentially another variant of Mahler's ubiquitous falling tonic-triad (*Sixth Symphony, etc.*)—

## Ex. 17

which was said by his friends to mirror so uncannily the sudden clouding over of his features after he had made a cheerful remark. Here the minor triad corresponds in essence to its function in the *Sixth*, while the whole D-major paragraph tells us explicitly to what it is counterpoised here—not life, but the calm acceptance of its ending.

But in this second vein, the mood of passionate protest, death is terrible and to be feared, not sadly embraced. It is the interrupter, the grim destroyer of unfulfilled ambitions, the crouching ape of *Das Trinklied* whose "howls pierce the sweet scent of life." And so the music begun with *Ex. 15* culminates in an even more gripping and powerful motif than the major-minor chord—a gesture of ultimate despair which grows directly out of the "farewell" figure and the major-minor alternation, and rhythmically from the opening funeral tread:

Ex. 18

By placing the semitone *between* those third and second degrees of the scale, chromaticizing the "ewig, ewig" complex and implanting a desperate new rhythmic impetus to it, Mahler transforms in the most direct and graphic manner his evocation of a gentle resignation into a fierce cry of anguish. Again the inner processes are illuminated by the motivic analogies to *Das Lied von der Erde*. Ex. 18 is preceded by a shrill lament in the violins which anticipates the chromatic figure in its first bar:

Ex. 19

In the counter-statement of this material, which eventually concludes the exposition section at the 107th bar, this figure evolves into:

Ex. 20

Compare this latter with the outline of the passage "Du aber, Mensch" ("But thou, Man, how long livest thou") from *Das Trinklied vom Jammer der Erde*:

Ex. 21

There, too, an anticipation of the chromatic descending figure in another part of the scale may be heard in the wild desperation with which the ape's howling is described ("... hinausgellt in den suessen Duft des Lebens"),<sup>6</sup> while Ex. 3 from *Der Abschied* contains a poignant instance

<sup>6</sup> This canto is in a compact sonata form, and the evocation of the spectral ape launches a varied reprise with terrible intensity.

of the semitone rising to the mediant which ends *Ex. 18*. The chromatic motif of the *Ninth* recurs throughout the developments of the second-subject matter, thundering in the loud passages and muttering ominously in the soft ones, as in the following metamorphosis:

*Ex. 22*

Muted Trombones *sf* *morendo*

It would be quite unfeasible to trace in detail the full development of all the materials so far quoted, and impossible to verbalize all the conceptual implications of such development. The musical experience itself must take over where the power of verbal characterization begins to fail. I have tried to supply a few expository guidelines on which the listener may conduct his own personal explorations. Suffice it to say that Mahler's symphonic texture is as fully integrated and unified in this movement as in any of his mature works. But its underlying structure is unique in Mahler's music, and I would like to give at least an elementary indication of its nature.

What we have here is a singular amalgam of the sonata and rondo forms that is utterly *sui generis*. The movement contains a regular exposition, recapitulation and coda, but also an unusually long, multiple development section which alternates extended episodes in subsidiary tonalities with rondo-like returns to the main tonality and partial subject-matter—analogs, if you like, to the classical *fausses reprises* of Haydn, Beethoven, etc. Now as a matter of fact the exposition already contains a preliminary suggestion of rondo style. Like many by Mahler, it is a double exposition, wherein the two main sections are both repeated with alterations, in lieu of the classical repeat sign. But the fullest close *within* the exposition is that which separates the re-statement of the first subject from that of the second subject. In the initial statement, the D-minor music flows back into the D-major at a climactic point (right after *Ex. 18*), so smoothly that there is a strong suggestion of the ternary form A-BA that begins most rondos. Or rather it is like a single statement of a *maggiore* theme with a *minore* in the middle, all in the relatively brief, evenly distributed bar-ratio of 26-20-33. The only real harmonic movement out of D here is a momentary excursion into B flat major in the restatement, where a new subsidiary is inserted between the two main D-major clauses. But after the full close, with a D-major cadence once more turning to D-minor in the next bar, the key-signature itself suddenly changes out of D-major-minor for the first time, and the second subject erupts anew and now accelerates to a ferocious *Allegro*, bringing the exposition to its close with a desperate, warlike peroration in B flat major.<sup>7</sup> Thus the exposition fulfills both sonata

<sup>7</sup> This tonal progression of the exposition is itself not unusual in sonata writing. But it encompasses a secondary tonal relationship (relative major of the subdominant minor) in which the implied link is initially missing. For as I said, the two keys are juxtaposed directly. G minor has no place in the exposition, occurring only in the development.

and rondo implications all within the length of these 107 bars.

The development section is fully twice as long as this. After one more nostalgic return to the main key at the start, it sets forth, as I indicated, three extended and well-defined episodes in other keys: *Allegro risoluto* in G minor (beginning with the chromatic motif in the bass), *Appassionato* in B flat minor (beginning with *Ex. 15*), and *Quasi allegro* in B major (beginning with both themes in combination). In contrast to their sustained though highly charged character, the brief returns to D minor or major which separate these episodes are broken, fragmentary, and evanescent. Thus the classical sonata is at once observed and turned inside out, as it were. The development section gets away from the tonic key, not by modulating rapidly and freely without ever touching the home key, in the usual manner, but by setting up alien "islands" which crumble one by one, each succeeded by futile gropings to "attain" or "remember" the song of peace. Only the third and last episode (and the very number three in this context recalls the three blows of fate in the finale of *VI*) leads amid mounting tumult to a catastrophic climax which sunders everything and finally ushers in the real reprise. Naturally this unprecedented concept takes longer to unfold than the customary development. One need not, however, get lost in it if the form and procedure are understood.

Although there are numerous instances of beginning a recapitulation *fortissimo* where the exposition began softly, this terrible moment of delayed reprise can be compared in its fateful and uncanny power only with the first movement of Beethoven's *Ninth*. Tovey wrote of that famous passage: "Instead of a distant nebula, we see the heavens on fire." So in this work, whereas the first sound we heard was that muffled funeral tread, impressionistically remote (*Ex. 9*), here it returns at close range, hammered out "*mit hoechster Gewalt*" by the trombone choir and tympani. And before the nostalgic main melody can at last return, we are summoned into the presence of some dreadful cortège ("*Wie ein schwerer Kondukt*"), which expands the six foreboding introductory bars into a daemonic fulfillment encompassing thirty-three bars.

For the reprise itself, Mahler turns things around again. The main section is telescoped into a single statement of the lyric theme and its subsidiary; the second half of the theme itself is intensified by chromatic distortion, as if from overwhelming grief—the aftermath of all the preceding revelations. This goes without cadence at *ff* level directly into the second subject. But after only five bars at this level, also telescoped in their melodic outline, there is a sudden hush as the music changes to a sustained *Lento misterioso*. And now, in place of the expository climax with the fate-motif (for we have been through all that and more), the reprise remains in a partial state of suspension, interrupted only fitfully by attempts of the more passionate music to break through. Formally, this dominant-suspension passage actually performs the function of a cadenza leading into the coda<sup>8</sup>—a cadenza in tempo, scored

---

<sup>8</sup> Compare the cadenza on the dominant of F sharp minor, in the finale of the *Second Symphony* (cue 30).

for divers instruments in counterpoint, and interrupted more than once, as I said, but complete with classical (if much elaborated) cadential trill! It is a cadenza that flutters and quivers on the threshold of that haven of peace into which the coda is finally to settle, as the last specters scatter and vanish:

## Ex. 23

Horns, Clarinets

Violins

Contrabassoon

Harp

Bassoons

etc.

Note how again the minor third tone is raised to the major just before the resolution.

In the first part of the coda, the chromatic fate-motif itself is caught up in this resolution, united and reconciled with *Exx. 10* and *19* in a piquant and magical piece of tone-painting:

Ex. 24

The image shows two staves of musical notation. The top staff is for Horns, marked with a dynamic of *p espr.* (piano, spiritoso). The bottom staff is for Eb-Clarinet. Both staves are in a key signature of one sharp (F#) and a time signature of 3/4. The music consists of a series of chords and melodic fragments, with some notes beamed together and some marked with accents or slurs. The bottom staff includes a triplet of eighth notes near the end.

Beneath this, even the palpitating viola figure from *Ex. 10* is transformed by the cellos into something more ethereal. The esthetic effect, though quite different, is analogous to that wrought by the upward resolution of the chromatic motif of desire at the end of *Isolde's Liebestod*. As in *Tristan*, Mahler's chromatic motif of anguished protest is heard literally dozens of times before it is finally resolved in this passage. The music then moves mysteriously into E flat, to introduce an ethereal flute cadenza with softest woodwind harmonies and harp. This flute arches upward and floats down again, met on the way by a muted chord from the formerly menacing but now likewise subdued trombones. On the last page, the lyric theme slowly evaporates in D major, in a broken dialogue for solo violin and winds, in which the oboe keeps repeating its "ewig . . . ewig," as described before, till the final *morendo*. And this time the falling cadence is completed only by a very tenuous high D in the piccolo, flageoletted harp, flageoletted plucked violins and violas (on the G-string),<sup>9</sup> and flageoletted bowed cellos.

#### SECOND MOVEMENT (SCHERZO IN C MAJOR)

The device of placing a more lyric theme ahead of a more active one in the opening movement is paralleled by Mahler in the symphony as a whole, by placing two faster movements within two slower ones. Thus almost everything is formally reversed in this valedictory work, just as Mahler's whole perspective is altered by his sentence of death. Now I mentioned before that the idea of *beginning* themes with the falling cadence, the "ewig" complex, completed or uncompleted (*Exx. 13 and 14*), permeates the whole symphony. And immediately this can be perceived in the second movement, which might be called Mahler's "apotheosis of the dance." It is a kind of double *Scherzo* in which a *Laendler* (*Tempo I*) is set in opposition to a waltz (*Tempo II*)—country and city cousins, so to speak. The slower of the two, the *Laendler*, has a *Trio* of its own attached to it which is even slower (*Tempo III*). The *Trio* subject has almost the graceful quality of a minuet, and by this

<sup>9</sup> Orchestral violinists are wont to complain that the *pizzicato* simply "won't resonate," implying that in this case Mahler's quest for extreme sonorities exceeded for once his knowledge of the instrument employed. It is true that the sound cannot be heard more than a few feet away when demonstrated by a single player. But as flicked by all the violins and violas in unison, it does make a very soft "effect"; and that, as the late Dimitri Mitropoulos pointed out, is all that Mahler wanted, definitely nothing more.

name it is often called in order to distinguish it. Viewing them together, it will be quickly seen that each of the three dances in turn begins with the complex to which I refer:

Ex. 25

The musical score for Ex. 25 consists of four systems of staves, each representing a different instrument or section. The music is in 3/4 time and features a variety of dynamic markings and articulations.

- System 1:** Clars. (Clarinets) and Violas, Bsns. (Violas and Bassoons). The Clars. part starts with a *p* dynamic, followed by *f* and *sf*. The Violas, Bsns. part starts with *p* and continues with *f* and *sf*. A bracket with an 'x' spans the Clars. staff in the final two measures.
- System 2:** Horns. The Horns part starts with *sf*, then *p*, and ends with *pp*. The lower staff continues with *p* and *f* dynamics.
- System 3:** Violins II and Cellos. The Violins II part starts with *p*, then *ff*, and ends with *sf*. The Cellos part starts with *fp* and continues with *fp*.
- System 4:** This system features trills (*tr*) in the upper staff, starting with *sf*. The lower staff continues with *fp* dynamics. The system concludes with "etc."

## Ex. 26

1st time (a)

2nd time (b)

## Ex. 27

Vins., Hrs.

Could any clearer way be found of saying farewell in turn to each of these dances? As Walter truly says, "one feels that 'the dance is over.'"<sup>10</sup> Furthermore, two of these themes do more than merely echo the "ewig" complex. The minuet is actually a kind of dance-variation of the D-major theme of the first movement (*Ex. 11*)—a new,  $\frac{3}{4}$  metamorphosis of that melody already much varied in  $\frac{4}{4}$  meter, and connected by Mahler at one point with "vanished days" and "scattered love." Similarly, the second form of the waltz theme closely anticipates the opening theme of the *Adagio-finale*, as we shall see. This particular cyclic device, first used with notable effect in the last two movements of the *Fifth Symphony* (*Adagietto* and *Rondo-Finale*), is erected almost into a constructive principle in the two final symphonies. For in the *Tenth* also, as Deryck Cooke describes in his analysis in this issue, slow themes from the outer movements are similarly transformed into faster or more dancelike themes in the inner movements, so that the opening of the work is recollected, and the end foreshadowed, in these faster passages.

The key structure of this double *Scherzo* mirrors the *Laendler-waltz* antithesis. The *Laendler* and its *Trio* are set in a very orderly classical relationship to each other. The *Laendler* themes, beginning with *Ex. 25* and marked "*Etwas taepfisch und sehr derb*" ("A little clumsy and very coarse") as well as "*gemaechlich*," are in C major. The minuet is in the normal subdominant key of F major. Before the minuet can even enter, however, the waltz interposes itself, breaking in without pre-modulation in the more clashing key of E major (*Ex. 26a*), and itself modulating

<sup>10</sup> *Op. cit.*, p. 125.

freely and rapidly. Later on, a second eruption begins in D major (*Ex. 26b*), faster than before, in a new harmonic and rhythmic guise. It is this second form of the waltz theme (in the key of the first movement by no accident, I am sure) which is of greatest significance in the continuous evolution of the "ewig" complex. In the E-major passage, the descending figure began on the tonic, and the melody descended through six tones of the E-major scale (to the mediant, G $\sharp$ ) before turning upward again in the third bar (see *Ex. 26a*). In the D-major passage, the descending figure begins on the mediant tone (F $\sharp$ ), the usual starting place for the "ewig" complex, and the new melody works its way down a whole-tone scale to the next F $\sharp$  (enharmonically written as G $\flat$ ).<sup>11</sup> The long-term significance lies in the chord-progression as well as the melodic outline, and extends over three movements.

This new melodic form of the waltz is extended into a 15-bar sentence, several times repeated with variations. In *Ex. 26b* I have indicated the harmonic progression of the important first four bars; here now is the melodic outline of the whole sentence:

Ex. 28

As will be seen, it is extremely symmetrical, being in three four-bar periods and a cadential three-bar period. The first period completes the whole-tone descent; the second, answering period, introduces a chromatic turn which is also to be of the utmost importance. The third period repeats the whole-tone progression with embellishment, except that the melody lands on G instead of G $\flat$ , over a Neapolitan sixth chord. And this prepares for the perky cadence of the final period, in

<sup>11</sup> By "works its way," I mean that the harmony is of course not whole-tone harmony, but moves by Mahler's characteristic third-chains.

which the chromatic turn is repeated on the dominant with a characteristic snap at the end. This whole sentence, almost aggressively carefree and debonair, is destined to be transformed into the first five bars of the profound main *Adagio* theme of the finale!—all, that is, except the perky cadence figure, which serves to round the whole thing out and dismiss it with a shrug. The turn, it will be noticed, contains the three chromatically descending tones which formed the basis of the fate-motif of the first movement (*Ex. 18*), but they are thoroughly rationalized into the dance fabric. So after three heedless rotations of the 15-bar theme, the chromatic complex gradually begins to acquire more positive shape again. It has already been heard in a new rhythm in the previous waltz section, but disguised with such an innocuous harmonization, and so integrated as a transitional dance figure, that its derivation would almost certainly go unnoticed:

Ex. 29

A little later it was heard in a more definite shape, repeating the descending tones as in the first movement, but still quite rationalized by its harmonization:

Ex. 30

Now this same latter figure is repeated with woodwind doubling, interrupting the bouncy cadence, and thereafter it becomes steadily more aggressive.

There are also several subsidiary waltz themes. One, with explosive melodic seventh and ninth figures presaging the next movement,—

## Ex. 31

Woodw. *f*

Horns

Tbnes.

*gua*

*p*

Horns

*f*

*sf*

is later combined with the *Laendler* theme (first part of *Ex. 25*) in the waltz tempo. And as the country dance is "caught up," as it were, by its more sophisticated cousin, it too tries to modulate freely:

## Ex. 32

Horns *f*

Woodw. *ff*

Horns *sf* *ff*

Woodw. *sf* *ff*

(Figures like *Ex. 31a* are heard in all the dances.)

After the second waltz, there is a brief reprise of the minuet in F (the last appearance of that key in the *Scherzo*), full of lingering re-wards, and ending suspended with a long pause on an unresolved chord, as if reluctant to reach a cadence. When the C-major *Laendler* itself then returns, ostensibly for a full formal reprise, the tempo is indeed "wie zu Anfang," but nothing else is quite the same. Instead of serving the function of introducing the theme of the second part of *Ex. 25*, the first part wishes to modulate as it did in the waltz, and is haunted by a rocking figure related to *Ex. 31a*. And instead of stopping on a tonic chord as in *Ex. 25*, the *Laendler's* "ewig, ewig" figure has a tendency to land softly and poignantly on a submediant or flat submediant chord, interrupting the cadence. The latter harmony, already heard prominently in *Ex. 26b*, is to prove of utmost significance to the rest of the symphony. When the formerly boisterous, stamping "fiddle" tune from *Ex. 25* does return, all we hear of it is a pale reflection. It begins in a contrapuntal inversion, a solo viola ruefully taking the former counter-voice over subdued cellos with the main theme. This immediately evokes the chromatic motif in its rhythm heard in the waltz, but now more exposed, with an upbeat derived from the rhythm of *Ex. 31a*:

## Ex. 33

The musical score for Ex. 33 consists of three staves. The top staff is for Viola solo, starting at measure 23 with a chromatic motif. The middle staff is for Cellos, playing a similar motif with dynamics *f* and *p*. The bottom staff is for Oboes, playing a more melodic line. The score includes various musical notations such as accents, slurs, and dynamic markings.

As the viola is replaced by an even hollower solo violin, the chromatic motif is repeated higher, with the upbeat figure inverted—downward instead of upward sevenths.

Quite suddenly, all this is displaced by the explosive theme from the waltz (*Ex. 31*), as though evoked by the repeated sevenths. And just as the *Laendler* phrase joined this theme at the waltz tempo before, so now *31* enters at the *Laendler* tempo, and only gradually speeds up until the entire waltz is again going at full tilt. This time it does not begin with *Ex. 26* in either of its forms, but with other subsidiaries which become quite scintillating, until finally the 15-bar rotating theme (*Exx. 26b* and *28*) enters in B flat for a last couple of whirls. It is interrupted by a "grieving" ("klagend") trumpet call, marshalling the music back to C major by means of the "ewig" motif with one of its upbeats from the first movement (like a sad reminder of the day's bitter business), and the *Laendler* reappears in that key, as unexpectedly as it disappeared. But it gets no further than it did before. The opening phrase is still haunted by the rocking figure and by the interrupted cadence in various

keys, the stamping fiddle tune declines altogether to make an appearance. Suddenly the C-major turns into a stern, almost angry C minor,—

Ex. 34

Ex. 34 shows two musical staves. The upper staff is for Violas and Cellos, marked *f*. The lower staff is for Horns, marked *ff*. The music consists of rhythmic patterns and chords, with a key signature change to C minor indicated by a flat sign on the bass line.

a harbinger of the somber coda, which will vacillate between the tonic major and minor in Mahler's most spectral vein.

The major mode returns after about fourteen bars, but there is a low, ominously rising bass. And the next time the interrupted cadence occurs, instead of the soft, pensive flat-submediant chord we get a loud, rasping one with added seventh, to introduce a truly horrendous statement of the chromatic motif, like the howling ape itself this time. It is combined with a rising, distended transformation of the rocking figure, in a kind of contrapuntal grimace which ends impaled on a naked tritone:

Ex. 35

Ex. 35 shows two musical staves. The upper staff is for Flute (Fls., Ob.), marked *ff*. The lower staff is for Violin I (Vins. I), marked *ff*. The music features a chromatic motif and a rising bass line, with dynamic markings including *cresc. molto* and *pp*. A tritone is indicated at the end of the passage.

Now the mirth is "displac'd with most admir'd disorder." The tritone seems to function as a distortion of the classical six-four chord preceding a cadenza, since the "cadenza" itself (or anti-cadenza, if you like) ensues in the form of a series of short, shrill utterances in the various woodwinds (again derived from the rocking figure) over a pounding drone-bass taken from the *Laendler* (Ex. 25). Each pair of woodwind figures alternates with the next pair in the major and minor modes, thus:

Ex. 36

The musical score for Ex. 36 is presented in two systems. The first system features a Piccolo (Picc.) part in the upper staff with a melodic line marked *8va* and *Cis.* The piano accompaniment (piano) is shown in the lower staff with a heavy *ff* dynamic. The second system includes parts for Oboe (Obs.), Flute (Fls.), and Bassoon (Bsns.) in the upper staff, and piano accompaniment in the lower staff. The piano part continues with *ff* dynamics and includes a *pp* section. The score concludes with the word "etc." on the right side.

The afore-mentioned coda is another disintegrating one, but spectrally hollow rather than peaceful. Wisps of the dances gradually evaporate in the alternate modes of C, amid the intermittent wailing of the chromatic motif, which eventually settles into a repeated dominant-seventh chord with *appoggiatura*. "The dance is over" indeed, with no transfiguration as in the first movement—only a ghostly cadence with plucked strings, and a "unison" piccolo and contrabassoon five octaves apart!

### THIRD MOVEMENT (RONDO-BURLESKE IN A MINOR)

To follow such a rich and complex double-Scherzo with the contrapuntal *tour de force* of the daemonic *Rondo-Burleske* is probably the boldest stroke in the whole series of startling juxtapositions which Mahler created. Here, for only the third time, Mahler uses the word "rondo" in a movement-title, but he uses it in utterly sardonic contrast to his two earlier rondo-finales: the *Fifth Symphony's* Rondo in D major and the *Seventh's* Rondo in C major. Mahler sets in ultimate opposition to those joyfully extraverted pieces the equally busy, equally assertive,

and equally logical construction of this savagely nihilistic *Rondo-Burleske* in A minor—his tragic key, and the relative minor of the preceding movement. This too is *like* a finale, but it is a finale with an epilogue, an epilogue which grows out of the invincible humanism that dares to raise its head in the very midst of these diabolic voices the moment they are silent. Let us see how its principal thematic ideas are ever so subtly related to the concepts already outlined.

Fritz Stiedry suggests that the superscription "To my brothers in Apollo" (not found in the published score) is "an ironical allusion to the fugato style of the piece," and "a challenge to some of his composer-colleagues."<sup>12</sup> The headings are "*Allegro assai*" (2/2), and "*Sehr trotzig*" ("Very defiant"). After a six-bar introduction, the principal rondo theme begins as follows:

Ex. 37

Immediately one sees that the tragic key of A minor is no arbitrary choice. Underlying the defiant yet compulsive rhythm of these four bars we may detect the iron boot—the inexorable martial tread of the *Sixth Symphony*:

Ex. 38

Motivically too, it is an extraordinarily pithy four bars. Figure a, which again features the tritone interval so prominent in the preceding coda, also anticipates the *Tenth Symphony*. It is turned into a mocking sneer in the following bar, in the muted trombones (not shown). The note D#, the augmented-fourth tone itself, is very prominent in the ensuing music (sometimes enharmonically as E<sub>b</sub>). Figure b recalls the A-minor movement of the *Fifth Symphony*, and c contains a suggestion of our descending chromatic motif, grotesquely distorted. The reference becomes even more pointed when the theme is varied thus by the horns (cue 29),—

<sup>12</sup> Preface to Boosey and Hawkes score.

Ex. 39

and when the whole business is inverted by the strings (cue 30):

Ex. 40

One of the most awesome and compelling things about this whole mad romp is the way the martial tread, which is never hammered out in full by the percussion as in VI, nevertheless makes itself felt ever more strongly in the rhythmic pulse of the themes themselves. Even the "contrasting" theme in the major does not escape it:

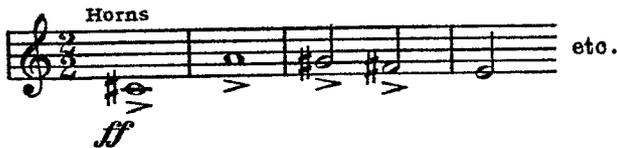

Ex. 41

In fact this melody, in its apparent gay insouciance, is as diabolically pertinent as the rest of it. It heedlessly satirizes not only the military tread, but also the "ewig" complex. Figure *x* outlines the falling cadence once more, this time in the key of F major. But again, as in the *Scherzo's Ex. 26b*, the harmony is diverted into the flat submediant. In fact the opening chord-sequence is exactly the same as in *26b*: tonic—dominant—flat submediant (I-V- $\flat$ VI). The downward pull of the melody and harmony even suggests a variation of *26b*. Of the latter's seven whole-tone steps from mediant to mediant we now get five in the first half of the tune, after which the second half sarcastically resolves itself into the dominant at the seventh bar, while the bass continues to sink and the whole thing is ready to start over again. Whether or not one of these tunes is a variation of the other, it is certain that both prepare for the great theme of the finale. The eight bars of *Ex. 41* do essentially what the fifteen bars of *Ex. 28* do: they take the "ewig" figure, bypass its finality, and attempt to "laugh it off." The finale takes the same harmonic idea and constructs from it a courageous affirmation of life in the very face of death—surely the most sublime embodiment of the variational principle in music imaginable.

When this 2/4 section returns later in A major, it incorporates the descending chromatic motif into a unison passage (just before cue 35) widely considered an evocation of the "Pan" theme from the *Third Symphony*. The implications of this can be pondered *ad libitum*. For who else indeed has constructed a musical symbology so rich and allusive as Mahler's, so pregnant with limitless associative possibilities? Following this, the main rondo theme is thrown against a figure which even more nakedly asserts the martial rhythm of *Ex. 38*:

Ex. 42

And when both are repeated immediately after, the first two bars of *Ex. 37* are replaced by a significant figure which brings into the whirling madness the turn introduced in *Ex. 28* in the *Scherzo*—not chromatic for the moment, but shortly to assume the greatest significance:

Ex. 43

As *Ex. 42* becomes increasingly insistent in the brass, the violins attain ever new heights of shrillness, which suddenly evaporates in a high tremolo and flutter-tongue on the dominant of D major.

The crucial slow episode of the movement thus reached is another of the occurrences in the *Ninth Symphony* which seem to have garnered all that Mahler has learned in his previous works into a uniquely satisfying form. This is basically yet another variant on something with which Mahler was much concerned: Beethoven's dramatic musical device of "groping" one's way into the finale by seeming to search in the darkness for its idea, either through fragments of what has gone before, or "phantoms" of what is to come, or both. But whereas in the *Sixth* and *Tenth* symphonies Mahler follows Beethoven himself, as well as Bruckner, in beginning the finale *per se* in such a manner, here he incorporates the device into a central episode of the preceding movement, creating out of a sound structural principle, as he so often did, something uniquely his own and perfectly adapted to the altered form of the work at hand.

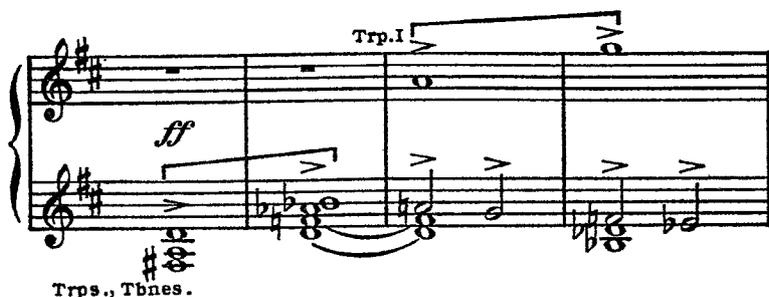

This remarkable episode is in two main parts. The first half, which ends just before cue 39, sets two basic ideas in opposition. One is a series of passionate utterances in D major, each beginning with a slow version of the turn, sometimes diatonic and sometimes chromatic, seeking to mount ever higher, but frustrated with varying degrees of vehemence depending on how far it gets. The other is a figure in D minor growing out of *Ex. 42*. It is stern and forbidding, laden with doom; but curiously, a bit of canonic writing seems to reveal its relation to a short motif of aspiration, like a fervently ascending prayer, from the *Eighth Symphony*:

Ex. 44

This is first heard in the *Eighth*, significantly, in E flat minor at the point of resolution of an E-flat-major cadence (cue 17), after the final appearance of the words "*Imple superna gratia*" ("Bestow thy heavenly grace"), and leading to the sudden plunge into D minor for the contrasting section "*Infirma nostri corporis*" ("The infirmity of our flesh"). Here is how the similar motif appears, by accident or otherwise, out of the counterpoint of the present passage:

Ex. 45

This is a perfect exemplification of the dichotomous pull we so often hear in Mahler's lines: the aspiration and its simultaneous rejection. It is as if the two ideas ("Superna gratia" and "Infirma") presented consecutively in *VIII* are telescoped here. Later the same motif itself becomes major and is movingly combined with the aspiring D-major music at its noblest:

Ex. 46

And immediately afterward we see how the diatonic turn, repeated in descending sequence, becomes that most ubiquitous motif of all which I illustrated as *Ex. 4*.

The second half of the episode reintroduces the fast turn, in a shrill hobgoblin version of *Ex. 43a* in the clarinets. The music moves through various keys, mostly in minor, as the slow-turning theme vies for dominance with this apparition as well as with *Ex. 42*. The clarinet is like a call-to-arms of the daemonic elements as it strives to get the main rondo theme going again. The music, however, remains episodic and fragmentary until, after cue 40, there is a 22-bar retransition in which the daemonic figures of the rondo all seem to gather from afar, shadowy, and still in the slower tempo. Then, ushered in by *Ex. 42* in the muted horns, they suddenly burst through in the original key and tempo, and a shortened reprise leads to the wild, unrestrained stretto-coda in which these specters of Mahler's A-minor diabolism, as well as his harmonic and contrapuntal mastery, ride supreme to the end in a veritable *Walpurgisnacht*.

#### FOURTH MOVEMENT (ADAGIO IN D FLAT MAJOR)

Throughout the finale, Mahler sings with a purer, a more probing and penetrating voice than even he had heretofore acquired. This *Adagio* grows organically out of the other movements, and yet affords an utter catharsis of all that has preceded it. The very tonality is a unique kind of resolution. As Donald Mitchell has pointed out, Mahler used progressive tonality so extensively for musico-dramatic purposes, that the symphonies which do *not* move from one key into another are as significant from that standpoint as those which do—certainly from the *Fifth* on. Thus, e.g., "the *Fifth* 'progresses' from C sharp minor to D major, a key-scheme which reflects the elevation of the hero from a

prostrate position (the opening funeral march) to an upright one (the radiant finale). In the *Sixth* he cannot escape the fateful A minor in which the work begins and ends. The very *non*-progression of the overall key-scheme is quite as dramatic in intent as the progressive tonality of the *Fifth*.<sup>13</sup> Similarly, *VII* begins in the deep, mysterious night of B minor, and ends in the radiant sunlight of C major. *VIII* is concentric like *VI*, but not in a key from which it would seek to escape, rather one to which it blissfully returns; it begins where the *Resurrection Symphony (II)* ends, in E flat major.

In fact it will be noted that Mahler's first two odd-numbered and last three even-numbered symphonies are all concentric, while the remaining five (*II, IV, V, VII* and *IX*) are all progressive. It is, however, only from the *Fifth Symphony* on that he alternates each time a concentric symphony with one in which the ending is exactly a semitone removed from the beginning. Evidently he discovered with the writing of *V* that the "polarity" of this semitone shift satisfied his sense of overall tonal progression best.<sup>14</sup> And since *V* and *VII* both move a semitone upward, the fact that only the *Ninth* moves a semitone downward acquires a special and poignant significance. If a semitone rise, beginning in the minor mode and ending in the major, may be said to signify optimism or triumph, then a semitone fall, both beginning and ending in the major mode, may equally well signify retirement and peaceful resignation.

It is also possible, as Harold Truscott and others have shown, to regard certain keys in a tonal scheme as "functions" of other keys. In a closely reasoned article,<sup>15</sup> Truscott argues that a Mahler symphony is always "in" a certain key even when it does not begin literally *with* that key, and that therefore "progressive" is a misnomer. I think this is largely a question of semantics myself. Conceptually, we may say that a key is "reached," or we may say that it is "revealed," and the musical process may be exactly the same in either case. Certainly one key will be more "important" or more "decisive" than the other; usually it is the key which is gradually being "revealed" or "arrived at," as the case may be, not the starting point. In that sense, *V* is certainly a symphony "in D major." But then so are *I* and *III*, so if we call the *Fifth* a symphony in C sharp minor, we may choose to consider that this is only a conveniently short way of distinguishing it from the others. It is "the D-major symphony which begins in C sharp minor." The second movement of *V* is in A minor, and Truscott rightly points out that A and C♯ are the fifth and seventh tones of the D-major chord. And when he says that in a performance of *V* he was left at the end of the second

---

<sup>13</sup> *The Listener*, October 25, 1962.

<sup>14</sup> Actually the sketches for the *Tenth* are ambiguous in this regard, since two alternate final pages survive: one in the opening key of F sharp major, the other in B flat major. The fact that the two pages are otherwise substantively identical indicates anew what importance Mahler attached to the question. Had he eventually chosen to end in B flat, this would be his only defection from concentricism or semitone polarity in the numbered symphonies after *IV*.

<sup>15</sup> *Some Aspects of Mahler's Tonality*; *Monthly Musical Record*, November-December, 1957.

movement with the distinct impression of a major third, A and C#, "literally humming together," to which the D-major third movement "came as a resolution," there is no reason to doubt him. Nor that the *Fifth Symphony* is "simply the most enormous perfect cadence [in D major] ever written." Such large-scale insights are extremely valuable. But again I don't see any real conflict with the "progressive" viewpoint. C sharp minor can indeed be a "function" of D major, but it is also a real key, and as the large-scale plan *begins* to unfold, it is for the moment more real than D major. It is like the movement of the moon around the earth, which is no less real to us on earth just because we are all, earth *and* moon, circling in a much grander orbit around the sun. Infinitely smaller though the moon may be, it can still occasion a total eclipse of the sun to our vision. And as moonlight is a totally different thing to our *senses* than sunlight, even though it be only a reflection of sunlight, so is our C sharp minor to this D major, or B minor to C major. The C sharp minor can be *at one and the same time* the key of the leading-tone minor of D major, and a submerged world destined to rise through that semitone to its opposite "polarity," for as modern physics and cosmology instruct us, *all* motion is relative.

The "polar" view is, in any case, wholly consistent with what happens esthetically in *V*, *VII* and *IX*. It would seem that, having built upon Beethoven and the other classics (*cf.* Beethoven's *Fifth* and *Ninth*) in spanning a symphony dramatically with tonic minor and major modes in his own *First* and *Third* (D minor to D major in both cases), Mahler conceived in his *Fifth* the idea of enhancing the minor-major polarity by that semitone depression of the opening minor, repeated it in his *Seventh*, and then partly reversed it in the *Ninth*. Now it is quite obvious that just as the process in *V* and *VII* can be characterized as a rising *to*, so that in *IX* is properly characterized as a falling *from*. The *Ninth* is yet another D-major symphony, his fourth and last, which happens to end, most poetically and appropriately, a semitone *below* the main tonic. As it is also a four-movement work, unlike the *Fifth* and *Seventh*, which are both five-movement works, it also happens to be his only symphony of which *each* movement inhabits a different tonality than the others: D, C, A, and D flat respectively. Even so, the tonal relationship of the first three movements is classically simple. A minor is the dominant minor key of D major, and C major is the relative major key of A minor. Had the symphony returned to D after the C major and A minor, that would have been a scheme common enough both during and after Haydn's time.<sup>16</sup> It is the D flat alone which gives the key-scheme *per se* its Mahlerian stamp.

But there is a further sense in which this relationship is unique even in Mahler. The *Fifth* begins in a key of four sharps and ends in a key

---

<sup>16</sup> This, of course, takes no account of the degree of tonal complexity *within* each movement. Although *IX* is *not* concentric, each individual movement is, however internally complex, where as in *X* the reverse is partly the case. With the F-sharp ending preferred by all its realisers, the latter is concentric, while the last two movements individually, whichever ending is chosen, are not.

of two sharps; the *Seventh* begins in a key of two sharps and ends in a key of no sharps or flats. No other symphony begins, like the *Ninth*, with two sharps and ends with five flats. Can this be related to any prior device of Mahler? Yes, and a very prominent one—his love of enharmonic relationships. Let us look at the ending of *IX* enharmonically. *V* begins in C sharp minor, *IX* ends in D flat major. One is the enharmonic major of the other. Now in addition to his fondness for those vivid major-minor tonic juxtapositions we discussed earlier, Mahler also displays a liking for enharmonic juxtapositions of major and minor. A striking example is the last movement of *II*, where, for instance, we have that lovely long cadenza, suspended on the dominant of F sharp minor, in which the sound of far-off heavenly trumpets is alternated with that of earthly bird-song. This dominant suspension is ultimately resolved, of course, but whereas we would expect it to resolve into F sharp major, the music in fact resolves into G flat major, with the mysterious entry of the unaccompanied chorus. This is surely about the eeriest enharmonic resolution in musical history—one that sends a shiver down the spine of the listener no matter how often he may have heard it. I think this is the sort of metamorphosis which Mahler subtly wished to convey at the outset of the D-flat-major *Adagio* of *IX*. There is indeed a direct enharmonic juxtaposition on the tonic here too, but it is *within* the movement. Let us see what it implies.

The rising tonality of *V*, rising out of that desolate funeral march in C sharp minor ("prostrate," as Mitchell says) into a lively, bustling D major, implied an acceptance of life's challenge, an unquenchable optimism even in the teeth of the cruelest oppression. *IX* depicts a retirement from life, so it sinks once more *from* D major—to what? Initially, to D flat major, for it is a voluntary retirement, and so the tonality suffers a sea-change analogous to that of the *Resurrection* chorus—a willing renunciation of life and acceptance of its end, an interim dwelling "*in einem stillen Gebiet.*" This is more positive—a step further, so to speak—than the sweet nostalgic regret in the first movement, but it is no less subject to reversion. So the *Adagio*'s second subject is pitched in that very enharmonic minor, that C sharp minor of the *Fifth*'s desolate opening, and the music passes easily from one dimension into the other, back and forth, without visible movement. This is music truly on the threshold of infinity. Thus the ubiquitous tonic major-minor complex is present in the *Adagio* in a newly enhanced context, through the use of enharmonics. Tonally we have partly the progression of *V* in reverse, and partly something altogether different, reflecting the ambiguity of Mahler's feeling. The "*ewig*" cadence and the chromatic fate-motif are here too, fully integrated into the new musical fabric. Thus the whole *Adagio* translates into pure music the poetic ambiguity of *Der Abschied*, with its lingering sensuousness and the overwhelming passion of its outburst apostrophizing "*Schoenheit,*" "*ewigen Liebens,*" and the "*Lebens-trunk'ne Welt.*" It is music imbued not only with the utmost sadness of leave-taking, but with a deep love of life and a feeling for life in every fiber.

First is the two-bar unison flourish (slowed down from *Exx.* 28a and 43a) on the G-strings of all the violins:

## Ex. 47

Again we have the chromatic version of the turn. Here the tribute to Bruckner's precept (the E-major *Adagio* of his *Ninth*) implicit in the first upward sweep on the dominant is perfectly balanced between a sense of identity and a sense of "otherness." (I prefer that expression here to "dissociation.") Bruckner begins with a five-note chromatic motif, also on the G-strings, though of the first violins only:

## Ex. 48

Both figures play about the upper dominant (a semitone to either side), but Bruckner stresses the two chromatic tones (the latter all the more by the subsequent octave plunge) at the expense of the dominant itself,<sup>17</sup> while Mahler again sublimates the chromaticism into the ostensibly more conventional turn (unconventionally provided with stress marks)—that very turn which, moreover, becomes a remarkable expressive device through the sheer pervasiveness of its use in the subsequent string texture.<sup>18</sup> It is now like a sigh which recurs in every voice at every register; when the stress marks are added, the sigh becomes almost a sob, in the style of the Italian madrigalists. The music is literally permeated with it, sometimes in its original slow semiquavers and sometimes further lengthened into quavers.

The principal statement for strings is divided by a two-bar interlude for the bassoon into two main clauses, and each half introduces one of the two motto figures which unite all the movements of the symphony. Here is the full texture of the first two bars:

<sup>17</sup> Another difference is that Bruckner's figure is not merely introductory. It is part of the main theme, which continues on the next beat with full harmonization.

<sup>18</sup> The slow chromatic turn made lyric, especially on the dominant, has an almost universal connotation of deep pain and sorrow, as in the *Crucifixus* of Haydn's *S. Cecilia Mass*, or, without the middle note, the second *Kyrie* of Bach's *B Minor*.

## Ex. 49

*Molto adagio*

x

*p*

v

*p*

Col basso ↓

Detailed description: This is a musical score for piano and bass. The tempo is marked 'Molto adagio'. The key signature has three flats (B-flat major/C minor) and the time signature is 4/4. The piano part (top staff) begins with a dynamic marking of *p* and features a melodic line with a slur over the first two measures. The bass part (bottom staff) starts with a dynamic marking of *p* and has a 'Col basso' instruction with a downward arrow. There are various musical notations including slurs, accents, and dynamic markings throughout both staves.

The complete harmony is necessary here in order to show the occurrence of the same chord-progression under the "ewig" figure as in *Exx. 26b* and *41*—essentially, I-V- $\flat$ VI, with an intervening III chord occasioned by the dropping of the alto (viola) voice on the second beat.<sup>19</sup> It is nowhere more difficult than here to find words to express adequately the profound effect of this use of altered harmony, structurally related to music otherwise utterly unlike it, in the predominantly diatonic opening of a solemn, hymnlike polyphony which is to become increasingly chromatic as it progresses. It immediately produces a warmth and deepening of the music comparable to the moving overall effect of the very remoteness of the key chosen. But rather than grope for suitable descriptive analogies, I shall take recourse to an antipodally "common" musical analogy. First, here is the upper melodic voice of the whole main clause:

## Ex. 50

Vins. I

*p*

*f*

*f*

Detailed description: This is a musical score for Violins I, consisting of three staves. The key signature has three flats and the time signature is 4/4. The first staff begins with a dynamic marking of *p*. The second and third staves begin with a dynamic marking of *f*. The music features a melodic line with various rhythmic values, slurs, and accents.

<sup>19</sup> The third bass note, though written A $\flat$ , is as truly the root of a flat-sixth chord as in the earlier examples, since this chord can be represented as B $\flat$ bD $\flat$ F $\flat$ , the flat submediant of D flat major. As Mahler used the B $\flat$ b notation in the same context in bar 17, and in the same contrabass register in bars 22 and 136, it is difficult to know why he used the A natural here, but it must obviously have had some practical rather than structural application.

I think the derivation I mentioned of the first five bars from an astonishing metamorphosis of the first twelve bars of *Ex. 28*, including the chromatic turn at the corresponding point, will be quite clear, and nothing more need be said about that. And so I come to my popular analogy.

When I first made the acquaintance of this music in my late 'teens, I was much bemused by the fact that, in the first six bars of the above, Mahler seemed to quote from no fewer than four popular English and American hymns and ballads, one after another, beginning with *Abide with Me* on the first descent from mediant to tonic. Actually, if three-fourths of the opening bar is played on the piano with a regular instead of altered submediant (i.e., I-III-V<sup>7</sup>-VI), and with the dotted polyphony pressed into harmonic line, it is *Abide with Me*. But even stranger than this chain of resemblances were the uncanny alterations in the bass progression. Now some musicians and music-lovers seem positively embarrassed by the resemblance alone, and would prefer that one didn't even mention this. They seem to be unaware of the fact that our whole musical experience is founded upon subconscious association with the "commonest" sounds that prevail in the world around us, and that without the innate faculty of *making* such associations subconsciously, it is quite impossible to be musical at all. Elsewhere I have referred to Mahler's musical surrealism—his custom of putting the most familiar musical "objects" into the most unfamiliar, dreamlike and magical contexts. This I am sure is his unique strength, the principal source of the earthy power that will grow and outlast the lifespan of any who read this. Whether it was because Mahler's musical gifts were more completely integrated with his subconscious emotional life than in others, or for some other reason, I do not know, but I firmly believe that this *Adagio* could only have been conceived in the brain of one who knew that the most profound utterance that man can conceive is somewhere akin to the childish parable—one who could perceive the relatedness of all things, not just the differences of a few. "One must use the most ordinary words to say the most extraordinary things."

After thus beginning his first clause with the "ewig" figure in variation, Mahler offers his other main motto, the chromatically descending fate-motif. He presents it in closer proximity to the first one this time, opening the second clause with it in a new cry of overwhelming grief and desolation:

Ex. 51

For whereas, in the first movement, the initial three descending tones of the motif were repeated immediately at the same pitch (as in *Ex. 18*), here they are answered a third higher, with an even more terrible intensity. Furthermore, this second half of the new motif echoes all but the final note of the chromatic turn, and Mahler will make this relationship even more graphic later on. But after four bars this passage resolves back into a varied restatement of the first clause, a solo horn suddenly

standing forth with a majestic elaboration of the first two bars that is to evolve further into this form:

Ex. 52

The restatement is extended in a new direction, including a wonderful effect of aspiration achieved through a descending scale that repeatedly moves into higher octaves. Later on this idea is set against the unbroken scale itself in contrasting phrasing, as follows:

Ex. 53

One may think that it is like Richard II's

Mount, mount, my soul, thy seat is up on high,  
Whilst my gross flesh sinks downward, here to die.

Or, on the other hand, it may suggest the purely earthly ideals and aspirations which continue to soar even as the flesh fails, just as Mahler is recorded to have read philosophy (not the Bible) on his own death-bed, by tearing out the pages and holding them up before his eyes in a trembling hand. At any rate, there is a similarly aspiring violin figure in both parts of the *Eighth Symphony*, over a dominant pedal. It is heard thus at cue 22 in Part I—

Ex. 54

to the words "*Firmans virtute perpeti*," following "*Infirma nostri corporis*" ("The infirmity of our flesh invest with eternal strength"), and in slightly altered form after cue 79 in Part II, to the words "*Die ew'ge Liebe nur vermag's zu scheiden*" ("Eternal love alone can separate them"—i.e., the spirit from "earth's residue"). The relationship of both to a crucial figure in the *Kindertotenlieder* will become clear on the final page of the *Ninth*.

At that point in the exposition there is a complete change in the musical texture. The rich polyphony evaporates, and the C-sharp-minor section is ushered in with but two voices "without expression," separated by a void of nearly five octaves:

Ex. 55

The upper voice is scored for the first violins. The lower voice is doubled in a still lower octave, making a total span of six octaves. But instead of cellos and string basses as expected, it is strikingly scored for cellos and contrabassoon; in fact the phrase is identical with the interlude for solo bassoon heard earlier. Of the several themes of this section, one, heard initially in the continuation of the first violin line, suggests a transformation of the chromatic Ex. 51 into the diatonic minor mode:

Ex. 56

Both sections are worked out again more fully in their original keys. The two clauses of the main section, however, are worked into a more continuous fabric the second time. The C-sharp-minor section maintains throughout a sparse, chamber-like texture somewhat resembling that of *Der Abschied*, and including a liberal use of solo strings. This is especially marked in its second appearance, which begins with a minor-third *ostinato* almost identical with that heard in *Der Abschied*, and initially scored for the same instruments—clarinets and harp in unison:

Ex. 57

Ex. 58

That is interrupted by a passionate development of *Ex. 51* and *sequelae*, leading to a climax wherein the connection between *Ex. 51* and the chromatic turn is spelt out in a tragic proclamation by the trumpets, in a full brass polyphony over a drum-roll *crescendo* which reverts for a moment to the catastrophic utterance of the first movement. This is the emotional crisis of the finale, before the point of reprise. The final note of the turn is at last filled in *within* the context of *51*, and the harmonic sequel to this consummation is greeted by a shattering cymbal stroke at the conclusion of the drum-roll (\*), over a tritone bass. The violins come in and then complete the introductory flourish (which we then see to be in the same key as in *Ex. 47*) with its scale descent in augmented form, with utmost emphasis, and an octave higher than at the opening of the movement:

Ex. 59

The musical score for Ex. 59 is arranged in two systems. The first system includes parts for Trumpets (Tr.), Horns, Tubas (Tbn.), and Bassoon (Basso col.). The second system includes parts for Violins (Vins.) and Cellos. The score is written in a key with two flats (B-flat major or D minor) and a 3/4 time signature. The first system features a *ff* dynamic for the trumpets and a *Sehr fließend* tempo marking for the tubas. The second system features a *Pesante* tempo marking for the tubas and a *molto rit.* marking for the cellos. The score includes various musical notations such as triplets, accents, and dynamic markings.

Once more Mahler has neatly and imperceptibly telescoped the culmination of the development with the beginning of the reprise. The har-

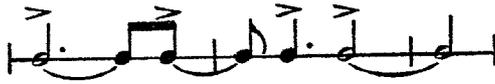

mony has suddenly disappeared under the high C flat, leaving it exposed; and before the descent begins, the slashing down-strokes of all the violin bows have outlined the opening funeral tread of the whole symphony—

Ex. 60

in the following form:<sup>20</sup>

Ex. 61

After the brass peroration of *Ex. 59*, the chromatic motif is stripped of its anguish and terror, as at the end of the first movement. In the reprise, this motto of despair is simply heard as a sad but accepted corollary to the final song of yearning, which rises once more to the heights and then sinks back to be swallowed up in oblivion. In the coda, the motif is a mere wisp of sound disappearing with the others. The reprise itself is dominated by a statement and counterstatement of the main clause; the *minore* does not return. The statement is enriched by a flowing counterpoint for horns and cellos, again featuring the turn, as well as a noble figure (bracketed below) further recalling the *Eighth Symphony*. Compare the following, noting also the use of the stressed chromatic turn already in the texture of the *Eighth* (Part II, cue 20):

Ex. 62

<sup>20</sup> This effect needs to be carefully brought out by the conductor, obviously by having the bows lifted between strokes. Too many interpreters simply seem to ignore it as an effect, either because they are unaware of this "far-out" reference or because they don't believe it can be brought off. I for my part cannot believe these particular syncopations to be accidental, and even if they were, it is still sloppy execution, of the sort to be avoided on principle in Mahler, to allow the bow-strokes to run together. I think it safest to lay it down as a ground-rule that any Mahler indication neglected will probably obscure some relation, since nothing is quite accidental, just as the omission of any line in Shakespeare leaves some gap in the structural and dramatic logic observable by and significant to someone. To me, this strange effect in the upper register simply declares, all the more clearly and graphically for its unexpectedness, that Death is omnipresent and inescapable. If the previous use of the rhythm has been suitably apprehended and assimilated, it can be one of his most chilling devices.

Ex. 63

This seven-bar statement is *fortissimo*, and one more cymbal crash gives it urgency at the fifth bar, after which the percussion is silent. A five-bar interlude, beginning with a sudden hush and embodying the partly sublimated chromatic figure, prepares for the final counter-statement. This begins *pianissimo*, with the flowing passagework removed, the woodwinds and brass joining the strings in the polyphony of *Ex. 49*, but inverted, with the "ewig" motif now in the horns and cellos, below the voice formerly assigned to half the cellos. The bass is reinforced by bass clarinet, bassoons and tuba, in which the turning figure groans repeatedly as a dissonant distortion of the polyphony increases at the third bar (*crescendo*) and reaches a poignant climax in the fifth and sixth bars (*fortissimo*), with the violins and trumpet in excruciating bi-tonal conflict with each other. This dissolves in a rapid *diminuendo*, and there is a final accompanied cadenza for the high violins, from which they descend in a touching echo of the flute cadenza in the first movement.

After a general pause, the 27-bar coda for *pp* strings, *Adagissimo*, concludes the symphony. All the strings are muted except the first violins, which remain mostly above the staff. These unmuted violins enter in the fourth bar, after a veiled, almost remote statement of the chromatic motif (*Ex. 51*). In the first violin part there is once more an echo of the *Eighth Symphony* and of the *Kindertotenlieder*. Compare the following with *Ex. 54a* from the *Eighth*—

Ex. 64

—and, even more directly, with the music to which the words "Der Tag ist schoen auf jenen Hoeh'n" ("The day is bright on yonder height") are sung in the cycle. The slow melodic descent of a fifth, from supertonic to dominant, suggests once more the flute cadenza, as well as the descent from the finale's opening flourish (*Ex. 47*), and again it seems as if they are all evoked by the same associations. From here to the end the first violins only repeat the dominant  $A_b$  tone. A final statement of the chromatic motif in the second violins is altered so that the second half begins no higher than the first half, as though too numb or too oblivious to move:

## Ex. 65

The musical score for Ex. 65 is written for piano in a key signature of three flats (B-flat major or D-flat minor). It consists of two staves. The first staff has a treble clef and the second a bass clef. The music begins with a *pp* dynamic. The first measure contains a chromatic turn. The second measure is marked *dim.* and *ppp*. The third measure is marked *pp* and has a *rit.* marking above it. The final note of the first staff is a G natural, which is the fifth of the minor tonic triad. The second staff has a similar chromatic turn and ends with a G natural, which is the fifth of the major tonic triad.

The repeated viola figure below transforms the chromatic turn about the dominant back into the diatonic form by raising the double flat with which it began in the movement's opening flourish. The final note shown above in the second violins, along with the open fifth in the cellos below, form the minor tonic triad, and this too is raised to the major triad when the second violins reenter for the closing bars on F natural. Thus the tonic major-minor motif is reversed, in precise opposition to the closing bars of the *Tragic Symphony*, which asserts the minor triad with awful finality. In the two final bars, the diatonic turn of *Ex. 65* is reversed. The violas die away on the dominant, the cellos repeat the open fifth, similarly dying away, and the resolving mediant tone in the second violins is far above the fifth which it resolves, as though it were a resolution on some ethereal plane, disembodied and not of this world:

## Ex. 66

The musical score for Ex. 66 is written for piano in a key signature of three flats. It consists of two staves. The first staff has a treble clef and the second a bass clef. The music begins with a *ppp* dynamic. The first measure contains a chromatic turn. The second measure is marked *ppp* and has a triplet of notes marked with a bracket and the number 3. The third measure is marked *ppp* and has the word *ersterbend* written above it. The final note of the first staff is a G natural, which is the fifth of the minor tonic triad. The second staff has a similar chromatic turn and ends with a G natural, which is the fifth of the major tonic triad.

This is surely a kind of Buddhist *nirvana* to which Mahler's contemplation soars, not the Roman Catholic resurrection of the two choral finales (*II* and *VIII*). All the familiar aspiring to heaven of the *Eighth* is there, but it is finally sublimated into this ethereal oblivion. Again the verbal clue to the instinctual meaning of such music seems to be provided by *Das Lied von der Erde*. I noted above the resemblance of *Ex. 19* to the phrase "Du aber, Mensch." In the earlier work, the plaint "But thou, man, how long livest thou" is contrasted with "The sky is eternally blue, and the earth will long stand fast and blossom in spring" ("*Das Firmament blaut ewig,*" etc.). In our thermonuclear age, of course, not even that is literally certain. But our petty world is to the greater cosmos as the individual human is to the race: a mere speck in the continuum. In *Das Lied*, the answer to "How long livest thou" is:

"Not a hundred years canst thou enjoy all the rotten trinkets of this world." And the resolution seems to be found not in personal salvation and immortality, as in *II* and *VIII*, but in the great "collective unconscious":

Die liebe Erde allueberall  
Blueht auf im Lenz und gruengt aufs neu!  
Allueberall und ewig blauen licht die Fernen!  
Ewig . . . Ewig . . .

We see that in these last works of Mahler, Catholicism is completely replaced by Pantheism. That is the final paradox of Mahler's paradoxical life: that, faced with actual death, he no longer strove for reconciliation with eternity, but with *this* world. In the text of *Das Lied*, which is quite literally a "song of the earth," he instinctively returned once more, perhaps, to something like the youthful philosophy of Nietzsche, who had said: "A new pride taught me mine ego, and that teach I unto men: no longer to thrust one's head into the sand of celestial things, but to carry it freely, a terrestrial head, which giveth meaning to the earth."

Not only is the philosophy of *Das Lied von der Erde* a pagan philosophy, but after the *Eighth Symphony* the only explicit mention of God connected with Mahler's music is that which he inscribed in the margin of the *Purgatorio* from the *Tenth*: "O God, why hast thou forsaken me?" Mahler's final rejection of the orthodox theologies which so troubled him seems implemented by his instruction that during his funeral not a word should be spoken nor a note sung. Thus the final words which he did set to music, the words quoted above about "the beloved earth," must be accepted as his final verbal testament of faith, and nothing in the instinctual expression of the music which follows contradicts them. The dissolving into *nirvana* at the end of the *Ninth* even hearkens somewhat back to the oblivion of the end of the *Lieder eines fahrenden Gesellen*, under the snowfall of blossoms from the lime tree of childhood where "all was good again: love and grief and world and dream"—"*Lieb' und Leid und Welt und Traum*." But this is the reconciliation of childhood through the mind and heart of a man. This symphony which began with the distant tread of death, and which examined every aspect of its proximity to life, ends as nearly and truly reconciled to both as it seems possible for a man of Mahler's tremendous and clear-sighted intellect to become.

## IN MEMORIAM

### DIMITRI MITROPOULOS

On November 2, 1960, the world of music lost one of its most eloquent interpreters with the death of Dimitri Mitropoulos. The Greek-born maestro's youthful interests lay in piano and composition, for both of which he showed precocious gifts. During his piano study with Busoni in the 1920's he acted as répétiteur of the Berlin Opera. Henceforth he devoted himself more intensively to the conductor's art. After a period as director of the Athens orchestra and numerous guest appearances throughout Europe he made a successful American debut with the Boston Symphony Orchestra in 1936.

In 1937 began a twelve-year association with the Minneapolis Symphony. Under his dynamic leadership the orchestra grew rapidly in stature and audiences heard, in addition to the classics, a wide range of contemporary music presented with the greatest brilliance. Long an ardent admirer and conductor of the works of Mahler he was presented the medal of the Society in 1940.

He was engaged by the New York Philharmonic Society in 1949 and in 1950 became its musical director, a post he relinquished in 1958, continuing, however, as frequent guest conductor. His highly successful association with the Metropolitan Opera began in 1954.

Few, if any, of the major conductors of our time have espoused the cause of contemporary music so consistently and so effectively. His interest in Schoenberg, Berg, and Webern began long before these men were *à la mode*. At the opera a catholicity of taste led to memorable productions of Wagner, Verdi, Strauss, Puccini, and Barber. His incandescent performances of *Elektra* and *Salomé* will long be remembered by his New York audiences. In the concert halls and opera houses of Germany, Italy, and Austria he received the enthusiastic acclaim of listeners and musicians alike.

Any eulogy of this great artist would be singularly incomplete without tribute to Mitropoulos the man. In his youth he became an intense admirer of St. Francis of Assisi. His subsequent career was strongly colored by a spiritual outlook uncommon among practicing artists of our day. He felt a keen moral obligation to place his talents and material resources at the service of mankind. As a result, his personal life was almost that of an ascetic, but he aided countless young composers and performers both here and abroad with strong encouragement and material support. Many of the now-famous figures in the world of professional music were frequent recipients of his benefactions. The kindness and respect he exhibited toward the members of the orchestras he conducted were bywords in our own country and on the continent. An illustrious career has ended, but the influence of this great musician will live on for years.

DIMITRI MITROPOULOS  
1896 - 1960

## A PERFORMER'S RIGHTS (2)

By STANLEY POPE

Among the great composers there are few who depend so much on a carefully balanced performance as Bruckner, whose massively changing elements of expansion and contraction must be taken into account if his symphonies are to emerge as an even flowing organic growth.

Not only this. The musical content is that which lies beyond the notes, and whereas the average listener will have no difficulty in following music of a traditional pattern, an idiom outside his experience must be presented clearly if it is to be understood. Listeners hearing the performance of a well-known symphony may easily be blinded by bland efficiency, for they subconsciously supply the qualities that are missing from their own experience. This experience, or knowledge, has been gained after hearing many performances of the same work. They will react similarly when confronted with any work in a familiar idiom. On the other hand, if the idiom is strange to them, a faithful reproduction of the notes alone will not recreate the spirit of the work for them and they will not have sufficient experience to recreate it for themselves. In this case the performers have an unfair advantage over the unfortunate composer who is invariably called to task.

It is not only modern composers who suffer this indignity. It is still happening to Bruckner. He has been frequently accused of writing shapeless movements and of badly welding the parts together. But it is a mistake to try and make his music fit into the traditional forms of the earlier Viennese masters. Although the overall shape of his symphonies may bear a resemblance to that of the work of other 19th century symphonists, the form of the separate movements is highly individual and calls for very careful thought when planning a performance.

In the late 19th century music was far more freely treated than it is today, and although it would be unthinkable to return to the liberties taken in those days, we are in danger of forgetting that *Tempo* does not depend upon the clock, but that it is a quality dependent on the musical situation. As that situation changes, so does the *Tempo*. When handling one of Bruckner's great movements we must not maintain our course relentlessly if inflexions in tempo are demanded by the music. On the other hand constant change in basic tempo will disturb the smooth unfolding of the work. Often enough the music calls for changes in tempo which have not been indicated by the composer. Bruckner may have thought, as did Brahms, that such indications as *poco meno mosso* and *piu animato* lead to exaggerations with the consequent disruption of the movement's forward flow. What is misleading, however, is that he sometimes put them in the more obvious places and omitted them where we should have been glad of his guidance.

Balancing form and material in a highly compact structure, such as

came from the pen of Beethoven, calls for the greatest concentration, but Bruckner's more leisurely synthesis demands longer periods of relaxation. Balancing implies pertinent reconstruction with an eye to the relevant importance of the underlying growth of the symphony as a whole on the one hand, and of the material from which it is made on the other. Some performances fail to carry conviction because the argument is not sustained and becomes bogged down in a series of episodes, others because material has been glossed over for fear of destroying the continuity. One is often faced with a dilemma and has to rob Peter to pay Paul.

The important thing is to know how and when to do it. Mutilation is no solution and Schalk's edition does nothing to help us. In fact he further increases our difficulties by completely destroying the natural balance of the *Finale*. Perhaps he reorchestrated the symphony for the mere fun of it, for Bruckner's original scoring is frequently more transparent than Schalk's, and at its best abounds in a refreshingly personal use of the orchestral palette. It is an error to compare Bruckner's orchestration with that of his contemporaries. His sounds are less brilliant than Tchaikovsky's and more strongly contrasted than those of either Brahms or Dvorak. He did not possess the surety of Berlioz nor the *metier* of Verdi or Wagner. But the tone-colouring of his own instrumentation is as essential a part of his symphonies as the themes themselves, and the practice of performing the Revised Edition of Schalk is one which we hope has been abandoned for good.

The four movements of the Fifth Symphony are closely related to one another, not only in the more obvious instances such as the return to the first subject from the first movement after letter V in the *Finale*, the opening bars of the second and third movements and the reference to earlier material before letter A in the *Finale*, but also by much other material which can be traced going through the symphony in one form or another. Compare the pizzicato figure at the beginning of the work with cellos and basses after letter A in the *Trio*, and again the first theme in the first *Allegro* with bars 7 and 8 of the *Scherzo* of which the woodwind figure is a derivation inverted.<sup>1</sup>

The musical content of the symphony implies that the movements should be related in *Tempo*. This means so shaping the movements as to demonstrate at salient points the characteristics they have in common. This will in no way prevent us from constructing each movement according to its individual demands, nor will it mean a rigid application of our findings. But we shall have devised a plan which can be fashioned to meet our own requirements as well as what we believe to be those of the composer. There is no such thing as a final interpretation of any great work, and the present paper is no more than an attempt to present a balanced account of this symphony from which some interpreters may wish to proceed. The element of artifice introduced by such calculations may appear to lead to pedantry from which any performance must be free. Moreover, the use of the metronome, to which constant reference will be made, stands in direct opposition to the conception of tempo as a quality not to be measured by the clock referred to above. But such are

<sup>1</sup> cf. Anton Bruckner's *Sämtliche Werke*, Vol. 5, edited by Robert Haas.

the limits of our terms of explanation, that once the music has dictated this 'tempo' we must then refer to our mechanical device!

As a key to a common unit binding together the major elements of this symphony, I have taken the opening of the Finale proper (*Allegro moderato*) as  $\text{♩} = 116$ . Not only is this a satisfactory pace from which to set out on this movement, but it gives us a clue to the speed of the great slow movement. At bar 26 in the Finale the octave, head of the fugal subject, appears in the flute. If these quavers are played at the same speed as the opening crotchets at letter A (*i.e.*,  $\text{♩} = 116$ ) then the basic tempo of the *Adagio* will be  $\text{♩} = 29$ . Thus the triplet crotchets, at 87 to the minute, while moving easily will not drag uncomfortably, and the oboe tune ( $\text{♩} = 58$ ) will still retain the characteristic of an *adagio*. Whereas Bruckner has written  $\text{♩}$  at the beginning of the slow movement, he changes this to C at letter H (p. 69), where he refers to the "Allabreve-Takte" and indicates a slightly slower crotchet. It would seem that he was thinking in terms of two in a bar at the beginning of this movement. This would appear to apply to the beginning of the symphony as well. To open the symphony at  $\text{♩} = 48$  destroys the quality of the *adagio*. On the other hand to lead off at  $\text{♩} = 24$  (with four beats in the bar, of course) makes it impossible for the listener to take in the first fourteen bars as one phrase. If we return to the same  $\text{♩} = 29$  as the second movement, we may still retain the basic pulse of two beats in the bar and also be able to grasp the first phrase as a whole. If we can accept this, we have established a point of contact at important moments in the symphony: the opening of the work, the beginning of the second movement and of the Finale.

First Movement, *Adagio - Allegro*.

As  $\text{♩} = 29$  is too slow a beat to assure precision in the basses, the beat should be subdivided:  $\text{♩} = 58$ . The pizzicato quavers must be played thematically. Much of the important material in this symphony is to be traced to this figure

inverted and transposed

thus

becomes:

of the 2nd and 3rd movements, and

of the Trio. The interval of the 5th that this initial figure encompasses also introduces the main theme of the first Allegro and, most clearly, the great chorale in the Finale. From the 7th bar the accents must be expressive. A clear distinction is to be made between the semiquavers and the demi-semiquavers in bars 15 and 16. Bruckner was inclined to leave some empty spaces in his scores as at bars 21/22 and 29/30. Presumably he imagined the sound travelling around as it would in a church, but some of our concert halls, like the Royal Festival Hall in London, have little reverberation and it may be advisable to hold the minims of bars 21 and 29 longer than their real value. We must establish the tempo for the first Allegro theme before knowing how much faster the *Bewegter* (*im künftigen Allegro-Tempo*) should be.

As the composer goes to some pains in the introduction to the Finale to differentiate between "Allegro" and "Allegro moderato" we shall assume that the first movement proper should set out faster than  $\text{♩} = 116$ . However, we must think of the second theme which is introduced at letter C. To play this at the main allegro tempo would make nonsense of it, and yet to have too great a disparity between this and the opening allegro would constitute a first threat to the main flow of the movement. I suggest, therefore, that  $\text{♩} = 128$  will give us impetus, but will also permit us not to hurry the second theme. "Bewegter," then, at bar 31 at  $\text{♩} = 128$ . Care should be taken not to make any diminuendo in *Ursprüngliches Adagio* until bar 50.

Once the Allegro is under way one should not push the music forward during the diminuendo between bars 63 and 70. If the tempo should become slightly relaxed (slower) it will re-establish itself again with the "ff" at bar 79. Trombone III and Tuba should come forward in bars 83/84, and the horns must play well up in bars 82, 88 and 90 otherwise they will not be heard. The second theme, not to be hurried if the close of the phrase in the violins in bars 111 to 116 is to be allowed to sing, may be introduced at circa  $\text{♩} = 96$ . This and analogous passages call for careful dovetailing. So that the change of tempo should not be too abrupt, a *poco rallentando* going through to the new tempo may start at bar 96. It is natural for the music to have moved forward to  $\text{♩} =$  circa 108 by bar 127. I would suggest delaying the *ritardando* until bar 129, two bars later than printed, and avoid bringing the movement to a standstill. The main rhythm continues as two beats in the bar, for the music is kept buoyant by the material in the horns after bar 131. The passing notes in Horn II must be brought sufficiently forward, Horn I playing "quasi solo" throughout. Between letters E and H we have to re-establish the allegro impetus. With  $\text{♩} = 108$  at F,  $\text{♩} = 112$  at G and

$\text{♩} = 120$  at H, we shall gradually increase the movement without throwing it forward. At bar 151 to 155 *ff* in the strings will stimulate the movement, as will *poco piu animato* after F. In bars 167/168 care must be taken not to cover 1st trumpet. This very important question of the trumpets is to be considered later. Flutes, clarinets and violins should play *espressivo* from 185 to 188. At bar 205 it is necessary to alter the nuances to allow the horns to come through.

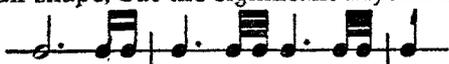

The image shows a musical score for four sections: Woodwind, Horns (sounding), Brass, and Strings. The score is written in a key signature of two flats (B-flat and E-flat) and a common time signature (C). The tempo is marked as  $\text{♩} = 120$  at H.

- Woodwind:** The top two staves (treble and bass clef) show a melodic line starting with a dynamic of *f* and an accent (>). The notes are B-flat, B, and B-flat.
- Horns (sounding):** The staff shows a rhythmic pattern of eighth notes with a dynamic of *fff* and a marking 'a 4'. The notes are B-flat, B, and B-flat.
- Brass:** The top two staves (treble and bass clef) show a melodic line starting with a dynamic of *mf*. The notes are B-flat, B, and B-flat.
- Strings:** The bottom two staves (treble and bass clef) show a melodic line starting with a dynamic of *mf*. The notes are B-flat, B, and B-flat. There are slurs and a *ff* dynamic marking in the lower staff.

This magical transition from 209 to 236 must not be hurried, but must lead flowingly into the cadence after 217. This can then be played at the same speed as the beginning of the second theme,  $\text{♩} = 92$ . From 213 to 216 horns play *en solo*, and strings make a crescendo to *forte* from 214 to 216. Bar 217 must start afresh and a slight expressive *ritenuto* may be introduced at 219 and 220, but the tempo must be re-established at 221, where the movement must be kept going steadily.

"Tempo of the Introduction—Adagio." The character of the music after bar 247 calls for a tempo with a little more movement than the Introduction as we had planned it. Here again it looks as though

Bruckner's own idea of the Adagio is not as heavy as our own, but the opening statement of this symphony is indeed monumental, and its unique position amongst symphonic openings calls for space and dignity. For this reason I would hesitate to recommend a faster tempo. But I am aware of the necessity not to drag after bar 247 and would not suggest a slower tempo than  $\text{♩} = 64$  for this Adagio. This also has the advantage of making a smooth change-over to Allegro at  $\text{♩} = 128$ . Long singing strokes of the bow for the quavers in bar 255, and by 257 the crescendo should have reached *forte* and should continue to develop to *ff* at bar 259. At letter L we run into some difficulties concerning both rhythm and balance. It is assuredly absurd to underline detail to the detriment of overall shape, but the significant rhythmic figure

can be clearly observed without detrimental consequences. The tempo must not be too rapid otherwise the trombones will be unable to produce the demisemiquavers however sharp their tongues. The orchestra must be held from bar 275 without destroying the impetus. The limit at which this rhythm can be clearly performed is  $\text{♩} = \text{circa } 120$ , but even so, the trumpets and trombones should be asked not to play the semiquavers too quickly so as to assure sufficient contrast with the demisemiquavers which follow. This request should be made wherever the figure appears in the orchestra. For the sake of clarity an even steadier tempo is called for at M. The opportunity for further reducing the pace is given us in the *pianissimo* from 297, but it may still be necessary to pull back smartly at M to  $\text{♩} = 100$ . Having made our point we may let the music have its head from *pp* bar 315 without allowing it to run away. This fluidity is essential in view of the rapidly changing musical dictates. I would put forward for consideration the following changes in nuances in the interest of transparency between letters L and N. Horns: only *forte* after M. Trumpets: only *forte* at bar 287 for three bars, and again at 304 for four bars; *fortissimo* from 309 onwards. Trombones: only *forte* at L for three bars, 1st trombone *forte* in bars 289/290, 2nd and 3rd trombones only *forte* in 288 to 290, all trombones only *forte* from M for four bars—otherwise as printed throughout this passage. Timpani: only *forte* at bars 303 and 306. 1st violins: *ffp* at bar 293, *ff* again at 295. 2nd violins: *ffp* at bar 295, *pp* as printed at 297. Violas:

From N the accents should all be very firm. The chorale-like interpellations at 325 and 331 should return at the tempo of the second theme ( $\text{♩} = 92$ ) but bars 329/330 and the fanfare at 339 should be allegro ( $\text{♩} = 100$ ). The return to the restatement at letter O means a return to  $\text{♩} = 128$  which can be brought about during the crescendo from 347. The return to  $B\flat$  major comes as a surprise. Unfortunately the decisive D natural is only found in the violins and is too easily covered. Horns and trumpets play only *forte* and violins come as far forward as they can. Horns, trumpets and trombones only *forte* at 373; timpani *ff* at 375; from 376 the tempo should be eased in view of the return of the second subject at letter P. From this point to letter U the movement proceeds as from C to bar 204, but with 1st trumpet *espressivo* between 410 and 418, trombones *mf* at 413 and strings *ff* at 419. From S onwards the following melodic line must be predominant:

bows. This is characteristic of the composer and such groups must never be tied under one bow. In the third bar of G violins *poco forte* and violas *mf* will allow basses to come through. This *poco forte* need not be held longer than three bars, after which a *crescendo* may be indicated for three bars followed by the printed *diminuendo* back to *p*. As at bar 61, so here the music has naturally moved forward. This is all to the good, for from 139 to 162 is a cadence which must not be permitted to plod along. Its progression must be smooth, the only accents being provided by the pizzicato in the strings. By 151 it may have reached  $j = 56/58$ , but as in so many instances *changes of tempo depend greatly on the conditions of the moment*; violas' entry must be smooth and without accent. The tempo may be eased in the last four bars before H.

As Bruckner asks for a slower crotchet, one may begin here at  $j =$  circa 50. All strings must play *legatissimo*. At 171 1st trumpet must not dominate, but must let trumpets II and III come forward. The melodic line of flutes, 2nd oboe, 2nd clarinet and trumpets in 169 and 170 must not be covered. So that *hervortretend* should have its effect in violins in bars 173 to 176, the 2nd violins may be marked *mp* and *ppp* at alternate bars. The significant falling sevenths should be played *en solo* by horns I and II at letter I, by trumpets II and III one bar later, and by trumpets I and II in the following bar. A real *ppp* is essential in bar 183 in the strings and the trumpet solo which answers the flutes and oboes in bars 185/186 must be played *molto legato*. In the two bars following K care must be taken to see that the trumpets continue the melodic line started by the 1st trombone without a break and without an accent of their G natural (written D natural). In bar 192 the D natural of the 3rd trumpet must not cover the melodic line in the other trumpets, which answer the solo of the 1st and 2nd trombones in the two previous bars. Trumpets I and II must continue to stand well forward in bars 193/194. In 196 to 199 we again encounter our problem with the trumpets, for these dissonances must have plenty of punch, and the falling sevenths must stand out without having to reduce unduly the tone of the trombones. The choral-like cadence at M must not be pushed, but the following bars must be permitted to flow easily— $j =$  circa 52. The oboe, who introduced us to the scene at the beginning of this Adagio, is now the last to take leave of us as we pass on to the next movement.

Third Movement. Scherzo. *Molto vivace (Schnell)*.

It is a general practice to play the Scherzos of both the 5th and 7th symphonies too quickly. In the case of the 7th symphony, a tradition was established in the early days of changing the tempo at bar 125. This completely unbalanced the even flow of the movement. To race through the rest of that scherzo at the initial speed would have made nonsense of it and, moreover, it would have been quite impracticable from the players' point of view. If a reasonable pace had been set at the start to give a *very fast crotchet*, in accordance with the composer's *Sehr Schnell*, (I am not advocating three beats in a bar!), then there would have been no need for a change of tempo. This is a question which calls for detailed comment elsewhere.

What of the scherzo of the Fifth symphony? Bruckner has given us an excellent clue in "*Im gleichen Tempo*" which heads the Trio. In the

trios of his first four symphonies the composer invites us to contemplate the rural scene of his homeland. Even in this symphony, although we are taken a stage further than the Ländler-like swing of the earlier trios, we are still very close to Bruckner's native soil. In order to recapture the atmosphere I would suggest  $\text{♩} = 156$ . Presumably it was intended that one bar of trio should equal one bar of scherzo. This would make the tempo of the scherzo  $\text{♩} = 78$ . (Trio  $\text{♩} = 156$ ;  $\text{♩} = 78$ ; Scherzo  $\text{♩} = 78$ .) At first sight it appears slow, but the crotchet is fast at  $\text{♩} = 234$ , and it permits the horns, trumpets and trombones to place their syncopated notes clearly without unbalancing the ensemble, or, at the worst, initiating a scramble after bar 327. The change to the new tempo at bars 23, 189 and 267 is perfectly simple if two crotchets of *Bedeutend langsamer* equal three crotchets of the *Molto vivace*; thus  $\text{♩} = 78 = 156 \div 2$ , or  $\text{♩} = 156$ . These new crotchets will also equal those in the trio.

Strings begin with a crisp staccato; the wind staccato in bar 6 must be very short and the quavers in bar 7 must not be hurried; trumpets only *forte* in bar 15 but *ff* two bars later; trombones and timpani only *forte* in bar 15, but the timpani should support the orchestra with accents, and play *ff* with the trombones four bars later, adding further accents in bars 15 to 17. *Bedeutend langsamer*  $\text{♩} = 156$ ; 2nd violins *mp* and *hervortretend*. Between bars 31 and 46 the figure in the flutes, oboes, clarinets and 1st and 2nd trumpets should be clearly audible without covering the strings. At letter A *Allmählich wieder ins schnelle Tempo*, *Allmählich—gradually*, so that the tempo *vivace* is regained by the time the trombones reach their *ff* in bar 63. The horn and trumpet accents in bars 63 and 65 should be strong, and I reinforce these with accents in the timpani; timpani crotchets in bar 78 *pp* but audible. The *crescendo* in violas and cellos in bar 105 up to *mf* at the end of bar 107, and violas *mp* at 136 and 142, and *mf* at 148. If horns, trumpets and trombones play *ff* as indicated between 159 and 169, the material in the clarinets, 2nd violins and violas will be lost. I suggest inserting the following nuances: flutes, oboes, horns, trumpets, trombones and 1st violins *diminuendo* from bar 159 to *mf* in 162; and flutes, oboes and violins *forte* in bar 179; trumpets *mf* in 179 and trombones a *diminuendo* in 179 to *forte* in the following bar. The writing between 189 and letter K consists of an interplay of thematic fragments and demands the most transparent tone from all parts of the orchestra. Unless a clear melodic line is chosen in performance, the listener is left with a nebulous impression. There are numerous possibilities, of which the following scheme may serve as one. After the first two bars of flute solo, the second violins play *en dehors* until letter G; the flute takes over until letter H. From this point the melody passes to the 1st violins for four bars, then to the 2nd violins for four bars, followed by the 1st violins again. The quavers in the trumpets and trombones in the bar before letter J should be staccato. From K to bar 310 as before, but the added details clearly audible: bar 249, horns *mp dolce*; bar 292, 1st horn *en solo*; bar 315, flutes, oboes and clarinets *fff*, horns, trumpets and trombones *forte*. Before letter O the sound must melt away so that the *ff* comes as a surprise; the timpani entry very heavy.

Trio. *Im gleichen Tempo*  $\text{♩} = 156$ . The scoring here is quite clear. I

would favour bringing the violas and cellos well forward from bar 41. Horns, cellos and 2nd violins should also be brought into relief as they enter after bar 65, 2nd violins *forte ma dolce*. After E the imitation between trombones and horns must be distinct; 2nd oboe alone (i.e., 1st oboe *tacet*) in the bars before letter F. The violin entry at bar 138 must be firm—*mp*—and this charming cadence, so rich in harmonic invention, must not be glossed over. An expressive accent in bar 141 on the B natural in the 2nd violins and on the G in the cellos will bring the harmony into greater relief.

Finale.

This monumental structure falls into two parts.

The first exposes all the material used in the second, of which it is just half the length. It consists of 210 bars and unlike the exposition of a sonata all its elements are clearly separated. After the retrospective introduction, the 1st theme, subject of a fugal exposition, modulates to F major. This is followed by a lyrical section, a happy contrast to the academic severity to be encountered throughout much of the movement. It begins in D $\flat$  major, the flattened sixth degree of F. This is fortuitous, for although the composer has bound the tonic and flattened sub-medi-ant closely together in the 1st subject of the 1st Allegro, and at other points throughout the work, it is a relationship with which Bruckner's symphonies abound. This leads to a full close some seventy bars later. At letter F comes material used in the second part as a vehicle for introducing the 1st theme from the first movement. It takes us to the final section, the chorale, with which the first part comes to an end. This "exposition" ends in F major, the dominant key.

In the second part, which might be called the Principal Section, we shall encounter the four subdivisions of the first in the same order but with two great differences; the first theme is replaced by a double-fugue, which is introduced by a fugal exposition on the head of the chorale, and a short coda reintroducing the first theme from the first movement makes its appearance after the restatement of the lyrical section and the material from letter F. This coda, in fact, incorporates the chorale which brings to an end this section, as it did the first.

We have considered at some length the tempi to be adopted, and the orchestration presents no problems as far as bar 210. Adagio  $\text{♩} = 58$ , Allegro moderato  $\text{♩} = 116$ . The clarinet must take care not to produce his solo as a humorous interpellation. It is not so intended. Allegro  $\text{♩} = 128$ ; care must be taken to observe scrupulously the change of nuance between *p* and *pp* in bar 15 and *mf* to *p* in bar 19. Adagio; the triplet-crotchets equal 87 MM as above. The octave which makes its appearance in each reminiscent fragment, by the clarinet in the first, the trumpet in the second, and the flute in the third, must be audible. After letter A it may be necessary to reduce the *ff* in the supporting voices so as not to cover the lower notes of the subject at each entry. Any concession to the subject must not be accompanied by a weakening of the rhythmic impulse. Give the lyrical theme an opportunity to sing after letter B at approximately  $\text{♩} = 96$ . It is amusing to find Bruckner writing *hervortretend* in all the string parts, and adding a footnote that the violas and cellos must be more *hervortretend* (predominant) than the rest! Here I seize upon "a Performer's Rights" as an excuse for ignor-

ing this instruction, and bring forward the melody in the 2nd violins as far as *pp* where I allow both sections of violins to lead the way. The *pp* in bars 75 and 77 are most important. From bar 77 woodwind, horn and trumpet take over the melodic line. From letter C I turn the bowing upside down, beginning the bar with an up-bow. This is more convenient in view of the ensuing nuances. Here, *Etwas mehr langsam* may be held at  $\text{♩} = \text{circa } 92$ , and the tempo returns to  $\text{♩} = 100$  at D, from which point the oboes give sufficient support to the 2nd violins: *pp* crescendo followed by *pp subito* and *crescendo* are to be carefully observed. From bar 113 to 116 cellos and violas must come well forward, and from bar 129 the violas *en dehors* for two bars, then 2nd violins for two bars, and violas and 2nd violins again at bars 133 and 135 respectively. At letter F we return to  $\text{♩} = 116$ . A faster tempo at this juncture would cause a break at a point in the movement when it must be averted. We shall be hard put to smooth out the differences of tempo demanded by the music a few bars later before the entry of the chorale, and abrupt changes of tempo at these two points would intimate contours in the form which are not there. A disregard of the structure of the movement, in fact. Intonation is often questionable in the strings between bars 141 and 144, and should be rehearsed carefully. In the wind band the staccato minims should be half their true value, and they must always be cut off with utmost precision. It is this that will give them their staccato characteristic. To my mind an *accelerando* after bar 150 should be avoided, for if we are to establish a tempo suitable to the chorale by the time we reach letter H, at the same time making our change of tempo as little noticeable as possible, an *accelerando* will only add to our difficulties unnecessarily. Naturally, an increase to  $\text{♩} = 120$  may lie in the performance, and to hold the orchestra rigidly would be a mistake. But from bar 167 the *rallentando* to the tempo demanded by the chorale should begin so that at letter H the new tempo is established. There is a good case for maintaining a certain impetus, for the chorale returns at the end of the movement in augmentation. In order to create the impression, on the other hand, that the version at letter H and that at bar 583 are in the same tempo (thus destroying the effect of the augmentation) we could announce the chorale at  $\text{♩} = 64$ —very playable and broad—and at twice this speed,  $\text{♩} = 128$ , at the end of the symphony. It will be remembered that  $\text{♩} = 128$  was the tempo of the first subject in the first movement. But as one arrives at the final phrase in the exposition, for want of a better term, it is not the moment to halve the tempo. The enthusiasm of practical musicians often carries them away to the detriment of theoretical considerations, and in the academician inspiration is often bogged under by scholarly prejudice. So it is in everything. A man's strength becomes his weakness. In this particular situation much must be left to inspiration. I should suggest reducing the tempo to approximately  $\text{♩} = 84$ . This will "expose" the chorale with dignity and still permit the exposition to flow forward towards the Principal Section. Once more we encounter the question of the trumpets. Here the horns and trombones are placed fairly high, but the trumpets are playing relatively low. The old trumpet in F would be in a higher tessitura and a better match for the other brass instruments. We must see, then, that the 1st trumpet is

never covered, and that the first crotchet in bars 178, 184, 192 and 196 is held to its full value.

The Principal Section follows on from the calm conclusion of the exposition. We now embark on an extensive double-fugue. It needs careful reconstruction, and on no account should we consider omitting 101 bars between letters L and Q. This omission robs the movement of all but a fugal exposition, and the double-fugue is suppressed. In the few bars of introduction which modulate to the flattened sub-mediante of B $\flat$ , the last crotchet of the horn solo should be played *tenuto*, and the corresponding crotchet in bar 220 should also be held. The tempo was set at approximately  $\text{♩} = 84$  by the chorale, and it is from this that the *ruhig gestrichen* entry of the violas sets out. By the gradual gathering of momentum it reaches  $\text{♩} = 116$  to coincide with the entry of the first theme of the movement at letter L. This change of tempo should be imperceptible. The sudden changes of nuance to *pp* in bar 229 and *ppp* in the following bar should be noted, and also those in bars 245 and 246. The fugal writing offers so many possibilities to the interpreting artist that one can reveal new treasures to the listener every time it is performed. It is transparent and every detail can easily be heard. A curious effect is produced by the *molto ritenuto* at the end of the fugue. Bruckner obviously saw the need for a considerable change of tempo before letter R, but I am unable to persuade myself that it is correct to interpret this as *subito molto ritenuto* at bar 390, for the resulting deceleration produces a kind of tottering, the humorous effect of which is quite unintended and totally unsuitable in this context. The purposeful forward movement of the fugue may well have brought us to  $\text{♩} = 124$ , and the *molto ritenuto* will have to bring us back again to  $\text{♩} = 96$ , as at letter B.

Here the 1st violins lead the way. At letter T *Früheres Tempo* is missing in the score, but there is no doubt that it should be inserted. Looking forward to letter V, we have a different situation to prepare for than we had at F. Whereas there the climate had to be prepared for the chorale, here we have to consider the reappearance of the first theme from the first movement. This will receive rhythmic support from the trombones, reminiscent of the first theme of this finale. At letter V, then, the tempo will be brisk to accommodate these two elements. After bar 454, we shall have to advance to  $\text{♩} = \text{circa } 120$  at V. It is not unlikely that the tempo will have gone forward a little before letter U. The sixteen semiquavers in bar 140 make a delightful background chatter between horns and trumpets if it is distinct. Flutes, clarinets and oboes must be heard in bars 454/455. The strings and brass must allow flutes, oboes and clarinets to be heard at bars 462/463, and 470/471 in as far as this is practicable without destroying the mass of sound. Greater clarity will be assured by making the following changes in nuances: Horns I and II *forte* in bar 464, *ff* in 467, *f* in 472, *ff* in 475; trumpets I, II and III, bar 464 *forte cantabile*, 465 *crescendo*, 466 *ff*, the same in bars 472 to 474; trombones, bar 464 *forte*, 465 *crescendo*, 466 *ff*, also in bars 472 to 474 respectively, from bar 476 *forte marcato*; strings, bar 467 *mf*, 468 *ff*, 475 *mf*, 476 *ff*. Horns must be clear in bars 468 and 475. The main interest is centred in trumpets. Timpani must be heavy in bar 480. From bar 486, the music subsides temporarily for the last

time. This corresponds to the analogous passage just before letter H, and as we took time over the rising minims in the bass to prepare for the chorale, so we can take time now before the quavers in the violins at letter W. These must be played *legato cantabile*.

Once again I am content to let the music begin at about  $\text{♩} = 112$ , for we must bear in mind the re-entry of the chorale and the enormous build-up of emotional tension upon which it is to be launched. The orchestra must not be permitted to advance with the crescendo from bar 500, and the *ppp subito* in bar 512 is of great importance, to say nothing of the *pp* which precedes it. The following alteration in nuances not only assure greater transparency, but they also keep in reserve the artillery we shall be calling for a little later: Horns, *f* at letter X, *ff* at bar 525, Horn III *f* in 526, horns I and II *f* in 527, all horns, *ff* in 529, horns III and IV *f* in 530, *ff* in 531 with horns I and II; between letters X and Y, trumpets and trombones only *forte*, trombones *cantabile*; 1st violins *mf*, 2nd violins *fff*, violas *mf* in bar 525, at the  $\sharp$  in bar 529, and in bar 531. By letter Y the tempo may have increased to  $\text{♩} = 128$ , and to  $\text{♩} = 132$ , by bar 560. Between bars 538 and 545 the first trumpet, the trombones and horn figure in bar 544 must all come forward. The crescendo from 551 must come from a real *pp* and must grow evenly and relentlessly as far as letter Z. I am in favour of holding the orchestra well in hand from about bar 560, so that without making a deliberate *rallentando*, we can still bring about an impression of breadth at about  $\text{♩} = 120$ . These nineteen bars approach to the chorale constitute one of the truly colossal moments in symphonic literature. The horns' crotchets must come through in bar 565 and horns III and IV should double I and II in bar 567; trumpet III well forward in 571, as also his first two crotchets in bars 573 and 575; the 2nd trombone and 3rd trumpet must be *clearly heard* all the way from bar 575 to 582, where the entry of the *timpani* must be heavy.

Since the extra brass band was first used, it has been thought advisable to double the brass instruments in the chorale. In fact this is unnecessary. No performance of this symphony should be postponed because of the cost of extra players, for the chorale is well represented in the orchestra, and is sufficient to give the symphony the mighty ending it needs. The tempo should not be held back on arriving at this point. The tension which has been generated from letter W has reached its peak, and a calculated slackening to a new tempo would rob these final pages of their momentum, the very quality for which we have been preparing throughout the whole of this second part. Without the support of the horns between each phrase of the chorale, the melodic predominance would flag. It is therefore of the greatest urgency that the horns should support the structure to the best of their ability.

This symphony is one of Bruckner's greatest works, and the difficulties of playing it are not insurmountable even for the least pretentious orchestras. It is hard to reconstruct, but its problems are similar to those encountered in any symphony of such dimensions and they are certainly no justification for this truly magnificent work receiving few performances. Like any other great musical creation, it makes demands upon the

listener, but we, the performers, enjoy the privilege of so handling this mighty work that its wonders unfold intelligibly and so blend together as to reveal in its full greatness the total expanse of this centre-arch of Bruckner's symphonic output.

---

KILENYI BRUCKNER MEDAL AWARDED TO  
ROBERT SIMPSON

In appreciation of his efforts to create greater interest in and understanding of the works of Anton Bruckner, the Directors of the Bruckner Society of America awarded to Robert Simpson the Bruckner medal designed by Julio Kilenyi for the exclusive use of the Society. Dr. Simpson has lectured widely on Bruckner in Great Britain, has written analyses of his music for *The Listener*, *Music Review*, *CHORD AND DISCORD*, as well as for other periodicals, and has addressed audiences (with illustrations by the orchestra) at two successive Bruckner Festivals in London. As this is written Dr. Simpson is engaged in planning a complete Bruckner cycle for BBC's Third Program to be broadcast some time during 1962-63.

## IN MEMORIAM

BRUNO WALTER

Revered, honored, and loved throughout the entire world during his lifetime, Bruno Walter will forever be looked upon as one of the very great conductors of all time. His model performances of much of the orchestral and operatic repertoire will not fade from the memories of those who heard and saw him and for the future the legacy of recorded performances he inscribed will bear testimony for all times to his profound and deep insight into the works he chose to record, not to be sure for his own glory but for the illumination of the music itself. It was ever his wish to unfold to his audiences the heart and soul, the inner meaning, and the beauty of the masterpieces he was conducting. To this ideal he was dedicated and all the riches of the world of learning and art were his to help reveal the composers' thoughts. In his book, *Gustav Mahler*, and his autobiography, *Theme and Variations*, he sets forth in plain, honest terms his philosophy of music and with modesty recounts the even now legendary days of the first decade or so of this century.

Walter's career, which began at the Vienna Court Opera in 1901, extended through heights not since equalled in Munich from 1913 to 1922. After five years at the Charlottenburg Opera in Berlin, he conducted the Gewandhaus Concerts in Leipzig from 1930-1933. In 1934 he returned to Vienna and while there he laid the foundations for the Salzburg Festival tradition. In 1939 he came to the United States and made this country his home. Following the war he made numerous visits to the scenes of his early successes and everywhere was greeted with a warmth of affection few conductors had ever before been accorded, for audiences wanted to express to this great but humble person the same spirit of kindness and sincerity he showed toward them. Orchestral musicians in particular always welcomed him on the podium. They sensed his spiritual affinity with the music being performed and gave their utmost to this man who patiently sought their best efforts.

The musical domains of Mozart, Haydn, Beethoven, Schubert, and Brahms, concert-goers grew to look upon as belonging more to Walter than anyone else. Yet the composers toward whom Walter exerted his greatest powers and with whose music he will forever be linked were Bruckner and Mahler. To Mahler he was friend, associate, and disciple and his faith in Mahler's mighty creations never wavered. The last two works of Mahler—*Das Lied von der Erde* and the Ninth Symphony—he introduced to the world after Mahler's death. To Bruckner, whose music he acknowledged he came to understand only after a long period of time, he was equally devoted, feeling increasing power and beauty in this music as his life progressed. It was not easy for him, when he first came to the United States, to program Bruckner and Mahler every time he wished, but even in the face of difficulties, "What matters before all," he stated, "is to 'carry on' with performances of these masters and this I certainly will do as long as I live." Walter did carry on, and lived to see the time when the musical world prayed that his life would extend long enough to allow him to record all of Bruckner and Mahler. This time did not come to pass, but the works he did record are now treasures for eternity. We will always have Bruckner and Mahler, and what is more, with Bruno Walter conducting.

BRUNO WALTER

1876 - 1962

## MAHLER'S FIFTH SYMPHONY

By PARKS GRANT

The organizational scheme of Gustav Mahler's *Fifth Symphony* is unique. Its five movements are grouped into three larger parts, in other words there is a twofold plan of division. The arrangement is:

**PART I.** FIRST MOVEMENT. "Funeral March." *In gemessenem Schritt. Streng. Wie ein Kondukt.* C-sharp minor, 2/2 time.

SECOND MOVEMENT. (No title.) *Stürmisch bewegt. Mit grösster Vehemenz.* A minor, *alla breve* time.

**PART II.** THIRD MOVEMENT. "Scherzo." *Kräftig, nicht zu schnell.* D major, 3/4 time.

**PART III.** FOURTH MOVEMENT. "Adagietto." *Sehr langsam,* F major, 4/4 time.

FIFTH MOVEMENT. "Rondo-Finale." *Allegro giocoso. Frisch.* D major, *alla breve* time.

The concept of divisions-within-divisions had already appeared in the same composer's *Third Symphony*, where the first of six movements forms Part I, the remainder, Part II.

The object in the case of the work at hand might be to clarify the nature of thematic quotations from one movement to another, *i.e.*, the cyclic procedure, for a theme from the first movement reappears in the second (both Part I), and one from the fourth movement comes back in the fifth (both Part III); however, if the third movement carries references to the first and second, or if any of it returns in the fourth or fifth, except in the matter about to be mentioned, these allusions are too subtle for the present writer's eyes and ears.

An additional but less obvious cyclic element reaches into all five movements. It is a three-note germinal motive consisting of the rise of a whole-step followed by that of a half-step. This motive appears many times, notably in the principal subject of each movement. It might be well to take time to mention these occurrences.

First movement: first three notes. (See *Example 3*.)

Second movement: first five notes. It moves first upward, then downward, like a miniature palindrome. (See *Example 6*.)

Third movement: notes 4, 5, 6. (See *Example 10*.)

Fourth movement: notes 2, 3, 5. The fact that the fourth note is a repetition of the third is not an interruption. (See *Example 13*.)

Fifth movement: inverted (*i.e.*, going downward), as notes 2, 3, 4; also in retrograde motion, as first three notes of the "alto" voice. (See *Example 15*.)

In addition to the usual string section of first violins, second violins, violas, cellos, and double-basses, Mahler's *Symphony No. 5* is scored for the following instruments:

- 4 flutes, all alternating with piccolo.
- 3 oboes, one alternating with English horn.
- 3 clarinets, one alternating with D-clarinet and bass-clarinet.
- 3 bassoons, one alternating with contrabassoon.
- 6 horns.
- 4 trumpets.
- 3 trombones.
- tuba.
- timpani.
- bass drum.
- cymbals.
- snare drum.
- gong.
- glockenspiel.
- harp.

There is an additional percussion instrument (in the third movement) called *Holzklapper*, literally "wood rattle." It is not clear to the present writer whether Mahler had in mind the castanets or the wood-block. Or was it the slap-stick? Or perhaps some unusual instrument?

All music quotations in this article are made by the kind permission of the C. F. Peters Corporation, 373 Park Avenue South, New York 16, N. Y., who publish a pocket score of the work and from whom rental performance material is available. References to rehearsal letters and page numbers are to the Edition Peters miniature score No. 3087, copyright 1904, renewed 1932.

Let us now pass on to an analysis of the individual movements.

#### FIRST MOVEMENT

One searches his memory in vain for another symphony that begins as does the *Fifth* of Mahler—with an unaccompanied trumpet solo of  $11\frac{1}{2}$  measures. (See *Example 1*.) Though not the principal subject,

Ex. 1

Trumpet

this theme nevertheless plays a prominent role. The heavy, funeral-marchlike mood is then established, and at the fourth measure after rehearsal number 1 the horns announce a refrainlike motive. (See *Example 2*.) It is due to reappear twice during the course of the movement, though in other instruments.

## Ex. 2

Horns

The principal subject begins with the upbeat at rehearsal number 2. (See Example 3.)

## Ex. 3

1st Violins, Cellos

Violas, Clarinets, Bassoons

Double-Basses, pizzicato

## Ex. 4

Woodwinds

Violas

Cellos

Double-Basses  
Contrabassoon

Horns

Tuba, D.B.  
Contrabassoon

Detailed description: This musical score for Ex. 4 is written in B-flat minor (three flats) and 4/4 time. It features six staves. The top staff is for Woodwinds, the second for Violas, the third for Cellos, the fourth for Double-Basses and Contrabassoon, the fifth for Horns, and the sixth for Tuba, D.B. and Contrabassoon. The woodwinds and violas play a melodic line with eighth and sixteenth notes. The cellos and double basses play a simple harmonic accompaniment with long notes and rests. The horns and tuba play a rhythmic accompaniment with quarter notes and rests.

Oddly enough the violins are soon given a four sharp key-signature while the rest of the orchestra continues with four flats, yet without the slightest suggestion of bitonality.

A very short reminiscence of the trumpet theme leads to a new section, a stormy and wild outburst in B-flat minor. It begins with a wide upward skip which then falls back a half-step—a motive destined to figure prominently in the second movement (and a further cyclic element). A reminiscence of the "trumpet theme" does not divert the rest of the orchestra, and soon is announced a theme (in G-flat minor) of which there have already been suggestions, and which will return later. (See *Example 5*.) The outburst grows more frenetic, but just before 11

## Ex. 5

Violas

Detailed description: This musical score for Ex. 5 is written in B-flat minor (three flats) and 4/4 time. It features two staves for Violas. The first staff shows a melodic line with eighth notes and triplets. The second staff shows a similar melodic line with eighth notes and triplets, but with a key signature change to G-flat minor (six flats) indicated by a double flat sign (bb) on the first note of the second measure.

the first trumpet comes in with an abbreviated version of the "trumpet theme" (*Example 1*), as if sternly demanding a return to order. The music moves back to C-sharp minor, the "refrain" appears in the tuba, and at 12 the woodwinds announce material which unmistakably recalls the principal subject—seems to be a long-postponed continuation of it. Meanwhile the strings have so little to do for 31 measures that the orchestra almost sounds like a band.

Just before 14 the subordinate theme returns quietly, this time in D-flat major, the "tonic minor" in enharmonic equivalent.

Ten measures before 15 (min. sc., p. 39) the woodwinds conclude a phrase with a four-measure fragment taken from the first song in the *Kindertotenlieder* song-cycle. Is this self-quotation deliberate or subconscious? One should remember that the two works were composed at about the same time.<sup>1</sup>

After the timpani softly suggest the "trumpet theme," there is a quiet section in A minor based on a combination of new and old material. The upward leap of a minor ninth, falling back a half-step, may be found in the unobtrusive accompaniment. In the next movement it will assume major importance. The choice of key at this point may also be a preparation for the second movement.

The theme in *Example 5* is worked in, once (in varied form) as a countermelody strikingly divided relay fashion between two trombones, and the outburst that was originally in B-flat minor is suggested. Things soon quiet down under the influence of the "trumpet theme," and after some striking modulations a reference to this same theme closes the movement, with the flute taking over for the last four notes.

#### SECOND MOVEMENT

The second movement (the only one without a special title) is a hustle-and-bustle, purposely confused-sounding work of a type that sometimes turns up in Mahler. It foreshadows the "Rondo-Burlesque" of the *Ninth Symphony*. A vehement five-note motive (see *Example 6*)

#### Ex. 6

Cello, Double-Basses  
With Bassoons & Contrabassoon

is followed by a theme with a bold upward skip which then descends a half-step (and sometimes goes on) for which several passages in the first movement have prepared us. (See *Example 7*.) The material ap-

<sup>1</sup> In the fifth movement (min. sc., p. 222-223) there is a very brief quote—perhaps just coincidence—from the song *Lob des hohen Verstandes*. See Warren Storey Smith's article "Mahler Quotes Mahler" in *CHORD AND DISCORD* for 1954. Mr. Smith also believes the second movement of *Kindertotenlieder* is quoted in the fourth movement of the present work.

## Ex. 7

Woodwinds

Violins

The musical score for Ex. 7 consists of two staves. The top staff is labeled 'Woodwinds' and the bottom staff is labeled 'Violins'. Both staves are in G major (one sharp). The woodwinds part features a rhythmic pattern of eighth notes and rests, with some notes beamed together. The violins part features a melodic line with eighth notes and a final phrase with a half note and a quarter note.

pearing meanwhile in the trombones should not be overlooked, for it reappears several times during the movement, sometimes rather shortened, sometimes much so, often with the chords falling on beats that shift the original accent. It even appears overlapped on itself at 19 (min. sc., p. 83).

At 2 begins a more sustained, seething section, based strongly on the already-prominent upward leap of a ninth or its contraction the minor second.

The wild hurly-burly quiets down, and at 5 there is a more tranquil section in F minor. The upward minor ninth followed by the drop of a half-step remains as one of two accompaniment-figures, the other being a rhythmic-harmonic pattern which takes one or the other of the three forms shown in *Example 8*. It may be derived from background material

## Ex. 8

Flutes

Clarinets

Bassoons

The musical score for Ex. 8 consists of three staves. The top staff is labeled 'Flutes' and the middle staff is labeled 'Clarinets'. Both are in F minor (two flats). The flutes part features a rhythmic pattern of eighth notes and rests, with some notes beamed together. The clarinets part features a rhythmic pattern of eighth notes and rests, with some notes beamed together. The bottom staff is labeled 'Bassoons' and features a rhythmic pattern of eighth notes and rests, with some notes beamed together.

in the A minor section of the first movement. The theme itself, in the cellos, is one of those typically Mahleresque subjects that stubbornly insists on gravitating around one certain note, in this case A-flat.

At 7 comes a theme (see *Example 9*) which seems to be expanded

## Ex. 9

The image shows two systems of musical notation for strings. The first system is labeled "Strings" and is in E-flat minor (three flats). It features a treble and bass staff. The music consists of eighth and sixteenth notes with triplet markings. The second system continues the piece with similar rhythmic patterns and triplet markings.

from material that appeared in the turbulent section of the first movement.

The music returns to A minor. A full-dress restatement of the opening theme would seem to lie ahead, but actually it soon dies out.

Over nothing but a timpani roll the cellos meditate to themselves in E-flat minor. Other instruments join in, but cellos are in the spotlight for fully 25 measures.

Then the theme that the cellos first announced in F minor appears, now in E-flat minor, in horn octaves, with an accompaniment based on the rhythmic patterns of *Example 8* and of the upward leaps. The theme shown in *Example 9* soon joins with this material, still in E-flat minor.

The music grows more agitated. Suddenly and quietly, in B major, a quotation from the subordinate theme of the first movement interrupts. Mahler has given us a stroke of genius, for curiously its initial three notes are missing; hence the passage seems to have wandered into the picture from out of the past. Soon we are back with the rhythmic pattern (*Example 8*) and the background of upward leaps, which usher in a rather martial section in A-flat major, with many triplets. It leads through some sustained music in the brass, also featuring upward leaps, to a return to the wild turbulence of the principal section, again in its characteristic key: A minor. There is another "seething" section, this one in E minor, but based on the "cello" theme and with the rhythmic figure and upward minor ninths in the background. Mahler again combines themes and motives! With the same background the theme shown in *Example 9* returns at 23 (min. sc., p. 92), this time in F minor.

The music becomes heavier and more sustained by the time figures 25 and 26 are reached. At 27 the brilliant brass in D major momentarily suggest that this wild movement will end in a blaze of triumph. Here the harp appears for the first time in the symphony, playing glissandos and arpeggios. But the triumphant passage, like so much else that has already appeared, dissolves, and the wild opening section is back with us, this time in D minor.

A movement that has run the gamut of possibilities might seem planned to conclude in the wild uproar with which it began, but it does not. We are in for a surprise. At 33 (min. sc., p. 113) there is a section of almost elfin delicacy in A minor, obviously a coda. It features string harmonics and subtle bits from woodwinds and harp. The passage seems akin to the so-called "cadenza" near the end of the first movement in the *Ninth Symphony*.

The rhythmic pattern (*Example 8*) and upward minor ninths steal in just before the very end.

Mahler directs that a long pause should follow.

#### THIRD MOVEMENT

The third movement, entitled "Scherzo," is one of several symphony movements by Mahler influenced by the Ländler, a type of Austrian country waltz. Others are I:2, IV:2, IX:2, parts of VII:3, and to some extent II:2 and II:3. A horn is featured prominently in it, marked "Corno obbligato," though the total number of horns is reduced from six to five.

The movement opens in D, the mood jaunty, rather vigorous, perhaps a bit satirical. (See *Example 10*.) As various sections of the orchestra

Ex. 10

The image shows two staves of musical notation. The top staff is labeled "4 Horns" and "Obbligato Horn" and contains a single melodic line in treble clef with a key signature of one sharp (F#) and a 3/4 time signature. The bottom staff is labeled "Clarinets & Bassoons" and contains a complex accompaniment with multiple voices in treble clef, featuring chords and moving lines.

join in, one is struck by the highly contrapuntal nature of the work. The strings tend to have wide skips and to soar unrestrained over the musical canvas.

At 2 the violas begin an eighth-note figure which becomes an accompaniment for the woodwinds. These eighth-notes will later prove important.

Continuations and variants of already-presented material occupy the attention until an abrupt pause just before 6. Then, *etwas ruhiger*, the strings introduce an exceptionally graceful subordinate theme, which is

in B-flat major. After only 38 measures of it, we return at 7 to the original key, tempo, and theme, but in varied form—for exact repetition is almost unknown in Mahler.

At 8 the eighth-note figure comes back, starting in D, then going by way of F-sharp minor and A major to F minor. The trumpet announces, and woodwinds later continue, a short figure (see *Example 11*) soon to achieve prominence. Presently, with the separate directions

Ex. 11

"ruhig" and "langsamer," unison horns announce a quiet theme, also soon to become important, with the eighth-note figure as woodwind background. (See *Example 12*).

Ex. 12

At 10 (min. sc., pp. 134-135) there is a curious pausing, echoing effect, followed by hesitation, based on the theme in *Example 12*. There is some memorable echo-style interplay between the obbligato horn and the stopped first horn. It is sheer magic.

Then solo pizzicato strings begin a striking mandolin-like passage in D minor, with the material of *Examples 11* and *12* as basis, also the slightest hint of the subordinate theme. A heavily legato section continues, with effective use of short pedal-points. A variant on *Example 12*, with skips of sometimes as much as an octave and a fourth, enters at 13 in the trumpet, later taken over by the horn. The eighth-note figure accompanies.

Under the direction "*a tempo molto moderato*" the strings introduce a distorted version of the formerly lilting subordinate theme, and the music grows wild and grotesque, foreshadowing VII:3 and especially IX:2. Suddenly, at 17, the horns tumble us unceremoniously back into the key of D and a varied restatement of the opening theme, whose easy-going jollity is by now welcome.

Boisterousness soon increases. At 22 the theme of *Example 12*, accompanied by the eighth-note figure, returns. A more quietly mysterious version, with the ever-present eighths, begins in A minor with the direction "*das Tempo unmerklich etwas einhaltend.*"

Previous thematic material continues, sometimes quietly, sometimes noisily. Mahler makes new melodies out of juxtaposed snatches of old ones, contrapuntally combined with still others, until there are several hesitating passages based on the *Example 12* melody, and again with some wonderful dialogue between two horns, one of them muted. The mandolin-like material, with the eighth-note figure, soon joins in.

## Ex. 14

1st Violins

Violas

The image shows two staves of musical notation. The top staff is labeled '1st Violins' and the bottom staff is labeled 'Violas'. Both staves are in G-flat major (one flat) and 4/4 time. The 1st Violins part features a melodic line with eighth and sixteenth notes, while the Violas part provides a harmonic accompaniment with similar rhythmic patterns.

the key of G flat major. After modulations through several additional keys, always in a very lyrical style, there is a return to the principal key—F major—the melody being in the second violins. It begins in augmentation but almost imperceptibly returns to the original values ("imperceptibly," that is, to the ear of the listener rather than to the eye of the score-reader).

Again the music works up to a climax, and again it comes on a "tonic six-four" chord. The subsiding of the climax to a perfectly-planned conclusion is handled in a masterly yet very simple manner.

Throughout this movement—one of the most eloquent and restful compositions imaginable—Mahler makes remarkably effective use of non-harmonic tones, especially suspensions and appoggiaturas. The Adagietto is the quintessence of late Romanticism.

There is a direction to go right on to the last movement ("*attacca Rondo-Finale*").

## FIFTH MOVEMENT

The last movement opens with the single tone A in a horn, answered by the A an octave lower in first violins. The preceding movement had this very same tone at the top of its final chord. Is Mahler reluctant to leave the lovely Adagietto?

After some pastoral dialogue in woodwinds and horn, deceptively casual, the principal theme is announced in horns, bassoons, and cellos, with woodwinds continuing. See *Example 15*.

## Ex. 15

Horns

Cellos & Bassoons

The image shows a musical score for two parts: Horns and Cellos & Bassoons. The Horns part is on a single staff in G major (two sharps) and 4/4 time, featuring a melodic line with quarter and eighth notes. The Cellos & Bassoons part is on a grand staff (treble and bass clefs) in the same key and time, providing a harmonic accompaniment with chords and moving lines. The two parts are connected by a brace on the left.

Woodwinds

The musical score for Woodwinds consists of two staves. The upper staff is in treble clef and the lower in bass clef, both with a key signature of one sharp (F#). The music features a complex texture with multiple voices, including a prominent eighth-note figure in the upper voice and various chordal structures. A line connects a note in the upper staff to a note in the lower staff, indicating a specific interval or relationship.

At figure 2 the cellos announce a busy eighth-note figure (see *Example 16*), taken up in fugal style by other instruments. As this proceeds

Ex. 16

Cellos

The musical score for Cellos consists of two staves in bass clef with a key signature of one sharp (F#). The music features a busy eighth-note figure that is repeated and varied across the two staves, illustrating a fugal style.

we note that certain countersubject material was foreshadowed in that deceptively casual introduction.

Suddenly a rude B-flat intrudes, and four measures later an even ruder E-flat; yet only for a moment do they steer us astray from the confidence and cheerfulness of the prevailing key, D major.

Nevertheless there soon appears a section in B-flat, derived from a variant on the busy fugal theme, against which unison horns announce material soon to become important. See *Example 17*.

Ex. 17

4 Horns

The musical score for 4 Horns consists of two staves in bass clef. The first staff shows a sequence of notes with accidentals (B-flat, B-flat, B-flat, B-flat) and rests. The second staff shows a sequence of notes with accidentals (F-sharp, F-sharp, B-flat, B-flat) and rests, illustrating a section in B-flat.

After only ten measures of B-flat we go back to D, though again for only ten measures; then the music moves to the even brighter key of B. Soon the first violins quote a passage from the fourth movement, but in place of its former meditative quality there is now jauntiness, almost insouciance—a noteworthy example of the Wagner-Liszt "transformation of theme" principle.

This reminiscence closes in a brief codetta of crystalline delicacy that one of the French impressionists might have been glad to call his own.

The music moves through such a bewildering series of keys and with such a constant succession and intermingling of themes, both old and new, that one relinquishes any attempt to describe it properly. In fact, the whole symphony is such an amazing web of sounds that a description or analysis seems not only inadequate but an immodest and presumptuous thing to have undertaken. Quotations from the fourth movement appear again, combined with material from the present movement. Even the "impressionist" passage returns, this time in cut-glass woodwinds.

Years ago, in *Symphonies and Their Meaning, Third Series*,<sup>2</sup> Philip Goepf paid tribute to Mahler's *Fifth Symphony* with such enthusiastic expressions as "one of the most inspired conceptions of counterpoint in all music," "the full dream of a revival of the art in all its glorious estate," and "a genuine, original, individual quality of polyphonic art that marks a new style since the first in Bach and a second in Beethoven." It was specifically the last movement that Mr. Goepf had in mind when he wrote those ardent comments.

A sense of triumph comes into the music, and brilliant brass become more prominent. Between figures 21 and 22 there are so many triplets that one wonders why the composer did not change his time-signature to 6/4.

After going through several keys, and passing over a long G pedal-point, there is a short but quietly memorable passage in A-flat (except for a few measures in D-flat, the darkest key yet to appear), and then comes a delicate section in A, during which the harp appears for the only time in the movement, playing no more than four cannily-placed chords.

A march-like spirit which has already been much in evidence seems to be growing more and more prominent. It is heard in the background during a quotation from the fourth movement during a long passage in G. One should bear in mind that the relation of G to D is that of the key of the subdominant, long a favorite of composers for its psychological power to suggest an impending close. The end of the movement is not too far ahead.

We go through other keys before returning to D, where sustained and blazing brass suggest a triumphant chorale, strings and woodwinds meanwhile busy with the eighth-note figure. This leads to a wild conclusion whose frenzy of joy was probably suggested by the close of Beethoven's *Ninth Symphony*, for which Mahler had the deepest admiration.

Nine measures before the end, a suddenly-interrupting B-flat and some whole-tone scales seem to have thrown things off balance, but Mahler shrugs this aside with a brusque cadence in the principal key, D.

## GUSTAV MAHLER: PROSPECT AND RETROSPECT

By DONALD MITCHELL

A paper read to the Royal Musical Association, London, on May 11, 1961 (Chairman, Professor Sir Jack Westrup (President)), and reprinted by permission from the Association's *Proceedings*, 87th Session, 1960/61.

On 18 May, Mahler will have been dead for exactly 50 years. It is a convenient moment, perhaps, to survey, very briefly, the present state of Mahler studies and research.

It is a surprising fact, I think, that there is a need at all for the kind of research on documents and autographs that we associate with composers from the more distant past. Mahler, after all, was a public figure and lived in a glare of publicity. He was, undoubtedly, what the newspapers call "news," and that means a great deal of information about him of interest for later generations was recorded in the daily press or journals of the time.

So far, so good, one may think. But how accurate are those press reports, the advertisements, publishers' announcements, and so on, which are the very life blood of the industrious modern researcher, who pounces on a date here, a title there?

We are all of us indebted to the indefatigable Mr. Nicolas Slonimsky, that sleuth of the newspaper files, who has corrected many wrong dates and brought many forgotten dates to light. Newspapers, for him, at least for the most part, have the last word. But do they? And here I must add, that those of us associated with newspapers maintain a certain scepticism, even in the face of the daily black-and-white facts. It is, I sometimes think, the anonymous sub-editor who writes, or rather re-writes, the history that the unsuspecting reader has pushed through his door in the morning. This is not at all a flippant point. It can have all kinds of distressing consequences for the future.

Let us take one small example that concerns Mahler. The ordinary reader may well wish to know the date, place and circumstance of the première of the most popular of Mahler's symphonies, the Fourth. If he looks for the information in the 5th edition of *Grove*, he will find none of it. But Mr. Slonimsky's invaluable *Music Since 1900*<sup>1</sup> tells us that the work was first performed in Munich on 23 November 1901, conducted by Felix Weingartner. He has the date from a review in the Munich *Allgemeine Zeitung* of 26 November and from an advertisement in the paper on the day of performance.

Now Weingartner certainly was the conductor of the Kaim Orchestra in Munich, but it struck me as odd indeed that Mahler, who otherwise always conducted the premières of his works, should have made

---

<sup>1</sup> 3rd edition, New York, 1949, p. 20.

an exception of the Fourth Symphony. On the face of it, there seemed no reason to doubt Mr. Slonimsky's patient and convincing documentation. But a glance at Weingartner's autobiography solved the problem. There he makes it clear that while he conducted his part of the programme, it was Mahler who took over for the première of the Fourth Symphony. I haven't, naturally, wasted my time trying to find out why Mr. Slonimsky was misled, but it would not surprise me at all to discover that it was the newspaper that got the facts wrong. Weingartner, needless to add, goes on conducting the première of Mahler's Fourth Symphony to this day. He is on the rostrum in Deryck Cooke's excellent Mahler handbook.<sup>2</sup> Once unleashed, these errors are extraordinarily difficult to kill.

Well, that is a simple example of the kind of muddle still surrounding the bare facts of Mahler's life and music. Gradually, bit by bit, the pieces of the jigsaw puzzle are being fitted together. Gaps are being filled, misfits removed, the picture becomes a little clearer. It was only very recently, for instance, that I was able to attach a date and place to Mahler's baptism. An event of some biographical importance, one would have thought, but you will search the reference books in vain for a precise date. It seems strange that it was not until last year that someone was inquisitive enough to go along to the Kleine Michaelskirche in Hamburg and examine the baptismal register. And there, in his 37th year, Mahler was baptized on 23 February 1897. Another tiny detail has been completed. All the work that needs to be done, in this sphere alone of Mahler research, really requires the support of a generous pair of wings from, shall we say, Gulbenkian or Fulbright.

It is a biographical handicap, a crippling one indeed, that so many of Mahler's contemporaries are no longer alive to be cross-examined, to be emptied of their memories. The great upsurge of interest in Mahler and his music, postponed by the war and before that by the censorship of the Nazis, has come just too late. We have lost the possibility of sifting the reminiscences of friends and colleagues who might have helped sketch in the blank pages of Mahler's life, especially those evasive early years. (The great figures of the Mahler era, his widow, for example, and Bruno Walter, have long told us all they know.)

But even about the early years, the odd fragment of information comes in which helps one to pencil in a shadow—it's rarely anything more substantial. I have this particular period of Mahler's life very much at heart, having written, as some reviewers were not slow to point out, a whole book about Mahler's early compositions, many of which no longer exist.<sup>3</sup> I freely confess to succumbing at times to something near panic as I added yet another lost work to an already very long list. I began to wonder, not if the work was lost, but if it had ever existed.

Just such a work was an early opera, *Herzog Ernst von Schwaben*, which I supposed Mahler to have worked on in 1877 or 1878, when he was a youth of 17 or 18. I notice that my own description of the opera

---

<sup>2</sup> Published by the BBC in 1960, p. 29.

<sup>3</sup> *Gustav Mahler: The Early Years*, London, 1958.

begins, "Very little is known about this work," the libretto of which was written by a boyhood friend, Josef Steiner. Imagine my surprise, when, only a few months ago, I found that a close relative of the librettist was living in London. She was able to tell me that the projected opera was a topic of discussion in the Steiner household. More than that, she remembered the librettist picking out on the piano some of the tunes that his composer friend had imagined for the work. Steiner himself, of course, is long dead. But some 82 years after the opera was abandoned, left incomplete and probably destroyed, confirmation did come to me of the work's bodily existence. I had not, after all, been pursuing a total fantasy. It is odd how these footnotes to history come to be written.

There are some works from the early years, still extant, which have not been placed at our disposal. For familiar reasons, certain members of the composer's family sit on unpublished manuscripts which might add something to our knowledge of the young Mahler's development. (I must add here that the composer's widow is not among the squatters, though she has her compensating foibles.)

The International Gustav Mahler Society, which has its headquarters in Vienna, and correspondents in most of the countries of Europe, has been busy for some years collating and scrutinizing Mahler's sketches and autographs. This is a particularly important undertaking since it is by no means certain that the printed editions of the scores, though most of them appeared in the composer's lifetime, represent his final intentions. Hence the urgent need for yet another *Kritische Gesamtausgabe*. The first volume of the edition, a revised score of the Seventh Symphony, appeared last year. It was scrupulously prepared for publication by the President of the Mahler Society, Erwin Ratz, the distinguished Viennese musicologist.

It is true to say, I think, that Mahler was never satisfied with the instrumentation of his symphonies (he rarely altered the shape of a work). The most celebrated example of wholesale revision we find in the Fifth Symphony, of which two scores, both published by Peters, were printed. The later version greatly clarifies the sound of the earlier, and very often by the cutting of superfluous duplication; but one can also clarify, of course, by making additions, by strengthening a part through doubling, by meticulous dynamic articulation. It is amazing what Mahler can accomplish in the way of clarity by the addition of a few rests. His amendments remind us that transparent scoring is not just a process of knocking things out but as much a process of knocking things in. A comparison of the two scores of the Fifth will provide any inquiring student with ample evidence of the principles upon which Mahler worked. His unceasing anxiety to improve his scores is well illustrated by a reminiscence of Otto Klemperer, who attended the rehearsals of the Seventh Symphony in Prague, in 1908. "Every day," he tells us, "after the rehearsal Mahler took the complete orchestral material home, to improve it, polish it up and re-touch it. We attendant young musicians, Bruno Walter, Bodanzky, von Keussler and I, would gladly have helped him. He would not tolerate assistance and did

everything alone."<sup>4</sup> Typical of the man, and typical of his relentless drive after an ideal orchestral sound.

If we remember that this Klemperer experience may be applied to all the symphonies, that the re-touching went on long after the première of a work and its publication, the importance of a critical edition of the works becomes self-evident. In a very real sense every performance of a Mahler symphony under Mahler was a première. What the Mahler Society has to do is to catch up on the final première in each case and fix it in music-type. One cannot but wonder what changes Mahler would have effected in the Ninth Symphony and *Das Lied von der Erde*, works which he never himself heard.

Obviously the *Gesamtausgabe* is of the first significance. But even when that is accomplished, a wide field of musical, as distinct from biographical, research remains. We are familiar with Mahler's editions of Schumann's symphonies; but what do we know in detail of his re-touchings of Beethoven's symphonies and overtures; of Schubert's Ninth Symphony; his edition of *Oberon*; his reconstruction of Weber's opera *Die drei Pintos*; his edition of *Figaro*, which adds a scene in the interests of dramatic clarification; his suite of movements from Bach's orchestral works, for which he realized the continuo part? One never knows what sudden illumination, of Mahler or his time, one may gain from exploration of these side-paths, and others like them.

The most incidental fact, indeed, can sometimes challenge the assumptions one has held for years. I had always imagined, for example, that Mahler, one of the most celebrated European conductors of his day, must have been kept busy conducting Beethoven's symphonies. It was quite extraordinary to find from Klemperer's little book of reminiscences, which appeared only last year, that one of the reasons why Mahler enjoyed his time in America, which came at the very end of his life, was that there he had the opportunity to conduct, for the first time, the "Pastoral" Symphony. It makes an odd, if enlightening comment on the musical society of which, we know, Mahler was not always a very happy member.

One path that death decisively blocks, if the musician was born before the gramophone era, is that of performance. We can never know now what a Mahler performance was really like. None the less, rather in the same way that we can deduce the principles of Mahler's methods of revision from the comparison of different versions of the same work, we can at least estimate something of the impact and character of his performances by inspection of the scores from which he conducted. These provide, as minutely as possible within the limits of musical notation, a kind of map of Mahler's intentions. He applied phrase-marks and dynamics to the scores of other composers with the same liberality with which he showered his own. If one knows Mahler's music well, which tells us how his mind worked, and can use one's imagination, one could, I think, arrive at a clear picture of how he approached the music he conducted—though nothing, of course, can restore to us Mahler's conception of tempo. But his scores are documents of considerable in-

---

<sup>4</sup> *Erinnerungen an Gustav Mahler*, Zurich, 1960, p. 10.

terest, and some day should receive the attention they merit. My own perusal of them (the scores were very carelessly preserved in Vienna, when I saw them) did not get very far. But I saw enough to convince me that the kind of ideal articulation of sound after which Mahler laboured in his own music must have been no less prominent a feature of his performances. And much of what he wanted to achieve, though not the achievement, could be demonstrated in music-type, so meticulous and plentiful are the signs and symbols with which he adorns his scores.

There I must leave the story of Mahler studies. Much, as you have heard, remains to be done. More, indeed, than I suggest, for I have only scratched the surface of the problems. (I have not mentioned, for example, the gaps there are in his correspondence.)

You may well wonder whether we are likely to be surprised by the discovery of unknown musical autographs. Not, I am sure, from Mahler's maturity. But there is one lost early work which might still turn up. Mahler composed it when he was 23 and a conductor at the Cassel *Hoftheater*: the incidental music for Scheffel's *Trompeter von Säkkingen*, which was performed at the Cassel theatre as a sequence of "living pictures." The music was also successfully used in productions at Mannheim, Wiesbaden and Karlsruhe. Mahler quickly lost interest in what was undoubtedly an occasional piece and the work vanished. But I'm certain that there must be a set of parts buried somewhere in the archives of one of the opera houses that made use of the material.

A more tantalizing prospect—some might think it menacing—was opened up by an article which appeared in *Musical America* in 1938.<sup>5</sup> It was written by Paul Stefan, an intimate of the original Mahler circle in Vienna; but in 1938 he was an exile, and living in America, where he died in 1943. In this short article, which has received very little attention, he tells of a conversation with the late Willem Mengelberg, one of the most celebrated of Mahler's interpreters between the wars. Mengelberg claimed not only to have inspected, but to have played through at the piano, the manuscripts of four symphonies from Mahler's youth. The autographs were in the possession of the then aged Baroness Weber who was living in Dresden and had promised the composer never to permit a performance of works which he would sooner have seen destroyed. Fact or fancy? Here, of course, we're down among the dead men. Stefan is dead and Mengelberg is dead; Dresden was destroyed in the war and is now not the most accessible of cities. It is improbable that the Baroness survives. Where does one start?

The information contained in the article matches up at many points with what we know of Mahler's early life and works. He was certainly very friendly with the Weber household in Leipzig and there is no doubt that symphonies, or at least attempts at symphonies, must be counted among his early exercises in composition. Whether these Dresden manuscripts, if they are, or were, authentic, may be identified with the lost symphonies of which we have a record, or whether they represent fresh attempts, remains a wholly open question which may now

---

<sup>5</sup> Issue of 10th April, p. 20. I am grateful to Mr. Jack Diether, New York, who sent me this article.

never be answered. Perhaps an echo of this address may stimulate inquiry in Dresden itself. Meanwhile we may remark upon the irony of Stefan's article appearing in a year—1938—that could not have been less auspicious for research of this kind; both the time itself and the very nature of the subject excluded the possibility of acting on Stefan's information. Just over a year later the holocaust that many admirers thought Mahler's music presaged, consumed the Europe of which he had been a part.

His music, however—his published music—remains with us; and the centenary year has provided evidence of a most remarkable swing in Mahler's favour. The celebrations have been widespread, exhaustive and exhausting. England, which for many years was reluctant to take the plunge, has not been backward in paying generous tribute to this Austrian master. Who would have thought, ten or fifteen years ago, that a series of Mahler concerts in London would draw capacity audiences? That at the Festival Hall, an overflow audience would listen by relay to the programme that was being given in the main hall?

The historian must take note of these movements in taste. After all, the ultimate status of a composer is determined neither by critics nor by historians but by his capacity to attract and hold an audience, which feels the need to experience and re-experience his music. Historians may be the judges, critics the counsel for the defense or the prosecution; but the public is the jury.

One already hears voices, some of them influential voices, raising cries of "fashion." Composers, fortunately, are hardy annuals, at least the good ones are, and though fashion may freeze them one season and scorch them the next, they manage to survive these extremes of climate. Sibelius, I have no doubt, though now so senselessly, indeed sickeningly, downtrodden, will sprout again; perhaps a little less luxuriantly than before but still of a commanding size.

It may well be that Mahler will suffer the swings of fashion. But fashion is a two-way affair. For years, let us remember, in this country, Mahler—like some other composers—was subjected to the fashion of confident neglect. If one is obliged to choose between fashions, I prefer to rate as the more important a fashion that has its origins in aural experience of the music.

If there were historical reasons—those I concede—for the slow headway Mahler's music made in this country between the first and second world wars, there are good musical reasons, I think, for his present, relative, ascendancy. A substantial factor, undoubtedly, has been the discovery, in our own day, of Mahler's importance for some of the leading figures of twentieth-century music, not only composers of the intervening generation, like Berg and Schoenberg, but some of the most prominent composers of a later generation, often composers from a ample, or Britten. The influence of Mahler upon Shostakovich requires, musical culture quite the opposite of Mahler's—Shostakovich, for example, I think, no detailed substantiation. It is self-evident. And if one looks at a work of Britten's as recent as his last orchestral song-cycle, the *Nocturne*, one finds there, above all in the concluding song, a clear extension of Mahler's style.

The chronology of musical understanding is often capricious in actual sequence. It does not surprise me at all that a keener interest in Mahler has been stimulated by the more general awareness of contemporary music we encounter today. A growing recognition of a new musical climate he helped to create, however distantly achieved, encourages one to come to terms with his own music. The understanding of what Mahler was about, as shown by later composers, can usefully guide our own appreciation of his music. In catching up on their music, we can catch up on his, too. There is a great deal to be learnt, in fact, from listening to the history of music in reverse.

If nothing else, the centenary year has taught us, I think, that Mahler was, and is, of significance for the twentieth century. But it is one of the perils of centenaries that they unavoidably exaggerate and distort. (They also, let me add, tire a composer's friends and confirm the antagonism of his opponents. How one longs for the good old days when everyone was left in peace.)

I am particularly anxious on this occasion to avoid undue emphasis on the "prophetic" Mahler. It is all too easy to decline into a curious kind of obsessive state in which one can't hear the music for the prophecies. Linear counterpoint in the finale of the Ninth Symphony, the systematic use of fourths in the first movement of the Seventh, intimations of a conscious neo-classicism in the first movement of the Fourth Symphony and the last movement of the Seventh—all very important, true and prophetic. But there is a real danger here that in following the signposts one assumes a condition of perpetual mobility that prevents one from resting for a moment and regarding the symphonies as things in themselves, not pointers to the future.

Nonetheless, I should feel that I was failing in my duty if I did not mention a signpost that was brought to my mind only the other night when I heard Stockhausen's *Gruppen*, for three orchestras, for the first time. We live at this latest moment in a flood of news and views about musical space, stereophony, directional sound and multiple orchestras. During an idle moment in *Gruppen*—when the work, so to say, had moved away from me somewhere down the hall—it did strike me that Mahler too must be given his due as an early bird in the multiple orchestra business. The Second Symphony, in particular, which makes use of an off-stage brass band plus percussion, is rich in "stereo" effects. It was doubtless the dramatic, "resurrectional" character of the symphony that promoted the use of this device. But there is one passage in the finale in which the combination of the two orchestras gives us just those contrasts in texture and perspectives of sound which allow one to claim the passage as a clear and important historical precedent. Most significant of all, the orchestras enjoy a fair degree of rhythmic independence. My only excuse for adding yet another prophecy to the list is the fact that here we have Mahler foreshadowing the musical preoccupations of a generation of composers later than any I have previously mentioned. So far as his prophecies are concerned, Mahler seems to show a capacity to remain perpetually in fashion.

But how do the symphonies stand if we look at them as we might regard any of the other groups of symphonies by late romantic com-

posers? By Tchaikovsky, for example, Brahms, Bruckner or Dvorak? (And by the way, if I do not talk about the songs or song-cycles of Mahler's maturity it is because they have been received in a way that the symphonies have not. In general, moreover, they share the characteristics of style which belong to the symphonies in any given period.)

We shall find, I think, that Mahler's symphonies show a width of contrasts, both between works and within individual symphonies, that we do not find in any of the other composers I have mentioned. This may strike you as an elementary observation, but some elementary things are also very unusual. For example, if one places the first movements of the Second and Fourth Symphonies side by side, one finds oneself poised between two virtually opposed worlds and textures, monumental symphony on the one hand and something that one might think approaches a divertimento on the other. Mahler often referred to his Fourth Symphony as his "Humoreske." If one compares the two finales, the contrast is even more striking—an epic, choral finale on the one hand, a solo song on the other. Within the symphonies, too, as I have said, there is this same, sometimes disconcerting, shock of violent contrast. There is the well-known pastoral Andante from the Second Symphony, for example, which so surprisingly succeeds the solemnities of the huge first movement. Despite Mahler's call for a pause of five minutes—rarely observed in performance—the attempt to relax tension by way of extreme contrast does not, I think, come off. I was not surprised to discover that Mahler himself came to think that this juxtaposition of skyscraper and grass hut was a mistake, though not soon enough to prevent him from doing much the same thing in his Third Symphony, the first and second movements of which present a similar contrast in style and dimension. In later symphonies he was much more successful in holding a judicious balance between the relative weights of his sequence of movements.

But though, to return to my original point, the first movements of the Second and Fourth Symphonies exhibit such strikingly opposed features, they share, in form, an important unity. It is these two movements that represent, among the first group of Mahler's symphonies, his most successful handling of sonata structure. Yet paradox and contrast creep in even here. It is the first movement of the "simple" Fourth Symphony which shows the greater degree of formal sophistication. The point of recapitulation alone is a masterpiece of subtle compression. It simultaneously combines formal precedures which are normally exposed in sequence—the lead-back from the development and the recapitulation of the first group. The recapitulation proper, which at length finds its "right" key, starts, so to speak, in mid-stream.

Let me add at once that the sonata principle haunted Mahler from the beginning to the end of his cycle of symphonies. We find in his works a number of extremely original approaches to a form which, by the end of the nineteenth century, had become highly problematic. In any history of the sonata idea, Mahler's symphonies must receive the most serious consideration. He kept the form on its feet with extraordinary resourcefulness even when, by all the rules of the game, it should long since have been carried out of the ring.

Of course, you may argue, quite properly, that the sonata principle is, above all, a scheme of ordered tonal relationships, the force of which was dissipated by romantic harmony. But we have to face the curious fact that "sonata form" has gone on, I think quite meaningfully, even when tonal references have been completely abandoned, as we find in Schoenberg, for example. I think we must view Mahler's sonata movements as part and parcel of a general development in the history of music, which resulted at length in a valid form independent of its original tonal basis. In this respect, Mahler was surely very much Schubert's successor.

In some important respects, the Second Symphony is the odd man out among the first group of Mahler's symphonies. It anticipates the creative ambitions of the Eighth Symphony—his choral symphony—and the classical character of its first movement looks forward to the middle-period symphonies in which Mahler came closer, though perhaps not very close, to the house-style of the later Viennese symphonists.

It is in the First, Third and Fourth Symphonies that one finds Mahler's most comprehensive use of national musical materials; or perhaps it would be better to say "local" rather than "national." In these three works, and of course in parts of the Second, one hears, as one does not hear to the same degree in the later works, the music that Mahler heard about him in his youth: folksong, military signals, brass bands, and bird-song (shades of Messiaen!). One has to remember that Mahler was born in Bohemia and lived the impressionable years of his youth in Moravia. He was not a self-conscious musical patriot, but one cannot overlook the audible impact made on him by the world of sound which assailed his young ears. The most radical example of this influence occurs in the first movement of the Third Symphony, a movement of vast proportions which is largely built up out of military fanfares, folksong and popular march tunes, and throughout which the unmistakable sonority of the wind band predominates.

*(Here was played a recording of Mahler's Third Symphony, first movement, figures 43-51.)*

Many people find that music from the Third Symphony among the worst Mahler ever wrote. It certainly arouses in its acutest form the problem of his banality, about which so much has been written, on one side or the other, that I shall hold my peace on this occasion. I have said all I have to say elsewhere. But though one may dismiss the music, one is obliged to dismiss it for what it is—quintessential Mahler. One cannot account for it in terms of Strauss or Wagner, poles of reference, if you like, for much else in Mahler. Nor can one explain it in terms of the Viennese symphony. It is something quite singular; and in so far as it expresses a sense of place, I think we might approach the work as an offshoot, though a highly idiosyncratic one, of the nationalism in music we readily except elsewhere. This is not, of course, the whole truth about Mahler's early symphonies, but it is certainly one aspect of their style which has not been very thoroughly explored.

There is something undeniably different about Mahler's concept of nationalism—I would call it his "factuality." Mahler uses his materials, as it were, straight, not touched up. It is this feature of Mahler's early

symphonies which has caught the very intelligent ear of the German musicologist and sociologist, Theodor Wiesengrund-Adorno. In a new book,<sup>6</sup> devoted to the composer, a perceptive study indeed but alarmingly unreadable, he writes: "The term socialist realism suits Mahler alone, were it not depraved by current use; the Russian composers of 1960 frequently sound like a disfigured Mahler." I have already mentioned the influence of Mahler on Shostakovich. Is not socialist realism, indeed, yet another sub-division of a protracted nationalism?

I seem only to have scratched at the surface of Mahler's music. The middle-period symphonies, Nos. 5, 6 and 7—for that matter, all Mahler's later symphonies—show a turning away from so radical a use of popular materials. But he still retains very clear links with the style that gave us the first movement of the Third and unique "character" movements like the scherzos of the Second and Third Symphonies, or the famous parody funeral-march, the slow movement, of the First Symphony. Character movements of the new type are the second and fourth movements of the Seventh Symphony, a pair of nocturnal serenades in which the popular materials, the march tunes and birdcalls and military fanfares, have undergone a remarkable refinement. One finds music like this nowhere else in the symphonic literature.

But there is, in the later works, a distinct change of emphasis in style. From the Fifth Symphony onwards—excluding the Eighth because it is such a solitary achievement—it is possible to view Mahler with more consistency as one of the last in the line in the tradition of the Austro-German romantic symphonists.

Neither leading the troops nor bringing up the rear is an enviable situation. But though Mahler was often obliged to compose, as it were, with his back to the wall, his prodigal inventiveness did not fail him; nor was he slow to make tactical use of the legacy left him by his predecessors in the field. He required, for instance, a new type of strong, long, lyrical melody, for these abstract symphonies, one free of the association with nature that we find in the big, singing themes of the First Symphony. His invention was equal to the task, and we find the new type of melody serving as second subjects in the first movements of both the Sixth and Seventh Symphonies. It characterises, indeed, one of the best known of Mahler's movements, the Adagietto of the Fifth Symphony; melody, moreover, which wears a very personal face.

He was a tireless ransacker of musical resources which were certainly not conventional means of symphonic expression—the march, for example. I have never counted up the number of marches in Mahler's symphonies but they must amount to a formidable quantity. They certainly cover an extraordinarily wide range of mood. We march, it seems, not only into the grave but also out of it. But Mahler's successful promotion of the march, not just to symphonic status, but to first-movement status—above all in the first movement of the Sixth Symphony—deserves particular notice. There were distinguished precedents—Beethoven, Wagner—but no other composer has explored the possibilities of the march with such persistence.

---

<sup>6</sup> *Mahler: Eine musikalische Physiognomik*, Frankfurt, 1960, p. 67.

The waltz, the *Ländler* and the minuet—here, too, Mahler pursued these simple dance forms from the past and proved them capable of bearing new, if sometimes prickly fruit. The scherzo of the Ninth Symphony juxtaposes all three dances, a synthesis which is perhaps characteristic of the artist who stands at the end of a tradition. There is much that is synthetic, in the exact sense of the word, about Mahler's symphonies.

In the middle-period symphonies, his adherence to the sonata principle in his first movements is, if anything, strengthened. But, characteristically, he seeks out fresh approaches. The two movements which go to make up the first part of the Fifth Symphony, for example, represent a novel attempt to divide between two movements the functions of exposition and development we normally find in one.

But it was not really until the Ninth Symphony that Mahler broke through with what might be claimed as a new form: the slow first movement, which is not a slow movement placed first, but a first movement in a slow tempo which retains, none the less, its time-honored dramatic character and dynamic, developmental impetus, by a skilful handling of dual tempi. With some qualification, this same scheme and formal intention may be said to apply to the first movement of the unfinished Tenth Symphony.

And there, I fear, I must leave Mahler, with much left unsaid. It is clear from Mr. Deryck Cooke's magnificent reconstruction, from the sketches, of the finale of the Tenth Symphony, that the work was by no means Mahler's last word. Far from giving, or cracking, up, we have every reason to suppose that he would have launched out on yet another project. Mr. Cooke's great achievement, and the many Mahler performances we have heard this last year, in our concert halls and on the BBC, allow us, I think, to take a modest pride in the contribution this country has made to a just appreciation of Mahler's genius.

---

STATE UNIVERSITY OF IOWA SYMPHONY ORCHESTRA  
HONORS MEMORY OF ROBERT G. GREY, PRESIDENT  
OF THE BRUCKNER SOCIETY OF AMERICA

The State University of Iowa Symphony Orchestra, James Dixon, conductor, dedicated its performance of Mahler's Fifth Symphony at the twenty-fourth Fine Arts Festival, July 5, 1962, to the memory of Robert G. Grey, President of the Bruckner Society of America, Inc., who died on May 22, 1962. The University of Iowa Symphony Orchestra, conducted by Philip Greeley Clapp from 1937 to 1954, and now conducted by Mr. Dixon, has a record of Bruckner and Mahler performances unequalled by any group other than professional symphony orchestras. Professor Clapp was among the very first to receive the Bruckner Medal of Honor.

## MITROPOULOS AS A BOSTON REVIEWER HEARD HIM

By WARREN STOREY SMITH

These reminiscences will begin with what we have been told are the saddest of words, "it might have been." In short, if the Fates, or more accurately the board of trustees, had not decided otherwise, Dimitri Mitropoulos would in all likelihood have succeeded Serge Koussevitzky as regular conductor of the Boston Symphony Orchestra. When the Russian leader retired, after twenty-five glamorous years, the problem of finding a replacement was an unusually ticklish one. The choice was finally narrowed down to three quite dissimilar candidates: Mitropoulos, Charles Munch and Leonard Bernstein. As it came to me, via the underground, Bernstein, because of his youth, was not acceptable to the men of the orchestra, and Mitropoulos was not acceptable to Society. To be sure, it had found the Greek leader more than acceptable when, along with those of less exalted station, it received him rapturously whenever he took over the orchestra as guest. But a guest conductor is one thing, a regular conductor something else again. Koussevitzky had set a new pattern, namely, that of the conductor as social lion. Society had no difficulty in figuring out that this was no role for the anchoritic Athenian, whose private life was conducted in terms of monastic severity. When Munch was chosen, by the way, a press release from Symphony Hall stated hopefully that he would be a popular figure at Back Bay teaparties, a not entirely accurate prognosis, since the Alsatian conductor failed to exhibit the Koussevitzkian extroversion. One can even imagine the cynical saying that in Boston teapartying enjoys a higher rating than talent!

That Mitropoulos would have accepted the post seems fairly certain. He had given expression to his high regard for the orchestra; and the men, as I got the picture, were sold on him. At the conclusion of his third, and last, two-week term as guest conductor I wrote editorially in the *Boston Post*: "In his three visits to Boston the Greek conductor has won not only the Symphony public but also the Symphony musicians. And for our orchestra he entertains a particular regard. He admires its dignity, its artistic integrity. He feels that the men take pride in their work and that the audience takes a very special pride in them. Nor has he discovered in the public of the Symphony Concerts any evidence of the traditional Boston coldness."

Quite possibly, however, Boston's loss was Mitropoulos's gain. He had a wider opportunity as conductor of the New York Philharmonic Symphony. Consider, for example, those remarkable concert performances of *Wozzeck* and *Elektra* that could hardly have been brought to pass in Boston. Then, as everyone knows, he soon began flirting with the Metropolitan and finally transferred his full activities to that organization. Quite evidently, opera had come to intrigue him more than

symphonic music, although he accepted occasional engagements as orchestral conductor, such as his directing of the Mahler Eighth at Salzburg and his projected performance of the Third in Milan, during the rehearsals for which he took his final leave of us. In the previous season he had, of course, conducted the Mahler First, Fifth and Ninth, and the Adagio of the unfinished Tenth, as part of the Philharmonic's observance of the composer's centennial..

Mitropoulos was the darkest of dark horses when he made his combined Boston and American debuts on January 24, 1936. He was described as a protégé of Koussevitzky, and gossip had it, after he had electrified everyone with his performance of the Mahler First, that Mme. Koussevitzky advised her husband not to bring that young man back: he was altogether too good. But come back he did, the very next year, and again in the season of 1944-45.

Nor was that the last that Boston was to see of him. On February 1, 1948, he reappeared in Symphony Hall as head of the Minneapolis Symphony, the directorship of which he had assumed a decade before. There followed a few years later several appearances with the Metropolitan Opera Company,<sup>1</sup> which, to my exceeding regret, I did not hear; but I partly evened the score by taking in the Philharmonic *Elektra* aforesaid and another Philharmonic concert in which the Mahler Sixth was accorded its belated American premiere.<sup>2</sup> Moreover, like many another Bostonian, I listened to broadcasts, both of Philharmonic concerts and of Metropolitan performances, under Mitropoulos's direction. The things that impressed me most among the former were the Mahler Third and the first act of *Die Walküre*; and among the latter, a *Salome* that seemed to eclipse even the exciting version of Reiner, through which, at long last, that masterpiece was introduced to the Hub.

This is not the place for a summary of Mitropoulos's pre-American career. In any case he was not even a name to most of us when he exploded on the Boston scene, and his decidedly unusual provenance made his gifts seem all the more remarkable. As I put it at the time: "From Greece, mother of European music, comes the latest sensation in conductors, who yesterday led the Boston Symphony as guest through a stimulating and provocative concert. Mr. Mitropoulos's success with

<sup>1</sup> 1958-60. His operas in the 1958 season were *Eugene Onegin* on April 14 (opening night) and *Madama Butterfly* (April 19). He opened the 1959 season with *Vanessa*, on April 13, conducting *Tosca* on the 15th and the double bill of *Cavalleria Rusticana* and *Pagliacci* on the 18th. He bade farewell to Boston on April 23, 1960, when he opened the current Metropolitan season with *Simon Boccanegra*. Of this doubly significant event the Boston *Globe's* Cyrus Durgin, dean of the city's acting music critics, said in part: "The music is an amalgam of earlier, more forthright Verdi, and of the increasing subtleties of his later years, with orchestration that is a jewelled tapestry of subdued colors and filigree-work. Under Mr. Mitropoulos's consistent care for delicacy of phrase, this fount of melody flowed in beauty."

<sup>2</sup> Koussevitzky, who had to his credit the American premiere of the Mahler Ninth, as well as the first Boston performances of *Das Lied von der Erde* and the Seventh Symphony, wished also to introduce the Sixth to his adopted country. In this case the high fee for the rental of the orchestral material demanded by the Leipzig publisher, C. F. Kahnt, provoked a veto by the Boston Symphony trustees. Ultimately, the orchestral parts went up in smoke when Leipzig was bombed—an ironic business all around. Having obtained a score from London, Mitropoulos had the parts copied, and, as was said at the time, at his own expense.

the audience was pronounced; it would have been even greater if he had stooped to a program of sure-fire pieces.

"From Beethoven, for beginning, Mr. Mitropoulos chose the Second *Leonore* Overture, from Debussy *La Mer*, from Strauss the *Symphonia Domestica*; and to these he added, as his second number, an *Overture for a Don Quixote* by the 40-year-old French composer, Jean Rivier, hitherto unknown here.

"In aspect Mr. Mitropoulos is spare, almost ascetic, his features aquiline. He is very bald. His movements are abrupt and decisive. He conducts sans score and sans baton, and although before an audience his gestures are more moderate than in rehearsal, he still suggests a little the cheerleader. There is also thought of a conjuror, without magic wand, and he moves his hands now up, now down, now forward, now back. Of time beating in the conventional sense there is little.

"Immediately in Beethoven's Overture Mr. Mitropoulos disclosed the striking blend of clarity and intensity that distinguishes his conducting. His ear is sensitive, acute. Everything must be heard and everything is heard. The listener's attention is riveted, as the music comes vividly to life. Under Mr. Mitropoulos's hands *Leonora* No. 2 becomes so arresting that we are immediately led to speculate upon the effect which he might have had with the more finished and imposing No. 3."

I shall have occasion to return to the *Domestica* when I go into the matter of Mitropoulos's astonishing musical memory. I found here that, like Koussevitzky, he stressed the "tender, gracious and human qualities of the music" and went on to say: "Again there was clarity, even in the greatest complexity, a notable feeling for structure, for line as well as for color."

At the next pair of concerts he achieved the striking success with the Mahler First, already noted, offering besides the orchestral suite from Florent Schmitt's mimed drama *The Tragedy of Salome* and his own well-executed transcription of Bach's organ Fantasy and Fugue in G minor.

Chiefly to get another chance at the Mahler Symphony, which had been introduced to us in 1923 by (of all people) Pierre Monteux, and had gone unheard at Symphony Hall in the meantime, I took in the Saturday evening concert as well, and the enthusiasm and subsequent demonstration occasioned by the work and its performance exceeded even that of the afternoon before. Of that earlier performance I had written: "In the demonstration which followed, the men of the orchestra joined in the applause. By report the guest conductor has won them by his passion for perfection, his superb musical equipment."

On January 15, 1937, Mitropoulos began his second group of appearances. Said the *Post*: "No doubt many in the audience were having their first glimpse of this extraordinary figure: tall, gaunt, ascetic, who on first sight resembles a cross between a tonsured monk and an El Greco saint. For them it was something of a novelty to see him conduct without baton and without score and with his peculiar blend of intensity and animation, of austerity and excitement. For the rest of us the new experience came when he seated himself at the piano and, again with no music before him, bore the solo part in the first Boston performance of

Respighi's Toccata for Piano and Orchestra, conducting now with a free hand or two, now with his head and now with his eye.

"Save for the final number, Riccardo Castagnone's *Preludio Giocoso* (after Goldoni), the program as it now stands, with Casella's *La Donna Serpente* Suite put off until Monday evening, may be characterized as severe, quite lacking in the musical delights of the flesh. Yet the answering applause yesterday might have been prompted by one made up of the more lurid bits from the music of Wagner, Tchaikovsky and Strauss."

That pair of concerts began with two numbers for string orchestra, as arranged or adapted by the conductor: the Prelude to Purcell's *Dido and Aeneas*, together with Dido's "When I am laid in earth," and Beethoven's String Quartet in C-sharp minor, Opus 131. Although Mitropoulos's instrument was the piano, members of the orchestra who had played Opus 131, in its original form, freely admitted that he had taught them a great deal about their own job.

On this second visit the guest conductor put considerable emphasis on the music of what was then contemporary Italy. In addition to the pieces by Respighi, Castagnone, and Casella, pleasing and effective in their several ways, he performed, at the next pair of concerts, the Piano Concerto of Malipiero, heard, like the Castagnone and Casella items, for the first time in the United States. Of the Concerto I had occasion to observe: "And if any felt a week ago that Mr. Mitropoulos's simultaneous performing and conducting of Respighi's Toccata was in the nature of a stunt, there was less reason to feel that reaction in the case of the more temperate music of Malipiero. . . . The Concerto, now nearly three years old, would seem to form a valuable addition to a branch of musical literature sadly in need of new material." Where, one might ask, are these Italian pieces today? Anyway, they afforded no little enjoyment at the time, and not the least of Mitropoulos's virtues was his inquiring mind. This program ended with a superbly rhythmic performance of Ravel's *Rhapsodie Espagnole* and began, at the opposite musical pole, with another of the conductor's masterly Bach transcriptions, this time of the great organ fugue in B minor. But the thing that has remained with me most vividly over the years was the ensuing performance of the Schumann Second.

It was my privilege that evening to encounter Mitropoulos (even to sit next to him at table) at a dinner given by Boston's Harvard Musical Association. On greeting him I blurted out that that had been a great performance of the Schumann, whereupon he came back with "It's a great work." I think we were both right, although not everyone would accept the conductor's estimate of the music.

"To say," I wrote the next day, "that Mr. Mitropoulos carried all before him with the Symphony was to put it mildly, yet that he made the most striking impression with the brilliant, volatile Scherzo and the deeply expressive Adagio may not be denied. When the ensuing tumult had died down there were some protests that what had just been heard, since it sounded so much better than Schumann usually does, was not Schumann at all.

"In point of fact, Schumann was the least articulate of all the great symphonic composers. The C major, intrinsically the least Schuman-

esque of them all, merely happened to receive yesterday a degree of assistance seldom furnished to any composition."

A persistent fallacy in music criticism is the notion that a piece can be made to sound better than it is, when what has really taken place is that the work has finally been made to sound as well as it should. This comment generally rears its fatuous head when the reviewer finds himself liking something hitherto not to his taste, and in this way endeavors to justify his change of heart.

Two extremes of Mitropoulos's musical enthusiasms met in the programs which he offered on his next visit to Boston, in December, 1944. He had a commendable interest in the music of his own time, and he was especially drawn toward the creations of Schönberg and his dodecaphonic disciples. Not so easily accounted for, in his case, was a fondness for the romantics of the first half of the nineteenth century. You might say that it is a conductor's duty to program the music of all the important schools, but guest conductors generally favor their personal tastes. I have just detailed Mitropoulos's great success with the Second Symphony of Schumann, and in the first of his new pair of programs, those of December 15 and 16, he began with the "Scotch" Symphony of Mendelssohn, imparting to that work not only the appropriate sentiment but also a refreshing vitality.

It cannot be said too often that one of the marks of a great interpreter in any field is the ability to make us see or hear familiar things with fresh eyes or ears. It was a gift that Mitropoulos possessed in rare degree. Of this performance of the Mendelssohn Third I was prompted to say: "Moreover, no matter how well you may think you know the piece, you are quite likely to feel that you have never really heard it before. While not altogether blinding you to the fact that Mendelssohn was a suave and elegant composer, Dr. Mitropoulos (he's Dr. now)<sup>3</sup> makes you realize that the Scotch are a sturdy people, and were once a warlike one, and that their country is one of the most romantic in Europe.

"A similar act of rejuvenation," this review continued, "took place in the case of Rachmaninoff's Second Symphony, a work 65 years younger than Mendelssohn's but standing in no less need of the energizing, the clarifying and the glamorizing that it yesterday received. There were some judicious cuts that helped a lot but they did not tell the whole story. Under Dr. Mitropoulos's batonless hands the Russian's piece became engrossing and exciting and, in the slow movement, very lush besides."

With his emphasis upon new or unfamiliar music Mitropoulos kept his Boston audiences on their toes. But only once did he offer a composition, either new or old, from the hand of a native-born American, and that was in the pair of concerts now under discussion.<sup>4</sup> The piece, a local novelty, was Morton Gould's *Spirituals* for String Choir and Orchestra. "In two senses," this chronicler averred, "the title is misleading: the melodic material, while racial in feeling, is for the most part original, and the third section, *A Little Bit of Sin*, and the last, *Jubilee*,

<sup>3</sup> After he had assumed command of the Minneapolis Symphony (in 1938) the University of Minnesota conferred upon him a doctor's degree.

<sup>4</sup> The reference here, of course, is to his orchestral programs. Mention has been made (in footnote 1) of his conducting of Barber's *Vanessa* with the Metropolitan.

are anything but spiritual, and in them Dr. Mitropoulos suggested that he might beat any of the jazz conductors at their own game. The *Proclamation* and the *Protest* showed dramatic power, the *Sermon* deep feeling. In sum, a most rewarding novelty, and composer and conductor were alike hailed by an enthusiastic audience. In this music, as elsewhere, Dr. Mitropoulos conducted without score, playing freely and unhampered upon the band as though it were some mighty instrument, moulding the melodic line, modelling the orchestral tone, vitalizing the rhythm, and missing not one iota of musical matter or of musical effect."

As the Gould *Spirituals* constituted the only music by a native American to be offered in Boston by Mitropoulos in any of his four visits to Symphony Hall, so were Ernst Krenek's Variations on the North Carolina Folk Song, "I Wonder as I Wander," the only example of twelve-tone or, as we now say, "serial," music to be vouchsafed that city by him. They were heard, I might add, in the concerts of the following week.

This union of the ingenuous and the minutely calculated smacked a little of miscegenation. Incidentally, the tune adapted itself to this particular treatment through a curious circumstance: the melody is based on a six-tone scale,<sup>5</sup> and by putting these six tones and their proper transposition together, the requisite dozen was obtained. In my notice I quoted Mr. Krenek's explanation of the piece, as it appeared in the program notes:

"I have attempted to unfold the feelings of tragic loneliness and passionate devotion by which the solitary wanderer 'under the sky' is animated." "Sometimes," my review went on to say, "this mood is tellingly expressed in the music. Elsewhere Mr. Krenek, by precept and practice an atonalist in the manner of Schönberg, seems more concerned with the infinitely ingenious manipulations of his tune. You can find the work fascinating, and, coming upon it unprepared you might find it perplexing. Yesterday's audience received it politely and the composer cordially when the conductor escorted him to the platform."<sup>6</sup>

Incidentally, as an instance of Mitropoulos's almost quixotic insistence on committing to memory everything he conducted, no matter how ephemeral it might prove to be, he admitted in conversation that the memorizing of Krenek's piece had been a labor of weeks. "A month" was the way he put it.

Strange as it may seem, he actually added to the repertory of the orchestra on this occasion (the program was given a tryout in Sanders Theatre, Cambridge, the night before) the Second Symphony of Schubert,<sup>7</sup> a delectable work, more typically Schubertian than the Fifth Symphony, that is so much better known. But the high point of this program, which began with Mozart's Overture to *The Magic Flute*, was the eloquent performance of Vaughan Williams's *London* Symphony.

<sup>5</sup> Virtually, the Dorian mode with no mediant: D-E-G-A-B-C.

<sup>6</sup> Krenek, also established in Minnesota, as a teacher at Hamline University, St. Paul, accompanied Mitropoulos to Boston. A stimulating luncheon was arranged by Symphony Hall for the two notables and the local music critics.

<sup>7</sup> Not a novelty as far as Boston itself was concerned, since there had been a previous performance by the People's Symphony Orchestra.

Coming from Greece, a country with no easily distinguishable art music of its own (that is, if we sidestep antiquity), Mitropoulos was a true internationalist. Musically, it might almost be said, nothing was native to him and nothing foreign.

This visit ended with the concert of Sunday afternoon, December 24, at which the Mozart and Vaughan Williams items were repeated, while joined to them were the dances from Falla's *The Three Cornered Hat*, and a strange bit of business, now to be described. No purist in that sense, Mitropoulos had already given us transcriptions of the organ works of Bach, of a vocal number by Purcell, and an adaptation for strings of a Beethoven Quartet. But this went a great deal farther—too far, in fact. To come to the point, one Dmitri Rogal-Levitsky had set himself the task of orchestrating several of the piano pieces of Chopin, including some that never should have been subjected to such treatment. Mitropoulos's choice fell upon the "Revolutionary" Study, the C minor Nocturne and the A-flat major Polonaise. I can hear them today, in my mind's ear—and it is no treat—and this is what I was provoked into saying at the time:

"Since there must always be a fly in the ointment, that unwelcome insect made its appearance yesterday in the shape of three Chopin transcriptions by the Russian Dmitri Rogal-Levitsky. . . . Apparently the transcriber has endeavored to make these pieces as formidable orchestrally as they were pianistically in their own day. Anyway, he has thrown restraint to the winds and thrown in everything but the kitchen sink. The Study becomes a tonal earthquake and a mad scramble for the players. Save for an inflated climax, the Nocturne is an admirable job in kind and the Polonaise is okay if that is the sort of thing you like. Yesterday its terrific din brought down the house. With so much fine orchestral music crying to be heard, this transcribing business seems largely beside the point, except, perhaps, in the case of the organ works of Bach. And some will not even swallow these."

If Mitropoulos's generally-to-be-commended adventuring took him a bit too far in the case of these Chopin transcriptions, a survey of all of his Boston programs reveals the fresh and unfettered approach that he brought to the job of program-building. Would that there were more like him. He seemingly stopped at nothing. In New York, for instance, he resurrected such things as Schumann's *Julius Caesar Overture* and the well-constructed but not particularly original tone poem, *The Mystic Trumpeter*, by Boston's Frederick S. Converse.

In the course of this final Boston Symphony engagement I wrote an editorial in which I congratulated those of us who picked Mitropoulos for a winner when he was a virtual unknown, at least in our part of the world. I also commended him for his programming and pointed a moral with the Schubert and Vaughan Williams pieces aforesaid, describing the one as a minor work by a major composer and the other as a major work by a minor composer and asking for more of the same. "To claim," I said, "that once-important music may not become valueless in time is no less foolish than to assume that only those things that are currently played and sung are worth the doing. The core of the difficulty seems to be that those who determine upon our musical fare are inclined to concentrate on two classes of compositions: unique master-

pieces and contemporary novelties. This leaves out an enormous amount of music which may be heard both to pleasure and to profit.

"Once in a while somebody does something about it, of course, but unfortunately such adventurousness is generally in direct proportion to the obscurity of the adventurer. In other words, the big shots, whether conductors, singers or virtuosi, are inclined to play safe."

Mitropoulos's regard for the Boston orchestra has already been mentioned. On their part, the players were probably a little skeptical of this unknown conductor from far away Greece, but they were not long in taking his measure. As von Bülow put it, some conductors have their heads in the score, whereas others have the score in their heads. Koussevitzky belonged in the first category and Mitropoulos in the second. As said above, one of the pieces on his first Boston program was the *Symphonia Domestica* of Strauss, a work of considerable complexity, with dimensions to match, for all its homely subject matter. Mitropoulos always rehearsed from memory, although he might have a pocket score handy to consult for rehearsal letters, or numbers, as the case might be. As I got the story from one of the men, in a rehearsal of the Strauss tone poem, with the orchestra going full steam ahead, the conductor brought it to a sudden halt. Identifying a measure as so many bars after number so-and-so, he remarked quietly: "Second clarinet, those two notes are tied." The men were flabbergasted; and if there had been any doubts as to the quality of Mitropoulos's musicianship, they vanished forthwith..

In one of my first talks with Mitropoulos I brought up this matter of memorizing and asked him if, like Toscanini, he had a photographic memory. "No," he replied, "I just plain learn it." (His English was both fluent and colloquial.) His own explanation of this rigorous bit of self-discipline was that conducting, as compared with performing, was altogether too easy. Only by learning the music in this thoroughgoing fashion could he begin to work as hard as the men did. There are also conductors who will get along without their notes in the case of the standard repertory but will use them with novelties, particularly those that may prove to be short-lived, or for orchestral accompaniments of one sort or another. It may be argued that a conductor who is willing to use a score in the case of new pieces will get over more ground—one reason, possibly, for Toscanini's own rather limited symphonic repertory. But Mitropoulos, while committing literally everything to memory, still got over plenty of ground. If he had not driven himself so remorselessly, he might still be with us. He rejected the monastic life that so nearly claimed him, but he continued to subject himself to a comparable discipline. Art, as well as religion, has its martyrs.

To continue, and also conclude, the tale of Mitropoulos's appearances in Symphony Hall, the best thing to be said of his aforementioned concert with the Minneapolis Symphony is, perhaps, that it enlarged the circle of his Boston listeners, to be later materially augmented by his visits with the Metropolitan Company. It does not seem likely that many of those who had heard all or most of the Boston Symphony concerts discussed above could have honestly felt that this concert with what was then his own orchestra contributed greatly to their esteem for the man from Athens. Again, I shall quote, rather than paraphrase,

since my intention has been to record as faithfully as possible the immediate impressions received from these encounters, whether public or private.

"Thanks to the fact that Rachmaninoff's generally tedious Second Symphony ends excitingly and that Dimitri Mitropoulos and his Minneapolis Symphony Orchestra played this finale as excitingly as it could be played, their concert at Symphony Hall yesterday afternoon concluded in a burst of cheers and bravos.

"The pity of it is that the Greek conductor did not choose a more enlivening program with which to present himself here as the head of his own orchestra—we have heard him several times as guest conductor of the Boston Symphony and many years ago we heard the Minneapolis Orchestra under another leader. The only first-rate music on the list was the 'Jupiter' Symphony of Mozart, which, truth to tell, was not played or conducted with any particular distinction, while between it and the Russian's Symphony came another work of about the same vintage that has also experienced the ravages of time, namely, Bloch's *Schelomo* (Solomon).

"Possibly this last was included for the benefit of the orchestra's first cellist, Yves Chardon, once a member of the Boston Symphony. He played the solo part in the Swiss composer's overlong and turgid Rhapsody in exemplary fashion, and Mr. (sic) Mitropoulos gave it all he had. The music still refused to come to life, save in a few spots, one of them the always impressive close in which the Hebrew King can be heard to say 'Vanity of vanities . . . all is vanity.'

"It is always the same story when a visiting orchestra comes to Boston, or rather the same two stories. You do not recognize in the audience many faces that can be identified as belonging to Boston Symphony subscribers, and try as you will you cannot help comparing the visiting band with our own, to the former's disadvantage. There are many fine orchestras in this country and the Minneapolis Symphony is one of them, but you get the impression that its present conductor is less interested in tone, as such, than in interpretation. In that domain, even when you do not always agree with him, he is one of the most forceful of contemporary musical personalities. Yesterday's concert was given under the auspices of Anatolia College and the hall was filled."

That performance of the "Jupiter" hinted at, if it did not actually reveal, a temperamental insufficiency of the sort possessed by all great conductors. (The one who is equally happy in the interpretation of all music will not be outstandingly good in any music.) Conceivably, Mitropoulos was too tense to convey serenity, too serious for humor. Anyway, he was decidedly in his element the other two times that I encountered him, namely, the aforesaid appearances with the New York Philharmonic.

The first of these, the one that brought to American attention the Sixth Symphony of Mahler, actually preceded by a few weeks the concert with the Minneapolis Symphony just discussed. The concerts in question took place on December 11, 12, and 13, 1947. The article that appeared in the *Boston Post* on December 21 was reprinted in the 1948 issue of CHORD AND DISCORD. Quoting it *in toto* here would smack of superfluity. In point of fact, the writer was so much concerned with the

work itself, which had impressed him greatly, that he made no mention of Mitropoulos's interpretation, as such.

Of course, if the conductor's reading had not been as discerning and as forceful as actually it was, the piece would not have made the effect that it did. Incidentally, the New York press, while not one hundred percent for the music, freely gave conductor and orchestra the recognition that was their due. Just for the record, however, and because the Sixth is still pretty much of an unknown quantity in these parts, I am reproducing the two final paragraphs:

"The symphonic gradations and climaxes of the final movement,' writes Bruno Walter, Mahler's most devoted disciple, 'resemble in their dismal power the towering waves of the ocean that rush at the ship and wreak destruction.' Nor does Mahler soften the blow through a merciful brevity as does Tchaikovsky in the finale of the *Pathetic*. On the contrary, this concluding movement lasts close on half an hour, with only a passage here and there to offset the prevailing gloom. Without resorting to hyperbole, you can call it both terrible and terrifying. It has at times a nightmarish quality. Were a contemporary composer possessed of Mahler's remarkable powers, both of musical invention and of orchestration, he might thus paint the darkest side of our unhappy day. The three New York audiences that cheered the symphony could hardly have enjoyed this finale. Enjoy is not the word. Let us rather say that they responded instinctively to something by which a more innocent generation would have been shocked and repelled. In fact, we know that in the past the Sixth has had this very effect.

"Like most of the Mahler symphonies, the Sixth calls for a huge orchestra—incidentally, Mr. Mitropoulos conducted it, as he does everything, from memory—and included among the percussion instruments are cowbells (used with enchanting effect in the *Andante*, as a symbol of loneliness), a *rute* (a sort of birch brush applied to the bass drum) and a hammer. 'Thus Fate knocks at the door,' said Beethoven of the opening of his Fifth Symphony. In the Mahler Sixth it strikes us down."

At the concerts of December 11 and 12 the Mahler Sixth was companioned—and followed—by the Gershwin Piano Concerto, with Oscar Levant as the soloist. Talk about strange bedfellows! At the one in question the Symphony, quite properly, brought the end, while ahead of it came the *Coriolanus* Overture of Beethoven and the Handel-Casadesus Viola Concerto, with William Lincer as soloist.

In the afternoon I sat in on the Metropolitan Opera Intermission Quiz, and thereby encountered Mitropoulos, who was one of the panelists.<sup>8</sup> When I mentioned to him that I had come over to New York for the express purpose of hearing the Mahler Sixth, he remarked, as he had of the Schumann Second eleven years before, that it was a great work. He was right this time also; but while Mahler had his moments of resembling, or rather, suggesting Schumann, in spirit and execution these particular symphonies were many leagues apart.

<sup>8</sup> A point brought up during the Quiz was the relative standing of Wagner and Puccini, judged solely as composers for the theatre—in other words, as musical dramatists. Mitropoulos stoutly upheld the claim of Puccini.

Because of the magnitude of the undertaking, as well as its triumphantly successful outcome, the series of *Elektra* performances, on December 22, 23, and 25, 1949 (the last one broadcast over CBS), were more truly a monument to Mitropoulos than any of the other events here described, not excepting this American premiere of the Mahler Sixth. That Strauss's music drama after Sophocles, by way of Hofmannstahl, made a double appeal to Mitropoulos goes almost without saying. He was of the same blood and nationality as the great dramatist and he had given frequent proof of his fondness for the music of "Richard the Second." In view of all these things, I am quoting, as parting salutation to an extraordinary musician, all of the story that appeared in the *Boston Post* on January 11, 1950:

"It was high time that something out of the ordinary was done about Richard Strauss,<sup>9</sup> and though the three concert performances of *Elektra* by the New York Philharmonic-Symphony, under Dimitri Mitropoulos, with distinguished solo singers from the Metropolitan, were projected long before the composer died, they made a striking memorial. A performance in the theatre would have been more to the point, but for certain reasons a stage representation of comparable musical quality would have been out of the question.

"Let me explain. In the first place, Astrid Varnay, who gave so convincing a disclosure vocally of the greatly exacting title role, is not yet ready to undertake the part in the opera house, with the burden of acting added to that of singing. She is still only 30, and she maintains that an operatic *Elektra* is not for her just yet.<sup>10</sup> It is enough to hope that when she feels ready to assume it, the Metropolitan will be in the mood to let her do so. Not for ten years has it mounted what many consider Strauss's greatest work.

"The Metropolitan has a fine orchestra, as I had occasion to observe anew at two performances that I shall discuss here next week. Technically and expressively it could cope with Strauss's score, as it did with that of *Salome* last season, with Fritz Reiner to guide and inspire it. Numerically, in this particular instance it would fall short. You just couldn't squeeze into the Metropolitan's pit, ample as it is, the orchestra that seemed to fill the stage of Carnegie Hall: the Philharmonic augmented by players from the Metropolitan itself. To hear the music played by that aggregation of instruments and conducted (from memory) by Mitropoulos, who in this score proved himself uniquely eloquent, was something not soon to be forgotten. The first performance, that of Dec. 22, elicited ecstatic reviews from the hard-boiled New York critics, and all three were received with wild enthusiasm by their respective audiences. Many of the readers of this column heard the broadcast of the final one on Christmas Day, not quite the same thing, however, as hearing it in the hall.

"The music, then, as music, was presented under ideal circumstances: the singers measured up to their several assignments and the playing of the orchestra, as already suggested, provided an experience that could

---

<sup>9</sup> Strauss had died on September 8.

<sup>10</sup> In a matter of two seasons Miss Varnay considered herself ready to sing the role of *Elektra* with the Metropolitan Company. Fritz Reiner conducted.

seldom be duplicated. Nevertheless, it may be doubted whether the composer would have been entirely pleased. He designed the music to fit the words of Hofmannstahl's masterly text, after the drama of Sophocles, and that correspondence could be noted by all whose ears were sufficiently sharp. But he also designed it to fit the action, to paint in tone that which the eye sees, so that the effect on both eye and ear is intensified.

"To give a single example, in the words of the Philharmonic's program annotator, Herbert F. Peyser, the guilty queen, Klytemnestra, is a 'shivering, bloated, rotting hulk, a carcass weirdly bejewelled and strewn with ineffectual amulets.' So far as that is musically possible, Strauss has so limned her, but when you gazed upon Elena Nikolaidi, handsome of face and figure and handsomely attired, some if not all of Strauss's efforts went for naught. That Miss Nikolaidi sang the music superbly was not quite enough.

"Opera in concert form is and always has been a dubious venture. There is an excuse for it if the opera cannot otherwise be heard in a particular locality, an excuse present in the instance in question. And with these scores of Wagner and Strauss that are like symphonic poems with stage accompaniment, the concert performance, as I have already indicated, has its advantages.

"For the benefit of those who missed the broadcast, be it recorded that the other chief parts were assigned as follows: Chrysothemis, Irene Jessner; Orestes, Herbert Janssen; and Aegisthos, Frederick Jagel. That they measured up to Miss Varnay and Miss Nikolaidi is sufficient praise. Miss Jessner, by the way, has now sung her role under eight different conductors.

"How many Bostonians are aware that this mighty music drama was heard in this city, at the Boston Theatre, during a visit of Hammerstein's Manhattan Company, some 40 years ago? There are those who recall the excitement of the performance, with the inimitable Mariette Mazarin as Elektra, and the answering excitement on the part of the audience. Up to the moment when Elektra recognizes her brother, the returned Orestes, come to avenge their father's murder, this *Elektra* is a gripping but grim business, with a few relieving episodes. From then on the music, now lyric, now brutal, now infused with a mad and frantic joy, is like molten metal poured from a crucible. And like no other music, before or since."

In one of my earlier encounters with him I credited Mitropoulos with a "Midas-touch" which turned everything he conducted into a potential popular success. That observation, as time went on, proved to be basically correct. He really would have them cheering something like this Schumann Second, that they would ordinarily take in stride; while with such inflammatory material as the respective conclusions of *Elektra* and the Mahler First the results were sensational, unforgettable. There are many Mitropoulos recordings but they do not tell the whole story. To have missed him in the flesh is to have missed a unique and uniquely treasurable experience.

Program for Opening Concert in Philharmonic Hall, Lincoln Center,  
New York City

NEW YORK PHILHARMONIC

LEONARD BERNSTEIN, Conductor

INAUGURAL CONCERT

September 23, 1962, 9:00 P.M.

BEETHOVEN *Gloria from Missa Solemnis in D major, op. 123*

EILEEN FARRELL, Soprano

## BRUCKNER'S WANT OF SUCCESS

By ERNST LEVY

Ever since its appearance, Bruckner's music has encountered great resistance from the many, and has aroused great love and fervor in a few. There is something puzzling in the fact. For, after all, here is music that appears to be written in the successful Wagnerian idiom. It is full of easy-to-grasp melody. Its orchestral garb is brilliant and impressive. In fact, should we find that the few shied away from this music while the many spared not their applause, we should not be too surprised. Yet it is the other way around, which shows that neither the many nor the few are fooled by those external appearances—a noteworthy fact.

How, then, are we to explain the Bruckner Puzzle?

I think that an explanation is to be sought in two mutually related aspects of Bruckner's work. One concerns Bruckner's spiritual attitude. The other involves the concept of the symphony.

We begin with the latter.

I remember attending a rehearsal of a Bruckner symphony one day, as a very young man. I was deeply moved, and turning to one of my teachers sitting behind me gave vent to my enthusiasm, whereupon my teacher said: "Yes, it is beautiful music—but it isn't a symphony!" At the time I did not see what this could possibly mean. I have understood it long since. For somebody reared in the Beethoven tradition, Bruckner's symphonies are, indeed, not good symphonies.

This remark will be the starting point of my argument.

The supreme musical achievement of the Nineteenth Century is the Monumental Symphony, as determined by the evolution of the so-called "sonata form." Now the idea behind the evolution of that form is a dialectic, a dramatic one. Again, that idea is centered in the concept of "thematic development" for which the analytic technique perfected by Beethoven became the almost exclusive standard. In due course of time the "development idea," which originally had been more or less confined to the central piece of the sonata form, the so-called "development section," spread not only over the whole sonata form, but eventually over the sonata as a whole. Liszt's B-minor Sonata may be considered a final stage in that line of evolution.

In comparison to the Liszt Sonata, a Bruckner symphony should be dubbed formally conservative. On the surface, it looks like an oversized Beethoven symphony. But, just as the Wagnerian appearance of Bruckner's work is deceptive, being no more than the costume of the period, so its formal aspect is equally deceiving. Actually, Bruckner's spirit is diametrically opposed to that of Wagner. And behind the conservative formal appearance of the work, an entirely different form principle is active. That statement implies a difficulty for us, the listen-

ers, and the imputation of a weakness to the composer. The fact cannot be denied that Bruckner's conservatism has prevented him from completely and clearly bringing into the open the principle of growth inherent in his particular inspiration. The reasons for this might perhaps be found in Bruckner's deep and childlike respect for tradition and authority as well as in his failure to perceive intelligently that principle of growth. Be that as it may, it is now our duty and our task to overlook the deceptive resemblances, and to increase our awareness of the really relevant forces.

To gain an insight into the principle of growth of Bruckner's music, consider for instance the first movement of the Seventh Symphony. Note that there is no "theme" in the Beethovenian sense. Instead, we hear a long melody, of hymnic character, ending very nearly in a full stop. It is followed by another section describable in similar terms. In fact, the whole first movement consists of a succession of such periods. The truth of the matter is that while the classical disposition is still present, yet it has become largely irrelevant. An impression of "development" now arises from the way the various periods follow each other. We are presented with a *strophical* rather than with a dialectal principle. The symphonic evolution is achieved through a succession of strophes which in themselves may be lyrical. The effect is comparable to that of a series of *terraces*. Obviously this is the adequate means of building a large form out of the specifically Brucknerian inspiration. Now we may also interpret the function of that typical Bruckner "Generalpause," which is not at all to be taken in a Beethovenian, dramatic sense. Its role is rather to separate the steps and terraces from each other, thus impressively punctuating the discourse.

Bruckner's inspiration is essentially lyrical, in contrast to the essentially dramatic inspiration of Beethoven. The sonata form is essentially dramatic; the strophic form, essentially lyrical. By the qualification "essential" I mean to imply that neither form excludes the effects of the other, but that the emphasis as well as the means are different. That is why the ancestry of both the Wagner-Liszt group and Brahms may be sought in Beethoven, while the immediate ancestry of Bruckner is to be found in Schubert. Among the many symptoms of kinship in the music of the two masters one may be pointed out here as being particularly relevant: Schubert's song cycles (*Die Winterreise*, *Die schöne Müllerin*) also achieve a "symphonic whole" through the terracing of a number of "strophes"—in this case the single *Lied*.

If it is difficult enough to discover for one's self a new structural principle hidden beneath the aspect of a Beethovenian symphony, it is an even more arduous task to approach a spirit so different from Wagner, hidden behind the Wagnerian sound.

That spirit is entirely contrary to the temper of our times. There is in Bruckner no "excitement" in the vulgar meaning of the word—the only one that seems to have currency today. Instead, the excitement to be found in Bruckner is that of *ecstasy*. The inherent dramaticism does not result so much from conflict, from dialectics, as from a TRAVERSAL OF STATES OF BEING, embodied in the succession of the strophes. That is the theme common to all the symphonies, so much so that it might be no mere jest to say that Bruckner wrote but one symphony in

nine versions. This again is a feature that will strike most people as a strange one—and that is no wonder in times like ours, when “new” automatically carries the connotation of “better,” when “better” can only be thought of as being also “new,” and when it has been almost forgotten that the essential inner experiences are always the same, and at the same time are always new. Bruckner’s music, however, is deeply traditional. His ways are much like those of the oriental artist who will paint the same subject over and over again, gradually approaching the Divine by drawing nothing else perhaps in all his life but bamboos.

Ever since its appearance, Bruckner’s music has encountered great resistance from the many, and has aroused great love and fervor in a few. Could it be otherwise? Let us hope that the times will change. But also, let us pray that Bruckner may never become fashionable.

#### KILENYI MAHLER MEDAL AWARDED TO JAMES DIXON

In appreciation of his efforts to create greater interest in and understanding of the works of Gustav Mahler, the Directors of the Bruckner Society of America, Inc., awarded to James Dixon the Mahler medal designed by Julio Kilenyi for the exclusive use of the Society. James Dixon, now conductor of the State University of Iowa Symphony Orchestra, has performed Mahler works with the University Orchestra, the New England Conservatory Orchestra, and the Minneapolis Symphony. Presentation of the award was made to Mr. Dixon by Professor Earl E. Harper, Director of the School of Fine Arts of the State University of Iowa, at an orchestral concert of the twenty-fifth Fine Arts Festival at the University, July 9, 1963.

# MAHLER'S PLACE IN MUSICAL HISTORY

By JACK DIETHER

## I

Woe says: "Begone!"  
But all joy wants eternity,  
Wants deep, deep eternity.

—FRIEDRICH NIETZSCHE

Let me make it clear at the outset that this essay is not designed to qualify for a place in *The Oxford History of Music*, or even in *Grove's Dictionary*. Such a piece under such a title, taken in an absolute historical sense, would certainly be premature. As a matter of fact, the *Oxford History* itself has been frequently criticized for entitling one of its earlier volumes *The Age of Bach and Handel* more than *two centuries* after the event. Not that there is much doubt at this date that Bach and Handel are indeed the greatest composers of their age. What is questioned is rather the naming of an entire age after anyone, with emphasis on the fact that the age in question would never have so recognized itself. J. S. Bach, for example, was then for purely local consumption, and his music was never honored in retrospect, on an international scale, until the time of Mendelssohn, close to a century after his death. In the latter half of his own century, and even later, Bach was considered to be what we today would probably call a conservative, or even a reactionary—at all events, *passé*. The recognition of Bach's individual greatness, in terms far transcending the original utilitarian value of his works in his own society, is a product of ages quite removed from his own.

I would not, then, be so foolhardy as to attempt to speak in advance for any future time with any degree of certainty, either in terms of years, decades, or generations. If the world of a century hence, *e.g.*, does have the same historical appreciation of music as we have (which itself is by no means certain), it is theoretically quite possible that an *Oxford History* of that time (to draw an analogy to what happened with Bach) will publish a volume describing the late 19th and early 20th centuries as "the age" of someone of whom many of us have never even heard! I say "theoretically" in the awareness, of course, that our much-improved dissemination of music makes such a turn of events more unlikely now than in Bach's time. And obviously this Elfelldasen Zyboogiew, or whoever he might be, would have to be someone with virtually no influence on other music *now*—simply very great in his own right, and an inspiration to *future* times.

But it's still a possibility, and that is the point I am trying to make. I am not trying to place Gustav Mahler in the stream of history *absolutely*, since the history involved is still being written, and no one knows just where it will lead us. I am writing instead about how it looks, at

this juncture, to a person extremely sympathetic to Mahler's musical personality and artistic creed. From what we know about Mahler's considerable influence to date, and from the present manifestations of how musical history seems to be shaping up, I shall try to extrapolate some conclusions that are possible, and which seem to me probable. You may call it an essay in fantasy, if you like, or musical science-fiction, but at any rate I shall present my point of view about music as cogently and persuasively as I can, and the reader may accept it, reject it, or substitute his own in whole or in part.

Now some of our leading critics still refuse to recognize in Mahler anything more than a would-be world-shaker, a "shot heard round the immediate vicinity." Or they may even claim that he was an important but very *bad* influence, as some of them also claim Wagner to have been. This latter outlook is really quite significant from a subjective point of view, and should be carefully scrutinized by anyone who would understand the esthetics of modern music more clearly. It reveals just as much about Mahler's place as the tributes do, if analysed correctly. The people who deplore Wagner's influence, however, are generally rational enough to admit that such influence could be exerted only by someone who was a unique genius in his own right. It was left for Mahler's music to create such hysteria in those who reject it that they are frequently goaded into arguing both propositions at the same time: that he wasn't much of a composer, and that his music has been a powerful *subversive* influence in modern music. Such a reaction can really be understood only in esthetic terms probing downward into the psychological—and our psychological inquiries into music are still so naive that one can do little more than *suggest* what a profoundly controversial figure Mahler really is, under the surface of the platitudes about him that are still offered in high places.

The main points of the numerous writings by composers and musicologists, acknowledging and describing Mahler's widespread influence, have been well summed up by Howard Shanet in the program notes of the recent New York Philharmonic Mahler Festival, as reprinted in the 1960 CHORD AND DISCORD. They are so provocative that I would like to summarize them again here. "What is so special about Mahler?", Mr. Shanet asks himself. "Why is it that half a century after his death his public continues to grow, and even the most sophisticated listeners find his music more and more intriguing, while the compositions of many of his turn-of-the-century colleagues seem embarrassingly dated?" And why, in particular, does his music survive so well "in an age when its style is not even considered to be *in good taste*?" (my emphasis). To answer these questions, Shanet proceeds to consider (1) Mahler's artistic integrity, (2) his total dedication to his art, (3) his technical perfection in all branches of musical composition, (4) the prophetic quality of his individual musical traits, and finally (5) the "unique poignancy" of his music.

The individual traits mentioned are of a widely varied nature, and each one is tabulated to show its relationship to a corresponding trait of the "new Viennese school (Schoenberg, Berg, Webern, and their successors)". They have to do with melody, thematic construction, orchestration, and the specifically subjective nature of the music (morbidly and

the "expressionistic" devices in particular). The "unique poignancy" of Mahler is attributed to "what might be called a musical 'montage' effect: starting with musical fragments that are familiar and even old-fashioned (children's songs and marches, folk tunes and dances, bird songs and bugle calls), he puts them all together, but without adding any story or program to connect them with each other. That is precisely why they are so touching—no longer allowed their old meanings, they seem to be trying to say something to us, something which trembles precariously on the brink of conscious understanding."

The latter point, as so eloquently expressed by Mr. Shanet, is extremely important. Taken in connection with the other points, it all adds up to one overwhelming impression: that of artistic totality. Note these points well: Mahler's *unswerving* integrity, his *total* dedication, his technical perfection in *all* branches of composition—and all this applied to a musical content which utilizes *all* of the experiences residing in what might be called our "collective musical unconscious." To himself, more profoundly perhaps than to others, Mahler was referring when he wrote: "By making music one expresses only the integral (*i.e.*, the feeling, thinking, breathing, suffering) human being." (letter of 1906 to Bruno Walter).<sup>1</sup> Mahler was indeed, as I have pointed out earlier, "the first musical existentialist,"<sup>2</sup> and perhaps the only total one to date.<sup>3</sup> In his music we truly hear, in Nietzsche's expression, "the bowels of existence" speaking to us.

No wonder the reactions of the musically sensitive to this music are equally intense, whether positive or negative. For notice, the full effect of Shanet's "montage" phenomenon is not lost upon those who dislike Mahler intensely, any more than on those who love him. It's simply a matter of concept and terminology. For Shanet, who loves Mahler, the "something" which his music seems to be trying to say to us is "something which trembles precariously on the brink of conscious understanding"—a beautiful expression which goes about as far as one can at present in defining its unparalleled power of communication. To Paul Rosenfeld, the great critic of a past generation, that same undefinable "something" is experienced in these terms: "It seems to be begging something of us, entreating us to do something. But what it is it demands of us we do not know, or, if we guess, do not know at all how to

<sup>1</sup> Trans. Ernst J. M. Lert, CHORD AND DISCORD, Vol. I, No. 9 (1938) p. 11.

<sup>2</sup> *New York Times*, Sunday, March 13, 1960. For this analogy I am indebted to Alexander L. Ringer.

<sup>3</sup> Cf. *Gustav Mahler* by Bruno Walter, translated by James Galston (New York: Greystone Press, 1941) p. 128: "How dark is the foundation upon which our life rests," he once said to me with deep emotion, while his troubled look gave evidence of the convulsion of his soul from which he had just freed himself. And, haltingly, he continued, speaking of the problems of human existence: "Whence do we come? Whither does our road take us? Have I really willed this life, as Schopenhauer thinks, before I even was conceived? Why am I made to feel that I am free, while yet I am constrained within my character, as in a prison? What is the object of toil and sorrow? How am I to understand the cruelty and malice in the creations of a kind God? Will the meaning of life be finally revealed by death? In such and similar words laments, astonishment, and horror would pour from him as from a gushing spring. Fundamentally, there never was relief for him from the sorrowful struggle to fathom the meaning of human existence."

meet and gratify it."<sup>4</sup> But this feeling is rejected by Rosenfeld, and so he speaks of Mahler's "failed endeavors," with their "heaped banalities," their "false Beethoven and conscious naivetés and unfresh lyricism." At the same time they conjure up for him "torture-masses devised by the imagination of a ferocious medieval god for the punishment of transgressors against him . . . the blocks of ice in the circle of traitors in the Inferno that contains each its wretched congealed soul . . . a caked and buried face . . . parched lips and cracked laryngeal chords straining to frame speech . . .", etc. Has anyone who rejected Mahler so vehemently reacted to his music more morbidly than this? Today, with our supposedly greater tolerance of expressionism in all its forms, we may fairly ask: If Mahler's works could do all this for Mr. Rosenfeld and be "failed endeavors," what would he have done if he had succeeded?

But it is something other than expressionism that is suggested by Shanet's poignant "montages" of familiar fragments, "trembling precariously on the brink," especially if we juxtapose them with the nightmares which other features of Mahler's music so readily conjure up. What else is this but surrealism?—the surrealism of Hieronymous Bosch, or of Jacques Callot, one of whose fantastic engravings (*Des Jaegers Leichenbegaengnis*) was in fact a directly acknowledged inspiration to Mahler. Salvador Dali dissolves the reality into the dream when he takes a chest of drawers, familiar as your nose, and places it out in the middle of a desert such as only your sleeping brain could conjure up at will. Does not Mahler do as much when he takes a children's march and places it in a *Walpurgisnacht*, or in the black chill of outer space? The true visionary is he who can see "infinity in a grain of sand, and eternity in an hour." Visionary surrealism of this sort has simply not been cultivated in music at large, at least not in the music we hear in concert today. And since music critics are unfortunately inclined to be more conservative, more humorless, and less imaginatively free than critics of the other arts, is it any wonder that the adjectives "trite," "banal," "derivative," etc., flow so readily to their pens the moment they hear something familiar in Mahler, without their listening to consider how it is being used or what is being said—without trying to comprehend the work as a whole?<sup>5</sup>

Although one has to turn from music in order to find suitable analogies for Mahler's use of "musical montage," painting is not the only other art where such analogies are to be found. If Mahler's existentialism can be paralleled in the literary arts, so can his surrealism.<sup>6</sup> And if

<sup>4</sup> *The Tragedy of Gustav Mahler*, reprinted in *Musical Chronicle (1917-1923)*, (New York: Harcourt, Brace & Co., 1923) p. 238.

<sup>5</sup> As Schoenberg said: "One must use the most ordinary words to say the most extraordinary things." [Essay on Mahler from *Style and Idea* (New York: Philosophical Library, 1950), p. 18.]

<sup>6</sup> We even find a penchant for surrealism in some of Mahler's own early letters. Consider the following passage: "From the grey sea emerge two friendly names—Morawan, Ronow. And I see gardens filled with friendly people and a tree on which is engraved the name Pauline. A blue-eyed maiden curtsies and smiles and brings me a cluster of grapes. My cheeks redden again at the recollection. I see those eyes which once made me a thief—and again everything disappears. Nothing! Now there rises up the fateful umbrella; from its ribs and entrails I hear prophetic voices pre-

one has any doubt that musical criticism is esthetically naive and backward compared to literary criticism of corresponding repute, nothing can dispel such doubts more readily than to examine, by way of comparison, a few of the penetrating analyses of Mahler's analogues in literature and poetry. I offer in evidence the following extract by Philip Rahv concerning the writings of Kafka:

"A master of narrative tone, of a subtle, judicious and ironically conservative style, Kafka combines within one framework the recognizable and mysterious, extreme subjectivity of content with forms rigorously objective, a lovingly exact portrayal of the factual world with a magical and dreamlike dissolution of it. By unifying these contrary elements he was able to achieve no less than a new mutation in the art of prose fiction. . . . Thus it is clear that if Kafka so compellingly arouses in us a sense of immediate relatedness, of strong even if uneasy identification, it is because of the profound quality of his feeling for the experience of human loss, estrangement, guilt and anxiety—an experience increasingly dominant in the modern age. . . . There can be little doubt any longer of his stature as an artist in the metaphysical mode, whose concern is with the ultimate structure of human existence, or of his surpassing originality as an innovator in creative method. Like Rilke in the *Duino Elegies* he asked the supreme question: *Was war wirklich im All?* ('What was real in the world?')."<sup>7</sup>

It is evident that, with the substitution of a few phrases like "symphonic music" for "prose fiction," this entire quotation could apply equally well to the Mahler we have just been discussing. But where is the comprehension of Mahler in our critical press to equal this comprehension of Kafka? How often do the "banalities" of Mahler evoke in our critics "a sense of immediate relatedness," of "uneasy identification," rather than hoots of derision and a scramble to heave the whole thing overboard as quickly as possible? How often do we hear of "his feeling for the experience of human loss, estrangement, guilt and anxiety," instead of "his exuding of self-pity"? Why this critical lag in the musical world?

Perhaps it is because, as is increasingly known, the emotional impact of music is more direct, basic, and "visceral" than in the other arts. For

---

dicting misfortune for me like a Roman augur. Suddenly a table rises up from the ground and a spectral form completely clothed in blue clouds is seated at it. It is Melion, who is celebrating in song the Holy Spirit, and he offers incense to it with real *Dreikoenig*. We sit there like two scrofulous officiating for the first time at a holy mass. Behind us a hobgoblin hovers sneeringly; he is dressed in playing-cards and his face is that of Buxbaum. In a fearful voice he calls to us in the melody of the *Bertinischen Etueden*: 'Humble yourselves! This glory, too, will disappear! A stream of clouds from Melion enfolds the scene, and the clouds grow thicker and thicker.' [Letter of 1879 to Josef Steiner, trans. Gertrude Norman & Miriam Lubell Shrifte, in *Letters of Composers* (New York: Alfred A. Knopf, 1946), p. 295.]

We remember Mahler's love of the fantastic in literature, such as the tales of E. T. A. Hoffmann, and others mentioned by Walter. The close interconnection of the arts in Mahler's mind has also been pointed out in numerous regards. *E.g.* Dika Newlin rightly suggests that the phrasing of the title *Gestrandet—Ein Totenmarsch in Callots Manier*, originally applied to the third movement of the *First Symphony*, might have been suggested to him by Hoffmann's *Fantasiestuecke in Callots Manier*.

<sup>7</sup> Introduction to *Selected Short Stories of Franz Kafka* (New York: Random House, 1952), p. viii.

it follows that if the "identification" referred to is stronger, the uneasiness itself will be greater; thus the "experience of human loss," etc., will be even more intense. In that case, it is Mahler's expressive power, rather than his lack of it, that lands him in trouble with his detractors. As Sir Donald F. Tovey wrote early in our century (suggesting a field of inquiry that has never been surveyed to this day): "What we find so disconcerting about Mahler is that every aspect of his work shows all the advantages of an unchecked facility and none of the disadvantages. It has us beaten at every point, and leaves us no resource but to sit upright in our dignity as men of taste and say, 'This will never do.'"<sup>8</sup> And that, apparently, is how it comes about that a style "not even considered to be in good taste" continues to become more and more intriguing to sophisticated listeners with the passage of time.

As applied to Mahler, Rahv's term "ironically conservative" would of course characterize the "reminiscent" qualities which the critics who were the real conservatives affected to find "trite," "banal," etc. As with Kafka, however, what really disturbed were the outrageous *uses* to which Mahler put his "familiar" language. When Bruno Walter recalls the "shout of indignation" that went through the musical press in 1894 over the "sterility," "triviality," and "accumulation of extravagances" they found in Mahler's *First Symphony*, he adds: "It was, above all, the *Funeral March in the Manner of Callot* which was rejected with anger and scorn."<sup>9</sup> Could anyone with a drop of musical humor in his veins react with anger and scorn to such a delightfully macabre jest?

Again, Rahv writes of Kafka: ". . . The creative writer is the last person we may look to if our concern is with drawing a line between the normal and the abnormal. For whatever the practicing psychologist may make of that crude though useful distinction, the artist cannot attend to it without inhibiting his sense of life in its full concreteness and complexity." Mahler had indeed that sense of life, and was able to express it fully in musical terms. To deny the greatness of such an artist because one doesn't happen to like what he has to say, or because one may in fact be altogether revolted by it, is actually to bring one's frustrated wrath down on Mahler's head because he possessed such a gift, and used it to unburden himself of his own symphonies instead of the critic's.

## II

What is it, after all, that thinks  
within us? And what acts within us?

—GUSTAV MAHLER

How future times will view Mahler is, as I have said, very problematical, especially since the general state of music has been extremely turbulent since Mahler's death, and since there is a continuing estrangement between modern music and the wider public. Until we can discern "the main stream of music" in the first half of our century and later with

<sup>8</sup> *Essays in Musical Analysis* (London: Oxford University Press, 1952), VI, p. 75.

<sup>9</sup> *Op. cit.*, p. 3.

some degree of certainty, and know where it is leading, we can only conjecture about Mahler's ultimate place in it. There is even some disagreement over Mahler's true esthetic relationship to his immediate successors in Vienna, the afore-mentioned Schoenberg, Berg and Webern. I have already outlined this controversy in my essay, "Mahler and Atonality,"<sup>10</sup> but since that article is out of print, it might be useful to restate the argument briefly.

"The question," I wrote then, "of whether or not Mahler's last symphonies show an increasing tendency toward atonality is one that can be and has been argued in more ways than one. Ernst Krenek, for instance, points out that if a man continues to wade deeper and deeper into the water, pretty soon he is going to have to start swimming,<sup>11</sup> and he more than implies that Mahler was about ready to 'swim.' And from the opposing camp, so to speak, Dr. Robert Simpson states: 'It really cannot be asserted convincingly that Mahler in any respect anticipates "atonality," which is a purely intellectual pastime. If he writes harmonies that seem to be uncertain in their key, it is because, like Beethoven or Mozart, he does not at that moment want the hearer to know what key is coming next. It may be these transitional passages that have influenced Schoenberg (some parts of Mahler's *Ninth* come to mind); but an art that is all transition is as bad as one that is all introduction or all peroration.' He also criticizes Dika Newlin for saying that Mahler's use of progressive tonality (the device of beginning a piece in one key and ending in another) is 'the first step in the dissolution of tonality into "pantonicity" that made the system of the twelve-tone scale possible,' and he remarks: 'In these symphonies Mahler is deliberately making strong and dramatic contrasts of key; this would be impossible were his key-sense in any way tending to become "dissolved" into anything else. Mahler is not undermining old facts: he is simply taking advantage of their verity in a new way.'<sup>12</sup>

In these arguments, we can see in embryo the whole modern controversy over the correct relationship between chromaticism and diatonicism, dissonance and consonance, tension and relaxation. I can remember an analogy being made between harmonic tension and a rubber band. If the point of complete harmonic resolution (the tonic chord) in a piece of music be likened to the rubber band in its ordinary tensionless state, then the gradual stretching of the band will obviously correspond to the gradual increasing of harmonic tension in the music, by the superimposing of chromatic and dissonant effects which take it further and further away from that point of repose. But sooner or later a rubber band will snap if outward pressure continues to be applied to it, and then it is again *without* tension. So also in music: if there is no point of repose, *i.e.*, no tonality heard or implied, then there can obviously be no feeling of harmonic distance from it; the tonally oriented mind simply drowns in an uncharted sea, and the *new* chart provided by the twelve-tone system makes no impression on the primitive *emotional* responses. It is an esthetic and psychological problem pure and simple.

<sup>10</sup> *Music Review*, Vol. 17, No. 2 (1956).

<sup>11</sup> *Music Here and Now* (New York: W. W. Norton & Co., 1939).

<sup>12</sup> *Music-Survey*, Winter, 1948.

An amusing variant of this rubber-band analogy is implied by Strauss in the Introduction to his *Don Quixote* Variations of 1897, more than a decade before Schoenberg's introduction of atonality. In this work, the key of D major is associated with "home" in three different senses: it is (1) the home tonic (i.e., the key first established, from which the music departs and to which it returns), it is associated (2) with Don Quixote's geographical home (from which *he* departs on his odyssey, and to which he eventually returns), and also (3) with his psychological home (i.e., his psychic orientation, his sanity, which he first loses in the grip of obsessive delusions and then regains). The Introduction simply illustrates the process by which he loses that sanity. First he is depicted, in his normal D major, as of sound mind but flighty imagination—and we also hear themes representing the chivalric figments of that imagination. All very clear and orderly, and quite charming. But as these figments gradually take possession of him, forcing out sober reality altogether and putting themselves *in its place*, the music wanders further and further from "home," becoming increasingly wild and disordered, with ever-increasing dissonance and chromatic distortion of the musical ideas. Finally, his mind simply snaps, and the solo cello calmly proceeds to play the original *Quixote* theme in its *alter ego* of D minor—more fantastic now, but completely recognizable. He is the same person, *except* that his fantasy life, in the form of hallucinations, has now become indistinguishable from the real world: the true clinical picture of psychosis, as re-created by the youthful genius of Strauss.

Now modern psychology teaches us that the subconscious mind is primitive, unsubtle, intellectually moronic. Like all our greatest human achievements, our musical edifices, straining toward the clouds, are built up slowly and painfully out of the common mud we all inherit. No one knows why some reach the highest creative achievement and not others—least of all the musical genius himself. The achievement can be seen and heard by all; the explanation lies buried somewhere within that great unknown primitive morass we call the unconscious. As children we all respond to musical and other sound stimuli in one way or another. If we grow up with musical inclinations, we form strong likes and dislikes, but we cannot really explain these likes and dislikes in a rational way, except in the broadest and crudest terms. We know that they lead us whither they will, but we never really know *why* they do. If we are psychologically oriented, we suspect that our private responses are formed by early experiences and identifications, perhaps by accidental sound connotations both musical and extra-musical, and we may even deliberately set out to explore this ground; but we seldom get very far, for we are floundering about in the dark.

But if our individual experience of music is essentially mysterious, at least we have our common musical language to fall back on. What links us to the musical experience of others is generally more comprehensible than what separates us. We know how music evolved in history better than how it evolved in our individual selves, causally speaking. If we love Mahler, for example, we are aware that he represents a culminating point in the growth of what we call symphonic music, and beyond that, of all Western tonal music: i.e., music built on the tonic and dominant chords, on the other related chords, and on the diatonic

and chromatic scales. And about the time of Mahler's death, we know, atonal music was introduced into the world, seeking to replace that tonal system with a new, complete autonomy of each individual component of the chromatic scale. After that, causation in musical history seems to become as inexplicable, and as unpredictable, as esthetic causation in our own instinctual selves. It is at this point that the thread of esthetic or emotional cause-and-effect in the evolution of music seems to snap, leaving us with seemingly arbitrary choices of syntax—sometimes strangely persuasive, sometimes merely mystifying, irritating, or dull. Of course the same phenomena emerge simultaneously in all the arts; but again we see how the stronger, more purely instinctual responses to music create stronger reactions to this mystification, both *pro* and *con*. Even as passive consumers, we cannot intellectualize music as glibly as painting or sculpture: it gets inside us and wrenches us more.

It is quite fitting, in a way, that the role of Mahler, the most ambiguous of all composers, should be so ambiguously interpreted by the exponents of those opposing camps of modern music. He is increasingly claimed by *both* as their champion or prophet. Krenek claims that Mahler, with his increasing chromaticism in his later works, was wading deeper and deeper into the waters of atonality. Simpson claims, on the contrary, that he was strengthening and widening the expressive realm of tonality in these very same works. This confusion is part and parcel of our larger confusion about the relationship of tonal and atonal music. It is due, I believe, to our greater proficiency in technical analysis than insight into musical esthetics and psychology.

To Dr. Simpson, hearing all music from a tonal plane of reference, atonal music is simply music which is "all transition": *i.e.*, an unwarranted elevation of a specific, functional aspect of tonal music into an autonomous and absolute principle. This is borne out by the experience of those who hear atonal music as music which seems to be trying to "go somewhere," but never arrives; to whom any passage from an atonal work suddenly "tuned in on" seems more impressive than what follows it, forming a spiral of diminishing return as their expectation is repeatedly frustrated. What distinguishes an atonal-sounding passage in Mahler from a similar-looking and similar-sounding passage from an actual atonal work of Schoenberg, then, may be its context more than the isolated passage itself. The tonalist can take this as an inspiration for the transition and development sections in his own works. Equally, the atonalist can take it as an inspiration for the main body of *his* works. In either case, whether Mahler was weakening or strengthening the tonal idiom is a purely subjective opinion. The tonalist chooses to view it functionally, the atonalist merely texturally. (Even modernist composers freely agree to characterize pre-atonal and post-atonal harmony respectively as "functional" and "non-functional," as I noticed in a recent radio debate on "Mahler's Influence on Contemporary Music," which included Roger Sessions and Gunther Schuller.)

I made the following analogy in my above-mentioned article of 1956: "It is rather like the case of a fine novelist who uses the theme of sexual promiscuity to create tension in his stories inspiring a writer of another generation to proclaim sexual freedom as the natural and desirable condition of man." I still think that analogy will serve, though I believe that

Mahler's approach was too subjective, too instinctual, for him to go about deliberately "creating tension." Mahler did not "use" themes, as much as they used him; or as he himself expressed it: "One does not compose—one is composed." So, whether he realized it or not, his work is a catalyst helping to give birth to a new musical language—or a Frankenstein spawning a monster, depending on how you choose to look at it. Then again, one may like a good deal of this new music, yet deplore the tons of technical explanation and analysis designed to achieve, by sheer weight, volume, and erudition, a public acceptance that can never be achieved except through the senses and the emotions. Above all, it is quite likely the idea that the twelve-tone system has "evolved naturally" from chromatic tonal music that is responsible for much of our present confusion about music.

As I wrote in 1956: "To argue that Schoenberg was still following the old 'laws' of musical construction in his atonal works and later would deny him the status of a genuinely revolutionary composer. Not only that, it contradicts the whole meaning of the first fourteen years of our century. It is scarcely possible for us to realize fully today the intolerable tension of that period, the tension that *had* to find release. To be then a contemporary artist in the true sense was in itself a disturbing and iconoclastic experience; if Schoenberg really believed he was a traditionalist through it all, then I think he was deceiving himself. For I simply cannot go along with that school of thought which claims to demonstrate an orderly connective evolution in the emergence of twelve-tone music. Nor can I feel or understand it as a repetition of the tonal system on a higher plane, as it is sometimes represented. To me that is plainly a rationalization, because psychologically there was and is no emotional integration or stability that would allow such a process to take place. On the superficial level one can point to any number of convenient parallels, but the underlying spirit is more significant. The 'tonal system' is simply an arbitrary but highly developed system representing the slow conditioning of centuries of European culture. To throw it out and try to supplant it overnight with something equally arbitrary and with *no* conditioning behind it was basically a revolutionary act, a conscious or involuntary rejection of that culture and all it represented. It was necessary not from the standpoint of any evolutionary inevitability within the tonal system, but because of psychological forces with a strong destructive component."

The same forces could be observed in each of the arts, each in its own characteristic manner. The longing to be internally free is at the heart of all external revolutions, but most of all in this emergent age of depth psychology. And in music it was Mahler, I concluded, who "helped to awaken that modern longing for freedom."

### III

It will forever remain a secret of Nature how it could have created and made capable of living a man with such violent inner conflicts as Mahler.

—BRUNO WALTER

I hope that by now it will be clear why I have stressed, in connection with Mahler, the analogous developments in the allied arts which we

call by the names of surrealism, expressionism, etc. The chronic over-concentration on technical problems and innovations in music (in part a reaction to the simplified, pretty-pretty "appreciation" school of thought) has blinded us to the deeper, esthetic implications of what is taking place, and led us to false rationalizations which have served only to further mystify an already mystifying process. The fact that the "psychological forces with a strong destructive component" mentioned above are already present and very prominent in Mahler will have occurred to anyone who fully responds to his music, and probably to many who respond negatively. The apocalyptic urge to "upset the apple cart" on a cosmic scale is already inherent in the libretto which Mahler composed for his cantata *Das klagende Lied* before he was twenty, and continues to wax throughout his turbulent career. Mahler is, in this sense, as truly a revolutionary artist as Schoenberg himself. Also, both are true romantics in the Beethovenian and Berliozian sense. But in Mahler, the feeling of "all against all," of the irresistible force against the immovable obstacle, is manifested in the cataclysmic confrontation of musical order and "logic" (the tonal system) with the anarchy and nihilism suggested by its imminent destruction. He seems to be pulling himself back from an abyss, fighting off destruction by his sheer power of will. Thus, in the first movement of the *Ninth Symphony*, for example, plain D major is "home" in all the same ways as it is in Strauss' *Don Quixote*—but the struggle to assert and reassert it is far more Promethean. The rational, "tonal" Mahler has to contend with a daemonic, nihilistic Mahler which Bruno Walter identifies with Mahler's favorite character Roquairol.<sup>13</sup>

Schoenberg puts the matter on an altogether different plane. He simply rejects the old order, and sets out to establish a new one. For him the beginning is obscure and painful. There is again the youthful defiance, in *Gurre-Lieder* just as in Mahler's *Klagende Lied*:

Du strenger Richter droben,  
Du lachst meiner Schmerzen,  
Doch dereinst, beim Auferstehn des Gebeins,  
Nimm es dir wohl zu Herzen.

This seems to be Mahler all over again. But Schoenberg cannot live forever on the edge of an abyss. He feels Mahler's conflict intensely, but he is not imprisoned in the "all against all." So, like his fellow revolutionaries in the other arts, he forcibly "emancipates" himself from his oppressions by crashing through the "barrier" and making himself a more comfortable place on the other side. He shows us that the abyss is not an abyss after all, if we will it otherwise, but only another plateau. He does not accomplish this in one step. At first he uses the atonal language altogether expressionistically, as in the *Five Pieces for Orchestra* (1908) and *Pierrot Lunaire* (1912). He extends the listener an invitation to accompany him into yet another strange world—a bit morbid, perhaps, but fascinating. This is not the real world, but an expressionist, a stylized one. But stylization is difficult to maintain, with such freedom of choice as atonality affords. The real world keeps breaking

<sup>13</sup> *Op. cit.*, p. 137. How this is linked to deep sexual apprehensions will be evident to any practicing psychologist.

through in a rather literal way, in the form of tonal elements and tonal habits of thought, and this is felt to inject a stylistic confusion. So Schoenberg is silent for several years, as though perplexed. Finally he brings forth, fully developed, his twelve-tone technique of composition. The new world of sound has been officially tamed, the dissonance wholly emancipated. The listener will no longer be tempted to find tonal frames of reference where none are intended: the new method provides a guarantee of putting them just where they are wanted or eliminating them altogether, depending on the tone-row selected. Thus expressionism passes over into abstraction, as cubism in art passes into abstraction.

For the modern artist, this is the progressive means of escape from the existentialist questioning, the self-torturing problems of a Mahler. It answers all of the purely musical problems of the day, though none of the philosophical questions. But the mere listener is not interested in musical problems in the abstract. Music is not his way of life, it is simply one of the things that help to make his life more bearable, or more interesting, or more fulfilled. He is not caught up in the inexorable demands of musical progress; he is free to choose what he wants or needs from the whole complex of musical history, and all the intellectualizing in the world will not persuade him to the contrary. The twelve-tone composer who believes that Wagner, Bruckner, Mahler and Strauss have paved the way for him to be accepted by the public, because the textbook musical theorists tell him so, may be in for a long and painful process of disillusionment. His world may simply not be their world, surface appearances to the contrary. If he is a real composer, he will go his way regardless. As for those who "practise" the twelve-tone technique simply to be "in," they will be "out" sooner than they imagined possible.

Of course not every follower of Schoenberg's innovation has rejected the old order and embraced the new with single-minded enthusiasm comparable to his. Alban Berg is the first and chief of these anomalies. Whereas Mahler is now apt to be claimed, as I have said, by both the opposing modern "camps," poor Berg is frequently rejected by both. He is of course too modern for the traditionalists, while the "pure" dodecaphonists have been heard to say that his writing is really too old-fashioned and sentimental for their taste. Mahler said that he did not understand his young friend Schoenberg (after stoutly defending him from public rage); I am not so sure he would not have understood Berg, whose *Wozzeck*, dedicated in 1921 to Alma Mahler, is not only one of the most profound works in the free atonal idiom, but a true expressionist masterpiece. Berg, as is well known, regarded Mahler's *Ninth* as one of the most beautiful compositions in existence, and I am inclined to believe that Mahler would have paid *Wozzeck* the same compliment, either in part or in sum, if he had lived to make its acquaintance.

Though all of Berg's mature works following *Wozzeck* (and there are not so many) are in the twelve-tone idiom, he is one composer working *in* that idiom who, I think, convinces us that Mahler's abyss is still there, and that he, Berg, can still see into it from his new encampment. His twelve-tone *magnum opus*, the *Violin Concerto*, dedicated to the memory of Frau Mahler's daughter Manon Gropius, almost reconciles the tonal and twelve-tone camps through the inspired selection of its

tone-row, and its superimposed variations on Bach's *Es ist genug*. The fact that its construction is sometimes criticized by the orthodox twelve-tone theorists, despite the fact that it offers about the only true artistic example of the "evolutionary" linkage which by laborious theorizing they claim to exist, only illustrates how far from reality such abstract theorizing can lead one.

And finally, how might Mahler's place in musical history have been modified or extended if he had lived longer? Those of the "wading deeper" persuasion will of course maintain that he would sooner or later have become an atonalist. Others cannot conceive of his continuing at all. They find a complete statement and rounding-out in his existing works, ending with his "farewell to life." They think of his death as an involuntary suicide, coinciding with the real completion of his artistic life-work.

I do not think that either of these views is wholly convincing. To take the latter point first, it is indeed difficult to imagine where Mahler might have turned after the Dantesque visions and apotheosis of the *Tenth Symphony*. But the same would certainly be said of the *Ninth*, and with strong internal justification, if we had never seen the *Tenth*. And equally would it have been said of *Das Lied von der Erde*, had there been no *Ninth*. So we must conclude that Mahler had an immeasurable and unpredictable faculty for renewing himself and pushing on. Every Mahler symphony is really a "final summing-up"—of the Mahler of *that* period: this is one of the things that make his work so engrossing. No two symphonies are anywhere nearly alike, for the simple reason that each one utterly exhausted and consumed *that* Mahler, and out of the ashes rose a new one, thus forming an ever-evolving but continuous creative "stream-of-consciousness." We cannot imagine where it would have led next, for the very good reason that the only brain in which it could conceivably be imagined perished on May 18, 1911.

I think too that this word "evolving" is the key to a correct appreciation of the former controversy: *was* Mahler heading toward atonality, and would he have arrived? I have indicated my belief that it is possible for one to be a "tonally-centered atonalist," and that Alban Berg was one—certainly in *Wozzeck*. The great D-minor "Interlude" with which *Wozzeck* virtually ends is the apotheosis and emotional resolution of the entire opera, as if the main body of the work were some gigantic, perpetually deferred cadence—a work, in other words, that is tonal in the breach rather than the observance. To a work of this sort, perhaps, Dr. Simpson's strictures about being "all transition" might justifiably apply, though sublimely so. Dramatically, *Wozzeck* is such a tremendous work because of the deep compassion that underlies its expressionist distortion of reality. Harmonically, it is tremendous because its atonality is not felt simply as an *absence* of tonality, but as a continuous *forcing out* of tonality. When the dam that is holding it back finally crumbles, it pours over us in a flood of life-feeling as irresistible as the best of Mahler.

I can conceive of Mahler as an "atonalist" in that specific sense, as one who could further integrate the suspension of tonality into the modulatory symphonic principle which he had already extended further than anyone else. But I think the emphasis would be on the word "integrate."

Schoenberg himself, writing of Mahler's symphonies, says: "Anyone who can write such scores has one of those minds in which perfection automatically originates."<sup>14</sup> Berg, on the other hand, was a man with something of Mahler's inner vision or "inner ear," of his "sense of life in its full concreteness and complexity"—yet lacking the comparable equipment, the artistic *totality*, the sheer musical genius to find exactly the right vehicle for transmitting a full measure of that vision to the outer world. I *cannot* see Mahler consciously striving to hold a work together by an arbitrary series of classical devices and structures, as Berg did in *Wozzeck*—not that this is any deficiency in the ordinary sense. Still less can I imagine him concerning himself with serial methods of construction on a rational, a *priori* basis, as all his Viennese successors were later to do. I do believe he would probably have done more, esthetically speaking, with those expressive features which Shanet enumerates as linking him with his successors than either he *had* done or they *were* to do.

Thus I am inclined to think that Mahler, if he had or could have survived the terrible emotional crisis of 1910-1911 and continued his work, would probably have written powerful works capable of further altering and deepening the course of musical history itself, by probing further into the things that artists were half-eager and half-afraid to explore. The same Schoenberg who could write so lucidly about Mahler's gift could also (in the same essay, in fact) write more superstitiously than Mahler himself about the nomenclature of symphonies: "It seems that the Ninth is a limit. He who wants to go beyond it must pass away. It seems as if something might be imparted to us in the Tenth which we ought not yet to know, for which we are not as yet ready. Those who have written a Ninth stood too near to the hereafter. Perhaps the riddles of this world would be solved, if one of those who knew them were to write a Tenth. And that is probably not to take place."<sup>15</sup>

Here is that fear of revelation, combined with the longing for it, perfectly expressed. Taken literally, this passage is superstitious nonsense, of course. Taken as a parable, it is pregnant with subjective meaning, which is the essence of musical creation. It is the instinctual understanding of one who had to find a way *out* of the intolerable dilemma into which Mahler's daemon had finally plunged musical esthetics—and the twelve-tone system was the way chosen. After Mahler, either human reason or musical syntax had to snap, and Schoenberg instinctively chose syntax. Like the Moses whose agony he was later to celebrate, Schoenberg led the exodus, to give music a fresh start in a new promised land.<sup>16</sup> This, as I have said, was a psychological necessity, not an evolutionary inevitability. The greater world little understands or cares. Strictly speaking, "the emancipation of the dissonance" means its proposed defunctionalization as dissonance, and the attempt to make it

<sup>14</sup> *Op. cit.*, p. 20.

<sup>15</sup> *Op. cit.*, p. 34. This was written before the publication of the Mahler *Tenth* sketches in 1924, and remains unchanged in the English translation published much later.

<sup>16</sup> One of Mahler's favorite sayings was: "Who hath brought me into this land?" Thus did he gibe at his own creative daemon.

function henceforth as consonance by replacing it.<sup>17</sup> This is no mere intellectual pastime, as Simpson claims: it is more akin to an exorcising of evil spirits.<sup>18</sup>

But Schoenberg continues: "We are still to remain in a darkness which will be illuminated only fitfully by the light of genius.<sup>19</sup> We are to continue to battle and struggle, to yearn and desire. . . . We are to remain blind until we have acquired eyes. Eyes that see the future. Eyes that penetrate more than the sensual, which is only a likeness; that penetrate the supersensual. . . . Mahler was allowed to reveal just so much of this future; when he wanted to say more, he was called away."<sup>20</sup> If we conjure up Mahler as he so tempestuously lived, we realize that he is like the children of whom Gibran tells us in *The Prophet*: "You may house their bodies, but not their souls, for their souls dwell in the house of tomorrow, which you cannot visit, not even in your dreams." Thus, Mahler's ultimate place is intimately bound up with our universal fate. And we are not prophets.

Has Mahler's time now come? Comparing the public attitude of today with that of only a generation ago, we are inclined to think that it has—but perhaps we are as yet only dimly aware of him. Perhaps only the future will scale the full heights and depths of his works in its fuller imagination, and, echoing the words of Gibran back to the ghost of Mahler himself, will really *know* whereof they speak when they point with astonishment to his compositions and tell him: "Your children are not your children; they are the product of life's longing for itself." Mahler brought both real and artistic children into the world, yet his unbounded spirit remained tortured to the end by all temporal limitations. His final agony of self-recrimination was that "my life has been all paper;" his final bliss was "Mozart!" We should not wonder at the agony—we should marvel rather that "he heard the bowels of existence speaking," and unlike Nietzsche did *not* go mad.

---

<sup>17</sup> I realize that there may be as many attitudes toward this as there are dodecaphonists; but many of the latter seem to be not at all clear about the larger distinction.

<sup>18</sup> In a similar manner, the sudden burgeoning of electronic music since World War II may represent a subconscious obsession with the chaining of the man-controlled "natural" forces which now threaten to destroy or contaminate the world. Such obsessions would not make either electronic or twelve-tone music any less valid as art.

<sup>19</sup> "I had plenty of opportunity to admire the capability for psychological understanding of this man of genius. No light fell at the time on the symptomatic facade of his obsessional neurosis. It was as if you would dig a single shaft through a mysterious building." [Letter of Sigmund Freud to his colleague Theodor Reik, quoted in Reik's *The Haunting Melody*, Chapter 23, "Freud and Mahler," p. 343 (New York: Farrar, Straus & Cudahy, 1953). For further comments on this chapter, see my essay "Mahler and Psychoanalysis," in *Psychoanalysis & the Psychoanalytic Review*, New York, Winter, 1958-1959, and Robert Still's "Gustav Mahler and Psychoanalysis," *The American Imago*, Fall, 1960.]

<sup>20</sup> *Op. cit.*, p. 34.

## GUSTAV MAHLER'S PIANO QUARTET IN A MINOR (1876)

by DIKA NEWLIN

Through the courtesy of Mme. Alma Mahler Werfel and the assistance of staff members of Radio Station WBAI, New York, I have been enabled to study this work and to transcribe the somewhat untidy manuscript into performable condition. As of this writing (February 1963) a public performance has not yet taken place but it is hoped that this may still be possible within the 1962-63 concert season.

Mahler wrote the single movement of this Quartet in his sixteenth year. Donald Mitchell (in *Gustav Mahler: the Early Years*) believes that it was the composition which won him a prize at the Vienna Music Academy in July, 1876. The records show that the prize was awarded for a Quintet movement, but, as no trace of such a movement has ever come to light, it seems likely that the records are in error. On September 12, 1876, Mahler and some of his friends from the Academy organized a concert in his home-town of Jihlava (Iglau) in which this composition figured, with the composer at the piano. On this occasion, a violin sonata by Mahler was also performed, and the youthful composer-pianist distinguished himself as a soloist as well—notably, in Schubert's *Wanderer* Fantasy (which he began to play in the wrong key and transposed to the end of the piece!) It would seem that this was the first public appearance of any of Mahler's music.

Since that day, the work has (presumably) gone unperformed. Mitchell, in his meritorious book, gave a brief description of it, without music examples but with a facsimile page of the manuscript. However, with the ever-increasing interest in all facets of Mahler's art it seems time to give this composition more detailed consideration. In the following paragraphs I shall attempt to present a few of its highlights.

The tempo is *Nicht zu schnell*, the meter  $\phi$ . After two introductory measures of quarter-note triplets on A-C, the left hand of the piano announces the germ-motif of the work:

Ex. 1

We recognize this at once as a motif common to many Mahler symphonies. Of course, its most striking appearance is in the first movement of the Sixth Symphony, which shares the Quartet's key of A minor:

Ex. 2

but we find its traces also in the Fourth Symphony and—more highly transformed—in *Das Lied von der Erde*:

Ex. 3 a and b

The interval of a sixth expands to a seventh, the bass continues downward in a scale-line, and we arrive at an F major chord, at which point the strings (first the 'cello, then the violin, followed by the viola) enter *mit Leidenschaft*. At measure 14, all the strings participate in the germ-motif, with which the left hand of the piano also continues; meantime the throbbing triplets continue in the right hand. The emotional tone continues intense; at m.26, we have the indication *Sehr leidenschaftlich* (very passionately). In measures 32-33, a new motif sounds forth in the violin:

Ex. 4

The foreshadowing of the Sixth Symphony is again plain (see first measure of Ex.2).

Ex. 5

It leads us towards the relative major. Then, at measure 54, to the accompaniment of flowing eighth-note triplets in the piano, the motif of Ex.4 now appears in the guise of a *cantabile* secondary theme:

(measures 202-215) Mahler did not bother to write out the piano part; however, it is easy enough to reconstruct what he intended from the parallel passage in the exposition.

Measure 216 brings back (now in A minor) the full chords with octave-leap which originally occurred as a variant of Ex.7. This time, the passage is interrupted by a short violin cadenza, marked by Mahler *ungemein rubato und leidenschaftlich*. After it, we hear once more the combination of the germ-motif, the motif of Ex.4, and the sixteenth-notes in the piano. Gradually all this fades away (*morendo*) over a *tremolo* pedal point on A in the left hand of the piano. In a striking ending, the piano brings the germ-motif one last time, over *pizzicato* chords in the strings.

Subjective in feeling, lucid in form, this movement is a more than creditable achievement for a youngster of sixteen. And it must fascinate us because of its motivic foreshadowings of the mature Mahler. Its performance and (we hope) eventual publication can only add to our appreciation of an increasingly beloved composer.

---

#### JASCHA HORENSTEIN AWARDED KILENYI MAHLER MEDAL

Jascha Horenstein has for many years been active on behalf of the works of Gustav Mahler. In England he included on his programs Mahler's First, Fourth, Fifth, Ninth, the Adagio of the Tenth as well as Mahler's songs. During the Mahler Centennial he gave a transcendent performance of Mahler's monumental Eighth. This performance with introductory comments by Deryck Cooke was broadcast by the British Broadcasting Corporation.

In appreciation of Mr. Horenstein's efforts to create a better understanding of Mahler's music in England the Directors of *The Bruckner Society of America* awarded to him the Mahler medal designed by the late Julio Kilenyi for the exclusive use of the *Society*.

## “VENI CREATOR SPIRITUS”

MAHLER'S EIGHTH SYMPHONY UNDER MITROPOULOS IN SALZBURG  
ON AUGUST 28, 1960

by HERMAN WEISS

May it be said at the beginning: Ours was a sentimental journey to Salzburg, or, more to the point, to hear Mahler's Eighth Symphony as the crowning experience of the Mahler Centennial. And may it be said that we do not try to hide the emotional feelings in this report.

We do not intend to analyze the music. It has been discussed often and extensively. We are aware of a few problems. However, they are rather irrelevant if one realizes Mahler's genius in the conception, execution and instrumentation of this overdimensional work: the first movement, *Veni Creator Spiritus*, the old hymn with its overflowing sonority, the final movement, the last scene of Goethe's *Faust* (2nd part) with its expression of belief, love and exaltation.

Hardly a more appropriate environment could have been found for this mysterious symphony than the *Felsenreitschule* in Salzburg,—mystic and weird in itself. Whereas the auditorium has a permanent ceiling, the tremendous stage with its rock wall as background is only loosely covered by a canvas, permitting the sun to illumine the performers. A living tree growing high up in the rocks had a symbolic meaning for this performance. Niches hewn into the upper part of the rock wall gave the second brass chorus an imposing place for its jubilant overpowering intonation at the end of both movements. Altogether the placement of the huge chorus (Vienna Opera Chorus, *Singverein der Musikfreunde Wien*) was a happy one. In their midst stood the outstanding solo septet: Mimi Coertse and Hilde Zadek (Sopranos), Lucretia West (USA) and Ira Malamiak (Contraltos), Giuseppe Zampieri (Tenor), Hermann Prey (Baritone) and Otto Edelmann (Bass) who discharged their extremely difficult duties with precision, beauty and devotion. Placed above the soloists were the *Wiener Saengerknaben* with their angelic voices, sometimes a bit overpowered by the augmented Vienna Philharmonic with its well known mellowness and yet outstanding power that has made it rightly one of the great orchestras of the world. But this was Dimitri Mitropoulos' day.

Many composers' works were not readily established. Eventually they either found their place in the repertoire or fell into oblivion. Even the famous Brahms (Hanslick)-Wagner feud was settled satisfactorily. Not so in Mahler's case. It has remained a "case" even 50 years after the master's death. Temperaments are still flying high, especially among the American critics. Purposely avoiding the expression "Program Music," we consider that Mahler's music is probably some of the

most subjective ever written. It is as if one's own feelings and experiences have been described. No wonder then that words like banal and trivial are often found in the write-ups. Are some of the critics really such philistines that they do not realize that our lives do not contain beauty and exaltation only! The centennial celebration has shown that Mahler's music is firmly established in the cultured world. This might have been quite different if not for the courageous, unselfish and devoted work of many conductors. However, with the exception of Bruno Walter we do not know of anyone who has done more for this cause than Maestro Mitropoulos.

We remember Mitropoulos' earlier remark to us: “When you conduct Mahler you feel sometimes quite lonely up there on the stage.” In Salzburg surrounded by an enthusiastic audience joined by all performers he certainly realized the great appreciation of the work as well as the feelings of love and gratefulness towards him. It is hardly necessary to mention that he conducted the gigantic work by heart (he did not need any help even for the cues during the rehearsals). Under his loving, understanding and inspiring hands the performance became a true celebration, a deeply moving unforgettable experience. Was it a coincidence that just when jubilant music pronounced the eternal truth the rays of the sun illuminated the heads of the boy singers? Our thoughts were wandering to the distant past when Mahler himself conducted the very first performance of the Eighth in Munich back in 1910. The emotional impact at that time was not greater.

It is fortunate that the human mind often tends to absent itself from the sad truth. In spite of the knowledge of distressing facts, no one that morning in the *Felsenreitschule* had any forebodings that Mahlers' Eighth would be the Maestro's requiem. We bow our heads in gratitude for the *Erlebnis*, Dimitri Mitropoulos.

## A NEW BRUCKNER BIOGRAPHY

Erwin Doernberg: *The Life and Symphonies of Anton Bruckner*. With a foreword by Robert Simpson, illustrations and music examples. xii, 232 pp. (London: Barrie and Rockliff, 1960). (Distributed in U.S. by W. S. Heinman, 400 East 72nd Street, New York 21, N. Y.)

Surprisingly enough, this is the first full-length study of Bruckner alone to be published in Britain. (It is, of course, not, as some publicity material has stated, "the first book devoted wholly to Bruckner in English"; that honor belongs to Engel's book of 1931.) Therefore, it is certainly deserving of our attention here. Designed for the general musical reader, it does not present highly detailed symphonic analyses, but, rather, guideposts to the works, illustrated with pertinent brief musical examples. There is also a section of general background to Bruckner, followed by eighty pages of biographical sketch. The work is completed by a calendar of composition and revision of the symphonies, a complete list of works, and a select bibliography. There is no discography, but Doernberg comments on current recordings, usually disparagingly (he finds the only extant recording of the Sixth quite inadequate, and criticizes various details of Jochum's Fifth and van Beinum's Seventh).

Taking a stand (as every Bruckner biographer must do) on the vexed question of Bruckner's texts, Doernberg expresses a strong preference for the versions prepared by Robert Haas as compared to the later editions of Leopold Nowak. (The old Schalk and Loewe versions, of course, are completely discredited.) In general he is not chary of criticizing other writers on Bruckner. He frequently disagrees with H. F. Redlich (*Bruckner and Mahler*, 1957) on points of fact (the specifications of the organ at St. Florian) or of stylistic interpretation (the presence or absence of a Wagnerian reminiscence in the Scherzo of the Sixth). He dislikes the "obvious pedantry" of Schwanzara (transcriber of Bruckner's harmony lectures at the University of Vienna). He takes exception to the present writer's belief that the "third theme" of Bruckner's sonata form grows out of classical precedents, preferring rather to consider it a "characteristic innovation." He finds words of praise, on the other hand, for Canon Dr. F. Linninger of St. Florian, whose investigations have corrected a number of Bruckner dates previously wrongly given.

In contradistinction to many other biographers, Doernberg definitely plays down the Bruckner-Mahler relationship. This is clearly seen in a passage concerning the Adagio of the Sixth. "The theme . . . is the kind of music which Mahler wished and attempted to achieve with his typical conscious exertion from time to time which, therefore, has led some critics to the profound observation that occasionally Bruckner anticipates Mahler." We regret this seemingly negative attitude towards Mahler but subscribe completely to Doernberg's words of affection for his great subject: "Bruckner's music is elemental, but not simple; deeply felt but not sentimental; complex but not sophisticated; thought-stirring but not intellectual. To understand and to love Bruckner is one single mental process—a rich and rewarding experience."

—DIKA NEWLIN

## NOTES ON CONTRIBUTORS

DERYCK COOKE, who was born in Leicester, England, in 1919, studied English Literature and Music at Cambridge University, where he obtained the degrees of Master of Arts and Bachelor of Music. In London he won the diplomas of Associate of the Royal College of Organists and Associate of the Royal College of Music, for organ and piano playing respectively.

He originally intended to become a concert pianist, but after five years of war service in the Middle East with the British Royal Artillery, he became more interested in the wider aspects of music theory and aesthetics. From 1947 to 1959, he worked in the Music Division of the BBC, as writer of scripts for music broadcasts, musical advisor to *Radio Times*, and programme-producer; but since 1959 he has been working as free-lance author, journalist, musicologist, and critic. Has been music critic of the *New Statesman*, writes record reviews for *The Gramophone*, and broadcasts regularly on musical subjects on the BBC.

Author of a controversial book on musical expression, *The Language of Music* (Oxford University Press, 1959), and of "Gustav Mahler 1860-1911," a booklet issued by the BBC as a companion to their Mahler Centenary celebrations of 1960, he is at present working on contributions to the New Oxford History of Music, and on a study of Wagner and his times. His setting of Burns's *Tam o' Shanter*, for tenor, male chorus, strings and piano, has been broadcast by the BBC.

JACK DIETHER is a writer on music and drama who, among other duties, does all the Bruckner, Mahler, and Shakespeare record reviews appearing in *The American Record Guide*. Because of his detailed coverage, that publication during the Mahler centennial year devoted more pages to Mahler than to any other single composer.

PARKS GRANT has contributed frequently to CHORD AND DISCORD since the issue of March, 1934. At present he is Associate Professor of Music at the University of Mississippi at Oxford, Mississippi. He is a composer of note as well as a writer on music.

EDWARD F. KRAVITT is a member of the music department at Hunter College and received his A.B., A.M., and Ph.D. degrees from New York University. He has contributed to *The British Journal of Aesthetics*, *Acta Musicologica*, *Notes* (Music Library Journal), *The Journal of Aesthetics and Art Criticism*. He was awarded a Fulbright grant and extension for study in Germany and the George N. Shuster faculty (Hunter College) fellowship.

ERNEST LEVY was born in Switzerland in 1895. He has taught and lectured at the Basle Conservatory, Westminster Choir College in Princeton, New England Conservatory, Bennington College, University of Chicago, and Massachusetts Institute of Technology; at present he is Professor of Music at Brooklyn College. He has written thirteen symphonies and works in other forms; a number of his compositions have been published and performed; his Eleventh Symphony won the Fromm Music Foundation Award, his cello concerto the prize of the City of Basle.

DONALD MITCHELL, born in 1925, was editor of *Music Survey* from 1947 to 1952 (from 1949 in collaboration with Hans Keller). He was London music critic for the *Musical Times* for the years 1953-1957. In 1957 he was appointed assistant editor of *Tempo* and in 1958 he became editor. In 1958 appointed music editor and adviser to Faber & Faber, Ltd. From 1957-1959 contributed regular music criticism to *The Times*. Joined the music staff of *The Daily Telegraph* in 1959. His chief publications are: *Benjamin Britten* (ed. with Hans Keller), 1952; *The Mozart Companion* (ed. with H. C. Robbins Landon), 1956; *Gustav Mahler, The Early Years*, 1958.

DIKA NEWLIN holds degrees from Michigan State University, University of California, and Columbia University. Her work in California included three years of

study with Schoenberg. At present Miss Newlin is Professor of Music at Drew University. While her greatest enthusiasm is composing, and her compositions have won equal success with her writing, Miss Newlin is best known for her book, *Bruckner-Mahler-Schoenberg*. She has translated Leibowitz's *Schoenberg and His School* and Schoenberg's *Style and Idea*. She has written for many periodicals.

STANLEY POPE, born in London in 1916, was educated at the Conservatoire in Vienna and studied with Richard Stöhr. Later he studied with the Swiss composer, Frank Martin. His associations with Felix Weingartner and later with Paul Kletzki in Switzerland, as also with Carl Schuricht, with whom he worked as assistant, played an important role in his musical outlook. In his early thirties he had already established his reputation conducting in Paris, Vienna, Copenhagen and many other European cities. Since 1952 he has been artistic director of the Symphonia Concerts Society in London.

JACQUES POSELL, first double bass player of the Cleveland Orchestra and instructor at Oberlin Conservatory, is a philatelist of long standing. He has formed an outstanding collection of "Music on Stamps," portions of which have been exhibited at different times in Cleveland including several exhibits at Severance Hall. He has also written articles on this subject for philatelic magazines including two articles for the Cleveland Orchestra program book in connection with his exhibits for the Orchestra.

ROBERT SIMPSON, born in London, 1921, originally intended to study medicine. After two years of medical studies, he decided to study music and received a Doctor of Music degree from the University of Durham. He is a composer, writer and lecturer. Among his compositions are three symphonies, a violin concerto, three string quartets, etc. He has written and lectured extensively on Bruckner in England. In 1956 he was awarded the Carl Nielsen Medal by the Danish Society. Since 1952 he has been a member of the music division of the British Broadcasting Corporation.

WARREN STOREY SMITH, born in Brookline, Mass., succeeded Olin Downes as Music Editor of the *Boston Post*, now discontinued. He has been a member of the faculty of the New England Conservatory since 1922 where he teaches the history and theory of music.

HERMAN WEISS, born in Frankfurt/Main, Germany, was graduated from the Medical School of the Johann Wolfgang Goethe University, Frankfurt, in 1923. He studied music at the Hoch Conservatory in Frankfurt, from 1921 to 1923 was Assistant Correpetitor Opera Munich, from 1929 to 1936 Medical Director Sanatorium Buehlerhoehe, Baden-Baden, from 1939 to 1948 Medical Director Aurora Institute, Morristown, N. J., and since 1948 Medical Director Royal Oaks Nursing Home, Madison, N. J.

Among American artistic developments of recent years the rebirth of interest in the music of Bruckner and Mahler is second to none in significance. When *The Bruckner Society of America* was founded on January 4, 1931, performances of these two composers by our major musical organizations were not merely rare, but also ineffectual, because American music-lovers had no adequate approach to the proper appreciation of the art of either Bruckner or Mahler. Therefore the *Society*, having adopted as its chief aim the fulfillment of this void, published the first biographies of these composers in English and issued a magazine, CHORD AND DISCORD, devoted almost entirely to discussions of their works.

The *Society* solicits the cooperation of all who are interested in furthering this aim. Inquiries concerning membership may be directed to Charles L. Eble, President, Box 246, Iowa City, Iowa.

## NOTES ON SOME MAHLER JUVENILIA

by JACK DIETHER

### I. *DAS KLAGENDE LIED*—GENESIS AND EVOLUTION\*

— 1 —

On November 1, 1880, Mahler wrote<sup>1</sup> concerning his cantata *Das klagende Lied*: "My fairy-tale piece is finished at last— a child of sorrow on which I've labored for over a year, and have managed to put into pretty good shape. The next step: to get a performance by any means possible." Sixteen years later (the piece being still unperformed) he said of it in a letter to his friend Max Marschalk:<sup>2</sup> "The first work in which I found myself as 'Mahler' is a fairy-tale for chorus, soloists and orchestra— *Das klagende Lied!* This work I designate as Opus 1."

And as though to implement that resolution, all the compositions by Mahler that preceded it have been renounced, abandoned, or destroyed by him. These go back as far as his pre-adolescence, and culminate in numerous songs, piano pieces, chamber works, and even symphonies composed during his years at the Vienna Conservatoire (1875-78), completed or otherwise. Only a very few precious fragments of these survive. Hard luck for the musicologist or biographer interested in tracing his early stylistic development, for no composer ever burned his bridges more assiduously behind him than Mahler.

But as a result, *Das klagende Lied* blazes forth, for us, like a bright comet out of a dark infinity— bearing, to be sure, its certain traces of Wagner and earlier romantics, but also with the unmistakable imprint of "GUSTAV MAHLER" burned into virtually every page. And even then, Mahler did not choose to leave *all* of this astonishing "Opus 1" to posterity, as we shall presently see. No opera, as it was formerly thought to have been conceived, it now appears to have been designed as a cantata from the very start.

One thing that sharply distinguishes *Das klagende Lied* from Mahler's later vocal works is that the entire poem to which it is set is also the composer's own. The title is from an actual fairy-tale by Ludwig Bechstein, an author who died the same year Mahler was born—and from which story the main elements of the poem are also taken.

"Fairy-tale" indeed! As retold by Mahler, it is nothing less than a tale of fratricide and supernatural retribution— yet with the romantic aura that surrounds even the grimmest examples of that genre. The original manuscript score owned by Alfred Rosé, Mahler's nephew, is in three sections, each bearing its own subtitle. And prefacing that

\* Reprinted by courtesy of Capitol Records, Inc.

<sup>1</sup> From Vienna, to Dr. Emil Freund. *Gustav Mahler Briefe*, ed. Alma Maria Mahler; Paul Zsolnay Verlag, Berlin, 1925; p. 15.

<sup>2</sup> Hamburg, December, 1896. *GMB*, p. 201.

score is the complete three-part poem in ballad form in Mahler's own hand, as follows (translation added):

*DAS KLAGENDE LIED*

I. WALDMÄRCHEN

Es war eine stolze Königin,  
 Gar lieblich ohne Massen;  
 Kein Ritter stand nach ihrem Sinn,  
 Sie wolt' sie alle hassen.  
 O weh, du wonnigliches Weib!  
 Wem blühet wohl dein süsser Leib?

Im Wald eine rote Blume stand  
 So schön wie die Königinne;  
 Der Ritter, der die Blume fand,  
 Der konnt' die Frau gewinnen.  
 O weh, du stolze Königin!  
 Wann bricht er wohl, dein stolzer Sinn?

Zwei Brüder zogen zum Walde hin,  
 Sie wollten die Blume suchen,  
 Der Junge hold und von mildem Sinn,  
 Der Andre konnte nur fluchen.  
 O Ritter, schlimmer Ritter mein,  
 O liessest du das Fluchen sein!

Als sie nun zogen eine Weil',  
 Da kamen sie zu scheiden;  
 Das war ein Suchen nun in Eil'  
 Im Wald und auf der Haiden.  
 Ihr Ritter mein in schellem Lauf,  
 Wer findet wohl die Blume auf?

Der Junge zieht durch Wald und Haid',  
 Er braucht nicht lang zu gehen,  
 Bald sieht er von Ferne bei der Weid'  
 Die rote Blume stehen.  
 Die hat er auf den Hut gesteckt,  
 Und dann zur Ruhe sich hingestreckt.

Den Andern treibt der wilde Hang,  
 Umsonst durchsucht er die Haide,  
 Und als der Abend herniedersank,  
 Da kommt, er zur grünen Weide.  
 O weh, wem er dort schlafend fand,  
 Die Blume am Hut, am grünen Band!

Du wonnigliche Nachtigall,  
 Und Rotkelchen hinter der Hecken,  
 Mir scheint, ihr wollt mit eu'rem Schall  
 Den armen Ritter erwecken.  
 Du rote Blume hinter'm Hut,  
 Du blinkst und glänzest ja wie Blut!

Ein Auge glänzt in wilder Freud',  
 Dess' Schein hat nicht gelogen;  
 Ein Schwert von Stahl hängt ihm zur  
 Seit',

Dah hat er nun gezogen!  
 Der Alte lacht unter'm Weidenbaum,  
 Der Junge lächelt wie im Traum.

*THE SONG OF LAMENTATION*

I. FOREST LEGEND

There was a proud and stately queen,  
 Of beauty without measure;  
 No knight within her favour stood,  
 All shared her great displeasure.  
 Ah woe, thou fair young lady bold!  
 To whom dost thou thy charms unfold?

A flower lovely as the queen  
 Did grow in a forest shady;  
 The knight who could the flower find  
 Might win the royal lady.  
 Ah woe, thou proud and stately queen!  
 When will it break, thy haughty mien?

Two brothers came into the wood,  
 The flower to discover,  
 The younger fair and of gentle mood,  
 But envy-blacken'd the other.  
 O knight, my evil-omen'd knight,  
 O turn away thy hateful spite!

When they had gone a little pace,  
 They ceas'd to walk together,  
 And now in search began to race  
 Through forest, field and heather.  
 My hasty knight, with darting eyes,  
 Who now will find the costly prize?

The younger search'd through wood  
 and lea,  
 And had not long been seeking,  
 When saw he, by a willow tree,  
 Through grass the flower peering.  
 He pluck'd and stuck it in his cap,  
 Then stretch'd he out to take a nap.

The other comb'd through crag and rill,  
 In vain through the heather peering,  
 And as the sun sank behind the hill,  
 He came to the grassy clearing.  
 Ah woe, whom there he sleeping  
 scann'd,  
 The flower in his cap, in green-hu'd  
 band!

Thou rapture-bringing nightingale,  
 And red-breast, thy long vigil keeping,  
 Methinks thy singing should prevail  
 To wake the poor knight sleeping.  
 Thou blossom red in sleeper's cap,  
 Thou shinest forth indeed like blood!

His eye doth gleam in frenzy wide,  
 To wilder mood replying;  
 A sword of steel hangs by his side,  
 To which his hand goes flying!  
 The elder laughs 'neath willow there,  
 In death the lad a smile doth wear.

Ihr Blätter, was seid ihr vom Tau so schwer?

Mir scheint, das sind gar Tränen!  
Ihr Winde, was weht ihr so traurig daher,

Was will euer Raunen und Wähnen?  
"Im Wald, auf der grünen Haide,  
Da steht eine alte Weide."<sup>3</sup>

## II. DER SPIELMANN

Beim Weidenbaum, im kühlen Tann,  
Da flattern die Dohlen und Raben,  
Da liegt ein blonder Rittersmann  
Unter Blättern und Blüten begraben.  
Dorst ist's so lind und voll von Duft,  
Als ging ein Weinen durch die Luft!  
O Leide, Leide!

Ein Spielmann zog einst des Weges daher,  
Da sah er ein Knöchlein blitzen;  
Er hob es auf, als wär's ein Rohr,  
Wollt' sich eine Flöte d'raus schnitzen.  
O Spielmann, lieber Spielmann mein,  
Das wird ein seltsam Spielen sein!  
O Leide, weh! O Leide!

Der Spielmann setzt die Flöte an,  
Und lässt sie laut erklingen.  
O Wunder, was nun da begann,  
Welch' seltsam traurig Singen!  
Es klingt so traurig und doch so schön,  
Wer's hört, der möcht' vor Leid vergeh'n!  
O Leide, Leide!

"Ach Spielmann, lieber Spielmann mein,  
Das muss ich dir nun klagen:  
Um ein schönfarbig Blümelein  
Hat mich mein Bruder erschlagen.  
Im Walde bleicht mein junger Leib,  
Mein Bruder freit ein wonnig Weib!  
O Leide, Leide! Weh!"

Der Spielmann ziehet in die Weit',  
Lässt's überall erklingen.  
Ach weh, ach weh, ihr lieben Leut'!  
Was soll denn euch mein Singen?  
Hinauf muss ich des Königs Saal,  
Hinauf zu des Königs holdem Gemahl!  
O Leide, weh! O Leide!

## III. HOCHZEITSSTUECK

Von hohen Felsen erglänzt das Schloss,  
Die Zinken erschall'n und Drometten;  
Dort sitzt der Ritter mutiger Tross,  
Die Frau'n mit goldenen Ketten.  
Was will wohl der jubelnde, fröhliche Schall?

Ye leaves there, why hang with dew-drops low?

Great tears ye might be shedding!  
Ye winds there, why waft ye regretfully so,

Your rustle and whisper spreading?  
"In woods, by a grassy pillow,  
There grows a weeping willow."

## II. THE MINSTREL

By willow cool, in firry wood,  
Where jackdaws and ravens hover,  
There lies a knight both fair and good,  
Whom the leaves and the blossoms o'ercover.  
'Tis mild and fill'd with fragrance there,  
And sounds like weeping fill the air!  
O sorrow, sorow!

A minstrel's steps to the clearing did lead,  
A glist'ning bone there did stay him;  
He carv'd it out, as 'twere a reed,  
A goodly flute to essay him.  
O minstrel, wand'ring minstrel dear,  
Strange is the music thou wilt hear!  
O sorrow, woe! O sorrow!

The minstrel put it to his mouth,  
And set it loudly ringing.  
What magic then did issue out,  
What strange and doleful singing!  
So sad it sounded, and yet so fair,  
Who heard might die of sorrow there!  
O sorrow, sorrow!

"Ah minstrel, wand'ring minstrel dear,  
Lament must I unto thee:  
For a fine-color'd flow'ret here  
My brother rashly slew me.  
My bleaching bones in forest hide,  
My brother woos a fair young bride!  
O sorrow, sorrow! Woe!"

The minstrel took it far and near,  
The doleful song essaying.  
Ah woe, ah woe, ye people dear!  
What think ye on my playing?  
Away must I to the kingly hall,  
Away to the beauteous queen of us all!  
O sorrow, woe. O sorrow!

## III. WEDDING PIECE

On rocky summit the castle gleams,  
The trumpets resound from their stations;  
With knightly followers bold it teems,  
And ladies with gold decorations.  
What tokens his gladdening, joyful recall?

<sup>3</sup> Original German text of Part I by courtesy of Alfred E. Rosé.

Was leuchtet und glänzt im Königssaal?  
O Freude, heia! Freude!

Und weisst du's nicht warum die Freud'  
Hei, dass ich dir's sagen kann:  
Die Königin hält Hochzeit heut'  
Mit dem jungen Rittersmann.  
Seht hin, die stolze Königin!  
Heut' bricht er doch, ihr stolzer Sinn!  
O Freude, heia! Freude!

Was ist der König so stumm und bleich?  
Hört nicht des Jubels Töne,  
Sieht nicht die Gäste, stolz und reich,  
Der Königin holde Schöne.  
Was ist der König so bleich und stumm?  
Was geht ihm wohl in Kopf herum?  
Ein Spielmann tritt zur Türe herein!  
Was mag's wohl mit dem Spielmann  
sein?  
O Leide, Leide! Weh!

"Ach Spielmann, lieber Spielmann mein!  
Das muss ich dir nun klagen:  
Um ein schönfarbig Blümelein  
Hat mich mein Bruder erschlagen.  
Im Walde bleicht mein junger Leib,  
Mein Bruder freit ein wonnig Weib!"  
O Leide! Weh, o Leide!

Auf springt der König von seinem  
Thron

Und blickt auf die Hochzeitsrund;  
Und nimmt die Flöte in frevelndem Hohn  
Und setzt sie selbst an den Mund.  
O Schrecken, was nun da erklang!  
Hört ihr die Märe, todesbang?

"Ach Bruder, lieber Bruder mein,  
Du hast mich ja erschlagen;  
Nun bläst du auf meinem Totenbein,  
Dess' muss ich ewig klagen.  
Was hast du mein junges Leben  
Dem Tode hingegeben?"  
O Leide, weh! O Leide!

Am Boden liegt die Königin,  
Die Pauken verstummen und Zinken;  
Mit Schrecken die Ritter und Frauen  
flieh'n,  
Die alten Mauern sinken.  
Die Lichter verloschen im Königssaal!  
Was ist es wohl mit dem Hochzeitsmahl?  
Ach Leide!<sup>4</sup>

<sup>4</sup> Universal Edition.

What glitters and shines in kingly hall?  
O rapture, hey-ho! Rapture!

And know'st thou not, wherefore this  
rouse?  
Ho, that can I truly say:  
The queen exchangeth marriage vows  
With yon youthful knight today.  
See there, behold the stately queen!  
Now will it break, her haughty mien!  
O rapture, hey-ho. Rapture!

Why is the bridegroom so pale and  
cow'd?  
Hears not the shouts of pleasure,  
Sees not the guests, so rich and proud,  
The queen in her stately measure.  
Why is the bridegroom so cow'd and  
pale?  
What casts upon his mind this veil?  
A minstrel steps 'fore the portal wide!  
What showeth he the guests inside?  
O sorrow, sorrow! Woe!

"Ah minstrel, wand'ring minstrel dear,  
Lament must I unto thee:  
For a fine-colour'd flow'ret there  
My brother rashly slew me.  
My bleaching bones in forest hide,  
My brother woos a fair young bride!"  
O sorrow! Woe, o sorrow!

The king leaps up from his royal chair  
And strides through the wedding crowd!  
Then takes the flute with a withering  
glare  
And plays it clearly and loud.  
O horror! What is now convey'd?  
Hear ye the tidings undismay'd?

"Ah brother, dearest brother lost,  
'Twas thou my life didst sever;  
Now play'st thou on my bone, that must  
Lamenting sing forever.  
Why hast thou my youth unfinish'd  
To sombre death diminish'd?"  
O sorrow, woe! O sorrow!

The queen sinks down insensately,  
The drums and the trumpets are humble;  
In terror the knights and their ladies  
flee,  
The ancient ramparts crumble.  
The lights in the kingly hall have ceas'd!  
What now remains of the wedding  
feast?  
Ah sorrow!<sup>5</sup>

<sup>5</sup> Translation by J. D., by courtesy of the Caramoor Festival, Katonah, N. Y.

This poem bears its own date of completion: March 18, 1878, or about  $2\frac{1}{2}$  years before the completion of the score. Prof. Rosé tells us that the manuscript score of Part I occupies 71 pages, that of part II 44 pages, and that of Part III 60 pages. Along with the fact that we know Mahler to have been a voracious reader of folk stories and poems, it has been suggested by Donald Mitchell that the immediate inspiration may have come to him from another musical treatment of the same story. Of this earlier setting, Mitchell writes in his book *Gustav Mahler—The Early Years*:<sup>6</sup> "I have no information about the work apart from its title, no knowledge whether it was a song, chorus, or instrumental movement, but . . . on May 3, 1876, in the second half of a concert of 'new music' given at the Conservatoire, a concert which Mahler may well have attended, a piece entitled *Das klagende Lied* by one Martin Graf was performed."

## 2

Mahler graduated with high honors from the Conservatoire later in the spring of 1878, and our knowledge of his two succeeding years of frustration and privation is spottier than for any other period of his life. From various letters we know that he lived principally in Vienna (the scene of his greatest future triumphs!), eking out a miserable existence as a private piano teacher. He moved more than a dozen times during that period, usually sharing a Bohemian existence and quarters with fellow musicians such as Hugo Wolf, who had been expelled from the Conservatoire for insubordination. These young musicians shared a common passion for Wagner—his political tenets as well as his music—and were ardent socialists and vegetarians.

At this time, as well as during his earlier days at the Conservatoire, Mahler also took courses at the University of Vienna when he could. There he studied history and philosophy as well as music, and befriended the venerable professor, Anton Bruckner, whose Third Symphony he and a fellow composer had arranged for piano duet in 1877. He spent his summers partly with his parents in Jilhava (then known as Iglau) in Moravia (now in Czechoslovakia), and partly with his friend Emil Freund in Seelau, which was about three hours' journey by cart from Jilhava.

During the summer of 1879 he also taught piano, on a farm near Budapest, to the sons of a well-to-do Viennese acquaintance, Moritz Baumgarten. Struggling against a terrible feeling of inner oppression, the 19-year-old lad wrote from the farm to his friend Joseph Steiner:<sup>7</sup> "Everything is so desolate around me, and the twigs of a hard, dried-out existence snap in back of me . . . I only know I cannot go on this way! I tear violently at the bonds that chain me to the disgusting sewer of my existence. With the strength of despair, I cling to my sole comforter—sorrow." In this long and astonishing letter Mahler fantasized himself as Ahasuerus, the Wandering Jew—an image that was to haunt him recurrently in years to come.

<sup>6</sup> Rockliff, London, 1958; pp. 141-2.

<sup>7</sup> GMB, p. 5.

It was evidently on his return to Vienna, late that summer, that he began working arduously on the music to the *Klagende Lied* poem he had written 18 months earlier. Instead of abandoning or postponing it indefinitely, as he had abandoned an opera libretto<sup>8</sup> furnished him by Josef Steiner a year or two before— or as he was shortly to abandon two more libretti<sup>9</sup> of his own writing— he now applied himself to the cantata text with a will. To his fellow musician, Anton Krisper, he sent for Krisper's approval a poem<sup>10</sup> he called *Ballade vom blonden und braunen Reitersmann*, and which in all main essentials is actually the first part of the cantata poem, the part entitled *Waldmärchen*. In Mahleresque style he was able to rise above his "worthless existence," as he called it,<sup>11</sup> in a flurry of creativity which brought him to the conclusion of Part II (*Der Spielmann*) by the following 21 March— "at the coming of spring!", as Mahler wrote jubilantly beneath the date.<sup>12</sup>

The fanatical concentration with which he had devoted himself to the latter part of this seems, in point of fact, to have temporarily undetermined his health. Years later he confided to his friend and biographer Natalie Bauer-Lechner that he had suffered terrifying visions at that time. One of these is retold in the words of Gabriel Engel,<sup>13</sup> as follows:

"The enthusiasm of youth and the spell of inspiration rendered him oblivious of the drain excessive labor was making on his constitution and nerves already weakened by inadequate diet. Then one night, exhausted by many hours of concentration upon highly dramatic moments in the work, he arrived at a passage in the text calling for the most subtle musical allusion to the thoughts of trees and flowers. A feeling of extreme uneasiness suddenly took possession of him. Some secret force compelled him to keep raising his tired eyes from the paper to watch a certain shadowy corner of the room. In vain he tried to focus his attention on the musical problem at hand. The weird opposing force was too strong, and at last he surrendered completely. All at once it seemed to him that the wall was coming to life. Someone was struggling furiously to come through it into the room. Now he could see the apparition's face, contorted with the agony of hopeless struggle. Suddenly he knew it was his own face! Terror-stricken, Mahler rushed from the room.

"Next day he attempted to continue his work at the point where it had been interrupted by the grim hallucination, but with his very first approach toward the mood which interpreted trees and flowers in terms of music, that uncanny sense of hopeless agonized striving returned to oppress him, and he was again compelled to abandon the composition. Many days of compulsory rest passed by before he could cope successfully with this abnormal mental state."

<sup>13</sup> *Gustav Mahler, Song-Symphonist*; The Bruckner Society of America, New York, 1932; p. 27.

A curious parallel exists between this cantata and his First Symphony, completed eight years later: in both cases, part of the music was also used in a set of songs dedicated to a young woman with whom Mahler was in love at the time. But in the latter case the amorous experience, as well as the songs, definitely preceded the symphony, whereas in the earlier one the events seem to have been almost simultaneous.

The story of Johanna Richter, the blonde singer at Cassel in the year 1884, to whom Mahler dedicated his *Lieder eines fahrenden Gesellen* (later to use two of the songs in his symphony), is well known. But it also happened in the spring of 1880 that Mahler was in love with a girl named Josephine Poisl, daughter of the postmaster at Jilhava. Mahler at that time wrote three or more songs which he dedicated to her, as follows:

	Josephinen zugeeignet	
	5 Lieder (für Tenorstimme)	
<i>Im Lenz</i>		19. Februar 1880
<i>Winterlied</i>		27. Februar 1880
<i>Maitanz im Grünen</i>		5 März 1880

That is as far as the inscription goes,<sup>14</sup> and evidently the songs too. Josephine's birthday fell on March 19, and Mahler proposed to visit her in Jilhava during his Easter vacation. Receiving no reply to his letter, however, he did not go. And the following week he learned from his local confidant, Franz Melion, that Miss Poisl had herself fallen in love with another man, whom she later married.

The first two songs listed above are unpublished, while the third, *Maitanz im Grünen*, has been transformed into *Hans und Grethe*, in the collection of *Lieder und Gesänge aus der Jugendzeit*, Volume 1. It is the melody of the first song, *Im Lenz*, which occurs in *Das klagende Lied*. According to Prof. Rosé, owner of the manuscript of the three existing songs, the following lines from *Im Lenz*—

Ich bin nicht blind und sehe doch nicht,  
Im Dunkel wach' ich und träume im Licht!  
Könnst' lachen und könnte weinen,  
Doch sagen könnst' ich es keinem!

and the following from *Der Spielmann*—

O Wunder, was nun da begann,  
Welch' seltsam traurig Singen!  
Es klingt so traurig und doch so schön,  
Wer's hört, der möcht' vor Leid vergeh'n!

are both sung to the same music. Since the song is dated February 19, while the completion date of *Der Spielmann* is March 21, it would be difficult to guess which setting actually came first. The same melody is heard again in the third part of the cantata, the *Hochzeitsstück*.

It was during the composing of Part III that Mahler's career took the turn that was to lead him permanently in a totally new and unexpected direction. Although the high honors he had won at the Con-

<sup>14</sup> See D. Mitchell, *op cit.*, p. 198.

servatoire had been awarded for his prowess as a pianist and a composer—and a particularly outstanding career as a concert pianist had been predicted for him—Mahler's difficult times in Vienna between 1878 and 1880 had prompted at least one friend to urge him to inquire at an agency about a possible conducting post. The urging came from the publisher Theodor Rättig, for whom Mahler and Rudolf Krzyzanowski had prepared their dual piano version of Bruckner's Third Symphony. Mahler finally did so, though the thought of actually becoming a conductor apparently had never entered his head.

Through this agency he was offered a very modest and temporary summer post—so modest and so outwardly unsuitable that his own parents urged him not to accept it. It was a summer theatre in Hall, a spa in Upper Austria where operettas and other light entertainment were offered. Nevertheless Julius Epstein, Mahler's piano teacher at the Conservatoire, distressed at the straitened circumstances into which his pupil had fallen, urged him to accept the post purely as a stepping-stone, and added his personal recommendation of Mahler. "You will soon find other places," he remarked assuringly.<sup>15</sup> Mahler accepted, and the ensuing engagement interrupted his renewed course of studies at the University, as well as his progress on the *Klagende Lied*.

That summer bade fair to be as disheartening for Mahler in its way as the previous one on the Hungarian farm had been. He was obliged, for example, to walk the baby-carriage of the manager's wife about the grounds, put the music out on the stands and collect it, and dust the piano as a part of his "conducting duties." In addition to that, his yeoman services were not even particularly appreciated by the demanding manager, and did not even yield a letter of reference, so that the autumn found him back in Vienna, outwardly as before. In fact, however, the very unsuitability of the post and of his working conditions, rather than casting Mahler into his usual depression, seemed to make him only determined to do better in a profession that really challenged his ingenuity, as conducting did. For already on June 21 he had written a letter from the spa to his agent, offering him an enlarged fee for obtaining a more suitable winter conducting post in a real opera house. Despite the offer, nearly another year in Vienna passed before a second and more dignified engagement was secured, at the opera house in what is now Ljubljana, Yugoslavia, and was at that time Laibach, Austria.

And thus began Mahler's gradual, step-by-step ascendancy in the operatic and concert world that was to take him in 16 years and nine engagements, through Prague, Leipzig, Budapest and Hamburg, to the pinnacle of his fame as Director of the Imperial Opera in Vienna itself, and as one of the most eminent and revered conductors of the past century. His own outward attitude to that brilliant but, to him, secondary career remained decidedly ambiguous, to be sure. In his letters he continued to refer to himself as being chained by evil necessity to "the

---

<sup>15</sup> Paul Stefan: *Gustav Mahler—A Study of His Personality and Work*; G. Schirmer, New York, 1913; p. 20.

treadmill of the theatre," and ultimately as being the "slave" rather than "director" of the Vienna Opera. On the other hand he was able to recognize and to write, as late as the year before his death,<sup>16</sup> that "I must have some practical outlet for my musical abilities, to balance the tremendous inner experience of creative work." Indeed it seems due to the dichotomous, almost schizoid, inner tensions and strivings of the man and the composer, that his music possesses always that feeling of urgency and outflowing power which we call Mahlerian. Despite his complaints about it, his need to conduct could have been, as Donald Mitchell<sup>17</sup> believes, "a basic dynamic component of his musical character, as irrepressible as his invention."

The music of the *Klagende Lied* was completed, at any rate, on November 1, 1880, during the final Viennese winter of his youth, and amid frequent visits to his parents' home in Jihlava. As the performance he was determined to obtain "by any means" was not forthcoming, Mahler submitted it for the annual Beethoven Prize at the Vienna Conservatoire. By that he hoped to reap both glory and financial reward, and to launch his composing career "with a vengeance." Alas for all such hopes of a young original genius! Although he knew his work to be vastly superior, in technical quality alone, to anything thus rewarded since the contest was first inaugurated in 1875, he failed to reckon with the innate conservatism of the jurors, who evidently threw up their hands in horror at such an aggressively revolutionary score.

Mahler's bitterness at losing this contest was scarcely lessened after nearly twenty years. By 1896, it is true, he was able to compose a light-hearted satire on such musical juries, in the song *Lob des hohen Verstandes* ("Praise from a Lofty Intellect"). Yet in 1898, in his biographical conversations with Natalie Bauer-Lechner, his bitterness broke out anew. Though we know the account given in her words<sup>18</sup> to be not entirely accurate in detail, it certainly expresses his feelings about the matter in unmistakable terms:

"Had the jury of the Conservatoire," he told her, "which included Brahms, Goldmark, Hanslick and Richter, given me at that time the Beethoven Prize of 600 Austrian florins for the *Klagende Lied*, my whole life would have taken a different turn. I was just working on *Rübezahl*, would not have had to go to Laibach, and would thus possibly have been spared my whole cursed operatic career. Instead, however, Herr Herzfeld got the first composition prize, and Rott and I went empty-handed. Rott despaired and died soon afterwards insane, and I was (and shall always remain) condemned to the hell of theatrical life." (Translation by Donald Mitchell. The abandoned opera *Rübezahl* exists only as an unpublished libretto.)

We next hear of *Das klagende Lied* from about 1888, when Mahler was in transition between his posts at Leipzig and Budapest. Guido Adler, an early Mahler biographer, writes that Mahler made some revisions in the score at that time—for what proposed occasion is not

<sup>16</sup> New York, January 1, 1910, to Dr. Guido Adler. *GMB*, p. 461.

<sup>17</sup> D. Mitchell, *op cit.*, p. 107.

<sup>18</sup> N. Bauer-Lechner: *Erinnerungen an Gustav Mahler*; E.P. Tal & Co. Verlag, Leipzig, 1923; p. 104.

disclosed—and also decided to drop the subtitles and to omit the first part of the work, the *Waldmärchen*, completely. There is no other authority than Adler for the assertion that this is the approximate year Part I was dropped. In any case the *Waldmärchen* does not appear in any of the *Klagende Lied* scores we know, and our principal knowledge of it (and of the complete original version of the work) comes from Alfred Rosé, who owns the only known complete score and does not permit it to be photographed. Mahler gave this score to his sister Justine prior to his and her marriages, and as far as we know never bothered about it again, although there was some later disagreement between them about the *Rübezahl* libretto, which she owned; Mahler wanted it destroyed. Justine and her husband Arnold Rosé, Mahler's concertmaster in the Vienna Philharmonic, scrupulously kept the original *Klagende Lied* intact, and so it came down to their son. Prof. Rosé conducted the *Waldmärchen* on the Brno and Vienna radio in 1934 and 1935, from his own hand-copied orchestra and vocal parts, but has declined to make it generally available (or the three unpublished songs "to Josephine," which he performed at the piano in September, 1934). Otherwise we have, in the Vienna City Library, a complete four-staved sketch and a nearly complete full score of the original version of Part II (*Der Spielmann*), but no manuscript of the original versions of Parts I and III.

Sometime during his Hamburg period (1891-97), Mahler made a new revision of the remaining two-part score—in which, it must be remembered, the former "Part II, *Der Spielmann*" is now simply "Part I" (no title), and the former "Part III, *Hochzeitsstück*" is simply "Part II." In this revision he eliminated the off-stage band which originally appeared in the latter section, putting everything back into the main orchestra. Before the cantata was finally published, however (Vienna, 1899), Mahler made a fourth revision in which he restored the off-stage band once more. As he explained to Bauer-Lechner,<sup>19</sup> he had made the change in Hamburg, eliminating the off-stage instruments, simply because "That, I knew, the gentlemen would not perform"—seeming to indicate another projected performance which never transpired. "Now," he said, "it strikes me the change was not for the better, so I must return the passages to their original state—whether they can be performed or not!" The fact that they *could* be performed was proven when the première of *Das Klagende Lied* was given at a Vienna Philharmonic concert under Mahler's direction, on February 17, 1901—more than twenty years after it was composed! There was some final rescoring in a second printing after the première.

A microfilm of the "Hamburg" version is in the New York Public Library (the manuscript being part of the Alma Mahler estate), and it is evident that, aside from this off-stage restoration, the only change in the first published version, *à propos* of the Hamburg score, is a proliferation of expression marks. Beyond that, Donald Mitchell, who has made a thorough comparison of the *original* (1880) and revised versions of the erstwhile *Der Spielmann*, has pointedly advised that *all* the essentials of that work as we know it today, including instrumen-

<sup>19</sup> *Idem*, p. 106.

tation, are already present in the original score, composed at the age of twenty. As his colleague Deryck Cooke has expressed this important revelation:<sup>20</sup> "The intensely individual style is already there . . . and so is the fantastic Mahlerian orchestral timbre, which has been attributed to his experience as a conductor. In other words, Mahler was Mahler the composer *before* he began to become Mahler the conductor."

---

 4
 

---

The most puzzling question that remains for us is this: Why did Mahler delete the *Waldmärchen*, the cantata's original Part I? And having given it to his sister as part of the original score, why did he leave no further instructions about it one way or another?

Was the deletion made for musical reasons? That we cannot answer with certainty until we can examine the original manuscript. But Hans Holländer, who annotated the 1934-35 performances, says<sup>21</sup> there are "substantial and inspired moments" in Part I, with "the murder scene built up as a great dramatic climax." And Mitchell writes:<sup>22</sup> "We recognize that *Waldmärchen* is much of a piece with the rest of the cantata when we encounter Mr. Rosé's references to its trumpet and horns calls, its drum fourths, bird-song, and characteristic Mahler triplets." (Rosé also specifies a part for solo bass singer in the *Waldmärchen*. There is no solo bass in the two-part work we know today, or in the original version of *Der Spielmann*.)

Was it made for dramatic reasons? That is especially difficult to imagine. Certainly a reading of the mere text of *Waldmärchen* helps to clarify the story in our minds, and to make it *more* dramatically viable. That is why we are presenting it here, for the first time in both German and English. In the original version of the cantata, we first meet the "proud and stately queen," and then the other two main protagonists—the two brothers who are to re-enact the Cain-and-Abel drama, and who are immediately contrasted for us. We then have the desperate search for the flower, its discovery, the fateful encounter, and finally the murder—Dr. Holländer's "great dramatic climax." In the original Part II, we are then introduced to the chief "supporting" character, the minstrel (*der Spielmann*). In the revised version, the work *begins* with this subordinate character, who then finds a bleaching bone from the body of the murdered brother—a man we have never met, dramatically speaking. In the original Part III, the accusation at the wedding feast is a kind of delayed confrontation (by supernatural means) of the two brothers who were presented in Part I. The lament sung by the carved bone, heard both in Parts II and III, is evidently intended each time to bring the listener *back* to the murder scene, as in a cinematic "flashback." In the revised version, there is nothing to bring us back *to*. Again, the handling of the queen suggests a natural

<sup>20</sup> *Tempo*, London, No. 51 (Spring-Summer, 1959); p. 34.

<sup>21</sup> See D. Mitchell, *op cit.*, p. 155.

<sup>22</sup> *Idem*, p. 154.

arch-shaped structure in the original three-part poem, which we do not get when she is first introduced in the latter of the two remaining sections. Notice that Mahler, in his original text, has even contrived a "verbal flashback" in the words "When will it break, thy haughty mien?" (from Part I) and "Now will it break, her haughty mien!" (from Part III).

Was it made for temporal and pragmatic reasons only? Such was the opinion expressed by Alfred Rosé himself, in an interview conducted by Robert Chesterman for the Canadian Broadcasting Corporation. Without claiming his version of the matter to be any *more* than a personal opinion, Mr. Rosé said: "Mahler thought that the two movements in themselves were already very extravagant, and he thought he might not have a chance if he submitted the whole three parts: it was too long and it was too modern for that time." But then why did Mahler not make his long-term wishes known? Why did he not personally preserve the original three-part score for posterity, as Bruckner did his original symphony manuscripts, which were also considered too long and too modern "for that time"? Why did he give it instead to his sister Justine as if it were purely a family matter, rather than a vital musical one? Bruckner was a shy, diffident man, easily prevailed upon by "practical" advisors, yet these advisors could not part him from his original autographs while he lived. Mahler, on the contrary, was usually aggressively uncompromising in artistic matters—in the matter of the passages for off-stage band, for instance. When he became convinced that his intended simplification of these passages had been musically ill-advised, he restored them to their original form without hesitation, "whether they can be performed or not!" This does not sound much like the man who would give up an integral part of his cantata *just* because it seemed practical to do so at the time. Some deeper compulsion than mere expediency clearly appears to have governed Mahler's atypical behavior in respect to the original *Klagende Lied* and its abridgement. (It will be remarked, incidentally, that Prof. Rosé's expressed opinion—that Mahler's elimination of *Waldmärchen* was a purely temporal matter—sorts poorly with his own resolve not to make it fully public now.)

Well, what then is left? If we can discover no rational reason for Mahler's permanent deletion of the *Waldmärchen*, are there any possible *irrational* explanations for his handling of it? Here we find ourselves at once on more fruitful ground, since composing was, for Mahler, unquestionably a very personal and intimate pursuit. We remember his superstitions—about writing a Ninth Symphony, for example, or about including or not including the "death stroke" in the finale of his Sixth. Mahler was an obsessive artist, a compulsive artist: this we have on the professional testimony of no less an authority than Sigmund Freud, following a prolonged psychoanalytic session with the composer in the summer of 1910.<sup>23</sup> If we can surmise the particular inner compulsion that prompted him to compose *Das klagende Lied* in the first place, we might well be able to surmise, in addition, the par-

<sup>23</sup> Letter to Dr. Theodor Reik, January 4, 1935. See T. Reik: *The Haunting Melody*; Farrar, Straus and Young, New York, 1953; pp. 342-3.

ticular nature of the compulsion that prompted him to *withdraw* Part I again.

On one symbolic level, the rationale of *Das klagende Lied* seems clear enough. Mahler himself is the minstrel who upsets "the apple cart," or the *status quo*, or the Establishment—which, as a young musical revolutionary, he clearly wished to do. "What think ye of my playing?" he cries to one and all (these being the only words in the presently constituted work which are shouted at full force by the three soloists in unison) as he takes his cataclysmic message "far and near." And of course it is the musical "Establishment" itself which crumbles in ruin at the end, like the walls of Jericho before Joshua's trumpets. This is the sort of thing which quite possibly was instinctively perceived by Brahms when he later said:<sup>24</sup> "It is not wholly intelligible to me why Richard Strauss is proclaimed music's Revolutionary. I find that Mahler is King of the Revolutionaries."

So much for the minstrel. But there is surely a deeper motivation behind this story. For what shall we say about the two brothers, and their rivalry for the queen? What did they mean to the composer? Evidently a great deal, when we consider that Mahler took the trouble to alter the nature of the rivalry as well as the sex of the victim! In Bechstein's *Klagende Lied*, the rivalry is between a brother and sister who are already of the royal family, the queen is their mother, and the burden of their rivalry is the succession to the throne, pure and simple. What then transpires, as summarized by Mitchell,<sup>25</sup> is as follows:

"The princess, the first-born, finds the flower and lies down to sleep, whereupon she is murdered by her jealous brother. In later years a peasant boy picks up a bone and makes a flute from it; he is startled when a child's voice issues forth and tells the manner of the sister's death. A knight takes possession of the flute and appears at the castle where the guilty brother is king and his mother still mourns her lost daughter. It is to the old queen alone that the flute reveals the terrible truth. She then takes the instrument and herself plays it to her son before a festive assembly in the castle hall. The story ends on this note of chilling catastrophe, in which the mother is the final instrument of her son's doom."

What Mahler's poem did was to superimpose upon this story a quite different "singing bone" story by the Brothers Grimm—one entitled, indeed, *Der singende Knochen*—with which Bechstein himself was familiar when he wrote *Das klagende Lied*, and involving three princes, an old king, and a boar hunt. Now in psychological terms the conflict between two brothers, with both a woman and a throne at stake, as envisioned by Mahler, classically suggests a strong "sibling" rivalry. Could there have been such a rivalry in Mahler's background? Most decidedly there could.

Among the 14 children of Mahler's parents (some of whom Gustav

<sup>24</sup> See Ludwig Karpath: *Begegnung mit dem Genius*; Vienna, 1924; p. 90.

<sup>25</sup> D. Mitchell, *op. cit.*, p. 143.

scarcely knew because of the high incidence of infant mortality in the family), the one closest to him in his childhood was Ernst. Gustav was born on July 7, 1860, and Ernst just nine months later, on April 13, 1861. They were the second and third children of their parents' marriage; but, as the first child died before Gustav was even born, Gustav and Ernst were the two eldest until Ernst died of hydrocardia after a long illness on April 13, 1874, on his 13th birthday, and just a year before Gustav left for the Vienna Conservatoire.

Mahler's wife Alma, who did not meet him until he was 41, recalls<sup>26</sup> that he spoke even then of Ernst's death in these terms: "This was the first harrowing experience of Gustav Mahler's childhood. He loved his brother Ernst and suffered with him all through his illness. For months he scarcely left his bedside, and never tired of telling him stories. To all else he was blind." And Bauer-Lechner<sup>27</sup> records an earlier recollection: "Between Gustav and Ernst (the brother nearest to him in age and affection) there evolved a fascinating little game. Ernst would pretend to be 'at his service' all day, bringing him whatever he wished, cleaning his clothes and shoes without complaint, etc., so that Gustav would repay him by playing the piano for him."

The abandoned opera libretto tendered to Mahler by his friend Josef Steiner, which we mentioned earlier, was called *Herzog Ernst von Schwaben*, quite possibly after the verse-drama by Johann Uhland. Mahler may have discussed it or even suggested the subject to Steiner; in any case the libretto seems to have been written in 1877 or 1878. Neither it nor any music for it by Mahler has apparently survived. But in his afore-mentioned letter to Steiner of June, 1879,<sup>28</sup> he not only refers to the opera but connects it in his mind with Ernst Mahler:

"Again the song of yearning [*das Lied der Sehnsucht*] sounds in my ears, and again we wander together over familiar fields. There stands the organ-grinder, holding his hat in his withered hand, and in his music, so out of tune, I hear the greeting of 'Ernst von Schwaben'. Now Ernst himself appears, holding out his arms to me; and as I gaze at him, I see it is my poor brother."

Furthermore, Dr. Theodor Reik believes that Mahler's song-cycle *Kindertotenlieder* (1901-04) was also connected, perhaps unconsciously, with the memory of his deceased brother. In this cycle, Mahler selected five out of the literally hundreds of poems (bearing the same general title used by Mahler) written by Friedrich Rückert as elegies upon the death of his little son. Reik points out that the Rückert boy was also named Ernst, and that Mahler undoubtedly read this "in the introduction to Rückert's cycle of poems, or in biographical footnotes." When Ernst died, Reik declares in his fascinating book *The Haunting Melody*,<sup>29</sup> "the sensitive boy Gustav must have unconsciously experienced the mourning of his parents, too, in addition to his own grief about his younger brother's death . . . These feelings which were not

<sup>26</sup> A Mahler: *Gustav Mahler—Memories and Letters*; The Viking Press, New York, 1946; p. 7.

<sup>27</sup> Unpublished diary and notes.

<sup>28</sup> *GMB*, pp. 7-8.

<sup>29</sup> pp. 317-8.

fully expressed, and the words which were unsayable, come alive in the music of the Rückert songs." In addition to the possible triggering of these elegiac feelings and subsequent music by the name "Ernst," it is also possible that Mahler was put in a more receptive frame of mind for it by the première of his 21-year-old cantata *Das klagende Lied* earlier that same year, 1901.

Now what does all this have to do with the question of "sibling rivalry" posed earlier? If the kindness and solicitude exercised by Mahler before Ernst's death were, in fact, a partial compensation for an earlier, half-submerged rivalry and hostility, how much *more* grief-stricken (and unconsciously guilt-ridden) he would have been bound to feel when the death actually occurred! The suppressed, unrecognized feeling would have been as if he had somehow willed it—as if he were actually responsible for this untimely and tragic death.

And what initial infantile rivalry could have fathered such a strong reaction? In his paper *Gustav Mahler and Psychoanalysis*,<sup>30</sup> Dr. Robert Still writes: "The wounding blow that must have contributed so much to the disturbance of Mahler's psyche was that his mother gave birth to another son soon after his own birth . . . Even if we leave out of account the probability of his sudden weaning at a very early stage, it is safe to assume that another pregnancy so soon, with Mahler's consequent neglect in a poor home, would have aroused the most negative feelings at a very much earlier date than children are usually called upon to face these things." Allied to this is the strong mother-fixation which Freud diagnosed in his marathon session with Mahler.

Thus it appears that Mahler would have been inwardly impelled to write and compose *Das klagende Lied*— a musico-dramatic treatment of the theme of brother-murder and its retribution—in order to "live out," and thus exorcise, hidden feelings of fratricidal guilt over his own brother's death. A psychologist would almost certainly suggest this possible solution on being confronted with the bare facts of Ernst's death and the story of Mahler's poem.<sup>31</sup> The hypothesis would be further reinforced by learning of Mahler's deliberate changing of the sex of the murder victim of Bechstein's tale, thus *making* it conform to the brother-murder theme—and by learning of the further evidence that Ernst's memory continued to haunt Mahler's imagination in sundry

<sup>30</sup> *The American Imago*, Fall, 1960.

<sup>31</sup> "Mahler transformed the tale into a more direct representation of the oedipal triangle, but it is a younger brother who is murdered, not the father. The text could refer to Mahler's unconscious murderous impulses toward a younger brother. Substitution of the brother for the father avoids direct conflict with the feared father which, as we have seen before, was Mahler's approach to this problem. Of particular significance is the use of music to reveal the crime and thereby bring about the punishment of the guilty one. The minstrel is Mahler too, the self-styled 'Singer of Nature', who mitigates his unconscious guilt by publicly revealing the crime (musically) and making atonement. Thus Mahler's Opus No. 1, the first work in which he 'found himself again,' literally depicts a tale of fratricide and punishment, foreshadowing the theme of death and restitution (resurrection) which seems to be alluded to in so many of his major works." William E. Mooney, M.D.: "Gustav Mahler—A Note on Life and Death in Music"; *The Psychoanalytic Quarterly*, January, 1968. [The word "again" in the subquote above indicates a mistranslation of the epithet in Mahler's letter to Marschalk ("*Mein erstes Werk, in dem ich mich als 'Mahler' gefunden . . .*") previously quoted. (See footnote 2.)]

ways. Even the nature of the hallucination he suffered while working on the composition in a weakened and therefore suggestible condition—a vision of himself struggling to come through the wall—could certainly have been induced by a buried feeling of guilt.

Mahler's later attitude toward the poem and its music would then be explained if we imagine that none of this causative chain of events ever entered his consciousness. About eight years elapsed, according to Guido Adler, between the completion of the cantata in its original form (1880) and the first re-examination (c.1888) during which he decided to eliminate the *Waldmärchen*. If this re-examination brought with it a still half-submerged recurrence of the uneasy feelings connected with the work's pre-genesis, without his being able to identify the real source of such feelings (since they never had been consciously expressed or acknowledged in the first place), they might have attached themselves with particular force to the first part of the work, in which the actual, living rivalry of the two brothers is expressed in words and music, culminating in the crime of passion, the murder itself.

It may even have been that the principal exorcism occurred in the very composing of the murder scene as "a great dramatic climax." And having brought about that strongest act of catharsis, Mahler may have had a correspondingly diminishing desire to relive it again and again. (It cut, in other words, "too close to the bone.") And so his unacknowledged reluctance to do so could have been consciously experienced as a conviction that the *Waldmärchen* was redundant, or impractical, or inferior, or any number of combined rationalizations, none of which he seems to have dignified with his official verdict. He evidently preferred simply not to discuss it, as if subconsciously aware that he would be hard-put to stand his ground in any rational discussion of the matter.

Needless to say, if these were Mahler's unconscious motivations, they would only have been strengthened by a further personal tragedy which occurred in 1895. That, we remember, was just before the final crucial stage in the long-delayed presentation of *Das klagende Lied* to the musical public in Vienna, where it had originated so long before. In that year, another brother named Otto—like himself, a composer, whom at one time Mahler is said to have considered actually more talented than himself—*shot himself to death*, at the age of 21. We can well imagine that Gustav's unexpressed reluctance to revive the fictional murder scene would have been even stronger, when the trauma of the illness and death of a beloved brother had been thus compounded by that of the death of a second brother by his own hand! Nor would there be anything accidental in the ultimate turning over (i.e. turning back) of the whole "problem" (the original three-part work) to his sister, a member of that very household from which it had arisen in the first place.

If there is any substance in the foregoing hypothesis, or in a somewhat different one concerning the change of sex in the poem, proposed by Dr. Still (one which does not, however, concern itself with our *Waldmärchen* problem), no doubt the truth would have come out in further consultations with Sigmund Freud. But as Freud himself wrote

in 1935,<sup>32</sup> in a letter to Dr. Reik concerning the single extraordinary session of 1910: "No light fell at the time on the symptomatic facade of his obsessional neurosis. It was as if you would dig a single shaft through a mysterious building." Mahler had urgently consulted Freud that summer, because his marital situation had reached a crisis for which he well realized he was partly to blame. Although Freud had, as he informed Reik, "plenty of opportunity to admire the capability for psychological understanding of this man of genius," nothing emerged from the session devoted to that crisis which enabled Mahler to continue with his work-in-progress of *that* time, the Tenth Symphony, rather than giving all his attention to his foundering marriage. At least we now know that Mahler had intensely personal, non-musical reasons for putting the Tenth aside and locking it away in its fragmentary state. It seems more than likely that there are similarly personal reasons for the form in which this powerful cantata of 30 years earlier, *Das klagende Lied*, has reached us.

## 6

Poor substitute though it may be for the complete score, Alfred Rosé's thematic analysis of the *Waldmärchen*<sup>33</sup> nevertheless gives us a clear picture of the musical events in synoptic form.\*

"Over a soft drum roll," he writes, "we hear a call by two horns in A minor, answered in echo by another pair and followed by the gentle murmur of clarinets:

Ex. 1 *Langsam und träumerisch*

The musical score for Ex. 1 is in 6/8 time and consists of two staves. The upper staff is in treble clef and contains a melodic line. It begins with a half rest, followed by a quarter note G4, a quarter note F4, and a quarter note E4. The first measure is marked with a piano (*p*) dynamic. The second measure contains a half note G4, marked with a pianissimo (*ppp*) dynamic. The third measure contains a half note G4, marked with a piano (*p*) dynamic. The fourth measure contains a triplet of eighth notes: G4, A4, and B4, marked with a piano (*p*) dynamic. The lower staff is in bass clef and contains a tremolo pattern marked with a pianissimo (*pp*) dynamic. The score is divided into two sections, 'a' and 'b', with a triplet of eighth notes in section 'b'.

In shriller wind a motive sounds containing a prominent upward fifth, against a tremolo in the violins and an arpeggio for the harps:

<sup>32</sup> See footnote 23.

<sup>33</sup> Essay written in connection with the radio broadcasts of 1934-35 in Brno and Vienna.

\* *Editorial note:* As this issue goes to press, it is announced that Prof. Rosé's manuscript has been acquired by Yale University through the purchase and donation by Marshall and Thomas Osborn, the sons of James M. Osborn of New Haven. See the beginning of Part III of this essay regarding the parallel acquisition of the hitherto unknown 1893 version of Mahler's Symphony No. 1. A New Haven performance of *Das klagende Lied* including *Waldmärchen* is scheduled for January 13, 1970. The first-recording rights to *Waldmärchen* (following this local première) have been acquired by CBS Records on behalf of Pierre Boulez.

Ex. 2

The first pair of horns replaces the soft clarinet tone, singing a melancholy phrase in which the characteristic 'Mahler triplet' already appears. It is twice announced in D major, and then 'answered' in D flat major:

Ex. 3

The other instruments join in an *accelerando*, and the first fortissimo is reached in the key of C minor, dominated by the call of the fifth played by two trumpets. This subsides to the accompaniment of a jagged trochaic rhythm, returning to the opening tempo:

Ex. 4

*Schneller*

*8va*

*ff*

*dim.*

*mf*

*c rit.*

*Wie am Anfang (aber Halbe)*

Pizzicato quarter notes in the strings, along with fourths in the timpani, outline a kind of march rhythm. Over this, woodwind figures are heard, alternating with Ex 1b in the horns.

"Trills in the violins over Ex. 3a (now in the minor mode) introduce an F minor fanfare in a livelier tempo, followed by birdlike figures in the woodwinds:

All this is immediately repeated in the major (D flat), and then figure 'a' by itself in D major. A crescendo leads to a majestic new peroration in D, including figure 'a' once more:

Ex. 6 *Maestoso* *Lebhafter*

*ff* *a* *f* *b*

*Ex. 5a* *3* *3*

*Ex. 3a* *3* *3*

Meanwhile the speed gradually increases until the march tempo is reached again. With a further increase, the lower staff of Ex. 4 returns (i.e. without the chromatic figure 'a' above). Horns and clarinets hold quiet colloquy, beginning in E flat major and extending the material of Ex. 3a with new additions:

Ex.7

*Ex. 3a*

*pp*

*mf*

*pp(8ves)*

"There is a ritardando, with only the slightest touch of Ex. 1b, and then the first stanza of the poem is prefaced by an orchestral passage in E flat major beginning in the woodwinds, depicting the 'proud and stately queen':

Ex. 8

*Zart*

*a*

*b*

*p*

This is terminated by short and sharply accented string figures:

Ex. 9

The first vocal solo begins, sung by the alto:

Ex. 10

Es war ei - ne stol - ze Kö - ni - gin, gar  
lieb - lich oh - ne Mas - sen;

The woodwind figures of Ex. 8, partly doubled by the singer, are woven about a triplet accompaniment in the strings. As the alto solo ends on the fourth line of verse, the accented string figures (Ex. 9) return. The male chorus enters softly, singing in chorale form the couplet 'Ah woe, thou fair young lady bold,' etc., supported by quiet string chords:

Ex. 11 *Zurückhaltend*

*pp* O weh, du won-nig-li-cher Weib! Wem  
blü-het wohl dein süs-ser Leib?

This is derived from the second half of Ex. 7. It is rounded out by the woodwinds alternating with each other in descending B minor scales, with a rising fourth as the upbeat:

## Ex. 12

*pp* *rit.*  
*pp* *pp*

"The music of Ex. 8 seems about to begin anew in E major, but instead the initial figure 'a' is linked to a new influx of pastoral figures, chiefly in parallel thirds in the woodwinds, supporting the bass solo 'A flower lovely as the queen':

## Ex. 13

*Ruhig und träumend* *Ex. 6a*  
*Ex. 8a* Im Wald ei-ne ro-te Blu-me  
*p*

## Chord and Discord

The musical score is presented in two systems, each with three staves. The top staff is the vocal line, the middle staff is the piano accompaniment, and the bottom staff is the bass line. The key signature is E minor (three sharps: F#, C#, G#). The first system contains the lyrics: "stand Ach so schön wie die". The second system contains the lyrics: "Kö - - - ni - gin - ne;". The score includes various musical notations such as triplets, slurs, and dynamic markings like *a*, *hervortretend*, and *sfz*.

The tenor soloist joins the bass in a livelier tempo for the second pair of lines, to the accompaniment of Ex. 6, but pianissimo. Then follows a sonorous interlude with a new reminder of the 'royal lady' herself (Ex. 10) played 'very passionately' by the violins and violas. A diminuendo in gentle triplets leads to another chorale-like couplet (as in Ex. 11), 'Ah woe, thou proud and stately queen,' sung by the altos, tenors, and basses of the chorus. Again the descending scales with their up-beat (as in Ex. 12), this time in E minor and played by the strings—the first violins, then the violas, and finally the cellos and basses.

"The tenor takes up the narrative in a swaying *Andante*, with the tune of his 'Two brothers came into the wood' drawn from the lively fanfare motive (Ex. 5a) in A major. In a suddenly redoubled tempo, 2/2, the oboe and horn alternate with each other, and a steady eighth-note accompaniment in the strings steps up its beat to triplets (not shown in the example below) as support for the alto solo on the words 'But envy-blacken'd the other':

Ex. 14 *Schneller*

ALTO

Der An - - - dre konn-te nur flu -

*accel.*

- chen.

Outcries in the full orchestra lead to suddenly plunging strings, and a third choralesque couplet (on the plea 'O knight, my evil-omen'd knight'), this time for the full chorus. Now the rising fourths and descending scales are taken over by the chorus itself to repetitions of 'das Fluchen' in B minor:

## Ex. 15

das Flu - - - chen.

das Flu - - -

*pp*

*^*

*v*

*rit.*

chen.

chen.

*v*

“The choral tenors and basses sing ‘When they had gone a little pace’ in a lively F minor march tempo:

Ex. 16 *Lebhafter* *a*

*p* Als sie nun zo-gen ei-ne Weil', Da  
*f* *f > p*  
 ka-men sie zu schei-den;

'And now in search began to race' brings the full chorus ('*Lebhaft*') against agitated horn calls—and again the jagged rhythm in the strings, closing in a peremptory descent:

*Schneller*

Ex. 17

*f* *Ex. 4c*  
*ff*  
*ff*

The bass soloist takes up the couplet, 'My hasty knight, with darting eyes,' supported by the tenor as he descends the E flat minor scale in quarter notes:

Ex. 18 *Zurückhaltend*  
BASS SOLO

Ihr Rit-ter mein in schnell-lem Lauf, Wer fin-det

TENOR SOLO

die Blu- - - - me?

wohl die Blu- - - - - - - - me?

The chorus echoes this with the A flat minor scale in eighth notes (*cf.* Exx. 12 and 15).

"Ex. 5a sounds again, and then the first pair of horns recapitulates the melancholy triplet tune (Ex. 3a), embellished by some of the same figures as in Ex. 13, and which will be encountered again in Ex. 21. Clarinets trade the theme back and forth, and bird calls sound again. The soprano soloist sings 'The younger search'd through wood and lea' (again to the tune of Ex. 5a), supported by the male chorus. Under shimmering violin tremolos, Ex. 3a is transformed so that its second and fourth bars acquire a questioning upward turn:

Ex. 19

*pp* *cresc. 2ndo* *f*

The full chorus, divided at times into eight parts, takes up 'When saw he by a willow tree,' rising to an excited high B flat for the unison sopranos:

## Ex. 20a

SOPRANOS

**SOPRANOS**  
**ff** der Weid' die ro -

**ALTOS**  
**ff** der Weid' die ro - te

**TENORS I**

**ff** Bald sieht er von Fer - ne bei der

**BASSES I**  
**ff** Bald sieht er von Fer - ne bei der

**BASSES II**  
**ff** Bald sieht er von Fer - ne bei der

The musical score consists of six staves. The first three staves are in treble clef, and the last three are in bass clef. The key signature has two flats (B-flat and E-flat). The first staff has the lyrics 'te Blu - me steh'n.' with notes G4, A4, Bb4, C5, Bb4, A4, G4. The second staff has 'Blu - me steh'n,' with notes G4, A4, Bb4, C5, Bb4, A4, G4. The third staff has a whole rest. The fourth staff has 'Wei - de' with notes G2, A2, Bb2, C3. The fifth staff has 'Wei - - de' with notes G2, A2, Bb2, C3. The sixth staff has 'Wei - - de' with notes G2, A2, Bb2, C3. There are various musical markings including slurs, accents, and dynamic markings like 'p' and 'pp'.

The music subsides with horn and trumpet calls (Ex. 6, *pianissimo*) under a string tremolo. The chorus subdivides into eight again for 'Then stretch'd he out':

ge - - streckt.

ge - - streckt.

Horn and trumpet figures (Ex. 5a in C major) are heard over low C and G in eighth notes in the timpani. And then, with the embellishment of thirds and sixths mentioned earlier, the words 'zur Ruh' are echoed by the choral voices—

*In gehender Bewegung*

Ex. 21

Ex. 21 is a piano arrangement consisting of three staves. The top staff features a melodic line with a triplet of eighth notes, a quarter note, and a half note, followed by a triplet of eighth notes and a half note. A bracket labeled 'Ex. 5a' spans the first two measures. The middle staff contains a bass line with a quarter note, a half note, and a quarter note, followed by a quarter note, a half note, and a quarter note. A bracket labeled 'Ex. 6a' spans the first two measures. The bottom staff has a bass line with a quarter note, a half note, and a quarter note, followed by a quarter note, a half note, and a quarter note. A bracket labeled 'Ex. 5a' spans the first two measures. The final measure of the top staff is marked with a dynamic of *pp* and an accent (^) over a triplet of eighth notes. A bracket labeled 'a' spans the final measure of the top staff. The bottom staff ends with a double bar line and a common time signature (C).

This section shows the vocal and piano parts for Ex. 21. The top staff is for the soprano, with the instruction 'SOPRANOS' above it. It begins with a triplet of eighth notes, a quarter note, and a half note, followed by a quarter note, a half note, and a quarter note. A bracket labeled 'Ex. 5a' spans the first two measures. The middle staff has a bass line with a quarter note, a half note, and a quarter note, followed by a quarter note, a half note, and a quarter note. A bracket labeled 'Ex. 5a' spans the first two measures. The bottom staff has a bass line with a quarter note, a half note, and a quarter note, followed by a quarter note, a half note, and a quarter note. A bracket labeled 'Ex. 5a' spans the first two measures. The final measure of the soprano staff is marked with a dynamic of *pp* and the word 'zur' below it. A bracket labeled 'a' spans the final measure of the soprano staff. The bottom staff ends with a double bar line and a common time signature (C).

ending again with the multiple descending scale, now in F minor.

"In a very brief statement, quickly overtaken by the ensuing action, Ex. 4b is heard in a new form which is shortly to assume greater significance:

Ex. 22

The musical score for Ex. 22 consists of two staves. The upper staff is in treble clef with a key signature of two flats (B-flat and E-flat) and a time signature of 3/4. It begins with a *ppp* dynamic marking and contains three measures of chords. The lower staff is in bass clef with the same key signature and time signature. It features a rhythmic pattern of eighth notes and rests, with a *pizz.* marking. A bracket labeled *Ex. 2a* spans the first two measures of the bass line.

The choral basses sing 'The other comb'd through crag and rill' to the tune of Ex. 16a, followed by Ex. 4a (the chromatic figure from the prelude) and 4b together for the only time since then. The passage is marked '*Bewegter*' ('Livelier'). There is more play with 4b in the woodwinds (Ex. 22 in diminution, etc.) over a pizzicato bass, as the male chorus tells of the setting sun and the approach of evening. The fifth motive is also heard under an eerie semitone call:

Ex. 23

The musical score for Ex. 23 consists of two staves. The upper staff is in treble clef with a key signature of two flats (B-flat and E-flat) and a time signature of 3/4. It begins with a *p* dynamic marking and contains two measures of chords. The lower staff is in bass clef with the same key signature and time signature. It features a rhythmic pattern of eighth notes and rests. A bracket labeled *Ex. 2a* spans the first two measures of the bass line. A dynamic marking *a* is placed above the first measure of the upper staff.

Suddenly there is an orchestral cry in A minor, and the soprano soloist sings 'Ah woe, whom there he sleeping scann'd' to the music of Ex. 14.

Another string passage plunges into the more developed form of the triplet horn theme (Ex. 7), sounding now '*Wie aus der Ferne*' ('As from a distance'), and answered by oboes and clarinets. A more extensive reprise of the orchestral component of Ex. 13, even more allusive and poignant than before, introduces the soprano solo 'Thou rapture-bringing nightingale.' This entire stanza is given to the soprano alone, whose narrative becomes faster as the lyric theme mounts in the full orchestra. The eighth-note patterns in the strings again turn into triplets (accompanying the music of Ex. 14 as before), woodwinds and horns rise up, reaching a fortissimo climax with a clash of cymbals.

'Fanfares in the trumpets and horns (5a, 6b, etc.) along with Ex. 4a lead to the trochaic rhythm in the strings as accompaniment to the male chorus, 'His eye does gleam in frenzy wide.' We hear the mount-

ing call of the woodwinds, rhythmic pulsations in the upper strings (Ex. 16), and accentuated cries from the four stopped horns. A loud cymbal crash and orchestral turmoil greet the 'sword of steel' proclaimed by the full chorus. This culminates in a great outcry from the orchestra and chorus in B flat minor over a pedal point on G; the descending scales (Ex. 12) return, to echoes of 'der Alte.' A *ritardando* leads to a passage with soft string tremolos and arpeggios in the harps, depicting a mysterious woodland mood. Sadly the alto soloist reports the death of the young knight:

## Ex. 24

*Langsam*

Der Jun - ge lä - -

Ex. 8a

chelt wie im Traum.

<ff> ppp

a

"Now the main themes are tenderly reviewed by the orchestra, 'Sehr ruhig' ('Very peacefully'), beginning with another extensive treatment of the music of Ex. 21, now in G flat major. Woodwinds sing a melancholy after-song based on Ex. 1, and we hear the very opening bars of the prelude (1a) in their first and only reprise. Ex. 22 is transformed into a canonic elegy of great poignancy:

## Ex. 25

Ex. 2a

Ex. 2a

espr.

a

Ex. 2a

The image shows two staves of music. The top staff is in treble clef with a key signature of three flats (B-flat, E-flat, A-flat) and a common time signature. It contains a melodic line with several accents (^) and a triplet of eighth notes. The bottom staff is in bass clef with the same key signature and time signature, featuring a bass line with a long note and a triplet of eighth notes. The label 'Ex. 2a' is centered between the two staves.

We hear the eerie semitone figure (Ex. 23) over dark forest murmurs (Ex. 1b in steady triplets):

Ex. 26

Ex. 2a

The image shows two staves of music. The top staff is in treble clef with a key signature of three flats and a common time signature. It features a melodic line with triplets and dynamic markings 'fz' and 'pp'. The bottom staff is in bass clef with the same key signature and time signature, featuring a bass line with a long note and a triplet of eighth notes. The label 'Ex. 26' is at the top left, and 'Ex. 2a' is centered below the staves.

Ex. 26

Ex. 2a

This image is identical to the one above, showing two staves of music with the same notation, including triplets and dynamic markings 'fz' and 'pp'.

With one of those enharmonic shifts so beloved of Mahler, the call of the fifth is sounded by the four trumpets in a sorrowful F sharp minor setting.

"The also soloist sings the epilogue, 'Ye leaves there.' Then the chorus raises its voice in measured rhythm with the closing couplet, 'In woods by a grassy pillow,' based on a variant of the theme of Ex. 18 for the male soloists. It rises to F sharp, and then descends the minor scale in peaceful quarter notes, as in the former example:

## Ex. 27

*Etwas bewegter*

*p* "Im Wald, auf der grünen Hai-de, Da steht ei-ne al-te  
Wei- - - - - de."  
Wei- - - - - de."

*f* *ff* *pp*

Ex. 5a Ex. 2a

The call of the fifth sounds yet again in the trumpets and trombones, and the F sharp minor triad fades out in the full orchestra to a final *pp*."

To the listener who is at all familiar with *Das klagende Lied* as published, performed and recorded, it requires only a glance through this analysis to recognize that a goodly portion of the thematic materials are shared, and that the two-part work we know is simply riddled with leading motives which find their origin and point of departure in *Waldmärchen*. Exx. 1b, 2a, 3a, 4b, 4c, 5, 6, 7, 8a/b, 12, 14, 15, 16, 17, 19, 20b, 23, 24, 25, and 26 above are all continued, developed, and varied in the succeeding sections of the work, while other motives have a flavor peculiarly their own.

This will scarcely be surprising to Mahler aficionados. The major surprise is that one important group of themes in the *Waldmärchen* looks ahead *not* to the remaining parts of *Das klagende Lied* itself, but rather to the *Lieder eines fahrenden Gesellen* of 1884, and to the Symphony No. 1, completed four years after that. The connection is seen most graphically in Ex. 21, where the music of the repeated words

"zur Ruh' . . . zur Ruh' . . .", as the young knight lies down to sleep under the willow tree, is echoed in the final page of the song-cycle to the words "*Lieb' und Leid, und Welt und Traum.*" as the wanderer lies down to rest in the shade of the lime tree. The whole texture of the music from the cantata, as shown in Ex. 21, is even more graphically represented (and subtly transformed) in the peaceful interlude from the funeral march of the Symphony, the entire 30 bars of which are drawn from the final stanza of the *Gesellen* song (entitled *Die zwei blauen Augen von meinem Schatz*):

Ex. 28

The musical score for Ex. 28 is presented in two systems. The first system includes staves for VIOLINS, OBOE, and HORNS. The VIOLINS part is marked *pp* and features a rocking melody with syncopated rhythms. The OBOE part is marked *p* and provides a syncopated accompaniment. The HORNS part is marked *p* and features a rocking melody. The second system includes staves for VIOLINS AND VIOLAS and HORNS. The VIOLINS AND VIOLAS part is marked *pp* and features a rocking melody with syncopated rhythms. The HORNS part is marked *p* and features a rocking melody. The score is divided into three sections: 'a' (Violins), 'b' (Violins and Violas), and 'c' (Horns).

Here the marked segment 'a' presents in reverse sequence the two elements found in Ex. 21a—the upward figure with 16th-note rest, and the syncopated effect of the eighth note at the beginning or middle of the bar followed by a quarter note—also to be found in Ex. 13a. The syncopated rhythm is repeated in alternate bars of Ex. 21. The rocking chords of figure 'b' above, gradually descending, accompany the same melody in the *Waldmärchen* (sung by the chorus) as in the Symphony (figure 'c', played by the horns). It is the combination of the rocking chords and the soft syncopations that gives both of these versions of the theme their peculiarly hypnotic quality, *i.e.* in addition to the intrinsically soothing effect of the harmonies and of the general tone and dynamics of the music, apparent alike in cantata, song, and symphony.

It is apparent from the analysis that some of these same thematic elements (quoted in Exx. 13 and 21) are also to be found in other parts

of *Waldmärchen*, permeating one facet of what might be called (along with the important thematic complexes represented by Exx. 2, 3, 5, and 7) the "woodland" or "nature" elements of the music. And it is equally evident that the genesis of the *Gesellen* complex is Ex. 1. In this pair of motivic cells, the figure 'a' is a tonic-dominant call rising out of A minor, to which the final "zur Ruh'" in Ex. 21 is an answering dominant-tonic cadence in C major. This connection is found only in *Waldmärchen*, and neither element reappears in *Das klagende Lied* at all. Figure 'b' (of Ex. 1) is the harmonic genesis of the rocking motive in a slightly more complex rhythm, and this is about the only connecting link to the *Gesellen* group which survives in the published cantata.<sup>84</sup> And there the link, to be sure, is not apparent—for example, when these harmonies occur in the violas at cue 7, against repetitions of Ex. 5a/b (first in G sharp minor, then in C minor, and finally in F minor) intended to take us back to the arboreal "scene of the crime" as the alto takes up the narrative with "*Beim Weidenbaum, in kühlen Tann . . .*", etc. The rocking harmonies are returned to the clarinets at cue 9, following the eerie night-call which harkens back to Ex. 23a; in Ex. 26, these two had been heard together.

The other ingredient of Ex. 26, the "call of the fifth" (or "*Quintenruf*", in Prof. Rosé's designation), which is announced in Ex. 2 and haunts so much of *Waldmärchen*—and which, it will be noticed, anticipates in its primeval effect the distant, echoing horn-calls in the finale of the Second Symphony—is heard less often in its original form in the published *Klagende Lied*. At cue 54, just before the alto sings the words "*Was ist der König so stumm und bleich?*" (Why is the bridegroom so pale and cow'd?), the solo horn seems to supply the secret answer to the question by blowing the fifth motive, with its sorrowful appendage from Ex. 25a. This is heard under a sustained open fifth in the flutes and flageolleted cellos, and under muted tremolos in the violins:

---

<sup>84</sup> Of course, the tonic-dominant ostinato bass-tread in quarter notes, which appears earlier in the same song, still remains as a major stylistic feature linking the three works. For a basic specimen from *Waldmärchen*, see Ex. 7. Cf. also the published *Klagende Lied*, after cues 1, 3, 4, 5, 6, 8, 11, 12, 15, 17, 30, 31, 32, 34, and 60; *Lieder eines fahrenden Gesellen*, after cues 2, 7, 14, 15, 16, 27, and 28; and Symphony No. 1, after cues 4, 6, 7, 16, 17, 20, 21, and 33 (first movement), cues 1, 3, 5, 13, 16, 17, 21, 22, 23, 26, 27, and 29 (second movement), and cues 1, 2, 3, 4, 7, 8, 9, 13, 14, 16, 17, 18, and 19 (third movement). Eighth-note tonic-dominant drum strokes also occur in *Waldmärchen* (see the last part of the paragraph following Ex. 20b) and in the off-stage band music from *Hochzeitsstück* (after cues 46, 47, 48, 49, 66, 67, and 70), while—to come back to the pivotal song again—an eighth-note plucked ostinato on the tonic and dominant accompanies the "*Auf der Strasse*" interlude in the Symphony almost throughout (third movement, after cues 10, 11, and 12).

55

How much more revealing this must be if we are familiar with what it has already signified! But this particular setting is also prophetic of

much to come in Mahler's symphonic music, with its E major chord changing to E minor (second bar— subtly orchestrated as always!), and its downward curve of lamenting brass. And the counterpoint of the flute before the broader repetition of Ex. 25a (against the vocal part, not shown above) makes it clear that this is also a variation of the descending minor scale motive beginning with rising fourth (Exx. 12 and 15)— of which more later. That is, the flute and horn between them trace all but the last degree of the descending E minor scale—to be interrupted at cue 55 by the chord of G sharp minor!

In the prelude to *Der Spielmann*, beginning at cue 5-5 (i.e. five bars before cue 5), a new motive appears in which the call of the fifth is nicely dovetailed with a chorale-like treatment of the *Dies Irae* plainchant—the latter as in a more extensively developed motive in the Second Symphony:

Ex. 30

BRASS

*Dies Irae* Ex. 2a

How, we must ask, could any listener possibly recognize or appreciate *this* motive combination without a prior knowledge of the *Waldmärchen*?! Note also the inversion (marked 'a' above) of the first three notes of Ex. 8a. The *Dies Irae* chorale returns verbatim during an orchestral interlude in the *Hochzeitsstück*, at cue 61.

It is easy to see that Mahler's long-term scale of reference is fully at work in the original three-part cantata. I have already mentioned that Ex. 5a/b returns in successive minor keys after cue 7 of the published score, albeit without the "triplet" theme which appears on the lower staff of Ex. 5. In addition to that, however, the entire F-minor complex of Ex. 5 in the *Waldmärchen*— dominant trill, triplet theme,

soaring fanfare, and bird-song— which, we are told, is immediately repeated in D flat major at that point, returns intact in F major at cue 23+4 in *Der Spielmann*. All this material is packed into a mere six bars.

The original triplet motive (Ex. 3a), which directly precedes this at cue 23, had already made its impressive first solo reappearance right after cue 3, "contradicting" (as Deryck Cooke has said<sup>35</sup>) the C-minor oppressiveness of the *Spielmann* prelude with its limpid horn tones in F major over a strumming harp. We then hear a bit of the motive's continuation (as in Ex. 7) in the oboes, *over* the new C-minor bass theme with which this prelude has opened. This is succeeded, in C major (cue 4, flutes and clarinets), by the first thematic harbinger of the wandering minstrel who is to be the unwitting instrument of retribution upon the guilty brother:

Ex. 31  
FLUTES  
CLARINETS  
*p*

And, as if following inexorably from this, the retribution itself is then forecast directly by means of the *Dies Irae* chorale (Ex. 30). At cue 57 the triplet motive also recurs in the version ending with an upward inflection (Ex. 19A), very impressively against the choral tenors' singing of "*Sieht nicht die Gäste, stolz und reich.*"

The principal new theme offered in the *Hochzeitsstück* prelude is the "castle" or "kingly" motive introduced by the trumpets at the fifth bar:

Ex. 32

And if the general shape and rhythm of this motive looks vaguely familiar, the ensuing festive chorus makes the derivation from the Ex. 5a fanfare perfectly clear. The basses first offer a phrase closely resembling Ex. 5a itself, doubled by the horns, and then the tenors respond with the very trumpet motive we have just heard, again in unison with the trumpets themselves:

<sup>35</sup> D. Cooke: *Gustav Mahler (1860-1911)*; British Broadcasting Corporation, London, 1960; p.21.

## Ex. 33

The musical score for Ex. 33 consists of two systems. Each system has a vocal line in the upper staff and a piano accompaniment in the lower staff. The key signature is one flat (B-flat major or F minor), and the time signature is 4/4. The first system begins with a piano (*ff*) dynamic marking. The vocal line starts with a rest, followed by the notes for 'Vom ho - hen Fel - sen er - glänzt das Schloss,'. The piano accompaniment features a rhythmic pattern of eighth and sixteenth notes. The second system continues the vocal line with 'hen Fel - sen er - glänzt das Schloss,'. The piano accompaniment continues with similar rhythmic patterns.

This close succession of one figure by the other is like an obsessive overturning of the natural order of things, culminating not so much in a proud flourish as in an angry cry.<sup>36</sup>

But the chief use of Ex. 5a in its original form in the *Hochzeitsstück* occurs within the context of Ex. 6. Eight bars after the announcement of the "castle" theme in the prelude (cue 40) the metre changes from 6/8 to 4/4, and Ex. 6 is heard in its literal entirety.<sup>37</sup> It returns again in its entirety at cues 44 and 50, while 6a is heard by itself at cues 41, 48, 51 + 2, and 70, always in the horns.

The other principal fanfare motive is Ex. 16, evidently first announced in *Waldmärchen* by the male chorus in F minor, to the words "*Als sie nun zogen eine Weil*." It is reintroduced six bars after cue 19 by the alto soloist, in the same key, to the words "*Der Spielmann setzt die Flöte an*," against one of the typical "distress" motives<sup>38</sup> of the minstrel—

<sup>36</sup> It is instructive to discover that a page from a four-stave sketch for the *Hochzeitsstück* found among Alma Mahler's manuscript collection—the opening page of the prelude—bears another of those subtitles subsequently deleted by Mahler. At the head of this prelude is inscribed the word "*Höllenjubil*" ("Hell's Festivity"). (See Plate II.)

<sup>37</sup> In the afore-mentioned four-stave sketch, the bar containing the contrapuntal combination of Exx. 3a and 5a occurs at the left margin, and next to it is inscribed (twice!) the word "*Natur*". (See Plate II.)

<sup>38</sup> This becomes itself a vocal motif later on, to the words "*Ach weh, ach weh, ihr lieben Leut!*" (cue 34). It derives ultimately from the unquoted minstrel theme at cue 6 (second, ninth, and eleventh bars), and it evolves out of a passage of extended development of that theme beginning at cue 17.

Ex. 34

FLUTES

Der Spiel - mann setzt die Flö - te an,

but not before it has been heralded in the trombones (six bars after cue 17) during an agitated orchestral peroration in the unusual key of D flat minor. At cue 33 the male chorus lays claim to it once more, in A flat minor, to the apocalyptic words "*Der Spielmann ziehet in die Weit'.*"

I might add that even the inane tootlings of the off-stage band in the *Hochzeitsstück* are to a large extent quasi-satirical distortions of significant motives carried through the three sections of the cantata, notably the elements of Ex. 5. The undignified things that happen to them are of the general sort that happen to Strauss' Dulcinea motive in the common thoroughfares of *Toboso*,<sup>39</sup> or to Berlioz's *idée fixe* in the *Witches' Sabbath*.<sup>40</sup> But these *particular* sounds, as Donald Mitchell has expounded, point ahead to Mahler's ironic or parodistic use of wind-band sounds in the third movement of *Symphony No. 1*, the first and third movements of *No. 3*, and so on. And the instrumentation is, in Mitchell's words,<sup>41</sup> "evidence of Mahler's taste for the authentic sonority of the wind band, a taste undoubtedly conditioned by his familiarity with the piercing, plangent timbre of the military band in his childhood days." Here the ensemble is the largest ever used by Mahler as an off-stage unit, consisting of a piccolo, 2 flutes, 2 oboes, 2 clarinets in B flat, 2 clarinets in E flat, 4 horns, 2 trumpets (or flügel-horns), triangle, cymbals, and timpani.

## 8

Since the three songs of the spectral flute itself are the chief *narrative* links with the *Waldmärchen*, recalling the scene of the murder in the slain brother's own words, it is to be expected that these songs would be especially rich in musical allusion as well. Here Mahler employs the Wagnerian motivic device at its most subtle and complex, leaving the voice free to express powerful emotions in the most natural

<sup>39</sup> *Don Quixote* (1897), Variation VI. Richard Strauss' recourse to satire and parody became more pronounced in later works such as *Der Rosenkavalier* and the music for *Le bourgeois gentilhomme* (*Der Bürger als Edelmann*).

<sup>40</sup> *Symphonie fantastique*, fifth movement (*Songe d'une nuit du Sabbat*)— a movement which also makes reference to the *Dies Irae*. The fact that Mahler's thoughts were, indeed, not far from the idea of a *Walpurgisnacht* at the outset of Part III is indicated by the afore-mentioned subtitle on the prelude: "*Höllenjubil*".

<sup>41</sup> *Op. cit.*, p.188.

way, while the orchestra supplies the linking details. According to Donald Mitchell,<sup>42</sup> "one extraordinarily interesting idea Mahler had at the FS [first full score] stage was to have a boy's voice doubling, 'from afar,' the contralto's delivery of the flute's narration of the murder." And in the first printing of the score which appeared in 1899, even the clear designation "Alt-Solo" bore the contradictory footnote "*Womöglich durch eine Knabenstimme auszuführen!*"—"Sung if possible by a boy's voice!". It is interesting to bear in mind either or both of these possibilities when studying the first song.

This first spectral song follows the sudden irruption of the E flat minor chord at cue 25-2 which comes, as Mitchell says,<sup>43</sup> with "chilling effect" upon the "somnolent F major" cadence. The first pair of lines seems to contain a series of evocative variations on the *Waldmärchen's* Ex. 25a (the upward fifth with its elegiac continuation), beautifully scored for winds and tremolo violins:

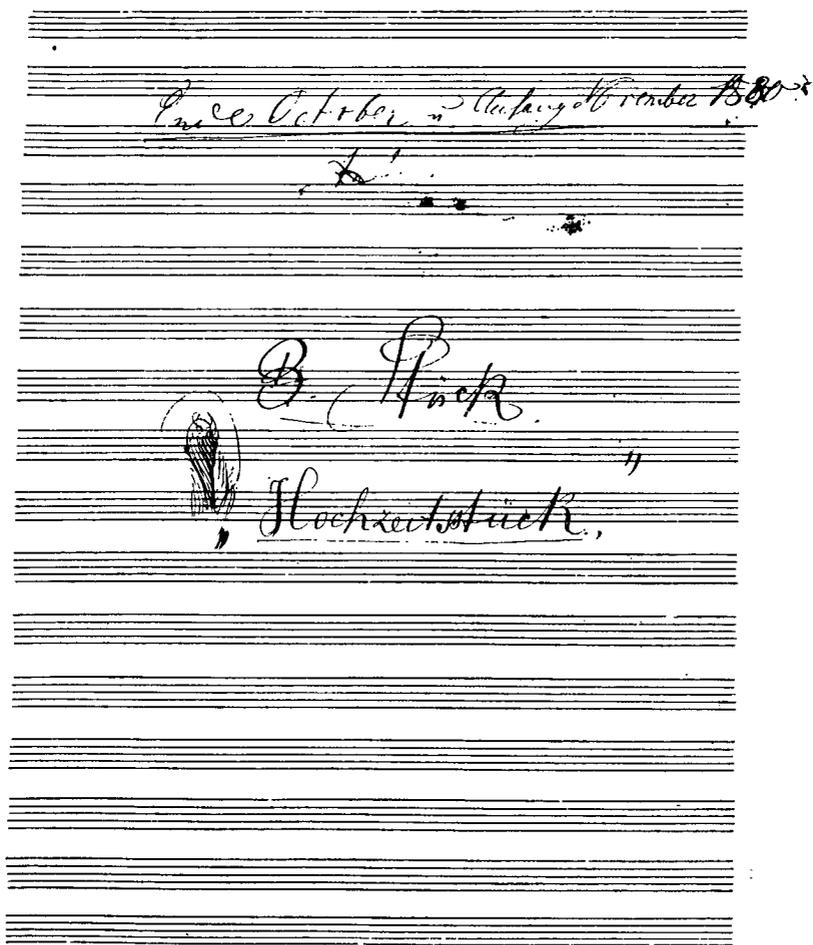

PLATE I

Mahler *Das klagende Lied*. Title page for four-stave sketch (1880) of *Hochzeitsstück*, from the collection of Alma Mahler. (by kind permission of Jerry Bruck). Note the designation "3 Stück", with the figure "3" written over a mysterious "4". No explanation whatever for the latter numeration has appeared.

The image displays a handwritten musical score on four staves. The notation is dense and includes various musical symbols such as notes, rests, and dynamic markings. There are several annotations in cursive handwriting: 'Höllens Jubel' written vertically on the left side, 'distense' at the top, and 'bige hin' at the bottom. The score is heavily scribbled over with black ink, particularly in the middle and right sections, indicating a working draft or a sketch. The staves are connected by a large bracket on the left side.

PLATE II

Mahler *Das klagende Lied*. First page of four-stave sketch of *Hochzeitsstück* from the collection of Alma Mahler (by the kind permission of Jerry Bruck), with subtitle "*Höllens Jubel*" appended to the opening bars. The twenty bars in 2/2 metre later emerged as ten bars in 4/4 metre.

gen:

The second pair of lines begins in D major, and the mention of the queenly prize ("*ein schönfarbig Blümelein*") for which the fratricide was committed evokes Ex. 8a/b— i.e., the greatest number of notes from Ex. 8 we are to hear until the third flute song.<sup>44</sup> The word "*erschlagen*" is so inflected that the dismal Ex. 23a then comes as a two-fold echo:

## Ex. 36a

VIOLINS CELLOS

Um ein schön-far-big Blü-me-lein hat

HORN VIOLAS

*p. aber hervortretend*

Ex. 8 a b

<sup>44</sup> Elsewhere we hear only the first four notes of Ex. 8, plus a fifth note (at cues 24, 55, 56, and 64), although the third of these instances is beautifully integrated into a reprise of Ex. 24 to the words "*Hört nicht des Jubels Töne.*" Here the music alone practically tells us, if we know the earlier words connected with Ex. 24, that the king, "hearing not" the sounds of jubilation, is haunted by the memory of the expression upon the face of his slain brother ("*Der Junge lächelt wie im Traum*"), perhaps as Boris Godunov was by the account of the murdered Dmitri.

mich mein Bru - der er - schla - gen.

Ex. 23a

FLUTES

*p*

The musical phrase indicated as figure 'x' was also sung in the first stanza of *Der Spielmann* to the words "Unter Blättern und Blüten begraben." There it was likewise followed by Ex. 23a (at cue 9), with the same mournful echo-effect after "begraben"; and this, as we mentioned before, was succeeded by the clarinets' rocking harmonies derived from Exx. 1b and 26, gently modulating to the key of "Dort ist's so lind":

Ex. 36b

*p*

But now we are wrenched back to the "sudden orchestral cry" in *Waldmärchen* cited after Ex. 23, and the ensuing fortissimo couplet marked "Etwas bewegter"—

*Im Walde bleicht mein junger Leib,  
Mein Bruder freit ein wonnig Weib!*

would appear to be a direct C-minor reprise by the alto (vocally augmented by "O Leide!", etc.) of the A-minor soprano couplet

*O weh, wem er dort schlafend fand,  
Die Blume am Hut, am grünen Band!*

—to the music first set forth in Ex. 14. The revelation is climaxed with the music found on the lower staff of Ex. 4— i.e. the "fifth" motive sounded by raucous horns, which then plunge downward into the nervously pulsating version of Ex. 5a.

The second flute song, also sung by the alto, and identical in text to the first, follows the general plan of the first song, but with greater intensity in the first pair of lines (trumpet in place of English horn, etc.), in C sharp minor, and greater divergence in the second pair (G flat major). The couplet, however, begins elegiacally this time (F minor), without a sudden break in tempo or dynamics, but ends with a shock on a fortissimo octave leap. And the commiseration of the chorus has to contend with the now ironic tootling of the off-stage band.

The single stanza that intervenes between the second and third flute songs is devoted almost entirely to the music of Ex. 32, the "kingly" motive. The whole chorus sings it in unison, to the words "Auf springt der König von seinem Thron," and then it is tossed about in the orchestra with mounting frenzy, until we hear the chorus' octave-leap cries of "Schrecken! Schrecken!". The orchestral peroration breaks off on the solitary recurrence of Ex. 17 outside *Waldmärchen*.

The third flute song begins familiarly, although in the cold, clear voice of the soprano this time, in A minor. Instead of "Ach Spielmann . . ." we hear "Ach Bruder, lieber Bruder mein." And where the word "klagen" came before, now we hear "erschlagen" already: "Du hast mich ja erschlagen"— "Twas thou my life didst sever." This is the crucial confrontation, and now we are brought back to the murder scene with a vengeance. The mind that slept while the tragic blow was struck is now awake and accusing, if "more in sorrow than in anger." And now at last we hear a full four bars of the "proud queen's" music from Ex. 8, trill and all, against a bitterly elegiac new counterpoint in the cellos—

## Ex. 37

The musical score for Ex. 37 consists of two staves. The top staff is for the Horn, starting at measure 74 and ending at measure 75. It is marked "p molto espress." and "zart". The bottom staff is for the Cellos, also spanning measures 74 to 75, and is marked "pp" and "pp". The music features a complex rhythmic pattern with many beamed notes and rests, and dynamic markings such as "p", "pp", and "zart".

and we are brought back further still, to the psychological starting point, but with a new emotional perspective. And the queen, who is

herself at hand, will faint away at the realization.

But first we have the singing of that distraught coloratura couplet (sparked by the sudden leap of a tenth on "*klagen*", which has now traded places with "*erschlagen*")—

*Was hast du mein junges Leben  
Dem Tode hingegeben?*

in which Mahler gives his vocal imagination free rein, albeit with an inspired reference to *Dies Irae* at the very apex, and on the appropriate word "*Tode*". Here is musico-dramatic verity of the highest order, whose all-resolving and cathartic quality is surely much enhanced by the larger scale of reference which embraces *Waldmärchen*. There seems, indeed, little excuse to have as many as three spectral flute songs unless they do serve this larger structural function.

9

And so we come finally to the *Leitmotiv* which probably permeates the original *Klagende Lied* more than any other: the descending minor scale with rising fourth upbeat. And it is this motive which, without question, drives home the structural necessity of the *Waldmärchen*. As we see from the analysis of the deleted piece, the motive is both sung (as in Ex. 15) and merely played (as in Ex. 12); but more than this, it actually concludes (or, in just one case, is heard in the penultimate line of) seven of the nine stanzas of *Waldmärchen*— *i.e.*, all except the sixth and seventh stanzas. And it is variously sung to the words "*das Fluchen*" (third stanza), "*die Blume*" (fourth), "*zur Ruh*" (fifth), "*Der Alte*" (eighth), and "*alte Weide*" (ninth and last stanza, bringing the music itself to a close on an F sharp minor chord). That is to say, it serves as a kind of musical refrain, just as the words "*O Leide, weh!*" thenceforth become a verbal refrain in all but two stanzas.

In the two published parts of the cantata, the descending motive is heard chiefly in quite subtle variation form, and these variations begin on the very first page of the *Spielmann* prelude:

Ex. 38

FLUTE

The musical score for Ex. 38 consists of three staves: Flute, Oboes, and Clarinets. All staves are in G minor (two flats) and 4/4 time. The Flute part begins with a piano (*p*) dynamic and a breath mark (*A*). The Oboes and Clarinets parts also begin with a piano (*p*) dynamic and a breath mark (*A*). The music features a descending minor scale with a rising fourth upbeat.

This is repeated with a new extension five bars later, at cue 1. Twelve bars after that comes a second variation, likewise involving only a part of the scale; it is repeated verbatim at cue 34+7, and finally, at 60+6, it finds a most impressive harmonic and melodic fulfillment, descending the entire scale:

Ex. 39

*Ex. 31a*

These solemn wind chords forge a kind of fateful link between the original Ex. 12 and the *Dies Irae* chorale. Note the initial rhythm with dotted-quarter rest, derived from the very opening bars of the prelude, and previously cited in Ex. 31.

The third variation takes the form of angry eighth-note scales in C minor leading to the climactic return of Ex 4c (cue 2+4):

Ex. 40

*Etwas drängend*

(Compare the downward-thrusting trochaic figures in the first movement of Symphony No. 2.) The fourth variation (at cue 3-2) serves to conclude the subsiding bass figure which ensues—

Ex. 41

*ff* *mf* *p*

while the fifth is perhaps the *Dies Irae* motive itself (Ex. 30), as an examination of its bass line may suggest. The latter connection is further pointed up when the *Dies Irae* returns, at cue 61, immediately after the impressive variation quoted in Ex. 39.

The sixth variation, for the woodwinds in the major mode (at cue 5), separates the two clauses of the *Dies Irae* theme, and is one of the series of harbingers of the minstrel's music of which Ex. 31 is also one:

Ex. 42

*p*

Note that the inverted bass-line opening (mirroring the top line) also suggests the third and fourth bars of Ex. 8, as does the trill in the flutes. The seventh variation is again in the bass, and is preceded by the second clause of the *Dies Irae* chorale:

Ex. 43

*f* *pp*

This is followed at cue 6 by the main *Spielmann* motive in F major. Based on a jaunty transformation of the prelude's opening bass figure, the well-remembered theme need not be quoted here, since it evidently bears no direct relation to anything in *Waldmärchen*. It brings the prelude to a close.

All the variations thus far have occurred in the prelude to *Der Spielmann!* (excepting the final metamorphosis of the second variation quoted as Ex. 39). Thereafter the descending minor scale becomes asso-

ciated chiefly with the verbal refrains, thus linking the ends of the stanzas together, just as those of the *Waldmärchen* were linked *without* a verbal refrain. However, the descending scale continues to be employed in more varied guises than it evidently was in the *Waldmärchen*. Obviously Mahler was depending upon the original motive's having been thoroughly digested by the time *Der Spielmann* gets under way, one of the several important facts which he chose to overlook in deleting Part I.

At the end of the first stanza of *Der Spielmann* (cue 10), for instance, the tenor soloist sings the straight octave-drop version of the descending motive, but in *dominant* harmony, against an equally interesting harmonic version of the descending scale, first vocal and then instrumental:

## Ex. 44

SOPRANO SOLO

ALTO SOLO 0

Lei - de, Lei - de!

TENOR SOLO 0

HORNS

pp

Lei - de!

This is followed by a beautiful cadence onto the B flat minor chord in the root position, featuring Ex. 36b (clarinet and bass clarinet doubled by violas) with a new, short extension (stopped horns and violas), and an arresting new bass figure:

Ex. 45

*zurückhaltend.*

The bass figure sounds like a curious anticipation of the figure underlying the fourth movement of Symphony No. 3 ("O Mensch, gib Acht"), but upside down, while in the extension, with its little stab on the second note, the instruments themselves seem to be articulately repeating the words "O Leidel!" And indeed, this is exactly what the chorus will be doing later (Ex. 51 below).

In the second stanza, the scale motive appears in the couplet as well as the refrain. Against a veiled, mysterious, and beautifully scored ostinato march-rhythm in B flat minor, the lower half of the divided choral basses "whisper" the phrase

Ex. 46

*pp (flüsternd)*

O Spiel-mann mein, O Spiel-mann, Spiel-mann

mein! O Spiel-mann mein!

—which the rest of the chorus, divided into six more parts, embroiders above. Then the tenor soloist bursts out passionately with the last line of the stanza, the alto joins him in harmony for the refrain (she being obviously influenced by the *Dies Irae* figure), and the low winds and strings provide a new melodic variant of the descending motive:

## Ex. 47

Musical score for Ex. 47. The top staff is for Tenor Solo, marked *p*. The lyrics are: "Das wird ein selt - sam Spie - - - len". The bottom staff is for Horn, marked *p*. The key signature is A-flat minor (three flats).

Musical score for Ex. 47, continuing from the previous system. The top staff is for Alto Solo, marked *sehr ausdrucksvoll* and *ALTO SOLO*. The lyrics are: "sein! O Lei - de weh! O Lei -". The bottom staff is for Horn, marked *f*. The key signature is A-flat minor.

Musical score for Ex. 47, continuing from the previous system. The top staff is for Horn, marked *molto espress.*, *mf*, and *p*. The lyrics are: "del". The bottom staff is for Horn, marked *pp*. The key signature is A-flat minor.

Ex. 45 returns in A flat minor, and then the scale motive is played in virtually its original form for the first time in *Der Spielmann*, but with the upbeat slyly accommodated to the characteristic "hocketing" *Spielmann* rhythm announced in the third bar of the prelude (again compare Ex. 31a):

## Ex. 48

OBOE

Musical score for Ex. 48, featuring four parts: OBOE, TRUMPET, BASS CLARINET, and TROMBONE. The score is in 2/4 time and B-flat major. The Oboe part begins with a *p* dynamic and features a melodic line with a crescendo to *pp*. The Trumpet part starts with a *pp* dynamic and has a similar melodic contour. The Bass Clarinet and Trombone parts enter later in the measure with a *p* dynamic, playing a lower, more sustained line. The score is divided into four measures.

Musical score for Ex. 48, featuring two parts: BASS CLARINET and TROMBONE. The score is in 2/4 time and B-flat major. The Bass Clarinet part begins with a *pp* dynamic and features a melodic line with a crescendo. The Trombone part starts with a *pp* dynamic and has a similar melodic contour. The score is divided into two measures, with a box containing the number 17 above the first measure.

In the third stanza, where the word "Leid" occurs in the couplet as well as the refrain, we have the following variation which is combined with a continuation of the melody from the song *Im Lenz*:

## Ex. 49

22

SOPRANO SOLO

Es klingt so trau-rig und doch so schön, Wer's

*pp.*

hört, der möcht' vor Leid ver-geh'n!

ALTO & TENOR SOLOS

*pp.*

O Lei-de, Lei-del

This leads directly to the interlude in which Ex. 5 appears in the major, as described earlier, but which also gives us the following dreamlike transformation of our motive, beginning with solo violin, and settling into Donald Mitchell's "somnolent F major" cadence:

## Ex. 50

HORN

Ex. 8a

Following the portion of the first flute song quoted in Ex. 35, we hear (at cue 27+2) a sweeping series of simultaneously rising and falling scales in A major, which, after so many minor scales, lends a strongly anticipatory and revelatory quality to the sequel in D major. As *Der Spielmann* draws to a close, Ex. 47 is recapitulated (at cue 36+3), in a gradual diminuendo from *ff* to *pp*. To the musical phrase to which the tenor sang "*Das wird ein seltsam Spielen sein*" before cue 16, the three soloists now sing, at full force and *unisono*, the words "*Was soll denn euch mein Singen?*", doubled by flutes, oboes, and clarinets—a shrill interrogative. The female chorus sings the phrase (with the suggestion of *Dies Irae*) which was formerly for solo duet, and the male chorus sings the descending scales, altered as in Ex. 47—

both of these to the refrain "O Leide, weh!". *Der Spielmann* ends with a whispering (again, literally "flüsternd") of the artful instrumental cadence (Ex. 45, this time in C minor) which formerly succeeded both Exx. 44 and 47, but now in the choral version (doubled by low winds and strings) for which it seemed destined:

## Ex. 51

*ppp* (*flüsternd*) *pppp*  $\Lambda$

TENORS

O Leide, Leide, weh! — O Leide

BASSES

*ppp* (*flüsternd*)

O Leide, weh! —

de! —

— O Leide, weh! — O weh! —

*pppp*

During the opening chorus of the *Hochzeitsstück*— at cue 45— we hear another major-mode variation, and one which actually goes back to the *Waldmärchen*:

## Ex. 52

45 *zurückhaltend*  $\text{3}$

*pp*

Was leuch - tet und glänzt —

*pp* Was leuch - tet und

$\text{3}$

— im Kö - nigs - saal?

glänzt — im Kö - nigs - saal?

As may be noticed, this is a rhythmically rephrased version of Ex. 20b. Still another variation *combines* the major and minor modes to excellent effect. This occurs at cue 58, linking the chorus' "Der Königin holde Schöne" to the alto soloist's "Was ist der König so bleich und stumm?". Against a mysterious hush, first the sopranos and then the tenors sing the octave drop. Meantime the flutes, oboes, harp and tremolo violins descend two E-major scales in triads against a rising bass. As the tempo slows a bit, we then continue down a third scale, but this time in empty octaves and in E minor:

## Ex. 53

*Nicht schleppen*

Der Kö - ni - gin hol - de Schö -

Der Kö - ni - gin hol - de Schö - ne.

*pp* *ppp* *f*

*pp* *sempre pp*

58

ne.  
Schö -

*Etwas zurückhaltend* 59

ne.

Obviously this is not only a lovely variation on the descending scale motive, but also on Mahler's favorite major-minor tonic triad change. The subtle scale-variation occurring at cue 54 has already been cited in Ex. 29.

I leave unquoted the choral climax at cue 81— where the scale figure is linked to a chromatic wailing motive (up and down the diminished melodic third D#-E-F) which is to be used with stunning effect in

the finale of Symphony No. 1— and proceed to the closing pages of *Das klagende Lied*. At cue 84 the tenor sings "*Die Lichter verloschen im Königssaal*" — set with ineffable pathos to the first three bars of Ex. 8!— and doubled by a clarinet and bass clarinet. Eight bars later the singer makes the final ironic query, "What now remains of the wedding feast?". As the same clarinets (B-flat and bass) play a last pathetic echo of the fanfare motive Ex. 3a (one of the "nature" motives, as we have seen), the tenor himself echoes it more slowly with a sadly questioning inflection. This seems about to resolve into E major, when the violas and cellos come softly in on G natural— the minor instead of the major mediant tone— and then sink quietly down the E minor scale:

## Ex. 54a

TENOR SOLO

pp  
Was ist es wohl mit dem Hoch - zeits -

CLARINET

BASS CLARINET

pp

Ex. 3a

85

pp

VIOLAS AND CELLOS

Finally the descending motive in its original form rounds out the picture: the soprano steals in and brings the music back to the A minor tonality out of which the *Waldmärchen* had arisen—

## Ex. 54b

*Rit.* *Sehr langsam*  
SOPRANO SOLO

*ppp* Ach Lei - de!

OBOE *p*

ENGLISH HORN *p*

*ppp*

and a short, sharp chord dispels the dream with a rude jolt. Again it is seriously to be doubted that listeners to the two-part *Klagende Lied* will experience the precise stab of recognition which this last example ought to bring with it, despite the far-reaching and subtle variations to which the motive has been subjected. Instead of coming full circle, in other words, for them the music has come only half-circle.

By now the grand over-all musical plan of the original three-part *Klagende Lied*, Mahler's "Opus 1," should commence to be abundantly apparent, and to be recognizable as a plan which is as breathtaking in its scope as those in any of the subsequent symphonies. Do those who already love the published and recorded editions of the work need more than that to persuade them that this original version must needs be a still richer musical experience, and, above all, a more viable and moving musico-dramatic one?

---

 II MAHLER AND HEINE
 

---

---

 1
 

---

In his afore-mentioned *Gustav Mahler—The Early Years*, on pages 127 and 128, Donald Mitchell discussed the two undated song-fragments which were at that time in the possession of Alma Mahler, but which are evidently missing from the collection in New York City currently being catalogued by the late widow's daughter.<sup>45</sup> "There are no dates attached to these fragments," Mitchell wrote, "but I think it probable that they belong to Mahler's early student period. They

<sup>45</sup> As with the Hamburg version of *Das klagende Lied*, the microfilms of these manuscript scores owned by the New York Public Library may be studied on lantern projection in its Library and Museum of the Performing Arts at Lincoln Center.

might possibly be earlier than 1876 . . . but I doubt if they are later than 1879, if 1880 may be taken as the year in which Mahler's talent for song-composition bore its first fruits,<sup>46</sup> among which these interesting but very tentative fragments cannot be counted."

Describing the two as widely contrasted, Mitchell continued: "The incomplete setting in D minor of an unidentified text is as diatonic as the attempt at *Im wunderschönen Monat Mai* is chromatic. . . . The D minor fragment discloses a typically Mahlerian rhythmic structure in its melody; and though, in general, a rather indecipherable manuscript, it conveys a faint impression of the style of the early *Wunderhorn* songs which were to be composed after 1888."

Concerning the other fragment, set to the Heine poem associated by most listeners with Schumann's setting, Mitchell wrote that although "it is evidence, no doubt, that Mahler's intense admiration and affection for Schumann's art were part of his early musical life,"<sup>47</sup> nevertheless "Mahler's *Im wunderschönen Monat Mai* has the distinction of being not only his most Wagnerian piece, but also the only one in which we can watch him completely surrender himself to the color, sensuousness, and freedom of typically Wagnerian harmonic progressions, as if fascinated by a quite new realm of sound, while unable to do more than superficially revel in—and imitate—its sonorities. . . . The contours of the vocal line and the character of the harmony . . . place Heine's fragile lyric in an extravagant atmosphere of *Tristan*-esque yearning."

Revealing as the study of this fragmentary score can be, the present writer feels that the "D minor setting of an unidentified text" is an equally intriguing bit of early Mahleriana, both for the choice of words and the choice of music. And so I was much gratified to discover, not so long ago, the source of this text. It is a lower-Rhenish folk song entitled *Weder Glück noch Stern* ("Neither Luck nor Star"), of which two very simple and diatonic musical settings were collected in the 1830s by the same Heinrich Heine who wrote the other poetic object of Mahler's early attention, and which are currently published in Ludwig Erk's *Deutscher Liederschatz*, Volume III.<sup>48</sup>

Both settings published by Erk are in G minor, are marked *Langsam*, and are in three strophic verses. The first setting (first on the page, that is) is in 6/8 time, while the second, headed "*Ältere Volksweise* (1807)," is in 4/8. The accompaniment to the earlier tune (which I personally consider the more interesting setting of the two), and whose top line is identical to the vocal line, is as follows:

<sup>46</sup> This refers, of course, to the three unpublished songs "to Josephine" mentioned earlier, and to the beginning of the series of songs later collected by Mahler and published as *Lieder und Gesänge aus der Jugendzeit*. Considering that 1880 is also the year *Das klagende Lied* was completed in the autumn, the case for an earlier date for the fragments seems definitely understated.

<sup>47</sup> More tangible evidence of this is perhaps to be found in Mahler's Piano Quartet movement of c.1876, in whose opening theme Mitchell discovers "something of Schumann's spirit mingled with Brahms's" (*Op cit.*, p.127).

<sup>48</sup> "*Eine Auswahl der beliebtesten Volks-, Vaterlands-, Soldaten-, Jäger-, und Studenten-Lieder für eine Singstimme mit Piano- oder Fortepianobegleitung*"; C. F. Peters, Leipzig, 1905, pp.46-7.

Ex. 55 *Langsam*

The text for the older setting reads thus:

*Es fiel ein Reif in der Frühlingsnacht,  
Er fiel auf die zarten Blaublümelein,  
Sie sind verwelket, verdorret.*

*Ein Jüngling hatte ein Mägdlein lieb,  
Sie flohen gar heimlich von Hause fort,  
Es wusst's nicht Vater noch Mutter.*

*Sie sind gewandert wohl hin und her,  
Sie haben gehabt weder Glück noch Stern,  
Sie sind verdorben, gestorben.*

The later one, as printed by Erk, differs from this only in substituting "schönen" for "zarten"

Mahler changes a few more lines. He omits the "Er" from "Er fiel," begins the second stanza with "Es hat ein Knab' ein Mägdlein," continues with "weder Vater noch Mutter," and substitutes "hatten" for "haben gehabt" (or else he simply read a different version). But the really fascinating thing about this fragment is that the music stops just one line short of the end of the poem; the last word which Mahler sets to music is "Stern". And having begun in D minor, he breaks off in the region of F sharp major (the exact progression, by the way, of the Tenth Symphony finale!). On paper it almost looks as if the young Mahler himself had "no star" to guide him, and that having modulated to F sharp, he had no idea how to get back (or resolve the thing anyhow) in one line.

But then we see that Mahler has continued to write words on the blank staves below, writing out not only the final line of the poem, but an extra stanza of his own devising. Though the penmanship becomes an increasingly indecipherable scrawl as it proceeds, Mahler's own ending to the story has been tentatively rendered, with the help of Metropolitan Opera conductor Jan Behr, somewhat as follows:

*Auf ihrem Grab blaue Blüm'lein blühen,  
Umschlingen sich wie sie einmal,  
Dem Reif sie nicht welken, nicht dorren.*

Evidently the chromatics of his other Heine setting are not the only "Tristanesque" thing about these early efforts. Mahler actually proposed (whether seriously or not, we cannot know) to bestow something resembling the floral apotheosis of the old Tristan legend upon this stark simple folk ballad of star-crossed lovers, permitting their graves to put forth intertwining flowers!<sup>49</sup>

This is surely as self-revealing in its small way as anything we have just discussed in connection with *Das klagende Lied*. Mahler must have felt a strong identification with these adolescent lovers who fled their homes, unbeknown "to father or mother," who "wandered far and wide," and who—having neither luck nor guiding star— simply, we are told, "succumbed and died." Here again is truly a "song of a wanderer"— whether it be "mankind [who] has driven him forth," as in his fantastic letter of 1879 to Josef Steiner,<sup>50</sup> or "the two blue eyes of my sweetheart [which] have driven me into the open world," as in the *Lieder eines fahrenden Gesellen*. If *Weder Glück noch Stern* is a voluntarily abandoned early preparation for anything in Mahler's later output, it is surely for the poem published posthumously in *Der Merker* on March 1, 1912—the "Gesellen" poem which he did not set to music in his song-cycle, dated "Cassel, December 1884," and translated as follows by Gabriel Engel:<sup>51</sup>

The night looks softly down from distances  
Eternal with her thousand golden eyes,  
And weary mortals shut their eyes in sleep  
To know once more some happiness forgotten.

See you the silent, gloomy wanderer?  
Abandoned is the path he takes, and lonely,  
Unmarked for distance or direction.  
And oh, no star illuminates his way,

<sup>49</sup> "And he took their beloved bodies away with him upon his ship to Tintagel, and by a chantry to the left and right of the apse he had their tombs built round. But in one night there sprang from the tomb of Tristan a green and leafy briar, strong in its branches and in the scent of its flowers. It climbed the chantry and fell to root again by Iseult's tomb. Thrice did the peasants cut it down, but thrice it grew again as flowered and as strong. They told the marvel to King Mark, and he forbade them to cut the briar any more." Joseph Bédier: *The Romance of Tristan and Iseult*, trans. Hilaire Belloc and Paul Rosenfeld; Pantheon Books, New York, 1945.

<sup>50</sup> *GMB*, p.9.

<sup>51</sup> *Op. cit.*, p.43.

A way so long, so far from guardian spirits!  
 And voices versed in soft deceit sound, luring:  
 "When will this long and futile journey end?  
 Will not the wanderer rest from all his suffering?"

The Sphinx stares grimly, ominous with question,  
 Her stony, blank gray eyes tell nothing, nothing,  
 No single, saving sign, no ray of light—  
 And if I solve it not, my life must pay.

No wonder, perhaps, that Mahler could not set to music that earlier apotheosis "*auf ihrem Grab*," much as he might have wished to! If there were in his soul "no single, saving sign, no ray of light," he could not manufacture one to order— neither then nor later.

As usual, there are familiar connections and handprints all over the song: a minor scale in harmonic thirds—

Ex. 56

Musical notation for Ex. 56, showing a chromatic alteration in a minor scale. The notation is in 4/4 time, with a treble and bass clef. The melody in the treble clef consists of a sequence of notes: G4, A4, Bb4, C5, D5, E5, F5, G5. The bass line consists of a sequence of notes: G3, F3, E3, D3, C3, B2, A2, G2. The key signature is one flat (Bb).

a chromatic alteration—

Ex. 57

Musical notation for Ex. 57, showing a chromatic alteration in a minor scale. The notation is in 4/4 time, with a treble and bass clef. The melody in the treble clef consists of a sequence of notes: G4, A4, Bb4, C5, D5, E5, F5, G5. The bass line consists of a sequence of notes: G3, F3, E3, D3, C3, B2, A2, G2. The key signature is one flat (Bb). The lyrics are: "Es fiel ein Reif in der Früh - lings - nacht,".

Fiel auf die zar - ten      Blau - blü - me - lein,

and so on. But even more striking, as we come straight from a consideration of *Das klagende Lied* and its *Waldmärchen*, is to look at the first bar of Ex. 57, note what it grows into by the second stanza—

## Ex. 58

Es hat ein Knab' ein      Mägd - lein, Sie

flo - hen gar heim - lich von      Hau - se fort,

and compare the style, at least, of the result with that of the last four bars of Ex. 8. In the above example, the temptation to change the awkward "Mägdelein" to *Mädelein* is well-nigh irresistible. But beyond that, it is apparent that we have here another significant evolutionary link in Mahler's development, and that, as with the Piano Quartet, this "failure" would have been far more interesting and moving than most student-composers' most hoped-for successes.

————— 2 —————

As for the fragmentary setting of *Im wunderschönen Monat Mai*, whose music works its way through one of its two stanzas, here is an example of its pervasive yet somehow charming chromaticism:

Ex. 59

The musical score for Ex. 59 is presented in two systems. The first system shows the piano accompaniment in 4/4 time, with both treble and bass staves. The second system shows the vocal line in the treble clef and piano accompaniment in the bass clef. The vocal line includes the lyrics "Im wun - der - schö - nen". The piano accompaniment features complex chromatic patterns and chords, including a prominent tritone in the bass line.

Musical score for the vocal line and piano accompaniment. The vocal line is in G major, 4/4 time. The piano accompaniment features a dotted rhythm in the third bar and syncopated octaves in the fifth bar. The lyrics are "Mo - - nat Mai,".

Among the ingredients most immediately recognizable as Mahlerian we have (1) the use of the dotted rhythm in the third bar, which arrives with the same piquancy as that which makes its entry in the fifth bar of the matchless song from Mahler's middle or latter twenties, *Ich ging mit Lust durch einen grünen Wald*—

## Ex. 60

Musical score for the vocal line and piano accompaniment. The tempo is *Trümerisch, durchaus zart.* The vocal line is in G major, 4/4 time. The piano accompaniment features a dotted rhythm in the third bar and syncopated octaves in the fifth bar. The lyrics are "Ich ging mit Lust durch ei - nen grü - nen Wald, Ich hört' die Vög - lein sin - gen."

and (2) the syncopated octaves in the piano in the fifth bar (against the straight quarter-notes of the voice), which have the unmistakable flavor of those lyric syncopations we have discussed in the music shared between *Waldmärchen* (with its willow tree) and *Die zwei blauen Augen* (with its lime tree).

This, I submit, is an exceedingly promising start for a song, although one is inclined to wonder why the music persists in languishing, when the poet's words are filled with energy and *joie de vivre*. The only plausible explanation is the most obvious one: that the words speak of love and desire, and that young Mahler immediately and subjective-

ly begins to express their *unfulfillment*. The two stanzas of the poem are thus translated by Philip L. Miller:<sup>52</sup>

In the lovely month of May  
When all the buds were bursting,  
Then within my heart  
Love broke forth.

In the lovely month of May  
When all the birds were singing,  
Then I confessed to her  
My longing and desire.

It is the first poem of Heine's *Lyrisches Intermezzo* (1822-3), and the first of Schumann's *Dichterliebe* cycle (1840) also. The poem which is *second* in both already speaks of tears and sighs, to be sure, but Mahler clearly "jumps the gun" by sighing and languishing through the first— or rather the first stanza of the first, which is as far as he went.

How differently he handled the second of the *Lieder eines fahrenden Gesellen*, set to his own poem! Here the first three stanzas fairly sparkle with the music of the morning field in sunlight, the merry finch, the dewdrops and bluebells, while the fourth provides the complete personal contrast of

*Nun fängt auch mein Glück wohl an?!*  
*Nun fängt auch mein Glück wohl an?!*  
*Nein! Nein! Das ich mein',*  
*Mir nimmer, nimmer blühen kann!*

But in the *Wunderschönen Monat Mai*, Mahler was prepared only to languish; and after the following—

## Ex. 61

The musical score for Ex. 61 consists of three staves. The top staff is in treble clef, the middle in alto clef, and the bottom in bass clef. The music is in 3/4 time and features a key signature of one sharp (F#). The lyrics are: "Die Lie - be auf - ge - gan - gen, Da". The melody is primarily in the treble clef, with accompaniment in the other two staves. The piece concludes with a 4/4 time signature.

*a*

exquisite though it is, where could he go for his second stanza? Not being Mahlers, it is impossible for us to say, and it is conceivable that Mahler the student didn't know either.

This is notwithstanding another very touching document. In the figure marked 'a' above, by the way, Mahler seems to be rather on his way to the extraordinary chromatic descent with minor-seventh upbeat which crowns the truly purposeful languishing of the Leander setting *Erinnerung* of a year or two later:<sup>53</sup>

<sup>53</sup> H. F. Redlich tentatively dates this as "1879-80 at the latest." *Bruckner and Mahler*; Farrar, Straus and Cudahy, New York, 1955, p.176.

## Ex. 62

*p*

And that occurrence Donald Mitchell finds, in turn, to be "a little reminiscent of the extravagant soprano shriek that is the climax of *Das klagende Lied*."<sup>54</sup> It may be this strong sense of purpose and unity of style in *Erinnerung* ("rhythmic repetition . . . doleful minor seconds . . . accompanimental triplets which throb insistently") that deters Mitchell from noting, in his brilliant five-page analysis of the song, that its chromaticism is in fact every bit as pervasive as that of the Heine fragment—which is therefore *not* merely an atypical oddity.

<sup>54</sup> *Op cit.*, p.218.

We can then truthfully, if unhappily, say that Mahler's only two musical "collaborations" with Heinrich Heine were abortive. He must surely have felt, however, an emotional kinship with the volatile German-Jewish writer who, like himself, found that conversion to Catholicism was "the admission-ticket to European culture,"<sup>55</sup> but who none the less remained strongly skeptic in temperament— though an eternal seeker— to the end.

---

### III BLUMINE AND THE FIRST SYMPHONY

---

#### 1

---

During the summer of 1967, the musical world was first made generally aware of the rediscovery of the original second movement of Mahler's Symphony No. 1: an *Andante allegretto* subtitled "*Blumine*" which has been deleted from all published versions of the symphony. On June 18 of that year, Benjamin Britten conducted this *Andante* with the New Philharmonia Orchestra as part of his annual Aldeburgh Music Festival. Then on April 9, 1968, the New Haven Symphony Orchestra, under its music director Frank Brieff, performed the movement in its original place *within* the complete symphony for the first time since Mahler's earliest performances, which began in Budapest on November 20, 1889, and continued in Hamburg (1892) and Weimar (1894). This five-movement Mahler First was heard in Woolsey Hall on the campus of Yale University, New Haven, Connecticut.

The events which led to this performance began on December 8, 1959, when Mrs. James M. Osborn of New Haven purchased an original Mahler manuscript at an auction at Sotheby's of London. It turned out to be the earliest known version of the Symphony No. 1, and by courtesy of Mr. and Mrs. Osborn it was subsequently used by the Internationale Gustav Mahler Gesellschaft as part of the source-material for the 1967 critical edition of the symphony (Universal Edition). In his Revision Report at the front of the score, the President and chief editor Professor Erwin Ratz refers to the Osborn score simply as "Das Manuskript (Ms.)"— without acknowledging the source of it by name!

The IGMG did not, of course, include the *Blumine* movement in the critical edition, and the Revision Report simply remarks that "the First Symphony, as commenced in 1884 and completed in 1888, originally contained five movements. . . . Mahler later decided to delete the second movement, an *Andante*, as well as the literary designations attached to the various movements, derived from Jean Paul's novel *Titan*."

Now, as it happens, Mr. and Mrs. Osborn,\* who are prominent art-patrons of New Haven and who have deposited the Mahler manuscript

---

<sup>55</sup> See H. F. Redlich, *op cit.*, p.128.

\* (Editorial note: Mrs. Osborn died on December 23, 1968.)

in the special Osborn Collection of the Yale University Library, have cited the previous owner to the effect that it was *not* Mahler's decision to delete the *Andante*, but rather his publisher's, as we shall presently see. In any case the performing and publishing rights to the movement have been turned over by the Osborns to the New Haven Symphony as a gesture of community good will. It is now published in octavo score by Theodore Presser, under the title *Symphonic Movement—Blumine*, and in a very short time the parts will be available to all orchestras on a rental basis.

Thus the first five-movement recording of the Symphony No. 1 was made at Woolsey Hall by recording-producer Jerry Bruck (who is also a Director of The Bruckner Society of America) for release by Odyssey Records, less than a month after the première. It is important, however, to point out one crucial difference between the public performance and the recording. In the former instance, conductor Frank Brieff altered the orchestra-parts of the four regular movements to conform to the smaller layout of Mahler's earlier scoring: only three of each woodwind instead of four, and no alternating voice of the English horn, bass clarinet, or contrabassoon; four horns rather than seven, four trumpets rather than five, and three trombones in place of four. He also restored a few other instances of Mahler's earlier scoring in these four movements, such as muted horns instead of clarinets for the opening fanfare, and muted solo cello in unison with the muted solo string bass at the beginning of the funeral march.

He did this, it was explained, simply in order to impart for this occasion a bit of the special "flavor and atmosphere" of the original performances under Mahler's own direction. In preparation for the recording, however, he restored the full orchestration and the revised instrumentation of the published versions. Now it is obvious that a recording ought to be made on the basis of a single authentic scoring, rather than a hybrid scoring, and I shall presently suggest good and sufficient reasons for doing it just this way. Before discussing the pros-and-cons of including the *Blumine* at all, however, I should like to add a further word *about* the published scores and the Critical Edition.

Since no recordings of the Mahler First have yet been made on the basis of the new 1967 Critical Edition of the IGMG, it is a pity that the New Haven recording could not have been the first to do so as far as the four unknown movements are concerned. The orchestra parts for this edition were not yet available to the conductor, although he owned a copy of the score, and he adjusted the performance to the usage of this critical edition wherever he was able.

The difference in the editions is simply this. In his Revision Report, Prof. Ratz cites the following source-materials used by the editors of the IGMG:

1. the manuscript (Ms.)
2. the first edition (EA), published by Weinberger in 1899
3. a second printing of the first edition
4. The copy-model for the final setting, published by Universal Edition in 1906

As he then explains, "a serious complication arises from the fact that a reprint was published by Boosey & Hawkes in 1943— also taken over later by Universal Edition— derived not from the final setting of 1906 (UE), but from the EA of Weinberger (1899), specifically the second printing of EA. Evidently no specimen of the UE setting of 1906 was available in London for the reprint, and so the old Weinberger score was used for the photographic reproduction. It is possible that a subsequent confusion arose as to which setting *was* the final and authentic one, so that what was republished in 1943 was erroneously taken as definitive. From this has resulted innumerable deviations in the commercial recordings of this most frequently performed of Mahler's symphonies."

Besides the usual printing errors and omissions requiring careful searching and pruning (hence the recourse to as many autograph manuscripts as possible), that is just the sort of heedless, wholesale "blooper" in the publishing world which ought to convince every Mahlerite of the prime necessity of the collected Critical Edition. There are hundreds of small differences, and a few major ones— many involving Mahler's striving "for an ever greater distinctness and clarity in the realization of his musical ideas," as Prof. Ratz puts it— between his 1899 and 1906 versions of Symphony No. 1. That the former could come back on him by pure negligence forty-four years later is a circumstance that even the recurrently ill-starred Mahler could not have foreseen.

So then what about *Blumine*? Is that too something which Mahler would not have wished to "come back on him" after sixty-eight years? The manuscript score in which it is contained was put up for auction at Sotheby's by John C. Perrin of Brussels. Mr. Perrin was born in Belgium in 1894. His father was an American sales-executive from Seneca Falls, N. Y. His mother was the former Jenny Feld, a music pupil, singer, and lifelong friend of Mahler.

As James Osborn describes it in his "history of the manuscript," Jenny was "a member of a musically gifted family in Budapest. Her father, the executive of an insurance company, sent Jenny, her brother, and her sister, with their mother to Vienna in 1878, when Jenny was twelve years old. During the following six years they had an intensive education, including the teaching of the best musicians available. Their music tutor was a young student at the Vienna Conservatory named Gustav Mahler. All of them had talents which flowered, leading to prizes in the conservatories they attended, and to concert performances. After the Felds returned to Budapest in 1884 they continued to correspond with their tutor, and to their pleasure Mahler was appointed director of the Budapest Opera in 1889. The intimacy with the Feld family was renewed, and Jenny, who had a lovely soprano voice, appeared in many concerts conducted by Mahler. The family was also in attendance at the initial performance of the First Symphony with the Budapest Philharmonic."

Mahler gave the manuscript of the symphony to Jenny Feld, according to her son John, "in March, 1891, when he left Budapest for his new position at Hamburg." Since that account unfortunately does not gibe with the composer's own inscriptions in the score, which identify

it without question as a revised score of 1893, Mr. Perrin was asked for further comment on the difficult question, and this was his reply:

"My mother told me she returned twice the manuscript to Mahler. Once in 1893, the year he had chosen a Steinway piano for her at the Central European depot of Steinway in Hamburg. A performance of this very symphony took place that year in Hamburg, another one in 1894 at Weimar, after which he returned the manuscript to my mother. This answers the puzzle. May I add that my mother again returned the manuscript to Mahler in 1897 when he had his bitter fight with Vienna editor Weinberger, who imposed alterations. Mahler finally gave in and rewrote for editing as it is known nowadays in this new form. Among other alterations the *Blumine* movement was suppressed; Mahler was furious, and gave in only very reluctantly. . . . [In 1898] Mahler was invited to direct his Second Symphony in Liège, stayed several days with my parents in Brussels, and I understood handed the manuscript to my mother, which never left her since."

Although Mr. Perrin states that "all these data have been carefully checked and cannot be contested," we do know from more than one source that the Hamburg performance took place in the autumn of 1892, not in 1893. Aside from that it all *could*, I suppose, have happened that way, though if Mahler needed this revised score back when he conducted the work in 1894, and again when he took it to the publisher Weinberger in 1897, I marvel how he managed without it when he conducted the symphony in Berlin in 1896. It does seem an altogether laborious way of getting the score into the hands of Jenny Perrin finally in 1898—a very natural date for Mahler to give it away if he were going to give it away at all, *after* he had made another completely new score, namely the final revision for publication.

If Mahler had given Jenny a score of the symphony in 1891, on the other hand, and she had been obliged to return it to him in 1893 (as Mahler could easily have foreseen), it would be a *different* score which he gave her in 1894, unless the repeated inscriptions 1893 on it are spurious. But it is undoubtedly Mahler's hand, and the tangible evidence of what he wrote raises serious doubt that Jenny Feld could have had anything to do with this manuscript as early as 1891. One does not handle active (as opposed to inactive) autographs this way, and Mahler himself is mute witness that he did not.

Now the fact of exactly when she received it is of little significance in itself, since it suffices that it eventually came to her, thence to her son, and thence to the London auction. But the credence to be attached to the statements of Mr. Perrin and/or his mother in general is of vital importance when we come to the specific but unsupported charge that Weinberger imposed the deletion of the *Andante* on an unwilling Mahler. And so, in order to set the background for these disputed events as clearly and knowledgeably as possible, I think it is important to learn everything that we can from this fascinating and revealing 1893 score itself.

lections division of the Yale University Library, is clear and in excellent condition, with Mahler's familiar handwriting evident throughout. The title page (see Plate III) reads as follows:

Symphonie ("Titan")

in 5 Sätzen (2 Abtheilungen)

von

Gustav Mahler

I. Theil: "Aus der Tagen der Jugend"

1. "Frühling und kein Ende"
2. "Blumine"
3. "Mit vollem Segeln"

II. Theil: "Commedia humana"

4. Todtenmarsch in "Callots Manier"
5. "Dall Inferno al Paradiso"

The whole page is crossed out in three slashing strokes, very likely by Mahler himself on some future date, on the evidence of his strong reaction against the earlier provision of a literary program for the work. This is described in a letter to the critic Max Marschalk after the Berlin performance of March, 1896.

"My friends persuaded me," Mahler wrote, "to provide a kind of program for the D major Symphony in order to make it easier to understand. Therefore I had thought up this title and explanatory material after the actual composition. I left them out for this performance, not only because I think they are quite inadequate and do not even characterize the music accurately, but also because I have learned through past experiences how the public has been misled by them."<sup>56</sup>

Some of the titles turn up again in the score itself, however, and there they have not been crossed out. The heading of the first movement is inscribed "*Nro. 1: Frühling und kein Ende*," along with the familiar "*Langsam! Schleppend!*". There are fifteen four-page folders in the first movement, with each folder numbered consecutively in the top corner.

The next movement is headed simply "*Nro. 2: Andante alegretto*" (*sic*); no "*Blumine*" here. (See Plate IV.) The scoring consists of only 2 flutes, 2 oboes, 2 clarinets in C, 2 bassoons, 4 horns, 1 trumpet, harp, timpani, and strings. The movement is contained on only four folders (16 pages), of which the first two folders are copied on slightly smaller manuscript paper than all the rest of the score. The last page is inscribed "*Renovatum 16. August 1893.*"

After this comes "*Nro. 3: Scherzo*," in which the "3" has been altered from a "2" in different ink, and similar alterations (from "3" to "4", and from "4" to "5") are to occur in the heading for each successive movement. The word "*Scherzo*", it will be recalled, does not occur in the published scores. Following the word "*Scherzo*" here, in-

PLATE VI

Mahler Symphony No. 1. Page from finale of Osborn manuscript, showing beginning of deleted reprise into the coda. Note variance from introduction at sixth bar.

stead of "*Kräftig bewegt, doch nicht zu schnell*," we have "*Kräftig bewegt! (Langsames Walzertempo)*." Whereas the *Andante* folders were numbered "1" to "4", we now continue numerically where the first movement left off (ignoring the intervening *Andante*), with folders 16 through 25. The last page is inscribed "*27. Jänner 93 renovatum*."

Next comes a title-page with only "*2. Theil*," and what is evidently the literary title *scratched* out. The next movement is headed "*Nro. 4: Todtenmarsch 'in Callots Manier', ein Intermezzo à la Tempe funbre*" (*sic*). The tempo marking is as we know it ("*Feierlich und gemessen, ohne zu schleppen*"), but with an exclamation point and the last three words underscored. The folders of this movement are numbered "1" through "6". The only inscription at the end is "*folgt sogleich Nro. 5*," with the "5" altered from a "4".

The finale is headed "*Nro 5: 'Dall Inferno al Paradiso!' Stürmisch bewegt*." There are twenty-one folders; these are numbered, however, 1 to 13, 14a, 14b, and 15 to 20. Folder 14a contains 33 bars of music, of which all but the first seven are crossed out. The last bar before the deletion corresponds to bar 508 of the Critical Edition (or cue 44+13). In the deleted portion, the *diminuendo* at that point continues for seven more bars (accompanied by a "*molto rit.*") and then fades out completely. (See Plate V.) Then, after a general pause, the cymbal crash from the start of the movement recurs, followed by a slightly varied reprise of the stormy opening bars. (See Plate VI.) This reprise breaks off at the end of folder 14a. In 14b, the music resumes, just as we know it, at the point before the deleted passage began, with CE bar 509, and so on. The last page of folder 15 stops in the middle of the page, with the notation "*Weiter in der Partitur beim Zeichen Ø*." The first six bars of folder 16 are crossed out; they consist of the six previous bars differently orchestrated. The sign "Ø" follows this, and then the music continues without further interruption to the end.

The most dramatic occurrences in the score are, of course, those connected with the "*Blumine*" *Andante* and the finale. Let us consider the finale first. To begin with, this is obviously a completely re-copied score of the symphony dating from 1893, although (lacking an earlier version with which to compare it) we cannot know to what extent the work was altered in the rewriting. However, the crossed-out bars in the finale dramatically display Mahler *in the process* of doubling back on his tracks to make one major alteration in the music itself, either *after* reaching folder 16, or, more likely, after completing the entire finale.

From this it would appear that the transition from the reprise into the coda beginning at bar 509 was the last part of the symphony (as we know it today) to be written, and that in the previous performances (the 1899 première in Budapest and the second performance in Hamburg in 1892) this part of the finale must have gone quite differently. Strange to think that the finale's crashing entry which is said to have startled one poor lady half out of her wits at the première should have been heard *twice* at that performance! And that a reprise

of the opening pages of the introduction originally linked up with the coda in a manner which is now completely lost to us! (It is easy enough, however, to see how it would have been done around cue 47 or 48.) In the last 19 deleted bars of folder 14a, the only difference from the introduction is the timing of the fanfare for trumpets and trombones. In the reprise, the first half of the fanfare was delayed for eleven bars, evidently to link it up with the second half. (I say evidently, because it is just at this point, corresponding to the end of CE bar 19, that folder 14a ends and the deleted passage breaks off.

There is not the slightest doubt that the substitution, five years after Mahler's completion of the symphony, of the transition passage beginning

was a major inspiration— a marvelously new and subtle way of entering into F minor for the last time, in place of simply one more F-minor "outburst". And apparently, if Mahler had not decided to spare himself the trouble of copying out again the seven *undeleted* bars of folder 14a, by leaving it in the manuscript, we would know nothing about the alteration. Folders 10, 11, 14b and 15 are written on a different make of manuscript paper than the rest of the finale. The fact that 14b and 15 were substitute folders inserted after the finale had been completed, and ending with the six re-orchestrated bars (CE bars 582-7), is indicated by the notation "*weiter in der Partitur*" at that point. Obviously the original folder "14" was simply changed to "14a" when the substitute pages were added, so as to link up without renumbering every subsequent page. It would appear, then, that folders 10 and 11 were substitutes also, though substitutes for what, we cannot know, since in that case the folders which they replaced were simply taken out of the manuscript. As it is, the deleted reprise in the Osborn score indicates the only instance, of our certain knowledge, of Mahler's having altered the *structure* of a piece after the première!

Now let us try to reconstruct the chronology of the whole revision. At the end of the funeral march there is no date inscription, but the movement is written on the same kind of manuscript paper as the main portion of the finale. I suggest that these two movements were revised first, ending on January 19, and so inscribed at the end of the finale. The folders for the first movement and *Scherzo* share a single numbering system (folders 1 to 25), and the end of the *Scherzo* is inscribed with the date January 27. Some of these folders are written on the same make of manuscript paper (inscribed "Joh. Aug. Böhme, Hamburg") as the substitute folders in the finale. Again, I suggest that Mahler went right back to the beginning after completing the finale, revising and recopying the first movement and then the *Scherzo*.

The continuous numbering of the folders from the end of the first movement directly into the *Scherzo*, along with the numbering of the *Scherzo*, funeral march, and finale as movements 2, 3 and 4 respectively, clearly demonstrates Mahler's deletion of the *Blumine* as of that time, just as the re-insertion of the movement *into* the scheme (inscribed with the date August 16), and the subsequent renumbering of the movements, clearly shows that Mahler had a second change of heart about it during his summer vacation that year. It also shows that he then revised and recopied *Blumine*, just as he had the rest of the symphony.

This means at the very least that the publisher Weinberger of Vienna, who obviously was not at Mahler's elbow in 1893, dictating his actions, could not have been the *first* person in whose head the idea of reducing the number of movements to four had occurred. In all likelihood that person was, rather, the composer himself. If, however, the original decision *was* Mahler's, it was one which he was shortly to rescind by putting it back again. And that was unquestionably the score which was used at the performance in Weimar the following year, if Paul Stefan's description of the program is correct.

And what happened after that? It appears that *Blumine* was out again, for good, as of the 1896 performance in Berlin, along with the

literary program and titles. The performance was nevertheless a complete fiasco, and Mahler was deeply depressed by this as well as by the course of his liaison with Anna Von Mildenburg at that time. Then came the negotiations with Weinberger which Mr. Perrin places in 1897, of which we know virtually nothing of and by themselves, but which did lead to the publication of the First Symphony in four movements in 1899. In the absence of (1) an 1897, 1898, or 1899 autograph, (2) a publisher's copy-model (*Stichvorlage*) for the first edition, or (3) any mention of the matter in question in the known correspondence of Mahler, there is not a shred of documentary evidence to sustain Mr. Perrin's assertion that Mahler even *submitted* the *Andante* movement for publication, either as part of the symphony or in connection with it.

And what were the *other* alterations which Mr. Perrin says were imposed by Weinberger, on which Mahler also "finally gave in" and thence "rewrote for editing"? Except for minor details like the final tutti bars which are twice separated by four instead of two bars of drum rolls, and the closing "snap" which is in eighth notes instead of quarter notes— details in which Weinberger would hardly be much interested— there are absolutely no compositional differences between the 1893 manuscript and the first edition. As for the enlargement of the orchestra to something closer to Mahler's later "standard" ensemble, as described earlier, that is hardly something which Weinberger would have demanded and Mahler would have resisted— quite the opposite, one would think. And as for the other differences in orchestration, if any of these had been imposed against Mahler's will, they would certainly have been rectified when Mahler prepared a wholly new edition for Universal in 1906. Yet I can think of no single instance in which the second edition (UE) goes *back* to the 1893 score in contradiction of the first edition. Again, the very appearance of the score which he has preserved for us bears witness against Mr. Perrin's own charge. In all essentials the first edition is manifestly on the straight route from 1893 to 1906, not a detour.

And lastly, we have no vestige of evidence that Mahler tried to reinstate *Blumine* when he made this completely new edition of 1906 for a new publisher. While I have no doubt that Mr. Perrin was told all the things he has said about the manuscript as well as about *Blumine*, I think he is simply "barking up the wrong tree." Whatever claim the *Andante* has on our attention can only come, not from Mahler's explicit authority— it doesn't exist— but from our looking deeper and with some small degree of insight into the matter. Whatever claim it has to be once more a part of Symphony No. 1 can come only from itself.

What, to begin with, does "*Blumine*" mean? Where does the word come from? Mahler doesn't tell us, and so there has been much speculation seeking to account for the subtitle by linking it directly or indirectly to Jean Paul's *Titan*. But Henry-Louis de La Grange, the inde-

fatigable Mahler researcher and biographer, pointed out in a recent letter that word actually occurs in the title concocted by Jean Paul for a three-volume collection of his magazine essays published in 1810, 1815, and 1820. It seems that after listing and pondering a number of picturesque ideas for the title of that collection—*Naturalienkammer*, *Karthaunenpapiere*, *Sammelsurium*, and so on—the imaginative author had decided to call it *Herbst-Blumine*, a coinage that might be rendered as "Autumn Flora". For according to Kurt Schreinert, in the general preface to the modern Böhlau edition of the work (Weimar, 1942; see Page 86), the hyphenated title (a) alludes to the season in which the original volume was published, and (b) pays homage to C. H. Wolke's Germanization of "flora" as "*Blumine*" (from the *Allgemeiner Anzeiger* of June 28, 1810).

Random attempts to retranslate the unitary sobriquet adopted by Mahler (or alternately the "*Bluminenkapitel*" cited by Paul Stefan from the Hamburg and Weimar programs) have tended to be about as fanciful as Jean Paul himself. If an English translation must be applied, I suggest sticking to "Flora". Besides being a generic word, this also happens to be a girl's name. And I suspect that, for Mahler, "*Blumine*" was above all a familiar nickname, drawn from his favorite author and applied to a specific something or someone. In the musical context, it would appear to have been also associated in his mind with the name of another Jean Paul novel: *Blumen-, Frucht-, und Dornenstücke* ("Flower, Fruit, and Thorn Pieces"—referred to by Bruno Walter, after its protagonist, as *Der Siebenkäs*), which he borrowed as an auxiliary subtitle for Part I of his programmatic Symphony (movements 1 to 3). Thus the emotional connotations are quite clear, without any too-literal recourse to the actual works of Jean Paul.

I also think that Mr. Perrin is on the right track when he couples his story about Mahler and Weinberger with remarks about Mahler and Johanna Richter, the "blue-eyed sweetheart" of the *Gesellen* cycle and the Cassel Opera. "I have written a cycle of songs dedicated to her," Mahler wrote to Fritz Löhr on New Year's Day, 1885.<sup>57</sup> "She doesn't know them, but they cannot tell her more than she already knows. . . . [In them] a man is condemned by his fate to become a wanderer over the face of the earth." According to John Perrin, *Blumine* was also written by Mahler for "her":

"The First Symphony in its original form was considered as a symphonic poem in two parts and five movements. The editor considered it too long, and after a hard fight Mahler gave in very reluctantly (as my mother told me) and, full of anger, suppressed the *Andante*, which expressed his innermost feeling for Johanna."

Well why, it may be asked, should one urge a story uttered in the same breath as a doubtful one? Simply because the second story has other circumstances to commend it, and cogent ones at that. In 1920, Max Steinitzer of Leipzig contributed to a Mahler commemorative is-

<sup>57</sup> GMB, pp.33-4.

sue a personal reminiscence<sup>58</sup> in which he quoted from memory six bars from the lost incidental music Mahler wrote in 1884, in Cassel, for a staging of Joseph von Scheffel's narrative poem *Der Trompeter von Säckingen*:

## Ex. 64

TRUMPET SOLO

STRINGS

Though in a different key, this is otherwise almost identical to the opening of the main trumpet theme in *Blumine*. (See Ex. 72 below.)

"Mahler took with him to Leipzig [in 1886]," wrote Dr. Steinitzer, "only this one piece in score, a very appropriate setting of the tableau wherein Werner plays a serenade across the moonlit Rhine toward the castle where Margareta lives. But Mahler found it too sentimental, became annoyed with it, and finally made me promise I would destroy the piano score I had made from it."

*Der Trompeter von Säckingen* was also the title of an abominable but very popular opera by Viktor Nessler which Mahler loathed because he had to conduct it frequently in his semi-provincial surroundings at that time, and even later.<sup>59</sup> On June 22, 1884, Mahler wrote to his friend Fritz: "The other day I had to write, head over heels, incidental music for the '*Trompeter von Säckingen*', which is going to be performed tomorrow with living pictures in the theatre. The opus was ready within two days, and I have to confess that I find it a great joy.

<sup>58</sup> *Musikblätter des Anbruch*, Special Gustav Mahler Issue; Vienna, April, 1920, pp.296-8.

<sup>59</sup> "In Prague it seems that Mahler got so sick of conducting *Der Trompeter* that, to satisfy his mounting aggression, he performed the work with its *Leitmotiv* omitted throughout. No one noticed the loss." In 1892, when he flatly refused to conduct the opera at all at Covent Garden, an English critic remarked: "Herr Mahler is evidently not in sympathy with this work." D. Mitchell *op. cit.*, pp.228-9.

As you can imagine, it hasn't got much in common with Scheffel's affectations, but, of course, goes far beyond the poet's conception."<sup>60</sup>

As Donald Mitchell says in his book: "Mahler's 'great joy' was shared by his public at Cassel, and his *Trompeter* music travelled to Mannheim, Wiesbaden and Karlsruhe, and was acclaimed. But in reporting this news to Löhr in January, 1885, Mahler discloses a change of heart towards the *Trompeter* score. He disclaims that he has had any hand in promoting the music's success outside Cassel, 'for you know how little this, of all my works, matters to me.'" Mitchell repeats Max Steinitzer's suggestion that a score or a set of orchestral parts for the original music might yet turn up "on a library shelf in some German provincial theatre."

So at least we know that the big trumpet theme of *Blumine* had its origin in a unique kind of moonlit serenade or love-song, and the alternately brooding and elegiac middle section of the movement fits well into place with such a romantic conception. The love of Werner the trumpeter for Margareta in the poem might well have been connected in Mahler's mind, through this music, with his current love-affair with Fräulein Richter. But just what sort of love-affair was it? Gabriel Engel writes:<sup>61</sup>

"Their constant efforts to loosen their attachment lent the entire love-episode the semi-comical air of an endless leave-taking. Holidays struck them as best suited to the accomplishment of a permanent farewell. They parted at Christmas of that year (1884). New Year's Eve, however, seemed too significant a date to be neglected." After describing his New Year's parting to Fritz in painful detail, Mahler wrote again on May 28:

"When I wrote you some time ago that our affair had come to an end, it was only the trick of the shrewd theatrical manager who announces 'Last performance!', only to follow it next day with another." Others speak of overt betrayal by Johanna, but it is scarcely necessary to add that too,<sup>62</sup> in order to see that Mahler's emotional state was shot through with feelings of ambivalence and uncertainty about the ecstatic but troublesome episode.

Now let us review again and compare the progress of that trumpet melody which is shared by the *Säckingen* and *Blumine* scores. The incidental music was composed in June, 1884 (the same year that Mahler composed the *Lieder eines fahrenden Gesellen* and began composing the First Symphony), and proclaimed "a great joy." By January, 1885, Mahler was writing to his friend: "You know how little this, of all my works, matters to me." In 1886 he took the score of *only* the trumpet serenade with him to Leipzig, where Max Steinitzer became attached to it and made a piano reduction of it. Mahler "became annoyed" about the music again, and enjoined his friend to destroy the piano score. Then he put some of the same trumpet music into his

<sup>60</sup> Trans. D. Mitchell: *op. cit.*, p.226.

<sup>61</sup> *Op. cit.*, pp. 40-1.

<sup>62</sup> It would render much more pointed, however, Mahler's original subtitle characterizing the opening of the finale as "Like the sudden outburst of a deeply wounded heart." But whatever the facts of the tempestuous affair itself, the former lovers remained on good terms after Mahler departed Cassel for Prague.

First Symphony, the symphony which is also thematically related to the *Gesellen* cycle avowedly written for Johanna. After two performances of the symphony he took the music out again; then he wrote it out anew and put it back in for the third performance. For the fourth performance, he removed it once more.

If the music was no good to begin with, was it worth all that trouble? And if it is worth the trouble, does it deserve its ultimate rejection? Obviously Mahler was not rationally reacting to a piece of music *per se*. Through this music, he seems rather to have been unconsciously relieving the emotional trauma of his off-again-on-again affair with Johanna Richter, or something very much like it.<sup>63</sup> The music does appear (in John Perrin's words) to have expressed, or at least to have been trenchantly associated with, "his innermost feeling" about something. And in view of this ambiguous history, it would not have been inconsistent after all if Mahler had inserted the movement once more and then fought for it, "full of anger," when an insubordinate publisher tried to dictate terms about it.

The fact that Mahler, who was normally adamant and unyielding in artistic matters that concerned him, ultimately "gave in" would also be consistent with this ambivalence. It is extremely difficult to accept the idea of other alterations imposed on the symphony, simply because these do not appear. But this alteration does appear, and it is not nearly so difficult to accept the possibility that it was preceded by Mahler's last skirmish with the subconscious memory of Johanna— or that he was inwardly relieved to put the ultimate responsibility upon someone else, even if he did not realize it.<sup>64</sup> Gerald S. Fox, a Mahler enthusiast, has offered the suggestion that "*Blumine*" signified, for the composer, his own pet name for Johanna Richter. As with the mysterious "Rosebud" of Orson Welles' film classic, *Citizen Kane*, I am sure it is nothing less intimate and personal.

---

 4
 

---

This is the sort of thing perfectly calculated to split Mahlerites right down the middle. But in the long run, I think it simply comes down to a personal preference as to whether one enjoys hearing *Blumine* by itself, or would rather hear it in the symphony sometimes, every time, or never. What, for example, is its proper place in the Collected Critical Edition? I think the IGMG was absolutely right not to publish it in the symphony, but would not have been remiss to have offered it as an appendix. For my own personal taste, I think it belongs in the symphony; and I shall simply state my reasons for this feeling and leave it at that.

---

<sup>63</sup> This in turn would, of course, be etiologically related to the traumatism of Mahler's infancy which we discussed before.

<sup>64</sup> And note the significant resemblance to the oblique manner in which the *Waldmärchen* has been preserved. Mahler presented the three-movement *Klagende Lied* to his sister after he was quite through with it. The five-movement Symphony No. 1 he presented to another lady whom he liked.

Long before I ever saw or heard this *Blumine* music, but knew from Stefan and Bekker of its former existence, I felt that the *Scherzo*'s vigorous *Ländler* tune "bumped" against the exuberant coda of the first movement in a wholly uncharacteristic way. I felt the esthetic need for *some* interlude, and I also felt that the macabre funeral march from the darker side of the *Scherzo* needed something lyrical on the forward side to counterbalance it. Not, mind you, the brief "*Auf der Strasse*" episode *within* the funeral march, but a complete movement, if still of relatively small dimensions. Naturally, at that time I had no idea that the lyrical part of the finale was making actual melodic references back to this very *Andante* which I missed. If I had, I would have felt the hiatus even more keenly. The finale itself, which I have always loved dearly, today has yet more meaning for me, now that I am familiar with the music of the *Andante*, and therefore know to what these "flashbacks" are referring.

It seems as if Mahler was divided between a preference for the four-movement and for the five-movement symphony. The Second is a five-movement symphony with the *Andante* placed second, just as the original First Symphony is. And so is the Third, if we will imagine its two short vocal movements to be a unit counterbalancing the *Tempo di Menuetto* (originally titled "*Was mir die Blumen auf der Wiese erzählen*," by the way). The Fourth was originally planned in six movements. We also learn that Mahler once considered deleting the *Andante moderato* of the Second, because it interrupted "the natural dramatic progression of the work." Would that symphony be a better-balanced work without it? And couldn't one say the same of *any* lyric *Andante*? Isn't that its normal function after all, to "interrupt", i.e. to provide an interlude? I for my part instinctively feel that the original First Symphony is a more ideally balanced work than the revised one.

The Fifth and Seventh are five-movement symphonies, the latter with counterbalancing *Nachtmusiken* flanking the *Scherzo*; and in the intervening four-movement Sixth, Mahler had trouble deciding which of the inner movements ought to come first, as though he actually missed the arc-shaped structure even here. Only in the Ninth did he seem to come decisively to terms with a wholly new four-movement conception. Yet the Tenth sketch finds him experimenting with a new kind of five-movement arc form, this time with two counterbalancing *Scherzi* flanking an intermezzo!

Concerning the orchestration of *Blumine* it is interesting to note that, even after revision, Mahler left the movement scored for a much smaller ensemble than the four surrounding movements. This is a precedent for later movements like the Fifth's *Adagietto* for strings and harp, or the Seventh's *Andante amoroso* for mandolin, guitar, harp, and chamber orchestra— both within a much larger and more dynamic canvas. If Mahler perchance *did* submit *Blumine* to Weinberger within his orchestrally augmented symphony as of 1897, my guess would be that he still left *Blumine* just as it was before. That is why I feel it is perfectly all right to present it within the context of the symphony as we know it today, though it might be pleasant and fruitful on some future

occasion to perform the whole 1893 score *as is*.<sup>\*</sup> Things like the unison for solo cello and solo contrabass in the funeral march are well worth hearing.

Is the *Blumine* too sentimental? That again is a question of individual taste. Certainly it is sentimental in part: i.e. the trumpet solo seems to have a deliberate old-worldliness about it, not unlike that of the much longer posthorn part in the Third Symphony, a part which I find extremely sentimental, albeit exactly right in its contribution to the whole. Or similarly, the solo trombone part in the first movement of the Third, which at one point (cue 33) is explicitly marked "Sentimental"! Doesn't the Seventh's *Andante amoroso* have its own special brand of sentimental charm, setting it apart as a distinctive *genre* piece? Aren't the songs all *genre* pieces too, each combining the elements of sentimentality, grotesquerie, pathos, humor, etc., in its own special way? This is the essence of Mahler's musical art; and so any adjective can be an objective characterization, until it is prefaced by "too", when it becomes subjective.

And finally where, if anywhere, does *Blumine* belong in the motivic plan and structure of the symphony? In this respect the symphony's starting point is the *Gesellen* cycle, especially with respect to the interval of the fourth (as Dika Newlin has pointed out), and regarding which we have already discussed the tonic-dominant "tread bass" which stylistically links the symphony, song-cycle, and *Das klagende Lied*.<sup>65</sup> The first three songs all begin with prominent fourth intervals—

C *Stürmisch, wild* WOODWIND, VIOLINS I

HORNS *ff* *p*

TROMBONES *ff* *p*

while the last song brings in the tread bass for the second stanza, and restores the melodic prominence of the fourth interval in the third stanza:

Ex. 65d

Auf der Stras-se steht ein Lin - den-baum, Da  
 hab' ich zum er - sten Mal im Schlaf ge - ruht!

All of these stylistic elements, and some of the actual themes, penetrate the symphony. The whole first three stanzas of the second song (100 bars) in slightly altered sequence, beginning with Ex. 65b, form the exposition of the symphony's first movement, but they are made to grow out of the slow introduction's stylized fourth-interval "cuckoo call" and six-note figure built from it:

Ex. 66

*pp*

The horn theme at cue 15 is almost an "apotheosis of the fourth":

## Ex. 67

The Scherzo theme is a  $\frac{3}{4}$  variation of both Exx. 65b and 67, including a literal "Ländlerization" of figure 'a' above—

## Ex. 68

while the very bass foundation gives the same rhythmic treatment to the tonic-dominant tread:

## Ex. 69

The funeral march on *Frère Jacques* of course begins with the bass tread in solemn dirge-tempo, and prominent new fourths are featured both in the last two bars of the main canon theme and in the staccato sequent uttered by the oboe. The latter seems to mock the unchanging bass itself with waggish duplication:

## Ex. 70

The middle section of the movement, I need hardly repeat, is a close-to-literal reprise of the last 30 bars of the *Gesellen* cycle, beginning with Ex. 65d and incorporating Ex. 28.

Fourths are not featured quite so prominently in the finale until the first reminiscence of Ex. 66 occurring at cue 21, and the soft fanfares at cues 25 and 26. They come into their own once again with the renewed fanfares at cues 33 and 34, and with the triumphantly "inevitable" metamorphosis, at cue 35, of the "cuckoo-derived" figure (Ex. 66) into no less than a paraphrase of "And He shall reign for ever and ever" from Handel's *Messiah*—

Ex. 71

*a* *3.*

—one of Mahler's most brilliantly "surrealist" juxtapositions. (It is a juxtaposition, because the first occurrence of Ex. 71 shortly fades into a pianissimo and is immediately replaced by Ex. 66.)

With this background, there can be little doubt that the Trumpeter from Säckingen feels himself thoroughly at home when he blows his long-silenced serenade at the fifth bar of the *Andante*—

The first bars of the trumpet tune return here.

\*

This long, winding melody, with its initial rising fourth, its nostalgic, old-fashioned chromatic passing-notes, its rhapsodic scale-fragments and melodic arpeggios, combines in one flowing, embroidered line the separate character-features of many a short thematic figure found in the song-cycle as well as the symphony.<sup>66</sup> (The embellishments, not shown above, are of course a very essential aspect of it.) And in all these respects it is closely akin to the other longest theme in the symphony, the D-flat *cantabile* in the finale, beginning at cue 16. The latter is, however in duple time!

It is Mahler's singular coup in this case to have these two independent but "brothers-under-the-skin" themes run parallel courses for a greater part of the way, permitting them to begin to converge melodically only in their respective cadence-figures. How this is done can be seen from the following, beginning just after cue 18 in the finale:

Ex. 74

*Breit* *3* *Ex. 73a*

*molto espr.* *p*

*rubato* *rit.*

*accet.*

<sup>66</sup> For example, the rhythmic analogy between figure 72a and the trumpet figure 71a is obvious. If 72a were transposed to the key of D (as in Ex. 64), 71a could even follow it quite naturally.

It is the penultimate bar of Ex. 73 shown as figure 'a'—augmented in time value, and with its first note further extended in length—which is lingered over most extensively in the finale. First the augmented phrase is treated in rising sequence, as in Ex. 74; and since figure 73b concludes this same example, the whole of Ex. 74 thus comes as an elegiac extension and elaboration of the erstwhile two-bar *Blumine* cadence (73a/b). Immediately after that, in a kind of after-cadence, figure 73a returns again, in the cellos (cue 19), and is repeated this time in falling sequence. All this seems now to take on that very aspect of "endless leave-taking" cited by Engel in connection with Mahler and Johanna Richter. But that is an esthetic point hardly to be comprehended in listening to the finale, if one knows only the foreshortened symphony, *sans Blumine*.

Immediately after this double cadence comes the reminiscence of Ex. 66 in the clarinets, along with a darkly prowling chromatic theme in the bass, also drawn from the first-movement introduction. And later, at cues 38, 39, and 40, come a whole company of shadowy figures from the first movement, merging at one point with a fragmentary wisp of the finale's own *cantabile* melody. All these cross-references are immediately apprehended, and are meant to be, as is the elliptical reference to *Blumine*. A moment later (cue 41) the *cantabile* is conjured up in a little more substantial form, but with a new continuation which gets lost and trails off inconclusively. But suddenly, at cue 42, the rising sequence on figure 73a reenters in the oboe and picks up the thread again. And now, at the very first mention of the *Blumine* figure in this varied reprise, the strings take over after the third bar with a passionate new rising sequence on *its final bar alone*. This comes to a searing *fff* climax with timpani and cymbals (cue 44), and then falls back again in a syncopated scale-passage, linked in essence to the falling scale-figures of both Ex. 73 and the three bars preceding Ex. 74 (unquoted).

The momentary violence of this passionate upheaval may seem slightly puzzling at this point, unless we realize that it is perhaps close to being Mahler's personal version of the heartbreaking culmination of Wotan's Farewell. Since the deleted "cymbal-crash" (or "thunder-and-lightning") reprise in the pre-1893 version of the symphony would have immediately followed this, we are then in a position to really appreciate how much better Mahler was able to handle this whole section with the help of the new 1893 transition. In view of all that, I cannot bring myself to believe that Mahler's ultimate deletion of

*Blumine* (and it *was* his final responsibility after all) was any more a rational act than his deletion of the *Waldmärchen*.

If I have so far barely touched on the middle section of *Blumine*, it is because the important issue of the movement's direct relevance to the rest of the symphony is concentrated in the trumpet melody together with its string cadence, which dominates and indeed pervades most of the movement, though much less so the middle part. With the latter, another issue confronts us. While the stylized archaism of "Werner's trumpet song" may not be to everyone's liking (just as the great trombone soliloquies in the Third Symphony assuredly are not), I hope I have sufficiently demonstrated that it cannot be simply torn out of the context in which Mahler has (as always) intricately embedded it, with the expectation of coming up with a fully integral result.

The middle section, on the other hand (I suppose we can call it a *Trio*, since the form of the movement is strictly ternary), offers nothing that is burningly significant to a larger understanding of the work. What it offers is music which, with the aid of its subtle instrumentation, seems to beckon us in the opposite direction from the "period" soloism of Säckingen, toward an acerbic and spare counterpoint.

This *Trio* is launched, surprisingly enough, by a delicate octave-glissando effect which Mahler was to employ again at an analogous point in the Sixth's *Andante* (cue 58), but an octave and a half higher in the latter case. Then for a dozen bars the music is haunted by minor-mode fragments from the trumpet's serenade, scored for winds and harp, with muted strings which are very lightly sketched in without bass. From this, I cite the last four bars:

Ex. 75 6

VIOLINS I *ohne Nachschlag*

OBOES

CLARINETS

FLUTES

BASSOON I

HORN

BASSOON 2

After that we hear another ten poignantly singing bars, beginning with the following little dialogue for ultra-Mahlerian horns and oboes:

## Ex. 76

Musical score for Ex. 76, featuring Horns and Oboes. The Horns part is in the lower register with a *pp* dynamic. The Oboes part is in the upper register with a *pp* dynamic. Both parts are connected by a long slur.

Then a hesitant but brooding passage of eight bars, with dissonant horn chords, low plucked strings, and tremolo-like effects in the harp.

Out of this rises a haunting duet for oboe and bowed string basses. The former is heard in a free variant and development of the trumpet theme, starting in A minor, while the latter keep repeating the first five notes of the same phrase in a rising sequence:

## Ex. 77

Musical score for Ex. 77, featuring Oboe and Basses. The Oboe part starts with a box containing the number 9 and a *pp xart* dynamic. The Basses part starts with a *pp* dynamic and an *8va* marking. The score is divided into two systems, with the second system ending with a *poco rit.* marking.

This certainly evokes and matches the best pages of the Fourth Symphony's *Poco adagio*. It is accompanied only by a continuous octave tremolando on A in the cellos. Though not immediately apparent, we have already started on a retransition into the main section. The tempo speeds up slightly, and we hear the loveliest combination of all, an expressive duet for first violins and horn. The latter begins to repeat the rising sequence of the last example, then executes an arched figure, almost meeting the violins in a "reverse arch" at the distance of a poignant major third:

Ex.78 [10] *Etwas bewegter (quasi Allegretto)*

Musical score for Ex. 78, featuring Violins I and Horn. The Violins I part is marked *p espressivo* and includes a dynamic marking *a*. The Horn part is marked *p*.

This example of the essence of Mahler's mature, spare and bittersweet lyric counterpoint is accompanied by a soft eighth-note strumming of the second violins, and by a plucked bass.

The retransition proceeds with a few more bars of elegiac oboe tones:<sup>87</sup>

## Ex.79

Musical score for Ex. 79, featuring Oboe, Violins II, Bassoon, and Cellos & Basses. The Oboe part is marked *p* and includes a dynamic marking *poco rit.*. The Violins II part is marked *p* and includes a dynamic marking *poco rit.*. The Bassoon part is marked *p*. The Cellos & Basses part is marked *p pizz.* and includes a dynamic marking *poco rit.*. The score is divided into three sections labeled *a*, *b*, and *c*. The Violins II part is marked *geteilt* and includes a dynamic marking *p*. The Bassoon part is marked *p*. The Cellos & Basses part is marked *p pizz.* and includes a dynamic marking *poco rit.*. The score is divided into three sections labeled *a*, *b*, and *c*. The Violins II part is marked *geteilt* and includes a dynamic marking *p*. The Bassoon part is marked *p*. The Cellos & Basses part is marked *p pizz.* and includes a dynamic marking *poco rit.*.

## MAHLER RESEARCH AND EDITING IN VIENNA

PARKS GRANT

Professor of Music

University of Mississippi

Regular readers of CHORD AND DISCORD probably know that since 1955 a Vienna organization called the International Gustav Mahler Society has been engaged in the re-publication of Mahler's complete works in an authoritative and definitive "Critical Collected Edition," incorporating post-publication changes made by the composer in some works and weeding out misprints which presses have been faithfully (or rather, unfaithfully) grinding out, year after year, in others.

A sabbatical leave from my music professorship at the University of Mississippi during the 1965-1966 academic year made it possible for me to go to Vienna and offer my full time to the Society in its work on this fascinating project. Thanks to the fact that American universities give half salary to faculty members when on sabbatical leave, I was able to work at no expense to the Society, for like all too many worthy organizations, the I.G.M.S. is not overwhelmed with money. Its support is adequate, but not bountiful. Volunteer workers, if capable and qualified for the exacting work and possessed of the requisite background, patience, and thoroughness, are a boon to the organization, even though they might be able to work only part-time. On the other hand, a person who is not conscientious and painstaking is worse than no one.

President of the International Gustav Mahler Society is Prof. Dr. Erwin Ratz, typically Austrian even to his mode of dress and his accent (and I found the Vienna accent difficult)—a man whose qualifications are unsurpassable for the task to which he is devoted, but who is able to give it only a part of his time. This scholarly, nervous, lovable, erudite 68-year-old man, who never seems to rest, is a professor at Vienna's famous *Akademie für Musik und darstellende Kunst*, a member of the board of directors of the *Konzerthaus*, the author of a textbook on musical form (soon to appear in a new edition), and a former friend of Berg and Webern. As if his present teaching and editorial duties were not enough, he is also currently preparing a new and corrected edition of the famous *Treatise on Harmony* by his teacher, Arnold Schoenberg. He has done or is doing further editorial work with the compositions of Bach, Beethoven, and Schubert.

### *Preliminaries*

At three o'clock on the afternoon of August 31, 1965, the *Orient Express* deposited my wife and me at Vienna's *Westbahnhof*. On September 1 I showed the Society's address to a rental agent and asked him if he knew of anything nearby. A small furnished apartment only three-and-a-half blocks away was on his list, and when I discovered that a large writing-desk was in the living-room we promptly moved

in. On September 2 I reported to Prof Ratz at the Society's headquarters, on September 3 he made a tremendous amount of material from the Society's archives available to me, and on September 4 I commenced work on Project I—the *Second Symphony*.

It might be well to clear up three points before discussing any of the individual projects.

First I should explain what an "engraver's copy" is (in German, *Stichvorlage*). This is a handwritten copy of the composer's manuscript, made by a professional music penman. The engraver's copies are more readily readable than Mahler's often hasty handwriting, which in the case of the *Ninth Symphony* was downright bad. In contrast, the script of the two professional penman who prepared the engraver's copy of this same work (the first movement in a different—and even better—hand than the second, third, and fourth) was always clear and absolutely beautiful, though these men permitted a small number of errors to intrude.

Second, I volunteered with my mind made up to the fact that the Society already had ten years' experience in the Mahler project, that certain routines and practices had been established and found to work well while others had been rejected as inferior, and that anyone aiding in the task, even though working of his own volition and without salary, would still have to be willing to follow the established procedures, otherwise his "help" would only become a hindrance. In short, to be an "individualist" would be all right, just so one was not a "rugged individualist."

Third, the reader must understand the various types of change Mahler made in his compositions. These are:

1. Changes made in the manuscript before submitting it to the publisher.
3. Changes made (other than corrections) while checking the engraver's copy.
3. Last-minute changes (other than corrections) made in the publisher's proof-sheets.
4. Changes and corrections made in the published score after the first edition, but before the final edition (in the case of compositions that went through more than one edition).
5. Changes and corrections made after the publication of the last edition.

Changes of the first, second, and third types would not officially concern anyone listening to a Mahler work—they occur in many people's music—though they often provide a fascinating "glimpse into the composer's workshop" for a curious researcher. I saw many examples of Types 1 and 2. Type 3 examples exist in connection with certain works, though not with those with which I was involved. This leaves Types 4 and 5 as the focal points of the researcher-editor's attention, and what was involved will become clear as the separate projects are described.

The foregoing does not include out-and-out misprints, which of course are the most important of all.

## Procedure

The procedure was a little different for each of the four projects, but in general it was this: I corrected, in red pencil, all obvious misprints. Suspected misprints or places about which there might be some question I kept on a list. These were thoroughly discussed with Prof. Ratz during our periodic conferences, always held in my apartment (and I loved being addressed as "Herr Professor"), at which each item was disposed of in one or the other of four ways:

1. We decided the printed version was perfectly correct.
2. We decided a change was necessary, and made it in red pencil.
3. We decided that the flaw was so slight that the present status could be conscientiously allowed to remain.
4. We were unable to determine exactly what Mahler's intentions really were and earmarked the spot for discussion in the "Revision Report" (*Revisionsbericht*) which Prof. Ratz will prepare for inclusion in the preface to each work as it comes out in the new "Critical Edition."

My list of "questionable places" for the *Second Symphony* runs to 15 closely-written pages, for the *Ninth* to 11, but for the less problematical *Eighth* and *Third* to only 3 and 4, respectively.

It might be well to clear up what comprises a matter of the third type on the foregoing list—something not flawlessly correct, yet also not worth the bother of a change. The forthcoming editions of all four symphonies on which I worked will be made by altering the plates of the present editions, not by engraving the works afresh as was done with the Society's edition of the *Sixth Symphony*. Hence only the genuinely necessary changes were to be made.

And what might be some specific examples of discrepancies which, although observed, could with a clear conscience be allowed to go unaltered?

(1) Certain instruments are sometimes notated with one clef, but for exceptional passages with a different one. For instance, the viola generally uses the alto clef, but changes to the treble for the notes in its high register. Imagine that a certain passage concludes in the treble clef and that a rest of a page or more intervenes before the violas re-enter with the normal alto clef. Composers' accepted procedure is to give warning of the clef-change on the viola staff of the score by placing an alto clef after the last measure of the treble-clef passage or at the end of the affected staff, or by opening the viola staff on the new page with the treble clef but inserting an alto clef just before the violas resume playing. Now, if none of these little "warnings" happened to be given, but the music itself was written correctly and with the correct clef, a change was deemed unnecessary. Few score-readers indeed would notice the absence.

(2) Sometimes a sharp or flat would be written superfluously, as an accidental in front of a note already affected by a sharp or flat in the key-signature. If there was no other mistake, and no likelihood of mis-

interpretation, we did not remove the majority of these unnecessary symbols.

(3) Sometimes Mahler, either through carelessness or for reasons best known to himself, deliberately adopted an incorrect style of notation. For example, on pages 200, 201 and 202 of the *Second Symphony* there is a series of arpeggios for the second harp in a passage written in 2-2 time. Sixteenth-notes are used exclusively. Where the arpeggios consist of irregular groupings of 9, 10, 11, or 13 notes to a measure, the use of sixteenth-notes (rather than eighths) might possibly be justified. But when the arpeggios consist of 8 notes, as three of them do, eighth-notes are absolutely a requisite; yet Mahler writes sixteenths. In effect, he implies that 8 sixteenth-notes equal one whole-note! Yet we are going to allow those measures to stand. To quote Prof. Ratz, "Mahler wrote it that way." He is not the first composer who through error or sheer perverseness insisted on employing, for obscure reasons, a theoretically incorrect style of notation.<sup>1</sup>

Similarly, in the *Eighth Symphony*, on pages 64 and 119 he writes eighth-note quintuplets where sixteenths would be correct. Even though leaving the passage as printed courts confusion with some perfectly correct quintuplet eighths elsewhere, no change will be made.

In compiling my lists of "questionable places" I always included anything that I observed, anything, no matter how slight, that I thought might—just might—need changing. I screened out and ignored nothing, even things I felt positive could be allowed to stand. Some things I thought unimportant seemed important to Dr. Ratz, and some I deemed important needed some arguing before he accepted them. I took no final action without his knowledge. "I am an editor, not a dictator," I told him several times. Similarly, he did not change anything he observed without telling me. Changes were made only when we were both convinced of their necessity.

Some of our conferences lasted as much as three hours. My wife always served coffee and cookies to keep fatigue away. My magnifying glass was pressed into service again and again, particularly in inspecting the manuscript facsimiles. I always felt exhilarated and a-tingle with energy, rather than tired, at the conclusion of a conference. There was no better cure for listlessness or boredom than a vigorous session with "the Professor."

Throughout the project I was able to keep my own hours. When I got tired I broke off at the first good stopping place and did something else for a while. The work was highly detailed and exacting, and even though I would often grow tired I never became bored. Every moment was interesting for I never had to work "against the grain" or when out of the mood. I always had zest for the job.

The work demanded a well-nigh comprehensive knowledge of music—harmony, counterpoint, style, composition, ear-training, orchestration, form, notation, instrumental technique. Most valuable of all was 33 years' experience as a student of Mahler's music, for many slips were

<sup>1</sup> On page 150 of all three editions of the same work some harp arpeggios are written in sixteenth-notes where thirty-seconds would be rhythmically correct. Mahler's manuscript shows thirty-seconds. This change *will* be made.

discovered simply because a passage did not ring true—did not agree with what it would be likely for Mahler to write.

It would never be admissible for the Society's editors to take a "we are God" attitude. Our task is to establish and publish what Mahler actually wrote (or intended to write), not what we think he ought to have written or what we wish he had written. Certain technical problems for the players are embedded in the very notes he wrote, but it is not our province to solve these or to simplify them. The conductor also is occasionally confronted with certain difficulties. He must cope with these, not the editors.

For example: Mahler sometimes writes low B for the flute (in solos in the *Fourth Symphony*, fourth movement and *Seventh Symphony*, second movement), low B-flat for the oboe, low E-flat for the clarinet in B-flat (but never for the clarinet in A), low A for the bassoon. Many flutes, oboes, clarinets, and bassoons do not possess these notes, and almost never does Mahler make provision for their non-availability. He often writes for a type of celesta capable of going an octave lower than the standard instrument. On page 108 of the *Ninth Symphony* there is an unplayable low E for the B-flat trumpet. Some of his harp parts ought to be written in enharmonic notation, for complete correctness. The Society, even though well aware of these matters, would be stepping out of function if it attempted to furnish alternate readings or even to suggest solutions in footnotes.

On rare occasion, however, Prof. Ratz and I felt we would be justified in making an exception to this policy—in taking matters into our own hands. Here are two examples.

(1) On page 154 of the *Eighth Symphony* (in the second movement) a staff marked "Harps 3 & 4" is found, and for the only time in the entire work. The two instruments play in unison. In the same passage, harps 1 & 2 also play in unison, though they have a different part. The new edition will mark this spot Harp 1 and Harp 2, rather than Harps 1 & 2 and Harps 3 & 4. Mahler never writes more than two harp parts, in this work or elsewhere, but often requests that each be doubled or tripled if possible. We reasoned that his real meaning here was "3rd and 4th harpists, playing the 2nd harp part." He surely did not mean to bring in two instruments to play nothing but a few measures in a long symphony.

(2) In the third movement of the *Ninth Symphony* Mahler uses clarinets in A throughout, except for four measures on page 141, where he writes for clarinets in B-flat. The new edition will re-write these measures for clarinets in A. Nothing is gained by changing instrument for such a short time, especially since the players have only one measure of quick tempo in which to change back.

Let me now discuss the projects individually.

### *Project I — the Second Symphony*

#### Materials:

1. Miniature photocopy of Mahler's manuscript.
2. Miniature photocopy of the engraver's copy.

3. Miniature photocopy of the printed score, with changes made by Mahler subsequent to publication.
4. First edition of the score in "full score" size (published by Weinberger, Vienna, 1897; copyright by Friedrich Hofmeister, Leipzig).
5. Second edition of the score, in "study score" size (published by Universal Edition, London, 1952).
6. Third edition of the score, in "full score" size (published by Universal Edition, Vienna, no date, but probably in the early 1920s).
7. A complete set of the orchestral parts.

Items 1, 2, and 3 were very tiny, about the size of 35mm. pictures. However, I had anticipated the possibility of working with miniature materials, hence had tossed the previously-mentioned magnifying glass into my brief-case before leaving home.

The study score is available from several other publishers—my personal copy (which I left at home) is the Kalmus edition—but in any case a study score always represents the *second* edition, not the third, and hence does not correspond to Mahler's final wishes. Observe the recent date of the copy placed at my disposal; yet it does not represent the third edition. This circumstance should be borne in mind by anyone who buys a study score of this important work. The second edition does, however, resemble the third edition much more than the first.

The first edition was printed on excellent white paper; however it was poorly bound in paper covers and fell apart while I was working with it. The second edition was typical of study scores—paperbound. The third edition was sturdily bound in stiff dark-red covers, but the paper, apparently manufactured right after the First World War, was grayish, brittle, and wretched; rag content probably nil.

After a note-by note comparison, I copied all the changed passages of the third edition back into the first, using blue pencil. Then the second edition was also made to conform to the third, and here I made the changes in green pencil. Misprints in the third edition were corrected with red pencil. There were many such misprints. The reason?

Both of the later editions, except for pages 186, 190, and 208 which were newly engraved for the third edition, were made by altering the original plates. Mahler often included corrections of mistakes that were not too serious in the first place—superfluous accidentals, an omitted though perfectly obvious dynamic mark, or the like—and in correcting these the engraver would often carelessly make a new and far more serious mistake in the preceding or following measure, or on the staff just above or just below; in other words, in attempting to repair a "pecadillo" the engraver would commit a "crime." At our conferences the misprints due to such bungling often aroused Prof. Ratz's scorn, and the words *blöd* ("idiotic"), *Schlamperei* ("sloppiness"), and *Dummheit* ("stupidity") often rent the air. Slips of this and other types were numerous. However, I feel the new edition will eliminate as large a number as is humanly possible.

Does this imply that some observed misprints are humanly impossible of rectification? A few are. On some multi-staffed pages there is simply not enough room to repair a not-too-serious error. Anyone familiar with this symphony will remember how full some pages are. And then on page 75 appear in the first flute part, in tiny print, the grace-notes C and D-flat (D and E-flat in the first clarinet, which doubles the flute). Reference to the violin and second clarinet parts and to the parallel passages on pages 57 and 62 strongly suggests that D-flat should be D. The change, however, would be so hard to make that the whole decision will be left to the judgment of Universal Edition, the publishers.

Then, on pages 62 and 76 half of the cellos are first asked to put on the mutes, then to remove them, with no rest whatever—right in the midst of a passage. Although neither indication appears in the manuscript, it does appear in all three editions of the score and in the parts, so there is nothing to do but leave it as it is, fully aware that it calls for the impossible.

A passage that had always puzzled me appears as one goes from page 100 to page 101. Here an important melodic bit begins in the first violins on 100, concluding on 101. On 101 the first violins are divided, written on two staves, but the passage is finished only on the upper staff; the lower has a rest. In other words, half of the first violins simply disappear in the course of the phrase. A clue to how this came about is in the manuscript. Originally, all the first violins completed the phrase, and the sixteenth-note figure which now, after a measure's rest, appears in the lower half of the first violins was originally given to the upper half of the second violins. Between the manuscript stage and the first edition, Mahler changed the distribution of parts. It is now much too late to do anything about the matter; the curious passage must stand.

To give a list of the corrections to appear in the new edition would be long and boring—and would destroy sales! Let me mention only two.

(1) On page 18, measure 1, the first eighth-note for the first clarinet should be D-flat, not D. (In the part this is written enharmonically—and correctly—as C-sharp.)

(2) On pages 24 and 25 the three staves allotted to the horns show the distribution as 1 & 2, 3 & 5, and 4 & 6. On page 26 the distribution is "normal," i.e., 1 & 2, 3 & 4, and 5 & 6. Now, as we turn from page 25 to 26 the voice-leading for the six horns is so barbarous that it would shame any self-respecting conservatory freshman. However, if we back up to measure 6 on page 24 (at the solo cymbal crash) and change the distribution there, the voice-leading works out simply and sensibly, and the intervening material is also more logical. Mahler apparently forgot to write in the re-distribution, but the revised edition will follow what seems to be his true wishes. (More about this matter later.)

Among other things we also corrected Mahler's misspelling of a *cappella* (written "a *capella*" twice on page 186). Incidentally, there is ground for believing Mahler was a poor speller, even in German,

unless the orthography of that language has changed considerably since his day. As many readers have probably observed, he was old-fashioned in his spelling tastes, clinging to *getheilt* for "divided" after *geteilt* became the official spelling, and usually preferring *ClarINETTE* to *Klarinette*.

To conclude the project, I checked the entire set of orchestral parts. Since the "*Resurrection Symphony*," as it is often called, is one of the longest ever written, and requires one of the largest ensembles, it will be apparent that the stack of parts was very high and that the job was far from small. All parts are intelligently edited and clearly printed, the strings on good paper, the woodwind, brass, and percussion on excellent paper. However, the parts do not conform to the third edition at all places; sometimes they do, but at other times they follow the second or even the first. I therefore had to bring all of them completely in line with Mahler's final wishes, as expressed in the third edition. (This is just one more indication of the urgent necessity of the Society's project. During all these years, orchestras have not been playing the right notes!) In addition I of course corrected out-and-out misprints. However, with the exception of one part, there were just a few, though these few were often very serious. The seriously inaccurate (even though beautifully printed) part was that for the fourth trumpet, which was laden with errors. At one point the notes duplicate another of the trumpet parts, and the true fourth trumpet music is given to nobody! I fear the engraver tarried too long in the *Bierstüberl* the night before he did this job, and that the proof-reader loafed on the company's time.

It will be obvious that work on the *Second Symphony* took many days.

Since the huge mass of material involved in the work on this composition was turned over to me on September 3, when we were barely settled in the apartment, from the reader's viewpoint it may look as if I had fallen into the hands of a merciless slave-driver, bent on exploiting me and taking advantage of my good-natured willingness. Quite the opposite! Prof. Ratz made clear that the Society was in no hurry on the project, that the job could not possibly be completed for a long time, that while the weather remained good I should go out and get acquainted with the city, visit the museums, and postpone this work until rainy days. But who could keep his hands off such a treasure, even in lovely September weather and in such a delightful Old World city as Vienna? Nevertheless I must confess that there was a positive correlation between bad weather (incredibly miserable throughout November) and the quickness with which I got work done, on other symphonies as well as the *Second*.

### *Project II — the Ninth Symphony*

#### Materials:

1. Photocopy of Mahler's manuscript.
2. Photocopy of the engraver's copy.
3. Study score (Universal Edition, London, 1952).

One other item was made available later, at a highly opportune moment, and will be mentioned in its proper place.

I began work on the *Ninth Symphony* on December 6, 1965. Originally I was to edit only the third and fourth movements; someone else was scheduled to do the other two. But more about this later.

In contrast to the neatness of Mahler's other manuscripts, the writing in the *Ninth Syphony* is extremely messy, at points practically illegible (for he was in wretched health as well as hurried when he wrote it); there are several points where he seems to have set a new page down on the still-wet notes of the preceding page, resulting in a frightful blur. To make matters worse, the reproduction in this photocopy left much to be desired. The engraver's copy, on the other hand, was beautifully written and the reproduction was perfect.

I had gone only a little way into the third movement when I discovered that the printed score contains a mass of misprints. There is no positive correlation between messiness in the manuscript and misprints in the score, for some of the few clearly-written passages were engraved inaccurately. Certain misprints were nothing short of fantastic.

A rubber-stamped notice on the engraver's copy shows that Universal Edition released it to the engraver on July 11, 1912. Mahler died on May 18, 1911. It is thus obvious that he never saw the proofs. I doubt if anyone ever proofread the work. If anyone did, the job was even less than half-hearted, or there would not be so many inexcusable errors in the published score—at least 112 in the third movement alone. Unless by some miracle the parts are correct while the score is wrong, the world's orchestras have been playing some amazing inaccuracies—some in the chief melodic line!—for more than 55 years.

This is no reflection on Universal Edition of London, for other publishers have used the same plates. My personal copy, which I did not take with me, bears the imprint of Boosey & Hawkes, and is identical, except for some preface pages, with the edition with which I worked.

Later I shall give a few examples of misprints. For the present I shall merely say that there are ten errors on page 164 alone, not counting an unplayable note for the cellos, very clear in the manuscript, which will be put in parentheses in the new edition. The joke, "A fly lit on my music and I played him," comes to mind in a place on this same page where the engraver mistook a spot on Mahler's manuscript paper for a note, and intruded it into the score!<sup>2</sup>

There were fewer inaccuracies in the fourth movement, but two of them are important. In this, as well as all music, the obvious misprints that would be apparent to any musician are not what is serious; rather, what is serious are the slips that *look* as if they were right but are actually incorrect—worst of all when they substitute the trite where Mahler wrote the distinguished.

---

<sup>2</sup> On page 123, upper system, measure 7, an overgrown staccato dot in the viola part was mistaken for a note, thus forming the double-stop G-A where Mahler intended only the single note G.

On the night of December 31, with less than an hour of 1965 remaining, I finished work on the *Ninth Symphony*.

Or so I thought. The future was to prove that I was hardly more than started.

### Project III — the Eighth Symphony

Materials:

1. Photocopy of the manuscript.
2. Study score (Universal Edition, London).

Early January of 1966 found me at work on the "*Symphony of a Thousand*," as it is often called. The manuscript, although neat and clear, differed markedly from the printed score. Evidently Mahler made a host of changes between the manuscript stage and printed stage—probably at the time of the work's première in September of 1910 at Munich.

To examine the engraver's copy and have it for reference would doubtless be a most helpful and revealing experience, but if this document still exists the Society has never been able to locate it.

All I could do was read the score note by note, vertically and horizontally, for "sense"—that is, scrutinize everything until I came to a "that's-a-queer-thing-to-write" kind of passage, then examine the manuscript to see if it gave any clue as to whether the printed material was correct or erroneous. Luckily, the manuscript nearly always provided a clear solution. Misprints were nowhere nearly as common as in the *Second* and *Ninth Symphonies*; several of the "queer" things were perfectly accurate.

Mahler writes incorrectly for the organ, manuals and pedals both (he apparently did not understand this most complicated of instruments), but his real meaning is always clear, so no editor should tamper with the notation, unconventional though it sometimes is.

For two selected examples of the infrequent misprints, let me mention:

(1) First movement, measure 151. Last note in first triplet for the solo violin is wrong, as can be proved by later parallel passages and by reference to the manuscript.

(2) Second movement, measure 335. Last violin note should surely be G, not G-flat as the key-signature suggests, even though both manuscript and score agree here.

In this symphony, it looks to me as if the celesta is written at actual pitch up to measure 1270 of the second of the two movements (it is silent in the first), but conventionally (i.e., an octave below actual pitch) from measure 1344 onward.

### Back to Project II — the Ninth Symphony

In early February I finished the *Eighth Symphony* and Prof. Ratz asked me to do the first movement of the *Ninth*. Later he added the second movement, meaning that I eventually edited the entire work. He never explained whether the person originally assigned to the first

two movements had backed out or had to be withdrawn for poor work; and tact and ethics suggested that I should not ask.

Photocopies of the sloppy manuscript and the precise engraver's copy were of course made available, and I began work on February 10. Again, numerous and serious misprints came to light. One was so bad that our adopted policy of making as few changes as possible, and as easily as possible, had to be shelved. This was the curious botch I discovered on page 88, lower system, in the second movement. Here there is a part for a solo violin, yet the engraver placed its staff *below* that for the remainder of the first violins. And when the solo violin joins with the rest of the section, the engraver gives it the music of the *second* violins—and makes a slight misprint in the process! (There are two other misprints on this page.) Prof. Ratz said he would insist on this being corrected so that the staves appear in proper order, no matter how much trouble is involved, for the mistake was unpardonable in the first place.

Of course this will punish the wrong party. The person who will have to make the correction is surely not the same one who blundered back in 1912, for that man must now be in the place where music engravers go when they die (and I think I know where this one went!)

While at work I learned a number of odd things about the *Ninth Symphony*. For example, the printed score calls for two harps, yet only one harp part ever appears; sometimes it is indicated to be played by both instruments in unison ("zu 2"), other times by the first harpist only ("I.") Neither the manuscript nor the engraver's copy makes any mention of two harps. The idea to double this part here and there stems from Mahler's devoted pupil and disciple, the late Bruno Walter, who doubtless remembered the frequent indications in other scores that the harp parts, whether one or two, should if possible be played by two or three instruments in unison. Although Walter's sincerity and good intentions are beyond question, he nevertheless neglected to indicate that the directions "I." and "zu 2" were purely his personal idea, not the composer's. He did certain other anonymous editing, including the insertion of the direction *klagend* ("complaining" or "plaintive") for the trumpet on page 99.

Walter conducted the world première of this work in June, 1912, so it is clear that Mahler never heard it performed. This fact will account for many of the odd things I found.

Still amazed by some of the errors, I finished editing the second movement (and hence the whole symphony) on March 12. That should have ended my work with the *Ninth Symphony*. But it turned out that such was by no means the case.

#### Project IV — the Third Symphony

##### Materials:

1. Photocopy of the manuscript.
2. First edition of the score (Weinberger, Vienna, no date).

3. Second edition of the score (Universal Edition, Vienna and Leipzig, no date; this copy printed 1920).

I was also given a Boosey & Hawkes study score (London, 1943), but since it was identical with the second edition, except that the print was smaller, I almost never used it.

The second edition had again been made by altering the plates of the first, except for nine pages which were freshly engraved. Mindful of the way the engraver of the *Second Symphony* had often intruded fresh mistakes when making one of Mahler's alterations, I minutely examined all changes and the notes that surrounded them. I was glad to see that almost invariably all was well; someone had learned a lesson from the botches in the *Second Symphony*. The newly-engraved pages I of course read carefully "for sense." There were a number of misprints, but only one was really serious: in the first movement, measure 411, the third note for the second trumpet should surely be E, not G.

Three interesting oddities came to light.

(1) The first edition showed that the famous post horn solo in the third movement had originally been given to the flügelhorn.

(2) The manuscript facsimile curiously showed that Mahler had originally designated the key of this symphony as F major rather than D minor.

(3) I had long known that the fourth movement of the *Fourth Symphony* had once been intended for use in the *Third*,<sup>3</sup> but never knew where it was to have fitted in. (The fact that there are themes common to both the *Third* and *Fourth Symphonies* stems from this early plan, as readers probably know.) The manuscript suggests that it would have been the second movement, the present second movement the third, and so on.

#### Once More Project II — the Ninth Symphony

While I was still occupied with the *Third Symphony*, during an idle moment I flipped open the *Ninth Symphony* score to its most mistake-ridden movement—the third—and to my distress within a few minutes found four misprints that had escaped me on the previous reading. There was nothing to do but read through this troublesome movement a second time, scrutinizing every note.

I found out that some previously-suspected misprints in the music for one instrument turned out to be quite correct as given, the queer-ness of the passage being due to the odd relationship caused by a hitherto-undiscovered error in a different instrument's part. The list of misprints and questionable places grew by leaps and bounds—a total of 55 new items. (Some of these, of course, were so slight that we eventually decided to let them stand as printed, though others were very serious.) The questionable places—spots where it is impossible to determine Mahler's real intentions—had by now become so numer-

<sup>3</sup> It was originally composed as a completely independent work, a song with orchestra.

ous as to be embarrassing; there were so many that I was afraid they would jeopardize the value of the new edition. And my allotted eight-month stay in Vienna was almost over!

Help arrived in the nick of time. There are some sketches for the *Ninth Symphony*—a highly incomplete and tentative score—which had once belonged to Alban Berg, whose 82-year-old widow loaned them to the Society so a photocopy could be made. This very clear photocopy was turned over to me on April 14. It contains none of the fourth movement; parts of other movements are missing; the form of two movements was later changed; and there were many changes in content, not to mention orchestration. For all these shortcomings the sketches proved to be a veritable gold mine, and for these reasons:

1. They proved that I had been quite right in making changes that on earlier occasions seemed so obviously necessary.
2. They proved that some of the suspected mistakes were indeed errors.
3. They proved that certain other suspected mistakes were entirely correct as printed.

The result was that the list of "questionable places" shrank dramatically. I am now confident that the authenticity of the new edition should be high.

I shall always be glad that I made a second study of this movement and that the sketches, with all their limitations were made available to me.

Let me conclude discussion of the *Ninth Symphony* by citing four glaring misprints—one per movement.

(1) Page 6, measure 1. Last eighth-note for first violins should be F-sharp, not F. (Note that this error occurs in the chief melodic line!)

(2) Page 99, measure 7. Repeated note for violas should be E-sharp, not E.

(3) Page 144, lower system, measure 1. In viola part between chord of grace-notes and principal note, insert a treble clef, making principal note high A-sharp, rather than B-sharp.

(4) Page 172, lower system, measures 3 and 4. Tied D-flat for second violins should be marked *8va*.

The last conference with Prof. Ratz, devoted to the *Third* and *Ninth Symphonies*, occurred on April 26. A mere four days later this genial scholar said *auf Wiedersehen* to us at Vienna's *Südbahnhof* as our train pulled out for Venice, from which we eventually proceeded home. How reluctant I was to leave Vienna!

It would be dishonest if I left the impression that I edited four Mahler symphonies single-handed. I was simply the only person who was able to give full time to the project. Prof. Ratz checked through these works also, and caught a number of points that had slipped by me, just as I caught many that escaped him—though of course we both caught the majority. In addition, a third person, whom he never identified, went through the thorny third movement of the *Ninth Symphony*.

This man was young and inexperienced, and I judged that his work was deemed, in general, unsatisfactory, for I caught ever so many points that he missed. What counts is that in spite of his limited skill he *did* catch 13 mistakes that had eluded both Ratz and me, five of them important. He proved that three pairs of eyes are indeed better than two, just as two are better than one.

#### Other Items

During my eight months in the Austrian capital I got to see two curiosities which the Mahler Society has in its archives.

One is the suppressed Andante from the *First Symphony*. This work was originally to have had five movements, of which the Andante was to be the second. Mahler's decision to discard it was a wise one, for the movement is entirely too "lightweight" for use in a symphony. The Andante is short, in C major 6-8 time, and scored for a small orchestra.

The other was the symphonic poem *Totenfeier*. It is clearly dated Prague, September 10, 1888. With very few changes in the music itself, but many in the orchestration, *Totenfeier* eventually became the opening movement of the *Second Symphony*; indeed this movement is still often called by that name. It was *Totenfeier* that provided the clue for the solution of the horn voice-leading problem on pages 24, 25, and 26 of this symphony, mentioned earlier.

On the day I reported to him, Prof Ratz turned over to me all the Society's photostatic copies of the manuscript and sketches for the incomplete *Tenth Symphony*. He strongly hinted that he would like to have me whip these tentative, chaotic, and semi-legible sketches into a clear version for publication—not a "completion," just an orderly statement of what music Mahler left. (Rumors that Ratz is opposed to the publication of this material are unfounded.) However, I preferred to confine myself to the compositions already mentioned. Judging from my own experience as a composer, I felt there is a strong possibility that Mahler might have made slight or radical changes in the material he left at his death, extending here, pruning there, transposing certain passages to other keys, interchanging sections, or altering melody, harmony, or rhythm. As readers know, a controversy rages over the *Tenth Symphony*, and for some reason that I cannot quite analyze, I preferred not to get involved in it. Enough "opinionating" has been done already. Some recently-discovered additional pages were turned over to me much later. Although I did not study them closely, I strongly suspect they might not represent genuine additional music, but rather that they are "sketches for the sketches" or even material Mahler had to discard eventually.

At our first meeting Prof. Ratz also gave me the original edition of the *Sixth Symphony* (C. F. Kahnt, Leipzig, 1906), marked in red pencil with all the post-publication changes Mahler made in that work—changes so thoroughgoing that the Society had to republish it completely, from A to Z. There were only seven pages with *no* change whatsoever! On many pages, more material was changed than was allowed to stand, the retouches almost invariably being confined to the

orchestration. The hours of grueling work that were required on the part of Prof. Ratz and his associates, and its difficulty, can well be imagined.

The ruling principle behind the changes in the *Sixth Symphony* is the same that caused the changes in the *Second* and *Third*: greater clarity, more assurance of effect, underlining of the important versus subdual of the accompanying material, and reduction of the likelihood of an inaccurate impression in case the work should fall into the hands of an inferior orchestra or a superficial conductor. I would say a singleness of purpose underlies all of Mahler's retouches.

RARE WORKS BY HUGO WOLF ON  
DEUTSCHE GRAMMOPHON

*Penthesilea* (original version); *Italian Serenade* (chamber orchestra); *Der Feuerreiter* (choral version), *Gebet, Neue Liebe, Wo find' ich Trost?* (Mörke); *Mignon, Harfenspieler I/II/III, Prometheus* (Goethe). Evelyn Lear (soprano), Thomas Stewart (baritone), Vienna Youth Chorus, Vienna Symphony Orchestra conducted by Otto Gerdes. DGG stereo discs SLPM-139426/7 (four sides). *String Quartet in D Minor* (original version). La Salle String Quartet. DGG stereo disc SLPM-139376 (two sides).

The above-named recordings arrived from Deutsche Grammophon Gesellschaft this year, to remind us that Bruckner was not the only Austrian composer who suffered from the "Viennese syndrome" of having his works carved up and redecorated at leisure by various "Praktiker" for posthumous publication as well as performance. For it can likewise be said of Hugo Wolf that, while his *Lieder* with piano have come down to us pretty much as he conceived them, this is not necessarily the case with his orchestral and chamber works. And so Vienna has had to give birth also to an International Hugo Wolf-Gesellschaft, with the ultimate and familiar aim of creating a *Kritische Gesamtausgabe* (or collected critical edition) of Wolf's works, free of all errors, corruptions, and curtailments. The DGG record issues detailed above grew in part out of a Hugo Wolf concert conceived in this spirit and performed in Vienna on September 25, 1968.

They include the first recording ever made of the symphonic poem *Penthesilea* (composed 1883-85), the first recording of the D Minor String Quartet in its fully authentic version, the chamber-orchestra version of the Italian Serenade, the chorus-and-orchestra version of the ballad *Der Feuerreiter*, and the voice-and-orchestra versions of eight other songs of which only *Prometheus* has been so offered on disc before. This welcome broadening of the recorded Wolf repertory ideally *should* have been launched some eight years earlier, since 1960 was the Wolf centennial as well as the Mahler centennial. It is nevertheless a start, belated or not, and I sincerely hope it will be followed up with similar releases in due time.

Wolf and Mahler were themselves both present, as enthusiastic student-supporters of Anton Bruckner, when the latter suffered the most humiliating rebuke of his composing career at the Viennese première of his Third Symphony in the winter of 1877. And just nine years later, Wolf was to endure an even more humiliating experience in the same place. Hans Richter led the Vienna Philharmonic on October 15, 1886, in a trial reading of *Penthesilea*, a work described by the biographer Frank Walker<sup>1</sup> as "an extremely complex and difficult score, and something of a phenomenon in the pre-Straussian era in which it was written." And that reading, the composer believed, was

<sup>1</sup> *Hugo Wolf—A Biography* (London: J. M. Dent & Sons; second, revised and enlarged edition, 1968), p. 186.

deliberately sabotaged either by the conductor or by a hostile clique in the orchestra itself, in order to teach the upstart a lesson in how to behave. Whether or not this belief was justified, *Penthesilea* was reportedly hooted and derided by the musicians who had just struggled through it, and who then proceeded to vote it down, further prompted by some derogatory remarks from the podium.

It was the only hearing of this, his largest orchestral work, Wolf was ever to get. Well aware of certain blemishes in the score, the composer was long determined to make some instrumental revisions. Unfortunately, he did not actually do so until 1897, after his mental breakdown, by which time he was evidently incapable of any rational judgment in the matter. As Frank Walker puts it,<sup>2</sup> "confined in Dr. Svetlin's asylum, he made alterations to the orchestration which actually added to the generally thick and noisy effect of the original scoring." Walker adds that it was a tragedy Wolf did not clarify the texture of *Penthesilea* in 1885 or 1886, making its instrumentation fully "worthy of its magnificent conception and design." One of the most pathetic delusions of Wolf's last clouded years was that he had composed an opera on *Penthesilea*, which he was to produce himself in Weimar, in revenge upon Vienna.<sup>3</sup> "Above all," he wrote, "I should like to make Fr. Sedlmair desert the Vienna Opera. I hope I shall succeed. She will make a magnificent *Penthesilea*."

Regarding its later history, Walker says<sup>4</sup> that "*Penthesilea* was first published posthumously in 1903, after revision by Joseph Hellmesberger the younger, assisted by advice by Ferdinand Löwe and Willibald Kähler." But this revision certainly did nothing to "clarify the texture" either. Rather it had the effect of weakening it, "just as Rimsky-Korsakov 'softened' Mussorgsky's scoring to make it comply with the taste of the time," in words of Erik Werba from the DGG album-notes.

"It was not until 1937," continues Walker, "that the real nature of the 'revision' to which Wolf's score had been subjected became known. In that year a full score was issued<sup>5</sup> which reproduced the work exactly as it stands in the manuscript, and revealed the remarkable extent to which the editors of the earlier version had departed from the composer's intentions. In addition to a thorough overhaul of the orchestration, an enormous and unacknowledged cut was made, 168 bars in length. The original version encourages the belief that in this work, which has been all too often dismissed as a misapplication of Wolf's energies and a secondary offshoot of his genius, we possess one of the grandest romantic conceptions of the 19th century."

The remarkably close analogy here to the case of Bruckner's Ninth Symphony, also published posthumously in 1903 in an unacknowledged "arrangement" by Ferdinand Löwe, and republished in the original version in 1934, some 31 years later, will not be missed by regular readers of *Chord and Discord*. And the editorial "guiding angel" behind the musicological edition of *Penthesilea* is none other than the well-loved, founding co-editor of the Bruckner-Gesellschaft, Robert Haas.

<sup>2</sup> *Idem*, p. 192.

<sup>3</sup> Cf. letter to Heinrich Potpeschnigg quoted in *op. cit.*, p. 450.

<sup>4</sup> *Idem*, p. 188.

<sup>5</sup> Musikwissenschaftlicher Verlag, Leipzig and Vienna.

Having silently sequestered this score on my library shelf for some 25 years, I am highly gratified, to say the least, to be able to augment it at last with a recording of the work. With more than a suggestion of Liszt and of the *Zaubermädchen* from *Parsifal*, *Penthesilea* also anticipates something of the Biblical voluptuousness of Strauss, as indeed of the more bardic chromaticisms of Schoenberg's *Gurre-Lieder*. All this is compounded with the acrid harmonic touches we might expect from the composer of the Italian Serenade and *Der Corregidor*. In short, a highly pivotal work. I leave the record listener to explore for himself *Penthesilea's* program, derived from Kleist's tragedy about Achilles and the Queen of the Amazons.

DGG's lucid sound and Otto Gerdes' sympathetic interpretation of the Original Version are the recording's very welcome attributes. With this release, Vienna has made tangible amends for the painful scene of the early trial-reading of 83 years ago. My only serious reservation about the DGG pressing is the disruptive and quite unnecessary division of this 25-minute performance onto two record sides. Although three main sections (of very unequal length) with subtitles are indicated in the score, Frank Walker points out<sup>6</sup> that these are "not to be regarded as separate movements; the material of the first two short sections is made use of and developed in the long third section." Hence, to separate the first five minutes of this integrated and continuous music from the remaining twenty by a turnover, without a compelling necessity, displays an artistic gaucheness verging on lunacy. It strongly invites a competitive version, coupled perhaps with some of Wolf's mature and still unrecorded score for Henrik Ibsen's *Feast at Solhaus* (1890-91).

The work sharing a side with the beginning of *Penthesilea* is the chamber-orchestra version (1892) of Wolf's eight-minute Serenade in G major, originally for string quartet, of 1887. It was only for the orchestral version that Wolf appended the word "Italian" to the title; but since he had already alluded to the quartet-movement as an *Italienische Serenade* in a letter of 1890, it has been retroactively applied to the original as well. Wolf intended to add further movements, but only brief sketches for a slow movement (1893), a third movement (1894), and a final tarantella (1897) survive. The Serenade has become the most popular of Wolf's instrumental compositions, and the only "concert staple" among them. The best of the more recent recordings of the quartet version, by the Juilliard Quartet, is no longer available (a statistic in the high-mortality rate of the RCA catalogue), but this is closely seconded by the Los Angeles Quartet (Crystal S-103).

Walker expresses the opinion<sup>7</sup> that "the arrangement for small orchestra, with its rich coloring, is greatly to be preferred to the original version for quartet. It brings out all the latent romanticism of the music, concealed beneath its satirically humorous manner." It is undeniable that the delightful astringency of the main theme, scored for solo viola in both versions, stands out in brighter relief against the coloring of woodwinds, horns, and concerted strings. It shows optimal

<sup>6</sup> *Op. cit.*, p. 189.

<sup>7</sup> *Idem*, p. 312.

judgment that Wolf, who originally had the idea of rescoring the first and third occurrences of this theme for English horn, reverted to the viola throughout.

The same might be said of the context of the solo cello cues which remain in the orchestral version, at bars 302 and 541. Such bitter-sweet alternations of solo and tutti string color will be readily recalled as the crux of many an analogous Mahler tableau. Highly effective too are the cues for solo bassoon (bar 59) and for the warbling flute (118 and 252), and above all the successive cues in the piquant F# minor-major colloquy (beginning at 342). There is an especially Mahleresque harmonic touch at 504, again in F# minor. Manifestly there is no trace of *Penthesilea's* besetting thickness here. Yet the quartet version has its own special charm, and I cannot imagine why anyone who likes this music would not be exceedingly fond of it in both settings. The new orchestral recording is notably clearer in its articulation and warmer in sound than the only other current version, by William Steinberg and the Pittsburgh Symphony (Pickwick SPC-4027). The superior articulation under Gerdes includes both the viola (Siegfried Führlinger) and cello soli.

At the head of the score of the youthful String Quartet in D Minor stands the inscription "*Entbehren sollst du, sollst entbehren*" ("Renounce! You must renounce!") from Goethe's *Faust*. Frank Walker says of the music:<sup>8</sup> "Some intense Faustian struggle in the young man's soul is here worked out in purely musical terms. . . . It is Beethoven's shadow that is felt to lie heavily over the whole composition; but in place of the unearthly wisdom, joy, and sadness of Beethoven's third period, there is in Wolf's Quartet a turbulent strength and cataclysmic intensity of suffering, such as only youth is able to conceive or support. . . . There had been nothing in the young Wolf's output up to this time to suggest that he was capable of such sustained creative achievement—the epic breadth of the design of this Quartet, the daring freedom of its forms, the sheer mastery over stubborn musical material."

Wolf Rosenberg, the annotator of the DGG recording, points out that this work is exactly contemporary with Mahler's *Das klagende Lied*, and that, like the Mahler cantata, it is "far ahead of its time." If its date of composition were unknown, he writes, "one would assume this Quartet to have been written about the turn of the century." Both the Quartet and *Das klagende Lied* were undertaken in 1878, when both composers were 18. A year earlier they had been fellow students at the Vienna Conservatoire (from which Wolf had been expelled), and less than a year later they were even to share lodgings. Both works were evidently completed by 1880,<sup>9</sup> although Wolf was to substitute (if that is the right word) in 1884 a newly composed finale for his Quartet<sup>10</sup>—a finale which establishes a stylistic link to the Italian *Serenade*—and both were pre-eminently *Sturm und Drang* pieces in the hereditary line of Beethoven and Wagner. After that, the two young

<sup>8</sup> *Idem*, pp. 106-8.

<sup>9</sup> See Frank Walker's chronology of the Quartet in *op. cit.*, p. 106.

<sup>10</sup> The existence of an earlier finale has been inferred from Wolf's later reference to his "Quartet from the year 1880" and from a letter written by him in January, 1881, referring to a "recent" private performance of the Quartet at the home of Natalie Bauer-Lechner; but no score survives.

men went increasingly separate paths. But the youthful works in question were to bear the further common fate of remaining unperformed in public for an entire generation—i.e., until *after* "the turn of the century" indeed.<sup>11</sup>

The Quartet was first published in 1903, in a somewhat re-edited version prepared by Joseph Hellmesberger. Aside from extensive alterations in bowing and phrasing, the editor altered the actual music in five separate if brief instances, and he made the *Adagio* the second movement (as, it appears, Wolf originally conceived it), instead of third as he later rescheduled it. A now-deleted Columbia monophonic recording of the work (ML-4821) was made in New York in 1953, from the Hellmesberger edition, by the New Music Quartet (Broadus Erle, Matthew Raimondi, Walter Trampler and Claus Adam), along with the Italian Serenade.

Later, in 1955, the original manuscript turned up at a public auction and was purchased by the Austrian National Library. The Hugo Wolf-Gesellschaft's critical edition, prepared by Hans Jancik, was duly published in 1960.<sup>12</sup> It is this edition, with the *Adagio* again the third movement and the *Scherzo* the second, which is now recorded for the first time by the La Salle Quartet (Walter Levin, Henry Meyer, Peter Kamnitzer and Jack Kirstein), whose rendition holds the field alone.

Despite the textual improvements, my recommendation would have to be divided between the two if the older recorded version were still obtainable. With slower tempi for the *Grave* introduction and for the *Adagio* movement, the New Music Quartet digs in more impressively. Also, the leading violinist, Broadus Erle, plays the difficult high passages in the *Grave* with better intonation and articulation than Walter Levin, his counterpart in the La Salle. But most of the faster passages are beautifully conceived and executed by the latter group, and the final impression is of a strong and vital interpretation. As for the sound qualities, one attribute stands uppermost in my mind. Frank Walker said<sup>13</sup> that he doubted "whether all the details can ever be made to sound clear in performance," since "the texture of the work is often so close." I think that DGG's spacious and well-placed stereo sound helps enormously to come nearer to that goal, or at least to alleviate the claustrophobia we tend to get in the pre-stereo recordings of such closely contrapuntal works—even the best recordings, and Columbia's is quite good for its time.

The Mörike and Goethe settings heard in the double album were all composed at the height of Wolf's career, during that astonishing year between February, 1888, and February, 1889, when he produced more than 100 songs for voice and piano based on the lyrics of those two poets alone.<sup>14</sup> All are sung here with orchestral accompaniment. Eight

<sup>11</sup> The story of another gratuitous insult in Vienna, *à propos* of the Quartet, is related by Walker, pp. 176-7; this 1885 incident directly foreshadowed the above-mentioned *Penthesilea* disaster.

<sup>12</sup> Musikwissenschaftlicher Verlag, Vienna. The Quartet shares a volume with the Intermezzo for String Quartet (1886) and the original version of the Serenade.

<sup>13</sup> *Op. cit.*, p. 107.

<sup>14</sup> Virtually all the songs on which Wolf's chief reputation rests were composed in the years 1888-91. As summarized by Eric Sams, these years gave birth to "over 200 songs to words by Mörike, Eichendorff, Goethe, Geibel, Keller and Heyse." *The Songs of Hugo Wolf* (London: Methuen & Co., 1961), p. 1.

of them are drawn from the versions for solo voice and orchestra which Wolf made of some 27 of his *Lieder* in the succeeding years, while *Der Feuerreiter* is sung in his version for chorus and orchestra.

The original song *Der Feuerreiter* was composed on October 10, 1888. The choral version, subheaded "A Ballad for Chorus and Orchestra" and containing some compositional elaboration of the original voice part and accompaniment, belongs to the autumn of 1892. (Mention of the latter year is missing from DGG's album-notes after the words "October and November," implying that this also belongs to 1888.) Eric Sams said of the work:<sup>15</sup> "Eduard Mörike was adept in the poetry of magic and dream. This ballad is all black magic and nightmare. It is remarkable alike for its vividness and its obscurity, like the strange fire-lit scenes it describes. . . . It is Mörike's own per-fervid imagination that has given legendary force to the bizarre narrative by making it seem true and compelling. Wolf's imagination in turn was fired and fused into music of nerve-flaying intensity."

The *Lied* version was notably interpreted by the tenor Helge Roswänge in Volume VI of the old HMV recordings of the Hugo Wolf Society, and also by the baritone Heinrich Rehkemper on a Polydor record. The effect of the chorus is much more coldly impersonal, thus placing more emphasis on the accompaniment than on the human narration—and particularly upon Wolf's grotesque and prophetic orchestration. Again it is above all certain parts of Schoenberg's *Gurre-Lieder* (*cf.* the choruses of the dead retainers) that are evoked, in anticipation as it were. The closing refrain in each stanza is set to excited reiterations of "*Hinter'm Berg, hinter'm Berg,*" etc., which most unfortunately sound like *Jingle Bells*. The singing of the Vienna Youth Chorus is exemplary withal, and the depth of the recording very effective in its way. I would emphasize that the full dynamic contrast employed here demands a hearing at a high-gain level in order to catch also the smallest whispers. (The sopranos "*Husch!*" is almost non-existent.)

Evelyn Lear sings the other three Mörike settings, whose texts are all intimate and self-searching, and whose music is filled with that devoutness tinged with anguish which is always so moving in Wolf.<sup>16</sup> Although the original compositions were separated in time (one in spring and two in autumn of 1888), the orchestrations were achieved in three consecutive days—September 4-6, 1890—so that they make a rather nice miniature cycle in this form. Sometimes the long-held wind and string chords of the first two (all are slow-moving), along with the solo-violin cantilena heard in the opening song, *Gebet* ("Prayer"), convey a rather Straussian religiosity which tends to repel.<sup>17</sup> But all this falls more convincingly into place as we reach the third, *Wo find' ich Trost?* ("Where May I Find Comfort?"), with its tragic and retro-actively personal outcry:

Lord, Lord, will the night soon be over?  
What shall save me from death and sin?

Miss Lear is at something less than her optimum form in these songs

<sup>15</sup> *Idem*, pp. 83-4.

<sup>16</sup> Hugo Wolf was "a freethinker, like his father before him." F. Walker, *op. cit.*, p. 416.

<sup>17</sup> Richard Strauss' Four Last Songs of 1948, whose lingering sweetness evidently leaves many hovering "between ecstasy and abhorrence," are classically of that genre.

—whether because of insufficient preparation, conflicts of artistic approach, simple fatigue, or what, I would not hazard a guess. She makes up for it in her one other and longest number, the well-known song of Goethe's Mignon—*Kennst du das Land?* Wolf made two orchestrations of this great song, which he originally composed on December 17, 1888. The first one, dating from 1890, was lost in a public conveyance, and so Wolf rescued the song in 1893. The first orchestration was eventually recovered by rare chance and posthumously published, and it turns out to be rather different from the second. The original song with piano is itself so deservedly famous, and so frequently recorded, that it seems incredible neither of the orchestral settings has been put on disc before now. Miss Lear sings the first one, and it would certainly be a pity not to get the second from an artist of comparable eminence—or from Lear herself, perhaps with the other three Mignon songs from Goethe's *Wilhelm Meister*, all of which were set by Wolf.

*Kennst du das Land?* is of course the best-known of these four songs of the waif Mignon, and the finest of the total of ten songs drawn from the pages of *Wilhelm Meister*. The whiff of harp arpeggio in the ritornello of this orchestral version subtly invokes the old harper, who is not physically present, but present in spirit, during Mignon's singing of the ballad to Wilhelm in the novel. This is a subtle dramatic point indeed, since Mignon poignantly appeals to Wilhelm, in her wild and passionate vision, as "beloved", "protector", and "father" in turn. And on the other side of the disc, appropriately enough, Miss Lear's husband, Thomas Stewart, delivers the three *Harfenspieler-Lieder*, or songs of the old harper himself from the same novel, with Wolf's orchestration of December 2-4, 1890.

In these songs, as Frank Walker says,<sup>18</sup> "the composer all the time holds in his mind's eye the figure of the stricken harper, and allows nothing to deflect him from his purpose of tragic portraiture." The orchestral settings look ahead to Mahler's *Kindertotenlieder*, firstly in their sparsely contrapuntal, interwoven lines and chamber-like scoring, and secondly in their tightly controlled inward emotion, breaking out in unrestrained grief only in the third song, *Wer nie sein Brot mit Tränen ass*, which is marked "*Langsam und mit tief klagendem Ausdruck*."<sup>19</sup> I had heard the orchestral settings only once before, in a memorable interpretation by the baritone Dietrich Fischer-Dieskau, with the New York Philharmonic under Steinberg. Fischer-Dieskau is, of course, particularly adept in this kind of orchestral *Lied*. So it is no small compliment to say that I received much the same thrilling effect from Thomas Stewart, with his own inner shaping and his own dark intonation of the words "*Der kennt euch nicht, ihr himmlischen Mächte*" ("He knows ye not, ye heavenly powers").

Finally, in the orchestral setting (dated March 12, 1890) of Goethe's epic poem *Prometheus*, Stewart challenges the long-standing memory of one of the finest achievements of the HMV Hugo Wolf Society series—the performance by the baritone Friedrich Schorr<sup>20</sup>—and of a

<sup>18</sup> *Op. cit.*, p. 244.

<sup>19</sup> Compare Mahler's "*Mit leidenschaftlichem Ausdruck*" (*Kind.* I, bar 59) and "*Mit ausbrechendem Schmerz*" (*Kind.* III, bar 55).

<sup>20</sup> In Volume II (c.1932); accompaniment by Roger Heger and the London Symphony Orchestra.

still earlier recording by Heinrich Rehkemper to boot.<sup>21</sup> So, in addition to the inherent gratification of hearing the electrifying orchestra score in up-to-date stereo sound at last, I am happy to say that the bearded Mr. Stewart also acquits himself well, handsomely bearding Hugo Wolf in his own den. Listen to the utter scorn he puts into the words "eure Majestät"! And since this song (or *scena*, as it might be called) dwells more in the pure Wagnerian realm than almost any other of Wolf's works, we ought to expect no less from a leading Wagnerian baritone, of this or any other day.

In any event, I feel that if there is one poem by Goethe that seems destined to be set by either Hugo Wolf or Gustav Mahler at the height of his powers, it is *Prometheus*.<sup>22</sup> Schubert's setting, in the opinion of Frank Walker,<sup>23</sup> "for all its noble qualities, cannot really be compared with Wolf's mighty tone-poem, principally because the requisite notes of burning anger and contempt were not in Schubert's nature." And only the orchestral version of the Wolf song, he feels, fully displays the magnificence of Wolf's conception: "In the opening bars of the orchestral introduction we feel the hero draw himself up to hurl his defiance in the face of Zeus, whose presence is revealed in the lightnings, the thunderbolts, and the menacing growls that follow. Then above the raging storm is heard the voice of Prometheus in proud mockery, as he compares the god's assaults on oak and mountain-top to the idle pastime of a boy beheading thistles. At each fresh climax of audacious defiance the fury of Zeus, the thunders and the lightnings, are renewed, until in the end they are felt only as the expression of the god's impotence in the face of Prometheus's independence."

Could there be any doubt that Wolf had his own works and the Musical Establishment at least subliminally in mind when he set the ringing challenge of Goethe's final stanzas?:

Who aided me  
Against the overweening Titans?  
Who rescued me from death,  
From slavery? . . .  
Have I not been shaped into man  
By allmighty time  
And eternal destiny,  
My masters and thine?

Dreamest thou, perhaps,  
That I should hate life,  
Flee into the wilderness,  
Because all my visions  
Do not blossom?

Here I sit, forming a people  
In mine own image,  
A race even like myself,

---

<sup>21</sup> Reissued on Scale mono LP 809 (a miscellaneous Rehkemper recital), with an unidentified orchestral accompaniment; from acoustic Polydor 66004 of c.1924/5. In recent years Hans Hotter and Dietrich Fischer-Dieskau have both recorded the piano version with Gerald Moore accompanying.

<sup>22</sup> Mahler even paraphrased passages from the poem liberally in his much-noted letter of June 17, 1879, to Josef Steiner. See Gabriel Engel's *Gustav Mahler, Song-Symphonist*, p. 25.

<sup>23</sup> *Op. cit.*, pp. 252-3.

*Chord and Discord*

To suffer, to weep,  
To enjoy and to gladden each other,  
And to defy thee,  
As I do!

"The last words, '*wie ich*,'" writes Eric Sams,<sup>24</sup> "are echoed by strong hammering chords, as the forger of mankind with one gesture turns his back on Heaven and resumes his human creation."

JACK DIETHER

NOTE: No officer or director receives any remuneration for services rendered as officer or director.

Among American artistic developments of recent years the rebirth of interest in the music of Bruckner and Mahler is second to none in significance. When *The Bruckner Society of America* was founded on January 4, 1931, performances of these two composers by our major musical organizations were not merely rare, but also ineffectual, because American music-lovers had no adequate approach to the proper appreciation of the art of either Bruckner or Mahler. Therefore the *Society*, having adopted as its chief aim the fulfillment of this void, published the first biographies of these composers in English and issued a magazine, CHORD AND DISCORD, devoted almost entirely to discussions of their works.

The *Society* solicits the cooperation of all who are interested in furthering this aim. Inquiries concerning membership may be directed to Charles L. Eble, President, Box 1171, Iowa City, Iowa 52240.

## IN MEMORIAM

This final issue of *Chord and Discord* is dedicated to the memory of Jack Diether, a frequent contributor of scholarly articles to this journal and its editor at the time of his death. He was the author of album notes for numerous recordings as well as program notes for various symphony orchestras and wrote the scripts for the Canadian Broadcasting Corporation for *Portrait of Anton Bruckner* (1967), *Portrait of Gustav Mahler* (1968), *Life of Beethoven* (1970), *Ralph Vaughan Williams* (1972), *Edward Elgar, Portrait of an Enigma* (1973). He was founder of New York Mahlerites in the mid-70s, member of Gustav Mahler Society, USA, Music Critics Association, Musical Academy of Recording Arts and Sciences, and Dancing Critics Association. In *Baker's Biographical Dictionary of Musicians*, 8th edition, his 1969 *Chord and Discord* article, "Notes on Some Mahler Juvenilia", is given special praise.

# MAHLER'S RÜBEZAHL: AN HISTORICAL INTRODUCTION

by DIKA NEWLIN

In 1958, Donald Mitchell had to write, concerning the manuscript of Mahler's RÜBEZAHL libretto, "There is no account of its fate."<sup>1</sup> Since then, a copy of the libretto—unfortunately, not accompanied by a score—has come to light among the papers left behind by Alma Mahler. A microfilm of this material is available in the Music Division of the New York Public Library. While the libretto as we have it is not quite complete, it gives us a fairly clear picture of what the work was planned to be.

We first hear of the idea of a fairy-tale opera by Mahler in 1879. At that time, Mahler and Hugo Wolf were still good friends. Alma Mahler tells the following story:

One day, . . . Wolf got the idea of writing a fairy-tale opera. This was long before Humperdinck and undoubtedly an original inspiration. They considered many themes and finally hit on Rübèzähl. Mahler was young and impulsive and he began on the libretto that very night and finished it the next day. In all innocence he took it to Wolf for him to see. But Wolf also had made a start and was so put out by Mahler's having stolen a march on him that he threw up the whole idea and never forgave him. Outwardly they remained on friendly terms for some time longer, but they avoided each other's society. Many years later they met on the way to the *Festspielhaus* at Bayreuth and passed by with a curt: 'Hallo.'<sup>2</sup>

This account is not entirely accurate. For one thing, the idea of a fairy-tale opera was not exactly an "original inspiration." Even the Rübèzähl theme, as Mitchell points out, had been used in opera before; works by Joseph Schuster (1789), Wilhelm Würfel (1824) and Friedrich von Flotow (1853) have the mythical mountain spirit as protagonist. It seems unlikely, too, that Mahler wrote the libretto overnight—though admittedly certain flaws in its composition suggest hasty writing. On the basis of available information (Mrs. Mahler's comments, letters to Anton Krisper and Friedrich Löhr, a remark in Natalie Bauer-Lechner's memoirs), we might prepare the following chronology, as suggested by Mitchell: 1879—genesis of idea; 1880 or 1881—preparation of text; 1882—work on music; 1885—abandonment of project. But, many years later, Mahler had still not forgotten the work. He even searched out the libretto for Max Marschalk, the Berlin critic and composer, who, he thought, might want to set it to music. Later, though, Mahler conceded that it might be difficult to do anything worthwhile

<sup>1</sup> Donald Mitchell, *Gustav Mahler, The Early Years* (London, 1958), p. 57.

<sup>2</sup> Alma Mahler, *Gustav Mahler, Memories and Letters*, (tr. Basil Creighton, London, 1946), p. 53.

with this "youthful fantasy." Yet it seems that, as Mitchell has convincingly stated, the work, "however defective when viewed dispassionately, still retained for him a certain glamour. It is impossible, despite the frustrating absence of the music, not to feel RÜBEZAHN as a work of special significance in Mahler's early development. He never did, in fact, quite grow out of it."<sup>3</sup>

We know little of what the music of RÜBEZAHN was like. Paul Stefan mentions that the main theme of "Maitanz im Grünen" (March 5, 1880; later known as "Hans und Grethe") was used as a chorus. We find this passage in Scene 4, in the "ring-around-the-rosy" chorus of the Attendants. The text is identical with that of the song:

Ringel, ringel reih'n!  
Wer fröhlich ist, der schlinge sich ein!

Later in the scene, Emma drifts dreamily into further reminiscences of the song:

Und ist doch der Mai so grün  
Und die Lüfte, sie zieh'n—

and:

Wer ein liebes Liebchen küsst,  
Wie glücklich der ist.

Another textural parallel—suggesting, possibly, a musical similarity—may be found in Scene 5. Ratibor, pining for the absent Emma, sings:

In Busch seh' ich ihr Haar nur weh'n—  
am Himmel ihr blauen Augen steh'n  
Und mag ich träumen oder wachen  
Mir klinget immer ihr silbern Lachen!

Compare the following lines from the third song of *Lieder eines fahrenden Gesellen*:

Wenn ich in den Himmel seh'  
Seh' ich zwei blauen Augen steh'n!  
O weh! o weh!  
Wenn ich im gelben Felde geh',  
Seh' ich von fern das blonde Haar  
im Winde weh'n!  
O weh! O weh!  
Wenn ich aus dem Traum auffahr'  
Und höre klingen ihr silbern Lachen  
O weh! O weh!  
Ich wollt', ich läg auf der schwarzen Bahr,  
könnt nimmer, nimmer die Augen aufmachen!

In more general terms, Paul Stefan states (basing his information on comments gleaned from Mahler's friends), "The bright humour, and the dark, biting perverse style à la Callot, which we know from the

<sup>3</sup>Mitchell, *op.cit.*, p. 139.

lyrical and symphonic works, existed already in RÜBEZAHL. Especially a March of the Suitors (Scene 1: D.N.) is remembered as accompanied in the maddest of moods."<sup>4</sup>

With these few hints, we must be content. The music of RÜBEZAHL is gone forever, but all the more must we appreciate the unique contribution of Julia Morrison, who has made Mahler's drama live again for the modern reader.

## Foreword

BY Julia Morrison

To what extent is one justified in trying to improve a script such as this RÜBEZAHL which Mahler left? I decided that if I were going to work with it at all, I must take the chance of making it as good as its potential would allow but without violation of any of Mahler's aesthetic intentions. His script bears many traces of rapid composition: character development and differentiation, dramatic progression, economy, and diction are not given their due because of this, probably, and it is such flaws that I have tried to lessen.

Neither strict translation nor adaptation, this English work might rather be called a version just as many folk tales, among them FAUST, HALFCHICK, RAPUNZEL and RÜBEZAHL, exist in many forms—versions. Here, my purpose has been to stay as close to Mahler's work as I could but to take liberties where necessary to make a work which is more singable, speakable, believable, economical, etc. Such liberties include:

Differentiating characters via speech patterns of various sorts, having them speak in manners of dissimilar epochs.

Giving *Rübezahl's* character an especial timeless quality, also setting him more apart, by framing his words in a distinctive kind of period English.

Retaining passages crossed out in the original script. Since much of Mahler's work is still missing, all that exists and is unreplaced and useful should be kept.

Revising some verse forms, using rhyme more freely and less frequently, employing occasional prose for variety; and changing punctuation—mainly reducing the number of exclamation points!

Completing stage directions where needed.

Adding twentieth-century American lines to the chant, "Ring Around the Rosy," (page 18), to round it off and add portent.

Altering the sequence of the last pages in Mahler's script; this is indicated here within the English version.

Unfortunately, we have no "Prologue", rather only some tantalizing references to it, as on pages 9, 15, and 17. We know from at least one

---

<sup>4</sup>Paul Stefan, *Gustav Mahler, A Study of His Personality and Work* (tr. T. E. Clark, New York, 1913), p. 21.

German form of the tale that Rūbezahl changed himself into a laborer in order to live with human beings and so learn about them: thus, the Charcoal Burner referred to on page 9 is consistent. Also, as on pages 7 and 9, the Princess (Emma) was first seen by Rūbezahl while at play and with her attendants. It is strange that no character, even Emma, ever refers to or addresses Rūbezahl by name until the crowd scene at the end of Mahler's work; in the old tale, in one form at least, no character uses the name at all, and even the narrator is sparing with it. In one version, Emma creates several kinds of messenger: bee, cricket, magpie, and horse.

Mahler quotes his own song exactly on page 21. (See Dika Newlin, "Mahler's RÜBEZAH: AN HISTORICAL INTRODUCTION," above.) This seems promising as a personal and fitting variation.

All page references in this Foreword refer to my English version, RÜBEZAH, TURNIP COUNT

## RÜBEZAH, TURNIP COUNT

A Libretto by GUSTAV MAHLER

English Version by JULIA MORRISON

### characters

King	Kunigund
Servant	Ratibor
Chancellor	The Shepherd
Court Marshal	Falcon
Prince Alpha	Horse
Prince Beta	Sparrowhawk
Prince Gamma	Ministers
Emma	Courtiers
Rūbezahl	Servants
Brinhild	Elves
Irmentraut	Spirits
Adelheit	Rural People
Edelgard	Wedding Guests

### Scene One

(Throne room in the royal palace. Ministers, courtiers, servants. KING enters in a dressing gown, crown upon his head; in his right hand is the scepter, in his left is the imperial orb.)

EVERYONE  
(hymn-like)

O King! O King!  
To you we homage bring.  
God grant long life to you.  
May good health be yours, too.

KING

Thank you, my dear subjects. I always strive to rule with wisdom and mercy.

(to SERVANT)

Is my daughter Emma up yet?

SERVANT

Early this morning she went down to the forest with her attendants.

KING

What else has been happening in my kingdom? Haven't any widows and orphans been oppressed? Or merchants been plundered? Woe to doers of wrong!

CHANCELLOR

Your wisdom spreads peace and justice among your subjects. A profound calm prevails here.

KING

And another thing: I am informed that lately the spirits of forest and mountains have been haunting the minds of my people. What is this? Are all my scientists and scholars sleeping? I want the newest results of scientific study to be made known in every corner of my realm. If need be, they should be distributed in writing!  
Enlightenment! Enlightenment!

MINISTERS

Our Lord and King, your will  
We hasten to fulfill.

(MINISTERS exit)

(COURT MARSHAL enters)

COURT MARSHAL

Three princes just arrived from Greece, await in hope they may approach your throne, your Majesty.  
Will you receive them now?

KING

Bring them to me. I'll receive them here and now!

(COURT MARSHAL exits.

KING sits on throne.

March-type music.)

The princes, ALPHA, BETA,  
GAMMA, enter)

ALPHA    BETA    GAMMA

Hail, hail, O King!

EVERYONE

Hail!

(music stops)

ALPHA

(stepping forward; with pathos)

Near bright Eurota's waves agleam with swords  
There, where greatest heroes' spirits wander,

I grew up to fight the foe with courage.  
 Loftiest bards for my deeds scarce find words!  
 My father sits upon his country's throne.  
 I am Alpha, his beloved son the first.

KING

Take a rest, after such a long journey. Prince Alpha, welcome to my  
 flourishing land! That speech wasn't long. Do sit down.  
 (indicates a seat next to his throne)

BETA

(stepping forward)

In Arcadia's verdant valleys  
 Where the flowers are sweetly nodding.  
 And the songs of nightingales  
 Flow into the tenderest hearts,  
 Rocked by zephyrs gently smiling  
 Stood my cradle, promise-filled.

Where hearts are all charmed and enchanted,  
 There my victories are willed.  
 Hellas' valleys proudly call me  
 Sweet Arcadia's noblest son.  
 But my father, with affection,  
 Simply call me: Beta-kon.

KING

You just sit down with us, Prince Beta-kon. It's plain to see that you're  
 a worthy son.

GAMMA

(stepping forward)

By nature I'm rather silent and shy,  
 And not very fluent in my speech.  
 My name is Gamma. I've come here from Greece.  
 My royal father sends regards to you.

KING

Be seated, noble Prince. When you return  
 Please lay our thanks at your royal father's feet.  
 Now tell me, worthy princes that you are:  
 Why have you journeyed to us from so far?

ALPHA -

O King, the fame of your daughter's beauty has spread even to Greece.  
 It made our thoughts soar on such mighty pinions that they carried us  
 immediately to the Bohemian Mountains.  
 So here we are, ready to try our luck.

KING

Alas, poor Princes, you simply do not know how hard-hearted against  
 all men my daughter Emma is. Not one has yet succeeded in winning  
 her favor. Each suitor has been driven off in disgrace and ridicule.

GAMMA

Well, leave that to me. Much speechmaking I gladly turn over to others, but when it's a matter of capturing a woman's heart, I know how to hold my own.

KING

All right, try your luck, then!

EMMA  
(offstage)

Father! Father!

KING

Ah ha! Here she comes!

(EMMA storms in wildly. When she sees the princes, she stops short.)

Now, my dear, what's the matter?

EMMA

Oh! Father, there are ghosts in the woods.  
And we            we only wanted—

KING

—You wanted            what?

EMMA

We only wanted            (quickly)            to take a walk.  
Then out of the mountains came a shriek.  
With a scornful sneer and a ghostly squeak  
*It*, *It* chased us around. Then all at once,  
We came flying out of the woods in a bound.

KING

But, dear child, aren't you old enough now to be giving up all this nonsense? Again, you've let yourself be    uh, terrified    or uh, d-d-distressed and uh, f-f-f-frightened by a simple falling rock.

EMMA

But Father! I heard the voice of the Mountain Spirit, and it was perfectly clear.

KING

No. It must have been the wind, or some other natural sound.

ALPHA

In truth, she is a maiden fair.

BETA

I've never seen a lovelier.

EMMA

Who are these dreadful men, anyway?  
They look at me as if I were for sale!

KING

More suitors for your hand, my dear.  
These three are princes, who were lured from Greece  
When they heard the news of your beauty.

Ooooooh! I feel very strange.

EMMA

KING  
(to the PRINCES)

Well, here's your chance.  
So try your luck!

(The PRINCES approach EMMA)

ALPHA  
(with a grand gesture)

The greatest hero of the age  
Approaches, shy, his lovely sweet.  
He who was never overwhelmed  
Now lies quite vanquished at thy feet.

Hot the clash of gleaming swords,  
Hot the spearheads flailed above  
The foemen's heads in a wild affray,  
But hotter yet my fervent love.

EMMA

Well, well, Prince, that's very nice.  
But must you say it twice!  
Let's get on now.

(ALPHA, offended, sits.)  
BETA

Not with slaughter of the foe,  
Not with clang of mighty swords,  
Not with grim and bloody words,  
Will I my beloved woo.

Where the nightingales are singing  
And the zephyrs softly blow,  
Where the flowers are sweetly blooming,  
There I pray my fate to know.

EMMA

Prince Number Two, your words display good will.  
But why should I grant any wish of yours?

(She makes gesture of dismissal.  
BETA, offended, sits beside ALPHA.)

GAMMA

O perfect maiden, fair to see,  
Only my eyes may speak to thee.

(stammering)

My sinful heart with passion throbs,  
My soul is in a fevered daze.

EMMA  
(laughing)

Your words are shortest of all, Prince,  
So you merit the longest praise.

ALPHA  
(insistently)  
Yet now, my Angel, may I hope?

EMMA  
(PRINCES approach, interested)  
Of all the men I've ever met  
I think you three are the most absurd.  
(EMMA laughs uncontrollably.  
PRINCES step back.)

BETA  
Woe! Alack! Are those your final words?

KING  
(softly; to EMMA)  
If you keep talking like this  
You'll drive these suitors away, too.

EMMA  
(stamping her foot)  
So—why didn't they stay in Greece?  
I do not want them here.  
I never sent for them

ALPHA    BETA    GAMMA  
(to each other)  
How very strange!  
How unusual!  
Odd!

(Their voices fade to a murmur.  
Violent commotion offstage.)  
COURT MARSHAL  
(offstage)  
Stand back there! How dare you presume—  
(The door is flung open hastily.  
RÜBEZahl enters. He wears a  
long, fox-red beard and looks exactly  
like the CHARCOAL BURNER in the  
"Prologue." With his club he fends off  
the COURT MARSHAL who follows  
him anxiously.)  
RÜBEZahl

Begone, thou dog.  
(COURT MARSHAL shrinks back in  
fright. RÜBEZahl steps forward.  
Confusion.)

KING  
What is this piece of riff-raff?  
RÜBEZahl  
(looking around in amazement)

Aha! Here see I round about  
 Yet more fayre ladies, flowre harvesters  
 Like as her without in forest wyde.  
 Knew I not this bee the upper world,  
 Yet would I think me in my turnip field.  
 But dallies here that selfsame damzell?  
 How now: what is it with those little men?  
 Meseemeth they bee pyning after lasses!

(spies EMMA; rushes joyfully to her.)

Lo! Her I do espy, the timid fawne!

(taking her hands)

O lovely lady, wilt thou with me come?

(EMMA screams and faints.)

She falls to ground. What ho! Cannot ye stand?

KING

(very upset)

What stupid babblings!

He acts as if this were a stable.

(Everyone moves to attack RÜBEZAHL.  
 He draws himself up tall and laughs vigorously.)

RÜBEZAHL

Haha, haha!

Herewith come the worms, acreeping.

Avast! Withdraw! Else bee your bones abroken.

(All shrink back, terrified. KING flees farthest, followed closely by PRINCES.)

KING

(onstage but hidden)

Now then! Quick! Stop all this!

Throw him in prison. He'll pay with his life.

(Crowd tries to press forward at RÜBEZAHL. He grows more and more angry.)

RÜBEZAHL

Ha! Foolish groundlings. Ha! Ay me!

Drawe abacke, ye cursed miscreaunts!

How like a swarm of flies they buzz about.

(Lifts EMMA in his arms.)

Come thou with me. Leave them to murmur here.

(RÜBEZAHL disappears with EMMA through the ceiling of the great hall. EVERYONE stares after him, motionless and confused.)

curtain

Scene Two

(RÜBEZAHL'S subterranean kingdom. Fantastic splendor, grottoes, arbored walks. EMMA lies unconscious on a couch of flowers. RÜBEZAHL stands shyly beside her, leaning on his club, at a loss as to how to proceed.)

RÜBEZAHL

Alas, she lies all whyte and still.  
How can I help the girl?  
What ails me now—my selfe is straunge  
And swiftly beats my hart, my hart.

Sithens thou didst gaze on me that while  
All courage hath me fled.  
Meseemeth now I bee thy prisoner  
Whylest thou bee lost in heavye sleep.

A prisoner? Yea, now I understand  
What in that Upper World poore men must do.  
For me it is to seeke the fayrest flowres  
Like poor wights I saw sporting in the forest.  
(He looks at his club.)

But lo! Why are ye in my hand?  
Alas, I wote not why yet am I sternly warned.  
Avast! Thou art no prise.  
Begone from me!

(Throws the club away. Bends over  
EMMA.)

Why are so tightly closed her eyes?  
The lips so firmly prest. Bittre my griefe.  
So lies the damzell there in dreadfull sleepe.  
Ay me! Could she be dead?

(Kneels beside her.)

So holie were it now with her to dy,  
Thus for to win the fraile and silent maid.  
(He lifts her head and presses close.  
EMMA opens her eyes.)

EMMA

Oh!

(RÜBEZAHL starts back, then  
stands embarrassed.)

Where am I? Oh!           It seems so strange.  
(She sees him.)

Woe is me! And it's not a dream.  
(She springs from the couch. Bursts  
into tears.)

RÜBEZAHL

What mean these painful teares? What sorrowes?  
 Tell, O tell the cause. Can I thee soothe?  
 Here stands thy slave afyre with eagerness  
 Abold to serve, all wishes to performe.

EMMA

Get away from me! How dare you come so near?  
 O Father, if I'd only listened.  
 You villain, have you forced me from my home  
 Just to kill me with your horrible presence?

RÜBEZAHL

(stepping backward, shy and embarrassed.)

Hast dreadfull hate for me?

EMMA

(in violent rage)

How can you ask that, foul betrayer?  
 You broke into our peaceful fold like a ravenous wolf.  
 Why are you up on our earth anyway, monster?  
 Say exactly now: what do you want from me?

RÜBEZAHL

(disconcerted)

I           What want I           from thee?  
 That truly know I not.  
 But wait: yet can I say!

EMMA

Stupid spirit!  
 So tell me. That is, if you really know.  
 Do I always have to ask you twice?

RÜBEZAHL

I           alas           in truth, it is forgot.

EMMA

O monster. If you are that dense  
 Can't you at least restrain your tongue!  
 O Brinhild, Brinhild, truest friend!  
 And each of my dear sisters.  
 O Edelgard and Irmentraut!  
 Where are you? How can I find you?  
 I'll never hear your songs again  
 and never see you.           Nevermore!

(Weeping, she throws herself on the couch.)

RÜBEZAHL

(with joy)

Must you on your sisters think?  
 Behold: I go to fetch them!

Tarry yet awhile, my noble maid.  
Right speedily am I away and back. An instant more—  
(he rushes out)

EMMA

(on the couch; burying her head)

How could this have happened to me?  
I wish that I were dead  
And free from all these pains.

(cries)

CHORUS OF ELVES

(Offstage. As they sing, the light  
turns to a rosy twilight. EMMA  
ceases weeping as she falls asleep.)

Evening now is softly falling,  
Bathing flowers with dew and stilling  
Pains from days of burning sun,  
Floating in to blossomy bowers,  
Lingering with woodland lovers,  
Stroking them with tender hand.  
Evening's husky wing is spreading  
Over valley, stream and meadow.  
Softly glows the moon's full shine.  
Rose and grape, grown tired of climbing,  
Close their eyes now, gently smiling,  
And forgetting all their pain.

Down your tender cheeks so glowing,  
Bitter tears are swiftly flowing,  
Poor grief-stricken mortal maid!  
Sleep, yet sleep, and have no fearing,  
For the sun has left our mooring.  
Evening brings the mildest tide.  
Heia, heia  
Eia popeia.

(EMMA is asleep. Deep twilight. In  
the background her dream-picture  
suddenly appears glowing: RATIBOR  
lies under trees, gazing up at the sky  
through the leaves. EMMA talks in  
her sleep.)

EMMA

How fine he looks in this rosy light.  
I'm here, beloved Ratibor.  
Come on. Can't you see me?  
Down here in the valley.  
Why can't he find me?  
Here there lower farther now!

Come on! Come! I cannot reach you, dear.  
 Don't you see: I am in chains,  
 Imprisoned here by floral ties.  
 Please come.  
 Won't you lie down with me?  
 But watch out, my darling: there are nettles here.  
 Come, come, please come!

(stretches out her arms as if to  
 embrace him; RÜBEZAHL enters)  
 RÜBEZAHL

Behold: I am returned.  
 But say: bee I not quickly back to take my place?

(The apparition stops abruptly.  
 Stage assumes its former lighting, etc.  
 EMMA, awakened by RÜBEZAHL'S  
 voice, jumps up. Realizing that she  
 has just reached out for him, she  
 turns away blushing, eyes down-  
 cast.)

RÜBEZAHL

Girl, what means all this?  
 Art reft of tongue?  
 Look round about.  
 Here is devise for pleasure, thy tyme to passe.

(EMMA does not look at him.)

Lo verily! thy sisters do appear.

EMMA

(She turns quickly to look, but is dis-  
 appointed.)

Are you trying to make a fool of me now?

RÜBEZAHL

So heare me then!  
 All in this basket rest those thou lov'st deare,  
 To be possest by thee.  
 Onely take this wand  
 And touche the turnips there.

(hands her a wand)

Withal they will arise about thee here.  
 But prithee, lady, touche them not againe;  
 Lest their eyeliddes then be closed  
 And to their graves they reele,  
 Once more turnips to bee,  
 Ere scattered are as dust.

EMMA

(She snatches the wand from him.)

Is this perhaps another one of your jokes?

(She hurries to the basket; touches a  
 turnip.)

O please, dear Brinhild, come

BRINHILD appears. They embrace.)  
(to RÜBEZAHL)

How can I ever thank you?

RÜBEZAHL

It is but well I wote my meet reward!

EMMA  
(to BRINHILD)

Beloved sister, aren't you thrilled?

Now I can summon them all—right here!—to me.

(She runs to the basket, touches one  
turnip after another.)

O Edelgard and Irmentraut,

O Adelheit and Kunigund,

Come, please come. Return to me.

(With each name she says, another  
ATTENDANT appears. Finally all  
are present, just as they were in the  
"Prologue." Embraces, kisses.)

EMMA  
(to RÜBEZAHL)

So, that is good. Very good indeed. Now, you can just go.

Yes! Leave. Why should you have to stay?

(impatiently)

Get out! Leave us in peace. We don't need you.

RÜBEZAHL  
(Depressed, he looks at EMMA in  
surprise.)

Lady, what boots it thee thy soule

With restlesse anguish often so to stir?

EMMA  
(restrained)

Didn't you hear me; why do you just stand there?

Just go on out and pick us some flowers.

RÜBEZAHL  
(bewildered)

But whereto howso flowres, deare lady?

EMMA

Now! To decorate our hair.

RÜBEZAHL  
(to himself)

How I do feel me. No, I wote not how.

EMMA  
(at the very edge of her patience)

Will you get going? And don't keep us waiting!

RÜBEZAHL  
(sighing)

Tender lady, soft! forgive!  
 Skill have I not but yet will lerne  
 That I may serve thy every neede.

(he exits)

EMMA

At last the stupid fellow is gone.  
 Now you must tell me everything.  
 O say: did Father scold because  
 I am no longer at his side?

BRINHILD

At first he was startled and troubled,  
 But then those emotions subsided.  
 And through all his land he gave order:  
 The one who would free you be given  
 His own Princess Emma as bride.  
 Then from every suitor came swearing  
 And oaths he would find you or die.

EMMA  
 (quickly)

And Ratibor?

BRINHILD

What a fool!  
 He sits in the woods, weeping, moaning,  
 And nobody knows what is wrong.

EMMA

If he only knew that I am here  
 He'd speed right now to rescue me.

BRINHILD

Instead, he waits in deathly fear.

EMMA

Oh, how I wish that I were free.

(with sudden decision)

Still, now I'm sure: he'll rescue me,  
 Or else I never could be free.

(hurries to the basket)

Now, dear little wand, grant me this wish:  
 Compose an invocation for my knight.

(She touches a turnip. A  
 SPARROWHAWK flies out.)

Fly, O fly, fly far and free,  
 Free and fast as you can fly  
 To my dear love so loyal and true,  
 Lying under the greenwood tree.  
 Yes! Fly to my dear Ratibor.  
 Alight and whisper in his ear:

Your Emma is a prisoner  
 In the Spirit-King's domain.

She prays that you will rescue her,  
Make her your bride, and still all pain.  
Fly, O fly, fly far and free,  
Lead my knight to victory!

(SPARROWHAWK flies away)

EMMA

(to the ATTENDANTS)

Come on, take hands, and form a ring;  
Let us rejoice and dance and sing.

(EMMA and ATTENDANTS take hands  
and sing the song from the "Prologue".  
As they dance and sing: the

curtain

Scene Three

(This does not exist in the original  
manuscript as it is known now.  
These lines are written at the end of  
Scene Two, however, and might  
have been the germ of the missing  
scene:

Page 25 diagonally in the margin:

A cunning little bee so fine and pert,  
Will be my faithful messenger.

(These lines supposedly belong to  
EMMA.)

Scene Four

(RÜBEZAHL'S subterranean king-  
dom. The stage is empty.)  
CHORUS OF SPIRITS  
(offstage)

(The text is missing)

EMMA

(fleeing across the stage in sudden  
terror; ATTENDANTS trip along  
behind her, and they are now old and  
disfigured)

Help! Help! Spirit, you are master of these witches.  
Exorcise these horrible specters.

ATTENDANTS  
(in confused exclamations)

Why do you run  
With cries of doom?  
We don't pursue!  
Stay here with us.

EMMA

What do you want?  
I don't know you  
With those wrinkled brows  
And cheeks so pale.

ATTENDANTS

Youth must fade.  
Virtue must stay.  
You want to play with us no more?  
We cannot please you further?  
Well then, beware the day when we judge you!  
(They threaten EMMA with their  
crutches.)

EMMA

In heaven's name, leave me alone.

ATTENDANTS  
(scolding)

You must dance and play.  
We will not free you.  
Since you made us, so you now must bear us,  
So out of your life you cannot force us!  
We too had youth and grace. But now we're old.

EMMA

Get away from me, you spooky pests.

ATTENDANTS  
(crowding around her)

Let's all admire her dainty airs and graces.  
This sugar doll can't bear our ugly faces.  
(they hug EMMA)

Stop screaming now. Come here: it's nice and cozy;  
So we can skip to ring-around-the-rosy.  
(they start dancing with EMMA)

Ring-around-the-rosy,  
Pockets full of posy.  
Ashes! Ashes! All fall down.  
A happy girl will frisk with us.  
Come on: dance!

(EMMA screams, frees herself and  
falls.)

RÚBEZAHL  
(entering quickly.  
to ATTENDANTS)

Bee banisht now to lumpes of earth, bee dust  
Forlorne, to sleepe as ere you were created.

(ATTENDANTS, making strange  
sounds, sink to the ground and  
change to a small heap of dried  
turnips. RÜBEZahl bends over  
EMMA and lifts her.)

RÜBEZahl

My deare, have done with dreading:  
Those fearfull hags are vanisht.

(EMMA regains consciousness.)

Thou art nathlesse trembling!

EMMA

Are they really gone?

RÜBEZahl

Look you now. They are as once they were.  
The turnips, too, have gone, returned to dust.  
Becalm ye, sweet fayre childe.

EMMA  
(horrified)

Such a gruesome place.  
Malicious Spirit, you have deceived me.

RÜBEZahl

I acted onely as thou didst demand.  
What is it with thee, then?

EMMA  
(enraged)

Spirit, that was unfair.  
You tricked me horribly.

RÜBEZahl

Thy attendants I brought at thy request.  
A sport for thee made I as best I could.

EMMA  
(sobbing)

And I am left alone again in this ghastly cave.

RÜBEZahl

Tyme hast thou now to think.  
I wait on thy command.  
My Spirit Realm would I transform for thee!  
Behold yon basket, to the brim 'tis filled.  
A word, and any wish is thine anew.

EMMA  
(angrily)

What should I do with these flickering shadows,  
These creatures which have no flesh nor blood,  
These pictures which have no bad nor good,  
That are here today but tomorrow gone?

RÜBEZAHL

What bee here lacking in my lands?  
 Asked I not all my regiments  
 Over thee to hover at all tymes?

EMMA

An empty picture is no good to me.  
 Your magic is most sickening.  
 I have no real life here, only a dream.  
 Free me from this annoying custody.  
 Otherwise I'll die of the privation.

RÜBEZAHL

Before thee fades away my spirit vigor.  
 Helpless then I, like to a childe so feeble.  
 Hast thou not word for me like mine for thee,  
 My goodly workes all proven so sincerely?  
 Before thee fades away my spirit fyre.  
 Helpless then I, like to a childe so faint.

EMMA

Free me from this annoying custody.  
 Otherwise I'll die of the privation.

RÜBEZAHL

This dying—woulde it be so deeply sadde?  
 Meseemeth more 'tis love itself attains.

EMMA

You monster, get away from me,  
 So I won't have to look at you again.  
 You are a total loss to me  
 Because your nature is a mystery.

(violently)

Get out of here. Leave me to myself.

RÜBEZAHL

I wait upon thy merest whim.  
 Though farre I bee, thou hast my thoughts.  
 But now, this while, may I not serve—

EMMA

—Create some earthly flowers for me.  
 I'm loniely for those fragrances  
 That remind me of my homeland.  
 Let them share my sorrow now.

(RÜBEZAHL exits sadly)

(Here there is probably another gap in the script. At the beginning of this scene, an empty stage was called for, but stage directions indicate otherwise now.)

EMMA  
(reclines on her couch of flowers)

Surround me with your bliss,  
Beloved loneliness.  
Bring dreams of earthly suns  
And forest holidays.

(The music leads into a gentle,  
dreamy tune. Pause. EMMA sings to  
herself.)

EMMA  
"But in May the world is green  
And the zephyrs do blow."  
(she sits up)

Will I ever see you again,  
Green country of my home?  
Am I trapped here in the shadows?  
Will I come back to life?

"In the sweetest lover's kiss  
What splendors, what bliss. . ."

O darling love, once mine so dear,  
Have you now forgotten me?  
(after a while)

Or—did my message get lost?  
Could it be my messenger didn't sing it?  
(She jumps up, violently.)

Yes, of course: my message was lost.  
My bird didn't reach the lights of earth.  
I'll send a stronger messenger right now  
To take the information to my love.  
(She hurries to the basket and  
touches a turnip with the wand.)

Falcon clever, strong and white,  
Fly forth with boldest flight.  
Fly to my dear Ratibor,  
Fly and whisper in his ear:  
Your Emma is a prisoner  
In the Spirit-King's domain.  
She prays that you will rescue her,  
Make her your bride, and still all pain.

Fly, O noble falcon, free,  
Lead my knight to victory!  
(FALCON flies off. EMMA gazes  
after it.)

EMMA

Ah, to have wings like those!  
Then I'd soon reach my goal.  
But—could I ride on his back?

(Sudden decision. Joyous.)

But yes! I'll rush to Ratibor. Why not!  
I'll simply make myself a horse. And then  
Let him bear me far from this evil land.

(Hurries to the basket.

RÜBEZAHL enters with a huge bouquet. EMMA is frightened and angry.)

Oh! Monster! Are you here again?  
Such a troublesome thing.

(RÜBEZAHL looks at her in surprise. She brings herself under control.)

I mean to say: uh, your service was quite fast.

RÜBEZAHL  
(very shyly)

Lady, here be as thou not long hath wished  
The fayrest flowres of my purest fields.  
Lest these be fewer than thou hast desired  
Still more remain, full bloomes to fetch for thee.

EMMA

Ha ha ha!

A thousand instead of a small bouquet.

(RÜBEZAHL looks at her, astonished.  
She collects herself.)

Give it here! It's huge, I must admit,  
But still it pleases me nonetheless.

(to herself)

Now, feminine wiles, stand by me.

(aloud)

Indeed, you show great faithfulness.

I know the two of us will get along.

But how much do you love me?:

That is what you'll have to prove.

So go out to your fields

And count each turnip you own,

Missing not a one.

Should you miss even one,

(glances toward basket, laughing)

You will be at the end of your luck.

RÜBEZAHL  
(enchanted)

With brightly glowing fyres I burn for thee.

Shouldst thou command, all mountains would I raise.

(RÜBEZAHL dashes out.)

EMMA

(She goes to the basket, which now contains but one turnip. Joyously.)

And you, my last remaining dear,  
Change to a wingèd horse right now.  
Then take me quickly away  
To the man I love so well.

(She touches the turnip. A small white HORSE appears. She mounts it.)

Fly, you noble steed, fly free.  
Take me from this hellish place.

(She flies off on the HORSE.)

curtain

Scene Five

(An open forest clearing in the Giants' Mountains. In the background, on high cliffs, is a castle. Spring landscape, cowbells, hunting horns, shepherd's pipe.

Pastorale.

RATIBOR enters, in thought.)

RATIBOR

From every side the word resounds:  
Spring has come. The spring is here!  
This message cannot be destroyed.  
But why must my old grief arise?

You call: "Come to my budding fields!"  
Still, could I find oblivion there,  
Since Emma's trace is all around:  
Her white hands beckon me;  
The bush waves like her hair;  
The heavens are her eyes.  
No matter if I dream or wake,  
Her silver laugh is always here.

(He sits by a linden tree. Evening falls. A SHEPHERD passes by with his flock; he waves a greeting to RATIBOR.)

RATIBOR

Farewell, my good shepherd.  
Be watchful! Guard your sheep.  
Count all your precious lambs  
That not a one be stolen.  
The wolf is full of rage and spite  
And will give you only loss.

(Pause. A hunting horn sounds.)

The hunting horn sadly wanders around  
 As if it were helping me seek my love.  
 And all the nearby beechtrees and firs  
 Are telling my tear-soaked adventure.

(The white FALCON flies in.)

FALCON

Ratibor!

RATIBOR

(surprisedly looking up and about)

Who is it calling that unhappy name?

FALCON

Emma!

(pause)

Your Emma is a prisoner.  
 In the Spirit-King's domain.  
 She prays that you will rescue her,  
 Make her your bride, and still all pain.

RATIBOR

(leaping up)

What's this? Can a bird be talking?

Or am I caught in a dream?

Speak on, wingèd messenger,

Let me hear your sweet account

Of my little partner's news.

FALCON

Your Emma is a prisoner

RATIBOR

But tell me where. And who has her in prison?

FALCON

In the Spirit-King's domain.

RATIBOR

What should I do? How can I help her?

How can I find my darling pixie?

FALCON

She prays that you will rescue her,  
 Make her your bride, and still all pain.

RATIBOR

(angrily)

Stop that ceaseless chatter. Only tell me

What's wrong now with my little chicken.

FALCON

Your Emma is a prisoner.

RATIBOR

No more! That song of yours is an outrage.

(FALCON flies away. RATIBOR paces, highly excited.)

This news gives me new life and power.  
O noblest of hours that I have waited for!  
She's alive. She loves me. How can I contain it!  
O, such a blissful Maytime.  
What wouldn't I dare to rescue her!  
My lady, since you've helped thus far,  
Allow me to ask one question — one —  
How should I set out to free you?  
Help me now, dear sweet maiden.

(EMMA enters on the HORSE. RATIBOR rushes to her, helps her dismount. Kissing, embracing, etc., during the following)

EMMA

Thank heaven to be back here again.

RATIBOR

You're safe in my arms now.

EMMA

Oh! Warm me on your breast.

RATIBOR

My queen.

EMMA

My lord and master.

RATIBOR

I can't believe it. A dream, it's a dream!

EMMA

Let's dream in our heavenly room.

RATIBOR

May I never awaken then!

EMMA

This dreamer makes me want to laugh.

RATIBOR

O blue eyes. O round cheeks.

EMMA

Breast to breast. Mouth to mouth.

RATIBOR

Most charmed of figures. Now just let me die!

EMMA

My kiss would resurrect you.

RATIBOR

Ecstatic love. O blissful wooing.

EMMA

Oho! It's time for a merry hunt in the hedges.

(She breaks away and runs off.)

You'd better catch me if you want to have me.

Come forth, brave huntsman.

(leaping over a ditch)  
 Leap over that ditch and come after me.  
 RATIBOR  
 You'll soon see just how *I* can leap.  
 (He is over the ditch and after her.)  
 EMMA  
 (off ahead again; laughing at him)  
 Ha ha. Ha ha. Faster!  
 Or else I'll be flying far from *your* nest!  
 RATIBOR  
 (He swerves so he confronts and catches her while in motion.)  
 Ah, now I have you. And you'll stay right here.  
 (pulls her down to him; they sit.)  
 My dear girl, how I love you!  
 EMMA  
 If you're my sweetheart — kiss me.  
 RATIBOR  
 A thousand times each instant.  
 EMMA  
 I can do that better than you.  
 I will cover you with kisses:  
 Just tell me which kind you like best.  
 RATIBOR  
 Try, then. I'll tell you the kind, and keep count.  
 EMMA  
 How grand it is here, playing man and wife.  
 (KING enters. He looks at them a while, then bursts into deep laughter.)  
 KING  
 Come here! Come here! Everyone come!  
 Something wonderful is here. Come!  
 (The stage gradually fills. EMMA jumps up and embraces the KING warmly.)  
 KING  
 Now for the joyous wedding feast.  
 And all of you will be our guests.  
 EMMA  
 My dear, dear father, I have you again.  
 KING  
 Now I can close my eyes in peace.  
 EMMA  
 Why are your eyelids so swollen and red?  
 KING  
 From all the sleepless nights I've had.

EMMA

And your hair: why has it grown so white?

KING

From the three winters since your flight.

EMMA

Here on your face I see many a crease.

KING

Yes. Those are the three years of your loss.

EMMA

(startled)

Three years, you say?!

KING

Why, didn't you know that?

It really was three years.

EMMA

Dreadful! And it seemed like just three days.

BRINHILD

It's true: three times our meadows have turned green

Since the day you were stolen from us.

We'd begun to think you gone for good,

And now, what miracle has brought you back?

We are most curious to hear your tale.

EMMA

When I awakened from my faint,

I was down in the Spirit-King's world

Among strangely charming splendors.

All his empire was at my command,

And the thief, himself, at my feet

Bashful as any child.

I nearly laughed at the poor bird —

For his wisdom seemed flown in the breeze—,

But instead I mourned.

Then as I wept from all those wrongs

And fearlessly called for my loved ones,

He went out for a short time

And returned with a basket of turnips.

Turnips with curious magical powers;

I simply had to touch them with a wand

And at once each person I thought of

Was produced, alive, for me.

First I created my attendants,

But they lasted scarcely three hours,

For the tender dream was past

When they grew old and disgusting.

Then I made a strong and clever falcon,

And sent him back to earth as messenger.

As I watched him quickly disappear

In boldest flight completely burden-free

I realized that with a little thought  
 I could myself as quickly steal away.  
 So I dreamed up a little tale to send  
 The Spirit out for a fresh turnip count!  
 For me, then, I dreamed up a little horse  
 And steered him on that route the falcon chose.  
 Before I knew it — flash! — I was back here.  
 And the poor Spirit still is counting there!

(Again, there are irregularities and gaps in the manuscript. EMMA, in the speech above, refers neither to BEE nor to SPARROWHAWK. Following this speech are scribbles and the words, COURT MARSHAL. The sequence of the last ten pages — including those numbered but blank — has been changed in this version in order to provide the story with continuity. At this point there are two blank pages.)

EVERYONE

Aha, Rübezahl, where is your bride?  
 Is all of your counting completed?  
 Count them, count with greatest care!  
 Sir Rübezahl, Rübezahl, Rübezahl!

(A severe storm blows up. Total darkness. Then, on a steep and rocky path, RÜBEZAHL appears in his true form,\* surrounded by spirits. Red bolts of lightning flash on the stones.

\*RÜBEZAHL's true form would be ghostly in appearance here, most likely.)

RÜBEZAHL

Here bee I. Ha! What could you want of me?

EVERYONE

(All sink to their knees, horrified.)

Horrors! All of Hell's terrors are releasing here.

RÜBEZAHL

(laughing loudly)

Oho! You field of men. Oho! You broode of turnips.

Bee you in fine to the edges of your courage?

Haha! Aha! But rest you now. Fear not:

O'er only one of ye sit I as judge.

(to EMMA)

And hidst thou in the smallest crack,  
 That would I weene, poore girl. Beware!

Cast off be all my human sense and form.  
Behold me trulie as a spirit selfe.

(EMMA and RATIBOR try to speak, and cannot. Rübezahl stretches out his hand. They stand as though rooted to the spot.)

RÜBEZAHL

Hear me, ye woman: I come not to judge.  
The hart of man is small and dwells alone.  
The spirit bond is great societie.  
Man longs in weaknesse, spendes a lyfe unreaile.

For thee I planned immortal lyfe.  
For thee thou chose to dwell with men.  
Farewell. Assume thy dreary state,  
Joy fully in its povertie.  
Revel in thy small rewards,  
Ne'er dreaming thou art pitifull.

(with deep sorrow)

To my Spirit World I goe,  
From my woundes to steale the sting.  
Farewell, Flesh, forevermore!

(RÜBEZAHL disappears gradually with all his spirits. The stage grows light once more. The moon rises. Quiet. EVERYONE is kneeling. Pause. RATIBOR kneels before EMMA; she gazes down at him, shattered. KING rises and joins their hands. EVERYONE rises now. A procession forms, then wends upward toward the castle. BRINHILD and the other ATTENDANTS crown EMMA and RATIBOR with wreaths.)

KING

It's time to have our wedding feast.  
But where are the minstrels now, after all?

(From the forest comes a throng of MINSTRELS. They move to the head of the procession. During the following choruses of spirits and of people, the procession continues toward the castle. Strong moonlight. The music is played and sung.)

CHORUS OF RURAL FOLKS AND  
WEDDING GUESTS

Blossom out! Blossom out! Wreaths in your hair.  
Cypresses and roses.

March on! March on! March on! You blissful pair.  
 Gone are all distresses.  
 Gone are winter stings and separation;  
 Here are summer laughs and love's devotion.

CHORUS OF SPIRITS  
 (offstage)

Call on us! Please come back home.  
 How sick you are, how tired!  
 Weary wandered, rest. No longer roam.  
 You've tasted worldly fate,  
 Been cut by human spite.  
 Now come into our midst.

CHORUS OF RURAL FOLKS AND  
 WEDDING GUESTS

Play on, play on, O minstrel.  
 Far and wide be heard.  
 Good luck be to the honeymoon,  
 Blessings and Godspeed.  
 In stillest moods we marched along,  
 Now move toward home with wedding song.  
 Good luck!

(The procession has moved into the distance. The singing of the RURAL FOLKS AND WEDDING GUESTS is far off. Empty stage.)

CHORUS OF SPIRITS  
 (Sung offstage, over an empty stage.)

With melodies so sweet and tender  
 We sought in vain to make your heart surrender.  
 Between mere man and spirit  
 There always will be strife.  
 The heart of man dwells in the trivial.  
 The spirit self is noble, bright and clear,  
 Blessed with eternal life.

(Slowly falls the  
*curtain*)  
 THE END

RÜBEZAHL  
by GUSTAV MAHLER

I. Verwandlung

Saal im königlichen Pallaste. Minister, Hofleute  
und Diener. König tritt auf im Schlafrock,  
die Krone auf dem Kopfe, in der Rechten den  
Szepter, in der Linken den Reichsapfel.

*Alle* (hymnenartig)

Herr König! Herr König  
Wir grüssen unterthänig!  
Gott schenk' dir langes Leben  
—Gesundheit auch daneben!

*König* Ich danke Euch, meine lieben Unterthänen!  
Ich will mich bemühen, euch immer weise und  
gnädig regieren. (Zu einem Diener). Ist meine  
Tochter Emma schon aufgestanden?

*Diener* Sie ist schon in aller Frühe mit ihren  
Jungfrauen in den Wald hinuntergegangen.

*König* Was hat sich sonst in meinem Reiche  
begeben? Sind keine Wittwen und Waisen  
bedrückt worden? Sind keine Kaufleute  
geplündert worden? Wehe den Ubelthätern!

*Kanzler* Deine Weisheit verbreitet Frieden und  
Gerechtigkeit unter deinen Unterthanen.  
Tiefe Ruhe ist in deinem Volke!

*König* Noch eins! Es ist mir kund worden,  
dass in neuester Zeit wieder die Wald- und  
Bergeister in den Köpfen unseres Volkes  
herumspuken. — Schlafen meine Naturforscher  
und Gelehrten? — Ich wünsche, dass die  
neuesten Resultate der Wissenschaft in allen  
Theilen meines Reiches kundgemacht, und wenn  
nöthig, sogar schriftlich vertheilt werden!  
Aufklärung! Aufklärung!

*Die Minister*

Wir eilen, deinen Willen  
in Eile zu erfüllen.

(alle Minister /ab/)

*Hofmarschall* (tritt auf)

Drei Prinzen sind aus Griechenland gekommen  
und harren vor der Thür, sich dir zu nah'n!  
Geruh'st du. König, nun sie zu empfah'n?! /empfangen/

- König* Führ' sie herein, sie seien aufgenommen!  
(Hofmarschall ab)  
König setzt sich auf seinen Thron  
*Musik. Marsch.*
- die Prinzen *Alpha, Beta, Gamma* (treten auf)  
Heil! Heil dir! König!
- Alle* Heil! *Musik* hört auf.
- Alpha* (tritt vor). mit Pathos.  
An des Eurotas schwertdurchglänzten Wellen  
dort, wo der grössten Helden Geister wandeln  
dort wuchs ich auf in muthig kühnstem Handeln  
—die grössten es nur scheu erzählen!  
Mein Vater hehr' sitzt auf des Landes Thron  
ich selbst bin Alpha, sein geliebter Sohn!
- König* Nimm Platz, der aus so weiter Fern' gekommen!  
Prinz Alpha, sei in meinem Land willkommen  
Nicht lang geredet! Dorten Platz genommen!  
(er weist ihm einen Platz neben sich an.)
- Beta* (tritt vor).  
In Arkadiens grünen Fluren  
wo die Blumen lieblich spriessen  
und die Nachtigallenlieder  
sich in zarte Herzen giessen  
  
Stand, vom Zephir lau umlächelt  
meine hoffnungsvolle Wiege  
wo die Anmuth Herzen bindet  
feiere ich meine Siege!  
  
Hellas Gaue nennen mich  
stolz nur ihren grössten Sohn  
doch mein Vater, zärtiglich  
schlechthin, kurz, nur Betakon!
- König* Nehmt ihr daneben Platz, Prinz Betakon.  
Ihr seid, man merkt es gleich, ein guter Sohn!
- Gamma* (tritt vor).  
Ich bin von etwas schweigsamer Natur  
und in der Rede Kunst nicht sehr gewandt  
—Ich heisse Gamma, bin aus Griechenland;  
Mein Vater, unser König, lässt euch grüssen!
- König* Nehmt Platz, Herr Prinz, kommt ihr einst wieder heim,  
so legt ihm gütigst meinen unsern Dank zu Füssen!  
  
Nun aber sagt mir, werth' und edle Herrn!  
Was führt euch her denn, aus so weiter Fern'?

- Arion* O König, der Ruf von deiner Tochter Schönheit  
ist auch nach Griechenland gedrunge, und hat  
unsere Gedanken einen so mächtigen Schwung  
gegeben, dass sie uns gar schnell bis in's böhmische  
Gebirge getragen! Da sind wir nun und  
wollen unser Glück versuchen!
- König* Ach, ihr armen Prinzen, ihr wisst  
wohl noch gar nicht, wie hartherzig meine  
Tochter gegen alle Männer ist. Noch Keiner  
hat sich ihre Gunst erringen können.  
Jeder musste mit Schand' und Spott abziehen!
- Gamma* Nun, das lasst nur meine Sache sein  
— das viele Reden überlasse ich gern den  
Andern — aber wenn es gilt, ein Weiberherz zu  
besiegen, da stehe ich meinen Mann.
- König* Nun, versucht euer Glück
- Emma* (Stimme noch draussen)  
Vater! Vater!
- König* Ah! Da kommt sie selbst!  
(Emma stürmt zur Thüre herein, sie ist im Ganzen sehr  
ausgelassen. Wie sie die Prinzen sieht, stutzt sie.)  
Nun, liebe Tochter, was ist gescheh'n!?
- Emma* Ach Vater — es spukt im Walde draussen  
Wir wollten grade — —
- König* Ihr wolltet — nun?
- Emma* Ei nun — wir wollten — (schnell) spazieren geh'n!  
Da schrie es plötzlich vom Berg herunter  
und schnitt uns höhnisch eine Fratze  
und mit einem Satze  
so kunter bunter  
waren wir aus dem Walde draussen.
- König* Aber, liebes Kind, du bist doch nun gross  
genug, um endlich diese Thorheiten zu lassen  
Da hast du dich wieder einmal von einem  
Felsklotz gefürchtet geängstigt schrecken lassen.
- Emma* Aber, Vater! Ich habe doch ganz deutlich  
die Stimme des Berggeist's vernommen!
- König* Nun, das war der Wind, oder sonst  
irgend eine Naturkraft, die Lärm macht.
- Alpha* Sie ist fürwahr entzückend schön!
- Beta* Ich hab' noch nie eine Schön're geseh'n!

- Emma* (zum König)  
Wer sind denn die unausstehlichen Männer?  
Sie gaffen mich an, als wären sie Kenner!
- König* 'S sind wieder einige neue Freier  
3 Prinzen sind's aus Griechenland  
die deine Schönheit hergebannt!
- Emma* O weh! Mir ist schon nicht geheuer!
- König* (zu den Prinzen)  
Nur nicht gezogen! Rasch, ihr Herrn!  
Versucht selbst eu'res Glückes Stern!  
die Prinzen nahen sich ihr.
- Alpha* (Mit grosser Gebärde) /Gebärde/  
Sieh'! Des Jahrhundert's grösster Held  
—er naht bescheiden sich der Süssen—  
—den nicht überwand die ganze Welt  
—er liegt besiegt zu deinen Füssen  
Heiss ist's, wenn die Schwerter toben,  
heiss, wenn sich in grausen Triebe  
der Feinde Speere grimm erhoben  
—Doch heisser noch ist meine Liebe.
- Emma* Sehr gut, Herr Prinz — recht schön!  
Es kann gleich weiter geh'n!  
(Alpha setzt sich verduzt wieder)
- Beta* Nicht der Feinde grimmes Sterben,  
Nicht der Schwerter wüster Klang  
Nicht in grimmen Schlachtgesang  
will ich, Schönste, um dich werben.  
—Wo die Nachtigallen flöten  
und Zephire flüsternd weh'n.  
Ja, im Duft von Blumenbeeten  
will ich um Erhörung fleh'n!
- Emma* Ihr Prinz, bezeiget guten Willen  
—doch sagt—muss ich ihn gleich erfüllen?  
(bedeutet ihm durch eine Geberde, dass auch er enlassen  
sei.  
Er setzt sich, ebenfalls verduzt, neben Alpha)
- Gamma* O Süsse, Holde! ohn' Gebrechen!  
Nur meine Augen mögen sprechen!  
(etwas stockend) Mir wird's im Herzen schon ganz sündig  
von den Gefühlen, die d'rin toben!
- Emma* (lachend)  
Kurzgefasst! Und doch wie bündig!  
Herr Prinz! Fürwahr! Man muss euch loben!

Alpha (drängend)

Nun — mein Engel — darf ich hoffen?

Emma

Von Allen die ich je getroffen  
(die Prinzen nähern sich mit Interesse)  
Seid ihr die lächerlichsten wohl!

(lacht unbändig) (die Prinzen fahren zurück)

Beta

Ha! Ist dies' euer letztes Wort!?

König

(zu Emma leise)  
Du wirst gewiss, sprichst du so fort,  
dir alle Freier noch vertreiben!

Emma

(stampft mit dem Fuss)  
Ei, so sollen sie doch bleiben  
daheim in ihrem Griechenland  
—Hab' ich denn um sie gesandt?!

Alpha

Beta

(zueinander) Höchst sonderbar! Höchst sonderbar!

Gamma

(Ihre Stimmen verlieren sich in Gemurmeln)

draussen entsteht heftiges Gepolter und man hört die  
Stimme des *Hofmarschall*

Zurück, Verwagner!

die Thüre wird hastig aufgerissen, und Rübezahl erscheint mit einem langen, fuchsrothen Bart und überhaupt ganz so wie der Köhler aus dem Vorspiel, und wehrt mit seiner Keule den Hofmarschall ab, der ihm verzweiflungsvoll folgt.

Rübezahl Fort, du Hund!

Marschall weicht  
erschrocken zurück. Rübezahl tritt vor. Alle  
schauen betreten auf ihn.

König

Was ist das für ein grober Gesell!?

Rübezahl

(schaut sich verwundert um).

Haha! Da seh' ich da zur Stell'  
noch einige solche Blumensucher  
wie der dort in dem Walde draussen!  
—Ha wüsst ich nicht, dass dies die Oberwelt  
ich meint', ich wär' in meinem Rübenfeld.  
—Ob ich hier jenes Weib wohl seh'!?  
—Was diese Männlein wohl hier nur treiben!  
Mir scheint, sie suchen gar auch nach Weiben?

(erblickt Emma, und eilt freudig auf sie zu)

Da ist es ja, das flücht' ge Reh!

nimmt ihre Hände

O schönes Weib, willst du mit mir gehn?!

(Emma stösst einen Schrei aus, und fällt in Ohnmacht.)

Jetzt fällt sie gar um! Ei, kannst du nicht stehn!?

*König* (ganz aufgelöst)

Was sind denn das für müssige Schwänke?  
Der thut ja, als wär' er in einer Tränke?

Alle wollen ihm an den Leib. Rübezahl richtet sich erstaunt auf und schlägt eine Lache auf.

*Rübezahl* Hahahaha!

Jetzt kommen die Würmer gar angekrochen  
(hebt die Keule) Zurück! Sonst sind euch die Glieder gebrochen!

Alle weichen in Angst zurück. Der König flüchtet sich am weitesten von allen — nur noch die Prinzen suchen ihm den Vorrang abzugewinnen.

*König* (ruft aus seinem Versteck)

Auf! Werft den Frechen in's tiefste Verliess!  
Den Hohn er uns mit dem Leben büss!

Sie versuchen auf ihn einzudringen.

*Rübezahl* geräth allmählig in Zorn

*Rübezahl* Ha! Dumme Rüben! Wie ihr doch thut!  
Zurück! Verdammte Männerbrut!  
—Wie ein Fliegenschwärm sie mich umbrummen  
hebt Emma in seinen Arm  
Komm mit du Weib und lass sie summen!  
(fährt mit ihr durch die Decke des Saales davon.)

Alle erheben vor Erstaunen ganz ohne Fassung die Köpfe, und starren ihm bewegungslos nach. Während dessen fällt der Vorhang.

— — — — —  
Ende des 1. Aufz.

## 2. Verwandlung.

Unterirdisches Rübezahls. Phantastische Pracht—  
Grotten — Laubgänge. Emma liegt ohnmächtig auf einen Blumenlager.

*Rübezahl* (steht schüchtern vor ihr, auf seine Keule gestützt und weiss sich nicht zu helfen.)

Da liegt sie nun — so blass und stumm  
—was beginn' ich wohl mit dem Weibe?

Wie ist mir denn — Ich kenn' mich kaum  
—Mir bebt das Herz im Leibe!

Seit mich dein Blick da oben traf  
da ist mir aller Muth vergangen  
—mir ist's, als hieltst du mich gefangen  
—und liegt /! ja doch im tiefem Schlaf?

Gefangen? O, ich versteh' es nun  
Was droben die bleichen Männlein thun!  
Jetzt ist's mir, als müsst ich selbst Blumen suchen  
wie der da droben unter den Buchen!

(Er blickt auf die Keule)

Und du — was willst du in meiner Hand  
—Ich weiss nicht — wie es mich bitter mahnt,  
Ha — weg mit dir! (Er schmeisst sie fort)  
was sollst du mir!

Er beugt sich über sie

Warum macht sie wohl die Augen zu?  
Die Lippen schliesst sie — o bittre Noth—  
So liegt sie da in grauser Ruh! —  
—ach — wäre sie todt — ?

Er kniet nieder neben sie

Ach — selig wär's, ihr nachzusterben  
—so stumm und blass sie zuerwerben!

Er hebt ihren Kopf und schmiegt sich an sie.

*Emma* (schlägt die Augen auf)

Ach!

(Rubezahl fährt /! zurück  
und bleibt verlegen stehen)

Wo bin ich? — Ha — ich fass' es kaum —  
(erblickt Rubezahl)

O weh mir! — Es ist kein Traum!?

Sie springt vom Lager auf und bricht in Thränen aus.

*Rubezahl* O — du weinst — was sollen deine Thränen?  
Drückt dich ein Leid — o sag — kann ich es stillen?  
Sieh deinen Sklaven vor Begier entbrennen,  
den kühnsten deiner Wünsche zu erfüllen.

*Emma* Ha, fort von mir — wagst du's zu mir zu treten  
—O Vater — hätt' ich früher dir geglaubt!  
Hast du mich darum, Frecher, nur geraubt  
um mich durch die verhasste Näh' zu tödten?

*Rubezahl* (ist schüchtern und verlegen zurückgetreten)  
(sehr ernst)

Du zürnest mir?

- Emma* (mit aufbrausender Heftigkeit) Ha! Frägst du noch?  
Verräther du — Und brachest doch  
du grimmer Wolf in uns're Heerde  
—Was kamst du, Unhold, auf die Erde!  
Ha sag'! Was willst du denn von mir!
- Rübezahl* (ohne Fassung)  
Ich — was ich will — von dir!?  
—Das weiss ich wahrlich nicht zu sagen  
—Ja doch — (sehr schüchtern) Jetzt weiss' ich's—
- Emma* O dummer Geist!  
Nun also sag's, wenn du es weisst  
Muss ich denn immer zweimal fragen?
- Rübezahl* Ich — ach — jetzt hab' ich's schon vergessen
- Emma* O Unhold! Bist du denn so dumm,  
so bleibe wenigstens doch stumm!  
O Brinhild, Brinhild,—traute Freundin!  
O — meine lieben Schwestern all!  
O Edelgard — o Irmentraut!  
Wo seid ihr — wo soll ich euch suchen!  
Ich hör' wohl nimmer eu're Lieder  
Ich seh' euch nun wohl niemals wieder!  
(wirft sich weinend auf das Lager)
- Rübezahl* (freudig)  
Musst du deiner Schwestern denken!—  
—Sieh', ich geh' sie dir zu schenken!  
Harre Herrin — eine Weile!  
Gleich bin ich da — im Nu — ich eile!  
geht eilends ab
- Emma* (verbirgt ihr Haupt im Lager)  
O wehe, weh' mir Unglücksel' gen!  
O komm, o komm, du süsster Tod,  
befreie mich von meiner Noth!  
(bricht in Thränen aus.)
- Elfenchor* (unsichtbar, während ihres Gesanges breitet sich rosige  
Dämmerung über die Szene, und Emma schläft  
unter Thränen ein.)  
Abend will sich niedersenken  
will mit Thau die Blumen tränken  
die die Sonne hat verbrannt!  
Und er schwebt in Blütenregen  
und er weilt auf allen Wegen  
streichelt sie mit zarter hand!  
Über Wiesen, über Hügel  
breitet sich sein dunkler Flügel  
Mild erblinkt des Mondes Schein!

Und die Rosen und die Veiglein  
schliessen lächelnd ihre Auglein  
und vergessen ihre Pein.

Ach, von deinen zarten Wangen  
laue Tropfen niederhangen,  
O du armes Menschenkind!  
Schlafe, schlafe, lass das Bangen.  
Ist die Sonne weggegangen,  
Kommt der Abend, sanft und lind!  
(Emma ist eingeschlafen)  
Heia, heia  
eia popeia! . . .

Es ist vollständige Dämmerung eingetreten, und im Hintergrund erscheint plötzlich das Traumbild Emmas in lichten Schein: Ratibor liegt unter den Bäumen und schaut durch die Blätter zum Himmel.

*Emma* (im Schlaf)  
Wie weilt er so schön in rosigem Licht!  
hier bin ich — mein lieber Ratibor!  
So komm doch — siehst du mich denn nicht!  
Da unten — in der Schlucht  
—o wie der Dumme sucht—  
Da — unten — weiter — hier  
so komm — ich kann ja nicht zu dir!  
Siehst du denn nicht — ich bin in Fesseln —  
Hier weil ich unter Rosenketten!  
O komm! Willst du dich neben mich nicht betten?  
Ach! Hab' Acht! — Geliebter — Hier sind Nesseln —  
O komm — o komm!  
(sie streckt die Arme aus, als ob sie ihn umarmen wollte; indessen ist

*Rubezahl* eingetreten mit den Worten  
Hier bin ich wieder zur Stell'!  
Sag an! — war ich nicht schnell?

(Sofort ist die ganze Erscheinung verschwunden, die Szene wie früher und Emma, durch die Stimme geweckt hastig aufgesprungen.

Emma bemerkt, dass sie den Rubezahl umarmen wollte, wendet sich unwillig und erröthend und bedeckt die Augen.

*Rubezahl* Nun — was soll das, Weib!  
Bist du denn stumm?!  
Sieh' dich doch um!  
Ich bring' dir was zum Zeitvertreib!

Emma bleibt noch immer abgewendet

Sieh', hier stehen deine Schwestern!

*Emma* (wendet sich hastig und bleibt enttäuscht stehen)  
O — Höhnst du mich noch!

*Rübezahl* So höre mich doch  
Dir ruhen in diesem Korbe die Lieben  
als deine Habe  
berührst du die Rübe  
mit diesem Stabe

(er reicht ihr ein Stäbchen)

So steh'n sie dir auf — da hüben und drüben  
doch rührst du sie wieder  
sie schliessen die Lider  
und wanken zu Grabe  
um wieder als Rüben  
in Staub zu zerstieben!

*Emma* (entreisst ihm das Stäbchen)  
Ist dies' ein neuer Hohn? (eilt zum Korb)  
(berührt eine Rübe)  
O liebe Brinhild — sei bei mir. (Brinhild steht da und  
Ach guter Geist — wie dank' ich dir, liebkost sie)

*Rübezahl* Ich wüsste mir schon den Lohn!

*Emma* (zu Brinhild)  
O traute Schwester, freust du dich nicht?  
—Jetzt ruf' ich mir alle— alle her!

eilt zum Korbe von Rübe zu Rübe

O Edelgard, o Irmentraut,  
O Adelheit — o Kunigund!  
Seid alle — alle wieder bei mir!

So wie das Wort ausspricht, entsteht immer eine  
von ihren Gespielen, bis sie alle vollzählig wieder  
da sind, wie sie im Vorspiel erschienen waren.

Allgemeine Liebkosung.

(zu Rübezahl) Es ist nun gut — Du kannst jetzt geh'n!  
Nun geh' wir brauchen dich nicht mehr!

*Rübezahl* (ganz unmuthig) blickt verwundert auf sie  
O Herrin, will es dir belieben  
sich immer nur so zu betrüben!?

*Emma* (bezwingt sich)  
Nun hörst du nicht — was bleibst du steh'n?!  
So geh' uns einige Blumen zu pflücken.

*Rübezahl* (ganz verwirrt) . . . . .  
wie Herrin Blumen wozu denn die!

*Emma* Nun um damit die Haare zu schmücken.

- Rubezahl* (für sich)  
Mir ist zu Muthe ich weiss nicht wie!
- Emma* (ganz ungeduldig)  
So geh' doch, und lass' uns so lange nicht harren!
- Rubezahl* (seufzend)  
O Holde, verzeih'! In der Frauen Dienst  
Bin ich noch nicht so sehr erfahren!  
—Ich will's nun lernen — wenn Du es wünschst!  
(geht ab)
- Emma* So — endlich ist der Dumme fort!  
Nun müsst ihr mir alles genau erzählen.  
—O sagt — thät wohl mein Vater schmählen.  
als er mich nicht mehr sa /sah/ am Ort?!
- Brinhild* Im Anfang war er zwar erschreckt  
doch als sich die Angst ein wenig gelegt  
da liess er es laut im Reich verkünden  
Dein Retter wird eine Braut sich finden!  
Drauf schrieen die Prinzen und schworen sich's hoch  
Wo du auch seist — sie fänden dich doch'!
- Emma* (schnell) Und Ratibor?
- Brinhild* Der junge Thor?  
Der sitzt in den Wäldern und weint und klagt  
und keiner erfährt's, warum er verzagt!
- Emma* Ach — wusst' es der Gute, dass ich gefangen  
gewiss — er eilte mich zu retten
- Brinhild* Indessen muss er nun harren und bangen
- Emma* O — wie zerreiss' ich doch diese Ketten!  
(mit plötzlichem Entschluss)  
Ach ja — ich hab's — er soll mich befrei'n  
—Sonst will ich ewig gefangen sein!  
(eilt hin zum Korb)  
Nun liebes Stäbchen lass dich bitten!  
Schaff mir einen Boten für meinen Ritter!  
(Sie berührt eine Rübe: ein Sperber fliegt hinauf)  
Fliege Vöglein — fliege frei —  
Flieg' so schnell ein Vogel fliegt —  
Fliege hin zum Knaben treu  
der unter den grünen Bäumen liegt.
- Flieg' zu meinem Ratibor —  
flieg' und flüstre ihm in's Ohr!:
- Emma weilt in schweren Banden  
in des Geisterkönigs Landen:  
sie harret dein, dass du an Ketten

als deine Braut sie wirst erretten!  
 Fliege Vöglein, fliege,  
 sieg' mein Ritter, siege!

der Sperber fliegt fort.

Und nun kommt und schlingt der Reih'n  
 —Lasst uns alle fröhlich sein.

Sie fassen sich in die Hände, und singen das Lied  
 aus dem Vorspiel.

Währenddessen fällt der Vorhang.

— — — — —

Blatt 25 quer am Rand:

Kluges Bienchen, zart und klein  
 sollst mein treuer Bote sein

4. *Verwandlung*  
*Unterirdisches Reich Rübezahls*  
 die Bühne ist leer

*Geisterchor* (unsichtbar)

/leer/

*Emma* (flieht in jähem Schreck über die Szene; hinter  
 ihr trippeln ihre Genossinnen — alt und entstellt—

Ach! Zu Hilfe! Hexenmeister —  
 Weh! Beschwöre deine Geister!

*Weiber* (durcheinander)  
 Was läufst du uns fort  
 mit Weh und Ach!  
 Wir kommen nicht nach!  
 Bleib' doch am Ort!

*Emma* Was sollt ihr von mir?  
 Ich kenn euch nicht!  
 Mit den Runzeln — ihr—  
 im fahlen Gesicht!

*Weiber* · Jugend vergeht!  
 Jugend besteht!  
 Willst nicht mehr mit uns spielen?  
 Gefallen wir dir nicht?  
 Wart' nur! Wir halten Gericht!  
 (drohen ihr mit den Krücken)

*Emma* Lasst mich um Himmels willen!

*Weiber* (keifen)  
 Mit uns spiel und kos!

Wir lassen dich nicht los!  
 Hast uns geschaffen — musst uns leiden—  
 kannst dich nicht mehr von uns scheiden  
 —statt der Jungen — nun die Alten!

*Emma* Weicht von mir, ihr Spukgestalten!

*Weiber* (schaaren sich um sie)  
 Seht doch, wie sie sich ziert—Feinliebchen!  
 Wir sind ihr zu schlecht, dem Zuckerpüppchen!  
 (sie fassen Emma in die Arme)

Komm nur! Kannst noch so schrein!  
 Wir spielen ringel reih'n!  
 fangen an mit ihr zu tanzen)  
 Ringel ringel reih'n!  
 Wer fröhlich ist, der schlinge sich ein!

(Emma stösst einen Schrei aus und fällt um)

*Rübezahl* (kommt eiligst herbei)

Werdet zu Staub, aus dem ihr geschaffen!  
 In die Erde! Weiter zu schlafen!

Die Weiber sinken unter sonderbaren Lauten  
 zur Erde — und man sieht ein Häuflein  
 vertrocknete Rüben.

Er beugt sich zu Emma u. richtet sie auf.

Süsse Herrin! Lass das Bangen!  
 Die dich geängstigt — sind vergangen!

*Emma* (kommt wieder zu sich)

*Rübezahl* Du zitterst noch!

*Emma* Sind sie schon fort!?

*/Rübezahl/* Sieh' dort — sie sind, was eh' sie waren,  
 Die Rüben sind wieder zur Erde gefahren!  
 Sei ruhig!

*Emma* (entsetzt) Grauensvoller Ort!  
 Boshafter Geist, du hast mich getäuscht!

*Rübezahl* Ich that ja nur, was du geheischt!  
 Was ist dir, Frau?!

*Emma* (aufbrausend) Das ist zu viel!  
 Boshafter Geist, du hast mich getäuscht!

*Rübezahl* Deine Gespielen hast du geheischt!  
 Ich that, was möglich — ich gab dir ein Spiel!  
 ich konnt...

*Emma* (schluchzend)  
 Nun wieder allein in dieser Höhle!

*Rübezahl* Du hast ja Zeit zur Überlegung!  
ich warte ja nur auf diene Befehle!  
und setze das Geisterreich in Bewegung!  
Dort steht ein Korb, bis zum Rande gefüllt!  
Ein Wort! und dein Wunsch ist auf's Neue gestillt!

*Emma* (zornig) Was soll ich mit diesen Schattenwesen!  
—Die Menschen ohne Fleisch und Blut—  
—Die Bilder, die nicht schlecht noch gut—  
—die gestern leben und heut' verwesen!

*Rübezahl* Was fehlt dir denn in meinem Reich?  
Bot ich mein Heer nicht auf sogleich  
die dich als Diener treu umschweben?

*Emma* Was ist mir denn der leere Schein?!  
Mir ekelt vor deinen Zauberein!  
Nur Träume lebe ich — nicht wirklich Leben!  
—Befrei mich von der lästigen Haft  
—sonst sterb' ich in diesem Ungemach!

*Rübezahl* Es schwindet vor dir meine Geisteskraft  
—Bin hilflos ach wie ein kind, so schwach.  
Und hast du denn kein Wort für mich  
der ich dir doch so treu ergeben!  
Es schwindet vor dir meine Geisteskraft  
—Bin hilflos — ach — wie ein Kind, so schwach.

*Emma* Befreie mich von der läst' gen Haft  
—sonst sterb' ich in diesem Ungemach!

*Rübezahl* Und ist es denn so schlimm dies Sterben!?  
Mich dünkt — es heisst: sich Lieb' erwerben

*/Emma/* O geh —, du Unhold mir aus den Augen  
dass ich dich, läst' gen nicht mehr seh—  
—was kann mir deine Gesellschaft taugen  
wenn ich dein Wesen nicht versteh'!

(heftig) —O geh! So lass' mich doch allein!

*Rübezahl* Ich bin gehorsam deinem Willen  
—doch bin ich ferne — und denke dein—  
kann ich dir keinen Wunsch erfüllen?

*Emma* So schaff' mir Erdenblumen heut!  
Ich sehne mich nach den süßen Seelen  
die mir von der Heimath Lust erzählen  
—sie theilen ja mein stilles Leid.

(Rübezahl geht traurig ab,)

*Emma* (legt sich auf ihr Blumenbett)  
Und nun umgieb' mich mit deinen Wonnen  
du liebe, traute Einsamkeit!  
—nun will ich träumen von Erdensonnen  
und von des Waldes Lustbarkeit!

Die Musik geht in eine sanfte, träumerische Weise über.

Pause.

—(singt in Gedanken)  
"Und ist doch der Mai so grün  
und die Lüfte, sie zieh'n" —

(sitzt auf) /?/

Kann ich euch nimmer wiederseh'n,  
—ihr meiner Heimath grüne Matten?!  
Bleib ich gefangen unter den Schatten!  
—Ach! Werd' ich nimmer aufersteh'n!  
— — —

wer ein liebes Liebchen küsst  
wie glücklichich der ist,

—O du — mein trauer Knabe mein  
werd' ich von dir vergessen sein!?

—(nach einer Weile)

Ist meine Botschaft denn ganz verklungen  
— — — —oder hat mein Bote sie nicht gesungen!

(spring auf — heftig)

Gewiss — gewiss — er weiss es nicht  
mein Vöglein Bienchen kam nicht an's Erdenlicht  
— — — —

—ich send' einen Stärkern auf zur Erde  
—dass meinem Liebsten die Kunde werde!

eilt schnell hin zum Korbe — berührt mit dem  
Stäbchen eine Rübe.

Weisser Falke, stark und klug,  
Fliege auf mit kühnem Flug.  
Fliege' zu meinem Ratibor —  
Flieg' und flüstre ihm in's Ohr!:  
"Emma weilt in schweren Banden  
in des Geisterkonigs Landen;  
sie harret dein, dass du aus Ketten  
als deine Braut sie wirst erretten!"  
Fliege, Vogel, fliege,  
Sieg mein Ritter siege!

Falke /?/ fliegt davon. Emma sieht ihm nach  
Ja wer wie dieser Flügel hätt  
der streift wohl bald in sein Ziel!/?/  
—Doch wie, säss' ich ihm auf dem Rücken?

(Mit plötzlichem Entschluss) (freudig)

Ach ja — ach ja — zum Knabe schnell  
—ich schaffe mir ein Ross zur Stell  
entflieh auf ihm des Feindes Reiche /?/  
(eilt zum Korbe)

Rübezahl tritt auf mit einem riesigen Bündel Blumen,  
(erschrocken, aber zornig) O Unhold — bist du schon wieder hier?

Du überlästiger . . . . .

Rübezahl blickt sie verwundert an

(sie bezähmt sich)

—Ei — nun — ich mein — du wärest schier  
in deinen Diensten so langsam nicht!

*Rübezahl* (sehr schüchtern)

Hier, Herrin, sind, wie du befohlen  
die schönsten Blumen meiner Flur!

‘S sind ihrer genug — doch wünsche nur  
ich kann dir immer mehr noch holen!

*Emma* (lacht auf) Haha!

Statt eines Sträuschen ein ganzer Stoss —

(Rübezahl blickt sie verwundert an)

(sie erinnert sich wieder)

Gib her! — zwar ist er ein wenig gross,  
doch will er mir d’rum nicht schlechter gefallen.

(zu sich) Jetzt, Weiberschlaueheit steh’ mir bei!—

(laut) —Fürwahr — du zeigst mir grosse Treu!

—ich sehe schon — so wird es geh’n.

—doch soll ich erkennen — wie gross dein Lieben,  
so musst du mir erst eine Probe besteh’n!

Du sollst mir alle deine Rüben

so viel du auch hast, auf den Feldern zählen

—doch darf dir auch eine da nicht fehlen

mit einem Blick auf den Korb — lachend

—sie würde sicher dein Glück dir stehlen:

*Rübezahl* (entzückt)

Ich brenne, Süsse, in heissen Flammen;

Befehl und ich trage die Berge zusammen!

(geht eilends ab)

*Emma* (freudig)

Un/d/ nun komm, du letzte Rübe,

steh’ als Flügelross vor mir.

Führ in Eile mich von hier

hin zu dem, den heiss ich liebe!

berührt eine Rübe, ein weisses geflügeltes Rösslein steht

vor ihr; sie besteigt es.

Fliege, Rösslein, fliege fort,

Entführe mich dem bösen Ort!

fliegt mit dem Ross davon.

Vorhang fällt.

Ende der 4. Verwandlung

— — — — —

## 5. Verwandlung.

Offene Waldgegend im Riesengebirge,  
hinten auf hohen Felsen das Schloss.  
Frühlingslandschaft. Heerdenglocken,  
Hifthorner. Schalmei

## P a s t o r a l e.

*Ratibor* (Kommt gedankenvoll)

Nun ruft es schon aus allen Ecken:  
Der Lenz ist da, der Lenz ist kommen!  
Und nimmer und nimmer will es verstummen,  
O musst ihr denn wieder mein Leid erwecken?

“Hinaus!” Du rufst? — Zur grünen Flur!  
—Ob ich denn da Vergessen fände!  
—Ach über all nur ihre Spur—  
—Es winden ihre weissen Hände  
—Im Busch seh’ ich ihr Haar nur weh’n  
—am Himmel ihr’ blauen Augen steh’n  
und mag ich träumen oder wachen  
mir klinget immer ihr silbern Lachen!

Er setzt sich nieder bei einer Linde.

Es wird Abend. Ein Schäfer zieht mit seiner Herde  
vorbei und grüsst *Ratibor*.

Fahr’ wol du guter Schäfer mein,  
Sei wachsam! Hüte deine Herde.  
Zähl alle deine Lämmelein  
dass dir nicht eins geraubet werde.  
—der Wolf ist voller Grimm und Tück  
und giebt dir keines mehr zurück!

Pause. Man hört ein Hifthorn

Das Hifthorn irrt so traurig umher  
als wollt es mit mir die Liebste suchen,  
und alle die Tannen und die Buchen  
erzählen die thränenfeuchte Mär!

Ein weisser *Falke* kommt geflogen und ruft

*Ratibor*!

*Ratibor* blickt verwundert

Wer rufet den unsel’gen Namen!?

*Falke* ruft noch einmal:/ Emma!

*Falke* Emma weilt in schweren Banden  
in des Geisterkönigs Landen.  
Sie harret dein, dass du aus Ketten  
als deine Braut sie wirst erretten

- Ratibor* (springt auf)  
Was hor' ich? Können Vögel reden?  
hält ein Traum meinen Sinn gefangen?  
—Nur weit /er/ — mein geflügelter Bote  
lass mich zur süßen Kunde gelangen —  
O sprich! — was macht meine kleine Genossin?!  
*Falke* "Emma weilt in schweren Banden"  
*Rat.* O sprich doch — wo — wer hält sie verschlossen?  
*Falke* "In des Geisterkönigs Landen"  
*Rat.* Was muss ich thun? Wie kann ich ihr helfen?  
Wie find ich meinen lieben Elfen!?  
*Falke* "Sie harret dein, dass du aus Ketten  
als deine Braut sie wirst erretten!"  
*Rat.* (zornig) So lass doch endlich dein ewiges Sprüchlein  
—Was ist's mit meinem süßen Kuchlein?  
*Falke* "Emma weilt in schweren Banden"  
*Rat.* Ha fort! Zu viel! Du singst mich zu Schanden!  
(Falke fliegt fort)  
*Rat.* (geht in grosser Aufregung auf und ab)  
Ha — Neues Leben giebt mir die Kunde —  
O hohe heissersehnte Stunde!  
Sie lebt! Sie liebt mich — wie soll ich's tragen!!  
—O wonnevolle Maienzeit!  
—was möcht ich nicht — sie zu retten — wagen!  
—O Herrin, halfst du schon so weit,  
—so lass mir doch noch eines sagen!  
—was aus den Banden dich befreit  
—ach hilf — mein kleines, süßes Mädchen!

Emma kommt auf weissem Ross; Er eilt, ihrem /?/ Ross zu helfen.  
Sie fällt ihm in die Arme, und sie küssen und  
herzen sich unter dem folgenden:

- Emma* Dem himmel Dank! Da bin ich wieder!  
*Rat.* Ich halte dich in meinen Armen  
*Emma* O lass mich an deiner Brust erwärmen  
*Rat.* Meine Königin!  
*Emma* Mein süßer Gebieter!  
*Rat.* —Ich Kann's nicht glauben! Es ist ein Traum!  
*Emma* O lass uns träumen im Himmelsraum!  
*Rat.* O möcht ich nimmermehr erwachen —  
*Emma* Wie will ich über den Träumer lachen!  
*Rat.* O Augen blau! O Wangen rund!  
*Emma* O Brust an Brust — und Mund an Mund!  
*Ratibor* Ach — lieblichstes Bild — ach — lass mich sterben!  
*Emma* Meine Küsse sollen dich wiederwecken!  
*Ratibor* O Wonniges Lieben! O seliges Werben!  
*Emma* Hei, fröhliche Jagd unter grünen Hecken!  
(reisst sich los und läuft vor ihm her)  
Nun musst du mich fangen — willst du mich haben!  
Nun vorwärts muthiger Jägermann!

(springt über einen Graben)

Rat. Nun spring mir nach da über den Graben —  
Sollst sehen — wie ich springen kann!  
(springt hinüber)

Emma (ist schon wieder fort) (lacht ihn aus)  
Haha.

Nur schneller — sonst flieg ich dir weit vom Nest —

Ratib (macht eine Schwenkung, so dass er ihr entgegenkommt u.  
fängt sie auf /?/)   
Nun hab' ich dich! Diebin Lose! Jetzt bleibst du mir fest!

er zieht sie zu sich nieder u. sie sehen /?/ sich

Mein liebstes Mädchen! Wie lieb' ich dich!

Emma Bist du mein Liebster — so küsse mich!

Rat. Ja tausendmal in einen Nu!

Emma Ich kann es doch noch besser als du!

Mit Küssen will ich dich bedecken;

Sollst mir sagen welche —

Rat. Versuch's nur einmal — ich zähle gern!

Emma Wie schön! Nun spielen wir Mann und Frau!

Der König ist herausgetreten, sieht ihnen eine Weile zu und lacht unbändig.

König Herbei! Herbei! Kommt alle herbei!  
Geschehen ist eine Wundermär—

(die Szene füllte sich allmählig)

(Emma springt auf und fällt ihrem Vater um den Hals)

Nun halten wir fröhlich' Hochzeitsfest,  
ihr alle seid gelad'ne Gäst'!

*fehlen 2 Seiten*

Alle (durcheinander)

Ha! Rübenzahlen — Wo ist dein Gemnah?!  
—sind schon alle gezählt Zähl nur genau—

Herr Rübezahl!

Rübezahl! Rübezahl!

(Ein furchtbarer Sturm erhebt sich — und es wird vollkommen dunkel. Auf einem Felssteige erblickt man den Rübezahl in seiner wahren Gestalt, umgeben von seinen Geistern; rothe /?/ Blitze zucken um den Stein.)

Rübezahl Hier bin ich! He! Was wollt ihr von mir!

Alle (sinken vor Entsetzen auf die Knie)  
Entsetzlich, der Hölle Graus ist los hier!

Rübezahl (lacht laut auf)  
Hei Menschenfeld! Hei Rübenbrut!  
Seid ihr zu End mit eurem Mut!?  
—Haha! Seid ruhig! Fürchtet euch nicht  
Mit Einer von euch nur halt' ich Gericht!

(zu Emma)

Und verbärgst du dich auch in der kleinsten Ritz  
 —ich sehe dich, thöricht Weib — du weisst es—  
 Fort warf ich der Menschen Leib und Witz  
 —Nun sieh mich in der Gestalt des Geistes

(Emma und Ratibor machen eine Bewegung, als ob sie sprechen wollten.)

*Rübezahl* (Streckt die Hand aus, worauf sie wie festgebannt stehen bleiben.)

Nun höre mich, Weib! Nicht komm' ich zu rechten  
 —Der Menschen Herz ist eng und klein!

Nicht können mit Geistern das Band sie flechten  
 —ihr Sehnen ist schwach — ihr Leben — Schein!

—Unsterblichkeit — Tugend, wollt' ich dir geben,  
 du wähltest der Menschen ärmlich Leben.

Fahr hin! Du elend' thöricht Wesen!

Sei glücklich in deiner Armlichkeit!

Kost' aus die Freuden, die du erlesen

—und fühle nicht deine Erbärmlichkeit!

(mit tiefem Schmerz)

—Ich will im Geisterreich genesen

von der Wunde — die mich quält — der bösen

—Lebt wohl, ihr Menschen, in Ewigkeit!

(Nun verschwindet er allmählig mit seinen Geistern — es wird wieder licht. Der Mond ist aufgegangen.)

Tiefe Ruhe ist eingetreten

Alle bleiben auf den Knien

Lange Pause

(Ratibor kniet vor Emma — diese blickt erschüttert auf ihn hinunter

Der König gibt ihre Hände zusammen. Der Zug ordnet sich zur Burg  
 hinauf. Brinhild mit ihren Jungfrauen bekränzen sie.)

*König*

Und halten wir nun Hochzeitsfest

—wo bleiben die Spielleut' denn zuletzt?

Aus dem Walde tritt eine Schaar Spielleute u. stellen sich an die Spitze  
 des Zuges. Unter dem nachfolgenden Gesang der Geister u. der  
 Menschen bewegt sich der Zug zur Burg hinauf. Der Mond scheint.  
 Die Spielleute musizieren.

*Chor der Landleute und Hochzeitsgäste.*

2)

Blüh' auf! Blüh' auf! Du Kränzlein im Haar!

Mit Rosen und Cypressen

Zieh' ein! Zieh' ein! du glücklich Paar!

Nun aller Noth vergessen!

Vorbei mit Winter — Trennungsleid!

Nun lacht der Liebe Sommerzeit!

Glück auf!

*Chor der Geister (unsichtbar)*

Kehr ein bei uns! O komm nach Haus!  
 Wie bist du krank und müde!  
 Du müder Wanderer, ruhe aus  
 Bei uns ist süßer Friede,  
 Gekostet hat du Erdenglück  
 dich hat verwundet Menschentück  
 O komm in unsre Mitte!

*Chor der Landl. / eute / u. Hochzeitsgäste*

- 1) Spiel auf! Spiel auf! Du Spielmann mein  
 dass weit und breit es klinge Schelle  
 Glück auf! Glück auf! Zum Hochzeitsreih'n!  
 Viel Glück und Segen bringe!  
 Gar so stillen Muths wir zogen aus  
 Mit Hochzeitsklage wir zieh'n nach Haus  
 Glück auf!

Chor der Geister Der Zug der Landleute ist schon bei der letzten Strophe verschwunden und man hört ihren Gesang in der Ferne. Die Szene bleibt ganz leer und man hört zuletzt nur noch den Gesang der Geister.

Der Vorhang fällt langsam

*Chor der Geister*

Wir wollen dich gar leis und lind  
 Mit sanfter Weis' umschweben:  
 —Ach — Zwischen Geist und Menschenkind  
 kann's keine Brücke geben.  
 —des Menschen Herz ist dunkel — klein  
 —der Geist ist klar wie Sonnenschein  
 und voll vom ew'gem Leben

*Der Vorhand fällt langsam*

l e e r

Emma Lieb Väterchen mein! — Jetzt hab' ich dich wieder  
 König Nun thu ich gern die Augen zu  
 Emma Was sind denn so roth deine Augenlider?  
 König das thaten die Nächte ohn' Schlaf und Ruh'!  
 Emma Und was sind deine Haare denn worden so licht?  
 König Das sind die drei Winter seit deinem Scheiden.  
 Emma Und wast hast du für Falten in deinem Gesicht?  
 Kön. Das sind die drei Jahre aus deinen Leiden.  
 Emma (erschrocken) 3 Jahre sagst du!  
 König Ei weisst du's denn nicht?  
 So lang musstest die Heimath du meiden.  
 Emma Entsetzlich — Mir schienen's 3 Tage nur!

*Brinhild* —Glaub' mir — seit dem du uns warst geraubt  
das dritte Mal schon verjüngt sich die Flur  
—wir hatten dich schon verloren geglaubt!  
—Welch' Wunder gab dich uns zurück!  
Verkünd' uns doch dein seltsam Geschick!

*Emma* Als ich von der Ohnmacht aufgewacht  
—da fand ich mich unten beim Geisterkönig  
umgeben von seltsamster Zauberpracht  
—Sein ganzes Reich war mir unterthänig!  
Und mir zu Füßen lag der Räuber  
und war so schüchtern als wie ein Kind  
—zuerst fast lacht ich über den armen Täuber  
—sein ganze Weisheit war in den Wind!  
dann aber weint' ich  
Als ich nun weinte in meinem Leid  
und rief voll Angst nach meinen Lieben  
—da verschwand er auf eine kurze Zeit  
und brachte mir dann einen Korb mit Rüben.  
Die hatten seltsame Zauberkraft  
—ich brauchte sie nur mit Stab zu rühren  
—gleich war mir jede Gestalt erschafft  
die ich nur mocht im Sinne führen.  
—zuerst erschuf ich mir meine Frau'n  
—doch ach — drei Stunden dauert es kaum  
so war vergangen der zärtliche Traum  
—sie wurden alt und schufen mir Gram!  
Da schuf ich mir einen Falken klug  
und schickt' ihn als Boten hinauf zur Erde  
—als ich ihn nun in kühnen Flug  
verschwinden sah — ohn' alle Beschwerde  
da dacht' ich mir — es wär' nicht schwer  
mich selbst mit List so fortzustehlen,  
schnell sann ich mir aus eine feine Mär  
und schickte den Geist sein Rüben zu zählen!  
dann sehnt ich mir ein Rösslein schnell  
das liess ich den weg des Falken wählen  
—und eh' ich's versah — schon war ich zur Stelle,  
—der Geist wird wohl noch Rüben zählen!

Hofmarschall

## PERSPECTIVES ON ANTON BRUCKNER: AN INTERNATIONAL SYMPOSIUM

DEPARTMENT OF MUSIC, CONNECTICUT COLLEGE. 21-24 FEBRUARY 1994

*Perspectives on Anton Bruckner* was the first symposium in North America devoted entirely to the Music of Anton Bruckner. Organized by Timothy L. Jackson, Connecticut College, and Paul Hawkshaw, Yale School of Music, the conference and its concerts offered a re-evaluation of Bruckner's music, its dissemination, and its reception. An international roster of scholars presented papers at five sessions: *Analytical Issues* (two sessions), *Source and Documentary Studies*, *Bruckner as Cultural Icon*, and *Reception and Influence*. Robert Bailey, Janet Schmalfeldt, Christoph Wolff, Leon Botstein, and Christopher Hailey respectively served as chairpersons. Two programs of music featured Gustav Mahler's and Rudolf Krzyzanowsky's two-piano arrangement of Bruckner's Third Symphony, an arrangement completed in Vienna in 1920 by students of Arnold Schoenberg of the Seventh Symphony for chamber ensemble, *Lieder*, and choral pieces including the modern premiere of the final version of *Du bist wie eine Blume*. The performers were Paul Althouse conducting the Connecticut College Chamber Choir; Paul Phillips directing members of the Connecticut College Faculty and Eastern Connecticut Symphony Orchestra; Soprano, Roxane Althouse; Baritone, Richard Lalli; and pianists, Gary Chapman and Andrzej Anweiler.

The conference was designed to begin to disencumber Bruckner from layers of special interest which have hindered the dissemination of his music since the inception of his career as a professional composer. Generations of supporters who used him and his music for their own political and personal self-interests and, at times, self-aggrandizement, have colored and often negatively impacted the perception and understanding of Bruckner as a person and a composer. The figure of Richard Wagner has, of course, always hovered in the background and often dominated.

The specifics are well-known. As early as 1867, when Johann Herbeck and Eduard Hanslick fought, in the face of heavy odds, to bring Bruckner to Vienna, they thought they had found the contemporary Austrian symphonist who could serve as a suitable counterweight to the pernicious influence of Richard Wagner. The composer's unabashed admiration for Wagner's music soon turned Hanslick into Bruckner's most powerful adversary. For the next thirty years Hanslick and his followers, in a segment of the Viennese press representing a strange combination of political liberalism and musical conservatism, vituperatively condemned what they described as the uncontrolled Wagnerism and decadence of Bruckner's "music of the future." Such a reaction played perfectly into the hands of Viennese Wagnerites. The *Wiener akademische Wagner-Verein* propped

Bruckner up on a pedestal, and he became the darling of the local anti-Brahms, politically conservative, and often anti-semitic press. Young Wagnerites including Mahler, Wolf, Göllerich, Löwe, and the Schalk brothers were among his staunchest supporters and were often responsible for the early publication of his works.

Wagnerian ideology and contemporary politics controlled Bruckner's legacy well into this century. Perhaps realizing that his young editors were not always scrupulous and sometimes even tried to make his music sound more like that of Wagner, Bruckner left the autograph manuscripts of most of his major works to the Imperial Library. If he expected accurate versions to be available for posterity soon after he passed away, he was mistaken. Powerful Viennese with vested interests (not to mention a few skeletons in the closet) intervened, and for forty years, most of the manuscript versions remained relegated to the library shelf.

One of the great ironies of the history of the dissemination of Bruckner's music in our century is that a major impetus for the first important attempt to rectify the situation came as a result of a greater evil. In 1937 Adolph Hitler attended the consecration of a bust of the composer in Regensburg's palace of Valhalla. Bruckner was now a paragon of Wagnerian virtue and prototypical German composer. This native son of Hitler's Oberösterreich and hero of the Viennese conservative press (which Germany needed to support the *Anschluss*) had become a cultural icon of the Nazi party. It was now propitious to publish the pure *Urfassungen* of this German master in a new musically and politically correct *Gesamtausgabe* edited by Robert Haas and Alfred Orel. Any benefits which accrued as a result of the appearance of the new scores, some of which have, correctly, been criticized for questionable editorial practices, were more than offset in many parts of the world by the negative implications of Bruckner's adoption by the third Reich.

After the second world war public sentiment demanded the expurgation of Nazi influences on the preparation of the Collected Edition of Bruckner's works. Leopold Nowak began a new *Gesamtausgabe*. His policy for more than thirty years was to shield the primary sources from outside scrutiny even more rigorously and effectively than his predecessors at the beginning of the century. Only in the past decade have performers and scholars from the international community been allowed consistent access to surviving materials. They have begun the long-overdue systematic investigation of the primary sources for Bruckner's major compositions. Many results of their work were presented at the Connecticut conference.

At the conference the sessions on reception attracted the most attention and stimulated the most discussion. Margaret Notley observed that the roots of later National Socialist thinking on Bruckner can be found in the Viennese press of his own time. Bruckner received much of his contemporary critical acclaim from Wagnerian fundamentalists, many of whom belonged to "the most extreme part of the *völkisch* fringe" of Vienna. Bryan Gilliam considered the importance of the Regensburg ceremony of 1937 and dis-

cussed the reasons Bruckner was particularly suited to Göbbels' propaganda campaign. An Austrian peasant genius victimized by Jewish (i.e. Hanslick's) criticism admirably served Hitler's social and political agenda. In 1937 when relations with the Vatican were disintegrating and Naziism was being promoted as a religion in its own right, the composer's well-known reputation as a devout Roman Catholic was downplayed. Göbbels speech at the ceremony described Bruckner as a German composer whose genius "frees itself of all ties to the Church."

Christa Brüstle illustrated the major role which National Socialist politics played in the inaugural efforts on the Bruckner Collected Works Edition, especially in its publication of the Fifth Symphony, which became a symbol of *urtümlisches Künstlertum*. Benjamin Korstvedt continued the discussion of the *Gesamtausgabe*, pointing out that political ideologies caused the editors to reject valuable evidence in earlier printed scores and ultimately mislead performers and scholars, particularly in the cases of the Second and Fourth Symphonies. Political and nationalistic ideology also controlled theoretical writing, as Stephen McClatchie observed in his study of Wagner scholar, Alfred Lorenz', and his pupils' analyses of Bruckner's compositions.

Editorial and source-critical issues have plagued Bruckner scholarship throughout the twentieth century. William Carragan's and Paul Hawkshaw's studies of the materials for the Second Symphony and F-Minor Mass, respectively, revealed the existence of previously unknown versions of both works. Many of Bruckner's primary sources continue to retain untold secrets. Each of his major works needs a systematic re-examination of the sources, manuscript by manuscript, print by print. Elisabeth Maier presented a fascinating look at the insights Bruckner's personal calendars provide into his private and public life.

Papers on the impact of Bruckner's environment as well as his influence on contemporaries and subsequent generations included Andrea Harrandt's description of the social and musical influence of the male chorus movement on Bruckner's development as a composer and conductor. His devotion to this movement, which was at the heart of German *völkisch* sentiment, lasted throughout his career and culminated in the composition of *Helgoland* in 1893. Robert Wason demonstrated the important contribution of Bruckner's pupil Josef Schalk in updating Sechter/Bruckner theory of harmony to cope with late nineteenth-century chromaticism. His paper dealt specifically with an unpublished study of Josef Schalk, *Aufsatz über die Chromatik*. Marianna Sonntag considered Ernst Kurth's interpretation of the Ninth-Symphony *Adagio* in light of the sketches which survive in Krakow. Morton Solvik presented an iconographic perspective on late nineteenth-century and, specifically, Mahler's perception of anxiety and the "Threatening Side of Nature." Amy Bauer offered thoughts on Bruckner's influence on the composer, Györgi Ligeti.

The analytical sessions provided some new perspectives on Bruckner's music. Timothy Jackson discussed the form of the Finale of the Seventh Symphony. Among other things, the tragic references of its reversed sonata form as well as subtle allusions to the music of Liszt

and Wagner point to the existence of a complex program about the latter's death and its implications for the Art of Music. Edward Laufer applied Schenkerian methodology to illustrate long-range organic prolongations operating in the *Adagio* of the Ninth Symphony. Even the great Austrian theorist, who himself admired the composer very much as a person, did not understand this aspect of Bruckner's music. Joseph Kraus and Thomas Röder used examples from the first four symphonies and the string quintet to debunk the myth that Bruckner's *Scherzi* are consistently four-square and follow a uniform aesthetic and formal plan. They are full of intricate phrase structures of uneven lengths and, within phrases, hypermetrical irregularities are a consistent organizational feature. Contrary to the popular belief that Bruckner's revisions regularized the music into four and eight-measure phrases, they often resulted in the expansion of what was already an unusual hypermetrical structure.

Warren Darcy developed James Hepakoski's theory of "Sonata Deformation" as it applies to the outer movements of Bruckner's symphonies. John Williamson continued the discussion of this work by considering the rhetorical implications of Bruckner's juxtaposition of learned contrapuntal styles—Chorale and Fugue—with the nineteenth-century process of symphonic development. Of particular interest in this regard is the relationship between the opening thematic group in the first movement and the Chorale and Fugue in the Finale. Stephen Parkenny considered the contrapuntal aspects of the same symphony in light of the composer's application for a post at the University. In his semiotic analysis of the Fourth Symphony, Robert Hatten pointed out Bruckner's reference to recurring nineteenth-century topoi including the Pilgrims' March from Berlioz' *Harold in Italy*, Mendelssohn's *Italian Symphony* and, of course, Wagner's *Tannhäuser*.

One unanimous view emerged as the meetings proceeded: that Bruckner remains cloaked in an almost exclusively Wagnerian mantle is no longer justifiable. There is no question he admired Wagner and often made references to his music; the *Meister aller Meister* certainly influenced his harmonic language and orchestration. Yet aesthetically, politically, and philosophically the two men could not have been further apart. Wagnerism has clouded the more pervasive traditional roots of Bruckner's symphonic and sacred styles. He was well-versed in the Viennese classics—Haydn, Mozart, Beethoven, and Schubert—and spent considerable time with the music of more contemporary figures such as Berlioz and Schumann. All surviving evidence indicates that, during periods of self-analysis, he turned to these composers—not to Wagner.

*Perspectives on Anton Bruckner* raised an enormous number of interesting, often controversial, and always stimulating issues. Some of the papers presented at the conference will appear in a volume published by Cambridge University Press.

JOSEPH BRAUNSTEIN (1892-1996):  
A VOICE FROM THE BRUCKNERIAN PAST  
(A Tribute and an Interview)

BENJAMIN M. KORSTVEDT  
with DAVID H. ALDEBORGH

The name Joseph Braunstein may not be a very famous one, but it is likely to be familiar to Bruckner aficionados, especially collectors of Bruckner LPs. In the 1950s, 1960s and 1970s Braunstein wrote fascinating liner notes for a number of recordings of Bruckner symphonies.<sup>1</sup> These notes offer some remarkable glimpses of a lost epoch in the history of Bruckner's music. Born in Vienna in 1892, Braunstein was active in Viennese musical life during the first four decades of this century.<sup>2</sup> He both heard and played Bruckner's music under Franz Schalk and Ferdinand Löwe in the 1920s. In addition, in the 1930s Braunstein discussed Bruckner editions with Robert Haas, who prepared the first collected edition of Bruckner's works.

Braunstein's writings on Bruckner are not extensive, but they are notable for both their historical soundness and their musical acuity. Consider Braunstein's comments on the Ninth Symphony, which are brief yet make some important points often missed even in lengthier accounts. For example, although it was not common knowledge at the time, Braunstein stressed that not only had Bruckner definitely conceived of the Ninth Symphony in four movements, but had in fact sketched most of the Finale before his death. Braunstein also neatly dismantled the frequent misconception that Löwe was guilty of duplicitously publishing his own posthumous edition of the Ninth Symphony (1903) as Bruckner's original by quoting Löwe's preface to the score, which is quite clear in identifying the editor. Braunstein also explained the musical logic of Löwe's substitution of flute and bassoon for the pizzicato violins in the Scherzo: pizzicato is very difficult at Bruckner's fast tempo and Löwe was apparently concerned to facilitate proper performance of the piece.<sup>3</sup>

In other essays, Braunstein offered a fresh view of the much-discussed textual issues surrounding Bruckner's music. For example, about the Eighth Symphony he wrote:

The very intricate question as to whether the original versions [i.e., Haas's and Nowak's editions] or the first editions [i.e., those published during Bruckner's life-

---

<sup>1</sup> See the bibliography for a complete list.

<sup>2</sup> For a brief biography see Allan Kozinn's obituary in the *New York Times*, 13 March 1996, p. B12.

<sup>3</sup> See Braunstein, notes to Anton Bruckner, Symphony no. 9, Bavarian Radio Symphony Orchestra, cond. Eugen Jochum, Decca DX 139 LP (1956) and review of Anton Bruckner, Symphony no. 9, Pro Musica Symphony Orchestra, Vienna, cond. Jascha Horenstein, Vox PI 8040 LP, *Musical Quarterly* 40 (1954), pp. 286-89.

time] should be used for performances is by no means conclusively answered yet. The present writer, who in his students days not only had the opportunity of hearing Bruckner's compositions under the direction of Löwe and Schalk, but was privileged to play them when they first presided over the orchestra, is not prepared to accept the first editions as [unauthorized] arrangements and accept the original versions instead.<sup>4</sup>

Braunstein was refreshingly skeptical about the prevailing orthodoxy—and refreshingly free from the biases and hidden agendas that so often mar Bruckner criticism.<sup>5</sup> Indeed, his comments are a welcome tonic to the generally unreflective, and often poorly informed, stance taken by so many writers of program notes. And in view of Braunstein's personal involvement with a pivotal period in the history of Bruckner's music, his statements have a degree of authority that cannot be dismissed lightly.

\* \* \*

Early in 1992 I idly glanced through the directory of the American Musicological Society and was surprised to run across the name Joseph Braunstein. My interest was especially keen because at that time I was in the early stages of a dissertation on the textual history of the first printed edition of Bruckner's Fourth Symphony. Like Braunstein, I was skeptical about the old stories impugning the authority of this text, and for this reason I was eager to contact him; he seemed sure to have a uniquely valuable perspective on the matter.<sup>6</sup> Although it seemed unlikely that the Joseph Braunstein listed in the 1992 AMS Directory was the same man who had played under Schalk and Löwe in the 1920s, I nonetheless sent a letter to him. A couple of weeks later I received a most remarkable reply: a single-page letter, typed with evident, painstaking care, and signed by a venerable, if shaky hand. It read in part:

I am a centenarian and your letter has catapulted me into my past. I grew up musically with performances of Bruckner symphonies based on the first editions. As an orchestral musician from 1919 to 1924 I played only the first editions. I became acquainted with the problem of the original versions in conversations with Robert Haas and I was somewhat involved in the events [in 1935] which surrounded the tryout of the original Finale of the Fifth Symphony.

---

<sup>4</sup> Notes to Anton Bruckner, Symphony no. 8, Vienna Symphony Orchestra, cond. Jascha Horenstein, Vox Turnabout THS 65090/91 LP (1970); reissued as Vox Box CDX2-5504 CD. The quotation is taken from the latter source, p. 11.

<sup>5</sup> It is worth noting that Werner Wolff, another Bruckner critic born in the nineteenth century, shared Braunstein's doubts about modern dismissals of the editions of Bruckner's music published in the nineteenth century; see his *Anton Bruckner: Rustic Genius* (New York, 1942), pp. 261-70. Indeed, the belief that the original publications of Bruckner works are corrupt arose only after Bruckner's death, primarily during the 1930s.

<sup>6</sup> Ultimately my research led me to conclude that by any reasonable standard the version of the symphony published in 1889 is fully legitimate and must be considered authentic. See my forthcoming article, "The First Published Edition of Anton Bruckner's Fourth Symphony: Collaboration and Authenticity," *19th-Century Music* 20 (1996), pp. 3-26.

A follow-up letter went unanswered. But in 1994, with the mediation of Carol Marunas of Essex Entertainment, a personal friend of Dr. Braunstein, I did successfully reach him by telephone. In the following months we had several fascinating conversations on the telephone. Finally, on 29 April 1995, David Aldeborgh of the Bruckner archive in Poughkeepsie, New York, and I visited Dr. Braunstein at his residence on East 96th Street in Manhattan. In Dr. Braunstein's small apartment, which was crowded with books, scores and recordings, we talked for some two hours about his career as both a performer and a scholar in the Vienna of the 1920s and 1930s, and of course, about Bruckner's music. We found Dr. Braunstein to be remarkably energetic and clear-headed, and to have astonishingly sharp memories of his musical experiences in Vienna. Indeed, he recalled many of the leading Bruckner scholars of the time with real vividness, and showed considerable curiosity about our work. With Dr. Braunstein's permission we taped the conversation; it is transcribed below.<sup>7</sup>

\* \* \*

Ben Korstvedt: You knew Robert Haas quite well didn't you?

Joseph Braunstein: Yes. When he came to Vienna from Dresden he gave up a musical career and then took up an academic career.

B. K.: He had been a conductor in Dresden?

J. B.: He was never a conductor. He was what we call a *Korrepetitor* [i.e., a répétiteur]. He was a *Korrepetitor*; he was a [vocal] coach. And then he took up the academic career: he was first what was called a *Privatdozent* [i.e., a lecturer] and then he acquired a professorship. And it seems to me, that he was always in sympathy with the Nazis. He was, I would say, somewhat active in that movement. His newspaper was the Nazi paper, the *Völkische Beobachter*—it was on his desk in the National Library! It shouldn't have been, because that was actually a step against the government which paid him. But we'll leave that aside for the time being.

Nowak was very modest and didn't have any connection with the government. But Haas was different. Haas immediately showed his sympathy with the Nazi movement, and then, when the Nazis actually came to power, it was his time. But actually, I had a very good personal relationship with him. I could never complain about any strong intentional declaration on his part that he was a friend of the Nazi movement; he avoided that in our personal relationship.

Then after the collapse of the Nazi regime, Haas lost, naturally, his positions, and his successor was Leopold Nowak. Nowak was more on the side of the Catholic party. The Catholics had a very important power in Austria politically. And he was, I believe, in his student years, a member of a Catholic organization. I still believe that he was a *decent* man; that I must say. As I mentioned before, with the collapse

---

<sup>7</sup> It has been edited slightly in interests of clarity.

of the Nazi regime, Haas's power came to an end, and Nowak was appointed Director of the Music Division of the National Library. And so he also inherited the Bruckner business; that was a matter of course. And then he started to publish . . . I don't know. I must confess, I have never had a very intense knowledge of his Bruckner publications; maybe you have more than I. After all, that was a time when I had to be concerned about survival! The Bruckner matter became secondary. I had to survive: I was married, and my bride was very ill—multiple sclerosis. So, I had enough problems, and I could not immerse myself in Brucknerian matters. I was more at the fringe.

B. K.: When did you leave Vienna and come to New York?

J. B.: I left Vienna on April 15, 1940. Yes, I lived under Hitler. I had some experiences as far as life under Hitler is concerned. Oh, yes! Oh, yes! The Gestapo came to me—actually in order to go after a sister-in-law. But they also interrogated me a little bit. There was one fellow; he said: "You are writing about music. I cannot understand how a Jew can write about German music." I kept silent, oh yes. I did not say anything. He left. He didn't go after me; he went after my sister-in-law, because my sister-in-law lived with an "opulent" Jew. The Gestapo were after his money. So, I left my country in a boat. It is very hard to describe: I was sad and I was glad.

But as I said before, I had a good personal relationship with Haas and with his assistant, Dr. Schneider. He too had the Nazi paper on his desk! [Striking chair for emphasis.] In spite of the fact that he was an employee of the Austrian government. He [Schneider] was formerly an officer in the Austrian army; he came from Salzburg.

And then I came to New York and all I had to do was to survive. That took some time. Now I can look at that period as an analyzing historian. Ask me what you want to know.

B. K.: You mentioned to me that when Haas was making his edition of the Fifth Symphony, he spoke with you about it.

J. B.: Actually he was somewhat—in a certain sense—an enemy of Schalk. He maintained that Schalk was responsible for . . . [pauses while searching for the right word] manipulating the Brucknerian manuscripts. He [Schalk] had access to them; because as conductor of the State Opera, Schalk had access. When he went to the Nationalbibliothek, the National Library, every door was open. Someone once said, "Schalk is not a musician, not a conductor; he is an Austrian institution!" Yes, that he was! And in that capacity he had enormous power. I remember that when he was conducting the Fifth Symphony, in the newspaper there was some allusion to the idea that he was tampering with the score. A statement was issued by his wife, that he was going to conduct the symphony exactly as it was put down on paper by Bruckner; that was, I should say, the gist of the statement. Actually, Haas convened interested people in the National Library to speak about the tampering with the Brucknerian manuscripts. He said that Bruckner was subjected to sanctions. Do you know about that? [general assent] I heard it; I attended this gathering. The moderator of the gathering, a gentleman who was a very fine man, didn't want the

memory of Löwe and Schalk to be muddied by Haas. And then came Haas with his "Sanktionenstheorie."<sup>8</sup>

B.K.: When I was in Vienna, in the Nationalbibliothek, last year, I saw the papers of Lili Schalk there. And in them are many newspaper articles from that time, in which people debated whether Haas's "Sanktionenstheorie" was true. And it seems that many Viennese felt that it was an unfair accusation.

J.B.: Yes, against Schalk or Löwe. As I say, the moderator—I have forgotten his name, in spite of the fact that when I was in military service he was my commander—didn't want the names of Löwe and Schalk to be muddied by Haas.

Haas was a small man, I mean physically. But nevertheless, he must have been very . . . Hah! [trails off]. . . Now I believe Haas is forgotten, except his books. His books were *good*. One on Mozart, I believe. He knows something, there is no question about it. He was a scholar, actually he was a scholar. But he was also an *Intrigant* [i.e., a schemer]. He combined his scholarship with very unfair, unfair actions. Absolutely. I don't know how he was judged abroad.

David Aldeborgh: Generally speaking, Haas has had a lot of sympathy around the world for his scores. Two people, Doernberg and Redlich, both wrote books which were very critical of Nowak.<sup>9</sup> They praise Haas as being the one who saved the Bruckner tradition. I don't agree with that conclusion. . .

J.B.: [Interjecting in agreement] No, no, no! I say, Haas had his partisans. Absolutely. I talked with him very often: he was always talking about Schalk, and Schalk, and Schalk.

B. K. I have been studying the history of the Fourth Symphony, and I have concluded that the so-called Löwe/Schalk edition is actually Bruckner's own edition: he revised it and he prepared it for publication.

J. B. Yes, that was one of the symphonies in which, I would say, his signature was on the papers.<sup>10</sup>

D. A. Did you ever play under Schalk?

---

<sup>8</sup> For a discussion of these events and the debates surrounding them see Korstvedt, *The First Edition of Anton Bruckner's Fourth Symphony: Authorship, Production, and Reception* (Ph.D. diss., University of Pennsylvania, 1995), pp. 99-143.

<sup>9</sup> Erwin Doernberg, *The Life and Symphonies of Anton Bruckner* (London, 1960; rpt. New York, 1968) and Hans T. Redlich, *Bruckner and Mahler, The Master Musicians* (London, 1955). See also Deryck Cooke's influential, albeit crucially flawed, essay "The Bruckner Problem Simplified," in *Vindication: Essays about Romantic Music* (Cambridge, 1982), pp. 43-71 and his equally problematic article "Anton Bruckner" in *The New Grove Dictionary of Music and Musicians* (London, 1980), vol. 3, pp. 352-71; rpt. in *The New Grove Late Romantic Masters.*, ed. Stanley Sadie (London, 1985), pp. 1-73.

<sup>10</sup> This is not quite accurate: Bruckner did not actually sign the copy of the score used to prepare the printed edition, but he did revise it extensively. He also signed a contract authorizing its publication. For a full accounting of these details see Korstvedt, *The First Edition of Anton Bruckner's Fourth Symphony*, pp. 296-314, and "The First Published Edition of Anton Bruckner's Fourth Symphony," pp. 7-16.

J. B. [quite merrily] Oh, I have played under Schalk in the concert hall and much in the opera. Oh, yes. *Meistersinger*, *Götterdämmerung*, and et cetera. Almost all of Wagner which Schalk conducted. In my time there was a division between Schalk and [Bruno] Walter. Walter conducted *Rheingold* and *Walküre*; Schalk conducted *Siegfried* and *Götterdämmerung*.

D.A.: What instrument did you play?

J.B.: In the orchestra, mostly viola.

D.A.: What did you think of Schalk as a conductor and as a person?

J.B.: [Earnestly] I had the highest regard for him; I had the highest regard for Schalk. I still remember with greatest pleasure when there was a memorial concert for Schalk and when a critic—Robert Konta [?] was his name—said that Schalk was not a conductor but was an Austrian institution. And it was true. He was officially the conductor of the concerts of the Gesellschaft der Musikfreunde, and the programs ranged from the *Messiah* up to Bruckner. Sometimes he was invited to conduct at the Court Chapel at Masses, in the Hofkapelle, actually during the Mass—strictly Catholic Mass, naturally. He was invited, so to speak, as a guest conductor to conduct the D Minor Mass of Bruckner.

B.K.: Did his interpretations of Bruckner's symphonies differ from modern day styles?<sup>11</sup>

J.B.: Most certainly, most certainly. The idea was, I would say, religious—it was religious. I remember, we played mostly from the parts issued by *Breitkopf & Härtel*, and sometimes the bowing was indicated. And he was very critical: "Leipziger Stricharten! [the Leipzig manner of bowing!]" [Laughter]

D.A.: Did you ever play the Fifth Symphony under Schalk, or did you ever hear him do it?

J.B.: Wait a minute, let me see. I heard him do the Fifth Symphony; I was in standing room.

D.A.: Do you remember anything about the tempi? Did he open slowly or rapidly?

J.B.: That was now sixty years ago. What do you want from me?

D.A.: The reason that I ask is that Leon Botstein<sup>12</sup> feels that Bruckner should be played more quickly than we usually hear him.

J.B.: No, I think that the tempi of Schalk's were rather on the slow side. I would call them Bayreuth tempi, Wagnerian tempi, on the slow side. But it was wonderful, for instance, in *Götterdämmerung*, the transformation from night to day in the first act; it was really, really very moving. He also did the little things, he was always intent. . . . I

---

<sup>11</sup> [B.K.] During our first telephone conversation, I asked Dr. Braunstein if he could compare Schalk's Bruckner interpretations to those of any later conductor, whether Karajan, Klemperer or Walter. He answered in his inimitable manner: "Furtwängler! Furtwängler!"

<sup>12</sup> The conductor and scholar who had on 13 January 1995 led the American Symphony Orchestra in a performance of the Schalk edition of Bruckner's Fifth Symphony in Lincoln Center.

have the best recollection of Schalk, as everything: as a conductor in the concert hall, and as an opera conductor!

B.K.: You do not believe Haas's idea that Schalk . . .

J.B.: [Interjecting] No, no. I don't believe that, no.

B.K.: Did you know Alfred Orel?

J.B.: Oh, oh! [Laughs with recognition.] Alfred Orel! That is also an interesting case. Orel was also involved politically; he was employed by the City of Vienna, but nevertheless he was a Nazi. He worked in the *Stadtbibliothek* of the City of Vienna. He was an employee of the city government, and the city government was socialistic [and thus opposed to Nazism].

B.K.: Is it true that he and Haas became enemies?

J.B.: In a certain sense, yes. Orel became critical of Haas's editions, and he tried to make [his point] very diplomatically. He would not come out rabidly, but he showed his opposition very smoothly.

B.K.: Haas did not take kindly to that sort of opposition.

J.B.: No, no. It was interesting, when this all took place they were both coming out of the music institute of Guido Adler. Both were becoming rabidly anti-semitic, and they were students of Guido Adler. [Adler was Jewish.] It was an *impossible* situation, impossible.

D.A.: Who was Guido Adler?

J.B.: Guido Adler was the head of the Austrian musicological school. He was a professor, full professor and had an interesting [life]. He was one of those who attended the first Bayreuth Festival in 1876.

B.K.: You were a student of Guido Adler's also.

J.B.: Yes. Actually, my book on *Leonore* is dedicated to him.<sup>13</sup> Oh, yes!

D.A.: Did you know Löwe at all? Did you ever have any experience with Ferdinand Löwe?

J.B.: With Löwe, oh yes! I played dozens of times with him, most of the Bruckner symphonies. I remember, at that time in Vienna, the symphony orchestra went to Linz and did a program, naturally, with a Bruckner symphony—ah, [correcting himself] at that time Schalk was conducting.

B.K.: Was Löwe as good a conductor as Schalk?

J.B.: He was different. Löwe was more sedate. Löwe conducted everything: as Concert Director of the Wiener Konzertverein, he had so many subscription concerts a year: he conducted *Concerti Grossi* by Handel and had to go up to Bela Bartók—an enormous work load—enormous work load. He was a nice man, a nice man. I remember a concert in Pressburg and on the train I was sitting very close to him. Interestingly enough, in spite of his strong attachment to Bruckner, Löwe was an excellent interpreter of the Brahms chamber music with piano.

---

<sup>13</sup> He refers to his dissertation, which was published as *Beethovens Lenore-Overtüren* (Leipzig, 1927).

B.K.: He was a pianist?

J.B.: Yes! And he was an *excellent* interpreter of Brahms chamber music with piano. After his death, it fell to me to do the eulogy, and I mentioned that. And then I got a letter from Löwe's son, and he was delighted to see that I had a great understanding of his father's interpretation of Brahms.

Löwe, Löwe. . . Actually, [chuckles] in the orchestra, he was spoken of only as "The Ferdinand." You see his first name was Ferdinand; he was only "the Ferdinand." Nobody would have dared to say of Schalk, "The Franz" . . . I am delving into my past today . . .

D.A.: Did you ever know a conductor named F. Charles Adler?

J.B.: Adler? Charles? No.

D.A.: He apparently knew Löwe. He made some recordings of Bruckner: he made the only commercial recording I know of the Löwe edition of the Ninth. He did that with the Vienna Symphony—the Wiener Symphoniker. He also made recordings of the Third Symphony and the First.

J.B.: The name is new to me. Of conductors who were programming Bruckner I knew only Löwe and Schalk. Oh, I remember in the Philharmonic concerts in Vienna, Weingartner conducted the Third Symphony. His tempi were too quick. It must be slow: [sings a bit of the *Gesangsperiode* of the first movement at a properly flowing tempo].

B.K.: Did you ever hear Furtwängler?

J.B.: Hoy! I played X times under Furtwängler, X times under Furtwängler! Let me tell you a story. One day in the morning mail I got a card from the Vienna Symphony Orchestra that I should come immediately to a rehearsal for a subscription concert; that was all. So I came: Fourth Symphony of Schumann. I didn't know who the conductor was. Of course, I had to be concerned first of all with my part. But, after a few measures I thought: "Who is that on the podium? He is extraordinary; who could that be?" I had no idea. The symphony was rehearsed. We had a break, and I went to several members of the orchestra whom I knew: "Who is the conductor?" "Furtwängler."

I played for instance with Furtwängler, Bruckner's Ninth Symphony, Schoenberg's *Verklärte Nacht!*

B.K.: Under Furtwängler?

J.B.: Yes, ah yes. I remember once—I was not playing, I was only listening—he did a splendid performance of a Haydn Symphony, I've forgotten which one. It was *really* splendid; it went like a mountain stream. I also heard *Tannhäuser* under Furtwängler. So many, many years have passed, that many details cannot be kept in mind. But he was an extraordinary conductor—extraordinary conductor, be it Haydn, be it Brahms, be it Bruckner. Never Mozart! I cannot recall any Mozart under Furtwängler—no.

B.K.: Not even *Don Giovanni*? No operas?

J.B.: No, never. Never, never.

D.A.: Did you ever play under Knappertsbusch?

J.B.: Ja, yes. [Pauses to think.] I may have played under Knappertsbusch in the symphony orchestra. But the details I have

*vergessen* [forgotten]. He was strictly, I would say, a Wagnerian conductor, Wagnerian tempi. But he knew his business, oh yes, and he was liked by the orchestra because he was not a stickler. He was light on the orchestra—ha, ha—he was not a stickler.

So, what else have you to ask?

D.A.: I would be interested in anything that you could tell us about both Schalk and Löwe, in terms of the type of people they were. You've already indicated that you thought that Schalk was a very fine man, and the same thing about Löwe.

J.B.: Yes, personally they were both very fine men. Schalk was also a chess addict. Oh, yes. I attended the first performance of *Parsifal* in the State Opera—at that time it was already the State Opera. It cost me twelve hours, mostly standing. But I was young. It is said that at the dress rehearsal of *Parsifal* [that due to technical difficulties with the scenery (during the gradual transition from the forest scene to the Grail Hall towards the end of the first act) there were a number of prolonged interruptions, during which Schalk, to pass the time, became engrossed in a chess game from which he had difficulty separating himself, and that he would alternately conduct or return to the chess game as the situation allowed.]<sup>14</sup>

D.A.: Would you say the Schalk had an intense personality? His photographs seem to show a great intensity around the eyes.

J.B.: That is true, yes. [Pauses.] It was an intense personality. I have the greatest respect that he was capable of conducting the Fifth Symphony in Graz, with an orchestra in which maybe nobody had heard a tone of Bruckner! [Braunstein refers to the first performance of the work under Schalk in 1894.] He succeeded.

D.A.: Do you have any particular opinion about the editions, the first editions of the Bruckner symphonies, such as the Fifth, such as the Ninth? Do you have any particular feeling about them?

J.B.: The edition of the Ninth Symphony was entrusted to Löwe. I don't know what happened behind the scenes. I believe that he tried to be true to the text as it was written. I don't think that he made any changes. . .

D.A.: What I've read is that when Löwe planned to mount the premiere performance in 1903, during the rehearsals certain things struck his ear that didn't sound right to him. So he was making little changes in the course of the rehearsals. In any case, the types of changes he made are the very same type of changes that were made in the Fourth Symphony. For example, in the first edition of the Fourth Symphony you have a first and second ending on the Scherzo; he did the same sort of thing now for the Ninth. So in other words, I think that he might have felt that he had permission from Bruckner, spiritually, to do the sort of things that Bruckner himself had permitted for the Fourth. That's my theory.

---

<sup>14</sup> The bracketed portion of the transcription contains the gist of what was said while the tape cassette was flipped from Side A to Side B.

J.B.: I see, the practice of the Fourth was applied to the Ninth. In any case, what you said must point to a very delicate ear. There cannot be substantial changes; it must be little things. The structure was not touched! It was not Löwe's intention to improve Bruckner, no, no, no. He was too sincere a man.

D.A.: My first experience with the so-called "Löwe" Fourth was a concert by the New York Philharmonic conducted by Joseph Krips [on 5 March 1964]. That was the first time that I had heard that edition of the Fourth, and at the beginning I didn't know it was anything different from what I had heard before. But then every once in a while a little something would happen and I would say: "Isn't that a wonderful conductor; he just brought that out so beautifully." Actually these are details that were written into the score of that edition, but I didn't realize that. It wasn't until the chorale in the first movement [mm. 305-32], where the violas play pizzicato instead of arco—that's when I knew it was the Löwe edition. And that was the first time I had heard it. I was so impressed by the beauty of the sound; there was a radiance that pervaded the sound throughout the entire piece. And it impressed me so much. This is when I said to myself, "these first editions deserve a review; they should be reevaluated." They had been nothing but condemned by the critics—by the so-called scholars—up until that point. And I said, "wait a minute, my ears tell me that this is beautiful." That was my reaction.

J.B.: I know what you mean. I don't think that Löwe tampered with the scores. No, no, no. Actually the task which fell to him, to bring out the Ninth Symphony, that is superhuman—that is really almost superhuman. Always, as often as I heard the Ninth Symphony, I was struck by the enormous power, which here in the space of a few measures is brought to real sound. It must have been a tremendous task for Löwe to bring out the first performance of the Ninth Symphony. Tremendous.

D.A.: As I mentioned to you, I have a recording of this symphony conducted by F. Charles Adler, with the Wiener Symphoniker. This is a very old recording from about 1952. I will make you a copy of it on cassette and send it to you. I think you might be interested in hearing it—the Löwe edition of that symph. . . .

J.B.: [Interrupting] Listen, I cannot reconcile myself to the expression "Löwe edition."

D.A.: Well he was the editor. That's what I mean by the "Löwe edition." One could simply call it the "first edition."

J.B.: I suppose that Löwe and Schalk got together and decided who was going to do that. Schalk was at that time already a conductor at the Vienna Court Opera. . . . [thinking out loud] So who is going to do that? . . . ah, ah . . . now you see . . . Löwe . . . Löwe . . . Ferdinand . . . [trails off].

B.K.: I hope that we haven't tired you out too much.

J.B.: No, no, some times came back to me that I had almost completely forgotten. In that respect, I am a living monument . . .

. . . a living monument! It sometimes seems that I am living too long!  
[laughter]

D.A.: Did you ever hear the name Cyrill Hynais [accenting second syllable]?

J.B.: No.

D.A.: He was one of the early editors of Bruckner. He was a pupil of Bruckner.

J.B.: Who? [D.A. writes name.] Ah! Cyrill *Hynais*! [pronouncing the C of Cyrill as "Ch" and strongly accenting the first syllable of the last name] Cyrill *Hynais*! Oh, yes! He was one of Bruckner's students.

D.A.: Can you tell us anything about him?

J.B.: Actually, he was a conductor at a Viennese Church. Cyrill Hynais, yes. . . . You might find something about him in a [musical] dictionary. [He starts to look through his library.]

D.A.: Was he Austrian?

J.B.: Yes, *Viennese* [with emphasis]. Viennese. Cyrill Hynais, Cyrill Hynais [He continues to search, but without success].

B.K.: Vienna must have been a very wonderful city back in the 1920s and 1930s.

J.B.: No comparison with today. The best thing is not to think about it, and to keep to the memories you have. So, is there anything else you want to know?

B.K.: I don't think so. You have told us many, many fascinating things. It has been a great honor to meet you.

J.B.: Don't exaggerate! I am very grateful that you made the trip. I didn't think I would have had the opportunity to talk of these things with somebody who is well-versed in these matters. As you know, I am a hundred and three.

D.A.: You are doing very well for a hundred and three! You are remarkably clear.

J.B.: My mind is absolutely clear. If necessary, I could still go on the podium and give a lecture, oh yes, about something about which, I would say, I have been an expert.

[After discussing some unusual items in his library, notably his own collected writings, we said goodbye. His parting words to us were, "It was really a most pleasant afternoon."]

\* \* \*

On 10 March 1996, Joseph Braunstein died. This article is dedicated to his memory, in gratitude for his cheerful hospitality and willingness to share with two relative strangers personal memories of what, for Bruckner-lovers at least, are truly historic experiences. We salute his remarkable spirit.

### JACK DIETHER COLLECTION

In 1996 the Music Research Section of the Lincoln Center Library for the Performing Arts, New York City, started a "Jack Diether Collection" which includes the Diether letters, including correspondence with Alma Mahler Werfel, Joe Wheeler, Dimitri Shostakovich, Theodore Reik, Donald Mitchell and many others, and various writings of Diether, published and unpublished. The collection will be available to scholars and others doing research or interested in the subject matter.

## MAHLER'S FINAL ILLNESS\*

NICHOLAS P. CHRISTY AND BEVERLY M. CHRISTY

From the Department of Medicine, Roosevelt Hospital, and the College of Physicians and Surgeons, Columbia University, New York, N.Y.

The relation of physical and mental illness to the work of creative artists remains a mystery. Critics and musicologists have tried to trace the connections between the sufferings of composers and what they have written. Haydn, Mozart, Beethoven, Schubert, Schumann, Wagner, Bruckner, Mahler, Schoenberg — all have been the subjects of retrospective medical and psychological investigation. In no case have these researches been genuinely productive of insights into the music. Monteverdi, Vivaldi and J. S. Bach (but not Gesualdo) have generally escaped this kind of research, perhaps fortunately, because they are ancient enough so that the external and emotional facts of their lives are not well enough known to provide "data" for the construction of elaborate explanations of how and why they wrote what they did.

Gustav Mahler has been less fortunate. He is sufficiently "contemporary" so that people who knew him, corresponded with him, served as players under him, have all left reminiscences, copious but more or less inaccurate, giving a variegated, confused picture of Mahler as a hypochondriacal, obsessive, difficult man, torn apart by early traumas and crippled by doubts and fears. As de La Grange has pointed out, Mahler's widow has been a major contributor to public misconceptions about him.<sup>1</sup>

Mahler's work was initially rejected by critics because it was judged to be undisciplined and morbid. Curiously, the current critical acceptance and great popularity of his music are sometimes also ascribed to his "neuroticism"<sup>2</sup>. The theory is that he was a great composer because he was a great neurotic; that because this is an age of pain, the musical public is in tune with Mahler because he was in such pain himself:

---

\*Revised version of a paper that originally appeared in the *Transactions of the American Clinical and Climatological Association*, 82:200, 1970. The authors acknowledge with thanks the help of many people. For general advice we are grateful to Dr. Sanford Farrer, the late Dr. Arthur I. Hutner, Miss Anna Mahler, Mr. Winthrop Sargeant, Dr. Eugene Schorr, Dr. Barry G. Wood and the staff of the library of the Performing Arts, Lincoln Center. Many items of specific information were obtained from Dr. Louis Bergmann, Mr. Jack Diether, Dr. Edward Reilly, Dr. Gerhart Schwarz, Dr. Laurence Taylor, and Dr. G. Fruewirth of the Austrian Institute in New York City. Particularly valuable were the detailed notes on Mahler's endocarditis communicated to us by Dr. George Baehr.

<sup>1</sup> de La Grange, H.-L. Mahler: a new image. *Saturday Review*, March 29, 1969, p. 47

<sup>2</sup> Schonberg, H.C. With malice toward Mahler. *New York Times*, March 2, 1969, p. D21

"He's a sufferer who forces man to look into a mirror. He exposes naked nerves"; "Mahler was a high-strung genius who speaks today to a high-strung generation."<sup>3</sup> It is true that Mahler suffered a great deal but to claim that he wrote great music because he was greatly afflicted is equivalent to Macaulay's notion that James Boswell was a great author because he was a great busybody.<sup>4</sup>

In this paper we propose that Mahler's much-publicized neuroses have been misinterpreted by early biographers and later theorists and we present a new, precise diagnosis of his terminal cardiac disease never previously defined in medical terms.

All the biographical accounts indicate clearly that Mahler was a robust, vigorous, active man, fond of long walks, mountain-climbing and swimming. In the 1880's and 90's he began to be troubled with two ailments that plagued him much of his life: migraine headaches and hemorrhoids, the latter requiring at least three operations and once causing a near-fatal hemorrhage. (It is noteworthy that the textbook characterization of the migrainous patient fits what we know of Mahler: "anxious, striving, perfectionalistic, order-loving, rigid. . .", traits also compatible with the "normal" behavior of hard-working, successful people.) He was in generally good health until 1907, which was a catastrophic year. His harsh methods had created powerful enemies at the Vienna Opera and at Court. This, together with a virulent anti-Semitic campaign, was enough to oust him from the Opera Directorship. In July of that year, his elder daughter, Maria Anna died at age 5. In the same month a casual physical examination of Mahler by a general practitioner, a Dr. Blumenthal, disclosed valvular heart disease, a diagnosis later confirmed by cardiologists according to a letter from Mahler to his wife (September 30, 1907):

---

<sup>3</sup>'The man who speaks to a high-strung generation'. *Time*, June 23, 1967

<sup>4</sup>It should have been clear even to the earliest critics that Mahler was a forceful and unique personality in order to have coped efficiently with practical affairs, to have succeeded notably as a practicing musician and theatre director, and to have attracted as his enthusiastic admirers such people as Thomas Mann, Anton Webern, Gerhart Hauptmann, Arnold Schoenberg, Alban Berg, Ferruccio Busoni, Richard Strauss, Bruno Walter, Willem Mengelberg and Otto Klemperer. Mann had almost unlimited admiration for Mahler. In a letter to the composer written in 1909, after the first performance of the Eighth Symphony, Mann characterized Mahler as ". . . the man who. . . expresses the art of our time in its profoundest and most sacred form". In another letter (*Briefe*, 1889-1936, vol. 1, ed. Erika Mann, Frankfurt-am-Main, S. Fischer Verlag, 1962 p. 184) Mann described the powerful effect the news of Mahler's death had had on the genesis of *Death in Venice*. In Mann's novel, *Doktor Faustus* (1948), the hero, Adrian Leverkühn is a composite of many real (Schumann, Mahler, Arnold Schoenberg, Nietzsche) and imaginary people; there are several resemblances to Mahler's life and work. Leverkühn's teacher was an organist and polyphonist; Mahler was an informal pupil of Bruckner. Leverkühn wrote 13 songs to words by Brentano; Mahler wrote several songs to folk-poems collected and revised by von Arnim and Brentano (*Des Knaben Wunderhorn*). Leverkühn's early style was a "travesty of innocence"; Mahler's work is often characterized by deliberate naiveté. Both wrote vast orchestral-choral works on universal and religious themes. Leverkühn lost a nephew, Mahler a daughter.

<sup>5</sup>Beeson, P. B. and McDermott, W. (eds). *Cecil-Loeb Textbook of Medicine*, 12th edition, Philadelphia, Saunders, 1967, p. 1477

"Dr. Hamperl. . .<sup>6</sup> found a *slight* valvular defect, which is entirely compensated and he makes nothing of the whole affair. He tells me I can certainly carry on my work just as I did before and in general lead a normal life, apart from avoiding overfatigue".<sup>7</sup> According to Mrs. Mahler's biography, however, a Dr. Kovacs "confirmed the verdict. . . [but] forbade him to walk uphill, bicycle or swim; indeed he was so blind as to order a course of training to teach him to walk at all; first, it was to be five minutes then ten and so on until he was used to walking; and this for a man. . . accustomed to violent exercise! And Mahler did as he was told. Watch in hand, he accustomed himself to walking—and forgot the life he had lived up to that fatal hour."<sup>8</sup> Mrs. Mahler says further that in that winter, "Mahler was so shattered by the verdict on his heart that he spent the greater part of the day in bed. . . he got up only for rehearsals or for the performance. . . if he was conducting".<sup>9</sup> And again, to confirm the suspicion that Mahler was made unduly "heart-conscious" by his doctors: ". . . we avoided strenuous walks owing to the ever-present anxiety about his heart. Once we knew he had valvular disease. . . we were afraid of everything. He was always stopping on a walk to feel his own pulse; and often asked me. . . to listen to his heart to see whether the beat was clear, or rapid, or calm. I had been alarmed for years by the creaking sound his heart made—it was particularly loud at the second beat—and I had always known that it must be diseased. . . he had a pedometer in his pocket. His steps and pulsebeats were numbered and his life [was] a torment."<sup>10</sup>

The picture painted by Alma Mahler is not in harmony with the vigorous conducting and composing activities of his remaining years, 1908-1911, when, in order to earn enough money to support his family and retire exclusively to composing, he came to New York City to conduct a part of the Metropolitan Opera season and to lead the Philharmonic Society orchestra. The story is told that after rehearsals and performances in New York he was bundled up and taken off home like an invalid. Yet he had enough energy to work hard at composition. He completed the orchestration of the *Eighth Symphony* in the disastrous summer of 1907, wrote *Das Lied von der Erde* and the *Ninth Symphony*, both immensely complex scores, in 1908 and 1909; sketched the 5-movement *Tenth* in 1910; and thoroughly revised the *Fourth* and *Fifth Symphonies* in 1910-11. He also kept busy conducting; he led the first performances of the *Eighth Symphony* in Munich

---

<sup>6</sup>Dr. Louis L. Bergmann, late Professor of Anatomy at New York Medical College and a native of Vienna, recalls that Hamperl, who lived near the Mahlers in Heiligenstadt, was extraordinarily kind and an "uncanny diagnostician". A beloved local figure, he died in 1918 or 1919; his funeral procession was two kilometers long. By the standards of today, only Hamperl gave Mahler correct medical advice.

on September 12 and 13, 1909, and had then and there his only unqualified popular success as a composer—the work was received with ovations. In America, he conducted 46 concerts in several cities in the winter of 1909-10, and in his last winter, 1910-11, completed 48 of his 65 scheduled performances. This record of achievement and activity is less in keeping with the biographer Specht's statement that "*Er war ein arger Hypochonder*"—"he was an utter hypochondriac" for whom "to be sick was frightful" and is more in tune with Mahler's own often-repeated joke, "*Krankheit ist Talentlosigkeit*"—"sickness is a lack of talent,"<sup>11</sup> and with the stoicism of his conversations with Bruno Walter: "Now he spoke of the serious consequences of the discovery of his illness and of the revolutionary change in his life and work which would result from the precautions he would have to take. . . he had now to restrict all bodily movement as much as possible which entailed not only a heavy sacrifice, but anxiety about his work. . . the tone of our talk was unsentimental and realistic. . . 'I shall', he said, 'soon get used to it'"<sup>12</sup>. The photographs of Mahler about this time show him worn, but he does not appear beaten.

Rich as they were in accomplishment, the record of Mahler's last years is bleak. Bearing the news of his presumably fatal cardiac lesion with anxious fortitude, he worked hard through the summer of 1910, when there occurred a crisis in his marriage. The story has been told many times, by Alma Mahler herself,<sup>7</sup> by the psychoanalyst Theodor Reik,<sup>13</sup> by Ernest Jones in his life of Freud,<sup>14</sup> and most recently by Henry-Louis de La Grange<sup>1</sup>. Briefly, Mrs. Mahler adored the image of her husband as a great man ("You are married to an abstraction", friends told her) but resented the fact that his work took precedence over her<sup>1</sup>. Mahler felt guilty about this, already feeling guilty about having married a much younger woman, and although he was domineering in his home, he was more solicitous of Alma's welfare than he has been given credit for<sup>1</sup>. When Mahler discovered Alma's liaison with the young architect, Walter Gropius, he not only feared the loss of her, but became deeply concerned about his own emotional state, and sought the advice of Sigmund Freud, with whom he had a one-day "analytic" session in Leiden. From this single interview and Freud's brief account of it has emerged the standard psychological view of Mahler as suffering from a mother-fixation, a "Holy Mary Complex", and an obsessional neurosis<sup>13</sup>. We cannot know now whether this view is correct or not, but Mahler's distress of 1910 seems quite adequately provoked on a reality level when we consider that he was 50, that he lived with the assumption that he had a poten-

tially fatal heart disease, had lost his honorific post at the Vienna Opera, had lost his elder child, and now had discovered that he was, perhaps, about to lose his wife. This accumulation of disasters rather than failing physical or mental health sufficiently explains why he never finished the *Tenth Symphony*.

The most probable diagnosis of Mahler's cardiac ailment is rheumatic heart disease with superimposed subacute bacterial endocarditis. The evidence is this (see Table 1). Mahler's mother and perhaps siblings had "heart disease", not further defined. Rheumatic heart disease sometimes runs in families. Mahler is said by at least two biographers to have had St. Vitus' dance (a manifestation of active rheumatic fever) in childhood. He had had many bouts of pharyngitis throughout life, some with visible tonsillar exudate. There were two bouts of sudden weakness and "heart consciousness" that might have been arrhythmia; the dates are uncertain. A heart murmur, said to denote a "compensated slight valvular defect" was discovered when he was 47. The fact that it was virtually asymptomatic before that is entirely consistent with rheumatic valvular disease.

The alleged angina (pain in the chest) is rather uncommonly associated with certain special forms of rheumatic valvular disease. This "angina" may have been misinterpreted in the English-speaking world as "angina pectoris", the cardinal symptom, chest pain, of coronary artery disease, when, in fact, the original references to Mahler's illnesses meant simply "pharyngitis" or sore throat. Mahler was known to have had several bouts of pharyngitis or tonsillitis, one or more shortly before his incapacitation of February, 1911. German speaking physicians generally mean "pharyngitis" when they use the term, "angina". (See, for example, the several forms of "Angina" listed under the heading "Diseases of the Pharynx and palatal tonsils" in the table of contents of Brugsch, T., *Lehrbuch der inneren Medizin*, Vol 2, Berlin-Vienna, Urban and Schwarzenberg, 1932.)

A possible example of such a misinterpretation is found in Paul Stefan's biography (*Gustav Mahler, eine Studie über Persönlichkeit und Werke*, 4th edition, Munich, Piper, 1912), as translated by T. E. Clark (New York, G. Schirmer, 1913): "his old heart disorder reappeared. . . then came another attack of angina. . . ill with fever he conducted on February 21. . . then broke down. . .". Fever is not associated with angina in the sense of "angina pectoris". Far more likely, he had a bout of pharyngitis and either a reactivation of rheumatic fever or the onset of bacterial endocarditis, both febrile illnesses.

The evidence for endocarditis is presented in non-technical terms in Alma Mahler's biography.<sup>7</sup> The authors are able to give here an accurate technical recital of this evidence based on the detailed recollections of Dr. George Baehr, formerly Chief of Medicine at Mt. Sinai Hospital, New York City, who was in 1911 Fellow in Pathology and Bacteriology in Libman's laboratory. Dr. Baehr's vivid account follows:

"Some time in February, 1911, Dr. Emanuel Libman was called in consultation by Mahler's personal physician, Dr. Fraenkel, to see the famous composer and director. Apparently Dr. Fraenkel had suspected that Mahler's prolonged fever and physical debility might be due to subacute bacterial endocarditis and therefore called Libman, Chief of the First Medical Service and Associate Director of Laboratories at the Mt. Sinai Hospital, in consultation. Libman was at that time the outstanding authority on the disease. At the time of the consultation, the Mahlers were occupying a suite of rooms at the old Savoy Plaza (or it may have been the Plaza) at Fifth Avenue and 59th Street overlooking Central Park. Libman confirmed the diagnosis clinically by finding a loud systolic-presystolic murmur over the precordium characteristic of chronic rheumatic mitral disease, a history of prolonged low grade fever, a palpable spleen, characteristic petechiae on the conjunctivae and skin and slight clubbing of fingers. To confirm the diagnosis bacteriologically, Libman telephoned me to join him at the hotel and bring the paraphernalia and culture media required for blood culture.

"On arrival I withdrew 20 c.cm. of blood from an arm vein with syringe and needle, squirting part of it into several bouillon flasks and mixed the remainder with melted agar media which I then poured into sterile Petri dishes. After 4 or 5 days of incubation in the hospital laboratory, the Petri plates revealed numerous bacterial colonies and all the bouillon flasks were found to show a pure culture of the same organism which was subsequently identified as *streptococcus viridans*.

"As this was long before the days of antibiotics, the bacterial findings sealed Mahler's doom. He insisted on being told the truth and then expressed a wish to die in Vienna. Accordingly, he and his wife left shortly thereafter for Paris where the diagnosis and prognosis were reconfirmed, and then proceeded to Vienna"<sup>15</sup>.

There he died on May 18, 1911.

Mahler's death has been seriously attributed, at least indirectly, to psychosomatic causes<sup>16-18</sup>. We do not believe such attributions are medically valid.

Diether<sup>16</sup> like Stefan and others, falls into the natural error of interpreting Mahler's "angina" as "angina pectoris" (see above). He says ". . . in 1907, the disclosure of his own heart condition (angina pectoris) put the conflict on a different plane. . . " The "heart condition" was not "angina pectoris" but rheumatic valvular disease. Later Diether refers to the well-known capacity of emotional upsets to trigger attacks of angina pectoris: "Again we read concerning his heart disease: 'Any emotion may bring on an attack, but especially anger, grief or worry'", etc. But we contend that angina pectoris is not the disease Mahler had, so that Diether's further statements are not applicable: "This very heart condition, a functional disease, was possibly psychosomatically induced as a final means of escape from the unbearable. . . dilemma"; and "the final

<sup>18</sup> Still, R. Gustav Mahler and Psychoanalysis. *American Imago* 17:217, 1960

illness was of course not an attack of angina, but a streptococcus infection induced by the functional condition of which the angina was one aspect". There is no recognized connection between emotional disturbances and exacerbation of rheumatic heart disease or its complications.

In an attempt to define the effect of Mahler's awareness of his cardiac ailment upon his psyche, the psychiatrist, Mooney<sup>17</sup>, says: "the diagnosis of serious heart disease was the beginning of the end for Mahler. It brought into consciousness his life-long fear of death. . .the fantasy of invulnerability. . . was destroyed. Mahler never recovered from this narcissistic injury—it led slowly, but directly, to his death"<sup>17</sup>. But we have already seen how much work, both composing and conducting, Mahler was able to accomplish after being told of his valvular disease, and even after his physicians had made him over-concerned about it. It is hard to see how Mahler's attitudes toward illness, or how partly hypothetical emotional sufferings would favor, or indeed would affect in any way, his chances of acquiring a streptococcal infection.

Finally, the musicologist, Still<sup>18</sup> paraphrases Alma Mahler as follows: ". . . although officially he died of a 'streptococcal infection', Professor Chvostek. . .gave it as his opinion that if Mahler had survived, his whole nervous system would have collapsed, and that the rest of his life would have been spent in a wheelchair. Thus it would seem that he was psychologically consumed from within"<sup>18</sup>. First, in 1911, almost nobody recovered from the disease Mahler had, bacterial endocarditis. The disease had a virtually 100% mortality, so that the question of "survival" does not arise. Second, one cannot tell from Alma Mahler's account whether Chvostek's gloomy prognosis was meant to refer to Mahler's physical or psychological condition. The endocarditis, predictably, incapacitated Mahler, but there is certainly no evidence that either his rheumatic valvular disease or his awareness of it had any deleterious effect on his creativity<sup>19-22</sup>.

This analysis of psychological studies<sup>16-18</sup> on Mahler's last years and the evidence given in the present study force the conclusion that Mahler's death was owing entirely to organic causes.

This paper has attempted to define accurately Mahler's cardiac disease and to suggest that many earlier writers have tended to over-

emphasize its effect upon his work, as well as his "neuroses". Attempts to explain various aspects of Mahler's music on the basis of the existing fragmentary evidence we have concerning his medical and psychological difficulties are harmless exercises, but the conclusions drawn are bound to be inaccurate because the evidence is necessarily incomplete. As with other creative artists, how Mahler translated his experience into what he wrote continues to be the elusive thing<sup>23</sup>.

### TABLE 1

*Evidence for Rheumatic Heart Disease with Superimposed  
Subacute Bacterial Endocarditis*

Mother and possibly siblings had "heart disease"  
 "St. Vitus' dance" in childhood  
 Frequent sore throats in childhood and as an adult  
 Findings of heart murmur at age 47 (1907) and "loud second sound"  
 "Angina" 1908-1911  
 Streptococcal bacteremia found twice, New York City and Paris, February-April, 1911  
 Intermittent fevers, February-May, 1911  
 Pallor (anemia), weakness, March-May 1911  
 Arthritis, uremia (?embolic phenomena), "pneumonia" (or heart failure); died May 18, 1911

## THE DIAGNOSIS—TERMINAL BUT NOT FINAL: A COMMENTARY ON THE CHRISTYS' PAPER

STUART FEDER, M.D.

With the publication of Dr. Nicholas and Mrs. Beverly Christys' scholarly and medically well-documented papers on Mahler's final illness there can be little doubt that the final clinical diagnosis was Subacute Bacterial Endocarditis and no doubt at all that the bacterial pathogen responsible was *Streptococcus Viridans*. While one could quibble with certain of the data (for example, the question of whether Mahler indeed suffered from rheumatic chorea as a child or whether his apparent St. Vitus' dance had quite different origins) the medical evidence marshalled by the authors support their scientific conclusions to a degree that makes their contribution a significant one in that special corner of medico-historical study—the mortal ills of the artist.

Such painstaking work may readily seduce one to extend what would be a justified respect for highly technical medical expertise into the fields of musicology, aesthetics and that branch of psychology which concerns itself with the mental life of the creative individual. Certainly, it would hold out promise for guidance through the borderland of psychosomatic medicine. Therefore, when it is suggested that psychosomatic factors are beside the point in considering the terminal illness of Mahler, one may be inclined to uncritically respect the opinion of writers of so authoritative a presentation.

Presumably, had an autopsy been performed on Mahler's body, it would have revealed the characteristic sclerosed heart valves of chronic rheumatic heart disease upon which was superimposed the clumping of bacteria and consequent inflammatory reaction diagnostic of bacterial endocarditis. (Here, again, the medical quibbler might cite cases originally described by the very consultant called in by Alma's Dr. Fraenkel, Dr. Emanuel Libman, in which despite a characteristic clinical picture, the confirming pathological evidence is lacking, frustrating definitive diagnosis. However, such cases were rare enough at the time to be medical curiosities.) The Christys then invite us to consider that this is the *whole* story of Mahler's death—that emotional factors would not exert an influence on either clinical course or final outcome in any significant way, and conversely, that the entire pathological process could exert no influence upon the mental processes of the man or upon the content of his mind in any but a very general way.

What would the *psychological* equivalent of an autopsy reveal—a study of the terminal phase of Mahler's life? With specific reference to the Christys' paper, how would the documented medical facts appear within this context? Weisman and Kastenbaum (1968), who have described the use of such a psychological assessment state:

...the somatic autopsy does not answer all the questions. Autopsies do not always disclose the cause of death, nor do they invariably demonstrate why patients die when they do. What people die *with* is not the same as what people die *from*... Furthermore, what prompts a person to become ill, enter the preterminal phase, and die at a particular time and in a particular way cannot always be ascribed entirely to a disease process. The final illness is a psychosocial as well as a medical event, in the same way that the person's complete biography is something more than the sum total of medical and nursing notes made during his lifetime.

Such an approach beckons us to draw back our gaze from its narrow focus on the laboratory petri dishes in which volcanoes of streptococci are visible to the naked eye, and to take in a broader panorama. Such a view would include Mahler's life's experiences with fatal disease and with death itself. It would also include his characteristic mode of coping with the fact, the threat and the imminence of death throughout his lifetime and in particular during the pre-terminal state. Among the specific questions Dr. Christy's paper might raise would be whether there is any evidence that Mahler's mental state could have affected the precipitation of his terminal illness, its duration or the timing of his death. Such a viewpoint would also permit us to consider the quality of Mahler's death. Was it, to use Weisman's term an "appropriate death"? He defines this as "one in which there is a reduction of conflict, compatibility with the ego ideal, continuity of significant relationships and the consummation of prevailing wishes. In short, an appropriate death is one which a person might choose for himself had he an option. It is not merely conclusive, it is consummatory." Or, failing to achieve this admittedly ideal state, did he die in conflict, guilt, panic and isolation?

Before a consideration of the details of Mahler dying, a word about data would be appropriate since the data appropriate to such a study as the above are so considerably different in method and content from that which permits the establishment of the bacterial pathogen. If one is considering the emotional state of the dying person, one cannot dismiss any content of his mental life. In Mahler's case, it would not suffice to include the usual materials of biography, such as personal accounts and letters, and to leave out his own most characteristic mode of conceptualizing and realizing that which was in his mind—namely the form of thought we know as music. Its appropriate interpretation is, of course, a major one but basically a technical one. The music is as much a part of the psychological record as the laboratory reports are of the pathological. During the period under consideration Mahler composed *Das Lied Von Der Erde* (1907-1908), his Ninth Symphony (1909-1910) and the near-completed sketches for the Tenth Symphony (1910). Our inquiry into the more immediate antecedents will take us back to 1901. This is the time of the Fifth Symphony, but more relevant to our topic, the *Kindertotenlieder*. The first of these songs were written in the summer of 1901, a few months before he first set eyes on Alma and only a short time after his first terrifying experience of being tapped on the shoulder by Death. These are some of the data which will be considered in the companion article to this commentary, *Mahler, Dying*.

The Christys' description of Mahler's character, which their study soon plunges us into, attempts to establish the authentic Mahler as a robust, vigorous, active man, fond of physical exercise, etc. Its aim appears to be to set the stage for a man "in generally good health" to be struck down in his strength by a bacterial disease which ultimately killed him. Character features which must be considered to be neurotic are felt to be distortions of what "biographical accounts indicate clearly." In fact, biographical accounts do indeed reveal this robust side. At the same time, they reveal equally clearly an anxious, phobic, depressed and hypochondriacal side. Similarly, while they bring to light features of generosity, love and high standards, they disclose at the same time narcissistic preoccupation, intense rage and, at times, frank cruelty. In short, Mahler was an extraordinarily complex person by any standard, which is one of the reasons we all find him so interesting and are writing about him in the first place!

The mysteries of such a person do not yield to simple explanation. The authors, however, treat his terminal illness as if it were an affair between bacteria and cardiac muscle. Yet this particular disease happened to have been contracted by a particular complicated person and we may glimpse the intricate interaction between person and disease at any point in time. At very least strong psychological reactions may ensue after a disease sets in, those of fear and anxiety tinged by past experiences and with past conflicts. Questions commonly asked are, "Why me; why now?" and fantasy rushes in with the answers. An even more interesting although elusive aspect of this relationship between physical disease and psychological state is the question of predisposition to illness. While it is well-documented that physical host factors play a role in the eventuation of illness, the *evidence* for such psychological host factors has been in the past anecdotal and only recently rigorously studied. A third way in which disease and host psychological factors may interact is in the determination of the course of disease—the course of development, fulmination, exacerbation and remission; and perhaps in the timing of recovery or even death itself. Perhaps these considerations are omitted by the authors because the *evidence* for them both in general and in Mahler's case is not of the same order as the evidence they do cite. While this is true, in their paper the authors appear to extend the evidence that he died of subacute bacterial endocarditis to the conclusion that therefore, we don't have to bother ourselves at all with his psyche!

With regard to Mahler's general health, it is unlikely that if a medical history were taken from Mahler even at age 35, he would have considered himself to be in good health. To begin with, as noted, he had two chronic diseases, migraine and hemorrhoids which are ordinarily disabling to a greater or lesser degree. For example, it is difficult for a man suffering from hemorrhoids to consider himself to be in good health because of periodic pain and bleeding, which are regularly aggravated physiologically. While a physician may tend to consider this a minor problem, certainly not a problem of life-threatening proportions, the patient usually does not. Certainly not when, as was the case with Mahler, a life threatening episode did in fact occur. This

happened in 1901, at which time he had a hemorrhage which his surgeon told him involved a terrible risk. A week later he was operated on by the famous Hohenegg. It is rare for a patient to exsanguinate from this condition but possible with neglect, even though effective surgery had been developed by the turn of the century. More significant however was Mahler's firm belief that he could have died. He communicated this to those close to him and, as we shall see later, this episode was to have an enduring effect on his subsequent life. There had been another scrape with death earlier in 1894 when at the age of 34 he was stricken with cholera. His sister Justine came to nurse him and was so alarmed at his condition and what she believed to be the imminence of his death, that she ate from the same spoon in a sisterly *Liebestod*. Among the many psychological vectors that went into the shaping of his musical thought of that time, this experience was among those which led him to modify his concepts of "brotherhood" in the direction of "resurrection" in the working out of the Finale of the Second Symphony. (Feder, 1990)

Everyday life was filled with complaints that we would now term "functional"—medical problems for which there is no detectable physical cause at the moment and therefore presumed to be psychophysiological. These included various gastrointestinal disturbances, occasional vertigo and periodic fatigue. While the latter might possibly have resulted from blood loss, it more likely draws our attention to a common somatic concomitant to the chronic depression to which Mahler was prone. He experienced this in various shadings ranging from the "Sehnsucht" he occasionally wrote of to friends, a strongly nostalgic sadness, all the way to work-inhibiting despair. Then, of course, there were the migraines which could strike at any moment and indeed often did at unpropitious times.

That Mahler himself did not feel he was in good health is also supported by the various diets and regimens he undertook from time to time as well as occasional visits to Ischl to take the waters. Finally, in addition to the depression noted above and its sequellae, there were, of course, several symptoms of a frankly psychological nature which cannot lightly be passed off. Although at times he suffered from disabling attacks of anxiety which would usually occur while he composed in his usual isolation and send him fleeing from it, more often overt anxiety was circumvented, making its appearance in another symptom. The one that was most important and most constant throughout his adult life was a thanatophobia about which we will have more to say later. This review should perhaps be wound up with an account of the psychological symptom which brought him to Freud, but the delicacy of existing accounts makes definitive diagnosis impossible. There were probably elements of impotence, depression and anxiety.

That Mahler was able to be so productive in time of illness tells us more about his character than it tells us about his health. The authors of the *Final Illness* return repeatedly to the point that his "record of achievement" is not in keeping with the picture of a man beset by illness, real or imagined. I would suggest the opposite. It was precisely

in response to illness and threatening death, in fact, in the very mastery and denial, that Mahler was so driven to produce. Keeping in mind his double professional life of conductor and composer, this is more cogently seen in the latter. Mahler's comment, "Krankheit ist Talentlosigkeit", which is cited, is a good epithetical summary of a function of his creative life and is perhaps best understood by its reverse form: The exercise of talent is health-giving, life-giving, death-vanquishing. His correspondance frequently reveals his fantasy of creativity in composition being related to birth.

A related function of composition touches on a frequent feature of the classical migraineous character, if there can indeed be said to be one, namely chronic states of rage. I have discussed elsewhere Mahler's proclivity, even knack of binding his frequently experienced anger in musical conception. Thus for Mahler, to be creative was the opposite, in denial, of any feared tendency to be destructive. Moreover, in some magical way, creativity might ward off destruction, illness, threat to body integrity, and the harbingers of death were linked to this feared destructive force. Thus Mahler's achievements in the face of illness make a certain sense, but it is not "common sense".

The "theory" cited, that "he was a great composer because he was a great neurotic" is quoted from an anonymous journalist in *Time* magazine, is in its context, a straw-man. Nevertheless, there may well be common sources in the psyche of both neurosis and creativity. This is not to say that these elements in common are all there was to Mahler's creativity. This would be too polar a statement going beyond what we know and more important, lacking in respect for what we as yet do not know. In any event there are undoubtedly multiple stages of creativity.

Against the background of either-or statements, it is difficult to follow the mutual modification of emotional and physical factors. The authors hew closely to traditional medical thinking in seeking a definitive diagnosis. According to the law of parsimony, one seeks to single out the most likely diagnosis, which is exactly what Dr. Christy does. Likewise, according to the method of differential diagnosis, he attempts to rule out other possible causes. Thus emotional factors are "ruled out" on the basis of shaky evidence (Still, Mooney, Diether), or error in medical interpretation (Diether). Another factor leading to the weeding out of the emotional is lack of confirmation in the literature: ("There is no recognised connection between emotional disturbance and exacerbation of rheumatic heart disease or its complications."). However, in ruling this out Dr. Christy substitutes common sense for any particular expertise in this area ("...Mahler's distress of 1910 seems quite adequately provoked on a reality level"). His answer then to those who say, "there is more to it" is simply, "there isn't"!

The error of the understanding of the term "angina" is presented with all the force of a cannon levelled against a poacher when actually any medical dictionary would set the record straight. While it is straightforward to point out the error, it does not mean Diether is all wrong. One of the things that draws scholars with psychological interest to Mahler is that Mahler specifically invites it. He lets us know

*biographically* that there are connections in his awareness between his inner and outer life and his music, something many sense from the music itself in any event. While what the Christy's say about the "recognized connection" between emotional states and the particular illness is absolutely correct, it is *too* absolutely correct, i.e., the statement is put too literally interpreted for our current state of knowledge. It is certainly known that emotional factors do modify both normal physiology and physical illness. Even more specifically, there is growing evidence that individuals are increasingly prone to disease when in particular emotional states. Briefly, these are helpless, hopeless states related to loss. On the other hand there is much that is generally unknown, much less applicable to an individual, and some psychological writers have invited criticism by drawing conclusions too specific for the available psychological evidence, method and biographical material.

Incidentally, Freud did not fall into this error, and the so-called, "standard psychological view of Mahler" cited as stemming from him is a distortion fostered by quoting from work to work. Freud specifically narrowed the scope of his interpretation saying, "It was as if one would dig a *single shaft* through a mysterious building". He was quite careful to avoid *pars-pro-toto* thinking.

A few other details of the paper merit comment. The summary of evidence (Table 1) lists St. Vitus dance in childhood. While there is little firm evidence for it, there is considerable evidence that Mahler had a gait disturbance as an *adult* and rheumatic chorea, St. Vitus's dance characteristically runs its course earlier. This gait disturbance, almost always commented upon in descriptions, has intrigued many the more so since his mother also had an abnormality, being lame in one leg. I cite this as well as the history of heart disease and history of frequent sore throats because they are part of the family history as well, which may not only ultimately affect *physical* health but at the same time modify attitudes and feelings toward illness. Mahler's "heart consciousness" is mentioned and his doctors are held responsible. But Mahler was only too aware of the heart disease in his family; it had claimed both father and mother when he was 29, and earlier, an infant brother, Alfred and his most beloved brother Ernst, when Mahler was 14 years old. These were factors which were to affect his attitude toward his own illness and lend specificity and immediacy to his fear of death.

It would indeed be interesting, if Dr. Christy is correct that the rheumatic heart disease was diagnosed in 1907, because it would throw light on the very connections he is seeking, lending credence to the effect of an arduous year events on the clinical emergence of a physical illness which was long in developing. That year saw increasing aggravation at the Opera, the illness of both children and an operation for Alma and finally, the death of his most beloved child in July 1907. However, it seems likely from several sources that Mahler was well aware of the rheumatic problem earlier. Alma is quoted to this effect, ("I had been alarmed for years by the creaking sound his heart made.") and two letters which are possibly misdated would also

tend to support this if dates are accurate. More likely, Mahler *psychologically* dated the beginning of the end to his elder daughter's death, and this very term (cited as being from Mooney) was the exact term Alma used. While it is true that there are often errors in her writing on Mahler, quite often they tend to be in direction of Mahler's own distortions dictated by his fantasies and beliefs.

However, it is just such details that are waved away with the Christys' ruling out psychological factors, substituting common sense for psychological investigation and winding the whole affair up with how the inadequacy of the latter "force the conclusion that Mahler's death was owing *entirely* to organic causes." Yet an interesting direction is suggested by the admission, "It is hard to see how Mahler's attitudes toward illness, or how partly hypothetical emotional sufferings would favor, or indeed would affect in any way his chance of acquiring a streptococcal infection." I am in full agreement as it is indeed hard to see. But let us attempt to approach this difficult and interesting question in the context of Mahler's last years of life.

## MAHLER, DYING

STUART FEDER, M.D.

George Engel, a medical educator and psychoanalyst, once had occasion to review the scientific papers of his uncle, Dr. Emanuel Libman (1872-1926), the eminent physician and bacteriologist, and noted that case histories prior to 1899 often began with references to life settings associated with the illness and presumably felt to be associated with its development. Such observations, usually psychological in nature, yielded to the fascination with new scientific methods around the turn of the century, particularly those in bacteriology. After 1900 such clinical psychological observations tended to be omitted. Indeed a backlash was observed, which is in part understandable for a lack of a comparable scientific framework within which such observations could be integrated. By an extraordinary coincidence, it was this very Dr. Libman who was called in consultation by Dr. Frankel, Mahler's physician, to see Mahler in February of 1911. He sent his assistant at the time, Dr. George Baehr, later Professor Emeritus at the Mount Sinai School of Medicine, to draw the blood which revealed the fatal diagnosis. It is to Dr. Christy's credit that he tracked down Dr. Baehr, who provided the most interesting letter which is quoted. Alma, too, gives an account of the event, although she is mistaken in the hospital affiliation of the resident in question.

In a recent interview, Dr. Baehr presented the case history as he recalled receiving it from Dr. Libman as part of the normal exchange of medical information. True to the nineteenth century medical heritage of both, it starts with a statement of the relevant antecedent life events and psychological state of the patient.

Dr. Baehr: As I understood the history from (Dr.) Libman, Mahler had lost a daughter from scarlet (fever), a streptococcus infection of the more acute type. As I understood the history of the case I got from Libman, he became very depressed and rightly or wrongly, that made me believe that his depressive states were due to the memory of this daughter. I also learned that he had been told by his doctor long ago he'd had a heart lesion and that he must not tax it and get rest. So that I didn't know to what degree his depressive states were involved.

There is no question that Mahler died as result of subacute bacterial endocarditis superimposed upon a chronic rheumatic heart problem. My purpose in this section is to spell out and to amplify modifying and contributory psychological factors, the very ones the nineteenth century physicians were so attuned to. While this intuitive clinical sense did not disappear from medical practise, it was displaced in medical writing by more "scientific" evidence and scholarly style. However, a growing body of knowledge from the fields of psychiatry, psychoanalysis and epidemiology make it now possible for us to examine these contributory factors more closely. At the same time there is more biographical data available which enables us to begin to understand what all of this has to do with the life of a man who was a creative genius, how he lived his final years, and how he died.

The year 1907 was the turning point in Mahler's life: it marked the beginning of the end in both his physical health and psychological equilibrium. The spectre of death, ever latent, and his constant companion in life heretofore, frighteningly materialized and, in turn the mental activity of preoccupation was necessarily reflected in the mental activity of composition. Even prior to the fateful summer of 1907 premonitions of "the end" had already begun to gain force with the gradual breakdown of whatever hard-won stability Mahler had gained in economic and social spheres of life. His position as conductor and director of the Vienna Court Opera had been secured a decade earlier with a *coup d'état* which involved among other things an anticipatory conversion to the Catholic faith in 1896 in order to clear the way. He conducted his first performance in May of 1897. The following year he added the burden and the honor of the directorship of the Vienna Philharmonic to his duties, an alliance which lasted only three years. The innovative dictator of the opera failed to flourish in the critical climate and democratic structure of the orchestra and ultimately Mahler used the excuse of the burden of work and the occasion of impaired health to tender his resignation in February of 1901. This was the first time Mahler, who would conduct through the fiercest of his migraines, ever yielded to considerations of health. While it may have served a convenient excuse, there was a deeper meaning in his emotional life for he had just experienced his first personal skirmish with his long-familiar adversary, death.

Lofty encounters often occur under mundane circumstances. Such was the case, as Mahler firmly believed he came close to losing his life as a result of uncontrolled rectal bleeding from a long-existing hemorrhoidal problem. He had had surgery before and there is some suggestion of neglect, but neither Alma's account nor that of de La Grange's provide us with enough data to assess the actual danger. Dr. Albert Lyons suggests such a possibility existed then as even now under certain circumstances. In any event it was Mahler's firm belief that he narrowly escaped death in February of 1901, and there is some evidence that his physicians explicitly led him to this conclusion. Lying in bed a few days later he jokingly drafted his obituary: "Gustav Mahler has finally met the fate that his many crimes desired."

It was during the summer of that year that his musical thought shifted from the optimistic and classical simplicity of the Fourth Symphony, relatively free of the conflict torn quality of its predecessors, to a mood and style which was to be the emotional prelude of the works of his last period. Its harbinger was the first of *Die Kindertotenlieder* written in the summer of 1901. Mahler's songs had always been the barometer of his emotional life, and these as well as the other Rückert songs of this period served as emotional pedal-point through the completion of the Fifth Symphony and the composition of the Sixth, Seventh and Eighth. This underlying mood develops to full statement only in the summer of 1907, to which we will come presently, with the composition of *Das Lied von der Erde*.

Another emotional current accompanied that which gave forth *Kindertotenlieder*, a sudden, dramatic interest in Alma Schindler,

whom Mahler met shortly thereafter on November 10, 1901. According to Alma's account, within a week marriage had become a foregone conclusion. On his first visit following their meeting she writes, "He kissed me and went on to talk of a speedy marriage." The marriage occurred four months later and their first child was born on November 3, 1902, less than a year after they first set eyes on one another and eight months after their marriage. This must be considered a remarkable performance for an obsessive bachelor of 41 years! The intriguing question of what lay behind this extraordinary sequence of events will be considered later. For the moment, these were the events contributing to the picture of Gustav Mahler in the dawn of 1907—a mature artist in both his chosen spheres, conducting and composing, a husband and father of two (the second child born in June 1903) and a prominent although controversial figure in Viennese society, against whom considerable criticism was beginning to mount.

By the end of the year events had conspired to create a quite different picture: arriving in New York in December of 1907 he was a man who had given up the achievement he had so fervently aspired to—no longer the "god of the southern zones" of Vienna, he had been bereaved of his elder and favorite child and at the same time he was aware that he would soon face death himself. Maria had died of scarlet fever on July 5, 1907, and Alma specifically but probably inaccurately dates the diagnosis of Mahler's heart condition to a few days later. Perhaps she sensitively reflects Mahler's perception in this as she so often does in error. He had requested release from his contract at the Opera by Dec. 31, 1907, and by that time was on his way to the New World.

The very decision to spend the last musical seasons, of which there were four, in New York is of interest since there were many determinants. Mahler had already been negotiating a tour with Conried of the Metropolitan Opera during the period when criticism mounted in Vienna. It had been characteristic of Mahler all his life to have his next move shrewdly in view even as his temperament was contributing to the disintegration of his current position. With the death of Maria and the clarification of his own illness the move took on a new significance: a new life in a new world! Mahler was a chronically depressed person. Exacerbations of this mood were often most apparent in behavior which served as attempts to ward it off in one or another way. The quest for the new world was a denial of and a restitution for the preceding disasters and its depressing potential. It was also rooted in the future in another way. Alma tells us that they could have lived on his retirement stipend and thus he could have devoted himself to composition exclusively. However, he was much concerned about the financial future of the remaining family. He was no stranger to this as it recapitulated his assumption of family responsibility after the death of both parents in 1889 with one exception. It was now his way of anticipating his own death just as it would be for less gifted men. However, as we shall see, Mahler had a complex relationship to the post-life of his fantasies.

In NY, Alma doesn't at first speak of depression but rather frenzied activity; he was like "a motor" she said. I suggest Mahler's long

standing sense of guilt both drove him relentlessly and masked depressed feelings. The latter nonetheless are revealed poignantly and elegantly worked out in the music of this period, in particular, *Das Lied*. But behavior revealed a long standing pattern of resentfully experienced hard work conducting and delaying composing until summers. In this sense composition bore the same relationship to conducting as play to work and could be engaged in exclusively only after the penance of hard labor.

The new world had still another meaning. Even as Mahler's own end was approaching, this was a repetition of one of the very first important experiences in his own life. Mahler had had an older brother, Isadore, who died in infancy as a result of an accident sometime in 1859, possibly even before Gustav was conceived. Frequently, children born under such circumstances as Mahler was on July 7, 1860, are perceived by the parents as replacements. This was a psychological burden Mahler carried all his life and one that often underlay his sense of duty and perhaps even was one factor in his creative drive. At his birth Mahler's father, Bernhard, obtained a permit to move and when he was three, a move to a new and better life, from Kalisch to Iglau, was made. These elements—a new world, a fresh start, the identification of sorrow with its locale and restitution for loss, were all very likely part of Mahler's fantasy of coming to America. It is only surprising that Alma did not once again become pregnant, and one cannot help but wonder whether there was not a miscarriage at some particular points during the ensuing four years. In any event, Mahler's eldest, like Isadore, was also now dead and in the above context one catches a glimpse of the way in which he was coming to terms with this fact. The bereavement cast a shadow over the remaining years and, as we shall see, took its toll physically as well as emotionally. His trips to America were thus related to this loss and indeed, his final voyage home as well. When Dr. Baehr drew the blood for the test, Mahler, who was otherwise resigned and cooperative, made it a condition that he be told if the diagnosis was fatal. When Dr. Libman, who was also present, asked why, Mahler replied that he wished to return to Vienna to die. It was his wish to be buried with his daughter—Alma writes, "in the same grave." Thus Mahler ultimately yielded his denial and fantasy of resurrection to the likelihood of death and wishes for reunion. "Likelihood" is stated because like everyone else Mahler did not quite believe in his own death. Finally, on another level, the object of his wishes was his mother for whom Maria had been named. A view of Mahler's life reveals clearly etched identification with both parents and resulted in human qualities which were often quite useful in their amalgam in the tasks he undertook. But toward the end of his life a yearning for his mother revealed itself. Among other places, it became manifest in his increasingly childlike attitude toward Alma and in the exceedingly close and meaningful relationship he developed at this time with her mother, Mrs. Schindler. Tragically, this attitude of regression rendered him all the more vulnerable when Alma turned her interest toward others.

The central theme of this portion of the study is concerned with the effects on Mahler of his bereavement in its broadest influence and his attitude toward death. In the matter of death, Mahler was well experienced, perhaps a virtuoso, even for his time. In evaluating the attitude of the man one must consider the experiences of the child. For such is the nature of human development that each preceding phase and its associated experiences modifies those to come. Isadore's death, hardly mentioned in the Mahler literature, must have cast a long shadow over Gustav's life, kept alive by his parents' memories and their expectations of the replacement. When Gustav was five, the first of several sibling deaths occurred with that of the 1 1/2 year old Karl and a few months later the death of the 6 month old Rudolph. Again, Gustav was the survivor and it was about this time that Mahler, who had by now had his first piano lessons, wrote his first composition. It was called *Polka mit einem Trauermarsch als Einleitung* (Polka with an introductory Funeral march). It has been remarked (de La Grange) how consistent this is with Mahler's later characteristic mixture of gaiety and sadness. It is also characteristic of children of this age to react to death in idiosyncratic ways which do not resemble adult grief. Children, for example, are intolerant of sustained painful moods and will often appear to be either callous to a loss or denying it, appear to be gay while at times harboring the fantasy that it had not occurred at all (Wolfenstein). Such a propensity also facilitates the expression of ambivalent feelings which the child may have had toward the lost object.

What is most noteworthy in Mahler, is his extraordinary ability to begin at this age to conceptualize such a mixture of feelings in the language of the composer. Thus even as musical skills were developmentally unfolding they were soon linked to a particular kind of content. One might say Mahler was a born memorialist in music. There is a remarkable persistence and development of a memorializing style into his adult life. During his last period of musical composition, starting with *Das Lied* and heralded by the first of *Die Kindertotenlieder* in 1901, he turned his attention to himself as the object of memorialization. The closing measures of both, for example, may be as close as music comes to a certain kind of epitaph, the kind that makes a statement not on the person's life but on his afterlife.

But by this time, Mahler had already had ample reinforcement of these early five-year-old trends. He experienced repeated sibling deaths at ages 11, 13, and 14. The last was the death of his younger brother (by a year or less), Ernst. The story of Ernst is a chapter in itself and will not be detailed here except for one aspect which has an important bearing upon Mahler's characteristic way of dealing with bereavement and loss. This was the memorializing of Ernst in the unfinished opera project, *Ernst, Herzog des Schwabens*. In the play upon which it was to have been based (by Ludwig Uhland 1782-1862), which is a drama of fidelity and brotherly love, Ernst is idealized as a hero by the fifteen (?) year old Gustav. Any mixed feeling he may have had about Ernst were filtered out, although soon he was to embark

upon the writing of the first work he considered, "Mahlerian", *Das klagende Lied*, a saga of fratricide.

Death, grief and loss then were constant stimuli to master as the child composer developed into the man. As he wrote in *Lieder eines fahrenden Gesellen*, "Mein gesell war Lieb und Leider", my companions were love and sadness. The potential pun in this line could not have escaped Mahler's interest in irony: *Lied*, which means song, is changed to *Leid*, the root for pain or suffering with the transposition of two letters. Each person seeks to cope in terms of his own style and characteristic strengths. In Mahler's instance, coping and mastery always occurred in terms of his most characteristic and readily available mode of thought and behavior; namely: musical thought, musical behavior. It would be our expectation that with the imminent threat of his own death his attempt to come to terms with it would in some way be revealed in his music. The memorialization aspect of this is commented upon above. Others, especially Diether and Walter, have commented upon the "expressive content" of his last works, especially its valedictory quality.

Against this background, let us return to Mahler at age 41 in 1901. By this time only tattered remnants of the nuclear family remained. His parents had been dead for eleven years and of the fourteen children born, only four now survived: Alois and Justine, like black and white, the former mentally disturbed and an emotional strain on Mahler, and the latter devoted to him; also the young Emma, and finally, Gustav himself. His brother, Otto, the object of much concern, effort and aggravation after the death of his parents, had suicided in 1895.

A question must be raised before going on to considering in more depth the effect of Maria's death on Mahler and his own dying period. What motivated him to marry? Again, the consideration of his relationships with women and his sexuality would merit a chapter. But by the time he reached 41 he considered himself a confirmed bachelor and already in "the autumn of my life". The answer I would propose in brief has all the limitations of a brief answer, i.e., it is too oversimplified, yet at the same time I believe it cuts to the heart of the matter: he married in order to have children. It was an act continuous with his previous coping with death and memorialization and thus had its roots in the same pockets of his inner life as his music itself. The imminence of death which he experienced in February of 1901 abruptly thrust his preoccupation with death from the world of philosophy, fantasy and music to reality. He actually could have died! Each word in this proposition had special meaning to him. In a typically counter-phobic manner he "wondered whether it would not be better to have it done with since everyone must come to that in the end". (de La Grange)

Prior to this, Mahler had found himself briefly and mercifully in the most conflict-free period of his life. Gone temporarily were the family worries, strife, and financial struggle with which he had contended for so long. The death of Otto and his subsequent relationship with the singer Von Mildeburg in 1895-96 had thrown his life into a disorganizing emotional turmoil. Now there was a hard-won equilibrium and

he was in the midst of his most creative and productive period. But now death reared its head and directed its gaze toward him re-evoking all the associated conflicts of his antecedent life. Thus in the midst of this creative period a macabre mental current insinuated itself as he was at work on the Fifth Symphony. That summer, the bachelor Mahler started work on *Die Kindertotenlieder*. Indeed certain thematic similarities have been noted between the two works (DLG 79). Mahler considered these songs among certain other works "a child of sorrow". Reik believed that Mahler had been considering marriage for over a year (without giving any supporting evidence) and that this evoked parental anxieties. I believe a more accurate formulation would be that anxieties about death, ever latent, now became more conscious and led to a wish to counter death with immortality in having offspring who would embody him into the future. This is, of course, only a recapitulation of a theme already elaborated musically in the Second, (Resurrection) Symphony. That the wish to have children should be represented by their death is intriguing, and one is tempted to add it could only happen with such a person as Mahler. There are many psychological vectors which can be teased out in his life's experiences and the character it helped form. To begin with there was the unconscious connection and equivalence of life and death, the seeds of which were planted with Isadore's death and his own birth and which were nurtured by the repeated experiences of both death and birth in his home during childhood. Another factor relates to the fact that only the person who *has* can lose. Parkes puts this very well when he speaks of bereavement as "the cost of commitment". Finally, for the moment, Mahler's entire orientation in life was to be invested in the past—in lost objects, past memories and ancient longings. Love was experienced the more for its distance in time and in the quality of memory. His interest in memorialization was part of this trend. So that to represent *the wish* to have a child in *the form* of a parent in mourning would be entirely in keeping with Mahler's character and inner life. Its relationship to his identification with his own parents is of course, immediately obvious.

Prior to the summer's work of 1901 Mahler underwent the operation which had been recommended, with the understanding that he might not survive another hemorrhage such as that of the preceding winter. It was performed by the eminent surgeon Hohenegg on June 4. It was on November 7 that he met Alma at a dinner party at the Zuckerkandls, mutual friends. By November 27, when he first called upon Alma he spoke of marriage, and their child was conceived, as noted, even before the marriage could take place on Mar. 9, 1902. Thus Gustav Mahler was most certainly potentially a father sooner than he was a husband! . . . If the child they conceived was in fact born at term on November 3, 1902, we can date back conception to February. This would have been about the time of the anniversary of Mahler's own near death, as he believed it, and two of the most critical events in his life; these were the death of his father on Feb. 18, 1889 and Otto's suicide on Feb. 6, 1895.

There was a sense of urgency for the 41 year old bachelor to marry, which may also have come from a powerful contemporary historical event: the turn of the century. Few comparable external events could appeal to the mind as a stimulus for fantasy about the passage of time and one's past and future life. Indeed, that very summer, Mahler set another Rückert song, *Mitternacht*. In the creative logic of the unconscious, after "autumn" could only come "midnight". Interestingly, its rhyme and formal patterning are reflected in a poem Gustav wrote to Alma the very night he met her (DLG 669). The relationship of this song to Mahler's fantasies about the turn of the century is further underscored by an error in the dating of the manuscript, a parapraxis. de La Grange who owns the manuscript points out that it is mis-dated by Mahler retrospectively to 1900!

Although there is no direct evidence at this time, it would be difficult to imagine that Mahler did not wish to have a son. His intense narcissistic interest in his post-life is legendary. His favorite motto was "my time will yet come." He was, with the exception of the deranged Alois, who had by now wandered off into obscurity to Mahler's relief, the only surviving brother of ten. Thus only he could pass on the family name. Mahler's attachment to his mother has become apocryphal since Freud noted his "Mutterbindung", mother fixation (Jones, Reik). But his close attachment to Bernhard remained ever alive in his strong identification with his father in character. It is of interest that the only piece of furniture Mahler salvaged from Iglau had been his father's chair which he had in his study and would sometimes point out with nostalgia. Given these details and Mahler's urge to memorialize, one might wonder whether the child's conception during the anniversary month is more than mere chance, considering the other circumstances of that unusual year of Mahler's life.

The child, however, turned out to be a girl and was named after Mahler's mother, Maria. From the above it will be clear what burden of parental fantasy and expectation she bore. From the first Mahler had a "special" relationship with the child and even after the birth of a second child, Anna, 20 months later, Maria remained his favorite. The family stories and anecdotes reported by the various biographers, while interesting in themselves, would not do justice to the depth of Mahler's attachment to this child nor to its content, for Mahler was always more involved with himself in the personal *meanings* people and events had for him than with the people or occasions themselves. A good example of this was his abstract love of animals as expressed in both letters and programs of musical works (e.g., the Third Symphony). But he did not really *like* animals; or at best, it was a truly platonic relationship, that he had with them. Likewise, the *idea* of being married was of critical importance to him, particularly since it was, I believe, the gateway to immortality for him. But this hardly would make him a devoted husband to the real person his wife was nor a devoted father. In fact, when Maria was actually dying he could not bear to be with her, and Alma reports, "he hid himself in his room each day" and slept through the operation which had been performed to relieve her breathing. During

the course of an earlier illness he had been convinced that it had been he who "called her back to life." Such was the grand level of his notions of fatherhood. Alma makes it a point to quote an observation made to her, "You have an abstraction for a husband, not a human being." Yet the very abstractions that so preoccupied her husband were very human indeed, those of life and of death.

It is only against this more extended background that we can begin to understand what the death of this child meant to Mahler. All his life he had struggled with ambivalence about birth and anxiety about death. He had paid dearly for the loss of the few he really cared for, and, psychologically, never quite gave them up. Even after his parents died in 1889 his behavior *in loco parentis*, assuming responsibility for the remaining family, served to preserve their memory within him but at a sacrifice of work and health. He had overcome the self-imposed tasks of this phase of his life, discharging what he felt had been his obligations to family and ultimately achieving the position in Vienna which he called, perhaps only half in jest, "the god of the southern zones". Now, in his forties his position and health both faltered. Ever creative in his solutions both conscious and unconscious, he made his next bid for stability in marriage and fatherhood. In 1907 the world toppled. Circumstances forced him to resign his position in the opera (circumstances in which he was of course an active participant); health failed and death threatened, this time in actuality; and finally with the death of Maria and all she meant to him, he lost his passport to immortality. To be sure, composing remained, but at this point of his life, his future esteem as composer was far from assured. His "my time will yet come" was in good measure wishful thinking and whistling in the dark. But as ever, some of the functions composing served were those of conceptualizing, organizing and externalizing inner anxiety and conflict. Therefore, the much written about expressive content of the last works by critics responsive to the music comes with little surprise. They are often intuitive accounts, and I would suggest that some of them about psychobiographical data would serve to amplify and support such accounts. Equally important it would provide a certain specificity of detail.

In a related way, while the common sense view of the Christys that this triple assault of fate would make anyone depressed, it fails to reveal to us the specific way in which Mahler was depressed and the meaning these events had for him. It is only a consideration of this that enables us to link his reaction and state of mind to his final illness.

In recent years a number of investigators have studied the circumstances under which physical illness occurs. Thus, science has come full swing from those nineteenth century observations cited earlier which were later omitted. The circumstances themselves have become legitimate subject for investigation. The interested reader is referred to several such studies.

The thrust of these studies is that psycho-social events also interact among the many factors that determine disease. A corollary would be that associated events, such as, for instance, Dr. Libman's comments on Mahler's bereavement and depression in the context of his final ill-

ness, are not random events. To be sure, some psychological phenomena may be a result of physical illness. However, others may be clearly shown to precede its onset and therefore participate among etiological factors. There has been particular interest and success in demonstrating that bereavement is one human experience that tends strongly to antedate the onset of illness. One pair of investigators, Engel and Schmale, look to the particular state of mind which certain life stresses engender. Starting from the frequently made observation that "psychological factors appear to influence the time of onset and exacerbation, as well as the course, of many diseases in man and animals", they proceed to examine the kinds of circumstances which predispose to physical illness. They particularly focus upon the setting and onset situation of the illness and the state of mind induced in the patient. They have thus delineated a characteristic mood of helplessness and hopelessness which they refer to as the "giving-up-given up complex."

There is ample evidence that the triple loss of 1907 left Mahler in a depressed state. The vicissitudes of this state up to the winter of 1911 make a fascinating story in themselves and we will follow some of them here. It is very largely a story of how Mahler more or less successfully dealt with this state until failing physical, weakened psychological defenses and a particular *coup de grace* from the outside world unmasked this chronic underlying depression and ushered in a hopeless and helpless psychological state which immediately preceded the onset of the Subacute Bacterial Endocarditis.

Mahler's first reaction to the child's death had not been shock or grieving but stark, unmitigated fear! Alma describes how upon the arrival of Mrs. Schindler, "We all three slept in his room. We could not bear being parted for an hour. We dreaded what might happen if any one of us left the room. We were like birds in a storm and feared what each moment might bring—and how right we were."

Fear of this nature cannot be long sustained and it was soon supplanted with a variegated form of denial. Frank fear was thus staved off with a single exception, until nearly the end when, as already noted, he was to turn to Mrs. Schindler for motherly solace. The exception was the panic state of the summer preceding Mahler's death, the summer of 1911 after he heard of Alma's interest in another man, when he wrote the verbal expostulations on the manuscript score of the Tenth Symphony. But earlier, within two weeks of the child's death one can still perceive Mahler's denial in a note written to Alma from the restaurant car of a train en route to Vienna. He speaks here of the "obligatory traveller's appetite", while one of the most constant features of both mourning and depression is the loss of appetite. This attitude of denial is also reflected in his entire point of view about the "New World" which has already been mentioned: A new life is substituted for the old. Likewise, several who knew him that first season in New York described a state of near-hysterical euphoria (Wessling).

This picture of the wiry, eccentric, exacting dynamo was the picture of Mahler, the conductor. Mahler, the composer, gave mourning its due, for the time between the child's death and Mahler's departure for New

York was spent in Schluderbach in the Tyrol, where he attempted to come to terms with bereavement in his characteristic way, in musical creativity. It was here that he recalled the poems of *The Chinese Flute*, a translation by Hans Bethge which he had put aside some time before, perhaps as a *memento mori*, to be drawn out at just such a time. By the time he left Schluderbach he had sketched out *Das Lied von der Erde*. The theme of farewell is explicit in both words and music, perhaps more richly so in the latter. As in the *Kindertotenlieder*, the composer-singer is apparently identified with the bereaved. Careful analysis reveals an emotional background too complex to be detailed here. One element is particularly noteworthy. That is Mahler's own growing fear of death as it shows itself in his broad conception of this work. Musically, as many feel, it has the structure of a symphony. But Mahler did not yet wish to commit himself to the naming of a Ninth Symphony since several composers, namely Dvorak, Schubert, Bruckner and, especially significant to Mahler, Beethoven, did not live to write a Tenth. He thus dealt with his dread by a superstitious act compounding it later after he had completed his Ninth by considering it really to be his Tenth.

It is not by coincidence that Alma calls the chapter in which she describes the death of their child and the immediate events following, "Sorrow and Dread". Although at times historically inaccurate, she had a near uncanny knack of reflecting Mahler's own feeling and beliefs in her very distortions. At such times, historical error may stand as if in the relationship of interpretation to unconscious material. Thus Alma clearly relates the onset of Mahler's heart disease to the death of their daughter although it is very unlikely to be historically accurate. As she relates it, the day after the child's death when Dr. Blumenthal came to examine Mrs. Schindler, Mahler, "thinking to make a cheerful diversion" (sic!) invited the doctor to examine him. "Well, you've no cause to be proud of a heart like that", he said in that cheery tone doctors often adopt after diagnosing a fatal illness. This verdict marked the beginning of the end for Mahler" (Alma 122). It is unlikely that the murmur of the underlying chronic rheumatic heart disease would not have been previously detected in Mahler's repeated earlier medical examinations. Moreover, Alma herself notes her earlier anxiety as the murmur had been audible to her as she lay next to him! The most significant element here is that Mahler and Alma connected the illness to the bereavement. Mahler believed his daughter's death heralded the beginning of the end just as he believed he himself nearly died in the winter of 1901. While beliefs in general do not kill, they can often take part in the emotional background which affects disease.

In a paper entitled, *Life Setting Conducive to Illness*, Engel reviews typical life settings in 100 anecdotal accounts in which sudden death followed some important life event. In half of these, the stress was the news of the death of a loved one. Other more rigorous studies of bereavement strongly suggest that individuals suffering bereavement are more at risk for the development of physical disease during the ensuing year than a group of controls (Parkes). It is in this sense that I believe Mahler to have been "at risk" during this period of his life despite his prodigious attempts to ward off the significance to him of his loss.

The ensuing months saw a gradual erosion of Mahler's physical health and *pari-passu*, a weakening of his psychological defenses. Despite his energetic if not frantic pursuit of work during the four "American seasons" the strain he was under and his increasing yielding to it were apparent to many. Alma, for example, speaks of the "stress" he was under and his increasingly apparent "inner tension". She said "he was a motor". But she perceived "inner changes-, he was somewhere else. . . more sensitive." He gradually became more child-like: "Did I do it well, Almschi?", he would ask her (Wessling).

By 1909, during the summer of which he worked on the Ninth Symphony, others had noted his increasing distractibility and depression. For example, Prince Troubetsky observed the "emptiness" of his face and noted that while seemingly involved in conversation, he was beating time with his finger, involved with inner, musical thoughts (Wessling). It was about this time that he would lie very still, as if playing at death, telling Alma, "When I lie like this, I am no longer myself. My soul leaves me and floats above my poor old body which will soon be dust". (Wessling)

We may perceive then a gradual weakening against which the conductor valiantly strove to continue an arduous schedule and the composer, awaiting his turn, took up the pen each summer. When does the end come for a person such as this? I believe that there is evidence that an event occurred in the summer of 1910 that served as the psychological *coup de grace* and that it was this blow that plunged Mahler into the mental state that preceded the development of the S.B.E., a state of anxiety approaching panic and a state of helplessness and hopelessness which proved intolerable. The stimulus was Alma's affair with Walter Gropius.

While some might judge Alma for setting this state of affairs in motion, it is far more instructive for a psychologist to study the web in which Alma and Gustav were enmeshed at this time in their lives. Mahler sought the gratification of some very particular needs in his marriage and was ever much involved with himself. He made these narcissistic needs and expectation clear in many ways, both obvious and subtle. For example, quite early in their relationship he forbade her from composing. The message was clear: she was to be a mother and a wife, the very order in fact in which they occurred. Likewise, during his very first visit, he suggested that she burn her edition of Nietzsche who was one of Mahler's favorite authors. Alma, on her part was a woman who was gifted and ambitious. It could not have been easy for her to live the rest of her life in the fading shadow of a great man. It is not without significance that she began to emerge as his power weakened. While she was devoted to Mahler in behavior it was difficult for her to tolerate the illness and attendant regression. She too depended upon her mother for help in this regard and at the same time, sought her mother's encouragement in a continued sexual life as being "good for your health". She was, after all, "in her best years, chained to a broken, oversensitive man." As early as 1908 he looked old enough to be her father and a customs inspector made the *faux pas* on the return from the first American season. With regard to their physical life together,

one also wonders about the effect of the mutual recriminations, spoken and unspoken, which is so commonly seen after the death of a child and what if any stresses this may have put upon their marriage. In any event, by the summer of 1910 it was clear to Alma that "my marriage was no marriage and that my own life was unfulfilled."

For Mahler's part, perhaps this aspect of the relationship is best characterized by Freud's tactful comment in a letter to Reik, "he withdrew his libido from his wife, thus, probably designating an impotence problem. This would be entirely consistent with Mahler's depression as well as his increasingly debilitated physical state. As for his emotional investment in his wife, another aspect of "libido", this was stronger than ever but its character was markedly altered as he looked to her for support and strength.

Alma's liaison with Walter Gropius, the details of which are not immediately relevant, came to Mahler's attention in a shocking way, namely through a love letter to Alma mistakenly directed by Gropius to him! It is precisely here that the true "beginning of the end" started from a psychological point of view. There is every evidence that Mahler panicked at the prospect of losing Alma. She by now represented a great deal to him and moreover, in his current state such an abandonment represented a foretaste of death even as he clung to her for sustenance. *Der Abschied* (the Farewell of *Das Lied*) notwithstanding, Mahler had on more than one occasion in his life reacted to farewells, losses and perceived abandonment with panic-induced mental disorganization. In this sense, the finely controlled masterpiece of valediction in *Das Lied* may be viewed as a mastery in the materials of music of one of the most frightening of human situations, separation and death. Indeed, Mahler already had a long history of experiences of this nature and characteristic ways of coping with them. One of the more dramatic instances occurred in 1893 as his affair with the soprano Anna Von Mildeburg came to an end. This relationship, too, had started with Mahler very much the master of the situation, reducing Anna to tears during the first rehearsal in which he met her. After she became unresponsive to him he was in a depressed and frantic state for months. This entire experience had occurred against the background of the suicide of his brother Otto, who Mahler had never forsaken despite his growing rage at Otto's continued dependence upon him into his early twenties.

Returning to the Gropius letter, to detail such a stress at this time in his life without emphasizing Mahler's extraordinary strengths and capacity for mastery would be to miss something essential in the man. However, now, in a physically weakened condition, already depressed, still under the effect of bereavement and having already started to face the reality of his own death, the blow of Alma's abandonment was more than Mahler could cope with. He was plunged deeper into depression and his behavior became uncharacteristically disorganized. On one occasion, he fainted on the stairs.

Alma describes what came after the Gropius letter as guilty behavior on the part of Mahler as he frantically tried to make amends to her. But her account reveals something much different and she was well

aware that he was "shaken to the depths" (Alma, *And the Bridge*, p. 53) by the whole experience. He began to write letters and poems to her of adulation, entreaty and terror of separation:

My breath of life!

I've kissed the little slippers a thousand times and stood by your door with longing. You took pity on me, glorious one, but the demons have punished me again, for thinking of myself and not of you dearest. I can't move from your door; I'd like to stand there until I've heard the sweet sound of your living and breathing.—But I must leave! My queen has sent me into exile below. I bless you my beloved—whatever fate awaits me at your hands. Every beat of my heart is for you.

Thus he spelled out for her *in italics* the meaning of abandonment at this time. At the same time overtones of old themes occur of the banished, the wanderer and the adorer of some feminine, perhaps maternal ideal which are so clear in the earliest works such as *Das Klagende Lied* and *Songs of a Wayfarer*. Nothing can so change a man's behavior as the threat of a severe sentence, and Mahler was already under sentence of death. Mahler became suddenly devoted to Alma. He would give her anything. He dedicated his Eighth Symphony to her, something he had shunned doing before. Even Alma thought he might later regret it. He even rediscovered her compositions crying, "What have I done! These songs are good. They're splendid! . . . we'll have them published. I'm not going to rest until you start working again. My God, was I blind?" (Alma, *And the Bridge*, 54). The tone of Mahler's report of his August 1910 consultation with Freud has the very same tone of admonition. "Apparently," relates Alma, "Freud managed to calm him down by a stern approach. 'How can a man in your condition tie a young woman to him?' he chided Mahler." (Alma, *And the Bridge*, 53). Neither of the two brief letters of Freud about this consultation reveal this admonishing quality although it is not impossible.

However, it is in the music itself that one can trace the full impact of this experience of Mahler. In the summer of 1910 he was at work on the Tenth Symphony, which along with the Ninth and *Das Lied*, comprise the final trilogy written between 1907 and his death in 1911. There is a striking general agreement among listeners of every degree of experience, that the mood of "farewell" permeates these scores even without the verbal cues of *Das Lied*. This is partially due to the use of allusion and quotation in the music such as, for example, the reference to the Beethoven *Les Adieux* sonata with its "Lebe wohl" motive in the Ninth. Diether has enlarged upon this in his article on the Ninth Symphony. (*The Expressive Content of the Ninth, Chord and Discord*, Vol. 2 No. 2, 1963). Another example of quotation in the Ninth is that of Johann Strauss' *Freud Euch des Lebens*, an unlikely quote for Mahler whose musical taste led him to eschew such trivia. In fact, Alma relates how early in their marriage in a rare evening out they heard Lehar's *Merry Widow*. On the way home trying to reconstruct the music they stopped in a music shop where Mahler engaged the proprietor while Alma sneaked a look at the music. She said "both of us were then too 'high brow' to consider buying such music". A note of regret is

conveyed in the Ninth in the context of this quotation. Interestingly, in the short score of this movement as Redlich points out (Redlich 219), Mahler wrote the legend "O vanished day of youth, O scattered love." (Cue 8). This work was written in the Summer of 1909. It is perhaps not insignificant that the musical quotation is from the final section of an obscure Strauss waltz. Characteristically, the form was that of a string of five waltz tunes and this was the last waltz.

Working on the sketches of the Tenth Symphony in 1910 Mahler was in the distraught state already described. These sketches are peppered with verbal expostulations which betray his state of mind better than either the accounts of Alma or of Freud. These are dated by Alma to those weeks early in August following the Gropius affair. The symphony was conceived as being symmetrical with two outer slow movements and two inner scherzi, themselves separated by an intermezzo entitled, "Purgatorio"—a total of five movements. Following is a condensed listing of the verbal material inscribed upon the score:

Third Movement: ("Purgatorio") Death! Transfiguration! (page 4)

Compassion! O God! O God, why hast thou forsaken me? (page 3).

Fourth Movement: title page: The devil leads me in a dance . . .

Madness seizes me. Accursed! Demolish me that I may forget my being! that I may cease to exist, that I may. . . End of movement: None but you know what it signifies! Ah. Ah. Ah. Fare thee well my lyre!

Farewell. Farewell. Farewell Ah well — Ah Ah

Fifth Movement (Finale): To live for thee! To die for thee!

Almschi (page 10)-(repeated again at close of movement.)

Manifestly these outcries reveal Mahler's preoccupation with abandonment and betrayal. Their tone is valetudinal but hardly resigned. Despair breaks through in suicidal wishes frankly revealed and anxiety over loss of control in psychosis. A deep sense of guilt going far beyond that which Alma detected is betrayed in the title of the central movement, Purgatorio. "Inferno" had been written next to it and was crossed out. Perhaps Mahler thus sought some meaning to his suffering in Dante-esque purification preparatory to paradise and reunion with Beatrice, the eternal Mother. In fact, there is rich free-associative allusion in these fragments. For example, the quotation from Matthew (XXVII,46) is related to Mahler's interest in the Bible which he quoted, often ironically, as well as a life-long identification with Christ. The reference to Alma's understanding of what a particular musical passage signifies is in itself an interesting example of a memory conceptualized in musical tone which would need only to be pointed out to the responsive listener. There are many such examples in the music of Mahler. This particular one refers to an experience the two of them had in New York during the first season there (1907-08) when they watched a funeral cortege of a fireman alongside Central Park from their eleventh floor window in the Hotel Majestic. A stroke on a muffled drum was followed by complete silence as the procession moved. The experience had brought tears to Mahler's eyes.

But the most important thing these verbal fragments tell us about

Mahler's state of mind is the helpless and hopeless condition to which he had by now descended. Christ on the cross had been left to die alone and only death lay in the future. The only possible hope was in the latent fantasy of resurrection and reunion after death. For at base, as all mortals, Mahler did not believe in his own death.

But what of the music itself to which these remarks might be seen in Klaus Roy's words as "extreme program notes"? Roy: Creative Process in Mahler's Tenth Symphony (*Chord and Discord*, Vol. 2 No. 8, 1958). The single most striking fact is that the music is intact and cogent for its state of completion! Roy, among others, is struck by the contrast between the thoughtful musical organization and the freely emotional, illogical annotations. Deryck Cook, who reconstructed a performing version, likewise points out that the Adagio and Purgatorio, the two most frequently performed sections, are intact in the sketch except for orchestration. Many have speculated on the above. I would suggest that this is only one example of many that can be drawn from Mahler's life and work of the function of musical composition in his life. In my judgement, it served an organizing, integrating and mastering function to the composer's life experience. Music was one of Mahler's earliest modes of thought and had developed *pari-passu* with language. It acquired an autonomous function in his life which remained to the last. Mahler's behavior and verbal productions show evidence of disorganization. For all intents and purposes, the music does not. One may argue about the merits of this work relative to his others, whether it is as inventive or esthetically pleasing, etc. But the ability to conceptualize musically is basically intact.

Nevertheless we would speculate that the "content" of this music must have something to do with its scrawled verbal associations. These are difficult to come by and the whole process invites subjectivity. However, there is one example of a connection which also throws some light on Mahler's mental state and therefore the fundamental interest of the study, that state of mind which preceded the S.B.E., which we are by now becoming increasingly acquainted with.

Redlich points out the centrality of the Purgatorio movement not only because of its position in the symphony but because of the reappearance of its motive in the final movement (Redlich-p, 230). The theme in Purgatorio is accompanied by the words, "Have mercy, O Lord, Why hast Thou forsaken me." Its reappearance as a reminiscence in the last movement bears the legend, "Almschi, to live for thee, to die for thee." In Redlich's musical judgement, the Purgatorio is "a disappointment for the true Mahler lover because of the utterly derivative character of its principal motive. It is pervaded by a restless figure re-echoing the spookish Wunderhorn song, *Das irdische Leben*, just as the oboe's chief tune seems to re-echo the world of the early symphonies and their scherzo-like middle movements." To hark back to an earlier time may well reflect a failure of invention. It may also reflect a wish for earlier creative days: the days prior to the writing of the Ninth after which, musically, Mahler wrote on borrowed time. . . It had been on the score of the Ninth that he'd inscribed, "O vanished days of youth". Mahler always acknowledged the autobiographical sources of

his music. In one such reference about this time, one tinged with regret, he said, "Ich habe Papier gelebt." (I have lived paper, literally).

His song, *Das irdische Leben* is unique in many respects. For one thing it was never self-quoted in any subsequent work either literally or in spirit. For another its thematic topic is unique among all of Mahler's songs. Separations, partings, reunions, heavenly life, sarcastic portraits—all were subjects for the Wunderhorn songs, but this song was about starvation. Mahler himself considered it one of his finest works. (Walter p108) In the verse a child repeatedly implores his mother for bread. She chillingly suggests he wait as the grain is successively harvested, threshed and finally baked. "Tomorrow," she says as the child begs with increasing urgency. The ostinato figure in the music and skillful key changes serve to heighten the urgency of the child's needs and the desperate pain of delay. Likewise the return to the same key each time the mother "speaks" emphasizes her alarming unresponsiveness. In the end the child dies, reflected in a brief coda, in which the motive descends and motion ceases.

It is surely no coincidence that what might be properly called mental associations while engaged in the composition of the Tenth Symphony drew him back to the musical and verbal content of *Das irdische Leben*. The essential theme is that of starvation leading to death. In the poem as well as in early human life, only one person can satisfy the urgent need. If she fails, the giver of life becomes the bearer of death. Mahler's behavior toward Alma, his letters and poems likewise suggest such an awesome view of Alma in Mahler's last year of life. He began to idealize her often in lavish terms which even made her uncomfortable. He attempted to propitiate her as if she were some capricious goddess whose decree could go either way and who could be favorably influenced with offerings. There is no evidence, of course, that Alma bore him any malice, quite to the contrary, as she continued to be deeply in love with him. But such was the web into which life experiences and the needs of each drew them. Both, feeling equally helpless in Mahler's last year of life, turned increasingly to Alma's mother, Mrs. Schindler. Just as she had been summoned on Maria's death three years before, she was immediately called after the Gropius incident and remained an important figure to both during Mahler's dying days. It was she who had been immediately sent for from Vienna when it was decided in February 1911 that Mahler must return home via Paris where he would consult another bacteriologist. She cared for him tenderly throughout the trip and in Paris. Of the relationship among the three Alma writes, ". . . he was always right in her eyes, even if sometimes it made things awkward for me. It was the utmost happiness when we were all three together alone" (Alma 192). Thus Mrs. Schindler became the good, nurturing mother of both, and perhaps Mahler's greatest comfort. At times now he would spurn members of his own remaining family for fear of any rift with Alma. As she perceived it, "Mahler was no longer blind. On the contrary he now watched feverishly whether or not I was shown enough warmth and respect."

In November of 1911 they had made the final voyage to America. It was this season which was cut short when Mahler became weak and

febrile and the diagnosis was made. A final insult had been a recurrence of difficulty with his orchestra and a confrontation during which certain accusations were made and his powers restricted. It was following this that his constitution finally yielded. He conducted until he no longer could. His strength ebbing, he programmed what he must have known would be one of his last New York concerts. It included Busoni's *Berceuse Elegiaque*. The program notes (H.E.K.) relate how Busoni returned to an earlier piano piece after the death of his mother and had developed it in a larger work, something incidentally Mahler had done on several occasions. The score bore the verse:

Schwingt die Wiege des Kindes,  
 Schwingt die Waage seines Schicksals,  
 Schwingt der Weg des Lebens,  
 Schwindet hin in die ewigen Fernen.  
 (The child's cradle rocks, and so do the scales of fate.  
 The course of life also swings and dwindles in the endless  
 distance.)

Mahler himself could not have found a more characteristic text to set, combining as it does the lyricism of the *Wunderhorn* and gravity of *Das Lied*. Busoni said of this score, from which Mahler conducted, "The title page bears a picture of a mother at the cradle of her child and, in the background, a man following a coffin. The man sings to his dead mother the same song which he had heard from her as a child and which had followed him through a lifetime and undergone a transformation." Mahler conducted the concert on Tuesday, February 21, 1911, but on the program of the following Friday afternoon it is noted that the concertmaster would conduct "owing to the indisposition of Mr. Mahler."

It was from this point that the final struggle with death began. Mahler varied in attitude. Alma reports, "Often Mahler was convinced of his recovery; more often he was despondent and afraid of death." (Alma, *And the Bridge*, 58) In a characteristically counter-phobic fashion, he made jokes about his coming death. He would say to Alma, "You'll be quite a catch if I die now. . . -well, who is going to land you?" He would actually make lists humorously rejecting one suitor after another. These macabre jokes reveal still another side of Mahler's attitude toward death: namely his intense interest in his post-life, of which his wife's second husband would of course be a part. We know now he was correct that this would remain a part of his own history. But Mahler had long had a strong interest in this as reflected in his words: "My time will yet come." Incidentally, this too is a reference from the New Testament, words spoken by Jesus to the disciples: "My time is at hand." (Matthew XXVI,18)

Mahler's interest in his post-life extended, as is often the case, to interest in his burial. It was to Mrs. Schindler that he gave directions "to have him buried beside his daughter at Grinzing, in a simple grave, with no pomp and ceremony, and a plain headstone with nothing but "Mahler" on it. 'Any who come to look for me will know who I was, and the rest do not need to know' "(Alma 197). Later Alma notes his wish to be buried "in the same grave" as their daughter. When he told

this to Alma he had also asked her to promise never to desert him. In this is reflected Mahler's wish to be reunited in death with his beloved daughter. This was a wish Mahler had been aware of for some time. When he had demanded of Frankel that he be told if his condition was fatal and the latter asked him why, Mahler had answered that if so he wished to return to Vienna to die.

Yet the fantasy of reunion after death is not death at all but another state of living. This was one of the ways Mahler never believed in his own death. Another comes from a detail provided by Mahler's biographer, de La Grange, (personal communication) who relates that one of Mahler's final requests was that after he died his heart be pierced with a sharp instrument. Ostensibly he had the fear of being buried while he still lived. Behind this lay his belief that even after the doctors said he was dead, he would remain alive.

When the final moment came Alma tells us "there was a smile on his lips and twice he said, "Mozart". She also noted that with a finger, Mahler was conducting on the quilt. During his last days he was often preoccupied with the history of Mozart's illness and death (Wessling). It clearly gave him comfort. He said, "He had to endure it so, why should I not bear it likewise." In a terminal, hallucinatory state he died while conducting and listening to the music of Mozart.

## THE BRUCKNER SYMPHONIES IN PERFORMANCE

by HANS-HUBERT SCHÖNZELER

It is always an invidious task for a conductor to discuss essentials of a performance, and this perhaps applies to the performance of Bruckner symphonies more than to any other works. It may therefore be of use to outline the particular problem facing the conductor in general terms and then apply them to the specific case under discussion.

With the exception of drama, of the theatrical stage, no other art form labours under the same handicap as that which confronts the composer: the painter paints his picture and the viewer looks at it; the writer writes his book and the reader reads it; and at a pinch even the play, the creation of the dramatist, can be read by the uninitiated. But the number of people outside the professional world of music who can read (and hear with an inner ear) the printed notes of a score is relatively small. For this reason the composer always has, and presumably always will have, to rely on a mediator, a go-between, an interpreter. In the case of a work for piano, for voice, for a chamber group of instruments, at least the interpreter is a direct mediator inasmuch as the performer familiarizes himself with the score and then presents it to his audience directly through the medium of his instrument. When we come to symphonic music, however, the complexity to the problem takes on yet another dimension: The conductor studies his score, yet he does not produce a single sound. It is up to him to communicate what he considers (objectively or subjectively!) the score should sound like to a large assembly of musicians, whose task it then is to translate the conductor's intensions through the medium of their instruments into the living sound which finally reaches the ears of the audience.

The first stage in discussing the role of the conductor in general with regard to his attitude is, of course, an intrinsically personal one: Does Mr. XYZ want to open the ears of his audience to the greatness and beauty of Bruckner, or does he merely want to show off - 'this is how XYZ conducts Bruckner!?' If the latter is the case, it is evidently superfluous to pursue the matter any further. But let us assume the former case: A conductor, a serious and honest musician, has studied his score *à fond*, has familiarized himself with the composer, and wants to do his utmost to present to the public what he sincerely and honestly believes the composer intended his music to sound like when he committed it to paper. For let us face it: Our musical notation is but a very rough and ready shorthand which furnishes the interpreter with the bare bones of a skeleton, with the most general indication as to his intentions, and it is up to the interpreter to invest this skeleton with flesh and blood and to breathe life into it. Needless to say, it is at this juncture that the innate integrity of the interpreter plays such an overwhelming part.

The next problem arises once the conductor has 'done his homework' and stands in front of the orchestra to rehearse the score he has studied. Here the problem is a technical one, that of obtaining the right notes, achieving a clean ensemble, seeing to such matters as phrasing and dynamic balance, and obtaining all these results in an easy, friendly rapport with his orchestra without losing respect. In the case of Bruckner he is faced with yet another difficulty: There are probably few works in the orchestral repertoire which are as tiring for the musician as Bruckner symphonies, and more than one orchestral player has frankly admitted that, whereas he loves to listen to Bruckner, he hates playing his music. There are various reasons for this attitude: The strings often have interminable passages of *tremolo*, the woodwinds at times spend what seems to be hours counting bars rest, and the brass (when they have almost reached exhaustion point) are required to make big *crescendos* and produce one of those enormous climaxes which we all know so well in Bruckner's symphonies. This is no criticism of Bruckner's mode of composition: He *had* to write in this way in order to achieve the result and the effect he intended. But it cannot be denied that they put a supreme demand on the resources of any orchestra, and this a conductor has to bear in mind when rehearsing a Bruckner symphony in order not to overtax his players and be faced, on the night of performance, with an orchestra which is exhausted and 'played out'.

The other hurdle to be overcome in the preparation of any symphonic work is a much more subtle one and is very difficult to define. Having thoroughly familiarized and identified himself with the music he is about to perform the conductor must communicate his conception of what the music should convey on a spiritual, esoteric plane to his orchestra in such a way that they are convinced enough as a corporate body to pass on this conviction to the audience. It is one of the mysteries of musicmaking how this process takes place. We have all fallen under the spell of men like Furtwängler and Toscanini, Bruno Walter and de Sabata, and we know full well that if a lesser man chose the same tempi, the same dynamics, the effect would not be the same. And in the end we take refuge again in such terms as 'personality', 'personal emanation', 'genius' and the like—terms which basically do not mean anything and yet mean everything because they are vague attempts to explain the inexplicable.

In the main, the foregoing has been a rough outline of the various difficulties and problems which confront the true conductor in the performance and interpretation of any great work of music. In a small way particular reference has already been made to Bruckner; but let us now apply these several points to Bruckner symphonies in particular. And it is strange that, taking these points one by one, a circle appears to close, beginning in the spiritual and ending in the spiritual, just as is the case in any Bruckner symphony. It is obvious that the first step in performing, in interpreting one of Bruckner's symphonies is not only a thorough, professional study of the score, but it also means that the conductor has to submerge himself in the peculiar

spiritual—one might almost say rarified—world in which Bruckner lived and composed. It is not intended to suggest that only a conductor who is a devout Roman Catholic can possibly attempt to perform a Bruckner symphony. As is well known Bruckner's faith in the Holy Roman Church was deeply rooted, was so much instilled in him that he never questioned it for one moment throughout his life. But when he gave utterance to it in the wordless *Credo* of his symphonies, through the very nature of music itself, it became more than interdenominational, for it achieved an intensity of spirituality which transcends the orthodoxy of organized religions. It is the feel of a Supreme Being, no matter what it be called, this undoubting belief in an ultimate salvation which must somehow be shared, in all humility, by anyone who wants to perform a Bruckner symphony in such a way that it communicates to those who listen that message which is so intensely Bruckner's own. For in Bruckner we have the unique case—a romantic free from eroticism.

From these spheres of sublimity we come to the next stage which is an anticlimax: The problem of realizing those intentions through the medium of the orchestra. This spells 'rehearsals' and they, in turn, imply technicality and sober, matter-of-fact hard work. Almost every Bruckner symphony starts off with either a *tremolo* or some basic rhythm, *pianissimo*, in the strings. What Bruckner meant by *pianissimo* is perhaps best illustrated by the episode in Linz when he was rehearsing a work by Schumann with the *Frohsinn* choral society: He kept repeating a certain *piano* passage over and over again, exclaiming with annoyance, "It still sounds like a trumpet!" until the members of the choir got tired of the procedure and decided that at the next rehearsal they would not sing at all in the passage in question. When it came to the point, the choir fell silent, and Bruckner, hearing the music with an inner ear, went on conducting, smiling blissfully and saying, "Now it's right!". The only term which probably expresses the beginning of a Bruckner symphony is the German prefix 'Ur-' for which there is no equivalent in English: It is the very beginning, the primordial, the feel which we experience when, with full consciousness, we read that opening phrase of the Gospel According to St. John: "In the beginning was the Word". In the same way a Bruckner symphony must well forth from the void, must give the experience which Halm once described by saying that in the opening bars it is not a symphony which starts, but the very beginning of music itself. How to achieve this? There are tricks of the trade, and every conductor has his own, but the basic necessity is complete and utter conviction.

Next come the rhythmic complexities. Enough has been said and written about the famous 'Bruckner Rhythm' of duplet against triplet, and basically this seems simple enough. But when they are superimposed and especially when this results, as it does particularly in the 5th and 6th symphonies, in the triplet figuration occurring simultaneously with a dotted duplet rhythm, the strictest attention to rhythmic clarity becomes essential. Let it never be forgotten that, despite his romanticism and the supposed Wagnerian influence, Bruckner was basically

an organist who had gone through the stringent school of that disciplinarian contrapuntalist Simon Sechter, which makes it imperative that even in the apparently most lush passages of his symphonies linear clarity is still of supreme importance, and rhythmic pregnancy must never be sacrificed to a wallowing in orchestral sound.

While on the subject of precision a timely word might be said about Bruckner's General Pauses. Most Brucknerians will know about the fact that when his 2nd Symphony was first performed it earned itself the name of *Pausensymphonie*, 'Symphony of Pauses'. When asked about this matter, he said with his typical naiveté: "But look, if I have something important to say I must first take a deep breath". Nor must it be overlooked that Bruckner was precise to the point of pedantry in the periodicity of his scores, numbering them bar by bar—perhaps a remnant of the numeromania with which he was afflicted in 1867. The general pauses in a Bruckner symphony are part and parcel of a well thought-out and well balanced scheme, and any conductor who does not adhere to these pauses in the strictest metrical sense commits a crime against Bruckner and the form which he mastered to perfection (despite all those who accuse him, of all people, to formlessness).<sup>1</sup>

Like the general pauses, Bruckner's treatment of dynamics is both intensely personal and of utmost importance in the shaping of his symphonies. There is hardly another composer who so consistently changes his dynamic levels with such utter abruptness, and it would not be too far-fetched to assume that this particular treatment also has its roots in Bruckner the Organist: One can virtually see him, sitting on the organ bench, pulling out his stops and changing over from one manual to the other. It is in this respect, incidentally, that Bruckner has been most sinned against by those enthusiastic 'editors' of his, Ferdinand Löwe and the brothers Schalk, particularly Franz. Granted, nothing could be worse than the huge cuts they inflicted particularly on the 4th and 5th Symphonies and the large-scale re-orchestration of Nos. 5 and 9, but with these cuts they damage the form of Bruckner's work in such a blatant way that it is immediately obvious to all and sundry. It is by their alterations of Bruckner's dynamic concept that they violated the spirit of the music in an insidious and subtle manner. Bruckner erected his symphonic structures largely in enormous blocks of sound, hence the sudden and often violent changes of volume; not only did this treatment go against what people were accustomed to in those days: Above all it did not fit in with the convenient and desirable (though mistaken) notion that Bruckner was the 'Wagnerian

---

<sup>1</sup>This statement regarding the metric and formal necessity of general pauses in principle applies to live concert performances only. In the case of gramophone recordings and radio broadcasts, where we are dealing with an artificial medium in any case, it may be modified. In a live performance any conductor worth his salt can hold the tension over protracted periods of silence and make them eloquent (*vide* Aldous Huxley's magnificent essay "The Rest is Silence"), whereas such a silence in the event of mechanical reproduction is apt to lose its tension and result in a meaningless gap. For this reason a shortening of some of Bruckner's general pauses in an artificial reproduction medium may be justified.

Symphonist'. For this reason Lowe and Schalk assiduously ironed out Bruckner's dynamics, smoothed and glossed them over and adapted them to Wagner's *idée fixe* that music is the 'art of transition'. Without wishing to cast aspersions on the basic honesty of these men, who were devoted to 'their' Bruckner and had only his welfare at heart, we now realise clearly how wrong they were.<sup>2</sup> When Bruckner wrote a long *pianissimo* passage and then came crashing in with the full orchestral *tutti*, he knew full well what he was doing, why he did not precede his *fortissimo* with a *crescendo*: he was piling blocks of granite on top of each other, not shaping a landscape garden! For the conductor these huge dynamic changes present a difficulty, for there is an inherent tendency in all orchestras to lead into a *fortissimo* with a *crescendo* and similarly to fade into a *pianissimo* with a *diminuendo*. These tendencies the conductor has to counteract with utmost intensity, and in my own personal experience I have found it expedient to go to the other extreme and ask the orchestral players to mark a *diminuendo* in their parts immediately prior to one of Bruckner's *fortissimo* outbursts or conversely a *crescendo* before one of his sudden drops into *pianissimo*. This procedure, however, though effective from the dynamic point of view holds a great danger. Just as Hans von Bülow fought all his professional life along the famous line: "*Crescendo means pianissimo, diminuendo means fortissimo!*" in order to counteract the natural, agogic tendency of his orchestral players and achieve a gradual, graduated rise or fall in dynamic level, in the same way the conductor of a Bruckner symphony, adopting the method outlined above, must beware of falling into the trap of involuntarily coupling such a *crescendo* or *diminuendo* with an *accelerando* or a *ritardando* respectively. BRUCKNER'S BASIC TIME-RHYTHM MUST GO ITS INEXORABLE WAY, otherwise the entire intended effect is spoilt or, at the very least, watered down. In connection with this discussion on dynamics it is, incidentally, interesting to note that, contrary to the opinion generally held the orchestra which Bruckner requires for his symphonies (and with which he can achieve such an overwhelming volume of sound) is by no means bloated. In his ten symphonies (Nos. 0-9) he never uses any woodwind instrument such as Piccolo, Cor Anglais, Double Bassoon etc., and what is more, restricts himself to double woodwind in all but the last two (Nos. 8 & 9) where he uses triple woodwind. Harp and Percussion only come into No. 8 (if we discount the famous cymbal clash in No. 7). For the rest he makes do with one timpanist. Nos. 0-6 have four horns and three trombones; Nos. 0-2 have two trumpets which are increased to three

---

<sup>2</sup> It is not proposed to go into the question of the 'versions' within the scope of this article. The matter has been elucidated in detail in an excellent series of five articles by Deryck Cooke entitled "The Bruckner Problem Simplified" in the *Musical Times*, London, (Jan., Feb., Apr., May, and Aug. 1969) and I have also dealt with it in an appendix of my own BRUCKNER (Calder & Boyars, London, and Grossman, New York). Suffice it to say that for present-day performances only the original versions edited by Robert Haas, Leopold Nowak, Fritz Oeser and Alfred Orel can lay claim to validity.

from No. 3 onwards, and from No. 4 onwards the score also includes a bass tuba. Totalling up the number of players we find that up to and including No. 6 the orchestral complement required for a Bruckner symphony never exceeds that needed for a Brahms symphony, and it is only in the last three symphonies, Nos. 7-9, that the inclusion of the quartet of Wagner Tubas increases the orchestral apparatus to somewhat more unusual proportions. The fact that Bruckner is able to achieve such a magnificent volume of sound is partially due to his manner of scoring, but the basic secret is one of contrast, and for this reason also it is essential that his original dynamic markings are punctiliously observed.

Much has already been said on the subject of form, and perhaps this may seem excessive. It certainly would be so in the case of many other composers, but in Bruckner the problem of form assumes such paramount importance that it must be considered in the greatest detail, also with regard to interpretation. His symphonies are conceived on such an immense canvas, and although the very tight thematic inter-relationship (about which so much has been written and which, for this reason, it is not proposed to discuss in detail in this article) serves to a large extent to preserve coherence, there is nevertheless the danger that in performance his symphonies may 'fall apart'. Bruckner's basic principle is the sonata form which he adapts to his own personal needs. The use of general pauses to clarify the subdivisions of his vast movements has already been mentioned. There remains the other facet which is far too often ignored for the simple reason that it is the pauses, the sudden breaks, which are infinitely more characteristic of Bruckner than that other important factor: his transitions. It has been said earlier that Bruckner did not subscribe unconditionally to the Wagnerian 'art of transition' creed when enlarging on his dynamic principles. Nevertheless, when he did want or need to write a transition, he could do so with complete and utter mastery. Perfect examples of such transitions can be found in the first movement of his Symphony No. 4, where one could almost say that he 'floats' from exposition into development, from development into recapitulation, and there are many other instances. But perhaps his own personal mode of transition is most striking at another juncture which is necessitated by his formal concept. The number "Three" has always occupied an important place in music, and somehow or other it seems to be a natural thing for a movement to fall into three main sections. This was the case in the classical sonata form, which consisted of the three distinct major sections: Exposition—Development—Recapitulation, with a short little Coda added as a concluding 'tail-piece', a general rounding-off. As Bruckner extended his Codas to completely unprecedented proportions (taking as his example the Beethoven of the 3rd and 9th Symphonies) this tri-partite structure was endangered. In order to restore it he resorted to a procedure which is nothing short of genius. In some of his first movements he lets the climax of his development section coincide with the beginning of the recapitulation,

thereby fusing these two sections into one enormous central span which has its apex at the very moment of junction. Added to this Bruckner invested climactic transitions of this nature with a series of harmonic tensions which cannot but have a shattering impact on any listener who is truly listening. Let us examine this process in the case of the 6th Symphony.<sup>3</sup> Having begun his development on a *piano* and *pianissimo* level after the third thematic group of the exposition has died away, he slowly builds up his orchestral volume by means of a development of the second group of themes, until at bar 95 (letter M), he reaches a *fortissimo* in E flat major on the opening subject—a key removed from the symphony's tonic of A major. From here he moves through G flat major to A flat major—and now comes the unforgettable moment. Whilst the A flat root is thundered out in the basses in the rhythmic pattern of the opening of the symphony, the timpani enter at bar 207 with a *forte* roll on the low E. The human ear will never admit the timpani as a transposing instrument—it will therefore hear this E as the root of a chord in E. Thereby the A flat of the basses becomes enharmonically changed to a G sharp, the harmonic feel alters from flats into sharps, the chord is accepted as the first inversion of a seventh chord on E—which is the dominant to A Major, and it is on the tonic A major that in bar 209 (letter N) the climax of the development is achieved simultaneously with the beginning of the recapitulation. It may seem to be off the subject that such analytical particulars are discussed here, but they bear very vitally on the interpretation and performance of each and every Bruckner symphony although, of course, the details of such harmonic tension vary from instance to instance and never adhere to one cut-and-dried scheme. It is not to be expected that the average, educated music lover studies a score with such care before attending a concert, yet the principles discussed above, and in particular that of the harmonic tensions,<sup>4</sup> is of supreme importance to the structure of all Bruckner symphonies. It is therefore one of the conductor's tasks to familiarize himself to the utmost with these details so that he can bring them out in performance with perfect clarity and utter conviction. Only in this way will the listener intuitively sense the complete cohesion of the whole while listening to a Bruckner symphony without, as often as not, being able to put his finger onto why the entire long span of the movement appears to stand firm without danger of collapse.

This now brings us to the last and greatest problem—doubly great because unavoidably it touches on regions of the spiritual. It is the

---

<sup>3</sup>All bar numbers and rehearsal letters are based on the score of the original version as published by the Musikwissenschaftlicher Verlag, Vienna (ed. Haas or Nowak).

<sup>4</sup>The question of these harmonic tensions, which in this article has been merely touched upon briefly, forms the basis of an excellent and detailed study by Robert Simpson, "The Essence of Bruckner" (Victor Gollancz, London 1967).

problem of Bruckner's time scale. Again, this problem has two sides to it, of which one is technical and can be clearly defined, whereas the other goes into regions of feelings and emotions, and is therefore infinitely more difficult to express and formulate. On the technical side the matter is relatively simple. There is no need to tell anyone who has some inkling of Bruckner that his tempi are basically slow and that a Bruckner *Allegro* is something vastly different from, say, a Tchaikovsky *Allegro*. In fact, it would hardly be an overstatement to say that whereas one might easily play Bruckner too fast, it is almost impossible to play his music too slowly. But where the greatest mistake is being made is not so much in the basic tempo itself, but rather in changes of tempo within one movement. True, Bruckner often puts markings in his score such as 'Langsamer' or even 'Bedeutend langsamer' ('slower' or 'considerably slower'). If these instructions are taken too literally or even exaggerated, the resultant effect is one of disjunction, of breaking the flow, which is in direct antithesis to the very essence of Bruckner. Fortunately we are provided with a guide in one of the very, very rare occasions that Bruckner put a metronome marking into one of his scores, in the Finale of his 8th Symphony. At the beginning of this Finale ('Feierlich, nicht schnell'—Maestoso, non troppo allegro) he gives the metronome marking  $\text{♩} = 69$ ; later, at bar 69 in the Haas score (letter D) and again at bar 567 (letter Mm), he accompanies the instruction 'Langsamer' ('slower') with the metronome marking  $\text{♩} = 60$ . The difference between these two tempi is relatively small, which justifies the assumption that in Bruckner's mind the conception of a tempo for a given movement was not a line, but rather a band with an upper and lower limit: Everything within these two limits conforms to the basic tempo, and the variations which he indicates should take place WITHIN THOSE LIMITS. The interpreter thereby has the licence to vary his tempo both according to Bruckner's instructions and the demands of his own artistic conscience without ever breaking the broad flow, the main stream of the music or making the listener consciously aware that the basic pulse has been altered—and thus the grand overall unity of the movement is preserved.

But whereas these hints and suggestions may help the performer on the purely technical plane, they really beg the main question. The problem of allowing an essentially 'right' time evolution in a Bruckner symphony is far more complex and demands a devoted and complete involvement on the part of the performer in what is the world of Anton Bruckner—and this applies equally to the listener. Bruckner was a romantic inasmuch as he lived during what historians describe as the romantic epoch in music, and his harmonies were affected and conditioned by his time and by the composers who lived and worked immediately before and around him. But in the true sense of the word he was *not* a romantic—for this he was far too conscious of the classical form and of the heritage of Beethoven and Schubert (not to mention the Italian polyphonic school, Bach and Händel, Mozart and Haydn). And even Wagner, whom he adulated, only added a final harmonic gloss to what was essentially already set and formed. It must

always be remembered that Bruckner's first contact with Wagner's music only came about when he had reached the age of 38, when he had completed seven gruelling years' study with Simon Sechter followed by two years' study with Otto Kitzler, and that in later years he paid no attention whatsoever to the texts and plots of Wagner's *Gesamtkunstwerk*: It was only the harmonic texture which enticed and attracted him. Nor are there any 'romantic' traits in his works: None of his symphonies bears a title with the exception of the 4th, and here the description "Romantic" is far too vague to count as such, he never wrote any of the programme music so dearly beloved by romantic composers. When he tried to invent some sort of 'programme' for his symphonies in order to please his friends, his inventions border on the ludicrous, and in the vocal field, apart from sacred music, he only wrote a handful of choruses, mainly for male choir. That other field which is so important in the romantic era, the *Lied*, he never touched on at all.<sup>5</sup> On the other hand Bruckner has often, and equally mistakenly, been described as a mystic. This again is far removed from the truth, for this son and grandson of Upper Austrian village school teachers had far too clear an eye for the realities and at the same time a whole-hearted appreciation of the joys of life to qualify for the epithet 'mystic'. The secret of Bruckner's time concept lies in other aspects of his character. One of these is his almost limitless patience. It is well known how he strove for perfection (and, let it be admitted, to him personally 'perfection' often meant the acquisition of certificates and diplomas) and would not commit his first fully valid symphony to paper until he had reached his 41st year. This innate patience is reflected in his symphonies, and in order to come to a true understanding and enjoyment of his music this same patience is a prerequisite, not only in the listener, but also in the performer. It is strange, but again and again one has the experience—be it as listener or as conductor!—that a Bruckner symphony, taken at a slow and regular pace, appears infinitely shorter than a performance which is rushed, although in the matter of actual duration it is the latter which is the shorter. We come again to something which has been said earlier on: This feeling of "In the Beginning. . .". Bruckner was a visionary, and although these visions had their origin in his unquestioning faith, it is a feeling which can be experienced by every one of us, irrespective of our beliefs. It has been said that 'whereas Beethoven and Brahms, in their symphonies, are scaling the mountain side, Bruckner stands on the summit and serenely surveys the vast horizons around him'. This may perhaps, in a feeble way, explain the emotive effect of a Bruckner symphony, this romanticism without eroticism, without hustle and bustle—a romanticism which is most intrinsically Bruckner's own and

---

<sup>5</sup> Let me hasten to add, before the admonishing finger of the critic be raised against me, that I am aware of the five-odd songs which he composed between 1851 and 1868, but they are far too trivial to affect the argument as such.

which cannot be adapted to OUR every day conceptions, but to which we have to adapt ourselves. The essence of performance is communication, communicating to the listener the message which Bruckner had for the world. This message comes out of Bruckner's spirituality, and no matter what metamorphosis this message may undergo in the process of interpretation, it must bear the stamp of both serenity and tranquility on the one hand and a certain amount of awe on the other, the sort of awe which probably every one of us has felt when looking up to the stars on a clear night and realizing our own insignificance within the immensity of the cosmos. Bruckner is the pendulum beat of that cosmos.

#### KILENYI MAHLER MEDAL AWARDED TO JAMES CONLON

In appreciation of his efforts to create greater interest in and understanding of the works of Gustav Mahler, the Directors of the Bruckner Society of America, Inc., awarded to James Conlon the Mahler medal designed by Julio Kilenyi for the exclusive use of the Society. James Conlon has performed works of Mahler on numerous occasions with many different orchestras. Presentation of the award was made to Mr. Conlon by the President of the Bruckner Society, Charles L. Eble, following Mr. Conlon's performance of Mahler Symphony No. 1 with the Chicago Symphony Orchestra at Orchestra Hall in Chicago, November 19, 1991, the fourth of four performances.

## A NEW GUIDE TO THE BRUCKNER SYMPHONIES

*The Essence of Bruckner—An essay towards the understanding of his music* by Robert Simpson. Victor Gollancz Ltd., London, 1967, 206 pp., ind., 38/-.

“What next—B flat? There is a crescendo in that direction, but if there is any key with which this section will have no truck, it is B flat. Look what it did to D flat last time! so with the deftness of a child evading a rough Playmate, the music slips away into C Major. . . .”

“And then? ‘Now,’ says the composer after a mere 222 bars, ‘we can begin!’ By this time Bruckner is well out of earshot of the enemy’s blasphemy, and if we wish to enter his world and taste its rewards we must also leave the enemy to grind his teeth in solitude. So now the finale can ‘go’ . . .”

Few Brucknerites, I trust, need to be told what finale *that* must be. With just such harmonic and structural metaphors—and with a nod toward Tovey<sup>1</sup> his great predecessor (at least for the Fourth and Sixth Symphonies<sup>2</sup>)—Robert Simpson, composer and hitherto the author of the fascinating *Carl Nielsen, Symphonist*,<sup>3</sup> just as lucidly traverses the Bruckner nine in 167 pages and 154 musical examples in his newest book. In addition to the allocation of a chapter for each of the nine, there is an introductory chapter dealing collectively with the so-called *Nullte* Symphony, the String Quintet, the masses and *Requiem*, the *Te Deum*, and other works.<sup>4</sup> Dr. Simpson’s personal metaphorical style is already familiar to past readers of CHORD AND DISCORD through his analyses of the Seventh and Eighth Symphonies,<sup>5</sup> of which the present Chapters VIII and IX are an expansion.<sup>6</sup>

“The essence of Bruckner’s music,” he concludes in a summarizing chapter, “lies in a patient search for pacification. . . . I mean its tendency to remove, one by one, disrupting or distracting elements, to seem to uncover at length a last stratum of calm contemplative thought. . . . I am sure the characteristic Brucknerian process is essentially the reverse of the kind which raises the tension until it explodes into a finale.

<sup>1</sup> Sir Donald Francis Tovey, Reid Professor of Music in the University of Edinburgh, 1914-39.

<sup>2</sup> *Essays in Musical Analysis*, Vol. II (London: Oxford University Press, 1935), pp. 69-84.

<sup>3</sup> London: J.M. Dent and Sons, 1952.

<sup>4</sup> The author does not try to discuss the individual motets, but puts in an eloquent word for the part-song *Abendzauber*, for baritone solo, male chorus, and four horns—“a ravishing piece, written in 1878, and breathing the same atmosphere as the opening of the Fourth Symphony.”

<sup>5</sup> Issues of 1963 and 1950.

<sup>6</sup> To those who doubt the fact that honest structural analysis (metaphorical or otherwise) must be harmonic, I would commend the following pertinent statement on page 85: “The average listener who neither knows nor cares what key the music is in must be assured that it is these very events that are, if he is enjoying the music, keeping his ear engaged, whether he realizes it or not.”

Human tensions in Bruckner are usually gradually pacified, and this a positive, not a negative process." That is a very plausible over-all view, in the light of Bruckner's emotional instability and frequent mental breakdowns, and cries out for a psychological study in the vein of the great Sterba<sup>7</sup> and Squires<sup>8</sup> monographs on Beethoven, or the several such studies of Mahler from Reik<sup>9</sup> onward.

This is by far the most detailed analysis of Bruckner's symphonies we have had in English, including that which appeared in 1960 by Erwin Doernberg,<sup>10</sup> to which Dr. Simpson himself wrote the preface. Simpson's style is wittier than Doernberg's; and, as an additional boon, readers who happen to be admirers of Bruckner and Mahler are spared the sarcasm gratuitously bestowed on the latter by Doernberg.<sup>11</sup>

For a comprehensive and unified discussion of the still bothersome textual problem in Bruckner, Doernberg's single chapter devoted to this subject is still without a peer. At any rate, Simpson, like Doernberg, reveals in the long run a clear preference for Robert Haas among Bruckner editors. He simply discusses the major points as they arise, though his general feeling toward Haas and Nowak, in respect to their successive "Critical Editions," emerges fully in the summing-up chapter: "It is a pity that there are still those who are prepared to perpetuate the confusion by using musicological pedantry where only insight will do; as we have frequently seen, the facts are often impossible to find out by normal scientific research methods."

By "the facts," he means, of course, the extent to which Bruckner was actively coerced or cajoled into altering things in his own hand, against his better judgment and his true artistic intent. In the crucial case of the Eighth Symphony, of which Nowak issued (in 1955) the precise "autograph revision" of 1890, whereas Haas prepared (in 1939) a "compromise" between the 1887 and 1890 autographs, Simpson admits that "from a purely musicological point of view, Nowak's position is unassailable," though for practical purposes he finds that some recourse to Haas is indispensable. He might have added that the Haas edition is in fact a performing version, based on an intuitive combination of two autographs, not a critical edition at all in the accepted sense. And the only thing that can balance and fulfil Nowak's techni-

<sup>7</sup> *Beethoven and His Nephew* by Editha and Richard Sterba, M.D. (New York: Pantheon Books, 1954).

<sup>8</sup> *The Problem of Beethoven's Deafness* by Paul C. Squires, Ph.D. (*The Journal of Abnormal and Social Psychology*, April-June, 1937).

<sup>9</sup> *The Haunting Melody* by Theodor Reik (New York: Farrar, Straus and Young, 1953).

<sup>10</sup> *The Life and Symphonies of Anton Bruckner* (London: Barrie and Rockliff). See Dika Newlin's review in CHORD AND DISCORD, 1963, p. 186.

<sup>11</sup> When Simpson criticizes an aspect of Mahler's music, as he does on page 97, he is equally critical of the same aspect in Bruckner's. He does not, as Doernberg so unconvincingly does, pit Bruckner's expressive "spontaneity" against Mahler's "typical conscious exertion" over the same kind of melody!

cally correct but incomplete scholarship is the engraving of the *other* autograph he has promised for thirteen years.<sup>12</sup>

"Perpetuating the confusion" naturally refers to that confusion originally inaugurated, in large part, by the partisan championship (in both good and bad senses) of the Schalks, Loewe, Oberleithner *et al* — potentially good insofar as these men were enthusiastic Brucknerites (and Bruckner was a hopelessly poor advocate for himself), but functionally bad insofar as they were also staunch Wagnerites. Simpson contributes some valuable critical asides on that score, *viz*:

"Their conception [of Bruckner's intentions], though lucid to themselves, was a complete misunderstanding based on what they found in Wagner. Their championship of Bruckner antagonized many who might have understood him better than they, and their copious advice, far from reassuring the timid composer, threw him into agonies of uncertainty and protracted bouts of revising, without which he might have written much more music."

"Brahms, whatever antagonism he may have expressed, understood Wagner; Bruckner, whatever adoration he showed, did not. Bruckner was bowled over by the sound of Wagner's music, but did not know what it really meant, whereas Brahms, resisting its heady appeal, knew and resented its significance. . . Their attitudes to Wagner divided them; yet they had more in common with each other than either had, in truth, with his own supporters in the feud. There is evidence that Brahms came at last to an inkling of this, for he was seen to applaud vigorously a performance of Bruckner's F Minor Mass, and afterwards persuaded the conductor, Richard von Perger, to perform the *Te Deum*. This is more than Bruckner's beloved Wagner ever did for him."

Here is controversial and thought-provoking writing, and there is much more. Especially interesting at the present juncture is Dr. Simpson's evaluation of the sketches for the Ninth finale:

"I must confess to more than skepticism about attempts to complete the Ninth Symphony, not only because the final coda is altogether missing (and it would be a bold, not to say impertinent, man who would try to compose Bruckner's greatest climax for him), but because the sketches do not provide the momentum to support such a coda. Alfred Orel has skillfully assembled a conflation of them into a more or less continuously written four-stave score, and others have made full scores 400-odd bars long, relying in part on the instrumental indications shown by Bruckner. But from the sketches one can divine only broad outlines; it is possible to identify developmental and recapitula-

---

<sup>12</sup> In the unique instance of the Third Symphony, both of whose pertinent autographs have been engraved (by Oeser and Nowak respectively), Simpson unhesitatingly states and develops his thesis that the compositional defects are Bruckner's in the first place ("He has entered a new world, but has not yet found his way about it")—with the clear inference that it would require a super-Haas and more to remedy the problems raised by this great ground-breaking work.

tory elements, but there is no real inner continuity perceptible as an organic process, no genuine coherence, and often a total absence of those inner parts that normally mean so much to the growth of a Bruckner movement. . . I do not believe that anyone will ever succeed in doing for this movement what Deryck Cooke has done so magnificently for Mahler's Tenth Symphony. There is no doubt that Mahler saw his Tenth whole. Bruckner was still trying to conceive the exact form and nature of his finale."

This feeling on Simpson's part is related to that "search for pacification" which (as mentioned above) he finds to be indeed "the essence of Bruckner." At first, he writes, "I used to think that the completed movement would have resolved the tensions of the symphony by revealing an essential calm and majestic mind behind all the emotional disturbance of the rest; but the more familiar are these sketches, the more marked does the impression become that the subjective elements are still overwhelmingly there, that Bruckner's condition was not such as to be able to exorcise them."

This is a fascinating theory in view of the fact that, as we know, Bruckner spent the last two years of his life in a state of only intermittent lucidity, during which periods he continually strove to complete this finale. It makes an ironic complement to Mahler's musical *dénouement*. In his sketches for the Tenth, Mahler worked his way through to what Cooke regards as the state of "benediction" expressed in the final pages,<sup>13</sup> but then rejected the whole thing (at least temporarily) by locking it away in its fragmentary state; and his illness and death the following spring made it permanent. Bruckner, according to Dr. Simpson's musical diagnosis, was still struggling to "exorcise" that selfsame demon, perhaps, of which Mahler wrote when he said "The Devil is dancing it with me!"<sup>14</sup> —and Bruckner failed completely in that effort.

If present plans materialize, we will soon be able to test Simpson's hypothesis in the actual performance of various realizations of this finale,<sup>15</sup> analogous to those of the Mahler Tenth prepared by Cooke, Wheeler, and others. Contrasting the prospects in each case, Simpson speaks of what Cooke has "done so magnificently"; but in fact these post-Mahlerian efforts too have been frowned upon by some leading musicians. Nevertheless, the decisive point in favor of hearing them is that there have already been extant, for many years, truncated (*i.e.* one or two-movement) versions of the work which were invariably put forth as "the Mahler Tenth," and which thereby constituted much more of a perversion of what Mahler wanted to say *in toto*, in his final work, than any conscientious and competent five-movement

---

<sup>13</sup> Others, like Wheeler, find the parting "sigh" to be far removed from one of fulfillment or contentment!

<sup>14</sup>"*Der Teufel tanzt es mit mir,*" part of the inscription on the title page of the fourth movement of No. 10 (four stave sketch).

<sup>15</sup> Presented by Arthur D. Walker, Ernst Märzendorfer, etc.

“performing version of the sketch” (proffered as exactly that and no more) could be.<sup>16</sup>

The prevailing situation is very much the same with Bruckner’s Ninth today as with Mahler’s Tenth prior to 1963. We have a fragment or torso universally presented as “the Bruckner Ninth” which, by Simpson’s own Brucknerian definition, cannot properly be so designated in any sense. Nor can this version be logically regarded as the final word even on the given portion of the work, for Simpson also warns: “We must never forget, in criticizing the Ninth, that the whole of what is extant is only its first draft, and that Bruckner would certainly have gone over it all again.” So we have three movements ending with a “final” E-major “resolution” which is actually, in Brucknerian terms, no resolution at all—only a temporary stopping-place. Assuming, then, that Dr. Simpson is correct about the state of the finale, would it not be a lesser perversion to present in performance (as what the composer left us) *three and a half* movements, completely unresolved? That would be more painful, if the author is right—but, to the same extent, also more accurate.

*The Essence of Bruckner* is dedicated “to Jascha Horenstein, who interprets Bruckner with love and authority.”

JACK DIETHER

## NOTES ON CONTRIBUTORS

- DAVID H. ALDEBORGH, Head of Bruckner Archives, Poughkeepsie, N.Y. Assisted William Carragan in completion of Bruckner Symphony No. 9. Produced, 1985, first recording of Bruckner Magnificat, Jerusalem Records. At present assisting in the preparation of the Critical Edition of Bruckner's Second Symphony.
- NICHOLAS B. CHRISTY, M.D., B.A., Yale University; M.D., Columbia University. Former Prof. of Medicine, College of Physicians and Surgeons of Columbia University, New York, N.Y., and Chairman of Department of Medicine, Roosevelt Hospital, New York, N.Y.
- JACK DIETHER was a writer on music and drama, who among other duties, wrote all the Bruckner, Mahler, and Shakespeare record reviews appearing in *The American Record Guide*. Because of his detailed coverage, that publication during the Mahler Centennial year devoted more pages to Mahler than to any other single composer.
- STUART FEDER, M.D., is Clinical Associate Professor at the Albert Einstein College of Medicine. He also holds a graduate degree in music from Harvard University and is a frequent writer on psychological aspects of music, including several on the life and works of Gustav Mahler. Dr. Feder is also on the faculty of the New York Psychoanalytic Institute and the Juilliard School of Music, Evening Division, where he teaches a course entitled "Mind and Music."
- PAUL HAWKSHAW, Ph.D., Columbia University. Professor of Music and Associate Dean, Yale University School of Music.
- TIMOTHY L. JACKSON, B.A., McGill University; M.A., Queens College; Ph.D., City University of New York. On faculty of University of North Texas, College of Music. Co-author with Paul Hawkshaw on Bruckner article in the *New Grove* to be published in the year 2000.
- BENJAMIN M. KORSTVEDT, Ph.D., University of Pennsylvania with a dissertation on Bruckner's Fourth Symphony. He is at present on the faculty of the University of Iowa. He has published studies of Bruckner in several journals, including *19th Century Music* and *The Musical Quarterly*, and is currently writing a monograph on Bruckner's Eighth Symphony for Cambridge University Press.
- JULIA MORRISON, M.F.A., University of Iowa, writing, arts; M.A., University of Minnesota, library sciences; other studies at University of North Texas and Fordham University. Publications include poetry, prose, reviews and translations of various Faust legends, Rilke, George, Hofmannsthal. Works performed: drama and chamber music.
- DIKA NEWLIN holds degrees from Michigan State University, University of California, and Columbia University. Her work in California included three years of study with Schönberg. At present Miss Newlin is Professor of Music at Virginia Commonwealth University, Richmond, Va.
- HANS-HUBERT SCHÖNZELER (1925-1997). British conductor of German birth. Author of *Bruckner* (London, Calder and Boyars; New York, Grossman, 1970). In 1973 conducted world premiere of the first version of Bruckner's Eighth Symphony.

# The Life of Anton Bruckner

BY GABRIEL ENGEL

from CHORD AND DISCORD

A JOURNAL OF MODERN MUSICAL PROGRESS

Published by the Bruckner Society of America, Inc.

in January, 1940 -- (Vol. 2, No.1)

Like Franz Schubert, Anton Bruckner springs from a line of Austrian schoolmasters. In the pleasantly situated village of Ansfelden, not far from the town of Linz, Bruckner's grandfather Joseph and his father Anton had both devoted their lives to the drab duties of rustic pedagogy, at that time still considered a hereditary occupation among provincials. Hence the arrival on earth of Anton himself on September 4, 1824, meant in the normal course of things merely a fresh candidate for the abundant miseries of schoolmastership.

As early as his fourth year the tiny "Tonerl," like Haydn a century before him, showed his undeniable musical bent, for even then he could bring forth intelligible music from a little fiddle and (to quote an old Ansfelder's naive characterization of these first signs of composer's fancy) "could often be heard humming or whistling unknown tunes."

With the dawn of schooling the child showed a hearty dislike for all classroom activities, except the "Singstunde," an hour which seemed for him filled with irresistible enchantment. Of course, he received many a whipping for his backwardness in all extra-musical studies.

As tradition demanded of the village school-teacher, Father Bruckner had also to play the organ in church, and it is doubtless owing to his efforts that Anton at ten knew enough about the organ to attract the attention of a good musician in a nearby village. Under this man Weiss, a cousin of the family, the boy then earnestly studied musical theory and organ-playing for two years. Remarkably enough, the organ preludes he composed during that period exhibit a freedom of expression which deserted him all through his subsequent decades of theoretical study not to return again unimpaired until his years of maturity as a symphonist.

The death of his father in 1837, leaving eleven children (Anton being the eldest) rendered it imperative for his mother to accept the refuge offered the gifted boy as Saengerknabe in the sacred music school of St. Florian. The four impressionable years he spent there learning how to play the organ, piano, and violin, and mastering the elements of musical theory doubtless stamped his entire character, musical and otherwise, with a fervent piety which no later influence ever dimmed. Even when the conflict of suffering and passion rages highest in his monumental symphonic first and last movements, a sudden naive appeal direct to heaven through austere trombone chorales points back to the influence of those early years of unquestioning devotion and zeal at St. Florian.

Page 2 -- The Life of Anton Bruckner

Yet at this time the idea of music as a life-work seems hardly to have entered the boy's mind. His father had been a schoolmaster; he too must become one. To further this aim he added to his arduous music courses private studies in academic subjects, finally gaining admission to the teachers' preparatory school at Linz.

Though even a brief ten months spent in learning what a pious child must not be taught proved trying to so human a soul as young Bruckner, he passed his examination for a position at seventeen and set out for the first scene of his teaching career, the world-forsaken mountain-village of Windhaag. Here, as assistant village teacher and organist, he was to receive the munificent monthly

wage of two gulden (less than eighty cents). Additional attractive features of his work were that he must help in the field during "spare" time and breakfast with the maid servant.

In spite of these crushing handicaps the youth seems not to have been altogether unhappy, for he found the village-folk friendly. An especial joy was the folk-life and dancing, with its opportunity for a new, fascinating kind of music making. In this pleasant life the youth gladly joined, playing the fiddle at dances and absorbing those rustic, rhythmic strains which the Midas-touch of his genius later turned into incomparably vital and humorous symphonic scherzos. The ancient calm of the village church services was frequently interrupted by the new organist whose marked leaning towards dramatic harmonies was irrepressible. His experience with the startled villagers in this respect was much like that of the great Bach himself, who was once officially reproved for his fantastic modulatory interpolations during the ritual music.

Yet Bruckner's innate musicianship must have dawned even upon the ignorant villagers, for this word has come down about it direct from the lips of an old Ansfelder, "Yes, that fellow Bruckner was a devilish fine musician!" Then, as an afterthought, in the light of a teacher's unhappy lot, "I wouldn't let any son of mine become a teacher. No, sir! Much better be a cobbler!"

One day Bruckner, who was absent-minded, forgot to attend to some menial chore in the field and for punishment he was transferred to the still smaller village of Kronsdorf.

The teacher's demotion proved the musician's promotion, however, for the little "nest" lay only an hour distant from two historic towns, Enns and Steyr. The latter was noted for its fine organ and soon became the object of the youth's frequent pilgrimages. In Enns, moreover, lived the celebrated organist von Zanetti, a fine musician, who now became Bruckner's new master of theory. All his compositions during this period bear the modest character of occasional church music.

Page 3 -- The Life of Anton Bruckner

Completely humbled in the face of superior knowledge the zealous student was content to obey implicitly the so-called laws of music. Infinite thoroughness, the sole path to perfection, became an obsession with him. Trustingly he allowed the incredibly long veil of years of academic self-suppression to fall over his genius.

Meanwhile he had been preparing himself for the final examination for a regular schoolmaster's license. At length, in May 1845, he passed the test, and experienced the good fortune of an immediate appointment to St. Florian, the happy haven of his earlier youth.

The texts and dedications "to the beautiful days of young love" of several of his songs and piano pieces in those days tell us that Bruckner met his first "flame," young Antonie Werner, soon after his appointment as teacher at St. Florian. Yet sentiment was but short-lived in the heart of this youth whose insatiable yearning for musical knowledge swept aside all other considerations. At this time, too, there began to unfold that magnificent gift of his for free improvisation on the organ, the gift with which he in later years held audiences spellbound, even as Beethoven and Bach had done before him.

In 1851 the post of organist at St. Florian was declared vacant and Bruckner, who had for some time been occupying it as substitute, was officially appointed thereto. By then he had reached the comparatively affluent state of eighty gulden per year, plus free rent, and one of his dearest wishes had at last been realized: he was master of the finest organ in the world. Determined to become a virtuoso of the keyboard he made it a habit to practice ten hours a day on the piano and three hours on the organ.

At St. Florian in 1849, he composed his Requiem in D-minor, the only early work

deserving classification with his mature accomplishments.

Desiring to obtain a license to teach in "main schools" he continued his academic studies, stressing Latin, and in 1851 successfully passed that examination as well.

In 1853 he had made his first trip to Vienna in the hope of laying the ghost of doubt that would ever loom up in his soul as to the lifework he had chosen. This doubt had even led him to consider giving up music altogether, for he once applied for a clerical position in Linz, claiming in his letter that he had been preparing himself for several years for such a vocation. Fortunately, wise counsel induced him to forget such thoughts and to apply himself anew to theoretical studies. From this decision date his amazing years of self-imposed confinement in the contrapuntal chains forged by the famous Viennese musical grammarian, Simon Sechter. There is this to say for the almost incomprehensible devotion of the superannuated schoolboy Anton to his text-book lessons, that only such hard prescribed work could dispel the torturing doubts which lurked grimly at the threshold of his consciousness.

Page 4 -- The Life of Anton Bruckner

In January, 1856, having been persuaded to take part in an open competition for the vacant post of organist at the Cathedral in Linz, he easily carried off the honors, astonishing all by his incredible powers of improvisation on given themes.

During the first few of the twelve years he served as organist in Linz, Bruckner made practically no efforts at original composition, burying himself heart and soul in the contrapuntal problems heaped upon him by the pedantic Sechter. During the periods of Advent and Lent, the Cathedral organ being silent, Bishop Rudigier, who greatly admired Bruckner's genius, permitted him to go to Vienna to pursue (in person) the studies which throughout the year had to be left to the uncertain benefits of a correspondence course.

One may get some inkling of the stupendous physical and mental labor involved in "studying," as Bruckner interpreted the term, if one believes the evidence advanced by eye-witnesses, who assert that the piles of written musical exercises in the "student's" room reached from the floor to the keyboard of his piano. "For those who think this incredible there is the written word of the unimpeachable Sechter himself to the following effect. Upon receiving from Bruckner in a single installment seventeen bookfuls of written exercises, he warned him against "too great an intellectual strain," and lest his admonition be taken in ill part by the student, the teacher added the comforting, indubitable assurance: "I believe I never had a more serious pupil than you." Eloquent of Bruckner's Herculean labors in the realm of musical grammar and rhetoric during those years is the list of examinations to which he insisted upon subjecting himself (after typical Bruckneresque preparation). After two years of work, on July 10, 1858, he passed Sechter's test in Harmony and Thorough-bass. Of the text-book he studied (now a treasured museum possession) not a single leaf remained attached to the binding. Then on August 12, 1859, he passed Elementary Counterpoint; April 3, 1860, Advanced Counterpoint; March 26, 1861, Canon and Fugue. Thereupon he remarked, "I feel like a dog which has just broken out of his chains."

Now came the crowning trial of all, one without which he could not be sure of himself. He begged for permission to submit his fund of accomplishments to the judgment of the highest musical tribunal in Europe, a commission consisting of Vienna's five recognized Solons of musical law (today all turned to names or less than names). The request was granted and Bruckner accorded the grace of choosing the scene of "combat."

Such final tests of "maturity," not uncommon in Vienna, were usually of a somewhat stereotyped nature, but in the case of this extraordinary candidate the

occasion assumed an epic cast.

Bruckner had chosen for the scene of his grand trial the interior of the Piaristen-Kirche. Had Wagner been present, he might have been reminded of the examination of Walter by the Meistersinger, which he was even then planning. The customary short theme was written down by one judge and submitted to the others for approval; but one of these maliciously doubled it in length, at once changing a mere test of scholarship to a challenge of mastery.

Page 5 -- The Life of Anton Bruckner

The slip- of paper was then passed down to the expectant candidate seated at the organ. For some moments he regarded it earnestly, while the judges, misinterpreting the cause of delay, smiled knowingly.

Suddenly, however, Bruckner began, first playing a mere introduction composed of fragments of the given theme, gradually leading to the required fugue itself. Then was heard a fugue—not such a fugue as might be expected from an academic graduate, but a living contrapuntal Philippic, which pealed forth ever more majestic to strike the astonished ears of the foxy judicial quintet with the authoritative splendor of a lion's voice bursting forth from the jungle.

"He should examine us!" exclaimed one judge enthusiastically. "If I knew a tenth of what he knows. I'd be happy I"

Then, being asked to improvise freely on the organ, Bruckner exhibited so fine a fantasy that the same judge cried: "And we're asked to test him? Why, he knows more than all of us together!"

This man's name was Herbeck, and he was from that moment Bruckner's greatest musical friend. Unfortunately he died too soon to be of much help to the struggling composer.

Of great advantage to Bruckner during his Linzian years was the opportunity afforded him for the first time to try his hand at "worldly" music, for church-music had monopolized his attention ever since his earliest boyhood. The choral society "Frohsinn" chose him as director in 1860. Through this association, on May 12, 1861, Bruckner made his first concert appearance as composer with an "Ave Maria" for seven voices.

He struck up a friendship with the young conductor at the theatre and was appalled at the realization that all his earnest years of academic study were mere child's play beside the practical musical craftsmanship of this brilliant young exponent of the "modern" school. Eagerly he gave himself into the care of this new teacher. Otto Kitzler. From the regaling analysis of Beethoven's sonatas, Kitzler led his enthusiastic disciple to the study of instrumentation, introducing him to the beauties of the Tannhaeuser score. Here Bruckner was given his first glimpse of a new world of music, the very existence of which he had scarcely suspected. In 1863, finally convinced that he was ready to face the musical world alone, he took leave of Kitzler and the last of his long years of preparation.

Those years are perhaps unique in the annals of mortal genius, at least in those of Western civilization. The naive modesty of a great artist already within sight of middle age burying himself more desperately than any schoolboy in the mass of antiquated musical dogma prescribed by a "Dr. Syntax" would be at once labeled in these psychoanalytic days as a sample of the workings of an inferiority complex. But Bruckner's had been a church-life, his language a church idiom, and in the light of this, is it illogical to claim that his particular preparation had to differ from that of other symphonists as the architecture of a cathedral differs from that of a palace or villa?

Page 6 -- The Life of Anton Bruckner

In short, without those drab years of study mistakenly termed "belated," the

tremendous symphonic formal concepts of Bruckner might never have been realized.

Of significance in the contemplation of his spiritual affinity to Wagner is the fact that an Overture in G-minor (composed by Bruckner in 1863) closes with the still unknown "Feuerzauber," not that either master plagiarized the other, but that the caprice of nature which set two such gigantic figures side by side in the same generation must not be ignored. It is truly a cause for human gratitude that sublime accident granted the one the faculty it denied the other. Epic as is the expression of both these Titans, Wagner's helplessness in the field of the symphony is as notorious as Bruckner's in that of the music drama. The future will simply have to regard the two composers as kindred in spirit, but supplementary in achievement.

The music of Tannhaeuser sang into Bruckner's ears a veritable proclamation of independence. Thus, Wagner, whom he had as yet never seen, set him free at a mere spiritual touch, spurring him to unrestrained self-expression. With the very first effort of this new-born Bruckner, the glorious Mass in D, the world was endowed with an initial major work surpassed in-depth and brilliancy perhaps by no other in the entire range of music. Inspired by Tannhaeuser, if you will, yet sounding not the slightest echo of its strains, the Mass abounds in fine passages, unjustly dubbed Wagnerian, for they could not as yet have had any prototype. The opening Adagio, built up on the theme of the Liebestod (a year before the first performance of Tristan), the music accompanying the settling down of the dove at the end of Parsifal (nineteen years before the first performance), the "Fall of the Gods" and the "Spear-motive" from the Ring (twelve years before Bayreuth), these anticipatory touches should, injustice, be viewed, not as Wagnerisms, but rather as forerunners of the new epic spirit that was just rising in music.

The composition of this masterpiece took only three months. After the first performance, in the Cathedral at Linz, November 20, 1864, the Bishop Rudigier was heard to remark: "During that mass I could not pray." Indeed, so profound was the impression the work made, that it was given a "concert" performance by general request Shortly after, achieving a veritable triumph. Bruckner's success was proudly reported in the Viennese papers, for it was good publicity for the "home" conservatory of which he had been "one of the best pupils."

Page 7 -- The Life of Anton Bruckner

Elated by his success Bruckner at once began working on his first symphony. That year (1865) May 15 had been set aside in Munich for the greatest musical-event of the century, the initial performance of Tristan. Naturally, Bruckner made the trip to the Bavarian capital and when, owing to the illness of Isolde (Frau Schnorr), the event was postponed till the tenth of June, he decided to await the great day in the city. There he had the fortune to be presented to Wagner himself, who at once took a liking to the serious, honest Austrian, inviting him to spend many an evening in the famous Wagnerian "circle." Von Buelow became Bruckner's first confidant when the latter shyly showed the great pianist the first three movements of his growing symphony. Von Buelow was so astonished at the splendor and freshness of the ideas in this new score that he could not refrain from communicating his enthusiasm to the great Richard, much to Bruckner's embarrassment, for when Wagner asked in person to see the symphony, so great was the awe in which the younger composer stood of the "Master of all masters" that he could not summon up the courage to show it to him. He shrank from such a step as though it had been a sacrilege. So naive was his hero-worship of the master that he could not even be induced to sit down in Wagner's presence. No wonder, then, that after the Tristan performance Wagner became for Bruckner a veritable religion. Yet for this faith the younger man was condemned to suffer such abuse as has fallen to the lot of no other in the

annals of art. He was to write nine mighty symphonies, ad majorem Dei gloriam, for from man he was destined to receive not reward, but neglect, scorn, and spiritual abuse beyond measure.

On April 14, 1866, Bruckner's first symphony was complete, ready to announce to a skeptical world that the supreme instrumental form had not culminated in Beethoven. True enough, it was from the immortal Fifth of Beethoven, that Parnassus of musical classicism, that this new master drew the spiritual motto for all his symphonic efforts. Each of his symphonies might be described as an ascent *per aspera ad astra*. Through the logical order of the four movements he unfolded the panorama of the trials of the human soul as hero. Beginning with (first movement) the drama of inner conflict, then (adagio) returning from the prayerful communion with God to the (scherzo) joys of life in nature, at length (finale) with unconquerable energy and determination entering upon the battle with the world, culminating in the final triumph over all opposition, he laid down the permanent spiritual foundation for all his symphonic labors. That the first performance of this symphony, 1868, technically the most difficult that had as yet come into existence, was not a total failure, is scarcely short of a miracle, for the best string and brass sections the town of Linz could provide faced the allegedly "impossible" score almost hopelessly. Yet Bruckner conducted the numerous rehearsals with such desperate zeal that the result was at least musical enough to call forth respectful comment from the critics, though they could have gleaned but the scantiest notion of the true significance of the work from such a performance.

Page 8 -- The Life of Anton Bruckner

Even the noted critic Hanslick, on the strength of this favorable report, congratulated the Viennese conservatory, hinting approvingly at a rumor that its faculty was soon to be augmented by so valuable an acquisition as Bruckner. The rumor came true, though only after long, long hesitation on Bruckner's part. He feared to give up his modest but secure post in Linz for a miserably underpaid and insecure chair in theory at the noted music school of the capital, but his friends, understanding his timidity and realizing the tremendous artistic advantages of the proffered position, urged him to accept it. At length, after Bishop Rudigier assured Bruckner that the organ at the Cathedral in Linz would always be waiting for him, he decided to risk the chance. The date upon which he officially assumed his title of professor was July 6, 1868. Just about this time, in his forty-third year, he was made the unhappy victim of a great spiritual shock. The parents of the seventeen-year-old Josephine Lang with whom the composer had fallen in love refused him the girl's hand because of his age. In Bruckner's many cases of platonic affection for young girls (this continued till his seventieth year) there is enticing food for the modern psychologist's or psychoanalyst's formulizations. Now began for Bruckner a slow and cruel martyrdom. His very first Viennese attempt, the newly composed Mass in F-minor, was refused a hearing on the ground that it was "unsingable." After this two new symphonic attempts were suppressed by the nerve-racked composer himself with the bitter comment: "They are no good; I dare not write down a really decent theme." Discouraged, he decided to stop composing for a while and set out on a concert tour through France. The newspaper reports of this series of recitals were so jubilant that Europe soon rang with the name of Bruckner, "the greatest organist of his time." Returning to Austria, in better spirits, he experienced "the most glorious day of his life" when his Mass in E-minor (composed in 1866) was given its initial hearing (Linz, 1869) midst unqualified enthusiasm. The astonishing reports from France about Bruckner's organ-improvisations had so aroused the curiosity of many Englishmen that the virtuoso was offered fifty

pounds for twelve recitals in London to be given within a week! Out of this "munificent" fee he was expected to pay his own travelling expenses! Nevertheless August 2, 1871, found Bruckner seated at a London organ dutifully improvising on the appropriate theme "God save the King." Phlegmatic John Bull, quite impressed by the grandeur of these improvisations, nevertheless remarked judiciously that the performer showed his weakness in a Mendelssohn sonata, as had been expected. After one of these recitals a London lady advised Bruckner through an interpreter to learn English before his next visit to Britain. He never visited England again.

Page 9 -- The Life of Anton Bruckner

Back in Vienna he doffed the hated mask of virtuoso and determined at his own cost to give the shelved F-minor Mass the hearing he felt sure it deserved. The performance took place in June, 1872. He had hired the world-famous Philharmonic orchestra for the occasion at a cost of three hundred gulden (eight months' wages to the Professor of Counterpoint) but the favorable report of the famous Hanslick about the work (though he declared it reminded him in spots of Wagner and Beethoven) was alone worth the price. Could Hanslick, Wagner's most powerful and bitter opponent, only have dreamed that the simple Bruckner was destined to receive at the hands of the great music-dramatist the heavy legacy of critical abuse he had gathered through two score years of stormy travel from Dresden to Bayreuth! Bruckner, only two years before this (1869), humbly as any music student, had sat with rapt attention at the feet of Hanslick, then lecturer on "Musical History" at the Viennese conservatory.

Meanwhile, during his London experience, he had launched upon a new symphony, determined to make it from the viewpoint of technical playability totally acceptable to the easy-going world of musicians and critics among whom fate had cast his lot. Conviction would not let him abandon the titanic skeletal structure of his First, the symphonic "wagon" to which he had "hitched his star." After long pondering he hit upon the unusual idea of punctuating the longer movements of the work with general pauses in the whole orchestra. This striking device at once caught the knowing ears of the musicians during the rehearsals for the first performance and resulted in the fabrication of the sarcastic nickname, "Rest Symphony," by which the work was thereafter known in Vienna. The description "Upper-Austrian," later applied by the noted Bruckner biographer Goellerich, is far more appropriate, for the opening and closing movements, and particularly the scherzo, are thoroughly saturated with the atmosphere and song of Bruckner's rustic "home country" surroundings. Upon being once more refused an official hearing for his new work on the ground of "unplayability," Bruckner again dipped deep into his yawning pockets and invited Vienna to hear his Second Symphony to the tune of four hundred and five gulden literally borrowed on a "pound of flesh." Speidel, a prominent critic, had the honesty to say in his report of the occasion: "It is no common mortal who speaks to us in this music. Here is a composer whose very shoe-laces his numerous enemies are not fit to tie." Hanslick, still no outspoken Bruckner opponent, expressed discomfort at the titanic dimensions' of the work, and lauded the "masterly manner" in which the orchestra played the "unplayable" score. (October 26, 1873.)

Although Brahms, whose First Symphony was still uncompleted, had nevertheless been firmly seated on the world's symphonic throne (for had he not been crowned by all critics as Beethoven's heir?) court-conductor Herbeck could not refrain from making the following remark to Bruckner after hearing this work: "I assure you if Brahms were capable of writing such a symphony the concert-hall would rock with applause."

Page 10 -- The Life of Anton Bruckner

Bruckner did not enter upon these huge personal expenses because of a thirst for

public applause. That the joys of symphonic creation were sufficient spiritual exaltation for him, is clear from the zeal with which he began work upon his Third at the very moment his Second was unconditionally rejected by the Vienna Philharmonic. In the production of this new score he gave up all thought of mollifying friend and foe, who alike had complained about the length and difficulty of his previous orchestral efforts. The heroic defiance that stalks proudly through every movement of this work, making it sound much like a huge declaration of independence, has caused many to label it "another Eroica," implying a definite community between Beethoven and Bruckner.

That it was Bruckner's original intention to make this Third a "Wagner" symphony is clear from the actual note-for-note quotations from the already widely discussed Ring. He had apparently, by now, summoned up the courage to go to Wagner and ask him for his artistic approval. Fortunately his arrival at Bayreuth, armed with his last two symphonies, caught the Master of Wahnfried in most friendly humor. Bruckner's own description of his emotions as Wagner examined the scores is eloquent: "I was just like a schoolboy watching his teacher correct his note-book. Every word of comment seemed like a red mark on the page. At last I managed to stammer forth the hope that he would accept the dedication of one of the symphonies, for that was the only and also the highest recognition I wanted from the world." Wagner's answer, one of the few happy moments in Bruckner's tragic life, is surely recorded by the angels. "Dear friend, the dedication would be truly appropriate; this work of yours gives me the greatest pleasure."

After that, Bruckner went on, "We discussed musical conditions in Vienna, drank beer, and then he led me into the garden and showed me his grave!" They apparently spent a most delightful afternoon together. On the authority of the famous sculptor Kietz, who was present part of the time, we have it that a most amusing sequel developed on the two following days. Bruckner had had not only some, but in fact so much beer, the hospitable Wagner continually filling his mug and urging him to empty it (for a whole barrel had been ordered for the occasion), that the next morning found the Austrian quite muddled and at a loss which of the two symphonies the master had preferred. Ashamed to return to Wagner, he sought out the sculptor and appealed to him for help in this dilemma, but the latter, highly amused, pretended not to have paid attention to the discussion, saying he had heard some talk about D-minor and a trumpet. Now in the sculptor's own words, "Bruckner suddenly threw his arms about me, kissed me, and cried, 'Thank you, dear Mr. Councilor (I don't know to this day how I came by the title) thank you! I know it's the one in D-minor the Master has accepted! Oh, how happy I am that I know which it is!'" Next day, however, he was once more doubtful, for he sent the following message to Wagner on a slip of blue paper (now a treasured museum possession): "Symphony in D-minor in which the trumpet introduces the theme. A. Bruckner." The same leaf came back to him promptly with the following addition: "Yes, yes! Hearty greetings! Wagner." Thus came Bruckner's Third to bear the name Wagner Symphony. Whenever Wagner heard Bruckner's name mentioned thereafter, he would exclaim, "Ah! Yes, the trumpet."

Page 11 -- The Life of Anton Bruckner

The report of this incident with its clear implication of Wagner's regard for Bruckner's genius proved the death-knell for whatever chance the symphonist may still have had for Viennese recognition during the Hanslick regime. Up to that moment his work had been neglected mainly because the musicians of the city had little ear for such "modern" harmony and dramatic orchestration, but the leaps and bounds Wagner's music-dramas and Liszt's Symphonic Poems were making in the world of art had brought about a complete revolution in musical taste. The new era was one of bitter personal hatreds between musicians and critics of two opposing factions. No political enemies have ever used more poisonous epithets

than the Wagnerites against the Anti-Wagner-ites and vice-versa. A lion for punishment, both taking and giving, Wagner could easily weather the storm of unspeakable abuse, but away from his scores and classes Bruckner was a mere child so simple and shy that the merciless critical boycott of his works, which now followed, all but crushed his spirit. It was inconceivable to him that human beings could be as cruel as Hanslick and his snarling myrmidons were to him, merely because he had gained Wagner's friendship and recognition. His only solace was that he had become reconciled to composing work after work without the encouraging incentive of public hearings, The Fourth, already in the making at this time and bearing the title Romantic, was finished November 22, 1874. Although the description Romantic is no less fitting than that of Pastorate in the case of Beethoven's Sixth, there seems little doubt that the detailed "program" or symphonic plot communicated to his circle of friends by Bruckner was a post-analysis influenced by no other than Wagner, who had even published a rather fantastic pictorial description of Beethoven's Ninth. It is at any rate silly to dilly-dally over the fitness of its details, for the Romantic has so clear and effective a tale to tell that it has become the favorite vehicle for the introduction of Bruckner to a new audience. That the composer did not regard the "program" seriously is evident from his remark concerning the Finale: "And in the last movement," said he, "I've forgotten completely what picture I had in mind." Yet the work possesses an unmistakable unity hitherto without precedent in absolute music, for all four parts spring from the main theme in the first movement. So logical and masterly is the development of this theme in the course of the work that the climax is not reached until the closing portion of the Finale, making the Romantic symphony from the point of view of perfection of form perhaps the last word that has yet been spoken by man.

Page 12 -- The Life of Anton Bruckner

At this time, thanks to the zeal of his enemies his material condition had become almost hopeless. To quote from one of his letters, January 19, 1875: "I have only my place at the Conservatory, on the income of which it is impossible to exist. I have been compelled to borrow money over and over again or accept the alternative of starvation. No one offers to help me. The Minister of Education makes promises, but does nothing. If it weren't for the few foreigners who are studying with me, I should have to turn beggar. Had I even dreamed that such terrible things would happen to me no earthly power could have induced me to come to Vienna. Oh, how happy I'd be to return to my old position in Linz!" The Viennese musical "powers that be" had conspired to make life unbearable for the avowed Wagnerite. One of the highest officials at the conservatory, in answer to an appeal by Bruckner, gave him the following generous advice: "It's high time you threw your symphonies into the trash-basket. It would be much wiser for you to earn money by making piano arrangements of the compositions of others." The same man, with equally kind intent, went so far as to say, "Bruckner can't play the organ at all."

The warlike Wagner's arrival in Vienna in the spring of 1875 drew more hostile attention to the timid symphonist. Of course, it did him more harm than good. The music-dramatist's reiterated praise of Bruckner's work was like a signal for the Viennese authorities to redouble the cruelty of their method of torture. Dessoff, conductor of the Philharmonic, promised to perform the Wagner Symphony, invited Bruckner to several rehearsals, and suddenly (after two months of preparation) declared he could not find room for it on a program. Later the orchestra took hold of it again, but rejected it finally (only a single musician opposing the move) as "absolutely unplayable."

Just as the persecuted Wagner set to work on his Meistersinger, pouring his sufferings out through the lips of Hans Sachs, Bruckner plunged into the tragic

depths of his Fifth. Only in the construction of his colossal symphonies was he able to play the hero against fate. Over two years in the process of composition the Tragic symphony was compelled to wait eighteen years for its first hearing. That was not to be in Vienna, nor was Bruckner ever to hear the work at all. In 1876 Wagner invited him to the inaugural Ring performances at Bayreuth and the two giant musicians once more discussed the Wagner Symphony. Perhaps as a direct result of this conference Bruckner now set about simplifying the condemned score and again appealed to the Philharmonic for a hearing. The prompt refusal then given his request must have convinced even him that a relentless hostility due to Wagner's praise made his cause impossible so far as that organization was concerned. Into this spiritual state of almost total eclipse there suddenly broke a ray of light. Herbeck, old friend of sunnier days, conductor of the fine, though less-famed, orchestra of the Society of the Friends of Music, became so disgusted with the unjust persecution that he determined to brave the wrath of critics and musicians by espousing tile Bruckner cause. Hardly had he announced the first step of his campaign, a production of the tabu Wagner Symphony, when he died. had not, at this juncture, an influential government representative named Goellerich (father of the noted Bruckner biographer) stepped into the breach, the Third Symphony would have been taken off the Herbeck program and the unhappy composer, poisoned with a cup of misery worthy of a Job, would probably have gone mad.

Page 13 -- The Life of Anton Bruckner

The performance itself which took place December 16, 1877 was one of the saddest in the history of music. Since no conductor dared to wield the baton upon the occasion, Bruckner himself was compelled to direct the orchestra. Early in the course of the symphony. Director Hellmsberger, spokesman of the conservatory, burst out laughing. Promptly another "director" followed suit. Upon this the apish students joined in. Then, of course, the public began to giggle. Soon some people rose and left the hall, indignant that the cause of music had been offered so great an insult as the performance of a Bruckner work in Vienna, the sacred musical metropolis. When the symphony came to an end there were hardly ten people left in the parquet. The few faithful occupants of the "standing room," a handful of Bruckner-pupils, among them Gustav Mahler, rushed down to the heartbroken master, from whom even the musicians of the orchestra had fled, and attempted in vain to cheer him with consoling words. At this moment an angel approached, in the guise of the music publisher Rattig, described the symphony as wonderful, and declared himself ready to risk the expense of publishing it. Under such a black sky was the Wagner Symphony given to the world.

To return to the Viennese critics for whose Wagner-gobbling appetite it had been a gala evening, the director Hanslick (intending it, of course, only as a joke) for once told the absolute truth, namely, that he "could not understand the gigantic symphony." He said there had come to him, while listening, "a vision in which Beethoven's Ninth had ventured to accost the Valkyr maidens, only to be crushed under their horses' feet." As a sarcastic climax he added that he "did not wish by his words to hurt the feelings of the composer, whom he really held in great esteem."

A little before this time, through the good graces of the previously mentioned Goellerich, the University of Vienna had announced! the creation of a "chair" of music and the inclusion of harmony land counterpoint in the regular curriculum. Despite the firm opposition of Hanslick, Bruckner, who had ten years before appealed to the faculty that some such step be taken in his behalf, was now appointed lecturer. From the opening address, April 30, 1876, which was attended by so great a number of students that the occasion might well be compared to the first of Schiller's lectures at Jena, the younger generation embraced the Bruckner cause enthusiastically. To the academic subjects taught by

Bruckner, with Goethe's words as motto: "Gray is every theory. Green alone life's golden tree," were added those glorious improvisations for which he was so noted and the inspiring message of which endeared him to the hearts of his "Gaudeamus," as he lovingly called his students. The open enmity of Hanslick towards their beloved professor gradually assumed for them the proportions of a political issue and a life problem. In the years to come the Bruckner cause in Vienna was to attain such strength through the loyalty of these University students that the combined enmity of critics and musicians would have to bow before it in the dust. This was actually realized ten years later, when the Philharmonic was finally compelled, owing to the force of public opinion, to program the already world-famous Seventh Symphony (1886).

As the result of the frigid reception accorded the Wagner Symphony Bruckner spent the next two years (1878-80) in a radical revision of the instrumentation of the Second, Fourth, and Fifth symphonies, including the composition of a totally new movement, the now famous Hunting Scherzo, for the Fourth or Romantic. However, the changes he made in the scores are not of the nature of compromises between the artist and the world, for the themes of the symphonies remained unaltered, only unnecessary rhythmic and technical complications being abandoned.

To this interval also belongs the composition of the (Quintet for strings, Bruckner's sole contribution to chamber-music, but a work so deep and mighty that those who have heard it proclaim that in the whole range of chamber music only the last Beethoven string-quartets attain such spiritual heights. The Quintet was composed by the symphonist Bruckner and has the sweep and grandeur of his best symphonic creations.

The interval of rest from major composition saw him frequently attending the many colorful formal dances of Vienna. It seems psychologically consistent that one whose mind was always engaged in tragic inner conflicts should seek recreation in the halls of festivity and laughter. Bruckner had always been fond of dancing.

A severe attack of "nerves," doubtless due to overwork, drove him to seek relief in Switzerland during the summer of 1880. In August of that vacation period he visited the Passion Play at Oberammergau and fell head over heels in love with one of the "daughters of Jerusalem," the seventeen-year-old Marie Barti. He waited for her at the stage-door, obtained an introduction, and escorted her home. After spending that evening and most of the next day in the Barti family circle he arrived at a temporary understanding which left the love affair on a correspondential basis. There followed a lively exchange of letters between him and Marie, lasting a year, but the time came when the girl no longer answered him. Thus the now fifty-six-year-old lover found himself again refused entrance into the halls of matrimony. One is here involuntarily reminded of the love of the thirty-seven-year-old Beethoven for the fourteen-year-old Therese Malfatti, though nowadays we have ceased to gasp at such things. The solitary silent remnant of this romance of Bruckner's is a photograph of his bearing the inscription: "To my clearest friend, Marie Barti."

In these gloomy days when, following the deplorable fiasco of the Wagner Symphony, no one in Vienna dared or cared to lift a hand in favor of the Romantic and Tragic symphonies, now long finished and still unperformed, a malady affecting his feet compelled Bruckner to take to his bed. There, in spite of depressing circumstances, he summoned up the spiritual strength to work on his Sixth Symphony. As if his misfortunes had merely been trials sent from Above to prove his faith, while Bruckner was still busy with the last movement of the new work, Hans Richter, the Wagner disciple, visited him and was so struck with the beauties of the dormant Romantic Symphony that he at once programmed it and invited the composer to a rehearsal. Richter's own words describing the occasion reveal Bruckner's naive character: "When the symphony was over," he related, "Bruckner came to me, his face beaming with enthusiasm and joy. I felt him press a coin into my hand. 'Take this,' he said, 'and drink a glass of beer to my health.'" Richter, of course, accepted the coin, a Maria Theresa thaler, and wore it on his watch-chain ever after. The premiere of the Fourth took place on February 20, 1881 and proved a real triumph for Bruckner, who was compelled to take many bows after each movement. On the same program, however, the symphonic poem, the "Singer's curse" by Buelow, met with utter failure. Buelow, now a deserter from the Wagner camp, and turned to a staunch Brahmsian could not contain his jealousy and asked sarcastically, referring to the successful symphony: "Is that German music?" From Buelow, at any rate, the most devoted of Wagnerians could expect no praise. In time the insults Bruckner had to endure from that source grew vile beyond description. Even seven years later, with musical Germany at the composer's feet, Buelow still stood by the sinking ship, saying: "Bruckner's symphonies are the anti-musical ravings of a half-wit." At last in 1891, the patient composer experienced the gratification of hearing that Buelow had finally relented and was promoting Bruckner's *Te Deum* as a splendid work well worthy of public performance,

In July, 1882, he made a flying trip to Bayreuth to hear the opening performance of *Parsifal*. To him these few days were a beautiful idyll. He would stroll along the road with a black frock-coat on his arm, ready to don it hastily should Wagner come along by chance. It made no difference to him that people said this was an unnecessary act of homage. Sometimes he would stop at "Wahnfried" and gaze at its windows long and reverently. Mornings he would visit Wagner. The Master would come out to greet him, offering him the hand of the little Eva, while he said laughingly: "Mr. Bruckner, your bride!" Then Wagner would deplore the disappointing state of contemporary music, exclaiming: "I know of only one who may be compared to Beethoven -- and he is Bruckner!" One evening, grasping the Austrian's hand, the aged Master cried: "Rest assured, I myself shall produce the symphony [meaning the Wagner] and all your works." "Oh, Master!" was all Bruckner could answer. Then the question: "Have you already heard *Parsifal*? How did you like it?" Bruckner sank upon his knees, pressing Wagner's hand to his lips, and murmuring: "Oh, Master, I worship you!" Wagner was deeply moved. When they bade each other good night that evening, it was the last greeting they ever exchanged on earth, for the call of Valhalla for the "Master of all Masters," as Bruckner called him, was soon to sound. This is the premonition that took hold of the younger composer, then already deep in the creation of his Seventh Symphony. No more majestic tribute to the greatness of one mortal has ever been paid by another than in that glorious, soaring Adagio of Premonition. It is an appeal direct to the soul of the mighty music-dramatist, spoken in its own dialect, consummately mastered by a kindred soul.

The death of Wagner was a stupendous blow to the whole musical world and especially so to Bruckner. The latter, now approaching his sixtieth birthday, was still humble Prof. Anton Bruckner to the world about him. The field of musical fame, suddenly deprived of its solitary gigantic tenant, seemed to yawn for a new Titan. The psychological moment was at hand.

On the twenty-ninth of December, 1884, Hugo Wolf wrote: "Bruckner? Bruckner? Who is he? Where does he live? What does he do? Such questions are asked by people who regularly attend the concerts in Vienna." The Viennese were destined to the shame of soon basing taught by Germany the greatness they had been ignoring in their midst for a score of years.

When on December 30, 1884, young Arthur Nikisch, Bruckner pupil, gave the Seventh Symphony its first hearing in no less modest a hall than the celebrated Gewandhaus at Leipzig, it was as if a divine Voice had burst forth from total darkness crying, "Let there be light!" As the last note ceased there was enacted a scene of unparalleled enthusiasm, the applause lasting fully fifteen minutes. Bruckner appeared on the stage dressed in his simple manner and bowed repeatedly in answer to the unexpected ovation. One of the critics present spoke of him as follows: "One could see from the trembling of his lips and the sparkling moisture in his eyes how difficult it was for the old gentleman to suppress his deep emotion. His homely but honest countenance beamed with a warm inner happiness such as can appear only on the face of one who is too goodhearted to succumb to bitterness even under the pressure of most disheartening circumstances. Having heard his work and now seeing him in person we asked ourselves in amazement 'How is it possible that you could remain so long unknown to us?' " On New Year's Day, 1885, the whole world knew that a great symphonic composer whom snobbish Vienna had for years held bound and gagged was at last free to deliver his message to all mankind.

Page 17 -- The Life of Anton Bruckner

The performance of the Seventh Symphony in Munich under Hermann Levi proved an even greater triumph. The conductor called it the "wonder work," avowing its interpretation was the crowning point of his artistic career. Perhaps Levi, famous Wagnerian chieftan as he was, intended to annihilate Brahms with a word when he also added, "It is the most significant symphonic work since 1827!" Into the performance at Karlsruhe (the work was now making its meteoric way through all Germany), Felix Motti, gifted Bruckner pupil, threw so much spiritual fire that even the white-haired Liszt, sitting among the distinguished audience, became from that moment a staunch Brucknerite. This conversion was all the more remarkable since the great pianist had long remained cold to Bruckner's music, although he had been for two score years one of the chief marshals of the Wagnerian camp. Liszt as a Wagnerian had secretly nursed the notion that the Liszt Symphonic Poems could never be properly understood by the people until they had learned to appreciate his son-in-law's music dramas.

Despite the recognition of the whole of Germany, Vienna and the Philharmonic continued to maintain a dogged aloofness. Still fearful, Bruckner anticipated any possible desire on the part of the famous orchestra to play his work by entering a formal protest against such a move, on the ground that "the hostility of the Viennese critics could only prove dangerous to my still young triumphs in Germany."

For diplomatic reasons, no doubt, the Quintet was now given, for the first time in its entirety, by the Hellmesberger aggregation. One of the most prominent reviewers wrote about it as follows: "We cannot compare it with any other Quintet in this generation. It stands absolutely alone in its field." Even Kalbeck, Brahms' biographer and one of Bruckner's bitterest enemies, said: "Its Adagio radiates light in a thousand delicate shades – the reflection of a vision

of the seventh heaven."

Apparently the dawn of recognition was at hand, even in Vienna. Yet the conspirators were determined to die hard. Another critic, on the same occasion, after paving the way by admitting that the Quintet was perhaps the deepest and richest thing of its kind, warned the public on ethical grounds against Bruckner as "the greatest living musical peril, a sort of tonal Anti-Christ." His argument follows: "The violent nature of the man is not written on his face—for his expression indicates at most the small soul of the every-day Kapellmeister. Yet he composes nothing but high treason, revolution, and murder. His work is absolutely devoid of art or reason. Perhaps, some day, a devil and an angel will fight for his soul. His music has the fragrance of heavenly roses, but it is poisonous with the sulphurs of hell."

Meanwhile, for the benefit of his Viennese friends, whom he did not wish to disappoint, the composer personally prepared the initial performance of his recently finished *Te Deum*. This, a semi-private affair, took place in a small concert-hall. Two pianos were used in the absence of an impartial orchestra.

Page 18 -- The Life of Anton Bruckner

Suddenly Germany and Holland began clamoring for other Bruckner compositions, but only the Wagner Symphony had appeared in print. That work had even penetrated to America where the noted Wagner disciple, Anton Seidl, had given it a hearing at the Metropolitan Opera House, December 6, 1885. When Bruckner heard about the favorable report in the New York Tribune, he was as happy as a child, and exclaimed: "Now even America says I'm not bad. Isn't that just rich?" These successes, however, did not turn his head. He was far from ready to rest on his laurels. During the summer of 1884 he began work upon a new symphony. His sister, in whose house in the little town of Voecklabruck he was vacationing, says he would show her a stack of music-paper covered with pencil marks, saying that these scribblings would become another symphony. In order to be able to set down undisturbed the ideas that came to him during frequent walks) in the surrounding woods, he rented a room with a piano in a house nearby, "just for composing."

When he heard that the owner of this house had a young and pretty daughter, he said, "I'm glad. Now I'm sure I'll be able to compose here." Every day he would bring this girl, a Miss Hartmann, a bouquet of flowers. The presence of the younger fair sex seems to have been always a source of happiness to the composer. He was then over sixty years old.

At this time, like Balboa when he first stood upon the hill overlooking the mystic expanse of the Pacific, Bruckner stood at last in the halo of his belated and hard-earned fame looking back with calm melancholy upon the bitter trials of his artistic career. Beneath this retrospective spell his Eighth Symphony unfolded itself. As a colossal structure of spiritual autobiography in tone it is a sequel to his Fifth or Tragic Symphony, which it excels in depth of expression. It has been called the "crown of nineteenth century music." It is useless to attempt to give any idea of it in words, but its message in brief is: (First movement) how the artist, a mere human, like Prometheus, steals the sacred fire from heaven and, daring to bring the divine essence to earth, is condemned to suffer for his temerity. (Scherzo) how his deed is greeted with scorn and ridicule by his fellow-men, and he finds solace only in the beauty of nature. (Adagio) reveals the secret of his creative power, communion with the Supreme Source. (Finale) the battle all truth must fight on earth before it attains recognition and the final victory and crowning of the artist. '

In Bruckner's physical appearance at this time there was! no hint of senility. He was a little above the average in height, but an inclination to corpulency made him appear shorter. His physiognomy, huge-nosed and smooth-shaven as he was, was that of a Roman emperor, but from his blue eyes beamed only kindness

and childish faith. He wore unusually wide white collars, in order to leave his neck perfectly free. His black, loose-hanging clothes were obviously intended to be, above all, comfortable. He had even left instructions for a roomy coffin. The only thing about his attire suggestive of the artist was the loosely arranged bow-tie he always wore. About the fit and shape of his shoes he was, according to his shoe-maker, more particular than the most exactly elegant member of the fair sex. As he would hurry along the street swinging a soft black hat, which he hardly ever put on, a colored handkerchief could always be seen protruding from his coat-pocket.

Page 19 -- The Life of Anton Bruckner

In the summer of 1886 he arrived in Bayreuth just in time to attend the funeral of Liszt. As Bruckner sat at the organ improvising a "Funeral Oration" in his own language out of themes of Parsifal, it was as if he were saluting the passing of that golden age of nineteenth-century music, which had endowed the world with the titanic contribution known as the art of Wagner. Now he was leader of the glorious cause, its highest living creative exponent, but he stood alone, he and his symphonies, while the enemy still held the field in great numbers,

The Seventh Symphony continued making new conquests. Cologne, Graz, Chicago, New York, and Amsterdam paid tribute to its greatness. When it reached Hamburg the aged teacher of Brahms said it was the greatest symphony of modern times. Brahms, however, continued to shrug his shoulders, and remarked: "In the case of Bruckner one needn't use the word 'Symphony'; it's enough to talk of a kind of 'fake' which will be forgotten in a few years."

Then young Karl Muck, Bruckner pupil, came to Graz with the same symphony, and following upon this really Austrian triumph, Vienna was compelled at last to capitulate, much to the annoyance of the Hanslick coalition. Hans Richter conducted the hostile "King of Orchestras" on March 21, 1886. The Seventh Symphony, after hunting for the "blue bird" all over the world, had come home at last to bring happiness to the "prophet in his own country." Hanslick's review the following day was a sort of brief apologia pro vita sua. "It is certainly without precedent," complained he, "that a composer be called to the stage four or five times after each movement of a symphony. To tell the truth the music of Bruckner so rubs me the wrong way that I'm hardly in a position to give an impartial view of it. I consider it unnatural, blown up, unwholesome, and ruinous." Kalbeck, his aide-de-camp, picked on Richter for having shown personal homage to Bruckner and alleged that it was done purely for popular effect. Concerning the music itself he said: "It comes from the Nibelungen and goes to the devil!" Dompke, another member of Hanslick's staff snarled: "Bruckner writes like a drunkard." Richter, at the banquet of the Wagner-Verein held to celebrate the occasion, declared that many members of the Philharmonic orchestra had changed their minds about Bruckner and that there would be no difficulty about producing his works in Vienna from that time on. As a matter of fact, the next symphony, the Eighth, was introduced to the world by the Philharmonic. Heroic Richter now carried the banner into the British Isles, in spite of Brahms' reproving earning, "You surely are not going to perform Bruckner in England!"

Page 20 -- The Life of Anton Bruckner

The triumphant journey of the Seventh continued, Budapest, Dresden, and London next being conquered. To be sure, Berlin, in the hands of the Brahms marshals, Buelow and Joachim, only gave it a timid welcome. A prominent writer said of the occasion: "It was like offering a roast to a table of mules." Another said: "I considered Brahms a great symphonist until to-day, but how the little 'Doctor'

seemed to shrink when he was programmed beside this giant, as was the case in this concert!"

It was still impossible for Bruckner to find publishers for his colossal work. Time after time his manuscripts were called for by different firms, but always returned to him with regretful apologies. Then Suddenly, New York through Anton Seidi threatened to publish the Romantic, whereupon Hermann Levi for the second time made a collection of the required sum in Munich and thus saved Europe from the imminent disgrace.

In the autumn of 1880 personal friends of Bruckner and Brahms, hoping to end the quarrel between the two masters, agreed to bring them together in a Viennese restaurant. Bruckner, quite amicable, had arrived early and had already had two or three portions of Nudel-soup before Brahms put in an appearance. "Stiff and cold they faced each other across the table," related one of those present. It was an uncomfortable situation and the well-meaning conspirators were highly disappointed. Finally Brahms broke the silence and called for the bill-of-fare. With a forced display of good-nature he cried out: "Now let's see what there is to eat!" He glanced along the list of courses, suddenly looked up, and ordered: "Waiter, bring me smoked ham and dumplings!" Instantly Bruckner joined in, crying, "That's it, Doctor! Smoker ham and dumplings. At least that's something on which we can agree!" The effect of this remark was instantaneous. Everybody shook with laughter. The ice was broken and the remainder of the evening proved to be friendly and jolly.

A real understanding between the two was, of course, impossible. It was a case of temperaments diametrically opposed, conceptions of art basically at variance, in short, an apt illustration of Kipling's phrase "And the twain shall never meet."

Bruckner explained the situation thus: "He is Brahms (hats off!) ; I am Bruckner; I like my works better. He who wants to be soothed by music will become attached to Brahms; but whoever wants to be carried away by music will find but little satisfaction in his work." Brahms himself had declared before joining the Hanslick camp: "Bruckner is the greatest symphonist of the age." Once after listening to a Bruckner symphony Brahms approached the composer, saying: "I hope you won't feel hurt about it, but I really can't make out what you are trying to get at with your compositions." "Never mind, Doctor," answered Bruckner, "that's perfectly all right. I feel just the same way about your things."

Page 21 -- The Life of Anton Bruckner

In 1890, warned by repeated attacks of laryngitis and general nervousness, he begged leave to spend a year free from conservatory duty. His request was granted, but with no pay. He now drew the long-dormant First Symphony from its dusty shelf and set to work polishing it. Several years before, Hans Richter, happening to be present when two of Bruckner's pupils played a four-hand arrangement of the work, in his enthusiasm snatched up the orchestral score and wanted to run off with it, when Bruckner called out anxiously, "But the ragamuffin has to be cleaned first!" From that time the First Symphony was known in Bruckner circles as the "Ragamuffin"— an apt nomenclature, indeed, when one remembers the impudence of the opening bars.

Hermann Levi, already familiar with it, was particularly worried that the aging master might make radical changes in the process of revision and wrote to him: "The First is wonderful! It must be printed and performed—but please don't change it too much—it is all good just as it stands, even the instrumentation. Please, please, not too much retouching." An eloquent tribute to the genius of the early Bruckner is this, verdict from the lips of the greatest of Wagnerian conductors and certainly one of the finest musicians of his time.

During these vacation days the master would review with longing the happy days

before his Viennese trials began. Wondering what had become of the pretty Josephine Lang with whom he had fallen in love twenty-five years before, he decided to look her up. She had married long before and he was delighted to find in her beautiful fourteen-year-old daughter the living replica of her mother whom he had loved so long ago. Kissing the girl, he called her: "My darling substitute." In her company all reckoning of time past or present was lost for him and his heart beat once more as swiftly as the vacation moments flew by. On December 21, 1890, the first and second printed versions of the Wagner Symphony were performed consecutively in Vienna. Hanslick admitted that here and there four or eight bars of exceptional and original beauty might be heard, but that the bulk of the work was "chaos." One wonders whether the man was really so old-fashioned that he could only read confusion out of the super-order which the world now knows as Bruckner's symphonic form, as vast and as centripetal as a great empire.

About Hanslick there seems ever to be popping up a ghost of doubt, "Was the man, after all, sincere?" If so, he certainly deserved the immortality Wagner gave him in the figure of Beckmesser. It is good for us to keep in mind that Beckmesser or Hanslick, the stubborn reactionary, is an eternal type to be found in every generation and in every field of activity.

Page 22 -- The Life of Anton Bruckner

On the above occasion the critic Helm, long faithful Hanslick assistant, left the opposition and stepped over to Bruckner's side beating his breasts for his past sins. The valiant Kalbeck still stood firm and incorrigible. He offered this recipe in lieu of criticism: "Stand the Allegro of Beethoven's Ninth on its head and see the Finale of this Bruckner Symphony tumble out."

Vienna was by then thoroughly convinced of Bruckner's quality. A group of wealthy Austrians met to take financial measures necessary to free the composer from his arduous academic duties. Though pride at first led him to misunderstand the motive for this, the master soon realized that nothing but regard for his genius had prompted it and gratefully accepted the offer, deeply moved. Thus he was set free to do with the last five years of his life as he wished. His new found leisure permitting, he would often make trips to Germany to hear his works performed.

Once a chambermaid in a Berlin hotel pressed a note into his hand on his departure for Vienna, in which she expressed great concern for the bodily welfare of her "dear Mr. Bruckner." Naturally, he responded at once, but insisted (this was a matter of principle with him) upon being introduced to the girl's parents. With them an understanding was quickly arrived at and a lively correspondence entered upon, until Bruckner, despite the admonition of his horrified friends, had made up his mind to marry the girl. He insisted, however, that she be converted to Catholicism and this proved in the end the only stumbling block to one of the most curious matches on record. Fortunately, the girl would not sacrifice her faith even for the privilege of nursing her beloved Mr. Bruckner." He was seventy-one years old when this adventure with Ida Buhz, the solicitous maid, came to an end.

Then there was also his "affair" with the young and pretty Minna Reischi. Add to a pair of roguish eyes a thoroughly musical nature and it is easy to see why the aged lover lost his heart to this girl. She, of course, must have been merely amusing herself at Bruckner's expense, because when she went as far as to bring the composer home to her parents, these sensible people of the world at once awakened him out of his December dream. When he came to Linz shortly after, his acquaintances guessing the truth, teased him, saying: "Aha! So you have been out

marrying again!" With Minna, however, who afterwards married a wealthy manufacturer, Bruckner remained very friendly until the end. In the autumn of 1891 he was created "Honorary Doctor" of the University of Vienna, a distinction which gave the ingenuous composer much happiness. Not long before this he had received from the emperor Franz Joseph an insignia of which he was inordinately proud and which he was very fond of displaying, much as a child will a new toy. This weakness of his for glitter, a characteristic as a rule incompatible with true greatness, is yet easily to be reconciled with his childishness and the long years spent in a land where titles and decorations were regarded as the highest marks of honor.

Page 23 -- The Life of Anton Bruckner

The summer of 1803 saw him the central figure at the Bayreuth Festspiele. His arrival was enthusiastically greeted by a host of musicians and music-lovers. In the confusion of welcome the trunk containing the sketches of the Ninth Symphony disappeared, but after many anxious hours it was located at the police-station, to the composer's great relief. Daily he made his pilgrimage to the grave of the "Master of all Masters." The critic Marsop, once an enemy of his, says he saw Bruckner! approach Wagner's grave reverently, fold his hands and pray with such fervor that the tears literally streamed down his face. Perhaps, Bruckner already felt that this visit to Wahnfried might be his last.

In the consciousness of the more enlightened Viennese his name now occupied a place beside the great masters who had lived in the "city of music," and as he passed along the street, voices could be heard whispering with awe: "There goes Anton Bruckner!"

He lived in a small, simple apartment of two rooms and kitchen, tended by an old faithful servant, Kathi, who for twenty years had spent; a few hours each day caring for the bachelor's household. In the bluewalled room where he worked stood his old grand piano, a harmonium, a little table, and some chairs. The floor and most of the furniture were littered with music. On the walls hung a large photograph and an oil painting of himself. From this room a door led to his bedroom, the walls of which were covered with pictures of his "beloved Masters." On the floor stood a bust of himself which he was pleased to show his friends, who relate that he would place his hand upon its brow, smile wistfully, and say: "Good chap!" Against the wall stood an English brass bed presented to him by his pupils. This he called "My one luxury." At home he would go dressed even more comfortably than on the street, merely! donning a loose coat whenever a guest was announced. Kathi knew exactly at what hours guests were welcome. If the master was composing no one was permitted to disturb him. At other times he went in person to meet the caller at the door. Bruckner worked, as a rule, only in the morning, but sometimes he would get up during the night to write down an idea that had suddenly! come to him. Possessing no lamp, he did this night work by the light of two wax candles. When the faithful Kathi saw traces of these in the morning she scolded him severely, warning him to be more careful about his health. When she insisted that he compose only in the daytime, he would say contemptuously: "What do you know about such things? I have to compose whenever an idea comes to me."

Sometimes, other answers failing him, he tried naively to impress her with his importance, crying: "Do you know whom you are talking to? I am Bruckner!" "And I am Kathi," she retorted and that was the end of the argument. After his death she said of him: "He was rude, but good!"

Page 24 -- The Life of Anton Bruckner

On the eighteenth of December, 1892, occurred the most impressive performance of his career, when the Philharmonic played his Eighth Symphony. Realizing the

unprecedented depth of this work, a profundity which only movements of the most colossal proportions could cope with, Bruckner had been much worried concerning the welcome it would receive from the public. The performance, however, was superb and aroused the greatest enthusiasm. Just before the Finale the exasperated Hanslick rose to take his leave and received an ovation such as only the consummate villain of the play is given upon a particularly effective exit. Bruckner's condition at this time was already causing his doctors much concern and it was only owing to the extreme importance of the occasion that they permitted him to be present.

At the close of the symphony, which had been the sole number on the program, the applause was tremendous and threatened never to end. Bruckner, after countless bows to the audience, turned and bowed to the famous orchestra which had at last been won over to his side. It was a true triumph, the first unqualified victory he had ever gained in Vienna. The critics called it the "crown of nineteenth century music," "the masterpiece of the Bruckner style." Hugo Wolf wrote: "The work renders all criticism futile; the Adagio is absolutely incomparable." Even the "holdout," Kalbeck, at last admitted, "Bruckner is a master of instrumentation," and "the symphony is worthy of its sole position on the program."

Bruckner was most unhappy that increasing illness often made it impossible for him to hear his own works, the performances of which were becoming ever more frequent. He had been put on a strict diet. "Even my favorite Pilsner beer is forbidden me," he complained to his former teacher Kitzier. His badly swollen feet rendered organ playing out of the question and he had to remain in bed most of the time. Nevertheless it was this same suffering Bruckner who wrote the rollicking Scherzo of the Ninth' Symphony, perhaps the most vital of all his lighter movements.

The end of 1893 saw such an improvement in his condition that he was even permitted a trip to Berlin. This change for the better was, alas, only temporary, for the following days brought such an enduring relapse that he could not attend the first performance of his Fifth Symphony in Graz, under that young eagle of the baton, Franz Schalk, April 8, 1894. A devoted pupil of Bruckner, Schalk had fervently embraced the enormously difficult undertaking of love involved in the study and production of this mighty work, with its irresistibly inspiring climax. Only the presence of the ailing master was lacking to render the occasion as happy as it was musically important.

During the summer Bruckner was sufficiently recovered to return to the rustic surroundings of his earlier years, but his seventieth birthday was celebrated quietly, by order of the Viennese doctor who had accompanied him. Telegrams of congratulation and best wishes streamed into the little town of Steyr from all corners of the earth. Articles about him and his work appeared in all the newspapers. The people of Linz bestowed on him the key of the city; he was elected honorary member of countless musical organizations. In short, not a single sign of esteem the earth might show its kings of tone was now withheld from the ailing genius. The glory he had richly earned twenty years before now came to him when the greatest joy he could reveal at the realization of his universal recognition was a wistful smile in which life-long spiritual pain lurked behind the ghost of a belated happiness.

Page 25 -- The Life of Anton Bruckner

Unexpectedly, what seemed a swift recovery, in the fall of 1894., found him once more ascending the platform at the university to resume his lectures on musical theory. Only a few such days of grace were granted his shattered body by relentless Fate, for two weeks later he stood for the last time before his beloved students. From then on his health declined steadily and even his mental condition suffered from erratic spells. He was compelled to abandon his Ninth

Symphony at the close of the third. movement, an Adagio which, he told friends, was the most beautiful he had ever composed. From sketches found among his posthumous effects we know it had been his intention to add to this glorious work a purely instrumental finale, perhaps in the manner of the closing portion of his Tragic Symphony.

Yet, little though he realized it, when the last note of this Adagio dies out there is no expectation unfulfilled. It is as if he has confessed all, poured out his very soul in this music, so that the work he despaired of ever finishing, the work he died thinking incomplete, now strikes the listener as a perfect symphony-unit needing no prescribed finale.

On January 12, 1806, he heard his Te Deum, its performance in Vienna having been recommended by no other than Brahms himself, who at last seems to have changed his attitude towards the man he had opposed for years. This was the last time Bruckner ever heard one of his own works. The very last music he listened to in public was Wagner's Liebesmahl der Apostel. It was much like a musical farewell-greeting from the Master he had esteemed above all others in his lifetime. During the summer of that year Bayreuth was prepared for the worst, for a strong rumor was afoot that Bruckner was dying. Yet his gigantic vitality outlived the season. Not till October 11 did the dreaded moment come. It was a Sunday. In the morning he had occupied himself with the sketches for the Finale of the Ninth Symphony. There seemed nothing alarming about his condition. At three in the afternoon he suddenly complained of feeling cold and asked for a cup of tea. A friend who was with him helped him to bed, but no sooner did he appear comfortable, when he breathed once or twice heavily and all was over. At the burial service Ferdinand Loewe conducted the Adagio of the Seventh Symphony. Hugo Wolf was refused entry into the church on the ground that he was not a member of any of the "Societies" participating. Brahms, a very sick old man, stood outside the gate, but refused to enter. Someone heard him mutter sadly: "It will be my turn soon," and then he sighed and went wearily home. In accordance with Bruckner's implicit wish his remains were taken to St. Florian where they lie buried under the mighty organ that had been his best friend and into the golden majesty of which he had on innumerable occasions poured the troubled confessions of his tragic life.

## PREFACE

The publication of this book marks the twenty-fifth anniversary of the founding of *The Bruckner Society of America, Inc.*

The author, the late Gabriel Engel, was the editor of the Society's magazine *Chord and Discord* from its inception to the date of his death on August 1, 1952. He contributed numerous essays of lasting value to the magazine and also wrote the articles on Bruckner and Mahler contained in the *Encyclopedia of Music and Musicians* as well as two monographs: *The Life of Anton Bruckner* and *Gustav Mahler — Song Symphonist*.

He analyzed the symphonies and *Quintet* of Anton Bruckner in the hope that his effort would aid in clarifying the message of the Austrian master.

The dedication of this modest volume to Dr. Martin G. Dumler, President of *The Bruckner Society of America, Inc.*, whom the late Gabriel Engel held in great esteem, is in accordance with the oft expressed wish of the author.

## FOREWORD

The aim of this concise monograph is to present Bruckner's symphonies as a unified artwork logically evolving. While analyzing the symphonies separately, it stresses the principal features determining their common individuality.

The controversy over the relative validity of the "original" and "revised" versions is not entered upon. Instead there are set forth in a brief preliminary discussion the origin and nature of Bruckner's orchestral language, involving what is perhaps the most decisive (yet hitherto neglected) internal evidence in that fascinating case.

A new grouping of the symphonies is suggested. An analysis of the *Quintet* is appended because it is Bruckner's sole instrumental work in a larger form generally regarded as worthy of a place beside his symphonies.

## INTRODUCTION

Bruckner's *First Symphony* is the awakening cry of the spirit of a giant symphonist. Though he was already forty at the time of its composition, the unbridled enthusiasm of an ambitious first opus infuses the work with convincing sincerity. His *Mass in D Minor*, composed a year earlier, proved him not only a master in the field of ritual music, but an adept orchestrator with strikingly progressive tendencies. The resourceful instrumental idiom revealed in the prelude to the "Et Resurrexit" in that work is an eloquent symphonic prophecy. Examination of over a dozen Bruckner compositions penned in the course of the two preceding decades reveals that the dominant features of the orchestral language of his entire symphonic cycle were firmly rooted in his own fantasy. They show him to have been from the outset an orchestrator of linear tendencies, a tonal draughtsman, whose ideal of orchestral tone prescribed the rigid economy of instrumental volume and coloring indispensable to the framing of a fundamentally polyphonic message.

Already in his early twenties Bruckner, steeped in the composition of sacred music, was laying down the idiomatic foundations of his future symphonic labors, as yet mere hopes and resolves, quickened by rare, reverential hearings of his great forerunners, especially Schubert. Instinctively, he recognized the broad vistas of harmonic progress they had laid bare. Marking the vivid effect of their most novel usages, he ventured an

even more daring application of some of the principles involved. Thus to the harmonic richness of Schubert's lightning transformations from major to minor (and vice versa) he added a wealth of subtle enharmonic nuances scarcely glimpsed by his short-lived "romantic" countryman.

In his "Amens" he recreated the charming melodic cadences of Haydn and Mozart, clothing them with fresh interest through frank dissonances. How disturbing these "Amens" seemed to his contemporary publishers (who "corrected" them for public consumption) may readily be seen by comparison with the original manuscripts, which still display Bruckner's grammatical "errors." Many melodic and harmonic features characteristic of his symphonic idiom were nurtured in his early church music. Particularly noteworthy among these are the impassioned sixth and octave leaps in his melodies. Ascending, they spread an air of fervent aspiration; descending, they suggest prayerful humility, literally mirroring the act of a penitent sinking to his knees in worship. From the same source also Bruckner drew those step-wise, parallel progressions of the outer voices in their gradual, resolute rise to a climax; those moments of full major tonic grandeur bursting out of fortissimo unisons; those broad-winged melodic flights in sixths above sustained organ-points; even that typical rhythmic characteristic, the division of a measure into alternate two and three-note phrases, so prevalent in his symphonies that it has come to be widely known as "Bruckner Rhythm."

## THE MINOR TRILOGY\*

- I Symphony, C Minor (1866)
- II Symphony, C Minor (1872)
- III Symphony, D Minor (1873)

\*The validity of this grouping is attested by the fact that all of Bruckner's outstanding compositions during this period were also in minor. These include the three Masses: No. 1, D Minor (1864); No. 2, E Minor (1866); No. 3, F Minor (1867).

## FIRST SYMPHONY (C MINOR)

### I. ALLEGRO. (2/2).

Often subtitled "Storm and Stress" the *First Symphony* reflects a powerful conflict between the individual message of a symphonic genius and the traditional means available for its expression. The highly characteristic nature of the opening theme, skipping with carefree abandon over a stubbornly punctuated tonic bass, caused Bruckner to call the work "Das kecke Bese!" (The Saucy Maid), a nickname that has clung to it ever since.

*Allegro. (molto moderato) ♩ = 60.*

The musical score consists of three systems of music. Each system has a treble clef staff and a bass clef staff. The first system begins with a half rest in the treble staff, followed by a series of eighth notes. The bass staff has a steady eighth-note accompaniment. The second system continues the melody in the treble staff, with some notes beamed together. The bass staff continues its accompaniment. The third system shows the melody continuing, with some notes marked with accents. The bass staff continues with its accompaniment. The key signature is C minor (three flats) and the time signature is 2/2.

A burst of spontaneous song, marked by rugged rhythm and sharply etched orchestral setting, this

melody at once evidences Bruckner's inventive genius. Eluding all expectations of cadence it leaps tauntingly on and speedily rears itself to a towering climax. In the virtually self-evolving growth of this very first theme into a larger thematic structure (usually called theme-group) is revealed the dominant principle of Bruckner's symphonic melody-treatment.

A brief heroic episode (a series of stirring fanfares over a rapid, blustering motif in the basses) marks the attainment of the first peak of power.

Viol.  
Horn.  
Cell.

The leading motifs here presented become the chief driving forces of the whole movement.

A subtle interlude, drawn from the opening theme, descends like a narrow mountainpath winding down to a sunny Upper Austrian valley. In this calmer atmosphere is born the second theme, a song of ardent love in the violins above a transformed fragment of *Laendler* melody.

Etwas langsamer.

1. Viol.  
*p dolce*  
2. Viol.

The artist who glimpsed this vision of beauty is clearly the same who penned the celebrated "Zizibee" double-theme of the *Romantic* a decade later.

The third subject, a daring trumpet theme heralded by an exultant march motif, proves especially surprising as the sequel to a love theme.

**Breit.**

In later years, pressed for an explanation of the precipitant nature of this music the composer merely said with a sigh, "I was head over heels in love in those days." Yet in all respects, save its careful observance of smooth transitions between contrasted passages, this first section displays the chief features of Bruckner's individual symphonic style.

The development section, despite a brevity sprung from an over-anxious subservience to traditionally sanctioned proportions, sets forth an abundance of familiar

thematic life in fresh guise. The tale unfolded in this concise first development section is a spiritual forecast of those told in lavish detail in the corresponding sections of the later symphonies. Already here Bruckner treats the recapitulation as more than a formal restatement of the principal themes. He senses the peril to artistic integrity lurking in the traditional recapitulation of themes. In his later symphonies the recapitulation is to assume a revolutionary significance as the actual climax of the development section. In the *First* he strives to make it a logical sequel familiar, yet surprisingly fresh in its wealth of supporting thematic detail.

Like a skillful novelist, reserving his most telling utterance till the last, Bruckner purposely denies the end of this initial opening movement conclusive character. The tale of the symphony itself is far from ended; it has but reached a moment of high suspense, during which it must remain poised until the turbulent air is calmed for the profound, soul-searching revelation of the coming *Andante*.

## II. ADAGIO. (4/4). ANDANTE. (3/4).

The "Adagio Composer", some called him twenty years later, when instant acclaim greeted the premiere of the slow movement of his *Seventh* at Leipzig. Yet the moving qualities of that grand *Adagio* were already richly present in the slow movement of the *First*. Bruckner, in despair at the unhappy outcome of his life's chief love-episode, here poured out his sorrows in the sustained melodic language for which he was to

become universally famous. Far more than the other three movements of the *First* it was an expression impelled by inner necessity, a fervent prayer for solace, rising out of the abject confession of the sufferings of a stricken soul. Its noble message is the wresting of ultimate spiritual triumph from deep, personal tragedy. Traditional form, employing two contrasted song-themes, is eminently suited to the framing of such a message.

Adagio.  $\text{♩} = 76$

The musical score consists of four systems of staves. The first system features Horns (Horn. *pp*), Violins (Vl.), and Celli (Cell. *pp*). The second system includes Horns (Horn. *pp*), Violins (Vl. *p*), Celli (Cell. *pp*), Oboe (Ob. *breit*), and Strings (Str. *pp*). The third system shows Horns (Horn. *mp*) and Strings (Str. *cresc.*). The fourth system includes Horns (Horn. *pp*), Violins (Vl. *f*), Celli (Cell. *pp*), and Strings (Str. *pp*).

A song of warm consolation follows upon the gloomy first subject.

Out of this, in turn, issues a melody of childlike joy, its spontaneous charm enhanced by the new rhythm in which it is framed.

III. SCHERZO. (3/4). *Lebhaft* (Lively); TRIO. (3/4). *Langsam* (Slow).

The Scherzo reveals Bruckner an instinctive master of that concise form quickened and perfected by Beethoven. A shadow hovers over the opening theme, qualifying the merriment inherent in its dancing rhythm.

A boisterous unison-passage provides the element of

contrast in the first portion. The graceful, placid, purely Austrian theme of the *Trio* at once proclaims the composer a countryman of Schubert.

A musical score for Violin and Horn. The Violin part is on the top staff, starting with a treble clef and a key signature of one sharp (F#). The Horn part is on the bottom staff, starting with a bass clef and a key signature of one sharp (F#). The score shows a melodic line in the violin and a harmonic accompaniment in the horn.

IV. FINALE. (4/4). *Bewegt und feurig* (With life and fire).

The stern opening notes of the *Finale*, thundered forth by the full orchestra, blot out completely the scene of the dance.

**Bewegt und feurig. ♩ = 126**

A musical score for the Finale section. The score is in 4/4 time and features a key signature of two flats (Bb). It consists of two systems of music, each with a treble and bass staff. The music is marked with a forte (f) dynamic and a tempo of 126 beats per minute. The score shows a complex, rhythmic accompaniment in the bass and a melodic line in the treble.

They are an ominous reminder that the path of victory, barely glimpsed in the heroics of the opening movement, is beset with a world of hostile elements

still to be overcome. As in the first movement, here also, three contrasted themes are presented.

**Ruhig.**  $\text{♩} = 84$

1. Viol.

*p dolce*  
Str.

*mf deutlich hervortretend*

*ff*

Brief, sharply defined, these contain felicitous motifs for Bruckner's predominantly contrapuntal style of development.

*fff*

The impressive closing hymn of triumph and the long-delayed return to the tonic key are especially daring features. In later years Bruckner himself, commenting upon the abrupt nature of this sudden conclusion set down in a moment of sweeping inspiration, remarked, "I didn't care what anybody would say; I just composed as I wanted to."

## SECOND SYMPHONY (C MINOR)

The six years separating the creation of Bruckner's first two symphonies brought the most radical changes of his career. During this period he ventured to seek his fortune in Vienna, then the world's acknowledged musical metropolis. He even sought as organ virtuoso to gain the applause and riches usually denied to all musicians save master pianists and fiddlers. It was at London, whither a futile concert tour had taken him in the summer of 1871, that he began his *Second*. Musical experts of the Austrian capital had passed adverse judgment on the score of the *First*, pronouncing the thematic material too free, the instrumental coloring too coarse, the dynamic contrasts too violent, the symphony, in short, "unplayable". The effect of their criticism upon the shaping of the *Second* is best summarized in Bruckner's own words: "They frightened me so, that I feared to be myself." Though now generally regarded as a work inferior to the *First* in emotional appeal, the *Second* proved, as a result of that very criticism, a more plastic creation.

### I. MODERATO. (2/2).

The opening theme marks the first appearance in Bruckner of those broad-winged, songlike melodies characterizing his later symphonies.

**Moderato.**

Viol. *p*  
*mf* Celli.  
 Horn.  
 Horn.  
 Horn.  
 Fl.  
 Cell.  
 Horn.  
*cresc.*  
 Cell.  
*mf*

An expressive dialogue between cello and horn beneath a soft *tremolo* in the violins, it is imbued with a centralized power, bearing within it the seeds from

which springs the varied musical life of the entire movement.

In place of the customary smooth transitional passages Bruckner in this section employs the novel device of setting off the successive theme-groups from each other by full pauses. "This ought to be called the 'Rest Symphony'," remarked one of the musicians contemptuously at the first rehearsal. The nickname caught on at once, to become a permanent sneer among the invectives heaped upon Bruckner by his detractors. Pressed to explain these pauses the composer naively said, "When I want to present a new, momentous idea I must stop to catch my breath."

This opening movement reveals a definite intensification in the polyphonic nature of Bruckner's ideas. The double-theme which introduces the second group is a deeper-voiced, more impassioned expression than the corresponding *Laendler*-haunted song-theme in the *First*.

In the development, remarkable for its resourceful, effortless counterpoint, familiar thematic fragments attain full exploitation in a world of ingenious combinations. Hitherto subordinated motifs blossom into full-blown melodies. An abrupt pause at the very summit of power; a last moment of introspection reflected in

the initial motif framed in tender woodwind and cello tones; then the coda, a brief, blustering, dynamic passage, dominated by the pointed rhythm first marked by the trumpets in the opening theme-group.

## II. ANDANTE. (4/4).

The *Andante*, a radiant song of inner communion, begins with a yearning theme ardently voiced by the strings.

The musical score consists of three systems of staves. The first system features a single staff for the 1. Violin and a grand staff for strings (p Str.) with dynamics *p* and *dim.*. The second system features a grand staff for cello (cel.) and horn (Horn) with dynamics *p* and *mf*. The third system features a grand staff for strings (Str.) with dynamics *p*. The key signature is two flats (B-flat and E-flat), and the time signature is 4/4. The music is characterized by a yearning, melodic theme in the strings and woodwinds, with a plucked string accompaniment.

This melody is enhanced by an accompaniment itself of almost independent song-like nature. The second theme, a highly individual Brucknerian concept, is a duet between plucked strings and a solo horn. Unusual harmonies clothe it with mysticism.

Alternate variations of the two themes, amid increasing harmonic richness and rhythmic variety, mark the unfolding of the movement. Appropriately, the ecstatic "Benedictus" theme of the *F Minor Mass*, in symphonic garb, dominates one of the most eloquent moments, devoted to the soul's contemplation of super-earthly things.

### III. SCHERZO. (3/4). *Maessig Schnell* (Moderately fast).

Sudden and violent contrasts sway the *Scherzo*, which alternates between a vigorous, stamping motif and a sinuous, rather lyric phrase.

The *Trio* is a gracefully swinging *Laendler*, sprung from the very heart of Bruckner's rustic homeland.

This was the movement that prompted his delighted adherents to call the symphony the "Upper-Austrian". Bruckner here again proved himself an instinctive mas-

ter of the *Scherzo*-form. In it he had found a ready, perfect vehicle for the expression of some of his life's most vivid experiences, the landscape, the songs, and folk-dances of his native countryside.

#### IV. FINALE. (2/2). *Ziemlich schnell* (rather fast).

Formally, the *Finale* is a somewhat unusual combination of sonata and rondo, sprung from the composer's desire to develop each of his themes. Not content with espousing the generally impetuous character of traditional symphonic *Finale*-form, Bruckner effected a clear relationship between the thematic material of the opening and closing movements. Thus he achieved a true symphonic summing-up, immeasurably strengthening the unity of the entire work. That this was one of the principal tenets of his artistic creed is witnessed by the increased care with which he constructed similar summations in his subsequent symphonies.

Drawn from the opening theme-group of the first movement, three distinct motifs, ingeniously welded into a polyphonic unit, introduce the *Finale*.

The image shows the beginning of the musical score for the Finale. It consists of two staves of music. The top staff is labeled '1. Viol.' and the bottom staff is labeled '2. Viol.'. The tempo is marked 'Ziemlich schnell.' and the dynamics are marked 'p' (piano). The music is in 2/2 time and features a complex polyphonic texture with overlapping rhythmic patterns.

At first sounded with the utmost restraint, all the pent-up forces of conflict are gradually loosed as the music ascends toward a summit of rhythmic and tonal

power. From the *Scherzo* itself stems the ensuing theme, a resolute outburst by the full orchestra eloquent of a determination to sweep aside all obstacles.

Moments of comparative calm, based on a reminiscence of the swaying figure in the second theme of the opening movement, relieve the grim atmosphere of battle.

Throughout the composition of the *Second* the mood of his then recently completed *E Minor Mass* was still strong upon Bruckner. Most dramatically, after an extended passage in the *Finale* marked by violent, exhausting conflict, the orchestra is suddenly hushed—and like the very voice of Faith (for Bruckner devoutly believed Faith the soul's only hope of eternal salvation), the *Kyrie* theme of the *Mass* sounds the promise of surcease from earthly trial and tribulation.

The song-theme group is introduced by a Brucknerian double-theme, a *Laendler*-inspired melody in "Bruckner Rhythm" shedding its sunshine over an expressive song in the viola.

An air of firm resolve sways the third theme-group. The heroic burden of fanfares is tempered with the more gracious strains of a devout chorale. "Bruckner Rhythm" remains an influential factor. Especially majestic in its promise of ultimate triumph is the sudden reappearance of the initial theme inverted in the trombones.

While Bruckner's first two symphonies retain, in all essential respects, classic lines and dimensions, examination of the score of the *Third* reveals a form broadened far beyond the utmost dimensions of the sonata structure employed by Beethoven. The soundness of this magnification is attested by its integral origin. In place of the classicist's brief contrasted themes, skillfully bridged by interludes, Bruckner sets forth in straightforward fashion three independent theme-groups, each consisting of well-contrasted motivated portions. Yet it

is Bruckner's broadening mode of thematic development in the *Third* that is mainly responsible for the unprecedented length of the opening and closing movements. Here, for the first time, he grants each motif the full expression which its individual nature justly demands. The result, a huge development section, acquires convincing unity through the mastery with which the separate paragraphs are gradually reared aloft towards a towering climax, doubly surprising and impressive because it proves to be the recapitulation itself!

In this, as in all the Bruckner symphonies that followed, the opening and closing movements must be regarded as logical sequels, indispensable and supplementary to each other. Conflict, triumph, and apotheosis constitute their content, while invincible faith, supporting the heroic soul through its every trial, cloaks the whole in the spirit of affirmation which fore-ordains the ultimate victory. Hence the first movement closes, as does that of Beethoven's *Ninth*, in the midst of conflict. There follow interludes setting forth the communion of the soul with God (*Adagio*) and a retrospect of the joys of existence (*Scherzo*). As the opening movement ends, the central theme, at first sounded mysteriously out of infinite distances, has arrived at the heart of the battle scene, to stand revealed as a mighty warrior armed for the decisive fray yet to come.

## II. ADAGIO. (4/4, 3/4), (Quasi Andante).

This is the first of Bruckner's celebrated long slow movements. In place of the tragic bitterness characterizing the *Adagio* of the *First* and the mystic, contem-

plative quality dominating that of the *Second*, this section is swayed by an air of soaring, unquestioning faith. It begins with a deep, noble song of communion, suggesting a prayer uttered by one worshipping on bended knee.

The answering theme, a consoling melody framed in a new, quickened rhythm, is like a message of encouragement from Above.

So subtle is the initial re-creation of the opening theme in a fresh rhythmic pattern that it might at first be mistaken for a wholly new idea.

Yet it is but the first of the varied thematic restatements which constitute traditional *Adagio* framework.

The melodic and harmonic magnificence of this section reflects the decades which Bruckner spent in the baroque splendor of ancient cathedral surroundings. More overwhelming with each symphony grows this air of grandeur, suggestive of the mighty, domelike structures of the Houses of God which nurtured and mirrored Bruckner's lofty spiritual aspiration.

III. SCHERZO. (3/4). *Ziemlich schnell* (Rather fast).  
TRIO. (3/4).

The *Scherzo*, a delightful expression of every phase of the *Laendler* spirit, is full of Bruckner's typically naive humor and laughter. Prominent in the melodic line is a motif drawn from the initial (or central) theme of the symphony.

A swinging *Laendler*-melody provides a happy contrast to the whirling, leaping abandon of this beginning.

The Trio, also a sunny *Laendler*-melody especially

### Langsamer.

The image shows a musical score for two instruments: Violin and Trumpet. The tempo is marked "Langsamer." (Ad libitum). The key signature has three sharps (F#, C#, G#). The Violin part (top staff) is marked "dolce" and features a melodic line with a long, sweeping phrase. The Trumpet part (bottom staff) is marked "mf" and "p", playing a more rhythmic accompaniment with some melodic fragments. The score is written in a standard musical notation with a grand staff (treble and bass clefs).

(Goellerich) asked him to explain the glaring incongruity of these two melodic lines. Pointing to the crepe-decked doorway of a house they were just passing Bruckner said, "From the mansion opposite comes the sound of dance-music and merrymaking; here on this side lies a man on his deathbed. Such is life. That's the thought behind my theme."

Not until the whole epic plot of the work has been unfolded and the heroic soul has emerged victorious on the final reutterance of the opening or central theme amid the full splendor of massed instruments, does one realize how masterfully Bruckner planned every detail of this symphony before proceeding to set it down. A true mystic, for him this theme was to tell the beginning and end of all. Its component elements were to govern every episode of the gigantic drama performing through four movements, attaining apotheosis in a final expression, like a revelation of the Prime Source framed in the utmost tonal majesty.

## THE MAJOR TETRALOGY\*

- IV Symphony, E Flat Major (1874)
- V Symphony, B Flat Major (1876)
- VI Symphony, A Major (1879)
- VII Symphony, E Major (1883)

\* Bruckner composed only two other outstanding works during this period, both in major. They are: The Quintet, F Major (1879) an analysis of which appears at the end of this book; the Te Deum, C Major (1881).

## FOURTH SYMPHONY (E FLAT MAJOR) ROMANTIC

Toward the close of his arduous career Bruckner, at length become famous, was awarded an honorary degree by the University of Vienna. He was puzzled by the Greek word "Melipoeos" inscribed upon his diploma. Scholars whom he asked to interpret the term were divided between "tone-poet" and "tone-craftsman". Bruckner preferred the latter, though more prosaic translation, insisting that the former smacked too much of "program" music.

It is likely that the few touches of realism (bird-calls, wood-murmurs, etc.) in the *Romantic* were influenced by the sensational apparition of Liszt's symphonic "poems" in the concert world. Yet Bruckner was no more a romanticist than Beethoven, who warned against a too literal story-background interpretation of the *Pastorale*, his lone symphonic venture beyond the strict borders of absolute music.

### I. RUHIG BEWEGT. (2/2). (*Tranquillo, con moto*)

As the solo horn sounds the opening theme midst an ecstatic tremolo in the strings, it seems as though the very lips of Nature open in fervent, hymn-like song.

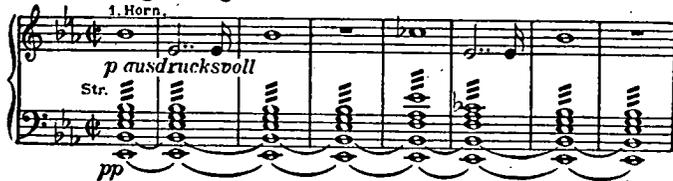

Ruhig bewegt.

1. Horn.

*p* ausdrucksvoll

Str.

*pp*

This simple, superb melody, created out of a single interval (a fifth), is one of the most expressive of Bruckner's thematic inspirations. Veiled in deep mystery by the distant murmur of strange, supporting harmonies, it breathes the grandeur of a majestic *adagio*. The veil lifts as new voices (woodwind, strings) take up the theme in imitative dialogue. With broad pulse unaltered, it rises to a summit of sonority, generating fresh motivation as it rises. This ascent, portrayed in gracious melody, framed in "Bruckner Rhythm", forms the second portion of the opening theme-group.

Quickened by successive recurrences of this rhythm the pulse of the music speedily approaches *Allegro* character. There ensues a veritable burst of jubilation amid a wealth of melodic fragments rising and falling as though sounded antiphonally from heaven above and earth below.

The whole universe seems to glory in this sunrise!

## II. ANDANTE. (4/4).

The *Andante*, as usual with Bruckner, presents a typical adventure of the spirit on earth, involving ever-present pain and suffering. A song of unrequited love, one of the most wistful of symphonic slow movements, it remains nevertheless fundamentally an expression of affirmation. Even the deep melancholy of the opening theme, eloquently voiced by the cellos, is relieved by a motif of hope and surcease, whispered by the violins.

Andante.

The musical score consists of three systems. The first system shows the piano accompaniment with a treble clef and bass clef. The treble clef part starts with a *pp* dynamic and features a series of chords and eighth notes. The bass clef part starts with a *p (gesangvoll)* dynamic and features a melodic line. The second system continues the piano accompaniment, with a *cresc.* marking in the treble clef part. The third system shows the first violin part, labeled "1. Viol.", starting with a *pp* dynamic and playing a melodic line.

The plaintive tale of love continues in a series of song-paragraphs, much like a recitative against a background of plucked strings. Bruckner's genius for instrumentation unerringly selects the poignant voices of the violas for a telling role in this section.

mp (deutlich hervortretend) *cresc.*

Str.(pizz.)

Str.

pp

tr

tr

The final, irrefutable promise of surcease is expressed in a lofty revelation midst nobly mounting utterances by the trombones.

### III. SCHERZO. (2/4). *Bewegt* (Con Moto). TRIO. (3/4). *Gemaechlich* (Leisurely).

Strikingly romantic in its vivid descriptive quality is the Scherzo, marked by stirring fanfares of hunting horns framed in irresistible merry melody and harmony.

*Bewegt.*

3

A second subject, ingratiating with its touch of chromaticism, provides a happy contrast.

The gracefully winding *Trio* is an idealized Upper-Austrian peasant dance, fragrant with delicate harmonic turns, executed in the magic spirit native before Bruckner to Schubert alone.

This *Scherzo*, in reality the second composed for the *Romantic*, was substituted for the original in order to heighten the romantic air of the symphony. A delightful creation, perfect in every detail, it is a universal favorite.

IV. FINALE. (2/2). *Maessig bewegt* (Moderately lively).

It seems almost superfluous to warn listeners not to give too literal attention to Bruckner's own explanation of the content of the *Romantic*. The tones in which the symphony is set are far too vast and deep for any such naive picturing as: "A citadel of the Middle Ages — Daybreak — Reveille is sounded from the tower — The gates open — Knights on proud chargers leap forth — The magic of nature surrounds them." This is but childish afterthought on the part of a man whose creativeness was purely musical, whose delvings into literature scarcely ventured beyond Gospel and the prayer book.

Particularly in the *Finale*, framed in elaborate sonata-structure, is revealed the superficial inadequacy of the description "Romantic" for this work. The grim conflict which it presents is the decisive struggle in which the spirit, beset with earthly dangers, overcomes all obstacles on the path to ultimate triumph.

Against a weirdly pulsing background in the lower strings a brief motif whispered by a horn suggests dire forces rousing.

Fanfare echoes of the "Hunting Scherzo" intensify the air of growing portent. Suddenly all the pent-up elements of strife burst loose with savage power in the giant-paced main theme.

*ff*

Bruckner's *Romantic* is a symphony of Nature — as viewed by a true mystic. Perhaps no composer has

given this concept of Nature clearer verbal shape than the Bruckner disciple Gustav Mahler. The devout Bruckner might have shrunk in horror from Mahler's pantheistic doctrine of the spiritual union of Nature with Man, but essentially it was the same as his own.

Mahler said: "That Nature embraces all that is at once awesome, magnificent, and lovable, nobody seems to grasp. It seems so strange to me that most people, when considering Nature in Art, think only of flowers, birds, woods, etc. No one seems to give thought to the mighty underlying mystery, the god Dionysos, the great Pan."

## FIFTH SYMPHONY (B FLAT MAJOR) TRAGIC

The first notes of Bruckner's *Fifth* are played by plucked strings; the second theme is tinged with the same instrumental color; in fact, plucked strings play a notable part in so many salient moments of the work that it was nicknamed the "Pizzicato Symphony". Many know it as the "Church" or "Faith" Symphony because of the abundance of its choral passages. Bruckner sometimes called it the "Fantastic", but fearful of programmatic misinterpretation, preferred to speak of it merely as his "contrapuntal masterpiece". Perhaps no name describes the symphony more aptly than the "Tragic", proposed by Goellerich, the composer's authorized biographer.

Better acquainted than anyone else with the circumstances surrounding the origin and execution of the work he was able to penetrate beyond such externals as style and color to its spiritual roots. He saw the *Fifth* as the deeply personal expression of a genius doomed to utter loneliness by the scorn and neglect of a misunderstanding world. He caught in the *Adagio* the true spiritual keynote of the work. Its brooding main theme was the despairing utterance of abandoned genius. Through the mighty blare of triumph trumpeted forth by redoubled brass in the *Finale* he saw the transfigured image of the man who found the strength to wrest peace from his agonized soul through renunciation.

In the *Fifth* the characteristics generally regarded as typical of Bruckner's symphonic style find their most convincing expression. Far more than any of his other symphonies it is a polyphonic work, the composer's proud description, "my contrapuntal masterpiece," testifying to the extraordinary care with which he had fashioned its many-voiced strains.

Double-themes previously employed by Bruckner as separated incidents of only local significance assume in this work a progressive, cyclic role. From the first and second theme-groups in the opening movement he has drawn two sharply contrasted motifs and united them to form the remarkable double-theme which begins the *Adagio*. The pulse of the upper melody (4/4) conflicts with that of the lower one (6/4). The result is more than a bit of subtle rhythmic counterpoint; it is an unforgettable tonal portrait of spiritual desolation. In the *Scherzo* the two motifs part once more, each assuming the leading role in one of the two divisions of the movement. In the *Finale* they are welded together again, inseparable at last in the framework ideally suited to the exploitation of the double-theme—the double-fugue.

The principal motifs of the *Fifth* haunted Bruckner many years before he felt his mastery of their possibilities equal to their symphonic shaping. A manuscript fragment of a B flat Symphony sketched in the fall of 1869 reveals in essence the pizzicato introduction to the first two theme-groups and a main theme with the same rhythmic contour as that of the *Fifth*, not to mention the downward octave-leap which is perhaps the most striking characteristic of the *Finale*.

## I. ADAGIO. (2/2). ALLEGRO. (2/2).

The *Fifth* begins on a note of almost hushed awe, like the mystic invocation to a Muse too lofty for more familiar hailing. The listener senses at once that he is about to experience a mighty adventure of the spirit. This concise *adagio* introduction, the only one in all the Bruckner symphonies, is an integral portion of the work because it presents the very origin of the main ideas to be exploited. They are heard in the process of creation: tone, to rhythm, to harmony, to melody. The mysterious measured plucking of the basses intensifies the initial air of spiritual uncertainty portrayed by the other strings as they grope upward one by one towards the light.

Adagio.

*pp*  
8va bassi.....

The interruption by a softly uttered chorale fragment is the first glimpse of the path leading to that light — Faith.

At first hardly more than an element of devotional coloring, it assumes thematic shape in a reinforced repetition. Like a halo it hovers over the sturdy motifs which immediately take form beneath it. Issuing out of the central theme of the *Romantic* this majestic, marchlike fragment ascends step-wise, its merged romantic-religious flavor suggesting some heroic figure,

come his mother-tongue. To other nineteenth-century composers it was a more or less academic cultural idiom; to him it was a living language, capable of expressing a world of emotional nuances.

## II. ADAGIO. (4/4).

The song of earthly sorrow which begins the *Adagio* is aptly framed in the poignant tones of the oboe.

*Adagio*

*mp dolce mf*

*mp Str.*

A lyric interpolation in keeping with the earnest dramatic burden of the entire work, triumph over suffering through renunciation, it yields gradually to strains of increasing hope.

*Sehr breit.*

*f (Str.)*

*mf*

Brighter and brighter grows the light surrounding the uplifted spirit. Finally the very gates of heaven seem to open as the golden voice of the trumpet sounds its radiant message of indomitable Faith, scattering the last cloud of doubt.

III. SCHERZO. (3/4). *Molto vivace*. TRIO. (2/4). *Allegretto*.

The heroic source motif made its appearance in the opening *Adagio* in major guise. Inverted and quickened, but still in the brighter mode, it was the first to enter the scene of conflict presented in the initial *Allegro*. Transformed into minor it assumes the dominant voice in the melancholy double-theme of the slow movement. In the Scherzo it is now reborn, appearing as a carefree, lilting melody, though still in minor.

IV. FINALE. (2/2). *Maessig bewegt* (Moderately lively).

In his conception of the *Finale* as the scene of highest dramatic intensification Bruckner went beyond his fore-runners, endowing the symphony with the crowning stamp of formal integrity. Convinced from the outset that the *Finale* should present the resumption and successful termination of the spiritual conflict entered upon in the opening *Allegro*, he strove to make it the most dramatic and majestic section of the symphony.

The task he set for it was to scale summits of power loftier than any attained in the previous movements, a goal of supreme spiritual triumph, resolving and clarifying all that had gone before. This *Finale*-conception, already impressively formulated in the *Third*, bore its most splendid fruition in the *Fifth*.

After a brief retrospect, the *Finale* plunges into the herculean task necessary to the final resolution of the conflict. The two opposing forces, originally heralded in the opening *Adagio*, now make their last and decisive appearance. One is a disturbing, rebellious influence, characterized by octave-leaps and a rough, sharply pointed rhythm.

The other is a sturdy chorale, infinitely more heroic in this final transformation than in its original guise.

Each is destined in turn to become the subject of a fugue, unfolding the tale of tremendous spiritual struggles, through which the Soul (as here) gathers added strength with the advent of each fresh subsidiary theme. A charming song-theme in an ingenious polyphonic setting relieves the mounting tension.

At length the tide of conflict is turned, the goal of all this striving glimpsed. In hushed awe the Soul pauses suddenly before the dazzling revelation. Out of the silence rise golden voices singing the song of eternal promise. At first sounded in impressive grandeur by the brass it is softly re-echoed in accents of deep devotion by the strings. Thus on a note of unshakable affirmation begins the celebrated double-fugue, presenting the final inseparable union of the conflicting themes.

## SIXTH SYMPHONY (A MAJOR) PHILOSOPHIC

The *Fourth* and *Fifth* were still unperformed. The premiere of the *Third*, conducted by Bruckner himself, had proved a pitiful fiasco. Loneliness, increasing illness, and financial trouble filled the composer's cup of misery to overflowing. Yet he found in unremitting work the necessary courage to carry on. The cheerfulness dominating the first movement of the *Sixth*, largely written during a long period of painful sickness, is eloquent of the resignation that had settled over Bruckner's soul.

In content this movement is definitely related to the

Romantic, to the radiant message of which (the union of Man and Nature) Bruckner here added a more human quality. The spiritual wealth amassed in the *Fifth* yielded rich interest in a calmer, more philosophic outlook. The sunrise in the *Romantic* is more brilliant, but that of the *Sixth* issues from a deeper ecstasy. It is shot through with delicately varied instrumental and dynamic shades and subtle melodic, harmonic, and rhythmic nuances.

### I. MAESTOSO. (2/2).

Bruckner regarded this symphony as his most daring expression. It abounds in phrases framed in "Bruckner Rhythm". The very opening notes, struck off by the violins in sharp staccato style, present that characteristic rhythm in lively form as a pulsating background for the main theme.

The musical score is presented in two systems. The first system shows the beginning of the piece, marked 'Maestoso'. The treble clef staff contains a violin part starting with a piano-piano (*pp*) dynamic, featuring a series of eighth notes with triplet markings. The bass clef staff contains a cello and double bass part starting with a piano (*p*) dynamic, also featuring a series of eighth notes with triplet markings. The second system continues the same rhythmic pattern, with the violin part marked *p* and the cello/bass part marked *p*. The key signature is two sharps (F# and C#), and the time signature is 2/2.

Drawn softly from the lower strings, this theme begins with a sighing question. Almost a paraphrase of

the main theme of the *Romantic*, it suggests at once a definite community of content between these two works.

When the next theme-group is introduced by a doleful strain in square rhythm over a plucked accompaniment in triple-rhythm borrowed from the *Fifth*, we divine that the *Sixth* also constitutes a reflective sequel to the more dramatic struggles of the spirit portrayed in the preceding symphony.

**Bedeutend langsamer**

The first system of the musical score shows a piano accompaniment for strings (p Str.) in the lower register and woodwinds (Ob., Viol., 1. Horn.) in the upper register. The music is in a key with three sharps and a 3/4 time signature. The tempo is 'Bedeutend langsamer'.

The air of gloom that hovers over the opening bars of this song-theme group is but the fleeting shadow of a painful reminiscence, swiftly dispelled by the cheery sway of the melody which bursts from it.

The second system of the musical score shows a piano accompaniment for strings (p sehr zart) in the lower register and woodwinds (Ob., Horn., Cell.) in the upper register. The music is in a key with three sharps and a 3/4 time signature. The tempo is 'Bedeutend langsamer'.

Even the third theme-group, dominated by a pound-

ing unison passage in "Bruckner Rhythm", bristles with warlike intent. Vainly it searches every plane of tonality for a scene of conflict, only to succumb to the calm, richly harmonized episode, which terminates the exposition.

This air of peace also sways the development section, devoted to a eulogy of the wonders of Nature. Familiar song-themes rise on ever-broadening wings, the tide of melody surging irresistibly upward toward a climax. The listener, on the alert for some subtle bridge leading to the traditional recapitulation, suddenly realizes that he is in the midst of that restatement. Yet nothing abrupt has occurred. In this opening movement, for the first time in symphonic literature, the climax of the development and the beginning of the recapitulation actually coincide. That this remarkable innovation in sonata-form was no mere flying ship in Bruckner's workshop is convincingly proven by its increasingly convincing reappearance in his subsequent symphonies.

## II. ADAGIO. (4/4).

The slow movement begins with a yearning love-song, the bright counterpart of the plaintive message

presented in the corresponding section of the *Romantic* and intensified to deep gloom in the *Fifth*.

**Adagio, (sehr feierlich)**

*et oct. bassi* .....

A shadow crosses the sunny path of this three-voiced melody when the oboe intrudes its counterpoint of plaintive sighs.

A mournful phrase in the horns threatens to revive the memory of unrequited love (Bruckner's life abounded with instances); but the new-found spiritual antidote, philosophic resignation, easily counteracts all bitterness. The second theme is a soaring, untroubled love-song.

An ominous, gloomy contrast to all this yearning is the third subject, a march-like theme of funeral cast.

Grave.

pp  
et oct. bassi  
Fke.  
Str.  
mf  
dim.

The central portion of the movement is occupied with a resourceful contrapuntal exploitation of the opening theme, its varied restatements resulting, as usual with Bruckner, in a subtle mingling of rondo and sonata form.

### III. SCHERZO. (3/4). *Ruhig bewegt.* TRIO. (4/8).

The magic play of elfin spirits characterizes the beginning of this rather impressionistic *Scherzo*, the first of a series of Bruckner *Scherzi* to portray the witchery of Pan entangled with the very roots of Nature.

*Ruhig bewegt. (Etwas gemessen.)*

pp  
C. Fl.  
Ob.  
Kl.  
1. Viol.  
2. Viol.

The *Trio* unfolds a fresh aspect of this extraordinary gayety. The woodwind advances fragments of melody based on the opening theme of the *Allegro*, while mischievous harmonic interruptions issue from plucked strings or horn groups in sharply punctuated rhythm.

The image shows a musical score for two instruments. The upper staff is for Violin, marked 'Viol. pizz.' and 'mf'. The lower staff is for Cello and Double Bass, marked 'Celi. Rb.' and 'mf (sehr bestimmt) Horn.'. The music is in 4/4 time and features a rhythmic pattern of eighth and sixteenth notes with various accidentals.

#### IV. FINALE. (2/2). *Bewegt, doch nicht zu schnell* (Lively but not too fast).

The comparatively calm atmosphere prevailing over the *Finale* is one of the most individual features of this symphony. The virtual absence of conflict is wholly consistent with artistic integrity. Since the opening movement advanced no conflict, the *Finale* has none to resolve. Lacking the dramatic character of other Bruckner closing sections, it remains nevertheless a *Finale* conforming in essential respects to the accepted meaning of the term. All its thematic factors (and there is an unusually rich store of these—fanfare, chorale, march, and song) move swiftly and smoothly along. Drawn together at last, as though by some mysterious inductive power, they become merged into the jubilant reentry of the opening theme of the symphony.

SEVENTH SYMPHONY (E MAJOR) LYRIC  
I. ALLEGRO MODERATO. (2/2).

The long, soaring song-theme which opens the *Seventh* is a spontaneous union of three distinct melodic segments.

The image displays a musical score for the opening of the Seventh Symphony. It consists of two systems of staves. The first system shows the piano part in the upper staff, marked *pp*, and the cellist/bassoon part in the lower staff, marked *mf breit*. The piano part features a series of chords in the right hand and a melodic line in the left hand. The cellist/bassoon part enters with a melodic line. The second system continues the piano part and the cellist/bassoon part. The key signature is E major (three sharps) and the time signature is 2/2.

It is closely related to the main theme of the *Romantic* which it resembles in harmonic and instrumental color, but its employment of additional melodic elements from the opening bars of the *Fifth* and *Sixth* lends it far wider scope. In short, this broad-winged theme unites the chief thematic elements of the three preceding symphonies, integrating them in a new, final expression of unforgettable beauty.

Beauty of song, the ideal proclaimed at the outset and unwaveringly maintained throughout, is the chief factor accounting for the popularity of the *Seventh*. Its huge proportions result from the use of larger thematic structures in place of the concise motivated blocks char-

acterizing the three earlier works of the major tetralogy. This popularity, the unprecedentedly huge proportions of the work notwithstanding, proves that an orderly array of beautiful ideas, possessing all the vital characteristics necessary to the maintenance of interest in an extended orchestral composition (abundant melodic, harmonic, rhythmic, instrumental, and dynamic variety), will always prevail over any objections that may be raised against such a work from an academic viewpoint. The successful employment of a longer singing theme in the *Seventh* represents the fulfilment of Bruckner's individual principle of thematic construction, involving the complete subjugation of form to content.

Whereas the first theme, a homophonic composite of three ideas, is an invocation to Song, the second, predominantly polyphonic, is more mobile, its apparent peacefulness disturbed by restless fundamental harmonies.

The image shows two systems of musical notation. The first system consists of two staves: the upper staff is for Oboe (Ob.) and the lower staff is for Horn and Trombone (Hörn. Trp.). The Oboe part has a melodic line with a slur over the first two measures and a dynamic marking of *mf* in the third measure. The Horn/Trombone part has a rhythmic accompaniment with a dynamic marking of *pp* and the instruction *ruhig*. The second system continues the Oboe line with a dynamic marking of *dim.* and features a more complex rhythmic pattern. The key signature is three sharps (F#, C#, G#) and the time signature is 4/4.

Spinning itself out in little rhythmic turns, it evades cadence repeatedly. Not even a complete restatement in inversion can shake off this restlessness.

The third theme-group consists of two contrasted melodies—one a sharply rhythmic idea of satirical cast, the other a wistful concept of pastoral flavor.

The image shows two staves of musical notation. The top staff is for Holzbr. (Woodwinds) and the bottom staff is for Str. (Strings). Both are in a key signature of three sharps (F#, C#, G#) and a 4/4 time signature. The Holzbr. part starts with a sharp rhythmic motif, while the Str. part provides a more wistful accompaniment. Below the Holzbr. staff, there is a separate staff for Viol. (Violin) starting with a wistful melody marked 'p'.

Of all these themes only the satirical one is a really hostile element, contesting the sway of song in the development. In that section the appearance of the opening-theme exclusively in inverted form is a subtle piece of artistry, reserving the forthright restatement of the theme for the recapitulation proper, where it appears completely fresh. As in the *Sixth*, the climax of the development and the return of the main theme coincide, enhanced thematic freshness rendering this phenomenon in the case of the *Seventh* even more effective.

## II. ADAGIO. (4/4). *Sehr feierlich* (With great solemnity).

For this celebrated *Adagio* Bruckner adopted the

general features of the classical variation form, but abandoned as unsuited to his message the florid filigree-passages widely cultivated by his forerunners in varying their slow themes. He chose rather to inject a touch of sonata-form through the interpolation of concise passages of thematic development. Using familiar melodic elements he recreated them into delightfully fresh thematic structures.

This gigantic earnest Adagio is generally regarded as a "funeral ode" in honor of Wagner whose death occurred while the composition was in the making. The inexpressibly mournful opening theme, set for a choir of Bayreuth tubas, eloquently supports the movement's accepted nickname, "Adagio of Premonition".

*Sehr feierlich, (aber nicht schleppend.)*

*p sehr ausdrucksvoll*

*cresc.*

*p dim.*

Yet the actual "funeral music" (according to Bruckner himself) does not begin until close to the end, where it is ushered in by a jarring cymbal crash. "At this point,"

said Bruckner, "the shocking news of the master's death reached me."

Two broad-winged song-themes, totally contrasted in mood, alternately sway the entire content. The first, the funeral theme, progresses from stately solemnity to majestic affirmation on the impressive three-chord "Resurrection" motif from the *Te Deum*. The unfolding of this motif's tremendous latent power evokes the movement's supreme climax. Climbing steadily from plane to plane, the span of its wings constantly broadening, it becomes a mighty universal "Credo" sweeping aloft to the very gates of heaven.

The second theme, like a radiant melody sung by Cherubim, presents a unique combination of charm and nobility.

**Moderato (sehr ruhig.)**

The image shows a musical score for a Moderato section, marked "sehr ruhig." (very calm). The score is written for Violin (Viol.) and String (Str.) instruments. The key signature is three sharps (F#, C#, G#) and the time signature is 3/4. The Violin part features a melodic line with a crescendo and decrescendo. The String part provides a rhythmic accompaniment with a similar dynamic structure. The score is divided into four measures, each with a fermata over the final note.

III. SCHERZO. (3/4). *Sehr schnell* (Very fast); TRIO. (3/4). *Etwas langsamer* (Somewhat slower).

After this contemplation of Eternity the *Scherzo* seems like a rude awakening to earthly things. The opening theme, a bit of bizarre realism for Bruckner, sounds its drab Reveille, a melodic paraphrase of the crowing of the cock.

In a moment all is feverish motion; the constantly increasing agitation finds vivid outlet in a wild dance-orgy.

The *Trio* is an idealized, nostalgic *Laendler*-melody, eloquent of Bruckner's inextinguishable love for his Upper-Austrian homeland.

**Etwas langsamer.**

IV. FINALE. (2/2). *Bewegt, doch nicht schnell* (Lively, but not fast).

A majestic dome-like structure is the *Finale*, the very order of its themes suggesting an arch. The opening subject is a martial concept, literally the lyric initial theme of the symphony arming for battle.

Viol.  
pp  
p  
zart, doch bestimmt  
p sehr bestimmt

p

A "third" theme, in reality the opening subject now fully armed, completes the array of spiritual forces involved in the conflict about to take place.

Schwer  
ff sempre marc.

In the development section which presents this conflict, all the material set forth is granted resourceful exploitation in a number of fresh melodic recreations, varying from gentle playfulness to titanic grandeur.

RETROSPECT AND FAREWELL

VIII Symphony, C Minor (1885)

IX Symphony, D Minor (1894)

## EIGHTH SYMPHONY (C MINOR) THE GERMAN "MICHEL"

Salient structural features, revealed in progressive development in the preceding symphonies, attain supreme representation in the *Eighth*. Chief among these are: the continuous generation of fresh thematic life out of a few given motifs; the exploitation of this cumulative content through a vital polyphonic idiom; the logical shaping of a vast symphonic structure, culminating in a grandiose climax, the welding of the principal themes of all four movements into a single choir of triumph. Spiritually also, the *Eighth* marks the summit of Bruckner's symphonic expression. In this work, at last, is unfolded in full tonal grandeur the sublime Christian epic of human suffering, humility, and transfiguration through Faith that had been Bruckner's symphonic message from the outset. Not the somewhat theatrical *Third*, not even the *Fifth*, that mighty austere utterance of his middle years, had pierced so deeply into his soul for its roots. The tragic implications of the *Fifth* were but passing clouds beneath the radiant sun that shone steadfastly over Bruckner's tetralogy in major keys.

The portentous opening movement of the *Eighth* ushers in a change in his spiritual world no less drastic than the sudden sunrise of the *Romantic*. The *Fourth* seems literally to have sprung from Bruckner's ecstatic happiness in Wagner's recognition; the *Eighth*, con-

ceived immediately after Wagner's death, is an eloquent witness of the grim impress made upon Bruckner's spirit by that event. The rude shock of the cymbal clash climaxing the "Adagio of Premonition" in the *Seventh* was more than Bruckner's realistic record of the moment of his great friend's passing; it was also the herald of a rude awakening in his own creative world, a dawn less roseate, but ushering in a more sapient and human view of life.

The contemplation of Death, looming before him like a grim spectre, and the realization of abject solitude, conjuring up the panorama of a lifelong struggle against adversity, determined the tragic, introspective content of his new symphony. C Minor, the key which he had adopted for his *First* and *Second*, beckoned to him out of the dim past with the promise of more significant revelations. The pointed rhythmic contours of the main theme of the *First* seemed to bristle with new life unbounded, clamoring for expression. Reaching back to this initial work he also gathered up in the course of retrospect the essential wealth of the intervening symphonies. Thus Bruckner consciously made his *Eighth* an intensely personal expression, almost a spiritual autobiography in tone.

The tragic caste and unusual length of the opening section made inadvisable the traditional juxtaposition of a correspondingly grave, extended slow movement. Faced with a similar problem in his *Ninth*, Beethoven had interposed a fleet, stirring *Scherzo*, thus not only relieving the spiritual tension aroused by the first movement, but also freshening the listener's mind for the

weighty revelations of the slow movement to follow. Therefore, Bruckner also decided to accord his *Scherzo* second place in this symphony.

The first movement in its original form was completed in the latter part of 1884 in Vienna. Before continuing on to the *Scherzo* Bruckner experienced a miracle. The *Adagio* of the *Seventh*, given its premiere at Leipzig on December 30, was hailed by experts as a symphonic masterwork. At once the elderly, shy professor of counterpoint became the most discussed figure in the realm of serious music. He had long since reconciled himself to a life of obscurity, sighing, "Surely I am the most incurable idealist to go on composing at all." Nevertheless, his happiness in this wholly unexpected world-fame was unbounded. He re-experienced this brilliant triumph over long prevalent adversities in the fictitious person of the typical Upper-Austrian rustic "Michel", whom he subsequently named as the hero of the *Scherzo* of the *Eighth*.

Much of the naive "Michel" story, however, was a mere afterthought. The original manuscript at the point of the first entry of the "Michel" motif bears the notation "Almeroth". Carl Almeroth, a lovable, genial Upper-Austrian, was one of Bruckner's dearest friends. A native of the charming little town of Steyr, where Bruckner composed the *Scherzo* and later movements of the *Eighth*, he (and not the symbolic "Michel") was the character the composer intended to embody in his lumbering, sturdy, good-natured motif. Doubtless it occurred to Bruckner afterwards that Almeroth's nature was typically Austrian. Thereupon he evolved

the rest of the "Michel" background for the symphony, carrying some of the incidents over into the *Finale*. As a valid commentary on the Promethean happenings reflected in the score it is certainly inadequate. Not unless one is willing to concede Bruckner that peculiarly Mahlerian trait of symbolism, is the miraculous transformation of "Michel" to "St. Michael", allegedly celebrated in the closing triumph of the symphony, in the least plausible.

Letters Bruckner wrote to the critic Helm and the conductor Weingartner years after the work was finished are the chief authorities for the details of the "Michel" legend. Said Bruckner to the former with special reference to the *Scherzo*, "My Michel typifies the Austrian folk-spirit, the idealistic dreamer, not the German spirit, which is pure *Scherz* (jest)." Thus unconsciously, perhaps, he made his "Michel" a species of self-portrait.

A representative portion of Bruckner's commentary on the *Scherzo* follows. "Michel, pulling his cap down over his ears, presents his head, crying 'Punch away! I can stand it!' Wearied by the showers of buffets he yearns for rest. He swings about him with all his strength scattering his enemies, and emerges victorious. (*Trio*) Michel dreams of the country — He longs for his sweetheart — He prays — Sighing, he awakens to rude reality."

And in the *Finale*: "Michel, from a place of concealment, steals a view of the pomp and ceremony (*The meeting of the emperors*) — He is pursued and captured by Cossacks — The trombones begin a funeral

chorale for him — He squirms away and disappears with a chuckle high up in the flutes.”

The absence of reference to “Michel” in Bruckner’s remarks concerning the first slow movements is added proof of the synthetic nature of the legend. One is reminded of his inability to “remember” the imagery underlying the *Finale* of the *Romantic*. Poetic commentaries easily might be adduced to “illuminate” the content of the *Eighth*. So vast is its scope, however, that cosmic imagery alone may conjure up an even remotely adequate verbal parallel. Like Beethoven’s *Eroica* it defies and beggars “description”. It stems from the inmost depths of absolute music, the arcana of which no verbal abracadabra may pierce.

### I. ALLEGRO MODERATO. (2/2).

The identity of the tonic is veiled as the opening theme is first presented in lightly sketched outline against a mystic background (string tremolo tinged with sustained horn-tone).

What a strange, yet masterly theme this is! Occurring scarce three full measures in animated tempo, it consists of the four motifs of the symphony, one of them the more rhythmic pattern formed by the union of the other three. This rhythmic profile at once commands the centre of attention. Set forth in relief

through a series of uninterrupted recurrences it is the vehicle upon which the three tonal motifs grope upward through modulations to the light of definite tonality.

Since all the thematic life of the symphony is drawn from these motifs, they are eminently worthy of analysis. They are

- a) Two tones a second apart. This interval dominates the heroic passages.
- b) Two tones a sixth apart. This interval, notably prominent in Bruckner's most heartfelt inspirations, governs those particularly expressive moments of the *Trio* (Scherzo), *Adagio*, and *Finale*, given over to songs of yearning.
- c) A lyric group of five closely-knit tones, the chief melodic element of the first theme-group and the source of numerous subsequent passages filled with tender ecstasy. The first movement, *Adagio*, and *Finale* close with this motif.
- d) A rhythmic framing of a, b, and c. To the relentless persistence of this grim motif is due in great measure the deeply tragic undertone of the opening movement. Especially impressive is its appearance as pure rhythm (on a monotone in the brass) at the climax of this section, a passage Bruckner aptly called "Death's Annunciation."

The lyric motif (c), at first the sole melodic phrase, at once spreads its wings. Inverted and augmented it bursts into flight, preparing the advent of outspoken "Bruckner Rhythm".

Viol.  
Hörn.  
cel.  
mf

Descending in a stream of impassioned phrases this first predominantly melodic expression of the symphony resolves in a graceful cadence midst imitative echoes (woodwind) bearing the motif's original rhythmic contour.

The mode of thematic structure in this opening group, aside from the vastly richer motivation of the later work, is essentially that of the *Romantic*, a steadily rising edifice of uniform theme-blocks. Furthermore, this process in the *Eighth* goes on in a highly dramatic atmosphere. Levi, the eminent conductor who pronounced the work "the crown of nineteenth century music," was the first to recognize the perfect centralization of its gigantic framework embracing a world of subtle and delicate details of construction. Wellesz, an unexcelled authority of our own day, choosing the opening theme-group of the *Romantic* and Brahms' *Third*, has shown the superior sensitivity of Bruckner's symphonic creative process. How much greater had been this disparity had he chosen Bruckner's immeasurably more masterly *Eighth*!

In the *Romantic*, the advent of "Bruckner Rhythm" is sudden, spontaneous. In the *Eighth* it is heralded in advance. We glimpse its profile in the course of the opening theme-group. When it emerges full-blown,

shaping the pure lyricism of the second theme-group it calls for no intellectual readjustment on the listener's part. Yet the preparation has about it nothing of the traditional "bridge"; it is a new, self-evolving process, sprung from the dynamism inherent in the motif *c*.

The second theme-group begins with a song of ardent aspiration, its nobility precluding all eroticism.

Lingering sighs, skillfully drawn from an inversion of the song-theme, are stilled by the air of trust and solace spread by a fresh melodic structure previously unheard.

Thus the intellectual factors swaying the first theme-group have been balanced by their emotional counterparts dominating the second.

There is an additional feature in the human make-up which determines man's heroic nature: the will — the spiritual force that makes for human tragedy or triumph, depending on the degree in which its possession

invokes resistance to adverse, destructive influences. This heroic element is the ruling quality of the third theme-group. A restless, staccato counterpoint in the strings provides the background for an increasingly animated interchange between horns and woodwind.

Energetic motifs, derived from the preceding theme-groups, enhance the power of the ensuing string unison, striving upward toward a great climax by chromatic stages.

Another striking motif, a broad downward-leaping seventh in trumpets and woodwind, adds to the growing agitation.

Trumpet fanfares, obvious heralds of heroism, intensify the militant nature of this group, bringing the exposition of the themes to a stirring conclusion.

The development section presents the titanic conflict of the three main factors: the mind, the heart, the will.

The logical unfolding of such a struggle involves a climax of inextricably united elements, rendering ineffectual a traditional recapitulation of separate theme-groups. The air of suspense, mounting steadily through the violent encounters unfolded during the extended development, is maintained unabated throughout the recapitulation. Not until the last climax, at the very threshold of the *Coda*, is there a moment of relief, and then only a sombre one, described by the composer as the "striking of the clock of Death". This intensification of suspense until the end is a formal doctrine already effectively formulated in earlier Bruckner symphonies, yet never so masterfully as in the *Eighth*.

Two summits stand out along the rising skyline of the development. The first, the product of united thematic elements of the first two theme-groups, is finally sealed by means of a grandiose combination of these elements in inversion and augmentation. The second, attained just before the *Coda*, is that realistically dramatic moment which Bruckner in a new moment of foreboding, happily not realized until more than a decade later, described as his own "Death's Annunciation."

The stark profile of the opening theme, grimly bereft of all quality save pulse, is a vivid tonal portrayal of the inexorable pounding of Fate upon Life's door. What avails it to continue the despairing struggle against a force beside which the united strainings (de-

velopment section) of mind (first theme-group), heart (second theme-group), and will (third theme-group) sink to pygmy insignificance? The *Coda*, an epilogue of utter resignation, presents a sudden contrast, intensifying the tragic implications underlying the whole movement.

II. SCHERZO. (3/4). *Allegro moderato*. TRIO. (2/4). *Langsam* (slow).

The *Scherzo*, like all these lighter, fleeter-footed Bruckner movements in triple-rhythm, presents no formal problem. In a mystic atmosphere of whispered-string-tremoli pierced by horn-tone, the rustic "Michel" motive (already discussed) lumbers good-humoredly into the changed foreground.

The image shows a musical score for the Trio section of the Scherzo. It consists of two systems of staves. The top system includes a Violin staff (Viol. (geteilt)) with a *pp* dynamic, a Horn staff with a *mf* dynamic, and a Cello/Double Bass staff (C&B.) with a *mf* dynamic. The bottom system includes a Violin staff with a *p* dynamic and a Cello/Double Bass staff with a *p cresc.* dynamic. The music is in 2/4 time and features a prominent eighth-note rhythmic pattern in the strings and horns.

Inverted the motif becomes still more droll. "Michel is sleepy," explained Bruckner. A delicious bit of instrumental realism is the stinging effect of plucked strings combined with hymning, bee-like horn-tones,

portraying the rude manner in which "Michel's" sleep is disturbed by outer influences.

The *Trio*, in double rhythm, is "Michel's" *Träumerei*, filled with daydreams of his beloved homeland.

Is this not Bruckner's own dream of longing, reaching back from the imprisoning huddle of the Metropolis, the home forced upon him by circumstances, to the wooded mountainous freedom of his native Upper Austria? Fragments of yearning, folk-like strains, conjure up passing visions of the scenes of his childhood. The occasional arpeggiated voice of the harp, most rarely heard in Bruckner's orchestral family, intensifies the music's nostalgia.

III. ADAGIO. (4/4). *Feierlich langsam, doch nicht schleppend* (solemn, slow but without dragging).

This sublime slow movement, the longest in symphonic literature, rises to unprecedented heights of devotional ecstasy, over which the celestial voice of the harp hovers like a halo.

Three motifs combine to produce the opening theme of the *Adagio*. The first, a long-drawn sigh, reflecting yearning, and the second, a broad, diatonic descent, reflecting devout humility, form a question answered

by the third, an upward mounting broken major-triad, bright with the promise of splendors to be revealed. Upon a syncopated background of softly pulsing strings over a tonic organ-point of twenty measures is unfolded the heartfelt initial melody.

Feierlich langsam, doch nicht schleppend.

The musical score consists of two systems. The first system features a first violin (1. Viol.) part with a melodic line and a string (Str.) part with a syncopated rhythmic pattern. The second system features a horn and tuba (Horn, Tuba) part with a melodic line and a string (Str.) part with a syncopated rhythmic pattern. The music is in a minor key with a tonic organ-point.

So naturally have familiar motivated elements been fused into this new melodic line that their presence, readily identifiable, nevertheless makes the impression of complete spontaneity. Out of an atmosphere of restrained melancholy, the latent depth of its pathos betrayed alone by the impassioned accents of the violin G-string's upper range, the prayerful theme mounts steadily, merging with the vision of splendor (referred to as the third motif).

**Ein wenig belebend.**

There follows now a song of fervent gratitude, a fitting supplement of the foregoing melody.

Unmistakable in their Brucknerian quality are the hymnlike chorale fragments characterizing this passage. Ecstatic harp tones radiate from its melodic summit.

In the second theme-group the impassioned yearning and the devotional fervor dominating the two themes of the preceding group, respectively, are fused into an ardent song of hopeful longing.

Viol.  
p Cello.

pp  
cresc.  
dim.  
f

Against a background literally trembling with portentous expectation (string-tremoli) the full tuba choir proclaims the promise of Eternity.

pi  
mf  
dim.

Another hymnlike utterance is the soul's grateful response to the message from Above. A brief interlude in triple rhythm prepares the scene for the return of the initial theme.

The restatement of themes is nowhere a severer test of the composer's resourcefulness than in the *Adagio*. In the first recurrence of the opening theme, the bright, answering portion is intentionally omitted. As the motifs of yearning are reared to a tremendous climax,

it would seem as though the whole universe were appealing for salvation. A world of subtle polyphonic detail is heralded by the echoing horn that follows closely upon the main melodic line. Reshaped and recombined familiar motifs attain richer significance, revealing glimpses of loftier summits yet to be scaled by the indomitable spirit.

For the final restatement, embodying the triumph of the soul, is reserved the thorough exploitation of the motif of splendor, thus far intentionally omitted. Here the horn fanfare of the first movement is reborn in a more heroic guise, unmistakably reminiscent of the Siegfried-theme. Bruckner explained this as a tribute to his great friend Wagner, as yet scarcely cold in his grave. The very Heavens seem to open to the overwhelming climax ushered in by this remarkable passage. The *Coda*, reminiscent of the beginning, presents for the last time the initial sighing motif over a sustained organ-point on the tonic. Gone is the fleeting shadow of doubt that darkened the motif's first appearance. Yet the movement ends upon a note of devout humility. Resigned, but swayed by unshakable faith in Eternity, the glories of which it had beheld in revelation, it awaits the great release, the fateful signal of the "Clock of Death".

#### IV. FINALE. (2/2). *Feierlich, nicht schnell* (solemn, not fast).

The unlimited thematic richness of the *Finale* shows that Bruckner had steeped his soul in the motivated life of this symphony more intensely than in any pre-

ceding work. In the increased subtlety and resourcefulness of its melodic derivations from the central motifs already extensively exploited in the foregoing sections it is truly the crowning movement of the symphony. Bruckner did not merely compose the *Eighth* - he lived it. An inkling of the inspired abandon with which he set down this *Finale* may be gathered from the ejaculation "Hallelujah!" written in his hand at the point of climax in the manuscript marked by the simultaneous entry of the main themes of all four movements.

Some of the "Michel" incidents allegedly suggested by the *Finale* have already been set forth. Remarkable indeed is Bruckner's transplanting of this jolly legendary character into a scene of political pomp (the meeting of Franz Josef and the Czar at Olmütz). Is not this "Michel" who views the grand ceremony in reality the new Bruckner, now a famous musician, proudly bearing the decoration of the emperor's own order? His worship of rank and pomp can only be understood as closely akin to his devout participation in the church ritual. The emperor was to him a temporal symbol of divinity.

The harmonic foundation of the opening bars has a transitional effect, qualifying the abrupt change from *Adagio* to *Finale* character.

**Feierlich, nicht schnell.**

The image shows a musical score for the beginning of the finale. It consists of two staves: a piano (p) staff on top and a bass staff on the bottom. The piano staff features a complex texture of chords and arpeggios, with a dynamic marking of *f* (forte) at the start. The bass staff has a more rhythmic and melodic line, often moving in parallel motion with the piano accompaniment. The key signature has one sharp (F#), and the time signature is 4/4. The music is marked "Feierlich, nicht schnell." (Solemn, not fast).

Motifs of a warlike nature serve as the backbone of the first theme-group. Prominent among these is a regular, rhythmic stamping, like the clatter of horses' hoofs, suggesting the approach of squadrons of cavalry.

Impressive instrumental coloring, horns, trombones, and tubas dominating, reflects the pomp of the occasion. Jubilant fanfares herald the great triumph now in sight. The "Michel" motive, wide-awake and armed for battle, is welded to the rest, lending the thematic scene freshness and jollity.

The second theme-group, rich in chorale fragments, is characterized by an air of prayerful devotion.

This religious fervor at this point is more impassioned than that of the chorale passages of the *Adagio*. It has a more rapid pulse and a vital supporting melodic line formed by a familiar motif descending inverted. The expressive voices of the solo horn and the violins in low register lend it added warmth.

The third theme-group presents a remarkable paradoxical combination of underlying significances.

Gracious melodies filled with the promise of peace spread reassuring wings over the disturbing burden of martial rhythm in the strings.

The contrapuntal skill with which the development is reared to an overwhelming climax, the simultaneous union of the principal themes of all four movements, beggars description. Heroic settings of familiar themes plunge the section into mighty conflict. The din of battle mounts, subsides, and mounts again to greater heights of fury. One moment we seem to be in the very midst of battle, next we catch its echoes from the distance. Chorale fragments are hurled into the breach to sustain the heroic spirit, on the ultimate triumph of which all depends.

The most impressive passage of the movement is the *Coda*, the overwhelming record of that triumph. A last powerful, austere presentation of the opening theme in the trombones; an equally heroic last appearance of the "Michel" motive in broad augmentation in the trumpets and the total stage for the great triumph is set. The gloom of the initial key, C-minor, has been transformed to the bright splendor of C-major. Now in the utmost imaginable splendor resounds the consummately welded choir of the symphony's four principal themes, the very embodiment of Bruckner's polyphonic genius.

## NINTH SYMPHONY (D MINOR)

During the five years he devoted to the composition and revision of the *Eighth* Bruckner still enjoyed robust health. It was not until his sixty-fifth year, the time of his first sketches toward a *Ninth*, that the chronic trend of a dropsic condition, the dread ailment which had carried Beethoven off at the peak of his creative power, evoked the foreboding that his days were numbered.

Thereafter his existence was swayed by a single longing: to be spared long enough to finish his *Ninth*. With the inexorable advance of the disease this longing turned to prayerful obsession, in the despairing grip of which even his awe-inspired humility towards God underwent a singular transformation. The physician who attended him at the Belvedere Palace (a belated, ironic luxury which the emperor had granted him) has communicated some impression of the doomed man's religious attitude. Wrote Dr. Heller, "Often, I found him on his knees in profound prayer. As it was strictly forbidden to interrupt him under these circumstances, I stood by and overheard his naive, pathetic interpolations in the traditional texts. At times he would suddenly exclaim, 'Dear God, let me get well soon; you see I need my health to finish the *Ninth*.'"

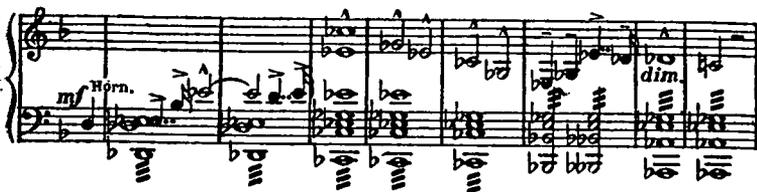

Hence this symphony might aptly be named "Farewell", rather than "Unfinished". Though the futile, tortured strivings of his last hours to formulate a suitable *Finale* show that Bruckner himself regarded the sym-

phony as unfinished, posterity has come to view its three movements as a consummate framework for one of the noblest, most inspiring revelations in tone. When the last note of the *Adagio* has died away there remains no expectation of further revelations to come. Those familiar with this close only in the "Loewe" version may regard such a view with some doubt. There Bruckner's intention, drastically altered, echoes the end of *Parsifal*, its air of resignation suggesting a sinking back to earth. In Bruckner's original manuscript the *Adagio* is marked by no such descent. Ascending ever higher it merges in an ecstasy of affirmation with Eternity.

I. FEIERLICH MISTERIOSO. (2/2). (Mystically Impressive).

The opening bars present a synopsis of the symphony's content. Brooding contemplation of the ultimate mystery, Death and the Hereafter, is suggested in this celebrated passage. Like a solemn chant is the initial motif, softly intoned by a choir of eight horns against a portentous background (tremolo).

The image shows the first system of a musical score. It consists of two staves: a piano part on top and a horn part on the bottom. The piano part begins with a treble clef, a key signature of one flat (B-flat), and a 2/2 time signature. The first measure is marked *pp* and *Str. trem.*. The horn part is marked *Horn*. The piano part features a series of notes with a tremolo effect, indicated by a wavy line underneath. The horn part plays a series of notes, with a *pp* marking and a *Picc.* instruction. The system ends with a double bar line.

The grimness of its sombre rhythm is accentuated by hollow, choked trumpet-tones. Its mournful pathos midst austere majesty suggests man's last backward glance from the threshold of the Unknown. One terrifying instant of perplexity, and then the parting soul leaps aloft to meet the dazzling revelation of Eternity. Words cannot describe the splendor here attained by the horns, which have burst their unison fetters to form a golden halo of harmony. Descending they sound like jubilant angel voices bearing a wondrous message down to earth. Their cadence is the spreading of its gracious burden over all mankind. Such is the mystic underlying significance of this richly motivated introduction to the first theme-group. Yet the presentation of these motifs has achieved a purpose symphonically far more important than the mere formulation of a musical passage, however beautiful. It has released the elemental forces from which the main or central theme is to evolve.

The breathless pause at this point is a vivid record of personal reaction, the reaction of one who has beheld a miracle and is completely overwhelmed. As some-

times in a poem a fresh stanza will issue from an echo of the preceding verse, so the transfigured cadence of the opening passage lingers on in the episode that follows. Enharmonic transformations on ascending planes of tone and volume reflect growing suspense in the face of a tremendous disclosure. Downward leaping octave-intervals anticipate the dominant feature of the approaching theme.

An ominous roll in the timpani intensifies the air of agitation. The thundering unison that bursts forth with cosmic power from the summit of this dynamic interlude is the Voice first heard in the trumpet-theme of the *Third*. There speaking in the same key and rhythm, but subdued and diminished by infinite distance, it was like the herald of a miracle to come. Here it sounds the revelation itself. Thematically it also consists of two segments, a gigantic descent by octave-leaps and a broad, diatonic return aloft, gradually accelerated. The whole cosmos trembles with the irresistible force of its reverberations (timpani-roll), while plucked strings sound waning fragments of familiar motifs, gradually releasing the overwhelming tension.

**Streng im Zeitmaß.**

*ff*

G-Saite.

Out of one of these, a descending sixth, is born the song-theme introducing the second group, a prayerful melody in the violins, unmistakably Brucknerian in the spirituality of its yearning.

**Sehr ruhig.**

*p*

Str. *p*

Str. Ob. Horn.

A graceful, encircling figure enhances its charm and expressiveness. Like the corresponding song-theme of the *Seventh* it is supplemented by an inversion of itself. Directed aloft it points the way to a summit of jubilant ecstasy, the goal of the entire song-group.

The character of the third theme-group is without

precedent in Bruckner's symphonies. Hitherto the vehicle of heroic elements, destined to sustain the conflict during the development, this theme-group in the *Ninth* begins on a note of infinite world-weariness, a longing for ultimate peace so overwhelming that it seems to span the whole universe.

It culminates in a song of lofty aspiration. Despite a slight physical similarity due to a community of motivated sources, its kinship to the main theme of the song-theme group is not close. Spiritually it is a more impassioned expression.

A musical score for Violin and Horn, likely from the Ninth Symphony. It consists of two staves: a treble clef staff for the Violin and a bass clef staff for the Horn. The music is in 3/4 time and features a melodic line in the Violin part and accompaniment in the Horn part. The dynamics are marked *p*, *d*, and *mf*. The score shows a sequence of notes and rests, with some notes beamed together. The word "etc." is written at the end of the Horn part.

The development presents a thorough exploitation of the themes and their motifs on a gigantic scale. Its plan, like that in the opening movement of the *Eighth*, is an ascent over a gradually rising range of mountain-

tops to a supreme summit. Darkness, the gloom of the earthbound, hovers over the first of these peaks. Occasional glimpses of radiance caught through the clouds intensify, by contrast, the dominant gloom. The motifs employed are exclusively those of the introduction to the first theme-group.

In the next paragraph the grand unison theme of the first group is the center of attention. It now becomes the material for a huge tonal structure, skillfully enriched with every resource of the polyphonic master. The austerity of this passage is enhanced by the persistent reappearance of the gloomy opening motif in march-like guise. The climax attained by the exploitation of these dramatic elements overtakes and absorbs the formal reentry or recapitulation of themes. There is no let-up in suspense until the uttermost barrier of tension is reached. An abrupt pause — and then, as in the opening theme-group, awe-inspired melodic fragments venture to open timid lips, reflecting the overwhelming impressiveness of the foregoing passage.

Not before the re-entry of the song-group does the listener become aware of the identity between the climax of the development and the recapitulation of the first theme-group, already accomplished. From the

shadow of the third theme's world-weariness issued the Coda, the most austere passage of the whole movement. The brooding initial motif and the startling upward-leap that followed it constitute this last paragraph's thematic bases.

II. SCHERZO. (3/4). *Bewegt lebhaft* (Lively). TRIO. (3/8). *Schnell* (fast).

As in the *Eighth*, to relieve the long-sustained dramatic tension of the opening movement, Bruckner placed the *Scherzo* second. From every viewpoint his most vital expression in the lighter vein this *Scherzo* yields to none of its predecessors in rhythmic variety, harmonic charm, instrumental color, and perfection of welding. Referring to one of its many daring features Bruckner said, "When they hear that, they won't know what to make of it; but by that time I'll be in my grave." The heated arguments aroused among experts by the very opening harmony eloquently bore out his forecast. Whatever its grammatical nature, all were agreed upon the originality of its effect. Framed in a unique witty rhythm it is the veritable echo of Bruckner's chuckle of anticipation.

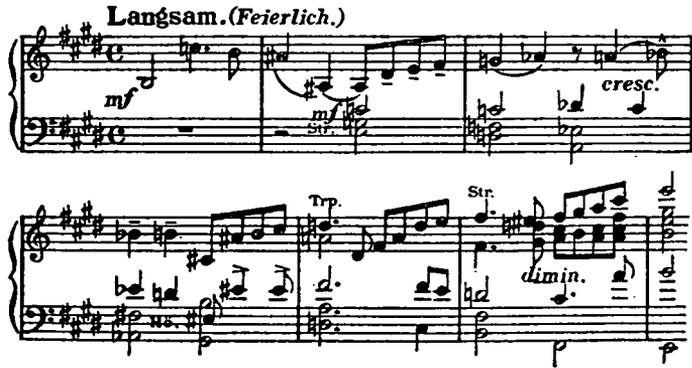

The image shows a musical score for three instruments: Flute (Fl.), Violin (Viol.), and Cello (Cell.). The music is in 3/8 time and marked *pizz.* (pizzicato). The top staff is for Fl. Viol. pizz., the middle for Viol. pizz., and the bottom for Fl. allein and Cell. pizz. The key signature has one sharp (F#) and the time signature is 3/8. The music consists of rhythmic patterns with various accidentals.

Even amid this carefree rhythmic abandon there is a moment for pure melody. A nostalgic memory of youthful bliss forever vanished finds expression in a song of ardent yearning.

III. ADAGIO. (4/4). *Langsam.* (*Feierlich.*)

The *Adagio*, the most human as well as the most austere of Bruckner's slow movements, opens with a motif of infinite yearning midst utter loneliness.

In the impassioned voices of the violins this motif, a rising minor ninth sinking back chromatically into a

descending octave, seems the very essence of melancholy. It suggests the weary, earth-bound soul, poised before its flight into the Unknown, posing the ultimate question, "Is Death then the end?" Brooding signs issue from its perplexed cadence, insistently questing the light of Revelation. They culminate in a radiant E-major tonic harmony, a promise of the splendor of the Hereafter.

Portentous implications latent in the opening motifs are stressed in the further exposition of this first theme-group. A series of boundlessly poignant outcries by the horns is answered by savagely blaring trumpet-fanfares against an orchestral background seething with agitation.

This passage was significantly described by Bruckner as the "Motif of Fate". It is the symphony's most impressive embodiment of the startling upward-leap in the horns at the beginning of the first movement. Raised to a ninth, its eloquence enhanced by polyphonic setting, it plays an outstanding role in the thematic life of the *Adagio*.

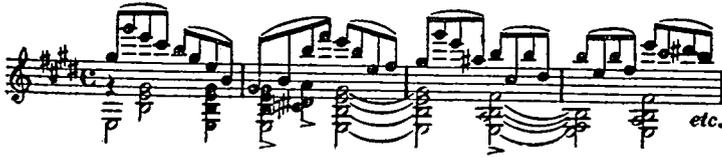

A natural sequel is the ensuing noble, placid melody which Bruckner himself called his "Farewell to Life".

The image shows two staves of musical notation. The top staff is labeled "Hörn. Tub." and the bottom staff is labeled "ritard. e dimin.". Both staves show a melodic line with sustained notes and a harmonic accompaniment of sixths.

Harmonious sixths in horns and tubas lend it unmistakable Brucknerian character. One beautiful theme follows the other in this sustained song theme-group, spreading burdens of wondrous solace, faith and gratitude.

The image shows a single staff of musical notation with a melodic line and a harmonic accompaniment of sixths.

The degree of pure lyric ecstasy here attained is matched only in the soaring 3/4 section of the *Adagio* of the *Seventh*. In its sustained character, however, the singing quality of this last *Adagio* is supreme. Dreamy echoes of the *Seventh* and *Eighth* haunt the closing measures.

Almost until his last hour on earth Bruckner worked desperately over his futile sketches toward the *Finale*, which he was fated to abandon, a mere sphinxlike fragment. Among the quavering, incoherent pen-strokes on his note-paper near the end (the author is the proud possessor of one of these precious pages) are scattered phrases from the Lord's Prayer indicating the unshakable Faith of the man in whose life and work the power of prayer had played so important a part.

## QUINTET (F MAJOR)

Composed during the earlier half of 1879 Bruckner's *Quintet for Strings*, scored for two violins, two violas, and cello, represents his sole contribution to the literature of chamber-music. Aside from his nine numbered symphonies it is his only mature instrumental work in a larger form. It was first performed in 1880 in Cologne.

### I. GEMAESSIGT. (3/4).

The principal melody of the opening theme-group, a genuinely romantic idea, is introduced softly in the first violin.

The image shows two systems of musical notation for piano accompaniment. The first system is marked "Gemäßigt" and "p.". It features a triplet melody in the right hand and a supporting bass line in the left hand. The second system is marked "sempre cresc." and "dim.". It continues the triplet melody in the right hand and the supporting bass line in the left hand.

Of the lighter lyric texture native to chamber-musical expression, it has, nevertheless, the broadly soaring

melodic line of Bruckner's symphonic cantabile passages. One of its elements, an ascending arpeggio, at first assumes an individual role in the cello; then in a resolute, staccato transformation it becomes the rhythmic and harmonic backbone of an ardent supplementary theme in the first violin.

The cadence of this theme, a brief, characteristic motif, is the source of the vigorous rhythmic life in the ensuing passage. Its dramatic possibilities are gradually revealed by the different instruments, at first alternately, then in combinations of increasing strength, leading to a powerful climax in a typically Brucknerian unison utterance.

The second (or song) theme-group begins with a

melody of delicate texture in the bright, ethereal tonality of F# major.

The image shows two systems of musical notation for piano. The first system is marked *pp sehr zart*. The right-hand part features a delicate, chromatic melody in F# major, while the left-hand part provides a simple harmonic accompaniment. The second system continues the piece with similar textures, showing the continuation of the melodic and harmonic lines.

A rather unusual harmonic phenomenon for classic sonata form, this chromatic rise, in place of the traditional dominant change, is nevertheless amply sanctioned by Schubert. Bruckner has merely postponed the entry of the dominant to achieve increased richness of harmonic color. Skillfully he leads the song theme-group over paths of ever fresh harmonic interest, until the expected tonal haven has been reached.

The short development section is devoted almost exclusively to the exploitation of the thematic material in the first group, the song theme-group being represented only by fragmentary particles in subordinated settings. The first violin, somewhat in the manner of improvisation, sounds the key-note of the preliminary portion. One by one the other instruments add their voices; then they unite in various combinations suited

to the changing contrapuntal texture of a Brucknerian development section. A warm, comforting melody in the first violin counteracts the restlessness evoked by the exploitation of conflicting motifs.

When the first violin suddenly sounds the opening theme in its original form, the recapitulation seems to have set in, but immediately the second viola, inverting the theme, contradicts this impression. New contrapuntal life now arises in an imitative conversation in the violins. Finally, the first violin, in an impassioned *Cadenza* "ad libitum", leads to the real recapitulation.

No mere repetition of ideas previously presented, this "restatement" soon strikes out along paths of fresh revelation. A triplet figure, drawn from the opening bar of the principal theme, attains special significance. A richer contrapuntal texture lends this final setting an air of fulfillment. The song-group is reintroduced in novel tonal surroundings, enriched by subtle enharmonic coloring.

The hand of the symphonic master is evident in the structure of the summary (*Coda*). The principal ideas, arrayed side by side, are finally resolved. The movement closes jubilantly with an organ-point on the tonic.

## II. SCHERZO. (3/4). *Schnell* (fast).

Unlike Bruckner's hardy symphonic *Scherzi* this airy movement also shows the composer's keen grasp of the essential difference between symphonic and chamber-music. Yet it, too, is a dance of unmistakable Upper-Austrian flavor.

The outstanding thematic line, assigned to the second violin throughout the opening portion, is a curious, winding melody in *Laendler* rhythm.

The image displays two systems of musical notation for piano. The first system consists of a treble and bass staff. The treble staff features a complex, winding melodic line with slurs and accents, while the bass staff provides a rhythmic accompaniment. A dynamic marking of *p* (piano) is placed at the beginning of the first measure. The second system also consists of a treble and bass staff. The treble staff continues the melodic line, and the bass staff provides harmonic support. A dynamic marking of *cresc. poco a poco* (crescendo poco a poco) is placed at the beginning of the first measure. The key signature is one flat (B-flat) and the time signature is 3/4.

Above it the first violin softly plays a lilting counter-theme. Cello and violas mark the rhythm, at the same time filling out the rich harmonic texture. Both themes are then inverted in the violas, the music acquiring increased harmonic and contrapuntal subtlety. The complex nature of this passage caused Bruckner to insist upon a slower tempo: "almost andante," he said in a letter. The form, as usual, is simple A-B-A, the original themes returning to bring the *Scherzo* portion to a close.

The *Trio* is a slower, more graceful, expression, also of *Laendler* character.

**Langsam.**

*mp* *p* *pp*

*p* *pp*

The flourishes of the second violin are haunted by the sunny spirit of "Papa Haydn". This delicate melodic line and the broader one it surrounds are both unmistakable sequels of the principal theme of the *Scherzo*, which also consists of two contrasted melodies. Yet how different are the two themes in effect!

### III. ADAGIO. (4/4).

Of truly symphonic breadth is the opening theme of the *Adagio*, introduced in the first violin.

**Ausdrucksvoll.**

*p* *sfz.* *mit Wärme*

*cresc.*  
*p* *r. H.* *legato* *dim.*

Beginning softly it soars aloft on stately wings with growing ardor, and then descends in gracious curves to become the whispered confession of a noble soul's yearning. To find another melody of such depth and purity one would have to go to Bruckner's greatest symphonic *Adagios*. A series of prayerful sighs lead to impassioned outcries.

A regular unison pulsation in the violins and second viola, almost like a living heart-beat, introduces a brighter mood.

*pp* *cresc. p* *cresc. dim.*  
*gesangvoll*  
*pp* *breit*

A melody radiant with hope and confidence appears in the first viola, the pulsation surviving in rich supporting harmonies. The total absence of any bass gives this "tenor" theme a lofty, visionary quality.

A new, livelier descending figure, at first of rather dramatic character, attains apotheosis in the violas, clothing with the splendor of a benediction the farewell reappearance of the "tenor" theme in the first violin. Ineffable peace hovers over the last phrase.

#### IV. FINALE. (4/4). *Lebhaft bewegt* (lively).

The closing movement can be completely grasped only in the light of the preceding sections. A lively staccato motif in the second violin over an organ-point of distant tonality dominates the beginning.

Though the first theme-group is devoted to the restoration of the central tonality of the work, even the most unsophisticated ear need not shrink from the com-

plexity thereby implied. It is not the dry grammar, but rather the poetry of harmony that sways this tonal quest. It lends the entire passage an air of suspense, like the preparation for some significant disclosure. In Bruckner's symphonies such passages culminate in gigantic unison outbursts. Here the excitement subsides into a mere whisper, hushed in a "general pause."

The second (or song) theme-group, slower than the first, is dominated by a swinging, *Laendler* figure, drawn from the *Scherzo*.

Langsamer.

The image shows two systems of musical notation for a piano piece. The first system is marked 'p' and the second system is marked 'cresc.'. The notation includes treble and bass clefs, a key signature of two flats, and a common time signature. The music features a prominent rhythmic motif in the bass line, which is described in the text as a 'Laendler' figure. The first system shows a melodic line in the treble and a more active bass line. The second system shows the melodic line moving to the bass and the treble line becoming more active, with a 'cresc.' marking indicating a dynamic increase.

This rhythmic motif given to the first viola, provides a firm basis for the somewhat rhapsodic melody in the first violin. Later, with broadened span, it acquires the bold sweep usually associated with fugue-themes. The cello takes it up with strokes of full power; the first viola answers it in the dominant. Yet it proves to be no fugue, but rather the herald of a highly contra-

puntal development section, presenting the final and decisive conflict of the work. A brief triplet motif, derived from the very first phrase of the *Quintet*, becomes the outstanding thematic element. Motifs of the song theme, as well as a prominent figure in the *Adagio*, are also exploited.

The contrapuntal artistry of this development defies description. In the natural felicity of his polyphonic idiom Bruckner was a supreme master. Yet the convincing effect of this *Quintet-Finale* is the result of no combination of devices, however masterly. Here also, as in Bruckner's symphonies, the spirit's gradual, indomitable rise towards ultimate triumph in the face of a world of obstacles is the underlying concept.

## APPENDIX

### MISCELLANEOUS DATA

Die Zwölfordnung der  
Töne  
340 pages, with musical  
examples

**Rudolf Oesterreicher:**  
Emmerich Kalman  
250 pages, 60 illustrations

Among American artistic developments of recent years the rebirth of interest in the music of Bruckner and Mahler is second to none in significance. When *The Bruckner Society of America* was founded on January 4, 1931, performances of these two composers by our major musical organizations were not merely rare, but also ineffectual because American music-lovers had no adequate approach to the proper appreciation of the art of either Bruckner or Mahler. Therefore the *Society*, having adopted as its chief aim the fulfillment of this void, published the first biographies of these composers in English and issued a magazine, *CHORD AND DISCORD*, devoted almost entirely to discussions of their works. Copies of *CHORD AND DISCORD* are available in the principal public and university libraries in the United States.
