## History of Beer

Beer is one of the oldest beverages humans have produced, dating back to at least the 5th millennium B.C. in Iran, and was recorded in the written history of ancient Egypt and Mesopotamia and spread throughout the world.

As almost any cereal containing certain sugars can undergo spontaneous fermentation due to wild yeasts in the air, it is possible that beer-like beverages were independently developed throughout the world soon after a tribe or culture had domesticated cereal. Chemical tests of ancient pottery jars reveal that beer was produced as far back as about 7,000 years ago in what is today Iran. This discovery reveals one of the earliest known uses of fermentation and is the earliest evidence of brewing to date. In Mesopotamia, the oldest evidence of beer is believed to be a 6,000 year old Sumerian tablet depicting people drinking a beverage through reed straws from a communal bowl. A 3,900 year old Sumerian poem honouring Ninkasi, the patron goddess of brewing, contains the oldest surviving beer recipe, describing the production of beer from barley via bread. In China, residue on pottery dating from between 5,400 and 4,900 years ago shows beer was brewed using barley and other grains.

The invention of bread and beer has been argued to be responsible for humanity's ability to develop technology and build civilization. The earliest chemically confirmed barley beer to date was discovered at Godin Tepe in the central Zagros Mountains of Iran, where fragments of a jug, from between 5,400 and 5,000 years ago was found to be coated with beerstone, a by-product of the brewing process.

Beer may have been known in Neo-lithic Europe as far back as 5,000 years ago, and was mainly brewed on a domestic scale. Women brewers dominated alcohol production on every occupied continent until commercialization and industrialization of brewing occurred.

The Finnish epic Kalevala, collected in written form in the 19th Century but based on oral traditions many Centuries old, devotes more lines to the origin of beer and brewing than it does to the origin of mankind.

The mythical Flemish king Gambrinus (from Jan Primus (John I)) , is sometimes credited with the invention of beer.

According to Czech legend, deity Radegast, god of hospitality, invented beer.

Ninkasi was the patron goddess of brewing in ancient Sumer.

In Egyptian mythology, the immense blood-lust of the fierce lioness goddess Sekhmet was only sated after she was tricked into consuming an extremely large amount of red-coloured beer (believing it to be blood) : she became so drunk that she gave-up slaughter altogether and became docile.

In Norse mythology the sea god Ægir, his wife Rán, and their 9 daughters, brewed ale (or mead) for the gods. In the Lokasenna, it is told that Ægir would host a party where all the gods would drink the beer he brewed for them. He made this in a giant kettle that Thor had brought. The cups in Ægir's hall were always full, magically refilling themselves when emptied. Ægir had 2 servants in his hall to assist him ; Eldir (Fire-Kindler) and Fimafeng (Handy) .

In Nart sagas, Satanaya (Ubykh [satanaja] , Adyghe [setenej] , Ossetian [ʃatana] ) , the mother of the Narts, a fertility figure and matriarch, invented beer.

Recent Irish Mythology attributes the invention of beer to fabled Irishman Charlie Mops.

Beer produced before the Industrial Revolution continued to be made and sold on a domestic scale, although by the 7th Century A.D. , beer was also being produced and sold by European monasteries. During the Industrial Revolution, the production of beer moved from artisanal manufacture to industrial manufacture, and domestic manufacture ceased to be significant by the end of the 19th Century. The development of hydrometers and thermometers changed brewing by allowing the brewer more control of the process, and greater knowledge of the results.

Beer was one of the most common drinks during the Middle-Ages. It was consumed daily by all social classes in the northern and eastern parts of Europe where grape cultivation was difficult or impossible. Though wine of varying qualities was the most common drink in the south, beer was still popular among the lower-classes. The idea that beer was consumed more commonly than water during medieval times is a myth. Water was cheaper than beer, and towns and villages were built close to sources of fresh water such as rivers, springs, and wells to facilitate easy access to the resource. Though probably one of the most popular drinks in Europe, beer was disdained by science as being unhealthy, mostly because ancient Greek and more contemporary Arab physicians had little or no experience with the drink.

In 1256, the Aldobrandino of Siena described the nature of beer in the following way :

« But from whichever it is made, whether from oats, barley or wheat, it harms the head and the stomach, it causes bad breath and ruins the teeth, it fills the stomach with bad fumes, and as a result anyone who drinks it along with wine becomes drunk quickly ; but it does have the property of facilitating urination and makes one's flesh white and smooth. »

The use of hops in beer was written of in 822 by a Carolingian Abbot. Flavouring beer with hops was known at least since the 9th Century, but was only gradually adopted because of difficulties in establishing the right proportions of ingredients. Before that, gruit, a mix of various herbs, had been used, but did not have the same preserving properties as hops. Beer flavoured without it was often spoiled soon after preparation and could not be exported. The only other

alternative was to increase the alcohol content, which was rather expensive. Hopped beer was perfected in the medieval towns of Bohemia by the 13th Century. German towns pioneered a new scale of operation with standardized barrel sizes that allowed for large-scale export. Previously, beer had been brewed at home, but the production was now successfully replaced by medium-sized operations of about 8 to 10 people. This type of production spread to Holland in the 14th Century and later to Flanders and Brabant, and reached England by the late-15th Century.

English ale and beer brewing were carried-out separately, no brewer being allowed to produce both.

The Brewers Company of London stated :

« No hops, herbs, or other like thing be put into any ale or liquore wherof ale shall be made - but only liquor (water) , malt, and yeast. »

This comment is sometimes misquoted as a prohibition on hopped beer. However, hopped beer was opposed by some, e.g. :

« Ale is made of malte and water ; and they the which do put any other thyng to ale than is rehersed, except yest, barme, or goddesgood (3 words for yeast) , doth sophysticat there ale. Ale for an Englysshe man is a naturall drinke. Ale muste haue these properties, it muste be fresshe and cleare, it muste not be ropy, nor smoky, nor it must haue no wefte nor taylor. Ale shulde not be dronke vnder .v. dayes olde. (...) Barly malte maketh better ale than Oten malte or any other corne doth. (...) Beere is made of malte, of hoppes, and water ; it is a naturall drynke for a doche (Dutch) man, and nowe of late dayes it is moche vsed in Englande to the detryment of many Englysshe men (...) for the drynke is a colde drynke. Yet it doth make a man fatte, and doth inflate the bely, as it doth appere by the doche mennes faces and belyes. »

In Europe, beer brewing largely remained a home activity in medieval times. By the 14th and 15th Centuries, beer-making was gradually changing from a family-oriented activity to an artisan one, with pubs and monasteries brewing their own beer for mass-consumption.

In the late Middle-Ages, the brewing industry in northern Europe changed from a small-scale domestic industry to a large-scale export industry. The key-innovation was the introduction of hops, which began in northern Germany in the 13th Century. Hops sharply improved both the brewing process and the quality of beer. Other innovations from German lands involved larger kettle sizes and more frequent brewing. Consumption went-up, while brewing became more concentrated because it was a capital-intensive industry. Thus, in Hamburg, « per capita » consumption increased from an average of 300 liters per year in the 15th Century to about 700 in the 17th Century.

The use of hops spread to the Netherlands, and then, to England. In 15th Century England, an unhopped beer would have been known as an ale, while the use of hops would make it a beer. Hopped beer was imported to England from the Netherlands as early as 1400 in Winchester, and hops were being planted on the island by 1428. The popularity of hops was at first mixed.

The Brewers Company of London went so far as to state :

« No hops, herbs, or other like thing be put into any ale or liquore wherof ale shall be made - but only liquor (water) , malt, and yeast. »

However, by the 16th Century, ale had come to refer to any strong beer, and all ales and beers were hopped, giving rise to the verse noted by the antiquary John Aubrey :

Greeks, Heresie, Turkey-cocks and Beer

Came into England all in a year.

the year, according to Aubrey, being the fifteenth of Henry VIII (1524) .

In 1516, William IV, Duke of Bavaria, adopted the « Reinheitsgebot » (Purity Law) , perhaps the oldest food regulation still in use through the 20th Century (the « Reinheitsgebot » passed formally from German law in 1987) . The « Gebot » ordered that the ingredients of beer be restricted to water, barley, and hops ; yeast was added to the list after Louis Pasteur's discovery in 1857. The Bavarian law was applied throughout Germany as part of the 1871 German unification as the German Empire under Otto von Bismarck, and has since been updated to reflect modern trends in beer-brewing. To this day, the « Gebot » is considered a mark of purity in beers, although this is controversial.

Most beers until relatively recent times were top-fermented. Bottom-fermented beers were discovered by accident in the 16th Century after beer was stored in cool caverns for long periods ; they have since largely outpaced top-fermented beers in terms of volume.

Following significant improvements in the efficiency of the steam-engine in 1765, industrialization of beer became a reality. Further innovations in the brewing process came about with the introduction of the thermometer in 1760 and hydrometer in 1770, which allowed brewers to increase efficiency and attenuation.

Prior to the late 18th Century, malt was primarily dried over fires made from wood, charcoal, or straw, and after 1600, from coke.

In general, none of these early malts would have been well-shielded from the smoke involved in the kilning process, and consequently, early beers would have had a smoky component to their flavours ; evidence indicates that maltsters and brewers constantly tried to minimize the smokiness of the finished beer.

Writers of the period describe the distinctive taste derived from wood-smoked malts, and the almost universal revulsion it engendered. The smoked beers and ales of the West Country were famous for being undrinkable - locals and the desperate excepted.

This is from « Directions for Brewing Malt Liquors » (1700) :

« In most parts of the West, their malt is so stench'd with the Smoak of the Wood, with which 'tis dried, that no Stranger can endure it, though the inhabitants, who are familiarized to it, can swallow it as the Hollanders do their thick Black Beer Brewed with Buck Wheat. »

An even earlier reference to such malt was recorded by William Harrison, in his « Description of England » , 1577 :

« In some places, it (malt) is dried at leisure with wood alone, or straw alone, in other with wood and straw together, but, of all, the straw-dried is the most excellent. For the wood-dried malt, when it is brewed, beside that the drink is higher of colour, it doth hurt and annoy the head of him that is not used thereto, because of the smoke. Such also as use both indifferently do bark, cleave, and dry their wood in an oven, thereby, to remove all moisture that should procure the fume (...) »

« London and Country Brewer » (1736) specified the varieties of « brown malt » popular in the city :

« Brown Malts are dried with Straw, Wood and Fern, etc. The straw-dried is the best, but the wood sort has a most unnatural Taste, that few can bear with, but the necessitous, and those that are accustomed to its strong smoaky tang ; yet, it is much used in some of the Western Parts of England, and many thousand Quarters of this malt has been formerly used in London for brewing the Butt-keoing-beers with, and that because it sold for 2 Shillings per Quarter cheaper than Straw-dried Malt, nor was this Quality of the Wood-dried Malt much regarded by some of its Brewers, for that its ill Taste is lost in 9 or 12 Months, by the Age of the Beer, and the strength of the great Quantity of Hops that were used in its preservation. »

The hydrometer transformed how beer was brewed. Before its introduction, beers were brewed from a single malt : brown beers from brown malt ; amber beers from amber malt ; pale beers from pale malt. Using the hydrometer, brewers could calculate the yield from different malts. They observed that pale malt, though more expensive, yielded far more fermentable material than cheaper malts. For example, brown malt (used for Porter Beer) gave 54 pounds of extract per quarter, whilst pale malt gave 80 pounds. Once this was known, brewers switched to using mostly pale malt for all beers supplemented with a small quantity of highly-coloured malt to achieve the correct colour for darker beers.

The invention of the drum-roaster in 1817 by Daniel Wheeler allowed for the creation of very dark, roasted malts, contributing to the flavour of porters and stouts. Its development was prompted by a British law of 1816 forbidding the use of any ingredients other than malt and hops. Porter brewers, employing a predominantly pale malt grist, urgently needed a legal colourant. Wheeler's patent malt was the solution.

Yeast ring used by Swedish home-brewers in the 19th Century to preserve the yeast between brewing sessions.

Louis Pasteur's 1857 discovery of yeast's role in fermentation led to brewers developing methods to prevent the

souring of beer by undesirable micro-organisms.

## Brewing in ancient Germania

Brewing in ancient Germania was done by the women who germinated wheat grains and flavoured their beer with myrtle, ash leaves and oak bark. Tacitus reports that the Germans drank beer out of auroch horns while lying comfortably on bearskin coats. After the 7th Century, monks began to brew beer as a kind of « liquid bread » allowed during fasting days of Lent. This beer was especially strong and nourishing. Soon, they began to sell their beer in their monastery taverns, and many monasteries in Germania, Gallia and Britain become rich and famous. Monks soon had competition. Private northern German breweries were taking their own beer to Flanders and Sweden by 1200 A.D. There were over 600 such breweries in Hamburg alone in the 1500's. Monarchs liked the private brewers, as unlike monks, they had to pay taxes. Soon, royalty got into the act of promoting suds.

Beer was still made by the women in their household until the Middle-Ages. A common breakfast treat was warm beer enriched with eggs, ginger and nutmeg. The monks soon discovered hops as an appropriate spice for their beer. Although hops add a sour, bitter taste, they helped to keep it fresh longer and were thought to have a calming effect to reduce the danger of caving in to the devil's sexual temptations. Hildegard von Bingen recommended in her 12th Century book that « One should drink beer ! » and she prescribed it for depression and sleeplessness.

At the end of the 15th Century, there were numerous breweries in cities such as Salzburg, usually in combination with an inn. This is thanks in part to the famous physician « Paracelsus » (Theophrast von Hohenheim, 1493-1541) who spent much of his life in Salzburg and discovered that beer was good medicine. Paracelsus replaced speculative doctrines with observations of nature, including the beneficial effects of beer. People were happily in agreement with his theory. A brewer of the day not only brewed beer, he butchered his own meat and hosted guests to enjoy the hospitality. Townsfolk passing by would have a drink of beer and carry some home in jugs. Soon, 12 major breweries dominated Salzburg, and there were more than 100 individual brewers.

Brewing was risky business in the Middle-Ages, and those eager for greater profit often used cheap filler ingredients to pad the beverage, from fruit, herbs and eggs to tree bark and fish bladders. As a result, beer was sometimes putrid tasting and even poisonous. This gave urgency for some sort of uniformity law. The first regulation appeared in Augsburg, Bavaria, in the 1480's. Bavaria's reigning Duke Wilhelm IV expanded the Augsburg regulation to cover all of Bavaria and it became official at Ingolstadt in 1516.

The « Reinheitsgebot », or the German (or Bavarian) Beer Purity Law was a regulation governing beer production in Germany which in its original text decreed that the only ingredients which could be used in beer production were beer were water, barley, and hops (it was later revised to allow yeast) . It also set the price of beer. The penalty for making impure beer was also set : a brewer using other ingredients for his beer could have those barrels confiscated without compensation. 16th Century Brewers in Bavaria have generally received the credit for having originated or at least modified beer to its modern form.

From 1871, the « Reinheitsgebot » gradually spread from Bavaria to throughout the German Empire at Bavaria's insistence. Brewers outside of Bavaria sometimes objected and the law also led to the extinction of some old brewing traditions and local specialty beers, and it gave « Pilsner » style beer preeminence.

The « Reinheitsgebot » was also enforced in Greece from the early 19th Century thanks to the first Greek King, former Bavarian Prince Otto who, as one of his first royal acts, opened a brewery in Greece.

Original « Reinheitsgebot » :

« We hereby proclaim and decree, by Authority of our Province, that henceforth in the Duchy of Bavaria, in the country as well as in the cities and market-places, the following rules apply to the sale of beer : From Michaelmas to Georgi, the price for one “ Mass ” (Bavarian Liter : 1.069) or one “ Kopf ” (bowl-shaped container for fluids, not quite 1 “ Mass ”) , is not to exceed one Pfennig Munich value, and From Georgi to Michaelmas, the “ Mass ” shall not be sold for more than 2 Pfennig of the same value, the “ Kopf ” not more than 3 Heller.

If this not be adhered to, the punishment stated below shall be administered. Should any person brew, or otherwise have, other beer than March Beer, it is not to be sold any higher than 1 Pfennig per “ Mass ”. Furthermore, we wish to emphasize that in future in all cities, markets and in the country, the only ingredients used for the brewing of beer must be Barley, Hops and Water. Whosoever knowingly disregards or transgresses upon this ordinance, shall be punished by the Court authorities' confiscating such barrels of beer, without fail. Should, however, an inn-keeper in the country, city or markets buy 2 or 3 pails of beer (containing 60 “ Mass ”) and sell it again to the common peasantry, he alone shall be permitted to charge 1 Heller more for the “ Mass ” of the “ Kopf ”, than mentioned above. Furthermore, should there arise a scarcity and subsequent price increase of the barley (also considering that the times of harvest differ, due to location) , WE, the Bavarian Duchy, shall have the right to order curtailments for the good of all concerned. »

### Beer, Taverns and Inns in the Habsburg Empire

Max Graf :

« In Vienna, even if nowhere else, in the 19th Century there existed a kind of democracy in the taverns which prevailed as long as the effect of the wine. »

« Even the modest citizen had an easy existence. At 10 o'clock in the morning, after 2 hours' work, he would go to his favourite inn and fortify himself for further accomplishments with a glass of fresh beer and a portion of goulash. Evenings, with wife and children, he would saunter in the “ Prater ” where in good weather the inns were crowded, where games and entertainments were continuously patronized, and where music sounded from all sides - shrill barrel organs, blaring, brass bands, or waltz violins. Or he might sit in a corner of the tavern he regularly frequented, and talk politics with his cronies. The waiters kept carrying glass after glass of foaming beer, while smoke rose to the roof from numerous meerschaum pipes or long Virginia cigars. »

...

It may seem convenient to link the societal unrest of the mid-19th Century with the unrest of discovery then rocking the brewing world. But simultaneity cannot help but establish at least the possibility of relation. The isolation of pure lager yeasts and the founding of new beer styles dependent on greater technical achievement by Anton Dreher in Vienna ; Gabriel Sedlmeyer in Munich ; Emil Hansen in Copenhagen ; and brewers in the Czech city of Plzeň (as well as through the immunological experiments of Louis Pasteur, who did much of his work with brewing yeasts) captured the world's fascination with brewing innovation. When the Czechs, Bohemians, Moravians, Germans, and Austrians spread outward into the wider world, they were liable to carry with them their enthusiasms. They did not sweep all brewing culture before them, but they did establish a way of doing things wherever they went. At the same time, emigrants from the wine-making regions of Italy and Hungary were busy themselves spreading world wine culture.

...

Wine was preferred in Habsburg Vienna, and the kind of taxation that marginalized wines in England only affected wine consumption in the Habsburg Empire more slowly ... though the eventual stratification we see in England does eventually appear in the Habsburg domains as well.

« Modest » is perhaps the right word to describe the amount of beer drunk by the Viennese in the 1730's. It was about 65 litres per head per year. From the end of the 16th Century, there was a steady increase in the consumption of beer. By the end of the 18th Century, it was the same as that of the most frequently consumed alcoholic drink, namely wine. In the 1730's, the Viennese were still drinking around 3 times more wine than beer. Brandy and fruit juice also became more popular from the 16th Century on. It was in particular in the towns that wine was an important drink, because the water supply there was often inadequate and could be a source of epidemics. In the 18th and 19th Centuries, the consumption of beer rose and that of wine fell, because increasing prices and taxation meant that the poorer classes could not afford it, so that drinking wine became more and more the preserve of the upper-classes.

There's a little more about the « Gasthäuser » and « Schenken » (inns and taverns) where this drinking was going on.

In the Habsburg territories, it was not always left to the people themselves to choose which beer and which wine they drank. It was not unusual for the lords of the manor to decide this for them.

Licences to sell beer or wine were granted either to persons or to premises and were restricted to burghers and vineyard owners respectively. Nor could any beer or any wine be sold. The authorities could oblige landlords to procure beer from a particular brewery - in most cases, one attached to a monastery or a landowner's castle, which could make a considerable profit from such sales. Whereas in the Middle-Ages, many households brewed their own beer, from the middle of the 15th Century brewing increasingly became a specialized trade practised by burghers, the aristocracy and monasteries.

It was permitted to serve wine only between 29 September (that is to say after the grapes had been harvested) and 30 April. Wine-making, an everyday activity for many Viennese, was at times frowned upon by the Habsburg rulers. Ferdinand I tried to ban wine-presses from the city altogether on hygienic grounds. Work in the vineyards was done mostly by labourers and itinerant workers. Wine was produced both for domestic consumption and to be served in local taverns as well as for export. The rulers made a considerable amount of money from the consumption of alcoholic beverages, because they were taxed at an average rate of 30 % . To check that this tax had been paid, collectors provided each barrel destined for sale with a « dispatch certificate » (« Passierungspass ») and a special mark. It is not surprising that there were numerous conflicts between landlords and tax-collectors. In addition, functions held in taverns were also taxed : for example, in Vienna, a levy of 15 Kreuzer was charged for each musician.

Gradually, beer replaced wine as the population's favourite drink. But inns and taverns remained as popular as ever. There was an ever-increasing gap between the price of wine and the price of beer. The beer consumption also increased for social reasons. Price changes in the 19th Century often led to « Beer riots » .

Alcoholic drinks were served in inns (« Gasthäuser ») , which specialized in either beer or wine and also offered additional services such as beds for the night and fodder and stabling for horses. Taverns (« Schenken ») , some of which also served as staging posts for mail-coaches, were important meeting-places for the inhabitants of both towns and villages : they were where information was exchanged, assemblies held and all kinds of occasions celebrated - weddings, baptisms, dances and so on. Because inns and taverns were also places where people might discuss politics and the ruling classes in a critical manner, they were regarded with suspicion by the authorities. They suspected that taverns were places where people gambled, dealt in stolen goods and indulged in immoral behaviour, while making use of the inns as places to recruit soldiers. The main-concern of the authorities was to bring « order » to the inns and taverns and to the towns in general : landlords were required, among other things, to check the passes issued to beggars and strangers, and to report people attending Protestant church services.

Towards the end of the 1850's, the beer production was revolutionized by the arrival of Anton Dreher's lager beer of Kőbánya, Hungary, and the spread of the Czech « Pilsner » beer. The « Pilsner Urquell » , the « Schwechater Lager » and the « St. Marxer Abzugbier » were considered high-quality products.

Pope Leo XIII was prescribed « Pilsner Urquell » by his doctor to facilitate his digestion.

...

**1637** : Construction of a brewery in Linz.

**1854** : Peter Schmidt founder of « Kőbányai Serfőző Társaság » produced the first « Kőbányai Ser » .

**1862** : Anton Dreher, the « King of Beer » , bought the « Kőbányai Serház » .

**1870** : Anton Dreher junior takes-over the leadership of the company. He developed the technology and capacity of his

factories, and Kőbánya soon became the largest brewery of Hungary.

The Dreher Brewery and Tavern played an important role in the Social-Democrat movement of Vienna following World War I, also known as « Red Vienna ». In the middle of the 19th Century, Anton Dreher senior had purchased 2 small, adjacent restaurants and combined them into one « Gasthaus » with a big garden. « Dreher's Établissement » opened on 25 December 1859 and was an immediate hit as a hot Beer Hall. It had not only the garden and the tavern, but also a restaurant and a dance-hall. Between 1918 and 1933, it became the un-official meeting-place of « Landstraßer » Social-Democrats of Vienna.

The history of beer in Bohemia, Moravia, and Silesia, goes back further than the creation of « Pilsner Urquell » in 1842. Beer was made in the Czech lands even before the Slavic migration in the 6th Century.

### Anton Dreher

The Austrian brewer Anton Dreher was born on 7 May 1810 in Schwechat near Vienna ; and died on 27 December 1863 in Schwechat. He was an important figure in the development of pale lager.

In 1840, Dreher introduced a beer that combined the crispness of lager with the paler hues of the English ale ; this new style of beer became known as the Viennese style and was called « Schwechater Lagerbier » .

When Franz Anton Dreher died of marasmus in 1820, his 10 year old son was too young to manage the brewing business. Dreher was apprenticed to the brewer Meichel, in Simmering, and later undertook a study tour, a journeyman's tour, through Germany, where he studied at the Sedlmayr brewery of Munich, in England, where he studied at Barclay and Perkins in London, and in Scotland. In 1836, he partnered with his mother, and with the help of his wife's marriage portion, he experimented with the English malting process, which produced a caramelized, crystal malt ; he was able to buy his mother out by 1839. Here, he was the first brewer in the European continent to use the English malting process. He owned acres of land throughout Austria and Bohemia, and grew his own hops and barley, which allowed him to save on costs. When he died suddenly in 1863, he was worth 10 million Gulden.

Starting in 1836, Anton Dreher took-over the brewery and developed the bottom-fermented beer (« Schwechater Lagerbier ») which he presented in 1840-1841. It was a new style of beer, methodically bottom fermented to produce a brew that was coppery reddish-brown in colour. It required steady, cool temperature for maturation and storage, and this requirement gives the beer its name : « lager » (in German, « Lager » means storehouse or warehouse) . Originally, he called the beer « Märzen » (March-Beer) , because it was brewed in March, when the water was cold, and ice was still available. Eventually, the name « lager » became the accepted name ; it was also called Vienna « Typ » , or Vienna Style Beer. In 1858, Dreher's lager won the gold medal for excellence at the Beer Exhibit in Vienna. The greater honour occurred on 26 November 1861 when Emperor Franz-Josef I visited the brewery and awarded Dreher with the Knight's Cross of the Franz-Josef Order. In 1862, he received the Gold medal with Diploma from the World Exhibition in Paris. In 1869, his « Lager » beer won the High First Prize.

The Danube river provided the water needed for unlimited beer and malt-making. The attention turned to Kőbánya because of a beer made by Peter Schmidt, a brewer Master from Pest who studied in Munich. Schmidt stored beer in his rock cellar in Kőbánya. The water in the wells, made by deep drilling technology, is perfectly suited for beer-making ; the cellars of Schmidt's brewery provided the steady cool temperature needed for maturation and storage. It was the ideal warehouse, or, in German « Lager » , for storing the beer.

The surge of the Kőbánya beer production attracted Dreher's attention, in part because Schmidt's beer was competition for him. He visited Pest-Buda on several occasions between 1856 and 1860 ; by 1862, he was able to buy the Kőbánya Brewery Company. He purchased further plots of land and prepared for expansion, but died suddenly in 1863, leaving his 14 year old son to implement the plans.

In 1873, the beer won another Gold medal at the World Exhibit in Vienna ; in 1878, in Paris ; in 1879, in Sydney ; in 1878, in Melbourne ; in 1882, in Trieste. On June 4, 1883, Emperor Franz-Josef visited the brewery for the second time, and honoured Anton Dreher junior with the Knights Cross of the Order of Franz-Josef. In 1897, Dreher received the Commander's Cross ; and later, the Great Cross of the Order ; and, in 1902, the Order of Iron Cross, 2nd Class.

After his father's death in 1863, Anton Dreher junior continued the work on the brewing process. He started to export this beer first to the Netherlands, then to Triest (now Trieste) , where it was known as « Birra Dreher » , and then, to Germany. In 1871, known as the winter without ice, Dreher constructed a cooling machine to process the beer. He continued to develop the brewery, the mechanization, and the fields, and by 1897, the brewery was producing 739,639 Hectoliters of beer, which was more than double the amount produced under his father in the company's most productive year.

### Regulars' table : the « Stammtisch » tradition

Max Graf :

The neighbour who talked with a Czech or Hungarian accent was just as much a Viennese as he who was born there. One did not laugh at his pronunciation and his peculiarities as at a foreigner, but one saw in him a man like oneself. Thus, sprang-up the spirit of friendliness, companionship and popular humanism which brought Viennese together, caused them to gather in the smoky coffee-houses and inns and made them become friends.

...

A « Stammtisch » (German for regulars' table) is an informal group meeting held on a regular basis, and also the usually large, often round-table around which the group meets. A « Stammtisch » is not a structured meeting, but rather a friendly get-together.

Traditionally, the meeting-table is marked with a somewhat elaborate sign reserving it for regulars. Historically, such a meeting might involve socializing, card-playing (such as « skat ») , and often political or philosophical discussions. The

words « Stammtischpolitik » (« Stammtisch » politics) and « Stammtisch-niveau » (« Stammtisch » level) , describe the simplified nature of « Stammtisch » discussions, and have an established metaphorical usage in describing simplified political and social discussions beyond the « Stammtisch » itself.

Especially in rural areas and smaller villages, being part of the « Stammtisch » was often related to a certain social status. In the second half of the 19th Century, a « Stammtisch » typically consisted of local dignitaries such as the mayor, doctor, pharmacist, teacher, forester or wealthy farmers. Inviting a stranger to take a seat at the « Stammtisch » was a sign of extraordinary appreciation. This was similarly the case with types of regulars' tables in « cafés » consisting of writers and artists.

### What happens at a « Stammtisch » ?

It is a table in a restaurant or a « Gasthaus » (inn) , which is reserved for regular customers who gather on certain days of the week to talk, play cards or hold meetings. The « Stammtisch » is usually at its most influential in the country-side, in villages where the « Gasthaus » still is the focal-point of social life.

Here, typically, the « Bürgermeister » (Mayor) , the farmer, the shop-keeper and many others will sit together frequently after church on a Sunday (known as « Frühschoppen ») and on at least one week-day evening to play cards and discuss the affairs of the village. Their table is marked with a metal sign marked « Stammtisch » (sometimes soldered on to a now-redundant ashtray) to signal the un-suspecting visitors that they should sit elsewhere. Many a tourist has made the mistake of sitting at the « Stammtisch » without permission.

All topics are discussed here over a glass of wine or beer - the annual village festival is planned. In Austria, it is still largely a male activity though women often have their own « Stammtisch » . In cities, women come together in the week to play cards and chat.

The « Stammtisch » is still is the focal-point of social life in Austria. It is a meeting of people, a great opportunity to talk, to share and to have a good time together.

But the custom is not confined to Austria. Wherever there are German speakers there are informal gatherings where they can casually speak German to keep their language skills from growing rusty, and to share ideas, poetry, or literature.

### Tradition and Friendship

The Austrian and German « Stammtisch » tradition sometimes confuses the un-suspecting visitor or tourist. Imagine - you enter the inn, see a wonderful empty table in the most exquisite location. You settle down and enjoy some beer and a small snack with a few friends.

Suddenly, someone approaches your table and starts « shouting and gesturing » at you while pointing vigorously at a

sign that says « Stammtisch » .

If you think that the waiter will come to your rescue forget it, conveniently he turns a blind eye.

What's wrong ? Well, you have sat at the reserved table only for regulars and members of the « Stammtisch » . Beat a hasty and humble retreat to some far off corner.

Almost every Austrian inn/restaurant has a table that is set aside for regular customers. You will find a sign on or over the table indicating its status.

Usually, this is the biggest table with the best location. The table is always laid immaculately and is certainly the largest table in the room.

If, however, you are one of the regulars, you know you will always have a place in the inn no matter how busy they are. And you know that some of your friends and colleagues will eventually show-up, so there's no worry about drinking or dining alone.

If no one is sitting at the « Stammtisch » , you may be able to sit there, but don't be surprised if you are told to move.

If one of the regulars comes to sit down, you should, out of respect, offer to vacate the table. Most of the time, this sign of politeness and respect will be met with an offer for you to remain where you are.

Sunday mornings are a favourite and popular time for the « Stammtisch » to meet and gives the opportunity to bane the ear of 1 or 2 influential village characters.

### Wallsee-Sindelburg : « Bruckhof »

The oldest documented ancestor of Anton Bruckner is mentioned in the register of the Wallsee-Sindelburg region. If you go from CEd (near Amstetten) to Sindelburg, you will pass through the fertile hill of Teufelsberg, and then, cross the Sommerauerbach bridge. At about 200 meters from there, a peasant named « Jörg hueb au prugk » (George, near the bridge) was living in a house in 1449.

Today, the Lampersberger family (who produces local cider) runs a rustic restaurant-tavern inside the « Bruckhof » - the house of the peasant ancestors of Bruckner.

A commemorative plaque on the « B(P)ruckners » adorns the façade of the building since 1999 :

Haus der Urahnen

## ANTON BRUCKNER's

1400-1625

Gemeinde  
Wallsee Sindelburg

### Neureug bei Œd : « Gasthof Redl »

Josef (Josephus or Josepha) Pruckner « senior » was born in 1749 in Œd near Amstetten, in the region of Upper-Enns, Lower-Austria. He learned the trade of cooper (barrel-maker) in the work-shop of his father (who also made brooms) . However, his ideal was to become a teacher - and he did.

Not yet 16, Josef leaves his father's work-shop and goes to Linz for a period of 6 weeks in order to receive a formal training at the Imperial-Royal Academy (« Kaiserlich-Königlich Präparandie ») , located at « Hofgasse » Number 23, to become a teacher. This profession was the most noble after that of the priesthood.

The rise of the « servile farmer » to the ranks of the bourgeoisie was due to his marriage in 1765 with Maria Theresia Perger, the daughter of a wealthy stonemason of the town of Perg. The religious ceremony will be held in the town of Œd at the house Number 8.

For years, the couple will operate a renowned « Schankhaus » (inn) in Neureug near Œd : the « Gasthof Redl » . Today, a commemorative plaque adorns the façade of the establishment.

(The Pergers were, from generation to generation, inn-keepers by trade.)

Oed 8, 3312 Oed bei Amstetten - <http://www.gasthof-redl.at>

### Sierning : « Zum Krößwang Inn »

Sierning lies between Steyr and Bad Hall. This old town has been able to develop a small iron and steel industry.

The parish of Sierning is one of the oldest in the District of Steyr-Land in Upper-Austria. It was founded in the year 777. It will be mentioned between 985 and 991, at the Synod of Mistelbach.

The parish church of St. Stephen (« Pfarrkirche Heilig Stephan, St. Stephanus ») is located in the town-centre, on « Kirchenplatz » . It is a Gothic church with 3 naves. The construction started in 1288 and was completed in 1487. The square in front of the church sits on the site of a former multi-confessional cemetery, the « Friedhofgasse » .

The « Neuzeug » Tavern (« Taverne zu Neuzeug ») , right next to the parish church, was the childhood home of

Theresia Helm (Anton Bruckner's mother) . The beer-hall is still there at « Theresia-Helm-Straße » Number 28.

The building was gradually adapted from an « old and new » ensemble to a residential complex totalizing 11 residential units.

...

The ancestors of Theresia Helm are, on record, in Sierning and / or Sierninghofen, from the 17th Century. The name Helm is recorded in this part of Upper-Austria from, at least, as long ago as 1650 and had its own coat-of-arms. Bruckner's maternal grandfather Johann Ferdinand Helm, a Master knife-maker resident in Sierninghofen, soon became the owner of what the documents call the « tavern at Neuzeug » , where he led the life of a publican and bailiff of the manor at Gschwendt. Theresia Helm was born in that « tavern » (« Zum Krößwang Inn » located at « Neuzeug, Nummer 1 ») , on 6 April 1801. She often stayed at the rectory in nearby Wolfarn, where her aunt Rosalia Mayrhofer was the house-keeper. Theresia was a member of the church choir. In Wolfarn, she met Anton Bruckner senior (Bruckner's father) , a teacher from Ansfelden, in 1823 and married him on 30 September 1823. Bruckner often stayed in Wolfarn as a child visiting his mother's aunt.

...

The mother of composer Anton Bruckner, Theresia Helm, was born on 6 April 1801 in the building of the « Zum Krößwang Inn » at Number 1 Neuzeug Street, in the village of Sierning. (The place is now called the Neuzeug Tavern, at Number 28 on Theresia-Helm Road) . She was baptized on 7 April 1801, at 10 o'clock, in the parish church of St. Stephen (« St. Stefan Pfarrkirche ») . Her father, Johann Ferdinand Helm (an office governor) was the host of the inn ; he also kept the order in the pub which was mainly attended by raftsmen. Her mother, Anna Maria (« née » Mayrhofer) came also from Neuzeug. She died when Theresia was only 10 year old.

Theresia grew-up in a wealthy household. Her father, an administrator (« Amtsverwalter ») disposed of plenty of land property. His position gave him a social standing higher than that of a school teacher. He was an inn-keeper ; received a generous income as Gschwendt office governor in Neuzeug ; and was also a Justice department publisher.

After the death of Anna Maria, Johann Ferdinand married for a second time ; however, he passed away after only few years. In 1821, Theresia's step-mother married for a second time. She had now step-parents.

In 1817, Theresia works as a house-keeper in the presbytery of the parish of Wolfarn. But she must pause for few years to take care of her paternal uncle who became a widower. In 1822, she returns to her job at the parish. There, she will meet her future husband, teacher Anton Bruckner senior, which is 10 years older than her. The couple marries in Ansfelden, on September 30, 1823. Theresia will bare 11 children, but only 5 will survive.

Ansfelden : « Home Sweet Home »

Bruckner's mother and father were very different persons. The mother, extremely religious and very temperamental, sometimes treated the children with harshness. While the father, a school teacher and musician, was a conscientious, tender-hearted, good-natured man, inclined to the joy of life, who always sought peace at home - especially after offering free extra-hours at village dances.

There were not only parents and children at home. There was also the grandfather (who died on April 22, 1831, at the age of 82) and the unmarried aunt Anna Maria (born in Ansfelden in 1784) who was blind. Little Anton used to make fun of her because of this handicap.

The school teacher's apartment was very small at that time and, for us, it is hard to imagine how 7 people (Bruckner's mother gave birth to 12 children, but only 5 survived) managed to live in such cramped conditions.

In 1959, there was still the original furniture as well as a guest-book in Anton Bruckner's birthplace. The school of Ansfelden is located in the immediate vicinity of the church. Mentioned for the first time in 1600, it was originally a wooden structure ; this was replaced by a stone building in 1665. Adaptations in 1705-1706 and 1783 put the finishing touches to the building as Bruckner knew it in his childhood in the 1820's and early 1830's.

At that time, there was a close link between church and school, that is why teachers were not only under obligation to behave properly and as good Catholics, but they also had to serve as vergers and organists.

### Theresa Helm

According to her own words, Theresa Helm was « a resolute person » .“ Tonerl “, the first-born, was her favourite child.

According to Anton, his mother was a strong and determined woman, very musical in spirit, but often confronted with attacks of depression. The biographer August Göllerich junior has repeatedly emphasized the recurrent melancholic state in this family. At the end of his life, the composer will remember his mother's love but also the moments of tension where she completely lost control.

It was then that the father intervened wisely and said :

« Come “ Tonerl ”, mother is nervous. »

And they left the room together.

Infant, the young Bruckner was highly-receptive to music. He was always quick to be appeased by a few chords struck by his father on the home spinet.

« Tonerl » picks apples

The 6 year old « Tonerl » had 2 pairs of shoes : one pair with thin soles, and one pair with thick soles.

One day, the young boy was supposed to wear the hard pair of shoes to pick apples. But he wanted to take the more comfortable and light ones, feeling that the others were much too heavy for him.

The mother tried at first to use good words to dissuade him. Finally, her patience was exhausted :

« I will make the shoes fit easier for you ! » , she cried angrily, and administering a correction to the unruly boy.

Later, Bruckner recalled that he was very proud of his early stubbornness ...

### The siblings

Anton Bruckner is the eldest of a family of 11 children, 5 of whom will die at an early age. He is followed by 3 sisters (one of whom is blind) and a slightly handicapped brother (half-minded) .

**First child** : Anton Josef Bruckner (1824) had extremely polite relations with his parents (use of « vous ») .

**2nd and 3rd children** : The mother will give birth to 2 other boys (1825-1826) who will die soon after their birth.

**4th child** : Birth of Therese on March 23, 1828. She will be mortally infected by pertussis towards the age of one.

**5th child** : Birth of Rosalia (known as « Sali ») (bride's name : Hueber) on February 17, 1829, named in honour of aunt Rosalia Mayrhofer (the sister of Theresia Helm and godmother of little Anton) . She died in Vöcklabruck on May 5, 1898.

**6th child** : Birth of Josefa (known as « Pepi ») (bride's name : Wagenbrenner) on March 13, 1830. She died in St. Florian on July 3, 1874.

**7th child** : Birth of Ferdinand Alois in 1831. He died shortly after.

**8th child** : Birth of Ignaz (known as « Nazi ») on July 28, 1833, grappling with violent convulsions. He will eventually survive, but not without consequences.

**9th child** : Birth of Maria-Anna (known as « Nanni ») on June 27, 1836.

### « Tonerl's » singing lessons

« “ Papa ” noticed when Anton arrived (too) late from his singing lessons. Furious, he tried to grab him by the hair, but was only partially successful. My brother escaped without being hurt. »

(Ignaz Bruckner)

### Ignaz Bruckner

Ignaz Bruckner : Younger brother of Anton. The only other male-sibling to live past childhood (he was the 9th child of the family) . He will inherit a weakness in the eyes and will be considered all his life as a half simpleton. In 1851, Ignaz will act as a gardener at St. Florian until his vision begins to deteriorate. After which, he will be transferred as a servant, inside the monastery. One of its main functions is to be responsible for the operation of the bellows of the Abbey pneumatic organ (build by Josef Mauracher) , which is located in the Marian Chapel (« Marienkapelle ») . Ignaz always remained close to his brother. After the death of the composer, inheritance and payments related to copyright works will be bequeathed in equal parts, to Ignaz and his sister Rosalia (« Sali » Hueber) : which is worth about 10,000 Guilders. Ignaz Bruckner will die in St. Florian, on 4 January 1913.

### Bruckner's father failing health

The period of Carnival and private family celebrations were golden opportunities for Bruckner senior to increase his income. Despite failing health, he often taught late in the evening and spent sleepless nights playing the violin. Getting prescribed stimulants did not counteract his states of exhaustion and nervous fever, which became more and more frequent. He had to resign himself to stay in bed very often. It was already obvious that he could not overcome his malady. He was a victim of what was locally known at the time as the « School Masters' illness » , which consisted of over-work, alcoholism, sneaky tuberculosis and nervous exhaustion. He fought for his life for more than 6 months.

Ignaz Bruckner :

« I don't remember anything about “ papa ” when he felt well. But I do remember him when he was very sick. On one occasion, he called me by my name and I immediately fled. I remember him lying in bed ... »

« Mother often compared my brother Anton to “ papa ”. Years later, my brother became physically stronger than him. »

### Death of Bruckner's father

Seeing the gravity of the situation, the priest (the personal confessor of the sick, Father Karl Schneeweiß, 1808-1887) was summoned to administer the last sacraments. The pain of little Anton was so intense that he eventually fainted at his father's bedside. Exhausted, the 46 year old man passed away on Wednesday June 7, 1837. A diagnosis of « consumption » was mentioned on the death-certificate.

Ignaz Bruckner :

« When “ papa ” died, he was wearing a black cassock and a night cap - which was also black. »

Although a new cemetery had just opened outside the centre of Ansfelden, Anton senior will be buried in the courtyard of the parish church. This event will have a significant impact on the life of the young musician in the making.

« I liked the music at “ papa's ” funeral. I was laughing a lot. The lady officiating as a grave-digger said to me :

“ You must not laugh, it is your father who is dead. ” »

« I still remember the food that was served at the funeral. Because it was a day of fasting, we were allowed to eat “ Grießschmarrn ” (semolina pancakes) . There were also bread dumplings, horseradish, rice and grapes ! »

According to the law, Theresia Helm has 2 weeks to leave the function apartment at the old school of Ansfelden. She moves with her few belongings to the house Number 11 in the town of Ebelsberg where she will remain for the rest of her life - accompanied by her blind sister-in-law, Anna Maria, and the other 4 children - Anton's younger brothers and sisters : Rosalia (8 years old) ; Josefa (7 years old) ; Ignaz (4 years old) ; and Maria-Anna (1 year old) . She will hardly survive, becoming an assistant house-keeper and laundress. Luckily, her husband had already paid his due to the Linz Teachers' Association before his death. Theresia also had the support of family members except for her cousin Anton Helm who resides in the parish of Neuzeug. Anton still managed to spend a few days with his mother before his final departure for the monastery of St. Florian.

### The young Bruckner at St. Florian

**Summer 1838** : Anton Bruckner always enjoyed good food and plenty of it, as we know from an amusing story of his earlier days. In St. Florian, he once played the organ so strangely during the service that the Prelate called him at once and asked him, rather resentfully, for an explanation. Bruckner explained that at dinner, since he sat at the end of the table, he got only the remnants of meat which the others had left. With so little food, he could not play better. The Prelate promised improvement, and we hear of no further complaints on that score. Bruckner's thirst was as keen as his appetite.

...

« Anton Bruckner performed his task with highest Mastery, especially in his varied use of the organ stops and, with this, his appointment was assured. His achievements in Linz are well-known. I should only add that, during a conference of local teachers, he delighted us in church with his playing. Later on, I was a regular guest at St. Florian on holy-days and attended his organ recitals ; in later years, these became more obscure because of his growing absorption in the music of Richard Wagner. He was a diligent worker and a hearty eater. His appetite was well-catered for by the monks. His favourite dish was strudel and, for his sake, it often appeared on the table. At St. Florian, everyone went to their rooms after the evening meal ; but Bruckner would go and spend a few hours at the “ Gasthaus ” (Inn) , drinking rough cider with his old friends. » (Franz Gräßlinger)

...

Max von Oberleithner on Anton Bruckner :

As a boy in the monastery of St. Florian, Anton Bruckner heard lieder by Franz Schubert ; under the influence of what he heard, Bruckner made the decision to become a composer. The comment of a religious instruction teacher whom he, as he stressed, « very much revered » :

« If he wishes to realize his decision, he must keep away from women. »

According to the further record of this conversation, his self-understanding as a composer was irrevocably tied to the renunciation of sexual fulfillment. His confession to Oberleithner, that he « feared he would perish in this struggle » , is not, as usual, to be dismissed just as an anecdote ; rather, it brings-out into the open (in the doubtless multi-factorial genesis of his sickness) a participating factor : his sexual abstinence. His outlook on life was first and foremost strictly ethical and religious, according to which sexuality is only legitimized by the sacrament of marriage. In addition, Bruckner's strict and consistent adherence to this sexual-ethical requirement corresponds to the extreme development of personality traits that probably occupy the upper-levels on the societal rating scale but they are, on the other hand, found above average in compulsive personalities : excessive conscientiousness ; moral scrupulousness ; rigidity ; and conservatism - traits that in Bruckner's personality are undeniably pronounced.

For the formation of these personality traits, it requires an inherent potentiality in the person for their development, for whose actual development however (that is, whether developed less or more extremely) promoting or restraining factors are decisive.

One of these promoting factors of Bruckner's personality traits immediately suggests itself :

For if the climate of the monastery was well-meaning for him, one that encouraged his gifts, it was also an upbringing and lifestyle of regulation of everyday life, of strict observance of the laid-out orders and prohibitions. This structure, constituted of rules, orders and prohibitions that determined Bruckner's life there, allowed him to experience them also as support, as order, orientation and in part also as release from personal responsibility and, thereby, also serve the function of emotional relief.

...

As a young chorister, Bruckner kissed the hands of the canons in St. Florian and when the school teacher addressed his Superiors. Official formalism within the hierarchy of the Church and within the Monarchy had left inextinguishable traces on the boy.

**Windhaag : The assistant school teacher**

**1842** : Having attained certification as an assistant teacher, Anton Bruckner was sent to the small border village (approximately 35 houses) of Windhaag near Freistadt, in the Mühlviertler (located in the extreme north of Upper-

Austria) .

The old school-house (« Alte Schulhaus ») was given its present look in 1853-1854. Run-down and dilapidated during Bruckner's time, the building consists of only a single room at the ground-floor level.

Therefore, the 70 registered students were divided in 2 smaller groups : one class takes place in the morning, and the other in the afternoon. Bruckner's dedication and kindness will be emphasized by all of his students.

In 1895, the choral Society « Frohsinn » of Linz (whose director Bruckner had been intermittently between 1860-1868) had a memorial plaque affixed to the building.

The critical lack of space will force the authorities of St. Florian monastery to look for new premises.

Given his status as an assistant, Bruckner was to teach only children of the elementary level on a weekly basis. By religious conviction, he will not fail to speak to them of the « Celestial Bodies » !

However, he will take the risk of teaching reading, writing, religion, science (arithmetic, geography) and natural sciences (appearance of day and night, drawing the spherical shape of the earth on the black-board) during Sunday school - something unusual for the time.

Like his father, Bruckner supplemented his income by playing the violin at community festivities. (Out of this paltry sum, the young boy, already remarkably cautious, paid his first contribution to an insurance policy for old age.) The musical resources of the church were even more meagre than those at Ansfelden ; the organ and a few amateur singers and instrumentalists were all he had to work with.

The Sunday activity was contrary to the regulations imposed by his immediate superior, the irritable school Master Franz Fuchs (1787-1860) . A reprimand will soon follow ...

### Windhaag : The inimicable house-keeper

A man in Windhaag made the following illuminating remark :

« I would rather see my son a shoe-maker than a school teacher. »

Ernst Décsey called the average Austrian school « the village Conservatory » .

Bruckner's immediate superior, professor Franz Fuchs, treated the young man like a slave.

The « not enviable » daily chores looked like this :

Early rise : 4:00 am in the summer (5:00 pm in the winter) .

Taking the job of the sacristan : ring the chimes ; bring some mass-wine, help the priest dress for service ; light-up the lantern, ring the little bell, play the organ ; assist the parish priest in his ministerial duties ; teach the small children ; write notes ; ploughing ; make hay ; digging potatoes ; thresh grain ; ring the church-bell for the evening prayer.

9:00 pm : Ring the bells to mark the end of the day (called : « Huß-Ausläuten » - a ritual in place in Windhaag since the period of the Hussites) .

Once Bruckner intentionally slipped the priest's chasuble the wrong way (the front oriented to the back) . A trick that made « the man of cloth » stumble when walking. The twisted servant received a slap in the face for his bad joke.

On another occasion, Bruckner will enter inside the parish church with his red boots.

Modest as he was, Bruckner had never shown any sort of social pride, but being banished to the kitchen and the society of the maid of all work for his meals was a bitter demand. He hated being considered her equal and the girl, for her part, may have made a fool of this peculiar fellow who was so different from all the men she knew. What a theme for a dramatist a scene presenting a clash between the 2 sharply contrasting characters !

### Windhaag : On the menu

In the morning, Bruckner had to eat, along with the farm servant, the usual sour milk soup (« Säursuppen ») .

At lunch-time, he had to eat along with the house-people (« Dienstboten ») . The menu consisted of flour soup (« Brennsuppen ») , millet gruel (« Brein ») with cabbage or poppy noodles (« Maggnudeln ») , and occasionally also flour dumplings (« Maggnudeln ») .

Only twice a week, there was meat on the menu.

On Sunday, beef was served with horseradish, otherwise pork (« Schweinernes ») or smoked meat (« Gselchts ») with potatoes and cabbage.

### Windhaag : Enjoying oat beer

Occasionally, for supper, 3 large oat beer mugs brought great pleasure to Anton Bruckner :

« My God, with this, I do not have to eat any more ! »

### Windhaag : A haunting spectacle !

Late in the evening, the parish vicar of Windhaag-an-der-Maltsch, accompanied by « Herr » school Master Franz Fuchs and noble guests were sitting at the usual table of the local « Gasthaus » .

Suddenly, the pastoral servant rushed in the inn, shouting with terror :

« Something is happening in the cemetery ! »

The dignitaries hurried-up to the scene of the extraordinary event, and lo and behold :

Among the graves, lasciviously spooky flames are moving back and forth !

The first witnesses reported this horror-story which quickly spread in the village. The crowd of curious but hesitating spectators got bigger and bigger. Finally, a courageous soul dare to walk in the cemetery, and ... the mystery was solved.

The assistant teacher Anton Bruckner had glued sticks of wax candles on the back of a dozen crabs which quickly inflamed their bodies. He then released the poor crustaceans between the graves.

Bruckner finally got his revenge !

### Windhaag : the Sücka family

**1842 :**

Friendship was also offered to Anton Bruckner in Windhaag, for he was a welcome guest at the home of the weaver Sücka, to whose son he became both boon companion and mentor. They enjoyed playing violin duets together, with Anton Bruckner invariably taking the second part. Sometimes, father Sücka assisted them on the trumpet. Occasionally, village doctor Bezei joined them with his flute, and, once in a while, other villagers came with their instruments. They are said to have done fairly well, and this is not hard to believe, as Austria has always been the country for home music-making.

...

An amelioration was the support of a local weaver, Johann Sücka, who placed the family clavichord at his disposal. Although his employer, Franz Fuchs, has often been pictured as unsympathetic, partly as a result of friction with Bruckner over farm-work, he nevertheless provided a glowing reference when it was time for the young man to move on.

...

Like his father before him, Anton Bruckner supplemented his income by playing the fiddle at local dances and inns an obvious drain on his energy as it often kept him up until the early hours of the morning. He played duets with Franz Sücka almost every night. But there were some compensatory benefits, not least the friendship of Johann Sücka, a weaver by trade, and his family. Bruckner gave music-lessons to his 3 children, Maria, Rosalia and Franz, and prepared Franz for the teacher-training course in Linz. By way of recompense, Bruckner enjoyed a regular hearty breakfast at the Sücka household and « Frau » Sücka did his laundry. Johann played both clarinet and trumpet and would join his son (first violin) and Bruckner (2nd violin) in some domestic music-making. Bruckner was delighted when Sücka purchased a 53 key clavichord as he was able to practise on it to his heart's content !

...

Personal and musical contacts with the family of Franz Sücka : Anton Bruckner teaches the children (Maria, Rosalia and Franz) . He plays dance-music along with Josef Jobst, the Sückas, family doctor Bezei, and Anton Preinfalk from Leopoldschlag and Krackowitz.

In 1872, Josef Jobst wrote a « Ländler » which he had played with Anton Bruckner, Franz Sücka, Toni and Johann Maurer.

Possibly in Anton Bruckners' possession (exposed behind a glass in his little room in Windhaag) , five 2-voiced country-dances.

In Windhaag, Bruckner mentions for the first time suffering of a headache (migraine ?) .

...

In a short time, residents of the small town of Windhaag knew that the Sücka family (a family of local weavers) had offered hospitality to this young man passionate about music. Bruckner will deepen the mastering of the organ and the violin during his stay.

The Sückas (Weber and Zázilia) will serve Bruckner a « decent » breakfast (in order to get-back on his feet after playing all night !) accompanied by the usual and so tasty hot malt coffee (he will be happy to go without the horrible morning soup prepared by the maid of school Master Franz Fuchs) .

Maria, the eldest daughter of the family, reported about Anton Bruckner :

« My mother, Zázilia, took care of his clothes and underwear, as well as ensuring his overall decent look. »

Bruckner will feel at home very quickly with the Sückas. In recognition of so much generosity, he will give music-lessons in his spare time to the 2 young girls : Maria, the eldest ; and Rosalia, the younger.

## Bruckner, the enthusiastic swimmer

The Enns River offered great bathing opportunities during summer time. Anton Bruckner was an enthusiastic swimmer !

## Mühlviertel : The « Rocka Roas »

Although it was forbidden for Bruckner to play the violin at weddings or feasts at the local inn (especially on Sundays and holidays) , he never missed an opportunity to participate in order to increase his low incomes (as his father, Anton senior, did before him) . He was given an amount of 3 Kreuzers and the food was served to him for free.

The « Mühlviertel » region in Upper-Austria had a very special tradition : the « Rocka Roas » .

During the period of Carnival, the girls would meet each week in the afternoon on a different farm to sing, to work the cattails, to spin the linen, and, naturally, gossip. In the evening, after work, the boys came spontaneously to join them to dance until very late into the night.

Almost every evening, the young Franz Sücka (1st violin) was accompanied by his good friend Anton Bruckner (2nd violin) . Sometimes, the paternal Weber Sücka (a professional weaver, trumpeter and accomplished clarinetist) decided to join the spirited « fiddling duo » who lent themselves to improvisations. The town of Windhaag also provided a family doctor (Doctor Bezei) who played the flute and a group of young music-school students.

Bruckner always took the time to transcribe in his personal diary the most relevant information concerning his female partners during the village dance of the previous night. He wore relatively short and very loose trousers (not very elegant) which favoured his foot-work at the organ but also his leg movements and his steps on the dance-floor.

His written comments included several nicknames given to the dresses of his charming ladies :

« Zottel » , « Gschnürleten » , « Gigerl » , « Blauen » , « Weichen » .

A peasant once said to Bruckner :

« Let me tell you : My boy won't leave the house unless a village dance is organized by the shoe-maker's ! »

## Bruckner, the agile dancer

Although Bruckner's pocket calendars hide any emotional impulse, the manner of their conduct is, for him, a typical behavioural tendency which, in contemporary terminology, would be characteristic of an anankastic (obsessive-compulsive) personality. Certain pages of the pocket calendar convey the appeal of statistics. Daily, until one day before his death, Bruckner recorded the number respectively each day of prayers performed (separately, by the type of prayer ; each marked by their first letter) with the appropriate number of strokes. Recorded also was the number of dancing

partners, with whom he (an admirer of Johann Strauß) danced during a season. As a singular occurring behaviour, this could be tolerated as a variation of normal behaviour. However, as seen in these and similar behavioural characteristics of Bruckner's, aspects of his personality are occasionally (especially at times of multiple stresses) seized and controlled by an inner personal compulsive dynamic.

...

Anton Bruckner always had been a lively and good dancer. In his hometown, he had gone to gatherings and joined in the country-dances, maybe to the tunes of Franz Schubert and Ludwig van Beethoven. In Vienna, the waltzes of Johann Strauß may have inspired him. He loved this Viennese composer's music as much as did Johannes Brahms ; and, vice-versa, Strauß gave him full-recognition as a composer and wired him after the first performance of the 7th Symphony :

« I am deeply moved ; it was one of the strongest impressions in my life. »

Bruckner, for his part, is reported to have said :

« I like a waltz by Johann Strauß better than a Symphony by Brahms. »

Max Graf :

« Viennese women had refined the waltz rhythm, which was originally that of a peasant dance, even by the time of the Schubert waltzes. »

« The Viennese considered himself indestructible even in hard times. He was the born optimist. This quality, along with his sensitiveness and his appreciation of the beauty of Nature, has made him a musician. His unworried, care-free attitude toward life he expressed by singing and playing and dancing, over wine at the inns, at festivals on the village green, on mountain-climbing excursions. One sang or listened to music because one drank, and one drank because one wanted to sing. All this may have been primitive music, even animalistic music, but through the Centuries, it developed the Viennese into a musician and Vienna into a city of music. »

...

In Bruckner's diary, 2 antithetical forces in him can be seen in head-on clash. The same diaries in which he conscientiously lists how many quadrilles he has danced with a certain young lady at the annual « Concordia-ball » , contain strange abbreviations of repeated A's and V's, often heavily under-scored, standing for the daily number of « Ave Maria's » and « Pater nosters » (« Vater unser ») he had prayed. Undoubtedly, there is a psychological link between his unsuccessful love-affairs and the strangely fanatical side of his religious worship.

**The Biedermeier mania for dancing**

A veritable mania for dancing seized the Viennese population during the Biedermeier era : dance-halls accommodating several thousand were opened and regular dances were held.

Traditionally, religious feasts such as Christmas had been celebrated in larger social groupings or institutions such as the Church, the guilds or work-shops. Maria Theresa reduced the number of religious holidays. The trades that had been organized in guilds were increasingly replaced by manufactories, there was a growing separation between work-place and domestic living-space, and traditional bonds within the community started to loosen. As a result, these feasts began to be celebrated within the family circle. Many underprivileged people such as journeymen or female servants, who were not able to set-up a family for economic and legal reasons, now, for the first time, had a modicum of leisure-time at their disposal which they could spend according to their inclinations. They became the « consumers » in the newly-established places of entertainment.

In the suburbs, resourceful entrepreneurs founded large-scale places of entertainment during the 1830's for the diversion of the increasingly « entertainment-addicted » population : the Tivoli in Meidling, Dommayer's Casino in Hietzing and the « Sophiensäle » dance-hall, originally a bathing establishment. Magical pleasure domes were built : the « Apollo-Saal » in the suburb of Schottenfeld had artificial lakes with swans and waterfalls, and, in the « Neues Elysium » restaurant-café on « Johannesgasse » Number 4, one could embark in a horse-drawn railway on a voyage around the world, passing through 5 rooms decorated as the different continents. The ever larger and more spectacular establishments were however no longer visited by all classes, as a majority of the Viennese population could not afford such pleasures. During the « Ringstraße » era, the ball-rooms were a centre of attraction for the middle-classes.

**1830** : The « Gesellschaft der Musikfreunde » invites guests to dance with the establishment of its first Ball.

**WAB 59** : « At the feast » / **WAB 86** : « Table song »

« An dem Feste » (At the feast) , **WAB 59** : Song in D-flat major composed by the 19 year old Anton Bruckner in 1843 during his stay as school teacher's assistant in Kronstorf.

Text incipit :

« An dem Feste, daß uns heute zu dem frohen Kreis vereint. »

(At the feast that united us today to the joyful circle.)

Bruckner composed this youth work on a 5 strophe text of the parish priest of Kronstorf, Alois Knauer. He dedicated it to Josef Ritter von Peßler, the parish priest of Enns. The work was performed on 19 September 1843 in the church of Enns.

...

In his period in Kronstorf, Bruckner very regularly visited close-by Enns, where he studied with Leopold von Zenetti. Alois Knauer was the priest in Kronstorf and wrote the text of this table-song. His colleague Joseph Ritter von Peßler was a priest in Enns and received the composition with a dedication for his birthday :

« Auf das feierlich Geburtsfest des Hochwürden Herrn Dechant und Stadtpfarrers in Enns am 19. September 1843. »

The performance in the parish church of Enns was probably sung by the Enns Social Club. After 50 years, on 22 February 1893, Bruckner revised the composition (only slightly) , and it was given a new text by Karl Ptak. As a table-song or « Tafellied » (**WAB 86**, Volume XXIII/2, Number 36 : 3 stanzas) , Raoul Mader conducted this version at the Viennese Academic Singing Society on 11 March 1893. Later, adaptation followed by Alfred Zehelein and Ludwig Carl Kraus. This choral-piece has also been passed down for 4 part mixed-choir.

Compared to Windhaag, Bruckner felt very comfortable in Kronstorf because he was accepted by most of the people in his entourage. The school Master of Kronstorf, Franz Seraph Lehofer, indulged Bruckner in his musical endeavours. He allowed him to keep Sücka's 53 key clavichord in the school-house (the living quarters were too small) where, according to anecdotes, he often practised (playing Bach and Schubert) until the early hours of the morning which will eventually irritate the neighbourhood but especially his roommate !

« The old but sturdy “ Frau ” (Theresia) Lehofer often tolerated me until 1:00 am. She knew that my intensive practice was essential for my development as a musician. I was really sorry to annoy the others. »

(August Göllerich / Max Auer, Volume 1, page 221.)

### Kronstorf : « Gasthaus Steinleitner »

The « Brucknerplatz » in Kronstorf has been the host since 1838 of a massive column. At that time, it was set-up as a plague memorial by Friedrich Wilhelm, the host of the « Unterer Wirtshausen » (lower-inn) (today's « Steinleitner » Inn, located at Number 54 on the « Hauptstraße ») . In 1934, the column was transformed into a war memorial, but, in 1983, the column was restored to its original function after the creation of a new war monument.

The « Gasthaus Steinleitner » is a 2 storey 4 cornered building dating back to the 17th Century. The street-front shows a fresco painting from the year 1828, which represents the history of the « Egyptian Joseph » . Between the windows, Joseph, his father Jacob and his brothers are depicted as life-size.

### Kronstorf : « Gasthaus Rahofer »

The guest-house « Rahofer » located at Number 56 on the « Hauptstraße » is an imposing 2 storey square building with a court-yard, which formerly belonged to the Count of Lamberg Castle. The interior partly shows a building fabric still preserved from the 17th Century, with numerous architecturally valuable vaults. The façade structure dates from the middle of the 18th Century.

In the course of the Austrian War of Succession, Bavaria and the French invaded Kronstorf in 1741. Napoléon Bonaparte took command of southern Germany in 1805. At the beginning of November 1805, he was coming from Steyr targeting Kronstorf near the Upper-Tavern (« Oberen Taverne ») (today's guest-house « Rahofer ») .

### St. Florian : « Landhotel und Gasthof »

**1833-1967** : The barn (managed by « Herr » Beschäl) is used as a stopping-point for traveller. The horses are quartered at the stable (owned by « Herr » Paura) . From February 1 to June 30, breeding season, the site is fully-occupied by stallions - in order to cover the mares of private breeders.

**1858** : Erection of a new house to replace the previous wooden structure - already owned by « Herr » Johann Dannerer and « Frau » Juliane Dannerer.

**1887** : The installations are mentioned for the first time in the « Land » register as a guest-house ; formerly, the « Schneider-Sailer-Haus » .

**Around 1890** : A picture (photo) of the site is taken from the church tower of St. Florian-am-Inn.

**1893** : Another barn and horse-stable are built.

**Wednesday, 2 May 1945** : The inn is under heavy Allied artillery fire. A shell shot from a tank hits several walls.

**1951** : The property (up to now owned by the Dannerer family) is handed-over to « Herr » Josef Moritz and « Frau » Hildegard Moritz. Under this new administration, the inn will increase its popularity - locally and abroad.

According to the older residents of St. Florian, the inn had a nickname : « Gasthaus zum Geißpitz » .

**1958** : Building of a hall above the stables.

**1989** : Expansion work to the inn - addition of an entire floor ; rooms are also enlarged.

**Since 16 July 2004** : The « Landhotel Hotel & Gasthof » of St. Florian is owned by the brewery « Josef Baumgartner GmbH » .

**June 2008** : Inauguration of the « new » « Landhotel und Gasthof St. Florian » . « Frau » Azer (with the help of family members) takes over the lease and continue to manage the inn in the great family tradition.

**2011** : Some renovations are carried-out in the hall, the Schärtinger lounge, the dining-room and the kitchen.

...

**1833-1967** : Diente das Anwesen als Beschälstation ; Von Stadl Paura wurden die Pferde hier einquartiert ; Bedeutung für Beschälstation : Es handelt sich um eine Pferdezucht an dem die Zuchthengste (Beschäler) während der Deckzeit (1. Februar bis 30. Juni) aufgestellt sind, um die Stuten der Privatzüchter zu decken.

**1858** : Wurde das Haus erbaut, vorher stand bereits ein Holzhaus Besitzer waren Herr Johann Dannerer und Frau Juliane Dannerer.

**1887** : Erstmals im Grundbuch als Gasthaus registriert ehemaliges « Schneidersailerhaus » .

**Um 1890** : Aufgenommen vom Kirchturm aus St. Florian am Inn.

**1893** : Folgte noch ein Bau von Scheune und ein Pferdestall.

**1945** : Am 2. Mai stand das Gasthaus unter Beschuss der Artillerie, eine Panzergranate durchschlug mehrere Wände.

**1951** : Wurde das Anwesen an Herrn Josef Moritz und Frau Hildegard Moritz (ehem. Dannerer) übergeben. Unter dem Gasthaus zum « Moritz » war es weit und breit bekannt und beliebt.

**1958** : Folgte der Saalbau über dem Stall.

**1989** : Erfolgte der Umbau - das Gasthaus wurde mit einer ganzen Etage aufgestockt und es wurden lauter Zimmer ausgebaut.

Laut Angaben der älteren Bewohner von St. Florian hatte dieses Gasthaus einen Spitznamen und hieß « Gasthaus zum Geißpitz » .

Seit **16. Juli 2004** ist das Landhotel Hotel & Gasthof im Besitz der Brauerei Josef Baumgartner GmbH.

Im **Juni 2008** die große Neueröffnung für das « Landhotel und Gasthof St. Florian » .

Frau Azer, gemeinsam mit der Familie, übernimmt die Pacht seit **2008** und führt es bis heute in alter Tradition und familiärerer Atmosphäre weiter.

Im Jahre **2011** wurden noch einige Renovierungsarbeiten in der Gaststube, Schärldinger Stüberl, Saal und in der Küche durchgeführt.

**Linz : Jörger Freihaus (Landkanzlei, Handelsakademie)**

At the age of 16, Anton Bruckner studied Latin and attended a 2 year teacher's training course at the « Präparandie » College in Linz (located at « Hofgasse » Number 23) for his social advancement, while continuing his development as a musician.

The students of the Institute were actively involved in Linz's musical life ; in particular, at the « Minoritenkirche » (Friars Minor Conventual Church) where Viennese Classics such as Wolfgang Amadeus Mozart and Franz-Josef Haydn could be heard.

### Linz : « Gasthof zum Bayerischen Hof »

Karl Seiberl :

« Bruckner became cathedral organist in Linz. At that time, we ran into each other only by chance. All I know about him is that he was continuing his Latin studies with a student in the upper-part of the grammar school. His social life centred on the “ Gasthof zum Bayerischen Hof ”, where he had his lunch, and where he was able to meet lawyers, whose company he preferred. »

Bruckner was so well read in the Bible that he could hold his own against many theologians. He also showed a lively interest in Christian literature, such as David Friedrich Strauß's « Das Leben Jesu » , a very controversial book at the time.

### Bruckner unleashes his power

Anton Bruckner ended his training in Linz with excellent grades, but ...

**Friday, 30 July 1841** : Public organ examination. Bruckner only receives the mention « good » .

The teenager who was much in the mood for trials and testimonies, regarded this result as disgraceful. So, he did not rest until this stain was eradicated from his « dossier » .

When he took the final examination in 1845 in front of senior teachers from major schools of Linz, he asked his former (and strict) St. Florian organ teacher, Johann Nepomuk August von Dürrnberger, to submit a difficult theme to develop. He performed so masterfully in the form of an improvisation, that the delighted Dürrnberger, who had been quite dismayed by the average note of his pupil, assigned the mention « very good » .

### Bruckner starts teaching

In **September 1845**, the young Anton Bruckner signed a contract of employment with the Seminary and Market School of St. Florian, thereby returning to the school that he had attended as a boy-chorister. He taught at the school for a decade, first as an assistant-teacher, and later, as an Upper-School teacher. From 1850, he also served provisionally as the monastery's organist. Although, in addition to his duties at school, Bruckner also taught the boy-choristers singing and violin, he still found time to give private lessons to his piano pupils. Bruckner gave piano lessons on a valuable « Bösendorfer » grand piano which he had inherited (with an harmonium, a small table and few chairs) from his friend and patron, the monastery clerk Franz Sailer (Bruckner's brother Ignaz's godfather) after the latter's death. (It seems

that Sailer bought it during an exhibition held in a country house in Linz, in 1848.)

Among his pupils were the 3 children of the notary Josef Marböck, the daughter of the diocesan magistrate Ruckensteiner and a 16 year old girl, Aloisia Bogner, who was the daughter of his former teacher, Michael Bogner.

### St. Florian : School House

The Baumberger Café and Pastry-Shop at « Marktplatz » Number 4 is located in the building of the former St. Florian school house (which was first mentioned in 1561) where Anton Bruckner taught for a decade (1845-1855) .

The specialities of the house : St. Florian and Bruckner tarts !

### Aloisia Bogner : Bruckner's first flamme

Aloisia (aka : Aloysia, Louise or Luise) Bogner is the eldest daughter of St. Florian's monastery music-teacher Michael Bogner (the former voice professor and immediate Superior of the young Bruckner, also in charge of the boys' choir) . Bruckner has lived in this « home of adoption » since 1845. He returns 5 years later. The new assistant-teacher aged 26 falls in love with Aloisia, his young and charming 16 year old piano student. This will become his first idyll.

Bruckner will offer his most beautiful « love songs » by sneaking them under her bedroom window. The « Steiermärker » , a stylized « Ländler » from Styria (in A-B-C-A form) in G major for piano (**WAB 122**) is an example.

One day, he will confess to Aloisia his deepest feelings but in a most unorthodox and clumsy way :

« Wann Sie meine Frau werden möchten, tät i lhna einsperren ! Da mag i Eahna nimmer ! »

(« If you ever have the idea of marrying me, I would have to locked you up ! »)

She will briskly express her refusal and marry another man the following year.

During a mass celebrated in St. Florian many years later, Bruckner, the organist, will reconnect with Aloisia.

He will go to meet her in a friendly way, saying with a smile :

« You are the sand that extinguished my first flame. »

Bruckner will express his profound disappointment by composing the cantata in B-flat major entitled « Entsagen » (Renunciation, **WAB 14**) - scored for SATB choir or quartet, soprano or tenor soloist, and organ (or piano) .

### Tragic death of Johann Baptist Weiß

**Wednesday, 10 July 1850** : In the morning, a police officer approaches the cottage of Johann Baptist Weiß, uncle and godfather of Anton Bruckner. Terrified, the man fled to the village cemetery where he shot himself in the head. Weiß, under pressure, was forced to pay-off a huge debt for which he was not responsible, which consisted of a misappropriated amount of money belonging to the parish church of Hörsching. Bruckner will try several times, but in vain, to persuade the church authorities to entrust to him the skull of his revered relative.

### The notary of Melk

Anton Bruckner will often go to the abbey-town of Melk to pay a visit to his former St. Florian colleague, the notary Josef Marböck (and his wife Marie) . As for them, the 3 oldest children (Marie, Josef and Moritz.) will have the great privilege to receive private piano lessons from the Master.

(Bruckner came into close contact with Marböck after Franz Sailer's death on September 13, 1848.)

A commemorative plaque (recalling the visits covering the period 1875-1876) can be found near one of the windows on the second floor of the house bearing the Number 12 on the « Hauptstraße » . The Melk basilica is one of the first pilgrimage destinations in Austria for obscure reasons for miraculous cures ...

The 3 Easy Pieces (G major ; G major ; and F major) (« Drei kleine Stücke ») (**WAB 124**) were composed for the children of Josef Marböck, to be played on their father's birthday on March 19.

**Saturday 19 March 1853** : Marie junior and Josef junior play for their father Josef Marböck senior the first of the three 4 hands piano pieces (**WAB 124**) . « Frau » Marie Marböck senior notes the event on the music-score's cover-page.

**Sunday, 19 March 1854** : Marie junior and Josef junior play for their father Josef Marböck senior the second of the three 4 hands piano pieces (**WAB 124**) . « Frau » Marie Marböck senior notes the event on the music-score's cover-page.

**Wednesday, 12 September 1855** (Mary Name-Day) **or Sunday, 16 September 1855** : Marie junior and Josef junior play the third of the three 4 hands piano pieces (**WAB 124**) . « Frau » Marie Marböck senior notes the event on the music-score's cover-page.

### Emma Krenn (born Thaner)

Anton Bruckner was madly in love all his life. One of his former pupils from Linz, Emma Krenn (born Thaner) , reports that he inevitably took fire for any well-turned young girl, « as long as she was 16 years old » !

His sincere but crude manners « vis-à-vis » his young conquests were for them an incentive to quickly scamper-off.

He never knew how to find « the » appropriate attitude.

While in his youth, he used unbelievable detours to declare himself, saying, for example, to a young girl :

« Wann Sie meine Frau werden möchten, tät i lhna einsperren ! Da mag i Eahna nimmer ! »

(« If you ever have the idea of marrying me, I would have to locked you up ! »)

He then fell into the other extreme, and began to speak of marriage at the first encounter. This approach was less successful as the age of those whom he met did not vary, ... so to speak.

...

Emma Thaner, one of his former pupils at Linz, where he was Cathedral organist for many years, has given us this picture of the rustic swain, for even though he lived in cities, first Linz and then Vienna itself, Bruckner's peasant upbringing never deserted him. His speech was provincial, his clothes unpressed, his table manners atrocious. Her pathetically amusing sketch of the always courting, always frustrated Bruckner is given us in Max Auer's « Anton Bruckner » :

« Love played many a prank upon him. I believe he was in love with everyone of his girl pupils who had passed her 16th year, though it was the dark-eyed, black-haired ones whom he preferred above the others (...) »

« I can still see him before me, telling about his experiences and enlivening his stories with expressive gestures, while he would cast frequent side-long glances towards a large mirror. He loved to talk about his “ conquests ” (as he called them) which were in reality only his pursuit of this or that girl (she might have been a servant girl for all he cared, so long as she was pretty) . How happy he was when at a turning of the way, his “ victim ” would finally bend her head nervously in answer to his effusively “ polite ” greeting, giving him (as he called it) “ a smile full of meaning ”. Invariably, he would end these stories in a voice raised to an exultant pitch, exclaiming triumphantly, “ I'm a regular devil !! ” Then, he would gaze at himself in the mirror with frank admiration. »

...

Emma recalled her years of study with Bruckner, describing him as a « strict teacher who took a great deal of trouble with his pupils » and mentioning, « inter-alia », his occasional vanity and keen eye for feminine beauty. She was, by her own confession, not a particularly talented pupil and never learned to play « Stille Betrachtung an einen Herbstabend » (WAB 123) which she found too difficult.

**Saturday, 10 October 1863 : WAB 123** - « Stille Betrachtung an einem Herbstabende » (Quiet meditation on an autumn evening) , a touching character piano-piece of 58 bars in F-sharp minor (sketch) .

Written in Linz, this composition with its reflective underlying mood (the title which accompanied the clean copy of the sketch was « Herbstseufzer », or « Autumn Sighs ») was dedicated to Emma Thaner, who took weekly lessons during the years 1857 to 1863. According to her testimony, the « unavailing anticipation of the beloved » served as an underlying programmatic idea for the work.

According to Walburga Litschauer, the « Venetianisches Gondollied » (Venetian Gondola Songs, a paraphrase of the « Lied ohne Worte »), Opus 30, No. 6, by Felix Mendelssohn-Bartholdy (« the Mozart of the 19th Century » as Robert Schumann called Mendelssohn) clearly served as a model for Bruckner. To a great extent, these 2 lyrical works share common grounds in terms of key, tempo, rhythm and realization.

A remarkable feature is the persistence of Bruckner in a densely constructed cadenza prior to the repetition :

Bruckner's individuality here makes itself felt, an individuality which could now (after the conclusion of his studies with Otto Kitzler and his official « absolution » in June 1863) express itself in « free creation » .

« Bruckner Gesamtausgabe », Volume XII/2, No. 4.

### Antonie Werner

Texts and dedications of several lieder and piano pieces by Bruckner, composed in 1850, reveal the appearance of another « flame » :

« Fräulein » Antonie Werner (the 16 year old daughter of a tax-collector) which he met shortly after his appointment as teacher in St. Florian.

The sparks will be short-lived in the heart of the young man as this new proposal led to another refusal. To aborted love-affairs were added difficulties with regard to the free development of his musical ambitions.

Loneliness, lack of confidence and the disengagement of the monastery authorities marked the second half of Bruckner's 10 years in St. Florian - which could bring him to a human and artistic crisis.

But fortunately, his thirst for knowledge and social advancement managed to sweep-away all other personal considerations.

### Isolation of Bruckner

The tragic suicide of his beloved cousin (and godfather) , composer Johann Baptist Weiß, surely had serious repercussions on the lack of self-confidence of the young Bruckner. The uncertainty about his situation as an organist in St. Florian also complicated things. As evidence, he will refuse during this period many lucrative offers.

Anton Bruckner had to face some isolation. He was frustrated not to be appointed titular organist at St. Florian, but also not to be able to marry. The monks were the only persons he could lean on, sentimentally and sensitively. Only there was he accepted with understanding, being a deeply neurotic person.

This melancholy was characteristic for many of his ancestors, his 3 sisters and his mentally retarded brother, Ignaz, and he felt very lonely.

On **March 19, 1852**, he wrote to his old friend from St. Florian, the singer and organist Josef (Eduard) Seiberl (1836-1877) now attached to the « Marienkirchen » :

« I am always sitting alone, being poor, lost and melancholic, in my little room. Give me your news soon. »

(August Göllerich / Max Auer, volume 2/1, page 134.)

Regardless of the complaints, Bruckner has not ceased to study, to work assiduously to guarantee his income and to gain a certain social stability.

### **WAB 83 : « Toast » Fanfares**

**1851** : The « Toast » Fanfares are miniatures that Anton Bruckner composed as gifts to choral Societies. The « Sängersprüche » (Singers' Mottos) No. 1 in D major (« Ein jubelnd Hoch in Leid und Lust ») and No. 2 in A major (Lebt wohl, ihr Sangesbrüder) for male-chorus « a cappella » (**WAB 83**) were written at St. Florian, in 1851, at the request of old friend from St. Florian, the singer and organist Josef (Eduard) Seiberl, « Kapellmeister » of St. Marienkirchen an der Polsenz, and the Liedertafel « Eferding » for performance at the Passau « Sängerfest » .

Motto No. 1 :

« Ein jubelnd Hoch in Leid und Lust dem deutschen Lied aus voller Brust »

(A full-breasted jubilant high, with both sorrow and lust, in honour of the German song.)

Motto No. 2 :

« Lebt wohl, ihr Sangesbrüder, lang noch ertönen eure Lieder »

(Farewell, my singing brothers. Your songs will resonate for ever.)

### **St. Cecilia's Day**

As a musician, Anton Bruckner made sure he always honoured St. Cecilia's Day.

Especially, in **1852** :

« I made a colossal idiot of myself then. »

The drink was punch and, in proposing a toast to the Saint, Bruckner held forth on her life and works without knowing much about either. But, on the way home, he lost the key to the great organ, and he was to play the next morning at 7 o'clock. How could he find it again ? There was nothing for it but to get the boys up early and set them looking ; fortunately, they found the missing key with time to spare.

### Prelate Michael Arneth

Anton Bruckner seems to have spent rather more time in lively company in those early days :

« The Prelate Arneth used to like me a lot, but he changed his tune. »

He once said that if the visits to the tavern didn't stop soon, he would have Bruckner and the organ thrown-out. « It struck me that if the " Herr " Prelate had thrown both me and the organ out together, things would have been all right. I wrote a Cantata for the " Herr " Prelate's Name-Day and he arranged for me to get 30 Florins holiday money in return. But I wasn't able to thank him ; he never let me. »

### St. Florian : « Gasthof Zum goldenen Löwen »

« At the Golden Lion » Inn (« Gasthof Zum goldenen Löwen ») is located at « Speiserberg » Number 9, right next to the entrance of the Augustinian monastery of St. Florian and the historic Fire Brigade Museum.

The guest-house was first mentioned in official documents in 1742.

This true village inn offers a magnificent view of St. Florian's market-place.

An Upper-Austrian delicacy, the « Anton Bruckner dish » , complete with smoked meat and « sauerkraut » (pickled cabbage) , which was the composer's favourite, is not exactly what we can called ... light cuisine !

### Vöcklabruck : Bruckner's second home

The village of Vöcklabruck and its surroundings are closely linked to Anton Bruckner. In addition to St. Florian monastery and the cities of Linz and Vienna, this little town must be particularly proud of its role in the destiny of the composer.

**Sunday, 14 January 1855** : Pastor Thomas Herz from Ebersberg announces that nobody opposed the wedding of Rosalia Bruckner (the 5th child of the family, born on 17 February 1829) with Johann Nepomuk Hueber (the former gardener

of St. Florian monastery, born in 1827) .

**Tuesday, 16 January 1855** : Rosalia Bruckner marries Johann Nepomuk Hueber at St. Ulrich parish church in Vöcklabruck. We do not know if Anton Bruckner played the organ during the ceremony. The old historical instrument (in very bad shape) was affectionately baptized « Kletzentruhe » .

The couple will establish a local nursery and garden centre (which is still in operation today !) : a first for the town of Vöcklabruck.

A memorial plaque can be seen on Johann Nepomuk Hueber's Gardener House (« Hueber-Gärtnerhaus ») located at « Graben » Number 15.

**Saturday, 9 June 1855** : Anton Bruckner's niece Johanna Hueber is born in Vöcklabruck.

**Saturday, 13 June 1857** : Anton Bruckner's nephew Anton Hueber is born in Vöcklabruck.

**Saturday, 19 May 1860** : Anton Bruckner's niece Monika Hueber is born in Vöcklabruck.

**Saturday, 4 April 1863** : Anton Bruckner's nephew Theodor Hueber is born in Vöcklabruck.

**Thursday, 9 August 1866** : Anton Bruckner nephew Gustav Hueber is born in Vöcklabruck.

**Tuesday, 5 August 1884** : Laura Hueber, daughter of Bruckner's niece Johanna Hueber, is born in Vöcklabruck.

Anton, the eternal bachelor, was « attracted » by Rosalia's cooking skills : she was a real « cordon bleu » !

Bruckner will maintain an abundant correspondence, marked by tenderness and brotherly love. Over the years, he will send her many gifts. (Today, the descendants of Bruckner's sisters and sisters-in-law treasure these numerous artifacts.)

Over a period of 40 years, he will spend part of his annual vacation in Vöcklabruck with the Huebers. He will feel at home each time.

Bruckner was not only a familiar figure in this town (he had a lot of friends) but also a key-element of its musical life. He founded the « Vöcklabrucker Liedertafel » (Vöcklabruck Choral Society) .

...

**1855** : St. Florian's organ, violin, piano, voice, harmony and counterpoint teacher Johann Nepomuk August von Dürnberger was particularly helpful in encouraging Bruckner to apply for the vacant position of cathedral organist in Linz.

## St. Florian : « Gasthaus Sperl »

Following the death of Michael Arneith, Friedrich (Theofilus) Mayr was appointed new abbot of St. Florian.

For the occasion, Anton Bruckner wrote his most ambitious work to date, a « Missa solennis » in B-flat minor. (WAB 29) for 4 part mixed-voice choir, soloists, orchestra and organ.

**Thursday, 14 September 1854** : The Mass is premiered at the abbey church during the induction of Bishop Friedrich I (Mayr) .

« Bruckner's " Missa solennis " is a musical summa of the first 30 years of his life. »

Robert Führer saw the score and suggested to Bruckner to study with Simon Sechter. Bruckner showed Sechter the Mass and Sechter accepted him as a pupil. The « Missa solennis » was the last major work Bruckner wrote before concluding his studies with Sechter, who did not allow his students free composition while studying with him.

Having worked furiously to prepare the Mass, for the first performance, Bruckner was deeply hurt when he was not included among the distinguished guests invited to the banquet following the ceremony (perhaps, because it would not have been appropriate in terms of the « étiquette » of the day for a mere artisan to be at the table with such notables) . For this reason, he will be angry with the servers.

August Göllerich junior records that he finally booked a table for himself, at one of the local inn, the « Gasthaus Sperl » , ordered a 5 course dinner with 3 kinds of wine, and began his lonely celebration with the words :

« The Mass deserves it ! »

(« Mess' verdient's ! »)

Bruckner's personal situation at St. Florian did not seem to suit him anymore. He became increasingly frustrated about his material conditions, partly because of the provisional status as organist. That is why he will start to project himself beyond the walls of the monastery.

## Gmunden : « Gasthof zur Goldenen Sonne »

When he was in Gmunden, Anton Bruckner always stayed at the « Golden Sun » Inn and Tavern (« Gasthof zur Goldenen Sonne ») located at « Theatergasse » Number 4 (originally, an old salt warehouse) .

A commemorative plaque, placed in the inner court-yard, recalls the many personalities who stopped there :

« Since 1596, this Hotel has seen the passing of many important personalities such as Franz Schubert, Nikolaus Lenau,

Anton Bruckner, Karl Goldmark, Johannes Brahms, Johannes Evangelist Habert, Friedrich Hebbel, Joseph Victor von Scheffel et Peter Rosegger. In 1779, the German Emperor Josef II of the Holy Roman Empire lived here. In 1618, this was the baker's house ; in 1641, the butcher's house. In 1966, Ernst Hartleitner resurrected the arcade court-yard as part of a renovation project. The site is now accessible to the public through a new access. »

(Today, you will find the « Sonnenhof » Chinese Restaurant on ground-floor.)

### Bruckner in Linz

Anton Bruckner left St. Florian to settle permanently in Linz, in order to assume his full-time responsibilities.

For Bruckner, who was brought-up in the country-side and was afraid of the « big city » , the capital of Upper-Austria. meant « noise and hazard » .

He found completely different life conditions : an urban agglomeration with a « bourgeois milieu » and fixed rules of social conduct.

In spite of shyness and reserve, the gregarious Bruckner will still visit carnival evenings and dances as an eager participant.

Beside his activities as organist, Bruckner took time to visit Linz's rich burghers and poor families.

He will earned extra-income from private piano lessons, gathering a circle of pupils around him (the « Linz Circle ») , and, thus, accessing to the city's public life.

### Linz : Remedies for Bruckner

The accounting book, entitled « Cathedral Church Accounts 1850-1860 » (« Domkircherechnungen 1850-1860 ») , mentions at pages 32 and 123 the lists of « disease remedies » for organist Anton Bruckner.

### Linz : Bruckner's apartments

Anton Bruckner will reside at 4 different places in Linz :

**1840-1841** (« Präparandie » period) : « Wohnhaus » located at « Pfarrgasse » Number 11. Commemorative plaque offered in 1914. The original building no longer exists. It was demolished in 1951 after serious damage due to WWII bombings.

**Tuesday, 13 November to Saturday, 22 December 1855** : Back in Linz, Bruckner found a place to live near his previous apartment of 1840-1841 : « Pfarrgasse » Number 7. Commemorative plaque offered.

**Monday, 24 December 1855 to October 1868** : The official residence of the Sacristains, located at « Pfarrplatz » Number 164. The building is demolished (now, « Pfarrplatz » Number 5) .

Anton Bruckner visits his new place of residence (where he will not have to pay rent) : the service apartments of the Sacristains' official residence (called the « Mesner Häusl » , « Meßnerhäusel » , « Musikantenstöckl » or « Mesnerstöckl ») to the right of the parish church : Bruckner occupied apartment Number 162 on the second floor, which consisted in 2 rooms and a kitchen. This will become his accredited home. « Regens chori » Karl Zappe and Wenzel Lambl, a cathedral singer, were his room-mates.

During his stay in Linz, Bruckner often visited the Imperial and Royal Teacher-Training College (« Kaiserlich-Königlich Präparandie ») located at « Hofgasse » Number 23, close to the « Mesnerstöckl » .

**1869** : The « Florian-Haus » (« Florianer Stiftshaus » or « Freihaus des Klosters St. Florian ») , the residential home in Linz of the monks of St. Florian located at « Landstraße » Number 22, became Bruckner's « pied-à-terre » after he was officially appointed in Vienna.

The actual corner-house consists of 3 storeys, an attic, and a round cornered bay-front composed of 4 windows on each floor. There is a total of 6 window-axes on the street-sides, including a 4th one, from the right, with double windows above the main-portal which shows an irregular round-arched entrance. The portal is flanked by 2 Tuscan pilasters made of granite blocks. The ones on the top bear the year « 1616 » . There is 6 unevenly distributed axles at the « Spittelwiese » .

Already, in 1492, a small house was mentioned on the property ; 2 smaller ones followed. In 1615, Provost Leopold of St. Florian monastery acquired the dwelling and the garden owned by Josef Fellenschlager. After buying another piece of land, the Provost decided to erect a new and spacious building (1615-1618) designed by architect Marx Martin Spaz. In 1644, the place was liberated by Emperor Ferdinand III.

Under St. Florian's Provost David Fuhrmann (1667-1689) , the « Freihaus » (communal residence) was decorated with stucco and paintings. In 1785, it was confiscated by the religious fund. But, in 1792, it was fully-returned to the authorities of the monastery. The ground-floor was largely devalued to accommodate commercial activities.

...

Das Eckhaus mit drei Geschoßen nebst Dachgeschoß besitzt einen dreigeschossigen, runden Eckerker mit vier Fenstern in jedem Geschoß. An der Landstraße sechs Fensterachsen, darunter die vierte Achse von rechts mit Doppelfenstern über dem Portal. Sechs ungleich ausgeteilte Achsen an der Spittelwiese. Das stattliche Hauptportal zeigt einen rundbogigen ungegliederten Eingang. Er wird von zwei aus Granitquadern gefügten toskanischen Wandpfeilern flankiert, die mit dem Schlussstein des Tores das gerade Gebälk tragen, bezeichnet 1616.

Bereits 1492 ist ein kleines Haus auf dem Grundstück erwähnt. Weitere zwei kleinere Häuser folgten. 1615 erwarb

Propst Leopold von St. Florian von den Josef Fellenschlagischen Erben deren Behausung samt Garten. Nach einem weiteren Grundstückserwerb ließ der Propst 1615 bis 1618 ein neues, geräumiges Haus errichten.

Architekt war, wie der Stilvergleich vermuten läßt, Marx Martin Spaz.

1644 erfolgte die Hausbefreiung durch Kaiser Ferdinand III. Unter Propst David Fuhrmann (1667-1689) wurde das Freihaus mit Stuck und Gemälden ausgestattet. 1785 wurde das Haus vom Religionsfonds eingezogen, doch 1792 dem Stift zurückgegeben. Das Erdgeschoß wurde durch Geschäftseinbauten größtenteils entwertet.

### Emilie von Binzer

Having made the break with St. Florian, Anton Bruckner now embarked on a career as a professional musician. It would appear that he had no difficulty in quickly becoming involved in Linz's social life and, certainly in the 1860's when his first important large-scale compositions were written, becoming a highly-regarded member of the community. Elisabeth Maier gives credence to the possibility of a musical post for Bruckner in the Court of Emperor Maximilian (Emperor Franz-Josef I's younger brother) in Mexico in the 1860's, inasmuch as Maximilian had a strong connection with Linz. He was a close friend of Emilie von Binzer, who had a salon in Linz which Bruckner occasionally frequented. This certainly explains Bruckner's interest in Maximilian's ultimately tragic « Mexican adventure » .

Emilie von Binzer (born von Gerschau) .

Pseudonym : Ernst Ritter.

Birth : Monday, 6 April 1801 in Berlin.

Death : Monday, 9 February 1891 in Munich.

### Family

Daughter of Peter von Gerschau et Karoline Henriette von Gerschau.

Sister of Maria von Flotow.

Wife of August Daniel von Binzer.

Mother of Klara Louise Georgine von Colomb ; Karl Heinrich Friedrich von Binzer ; Alexandrine von Binzer et Marie Charlotte Friederike von Binzer.

**Tuesday, 22 July 1823** : Aged 22, Emilie gives birth to Klara Louise Georgine von Colomb Flensburg, in Schleswig-Holstein (Germany) .

**Ugh !**

Anton Bruckner was madly in love, once again. This time, it was with a nice girl from Linz. A delicate, sweet and smart blond girl coming from a good family. She became his private student. When the Master was playing at the piano (and liked to do so very much) , she sat patiently at his side, for hours, with great admiration. She sensed the future greatness of her teacher and asked him for a vast number of hand-written sketches, drafts and similar trifles. For his part, Bruckner believed the love was mutual ; he was actually floating in heaven ! But one day, he was quickly brought back to earth.

Here's the story :

He had just presented his most beautiful new themes to her admirer. She listened respectfully, and then, she bluntly told him that she was about to marry a wealthy citizen from Linz. Bruckner stood-up, slammed the top of the piano, went to the door, and expressed a loud : « Ugh ! » . He was never seen in this house again.

**Vienna : Bottom-fermented lager**

**1856** : « Pilsen » beer makes it to Vienna for the first time.

An even 65 buckets are delivered to « Herr » Josef Šedivý at « Salvatorstraße » Number 379.

The Burghers' Brewery later becomes the official supplier to the Imperial Court.

**Friday, 1 July 1870** : A storehouse opens in Vienna.

This quality fermented lager also conquered other european cities :

In 1853, it was already served in 35 inns of Prague.

In 1862, he was even found in Paris.

**Bruckner at the restaurant**

Anton Bruckner preferred the companionship of his friends and pupils in a modest inn, where « Gemuetlichkeit » (tranquility) was the mood and where polite behaviour and fashionable dress were of no consequence. There, at his « Stammtisch » (regular table, habitually reserved for him) , he was Lord and King, whom nobody dared oppose. There, his sense of humour came into play, sometimes at the expense of his enemies. There, he felt care-free and young, and enjoyed life, forgetting trouble, sickness, and even the doctor's diet prescribed when his ailment grew worse. It was extremely hard for him to follow the diet, for he was very fond of Austrian food, good but rather « heavy » .

One must have lived in Vienna to appreciate what a cozy restaurant means to bachelors. The customer enjoys special privileges ; both the host and the waiter vie with each other to satisfy the guest in his individual desires.

When Anton Bruckner entered his favourite place, he would tell the waiter :

« Bring me 3 portions of smoked meat with dumplings. »

And he was sure of getting his favourite dish in ample quantities.

Anton Bruckner had an original way of speaking in his quaint Upper-Austrian dialect. In the German biographies of the composer, his remarks are related in this « patois » . Richard Wagner, as is well-known, spoke Saxon dialect ; Johannes Brahms could not conceal the accents of North Germany. But their remarks are not quoted in their own particular idioms. With Bruckner, it is different. Transposed into High-German, his speech loses the characteristic Bruckner flavour. His steadfast nature, firmly rooted in his homeland, made him use his native dialect to the end of his days.

Anton Bruckner's style of speaking was straight and simple ; he was not given to good words or remarks sparkling with wit. When he addressed persons in influential positions, he spoke with a humility quite incompatible with his rank as musician. He was profuse with « Your Honour » , « Your Grace » , and the like. He did not realize that Richard Wagner was embarrassed when he told him : « Master, I worship you ! » Bruckner used forms of address and expressions of devotion which did not always apply to the person addressed. For instance, he called Johannes Brahms : « Mister President » . Once, when he met Brahms in a restaurant, he served him with beer, perhaps remembering that Wagner had done the same for him at « Wahnfried » .

### Bruckner's favourite food

As a bachelor, Anton Bruckner was lifelong dependent on guest-house catering. In accordance with his simple nature, he always preferred the Upper-Austrian local home-made cuisine (« Hausmannskost ») . House-smoked preparation with semolina dumplings and sauerkraut (« Hausgeselcht mit Grießknödeln und Sauerkraut ») was his favourite food. This was so widely known that he was once entertained for 3 days in a row in private homes in Steyr.

In the various restaurants of Linz, he was served the specialities of the house. Bruckner ate little during the day, but, in the evening, the portions were never large enough for him :

His excuse was :

« When I am supposed to work, I must also be fed ! »

In another Linz guest-house, he loved the « Fleckerlspeis » prepared with leg-meat (a gratin of small pasta squares and left-overs from the Sunday roast) . Once, he ate 16 large portions of plum-pudding for dessert !

His other Linz favourites :

Munched pasta noodles, potato dumplings, plum dumplings (each filled with 2 fruits) , « Apfelschlangel » (buttery, soft and crumbly layer of short-crust pastry wrapped around tangy sweet cinnamon-spiced apples) , « Apfelradeln » (baked apple rings) .

As a table beverage, he preferred the homeland apple-cider, or the « Landlbirne » \* fruit-wine or, most of all, the Viennese « Pilsner » beer.

(\* A perry pear known as « Landlbirne » in Lower-Austria, « Green “ Landlbirne ” » in Upper- and Lower-Austria, and by other names in Upper-Austria and Istria. Fruit small to medium, globular or turbinate and very even in contour, leaf-green changing to greenish-yellow when ripe, densely sprinkled with very fine russet spots ; flesh whitish, fine-grained, juicy, astringent, saccharine, addulous ; good for transportation ; end of October to December.

\* A pear used for perry in Lower-Austria. Fruit small, turbinate to ovate, very regular in contour, yellow when ripe, covered with cinnamon-russet and finely dotted with green specks, some red on the sunny-side ; flesh white, tolerably fine, juicy, highly-saccharine, only slightly astringent, very aromatic ; September.)

Bruckner used to arrive at the guest-house late in the evening. But then, he still stayed for a long time with his friends.

If, at an advanced hour, someone in the group was ready to go back home, he replied :

« Come on, stay for a little while, it's so much fun ! »

After saying yes to Bruckner, the poor fellow fell asleep and started to snore loudly.

### Flirting from the tavern's window

« After a meal, the Master of the organ and I would sometimes look-out of the window and, on one occasion, some comely wenches were obviously eyeing us with amusement from the tavern opposite. Bruckner was very eager to find-out who these “ ladies ” were. But when, to his alarm, he discovered that they were girls of very easy virtue, known as “ Flitscherln ” (hookers) in Linz, he indignantly stepped-back from the window. »

### Linz : « Gasthof Goldener Anker »

The « guest-house of the Golden Anchor » (« Gasthof Goldener Anker ») is located at Number 5 on the « Hofgasse » , in the centre-part (« Innere Stadt ») of Linz. This is the oldest restaurant in town, serving local cuisine. There is a traditional dining-room and a garden terrace where beer is served. The roots of the « Golden Anchor » go back to 1670. At that time, the guest-house was called « Zum Grünen Kranz » . Since 1730, it has been known as the «

Goldener Anker » . In 1834, it came into the hands of the Traxlmayr family, to which also the coffee-house of the same name goes back. In 1919, Franz and Antonia Pilsl bought it. They are the grand-parents of Franz Pilsl, who managed the house for a period of 32 years. He sold it to Walter Mayer in 2013.

### Linz : Hotel « Wolfinger »

Anton Bruckner was a regular guest at the Hotel « Wolfinger » , located on the main-square of Linz. The site possess a rich history that extends back to the 15th Century. The hotel with its peaceful interior court-yard was originally built as a monastery, and the first recorded owner was Christoph Waiß, in 1533. In 1585, Christoph Canevale rebuilt the house for Peter Waiß, who was later to become mayor, and who owned the building, from 1568 to 1616. The building was a guest-house from 1646 ; known as the « Golden Lion » , from 1771. Leopold Wolfinger was the long-serving head-waiter there and, in 1894, he leased the building, becoming the owner 3 years later. The name « Hotel Wolfinger » has appeared on the hotel's façade since that time. In 1974, the hotelier family Dangl acquired the renowned building, which has been heritage protected since 1940. A number of famous people have lodged at Hotel « Wolfinger » , including Prince Metternich (1841) , His Royal Highness Archduke John of Austria (1843) and Hans Christian Andersen (1869) .

### Linz : Hotel « Zum Roten Krebs »

Anton Bruckner looked at me distressed and reproachfully said :

« But, “ Herr ” Doctor ! The “ Rote Krebs ” enjoys a great popularity in Linz ! »

**Wednesday, 3 September 1856** : The Liedertafel « Frohsinn » accompanied by chairman Josef Hafferl will entertain the members of the Vienna Men's Choral Society (« Wiener Männergesangverein ») , which has just arrived at the « Zum Roten Krebs » inn. The famous choristers will then continue their tour. Next stop : the town of Lambach.

...

A thriving inn-restaurant in Linz at the time of Bruckner was the « Zum Roten Krebs » - located at Number 11 « Obere Donaulände » in the city-centre. The terrace offered a fine-view of the rushing waters of the Danube and the gentle slopes of the Mühlviertel. In seasonable weather, the terrace would be packed with people laughing and carousing.

The site was first mentioned in official documents in 1595. It became a guest-house around 1680. The place was named « Zum Roten Krebs » in 1771. On the first floor (second axis) , there is a house-sign : a stone tablet with the relief of a crayfish with the inscription : « Gast Hofe zum Krebsen des Seb(astian) Vogl 1837 » (« At the Crayfish » Inn owned by Sebastian Vogl, 1837) . With time, alterations were made to the Biedermeier style 5 storey corner-house which is composed of 15 architectural axes : 10 on the « Donaulände » side, and 5 on the « Hofberg » side. First, it was stripped of its original ornament. Then, in 1845, a porch at ground-level (originally rounded, but now beveled) was

added by Johann Rueff, next to the neighbouring house (Number 13) . On the first floor, another porch including a terrace and a « salon » was built by Michael Lettmayr in 1872. The terrace stem, dating from that year, still exists. The west-sided firewall collapsed in 1931. The façade was modernized by Carl Magnus Pader in 1936. The small arcaded court-yard stayed intact from the Renaissance period until 1945. After Allied bombings damaged the upper-floors, only the glazed corridors survived. A granite column was preserved on the ground-floor. On the Hofberg's side, a bay-window situated on the first floor (second axis) is ornated by a granite crest composed of a grotesque mask dating from the 16th Century. After the disastrous flood of 2013, the hotel was forced to close. It was fully-renovated and transformed into luxury apartments.

### Linz : « Gasthaus Zur goldenen Kanone »

The « Gasthaus Zur goldenen Kanone » , located at « Landstraße » Number 18-20 in Linz, was a restaurant-inn frequented by Anton Bruckner and his friends.

The builder Max Ortner (born on 27 September 1882 in Linz ; died on 28 September 1956 in Linz) gives a new façade to the guest-house and renovates also its interior.

Alois G. (born in Lower-Austria in 1919) stole a bicycle in front of the « Zur goldenen Kanone » Inn. He is arrested. As an « enemy of the nation » , he will be sentenced to death and executed.

### Linz : Soup and pretty waitresses at the « Gasthof zum Bayerischen Hof »

The whole city of Linz knew Anton Bruckner, and they all gladly stopped to watch when he stepped briskly through the streets. He made copious use of a snuff-box, while an exceptionally large blue handkerchief formed a bulge in his coat pocket. He enjoyed a cigar and a glass (or several glasses) of wine in the company of friends of an evening. On Fridays, he made tracks for the « Gasthof zum Bayerischen Hof » (the Guest-house of the Bavarian Court-yard - now, « Zaininger ») , where he would pay no attention to the salutations of his loyal supporters, going straight-up to the waiter and asking anxiously :

« Is there any crayfish soup, Josef ? »

If the obliging Ganymede said there was, Bruckner would call to him :

« Quick, Josef, bring me 3 helpings ! »

He invariably wanted 3 helpings of his favourite dishes, which were lamb lights with dumplings and mutton with turnips.

...

After a performance of the Liedertafel « Frohsinn », Anton Bruckner often brings his fellow-singers to celebrate at the famous Bavarian-inn called « Gasthof zum Bayerischen Hof » - especially because of the large number of pretty waitresses !

**Thursday, 6 October 1864** : The Liedertafel « Frohsinn » celebrates the 80th birthday of Albert Methfessel at the « Zum Bayerischen Hof ». He is appointed honorary member for the occasion.

## History

The « Gasthof zum Bayerischen Hof » (the former home of Emperor Franz-Josef II) is a typical Renaissance town-house which includes an arcaded court-yard. It is located at « Hofberg » Number 4 in the city-centre (« Innere Stadt ») of Linz (in the immediate vicinity of the Danube) . Franz-Josef visited the Bavarian pub of the « Bayerischen Hof », incognito, on 2 occasions under the pseudonym « Graf Falke » !

The building, occupied by an inn since 1650, also housed the Guild of the barrel-pullers of the city of Linz. In 1771, the place was called « Gasthof zur Weiße Gans » (the White Goose Inn) . The « Hofberg » (Court hill) leads on a length of about 70 meters from the Upper-Danube River Bank to the Court alley.

The 4 storey building consists of 5 linear architectural axes and a partially pre-dazzled attic. The main-portal on ground-floor, which bears the year 1578, consists of 2 ornated curbstone pillars and 4 flat arched openings with plastered grooving. The façade was restored in 1957. Attempts to solidify the structure by concreting the cellar were undertaken in 1959-1960.

Under the middle-window on the second floor, a commemorative stone plaque bears the following inscription :

« In memory of the unforgettable Emperor Josef, who lived in this house in 1783 and 1786. Provincial capital, Linz. March 13, 1870. »

The original building is considered the oldest historically documented house in Linz :

On January 23, 1273, Pope Gregory X confirmed the freedoms and rights of the Nonnberg Abbey in Salzburg (the « Office of the Danube ») as well as the possession of the « Linzer-Haus » .

As early as the 13th Century (1273) , the Nonnberg Abbey of Salzburg (a convent of nuns) , as well as the other Salzburger abbey (monks) installed in Linz, shared a building to store their Wachau wine. The product was first transported by ship from Wachau to Linz ; then, the sender used the best (ground) road from Linz to Salzburg. The Nonnberg Abbey owned a manor located at the entrance of the Haselgraben, the most important route to Bohemia. This strategic site facilitated greatly the commercial operations.

In 1579, the Abbess granted the dilapidated storing-house, as a perpetual succession right, to Jobst Schmidtauer who

had already begun the construction of a new house, a year earlier. Schmidtauer reports in 1582 that he started to demolish the old structure affected by bad masonry and rotten wood. A prison for the subjects of the Nonnberg Abbey still existed inside the storing-house in 1635 - but this was contrary to the interests of the City of Linz. It was not until the middle of the 17th Century that the legal dispute between the Abbey and the municipality was settled by a money payment.

...

Bereits im 13. Jahrhundert hatte das Salzburger Stift Nonnberg wie auch die anderen Salzburger Stift in Linz ein Haus zur Einlagerung seines Wachauer Weins. Von der Wachau bis Linz wurde der Wein auf Schiffen transportiert, von Linz nach Salzburg wählte man den einfacheren Landweg. Das Stift Nonnberg besaß die Grundherrschaft über Häuser am Eingang des Haselgrabens, des wichtigsten Weges nach Böhmen. Somit konnte der Handel nach Böhmen kontrolliert werden.

Im ausgehenden 16. Jahrhundert verkaufte das Stift Nonnberg sein Haus, behielt sich aber noch gewisse Kellerrechte und einen Raum als Gefängnis für seine Untertanen vor. Ab dem Mitte des 17. Jahrhunderts befand sich hier die Zunftlader der Fasszieher.

...

Im Kern handelt es sich um ein renaissancezeitliches Haus mit Arkadenhof. Die Schauseite von vier Geschoßen und teilweise vorgeblendetem Dachgeschoß und fünf Achsen zeigt im Erdgeschoß Putznutung, in die das Hauptportal und 4 korb- beziehungsweise flachbogige Öffnungen eingesetzt sind. Das Hauptportal besteht aus zwei verzierten Pfeilern auf Prellsteinen. Es trägt die Jahreszahl 1578.

Unter dem Mittelfenster des zweiten Obergeschoßes ist eine Steintafel mit Inschrift angebracht :

« Dem Andenken des unvergesslichen Kaisers Josef welcher in den Jahren 1783 und 1786 in diesem Hause wohnte. Die Landeshauptstadt Linz am 13. März 1870. »

Ältestes historisch nachweisbares Haus in Linz : am 23. Jänner 1273 bestätigte Papst Gregor X. die Freiheiten und Rechte des Stiftes Nonnberg in Salzburg sowie den Besitz des Linzer Hauses. 1579 verliehen Äbtissin und Konvent das baufällige Haus zu ewigem Erbrecht an Jobst Schmidtauer, der schon ein Jahr vorher mit dem Neubau des Hauses begonnen hatte. 1582 berichtet er, daß er das alte Haus mit schlechtem Mauerwerk und verfaultem Holz abgerissen habe. 1635 bestand im Haus noch das Gefängnis für die Stiftsuntertanen des Nonnberger « Amtes enhalb der Donau » . Dies lief den Interessen der Stadt zuwider. Erst in der Mitte des 17. Jahrhunderts wurde der Streit durch eine Geldzahlung bereinigt.

Seit 1650 beherbergt das Haus einen Gasthof, wo sich die Zunftlade der Linzer Fasszieherinnung befand. 1771 als « Zur weißen Gans » bekannt, später in « Zum bairischen Hof » umbenannt.

Die Fassade wurde 1957 restauriert, Versuche zur Festigung des Hauses durch Betonieren des Kellers wurden 1959-1960 unternommen.

### The Vienna Lager beer

The « Vienna lager » beer was named after the city in which it originated. A traditional « Vienna lager » is brewed using a 3 step decoction boiling process. Munich, Pilsener, Vienna toasted and dextrin malts are used, as well wheat in some cases. Subtle hops, crisp, with residual sweetness.

This direct ancestor of the pale « Pilsner » style Lager was first brewed in 1840 in the town of Schwechat, near Vienna. The local brewer, Anton Dreher, used an indirect method for drying his malt : kilns. This method left the malt much paler than ever before. The beer was brewed using the German brewing method and also used bottom-fermentation. The resulting product was a darker beer of copper red colour containing traces of a caramel-nut taste from the slightly roasted malt.

...

In 1820, Franz Anton Dreher dies leaving the Klein-Schwechat Brewery to his 10 year old son, Anton Dreher ; but Anton is too young to take-over operations. Instead, the late-1820's finds Anton starting his brewing education in anticipation of taking-over the brewery at a later time. So, he undertakes an apprenticeship journey, visiting a series of breweries around Europe.

At the same time, another young brewer, Gabriel Sedlmayer II, son of Gabriel Sedlmayer, owner of Spaten Brewing Company, is also making the same journey of learning. Somewhere along their travels, the two meet, become good friends, and even make much of their remaining travels together.

At this time, early in the 1830's, a new kilning technology has come into use in England. Up to end of the 1700's, malt was kilned directly over fire, creating a malt dark in colour, with a strong toasty, sometimes smoky, profile. But by the early-1800's, the British are refining a way to dry malt using hot air instead of direct heat, imparting a lighter colour to the malt and a more delicate profile.

Dreher and Sedlmayer learn of this new technology while visiting English breweries. It seems they may have even gone as far as stealing samples of wort and yeast from some of the breweries for later analysis. They take what they learn, legally and illegally, back to their respective home cities ; and, in 1836, Dreher takes his place at the head of his father's brewery.

Using his newly-gained knowledge, he starts experimenting with the English way of kilning and creates an amber malt

that is just slightly caramelized. He calls it « Vienna malt » and promptly combines it with lager yeast, brewing a reddish-copper lager with a delicate slightly bready malt profile. He releases the beer in 1841 as « Lager Vienna Type » or « Vienna » style lager.

Meanwhile, Sedlmayr is doing his own experimenting with hot air kilning. His creation is a malt kilned to a slightly higher degree. Not to be outdone he, too, combines his new malt with lager yeast and the well-known Munich « Märzen » is born.

« Märzen » was a term first used in Vienna, not Munich, to describe beers made in March and then cellared in caves. Also, Sedlmayr decides to market the new beer as « Märzen gebraut nach Wiener Art », or « March beer brewed in the Viennese way ». These 2 pieces of information seem to indicate he may have been imitating these earlier Viennese « Märzens » and it was only his new malt, and maybe the times, that made his beer famous instead of these earlier Viennese renditions.

The 2 beers have very similar, to the point of being expected, idea among many brewers that to make a Munich « Märzen » out of a « Vienna lager » recipe really all that is required is to switch the Vienna malt for Munich. Though not quite so simple, it does illustrate how closely related the 2 beers are. The Munich « Märzen » is slightly sweeter on the finish, carries less of a hop presence, and is generally slightly higher in alcohol.

In 1861, Napoleon III invaded Mexico after President Benito Juarez refused to continue to pay interest to European powers. The invasion and subsequent occupation brought about the Second Mexican Empire, and installed in 1864 Maximilian I (the brother of Austrian Emperor Franz-Josef), from the Austrian Imperial Palace, as a puppet ruler.

Maximilian brought a few Austrian brewers with him and they started making « Vienna lager » in Mexico. Of these brewers, a man named Santiago Graf seems to have had the largest influence.

But the reign of Maximilian was short ...

He was executed by a firing-squad in 1867 (the same year as the Austro-Hungarian compromise) .

World War I left Austria in economic tatters and « Vienna lager », its popularity already fading, completely disappeared from its mother-country.

Fortunately, the « Vienna lager » has been preserved in Mexico.

In 1890, a consortium of German- and Spanish-speaking brewers would establish the Cuatémoc Moctezuma Brewery in Monterrey. Arguably, their most distinctive product, « Dos Equis » (amber), would prove to be one of the world's most enduring examples of a Vienna-style lager.

In 1926, « Cerveceria Modelo » opened in Mexico City, and soon, it was producing its own adjunct-laden example of

the style, « Negra Modelo » . (Adjunct cereals, especially corn, started making-up more and more of the grain bill, creating a beer with far less of the defined but delicate malt back-bone found in the original examples.)

Other iterations of the « Vienna lager » style would make an appearance and have great popularity in post-prohibition America.

In recent decades, even the authentic « Vienna lager » has found a new bastion of burgeoning fame among the American craft beer movement.

### Linz : « Gasthof Zum schwarzen Bock »

Anton Bruckner calmly spooned 3 plates of crayfish soup, and settled for 2 portions of stuffed veal breast « At the Black Goat » Guest-House (« Gasthof Zum schwarzen Bock ») in Linz (established in 1771) .

Before 1595, the bourgeois residence was called the House of Maschgowitz. In 1595, inn-keepers are registered as owners. A fire destroyed the roof structure and the whole rear-section in 1800. The building was completely demolished in 1946 after a heavy allied bombing. Between 1956 and 1958, a new building reminiscent of the old original appearance was erected by Karl Schneider. The guest-house, located at Number 22 « Altstadt » in the centre-part of the town, re-opened in 1959 under the management of Peter Dimmel. Today, it is occupied by the « Café Aquarium » .

...

Der viergeschossige Neubau in Anlehnung an das alte Erscheinungsbild hat nur am Erker ein Putzrahmen-system, das jedoch durch die technische Ausführung, die veränderten Fenster-proportionen und nach Wegfall der Gesimse kalt und starr wirkt. Auch die Erkerschalen sind neu. Die übrigen 2 Achsen in der Altstadt und die elf Achsen der südlichen Seiten-front sind ungegliedert, drei davon mit Terrassen im 3. Obergeschoß. Weitere sechs Achsen in gleicher Ausführung schließen über einer Hofeinfahrt und sind mit eigener neuer Haus-nummer Nummer 22a versehen.

### Cholera Epidemics in the 19th Century

First appearing in Europe and North America beginning in 1817-1818 and presumed to have come from India, epidemic cholera returned and travelled around the world many times through the end of the 19th Century, killing many thousands. Causing profuse and violent cramps, vomiting and diarrhea, with dehydration so rapid and severe the blood thickens and the skin becomes death-like and blue, cholera victims can die in a matter of hours. Because 19th Century transformations in industrial, urban, political, and cultural life were intimately connected with discussions of proper public health practices and causes of disease, attempts to explain epidemic cholera involved every part of society.

### Causes of Cholera

For much of the 19th Century, most European and American physicians believed cholera was a locally produced miasmatic disease - an illness brought about by direct exposure to the products of filth and decay. Climate and geographic location were also factors. It was a common assumption that those who engaged in morally and physically intemperate behaviour or who had inferior cultural practices were more likely to get cholera when exposed to these miasmas and environmental conditions. Observations that the poor, who lived in densely populated urban slums, suffered from cholera in greater numbers than the rich, who were much differently housed, were used as evidence for this assertion. The germ theory, developed in the later 19th Century, placed less emphasis on social and environmental factors, although the issue of individual predisposition and susceptibility due to personal behaviour lingered.

### Was Cholera Contagious ?

For most of the 19th Century, most scientists, physicians and sophisticated lay people believed cholera was not contagious. The observation that a doctor could have daily contact with cholera patients without falling ill led to the conclusions that cholera was not transmitted from person to person. This was an accurate observation given that cholera is usually transmitted through contaminated drinking water, as John Snow first demonstrated in 1855.

Until Robert Koch identified the cholera bacillus in 1883, science continued to favour anti-contagionism. Leading anti-contagionists or contingent contagionists included Max von Pettenkofer and Southwood Smith. According to the contingent contagionist perspective, cholera could be contagious, but only under particular circumstances.

The existence of the cholera bacillus did not necessarily prove cholera's contagiousness either ; some argued that the bacillus was the product of the disease, not its cause. Another issue was how to explain the existence of healthy carriers - people who had the cholera bacillus in their bodies but who were not sick. In practice, public health measures often involved a blend of contagionist and anti-contagionist views.

The International Sanitary Conferences, predecessor to the World Health Organization, were first convened in Paris, in 1851, to discuss cholera's contagiousness ; Europe's most important scientists and public health officials attended the meetings. Quarantine, intimately related to contagion, was another important topic at the Conferences, since it was of central concern to government officials and those involved in commerce. For if cholera was not contagious, there was no reason to submit to the significant personal and economic sacrifices involved in quarantines.

### 19th Century Treatments

Despite the continued discussion about the cause of cholera, over the course of the 19th Century, the actual treatment of the disease did not change much. Patients with families were cared for at home. Physicians, when called, would use such characteristic treatments as bleeding or opium. Homeopathic methods were popular among the middle- and upper-classes, as were other eclectic treatments, and all manner of dietary and hygienic regimens were promoted in newspapers and books. Those without families might find themselves in charity hospitals, which could become grim places indeed during an epidemic. Preachers gave sermons on the meaning of cholera for both individuals and society. Riots ensued due to popular revolt against mass burials.

## The Epidemics Subside

By the end of the 19th Century, cholera epidemics no longer appeared in Europe and North America. The reasons for this are uncertain, but standards of living had risen and many communities had made major changes in sanitation practices and established permanent boards of health. As part of the transformation to the germ theory, medical thought had changed in many ways as well. In 1831, most physicians believed cholera to be a non-specific, non-contagious miasmatic condition that favoured the morally and physically predisposed. By the end of the 19th Century, although the miasmatic interpretation still had influence, cholera was primarily understood to be a specific contagious disease caused by a particular microscopic organism.

## Vienna and cholera

Cholera is in Moscow in September 1830, then, Vienna in August 1831. By September of that year, the Viennese public « has given itself up so entirely to dread, that already several persons have died with fright or become mad ». From Vienna, the cholera also advanced towards the West, gained Brünn and Linz, crossed the Bohemian frontier, and, on reaching the banks of the Moldau, it was not long before it invaded Prague. It has been in operation since the beginning of December 1831. To sum-up, the mortality rate was small and the progress was not very rapid during the last months.

## Vienna's Sewer System

With the construction boom after the second siege of Vienna by the Turkish army, in 1683, the city's sewer system continued to grow as well. Most new buildings were connected to the city's sewers. As a result, Vienna became one of the most advanced cities in terms of sewerage in Europe in the 19th Century. In 1739, Vienna was the only city to be fully-sewered within the city walls.

Other cities of a similar size did not start planning and building their sewer systems to this extent until decades later. Despite this, the city was often swept by deadly plagues because the residents of the communities on the periphery of Vienna not only discharged their waste into the open brooks flowing through the Vienna Woods but also used the contaminated water for washing and drew drinking water from well houses located close to the brooks.

The most tragic event occurred in 1830, when an unusually large ice-jam on the Danube caused the brooks and rivers around Vienna to burst their banks. The resulting cholera outbreak cost over 2,000 lives.

Immediately following this disaster, the decision was made to cover all important streams in the city and its environs. Additionally, 2 main-collector sewers were built parallel to the River Wien, which led to the Danube (referred to as River Wien main-collectors or « cholera sewers »). By 1850, Vienna had a well-functioning sewer system.

After the city-walls and the outer-fortification, which had been built around the surrounding communities, were torn-down and 33 suburbs were incorporated into the administrative territory of Vienna, comprehensive and uniform urban

planning became possible. In 1893 and 1894, construction of additional large collector sewers to the left and right of the Danube Canal began.

...

The history of Vienna's sewer system goes back to about 100 A.D. when the Romans built a highly-sophisticated sewer system in their military camp « Vindobona ». In the Middle-Ages, Vienna was no different from any other European city as far as hygienic conditions were concerned : garbage landed in the streets and sewage was simply allowed to flow into the many free-flowing tributaries of the Danube, causing repeated outbreaks of epidemics.

It was not until the middle of the 18th Century that Vienna, at that time covering the area corresponding approximately to the present 1st District, had a well-functioning sewer system well before other European cities. Conditions in the suburbs, however, were still far from ideal. In 1830, exceptionally high-waters and ice on the Danube dammed-up the tributaries, which caused widespread flooding and the contamination of ground water. The ensuing cholera epidemic killed over 2,000. It was only then that the city started tunnelling and integrating the water courses in the western districts of the city into a combined storm and sanitary sewer system and building sanitary sewers on either side of the River Wien. Until then, the River Wien alone had taken the raw sewage from countless industries as well as almost 4,000 tenement blocks along its banks. A first step had been taken and the city could pride itself on having one the most advanced systems of sewers in Europe, years if not decades before other major cities.

As Vienna's population grew exponentially until World War I, to cope with the burgeoning waste waters, further improvements were necessary, namely the construction of sanitary sewers on either side of the Danube Canal, the partial construction of vaults over the River Wien and the extension of the sewer system into the outer-districts. The precarious economic situation in Vienna during the 1920's and 1930's, however, slowed down further improvements and, during World War II, Vienna's sewer system suffered badly from bombing. 1,800 hits were counted and it was not until 1950 that the last of the War damage was repaired. Today, Vienna continues to have one of the most modern sewer systems and treatment works world-wide.

### Important dates

**Approximately 100 A.D.** : The military camp of the 13th Legion in « Vindobona » has a modern sewer system.

**Approximately 400 A.D.** : With the migration period, the sanitary standards of the Romans are lost for Centuries.

**1388** : Construction of subterranean stone conduits leading to openly flowing channels.

**1683** : Construction boom ; after the second siege of Vienna by the Turkish army, new buildings are generally connected to the street sewers.

**1739** : Vienna is the only city in Europe to be fully-sewered within its city-walls.

**1830** : A cholera outbreak costs more than 2,000 lives. The « cholera sewers » alongside the River Wien are built.

**1837** : Further large collectors are built (for the Ottakringerbach, Alsbach and Währingerbach brooks) . In comparison, the construction of a cohesive sewer system began in Hamburg in 1848 ; in Paris in 1855 ; in London in 1858 ; in Frankfurt in 1867 ; and in Berlin in 1873.

**1851** : Expansion of the sewer system and renovation of old sewers.

**1861** : Sewer construction boom after the city-walls were torn-down, including changes to a part of the covering of Ottakringerbach and the main-collector to the left of the River Wien.

**1881** : Expansion of the sewer system, modifications, smaller construction activity.

**1891** : Construction starts on the collector sewers in the suburbs ; new construction and modifications to the Krottenbach, Währingerbach, Ameisbach and Lainzerbach brooks ; construction of the right and left main-collectors alongside the Danube Canal begins.

**Until 1914** : Constant expansion of the urban sewer system (status in late- 1914 : 923 kilometres of public sewers ; 1,530 kilometres of house sewers) .

**Sunday, 1 July 1923** : Private sewer cleaning companies are bought by the City of Vienna under Mayor Karl Seitz, and their staff is employed by the city. This is considered the founding year of the « Wien Kanal » .

**Until 1930** : World War I and the Great Depression slow-down the expansion of the sewers.

**1948** : A British film team comes to Vienna to shoot the film « The 3rd Man » . Music-score composer Anton Karas and Vienna's sewer system become world famous.

**Until 1950** : Repair of damages caused by Allied bombing (1,765 individual damages on main and secondary sewer lines) .

**1951** : Vienna's first waste-water treatment plant is opened in Inzersdorf (closed-down in 1970) .

...

A cholera epidemic gripped Vienna in 1831-1832. High death rates gave rise to intellectual speculation and practical measures.

In the 18th Century, it was not only small-pox but also cholera that claimed the lives of countless people. Vomiting and diarrhoea, dehydration and confusion were the usually fatal symptoms of the disease. Cholera is caused by a

bacterium and is transmitted primarily through contaminated water. Particularly in countries where minimum hygiene requirements cannot be met, it occurs repeatedly even today. A Europe-wide cholera epidemic gripped Vienna, in the years 1831 and 1832. Panic and despair were widespread irrespective of borders and despite the measures put in place which included sanitary cordons, official posts set-up to regulate transit traffic and regulations obliging visitors to stay for a minimum of 14 days to prevent possible epidemics. Contemporaries spoke of « divine retribution » and many besprinkled their houses with holy-water in the hope that it would ward-off the disease. While doctors and social economists accepted the epidemic as « a natural phenomenon », there was talk, from the point-of-view of population policy, of natural selection. As « Nature's police », it would decimate the surplus population and only the strong would survive. This pessimistic diagnosis can be traced back to the English economist Thomas Robert Malthus, who predicted a food supply crisis in view of the growing population. In the years 1831 and 1832, the death-rate among those infected with cholera, in Vienna, was 64 % . Journeymen and domestic servants were as much affected as aristocrats and clerics. Effective protective measures were unknown at this time. Stronger measures were, therefore, taken to halt the spread of the disease : fever hospitals were expanded, regulations were implemented for the disposal of the bodies of those who died of the disease, and circulars with safety precautions were distributed. There were instructions not to dispose of excrement and blood by tipping them outside the house. However, these regulations and suggestions were only partially successful, particularly since urban planning contained no provision for waste disposal. Above all, it was the poorer social strata who were particularly badly affected. In the summer of 1832, the epidemic struck again. However, this time there were almost no victims amongst the nobility. The construction of pipelines to bring water from alpine springs to Vienna, at the end of the 19th Century, guaranteed a modern and hygienic water supply. With similar measures, cholera epidemics were gradually eliminated from the whole of Europe and death rates sank drastically.

...

On **Monday, 25 July 1831**, the « London Courier » supplied information that at St. Petersburg, since the first manifestation of cholera to July 7th, the number of persons attacked reached 1,230, with 558 deaths. The report added that the « number of persons recovered was very small, there being on July 8th, in the morning, 665 sick remaining » .

According to accounts from Vienna, on **Sunday, 17 July 1831**, cholera was no more than 44 miles from the capital. Pesth was already surrounded by a cordon, as cholera continued to spread on both sides of the Theiß, with some cases reported at Szelnok, Heves and Erlau. In consequence, it was felt more serious precautionary measures would be needed at Vienna. A sanitary cordon, composed of 36,000 chosen troops, were ordered to protect the capital against cholera ; in order to prevent the scarcity of provisions which might ensue from this form of seclusion, bakers were ordered to lay in corn sufficient for the consumption of the inhabitants for 3 months.

To raise spirits, the Emperor resolved that, « whatever may happen » , he was to remain in residence, and he « intimated to the members of the Imperial family to do the same » . Taking a firmer stance with public functionaries, none were allowed to leave their posts, request a passport or take a leave of absence. The establishments « Josephinum » and « Theresianum » were converted into hospitals, while no Jews (« known for their want of

cleanliness and their mode of life » , being « peculiarly susceptible of contagion ») coming from Poland were permitted to pass through Brünn, in Moravia. They were also to be expelled from their closely built quarters in Prague, Pesth and, probably, Vienna while the police « purified » their habitats.

While German newspapers chiefly related news of cholera, « which has been, for some time, a prominent feature in all the Journals of the North of Europe » , foreign ministers in Vienna, dreading the disease, all removed to Baden, a city not known to be infected by any epidemic disease.

In mid-August, a private letter from Vienna painted a melancholy picture :

« The approach of the cholera has filled every mind with alarm. The public has given itself up so entirely to dread, that already several persons have died with fright or become mad. »

The writer indicated that all communication with Hungary, from whence almost all provisions arrived, had been severed, greatly augmenting prices.

Precautions in Vienna included dividing the city and suburbs into 50 districts, each with 4 physicians under the supervision of a doctor who had been practising in Warsaw. Because people did not know how cholera was contracted and, thus, presumed it was contagious, a commissary was appointed to every 4 houses, bound to visit them daily, in order to prevent more than 3 persons from sleeping in the same room. Every house was furnished with a quantity of chlorate of lime and fumigated every day with vinegar. It was also recommended that the mouth be washed every morning with vinegar and that a drop of the essence of chamomile on a piece of sugar should be taken while fasting. Houses were also required to be supplied with a quantity of vinegar, herbs, tea, flannel and heated sand.

The Emperor gave 2,000,000 Florins toward the establishment of hospitals, for which the most extensive houses and the theatre were appropriated. No one was allowed to go 3 leagues from the capital without a certificate of health, but, at the same time, numerous carriages set-off « in crowds » for Switzerland and the Tyrol. By August 16, all theatres were to be closed and all unemployed foreigners were ordered to leave within 8 days. The Emperor went with his Court to Schönbrunn, where the outside-walls and windows were closed with planks. The young king of Hungary, Prince Metternich, and the foreign ambassadors joined him there.

Notices from the German newspapers, up to **September 1st**, indicated that the sicknesses in Vienna « were to be classed, according to the medical report, not under the head of oriental, but of sporadic, cholera » . Cholera continued to rage in Lemberg, where 50-60 daily deaths were recorded. In Frankfurt, preemptive measures included a house of quarantine for strangers coming from suspected places and a hospital to care for those attacked by the disorder. A separate report indicated that greater exertions were being made at Stockholm to prepare hospitals for cholera patients.

In what may be viewed as germ warfare, a correspondent for the « London Courier » wrote the following in a letter dated **July 18** :

« One of the feats of the Russians must be observed. In Sienpic, they broke open the church, robbed it, and left the cholera in the place. »

He added :

« The cholera, here, is treated as a tangible article : something to be laid hold of (and, yet, we are completely in the dark as to the precise situation, in the church of Sienpic where the alarming personage was secreted) whether in the reading desk, in the folds of the parson's surplice, or in the belfry. »

He added the disease was making great ravages in St. Petersburg : on **June 29**, the total number of cases was 3,418, with 1,479 deaths.

Adding to the confusion, a letter from Pesth, dated **July 21**, noted :

« We know nothing of the cholera, here, except some cases of sudden-death which, at another time, would not have been regarded, but which many persons immediately took to be the destructive Indian disorder. The cases of death, in other parts of Hungary, appear also, as many assert, not to be caused by the Indian cholera, but by a kind of dysentery, not uncommon in these parts. However, the question must soon be decided, and, at all events, the precautions adopted by the government deserve to be gratefully acknowledged. »

Precautions included placing placards on street-corners announcing that quarantine was re-established, « but that the pontoon bridge is not to be taken down again » . Doors of all private houses were to be closed at 9 pm, and all coffee-houses and hotels shut at 10 pm. In case of disturbances during hours of darkness, nightlights were to be put in all windows facing the street. Due to the fact that several cases of « incendiarism » had occurred, city magistrates of Pesth were authorized to sentence persons convicted of this crime to a rapid execution. The final order warned all citizens that in case of public disturbances they were to keep their distance from the rioters, « lest they should suffer with them for their disobedience of the lawful authority » .

...

Professor Rolleston talks of cholera to the editor of the « Spectator » :

« SIR,

There is one sentence in your last week's exposition of Pettenkofer's views as to cholera, which I do not feel sure that the Professor himself would agree to. It is this :

“ It comes, then, to this, that any town which will go to the expense of having all its streets and houses well scoured, and securing for its citizens a constant supply of pure drinking water, can thus secure for itself, according to Professor Petteukofer's theory, perfect immunity from the attacks of cholera ? ”

A town which has taken all these precautions may, I think, according to Pettenkofer, still be amenable to an attack of cholera ; for if its sub-soil is porous, it may still retain in its superficially placed strata much of the impurity with which the anti-sanitary arrangements of our forefathers saturated their surroundings. According to Pettenkofer, 5 conditions, 2 of which depend on personal and 3 on local causes, are necessary for the spread of cholera. The first personal condition is the presence in the place in which cholera is to spread of the particular and specific cholera poison, cell or ferment, which originates in the “ rejeetamenta ” of choleraic patients, and also in the “ excreta ” of healthy persons who have come from choleraic districts. The second personal condition is the receptivity or susceptibility, often self-superinduced, of the person to be infected. The first local condition is a porosity and permeability to air and water of the subsoil. The second is the presence at a greater or less depth from the surface of this porous subsoil of what Pettenkofer calls “ Grundwasser ” (though he tells us that his opponents will not use his nomenclature) and what we call “ springs ”, and also “ handsprings ” or “ sub-soil water ”. This second local condition is specially deadly when the level of the “ springs ”, or of the “ land-springs ”, as the case may be, has just fallen unusually low, after having been previously unusually high. The third local condition, without which the diffusion of cholera is impossible, is the presence, more or less diffused, in a sub-soil of the character specified, of those organic matters which modern sewage whirled away from our precincts, but which ancient slovenliness left to fester all around its houses in cesspits and iniddens. Now, in this, as in many other cases, the sins of the fathers are visited upon the children, and soils may retain for almost indefinite periods the taint of organic impurities which were allowed to soak into them even generations ago. A greater greenness in the growing grass or corn enables us to recognize even now the graves at Culloden, and indeed the burial-places of yet, older British warriors, who knew as little of the broadsword as they did of the bayonet. Now, it is possible that in extreme cases such as these, the greater exuberance of vegetation may depend upon other conditions than that of its finding putrefiable organic matter to feed upon in the soil ; but it is impossible to escape from the evidence which goes to show that animal, and specially human, life may be seriously affected by the disturbance of organic matters which have lain in the earth undisturbed for very long periods. We have the excellent authority of Vicq d'Azyr for saying that an epidemic was caused in Auvergne by the opening of an old cemetery, and similar histories are not wanting in the records of our East-Indian medicine. The facts that Loudon church-yards help to destroy life by their exhalations, whilst vegetable life may remain dormant, yet, alive for ages when buried in the earth, may seem unlike enough to each other, but they are really alike, inasmuch as they both show that the earth beneath and around our houses may harbour and preserve organic agents in a condition from which they may arise and prove potent for mischief for periods which are practically indefinite. Finally, Pettenkofer's own words are :

“ A considerable time, even many years, must pass before the organic matters in the soil are so changed and decomposed that the cholera germ can no longer develop itself when the other necessary conditions are present. ”

The sewerage of Vienna and Munich, he goes on to say, is a most desirable thing ; but he advises us, in the contingency of the impending of a cholera epidemic, to put our trust in means which starve the cholera germ by destroying the alkalinity of the sewage. Let us, he might say, by all means, avoid any further impregnation of the earth around our dwellings with sewage ; but it would be as foolish for us to expect that by putting sanitary measures and sewage in force on the spur of the moment we can nullify the impurities which years of neglect have accumulated and infiltrated all around us, as it would be for a repentant drunkard to expect that his fluids and

tissues would become instantaneously renovated on the instant of his taking the pledge to total abstinence. Much good may, it is true, be done even at the moment by abating local nuisances ; but they can only be abated at the moment, they cannot be nullified ; whereas the personal element of a specific poison can be nullified and destroyed in the “ rejectamenta ” by the employment of acidifying disinfectants. Sanitary measures and systems of the kind specified in your article may or may not prove, ultimately, to be omnipotent against epidemics ; but if they are to have this power, they must have time allowed them to acquire it in. The best case may be injured by an over-statement ; and I think it is an over-statement of the virtues of sanitarian reforms to say that towns perfectly sewerred and supplied with perfectly pure water are perfectly safe against cholera. But the over-statement may become a just statement of the case when we add to it the qualifying clause, “ if these arrangements have been at work for a sufficiently long time ”.

I take this opportunity of saying that Pettenkofer's views, of which, as expounded in his own “ Zeitschrift für Biologie ”, a sketch appeared in the Standard of Monday, August 6, are now accessible to the reader of German in a shilling pamphlet, published in Munich, under the joint editorship of himself, of Doctor Griesinger, of Berlin, and of Doctor Wunderlich, of Leipzig, 3 names of very high-rank and authority in German and, indeed, in all medical literature.

There is little added in this pamphlet, and nothing that is contradictory to the views which are put-out at much greater length in Pettenkofer's Memoirs in the “ Zeitschrift für Biologie ”, but the following 4 or 5 points, specially insisted upon in the smaller publication, deserve notice at the present crisis.

In the pamphlet, which bears we may say the title Cholera Regulations, special stress is laid on the importance of employing for the disinfection of sewage some one of the different metallic salts, and particularly for several economic as well as chemical reasons the sulphate of iron, which will keep-up in it an acid, in preference to the chloride of lime, which possesses and produces an alkaline reaction. For actual experience has shown that a particular atmosphere is necessary for the life of the cholera germ, and this particular atmosphere is furnished by the alkaline exhalation of decomposing human sewage. The establishment of “ Observirungs-spitals ” for persons afflicted with premonitory diarrhea is recommended in the pamphlet, as well as in the papers published in the “ Zeitschrift ”. 4 % only of persons so affected and so removed to “ Houses of Observation ” were found to pass on into confirmed cholera - a result sufficiently confirmatory of the recommendation. But, in these days, when English doctors and doctrines differ so widely as to treatment, it is important to say that the Germans, like most of our East-Indian practitioners, recommend small doses of opium as the best medicine for precursory symptoms.

That it is now universally allowed that choleraic “ excreta ” are the source of the specific cholera germ may be seen from the literary fact that a dispute as to the first discoverer of the all-important fact, “ a Prioritals streit ”, as the Germans call it, has been raging for now more than 10 years on the Continent. The safety which, by acting on the obvious corollary of this result and disinfecting their “ excreta ”, we can insure to ourselves, is as great as that which a complete (and impossible) quarantine would have secured, or as that which a non-porous, non-springy, non-contaminating subsoil does actually confer.

The language of the German Professors seems intended to convey the impression that drinking water may, when it is

impure, favour the spread of cholera rather by its general anti-sanitary powers than by becoming the vehicle for the specific cholera germ. But they do not positively declare themselves, at least in this pamphlet, to be opponents of Doctor Snow's explanation of such facts as those put on record by the " Registrar-General " in the papers of this day.

Of season and of temperature, as influencing the progress of cholera, our Professors say nothing. But it is obvious that, according to their views, the influence of heat and of cold, which latter we are now hoping for, can count but for little except indirectly. Heat promotes evaporation of moisture, and so will in many soils lower the level of the " Grundwasser ", and it favours certain decompositions which render the soil alkaline, whilst cold works in precisely the opposite direction. And so far, but not farther, our common opinion is correct. In chilly, and therefore, by virtue and help of the Gulf Stream, rainy England, cholera and typhoid fever are summer and fine autumn diseases ; but this seasonal distribution does not hold good in by any means all other countries, nor even in this always.

I am happy to be able to say that the system of disinfection so strongly recommended, and carried-out with such gratifying results in Germany during the severe epidemic of last year, is being put into operation throughout this city, under the superintendence of Doctor Child, the Medical Inspector of our Local Board of Health. A somewhat similar system of disinfecting has been carried-out and, I presume, is still being carried-out in Bristol, during the present month, and the cholera which broke-out there at the beginning of this month seems, according to the " Registrar-General's " Report of this day, to have ceased there. It is very probable, though possibly not a matter of demonstration, that the attainment of this result has been due to the labours and energy of the 2 well-known medical advisers of Bristol, Doctors Budd and Davies. And it is well to say that both the theory and the practice of the former of those gentlemen have been laid before the public in a small pamphlet, a perusal of which, by showing the almost entire unison and harmony of the advice given by Doctor Budd, in the West of England, and by Professor Pettenkofer, in the South of Germany, ought to prompt the dullest and the most sluggish to follow their recommendations.

For as it seems to me, the system of disinfection as a means of prophylaxis against cholera has, at once, the strongest scientific and the strongest moral claims upon our attention at the present moment. As to its scientific claims, the theory upon which it is founded reconciles and explains much that was previously obscure, confusing, and contradictory in the otiology of the disease, and in the few cases in which it has as yet been found practicable, either in Germany or England, to put it to the test of actual experiment, the results which it was predicted would ensue upon its application have actually occurred. In a moral point-of-view, it has even stronger claims upon our attention in a world in which and in a matter in which " probability is the very guide of life ". At the present moment, no other practicable means for prophylaxis on the large scale has even been hinted at.

The otiose scepticism which is content to deny and disbelieve overtly and genially enough, everything which it has never chosen to examine into, becomes at a crisis like the present simply a public offence.

There is a larger and less amusing class of men whose minds are just active enough to make them good at objections without making them good at anything else. On the present, as on most other occasions, such men content themselves with making suggestions in the helpful negative shape familiar to them, and they warm into sympathy with investigation only so far as they hope to see our present means for doing good superseded in the progress of

discovery, and those who have availed themselves of such imperfect light as they could at the time obtain discredited thus as clumsy bunglers. Such persons are more powerful just now than under ordinary circumstances for provoking anger ; in a population which knows itself to be mortal, they are fortunately less powerful for producing mischief.

I am, Sir, your obedient. »

### Cholera epidemic in Upper-Austria

**Monday, 25 June 1855** : The beginning of a cholera epidemic in Upper-Austria. It will last until 25 September 1855.

**Mid-July (or Monday, 25 June 1855 ?)** : A cholera epidemic breaks-out in Linz, which later ramped-up in St. Florian, and subsided in Linz until mid-September. After what a statue of Mary is erected on St. Florian's Market Square.

**Wednesday, 8 August 1855** : Anton Bruckner's blind aunt Anna Maria (the sister of Theresia Helm) dies at 70, presumably due to the consequences of cholera.

The song festival (due to begin on September 9th) which brings together all the Upper-Austrian « Liedertafel » choirs is cancelled because of the cholera epidemic (which is still prevalent in Linz) .

**Wednesday, 26 September 1855** : The cholera epidemic is declared extinct. A member of the Schiedermayr family is among the 56 victims in St. Florian.

**August 1858** : A new cholera epidemic in Linz makes 450 deaths.

**Thursday, 2 September 1858** : The Liedertafel « Frohsinn » temporarily ceases its activities.

### Bruckner, the Choir-Master

The information that has come-down to us shows that Bruckner was a demanding Choir-Master, meticulous in his approach and particularly picky about dynamics. He will emphasize the quality of the breathing, the pronunciation and the relationship with the piano accompaniment. (During some performances of the Liedertafel, he will bring his help as a leading pianist, which will be acclaimed by the critics.) He detects the slightest mistake. Often carried-away by the euphoria of the moment, Bruckner takes time to re-concentrate. The choir must sometimes resume calm passages until it gets the right tone.

Satisfied with the result of a pianissimo, Bruckner exclaimed :

« That's precisely what I want ! »

(He had finally heard what his inspiration demanded.)

This shows Bruckner's strength of concentration, that ability to forget everything that happens around him. Besides, he always left the rehearsals of the Liedertafel all soaked !

These interventions are often coloured. If he judges that the piano plays too hard, he will say :

« It sounds rather like a trumpet ! »

...

Anton Bruckner is probably the most famous member but also the most famous Choir-Master in the history of the Liedertafel « Frohsinn » of Linz. As a singer, Bruckner was of no importance. He was a second tenor because he did not have a nice voice. But as a choir-boy in St. Florian, he had a magnificent soprano voice. His accomplishments as a Choir-Master were all the more important. He succeeded in imposing a strict magisterial discipline, studying meticulously, paying great attention to clear pronunciation, proper breathing and being particularly attentive to balanced voices.

He was mostly concerned with the quality of the bass-section. For him, it represented a constant misery.

« I cannot hear the bass-voices. They must be clear ! »

But the biggest challenge was the piano (p) produced by the choir.

If it appeared to him to be too fragile, he rebuked :

« It sounds no longer like a trumpet ! »

To obtain a pianissimo (pp) , his bottom was so low that he almost sat on the floor.

When he was conducting in shirt-sleeves, his whole body was feverish. He was then in perfect harmony with the music. During the most beautiful moments, he became so extatic that he needed some time to return in the rehearsal-room, in front of the singers, to continue his work.

Once, Bruckner was not satisfied with the placement of a pianississimo (ppp) by his singers. He knocked again and again. So, angry, they simply decided to stop singing just at this point, not a single note was produced, tricking their pedantic conductor.

« Said and done ! » , he exclaimed.

How astonished and concerned, however, they all stood there when Bruckner quite enthusiastically cheered :

« Yes, now it was beautiful ! »

His inner-ear had given him, pure fool, the perfection.

### Bertha Barghesi

Anton Bruckner will often visit the couple Karolina Barghesi - Karl Schiedermayr in Ottensheim (Upper-Austria) .

Officially, Josef Schiedermayr (1821-1874, himself an illegitimate child, who became lawyer) had in 1855 an illegitimate daughter with Karolina Barghesi (Bargezzi) . Her first name : Bertha.

**Tuesday, 7 August 1855** : Church of Maria Treu (Piarist Church) in Josefstadt, Vienna. Parish register entry :

Birth of Bertha Barghesi. Mother : Karolina Barghesi ; Father : Josef Schiedermayr.

She was adopted in Vienna by Josef's brother, the physician, botanist and choir-Master Karl Schiedermayr who lived for some time with Karolina. The couple married in 1874.

Bertha Barghesi married the teacher and choir-Master Alois Weißgärber senior (1845-1914) , with whom she had 5 children : 2 sons and 3 daughters. Because of certain facial resemblance to Anton Bruckner in the 2 sons, the suggestion has been made that Bruckner was Bertha's father !

Alois Weißgärber junior became an officer in the Austrian army and one of the leaders of the Vienna Philharmonic.

Maximilian Weißgärber (born on 21 October 1884 in Ottensheim near Linz, Upper-Austria ; died on 30 November 1951 in Vienna) played with the Vienna Philharmonic and was also a member of the Weißgärber String Quartet.

Bertha Barghesi-Weißgärber died in 1923.

According to an « uncertain » DNA analysis, Anton Bruckner is ruled-out as the father of Bertha Barghesi.

BEATRIX WEIßGÄRBER-FRÖHLICH : Vorfahren meines Vaters.

RENATE BRONNEN : Die Weißgärber-Geschwister. Ein Kapitel aus dem Leben Anton Bruckners ?

### Simon Sechter worries about his best student

Anton Bruckner regularly spent some time in Lent and Advent each year, with Simon Sechter. He also used a large

part of his summer vacation to complete, in **1859**, the second stage of the course in Vienna. On **Friday, 3 June**, he wrote to Sechter to confirm that he would be spending 6 weeks in Vienna and, on **Monday, 6 June**, he informed Rudolf Weinwurm that he would be travelling from Linz to Vienna, by Danube steamer, on **Thursday, 30 June**, and asked him to reserve a room for him in a suitable hotel near Sechter's house - « as quiet and cool as possible and ideally looking on to a garden ». The fruit of Bruckner's intensive studies, in the summer heat of Vienna, was a certificate from Sechter.

6 months later, on **Friday, 13 January 1860**, Sechter informed his industrious pupil that he was more than satisfied with his progress and counselled him not to over-stretch himself :

« I have read through your 17 work-books of double-counterpoint exercises and am amazed by your industry and the progress you have made. So that you are in good health when you come to Vienna, I entreat you to take more care of yourself and give yourself the necessary rest. In any case, I have absolutely no doubt about your industry and eagerness and do not want you to damage your health by over-stretching yourself intellectually.

I feel constrained to tell you that I have never had any student as industrious as you. »

The warning will be in vain. In addition to his official duties as organist, Bruckner spent an average of 7 hours daily practising counterpoint. The sleepless nights were the norm. Thousands of pages of exercises, from 1855 to 1861, survived. It recognizes the meticulousness and the method of work of the former school teacher.

Anton Bruckner's next study-visit to Vienna was towards the **end of February or the beginning of March 1860**. He had to change his original plan of arriving in Vienna, on **Wednesday, 22 February**, because he had not yet received any reply to 2 letters he had sent to Simon Sechter and suspected that his teacher, who had recently suffered 1 or 2 bouts of ill-health, might be indisposed. He asked Rudolf Weinwurm to visit Sechter and ask him if it was convenient to come.

### The soup of « Frau » Eidenberger

Anton Bruckner never dedicated a work to the ancestral land of Amstetten but an anecdote, transmitted by oral tradition, involves a woman born in the region :

Since Bruckner was organist at the Linz cathedral from 1855 to 1868, he often had the opportunity to go to Lustenau to visit the wealthy company owner « Herr » Eidenberger. In the 19th Century, this town was marked by agriculture before becoming in the 20th Century the centre of the embroidery industry of Vorarlberg.

Bruckner particularly enjoyed the « delicious soup » served by his wife, « Frau » Eidenberger, who was born in the village of Pampl in the peasant region of Ulmerfeld. To thank her, he will send a precious ring bearing the inscription : « The Pearl of Lustenau ». (Lustenau was then a suburb of Linz.)

Persons who inherited in succession the famous ring : the Kriechbaum family, Mrs. Lilly Selker, the Kubasta-Scheinecker

family. Today, it is owned by Mrs. Gertraud Ornazeder.

Until 1806, Lustenau was a free court of the Holy Roman Empire and then, after the dissolution of the latter, an independent State. Until 1830, it was an independent county reigned by the counts of Waldburg-Zeil-Lustenau-Hohenems. After 1830, it became part of Austria. The name Lustenau derives from a document signed by the Carolingian king Charles the Fat with the title « Lustenauua curti regali », meaning « Royal Court of Lustenau ». Lustenau is now the industrial area of Vöest.

### « Ten Pin » Bruckner

Did you know that Anton Bruckner was a frequent guest in the small town of « Luftenberg-an-der-Donau » ? He went regularly at the local tavern (« Gasthaus ») to play bowling along with the local folk music-band !

In 1975, the site housed the Mayrhofer Restaurant (« Gastwirtschaft Mayrhofer ») .

To commemorate those memorable evenings, a plaque was installed on December 5, 1987, on the building (now owned by the Paschinger family) .

Luftenberg-an-der-Donau is a small market-town in the Mühlviertel district of Perg, Upper-Austria. It is located at approximately 13 kilometres southeast of the city of Linz.

Graves, ancient cult sites, a Celtic fort, a town settlement strategically located by the Danube and the mouth of the River Traun, already existed during the Bronze Age. The first documented mention of Luftenberg dates from around the year 900. Transport by boat was first mentioned in 1208. In addition to the salt trade, mining in quarries represents an important economic activity. Historically, Luftenberg has developed a close relationship with the small market-town of « St. Georgen-an-der-Gusen (St. George's Town on the Gusen River) » .

### Vienna : Hotel « Zum Goldenen Kreuz »

**Tuesday, 3 April 1860** : Simon Sechter was able to provide his pupil with a certificate marking the successful completion of the third stage of the course. In order to prepare for the examination, Bruckner had stayed since the end of February at the Hotel « Zum Goldenen Kreuz » , located at « Mariahilferstraße » Number 71a (99) in the 6th District. When he wrote to Rudolf Weinwurm, at the beginning of the following year, asking him, once again, to find suitable accommodation **from the middle of February to the end of March**, he stated his preference for private lodgings :

« There is no peace day or night in a hotel. At the “ Kreuz ” on “ Mariahilf ”, last year, I could never get to sleep before 3:00 or 4:00 in the morning because of unruly neighbours. I cannot and will not put-up with that again, unless absolutely necessary. »

Between 1663 and 1665 (before the erection of the walls) , 3 inns were established in the suburb of Mariahilf (now,

the 6th District of Vienna) . The Hotel « Zum Goldenen Kreuz » was opened in 1665. It was the third oldest wine-house in Vienna.

A very popular tavern, the inn was also a very popular dance-hall. In the 18th Century, theatre « troupes » stopped at the « Zum Goldenen Kreuz » - among others, Franz Pauli (1770) and « Prinzipal » Wenzel (1777) .

At a certain point, the building was owned by druggist M. Wallace.

Michael Kummer, from Bavaria, bought the old Inn « Zum Goldenen Kreuz » in 1870. The building was demolished. Kummer then started the construction of a 5 storey historical style bevelled-edge structure (accentuated by free columns and figures) according to plans by architect Edward Kaiser. « Hotel Kummer » was inaugurated in 1872.

The immediate proximity to the Palace of the great Chancellor Wenzel Anton, Prince von Kaunitz-Rietberg caused the business of the « Hotel Kummer » to be so flourishing that it became a « stately » hotel. Shortly after the birth of Johann, the Strauß family moved there in 1825 (their other son, Josef, was born in August 1827) .

Friedrich Schlägl, one of the founders of the Classical Viennese literature, regularly gathered followers and friends (writers, painters, sculptors, actors) around the « Alt-Mariahilfer-Künstlerstammtisch » (Association of senior native artists of Mariahilf) at the « Hotel Kummer » . They included the Austrian dramatist and novelist Ludwig Anzengruber, the Styrian writer and poet Peter Rosegger (Roßegger) , the German painter and lithographer Jakob Alt, and the Italian actor Tristano Martinelli.

In 1904, the original « Hotel Kummer » was demolished and rebuilt by L. Schwartz in 1905, based on plans by architects Carl Schuhmann and Ludwig Tischler.

During the Allied occupation after the Second World War (1945-1955) , the « Hotel Kummer » was part of the French sector in Vienna. It was used as a French hotel before the « Hôtel de France » located at Number 3 on « Schottenring » .

In February 1955, « Hotel Kummer » became part of Austria Hotels International (« Österreichische Hotelbetriebs-AG ») .

## Geschichte

Hotel « Zum goldenen Kreuz » (6, Mariahilfer Straße 71 A) , beliebtes Einkehrwirthshaus in Mariahilf, als drittältestes Weinhaus der Vorstadt 1665 gegründet. Im 18. Jahrhundert traten hier Wandertruppen auf (unter anderem 1770 Franz Pauli und 1777 der Prinzipal Wenzel) . Zur Zeit Friedrich Schlägls war das Lokal Treffpunkt von Schriftstellern, Malern, Bildhauern und Schauspielern, zu denen Anzengruber, Rosegger, Alt, Strampfer, Preleuthner und Martinelli gehörten. Das « Goldene Kreuz » war auch als Tanzlokal sehr beliebt. Seine Blütezeit erlebte das « Goldene Kreuz » ab 1872, als der aus Bayern stammende Michael Kummer im dem 1870 nach Plänen von Eduard Kaiser neuerbaute Haus ein Hotel

eröffnete (« Hotel Kummer ») . Später kam das Haus in den Besitz des Drogisten M. Wallace. 1904 wurde das Hotel demoliert und 1905 durch L. Schwartz neu erbaut. Während der Besatzungszeit (1945-1955) war das Hotel von den Franzosen okkupiert. 1955 kam es an die Österreichische Hotelbetriebs-AG.

...

Das Hotel Kummer (6, Mariahilfer Straße Nummer 71 A ; ursprünglich « Zum goldenen Kreuz ») , erbaut 1870 von Eduard Kaiser und von Michael Kummer 1872 als Hotel eröffnet ; fünfgeschossiges streng historisches Gebäude, dessen abgeschrägte Kante mit Freisäulen und Figuren repräsentativ akzentuiert ist.

Nach dem 2. Weltkrieg fiel das Hotel Kummer während der Zeit der Alliierten Besatzung (1945-1955) laut dem Zonenabkommen dem französischen Sektor in Wien zu und wurde von der französischen Besatzungsmacht als Quartier in Wien genutzt, bevor es durch das « Hôtel de France » (1, Schottenring Nummer 3) ersetzt wurde.

...

Zwischen 1663-1665, wurden vor den Stadtmauern Wiens drei Wirtshäuser gebaut, wo später der 6. Bezirk entstand : « Maria Hilf » . Eines davon hieß « Zum Goldenen Kreuz » und stand dort, wo sich heute noch das Hotel Kummer befindet. Die unmittelbare Nachbarschaft zum Palais des großen Staatskanzlers Kaunitz ließen die Geschäfte des Einkehrghasthofes so florieren, daß daraus ein stattliches Hotel wurde, in welches 1825 die Familie Strauß einzog (kurz nach der Geburt ihres Sohnes Johann) und längere Zeit dort wohnte, wo am 20. August 1827 ihr Sohn Josef geboren wurde.

1870 wird der Einkehrghasthof abgerissen und nach Plänen von Edward Weiser ein Hotel errichtet. Der aus Bayern stammende Gastwirt Michael Kummer erwarb das Hotel « Zum Goldenen Kreuz » und eröffnete im Jänner 1872 das « Hotel Kummer » , welches in dieser Form vom Architekten Team Carl Schuhmann und Ludwig Tischler geplant und gebaut wurde. Innerhalb kurzer Zeit wurde es ein bekannter Betrieb und alles was Rang und Namen hatte fand sich im Hotel Kummer ein.

Friedrich Schögl, einer der Begründer der klassischen Wiener Literatur, sammelte regelmäßig Anhänger und Freunde beim Alt-Mariahilfer-Künstlerstammtisch im « Kummer » um sich. Nach dem Tod von Michael Kummer, wurde das feinbürgerliche Haus mit 150 Betten von seinen Schwiegersöhnen weitergeführt, bis es im Februar 1955 von den Austria Hotels International erworben wurde, in deren Eigentum es sich bis heute befindet, wie weitere Hotels in Wien, Baden bei Wien, Eisenstadt, Prag und Brünn.

Das Hotel Kummer freut sich seine Gäste aus aller Welt willkommen zu heißen.

...

It is no accident that Bruckner identified (at first, as student ; later, as teacher) so totally with the designated

teaching methods of Simon Sechter, so aptly described by Friedrich Klose as a « relentless strait-jacket system » .

Bruckner's genius was freed from scholastic chains by Otto Kitzler.

### Birth of Gustav Mahler

**Saturday, 7 July 1860** : Gustav Mahler is born in the town of Kalischt (house Number 9) on the border between Bohemia and Moravia (in the Vysočina region) .

Eye colour : Brown.

Father : Bernard Mahler (1827-1889) .

Mother : Marie Mahler-Herrmann (1837-1889) .

Hereditary diseases : Mother and possibly siblings : heart-disease.

Brother Ernst Mahler (1862-1875) died of endocarditis.

### Doctor Josef Kopfstein

Doctor Josef Kopfstein : General practitioner in the town of Jihlava (Iglau) , located at Number 170 « Hauptplatz » (today, Number 25/643 on « Masarykovo » Square) . Kopfstein was the Mahlers' family doctor.

### Liedertafel « Frohsinn's » new choir-master

**Wednesday, 7 November 1860** : During the plenary meeting of the music society, Anton Bruckner, aged 36, was « unanimously » elected choir Master of the Liedertafel « Frohsinn » in Linz. His salary : 520 Florins ; including free hosting.

A newspaper of Linz will report the appointment :

« The Liedertafel made an enlightened artistic decision by choosing the highly-cultured “ Herr ” Bruckner as choir Master ! We see in him the man who can lead them to glory and great honours. »

This nomination will significantly increase Bruckner's visibility and reputation among the citizens of Linz.

Under his directorship, despite the disagreements and internal quarrels, the choir will go from a simple amateur group to a semi-professional vocal ensemble.

## Death of Theresia Helm

Anton Bruckner will be able to financially support his mother, whom he loves more than anything else in the world. She had sacrificed a great deal by moving to Ebelsberg to work as a servant so that he could attend school at St. Florian. On several occasions, he will propose to her to move to Linz and live at his side. More he will advance in his career, less the contacts will be frequent.

**Sunday, 11 November 1860** : Bruckner's mother, Maria Theresia Helm, died at the age of 59 years of a lung disease (tuberculosis) at her apartment of « Schmiedhaus » (the Blacksmith's house) Number 70 in Ebelsberg. The building has since been demolished ; the site now corresponds to « Kremsmünsterer-Straße » Number 2 where the local community centre (« Volkshaus Ebelsberg ») was erected.

In a letter addressed to his sister Rosalia, he said :

« My dear “ Sali ” ! I am deeply sorry to inform you that the situation has taken an unexpected turn. Our beloved mother has just left for a better world (11 November, at 4:00 pm) . The funeral service will take place on Tuesday morning. I hope you will be able to attend, along with the brother-in-law. »

When his mother died, Bruckner restricted himself to 2 key-words on the edge of a pocket calendar page :

« Mother died. »

Bruckner will bring a photographer, named Zinnogger, from Linz specially to immortalize his mother, lying on her death-bed. He will keep the picture in a special place in his room (covered with a green curtain) for the rest of his life.

Her coffin, which was originally at the Ebelsberg cemetery, was relocated in 1924 alongside her husband, Anton « senior » , in the court-yard of the parish church of Ansfelden.

Bruckner referred to his mother on several occasions in his personal correspondence. In a letter addressed to Leopold Hofmeyer (Steyr) in 1882, Bruckner reports that October 15 is a particularly significant day to him. It is the anniversary of St. Teresa of Avila ; a model of holiness for « Theresia » Helm.

## Liberals and Catholics in local Politics : the Hospitals

This constellation (of communes as the last bastion of true Liberalism against the steadily rising ambitions of the Catholic Church) quickly led to conflict. After the Revolution and counter-Revolution in 1848-1849, many of the older « traditional » power structures had been upset, and Liberals and the Catholic Church began battling for influence in the newly emerging structures, institutions and political practices. And the ideological re-alignment of a post-Josephinist Catholic Church was squarely at odds with a Liberal communal administration ardently trying to stretch the boundary

of what could belong in its grasp. This article will now turn to 2 case studies at the local level to explore this conflict in more detail. The first study involves the prolonged attempt by the Liberal medical and political communities in Linz to press for the building of a general hospital in the city, an effort countered by the Catholic Church which, instead, argued for the expansion of existing religious hospitals.

Until the late-18th Century, hospitals tended to be small scale affairs : « Siechhäuser » set-up during or right after an epidemic ; « Bruderhäuser » or « Bürgerspital » erected by artisans or town burghers to care for their peers ; or « Hospitale » erected by religious orders or, sometimes, by communes to serve as multi-functioning quarters for the sick, terminally ill, indigent, and often the insane. In contrast, the idea of the hospital that emerged in the late- 18th and 19th Centuries (the « Allgemeines Krankenhaus ») (41) was set apart from these earlier structures in 2 important ways. First, the « Krankenhaus » aimed to heal the curable sick ; neither charity nor (unless it was for medical research) the terminally ill necessarily interested its doctors. Second, it aimed at universality : to serve all social classes and curable illnesses in one building.

Universality meant, however, that while all patients would enter through the same front-door, they were immediately separated by disease, gender and social class once inside. The medical aspect of this separation was grounded in what Michel Foucault and others have called the emerging « clinical gaze » of the medical profession in the late- 18th and early 19th Century. (42) General hospitals were clinics ; patients were separated by disease, and each disease was treated and studied in isolation. At the same time, aspirations of a universal « clientèle » also meant that the social classes existed together apart : private rooms for an emerging middle-class not rich enough to have a private doctor care for them at home but repelled by the idea of sharing a room with the labouring masses were seen as the most important financial base for the new hospitals.

Within the modernization of hospitals and health-care in the 19th Century Germany, historians of medicine tend to differentiate between 2 phases : a « push » phase, from about 1790 to 1848, as the medical community restructured itself and began lobbying the State for new hospitals, and a « pull » phase, from 1848 until 1914, when an industrializing and increasingly urban population began to make greater use of those hospitals, filling existing beds and demanding more. (43) In the medieval and early modern period, Linz was in many ways a « typical » central European city in the number and type of hospitals contained within the city. (44) Linz and, to a large extent, Austria, however, diverged from the « German » model in the timing and fashion of the transition from Hospital to « Krankenhaus » and, especially, in the role of the Church in this transition. New hospitals in Linz in the middle of the 18th Century were built under the auspices of religious orders (those of the « Elisabethiner » , in 1744, and of the « Barmherzige Brüder » , in 1756) and only ostensibly placed under centralized State control, in 1770, which fostered a certain tension between the Catholic Church and the increasingly « clinical gaze » of the late- Theresian and Josephinian bureaucratic State. (45)

In Linz, the switch from segmented care (specialized artisan, burgher or pilgrim hospices) to universal « Krankenhaus » care, thus, already began to occur in the early 18th Century but, unlike in France or Prussia, it occurred under the ægis of the Church. (46) Anton Knörlein, one of Linz's most prominent medical doctors in the 1850's and director of the city's insane asylum, described the frustration he and many of his colleagues felt when he wrote :

« The scholastic and mystic nonsense must be swept-out of doctors' and hospital administrators' heads, in order to enable a reasoned study of the natural processes of life. » (47)

In Linz, the medical « old order » was tied much more closely to the Church than in France or in Prussia, and the transformation of the « clinical gaze » into modern clinical practice also became an exercise in anti-clericalism : modern medicine needed not just general, but also « secular » hospitals.

In Upper-Austria, no secular hospitals were built before 1848 (in contrast to Munich, Mainz and most other medium-sized towns in German-speaking Europe) with the result that the « push » and « pull » phases of health-care modernization largely took place concurrently. The first « pull » came in the 1830's, as several public-works projects, better methods of transportation, and the establishment of the first textile factories in the Linz suburb of Kleinmünchen drew workers and travelers to the city on the Danube. (48) The often unsanitary working and living conditions brought rates of sickness and disease well-above the capacity of the local hospitals to deal with - a new hospital with 40 beds built under the auspices of the « Barmherzige Schwestern » , in 1842, barely helped. Also, although Linz was spared when Asiatic cholera first appeared in Europe between 1826 and 1837, the medical community, the provincial administration, and the municipalities engaged in a valuable training exercise in cooperation and social-hygienic policing : during the crisis, the entire municipality (including, for the first time, the religious hospitals) was placed under a centralized system of medical supervision. (49) Writing a report, in 1856, for the Ministry of the Interior, Weis von Starkenfels, the General-Inspector responsible for hospitals in Upper-Austria, counted a mere 160 beds in Linz's 3 hospitals : the « Elisabethiner » , 60 beds ; the « Barmherzige Brüder » , 60 beds ; and the « Barmherzige Schwester » , 40 beds. (50) Linz, however, had a total population of 27,000 (with suburbs this figure rose to over 40,000) (51) , which translated into 1 hospital bed per 168 (with suburbs, 1 per 250) inhabitants. By contrast, as Weis von Starkenfels and other Liberals took pains to point-out, when a 400 bed general hospital opened in Munich, in 1813, it had a ratio of 1 bed for every 68 inhabitants. (52) It was time for more (and secular) hospital beds !

The « push » for a new general hospital began in the 1840's and became a focal-point of Liberal demands, in 1848, and the election of Reinhold Körner to the mayor's office, in 1850, gave them a powerful new platform from which to press their case. Already on the eve of Körner's election, on 15 September 1850, the Liberal choral group Liedertafel « Frohsinn » held a benefit-concert in his honour, raising 458 Florins for a new hospital. 3 days later, the newly-elected Linz « Gemeinderat » placed the building of a new hospital on its agenda, as well. Indeed, in 1850, all sides (the government, prominent Liberals and even the Catholic Church) agreed that there was an ardent need for additional hospital beds. The disagreement came over where to put them. The Church and, for some time, the Ministry of the Interior, argued that an expansion of the existing religious hospitals would be the most cost-effective solution ; Liberals and the medical community in Linz wanted to build a new « secular » general hospital. (53) In the midst of this disagreement, a petition for a series of tax-free lotteries to raise money for the project was rejected by the Ministry of the Interior, even though it had included a positive recommendation from the local « Statthalter » . (54)

Town officials decided to press forth on their own. By February of 1852, the city had raised 30,000 Florins for the hospital through the sale of municipal property and an additional 10,000 Florins through private donations. (55)

Feeling optimistic, the mayor's office sent a delegation to Munich, in September, to study the general hospital there. In 1854, the Conference of Ministers finally permitted the municipality to draw funds from the State lottery (56), adding a further 53,220 Florins to the project and bringing the total to 93,220 Florins. This sum represented a solid financial foundation with which construction could begin. But drawing funds from the State lottery also meant an additional review by the Imperial Building Commission, which judged it too expensive and, in early 1856, recommended the expansion of existing religious hospitals. (57)

After the Imperial Building Commissions' recommendation, the religious Orders, now prompted by the diocese administration, began pleading their case. First, Maria Lácilia, abbess of the « Elisabethiner-Orden », wrote to the « Statthaltereii », informing it that their hospital had recently expanded from 60 to 75 beds and could easily fill double that number. A few weeks later, the diocese administration wrote as well, adding that it fully-agreed with the wishes of the « Elisabethiner », but that any plan needed full-approval from both the diocese administration and the « Elisabethiner » so that there would be a « sense of religious community (« geistliche Kommunität») », especially of rules and regulations. (58) The « Statthaltereii » then wrote to Julius Dotter, head of the Order of the « Barmherzige Brüder », asking whether the Order would also want to be included in any expansion plans. Dotter replied positively but, like the « Elisabethiner », expressed concern that the religious character be maintained : a new hospital wing would remain under religious control, never subject to municipal authority - even during epidemics ; the head of the Order was to remain head of the new wing ; all employees would be paid from a « Fond » created to build the buildings so that the expenses of the additional beds would not burden the order ; finally, the Brothers of the Order set the fees but it would be the duty of the secular authorities (who would not be in daily contact with the Brothers) to collect those fees from the patients. (59)

In late-May, an additional report from the Upper-Austrian Building Commission appeared, re-affirming the recommending of the Imperial Building Commission that an expansion of the religious hospitals would help keep-down costs, and, around the same time, Bishop Franz-Josef Rüdiger of Linz (Bishop from 1853 to 1884) began a small publicity campaign in support of the religious hospitals. In a series of articles in the « Linzer Diözesanblatt » (a small paper printed for the diocese clergy and, thus, aimed at providing content for the next week-end's sermons), Rüdiger emphasized the importance of charity as a principle in hospital maintenance, a principle, he argued, the Catholic Church was better suited to upholding than the State. (60)

The boldness exhibited by the religious Orders, in making their demands, prompted Liberals (who, by the mid- 1850's, had few other outlets for their political energies) to push for their own vision with renewed vigour. The motto of the new general hospital was to be :

« To ensure every sick person access, regardless of nationality, confession, gender or illness, at any time of day or night. » (61)

In a flurry of letters to the « Statthaltereii » and the Ministry of the Interior, officials from the mayor's office and the medical council now began to formulate certain principles that, in their eyes, made a « general » rather than « religious » hospital an absolute necessity, regardless of costs :

- 1) The admission of sick people should take place at every hour of the day and night.
- 2) No person, as long as he or she suffers from a curable illness, should be refused admission.
- 3) For those requesting separated care, private rooms in a separate wing should be available.
- 4) Every institution should remain flexible enough, in its external and internal workings, to enable the progress of the medical arts and sciences, as well as the diverse wishes of the public. (62)

This was the Liberal vision of a general hospital : universal in who it accepted, open at all hours and to all classes (meaning that middle-class patrons could have private rooms) , and managed for the benefit of patients (the public) and doctors (medical science) . This vision stood in stark contrast to the religious hospitals : only open at certain hours of the day, unwilling to treat either pregnant women or those with sexually transmitted diseases while, at the same time, utterly indiscriminate with the patients it did take - everyone, rich and poor, with a broken arm or a contagious fever, shared a room and, when need be, a bed. As the Provincial Medical Commission (63) now reported : to expand the existing hospitals would only « make its weaknesses incurable » . For medical professionals, the question of separate rooms for middle-class patients was not merely an exercise in pampering ; it was a question of public health and of money : What good was a hospital that scared away its only paying clientele ? How could middle-class patients, not rich enough to pay for in-house medical care but, nevertheless, of sufficient social standing to make residency next to common labourers and maids uncomfortable, be treated ? Just as importantly, so continued another petition to the « Statthaltereii » on the matter, the freedom of the medical profession was visibly restrained :

« Under current arrangements, a doctor prescribing treatment is limited to those practices approved by the religious order. »

Research was out of bounds as were new treatments not yet vetted or approved by the head of the religious order. Indeed, the problem of authority ran deep. A doctor in a religious hospital merely made visitations ; he did not reside there. And, most importantly, monasteries had « neither a mandate nor an interest in serving the interests of art, science or humanity ; nor to fund the adoption of modern practices and technologies » . It was public health in general that suffered most when religious hospitals insisted on their independence. (64)

When an outbreak of Asiatic cholera afflicted the region, in the summer of 1855, Liberals saw a new opportunity to make their case. The outbreak of cholera was horrific ; in Linz alone, 1,429 people (just over 5 % of the population) died from the disease in the 3 summer months of that year. (65) Writing to the « Statthaltereii » , in the midst of the epidemic, Vinzenz Fink, then mayor of Linz, argued that the hospital question was not only relevant to the city of Linz but also affected Urfahr and Linz's other suburbs, « many of which are home to large working-class populations » , most of whom were not adequately tied into the local health-care systems. Religious authorities were flatly opposed to any sort of regional or municipal authority structure, Fink argued, thus making municipalities powerless in times of crisis. (66) This argument now convinced the Ministry of the Interior as well : public health was the highest good. In the wake of the cholera epidemic, the idea of expanding the religious hospitals was shelved for good. (67)

The conflict surrounding the building of the general hospital in Linz demonstrates how the idea of health-care, through specific conflicts, shifted away from one of Christian charity toward one of public health and jurisdiction of the secular authorities : the medical professionals, the municipalities, the provinces, and the State. At first, efforts by the municipality to build a general hospital proved unsuccessful, as the government in Vienna and the Catholic Church opposed these efforts on cost and religious grounds. Nevertheless, these early failures forced the medical community to more clearly articulate their vision, with the already mentioned motto :

« To ensure every sick person access, regardless of nationality, confession, gender or illness, at any time of day or night. » , as the result.

The cholera epidemic of 1855, then, made the Liberal principal of health as a public good all the more urgent : a « free » medical community working together with the secular authorities in safe-guarding public health. In this instance, the alliance between the Catholic Church and the centralized Austrian State in the neo-absolutist era lost to an equally powerful coalition of local Liberal politicians and medical professionals as all sides confronted a new, thoroughly « modern » problem : epidemic disease in industrial and urban conditions.

## Conclusion

Despite the powerful alliance between Catholic Church and Austrian State, that emerged in the 1850's, the ability of the Church to turn its vision of an independent and post-Josephinist Church into reality was not always successful. Local Liberals were able to use the levers of local government effectively in pressing their case and the central government was not at all averse to ruling in their favour, even around the time of the signing of the Concordat. Far from exiting the political arena after the failures of 1848, Liberals thus warmed to the possibilities of local government in the 1850's, using the provisional communal law of March 1849 to barricade their municipalities against intrusion by the State and by the Church. Linz and many other municipalities in Upper-Austria had a continual succession of mayors with activist pasts and Liberal agendas. On the ground, such efforts led to a multi-faceted struggle between opposing Liberals and the Catholic Church, as each sought to redefine the « Gemeinde » (here, in the double meaning of commune and parish) through its efforts. Hospitals and health-care, in Upper-Austria the « traditional » domain of various Catholic orders, became a highly-contested area of Catholic-Liberal interaction, as the efforts at professionalization of the medical community clashed with a confident Catholic Church in the midst of negotiating the Concordat with a willing government in Vienna. The clash pitted concepts of modern medicine (of hygienic policing, of having a chief physician and not the Bishop run a hospital, of treating all diseases equally and patients on their own terms, of allowing the city's medical committee to coordinate all hospitals in times of emergency) against the Church's vehement assertions of independence from the State.

The « von Jenny burial case » proceeds in a similar manner. The principles of Josephinist cemetery legislation had been muddled by the dramatic legal restructuring of 1848 and by the communal restructuring under the Stadion administration. This left the door open for both Liberals and the Catholic Church to claim forms of jurisdiction over « their » cemeteries at a local level. Here, the democratic and multi-confessional ideals of the Liberal political community ran-up against the ambitions of a Church seeking to consolidate its power in the aftermath of the Concordat. While a

« victory » is harder to spot here (yes, Fridolin von Jenny was ultimately buried with tombstone in Schwanenstadt, but his son, and many other Protestants, were not as the Church redoubled its efforts to claim jurisdiction over communal cemeteries) , the dynamic is the same.

Nevertheless, the difference between the 2 cases is also important : if the conflict over hospitals emerged as a simple question of old and new (of « outdated » and « modern ») , then, the tenacity with which Bishop Franz-Josef Rüdiger tried to hinder Fridolin von Jenny's demonstrates that the Church was also in the process of re-making itself. Rüdiger's embarrassment after local officials permitted the funeral to take place resulted from the fact that he was actively engaged in changing existing practice. His vision of a post-Josephinist Catholic Church included a vigorous defense of Church rights still in the process of being formulated during the Concordat negotiations in 1854-1855 - here, with the example of cemetery laws but equally applicable to marriage and censorship laws. The more Josephinist leaning clergy within the diocese by no means accepted Rüdiger's conservative and ultramontane views - Reitshammer's predecessor in Schwanenstein would undoubtedly not have brought the case to Rüdiger's attention. The « von Jenny case » , thus, adds a more sophisticated understanding to the wide array of difficulties that greeted Bishops, even ardent conservatives like Rüdiger, as they sought to implement their vision of a post-Josephinist Austrian Catholic Church in their dioceses. And both cases demonstrate the complex interaction of progressive and reactionary forces that define the era of neo-absolutism.

## Notes

(1) « All sovereignty proceeds from the people » , the delegates in Kremsier had initially declared, whereupon Stadion rose to declare the « dictum » unacceptable to the government. The proclamation was dated : 4 March 1849. On both constitutions, see : Carlile Aylmer Macartney. *The Habsburg Empire (1790-1918)* , New York (1969) , pages 417-425.

Stand : Austria, in : Culture Wars : Secular-Catholic Conflict in 19th Century Europe, edited by Christopher Clark and Wolfram Kaiser, Cambridge (2003) . Also, see many of the articles in : Peter Urbanitsch and Hannes Steckel. « Kleinstadtbürgertum in der Habsburgermonarchie : 1862-1914, Bürgertum in der Habsburgermonarchie » , Nummer 9, Vienna (2000) .

(12) Thomas Götz. « Bürgertum und Liberalismus » , Nummer 23, pages 522-525. Ernst Hanisch. « Der lange Schatten des Staates. Österreichische Gesellschaftsgeschichte im 20. Jahrhundert » , Vienna (1994) . Hanisch's thesis has not been without its detractors, who argue, rightly, that it reproduces a peculiar and rather static Austrian form of the Sonderweg argument. See, for example : Eduard G. Staudinger. « Ernst Hanischs “ Der lange Schatten des Staates ” : Eine sehr persönliche Gesellschaftsgeschichte in unserem Jahrhundert » , in : « Zeitschrift des Historischen Vereines für Steiermark » , Nummer 87 (1996) . Hans Heiss. « Der lange Schatten des Staates » , in : « Österreichische Gesellschaftsgeschichte im 20. Jahrhundert » , review of : Hanisch Ernst. « Der lange Schatten des Staates, Archiv für Sozialgeschichte » Nummer 35 (1995) .

(13) This point is best made by : Karl Vocelka. « Verfassung oder Konkordat ? Der publizistische und politische Kampf der österreichischen Liberalen um die Religionsgesetze des Jahres 1868 » , in : « Studien zur Geschichte der Österreich-Ungarischen Monarchie » , Band 12, Vienna (1978) .

(14) Alexander Bach remains a strange « lacuna » in Habsburg historiography. The few extended studies that exist include : Heinrich Friedjung. « Alexander Bachs Jugend und Bildungsjahre » , in : « Historische Aufsätze » , Stuttgart / Berlin (1919) . « Alexander Bach : politisches Characterbild » , Leipzig (1850) . Minna Regina Falk. Social Forces in the Austrian Revolution of 1848, with Special Attention to the Leadership of Alexander Bach » , Ph.D. Dissertation, New York University (1933) .

(15) On Alois Fischer, who held the position from 1849 to 1851, see : « Alois Fischer, Aus meinem Amtsleben » , Augsburg (1860) .

(16) Until 1849, Salzburg was administratively part of Upper-Austria.

(17) As with his brother Alexander, there has been little written on Eduard Bach. See, for example, the often inaccurate : Friedrich Walter. « Beiträge zu einer Biographie Eduard Bachs » , in : « Mitteilungen des Oberösterreichischen Landesarchivs » , Nummer 8 (1964) . A more balanced view can be found in : Harry Slapnicka. « Oberösterreich, die politische Führungsschicht : 1861 bis 1918 » , in : « Beiträge zur Zeitgeschichte Oberösterreichs » , Nummer 9, Linz (1983) . Harry Slapnicka. « Eduard Bach (1814-1884) . Kaiserlicher Statthalter in der zentralistisch-bürokratischen Ära » , in : « Oberöreicher : Lebensbilder zur Geschichte Oberösterreichs » , edited by Gerhart Marckhgott and Harry Slapnicka, Linz (1991) . The « official » record is probably closer to the mark. See : Bach's obituary, in the « Linzer Zeitung » (17 February 1884) , page 1.

(18) Kurt Wimmer. « Liberalismus in Oberösterreich : am Beispiel des Liberal-politischen Vereins für Oberösterreich in Linz (1869-1909) » , Beiträge zur Zeitgeschichte Oberösterreichs / herausgegeben vom Oberösterreichischen Landesarchiv

» , Nummer 6, Linz (1979) , page 22.

(19) The German term « Gemeinde » denotes a geographical sub-unit of the province (« Land ») and is, thus, equivalent to the English term « commune » . The larger municipalities existed as separate entities and usually enjoyed further privileges, either through their status as « market » or « free » towns, or with a unique set of privileges granted by the Emperor. See : Franz Stundner. « Die Entwicklung des Städtewesens in Österreich im 19. Jahrhundert » , in : « Die Städte Mitteleuropas im 19. Jahrhundert » , edited by Wilhelm Rausch, Linz (1983) .

(20) The reform of the « Gemeindesystem » , like much of the Stadion constitution, became the subject of heated battles between the ministries and within the government. In practice, the constitution was increasingly ignored during the 1850's, but became the foundation for a much more thorough reform, a decade later. See : the « Linzer Zeitung » (29 July and 20 September 1851) , as well as : Werner Ogris. « Die Entwicklung des österreichischen Gemeinderechts in 19. Jahrhundert » , in : « Die Städte Mitteleuropas im 19. Jahrhundert » , edited by Wilhelm Rausch, Linz (1983) , pages 85-90. A good overview of the conflicts within the government can be found in : Friedrich Walter. « Die Österreichische Zentralverwaltung. III. Abteilung : Von der Märzrevolution 1848 bis zur Dezemberverfassung 1867 » , volume I : « Die Geschichte der Ministerien Kolowrat, Ficquelmont, Pillersdorf, Wessenberg-Dobhoff und Schwarzenberg » , Vienna (1964) , page 572 ff.

(21) « Die Grundfeste des freien Staates ist die freie Gemeinde. » The « Gemeindegesetz » was issued just 2 weeks after the Stadion Constitution. Article I of the « Provisorisches Gemeinderecht » , « Reichsgesetzblatt » , Nummer 170 (17 March 1849) , pages 203-223. All laws cited from : « Österreichische Nationalbibliothek » , Austrian Newspapers Online - « Gesetzestexte » (Online Database) - « Österreichische Nationalbibliothek » (cited on 29 October 2004) is available from <http://anno.onb.ac.at/gesetze.htm> . Also, see : Werner Ogris. « Gemeinderecht » , page 86.

(22) Liberal historians and commentators have, of course, pointed to these provisions as « Stadions reifste legislatorische Leistung » . Werner Ogris. « Gemeinderecht » , page 86.

(23) On this point, see : Thomas Götz. « Bürgertum und Liberalismus » , Chapter 4.

(24) The commune became an important setting for Liberal activity in much of Europe in the years after 1848. See, for example : Sudhir Hazareesingh. Religion and Politics in the St. Napoléon Festivity (1852-1870) : Anti-Clericalism, Local Patriotism and Modernity, in : English Historical Review 69, Number 482 (2004) . Gordon A. Craig. The Triumph of Liberalism : Zürich in the Golden Age (1830-1869) , edited in paperback, New York (1988) . Theodor S. Hamerow. Restoration, Revolution, Reaction : Economics and Politics in Germany (1815-1871) , Princeton (1958) .

(25) In the « Vormärz » , Austrian counties and municipalities enjoyed comparatively few rights when compared to their neighbours to the north. As Thomas Nipperdey has fittingly put it, during these years, « die städtische Verwaltung wurde verstaatlicht » . Werner Ogris. « Gemeinderecht » . Thomas Nipperdey. « Deutsche Geschichte 1800-1866. Bürgerwelt und starker Staat » , 3rd edition, Munich (1983) , page 339. James J. Sheehan. German History (1770-1866) , Oxford history of modern Europe, Oxford / New York, (1989) , page 489.

(26) See accounts in : the « Linzer Zeitung » (October and November 1850) . Also, see : Franz Kirchmayr. « Oberösterreich » , page 8.

(27) From Reinhold Körner's speech upon being elected mayor. Reprinted in the « Linzer Zeitung » (17 November 1850) .

(28) There is some doubt among historians over whether Reinhold Körner resigned in protest or was forcefully asked to resign. More than probably, it was a mix of both. Georg Grill. « Das Linzer Bürgermeisterbuch » , Linz (1959) , page 108. Franz Kirchmayr. « Oberösterreich » , page 167.

(29) See the various Chapters, in : « Urbanitsch and Steckel, Kleinstadtbürgertum in der Habsburgermonarchie : 1862-1914 » .

(30) On the Ordinances of 18 and 23 April 1850, see : Erika Weinzierl-Fischer. « Die österreichischen Konkordate von 1855 und 1933 » , in : « Schriftenreihe des Arbeitskreises für österreichische Geschichte » , Vienna (1960) , page 59.

(31) On this point, see : Peter Wozniak. « Leo Thun » .

(32) Although this point may sound minor, it represented a major and hard-won concession on the part of the Church. The complete Concordat is reprinted in : Erika Weinzierl-Fischer. « Konkordate » , pages 250-258.

(33) A good overview of the clerical / anti-clerical culture wars in 19th Century Europe is provided by : Culture Wars : Secular-Catholic Conflict in 19th Century Europe, edited by Christopher Clark and Wolfram Kaiser, Cambridge (2003) .

(34) Some scholars argue that Josephinism was the Austrian version of reform Catholicism while others emphasize its uniquely Austrian aspects, focusing on the role it played in the Habsburg State-building process. For an example of the former, see : Eduard Winter. « Der Josefinismus und seine Geschichte. Beiträge zur Geistesgeschichte Österreichs (1740-1848) » , in : « Prager Studien und Dokumente zur Geistes- und Geisinnungsgeschichte Ostmitteleuropas » , Band I, Brno (1943) . For the latter, see : Ferdinand Maass. « Der Josephinismus » , Wien (1951) . William D. Bowman. Priest and Parish in Vienna (1780 to 1880) , in : Studies in Central European Histories, Boston (1999) . Also, see : Derek Edward Dawson Beales. Josef II, volume I, Cambridge (1987) . Timothy Charles William Blanning. Josef II, Profiles in power, London (1994) . Charles W. Ingrao. The Habsburg Monarchy (1618-1815) , New approaches to European history, Cambridge / New York (1994) , Chapter 6. Charles H. O'Brien. Ideas of Religious Toleration at the Time of Josef II. A Study of the Enlightenment among Catholics in Austria, in : Transactions of the American Philosophical Society 59, Number 7 (1969) .

(35) Adam Bunnell. Before Infallibility : Liberal Catholicism in Biedermeier Vienna, Rutherford, New Jersey (1990) .

(36) See, especially : Gottfried Mayer. « Österreich als katholische Grossmacht : ein Traum zwischen Revolution und liberaler Ära » , in : « Studien zur Geschichte der Österreichisch-Ungarischen Monarchie » , Band 24, Vienna (1989) .

**(37)** Ultramontanism denotes a strain within Catholicism that emphasizes a strict sense of hierarchy and the primacy of the Pope within the Catholic Church, as a whole. As Nicholas Atkins and Frank Tallett have noted, the term « came to embody an ideology that took in liturgy, devotion, clerical discipline, theology and extended to the realm of politics, social action and culture ». Nicholas Atkin and Frank Tallett. *Priests, Prelates and People. A History of European Catholicism since 1750*, Oxford (2004) , page 130. In relation to Liberalism, Ultramontanism denotes the idea of a Roman Catholic Church existing apart from (or, on occasion, even above) the (Liberal) State. See the introduction in : Max Voegler. *Religion, Liberalism and the Social Question in the Habsburg Hinterland : The Catholic Church in Upper-Austria (1850-1914)* , Ph.D. Dissertation, Columbia University (2006) .

**(38)** While it often makes little sense to speak of a « Germany » before 1866-1871 (that is to exclude the German-speaking regions of the Habsburg Monarchy from the historical narrative before that date) , when it comes to Catholic theology and inner-Catholic politics, there was a marked difference between the German-speaking provinces within and without the Monarchy, long before 1871. As the well-known Munich theologian Ignaz von Döllinger commented while speaking in Linz, in 1850 :

« Wir draußen in Deutschland wussten äußerst Wenig von dem, was in dem katholischen Österreich auf dem theologischen Gebiete vorgehe und was uns Österreich selbst auf diesem Gebiete erschien, was für uns andere, ich möchte sagen, so ganz fremdartig, so ganz, wie es schien, auf einem anderen Boden gewachsen, aus einem anderen Geiste hervorgebracht, daß wir es als etwas für uns Unverständliches ganz beiseite legten. »

Johann Friedrich. « Ignaz von Döllinger. Sein Leben auf Grund schriftlichen Nachlasses » , 3 volumes, Munich (1901) , page 82. On this point, also see : James J. Sheehan. *What is German History ? Reflections on the Role of the Nation in German History and Historiography*, in : *Journal of Modern History* 53, Number 2 (1981) . William D. Godsey. *Nobles and Nation in Central Europe : Free Imperial Knights in the Age of Revolution (1750-1850)* , Cambridge (2004) .

**(39)** Some historians have argued that the Concordat can be interpreted as a « re-articulation of Josephinist principles regarding the Church-State relationship ». In the scope of its ambitions and its willingness to dispense with existing regulations, it certainly matched the scale of many Josephinist reforms ; but, whereas Josephinism had sought to fuse the 2 bureaucracies together, the Concordat aimed at separating them while giving the Catholic Church jurisdiction over central State functions such as primary education and marriage laws. Josephinist principles, in contrast, were always first and foremost about State jurisdiction. John W. Boyer. *Political Radicalism in late- Imperial Vienna : Origins of the Christian-Social Movement (1848-1897)* , Chicago (1981) , pages 20-21. The above quote is from : Pieter M. Judson. *Exclusive Revolutionaries : Liberal Politics, Social Experience, and National Identity in the Austrian Empire (1848-1914)* , in : *Social History, Popular Culture, and Politics in Germany*, Ann Arbor (1996) , page 71.

**(40)** Erika Weinzierl-Fischer. « Konkordate » , pages 73-74, 100. Although Liberals were rightly distraught at many aspects of the Concordat, it also created the basis of a separation of Church and State that would make the later transition to religious equality and Liberal constitutionalism much easier. On this point, see the discussion, in : John W. Boyer. *Political Radicalism*, pages 19-21. Gene Burns. *The Politics of Ideology : The Papal Struggle with Liberalism*, in *the American Journal of Sociology* 95, Number 5 (1990) , pages 1130-1132.

(41) I will use « general hospital » to denote the German « Allgemeines Krankenhaus » and « religious hospital » for « Ordensspital ». There are no ready equivalents in English for the words « Hospital » and « Krankenhaus ». Hospice, the nearest equivalent to Hospital, fails to convey the openness of the term - which refers to any institution that took people in and remains in use in Austria and Switzerland (« Spital »), as a synonym for « Krankenhaus ». The very term « Krankenhaus », thus, denotes an attempt of the late- 18th Century medical community to differentiate « their » institution from « Spitale ». Robert Jütte. « Vom Hospital zum Krankenhaus : 16. bis 19. Jahrhundert », in : « Einem jedem Kranken in einem Hospitale sein eigenes Bett » in : « Zur Sozialgeschichte des Allgemeinen Krankenhauses in Deutschland im 19. Jahrhundert », edited by Alfons Labisch and Reinhard Spree, Frankfurt-am-Main / New York (1996), page 32.

Jahrhunderts », in : « *Historische Zeitschrift* », Nummer 260 (1995), pages 102-103. Alfons Labisch. « Stadt und Krankenhaus. Das Allgemeine Krankenhaus in der kommunalen Sozial- und Gesundheitspolitik des 19. Jahrhunderts », in : « Einem jedem Kranken in einem Hospitale sein eigenes Bett », in : « *Zur Sozialgeschichte des Allgemeinen Krankenhauses in Deutschland im 19. Jahrhundert* », edited by Alfons Labisch and Reinhard Spree, Frankfurt-am-Main / New York (1996), page 255.

(44) On hospitals in Linz before the 19th Century, see : Anton Knörlein. « Kurzgefasste Geschichte der Heilanstalten und des Medicinalwesens in Linz », Linz (1855). Sturmberger. « Vom “ Hospital ” zum “ Krankenhaus ” », pages 227-241.

(45) The 1770 « Sanitäts-Normativ » created a medical council of government officials and doctors in each province, which met every 8 days to consult on matters of public health. But while this did much to centralize the medical profession, it did little to increase State oversight of Church-controlled hospitals, over which the council had no direct control. See : Anton Knörlein. « *Geschichte der Heilanstalten* », page 15.

(46) The Catholic Church played an important role in health-care throughout the 18th and early- 19th Century, a welcome partner of the State in endeavors such as the vaccination campaign in the late- 18th Century. Michael Pammer. « Vom Beichtzettel zum Impfzeugnis : Beamte, Ärzte, Priester und die Einführung der Vaccination », in : «

Österreich in Geschichte und Literatur 39 » , Number 1 (1995) .

(47) Anton Knörlein. « Geschichte der Heilanstalten » , page 11.

(48) The building of the Maximilian Towers and the Linz-Budweis (České Budějovice) railroad in the early 1830's, as well as the start of regular traffic on the Danube, later that decade, by the « Donau-Dampfschiffahrtsgesellschaft » brought a steady stream of workers, merchants and tourists to the region.

(49) « 4 Cholera-Spitäler wurden errichtet, die Stadt in Sanitäts-Bezirke getheilt, und Ärzte und Wundärzte zu deren Überwachung aufgestellt » . Anton Knörlein. « Geschichte der Heilanstalten » , page 31. On Asiatic cholera in Europe, see : Richard J. Evans. Epidemics and Revolution : Cholera in 19th Century Europe, in : Past and Present, Number 120 (1988) . In the Monarchy, doctors from all provinces were invited by the government in Vienna to travel to Galicia, in 1831, in order to study the effects and dangers of Cholera up close. Zdenek Hornof. « Josef Škoda als Choleraarzt in Böhmen » , in : « Clio Medica 2 » , Number 1 (1967) . In Upper-Austria, as in most other towns in Central Europe, the results of the expedition were followed quite closely. See, for example, « Berichte des Herrn Doktor Leo aus Warschau über die heilung der Cholera » , Steyr (1831) . As Peter Baldwin has noted, the 1830's epidemic produced « a veritable biblio-cholera » that, in itself, seemed acutely contagious. Peter Baldwin. Contagion and the State in Europe (1830-1930) , Cambridge (1999) , pages 38-39.

(50) Weis von Starckenfels' title was « General-Inspektor für Gefängniswesen » , which also included hospitals. Starckenfels to Alexander von Bach (6 January 1856) . « Oberösterreichisches Landesarchiv » StPr VII D, Schachtel 371. A rather different estimate is available in : Franz Kirchmayr. « Oberösterreich » , pages 474-478. He comes to a total of 600 beds, although he includes institutions that catered to « specialized » groups : the « Landes- Irrenanstalt » , for the insane ; the « Gebär- und Findelanstalt » , for the unwed mothers ; the « städtisches Krankenhaus » , for women with venereal disease ; and the « städtische Versorgungsanstalt » , a poor house.

(51) Figures are for 1857. « Suburbs » includes : Urfahr, Kleinmünchen, Ebelsbergen, Traun, and St. Peter. See : « Österreichisches Statistisches Zentralamt, Geschichte und Ergebnisse der zentralen amtlichen Statistik in Österreich (1829-1979) » , in : « Beiträge zur Österreichischen Statistik » , Nummer 550A, Vienna (1979) , page 13. Michael John and Gerhard A. Stadler. « Zur Bevölkerungsentwicklung und Stadtwachstum in Linz (1840-1880) » , in : « Historisches Jahrbuch der Stadt Linz » (1987) , page 121.

(52) In the plans, reports and correspondence of local officials and doctors involved in the planning process, Munich, more often than Vienna or even smaller towns in the Monarchy, such as Brno, was the model for their planning efforts throughout the 1840's and 1850's. Alexander Brenner and J. Kempf. « Das Allgemeine Krankenhaus der Stadt Linz : 1865-1904 » , Linz (1904) . On the general hospital in Munich, see, Reinhard Spree. « Sozialer Wandel im Krankenhaus während des 19. Jahrhunderts. Das Beispiel des Münchner Allgemeinen Krankenhauses » , in : « Medizinhistorisches Journal 33 » , Numbers 3, 4 (1998) , page 251.

(53) In their plea to the « Statthaltereie » , Anton Knörlein and Joseph Onderka called it a « Civilkrankenhaus » , in

order to further distinguish it from the religious « Ordensspitäler » . (Josef Onderka was the head of the medical community, the « Regierungs- und Landes-Medicinalrath » , in Upper-Austria.) **(67)** Bratislava (« Preßburg ») was the only other town to receive lottery funds to build a general hospital in the 1850's, at least of the cases documented in the minutes of the Conference of Ministers in the 1850's. « Protokolle Buol-Schauenstein » , volume 3, edited by Waltraud Heindl, page 171. The conflict over the building of the hospital was by no means over, however, as the municipality and the province soon became embroiled in a prolonged struggle over who would control the new hospital. See : Max Voegler. Religion, Liberalism and the Social Question, page 123 ff.

### No more hotels

**Sunday, 10 February 1861** (Sunday before « Mardi Gras ») : Letter from Anton Bruckner to Rudolf Weinwurm :

Bruckner thanks Rudolf for the correspondence (letters) . He confirms his arrival date (Wednesday 13, at noon) and sends greetings from Alois, his brother. Bruckner will bring the Liedertafel « Frohsinn » . He complains about last year's restless accommodation, and would rather stay in a private apartment than a hotel. He is dissatisfied with the Linz conditions.

### Urfahr : Local tavern

**Saturday, 13 July 1861** : The Liedertafel « Frohsinn » , under the direction of Anton Bruckner, sings at a local tavern in the town of Urfahr, just across the Danube (a borough of Linz since 1919) .

The reason : fine-tuning a selection of choral pieces to be performed during the « Großen Deutschen Sängerkongress » (Great German Singers' Festival) , which will begin in only one week (**from Saturday, July 20 to Tuesday July 23, 1861**) in the city of Nuremberg.

### Nuremberg : Great German Choral Festival

**Friday, 19 July 1861** : The Liedertafel « Frohsinn » , accompanied by some members from other Choral Societies of Upper-Austria, goes by boat to the town of Passau, in Lower-Bavaria - also known as the « Dreiflüssestadt » (City of 3 Rivers) because the Danube is joined at Passau by the Inn from the south, and the Ilz from the north.

**Saturday, 20 July 1861** : Bruckner and the Liedertafel « Frohsinn » continue their trip in direction of Nuremberg by train. Their arrival is scheduled for 2:00 pm. They receive a warm welcome from the citizens of Nuremberg.

Participants who made the trip :

Josef Hafferl, Doctor Anton Stifler, Theodor Zehden, Joseph Hametner (tenor) , Adalbert Markus, Doktor Julius Benoni, Johann August Dürrnberger, Fiala, Doctor Hocke, Franz Hoffelner (tenor) , Josef Kaar, Karl Kerschbaum, Matthäus Kirchberger, Engelbert Lanz, Anton Munsch, Ortner, Franz Reininger, Stupöck, Karl and Josef Weilnböck, Othmar Wessely, and members from Alois Weiwurm's Choral Association.

Bancalari, Baron Andreas von Baumgartner, Bayerlein, Billing, Karl Debrois de Bruyk, Frey, Friedrich, Gehmacher, Kleinecke, Langer, Mannheimer, Carl Ritter von Olschbaur, Georg Pointner, Prix, Karl Santner, Julius Scheda, Franz Schützenberger, August Stradal senior.

### The young Nietzsche

During his school vacations, the young Nietzsche wanted to visit the « Deutsche Sängerkunst » and travelled via Bamberg, Forchheim, Lichtenfels and the monastery at Banz.

Obviously, Nietzsche had arrived by train from Plauen, where he had stayed at his « dear aunts » (and with his wealthy uncle Hermann Friedrich Theodor Nietzsche) . On **Saturday, July 20, 1861**, young Nietzsche received a traveling document that was issued by the Royal Court at Plauen and allowed « the student of the Prince's School at Pforta near Naumburg, Friedrich Wilhelm Nietzsche (...) to travel to Nuremberg and to Swiss Franconia for his vacation » (« Zögling der Fürstenschule Pforta bei Naumburg, Friedrich Wilhelm Nietzsche (...) zur Reise nach Nürnberg und die fränkische Schweiz, zum Vergnügen ») .

With respect to his stay at Nuremberg, he made the following notes :

« Nightly travel. “ Hof. ” Crowded. Messy. Not feeling well. Bamberg. Better. Nuremberg. Traveling companions : 2 singers, one fat gentleman, a silent man, a lady with a child with a bleeding nose, etc. Discomfort. First impression of the City. Schmidts. Politeness of the Nurembergers. Going-out. General remarks. Festival Hall. Rehearsal. (illegible) . Return. Ägidien Church with wonderful side-chapels. Dürer paintings. “ Jesus auf Gethsemane ”. Frauenkirche. Catholic mass. Colourful windows. Book-store von Schmidt. Noon, the 4 directors. Champaing. Concert. Searched long for the “ Blaue Glöckli ”. “ Kapellmeister ” Tschirch. Komposition. Opera : “ Meister Martin und seine Gesellen ”, is seeking to stage it in Nuremberg. “ Die Schwäne ” (The Swans) . “ Schwanengesang ” (Swan Song) completed. Composed early, works drafts out at night. - Night lodgings. »

(« Nachtreise. Hof. Überfüllung. Unordnung. Unwohl. Bamberg. Besser. Nürnberg. Reisegesellschaft. 2 Sänger 1 dicker Herr, ein stummer Stiller, die Dame mit naseblutendem Kind und so weiter. Ungemüthlichkeit. Erster Eindruck der Stadt. Schmidts. Höflichkeit der Nürnberger. Ausgehen. Allgemeine Bemerkungen. Festhalle. Probe. (unleserlich) Rückkehr. Ägidienkirche mit prachtvollen Nebenkappen Dürerbilder Jesus auf Gethsemane. Frauenkirche, catholscher Gottesdienst, bunte Fenster. Buchhandlung von Schmidt. Mittag, die vier Direktoren. Champagner. Konzert. Blaues Glöckli. Lange gesucht. Kapellmeister Tschirch komponiren. Oper : Meister Martin und seine Gesellen sucht in Nürnberg aufzuführen die Schwäne, Schwanengesang vollendet. componirt früh, arbeitet in der Nacht aus. - Nachtquartier. »)

### Nuremberg : The sister of a wafer-producer

During the Nuremberg Festival, Anton Bruckner was staying at the house of wafer-producer Robert (Franz ?) Zimmermann (his father, a surgeon, was practising not far away, in the town of Fürth) .

Bruckner falls in love with Zimmermann's sister.

### Nuremberg : « Sächsischen Hof »

During the Nuremberg Festival, the Liedertafel « Frohsinn » singers stayed at the Hotel « Sächsischen Hof » .

They performed at the specially erected Festival Hall in « Maxfeld » (a park named after Bavarian king Maximilian II) , which could welcomed between 5,000 to 6,000 singers (5,600) . (This event is reminiscent of a marble vase, erected in 1891, which still stands in the city-park.)

The area originally consisted of orchards and fields. Georg Zacharias Platner, great patron of the municipal parks in Nuremberg, transformed the « Maxfeld » at his own expense, from 1856, into an English landscape park. A small artificial lake was built in the heart of the green area. It became the icon of the 1861 Great German Singers' Festival. Around 1865, city expansion will curve agricultural activity there.

After the concerts, visitors would enjoy the rich gastronomic tradition of the city of Nuremberg.

### Regensburg : « Walhalla »

**Wednesday, 24 July 1861** : After the Festival, on their way back, Anton Bruckner and the Liedertafel « Frohsinn » make a stop in the town of Regensburg to visit the « Walhalla » Temple.

They also stop in Passau before returning to Linz.

### Olga, the provocative waitress

Anton Bruckner took umbrage at a practical joke, played on him by the « Frohsinn » . It involved a restaurant waitress, called Olga, who had caught the composer's eye. She was encouraged by some members of the Choir to dress seductively and pay a visit to the unsuspecting Bruckner who was coaxed into a room, alone. Shocked and distressed, Bruckner escaped by going through the window, in great haste.

Consequently, he resigned his conducting post, in **September**.

**Thursday, 3 October 1861** :

« I was grossly insulted by “ Frohsinn ” and resigned from the Choir, in **September**. Sechter stayed with me for a few days. I am thinking of travelling to Vienna, in the second half of November. Could you please be available and, perhaps, make a few preparations. In any case, I would like to invite (Benedikt) Randhartinger, the Court music-director, and Gottfried Preyer to be members of the examining committee. Write to me soon. Sechter will be in charge of the examination. »

...

Anton Bruckner was at first attracted by noticing smiling women across the street from where he was in Linz, and then, repelled to be told that they were prostitutes. His lifelong crushes on young women and teenage girls seemed to have made him the butt of jokes among his friends and associates, but there is no evidence of any hanky-panky before the girls left him for younger, more handsome suitors.

Compulsive behaviour on the basis of fear of touching, whose sexual accentuation is obvious, is presented in a report from Max Auer. According to this, Bruckner developed this compulsion during his « Vienna years », that he would carry a glove with him on days when confession was imminent.

This was for the following purpose :

Between the granted absolution and the reception of Holy Communion, should there possibly be an encounter with a woman (who might possibly be in a state of « impurity ») he could offer only his gloved hand.

Bruckner internalized this « structure » and sought it in « the world outside », that of authorities that offered the prescriptions that gave him security, that is those that minimized his (subjective) risk of making mistakes.

### Bruckner and Brünnhilde

Although Anton Bruckner was idolizing the music of Richard Wagner, he was completely indifferent to the drama on stage (plot) .

He studied « Tristan und Isolde » from a textless score and, at the end of « Götterdämmerung », someone had to explain to him that Wotan had not cremated Brünnhilde.

« Tell me, why did they burn the woman at the end ? »

Bruckner found it odious to use immoral intrigues in contemporary works. The notion of impurity meant for him to reject anything that could offend the religious sentiment of the Catholic devotees.

### Bruckner and Tannhäuser

Sometimes, when Anton Bruckner came to Vienna, he visited the Opera House. Here, he attended performances of

Wagner's Operas. He was deeply moved when he heard « Tannhäuser » . He stood in the standing-room section when he heard tenor Hermann Winkelmann sing the story of his pilgrimage to the Pope in Rome.

When Tannhäuser related how he was cursed by the Pope, Bruckner began to cry and shouted :

« Why did he not pardon him ! Why did he not pardon him ! »

### Bruckner at the « Burgtheater »

Vienna offered most interesting attractions to anyone concerned with cultural matters. There were the Imperial Theaters, museums, delightful surroundings which had enchanted Beethoven and Schubert, the Imperial Library, and the opportunity of association with outstanding men of science and art. Anton Bruckner, however, made no use of these opportunities.

He asked his friend Friedrich Klose :

« Why do you frequent the “ Burgtheater ”. Do you want to become a poet ? »

Bruckner is said to have attended only one performance at the « Burgtheater » . It was a Shakespearean drama, and it bored him to death. Anyway, he never went a second time.

### Brahms in Vienna

**After 1862** : After he moved to Vienna where he spent the rest of his life, Johannes Brahms lived simply in modest lodgings and enjoyed his food by mostly dining-out.

### Kürnberg bei Linz : « Gasthaus Jäger »

« As our lessons had come to an end and the period of my Linz contract was also drawing to a close, Bruckner asked me, one day :

“ When am I going to be released ? ”

When, I replied, that it could happen at any time as he had already overtaken his teacher who had nothing more to teach him, he refused such an easy way out and invited my wife and me on a coach excursion which took us to the charming hunting lodge of Kürnberg, situated in the woods. There, during a happy meal, the desired “ release ” from “ apprenticeship ” took place. We had an uninterrupted friendship until his death. »

(Otto Kitzler)

Bruckner will note at the end of his last study-book :

« Overture, Symphony and Psalm - completed on July 10, 1863. »

**Friday, 10 July 1863** : Otto Kitzler and his wife invite his graduating student, Anton Bruckner, in Kürnberg (Leonding) to the famous « Hunters' Inn » (« Gasthaus Jäger ») also known as the « Travellers' Inn » (« Ausflugsgasthaus ») , located at « Forsthausstraße » Number 72, in an idyllic surroundings. An hour walk from the centre of the capital, Linz.

Bruckner's friend, Karl Zappe, is also part of this intimate but solemn event.

« Magister » Kitzler takes the opportunity to officially present Bruckner with a certificate in composition and instrumentation :

« “ Herr ” Anton Bruckner, organist at the Cathedral of Linz, studied music theory in composition and instrumentation under my supervision and devoted himself to his studies with such diligence and perseverance that he succeeded in completing the “ cursus ” of a normal duration of 2 years, in only 19 months.

My sincere congratulations accompany this talented aspiring artist, determined to undertake a new career as a composer.

Linz, July 10th, 1863.

Otto Kitzler,

“ Landestheaters Kapellmeister ”. »

Kitzler then left for the town of Brünn (Brno) .

A commemorative plaque, offered by the municipality of Bergham, was unveiled on November 14, 1976 :

« On 10 July 1863, Anton Bruckner (1824-1896) celebrated in this house, in the company of Otto Kitzler, the end of his studies. Thus, began his period of free artistic creation. Gift of the Leonding Choral Society, November 14, 1976. »

Although Bruckner probably never actually said that he felt « like a yard dog, which has broken loose from its chain » (Max Auer probably put these words in the composer's mouth) after his acquittal, he now felt safe in his acquired creative freedom.

Starting around 1500, Imperial hunts (organized, among others, by Emperor Maximilian I) took-place in the forest of Kürnberg, nearby Linz Castle. In 1686, Emperor Leopold I, accompanied by Count Andreas Khevenhüller, organized deer-hunting-games in the presence of more than 1,000 persons. Spectacular demonstrations of this kind also took-place under Emperor Charles VI.

The last Imperial hunts were held in 1732.

Under Empress Maria Theresia, official hunts were discontinued and the hunting-grounds were offered for purchase in order to improved the financial situation of the Empire. Since the 18th Century, the entire forest area of Kürnberg has been owned by the Cistercian monastery in Wilhering, situated at about 8 kilometres (5 miles) from Linz.

### Vienna : « Hotel Kaiserin Elisabeth »

**1863** : During a visit to Vienna, Linz organist Anton Bruckner stayed at the « Hotel Kaiserin Elisabeth » located at « Weihburggasse » Number 3, close to the shopping-streets « Kärtnerstraße » and « Graben » , next to St. Stephen's Cathedral.

A commemorative plaque in tribute to the composer recalls his passage :

Es waren zu Gast in diesem Hause

|                        |             |

### Prominent guests

**1767** : Wolfgang Amadeus Mozart.

**1838** : Clara Schumann.

**1854** : Cavalry Captain Baron von Mertens ; Count and Countess Schönfeld, from Graz ; Count L. Colloredo, from Milan ; Prince Grimaldi of Tuscany ; Prince Carl von Baden ; Count G. Batthian ; Countess Peyrette de Concorde.

**1855** : Prince Karl Auersperg, from Prague ; Prince Karl of Bavaria ; Princess Hohenlohe, from Baden ; Countess Lützow, from Rome ; Princess M. Cantacuzine.

**1856** : Court « Kapellmeister » Franz Liszt ; Major General Prince Holstein, from Ödenburg ; Count E. Kinsky, from Ischl.

**1857** : Secretary of Embassy Vicomte Félix Arjuzon, from Paris ; Count Nostiz, from Prague ; Lieutenant Colonel Prince L. Hohenlohe, from Prague.

**1859** : Anton Rubinstein ; Count A. Kaunitz ; Duke Nikolaus von Württemberg.

**1861** : Marie, Duchess of Parma ; Prince Robert de Bourbon.

**1862** : Richard Wagner ; H. Rothschild, from Frankfurt ; Duke E. Sforza, from Venice.

**1863** : Richard Wagner ; Court organist Anton Bruckner ; painter Moritz von Schwind.

**1869** : General Count Radetzky ; « Abbé » Franz Liszt.

**1889** : August von Pettenkofen.

**1895** : Adolf Menzel.

**1896** : Eduard Grieg.

**1957** : Olga Tschechova ; Vera Tschechova.

**1958** : Oskar Kokoschka.

## History

**1348** : The founder, Lord Albrecht von Mistelbach, is first mentioned during the era of Rudolf IV.

**1359** : Owned by the armor-maker Herding der Brüner.

**1460** : Owned by His Majesty Emperor Friedrich III ; the building was known at the time as the « Alter Dechanthof » (House of the Old Duke) .

**1472** : Owned by Leupolden Wehinger.

**1487** : Hans Widerstorffer inherited from previous owner Stefan Slyner.

**1542** : Owned by Kaspar Neupeck, Bishop of Vienna. Thereafter owned for a long period by the aristocratic Neupeck family.

**1683** : Owned by Christoph Grappler.

Reconstruction was necessary after the second Turkish siege.

**1795** : Owned by Emanuel von Dorin.

**1804** : Construction and renovation ; henceforth, a 4-story building.

**1809** : Franz Xaver von Buchberg.

**Munich** : « Hotel Vier Jahreszeiten »

**Saturday 26 September to Tuesday 6 October 1863** : Anton Bruckner attends the Music Festival in Munich.

There, he meets the composer and Court « Kapellmeister » Franz-Paul Lachner, who was also a student of Simon Sechter. From 1836 to 1865, Lachner was a major figure in Munich's musical life, directing performances at the Opera as well as various concerts and festivals. He is rightly considered as the most noble, most Viennese and conservative composer in southern Germany.

Robert Schumann regarded Franz Lachner as « the most gifted and scholarly composer in southern Germany » .

Bruckner will have the chance to visit the city on numerous occasions, staying at the luxurious « 4 Seasons » Hotel (« Hotel Vier Jahreszeiten ») located at « Maximilianstraße » Number 17, in the city centre. The building is situated at 500 metres from the « Marienplatz » , the Court Theatre and the English gardens.

This luxury hotel comprises a total of 304 rooms which spreads over 6 floors. With the « Bayerischer Hof » , the « Hotel Vier Jahreszeiten » is the place of choice for statesmen and kings.

Built according to plans by architect Rudolf Gottgetreu, the « 4 Seasons » was inaugurated with great pomp on the famous « Maximilianstraße » (as ordered by Maximilian II of Bavaria !) by « hôtelier » August Schimon, July 25th, 1858. Intended to break all standards set before, it was already equipped in all rooms with gas-lighting. During the First World War, the hotel was at the centre of the nationalist agitation created by the Pan-German Federation. From 1919 to 1924, it was the meeting-place of the Thule Society.

**Ischl** : « Weinhaus Attwenger »

**Summer 1863 to 1890** : As Court organist, Anton Bruckner always went to Ischl for Emperor Franz-Josef's birthday (celebrated on 18 August) and other festive celebrations at the Imperial House (« Kaiservilla ») . Bruckner liked to be called the « Organist of the Emperor » . He always stayed at the inn-tavern « Weinhaus Attwenger » which is owned since 1847 by his old school friend, the teacher and inn-keeper Johann Nepomuk Attwenger who is accompanied by his

charming wife.

Bruckner took his copious meals there.

On the menu, today :

Veal medallions, « schnitzel » (slices) of paprika, breaded pork cutlets, « tafelspitz » (pot roasts) , roast duck served with honey sauce and ginger, fried chicken and several species of fresh fish caught from the lake.

Also, Bruckner selected one of the cosy little rooms (made of wooden panels and decorated with rustic trinkets) . Today, a commemorative plaque decorated with a bronze relief (by artist Franz S. Forster) can be seen at the entrance of the « Bruckner room » - a joint donation by the Ischl Bruckner Association (« Brucknerbund ») and the Attwenger family.

The famous composer Franz Lehár lived in a sumptuous villa, right next door. He had the chance to share this peaceful environment ... and the wine glasses from the Attwenger's « Weinhaus » !

The health-resort of Ischl, which was chosen as a summer residence by the Imperial family since 1849, attracted a lot of prominent guests, and thus, the « Weinhaus Attwenger » became a popular retreat for artists and politicians :

Johann Strauß junior, Johann Brahms (who composed his famous « Lullaby » Opus 49, No. 4, in Ischl as well as several of his later works) , Moritz von Schwind, Ferdinand G. Waldmüller, Alexander Girardi, Karl Kraus, Carl Michael Ziehrer, Emmerich Kálmán, Oscar Straus and Anton Webern.

The singer, actor and playwright Johann Nepomuk Nestroy liked to sit at a table at the « Weinhaus Attwenger » with food and drink :

« A table in the most beautiful area. »

It is one of the oldest and most beautiful houses in the village. It sits in the middle of a shady garden overlooking the right bank of the river Traun. It was built around 1500 (the central part dating from 1540) when a salt paver (the middle-man between the salt-mine owner and the dealer) collected the sale-tax on salt and returned it to the landlord. Since the traders had sometimes to wait for the ships with the salt, the trans-shipment area became a stop-over : for this reason, the house was transformed into an inn, in 1618 : the « Rastl'sche Gastgebsbehausung » .

**Ischl : « Zauner » pastry-shop**

During his stay in Ischl, Anton Bruckner always took the time to sign the guest-book of the famous « Zauner » pastry-shop (« Konditorei Zauner ») founded in 1832, located at « Pfarrgasse » Number 7.

As for Franz-Josef, during his stay at the « Kaiservilla », he visited every morning his mistress, the actress Katharina Schratt, who was living in the neighbouring villa. For fear of missing her home-made « Guglhupf » (a lemon-sponge cake) that the Emperor liked so much, she always ordered a spare one directly from « Zauner » - just in case ! Even today, customers at « Zauner » can taste the original « Guglhupf » of Katharina Schratt according to her own recipe.

...

Since 1832, « Konditorei Zauner » has welcomed the people of Ischl and visitors to the « Kaiserstadt » with its sweet delicacies. It is one of Austria's leading cake and pastry-shops renowned for its tradition and quality. « Konditorei Zauner » is a living reminder of the Kaiser's time in Ischl. Alongside an impressive selection of pastries and coffee specialities, the building itself exudes a truly Imperial flair.

### Ischl : The Old Brewery

Anton Bruckner paid visits at the local brewery located at « Grazer-Straße » Number 16. He surely wandered through the 400 year old cellar (376 square-metres !) which served as a refrigerator (its temperature, both summer and winter, is a constant 12 degrees) for both the « Ischlerbräu » and the townspeople. (The so-called « Grieblkeller » was owned by the company until 1908.)

The original cellar was even larger because it was connected to neighbouring cellars.

The remarkable, original medieval structure of the vaulted cellar is largely still intact. This includes the stone pillars, which were spaced to make it easy for delivery carts to turn in order to leave the cellar. The marks from digging in the local sandstone rock are still visible.

In 1971, the Schmalnauer family took-over the property and renamed it « Café-Casino Keller » .

### Beethoven's skull

On the morning of **Tuesday March 27, 1827**, a private autopsy was performed on Ludwig van Beethoven by Doctor Johann Wagner, an assistant at the « Pathologisch-anatomisches Museum » in Vienna. Doctor Andreas Wawruch, Beethoven's primary doctor since **December 1826**, was in attendance. The temporal bones were sawed out and taken away for study. Gerhard von Breuning reported that he had been told they were in the possession of the mortuary orderly, Anton Doner. According to a Viennese rumor, Dotter sold the bones to a foreign physician. (Another unconfirmed rumor adds that the temporal bones ended up in London and were destroyed during a German bombing attack on the city, during World War II.) Whatever the truth of the matter, the bones are now lost. A second saw-cut across the top of the skull is clear in the somewhat gruesome frontal photograph that was taken during the **1863** exhumation.

Gerhard von Breuning reported :

« In addition, the skull had been sawed through cross-wise, as was usual in autopsies. »

The official report of the **1863** exhumation of Beethoven states that « the sawing process must have been handled in a very rough way » because « the seams of the skull bones did not close perfectly since numerous splinters had been lost » . As it is clear from the autopsy report, Doctor Wagner also cut open the thoracic and abdominal cavities. He described the appearance of the lungs, liver, gall bladder, spleen, pancreas, stomach, intestines, and kidneys.

**Tuesday, 13 October 1863** : Ludwig van Beethoven's remains were exhumed, studied and reburied in a more secure casket inside a brick vault ; the proceedings were paid for by the « Gesellschaft der Musikfreunde » . At that time, fragments from the back of his skull, which had been separated during the autopsy, were acquired by the Austrian doctor Romeo Seligmann.

Anton Schindler published an infamous biography of Beethoven. Schindler was careful to put in a note for his phrenological audience, including the autopsy's description of the numerous convolutions of the brain and the thick skull, since « it would not be uninteresting to many admirers of Beethoven to learn the conformation of his skull » . Certainly, Beethoven was one of those figures whose genius was not only legendary but highly-specific, and no doubt a thorough study of his skull could afford much insight to the phrenologically inclined. As it happened, in **October 1863**, they got their chance.

While Stephan von Breuning's attempts to keep thieves away from Beethoven's grave had worked, he couldn't keep-out nature and, by **1863**, Beethoven's grave was in disrepair. That year, the « Gesellschaft der Musikfreunde » (the Society for the Friends of Music) decided to exhume and rebury 2 bodies to « save the earthly remains of Beethoven and Schubert from further decay and, at the same time, to establish their resting places in a deserving manner » .

The Society for the Friends of Music was founded in 1812, in an attempt to stem the decline of music appreciation and attendance in the wake of the Napoleonic Wars. In its nearly 200 year history, it has established itself as one of the pre-eminent Classical music organizations and has counted in its ranks dozens of notable composers and conductors. In 1870, construction would be complete on the Society's « Musikverein » , a concert-hall that still ranks among the finest in the world but, even by **1863**, it had become the pre-eminent musical institution in Vienna and, as such, its authority in matters concerning the city's beloved composers was relatively unquestioned.

The exhumation was paid for by a special concert « playing exclusively compositions by the deceased, in order to erect a monument with the proceeds » , and it was decided that the exhumations of Beethoven and Schubert would happen simultaneously. There was a certain poetic quality to this decision since Schubert's death was itself connected to Beethoven's. According to a possibly apocryphal story, on the evening of Beethoven's funeral, a number of his friends and fellow composers had gathered, at a local inn, to celebrate their deceased friend. « To the memory of our immortal Beethoven ! » , Schubert is supposed to have said and, after the first toast, was drunk, he lifted his glass once more and said, « And now, to the first of us to follow Beethoven ! » . He was toasting himself ; of those assembled, he was the first to die, on **Wednesday November 19, 1828**.

Linked in death, they were now to be linked in exhumation. The Society for the Friends of Music could count in its ranks a fair number of doctors, and the Society's board appointed a committee that would be present to handle the treatment of the remains while their new coffins were prepared. In charge of Schubert, was a doctor named Josef Standthartner. In charge of Beethoven was « trouser buttons » himself, Doctor Gerhard von Breuning - because he stuck to him the way a button does to clothing.

In the years after his father died, Gerhard trained as a doctor, attending the Josephinian Military Academy, from which he graduated in 1837. He began his career as a military doctor and, for a time, was the chief-physician at the Imperial Royal Invalids Home before switching to private practice in 1852. His early friendship with Beethoven had cemented a life-long love of music, and he had long since become a member of the board of the Society of the Friends of Music. Even as he established himself as a surgeon of some repute, it is fair to say that Beethoven never left him. Like Rosenbaum, he lived a dual life : one of empirical facts, rational logic, knowable information ; the other the ineffable world of music.

So, he was the immediate and obvious choice to oversee the exhumation of Beethoven : it was, in many ways, a culmination of his 2 life-long obsessions. Breuning was the perfect man for this job - a capable doctor who had a passion for music and who had known Beethoven personally.

...

Stephan von Breuning had placed over the coffin. They were unable to finish that day and, once again, an armed guard was posted at Beethoven's grave until the next morning.

The wood of the coffin itself, they found, had disintegrated into white-yellowish chunks. The remains were likewise not in the greatest shape ; bones were missing - some carpal bones from the wrists and tarsal bones from the ankles as well as a few ribs. Beethoven's bones were still a light colour, but Schubert's bones were a deep brownish-black as a result of the damp soil and water leakage where he had been buried. In addition, they noted that around Schubert's skull was a « rather dense covering of his (as everybody knows) very luxuriant hair » which, unfortunately, was now « mixed with a lot of damp soil, half rotten wood shavings, and many hundreds of insect larvæ » . At the exhumation, Schubert's hair (presumably cleaned of wood shavings and maggots) was presented reverentially to his brother. The committee also found numerous decayed pieces of clothing, the sole of a shoe, and 2 pieces of a comb that had been used to hold back the aforementioned « luxurious amount of hair » . The committee's official exhumation report stated :

« All these objects were carefully collected ; the members of the administration took individual parts of the remnants of clothing and the wood of the coffin of Beethoven as well as of Schubert » and, while Breuning kept safeguard over most of them, « parts were given over to the few persons present at this serious act who were visibly moved by strong emotions » .

The hair and clothing were important, to be sure, but, as Breuning later wrote :

« The main-goal was, of course, the retrieval of the skull. »

In that age of skull-stealing, all sorts of rumors were circulating about Beethoven's head. Numerous men on the committee believed that the head would be missing, that someone would have bested Stephan von Breuning and removed the head before it had gone into the coffin. Others assumed it would be there, and the committee had heard another, perhaps more reliable rumor that only part of the skull would be missing. This last rumor turned-out to be true. Beethoven's skull was found to be in pieces ; it had been broken into approximately 9 different fragments by Doctor Johann Wagner and, in decay, they had not held their shape but lay in a pile at the bottom of the coffin. As some had feared, a few important fragments were missing. Specifically, the petrous segments of the temporal bones (the small pyramid-shaped pieces of the skull that contain all the organs of hearing) had been removed « by having been sawed-off vertically » . In other words, when Wagner had segmented the head into numerous pieces, he had deliberately cut-out the single most crucial part of the skull for understanding Beethoven's deafness and, now, it seemed that he had never returned them to the body. This also helped to explain Beethoven's poor appearance while he lay in state because Wagner had patched-up the missing bones with clay, further distorting the face.

It was a crushing disappointment. For someone looking for the answer to Beethoven's deafness, the temporal bones were a conspicuous absence. A conclusive diagnosis on the Mæstro's hearing loss was now all but impossible.

Even with the remains in such sad shape, all present understood that it was a rare opportunity to study the anatomy of the 2 composers and learn something vital about their lives and their deaths. The original intention had been to rebury the bodies that same day, but now that they were unearthed, there was a discussion as to whether to keep them above ground. Casts and photographs, to be sure, could tell a lot, but there was something more to the actual skulls, especially Beethoven's, whose deteriorated condition meant that, as Breuning argued, « important proportions of the skull can only be obtained by comparing repeated measurements of the original skull with its individual parts » .

The Society's board-members agreed with the exhumation committee that, at least for the time being, the skulls need not be immediately reburied. Everyone saw the important scientific opportunity afforded by the exhumation and agreed that photographs and casts should be taken of the skulls. In addition, the board had to decide whether to rebury the skulls or house them in « a worthy place that would closely reflect the grand activity of the spirits that lived in these bony dwellings » .

There was also the problem of the missing temporal bones. « Since 2 essential components of the skull have never been put ...

...

... exacting measurements of the skulls for future scientific research. Known by his friends simply by the nickname « Wonderful » , for his brilliance and congeniality, Romeo Seligmann had taught himself Arabic and Persian while still a high-school student and had become one of the foremost scholars of the history of medicine. In his spare time, he worked-out a philosophical treatise on the relationship between ancient Indian and Greek medicine, and he was

building his own skull collection for his anthropological research. In addition to his medical specimens, he was an avid art-collector, and, through his friendship with Gœthe's daughter-in-law, Ottilie (who was a patient and lavished gifts on him) , he acquired a massive collection of Gœthe portraits and mementoes (which became known as his « Gœthiana ») .

Shepherding the head of Beethoven through the whole process, of course, was Breuning. Indeed, he kept the skull with him at all times ; although work on the skulls was done in a secret location, where there had to be at least 2 people present at all times to prevent tampering or theft, Breuning was allowed to take Beethoven's home with him each night. He was not a phrenologist by profession, nor was he captivated by the New Science, as Joseph Carl Rosenbaum and Johann Peter had been 60 years earlier. But the fact that phrenology had been largely discredited didn't mean it hadn't left its traces on respectable science. As he compared their skulls in the laboratory, Breuning made a pronouncement about the 2 composers that has since become infamous in Classical music studies : He claimed that the skulls « seemed to reflect the characteristics of the composers' works. The walls of Beethoven's skull exhibit strong density and thickness, whereas Schubert's bones show feminine delicateness » .

Breuning also claimed that the fragmentation of Beethoven's skull, combined with the dampness of the grave, had caused the bone to warp and that this explained the rather odd shape that the forehead had assumed. Rather than being a high, well-developed forehead, as could be expected of such a genius, it was sloped back and disturbingly low. Warping, due to moisture, seemed the only plausible reason for this.

While the casts were being made, a quick search for the missing temporal bones was also carried-out. There had been a published report that a certain unnamed « medical celebrity in Paris » might know their whereabouts and, perhaps, might even have taken them. But this inquiry came to no avail ; the medical celebrity in question replied in a letter :

« When I left Vienna, I only had the pleasure to take with me from the Austrian capital the gratitude for my professors and the friendship of my colleagues that I appreciated. I never heard anyone speak about Beethoven's ears. »

As for the items of clothing and other fragments, Breuning ordered special zinc cases so that they could be returned to the new coffins without fear of further disintegration.

Despite his work during this time, Breuning was still upset over the board's decision to reinter the skulls, and he would continue to brood over it in coming years. He wrote, 20 years later :

« How important and how interesting it would be for science if these skulls remained available for further, more thorough investigation. They should be preserved above the earth and accessible in a museum, art gallery, or library. The 2 composers would be better honoured by such action than by the usual interment of their skulls in tombs. »

The board's decision reeked of a superstition that Breuning found indefensible when compared to scientific inquiry.

« Only highly-prejudiced people (who are unfortunately in the majority) would be offended » by putting the skulls in the museum, and « any person with scientific training would certainly not object » .

Breuning concluded :

« I am sure no feelings of piety will be offended if the dry skulls, having long been separated from the rest of the skeletons, should be immortalized in such a way. »

But Breuning's attachment to the head of his father's friend had gone beyond simple scientific inquiry. Each night, he returned home with the skull, placing it lovingly beside his bed to meditate on while he drifted off to sleep.

Breuning later said of those days :

« What stormy feelings passed through my mind, evoking such powerful memories, as I had possession of that head for a few days and kept it by my bedside overnight and, in general, proudly watched over that head from whose mouth, in years gone by, I had so often heard the living word ! »

...

... has been shed rests. »

After he had finished, the new coffins were sealed in the vault and the crowd dispersed. But, as these things go, not all of Beethoven had made it back into the vault.

What was left of Beethoven remained undisturbed for another quarter of a Century, until 1888, when the body was, once again, exhumed. This time, the reason was that the Währing Cemetery was in near disintegration and was to be demolished to make way for new buildings. Along with the other coffins to be moved, Beethoven's remains were to be transferred to the « Grove of Honour » of the Central Cemetery, in Vienna.

When Gerhard von Breuning heard the news, he wrote an essay on the skulls of Beethoven and Schubert, in which he lamented the dispersal of the cemetery's occupants :

« Along with the cemetery's demise, we will likewise have to bury many historical memories that link us to the times and conditions of their lives. »

He recalled the various composers and friends who had desired to be buried close to Beethoven : Stephan, his father, who had wanted to be buried next to his friend and had been laid to rest « a few graves further down » ; Clementi and Ritter von Seyfried, buried on either side of the composer ; the playwright Johann Nepomuk Nestroy and the poet Franz Grillparzer ; and Schubert, whose « longing to be close to Beethoven, often expressed in his feverish dreams, was fulfilled when he was buried only a few graves up from Beethoven » .

Breuning saw the cemetery as a delicate network of old friends and colleagues whose lives had intersected in startling and momentous ways and who now continued their conversations in the grave. A whole history could be unraveled by tracing the connections in the Währing Cemetery.

He wrote :

« All these memories and reference points connecting us with the past are now being destroyed and will be forgotten as these “ famous ” and “ outstanding ” deceased people will be transferred to other cemeteries. »

It's odd that a rationalist like Breuning should care about this so much. He was clearly of 2 minds : he wanted Beethoven's remains transparently available for science for all time ; he even complained that the photos taken, in 1863, had not been made publicly available. But it was hard for him to maintain scientific objectivity, hard not to see the beauty in a cemetery of old friends lying beside each other, hard not to see the mystery in the skull of a friend by one's bedside, the living word now silent.

As with the 1863 exhumation, when Beethoven was moved in 1888, medical experts were allowed access to the composer but, this time, only for a mere 20 minutes - they later complained that the circumstances surrounding this examination « were highly-unfavourable » . Still, they had enough time to find that the plaster casts were accurate enough to be used for future study and that there could be « no real objection to the authenticity of the skull fragments found in the coffin » .

The 1863 exhumation had already revealed the strange way in which, over time, underground, bones simply disappear. Decay, bacteria, any number of factors can cause even something as hard as bone to disintegrate. So, the 1888 doctors, pressed for time, noted only in passing that a portion of the occipital bone was missing, as was a portion of the left parietal bone. These pieces were substantially larger than the petrous bones taken by Doctor Johann Wagner - the occipital bone forms the broad back shelf of the head, and the parietal bones each form half of the roof of the cranial cavity. The missing pieces, each about 4 inches long, seemed too big to have simply disintegrated, especially considering that the express purpose of the 1863 reburial had been to keep the remains in better condition. The committee continued its cataloguing of the bones of the skull, then moved on to its conclusions. Curiously, the members seem to have not found it noteworthy that more of the skull was missing than had been in 1863. Each autopsy, it seemed, led to more bits of Beethoven's head disappearing ; perhaps, this was just the way of the world.

As in 1863, a speech was given at the 1888 reburial, written by Joseph Weilen and delivered by the actor Josef Lewinsky. In his praise of Beethoven, Weilen noted that the composer was to be buried next to the cenotaph of Mozart, « whose grave covers not his bones but the shameful reproach for his contemporaries who, having received his Masterpieces, lacked due regard for preserving his ashes » .

He, then, quoted Franz Grillparzer, whose body was also about to be transferred out of the Währing Cemetery :

« You who have gathered at this place, step closer to this grave the one who lies here was inspired. Striving for one

thing, caring for one thing, suffering for one thing, offering everything for one thing, this is how this man walked through life. If there is still any sense of wholeness in us in this broken time, let us gather together at his grave. This is why there have always been poets, and heroes, singers, and those inspired by God - so that, through them, poor ruined human beings raise themselves up, ponder their origin and their destination.

It is not clear whether either Gerhard von Breuning or Romeo Seligmann was present for this second exhumation. It's not clear whether, if they had been, they would have shared what they knew about the newly discovered missing portions of Beethoven's skull : the occipital fragments. As he saw his own death impending, Beethoven had bitterly remarked to Doctor Wawruch that, if anyone could save him from the oblivion of death, « his name would be “ Wonderful ” ! » . He had been referring to the “ Messiah ” but, in a curious way, his prophecy would yet come true : in 1863, persons unknown had kept-out a few precious fragments of the composer's skull (to save them from the oblivion of decay and disintegration) and given them to Doctor Romeo Seligmann, known to his friends simply as, « Wonderful » .

### Beethoven's doctors

During his lifetime, Beethoven called upon a number of doctors in the hope of finding a cure for his health problems and in particular his hearing troubles which, despite the treatments, progressed to profound deafness. The composer had frequent arguments, with many points of provocation from a refusal of certain practitioners to assume their responsibilities.

### BERTOLINI Andreas

Assistant to Doctor Malfatti, he became Beethoven's friend in 1806 and his medical advisor between 1808 and 1816, when he quarreled with the composer at his lodgings over a difference of opinion on a professional and musical subject. Beethoven appreciated his refined personality, his musical advice, and his quality of life. In 1831, struck by cholera and believing himself doomed, he decided to destroy all his correspondence with Beethoven for, he said, fear of contamination, but more likely from fear of making his personal documents public.

### BRAUNHOFFER Anton

Professor of Natural History and medical technology at the University of Vienna, medical practitioner, adept at dietetics, he cared for Beethoven between 1820 and the start of 1826. He was a strong influence on Beethoven's way of life and took a great interest in the duration and progression of his illness in the spring of 1825. A disagreement arose between them for an unknown reason and Braunhoffer did not respond to the requests of the gravely ill composer's friends to attend his bedside on his return from Gneixendorf at the beginning of December 1826. Beethoven dedicated 2 canons to him : « Doktor, sperrt das Tor dem Tod » (WoO 189) in May 1825 ; and « Ich war hier, Doktor » (WoO 190) in June 1825.

### von BREUNING Gerhard (1813-1892)

While there isn't much to say about Gerhard von Breuning, he was an important part of his friend's life. He was very close to Beethoven from a young age, to which he paid daily visits at his home in the last years of his life, from 1825 to 1827 ; he was not present at the time of his death. He became a private practitioner much appreciated in Vienna. He was the son of Stephen von Breuning (1774-1827) , a childhood friend of Beethoven's, and Constance Rushowitz. In 1874, he published a collection of memoirs on Beethoven titled « Aus dem Schwarzspanierhaus » .

### FRANK Johann Peter (1742-1821)

Originally from Zweibrücken (Sarre) , he completed his medical studies at Göttingen and Pavia, where he was named professor and director of medical studies in 1785. His professional and scientific reputation took on a further responsibility in 1795 with the direction of the General Hospital and health services of the poor in Vienna. His medical works on health-care and preventative medicine date from this time. A victim of hostility and intrigues, he left Vienna in 1805 and accepted a professorial chair at Vilna in Lithuania ; in addition, he was called to St. Petersburg to serve as the private physician to Tsar Alexander Ist, Emperor of Russia. In 1808, he returned to Vienna. Napoléon Bonaparte conquered Schönbrunn and, in 1809, offered him a post in Paris, but he declined. He was Beethoven's doctor from 1800 to 1809.

His son Joseph (1771-1841) , doctor and composer, organized frequent musical « soirées » in Beethoven's honour. In 1798, he married Crisina Gerhards, a talented soprano and enthusiastic admirer of Beethoven's works.

### MALFATTI MONTE REGGIO Giovanni (1775-1859)

Born in Lucca, Tuscany, he completed his medical studies in Bologna and Pavia, and then, in Vienna in 1779, under the tutelage of Professor Johann Peter Frank. On his arrival in Vienna, he was named assistant chief-doctor of the General Hospital, until 1804, the date in which he changed to private practice. He was always greatly appreciated for his knowledge and kindness. He was the personal physician to the Archduchess Beatrix von Este and the Archduke Karl, likewise for the great number of foreign diplomats present for the Congress of Vienna from September 1814 to June 1815. His notoriety led to him taking the presidency of the Medical Society of Vienna, of which he was one of the founders. He is the author of many medical works, such as « Entwurf einer Pathogenie » which became a reference work. He was ennobled in 1837. He made the acquaintance of Beethoven in 1797, through their mutual friend Baron Ignaz von Gleichenstein, and became his physician in 1809 on the death of Professor Schmidt. He remained so until a misunderstanding led to a rupture in the friendship in 1816. Doctor Malfatti was called to the bedside of the gravely ill Beethoven at the beginning of 1827. Beethoven dedicated a small cantata to him « Un lieto brindisi » (WoO 103) , composed for his birthday.

### SCHMIDT Johann Adam (1759-1809)

Born in Aub (near Würzburg) , he began his medical career as an army surgeon. He was named Professor of Anatomy at the « Medizinisch-chirurgische Josephs-Akademie » in Vienna in 1789. This institution, created by Emperor Josef II in 1786, was also called the « Josephinum » . He was a Royal and Imperial advisor and a respected doctor, particularly

in the field of ophthalmology. The publication of a number of medical articles contributed to his scientific reputation. A long term friend of Franz Gerhard Wegeler, who later wrote a Beethoven biography, the composer trusted him and appreciated his advice and his care. He cared for Beethoven until his death in February 1809. In his « Heiligenstadt Testament » , Beethoven appealed to Doctor Schmidt to describe his malady to the world after his death. He was also known as a violinist of talent. Beethoven dedicated the Trio for piano, violin and cello in E-flat major, Opus 38 (arrangement of the Septet, Opus 20) to him.

### SEIBERT Johann (1782-1846)

Professor and principal surgeon at the General Hospital of Vienna, he performed the abdominal punctures on Beethoven at his home in the last months of his life.

### von SMETANA Carl (1774-1827)

Renowned surgeon and ophthalmologist of Vienna, he was consulted by Beethoven many times in 1819 in regard to his hearing difficulties, and again, at the end of his life for his sight troubles. He operated on a hernia for Karl, the composer's nephew, in 1816. Beethoven called upon him for advice on Karl's failed suicide attempt in the summer of 1826. He was a State advisor.

### von STAUDENHEIMER Jakob (Ritter) (1764-1830)

Born in Mayence, he received his formative medical training in Paris (and in chemistry under the direction of Antoine Fourcroy) and in Augsburg. He continued his studies in Vienna under the authority of the celebrated clinician Maximilian Stoll. A practitioner of great renown, he was personal physician to Emperor Francis I. It was while staying with the Imperial family in Bohemia in 1812 that he made the acquaintance of Beethoven and gave him health advice. He became his doctor in 1817. Adept at the usage of the baths, he recommended cures in Baden, where Beethoven stayed many times. The frequent oppositions and divergences between the 2 men, rising in particular from Beethoven's non-cooperation in his doctor's recommendations to abstain from alcoholic beverages, dotted all their meetings until the relationship ruptured at the end of 1824. This is the reason for Staudenheimer not responding to the calls of Beethoven's prodigal family to treat Beethoven in December 1826. In 1821, he was attached to the Duke of Reichstadt, son of Napoléon Ier and Empress Marie-Louise.

### von VERING Gerhard (Ritter) (1755-1823)

Born in Ösede (Westphalia) , he received his early medical training in Germany, France and England. A military surgeon, he became the director of the Health Institute of the hospitals of Vienna from 1797 to 1809. He was medical advisor to Emperor Josef II. He became Beethoven's doctor at the beginning of his hearing difficulties in the summer of 1801. His daughter Julie, a talented pianist, married Stephen von Breuning in 1808, the childhood friend of Beethoven. She died a year later.

## WAGNER Johann (1800-1832)

Assistant pathologist at the Museum of Pathology in Vienna, he performed the autopsy on Beethoven at his home in the « Schwarzschanerhaus » on March 27, 1827, and wrote-up the procedure in Latin. He was named professor of pathology in 1829 but died 3 years later. During the anatomical investigation, he was accompanied by the young assistant Doctor Carl von Rokitansky (1804-1878) who was named professor at the University of Vienna in 1834. The latter achieved fame through his original scientific works which pioneered modern anatomical pathology.

...

Doctor Johann Wagner, an assistant-physician at the Museum of Pathology in Vienna, performed an autopsy on Ludwig van Beethoven the following day. He did not describe any significant abnormalities in the chest cavity but found evidence of advanced cirrhosis in the abdomen :

« There were 4 quarts of a cloudy grayish-brown liquid spread throughout the abdominal cavity. The liver appeared shrunk to half its volume, hard as leather, greenish-blue in colour, and infested with pea-sized nodules on its bumpy surface as well as inside the organ itself (...) The gallbladder contained a dark brown liquid together with numerous gritty gallstones. The spleen appeared twice the normal size, was black and rough ; in the same way, the pancreas also seemed larger and harder, and its excretory duct was the width of a goose feather quill (...) »

Both kidneys contained small stones and showed changes consistent with infection.

Wagner's dissection and description of the auditory apparatus failed to delineate a specific cause for Beethoven's deafness.

He wrote :

« The external acoustic canal appeared covered with shiny flakes of skin, especially toward the hidden eardrum.”  
Wagner further elaborated :

(...) The Eustachian tube [connecting the middle ear to the throat] was very thick, its mucous lining was swollen and somewhat constricted toward the bony portion of the tube. Some pitted scars could be seen at the opening of the tube and by the tonsils. The air spaces of the mastoid process (a part of the temporal bone immediately behind the ear canal) , which was large and not marked by any indentation, were covered with a bloody mucous lining. The entire petrosal bone [which houses the middle and inner-ears] was permeated by a system of large vessels and displayed a similar blood-filled character, especially in the vicinity of the cochlea (part of the hearing apparatus) , whose posterior wall membrane appeared to be slightly reddened.

The facial nerves were unusually thick ; the auditory nerves, on the other hand, were shriveled and unmyelinated and the arteries that ran alongside were extended to the width of a raven's quill and made-up a mass of tissue. The left

auditory nerve was much thinner and emerged in 3 extremely thin gray furrows, the right one in a thicker clear white furrow, out of the 4th ventricle of the brain, whose substance here was firmer and more vascular. The convolutions of the brain, which was otherwise spongy and much softer, appeared to be much deeper and more numerous than normal.

The bone of the skullcap was uniformly dense and had a thickness of about half an inch (...) »

The bones housing the auditory organs were sawed out and placed in the care of a laboratory assistant at the Pathological-Anatomical Museum of the University of Vienna. Strangely, no record of the specimens has been found in the registry of this institution, but observers remembered seeing them there. Rumours circulated that the assistant later sold the relics to a foreign doctor for an undisclosed sum of money, thus removing them from scientific scrutiny.

The Wagner autopsy became an important document from both the processes it described and those it did not include. For example, changes of syphilis, a common, well-defined infection known to most medical practitioners of that time, were not mentioned. The hearing organ was described somewhat but its detailed structure and the tiny bones transmitting sound through the middle ear to this organ escaped comment. This glaring omission and loss of the actual ear parts for further analysis essentially eliminated a chance to determine the specific cause of Beethoven's deafness.

On **Thursday March 29, 1827**, approximately 20,000 people turned out for Beethoven's funeral. His remains were interred in a grave-yard in the Viennese district of Währing and several layers of brick and stone were laid over the wooden coffin to thwart an alleged plot to steal the composer's skull. A little over one year later, the remains of Franz Schubert would be buried close to those of Beethoven, the man he idolized. In 1863, both composers' bodies were disinterred for better preservation in new zinc caskets. Schubert's exhumation was uneventful, but it took 8 hours to remove the layers of brick and stone over Beethoven's coffin. During these activities, the remains were subjected to detailed measurements, and both skulls were photographed and cast. One of the investigators, Franz Seligmann, secreted away 3 pieces of Beethoven's skull, which eventually passed to his son, Albert. A pathological study of these skull fragments by Hans Bankl and Hans Jesserer in 1987 found no significant abnormalities other than slightly increased thickening. In 1888, the remains of the composers were disinterred once more for transfer to the Musicians' Grove of Honour in Vienna Central Cemetery, where they rest today.

### Beethoven's abdominal symptoms

The origins of the abdominal complaints, which Beethoven and others reported during the last 4 decades of his life, were not conclusively revealed by his autopsy. Definitively identifying possible causes would require sophisticated pre- and post-mortem laboratory examinations not available during his lifetime. His 2 exhumations shed no additional light on this complex medical problem. During the intervening years, scholars have proposed many disease processes to include and explain all of his symptoms but none has been convincing.

### Biliary colic and pancreatitis :

The presence of gallstones and an enlarged, firm pancreas documented during Beethoven's autopsy provides a possible, though unlikely, source for the composer's chronic abdominal pain. Colic caused by gallstone irritation or obstruction of the biliary tract usually occurs rapidly, localizes to the right upper-part of the abdomen and may be associated with nausea and vomiting. It tends to last a few hours and subsides just as rapidly, unless complicated by infection or pancreatitis. The pain of associated pancreatic inflammation often is felt in the central or left upper-abdomen with radiation to the back. Pancreatitis can progress to a chronic state with long periods of associated abdominal discomfort that typically does not have a colicky element. Undoubtedly, briefer periods of abdominal pain experienced by Beethoven could have been due to the post-mortem abnormalities seen in his pancreatico-biliary system.

### **Inflammatory bowel disease :**

Crohn's disease (regional enteritis) , an inflammation of the bowel, has no known cause and can affect any part of the gastro-intestinal tract. It tends to develop in the second or third decade of life and may persist for many years. Bouts of abdominal pain, fever and diarrhea can be followed by symptom-free periods, but the disease tends to worsen progressively. Typically, the small bowel shows areas of inflammation with narrowing and resultant obstruction. Complications like perforation and fistula formation (an abnormal communication with adjacent organs or skin) are relatively common. Extra-gastro-intestinal manifestations, such as skin lesions, inflammation of the eyes, arthritis, hepatitis and pancreatitis, occur in approximately 1/3 of patients. In long-standing cases, cancer of the bowel is a distinct threat.

Beethoven's abdominal complaints never included bowel crises such as obstruction or perforation. His eye and sporadic musculo-skeletal complaints, which can be seen with regional enteritis, were non-specific and self-limited. Because characteristic intestinal lesions were not found during the composer's autopsy, Crohn's disease is an unlikely cause of Beethoven's abdominal problems.

Ulcerative colitis, another inflammatory bowel disease, also of unknown origin, often develops during the 3rd and 4th decades. In contrast to Crohn's disease, which can involve many areas of the gastro-intestinal tract, ulcerative colitis affects primarily the colon and rectum. It is characterized by abdominal pain, severe diarrhea and rectal bleeding. Joint inflammation and a type of spinal arthritis can complicate this illness, but Beethoven's musculo-skeletal symptoms do not seem to be compatible with these conditions. Long-standing cases of ulcerative colitis pose a risk for the development of colo-rectal cancer and immediate life-threatening complications such as perforation and bleeding. Beethoven's abdominal complaints do not match the usual presentation of ulcerative colitis, and his autopsy mentioned no colonic lesions.

### **Infectious processes :**

Infectious diseases such as brucellosis, typhoid fever and typhus can produce abdominal complaints like those described by Beethoven, but they usually do not persist for long periods. Although he was exposed to tuberculosis by his mother and brother Casper Carl, he showed no evidence of the disease in life or at the time of autopsy. Manifestations of other infectious intestinal diseases common during Beethoven's time do not match his protracted clinical course.

### WAWRUCH Andreas Ignaz (1773-1842)

Born in Niemczicz (Moravia) on November 22, 1773 (the dates of his birth vary in his biographies : 1771 and 1782) , he completed his studies in philosophy and theology at Olmütz then re-orientated to medicine at the University of Prague. After his medical graduation, he completed his scientific training in Vienna under the renowned clinician Professor Johann von Hildenbrand. In 1811, he received honours in history and medical literature in Vienna and taught Latin. The following year, he was named full-professor (« Professor ordinarius ») of pathology and pharmacology at the University of Prague where he was known and appreciated as the most popular teacher. His wide popularity meant that he was called to Vienna in 1829 to become director of a medical clinic and teach pathology and therapy of internal illness at the University. His career continued until his death on March 21, 1842. He has many scientific publications on infectious pathology and parasites to his name. He was a member of the Imperial Medical Society. An enthusiastic musician and cellist of repute, he was a great admirer of the music of Beethoven. He was called to his bedside on December 5, 1826, and lavished attentive care upon the composer until his death. Sometime later, he published a circumstantial report on the Master's illness entitled « Ärztlicher Rückblick auf Ludwig van Beethovens letzte Lebenspoche » . The report appeared in the « Wiener Zeitschrift für Kunst, Literatur, Theatre und Mode » edition of April 30, 1842, and was dated May 20, 1827.

### WEGELER Franz Gerhard (1765-1848)

There is a lot to say about Franz Gerhard Wegeler. Born in Bonn on 22 August 1765, of Alsatian parents, he began his medical studies in Cologne and completed them in Vienna where he was made a doctor of medicine in September 1789. On his return to Bonn, he was quickly entrusted with a teaching position and was then promoted successively to professor, dean and rector. In 1794, on the decision of the occupying French authorities, the university was closed, which led Wegeler to seek refuge in Vienna for 2 years (1794-1796) . After this time, he resumed his teaching at the central maternity school in Bonn which he left in 1807 to begin private practice in Koblenz. Again, he accepted official responsibilities and became medical advisor to the government in 1814, eventually taking his retirement in 1842. He died in 1848, at the age of 83. It was fortuitous that he made the acquaintance of the young Ludwig van Beethoven in 1782. He remained very close to him until 1787, the date of his first departure for Vienna. It was through his mediation that Beethoven entered into the close relationship with the von Breuning family whose daughter Eleanor (called Lorchen) Wegeler married in 1802. Throughout his life, Beethoven maintained regular epistolary contact with Wegeler. In 1838, Wegeler and Ries published their own Ludwig van Beethoven biography under the title « Biographische Notizen über Ludwig van Beethoven » , followed in 1845 by a complementary volume by Wegeler alone.

### WEISSENBACH Aloys (1766-1821)

Born in Telfs (Tyrol) , he participated in the war against France as a surgeon and was named professor of surgery and chief-doctor at the Hospital of St. John in Salzburg. He met Beethoven in Vienna in 1814 at the time of a scientific residence. Weissenbach published his memoirs and assertions on the deafness of the composer. This particular Ludwig van Beethoven biography was published under the title « Meine Reize zum Kongress, Vienna 1816 » . An amateur playwright and poet, he also eventually became deaf.

## Sierning : « Gasthof Wimmer »

The name « Forsthueb » appears for the first time in 1780 in the « Book of the Passion » (Linz Archives) . « Forsthueb » was the Court domain of Sierning.

Count Lamberg of Steyr will invite Emperor Franz-Josef, Archduke Ferdinand Karl of Austria-Este and Prince László to participate in hunting-games on his vast domain of « Forsthof » . Military maneuvers of the Imperial Army will take place on 2 occasions on the Count's lands, in the presence of high-officers : General Fieder, Archduke Franz-Salvator and Archduke Charles (the future Emperor of Austria) .

During his frequent visits to Sierning, Anton Bruckner was always glad to stay at the « Gasthof Wimmer » , established on the forest lands of Count Lamberg of Steyr. The building was acquired in 1827 by Ignaz Wimmer, the first mayor in the history of the town (1850-1860) .

Josef Werndl (1831-1889) , the Father of the Steyr workers, was also a frequent guest there.

Bruckner will have a big crush on the inn-keeper's daughter. He would dedicate to her a charming song (now lost) composed around 1885 :

« The Rose » (« Die Rose » , **WAB deest 20**) .

In 1868, August Wimmer, the son of Ignaz, married Maria Quereder, daughter of the owner of the « Gasthaus Maria-Theresien » . August will be himself mayor of Sierning from 1874 to 1876.

In 1898, Franz Baumschlager married the young Augustine Wimmer, daughter of August and Maria. Since then, the Baumschlager family has run the « Gasthof Forsthof » (« Landhotel Forsthof ») .

## Mayors of Sierning

**17 August 1850** : Ignaz Wimmer

**1 January 1855** : Felix Lippert

**2 February 1861** : Franz Wolfsjäger

**13 July 1864** : Gottfried Wimmer

**17 July 1870** : Josef Wegscheider

**13 July 1873** : August Wimmer

**10 July 1876** : Georg Arbehthuber

**13 July 1879** : Johann Bräuer

**18 July 1888** : Johann Bräuer

**1 July 1894** : Karl Wiesner

**9 July 1906** : Karl Wiesner

**16 February 1909** : Friedrich Bauernnebel

### Steyr : Bruckner and Josef Werndl

The Austrian inventor, industrial pioneer and weapons manufacturer Josef Wendl was born on 26 February 1831 in Steyr, Upper-Austria.

He was the son of Leopold Werndl and Josefa Anna Werndl (born Müller) .

Husband of Karoline Antonia Werndl.

Father of Josef Carl Werndl (born on 13 August 1856) ; Caroline von Imhof (born on 14 August 1859) ; and Anna von Lamberg (born on 23 December 1861) .

Brother of Leopold Dominik Seraphin Werndl ; Baron von Buddenbrock (Werndl) ; Roman Werndl ; Eduard Werndl ; Philomena Werndl ; Cäcilia Werndl ; Franz Werndl ; Rosa Gschaider ; Johann Werndl ; Maria Victoria Werndl ; and Ludwig Werndl.

Josef was the son of weapons maker Leopold Werndl and his wife Josefa Müller. He was apprentice-miller in Prague and Vienna before completing a long study-tour across England, Thuringia and finally in the United States, at the Remington and Colt fire-arms factories. On his return in 1855, he and his mother took-over the management of the « Josef und Franz Werndl & Company, Waffenfabrik und Sägemühle » .

Since the 14th Century, the Upper-Austrian city of Steyr is known as an important metallurgical centre and is known for his famous gunsmiths. In the middle of the 17th Century, thousands of muskets, pistols, and rifles were produced annually for the Imperial Army of the Habsburgs. In the second half of the 19th Century, the economic situation in Steyr was considered critical but the arrival of Josef Werndl gave a serious boost to the region.

Werndl built homes, schools, a dispensary and a swimming-pool for his workers (he was the founder of the local swimming school) . The working-class sector was partly preserved, especially in the Wehrgraben district.

Werndl built the first hydro-electric power stations in Austria, and thus, the town of Steyr was the first agglomeration in the Alps equipped with electricity.

Anton Bruckner, who spent many summer vacations in Steyr, met Josef Werndl at the local tavern (they also had the opportunity to meet in St. Florian) .

Werndl was a member of the « Steyrer Liedertafel » which was often conducted by Bruckner (who was named honorary member) .

The town of Steyr was proud to have a « Gesellschaft Musikverein » , a Men's Choir, the « Liedertafel » and an excellent Church Choir (under the directorship of Bruckner's friend, Franz Xaver Bayer) .

The « Stadtpfarrkirche » Franz Xaver Chrismann organ (built in 1772) was often played by Bruckner.

Steyr was the birthplace of the 8th and 9th Symphonies.

Bruckner considered to be buried there (in case this is not possible at St. Florian) .

Hair-dresser and dialect poet Josef (« Sepp ») Stöger collected Bruckner's hair in the hope of ... posthumous fame !

On Good Friday, 1889, Josef Werndl contracted a pleurisy while trying to get to Letten (a commune of the town of Sierning) in an open horse-drawn cabriolet - despite of pouring rain !

He died on April 29, at 5:45 am, in his Villa in Petzengütl. He was buried at the cemetery of Mount Tabor in Steyr.

### Steyr : Mayor Georg Pointner

Steyr Mayor Georg Pointner developed a very special relationship with Anton Bruckner (Pointner was an old school teacher ...) .

When he lived in Vienna, Bruckner was a frequent guest at the Mayor's residence during his summer vacations.

Pointner was President of the Red Cross Society and co-founder of the « Steyrer Liedertafel » . He was also elected as honorary member of many other Societies.

...

Georg Pointner was born in 1819 in the town of Gramastetten, in the Mühlviertel. His father was a linen weaver and small house owner. After attending the local « Volksschule » (Elementary school) , he studied at the Linz « Hauptschule » (Secondary school) , then attended the « Kaiserlich-Königlich Präparandie » (Imperial and Royal Teacher-Training

College) located at « Hofgasse » Number 23. From 1838 to 1850, he taught in various parishes, including the town of Gleink. During a short time, he worked for the municipal services of Losensteinleithen and Gleink. He finally became director of the law firm of notary Franz Kiderle and was elected « Burgmeister » of Gleink. In 1870, Pointner left to become director of a real estate agency in Steyr. He was elected at the Town Council and occupied the post of Chairman of the legal department.

**Monday, 16 June 1879** : Georg Pointner is unanimously elected as the new « Burgmeister » of Steyr after the death of Mayor Moritz Crammer.

Important dates covering his 3 mandates (1879-1888) :

**1880** : Steyr celebrates its 900th Year of foundation. Emperor Franz-Josef attends the festivities.

**1884** : Steyr holds a Great commercial exhibition. Electric lighting appears on the single streets.

**1882-1883** : Construction of the « House for the Poors » on « Sierninger-Straße » .

**1882-1883** : Construction of the school building which will house the Imperial-Royal College and Experimental Institute for Iron and Steel Processing (« Kaiserlich-Königlich Fachschule und Versuchsanstalt für Eisen- und Stahlbearbeitung ») on « Schwimmschulstraße » .

**1882-1883** : Construction of the military barracks (« Jägerkaserne ») and Officers' Pavilion (« Offiziersgebäude ») on « Schlüsselhofgasse » .

**1882-1883** : Construction of the Steyr Valley Railway (« Steyrtalbahn ») from Garsten to Grünburg.

A 760 millimeters (2 feet and 5 15/16 inches) narrow gauge railway in Upper-Austria, which ran along the valley of the River Steyr from Garsten through Steyr, Grünburg and Molln to Klaus, with a branch-line to Sierning and Bad Hall.

...

**Friday, 23 March 1888** : Georg Pointner leaves his post as First Magistrate due to illness.

**Saturday, 20 January 1900** : Death of Georg Pointner. He is buried in a crypt in the oldest part of the Steyr Cemetery.

## Awards

**August 1880** : Honorary citizen of the City of Steyr.

**1881** : Knights' Cross of the Order of Franz-Josef.

**1884** : Imperial Councillor.

### Linz : The Mayfeld's

Anton Bruckner's friends in Linz included the government official (District Governor) Moritz von Mayfeld, whose wife Barbara (« Betty ») , a pianist, helped him in artistic and social matters. Moritz has forged friendship with Bruckner after his appointment as organist at Linz cathedral.

The couple lived in Linz, from 1859 to 1873 ; and they both were very fond of Bruckner, considering him a close friend and a gifted composer. Bruckner often visited them at Schwamenstadt, in Upper-Austria.

During musical evenings at their residence, they will give him more in-depth knowledge of the works of Ludwig van Beethoven, including the late Piano Sonatas.

Bruckner derived great pleasure from listening the Mayfeld's playing the Beethoven Symphonies in piano-duet versions. They gave him immense encouragement when his first truly original compositions began to appear in the 1860's.

One day, in Linz, Moritz von Mayfeld pointed-out to Bruckner that he used too many pauses in his Symphonies.

A little annoyed, the composer replied :

« But look at “ Herr ” Beethoven, who also pause at the beginning of the 5th, and again just after ! »

On one occasion, Bruckner refused to listen to Moritz playing piano pieces from other composers, fearing that it might disturb his « primary mission » .

The couple will also attempt to instill the basics of « étiquette » but Bruckner will remain indifferent. He was proud to speak his Upper-Austrian provincial dialect in social gatherings ignoring the reaction of intellectuals.

### Moritz von Mayfeld

The provincial district commissioner, composer, pianist, painter, writer, journalist and music-critic, Baron Friedrich Moritz (« Maurice ») Franz Edler von Mayfeld was born on 1 February 1817 in Vienna and died on 31 August 1904 in Schwanenstadt, Upper-Austria.

**1839** : Graduates from Law school and he becomes a Government official.

**1840-1850** : District Governor at the Vienna Woods' Regional Office.

**From 1848 until his death** : Lived in Schwanenstadt.

**Monday, 9 October 1848 to Wednesday, 30 May 1849** : Moritz von Mayfeld is elected a member of the Frankfurt National Assembly (Parliament) representing the 13th electoral District of Enns, Upper-Austria. His constituency office was at the « Hotel Württemberger » (« Württemberger Hof »), in the town of Waidhofen an der Thaya.

**1850-1851 and 1859-1873** : District Governor in Linz.

**1851** : Moritz von Mayfeld married Barbara (« Betty ») (« née » Edle von Jenny), the daughter of a textile manufacturer living in Schwanenstadt. She was a talented amateur pianist.

**1851-1854** : District Governor of Braunau-am-Inn.

**1854-1860** : District Governor of Ried-im-Innkreis (« Kreiskomissar 3. Klasse », in Kreisbehörde Ried) .

**1873-1880** : District Governor of Vöcklabruck, Upper-Austria.

Then, he retired as a Provincial civil servant.

### Barbara von Mayfeld

Baroness Barbara (« Betty ») von Mayfeld (Maiden name ; Edle von Jenny) was born on 15 May 1832 in Schwanenstadt, Upper-Austria ; and died on 13 June 1908 in Schwanenstadt. The daughter of a textile manufacturer from Schwanenstadt, she was an accomplished and talented amateur pianist. She studied composition and also received tuition in piano performance from Bruckner (during his « Linz Period ») . In 1851, she married Moritz von Mayfeld in St. James parish church (« Pfarrkirche St. Jakob ») in Schwanenstadt.

One day, « Betty » will say about Bruckner's over-broad pants :

« Did you make these clothes yourself or did you have them cut by a joiner ? »

But even such pointed remarks seem to have made very little impression on the stubborn Bruckner whose Upper-Austrian dress sense was a source of much amusement.

### Linz : General Hospital

The municipality of Linz faced a series of new challenges : the entire social administration, schools, communal housing construction and the administration of services in a narrower sense. The latter includes the entire city's economic operations and « city technology » . The growth of the city presented a great challenge to the local authorities in terms of hygiene.

Epidemic diseases such as cholera, typhus and tuberculosis, from which Linz was not spared, marked a starting-point. The level of medical knowledge at the time recognized the need for a sewage system and a central water main. Thus, particular emphasis was placed on the construction of sewers and water mains in the second half of the 19th Century.

Gas and, later, electricity provision were further innovations in terms of city technology. The construction of a gas works in Linz, in 1857, was primarily intended to supply public lighting. Electricity, on the other hand, was to power the trams. In this area, too, Linz was at the fore-front of the Monarchy.

The growth in population demanded the construction of new schools on the one hand, and an extension of support for the poor on the other. Barracks were intended to guarantee internal security. A regular police force took-over the register and passport administration in 1866. The city's infrastructure was further strengthened by the construction of the General Hospital in 1863 and the establishment of a voluntary fire force in 1866.

**1863-1866** : Construction of the Linz General Hospital, although it does not become operational until 1868.

**Tuesday, 15 September 1863** : The foundation stone for the Linz General Hospital is laid.

**1865** : 1 doctor and 4 employees take-over.

### The classy and humble high-school teacher

Anton Bruckner was extremely curious and hard-working. As collegiate organist in St. Florian, he had acquired the basic concepts in Latin, in order to fully grasp the meaning of the hymns and to set them accordingly to music. In Linz, he continued his Latin studies.

**1864** : As high-school teacher, he had a very brilliant student in his 7th grade classroom, whose father could be living with ease for years. Nevertheless, Bruckner's respect, here, for spiritual knowledge and his humility before all those who were somehow superior to him was so touching that he, the 40 year old cathedral and famous organ virtuoso, always addressed this 17 year old as ... « Professor » !

### First visit at Kreuzen

**Summer 1864** : 2 local Upper-Austrian newspapers report that Anton Bruckner stays for the first time at Kreuzen (according to the letter of 10 October 1864, Anton Bruckner expected Rudolf Weinwurm in August) .

The first signs of Bruckner's illness (which presented itself with a strong tendency towards recurrence, whose symptoms manifested themselves at a psychological-mental, as well as physical level) appeared, according to various indications, in the year 1864. Commenting on Bruckner's « melancholy » , in his letter of **6 August 1864**, to Rudolf Weinwurm, the biography by August Göllerich and Max Auer speaks of « The beginning of a crisis » , which « several years later, would reach its climax and solution through a severe illness » . According to Max von Oberleitner, Bruckner (being in a « critical state ») sought Kreuzen for cold water-cure in summer of 1864, thus, in the year that Auer says was the

beginning of his crisis.

### Christmas Day : Official Town Hall lunch

**Sunday, 25 December 1864** : (Invitation-card in bold print.) Anton Bruckner is invited on Christmas Day by the Mayor of Linz, Reinhold Körner, for an official lunch at the « Altes Rathaus » (Old Town Hall) on the « Hauptplatz » (main-square) .

« The mayor of the provincial capital of Linz asks his homeland citizen, “ Herr ” Anton Bruckner, to honour him with his presence on the 25th of December, 1864, at one o'clock in the afternoon.

Hôtel Krebs. »

...

A Liberal merchant, Reinhold Körner (born 11 March 1803 ; died 11 February 1873) became the first constitutional elected Mayor (in an extravagant ceremony ...) whose office was laid-down by a constitution.

**30 July 1848 - 11 August 1850** : Provisional Chairman of the Local Council.

**11 August 1850 - 21 March 1854** : Liberal Mayor (first mandate) .

**3 February 1861 - 31 March 1867** : Liberal Mayor (second mandate) .

### Munich : « Tristan und Isolde »

**Monday, 15 May 1865** : The premiere of Richard Wagner's « Tristan und Isolde » in Munich will be postponed due to the illness of soprano « Frau » Malvina Schnorr von Carolsfeld. Anton Bruckner stays at the Hotel « 4 Seasons » . Ludwig Speidel and Johann Herbeck were also in Munich for the event.

**After 15 May 1865** : Anton Bruckner meets the Russian pianist, composer and conductor Anton Rubinstein at the Hotel « 4 Seasons » in Munich. He shows him the 1st movement of his Symphony No. 1 (**WAB 101**) , and introduces him to Hans von Bülow. Bruckner is invited each evening by Richard Wagner.

Bruckner informs himself daily of the health-condition of soprano « Frau » Malvina Schnorr von Carolsfeld.

### Snoozing during the B minor Sonata

As a promising young composer, Johannes Brahms was introduced to the great Franz Liszt in Weimar who promptly played Brahms' Piano Sonata in C at a house recital, heaping praise on the young whipper-snapper. Liszt then played

his own Piano Sonata in B minor to which Brahms fell asleep.

### Franz Liszt's bad dental record

Bad dentistry in the 19th Century turned Franz Liszt in old age from the most beautiful man in the world to one of the orcs in « Lord of the Rings ». It also had a drastic effect on what food he could enjoy. While staying with his vegetarian son-in-law for the Bayreuth premiere of « Tristan und Isolde », he was sent a smoked veal cutlet in apricot sauce by Richard and Cosima. Unable to chew, Liszt passed the cutlet to his devoted pupil Lina Schmalhausen, who gave it to her dog while she cooked him some broth. Liszt didn't help his cause by grinding his teeth together when excited at the piano and he got through several sets of dentures. As age took its toll, he became partial to asparagus because he could eat it without putting said dentures in, though even this most amenable of foods became something of an ordeal in the composer's final months - deteriorating vision meant that, at a London banquet held in his honour in 1886, Liszt had to be helped out by Winston Churchill's mother, Jennie (Jerome), as he could not see the plate.

...

Franz Liszt had suffered from chronic dental disease for much of his adult life. He had had a partial set of upper false teeth made in Paris in 1864 by the famous American dentist Thomas Evans. It contained 5 teeth, including the 2 front ones. Liszt evidently had pyorrhoea, and his teeth often loosened and fell-out. His condition was aggravated by the fact that he often unconsciously ground his teeth, possibly because of excitement while playing the piano, and some teeth were impacted. (This first denture came into the possession of Henrik Gobbi in the 1870's.) Liszt's gum-disease progressed, and, during the next 15 years, he lost still more teeth. He had a second upper-denture made, this time in Budapest by Professor József Árkövy, in the period 1879-1880. It contained 8 teeth, including 5 in the front, with a supporting metal brace. Liszt was friendly with the Árkövy family and often visited them at their home in Franciscan Square. According to « Frau » Árkövy, her husband made Liszt a complete set of false-teeth in 1883. It is clear that dental disease was a difficult burden for Liszt to carry with him into old age. It affected many aspects of his daily life and resulted in a highly-restricted diet of soft foods. Liszt's friends and pupils understood his problems, and whenever they entertained him to a meal were careful to supervise the cooking. But there were times, as at Bayreuth, when Liszt was at the mercy of people who were too busy or too indifferent to care. During his last 10 days, Liszt complained of extreme soreness of the lower-jaw.

### Dentist József Árkövy

József Árkövy was born on 8 February 1851 in Budapest and died in 1922. Professor of clinical dentistry at the University of Budapest. He graduated in 1876 from the university of his native city, and then, went to London, where for several years, he practised in the German Hospital. In 1881, he established a clinical hospital at Budapest, which was amalgamated in 1890 with the general clinics as the « Department of Dentistry ». Árkövy is the pioneer of scientific dentistry in Hungary, and the author of several works on the subject, the more important of which are : « A Fogak Gondozása » (1881) ; « A Fogbél és Gyökhártya Bántalmak » (1884) ; and « Diagnostic der Zahnkrankheiten »

(1885) . He has also published several essays in Hungarian, German, and English dental journals. Árkövy has been baptized.

### Bruckner and the « Gugelhupf »

During his last years in Linz, Anton Bruckner taught piano and voice lessons to the daughter of a government councilor. The whole family sometimes joined him in the afternoon during the coffee-break. On such occasions, Bruckner's exaggerated courtesy seemed very involuntary but so very funny. He decided to control every sip of coffee and every piece of delicious refined marble cake (« Gugelhupf ») - otherwise, he would throw himself into the bowl like a voracious glutton. He thought that this restraint behaviour belonged to the « étiquette » of the rich and famous. Bruckner was so overly formal that the children sitting at the table giggled into their napkins.

When he was asked to eat in a more relaxed and conventional way, Bruckner, very embarrassed, finally gave this strange apology :

« Thanks a lot, thanks a thousand times. I was not comfortable, “ Herrin ” Baroness. I was so terrified ! »

A « Gugelhupf » (also « Kugelhupf » , « Guglhupf » , « Gugelhopf » , and, in France, « kouglof » , « kougelhof » , or « kougelhopf ») is a light, yeasted marble cake, traditionally baked in a distinctive circular Bundt mold. It is popular in a wide region of Central Europe, including southern Germany, Austria, Switzerland, Slovakia, Czech Republic, Poland and Alsace.

In late Medieval Austria, a « Gugelhupf » was served at major community events such as weddings, and was decorated with flowers, leaves, candles, and seasonal fruits. The name persisted through the Austro-Hungarian Empire, eventually becoming standardized in Viennese cook-books as a refined, rich cake, flavoured with rosewater and almond. Many regional variations exist, testifying to the wide-spread popularity of the « Gugelhupf » tradition.

### « Nanni » in Linz

**1866** : Anton Bruckner's sister Maria-Anna, known as « Nanni » (the 11th and last child of the family, born on 27 June 1836) , will join him in Linz. She will act as a house-keeper (without pay) and confidante.

« Our sister Anna went to live with my brother Anton, in Linz, and then, in Vienna. She was our favourite. Mother has prayed a lot for her, even on her death-bed. She told Anton that he must now be responsible for her because she was a very fragile woman. So, my brother took care of her. »

(Ignaz Bruckner)

...

**1866** : Bruckner will attend, for the first time, a performance of Ludwig van Beethoven's 9th Symphony.

### Mahler's migraine

**1866** : Gustav Mahler (aged 6) has been suffering of migraine attacks since childhood.

### Josefine Lang

Neufelden is a town in the District of Rohrbach, Upper-Austria. Anton Bruckner often went there to visit his girlfriend Josefine Lang (1844-1930), the comely daughter of a Linz butcher. During summer cures, he always met her at the local spa where she was working.

Bruckner had first made her acquaintance at the end of the 1850's, when he was employed for a short time as a supply teacher at the local school and she was one of his pupils. He had, then, invited her to join the church-choir, had made friends with her brother Anton, and, eventually, plucked-up the courage to write to her on **Thursday, 16 August 1866**, making a formal proposal of marriage (the brother had certainly already informed her) .

He urged her to be completely honest and to give a definite « yes » or « no » !

« Sehr verehrtes, liebenswürdiges Fräulein ! Nicht als ob ich mich mit einer Ihnen befremdeten Angelegenheit an Sie, verehrtes Fräulein wenden würde, nein in der Überzeugung, daß Ihnen längst mein stilles, aber beständiges harren auf Sie bekannt ist, ergreife ich die Feder um Sie zu belästigen. Meine größte und innigste Bitte, die ich hiemit an Sie, Fräulein Josefine zu richten wage, ist, Fräulein Josefine wollen mir gütigst offen und aufrichtig Ihre letzte und endgiltige, aber auch ganz entscheidende Antwort schriftlich zu meiner künftigen Beruhigung mittheilen und zwar über die Frage Darf ich auf Sie hoffen und bei Ihren lieben Ältern um Ihre Hand werben ? oder ist es Ihnen nicht möglich aus Mangel an persönlicher Zuneigung mit mir den ehelichen Schritt zu thun ? »

(« Respected and lovable young lady ! Not that I wish to alienate you with my questions, dear friend. I take the pen to put an end to my long silence. Far from me, the idea to bother you. I venture to present to you, “ Fräulein ” Josefine, my greatest and sincere request. Your response will be decisive and soothing for my future. May I ask your dear parents for your hand ? Or is it quite impossible because of a lack of love on your part for me ? »)

The Langs declined, saying that, as a 17 year old, Josefine was really too young (20 years younger than Bruckner who will be 43 in September) .

She returned his presents : a prayer-notebook and a gold watch.

But the parents were happy to see their daughter marry, in **1870** , Josef Weilnböck, the son of the wealthy Commissioner of the District of Neufelden, Karl Weilnböck, rather than the penniless music composer ...

Although initially disappointed, Bruckner harboured no ill feelings.

One of Josefine's older sisters, Antonie (?-1863) , married Albert Stadler, a friend of Franz Schubert.

**Neufelden : « Gasthof Weilnböck » (Hotel Scherrer)**

**1217** : Velden Castle (« Schloß Velden ») was erected in Neufelden by the bishops of the diocese of Passau.

**1523** : The Neufelden Brewery was already mentioned as the brewing site of the Diocese of Passau. Parts of the cellar dates from this period.

**Until 1528** : Velden Castle was the property of the episcopal bishop of Velden and the province (« Land ») . Later, the building was transformed into a prison (« Neufelden Burggraben ») .

**Sunday, 31 May 1626** : Because of a horse, an altercation with the Bavarian garrison of Lembach provoked a strike by the farmers of the region. An investigation was initiated.

**Sunday, 17 May 1626** : 5 groups of pilgrims composed of converted farmers intervened in the conflict by besieging the public market. A group of 25 rebellious farmers killed 3 priests who were part of a procession, and also manhandled pastor Gries. Subsequently, they fled to Rohrbach Sarleinsbach to take refuge on the hill of Velden Castle. The next day, they besieged the Castle itself.

**Monday, 29 November 1649** : Creation of a municipal Brewery in the Market Town of Neufelden.

**1699** : Velden Castle was, for the most part, in ruins.

**1728** : 1,360 buckets of beer were produced by the municipal Brewery.

**1789** : Karl Wöb, who comes from the famous linen trade family, bought what was left of Velden Castle to build the new Town Hall (« Rathaus ») .

Following owners : Franz Zwierniza, Josef Karl Peßler (**1810**) , Gabriel Kobel Müller (**1825**) , Anton Löffler (**1826**) , the Weilnböck family (**1829 to 1900**) .

**1795 to 1797** : 3,033 buckets of beer were produced by the municipal Brewery.

**Thursday, 27 July 1865** : The municipal Brewery was purchased by the Scherrer couple (Martin and Theresia) . A dynasty of Brewers in Upper-Austria was born : « Brauerei Scherrer Neufelden » .

**Before 1926** : The municipal Brewery housed the « Gasthof Weilnböck » .

**1926** : The Weilnböck Inn became the Hotel Scherrer.

**1926-1927** : Franz Scherrer achieved a production of 4,123 hectoliters of beer.

**1950** : Renovations of Hotel Scherrer. A history museum was included.

### Henriette Reiter

At the beginning of 1866, Anton Bruckner had informed Rudolf Weinwurm of several improvements which had been made to his flat - at a cost of 300 Florins which he had to borrow from his insurance society. Was he thinking seriously about marriage and « putting his house in order », as it were, for such an eventuality ? After the disappointment of Josefine Lang's rejection of his suit, he immediately turned his attention to another sweet, nice, young lady, the 18 year old Henriette Reiter who worked in Steyr with the leather Master, named Turek. After, she went living with her mother, the owner of a flower-shop in the « Josefstadt » area of Vienna.

Having made further enquiries about her, through a friend in Steyr, Bruckner had been informed that her dowry would probably be of 3,000 Florins (100,000 euros) . As he calculated that this sum, combined with his present level of income, would not be sufficient to provide her with the standard of living to which she was accustomed, he asked Weinwurm to find-out more about her but, under no circumstances, to divulge his age. He considered that he looked younger than his 42 years !

Weinwurm replied by return of post, enclosing the necessary information, and Bruckner wrote again, mentioning both the Viennese girl and a girl from Salzburg whose name he would like Weinwurm to send.

### High-esteem for his St. Florian's teacher

**1866** : St. Florian's teacher Johann Nepomuk August von Dürrnberger spent some time in Grünburg near Steyr, possibly to recuperate from an illness. A letter which Bruckner sent him on his Name-Day is sufficient evidence of the high-esteem in which he still held him :

« It is an expression of gratitude for the trouble which you took with me when you were once my teacher. It also comes from my deep respect for your almost unparalleled fair-mindedness and the energy which you expended in pursuing what was obviously right. It is further an expression of love - in response to the love which particularly touched me through your goodwill and benevolence of which I was often the recipient. Under such circumstances, who would not avail himself of an opportunity of giving expression to his feelings ? ... May God keep you in health for many, many years, bless you and amply reward you ! So many of your pupils will echo that today ! I join my voice to theirs and have every reason to do it in a strong " forte " . »

### Hydro-therapy

Hydro-therapy (formerly called hydro-pathy) is a part of medicine, in particular of naturopathy, occupational therapy and physiotherapy, that involves the use of water for pain relief and treatment. The term encompasses a broad range of approaches and therapeutic methods that take advantage of the physical properties of water, such as temperature and pressure, for therapeutic purposes, to stimulate blood circulation and treat the symptoms of certain diseases.

While the physiological mechanisms were initially poorly understood, the therapeutic benefits have long been recognized, even if the reason for the therapeutic benefit was in dispute. For example, in **November 1881**, the « *British Medical Journal* » noted that hydro-pathy was a specific instance, or « particular case », of general principles of thermo-dynamics. That is, « the application of heat and cold in general », as it applies to physiology, mediated by hydro-pathy.

In **1883**, another writer stated :

« Not, be it observed, that hydro-pathy is a water treatment after all, but that water is the medium for the application of heat and cold to the body. Thus, the “ active agents in the treatment are heat and cold ”, of which water is little more than the vehicle, and not the only one. »

Although standard anatomy and physiology text-books make only passing reference, if any, to hydro-therapy, some of the best descriptions of the underlying physiology upon which hydro-therapy relies, are to be found in such text-books. For example, one of the best succinct descriptions of blood redistribution (which is fundamental to the above-mentioned reflex reaction) , quoted below, is from a standard text-book.

« By constricting or dilating arterioles in specific areas of the body, such as skeletal muscles, the skin, and the abdominal region, it is possible not only to regulate the blood pressure but also to alter the distribution of blood in various parts of the body. »

Before World War II, various forms of hydro-therapy were used to treat alcoholism. The basic text of the « *Alcoholics Anonymous* » fellowship, « *Alcoholics Anonymous* » , reports that A.A. co-founder Bill Wilson was treated by hydro-therapy for his alcoholism, in the early 1930's.

In Europe, interest in various forms of hydro-therapy and spa tourism continued unabated through the 19th Century and into the 20th Century, where « in France, Italy and Germany, several million people spend time each year at a spa » . In 1891, when Mark Twain toured Europe and discovered that a bath of spring water at Aix-les-Bains soothed his rheumatism, he described the experience as « so enjoyable that if I hadn't had a disease I would have borrowed one just to have a pretext for going on » .

This was not the first time such forms of spa tourism had been popular in Europe and the United Kingdom. Indeed, in Europe, the application of water in the treatment of fevers and other maladies had, since the 17th Century, been consistently promoted by a number of medical writers. In the 18th Century, taking to the waters became a fashionable pastime for the wealthy classes who decamped to resorts around Britain and Europe to cure the ills of over-

consumption. In the main, treatment in the heyday of the British spa consisted of sense and sociability : promenading, bathing, and the repetitive quaffing of foul-tasting mineral waters.

Various forms of hydro-therapy have been recorded in ancient Egyptian, Persian, Greek and Roman civilizations. Egyptian royalty bathed with essential oils and flowers, while Romans had communal public baths for their citizens. Hippocrates prescribed bathing in spring water for sickness. Other cultures noted for a long history of hydro-therapy include China and Japan, this latter being centred primarily around Japanese hot springs, or onsen. Many such histories predate the Roman « thermæ » .

James Currie, who, according to Captain R. T. Claridge discovered « the merit of settling the use of cold water and who established the scientific base of Hydropathy » .

2 English works on the medical uses of water were published in the 18th Century that inaugurated the new fashion for hydro-therapy. One of these was by Sir John Floyer, a physician of Lichfield, who, struck by the remedial use of certain springs by the neighbouring peasantry, investigated the history of cold bathing and published a book on the subject, in 1702. The book ran through 6 editions within a few years and the translation of this book into German was largely drawn upon by Doctor J. S. Hahn of Silesia as the basis for his book called, « On the Healing Virtues of Cold Water, Inwardly and Outwardly Applied, as Proved by Experience » , published in 1738.

The other work was a 1797 publication by Doctor James Currie of Liverpool on the use of hot and cold water in the treatment of fever and other illness, with a 4th edition published in 1805, not long before his death. It was also translated into German by Michaelis (1801) and Hegewisch (1807) . It was highly-popular and first placed the subject on a scientific basis. Hahn's writings had meanwhile created much enthusiasm among his countrymen, societies having been everywhere formed to promote the medicinal and dietetic use of water ; and, in 1804, Professor E. F. C. Örtel of Anspach republished them and quickened the popular movement by un-qualified commendation of water drinking as a remedy for all diseases.

In the 19th Century, a popular revival followed the application of hydro-therapy around 1829, by Vincenz Priëbnitz, a peasant farmer in Gräfenberg, then part of the Austrian Empire. This revival was continued by a Bavarian priest, Sebastian Kneipp (1821-1897) , « an able and enthusiastic follower » of Priëbnitz, « whose work he took-up where Priëbnitz left it » , after he read a treatise on the cold water-cure. In Wörishofen (South Germany) , Kneipp developed the systematic and controlled application of hydro-therapy for the support of medical treatment that was delivered only by doctors, at that time. Kneipp's own book, « My Water Cure » , was published in 1886 with many subsequent editions, and translated into many languages.

Hydro-therapy as a formal medical tool dates from about 1829 when Vincenz Priëbnitz (1799-1851) , a farmer of Gräfenberg, in Silesia, then part of the Austrian Empire, began his public career in the paternal homestead, extended so as to accommodate the increasing numbers attracted by the fame of his cures.

At Gräfenberg, to which the fame of Priëbnitz drew people of every rank and many countries, medical men were conspicuous by their numbers, some being attracted by curiosity, others by the desire of knowledge, but the majority

by the hope of cure for ailments which had as yet proved incurable. Many records of experiences at Gräfenberg were published, all more or less favourable to the claims of Prießnitz, and some enthusiastic in their estimate of his genius and penetration.

Captain R. T. Claridge was responsible for introducing and promoting hydro-pathy in Britain : first in London, in 1842 ; then, with lecture tours in Ireland and Scotland, in 1843. His 10 week tour in Ireland included Limerick, Cork, Wexford, Dublin and Belfast, over June, July and August 1843, with 2 subsequent lectures in Glasgow.

Some other Englishmen preceded Claridge to Graefenberg, although not many. One of these was Doctor James Wilson, who himself, along with Doctor James Manby Gully, established and operated a water-cure establishment at Malvern, in 1842. In 1843, Wilson and Gully published a comparison of the efficacy of the water-cure with drug treatments, including accounts of some cases treated at Malvern, combined with a prospectus of their Water Cure Establishment. Then, in 1846, Gully published « The Water Cure in Chronic Disease » , further describing the treatments available at the clinic.

The fame of the water-cure establishment grew, and Gully and Wilson became well-known national figures. 2 more clinics were opened at Malvern. Famous patients included Charles Darwin, Charles Dickens, Thomas Carlyle, Florence Nightingale, Lord Tennyson and Samuel Wilberforce. With his fame, he also attracted criticism : Sir Charles Hastings, a physician and founder of the British Medical Association, was a forthright critic of hydro-pathy, and Doctor Gully, in particular.

From the 1840's, hydro-pathics were established across Britain. Initially, many of these were small institutions, catering to at most dozens of patients. By the later 19th Century, the typical hydro-pathic establishment had evolved into a more substantial undertaking, with thousands of patients treated annually, for weeks at a time, in a large purpose-built building with lavish facilities (baths, recreation rooms and the like) under the supervision of fully-trained and qualified medical practitioners and staff.

In Germany, France and America, and in Malvern, England, hydro-pathic establishments multiplied with great rapidity. Antagonism ran high between the old practice and the new. Unsparing condemnation was heaped by each on the other ; and a legal prosecution, leading to a royal commission of inquiry, served but to make Prießnitz and his system stand higher in public estimation.

Increasing popularity soon diminished caution whether the new method would help minor ailments and be of benefit to the more seriously injured. Hydropathists occupied themselves mainly with studying chronic invalids well able to bear a rigorous regimen and the severities of unrestricted crisis. The need of a radical adaptation to the former class was first adequately recognized by John Smedley, a manufacturer of Derbyshire, who, impressed in his own person with the 70's as well as the benefits of the cold water-cure, practised among his work people a milder form of hydro-pathy, and began, about 1852, a new era in its history, founding at Matlock a counterpart of the establishment at Gräfenberg.

Ernst Brand (1826-1897) of Berlin ; Rajen and Theodor von Jürgensen of Kiel ; and Karl Liebermeister of Basel, between 1860 and 1870, employed the cooling bath in abdominal typhus with striking results, and led to its introduction to England by Doctor Wilson Fox. In the Franco-German War, the cooling bath was largely employed, in conjunction frequently with quinine ; and it was used in the treatment of hyperpyrexia.

Hydro-therapy, especially as promoted during the height of its Victorian revival, has often been associated with the use of cold water, as evidenced by many titles from that era. However, not all therapists limited their practice of hydro-therapy to cold water, even during the height of this popular revival.

The first american hydro-pathic facilities were established by Joel Shew and R. T. Trall, in the 1840's. Doctor Charles Munde also established early hydro-therapy facilities, in the 1850's. Trall also co-edited the « Water Cure Journal » .

By 1850, it was said that « there are probably more than 100 » facilities, along with numerous books and periodicals, including the « New York Water Cure Journal » , which had « attained an extent of circulation equalled by few monthlies in the world » . By 1855, there were attempts by some to weigh the evidence of treatments in vogue at that time.

Following the introduction of hydro-therapy to the United States, John Harvey Kellogg employed it at Battle Creek Sanitarium, which opened in 1866, where he strove to improve the scientific foundation for hydro-therapy. Other notable hydro-pathic centers of the era included the Cleveland Water Cure Establishment, founded in 1848, which operated successfully for 2 decades, before being sold to an organization which transformed it into an orphanage.

### Prießnitz, Kneipp, and the hydro-pathy movement

Into this environment, just ripe for a new « miracle » method of healing, came water healer Vincent Prießnitz (1799-1851) , an uneducated Austrian peasant who developed a collection of water treatments into a natural healing philosophy called hydro-pathy. From direct observation of the effects of cold water treatments on farm animals, himself, and his neighbours, Prießnitz became a believer in the healing effects of water. He noticed that animals' sprains and bruises as well as tumors on horses' hoofs healed faster when they were bathed with cold water. He treated his own fractures and bruises from a serious accident by using cold water and quickly regained his health, contrary to a doctor's prediction. After Prießnitz experimented further with cold water, he also became convinced of the healthy effects of profuse sweating and of his ability to cure gout and rheumatism, common complaints at that time.

Prießnitz believed that all illness was caused by morbid or disease-causing humors that formed inside or outside the human body and were introduced into the blood. These morbid humors came from immoderation (too much food, bad food, use of stimulating liquors, excessive mental excitement, too little exercise) , inhalation of noxious air, or lack of cleanliness. Exercise, diet, fresh air, vigorous massage, and above all, water were used to expel the humors and disease from the system. Prießnitz's hydro-therapy treatments included sweat baths, cold baths, wet sheet packs, and many local cold water treatments, such as eye and foot baths. Sweating forced-out bad humors and inflammation, wet sheet-packs restored healthy circulation and secretions, and cold baths encouraged the natural functions of the skin.

As with so many « miracle » cures of the past, Prießnitz's success was built upon the beliefs of the time (he retained the concept of humors) , a germ of truth (the circulatory effects of various types of water applications) , and the human taste for novelty. This is not to say that many of Prießnitz's cures were not effective ; the effects of many of his hydro-therapy treatments have been validated scientifically. However, the use of water as the primary agent in a medical system was revolutionary. According to this approach, water was employed to cure every type of illness and chronic disability, and no treatment could be successful without water.

Prießnitz became wildly successful. First, he treated his neighbours ; then, when his fame spread, the Austrian government was forced to give him a special license to treat patients and to build new roads to help people gain access to his mountain home. In 1840, Prießnitz treated 1,600 patients from all over the world using primarily cold water and healthy diet. In 1843, he published « The Cold Water Cure » , which went through many printings and translations into other languages. Physicians from many countries, including the United States, made pilgrimages to his institution and established their own « water-cures » back home. In France, Spain, the Czech Republic, the United Kingdom, Austria, Germany, and the United States, these water-cures would treat the sick with water as the primary agent. In 1852, there were 24 water-cure establishments in England and Ireland alone. Even physicians who did not specialize in water treatments experimented with various ones. For example, Jean-Marie Charcot, famous French neurologist and teacher of Sigmund Freud, experimented with warm circulating water to treat joint inflammation and invented the Charcot shower, a very strong jet of water directed upon the back of a standing patient. Technological progress, such as indoor plumbing which supplied running water, meant that it was possible to use water in large quantities for various hydro-therapy treatments.

Hydro-paths could be either folk healers or trained physicians, and they treated a wide variety of medical problems. They generally urged their patients to follow a healthy lifestyle, which included eating unrefined food, drinking lots of water, and exercising regularly. Water treatments included wet-packs and dripping sheets, whole-body baths, local baths (sitz baths were a favourite) , steam inhalations, affusions, compresses, gargles, douches, sprays, fomentations, treading in cold water, walking barefoot on snow, and swimming ; patients were sponged, wrapped, cooked in saunas, scrubbed, hosed inside and out, sprayed, dunked, bathed and steamed. There seemed no end to the inventive ways that water could be applied to the body. Swedish massage, originally from Swedish masseuses and masseurs who had emigrated to other countries, was frequently offered as part of the regimen. As had occurred so often before, proponents of water treatments found it natural to combine them with diet, exercise, and massage. With hydro-pathy, the health fad of the moment, people on both sides of the Atlantic could satirize the movement.

20 years after Prießnitz, Sebastian Kneipp (1821-1897) , a Bavarian priest who cured himself of tuberculosis with water treatments and diet, became another internationally prominent lay healer. Kneipp incorporated herbs, exercise, fresh air, nutrition, and emotional treatment into his version of the water-cure, which he called nature cure. Body hardening (the strengthening of the body) he considered the best way to preserve health, and as with Prießnitz before him, his treatments were often harsh and rigorous, including ice cold baths and walking barefoot in the snow. Baths of various temperatures and ingredients (from herbs to clays) were common. Gout was treated by using herbal packs, herbal baths, cold washings, and local douches. Warm applications were gradually changed to colder ones until a patient might end-up in an ice-cold bath - and not always a local bath, such as a sitz bath, but often the entire

body. Patients and doctors who wanted to learn his methods flocked to Bad Wörishofen, the spa-town where Kneipp practiced, from many countries in Europe and elsewhere. Kneipp treated royalty and simple peasants alike, including the Archduke Ferdinand of Austria, whose assassination touched-off World War I. Kneipp also cured Archduke Ferdinand's father, Archduke Josef, of Bright's disease, a kidney disorder. He also treated Pope Leo XIII. Kneipp had a profound influence on the hydro-pathy movement, and the English edition of his book, « My Water Cure » , went through 50 printings in its first 5 years. Many lay people and numerous orthodox physicians returned from a Kneipp « cure » to establish hydro-therapy practices in their own communities.

Back in the United States, some of the lay people who had healed in European water-cures would go on to found alternative colleges, give intense competition to the orthodox (university trained) doctors, and eventually either join conventional medical practice or become naturopathic physicians. Massage, although seen as a secondary therapy, was a popular adjunct to water treatments and used a great deal. In 1892, Kneipp commissioned German-born Benjamin Lust to carry Kneipp's methods to the United States, and, in 1902, his American followers changed their work from « Kneipp's water-cure » to « naturopathy » . Naturopathic medicine has continued as a medical specialty of its own since that time and continues to make far more use of hydro-therapy than does any other branch of medicine.

### The resurgence of spas

During this period, the upper-classes of Europe had both the wealth and the leisure time to retreat to spas for extended periods. This was fortunate, since a typical water-cure lasted 24 weeks and required immersion up to the neck for at least 3 hours twice a day, 3 days per week. New technological advances (better plumbing and travel by railroad) made luxury water-cures possible at far-flung spas. Rich patients went not only for the healing of physical ailments such as rheumatism and gout and to get fresh air and sunshine but also to see and be seen at fashionable resorts. Well-to-do invalids flocked to try the water treatments, usually receiving massage as well. Amusements such as horse racing, boxing matches, gambling, flirting, and attending the theatre softened the rigours of the water-cure. Spa-therapies also had a strong placebo effect for those with psychosomatic illnesses and « nerves » : there are many reports of hysterical paralysis, even blindness, being cured at spas. Upper-class invalids whose emotional pain was being expressed as a physical ailment might become confirmed spa-goers, as their doctors referred them to one spa after another.

In Germany, the spa-resort now called Baden-Baden was discovered by the Romans in 75 A.D. and named « Aquæ Aureliæ » (waters of the goddess Aurelia) . Used continuously since the time of the Romans, its waters were reputed to be effective for treating obesity, arthritis, rheumatism, heart and circulatory problems, respiratory disorders, and many other maladies. In its mud-pack rooms, patients were enveloped in mud for half an hour, sprayed with water from hoses, bathed, massaged, and then, allowed to rest. By 1830, 15,000 people visited the resort every year, including such luminaries as Queen Victoria, Napoléon III, « Kaiser » Wilhelm, Frédéric Chopin, Johannes Brahms, Fyodor Dostoyevsky, Eugène Delacroix, and Leo Tolstoy.

American author Mark Twain paid a visit to Baden-Baden and wrote :

« I fully believe I left my rheumatism there. »

Bath, England, was another pleasure center as well as a place of healing. Its waters had also been in continuous demand since Roman times, and to bring it up to fashion, the town had a major face-lift in the early 1800's, with the renovation of medieval buildings and the construction of magnificent stone buildings in Classical style.

These great spas and others, such as « Montecatini Terme » in Italy and « Évian-les-Bains » in France (all discovered by the Romans almost 2 millennia ago) , adopted the water-cure and the hydro-therapy methods of Prießnitz and Kneipp. Many spas had a reputation for healing specific complaints. The fashionable « Bad Kreuznach » in Germany was known as the ladies' spa, since its waters were supposed to have a rejuvenating effect on inflammatory conditions of the female pelvic organs. « Bad Ems » was reputed to be healing for throat complaints. In France, « Bagnoles de l'Orne » had hot radium-impregnated water beneficial for blood vessel problems ; the waters of « Vittel » were said to act on the liver and kidneys to treat arthritis and gout ; and the waters of « Plombières » continued to be used for female infertility.

When John Harvey Kellogg visited Leukerbad, in Switzerland, in 1883, the mineral water baths of 95°F to 98°F were extremely popular. They were used principally by patients with nervous disorders, rheumatism, psoriasis, and eczema. During their stay at Leukerbad, patients typically entered the baths around 7:00 am and remained in them until 1:00 pm each day, which explains the need to play chess, write letters, and drink tea to pass the time. A combination water and massage treatment used at a number of famous spas was the « Aix douche-massage » . During this treatment, the patient was massaged by hand and simultaneously sprayed with high-pressure water from a hose ; sometimes, 2 masseurs at once performed the treatment, spraying and massaging for up to 15 minutes. This technique was used as part of the treatment for diabetes at « Aix-les-Bains » in France.

New hydro-therapy techniques were always of interest to Europeans, and when French soldiers stationed in Turkey brought Turkish baths and massage techniques back home in the early 1800's, they soon became very popular. Turkish baths were introduced into England in the 1880's and were enthusiastically adopted by the English. (As in the United States, bathrooms with running water would not be available to all citizens until about 1920.)

### Vincenz Prießnitz

Vincenz Prießnitz was a peasant farmer of Gräfenberg, in Austrian Silesia, who is generally considered the founder of modern hydro-therapy, which is used in alternative and orthodox medicine. Prießnitz stressed remedies such as suitable food, air, exercise, rest and water, over conventional medicine. He is thus also credited with laying the foundations of what became known as « Nature Cure » , although it has been noted that his main-focus was on hydro-therapeutic techniques. The use of cold water as a curative is recorded in the works of Hippocrates and Galen, and techniques such as spas, bathing, and drinking were used by various physicians in Europe and the United States through to the 18th Century. The practice was becoming less prevalent entering the 19th Century however, until Prießnitz revived the technique after having major success applying it on patients in his spa in Gräfenberg (now, Lázně Jeseník) . Prießnitz's name first became widely-known in the English-speaking world through the publications and lecture tours of Captain R. T. Claridge, in 1842 and 1843, after he had stayed at Gräfenberg in 1841. However, Prießnitz was already a household name on the European continent.

Richard Metcalfe stated in his 1898 Biography :

« There are hundreds of establishments where the water-cure is carried-out on the principles laid-down by Prießnitz. »

Indeed, Prießnitz's fame became so widespread that his death was reported as far away as New Zealand.

Vincenz Prießnitz was born into a farmer's family in the village of Gräfenberg (now, Lázně Jeseník) near Frývaldov (now, Jeseník) and baptized Vincenz Franz. His parents were among the first settlers of the village. When Vincenz was 8 his father went blind and he had to help in the farm, especially after his elder brother died 4 years later. Once Vincenz watched a roebuck with a wounded limb coming to a pond (or stream) to heal its wound. He healed his own finger injured during timber felling with water-wraps (1814) . He also relieved pain after spraining his wrist by applying wet bandages, which lessened the inflammation.

In 1816, Prießnitz was injured more seriously when he broke his ribs in an accident with a cart and the doctor claimed it was fatal or, at least, crippling. Prießnitz refused to accept the doctor's diagnosis, and, over the next year, he healed after applying wet bandages to his chest and drinking large quantities of water. His recovery strengthened his conviction in the practice, and brought him local fame. Prießnitz began healing animals on his farm and in his village, and later, began developing techniques and protocols for healing people. Different types of baths focused on healing different body-parts and various afflictions, including paralysis, insanity and poisoning. Soon, queues of people were coming to Gräfenberg. So, in 1822, Vincenz decided to rebuild his father's house, building part of it as a sanatorium and spa for his patients.

As Prießnitz's experience grew, the procedures of his treatments became more precise and regular. To treat many diseases, he would wrap the patient in wet bandages and many layers of blankets to cause heavy perspiration from the heat. After several hours, the patient was then instructed to bathe in cold water, and also drink plenty of water. He believed that the rapid changes in temperature allowed the pores of the skin to open and evacuate bad substances in the blood. Another theory Prießnitz held was that the body tended towards health naturally. His treatments, which involved no drugs or herbal medicines, were designed then to help the body remove foreign matter from the body. The extreme conditions disturbs this matter, which prompts a bodily response. Prießnitz also required his patients to add strenuous exercise to their daily regimen, and sometimes required his patients to fast. The food served was bland and hard, and water was the only drink served. Cold water was sometimes added to the food to promote water intake, and patients were required to drink 12 glasses of water per day at a minimum, with some drinking as many as 30 glasses.

Before Prießnitz's spa was built near his family house, Prießnitz mostly made house-calls. As his popularity grew, Prießnitz limited his practice to his residence, and began expanding the Gräfenberg spa with lodgings, dining-rooms, showers and bath-houses. Some patients lived in the spa for up to 4 years. He constructed several douches, which were heavy-showers of cold water that flowed from nearby mountains. The water from these douches fell from up to 20 feet in the air, with a stream so strong that new patients were sometimes « flattened by the force of the stream » . Other baths were created for different body-parts, such as eye-baths, foot-baths and head-baths.

In 1826, Prießnitz was invited to Vienna to heal the Emperor's brother Anton Viktor, Grand Master of the Teutonic Knights. This gave him a great reputation so many people from all over the country streamed into Gräfenberg.

His « sponge washing » technique was not accepted by local doctors who accused him of being an impostor with no medical background. These early opponents brought Prießnitz to court several times, but he was acquitted each time, and inspections of his spa confirmed that water was the sole healing agent used in the facility. In 1838, Prießnitz was granted a permit to establish the spa he founded several years earlier. These high-profile cases only served to expand his fame throughout Europe. As hydro-therapy became more widely accepted, his opponents became more concerned with his exact methods than the overall practice, finding Prießnitz's treatments far too extreme and taxing on the body. The food offered at the spa was also notoriously bad-tasting and un-healthy. One visitor complained about being served « veal wick was 10 days old ». Doctor Robert Hay Graham, who visited the Gräfenberg spa in October 1842, noted that Prießnitz did not keep any records of his patients, and that his practice was based on hunch and experience over any systematic approach. Graham suggested that Prießnitz's treatment worked on 1 out of 20 people at best, and that a milder water-cure that was combined with other medicines would be preferable.

In 1839, 1,500 patients arrived (among them, 1 monarch, 1 duke, 1 duchess, 22 princes and 149 counts and countesses) and 120 doctors to study the new therapy. A visit by Arch-Duke Franz Carl, in October 1845, was greeted with an address extolling the virtues of Prießnitz and his methods, signed by 124 guests, from a variety of countries. The new spa-house, built that year with 30 rooms, was called « Castle » and the next house was called « New Spa-House ». In 1846, Prießnitz was awarded a medal by the Emperor. Various aristocratic patients did him reverence by erecting monuments in the spa-town. Among the most famous guests was Nikolai Gogol who visited the spa twice, in 1839 and in 1846.

In 1842, R. T. Claridge published « The Cold Water Cure, its Principles, Theory, and Practice », which detailed Prießnitz's treatments. Claridge was himself a patient of Prießnitz, and his book's descriptions contain notes on the process of his own treatment at the spa, and the effectiveness of Prießnitz's treatments on other patients with various diseases.

Prießnitz's practice spread to the United States soon after becoming established in Europe, and several hydro-pathic medical schools and medical journals were created in the U.S. Some practitioners performed scientific experiments on the effects of known water-cures, and they developed new methods and theories about the field. The usage of extreme temperature was toned-down to account for differences in patients' age and condition. One notable theory that emerged was that osmosis contributed to the healing effects of water. The skin was thought to act as a membrane, and impurities in the body would flow-out into pure water applied by bandages and baths.

Prießnitz's English biographer, Richard Metcalfe, notes that despite the fame of the Graefenberg setting, Prießnitz believed that the water-cure treatment was what provided his patients relief, not the locale.

That Prießnitz was of this opinion appears from the fact that after his fame had spread throughout Europe, and people came to Gräfenberg from all quarters, he did not confine his practice of hydro-pathy to that healthy region, but visited and treated patients at their own homes in towns, where similar success attended his manipulations.

There are some who would stultify Prießnitz by making his saying, « Man muß Gebirge haben » (One must have mountains) , to mean that he considered a mountainous region indispensable to the successful practice of hydro-pathy. But, as the facts stated above show, the whole career of Prießnitz gives the lie to such a notion.

Vincenz Prießnitz died in 1851. Newspapers of the day reported on the morning of his death :

« Prießnitz was up, and stirring about at an early hour and complaining of the cold, and had wood brought in to make a large fire. His friends had, for some time, believed him to be suffering from dropsy in the chest, and, at their earnest entreaty, he consented to take a little medicine, exclaiming all the while, “ it is no use ”. He would see no physician, but remained to the last true to his profession. At about 4 o'clock in the afternoon, “ he asked to be carried to bed, and, upon being laid-down, he expired ”. »

Prießnitz's wife Sofie died in 1854, and was buried in the family crypt in Gräfenberg, where Prießnitz also lay. They had 9 children, comprising 8 daughters and 1 son, Vincent Paul, who died aged 37 (22 June 1847 - 30 June 1884) .

### Sebastian Kneipp

The Bavarian priest Sebastian Kneipp was born on 17 May 1821 in Stephansried, Bavaria (Germany) ; and died on 17 June 1897, in Bad Wörishofen, Germany. He was one of the founders of the naturopathic medicine movement. He is most commonly associated with the « Kneipp Cure » form of hydro-therapy : the application of water through various methods, temperatures and pressures which he claimed to have therapeutic or healing effects.

In Norway, he is mostly known for his wholemeal bread recipe. « Kneippbrød » is the most commonly eaten bread in Norway.

His father was a weaver, and Kneipp trained as a weaver until he was 23 when he began training for the priesthood. He fell ill with tuberculosis, and claimed that he was healed by a « water-cure » that he read in a book that he found. He was ordained as a Catholic priest, in 1852.

In the 19th Century, there was a popular revival in the application of hydro-therapy, instigated around 1829 by Vincent Prießnitz, a peasant farmer of Gräfenberg, then part of the Austrian Empire. This revival was continued by Kneipp, « an able and enthusiastic follower » of Prießnitz, « whose work he took-up where Prießnitz left it » , after he came across a treatise on the cold water-cure. At Wörishofen, while serving as the confessor to the monastery, he began offering treatments of hydro-therapy, botanical treatments, exercise and diet to the people who lived in the village. Some of his suggested treatments included « ice cold baths and walking barefoot in the snow » and other « harsh » methodologies. In 1893, M. E. Bottey described Kneipp's water-cures as « dangerous in most cases » . Wörishofen became known as a place with a reputation for spiritual healing. In addition to « peasants » , Kneipp's clients also included Archduke Franz Ferdinand of Austria and his father, Archduke Karl Ludwig as well as Pope Leo XIII. Others took Kneipp's processes back to their home countries to found alternative therapy spas and colleges. In America, Kneipp Societies were founded, which, under the influence of Benedict Lust, changed their name to Naturopathic Society of America.

Kneipp's book, « My Water Cure » , was published in 1886 with many subsequent editions, and translated into many languages. He also wrote « Thus Shalt Thou Live » ; « My Will » ; « The care of children in sickness and in health » .

In 1891, he founded « Kneipp Bund » , and organization that promotes water healing.

Archduke Josef dedicated his medical atlas to Kneipp. Kneipp's likeness was featured on a stamp. His recipe for whole wheat bread, called « Kneippbrød » , is the most commonly eaten bread in Norway.

...

In 1855, Father Sebastian Kneipp, a Catholic priest, became known as a man who could cure illness with applications of ice-cold water. Having cured himself of severe tuberculosis with cold water applications, he applied the principle to curing other diseases as well. He became well-known throughout Europe. His clients included the Archduke Franz Ferdinand of Austria and Pope Leo XIII. In America, Kneipp Societies became the forerunners of today's AANP (American Association of Neuropathic Physicians) .

Sebastian Kneipp was born in 1821 in a small town in Bavaria, Germany, approximately 50 miles west of Munich. Like his father, he was to become a weaver. By age 12 years, he already worked full-time in his father's business, but in his heart, he wanted to become a priest.

His father said :

« We have no money to send you to university. If God had wanted you to become a priest, he surely would have given us the money to send you to school. »

But the young Kneipp did not give-in. With the help of a mentor, he managed to enter preparatory school at age 23 and university 4 years later. While a student, he contracted severe tuberculosis, a disease thought to be incurable. Applying the principles of the healing powers of water, as discussed in a book by Johann Sigmund Hahn, Kneipp cured himself of the disease. He did so by immersing his body in the ice-cold water of the Danube River for a few seconds several times a week. In 1852, Father Kneipp was ordained, and 3 years later, he settled in Bad Wörishofen.

When Kneipp began an intensive study of the healing powers of cold water and certain plants, Bad Wörishofen was a small village with 969 residents in 1855. Upon conclusion of his studies, Sebastian Kneipp was certain that in order to be healthy the human body needed physical exercise, a healthy diet and in balance of body, mind and soul. To achieve health in his patients, he started a humble practice. Initially, his sole implements for affecting cures consisted of a wooden tub, a ladle and a watering can. He had many successes and his fame grew. In 1886, Father Kneipp published a book, entitled, « My Water Cure » which has been republished many times and translated into many languages.

Germany has 378 spa-towns. 68 of them offer the Kneipp method of healing. Today, Bad Wörishofen has 14,000 inhabitants, 165 clinics and hotels, 160 miles of foot- and bicycle paths, thermal pools, herb and aroma gardens, a barefoot and a forest trail, tennis courts and golf courses. The town's thermal pools, which include water-rich in sulphur, iodine and salt, are said to help alleviate chronic joint pain and circulatory disorders.

## 1864-1868

In confronting the various constellations of the crisis years of 1864-1868, Anton Bruckner developed an increased productivity as a composer, suggesting that a certain psychological stress set Bruckner into a state of internal tension which worked in the sense of stimulating his inspiration - i.e. , the creative process in him intensified. However, this excessive deployment of composing activity was accompanied by an increasingly intensified claim on his nervous system and led (exercised over a long period) to his psychological-mental and physical over-work. The addition of the pressure to cope (such as is exercised by a situation characterized by multiple stresses) would then mean an increase in the already existing tension, to which the structure of his personality reacted with an irritation that, in the end, actualized the existing potentiality for compulsive dynamics. This increasing valence and intensity in the awareness of pressing compulsive ideas (sometimes also ideas of persecution) began increasingly to fix themselves on his attention. Once the first crisis was surmounted and, therefore, abating, then the compulsive ideas lost their central presence, and questions and problems of composing returned again to the focus of his attention. In the degrees to which the progression of his ideas managed to take the direction of composing, his consciousness showed itself (as attention can always only turn to a content) once again capable of strong defence against « incidences of disorder » . In the creative act (which takes place as an act of self-transcendence in a condition of highest possible concentration on something that lies outside the person) , Bruckner blanked-out the incident of disorder from his consciousness.

Bruckner himself, at the beginning of the cited conversation with Theodor Helm, bore witness to this, when he addresses the personal inner-moment of creation of the « Benedictus » of the Mass in F minor as that in which having been close to « madness » , he had « found himself again » .

## WAB 27 : Mass in E minor

**1866** : The post of director of the Liedertafel « Frohsinn » male-voice choir cost Anton Bruckner a great deal of effort.

« Our affection for our conductor is shown by the way we persevered over a period of weeks in learning his extremely difficult Mass (in E minor) , which was sung at the inauguration of the new Cathedral's Votive Chapel. During the dog-days of **August**, the men and their female counter-parts patiently endured what must have been more than 20 rehearsals in the muggy-hall, with Bruckner conducting in his shirt-sleeves. »

The Bishop of Linz, Franz-Josef Rüdiger asked Bruckner for a mass to celebrate the accomplishment of the construction of the Votive Chapel of the new Linz cathedral. Because of a delay in completing the construction, the celebration of the dedication didn't take place until 3 years later, on **29 September 1869**.

## End of 1866 : Simon Sechter

**End of September - beginning of October 1866** : Both Simon Sechter and Michael Arneith wrote to Bruckner to confirm that no super-numerary organist would be appointed in the meantime. In any case, since such a post would be an unpaid one, the successful candidate would have to reside in Vienna. Because of the uncertainty of any other prospects for Bruckner in Vienna, at this stage in his career, he decided not to pursue his application. 6 months later, Bruckner heard from Sechter that he had been forced by ill health to give-up his position at the Court Chapel (for which he had received the Imperial « long service » medal) and that his duties were now confined to teaching at the Conservatory. Pius Richter, known to both Benedikt Randhartinger and the Lord Chamberlain, had been appointed first organist-designate and Rudolf Bibl, second organist-designate.

...

**End of October 1866** : Anton Bruckner heard from Simon Sechter, now 78 years of age, that persistent illness was confining him to his house, with the result that his Vienna Conservatory pupils had now to come to him for their lessons. Sechter hoped that Bruckner would pay him a visit the next time he was in Vienna and show him some of his recent compositions. A few days later, Bruckner, concerned about Sechter's health, asked Rudolf Weinwurm if he could obtain further information about his former teacher's domestic situation and, if possible, arrange for some other medical assistance to be made available. He, himself, was recovering from a bout of flu but hoped to have the time and energy to attend a forthcoming performance of Beethoven's 9th Symphony, in Vienna. He expressed his concern about Weinwurm, in view of an outbreak of cholera in the city.

**Sunday, 4 November 1866** : Letter from Anton Bruckner to Rudolf Weinwurm :

Bruckner asks Weinwurm to look after Simon Sechter. He himself is also ill, but he hopes to be able to go to Vienna for the performance of Beethoven's 9th Symphony. When is the concert ? Thanks for the greetings from Alois Weinwurm. Looking forward to seeing you again. Worries about cholera cases in Vienna and Linz.

**Early December 1866** : Anton Bruckner wrote again to Rudolf Weinwurm, asking him to obtain 2 tickets (one for Alois Brutscher and one for himself) for the Berlioz concert, and adding that he also wanted to hear Beethoven's 9th, even if it meant travelling to Vienna again on another occasion. He also mentioned that he had completed his Mass in E minor (**WAB 27**) , written specifically for the dedication of the Votive Chapel of the new cathedral (« Neuer Dom ») in Linz, and a piece for male-voice choir.

## Harbinger of things to come

Anton Bruckner felt an unbearable strong call for so-called hard and forced labour.

**1866** : The 42 year old Bruckner wrote to a friend :

« Under melancholy, I understand (...) mainly arrogance towards people, their friendship, correctness and fidelity. »

He was endlessly spending time in praying. He was imagining things.

### Karl Waldeck

Anton Bruckner's counting obsession, once it had set-in, accompanied him for the rest of his life, though its first onset can only be vaguely located. According to the statement of his friend Karl Waldeck, his observations of Bruckner's disorder (including, amongst other things, counting obsession and « fixed ideas ») occurred, in any case, before his stay at Kreuzen ; and he concludes his observations of the incidents referred to here with the statement that, after his discharge, Bruckner displays « some strange and bizarre things » which also persisted.

...

The organist, music teacher and composer Karl (Borromäus) Waldeck was born on 21 September 1841 in St. Thomas am Blasenstein, a village in the district of Perg, Upper-Austria.

In 1856-1857, Waldeck became the trainee student of Bruckner in Linz ; he will occasionally act as substitute organist (especially for the Morning Mass ! ) .

In 1858, Waldeck attended the Linz « Kaiserlich-Königlich Präparandie » (Imperial and Royal Teacher-Training College) . His teachers were Johann August Dürrenberger and Engelbert Lanz.

From 1858 to 1861, Waldeck was hired as assistant professor at Grünburg and Frauenstein (Upper-Austria) .

Back in Linz in 1861, he taught and was organist at « St. Matthias - Kapuzinerkirche » (the Capuchin church the marble tomb of Count Montecuculi is located) but he had to quickly leave his post for health reasons.

### Early 1867

The first signs of a severe depression which led to a nervous break-down, during the **Spring of 1867**, are alluded to in Anton Bruckner's letter to Rudolf Weinwurm. In enclosing 10 Florins, presumably the cost of the December concert tickets, he apologized for the delay and hinted at some kind of exhaustion which prevented him from writing sooner. He was pleased to report that his friendship with Alois Brutscher had returned to its earlier cordiality, and passed on a request from the Liedertafel « Frohsinn » for the name of a chorus by Robert Schumann which Weinwurm had conducted several years previously. He was intending to travel to Vienna for Johann Herbeck's performance of his Mass in D minor (**WAB 26**) in the Court Chapel, on **Sunday, 10 February 1867**, and asked for Weinwurm's advice about when he should come and what he should do.

The day before his letter to Weinwurm, Bruckner wrote to Johann Herbeck, thanking him for his willingness to perform

the Mass in D minor (WAB 26) and asking him if his « Afferentur » (WAB 1) and his « Ave Maria » (WAB 6) could be used as the Gradual and Offertory respectively. He hoped to be in Vienna, on the **8th or 9th of February**. Ludwig Speidel, who had written a complimentary report of Bruckner's organ playing at the « Piaristenkirche », 9 years earlier, had the distinction of providing the first review of the performance of a Bruckner work, in Vienna. Writing about the performance of the Mass in D minor at the « Hofburgkapelle », with Herbeck conducting and Bruckner playing the organ, he pointed-out that Bruckner had nothing to be modest about, in view of his « great theoretical knowledge » and his « truly outstanding organ playing » .

## Kreuzen

The fortress of Kreuzen is considered to be the second largest « burg » in Upper-Austria. It was built around the year 900. Originally located in the eastern part of the Duchy of Bavaria, the town of Kreuzen belonged to the Duchy of Austria since the 12th Century. In 1125, a pilgrim of « Creutzen » was mentioned as the initial owner of the castle. In 1209, it belonged to Hermann von Creutzen. Then, the Volkensdorfers inhabited the castle which became, in 1282, a princely fief. Under the reign of brothers Hans and Alber Volkensdorfer, the site was split in 2 : the front-castle and the rear-castle. When the last of the Volkensdorfers died (around 1489) , the castle passed to the brothers Siegmund and Heinrich von Prüschenk, who had already purchased sections of it 6 years earlier. The mercantile status of Kreuzen was granted by the Market Law of 1482. The town has been allocated to the Principality of Austria in 1490. In 1518, Adam Schweinböck bought the front-castle. In 1528, he sold it to Helfrich von Meggau and bought the rear-castle. In 1532, Meggau acquired the rear-castle to re-unite the 2 entities. In 1533, the feudal lordship was abolished and the castle became free. In 1880, a great fire devastated most of the remaining buildings of the Castle, in particular the roof.

During the Napoleonic Wars, the town of Kreuzen was occupied several times. The districts and towns of Kreuzen, Kalmberg, Dörfl and Wetzstein, established in 1850, as well as parts of Grein were merged in a single community in 1875.

At the instigation of administrator Ludwig Haberkorn and physician Doctor Maximilian Keyhl, Duke Ernst I of Saxony-Coburg-Gotha decided to convert in 1846 the old castle's tavern (« Schloß-Taverne ») in a « cold water station » . Under the direction of the next physician, Doctor Otto Fleischanderl, the place soon developed into the meeting-place of nobility and elegant aristocracy. New water-sources were conceived, bucolic paths built, and resting-places created. The most important area of the site at that time was the « Wolf's gorge » (« WOLFSSCHLUCHT ») which offered natural bath and shower facilities.

## Creating a cold water station

Ludwig Haberkorn lived in Kreuzen Castle. He was the administrator of Duke Ernst the 1st of the House of Saxony-Coburg-Gotha. In 1842, Haberkorn, a neurotic individual, learned of the then hardly-known hydro-therapy technique practised by the Silesian naturalist Vinzenz Prießnitz from Gräfenberg. Convinced by the healing power of water, the Duke authorized Haberkorn and his friend, the Court hunter Kajetan Perner, to erect in 1843 the first water shower

station nearby the the « Wolf's gorge » (« Wolfschlucht ») . Alas, the ineffective installation did not improve the nervous condition of Haberkorn. He then consulted Doctor Maximilian Keyhl, a surgeon based in Kreuzen. Haberkorn asked Keyhl to travel to Gräfenberg to study the water healing methods of Prießnitz. He agreed and stayed there for a while. When Keyhl came-back in September 1845, Haberkorn persuaded his new employer, Duke Ernst the 2nd, to build a cold water facility. This gave him total « carte blanche » . Under the supervision of Doctor Keyhl, Haberkorn built showers and wave-ponds (for thalasso-therapy) in the inspiring « romantic » environment of the gorge. Paths and bridges were laid-out and new water sources were created around Kreuzen Castle and the private Tavern of the Duke were rooms were specially set-up for the incoming bathers. On 14 May 1846, Haberkorn requested a governmental license from the « Imperial and Royal District Office » of Linz to operate the bath-house. The authorities responded swiftly. On 10 May 1846, the solemn inauguration of the cold water station of the Duchy of Coburg in Kreuzen (« Herzoglich-, Coburg'schen Kaltwasserheilstalt Kreuzen ») was celebrated in the former Tavern. Meanwhile, Ludwig Haberkorn's nervous condition worsened. Maximilian Keyhl tried everything in its power to save his noble friend but the disease was too advanced. Haberkorn died of nervous fever on August 14, 1846, aged only 41.

Famous areas of the site : the « Viennese wave-pond » (« Wiener Wellen-Bad ») , the « Grein's water-shower » (« Greiner Showchen ») , the « Duke's water-source » (« Herzogs-Quelle ») , Anton Bruckner's water-source (« Bruckners-Quelle ») , « Franz Stelzhamer's water-source » (« Stelzhamers-Quelle ») , the « shelter under the Rock » (« Felsendom ») , « Neptune's Cave » (« Neptunes-Grotte ») .

### Eugenie Knörlein dances with Bruckner

**January to 7 March 1865** (probably « Mardi Gras ») : Anton Bruckner attends a dance event organized by the « Linzer Lese- und Geselligkeitsverein » (Reading and Social Club of Linz) . Bruckner dances the whole waltz of Charles Gounod's « Faust » with the 17 year old partner named Eugenie Knörlein.

Eugenie Knörlein (« née » Pechwill) was born on 18 October 1847 in Linz and died in 1906.

She was the daughter of Court councillor Gustav Pechwill (born on 10 December 1819 in Prague ; died on 9 November 1905 in Vienna) who work for the Ministry of Finance.

Eugenie Pechwill married on 12 June 1871 in Niedernhart near Linz.

Parents of her husband : Doctor Anton Knörlein senior and Rosina Redtenbacher.

### Doctor Anton Knörlein senior

According to a very dubious anecdotal report by Eugenie Pechwill, her father-in-law Doctor Anton Knörlein senior, psychiatrist, one of Linz's most prominent medical doctors in the 1850's and the director of the Upper-Austrian Provincial lunatic, medical and nursing hospital in Niedernhart near Linz (« Oberösterreichische “ Landes-Irren-Heil-und Pflegeanstalt ” Niedernhart bei Linz ») recommended the admission of Anton Bruckner because of his deviant

behaviour (he was aroused by young women) . (As reported by Hermine Zeitlinger.)

The primary care physician, medical doctor, psychiatrist and Imperial-Royal professor Anton Knörlein senior was born on 18 February 1802 in Linz and died on 23 October 1872 in Linz.

Knörlein attended high-school (« Gymnasium ») in Salzburg and in Linz, then studied medicine at the University of Vienna where he received his doctorate. Doctor at the Lunatic Asylum of Prunerstift near Linz in 1836 ; chief-physician from 1851 to 1873. He contributed to the organization in 1866 of the Upper-Austrian Provincial lunatic, medical and nursing hospital in Niedernhart near Linz (« Oberösterreichische “ Landes-Irren-Heil-und Pflegeanstalt ” Niedernhart bei Linz ») which was inaugurated in September 1867 ; he was named director. After earning great merit, he became Imperial-Royal professor in Linz on 23 October 1872.

Knörlein wrote articles for the Medical Year-Book of Vienna in 1843, and the General Journal of Psychiatry (« Allgemeine Zeitschrift für Psychiatrie ») of Berlin in 1852 and 1863.

His book « The Irrationalities of Upper-Austria » (« Die Irrenangelegenheiten Oberösterreichs ») , written in 1851, became a great local success and even spreaded outside Austria.

He wrote in 1855 a brief history on the medical profession and medical institutions which appeared in the 15th Linz « Mnseal » Annual Report.

Knörlein donated a number of mammalian skeletons to the Linz Museum.

...

Why does Josef Schiedermayr need a provincial certificate ? To be admitted to the Linz Lunatic Asylum managed by chief-psychiatrist Doctor Anton Knörlein senior.

Logically speaking, it was easy for Johann Baptist Schiedermayr (composer and dean of Linz Cathedral) and Karl Schiedermayr to bring Josef at the asylum :

First, as « brothers » who were able to make the « request » .

Second, Doctor Karl Schiedermayr was a District physician. It was not difficult to find « 2 graduate physicians, among them a Court doctor (Coroner) » , who testified « that the patient was insane » .

The « Kapellmeister » and organist Johann Baptist Schiedermayr (1779-1840) will conduct the Liedertafel « Frohsinn » at the Linz « Alter Dom » . Schiedermayr was one of Bruckner's predecessors in Linz.

Das Schiedermayr Familie

(Schiedermayer, Schiedermair.)

**Johann Baptist Schiedermayr**, Komponist : geboren 23. Juni 1779 in Münster/Bayern ; gestorben 6. Januar 1840 in Linz.

Der Sohn des Schullehrers und Musikers Johann Georg Schiedermayr (circa 1746-1811) wurde 1788 Sängerknabe im Prämonstratenserstift Windberg (Deutschland) , wo sein älterer Bruder Georg (?-?) Organist war, kam 1791 ins Benediktinerstift Oberaltaich (Deutschland) und 1793 nach Straubing (Deutschland) , wo er bereits zu komponieren begann. Von dort ging er als Baßist und Organist nach St. Nikola vor Passau. Aufgrund der Säkularisierung in Bayern wandte sich Schule 1804 nach Linz, wo er unter Franz Xaver Glöggl bei der Kirchen-, Theater- und Bürgermusik mitwirkte. 1810 wurde er zugleich Dom- und Stadtpfarrorganist. Ab 1812 war er auch als I. Kapellmeister am Landestheater und als Dirigent der Redoutenbälle tätig. 1839 trat er Glöggl's Nachfolge als (provisorischer) Dom- und Stadtpfarr-Kapellmeister an. 1823-1837 unterrichtete er an der Gesangschule der Linzer Gesellschaft der Musikfreunde. Seine kirchenmusikalischen Werke, vor allem die Landmessen, wurden bis zum Cäcilianismus allgemein geschätzt.

Ehrenmitglied der Gesellschaft der Musikfreunde in Linz 1837.

### Werke

Kirchenmusik (Messen, Requien, Gradualien, Offertorien, Präludien, und so weiter) ; Kantaten ; Singspiele ; Kammermusik, Tanzmusik ; Orgelstücke.

### Schrift

Theoretisch-praktische Chorallehre (1828) .

...

Sein Bruder **Franz Xaver Schiedermayr**, Lehrer, Komponist : geboren 25. Dezember 1782 in Cham (Bayern) ; gestorben 1833 in Straubing (Bayern) . War in Straubing als Lehrer tätig.

Neue Orgel- und Klavierstücke (circa 1825) .

...

Sein Sohn **Karl Schiedermayr**, Arzt, Botaniker und Chormeister : geboren 3. November 1818 in Linz ; gestorben 29. Oktober 1895 in Kirchdorf-an-der-Krems (Oberösterreich) . Besuchte das Stiftsgymnasium Kremsmünster und studierte 1837-1843 Medizin an der Universität Wien. Er war bis 1890 als Arzt in Linz, Kirchdorf und Steyr (Oberösterreich) tätig (zuletzt Landessanitätsreferent für Oberösterreich) und auch als Botaniker angesehen. Er war Gründungsmitglied der Liedertafel Frohsinn (1845) , ab 1852 I. Chormeister der von ihm ins Leben gerufenen Liedertafel Kirchdorf. Daneben komponierte er auch.

Ehrenbürger von Micheldorf (Oberösterreich) und Kirchdorf.

...

Weitere Söhne :

**Johann Baptist Schiedermayr junior** (geboren 6. Juni 1807 in Linz ; gestorben 16. April 1878 in Linz) war Geistlicher (ab 1874 Dompropst) in Linz und Mitglied des Linzer Musikvereins. Er verfaßte einen Nekrolog auf seinen Vater.

...

**Josef Schiedermayr** (1821-1874) : Advokat, hatte wahrscheinlich mit Karolina Barghesi ein uneheliches Kind, Bertha Barghesi (Bargezzi, « née » Weißgärber, 1855-1923) , die gerüchteweise als Tochter Anton Bruckners kursierte. Sie wurde von Karl Schiedermayr adoptiert und heiratete 1874 den Lehrer und Chormeister Alois Weißgärber (1845-1914) , mit dem sie 5 Kinder hatte, und andere Max Weißgärber (geboren 21. Oktober 1884 Ottensheim bei Linz (Oberösterreich) ; gestorben 30. November 1951 in Wien) , Primgeiger der Wiener Philharmoniker und des Weißgärber-Quartetts.

...

Die Frage stellt sich nun, wozu benötigte « Josef Schiedermayr » einen Heimatschein ? Die Antwort lautet : Nicht er, sondern sein Bruder brauchte diesen zur « Einweisung in die Irrenanstalt in Linz » . Das Statut dieser Anstalt (seit 1861 Landesanstalt) , das von « Anton Knörlein » (1855-1873 Primarius) schon 1851 entworfen werden war, besagte im § 20 :

« Das Gesuch um Aufnahme kann von den Angehörigen oder Vertretern des Kranken, von einer Gemeinde oder von einer Behörde geschehen und ist zu belegen :

a) Mit dem Zeugniße “ zweier graduirter Ärzte ”, hierunter eines “ Gerichtsarztes ”, daß der Aufzunehmende geisteskrank sei.

b) Mit der nach einem vorgeschriebenen Formulare (Fragebogen) und in der Regel vom behandelnden Arzte zu verfassende Krankengeschichte.

c) Mit der amtlichen Nachweisung der Zuständigkeit (Heimatschein, Paß, etc.) .

d) Mit der Erklärung, ob die Verpflegung des Kranken gegen Bezahlung aus dem eigenen Vermögen oder von Anderen und nach welcher Verpflegsklasse erfolgen soll, oder ob sie unentgeltlich beansprucht wird ... » (Hervorhebungen von Verfasser.)

Logisch gesehen, war es für Johann Baptist und Karl Schiedermayr ein leichtes, die Einweisung des Josef in die

Irrenanstalt zu bewirken : Erstens waren sie als Brüder « Angehörige » , die das « Gesuch » stellen konnten, zweitens war es für Doktor Karl Schiedermayr als Bezirksarzt nicht schwer, « zwei graduierte Ärzte, hierunter einen Gerichtsarzt » zu finden, die durch ein « Zeugnis » bescheinigten, « daß der Aufzunehmende geisteskrank sei » (wie es den Anschein hat, war in kleineren Orten wie Kirchdorf der Bezirksarzt gleichzeitig der Gerichtsarzt, da ja auch meist das Bezirksamt als Bezirksgericht fungierte) , drittens war der « amtliche Nachweis der Zuständigkeit » mit dem « Heimatschein » erbracht und viertens waren die Verpflegskosten durch die in guten Positionen sich befindenden Brüder gesichert.

### Doctor Anton Knörlein junior

Doctor Anton Knörlein junior was born on 30 July 1837 in Linz. He was the son of the primary care physician, medical doctor, psychiatrist and Imperial-Royal professor Anton Knörlein senior who was the director of the Upper-Austrian Provincial lunatic, medical and nursing hospital in Niedernhart near Linz (« Oberösterreichische “ Landes-Irren-Heil-und Pflegeanstalt ” Niedernhart bei Linz ») . Knörlein junior studied at the « Josephinum » Academy in Vienna. He became primary care physician of the military Lunatic Asylum in Tyrnau, in 1891. He became head-physician of the garrison hospital in Baden near Vienna, in 1897. Sanitary-chief for Dalmatia, in November 1901.

### Linz : Provincial lunatic hospital

Inauguration : 1867.

Expansion projects : 1880-1881, 1887-1888, 1902, 1911-1912.

Architectural plan : Corridor system with pavilions.

Number of beds : 360 (1896) ; 700 (1910) ; 768 (1937) .

Staff : 3 doctors, 2 officials, 63 nurses (1896) ; 5 doctors, 99 nurses (1910) ; 5 doctors, 171 nurses (1937) .

Daily costs per person : 3 meals = 2 to 6 « Kroner » (1910) ; 3 budgets for food were offered (1937) .

The first psychiatric institution was established in 1788 in Prunerstift near Linz. The « Toll-Haus » building-design marked the beginning of the institutionalized care for the mentally ill in Austria. In the early days, the institution was more likely to isolate the patients than to medically treat them. Guards were monitoring the patients. The very agitated ones were usually tied-up to their beds, which was not a wise caring practice. Doctors were only consulted in special cases. The hygienic conditions were catastrophic. All these grievances were first mentioned in an official letter written in 1824 calling for the establishment of a new decent policy. At least, this led to an improvement of the sanitary conditions and the end of keeping the inmates in captivity. Free medical care was now also prescribed. In 1834, an institutional order was introduced and a primary care physician was appointed. A silk plantation was created in order to allow work and employment for the patients of the institution, which was a novelty at the time.

The lack of space led the Upper-Austrian Parliament to establish a « model institution » in Niedernhart, now part of the District of Waldegg in Linz. The building, which was designed to meet all the requirements of the time, had 228 beds and was inaugurated on **Sunday September 22, 1867**, as the Upper-Austrian Provincial lunatic, medical and nursing hospital in Niedernhart near Linz (« Oberösterreichische “ Landes-Irren-Heil-und Pflegeanstalt ” Niedernhart bei Linz ») . In 1893, the number of patients increased to 500. In 1896, the asylum made the acquisition of the Castle of Gschwendt near Neuhofen-an-der-Krems. 2 men's pavilions of 100 beds were built in 1903. A women's wing of 150 beds and an additional men's pavilion of 150 beds were added in 1911.

During World War I, the number of patients decreased from 877 to 596 due to limited sanitary conditions resulting in diseases such as typhus. After the War, however, the number of patients increased quickly. At the same time, the new director of the Institute, Doctor Julius Wagner-Jauregg, developed a treatment against malaria and progressive paralysis, thus, finding a cure against syphilis. He was awarded the Nobel Prize for his discovery in 1927.

From 1927 to 1938, the Austrian psychiatrist and neurologist Maximilian von Kurz zum Thurn und Goldenstein (1881-??) headed the Provincial Hospital in Niedernhart near Linz. In 1938, under the leadership of Rudolf Lonauer, the darkest Chapter in the history of the mental hospital began. In the course of the « preservation of the pure race » promoted by the National-Socialists, mentally and physically handicapped persons, manic depressive, epileptics and insane persons were often sterilized because they did not fit with the Nazi image of the « German people » . Later, the targeted « killing of unworthy life » began. In Hartheim and 5 other similar « killing » institutions, more than 70,000 people died of the so-called « euthanasia » under the jurisdiction of the « T4 » program. (The abbreviation « T4 » is used by everyone involved as a designation for the « Zentraldienststelle » and a code-name for the killing targeted especially at the patients in clinics and sanatoria.) This is also noticeable in 1945 in the number of patients at the Niedernhart Clinic : of 1,150 patients, only 363 remained.

The new beginning after World War II was difficult for the hospital, due to the considerable damage caused by the Allied air-raids. Initially, parts of it were provisionally relocated to the Provincial Women Clinic.

### Doctor Josef Födinger

Doctor Josef Födinger : physician and surgeon responsible of the town hospital and care-facilities in Linz. Member of the Upper-Austrian Medical Council.

### Convalescence of Bruckner in Kreuzen

Anton Bruckner's next 3 letters to Rudolf Weinwurm were written from Kreuzen where he spent a 3 month period of convalescence (**from Wednesday May 8 until Thursday August 8**) , after his nervous break-down in the Spring of 1867. Some indication of the nature of the illness is given in the first letter :

« You have heard nothing more from me, since my journey back from Vienna. You also did not attempt to find-out how I was getting on. As I presume that you still want to hear from me and as other reasons also make it necessary,

I am taking this opportunity of writing to you and, above all, of apologizing for not yet being able to grant your wish. In spite of what you may be thinking or may have thought (or indeed heard) , it was not laziness ! It was much more serious than that !!! It was total collapse and desolation, complete over-stress and nervous break-down ! I was in the most shocking state. I am confessing it to you alone - don't breathe a word. A little longer and I would have been finished, totally lost. Doctor Födinger in Linz has already informed me that madness would have been a possible outcome. God be praised ! He has saved me from that. I have been in Kreuzen, near Grein, since 8 May. I have felt a little better, over the last few weeks. But I am not allowed to play, study or work. Can you imagine such ill fortune ! I am a poor fellow ! Herbeck sent me the scores of my Mass (in E minor) and Symphony (No. 1 in C minor) without writing a word. Is everything quite so bad, then ? Please find-out, dear friend and write to me here, wretched and forsaken in my exile. If you had come to Linz at Easter, you would have been shocked by my condition.

Although Bruckner was over-joyed to receive a letter from Weinwurm, he did not reply immediately because of a temporary set-back, in his recovery. As he put it rather quaintly in his next letter, he delayed writing until he could relate « only good things » . He also provided Weinwurm with a brief time-table of his daily activities at the sanatorium. Perhaps, outside visitors were discouraged, but Bruckner's poignant « no one from Linz has ever visited me here » makes particularly sad reading.

In response to Weinwurm's request for a more detailed description of what was involved in the cure (one of Weinwurm's friends had evidently been making enquiries) , Bruckner wrote that it was a « cold water establishment, with very good air and springs but not particularly good drinking water » . The treatment consisted of a mixture of baths (foot baths ; « sitting baths » ; « wave baths ») and sessions during which the patient had to sit swathed in wet linen cloths. He had to drink frequently from the springs. Apart from a 3 course mid-day meal, the diet included only milk (« cold, sour, and hot ») and fruit. The treatment was geared to the needs of the individual patient and was determined on a daily basis by the doctor. It was a long day, beginning at about 4 am and finishing at about 9 pm. There were about 100 patients, and social activities were organized regularly. Bruckner, however, preferred to be on his own. The cost differed from patient to patient. Bruckner's monthly out-goings amounted to about 80 Florins. The normal length of stay was 6 weeks, but some conditions required 3 month or even 6 month treatment.

### Doctor Maximilian Keyhl

In 1835, the town physician and surgeon Maximilian (Florian) Keyhl from Frankenburg came to Kreuzen with his wife Aloisia and his 2 year old son Karl. He established his home and practice in the merchant's area of the town. Here, his wife gave him 7 more children. With his then meager income as a doctor, it was not easy for him to feed his family. Through his friendship with Ludwig Haberkorn (retiree of Duke Ernst I from the House of Saxony-Coburg-Gotha) , Doctor Keyhl became the co-founder and chief-physician of the « cold water station » of Kreuzen.

His son Karl attended the public elementary school (« Volks-Schule ») in Kreuzen. After completing his high-school degree (« Gymnasium ») in Linz, he completed his medical degree in Salzburg. In 1861, as a young practitioner, he married Maria Kees, the baker's daughter of Kreuzen. In 1864, he acquired a house at Number 3 in Kreuzen where he lived with his family and where he did his practice with the necessary bath facilities. Maximilian transferred to his son

Karl a invaluable expertise in hydro-pathic healing. When Maximilian disagreed with the landlord of the spa and suspended his practice for 1 full year, son Karl took-over the spa-centre during the same period.

### Convalescence : Dates and events

**Wednesday, 8 May 1867 to Thursday, 8 August 1867** : Anton Bruckner is sent in cure to Kreuzen, near Grein. He is supervised by the hydro-therapist doctor Maximilian (Florian) Keyhl.

His condition was so bad, that Bishop Franz-Josef Rüdiger of Linz organized a permanent company for him - a monk to help him to get rid of a terrible loneliness, help his bad thoughts and prevent him to commit suicide. Bruckner was inclined to do it openly.

His neurosis manifested itself in extreme irritability, noise sensitivity, and, above all, excess of counting. Some personal observations were expressed by privileged witnesses like Barbara (« Betty ») Mayfeld and Karl Hörzenberger.

During his stay in Kreuzen, Bruckner went on occasional excursions where he attended rehearsals by different local Choral Societies. In Grein, for example, he assisted to the rehearsals of the « Liederkranzes » .

In Kreuzen, Anton Bruckner gets to know the ribbon, braid, and silk button manufacturer from Vienna Mathias Salcher (1803 in Maria Luggau, Carinthia ; 1879 in Vienna) who keeps the bad news from him during his hospitalization.

**Thursday, 16 May 1867** : Anton Bruckner takes a loan of 250 Florins from the Linz branch of « The Anchor » (« Der Anker ») Insurance Company to pay for his convalescence fees.

The loan of 250 Florins from his Insurance Society which Bruckner had arranged at the beginning of his 3 month cure covered the total cost of approximately 226 Florins. About a month after leaving Kreuzen, Bruckner wrote to the episcopal office, in Linz, requesting some financial help in view of the amount of money he had to spend on his treatment. He received 60 Florins.

### « Der Anker » Insurance Society

The firm was formed in 1858 as « Allgemeine Versicherungs-Gesellschaft Helvetia » in St. Gallen. Three years later, it established its own private fire insurance company called « Helvetia Feuer » in St. Gallen, prompted by the Glarus fire. In 1862, « Helvetia Feuer » established its first branches in Germany and, starting in 1876, expanded into the United States, opening offices in California and New York. Following the California earthquake in 1906, « Helvetia » attempted to withdraw from the American market without paying on claims from the earthquake.

In Austria, the history of « Helvetia » Insurance Co. goes back to the establishment of « Der ANKER, Gesellschaft von Lebens- und Rentenversicherung » on **December 6, 1858**.

## Dates

**1850-1859** : Foundation of the « Helvetia » Insurance Co.

**1858** : « The Anchor - Society for Life and Pension Insurance » Co. is founded on a share-holder basis. In Vienna, « The Anchor » becomes a public limited company.

**6 December 1858** : The « Helvetia » General Insurance Co. is founded in St. Gallen.

**1860-1869** : The « Helvetia » General Insurance Co. opens a branch in Germany.

**1864** : « The Anchor - Society for Life and Pension Insurance » Co. already has 30,000 customers and representative offices in Białá, Brünn (Brno) , Graz, Hermannstadt (Sibiu) , Lemberg (Lviv) , Linz, Pest, Prague and Trieste.

**1894-1895** : The « Ankerhaus » is located in Vienna's 1st District, at the intersections of « Graben » Number 10, « Spiegelgasse » Number 2, and « Dorotheergasse » Number 1 (Conscription Number 1105) . This building was probably erected for architect Otto Wagner himself, between 1894 and 1895. The name derives from the fact that the previous building was bought in 1873 by « Der Anker » Insurance Society - it was first acquired in 1872 by the Austrian Savings Society. « The Anchor » still owns the actual « Ankerhaus » .

The ground-floors and the roof's studio (originally called « photo studio ») , with its glass surfaces, already points to the later building structures, as used in reinforced concrete elements. This marks a decisive step for Otto Wagner in the typology of the multi-functional city-house (shops, offices, apartments, studio) .

...

**1850-1859** : Gründung der Versicherungsgesellschaft « Helvetia » .

**1858** : « Der ANKER, Gesellschaft für Lebens- und Rentenversicherung » wird auf Aktionärsbasis gegründet.

**1858** : In Wien die « Gesellschaft für Lebens- und Rentenversicherung Der Anker » als Aktiengesellschaft.

Die « Helvetia Versicherungen AG » wurde **1858** unter dem Namen « Der ANKER, Gesellschaft für Lebens- und Rentenversicherung » gegründet.

Am **6. Dezember 1858** wurde die « Allgemeine Versicherungs-Gesellschaft Helvetia » in St. Gallen gegründet.

**1860-1869** : « Helvetia » kommt nach Deutschland.

**1864** : « Der ANKER » hat bereits 30.000 Kunden und Repräsentanzen in Bialá, Brünn, Graz, Hermannstadt, Lemberg, Linz, Pest, Prag und Triest.

**1869** : Der Hohe Markt wird Sitz der Gesellschaft. Einführung der Unfallversicherung. Erwerb weiterer Auslandskonzessionen.

**1870-1879** : Erste Niederlassung in den USA.

**1875-1900** : « Der ANKER » erwirbt Konzessionen für die Hansestädte Bremen, Hamburg und Lübeck sowie für Preußen (mit Sitz in Berlin) , das Königreich Bayern und Bulgarien. In Italien wird der Geschäftsbetrieb aufgenommen, in Brüssel eine Repräsentanz und in Frankreich eine Generalagentur errichtet. Um die Jahrhundertwende zählt « Der ANKER » so zu den größten Lebensversicherungsgesellschaften Europas.

**1880-1889** : Fuß fassen in Spanien.

**1890-1899** : Sterbe- und Alterskassen fusionieren.

**1900-1909** : Gründung « La Vasco Navarra » .

**1910-1919** : Entstehung der Patria.

**1914** : Bezug des neu fertig gestellten ANKER-Hofes. Das Gebäude besteht aus 2 Häusern, verbunden durch eine Brücke, die die Kunstuhr von Professor Franz Matsch trägt.

**1918** : Durch den verlorenen Weltkrieg zerfällt die österreichisch-ungarische Monarchie. « Der ANKER » muß sich aus einigen Geschäftsgebieten zurückziehen.

**1921** : Der Betrieb in Österreich wird auf verschiedene Sachversicherungszweige ausgeweitet. Neuer Firmenwortlaut : « Der ANKER, Allgemeine Versicherungs-Aktiengesellschaft » .

**1923** : Die Schweizer Rückversicherungsgesellschaft übernimmt die Mehrheit der Aktien des « ANKER » .

**1925** : Einführung der Schillingwährung. « Der ANKER » ist in Österreich, Ungarn, Deutschland, Jugoslawien, Polen, Bulgarien, Ägypten, der Schweiz, der Türkei und der Tschechoslowakei tätig.

**1938** : « Anschluß » Österreichs an das Deutsche « Reich » . Die « ANKER » Zentrale in Wien übernimmt die meisten Agenden und auch einen Teil des Personals der Berliner Niederlassung.

**1943** : Die Schweizer Rückversicherungsgesellschaft verkauft ihre Aktien an die deutsche Versicherungsgesellschaft « VICTORIA » und an die Bayerische Rückversicherungsgesellschaft.

**1945** : Durch Brandstiftung große Schäden am ANKER-Hof, 90 % der Geschäftsunterlagen werden vernichtet. « Der ANKER » gilt als « deutsches Eigentum » und kommt unter öffentliche Verwaltung.

**1948** : Die ausländischen Betriebsstätten (außer in Deutschland) gehen verloren.

## Wien : « Ankerhaus »

Otto Wagner : « Ankerhaus » in Wien - Bezirk 1, Graben Nummer 10, Spiegelgasse Nummer 2, Dorotheergasse Nummer 1 ; Konskriptionsnummer Nummer 1105.

Dieses Wohnhaus wurde 1894 bis 1895 von Otto Wagner vermutlich für sich selbst errichtet. Der Name leitet sich davon ab, daß der Vorgängerbau 1873 von der Versicherungsanstalt « Der Anker » angekauft wurde. Die Art des Untergeschoßes mit ihren Glasflächen weist schon auf spätere Baustrukturen hin, wie sie im Stahlbetonbau verwendet werden. Ab 1971 wurde es von Friedensreich Hundertwasser benutzt.

## Haus Stadt 1105

Im Jahr 1473 wird erstmals ein Besitzer erwähnt. Woher die seit 1480 gebrauchte Bezeichnung « das Steckhnhaus » herrührt, ist ungeklärt.

Während der Zweiten Türkenbelagerung 1683 schlug die erste in die Stadt geworfene Bombe beim « grünen Kranz » ein. Deren Bruchstücke wurden gesammelt, geweiht und in das feindliche Lager zurückgeschossen.

Ab 1736 befand es sich im Eigentum des Rat und Landschreibers Johann von Kees, einem berühmten Kenner beider Rechte : Professor des Kirchenrechtes an der Universität und schrieb mehrere juristisch schätzenswerte Werke.

Im Jahre 1783-1792 befand sich im Haus das « Café » Ducati, das in der josefinischen Zeit zu den bekanntesten der Stadt gehörte. Um den Rauchern entgegen zu kommen, räumte der « Cafétier » im ersten Stock, wo sich auch ein Billardzimmer befand, zwei Zimmer mit Tabakpfeifen und nötigem Zubehör ein. Auch gab es verschiedene Zeitungen, die schon damals von ihm im Subabonnement vergeben wurden.

1872 wurde das Haus vom Österreichischen Sparverein erworben und ging 1873 durch Kauf in das Eigentum der « Anker » , Gesellschaft für Lebens- und Rentenversicherung über, die sich auch noch heute im Besitz des gegenwärtigen, 1894 durch Otto Wagner erbauten Gebäudes befindet.

## Die Geschichte « Zum grünen Kranz »

Vor dem Haus soll sich am 27. Juni 1549 die Freveltat des Bäckerjungen Johann Hayn zugetragen haben, die zu Unrecht oft auf das Haus « Zum goldenen Becher » bezogen wird. Nach der Überlieferung hatte der Bäckerjunge während der Fronleichnamsprozession dem Priester die Monstranz aus den Händen gerissen und zu Boden geworfen. Er wurde festgenommen, verurteilt und auf dem damaligen Richtplatz, der Gänseweide, verbrannt. König Ferdinand I. (über Antrag der Universität) ließ den Ort der Untat durch ein Gitter absperren und eine Säule mit einem die Monstranz symbolisierenden Kranz aufstellen.

Auf der Säule steht in lateinischer Inschrift :

« Anno Domini 1549, am achten Tage des heiligen Fronleichnamsfestes (den 27. Juni) ist durch einen gottlosen

Menschen (Johann Hayn, Beckenjung aus Franken gebürtig) einem Priester in der Prozession das hochwürdige Sacrament unversehens aus den Händen gerissen und an diesen Ort mit erschrecklicher Gotteslästerung auf das Erdreich geworfen worden, um welche grausame Tat ihm Zungen und Hand abgehauen, folgendes zu der Richtstatt geschleift und daselbst lebendig verbrannt worden. Dies ist anderen zur Warnung diese Gedachtnuß hier gesetzt. »

Aus diesem Grund hieß das Haus bis ins 18. Jahrhundert « Zum grünen Kranz ». Diejenigen, die die Tat vor das Haus « Zum goldenen Becher » verlegen wollten, stellten die Behauptung auf, die Absperrung der Örtlichkeit habe sich auf das Raubergässchen bezogen.

1873 wurde das damalige Gebäude von der Lebens- und Rentenversicherung « Der Anker » gekauft, die 1894-1895 nach Plänen von Otto Wagner einen Neubau errichten ließ. Das konstruktiv-technisch durchdachte Gebäude mit seiner vorgehängten Glasfassade in den Sockelgeschoßen und dem Atelier im Dachaufbau (ursprünglich als « Photo-atelier » bezeichnet und wohl für Wagner selbst konzipiert, seit 1971 von Friedensreich Hundertwasser benützt) gehört zu den späteren Werken des Architekten ; es fixiert einen entscheidenden Schritt Wagners zur Typologie des multifunktionalen Großstadthauses (Geschäfte, Büros, Wohnungen, Atelier) .

#### Historische Gewerbe und Firmen innerhalb des Hauses im Laufe der Jahre

« Anker » (Versicherung) (1783-1792) .

Apotheke « Zum goldenen Hirschen » (vor 1410 - spätestens 1566) .

...

**Friday, 14 June 1867** (during the 5th week of his stay at Kreuzen) : Anton Bruckner explained in a letter his silence to his friend Rudolf Weinwurm, in the following intimation :

« It was total degeneracy and desolation - total enervation and over-wroughtness !! I found myself in the most terrible condition. A little longer and I would have been a casualty - been totally lost. Doctor Josef Födinger, in Linz, has already informed me that madness could have been a possible outcome. »

**Wednesday, 19 June 1867** : Letter from Anton Bruckner to Rudolf Weinwurm :

Since 8 May 1867, due to his internment at Kreuzen at the instigation of Doctor Josef Födinger, Bruckner was unable to fulfill (since his departure from Vienna) the wish of Rudolf Weinwurm. Bruckner was strictly forbidden to compose. Johann Herbeck returned the music-scores of the Mass in E minor (**WAB 27**) and the 1st Symphony (**WAB 101**) without any comment. Anton Bruckner's health-condition was bad since Easter.

**Friday, 21 June 1867** : Rudolf Weinwurm writes to Anton Bruckner.

**Saturday, 19 June 1869** : In a letter to Johann Baptist Schiedermayr, dean of Linz Cathedral, Anton Bruckner recalled

his tormented mood in Kreuzen on St. John the Baptist Day (**Monday, 24 June 1867**) .

**Monday, 1 July 1867** : Article in the « Linzer Morgen-Post » on the shooting of Ferdinand Maximilian's Emperor of Mexico.

**Friday, 5 July 1867** : Letter from Alois Brutscher (tradesman from Krems) to Anton Bruckner :

We learn how Bruckner feels since Alois Brutscher's departure of Kreuzen. Brutscher often reflects on Bruckner's depressed mood and talks of his own future in Krems. Maybe he will visit him in the next 14 days. Greetings to Johann Baptist Schiedermayr, dean of Linz Cathedral, Doctor Maximilian (Florian) Keyhl and priest Simon Kremshuber.

...

Although Anton Bruckner did not receive any visits from acquaintances in Linz, 2 letters from Alois Brutscher, a tradesman from Krems who had apparently been at Kreuzen for treatment and had befriended the composer while he was there, are extant. They show a touching concern for Bruckner's health and well-being. Brutscher asks to be remembered to Doctor Maximilian Keyhl, Johann Baptist Schiedermayr, dean of Linz Cathedral, and Simon Kremshuber, a priest from Linz (probably, the priest sent by Bishop Franz-Josef Rüdiger to provide Bruckner with spiritual help) , all of whom he had presumably met at Kreuzen. So, Bruckner was certainly not forgotten by the church, at least !

**Before 15 July 1867** : Anton Bruckner is suffering a relapse for approximately the last 2 weeks. He does not answer the letter from Rudolf Weinwurm immediately.

**Monday, 15 July 1867** : Letter from Anton Bruckner to Rudolf Weinwurm :

Bruckner thanks Weinwurm for the letter of **Friday, 21 June 1867** and his true friendship. He inquires about Gmunden. He reports on the progression (and recurrences) of his disease and the spa treatments. Yesterday, Johann Oetzelsberger handed greetings from Alois Weinwurm. The cure in Kreuzen will last until **Monday, 5 August 1867**. The fate of Emperor Ferdinand Maximilian's Emperor of Mexico occupies Bruckner very much.

**Before Sunday, 21 July 1867** : Letter from Rudolf Weinwurm to Anton Bruckner :

Very likely related to the evolution of the Spa treatment.

**Letter to Rudolf Weinwurm (21 July 1867)**

**Sunday, 21 July 1867** : Letter from Anton Bruckner to his friend Rudolf Weinwurm in Vienna, describing the water-cure.  
:

Anton Bruckner answers questions from Rudolf Weinwurm about the spa treatments in Kreuzen, the social life and the

financial aspect. Reliable medical information from Doctor Maximilian (Florian) Keyhl. Also wrote to Alois Weinwurm. Bruckner will be informed of the date of the end of treatment.

...

« Dearest friend,

I hasten to comply with your wishes.

1) Kreuzen is only a water-cure establishment. Fresh air and springs are very good ; but the institution itself has no drinking water worthy of praise.

2) The Cure is made by means of swathing (wrapped in wet sheets and rough woollen blankets for one or several hours) , also by means of half-baths (washing) , sitting baths, rubbings, “ Abklatschungen ” [a treatment where a damp cloth is applied tightly to the body and smacked with flat hands] (on wet sheets) , foot baths, rain-, douche- and wave baths. The Cure starts at 4 o'clock in the morning or, soon after, and is indeed any of the above. Then, after each Cure, you have to go drink from the springs. Then cold, sour or sweet milk for breakfast with butter or fruit such as strawberries. Then, after 10 o'clock, the second Cure again, but usually different. Spring water to drink as before. 12 o'clock communal lunch ; some dine alone (soup, a meat dish with vegetables, and then pudding) . (Per day, for lunch : 60 Kronen) After 4 o'clock again, Cure - spring water as above. Then : sour milk, etc. , as at breakfast for evening meals. Before going to bed, the last Cure, but this is not for all. I, for example, have this morning now : 1 hour swathing, then half-bath ; 10h30 : “ Abklatschung ” then, the sitting bath ; after 4 o'clock in the afternoon, the same or, if the weather's nice, the wave bath. Evening : foot bath.

3) The healing process is quite different for different patients and is determined every day, etc. , by the doctor. Currently, there are 100 or more guests here, somewhat fewer patients.

4) The social life is quite well cultivated ; but I prefer resting. There's also a piano ; people dance, play skittles, make trips, put on plays, have concerts, splendid of course.

5) The matter of expense is also various. I pay for the room 80 Kronen, a day ; there are also cheaper ones at 40 or 50 Kronen, a day. I have to pay the administration weekly 10-11 Florins, or a little more ; the doctor is weekly : 1 Florin, 50 Kronen tax ; the rest is board etc. , (which for me amounts to around 80 Florins a month) .

6) The procedure lasts for very different times with nervous disorders. People usually stay for 6 weeks ; but for those conditions : 3 or 6 months. You know I've been here almost 3 months.

Incidentally, your friend can apply to Doctor Maximilian (Florian) Keyhl to get reliable information.

I thank you for your love and look forward like a child to the next dear letter from you. I've also written to Alois.

With a kiss  
your friend  
Anton Bruckner  
Kreuzen, the 21 July, 1867.

(I write to you as soon as I go out : for without medical authorization, I am not allowed to.) »

...

Bruckner outlines the particular procedures of the hydro-therapy that Doctor Maximilian (Florian) Keyhl prescribed : swathing ; half-baths ; sitting baths ; massage with hot and cold wet cloths ; « Abklatschung » (a physical therapy in which short, sharp blows are administered to the skin with a moistened towel) ; foot baths ; shower baths ; and wave baths. In approaching an understanding of the, then, current diagnosis, it is interesting to compare the procedures prescribed and followed for Bruckner with those of hydro-therapy, as applied at Kreuzen according to one of Doctor Fritz Fleischanderl's brochures, from the year 1887. Of the 7 procedures that were applied to Bruckner, the indication « nervous disease » encountered for 6 of them, for 3 of which the more precisely conceived indication « neurasthenia » occurs. Neurasthenic symptoms were, at the beginning of the 19th Century, already a recognized symptom complex, under the appellation « vapours » , later named « spinal irritation » . George Beard took this relatively widely conceived spectrum of symptoms to belong together, in his opinion, as a complex for which, in 1867 (1869 ?) , he used the term « Neurasthenia » .

### Bruckner in a state of crisis

One morning, the patients of the sanatorium were entitled, during breakfast, to the provision of a group of travelling gypsy musicians who was passing in the vicinity. Suddenly, in the middle of the performance, Bruckner got-up from the table, rushed-out and disappeared. Seeing that he was not back in early afternoon, a systematic search began. He was neither in his room, nor in the living-room, or somewhere else in the establishment. The search then moved to the outside. They walked through the trails in the forest, taking great care to stop at the various waterfalls. They finally found him, weeping, helpless, a nervous wreck, sitting on the stump of a tree at the bottom of a precipice. He didn't even know how he had got up there and they hardly succeeded to save him. The deafening sound of the waterfall near him seemed like divine music to his ears.

Today, a commemorative plaque indicates the exact location of this sad event.

Back at the sanatorium, Bruckner will be prevented from coming in contact with the other spa-guests.

The incident was explained by the doctors as an « access of madness » while Bruckner insisted on his « desire to die » .

Or was it not rather his dismay at the wild and spontaneous music of these Bohemians. A music so far removed from his own which created this unbearable despair.

## Betty's dress

Bruckner asked her good friend « Betty » von Mayfeld (who was also at the Spa for a cure) not to wear again the dress she had on because of his compulsion to count each of the pearls on its pearl-pattern - a plea which reflects the agonizing experience of the unsuccessful attempt to resist the pressing mental impulses.

**Monday, 5 August 1867** : Originally, scheduling the last day in Kreuzen.

**Thursday, 8 August 1867** : End of the cold water-cure for Bruckner at Kreuzen.

According to the oft-quoted entry in the institution's records, after a 3 month stay in Kreuzen, Anton Bruckner was discharged on **8 August 1867**, « cured and healthy » .

It is correct that the symptoms manifested in Bruckner's illness (over periods of varying lengths) receded or changed ; the observation is incorrect, however, in the sense of « cure » as « correction » or « removal » of the « origin » of an illness, whereby its recurrence is rendered unlikely.

**Saturday, 10 August 1867** : Letter of Alois Brutscher (a tradesman from Krems) to Anton Bruckner :

Anton Bruckner received only yesterday the letter of Alois Brutscher sent 4 weeks ago. Brutscher hopes that the cure in Kreuzen improved Bruckner's health. He feels that Bruckner should not brood and be gloomy. Greetings to Johann Baptist Schiedermayr, dean of Linz Cathedral.

**Thursday, 15 August 1867** : Eduard von Nagel, the owner of the cold water-cure sanatorium in Kreuzen, confirms he have received the sum of 225 Florins and 72 Kronen from Anton Bruckner.

**Sunday, 3 September 1867** : Letter of Anton Bruckner to the Episcopal Consistory in Linz :

The Consistory asked for the health-care costs, since Anton Bruckner had to pay the amount of 225 Florins (excluding the medical expenses) to the Spa centre in Kreuzen.

## Eduard von Nagel

In 1865, a Linz merchant, Eduard von Nagel, acquired the cold water-cure facilities. His numerous financial investments will fundamentally change the look of the site. That same year (1865) , a dining-room, a billiard-room, a music-salon, and a cable-car system were added.

In 1867, Nagel bought the so-called « Mayrhäusl » across from the Court Tavern (« Hof-Taverne ») and built on the site a big new sanatorium (« Große Kurhaus ») in the Swiss-style, as well as the Villa of Vincent Prießnitz. In total, the Spa complex totaled 140 rooms (including the rented rooms of Kreuzen Castle and a series of beautiful salons) . The

institute gained a very good reputation through these improvements, so that during the high-season period even clients had to be refused. Their number increased from year to year.

Nagel was eager to offer his guests (patients) all possible comforts. In 1872, he built the ladies' bath apartment at the entrance of the « Wolfsschlucht ». In 1875, it was the turn of the men to get a bath apartment (at the Kempbach, north of Kreuzen Castle) . East of the main-building, Nagel extended the Spa gardens (« Kurpark ») and erected a new fountain. The medical equipment was also constantly optimized. In 1875, he met Doctor Maximilian Keyhl's therapeutic requirements.

Eduard von Nagel died in August 1880. On 14 February 1881, the physician Doctor Otto Fleischanderl acquired the Kreuzen sanatorium.

Health-practitioners under Eduard von Nagel in Kreuzen :

**Until 1868** : Doctor Maximilian (Florian) Keyhl. There is a list of those who took the cure (which was printed in 1874) in the library of the « Oberösterreichisches Landesmuseum » . Maximilian Keyhl died on 31 May 1870.

**1869** : Doctor Charles Weiser.

**1870** : Doctor Josef Plomer.

**1871-1873** : Doctor Ferdinand Krischke.

**1874-1877** : Doctor Felix Urbascheck.

**1878** : Doctor Otto Fleischanderl.

### Doctor Otto Fleischanderl

In 1878, Doctor Otto Fleischanderl was entrusted by Eduard von Nagel with the management of the cold water sanatorium in Kreuzen. Fleischanderl had completed his medical studies in Vienna and studied hydro-therapy for 3 years in Kaltenleutgeben with Professor Doctor Wilhelm Winternitz. In 1880, Fleischanderl married Amalia Thein-Müller. 1 year later, their son, Friedrich Karl, was born. During the summer months, the little family lived at the health-centre. During the winter months, they lived in Vienna, where Fleischanderl practiced surgery. For many years, from October to April, he also worked as a physician in Abbazia.

In August 1880, Eduard von Nagel died. On 14 February 1881, Otto Fleischanderl became the new owner. Under his management, the health-centre lived its golden years by going through a spectacular expansion program. In 1889, Fleischanderl built a new bath-house with a cable-way. In 1891, he built a magnificent garden-salon inside the main bath-house. In 1895, a new bath-house was erected near the existing one. In 1898, he opened a large Festival Hall,

which also served as dining-room. He purchased the so-called « Stadlschusterhaus » , a family guest-house, in order to increase the capacity of the health-centre. In 1906, he purchased the « Reichsgruberhof » , located south of the health-centre to offer his « clientèle » fresh farm products.

Around the turn of the 20th Century, Doctor Otto Fleischanderl was at the height of his career. Respected by his colleagues, he was recognized as a specialist in hydro-therapy. In 1897, he was awarded the title of « Imperial Council » physician on account of his professional accomplishments. In 1902, the town of Kreuzen made him an honorary citizen. To celebrate his 25 years of practice as Spa physician, a new path in the forest was named in his honour and a memorial plaque was installed at the Linz water-pond.

In everlasting memory  
of the outstanding physician  
and noble humanitarian  
DR. OTTO FLEISCHANDERL  
this path was inaugurated  
by the cure patients of Kreuzen  
in honour of their cure physician  
for his 25th anniversary Jubilee  
and named after him.

1902

...

Zum immerwährenden Andenken  
an den ausgezeichneten Arzt  
und edlen Menschenfreund  
DR. OTTO FLEISCHANDERL  
wurde dieser Weg von den dankbaren  
Curgästen zu seinem 25jährigen Jubiläum  
als Curarzt in Kreuzen eröffnet  
und nach ihm benannt.

1902

On **Friday, 28 May 1909**, the « Imperial Council » physician, Doctor Otto Fleischanderl, died of arteriosclerosis at the age of 61. The business community of Kreuzen will erect an honorary grave in his memory.

### Doctor Fritz Fleischanderl

Doctor Fritz Karl Fleischanderl, son of Otto Fleischanderl, attended the « Gymnasium » in Kremsmünster and graduated as Doctor of Medicine from the University of Vienna in 1905. After training in Vienna, Geneva and Straßburg, he became

the assistant of his father at the cold water sanatorium of Kreuzen during the season 1905-1906. On 16 July 1907, he married the merchant's daughter Katharina Kerbl from Klosterneuburg. In fall of the same year, he became the town physician at Großrußbach. In March 1909, 2 months before his death, Doctor Otto Fleischanderl handed-over the Spa to his son. Therefore, Fritz came-back to Kreuzen with his family, where he also practiced as town physician until 1919.

In October 1910, the economic and political context allowed Fritz to create a company under the name « Kuranstalt Bad Kreuzen AG ». This new entity has allowed greater financial flexibility and reduced the tax burden on the centre. The Fleischanderl family was the main share-holder. Through the sale of shares, the current debts could be paid and, consequently, the quality of services was improved. The health-centre continued to flourish until the outbreak of World War I.

The War became a turning-point in the history of the sanatorium. Fleischanderl offered the authorities to transform his Spa into a private military hospital. Already in September 1914, the first wounded soldiers arrived. In 1916, he resumed its normal operations while still promoting the war effort. However, the use of the Spa as a hospital had caused major damage to the infrastructure. Some buildings were badly crippled and the furnishings had to be largely replaced which resulted in indebtedness. Therefore, in 1919, Doctor Fritz Fleischanderl sold the company to Walter Malmann and moved with his family to Klosterneuburg, where he built a villa and set-up his own medical office.

Victim of high-inflation, Fritz Fleischanderl lost all his assets. He suffered from depression and also severe joint inflammation. He, nevertheless, continued to practice medicine at a local level. He retired in 1949 and moved to his daughter Hedwig in Tyrol.

In his last years, his psychological condition deteriorated sustainably so that he had to spend the rest of his life in a mental hospital in Hall, in Tyrol. Doctor Fritz Karl Fleischanderl passed away on April 20, 1957, in Hall, Tyrol, at the age of 76.

### Georg Rapperport

In 1920, the management of the company « Kuranstalt Bad Kreuzen AG » passed from Walter Malmann to Georg Rapperport. The chief-physician at that time was Doctor Popper. During this turbulent period, many former patients stayed away which resulted in a significant decrease in revenues. Taxes in general and municipal rates had to be deferred. Flat-rate residential tax had to be reduced. Nevertheless, in 1921, the company acquired the small property located at Number 10 in Neuaigen to accommodate the serving staff. The power connection of the health-centre to the « E-Werk Pabneukirchen » in 1923 brought an additional financial burden.

In 1926, Director Georg Rapperport pressed the municipality of Kreuzen to offer a taxi service. The request was granted on 29 August during a Town Council meeting. From now on, Rapperport was able to pick-up his guests by car from the train-stations in Amstetten and Grein. The promotional brochure of the time promised the guests better cures for nervous disorders, internal and metabolic disorders as well as rest and recovery.

Well-equipped examination-rooms were available to the Spa guests. The rooms of the establishment were nicely furnished. There were resting beds under the protected arcades of the bath-house. An adjoining room of the main-building served as a relaxing room and lounge. There was a salon with piano. Well-kept gardens and a view-terrace invited the guests to stay around. During the summer months, a small Orchestra performed in the magnificent « Kur-Saal » .

In 1930, the Spa physician Doctor Bräuer introduced the « Zeileis » treatment in Kreuzen. This new method brought momentarily more guests to the health-centre. Nevertheless, Rapperport was facing constant problems with covering the running costs for the institution.

### Kreuzen : The years of decline

Director Georg Theodor Radwanyi from Vienna bought the « Kuranstalt Bad Kreuzen AG » on 1 June 1933. At the time, Doctor Alexander Schmidt was the chief-physician of the Spa centre.

In order to reduce the accumulated debt, Radwanyi decided to sell shares of the company. To re-energize his business, he distributed postcards and offered a free-coupon which paid for the 2-way trip from Vienna to Bad Kreuzen. Due to the political turmoil in the year 1934, his promotional campaign did not bring the expected results. In 1935, a compensation deal was registered at the Commercial Court of Vienna. The bankruptcy proceedings were opened on October 10th. Doctor Alexander Schmidt was named forensic administrator and forecloser of the Spa centre. The procedure lasted for 2 years. On 5 November 1937, Mrs. Gisela Barasch from Vienna became the best bidder at the auction. She acquired the facilities for the sum of 76,759 Schillings.

In 1938, the enterprise was maintained for a while. However, no appreciable profit could be achieved. After the annexation of Austria to the German « Reich » (« Anschluß ») , the Jewish woman Gisela Barasch was forced to sell (« Germanized ») the Kreuzen health-centre to Johannes Rüdiger from Berlin. With the remaining money, she fled the Nazi regime by exiling in South America. Under the ownership of Johannes Rüdiger, the Spa centre was converted into a sanatorium for consumptive patients in 1939.

This marked the end of the long history of the « Kaltwasser-Heilanstalt » of Bad Kreuzen.

### Death of Simon Sechter

**Sunday, 10 September 1867** : Death of Simon Sechter in Vienna.

In the last years of his life, Sechter spent more money than he earned. He died in great poverty. He is buried in an honorary site at the Vienna Central Cemetery (Group 0, Row 1, Number 23) .

**Thursday, 12 September 1867** : Funeral of Simon Sechter. Anton Bruckner probably took part in the celebration.

## Mass in F minor (WAB 28)

Anton Bruckner tried to sketch the « Kyrie » of the Mass in F minor (WAB 28) during his convalescence in Kreuzen, in order to comply with an order from the Imperial Chapel in Vienna. But he was prevented from doing so by his doctors.

**Saturday, 14 September 1867** : Anton Bruckner starts to sketch the « Kyrie » of the Mass in F minor.

**Saturday, 19 October 1867** : Anton Bruckner finishes to sketch the « Kyrie » of the Mass in F minor.

**Wednesday, 6 November 1867** : Anton Bruckner finishes the first sketch of the « Gloria » of the Mass in F minor.

**Thursday, 21 November 1867** : Anton Bruckner writes « November 21, 1867 » at the « cum gloria » section of the « Credo » in the score of the Mass in F minor, and « 21 November » on a sketch of the « vivos et mortuos » and on a sketch of the score at « iudicare » .

Anton Bruckner plays at the piano to Karl Waldeck parts of the « Credo » of the Mass in F minor and makes changes to the « et incarnatus est » (as it is known today) .

**Friday, 22 November 1867** (St. Cecilia Day) : Anton Bruckner writes « November 22 » at « et in spiritum » of the « Credo » of the Mass in F minor.

In looking-back at the genesis of the « Benedictus » of the Mass in F minor (WAB 28) , in conversation with Theodor Helm, Anton Bruckner also remembered his inner-condition at that time : with the idea of the melody, Bruckner says, he « who had been near to madness, had found himself again » . This « inner-turnaround » showed itself from **Christmas Eve 1867**, that is to say 4 months after he was deemed « cured and healthy » and had left Kreuzen.

Bruckner's first Viennese attempt, the newly-composed Mass in F minor, was refused a hearing on the ground that it was unsingable. After this 2 new Symphonic attempts were suppressed by the nerve racked composer himself with the bitter comment :

« They are no good ; I dare not write down a really decent theme. »

## Financial support from Bishop Rüdiger

**Sunday, 6 October 1867** :

Letter signed by Jakob Reitshammer (Doctor in Theology) from the Bishops' Ordinariate of Linz to Anton Bruckner (date of the drafted letter : **Wednesday, 25 September 1867**) :

On **25 September 1867**, the Imperial-Royal Chancellery announced that a financial help of 60 Florins was granted to Anton Bruckner following its written request dated (**Tuesday**) **September 3, 1867** (letter received on **Wednesday, 4 September 1867**), to reduce the health-care costs of his convalescence at Kreuzen. The letter is signed by the Bishop of Linz, Franz-Josef Rüdiger.

Text of the official copy :

« 4044

To the Cathedral organist of Linz, “ Herr ” Anton Bruckner.

The Imperial-Royal Chancellery has given the following by means of Note Number 25 from M. Number 10539 :

“ The administration of the Cathedral is to allow to the ill Cathedral organist Anton Bruckner a grant of sixty Guilders (60 Florins) , and to authorize the Imperial-Royal Provincial Treasury Fund to pay the party concerned this sum on account of the religious fund. ”  
From the Episcopal Ordinariate,

Linz, 6 October 1867.

J. Reitshammer,

(Authorized) Secretary of the Chancellery. »

...

« 4044

An Herrn Domorganisten Anton Bruckner in Linz.

Die Kaiserlich-Königliche Statthalterei hat mittelst Note Nummer 25 von M. Zahl 10539 folgendes hierher mitgeteilt :

“ Die Statthalterei findet dem Domorganisten Anton Bruckner eine Krankheitsaushilfe von sechzig Gulden (60 Florins) zu bewilligen und die Kaiserlich-Königliche Landeshauptkasse zu ermächtigen, den Beteiligten diesen Betrag auf Rechnung des Religionsfondes zu erfolgen. ”

Was hiemit zur Wissenschaft gebracht wird. ... die Beilage folgt wieder zurück.

Vom Bischöflichen Ordinariate,

Linz den 6. Oktober 1867.

J. Reitshammer,

Kanzler (unleserlich) Secretär. »

The Bishop's Residence (« Bischofshof ») is located at « Herrenstraße » Number 19. It is the most important secular Baroque building in the city of Linz. Commissioned by Kremsmünster Monastery (1721-1726) , it was built by Michael Pruckmayr according to plans by Jakob Prandtauer, who was also responsible for the monasteries in Melk and St. Florian. The impressive lattice gate on the staircase is by Valentin Hoffmann (1727) .

The « Frohsinn » accomodates Bruckner

**Friday, 10 January 1868** : Letter from Anton Bruckner to the Liederafel « Frohsinn » :

Thanks for permitting us to use the rehearsal-room for preparation and performance of the Mass in D minor (**WAB 26**) .

(Note : Doctor Maximilian Keyhl's letter, **Thursday, 16 January 1868**.)

Doctor Maximilian Keyhl follows up

**Thursday, 16 January 1868** : Anton Bruckner received a letter from Doctor Maximilian Keyhl, one of the doctors who had treated him at Kreuzen, the previous year. Keyhl was pleased to hear that Bruckner was on the way to a full-recovery, but suggested that he continue the recommended treatment and diet.

Letter from Doctor Maximilian Keyhl to Anton Bruckner :

Advice on food diet and bath treatments. The health-condition of Director Beda Piringer from Kremsmünster has also improved. « Herr » Eduard von Nagel, the ownwer of the sanatorium in Kreuzen, reproached Bruckner about some complaints from Linz.

Bruckner also recommended that Weinwurm's friend contact Doctor Keyhl for further information. Doctor Maximilian Florian Keyhl (died on **Tuesday, 31 May 1870**) established the « cold water sanatorium » in Kreuzen, in 1846. There is a list of those who took the cure (which was printed in 1874) in the library of the « Oberösterreichisches Landesmuseum » .

...

A number of cures helped Bruckner only partly and particularly it was warm leading of Doctor Keyhl.

Those conditions were repeated, worse and harder as he became elder.

He wrote to a friend :

« It was a complete feeling of abandonment, loss. I lost my nerves and I am constantly frustrated and too sensitive. »

### Body of Emperor Maximilian of Mexico

**Thursday, 16 January 1868** : Anton Bruckner writes a curious and rather morbid letter to his friend Rudolf Weinwurm, in Vienna. Bruckner refers to his « pet », the recently executed Emperor of Mexico, whose body had just been brought back to Austria :

« Even during my illness, this was the only thing that was dear to my heart : it was Mexico, Maximilian. I'd give anything in the world to see the body of Maximilian. Be so kind, dear Weinwurm, as to dispatch a completely trustworthy person into the Imperial palace ; perhaps best inquire at the office of the Imperial Chamberlain, if the body of Maximilian is likely to be on view (i.e. , open in a coffin or visible in a glass frame) , or if only the closed coffin will be visible. Please, inform me kindly by telegram, so that I may not come too late. »

Both Bruckner and Weinwurm have been invited, at some point, to go to Mexico as Court organists of Emperor Maximilian, the younger brother of Emperor Franz-Josef of Austria.

Bruckner requested and received official permission from the Emperor to visit the family cemetery (in the Capuchin crypt) in order to see the body of his brother, Emperor Maximilian I of Mexico, following his unfortunate political assassination by execution (alongside 2 of his generals) after his trial before the military Court on June 19, 1867. The corpse was repatriated aboard the « SMS Novara » frigate.

### Bruckner's multiple manias

The mania of counting inanimate objects was really a mania of repetition - i.e. : a musical obsession, comparable to Robert Schumann's obsession with certain rhythmic patterns. This repetition-mania, which finds its creative reflex in Anton Bruckner's predilection for a frenzied repetition of short motives (e.g. , the 5 note motive propelling the Scherzo of Symphony No. 8) , is particularly evident in the sphere of religious worship. Mention has already been made of Bruckner's diaries, keeping a day-to-day account of the nature and number of his prayers. A friend relates how Bruckner, praying with him at the open bier of his late friend Ignaz P. Traumihler, the « regens chori » of St. Florian, repeated the words « Thy will be done » 9 times and how he recited in a loud voice the prayer « Our Father which art in Heaven » 5 times in succession. In moments of a more than usually troubled mental and spiritual condition (as, for instance, in the years 1887-1889) , the obsession with repetition and focusing morbid attention on the number and character of inanimate ornamental objects refused to be canalized into the purely musical or religious sphere alone. It began to inundate his everyday life, threatening his reason.

The mania for counting and adding-up figures is probably co-responsible with Bruckner's lifelong habit of counting through every composition, numbering each bar and even indicating the general harmonic trend after each stave through so-called « directs » at the turn of each page. Bruckner's pedantic insistence on counting every bar may also be responsible for his clinging to the rigours of 4 + 4 bar periods and for his partiality for rather stiff regularities of periodization - a tendency that brought him sometimes dangerously near to rhythmic monotony and to a structural 4 squareness comparing unfavourably with the rhythmic flexibility of the Viennese Classics.

That adding-up figures, maniacal repetition in every department of life and a morbid interest in inanimate objects may have played a kind of compensatory part in Bruckner's emotional life in which the spheres of sexual satisfaction and of intellectual pursuit (outside the sphere of musical creation) remained severely under-nourished, is also borne-out by his strange craving for examinations. He passed no less than 9 major ones, insisting on written testimonials in each case, and celebrating every one as a major event. The urge for repetition was equally strong in the case of his evident craving for self-assertion and self-confirmation, obviously being under constant threat from the permanent under-current of his lifelong inferiority complex. Taking all this into account, one is bound to come to the conclusion that at times Bruckner's reason must have been threatened as much as Robert Schumann's or Hugo Wolf's. What saved him was his emotional attachment to the Church and his music, which enabled him after 1863 to objectify his obsessions and internal conflicts in creations of over-powering eloquence.

...

Friedrich Eckstein concluded a series of observations of counting obsession shown by Anton Bruckner and which he recorded, and he homes in on the core of compulsive phenomena, namely the basic stance of people affected by these compulsions.

These counting compulsions, that beset Bruckner till the end of his life, appeared often inter-connected with the compulsive ideas his students conveyed as « fixed ideas ». From a visit together to Dresden, Max von Oberleitner describes the end of their stay there. Immediately before the return journey to Vienna (they were already on the way to the train-station), Bruckner was suddenly concerned by the question of how high the houses in Dresden were. Oberleitner's answer, that most of the houses were 2 storeys high, some « also 3 or 4 », Bruckner brusquely rejected, he had seen no 3 storey houses ! With this statement, he insisted the carriage, which had just about reached the station, be turned round. Upon the discovery of a 4 storey building, he counted its floors repeatedly.

Windows became a frequent object of counting obsession for Anton Bruckner. August Stradal reports Bruckner's stubborn counting of the windows of the « Herrenhof », the repeated miscounting of which obliged him, again and again, to begin counting anew. When Stradal, noticing Bruckner's increasing agitation, had counted with him (eventually, without error) the total windows respectively through to the end, Bruckner changed to the other side of the street, in order to recommence the counting of the windows from there.

In addition to Ernst Décsey's mention of dot-mania (« Punktmanie »), which expressed itself in a « fascination with dots in signatures and door panels », you find in Eckstein's memoirs (also referring the manifestation of this

condition) the following assertion :

« A single dot » transported Bruckner « especially if he had himself placed it at the end of a word » into a frame of mind of « awestruck shuddering » and, then again, in « a rather peculiar happiness » , in « a mood bordering on worship » .

If these unusual fixations on nothings, on trivialities and their fascination for Bruckner are to us rather strange or difficult to understand, there is even so something familiar in his control obsessions (because of episodic experience in our own behaviour) that touches us. But the recollections of this related by Friedrich Klose and Friedrich Eckstein definitely place the control compulsions that Bruckner developed outside the margin of normal behaviour. Indicators for their being outside the boundaries of normality are the chronicity and generalization typical of profound compulsive disorder.

**Linz : « Frau » Pauline Hofmann**

« Frau » Pauline Hofmann (Helene's sister) , one of Bruckner's piano students who is part of the « Circle » of Linz and for whom he will fire-up.

Emil Fink, the son of Linz mayor Vinzenz Fink (1856-1861) , was Bruckner's first piano pupil (1856) . He will also belong to this same circle.

**Hotel « Zum Roten Krebs » : Johanna Pichler falls in Bruckner's arms**

**Tuesday, 5 May 1868** : Anton Bruckner and the Linz district archivist, Doctor Ferdinand Krackowitzer, are having lunch on the terrace of the Hotel « Zum Roten Krebs » .

The terrace offers a fine-view of the rushing waters of the Danube and the gentle slopes of the Mühlviertel.

In seasonable weather, the place would be packed with people laughing and carousing.

Doctor Krackowitzer was accompanied by his aunt Aichberger and his cousins Johanna and Hermine Pichler.

Krackowitzer recalled :

« I was lunching there happily with a jolly fellow from Steyr, the owner of a cavernous singing voice and guardian of 2 charming young ladies. Bruckner, a close friend of the “ basso profundo ”, had seated himself at our table and was in animated conversation with the lovely Johanna. For apart from his note-heads, Master Anton also took a special delight in the heads of pretty women, and there is no denying that he was vulnerable to Cupid's arrows. Suddenly, the diners all noticed a great concourse and tumult of people flocking towards the bridge. The high-waves of the Danube were beating against the wooden “ Jochbrücke ”, which was in danger after being struck by heavy barges which a

steam-boat was trying to tow-up the river. All of a sudden, several pillars collapsed like playing-cards, hurling a number of unfortunates into the water. Terrified by this alarming spectacle, Johanna fell into the arms of Bruckner, who was standing beside her, and was tenderly comforted by him. For a long time after this episode, the dotting musician assiduously courted the young woman from Steyr and frequently asked me :

“ You do think Johanna likes me, don't you ? ”

But Bruckner often changed the object of his adoring allegiance. »

### Uncertain future in Vienna

If Anton Bruckner's report on the 9th day before Christ's Ascension is correct, the meeting with Johann Herbeck took place at the Hotel « Zum Roten Krebs » in Linz and the trip to St. Florian took place on **Tuesday, 12 May 1868** (and not on **Sunday, 24 May 1868**) . Herbeck offered Bruckner a professorship at the Vienna Conservatory.

**Sunday, 24. May 1868 (?)** : Meeting with Johann Herbeck at the Hotel « Zum Roten Krebs » in Linz, trip to St. Florian and discussion about the offer at the Vienna Conservatory.

...

Johann Herbeck's well-meaning letter seems to have intensified Anton Bruckner's feelings of isolation and uncertainty. A report in the Vienna « Neue Freie Presse » , on **Wednesday, 17 June 1868**, that the « Gesellschaft der Musikfreunde » had appointed Leopold Alexander Zellner, a teacher, composer and acoustician, to the vacant position at the Conservatory no doubt convinced Bruckner that a move to Vienna was now more or less out of the question. He gave full vent to his feelings in a letter to Rudolf Weinwurm :

« Dear friend,

No doubt, you know what has happened and how it happened. After you wrote, I made many requests in a letter to “ Herr ” von Herbeck, but these were, by no means, intended to suggest that I did not accept the original conditions. I should have gratefully accepted the position at any price.

I was waiting for the contract documents - and, then, it happened. I am dreadfully unhappy about the whole thing, can neither eat nor drink and expect that I shall have to make abject apologies. If only I had seized the opportunity immediately, wretched fellow that I am ! “ Herr ” von Herbeck's intentions were so generous ! Why did I give in to certain fears ?

Just think of this prestigious position ! Where and when will there be another opportunity like it ? I am a lost soul. Everything gets on my nerves. If I had dreamt that anything like this would happen, I would have travelled to Vienna every day. Take pity on me, Weinwurm - I am in a hopeless position, perhaps, abandoned for ever.

And so, all is perhaps lost !!! You can have no idea of my torment and dreadful sorrow ; my only wish is for this not to affect your own happiness.

If I had imagined that this would happen, I would not have written a single syllable. Now, I am in distress.

But I have only myself to blame for my stupidity and the resulting suffering - bitter suffering. How could this have happened ? I only wanted to explore the possibilities of improving the salary but should have accepted with alacrity ; after all, 600 Florins and many lessons, etc. , would have provided sufficient security.

Farewell, and think often of your grief-stricken friend,

Anton Bruckner. »

### Desperate letter to Hans von Bülow

On the same day (**Saturday, 20 June 1868**) , Anton Bruckner, apparently convinced that he had ruined his chances of obtaining a post in Vienna and anxious not to stay in Linz, for the rest of his life, wrote a remarkably undiplomatic letter to Hans von Bülow, in Munich. It was patently the act of a confused and emotionally overwrought man.

« N.B. - My address : Anton Bruckner, Cathedral organist and Choir-Master in Linz.

Dear, highly-esteemed Court Director,

I am, Sir, extremely sorry to have to trouble you with a request, particularly at a time when every moment is precious for you. I have been compelled to do so by pressing circumstances.

I have been fortunate enough to make a name for myself in Austria through my organ playing. In Vienna, I have been repeatedly called the best organist in Austria ; I am qualified as a Conservatory teacher (a pupil of Sechter's) . I have written several large Masses, the first of which was performed in the Court Chapel in Vienna with such success that a second was commissioned by the Lord Chamberlain. You, Sir, were good enough to examine some movements of my C minor Symphony a few years ago. Permit me, in confidence, to make the following request. If I am passed over in my own country, as I cannot stay for ever in Linz, could I, on your recommendation and on the recommendation of “ Herr ” Wagner, be granted an audience with the King and play the organ to His Majesty with a view to, perhaps, obtaining a position as Court organist or assistant music-director, either in the Church or the Court Theatre, in return for a better and assured salary ? Would this be possible, or is it completely out of the question at present ? I am confident that “ Herr ” Wagner, having written affectionately to me a little while ago, would gladly do all he could for me if there is any possibility at the present time.

Please be good enough to ask “ Herr ” Wagner. And, then, I beseech you, send me your own response and that of “ Herr ” Wagner as soon as possible. If this is a possibility, how much could I expect as my annual income ? I await

your reply most eagerly.

I humbly beseech you to treat this request of mine in the utmost confidence and, in particular, not to divulge it to anyone in Vienna.

Will the third and final performance be on the 29th ? If there is the slightest opportunity, I would like to come to Munich to share with “ Herr ” Wagner, my illustrious model, in the great pleasure and joy which his superlative work inspires. My congratulations and deepest respect ! Please be so kind as to reply.

Your grateful servant,

Anton Bruckner. »

On the trip back to Linz, Anton Bruckner finally gave a tentative affirmative answer. But, though urged by his friends to seize the opportunity immediately, he began to hesitate anew. Fear that he would not be able to live in Vienna on the salary offered him out-weighed the satisfaction which the high-standing of the new position should have given him. One day, he thought he had ruined his chances by his hesitation and scruples over un-important items in the contract.

### Quotations from Hans von Bülow

« A tenor is not a man but a disease. »

To a trombonist : « Your tone sounds like roast-beef gravy running through a sewer. »

Upon being awarded a laurel wreath : « I am not a vegetarian. »

« Always conduct with the score in your head, not your head in the score. »

« Bach is the Old Testament and Beethoven the New Testament of music. »

« The 3 greatest composers are Bach, Beethoven, and Brahms. All the others are cretins. »

« In the beginning was rhythm. »

### News from Johann Herbeck

**Saturday, 20 June 1868** : Johann Herbeck’s well-meaning letter seems to have intensified Bruckner’s feelings of isolation and uncertainty. A report in the « Neue Freie Presse » , on **Wednesday, 17 June**, that the « Gesellschaft der Musikfreunde » had appointed Leopold Alexander Zellner, a music-teacher, composer and acoustician, to the vacant position at the Conservatory no doubt convinced him that a move to Vienna was now more or less out of the

question. He gave full vent to his feelings in a letter to Weinwurm :

« Dear friend,

No doubt you know what has happened and how it happened. After you wrote, I made many requests in a letter to “ Herr ” von Herbeck, but these were, by no means, intended to suggest that I did not accept the original conditions. I should have gratefully accepted the position, at any price.

I was waiting for the contract documents - and, then, it happened. I am dreadfully unhappy about the whole thing, can neither eat nor drink, and expect that I will have to make abject apologies. If only I had seized the opportunity immediately, wretched fellow that I am ! “ Herr ” von Herbeck’s intentions were so generous ! Why did I give way to certain misgivings ?

Just think of this prestigious position ! Where and when will there be another opportunity like it ? I am heartbroken. Everything gets on my nerves. If I had dreamt that anything like this would happen, I would have travelled to Vienna every day. Take pity on me, Weinwurm - I am in a hopeless position, perhaps, abandoned for ever.

And so, all is perhaps lost !!! You can have no idea of my torment and dreadful sorrow ; my only wish is that this will not affect your own happiness.

If I had imagined that this would happen, I would not have written a single syllable. Now, I am distressed.

But I have only myself to blame for my stupidity and the resulting torment - bitter torment. How could this have happened ? I only wanted to explore the possibilities of improving the salary, but should have accepted with alacrity ; after all, 600 Florins and many lessons, etc. , would have provided sufficient security.

Farewell, and think often about your grief-stricken friend.

Anton Bruckner »

It is no accident that Anton Bruckner, in the absence of clear decision-making support, which he sought through various « authorities » to obtain, with regard to the question of his appointment as a successor Simon Sechter at the Vienna Conservatory, was in panic and despair, as their divergent opinions were unable to relieve his inner-conflict and Johann Herbeck’s letter, of **Saturday, 20 June 1868**, unequivocally referred to his own personal responsibility for the decision. In his vacillation, in the end, the desperation escalated into a suicidal statement to Herbeck, whose dismay expressed itself in the plea :

Don’t go « out of the world » but « out into the world » .

Settling in Vienna

**End of June 1868** : Anton Bruckner finally settled in Vienna when he was appointed to succeed his teacher, Simon Sechter, at the « Konservatorium der Gesellschaft der Musikfreunde » . He remained in touch with his former organ, violin, piano, voice, harmony and counterpoint teacher Johann Nepomuk August von Dürnberger (1800-1880) .

Bruckner temporarily found a small apartment on the top-floor of a building in the outskirts of Vienna. He was accompanied by his spinster sister Maria-Anna (known as « Nanni ») who will always act as house-keeper.

Bruckner was hesitant to forego the equity he had built-up in Linz but, in the end, he left for Vienna.

**Linz : Bruckner and Hanslick face-to-face at the « Gasthof zum Bayerischen Hof »**

**Around June - July 1868** : Eduard Hanslick assures Anton Bruckner of his support in Vienna during a meeting in Linz at the famous Bavarian-inn called the « Gasthof zum Bayerischen Hof » (the guest-house of the Bavarian Court - now, « Zaininger ») , where the Austrian poet and librettist Franz von Schober is also present.

**Ready for school day**

**Thursday, 23 July 1868** : Anton Bruckner sends a letter of thanks to the management of the Conservatory confirming the acceptance of the terms (while giving thanks to God !) and promises to be in Vienna for the beginning of the academic year, in October.

The course of events of the negotiations for the post had affected his psycho-physical condition to such a degree that, after their conclusion, or his final acceptance on **23 July 1868**, he revisited Kreuzen in the months of August and September that followed.

Bruckner had, at his command (as is often met with in deeply religious people) , an enormous tolerance for suffering, in the sense of endurance and what he could put-up with ; but he had only slight tolerance of stress, in the sense of a multiplicity of stresses, especially when he was pressurized by a, for him, very momentous decision.

**Vienna : Gasthaus « Zum goldenen Greif »**

**Friday, 24 July 1868** : Concert in Vienna in honour of the Schütz Choral Society by the Liederafel « Frohsinn » and the Linz « Sängerbund » performed at the Hotel « Erzherzog Karl » (Gasthaus « Zum goldenen Greif ») at Number 31 on « Kärntner-Straße » . Some choral-works « Thanking God » are sung for the occasion :

« Das deutsche Lied » , « Der frohe Wandersmann » , « Maiennacht » and « Liebe und Wein » .

**History**

When the house (including the inn) was own by Augustin Ertl (Erdl) in 1700, the name guest-house « Zum gülden Greiffen » appeared for the first time.

At the beginning, the Neustadt town-coachmen (« Landskutscher ») were the first to come to the guest-house, and later, their colleagues from Baden and Brünn followed. The horse carriages had their departure-points in front of the inn. In 1718, the house had a private school. In 1715, Bormastin called the guest-house « one of the most distinguished inns in Vienna ». House and inn remained predominantly owned by members of the Ertl family until 1833.

Johann Roszner, a member of the Outer-Council, was the owner of the « Zum gülden Greiffen » from 1763 to 1778. In 1772, he decided to erect a new building. In 1780, he offered well-furnished rooms and a restaurant menu for every budget (pricing : 24, 34 and 51 « Kreuzen ») . In 1807, a patriotic sign entitled « Archduke Carl » was hanged in front of the building honouring Archduke Charles of Austria, Duke of Teschen, winner of the Battle of Aspern-Ebling (on 21-22 May 1809) against the troops of Napoléon Bonaparte.

In 1807, the guest-house « Zum goldenen Greif » offered another innovation : the « Déjeuner à la fourchette » (French for fork-breakfast) , which was served between 10 and 12 o'clock and will quickly enjoyed great popularity.

The place often received prominent guests :

Ludwig van Beethoven came here in 1799 to give piano-lessons to Therese von Brunswick.

Franz Grillparzer liked to dine with painter Moritz Michael Daffinger who was so critical about the social conditions at that time that he was promptly denounced by a witness. Daffinger was detained for 3 days by the police. Grillparzer was blamed for complicity.

Lajos Kossuth, the owner at that time, partially converted the hotel in 1844. During the Revolution of 1848, he encouraged from the window the torch-bearers passing by.

From 1854, the first rank Hotel « Archduke Carl » was headed by the Anton Schindler family. Besides royalty and diplomats, Richard Wagner was among the famous guests.

### Zum goldenen Greif (I, Kärntner-Straße Nummer 31, Konskriptions-nummer 968)

Zwischen 1348 und 1394 besaß das Haus Cunrat von Schinta. Trotz mehrmaligen Besitzwechsels hielt sich die Bezeichnung « Schintahaus » (auch « Schynndahaus ») für das Objekt, das vor 1394 aus 2 Häusern entstanden war, bis ins 15. Jahrhundert. 1511 erwarb es Stadtrichter Hans Rinner von der Fronleichnambruderschaft zu St. Stephan, der es in diesem Jahr vermacht worden war. 1515 erhielt Rinner auch das Recht des Salzhandels, das jedoch mit seiner Hinrichtung erlosch (siehe Wiener Neustädter Blutgericht) . Nach Christoph Poldricz, der das Haus 1564 besaß, erhielt es den verballhornten Namen « Polleritzenhof » , der sich längere Zeit erhielt. 1680 findet sich unter den Besitzern erstmals ein Gastwirt (Michael Pitl) .

Als das Haus (samt Wirtshaus) an Augustin Ertl (Erdl) kam, hören wir 1700 erstmals vom Gast- und Einkehrwirthshaus « Zum gülden Greiffen » . Anfangs kehrten hier vor allem die Neustädter Landkutscher ein, später auch jene aus Baden

und Brunn (die Kutschen hatten vor dem Einkehrwirthshaus ihre Abfahrtsstellen) . 1718 war im Haus auch eine Privatschule untergebracht. Bormastin bezeichnet 1715 den Gasthof als « einen der vornehmsten Einkehrghasthöfe » Wiens. Haus und Wirthshaus blieben bis 1833 überwiegend im Besitz von Mitgliedern der Familie Ertl.

Johann Roszner, Mitglied des Äußeren Rats, der 1763-1778 Wirt war, ließ 1772 einen Neubau errichten. 1780 hören wir von gut möblierten Zimmern und verschiedenen Menüs (zu 24, 34 und 51 Kreuzern) . 1807 erhielt der Neubau das Schild « Erzherzog Carl » , eine patriotische Geste gegenüber Karl von Österreich-Teschen, dem schon damals populären späteren Sieger von Aspern (1809) .

1807 registriert der « Eipeldauer » noch eine Neuerung, das « Déjeuner à la Fourchette » (Gabelfrühstück) , das zwischen 10 und 12 Uhr serviert wurde und sich rasch großer Beliebtheit erfreute. Der « Greif » hatte des öfteren prominente Besucher : Beethoven kam 1799 hieher, um Therese von Brunswick im Klavierspiel zu unterrichten. Auch Grillparzer zählte zu den Gästen. Er speiste hier gerne mit dem Maler Moritz Michael Daffinger, der sich mit ihm allerdings so unverblümt über die damaligen Verhältnisse unterhielt, daß er, von einem Zuhörer denunziert, prompt zu drei Tagen Polizeiarrest verurteilt wurde und man Grillparzer der Beihilfe beschuldigte.

Schon in wenigen Monaten könnte man dort, wo Ludwig van Beethoven einst mit einem Klangverstärkungstrichter seine Nachbarn terrorisiert haben soll, bei angenehmer Hintergrundmusik dicke Wollhauben kaufen. Und wo man vor hundert Jahren im eleganten Stadthotel residieren konnte, dürften schon demnächst Bademäntel feilgeboten werden. Bauplatz-Archäologie ist ein hochinteressantes Betätigungsfeld - zumal in der Wiener Innenstadt, deren Grundmauern bekanntlich auf die Römer zurückgehen.

1848 wohnte Lajos Kossuth im 1844 teilweise umgebauten Hotel und sprach vom Fenster aus zu Teilnehmern eines vorüberziehenden Fackelzugs. Ab 1854 stand das Hotel « Erzherzog Carl » , ein Haus I. Rangs, unter der Leitung der Familie Anton Schindlers. Neben Fürstlichkeiten und Diplomaten findet man auch Richard Wagner unter den Gästen. Die Bedeutung des Hotels, in dem 1908 auch das Nachbarhaus Kärntner-Straße Nummer 29 aufgegangen war, erhielt sich bis zum 2. Weltkrieg.

1945 wurde es durch 2 Bomben (12. März und 8. April) getroffen, durch den im Feinkostgeschäft « Köberl & Pietok » (Johannesgasse Nummer 1) ausgebrochenen Brand am 11.-12. April vollständig zerstört und nicht wieder aufgebaut. Heute steht hier ein Erweiterungsbau des Finanzministeriums, der 1958 errichtet wurde (Kärntner-Straße Nummer 29-31) .

« Frohsinn's » new home : « Gasthof Zur Stadt Frankfurt »

**Saturday, 25 July 1868** : Opening-ceremony of the new « home » of the Liedertafel « Frohsinn » in the « Gasthof Zur Stadt Frankfurt » (« Guest-House of the City of Frankfurt ») located at « Hauptplatz » Number 34, near the « Altes Rathaus » (Old Town Hall) .

Among the special guests at the inauguration :

The « Land » Governor, Doctor Moritz Eigner ; the President of the board of directors, Doctor Mathias Weißmann ; the hotel-owner, Steinböck ; the artist-painter, Ferdinand Scheck ; and Anton Bruckner.

Among the performers :

Karl Komzák junior (violin) ; « Fräulein » Reprzensky (piano) , « Fräulein » Clotilde Kainerstorfer (Alto solo) , Doctor Ferdinand Krackowitz ( « Tannhäuser » parody) and « Herr » Weichhart (narrator) .

The Liedertafel « Frohsinn » will stay at this Hotel (which is located very close to the current building of the « Linzer Singakademie » at « Pfarrplatz » Number 10) from **1868 to 1874**.

Wealthy patrons plan to acquire the « Gasthof » in order to permanently establish the « Frohsinn » headquarters. In addition, a private concert-hall was to be arranged according to plans prepared by members of the Choral Society. But the great stock-market crisis of 1873 (the Vienna « Krach ») will eliminate the proceeds from the sale of 200,000 lottery tickets held throughout Europe.

The site originally consisted in 2 houses : a larger 5 storey one on the left ; and a smaller, 3 axled one on the right. The left-side house is mentioned for the first time as a « Gasthof » in 1595. It then became a bourgeois property. In 1684, it was once again converted into an inn. The name « Gasthof Zum schwarze Adler » (« Guest-House of the Black Eagle ») appeared in 1771, to later be called the « Gasthof Zur Stadt Frankfurt » . The right-side house is also mentioned in 1595. It appears in a register in 1802.

In 1866, both houses were combined behind a common façade according to plans by Karl Höbarth. It houses the town-hall since 1904.

A commemorative plaque honouring Ludwig van Beethoven was installed in 1872. It has been renewed in 1951.

### Rehearsing the Mass in E minor (WAB 27)

Anton Bruckner was so concerned about the performance of the Mass in E minor (WAB 27) that he spent a good part of his summer vacation in Linz, rehearsing the work no fewer than 28 times during the months of **August and September**. On **Sunday, 9 August 1868**, he received a letter of thanks from the Bishop for his sterling efforts. Rüdiger was able to tell Bruckner that the entire « Sängerbund » , some members of the « Frohsinn » and other individuals in the town had offered their services. Bruckner had to obtain official permission for a few days' leave from his Vienna Conservatory duties so that he could direct the final rehearsals of the work. He made this request indirectly through Johann Herbeck when he wrote to him to acknowledge receipt of an « honorarium » from the Lord Chancellor and to convey Rüdiger's invitation to attend the consecration ceremony and the official dinner, afterwards.

### Possible return to Kreuzen

**End of Summer 1868** : Very probably as a result of the enervating negotiation for Bruckner with regards to his appointment as successor to Simon Sechter, his condition proved itself again to be « in need of treatment » and, over the months of **August and September**, he took advantage of the possibility of the cure at Kreuzen. According to Göllicherich-Auer, in a following unspecified year, Bruckner made use, apparently for the last time, of a further treatment.

« Frohsinn » says farewell to their choir-master

**Sunday, 29 September 1868** : « Farewell evening » (« Abschieds “ Soirée ” ») organized in Linz at the « Gasthof Zur Stadt Frankfurt » by the Liedertafel « Frohsinn » , in the presence of Anton Bruckner.

The « honoured guest » plays freely a piano « Phantasie » .

Doctor Mathias Weißmann holds the farewell speech.

« Herr » Theodor Zehden presents a biographical sketch of Bruckner.

Adalbert Markus also thanks the members of the Linz Theatre Orchestra (including string-quartet members Koschier, Geyer, Karl (Karel) Komzák II (junior) and Seelig) for their earlier contribution on **Saturday, 9 May 1868** (performance of the Symphony No. I, **WAB 101**) . Plus the gentleness ... of the pianist !

Alexandrine von Soyka

Alexandrine von Soyka was born on 15 July 1857 in Teplitz-Schönau and died on 4 December 1931 in Vienna. This charming daughter of an officer will be a piano student of Anton Bruckner.

His father, Karl von Soyka, was born on 28 November 1828 in Klagenfurt and died on 17 August 1910 in Linz. The latter married Maria Plagino (born on 14 August 1830 in Broskoutzei and died on 24 April 1863 in Venice, Italy) on 6 March 1856 in Jassy.

Like Emma Thaner, Alexandrine Soika later recalled her experiences of Bruckner, the man and the musician :

« One day, I was taken by friends to the cathedral to see and hear Bruckner playing the organ. My interest, as a child, was at its keenest. We ascended the mysterious dark steps and my heart beat wildly. When I saw the plump man with his powerful shoulders and broad smiling face standing before me, however, I had an immediate desire to laugh which I could only suppress with great difficulty. But, now, he sat-down at the organ - and there was no more laughing ! I was overwhelmed by the atmosphere of solemn earnestness and silent awe, because it was now giants, now angels who appeared to inhabit the instrument. I was speechless, overcome. »

Vienna : « Währingerstraße » Number 41

**October 1868 - Summer 1876** : Anton Bruckner moved into his first « real » apartment in Vienna, a « Biedermeier » style residential building located on « Währingerstraße » Number 41 (the last floor) , in the 9th District.

Bruckner is now settled in Vienna for good.

His modest little apartment (door number 10) , situated on the third floor, consisted of a kitchen and 2 other rooms. The building, called « City of Nuremberg » , consists of a 3 storey wing overlooking the side-streets. It is a typical Viennese house, more spacious than comfortable which was designed in 1838 by the architect Franz Lausch for a certain Katharina Mayer.

Bruckner's younger sister Maria-Anna (known as « Nanni ») will follow him as a house-keeper and confidante. Bruckner will live there until the summer of 1876.

On June 18, 1961, a commemorative plaque marking the composer's passage was inaugurated at the entrance by E. Hauser, the Chairman of the Board of Trustees of the Alsergrund Heritage Museum (« Heimatmuseum Alsergrund ») located on the « Josefstädterstraße » .

Inscription :

« In this house lived Anton Bruckner (1868-1876) . The great Austrian composer has created here his 2nd, 3rd and 5th Symphonies. »

...

« In diesem Hause wohnte

1868 - 1876

Anton Bruckner

Der große österreichische

Komponist schuf hier seine

2. 3. 4. und 5. Sinfonie

Errichtet am 18. Juni 1961

vom Heimatmuseum Alsergrund »

...

An Imperial-Royal cadastre plan dating from 1829 (substantially modified in 1846) shows the « Währinger Gasse », which ends at the (actual) « Nussdorfer Straße ». The « Wohnhaus » in which we are interested was, at the time, registered under Number 282. To the north, on the site of the (actual) « Arne-Carlsson-Park », was the Imperial-Royal Military Outfit Depot and St. John the Baptist Church (« St. Johannes der Täufer Kirche »), which (according to another source) were demolished around 1860.

In 1863, the ground-elevation (and road-level) was lowered by 2 metres, undermining the façade of Bruckner's « Wohnhaus ». As a result, the entrance-gate was enlarged and the side-walk was raised.

The city records mentions that the commercial building located in the inner court-yard was already occupied a book-binding company in 1889 (anh is still in operation today !).

The 4 storey section has a uniform floor and a strict axis sequence, which is only slightly loosened to accentuate the main-entrance. The ground-floor is slightly banded.

The building shows 2 distinct cornices. The row of window frames of the 3 residential floors is strung on a delicate protruding, narrow plaster strip ; the other is situated at the upper-cornice.

The excessive height of the ground-floor which slightly disturbs the proportion of the ensemble is due to the fact that the street-level was lowered afterwards.

« Währingerstraße » is a relatively young street. Bonifaz Wohlmuets city-map of 1547 shows the frequently interrupted row of houses in direction of the actual « Währingerstraße » - which the people of the village of Siechenals called « Straß Inn die Signalis ». The town ended at the actual « Nussdorfer Straße » and the hospital of the same name.

« Nußdorfer Straße », with its connection to the Klosterneuburg monastery and the Danube area, represented the most important road engineering project of the period.

The direct route to the suburb was blocked by the open-channel of the Als and the large, closed site of the brick-works. It was not until 1862 that the factory was demolished and the path of the current road was developed. It was given the name « Währingerstraße » because it led, at the time, to the former suburbs. When the municipality of Währing was incorporated into the city of Vienna in 1894, « Währingerstraße » was extended around Währing's original « main-street » (« Hauptstraße »).

## Wohnen in Wien

Nach dem endgültigen Zurückdrängen des Osmanischen Reiches zu Ende des 17. Jahrhunderts konnte in Wien und seinen zerstörten Vorstädten mit dem Wiederaufbau begonnen werden. Die stark einsetzende Bautätigkeit hatte eine

Barockisierung des Stadtbildes zur Folge. Die weitreichenden Reformen unter Josef II. führten 1783 auch zur Modernisierung der Stadtverwaltung. Die Einführung der ersten Hausnummern (Konskriptionsnummern) sowie die Entwicklung der Kanalisation und Straßenreinigung fallen in diese Zeit. Die Auflassung zahlreicher Klöster und Friedhöfe schuf zudem neue Bauplätze.

## Geschichte

Ein Kaiserlich-Königlich Katasterplan aus dem Jahr 1829 (« berichtigt durchwegs im Jahre 1846 ») zeigt die Währinger Gasse, die auf Höhe der heutigen Nußdorfer Straße beim (zu jener Zeit noch offenen) Alserbach endet. In diesem Plan ist das hier besprochene Gebäude mit der Hausnummer 282 eingetragen. Nördlich davon, auf dem Gelände des jetzigen Arne-Carlsson-Parks, erstreckte sich das Kaiserlich-Königlich Militär-Montur-Depot und die « St. Johannes der Täufer Kirche », welche einer anderen Quelle zufolge um 1860 geschliffen wurden. 1863 wurde dann auch die dazugehörige, gut 2 Meter hohe Bodenerhebung abgetragen und das Straßenniveau entsprechend abgesenkt. Diese Maßnahme hatte zur Folge, daß auch die Fassade des Hauses Nummer 41 untergraben wurde. Man vergrößerte infolgedessen das Eingangstor und setzte den Eingängen der beiden Gassenlokale abgetreppte Podeste vor.

Aus Unterlagen der baupolizeilichen Akte geht weiters hervor, daß das gewerblich genutzte Gebäude im Innenhof der Liegenschaft bereits im Jahr 1889 eine Buchbinderei faßte, welche im Übrigen noch heute in Betrieb ist.

## Die Architektur

Das viergeschoßige Biedermeier-Wohnhaus weist eine gleichmäßige Geschoß- und strenge Achsenabfolge auf, welche lediglich zur Akzentuierung des mittigen Eingangs leicht aufgelockert wird. Das Erdgeschoß ist leicht gebändert und von den Regelgeschoßen durch ein

Gesims abgetrennt. Die Reihe der Fensterrahmen aller drei Wohngeschoße ist an einem zart hervortretenden, schmalen Putzband aufgefädelt, wobei dem obersten auch ein weiteres Gesims zugefügt ist. Die übermäßige Höhe des Erdgeschoßes wirkt leicht störend auf das proportionale Gesamtgefüge und rührt daher, daß das Straßenniveau nachträglich abgesenkt wurde.

## Der Name

Die Währinger Straße ist ihrer Anlage nach ein relativ junger Straßenzug. Auf Wohlmuets Stadtplan von 1547 ist die vielfach unterbrochene Häuserreihe in Richtung der heutigen Währinger Straße als « Straß Inn die Signalis » (nach Siechenals) bezeichnet, endete also beim Dorf Siechenals auf Höhe der heutigen Nußdorfer Straße und dem gleichnamigen Lazarett. Damals stellte die Nußdorfer Straße mit ihrer Verbindung nach Klosterneuburg und zum Donaugelände die verkehrstechnisch wichtigere Erschließung dar als jene nach Währing. Außerdem war der direkte Weg in die Vorstadt durch das zur damaligen Zeit noch offene Gerinne der Als und das große, geschlossene Gelände der Ziegelwerke versperrt. Erst um 1862 wurde die Fabrik geschliffen und der heutige Verlauf der Straße erstellt. Gleichzeitig erhielt sie ihren heutigen Namen, weil sie in den damaligen Vorort Währing führte. Anlässlich der Eingemeindung von

Währing nach Wien wurde sie 1894 um die ehemalige « Hauptstraße » in Währing selbst verlängert.

### 1868 : Christmas is coming

As 1868 drew to a close, Anton Bruckner looked forward to spending Christmas with his friends, in Linz. Johann Baptist Schiedermayr, dean of Linz Cathedral, was the recipient of the following letter :

« Dear Dean,

Above all, I must thank you for all the kindness you have shown me. I will never, never forget it ! For the sake of my nerves, I will not describe how difficult it was for me to take leave of you, Your Grace. I can find no words to describe how much I miss you. I also sorely miss every spiritual contact, with the exception of Father Schneeweiß who visited me recently. Otherwise, I am well and in very good health ; moreover, everyone is well-disposed towards me. The churches I normally attend are the Chapel of the “ Bürger-Versorgungshaus ”, St. Stephen’s and the Court Chapel. I have free admission to concerts and to the Court Opera. My Mass is to be performed in January, as further rehearsals are needed and Imhof has not been available.

I certainly hope that it will be possible for me to spend Christmas, in Linz. Then, Your Grace will not be able to get rid of me. In looking forward to it, I take comfort in the knowledge that Your Grace will have some idea of the pleasure I derive from being in your company. I also look forward very much to seeing His Grace the Bishop, again. I beg you to convey my deepest respects to him ; I certainly prayed (but did not write) , on 3 December. I do not know the address and don’t have the confidence to find-out.

Please, give my regards to your sisters. With the deepest respect,

Your Grace, from your grateful servant,

Anton Bruckner.

N.B. : My address is “ Währingerstraße Number 41 ”. »

Anton Bruckner performed regularly in front of Emperor Franz-Josef and his family in his duties as organist at the Imperial Chapel.

### Vienna : Memoirs of an old choir-boy

Anton Bruckner did not wield much authority over us choir-boys for, in spite of our good upbringing in the seminary, we had not entirely shed our Viennese penchant for mischief. Although he rehearsed his Masses with us, we did not really appreciate them. Pius Richter and Rudolf Bibl, the assistant Court music-directors, did tell us that their colleague was a great man and that his Masses were Masterpieces - better, even, than their own compositions ! But seen

through the eyes of disrespectful youngsters, Bruckner was merely an elderly, very amusing and, above all, enormously good-natured gentleman on whom we could play tricks with impunity.

When Bruckner arrived for a rehearsal, he would be very worked-up, and first, he would look for a chair :

« Boys, bring me a chair ! » , he would say, sitting-down with an effort and putting-out his cigar. The butt of the cigar he would carefully store-away in his coat pocket. Then, he ran his eyes over us, growing softly in anticipation of the trouble he would have with us. Then, he began the session with a :

« Boys, let's get-down to it ! »

After the rehearsal, the first thing he did was to look for the cigar-end he had put inside his coat. His search was nearly always in vain, because it was one of our regular tricks to filch the old man's beloved cigar from his coat pocket.

He would exclaim in despair :

« “ Jessas ”, my cab is already waiting outside, and now I can't find my cigar ! »

And with his lovely lack of guile, he would then beg :

« Boys, help me look for it ! »

That was the cue we were waiting for. We went about « searching » with a great hullabaloo, and the old gentleman would then receive the cigar we had « found » with much emotion and thank us profusely.

What tickled us most was Bruckner's frightful nervousness before conducting a performance of one of his Masses, when he appeared to go completely to pieces. We understood little of his genius ; all we could see was a funny old man holding his baton the wrong way round in his excitement ! In his other hand, he clutched a large blue handkerchief, which he began waving like a flag every now and then to the rhythm of the music. From time to time, while continuing to give the beat with his right-hand, he would bury his whole face in the handkerchief and blow his nose with the utmost deliberation. These things all served to amuse us.

All the same, I believe that we were very fond of Anton Bruckner, and not only because of the 3 cakes which he normally bought us after performances of his Masses. He went with his « boys » through thick and thin, the one great child among the 12 and 13 year olds.

### Today's menu for the Emperor

Emperor Franz-Josef was known to be a gourmet who relished good food and wine.

**Thursday, 11 March 1869** : Dinner at the « Hofburg » hosted by « Their Imperial and Apostolic Majesties Emperor Franz-Josef I and Empress Elisabeth of Austria-Hungary » .

This dinner menu is for a ball at the Imperial Palace which served as the Imperial couple's winter residence. The 11 course dinner offers a dish of spit-roasted roebuck (a red deer) kidney and no fewer than 4 desserts to satisfy the Emperor's sweet tooth.

When it came to preparing the table for a State dinner, Baron von Margutti, recalled how the Palace menu-cards at each place setting ...

« ... were the finest product of the Viennese paper industry. Each had the Imperial arms embossed in gold at the top. In accordance with an old custom at the Hapsburg Court, the menus were always in French. As a rule, the wines were not included. The only exception was in the case of special Court dinners and State banquets. »

The Emperor used to enjoy finishing his meals with a glass of Tokay from his own vineyards in Hungary. It was a strong sweet syrupy wine with a powerful perfume bouquet and was served in special glasses similar in size to a thimble.

Servants at these Court dinners wore a campaign uniform which consisted of a brown gold braided coat and black trousers offset with a dress sword. The footmen wore tail-coats edged with silver braid, black knee-breeches and gaiters.

The Emperor however was personally served by his military loaders who wore a green uniform with green trousers all with silver braid and a silver « bandolier » (an ammunition belt) without the hunting-knife.

### Menu

#### « *Potage à la Royale* »

(Chicken “ consommé ” garnished with savory egg-custard pieces.)

#### « *Mayonnaise de volaille à la ravigotte* »

(Poached chicken breast in a “ mayonnaise ” made from capers, mustard, herbs, white wine, veal stock, shallots and mustard.)

#### « *Rissoles à la moderne* »

(Fried puff-pastries filled with “ purée de foie gras ” and served with braised lettuce.)

*« Pièce de boeuf à la flamande »*

(A Flemish dish using a round of beef casseroled in beer, onions and herbs.)

*« Poulardes à la Célestine »*

(Young chickens fried with mushrooms and tomatoes and then flamed with Cognac and served with powdered garlic and chopped parsley named after the owner of “ Cercle ” restaurant in Lyon.)

*« Petits pois à l'anglaise »*

(Baby peas tossed with butter and parsley.)

*« Sorbet »*

*« Rein de chevreuil à la broche »*

(Spit-roasted roebuck kidney.)

*« Beignets de chocolat glacés »*

(“ Choux ” pastries filled with chocolate ice-cream.)

*« Gelée aux ananas »*

(Pineapple jelly.)

*« Compote mêlée »*

(Mixed poached fruits.)

*« Glaces »*

(Ice-creams.)

*« Dessert »*

*« Kaiserschmarrn »*

« Kaiserschmarrn » is probably the best-known of all the « Imperial » delicacies. It is a hearty meal frequently found in mountain huts. And it is the source of no end of confusion when this sweet dish is poorly translated as an « Emperor's omelette » .

The « schmarrn » part has now come to mean « rubbish » in colloquial German (« So a Schmarrn » is dialect for « what rubbish ! ») and one of the theories for the name comes from the idea that the dish developed from pancakes that were rejected by the Emperor.

However, it is far more likely that the latter-part of the word comes from the same root as « schmieren » (to grease or smear) and relates to the practice in the poorer communities of frying-up a combination of flour, milk and eggs and using some preserved fruit as added taste.

The legend which stems from this root says that the Emperor Franz-Josef I was served a traditional meal while out hunting but, because it was a meal for the Emperor, more milk and eggs and some raisins were added to the recipe.

Another linguistic theory holds that the « Kaiser » part was originally « Casa » - meaning something homely or made at home. However, the ingredients became the preserve of the better-off and, when Austrian cooks started to use the Imperial prefix « Kaiser » to mean a special class of delicacy in the 19th Century, « Casaschmarren » became « Kaiserschmarrn » .

Whatever the origin, the current incarnation of the « Kaiserschmarrn » is a heavy sweet pancake, often with raisins, which is chopped up and dusted with icing sugar and served with stewed plums or stewed apple on the side.

### « Kaisersemmel »

The « Semmel » refers to a bread roll - and a particular one at that. The traditional « Kaisersemmel » is made from white flour and a dough that has been kneaded for a certain length of time. The 5 folds of dough which create the « star » shape on the top help make the roll more crusty than the normal plain roll in other countries.

Where the « Imperial » part of the description comes from is open to interpretation. The most popular story tells of the fixed prices for food-stuffs imposed by the Imperial Court in the 18th Century. A deputation of Viennese bakers visited Josef II, who was so impressed by their product that he gave them permission to describe their rolls as « Emperor's Rolls » and freed them from the restrictions of the price controls.

A less interesting alternative source for the name points to a baker named Kayser at around the same time. And an even less popular theory says that the source may well have come from the Italian language.

### « Kaiserguglhupf »

The « Guglhupf » is a circular tall cake (a firm sort of sponge) with a hole in the middle and a wavy pattern over

the remaining cake. The Imperial version, the « Kaiserguglhupf », is with added raisins and, allegedly, comes from the preference of the 19th Century Court to have this served at breakfast. In those days, serving sweet items such as this would have been considered a outward sign of prosperity by the upper-classes.

## Paris and Nancy

**April 1869** : Anton Bruckner will interrupt his current activities to undertake an international organ-tour in Nancy and Paris.

He will leave Vienna for Nancy on **Saturday, April 24**. During his absence, he will not receive a salary from the Conservatory.

A few days earlier, Bruckner had written to a friend :

« Soon, I have to go to France. So help me God ! »

## Paris : « Hôtel de Diesbach »

**Saturday, 1 May 1869** : The « Journal de la Meurthe et des Vosges » publishes an article on the April 28-29 Paris concerts including a honourable mention of Anton Bruckner's organ playing and improvisation talent.

Bruckner is staying at the « Hôtel de Diesbach » located at « n° 26, rue d'Henemont (n° 89, avenue Foch) , Saint-Germain-en-Laye » , about 20 kilometres west of Paris. In 1879, the Notre-Dame missionary sisters will settle there. Besides is « la Chapelle Saint-Louis, dite des Franciscaines » .

This Hotel was probably built in the 18th Century, as evidenced by the plans of de Fer and de Boissaye on which it appears. In 1819, it was acquired by Comtesse de Diesbach-Bellerocche, who gave her name to the inn. In 1842, it was bought by Monsignor Denis-Auguste Affre, Archbishop of Paris.

This Hotel had various assignments :

**1863-1870** : International school.

**1879** : The Notre-Dame missionary sisters settled there (until 1994) .

**After 1893** : An orphanage and also a Neo-Romanesque chapel (in the same spirit as Saint-Pierre's church in Montrouge, Paris) were built.

**1980** : Closure (becoming a business-school) .

...

Cet hôtel figure sur les plans de DeFer et DeBoissaye, mais sans nom. Il fut acheté en 1819 par la comtesse de Diesbach-Belleruche et, en 1842, par monseigneur Affre, archevêque de Paris. Ce fut le siège d'une école internationale de 1863 à 1870. Les religieuses franciscaines de Calais, devenues sœurs franciscaines missionnaires de Notre-Dame, s'y installent en 1879. Construction de la chapelle entre 1893 et 1900. En 1901, construction de l'orphelinat. Il a été fermé en 1980 et est devenu une école de commerce. La congrégation a quitté la maison de retraite en 1994.

La chapelle est couverte en ardoise, avec vaisseau, cul-de-four, toit à longs pans, extrados de voûte, toit en batière, appentis. Orphelinat avec tuile mécanique, sous-sol, étage carré, toit à longs pans. Ancien hôtel enduit, avec ardoise, 2 étages carrés et 1 étage de comble.

Édifice / site : Hôtel de Diesbach, puis couvent de franciscaines.

Localisation : Île-de-France ; Yvelines ; Saint-Germain-en-Laye.

Aire d'étude : Saint-Germain-en-Laye Centre.

Lieu-dit : Quartier dit de la Réserve-Péreire.

Adresse civique : n° 89 avenue Foch ; n° 26, rue d'Hennemont.

Destinations successives : École supérieure ; maison de retraite.

Dénomination : Hôtel ; couvent ; orphelinat.

Parties non étudiées : Chapelle ; jardin.

Époque de construction : 18e siècle ; 4e quart du 19e siècle ; 1er quart du 20e siècle.

Année : 1901

Personnalité(s) :

Comtesse de Diesbach-Belleruche (habitant célèbre) .

Monseigneur Denis-Auguste Affre (habitant célèbre) .

Plan : allongé.

Élévation : ordonnancée.

Étages : 1 vaisseau ; sous-sol ; 1 étage carré ; 2 étages carrés.

Escaliers : Escalier dans-œuvre ; escalier tournant à retours avec jour ; en charpente.

Gros-œuvre : Calcaire ; pierre de taille ; enduit.

Couverture :

Type : Toit à longs pans ; pignon découvert ; extrados de voûte ; toit en bâtière ; appentis.

Matériau : Ardoise ; tuile mécanique.

Couvrement : Cul-de-four.

Décor : Sculpture (étudiée dans la base Palissy) ; vitrail (étudié dans la base Palissy) ; sculpture ; ferronnerie.

Représentation : Torsade ; ordre composite, croix ; feuillage ; sculpture sur le portail de la chapelle ; ferronnerie sur la rampe d'escalier de l'hôtel.

Typologie : Hôtel.

Propriété : privée.

### Bruckner and the Parisian press

Anton Bruckner wrote :

« The music magazines in Paris have said that the great organ in Notre-Dame had its day of triumph when I played, and no one in Paris ever heard anything like it. »

He was deeply moved by the kindness and interest shown by such great musicians as Camille Saint-Saëns, Ambroise Thomas and César Franck. Daniel François Esprit Auber and Charles Gounod embraced and kissed him. He was invited to parties. He, the Upper-Austrian school Master in his rustic clothes and top boots, trod the parquet floors of a Paris salon, surrounded by elegant cosmopolites who complimented him in an idiom which is difficult for the foreigner to understand, mainly because of its tempo. But from the charming tone of their French speech, he no doubt surmised what they wanted to tell him, and, smiling and bowing to the « Grand Seigneurs », he returned their flowering sentences.

« Never again, will I experience a triumph like that. » were his happy words.

Bruckner will not benefit from personal and professional contacts established during his French organ-tour. A rejected marriage proposal will conclude its journey. He left the city of Paris to go to the provincial town of Wels, in Upper-Austria. At the time, the local newspapers and Music Societies reported nothing from his recent triumph abroad.

### Wels : The Rabl family

**Tuesday, 18 May 1869** (Pentecost Day) : The French tour is over. Anton Bruckner meets organist Jean-Auguste Rigaux in Nancy, on his way back.

According to August Göllerich senior (who observed the Master's organ playing during this last trip) , Bruckner arrives in Wels in the evening where he will stay for the night. He gives an organ recital at the parish church (« Stadtpfarrkirche ») accompanied by singer « Fräulein » Sporn. At this occasion, she will present her cousin, Karoline Rabl, to him. Bruckner will immediately fall in love with Karoline. The next day, he went so far as to ask the parents (Karl and Rosa - who were also impressed by him) for her hand. Carl Rabl is a renowned Austrian zoologist and anatomist who comes from a family of doctors.

(Taken from the manuscripts on Anton Bruckner, preserved in the archives of the municipality of Wels. Tourist-Office located at Number 55 on the « Hauptplatz » .)

Bruckner will receive a glowing reception from the inhabitants. August Göllerich senior had asked to appoint Anton Bruckner as honorary member of the Men's Choral Society of Wels (« Welser Männer-Gesang-Verein ») . Karl Seiberl is the Choir-Master.

### Doctor Carl Rabl

**1870's** : Through the intermediary of South Tyrolean physician Doctor Alexander Fränkel, Doctor Carl Rabl meets Anton Bruckner most of the time at Vienna's 1st District popular guest-house (Restaurant and Beer-Hall) named « at Gause » (« Gasthaus und Bierkeller “ bei Gause ” ») located in a basement at « Johannesgasse » Number 12. Josef Vockner and Landgraf Vincent Egon zu Fürstenberg are also present.

« At Gause » is a popular beer-pub of the capital frequented by Bruckner, his Conservatory students and disciples.

...

The Austrian zoologist and anatomist Carl Rabl was born on 2 May 1853 in Wels, Austria ; and died on 24 December 1917 in Leipzig, Germany.

Rabl came from a family of physicians, who had emigrated from Bavaria to Upper-Austria in the 18th Century. He

attended the Monastery College (« Gymnasium ») in Kremsmünster and studied medicine and zoology at the universities of Vienna, Leipzig and Jena. He was promoted Doctor of Medicine in Vienna in 1882, and, 1 year later, he qualified for descriptive anatomy. After 2 years as a private lecturer, he was appointed professor in 1885. In 1886, he accepted the nomination at the Chair of Anatomy of Karl-Ferdinand University. In 1890-1891, he was Rector of the University. In 1903-1904, he was Dean of the Faculty of Medicine. In 1904, he became successor of Wilhelm His at the University of Leipzig. In 1917, he became Professor « Emeritus » .

Rabl was named honorary member of the Prague University Singers' Society.

Rabl made important contributions to cell research, fertilization, gastrulation and microbial growth. He even drew the illustrations of his publications. He developed the theory of the stability of chromosomes. On 3 occasions (between 1902 and 1910) , Rabl competed with Doctor Hans Chiari for the Nobel Prize in Medicine.

Rabl's most notable achievement was on the structural consistency of chromosomes during the cell-cycle. In 1885, he published that chromosomes do not lose their identity, even though they are no longer visible through the microscope.

Theory on the developmental history on the origin of branchiogenic carcinoma, congenital fistulas of the throat and cysts of the neck.

...

As a student, Carl Rabl's influences included Rudolf Leuckart at Leipzig, Ernst Wilhelm von Brücke at Vienna, and Ernst Hæckel at the University of Jena. In 1886, he became a full-professor at the German University in Prague, and, in 1904, succeeded Wilhelm His as professor of anatomy at the University of Leipzig. He was in charge of the anatomical institute at Leipzig until his death in 1917.

In 1891, Rabl married Marie Virchow, the daughter of German pathologist Rudolf Virchow. In 1902, he was a nominee for the Nobel Prize for Physiology or Medicine - the prize was, however, awarded to Ronald Ross, in 1902, for his work involving malaria.

...

Carl Rabl made important contributions to morphology, comparative embryology, and developmental history. Most important, however, was his role in the development of the chromosome theory. Rabl first clearly expressed the concept of the continuity of the chromosomes throughout cellular division.

He was the son of Carl Rabl, a physician, and intended to study medicine. Already, while attending the « Gymnasium » at Kremsmünster, he showed an interest in natural history and decided to study in Jena under the zoologist, physician, and evolutionist Ernst Heinrich Philipp August Hæckel (1834-1919) , a famous advocate of Charles Darwin's theory of evolution.

However, instead of going to Jena, he first studied medicine for 2 years at Vienna, from 1871. In the fall of 1873, he transferred to the University of Leipzig to work under the zoologist Karl Georg Friedrich Rudolph Leuckart (1823-1898) . During the summers of 1874 and 1875, he studied in Jena under Hæckel, who influenced him strongly and became his friend and correspondent.

In 1875, came under the influence of another great teacher, the physiologist Ernst Brücke (1819-1892) . While Hæckel was an enthusiast with a tendency to broad theorizing, Brücke insisted on extremely careful observation in his histological studies and firmly placed fact before theory.

While a student under Hæckel, Rabl had begun investigations into the formation of the germ layers in the young embryo. This was soon followed-up by research on the early cleavage and to the structure of the egg cell itself. This work convinced him that the events of cell division were precisely determined, and that embryological development was a mechanism in which the final position of each cell in the body had been pre-determined.

In 1882, he eventually received his medical degree from the University of Vienna and, subsequently, became first prosector at the anatomical institute there, assisting Karl Langer (1819-1887) . Rabl was habilitated for anatomy, in 1883 ; becoming professor « extraordinarius » , in 1885.

At this time, Rabl concluded, following studies of salamander larvæ, that the organization of the cell must remain through division ; that there was constancy in the number of chromosomal filaments characteristic of a given tissue ; and that a numerical law applied to each kind of cell. The idea of the individuality of the chromosomes had first been suggested by the Belgian embryologist and cytologist Edouard van Beneden (1846-1910) and was given its fullest definition by Theodor Heinrich Boveri (1862-1915) . Their works were fundamental to the understanding of the mechanism of heredity within the cell. The name chromosome was introduced by Heinrich Wilhelm Gottfried Waldeyer (1836-1921) , in 1888.

Rabl continued this work when he, in 1885, was appointed teacher of anatomy at the « Carl-Ferdinand-Universität » , in Prague (the German University in Prague) . Here, he attained the rank of « ordinarius » professor, in 1886. While at Prague, Rabl served a term as dean of his Faculty, and he was rector of the Ferdinand University, in 1903-1904. In 1891, he had married Marie Virchow, daughter of the pathologist Rudolf Virchow (1821-1902) . However, although they had many friends and Rabl was esteemed by his colleagues in Prague, he felt that he would be happier at a German University and, in 1904, accepted the chair at Leipzig as successor to Wilhelm His (1831-1904) . Rabl directed the anatomical institute at Leipzig, until his death in 1917.

Besides his work on the cell, Rabl's numerous special investigations included the development of the heart in amphibians, the formation of the lens of the vertebrate eye, and cranial segmentation, skeletal derivation, and the origin of the paired extremities. His contributions to morphology were widely cited by other comparative anatomists.

Carl Rabl was a nominee for the 1902 Nobel Prize for Physiology or Medicine. Another nominee was Hans Chiari (1851-1916) . The prize was awarded Sir Ronald Ross (1857-1932) for his work on malaria.

## Doctor Alexander Fränkel

Doctor Alexander Fränkel's detailed and comprehensive report about Bruckner is important.

Doctor Fränkel, a physician, frequented the « Riedhof » Restaurant in « Josefstadt » with Anton Bruckner for many years. Fränkel certainly conceded that Bruckner had a very modest level of general education, but he pointed-out his aptitude « in all realms of knowledge » , his ability to broaden his intellectual horizon and the adaptability of his intellect, as well as vouching for his above-average intelligence :

« Even if the sum of knowledge, which he carried with him, had no great weight, his intelligence vastly exceeded the average talent. »

...

The Austrian physician and surgeon Alexander Fränkel was born on 9 November 1857 in Jassy, Romania ; and died on 16 January 1941 in Hinterbrühl near Mödling, Lower-Austria.

After attending the Vienna « Gymnasium » and University, he received in 1880 the degree of doctor of medicine (doctor of « medicinæ universæ ») and joined the sanitary corps of the Austrian army. As surgeon of the Teutonic Knights, he took part in the Servian-Bulgarian War of 1855-1886. He resigned from the army in 1890, becoming lecturer on surgery at the University of Vienna. From 1881 to 1884, he practiced surgery at the 2nd Surgical University Clinic under Doctor Theodor Billroth. From 1884 to 1890, worked as regimental and chief-physician for the surgical

department of the « Garrisons-Spital » . In 1890, surgeon at the University of Vienna (receiving the title of outstanding professor in 1902, and full-professor in 1917) . From 1891 to 1893, assistant at the « Rudolfiner-Haus » founded by Billroth. From 1893 to 1904, chief-surgeon at the Vienna « Karolinen Kinderspital » (Karoline Riedl's Children Hospital) . Since 1895, assistant chief-surgeon of the general dispensary there. From 1895 to 1929, he succeeded Viktor von Hackers on the board of surgeons at the Vienna General Polyclinic.

Fränkel wrote many essays on a period of 25 years for the « Wiener Klinische Wochenschrift » , becoming its chief-editor in 1806. He wrote essays for the « Wiener Medizinische Wochenschrift » , « Wiener Klinik » , « Zeitschrift für Heilkunde » , « Centralblatt für Chirurgie » , and other publications. In his numerous scientific work, Fränkel dealt mainly with the problem of wound infection as well as with carcinoma research and treatment. He was secretary of the « Österreichischen Gesellschaft für Erforschung und Bekämpfung der Krebskrankheit » (Austrian Society for Research and Control of Cancer Disease) . The monograph « Das Problem der Krebskrankheit » (The Problem of Cancer Disease) , published in 1911, was written in this context.

Fränkel has embraced Christianity.

...

Doktor Alexander Fränkel, Chirurg : geboren 9. November 1857 Jassy, Rumänien ; gestorben 16. Jänner 1941 Hinterbrühl bei Mödling, Niederösterreich. Nach Studium an der Universität Wien (Doktor der medicinæ universæ 1880) war Fränkel 1881-1884 Operations-zögling an der Zweiten Chirurgischen Universitäts-Klinik unter Theodor Billroth. 1884-1890 wirkte er als Regiments- und Chefarzt der chirurgischen Abteilung des Garnisonsspitals Nummer 2, 1890 habilitierte er sich für Chirurgie an der Universität Wien (1902 außerordentlicher Professor, 1917 ordentlicher Titularprofesor) , 1891-1893 war er Assistent im von Billroth gegründeten Rudolfinerhaus, 1894-1904 Primarchirurg am Karolinen-Kinderspital und 1895-1929 Vorstand einer der chirurgischen Abteilungen an der Wiener Allgemeinen Poliklinik (Nachfolger Viktor von Hackers) . In seinen zahlreichen wissenschaftlichen Arbeiten befaßte sich Fränkel vor allem mit dem Problem der Wundinfektion sowie mit der Karzinomerforschung und -bekämpfung.

...

Der österreichische Militärsarzt wanderte in seiner Jugendzeit auf die Kriegsschauplätze des Balkan und wurde dort ein großer Kriegschirurg. Er lieferte auch kriegschirurgische Mitteilungen aus dem Deutsch-Ordensspital in Belgrad. Zurück in Wien schuf Fränkel an der Polyklinik eine neue Lehrstätte mit glänzenden Operationserfolgen und zahlreichen Schülern. Man gedenke besonders seiner glänzenden Verteidigungsschrift im Rechtsstreite zwischen der Österreichischen Gesellschaft für Erforschung und Bekämpfung der Krebskrankheiten mit der seinerzeitigen niederösterreichischen Stadthaltere, als es sich darum handelte, das Vermächtnis einer wohlthätigen Dame für die Krebsforschung zu retten. Fränkel setzte sich auch insbesondere dafür ein, um der Stadt und auch dem Lande die notwendige Anzahl von Spitälern zu verschaffen.

Wels : Honorary member

**Thursday, 20 May 1869** : Anton Bruckner is appointed honorary member of the « Liedertafel » of Wels. This Choral Society (founded in 1847) is under the management of August Göllerich senior. The composer has developed, over time, close ties with this town.

Letter from Anton Bruckner (Vienna) :

« Euer Hochwürden und Gnaden !

Soeben bin ich aus Paris angekommen, nachdem ich seit 24. April in Frankreich war. Ich habe in Nancy die zwei Konzerte am 28. und 29. von März mitgemacht und weitaus den Vorzug erhalten vor allen dort anwesenden Belgiern, Deutschen und Franzosen. Der Erfolg für mich war großartig. Die musikalischen Zeitungen aus Nancy, Lyon, Paris etc. spenden mir größten Ruhm. Auch in Paris habe ich zweimal konzertiert, zuerst im Atelier des Orgelbauers Merklin und dann in Notre-Dame, wo die größten Künstler aus Paris etc. versammelt waren. Zum Schluß verlangte ich noch ein Thema, welches mir einer der größten Organisten aus Paris gab, und als ich es in drei Teilen durchgeführt hatte, war der Erfolg ein grenzenloser. Solchen Triumph werd' ich nie mehr erleben. Die musikalischen Zeitungen aus Paris sagen, erst durch mich hätte die große Orgel von Notre-Dame ihren Triumphtag gefeiert, und man habe in Paris etwas Vorzüglicheres nie gehört etc. Solcher Erfolg, für mich zu überraschend, hat leider auf meine Gesundheit stark gewirkt, doch hoffe ich, durch Gottes Gnade bald wieder ganz gesund zu sein. Von Pater Schneeweis einen Handkuß. Solchen auch von mir an die Fräulein Schwestern. Nochmals danke ich Euer Gnaden für alles Gute, das mir zu Ostern so reich zuteil ward. Herr Waldeck schrieb mir, meine Messe würde schwer aufzuführen sein wegen des Raumes. Ich bitte Euer Gnaden gütigst, Sorge fragen zu wollen, daß selbe doch von den Damen und Herren der Liedertafel und des Musikvereines gut jetzt schon studiert werde ; denn auf dem Chor ist wohl zu nichts Platz, aber wir können selbe ja im Freien aufführen mit oder sogar ohne Tribüne. Will man aber nur eine kleine Messe und nicht meine aufführen, so ist's mir auch recht. Indem ich meine Bitte nochmals wiederhole, küsse ich Ihre Hände und verharre ehrfurchtsvollst. Euer Hochwürden und Gnaden dankschuldiger Diener,

Anton Bruckner

Von meiner Schwester Handküße.

Wien, 20. Mai 1869. »

**Monday, 24 May 1869** : In his edition, the « Welser Anzeiger » (The Wels Gazette) reports that Bruckner's performance has aroused « the astonishment and admiration of everyone » .

Vienna : Hotel « Zur goldspinnerin »

During his stay in Vienna **between 1869 and 1871**, Johannes Brahms lived at the Hotel « Zur goldspinnerin » (At the Golden Spider) , located at « Ungargasse » Number 2 in the 3rd District, offering a great view over the « Stadtpark » close to the « Stephansdom » . (Ludwig van Beethoven was also a guest there.) A commemorative plaque honouring

Brahms can be seen today in front of the actual building.

Since the 1870's, the « Zur goldspinnerin » was Vienna's largest hotel where you could discreetly rent « by the hour » . Shift-workers from the nearby factories would register to stay overnight - most of the time, sharing their bed. Day-workers would bring along prostitutes who lured their suitors on the streets of the First District (« Kohlmarkt » , « Kärntnerstraße » and « Seilerstätte ») .

At the end of the 19th Century, the Viennese bourgeoisie still frequented the hotel but it was now essentially the meeting-place between the « ladies of the night » and their suitors.

In 1908, the « Zur goldspinnerin » was extended and converted into a hotel-restaurant. It was renamed the « Goldene Spinne » (or « Goldenespinne ») .

After the Second World War, the « Goldene Spinne » , and with it just about every hotel in and around Vienna's city-centre (including the noble ones ...) , counted on this « quick and easy » way to make money.

Today, the hotel (located at « Bahngasse » Number 1a) looks quite different : the façade suffered major damage during Allied bombings. That is why it had to be rebuilt.

The hey-day of prostitution in this area ended in the mid-1970's with the reconfiguration of the city-centre. The construction of pedestrian zones, shopping-streets and restaurants, even for the sophisticated « clientèle » , led to the departure of the « faune » from the First District.

### 1869 : Bruckner's summer vacation

**Summer 1869** : Anton Bruckner spends his summer vacation in Linz, St. Florian, Schwanenstadt (at the Mayfelds) and Vöcklabruck (at the Huebers on « Graben » Number 15) .

At that time, Bruckner's home in Linz was the « Florian-Haus » (« Florianer Stiftshaus » or « Freihaus des Klosters St. Florian ») : the local residence of the monks of St. Florian, located at « Landstraße » Number 22.

### WAB 27 : « Gasthof Zur Stadt Frankfurt »

**August - September 1869** : As reported by Doctor Ferdinand Krackowitzer - Anton Bruckner personally conducts the rehearsals of the Mass in E minor (**WAB 27**) at the « Gasthof Zur Stadt Frankfurt » in Linz. The choir is composed of members of the Liefersafel « Frohsinn » and the « Sängerbund » , plus brass-pupils of the « Musikverein » .

Anton Bruckner mentioned that the Mass in E minor also took place 3 times (**before July 1869 ?**) at the Vienna Court Chapel.

## Vienna Conservatory : Academic Year 1869-1870

Hermine Adametz studiert am Wiener Konservatorium bei Anton Bruckner 3 (?) Schuljahre Harmonielehre und Kontrapunkt I und II.

Weitere Bruckner-Schüler sind Max Ambros von Rechtenberg (Harmonielehre und Kontrapunkt) ; Carl Gaßner (Harmonielehre und Kontrapunkt) ; Josef Hellmesberger junior (Harmonielehre und Kontrapunkt) ; Carl Kratzl (Harmonielehre) ; Josef Lamberger (Harmonielehre und Kontrapunkt) ; Leopold Landskron (Harmonielehre und Kontrapunkt) ; Josef Latzelsberger (Harmonielehre und Kontrapunkt) ; Carl Lux (Harmonielehre und Kontrapunkt) ; Wilhelm Rauch (Harmonielehre und Kontrapunkt) ; Hugo Reinhold (Harmonielehre und Kontrapunkt) ; Damian von Röbl (Harmonielehre und Kontrapunkt) ; Emil Schwarzkopf (Harmonielehre und Kontrapunkt) ; Josef Siebert (Harmonielehre, Kontrapunkt und Orgel) ; Eduard Stanek (Harmonielehre und Kontrapunkt) ; Leopold Svoboda (Harmonielehre und Kontrapunkt) ; und Carl Wolfrum (Harmonielehre und Orgel) .

...

Im « Personalstand des Konservatoriums im Schuljahre 1869-1870 » steht Anton Bruckner (alphabetisch bedingt) an erster Stelle :

« 2. Lehrpersonal.

Herr Anton Bruckner, Professor (Kontrapunkt und Orgel) , seit 1868 (2 Jahre) . »

...

Das alphabetische « Verzeichniß der Zöglinge » listet und andere folgende Schüler auf :

Hermine Adametz (« aus Ternanye in der Militärgrenze, 28 Jahre ») ; Ambros von Rechtenberg (« aus Krakau in Galizien, 18 Jahre ») ; Josef Lamberger (« Pest in Ungarn, 17 Jahre ») ; Leopold Landskron (« 27 Jahre ») ; Josef Latzelsberger (« aus Allhartsberg in Niederösterreich, 20 Jahre ») ; Wilhelm Rauch (« aus Deutsch-Preußnitz, 25 Jahre ») ; Damian Röbl (« aus Prag in Böhmen, 18 Jahre ») ; Emil Schwarzkopf (« 18 Jahre ») ; Josef Siebert (« 16 Jahre ») ; August Sturm (« 14 Jahre ») ; Leopold Swoboda (« 18 Jahre ») ; Carl Wolfrum (« 18 Jahre ») .

...

Anton Bruckners Schüler erscheinen auch im Verzeichnis der zwischen 15. Juni 1870 und 8. Juli 1870 vorgenommenen « Classen-Prüfungen » :

« Orgelschule des Herrn Professor Anton Bruckner (4 Schüler) :

### I. Klasse

Lobenswerth : 1. Josef Siebert ; 2. Max Ambros von Rechtenberg.

### II. Klasse

Vorzüglich : 1. Hugo Reinhold ; 2. Josef Latzelsberger.

Schule für Harmonielehre und Kontrapunkt des Herrn Professor Anton Bruckner :

### I. Klasse

(Unter 13 Zöglingen.)

Vorzüglich : 1. Emil Schwarzkopf ; 2. Carl Wolfrum ; 3. Hermine Adametz ; 4. Josef Hellmesberger junior ; 5. Carl Lux.

Lobenswerth : 1. Josef Lamberger ; 2. Josef Siebert ; 3. Carl Gaßner ; 4. Max Ambros von Rechtenberg.

### II. Klasse

(Unter 6 Zöglingen.)

Vorzüglich : 1. Leopold Landskron ; 2. Josef Latzelsberger ; 3. Hugo Reinhold ; 4. Damian Röbl.

Lobenswerth : 1. Eduard Stanek ; 2. Leopold Svoboda.

### III. Klasse

Vorzüglich : Wilhelm Rauch. »

...

Einige Schüler erhielten « Classenprämien » :

« Orgelschule des Herrn Professor Anton Bruckner :

### II. Klasse

I. Prämie : Hugo Reinhold.

2. Prämie : Josef Latzelsberger.

Kontrapunktschule des Herrn Professor Anton Bruckner :

I. Klasse

1. Prämie : Emil Schwarzkopf.

2. Prämie : Carl Wolfrum.

II. Klasse

1. Prämie : Leopold Landskron.

2. Prämie : Josef Latzelsberger.

III. Klasse

1. Prämie : Wilhelm Rauch. »

...

Anton Bruckner devoted one hour in the morning to prayer before teaching at the Conservatory, and one hour in the evening before eating his late supper (which he took around 10 pm in a « Gasthaus » in Vienna) .

Bruckner owned a lavishly equipped pedal-harmonium which is now kept at the Monastery of St. Florian and (confidential matter) can be tested there. It has, however, a frightfully loud and robust sound. Bruckner literature nowadays still has it that Bruckner had had an organ in his flat. This is, of course, a misunderstanding ; he had just his pedal-harmonium, an instrument which, because of the pedal, had been praised as « room-organ » in the 19th Century. Bruckner certainly could not afford a pipe-organ.

Bruckner had to hold his organ lessons at the « Kaiserlich-Königliche Lehrer- und Lehrerinnen-Bildungsanstalt » (The Imperial and Royal Educational Institute for Male and Female Teachers) as from 1870 at a pedal-harmonium.

On October 1, 1869, Bruckner was finally appointed professor for organ at the Conservatory of the « Gesellschaft der Musikfreunde » in Vienna but had still to wait for a proper organ. In the old building of the Conservatory (« Unter den Tuchlauben ») , where Bruckner had already been teaching harmony and counterpoint for 1 year, there was no organ either.

Even after the Conservatory had moved to the new building of the « Musikverein » (on « Bösendorfer-Straße ») at

the beginning (October 4) of the new term 1869-1870, the Conservatory could not furnish the newly-appointed and very first organ teacher of the institute with an organ. Again, Bruckner and his students had to make do with a pedal-harmonium until an organ was put-up in the « Kleine-Saal » (today, the Brahms Hall) which was also used for chamber-size concerts. Unfortunately, it does not exist any more.

In these stylish surroundings, Bruckner taught his organ students whose number was fixed at the « normal number of students » of 9, according to the decree of employment. Each of them Bruckner had to teach 3 hours a week « personally, punctually and conscientiously » .

At all times, Bruckner had been informing his students about his compositions in progress, gave them acoustic samples on the piano (and probably the organ as well) , and they acted as a noisy unit when his Symphonies were performed.

### **WAB 27 : Tense rehearsals**

**Autumn 1869** : Anton Bruckner was preparing in Linz the newly-completed version of his Mass in E minor (**WAB 27**) .

Dripping wet, only in shirt-sleeves, he was in the middle of lengthy rehearsals and implored the musicians and singers to persevere.

An anxious Bruckner told Hans Commenda senior that the first performance was in only 3 weeks at the Vienna « Hofkapelle » .

He sighed :

« You can't stop because the work is so difficult ! »

As a conductor, Bruckner was very pleasant with the ladies, but too magisterial (hard) with the male-singers.

During the decisive rehearsals, the « Kyrie » made such difficulties that Bruckner himself, in despair, threw-away the baton, and the singers ran apart, in tears.

However, the next day, the rehearsal went to general satisfaction.

The over-joyed Bruckner wrote to a friend :

« Well-rehearsed and conducted. The most glorious day of my life ! The Bishop and Governor (of Linz) toasted me ! »

### **Vienna : Death of « Nanni »**

**Sunday, 9 January 1870** : Letter from Anton Bruckner (Vienna) to Rosalia (« Sali ») Hueber (Vöcklabruck) :

Maria-Anna (« Nanni ») is very ill. Anton warns Rosalia to avoid direct contact with her sister due to a risk of contagion. (Their mother Theresia Helm died of the same affliction.) Anton and Ignaz would help to pay her travel expenses to Vienna.

**Sunday, 16 January 1870** : Letter from Anton Bruckner (Vienna) to Rosalia (« Sali ») Hueber (Vöcklabruck) :

Today, at 3 o'clock in the afternoon, Bruckner's younger sister, Maria-Anna (born on 27 June 1836 in Ansfelden) dies of tuberculosis. Father Schneeweiß is at her side.

**Tuesday, 18 January 1870** : Funeral of Maria-Anna Bruckner at the Church of the « The Holy Trinity » . The ceremony is headed by the Minorite Father Bernardin Karpfenberger, in presence of Anton, Ignaz and Rosalia.

She will be buried at the Währing Cemetery in Vienna. In 1901, Ignaz will order the transfer of her remains to St. Florian.

Rosalia will look after her brother for several days in his Viennese apartment.

**Sunday, 23 January 1870** : Letter from Anton Bruckner to Doctor Karl Schiedermayr :

Bruckner announces the death of her younger sister « Nanni » to Doctor Schiedermayr. He feels very guilty and blames himself for the deterioration of her health because of the daily shores as house-keeper. He thinks she would still be alive if she stayed in Linz.

« Our sister Anna went to live with my brother Anton, in Linz, and then, in Vienna. She was our favourite. Mother has prayed a lot for her, even on her death-bed. She told Anton that he must now be responsible for her because she was a very fragile woman. So, my brother took care of her. Unfortunately, she died too soon. His grave is in the cemetery of Währing. »

(Ignaz Bruckner)

« Nanni » was the only person with whom Bruckner could talk everyday during the first 2 years spent in the Austrian capital (it also saved him household expenses since 1866 in Linz) .

« Frau Kathi » , the new house-keeper

**End of January - beginning of February 1870** : Anton Bruckner must now hire a house-maid.

Her name : Katherina Kachelmayer (Kachelmaier, Kachelmayr) , or simply « Frau Kathi » .

She will spend a few hours daily, taking care of the apartment and preparing the meals (including salted pork

accompanied by bread dumplings) . She will be devoted to him for more than 20 years (until his death) . She will succeed in gaining his trust, and some notoriety with his pupils and colleagues.

She was born on 19 February 1846 and died on 23 March 1911 at the asylum of Steinhof, near Vienna. She was the wife of a worker.

In 1876, her monthly salary was 7 Florins (« Gulden ») .

She was very controlling - even tyrannical. She was obsessed with order and cleanliness (she even bullied him for misplacing a slipper !)

Bruckner was an old stubborn bachelor who was rather negligent. She was not allowed to touch anything on his desk or piano. Snuff from his silver-box was a solace, even if she growled about brown stains everywhere.

She had every reason in the world to despair of his disorder. She was a straight shooter - so parks would occasionally fly !

She often packed-up making her last « farewell » ... to finally return the next morning. Each time, she insisted that he was a very lucky man because it was very difficult to find a replacement able to negotiate with his numerous whims and quirks.

...

On « Heßgasse » Number 7, Bruckner was, at best, tempestuously served by Katharina Kachelmayr (« Frau Kathi ») . It was lucky she didn't spank him. He was her unending vexation and she didn't mind saying so, loudly. She couldn't bear the chaos in his bedroom. She was tired of the snuff-stained ink-blotted litter in the other chambers. Every 2 weeks, she had to threaten to quit if the « Herr » Professor didn't stop throwing stacks of note sheets on top of his slippers.

Certainly, « Frau Kathi » enjoyed Bruckner's full-confidence and decent respect. He never appeared partially clothed in the morning, even when he was an old man. What a delightful scene it must have been when he came into the kitchen for his morning cup of coffee ! He would sit-down and talk to « Kathi » about the happenings of the day before and complain about the malignity of his enemies. Sometimes, he would tell her about his harmless little adventures in love. He might, on occasion, ask her to help him in making an appointment with a girl or in getting a gift for a « sweet-heart » .

Bruckner opened up to « Frau Kathi » :

« Only once in my life, when I was young, did I ever kiss a girl. I have repented it deeply as a sin. »

The chronicler of this unique story adds nothing further.

Sometimes « Kathi » would be given a foretaste of the role she would play in stories about Anton Bruckner's life, when he told her :

« You will become a historical personage through me. »

We have not been told how she reacted to such remarks or whether she really was happy in performing her tasks. She was a faithful soul, and she served and nursed the sick composer for many years, up to the time of his death. He bequeathed her a small sum, which the heirs promptly increased. And, after all, she actually did become a historical figure.

### Bruckner plays at home

**1870's** : Anecdote from Anna von Gyurkowich :

« Anton Bruckner had an organ (pedal harmonium) in his flat (at « Währinger-Straße » Number 41 in the 19th District, on the third floor) . At that time, I was a girl of 13 and, with my brothers and sisters, often used to visit Mrs. Römer, the widow of a major of the Medical Corps who lived on the second floor of the aforementioned house. There, we heard Bruckner play the most wonderful Preludes on his instrument. »

### Kirchdorf : « Gasthof “ Zur Post ” »

**1870's** : During his summer holidays, Anton Bruckner frequently visited his friend Doctor Kaltenbrunner in Kirchdorf. He stayed at the « Gasthof “ Zur Post ” » , which also served as rehearsal-hall for the local « Liedertafel » .

Alois Spannesberger reports that Bruckner met Alois Weißgärber and « Fräulein » Schininger in Schlierbach. He made an excursion to Kremsmünster, where he received a letter from Richard Wagner.

**Thursday, 25 August 1870** : Anton Bruckner goes to Kirchdorf and hears the local « Liedertafel » under choir-Master Alois Weißgärber. He is very pleased with the results and even played some pieces himself at the piano.

Alois Spannesberger reports in a chronicle :

« Recently, “ Herr ” Anton Bruckner was on a trip to Kirchdorf, where he received a special award. »

### « Kirchdorfer Liedertafel »

Kirchdorf ist ein Stück lebendiger Kirchdorfer Tradition. Gegründet vor 160 Jahren, hat der Männerchor als musikalische Institution schon jetzt seinen historischen Platz behauptet.

Die Kirchdorfer Liedertafel zählt zu den ältesten Chören Oberösterreichs. Sie besteht derzeit aus 21 aktiven Sängern aller Alters- und Berufsgruppen. « Mit eiserner Dauer sind fröhlich wir Männer » lautet das Vereinsmotto seit 1852.

« Diese eiserne Dauer und die Fröhlichkeit werden uns ein guter Wegbegleiter auch in den nächsten Vereinsjahren sein. Es wird aber immer schwieriger, als reiner Männerchor zu bestehen. Daher sind wir auch auf der Suche nach Nachwuchs, um den Bestand des Chores auch auf die nächsten Jahrzehnte zu sichern » , so Obmann Günter Heim.

Nur vier Monate nach der Gründung des Chores am 9. Jänner 1852 standen die Sangesbrüder auf der Bühne und gaben ihr 1. Konzert. In den folgenden Jahren entwickelte sich der Chor prächtig, musste aber auch immer wieder um sein Bestehen ringen. Die Vereinsfahne aus dem Jahr 1868 ist noch heute bei jedem Konzert dabei.

« Sie fördert den Zusammenhalt des Chores und besteht aus prachtvollem Seidenstoff und einer Stickerei mit echten Goldfäden » , so Heim.

Um die Jahrhundertwende gab es auf Einladung der Kirchdorfer Liedertafel einen Besuch der Männergesangsvereine Frohsinn aus Linz und Frohsinn aus Wien. Die Kirchdorfer waren von den Darbietungen so begeistert, daß die Veranstaltungswiese in der Nähe des Parks seither den Namen « Frohsinnwiese » trägt.

### 1870's : The erection of the « New Vienna »

In the years around 1870, there was a crucial transformative phase in Vienna's development towards becoming a major modern metropolis. From 550,000 around 1850, Vienna's population had almost doubled to about 1 million by the 1870's.

For Vienna, 1873 became the key year of the era. Like the construction of the new « Ringstraße » , the World Exhibition symbolized the city's ambitions of attaining international standing. It was the first event of its kind not to be held in London or Paris, and an ostentatious display of superlatives : an area 5 times as large as the previous show in Paris, 53,000 exhibitors from 35 nations, 194 extravagantly designed pavilions, and crowning it all the Palace of Industry with its 85 metre high « Rotunda » , then the world's largest domed structure and a new Viennese landmark, and the 800 metre long Engine Hall. The Exhibition attracted more than 7 million visitors between 1 May and 2 November, yet, its objectives were only partially met. 1873 was also the year of the great stock-exchange crash which brought the phase of economic prosperity and optimistic hopes for the future to an abrupt end.

It is the period of large-scale building projects and the movers and shakers of the « Gründerzeit » era, of miserable social conditions, migration and the advent of the mass political parties, of increased mobility thanks to faster transport, of the advances made in medicine and technology and of the fashions of the period, which was a golden age in the decorative arts.

### The city as construction site

The municipal politicians of the Liberal age laid the ground-work for a modern technical infrastructure which became a prime driver of the economic boom and radically transformed the city. One of the key-projects was the regulation of the Danube, which was undertaken for flood protection purposes as well as with a view to the city's further expansion. The cutting of a new channel to shift the Danube closer to the city was expected to entail advantages in terms of trade, commerce and transport, the aim being to make the Danube into a navigable water-way. The idea of containing the main-arm of the river in a uniform, perfectly straight bed was not a new one, but it was not until now, with the aid of modern steam-engines, that it became possible to implement the plan within the space of a few years, from 1869 to 1875.

The most costly of the urban infrastructure projects was the construction of Vienna's first mountain spring water pipeline (1870-1873) , which tapped the Alpine springs of the Rax-Schneeberg massif to supply water to the city and its million-plus inhabitants. Repeated water shortages nevertheless ensued as a result of planning errors coupled with escalating water consumption. Besides water-supply and sewage disposal, the city fathers also tackled another hygienic problem : like the city as a whole, Vienna's « communal » cemeteries were in urgent need of expansion by the middle of the 19th Century. In 1863, the City Council introduced a system of central planning, and the new Central Cemetery in Simmering was officially opened 11 years later. The « burial question » was fraught with technical, religious and cultural implications that prompted heated debate in Vienna.

Last but not least, Vienna's transport infrastructure also underwent a radical transformation : the years around 1870 saw the construction of 4 of the city's 6 major « Gründerzeit » railway termini (« Südbahnhof » , « Nordwestbahnhof » , « Franz-Josefs-Bahnhof » and « Staatsbahnhof » - later called : « Ostbahnhof ») , and within a period of 6 years, 5 new bridges were built over the newly-regulated Danube, among them the « Kaiser-Franz-Josefs-Brücke » (later called : the « Floridsdorfer Brücke ») and the « Kronprinz-Rudolf-Brücke » (which became the « Reichsbrücke ») . To coincide with the World Exhibition, the City Council also had several bridges over the Danube Canal and the River Wien renovated or rebuilt. A task not considered to be within the remit of the civic authorities was the expansion of the public transport network, which was left to private investors : by 1873, a basic tramway system consisting of the « Ringstraße » lines and some initial links to the suburbs was in place, still operated by horse-drawn trams. The municipal politicians were likewise little concerned with the housing market, with the result that the speculation-driven expansion of new districts on the outskirts was dominated by « American-style » gridiron streets lined with low-standard tenement blocks. Mass immigration of people looking for work and soaring living costs swiftly exacerbated the housing shortage and the squalid living conditions of the urban poor.

### Boulevard of grandiose ambitions : the « Ringstraße »

The Emperor ordered the demolition of the city walls and fortifications in 1857, and an international urban planning competition held 1 year later yielded the « master-plan » which served as the blue-print for the key public buildings, green spaces, vistas and squares. The construction of the « Ringstraße » was a State-controlled, centrally managed, large-scale project. The overall supervisory role lay with the Ministry of the Interior, with the City of Vienna reduced to the status of onlooker while still being required to finance the new road and sewer network. The building of « New Vienna » became a bone of contention between the Imperial Court, government, military administration and civic

authorities. Compromise was achieved, inter-alia, through the assignment of parcels of land free of charge for the laying out of « Stadtpark » and « Rathausplatz » . The proceeds from the sale of building plots to private individuals enabled the state to finance representative public buildings like the « Hofoper » .

May 1st, 1865, saw the official opening ceremony for the « Ringstraße » - despite the fact that the major part of the boulevard was not yet built and still at the planning stage. Buildings, most of them inhabited, were already standing on « Opernring » , « Kärntnerring » and « Schuberting » , however, and the economic boom meant that intensive private-sector building activity continued right up until 1873. The clay beneath Vienna was thus transformed into « gold » , as illustrated by the meteoric career of brick manufacturer Heinrich Drasche : after founding the « Wienerberger » joint-stock company in 1869, he subsequently rose to become the richest man in Vienna, commissioning the building of the « Heinrichhof » , a huge new-style luxury apartment building directly opposite the Opera House. By 1873, all the main public buildings were already under construction or discussion, including the new City Hall, the Parliament and the museums. Vienna's leading architects, notably Heinrich Ferstel, Theophil Hansen and Friedrich Schmidt, designed the first major buildings in the « Viennese style » , an especially opulent variant of the neo-Renaissance style which caused an international furore.

This feverish period was also characterized by the mass entertainments of the « Gründerzeit » , innovations in home furnishings and engineering, the role played by the illustrated media, inventions such as pneumatic post and, not least, on the great arts debate of the time. As the capital city of music, Vienna, around 1870, provided the stage for a musical « clash of the Titans » between the « consummator » of Viennese Classicism, Johannes Brahms, and the New German School represented by Anton Bruckner and Richard Wagner. The early 1870's also saw Austria's first ever environmental campaign, to save the Vienna Woods from logging, as well as the expedition to the North Pole, which returned in 1874 after 2 years trapped in the ice. Grand hotels like the « Metropol » and « Imperial » opened their doors, while J. & L. Lobmeyr unveiled the first « Arabian-style » range of glassware. The latest fashions were imported from the world's major cities, among them ornate gowns with extravagant bustles.

### Vienna : « St. Annahof's » Café and Restaurant « Neues Elysium »

**1870** : The « St. Annahof » (or « Annahof ») is located in the 1st District of Vienna, right next to St. Anna Church (« St. Anna Kirche ») between « Annagasse » Number 3 and « Johannesgasse » Number 4. This building has a long history.

In 1628, the « St. Annahof » was a Jesuit monastery where the novitiate of the Order of St. Anna was offered. In the basement, there was an inn. In 1786, the building housed the Vienna Academy of Fine-Arts, where public exhibitions were to be held. The 18th Century saw the creation of the St. Anna Teacher's Training College which will welcome under its roof Franz Schubert (1797-1828) and Franz Grillparzer (1791-1872) . From 1870 to 1874, Anton Bruckner acted as assistant-professor of piano, organ and harmony.

On March 1, 1840, the Biedermeier-styled « Neues Elysium » café-restaurant was inaugurated in the basement of the « St. Annahof » . The entrance is located at « Johannesgasse » Number 4. It is considered to be « the first

underground ride in the world » .where one could embark in a horse-drawn railway on a voyage around the world, passing through 5 rooms decorated as the different continents.

It will quickly become one of the main attractions in Vienna.

In 1854, the owner, Josef Daum, died of cholera. His son then took-over. But financial difficulties which began in 1857 forced the closure of the coffee-shop in 1864.

The « Annahof » in its present form was built in 1894 according to plans by architects Fellner and Helmer who, at the time, specialized in building theatres in Europe. The « Annahof » was designed as a tenement-house with a « Revue » Theatre which also served as a Ball-Room Restaurant for Viktor Silberer, a pioneer of Austrian aviation.

Fellner & Helmer was an architectural firm founded in 1873 by Austrian architects Ferdinand Fellner (19 April 1847 - 22 March 1916) and Hermann Helmer (13 July 1849 - 2 April 1919) .

They designed over 200 buildings (mainly Opera Houses and apartment buildings) across Europe in the late-19th Century and early-20th Century, which helped bind the Austro-Hungarian Empire together and cement Vienna as its cultural centre. While most of the work stood in the former Austro-Hungarian Empire, others can be found from Switzerland to present-day Ukraine. Frequent collaborators for integrated exterior and interior artwork include Gustav Klimt, Hans Makart, Theodor Friedl, and other significant artists.

### Vienna : The « St. Anna Affair »

According to Bruckner, his positions as piano teacher at St. Anna College and as music teacher at the Vienna Conservatory do not yield enough money. That is why he decided to give private piano lessons on the time normally allocated to composition.

**September 1871** : Anton Bruckner's disproportionate affection for his female pupils will put him (once again) into trouble ...

During a piano class, Bruckner naively addressed one of his students, who is the daughter of a shoe-maker :

« Mein lieber Schatz » (My sweetheart)

(An expression that does not mean anything suggestive or inappropriate to him.)

Her immediate neighbour (perhaps, a bit jealous ...) , who happens to be the daughter of influential parents, reported the incident to the administration.

At the time, some parents were concerned about the atmosphere that seemed to prevail at St. Anna.

Terrified at the idea of being accused of contempt to good morals, Bruckner, in a state of panic, went from office to office to justify himself, claiming his innocence. Meanwhile, his very vocal rivals called this a scandal.

For his own defence, Bruckner even went so far as to ask his director, Josef Hellmesberger senior, to write him « de facto » an official certificate attesting his irreproachable behaviour during his courses at the Vienna Conservatory.

However, despite his « naïveté » , Bruckner had to face the Discipline Committee.

He will say, disillusioned :

« Difficile est satiram non scribere. »

(It is hard not to write satire.)

Quotation from the Latin poet Juvenal (« Decimus Iunius Iuvenalis ») who lived from the end of the First Century to the beginning of the Second Century A.D. He is the author of 16 poetic works gathered in a single book called « The Satires » , composed between the year 90 and the year 127.

In her extremely detailed article, « Bruckner und die “ Affaire St. Anna ” » , Elisabeth Maier begins by describing the situation at St. Anna's Teacher Training Institute in Vienna, in **October 1870**, when Anton Bruckner was appointed an assistant-teacher. Like many other educational establishments at the time, it was undergoing radical change and re-organization « encumbered with every conceivable difficulty » . Maier paints a fairly grim picture of Bruckner's working conditions at the Institute and, then, makes use of a considerable amount of archival evidence, including official documents and newspaper reports, to describe the accusation of improper behaviour that confronted him when he returned to his teaching duties in the **Autumn of 1871** after his successful series of organ recitals in London, his own reaction to the accusation as revealed in letters to friends, the obvious reluctance of the authorities to re-instate him fully, although he was finally exonerated of the alleged offence, and the suggestion of some behind-the-scenes political manoeuvres. She also clarifies some misapprehensions that have arisen in Bruckner scholarship as a result of Max Auer's erroneous suggestion (with thinly disguised anti-Semitic undertones) in Göllerich-Auer IV/1, pages 178f. , that the young lady who reported the alleged incident to the authorities was from a Jewish family and had apparently done so in a fit of pique, and underlines Johann Herbeck's helpful intervention. Bruckner was allowed to continue teaching at the Institute until **July 1873** but, at his own request, in the men's section only.

**Around the beginning of October 1871** : Anton Bruckner is accused of having offended young female students at St. Anna College for Teacher Training. He was denounced by the daughters of Director Joseph Karl Streinz. On the basis of an anonymous complaint, Bruckner is held responsible by school councilor Doctor Moritz Adolf Ritter von Becker. The Director, Professor Vernaleken, tries to dismiss Bruckner from the institution. Bruckner asks Karl Seiberl (now, a lawyer in Vienna) for legal advice.

**Thursday, 5 October 1871** : Letter from School Councilor Doctor Moritz von Becker (?) to Doctor Josef Jireček (not Karl

Ritter von Stremayr) of the Ministry of Education :

The letter refers to Director, Professor Vernaleken. Announcing the employment of assistant-teachers Eduard Kremser, Karl Hoffmann and Richard Kümmel. Dismissal of Anton Bruckner. Transferring the organ and music theory lessons to Eduard Kremser.

In August Göllicher - Max Auer, it is not clear whether Moritz von Becker or Professor Vernaleken is the author of the letter. It seems that Becker has merely issued an opinion.

...

Dismissal of Anton Bruckner from his post as assistant-professor in the context of the « St. Anna affair » . He will be later rehabilitated.

The Minister of Education, Karl Ritter von Stremayr (dedicatee of the 5th Symphony) will rule in favour of Bruckner.

The latter remained at his post until 1874 when Rudolf Weinwurm succeeded him in a major restructuring of the institution. (Although often separated for professional reasons, the ties between Bruckner and Weinwurm will last until the composer's death.)

Shortly after this unfortunate event, professor Bruckner's innocence will prove to be obvious. The whole thing will have been a simple but disastrous misunderstanding.

Two observations :

First - neither the pupils nor the superiors managed to decode Bruckner's personality.

Second - there was no matter for scandal despite an unusual but harmless use of words.

Nevertheless, from now on, Bruckner will ask to teach only boys - fearing that :

« Someone could come-up at any time to denounce me. » , he wrote to a friend.

The premature death of his supporter, Johann Herbeck, and the disastrous premiere of the 3rd Symphony will be the culmination of a series of personal set-backs that will have begun with the St. Anna « affair » .

Bruckner will admit :

« Without the presence of Herbeck, I think it will be impossible for me to earn a living. All the pleasures and joys of being in Vienna have left me. In order to survive, I have to face so many complications that there is no time for art. »

**Around Saturday, 14 October 1871** : Anton Bruckner explains to Councilor Hermann Heiß that he is no longer interested in teaching elementary or secondary female classes at « St. Annahof » .

**Before Sunday, 15 October 1871** : The Leipzig « Tonhalle » reports on the St. Anna « affair » .

**Sunday, 15 October 1871** : The « Steyrer Alpen-Boten » , Number 83, reports on page 2 :

« Professor Anton Bruckner, the victim of a perfidious Czech denunciation » about the St. Anna « affair » . The newspaper is using an article published in the « Linzer Tages-Post » on October 12, 1871 :

« We will add that this is the same Anton Bruckner who, just recently, won the First Prize ahead of all its competitors during an organ competition in London - the pride of Austria and of his beloved fatherland : Upper-Austria. It seems that you want to drive out of the country the few competent men who remain to us, and only mingle with the arrogant bearded Czechs !

God is great ! »

**Tuesday, 17 October 1871** :

Testimony of Robert Niedergesäß on Anton Bruckner's good teaching at « St. Annahof's » Elementary and High-School, and on his rigorous moral attitude :

« Testimony.

The Board of Directors has pleased to confirm that the Imperial-Royal Court organist, “ Herr ” Professor Anton Bruckner, had taught piano playing with great success at the State Institute for Education of Teachers in Vienna during the academic year 1870-1871. He proved to have excellent teaching skills, an irreproachable attitude, infallible moral principles, and to be totally dedicated to his profession. Those qualities honour both the artist and the teacher.

Vienna, October 17, 1871.

Robert Niedergesäß,  
Imperial-Royal Director of the Imperial-Royal State Institute for Education of Teachers in Vienna. »

...

Letter from the Ministry of Education to the provincial education authority :

Referring to the letter of October 5, 1871, Eduard Kremser, Karl Hoffmann, Richard Kümmel and Anton Bruckner

(monthly salary of 54 Florins) are to be employed at « St. Annahof's » elementary and secondary school. The Directorate assumes full responsibility. Bruckner could also give singing lessons. According to Councilor Hermann Heiß : Bruckner is preferable to Kremser (due to his success as church organist and conservatory professor) . A reprimand was addressed to Professor Vernaleken.

**After Tuesday, 17 October 1871 - before Sunday, 22 October 1871 :**

Letter from Anton Bruckner to the « Linzer Tages-Post » and the « Steyrer Alpen-Boten » :

Bruckner reiterates that the alleged suspension from « St. Annahof » College was based on malicious denunciations. He is now asking the newspapers to publish the real facts and also the text written by Director Robert Niedergesäß (17 October 1871) .

An update was printed in both newspapers.

The Sunday edition of the « Steyrer Alpen-Boten » (22 October 1871) has titled his article : « Bruckner not dismissed »

Similar texts also appeared in the Viennese papers. Ignaz P. Traumihler sent to Bruckner a copy of the « Wiener Zeitung » which included a letter to publisher Franz Xaver Witt.

The « Leipziger Tonhalle » (1871) printed on page 697 the updated article of the « Linzer Tages-Post » .

**Before Saturday, 21 October 1871 :**

Letter from Doctor Karl Schiedermayr to Anton Bruckner (?) :

The St. Anna « affair » and the rumor that Anton Bruckner had applied for a post in Munich are probably raised in this letter.

Letter from Karl Waldeck to Anton Bruckner (?) :

Waldeck denounces the injustice done to Bruckner in connection with the St. Anna « affair » .

**Saturday, 21 October 1871 :**

Letter from Anton Bruckner to Doctor Karl Schiedermayr :

Bruckner tells all the facts about the St. Anna « affair » . The truth is that Professor Vernaleken wanted his eviction. Today, Johann Herbeck has transmitted a letter to Bruckner from the Ministry of Education (that Herbeck had received

from Councilor Hermann Heiß) : the Board exonerates Bruckner from all charges. And so, he will not be dismissed. Bruckner says he no longer wants to teach female classes - despite financial losses ; and confirms that he never sent a petition to Munich.

Greetings to Bishop Franz-Josef Rüdiger, Doctor Karl Schiedermayr and his sisters, and Baron Karl von Eberl.

...

Letter from Alois Ritter von Hermann (not to be confused with Councilor Hermann Heiß) to Johann Herbeck :

Von Hermann informs Herbeck that the Ministry of Education had exonerated Anton Bruckner from the accusations against him. Bruckner had personally told von Hermann that he is not interested in informing the female classes.

...

Letter from Anton Bruckner to Karl Waldeck :

Name-Day Congratulations. Bruckner thanks Waldeck for his full support during the St. Anna « affair » . Today, Herbeck had sent him a letter from the Ministry of Education (which Herbeck had received from Councilor Heiß) . He is exonerated from all charges. Eight days ago, Bruckner said to Heiß that he no longer wants to teach female classes. He prefers to renounce to the sum of 500 Florins. Greetings to Waldeck's parents.

...

The « Welser Anzeiger » , Number 42, reports on page 5 that Anton Bruckner had been relieved from his duties at « St. Annahof » College, and that Rudolf Weinwurm would become his successor :

« Anton Bruckner.

Perhaps, the greatest organist in Germany (see the original text written by August Göllerich junior on August 19, 1871 !) . Our Bruckner, of whom we are all proud, has been removed from his teaching position at the Viennese Educational College.

We don't know whether we are well-informed, if we argue that this dismissal was wished by Bruckner himself, and that he really doesn't have a good reason to ask the King of Bavaria for a post, but we know that it is a tasteless wiz coming from those Viennese leaves, when they portray Bruckner as the unfortunate victim of the current wave of dominating Czech politicians, because the alleged Czech successor to Bruckner is ... Rudolf Weinwurm ! »

**Sunday, 22 October 1871 :**

Article about the St. Anna « affair » published in the satirical Viennese journal « Die Bombe », page 187 :

« It seems that Bruckner was too affectionate with his female students. Lewy is said to have called his female students “ d'Lewy-ten ”. »

« Die Bombe » was a humorous and satirical weekly journal, published in Vienna between 1871 and 1925. The first editor was Joseph Braun, followed by Karl L. Nekam. Among the employees were Isidor Fuchs and the famous cartoonist László von Freckay. Acute social and political satires were found only at the beginning. Gradually, the world of Theatre and Operetta became the main targets. The paper finally slipped into cheap eroticism.

The « Steyrer Alpen-Boten », Number 85, titles on page 6 : « Bruckner is not dismissed »

« (Bruckner is not dismissed.)

“ Herr ” Anton Bruckner sends the following letter to the “ Linzer Tages-Post ” :

Commendable editorial department !

On the occasion of the publication of an article in your esteemed journal in regard to my alleged dismissal from teaching at the St. Anna's Training Institute, I find myself obliged to get the facts straight :

However, it is correct that slanderous, malicious, anonymous denunciations on myself were submitted to the management of the aforementioned institution.

To understand how far these accusations are justified, one may refer to the content of the following testimony :

“ Testimony.

The Board of Directors has pleased to confirm that the Imperial-Royal Court organist, “ Herr ” Professor Anton Bruckner, had taught piano playing with great success at the State Institute for Education of Teachers in Vienna during the academic year 1870-1871. He proved to have excellent teaching skills, an irreproachable attitude, infallible moral principles, and to be totally dedicated to his profession. Those qualities honour both the artist and the teacher.

Vienna, October 17, 1871.

Robert Niedergesäß,  
Imperial-Royal Director of the Imperial-Royal State Institute for Education of Teachers in Vienna. ”

“ I presume that those honourable editors, who published the article about my alleged dismissal, will also publish the truth.

Anton Bruckner, Imperial-Royal Organist at the Imperial Chapel and Professor at the Conservatory in Vienna. ” »

**Saturday, 28 October 1871** : Letter from Anton Bruckner to Karl Waldeck :

Bruckner reassures Waldeck : he will not return in Linz, despite the hostility in Vienna (the St. Anna « affair ») .  
Name-Day Greetings. Best wishes from Bruckner for a speedy recovery for Karl Waldeck's father.

**Before Thursday, 2 November 1871** : Letter from Moritz von Mayfeld to Anton Bruckner (?) :

Moritz wants fresh news from Bruckner on the performance of the Mass in F minor (**WAB 28**) and on the St. Anna « affair » .

**Thursday, 2 November 1871** (Feast of All Saints) : Letter from Anton Bruckner to Moritz von Mayfeld :

Was Bruckner concerned ?

A performance of the Mass in F minor (**WAB 28**) is questionable, since the « Wiener Singverein » can only rehearse starting on November 21. Johann Herbeck had laughed at Bruckner after yesterday's religious office (because of the article published on October 22 in the satirical Viennese journal « Die Bombe ») . « Kapellmeister » Leopold Eder had informed the press in good faith. St. Anna's director Joseph Karl Streinz had denounced Bruckner. The Ministry had reconfirmed Streinz's as director (Herbeck received the second letter from Hermann Heiß yesterday) . Bruckner is unhappy about this. Greetings to Frau Barbara (« Betty ») von Mayfeld. Bruckner inquires about Doctor Spies in Linz.

### The Viennese woman

Max Graf :

The Viennese woman has given sensual colour to the city's life. Her gay, natural laugh (different from the spiritual laugh of the French woman) could be heard in Vienna through the Centuries. It was her chatter, kisses and embraces which inspired great music and small music, folk songs and dances. Though there exist no statistics by which one can measure exactly what Viennese music owes to women, there is one instance where a definite relationship between the two can be established.

### The « Wiener Kaffeehaus »

The first « Viennese » coffee-house was allegedly founded by an Armenian in 1685. Over the following Centuries, the coffee-house became a Viennese institution.

By the 18th Century, citizens could meet-up at wine cellars or beer and coffee houses on Kohlmarkt and Graben to drink coffee, play billiards and converse, and, in some establishments, they could also smoke. By 1790, there were

already 70 coffee-houses in Vienna. They took-on a central role in urban society - men went to a « café » to be entertained, to debate and discuss, and to play cards. In the expanding metropolis, it offered a relatively stable « clientèle » and the chance to escape cramped living conditions. For a long time, they were the preserve of men ; women were only permitted to sit in the coffee-house gardens. During the Biedermeier era, all social classes frequented the coffee-houses, and different kinds of coffee-house for different demands emerged. From the end of the 18th Century, music was provided in the summer coffee-houses, which were mostly branches of established inner-city coffee-houses. The coffee-house gardens offered regular concerts in a pleasant setting with fine views.

In return for supplying political information, the Italian Pietro Corti had been granted permission to establish a coffee-house in the « Paradeisgartl » (pleasance) near the Hofburg on the part of the city fortifications known as the « Löwelbastei » . In 1820, he opened another « café » in the « Volksgarten » , designed by Peter Nobiles. Here, Joseph Lanner and Johann Strauß senior gave concerts, mainly to audiences composed of the nobility and wealthy middle-classes. From 1840, there were regular summer « soirées » . The « Volksgarten » news sheet reported that « the elegant world » appeared in this coffee-house « in order to see and be seen, and to revive themselves in the cool of evening with a drink of coffee or other varied refreshments » .

...

The « Kaffeehaus » (traditional coffee-house) is a typical Viennese institution. They are said to date-back to the 17th Century Ottoman Wars :

When Vienna was liberated from the second Turkish siege by an Polish-Habsburg army in 1683, the victorious allies captured numerous sacks with coffee beans they initially thought were camel feed. A wise Polish army officer, understanding the actual value of these beans, is said to have asked his King Jan Sobieski for the coffee bags, and thus, was able to open-up the first coffee-house in Vienna - consequently establishing the long tradition of the Viennese « Kaffeehaus » .

The popularity of the Coffee-Houses in Vienna and their importance to Vienna social life is probably linked as well to the extremely relaxed atmosphere inside these « Cafés » :

It is completely normal for the guest to linger alone for hours and study the omni-present newspapers. Along with coffee, the waiter will serve an obligatory glass of cold tap-water and, during a long stay, will often bring additional water unrequested, with the idea being that you are a guest who should feel welcomed and not pressured to leave for another patron.

...

The Viennese coffee-house (« Wiener Kaffeehaus ») is a typical institution of Vienna that played an important part in shaping Viennese culture.

The social practices, the rituals, the elegance create the very specific atmosphere of the Viennese « café » . Coffee-

Houses entice with a wide variety of coffee drinks, international newspapers, and pastry creations. Typical for Viennese Coffee-Houses are marble table-tops, Thonet chairs, newspaper tables and interior design details in the style of Historicism. The Austrian writer Stefan Zweig described the Viennese Coffee-House as an institution of a special kind, « actually a sort of democratic club, open to everyone for the price of a cheap cup of coffee, where every guest can sit for hours with this little offering, to talk, write, play cards, receive post, and above all consume an unlimited number of newspapers and journals » . Zweig, in fact, attributed a good measure of Vienna's cosmopolitan air to the rich daily diet of current and international information offered in the coffee-houses.

In many Classic « cafés » (for example : « Café Central » and « Café Prückel ») , piano music is played in the evening and social events like literary readings are held. In warmer months, customers can often sit outside in a « Schanigarten » . Almost all coffee-houses provide small food dishes like sausages as well as desserts, cakes and tarts, like « Apfelstrudel » , « Millirahmstrudel » , « Punschkrapfen » and « Linzer torte » .

Unlike some other « café » traditions around the world, it is completely normal for a customer to linger alone for hours and study the omnipresent newspaper. Along with coffee, the waiter will serve an obligatory glass of cold tap-water and, during a long stay, will often bring additional water unrequested, with the idea to serve the guest with an exemplary sense of attention.

In the late-19th and early-20th Centuries, leading writers of the time became attached to the atmosphere of Viennese « cafés » and were frequently seen to meet, exchange and to even write there. Literature composed in « cafés » is commonly referred to as coffee-house literature, the writers thereof as coffee-house poets. The famous journal « Die Fackel » (The Torch) by Karl Kraus is said to have been written in « cafés » to a large extent. Other coffee-house poets include Arthur Schnitzler, Alfred Polgar, Friedrich Torberg, and Egon Erwin Kisch. Famous writer and poet Peter Altenberg even had his mail delivered to his favourite « café » , the « Café Central » .

Legend has it that soldiers of the Polish-Habsburg army, while liberating Vienna from the second Turkish siege in 1683, found a number of sacks with strange beans that they initially thought were camel feed and wanted to burn. The Polish King Jan III Sobieski granted the sacks to one of his officers named Jerzy Franciszek Kulczycki, who started the first coffee-house. This story was published by the Catholic Priest Gottfried Uhlich in 1783 in his « History of the second Turkish Siege » , and he took some liberties. In reality, Kulczycki's coffee-house missed being the first by more than a year. A more factual account has been reported by Karl Teply.

After some experimentation, the legend goes on, Kulczycki added some sugar and milk, and the Viennese coffee tradition was born. This achievement has been recognized in many modern Viennese coffee-houses by hanging a picture of Kulczycki in the window. Another account is that Kulczycki, having spent 2 years in Ottoman captivity, knew perfectly well what coffee really is and tricked his superiors into granting him the beans that were considered worthless.

According to recent research, Vienna's first coffee-house was, in fact, opened by an Armenian businessman named Johannes Diodato in 1685. 15 years later, 4 Greek owned coffee-houses had the privilege to serve coffee. The new drink was well-received, and coffee-houses began to pop-up rapidly. In the early period, the various drinks

had no names, and customers would select the mixtures from a colour-shaded chart.

The heyday of the coffee-house was the turn of the 19th Century when writers like Peter Altenberg, Alfred Polgar, Karl Kraus, Hermann Broch and Friedrich Torberg made them their preferred place of work and pleasure. Many famous artists, scientists, and politicians of the period such as Arthur Schnitzler, Stefan Zweig, Egon Schiele, Gustav Klimt, Adolf Loos, Theodor Herzl, Alfred Adler, and even Leon Trotsky, were constant coffee-house patrons. In Prague, Budapest, Cracow, and Lviv (Lemberg) and other cities of the Austro-Hungarian Empire there were also many coffee-houses according to the Viennese model.

...

Between 1890 and 1920, Vienna emerged as a site of unrivalled experimentation in art, culture, philosophy and science, and many have argued that the most concentrated and purest expression of European Modernism occurred in the Austrian capital. Coffee-houses which, by this time, had become a Viennese institution, played an important role in the city's cultural life. Along with a number of other coffee-houses, the « Café Impérial » became a hub for intellectual discussion and a daily meeting-place for artists, poets, musicians and intellectuals. While its location made it a popular retreat for musicians, the « Café » was also host to a bevy of journalists, politicians and intellectuals, who used the space to work, strategize and debate. Journalist and satirist Karl Kraus held court at the « Café Impérial » after abandoning his former haunt (« Café Central »), in 1910, on account of it being too noisy. Once he made the move, others (including Peter Altenberg, Hugo von Hofmannsthal, Rainer Maria Rilke and Franz Werfel) followed. Kraus spent countless hours at the « Café » at his regular table, which was reserved for him daily, though few were permitted to join him as he was notoriously ornery and worked best in isolation. Friedrich Eckstein, best described as an occultist, a man of letters, a polymath, a mystic and a private investigator, was one of the few Kraus permitted to sit at his table. Eckstein was a close friend of many of the artists and thinkers in Vienna during this time, and could often be found at the « Café Impérial » in deep discussion with Sigmund Freud or the composer Anton Bruckner. Robert Hirschfeld, another « Café » regular, was a music-critic and historian who reported for the « Wiener Zeitung » newspaper. A known agitator, he regularly instigated heated arguments with the likes of Gustav Mahler and Heinrich Schenker. A novelist and writer of bold, lyrical poems, Rainer Maria Rilke also spent many days writing at the « Café » and, in fact, penned many of his eloquent letters on the hotel's stationery. While women were not expressly forbidden, coffee-house culture in « fin-de-siècle » Vienna remained very much a male domain.

### The Cafés of Vienna

In every large or small town throughout the Habsburg lands, there is a Viennese coffee-house. In it can be found marble tables, bentwood chairs and seating booths with leather covers and plush upholstery. In bent-cane newspaper-holders, the « Neue Freie Presse » hangs among the local papers on the wall ... Behind the counter sits the voluptuous and coiffured cashier. Near her looms the expressionless face of the head-waiter, who as soon as the call « " Herr " Ober, the bill ! » is issued, will vanish from the guest's field of vision. The barman lurks casually, but jumps to attention readily enough, though at no time giving the impression of hurried bustle. All in good time, the junior waiter brings the quietly clinking metal tray with its full-glass of water to your table. One orders the coffee by means

of a secret language that no one from outside the country understands : « eine Melange mehr licht » , « eine Teeschale Braun » , « eine Schale Geld passiert » .

This evocative picture of the classic Viennese « café » can be found replicated in multiple histories, memoirs, biographies and works of fiction that focus on Vienna of the late-19th Century. This quotation captures the affection and nostalgia which has long coloured any consideration, academic or otherwise, of the Viennese « café » . The image evoked, of the marble table-tops, bent-wood chairs, multiple newspapers and idiosyncratic staff, is one that has become something of a legend. The distillation of the one thousand or so coffee-houses there were in Vienna around 1900 into a single image obscures the multiplicity and complexity of this particular space-type within the city.

The following text will introduce the « cafés » of Vienna as a social space in the city and the role they played in the city's social and cultural life. A historical account of the role of the « cafés » is difficult to establish because, for the most part, it requires delving into the ephemeral realm of the everyday life and habits of the people of Vienna. This life was essentially transitory and casual in nature and as such proves resistant to recording and documentation. Various opportunities for excavating the ephemeral do however exist. A number of the « cafés » themselves survive, in a more or less altered state, as a material record of these spaces. Visual records (photographs, drawings, paintings and postcards) can also offer a window onto the nature of these spaces and the society within. In addition, literary sources, such as fiction, travel writing, biography and autobiography, provide another perspective on how the « cafés » of Vienna were used and regarded by contemporaries.

The importance of the « cafés » as part of the « story » of Vienna 1900 is not simply a nostalgic construction following the Second World War. The « café » was the foremost public social institution within the city. Unlike the theatre or the opera-house, the « café » could be visited every day and at virtually any time of day. The proliferation of « cafés » through the city indicates that they were a regular feature in the lives of many Viennese. The « café » appeared as a location in novels and other literary works of the period. Guide-books in both English and German all make particular reference to the « cafés » of the city, exclaiming on their numerousness and the quality of the service. As a ubiquitous feature of city-life, the « café » was multi-farious in its provision of services to people of different classes and genders. The ephemeral nature of the sociability it played host to continues to make it difficult to categorize, in its close relation to the complex identity of the city at the dawn of the 20th Century.

### The Café and its relation to high and low culture

The relationship of « cafés » to the development of cultural life is well-established. Jürgen Habermas presented the coffee-houses of 18th Century London as the crucibles for the formation of a bourgeois public sphere in England. These « cafés » provided a space for an active public of private individuals with shared concerns to come together and create shared discourse. The printed word made a vital contribution to the establishment, through the practices of criticism and critical debate, of the realm of public discourse :

« The predominance of the “ town ” was strengthened by new institutions that, for all their variety, in Great Britain and France took-over the same social functions : the coffee-houses in their golden age between 1680 and 1730 and

the salons in the period between the Regency and the Revolution. In both countries, they were centres of criticism (literary at first, then also political) in which began to emerge, between aristocratic society and bourgeois intellectuals, a certain parity of the educated. »

Habermas' thesis maintained that this public sphere declined in the late-19th and early-20th Centuries into a passive culture of mass-consumption rather than public discourse. This decline was engendered by the growth in the number of people who constituted the public until its unity, as a single public, was impossible to sustain. Within Habermas' thesis, the development of the practice of voicing public opinion spread from the arena of literature naturally into matters of political and public interest, engendering the development of a sphere in which all matters of public interest could be discussed and new ideas formulated.

Habermas' theory cannot be applied seamlessly to the role of the « café » in Vienna. For one thing, prior to 1848, prohibitions on the expression of political opinions, together with the lack of a democratic framework of any kind in which such opinions could carry weight, made the development of a public sphere of the kind evoked by Habermas largely impossible. By the late-19th Century, when the « cafés » of Vienna had become sites of intense public discourse, both literary and political, the onset of mass-culture, presented by Habermas as the antithesis of the public sphere, was also well under way. The Viennese « café » is thus a site in which the development of a public sphere is both delayed and complicated by its chronological compression. By looking at the points at which the Viennese « café » does and does not conform to the outline of public space and public sphere developed by Habermas, we can build a clearer picture of the way in which the « café » contributed to the life of the city.

### The Café as a site of leisure

Habermas' assessment of the rise of popular mass-culture at the end of the 19th Century was couched in terms of the fracturing and decline of the public sphere, as culture and ideas were packaged for consumption rather than evolving through rational debate. This view, however, sets up an artificial dichotomy between high- and low-culture, the serious and the frivolous, which obscures the essence of the « cafés » as institutions straddling both professional and recreational spheres. The « café's » function as leisure venue was an established part of its identity as a public space. The link between recreation and « café » culture in the city of Vienna goes back to the 18th Century. The « Prater » Park had been opened to the people of Vienna by Josef II in 1766 and the first « café », the « Erste Café », opened in the « Prater » in 1787. The « Zweite Café » followed in 1799. Lithographic topographies of the city in the 18th and early-19th Centuries frequently show such outdoor « cafés », either those on the « Prater » or overlooking the city bastions. Such scenes indicate the ubiquity of these « cafés » as social spaces around the city. The stroll in the park, the promenade on the bastion and later the « Ringstraße », and the visit to the « café » were intimately woven into the pattern of Viennese leisure habits from the late-18th Century onwards. Though the majority of « cafés » did not provide elaborate entertainments until the late-19th Century, their offerings of refreshments, relaxed ambiance and table-top games were enough of a draw to make them prime sites for recreation in the city. For the bourgeoisie in particular, the « cafés » of the city-centre and wealthy suburbs provided a well-loved and regularly used space outside of the home for informal, primarily but not exclusively masculine socializing and private relaxation.

The « café's » function as a place where people went to relax and as a site of urban leisure is not an aspect that can be filtered out of any discussion of its role. By the late-19th Century, the growth of mass-media, the entertainment industry and the advent of party politics, all of which Habermas viewed as sounding the death knell to true public discourse, was well under way even in Vienna. Within the supposed decline of the public sphere, the only roles left for « cafés » to play would have been either as venues of popular entertainment or as retreats for an « élite » intellectual culture, divorced from public relevance. The growth of the large-scale entertainment « cafés » in Vienna from the 1870's confirms the idea of the rise of mass-culture. From relatively simple establishments serving coffee and various other beverages, tobacco, simple snacks and table-top games, « cafés » expanded in the 19th Century to take advantage of the growing wealth of the urban middle-classes and the entertainment industry was born. Grand entertainment establishments in new hotels, in city-parks and new bourgeois suburbs took the basic idea of a « café » and extended it to include more elaborate forms of entertainment.

The new hotels built in expectation of the crowds attending the 1873 World's Fair in Vienna all included extensive « café » spaces on the ground floor of their premises. « Prasn's Café and Billiard Hall », on the « Wienzeile », which first opened in 1851, offered extensive recreational facilities, including multiple games rooms, a concert-hall, a reading-room, a refreshment-room and conservatories. « Café Volksgarten », in the city-centre, offered a fine restaurant and outdoor concerts in the smartest park in the city. The « Prater » Park, with its long history as a centre for recreation, developed to include various amusements, such as the « Venice in Vienna » attraction, opened in 1895, and the Ferris Wheel completed in 1897. The « Café Dritte », originally established in the « Prater » Park in 1802, was refurbished in time for the World's Fair, expanding on the idea of the « concert-café » to become a « café » and variety theatre with a capacity for 5,000. Although the World's Fair proved to be something of a flop, the « café » was bought up by Anton Ronacher and became a huge success, showing musical comedies, operettas and other stage-acts. Much of the expansion of the entertainment industry in the late-19th Century was undertaken under the auspices of the « café », as an established leisure-venue type. The large entertainment « cafés » did not, therefore, represent an overturning of a more worthy, intellectual and politicized « café » space, but rather an elaboration on one ongoing aspect of the identity of the Viennese « café » .

### The Biedermeier Café

Alongside the identity of the Viennese « café » as a leisure destination, its role as a centre of cultural life was also a well-established facet of its popular identity. In the late-19th Century in particular, the « café » society of the early-19th Century was celebrated nostalgically as an emblem of the past cultural and intellectual achievements of the city. This so-called « Biedermeier period » was regarded by many as the pinnacle of good taste and authentic Viennese brilliance, from which modern culture had sadly declined. Adolf Loos's design for the « Café Museum » of 1899 was a conscious attempt to revive the atmosphere and ambience of a Biedermeier « café » . The image of the Biedermeier « café » incorporated within it a suggestion of vibrant intellectual and creative discourse followed by the city at large, and is analogous with Habermas' bourgeois public sphere.

The Biedermeier « café » was a public sphere in the sense that it provided a centre for the communication and propagation of new ideas. However, as its purview was limited to the arena of culture and aesthetics, its development

was stunted in relation to the development from a cultural discourse of literary criticism to a broader, politicized public discourse. The idea of the decline of the « café » into a mere venue for mass consumer culture has been shown to be too limited, setting leisure and public discourse in opposition to one another, rather than accepting that the recreational side of « café » life has always existed alongside any more serious functions. The fact that the « cafés » of Vienna played a significant role in the developing mass-entertainment industry at the end of the 19th Century did not preclude their continued contribution to Viennese culture. Habermas' notion of the disintegration of the public sphere dealt with any lingering manifestations of public creativity and vibrancy by relegating them to the province of « élite » intellectual circles, marooned and ever more irrelevant to the wider public. This dismissal underplays the importance of « cafés » as public venues for the development of literary and artistic modernism later in the 19th Century. It exaggerates both the degree to which the earlier « café » had been inclusive and the later « café » exclusive in its attitude to public engagement with culture.

The essence of the Biedermeier « café » was encapsulated in the popular imagination by the « silver coffee-house » . This celebrated « café » , which operated between 1824 and 1846, was nicknamed « silver » on account of its glamorous interior design, which included luxurious details such as silver table-ware and other fittings. A suitably illustrious « clientèle » , including the writer Franz Grillparzer, the actor Ferdinand Raimund, the theatre director Ignaz Schuster and the musicians Josef Lanner and Johann Strauß, were drawn to the « café » as it became a well-known meeting-place for Vienna's cultural « élite » . The nostalgia felt for this lost brilliance is encapsulated in a print by Vinzenz Katzler, « Die Kassierin vom Silbernen Kaffeehaus » (The Cashier from the Silver Coffee-House) , purporting to illustrate a scene in the « café » in 1826, which was circulated as a picture supplement in the conservative political journal « Hans Jörgl » in 1871. A circle of cultural luminaries are depicted gesticulating and conversing, grouped in an admiring circle around the cashier.

The Viennese « literary café » of the Biedermeier era remained crucially different from the English model celebrated by Habermas, however, in that the cultural life associated with it remained un-politicized. The strict regulation of all forms of expression within the Habsburg Empire prohibited the development of a mature politicized public discourse. The music of Johann Strauß and the stage performances of Johann Nestroy remained light-hearted and popular in character. Grillparzer was fundamentally frustrated by the restrictions placed upon him. Prior to 1848, Vienna had only 3 daily newspapers, all either government controlled or heavily censored. A tax on newspapers, not repealed until 1900, inhibited the development of mass-circulation newspapers, although a vigorous print culture did emerge. These constrictions in the printed realm prevented the effective mobilization of individual public opinion necessary for the creation of a politically engaged public sphere.

The Viennese « café » at the turn of the 20th Century was both a delayed example of the role of the « café » in the development of public discourse and a compression of the evolution of this role. In terms of politics, the « café » provided a venue for the development of advanced political discourse, with Victor Adler and the circle of early Austrian Social-Democratic movement meeting in the « Café Griensteidl » and foreign political activists, such as Leon Trotsky, meeting their fellow socialists in the « Café Central » . The development of this semi-private discourse largely coincided with, rather than preceded, the birth of mass party politics and the commercial mass-circulation press, which Habermas presented as antithetical to the survival of the bourgeois public sphere. Similarly, the « café » continued to

play an important role as a venue for advanced cultural discourse at the same time as playing a central role in the city's social life and the development of mass-entertainment culture.

### Class and gender barriers and the Café

A number of writers have pointed out the exclusions, particularly on the basis of class and gender, which compromised the supposed unity of the public sphere. Any exploration of the role of the « café » in Viennese society also needs to take such exclusions into account. In relation to sociability, issues of class and gender in Vienna are indivisibly intertwined. In general, different « cafés » throughout the city catered for people of different social classes, with the upper- and lower- middle-classes making-up the primary constituency of patrons. Although male members of the aristocracy would occasionally attend the smarter town-centre « cafés », rigid social codes dictated that their socializing took place primarily in the private houses of the « élite » circles in which they moved.

For the working-classes, there existed « Wirthäuser », or taverns. In 1902, there were approximately 4,000 of these, in comparison to the city's 1,100 « cafés », the majority located in the outer-districts of the city. These taverns and restaurants provided venues for working-class sociability, with an emphasis on alcohol and food. W. Scott Haine, in his study of the working-class « cafés » of Paris, described the communities that formed around the different local « cafés » as providing crucial support networks for newly-arrived young urban workers attempting to negotiate the transition to life in the big city. It is likely that the « Wirthäuser » of Vienna performed a similar function for new workers flooding into the city from across the Dual Monarchy of Austria-Hungary. The « cafés » of Vienna and other large cities within Austria-Hungary provided similar points of orientation and adoptive communities for newly-arrived Jews from the East. Haine's study does not discriminate between « cafés » and taverns. The distinction maintained in Vienna between the 2 types of venues, « Kaffeehäuser » and « Wirthäuser », was primarily a reflection of the class demographic of the « clientèle », rather than a reflection of any fundamental distinction in the sociability and services provided. The social institution of the « Stammtisch » (Regulars' Table) was maintained in both and the popularity of table-top games was also common. Just as a number of « cafés » were expanded into large entertainment venues, so various large entertainment facilities for the working-classes were also developed at the end of the 19th Century. Weigl's « Dreher-Park », set-up by the Dreher Brewery, offered daily concerts and variety performances and had a capacity of 20,000.

The « café » itself remained primarily a bourgeois institution, with multiple gradations between the finest « haute-bourgeoise » establishments and the lower-middle-class « cafés » of the outer-districts. Suburban coffee-houses catered primarily for local residents, so their nature reflected the demographics of different neighbourhoods. The coffee-houses of the 1st District tended towards the most elegant, but even « cafés » out in the less affluent suburbs maintained similar core features : a grand counter as a centre-piece, clusters of tables, billiard tables, newspapers and so on.

The regulation of social class and the question of which « cafés » it was appropriate to patronize were governed by the un-written rules that are maintained in all class conscious societies. The prominent figure of the head-waiter, who oversaw every aspect of each guest's visit, no doubt played a role in who was welcomed and who was not, but the system primarily ran by self-regulation. For example, in his autobiography, Stefan Zweig noted that his father, a wealthy

Jewish businessman, « avoided dining at Sachers' » (a grand Hotel and Café) and that this was « not for reasons of economy, but because of a natural feeling of respect ; it would have been distressing or unbecoming to him to sit at a table next to a Prince Schwarzenberg or a Lobkowitz » .

Despite the undoubted social divisions that regulated socializing even within the upper-middle-class, the idea of the accessibility of the public space of the « café » continued to have important currency. Habermas highlighted the importance of the emergence of the idea of the public and public sphere as, in principle at least, inclusive :

« However exclusive the public might be in any given instance, it could never close itself off entirely and become consolidated as a clique ; for it always understood and found itself immersed within a more inclusive public of all private people, persons who insofar as they were propertied and educated - as readers, listeners and spectators could avail themselves via the market of the objects that were subject to discussion. The issues discussed became “ general ” not merely in their significance, but also in their accessibility : everyone had to be able to participate. »

Zweig's often quoted statement that « the Viennese coffee-house was a sort of democratic club to which one bought admittance for the price of a cup of coffee » , is one that, even if not strictly true, reflects through its frequent repetition the importance of the principle of the accessibility of coffee-house discourse. At the very least, it suggests that within the coffee-houses a certain relaxation of the otherwise draconian observation of social propriety governing the bourgeois Viennese could be witnessed. The truth in Zweig's statement lies in the comparative accessibility of the coffee-houses, particularly within the general spectrum of the educated bourgeoisie. While he was still a school boy, Zweig and his contemporaries enjoyed the facilities of the coffee-houses. The biographies of many of Vienna's intellectuals include reference to the contacts they made in coffee-houses with established figures in their field, who served as mentors for their early careers. The school boy Hugo von Hofmannsthal's meeting with Herman Bahr in the « Café Griensteidl » and his subsequent inclusion in the « Jung Wien » circle is one of the most famous examples.

The accessibility of the « cafés » for women was, in the first instance, governed by class. The entertainment establishments and fairground « cafés » offered a space where both men and women, primarily of the working-classes and lower-middle-classes, could socialize together. Towards the bottom of the social scale, where both men and women had to work in order to keep their households going, the social niceties of who could patronize « cafés » and taverns were not so closely observed. Women of the lower-classes, taken-up as girlfriends by members of the bourgeoisie, were also welcome to accompany them to the grander « cafés » . Peter Altenberg's series, « Rules for my “ Stammtisch ” » , include various references to female companions. The line between girlfriends and prostitution was frequently blurred and certain « cafés » were also known as places where one could make the acquaintance of the « demi-monde » . However, as the waiting staff in the Viennese « cafés » were male, rather than female, the direct overlap of « café » and bordello that occurred frequently in Paris was not common in Vienna. The only consistent female presence in most « cafés » was the « Sitzkassiererrin » (cashier) . She corresponded to the role played by « La Belle Limondière » in the Parisian « café » : an attractive hostess, whose charms encouraged customer loyalty :

« Enthroned behind the bar, among the bottles and glasses is that ambassador of the fairer sex, the cashier. She is always a very sweet-tempered, accommodating representative of her sex. However cold-hearted you are, to be in the

presence of her warm heart will melt yours. Indeed, many have gone to the “ café ” to win a game and end-up losing their hearts to the cashier ! »

Haine comments that attractive or even famous young women were hired to lend lustre to the « cafés » of Paris. Alternatively, in the case of couples who ran « cafés », the wife often took the role of cashier and accountant. The city directories of 1891 and 1902 reveal that around 24 % of « cafés » were listed under the name of a female proprietor. Haine notes the common practice in Paris of the ownership of « cafés » being passed on and maintained by wives following the death of the husband and it is possible that there is a similar explanation for the comparatively large numbers of female proprietors in Vienna. Despite these female incursions into the male domain of the « café », they remained primarily masculine spaces and as such were allowed to relax the rigid observance of social hierarchies and of public morality. It is not surprising therefore that for middle-class women, for whom reputation was everything, they were largely prohibited spaces.

Alma Mahler-Werfel's diaries record the daily social life of a young middle-class woman who moved in advanced cultural and artistic circles. Despite her relative freedom to attend concerts and galleries and private parties in mixed company, Mahler-Werfel was not included in the « café-based » social life of her Secession friends and admirers. The only visits to « cafés » she records were a number of occasions on which she met with female friends in Demel's, the Imperial confectioners and « chocolatiers ». The « Café-Konditorei » that grew-up within such cake-shops were crucially different in a number of ways from regular coffee-houses. The waiting staff were female rather than male and the atmosphere remained closer to that of an « élite » shop. The « cafés » within the central parks of the city that hosted cafe-concerts were the only other type of « café » that a middle-class woman might commonly visit without the company of a man. For example, « Frau » Matzner, the ex-brothel-keeper in Joseph Roth's « String of Pearls », is deeply concerned with her respectability, but is happy to attend concerts in the « Stadtpark » and « Volksgarten cafés ». This supports the visual evidence of prints and drawings depicting the elegant men and women who attended such concerts.

Visibility played a large role in what differentiated the spectrum of respectability between different « cafés ». The open-air, high-visibility of the « café-concerts » in particular made them sufficiently respectable spaces for bourgeois women to visit unaccompanied as their conduct there was implicitly open to monitoring. The « Café-Konditorei » shared with the « concert-café » a greater degree of public visibility, as they had shop-display windows and, as retail premises, they entreated passers by to look-in. In most Viennese coffee-houses, however, the relationship between the interior and the street was more ambivalent. Unlike the broad plate-glass windows and richly illuminated interiors of the Parisian « cafés » that made « café » visitors highly-visible from the street, Viennese « café » interiors were not so immediately permeable. Windows were furnished with short curtains which guests could draw to keep-out the sun or conceal themselves from the street without obscuring their own view out, making the visibility of guests optional. The division of the « café » interior into separate rooms for reading, billiards or card-games, and the arrangement of booths with intimate seating, facilitated the free use of the space by men who could choose what activity they wanted to pursue and whether they wanted to be seen or remain concealed from anyone poking their head in the door. However, this division of space contributed to the maintenance of the « café » as a masculine space, as there was not enough visibility to guarantee respectability for female visitors.

The « café » was, therefore, primarily a masculine space, albeit one that was penetrated by women under certain conditions. A survey of the rich visual record of the « cafés » of Vienna amassed in the collections of the « Wien Museum » reinforces this perception. A number of the interiors reveal scenes of solely masculine sociability. Here and there, women appear, conforming to the exceptions outlined above. Ladies are shown being escorted to outdoor concerts, or taken for coffee in the high-ceilinged, glittering halls of the grander city-centre « cafés ». Families enjoy Sunday outings to grand « Ringstraße cafés ». There are bawdier tavern scenes, where waitresses resist being pulled into the laps of male « café » patrons. There is also an ambiguous class of female coffee-house patron, whose position is impossible to deduce from visual sources and who is also absent from the existing literature on the coffee-house. Many a predominantly masculine crowd is shown to contain a handful of female figures. Some may indeed be the « demi-mondaines » or girlfriends alluded to above, but a number of matronly figures who appear to exude respectability can also be seen. In the absence of further evidence, one can only speculate over the grounds on which they secured their dispensation to partake in male coffee-house life. It must also be noted that the period spanning the 19th to the 20th Century was one of uncertainty and contestation in relation to both class and gender norms.

### Literary Circles and the creative space

The association of the « café » with culture and the literary realm, established in the Biedermeier period, persisted into the 20th Century. After the closure of the « silver coffee-house », « Café Griensteidl » became the favoured home for the writers of Vienna. This sense of being part of a great Viennese tradition may in itself be an element of what the « café » contributed to culture (imparting a particular flavour to the experience of people frequenting the « café ») encouraging them, lending gravitas to their activities there. One of the many things the « café » offered writers and thinkers of all kinds was a place that was partially secluded, safe and home-like (private), as well as being integrated into the life of the city (public). The tensions between all these different aspects of the « café » played a major role in the vitality of the space.

The « café » challenges the established binaries commonly used for understanding space. It is a public space, and yet spaces within it, the table of the solitary « habitué » or of the established group of regulars, is rendered private or semi-private. It is an informal space, in that socializing between figures from different social backgrounds and the bending of rules in regards to extra-marital or pre-marital relationships with women are condoned. But, at the same time, it is a space governed by its own formalities and institutions : the formal dress and internal hierarchy of the waiting staff ; the opaque lexicon of the different coffee preparation names of the Viennese « café » tradition ; the ritual of service, with the coffee brought upon a metal tray, accompanied by a dish of sugar and a glass of water with the coffee spoon balanced on top of it. These formalities mirror, but do not match, the formalities that governed the world outside, in the manner of a Foucauldian heterotopia.

Michel Foucault coined the term « heterotopia » to describe spaces that were the same, but different from the real spaces of the world. These sites allowed for reflection on the real world and the enactment of many different kinds of difference :

« There are also, probably in every culture, in every civilization, real places (places that do exist and that are formed in the very founding of society) which are something like counter-sites, a kind of effectively enacted utopia in which

the real sites, all the other real sites that can be found within the culture, are simultaneously represented, contested, and inverted. Places of this kind are outside of all places, even though it may be possible to indicate their location in reality. Because these places are absolutely different from all the sites that they reflect and speak about, I shall call them, by way of contrast to utopias, heterotopias. »

Such counter-sites offer us another potential model for understanding the complex relationship of the « café » to the social and cultural life of Vienna.

The ambiguity of the « café » as a space was reflected in the attitudes of the writers who frequented them : « café » life was both celebrated and derided. Rather than embracing the idea of the Viennese « café » as a « literary institution » , many writers focused instead on the « café » as a frivolous place, thereby challenging the distinction between serious high-culture and careless, trivial, low-culture. The « Kleinkunst » developed by the « Jung Wien » was an explicit challenge to such notions of serious versus trivial endeavour and the frequenting of « cafés » was a real-life enactment of this challenge. By working in the « café » , these writers were able to associate with each other and with the everyday informal life of the city with which the « cafés » were so intrinsically bound. The Viennese « café » as a site of leisure, outlined above, had led to an established image of its « habitués » as time-wasters and layabouts, an association at least as strong as that of the celebrated Biedermeier « café » circles. The « café » was not a serious place. It was a place of idleness that contrasted with the real world of work.

In Stephan Zweig's « Ungeduld des Herzens » (Beware of Pity, 1938) , the young Second-Lieutenant Hofmiller resolves to reform his life :

« How stupid then, to idle away one's leisure time day after day at the " café " playing boring games of cards with dull-witted companions, or strolling up and down the promenade. No, from now on, no more of this torpid existence, this beastly lounging about. I would go less often to the " café ", would give-up playing billiards and that wretched Tarock, would have done once and for all with all those efforts to kill time that were of no earthly use to anyone and only blunted my own intelligence. »

Its value as a site for productive creativity was frequently criticized by writers :

« Seriousness and thoroughness do not thrive in the atmosphere of the coffee-house. This smoke impregnated air, tainted by gas jets and polluted by the sitting together of many people, this whirring of people coming and going, jabbering of guests and bustling waiters, this tangle of shadowy apparitions and indeterminable sounds, makes any quiet reflection, and collected thought impossible. »

And yet, despite this disdain, they all continued to spend significant portions of time there. The revolt against tradition witnessed in their writing, the subjective, self-reflective, ambiguous, paradoxical and transitory shifts they played with were well suited to this association with the « café » as a site of frivolity, play and fecklessness. The link between the « café » and the rise of Modernism in the late-19th Century is also well-established. Max Nordau, the influential Austro-Hungarian cultural critic and Zionist, presented the « café » as the natural habitat for the activities of the cultural « degenerates » he derided. In his famous book, « Entartung » (Degeneration, 1892) , his discussion of the

origins of the Symbolist movement in Paris tied the group closely to the « cafés » they frequented :

« Shortly after 1880, there was, in the “ Quartier Latin ” in Paris, a group of literary aspirants, all about the same age, who used to meet in an underground “ café ” at the “ Quai Saint-Michel ”, and, while drinking beer, smoking and quibbling late into the night, or early hours of the morning, abused in a scurrilous manner the well-known and successful authors of the day, while boasting of their own capacity, as yet unrevealed to the world.

(...) About 1884, the society left their paternal pot-house, and pitched their tent in the “ Café François ler ”, Boulevard Saint-Michel ”. This “ café ” attained a high-renown. It was the cradle of Symbolism. It is still the temple of a few ambitious youths who hope, by joining the Symbolist school, to acquire that advancement which they could not expect from their own abilities. It is, too, the Kaaba to which all foreign imbeciles make pilgrimage. »

Although derisive in tone, the quotation gives an indication of what the « café » as an institution offered young aspiring writers : companionship, the solidarity of like-minded individuals and a space apart from the main institutions of culture where new ideas could be gestated. Additionally, once its reputation is established, the « café » becomes a destination, drawing others of a similar caste of mind and providing a crucial hub for the growth and nourishment of a new movement. Nordau characterizes this scathingly as the refuge of the talentless. His attitude is similar in many ways to that expressed by Karl Kraus in his satirical essay, « Die demolirte Literatur » (A Literature Demolished, 1897) , in which he mock-lamented the closure of the « Café Griensteidl » and the blow this would strike to the, in his opinion, effete literary circles who met there. The many criticisms of the « café » , as asylums where the hopeless and idle found mutual empty assurance of their worth, carry within them evidence of the role of « cafés » as venues for important support networks for new cultural movements.

The « café » provided a place where those who did not fit comfortably into the established public institutions of culture (the universities and academies) felt they belonged. Andrew Barker, in his study of the ultimate « café habitué » and outsider figure, Peter Altenberg, sums up the value of the « café » environment :

« An organization for the disorganized, where young aesthetes renowned for their sensitivity felt safe from the threatening world outside. It was however, an institution where they could not only socialize, but also read and write. In addition, they could read about themselves :Vienna had long been famed for its capacity to produce and consume art, and public fascination with artists meant that their doings regularly made the newspaper headlines of the popular press, as they still do in a city neurotically aware of and sensitive to its artistic traditions. »

This quotation highlights both the community role played by the « café » and also its role as a site of communication and exchange. The practice of the majority of Viennese « cafés » in taking a selection of newspapers and journals for the use of patrons was well-established. Newspaper hawkers in the streets were forbidden, making the « cafés » important locations in which to access printed news. « Cafés » that catered to literary circles, such as « Café Griensteidl » , took a huge range of national and international newspapers and periodicals.

Altenberg's career encapsulated in many ways the nature of the relationship between the Viennese « café » and the city's modern literary culture. The written form he specialized in, the prose poem or sketch, captured the transience

and immediacy of everyday life. The ephemeral character of this form, easily dismissed as insubstantial, corresponded with general perceptions of the inadequacy of the modern literary movement. Much of Altenberg's work was first published in literary journals or newspapers so the « café » would have been a key-venue for the consumption as well as the production of his work. In addition to his published work, he was a prolific letter-writer, with many of his letters written and received in the « Café Central » .

The legend of Altenberg's initiation into the literary scene of Vienna also indicates yet another way in which the « café » , as an informal environment, facilitated the permeability of the groups that met there. In his own version of the story, Altenberg presented himself sitting in the « Café Central » , reading a newspaper that carried a cover story of a missing girl, « Joanna W » . His emotional response to her plight moved him to write the sketch « Lokale Chronik » . While he was writing at the table, Schnitzler, Hofmannsthal, Salten, Beer-Hofmann and Bahr, whom he knew as fellow regulars of the « café » , came in, noticed him writing and took-up his sketch ; their admiration of it prompted them to propel him into a literary career. In Salten's version of the same story, he comments on the amazement of the « Jung Wien » circle when they found-out that the author of this literary gem was none other than Richard Engländer, the cigarette salesman from the night « café » . Altenberg's contacts with « café » regulars helped him, as a 43 year old cigarette salesman, to establish himself as a writer. The « café » remained a place where the « élite » of Vienna's art and culture could position themselves in a way that made them accessible to each other and to the wider city, while at the same time carving-out a space apart for themselves.

### Sociability and the inner-world of the Café

For all its importance in the world of cultural production, the « café » was primarily a social space. It was sufficiently respectable to be openly frequented by the most august burgers of the city, but not so respectable as to prohibit a certain relaxation of social and moral mores. What was the nature of the sociability practised within the « cafés » that enabled such a relaxed attitude ? Time in the « café » was composed of a myriad of fleeting moments : moments of private contemplation and moments of connection between old friends and casual acquaintances. Its very looseness was a striking counterpoint to the rigidity of the rest of Viennese life and customs. The « café »'s identity as a site of urban leisure, as already mentioned, is an important factor in explaining the temporary suspension of strict codes of behaviour. At the same time, the « café » was not an anarchic site of hectic pleasure but remained bound-up with respectable, bourgeois city-life. A closer look at behaviour within the « café » can help us to understand its ambiguous nature.

The « cafés » of Vienna provided spaces throughout the city where men could withdraw from the street, without going home, and spend a few pleasant hours in solitary contemplation or group conviviality. They provided an important venue for peer-group socializing for groups of bohemian artists and writers as well as for more respectable and professional circles. A German guide to Vienna from the 1860's indicated that each « café » had its noted regulars. The guide outlined in which « cafés » visitors could find different types of groups congregating : students, bureaucrats, foreigners, financiers, Jews, grocers, fops, the « demi-monde » , etc. These established social circles are linked to the already mentioned idea of the « Stammtisch » . The « Stammtisch » was a time-honoured social institution in German and Central European culture. « Stammtische » ranged from formally constituted clubs to the informal social practice

of it simply being known that certain groups of friends frequented certain « café » tables on certain days. An article in the illustrated paper « Illustrierte Wiener Zeitung » in 1912 focused on the Viennese institution of the « café » « Stammtisch » . The article was largely nostalgic, recalling the great days of the Biedermeier « Stammtische » and the luminaries who met there, but it was accompanied by a series of photographs of contemporary « Stammtische » , revealing the range of groups who met under this heading. These groups revolved around shared interests, such as the « Wintersport-Klub » that met at the « Café Kremser » , or professional ties, such as the « Stammtisch » of actors and actresses at the « Café Weghuber » or the « Stammtische » of painters or of military men.

The major contribution that the « cafés » made to Viennese social and cultural life was the hosting of such « Stammtische » . These groups were vital, for both writers and many other professional and social circles, for the exchange of informal news, gossip and so on, as well as for the dissemination and discussion of printed news. In a city in which much of the management of government, academia, the economy and the arts were bound in interminable observance of protocol and elaborate established procedure, the ability to exchange knowledge informally and establish networks behind the scenes played a vital role in keeping the system moving. The « Stammtisch » groups, though not inherently inclusive, were at least more permeable than the more strictly observed hierarchies governing professional associations and familial social circles. « Stammtisch » groups had to be formed at some point and their membership, though regular, could evolve over time.

It would certainly be easier to effect an introduction to a new social circle at a « café » table than if that group met in the privacy of one or other of the members' houses. The niches in which many of the « Stammtische » were situated were still part of the wider space of the « café » interior. The common arrangement of « café » tables, with niches fitted with upholstered benches running around the edges of the room and free-standing tables surrounded by bentwood chairs scattered across the middle of the space, did not allow for impermeable privacy. The greater visibility of the groups who met there would have made it easier for a would-be member to identify with the group they would like to join. Memoirs and autobiographies indicate that these « Stammtische » were more or less permeable. Groups evolved and coalesced around key cultural figures and transformed over time as new contacts were made or old ties were broken. Lina Loos was drawn into the Altenberg circle through her sister, who was a writer, and became a key-figure in this group, also meeting her husband Adolf Loos there. The « Jung Wien » literary movement operated in many ways like a « Stammtisch » in the « Café Griensteidl » , and later the « Café Central » , and was flexible enough to admit new members, such as Peter Altenberg, into the circle.

Another of the striking aspects about « café » sociability is the extent to which unsociable behaviour was an established norm. The solitary coffee-house « habitué » , who had minimal contact with the staff and even less with the other guests, is a common figure in accounts of the coffee-house :

« Judge Reiter appeared each day (for decades) at the “ Café Colosseum ” at 4 o'clock in the afternoon, sat down at the same table, was served a “ Mélange ” with whipped cream and 2 horn-shaped short-breads, received the evening papers first and then successively all other national and international papers, read them, paid and did not have to utter a single word during this entire procedure. »

The role of the « café » as the home of the vital new modern movement in culture, needs to be set against the background of the « café » as a staple element in conventional, bourgeois, male existence across Austria-Hungary :

« Yes, it's the District Commissioner - and what's so strange about that ? He comes here every day between 5 and 7, to read the newspaper and the official digest and to smoke a Virginia. The whole town knows that, it's what he's been doing for 30 years. »

The « café » was associated with both cultural productivity, in the form of the literary « cafés » of the Biedermeier era, and with fecklessness and indolent loungers. It was patronized by the most upstanding city fathers, but was also a place where you could take your girlfriend without attracting undue censure. The writers of the « Jung Wien » movement and the other practitioners of early modernism embraced these contradictions, finding in the « café » the perfect venue for an exploration of the tensions between art and life. « Café » life is characterized by professional and semi-professional networking, in-depth literary discussion and frivolous play. The « café » was a vital part of life within the city, but, at the same time, had a marginal quality. It was a place that could be found at the heart of both conservative and Bohemian male sociability, without any apparent resentment between the 2 groups because, after all, « café » life was not a matter to be taken too seriously. The society that went on within it was both vital to the smooth running of the city and the flourishing of its cultural life, but was also inconsequential and trivial, thereby escaping excessive social regulation. The ambiguities of « café » life allowed urban modernity to creep into a city that preferred to look back to a glorious past rather than forwards towards an uncertain future.

### Bruckner remembers his favourite dishes

Even during his Viennese years, Anton Bruckner always remembered with great pleasure the exquisite dishes his favourite restaurants in Linz served him.

### Vienna : « Graben's Café »

A clearly visible inscription on an old building (above a street « café ») located on the historic « Graben » in Vienna reminds us of the visit of Anton Bruckner.

The « Graben » (German for Trench) is one of the most famous streets in Vienna's 1st District, the city centre. It begins at « Stock-im-Eisen-Platz » next to the « Palais Équitable » and ends at the junction of Kohlmarkt and Tuchlauben.

### Vienna : The coffee-house near the Stock-Exchange

Max Graf, a student at Bruckner's University lectures, remembers :

Sometimes, Anton Bruckner honoured me by allowing me to accompany him, after his lecture, to a nearby coffee-house. We used to sit at the round-table which stood in the middle of the room. Since this particular coffee-house was situated near the Stock-Exchange (and the « Hôtel de France ») on the « Ringstraße », the guests, for the most part,

were stock-jobbers who gazed curiously at the strange composer who ordered coffee and read the newspapers. We, young students, would sit and wait patiently until Bruckner finished reading. Once he read about the great pogrom in Kishinev (1881-1882) where hundreds of Jews had been killed, he looked distressed and timid when he laid the newspaper down. Anxiously, he looked at the guests who were sitting in the « café », discussing rates of exchange and market quotations, and said to us, with a half-shy, half-respectful glance at the Jewish guests :

« Jesus and Mary ! Now they have killed, in Russia, so many (with lowered voice ...) “ Jewish gentlemen ” ! »

Is Max Graf referring here to the « Café Central » who opened-up in 1876 in the former Vienna Stock-Exchange premises in « Palais Ferstel », on Number 14 « Herrengasse » ?

It has always been home to great philosophers, poets and leaders (such as Leo Trotzky, Arthur Schnitzler, Peter Altenberg or Sigmund Freud) .

### Vienna : « Café Central »

« Café Central » is a traditional Viennese « café » located at Number 14 « Herrengasse » in the « Innere-Stadt », 1st District of Vienna. The « café » occupies the ground-floor of the former Bank and Stock-Market Building, today called the « Palais Ferstel » after its architect Heinrich von Ferstel.

The « café » was opened in 1876, and, in the late- 19th Century, it became a key meeting-place of the Viennese intellectual scene. Key-regulars included : Peter Altenberg, Theodor Herzl, Alfred Adler, Egon Friedell, Hugo von Hofmannsthal, Anton Kuh, Adolf Loos, Leo Perutz, Alfred Polgar and Leon Trotsky. In January 1913 alone, Josip Broz Tito, Sigmund Freud, Adolf Hitler, Vladimir Lenin, and Leon Trotsky (the latter two being regulars) were patrons of the establishment.

The « café » was often referred to as the « University of Chess » (« Die Schach-hochschule ») because of the presence of many chess-players who used the first floor for their games.

Members of the Vienna Circle of logical positivists held many meetings at the « café » before and after World War I.

A well-known story is that when Victor Adler objected to Count Berchtold, foreign minister of Austria-Hungary, that war would provoke revolution in Russia, even if not in the Habsburg monarchy, he replied :

« And who will lead this revolution ? Perhaps, Mister Bronstein (Leon Trotsky) sitting over there at the “ Café ” Central ? »

The « café » closed at the end of World War II.

**1856-1860** : The young architect Heinrich von Ferstel builds in the centre of Vienna the opulent « Palais » with its

fantastic Venetian cum Florentine cum Trecento architecture, inspired from his long journey through Italy. « The Ferstel » was the most fashionable building of the period. It originally housed the Austro-Hungarian National Bank and the Stock-Exchange as well as bazaar and a « café » popular with artists and men of letters. This prestigious building in the style of those put-up along the « Ringstraße » boulevard still catches the eye today.

**1860** : The Vienna Stock-Exchange rents the ground-floor, today's « Café Central » . And the Austro-Hungarian national Bank is based at « Palais Ferstel » .

From the Stock-Exchange's founding Charter of 1771 regarding its business hours :

« The Stock-Exchange shall be open on all days with the exception of Sundays and prescribed holidays from 11 am to 1 pm ; and between Michaelmas (29 September) and St. George's Day (23 April) from 3 pm to 4 pm ; and between St. George's Day and Michaelmas from 3 pm to 5 pm. »

The Vienna Stock-Exchange was intended on the one hand to raise money for the Austrian State, whose finances were always in poor shape, by means of government bonds. On the other hand, it was meant to stem unregulated dealing in these bonds and in the paper money which had been issued since 1762. It was feared that unauthorized brokers would buy bonds and notes at very low-prices, and thus, reduce the income the State received from the such loans. It was also intended that prospective buyers should no longer acquire their notes from the institution responsible for the fund, for example the Vienna City Bank (« Wiener Stadtbank ») , but do so on the stock-exchange for the highest possible price. The Vienna Stock-Exchange was put in the charge of a stock-exchange commissioner, who had a military guard at his disposal - in case there were disturbances. The actual business of the exchange was done by brokers, with the rules stipulating that under no circumstances should they be bankrupt traders or under 25 years of age.

It was, though, only a relatively small group who were admitted to the Stock-Exchange, even if all the estates were permitted : those who had to remain outside included « idiots » , bankrupts, convicted criminals - and women.

In contrast to other stock-exchanges in Europe, the Vienna Exchange was allowed to deal only in government bonds and currencies and not in commodities. The first shares (for a bank) were issued in 1816 and, then again, in 1842 (for the Emperor Ferdinand Northern Railway) . From the middle of the 19th Century, the exchange played a key-role in raising the capital for new industrial enterprises. A branch-like system of exchanges was therefore set-up throughout the Habsburg territories, whose rates were all based on those of the Stock-Exchange in Vienna.

...

A revolutionary (Trosky) , a psychoanalyst (Freud) , several writers and poets (including Polgar, Zweig and Altenberg) and an architect (Loos) walked into a « café » . What sounds like the start of a joke was an everyday occurrence at « Café Central » (established in 1876) . Over coffee, cake and the odd cigar, some of the greatest poets, philosophers and (it has to be said) story-tellers the world has ever seen, got together in Vienna's most attractive coffee-house.

In his « Theorie des Café Central » (Theory of « Café Central »), Viennese dramatist and essayist Alfred Polgar (1873-1955) gives a detailed insight into the nature and essence of « Centralists », as « Café Central's » regulars were known. A number of famous personalities regarded this place of tranquility, upheaval, cigars, coffee, chess and billiards as their home.

Alfred Polgar :

« “ Central ” is not a coffee-house like any other - it's a philosophy. »

« A proper “ Centralist ”, locked in his coffee-house, has the feeling of being cast-out into the harsh world, exposed to strange coincidences, anomalies and the cruelties of the unknown. »

« “ Café Central ” is located below Vienna's line of latitude, on the meridian of loneliness. Its inhabitants are mainly people whose misanthropy is as strong as the craving for people who want to be alone, but also want company as they do so. »

« It's a coffee-house, take everything on balance. You'll never come across another place like it. »

They held court at hotly contested regulars' tables, notable names including Polgar, Loos, Werfel, Hofmannsthal, Altenberg, Musil, Kraus, Kuh, Schnitzler, Zweig, and a few revolutionaries to boot - Trotsky, Lenin and Stalin.

Naturally, this aura of intellectual exhilaration had a magical effect on the ladies, so every now and again a heart was destined to be broken. One such belonged to Peter Altenberg, who had idolized the wife of Adolf Loos, Lina.

In the lulls between heated debates, out came the chess-boards. The play was of the highest-quality :

Alfred Polgar was a dreaded opponent and defeating Leon Trotsky (alias « “ Herr ” Bronstein ») was a rare and scarcely believable honour.

Peter Altenberg can still be found in « Café Central » to this day - although only as a « papier mâché » figure. He sits next to the entrance, casting a rather grim, yet curious eye over guests as they arrive.

**Vienna : « Café Größenwahn » (« Griensteidl »)**

Anton Bruckner liked very much the old « Café Griensteidl » (in his time, called : the « Café Größenwahn ») and spent a lot of time there.

« Café Griensteidl » is a traditional Viennese « café » located at « Michælerplatz » Number 2 across from St. Michael's Gate at the « Hofburg » Palace, in the « Innere Stadt », 1st District of Vienna. The « Café » was founded in 1847 by former pharmacist Heinrich Griensteidl. In the January 1897, the original building was demolished during the course

of the renovation of the « Michaelerplatz ». In 1900, the « Café » was re-opened and became a popular location among the Viennese coffee-house culture. During the early- 20th Century, the « Café » was frequented by many artists, musicians, and writers, including Hugo von Hofmannsthal, Arthur Schnitzler, Arnold Schönberg, Hermann Bahr, Friedrich Eckstein, Rudolf Steiner, Hugo Wolf, and Stefan Zweig.

### Vienna : « Café Schwarzenberg »

The « Café Schwarzenberg » is the first establishment of its kind in Vienna to have opened (1860) on the « Ring » (circular boulevard) . Located at « Kärntner Ring » Number 17, it has been the meeting-place and work-place of many artists, writers, policy-makers and businessmen.

Piano concerts are heard very close to the « Café » , at the « Musikverein » , the « Konzerthaus » and the « Ronacher » .

Almost opposite, the Imperial Hotel, which was inaugurated in 1873, seduced even the faithfuls of « Café Schwarzenberg » like Sigmund Freud and Anton Bruckner. In an elegant atmosphere, you can taste the Imperial cake, a very popular delight, while listening to the Bösendorfer grand-piano.

### Where Viennese tradition is at home : « Konzert Café Schwarzenberg »

The Viennese coffee-house has been a stronghold of Austrian culinary tradition for Centuries. This tradition continues to be fostered in our days at the « Café Schwarzenberg » . Since its opening in the 19th Century, the « Café Schwarzenberg » has been a favourite with both locals and visitors to Vienna.

Enjoy laid-back conversations in Vienna's first « Café » on the « Ringstraße » over traditional coffee specialties, fine pastries and delicious treats of the Viennese cuisine. Tea-lovers will be surprised by the wide range of teas on offer.

The culinary offers are rounded-off by cultural events such as exhibitions, concerts or readings. Furthermore, visitors can choose from a wide-range of international newspapers.

In 1861, Europe's greatest boulevard was being built. The « Ringstraße » was taking its shape and evolved into the « Korso » between today's Opera and the « Stadtpark » , a promenade unknown to this point.

It was in those days when the « Café Schwarzenberg » , the oldest « Café » on the « Ringstraße » today, was opened by the Hochleitner family.

The « Café Schwarzenberg » has been a meeting-place for business people from the very beginning.

Although never an artists' or writers' « Café » , one famous visitor was a regular to his coffee-house for many years : The architect Josef Hoffmann, founder of the « Wiener Werkstätte » , used to be dropped-off by his driver to have lunch, read the newspaper and put his ideas down on sketching paper (« Quadratel Hoffmann ») . Many of his

outstanding works were created at the « Schwarzenberg » .

After 1945, officers of the Soviet Army occupied the rooms for their events and destroyed the furniture.

The « Café Schwarzenberg » today is one of the last « Cafés » on the « Ringstraße » upholding the typical atmosphere and tradition of a Viennese « Café » .

A popular meeting-place with the Viennese, an attraction for foreign visitors, a place to see and be seen.

...

« Café Schwarzenberg » is a traditional Viennese coffee-house, located on the « Ringstraße » boulevard (« Kärntner-Ring, Number 17 ») near the « Schwarzenbergplatz » , in the central « Innere Stadt » District of Vienna. Unlike many other traditional Viennese coffee-houses, the « Café Schwarzenberg » did not cater to a clientele of artists and intellectuals. The interior is notable for having remained largely unchanged since it was opened in the 19th Century.

« Café Schwarzenberg » is the oldest existing « Ringstraße » coffee-house, opened during the construction of the prestigious boulevard, in 1861, by a married couple with the family name Hochleitner. It quickly became an important meeting-place for influential entrepreneurs and financiers. Among the famous frequent guests was the architect Josef Hoffmann (1870-1956) , one of the founders of the artistic « Wiener Werkstätte » manufacturing company. Many of Hoffmann's designs were drafted at the « Café Schwarzenberg » .

### Vienna : « Café Impérial »

The « Café Impérial » located at « Kärntner Ring » Number 16, between the « Hofoper » and the « Musikverein » , was at the centre of Viennese intellectual life at the turn of the 19th Century.

The former private palace of the Duke of Wuerttemberg, completed around 1866 and never inhabited by the duke, was converted into a hotel for the 1873 World Exposition. It is one of the legendary palaces along the « Ringstraße » .

Since 1873 when the palatial town-house of the debt-ridden Duke Philipp of Württemberg was turned into an hotel by the « hôtelier » Johann Frohner (general-manager from 1873 to 1894 ; he died on 7 July 1894 ; his manager was G. von Rüling) , it has had an elegant, roomy coffee-house, which would be adorned with pictures by Moritz von Schwind. Hardly, a Viennese figure of prominence would not find his way to one or another « Imperial “ Stammtisch ” » .

On 1 May 1873, Emperor Franz-Josef opened the largest World Fair up to that time. Until November, Vienna was the stage on which the world and his wife were guests. 53,000 exhibitors brought speciality items from around the globe into the Imperial City. Among the guests of the « Hôtel Impérial » during a summer of such significance to Vienna was Brazil's Emperor Dom Pedro II. Denmark's Christian IX also lodged here, and liked to take carriage rides to the « Volksgarten » , where he listened to the « Deutschmeister » band giving concerts.

One of the most often (wrongly) quoted legends used to be that the « Hôtel » was opened by the Emperor. His Apostolic Majesty, Franz-Josef I, personally visited the hotel in 1879. The occasion was the visit of Prince Bismarck, who discussed an alliance with Count Andrassy of Hungary in one of the parlours on the second floor. 11 Prussian secret policemen kept watch over their prince. On 7 October 1879, the time had come : the treaty between Hungary and Prussia was sealed. That Franz-Josef I chose to go to the Imperial was a mark of great respect to his honoured guest.

« Discrétion oblige » : The head-concierge enjoys the reputation of being « the most important person » in any hotel, and the guest who befriends him is a wise and far-sighted person indeed. Nevertheless, the man with 138 keys « on his belt » (together with his team) really is in charge for everything that happens between arrival and departure. Being passionate about Opera, he is also a preferred conversation partner of all great Mæstros arriving at the hotel.

**Richard Wagner** composed and re-arranged the main-parts of his « Tannhäuser » while staying at the « Hôtel Impérial » , in 1875, to prepare for a new performance of the Opera under his supervision, in Vienna. He and his family occupied 7 rooms of the hotel, and he had a piano set-up in the parlour where he worked on the new arrangements. He also worked on the arrangements of « Lohengrin » (a Romantic fairy-tale Opera, in 3 acts) at the « Impérial » . See the memorial plaque erected by the Schubert Association in 1933, on the right of the hotel entrance.

Among the other regulars who frequented the elegant coffee-house :

- **Johannes Brahms** who liked to sip slowly his favourite coffee. He also composed at the « Hôtel Impérial » .

- **Anton Bruckner** who loved large portions of home-made « Kugelhupf » .

A « Kugelhupf » (also « Gugelhupf » , « Guglhupf » , « Gugelhupf ») is a light, yeasted marble-cake, traditionally baked in a distinctive circular Bundt mold. It is popular in a wide region of Central Europe, including southern Germany, Austria, Switzerland, Slovakia, Czech Republic, Poland and Alsace.

In late-Medieval Austria, a « Gugelhupf » was served at major community events such as weddings, and was decorated with flowers, leaves, candles, and seasonal fruits. The name persisted through the Austro-Hungarian Empire, eventually becoming standardized in Viennese cook-books as a refined, rich cake, flavoured with rosewater and almond. Many regional variations exist, testifying to the wide-spread popularity of the Gugelhupf tradition.

A speciality of the house is the « Imperial Tart » (« Imperial Torte ») which is a chocolate truffle, supposedly based on a secret recipe that is said to have been created by an apprentice cook who fashioned it when Emperor Franz-Josef opened the Hotel, in 1873. The confection comes in either a plain pine-wood box or a card-board box (for shipments) , each containing a single torte or group of small tortes. Tortes vary in size, from ones that are the size of an individually-wrapped candy to others that are the size of a small cake (approximately 6 inches or 15 centimeters) . A complementary torte box is provided to each guest-room and additional boxes can be ordered from the hotel for shipment.

- **Gustav Mahler**, the director of the « Wiener Hofoper » (always in tail-coat) . Mahler was a regular at the « Imperial

» for 3 years, as his widow would later be.

- **Franz Schalk**, Mahler's assistant at the Opera, would be regularly seen here, in tails, before performances in white tie and tails, which led the uninitiated to confuse him with the head-waiter.

- **Alma Mahler** who reminisces vivaciously in her memoirs how her German nationalist step-father, the artist Carl Moll, wanted to beat-up Karl Kraus here.

- **Carl Moll**, the famous « Jugendstil » painter.

- **Friedrich Eckstein**, the great polymath and mystic ; patron of Anton Bruckner and Hugo Wolf. His « Stammtisch » could be found in the second room on the left. One saw him, sitting there from morning till night, as Bruno Walter and others reported.

They all refer to the same source when they needed a reliable witness to back-up their claims : the aged head-waiter named Julius. The latter claimed that he had ushered Eckstein to the same table as an apprentice. Friedrich Eckstein was the brother of the suffragette, Therese Schlesinger, and the Austro-Marxist, Gustav Eckstein, and father of the writer, Percy Eckstein, and husband of a novelist, who made a reputation under the name of « Sir Galahad » . We find Eckstein's traces in the works of Sigmund Freud. He was the hero of Ludwig Hevesi's book, « Mac Ecke's Curious Journey » and the undiminished central figure in an Ecksteinian autobiography, « Old Unnamable Days ! » . He turns-up in the memoirs of Max Graf, Stefan Großmann, Roda Roda, in the venerable Albert Fuch's unsurpassed, « Geistige Strömungen in Österreich » and in Friedrich Torberg's legendary, « Tante Jolesch » . Hermann Bahr erected a literary monument to him in his novel, « Die Rahl » .

- **Karl Kraus**, critic and pamphleteer who, since 1900, appreciated the silence of the « Café Impérial » ; few people (except Eckstein) were allowed to approach this solitary character.

The editor of the « Fackel » even immortalized the coffee-house in his 1913 polemic, « The Lion's Head or the Dangers of Technology » . He would regularly meet with the architect, Adolf Loos, here. The editor of Innsbruck's « Brenner » , Ludwig von Ficker, would introduce the latter to Ludwig Wittgenstein here, on July 24, 1914 :

« We met at “ Café Impérial ”, where there ensued a somewhat strenuous, but positively stimulating conversation between him and the hard-of-hearing builder of the still controversial “ Haus am Michaelerplatz ”, on questions of modern architecture, which seemed to interest Wittgenstein. »

Later, Wittgenstein had a less than enthused view of Loos, as we see in a letter to his friend, the Loos pupil, Paul Engelmann, on the 2nd of September 1919. Nevertheless, in September 1924, Loos, ever the friend of the language-purist, Karl Kraus, presented Wittgenstein with a copy of his book, « Ins Leere gesprochen » (Spoken into the Void) , in remembrance of their animated conversation in the summer before the War. The friendly, if curious, sentence in which Loos expressed his good wishes ran : « for Ludwig Wittgenstein with thanks and most amicably : thankful for his stimulation, most amicably in the hope that he reciprocates these sentiments » . So saluted, he did not reciprocate the

sentiments. Moreover, he passed the tome on to his sister, Hermine, as she celebrated her 50th birthday that December with the words :

« I did not forget your birthday. I merely did not know what I could present to you that would fit the occasion. It recently occurred to me that you might not object to receiving Loos' book with his inscription :

“ Herewith, it passes over to your possession. ” »

- **Sigmund Freud**, the Father of psychoanalysis. It is rumoured that Freud conceived of his dream interpretation study while working at the « Café » , and he was known to hold impromptu psychoanalytical consultations at his table. He took his daily coffee at the « Café » and met with other academics and critics, including Friedrich Eckstein with whom he regularly shared a table.

- **Ludwig Münz**, art-historian.

- **Robert Hirschfeld**, historian and music-critic for the « Wiener Zeitung » .

- **Heinrich Schenker**, music theorist, music-critic, teacher, pianist, and composer.

- **Arthur Schnitzler**, author, dramatist and physician. Schnitzler remarked disrespectfully of him in his note-book of October 3, 1892 :

« Eckstein, very stupid. »

Mentioned in Schnitzler's novel, « The Road to the Open » , described by Roda Roda in his memoirs, the coffee-house on the « Ring » had soon become the meeting-place of literature and music.

- Writers **Peter Altenberg**, **Hugo von Hofmannsthal**, **Gustav Meyrink**, **Rainer Maria Rilke**, **Roda Roda**, **Franz Werfel**.

- **Carl Zuckmayer**, German writer and playwright.

- **Charlie Chaplin** : « Stay at the Imperial and feel like an Emperor. »

Charlie Chaplin arrived in Vienna for a few relaxing days. But otherwise, the occasionally warm Viennese heart knew no pity for the greatest film star of his time : Chaplin was badgered incessantly. Even his arrival resulted in a triumphal procession from the North Railway Station to the Imperial, with a crowd of 4,000 cheering the star. People climbed into trees to see him. Then, he spoke his first words ever into a microphone. His nervous cry of « Guten Tak, Guten Tak ! » (The Viennese physically carried him out of the railway station, and he could only hold onto his hat and cane with one hand) became what is probably the shortest interview for this new (and to Chaplin as yet not trusted) medium.

« I can only effectively assume to the role of The Tramp in mime. » , he explained to the press, who wanted to know

why he didn't continue speaking into the microphone. He did not yet want to make his voice known to the world.

Conductor **Herbert von Karajan**, who became artistic director of the Vienna State Opera in 1956, considered the Imperial as his occasional base camp, rang the concierge in a fury :

« I want to take a shower, and there is no water ! »

In truth, there was a burst pipe. The damage was repaired in no time at all. How, though, can you apologize to such a great Master of music without seeming ridiculous ? General-manager Littig gave him a small packet of coffee, the hotel's own blend, which Karajan so much appreciated. From this day forward, without a word, a packet of coffee was presented to Karajan on every of his arrival.

...

Das Hotel Imperial Wien liegt, wie der Name schon erahnen läßt, in Wien auf der bekannten Ringstraße. Es ist eines der auffälligsten Gebäude dieser Straße im 1. Gemeindebezirk.

Das Gebäude, ursprünglich unter dem Namen Palais Württemberg erbaut, ist ein fünfgeschoßiger Baublock mit sechssachsigem schwach hervortretendem Mittelrisalit. Im Giebel befindet sich eine Figurengruppe, die eine Frauengestalt auf Triumphwagen, von Hirschen und Löwen (den württembergischen Wappentieren) gezogen, darstellt. Im dritten und vierten Geschoß liegen im Mittelrisalit große Steinbalkone. Der Vorbau des Haupteinganges ist mit weißem Carraramarmor verkleidet.

Das Haus wurde 1862-1865 nach Plänen von Arnold Zenetti und Heinrich Adam erbaut. Unter anderem war Carl Kayer für die Inneneinrichtung zuständig. Es sollte als privates Palais für den Prinzen Philip von Württemberg dienen, der mit der Großnichte Kaiser Franz-Josefs I verheiratet war. Dokumenten zufolge ist es aber auch möglich, daß das Palais eine Morgengabe von Erzherzog Albrecht (der Vater von Maria Theresia) war.

Als 1928 die Aufstockung um zwei Geschoße erfolgte, wurde die ursprüngliche Dachbalustrade mit der großen Mittelkuppel entfernt. Im Jahr 1946 erfolgte der Umbau des Haupteinganges ; schon 1872-1873 wandelte man das Gebäude in das Hotel Imperial um.

Nach dem 2. Weltkrieg und während der Besatzungszeit diente das Hotel den Sowjets als Quartier. Dabei trug das Gebäude nur wenige Schäden davon. Insgesamt hat sich im Inneren nicht zuletzt durch Sanierung vieles verändert. Dennoch sind einige Repräsentationsräume und Salons erhalten geblieben. Die Festtreppe zeigt eine Skulptur von Heinrich Gasser, das « Donauweibchen » .

Seit jeher ist das Hotel Imperial im Palais Württemberg am Kärntner Ring eine der ersten Adressen Wiens. Es beherbergte und beherbergt Staatsgäste und unzählige Prominente aus Film, Politik, Musik, Wirtschaft und Gesellschaft.

1994 wurde das Hotel zum Besten der Welt gewählt - es ist bekannt für die Erfüllung der ausgefallensten Wünsche

seiner Gäste.

### University student Friedrich Eckstein

Friend and intermediary for Anton Bruckner. He vacationed with the Master and, later, met Franz and Josef Schalk, Ferdinand Löwe, and Karl Almeroth through Bruckner.

**Autumn 1879** : Through a « Kapellmeister » friend, the young Friedrich Eckstein gets to know Professor Anton Bruckner.

**Summer 1880 (?)** : Friedrich Eckstein who attends Professor Anton Bruckner's University lectures, comes into contact with him through the mediation of Ferdinand Löwe and the Schalk brothers.

**Tuesday, 25 July 1882** : Splendid banquet in the great-hall of the Bayreuth Festival's restaurant. Friedrich Eckstein finally arrives at destination after a walk of several days.

**Wednesday, 25 July 1882** : Friedrich Eckstein meets Anton Bruckner, Josef Schalk and August Göllerich junior in Bayreuth.

**Wednesday, 3 January 1883** : Letter from Hans von Wolzogen to Friedrich Eckstein :

Richard Wagner is quite aware of the consequences of the previous long-term hardships. He decides to spend the winter months in southern Europe.

**Friday, 16 May 1884** : Fire at the « Wiener Stadt-Theater » . The same day, Anton Bruckner has a chance to get closer to Friedrich Eckstein. Sitting at a « café » with him, he asks for advice on a Latin text by Bernhard von Clairvaux.

**Saturday, 17 May 1884** : Despite a rejection a few months earlier, Friedrich Eckstein finally becomes the private secretary of Anton Bruckner.

**Thursday, 4 December 1884** : Post-card from Anton Bruckner (Vienna) to Friedrich Eckstein : Bruckner asks Eckstein to come tomorrow at 12 o'clock.

**Saturday, 27 December 1884** : Whether Anton Bruckner traveled alone or accompanied (with Friedrich Eckstein) , is unanswered.

**Friday, 2 January 1885** : We ignore if Anton Bruckner was in Vienna on this day. Friedrich Eckstein is not sure if he will travel with the Master.

**Wednesday, 8 April 1885** : Performance in Cologne by the Heckmann String Quartet of Bruckner's Quintet (**WAB 112**)

(without the Finale) . Also on the programme, works by Philipp Julius Wolfrum and Johan Svendsen (who are present) .

In the audience : Friedrich Eckstein, Doctor Emil Kleser, Doctor August Guckeisen and Professor Doctor Franz Wüllner.

**Saturday, 2 May 1885** : Anton Bruckner conducts his « Te Deum » (**WAB 45**) with soloists Marie Ullrich-Linde (soprano) , Emilie Zips (Alto) , Richard Erxleben (tenor) and Heinrich Gaßner (bass) accompanied by the « Musikverein » Choir which include Hildegard Zweigelt (soprano) , Hedwig von Liszt, Franz Schumann (tenor) , Josef von Wöb, Friedrich Eckstein and his sister Emma Eckstein.

Also on the programme :

Songs by Franz Liszt (« Es muß ein Wunderbares sein » , « Du bist wie eine Blume ») and Richard Wagner (« Lenzeslied » from « Die Walküre ») , sung by Heinrich Adolphi and Bertha Ehn.

**Wednesday, 20 May 1885** :

« I hereby authorize my dear friend, Director Friedrich Eckstein, with regard to the publishing of my “ Te Deum ” (**WAB 45**) , to take the necessary steps at his discretion.

Vienna, 20 May 1885.

Anton Bruckner, m.p. »

**Mid-November 1885** : Letter from the German musician, music-publisher and editor Ernst Wilhelm Fritsch (1840-1902) to Anton Bruckner :

Whether the enclosed photograph is suitable for an article (30 December 1885, etc.) in the « Musikalischen Wochenblatt » . Anton Bruckner may give details of his « curriculum vitæ » and his work to Doctor Theodor Helm, who will write the final text.

Friedrich Eckstein is commissioned to answer the question and to visit Helm. Bruckner's paper note remains in Eckstein's possession.

...

If the German occult sub-culture was well-developed before the First World War, Vienna could also look back on a ripe tradition of occult interest. The story of this tradition is closely linked with Friedrich Eckstein (1861-1939) . The personal secretary of composer Anton Bruckner, this brilliant polymath cultivated a wide-circle of acquaintance amongst the leading thinkers, writers and musicians of Vienna. His penchant for occultism first became evident as a member of a « Lebensreform » group who had practised vegetarianism and discussed the doctrines of Pythagoras and the neo-

Platonists in Vienna, at the end of the 1870's. His esoteric interests later extended to German and Spanish mysticism, the legends surrounding the Templars, and the Freemasons, Wagnerian mythology, and oriental religions. In 1880, he befriended the Viennese mathematician Oskar Simony, who was impressed by the metaphysical theories of Professor Friedrich Zöllner of Leipzig. Zöllner had hypothesized that spiritualistic phenomena confirmed the existence of a 4th dimension. Eckstein and Simony were also associated with the Austrian psychical researcher, Lazar von Hellenbach, who performed scientific experiments with mediums in a state of trance and contributed to « Die Sphinx ». Following his cordial meeting with Blavatsky, in 1886, Eckstein gathered a group of theosophists in Vienna. During the late 1880's, both Franz Hartmann and the young Rudolf Steiner were « habitués » of this circle. Eckstein was also acquainted with the mystical group around the illiterate Christian pietist, Alois Mailänder (1844-1905) , who was lionized at Kempten and later at Darmstadt by many theosophists, including Hartmann and Hübbe-Schleiden. Eckstein corresponded with Gustav Meyrink, founder of the « Blue Star » theosophical lodge at Prague, in 1891, who later achieved renown as an occult novelist before the First World War. In 1887, a Vienna Theosophical Society was founded with Eckstein as president and Count Karl zu Leiningen-Billingheim, as secretary.

...

The Austrian polymath and theosophist Friedrich Eckstein was born on 17 February 1861 in Perchtoldsdorf, Lower-Austria, and died on 10 November 1939 in Vienna. He was a friend and temporary co-worker of Sigmund Freud.

He appears anonymously in Freud's « Civilization and its Discontents » as a « friend of mine, whose insatiable craving for knowledge has led him to make the most unusual experiments », including « the practices of Yoga. He sees in them a physiological basis, as it were, for much of the wisdom of mysticism » .

Also the husband of fellow-theosophist and writer Bertha Diener, Eckstein's penchant for occultism first became evident as a member of a vegetarian group which discussed the doctrines of Pythagoras and the neo-Platonists in Vienna at the end of the 1870's. His esoteric interests later extended to German and Spanish mysticism, the legends surrounding the Templars and the Freemasons, Wagnerian mythology and oriental religions. In 1886, in the week after the tragedy at Mayerling, in which Crown Prince Rudolf of Austria, and his mistress were found dead in mysterious circumstances, he and his friend, the composer Anton Bruckner (Eckstein was his road-secretary) traveled to the monastery of « Stift Heiligenkreuz » to ask the abbot there for details of what happened.

...

The proof sheets of Bruckner's Quintet, which at the time were in the possession of Friedrich Eckstein, « show many corrections in Bruckner's hand », which reveal that « the last actual manuscript handed in by Bruckner before the printing did not mark the conclusion of his work on the composition » .

...

One of Bruckner's pupils and closest friends, Friedrich Eckstein, visited the composer regularly at this time, and he was

often able to inspect the sketches for whichever work was then in progress. Eckstein was struck by how unusually the 7th's opening-theme came into being. His remarks about Bruckner's normal working habits (and how the opening of the 7th differed from these) is worth quoting at length :

« Almost every time I visited Bruckner at his apartment on the “ Heßgasse ”, I found him sitting at his old fashioned, bulky Bösendorfer grand-piano, deep in the sketch of one of his Symphonies, laboriously, with shaking hands, coaxing-out the harmonies. These musical outlines were in themselves quite remarkable. As a rule only, the violin or the top woodwind line was filled-in, and in the bottom, the bass ; in between was a yawning gap, and it wasn't until much later that the remaining orchestral voices were added. The harmonic dimension and the arrangement of the orchestral voices were already clearly established in the Master's inner-ear, and here and there, underneath the bass-line, would stand a note, usually in the form of a capital letter, to indicate the harmonic “ fundamental tone ” of the passage in question. »

« But what a wealth of unimagined beauty was revealed when I saw the very first bars of one newly-begun work, the wonderful 7th Symphony : where the string tremolos launch a deeply moving harmonic sequence that arches through a splendid chain of suspensions, bathing the main-theme, on horn and cellos, in shafts of radiant sunlight ! »

### Emma Eckstein

Emma Eckstein (1865-1924) was an Austrian author. She was « one of Sigmund Freud's most important patients and, for a short period of time around 1897, became a psychoanalyst herself » : she has, indeed, been described as « the first woman analyst. Emma Eckstein became both colleague and patient » for Freud. As analyst, while « working mainly in the area of sexual and social hygiene, she also explored how “ day-dreams, those ' parasitic plants ', invaded the life of young girls ” » .

Ernest Jones placed her with such figures as Lou Andreas-Salomé and Joan Riviere as a « type of woman, of a more intellectual and, perhaps, masculine cast who played a part in his life, accessory to his male friends though of a finer calibre » .

« Emma Eckstein was born in Vienna, on 28 January 1865, to a well-known bourgeois family » with close connections to Freud : « one of her brothers was Gustav Eckstein (1875-1916) , a Social-Democrat and associate of Karl Kautsky, the leader of the Socialist Party ; and a sister, Therese Schlesinger, a Socialist, was one of the first women members of parliament » . Another brother, Friedrich, appears (anonymously) in Freud's « Civilization and its Discontents » as a « friend of mine, whose insatiable craving for knowledge has led him to make the most unusual experiments » , including « the practices of Yoga. He sees in them a physiological basis, as it were, for much of the wisdom of mysticism » .

Emma, herself, was active in the Viennese women's movement, « collaborating with “ Dokumente der Frauen and Neues Frauenleben ” » .

After an nose operation in 1910, however, « Emma took to her couch, and remained a partial invalid until she died on (Wednesday) 30 July 1924 of a cerebral hæmmorrhage » .

When she was 27, she went to Freud, seeking treatment for vague symptoms including stomach ailments and slight depression related to menstruation. Freud diagnosed Eckstein as suffering from hysteria and believed that she masturbated to excess ; masturbation, in those days, was considered dangerous to mental health. Her « treatment lasted something in the region of 3 years - one of the most protracted and detailed of Freud's early cases » .

In her analysis, Emma Eckstein « supplied Freud with the material that would allow him to theorize hysteric symptomology » taught Freud about « the no-man's land between fantasy and memory, resonating with sadistic acts and fantasies of a former historical epoch » . Her « eager collaboration in her analysis gave Freud much precious material, contributed substantial changes and fundamental new elements to his theories : the wish theory of psychosis and dream ; the transferential reconstruction of her early pleasures and fantastic scenes from her inner-life » . In particular, Freud's theory of deferred action owed much to « Emma Eckstein's twinned scenes in shops » . « Now, this case is typical of repression in hysteria. We invariably find that a memory has been repressed which has only become a trauma through deferred action. »

Freud suspected, in addition to hysteria, a « nasal reflex neurosis » , a condition popularized by his friend and collaborator Wilhelm Fließ - an ear, nose, and throat specialist. Fließ had been treating « nasal reflex neurosis » by cauterizing the inside of the nose under local anesthesia, with cocaine used as the anesthetic. Fließ found that the treatment yielded positive results, in that his patients became less depressed. Fließ conjectured that if temporary cauterization was temporarily useful, perhaps, surgery would yield more permanent results. He began operating on the noses of patients he diagnosed with the disorder, including Emma Eckstein and even Freud, himself.

Eckstein's surgery was a disaster. She suffered from terrible infections for some time, and profuse bleeding. Freud called in a specialist, his old school friend, Doctor Ignaz Rosanes, who removed a mass of surgical gauze that Fließ had not removed. Eckstein's nasal passages were so damaged that she was left permanently disfigured. Freud initially attributed this damage to the surgery, but later, as an attempt to reassure his friend that he shouldn't blame himself, Freud reiterated his belief that the initial nasal symptoms had been due to hysteria.

Guilt over the episode has been identified as contributing to the dream of Irma's injection in « The Interpretation of Dreams » :

« Max Schur grasped right away the significance of the episode to the “ Irma ” dream in his paper on the specimen dream. »

Eckstein is also associated with Freud's seduction theory. In 1897, Freud cites her analytic findings to Fließ as support for his « so-called seduction theory, the claim that all neuroses are the consequences of an adult's, usually a father's, sexual abuse of a child » . Freud wrote that :

« Eckstein deliberately treated her patient in such a manner as not to give her the slightest hint of what would

emerge from the unconscious and in the process obtained from her the identical scenes with the father. »

Jeffrey Masson in his assault on Freud's abandonment of the seduction theory makes much of Eckstein's role, linking Freud's « abandonment » of her position with respect to the Fließ surgery to his « abandonment » of her evidence for the paternal etiology of neurosis : for « the idea (which even Masson concedes is crazy) that all neurotic patients had been sexually abused » .

Yet, while few (since Max Schur) would dissent that in regard to the failed surgery « Freud's evasiveness is blatant. Freud was eager to protect Fließ from the obvious charge of careless, almost fatal malpractice » , there is, at the same time, much to suggest that « as far as the seduction theory is concerned, Eckstein is a red herring, no more relevant than Freud's other patients. The fact that Masson lavishes so much attention on her is because Emma Eckstein is, for him, a woman whom Freud and Fließ abused. She is, thus, the prototypical psychoanalytic victim of this symbolic function. »

In 1904, « Eckstein had published a small book on the sexual education of children » , although, in it, « she does not mention Freud » . A few years later, however, in his open letter on « The Sexual Enlightenment of Children » , Freud refers to her book approvingly, highlighting « the charming letter of explanation which a certain “ Frau ” Emma Eckstein quotes as having been written by her to her son when he was about 10 years old » .

...

Emma Eckstein's relationship to Sigmund Freud and to psychoanalysis has been shrouded in mystery. Only vague hints as to her connection with Freud have emerged from the standard sources. Ernest Jones (Volume 2 ; pages 469) writes that Freud found the psychology of women more enigmatic than that of men. Freud was interested in another type of woman, of a more intellectual and, perhaps, masculine cast. Such women, several times, played a part in his life, accessory to his men friends though of a finer caliber, but they had no erotic attraction for him. Minna Bemays, then, in chronological order : Emma Eckstein ; Loe Kann ; Lou Andreas-Salome ; Joan Riviere ; Marie Bonaparte. It is not clear from whom Jones heard this, whether from Freud himself, or, more likely, from his daughter Mathilde. (The letters between Jones and Mathilde are in the Jones Archives in the Institute for Psycho-Analysis, in London. I could not find any reference to Emma Eckstein, there.)

Emma Eckstein was born in Vienna on January 28, 1865, the child of Albert (born in 1825) and Amalia (born Wehle, in 1836) Eckstein, and died on July 30, 1924, of « apoplexiacerebri » . Emma Eckstein had 5 sisters and 2 brothers. Her eldest sister, Kathe Hirsch, was the mother of Albert Hirst and Doctor A. Elias, both of whom granted interviews to K. R. Eißler in the 1950's about their « Aunt » Emma. (These interviews are now at the Library of Congress, in sealed archives.) One of Emma's brothers, Friedrich Eckstein, was referred to, by Freud, in : « Civilization and Its Discontents » (SE, 21 ; page 72) .

According to Anna Freud :

« Another friend of mine, whose insatiable craving for knowledge has led him to make the most unusual experiments and has ended by giving him encyclopædic knowledge, has assured me that through the practices of Yoga, by withdrawing from the world, by fixing the attention on bodily functions and by peculiar methods of breathing, one can in fact evoke new sensations and “ cœnesthesias ” in oneself, which he regards as regressions to primordial states of mind which have long ago been overlaid. »

Friedrich Eckstein, called « the philosopher of the “ Ringstraße ” », was a Sanskritist, a vegetarian, a close friend of Hugo Wolf, Anton Bruckner, and other musicians, and wrote articles about psychoanalysis. His autobiography, which Freud took with him to London, « “ Alte unnennbare Tage ! ” Erinnerungen aus 70 Lehr- und Wanderjahren » (Ineffable Days of Old Memories of 70 Years of Travel and Study) , edited in 1936 by Herbert Reichner (Vienna / Leipzig / Zürich) , mentions Freud several times (pages 20-24) .

There is some information given about the father, Albert Eckstein, an inventor, who had a parchment factory but, otherwise, he says little about the family. Emma Eckstein is not mentioned by name.

The other brother, Gustav Eckstein (1875-1916) , a Social-Democrat, was an associate of Karl Kautsky, the leader of the Socialist Party, in Austria. Gustav died of tuberculosis, at an early age. He is mentioned on page 214 of the « Österreichische Biographische Lexikon » (1815-1950) .

Karl Kautsky's son, an obstetrician, was a friend of Emma Eckstein. According to Mrs. Ella Heinz, a friend of his, whom I interviewed in Berkeley, in 1981, he spoke of an ill-fated gynecological operation that Freud encouraged, which eventually led to Emma Eckstein's death. I have not been able to confirm this from any other source, and Mrs. Heinz's memory of what Doctor Kautsky told her about this was rather vague. Emma Eckstein's sister, Therese Schlesinger, was one of the first women members of parliament. Her biography is found in : Alfred Magaziner. « Die Wegbereiter : Aus der Geschichte der Arbeiterbewegung » , Volksbuchverlag, Vienna (1975) ; pages 216-219.

We do not know much about Emma Eckstein's early life. Until 1905, she wrote articles ; after that, she seems to have withdrawn from the world and lived in a room, surrounded by books, never leaving her couch, apparently confined to it by a puzzling ailment which those around her considered hysterical in origin but which she felt was organic. A single mysterious line from an unpublished passage in a letter to Fließ (12 December 1897) indicates that Emma Eckstein, at Freud's request, saw patients. The passage itself is about the seduction theory.

The first line begins :

« Die Eckstein hat ihre Patientin so behandelt, daß sie ... » (Eckstein treated her patient in such a way that ...)

From the rest of the passage, it is clear that the treatment she used was nothing other than psychoanalysis. It is, unfortunately, the only such passage in the letters - nothing further is said about Emma's seeing patients. Fließ seems to have known about it, since Freud does not feel it necessary to explain to him why Emma would be seeing patients. Under what circumstances, for how long, and with what results, are all questions that cannot be answered.

In the Library of Congress, there is a series of 14 unpublished letters, given to the library by Emma Eckstein's nephew, Albert Hirst, that Freud wrote to Emma Eckstein between 1895 and 1910. One of these is simply a visiting-card, which reads, on the envelope :

« Fraulein Emma Eckstein  
V Siebenbrunnengasse 15 »

On the other side, it is written :

« Doktor Sigmund Freud  
Dozent für Nervenkrankheiten an der Universität  
Wien,  
ord. 3-5 h. IX, Berggasse 19  
Dies ist Fraulein Stella Pfeffer, 19 Jahr Ihr  
Pflegekind und so weiter »

The card is not dated. But since Freud uses the title « Dozent » , this was before he received the title of « Außerordentlicher » (associate-professor) before 1902.

The text reads :

« This is to introduce Miss Stella Pfeffer, 19 years old, your foster child, etc. No doubt the “ etc. ” referred to the fact that Freud had already discussed the “ case ” with Emma Eckstein before sending her. It appears to be a referral of a patient. »

Emma Eckstein had written about the sexual enlightenment of children as early as 1899, in an article published in the socialist « Die neue Zeit » entitled, « Eine wichtige Erziehungsfrage » - An Important Question in Education (« Die neue Zeit, Revue des geistigen und öffentlichen Lebens » , Band 18, 1899-1900 ; pages 666-669) . She writes there that a child knows shame only slightly, or not at all, knows no sexual feelings of any kind, and so, can only guess that there are other reasons, besides the desire to have children, that would fuel the desire to have sexual intercourse.

...

... moreover, « of a highly-fantastic kind » . Could this possibly be a reference to the shame she felt at having had ideas of being seduced as a child ? No doubt, by this time, she was well-aware that Freud felt she had never, in fact, been seduced, but was a severe masturbator, given-over to inventing stories « of a highly-fantastic kind » . At the end of her book, Emma Eckstein speaks of a fear that many young women had that « by dancing, by topical (medical) treatment such as massages and the like, or through a kiss, they could become pregnant » (page 30) . She hints that she, herself, « treated » such cases :

« Here, I wish to stress as well : I am not aware of a single case that can be thought of as the result of a constitutional predisposition to illness or lack of intelligence. When I, for the first time, succeeded with much difficulty in eliciting such a secret from a well-read, gifted 18 year old girl who had been educated accordingly when, for the first time, I came to see the emotional anguish of such a helpless being, I believed, deeply shaken, I was faced with the specific product of a diseased imagination. Once my attention had been drawn to it, though, experience taught me that this fantasy was not at all unusual, but is the exceedingly painful result of a lack of knowledge. »

She, then, proceeds to the device of an invented letter :

« I believe the best way to express my views and ideas, in regard to this subject, is by means of the following letter which is conceived (“ gedacht ”) as part of a correspondence between a mother and her child and is to provide the desired enlightenment from afar. »

Why would Emma choose to include a letter that could be mistaken for a real one to an imaginary son (who could also be mistaken for a real son) ? The theme of an unmarried mother (vaguely hinted at by the fact that the mother is writing to her son from far away - almost as if they were not to meet again) was very important to Emma Eckstein. She has a short article, in : « Dokumente der Frauen, “ Das Dienstmädchen als Mutter ” » (Servant as Mother) , published in 1899 (« Dokumente der Frauen » , Volume 2, Number 14, 1899-1900, edited by August Fickert, Marie Lang, and Rosa Mayreder ; pages 594-598) . The article is about « unmarried girls who come, at a very tender age, from the country to the city » (page 595) , where they take-up service in a wealthy household, convinced they are « under the protection of the family » . But, in reality, their protectors too often turn into their seducers :

« The inexperienced girls are only too easily made the victims of the men of the household. »

Emma, then, points-out :

« Our laws, which protect all our property, do not recognize the honour of somebody who serves, and these poor young girls are without rights and without protection even in the eyes of the law. A telling proof of this is paragraph Number 504 of our “ Laws of Tort ” : A guest in the house who dishonours a minor daughter, or a minor relative of the male or female head of the house who belongs to the household, is liable, for this transgression, to be punished with incarceration from 1 to 3 months according to the relationship to the family. Paragraph 505 says that the same punishment is to be meted-out to a woman servant in the family who commits a sexual felony on a minor son or a minor relative who is living in the house. So, we see : according to Austrian law, ... »

...

Freud adds :

« I do not believe that this touching letter brought the 2 sisters the enlightenment they wanted. Later on, the writer of it fell ill from unanswered questions of obsessional brooding. »

Freud clearly knows a great deal about the letter and the person who wrote it, and the person who did not answer it. As if impelled by some inner-need that he does not communicate, Freud adds a foot-note, in 1924 :

« After some years, however, her obsessional brooding gave way to a dementia præcox. »

It is not beyond the realm of possibility that Emma Eckstein had an illegitimate child, and that her letter is, in fact, based on reality. If the child was 10, at the time this book was written in 1904, then, she would have given birth in 1894, during her analysis. Being in analysis, she would have told Freud, and possibly nobody else. I must stress that none of the 6 people I spoke to, who knew Emma Eckstein, had ever heard any such rumor. Nor do I believe this is anything more than speculation. But it is one more piece of evidence that the mystery surrounding Emma Eckstein has, by no means, been resolved.

One more, perhaps minor, but nevertheless intriguing revelation comes from an unpublished letter that Freud wrote to Emma Eckstein, on April 17, 1904 :

« Dear Emma :

At last, I can give you the answer I owe you - I have been speaking so much that I did not get around to writing. So, as far as the thesis (or sentence) is concerned, you can make whatever use of it you wish. As soon as your work has seen the light of day, I will write, in accordance with your ideas, a review, add to it the censure (“ Tadel ? ”) you and I both wish and, then, offer the whole thing to the “ Neue Freie Presse ”. Anyway, it will take some time before it is printed. I will not demand that it appear in the Sunday issue. I know that such wishes do not allow themselves to be fulfilled and, in any event, it is entirely immaterial (on what day the review appears) . »

This comes from the collection of 14 unpublished letters to Emma Eckstein in the Library of Congress. It could well be that because Freud never did manage to publish the review, the open letter to Doctor Furst appeared in place of the promised review. From a later letter of February 11, 1905, from Freud to Emma Eckstein, we learn that the « Neue Freie Presse » rejected the review, and Freud intended to re-write it and send it elsewhere :

« Dear Emma :

So that you don't do away with yourself, which would be a grave loss for me, I am enclosing the response of the “ Neue Freie Presse ” to the letter we discussed. I answered :

“ I am perfectly prepared to re-write it but, this time, I must request assurance that it will appear next Sunday. ”  
As of now, there has been no answer. And now, I believe we are finally free of the “ Neue Freie Presse ” and can write the article for another newspaper and I hope get it published. And this time, it should be better.

Cordial greetings,

Your Doctor Freud »

Whether he ever did so, or whether he repaid this « debt » to a patient with the reference to her, in the 1907 article, is not known. My attempts to find the review have been unsuccessful.

At the end of his life, in 1937, Freud published « Analysis Terminable and Interminable » (SE, 23) . It would seem that, to the end of his days, he was preoccupied with Emma Eckstein. For, if I am not mistaken, that work contains a hidden reference to her case. Freud writes (page 222) :

« I now pass on to my second example, which raises the same problem (as Ferenczi's analysis) . An unmarried woman, no longer young, had been cut-off from life since puberty by an inability to walk, owing to severe pains in the legs. Her condition was obviously of a hysterical nature, and it had defied many kinds of treatment. An analysis lasting 3 quarters of a year removed the trouble and restored to the patient, an excellent and worthy person, her right to a share in life. In the years following her recovery, she was consistently unfortunate. There were disasters in her family, and financial losses, and, as she grew older, she saw every hope of happiness in love and marriage vanish. But the one-time invalid stood-up to all this valiantly and was a support to her family in difficult times. I cannot remember whether it was 12 or 14 years after the end of her analysis that, owing to profuse haemorrhages, she was obliged to undergo a gynecological examination. A myoma was found, which made a complete hysterectomy advisable. From the time of this operation, the woman became ill, once more. She fell in love with her surgeon, wallowed in masochistic phantasies about the fearful changes in her inside-phantasies with which she concealed her romance - and proved inaccessible to a further attempt at analysis. She remained abnormal to the end of her life. The successful analytic treatment took place so long ago that we cannot expect too much from it ; it was in the earliest years of my work as an analyst. No doubt, the patient's second illness may have sprung from the same source as her first one which had been successfully overcome : it may have been a different manifestation of the same repressed impulses, which the analysis had only incompletely resolved. But I am inclined to think that, were it not for the new trauma, there would have been no fresh outbreaks of neurosis. »

Certain facts speak in favour of identifying this patient as Emma Eckstein. First of all, the dates : when Freud speaks of the analysis having taken place « in the earliest years of my work as an analyst » , we must assume this to be between 1894 and 1898. Emma Eckstein's analysis certainly fell within this period. The letters to Fließ about her cover a period of about 3 quarters of a year, precisely the time Freud mentions as having been given-over to her analysis. The gynecological operation took place 12 to 14 years later, between 1908 and 1912. Do we have anything from that period that would indicate that Freud was in contact with Emma Eckstein ? Yes. In the Library of Congress, among the papers that Emma Eckstein left her nephew, Albert Hirst, is a medical prescription, dated May 24, 1910. It is for boric acid for the vagina. It is made-out to Miss Emma Eckstein (Emma Eckstein never married) , and it is signed by Sigmund Freud. Freud says that this was one of his earliest cases. Albert Hirst, her nephew, in an interview with K. R. Eißler, on March 16, 1952 (from the Jones Archives in London) , writes :

« This “ Aunt ” Emma, Freud's first patient, while her whole life was marred by a hysteria, still had unusual qualities. »

Freud says that she was « an excellent and worthy person » . Freud writes that the analysis of this patient was a success. Hirst also wrote an autobiography, « Analysed and Re-educated by Freud Himself » , which was never

published. (Albert Hirst's niece, Doctor Hanna E. Kapit, in New York, kindly sent me a copy of this autobiography.) He begins the chapter entitled, « Aunt Emma » with these words :

« One of Freud's earliest successes as an analyst, perhaps his earliest, was the cure of the neurosis of my aunt Emma. »

In the interview with Eißler, he said :

« I think it was of importance to him (Freud) in his practice that he had this great success, this well-known girl, this girl of a well-known family. Now, she was a very beautiful woman and after he had this great success, she, for several years, led a perfectly normal life. »

Freud says :

« She was a support to her family. »

Hirst, in the interview, says :

« She also, after the marriage of her 2 older sisters, ran my grandmother's household. That was quite a task - 6 members, and always open-house. »

Freud tells us that this patient suffered a relapse. Hirst, in his chapter on Emma Eckstein, writes :

« Then, Emma suffered a relapse. I have a notion that she was all her life in love with a certain Vienna architect, and that her relapse came after he got married, or after she became convinced in some other way that her love was hopeless. »

Freud says that there were disasters in the family and financial losses, and Hirst (interview) says that :

« She ran a rather complicated household which had to be run in a certain way on very little money, with most incredible efficiency. »

As for the symptom of not being able to walk, Hirst (autobiography) writes that :

« She spent all her days on her couch, never left her room, not even for meals, could not walk. »

(This is also mentioned in a letter to Fließ.)

Freud writes that :

« She proved inaccessible to a further attempt at analysis. »

And Hirst (interview) says :

« There was a time when, I remember, I don't think it was during the time that I was in analysis, but it may have been. Anyhow, Freud would come to her and try to continue the analysis. There was a conflict between him and her. »

Freud ends by saying that :

« She remained abnormal to the end of her life. »

Hirst (autobiography) writes :

« Emma soon returned to her couch on which she had lived so long. She survived, as a hopeless invalid, for another 10 years. »

### A Letter to Emma Eckstein

« November 30, 1905.

Dear Emma :

It won't do you any good if you deprive me of my title. It cannot change much between us, and I change my sentiments with as much difficulty as I do my opinions. Let me, therefore, repeat that it is only a nasty accident if I cannot resume your treatment. As though it had waited for you, the onslaught started after you stayed away so that within 1 week, I had to accept 4 patients and decline 2. You are only too familiar with the sad necessity of having to make a living ; and the touchiness you betray, though at a distance (that I should have treated you without expecting money from you) is something that is so little like you that I am convinced this will be the first thing you will take back. But it naturally has as much to do with the other. That you could be so misled, could so misunderstand the freedom to say anything in the treatment, and attribute to me the intention of offending you when I relied on my unshakable trust in your friendship and your love of truth, in order to permit you to obtain insight into a delicate but, nevertheless, usual and expectable transference - that, it is true, did not shake my opinion of you, but it did, again, instill in me respect for the elemental femaleness with which I constantly have to struggle. I am not surprised then that you also do not comprehend other sentences in my letter which cannot be misunderstood. I cannot possibly have meant anything but that it is impossible for me to let the discontinuation of treatment (the interruption, I hope) be explained with the pretext that I regard your pains as organic. That you would have to say something else instead which is closer to the truth, to explain the break, for example, that we had a quarrel ; that you could not accept something that I asserted and the like ; that you wanted some time in which to think things over or something similar.

May I, at the end, draw your attention to a small contradiction which is, in fact, at the bottom of your being angry. At one time, I am supposed to have offended you by denying you the qualities that would attract a man ; the other time, I must have offended you by explaining to you how it happened that in our relationship love did not appear. Can both injuries really be comprehended from the same stand-point ? I hope you will soon tell me : No (which, after

all, you like to say) and, therefore, I remain with cordial greetings,

Your Doctor Freud »

The 1952 interview with Emma's nephew, Albert Hirst, is instructive. He tells Doctor Eißler :

« There was a Viennese woman physician, the daughter of a rather well-known physician - a Doctor Dora Teleky. Now, she was a friend of the family and I thought she was a very good-looking woman, incidentally, and I admired her. She, one day, was visiting Emma, while Freud was analyzing Emma in the second stage, and discovered a ... oh, some ulcer or something, anyhow, some pus collection on her abdomen, and pretended to operate it and that was supposed to be the answer for the trouble, and Emma immediately had a great recovery and could get-up, and here was the proof that this thing was physical. And that must have happened while I was in analysis because I remember how indignant Freud was about Doctor Teleky for this interference, and he immediately stopped the analysis and said :

« Well, that's the end of Emma. That dooms her from now on, nobody can cure her neurosis. »

Hirst tells the same story, slightly differently, in his unpublished autobiography :

« The second event : Doctor Dora T(eleky) , a friend of the family, a woman physician, came to see Emma as a friendly visitor. She claimed suddenly to have discovered an abscess near Emma's navel and drained it. Dora claimed that she had found the source of Emma's illness and had cured it. She, thus, confirmed Emma in her rejection of Freud's diagnosis of a recurrence of her old neurosis. When I told that to Freud the next day, he was furious. He took Dora's " diagnosis " as a fake. That, to him, was a matter of course. He called it a highly-unprofessional ... »

**Vienna : Restaurant « Zur goldenen Kugel »**

Anton Bruckner loves the Viennese Restaurant « Zur goldenen Kugel » (To the Golden Cannonball) located at « Am Hof Platz » Number 11, next to the « Kirche am Hof » (also known as « Kirche zu den neun Chören der Engel ») . He enjoys his « Pilsner » and his favourite dish, rich in protein : roast pork with cabbage.

The original house, located at « Hausstadt » Number 340 B, was first mentioned in 1447. Its value fluctuated strongly : between 1454 and 1459, it rose from 45 to 200 Austrian Pfennig ! In 1504, it was sold for 154 Austrian Pfennig. The next buyer paid 380 Austrian Pfennig (the sale took place between 1527 and 1567) .

During the second siege of Vienna by the Ottomans in 1683 (the Second Turkish siege) , a group of 5 picturesque little houses, which closed the « Am Hof Platz » (who served as a market-square) organically towards the north, was the scene of clashes. On August 6, an Ottoman cannonball fell in the old, crooked structure (« Hausstadt » Number 340 B) . The ammunition was left trapped into the wall.

The baker's parade, which had become customary after 1683, ended on this market-square.

In 1686, the building was acquired by Michael Motz, the Outer Councillor and Commander of the Rumor Guard. He decided to open a tavern on the ground-floor. Motz had the brilliant idea of removing the Turkish cannonball from the wall, gold-plating it, and hang it outside to the façade as a memorial. Thus, he named the « Gasthof » and the building itself : « Zur goldenen Kugel » (The Golden Cannonball) . Around 1700, the « Gasthof » became very popular with merchants and craftsmen. Motz's successor will bring the tavern to its heyday. Between 1749 and 1771, the building was structurally connected to the next one (Number 340 A) , which was the Guild-house of the leather colliery maker.

From the 1870's until 1882, the building housed on the ground-floor the Nikola Market Café, a low-arched restaurant equipped with the most basic facilities. It enjoyed a lot of popularity with the market dealers and local people because of its good and generous breakfast served during the early morning hours. The furnishing consisted of large round marble tables, curved wooden arm-chairs, wall-mirrors, straight-armed bronze chandeliers, and 2 simple billiard-tables covered with wooden panels (on which the market baskets could be left) .

In 1882, the old building plus 2 neighbouring houses were demolished to make way, in 1883 (the year of the great memorial exhibition and the Bicentenary celebrations of the Second Turks Campaign) , for a brand new 5 storey palace with a magnificent façade, built accordingly to the plans of architect Ludwig Tischler (1840-1906) . It was originally called « Ledererhof » .

Born in Trieste, Tischler is one of the most active builders in Vienna (he is credited for 250 buildings) . He is often referred to as « the last Viennese Baroque architect » .

After the completion of the « Ledererhof » , it was decided to put above the portal the iconic Turkish cannonball with the inscription : « 6 August 1683 » . Eventually, the « Ledererhof » was called « Haus zur goldenen Kugel » (today's « Türkenkugel Haus ») . Fortunately, the famous restaurant, located on the ground-floor, survived the transition.

Between 1933 and 1934, the façade of the « Haus zur goldenen Kugel » was redesigned by Otto Großthal (1878-1961) and Emil Hoppe (1876-1957) . Damaged by World War II bombings, it was given a simpler look by Emil Hoppe in 1948. At the beginning of the 1990's, it was restored based on the original plan of 1883.

...

« Zur goldenen Kugel » (I. Bezirk, Am Hof Nummer 11, Teil, Konskriptionsnummer 340 B) .

Die I. urkundliche Erwähnung des Haus Stadt 340 B stammt aus dem Jahr 1447. Im Zuge der zweiten Belagerung Wiens durch die Osmanen im Jahr 1683 (Zweite Türkenbelagerung) schlug in dieses alte, verwinkelte Haus eine osmanische Kanonenkugel ein, die man später einmauerte. Im Haus befand sich ein Gasthof, der (wie das Haus) dem Äußeren Rat und Rumormeister (Kommandant der Rumorwache) Michael Motz gehörte. Er ließ die Kugel vergolden und gab damit dem Haus seinen Namen. Die Nachfolger von Motz brachten das Wirtshaus zu großer Blüte. Zwischen 1749

und 1771 wurde es mit dem Nachbarhaus Stadt 340 A, das ehemals das Zunfthaus der Ledererzeche gewesen war, baulich verbunden.

Im 19. Jahrhundert befand sich ab den 70er Jahren bis 1883 im Haus das Marktcafé Nikola, ein niedriggewölbtes Lokal mit einfachster Ausstattung, das sich aber bei den Marktleuten wegen seines in den frühen Morgenstunden servierten guten und reichhaltigen Frühstücks großer Beliebtheit erfreute. Die Ausstattung bestand aus großen, runden Marmortischen, Rohrsesseln aus gebogenem Holz, Mauerspiegeln, geradarmigen Bronzelustern und 2 einfachen Billardtischen, die mit Holzplatten abgedeckt wurden, auf denen die Marktkörbe abgestellt werden konnten.

1883 entstand an der Stelle des alten Hauses sowie zweier anderer Gebäude ein Neubau mit prachtvoller Fassade, auf den der Name « Zur goldenen Kugel » übertragen wurde (siehe Ledererhof) . Auch die namensgebende Kugel wurde in diesen integriert.

### Lederhof (Ledererhof)

Die Bezeichnung Lederhof umfaßte im späten Mittelalter mehrere Gebäude. Eines davon diente der Ledererzeche (communitas cerdonum) als Zunfthaus (Haus Stadt 340) . Davon leitet sich der Name des Hofes ab. Der « Lederhof » wird 1341, 1349 und 1353 genannt (ab 1366 mit dem Zusatz « an des Herzogen Hof ») . 1326 war das Bürgerspital Grundherr über acht Häuschen sowie neun Lederer- oder Sohl Schneiderische Am Hof. Erst ab dem 15. Jahrhundert ist es möglich, die verzeichneten Besitzer den einzelnen Gebäuden zuzuordnen. Das Gewerbe der Lederer und Färber war an das Wasser gebunden. Die Produktionsstätten befanden sich vor den Toren der Stadt (am Tiefen Graben und in der Vorstadt vor dem Werdertors) . Das Zunfthaus und die Verkaufstische lagen jedoch innerhalb der Stadt am Platz Am Hof. Vom späten 14. bis zum frühen 16. Jahrhundert war der Hof von neun Häusern umgeben. Die Bezeichnungen wechselten (1457 und 1476 « Am Hof bei den Sohl Schneidern » , 1449 und 1463 « Am Hof unter den Lederern ») , bis 1547 auf dem Plan von Augustin Hirschvogel die nördlich gelegene Gasse als « Am Leder Hof » aufscheint. Die Zahl der Hausparzellen reduzierte sich im Lauf der Zeit, die Bezeichnung Ledererhof wird ab 1795 häufiger, obwohl weiterhin andere Bezeichnungen existierten (1658 « Zu den sieben Häusern ») . Um 1770 standen hier nur noch fünf Häuser, die einen unregelmäßigen, hufeisenförmigen Baukomplex bildeten. Da die rückwärtigen Häuser Stadt 337 (Ledererhof Nummer 9) und 338 (Ledererhof Nummer 7) nicht in den Neubau von 1883 integriert wurden und eigenständige Objekte blieben, werden sie in diesem Artikel nicht berücksichtigt.

**Haus B** : Nummer 11 : Ledererhof (Konskriptionsnummer 336-340 ; darunter Konskriptionsnummer 340 : « Zur goldenen Kugel » , ursprünglich 2 Häuser, in einem das Marktcafé Nikola) .

Dieses Haus wird 1447 zum 1. Mal urkundlich genannt. In der Folgezeit schwankte sein Verkaufswert stark : Zwischen 1454 und 1459 stieg er von 45 auf 200 Pfund Wiener Pfennig ! 1504 wurde es um 154 Pfund Wiener Pfennig verkauft, doch der nächste Käufer zahlte bereits 380 Pfund Wiener Pfennig (dieser Verkauf fand zwischen 1527 und 1567 statt) . 1686 wurde es von Michael Motz erworben. Er unterhielt hier die beliebte Gastwirtschaft « Zur goldenen Kugel » . Deren Name, der auch für das Haus verwendet wurde, leitete sich angeblich von einer osmanischen Kanonenkugel ab, die im Zuge der Belagerung von 1683 (2. Türkenbelagerung) in das Haus einschlug. Diese wurde

danach in die Hauswand eingemauert und später vergoldet.

Zwischen den Jahren 1749 und 1771 wurden die beiden Häuser baulich verbunden. Seit den 1870er Jahren befand sich das sehr beliebte Marktcafé Nikola in diesem Gebäude. Obwohl es 1883 niedergerissen wurde, ist es im Häuserkataster von 1885 noch verzeichnet.

...

Das Haus « Zur goldenen Kugel » am Hof Nummer 11 in der Wiener Innenstadt verdankt seinen Namen einer türkischen Kanonenkugel, die 1683 an dieser Stelle eingeschlagen haben soll. Später wurde sie vergoldet und an der Fassade des Hauses angebracht.

Zur Zeit der 2. Türkenbelagerung Wiens standen an der Stelle des heutigen Hauses am Hof 11 « eine Gruppe von 5 malerischen kleinen Häusern, die den Platz organisch gegen Norden abschlossen ». Eines davon wurde der Erzählung nach im Jahr 1683 von einer steinernen türkischen Kanonenkugel getroffen. Der damalige Besitzer, der Äußere Rat und städtische Rumormeister Michael Motz, ließ die Kugel daraufhin vergolden und 1686 als Hauszeichen über dem Tor anbringen. Das Haus erhielt dadurch den Namen « Zur goldenen Kugel » und war schon um 1700 eine beliebte Gastwirtschaft bei Marktleuten und Handwerkern.

Am Hof hatte der Babenbergerherzog Heinrich II. Jasomirgott, der Stifter des nahe gelegenen Schottenklosters, seine 1. Wiener Residenz aufgeschlagen.

Zur Zeit der 2. Türkenbelagerung diente der Platz Am Hof als Marktplatz und für Volksbelustigungen. Hier endete auch der nach 1683 üblich gewordene Bäckerumzug.

Ab den 1870er Jahren war in diesem Haus das Marktkaffee Nikola untergebracht.

1882 wurde das alte Gebäude demoliert und im Jahr darauf ein fünfstöckiges Mietspalais, der Neubau des so genannten « Ledererhofs » nach den Plänen Ludwig Tischlers (1840-1906) errichtet. Mit rund 250 Bauwerken allein im Raum Wien zählt der in Triest geborene Architekt zu den meistbeschäftigten Baumeistern Wiens. Er wird auch gerne als « letzter Wiener Barockarchitekt » bezeichnet.

Auch die Türkenkugel bekam nach Fertigstellung des heutigen Gebäudes 1883 (« im Jahr der großen Gedächtnisausstellung und der 200-Jahr-Feiern zur Zweiten Türkenbelagerung ») wieder einen Platz. Sie wurde (so wie am Vorgängerbau) oberhalb des Portals angebracht und mit der Inschrift « 6. August 1683 » versehen.

1933-1934 wurde die Fassade des Hauses von Otto Schönthal (1878-1961) und Emil Hoppe (1876-1957) umgestaltet. Doch die Freude darüber sollte nicht lange andauern. Durch ein Bombardement im 2. Weltkrieg schwer beschädigt, wurde der Ledererhof 1948 von Emil Hoppe mit vereinfachter Fassade restauriert. Anfang der 1990er Jahre wurde sie wieder in ihrer ursprünglichen Form hergestellt.

Heute ist in dem Gebäude am Hof 11 eine Versicherungsgesellschaft untergebracht. Diese stiftete auch die Gedenktafel, die unter der vergoldeten Kugel angebracht ist. Die Inschrift lautet folgendermaßen :

TÜRKENKUGEL  
AUS DEM JAHR 1683 -  
SPÄTER EINGEMAUERT UND  
VERGOLDET - GAB DER EINST HIER  
BEFINDLICHEN GASTWIRTSCHAFT  
UND DEM HAUS DEN NAMEN  
EA•GENERALI

Das späthistoristische Wohnhaus (Nummer 11) trägt eine vergoldete Türkenkugel aus der 2. Türkenbelagerung am Portal und wurde 1882-1883 erbaut, die Fassade 1933 von Otto Schönthal und Emil Hoppe umgestaltet. Um 2010 erfolgte ein Dachausbau in Anlehnung in den Kriegswirren verloren gegangenen historischen Proportionen.

Hier befand sich das « Haus zur goldenen Kugel », das ein bekanntes Gasthaus, später ein beliebtes Marktlokal beherbergte. Daneben stand der Ledererhof, der aus dem Haus « Zu den fünf Kronen » und vier kleineren Nachbarhäusern hervorgegangen war und seinen Namen nach der Lederer-Innung trug, die sich wie auch die Färber ihr Zunfthaus in der Nähe des Tiefen Grabens bauten, da ihr Beruf an die Nähe des Wassers gebunden war.

#### Gewerbe und Firmen innerhalb des Hauses im Laufe der Jahre

Gastwirtschaft « Zur goldenen Kugel » .

« Marktcafé Nikola » (1. Bezirk, Färbergasse Nummer 2, Ledererhof) :

Auf der Freyung und Am Hof in der Inneren Stadt fand im 19. Jahrhundert nach Mitternacht stets ein buntes Treiben statt, wenn ungarische, slowakische, böhmische, mährische und deutsche Bauern ihre Marktprodukte zur Schau stellten. In der Nacht konnten die landwirtschaftlichen Produkte verkauft werden, doch am nächsten Morgen wurde der teilweise ohne Genehmigung veranstaltete Markt durch die Ordnungskräfte aufgelöst. Die Straßen wurden gereinigt und für den öffentlichen Verkehr wieder zugänglich gemacht. Die Marktleute fanden sich daraufhin meist geschlossen in Kaffeehäusern ein, wodurch sich die sogenannten Marktcafés etablierten. Eines dieser, vor allem von Marktleuten frequentierten Kaffeehäuser war das Café Nikola in der Färbergasse. Die Verkäufer kehrten sowohl bei Nacht, als auch am Morgen in diesem Kaffeehaus ein. Das Café war in einem niederen, gewölbten Lokal mit einer sehr einfachen Ausstattung, die aus runden Marmortischen, Rohrsesseln, Spiegeln und einfachen Bronzelustern bestand, untergebracht. Außerdem befanden sich 2 Billardtische im Café. Das Lokal konnte nicht mit anderen eleganten Etablissements der Zeit verglichen werden. Es diente vor allem dazu, den Marktleuten einen günstigen Kaffee in großen einfachen Tassen zu bieten. In Zeiten des größten Ansturms wurden auf die beiden Billardtische große Holzbretter gelegt, auf denen die Marktleute ihre Körbe und andere Utensilien abstellen konnten. Nach Mitternacht war das Café Nikola immer derart stark besucht, daß kein Platz mehr frei war. In dem verrauchten Lokal wurde über die Marktlage diskutiert und debattiert.

« Café Kugel » (Kaffeehaus) : Hier verkehrte unter anderen Alfred Polgar.

### Vienna : « Gasthaus zum Kühfuß »

Anton Bruckner enjoys his « Pilsner » beer at the « Gasthaus zum Kühfuß » , at « Kühfußgasse » Number 2 (« Tuchlauben » Nummer 10) near the « Petersplatz » , in the 1st District.

...

Hier standen ursprünglich 2 Häuser :

#### Haus A

Die 1. Erwähnung dieses Hauses stammt aus dem Jahr 1468. Bei diesem Haus (Stadt 148 beziehungsweise 146 in den Hofquartierbüchern von 1566 beziehungsweise 1587) scheint erstmals 1587 das Schild « beim Khüefuß » auf. Der Name könnte sich vom nahe gelegenen Milchgässchen und dem dortigen Milchmarkt ableiten, da hier viele Kühe untergebracht waren. Sicher ist, daß er nicht von der im 14. und 15. Jahrhundert nachweisbaren Bürgerfamilie Kühfußer (Stefan, Fleischhacker, Ratsherr 1455, 1457 ; Philipp, Ratsherr 1425, 1428) abzuleiten ist, da diese nicht in der Liste der Hausbesitzer aufscheint.

1609 kauft der kaiserliche Diener und Rat des Erzherzogs Maximilian, Elias Bayer, das Haus. Er wird zu den bedeutendsten Kaufleuten jener Zeit gezählt, die gemeinsam eine nicht zu unterschätzende Macht darstellten. 1663 wird ein zum Haus gehörendes « Stöchl » an den Handelsmann und äußeren Rat Peter Krafft (Khrappf ; siehe Haus B) verkauft. Am 28. September 1713 kauft der kaiserliche Hofagent und bischöfliche Secretarius Norbert Franz Haymerle das Haus, das er 1727 mit dem angrenzenden (Konskriptions-nummer 149 von 1566) besitzrechtlich vereint.

#### Haus B

Dieses Haus wird erstmals 1438 urkundlich erwähnt. 1505 fällt es unter anderem wegen Baufälligkeit an die Stadt, die es 1513 wieder verkauft. 1663 kommt es in den Besitz des Handelsmannes und äußeren Rates Peter Krafft (Khrappf ; siehe Haus A) . Am 27. November 1727 wird es an Maximilian Dominik Haymerle verkauft und mit Haus A besitzrechtlich vereint.

Zu dieser Zeit befindet sich im Haus ein renomiertes Bierlokal mit dem Schildnamen « Zum Kühfuß » (1904 ins Haus I, Naglergasse I verlegt) , das bereits auf Salomon Kleiners Stich von 1733 erkennbar ist. Auf einer Steintafel stand die Inschrift « O Mensch, thue Büß / denn hier ist der Kühfuß » .

#### Umbau 1749

1749 werden beide Häuser zu einem verbaut, wobei die alte Gastwirtschaft erhalten bleibt. Darüberhinaus befand sich

die Weinhandlung von Stefan Ferrich, Ritter von Ferrenhain, der auch ein Gastlokal angeschlossen war, im Gebäude. 1904 wird das Haus demoliert.

### Neubau 1904

1904-1906 wird der noch bestehende Neubau errichtet. Die an den Tuchlauben liegende Schmalseite schmückt ein Relief, das sich in der Mitte oberhalb des zweiten Stockes befindet und eine Mutter Gottes mit zum Gebet gefalteten Händen zeigt und von einem Laubkranz umrahmt wird. Statt der alten Gastwirtschaft eröffnet im Paterre des Neubaus das noch heute hier bestehende « Café Korb » .

1911 kauft die « Kaiser Franz-Josef Jubiläums Renten Versicherungsanstalt » das Haus, das sie am 1. Februar 1918 der « I. allgemeinen Unfall- und Schadenversicherungsgesellschaft » verkauft.

### The « Pilsner » Beer

« Pilsner Urquell » was the first « Pilsner » type beer in the world. In 1842, a brewery in Plzeň employed Josef Groll, a German brewer who was experienced in the Bavarian lager method of making beer. Beer in Pilsen, at the time, was not of very good quality and they needed to compete. Groll developed a golden « Pilsner » beer, the first light coloured beer ever brewed. It became an immediate success, and was exported all over the Austrian Empire. A special train of beer travelled from Plzeň to Vienna every morning. Exports of Czech beer reached Paris and the United States by 1874.

...

The New Town of Plzeň was founded at the confluence of 4 rivers : Radbuza, Mze, Uhlava and Uslava, following a decree issued by the Czech King Wenceslas II. He did so in 1295. Since the very beginning, the town became a busy trade-centre located at the cross-roads of 2 important trade-routes. They were linking the Czech lands with German cities Nuremburg and Regensburg. In the 14th Century, Plzeň was the third largest town after Prague and Kutna Hora. It comprised 290 houses on an area of 20 hectares. Its population was 3,000 inhabitants. In the 16th Century, after several fires that damaged the inner-centre of the town, Italian architects and builders contributed significantly to the changing character of the city. The most renowned among them was Giovanni de Statia. The Holy Roman Emperor, Czech King Rudolf II, resided in Plzeň twice between 1599-1600. It was in the time of the Estates revolt. He fell in love with the city. He even bought 2 houses neighbouring with the town-hall and had them reconstructed according to his taste. Later, in 1618, Plzeň was besieged and captured by Count Mansfeld's army. Many Baroque style buildings dating to the end of the 17th Century were designed by Jakub Auguston. Sculptures were done by Kristian Widman.

Plzeň experienced a tremendous growth in the first half of the 19th Century. The City Brewery was founded in 1842 and the Škoda Works, in 1859. With the population of 167, 000 inhabitants, Plzeň prides itself on being the seat of the University of West Bohemia and Bishopric.

...

« Pilsner » (also, Pilsen, or simply Pils) is a type of pale lager. It takes its name from the city of Plzeň, in Bohemia, Czech Republic, where it was first produced in 1842.

The City of Plzeň began brewing in 1295, but until the mid-1840's, most Bohemian beers were top-fermented. The taste and standards of quality often varied widely and, in 1838, consumers dumped whole barrels to show their dissatisfaction. The officials of Plzeň founded a city-owned brewery in 1839, called Měšťanský pivovar Plzeň (« Bürger-Brauerei » , in German ; Citizens' Brewery, in English) , which was to brew beer in the pioneering Bavarian style. Brewers had begun aging beer made with bottom-fermenting yeasts in caves (« lager » ; « gelagert » in German meaning « stored ») , which improved the beer's clarity and shelf-life. Part of this research benefited from the knowledge already expounded on in a book (printed in German, in 1794 ; in Czech, in 1799) , written by Czech brewer František Ondřej Poupě (Franz Andreas Paupie) (1753-1805) from Brno.

The Plzeň brewery recruited the Bavarian brewer Josef Groll (1813-1887) who, using new techniques and paler malts, presented his first batch of modern « Pilsner » , on 5 October 1842. The combination of brighter malt prepared by English technology, Pilsen's remarkably soft water, local Saaz noble hops from nearby Žatec and Bavarian-style lagering produced a clear, golden beer that was regarded as a sensation. 3 years later, in 1845, Groll returned to Vilshofen and, there, later inherited his father's brewery.

In 1853, the beer was available in 35 pubs in Prague ; in 1856, came to Vienna ; and, in 1862, to Paris. Improving transport and communications also meant that this new beer was soon available throughout Europe, and the « Pilsner » style of brewing was soon widely imitated. In 1859, « Pilsner Bier » was registered as a brand name at the Chamber of Commerce and Trade, in Plzeň. In 1898, the « Pilsner Urquell » trade-mark was created to put emphasis on being the original brewery.

...

In 1838, the citizens of Plzeň, Bohemia (The Czech Republic, now) saw something that would make any beer-lover cringe. The brew Masters of the town rolled 36 barrels of ale out into the street, opened them up, and spilled the beer in the main-square of town, letting it run into the ditches and, finally, into the nearby Radbuza River. The brewers had decided that the ale had become undrinkable. Even for breweries of Plzeň, with over 800 years of brewing experience, issues of contamination could still come-up. Ales were prone to being spoiled either by wild yeasts or bacteria.

### A New Beginning

This time, though, would be different. The brewers gathered after watching their work run down the street and decided that they to take drastic measures to make sure that this would not happen again. By this time, brewers in Bohemia and across Europe had learned of the importance of yeast to the brewing process. There was some debate about

whether fermentation was a living process or the by-product of the death of yeast, but there was no question that this mysterious little life form had a big affect on the character of a beer.

They hired Josef Groll, a Bavarian brewer, to come to Plzeň and teach them the German lagering method of brewing. Legend holds that, in 1840, a monk smuggled some of the precious lager yeast out of Bavaria. Whether this is the case or not, when Groll arrived in Plzeň there was a supply of lager yeast available. He also found a nearby source of excellent Saaz hops, a noble variety of hops that he would have been familiar with from Germany. The brewers of Plzeň had a well that supplied very soft water. With caverns carved for lagering in the local sand-stone, the stage was set for lager brewing.

### A New Recipe

Using light barley that was only partially malted and none of the roasted or smoked barley that the German brewers were using, Groll added generous portions of the fragrant Saaz hops to his brew. On October 5, 1842, he and the other brewers of Plzeň gathered for their first taste of the new beer.

### A New Beer

When they tapped the cask, they saw a beer unlike any other that they or anyone else in the world had seen. The colour of straw, it was light and clear. One could see right through it to the other side of the Bohemian crystal glass. Still cool from the lagering tunnels, this was a surprisingly refreshing beer, not dark and heavy like the ales that they were used to.

The brewers of Plzeň knew that they had a great new beer, here. Thanks to the Radbuza River, not only did news of this new beer from Bohemia spread, but so did a lot of the beer itself. « Plzeň » , or « Pilsner » , beer was born.

### Historic Dates

**976** : First written record of a castle called Plzeň.

**992** : Bishop St. Vojtech founded a small monastery and a church Kostelec of the Virgin Mary, nowadays' Church of St. George in Doubravka.

**1295** : New Plzeň was founded at the order of King Wenceslas II. Plans were made by the royal architect Jindřich. The town stretched on 20 hectares. Its layout was formed by a rectangular net of 15 streets and a square.

**1307** : First written record about a brewery in Plzeň. The oldest known town seal was attached to the document.

**1328** : First mention of a Latin school in the town.

**1411** : Master John Hus wrote a letter to the Pilsners, in which he prided their moral behaviour and appealed to them for persisting.

**1414** : Burghers led by the priest Václav Koranda senior expelled members of the Order of German Knights out of the town.

**November 1419** : Václav Koranda senior brought a group of South-Bohemian Hussites to Plzeň. They were led by John Hus.

**March 1420** : Hussites left the town for Tábor. Pilsen has stayed loyal to the Roman-Catholic Church since.

**1421** : Jan Žižka besieged Plzeň for the first time - without success.

**1427** : Hussites besieged the town, later again in 1431 and 1433-1434.

**Friday, 19 September 1434** : Emperor Zikmund Lucemburský's (Sigismund of Luxembourg) « Golden Bull » freed the town citizens from royal tallage, duties, tolls, and other charges.

**1449** : Plzeň became member of the anti-Podebrady Unity of Strakonice.

**1460** : The Great Bolevec Lake is founded.

**1466** : Pilsners turned away from the Czech King George of Poděbrady.

**1466** : Prague Chapter receiving Communion of consecrated bread resided in Plzeň till 1478.

**1468** : Pilsners recognized Hunyadi Mátyás of Hungary as the Czech King.

**1468** : First Czech book (Trojanska Chronicle) was printed in Plzeň.

**1480** : Pilsners gained the town magistrate's office.

**1507** : Devastating fire destroyed 2/3 of the town ; further fires in 1525, 1526, 1601, 1604, 1729, 1792, and 1835.

**1546** : After the death of Matouš of Švihov, the last parson of the Order of the German Knights, the town received a patronage right over the parish church.

**1578** : Town-council agreed that no non-Catholic person can become a town « burgher » . Since, Plzeň has stayed a faithful Catholic town.

**1599** : Emperor Rudolf II escaped to Plzeň from the plague epidemic in Prague. He resided in the town till 1600. Plzeň became, thus temporarily, the capital of the Empire.

**1633** : Albrecht of Valdštejn stayed in the town till February 1634. He was murdered in Cheb on 25 February 1634.

**1635** : Plague in Plzeň, further epidemics in 1648, 1680, 1714. 1832 : outbreak of cholera.

**1681** : Plague column erected at the town-square. It bears the first marks of Baroque in Plzeň.

**1695** : Jan Sladký Kozina was executed in Plzeň ; he was the leader of rebels of Domažlice region. His carcass was left hanging on the gallows for more than a year.

**1714** : Dominican convent founded.

**1776** : Grammar school established in Plzeň.

**1779** : Elisabethan property reforms : serfs allowed to rent and use shares of the town lordly yards.

**1786** : Population of the city rose to 5,246 inhabitants.

**1788** : Municipal government established in the town.

**1795** : Demolition of medieval town walls began.

**1799** : Russian army passed via the town. The Russians were an ally of Austria in the War against Napoléon Bonaparte. General Alexander Suvorov stayed in the town on 16 to 18 December.

**1804** : Philosophical institute established.

**1818** : First Czech theatre performance shown in Plzeň.

**1819** : Czech trivial school founded - the first Czech school in the town.

**1827** : D. L. Levita's tannery founded, the third biggest in Bohemia.

**1832** : First stone theatre in Plzeň founded, hospital opened-up.

**1835** : Fire damaged the spire of St. Bartholomew's Church.

**Tuesday, 2 February 1836** : Josef Vojtěch Sedláček died. He was a representative of the first revivalistic generation in

Plzeň.

**1840-1843** : Composer Bedřich Smetana studied in Plzeň.

Beer in Plzeň used to be brewed alternately by individual burghers with brewing rights. The quality varied, so the burghers of Plzeň had the idea of setting-up their own brewery to make good beer.

**Wednesday, 5 October 1842** : In the new Burghers' Brewery, the brewer Josef Groll brewed the first batch of the new « Pilsen » beer that would soon conquer the world.

**April 1843** : The Prague tailor Jakub Pinkas has his friend Martin Salzman bring in 2 buckets of « Pilsen » lager. He falls for its magic, gives his original trade the boot and opens a pub. The beer proves so popular that the premises soon needed to be extended into the neighbouring building. The pub would later be visited by prominent figures such as Czech philologist and historian Josef Dobrovský, historian and politician František Palacký, businessman Tomáš Baťa, and many more.

### The Master Brewers

In 1842, Josef Groll was the brew-master who made the first ever batch of what became known as « Pilsner Urquell ». Since then, only a small number of people have held the title of brew-master.

### Josef Groll (1842-1845)

Josef Groll, born in Vilshofen, Bavaria, in 1813, learnt his trade from his brew-master father in his home-town. Groll was invited to Plzeň by Martin Stelzer, the man who built the new Burghers' Brewery (that was the brewery's original name, reflecting how it was run by the citizens of Plzeň) . The 28 year old Groll brought an expertise in lager brewing and was responsible for using a new malting technique which gave a bright, golden beer. He fared well in the job and had an initial contract for 3 years after which the Burghers' Brewery Committee was obliged to interview more candidates. Groll applied for the position but didn't get the job so he returned to Vilshofen to take-over his father's brewery. Despite being a legendary figure in the beer world, his father is said to have described him as the « rudest man in Bavaria ». Regardless of his rudeness, he is one of the most famous brewers the world has known and the man who brewed the world's first golden lager. He died in Vilshofen in 1887.

### Sebastian Baumgärtner (1845-1850)

Bavarian brewer Sebastian Baumgärtner was hired as Groll's successor in 1845 after he tendered the most favourable terms for the available brew-master's position - he promised advantageous conditions for investors and large profits. He was offered a 5 year contract at the brewery, though little is known about him other than that he stayed for the duration of that contract and that he was seen as more of a businessman than brewer. The people of Plzeň didn't deem his tenure to be especially successful.

### Jakub Blöchl (1850-1879)

With 34 years of total service at the brewery, Jakub Blöchl is a very important figure in the evolution of « Pilsner Urquell » and he was able to develop the growing reputation of the beer and increase the output from 10,000 hectoliters a year to over 200,000 hectoliters. Born in Bavaria in 1820, he joined the brewery in 1845 with Baumgärtner and was his assistant. In 1850, another tender was sought to find the next brew-master and Blöchl was hired. We don't know whether this was a surprise or well-deserved but he was a great success and his era in Plzeň was lined with achievements. Blöchl was committed to the expansion and modernisation of the brewery and, during his time, ever-increasing sales led to the building of a new cellar, 2 new malt-house threshing room floors with rollers, installation of air-conditioning and a new cooperage. Upon retiring, he oversaw the conversion of a former Plzeň pub into a grand hotel followed by opening a beer house in the Prague suburbs. He retired at the age of 58 in January 1879 and died 4 months later. Thanks to his service, he became an honorary citizen of Plzeň.

### Josef Binder (1879-1900)

Josef Binder learnt to brew in his home-town of Kreuzberg and gained further experience in breweries in Munich, Passau and Linz. He went to Plzeň at the invitation of Jakub Blöchl when he was 26, and got the job of boiler in the brewery in 1863, being promoted to senior boiler in 1866. He then worked as a cellar-man before becoming a brewer's assistant in 1868. He became junior-brewer in 1871 and retained that position for 8 years, eventually substituting for chief-brewer Jakub Blöchl during his spells of illness. He was appointed to brewer in February 1879 and was soon promoted to the chief-brewer of the Burghers' Brewery. He was very successful in the position ; during this time, the Burghers' Brewery in Plzeň was awarded a number of prizes at both domestic and international exhibitions and trade-fairs, and the beer production increased by 100 % . He also oversaw the introduction of electric light and heating, which gradually replaced gas from 1881 - the project was finally completed in 1896. In 1885, Škoda engineering-built artificial cooling technology was installed at the brewery which began to replace the practice of using blocks of ice to cool the fermentation cellars. He was said to be a strict but fair boss who trained many experts to later become successful brewers themselves. After his tenure as brew-master, he became technical director and his total time spent at the brewery was 37 years. He died in March 1900 after a long illness.

### Adolf Bayer (1900-1929)

The son of a brewer, Adolf Bayer was born in Dobřany, near Plzeň, where he learnt the brewing-trade. He worked in 2 further breweries before moving to Plzeň in 1887 as a junior-brewer ; he became brew-master after his predecessor's death. He was heavily involved in many brewing organizations in the region and, from 1911, served as the Chairman of the Czech Brewing Industry Society. Bayer's time coincided with the construction of one of the defining features of the brewery : the water tower. Built by Eduard Kroh, it took 2 years to complete and was opened in 1907. It was also under Bayer that the brewery surpassed the 1 million hectoliters per year mark in 1913. He spent a total of 42 years at the brewery and, even with ailing health, was still working at the age of 70 ; he died after a short illness and we are told that right to the end, he was receiving and sending messages about brewery operations - a true brew-master.

### Jan Šebelík (1929-1946)

Bohemian brewer Jan Šebelík, born in Sušice in 1891, learnt his trade at his local town brewery and in Protivín, both located south of Plzeň. From 1912-1922, he worked as a chemist and controller in Plzeň's Svetovar Brewery (which, along with Gambrinus Brewery, merged with the « Pilsner Urquell » brewery in 1932) , then worked as a junior-brewer at Plzeň's Prior Brewery. In 1924, he was hired as an assistant brew-master at « Pilsner Urquell » . Šebelík became brew-master after Adolf Bayer's death, a position he stayed in until 1946 when he became technical director. Šebelík oversaw the reconstruction and modernisation of the electric power plant in 1938 ; this new plant enabled all the major brewery facilities to receive hot water.

### Antonín Vlasák (1946-1958)

Born in 1898, Antonín Vlasák joined the brewery in 1924 as a trained chemist. He was appointed a brewer in 1936, moving through the brewery to become head brew-master in 1946. Vlasák was responsible for over-seeing the rebuilding (in terms of production volume and the physical rebuild) following World War II as the brewery received substantial bomb damage during the war - on one night, in April 1945, it received 111 direct hits, causing extensive damage to the power station, malt-house, cooperage, water-plant and rail-tracks. In 1949, Vlasák introduced a lower-alcohol 8° beer, which remained for almost 40 years.

### Ivo Hlaváček (1959-1964)

Born in 1926, Ivo Hlaváček worked for 5 years at the West Bohemian Brewery in Staňkov before being appointed deputy technical director at « Pilsner Urquell » in 1958. One year later, he took-over the head brew-master position, which had been vacant for a year. He was brew-master until 1964 but remained at the brewery and worked several other top-positions in the company, including production manager. Hlaváček is a man of considerable note in the history of « Pilsner Urquell » and is seen as being responsible for saving the beer's original recipe. As a new brew-house was being build in early 1970's, there was a strong push from Communist Party members to have stainless-steel brewing kettles and to use steam-heating, which would have fundamentally changed the taste of the beer. It was Hlaváček who took on the role of travelling to the Communist headquarters in Prague and putting-up the fight to preserve the originality of « Pilsner Urquell » for following generations by insisting that copper brewing vessels and direct flame heating remained. We know now that he succeeded in doing so. He retired in 1987.

### Jiří Heller (1965-1976)

Born in 1915, Jiří Heller was the son of a Staňkov brewery worker. He started work in the same brewery as his father, becoming the brew-master, then, the director of the Plasy brewery in 1950. He joined « Pilsner Urquell » as a production manager in February 1959 and was appointed head brew-master in January 1965. In the same year, the water source was boosted with the opening of a third well and the brewery celebrated reaching an annual production of 1 million hectoliters for the first time since 1913 ; the Jubilee barrel was tapped on 23 December 1965 in the Plzeň pub U Salzmannu.

## Josef Schejbal (1976-1986)

Josef Schejbal was born in 1925 and trained as a brewery worker in Chudenice, before moving to Plzeň in 1949. From 1958 until 1976, he worked in the bottling plant, first as deputy manager, then manager. After studying fermentation technology, he was named head brew-master in September 1976. Schejbal was at the helm during the inception and building of the modern-day malt-house, opened in 1986 - the same year he retired. He died in Plzeň in June 1994.

...

The legendary pub U Pinkasů is located in the centre of Prague, not far from Wenceslas Square. It was the first pub in Prague to offer its customers beer produced in Plzeň by the Prazdroj brewery. The history of the famous « Pilsner Urquell », brewed since 1842, is closely linked to that of the restaurant, explains Karel Doubek, general-manager of the company, which owns the establishment :

« The first Mister Pinkas was called Jakub. He was originally from Budětice, a small village near Plzeň. He was a tailor by profession and had come to Prague with his wife for an apprenticeship. They moved into a downtown house where he made clothes, among others, for the monks of the nearby Franciscan monastery.

Jakub Pinkas had a friend, Martin Salzmann, who was a carrier from Plzeň, and who would often sleep over at his house. One day, it was in **April 1843**, Salzmann brought him 2 barrels of beer, which they had just started brewing in Plzeň. »

Jakub Pinkas wasn't exactly sure what to do with so much beer, so he put it in the cellar and started offering the brew to his customers. As you can imagine, people quickly took a liking to the « Pilsen » beer and started coming for the drinks rather than to have their clothes made.

Eventually, Jakub Pinkas decided to hang-up his craft as a tailor and make a living as an inn-keeper instead. His lack of experience in the business actually proved to be an advantage, explains Karel Doubek :

« At the time, beer was served in large jugs, which would stand on the tables, and people would pour the beer directly in their glasses. Because of that, the beer didn't taste so good, but it saved a lot of work for the waiters.

However, Jakub Pinkas didn't know this and he would fetch the beer in the cellar, pouring it into the glass straight from the barrel. The quality of the beer vastly improved and, in turn, attracted even larger crowds. »

U Pinkasů soon became a centre of Czech society and culture. A great number of famous people started frequenting the tavern, including actors, politicians and intellectuals of the National Revival movement, such as František Palacký or Josef Jungmann. Among regular guests was also president Tomáš Garrigue Masaryk and his son Jan.

**1849** : Saský bridge (nowaday's Roosevelt bridge) made accessible.

**Friday, 11 July 1856** : Josefa Kajetána Tyla died in Plzeň. He is buried at the Mikuláš cemetery.

**1858** : Telegraph connection to Marienbad established, Plzeň square and main-streets were lit by gas-lamp.

**1859** : Waldstein engineering enterprise established, it was purchased by Emil Škoda in 1869.

**1859** : Town-square (nowaday's Square of the Republic) was paved with cobble-stones.

As the popularity of « Pilsen » lager spread throughout Bohemia and the countries around, imitations started to appear. So ...

**1859** : The Burghers' Brewery had « Pilsner Bier » registered as a trade-mark, although this is also used by other beers from Plzeň.

**Monday, 18 February 1861** : Poet J. F. Smetana died. He was a representative of the second generation of Plzeň revivalists.

**1861** : Rail connection linked Plzeň to Furth-im-Wald, further tracks allowed connection of Plzeň and Prague in 1862 ; České Budějovice and Vienna, in 1868 ; Plzeň and Cheb, in 1872 ; Plzeň and Žatec, in 1873 ; Plzeň and Železná Ruda, in 1878.

**1866** : 2 month occupation by Prussian soldiers.

**Saturday, 15 October 1870** : Launch of the First Joint-Stock Brewery (now « Gambrinus » - a beer brewed at the Plzeňský Prazdroj brewery) , established by 20 prominent entrepreneurs headed by Emil Škoda.

**December 1870** : The first trade-mark, « Pilsner Actien Brauerei » , is registered.

**1873** : Both the Burghers' Brewery and the First Joint-Stock Brewery celebrate their first successful exports to the United States in the same year.

**1874** : « Pilsner » lager is being exported regularly to North America, and, by the end of the 19th Century, has reached Latin America, Africa and the Middle-East as well.

**1874** : František Ringhoffer buys a brewery with a mill, fermenting cellar and malt kiln for his estate in Kamenice, and founds the Velké Popovice Brewery.

**15 December 1874** : The first 60 hectolitres batch of beer sees the light of day at the Velké Popovice Brewery.

**1875** : The Velké Popovice Brewery is producing 18,000 hectolitres of beer - a figure which increases to 80,000

hectolitres of beer after extensive reconstruction work in 1902.

**1876** : The Burghers' Brewery and the First Joint-Stock Brewery are leasing and later purchasing their first railway wagons from the State Railway. They also set-up their own railway siding to replace the horse-drawn carriages.

**1887** : The Burghers' Brewery starts to bottle some of its lager. The First Joint-Stock Brewery follows suit.

**1888** : The First Joint-Stock Brewery launches its own bottling-plant, in response to the growing demand for bottled beer.

**1889** : New town water-works established at Homolka.

**1892** : The Burghers' Brewery celebrates its 50th anniversary, and to mark the occasion builds the Jubilee Gateway, which becomes the symbol of the brewery, the firm and the « Pilsner Urquell » brand.

**1895** : The Burghers' Brewery buys a locomotive.

**1897** : « Pilsner Urquell » takes pride in its consistent flavour - a fact that has also been confirmed by expert analyses. Measurements conducted by a Swiss laboratory in St. Gallen record the qualitative parameters of « Pilsner Urquell » beer.

**1898** : The General Customs Office in London had already designated « Pilsner » Beer as a special type of beer, regardless of its origin. So, the « Plzeňský Prazdroj - Pilsner Urquell » trade-mark was registered to protect the unique brand which serves as the model for all « Pilsner » type beers.

**1899** : The Burghers' Brewery builds its first bottling-plant, which will keep running for the next 70 years.

**1899** : At the World Exhibition in Paris, the Burghers' Brewery presents its own model of a refrigerated beer-wagon. It soon has 258 of these wagons.

**1900** : The « beer-train » of the Burghers' Brewery starts to make the run from Plzeň to Vienna every morning. A similar train is soon carrying beer to Bremen, where they are loaded onto ships for the U.S. markets.

**1914** : The Burghers' Brewery owns 388 wagons as well as its first cargo truck and car.

**2000** : Period materials are discovered in the gateway of « Pilsner Urquell » . Documents describing the modern history of the brewery are walled-up in it - as a message to future generations.

The joys of smoking versus addiction to tobacco

Whether it was done for medical purposes, as an addiction or for enjoyment with possible erotic effects, smoking was indulged in by all social classes.

Unlike chocolate, coffee and tea, tobacco was not consumed only by the upper social classes. 17th Century paintings show noblemen and noblewomen smoking, just as they show journeymen, mercenaries and peasant women smoking. In addition, things used by smokers such as pipes and snuff-boxes were popular motifs for painters of still-lives. Even though smoking was common in all social classes, it was also seen as a status symbol and a matter of prestige, depending on whether it was a pipe of clay or one of silver that was used. It seems likely that it was above all the poorer classes who used the tobacco that they smoked, snuffed or chewed as a means of satisfying their hunger. There were regional differences too in the way tobacco was used : in the late- 18th Century, people in Galicia, Hungary and the South Slav regions tended to smoke, whereas those in the Austrian territories preferred to snuff their tobacco. The upper-ranks of aristocracy were also very fond of tobacco as snuff, with the French Court serving as a model. When Marie Antoinette married the Dauphin, later King Louis XVI, she was given more than 50 gold snuff-boxes as wedding presents.

While people were convinced that chocolate had the ability to increase potency, coffee and tobacco were reputed to have the opposite effect, with the result that Catholic clergy were urged to smoke. However, when a tobacco factory was set-up by the Papacy in 1779, this was done rather for economic reasons. Meanwhile, contemporary doctors drew attention both to the dangers of addiction to tobacco and to its therapeutic function.

Unlike many of the other products that came from America, in the case of tobacco, the peasantry could substitute their home-grown product for expensive imports. However, the Habsburgs were against this practice because it undermined their tobacco monopoly. To ensure that they continued to profit from smoking, in 1723 Charles VI founded an Imperial tobacco manufactory.

Tobacco had already played an important role for the Austrian monarchs long before the reign of Emperor Franz-Josef I. The first Habsburg to appreciate the financial advantages offered by tobacco was Leopold I. In 1670, he needed money in order to fund his expensive hunting-games. Count Khevenhüller, his « Grand Master of the Hunt » , suggested leasing the monopoly for the cultivation and sale of tobacco to him to cover the Imperial hunt expenses. From then on (whatever the personal preference was for tobacco of the individual rulers) , the tobacco monopoly was placed under varying degrees of State control. Josef II eventually decreed an exclusive State monopoly over tobacco production in 1784, thus, founding the Austrian Tobacco Monopoly (« Austria Tabak ») .

### When non-smoking threatened the Monarchy

Archduke Ludwig regarded this « cigar story » as « a childish prank » , but one that he thought was « extremely unpleasant » . To put it more drastically, in 1848, it was a danger for the entire Monarchy. The people of Lombardy had decided to refuse to smoke in order to protest against the political system. In itself, this would not have been a significant threat, if only the refusal to smoke had not turned into a prelude to the Revolution of 1848. Field Marshall Count Radetzky, the commander-in-chief of the Austrian army in the Kingdom of Lombardy-Venetia, had special leave

and additional rations of cigars granted to the soldiers stationed there - on condition that they smoked them conspicuously in the streets of Milan. The non-smoking inhabitants of Lombardy thereupon threw stones at the smoking soldiers, and soon, street battles broke-out, in the course of which many people died.

It was not only the uprising that the Habsburgs had to worry about but also the loss of taxes. After all, the State profited from the people's taste for smoking, with 20 to 30 % of tax-revenue coming from the State tobacco monopoly - and, in Lombardy, it was above all expensive cigars that people smoked. That was why tobacco factories were the first targets of other rebellions, not least because of the use of the double-headed eagle as a symbol of the State monopoly.

In times of political crisis, the tobacco monopoly was often suspended, but was re-introduced as soon as the situation had calmed down. It was not necessarily the case that (non-)smoking as a form of protest against measures imposed by the State ended in violence. In the south of Styria, for example, the rebellious population went in for large-scale tobacco smuggling, and this was sometimes seen as a character quality typical of this region. On the other hand, people in Tyrol could get round the tobacco monopoly quite legally : as loyal marksmen in the struggle against Napoléon they had, as it were, earned the right to grow tobacco, even though this was granted for a short time only.

### The Austrian tobacco monopoly

Tobacco is still today a State monopoly in Austria and has served all the times to replenish the treasury of the government.

The tobacco monopoly was created 1784 by Josef II. , only the State was allowed to cultivate, produce and sell tobacco. These rights were then conceded against a fee or pre-payment, whereby e.g. cigarette stores were given to disabled ex-service men. Josef II. was a pragmatic who turned a vice into something fruitful for the community. Several times in history, the tobacco monopoly was a valuable asset, e.g. used to secure critical loans after the World War I.

In the 1848 Italian Revolution, the population was called to stop smoking in order to damage the Austrian Government ! 4.5 million lire was the Austrian income from tobacco sales in Italy alone. Less than a 100 years later, in 1934, the then in Austria illegal National-Socialists called for an identical boy-cott and appealed to stop smoking. Thereupon, « sudden stop of smoking » was declared illegal by the government.

With the entry of Austria into the European union, the tobacco monopoly loosened-up. For retail, there is still the need for a concession given by the monopoly administration, but the production and wholesale is open to competition. The State has secured himself his income via taxes on tobacco products.

It should be quoted the remark by Victor von Kahler :

« The 2 largest accomplishment that tied the Monarchy together was the menu in the restaurants and the tobacco monopoly » .

The State profited from the people's taste for smoking. In the 19th Century, up to 20 % of tax-revenue came from its tobacco monopoly. The figure would have been even higher if there had not been a great deal of tobacco smuggling, which people indulged in more and more as a form of resistance against such impositions by the State.

### Jewish Families and the Habsburg Tobacco Monopoly

Tobacco was unknown in Europe before the discovery of America. However, unlike other imports from the Americas that enriched European cuisine and coffers, European society did not uniformly embrace tobacco. At first welcomed as a miracle drug and cherished as a stimulant by « élite » circles, it was soon condemned by religious authorities for its « detrimental effects » on order and morality, and tobacco thereafter lost its exclusive and exotic reputation.

In Europe, the « new vice » was excoriated by religious reform movements that prescribed discipline and sobriety, as well as by societal forces in the early modern period that advocated self-control, restraint and moderation among citizens. English King James I (1566-1625) was among the first prominent tobacco opponents after gaining the throne in 1603. In his short tract « A Counterblaste to Tobbaco » (1604) , he condemned smoking as a « savage costume », adopted from the « barbarous Indians » that threatened to undermine English civilization. He further argued that the addictive character of tobacco destabilized the established hierarchy between husbands and wives, Masters and servants - and corrupted the mores and manners of English society. By his way of thinking, moral corruption would be followed by an economic decay that would jeopardize the health of his subjects, and the nation as a whole.

The « new vice » entered Central Europe during the Thirty-Years War (1618-1648) via English soldiers. Although opposed by the Catholic and Protestant churches as well as traditional rabbis, tobacco was rapidly adopted by soldiers of both sides of the conflict and through them disseminated to the general population. In the second half of the 17th Century, the countries north of the Alps began organizing a tobacco trade. In 1701, the Habsburg Emperor Leopold I published a general charter for all his provinces, where he declared that tobacco trade and production was to be a State monopoly. Like the Spanish King, he embraced tobacco as a taxable commodity and source of revenue for the crown.

The revenues generated by tobacco taxes did not live-up to the hopes of the Emperor and his Treasury, and the Treasury decided in 1722 to set-up its own tobacco factories, as was standard in the Western European countries. The first and primary factory was erected in September 1722 in Hainburg (Lower-Austria) with Baußart von Sonnenfeld, a privy councilor at the Imperial Treasury, as its first director. In 1723, the Treasury expanded its tobacco bureaucracy across the Empire, establishing provincial branches of the central tobacco administration in Bohemia, Moravia, Silesia, Upper-Austria, Styria-Carinthia, Carinola and the Austrian Littoral (i.e. : the area of Trieste, Istria and Gorizia) . These main provincial offices erected additional factories and managed tobacco production as well as retail sale.

The erection of State-owned factories, provincial and District administration offices, all manned by properly paid civil servants was expected to be the first step toward proper organization of the tobacco monopoly in the Habsburg Monarchy. However, short-comings on the local level resulted in corruption, rising prices and a simultaneous decrease in product quality. These short-comings lend to an enhanced black-market trade and contraband.

In response to the threat from the black-market, during 1725, Charles VI (1685-1740) invited to Vienna Diego First Baron d'Aguilar of the Holy Roman Empire aka Moses Lopes Pereira (born Mogadouro, Portugal around 1699-1759) to bring order to the market-place. He belonged to a Portuguese family of New Christians that had been active in the tobacco business on the Iberian Peninsula since 1653. Diego learned the business in Portugal from his father, Manuel Lopes Pereira, before moving to London in 1722, where he officially returned to Judaism, together with his family.

Given the Lopes Pereira family's expertise in the tobacco business, Diego d'Aguilar quickly pin-pointed the deficiencies in the organization of the Habsburg monopoly after his arrival in Vienna in 1725. He elaborated a plan, according to which he would lease the monopoly for the whole Monarchy for 8 years (enough time for efficient re-structuring) , paying an annual rent beyond the profit of the best year. In return, he stipulated terms that would allow him to effectively eradicate the reigning defects and deficits. The Court Treasury dismissed the propositions ; partly because of economic conservatism, partly because of anti-Semitism. They were scandalized by the idea of a Jew ruling over Austrian civil servants. Moreover, they conjured the threat of d'Aguilar « infiltrating » Austrian tobacco trade with huge numbers of Jews that would considerably augment the (legally restricted) number of Jews residing in the Bohemian Lands.

After 2 months of tedious negotiations, d'Aguilar agreed leasing the monopoly for the whole Monarchy, together with a Christian companion, the Marchese Carignani for a yearly rent of 400,000 Florins during the first 5 years, and 500,000 Florins during the remaining 3. Furthermore, he and his associate Carignani had to sign a « Letter of Commitment » neither to employ Jews in the administration nor in points of sale ; for retail sale, they were permitted to use the services of Jews, who were legal residents of the Habsburg Monarchy - i.e. : no foreign Jews.

Despite innumerable schemes against his person, Diego d'Aguilar tried re-organizing the monopoly according to the Iberian model and, for the first time, provided the Imperial Treasury with constantly growing revenue for almost 25 years. However, he had to commit himself not to employ Jews in public administration and points-of-sale and, in the Bohemian Lands, he could only hire few Jewish sub-contractors. Although he had personally risen to unprecedented positions of power and authority in the Monarchy, the impact of d'Aguilar's economic activities on the modernization process of Habsburg Jewry was thus limited. This should significantly change with d'Aguilar's successors during the next quarter of the Century.

In 1726, Charles VI ennobled Diego in gratitude for his achievements and awarded him the title Baron d'Aguilar. Thereafter, Maria Theresa, Empress of Austria (1717-1780) appointed him privy councilor to the Crown of the Netherlands and Italy, the highest bodies of foreign politics in the Monarchy, in the 1740's. While Diego's Jewishness was generously disregarded in these appointments, his Jewish background was a well-known and much discussed fact that, time and again, thwarted his business transactions.

In Moravia, Jacob Moses Dobruschka, who had established himself as an army supplier in Brno (Brünn) in the first half of the 18th Century, in 1750 began leasing the tobacco monopoly for Moravia together with his son Salomon Dobruschka (1715-1774) . One member of the Dobruschka family, Moses Dobruschka (1753-1794) (alias Franz Thomas von Schönfeld, alias Junius Frey) gained dubious fame because of his association with the false messiah Jacob Frank,

and later joined revolutionary forces in France in 1792 and was executed on the guillotine together with Danton. The family employed numerous Moravian Jews as sub-contractors and in retail sales, thus, providing many Jewish families with a comfortable income and the opportunity for upward social mobility.

The founder of the Lobel Honig « dynasty », (Jehuda) Löbel Hönig (Edler von Honigsberg) was born in Kuttienplan / Chodová Planá, in Western Bohemia at the beginning of the 18th Century. He made his money as an army-supplier during the Austrian War of Succession (1740-1742) . In 1752, he leased the tobacco monopoly for Prague, together with his sons Israel Hönig von Hönigsberg (1724-1808) and (Aaron) Moses Honig (1730-1787) , for a period of 10 years. Having gained the necessary experience in Prague, the Hönig family established a tobacco company together with other affluent Bohemian Jews - e.g. : Judah Löwel Baruch from Königswart (Kynžvart) who later adopted the surname Königswart ; the entrepreneur and Court supplier Wolf Joachim Edler von Popper (1730-1795) from Prague.

The Löbel Hönig company bid for the tobacco monopoly of the entire Monarchy in 1763, taking-over the Moravian trade controlled up to that time by the Dobruschka family. Over the stated opposition of the Empress Maria Theresa, who favoured a search for Christian lease-holders, the company secured a 10 year contract in 1765. The company fulfilled the contract by creating a network of Jewish sub-contractors that efficiently eradicated contraband and black-marketing. This successful and profitable business model enabled the company to renew its contract a decade later, in 1775, by offering an enormous payment to the treasury of 1,600,000 Florins annually. The Imperial Treasury insured compliance with the contract terms by appointing 4 Court commissioners to take control of the lease-holders' book-keeping and to remain familiar with the company's business affairs.

Despite these restrictions on its freedom of action, the monopoly lease remained lucrative as tobacco consumption within the Monarchy continued to rise. Maria Theresa's son, Josef II, Holy Roman Emperor decided to nationalize the monopoly in 1784, having paved the way to State control through the conditions of the 1775 contract that introduced the Court commissioners to the details of the business. Emperor secured the continuity of the enterprise by appointing Israel and Moses Hönig as directors of the national tobacco administration, without restricting their authority. Thus, Israel and Moses Hönig advanced to high-ranking State officials. How effectively this Jewish business network functioned, we learn from a complaint, filed by Count Strassoldo in 1790. Strassoldo documented that in Bohemia, 38 of 43 District lease-holders were Jews, who allegedly deprived the State and the Christian population of money and job opportunities.

Terrified by the events in revolutionary France, the Emperor ennobled Israel Hönig in September 1789, the first Jew so honoured in the Habsburg Empire. Due to their high official position and great economic power within the Empire, the Hönig family played a role in enabled upward social mobility among numerous Jewish lease-holders and sub-contractors for another 25 years.

Among the colourful Jewish intellectual figures of the 19th Century were descendants of the early Habsburg tobacco monopolists, including the writer and journalist Ludwig August Frankl (1810 in Chrast - 1894 in Vienna) , the American publisher, journalist and abolitionist Isidor Busch (born in Lodenice in 1822 - died in St. Louis in 1898) who played a major role in keeping Missouri within the Union during the American Civil War, and the painter Leopold Pollak (born

in Lodenice in 1806 - died in Rome in 1880) . All were scions of a single extended family that had made its fortune in the Habsburg tobacco trade.

...

**1850** : Closure in Linz of the woollen mill. A tobacco factory is established in its place as an emergency measure for the unemployed work-force.

**The Medical-Surgical Military Academy : Anatomical wax-models and tobacco enemas**

**The « Josephinum » as a training institution for medical students**

For the first time, practical medical training, using wax-models and medical instruments, was provided in the « Josephinum » , named after Josef II.

Short-comings in the medical care of the army persuaded Josef II to improve medical and surgical training. For instance, field-surgeons, who had hitherto only acquired very basic techniques, would henceforth also be trained in surgery. For this purpose, in addition to the medical studies provided in the University of Vienna, the Medical-Surgical Military Academy was opened in 1785 - known for short as the « Josephinum » . In order to provide students with the best possible education, learning aids such as wax-models, medical instruments and a specialist library were provided. The special wax-models of human body-parts that were produced in Florence for this purpose were intended to provide practical preparation for future anatomical and obstetric procedures. Josef II commissioned 1,192 such models, with a total value of 30,000 Gulden.

One revolutionary technique was the use of a tobacco enema. This instrument was used for re-animation. Warm tobacco smoke was blown into the rectum with bellows ; this, it was hoped, would stimulate the bowel, thereby, setting in motion a process of resuscitation. This invention was fully in the spirit of « Enlightenment » philanthropy. But to achieve this, it was first necessary to overcome prejudices - such as the belief that touching dead bodies made the living unclean. Maria Theresa's personal physician, Gerard van Swieten, attempted to eliminate this superstition in his Patent « über das Rettungswesen » published in 1769, which he wrote of the possibility of using resuscitation to bring-back to life people in a state of suspended animation, and those who were drowned, hanged or suffocated. At the same time, he sought to counter the myth of vampires that was spreading from Eastern Europe. The fear of swollen bodies, which oozed fluid and blood, fed the popular superstition that this was the work of (un-)dead persons who would rise from their graves at night in search of human blood. Bram Stoker's well-known figure of the vampire hunter, van Helsing (brought to life in the novel of 1897) was a tribute to van Swieten.

...

The « Josephinum » was founded by Emperor Josef II as a medico-surgical military academy and completed in 1785 based on architectural drawings by Isidor Canevale. It is the most prominent example of neo-Classical architecture in

Vienna and an important legacy of the Age of Enlightenment in Austria. In connection with the Vienna General Hospital and the nearby mental hospital named « Narrenturm » (Fool's Tower) , this entity of important medical and scientific institutions, all created within Josef's II short reign of 10 years, formed an important structural development still defining Vienna's urban landscape today.

The « Josephinum » houses the world-renowned collection of nearly 1,200 anatomical wax-models commissioned by Josef II in Florence for the newly-established academy, the historical library with scripts and volumes from the 15th to the 18th Century, as well as numerous additional collections of the Medical University of Vienna documenting the history of medicine and the great contribution of the « Vienna School of Medicine » .

The « Josephinum » is the historical gateway to the Medical University of Vienna and remains to date an important place for teaching, research and the exchange of ideas.

...

The historic « Vienna School of Surgeons » is officially called « Collegium Medico-Chirurgicum-Josephinum » , but generally rather known simply as « Josephinum » . It can be found north of the « Votivkirche » , in the 9th District of Vienna, the « Alsergrund » . It was founded in 1782 as a centralized academy for the training of surgeons that served in the Habsburg armies.

The « Josephinum » was named after and founded by Emperor Josef II, the great Emperor of Enlightenment in Austria. The « Josephinum's » headquarter is (like many things that were built under the rule of Josef II) a very important example for neo-Classical style and the most important piece of work by Isidor Marcellus Amandus Canevale. The latter one was a significant architect of this period.

The construction of the « Josephinum » was connected to the development of a nearby military hospital, the « Militär-Garnisons-Hauptspital » on today's « Van-Swieten-Gasse » . Both buildings were erected between 1783 and 1785. According to a much disputed view by Hans Tietze, the « Josephinum » is a Classical mini-version of the Baroque Austrian National Library at the « Hofburg » . The central entrance area was built in very expensive stone from the quarries of Kaisersteinbruch.

Upon the occasion of the « Josephinum's » opening, Emperor Josef II had a special coin designed. He endowed a library of 6,000 volumes and donated 30,000 Gulden towards the acquisition of anatomical wax-models for the Anatomic-Pathologic Museum, which was and still is attached to the « Josephinum » . In addition, the « Josephinum » was given a collection of zoological, geological and botanical specimens.

In 1786, the « Josephinum » Academy was elevated to the same rank as a University College and gained the right to award Master degrees and Doctorates for surgery. Another move upwards was performed in 1822, when the « Josephinum's » chair, Johann Nepomuk Isfordink, succeeded in convincing Emperor Franz I to elevate the « Josephinum » to the status of a full-university. In 1849, the « Josephinum » was closed-down and its duties were merged with the

University of Vienna. However, in 1854, it was re-opened as a division of the Military Academy, once again providing training for military surgeons.

Today, the « Josephinum » is home to the Institute for the History of Medicine of the Medical University of Vienna. Beyond that, it houses a museum that exhibits the anatomical specimens of the « Josephinum » collection. In the front-yard, a fountain depicts the goddess of medicine, Hygeia. It was made in 1787 by Johann Martin Fischer (who saved the « Donnerbrunnen » fountain) .

### What do Franz-Josef and a woman revolutionary have in common ?

For the one, it was a matter of political conviction, for the other, probably rather a source of pleasure, but it is unlikely that the two of them would ever have indulged in this vice together.

Franz-Josef was the first Emperor to smoke. In the years before the Revolution of 1848, smoking was frowned upon at Court and people were forbidden to smoke, at least in public, smoking being seen as a fire hazard because timber was still widely used to build houses until well into the 19th Century. This ban on smoking was, however, increasingly seen as a political imposition.

For example, in 1831, a pamphlet proclaimed :

« Unless smoking tobacco in the streets of the town is permitted forthwith there will be a revolution. The Imperial-Royal Lower-Austrian Rebels. »

People who nevertheless smoked in public were considered dangerous trouble-makers and Democrats. How smoking could indeed provoke a revolution was demonstrated in Vienna in 1846, when a brawl broke-out between students and the police after the former had smoked in the street. One of the first « achievements » of the Revolution of 1848 was to have the smoking ban lifted - at least, for men. Women were still subject to a social « smoking ban » . This led to tragedy for Archduchess Mathilde : she was burned to death in 1867 after she hid a cigarette under her clothes because she did not want to be caught smoking.

Besides, the State profited from the people's taste for smoking, as in the 19th century, up to 20 % of tax-revenue came from its tobacco monopoly. The figure would have been even higher if there had not been a great deal of tobacco smuggling, which people indulged in more and more as a form of resistance against such impositions by the State.

...

Of all the Monarchs of his time, Emperor Franz-Josef I was perhaps one of the most modest as far as his personal needs were concerned. His daily routine was strictly regulated (he got-up every day at 3:30 am !) and his private life was free from any extravagance apart from the occasional visit to the theatre and the pleasures of the hunt (you can

see many stuffed animals in the « Kaiservilla ») . He drank and ate only in strict moderation. Nevertheless, he did have one vice : **smoking**.

Eugen Ketterl, the Emperor's personal servant, reports this in his memoirs :

« When the Emperor sat alone with Count Paar in the train compartment, inter-course between the two was limited to the creation of huge billows of smoke, with the result that Emperor and general-adjutant were hardly to be distinguished any longer in the thick fog of tobacco smoke. »

### Bruckner, Emperor Franz-Josef and Virginia Cigars

« Bruckner - A Character Sketch » by Hans Ferdinand Redlich (from « Bruckner & Mahler » , The Master Musicians series) re-printed in the Boston Symphony Orchestra 94th Season Program (1974-1975) .

(Page 25 :)

« Bruckner must have cut a strange figure : ambling along, as in a day-dream, on the populous boulevard-like pavements of the elegant, new-built “ Ringstraße ” with its brand-new Parisian Opera House of 1868, both the visual symbols of Vienna's irrepressible gaiety, frivolity and sensuousness, even after the recent defeat of Sadowa. (...) A stockily built figure, carrying an imperious head on broad peasant's shoulders ; a profile whose aquiline nose recalled a Roman Emperor rather than a provincial organist from the back-woods of Upper-Austria ; clad in garments of strangely old-fashioned cut, black, with short, baggy trousers of grotesque width (apt trouser-legs for one contending with organ pedals) ; with a broad-brimmed slouch-hat (instead of the customary topper) and with a huge red, tobacco-stained handkerchief flapping from one of the bulging coat-pockets ; in his hand the inevitable snuff-box (in place of the customary elongated “ Virginia ” cigar) ; close-shaven (save for a ridiculously small suggestion of a moustache right under the nose) and the hair closely cropped (instead of the flowing locks and picturesque beard worn by artists and intellectuals) ; the mighty profile with the Roman nose and the deep-seated eyes expressing at once childish surprise and, as it were, a permanent silent quest. »

The « Virginia » Cigar originates from the alpine countries. The construction includes a short mouth-piece and an « Alicante » straw rolled into the structure. The straw is withdrawn before lighting-up. This produces an air-channel through the length of the cigar to cool the smoke.

Max Graf :

« At 6:00 in the morning, the Emperor sat at his desk in the palace, or at Schönbrunn and signed documents. On the desk stood a box of Virginia cigars. Nearby were the ministers in frock-coats and black cravats, who reported the order of the day. »

« Viennese soldiers returned from service in Italy, whistling Italian opera melodies. From Italy, too, Viennese officers

imported the greeting « Ciao » . Though it sounded Chinese, it was a contraction of the Italian word « schiavo » (servant) . From Italy, the soldiers brought the Virginia cigar which has become the « people's cigar » of Austria. »

« In the Strauß marches, one saw the typical Viennese soldier, his hat cocked over one eye, Virginia cigar in the corner of his mouth. »

### The new Vienna Conservatory

**Monday, 4 October 1869** : The Society of Friends of Music's « Conservatoire » in the new « Musikverein » building on « Karlsplatz » is officially open to students. The school occupies the second floor, in the right-wing of the « Musikvereingeäude » .

### The sour throat of little Mahler

**1870** : (Jihlava) The 10 year old Gustav Mahler suffers from sour throats. It will also be the case during adulthood.

### The new « Musikverein »

**Wednesday, 5 January 1870** : The building as a whole is finally completed. Emperor Franz-Joseph I lays the cap-stone at a ceremony marking the official inauguration.

The physical home of the « Gesellschaft der Musikfreunde » was regarded from the very beginning as a key-element of Vienna's cultural life.

This was a day of celebration for the whole of Vienna. Thousands of people flocked around the new music complex to watch all the high-ranking State dignitaries, eminent figures from the art-world and other distinguished individuals arrive in their carriages. The Society's President, Doctor Franz Egger, welcomed the official guests in the lobby, while the Vice-President, Nikolaus Dumba, greeted them in the main concert-hall. Once the Emperor and the archdukes had taken their seats, Dumba read-out the foundation document, which was signed immediately afterwards by the Emperor, who then proceeded to lay the final stone. The day after this ceremony was held, the « Musikverein » concert-hall finally fulfilled its true purpose by staging a festive concert with a programme of music by Beethoven, Haydn, Schubert, Bach and Mozart.

The leading role that Dumba had played in the construction of the new « Musikverein » building was officially recognized by the award of a special medal. On the occasion of the building's inauguration, Dumba and the leading architect Theophil von Hansen were awarded the Order of the Iron Crown by the Emperor. At Dumba's orders and expense, Theophil von Hansen's brother, Karl, undertook the decoration of the Propylæa at the University of Athens - more precisely, the coloured frescoes on the side of the building.

The Vienna « Ringstraße » era heralds an opportunity for the « Musikverein » to erect a new and magnificent building of its own. As early as 1858 (just as the demolition of the medieval city-wall was beginning) , the « Gesellschaft der Musikfreunde » had approached the Emperor with a plea for a building plot to be granted, as a larger building is deemed urgently necessary. This time now arrives, and the Emperor gifts the « Gesellschaft » a building plot on the left-bank of the river Wien.

**1867**

The architect Theophil Hansen is contracted to build the new « Musikverein » building. The funding comes not only from the Austrian State (the Emperor grants funding from the State lotteries) but also and mainly from private donors. Members and friends of the « Musikverein » are closely involved with the fund-raising effort and contribute to the building costs. The « Gesellschaft » itself creates incentives by providing special privileges to « Benefactors » and « Founders » .

A major donor was Nikolaus Dumba, industrialist and Liberal politician of Greek descent, whose name the Austrian government gave to one of the streets surrounding the « Musikverein » .

The « Singverein » and the Orchestra of the « Gesellschaft » under Johann Herbeck stage the premiere performance of Johannes Brahms' « German Requiem » .

**1881**

Franz Liszt conducts a concert performance of his own works by the « Gesellschaft » . He too is closely connected with the « Musikverein » , having been granted honorary membership by the « Gesellschaft » as early as 1838.

**1885**

At the initiative of the « Gesellschaft » , an international tuning pitch conference takes place in Vienna, to set an agreed pitch standard for the concert pitch A (at that time 870 simple harmonic oscillations) .

### « Musikverein » : Inaugural concerts

The Small Hall (« Kleiner-Musikvereinssaal ») located at « Musikvereinsplatz » Number 1 is known as the 598 seats « Brahms-Saal » since 1937. The inaugural concert was given by Clara Schumann.

At the opening ball, Johann Strauß conducts his waltz « Freuet Euch des Lebens » , which he dedicates to the « Gesellschaft der Musikfreunde » : one of many Johann Strauß premieres that will take place in the « Musikverein » .

**Wednesday, 5 January 1870** : Final rehearsal by Johann Herbeck in anticipation of the « Musikverein » opening

concert.

**Thursday, 6 January 1870** (Epiphany Feast Day) : The first « Gesellschaft » concert takes place in the « Großer-Musikvereinssaal » . Johann Herbeck conducts the Society's Concert Orchestra in a programme that reveals the multiple acoustic advantages of the new auditorium. Works by Ludwig van Beethoven, Franz-Josef Haydn, Johann Sebastian Bach, Wolfgang Amadeus Mozart and Franz Schubert.

The first visitors express their delight at the « wonderful harmony of the architecture » (Eduard Hanslick) . The design of the « Musikverein » building by Theophil Hansen, a Danish architect who had previously spent several years working in Athens, is acclaimed as a historicist masterpiece.

Anton Bruckner has certainly attended one of the 2 inaugural concerts.

The impact of the concert-hall upon visitors was overwhelming !

The critics immediately praised the grandiose acoustics of the large-hall, whose fame spread throughout the world in a short time.

The press wrote :

« As high as any expectations could be, they would still be exceeded by the first impression of the hall which displays an architectural beauty and a stylish splendour making it the only one of its kind. »

The impression must have been overwhelming - so overwhelming that Vienna's leading critic, Eduard Hanslick, irritatingly brought-up the question of whether this « Großer Musikvereinssaal was not too sparkling and magnificent for a concert-hall. From all sides spring gold and colours. »

Was this splendour, as Hanslick as a shocked ascetic supposed, not a distraction from the music ? Or does it rather have the exact opposite effect of directing the attention towards the music ?

The festive atmosphere of this hall throws off everything « which reminds one of everyday life » , wrote one Viennese critic, Carl Eduard Schelle. He thought that the « Großer Musikvereinssaal » did not only provide the ideal atmosphere for music but was music in itself :

« ... in the architectural details, in the ornament, the tones of colour such as in the separation of masses a perception does in fact manifest itself which one would like to call musical ; should it be possible to think of Mozart's great " Jupiter " Symphony constructed in solid, visible forms, then this new concert hall in the " Musikverein " building would provide a suitable picture. Hansen and Mozart really do have related characteristics in common. »

**But the organ case was still empty !**

In the course of the ambitious building project, at immense financial outlay, to build its new concert building, the « Gesellschaft der Musikfreunde » in Vienna had initially given less priority to the organ project. However, since the 1868 study plan created for the « Gesellschaft's » own Conservatory envisaged organ-playing as an important component of musical education, the plans for an organ began immediately thereafter.

**Monday, 11 January 1869** : Meeting of the organ commission.

Are attending :

Anton Bruckner, Leopold Alexander Zellner, Josef Hellmesberger senior, Johann Herbeck, Pius Richter, Emil Rotter, organ-builder Peter Titz, « Herr » Franz Wilt, Baron Peter Anton von Prandau-Hillebrand. Organ-builders Friedrich Ladegast, Eberhard Friedrich Walcker, Schulze, Ibach & Söhne, Merklin & Schütze, Aristide Cavallé-Coll and Titz-Hesse.

The « Gesellschaft der Musikfreunde » invited proposals from renowned organ-builders, including the famed Aristide Cavallé-Coll in Paris, who however showed no interest in the commission, and also Merklin & Schütze, also from Paris, who at first failed to respond at all to the invitation. A specially assembled organ commission, including Anton Bruckner as the organ professor from the Conservatory of the « Gesellschaft der Musikfreunde » , « Hofkapellmeister » Johann Herbeck and Josef Hellmesberger senior, Court organist Pius Richter and Leopold Alexander Zellner as General-secretary of the « Gesellschaft der Musikfreunde » , eventually gave the commission to Friedrich Ladegast from Weißenfels-an-der-Saale, at that time regarded as the leading organ-builder in the German-speaking world. The organ Ladegast designed with 44 stops, 3 manuals, and 1 pedal-board was expanded to 52 in total at the behest of the commission, and contained numerous technical innovations intended to improve performance.

Before long, however, the organ's technical innovations proved to be problematic ...

General-secretary Leopold Alexander Zellner, who was also an acoustician, organist and composer, examined the organ himself, and attempted various experiments and improvements.

According to Robert Hirschfeld's book « Geschichte der Gesellschaft der Musikfreunde » :

« One could find Master Zellner at all times (...) in his hidden laboratory, where he (...) devoted himself like a medieval master-student to the secret service of the organ. »

In 1880, Zellner gave-up and noted :

« All my own work, but now I have had enough. »

The numerous technical innovations which were intended to improve its performance, in fact, soon created irreparable problems, which eventually rendered the organ unusable.

**Summer-Autumn 1870** : After Johann von Herbeck retires as artistic director of the « Gesellschaft der Musikfreunde » at the end of the 1869-1870 season, the position of conductor of the Society's orchestral concerts is offered to Johannes Brahms.

**Saturday, 8 October 1870** : Brahms informs his father that he has « had to decline it for several reasons », adding that he may take it next year. For the 1870-1871 season, the direction of these concerts is now entrusted to Josef Hellmesberger senior, while Ernst Frank is appointed chorus master of the « Singverein » .

(The proposed separation of the 2 positions, both of which Johann Herbeck had occupied simultaneously, is in fact one of the reasons for Brahms's refusal. They will once more be combined when Anton Rubinstein takes over for the 1871-1872 season and will remain so under Brahms's eventual tenure of the artistic directorship.)

**Thursday, 16 November 1871** : After the resignation of Anton Rubinstein, the Concerts Committee proposed that Johannes Brahms should become the new conductor of the Society's Concert Orchestra and choir-Master of its Choral Society. Nikolaus Dumba and Doctor Josef Standhartner were appointed by the Society to negotiate terms with the composer. At the meeting held on **Monday, 27 November 1871**, they were already in the position to announce that Brahms was asking for a basic salary of 2,000 Gulden, plus an extra-fee of 1,000 Gulden for any additional concerts that he might be asked to do.

**Sunday, 10 November 1872** : Johannes Brahms has directed his first concert for the « Gesellschaft der Musikfreunde » in his new role as Concert Director.

It was the new organ's first « outing » .

Programme :

Wolfgang Amadeus Mozart : Concert aria « Ch'io mi scordi di te ? » (K. 505) for orchestra. Soloists : « Frau » Marie Wilt (soprano) , Johannes Brahms (piano obbligato) .

Franz Schubert : Sonata in C major for piano 4 hands, « Grand Duo » (D. 812) in an orchestral arrangement by Josef Joachim. The work was billed as : « Symphony in C major » . Soloists : « Frau » Marie Wilt (soprano) , Julius Epstein (piano) , Josef Hellmesberger senior (violin) .

Brahms wrote to Joachim :

« I don't have time to describe how beautiful you make everything sound, and what “ symphonic matters ” ran through my head on this occasion. »

Johannes Eccard, Heinrich Isaac : « A capella » choruses sung by the Vienna « Singverein » .

Georg Friedrich Händel : « Dettingen “ Te Deum ” » (HWV 283) sung by the Vienna « Singverein » . Brahms' setting called for the continuo, for which the organ now came into use. Soloists : Rosa Girzick (contralto) , Emil Krauß (baritone) , Rudolf Bibl (continuo) .

Krauß was also a qualified physician.

Brahms became artistic director of the « Gesellschaft der Musikfreunde » . This function combined the duties of a chief-conductor with those of a director. Brahms, who was uncomfortable with the administrative duties in particular, left this position after 3 years. He remained closely connected to the « Musikverein » , however, until the end of his life.

**Friday, 15 November 1872** (1:30 pm) : Inaugural concert of the Ladegast organ.

Within Theophil Hansen's visually and acoustically brilliant « Großer-Musikvereinsaal » , the instrument forms the central element. Prominently located at the front of the auditorium, it harmonizes in clarity and consistency with the homogeneity and opulence of the design, modelled upon Greek antiquity.

Attending the concert : Doctor August Wilhelm Ambros, Eduard Hanslick, Franz Pyllemann (1841-1873) , Ludwig Benedikt Hahn, and Friedrich Ladegast.

Programme :

For this occasion, Josef Weilen was commissioned to produce a celebratory poem, entitled « The Organ » , performed by « Burgtheater » actor Josef Lewinsky :

« So brause Orgel mächtigen Choral,  
Durch diesen stolzen kunstgeweihten Saal,  
Wie aus der höhern Welt ein Mahnungsruf (...) »

Johann Sebastian Bach : Toccata in D minor (BWV 565) . Soloist : Dresden organist Carl August Fischer.

Free improvisations by Anton Bruckner, in all registers, on themes from the F minor Mass (**WAB 28**) and the « Kaiserhymne » . Duration : 30 minutes.

(His imagination had elevated him to mighty, hymnic tonal constructions. But Bruckner was not able to impress his expert opponent Johannes Brahms and « other honest musicians » .)

Wilhelm Friedemann Bach : Organ Concerto. Soloist : Dresden organist Carl August Fischer.

Franz Schubert : « Die Allmacht » , Opus 79, No. 2 (D. 852) . Soloists : « Frau » Marie Wilt (soprano) ; Gustav Walter

(tenor) .

Felix Mendelssohn : Organ Sonata in B-flat major, Opus 65, No. 4. Soloist : Dresden organist Carl August Fischer.

Alessandro Stradella : Church Aria. Soloists : « Frau » Marie Wilt (soprano) ; Gustav Walter (tenor) .

Franz Liszt : Fantasy and Fugue for organ on the Theme B-A-C-H. Soloist : Dresden organist Carl August Fischer.

Johannes Eccard, Heinrich Isaac : « A capella » choruses sung by the Vienna « Singverein » under its artistic director, Johannes Brahms.

Professor Doctor Heinrich M. Schuster reported :

« Today, nobody can polyphonically improvise on the organ. Only once, however, this was granted to us : in 1872, at the inauguration of the great organ in the large-hall of the “ Musikverein ” where Anton Bruckner started with a splendid fantasy on the National anthem. »

« One could have expected more from such a famous Master than the exact acquaintance with certain neo-German musical innovations » , was the negative reaction of the conservatives.

From this, we may learn the good news of a harmonically high-explosive improvisation : Bruckner turned and twisted in chromatic non-harmonical inventions, authorized by the exponents of the new German compositional tradition, Liszt and Wagner, and that was the new kind of music which kindled the enthusiasm of Bruckner's students, too.

In Hans Rott's Symphony in E major, the « neo-German » seed came-up with a most beautiful fruit, although a conservative like Brahms did not like the « new tones » and (considering his own concept) what could he do but reject young Rott's score. In addition, the exponent of the « New Music » had the reputation of coming from Bruckner.

Bruckner's manuscripts, letters and autograph notes can be found in the archives of the « Musikverein » .

**Saturday, 16 November 1872** : Music-review of yesterday's concert in the « Österreichischen Volkszeitung » :

« Organ Concert.

Yesterday, the Society of Friends of Music introduced the giant organ to the Viennese audience. Our local organist, “ Herr ” Anton Bruckner, and the virtuoso organist from Dresden, “ Herr ” Carl August Fischer, competed with each other by highlighting all the possibilities of the beautiful instrument. “ Herr ” Fischer was decidedly superior. (...) The audience was very satisfied and very grateful. »

...

In 1904, a decision was taken to have a new organ especially built for the « Musikverein » .

The commission was given to the Imperial and Royal Court organ-builders (« Kaiserlich und Königlich Hof-Orgelfabrik ») Gebrüder Rieger from Jägerndorf in Austrian Silesia (known today as Krnov in the Czech Republic) . For this instrument with 71 stops, changes were also undertaken to the organ case and the façade was expanded to include more pipes. The organ console, which replaced the Ladegast console at podium level and was now located in the gallery, was encompassed by the centrally located balustrade that it retains today. In a performance directed by Franz Schalk of Johann Sebastian Bach's Mass in B minor on 12 November 1907, the Rieger organ was played for the first time, before being presented as a solo instrument on 11 December by Court organists Rudolf Dittrich, Josef Labor and Georg Valker.

This organ too, however, faced misfortune. When a grenade found its way into the « Musikverein » building in the last days of the War in 1945, the organ was damaged and initially underwent emergency repairs. In the course of renovation by Friedrich Molzer, in 1948, the disposition was changed and the stops expanded to 80. Not long after, however, wear and tear on the electronic tracker actions built-in, at that time, affected the precision functioning of the instrument.

### Doctor Karl Schiedermayr

**Tuesday, 21 June 1870** : Letter from Anton Bruckner to District physician Doctor Karl Schiedermayr :

Thanks for the Name-Day greetings (13 June) . Anton Bruckner congratulates Doctor Schiedermayr on the occasion of St. John the Baptist Day (24 June) . Death of Kreuzen's physician Doctor Maximilian Keyhl. Bruckner talks of his health examinations of June 18th and 23rd. Academic year lasts until the end of July. Greetings to Karl Schiedermayr's sisters (?) .

...

The Austrian physician, botanist and choir-Master Doctor Karl B. Schiedermayr was born on 3 November 1818 in Linz and died on 29 October 1895 in Kirchdorf-an-der-Krems, Upper-Austria.

He was the son of the ecclesiastical composer Johann Baptist Schiedermayr senior (1779-1840) and his wife, Barbara Schiedermayr (« née » Eggerstorfer) from Bavaria, who was living in Kirchdorf since 1804. He first studied at a secondary school in Linz from the early 1830's onwards. Then, he moved to Kremsmünster to study at the abbey college (« Gymnasium ») where Father Marian (Koller) raised his interest in natural sciences. After graduating with distinction, he studied medicine at the University of Vienna from October 1837 to 1841. In 1843, he received his doctorate of medicine after writing his Master's thesis in obstetrics (« Magister obstetriciæ ») . In 1844, he received his doctorate in surgery. At the University, he was particularly enthusiastic about the « Lehrkanzel der Botany » , the

lectures by Stephan Ladislaus Finite, and chemists Adolf Martin Pleischl and Josef Redtenbacher.

After his medical practice at the General Hospital of Vienna, he returned to Linz in 1845, where he worked as a military doctor, but also at the Institute for Deaf (Mute) and Blind. Then, he moved to Kirchdorf in October 1849, where he practised from 1853 to 1871 as provisional District doctor. He particularly distinguished himself during the plague and cholera epidemic of 1855 in Linz. In 1871, he became physician (and botanist) of the province of Upper-Austria for the Districts of Kirchdorf-an-Krems and Steyr. In 1874, he was named District doctor of the Statutory City of Linz and District doctor of Perg (also based in Linz) . The same year, he was appointed substitute medical officer for the province of Upper-Austria. On 25 March 1875, he was appointed Provincial Councilor and first medical officer for the province of Upper-Austria. He retired on 8 June 1890. In autumn of 1893, he published (in his town of Kirchdorf) an extensive supplement of his principal works. He was a correspondent of the Meteorological Central Institute and a member of several scientific societies and associations.

Karl Schiedermayr was regarded as musically talented ; he also composed music. In 1845, he was one of the founding members of the Liedertafel « Frohsinn » of Linz. On 1852, he founded the « Liedertafel » in Kirchdorf and was elected first choir-Master.

A few days before his 77th birthday, Schiedermayr died on 29 October 1895 in Kirchdorf, after a long and severe illness.

...

Doktor Karl B. Schiedermayr, österreichischer Arzt und Botaniker : geboren 3. November 1818 in Linz ; gestorben 29. Oktober 1895 in Kirchdorf-an-der-Krems. Seltener wurde sein Name auch Carl Schiedermayr geschrieben ; sein Namenskürzel lautet Schied.

Karl Schiedermayr wurde am 3. November 1818 als Sohn des seit 1804 hier lebenden und aus Bayern stammenden kirchlichen Komponisten und Domorganisten Johann Baptist Schiedermayr senior (1779-1840) und dessen Ehefrau Barbara Schiedermayr, « née » Eggerstorfer, in Linz geboren. Mit Johann Baptist Schiedermayr junior, einem Seelsorger und Geistlichen, und Josef Schiedermayr, einem Juristen, hatte er unter anderem 2 Brüder. Selbst besuchte Karl Schiedermayr nach der Normalhauptschule ab den frühen 1830er Jahren ein Linzer Gymnasium, ehe er in der 4. Klasse als Konvikts-Stipendist in das Stiftsgymnasium Kremsmünster, wo Pater Marian (Wolfgang) Koller sein Interesse für die Naturwissenschaften weckte, wechselte. Nach seinem Abschluß mit Auszeichnung vom Stiftsgymnasium studierte er von Oktober 1837 bis 1841 Medizin an der Universität Wien und erhielt im Jahre 1843 die Titel Doktor der Medizin und Magister obstetriciæ, den Magistertitel in Geburtshilfe. 1844 folgte die Promotion zum Doktor der Chirurgie, An der Universität zeigte er sich vor allem durch Vorlesungen von Stephan Ladislaus Endlicher, von der Lehrkanzel der Botanik, aber auch von Vorträgen der Chemiker Adolf Martin Pleischl und Josef Redtenbacher begeistert.

Nach seiner Spitalspraxis am Allgemeinen Krankenhaus Wien kehrte er im Jahre 1845 zurück nach Linz, wo er als Armenarzt, sowie am Blinden- und Taubstummeninstitut tätig war. In weiterer Folge übersiedelte er im Oktober 1849

nach Kirchdorf, wo er von 1853 bis 1871 als provisorischer Bezirksarzt praktizierte. Dabei zeichnete er sich vor allem bei der Blattern und Cholera-Epidemie im Jahre 1855 aus. Im Jahre 1871 wurde er zum landesfürstlichen Bezirksarzt der politischen Bezirke Kirchdorf an der Krems und Steyr. 3 Jahre später war er Bezirksarzt der Statutarstadt Linz und des politischen Bezirks Perg mit Sitz in Linz und wurde noch im gleichen Jahr zum substituierenden Landessanitätsreferenten für Oberösterreich ernannt. Am 25. März 1875 wurde er zum Statthaltereirat und offiziellen Landessanitätsreferenten für Oberösterreich ernannt, ehe er am 8. Juni 1890 in den Ruhestand ging. Weiters war er Korrespondent der meteorologischen Zentralanstalt und Mitglied mehrerer naturwissenschaftlicher Gesellschaften und Vereine.

Nachdem er sich bereits seit seiner Schul- beziehungsweise Studienzeit mit Botanik beschäftigt hatte, schloß er sich im Juni 1844 nach der Promotion und der abgelegten Spitalspraxis den Botanikern Brittinger, Hinterhuber und Franz Sailer an und erkundete die heimische Flora. Bald darauf kamen Ende der 1840er beziehungsweise in den 1850er Jahren weitere Botaniker wie Franz Aspöck, Johann Duftschmid, Pather Gotthard Hinterberger, Hofstätter, von Mörl, Franz Oberleitner, Ignaz Sigismund Pötsch, Robert Rauscher, Anton Eleutherius Sauter, sowie die Professoren Kermer und Friedrich Simony, sowie weitere Botaniker hinzu, die sich ebenfalls um die Landesforschung und die heimische Fauna bemühten. Dabei entstand auch eine Freundschaft mit dem Geologen Franz Carl Ehrlich vom Museum Francisco-Carolinum und eine Bekanntschaft mit dem Botaniker Josef Ritter von Mor auf Suneg und Morberg. Im Jahre 1849 trat er erstmals wissenschaftlich einer wissenschaftlichen Arbeit über Die Vegetationsverhältnisse in der Umgebung von Linz an die Öffentlichkeit, woraufhin er vom Francisco-Carolinum als Referent für Botanik in den Verwaltungsausschuß gewählt und mit der Ordnung des Herbars beauftragt wurde.

1856 nahm er die Verbindung zum aus Böhmen stammenden Mediziner und Botaniker Ignaz Sigismund Pötsch auf und begann mit diesem eine systematische Aufzeichnung der oberösterreichischen Kryptogamen. Hierbei widmete er sich im Speziellen der Bearbeitung der Algen und Pilze und Pötsch der Bearbeitung der Flechten, Moose und Farne. 1872 erschien in Zusammenarbeit mit Ignaz Sigismund Pötsch das Hauptwerk Schiedermayrs, die Systematische Aufzählung der im Erzherzogthume Österreich ob der Enns bisher beobachteten samenlosen Pflanzen (Kryptogamen), das von der Kaiserlich-Königliche zoologisch-botanischen Gesellschaft in Wien herausgegeben wurde. Weiters unterhielt er Kontakte zum Mediziner und Botaniker Anton Eleutherius Sauter, zum Beamten, Lokalhistoriker, Schriftsteller und Botaniker Ludwig Heufler von Hohenbühel, sowie zu diversen anderen Botanikern. Vor allem durch Sauter, dem damaligen Kreisarzt von Steyr und Nestor der österreichischen Kryptogamenforschung, kam er zu seinem Hauptgebiet, der Kryptogamenforschung.

Ab 1847 trat er als Ausschußmitglied des Musealvereins Francisco-Carolinum in Linz in Erscheinung und war ab 1890 Ehrenmitglied des Museums. Ab 1881 war er zudem Präses des Vereins für Naturkunde in Österreich ob der Enns (Oberösterreich). Verdient machte er sich vor allem um die Erforschung der bereits genannten Kryptogamen, befaßte sich jedoch auch mit Blütenpflanzen. Gleich mehrere von ihm, aber auch von anderen Botanikern entdeckte Pflanzenarten tragen seinen Namen. Außerdem machte er sich durch das Sammeln und Ordnen von paläontologischen Material verdient. Seine reichhaltige botanische Sammlung, sowie seine umfangreiche Bibliothek befinden sich heute im Oberösterreichischen Landesmuseum in seiner Heimatstadt Linz. Neben den erwähnten botanischen Studien nahm er auch mikroskopische Untersuchungen des Wassers der Donau, sowie der Brunnen in Linz vor, die den Bau der 1893

eröffneten Linzer Wasserleitung anregten. Noch zeitlebens erhielt er vom Geistlichen und Botaniker Franz de Paula Stieglitz einen Teil dessen mehr als 400 Arten umfassenden Flechtenherbars, der Großteil dieses Herbariums ging nach dem Tod von Stieglitz an das Stift Kremsmünster.

Durch seine Familie, der Vater Johann Baptist senior war Komponist und Organist, der Großvater Johann Georg Schiedermayr ein Schullehrer und Musiker, der Onkel Georg Schiedermayr ebenfalls ein Organist und der Onkel Franz Xaver Schiedermayr ein Lehrer und Komponist, kam auch Karl Schiedermayr mit seinen Brüdern zur Musik. Der als musikalisch begabt geltende Karl Schiedermayr gehörte unter anderem im Jahre 1845 zu den Gründungsmitgliedern des Männergesangsvereins Linz (genannt Liedertafel « Frohsinn ») und schuf im Jahre 1852 die Liedertafel Kirchdorf, bei der er auch als deren 1. Chorleiter fungierte. Wenige Tage vor seinem 77. Geburtstag starb Schiedermayr nach langer, schwerer Krankheit am 29. Oktober 1895 in Kirchdorf, wo er bis zuletzt lebte und von wo aus er im Herbst 1893 noch einen umfangreichen Nachtrag seines Hauptwerkes herausbrachte.

### Ehrungen

In Linz ist seit 1954 der Schiedermayrweg, in unmittelbarer Nähe zur Gugl in seiner Heimatstadt Linz, nach ihm benannt.

In unmittelbarer Nähe zum Landeskrankenhaus Kirchdorf-an-der-Krems befindet sich die ebenfalls nach ihm benannte Schiedermayr-Straße.

Weiters ist er Ehrenbürger von Micheldorf in Oberösterreich und seit 1937 von Kirchdorf-an-der-Krems, wo er lange Jahre lebte, arbeitete und seinen Lebensabend verbrachte.

### Vienna Conservatory : Academic Year 1870-1871

Zu Anton Bruckners Wiener Konservatoriumsschülern gehören Hermine Adametz (Kontrapunkt) ; Guido Adler (Harmonielehre) ; Max Ambros von Rechtenberg (Kontrapunkt) ; (Emil ?) Carl Kratzl (Kontrapunkt) ; Josef Lamberger (Kontrapunkt) ; Josef Latzelsberger (Kontrapunkt und Orgel) ; Felix Mottl, Heinrich Paschko (Harmonielehre und Orgel) ; Hugo Reinhold Kontrapunkt und Orgel) ; Damian von Röbl (Kontrapunkt) ; Emil Schwarzkopf (Kontrapunkt und Orgel) ; Josef Siebert (Kontrapunkt) ; Eduard Stanek (Kontrapunkt) ; George Vieh (Harmonielehre) (?) ; Gustav Walter (Harmonielehre) ; (ein 2. Gustav Walter, auch aus Arad, mit Orgel ?) ; und Carl Wolfrum (Kontrapunkt) .

Der Jahresbericht listet den Personalstand auf :

« 2. Lehrpersonal.

1. Herr Anton Bruckner (Kontrapunkt und Orgel) , seit 1868 (3 Jahr) . »

...

Folgende Schüler können für Anton Bruckners Lebensweg noch von Interesse sein :

Julius Desing ; Julius Egghard ; Reinhold Hummer ; Carl Lux ; Arthur Nikisch ; Emil Paur (« aus Czernowitz in der Bukowina, 15 Jahre ») ; Josef Pembaur (« aus Innsbruck in Tirol, 21 Jahre ») , Adolf Wallnöfer (« 16 Jahre ») ; Julius Winkler (« aus Raab in Ungarn, 15 Jahre ») .

Die « Classen-Prüfungen » fanden vom 14. Juni 1871 bis 15. Juli 1871 statt.

### The London organ tour

In the **summer of 1871**, an International Exhibition was held in London and the Exhibition Committee invited the Chambers of Commerce of the various countries to send their most prominent organists to London. During the Exhibition, organ recitals were to be given on the giant organ just built by Henry Willis for the Albert Hall, close to which the Exhibition was held. When Bruckner heard of this, he applied to the Vienna Chamber of Commerce to be sent to London and, after a trial, he was unanimously chosen from a number of candidates. He will compete against other organists from several other nations.

It is the Vienna Chamber of Commerce who sponsors these series of organ recitals : one every day for a week, in the Royal Albert Hall ; and 5 more, at Crystal Palace. The British press, fuming at the presence of so many foreigners, affords Bruckner only faint praise. The recitals, however, will produce loud applause. Programme : Works by Johann Sebastian Bach, Georg Friedrich Händel, and Felix Mendelssohn ; plus Bruckner's own organ improvisations.

Besides Bruckner, 6 other organists had been engaged for these several weeks of recitals : William Thomas Best, the official organist of the Hall, who had opened the series on July 18 ; Camille Saint-Saëns from Paris ; Alphonse Mailly from Brussels ; Löhr from Budapest ; Heintzen from Stockholm ; and Lindemann from Norway.

**Thursday, 13 July 1871** : Letter from Anton Bruckner (Vienna) to Anton Reißleitner (Linz) :

The organ concerts in London begin on **August 2, 1871**. Bruckner would like to be there 8 days earlier. Departure to Linz at the latest on **July 20th**. From there, leaving on the evening of the **21st**. On Sunday (**July 16**) , he plays the organ at the « Musikverein » . Joint return journey via Switzerland possible.

**Before Thursday, 20 July 1871** : Bruckner's student at the Conservatory, Josef Pembaur (from Innsbruck, Tirol) , recalls ...

Anton Bruckner talked at the Vienna Conservatory about his London concert plans. He would not rehearse much Johann Sebastian Bach, but above all improvise freely. He had studied and rehearsed the programmed pieces for about the last 3 months.

**Thursday, 20 July 1871** : Anton Bruckner leaves for London. He stops for 1 day in Linz. It is not possible to determine

whether Anton Reißleitner actually traveled with him. Perhaps, Bruckner was accompanied to London by his pupil Carl Kratzl.

« Toni », F. Zimmermann's sister

**Friday, 21 July 1871** : Anton Bruckner goes from Linz to Roth, near Nuremberg. There, he stays for a few days with the family of F. Zimmermann. His connection to Zimmermann dates from 10 years ago, at the Nuremberg Choral Festival of July 1861. Zimmermann's sister, named « Toni », arouses his lively interest ...

...

**Tuesday, 25 July 1871** : Anton Bruckner's trip to London and the beginning of the concerts on August 2nd, are reported in several Viennese newspapers :

« Wiener Fremdenblatt », page 6 :

« The Court organist Professor Anton Bruckner will go to London on August 2 to give organ recitals at the Exhibition Building during a period of 8 days, for which he is known to receive a fee of 500 Florins in silver. »

« Wiener Morgen-Post » : identical text.

« Wiener Neue Freie Presse », Number 2483, page 8 :

« The Court organist Professor Anton Bruckner will go to London on August 2 to give organ recitals at the Exhibition Building during a period of 8 days. »

« Wiener Neues Fremdenblatt », Number 204, page 5 :

« The Court organist Professor Anton Bruckner will go to London on August 2 to give organ recitals at the Exhibition Pavilion during a period of 8 days, for which he is known to receive a fee of 500 Florins in silver. »

**Wednesday, 26 July 1871** : The « Österreichische Volksfreund », Number 169, page 3 :

« The Court organist Professor Anton Bruckner will go to London on August 2 to give organ recitals at the Exhibition Pavilion during a period of 8 days, for which he is known to receive a fee of 500 Florins in silver. »

**Thursday, 27 July 1871** : Note in the « Linzer Tages-Post » at page 4 :

« The Court organist Professor Anton Bruckner will go to London on August 2 to give organ recitals at the Exhibition Pavilion during a period of 8 days, for which he is known to receive a fee of 500 Florins in silver. »

Beginning on **Wednesday August 2, 1871**, Bruckner was to play twice daily for a week, for a fee of £ 50, including travelling and hotel expenses. A detailed description of the Willis organ was sent with the contract.

A journey to London was not such a simple matter in those days and Bruckner, ever timid, implored his old friend, Father Otto Fehringer, to travel with him :

« Then, we can come back in fine style by way of Switzerland. » , he wrote temptingly.

But nothing came of this and Bruckner had to make the journey to London alone.

Bruckner became a friend of Father Fehringer several years earlier. He was attached to the Benedictine monastery of Seitenstetten in Lower-Austria. At the request of the composer, Fehringer was one of the main bass-players during the Viennese performance of the Mass in D minor (**WAB 26**) in 1872.

**London : « Deutscher Gasthof Seyd »**

Anton Reißleithner did not accompany Anton Bruckner to England. The latter changed his itinerary and travelled to Nuremberg to visit the Zimmermann family whose acquaintance he had made 10 years earlier during the 1861 Choir Festival. One of the family, F. Zimmermann, became his travelling companion.

**Before Saturday, 29 July 1871** : Anton Bruckner leaves Roth, near Nuremberg, for London. He is accompanied by F. Zimmermann and (?) Father Otto Fehringer (1844-1930) from Seitenstetten.

**Saturday, 29 July 1871** : Bruckner and Zimmermann arrive in London. On the advice of a local Viennese barber, Bruckner stays at the « Deutscher Gasthof Seyd » , a German guest-house located at Number 39 Finsbury Square.

The Austrian ambassador in London from 1860 to 1871, Count Rudolf Apponyi (1812-1876) , was contacted about Bruckner's visit and asked to provide all the support necessary. During his stay, Bruckner will once again over-exercise his love of good food ...

In the evening, the Albert Hall's mighty Henry Willis organ is tried-out for the first time. The steam-engines running the instrument are even re-heated at the instigation of the enthusiastic director.

It was a Saturday and the manager of the Hall explained to him that it was too late.

« Why did not you show-up earlier ? In principle, we have finished for the day. You know that the organ is propelled by steam. As long as the engine will hold, you are welcome. »

Undisturbed, the Master seated himself at the organ and began to practise and improvise - experimenting with the different stops. His abilities attract a little audience which listens to him well into the evening. Enthusiastic at what he

heard, the manager had the fires stoked-up and sent for various friends, so that when Bruckner finished he found to his astonishment that he had a considerable audience.

...

Royal Albert Hall, London, England.

Office of the Manager.

« 'scuse me sir ... there's 2 blokes at the front door ... one of 'em sayin' they're 'ere to play the organ. »

« The organ ? 'oo the hell are they ? »

« The gentleman doin' the talking is from the Austrian Embassy ... says his name is Count Apponyi. He says he has the authority for his associate to practice on the Willis Organ ... today. He has a German accent. »

« We've shut-off the steam ... there's barely any up. They'll have to come-back another time. »

« Right ... I'll tell 'em. »

(He returns in a couple of minutes.)

« I'm sorry sir, but they insist that the organ be made available at once ... they will take whatever steam is available. »

« Bloody hell ... See them in then. We don't want an international incident on our hands. This hall has only been open a couple of months. But I want to be out of here soon. »

« Right sir, I will let them in. »

The 2 men enter the hall and make their way to the grand organ manufactured by Henry Willis & Sons. The shorter of the 2 men, round and somewhat odd looking, takes a seat on the bench and begins to play Bach.

The manager of the hall hears the organ spring to life.

« You did tell him we don't have much steam up didn't you ? »

« Indeed sir ... I made that quite clear. »

Music begins to fill the hall. It is glorious. Every stop is used ... every pedal is touched. The few other people in the

hall stop what they are doing and move closer to the organ to see who is playing it. Familiar melodies turn into improvisational journeys.

« Good god lad ... 'oo did you say this man was ? »

« I believe he said his name was Bruckner ... Anton Bruckner ... from Austria. »

« Never heard of him ... »

« Do you want me to ask him to leave ? The steam is all but gone now. »

« Are you daft ? On the contrary ... start the fires back up. I have not heard anyone play like this since “ Monsieur ” (Camille) Saint-Saëns was here a couple of weeks ago. Good god ... this is incredible. »

...

Max Auer tells the story of his return late from his first visit to the Royal Albert Hall, peering-out of the horse-drawn « omnibus » trying to recognize the « Muster Gasthaus » at Number 30 « Finsbury Square » (the « Seyd's Deutscher Gasthof » main-entrance is at Number 39) . Seyd's German Inn whose name he would have forgotten, only to be rescued by a Viennese barber who had shaved him before and recognized him :

« Herr Professor ! » he shouted, and led him off the bus.

(Bruckner liked to be shaved-up close, he could never find a hair-dresser who could cut his hair sufficiently short at a time when it was far from fashionable.)

The Hotel is long gone, but the place marked by a blue plaque donated by the Brunel University, put-up in 1971, to commemorate the Centennial of Bruckner's stay in London :

« On 29 July 1871 / the Austrian Composer / ANTON BRUCKNER / 1824-1896 / stayed in the house / which used to occupy this site. / Bruckner started work on his / 2nd Symphony during his / period in London. »

The site was formerly occupied by the City of London and East London dispensary for the destitute sick, on 35 Wilson street.

The site was formerly occupied by the City of London and East London dispensary for the destitute sick, on 35 Wilson street, Finsbury, E.C.

The site was previously known as Finsbury Fields, part of the old Moorfields outside the City walls. They were used from medieval times for archery and the Lord Mayor's Hunt, and in the early-17th Century trees were planted and

walks laid out. Following the Fire of London, in 1666, many people camped on the Fields, and plague victims were buried here. In the mid-18th Century, John Wesley and the early Methodists first preached in Finsbury Fields to large crowds. Finsbury Square was formally laid-out in the late-18th Century, but none of these early buildings survive.

...

Finsbury Fields were previously the old Moorfields, part of fens outside the City walls, the land belonging to St Paul's Cathedral. When the Wesleys first established the Methodist movement here, they preached in Finsbury Fields to large crowds and, until the late-18th Century, the area was little built on. Although plans for laying-out the area were drawn up in 1751 by George Dance senior, who was City Surveyor, Finsbury Square was eventually laid-out by his son George Dance junior between 1777 and 1792 who was attempting to recreate a « West-End » atmosphere in the City, the fine houses overlooking a circular garden. Finsbury Square was the first public place where gas lighting was permanently installed and was fashionable until the late-19th Century particularly among members of the medical profession. Among its famous residents were the missionary David Livingstone, who stayed here in 1856 and composer Anton Bruckner, who began his 2nd Symphony while staying here in 1871. None of the original houses remain, and the buildings surrounding the gardens are 20th Century, mostly modern.

Finsbury Square and Finsbury Circus were laid-out in the late-18th and early-19th Centuries as the nuclei of a high-class suburb that never achieved its full-potential and was subsequently converted to commercial use.

### London : Subway accident

On one of the following days, Bruckner went to rehearse at Albert Hall. This time, the mighty organ's steam-engines lasted half an hour longer than usual. This over-time period surely saved his life ! The subway train (which he had used before) was involved in a dramatic accident. As Bruckner arrived at the station, he saw with horror severely wounded users which were carried away.

### London : Kensington station

During his trip, Anton Bruckner was much taken by the subway system, getting in and out at Kensington station, near Albert Hall.

Kensington station was opened on 24 December 1868 by the Metropolitan Railway (later, the Metropolitan line) and the District Railway (later, the District line) . The Metropolitan Railway had previously opened an extension from Paddington (Praed Street) (now, Paddington) to Gloucester Road on 1 October 1868 and opened tracks to South Kensington to connect to the District Railway when the District Railway opened the first section of its line to Westminster. The original South Kensington station, designed by the Metropolitan Railway's engineer John Fowler, had 2 platforms although it was intended that this would be supplemented as District Railway services extended.

On 1 August 1870, the District Railway opened additional tracks between Gloucester Road and South Kensington. On

10 July 1871, the District Railway opened its own facilities at South Kensington. The enlarged station had 2 through platforms for each company and a bay platform for terminating Metropolitan Railway trains from the west. The junction between the 2 companies' tracks was also moved from the west-side of the station to the east-side.

On 1 February 1872, the District Railway opened a north-bound branch from its station at Earl's Court to connect to the West London Extension Joint Railway (now, the West London Line) at Addison Road (now, Kensington (Olympia)) . From that date, the « Outer Circle » service began running over the District Railway's tracks. The service was run by the North London Railway from its terminus at Broad Street (now demolished) in the City of London via the North London Line to Willesden Junction, then, the West London Line to Addison Road and the District Railway to Mansion House - at that time, the eastern terminus of the District Railway.

From 1 August 1872, the « Middle Circle » service also began operations through South Kensington, running from Moorgate along the Metropolitan Railway's tracks on the north-side of the « Inner Circle » to Paddington, then, over the Hammersmith & City Railway track to Latimer Road, then, via a now demolished link, on the West London Extension Joint Railway to Addison Road and the District Railway to Mansion House. The service was operated jointly by the Hammersmith & City Railway and the District Railway.

...

The Metropolitan Railway extended their line southwards from Praed Street (Paddington) to Gloucester Road on 1st October 1868 with a further extension to South Kensington to join the Metropolitan District Railway which was building a line west from Westminster. The joint Metropolitan Railway and Metropolitan District Railway station at South Kensington opened on 24 December 1868. The Metropolitan District Railway extended their line east to Mansion House on 3rd July 1871 and although the companies remained independent and were indeed rivals, each company operated its trains over the other's tracks in a joint service known as the « Inner Circle » although the circular route itself wasn't completed until 6 October 1884.

### Bruckner's London debut

**Tuesday, 1 August 1871** : The « London Times » announces upcoming organ concerts including Bruckner's inaugural recital at Albert Hall which is scheduled for tomorrow.

**Wednesday August 2, 1871** (noon time) : Anton Bruckner makes his London debut at Albert Hall.

Programme :

Johann Sebastian Bach : Toccata in F major (BWV 540) .

Free improvisation upon the foregoing.

Georg Friedrich Händel : Fugue in D minor (HWV 428) .

Free improvisation (original) .

Johann Sebastian Bach : Free improvisation on Fugue in E major.

Free improvisation on English melodies.

### Toccata in F major (Johann Sebastian Bach)

The Toccata and Fugue in F major (**BWV 540**) is an organ work written by Johann Sebastian Bach. The toccata is thought to be written after 1714, and the fugue before 1731. It is thought by some that Bach joined together 2 previously separate pieces to create this work.

The toccata starts with a large linear canon (imitation theme, one hand imitating the other) over a pedal point in F major. It is then followed by a pedal solo vamping material from the canon. The canon is reiterated with some variations in the dominant in C major. This time, the hands are switched, and the left-hand leads the right. This is again followed by a long pedal solo. The 2 large canon flourishes cover 108 measures of the composition. The pedal solos cover 60 measures. The concerto movement exhibits a 7 part structure. The canons and pedal solos effect the departure from the home key of F to the dominant C, and the entire rest of the movement, with its concertante 3 part imitation and striking « proto-waltzes » , constitute the harmonic return. This formal pattern is unique within Bach's œuvre.

Hermann Keller expresses his rapture as follows :

« At the beginning, the extensive linear construction of the 2 voices in canon, the proud calmness of the solos in the pedal, the piercing chord strokes, the fiery upswing of the 2nd subject, the bold modulatory shifts, the inwardness of the 3 minor movements, the splendour of the end with the famous 3rd inversion of the 7th chord, who would not be enthralled by that ? »

Because of the range of the pedal parts, the organ at Weißenfels, with a pedal compass of f1, may be the organ the composition was written on. The Toccata (as a prelude) is proportionally the largest of all Bach's works in the format of prelude-fugue. It is often treated as a showpiece, with the ensuing fugue omitted. The Toccata's rhythmic signature suggests a « passe-pied » or a « musette » , although the monumental scale of the movement does not support these characterizations.

Nor does the harmonic adventurousness : 45 measures after the 2nd pedal solo there is a dominant chord which resolves deceptively to the 3rd inversion dominant applied to the « neapolitan » . In particular, the doubled root is found to move outward in contrary chromatic motion to a major 9th ; in the bass is a descending augmented unison, which absolutely could not be farther from the expected 5th. Bach implements this powerful deceptive cadence 3 times

in the piece ; it would not become idiomatic until Chopin and Tchaïkovsky.

## Fugue

The 1st subject in the fugue is chromatic and ornamental. The 2nd subject has a lot of modulation shifts and is sometimes initially presented as the counter-subject of the 1st. The Fugue is Bach's only thorough-going double fugue, where 2 subjects are exposed in separate sections and then combined. The effect is enhanced by the increasing rhythmic activity of the 2nd subject and by the more frequent use of modulation in the final section of the fugue.

The bravura of the F major toccata, with its pedal solos and manual virtuosity, contrasts sharply with the rather sober opening of the Fugue. Both represent 2 diverse aspects of Italian influence : the motoric rhythms and sequential passage-work of the Toccata, and the traditional « alla breve » counterpoint of the Fugue, with its chromaticism, harmonic suspensions, and uninterrupted succession of subjects and answers. These techniques are very similar to those used in the « Dorian » Toccata and Fugue in D minor (**BWV 538**) .

The Aria in F major (**BWV 587**) is believed to be a middle-movement of this composition, thereby, debunking the idea that Toccata, Adagio and Fugue in C major (**BWV 564**) is Bach's only 3 movement organ composition apart from the 6 Trio Sonatas.

(From **BWV 548**)

This massive work, requiring a good 15 minutes in performance, is one of Bach's most important and flamboyant organ compositions. Unlike most of his other preludes and fugues, this one seems to be a mature work written after Bach settled in Leipzig, in 1723. Unexpectedly, it's the prelude that displays the most severe musical architecture, while the fugue is comparatively free-wheeling (and harder to play) . The grand prelude is cast in a verse and refrain structure, but employs 3 related thematic elements - 2 for the verses. The refrain initially arches across 18 bars of the score ; after the 1st verse, it returns in the dominant, establishing the tonality for the 2nd verse. Here, Bach introduces the 3rd theme, a dotted figure linked to the themes of both the refrain and the 1st verse. After this 2nd verse, the refrain returns, modulating into the sub-dominant, where the 3rd verse develops the themes presented in the 1st 2. The refrain returns one last time ; under the influence of the dominant pedal note that introduces it, the refrain avoids returning to the tonic until its very last chord. Despite its strict melodic structure, the prelude is a great harmonic adventure.

Now comes the fugue, which manages to fall into ternary form while following the usual fugal conventions. The 1st of the 3 sections is a self-contained fugue, complete with its own exposition, modulations, and episodes. The fugue theme is something of a chromatic wedge expanding around a tonic point, this wedge giving the work its nickname. The theme picks-up 2 chromatic counter-subjects during the 1st exposition. After the harmonic tension and surprise of this 1st section, the fugue's 2nd section settles into the principal key. This portion is a 100 measure toccata, full of extremely virtuosic runs. The fugue theme pops-up now and then and is also echoed in the pedal material, but doesn't fully reassert itself until the 3rd panel of this triptych, which until near the end is a note-for-note repetition of the

Ist section. The work ends, however, in a resplendent Picardy 3rd, concluding this otherwise minor-mode fugue in a blaze of E major.

### The other Albert Hall concerts

**Thursday, 3 August 1871** (3:00 pm) : Second organ concert by Anton Bruckner at Albert Hall.

Programme :

Felix Mendelssohn : Organ Sonata, Opus 65, No. 1.

Johann Sebastian Bach : Fugue in C-sharp minor (BWV 849) .

Free improvisation on Mendelssohn's Organ Sonata.

Free improvisation on the Austrian National Anthem, « Sei gesegnet ohne Ende » , based on Franz-Josef Haydn's « Gott erhalte » .

Free improvisation on Georg Friedrich Händel's « Halleluja » from « Messiah » .

Free improvisation.

**Friday, 4 August 1871** (3:00 pm) : Third organ concert by Anton Bruckner at Albert Hall.

Johann Sebastian Bach : Organ Concerto in A minor (BWV 593) .

Free improvisation.

Free improvisation on Carl Maria von Weber's « Der Freischütz » .

Johann Sebastian Bach : Fugue in G minor.

Free improvisation.

Free improvisation on Great Britain's National Anthem, « God Save the Queen » .

**Saturday, 5 August 1871** (noon time) : Fourth organ concert by Anton Bruckner at Albert Hall.

Johann Sebastian Bach : Organ Concerto in C major (BWV 595) .

Free improvisation.

Free improvisation on the « Lorelei » Lied (Heinrich Heine, 1822) .

Johann Sebastian Bach : Fugue in G minor.

Free improvisation on Franz Schubert's « Fremd bin ich eingezogen » .

Free improvisation on Georg Friedrich Händel's « Halleluja » from « Messiah » .

...

Letter from the Imperial Court's Office to the Austrian ambassador in London, Count Rudolf Apponyi :

Anton Bruckner had already left for London. Request to support him on a benevolent basis. Visa endorsements by Eduard Wlassack, Prince Constantin Hohenlohe-Shillingstürst. and Charles Raymond.

...

Although Bruckner had already played for the first time, on **Wednesday August 2, 1871**, the then widely read « Musical World » published, on **Saturday August 5, 1871**, the following rather reserved announcement :

« “ Herr ” Anton Bruckner, Court Organist at Vienna, and Professor to the “ Conservatorium ” of that city, has arrived in London to play on the great organ of the Royal Albert Hall. The dates of his performance will shortly be announced. It takes some little time to become acquainted with the details of so large an instrument. “ Herr ” Bruckner’s strong points are said to be Classical improvisations on Händel, Bach, and Mendelssohn. »

**Sunday, 6 August 1871** : Organ competition at Albert Hall ?

**Monday, 7 August 1871** : Fifth organ concert by Anton Bruckner at Albert Hall.

Johann Sebastian Bach : Toccata.

Free improvisation.

Free improvisation on a theme by Felix Mendelssohn.

Free improvisation on a melody by Franz Schubert.

Free improvisation on Felix Mendelssohn's « Hunter's Farewell » (« Der Jäger Abschied ») .

**Tuesday, 8. August 1871** (3:00 pm) : Sixth organ concert by Anton Bruckner at Albert Hall.

Johann Sebastian Bach : Fugue in E minor (?) .

Free improvisation.

Free improvisation on a German melody.

Free improvisation on a theme by Franz Schubert.

Free improvisation on a fugue.

Free improvisation on Georg Friedrich Händel's « Halleluja » from « Messiah » .

An improvisation competition may also have taken place during this concert. Bruckner's « rivals » include :

William Thomas Best (Albert Hall) ; Gustaf Hjalmar Heintze (Stockholm) ; Johann Lohr (Budapest) ; Alphonse Maily (Brussels) .

The foreign organists were greatly disadvantaged because they did not have as much preparation and practice on the mighty instrument (built by Henry « Father » Willis) as William Thomas Best, the house-organist at Albert Hall.

**Friday, 11 August 1871** (3:00 pm) : Organ concert by Anton Bruckner at Albert Hall.

**Saturday, 12 August 1871** (noon time) : Organ concert by Anton Bruckner at Albert Hall.

**After Saturday, 12 August 1871** : Anton Bruckner uses his concert-free days to visit the city of London by consulting Greaves' Travel Guide (« London and surroundings ») which gave him a detailed description of London's Tower.

### London : Double-decker omnibuses

While in London, Anton Bruckner was much taken by the double-decker « omnibuses » horse-drawn by 2 horses with the conductor perched on his platform at the back. The « knife-board » type double-deck bus was the standard vehicle during the 1860's and 1870's. It acquired this name because of the seating arrangement on top where passengers, sitting back to back on the long seat, resembled the knife-boards commonly seen in Victorian kitchens. The buses would be identified by route description and destination rather than numbers. In the week he had off, between his organ recitals at the Royal Albert Hall and those at the Crystal Palace, Bruckner went sight-seeing, clutching his guide-book, Grieben's « London und Umgebung » (London and its surroundings) , and was especially interested in the Tower of London, of which he obtained a detailed description.

The 2 types of horse-bus (« knife-board » or « garden-seat ») generally carried around 26 passengers and had either 3 or 4 side-windows, being known as the « 3 light » or « 4 light » type, respectively. Front wheels were smaller than those at the rear, and top-deck passengers were exposed to the elements. Many buses were identified by their colour to aid identification and were generally plastered with advertisements. Route information was carried on wooden boards and also painted directly onto the vehicle, occasionally being abbreviated, e.g. , « CT & KR » (Camden Town & Kent Road) ; and « BS & W » (Baker Street & Waterloo) .

Horse-buses were in service for around 15 hours per day and needed a stud, or around 10 horses plus 1 or 2 spares. The services were very much patronized by the middle-classes - the horse-tramways of the 1870's, with their lower-fares, being the preserve of the working-classes. 2 horses were normally used with a 3rd (« cock horse ») often being added on hilly routes.

### London : the Crystal Palace concerts

**Saturday, 19 August 1871** : First organ concert by Anton Bruckner at London's Crystal Palace.

The registration instructions for the Mendelssohn Organ Sonata (Opus 65, No. 1) have been preserved.

Ainstie Barry described one of Bruckner's improvisations in his program booklet of May 23, 1887.

Bruckner meets Crystal Palace's organist, James Coward (who gives Bruckner a book of Madrigals) ; also : Ainstie Barry, E. Sommer, « Kapellmeister » and organist Theodor Mann, and many others personalities whose business-cards were found in Bruckner's estate.

Karl Lorenz reports that Bruckner later repeated an improvisation from his Crystal Palace recital during a University lecture.

**Monday, 21 August 1871 (2:00 pm)** (German National Day) : Crystal Palace concert celebrating the unification of Germany.

Programme :

Works by Carl Maria von Weber, Franz Abt, Giacomo Meyerbeer, Georg Friedrich Händel, Wilhelm Speyer, Wolfgang Amadeus Mozart and Franz Schubert.

Free improvisations by Anton Bruckner on Schubert's « Ständchen » (Serenade) and Karl Wilhelm's « Wacht am Rhein » .

At the end of the concert, when Bruckner was asked to play an improvisation of « Die Wacht am Rhein » (The Watch on the Rhine) , he could not remember the tune. One of the hotel servants, who was in the audience, helped him out

by whistling the melody softly. The servant was a fellow-Austrian, from Prague.

In the evening, organ concert by James Coward with works by Wolfgang Amadeus Mozart, Giovanni Buonaventura Viviani, Julius Benedict, Georg Friedrich Händel, Ludwig van Beethoven and Felix Mendelssohn.

**Tuesday, 22 August 1871** : Organ concert by Anton Bruckner at Crystal Palace - in front of 70,000 listeners !

At the end of the concert, he was carried in triumph on the shoulders of enthusiastic Londoners. Bruckner's official interpreter took the opportunity to send a marriage proposal to a lady who fell under his spell.

A female admirer advised Bruckner, through an interpreter, to learn the language of Shakespeare in anticipation of his next visit to England. In all likelihood, the composer conveys this message without any real malice :

« Tell the lady that she should learn German if she wants to talk to me. »

Bruckner never succeeded in undoing this mentality of provincial petty bourgeois, anchored in him from childhood. It seems that he later regretted his lack of tact towards the nice lady.

Although Bruckner was satisfied with his London success, he was less happy than he had been in Paris 2 years previously. In London, he did not meet any of the prominent musicians ; he was lonely and rather lost in that metropolis.

**Wednesday, 23 August 1871** : Organ concert by Anton Bruckner at Crystal Palace.

Letter from Anton Bruckner to Moritz von Mayfeld :

Bruckner talks about his recent successful organ-concerts : much praise, requests for « encores » , compliments from « Kapellmeister » and organist Theodor Manns. Greetings from Vice-Consul Doctor von Pinsio (?) . Bruckner will return to Vienna via Brussels. The scheduled concerts in Germany, Berlin, Holland and Switzerland are postponed. Greetings to « Frau » Barbara von Mayfeld. Yesterday, Bruckner played at Crystal Palace in front of 70,000 listeners. No music-reviews are to be expected in the « London Times » . Bruckner asks Doctor Anton Tužek (1824-1879) for a notification in the « Linzer Zeitung » .

**Saturday, 26 August 1871** : Organ concert by Anton Bruckner at Crystal Palace.

**Sunday, 27 August 1871** : Organ concert by Anton Bruckner at Crystal Palace.

**Monday, 28 August 1871** (3:00 pm) : Organ concert by Anton Bruckner at Crystal Palace.

Works by Felix Mendelssohn, Johann Sebastian Bach and free improvisation on Georg Friedrich Händel's « Halleluja »

from « Messiah » .

...

One sees how very fond Bruckner was of improvisation, in which art he was, by all contemporary accounts, a past-Master. Which before his journey to London, he said to a pupil in his Upper-Austrian dialect :

« No, i werd net lang den Bach einwerggin, dös sollen die machen, die ka Phantasie haben, i spiel über a frei's Thema. »

Which might be rendered as :

« Noa, I doan't care for grindin out lots o' Bach. They can do that as 'as no imagination o' their oawn. I plays always as I likes. »

In the course of a week, Bruckner gave 6 recitals at the Albert Hall with such success that August Manns, the famous conductor of the Crystal Palace « Saturday Concerts » , engaged him for 4 more. I quote here a letter of August 23 from Bruckner to an influential Linz acquaintance - the only one so far published from which we can glean further particulars of his stay in London :

« Just finish. Played 10 times ; 6 times at the Albert Hall, 4 times at the Crystal Palace. Tremendous applause, endless every time. Encores demanded. In particular, I often had to repeat a couple of improvisations. Both places, the same. Heaps of compliments, congratulations, invitations. “ Kapellmeister ” Manns of the Crystal Palace told me he was astonished and that I was to come again soon and send him my compositions. Yesterday, I played before 70,000 people \* and had to give encores as the Committee asked me to - for I didn't want to, in spite of the tremendous applause. On Monday, I played with equal success at the concert.

N.B. : Unfortunately, the critic of “ The Times ” is in Germany : so, hardly anything will be written about me “ now ”. Please, let the Linz papers know something of this. »

\* 70,000 people : This was at the German National « Fête » at the Crystal Palace, on August 19.

The postscript betrays clearly that Bruckner attached some importance to having his recitals noticed by the critics. As a matter of fact, the important « dailies » published nothing but the bare announcements. It was summer and these recitals, given mainly for the benefit of visitors to the Exhibition, were apparently not taken very seriously in musical circles. Still, in the already mentioned « Musical World » , we find reports striking and, by no means, enthusiastic note. There is mention of « 2nd rate foreigners » and of the « modest mediocrity » of some of the foreign organists and « a little discretion in the selection » of the artists is demanded (a little too late) of the management. Bruckner himself comes-off comparatively well :

« He has given us a grand “ extempore Fantasia ”, which although not very original in thought or design, was clever, remarkable for its canonic counterpoint and for the surmounting of much difficulty in the pedal passages. »

But now comes the blow :

« There can be nothing said extemporaneously upon the National Anthem of Austria, and still less upon the “ Hallelujah ” Chorus of Händel ; nor do we think any improvisation with any effect can be given upon the Toccatas of Bach or the Sonatas of Mendelssohn. Great composers exhaust their themes. Nothing can be added to the “ Hallelujah ” Chorus, nothing to a toccata of Sebastian Bach. »

What impression was made on Bruckner by London as a town, we do not know. He left at the end of August (by the way, he had begun the Finale of his 2nd Symphony here, on August 10) intending to return next year and tour the provinces. But nothing came of this. 4 years later, he received from the Royal Exhibition Commission a medal for his successful collaboration. Once later, in 1886, he thought of coming to London to conduct his 7th Symphony in place of Hans Richter, who was ill. But this plan, too, came to nothing. A few trips to Germany to hear performances of his works were the only occasions on which Bruckner went abroad in later years. Moreover, organ-playing gradually drifted into the background as Bruckner began to concentrate more and more on Symphonic composition. As he once put it himself :

« What my fingers play is forgotten, but what they have written will not be forgotten. »

Another music-critic reported :

« The executions by this disciple of art are truly excellent and quite worthy of the fatherland of Haydn and Mozart. “ Herr ” Bruckner executes the Classical compositions of Bach and Mendelssohn and others with a facility which leaves the ear nothing to desire and which would even certainly satisfied the composer himself in the highest degree » .

### A providential return home

**After Monday, 28 August 1871** : Anton Bruckner may have given organ concerts apart from the programmed recitals at Crystal Palace.

While in London, music-critics urged him to publish his compositions.

Offers for concert tours in England in 1871 and 1872.

Bruckner was offered for 1872 a concert-tour through the most important English cities for a tidy sum of 100,000 Guilders (« Gulden ») , 100 times what he earns in Vienna annually !

The provincial Bruckner leaves London after a stay that lasted one month, ignoring the offer to compose freely without

financial worries.

Fortunately, his return trip to Vienna (with a stop in Brussels) will prove to be « providential » .

Later, he reported to his sister Rosalia (« Sali ») Hueber that he missed the scheduled boarding on his ship. The latter will sink, taking with him many passengers. Bruckner never set foot again in England.

The travel anecdotes illustrate the extent to which Bruckner was uncomfortable outside his Upper-Austrian country, especially when he did not share the same language. He preferred to be surrounded by his fellow compatriots. He never showed any desire to learn the basics of the local language, or to discover the lifestyle of the foreigners who welcomed him with open arms. Not feeling at home even during his stay in Vienna, one must imagine his degree of discomfort in London.

**Linz : « Gasthof Stadt Brunn »**

**September 1871** : Anton Bruckner spends part of his summer vacations in St. Florian and Wels. While in Linz, he tells about his recent journey (organ-tour) to England to some friends gathered at the « Gasthof zur Stadt Brunn » (guest-house to the City of Brno) .

**London : Fear of cholera**

**Saturday, 19 August 1871** : Great alarm appears to be felt in London about the cholera (an alarm very useful in many ways) but the few facts known do not justify it. Cholera, after being endemic in Russia for 2, or, as some say, for 5 years, has reached Königsberg on the East Prussian frontier, but there is no proof that it is marching. No evidence of its progress is given, and the deaths, which were originally 2 in 3, are now 1 in 2. It is worth while in a time of panic to remember that as far as evidence can prove anything, it is certain that cholera is not communicated by touch, that the cause of contagion is an ezlaviurn from the fleece, and that diarrhea, apart from the poison, can no more develop into the Asiatic disease than gout can develop into paralysis. The statement made this week that cholera, has appeared in London is unfounded, and there is little probability that it will appear till next year - when it may be terrible. Meanwhile, the best precautions are the suppression of cesspools and expenditure on pure water. The only drug-palliative worth a straw is opium.

**June 1866** : A localized epidemic of cholera in the East-End of London claimed 5,596 lives, just as the city was completing construction of its major sewage and water-treatment systems ; the East-End section was not quite complete. Epidemiologist William Farr identified the East London Water Company as the source of the contamination. Farr made use of prior work by John Snow and others pointing to contaminated drinking water as the likely cause of cholera in an **1854** outbreak. Quick action prevented further deaths. In the same year, the use of contaminated canal water in local water-works caused a minor outbreak at Ystalyfera in South Wales. Workers associated with the company and their families were most affected, and 119 died.

## Vienna Conservatory : Academic Year 1871-1872

Am Wiener Konservatorium unterrichtet Bruckner folgende Schüler :

Hermine Adametz (Kontrapunkt) ; Guido Adler (Kontrapunkt) ; Max Ambros von Rechtenberg (Orgel) ; Josef Bachmeyer (Harmonielehre) ; Julius Czeglédy (Orgel) ; Wilhelm Kachler (Orgel) ; Franz Kliwar (Josef Kliwar ?) (Harmonielehre) ; Josef Lamberg (Kontrapunkt) ; Felix Mottl (Kontrapunkt) ; Johann Mötz (Harmonielehre) ; Heinrich Paschko (Kontrapunkt) ; Johann Pummer (Harmonielehre) ; Ignaz Reidinger (Kontrapunkt) ; Nicolaus Schaumburg (Harmonielehre) ; Josef Siebert (Kontrapunkt) ; Hermann Steudner (Harmonielehre) ; Alois Walach (Harmonielehre) ; Gustav Walter (Kontrapunkt, Orgel, « aus Arad in Ungarn, 22 Jahre ») und Carl Wolfrum (Kontrapunkt) .

Im Kapitel « B. Unterrichtsleitung » des Jahresberichts ist zu lesen :

« 3. Lehrkörper » :

Fußnote : « Im Laufe dieses Schuljahres hat der Generalsekretär Herr Leopold Alexander Zellner seine Stelle als Professor der Harmonielehre (seit 1868) wegen Überhäufung mit Geschäften zurückgelegt. »

I. Herr Anton Bruckner Professor (Kontrapunkt und Orgel) , seit 1868 (4 Jahr) . »

Folgende Schüler dieses Schuljahres spielen in Anton Bruckners späteren Jahren noch eine Rolle :

Julius Desing, Julius Egghard, Reinhold Hummer, Louise Kaulich, Josef Lamberg (« aus Pest in Ungarn ») , Josef Latzelsberger, Arthur Nikisch, Emil Paur, Adolf Wallnöfer (Bariton) und Julius Winkler.

Der « Übersicht der in den einzelnen Lehrfächern unterrichteten Schülerzahl. » ist zu entnehmen, daß von den 7 männlichen Orgelschülern (sämtlich in der Ausbildungsstufe) 3 ganz und 2 halb vom Schulgeld befreit waren und von den 16 männlichen Kontrapunktschülern (alle in der Vorbildungsstufe) alle befreit waren.

Auszug aus der « Unterrichtsstatistik » :

« Orgel, 3 Classen.

Schülerstand : systemisierter : 6 ; effectiver : 7 ; mehr : 1.

Monatlich ertheilte systemisierte Lehrstunden : 12, sonach im Jahre ... 120.

Gelehrt wurden in progressiver Folge :

In der I. Klasse : Manual- und Pedalspiel ; Cadenzen, Vorspiele, Generalbaßspiel.

In der II. und III. Klasse : Höhere Aufgaben des Orgelspiels : Fugen, Sonate, Konzerte. Und Kontrapunkt, 2 Classen (2 Lehrer) .

Effectiver Schülerstand :

16, monatlich ertheilte systemisierte Lehrstunden : 36, sonach im Jahre ... 360.

Gelehrt wurden :

In der I. Klasse : Einfacher und doppelter Kontrapunct der Octave, Nachahmung, einfache Fuge.

In der II. Klasse : Drei- und vierfacher Kontrapunkt, Canon, Doppelfuge. »

### Bruckner plays Liszt

**December 1871** : Anton Rubinstein conducts in Vienna Franz Liszt's « Christmas Oratorio » in 5 movements (part I of « Christus ») in presence of the composer. Anton Bruckner is presiding at the organ.

I. Motivum - Introduction.

II. Pastorale and Annunciation.

III. Stabat Mater speciosa (« Stood the beautiful Mother ») .

IV. Song of the Shepherds at the Manger.

V. The 3 Kings.

### Brahms : « Karlsgasse » Number 4

**End of December 1871** : Johannes Brahms moves into rooms at « Karlsgasse » Number 4, which will remain his address until the end of his life.

### Vienna Conservatory : Final examinations (July 1872)

**Tuesday, 9 July 1872** :

Schüler mit besonders guten Leistungen werden eigens erwähnt :

« Orgelschule des Herrn Professor Anton Bruckner :

(4 Zöglinge.)

### I. Klasse

Lobenswerth : Julius Czeglédy, Wilhelm Kachler.

### II. Klasse

Lobenswerth : Gustav Walter.

### III. Klasse

Vorzüglich : Max Ambros von Rechtenberg. »

...

« Schule für Harmonielehre (männliche Zöglinge) des Herrn Professor Anton Bruckner :

(10 Zöglinge.)

Vorzüglich : Franz Kliwar, Johann Mötz, Johann Pummer, Hermann Steudner.

Lobenswerth : Josef Bachmeyer, Julius Czeglédy, Nicolaus Schaumburg, Alois Walach. »

...

« Schule für Kontrapunkt des Herrn Professor Anton Bruckner :

(9 Zöglinge.)

### I. Klasse

Vorzüglich : Felix Mottl.

Lobenswerth : Guido Adler, Ignaz Reidinger, Gustav Walter.

### II. Klasse

Vorzüglich : Hermine Adametz, Josef Lamberg.

Lobenswerth : Max Ambros von Rechtenberg, Josef Siebert, Carl Wolfrum. »

...

Klassenprämien erhielten Anton Bruckners Schüler dieses Schuljahr nur in Musiktheorie :

« Schule für Harmonielehre (männliche Zöglinge) des Herrn Professor Anton Bruckner :

1. Prämie : Hermann Steudner.

2. Prämie : Johann Mötz.

(...)

Kontrapunktschule des Herrn Professor Anton Bruckner :

I. Klasse

1. Prämie : Felix Mottl.

II. Klasse

1. Prämie : Josef Lamberg.

2. Prämie : Hermine Adametz. »

...

« Verzeichniß der Schüler, welche in diesem Schuljahre ihr Hauptfach absolvirten.

Diese sind :

Herr Max Ambros von Rechtenberg ... (Orgel.) (...) »

...

« Verzeichniß der absolvirten Schüler, welchen das Diplom ausgefolgt wurde.

Diese sind :

Herr Max Ambros von Rechtenberg ... (Orgel.) (...) » (Nach dem 25. Juli 1871.)

## Hans Rott's mother

**Wednesday, 14 August 1872** : Actress and singer Maria Rosalia Rott, « née » Lutz (born in 1840) dies. Her boy, Hans, is 14 year old at the time.

## Vienna Conservatory : Academic Year 1872-1873

Anton Bruckners Schüler am Wiener Konservatorium sind Heinrich Benies (Harmonielehre) ; Julius Czegledy (Harmonielehre) ; Ludwig Emanuel (Harmonielehre) ; Eugen Grünberg (Kontrapunkt) ; Karl Kittel (Harmonielehre) ; Franz Kliwar (Kontrapunkt) ; Felix Mottl (Kontrapunkt) ; Johann Mötz, Johann Pummer, Hermann Steudner, Johann Straka (Harmonielehre) ; und Alois Walach (Kontrapunkt) .

...

Im Kapitel « B. Unterrichtsleitung » des Jahresberichts ist zu lesen :

« 3. Lehrkörper :

Fußnote, ohne Bruckner-Bezug.

I Herr Anton Bruckner Professor (Kontrapunkt und Orgel) , seit 1868, 5 Jahr. »

...

Folgende Schüler dieses Schuljahres spielen in Anton Bruckners späteren Jahren noch eine Rolle :

Julius Egghard, Reinhold Hummer, Louise Kaulich, Rudolf Krzyżanowski (« aus Eger in Böhmen, 13 1/2 Jahre ») , Josef Latzelsberger, Arthur Nikisch, Emil Paur, Hermine Proschko (« aus Linz in Oberösterreich, 21 1/2 Jahre ») , Josef Staudigl und Julius Winkler.

Der « Übersicht der in den einzelnen Lehrfächern unterrichteten Schülerzahl. » ist zu entnehmen, daß von den 5 männlichen Orgelschülern (sämtlich in der Ausbildungsstufe) 1 ganz und 2 halb vom Schulgeld befreit waren und von den 27 (26 männlichen) Kontrapunktschülern (alle in der Vorbildungsstufe) 26 ganz und 1 halb befreit waren (siehe die Anmerkung) .

...

Auszug aus der « Unterrichtsstatistik » :

« In den Vorbildungsschulen :

(...)

Orgel, I Klasse.

Schülerstand : systemisierter : 4 ; effectiver : 2.

Monatlich ertheilte systemisierte Lehrstunden : 8, sonach im Jahre ... 80.

Gelehrt wurden : Übungen im Manual- und Pedalspiele nach Christian Heinrich Rincks Practische Orgelschule. (...) In den Ausbildungsschulen (...) Orgel, 2 Classen.

Schülerstand : systemisierter : 4 ; effectiver : 2.

Monatlich ertheilte systemisierte Lehrstunden : 8, sonach im Jahre ... 80.

Gelehrt wurden in progressiver Folge : Die höheren Aufgaben des Orgelspiels : Fugen, Sonate, Konzerte. (...)

“ Kontrapunkt, 2 Classen (2 Lehrer) .

Effectiver Schülerstand : 27.

Monatlich ertheilte systemisierte Lehrstunden : 40, sonach im Jahre ... 400.

Gelehrt wurden :

In der I. Klasse : Einfacher und doppelter Kontrapunkt der Octave, Nachahmung, einfache Fuge.

In der II. Klasse : Drei- und vierfacher Kontrapunkt, Canon, Doppelfuge. ” »

### Rehearsing the 2nd Symphony

**Between Wednesday, 23 and Saturday, 26 October 1872** : Rehearsals of the 2nd Symphony (**WAB 102**) with the Vienna Philharmonic under Otto Dessoff - the only Orchestra capable of giving a good performance. Franz Liszt is present. Bruckner strives for simplicity to facilitate its execution and acceptance.

After a first rehearsal (sight reading) , Dessoff and members of the Philharmonic dismissed it as unplayable and meaningless, though it had already won the admiration of Liszt.

The first flutist replied to the Mæstro by saying :

« Someone who writes a mass like the Mass in F cannot compose foolish things. »

(Themes of the F minor Mass are found in the second and fourth movements of the 2nd Symphony.)

Bruckner will hear his former examiner, Johann Herbeck, after the rehearsal, exclaim :

« If Brahms was able to write a Symphony like this, the hall would collapse with applause. »

When Barbara (« Betty ») von Mayfeld played the Symphony at the piano, Bruckner fell at his knees and exclaimed :

« “ Madame ”, you are a goddess. »

After a wealthy patron, Johann Merbeck, had volunteered to underwrite costs, the new Symphony was finally performed at the « Musikverein » as part of the closing celebrations of the 1873 International Exhibition, on **Sunday, 26 October.**

The Symphony received enthusiastic approval from critics and public alike ; Bruckner received an ovation, and even the feared music-critic Eduard Hanslick temporarily stayed his barbed pen, finding positive things to say about the piece.

Bruckner celebrated this personal victory at the popular guest-house (Restaurant and Beer-Hall) named « at Gause » (« Gasthaus und Bierkeller “ bei Gause ” ») located in a basement at « Johannesgasse » Number 12 in the 1st District.

### Iglau : Čzap Hotel

**Saturday, 17 May 1873** : In celebration of the 21st anniversary of the Jihlava (Iglau) « Mannergesang-Verein » , the 12 year old Gustav Mahler plays on piano Sigismond Thalberg's Fantasia on Themes from « Norma » in the « Kleiner Fest-Saal » of Hotel Čzap, located at Number 15-1696 Zizkova Street (Sct. Johann's « Platz » Number 50-51) ; now, the « Dělnický dům » (Workers Home) . Both the male-choir and the female-choir participated in the mixed-program « soirée » .

### Vienna Conservatory : Final examinations (Mid-July 1873)

**Wednesday, 2 July 1873** :

Anton Bruckners Schüler werden in der Prüfungsstatistik erwähnt :

« Schule für Harmonielehre (männliche Zöglinge) des Herrn Professor Anton Bruckner :

(Unter 10 Zöglingen.)

1. Grad : Karl Kittel, Ludwig Emanuel, Johann Straka.

2. Grad : Heinrich Benies. »

...

« Schule für Kontrapunkt des Herrn Professor Anton Bruckner :

I. Klasse

(Unter 9 Zöglingen.)

1. Grad : Hermann Steudner, Johann Mört.

2. Grad : Julius Czegledy, Eugen Grünberg, Josef Kliwar, Johann Pummer, Alois Walach.

II. Klasse

(Unter 3 Zöglingen.)

1. Grad : Felix Mottl. »

...

In der Übersicht der Schüler mit Klassifizierung bei der Jahresprüfung sind verzeichnet :

« Orgelschule des Herrn Professor Anton Bruckner :

(2 Zöglinge.)

I. Klasse

2. Grad : Julius Czegledy.

II. Klasse

2. Grad : Gustav Walter.

Fußnote : zum Concurs (am 12. Juli 1873) zugelassen. »

...

Klassenprämien erhielten :

« Schule für Harmonielehre (männliche Zöglinge) des Herrn Professor Anton Bruckner :

1. Prämie : Carl Kittel.

2. Prämie : Ludwig Emanuel. »

« Schule für Kontrapunkt des Herrn Professor Anton Bruckner :

I. Klasse

1. Prämie : Hermann Steudner.

2. Prämie : Johann Mötz.

II. Klasse

1. Prämie : Felix Mottl. »

**1873 : Bruckner's summer vacation**

**Summer 1873** : During his summer holidays, Anton Bruckner goes successively to the spa resorts of Karlsbad and Marienbad (to recover his health by water-cures) and finally to Bayreuth in order to visit Richard Wagner (and ask him to be the dedicatee of his 2nd or 3rd Symphony) . For 28 years, Wagner made regular visits to Marienbad.

**Karlsbad : « Hotel Anger »**

**Before or after Monday, 4 August 1873 (?)** : According to « Herr » Kaufmann :

On his way to Mariánské Lázně (Marienbad) , Anton Bruckner stopped for a few days at Karlovy Vary (Karlsbad) spa-resort. He will stay at the « Hotel Anger » on « Neue Wiese » . There, he met the parish church music-director of St. Mary Magdalene, Alois Janetschek. Bruckner even improvised on the organ.

Stephan Janetschek grew-up in a musical home. His father, Josef Janetschek, was a flutist at the « Deutsches Theater » in Budapest. His younger sister Aloisia (1871-1947) was a concert pianist. His uncle, Alois Janetschek, director of church music in Karlovy Vary, supported the sick Johannes Brahms there, in August 1896. Janetschek was given a bust of Richard Wagner on the occasion of his 40 years' service jubilee of Karlovy Vary.

Note : If the date is **Wednesday, 6 August 1873**, a « several-day » stay in Karlsbad is questionable. Bruckner actually must have started his summer vacation on **Monday, August 4**.

« Water taken in moderation is not harmful »

Johann Wolfgang Goethe, Maria Feodorovna, the widow of Tsar Alexander III, King Friedrich Wilhelm III of Prussia, Friedrich Schiller, Prince Clemens Wenzel Lothar von Metternich, the economist Karl Marx with his daughter Eleonor, Ludwig van Beethoven, Otto von Bismarck, Empress Elisabeth und Emperor Franz-Josef I - these were all among the famous visitors to the spa at Karlsbad.

From the Middle-Ages onwards, many Habsburgs had visited various warm-water springs for the treatment of their illnesses, particularly Gastein (in the modern province of Salzburg) . A stay at a spa was believed to alleviate such complaints as metabolic disorders, diseases of the gastro-intestinal tract that were caused mostly by unbalanced diet during the winter months, and rheumatic disorders. Maria Theresa described thermal baths as « natural health pharmacies » .

From the medical point-of-view, taking the waters and spending time at a spa became a central component of the balneological research which flourished during the 18th Century.

Apart from the question of health, however, the entertainment of spa-guests was also of primary importance. One place that was especially popular with the nobility and later also the bourgeoisie in the 18th Century was Karlsbad in Bohemia, named after Charles IV (1316-1378) . Luxury hotels, casinos, and a programme of social events in the immediate vicinity were intended to guarantee a sophisticated spa-holiday. It was not without reason that Johann Wolfgang von Goethe described Karlsbad as the « chess-board of Europe » , where business agreements were as much part of the routine as love-affairs. But this kind of social and indulgent spa-holiday could only be afforded by a small sector of society, for the high spa-charges favoured the « élite » . Accordingly, in the 19th Century, the aristocratic spa-visitors became very heated about the increasing numbers of the middle-classes they were forced to mix with. These early beginnings of spa-tourism were ultimately also the result of improving transport infrastructure and the expanding rail network.

### Physicians of Karlsbad

(The order in which they began practising in Karlsbad.)

### Notable people associated with Karlsbad

Johann Sebastian Bach, German composer.

Ludwig van Beethoven, composer, came for spa treatments. He and the poet Goethe would take walks together, much to the delight of the local people.

Franz Liszt, Hungarian composer.

Richard Wagner, German composer.

Johannes Brahms, German composer.

Antonín Dvořák, Czech composer.

Edvard Grieg, Norwegian composer.

Frédéric Chopin, Polish composer ; he and his parents met for the last time during a holiday in Karlsbad, in August-September 1835.

Johann Wolfgang von Goethe, German poet, novelist, philosopher, scientist ; he lived in the house named « Zu den Drei Mohren » .

Friedrich Schiller, German poet.

Adalbert Stifter, Austrian writer.

Peter I of Russia visited Karlovy Vary, in 1711.

Josef II, Emperor of Austria.

Jean de Carro, Swiss physician, published the « Almanach de Karlsbad » .

...

Karlovy Vary (or Karlsbad) is a spa-town situated in western Bohemia, Czech Republic, on the confluence of the rivers Ohře and Teplá, approximately 130 kilometres (81 miles) west of Prague (« Praha ») . It is named after King of Bohemia and Holy Roman Emperor Charles IV, who founded the city, in 1370. It is historically famous for its hot springs (13 main springs, about 300 smaller springs, and the warm-water Teplá River) . It is the most visited spa-town in the Czech Republic.

The first Celtic settlers came there before the Middle-Ages.

On 14 August 1370, Charles IV, Holy Roman Emperor and Czech king, gave the city privileges to the place that, subsequently, was named after him. According to legend after he had acclaimed the healing power of the hot springs.

Due to publications by doctors such as David Becher and Josef von Löschner, the city developed into a famous spa-resort, and was visited by many members of European aristocracy. It became popular after the railway lines to Eger (« Cheb ») and Prague were completed, in 1870.

The number of visitors rose from 134 families, in the 1756 season, to 26,000 guests annually, at the end of the 19th Century.

The Karlsbad Decrees of 1819 had associated the city with anti-Liberal censorship within the German Confederation.

In the 19th Century, it became a popular tourist destination, especially known for international celebrities visiting for spa treatment. The city is also known for the popular Czech liqueur, « Becherovka ». The glass manufacturer Moser Glass is located in Karlovy Vary. The famous « Karlovarské oplatky » (Karlsbad spa-wafers) originated in the city, in 1867. The city has also given its name to the delicacy known as « Karlsbad plums ». These plums (usually quetsch) are candied in hot syrup, then halved and stuffed into dried damsons ; this gives them a very intense flavour.

### **Marienbad : « Weißen Röbl Inn »**

**From Wednesday, 6 August 1873 (?)** : During his stop in Marienbad (Mariánské Lázně) , Anton Bruckner was staying at the « White Horse Inn » (« Weißen Röbl Inn ») , located at Number 5063 Kurgast (today, Černý kůn) . Its brasserie-restaurant welcomed the public on ground-floor. The building (with 2 upper-floors) is L-shaped and accessible on 2 perpendicular streets. (It is just opposite the sumptuous Hotel « Excelsior » , which was only a few steps from the famous « Colonnade » .) At their intersection, we found (also on the ground-floor of the same building) the popular local grocery-store owned by Mister Friedrich Benisch (at Nummer 54 Poštovní Street) . You could, among others things, buy smoked meat, coffee, and paper.

Bruckner enjoyed the quiet of his hotel room, allowing him to polish-up the manuscripts of his 2nd and 3rd Symphonies which he hoped to present to Richard Wagner. The first draft of the 3rd Symphony had already been completed in Vienna, on 23 February 1873. He finished the Adagio on the 24th. The instrumentation of the Scherzo in March.

Through the mediation of the parish church music-director of St. Mary Magdalene in Karlsbad, Alois Janetschek, Anton Bruckner becomes acquainted with « Kapellmeister » August Labitzky.

In 1854, August Labitzky entered the « Musik-Kapelle » Orchestra of his father in Karlovy Vary. In 1868, he took-over the direction. Due to a steady expansion of the Cure-Orchestra, Labitzky was able to bring Antonín Dvořák's 9th Symphony (from the « New World ») to the European « clientèle » .

**Sunday, 31 August 1873** : Comfortably installed at the inn's brasserie, Bruckner completed the sketch of the Finale of his 3rd Symphony.

The « White Horse Inn » will later display this inscription (in gold letters) on a marble memorial plaque :

« It was in this house that lived during the month of August 1873, Doctor Anton Bruckner. Here, he composed the Finale of his 3rd Symphony. »

At the end of the Second World War, the inn is renamed « Černý Kůn » . It will be demolished in 1956-1957.

Mariánské Lázně is a spa-town in the Karlovy Vary Region of the Czech Republic. The town, surrounded by green mountains, is a mosaic of parks and noble houses. Most of its buildings come from the town's Golden Era in the

second half of the 19th Century, when many celebrities and top European rulers came to enjoy the curative carbon dioxide springs.

German settlers were called into this region by Bohemian rulers from the Přemyslid dynasty in the 12th Century. Although the town itself is only about 200 years old, the locality has been inhabited much longer. The first written record dates back to 1273, when there was a village of Úšovice. The springs first appear in a document dating from 1341 where they are called « the Auschowitzer springs » belonging to the Tepl Abbey. It was only through the efforts of Doctor Josef Nehr, the Abbey's physician who, from 1779 until his death in 1820, worked hard to demonstrate the curative properties of the springs, that the waters began to be used for medicinal purposes. The place obtained its current name of Marienbad, in 1808 ; became a watering-place, in 1818 ; and received its charter as a town, in 1868.

The name Marienbad first appeared in 1786 ; since 1865, it has been a town. Then, a second period of growth, the town's Golden Era, came. Between 1870 and 1914, many new hotels, colonnades and other buildings, designed by Friedrich Zickler, Josef Schaffer, and Arnold Heymann, were constructed or rebuilt from older houses. In 1872, the town got a railway connection with the town of Eger (Cheb) and, thus, with the whole Austro-Hungarian Empire and the rest of Europe.

...

Mariánské Lázně started slow development in the 1800's, and it soon became one of Europe's most famous and popular holiday resorts. Travellers in those old days often made mention of this small, but very charming and delightful place. One of the earliest famous guests in the town was Gøethe, who was a lover of baths, and who carried the fame of Marienbad to far-away lands. The town was developing slowly until the 1870's when a new railway line was built, as a result of which more and more visitors arrived. The golden age of Mariánské Lázně arrived, a period of elegant health spa hotels with equally distinguished guests, and bubbling social life. By the beginning of the 1900's, the town was considered one of the best holiday resorts in the continent. A large number of wealthy guests seeking recovery from illness flooded the town, where they had the chance to meet the above mentioned famous people, in addition to finding a cure to their problems. The most attractive buildings in town (including hotels built in « Art Nouveau » and Empire style) originate from the great age of Marienbad, around the turn of the 19th Century. The town's Russian orthodox church was built for the Russian tsar, and its Colonnade is the longest such building in the world.

### The Marienbad Orchestra

The Marienbad Orchestra, that was founded in 1821, plays here in the summer. « Kursaal Casino » , built in 1899-1891, is another famous building in the town, including a special marble ballroom where the Orchestra holds several concerts during the winter. Today, the only change in Marienbad is that it offers all the services demanded by the modern traveller, while it has maintained its unique atmosphere from the turn of the Century. This former bath town has become a popular location for many conferences, where guests can enjoy all the most up-to-date services. For instance, in Villa Butterfly, the first hotel of the Danubius Hotels Group outside Hungary.

Marienbad, together with its Orchestra, grew-up in the renowned region of music and the time of their common rise, at the beginning of the 19th Century, corresponded to the period of an unusual bloom of spa-bands. The birth of the permanent Orchestra was determined by the decision of « Herr » Prelate Karl C. Reitenberger, then superior of Tepel monastery, the owner and founder of the spa, to legalize music performances in Marienbad, in 1821. The relatively small band which played at the springs several times a day, greeted the guests and took part in balls, increased very soon to a middle sized Orchestra. To promenade concerts further concerts increased, « café » concerts from which Symphonic concerts developed took an important place. From the end of the 19th Century, the Orchestra of Marienbad inclined distinctly to the performances of Symphonic music which was usually played on the « colonnade » . The capacity of « Marienbader » musicians to cope with an unbelievably extensive repertoire, their ability to perform as soloists, the success in tours abroad, the public appreciation of the composer Gaspare Spontini, the fact that the spa Orchestra inspired Louis Spohr to the composition of the Waltz entitled « Erinnerung an Marienbad » (Opus 89) and the fact that Richard Wagner dedicated them the copy of a part of the score of the Opera « Rienzi » show their high-level. The conductors were chosen very cautiously, often to the recommendation of the « Wiener » music authorities. The development of the « Marienbader » Orchestra was determined by the level of Marienbad itself and, by the composition of its « clientèle » and its activity, reflected clearly the calibre and the orientation of the town councillors.

The « Marienbader » musical tradition was not interrupted by any social or political changes and the performances of the Orchestra were not stopped either by a War or by post-War events. In connection with the fundamental change of the spa operation (from the 19th to the 20th Century) , the Orchestra combined the function of a spa-band with that of a permanent Symphonic Orchestra. Besides promenade concerts, it organized regular Symphonic evenings, took part in musical Festivals (e.g. , in the renowned Frédéric Chopin Festival of which it was the co-founder) , organized concerts for children and youth and spread its touring activity also abroad. Since 1971, it bears the name « West Bohemian Symphonic Orchestra » .

## Conductors

**From 1814-1815 to 1817 :** Wenzel Voigt.

**1818-1820 :** Karl Beer.

**1821-1842 :** Josef Schurwonn.

**1843-1881 :** Theodor Krüttner.

**1882-1895 :** Michael Zimmermann.

**1896-1915 :** Adalbert Schreyer.

**1916-1921 :** Ferdinand Hellmesberger.

## Bayreuth : « Goldenen Anker » Hotel

It was from Marienbad that Anton Bruckner asked Richard Wagner if he had any objections to his coming. Wagner's reply will not offer any encouragement. Nevertheless, in the middle of September, before the ink on the manuscript of the original version of the 3rd Symphony was dry, Bruckner decided to take the train for Bayreuth. As soon as he arrived at the station, he went to the Hotel of the Golden Anchor (« Goldenen Anker ») , next to the Margravian Opera House, to reserve a room.

Founded in 1753 (and, since then, still operated by the same family : the Graf) , the Hotel of the Golden Anchor is ideally located in the heart of the Old town.

Located at the corner of the « Maxstraße » (continuing on « Richard-Wagner-Straße ») and the « Opernstraße » , very close to the Theatre of the Margravine, this jewel of Rococco-style architecture where Richard Wagner conducted Ludwig van Beethoven's 9th Symphony of Beethoven on the occasion of the laying of the first stone of the new « Festspielhaus » Theatre. There, you will taste the finest cuisine of Bayreuth : the local products are prepared with a science and a refinement that one would have believed French, but its author is a Bavarian « chef » in love with his art and fascinated by the search for flavours and their associations.

To see in this magnificent hotel integrating the « Art déco » style, the rare stained-glass door dedicated to the « Master of Bayeuth » .

The most popular table in the dining-room is set apart, like a private study. It is decorated with photographs signed by artists who frequented the site.

**28 August** : Birthday of the Opera « Lohengrin » . It is celebrated with a salad of lamb's lettuce and oak leaves with sea-food marinated in balsamic vinaigrette. Minced rabbit backs stuffed with wild mushrooms and a black plum tart flamed with Quetsch.

...

The Hotel « Goldener Anker » (Golden Anchor) is situated in a historic place in the heart of the Baroque-style town centre of Bayreuth, next to the world-wide famous « Margravian Opera House » .

« Tradition doesn't mean keeping of the ashes, but preserving the embers. »

According to this motto, Family Graf is running the Hotel « Goldener Anker » today. The hospitality tradition of the family, having lasted for 13 generations, reaches back to the 16th Century !

In this beautiful historic building on the « Opernstraße » , they provide, like in the previous Centuries, sophisticated services in the hotel and in the restaurant based on experience and much discernment.

At that time, the « inn » had been a coaching-house, where the coaches stopped in the court-yard to care, to feed and, if there was need, to change the horses.

Already in the 16th Century, the house on the « Opernstraße » received the inhabitants of Bayreuth who appreciated its hospitality and the fine beer. The history of the Family Köhler, one of the most ancient families of the town, can be traced-back as far as the year 1500, when it obtained the publican and brewery licence. The ancestors were cited as « butchers and free citizens of the town » .

The cellar of the main-building and parts of the annex buildings, initially used as pig stable and as store-room for the beer, still bear witness to that period.

When the Princess Markgräfin Wilhelmine had the Opera House built, she provided the same beautiful sand-stone bricks to the neighbouring home-owners of the « Opernstraße » for the reconstruction of their houses with the aim of creating a « magnificent boulevard » . Thus, the « Köhlers' Inn » was converted by the middle of the 18th Century from a humble gabled house into a sumptuous Prussian palace. In the wake of the refurbishment, the owner family received in 1753 a « noble gift » .

The name of the Hotel bears witness to the margravian passion for waging sea battles on an artificial lake, especially created for this purpose in the still authentic and interesting borough « St. Georgen » . Already in 1841, the Hotel « Goldener Anker » was lauded in the oldest guide of Bayreuth as a « clean, spacious and elegant » house. Less than 50 years later, the house was referred to as the most renowned hotel at Bayreuth, being then frequented by duchesses, princesses and queens. And the noble feasts were quite opulent, including Russian caviar, Rhine salmon « à l'anglaise » , veal rolls (« Kalbsvögel ») and Pomeranian goose breast, like, for example, on the occasion of the birthday of Prince Regent Luitpold towards the turn of the 20th Century. Yet, the humble inhabitants of Bayreuth were also served exquisite food. Today's appearance of the restaurant of the Hotel « Goldener Anker » was essentially marked by the local architect Adolf Schmall, who re-furbished profoundly the ground-floor in 1927 and decorated it in the « Art-Déco » style.

The Hotel, built with « margravian sand-stone » like the neighbouring world-wide famous Opera House (designed by Giuseppe and Carlo Galli da Bibiena) , has accommodated noble guests for 2 Centuries. Being shielded by the coat of arms of the Hessian Grand Duke, the Hotel has been appreciated by guests from all over the world as their familiar temporary home. Today, the Hotel « Goldener Anker » is still a privileged « anchorage » for many visitors during their stay at Bayreuth.

The guest-book of the Hotel « Goldener Anker » seems to be a list of names epitomizing the German cultural and intellectual history. Prominent persons and travellers pretending to a certain standing dropped here the anchor to enjoy the conveniences of the stylish house, which became already at the end of the 19th Century the most prestigious hotel in town.

The guests list includes flamboyant personalities from Richard Wagner, Anton Bruckner to Richard Strauß ; from Thomas

Mann to Gerhart Hauptmann ; from Arturo Toscanini to Herbert von Karajan ; from Agatha Christie to Günther Grass. Even the great Mark Twain recognized immediately the assets of the Hotel, when he visited Bayreuth in 1891. He remarked that it was a fine place for dining before adding disenchanted :

« No, what I want to say is that I can watch here the others having a fine meal. »

### Bruckner at « Wahnfried »

**Saturday, 13 or Sunday, 14 September 1873** : Anton Bruckner set-out for Bayreuth after taking the spa-waters in Marienbad to submit and dedicate to Richard Wagner (whom he greatly admired) his new Symphonies No. 2 in C minor and No. 3 in D minor (in which he had as yet, incidentally, only outlined the Finale) .

He knocks on the door of the not completely finished Villa « Wahnfried » . (He had already met Wagner in 1865 at the premiere of « Tristan und Isolde » in Munich.) Inside the music-room, bundles of manuscripts dragged everywhere. Wagner was very busy supervising the construction of his new Theatre and being immersed in the composition of the Tetralogy. He will receive Bruckner quite hard (probably relieved at the thought of getting rid of an unwelcome visitor, at least for now) .

Bruckner recalled in a letter to Baron Hans Paul von Wolzogen after Wagner's death :

« It was about the beginning of September 1873 (the Crown Prince Frederick was in Bayreuth for a few days) when I asked the “ Meister ” if I could present to him my Symphony No. 2 in C Minor and Symphony No. 3 in D minor. The Thrice-Blessed refused, due to lack of time (the construction of his Theatre) , and said that he could not review the scores at that moment since even the “ Nibelungen ” had had to be laid on one side. »

Wagner asked him to come-back in 3 days. A longer stay in Bayreuth meant for Bruckner more expenses that he could not really afford.

According to Max Auer, one of Wagner's servants noticed that Bruckner remained for hours in front of the Villa « Wahnfried » , watching from the windows. (He always carried a spare black suit on his arm, ... just in case !)

Three days have passed. He knocks at the door. This time, he is asked to come-back in 3 hours.

When he returns, he is told to enter.

« I did not know where to walk on the carpet. » , he later confided to his friends.

While Bruckner waited nervously in the living-room with the manuscripts of his Symphonies under his arm, he heard Wagner play the piano in the music-room.

Wagner finally appeared on the threshold. Bruckner timidly asked him to examine his scores :

« “ Meister ”, I have no right to deprive you of even a quarter of an hour, and I only thought that with the “ Meister’s ” great perspicacity, a single glance would suffice for him to understand the substance of it. »

Thereupon the « Meister » said, slapping me on the shoulder :

« Well, come then. » , and went with me into the music-room and looked at the 2nd Symphony.

« Very good » , he said, but he seemed to find it rather tame (for they originally made me very nervous about it in Vienna) , and picked-up the 3rd (D minor) , and exclaiming :

« Let’s see, let’s see - well - ah ! » , he went through the whole of the first section (the exalted one singled-out the trumpet part) , and then said :

« Leave this work here with me, I will take a closer look at it after dinner. »

Bruckner’s own description of his emotions as Wagner examined the scores is eloquent :

« I was just like a school boy watching his teacher correct his note-book. Every word of comment seemed like a red mark on the page. At last, I managed to stammer forth the hope that he would accept the dedication of one of the Symphonies, for that was the only and also the highest recognition I wanted from the world. »

I thought to myself, shall I make my request, when Wagner asked me what was on my mind. Very shyly, my heart pounding, I then said to my dearly beloved Master :

« Meister ! I have something in my heart, that I do not trust myself to say ! »

The « Meister » said :

« Out with it ! You know how much I like you. »

Thereupon, I made my request, but only in the event of the « Meister’s » not disapproving, since I did not want to profane his thrice-famous name.

Wagner did not respond immediately. Then, he took Bruckner by the blow and began to kiss him without stopping :

« This evening, at 5 o’clock, you are invited to “ Wahnfried ”, I shall be there, and after I’ve had a chance to look at the D minor Symphony properly, we’ll talk about this matter again. »

Not knowing how to kill time, Bruckner began to wander around Bayreuth. He finally ended-up on the construction

site of the « Festspielhaus » . He was so overwhelmed by this hive of activity that he nearly fell into a cement container, and completely forgot the time of the important « rendez-vous » !

A servant from the Villa had to get Bruckner.

When he entered the Villa, he heard Wagner play the « trumpet theme » of his 3rd Symphony on the piano.  
Bruckner :

I had been up to the Theatre-site immediately before I went « Wahnfried » at 5 o'clock. When I arrived, the « Master of masters » hurried to meet me with open arms and shining eyes. He was silent for a while, and then embraced and kissed me, saying :

« My dear friend, your Symphony is a masterpiece. The dedication would be truly appropriate. This work of yours gives me the greatest pleasure. »

It was Bruckner's original intention to make this 3rd a « Wagner-Sinfonie » . Wagner had obviously enjoyed seeing a composer like Bruckner express such profound respect for him. He was deeply impressed by the quotations from « Die Walküre » and « Lohengrin » . (Most of these quotes will be removed in subsequent revisions.)

Bruckner continues :

For 2 and a half hours, I had the good fortune to sit beside the « Meister » , while he talked about musical affairs in Vienna (the names of Johann Herberck and Eduard Hanslick were mentioned) , offered me beer, took me out in the garden and showed me his grave !!! Then I had, or rather, was permitted, blissfully happy, to accompany the « Meister » into his house.

Wagner introduced Bruckner to Cosima (and his little Eva) . Cosima will bring a brand new barrel of « Weihenstephaner Bier » which was ordered for the occasion. All in all, it was one of the happiest days in Bruckner's life.

The sculptor Gustav Adolf Kietz, who was working on a bust of Cosima and had set-up his studio in the Villa, which was still not completed, was also present during this conversation. According to him, Bruckner kept on trying to talk about Viennese enthusiasm for « Lohengrin » .

Wagner replied :

« Oh, never mind about that. I know that, there's a swan comes, bringing a knight, it's something a little different, it makes a change - here, have a drink instead, this is a wonderful beer, « Weihenstephan », to your health ! »

« For God's sake, « Meister », I mustn't, it would be the death of me, I've just come from Karlsbad ! »

(A stop at the water-cure station to treat his recurrent digestion problems.)

« Nonsense, it's good for you, drink it ! »

And in spite of his protests, which hilariously punctuated his musical conversation, Bruckner was obliged to drink one glass after another. The 2 men talked until well into the night, drinking beer and indulging in snuff.

### The hang-over

The Upper-Austrian guest had too much beer (« Oh, this beer, this disastrous beer ! ») . Back at the hotel in the wee hours of the morning, Bruckner realized that he did not remember which of his Symphonies the Master of Bayreuth had accepted as a dedicatee. Was it the 2nd or 3rd ?

In a state of panic, ashamed to return to Wagner, he went looking for sculptor Kietz everywhere in the city (fortunately, the latter was staying at the same hotel as Bruckner) . Once traced back, Kietz (highly-amused) , pretending not to have paid attention to the discussion, said he had heard several times some talk about a « Symphony in D minor » , believing it to be Beethoven's 9th. Bruckner was happy and relieved at the same time.

In the sculptor's own words :

« Bruckner suddenly threw his arms about me, kissed me, and cried :

“ Thank you, dear ' Miester ' Councilor (I don't know to this day how I came by the title) , thank you ! I know it's the one in D minor the Master has accepted ! Oh, how happy I am that I know which it is ! »

Kietz gave Bruckner (still doubtful ...) a chance to relax by offering him snuff and then suggested that he immediately write a short message to Wagner on a sheet of blue paper bearing the heading of the « Golden Anker Hotel » (« Gasthof Goldener Anker ») - now a treasured museum possession.

« Sinfonie in D-Moll, wo die Trompete das Thema beginnt ? A. Bruckner. »

(« Symphony in D Minor, the one in which the trumpet introduces the theme ? A. Bruckner. »)

The same leaf came-back to him promptly with the following scribbled addition underneath :

« Ja ! Ja ! Herzlichen Gruß ! Richard Wagner. »

(« Yes, yes ! Best wishes ! Richard Wagner. »)

In the dedication, Bruckner referred to Wagner as « the unreachable world famous noble Master of poetry and music

» .

Whenever Wagner heard Bruckner's name mentioned thereafter, he would exclaim :

« Ah ! Yes, the trumpet. »

So, the 3rd Symphony became the « Wagner-Sinfonie » in common parlance. The composer felt not only happy but honoured by the name, never realizing that the followers of Brahms would consider him, henceforth, a confirmed Wagnerite.

Wagner's conscientious study of the score shows that accepting the dedication was no empty act of politeness on his part, as indeed one would hardly expect of him. Cosima's diary tells us that early in 1875, he went through the Symphony at the piano with her.

### Gustav Adolph Kietz

The sculptor Gustav Adolph Kietz was born on 26 March 1824 in Leipzig ; and died on 24 June 1908 in Dresden. He studied with Ernst Rietschel.

Gustav was the younger brother of the artist Ernst Benedikt Kietz, with whom Wagner developed a close friendship during his Paris stay (from 1839 to 1842) . Gustav Adolph was a frequent guest at the Wagner household in Dresden, and participated in the Dresden uprising of 1849. Later, he sculpted busts of Wagner and Cosima. Kietz's chatty and vivid recollections (published 1905) include documents from his brother Ernst Benedikt's Estate.

...

Gustav Adolf Kietz younger brother of Richard Wagner's Paris companion Ernst Benedict Kietz resided in Dresden during this period and was a frequent visitor to the Wagner home. Gustav's memoirs, published in 1905, especially devoted to these years, became an eyewitness source for subsequent biographers. However, Kietz often simply repeats Wagner's own assertions, raising questions about his reliability. One example is Kietz's description of the Carl Maria von Weber episode. Kietz credits Wagner for generating public interest as well as for organizing the reburial, and inserts lengthy quotes from Wagner's speech, including of course :

« Nie hat ein deutscherer Musiker gelebt, als Du ! »

(« There never lived a more German musician than you. »)

There is no historical account of the Weber reburial beyond contemporary press reports and the biography written much later by his son, Max Maria. Thus, Wagner's version has not only dominated the record, it has become the official record, frustrating Ernest Newman's laudable intention of « hearing the other side » , of not making the mistake of

earlier Wagner biographers who « accepted far too unquestioningly Wagner's account of his dealings », which has made Wagner scholarship the « equivalent of our listening to one end of a telephone conversation ». This is not the place to analyze every retelling of the Weber reburial, an admittedly brief moment. Every Wagner biography and, of course, every Weber biography mentions it, almost always as an example of Wagner's organizational skills, natural talent at public speaking and, most importantly for his image, as promoter of the German national Operatic tradition.

...

Conservative and progressive listeners of the early 19th Century did hear some of Beethoven's music as « revolutionary ». By 1849, the opinion that works such as Beethoven's 3rd, 5th, and 9th Symphonies communicated « French » values of « Liberty, Equality, and Fraternity » was loudly professed in the pages of the « Neue Zeitschrift für Musik », and within political discourse in general. Even before revolution spread to Germany, newspapers warned public authorities that they should not consider Beethoven concerts mere distractions ; they were opportunities for thousands to hear « a music which would best resonate with fire and social collapse ». Government officials were encouraged to limit performances of Beethoven's music because « one can only pour so much water into a glass before it overflows ». Gustav Adolf Kietz reported that, in such « excitable times », the 9th Symphony had an « intoxicating effect » on audience members. When disturbances broke-out in German streets, Theodore Uhlig wrote that the « socialist consciousness » Beethoven expressed in his work had « reached its goal » with the 1849 rebellions. Amid fighting in Dresden, Richard Wagner reported, a revolutionary guard shouted down from a barricade that « joy's beautiful divine sparks ( " schöner Götterfunken " ) had made a blaze », implying that flames emerging from the burning Opera House represented the achievement of hopes Beethoven had recorded in the 9th Symphony. Like the Dresden Opera House, the Revolution of 1848-1849 went-up in smoke ; but these comments indicate that, by the time of the uprisings, Beethoven and his music had become important elements in the culture of revolution in Germany.

There is a variety of evidence that this association of the 9th Symphony with revolution was in many people's minds in Dresden. Gustav Adolf Kietz wrote of the third performance, on 1 April 1849 :

« The effect of the marvellous work was positively intoxicating in these turbulent times, it's impossible to describe its impact on the audience, you need to have experienced it ! »

...

Richard Wagner wrote for the benefit of King Ludwig II of Bavaria, who was presumably unaware of something that every inhabitant of Dresden knew, namely, that the charred building had been a Baroque Masterpiece by the « Zwinger » Palace architect, Matthäus Daniel Pöppelmann. It was here that Wagner's Palm Sunday concert had taken place exactly a month earlier. In the presence of his friend, Gustav Adolph Kietz, Wagner had repeatedly expressed his « delight and wonderment » at the old Opera House's « wonderful acoustics ». Following the devastating 1869 fire, the citizens of Dresden immediately set about rebuilding it (« Semper Oper ») .

« Weihenstephan » Beer

« Weihenstephan » is the name of the oldest beer in the world brewed since the year 1040 by the « Bayerische Staatsbrauerei Weihenstephan », located on Weihenstephan hill (Nahrberg) in Freising, Bavaria.

The first stone was laid in the year 725 by St. Korbinian, who then founded a Benedictine cloister with 12 other monks. The first mention of a brewed beverage dates from the year 43, probably using the nearby hop garden whose owners had to give a tenth of their harvest to the cloister. The monks manufactured several beers.

According to a medieval charter of Bishop Engelbert von Freising authorizing the brewing, this brewery is certainly the oldest still in operation, with that of the Abbey of Weltenburg. It is possible, however, that this document is a forgery dating from the beginning of the 17th Century.

Officially, Weihenstephan brews beer since 1040, when Father Arnold obtained permission from the town of Freising to brew and sell his beverage. A new stage was the proclamation, in front of the gates of the cloister, of the Law on the Purity of Beer proclaimed in 1516 by Duke William IV. With the secularization of the State in 1803 and the abolition of the cloister, the brewery became the property of the Royal State of Bavaria. It is now operating as a State directed enterprise under the control of the Bavarian Government. As the oldest still existing brewery in the world it stands upon the Weihenstephan hill, surrounded by the comparatively very young Weihenstephan Science Center of the Technical University of Munich. And so, a unique tradition and brewing culture developed over the Centuries. Today, Korbinian's heirs use the most modern technology, but they never forget their own history and their own high-standards. This allows us to brew a variety of beers of the highest possible quality.

...

Weihenstephan Abbey (« Kloster Weihenstephan ») was a Benedictine monastery in Weihenstephan, now part of the District of Freising, in Bavaria, Germany. « Brauerei Weihenstephan », located at the monastery site since at least 1040, is said to be the world's oldest continuously operating brewery.

The Weihenstephan Brewery can trace its roots at the abbey to year 768, as a document from that year refers to a hop garden in the area paying a tithe to the monastery. A brewery was licensed by the City of Freising in 1040, and that is the founding date claimed by the modern brewery. The brewery thus has a credible claim to being the oldest working brewery in the world. (Weltenburg Abbey, also in Bavaria, has had a brewery in operation since 1050, and also claims to be the oldest brewery in the world.) When the monastery and brewery were secularized in 1803, they became possessions of the State of Bavaria.

St. Korbinian, whose arrival in Freising is dated at around 720, founded a church dedicated to St. Stephen here. A dormitory for monks that originally adjoined the building disappears from records by the end of the 8th Century. The monastery itself, dedicated at first to St. Vitus, then later to St. Stephen and St. Michael, was founded by Bishop Hitto von Freising between 811 and 835. From then until 1020 or 1021, it was a monastery of Augustinian canons before becoming a Benedictine abbey.

The abbey was dissolved in 1803 during the secularization of Bavaria and its property sold-off. In 1810, the abbey church, which had been made into a parish church, was demolished.

In 1803, the Forestry School of Munich was moved into the empty buildings ; at the same time, a model farm was established. A large part of the previous abbey economy, with buildings and stables as well as forests and fields, was transferred to the forestry school or the model farm. From 1804, agricultural science was taught here by Max Schönleutner.

As early as 1807, both schools were wound up, as many teachers and students had taken part in Napoleon's invasion of Russia, from which few had returned. In 1852, the agricultural school was re-established in Weihenstephan and, in 1895, became an agricultural college, which formed the nucleus of the Technical University of Munich life sciences campus in Freising.

### Expo 1873 : Eduard Hanslick and Nikolaus Dumba

As an industrialist and a lover of the arts, Nikolaus Dumba had welcomed the idea of the Vienna World Fair from the very beginning, despite the fact that the government had carelessly appointed an incompetent man (Wilhelm Freiherr von Schwarz-Senborn) to the powerful position of financial director. The incompetence of this individual had led to vast sums of money being squandered even before the task of organizing the fair was completed.

**Friday, 14 March 1873** : Six weeks before the fair was due to open, Parliament debated a bill for a loan of over 7 million Gulden to cover the extra-expenses that had arisen.

Dumba criticized the government severely for appointing the wrong man to the post of financial director, although, as the fair would place Austria at the centre of the world's attention, he strongly supported the bill itself, saying :

« As a result of this event, Vienna will be welcoming thousands of people from all over the world, who will see for themselves what has become of the weak, frail Austria that was left to decline ; they will see how just a few years of constitutional life have sufficed to bring Austria a prosperity they could never have imagined. They will also see that no other nation has such a great thirst for education, culture and progress and that we do not wish to lag behind any other country. And when they return to their own countries with all their impressions of Vienna, which as if by magic has been transformed into a huge cosmopolitan city, then, millions of people will speak of Austria with respect. This certainly deserves a sacrifice, a sacrifice worth many millions (...) »

The party that Nikolaus Dumba represented in the « Reichsrat » was the German Liberal Constitutional Party.

Eventually a loan of 9,700,000 Gulden was approved for the World Fair.

As Vice-President of the Society of Friends of Music, Nikolaus Dumba assisted in the organization of the World Fair. Initially, the Operatic composer Errico Petrella was appointed chairman of the panel of judges for the musical events.

In his memoirs, Eduard Hanslick wrote of Petrella that :

« He knew neither German nor French, nor had any knowledge of Italian, so that they were unable to continue with the negotiations. The Ministry, therefore, having been advised of our complaints, had the bright idea of immediately appointing at our next meeting, as a kind of vice-chairman or honorary chairman, an art-lover who was not even a member of the panel of judges : “ Herr ” Nikolaus Dumba. From that point on, everything went well. Dumba’s incomparable ability to hit the nail on the head, to sort-out what was important from what was not, the skill he had acquired from his parliamentary experience in directing discussions and drawing clear concise conclusions from them were of the greatest value to us, particularly when his personal kindness did not conflict with the nature of his position as chairman. »

At the World Fair, which was held in Vienna between **1 May and 31 October 1873**, the organizers wanted to present all the basic sectors of cultural and economic life in 26 different thematic units. The 15th unit, for which Dumba was responsible, consisted of a display of musical instruments. The exhibits were housed in 5 different sections. One section contained a general display of musical instruments, while another the different types of wind-instruments. In a 3rd section, there was a display of different sound devices - devices that were similar to musical instruments but were not used to produce music - e.g. : signal whistles. The 4th section contained a display of glockenspiels and other chiming instruments, while the 5th contained statistical material. People came to exhibit musical instruments from almost every country in Europe, as well as non-European countries like Egypt, Persia, British India, China and North Africa. The exhibits in all of the thematic units - except the 24th, in which art objects from the past were displayed, including a collection of musical instruments from Cremona - had to be assessed by an international panel of judges. Half of the Austrian judges were elected by the exhibitors, and the other half were especially appointed. The panel of judges for each thematic unit had to elect a chairman, a vice-chairman and one or more « rapporteurs » from its section. Nikolaus Dumba, who had been appointed as a judge for the 15th unit, was also elected vice-chairman for the same unit. The « rapporteur » for this unit was Eduard Hanslick. The close friendship that later developed between Hanslick and Dumba may well have sprung from the collaboration between the 2 men at the fair. In any event, the famous music-critic Hanslick used a familiar form of address in the very friendly correspondence that he exchanged with Dumba from **July 1873** onwards. From this correspondence, we learn a few things, albeit not the most important, about the activities of the panel of judges.

**Friday, 20 June 1873** : Hanslick wrote to Dumba :

« My Dear Sir and Friend !

Tomorrow (Saturday, the 21th) : Early panel meeting at 8:00 am in the “ Rotunda ” (next to the Streicher Girclapiano) ; then, view the pianos from France, Italy, Switzerland and Spain. Straight after, at 11:30 am, meet at the Judges’ Pavilion, Room Number 5, to sort-out current business. Monday, meet again at 8:00 am in the “ Rotunda ” (pianos from the German Empire) ; then, at 11:30 am at the Judges’ Pavilion.

Yours devotedly in haste,

Eduard Hanslick »

Doctor Franz Egger and Nikolaus Dumba, the President and Vice-President of the Society of the Friends of Music, were responsible for organizing the musical events at the fair. Earlier, at a board meeting held on **Monday, 12 February 1872**, they had already invited proposals for these events.

### Expo 1873 : The Vienna World Fair

« Weltausstellung 1873 in Wien »

Motto : « Kultur und Erziehung » (Culture and Education) .

Objective : « Contemporary culture, the stimulation of progress, and display of every product from each sector of the economy. »

Duration : 1 May - 31 October 1873 (184 days) .

Entrance fee : Monday to Friday : 1 Gulden.

Entrance fee : Sundays and holidays : 50 Kreuzer.

Entrance fee : Opening-day and prize-giving day : 25 Gulden.

The exhibition was intended not only to fill visitors with enthusiasm but also to inform them about new developments in technology, and hence, to promote industry and increase sales. Not least because visitors were kept away by a cholera epidemic and the stock-exchange crash, profits were far below expectations and the state had to finance the entire cost of the Exhibition.

Area : 233 hectares, of which 16 hectares covered exhibition area.

Location : « Prater » Park, near Vienna - former Imperial private hunting-ground.

The Vienna « Prater » had already been an amusement park for a long time. But, in the summer of 1873, the park was completely cleared and renovated and became a world meeting-place.

Director-General : Doctor Wilhelm Freiherr von Schwarz-Senborn.

Costs : Expenditure : 19,123,270 Gulden.

Income : 4,256,349 Gulden.

Deficit : 14,866,921 Gulden.

Visitors : 7,255,000.

Exhibitors : 53,000, of which 9,104 from Austria (17 %) .

Participating countries : 35.

Major countries : United States of America, Austria, Belgium, China, Japan, Denmark, France, German Empire, Great Britain, Holland, Hungary, Italy, Russia, Switzerland.

Symbolic Central Pavilion : Industrial Palace or « Rotunda » , with the largest dome in the world.

There was ample space in the wide halls of the palace for the different nations to present themselves. The brilliant achievements of these years of rapid industrial expansion in Austria were adversely offset by the Vienna stock-market crash and a cholera epidemic.

Pavilions : 194 exhibition areas according to the site plan.

That fast-changing world was trading old scourges for modern ones, and the 1873 World Exhibition sat at the fulcrum of that transition. It aimed to present itself as a world leader and the equal of England and France. Despite the dark circumstances surrounding the event, it optimistically promoted the world's progress in industry, art, and agriculture, and highlighted foreign lands that were freshly accessible because of new transit options. Built from scratch in Vienna's enormous city-park, it was 5 times larger than the previous exhibition in Paris, making room for 53,000 exhibitors from 35 countries in 194 pavilions.

What was new was that there was a pavilion devoted exclusively to women, in which the organizers, however, equated women's work with arts and crafts. Since it was above all middle-class women who made products in this field, all other products made by women were ignored. This meant that women continued to be associated only with arts and crafts : what they produced was described as beautiful, charming or artistic, but not as useful or innovative.

Classification : 26 groups, 174 sections.

Jury : 956 members.

Prizes : 25,572 medals, of which 6,158 won by Austria.

An Expo to showcase the power of the Empire

The Project was not only supported by the political sphere, it was also backed by agricultural and industrial

entrepreneurs who saw it as an opportunity to present to the world the results of the recent economic boom. The Empire wanted to establish itself as a cosmopolitan nation and a strong player of international business.

### A « festival of progress » : how the World Exhibition came about

1867 marked a turning-point. After a number of disastrous years, the economy made a sudden recovery. A « miracle harvest » opened up opportunities for export, while the State reform that created the Austro-Hungarian Dual Monarchy (the « Compromise » with Hungary) placed trade, customs and fiscal policy on a new basis. Iron production, mechanical engineering and the construction industry were the drivers behind the up-swing. Vienna also established itself as a centre of finance, with countless sometimes dubious joint-stock companies springing-up in the period before 1873.

These boom years presented industrialists, trades-people and commercial policy-makers, as well as the proponents of reform in the applied-arts, with the opportunity to put into action a plan they had long held dear, namely that of staging a World Exhibition in Vienna. Since the « Great Exhibition of the Works of Industry of All Nations » held in London, in 1851, there had been 3 further World Exhibitions (1855 and 1867 in Paris ; 1862 in London) . These « festivals of progress » not only acted as a forum for global exchange of expertise among engineers and manufacturers but also presented bourgeois society and the respective host country with an ideal platform for self-presentation and image boosting. The Vienna of the « Gründerzeit » era was « on the fast-track » and intended to present itself to the world as a large modern city on its way to becoming a major metropolis.

It was not until 1870 (barely 3 years before the opening) that Emperor Franz-Josef enacted a sovereign resolution on the holding of the World Exhibition, in the face of resistance from the City Council, the municipal authorities and Mayor of Vienna Cajetan Felder, who cautioned against excessive costs. The influence of the local politicians was still limited at this point, though their scope for action expanded from the 1860's onwards with the end of the neo-absolutist regime. A prominent symbol of the heightened self-confidence of the civic administration « vis-à-vis » the Imperial house was Vienna's monumental new City Hall, on which work started in 1873.

### « Gründerzeit » and faith in human progress

The Austrian economy had been expanding dramatically since the early 1860's. The booming economy of this « Gründerzeit » (the period of history marked by rapid industrial expansion) fostered an increasing demand for a World Exposition to be held in Vienna. The modernization of Vienna introduced during this time was concentrated on the « Ringstraße » (Circular street) which had been built on the former city fortifications and was intended to connect the suburbs with the city-centre and form the focus for monumental public buildings and urban palaces. Because this project (similar to the radical restructuring of the centre of Paris by Baron Georges Eugène Haussmann) involved planning on a large-scale, those involved were confident that they would also be able to realize an ambitious project such as a World Exposition.

The realization of this project was initially set-back by the defeat of Austria by Prussia in 1866, and the reconciliation

with Hungary in 1867. However, a few years later, the success of the Austrian contribution to the 1867 Paris World Exposition revitalized the idea of a World Exposition in Vienna so that the scheme was picked-up again with enthusiasm and plans were implemented to organize the first World Exposition in a German speaking country. This was to take place in 1873 on the 25th anniversary of the coronation of Emperor Franz-Josef.

The exposition programme elaborated in 1871 was as follows :

« Under the highest auspices of their Royal Highnesses and his apostolic majesty, an international exposition is to take place in Vienna in 1873 with the objective of presenting and spurring further progress in contemporary culture and the total spectrum of the economy. »

The project was not only supported by leading Liberal politicians, but also by Austrian industry and agriculture because of the opportunity this would allow of demonstrating the « Gründerzeit » economic boom to the whole world. Moreover, after the failure of the pan-German ambitions, there was an overwhelming desire to polish-up the country's image and, for Austria, to present itself as a cosmopolitan, internationally competitive country. The new Vienna as the centre of the economic and cultural upswing tangibly demonstrated this euphoria in the form of enormous construction schemes. The « construction site » side of Vienna thus became one of the most important exhibits of the World Exposition.

The Emperor signed the decree authorizing the World Exposition on 24 May 1870. The honorary president of the World Exposition was his brother Archduke Karl Ludwig. The president was Archduke Rainer, one of Franz-Josef's nephews. Invitations were sent-out to foreign governments as early as the summer of 1870. Positive responses were received from the western European industrial countries, the United States, as well as for the first time from numerous countries in the Orient and the Far-East. 35 sovereign countries took-part at the Viennese exposition.

Baron Doctor Wilhelm von Schwarz-Senborn was appointed Director-General of the World Exposition in January 1871 and endowed with unlimited powers. An Imperial commission with 215 members was responsible for the organization. Also involved were 28 working committees with a total of 1,278 members responsible for realizing this major project. The construction work for the exposition was started very late, and although the scheduled opening-day had to be postponed, the speed with which this massive architectural project was financed and realized is still barely comprehensible even today. The « Reichsrat » (Parliament) approved a loan of 6 million Gulden in 1871. The costs eventually overran the initial very rough estimates by a factor of 3. Another 7 million Gulden were approved in 1872 followed by an additional 9.7 million Gulden shortly before the World Exposition was opened.

### A city within a city : the World Exhibition

Once the Emperor had given his approval for the World Exhibition, a planned city of gigantic proportions sprung-up within a very short period of time in Vienna's « Prater » area (the site occupied by today's City Hall had also been discussed as a possible alternative) , whose considerable distance from the city-centre gave rise to substantial costs. The exhibition grounds not only housed the vast Palace of Industry, Engine Hall and Hall of the Arts and almost 200

national and corporate pavilions, but were also equipped with state-of-the-art infrastructure including a sewer network, rail tracks and their own railway station. At the same time, a side-project also saw the long-established « Würstelprater » remodelled and expanded into the modern « Volksprater » amusement park.

The preparatory phase scheduled for the World Exhibition was incredibly brief. Thanks to the latest developments in transport and communications (telegraphy) , however, it proved possible, within a very short space of time, to organize world-wide participation, overcome the logistical problems associated with the transport of vast numbers of exhibits and mobilize huge streams of visitors. World Exhibitions were conceived as popular encyclopaedias of humanity, designed to cover an enormous spectrum of different aspects : industry, technology, science, the arts, culture, and so on. At the Vienna Exhibition, the task of representing the world with attributes such as progress, productivity and speed combined with the emotional experience provided by a huge variety of commodities, luxury and exoticism. The World Exhibition not only served as an economic stimulus, but also offered the broader public a global showcase of experiences on a whole new scale : Visitors embarked on a « sightseeing tour » of the Industrial Age, gazed in wonder at the clattering steam-engines, looms and sewing-machines and found-out about innovations in the worlds of transport and science. A society fond of consumption revelled in the assembled profusion of craftsman-made objects and devoted itself to the pursuit of « good taste » , which from the Austrian point-of-view primarily meant luxury goods in the internationally acclaimed « Viennese Renaissance » style. Artistic designs by sculptors and architects, executed with precise craftsmanship, were a consequence of the reform of the applied arts - and formed the basis for the latter's success.

But the aim was not only to educate the public : it was also about entertainment and the fascination of far-away places. At the « Prater » exhibition, grounds visitors were able to take an architectural tour of the world ; foreigners in exotic costume and authentic dishes from all over the globe became the talk of the town, and cocktails were served in a North American Indian wigwam. The oriental and Asian pavilions exerted the greatest attraction : a defining characteristic of the Vienna World Exhibition, they spawned trends in fashion, life-style and the applied-arts.

The 1873 World Exhibition is remembered by posterity chiefly for the huge financial deficit it incurred - just 4.2 million Gulden in revenues against expenditures of 19 million Gulden. In the speculative fever that gripped the age, the hopes of vast attendance figures, not to mention the substantial influx of capital, had led to excessively inflated expectations. Exploding costs, the stock-exchange crash and fewer visitors than anticipated (not least due to the cholera epidemic) resulted in sober disillusionment after the event. Ultimately, the only parties who really profited were individual exhibitors from the successful promotion of trade and industry and visitors from the effective transfer of knowledge. This notwithstanding, the capital of the Austro-Hungarian Empire succeeded in returning itself to centre-stage in the eyes of the world for the first time since the Congress of Vienna.

### An international city : the Exposition Site and its key-theme

Although construction measures such as the Danube channel or the gentrification of the « Würstelprater » were hotly disputed, the Exposition Committee was convinced that they had created the ideal backdrop for the prestigious World Exposition project in the form of the « Prater » Park with its mature trees and landscaped lakes and streams. As the

« most glorious natural park » , it formed « a wonderful environment for this majestic cultural display » and made a major contribution to « considerably enhancing the artistic impact of the buildings planned for the site » .

Bounded to the north by the station, to the south by the chic « Prater » Avenue opened in 1867, to the west by the « Volksprater » , and to the east by the « Heustadelwasser » with the adjacent « Prater » water meadows, the World Exposition Site covered an area 5 times as large as the « Champs-de-Mars » of the 1867 Paris World Exposition. The original idea of creating an « international city » in the form of numerous different national pavilions was rejected by Schwarz-Senborn in favour of a central exposition building for industrial products, machinery and the arts. The Industrial Palace with its « Rotunda » was the architectural highlight of the exposition. The Exposition Site was divided up into 5 east-west running zones : the southernmost was the park which led to the Industrial Palace and to the buildings dedicated to the arts. On show to the visitors here was a broad spectrum of international restaurants and « cafés » such as the Chinese Tea-House, examples of different types of housing, the reading-rooms, and the Jury and Emperor Pavilions. The 3rd zone showcased agricultural products and special exhibitions. This was followed to the north by the Machine Hall and the last zone bordering the north station which included exhibitions of industrial worker's housing from different countries, and the World Trade Pavilion. The entrances to the Exposition Site were in the north from the exposition station, in the south via the main-gateway, the entrance to the round tower, and from the « Volksprater » via the west-entrance of the Machine Hall and the west-entrance of the Industrial palace.

Although the key-themes were housed in the main exposition-halls, there were already signs at the Vienna Exposition of the trend towards nationally-focused exhibition concepts which would eventually lead away from a pure showcase of products to the self-depiction of countries in their own pavilions. This is evidenced by the generous areas between the exposition-halls set aside for national pavilions and social exhibitions. Another indication of this trend is the architectural layout of the Exposition Palace in which the countries were arranged from west to east according to their geographical location, and the housing of national presentations in their own side-galleries with their own entrances. This did not, however, mean that the countries depicted themselves objectively. On the one hand, the colonial powers presented their acquisitory intentions towards non-European areas, whilst the whole exhibition was completely dominated by the Austrian contribution. Moreover, whilst the western industrial countries primarily showcased technical or industrial achievements (such as the life-size copy of the entrance to the new Mont-Cenis-Tunnel) , non-European countries presented themselves and their cultures in an ethnic manner. Replicas of the temple of Kyoto in the industrial palace or an Egyptian tent with authentic interior decoration and matching costume-clad dummies were intended to graphically demonstrate other lifestyles. In addition, the exposition was also used to establish business contacts with industrial nations - e.g. : by Japan through its presentation of export goods.

### Danube diversion and prestigious « Ringstraße »

Exactly fulfilling the wishes of the Emperor who, as early as 1866, had already envisaged the « Prater » as the site of the unrealized 1870 World Exposition, the former Imperial hunting-park was officially designated the Exposition Site in 1869. The critics considered the long distance from the park to the city-centre to be a major disadvantage - not to mention the danger of the area being flooded by the river Danube. Despite these reservations, the area around the « Prater » became an integral part of the city reconstruction measures.

A new river bed was excavated for the Danube to finally remove the centuries old risk of flooding of the city and the « Prater ». The Danube control measures (themselves one of the World Exposition exhibits) made it possible to construct the northern station in the northern part of the « Prater » from which railway tracks were laid into each of the exposition buildings during the construction phase. The lowering of the ground water level, which was another consequence of the Danube control measures, allowed Vienna's drinking water supply to be improved. In combination with the construction of new hospitals, the improvement of the water supply was a major weapon in the fight against the regular risk of epidemics such as cholera.

The « Würstelprater » in the western part of the « Prater » site was renovated and « refined » as part of the World Exposition preparations. The informally evolved structure of this highly popular amusement park which had grown-up since the beginning of the 18th Century thus fell victim to the bourgeois fetish for order and control. The whole area was restructured in 1871 under the supervision of the architect Lothar Abel who ordered the tearing down of amusement booths, the straightening and widening of roads, the outlawing of vagabonds and the construction of regular rows of houses as per the master-plan. The « Würstelprater » (renamed the « Volksprater » or People's « Prater ») thus lost the earthy charm which had endeared it to many of its visitors. The proponents of the gentrification countered these arguments by underlining, in their opinion, the already overdue need to : « Raise the standards of the people's amusements ». Highlighting the extent to which they were out of touch with the grass roots, these spoilsports propagated the « beneficial change in the former tastes of the Viennese public which had lamentably gone astray » - a typical example of the inflexible encroachment and uncompromising restructuring of an urban institution with socio-political consequences.

The opponents criticized the reconstruction of Vienna (and the World Exposition project itself) as a planning failure because it was a short-term measure which only benefited the upper-classes, and thus, only fuelled social divisions. The essence of the criticism was that instead of helping to solve the housing shortage, money was being wasted in the construction of prestigious urban palaces and luxury hotels. The Danube itself became a temporary harbour for hotel ships hoping to cash in on the influx of tourists during the World Exposition. And the many foreign-workers involved in the World Exposition caused tremendous inflation in the price of housing, hotels and consumables. The workers who had come to Vienna for the World Exposition lived in barrack-like conditions ; locals were thrown-out of their homes which were then rebuilt as guest-houses for World Exposition visitors. Vienna became a magnet for speculators. The propaganda from the Liberal government propagating the benefits of the economic boom for everyone including the lower-classes was treated increasingly sceptically by many during this time.

### Stock-market crash and cholera

The glorious opening festivities and the initial interest of the invited guests in the Vienna World Exposition did not conceal for long the problems which were first mooted in 1872. At the time of the construction of the « Ringstraße » and the proposal of the plan to organize the World Exposition, Vienna found itself riding the crest of a « Gründerzeit » economic wave which attracted numerous stock-market speculators and businessmen to Vienna. Unfortunately, failure to assess the situation correctly, deceitful speculation and corruption caused the stock-market to crash only 9 days after the World Exposition opened. This « black Friday » or « Viennese stock-market crash » caused the immediate

financial ruin of numerous businessmen. Critics of the World Exposition felt their pessimism to be fully-vindicated and made the Imperial decision to implement a project of this type, and Schwarz-Senborn himself, responsible for the economic collapse. In June 1873, a second disaster occurred which was to keep prudent foreign visitors away from Vienna for sometime : 13 guests at the « Danube » World Exposition Hotel succumbed to cholera. Although hygiene and public health measures had already been implemented, the epidemic spread rapidly and despite there only being relatively few fatalities, enthusiasm for visiting the World Exposition was palpably dampened. Only when the danger of the epidemic was considered over by the end of October did the mass-influx of visitors from all over Europe materialize and bring crowds to the site in the numbers the organizers had hoped to see during the whole of the World Exposition.

The major spectacles at the site of the World Exposition included the fabulous balls and other spectacular events such as the visit of the German Princess Augusta, the Russian Tsar or Nasr-Ed-Dim, the Shah of Persia. The World Exposition was also harnessed as a festival of peace by politicians. Artistically directed receptions for guests of honour highlighted the understanding between nations in support of peace. This was an aspect which had been underlined by the Emperor on 5 November 1873, following the official opening of the « Reichsrat » . This was of major significance given the previous war between Germany and France, the founding of the German « Reich » , and Austria's wars on its northern and southern boundaries. Simultaneously, opulent decoration and stunning productions were used as political allegories to underline Austria's economic power and increased influence. The discrepancy between fantasy and reality at the World Exposition, between the ostentatious parading of the privileged classes and social reality (the indebtedness and social misery of the lower-classes) were clear for all to see.

### Rotunda and Machine Hall : Exposition architecture

The objective of the exposition organizers to create on Austrian soil a comprehensive picture of contemporary culture under the omen of the harmonious rapprochement between peoples was graphically reflected by an architectural concept presented by Carl von Hasenauer, the Chief-Architect of the exposition. An enormous Exposition Palace with a ceremonial hall at its centre, a Machine Hall, 2 Agricultural Halls, and the Art Hall reflected the key-themes of the exposition. These buildings were supplemented by numerous smaller pavilions erected by the participating foreign countries. These included exotic restaurants such as an Arabian « Café » , or an Indian Wigwam, worker's housing, a Japanese village with a faithful recreation of typical Japanese country-side including hills, a lake with bridges and a waterfall, and a holy shrine. Also to be seen were a mosque and a copy of the ancient Egyptian rock mausoleum of Beni-Hassan, not to mention the Brewery Pavilions and a cast iron palm house.

The « Rotunda » sat on the rectangular hall of the Industrial Palace which connected to the west and east with 25 metre high lateral halls themselves each flanked on both sides by 8 side galleries with a grid separation of 50 metres. The floor plan (described at the time as a « fishbone system ») was based on a 5 year old design by the architect Eduard van der Nüll and August Sicard von Sicardsburg. His plan was selected because of its transparency and the ability of housing separate countries within the side-galleries. It also opened-up the possibility of creating additional exhibition space by roofing over the court-yards between the side-galleries. The 70,000 square-metres of space within the Exposition Palace (which was 907 metres long and 206 metres wide) was constructed with wrought iron pillars

supporting flat-arched lattice arches. The spaces between the pillars were bricked-up as high as the capitals which also marked the base of the windows. The roofs were covered with zinc sheet. Four complex portals in neo-Baroque style (a novel type of historical expression) were located to north, east, south and west. The drawing of the main-portal on the south side shows the monumental nature of its colossal dimensions which call to mind the triumphal arches of the 19th Century.

The Machine Hall ran parallel to the Industrial Palace. This hall was 800 metres long and 50 metres wide and provided 40,000 square-metres of exhibition area. This was where the « brilliant inventions providing useful service and born-out of technical progress », i.e. : machine functions and operating principles, were to be showcased. As was also the case with the Art Hall and the Agricultural Halls, this was a brick building with framework walls and a roof construction featuring sheet-metal covered main trusses. The central gallery was 8 metres higher than the side-galleries, creating room for large windows between the pillars. Inside the building, the central gallery and lateral galleries were only separated by 2 long rows of pillars which, unlike the Industrial Palace, gave an immediate overview of the whole interior space. Two rail-tracks ran along the length of the hall to facilitate the transport of heavy machinery. These tracks were linked to 6 branch tracks via turntables. The form and function of the building was harmonized by dispensing with decorations and monumental portals.

The « jewel » of the exposition architecture was the Emperor Pavilion praised by architectural critics as a « work by Hasenauer graced by Hellenistic subtlety », as « a charming microcosm of the whole, colossal Exposition Site ». Divided into a projecting central structure and 2 lateral wings with pavilions at the corners, the building resembled a smaller version of the Industrial Palace, albeit more richly decorated and with the finest interior furnishings - as befitted the location of the private rooms of the Imperial couple.

### The Industrial Palace

Surrounded by variety shows and exotic restaurants, the chief-architect, Carl von Hasenauer, built what was the landmark of this first world exhibition in a German-speaking country : an enormous hall for industrial products that was given the name « Rotunda ». In order to draw special attention to the engineers' achievements, the daring steel construction was not covered on the outside.

...

The area chosen as the exhibition ground was a 12 hectare section of the popular « Prater » Park. The original idea for the Exhibition was to create an « international city » with numerous national pavilions. This approach was rejected in favour of a central exposition building for industrial products, machinery and the arts. The main construction, « The Industrial Palace », was the architectural highlight of the Expo and its « Rotunda » was the largest in the world : 83 metres high and about 110 metres in diameter. The structure, a feat of engineering and design, served as the focal-point and ideological locus for the Vienna Exhibition.

The « Rotunda » was the conspicuous central building, a gigantic structure which served as the focus of the World

Exhibition, with 4 rectangular galleries, each 190 metres long, leading away from it. There was a Palace of Industry and a Hall of Engines (between 700 and 900 metres long) , in which more than 1,000 exhibitors presented their products. The most important building material was iron, whose use was definitely regarded as modern in the 19th Century - think, for example of the Eiffel Tower, built for the Paris World Exhibition of 1889. In order to make room for the exhibition's numerous buildings, parts of the « Prater » Park were opened up and built over - up to then the area had been more or less untouched country-side.

...

The engineer Scott Russel based his concept for the « Rotunda » on his design for a 45 metre high dome created for the Great Exhibition of 1851 in London. Although Russel was accused of making structural engineering errors and mistakes in estimating the material involved, Hasenau approved the project and handed responsibility for realizing the scheme to the architect Friedrich Schmidt aided by others including the Duisburg-based steel company Johann Caspar Harkort. As predicted, the construction of the roof presented enormous problems which delayed the completion of the building until March 1873.

A total of thirty-two 24 metre high pillars arranged in a circle supported an enormous tension ring with a diameter of 104 metres. This tension ring was first riveted together on the ground before being lifted into place. The ring itself supported 41 metre long radial struts which converged upwards to meet at the pressure ring. The structural elements were emphasized by fixing the skin of the roof beneath the beams. Two lanterns were installed above the sloping part of the roof. The lower one had a diameter of 31 metres and housed a walkway providing visitors to the exhibition with a panoramic view of the whole site and beyond to Vienna and the surrounding area from the impressive height of 70 metres. The second lantern stood high above the roof and was topped by a round dome. The highest-point of the building at 85.30 metres (which made it the tallest building in the whole exposition) was a 4 metre high, 5 metre wide gilded replica of the Imperial crown set with precious stones. An enormous building was thus created as the symbol of the World Exposition. Its monumental dimensions exceeded those of St. Peter's in Rome. A « technological Masterpiece » , a symbol of the « enormous advancement in engineering » , and topped off with a crown - the key-expression of the megalomaniac, egotistical fervour of the youthful economic self-confidence of the Austrian Empire. Decorative elements inside the « Rotunda » were required to « harmonize » with the iron skeleton of the building with the objective of merely underlining the beauty of the structural engineering. The supporting pillars were linked with circular brick arches, whilst the metal skin and the iron pillars were wrapped in jute and decorated with figures. Daylight in generous quantities flooded into the building thanks to the large side-windows and the lantern. Four large trees from the former park decorated the centre of the hall along with the magnificent central fountain created by Antoine Durenne. A hydraulic lift whisked the visitors to an inner-gallery at a height of 23 metres which not only provided a good view of this arena for the finest exhibits and the biggest celebrations, but also gave access to the outside of the building onto the tent roof from where intrepid visitors could mount ladders to climb-up to the crown.

An important part given to education and science

Like in previous Fairs, the mechanical exhibits dominated in all sections. However, according to the press, the most interesting sections were those dedicated to education. One of the innovations of the exhibition was the « History of Prices » section which allowed exhibitors to show the gradual increase of labour productivity and the dependency between public taste and economic development. Vienna 1873 was also the first Expo to offer a site for international forums of scientists : there were 12 congresses and conference held in Vienna during the Expo.

### An Expo used as a tool for business and commercial development - the example of Japan

The exposition was used to establish business contacts between industrial nations. Japan, for example who was participating officially to an Expo for the first time, sought a double objective. On the one hand, in the context of the Meiji era, the Japanese delegation in Vienna was to observe and study as many technological and social achievements of Western countries as possible. On the other hand, Japan was to present itself as a commercial and future world power. Instead of presenting traditional Japanese art, the country preferred to display contemporary items that could please the European public. The Viennese visitors enjoyed it very much : the « japonism » trend was beginning.

### A successful event for the Austro-Hungarian Empire

Despite the natural cataclysms and shocks that happened during the event (an unforeseen flood of the Danube, a cholera epidemic, the May 1873 stock-exchange crash) , the Vienna Exposition was a great highlight of the Dual Monarchy and boosted the renovation of Vienna : the Danube channel along with the impressive reconstruction of the old part of the city (the « Ring ») were the highest success of the municipal building program.

The 1873 World Exhibition in Vienna was widely considered a colossal failure - it lost the equivalent of 160 million euro because of a devastating combination of the world's first truly international financial crisis and Vienna's last cholera epidemic. In many ways, this is all you need to know to understand the crucial time in history at which the World Exhibition was held :

At the beginning of a new era of science and public health, as well rapid communication that enabled rampant speculation and its inevitable consequences.

### A mixed result : The end and the repercussions of the exposition

140,000 visitors (the largest number attending any one day of the exposition) flocked to Vienna on 2 November 1873 on the final day of the great exhibition. Heinrich Ritter Fellner von Feldegg was appointed to organize the dismantling of the Exposition Site and to conclude the unsettled negotiations with exhibitors. Whilst all of the smaller pavilions were demolished, pains were taken to preserve the « Rotunda » , the Machine Hall, and the 2 Amateur Pavilions. The latter were taken-over by the Art Academy. The Machine Hall was used by the Vienna Council as a warehouse, whilst the « Rotunda » (soon to become a symbol of Vienna and its Liberal « Gründerzeit » and « Ringstraßenzeit ») continued to be a major cultural venue until it was destroyed by fire in 1937. The gentrified « Volkssprater » was handed back as it was to the park authorities. The Swedish houses and the Japanese village were acquired by

Londoners whilst the splendid furnishings in the Emperor Pavilion (whose demolition was the subject of enormous controversy) were left in the safe-keeping of the Museum of Art and Industry in Vienna.

Despite the cultural achievements of the exposition which demonstrated, in the sense of Liberalism, the progress made in the new capital city during the « Gründerzeit », the exposition project overall was subject to extremely harsh criticism. The World Exposition was made the scapegoat for the economic crisis which led to the collapse of the stock-markets. This diminished the political weight of the Liberal government leading in the long-term to the development of a multi-party system and the division of the population into national groups.

Schwarz-Senborn was accused of improper financial planning and made responsible for the exposition deficit of 14 million Gulden. The very low number of visitors on account of the cholera epidemic (20 million were expected, only 7 million came) only served to make the results even worse. The social problems associated with the sudden increase in unemployment when the exposition ended, and exacerbated by the inflated rents and rise in the price of food, encouraged criticism of the regime which was accused of excess financial investment for the sake of pure luxury and prestige. Moreover, there were serious doubts about the contribution of the World Exposition to industrial and scientific progress despite the many congresses held over the exposition period.

Forgotten were the stimuli to the urban development of Vienna and the enormous prestige gained by Austria overseas - not least through the personal interest and involvement of the Emperor. Vienna and the Austrian Empire were able to present themselves on the largest exposition area to that date on a site embellished by grandiose monumental architecture. The exposition provided the framework for an extremely diverse « festival uniting the peoples of the world » and established a vital platform for the politics of peace, cultural exchange and export trade-relations - e.g. : with Japan.

### John Scott Russel : the designer of the « Rotunda »

The engineer John Scott Russel was born in Scotland in 1808 and was already a well-known expert for resolving apparently unsolvable problems long before the Vienna World Exposition. He was brought to public attention primarily by the construction of the then largest steamship in the world, the « Great Eastern » and the transplanting of the « Crystal Palace » from the London World Exposition site of 1851 across the metropolis to Sydenham. After studying mathematics and mechanics, Russel became Professor of Experimental Physics at the University of Edinburgh at the tender age of 26. In addition to his theoretical research, he was also continuously engaged in putting ideas into practice - which resulted in the construction of numerous models for steam ships and traction engines. Russel eventually took-control of the Caird Shipyard in Glasgow and his inventions pioneered modern ship-building. The Commissioner General of the Vienna World Exposition, Baron Schwarz-Senborn, considered Russel the perfect engineer to develop an unusual attraction for this major event. The plan he finally produced exceeded all previous accomplishments in his field. Russel's design for the « Rotunda » created the largest domed building in the world.

### Director-General of the World Exposition : Baron Doctor Wilhelm von Schwarz-Senborn

Born in Vienna in 1816, Wilhelm von Schwarz-Senborn initially studied applied chemistry and furthered the promotion of industrial technology. As secretary of the Lower-Austrian Business Association, he played a decisive role in promoting economic reform and eventually became secretary of the Ministry of Trade. From 1860 onwards, he repeatedly represented Austria at international exhibitions. His personal commitment to the Austrian economy and the experience he gained as Austria's Exhibition Commissioner endowed Schwarz-Senborn with the qualifications required to advise the Emperor on economic and foreign policy matters between 1860 and 1866. After the 1862 London World Exposition, Schwarz-Senborn became director of the commercial office at the Austrian Embassy in Paris. On 9 January 1871, Schwarz-Senborn was officially appointed Director-General of the World Exposition at the request of the government and the Emperor. He agreed to the request on condition that he be given a completely free-hand with respect to the exposition concept, and returned to Vienna in May 1871 to carry-out the task. Schwarz-Senborn opened his Vienna office on the « Ringstraße » on 1 August 1871. He soon earned a great deal of criticism during the preparations for the exposition because of his apparently strong willed and chaotic style of leadership. Moreover, the government accused him of favouring foreign exhibitors (in particular the French) to the disadvantage of Austrian companies. Lavishly praised at the start as an exposition expert, Schwarz-Senborn's reputation declined dramatically and he was subsequently made responsible for the cost overrun and the financial failure of the exposition. After the World Exposition, he was sent to Washington in 1874 where he spent a few years as the Austrian ambassador. Even after his return to Vienna, he was unable to fulfill his original wish of becoming mayor and completing the development of the city. His glittering career came to a premature end with the disaster of the Vienna World Exposition.

### Chief buildings

Industrial palace and courts covered.

Machinery-hall.

Agricultural halls.

Art-gallery.

Amateurs' exhibition.

The grounds surrounding the main buildings were crowded with supplemental structures, either to accommodate exhibitors for whom room could not be obtained in the industry palace, or for special exhibitions by countries, companies, or individuals, or as architectural displays showing the styles or methods of construction in use in distant lands. The published list of the buildings enumerates more than 200.

A total of 185 constructions, besides the machine-hall and the industry palace, exclusive of the telegraph-stations, water-closet buildings, and various small pavilions. In the « Volksprater » , adjoining the grounds, there were 103 buildings for public resort.

## Additional buildings and structures

Jury pavilion.

Imperial pavilion.

Offices of the general direction.

Barracks for the military guard.

Building for exhibition of live-stock.

Flower-exhibition tent.

Trade and commerce of the world.

Sanitary-exhibition pavilion.

Brass industry, Austria.

Infant's pavilion.

Women's-work pavilion.

German Empire exhibition pavilion.

Buildings of Egypt.

Russian pavilion.

Japanese houses.

Spanish pavilion.

Persian pavilion.

Turkish dwelling-house and bazaar.

Austrian agricultural department (« Ackerbau ministerium ») .

Austrian Lloyds.

Austrian « Gymnasium » .

Austrian marine exhibition.

Austrian savings-bank.

Marine exhibition, Trieste.

Forestry exhibitions.

Fishery : Sweden, Norway.

Brick-making machines and ice-machines.

Repairing shop.

Engine, Prague joint-stock company.

Light-house, Paul & Co.

Building for stained glass.

Gas-works, English.

House of Schuberth.

Italian buffet.

Morocco villa.

Gothic mausoleum.

Chime of bells.

Hilger's bells.

Austrian mineral waters, pavilion.

Garden-house.

Iron goods, furniture, « kiosks » , etc.

Iron house and iron chapel.

Ticket bureau, iron (R. Ph. Wagner) .

Building-yard.

Building-stone, Dohlgoff.

Building-stone, Freund.

Summer-house, flowers, Haslinger.

Danube Steamboat Company's pavilion.

Dreher's (Austrian) brewery pavilion.

Palm-house, iron and glass (R. Ph. Wagner) .

Photograph association (Vienna) .

« Cercle Oriental »

Pavilion, Prince of Saxe-Coburg.

Pavilion, Prince Schwarzenberg.

Pavilion, Prince of Monaco.

Pavilion, Achmed's fountain.

Pavilion garden : Sweden, Norway.

Music pavilion.

Maunthner's pavilion.

Mining industry, Group I, Karinthia.

Mining industry, Group I, Stiermark.

Mining industry, Group I, Innerberger.

Mining industry, Group I, Vorderberg.

Bohemian coal industry.

States Railway Company.

North Railway Company (station, etc.) .

South Railway Company pavilion.

New Free Press (Vienna) .

Heller's music-box pavilion.

Northern Ocean, polar products (Sideroff) .

Newschloß parquetry pavilion.

Prince Pittel, model stable.

R. Ph. Wagner, model stables.

Money pavilion.

Patent Cork Company.

Stone-sawing machine.

Staling's roofing.

Tobacco and cigar stand.

Office for sale of opera and theater tickets.

Kosch asphaltum exhibition.

Clay goods, Chemical Ware Company.

Wienerberger Ziegel's fabric, brick, terra-cotta, and triumphal arch.

« Vieille Montagne » Zinc Company.

Telegraph Company, signal-office.

Water-tower, water-works.

English wash-house.

Fischer's Windmill.

Kien's portable dwelling-house.

Agricultural Company.

Dynamo-meter, etc.

Steel bridge (Rothschild) .

Steel bridge Piernasky (not covered) .

Steel bridge, Swedish.

Bridge and road construction company.

Book-store.

Cement-building, Portland cement.

Genient-Intilding, Cailly.

Cement, Lissbauer.

Cement-goods, Perlmoser.

Asphalt-pavement pavilion.

Presburgh exhibition.

Pumps and syringes, Meunk & Co.

Pump-house, Meunk & Co.

Bureau for information to travelers.

Cook & Son, excursion tickets and tourists' tickets.

Gaze & Son, tourists' tickets.

Aveling & Porter's traction engines.

Steffen's saw-mill.

State exhibition, J. Liebig.

Exhibition Austro-Silesian Company.

Swedish « hunting-box » .

Swedish military (ordnance) pavilion.

Garden summer-house, Sweden.

Olderhausen's fire-extinguishers.

Railway exhibition (sheds) .

Baking establishment.

### Expo 1873 : Buildings and Side Buildings

From the Official Plan of the General Direction of the Exhibition.

I. Industry-palace with the rotunda.

II. Machinery-hall.

III. Art gallery.

IV. Pavilion for art.

V. Exhibition of amateurs.

VI. Western agricultural hall.

VII. Eastern agricultural hall.

VIII. Jury pavilion.

IX. Emperor's pavilion.

X. Offices of the direction.

XI. Postal telegraph and customs.

XII. Barracks.

XIII. Building for the exhibition of horses.

XIV. Railway-station.

XV. Guard-houses.

XVI. Water-closets.

XVII. Covered ways of communication.

The plan is divided into 4 zones. Each zone has its own numbering.

First zone

I. American restaurant.

I 1/2. American school-house.

2. Beer-hall of the citizen brewery, « Pilsen » .
3. Beer-hall of the « Pilsen » Joint-Stock Brewery.
4. Hungarian wine-house (Czarda) .
5. American drinking-hall.
6. Pavilion of the New Free Press.
7. Swiss confectioners, by Possard, of Zürich.
8. Pavilion of the musical-box manufactory, by Heller, in Bern.
9. Beer-hall of the brewery of Liesing, near Vienna.
10. French restaurant.
11. Pavilion of Prince Monaco.
12. Pavilion of the Finsponk Domain.
13. Swedish school-house.
14. Swedish army exhibition.
15. Swedish hunting pavilion.
16. Gothic mausoleum, by Wasserburger.
17. Boiler-house for the water-supply, Brothers Decker & Co. , of Canstatt.
18. Kiosque of the Southern Railway.
19. Kühn's portable house (dwelling) .
20. Pavilion of the First Austrian Savings Bank.
21. « Herr » Stark's pavilion.

22. Pavilion of the Little Child.
23. Restauration of the « Frères Provençaux » , Paris.
24. Reading-room of Natale Biffi, from Milan.
25. Restaurant of Natale Biffi, from Milan.
26. Wine-house of Natale Biffi, from Milan.
27. « Eisen hof » , hall for the exhibition of metal industry.
28. Pavilion of the Austrian Healing Springs.
29. Pavilion of tobacco and cigar specialties.
30. Pavilion of the Perlmöser cement ware manufactory of J. Neumüller, in Nussdorf.
31. Russian restaurant, by Engel, in St. Petersburg.
32. Wine-house of Steiermark (Austrian province) of the Steiermark Vineyard Company of Gratz.
33. Russian dwelling-house.
34. Exhibition of the Austrian Lloyd.
35. Wigwam. Restaurant.
36. Iron forcing-house, by R. Ph. Wagner.
37. Palace of the Viceroy of Egypt.
38. Little Japan-buildings and gardens.
39. Doctor Hardt's Oriental Circle.
40. Turkish dwelling-house.
41. Turkish bazaar.

42. Turkish coffee-house.
43. Persian dwelling-house.
44. Exhibition of the Imperial and Royal Ministry of Marine.
45. Light-house, by Sautter & Co. , of Paris.
46. House of the Photographic Association.
47. Dairy of the Imperial and Royal Farming Company.
48. Pavilion for the reception of the sick.
49. Building court.
50. Italian restaurant - iron house, by S. C. Hemming & Co. , of London.
51. Exhibition of the Imperial and Royal Horticultural Society.
52. Pavilion of the iron furniture manufactory of Quittner & Herzog.
53. Gardener's dwelling.

## Second zone

1. Light-house.
2. Fountain. Sultan Achmed II.
3. Triumphal arch of Wienerberg brick manufactory.
4. Russian peasants' house.
5. Pump-house.
6. Iron church.
7. Swedish dairy.

8. Pavilion of the administration of the royal Hungarian « woods and forests » .

9. Pavilion of the Steiermark owners of woodlands.

10. Saxon peasants' house.

11. Szekler peasants' house.

12. Austrian school-house.

13. Vorarlberg peasants' house.

14. Austrian « Gymnasium » .

15. Pavilion for glass-painting.

16. Slovakian peasants' house.

17. Croatian peasants' house.

18. Roumanian peasants' house.

19. Gaydelian peasants' house from the neighbourhood of Preßburg.

20. Gaydelian peasants' house from the neighbourhood of Preßburg.

### Third zone

1. American restaurant.

2. Vienna bakery, by Roman Uhl.

3. English workman's dwelling-house.

4. Pavilion for seed.

5. Water tower for the high-water service.

6. Iron house, by S. C. Hemming & Co. , London.

7. Swedish restaurant.
8. Norwegian fishery exhibition.
9. Swedish fishery exhibition.
10. Norwegian garden « kiosque » .
11. German teaching pavilion.
12. Germany's pavilion of industry.
13. German exhibition of mining industry.
14. Tasting-room of the Dreher beer brewery.
15. Pavilion of the Duke August of Coburg-Gotha.
16. Pavilion of Prince Schwarzenberg.
17. Pavilion Mauthner.
18. Stable building, by R. Ph. Wagner.
19. Curtis' obelisk of cement.
20. Little house of artificial stone, by Chailly.
21. Vorderberg exhibition of mining industry.
22. Innerberg exhibition of mining industry.
23. Kärntner exhibition of mining industry.
24. Pavilion of the Joint-Stock Brewery of Silberegg (Kärntner) .
25. Joint-Stock Machine Building Company, formerly Danek & Co. , Prague.
26. Tar and asphalte, by J. Bosch.

27. Building ornaments of zinc, by Vincent Wenzel.
28. Steffen's exhibition of machinery.
29. Rothschild's bridge-building.
30. Rothschild's machinery exhibit.
31. Slate exhibit, by Jno. Liebieg.
32. Wood-ware, by Schuberth.
33. States Railroad pavilion.
34. English restaurant, by Abel Moser and Posse (Iron house) .
35. Pavilion of the joint-stock company for bridge and street building.
36. Tyrolese house. (Wares of carved wood.)
37. Additional exhibition : contributions to the History of Trades and Inventions, and pavilion for women's work.
38. Pavilion.
39. Pavilion of the Imperial and Royal Private Austrian Danube Steam Navigation Co.
40. Alsatian peasant-house.
41. Exhibition of the Imperial and Royal Ministry of Agriculture.
42. Wine-tasting hall of all lands.
43. Sacher's restaurant.
44. Pavilion of the joint-stock company for forest industry.
45. Pavilion of the Archduke Albert.

Fourth zone

1. Bakery by Heilfinger.
2. Boiler-house.
3. American boiler-house.
4. English workman's dwelling-house.
5. English boiler-house.
6. English workman's dwelling-house.
7. French boiler-house.
8. English gas factory.
9. Gas Company, limited.
10. Belgian workman's dwelling-house.
11. Machinery work-shop.
12. Swiss boiler-house.
13. Belgian boiler-house.
14. Pavilion of the world's trade.
15. German boiler-house.
16. Germany's pavilion for brick-kilns and ice-machines.
17. Austrian boiler-house.
18. Pavilion of the Northern Railway.
19. Pavilion of the Northwest Railway.
20. Boiler-house for the water-supply.

## 21. Pavilion Ringhofer.

### Expo 1873 : Opening day

**Thursday, 1 May 1873** (Noon time) : Opening ceremony of the Fifth World's Fair in Vienna at the Industrial Palace (« Rotunda ») .

On opening day, the streets of the « Ringstraße » were wet with a cold drizzle. More than 20,000 Viennese citizens came out to see the festivities, yet, the area around the « Rotunda » , « Leopoldstadt » and « Praterstern » , did not seem even half-full. Emperor Franz-Josef appeared at noon, signaling the beginning of the ceremonies. The program was unusually brief ; it concluded in less than 30 minutes and lacked any type of formal speech. However, the one characteristic that immortalized that day was the music. The strains of the « Hofoper Orchester » and the voices of 2 Viennese Choral Societies united in performing Georg Friedrich Händel's March, the waltzes of Johann Strauß, and the Austrian national hymn.

While the music emerged as a high-point of the initial celebrations, the atmosphere in Vienna during the Fair seemed rather half-hearted.

Emperor Franz-Josef opened the Vienna World Exposition in the presence of members of the Royal Family, aristocratic guests and numerous members of the government - though without any representative of the Church. The « Major Prater Procession » began at 11 o'clock with government representatives in national costumes. The arrival of their majesties was celebrated at 12 o'clock by the sounding of the national anthem and Baron Schwarz-Senborn guided the guests of honour into the festively decorated « Rotunda » where the opening-ceremony was held in the absence of the general public. The ceremony began by Archduke Karl Ludwig welcoming the Emperor with a speech and the hand-over of the general catalogue with a memorandum of the World Exposition. The opening speeches by Prime Minister Adolf Fürst von Auersperg and Mayor Baron Cajetan von Felder (1868-1878) celebrating the exposition as a « festival of peace uniting all peoples » and as a « contribution to the well-being of the whole of mankind » , were preceded by the following speech by his Royal Majesty the Emperor to officially open the Exposition :

« With great satisfaction, I see before me the completion of a major operation whose importance and significance I honour to the fullest extent. This ambitious project was accompanied by my faith in the patriotism and skills of my people, and the understanding and support of friendly nations. My Imperial best wishes and my grateful appreciation are dedicated to its successful conclusion. I hereby declare the 1873 World Exposition open. »

The choirs conducted by the Court Opera Music-Director then sang the Festival anthem composed by Georg Friedrich Händel with its own specially commissioned World Exposition text :

Glocken klingt und Fahnen weht,  
Heut zu festlichem Empfang  
Und das Werk, das fertig steht,

Grüße weihender Gesang.

Weite Hallen sind bereit  
Rings umher grünt Baum an Baum,  
Eine Welt voll Thätigkeit  
Regt sich stolz in diesem Raum.

Was der Geist ersinnt und schafft,  
Was gebildet Kunst und Fleiß,  
Mächtig Bild vereinter Kraft,  
Ringend nach dem höchsten Preis.  
Auf, ihr Völker, kehret her  
Zu der großen Geisterschlacht,  
Euer Fortschritt, Eure Wehr  
Und die Bildung, Eure Macht !

Arbeit ist der Staaten Grund,  
Gleiches Streben macht auch gleich,  
Einen Völkerfriedensbund  
Feiert heute Österreich !

Following the official opening ceremony, the first tour of the World Exposition by guests of honour began at around 12:30. Although numerous exhibits were still unready at the time of the opening-ceremony, the luxurious presentation of international arts and crafts in the Industrial Palace in particular was greeted with tremendous admiration. Other highlights included the colourful and exotic presentations by the colonial powers and the pompous « papier-mâché » installations in the Oriental section. A special attraction was the exhibit featuring progress in the educational field where visitors were introduced by way of models to kindergartens, schools and a selection of modern teaching tools.

...

Timed to coincide with the Emperor's 25th anniversary, the World Fair aimed to confirm the status of Austria-Hungary as a major European power and as an advanced industrial and economic State. As the opening address of Archduke Karl Ludwig to the Emperor asserted, the fair served to « direct the gaze of the world toward Austria and ensure the recognition of the participation of our fatherland in the promotion of the well-being of mankind through work and instruction ». Its significance was signalled by the presence at the opening-ceremony of, among others, Crown Prince Frederick of Prussia, Edward Prince of Wales, and the Crown Prince of Denmark, with their spouses.

**Expo 1873 : Opening speech at the « Reichsrat »**

**Wednesday, 5 November 1873** : Speech by Emperor Franz-Josef I at the ceremony celebrating the opening of the

Reichsrat :

« Despite the difficulties with which the World Exposition had to cope, this major operation blossomed into a glittering achievement and attracted prestige and recognition from all sides. Its charitable influence on the intellectual and economic life of the people, the promotion of culture, the stimulation of the innovative spirit and commercial enterprise, as well as on enhancing the esteem of honest toil, is acknowledged with gratitude throughout the world. I am able to say that the honour which was won and the success which was achieved in this friendly competition filled the political heart with pride and hope. The visits from the rulers of neighbouring and distant Empires with which I was honoured here at the World Exposition have tightened the bond of friendship with this Empire, enhanced the desire for peace, and raised the standing of the position of the Monarchy amongst the league of nations. »

### Expo 1873 : The Emperor's Pavilion

The beautiful pavilion for the use of the Emperor was a present to him from the artisans, each trade having contributed a sample of its best work. Most of the work was done by the builders, decorators, and furnishing-houses who participated in the exhibition. The chief expense to the commission was for the architect's design and drawings. It consisted of 4 main « salons » and a wide vestibule, which was exquisitely paved in mosaic. The « salons » were respectively for the Emperor, the Empress, the archdukes and the archduchesses.

The decoration was executed under the direction of Professor Störck. The walls of the « salon » of the Empress were hung with blue and gold, and the ceiling and doors were worked in colours and arabesque. In the centre of the ceiling, there was a shield painted on blue satin, by Freidrich Sturm, who composed and directed the paintings on the wood. The rest of the ceiling was decorated by Ignatz Schönbrunner. The stove was of white Carrara marble, by Francini ; the mirror by Lobmeyer, and the piano by Börsendorfer ; the lace-curtains were from the establishment of labor & Co. , and the chairs and sofa from Haas. The seats were covered with blue and gold embroidery, worked in the convent of the Daughters of the Redeemer.

### Nasir al-Din Shah's narrations of World Fairs

Nasir al-Din Shah's awareness of the image of Iran (and himself) in the European scene can be clearly seen in his descriptions of the expositions or world fairs in his European « safarnamahs ». Created at the end of the 18th Century, expositions became a common fixture on the world stage from the second half of the 19th Century. By the 1867 Paris Exposition and the creation of the national pavilions where the countries of the world were assigned a specific space in the fairs, the expositions became visual presentations of the European (and colonial) ordering of the globe, a function that they carry forth even to this day.

For Nasir al-Din Shah, these fairs also became yet another venue on which to situate and narrate Imperial power in his travel accounts. The importance of being represented on the global stage of world fairs for the Egyptians, Ottomans, and the Qajars has been noted extensively before. The juxtaposition of what we know about these world fairs and Nasir al-Din Shah's descriptions in his books of travel, descriptions that were aimed at his audience at home,

bring to the fore the cultural work that his narratives accomplished.

Each of Nasir al-Din Shah's European travels coincided with a world fair - Vienna in 1873, Paris in 1878 and 1889. The descriptions of the world fairs differ from one another, depending on the extent of Iran's presence and the context in which Nasir al-Din Shah was narrating it. Yet what is constant, and what needs to be kept in mind, is the way in which the king's presence itself acted as an additional representation of Iran (like the carpets and pottery on display) on the global stage that were the expositions. As such, the scenes of the world fairs in each travel account operate on 3 representational levels : on the level of the Iran booth or pavilion ; on the level of the Iranian king, himself an embodiment of his « dawlat » and « millat » , walking through the Iran section ; and on the level of the kingly narrative, and his creation of a textual image for his audience home and abroad.

On **August 1, 1873**, a cool day in Vienna, the king sets out toward the exposition, the first of its kind he has ever seen. As he approaches the grounds, traveling through Vienna, the king notes that because of the cholera epidemic, « the hot weather and the dirtiness of the city » , noteworthy people have all left for their summer homes. Bereft of « beautiful women » , the city is full of men, women, and children, who are all « dirty, pale, and most of whom have leprosy [“ bards va juzam ”] , [are] mostly poor, and seem emaciated [“ khamsah ”] like the people of Zanjan » . Seamlessly from this picture of disease and poverty, Nasir al-Din Shah enters his description of the Emperor's Pavilion, where he has lunch with the Emperor and proceeds from there to visit the exposition.

Nasir al-Din Shah here describes the building of the fair using almost exclusively familiar architectural terms for his readers :

The exposition is like the « chaharsu » or the cross-road Persian markets, it has a large dome (« gonbad ») , and is full of bazaars all moving-out from the great dome. Underneath the dome is a « hawz » (basin of water typical to Persian court-yards) and a fountain built by the French.

Nasir al-Din Shah explains what was contained in the fair :

Every State (« dawlat ») has a special place to display its wares. In addition to some of the « grand » States, such as Russia, England, Germany (France notably is not counted as one of the grand States) , there were wares from « the Ottoman State, Egypt, Greece, Japan, China, etc. » .

When it comes to the pavilions, Nasir al-Din Shah mentions those of Egypt, the Ottoman Empire, and Iran, claiming that « other than these, I didn't see pavilions from other States » . Nasir al-Din Shah doesn't give much description of the physical structure of the Iranian pavilion, which was a « 2 story exhibition-hall on a residential scale » . Instead, he explains to his readers that this « building of mirror work » was the product of only 3 months work by an architect named « Ustad Isma'il » and a carpenter, the former of which had managed to learn German during his 3 month stay. Nasir al-Din Shah again repeats how astonished he was at the job well-done in just 3 months, and notes that a lot of money had been spent on the pavilion. He then sits in the building with the head of the exposition, has some ice-cream and smokes a water-pipe, and leaves.

Reading the descriptions of the Vienna Exposition in the context of the disease-ravaged city raises the question of how much the King's impressions of the city fed into his (and his readers') opinion of the exposition as the site of European progress. Neither science nor advances in technology were able to prevent Vienna from becoming a ghost city full of emaciated people and lepers, a scene that Nasir al-Din Shah observes and records on the heel of his first entrance into the world fair. As such, it makes sense that his impression of it was both tempered and yet highlighted Iranian achievement in its midst.

### Expo 1873 : The covered ways

The covered ways were remarkable as containing the only gratuitous seats in the grounds of the Exhibition. Certainly, the ubiquitous iron chairs with spring seats were as comfortable as the charge (5 Kreuzers) for using them was moderate, but this tariff only obtained in places where there was no attraction, as the seats placed around the orchestra were respectively 20 Kreuzers for the inner-ring, and 10 Kreuzers for the outer. This scale of prices was relished by no one with the solitary exception of the proprietor of the Italian « Café », who on fine days found his tables crowded with those who chose to enjoy their beer and Beethoven at a price infinitesimally more than the mere privilege of sitting in the ring.

### Expo 1873 : Restorations and draining system

At the Liesinger, the Hungarian, the « Pilsner Actien » Brewery, and the « Pilsen Bürgerlich » restaurations, tens of thousands of persons dined daily from the opening to the closing of the Exhibition. Sometimes as many as 10,000 persons dined, and 22,500 « Seidel » glasses of beer were drunk per day at the « Pilsner Actien » alone ; and proportionate numbers of persons dined, and glasses of beer were drunk at the other restaurations named, except the Hungarian, where the staple drink was wine from Hungary. Hence, the quantity of sewage that came from these places, particularly washings, refuse, and fat from the kitchens, was enormous. In the drains from the kitchens, special traps were provided by the engineer for intercepting the refuse and fat. But so great and continuous was the cry from the crowds of diners for « Kellner, Speisen, and Bier », that no one had time to attend to them, or, indeed, to anything but the demands on the kitchen and the beer-barrel. Now and again, one or the other of the tributary drains would stop up, and then, came a dead-lock at the closets and then came a dead-lock at the closets and the sinks, and a request from the restauration proprietor for the immediate attendance of the « Ober-Ingenieur ». Upon opening the drains, they were invariably found to be stopped by a pair of trousers, a pair of stockings, and a newspaper, some table-napkins, some dish-cloths, and brushes, some large pieces of meat and bones, or some broken beer-glasses, which had been forced through the water-closets and sinks ; and bushels of fat were taken-out of the drains, as well as out of the reservoirs at the outlet.

### Expo 1873 : Beer at the Vienna World Fair

In 1873, a Brewers' Association was created in Vienna.

« The Austrian beers like all the light beers of Germany are brewed in accordance with the Bavarian system, and are

generally a very superior class of beverage. They are of a pale amber colour, exceedingly bright and sparkling, and of a full pleasant flavour, entirely free from acidity, remarkably light drinking, are invariably in fine condition, owing to their being kept constantly iced when the weather is in the least degree warm, and always carry a rich creamy head. The marked difference between the Austrian and lighter German beers and those of England arises principally from the brewing, still the after treatment and certain exigencies of climate contribute materially to the contrast. Austrian beer is not nearly so strong as English beer, yet from the quantity of unfermented extract which it contains, it drinks fuller so to speak in proportion to its strength and is infinitely more refreshing. In Vienna, everybody drinks beer, which even figures regularly at the Imperial dinner table, and owing to its exceeding lightness quadruple the quantity can be consumed as could be partaken of in England without the risk of getting intoxicated.

The great speciality in fact of the Austrian and lighter German beers is their producing neither intoxication nor drowsiness, and which is due principally to the small quantity of alcohol they contain. Still, there is another important reason which appears never to have been taken in consideration, namely, the purity of the alcohol and its freedom from aldehyde and fusil oil. The Bavarian system of under fermentation, which is in general use in the breweries of Austria, prevents the formation of aldehyde and ensures the entire elimination of the gluten of the malt, which is the great oxydizing agent, besides lessening the liability to produce fusil oil. The Vienna beers show upon analysis from 7 to 9 % , of proof spirit combined with an average of 3,000 grains of soluble extract per Imperial gallon. In all fermented saccharine solutions a certain quantity of alcohol is requisite to save them from further fermentation and ultimate acidity, but the Vienna beers do not contain sufficient spirit to protect them for any length of time after they have been removed from the ice cellars. When any nitrogenous matter is present, a change takes place more readily, and although the beer is free from gluten, the most powerful decomposing agent it has to contend with, it still contains albumen, which in the act of decomposition has the property of converting alcohol into acetic acid.

In brewing the light German beers, not only much fewer hops but from 30 to 40 % , less malt is used than in the average of English beers, still the former are not proportionally cheaper, simply because what they lack in material has to be made-up by superior production and finish. Ice, which is used in immense quantities, forms a considerable item in the expenditure of Austrian and German breweries generally. One large establishment, that of the celebrated Dreher, uses as much as 40,000 tons per annum in the brewery alone, besides the large extra quantity required in the various cellars and stores where the beer is kept, and for packing it when sent by railway in vans especially constructed for the purpose. All this is essential to maintain the soundness of the beer and ensure that brisk condition for which it is so celebrated, and although it adds considerably to the cost, the expenditure must still be incurred, or the beer after transit and exposure to even a moderately warm temperature will lose its fine character and get completely out of condition.

The consumption of beer of this perishable nature is chiefly confined to places on the continent where ice is plentiful, and where it is not the custom, as in England, for families to have beer in cask at their own homes, for a beverage of this light character can be kept on draught merely for a day or two after it has been once tapped. In no city in the world is beer to be found of such general excellence and of so uniform a quality as at Vienna, where it is almost invariably obtained in high-perfection, owing partly to the more celebrated breweries being so near to the capital, but chiefly to the quick consumption at the numerous beer-halls and gardens, which ensures fine condition as well as

perfect freshness. The demand at many of these establishments is so great that nothing is thought of drawing as much as 1,500 gallons in the course of a single day. With this rapid draught, the peculiar and often objectionable flavour imparted by the pitch used by all the German brewers to line their casks so as to keep them air tight, is perceptible in the Vienna beer only in a very slight degree, owing, no doubt, to its scarcely having time to take it up. This flavour, however, is frequently communicated to the beer in the fermenting tuns, which are lined with pitch that partially dissolves during the fermentation process.

Vienna beer would not be considered sufficiently stimulating for general consumption in England, besides which it lacks the aroma and flavour of the hop. The Germans generally often claim for their beer the advantage of its being both food and drink, which doubtless is true enough of the beers of certain localities, where it is the practice to leave a considerable proportion of the dextrine and sugar of the wort unfermented. This class of beer, which is drunk principally by the peasantry and labouring classes, is high-coloured, clammy, and heavy in bulk. Still, even the ordinary beers are regarded in a measure as so much food, and possibly the bibacious Germans do derive some benefit in this way from them. An analysis, however, of several samples shows that the total soluble extract, that is, the dextrine and sugar, comprised in an entire gallon, merely supplies the same amount of nutriment as is contained in 17 ounces of bread. Continental beer, generally, contains a larger quantity of soluble extract than English beer ; although in some kinds of the latter the proportion is considerable, still their headiness is a bar to sufficient being taken to impart an appreciable amount of nutriment.

In Austria, as in all the principal beer producing countries on the continent, a great increase in the consumption of beer has manifested itself of late years, combined with a marked decrease in the number of breweries, owing to the smaller breweries being forced to succumb to the competition of the larger establishments, which are conducted on more scientific as well as sounder economic principles. Between the years 1860 and 1872, the number of breweries decreased from 3,314 to 2,636, or more than 20 % , whereas during the same period the quantity of beer produced increased as much as 60 % . In Upper-Austria, where cider is largely drunk by the country people, no particular increase in the production of beer is apparent, and indeed, in years when apples have been plentiful, a positive falling-off commonly declares itself. The increased consumption of beer in Austria is contemporaneous in a measure with the rapid progress of one vast brewery establishment of European fame, namely, that of Anton Dreher, at Klein Schwechat, near Vienna, which in the first year of its existence brewed merely 333,832 gallons of beer, and now brews 8,798,300 gallons, an increase of more than 26 fold. A diploma of honour was given to “ Herr ” Dreher for the improvements in brewing which he had been the means of effecting, as well as to another large firm, A. Mantner and Son, of Vienna, a medal for progress being awarded to a celebrated brewery of Vienna beer, known as the Liesing Brewery Company ; and medals for merit to the Brunn and Hutteldorf Breweries in Lower-Austria, Hatschek Brothers, at Linz, and Herr, Kuffner, at Döbling. Honourable mention was further made of 3 other exhibitors.

Most of the Austrian beers have a mild and soft flavour, and it is rarely that any of them are so bitter as the English pale ales. An exception, however, must be made with regard to, the so-called « Pilsner » beer brewed at Plzeň, in Bohemia, on a very extensive scale, and much in favour with the Viennese, who do not object to pay a slightly higher-price for it. This beer is exceedingly pale in colour as well as remarkably light, being even weaker than the Vienna beer, and contains a considerable amount of carbonic acid. Its distinguishing quality, however, is its strong, indeed

almost medicinal bitter flavour, due to the Saaz hops, held in the highest-esteem in the locality. The Citizens' brewery at Plzeň, which produces by far the largest quantity of this beer, and is in fact the most extensive brewing establishment in Bohemia, had a medal for progress awarded to it for the samples it exhibited. Another brewery company at Plzeň received a medal for merit, the same reward being given to five other Bohemian breweries, in addition to which honourable mention was made in 5 instances.

Bohemia has been a beer producing State ever since the 14th Century, and its ales have long enjoyed a more than local celebrity. Today, the number of large breweries it supports are very great. Wine being neither plentiful nor cheap, and cider not being made to any extent, beer is an article of general consumption among the Bohemians, and the annual quantity produced shows an increase of no less than 76 % , during the last 13 years. »

...

In 1867, the Austrian submission to the « Exposition universelle » in Paris had included an « Austrian Village » , complete with a beer-hall selling lager of the Dreher Brewery and, among others, a « typical » Viennese bakery, a Hungarian tavern (« csarda ») , and a Tyrolean hut. The following World's Fair, held in Vienna in 1873, had also included a village that showcased rural dwellings from different parts of the Empire, with a more markedly ethnographic accent. Each building had included occupants from its place of origin, which enabled Viennese exhibitors at the Fair to have first hand encounters with, for example, Croat or Romanian peasants.

The Kärntner Restauration (Silberberg Company) , a wooden building of 2 stories with double story porch and verandah, was another feature from the excellence of the beer and the attractions of the « Kellner-innen » , whose immense snow white ruffs, high-kilted dresses and tall high-heeled laced-up boots were picturesque to a degree. There were also wooden « Bier Halles » , such the « St. Marxer Märzen Quelle » , kept by Pamperl & Co. , the « Restaurant du Nord » , the Hamburger Restauration of 2 stories (J. & J. Luckmann) and that of Willvouseder and Grubin at the rear of the Machinery-Hall, all frequented by the lower-classes of visitors, and differing in nothing from the « Bier Halles » in the Würstel « Prater » ; but the subject as well as the list of the « Bier Halles » and Restaurations is now exhausted and it cannot be hard to guess from it that visitors whether with slender or full purses could find no difficulty whatever in appeasing their appetites.

### Expo 1873 : The Tasting-Hall

Provision was made for the erection of a « tasting-hall » in which exhibitors could sell small portions of their wines, beer, or edible products, under strict rules, which were published in programme Number 65. It was in fact a great refreshment saloon, or a series of bars in alcoves, side by side, where the viands of almost all countries were retailed. There was only one main passage-way or hall for the public, and all chairs or seats were strictly excluded. The smallest compartment or alcove had a counter 2 meters long. The rent, 200 Florins per meter, was paid in advance at the time of application, and only exhibitors were allowed to rent compartments. The sale of produce not exhibited was prohibited, and also beverages on draught. Only such articles were admitted and sold as were capable of being stored in the ordinary way of trade, such as bottled wine, liquors, preserved fruits, and canned meats and fish. The

regulations even prescribed the maximum of a « drink » . For wines, it was not to exceed 0.044 liter, and for liquors half as much.

The duty on all articles liable to it was paid in advance. One advantage the exhibitor had was the reduced freight on all goods intended for the exhibition or the « tasting-hall » .

Water was supplied by hydrant to each alcove, but all other fittings, furniture, or any decorations were to be supplied by the tenant. No underletting was permitted, and compartments not occupied for 3 weeks were relet.

### Expo 1873 : Where to eat and drink

Sight-seeing is naturally an exhausting operation and after the prolonged mental effort necessary to take-in and digest the myriad wonders contained within the ring fence of the Exhibition, nature herself reiterated the cry of « il faut consommer » with as much persistence as a « garçon » in the now defunct « Café des Aveugles » in Paris. The only difficulty indeed to simple-minded folk was to make-up their minds before making-up their bodies, and to know where they might best repair their wasted tissues. There were restaurants : English, where meritorious if not always successful efforts were made to, at least, spell the names of English dishes ; American, where clam-chowder and pumpkin pie were procurable ; Italian, Swedish, Swiss, and Russian ; « Les Trois Frères Provençaux » , like a phœnix, resuscitated its old Palais Royal glories ; Sacher upheld the credit and the tariff of his famous restaurant, and every variety of German viand was obtainable at numberless « restaurations » , from « bock hähnl » to « Kalbsbraten » and « Kolasch » in meats, or « fogasch » , « sterlet » and « Danube carp » in fishes down to the simple « Ementhaler Käse » and garlic-scented Salami. In fluids, the field of choice was even still wider, you could procure anything you desired, from a bottle of Guinness's stout to a cup of Russian tea, from an ice-cream soda to a glass of Amontillado, every variety of vintage from Monte Pulciano to Ruster, from generous Chambertin to acid Styrian, whereas of the variety of beers there was literally no end.

Entering at the Elisabeth Avenue, the first building that caught the eye on the right-hand was the Hungarian Csarda, picturesquely perched on the summit of a green mound, itself as picturesque as its site. Its thatched roof and Norman arched porches gave it a unique appearance. At the side facing the avenue projected a square-porch supported by square-pillars, whose balustrade was as artistic in effect as it was simple in construction, being formed merely of open brickwork. Ascending the slope, you came on the terrace where a « Zigeuner » band with violins, zither and clarinet beguiled, with wild Hungarian melodies, the time occupied in consuming flasks of « Schomlauen » , « Erlaner » , or « Adelsberger » , « Ruster » or even princely « Tokay » . Around you, on every side, were seated Hungarian peasants in the costume so well-known through our hussars, or cattle herdsmen « Gulyàs » , and horse-keepers « Czikos » , in elaborately embroidered sheep-skin « bèkes » , and half-hours passed more pleasantly at but few places in the grounds than the moments spent at the Hungarian Csarda. Immediately beside were the 2 « Pilsner Bier Halles » , that the « Actien Brauerei » , and the « Pilsner bürgerlichen Bräuhauses » ; both 2 storied. The former built of stucco, the lower-story projecting so as to form an upper-terrace all round the building ; the latter of wood, with a wide verandah occupying 3 sides. Around both these houses were tables without count, and from 12 till 2, the visitor considered himself fortunate to obtain a seat either within or without, while worried waiters ran to and fro, « bier-

trägers » bearing as many as a dozen full-glasses in their hands were ubiquitous, a storm of « bittes, komme-gleichs » , and « augenblicks » met your appeals for food, and no better school could anywhere be found for exercising the greatest of all virtues : patience. On the left was the Chicago Restaurant, one storied and over-shadowed by fine old trees remnants of the primeval « Prater » . Here, the mysteries of American cookery might be practically studied ; the well-meaning effort to impart culinary knowledge, however, can hardly have been successful as before the close of the Exhibition, the business changed hands posing over to the well-known brewer Dreher. Two small « Kiosks » (Piel) did a business far surpassing that of many more pretentious concerns, supplying wine, coffee, or cognac to wash down the « gaufres » (wafers) that all day long were turned out piping hot to expectant crowds.

A wooden « kiosk » for the sale of Hungarian wines kept by Ignacz Flandorffer, a French Liquor Buffet, for the sale of brandies and wines, and one wholly given-up to Champagne, nigh at hand were also well-patronized ; and beside the Spanish Additional Exhibition, Juan Morphy of Cadiz erected his « kiosk » where admirers of sherry, rejoicing to find good wines, did not grumble at the price, 80 Kreuzers a glass. The American speculations to provide food did not pay, possibly from the rarity of American visitors, for not only did the Chicago Restaurant change hands, but also, the American Bar on the Elisabeth Avenue and the American Restaurant near the Machinery Hall. In the first, afterwards the « Bier Halle » of Elbschloß and Leitmeritzer, the great problem of air without draught was fully-solved, the lower-story open all round supporting an upper one on pillars, that again bearing the roof ; there were no walls, no windows, but thorough shade and ventilation. The American Restaurant, subsequently that of Abel, Moser and Bosse, was built entirely of wood and presented no striking feature to attract attention. The Liesinger « Bier Halle » consisted of a large central « salle à manger » (dining room) of one story, and 2 wings each of 3 stories, and, in this instance, the wisdom of taking time by the forelock was fully-exemplified ; for built long before the Industrial Palace itself, the business done before the opening was such as to recoup the proprietors, both for the building and rent during the entire display, leaving a margin of profit greater than many businesses obtain for the labours of a lifetime.

Singularly graceful and light in construction, the Swiss Buffet was an effort of genius on the part of its architect ; built of wood, brightly painted, with 4 projecting porches, a centre campanile and verandah running all round, it would be difficult to decide the nationality of its architecture. The shoes that supported its roof were decidedly Moresque but there all attempt to describe at must end, suffice it to say that Swine maidens in their « piquante » snowy « chemisettes » and black bodices, ministred ices and coffee all day long, and that whatever the attraction the chalet, the « Kellnerinnen » , or the coffee, it was always crowded. The Swedish punch of the Restaurant of Theodor Blanche in Stockholm compounded therein was considered one of the successes of 1873. The Restaurant of the « Trois Frères » (3 Brothers) gastronomically was everything, architecturally nothing, being simply wood and canvas looped up to form curtains, one great advantage it possessed being that from one of the covered ways leading directly to it, one could pass under shelter from any part of the Exhibition. Attached was a wooden house, the office and store-room of the well-known firm of Tampier Frères of Bordeaux. The Russian Restaurant asserted its nationality within and without in every possible manner, in its quaint Slavonic architecture, its waiters in caftans, pink, red, or blue, and black velvet knicknerbockers, and its viands and fluids including the indispensable caviar and vodka, whilst the bright « samovar » supplied tea to be drunk « à la Russe » « with one slice of lemon in the tumbler » . The full-merit of decoration was amply shown in the Italian Restauration of Natale Biffi of Milan. The building itself, though of 2 stories, projecting porch and verandahs, would have been nothing with its simple white-washed walls, but with trophies of flags

and innumerable shields of all the cities in Italy, marking its lines and angles, it was as bright and cheerful as even the Swiss Buffet itself, and the annexed wine-house, « osteria, trattoria » , call it what one will, was a notable feature of the year, there being no waiters but pretty « contodinas » , whose costumes fitted them to wait for artists at the steps of the « Trinita de' Monti » , or come on at Covent Garden in a chorus of « Masaniello » or « Fra Diavolo » . Near the Kirghiz hut was a small « Kiosk » for the sale of « Wildpret Bouillon » , where for 10 Kreuzers one might taste soups originally prepared on the borders of the White Sea. And now, plunging into a genuine bit of forest scenery, one came on a genuine Styrian house built entirely of wood, half hidden in greenery, it had its exterior staircase leading to a balcony and upper-story, the penthouse roof covered with shingles sloping nearly to the ground. In front were rough tables and benches round which Styrian damsels, with short red « jupons » and snowy kerchiefs tied round their hair incessantly hovered bearing bottles of wine for thirsty souls, whilst some Styrian mountaineers produced charming strains from an extraordinary « mélange » of instruments, violins, zithers, and rock and wood harmonicons, the sweetness of the tones produced from the two latter being simply marvellous. On the hottest day, the shade here was perfect, and though the house was hidden in the depths of the wood, few wine-houses were better known ; for the cunning proprietor had taken the precaution of placing life-sized figures of Styrian peasants admirably painted at every entrance to the wood. Also bowered in trees was a quaint tent covered with painted figures of Fenimore Cooper's Indians performing deeds of dering-do, scalping enemies, and all the other amenities of these children of nature, whom Artemus Ward designates as « pison » , this was known as the Wigwam, and the local colour of the scene was fully carried-out in the eyes of Continentals by the employment of exclusively black waiters dressed in spotlessly white suits. Within the Wigwam, a distinguished professor from New York compounded seductive mixtures with peculiar names, from the unsophisticated simplicity of a « whisky skin » to the high-art of a « Catawba cobbler » , while « slings » , « smashes » , and « juleps » , were fragrant with mint and tempting as ice and sugar could make them. The « Café Turc » served as a foil, there, fine featured Greeks in fez and baggy trousers brought you Turkish coffee, half of it grounds, in tiny « zarfs » and kindled your tchibouque or nargileh with live charcoal. The « Cercle Oriental » was not so exclusive in fluids, all being obtainable and the dishes excellent, the waitresses being costumed as Bayadères, and, as a matter of course, utterly unlike their Moslem sisters. The Trieste and English Restaurants were simply corrugated iron buildings, raised some 3 feet above the ground on a terrace with verandahs running round them, and having no particular features save that in the latter a dock wine glass full of bitter beer was procurable for the small sum of 30 Kreuzers or 6 Pence.

Over the « Heustadl Wasser » , were the Kriau Restaurant, kept by the well-known Vienna « chef » Sacher, the « Tiroler Bier Halle » , with waitresses in high-hats, ornamented with either cock's plumes or flowers, and several small beer-houses whose bill of fare, besides beer, included all kinds of Austrian comestibles, including « Sauregurkenzeit » , cucumbers pickled in brine, and, suggestive of cholera, evil smelling Limburger cheese, « Liptauer garnirt » , and every variety of salami and sausage. Near the Austrian Agricultural Hall was a plain wooden shed ascended by steps, and divided within into a series of booths ; this, the « Kost-Halle » was noted as a Cosmopolitan bazaar for the sale of liquors, one booth was occupied by « La Grande Marque » Cognac Company ; its neighbour devoted itself to Maraschino de Zara, a Dalmatian lady presiding in full national costume, a fortune of sequins, real or sham, being hung around her ; opposite, a Dutch damsel from Friesland, with a gold head-dress having 2 bosses at the side and surmounted by a lace cap, ministered Schiedam ; Champagne, Dunville's Irish Whisky, Curaçoa, « Kirchwasser » , « Eau de Dantzig » , and all the innumerable tribes of liquors were all obtainable at separate stands superintended by girls

in every imaginable costume, and, all through the day, an endless stream of visitors poured in to see if they did not remain to drink. The Kärntner Restauration (Silberberg Company) , a wooden building of 2 stories with double story porch and verandah, was another feature from the excellence of the beer and the attractions of the « Kellnerinnen » , whose immense snow-white ruffs, high-kilted dresses and tall high-heeled laced-up boots were picturesque to a degree. There were also wooden « Bier Halles » , such the « St. Marxer Märzen Quelle » , kept by Pamperl & Co. the « Restaurant du Nord » , the Hamburger Restauration of 2 stories (J. & J. Luckmann) and that of Willsvouseder and Grubin at the rear of the Machinery Hall, all frequented by the lower-classes of visitors, and differing in nothing from the « Bier Halles » in the « Würstel Prater » ; but the subject as well as the list of the « Bier Halles » and Restaurations is now exhausted and it cannot be hard to guess from it that visitors whether with slender or full purses could find no difficulty whatever in appeasing their appetites. Amongst a nation of smokers, it would have been impossible to have omitted the « Tabac Trafik » , and numbers of these were therefore dotted about in every direction to furnish the indispensable cigar, the principal being that belonging to the « Specialitäten-Trafik » in the Graben, and it needed the sign to divine that it was a tobacco-shop, its burnished copper dome, arched and laticed windows, and arabesque decorations bearing more resemblance to a small mosque or mausoleum erected over some defunct « Hadji » . The supply of fluids, did not, however, cease with beers and wines nor the solids with meats ; « Messieurs » Dows, Clark & Co. , in a corrugated iron building, manufactured delicious aërated waters to supply their 5 soda-water « kiosks » , pretty iron constructions with cupola roofs ; Karl Heilfinger had his Machine Bakery for the coarser kinds of bread ; and Roman Uhl, the Court Baker, a large factory to meet the demands made on his handsome shop facing the Water Tower where « Mehlspeisen » of every description tickled the palates of children, young and old. The long array of buildings has now, like all things mundane, come to an end, but still a word must be said of a construction which was neither Pavilion, « Bier-Halle » , « Café » or Restauration, but only a tree built-up in sections, the enormous « Araucaria » , or « Monkey puzzle » , so-called from the spikes with which it is covered frustrating the climbing efforts of « our poor relations » , which with the Brazilian flag at its summit towered erect for some 200 feet near the Khédive's palace.

The Pavilion of the Austrian Lloyds with its full-rigged must attracted attention by its singularity, and that of Anton Dreher's Brewery with its copper dome, its 4 porches, each shaped like a half barrel and supported by caryatides, displayed much architectural ingenuity.

...

The facilities afforded strangers for obtaining meals at their convenience as to time, locality, and style, are probably as great and varied in Vienna as in any European capital. It results from the habits of the people. They resort to the restaurants and « cafés » for their meals and for social entertainment and amusement.

A distinction is made in Vienna between restaurants and « cafés » , and beer-halls. There are also wine-houses, small-beer saloons, and the ice-cream saloons, where a variety of cakes, confections, and preserves can be obtained. There are over 200 respectable first-class « cafés » , 60 first-class restaurants, aside from those of the hotels ; a large number of beer-halls, where meals can also be procured ; and of refreshment-saloons in connection with the gardens. All these establishments are well-conducted, and are so well-distributed all over Vienna that a stranger can get a meal

at almost any hour or place where it suits his convenience best. These facilities permit of a very large temporary accession to the population of Vienna without inconvenience.

There are, in addition, the very important restaurants of the « Prater » , and of the exhibition itself, where thousands of persons, and probably 4/5 of the visitors, daily take their lunch or dinner. One of these restaurants, established in the exhibition-ground before the opening, has seats and tables for 4,000 persons, and it is crowded daily. It is said to have cost £ 9,000 , and to have cleared its cost before the middle of May.

There is a branch of the « Trois Frères » of the « Palais Royal » in Paris ; several Austrian, one or two Italian, an English, a Russian, and two or three American restaurants, besides a large number of bars, beer-stands, and soda-water fountains.

### Expo 1873 : Austrian Healing Springs Pavilion

The thermal baths of the Austro-Hungarian Crown countries, which enjoyed such great fame, could not fail to appear at the Vienna Universal Exhibition. A special wooden pavilion, very elegant, has just been dedicated to them in the Palace Park. Here, in Bohemian glasses of the purest crystal, fantastically engraved and coloured, charming nereids and naiads, clad in their picturesque national costumes, give visitors the sulphurous waters of Baden (on the Schwechat, at 8 kilometres from Vienna) . The mineral waters of the spa-establishment of Franzensbrunnen (in the vicinity of Eger, in Bohemia) . Those of Karlsbad, the most frequented spa-establishment in Europe, located in the circle of Eger, in Bohemia. Those of Kronstadt (in Transylvania) . The one of Salzburg, in the Grand Duchy. Those of Erlau (in Hungary) , and also the mineral waters of Cracow, in Gallicia.

It is to be hoped that this Exhibition of the various thermal products of Austria-Hungary will strongly contribute to increase their consumption, which is already so considerable, and to raise attendance at the spa-establishments of the Empire.

### Expo 1873 : The Turkish « Café »

Of all these Oriental buildings which enjoy such a great affection from the public, it is the Turkish « Café » that people visit the most. It is located opposite the Viceroy Palace, between the Turkish Bazaar and the Persian Villa.

It is a square building, surrounded by an open gallery, accessible by a staircase.

Inside, we find buffets, a fireplace, and large red couches placed along the walls ; finally, tables and chairs fill the gallery and the terrace. The interior decoration is completely Oriental. The ceiling is painted in colour, the sunrays are subdued by coloured stained-glass windows, and it is assumed that the inevitable citations from the Koran can be seen everywhere.

If you have already heard from the travellers of the East about the strange tumult which attracts the crowds in the « cafés », especially in Constantinople, and have heard the interesting and picturesque description of a Turkish « café », one will easily get an idea of the unique sensation that this Oriental establishment, frequented almost exclusively by Westerners, produces on visitors. The contrast is obvious when coffee is served to Western guests by Oriental boys. They are native Turks, wearing the national costume, standing near the fireplace formed by a shelf, on which water is boiling. This hot water is poured into small coffee pots which contains powdered coffee, and the Turks walk between the tables, shouting from time to time : « Turkish Coffee ! Turkish Coffee ! »

Another boy invites visitors to use the « Tchibouks » equipped with long jasmine wooden pipes.

The coffee, which is prepared in the Turkish tradition, is not separated from the used coffee grounds and is contained in small silver oval shaped cups.

Through the windows and through the doors, we see only Egyptian, Turkish and Persian buildings, so that one easily surrenders to the illusion of being in the middle of Turkey.

At first, this Turkish « café » owner had hired Greek boys, but the jackets with frogs, the fez and the coloured belt above the wide trousers did not seem to attract enough people. Then, the idea came to him to introduce a service of young women to provide a true Turkish atmosphere. Only the presence of authentic Turks was missing. But the « Golden Horn » is still quite far from Vienna, and the real Turks were having problems in leaving their « harems ». But the owner being very determined, decided to manufacture Circassian, Greek, and Albanian costumes at the tailor-shop, and then, looked for Viennese women to hire wherever he could find them.

His « café » was soon transformed, and everyone was amazed to see 12 Zulmas, Zoës, and Scheherazades : Viennese-

Turkish women costumed in wool and silk, well-coloured. A little bit of excitement in the silent Oriental neighbourhood was not to be despised ...

...

The precedent set by the Ottoman and Egyptian quarters at the 1867 Paris Exposition determined the format in Vienna 6 years later. The main exposition building was a longitudinal structure with a domed central section. The Ottoman and Egyptian pavilions were in the southeastern part of the park in front of the main-hall. Once again, picturesque landscaping brought the 2 displays into relation and created an Islamic village on the periphery of the fairgrounds.

The Ottoman quarter consisted of 7 small structures : a main-pavilion carefully duplicating the Sultan Ahmed Fountain (1728) in Istanbul and presenting it as an example of Ottoman architecture ; a high domed pavilion, the Sultan's Treasury, where valuable items such as jewelry were displayed ; a residential structure based on the Yali Kösk in Istanbul and reminiscent of the « Pavillon du Bosphore » of 1867 ; a bath, along the lines of Parvillée's bath in 1867 ; a « café » , and a small 2 story building with a bazaar on the first floor and residential apartments on the second floor. Whereas all the Ottoman buildings in 1867 were designed according to a set of clear principles that followed historic references, here, the main-pavilions quoted monuments, and the commercial structures interpreted vernacular traditions.

Unlike the Ottoman section, the Egyptian section consisted of a single building, composed of several distinct parts. The dominant feature was a pavilion that duplicated the funerary complex of Sultan Qaytbay in Cairo from the late Mamluk period (1470's) , its minaret and dome carved in arabesques and star patterns. A second minaret, with a square base, possibly inspired by the minarets of the mausoleums of Salar and Sanjar al-Jawli from the early Mamluk period (1300's) , marked the other end of the structure. The eclectic styles in between enhanced the impression of a street façade rather than suggesting a single building. As in the Ottoman section, the structure referred to both the monumental and the vernacular.

...

The « Café Turc » , a very pretty wooden building, having a verandah, accessible by some dozen steps. Here, obsequious attendants brought you as you seated yourself tchibouques ready lighted, first placing on the floor a brass pan and provided you with genuine Turkish coffee in tiny « Zarfs » . At the extreme corner of this range of buildings was the « Cercle Oriental » , approached by a high staircase leading to a verandah on the second story. Its orientalism was rather bizarre, one of the side Pavilions being Turkish, the other Chinese in design, whilst in the rear was a tea house in what was supposed to be Siamese in character. All these were designed by « Herr » Montani, an architect of great repute in Turkey, who has the appointment of « Court decorator to the Sultan » .

**Expo 1873 : Swiss Chalet and pastries**

Swiss pastry is renowned all over the world. In order to make it appreciated by the international public who visited the Exhibition, the Swiss have built a graceful « Chalet », large enough to house the crowds who gather under its jagged wooden marquises, to drink their coffee or to take ice-cream, accompanied by delicious cup-cakes.

One of the reasons of this influx (a little bit also ...) is to be served by the delightful and charming Swiss ladies dressed in the fashion of each of the cantons of the Helvetic Confederation, streaming with silver armor and metallic breast-plates, which they wear with so much grace.

### Expo 1873 : Chinese Tea Pavilion

This delightful and picturesque cottage will give us an idea of the inner-life in China. You will have the chance to taste the authentic Chinese tea, with the conviction that it is not an imitation, and it is possible that this cherished national product might accentuate trade-relations with China, as it will prove that it is easy to drink good quality tea at a reasonable price rather than paying for a very expensive bad tea.

The Pavilion is built in the style of those found in the islands of China, according to the sketch of architect Montain, at the expense of Doctor Hardt. The original construction of this little house and the grotesque manner in which it is painted will not fail to excite the visitors' general attention.

It is not, as one would believe, an inhabitant of the Celestial Empire who had erected this strange structure. It is the result of an ill-intentioned speculative entrepreneur. This building has nothing but walls across which, contrary to all custom, become narrower downwards and wider upwards. The roof of the house is curved like a horse saddle. We were easily content to look at this « wonder » from the outside, and throw at most a furtive glance in its insignificant interior. Unfortunately for the entrepreneur, the summer was so hot that one wanted more ice from the « Spitzbergen » than the best infusion of hot tea. And so, the Chinese strategy missed the target.

### Expo 1873 : Farmers' or peasants' houses

Herdsmen's cottages, Austria.

Herdsmen's cottages, Salzburg.

Alsace.

Galitzia.

Kroatia.

Roumania.

United States, Austria, Portugal, Sweden.

**Expo 1873 : Boiler houses**

United States of America, Austria, Belgium, France, German Empire, Great Britain, Switzerland, « Down Preis » fountain and hydraulic.

**Vienna : « Betty » invites Bruckner at « Möbius »**

The Mayfeld's (Moritz and « Betty ») saw Anton Bruckner frequently in Vienna because they housed at the « Hotel Kaiserin Elisabeth » during the winter months.

**1873 or before** : Knowing his grand appetite, « Betty » surprised Bruckner by inviting him at « Möbius » (Breying & Möbius) - a fine restaurant located at « Graben » Number 22 (other sides of the building on « Petersplatz » Number 4 and « Jungferngasse » Number 2) .

She said :

« And now, you order what is good and expensive - whatever you want, my dear Bruckner ! Here's the menu ! »

Bruckner did not even take the time to carefully examine the selection of « gourmet » dishes. He immediately asked for :

« Smoked meat with dumplings and cabbage ! »

He devoured 3 whole portions and washed everything up with his favourite « Pilsner » beer !

The noble restaurant « Breying & Möbius » was especially visited during Vienna's 1873 World Exhibition. The same

year, the Austrian Savings Bank bought the building (designed by architect Anton Baumgartner) . When part of it was demolished in 1875 (due to the broadening of the « Jungferngasse ») , a piece of the Old City wall was discovered.

The rear-façade of the building at « Petersplatz » Number 4 suffered serious damage on April 1945. The windows were completely shattered by the high air pressure caused by bombings. The first to complain was the owner of the vegetarian restaurant « Skala » which was one of the first Viennese inns to re-open after 7 May 1945. Unfortunately, for the time being, he was only able to serve stew to the working people (150 servings per day) - food stamps having been issued the day before ...

### Expo 1873 : Sunday's Symphonic concerts

2 Symphonic concerts as part of Vienna's World Fair :

**Sunday, 4 May 1873** : Opening speech by actor and poet Josef Lewinsky and writer, dramatist, and poet Salomon Hermann Ritter von Mosenthal.

Programme :

Franz Schubert : Essentially, works orchestrated by Franz Liszt.

Conductors : Otto Dessooff, Eduard Kremser and Rudolf Weinwurm (after refusal of Johannes Brahms) .

**Sunday, 11 May 1873** : Otto Dessooff conducts works by Ludwig van Beethoven including the 9th Symphony.

### Expo 1873 : The « Musikverein » organ concerts

**Tuesday, 22 July 1873** : The Vienna « Fremdenblatt » Number 200 reports on page 5 that Anton Bruckner gave an organ recital at the « Große Musikvereinssaal » as part of the International Exhibition musical events :

« During the World's Fair, the Society of Friends of Music offers an organ concert every Saturday from 1:00 to 2:00 pm (in front of meager audiences : 1 to 20 listeners ! ) . We had the chance to hear the general-director of the Society, “ Herr ” Leopold Alexander Zellner, the finest connoisseur of (Friedrich) Ladegast's instrument, and Professor Anton Bruckner, who carried his fame all the way to England, and from whom one can hardly say whether he plays with more devoted zeal when he transpires. (...) »

sp. » (Ludwig Speidel ?)

### Expo 1873 : Symphony No. 2

(It should be noted that Eduard Hanslick was a member of the music jury during the 1873 Vienna World's Fair.)

The 2nd Symphony, completed on July 26, 1872, was also read but rejected (as the « Nullte » before it) by Otto Dessoff and the Vienna Philharmonic Orchestra, despite the approval of some musicians, including David Popper, the famous cellist, who claimed to have fallen « under its spell ». This time however, Bruckner will proudly stand behind his composition.

On the occasion of the 1873 World Exhibition held in Vienna from May 1st to 1 November 1st (« Weltausstellung Wien 1873 ») , Bruckner decided to program his 2nd Symphony again. This major international event seemed to offer him the opportunity to perform his new composition at the Great Hall of the « Musikverein » before an exceptionally broad audience (given the circumstances) . However, the members of the Vienna Philharmonic were still hostile to the work dismissing it as unplayable, though it had already won the admiration of Franz Liszt.

But when a wealthy patron, Prince Johann Liechtenstein (Johann Merbeck) seconded by conductor Johann Herbeck, had volunteered to underwrite costs, Bruckner was able to say to the resigned musicians at the first rehearsal :

« Well, gentlemen, we can begin to repeat with intensity now that someone paid for it all. »

This anecdote comes from the 18 year old Arthur Nikisch, then acting as a substitute violinist in the Orchestra during the rehearsal.

**Sunday, 26 October 1873** : Vienna, « Musikverein Großer Saal » . Closing Concert of the Vienna World's Fair (Expo 1873) . The 49 year old Anton Bruckner conducts the « Wiener Philharmoniker » . (It is the first time one of his Symphonies is played in the Austrian capital.)

Program :

Johann Sebastian Bach : Toccata in C minor for organ (BWV 565) . Soloist : Anton Bruckner.

Anton Bruckner : Free improvisation for organ.

The music-critic Theodor (Otto) Helm reported that it was so unfortunate that this improvisation has not been transcribed on paper by someone in the concert-hall.

(One critic had already asked Bruckner why he did not put on paper his organ improvisations. The answer was : « You don't compose like you play. »)

...

Anton Bruckner : Symphony No. 2 in C minor, 1873 version (**WAB 102**) .

There were many changes in this revision. The order of the inner-movements was reversed ; in the Adagio, the horn

solo at the end was changed to a clarinet solo and a violin solo was added. The repeats were canceled in the Scherzo and Trio, a passage in the Finale was completely re-written, and a 4th trombone was added in the final few bars to reinforce the bass-line. (Critical version by William Carragan.)

The performance left a profound impression on the young Arthur Nikisch.

Critics were mixed, but Bruckner was very pleased by the enthusiastic response of the audience (who applauded with great warmth after each movement) :

« The musicians of the “ Philharmoniker ” played “ like Gods ” ! »

They played brilliantly, and were also pleased. As a token of gratitude, the Orchestra will accept only half of its concert-fee.

In a long letter of thanks, Bruckner addressed the Philharmonic by courteously asking if it would accept the dedication of the work :

« Honoured and respected Philharmonic Society. There is one more request I would dearly love to make. In order to allowed to the work to find its original destination, may I dedicate the work to you ? »

Unfortunately, the offer went unanswered.

The initial reception of the Symphony by the Viennese newspaper music-critics was a premonition of things to come. The more traditionalists were somewhat intrigued by this new and remarkable piece of work.

For example, critic August Wilhelm Ambros was surprised by the « musical exclamation and question marks » . He was the first to express 2 « clichés » that will persist for a great deal of time : the Symphonies Bruckner are chaotic in their form and import the Wagnerian style in the genre.

Eduard Hanslick, who was still bound to the composer, heard « several important and beautiful details in the Symphony » despite its « enormous proportions » and its « insatiable rhetoric » . But he was unable to share the opinion of the public.

### Expo 1873 : Franz Schwalm

During the World's Fair, Franz Schwalm, the father of Anton Bruckner's great-niece Laura Hueber, played twice a day in a civilian chapel located at the « Prater » .

### Entertainments in the « Prater »

Balloon ascents and « hair people », coffee-houses and the fat lady known as « Prater-Mitzi », a vivarium and « Kobelkoff, the Human Torso » - exclusive attractions offered by the Vienna « Prater », then as now a popular place of entertainment for the capital's citizens.

Between 1773 and 1799, Johann Georg Stuver staged pyro-technical displays on mythological themes or renderings of battle-scenes (The Siege of Vienna, 1783) as well as current events, all of which were extremely popular and drew crowds of up to 25,000 to the « Prater ». On these days, an admission fee was charged. Events of this kind represented the transition between courtly and middle-class festive culture. Friedrich Nicolai provides an account of one of these firework displays in the « Prater » in his « Reise durch Deutschland und die Schweiz » (Journey through Germany and Switzerland) :

« The earth trembles, the woods echo with deafening thunder-claps ; cities, palaces, fortresses, gardens, temples, fountains etc. , appear, all in many and changing hues of fire, lighting-up the surrounding area. »

Since the issuing of a decree by Emperor Josef II in 1775, the « Prater », formerly an Imperial hunting reserve, has been open to the public. In the 18th Century, it was already a popular destination with the middle-classes for Sunday outings. Social hierarchies are discernible in the different ways in which the area was used : the main avenue with its 3 coffee-houses was the elegant promenade where the rich and beautiful strolled, while the site of today's amusement park was the stamping ground for all the rest. Entertainments offered by the latter included merry-go-rounds, swings, skittles, shooting galleries, punching dolls and « Punch and Judy » shows, elaborate and hugely popular firework displays, even an ascent in a balloon.

The attractions in the « Wurstelprater » were a mixture of the educational and the absurd : a wax-works, a vivarium (an aquarium) and a planetarium as well as freak-shows with « hair people » (cases of hypertrichosis) and the Russian-born « Human Torso », Nikolai Kobelkoff. As technology developed, new attractions were presented such as a railway carousel or the first electrically-driven ghost train.

The « Prater » was the location for the first World Exhibition in Vienna, which was however not a great success. The Rotunda built specifically for it, at the time the largest domed building of its kind in existence, became very popular with the Viennese, but burned down in 1937.

In 1897, the famous giant Ferris Wheel was erected as part of the Golden Jubilee celebrations for Emperor Franz-Josef. 67 metres high, it represented a marvel of technology. Under the National-Socialists it was « aryanized », and was later badly damaged by fire during the Second World War. Afterwards restored, it is still the major attraction at the « Prater » funfair.

Until the early-20th Century, the « Prater » remained a place of novel entertainments : changing attractions such as « Venice in Vienna » (1895) with reproductions of Venetian palaces and canals, or a copy of an Ashanti village (1896) entertained the public. Emperor Franz-Josef seems to have visited these attractions and (as always) to have enjoyed them. People also had the opportunity to experience the new medium of film in the early Viennese cinemas at the «

Prater » .

...

The « Prater » was once Imperial hunting-ground and only accessible for the aristocracy, until the Austrian Emperor Josef II donated the area to the Viennese in 1766 as a public leisure centre. And since Emperor also allowed the establishment of restaurants and snack bars - small wonder that it didn't take long until the precursors of today's « Würstelprater » appeared on the edge of the former aristocratic hunting-grounds. Inn-keepers, coffee brewers, and gingerbread bakers (« Lebzelter ») hung-out their shingles ; seesaws and merry-go-rounds as well as bowling alleys were not far behind.

The 3 coffee-houses in the « Prater » were especially popular, in particular for their musical performances.

In 1895, the amusement area « Venice in Vienna » was established, in whose midst one of the landmarks of the city, the « Riesenrad » (Ferris Wheel) , appeared in 1897. The « Prater » became a place where everyone finds enjoyment. The « better » class of people came here in their horse-drawn carriages, military cadets and laundry girls met on secret dates, one found barrel organs, Heurigen singers and ladies orchestras - and some of the great composers of their time, such as the « Waltz King » Johann Strauß or the composers Joseph Lanner and Carl Michael Ziehrer performed here. For children's entertainment, puppet theatres were established in simple wooden booths, where Hanswurst played the leading part. The name « Würstelprater » derives from this figure.

In 1938, the « Prater » became the property of the City of Vienna.

(Image) Enthusiastic participants in a wheel-barrow race, these members of the Hitler Youth demonstrate the pro-Nazi sentiment of many Austrians after the « Anschluß » . While these young people were frolicking, others were finding the parks of Vienna far less hospitable. On 23 April 1938, numerous Jews were rounded-up on the Sabbath and forced to eat grass at the « Prater » , Vienna's famous amusement park. Some suffered heart-attacks and a few died from the ordeal.

During World War II, bombs and the construction of trenches destroyed large parts of the « Prater » area. A large part of the « Würstelprater » fell victim to fire in April 1945.

### Vienna : « Lusthaus »

The « Lusthaus » is a historic building in « Prater » park in the « Leopoldstadt » District of Vienna. It is located at the southeastern end of « Prater » Avenue, near the « Freudenau » race course.

First mentioned in 1560, as « Casa Verde » , the green summer-house served as a hunting-lodge in Vienna's « Prater » , which was then a hunting-ground. It was built in 1538, at the location where « Prater » Avenue met the Danube Canal. The « Lusthaus » was on the water until 1834, when the Danube Canal was moved.

After the « Prater » was opened to the public, in 1766, the summer-house was rebuilt from 1781 to 1783. It served as the location for large celebrations and festivities, such as the Imperial celebrations to mark the first anniversary of the Battle of Leipzig, in which Napoléon was defeated.

In the 19th Century, the « Lusthaus » , as well as the entire « Prater » , was a popular meeting-place for the nobility and bourgeoisie. During the First World War, the military bridge guard tasked with protecting the Danube bridge from sabotage was stationed in the summer-house. In the inter-War period, marked by economic instability and poverty, the composition of its patrons shifted ; the « Lusthaus » then served as a bar with dance and music. During the Second World War, the « Lusthaus » was almost completely destroyed by bombings, in 1944 and 1945. However, by 1948, a decision was taken to rebuild the building, and the City of Vienna earmarked a sum of 350,000 Shillings for its repair. During reconstruction, the building was restored to its 18th Century shape. In October 1949, the « Lusthaus » was re-opened.

Today, the « Lusthaus » houses a coffee-house and a restaurant.

### Cholera at the Vienna World Fair

**July to September 1873** : A serious cholera epidemic drives Anton Bruckner out of Vienna !

A cholera epidemic broke-out in Vienna. The effects on the City's World Exhibition was as disastrous as those of the « Krach » of the stock-market, in May of the same year. A first case of cholera was declared in late-June and, soon, hundreds of foreigners fled the hotels in a state of shock. The epidemic lasted 20 weeks, from early-July until late-October. In August, due to the disease, they counted 1,304 deaths and, in September, 1,092. The local authorities tried their best to stem the state of panic by claiming that the victims were mainly counted in school classes and in poor areas ; but the international press, exaggerating the effects of the tragedy, dissuaded many tourists to travel to Vienna. Fortunately, a series of preventive health measures limited the damage, and so, the epidemic was now in a stage of regression. Many foreigners came-back to Vienna during the fall season. The epidemic of 1873 was the last to strike the population of Vienna.

Paul Durand-Ruel who sent artist Gustave Courbet's works to Vienna on February 22, 1873, and who received them all again on July 15, 1873. The paintings were part of a group of 59 works that the art-dealer had taken into safe-keeping from Courbet, probably to avoid their potential confiscation. In his memoirs, Durand-Ruel recalls his disappointed hopes for the Vienna World Exposition :

« I had every reason to expect a success. Unfortunately, my predictions were not confirmed. Cholera broke-out in Vienna and this dealt the death blow to the Exposition. Everybody fled and I sold absolutely nothing. »

...

**July 1873** : Rehearsals (presumably only with the Vienna Boys' Choir (« Wiener Sängerknaben »)) in anticipation of a

performance of the Mass in F minor (**WAB 28**) .

### Vienna Conservatory : Academic Year 1873-1874

Anton Bruckners Schüler am Wiener Konservatorium sind Julius Czegledy (Orgel und Kontrapunkt) , Moriz Jelinek, Alfons Kraholetz, Johann Posholda (Harmonielehre) , Otto Reitinger (Harmonielehre) , Karl Schmidl (Harmonielehre) , Karl Schöfmann, Hermann Steudner (Kontrapunkt) , Johann Straka, Samuel Tausig (Harmonielehre) , Johann Winter (Harmonielehre) und Moritz Wolf (Harmonielehre, Orgel) .

Im Kapitel « B. Unterrichtsleitung » des Jahresberichts ist zu lesen :

« 3. Lehrkörper :

(Fußnote, ohne Bruckner-Bezug.)

I Herr Anton Bruckner, Professor (Harmonielehre Kontrapunkt und Orgel) , seit 1868 (6 Jahr) . »

Und andere folgende Schüler dieses Schuljahres spielen in Anton Bruckners späteren Jahren noch eine Rolle :

Guido Adler, Julius Egghardt, Anna oder Marie Gyurkovich, Louise Kaulich, Rudolf Krzyzanowski (« aus Eger in Böhmen, 14 1/2 Jahre ») , Josef Latzelsberger, Felix Mottl und Julius Winkler ; als Orgelschüler sind Julius Czegledy, Ludwig Ernst, Karl Kittel, Otto Lamprecht (schied wegen Disziplinarvergehen am 6. März 1874 aus) , Hermann Steudner und Moriz Wolf überliefert.

Von den 6 Orgelschülern gehören 5 zur Vorbildungsschule. Der « Übersicht der in den einzelnen Lehrfächern unterrichteten Schülerzahl. » ist zu entnehmen, daß von den Orgelschülern (nur einer in der Ausbildungsstufe) 5 ganz und 1 halb vom Schulgeld befreit waren - bei den 30 Kontrapunktschülern ist keine Untergliederung angegeben.

Auszug aus der « Unterrichtsstatistik » :

« In den Vorbildungsschulen (...)

Orgel

I. Klasse

Schülerstand : systemisierter : 4 ; effectiver : 2.

Monatlich erteilte systemisierte Lehrstunden : 8, sonach im Jahre ... 80.

Gelehrt wurden : Übungen im Manual- und Pedalspiele nach Christian Heinrich Rincks Practische Orgelschule. (...) In den Ausbildungsschulen (...) Orgel, 2 Classen. (Die 2. Klasse war in diesem Jahre nicht activirt.)

Schülerstand : systemisierter : 4 ; effectiver : 1.

Monatlich ertheilte systemisierte Lehrstunden : 8, sonach im Jahre ... 80.

Gelehrt wurden in progressiver Folge : Die höheren Aufgaben des Orgelspiels : Fugen, Sonate, Konzerte. (...)

« Kontrapunkt, 2 Classen. (2 Lehrer.)

Effectiver Schülerstand : 25.

Monatlich ertheilte systemisierte Lehrstunden : 40, sonach im Jahre ... 400.

Gelehrt wurden :

In der I. Klasse : Einfacher und doppelter Kontrapunkt der Octave, Nachahmung, einfache Fuge.

In der II. Klasse : Drei- und vierfacher Kontrapunkt, Canon, Doppelfuge. »

Die Übersicht über die in 120 Orchesterübungen aufgeführten Kompositionen enthält auch « Bruckner : Sinfonie in D » (3. Symphonie, ohne Datierungen) .

### The vegetarianism of Richard Wagner

According to Cosima Wagner, her husband was « a vegetarian in principle but in practice, neither his health nor the orders of his physician allowed him to be » .

**December 1873** : The couple lunched on roast hare and Wagner described how he had gone hunting in Bohemia in his youth. Squeamishly, he fired without taking aim, but beginner's luck meant he hit the rear leg of a running hare. Wagner was presented with his trophy but vowed never again to go shooting. The memory didn't spoil the couple's lunch, however - Richard Wagner was a man of many ideas but little consistency.

### Marianne Selch

**Wednesday, 25 February 1874** : Letter from Anton Bruckner to « Fräulein » Marianne Selch :

Included with the letter was an admission-card to attend a rehearsal at the « Musikverein » which she could use next Saturday (28 February 1874 ?) at 3:30 pm and next Monday (2 March 1874 ?) at 10:00 am.

Greetings from Bruckner to « Frau » Selch (her mother) .

The envelope that was delivered bears the stamped date : « 26 February 1875 » (an error ?) .

**Saturday, 28 February 1874** : Rehearsal at 3:30 pm at the « Musikverein » concert-hall for which « Fräulein » Marianne Selch had received an admission-card from Anton Bruckner.

**Monday, 2 March 1874** : Rehearsal at 10:00 am at the « Musikverein » concert-hall for which « Fräulein » Marianne Selch had received an admission-card from Anton Bruckner.

**Friday, 3 July 1874** : Dated music-sheet by Anton Bruckner, presumably dedicated to « Fräulein » Marianne Selch, including the second theme from the Adagio of the 3rd Symphony (**WAB 103**) (piano version) .

### Josefa (« Pepi ») Bruckner

**Friday, 3 July 1874** : Death of Anton Bruckner's sister Josefa (bride's name : Wagenbrenner) at Ignaz's home in St. Florian - located at « Alter Markt » Number 27 (now, « Wiener-Straße » Number 23) . Anton had reserved a tombstone for her in St. Florian.

### Plzeň : The missed « rendez-vous » with the Emperor

When Austro-Hungarian Emperor Franz-Josef made a quick stop-off in Plzeň in 1874, he was probably never told that a new pavilion had been built inside the Burghers' Brewery especially to honour his visit.

Sadly, the Emperor was in such a hurry that day that he never even made it out of Plzeň's main railway station. A disappointed but determined brewery manager ordered a special batch to be delivered up the road to the Imperial train. Franz-Josef duly drank the famed « Pilsner » from a special Moser crystal glass created for the occasion.

It may never have received its intended royal visitor, but that little pavilion has remained an important part of life at the Plzeň brewery ever since.

Tucked away behind the central court-yard, « Formanka » is now a small, quaint, one storied wooden and brick building that appears slightly out of kilter with its immediate surroundings. These days, it serves as the brewery workers' pub, and, during its 140 year history, many have stopped in at « Formanka » for a chat and an after-work sampling of their day's labour.

The name « Formanka » evolved from its proximity to the main road, which allowed coachmen (or formany) to stop-off for liquid refreshment and to rest their horses. Initially, it was a public facility, built to serve visitors and dignitaries. It replaced the earlier « visitors' drinking tent » and it was a much more basic construction than the one we see today, which dates from 1907.

## Visiting his sister

**First half of September 1874** : Anton Bruckner visits his sister Rosalia (« Sali ») Hueber in Vöcklabruck.

## Vienna Conservatory : Final examinations (beginning of July 1874)

Anton Bruckners Schüler werden in der Prüfungsstatistik erwähnt :

### Vienna Conservatory : Academic Year 1874-1875

Am Wiener Konservatorium hören Anton Bruckners Unterricht :

Heinrich Benkö (Harmonielehre) , Ludwig Emanuel, Hermann von Jan (Kontrapunkt) , Moriz Jelinek (Kontrapunkt) , Alfons Kraholetz (Harmonielehre) , Ernst Ludwig (Orgel) , Johann Mötz (Kontrapunkt) , Ernst Ollop (Harmonielehre) , Wenzel Pelikan (Harmonielehre) , Rudolf Pichler (Harmonielehre) , Vincenz Pritz (Orgel) , Otto Reitingner, Hans Rott (Orgel) , Karl Schöfmann (Kontrapunkt) , Johann Straka (Kontrapunkt) , Leopold Windhopp (Kontrapunkt) und Johann Winter.

Im Kapitel « B. Unterrichtsleitung» des Jahresberichts ist zu lesen :

(4. Lehrkörper.)

Fußnote, ohne Bruckner-Bezug.

I. Angestellte Professoren und Lehrer :

(...)

3) Herr Anton Bruckner, Professor (Harmonielehre, Kontrapunkt und Orgel) . »

Und andere folgende Schüler dieses Schuljahres spielen in Anton Bruckners späteren Jahren noch eine Rolle :

Julius Egghardt, Anna Gyurkovich, Louise Kaulich, Johann Kreuzinger, Rudolf Krzyżanowski (« aus Eger in Böhmen, 15 1/2 Jahre ») und Felix Mottl ; als Orgelschüler sind Julius Czegledy, Charles King aus Windsor, Ernst Ludwig, Vincenz Pritz, Hans Rott und Hermann Steudner überliefert.

Von den 6 Orgelschülern gehören 4 zur Vorbildungsschule. Der « Übersicht der in den einzelnen Lehrfächern unterrichteten Schülerzahl. » ist zu entnehmen, daß von den Orgelschülern (2 in der Ausbildungsstufe) 4 ganz und 2 nicht vom Schulgeld befreit waren - bei den 24 Kontrapunktschülern ist keine Untergliederung angegeben.

Auszug aus der « Unterrichtsstatistik » :

« In den Vorbildungsschulen ...

## Orgel, I. Klasse

Schülerstand : systemisierter : 4 ; effectiver : 3.

Monatlich erteilte systemisierte Lehrstunden : 8, sonach im Jahre ... 80.

Gelehrt wurden : Übungen im Manual- und Pedalspiele nach Christian Heinrich Rincks Practische Orgelschule.

In den Ausbildungsschulen ...

## Orgel, 2. Klasse

Schülerstand : systemisierter : 4 ; effectiver : 2.

Monatlich erteilte systemisierte Lehrstunden : 8, sonach im Jahre ... 80.

Gelehrt wurden in progressiver Folge :

Die höheren Aufgaben des Orgelspiels : Fugen, Sonate, Konzerte. (...) , in der Musiktheorie ...

« Kontrapunkt, 2 Classen. (2 Lehrer.)

Effectiver Schülerstand : 23.

Monatlich erteilte systemisierte Lehrstunden : 32, sonach im Jahre ... 320.

Gelehrt wurden :

In der I. Klasse : Einfacher und doppelter Kontrapunkt der Octave, Nachahmung, einfache Fuge.

In der II. Klasse : Drei- und vierfacher Kontrapunkt. Canon, Doppelfuge. »

Die Übersicht über die in 135 Orchesterübungen aufgeführten Kompositionen enthält kein Werk Anton Bruckners.

Leaving « St. Annahof » for good

**Early October 1874** : Since 1870, Anton Bruckner worked as a teaching assistant in piano, organ, and theory at the Teacher Training Institute of St. Anna in Vienna. He must now relinquish his post in favour of Rudolf Weinwurm.

**Tuesday, 12 January 1875** : In a pathetic letter addressed to his friend Moritz von Mayfeld, Anton Bruckner (who had

just left St. Anna's College for good) said :

« Nobody helps me. »

### Death of Mahler's younger brother

**Tuesday, 13 April 1875** : Death in Jihlava of Gustav's younger brother, Ernst Mahler (born in 1862) , possibly of endocarditis.

### Vienna Conservatory : Academic Year 1875-1876

**Monday, 20 September 1875** :

Anton Bruckners Wiener Konservatoriumsschüler sind Heinrich Benkö (Kontrapunkt) , Ludwig Emanuel (Kontrapunkt) , Carl Kepeller (Harmonielehre) , Johann Kreuzinger (Harmonielehre) , Rudolf Pichler (Kontrapunkt) , Otto Reitinger (Kontrapunkt) , Hans Rott, Benno Schönberger (Harmonielehre) , Christian Schröder, Hermann Steudner (Orgel) , Peter Szöllösi (Harmonielehre) , Johann Winter (Kontrapunkt) und Carl Zobel (Harmonielehre) .

Im Kapitel « B. Unterrichtsleitung » des Jahresberichts ist zu lesen :

« 3. Lehrkörper :

(Fußnote, ohne Bruckner-Bezug.)

1. Ordentliche Lehrer.

2. Herr Anton Bruckner, Professor (Harmonielehre, Kontrapunkt und Orgel) . »

...

Und andere folgende Schüler dieses Schuljahres spielen in Bruckners späteren Jahren noch eine Rolle :

Anna Gyurkovich, Louise Kaulich, Johann Kreuzinger, Rudolf Krzyzanowski (« aus Eger in Böhmen, 16 1/2 Jahre ») , Carl Lillich (« 13 1/2 Jahre ») , Gustav Mahler, Felix Mottl, Guido Peters (« 9 1/2 Jahre ») , Franz Schalk (« 12 Jahre ») , Julius Winkler (« aus Raab, 20 Jahre ») , Hugo Wolf und Fräulein Marianne Zips (« 18 1/2 Jahre ») .

Als Orgelschüler sind Felix Mottl, Vincenz Pritz, Hans Rott, Christine Schröder (« aus Tolna, 26 Jahre ») und Hermann Steudner (« 16 Jahre ») überliefert.

Alle 5 Orgelschüler gehören zur Ausbildungsschule. Der « Übersicht der in den einzelnen Lehrfächern unterrichteten

Schülerzahl. » ist zu entnehmen, daß von den Orgelschülern 3 ganz, 1 halb und 1 nicht vom Schulgeld befreit waren - bei den 22 Kontrapunktschülern ist keine Untergliederung angegeben.

Auszug aus der « Unterrichtsstatistik » :

Kontrapunkt, 2 Jahrgänge.

Effektiver Schülerstand : 32.

Monatlich ertheilte systemisierte Lehrstunden : 32, sonach im Jahre ... 320. »

Conservatory student Gustav Mahler

Friday, 10 September 1875 : The 15 year old Gustav Mahler registers at the Vienna Conservatory.

## His teachers

**1875-1876** : Julius Epstein (piano) .

**1877-1878** : Robert Fuchs (harmony) .

**1877-1878** : Franz Krenn (counterpoint and composition) .

(No conducting class in those days.)

Gustav Mahler thought little of most of the Conservatory staff and made that plain. His harmony teacher, Robert Fuchs, was a composer of pleasant orchestral serenades who later remarked with some perplexity that Mahler played truant, and yet, knew everything counterpoint Mahler learned (or, according to Victor Adler, did not learn) from Franz Krenn, a dry disciplinarian whose deadly dull tuition helped persuade Hugo Wolf to abandon his Conservatory studies prematurely. Mahler announced he was dropping-out too but, more purposeful than the explosive Wolf, he soon wrote a grovelling letter to the director, Josef Hellmesberger senior, begging for re-instatement. Hellmesberger agreed but Mahler can hardly have recalled him with affection. Although leader of a fine String Quartet which Mahler surely heard and admired, the director was a choleric anti-Semite. When Mahler made copy errors in the score of a Symphony he had written for performance by the Conservatory Student Orchestra, Hellmesberger hurled the manuscript to the ground and refused to conduct it even when the mistakes had been corrected.

Mahler promptly composed a Piano Suite instead, he noted later :

« Since it was a much weaker and more superficial work, it won a prize while my good things were all rejected by the worthy judges. »

Only 2 of Mahler's teachers really impressed him. One was that same professor Epstein, elegant pianist and publisher of Franz Schubert's piano works, who had recommended him for the Conservatory and who soon became his mentor and friend. When Mahler had to write to the Conservatory's governors asking to be let-off all tuition fees, Epstein added a post-script offering to guarantee half the sums due. He also helped-out by finding piano pupils, including his own son, for his impoverished student. Mahler was duly grateful. Long after he had left the Conservatory, he still wrote back to his old Master telling him his career was going well and, wryly, that he was just as arrogant as ever. Under Epstein's watchful eye, Mahler became a fine player, carrying-off the top Piano Prize in his first year with a performance of part of a Schubert Sonata (in A minor) .

Could he have made his career as a concert pianist ?

4 piano-rolls Mahler recorded in 1905 of excerpts from his Songs and Symphonies, the only aural evidence we have of Mahler the interpreter, raise doubts. Indispensable though the recordings are, above all as a guide to the tempi he wanted, they are rather sloppily played. No doubt Mahler, by then, was out of practice. In any case, it is a boon that

he took the conducting road instead. Without that long experience wrestling with often recalcitrant players in many different halls, his orchestration would surely have been less expert.

His fellow-students (sorted by age)

**Hans Rott (1858-1884)** .

Mahler felt that the unfortunate Rott was the most talented of them all. Rott took organ classes with Anton Bruckner. He excelled, achieving 1st grade each year, and winning First Prize in the organ competitions of the second and third years.

**Anton Krisper (1858-1914)** .

**Rudolf Krzyzanowski (1859-1911)** .

**Hugo Wolf (1860-1903)** .

**Arnold (Josef) Rosé (1863-1946)** . It was during these Vienna years, that Mahler also became friends with the Rosenblum brothers, who later changed their name to Rosé. Arnold and Eduard, accomplished musicians, later became Mahler's brothers-in-law (much to the disgust of Mahler, it might be added, who did not want to lose the domestic comfort his sisters provided him as a bachelor) .

Most of Mahler's Conservatory friends were just as poor but they somehow got to the Opera all the same. Hugo Wolf, for instance, spent much of his student life queuing for entry to the « Vierte Galerie » (« the gods ») and writing ecstatic letters home, especially about his idol Richard Wagner.

(« The gods » , or sometimes « paradise » , is a theatrical term, referring to the highest areas of a theatre such as the upper-balconies. These are generally the cheapest seats. One reason for naming the cheapest seats « the gods » is because the theatres have beautifully painted ceilings, often mythological themes, so the cheap seats are up near ... the gods !)

Along with many music-students of his generation, Mahler fell under the spell of Richard Wagner, although his main-interest was the sound of the music instead of the staging. It is not known whether he saw one of Wagner's Operas during his student days.

Mahler played percussion in the Conservatory Student Orchestra.

...

Mahler's circle of friends at the Conservatory initially consisted of no more than 4 or 5 individuals, some of them

more interesting than others, but, all in all, a good indication of Mahler's ability to attract important people of his own age. The individuals in question were Anton Krisper, Rudolf Krzyzanowski (and, to a lesser extent, his brother Heinrich) , Hans Rott and Hugo Wolf. It is also possible that Mahler briefly made the acquaintance of the mezzo-soprano Rosa Papier at this time. She later became a well-known member of the Vienna Court Opera and, following her early retirement on health grounds, a distinguished singing teacher whose pupils numbered Anna von Mildenburg. She also exerted considerable influence on Vienna's musical scene, helping in no small way to bring about Mahler's appointment as director of the Court Opera. The wife of the pianist Hans Paumgartner, she was the mother of Bernhard Paumgartner, later to become well-known as a Mozart scholar and as president of the Salzburg Festival. For a time, this group of friends was very small, an un-surprising state of affairs as Mahler was looking for something like a substitute family in the city. Professor Epstein took considerable interest in the boy and could play the part of a fatherly friend, but he inevitably had little time for the lad from Iglau, quite apart from his understandable reluctance to show undue preference for any one particular student. Of greater importance were friends of Mahler's own age : Wolf was born in the same year as Mahler, Hans Rott was 2 years older, Anton Krisper 3 years older, and Rudolf Krzyzanowski 1 year older. In comparison to today's State-run colleges of music, the Vienna Conservatory was a tiny institution, so that students of different ages very so on met on its various courses.

#### The Director : Josef Hellmesberger senior

The director of the Conservatory was Josef Hellmesberger senior, an archetypal Viennese who wore make-up and a wig that fooled no one in a desperate effort to appear younger than his 50 years ; his Franz-Josef mutton-chop whiskers also belied this attempt. Opinionated and autocratic, Hellmesberger was said to have 3 dislikes : his successor as leader of the Vienna Philharmonic, near-sighted people (!) , and Jews.

The young Gustav Mahler managed to irritate the Vienna Conservatory director not because he was a Jew, but because he, Mahler, did not suffer fools gladly. Even in his student days, Mahler was known for his self-confidence bordering on arrogance. He often let his instructors know what he thought of them and cut classes when he had better things to do.

Piano teacher Julius Epstein recalled :

« Mahler was not only a brilliant musician, but an amusing young man, and distinguished himself in his personal contacts by his ready wit. One day, as I entered a class, he called-out to me :

“ Professor ! Hellmesberger would like to see you in the office after the class. ”

I could hardly believe my ears ; I said pointedly :

“ I beg your pardon ! I didn't quite hear ! ”

Gustav Mahler repeated :

“ Hellmesberger would like ... ”

Somewhat annoyed, I snapped at him :

“ That is bad manners. You should say Director Hellmesberger. ”

Mahler replied, without a pause :

But Professor ! I have often heard you say that Director Hellmesberger is a genius ! ”

I interrupted :

“ Certainly, I have said that ! And so, he is ! ”

Mahler said with a grin :

“ Now, do we speak of a genius in this way ' Herr ' Beethoven, ' Herr ' Mozart or ' Herr ' Schubert ? If these great Masters do not need to be called ' Herr ', nor does Hellmesberger. ”

I had to admit that my pupil was right. »

...

Though Mahler was an accomplished pianist, by his second year at the Conservatory, he had decided that he would never be a professional on that instrument. Hearing the great pianists of his day in Vienna such as Franz Liszt and Anton Rubinstein convinced him of this. Thus, he focused his attention instead on composition, winning Conservatory prizes each year of his attendance. Though he failed twice to win the prestigious Beethoven Prize, his second attempt witnessed a remarkable submission :

« Das klagende Lied »

(Mahler writes numerous chamber and orchestral works that he later destroys.)

In many ways, it was his life outside of the classroom that was most defining for Mahler.

Mahler's Viennese fellow-musician, Ernst Křenek (who briefly married Mahler's daughter, Anna) wrote :

« A most peculiar attitude of hedonistic pessimism, joyful skepticism touching on morbid sophistication, became the dominant trait in Vienna's intellectual climate. »

For the impressionable Mahler, the city must have seemed like one giant candy-shop of musical goodies.

After passing-out of the Conservatory in 1878 with a diploma (but without one of the coveted silver medals for exceptional achievement won by 9 of his fellow-graduates) , Mahler stayed-on in Vienna another 2 years, sporadically attending courses at the Vienna University located on « Dr-Karl-Lueger-Ring » . He studied music history with Adolf Prosnitz and also attends occasional lectures, there, by Anton Bruckner.

Evidently, he did not learn much there, later admitting he only attended the « Vienna Woods » with any regularity.

Letter to Max Marschalk :

« Instead of going to lectures, I spent time in the Vienna Woods. »

In a way, these 18 or so months are mysteriously void of historical documentation : Mahler's « La vie bohème » days. It is known that he was under the thrall of Richard Wagner in these years and became a member of a strongly nationalistic student organization whose other members included influential Left-wing politicians such as Victor Adler, founder of the Austrian Social-Democratic Party. Mahler and his cohorts reveled in a rather odd mixture of Wagnerian « Gesamtkunst » , Nietzschean philosophy, socialism, vegetarianism, and pan-Germanism. But maddeningly, little is known of his day-to-day activities.

Mahler may ultimately have found the German nationalism and anti-Semitism of the Vienna academic Wagner Society too much to stomach, for it is clear from surviving documents that, by 1879, he had already resigned his membership as part of a concerted action that also included Anton Krisper, Rudolf Krzyzanowski and Hans Rott, but not Wolf, who remained true to his beliefs until the end of his life.

When Mahler, aged not quite 20, left Vienna for the dismal little job in Bad Hall, his head was full of the sound of folk-song, Bohemian bands, trumpet calls, marches, Bruckner Chorales and Schubert Sonatas.

...

**Saturday, 1 April 1876** : Gustav Mahler takes part with Anton Door in a piano recital at the assembly-hall situated on the 3rd floor of Iglau's « Hotel Zu den drei Fürsten » (Hotel of the 3 Counts) located on Masarykovo square - Number 44/1189 (« Hauptplatz » Number 371) .

Programme :

1) Ludwig van Beethoven : Piano Sonata, Opus 31. Soloist : « Herr Professor » Anton Door.

2a) Franz Schubert : « Sei mir gegrüßt » (D. 741) . Soloist : « Herr » Gustav Mahler.

2b) Robert Schumann : Nocturnes. Soloist : « Herr » Gustav Mahler.

3a) Anton Door : « Lied ohne Worte » . Soloist : « Herr Professor » Anton Door.

3b) Eduard Silas : Gavotte. Soloist : « Herr Professor » Anton Door.

4a) Charles Gounod : Paraphrase on « Frühlingslied » , Opus 59. Soloist : « Herr » Gustav Mahler.

4b) Josef Dessauer : « Nach Sevilla » , Spanish Lied for voice and piano. Soloist : « Herr » Gustav Mahler.

5a) Anton Rubinstein : Romances. Soloist : « Herr Professor » Anton Door.

5b) Anton Rubinstein : « Konzert-Walzer » (Concert Waltz) . Soloist : « Herr Professor » Anton Door.

6) Wolfgang Amadeus Mozart : Arias. Soloist : « Herr » Gustav Mahler.

The son of the owner of the house, Hans Bruckmüller, was another young musician, who composed a number of musical works and was a friend of Gustav Mahler.

Actuary, singer, song-writer, composer, and conductor, Bruckmüller was born on 30 October 1862 and died on 1935. He studied under Anton Bruckner and Franz von Suppé.

Iglau : « Hotel Zu den drei Fürsten »

Sources from the 1500's (16th Century) refer to an inn named « U Diveho Muze » (Wild Man) at this location. After a reconstruction in 1825, the inn was renamed « Hotel of the 3 Counts » . The large assembly-hall on the 3rd floor was used for theatre performances.

The « Hotel of the Three Counts » is believed to refer to the stay in 1805 of Marshal Bernadotte, the commander of the First Corps of Napoléon Bonaparte's great army. His adversary, the Austrian archduke Ferdinand, took-over Bernadotte's guest-room following the victory of Austria in the battle at Stoku, and also possibly during the stay of the King of Saxony in Iglau in 1815.

In 1585, the national convention of the 4 professional Federations of the Margraviate of Moravia took-place at the « Hotel Zu den drei Fürsten » .

...

**Friday, 23 June 1876** : At the annual « Concours » for first year students, organized by the Vienna Conservatory at the Small Hall (« Kleine-Saal » or « Brahms-Saal » , 598 seats) , Gustav Mahler wins a First Prize for piano of the Vienna

Conservatory for his performance of Franz Schubert's Sonata in A minor.

**Friday, 23 June 1876** : At the annual « Concours » for first year students, organized by the Vienna Conservatory at the Small Hall (« Kleine-Saal » or « Brahms-Saal », 598 seats) , Gustav Mahler wins a First Prize for piano of the Vienna Conservatory for his performance of Franz Schubert's Sonata in A minor.

**Saturday, 1 July 1876** : At the annual « Concours » organized by the Vienna Conservatory at the Small Hall (« Kleine-Saal » or « Brahms-Saal », 598 seats) , Gustav Mahler wins a First Prize in composition by performing the first movement of his Piano Quintet in A minor.

The work impressed so much Hermann Grädener (recently appointed to the teaching staff of the Vienna Conservatory) that he had it performed under prestigious circumstances : the chamber music « soirées » held at the home of Doctor Theodor Billroth, an eminent Viennese surgeon and amateur violinist, who was a close friend and musical confidant of Eduard Hanslick and Johannes Brahms.

This may have contributed to Brahms's particular interest in Mahler and his subsequent influential support of the composer. But, in other respects, the conduct of the young musician would hardly have appeared particularly congenial or promising to the composer of the « German Requiem » and the « 4 Serious Songs » . Mahler moved almost exclusively in Bruckner « circles » and took part in activities of the Academic Wagner Society, one of whose founders was his childhood friend Guido Adler. There can be no doubt at all, however, that, at the time, the young Mahler consciously avoided playing a personally conspicuous part within the Wagner movement, and was content in the role of a keenly observant and unusually receptive on-looker. For within the Academic Wagner Society, what Ernst Kurth called « the chaotic power struggles of the time, and a human-kind driven to confusion by feelings of triumphalism » struck him with full-intensity.

...

Arnold Schönberg, insisting on the legitimate interest that attaches to every aspect of the life and person of a great man, once said he would have liked to see how Mahler tied his tie. It is in something of that spirit that one approaches the earliest Mahler work to have come-down to us, the single movement for Piano Quintet in A minor (apparently the first movement of a projected 4 movement Opus) .

At one point, Mahler wished to publish the Quintet, as the surviving manuscript, which includes 24 bars of a Scherzo for Piano Quartet written in G minor, bears the stamp of music-publisher Theodor Rättig (who issued Mahler's piano-duet arrangement of Anton Bruckner's 3rd Symphony sometime between 1878 and 1886 - this was Mahler's first publication) .

Rättig did not print the Quintet. It has been theorized that Mahler sent the work to him, but he rejected it.

The work was recalled by Mahler (in a conversation with Nathalie Bauer-Lechner in 1893) to have been the best of

the lot :

« It excited a good deal of enthusiasm. »

« In the end, I sent it to Moscow for a competition and it got lost. »

In fact, it was found among the effects of widow Alma Mahler, after her death in 1964, in a folder labelled : « early compositions » .

Despite the encouraging attention this single movement was shown, it is likely that it (plus the 24 bar sketch for a Scherzo in G minor found with it in Alma Mahler's folder) was all Mahler ever completed of the Quintet. During his Conservatory years, he rarely if ever finished anything.

As Mahler confessed to Natalie Bauer-Lechner :

« It was not only that I was impatient to begin a new piece, but rather that, before I finished a work, it no longer challenged or interested me, as I had gone beyond it. But who, at the time, could know whether my trouble was not a lack of ability or of the power to persevere ? »

It is unclear from surviving documentation whether the Quintet was complete at this time. In several letters, Mahler mentions a Quartet or Quintet, but there is no clear reference to this Piano Quintet.

**Monday, 31 July 1876** : Orchestral « soirée » given by the Iglau (Jihlava) « Stadtkapelle » and « Mannergesang-Verein » conducted by Heinrich August Fischer (1827-1917) . The concert was held at the « Großer Fest-Saal » of Hotel Čzap, located at Number 15-1696 Zizkova Street (Sct. Johann's « Platz » Number 50-51) ; now, the « Dělnický dům » (Workers Home) .

Program :

Gustav Mahler : Sonata for violin and piano. Probably the world-premiere, certainly, the first recorded public performance. The Sonata must be considered lost, and, as consequence, the key and the number of movements remain unknown.

Other works by Johann Friedrich Kittl, Ludwig van Beethoven, Heinrich Wilhelm Ernst, Franz Liszt, « Anonymous » , Henri Vieuxtemps, and Franz Schubert.

Soloists : Gustav Mahler (piano) , Richard Schraml (violin) , N. Eichler (violoncello) .

**Tuesday, 12 September 1876** : Benefit-concert at Hotel Čzap in Iglau (Jihlava) , at which Mahler plays his (lost) Violin Sonata and the first movement of his Piano Quintet in A minor. Also, a Chopin « Ballade » and Schubert's «

Wanderer-Fantasie » .

**1877** : Mahler becomes friendly with Hugo Wolf ; both are members of the Vienna Wagner Society and share the same room.

Although the undeniable merits of the Academic Wagner Society lay principally in organizing public and semi-public concerts in which works of Anton Bruckner and Hugo Wolf were performed alongside those of Wagner, the activities of the Society, nonetheless, had their negative side too. As with all other Wagner Societies, it spread propaganda derived from principles laid-down by Bayreuth with the aim of forming troops of agitators in support of that kind of radical, pan-German Wagnerianism from which the French composer Camille Saint-Saëns (one of the most enthusiastic champions of Wagner in France) distanced himself.

**Wednesday, 20 June 1877** : Second internal student concert given at the Small Hall (« Kleine-Saal » or « Brahms-Saal » , 598 seats) by the Vienna Conservatory Orchestra conducted by Director Josef Hellmesberger senior.

Gustav Mahler won a First Prize for piano by performing Franz Xaver Scharwenka's Piano Concerto No. 1 (he had only a few months to learn the difficult solo-part) and Robert Schumann's « Humoreske » .

Mahler declined to compete for the composition prize.

Other composers performed during the evening :

Johann Nepomuk Hummel, Erwin Schulhoff, Alfred Zamara, Wolfgang Amadeus Mozart, Frédéric Chopin, Giuseppe Verdi, Felix Mendelssohn, Johannes Brahms, Theodor Kirchner, Charles Gounod.

The student « soirées » were not open for the public an, therefore, were never reviewed. This was Mahler's first and only appearance at these « soirées » .

**Thursday, 21 June 1877** : At the annual « Concours » for the second year piano students, Gustav Mahler is awarded (although not unanimously) a First Prize at the Small Hall (« Kleine-Saal » or « Brahms-Saal » , 598 seats) of the Vienna Conservatory for his interpretation on his set subject (Robert Schumann : duration around 20 minutes) .

**Wednesday, 12 September 1877** : Mahler registers in Franz Krenn's class in counterpoint but does not complete the course. He obtained his « Abitur » in Iglau.

**Saturday, 20 October 1877** : Lecture evening at the Vienna Conservatory.

Programme :

Bach-Gounod : « Méditation » for violin, violoncello and organ. Soloists : Hanns Wessely, Alexander Fimpel and Franz

Weber.

Piano piece by Frédéric Chopin with soloist Franz Zottmann.

Piano piece by Xaver Scharwenka with soloist Gustav Mahler.

**After Sunday, 16 December 1877** : (As reported by Adalbert von Goldschmidt) Gustav Mahler and Rudolf Krzyżanowski play at the Vienna Conservatory Bruckner's 3rd Symphony for piano 4 hands in the presence of Josef Schalk and Karl Goldmark.

**Thursday, 11 July 1878** : Annual « Concours » organized by the Vienna Conservatory at the Great Hall (« Golden-Saal » , 2,063 seats) . First of 2 concerts by the First Prize winning music students.

Program :

Frédéric Chopin, Wolfgang Amadeus Mozart, Johann Sebastian Bach, Rudolf Krzyżanowski, Carl Maria von Weber, Gustav Mahler, Félix Godefroid, Weber-Liszt.

Mahler : Premiere of the Scherzo of a Piano Quintet (manuscript lost) .

Soloists : Gustav Mahler (piano) , Johann Kreuzinger (violin) , Friedrich Skallitzky (violin) , Stefan Wahl (violin) , Eduard Rosenblum (Rosé) (violoncello) .

### Conservatory student Anton Krisper

Anton Krisper was born on 28 December 1858 in Laibach (Ljubljana, Slovenia) into a well-to-do family of businessmen ; and died in 1914 in Feldhof near Graz, Austria.

He registered at the Vienna Conservatory in 1876 and was a friend of Gustav Mahler. It seems that Krisper also played the cello, with Hugo Wolf as his accompanist.

Krisper is generally taken to have been a highly-gifted, multi-talented and extremely sensitive character. He is said to have written an Opera during his youth (probably « Zlatorog » (Gold Horn) , premiered in Prague) but no such work has come-down to us. Only one musical work survived. He also wrote about music but was not really happy doing this either.

Krisper remained at the Conservatory for only 2 years (without completing his studies) before moving to Leipzig and registering at the city's University, where he studied philosophy, and then, studied mining and worked as an engineer.

It was due their friendship that Mahler moved-in with his friend and spent some of his working life at the Krisper

House.

In 1879 and 1880, Mahler wrote 6 letters to Krisper, at that time not yet 20 years old. These letters are important because they suggest that Krisper was responsible for persuading Mahler to take the position at the Laibach Provincial Theatre « Landestheater ». Also, they contain Mahler's communication concerning his work and plans (« Rübzahl », a fairy-tale play ; a « Nordische Sinfonie » ; both of them later destroyed) revealing his impassioned disposition, filled with poetry.

Between 1881 and 1882, Mahler held the post of conductor at Laibach and learned his trade as a conductor. His bust now adorns the Krisper House's façade on « Rathaus-Platz » (« Mestni trg ») where stands the square-fountain sculpted by Francesco Robba.

Since that time, no more relations between the 2 friends can be traced.

More successful academically, Krisper wrote a dissertation entitled « Art Music in Terms of its Origins, Development and Consequences » (« Die Kunstmusik in ihrem Prinzip, ihrer Entwicklung und ihrer Konsequenz beziehungsweise Die Musiksysteme in ihren Prinzipien ») being praised by one of the leading figures of the as yet young discipline of musicology, Hugo Riemann, who characterizes it in his « Musiklexicon » as « a very interesting historical-theoretical study on harmonic-dualistic basis » .

Anton Krisper died at the Feldhof Sanatorium near Graz (a mental hospital supervised at the time by Doctor Richard von Krafft-Ebing) , evidently as the result of some venereal disease (most likely syphilis) . He was buried in Laibach.

### Doctor Richard von Krafft-Ebing

The Austro-German psychiatrist and author, Baron Richard von Krafft-Ebing (full-name : Richard Fridolin Joseph Freiherr Krafft von Festsberg auf Frohnberg, genannt von Ebing) , was born in 1840 in Mannheim, Germany ; and died in 1902 in Graz, Austria.

Krafft-Ebing studied medicine at the University of Heidelberg, where he specialized in psychiatry. He later practiced in psychiatric asylums. After leaving his work in asylums, he pursued a career in psychiatry, forensics, and hypnosis.

Krafft-Ebing's principal work is « Psychopathia Sexualis : eine Klinisch-Forensische Studie » (Sexual Psychopathy : A Clinical-Forensic Study) , which was first published in 1886 and expanded in subsequent editions. The last edition from the hand of the author (the 12th) contained a total of 238 case histories of human sexual behaviour.

This book popularized the terms sadism (derived from the brutal sexual practices depicted in the novels of Marquis de Sade) and masochism (derived from the name of Leopold von Sacher-Masoch) .

« Psychopathia Sexualis » is a forensic reference book for psychiatrists, physicians, and judges. Written in an academic

style, its introduction noted that, to discourage lay-readers, the author had deliberately chosen a scientific term for the title of the book and that he had written parts of it in Latin for the same purpose.

« *Psychopathia Sexualis* » was one of the first books about sexual practices that studied homo-sexuality and bi-sexuality. It proposed consideration of the mental state of sex-criminals in legal judgements of their crimes. During its time, it became the leading medico-legal textual authority on sexual pathology.

The 12th and final edition of « *Psychopathia Sexualis* » presented 4 categories of what Krafft-Ebing called « cerebral neuroses » :

**Paradoxia** : sexual excitement occurring independently of the period of the physiological processes in the generative organs.

**Anæsthesia** : absence of sexual instinct.

**Hyper-æsthesia** : increased desire, satyriasis.

**Paræsthesia** : Perversion of the sexual instinct, i.e. , excitability of the sexual functions to inadequate stimuli.

The term « hetero-sexual » is used, but not in chapter or section-headings. The term « bi-sexuality » appears twice in the 7th edition, and more frequently in the 12th.

There is no mention of sexual activity with children in Chapter III, « General Pathology » , where the « cerebral neuroses » (including sexuality : the paræsthesias) are covered. Various sexual acts with children are mentioned in Chapter IV, « Special Pathology » , but always in the context of specific mental disorders, such as dementia, epilepsy, and paranoia, never as resulting from its own disorder. However, Chapter V on sexual crimes has a section on sexual crimes with children. This section is brief in the 7th edition, but is expanded in the 12th to cover « Non-Psychopathological Cases and Psycho-pathological Cases » , in which latter sub-section the term « *pædophilia erotica* » is used.

Krafft-Ebing considered procreation the purpose of sexual desire and that any form of recreational sex was a perversion of the sex-drive.

« With opportunity for the natural satisfaction of the sexual instinct, every expression of it that does not correspond with the purpose of nature (i.e. , propagation) must be regarded as perverse. »

Hence, he concluded that homosexuals suffered a degree of sexual perversion because homosexual practices could not result in procreation. In some cases, homosexual libido was classified as a moral vice induced by the early practice of masturbation. Krafft-Ebing proposed a theory of homosexuality as biologically anomalous and originating in the embryonic and fetal stages of gestation, which evolved into a « sexual inversion » of the brain. In 1901, in an article

in the « *Jahrbuch für sexuelle Zwischenstufen* » (Year Book for Intermediate Sexual Types) , he changed the biological term from anomaly to differentiation.

Although the primary focus is on sexual behaviour in men, there are sections on Sadism in « *Woman, Masochism in Woman, and Lesbian Love* » . Several of the cases of sexual activity with children were committed by women.

Krafft-Ebing's conclusions about homosexuality are now largely forgotten, partly because Sigmund Freud's theories were more interesting to physicians (who considered homosexuality to be a psychological problem) and partly because he incurred the enmity of the Austrian Catholic Church when he psychologically associated martyrdom (a desire for sanctity) with hysteria and masochism.

...

One of the most influential figures in the history of human sexuality, Baron Richard von Krafft-Ebing was the first scientist to undertake a major study of sexual perversity in its varied forms.

Born August 4th, 1840, in Mannheim, Baden, Germany, he studied medicine at the University of Heidelberg. He chose psychiatry as his area of primary interest, and became a professor of psychiatry at the University of Straßburg (1872) . He soon re-located to the University of Graz, where, from 1872 to 1880, he served as medical super-intendent of the Feldhof mental asylum, which served more as a prison than a hospital. Krafft-Ebing crusaded for reform of this over-crowded facility (without success) , and was convinced of the importance of diagnosis, analysis and treatment of mental illness.

In 1879, he published « *Text-Book of Insanity* » , which further encouraged doctors to explore the cause of a patient's mental illness (be it hereditary, sexual, or physical) . He promoted therapy, rather than simple imprisonment. Krafft-Ebing found that, among the many manifestations of psycho-pathia, sexual deviance was routinely unexplored and merely dismissed as insanity. He launched a lifelong endeavour to demystify this form of mental illness by approaching the topic objectively and without shrinking from its more distasteful forms. The first volume of « *Psychopathia Sexualis* » was published in 1886 (first American edition was in 1892) . Beyond Krafft-Ebing's careful categorization and discussion of various forms of sexual perversity, it contained 45 case histories. In the years following its publication, Krafft-Ebing continued to interview sufferers of the various psychoses and neuroses, collect records of other noteworthy cases, and engage in correspondence with those who were encouraged to speak freely about their sexual practices (many of whom had no other outlet for discussion) . The 1888 edition had grown to 75 case histories. The 12th edition, upon which Krafft-Ebing was working at the time of his death, had 617 pages and featured 238 case-studies. It categorizes a wide array of sexual psycho-pathologies, from impotence to necrophilia, from lust-murder to handkerchief fetishism, all carefully arranged in categories of hyper-æsthesia (pathologically exaggerated sexual instinct) , anæsthesia (absence of sexual instinct) and the most frequently explored paræsthesia (perversion of the sexual instinct) .

« *Psychopathia Sexualis* » was intended as « a medico-forensic study » . Krafft-Ebing presented the case histories'

most sordid details in Latin « in order to exclude the lay-reader » .

Krafft-Ebing writes in his introduction to the first edition :

« The object of this treatise is merely to record the various psycho-pathological manifestations of sexual life in man and to reduce them to their lawful conditions. »

His book was aimed at « men engaged in serious study in the domains of natural philosophy and medical jurisprudence » .

Upon the publication of « Psychopathia Sexualis » , Krafft-Ebing became a prominent, if controversial, figure. He promoted psychiatry through a series of public lectures about his research, lectures which were described as « showy » , « glamorous » and « highly-sensational » . He was not interested simply in self-promotion. He entered the public debate by opposing Paragraph 175, a part of the German Kingdoms' legal code (adopted in 1871) that criminalized homosexuality. In spite of this progressive stance, Krafft-Ebing still considered homosexuality an illness that begged for treatment and a cure.

Krafft-Ebing would be a major influence upon the most prominent psychiatrists of the 20th Century.

In 1889, Krafft-Ebing became a chair of psychiatry at the University of Vienna, where he came in close contact with Sigmund Freud.

According to biographer Harry Oosterhuis :

« Although Krafft-Ebing dismissed Freud's seduction theory at a 1896 meeting of the Society of Psychiatry and Neurology as a “ scientific fairy-tale ” and although he felt that Freud generally did not empirically validate his theories with a sufficient number of cases, the 2 men must have been on good professional terms. Freud owned Krafft-Ebing's text-books and regularly received autographed copies of his works on sexual pathology ; moreover, Krafft-Ebing actively supported Freud's application for a professorship at the University of Vienna. »

It was while nearing the end of his studies in archæology (at the University of Basel in 1900) that Carl Jung read « Psychopathia Sexualis » . Receiving a « flash of illumination » from the book, he decided to change his field of study to psychiatry.

Among Krafft-Ebing's more unusual accomplishments was making psychiatric treatment fashionable. Catering to a middle- and upper-class patients that sought to avoid the horrors of mental asylums, Krafft-Ebing started a private practice, cultivated a well-paying « clientèle » and founded a sub-urban sanatorium for the « nervous » in 1886.

« Psychopathia Sexualis » was much more than a guide-book to perversity, it was an important part of the scientific community's efforts to establish authority over matters of sexuality. At the time, sexual dysfunction was either ignored,

dismissed as simple insanity, or dealt with as a religious issue. During the same period when science was claiming dominion over child-birth (previously the work of mid-wives) and death (ending the tradition of funeral wakes at home) , it argued that sexual behaviour was governed by the brain and the spine, and was a neurological issue, not a spiritual one « Psychopathia Sexualis » also proposed that heredity was a major factor, further establishing scientific dominion over mental illness.

« Psychopathia Sexualis » (and essays written at the time by Krafft-Ebing and others) introduced to our vocabulary such words as heterosexual, homosexual, sadism, masochism and fetishism. « Psychopathia Sexualis » quite literally defined sex.

But by gathering all forms of sexual abnormality under the umbrella of psycho-pathology, Krafft-Ebing cast a shadow of insanity upon all forms of sexual behaviour that deviated from the heterosexual norm. In spite of his efforts at objectivity and absolute honesty, Krafft-Ebing's « Victorian » mind-set is evidenced in « Psychopathia Sexualis » after all.

Michel Foucault wrote in his book, « The History of Sexuality » :

« This was in fact a science made-up of evasions, given its inability or refusal to speak of sex itself, it concerned itself primarily with aberrations, perversions, exceptional oddities, pathological abatements, and morbid aggravations. Claiming to speak the truth, it stirred-up people's fears. Involuntarily naïve in the best of cases, more often intentionally mendacious, in complicity with what it denounced, haughty and coquettish, it established an entire pornography of the morbid, which was characteristic of the “ fin-de-siècle ” society. »

...

Richard von Krafft-Ebing was born in 1840 in Mannheim, Germany. Since the Catholic Krafft-Ebing family had been ennobled around 1800 by the Austrian Emperor, from birth his title was « Freiherr » , or Baron. His father was a District administrator of the Grand Duchy of Baden. Richard went to school and studied medicine in Heidelberg, where his maternal grand-father, Carl Joseph Anton Mittermaier (1787-1867) , was a prominent professor of criminal law. During his studies, Krafft-Ebing lived in his grand-father's house, an intellectually stimulating and enlightened environment. After passing his examinations early in 1863, which permitted him to practice as a physician, he was granted a doctoral degree later that same year. His dissertation, which was published by the renowned publishing house of Ferdinand Enke, dealt with a topic that touched on psychiatry : sensory deliria (« Die Sinnesdelirien ») . The book was based on research in the Illenau asylum, near Baden-Baden, as well as on his personal experiences with hallucinations (during his training in the ward of internal medicine in Heidelberg, he had acquired typhoid, which caused serious fevers) .

During the summer of 1863, Krafft-Ebing attended lectures by the famous Wilhelm Griesinger (1817-1868) in Zürich on nervous and mental illness that included clinical demonstrations at the university-clinic Burgholzi. The young Krafft-Ebing was deeply impressed by Griesinger and decided to specialize in psychiatry. His grand-father, who was interested

in forensic psychiatry, may also have pushed him in this direction. Not only did Mittermaier pave the way for his grand-son to publish in the medico-legal journal « Friedrichs Blätter für gerichtliche Medizin » (for which Krafft-Ebing wrote the annual review on forensic psychiatric literature beginning in 1866) , his grand-father also helped him to obtain his first post in psychiatry. Mittermaier was a good friend of Christian Friedrich Wilhelm Roller (1802-1878) , medical director of the Illenau asylum and a leading figure in German psychiatry at that time. After having served as a volunteer for 3 months, Krafft-Ebing got an appointment as junior physician in this institution early in 1864. Before he started his training in psychiatry in Illenau, he made an instructional tour to Vienna, where he attended lectures of leading physicians of the renowned Vienna School of Scientific Medicine. He also visited Prague, where he gained some experience in obstetrics, and Berlin, where he attended lectures of Rudolf Virchow (1821-1902) , one of the leading medical scientists in Germany.

Krafft-Ebing started his career in psychiatry in an asylum in which the idealist « moral » approach to mental disease, dating from the early- 19th Century, was still in vogue. Roller, one of the leading asylum psychiatrists in Germany at that time, was strongly committed to the idea that psychiatric diseases were « diseases of the soul » that could not be reduced to organic disorders of the brain and nervous system. According to Roller, psychiatry was a medical discipline unlike the others. He believed that mental patients should be removed from the daily social environment that had caused their insanity and be isolated in a special therapeutic setting, in a mental asylum, which functioned as a refuge, offering a special, healing atmosphere. Illenau was situated in the country-side far away from towns, with its staff living on the premises. The daily life of its patients consisted of a meticulous regime of work, religious activities, special diets, sport, and leisure activities, among which music figured prominently. One anecdote about Krafft-Ebing tells how he frequently played the piano and improvised songs, in an attempt to cheer-up the patients. All activities at Illenau, in fact, had a therapeutical purpose. The asylum enjoyed fame for its sophisticated facilities and the humanitarian treatment of patients ; in the early 1860's, it was one of the first German asylums to introduce the non-restraint principle, which was developed in the 1830's in England.

Krafft-Ebing's training period at the Illenau asylum proved to be profoundly formative, both in terms of his approach to patients and scientifically. Although Roller strongly opposed the new medical psychiatry being developed at German universities beginning in the 1860's, his junior staff welcomed the innovative scientific ideas in mental medicine (especially those of Griesinger and Morel) , Darwinian biology, and the new science of experimental psychology as developed by Gustav Fechner (1801-1887) and Wilhelm Wundt (1832-1920) . Krafft-Ebing used his daily interaction with patients for research, and, while at Illenau, he published articles on forensic psychiatry, « dementia paralytica » , epilepsy, transitory insanity, the connection between physical brain damage and mental disease, and the therapeutical use of electricity. For the remainder of his life, Krafft-Ebing would stay in close contact with Illenau and especially with 2 colleagues who became good friends : Heinrich Schüle (1840-1916) , who was later director of the asylum, and Wilhelm Erb (1840-1921) , who became a leading neurologist. Early in 1869, after leaving Illenau, Krafft-Ebing set-up practice as a « nerve doctor » in Baden-Baden, specializing in electro-therapy. In the same year, he undertook an instructional tour through Italy and France. During the Franco-Prussian War of 1870-1871, he served at a medical station in a military camp in Rastatt, where he treated soldiers suffering from typhus. After his discharge from the army, he was put in charge of an electro-therapeutic institute in Baden-Baden.

When Krafft-Ebing started his career in the 1860's, a psychiatrist had generally little professional status ; as a standard specialization, psychiatry was not well-established until the end of the Century. It was definitely one of the least attractive specialties within medicine for an aspiring young physician. Working in asylums, most psychiatrists (or alienists, as they were often called in the 19th Century) were marginal figures at best, within the field of medicine as well as in society at large. At mid-Century, the professional situation of asylum psychiatry was even troubling. Mental asylums provided few posts and offered hardly any prospects for a scientific career. Moreover, asylum conditions deteriorated in the second half of the Century (in many respects, Illenau was the exception that proved the rule) . Hailed as sources of cure in the first decades of the 19th Century, the public asylums were silting-up with ever-expanding numbers of chronically ill patients. The majority of the patients of public mental institutions were drawn from the ranks of the poor and selected for essentially negative social reasons, rather than on the basis of sound medical criteria ; the asylum thus began to be a last resort for paupers, beggars, the disabled, the elderly, demented patients, and those who were a nuisance or a danger to society. Cure rates were low, and the often under-funded and over-crowded asylums had increasingly less in common with ordinary hospitals, which, by the 1870's, as therapeutic institutions, began to target the growing group of middle-class patients, especially with the improvement of hygienic conditions and anesthetic techniques.

By that time, however, public opinion no longer considered asylums as hospitals to cure but as custodial institutions. Psychiatrists came to realize that this carried with it un-intended and un-welcome professional consequences. Not only were they secluded in remote, monotonous, and oppressive institutions, and thus, consigned to an ignominious backwater of the medical profession, but they were also vulnerable to the accusation of locking people up on arbitrary grounds. Perceived as those in charge of removing the insane from society, alienists emerged in popular opinion more as guardians of law and order than as doctors who cured patients, even though it was invariably stressed that hospitalization was for the lunatic's own good. As long as their main institutional locus was the mental asylum, psychiatrists did little more than act as care-takers, and they could not escape the conclusion that the mental asylum had failed as a hospital. Moreover, to scientifically motivated psychiatrists, the asylum hardly proved to be a stimulating environment for their own intellectual growth.

From the birth of psychiatry around 1800, it had been a central problem for the new profession to define its expertise as a medical field. During the first half of the 19th Century, the special character of psychiatry was justified by its emphasis on « moral treatment » . This, however, did not require somatic treatment of the insane, and it was not a truly specific medical expertise. In fact, philosophers, jurists, and the clergy could and did claim to be at least as good as medical men in the practice of moral treatment. Psychiatry's dominion included many issues fraught with explosive religious and moral implications, and this made it close to impossible for psychiatrists to carve-out their own niche and gain authority as medical men. Even in the middle of the Century, psychiatrists still had substantial difficulties in convincing other scholars and the public that, as physicians, they had exclusive and scientific insight into the nature of insanity. The classification of the varieties of insanity remained subject to imprecision, uncertainty, and disagreement because it generally could only be based on more or less fleeting symptoms that were exceedingly difficult to measure according to the exact standards of positivist science.

For quite some time, psychiatry's social and intellectual position was, put mildly, a vulnerable one. Alienists longed to

be recognized not just as « moral entrepreneurs » in mental asylums, but as doctors and scientists. They sought to establish closer ties with the rest of the medical profession by trying to push psychiatry as an academic discipline and a natural science. By the late-1860's, it became clear that their attempts had not been altogether in vain, as the first university chairs for psychiatry were established in Germany and Austria. When Griesinger started his psychiatric clinic in the « Charité » Hospital in Berlin, in 1865, he set the tone of university psychiatry in central Europe. Between 1866 and 1882, similar clinics were opened in Göttingen, Zürich, Vienna, Heidelberg, Munich, Straßburg, Graz, Leipzig, and Bonn. Directed by professors of psychiatry, these clinics were dedicated to research and teaching. Patients were selected on the basis of medical criteria. The new psychiatric clinics were not just hospital wards to treat patients but also teaching facilities : patients were shown to medical students and discussed on ward rounds, and they were demonstrated in lectures. In their search for knowledge of the causes of mental disorders, physicians followed the example of laboratory medicine : brain anatomy, neuro-physiology, and bio-chemistry would lead psychiatry out of the obsolescence of the asylum and onto the road of medical status and progress. The story of psychiatry's rise as an academic discipline is closely connected to the growing popularity of biological psychiatry during the second half of the 19th Century.

Within psychiatric circles, his work on temporary mental derangements, including the so-called « Dämmerzustand » (a mental state between dreaming and being awake) and « Zwangsvorstellung » (irresistible thoughts, later conceptualized as obsessive-compulsive disorder) , was considered innovative. Even more important were his numerous publications on legal issues : he tackled questions involving, for instance, criminal acts under the influence of alcohol, the legal responsibility of hysterical patients, the self-accusations of the mentally ill, the validity of legal testimony in different psycho-pathological conditions, and dubious mental states in civil law. He was a pioneer and leading expert in the field of forensic psychiatry, and his « Lehrbuch der gerichtlichen Psychopathologie » (1875) was the first text-book in the German-speaking world to separate psychiatry from the rest of medicine as far as legal matters were concerned.

Throughout, his writings in this area show that he sought to broaden the field of psychiatry. Again and again, he argued that the current legal stipulations for distinguishing between offenders responsible for their actions and those who were not were far too formal and narrow. Usually, judges only accepted the diagnosis of lasting intellectual impairment as a valid symptom of insanity. According to Krafft-Ebing, this juridical conception of mental illness, and hence that of legal irresponsibility, was outdated : modern psychiatry showed that mental illness could be of a transitory nature and that it also included disordered emotions and deficient moral consciousness, which, apparently, left reason intact. Affective disorders figured prominently in his work :

« Deluded by the idea that only those people are insane who talk madly, one has simply ignored the expressions of disturbed feeling. Being ignorant of the insights of modern psychology that the imagination of man essentially depends on the quality of his feeling and that the motives of his will and actions are primarily determined by his feeling, one has completely failed to understand how disturbed feelings can make human action un-free. »

In addition, many mental disruptions were caused by, for example, dreaming, sleep-walking, somnambulism, hallucinations, intoxications, alcohol, fevers, or epilepsy, and these could not be taken for insanity as such but were nevertheless highly-relevant from a forensic view-point. The same applied to several cases of pelvic disorders caused by

gynecological lesions, menstruation, excessive masturbation, and sexual excitement without orgasm, which, Krafft-Ebing believed, could produce delusions. Essentially, he tried to convince his readers that there were many mental conditions that suspended the powers of the free-will but that were very difficult to identify as pathological by lay-persons. Echoing the physiological conception of disease, he pointed-out that modern medical science demonstrated that there was no clear boundary between the normal and pathological. All these arguments served one clear message : since deranged emotions and impulses could drive man to commit criminal acts and since there was good reason to speak of diminished criminal responsibility in such cases, the psychiatrist should have more say in jurisdiction « vis-à-vis » lawyers and others such as police authorities, clergymen, and educators.

These forensic considerations also inspired his best-selling « Psychopathic Sexualis » , which procured him fame (although not un-contested) inside as well as outside the medical world. Especially in the field of homosexuality, Krafft-Ebing was confronted not only with lawyers, but also with forensic experts in somatic medicine, who were responsible for furnishing physical proof of « un-natural vice » . Their investigation was generally restricted to a physical examination, and they, in fact, supported the prevailing juridical approach. Psychiatrists like Krafft-Ebing, however, focused on the personality of the offender and cast doubts on the current interpretation of the law. By the turn of the Century, the somatic experts in forensic medicine had lost some of their authority in Austrian courts, while the psychiatric view-point was partly acknowledged. From 1901 on, homosexual offenders could be cleared of charges if a psychiatrist diagnosed a « psycho-pathological condition » and concluded that the offense had been committed under the influence of an « irresistible urge » .

With his 3 volume « Lehrbuch der Psychiatrie auf klinischer Grundlage » (1879-1880) , partly based on hundreds of observations, Krafft-Ebing established his reputation as a leader in clinical psychiatry. It became a standard text-book in psychiatry and would remain so for 2 decades until it was replaced by that of Emil Kræpelin. Over the years, 7 editions came-out as well as translations in English, French, Italian, and Hungarian. Like other 19th Century psychiatrists, Krafft-Ebing was eager to contribute to a valid classification of psychiatric diseases. The basic psychiatric disorders, according to Krafft-Ebing, could be divided into 3 categories : emotional disturbances (feelings and dispositions, including strong variations therein) , mental derangements (involving the mind, memory, imagination) , and those of a psycho-motoric nature (drives and will) . Beyond these groups, his classification of the psychoses was based on a series of dichotomies. He differentiated between psychoses with and without intellectual retardation as well as between those with or without lesions of the brain (organic versus so-called functional psychoses or psycho-neuroses) . The functional psychoses were sub-divided into degenerative and non-degenerative as well as into melancholia (defined as « a painful inhibition of psychological functions ») and mania (« an exalted facilitation of psychological functions ») .

Krafft-Ebing was a highly-organized and efficient author, digesting vast amounts of literature (German as well as English, French, and Italian) and using and re-using the same material for different purposes. His published work amounts to hundreds of articles and about 90 books (including numerous re-editions and translations) . He published on a wide variety of subjects, including forensic issues, the classification and causes of mental disorders, alcoholism, moral insanity, sexual perversions, melancholia, paranoia, epilepsy, paralysis, multiple sclerosis, peripheral nerve lesions, obsessive behaviour, tabes, neuro-syphilis, hysteria, neurasthenia and nervousness, the psychiatric implications of

menstruation, the therapeutic use of electricity and hypnosis, administrative and legal issues of psychiatric treatment, and the teaching of psychiatry at the university. At the end of his career, several of his articles were collected in 4 volumes under the title « Arbeiten aus dem Gesamtgebiet der Psychiatrie and Neuropathologie » (1897-1899) . Translations of his works into English, Italian, French, Hungarian, Russian, Swedish, Dutch, Spanish, and Japanese contributed to his international reputation. He was on many editorial boards and contributed on a regular basis to prestigious journals like the forensic « Friedrichs Blätter für gerichtliche Medizin » , the « Allgemeine Zeitschrift für Psychiatrie » (the official organ of German asylum psychiatrists) , and the academic « Jahrbücher für Psychiatrie » and « Neurologie » , the journal of the Austrian « Verein für Psychiatrie und Neurologie » . He also contributed on a regular basis to « Der Irrenfreund » and some Vienna-based medical journals.

In 1882, Krafft-Ebing, who was in a relatively powerless academic position as « extraordinarius » , acquired a full-professorship, and, 5 years later, neurology was added to his chair. At the same time, the small psychiatric observation clinic was extended with a ward for nervous disorders. His struggle for clinical psychiatric wards in the university's general hospital (which he won in 1886 only after having threatened to leave Graz for a professorship in Freiburg) was not only a strategic move to strengthen his position in academia, but also of importance for the configuration of psychiatry as a promising medical specialty. 3 years later, in 1889, Krafft-Ebing moved to the more prestigious University of Vienna, which had 2 chairs of psychiatry. He first succeeded Max Leidesdorf (1818-1889) on what was named the first chair of psychiatry ; in 1892, after the death of Theodor Meynert (1833-1892) , he obtained one of the most prestigious positions in psychiatry when he was elected to the second chair while also receiving the honorary title of « Hofrath » (Councillor) . The first chair was linked to a provincial mental asylum, the « Niederösterreichische Landesirrenanstalt am Brünnefeld » , the second to a smaller psychiatric clinic in Vienna's General Hospital. Whereas the asylum mainly hospitalized chronic patients and its supervision included many administrative tasks, the clinic in the hospital, which carried more academic prestige, only admitted a limited number of more acute patients with mental as well as neurological disorders. In 1892, Krafft-Ebing also succeeded Meynert as president of the « Verein für Psychiatrie und forensische Psychologie » (re-named « Verein für Psychiatrie und Neurologie » in 1894) , the most important professional organization for psychiatrists in Austria. Unlike Meynert, who was obstinate and antagonized people, Krafft-Ebing was a diplomatic chairman who enlisted people's support ; under his leadership, the membership of the Society tripled, from 50 to 150 members. From 1895 until 1901, Sigmund Freud was a member of the administrative committee. Although Krafft-Ebing dismissed Freud's seduction theory at a 1896 meeting of the Society as a « scientific fairy-tale » and although he felt that Freud generally did not empirically validate his theories with a sufficient number of cases, the 2 men must have been on good professional terms. Freud owned Krafft-Ebing's text-books and regularly received autographed copies of his works on sexual pathology ; moreover, Krafft-Ebing actively supported Freud's application for a professorship at the University of Vienna.

Krafft-Ebing established himself firmly at the University in Vienna, like earlier in Graz, but he was nevertheless engaged in a continuous struggle with the medical faculty and university administrators over lack of resources, poor facilities, and the establishment of psychiatry as a medical specialty, fully-integrated into the curriculum. He complained that psychiatry was merely an optional specialization and not an obligatory subject in the curriculum of the medical faculty - only between 5 and 10 % of all medical students took his courses. In his view, it was a scandal that the majority of general practitioners, who, in Austria, were authorized to commit individuals to a mental asylum, had not received

any training in the diagnosis of mental illness.

« If citizens were only digesting, breathing, moving machines, one could be satisfied with such a state of affairs. However, they are feeling, thinking, and acting beings who, moreover, bear responsibility for their actions. Their psychological functions are a valuable asset for the State and their development, maintenance, and recovery, if disturbed, should belong to the most important interests of society. »

The lack of psychiatric knowledge, among physicians in general, was all the more deplorable, Krafft-Ebing asserted, because many admissions to mental asylums could be prevented if general practitioners were able to diagnose the first symptoms of arising insanity ; in an early stage, many mental illnesses were still curable. Moreover, a course in psychiatry would make doctors more attentive to the many people in modern society who had lost their mental balance and who were in imminent danger of becoming mentally ill. The study of psychiatry was useful, Krafft-Ebing admonished his students, since :

« It will sharpen your experience and knowledge with regard to all those individuals in today's society who, to be true, are not considered to be mentally ill, but who, nevertheless, may not be considered as mentally well-balanced. They display various malfunctions in their mental and moral personality and they are misguided and odd in their way of acting, feeling, and thinking. »

For medical students who did not specialize in psychiatry, it was particularly important to be confronted with mild and acute cases of mental and nervous illness, such as the neurotics, neurasthenics, hysterics, and hypo-chondriacs who were admitted to his psychiatric clinic. However, the clinic of Vienna's General Hospital (« Allgemeines Krankenhaus ») was, in fact, no more than an observation ward for incoming patients that lacked the space, tranquillity, and stability necessary to examine the progression of acute mental disorders, to experiment with new treatments, and to teach medical students. In Vienna, as in Graz, the pressure of non-medical regulations for admitting, transferring, and discharging growing numbers of (chronic) patients placed great strains on the orderly functioning of the university-clinic in which research and teaching had to be priorities.

The desire to escape the constraints and frustrations of institutional psychiatry must have driven Krafft-Ebing to further broaden and diversify his professional territory. At the Universities of Graz and Vienna, he tried to push the boundaries of psychiatry into the direction of neurology, partly because the anatomy and physiology of the nervous system were promising fields that were part of established medical science. Some neurologists tried to establish their professional identity by setting themselves apart from psychiatrists ; American neurologists had succeeded in doing so as early as 1875, but, in Central Europe, the 2 medical specialties were closely connected. Krafft-Ebing asserted that psychiatry was a branch of neurology and that psychiatric clinics should be linked-up with neurological clinics rather than with asylums. This clearly served the purpose of distancing himself from the lunatic asylum while strengthening his ties with main-stream medicine.

Already in 1869, after his training in psychiatry at Illenau, Krafft-Ebing had established himself as a « nerve doctor » in Baden-Baden, and during the rest of his career, he would be engaged with organic nervous disorders, especially

tabes dorsalis, a paralysis of the legs often accompanied by mental derangement, and general paralysis - at that time also known as, respectively, progressive paralysis, « tabes cerebrales », paralytic madness, and « dementia paralytica ». From the middle of the 19th Century on, physicians postulated that these diseases were late manifestations of syphilis, an assumption that was definitively proved in 1905 when the syphilitic spirochetes was discovered, and then, found in tabetic and paralytic patients. In fact, neuro-syphilis was the only psychiatric disease that eventually proved to be a successful target for bacteriological research. Under Krafft-Ebing's supervision, one of his assistants, Josef Adolf Hirschl (1865-1914), experimentally tested the causal link between syphilis and general paralysis. 9 patients who suffered from general paralysis were injected with the fluid from the sores of known syphilitics. Because, during the subsequent 6 months, the patients showed no reaction to the injection, Krafft-Ebing and Hirschl concluded that they already had syphilis. Although this experiment was controversial from an ethical point of view, which is why Hirschl's name was not made public, Krafft-Ebing presented these results in 1897 at one of the plenary sessions of the 12th International Congress of Medicine in Moscow - a definite sign of the international prestige he enjoyed.

The alliance with neurology was a means to raise not only the scientific level of psychiatry but also its social prestige as it attracted more patients from the middle- and upper-classes who feared being associated with the insane. By advertising psychiatric care as involving « nerves » and by posing as « nerve doctors », psychiatrists met the needs of this lucrative « clientèle », who, at all costs, wished to avoid confinement in a mental asylum, primarily geared as it was to housing the incurably and chronically insane of the pauper classes. Social prejudices concerning asylum psychiatry entailed that physicians in private practices and « nervous » clinics often used face-saving organic diagnoses to avoid the odium of mental disease. Hearing that one suffered from a physical disorder of the nerves was far more acceptable than learning that one was mentally deranged. Nervous diseases were not supposed to be part of institutional psychiatry. In the last 3 decades of the 19th Century, numerous private « nervous » clinics and sanatoriums were established in Central Europe for well-paying middle- and upper-class patients. These offered a variety of physical treatments such as massages, rest cures, and various other therapies (including electro-, light, hydro-, and dietary therapies). Although they would never advertise this, many of these establishments also admitted psychiatric patients, as long as they were controllable and kept quiet.

Krafft-Ebing had an active role in this expansion of psychiatric care. Along with his clinical work, he developed a private practice, and, in 1886, he founded the sanatorium Mariagrün in a suburb of Graz for an exclusive, wealthy « clientèle » suffering from a variety of psycho-somatic complaints and relatively mild nervous disorders, especially neurasthenia. Nervous diseases not only referred to somatic disorders of the central and peripheral nervous system, but also to neurosis, « nervousness », or « weak » and « tired » nerves.

Publishing scientific as well as popular works on neurasthenia, Krafft-Ebing played an important part in the introduction of this new and fashionable, but also rather vague disease category in Central Europe. Neurasthenia, conceptualized as an exhaustion of the energy of the central nervous system, had been coined as a clinical entity by the American neurologist George M. Beard (1839-1883) in 1869, and his main-works on the subject were translated into German in the early 1880's. The explanation of neurasthenia resembled the energy model that also defined the understanding of non-procreative sexual activities. It was widely believed that the supply of vital force in humans was finite and that an over-burdening of the mental faculties would tax the body in other processes. According to Beard

and other doctors, the over-expenditure of nervous energy was caused by the demands of modern urbanized society in which an increasing proportion of the population was engaged in sedentary brain-work rather than supposedly healthy physical labour. Krafft-Ebing also explained neurasthenia in terms of a disturbance of the balance between the accumulation and the expenditure of nerve force.

Neurasthenia was posited as a functional nervous disease, and it occupied a broad border-land between mental health and insanity. Krafft-Ebing diagnosed many of his private patients as suffering from neurasthenia ; their treatment was important for the prevention of more serious nervous and mental disorders, he maintained, because these could emerge from affected nerves. These patients were not (yet) insane and should not be hospitalized in asylums but treated in other (semio-) medical institutions. In the commercial brochure, Krafft-Ebing published together with Anton Stiehl and his former assistant Hugo Gugl, who were in charge of Mariagrün, the sanatorium was advertised as a comfortable place to stay, « far removed from the hassles of the world » for « all those fellow men who have been shaken in their nervous powers by the pressures of life » . They explicitly stressed that « mentally disturbed patients » were excluded. Most of the middle- and upper-class patients treated between 1887 and 1891 in Mariagrün were diagnosed with neurasthenia (nearly 60 %) , followed by hysteria (nearly 25 %) , morphinism (morphine addiction ; nearly 10 %) , and spinal disease (about 5 %) . They were offered a peaceful and pleasant environment, rest cures, copious diets, facilities for entertainment, physical therapies such as massages, and a variety of different baths. Implicitly, these well-paying patients were permitted to be demanding with the staff. Whereas in asylums and clinical wards Krafft-Ebing mainly treated lower-class patients with more or less serious mental derangements, the sanatorium as well as his private practice catered to men and women from the higher-ranks of society for whom hospitalization was not desirable. Among them, were several members of the German, Austrian, and Hungarian aristocracy and other wealthy patients from all over Europe ; they provided Krafft-Ebing the reputation of a « society doctor » . Although he also advocated the establishment of public institutions for nervous patients of the lower-classes, he must have been clear-minded enough to see that here was a profitable market to be exploited. This « clientèle » was not only more interesting and more rewarding than the generally poor asylum population, but it also gave him the possibility of up-lifting the social prestige of psychiatry.

Krafft-Ebing ventured beyond the asylum and the clinic to seek a new « clientèle » as well as to enlarge the audience for the new medical specialty, not only among medical students and physicians but also among the lay-public. In various ways (in lectures, demonstrations, writings) , he tried to popularize psychiatry. Being a good lecturer and often demonstrating patients, Krafft-Ebing's courses in Vienna attracted a large audience, consisting of medical students as well as others. His contemporaries have characterized his lectures as « showy » , « glamorous » , and « highly-sensational » , as theatre performances rather than academic lectures. In this respect, he resembled the famous French neurologist Jean-Martin Charcot, whose clinical lectures on hysteria in Paris were also public happenings. On occasion, Krafft-Ebing's more or less public activities (such as lectures, spectacular demonstrations of hypnosis, and his treatment of high-placed patients) were covered by the press. Moritz Benedikt (1835-1920) , a professor of electro-therapy in Vienna who disqualified Krafft-Ebing's scientific stature, noted slightly that Krafft-Ebing, dealing with « fashionable » topics like neurasthenia, sexual perversions, and hypnosis, had a fine nose for « worldly success » and was endowed with « journalistic talent » .

Krafft-Ebing also sought to advance the moral authority of his specialty in the wider community. He believed that, as a psychiatrist, he had a moral task to fulfill in society. Especially in the fields of forensic psychiatry and sexual pathology, he posed as an enlightened moral entrepreneur : ignorance and prejudice should make way for a scientific and humanitarian approach. Deeply influenced by his grand-father Mittermaier, who advocated reforms in jurisdiction, punishment, and the prison system, the forensic field had been an incentive for Krafft-Ebing to specialize in psychiatry after his medical studies. Again and again, he insisted that jurisdiction and punishment had to be geared toward a medical diagnosis and that criminals who couldn't be held responsible for their actions should be treated medically rather than being punished. Especially in the field of sexual perversion, he began to take a stand against what he viewed as ignorance and prejudice about moral offenders, whom as a forensic expert he came to know so well. Only those who were aware of the immorality of their actions and who could control their leanings were considered to be responsible and punishable in a legal sense. Stressing the significance of the distinction between immoral perversity and sickly perversion, Krafft-Ebing repeatedly insisted that only professional psychiatrists were qualified to diagnose mental illness in court. Echoing the concept of moral insanity, he pointed-out that acts covered by the law were often behaviours of a pathological nature over which moral offenders had hardly any control. Although individuals who suffered from moral insanity were a danger to society, they should not be considered as criminals but as sick persons, as « step-children of nature » in need of compassion. In a popular lecture on the development of morality, he asserted that it was the task of science to save « moral idiots » who suffered from a defective development of their brain, from scorn :

« Science shows that such moral monsters are step-children of nature, unfortunate creatures, against whom society has to protect itself, to be sure, but who should merely be rendered harmless and who should not be made to suffer for their social incapacity and their sexuality, for which they cannot be held responsible. »

As a member of the Liberal intelligentsia, Krafft-Ebing, although not politically active in a strict sense, generally felt obliged to raise his voice against social evils on behalf of mental and moral health. Together with Max Nordau (1849-1923) , among others, he contributed to a manifesto denouncing anti-Semitism (« Freiheit, Liebe, Menschlichkeit. Ein Manifestes Geistes van hermagenden Zeitgenossen ») published in 1893, in which he denounced the increasing class-antagonisms and ethnic conflicts as a « spiritual epidemic » . He also supported the pacifist movement of Bertha von Suttner (1843-1914) , expressed his aversion to the rising nationalism, and expounded the ideal of an international legal order that would ban War. Addressing a wide non-medical audience from time to time, Krafft-Ebing also revealed himself as a cultural critic. Like many others in « fin-de-siècle » Europe, he believed that mental and nervous diseases were increasing and that these were typical for modern industrialized and urbanized society. At the same time, he took a strong stand against the widespread distrust of natural science. When asked to give a lecture on the history of the plague in Vienna for the « Volksbildungsverein » , he dealt with the panic that had broken-out after 3 people involved in laboratory experiments with animals involving the plague had been infected and died. Criticism of science was also voiced in the Austrian parliament. Krafft-Ebing, however, pleaded for scientific research even though certain risks could not be ruled-out ; laboratory experimentation, he argued, was the only way to suppress this contagious disease that had claimed thousands of lives in the past.

Although Krafft-Ebing was at the apex of his career while in Vienna, he never felt at home in this city as he had

earlier in Graz. The academic climate in Vienna was spoiled by power struggles and intrigues, and Krafft-Ebing, not one to make enemies easily, was engaged in an up-hill struggle for years. Notwithstanding his aversion to divisions and dissension, he seems to have antagonized some of his colleagues in the medical faculty as well as some government officials. Partly due to his out-spoken views on forensic issues and also on sexual perversions (views that were often considered too lenient) , he was passed-over for a position on Austria's Supreme Medical Council. At the end of the 19th Century, forensic experts were increasingly emphasizing the extent to which mentally disturbed defendants posed a danger to society instead of pointing to illness as an extenuating circumstance.

In a letter to a friend, written early in 1894, Krafft-Ebing expressed his frustration with Vienna as well as with the clinic and hospital where he practiced. He complained bitterly about :

« Vienna with its soot, dust, wind, lack of walks for me and my family, its miserable clinic which sneers at every human feeling and the bureaucratic spirit which rules the hospital, not to mention the Jewishness with which one is confronted everywhere. For the next 10 years, there is no hope for the clinics here. Not only money, but also many other things are lacking. One's feeling and fair aspiration have to be blunted to endure the miserable conditions of my clinic, the stain on Vienna. Ethical sacrifices are the most difficult to make, for one sacrifices a large part of one's own moral substance. »

Weighed-down by many time-consuming administrative duties, badly equipped wards, and high-numbers of incurable patients, Krafft-Ebing retired early in 1902, at the age of 61. After celebrating his 30th anniversary as a professor of psychiatry at the University of Vienna, he returned to Graz to devote himself to writing and his work for the sanatorium. However, his lifestyle had never been a healthy one : he was over-weight and over-worked, always making long hours late at night, while drinking large amounts of black coffee. During his last term at the University of Vienna, he suffered from chronic pains due to migraine and neuralgia. All this had taken its toll over the years. At the end of the first year of his retirement, Krafft-Ebing died at the age of 62. Just before his death, he managed to re-edit the 12th edition of « *Psydiopathia Sexualis* » and the 7th edition of his psychiatric text-book. He also completed a substantial monograph on menstrual psychosis.

In his obituaries, written by close friends, students, and colleagues, Krafft-Ebing is depicted as a serious, hard-working man with a strong sense of duty. All noted his aristocratic appearance and complaisant character. Obviously, he strongly believed in good manners and bourgeois respectability, and, in his association with other scholars, he was very diplomatic.

As his friend Heinrich Schüle wrote :

« He did not easily open himself up to others and associate with people ; he was formal and reserved by nature. »

He was attacked several times, but, unlike many of his colleagues, he tried to avoid personal polemic. Apparently, Krafft-Ebing was not able to cope with the highly-competitive academic climate and the ruthless plotting and scheming

by some of his colleagues. Moreover, his successor Julius Wagner-Jauregg clearly suggested that Krafft-Ebing's complaisance bordered on the naive :

« He was extremely dignified by nature, and this was not always to his advantage. He was very peace-loving. In his entire life, he never wrote a polemic article and, in his professional as well as in his private life, he avoided any controversy or fight. He was perfectly honest, without any distrust. He did not even harbor the degree of suspicion which is part of the common insight into human nature and his goodness was often taken advantage of. »

At the same time, he had few close friends ; as a dedicated father to his family, he seems to have confined all intimacy to his wife (since 1874, he was married to Marie Louise Kissling - 1846-1903) and their 3 children. Although he was often praised for his kindness toward his students and patients, one cannot escape the impression that he was rather distant, reticent, even stiff and uncreatively formal - an impression that is reinforced by the arid style of his writings. There may be some truth in Emil Kræpelin's characterization of Krafft-Ebing. Kræpelin, who visited Krafft-Ebing in Graz in the summer of 1888 (right after meeting the flamboyant and impulsive Theodor Meynert) , wrote about him in his memoirs :

« A bigger contrast than that between him and Meynert is hardly possible. He was well-educated and, without doubt, very experienced, but, in general, he came across as an unimaginative, almost parochial man. His views were not surprising at all and although their sophistication was obvious, they did not attest to a superior intelligence. He told me that he often finished his book manuscripts long before the publisher's dead-line, and this struck me as very characteristic of the man ; he was orderly and systematic, but without special flair. »

### Graz : Feldhof Sanatorium

Doctor Richard von Krafft-Ebing, who following his dissertation had published numerous articles and some monographs, was one of those psychiatrists hoping to find a position at a university. In the 1869 annual-report of the local Medical Officer of Health in Baden, he was characterized as « an ambitious man thoroughly educated in the sciences » and as someone who « takes a great interest in forensic medicine and psychiatry and hopes one day to lecture on these subjects at a university » . Just when Krafft-Ebing was applying at the University of Leipzig in 1872, he was nominated adjunct professor of psychiatry at the University of Straßburg. Straßburg had been conquered from France in the Franco-Prussian War, and the German authorities attempted to turn this university into a showcase of German science. However, because of the poor clinical and teaching facilities, and perhaps also because Krafft-Ebing (who admired French culture and science) disagreed with the highly-nationalist Prussian policies, he left Straßburg within a year to become medical superintendent of « Feldhof » , the newly-established mental asylum of the Austrian province of Styria, situated a few miles from Graz. This position comprised a professorship in psychiatry at the University of Graz as well.

Upon his arrival in Graz, Krafft-Ebing's professional « élan » was again severely challenged. As an adjunct professor, his position in the university's medical faculty was weak. Moreover, teaching psychiatry to medical students proved no easy task. Krafft-Ebing felt that medical students should be exposed to both psychiatric theory and clinical practice. Clinical teaching in « Feldhof » was inconvenient for several reasons : the asylum was located outside of town, quite a distance from the university ; there were only chronic patients, who could hardly be cured ; and he faced serious internal opposition to using patients in his teaching because others felt that the presence of strangers could upset them and aggravate their illness, as would be the risk of public examinations and demonstrations of their cases. Apart from teaching facilities in the asylum, Krafft-Ebing needed a psychiatric clinic at the university, so that he could demonstrate patients to his students, preferably « fresh and curable cases » , as he phrased it in a letter to the provincial administration. Much to his disappointment, he was only granted a small observation ward.

There were substantial differences between the asylum in Illenau and the large and over-crowded asylum in « Feldhof » . Designed for 320 patients, it held 400 in 1879, Krafft-Ebing reported, and, 3 years later, there were 516 inmates. Whereas Illenau's medical staff could work in relative independence of government interference, « Feldhof » directly fell under the Department of Health in Vienna and the provincial government of Styria, which in the asylum was represented by a non-medical administrator. Although Krafft-Ebing insisted that the management of asylum should be in medical hands, as medical director, he continued to be dependent on government officials who often applied non-

medical criteria for the admission of patients (1881) . In « Feldhof » , he was faced with generally poor, uneducated, chronic, and sometimes violent patients who were difficult to treat and who included criminals suffering from mental derangements.

In a very critical account of the conditions in which the insane lived in Styria, published as a brochure in 1879, Krafft-Ebing presented a dismal picture of the asylum. After expressing his indignation about the inhuman treatment the insane received from their relatives outside the asylum, he asserted not only that « Feldhof » was too small to admit all patients from Styria, but also that it had not lived-up to expectations. Therapeutic facilities were lacking, the staff was forced to resort to outdated methods like restraint and isolation cells, and the physical health of the patients left much to be desired. All hope of curing patients had vanished, Krafft-Ebing continued : the wards were filled with numerous restless and raving patients, and only 20 % of those admitted to « Feldhof » could look forward to an improvement of their condition. Many patients stayed-on in the asylum until their, often premature, death. In such an institution, psychiatry had become more akin to routine custodial care than to a gratifying professional and scientific calling. Krafft-Ebing also complained about the bad location of the asylum and its poor architectural structure, which was unsuited for its medical purpose.

Leaving aside whether or not public opinion is right in claiming that a lunatic asylum should never have been built on this place outside Graz (exposed to storms as well as the heat of the sun, with poor connecting roads to the town, and without a park) , it cannot be denied from a technical point of view that the very simple architectural design of this asylum might, indeed, facilitate the care of massive numbers of chronic, mostly incurable patients ; yet is hardly appropriate for a hospital with the aim to cure people.

The best solution, Krafft-Ebing concluded, would be the construction of a new mental hospital in Graz, which should include a university-clinic and admit patients on a voluntary basis as well. Whereas admission to an asylum was subject to legal regulations and usually involved time-consuming bureaucratic procedures, in clinics only medical criteria would be applied.

Krafft-Ebing's efforts to reform « Feldhof » failed. Disillusioned with the prospects of a large public asylum, Krafft-Ebing withdrew from asylum management and turned his full-attention to the university. Since 1874, he had been in charge of a small clinical ward for the observation of psychiatric patients in the old mental asylum of Graz. What he wanted was a larger psychiatric and nervous clinic within the general hospital of the university, close to the other medical departments and dedicated exclusively to the medical treatment of potentially curable patients. He felt that it was important that this clinic admitted patients whom he would be allowed to use as illustration material in lectures for medical students who did not specialize in psychiatry. As prospective general practitioners, these students should be trained in the early diagnosis of mental illness. With an eye to his teaching, research, and writing, as well as to being able to design effective methods of treatment, Krafft-Ebing needed a wider variety and a higher turn-over of more acute patients than the asylum could provide for. What he wanted was, as he put it, good « usable patient and material » . This was especially important for demonstrations so as to make his lectures more concrete and attractive for medical students, for whom courses in psychiatry were not compulsory, and to convince a non-medical audience of the social importance of psychiatry. Apparently, he presented many patients in his lectures and courses ; in 1890, he

reported that to this end he had called upon some 3,000 of them in the previous 17 years.

After his resignation as medical superintendent of « Feldhof » in 1880, Krafft-Ebing focused his activities on teaching and research. He had already established a reputation in the academic world with a series of publications on various subjects.

...

Zu dieser Zeit bereits auf eine stattliche Anzahl von wissenschaftlichen Publikationen zurückblickend, war Doktor Richard von Krafft-Ebing bestrebt, eine akademische Laufbahn zu ergreifen. Nach einer Probevorlesung in Leipzig unter dem Dekan der medizinischen Fakultät Wunderlich war eine Entscheidung des Professorenkollegiums über die Bewilligung seiner Habilitation bereits zu erwarten. Jedoch am 13. Mai 1872 konnte von Krafft-Ebing nach der Angelobung seine psychiatrische Klinik in Straßburg eröffnen.

Nach einer einjährigen Gastrolle an der damals neu errichteten Psychiatrischen Klinik der Universität Straßburg (die Universitätsklinik bestand aus zwei Betten in einem Zimmer für Männer, einem weiteren Zweibettzimmer für Frauen und zwei Räumen für die Leitung der Klinik) brauchte der inzwischen zweiunddreißig Jahre alte Universitätsprofessor diese Beschränkungen nur kurze Zeit hinzunehmen.

Durch Vermittlung seines Lehrers Roller wurde ihm 1873 die Direktion der soeben neu errichteten steiermärkischen Landesirrenanstalt Feldhof bei Graz und gleichzeitig der Lehrstuhl für Psychiatrie an der Grazer Universität übertragen.

Im Jahr darauf folgte ihm dorthin als seine Gattin eine Landsfrau, Maria Luise Kißling (1846-1903) aus Baden-Baden.

Am 22. Mai 1874 eröffnete er die Klinik in Graz und leitete diese bis zum Jahre 1880. Nach jahrelangen Bemühungen erreichte er schließlich, daß er von den Belastungen der Doppelstellung in der Weise enthoben wurde, daß er die Verwaltung der Anstalt in Feldhof abgeben konnte. Unter entsprechenden Adaptierungen an der Klinik und seiner Ernennung zum Ordinarius 1885 war er ausschließlich Professor für Psychiatrie.

...

Es werden Menschen mit psychischen, psychosomatischen und neurologischen Erkrankungen aus der gesamten Steiermark sowie aus dem südlichen Burgenland ambulant und stationär behandelt, für die rund 780 Betten zur Verfügung stehen.

Die ursprünglich für 460 Patienten ausgelegte, 2 Weltkriege überdauernde und bis heute bestehende Krankenanstalt, zwischenzeitig mit mehreren Zubauten und der Einbeziehung mehrerer Filialen erweitert, ist Anfang des 21. Jahrhunderts ein großer Spitalkomplex mit mehreren Fachbereichen (Departements) .

Im Jahr 1839 beschloß die Landesbehörde des Kronlandes Steiermark, den Neubau einer sogenannten « Irrenanstalt »

in Graz bei der zuständigen Hofkanzlei in Wien anzuregen. Dieses sollte als Ersatz für ein bestehendes Irrenhaus für psychisch Kranke dienen, welches 1788 unter Förderung von Kaiser Josef II. gleichzeitig mit dem Allgemeinen Krankenhaus in Graz in der Paulustorgasse im aufgehobenen Kapuzinerkloster entstanden war. 1840 mit der Planung begonnen, wurde 1863 die Ausführung eines dem Stand der damaligen medizinischen Wissenschaft entsprechenden Neubaus einer Landesirrenanstalt für die Steiermark beschlossen. Durch den darauf erfolgten Ankauf des Feldhofes, einem Gutshof nächst Straßgang bei Graz mit Wirtschaftsgebäude und ausgedehnten landwirtschaftlichen Nutzflächen, wurde ein geeigneter Standort gefunden.

Nach dem Bauplan (1868) und der Grundsteinlegung im Jahr 1870 konnte die neue Landesirrenanstalt am 26. Dezember 1872 ihrer Bestimmung übergeben werden, deren I. Direktor der Professor der Universität Graz, Johann Nepomuk Czermak, wurde. Im Mai 1873 wurde dem zuvor in Straßburg tätigen Psychiater Richard von Krafft-Ebing die Anstaltsleitung übertragen. Am 22. Mai 1874 ging dazu die psychiatrische Klinik am Feldhof in Betrieb und Freiherr von Krafft-Ebing trat als Primarius der Universität Graz das Lehramt der Psychiatrie an. Mit Oktober 1880 gab er die Funktion als Direktor der Landesirrenanstalt auf, um sich auf Lehre und Forschung (1885 erfolgte seine Ernennung zum Ordinarius) zu konzentrieren. Sein Nachfolger wurde Julius Wagner-Jauregg (1857-1940) .

Steiermärkische « Landes-Irren-Heil- und Pflegeanstalt » Feldhof.

Gründung/Eröffnung : 1872-1873.

Erweiterung/Adaptierung : 1876, 1888, 1894, 1899, 1907, 1908-1909.

Anlage : Korridorsystem und 12 Pavillons (1896) .

Bettenkapazität : 402 (1896) ; 1262 (1910) ; 1800 (1937) .

Personalstand : 5 Ärzte, 8 Beamte, 127 Pflegepersonal, 48 Hauspersonal (1896) ; 7 Ärzte, 10 Beamte, 205 Pflegepersonen (1910) ; 10 Ärzte und 1 Ärztin, 277 Pflegepersonal (1937) .

Verpflegskosten pro Person und Tag : 43 Kreuzer (1896) ; 3 Verpflegsklassen 1,80-8 Kronen (1910) ; 3 Verpflegsklassen (1937) .

### Kinder als « Euthanasie » -Opfer im einstigen Feldhof

Unter dem ärztlichen Leiter Oskar Begusch und seinem Nachfolger Ernst Sorger wurden circa 1.500 Patienten der NS-Tötungsanstalt Hartheim zugeführt. Rudolf Lonauer schreibt von Rückständen, die er noch in der Zwischenanstalt Niedernhart in Linz hat, und Begusch von Überbelag, den er mittels Eisenbahntransport loswerden will. Auch Heinrich Wolfer war von 1938 bis 1940 dort Assistenzarzt.

Die gezielte Tötung von Kindern und Jugendlichen mit Behinderung durch das NS-Regime gilt als eines der dunkelsten

Kapitel der Medizingeschichte. Hunderte Kinder wurden im damals so genannten Feldhof in Graz « euthanasiert ». In Graz fand dazu am Freitag ein Gedenksymposium statt.

Der ehemalige Feldhof in Graz-Puntigam, heute die Landesnervenklinik Sigmund Freud, war während der Zeit der Nationalsozialisten für viele Kinder und Jugendliche die letzte Station. Im Feldhof gab es eine « Kinderfachabteilung ». Kinder und Jugendliche mit einer Behinderung wurden hier eingewiesen und begutachtet, schilderte der deutsche Historiker, Thomas Ölschläger, der sich seit Jahren mit diesem Thema beschäftigt, bei dem Gedenksymposium in Graz.

### **Gutachter entschieden über Leben oder Tod :**

Das im Feldhof diagnostizierte Krankheitsbild sei direkt der Kanzlei des Führers Adolf Hitler in Berlin gemeldet worden, so Ölschläger. Mehrere Gutachter entschieden, ob ein Kind getötet werden konnte oder nicht. Im Grazer Feldhof fanden 270 Kinder und Jugendliche den Tod. Die Tötungen wurden mittels Verabreichung von Barbituraten und Schlafmitteln in Überdosierung durchgeführt. « Das war keine Ad-hoc-Tötung, es wurde sukzessiv vorgenommen, damit es nicht so auffiel », sagte der Historiker.

### **In nassen Kleidern bei offenem Fenster verhungert :**

Nicht alle Kinder wurden auf diese Weise ermordet, zahlreiche Kinder habe man auch einfach verhungern lassen, sagte Rainer Danzinger, Facharzt für Psychiatrie und Organisator des Symposiums :

« Zum Teil hat man sie einfach sterben lassen durch Unterernährung, bei offenem Fenster mit nasser Kleidung liegen gelassen, das ist aus den Krankengeschichten erkennbar, wie die Kinder immer weniger spielen, immer stiller werden, und dann sind sie plötzlich tot. »

### **Der Grazer Feldhof zur NS-Zeit :**

Während der NS-Herrschaft wurden auch in Graz im Rahmen der « T-4-Aktion » Erwachsene und Kinder mit einer Behinderung eingeliefert. Insgesamt schickten vier verantwortliche Grazer Ärzte bis Kriegsende mehr als 1.000 Patienten im Feldhof in Graz-Puntigam in den Tod.

### **Vorfälle blieben jahrelang geheim :**

Trotz Dutzender Mitwisser wurde nach dem Ende des 2. Weltkrieges nur ein Arzt des Feldhofs angeklagt. Außerdem sei dieses dunkle Kapitel jahrelang vertuscht worden, weil nach Kriegsende zahlreiche belastende Krankengeschichten verschwunden seien, so die Organisatoren des Symposiums. Mit dem Symposium am Freitag wollte man die Beteiligung der Grazer Ärzteschaft an Patientenermordungen aufarbeiten, aber auch eine Brücke in die Gegenwart schlagen, betonte Danzinger.

Aus der Sicht Danzingers geht es auch maßgeblich um die Bedeutung der Trennung der Patienten, und zwar in solche,

die die teuren Leistungen der Medizin bekommen, und jene, für die es sich nicht mehr auszahlt. Hier, so Danzinger, müsse eine Brücke zwischen der Vergangenheit und der Gegenwart geschlagen werden.

#### **Buch zu « Euthanasie » -Verbrechen in der Steiermark :**

Mit dem Gedenksymposium am Grazer LKH sollte dieser jahrzehntelange Mantel des Schweigens endgültig gelüftet werden - im März erscheint dazu auch ein Buch, das unter dem Titel « Schattenseiten » bisher verleugnete « Euthanasie » -Verbrechen in der Steiermark behandelt.

#### **Mahler and « St. Vitus' Dance »**

It is said that Gustav Mahler had a twitching leg. When considering this characteristic, we already adduced the theory that this tic was a throw-back to a childhood illness, chorea minor, more popularly known as « St. Vitus' Dance » . If Mahler did, indeed, suffer from this illness as a child, then, it is not unlikely that his later mitral valve defect remained as a consequence, albeit undetected, a diagnosis that has repeatedly been proposed by writers on the subject. The problem is that the evidence that Mahler suffered from this particular type of chorea is so slender that we simply cannot be certain : in short, the connection between his twitching leg and a childhood chorea is impossible to prove. In the case of a person as highly-strung as Mahler, we may simply be looking at a nervous tic that he was not always able to control. In much the same way, it was only with difficulty that he was able to stop biting his fingernails at moments of nervous tension. This may or may not have been the case. Whatever the answer, it is likely that Mahler's mitral stenosis was the fatal consequence of a rheumatic illness or similar disease, and when we examine the frequency of Mahler's generally severe attacks of tonsillitis, then, the link becomes more than likely : his striking susceptibility to this complex of symptoms may more plausibly be seen as the starting-point for his final fatal illness than any congenitally weak heart.

...

Sydenham's chorea (SC) or chorea minor (historically referred to as « St. Vitus' Dance ») is a disorder characterized by rapid, uncoordinated jerking movements primarily affecting the face, hands and feet. Sydenham's chorea results from childhood infection with Group A beta-hæmolytic Streptococcus and is reported to occur in 20 to 30 % of patients with acute rheumatic fever (ARF) . The disease is usually latent, occurring-up to 6 months after the acute infection, but may occasionally be the presenting symptom of rheumatic fever. Sydenham's chorea is more common in females than males and most patients are children, below 18 years of age. Adult onset of Sydenham's chorea is comparatively rare and the majority of the adult cases are associated with exacerbation of chorea following childhood Sydenham's chorea.

Sydenham's chorea is characterized by the abrupt onset (sometimes within a few hours) of neurologic symptoms, classically chorea, usually affecting all 4 limbs. Other neurologic symptoms include behaviour change, dysarthria, gait disturbance, loss of fine and gross motor control with resultant deterioration of hand-writing, headache, slowed cognition, facial grimacing, fidgetiness and hypotonia. Also, there may be tongue fasciculations (« bag of worms ») and

a « milk sign » , which is a relapsing grip demonstrated by alternate increases and decreases in tension, as if hand-milking.

Non-neurologic manifestations of acute rheumatic fever are carditis, arthritis, erythema marginatum, and subcutaneous nodules.

### Death of Hans Rott's father

**Thursday, 10 February 1876** : Death of the famous Viennese comic actor Carl Mathias Rott (real name : Roth - born in 1807, married in 1862) , Hans Rott's father.

He was crippled in 1874 by a stage-accident (which lead to his death) .

**Friday, 11 February 1876** : An obituary was published in the « Wiener Illustrierten Extrablatt » .

### Conservatory student Otto Mahler

The Bohemian-Austrian musician and composer Otto Mahler was born on 18 June 1873 in Jihlava and died on 6 February 1895 in Vienna. He committed suicide at the age of 21.

The 12th child of Bernhard and Marie Mahler, Otto resembled his elder brother Gustav in displaying a special talent for music at an early age.

Gustav Mahler was already Director of the Royal Opera in Budapest when Otto Mahler entered the Vienna Conservatory in 1888, at the age of 15. Natalie Bauer-Lechner's memoirs describe Otto as having been « liberated from his father's business » by Gustav - who became head of the family, and financially responsible for Otto, upon the deaths of Bernhard and Marie in 1889.

Commentary on Otto's life tends to assert that he was a talented student. He appears to have been less diligent than his brother had been, however. After a few successful terms studying harmony and counterpoint with Anton Bruckner and piano with Ernst Ludwig, his marks declined, and the annual report for his first year shows that for some reason he took no final examination in composition. From that point on, his academic performance was increasingly poor, and, in April 1892, Otto Mahler left the Conservatory without a diploma.

With the help of his brother, Otto was able to find minor musical posts in provincial towns. He seldom stayed long in any place, however. In the autumn of 1893, he took on a position as choir-Master and second conductor of the Leipzig Opera. After moving to a position in Bremen, he returned to Vienna.

### Conservatory student Hans Rott

The Austrian composer and organist Hans Rott was born on 1 August 1858 in Braunhirschengrund, a suburb of Vienna ; and died on 25 June 1884 in Vienna.

Hans Rott's music is little-known today, though he received high-praise in his time from Gustav Mahler and Anton Bruckner.

Hans was left alone to continue his studies at the Vienna Conservatory. Fortunately, both his skill and financial need were recognized and he was excused from paying tuition. While studying, he briefly roomed with Gustav Mahler and Rudolf Krzyzanowski. He studied piano with Leopold Landskron and Josef Dachs, harmony with Hermann Graedener, counterpoint and composition (like Mahler) with Franz Krenn. He studied organ with Anton Bruckner, starting in 1874, and graduating from Bruckner's organ-class in 1877, with honours. Bruckner said that Rott played Bach very well, and even improvised wonderfully (a high-compliment since Bruckner himself was a great improviser) . Rott was also influenced by the works of Richard Wagner, and even attended the very first Bayreuth Festival in 1876. During that time, Rott was also organist at the Piarist church « Maria Treu » in Vienna.

...

At 20, Hans Rott was a phenomenon that no one forgot : Hans looked like King Ludwig II, friends said. And he was highly-talented.

The musicologist Guido Adler even explained :

« He was the most talented of us all. »

This statement was of some significance in a circle that included Hugo Wolf and Gustav Mahler. Many people believed in a great career for Hans Rott, especially his organ teacher at the Vienna Conservatory, Anton Bruckner. His « most outstanding pupil » was a figure with star qualities. Rott succeeded in presenting himself, although having absolutely nothing, in such a way that others admired him. Rain-water had free discharge out of his shoes, as he himself said. But when he came along in his old Havelock, a broad over-coat with a shoulder flange, without sleeves and in his red-and-white striped butcher's trousers, gigantically tall and with a dark-blond lion's mane, shining grey-blue eyes, easy-going and cheerful, then everyone saw a winner in him.

...

Until the summer of 1877, Hans Rott had been inscribed for organ lessons with Anton Bruckner, proved to be talented above average and became his favourite student. The fruits of the lessons become obvious in the programmes of the organ evening concerts of the Conservatory. On February 16, 1876, Hans Rott plays a « Chant et Variations » by Johann Christian Rinck ; on May 3, 1876, the « Adagio » from the Sonata in F minor by Felix Mendelssohn-Bartholdy and the Fugue in C major by Joseph Vockner ; on May 16, 1877, the « Fugue in G major » by Johann Sebastian Bach.

No doubt, the very good relationship between Anton Bruckner and Hans Rott had a beneficial effect on the musical and personal development of the student, although evidence is scarce. But this can be taken for granted : Hans Rott belonged to the « inner circle » of Bruckner disciples. The extreme closeness with the Master was linked with a strict condition : presence at Bruckner's « inn appointments » in the evening was obligatory. The Master's capacity of being an example for his subordinate and devoted students, was, however, not limited to holding one's liquor ; it was essentially grounded upon his musical authority and human qualities.

Hans Rott did for his teacher what he could. Together with his fellow-students Gustav Mahler and Rudolf Krzyzanowski, he wrote a piano-score of the flopped 3rd Symphony - a time-consuming task endangering the urgent preparations for the eminent examination at the Conservatory ! As with the 3rd Symphony, Hans Rott also would have gained a detailed knowledge of the 5th Symphony, then in progress : Bruckner wrote it in those years (1875-1878) during which he taught Hans Rott the organ. The final choral theme which (I am sure) Bruckner had conceived at the organ and played to his students, is promptly echoed in the first movement (bars 188-190) of Hans Rott's Symphony in E major (III. 5) .

...

Hans Rott composed his strongest and most personal works between 1878 and 1880 : the 1st Symphony in E major, a « Pastoral Prelude, the art-song « Der Sanger » (The Singer) and probably also the String Quartet in C minor, sketches for a 2nd Symphony and an Oratorio, « Der Tod » (Death) . When he completed his Symphony in E major in June 1880, he had a premonition of death. People became alien to him.

He wrote to a friend :

« I'd give everything for a dog. An animal could make me happy. I cannot entrust my heart to a person now. »

Hans Rott drafted his last will and testament in 1880, at the age of 22. But at the same time, he vibrated with desire for a future. He applied for the position of music-director in Muhlhausen and wrote to Hans Richter, the « Kapellmeister » of the Vienna Court Opera. Richter was to perform Rott's Symphony in E major with the Philharmonic. Rott was in financially dire straits, but he was in such high-spirits that even he became frightened.

He feared :

« The depth of the plunge will let people know the height of my present life. »

...

**Wednesday, 16 February 1876** : Hans Rott plays an organ composition by Johann Christian Heinrich Rinck (Choral variations) during a lecture evening at the Vienna Conservatory.

It is not known whether Anton Bruckner was present.

**Thursday, 2 March 1876** : The performance of « Lohengrin » under Richard Wagner's personal direction is attended by Hans Rott and Hugo Wolf.

**Wednesday, 3 May 1876** : Hans Rott plays organ works by Felix Mendelssohn (Adagio from the Sonata in F minor) and Josef Vockner (Fuge in C) during the lecture evening's second part (dedicated to « Neue Musik ») of the Vienna Conservatory.

**Wednesday, 21 June 1876** : Hans Rott wins the First Prize in the organ category (first academic year) at the concurs of the Vienna Conservatory (for harp, organ, cello and wind-instruments) with Felix Mendelssohn's Sonata in D minor.

Herman Dahlak wins the First Prize in the same category (second academic year) with Johann Sebastian Bach's Toccata in F major.

The jury was composed of Josef Hellmesberger senior, Johann Peter Gotthard, Doctor Karl Hausleithner, Karl Hoffmann, W. Rabenau, Doctor Josef Standhartner and Doctor J. von Walther.

Hans Rott had been admitted in a composition competition, although he had not completed the obligatory minor subject, « History of music » .

**August 1876** : Hans Rott goes to the Bayreuth Festival with the Vienna academic Wagner Society.

**Tuesday, 9 January 1877** : Hans Rott plays the Prelude and Fugue in D major by Johann Sebastian Bach at the lecture evening of the Vienna Conservatory.

Programmed works :

Songs by Ottokar Wöber.

Duet from « Jessonda » by Louis Spohr (with Miss Marianne Zips) .

Trio from « Zemire und Azor » by Louis Spohr (with Miss Marianne Zips) .

Also, works by :

Heinrich Heine (declamation) , Robert Volkmann, Friedrich von Flotow, Johannes Brahms, Johann Nepomuk Hummel, Robert Franz, Wilhelm Kleinecke junior, Henryk Wieniawsky, Giuseppe Verdi, Ludwig van Beethoven and Matthias Durst (Septet for 7 trumpets performed by students from the class of Adalbert Maschek) .

Participants :

Female music students : Gruschonig, Julius Bernhard Stern, Miss Amalie Stahl, Kruß and Miss Henriette Klunzinger.

Male music students : Winter, Girska, Benkö, Schram, Engel, Ludwig, Zobel, Schönberger, Rosenblum and Mattachich.

**Thursday, 15 February 1877** : Anton Bruckner's organ students participate at the lecture evening of the Vienna Conservatory.

Christian Schröder plays a Prelude and Fugue on BACH by Johann Christian Heinrich Rinck.

Largo for violins, violas, harp and organ (with Hans Rott) by Georg Friedrich Händel.

Also works by :

Felix Mendelssohn, Giacomo Meyerbeer, Henryk Wieniawsky, Franz Liszt, Josef Sucher, Josef Dessauer, Hiller, Matthias Durst, Wilhelm Bernhard Molique and Wolfgang Amadeus Mozart.

Participants :

Female music students : Weintraub, Weichsel, Eisler, Kosch, Okolok and Zamara.

Male music students from the class of Mister Harmsen. Male students from the class of Mister Karl Heißler. Belley, Mattachich, Rosenblum, Schreiber, Wunderer, Rudolf Pichler, Schandara and Kravchowitz.

**Monday, 2 April 1877** : Hans Rott is part of the Beethoven Concert organized by the Vienna academic Wagner Society. Unfortunately, it is cancelled at the last minute.

**Wednesday, 16 May 1877** : Hans Rott plays the fugue in G major for organ by Johann Sebastian Bach (BWV 541 or BWV 550) at the lecture evening of the Vienna Conservatory.

Also, works by :

Georg Muffat, Heinrich Albert, Johann Schop, Reinhard Keiser, Johann Sebastian Bach, Christoph Willibald Gluck, Johann Friedrich Reichardt, Carl Heinrich Graun, Carl Philipp Emanuel Bach, Rust, Johann Adam Hiller, Christian Gottlob Neefe, Wolfgang Amadeus Mozart, Ludwig van Beethoven, Carl Maria von Weber and Franz Schubert.

Participants :

Female music students : Bergmann, Sax, Miss Henriette Klunzinger, Miss Marianne Zips, Holeczek, Henritte Mallovic, Miss

Otilie Neuß, Rosner, Miss Marie Linde, Wolf, Ziffer, Kosch and Geißler.

Male music students : Liebau and Rosenblum.

**Wednesday, 30 May 1877** : Hans Rott plays the fugue in E minor for organ by Johann Sebastian Bach at the lecture evening of the Vienna Conservatory.

Also, works by :

Camille Saint-Saëns, Oskar Franz, Elias Parish Alvars, Robert Schumann, Franz Schubert (played by pianist Franz Zottmann) , Heinrich Röver, Ludwig, Rossi, Frédéric Chopin, Hans Schmitt und Ferdinand Hiller (choir from the class of Mrs. Mathilde Marchesi) .

Participants :

Female music students : Marie Exner, Göstl, Miss Marianne Zips, Miss Amalie Stahl.

Male music students : Rosenblum, Winter, Schram, Schreiber, Fimpel, Liebau, Fischhof and Ludwig.

**Thursday, 14 June 1877** : Anton Bruckner has just received his friend Prelate and « Regens chori » Ignaz P. Traumihler's letter and is dismayed at the news of Josef Seiberl's death. He hopes to be available for St. Florian until August 15, 1877.

Bruckner recommends as successor his Vienna Conservatory student Hans Rott, who is an excellent Johann Sebastian Bach player and improviser who studied counterpoint and composition with Franz Krenn and is currently organist at the Piarist church.

« May I give my warmest recommendation to Hans Rott, a graduate of the Organ School at the Conservatory. The son of the late-actor at the “ Theater an der Wien ”, he is an excellent musician, very pleasant and modest, very “ moral ”, plays Bach outstandingly and improvises astonishingly well for an 18 year old.

You will never find a “ better ” young man. He has been my “ best ” pupil, up to now. He studied Counterpoint with Krenn, who also likes him very much, and also Composition. He is now organist at the Piarist church in “ Josefstadt ” (in Vienna) . He and I would both be very grateful. But I do not want in the least to anticipate your decision. »

Rott did not get the job and, indeed, his short career reads like a series of set-backs. Born in Vienna, in 1858, Hans Rott was, as Bruckner comments, the son of an actor. His mother died early, in 1872, and when his father died 4 years later, Rott was left without any means of support. He was obliged to suspend his studies and take an office job but was able to resume his education when the Vienna Conservatory remitted the fees for the remainder of his course. In June 1876, he graduated from Bruckner's organ-class with distinction, winning the First Prize and a medal.

How different Hans Rott's ranking would be today had he been successful in gaining the position of an organist at the Monastery of St. Florian ! Alas, Bruckner's recommendation was not accepted, and Hans Rott remained unemployed.

**Saturday, 16 June 1877** : Hans Rott wins the First Prize (second academic year) with the performance of 2 movements from Johann Sebastian Bach's Fugue in G minor for organ. :

Hans Rott, « pupil of the second training-class for organ of professor Anton Bruckner » , wins unanimously the First Prize.

Approval signatures of Josef Hellmesberger senior and Leopold Alexander Zellner.

The prize jury : Josef Hellmesberger senior, Doctor Gerhard von Breuning, Rosa Csillag, Friedrich Heßler, Franz Otter, W. Rauch und F. Wilt.

Second 1st prize : Christian Schröder performed 2 movements from Felix Mendelssohn's Sonata in B-flat major.

Also performed : Johann Sebastian Bach's Concerto for harp, organ, cello and wind-instruments.

**Thursday, 12 July 1877** : Student concert of the Vienna Conservatory with the 2nd prize winners under the direction of Josef Hellmesberger senior.

Programme :

Works by Ignaz Brüll (with pianist Henritte Mallovic) ; Dieudonné-Félix Godefroid (with harpist Eduard Schuöcker) ; Carl Maria von Weber (with pianist Marie Exner) ; Johann Sebastian Bach (Toccatà in D minor for organ, played by Hans Rott) ; Joseph Joachim Raff (with pianist Franziska Kuhn) ; Franz Liszt (with pianist Ida Morgenbesser) ; Franz-Josef Haydn (Aria from « The Creation » sung by Miss Henriette Klunzinger) ; Frédéric Chopin (with pianist Anna Huber) .

**Wednesday, 13 March 1878** : Concert by the Vienna academic Choral Society performed at the « Musikverein » Great-Hall. Hans Rott participates as organist.

**Tuesday, 16 April 1878** (Car-Tuesday) : Second extraordinary concert by the « Society of Friends of Music » under the direction of Eduard Kremser.

Works by Carl Philipp Emanuel Bach, Johann Sebastian Bach and Georg Friedrich Händel.

John Leo Löwi and Hans Rott participate with Father Anselmus from Göttweig.

**Saturday, 4 May 1878** : Third private « soirée » of the Vienna academic Wagner Society at the « Bösendorfer-Saal » .

John Leo Löwi, Hans Rott and Rudolf Krzyżanowski are attending. On the programme, among others, lieder by Richard Wagner.

After the concert, they joined Karl Rott and Friedrich Löwi-Løhr at the pub of the « Gasthaus zum Riedhof » Hotel-Restaurant (« Zum Riedhof Wirtshaus »), located at the corner of « Wickenburggasse » Number 15 and « Schlöbelgasse » Number 12 (14), in the District of « Josefstadt » (8th).

**Monday, 6 May 1878** : Letter from Hans Rott to Heinrich Krzyżanowski :

(...) The final examination of the year at the Vienna Conservatory will take place on 27 May 1878. Hans Rott now often goes at the pub of the « Gasthaus zum Riedhof » Hotel-Restaurant. There, he meets Anton Bruckner for the last time. (...)

**Monday, 27 May 1878** : Final examination of the academic year at the Vienna Conservatory. Hans Rott receives a classification grade « One » for his « Prelude to a Suite » which give him the right to participate in a composition competition. Last private « soirée » of the season for the Vienna academic Wagner Society.

Rott now often goes at the « Riedhof » pub. (It is there where he will meet Anton Bruckner for last time.)

The « Zum Riedhof Wirtshaus » is located at the corner of « Wickenburggasse » Number 15 and « Schlöbelgasse » Number 12 (14), in the District of « Josefstadt » (8th).

**Monday, 5 August 1878** : Letter from Hans Rott to his friend Rudolf Krzyżanowski :

One week ago, on the advice of Anton Bruckner, Rott had applied for a job as organist at the monastery of Klosterneuburg.

**Tuesday, 13 August 1878** : Dairy entry by Hans Rott :

« Tuesday, 13th (...) Bruckner (and others ...) Letter (...) »

**Thursday, 26 September 1878** : Letter from Hans Rott to his friends Heinrich and Rudolf Krzyżanowski :

« (...) Tomorrow, I will go to meet Anton Bruckner (...) »

**Thursday, 3 October 1878** : Letter from Hans Rott to his friend Heinrich Krzyżanowski :

(...) Anton Bruckner rushes Hans Rott to contact Rudolf Krzyżanowski at Eile for the piano reduction of the 3rd Symphonie (WAB 103), since music-publisher Theodor Rättig has visited him 5 times ! (...) Bruckner believes in the re-entry of Rudolf Krzyżanowski's into his organ class (...)

**Friday, 13 December 1878** : Diary entry by Hans Rott :

« Friday 13th, Anton Bruckner - finished. » (Work on the 3rd Symphony or 4th Symphony ?)

**Thursday, 19 August 1880** : Hans Rott wrote to his friend John Leo Löwi :

« (...) there is something hypertensive, feverish in my present life that is pushing me to make a decision. »

(He was not the one who decided - it decided.)

### Bruckner stands for Hans Rott

A notable friendship had developed between Anton Bruckner and Hans Rott, his favourite student, causing Bruckner stand with him in the « cheap » ranks, rather than sit at his place of honour, during performances which they attended together.

**Tuesday, 2 July 1878** : Composition competition of the Vienna Conservatory.

Gustav Mahler wins First Prize for the Scherzo from his Piano Quintet and receives his diploma.

Mathilde Kralik received First Prize for her thesis, « Intermezzo from a suite » . Kralik graduated with a diploma in composition and the Silver Society Medal.

Also successful : Rudolf Krzyzanowski with his Adagio from a String Sextet ; Rudolf Pichler with his Prelude and Sarabanda from a Suite ; and Anton Bruckner's organ pupil Fortunato Luzzatto with a Quartet movement for piano.

For its part, Hans Rott received only ridicule and laughter from the jury for the premiere of his « Pastoral Prelude for Orchestra » . Anton Bruckner puts his foot down.

Carl Hrubý relates the event :

« At the end, a scornful laughter was heard from the “ Merker ” chair, sorry, the examiners' table. Thereupon, the otherwise so timid Bruckner rose and cried the flaming words to the “ Merkers ” down there :

“ Do not laugh, gentlemen, of this man you will hear great things yet ! ” »

Which of Hans Rott's works caused the gentlemen's scorn is not mentioned in the account ; most probably, it was the first movement of the young composer's Symphony in E major, a work which, more than 100 years after it had been written, experienced an unexpected renaissance and confronted the general public with the hitherto almost unknown name of « Rott » .

Bruckner was so impressed with his student that he wrote him a glowing recommendation as an organist to St. Florian's monastery.

Hans Rott resigns from his « Josefstadt » organist position after being falsely accused of stealing from the church archives. Unable to get work in Austria, he was obliged to accept a post in the Alsatian town of Mühlhausen (Mulhouse) , part of the German « Reich » , since 1870.

### Rott's sausages

Gustav Mahler mentions a number of anecdotes about Rott's activities as organist at the Piarist Monastery in Vienna, where he played for a pittance in return for free accommodation. Mahler remembered seeing a string of sausages hanging on a nail in his room, like a kind of a wreath. He would eat them, one by one, in order to appease his hunger. He ostensibly lost his post when the monks accused him of stealing their books.

**Thursday, 11 July 1878** : Prize-winners' concert at the Vienna Conservatory, at which Mahler performs his Quintet.

### Bruckner offended by absenteeism

**Saturday, 20 July 1878** : Hans Rott interrupts one letter to his Conservatory friend Rudolf Krzyzanowski, stating that Professor Anton Bruckner had just come to his door to express his consternation at not seeing more of « his favourite student » at the local pub !

« I have just been interrupted by a visit of Professor Bruckner who severely blamed me because of my infrequent visits to the “ Riedhof inn ” ; so, I will go there tonight. »

The « Zum Riedhof Wirtshaus » is located at the corner of « Wickenburggasse » Number 15 and « Schlöbelgasse » Number 12 (14) , in the District of « Josefstadt » (8th) .

### University student Gustav Mahler

**Mid-September 1877** : Gustav Mahler registers at the University of Vienna and takes courses in early Germanic literature, history of Greek art and history of art.

In the fall of 1877, although still a pupil at the Vienna Conservatory, Mahler matriculated to the University of Vienna. The registration forms, called « Nationale » in Austria, for a total of 3 semesters are preserved in the archive of the University. But not a single document, no letter, no « post-facto » account indicates why the developing musician took on a second program of study before completing the Conservatory. Was it the wish of the parents, in whose eyes a university degree had greater weight than the diploma of the Conservatory ? Was it Gustav's own decision because he had recognized the inadequacy of his « Gymnasium » (High-School) education ?

In the biography by Richard Specht that appeared in 1905 one reads :

« This born-musician, during that indeterminate fermentation process of the typical young artist (...) gave-up for a long time the thought of musical creativity and instead thought of becoming a poet. »

Mahler read the text of this small study before it went to press and did not object to this assertion, although both he and Bruno Walter (acting on Mahler's instructions) contested certain other details. Was attendance at the University perchance supposed to aid his development as a poet ? Today, it is difficult to believe in the sincerity of Mahler's vacillation between music and literature, since his surviving poetic works from this period are lacking both in originality and in fluency of expression. Probably the 3 university semesters served above all for the still very impressionable young man to become clearer about his own personality.

### University of Vienna : Winter Semester (1877-1878)

**Monday, 1 October 1877** : Winter Semester begins.

University students of Anton Bruckner at the Faculty of Philosophy :

Karl Dümmler, Martin Einfalt, Max Herbeck, Carl Kreutzer, Gustav Mahler, Josef Mayer, Johann Petkovsek, Richard Plasche, Emil Stöbel, Edmund Ullrich.

Bruckner's university harmony lectures are crossed, again and again, in Mahler's student book probably because Mahler didn't care about Bruckner's confirmation at the end of the semester.

### University of Vienna : Summer Semester (1878)

Anton Bruckner's university students registered at the Faculty of Philosophy :

Karl Dümmler, Martin Einfalt, Joseph Goldhahn, Gustav Mahler, Josef Mayer, Johann Petkovsek.

### Mahler's university years

**Thursday, 25 April 1878** : Second semester at the University of Vienna, where Mahler studies Classical sculpture, history of Dutch painting and history of philosophy.

Mahler's emotional life was subject to extremely powerful mood swings that go far beyond anything that might be thought of as normal in late-pubescence. His acute sensitivity is clear from the few surviving letters that he wrote to 4 of his friends of this period : Josef Steiner, Emil Freund, Albert Spiegler and Anton Krisper.

**August 1878** : Anton Bruckner's pocket calendar entry (unknown hand-writing) :

« Gustav Mahler studying philosophy on “ Wiengasse ” in Jihlava, Moravia. »

**Autumn 1879** : When Mahler met Josephine Poisl, his longing acquired a more concrete sense of direction, and so we now find him writing to Anton Krisper :

« I have just arrived in Vienna and am visiting the places where together we so often shared our joys and sorrows. I am the unhappiest of fortune's favourites ever to have writhed among roses. A new name is now inscribed in my heart alongside yours - true, only whisperingly and blushing, but no less powerfully for that. »

2 months later Mahler wrote to Krisper again :

« Dear friend, I have been quite dreadfully entangled in the delightful fetters of the darling of the gods. (...) For the most part, I have really spent the time wallowing in sweet sufferings in the most varied ways, arising in the mornings with “ Ah ” and going to sleep with “ Oh ” ; dreaming, I have lived, and waking, I have dreamt. (...) In a week, I shall be in Iglau and shall awake from my rosy dreams into a still rosier daylight. »

**Winter 1879-1880** : Third term at the University of Vienna, where Mahler attends courses in archæology, history of ancient philosophy, history of Europe at the time of Napoléon Bonaparte, and Eduard Hanslick's course on the « History of music since the death of Beethoven » .

Mahler constantly change address during this period. Although some of them can no longer be identified, it seems that when he started studying in Vienna, he lived on the « Margarethenstraße » near the « Naschmarkt » , within walking distance of the Conservatory, but from there, he moved to the « Salesianergasse » near the « Schwarzenbergplatz » , a quarter that evidently appealed to him as he later took rooms at the « Auenbruggergasse » , just round the corner from here, during his tenure as director of the Vienna Court Opera. In the **autumn of 1879**, he moved round the corner to the « Rennweg » , a major thoroughfare that leads-out of the town from the « Schwarzenbergplatz » , past the Belvedere Gardens, but, by the end of November, he was once again outside the city, living in one of Vienna's suburbs. When he left, Hugo Wolf moved into the room.

By **February 1880**, Mahler was living at Number 39 on « Windmühlgasse » in the 6th District of Mariahilf, a street that leads off the « Mariahilferstraße » . Within only a matter of weeks, he had moved again, this time to Number 12 « Wipplingerstraße » in an entirely different part of the city, a street that runs past the « Judenplatz » . There were also practical reasons for this restlessness : moving was easy, as pianos could be hired without difficulty, and Mahler's belongings could be packed-away in a few cases, consisting, as they did, in a small amount of cash, books, scores and not many clothes - a young enthusiast like Mahler needed nothing more, a modesty that he retained throughout his life. He was also sensitive to noise. True, he occasionally reduced his fellow-tenants and neighbours to a frenzy of despair by practising loudly on the piano, but he was easily disturbed by others.

And so, we find him writing to his friend Anton Krisper from the « Windmühlgasse » :

« In the next room lives an old maid who stays at her spinet the whole day long. Of course, she does not know that on account of this I am going to have to take-up my walking stick again, like Ahasuerus. Heaven knows whether I shall ever settle-down anywhere. There is always some heedless fellow to drive me from one room to another. »

(It is worth adding that this is the first occurrence of the Ahasuerus motif in Mahler's letters, here, without any reference to the fate of the Jews as a nation.)

There is a clear link here between Mahler's mood of world-weariness and his interest in Richard Wagner's notion of regeneration. (Wagner's essay on « Religion and Art » , in which these ideas, including vegetarianism, play a central role, had just appeared in the October issue of the « Bayreuther Blätter » .) Mahler had felt something similar in the **spring of 1880**, when he wrote to Anton Krisper to complain that the world had affected him for the first time on a « material » level, a remark that relates in part to his feelings of unrequited love but that was valid in other ways too.

**April 1880** : Mahler re-registers at the University of Vienna (in art and history) .

**Tuesday, 25 May 1880** : Unsigned post-card by Anton Bruckner (Vienna) to « Herr Kapellmeister » Gustav Mahler (« Wohlgeboren, Theatergebäude, Hall, Ober-Österreich ») .

**Thursday, 19 August 1880** : Mahler left Bad Hall and returned to Vienna. His agent, Gustav Lewy, had nothing lined-up for the coming season. It is clear from his few surviving letters from this period that Mahler (already suffering from melancholia, not to say depression) was plunged into the depths of despair.

**Autumn 1880 to autumn 1881** : This part of Mahler's life is exceptionally poorly documented.

Virtually all Mahler's letters are addressed to a small circle of adolescent friends, although his contacts with Siegfried Lipiner, with whom he had previously been so close, were noticeably distant at this period. Perhaps, the most eloquent of these letters is the one that he wrote to Emil Freund in Seelau in response to a particularly upsetting piece of news from Freund : on his first visit to Freund's house in Seelau during the **summer of 1878**, he had met a young woman who was related to his host and who fell in love with Mahler - we do not even know her name. According to Freund's later account of the matter, Mahler did not return her feelings but appears, rather, to have been annoyed by the strength of her emotions. Instead, he advised her to beware of unduly passionate feelings, a warning that must have made Mahler seem both precocious and cold.

In spite of the fact that he had just completed « Das klagende Lied » , all 3 events, together with his evidently unrequited love for Josephine Poisl and his inability to decide between the careers of piano virtuoso, conductor and composer, plunged Mahler into a state of deep depression.

**October 1880** : Emil Freund wrote to tell Mahler that the young woman had killed herself out of un-requited love.

Although Mahler himself appears not to have been responsible, the news arrived at a time when he was already feeling profoundly upset as Hans Rott had just been committed to an asylum and the first signs of Anton Krisper's syphilitically induced mental illness had made themselves felt to devastating effect.

**Monday, 1 November 1880** : Mahler's reply to Emil Freund reveals his state of mind in no uncertain terms :

« I have been dealt so many emotional blows in recent weeks that I find it almost impossible to speak to anyone who knew me in happier times. I can counter your news with some that is unfortunately just as upsetting : my friend Hans Rott has gone mad ! (And I'm bound to fear a similar fate for Krisper.) Your lines reached me at the same time as this last piece of news at a time when I myself was in need of comfort [no doubt Mahler is referring to his feelings for Josephine Poisl] . Misery is everywhere. It wears the strangest guises to mock us poor human beings. If you know a single happy person on this earth, tell me his name quickly, before I lose the little courage to face life that I still have.

Anyone who has watched a truly noble and profound individual struggle with the most vapid vulgarity [here, Mahler is clearly referring to Rott] can scarcely suppress a shudder when he thinks of his own poor skin ; today is All Saints' Day - if you'd been here at this time last year, you would know in what mood I welcome this day. Tomorrow will be the first All Souls' Day of my life ! Now, I too have a grave on which to lay a wreath. For the last month, I have been a total vegetarian. The moral impact of this way of life, with its voluntary castigation of the body and resultant lack of material needs, is immense. That I am completely taken by this idea you can infer from the fact that I expect of it no less than the regeneration of the human race. »

### Mahler, the vegetarian

Through the Academic Wagner Society (« Akademische Wagnerverein » , founded in 1873 at the University of Vienna) Gustav Mahler must have obtained a copy of Wagner's essay « Religion and Art » soon after its publication in 1880 (it occupied the entire October 1880 issue of the « Bayreuther Blätter ») .

« It is also true that he belonged to a Vienna Socialist-vegetarian group in 1880. »

(Michael Kennedy. « Mahler » from « The Master Musicians » series, 1974.)

In November of that year, he wrote to a friend :

« For the last month, I have been a strict vegetarian. The moral effects of this way of life are immense, owing to the voluntary subjugation of the flesh and the resulting absence of desires. You will appreciate how full I am of this idea when I tell you that I expect it to work the regeneration of man-kind. I advise you to change over to a natural way of life, with proper nourishment (compost-grown, stone-ground, wholemeal bread) , and you will soon see the fruit of your endeavours. »

The comment about « the regeneration of mankind » is straight-out of Wagner. Mahler took-up a conducting appointment in Olmütz, Moravia, from January 11 to March 17, 1883.

Kurt Blaukopf states :

« At the inn where the singers met in the evening, he invited ridicule by drinking water instead of wine or beer. Refusing meat, he asked for spinach and apples, and loudly declared his allegiance to Richard Wagner's vegetarian principles, throwing in a plea for woollen underwear for good measure. The citizens of this little town were agreed that he was a very queer specimen. Mahler spurned the food they offered him, and went hungry for the sake of his convictions. »

The third movement of Gustav Mahler's 1st Symphony is described as a funeral march based on the children's song « Frère Jacques » (or « Bruder Martin » to Mahler) interrupted at times by carnival type music. Mahler stated that it was based on a wood-cut made by Moritz von Schwind in 1850 called : « The Hunter's Funeral Procession » .

Mahler wrote :

« The external stimulus for this piece of music came to the composer from the parodistic picture, known to all children in Austria, “ The Hunter's Funeral Procession ”, from an old book of children's fairy-tales : the beasts of the forest accompany the dead woodsman's coffin to the grave, with hares carrying a small banner, with a band of Bohemian musicians, in front, and the procession escorted by music-making cats, toads, crows, etc. , with stags, roes, foxes, and other 4 legged and feathered creatures of the forest in comic postures. »

...

« The following season proved a very gloomy one for Mahler. Once more the “ city of music ” could furnish him no greater material consolation than that of a few piano pupils. Evenings, he would attach himself to a group of young, poverty-stricken Wagnerian enthusiasts and over a cup of coffee help wage the abstract battles of the music-dramatist's political and ethical doctrines. Of these sage utterances, one the young musicians adopted unanimously was the proposal to regenerate mankind through strict, vegetarian diet. Perhaps, the cost of meat dishes had as much to do with this resolution as the realization that carnivorous humanity was going to the dogs. (...) Although 2 years had passed since those unforgettable meat-less meetings of the young Wagnerians in Vienna, Mahler was in Olmütz still a vegetarian, claiming bitterly that he went to the restaurant to starve. »

Eventually, Mahler gave-up his vegetarian diet, but a string of health issues meant that he always watched what he ate.

We don't know exactly how handy Mahler was in the kitchen, but we do know that his sister, Justine, baked a killer « Marillenknödel » - a traditional Viennese apricot dumpling dish.

One of Mahler's friends, Ludwig Karpath, recalled the composer's shock at finding-out that Karpath wasn't a fan of « Marillenknödel » :

« What ! Is there a Viennese to whom “ Marillenknödel ” means nothing ? You will come with me right away to eat the heavenly dish. My sister Justi has her own recipe for it, and we will see if you remain indifferent. »

Karpath became an immediate fan of the apricot dumplings.

« In Hamburg, in 1894, his principal literary preoccupations were Dostoyevsky and Schopenhauer. »

It would appear that Mahler was eating meat again by the time he was working in Budapest, 1888-1890. It shouldn't be too surprising if he gave-up vegetarianism out of expediency - he later gave-up being Jewish and converted to Roman Catholicism simply to get the job wanted in Vienna. However, the indication that he was reading Schopenhauer in 1894 shows that he was still interested in the issues that had led Wagner to promote vegetarianism, also influenced by Schopenhauer. It is also clear from biographies that Mahler remained concerned about the relationship between humanity and the natural world for the rest of his life, and this was often reflected in his music. We also have quotes that in later life, having returned to smoking cigars, drinking alcohol and, apparently, eating meat, he did so in very deliberate moderation.

Gustav Mahler didn't skip meals, but he preferred food that was light, simple, thoroughly cooked, and minimally seasoned.

« Its purpose was to satisfy without tempting the appetite or causing any sensation of heaviness. » (Alma Mahler)

« An invalid's diet. » (Alma Mahler)

In 2 separate letters to Alma, Mahler mentions his vegetarianism :

1) « Keubler is also already here. A splendid fellow. After the Saturday evening rehearsal, I'll be joining him for a vegetarian meal. » (10 September 1908)

2) « I'll presumably have to assume the role of “ the flesh pots in the land of Egypt ”. Ouch ! What a metaphor for a husband with vegetarian inclinations ! » (June 1909)

Although Mahler often joined Victor Adler, Siegfried Lipiner and others at a gloomy cellar-restaurant in Vienna to dine on spinach and the like, we find him some years later in Budapest tucking into knucklebone and horseradish sauce.

During his stay in America, Mahler did not consider what was locally named « cheddar » to be real cheese.

(One of Mahler's tics was to peel the label from his beer bottle.)

## Professor Bruckner and Mahler go to lunch

Young Gustav Mahler used often to foregather with Anton Bruckner at midday. Bruckner stood the beer and Mahler had to pay for his own rolls of bread ; but as he generally had no money, he had to make his mid-day meal on beer alone. Bruckner was always surrounded by large numbers of young musicians, to whom he talked with child-like unrestraint. But if there were Jews present, he always (if he had occasion to say anything about Jews) gave them the courtesy title of « the Honourable Israelites » (« die Herren Israeliten ») .

...

Seeing him at lunch-time gnawing a roll with cheese rind, Mahler buys Bruckner a beer to wash it down. Mahler calls Bruckner his « father-in-learning » , over-looking his repeated disparagements of Jewishness. It is the price he has to pay for having a « Mentor » .

...

The short-score of Bruckner's 3rd Symphony finds a music-publisher in Theodor Rättig and, in appreciation of his efforts (as an arranger) , Anton Bruckner presented to Gustav Mahler nothing less than the autograph of the work's second version.

...

Although not actually a pupil of Bruckner, Mahler admires Bruckner's music, attends his lectures, and develops a friendship that will last until Bruckner's death.

In an undated letter to August Göllerich junior, Bruckner's personal biographer, Mahler later clarified his relationship to Bruckner :

« I was never Bruckner's pupil. The general belief that I was is probably attributable to the fact that I was regularly to be seen with Bruckner during my years as a student in Vienna and was always one of his greatest admirers and supporters. Indeed, I believe that my friend Krzyzanowski (working in Weimar at the present) and I were the only ones at that time. This would be in the years 1875 to 1881. The letters he sent me over a number of years are of very little interest. My involvement with him lasted until the completion of his 7th Symphony. I still recall with pleasure how, one beautiful morning during a lecture at the University, he called for me from the lecture-room (much to the astonishment of my colleagues) and played me the marvellous Adagio theme on a very old piano. In spite of the great difference in age between us, Bruckner's invariably happy, youthful, almost child-like disposition and his trusting nature made our relationship a true friendship, and so it was natural that as I gradually came to appreciate and understand the trials and tribulations of his life, my own development as a man and artist could not fail to be influenced by his. Indeed, I feel that I have more right to call myself his " pupil " than most of the others, and I shall always do so with respect and gratitude. »

...

Theodor W. Adorno couched his view of Mahler's relationship to Bruckner in the following way :

« No matter what apparent advantage Bruckner's dark and deep unaffected demeanour had over Mahler's disunity - it is still regarded as clumsiness on Bruckner's part, a somewhat unyielding structure which has no firmer foundation than that the influence of Nietzsche had not yet filtered through to St. Florian. »

...

The age of Romanticism, stressing at times banked emotion as a source of experience, was probably the perfect environment nurturing the aesthetics typical for poems and music of the time. It remains speculative if this elated « sensitivity » compensated for often unfulfilled dreams and wishes.

### Conservatory student Hugo Wolf

Hugo Wolf had a burning thirst for knowledge and a fever for work which made him sometimes forget the necessity for eating and drinking. Financial problems plagued him throughout his life.

Once, he declared :

« I had got used to being hungry. »

...

Hugo Wolf was born in Windischgrätz (now, Slovenj Gradec in Slovenia) , in the Duchy of Styria then a part of the Austrian Empire. An interesting and well-known fact is that Wolf's family origins are at Šentjur, near Celje. His grandfather's surname was « Vouk » ; his mother's ancestors came from Mojstrana. From his maternal side, Hugo Wolf was related to the famous conductor Herbert von Karajan.

Wolf's father was a leather merchant at Slovenj Gradec and an enthusiastic amateur musician. A child prodigy, little Hugo was taught piano and violin by his father beginning at the age of 4. He played the violin in the family orchestra at the age of 5 already. In primary school, he studied piano and music theory with Sebastian Weixler. Self-educated, he studied the scores of world-famous Mæstri. Subjects other than music failed to hold his interest. He was of quick temper from an early age, his contemporaries found him strange, he would drop-out of several secondary schools.

Wolf was dismissed from the first secondary school he attended as being « wholly inadequate » , left another over his difficulties in the compulsory Latin studies, and, after a falling-out with a professor who commented on his « damned music » , quit the last.

Wolf did not like his hometown. A letter to his sister has been preserved, in which he declares « that he opposes Slovene encroachment upon the German stronghold of Celje » . He made a modest living, at first as a piano teacher and an accompanist at dances, later also as a violinist in an orchestra.

Wolf went to the Vienna Conservatory much to the disappointment of his father, who had hoped his son would not try to make his living from music. He often changed friends (with whom he also lodged ; he and Gustav Mahler were lodgers together ! ) . He had tempestuous love-affairs, all of which ended unhappily for him.

Once again, Wolf was dismissed from the Conservatory for « breach of discipline » , although the oft-rebellious student would claim he quit in frustration over the school's conservatism.

After 8 months with his family, Wolf returned to Vienna to teach music. Though his fiery temperament was not ideally suited to teaching, Wolf's musical gifts, as well as his personal charm, earned him attention and patronage. Support of benefactors allowed him to make a living as a composer, and a daughter of one of his greatest benefactors inspired him to write « Vally » (Valentine) Franck, his first love, with whom he was involved for 3 years. During their relationship, hints of his mature style would become evident in his Lieder. Wolf was prone to depression and wide mood swings, which would affect him all through his life. When Franck left him just before his 21st birthday, he was despondent. He returned home, although his family relationships were also strained ; his father was still convinced his son was a ne'er-do-well. His brief and undistinguished tenure as second « Kapellmeister » in Salzburg only reinforced this opinion : Wolf had neither the temperament, the conducting technique nor the affinity for the decidedly non-Wagnerian repertoire to be successful, and, within a year, had again returned to Vienna to teach in much the same circumstances as before.

As a composer, Wolf won recognition with his lieder. Experts hold the view that none of his contemporaries was quite so successful in bringing the text into harmony with the music, not even Franz Schubert was on a par with him. Wolf stressed that, to him, setting a poem to music meant the realization of a poetic idea. In Vienna, he became very popular already in his student days. At the beginning, his role model was Richard Wagner, but he soon drifted away from him in his compositions. He knew personally the leading German composers of his time : Johannes Brahms, Anton Bruckner, Richard Strauß, he had also visited Franz Liszt. In 1884, when he was just 24, he became the music-critic of a somewhat sensation-seeking Vienna weekly. As a critic, he acquired more enemies than friends among musicians, above all because of his disparaging appraisal of Brahms. 10 years later, Gustav Mahler, as the director of the Vienna National Opera, turned down the staging of his only Opera, « Corregidor » . How popular he had become on the German musical scene, despite the lack of success in certain music circles, is attested by the founding of the « Friends of Hugo Wolf » clubs in Berlin, in 1896, and later, also in Stuttgart and Vienna. We may well speculate what else Hugo Wolf could have produced in the sphere of Symphonic, orchestral music, had he not died relatively young, at an age when neither Brahms nor Bruckner had tried their hand at Symphony scores.

Hugo Wolf was not a prolific composer : apart from the numerous lieder, greatly appreciated in German circles, and the only Opera, « Corregidor » , he left few compositions for the piano, the strings or the Symphony Orchestra. Wolf's early piece, a string quartet in D minor, attests that he is an excellent composer, the piece is full of ingenious ideas

and bold solutions as regards harmony, rhythm and counterpoint, but the thought that occurs to the listener is that the composer, scared by the melody and the warmth of the harmony, abandoned them and continued with a more modern idiom, which, however, does not tell us anything. He obviously wanted to demonstrate that he was a musician of the new wave and that he was not continuing the neo-Romantic tradition of Johannes Brahms (of whom he had been so critical) . It was probably for that reason that it was not executed in public during his lifetime.

...

Like Anton Bruckner, Hugo Wolf was a « little man » persecuted for his talent. A strict Catholic upbringing could not shield him from the heady atmosphere of the « Café » Griensteidl, whose luminaries he blithely assailed. His benefactress remained Rosa Mayreder, who, in 1895, persuaded him to compose a score for her libretto « Der Corregidor » . She has described how fussy the tiny man was. Since even the ticking of a watch could unnerve him, he forbade anyone to enter when he was composing. As a guest in the Mayreder house, he was fascinated to hear Lou Andreas-Salomé reminiscing about Friedrich Nietzsche, although she, in turn, proved an unmusical listener.

When told that a friend held him dearer as a person than for his music, the composer protested :

« My works, my music (for these, he must care above all) compared to them my person is entirely secondary ? »

Such was the self-effacement of the man who signed letters to « Frau Mayreder » :

« Your poor little Wolf » (« Dein armer Wölfling ») - an allusion to Siegmund in « Die Walküre » .

### Wolf's struggle with poverty

Hugo Wolf, at about the age of 17, was expelled from the Vienna Conservatory. Resolved as he was to stay in Vienna in order to work-out his musical destiny in his own way, he was now practically thrown upon his own resources. Remittances did indeed come occasionally from his father, but they were small - certainly insufficient to maintain the boy in comfort. To keep the pot boiling, he had to give piano and violin lessons. He had found some good friends in high-places in Vienna musical society, notably Felix Mottl the conductor and Adalbert von Goldschmidt the composer, who assisted him to get a few pupils. The struggle must have been a severe one. It helped to make the boy's character, but probably the mental strain and the physical privations he had to suffer at this time had something to do with the sad collapse of his nervous system in later years. That, he gloried, after his sturdy fashion, in his artistic independence is undoubted ; but in his letters to his parents, he preserves a tone almost of timidity, his object perhaps being, as his friend Edmund Hellmer suggests, not to wound, by too exuberant a display of joy, the father and mother who had so unwillingly given their consent to his residing in Vienna. He speaks only vaguely of his small successes, and makes as little as possible of his more painful experiences, as though dreading the obvious rejoinder that he had only himself to blame for them.

It goes without saying that he was constitutionally unfitted for teaching, or, at any rate, for the kind of teaching he

had to undertake at this time. Boy as he was in years, his musical nature was matured enough to create a wide gulf between himself and his pupils. He was probably impatient beyond the average of teachers at having to spend valuable time in labouring with children at the rudiments of piano technique ; and it is not surprising to learn that he put this side of his duties out of sight as far as was possible, and gave his energies to teaching his pupils the wearisome, but not quite so wearisome, elements of musical theory. We have a record of what his behaviour could be at its worst in the case of a certain « Fräulein G. » , to whom he had to teach the piano in the early 80's. She had apparently little musical talent, and Wolf found it hard to keep his temper with her. His language to her at times is said to have been more in keeping with the situation than with the conventions of polite society. He used to play duets with her, of a variety ranging from Beethoven Symphonies to Lanner Waltzes. When his patience was at an end, he would angrily drive her from the piano, and play by himself long stretches of the music of his predilection, especially that of Hector Berlioz. It ended with his refusing to teach her any longer, and telling her mother it would be the death of him to have anything more to do with so talentless a person. Conduct of this kind, comprehensible as it is to us, would hardly help him either to get new pupils or to keep old ones. His life was undoubtedly a hard one at this time ; while to his poverty, he added a pride that made him resent and reject all offers of assistance in which the charitable intention was too obvious. Only when in the greatest need does he ask his parents to send him money. The loss of even one lesson, we can see, must have been rather serious for him. In April 1878, he tells his father that he has been reading Kuh's « Life of Hebbel » , and, desperate as his own situation is, he congratulates himself on not being quite so badly off as the poet. Miserable as things are, he is thankful they are no worse. Another pupil has left him, the family having gone away for 5 weeks. He is living, he says, on one meal a day (soup, meat, and vegetables at 1 o'clock) and he has plans for saving the expense of eating at a restaurant by making his own wife at home, adding to it a little home-made cake and a piece of ham or sausage. A year later, he writes that his lessons bring him in on an average no more than 36 or 38 Gulden per month - not enough to pay for his lodgings, food, washing, and clothes. He begs his father to come to his support during May and June ; next year, he says, he hopes to be certain of being able to maintain himself. In May, there is the same pitiful story ; he is living on bread-and-butter, and complains bitterly of having no money in his pocket. The next year, 1880, his affairs are still no better. Yet, nothing could shake his determination to remain in Vienna, living in this way as best he could. From Windischgraz, whither he had gone on a short visit to his people, he wrote in terms of great urgency to Mottl. His father, he says, has had business misfortunes and is not in a position now to help him very materially ; Wolf, therefore, begs Mottl to get him some more pupils in Vienna.

In 1881, he seems to have found his pinched and precarious financial condition no longer endurable, and to have sought a theatrical appointment that would at last give him a settled if meagre income.

Year after year of sordid misery went by, until in the winter of 1883-1884, Wolf thought seriously of emigrating to America. A friend who was on his way to the States had made all arrangements, and it was actually settled that Wolf should sail from Bremen ; but, at the last moment, he changed his mind. He seems to have been making innumerable experiments in composition all this time.

**Hugo Wolf : Dates and events**

**Tuesday, 13 March 1860** : Hugo Filipp Jakob Wolf is born in a house on the main-square (at present : Glavni trg Number 40) in Windischgrätz, Duchy of Styria, Austrian Empire (now : Slovenj Gradec, Slovenia) , 70 kilometres southwest of Graz, 4th of 8 children born to Philipp Wolf, leather merchant and amateur musician, and Katharina Nußbaumer, daughter of a forge owner.

**Friday, 30 September 1870** : Hugo Wolf, aged 10, begins piano lessons at the school of the Styrian « Musikverein » (Musical Association) in Graz. His teacher is Johann Buwa.

**Thursday, 4 November 1875** : Hugo Wolf attends a performance of Ludwig van Beethoven's « Fidelio » .

**Wednesday, 17 November 1875** : At 10:45 am, outside the stage-door of the Vienna Opera House, wherein a rehearsal of « Tannhäuser » is in progress, Hugo Wolf, aged 15, meets Richard Wagner, aged 62, for the first time :

« With a truly religious awe, I gazed upon this great Master of Tone ... »

**Monday, 22 November 1875** : Premiere of Richard Wagner's new revision of « Tannhäuser » under the direction of Hans Richter. Hugo Wolf attends the performance.

**Sunday, 12 December 1875** : Richard and Cosima Wagner accompanied by Karl Goldmark attend the third subscription-concert of the season by the Vienna Philharmonic under conductor Hans Richter.

On the programme : Works by Hector Berlioz, Frédéric Chopin and Robert Schumann (2nd Symphony) .

Wagner meets Hugo Wolf after the concert.

**Wednesday, 15 December 1875** : Premiere in Vienna of a new production of « Lohengrin » under the supervision of Richard Wagner.

Hugo Wolf reports that Siegfried Wagner and a daughter of Wagner attended the performance.

**Sunday, 19 December 1875** : Hugo Wolf attends a performance of Carl Maria von Weber's « Der Freischütz » .

**Thursday, 2 March 1876** : A performance of « Lohengrin » under Richard Wagner's personal direction is attended by Hans Rott and Hugo Wolf.

**Sunday, 4 March 1877** : 7th subscription-concert of the season by the Vienna Philharmonic.

On the programme : Works by Robert Schumann, Robert Richmond (3rd Serenade with cellist Reinhold Hummer) and Felix Mendelssohn.

Hugo Wolf is especially inspired by Mendelssohn's « A Midsummer Night's Dream » incidental music.

**Monday, 5 March 1877** : Premiere of Richard Wagner's « Die Walküre » under the direction of Hans Richter.

Hugo Wolf and Felix Mottl want to meet both of them.

**March 1877** : Hugo Wolf is expelled from the Vienna Conservatory.

**Saturday, 10 November 1877** : Hugo Wolf, aged 17, sets-out from his home in Windischgrätz to Vienna in an attempt to support himself as a free musician.

**Sunday, 11 November 1877** : 6h30 - Hugo Wolf, aged 17, enters Vienna.

First subscription-concert of the season by the Vienna Philharmonic under the direction of Hans Richter.

On the programme : works by Robert Schumann (« Genoveva » Overture) ; Johann Sebastian Bach ; Richard Wagner (Prelude and Liebestod from « Tristan und Isolde ») ; Ludwig van Beethoven (5th Symphony) .

Hugo Wolf is in the audience.

**Wednesday, 14 November 1877** : Hugo Wolf attends a performance of Luigi Cherubini's « Wasserträger » .

**Sunday, 25 November 1877** : Second subscription-concert of the season by the Vienna Philharmonic under the direction of Hans Richter.

Premiere of Johann Herbeck's Organ Symphony in D minor.

Also on the programme : works by Felix Mendelssohn, Franz Schubert (8th Symphony) and Henry Litoff.

Hugo Wolf is attending the concert.

**Thursday, 29 November 1877 (?)** : Hugo Wolf and Adalbert von Goldschmidt attend the chamber recital by the Hellmesberger Quartet.

**Saturday, 14 December 1878** : Hugo Wolf attends the performance of Richard Wagner's « Siegfried » .

**Sunday, 15 December 1878** : Hugo Wolf attends the 4th subscription-concert of the season by the Vienna Philharmonic under the direction of Hans Richter.

On the programme : Symphony No. I of Johannes Brahms, and works by Felix Mendelssohn and Wolfgang Amadeus

Mozart (soloists : the Thern brothers) .

**Friday, 14 February 1879** : Viennese premiere of Richard Wagner's « Götterdämmerung » (in an abridged version) .

Alma reports the great enthusiasm of Gustav Mahler, Hugo Wolf and Rudolf Krzyzanowski at this occasion.

**Around 1880** : Hugo Wolf so revered Heinrich von Kleist that he carried his « Penthesilea » as a breviary in the vain hope of setting it to music.

**1880** : Sponsors arranged domiciles for Hugo Wolf, like the one at Mayerling. Wolf lived here a few 100 yards away from what was to be the Crown Prince's hunting-lodge. When just past his teens, he rolled his cigarettes at Mayerling, worked his coffee-machine, ate his vegetarian milk-and-groats, wandered the black-fir woods, bedded in farm-houses a girl named Wally Frank and wrote the « Mausfallsprüchlein » , an exquisite song uncanny in view of Mayerling's future. « Mausfallsprüchlein » sings about a Romantic idyll with a sweet little mouse - which turns sinister as a cat joins the party.

**Sunday, 20 February 1881** : Vienna, « Musikverein Großer-Saal » . Charity Concert to fund the « Deutscher Schulverein » (German School Association) . Hans von Bülow and Hans Richter conduct the « Wiener Philharmoniker » .

Ludwig van Beethoven : Overture from the incidental music « King Stephan » , Opus 117.

Ludwig van Beethoven : Concerto No. 4 in G major for piano and orchestra, Opus 58. Soloist : Hans von Bülow.

Hans von Bülow : « Des Sängers Fluch » (The Minstrel's Curse) , based on the poem by Ludwig Uhland, ballad for large orchestra, Opus 16. The work is conducted by the composer with Hans Richter on viola and soloist Josef Sulzer.

Anton Bruckner : Symphony No. 4 in E-flat major, « Romantic » , 1888 version (**WAB 104**) .

Hugo Wolf probably attended the concert.

**Sunday 13 to Tuesday 15 August 1882** : Hugo Wolf who was a student at the time of the 1882 Bayreuth Festival, still managed to find money for tickets to see « Parsifal » twice.

He emerged overwhelmed :

« Colossal - Wagner's most inspired, sublimest creation. »

**Monday, 16 October 1882** : Hugo Wolf arrives in Bayreuth late in the evening.

**Wednesday, 2 November 1881** : Hugo Wolf, aged 21, enters duties as chorus Master at the « Stadttheater » in

Salzburg.

**Wednesday, 14 February 1883** : Upon hearing the news of Richard Wagner's death, Hugo Wolf, aged 22, plays the funeral march from « Götterdämmerung » , then, spends the rest of the day in a tree crying.

**Friday, 6 April 1883** : Hugo Wolf, aged 23, plays through some of his songs for Franz Liszt, aged 71, now visiting Vienna. The older Master pronounces delight in what he hears.

**Sunday 8 to Tuesday 10 July 1883** : Hugo Wolf, Felix Mottl, Gustav Schönaich hear « Parsifal » in Bayreuth. (Travel grants were given to Robert Erben and Rudolf Bibl for the premiere.)

**Tuesday, 12 February 1884** : Hugo Wolf attends a piano recital of Anton Rubinstein in Vienna.

**Saturday, 13 March 1886** : Hugo Wolf meets Franz Liszt at the house of Adalbert von Goldschmidt in Vienna.

**Sunday, 18 April 1886** (Palm Sunday) : 8th subscription-concert of the season by the Vienna Philharmonic under the direction of Hans Richter. A tumultuous event !

On the programme : works by Franz Liszt, Franz Schubert (8th Symphony) and Ludwig van Beethoven (6th Symphony) .

In the audience : Rosa Papier, Gustav Schönaich, Eduard Hanslick, Anton Bruckner, Johannes Brahms, Hugo Wolf and Friedrich Klose.

**1888** : Because Hugo Wolf had dared to mock Eduard Hanslick and Johannes Brahms, the press ignored the publication of 53 of the « Mörike » songs.

**Friday, 2 March 1888** : Hans Paumgartner's wife, the mezzo-soprano Rosa Papier gives the first public performance of any songs by Hugo Wolf, (aged 27) . She sings « Morgentau » to anonymous words, and « Zur Ruh, zur Ruh ! » to words of Doctor Justinus Kerner.

**Friday, 23 March 1888** : Hugo Wolf plays and sings his « Mörike » settings to the « Wagner Verein » in Vienna. They are impressed.

**Saturday, 15 December 1888** : Ferdinand Jäger, who sang « Parsifal » at Bayreuth, gives an all Hugo Wolf concert accompanied by the composer in the « Bösendorfer-Saal » in Vienna - Wolf's first appearance in that role. Premiered are : « Der Soldat I » (first time in public) and « Seemans Abschied » to words of Joseph von Eichendorff ; « Anakreons Grab » and « Der Rattenfänger » to words of Johann Wolfgang Goethe ; « Der Jäger » (first time in public) , « Der Tambour » (first time in public) , « Fußreise » , and « Peregrina I » to words of Eduard Mörike ; and « Gesellenlied » to words of Robert Reinick. The performance is very successful.

**Wednesday, 22 January 1890** : In the « Münchener Allgemeine Zeitung » , an article by Josef Schalk appears entitled « Neue Lieder, neues Leben » . This will spread the name of Hugo Wolf, aged 29, beyond Vienna for the first time and give him an international fame.

**April 1890** : The 30 year old Hugo Wolf completes the 44 songs of the « Spanisches Liederbuch » (Spanish song-book)

**Thursday, 8 May 1890** : 7 songs for voice and piano by Hugo Wolf are performed for the first time at the « Kleiner Musikvereins-Saal » in Vienna :

« Die Bekehrte » and « Die Spröde » to words of Johann Wolfgang Gøethe ; « Begegnung » and « Frage und Antwort » to words of Eduard Mørike ; « Wer sein holdes Lieb verloren » to anonymous words (translation : Emanuel Geibel) ; « Und schlãfst du, mein Mãdchen » to words of Gil Vicente (translation : Emanuel Geibel) ; and « Elfenlied » to words of William Shakespeare (translation : August Wilhelm Schlegel) .

**Saturday, 21 November 1891** : Incidental-music to Henrik Ibsen's play « Das Fest auf Solhaug » (translation : Emma Klingensfeld) by Hugo Wolf is performed for the first time at the « Kaiserlich-Kønigliche Hof-Burgtheater » in Vienna.

**Thursday, 3 March 1892** : The first « all Wolf » recital in Berlin takes place. It is well-received.

**Saturday, 16 June 1894** : The « Ostdeutsche Rundschau » Number 163, page 1, reports the critic of a concert by Hugo Wolf, in which Anton Bruckner is mentioned.

### Max Graf about Hugo Wolf

Hugo Wolf was one of the most passionate enthusiasts. Although his wonderful « Møricke Lieder » , which now belong to the repertoire of all concert singers, had been published at that time, Wolf still had to live in the outskirts of Vienna as if in exile. A ferocious revolutionary, he was expelled by Vienna's fashionable society which detected in his songs strong traces of the damned Wagnerian poison. In writing the modern chromatic harmonies and expressive declamatory lines of a new musical epoch, he had committed a crime which was punished with the death sentence by the conservative music-critics of Vienna and by conservative musical society. Besides writing modern music, he dared, as music-critic of a weekly, to attack Eduard Hanslick and Brãnnns. Wolf was enthusiastic about the music of Wagner and Liszt, and excited about that of Berlioz. Bruckner was his saint, before whom he knelt. He was furious about the superficial taste of high-society, and stormed like a crusader against the walls of the old music fortress Vienna, swinging the banner of Wagner. He was fanatical, enthusiastic, moody, like all true artists. He was unjust, of course, subjective, but courageous and brave. The conservative music-critics of Vienna who pretended to defend Classical music when they were really defending their own narrow-mindedness, never forgave Wolf the enthusiastic fanaticism of his criticisms. The name Hugo Wolf disappeared from the columns of the Viennese daily papers where musical conservatism had entrenched itself. He was shunned like a leper and had to live outside the pale of a musical society which did not even know his name. He had to be satisfied with the love and admiration of a small group of friends who

recognized his greatness and his genius, and who could feel the delicacy of his soul behind the pricks of his personality. We young musicians, devoted to Wagner, fanatical believers in modern music, who hated the sensual conservatism of Vienna's wealthy society, believed in Hugo Wolf. His songs were new music. The words were filled with a new kind of emotion. A modern, nervous tempo swung through his harmonies. There was a new and fascinating lyrical feeling in his melodies, and more air and atmosphere in them than in other songs. There were new shades and colours which corresponded to those to be found in the impressionistic paintings of those days. Hugo Wolf belonged to us and we belonged to him. There is a secret understanding among young men of the same generation.

(...)

In the « Prater » of Vienna where people, by the hundreds, sat in the many restaurants, or rode on the merry-go-rounds ; where young couples, in love, walked under old chestnut trees, and where on lovely summer evenings the air was filled with music, songs and kisses, in 1902 a new amusement park had been opened. It was called « Venice in Vienna » . A sort of make-believe city had been built of canvas and wood. On water-filled canals, gondolas were manned by gondoliers imported from Venice. They shouted their melodious « Sta-li » and beat the dirty water with their long, black oars, standing on the high stern of the gondola and rocking to and fro. Vienna's best society sat in the restaurants and coffee-houses of the amusement section, or walked among the cheap settings of Gothic palaces, laughing, flirting and throwing « confetti » . Italian music floated seductively from the great open-air theatre, and in all the coffee-houses and restaurants, small groups of Italian singers shook their tambourines and entertained with folk-songs of Venice and Naples.

I had been standing in front of one of the stages, listening to Neapolitan songs, canzonettas and barcarolles, which reminded me of moonlit nights in Naples, of the white-sailed fishing boats heading slowly for Capri, of the wide Gulf of Naples and of Vesuvius. I was so absorbed in reminiscing, that I was not aware of 2 men who stood beside me and listened quite as attentively as myself. One of them was my friend Fritz Eckstein, a manufacturer and world-traveler, a great scholar in philosophy and calculus, a mystic and music-lover, who was serving as a volunteer secretary to Anton Bruckner, and who had the Symphonies of Bruckner and the songs of Hugo Wolf printed at his own expense. (This great man died in Vienna, not long ago, after the Nazis had expelled him from his home where, among books on philosophy and mathematics, piled from floor to ceiling, Hugo Wolf had lived as his guest for a long time.) The other listener was Hugo Wolf. He was extremely pale, and in his eyes a disastrous fire was burning. The approaching catastrophe was already painted in the pallor of that suffering face and in the restlessness of the eyes.

Fritz Eckstein introduced me to Wolf, but a conversation did not start for some time. Wolf remained silent, as if submerged in his thoughts. His glance was stinging, and I was careful not to disturb him, for, to all appearances, he wanted to be left alone with the dark powers in his soul.

Like many great artists, Wolf went from deep depression to excitement and fits of elation. He struggled between melancholy and agitation, and like Beethoven, the greatest musician of this kind, he knew hell and heaven, the deepest abysses and the highest peaks. I was greatly moved when, after Wolf's death, the director of the lunatic asylum where he died, showed me the chart where the physicians of that institution had recorded day-by-day the sufferings and

tortures of his sick mind. This diary of a diseased soul, as it were, proved that even in the changing moods of mental illness there was the same regular cycle of depression and excitement, of shining day and black night, restlessly revolving until his death, as there had been in the happier days of the creative artist. Fritz Eckstein, Hugo Wolf and I, after some fruitless attempts to start a conversation with the silent composer, sat down at a table in one of the coffee-houses and ordered coffee, the smell of which accompanies all phases of life in Vienna. The Italian singers there were singing the world-famous canzonetta, « Funiculi-Funicula » - the rattling rhythms of which had been sung for the first time when Cook opened the cog-railway carrying tourists to the summit of Vesuvius. It seemed as if this melody awakened Wolf out of a deep dream. He became excited, gave the singers money, and had them repeat the tune, which was new to him, again and again. He shouted enthusiastically, « I shall write a Symphony about that melody ! » He was not, of course, accorded the time to write any such Symphony, since he soon became lost in his sickness as in a dark swamp. But somewhat later, the young Richard Strauß used the merry tune in the last movement of his Symphonic-poem, « Aus Italien » , mingling the vivacious rhythms of the « funiculi » with the noises of the streets of Naples.

(...)

Hugo Wolf was, in his imagination, living in sunny Spain when his spirit dipped into darkness. While I was studying his new songs, he was walking under the arcades of the Vienna Opera House, shouting : « I am the new Director of the Opera House ! » Friends tried to calm him, and told him, at last, that he had to drive to the Imperial Castle in order to present himself, as new Director of the Opera, to the Emperor. He consented, and his friends took him to a lunatic asylum.

### Mahler and Wolf

The living Mahler was Wolf's nemesis when they both inhabited the fiercely competitive artistic world of « fin-de-siècle » Vienna. And the dead Mahler still haunts Wolf's reputation now, days before the centenary of Wolf's own death. While Mahler's extraordinary Symphonies fill the largest halls, Wolf's no less extraordinary songs still belong mainly to the connoisseur.

Almost none of this was, or is, Mahler's fault. But Mahler and Wolf made the same career at the same time in the same place. Their lives intersected at many key-moments and their reputations have danced in a kind of extended counterpoint ever since. But it is Mahler who won the prizes, then and now. And that, then and now, is Wolf's tragedy.

Mahler and Wolf were almost exact contemporaries, born just 4 months apart in 1860. They came from similar modest social backgrounds in the provinces of the Austrian Empire - Mahler's in Bohemia ; Wolf's in Styria. Artistically, their lives were both formed by the influence of Richard Wagner.

Their early careers marched in lock-step. Both arrived in Vienna in 1875 and inscribed in the Vienna Conservatory at the precocious age of 15. Both studied harmony in the same class. Mahler lasted longer than the always impatient and disrespectful Wolf but, even after Wolf's expulsion in 1877, the two remained close.

By 1879, Mahler and Wolf were sharing a garret, along with Mahler's friend Rudolf Krzyżanowski, in a classic Viennese « La Bohème » existence. All 3 were Anton Bruckner's pupils at the organ-class of the Vienna Conservatory.

Alma Mahler testified :

« All 3 were very poor and, as musicians, very sensitive to noise. If one had work, the others were reduced to wandering in the streets. »

They wrote their earliest music in one another's company. They scabbled pennies from teaching to attend the Opera together. Mahler and Wolf are even said to have shared a bed, though there is no suggestion of a sexual relationship. But it was probably at around this time that Wolf contracted the syphilis that was eventually to kill him.

Within a year, though, Mahler and Wolf drifted apart. Mahler left Vienna to pursue his conducting career. Wolf stayed, turning to music-criticism for a living. Away from one another, the two each matured as composers. But it was Wolf's songs, rather than Mahler's orchestral works, that were first to win critical acclaim, both in Vienna and beyond. Indeed, by the time Mahler returned to Vienna in 1897 to take-up the most prestigious post in Viennese music, director of the Court Opera, Wolf was probably the better-known composer. But Wolf's composing career was already at an end. His last completed songs date from March 1897, and, although he continued to work on his unfinished Opera « Manuel Venegas » , his body and mind were on the verge of collapse. And it was Mahler who triggered it.

Mahler's appointment to the Opera had fired Wolf's hopes that his Opera « Der Corregidor » would now at last receive a performance of which Wolf was convinced it was worthy. He went to see Mahler to press his case. Their meetings were friendly. Mahler showed some interest, though whether it was as much interest as Wolf immediately assumed is unclear.

What is clear, though, is that Wolf's visit to Mahler in his office at the Opera, in May 1897, was the breaking-point for Wolf's sanity. Seeing the score of Anton Rubinstein's Opera « The Demon » on Mahler's desk, Wolf became angry. He denounced Rubinstein's work. Mahler responded with some critical comments about « Der Corregidor » , and expressed doubts about whether it would be performed in Vienna. This argument was, as Wolf's biographer Frank Walker calls it, « the spark that had kindled a conflagration in his brain and brought on the long threatened insanity » .

### Wolf, the German nationalist

Hugo Wolf's patrons included Sigmund Freud's collaborator, Josef Breuer, Friedrich Eckstein, Adalbert von Goldschmidt, the civil servant, who would later himself become a typographer, Rudolf von Larisch, the conductor Ferdinand Löwe, the musician Natalie Bauer-Lechner and the ethnologist Michael Haberlandt. He did not spare them his German-nationalist mouthings, to which they only luke-warmly responded. Wolf had warmly endorsed Richard Wagner's fanatical campaigns against Jews, Johannes Brahms and eating meat.

Hugo Wolf had warmly endorsed Richard Wagner's fanatical campaigns against Jews, against Johannes Brahms and

against eating meat. Anti-Semitism was stock-in-trade.

He once cried :

« What should one say, when one has been deprived of Wagner's Operas for a whole month and Meyerbeer is played 3 times a week ? Are we in Palestine or in a German city ? »

### Conservatory student Rudolf Krzyżanowski

During Mahler's early years in Vienna, the Krzyżanowski brothers appear to have been his closest friends.

The Austrian conductor and composer Rudolf Krzyżanowski was born on 5 April 1859 in Eger (Cheb) , and died on 20 June 1911 in Graz.

**1872-1876** : Krzyżanowski studied violin, organ, piano and composition at the Vienna Conservatory together with Gustav Mahler. He was a pupil of professor Anton Bruckner and part of professor Franz Krenn's third year composition class.

Rudolf was evidently highly-gifted as a musician, equally talented not only as a violinist and pianist but also as an organist and as a composer.

Together with Friedrich Löhr, Hans Rott and Hugo Wolf, Krzyżanowski was part of the close circle of friends of Gustav Mahler, who studied at the Conservatory from 1875 to 1878.

At the same concert in which Gustav Mahler's prize-winning Scherzo for Piano Quintet was played, an Adagio for String Sextet by Rudolf Krzyżanowski was performed : it too, was awarded a prize.

**Wednesday, 22 December 1875** : Lecture evening at the Vienna Conservatory with performance of a Piano Quintet by Rudolf Krzyżanowski.

**Tuesday, 12 September 1876** : Benefit-concert organized by Gustav Mahler, student at the Vienna Conservatory, with the kind assistance of August Siebert (1856-1938) and Eugen Grunberg (1854-1928) , both members of the Vienna Court Opera Orchestra, and Mahler's Conservatory friend Rudolf Krzyżanowski. The concert is held in the « Kleiner Fest-Saal » of Hotel Čzap, located at Number 15-1696 Zizkova Street (St. Johann's « Platz » Number 50-51) ; now, the « Dělnický dům » (Workers Home) .

The net income will be donated to the local Imperial and Royal « Gymnasium » to provide teaching materials.  
Programm :

Gustav Mahler : Sonata for violin and piano ; Quartet for piano, 2 violins and viola (both works are lost) .

Other works by Rudolf Krzyżanowski, Henri Vieuxtemps, Franz Schubert, Frédéric Chopin, Jean-Delphin Alard.

The soloists : Gustav Mahler (piano) , Eugen Grunberg (1854-1928) (violin) , Rudolf Krzyżanowski (violin) , August Siebert (1856-1938) (violin) .

**Saturday, 9 December 1876** : Rudolf Krzyżanowski and Gustav Mahler gave a concert in Jihlava (Iglau) , at the Hotel Čzap, located at Number 15/1696 Zizkova street (Johann's « Platz » Number 50/51) .

**Sunday, 14 April 1878** (Palm Sunday) : Letter from Hans Rott to Heinrich Krzyżanowski (brother of Rudolf) :

Rudolf Krzyżanowski expresses his irritation with the new « Hunting Scherzo » from Anton Bruckner's 4th Symphony (WAB 104) .

**Tuesday, 16 April 1878** (Holy Tuesday) : Second special « Gesellschaft » concert under the direction of Eduard Kremser. Works by Carl Philipp Emanuel Bach, Johann Sebastian Bach and Georg Friedrich Händel.

In the audience : Hans Rott, his friend John Leo Löwi and Father Anselmus from Göttweig.

**Thursday, 2 May 1878** : Rudolf Krzyżanowski plays an organ fugue by Johann Christian Heinrich Rinck during the evening lecture at the Vienna Conservatory.

After the event, John Leo Löwi, Hans Rott (presumably Rott's half-brother Karl and Friedrich Löwi-Løehr) and Rudolf Krzyżanowski will go to the pub of the « Gasthaus zum Riedhof » Hotel-Restaurant (« Zum Riedhof Wirtshaus ») located at the corner of « Wickenburggasse » Number 15 and « Schlößelgasse » Number 12 (14) , in the District of « Josefstadt » (8th) .

**August 1878** : Anton Bruckner's pocket calendar entry (unknown hand-writing) :

« Rudolf Krzyżanowski, in Karlsbad (Karlovy Vary) . Porcelain store in Kleeblatt. »

**Academic year 1881-1882** : Rudolf Krzyżanowski who acted as piano accompanist for singers left the Vienna Conservatory in the course of the academic year.

**July 1883** : During a holiday trip to the Fichtel mountains and Wundsiedel (birth-place of Jean Paul ; 1763-1825) , Gustav Mahler stayed at the parents' house of his friends Heinrich and Rudolf Krzyżanowski, at Number 460 Provaznicka Street, in Cheb.

Next, Rudolf Krzyżanowski studied at the Prague Conservatory. After leaving the « Conservatorium » , he worked as « Kapellmeister » in Halle-an-der-Saala, Elberfeld, Ljubljana, Hanover, and Munich.

**Monday, 5 May 1884** : Letter from Anton Bruckner (Vienna) to Rudolf Krzyżanowski (Starnberg) :

Anton Bruckner wants to see Rudolf Krzyżanowski during his (planned) long stay in Munich.

**Beginning of August 1884** : We do not know if the meeting in Munich between Anton Bruckner with Rudolf Krzyżanowski materialized.

**Wednesday, 20 July 1887** : Mahler stays with his friend, the archaeologist and philologist Fritz Löhr, in Vienna and Perchtoldsdorf, then, travels via Reichenhall to Innsbruck, where he meets-up with brothers Heinrich and Rudolf Krzyżanowski ; all 3 men then cross the Alps on foot to Lake Starnberg.

**Thursday, 17 May 1888** : Mahler's resignation is accepted by the Leipzig « Neues Stadttheater » ; period of uncertainty ; he travels to Munich, then, stays with Heinrich Krzyżanowski in Starnberg.

**1892-1895** : Rudolf Krzyżanowski succeeded Karl Muck as first « Kapellmeister » at the « Neues Deutsches Theater » (Prague German Theater) . He conducted there the premiere of the Opera « Donna Diana » by Emil von Řezníček on December 16, 1894. In the composer's words written for the book « Künstler plaudern » , the work became not only a great success, but even a world success. And the Overture, which indeed passed into the repertoire of the concert-halls, had a tumultuous story of origin. Initially, that is to say, there was to come from me its Overture, but the manager suggested one day before the premiere, « It is truly unfortunate that this Opera has no Overture - could you not still write one ? » , « I sat-up all night and composed it. I was 24 years old back then ! » Krzyżanowski figures prominently in Řezníček's induction into a professional Society that existed until the end of the Second World War in Prague : the « Gesellschaft zur Förderung deutscher Wissenschaft, Kunst und Literatur » .

**1896-1897** : Rudolf Krzyżanowski became second « Kapellmeister » at the Hamburg « Stadttheater Oper » - next to Gustav Mahler. However, there was a disagreement.

A musical event of major importance in Mahler's Viennese years was his discovery of Richard Wagner's Opera « Götterdämmerung » , which he experienced in the company of 2 close friends, Hugo Wolf and Rudolf Krzyżanowski (Alma Mahler is the source of the well-known story of their expulsion from lodgings as a result of a vigorous performance of the Trio which ends Act II) .

**November 1899** : Rudolf Krzyżanowski performed Gustav Mahler's completion of « Die Drei Pintos » by Carl Maria von Weber.

Krzyżanowski was commissioned with Mahler in preparing the piano-duet version of Anton Bruckner's 3rd Symphony.

**1898-1907** : Rudolf Krzyżanowski was the first « Kapellmeister » of the Court Theater Orchestra in Weimar. There, he would conduct a production of Emil von Řezníček's « Donna Diana » .

With conductor Peter Raabe, who also worked in Weimar, there were disputes about the rankings that led to the dismissal of Krzyzanowski in 1907. His court-case was rejected in 1910.

A possible re-establishment was preceded by his sudden-death in Graz, on 20 June 1911 (only few weeks after Mahler's own death) , as a result of a failed operation.

Rudolf Krzyzanowski was married to soprano Ida Doxat (born in 1867) .

## Works

Piano Quintet, lost (1875) .

String Sextet, lost (1878) .

« Zaroni » , Overture or Symphonic poem for large orchestra, lost (1878) .

Symphony for large orchestra, lost (1878) .

« Elfe » , lied for mezzo-soprano and orchestra (1908) .

« Das Abendgöcklein » , lied, lost.

2 « Schilfflieder » , for voice and piano.

5 Songs, for solo voice and piano (published by Ries & Erler) .

Arrangement for large orchestra of Schubert's « Die Allmacht » , unfinished.

Arrangement of Bruckner's 3rd Symphony for piano 4 hands.

...

His older brother Heinrich Krzyzanowski (1855-1933) was a writer. Both brothers were close friends of Hans Rott and Gustav Mahler.

The Krzyzanowski family came from Eger in Hungary.

Mahler's early friendship with the Krzyzanowski brothers was warm and intimate. He had interests and ambitions in common with Rudolf, and his holiday plans on occasions included both brothers. His correspondence for some years makes frequent reference to Rudolf's career and he was always ready to advise, or use his influence on his friend's

behalf, where such was required. He suggested to his agent, for instance, that Rudolf should fill his post at Kassel when he moved on to Leipzig. Until the 1890's, at least, his letters show that he kept in touch with these companions of his youth. At one stage, Heinrich wrote to Mahler suggesting an Operatic project, but it appears that nothing came of the idea. They did Alpine walking together.

### Conservatory student Julius Korngold

Doctor Julius Leopold Korngold was a controversial figure - Jewish, a conservative figure (who abhorred atonalism and the whole Second Viennese School) , and possessor of an acid-tipped pen in a city rife with intellectual and political ferment and rivalries and an under-current of anti-Semitism, Doctor Korngold made his share of enemies with his influence.

He collaborated with his son Erich Wolfgang on the libretto of the Opera « Die tote Stadt » under joint pseudonym : « Paul Schott » .

The young Julius grew-up in Brno, the capital of Moravia, in a family who was not interested in music. In high-school (« Gymnasium ») , he found his own way in learning about music and literature. His diploma mentioned « excellent » in all fields, and « very well » in « German » . A talented amateur pianist, he took piano lessons and saw the early Operas, Operettas and Plays at the local « Deutsche Theater » .

A frustrated composer, Julius Korngold left Moravia to study part-time (starting with the autumn session of 1878) at the Conservatory of the Society of Friends of Music (« Gesellschaft der Musikfreunde ») with professors Franz Krenn and Anton Bruckner (in music theory and harmony) , but also with director Josef Hellmesberger senior. His fellow-students included Hugo Wolf and Franz Schalk. The cultural life of the Austrian capital offered Korngold the chance to go to the « Hofoper » , the « Musikverein » and the « Burgtheater » .

Korngold's memoirs recall private meetings with Anton Bruckner in a beer-hall after class, where the professor would carry forth a monologue, often to his student's dismay. When Korngold defended Antonín Dvořák's instrumentation, Bruckner proclaimed :

« Paint a pair of sausages green and blue if you like - isn't it still a pair of sausages ? »

(A more elegant version of this same bias against timbre is Gustav Mahler's comment, in a conversation with his brother, that Tchaikovsky's instrumentation in the « Pathétique » is no more substantial than a coloured top that ceases to fascinate, once it is no longer spinning.)

As a young critic and admirer of Johannes Brahms, Korngold had attracted Eduard Hanslick's attention after defending a performance of the 4th Symphony in an essay. Korngold's sympathies are, yet, another example of the false dichotomy history has drawn between Wagnerians and Brahmsians. As a youth, Korngold met with friends, each week, to discuss and analyze Wagner, and his enthusiasm did not wane even as he discovered the music of Brahms.

Korngold befriended the critic and spent time with Brahms during a visit to Vienna. Hanslick was chief music-critic at the most important German-language newspaper « Neue Freie Presse », and Julius became his « protégé » ; being named his assistant by the 1890's (succeeding Theodor Herzl) . Upon Hanslick's death, in 1904, he assumed his post. Now a noted music-critic, reviewer and front-page feuilletons writer, he was regarded as the top critic in Vienna in the early 20th Century, when that city was viewed as the centre of Classical music.

He is most notable for championing the works of Gustav Mahler at a time when many did not think much of him.

### Conservatory student Émile Jaques-Dalcroze

In 1887, Émile Jaques accompanied his father to Vienna and was admitted to the Vienna Conservatory. From 1887 to 1889, he studied organ, piano, composition, harmony and counterpoint with Anton Bruckner, Robert Fuchs and Hermann Grædener. The presence of Jaques-Dalcroze in Bruckner's classroom was short-lived : Bruckner insisted that « der dumme Franzose » (this idiot Frenchmen) study harmony right from the beginning. But the student objected. Bruckner tried to get him expelled from the Conservatory, but the Faculty administration stopped him. The intolerance and authoritarianism of the Upper-Austrian Professor represented the antithesis of Jaques-Dalcroze's freedom and playful nature.

The following episodes occurred in 1887-1888 and are recounted in a biography by his sister.

Émile Jaques-Dalcroze writes in a letter :

« I wish you could have some lessons from Bruckner. You can't imagine how particular and demanding he is. He loses his temper if you hold a note a second longer than necessary. Once you've reached the end of a fugue played to perfection, he makes you start all over again for not having sustained the final pedal-note.

After forcibly knocking you off your stool, he drives you firmly to the door. He is constantly taking snuff and seems unable to cope with the most trifling details of practical life. Before he leaves the classroom, we retie the knot of his cravat for him. »

In the same letter, Émile mentions some Operatic experiences in Vienna :

« I went to hear “ Lohengrin ”, and it fired my enthusiasm. The Orchestra under Richter was terrific, the production splendid, the singers very able, the choruses marvellous. At the performance of “ Faust ” last night, on the other hand, I would have left by the 2nd Act if I hadn't had to escort a young girl home. »

Émile's relationship with Bruckner went further downhill :

« When I'm on the organ stool, what comes-out is a series of oaths, curses, grumbles, stamping on the floor with his enormous feet, rebukes, ill-founded criticisms, rude remarks about the French. »

Matters came to a head when, after being requested to read through the figured bass of a Mass which he was sure had been well-executed, my brother heard a terrible scolding.

Bruckner cried :

« It's nearly right but you were playing in 5 parts and this bass only has 4 ! You'll have to go back to the beginning and follow my method. »

A violent scene ensued, the Master wanting to force his pupil to start the harmony course afresh, and the pupil stoutly refusing. There was nothing for it but to go to the director of the « Conservatoire » , who said that he would have to support the teacher.

Jaques declared that, not wanting to waste a year, he was abandoning « Monsieur » Bruckner and the organ and composition alike to take other composition and piano courses. His teacher bellowed that he wouldn't even manage to get into the elementary class.

2 days later, in front of a jury composed of Julius Epstein, Anton Dohr, Adolf Prosnitz, Robert Fischhof and the director, Josef Hellmesberger senior, the recalcitrant pupil played the « Étude » Number 15 from the « Gradus ad Parnassum » (by Muzio Clementi) and Beethoven's Piano Sonata in D. He read through and, then, performed a romance and minuet of his own. After the final note, complete silence. Bruckner was jubilant, thinking Jaques had lost, whereas Jaques was downcast, thinking the same thing.

Then, Prosnitz rose and said :

« I shall accept this boy in my class because, although he lacks technique, I can see undeniable talent in him. »

Later on, Émile Jaques-Dalcroze took lessons in Paris from Léo Delibes and Gabriel Fauré, the latter becoming a firm friend of his.

### University student Heinrich Krzyżanowski

Heinrich Krzyżanowski : « Gymnasium » teacher, literary, Germanist. Elder brother of Rudolf Krzyżanowski and friend of Hans Rott.

Relation to Mahler : Close friend in his youth, hiking companion.

**Wednesday, 20 July 1887 and Wednesday, 17 August 1888** : Meeting in the Fichtel Mountains with Mahler.

**July 1891** : Mahler takes a walking-tour of « Fichtelgebirge » .

Heinrich Krzyżanowski was born in 1855 (in the town of Cheb ?) and was inscribed not at the Vienna Conservatory but at the University, from where he graduated in German philology in 1877, his teacher being the eminent Germanist Richard Heinzel. After teaching in a series of grammar schools, he married and moved to Germany, working as a freelance writer in Starnberg near Munich (1883) , Munich and Berlin. His short-story « Im Bruch » was published in 1885.

Heinrich Krzyżanowski later moved back to Vienna, where he worked as a private tutor, for a time supported by Mahler, and lectured on literary topics. He spent some time in a mental institution. By the 1920's, he was living in the Tyrol. Heinrich Krzyżanowski died in 1933.

### Vienna Conservatory : Final examinations (June-July 1875)

Anton Bruckners Schüler werden in der Prüfungsstatistik erwähnt :

Bei den Vorbildungsschulen ...

« Orgelschule des Herrn Professor Anton Bruckner :

(3 Zöglinge.)

1. Grad : Ernst Ludwig, Hans Rott.

2. Grad : Vincenz Pritz. »

Bei den Ausbildungsschulen ...

« Orgelschule des Herrn Professor Anton Bruckner :

(2 Zöglinge.)

I. Klasse

1. Grad : Hermann Steudner.

II. Klasse

1. Grad : Julius Czegledy. »

Bei Musiktheorie ...

« Schule für Harmonielehre des Herrn Professor Anton Bruckner :

(11 Zöglinge.)

1. Grad : Heinrich Benkö, Ernst Ollop, Wenzel Pelikan, Rudolf Pichler.

2. Grad : Alfons Kraholetz. »

« Schule für Kontrapunkt des Herrn Professor Anton Bruckner :

(10 Zöglinge.)

I. Klasse

1. Grad : Ludwig Emanuel, Hermann von Jan, Leopold Windhopp.

2. Grad : Otto Reitingner, Johann Winter.

II. Klasse

1. Grad : Carl Schöfmann.

2. Grad : Moriz Jelinek, Johann Mötz, Johann Straka. »

In der Übersicht der Schüler mit Klassifizierung bei der Jahresprüfung ist zu lesen :

« Orgelschule des Herrn Professor Anton Bruckner :

1. Prämie : Ernst Ludwig.

2. Prämie : Hans Rott. »

Klassenprämien erhielten auch :

In der ...

« Schule für Harmonielehre des Herrn Professor Anton Bruckner :

1. Prämie : Heinrich Benkö, Rudolf Pichler.

2. Prämie : Ernst Ollop, Wenzel Pelikan. »

Und in der ...

« Schule für Kontrapunkt des Herrn Professor Anton Bruckner :

I. Klasse

1. Prämie : Leopold Windhopp.

2. Prämie : Ludwig Emanuel, Hermann von Jan.

II. Klasse

1. Prämie : Carl Schöfmann. »

Als einziger Schüler, der in diesem Schuljahr im Fach Orgel absolvierte und ein Diplom erhielt, ist Julius Czeledy verzeichnet.

### Steyr : Organ recital

**Thursday, 26 August 1875** : Anton Bruckner gives another organ recital at the parish church of Steyr, which again left a deep impression. His concluding improvisation on Georg Friedrich Händel's « Halleluja » elicited rapturous applause. The « several friends » mentioned in the review no doubt included Georg Armingier, the parish priest, who was presumably already playing host to Bruckner in the rectory. The hospitality extended to Bruckner, there, was precious to the composer : as a committed Catholic cultivating a close, lifelong relationship with clerics and the life of the Church, he found a congenial environment there that enabled him to concentrate on his work. At the same time, he was able to relax on excursions organized by his friends and to sample the down-to-earth « pub fare » on offer in Steyr and its environs.

### A bad joke by the students

**1875** : A group of students decided to make fun of Professor Bruckner ... the famous hardened bachelor. They asked permission to show-up at his apartment to surprise him. The « surprise » proved to be a notorious prostitute of Vienna. Bruckner did not say a single word. He crossed the room and knelt down on his « prie-dieu » . Above the crucifix was an picture hidden behind a little green curtain. Rising upright, he pulled the curtain and stood in silence in front of the students. The image (taken by the Linz photographer Zinnogger) was that of his beloved mother, Theresia Helm (from whom he had inherited the ardent faith) , exposed on her death-bed.

### Wagner praises Bruckner

1875 : Private « soirée » organized by the Viennese neurologist Josef Standhartner, the famous society doctor and earnest devotee of music. For the occasion, Richard Wagner read the 3rd Act of his Opera « Götterdämmerung » .

At the end, the « Master of Bayreuth » turned to Anton Bruckner and affirmed to the audience :

« There is only one, in the field of pure music, which can be at the level of Beethoven, only one, and his delighted face tells you to whom I think. »

At that same moment, the shy Bruckner (in tails and white gloves ...) had to feel immense pride, a renewed strength to continue on the demanding path he had traced.

### Doctor Josef Standhartner

The Austrian neurologist, physician, Court counselor, singer and music-lover Doctor Josef (Johann Nepomuck Vincenz) Standhartner was born on 4 February 1818 in Troppau, Austrian Moravian Silesia (now, Opava Moravskoslezsky, in the Czech Republic) ; and died on 29 August 1892 in Vienna.

Son of District secretary Leopold Standhartner et Johanna Nepomuck Schönaich.

Father of Mathilde Maria Wilhelmina Josefa Standthartner Schnabel (1856-) .

Standthartner was the husband of Wilhelmina (« Minna ») Josefa Khym Schönaich (1819-1900) . They married in 1856 at St. Stephen Cathedral in the 1st District. Their daughter was also baptized there.

His step-son was the journalist Gustav Schönaich. His niece was the Opera-singer, soprano Henriette Standthartner (1866-1933) , the wife of conductor Felix Mottl.

After attending the « Gymnasium » in Znojmo (Znojmo) , Standthartner came to Vienna in 1834. He studied medicine at the University of Vienna from 1835 ; became Doctor of Medicine in 1843. The same year, he entered the Vienna General Hospital (« Allgemeines Krankenhaus ») . He became internist there in 1845 ; secondary physician in 1847 ; ordaining physician in 1851 ; head-physician and Director of the General Hospital in 1857. Member of the General Hospital.

Standhartner was mostly concerned with inflammatory brain tumours, brain diseases, brain membranes, gap formations in the brain (« Porenzephalie ») , epilepsy and diabetes.

His medical publications appeared mainly in the « Medical Report of the General Hospital of Vienna » (« Ärztlichen Bericht des Allgemeinen Krankenhauses Wien ») , in the « Viennese Medical Press » (« Wiener medizinischen Presse ») and in the « Medical Year-Books » (« Medicinischen Jahrbüchern ») .

Standthartner was also a private practitioner and the personal physician (« Leibarzt ») of Empress Elizabeth of Austria (wife of Emperor Franz-Josef) .

Josef Standthartner was an important patron of music in Vienna. « Frau » Schönaich, received in her « salon » the principal artists and greatest musicians of the time.

Doctor Standthartner was one of Richard Wagner's closest and most helpful friends in Vienna - a major benefactor of the composer. He was perhaps the only physician ever to examine him.

He was also a staunch supporter of Anton Bruckner.

**May to August 1861** : Richard Wagner lived as a guest at the home of his friend Doctor Josef Standthartner, the primary physician at the General Hospital of Vienna. It was located at the corner of « Singerstraße » Number 32 (« Seilerstätte » Number 4) and « Singerstraße » , in the 1st District.

**November 1862** : The libretto of the Opera « Die Meistersinger von Nürnberg » had its first public reading in the parlor of the Standthartners' apartment.

With the influence of neurologist Standthartner and surgeon Theodor Billroth, the General Hospital became from 1865 a real cultural centre in Vienna.

In **1872**, Doctor Standthartner was one of the co-signatories for the foundation (1873) of the Viennese Academic Wagner Association (« Wiener Akademischen Wagner-Verein ») . Became an honorary member.

**1872, 1875, 1876** : Last visits of Richard Wagner to Vienna. He conducted with great success performances of his works at the « Musikvereins-Saal » . Wagner stayed at the Hotels « Zur Stadt London » (at Fleischmarkt Number 24) and « Erzherzog Karl » (« Kärntnerstraße » Number 31) but also at the Standthartners, and at Josef's work-place : the Director's office of the General Hospital !

**1861-1892** : Member and Director of the board of the « Gesellschaft der Musikfreunde » .

Vice-President of the « Rudolfiner-Verein » .

Standthartner died after a long and serious illness, on 28 August 1892 (shortly before midnight) , at his home in the « Alsergrund » District of Vienna. He was buried at « Heiligenstadter Friedhof » .

The funeral Masses of Josef Standthartner, his wife Wilhelmina, and several of their children were celebrated at the All-Holy Trinity Church, at « Alserstraße » Number 17, on the border between Josefstadt and the Alsergrund. (The funeral Mass for Ludwig van Beethoven was also celebrated here.)

## Honours

Knight of the Order of the Iron Crown (1874) .

Knight of the Royal Prussian Red Eagle Order (3rd class) .

Comthur of the Royal Bavarian Michael Order.

Order of Christ of Portugal.

Order of the Ernestine House of Saxony.

North Star of the Hawk of Weimar.

Commander of Isabelle of Northern Spain.

Takowa Order of Serbia.

Imperial and Royal Councilor (1892) .

## Standhartner and Wagner

### 1861

« I stopped first of all at Karlsruhe for another interview with the Grand Duke, was accorded the same friendly reception, and got permission to engage in Vienna those singers I might need for a model performance of “ Tristan ” at the theatre in Karlsruhe. Armed with this command, I went-on to Vienna, where I stayed at the Archduke Karl and awaited the fulfillment of a promise “ Kapellmeister ” Esser had made by letter to put-on a few performances of my Operas for me. It was here I first heard my “ Lohengrin ” performed on the stage. Although the Opera had already been given very frequently, the whole ensemble got together for the complete rehearsal I had requested. The Orchestra immediately played the Prelude with such beauty and warmth, and the voices of the singers and their other good qualities were displayed to such good advantage in the performance of a work they already knew well that, overcome by these impressions, I lost all inclination to criticize any aspect of the production. People seemed to notice how deeply moved I was, and, to Doctor Hanslick, this no doubt appeared the proper moment to have himself amicably introduced to me, while I was sitting on the stage and listening ; I greeted him shortly as if he were entirely unknown to me, whereupon the tenor Ander introduced him to me again with the comment that this was my old-acquaintance Doctor Hanslick ; I replied laconically that I remembered Doctor Hanslick very well, and turned-back to the rehearsal. It seems my Viennese friends now had the same experience as previously my London acquaintances, when they had tried to direct my attention to the most fearsome critic and found me disinclined to any such gesture. This fellow, who, then still a young student, had attended one of the first performances of “ Tannhäuser ” in Dresden and

had written about the work with glowing enthusiasm, had since developed into one of the most vicious opponents of my work, as had been amply demonstrated on the occasion of productions of my Operas in Vienna. Those members of the Opera company well-disposed toward me seemed, henceforth, to have no greater concern than to effect a reconciliation between me and this critic ; as they did not succeed, those who ascribed to the enmity, thus, aroused the ensuing failure of every undertaking in which I counted on Viennese support may not have been far wrong ... I was able to go about the real business I had in mind. The academic young of Vienna had wanted to do me the honour of a torchlight procession, but I declined this, thereby, gaining Esser's whole-hearted approval, in particular. Together with the highest-authorities at the Opera, he began considering how these triumphs could be exploited. I presented myself to Count Lanskoronsky, Comptroller of the Imperial Court, who had been described to me as a strange man who knew absolutely nothing about art and its requirements. When I submitted my appeal that he should give the principal singers at his Opera House, namely " Frau " Dustmann (formerly Luise Meyer) , " Herr " Beck, as well as possibly " Herr " Ander, leave at some future time to participate in the performance of " Tristan " I was planning for Karlsruhe, the old gentleman replied dryly that this would not be possible. He thought it far more reasonable, given the fact that I was satisfied with his ensemble, to give my new work in Vienna. I promptly lost the courage necessary to oppose this proposition.

As I was descending the steps of the " Hofburg " meditating about this new turn of events, I was met at the gate by a stately gentleman of unusually sympathetic countenance, who offered to conduct me in his carriage to my hotel. This was Josef Standhartner, a famous society doctor and an earnest devotee of music, destined henceforth to be a staunch friend for life. »

« Princess Metternich, who had sensed my difficulty in these matters when I left Paris, had recommended me most heartily in Vienna to the family of Count Nakos, of whose wife she had spoken to me with particular emphasis. I had now also made the acquaintance through Standhartner, during the few days I spent with him before he left, of young Prince Rudolf Liechtenstein, known to his friends solely as " Rudi ". He had been commended warmly to me as a fervent admirer of my music by his doctor, with whom he was on close terms. I often met him for meals at the Archduke Karl after Standhartner had rejoined his family, and there, we agreed upon a plan to visit Count Alakos at his estate, Schwarzau, some distance away. »

« In May, a surprise visit to the Wesendonks in Zürich had netted Wagner little, and, when during his Vienna sojourn they invited him to join them on a Venetian holiday in November, he saw the opportunity of striking again. (Fearful of mentioning Mathilde's name to Minna, he wrote her that Doctor Standhartner, summoned to Venice for consultation by Empress Elizabeth, had insisted on his companionship during the journey !) The " Tristan " project, which he described as dangling on the lax vocal cords of a fatigued tenor, was moribund, and his situation desperate ; plans to import Schnorr or Tichatschek to Vienna had fallen through. But Otto and Mathilde, at the end of their " largesse ", were deaf to hints. Poor Bülow, who could barely keep his household together, was soon bothered for a loan. »

« Money problems gave him no rest. Minna was again set-up independently, and his own needs were far from small. No new income would be forthcoming until " Tristan " was performed and started on the round of German theatres. News from Vienna's great " Kärntnertor " Opera House was not encouraging. The tenor, Ander, so glorious a " Lohengrin ", had become terrified of Tristan's part and was succumbing to a series of strategic indispositions. By mid-

August, Wagner was in Vienna and took-up residence in the house of Doctor Standhartner, a Wagner enthusiast and physician to Empress Elizabeth. Tausig formed part of Wagner's Viennese circle, as did Peter Cornelius, to whom had been entrusted the copying of those alterations and transpositions in the part of Tristan indispensable to Ander's recuperation. »

« In Weimar, he again enjoyed outwardly friendly relations with Liszt, who had recently avoided him in Paris on account of the Blandine affair and also because he feared being again laid under contribution. Though Liszt's trunks were already packed for his removal from Weimar, he had tarried for the concerts. The Princess' absence from " Haus Altenburg " (she was in Rome) helped the friends regain something of the old conviviality. Blandine and Ollivier were also with Liszt, and, when the Festival came to an end, Wagner enthusiastically accompanied his mistress and her husband to Nuremberg, Munich, and then, Reichenhall, where Cosima was taking the saline water-cure, Ollivier being obliged to submit all the while to Blandine's and Wagner's joking in German over his head. During this brief August visit to Reichenhall, Wagner first sensed that a " liaison " with the younger sister was also possible. Fascinated by Cosima's wild disposition, he would soon answer her questioning look. »

« On my last visit to Vienna, Kolatschek had called on me to offer the hospitality of his house if I should ever return for a longer stay, in order to spare me the unpleasantness of residing in a hotel. For reasons of economy alone, very urgent at the time, I had willingly accepted this offer, and now, drove with my luggage directly to the address he had given me. To my astonishment, I discovered at once that it was in a very remote suburb, virtually without any transport to Vienna. Moreover, the house was quite deserted, for Kolatschek had gone-off with his family for a summer vacation in Hutteldorf ; with some difficulty, I unearthed an old servant who had been given some vague idea by her employer that I was to be expected. She showed me to a little room where I was to sleep, if I wanted ; there appeared to be no arrangements for laundry or any other service. Greatly put-out by this disappointment, I first went-back into the city in order to wait for Kolatschek in a " café " near St. Stephen's square where, according to the maid, he would show-up at a particular hour. I sat there for a long time, repeatedly asking after the man I expected to meet, when suddenly I saw Standhartner come-in. His utter amazement at finding me here was intensified, as he told me, by the fact that he had never before entered this particular " café ". It was only a peculiar coincidence that had led him there on this day and at that time. When I informed him of my situation, he at once became incensed that I should be living in the most remote part of Vienna when I had such urgent business in the middle of the city, and he immediately offered me his own home, which he was about to leave for 6 weeks with his family, as a temporary abode. An attractive niece (Seraphine Mauro) , who was living in the same house with her mother and sister, would take-care of breakfast and the necessary services. I would, thus, be able to make myself comfortable with the whole house at my disposal. He jubilantly led me to the house, which had already been vacated by his family to spend their summer holidays in Salzburg. Kolatschek was notified, my bag brought-in, and, for several days, I enjoyed Standhartner's company as well as his splendid hospitality. But I also had to recognize a number of new complications for my situation in the further news my friends gave me. The rehearsals scheduled the previous year for this time (I had arrived in Vienna on August 14th) had already been postponed indefinitely, because the tenor Ander had reported trouble with his voice. Upon hearing this, I at once came to the conclusion that my stay in Vienna would be pointless ; yet, I could not think anybody would have any idea where I should turn to pursue any constructive purpose. »

« After the disastrous " Tannhäuser " performances in March 1861, Wagner fluctuated for a while between Paris,

Karlsruhe and Vienna, at length settling-down on the 14th August in the last named city, where it was proposed to produce “ Tristan ”. Minna had gone to Soden for a cure on the 10th July : from there, she went on to Dresden once more. In Vienna, Wagner had the loan of Doctor Standhartner's house for some weeks during the physician's absence. His wants were attended to by a “ pretty niece ” of Standhartner's. This pretty niece was one Seraphine Mauro.

According to Hagen Kunze's book, “ Richard Wagner und die Frauen ” :

“ Wagner was not insensible to so much beauty in his daily surroundings, and his ' dear little doll ' ( ' Puppe ' ) , as he always called Seraphine, did not let him sigh in vain ... The suffering in this affair of Wagner's fell upon his friend Peter Cornelius, who ... had lost his heart to the beautiful Seraphine some time before. ” »

« While this whole “ Tristan ” affair was running its endless course like some chronic illness, Standhartner had returned at the end of September with his family. Consequently, the next thing I had to do was to look about for a residence, which I found in the Hotel Empress Elizabeth. Through my cordial association with my friend's family, I got to know his wife (Wilhelmina) and 3 step-sons (Gustav, Karl and Franz) , as well as a daughter (Wilhelmina) from her first marriage, plus another daughter (Mathilde) from her second with Standhartner. With regard to my stay in this congenial home, I would henceforth greatly miss the kindly care devoted to me by the aforementioned niece Seraphine, who was not only tireless in her solicitude but also an amusing companion. Because of her dainty figure and hair always curled “ à l'enfant ”, I had named her “ the doll ”. Now, I found it more difficult to get along in a gloomy hotel-room. My living expenses also increased severely. »

**Friday, 16 August 1861** (Vienna) :

« I had another shock with my lodgings. Good Kolatschek lives in a frightfully distant suburb so that I promptly recognized I couldn't stay there as my cab-fares alone would have cost more than my lodgings. Moreover, it was very uninviting otherwise, and I was on the point of hunting for fresh lodgings when Doctor Standhartner, my highly-enthusiastic Viennese friend (a kind of Doctor Schuster) , luckily intervened, offering to house me in his roomy abode for as long as his family is away - til about the middle of September. This lies in the heart of the city and I'm getting to feel quite at ease in it ; the only thing I have to procure for myself is dinner. At least so far, as lodging is concerned, then, I can quietly wait now and see if anyone else will invite me thereafter, or if I must look-out for a furnished “ logis ” for myself, which indeed is what would suit me least. For now comes the other melancholy item in my communications, which will make it comprehensible to you that I'm not exactly in a cheerful mood ! »

**Wednesday, 13 November 1861** (Vienna) :

« Last Wednesday (6th) , my friend Doctor Standhartner (as deputy physician in ordinary) was summoned in haste by the Empress to a consultation in Venice ; as doctor and friend, he insisted on my accompanying him, since I needed a change, some distraction, if I meant to hold-out here. I returned this morning, and shall hope it has benefited me : at least, I had no talking to do for a few days running, but only sights to see, which really did me good. »

1861-1862

« By a fortunate last-minute coincidence, Wagner bumped into Doctor Standhartner, who was on the point of taking his family abroad. Standhartner offered him the use of his “ Seilerstätte ” apartment for several weeks, complete with the services of his pretty niece, Seraphine Mauro, who lived in the same house and could, therefore, attend to his creature comforts. Half-Italian and half-Viennese, Seraphine had a doll-like face framed by a wealth of dark ringlets that hung-down to her ripe young bosom. Wagner could hardly have remained indifferent to the charms that had already enslaved Peter Cornelius, who was tortured with jealousy. For a short while, “ Seraphinchen ” or “ Dolly ” became the sole focus of Wagner's interest in the opposite-sex - so much so that he shunned the company of everyone save Cornelius and Tausig. »

1862

« Wagner writes to Cornelius from Paris, at the end of January 1862 :

“ Listen ! On Wednesday evening, the 5th February, I am to read the ' Meistersinger ' at Schott's house in Mainz. You have no idea what it is, what it means to me, and what it will be to my friends ! You must be there that evening ! Get Standhartner at once to give you, on my account, the necessary money for the journey (from Vienna) . In Mainz, I will reimburse you, and whatever may be necessary for the return journey. ” »

« Sitting in a “ café ” on the “ Stephansplatz ” the next afternoon, Wagner suddenly saw a man enter whom he had met earlier in the year, when he had been in Vienna to look for singers for “ Tristan ”. The man was, personal physician to the Empress Elizabeth and an enthusiastic follower of Wagner's music. He insisted that Wagner should come and stay with him while his family was away, and Wagner made Standhartner's house his own for over a month, visiting the aristocracy, making new acquaintances, like that of the dramatist Friedrich Hebbel, discussing the world with his old friend Heinrich Laube again, now director of the Vienna “ Burgtheater ”, and trying to get “ Tristan ” finally performed. »

« Cornelius hesitated, as well he might, to give himself up body and soul to this devouring flame of a man ; he knew Wagner, and knew what sacrifices a friendship of his kind meant for the friend. Wagner was very angry with him for not accepting the invitation at once. He came to Vienna to liquidate his debts with the 135,000 guilders placed at his disposal for that purpose by the King, and generally to put his affairs in order. Asked by Seraphine Mauro the object of his visit to the city, he curtly replied, “ To quarrel with my friends. ” Heinrich Porges and his brother had called upon Wagner, but Cornelius did not go. “ There were such scenes, ” he writes to his brother Carl on 15th June, “ and tears of rage and despair over my conduct : no answer to his letter - my Cid had ' miscarried ' (he could put everything in order, go through it all cordially and calmly with me) at Sternberg, etc. , etc. , pianoforte ready (a box full of cigars) , Peter as man and artist, etc. , etc. ” He saw Standhartner, who advised him, in case he did not mean to accept Wagner's invitation, not to go near him just then, as it would probably lead to a complete rupture. So, Cornelius writes to Wagner between 1 and 3 in the morning, telling him that he could not settle in Munich now with anyone but his brother, but that when he has finished “ The Cid ” he will be willing to live there in merry

companionship with Carl and Wagner. No answer was vouchsafed to this letter. “ Standhartner speaks to him again in my interest. Heinrich Porges writes him - ' Reconciliation with Peter : otherwise - Egoist ! ' Thereupon, he writes at once to Porges : ' do not visit me today ', and to Standhartner : ' do not come till tomorrow ', etc. , etc. , etc. , and when they come next day, he is gone ! So that one can truly say that he has treated his best friends in Vienna like so many shoe-blacks ... He came in May 1861. This is the upshot of these three years ! ” »

« Cornelius writes at the same time to Reinhold Kohler on the 24th :

“ A row with Wagner ... I was simply to be a Kurvenal. Wagner does not understand that though I have many qualifications for that (even to a dog-like fidelity) - I have unfortunately just a little too much independence of character and talent to be his cipher behind his unit. ”

And on the same day, to his sister Susanne :

“ Unfortunately, we have separated, perhaps for ever. He wrote me :

' Come to Sternberg (come for ever) or I will have absolutely nothing more to do with you. - I could not consent to that - for ' The Cid ' has haunted me all the time since February, and is now coming to life - and if I were with Wagner I should not write a note ... I should be no more than a piece of spiritual furniture for him, as it were, without influence on his deeper life. I send you his letter. Tell me if any man ought to put such an ' Or ' to a friend : either everything, skin and hair - or nothing at all. I have never forced myself on Wagner. I rejoiced sincerely in his friendship, and was truly devoted to him in word and deed. But to share his life - that entices me not. ” »

« In Mainz, I saw Friederike Meyer again ... As I was also about to leave for Vienna, she was pleased to be able to make part of the journey with me, because she expected to stop for one day in Nuremberg where I could meet her for the rest of the trip. This, we did and arrived in Vienna together, where she went to the Hotel Munsch, while I again took-up residence in my already familiar Empress Elizabeth ... Friederike's own condition soon aroused my most intense concern. She had contracted for 3 guest-performances at the “ Burgtheater ” without bearing in mind how unfit she was at that time to make a favourable impression in the theatre, particularly before a Viennese audience ; the severe sickness from which she had recovered only in the most turbulent circumstances had disfigured her by making her unduly thin ; in addition, her head had grown virtually bald, and yet, she insisted on refusing to use a wig. The enmity of her sister had alienated the members of the “ Burgtheater ” company, and, as a result of all this, as well as an inept choice of roles, her appearances were a failure, and there could be no question of a permanent engagement. Although she grew steadily weaker and suffered from constant insomnia, she still tried to conceal her true situation from me out of courageous reticence. At a somewhat cheaper inn, “ The City of Frankfurt ”, she now intended, as she did not seem to be embarrassed for funds, to spare her nerves as much as possible and await an improvement : at my request, she summoned Standhartner, who didn't seem to be able to help her very much. »

« While these matters involved me in all sorts of difficult complications, I had been keeping-up my old acquaintances in Vienna. A strange incident had occurred at the outset of this visit. I was to read my “ Meistersinger ” for the

Standhartner family, just as I had done everywhere else : since “ Herr ” Hanslick was now considered a friend of mine, they thought it would be a good idea to invite him as well ; but here, we noticed in the course of the reading that this fearsome critic became constantly paler and angrier, and remarkably enough, when the reading was over, he could not be persuaded to remain for a time, but departed at once in obvious vexation. My friends all concluded that Hanslick had interpreted the entire libretto as a “ pasquinade ” directed at him and our invitation to the reading as an insult. And the critic's attitude toward me indeed underwent a highly-noticeable change from that evening forward and turned into bitter enmity, the results of which we were soon to see. »

« Though harsh, his estimate of Wagner is closer to modern criticism than is the indiscriminating adulation of the Wagnerites. As a partisan of the Leipzig School, Hanslick was deaf to many beauties in Wagner's scores, and, in respect to Wagner, Berlioz, and Liszt (and later, Bruckner and Richard Strauß) was unable to surmount an innate conservatism and a prejudice against “ literary ” music. Nonetheless, he could never be accused of intellectual dishonesty. One may disagree with his complaints about Wagner's unvocal writing, boring declamation, orchestral din, clumsiness, monotony, exaggeration of expression, and perpetual modulation ; yet, considering the hysterical excesses of the Wagnerites, he generally kept his temper, his logically presented opinions being based not on emotion but on a thorough study of the score in question. He had had 4 years of theory, composition, and piano with Tomaschek and was thoroughly professional at the keyboard. »

« I recognized “ Madame ” Kalergis, who had just arrived to spend some time in Vienna, being motivated, I fondly hoped, by the desire to do something for me as well. As she was also a friend of Standhartner, she got together with him at once to consider how I could be helped-out of the critical situation I was in, once again, as a result of the heavy expenses of the concerts. She herself had stated to our mutual friend that she had no funds at her disposal and could only meet special expenditures by going into debt. Thus, richer patrons needed to be enlisted. Chief among these was Baroness von Stockhausen, wife of the Hanoverian minister : as a very intimate friend of Standhartner, she was warmly attached to my cause, and also won-over Lady Bloomfield together with her husband, the English ambassador. There was a “ soirée ” at the residence of the latter, as well as several evening parties at the house of “ Frau ” von Stockhausen. One day, Standhartner delivered 500 guilders to me from an anonymous donour to help cover my expenses. “ Madame ” Kalergis managed to scrape together 1,000 guilders, and these were also turned-over to me by Standhartner for my subsequent needs. In her efforts to interest the court in me, however, she remained unsuccessful, despite her close friendship with Countess Zamoiska. »

« When the Standhartner family returned from vacation, Wagner moved into the “ Kaiserin ” Elizabeth Hotel on the “ Weihburggasse ”, which quickly proved far too expensive. At the invitation of the Wesendonks, he spent a week with them in Venice, then returned to Vienna. But this time with a new purpose in mind - to carry “ Die Meistersinger ” through to the end. In November, he wrote a fresh scenario - in December, back in Paris at the invitation of the Metternichs, he started the poem, and the complete libretto was ready by the end of the following January. »

« True, he got down to orchestrating the first Act of “ Die Meistersinger ” and spent his 50th birthday more pleasantly, in the company of his staunch friend Standhartner, than he had its immediate predecessors. True, the local glee-clubs and choral societies celebrated the occasion with a belated torchlight procession and serenade on June 3, and their written dedications referred to him for the first time as “ honoured Master ”, but the Master lacked a

mistress and his happiness was incomplete. »

**Wednesday, 12 November 1862** (Biebrich) :

« I hope to start my trip tomorrow, though ; so expect my next letter from Vienna. If you have anything of moment to write me meanwhile, please address c/o “ Doktor J. Standhartner, Stadt 806. Wien. ” »

« On **(Sunday) November 23, 1862**, he gave a reading of the “ Meistersinger ” libretto at the home of Doctor Standhartner. The latter, obviously with Wagner's consent, had included Eduard Hanslick in the guest-list. Hanslick, who left in high-dudgeon when the reading was over, is widely reported to have done so because he recognized himself in Beckmesser or thought the character a deliberate travesty of himself. A more likely assumption is that someone in the know tipped him off to the fact that Beckmesser's name had originally been “ Hanslich ”. No one would admit to this indiscretion, of course, and the critic was cynically congratulated on having sat through the reading without losing his temper. Although Hanslick disclaims any annoyance in his memoirs, it is true that most of his subsequent pronouncements on Wagner contained some element of malice. »

« Hanslick was subsequently invited to the home of Doctor Standhartner to hear Wagner recite the “ Meistersinger ” poem **(Sunday, 23 November 1862)** . At this time, the pedantic, narrow minded character now known to the world as Beckmesser appeared in Wagner's manuscript under the name of “ Hanslich ”. Wagner had maliciously trapped the critic in a barbarously contrived situation. Pale and upset, Hanslick fled the reading as soon as he could, Wagner doubtlessly finding the whole affair vastly amusing. As Hans Sachs, he had acted-out the last Act of “ Meistersinger ” and sent the cantankerous Marker fleeing the scene of contest. He wanted no mercies from the critics. Success would come from the Folk, from those with no knowledge of the musty “ Tabulatur ”. »

**Saturday, 27 December 1862** (Vienna) :

« Among all my cares and troubles, the care for you has still remained the most consuming. Nothing having turned-up from anywhere, at last I begged Standhartner to advance me the needful on my “ Tristan ” honorarium. He has had my wish complied with through his banker - so now, take heart, good Minna ! »

**1862-1863**

« But less than 5 months later this, together with the remains of sundry fees and loans, had disappeared, most of it swallowed-up by the expenses of a large, handsome apartment in a villa at Penzing, some 5 minutes ride from the beautiful palace of Schönbrunn, just outside Vienna. Biebrich had become petty and provincial, no place from which to launch an offensive against the theatrical establishment of Europe. The choice of Vienna was motivated by 2 thoughts : one was the lingering hope of seeing “ Tristan ” performed there ; the other, as he put it in “ Mein Leben ”, was because “ with no other German city had I developed so close an artistic relationship ”. Here, in the company of Cornelius, Tausig, Standhartner and others, and waited upon by a servant couple who remained faithful to him for a number of years, he celebrated his 50th birthday in grand style. “ Wagner is just like a child when he has money in

his pocket ”, said the Viennese conductor Heinrich Esser, who was to have directed the first performance of “ Tristan ”, “ and it does not seem to enter his head that it will not last for ever. And then, he claims that he cannot work at all unless his rooms are luxurious and unless he has exclusive use of a large garden - in a word, unless he can live like a lord. ” »

« Whether Wagner's account of the interview is strictly accurate or not, we have no means of knowing ; but the story, even as he tells it, indicates that Hanslick was not at this time a hopelessly prejudiced or evil-natured antagonist. In November 1862, they met again at the house of Doctor Standhartner in Vienna. Wagner read the “ Meistersinger ” poem to the company. »

1863

« Wagner had visited Vienna for a few days, in May and June, to gather-up his servants (the Mrazeks) and the dog, to pay the most urgent debts, and to re-purchase what could be located of his auctioned possessions. In a fury against friends who had faithfully acted to protect what they could of his property from the Viennese deluge he himself had let loose, he blamed them for his losses and wrote Mathilde Maier of their “ unbelievable stupidity ”. Cornelius especially aroused his ire by refusing an invitation to settle permanently with him in Bavaria. In his strange way, he loved Peter. During the dark hours at Mariafeld, he had gloomily written to Doctor Standhartner in Vienna, “ One thing ! Send Peter to me soon ! ... He must share all sorrow with me ... Only death must he leave to me alone ; he need only be close by ! ” Now, he found it incomprehensible that Peter preferred work on his Opera “ The Cid ” to the post of jester at the new Wagnerian court. Wagner was becoming more and more intractable. The opposing-side of a problem had never been within his vision ; now, even the middle-ground was blurring. One was either for or against him, and to be for him implied a complete sacrifice of personal desires. Cornelius reflected that he was treating old friends “ like boot-blacks ”. In a mood of deep resentment, Wagner had stormed Wotan like from Vienna to take-up residence at Villa Pellet. »

« Standhartner having returned to Vienna at the end of September, Wagner had to leave his comfortable quarters, and as there seemed no prospect of an early performance of “ Tristan ”, and life at a hotel was expensive, he accepted an invitation from the Wesendoncks to meet them in Venice. He remained there only 4 days - “ 4 miserable days ”, he calls them. How unbridgeable was the gulf made between him and Minna by the memory of the Mathilde affair of 3 years before may be estimated from his letters to his wife of 19th October and 13th November 1861. The first is sensible and tender ; he is full of pity for the poor suffering woman, and will gladly do anything in his power to alleviate her misery - anything, that is, but give-up the Wesendonck acquaintance. He still has plans for a reunion, and a quiet old age to be spent together. But as a preliminary to any rapprochement he insists, as he had always done, on her consenting never again to mention the name of Mathilde, for whom, he declares, his passion has from beginning to end been absolutely pure. Of all the tragedies of Wagner's life this surely is the greatest, that his one noble love, the one that was so necessary to him as an artist, to which we owe “ Tristan ” and many of the finest moods of the “ Meistersinger ” and “ Parsifal ”, should have been the one to embitter his existence and his wife's beyond all hope of remedy while his less worthy attachments were either unknown to Minna or counted for little with her. With Wagner obstinately resolved not to give-up the Wesendonck acquaintance, and Minna (blind to the ideal

nature of the attachment, and seeing it, in all probability, merely as another Lausot affair) as obstinately bent on making the cessation of this acquaintance a condition of a full-reconciliation with her husband, it was impossible that the breach between the 2 tortured and self-torturing souls should ever be healed. That Wagner dreaded giving Minna any cause to be reminded of Mathilde's name is evident from the sophisticated version he gives her of his Venice excursion, in his letter of 13th November 1861 : we can only regard as a piece of well-meant fiction his story that Doctor Standhartner, having been summoned in haste, as deputy physician in ordinary, to attend the Empress of Austria in Venice, had pressingly insisted upon Wagner accompanying him for his health's sake.

“ I returned early this morning. I hope it has done me good ; at least, I had no talking to do for several days, but only to go sight-seeing, which really benefitted me. ”

Not a word, it will be observed, as to having gone to Venice at the request of the Wesendoncks, or even as to their being in Venice at that time. »

« After the marked success of my first concert, I received some approaches from those circles to which, as now became clear to me, I had been secretly but strongly recommended by Marie Kalergis. My unseen patroness had most circumspectly prepared my introduction to the Grand Duchess Helene. I was instructed first of all to make use of a recommendation from Standhartner to the Grand Duchess's personal physician, Doctor Arneth, whom he had known in Vienna, and who, in turn, could introduce me to her most trusted lady-in-waiting, “ Fraulein ” von Rhaden. I would have been well content to make the acquaintance of this lady alone, for in her I found a woman of wide culture, great intelligence and noble bearing, whose increasingly earnest interest in me was admixed with a certain anxiety, which seemed to pertain to some worry about the Grand Duchess. It struck me that she felt something more should be done for me than could plausibly be expected from the Grand Duchess, her temperament and character being what they were. I was still not admitted directly to this exalted person, but rather received first an invitation to an evening party in the quarters of the chief lady-in-waiting, at which among others the Grand Duchess would also be present. »

« In the company of my gun-dog named Pohl, one of the most lovable and excellent animals that ever became attached to me, I undertook long walks every day, for which the extremely pleasant neighbourhood afforded admirable opportunities. Otherwise, I remained more or less alone for a time, as Tausig had been confined to his bed by a severe illness for an extended period, and Cornelius was suffering from an injured foot as a result of having jumped down carelessly from an omnibus when visiting Penzing. I continued my amicable association with Standhartner and his family. »

## 1863-1864

« I was able to spend New Year's Eve with the Standhartners in a confident mood and enjoy a poem specially written for the occasion by Cornelius, which was equally humorous and appropriate. »

« But the new year of 1864 soon assumed an increasingly ominous aspect. I fell ill with a rapidly worsening, painful catarrhal malady, which necessitated my making frequent demands on Standhartner's care. »

« Wagner had been staying at his hotel for 2 months. He was still hoping for the payment which was to be made to him after the first performance of “ Tristan ”, but it did not arrive - the proprietor became worried and sent him one bill after the other ... When one evening, together with Tausig, I went to visit him, he was full of woe and bemoaned his miserable position. Full of sympathy, we listened to him and sat on the sofa in deep depression, while he was pacing-up and down in nervous haste.

Suddenly, he stopped dead and said :

“ Ah, now I know what is missing and what I need. ”

He ran to the door and rang the bell loudly. The waiter finally appeared, slowly and with hesitation, for these people soon know which way the wind is blowing, and he was no less amazed than we were when Wagner ordered :

“ Will you bring us immediately 2 bottles of champagne on ice ! ” ; “ For God's sake, in this situation ! ”, we cried-out when the waiter had left again.

But he gave us a fervent lecture on the absolute necessity of champagne especially in desperate situations - only champagne could help one to overcome such embarrassments ... If you associated with Wagner, you went from surprise to surprise. When I entered his room the next morning, he showed me 1,000 guilders which the Empress had sent him, presumably at the instigation of Doctor Standhartner. »

« Now, it became clear to me that under these circumstances I could no longer maintain my position in Vienna or my establishment in Penzing, because there was not only no prospect of earning any money even on a temporary basis, but also my short-term debts had mounted to such an ominous height under the well-known system of usury that without some extraordinary assistance my very person was actually threatened. In this situation, I turned in utter frankness, at first only for advice, to Eduard Liszt, the youthful uncle of my old friend Franz and a judge at the Imperial Provincial Court. During my first stay in Vienna, he had commended himself to me as a warmly devoted friend, who would always be willing to do me a favour. As far as the redemption of my short-term bills was concerned, he could see no way-out other than to find a rich benefactor who would settle with the creditors. For a time, he believed that a certain “ Madame ” Schöller, a devoted admirer of mine and also the wife of a rich merchant, not only possessed the means but the willingness to use them on my behalf. Standhartner, from whom I concealed nothing, also thought he could do something for me in this regard. By these efforts, my situation was held in a state of suspension for a few more weeks, until it eventually turned-out that the best my friends could do for me was to provide enough money to take what seemed the absolutely necessary step of fleeing to Switzerland, where I would be personally protected until such time as I could raise funds to redeem my bills. »

« Thoughts of death gripped me so tightly that I lost all desire to shake them off. I set about bequeathing my books and manuscripts, of which Cornelius was to receive a share. Some time previously, I had taken the precaution of

commending my household effects remaining in Penzing, now no longer secure, to the protection of Standhartner. As my friends now most urgently recommended that I get ready to flee, I had turned to Otto Wesendonck, given the fact that my path would take me to Switzerland, and asked him to shelter me in his house. He rejected my request categorically : in response, I could not avoid pointing-out how shabbily he was behaving. Now, it was a question of arranging my departure so that it would appear I would be coming-back in the near future. In his great anxiety to cover-up my departure, Standhartner had me come to dine at his house, where my servant Franz Mrazek brought me my luggage. I bade a very distressed farewell to him, his wife Minna, as well as my good dog Pohl. Standhartner's step-son Karl Schönaich, who wept from grief, and Cornelius, who by contrast was in a frivolous mood, accompanied me to the station, where I departed on the afternoon of March 23rd, to go first of all to Munich, where I hoped to be completely unnoticed and have a chance to recuperate for 2 days from the frightful strain of the recent past. I spent those days in the " Bayerischer Hof ", from which I undertook a few walks through the city. It was Good Friday : the weather was very bad and seemed to reflect the mood of the entire populace, whom I saw proceeding from one church to another in deepest mourning. King Maximilian II, whom the Bavarians had grown to love, had died a few days before, leaving his son to ascend the throne at the youthful but still legitimate age of 18 and a half. In a display window, I saw a portrait of the young King Ludwig II, and felt that special emotion awakened in us by the sight of beauty and youth being placed in what will presumably be a very difficult situation. Here, I wrote a humorous epitaph for myself and, then, journeyed unmolested over Lake Constance, a refugee once again and in need of shelter, and on to Zürich, from where I immediately proceeded to the estate of Doctor Wille at Mariafeld. »

« I got very bad news from Vienna : to protect the household effects, I had left behind in my apartment there, Standhartner had gone so far as to sell them to a Viennese agent, reserving the right to re-purchase. To this, I responded in extreme indignation, as I saw my landlord, to whom I had to pay rent within a few days, compromised by this action. Through " Frau " Wille, I managed to obtain the money needed to meet this obligation and forwarded it at once to Baron Rackowitz. Unfortunately, I learned that Standhartner and Eduard Liszt had done a thorough job of things, having already paid the rent from the proceeds of the furniture and, thereby, cutting-off all possibility of my returning to Vienna, which both believed would be ruinous for me. But when I heard at the same time from Cornelius that Tausig, who was then in Hungary and had previously added his endorsement to one of my demand notes, now felt himself prevented by me from going-back to Vienna as he wished, I was so deeply upset that I decided on the spot to return there, no matter how great the danger might be. I notified my friends there of this but decided first to try to provide myself with enough money to be able to offer my creditors a settlement of sorts. »

« As to his male acquaintances, he was on terms of increasing friendship with the well-known critic Eduard Hanslick, who even sought the acquaintance of Brahms's family in Hamburg, sending his photo to the delighted Elise. He continued to see much of Tausig and Cornelius. Both were friends of Richard Wagner, who was then living in Vienna, and were anxious to arrange a meeting between Brahms and the composer who was responsible for the resuscitation of the music-drama. The introduction was at last effected through the medium of a third mutual acquaintance, Doctor Standhartner, who took Brahms to see Wagner on February 6, 1864. The evening was a gratifying success : apart from classical music, Brahms played his " Händel Variations ", and Wagner could not but be impressed by this magnificent work. He expressed his admiration in the following words :

“ One sees what can still be done with the old forms in the hands of one who knows how to deal with them. ” »

« Wagner liked neither Brahms the man nor Brahms the composer (though many of Brahms' greatest works were yet to come - the 4 Symphonies, the Violin Concerto, the B-flat major Piano Concerto, the clarinet quintet - they would hardly have changed Wagner's opinion) . Together with Tausig, Peter Cornelius and Weißheimer, Brahms had corrected the orchestral parts for Wagner's concerts in Vienna in 1862-1863, but this counted for little. The 2 men had met only once, in February 1864, when Doctor Standhartner brought Brahms to Wagner's house in Penzing. Musically, there was hardly a single point of contact between them. Brahms had gone to “ Das Rheingold ” and “ Die Walküre ” in Munich, in 1870, but later was known to dissuade his pupils from concerning themselves with Wagner's music. In 1875, there was to be an unpleasant “ contretemps ” between them when Brahms, who, back in the 1860's, had received as a present from Tausig the manuscript of Wagner's new Venusberg scene for the Paris “ Tannhäuser ” of 1861, refused to return it for Wagner to publish. Eventually, he did, but only in return for a copy of the de-luxe edition of “ Das Rheingold ”. In her diary, Cosima makes no effort to disguise her and Wagner's scorn for the “ crude, boorish ” man and his “ mediocre ” music. »

« The press was equally consistent in its hostility, although faced with the growing public acceptance of Wagner's music, less sure of itself than a few years earlier. Much of his free-time Wagner spent in the company of old friends, like Semper and Doctor Standhartner, and, of more recent acquaintances, among them the painter Hans Makart. »

« Wagner apparently got over his petulance, and still had hopes of inducing Cornelius to come to Munich, where he could have a post either at the Conservatory or under the King. “ But if he is really well-disposed towards me ”, Cornelius writes to his brother on 4th September 1864, “ let him interest himself actively in ' The Cid '. Everything depends on that now. But salvation will not come to me that way ; Wagner never for a moment thinks seriously of anyone but himself.” »

**Tuesday, 24 October 1865 (Vienna) :**

« Yesterday evening, Standhartner was with me : we've put a lot in order. Today, it's off with him to the dentist (it's that monster who will now decide my existence) that is to say, in Vienna. »

**Thursday, 26 October 1865 (Vienna) :**

« Yesterday, as a result of a very poor night, I was in a bad way : a tooth operation was undertaken ; reading Balzac brought balm - in the evening, an hour at the Standhartners. »

**1870**

**Sunday, 22 May 1870 :**

« Many letters and telegrams : King (Ludwig II of Bavaria) , (Hans) Richter, (Josef) Standhartner, etc. »

1871

**Monday, 21 August 1871 :**

« Letter from Doctor Standhartner (business-affairs) . »

**Friday, 3 November 1871 :**

« Richard writes letters to Doctor Standhartner, “ Herr ” Feustel in Bayreuth ; business-affairs, in short. »

1872

**Tuesday, 2 January 1872 :**

« Wagner writes to Doctor Standhartner and Kafka. »

**Monday, 11 March 1872 :**

« Richard sends the score of “ Tannhäuser ” to Doctor Standhartner, to have the first scene copied. »

**Wednesday, 24 April 1872 :**

« Letters from the Standhartners, Levi ... »

**Friday, 10 May 1872 :**

« Doctor Standhartner reports that people wish to form a Wagner Society in Prague and are inquiring through a member whether Wagner would agree to Czechs and Bohemians being represented in it in equal numbers. Wagnerian art is the only kind which unites hostile elements. »

**Tuesday, 21 May 1872 :**

« Morning rehearsal, many Bayreuth people in my box, but friends too, among them Doctor Standhartner, who has come all the way from Vienna. »

**Wednesday, 22 May 1872 :**

« Dinner at the “ Fantaisie ” with Standhartner, who, like everybody else, praised the behaviour of the children, particularly of “ Fidi ” (Siegfried Wagner) , at the ceremony. »

**Friday, 25 October 1872 :**

« Sent my father (Franz Liszt) the telegram from Doctor Standhartner describing Princess Hohenlohe's 18,000 Florins as “ a ridiculous exaggeration - one zero too many ”, to my great relief. »

**Wednesday, 6 November 1872 :**

« Telegrams from my uncle and Standhartner. »

**1874**

**Wednesday, 21 January 1874 :**

« I write to Doctor Standhartner regarding the concert in Vienna. »

**Tuesday, 28 July 1874 :**

« Telegram from our friend Standhartner, saying he is arriving today with his daughter - preparations and reception. Great joy at seeing this dear, loyal, and understanding friend again. Made music in the evening : 3rd Act of “ Siegfried ”. To my delight, Doctor Standhartner finds that Richard is looking very well. »

**Saturday, 1 August 1874 :**

« Richard relates some experiences from his life, the encounter with the King's erstwhile fiancée, Princess Sophie. Standhartner tells me how utterly the princes hate Richard. »

**Sunday, 2 August 1874 :**

« Richard very unwell, he seems to have caught cold yesterday, and singing is always a great strain on him. I, alone, accompany our friends to the railroad station ; I am glad of Standhartner's love for Richard and his delight in what he calls Richard's good fortune. Comfortingly, he finds him more cheerful than previously. But in what state do we leave our friends ? In these last 2 years, he has lost one son (Karl Schönaich) and is returning to the other (son, Gustav Schönaich) , who is wasting away ... Oh life ! We drape our wounds with rags.

Last night, I heard “ Fidi ” sobbing. I went to him. He complained that his throat was sore. In alarm, I sent for Standhartner, it turned-out to be nothing - but the shock, the alarm ! ... Richard spends the day in bed. »

**1875**

**Sunday, 3 January 1875 :**

« Very nice letter from Doctor Standhartner, asking us to stay with him and his family. »

**Saturday, 20 February 1875 :**

« In Vienna at 10 o'clock, on Sunday ; Standhartner, the Academic Wagner Society, 80 young people, and all sorts of others. Taken to Standhartner's house, cordial welcome. »

**Wednesday, 3 March 1875 :**

« Received calls in the evening, a “ soirée ” in Makart's studio in Richard's honour : Count and Countess Andrassy, Count and Countess Széchenyi, Countess Festetics, lady in waiting to the Empress, who told me in the morning that, for her, Richard's art is like the creation of the world ... Countess Wickenburg, Count Hoyos, Countess Wilczek, Prince Liechtenstein, the Standhartner family, the Liszt family, “ Herr ” and “ Frau ” von Angeli, Doctor Mosenthal, Prince Metternich, the Hellmesberger quartet, Semper (whom Richard seeing him for the first time in 8 years, does not at first recognize) , Countess Dönhoff, “ Frau ” Wolter, and many others - perhaps, 60 people in all. A pleasant occasion, everyone looking his best, face and clothes, and the general mood very cheerful. »

**Thursday, 4 March 1875 :**

« In the evening went through the 3rd Act of “ Götterdämmerung ” in Standhartner's house, with piano accompaniment. »

**Thursday, 11 March 1875 :**

« At 2 o'clock, welcomed by the good Standhartners in Vienna. »

**Friday, 12 March 1875 :**

« A letter has arrived from the King (Ludwig II) , as exalted and enthusiastic as ever. He wants the fragments to be performed after Easter. Richard wants to do the concert here without a rehearsal, our friend Standhartner is against it. »

**Monday, 3 May 1875 :**

« At 5 o'clock, left for Vienna, tolerable night journey ; arrival at Standhartners at 9. »

**Thursday, 6 May 1875 :**

« Concert at 12 o'clock - fine impression, “ Hagen's Watch ” repeated. But Richard is tired. I then visit the picture and flower exhibition with Prince Liechtenstein and Standhartner. »

**Monday, 10 May 1875 :**

« Sent-off copies of “ Götterdämmerung ” (to Mimi, the King, Standhartner) . »

**Thursday, 8 July 1875 :**

« Preparations for the children's arrival, and rehearsals, between times letters ; I to Doctor Standhartner, asking him to visit Hans (von Bülow, her first husband) and give me a report on his condition. »

**Monday, 1 November 1875 :**

« Battered arrival at 6 o'clock in the morning ; friend Standhartner at the station. »

**Thursday, 2 December 1875 :**

« A quartet “ soirée ” at Hellmesberger's. In the evening at our Standhartner friends. »

**1876**

**Saturday, 1 January 1876 :**

« Went to church, afterwards received visitors. Richard discovers that the newspapers are saying that “ Herr ” Scaria demanded 2,000 Florins for his entire stay in Bayreuth and had been turned-down by the management committee ! Richard is requesting a correction through Standhartner. »

**Thursday, 10 February 1876 :**

« Standhartner writes that “ Lohengrin ” will be possible in Vienna only on March 2. »

**Friday, 14 January 1876 :**

« Letters, a very good one from Standhartner with an account of the royalties, then a nice one (as always) from the King (Ludwig II) . »

**Wednesday, 12 April 1876 :**

« Richard receives a letter from Doctor Standhartner, saying “ Herr ” Jauner is making the release of “ Frau ” Materna conditional on the performances of “ Tristan ” and “ Walküre ” in Vienna, next winter. So, before the work has even been done here, the seeds of its dissolution are being sown ! »

**Sunday, 23 April 1876 :**

« Around midday, while our musicians are having lunch with us, various telegrams arrive ; firstly, from “ Herr ” Niemann, recommending for Sieglinde a “ Fräulein ” von Pretfeld, of whom all present say she would be (because of her figure alone) impossible ! Then, from “ Herr ” Jauner, saying he is awaiting a reply to his letter in order to come to an agreement with “ Frau ” Materna ! A veritable parade of baseness Richard refers him to his letter to Doctor Standhartner and concludes with the sentence that he hopes he will not have to prepare himself for a hostile attitude on the part of the management. »

1877

**Wednesday, 28 March 1877 :**

« God be praised ! Richard is continuing to work on “ Parsifal ”, even though it means we sometimes have to deal with repugnant business matters till late in the night. “ Herr ” Hodge asks for a postponement of the guaranteed payment, we grant it to him through the lawyer. Arrival of Richter, very vulgarly bringing the 20,000 Marks, with the request that Richard should sign a declaration of consent to the performance of the other 3 works. Richard is standing by what my father has written to Standhartner. Richter praises “ Die Walküre ” in Vienna - from my father's account, I gather that it lacks all dedication and nobility. »

**Saturday, 21 April 1877 :**

« Richard writes to friend Standhartner, setting-out the terms for the use of the “ Nibelungen ” : 10 % instead of 7 ; 20,000 Marks as an advance (not as a gift) ; in return, exclusive rights for the Austrian monarchy. »

**Wednesday, 25 April 1877 :**

« From friend Standhartner, a telegram saying that neither the Prince nor the management is raising any significant objections to Richard's proposals (10 % , 20,000 Marks advance) . »

**Wednesday, 1 August 1877 :**

« Once again in Wahnfried, friend Standhartner. »

**Friday, 3 August 1877 :**

« Friend Standhartner departs. »

**Saturday, 31 March 1877 (Bayreuth) :**

« You know that Standhartner and “ Herr ” Jauner have saddled me with a commission, concerning the complete performance at Vienna of the tetralogy, “ The Ring of the Nibelungs ”. Wagner is now not at all inclined to deal with

the Opera directors : the obvious proof, is that he declined the 20,000 Mark letter of credit brought him by Richter the day before yesterday, as a premium from “ Herr ” Jauner for the “ Nibelungs ”. When I spoke to him, however, of the supreme good-will that the Emperor so kindly displayed toward his work, he answered me immediately in tones of real emotion. »

**1878**

**Monday, 28 January 1878 :**

« Friend Standhartner reports that Hans (Richter) has made-up for his remissness and that “ Rheingold ” is a big success in Vienna - which we doubt, insofar as we have received no telegrams about it. »

**Wednesday, 5 June 1878 :**

« Memories of all our other good old friends - Standhartner, Mathilde Maier ... »

**Saturday, 14 September 1878 :**

« Friend Standhartner yesterday announced a visit, he is coming from the international exposition in Paris, and since he wrote in French, Richard says :

“ Il s'est exposé lui-même comme ami de Wagner, et, en cette qualité, il était en effet assez exposé là-bas. ”

(“ He has exposed himself as a friend of Wagner, and, in that capacity, was truly exposed there. ”)

As always, when he jokes in French, he makes use of the best and most original of expressions. »

**Sunday, 15 September 1878 :**

« Beautiful day ; after waiting in vain at the station for friend Standhartner, we drive to the Eremitage. »

**Monday, 16 September 1878 :**

« Friend Standhartner tells us about the policemen in Gastein who surround the German Emperor in masses, and if somebody has a hand in his pocket when the Emperor or Bismarck passes by, he is politely requested to take it out ! »

**Tuesday, 5 November 1878 :**

« Before reading this libretto (Spontini's “ Fernand Cortez ”) , he received and answered a letter from friend Standhartner ... He tells me that Standhartner was pleased with his clear, straightforward letter. »

**Tuesday, 12 November 1878 :**

« He comes upstairs to fetch me, sits down beside me, and suddenly laughs about Gurnemanz's herbs and roots :

“ He sounds so cross, so disgruntled. ”

Then, he became a bit impatient and said :

“ If you only knew ! ”

And soon, I do know, for when I enter the salon, I see a magnificent Persian carpet for my room lying there ! ... He had been in correspondence with Standhartner about it, and now, he sends-off a telegram of thanks, signed :

“ He and she. ” »

**1881**

**Tuesday, 4 January 1881 :**

« A nice letter from Standhartner pleases him and starts him reminiscing about Vienna ; Standhartner is proof, he says, that one can get through to the Viennese with music - how much had he done for him when he settled in Vienna ! He describes the bone structure of Standhartner's skull as frighteningly Slavonic, yet, at the same time, pleasing. »

**Saturday, 21 May 1881 :**

« At coffee-time, the Standhartners appear, father and daughter ; introductions and memories of Vienna. »

**Sunday, 22 May 1881 :**

« Richard slept well ; the Flower Greeting takes place a 8 o'clock and is very successful, the clock presented by “ Fidi ” - “ Parsifal ” delights Richard, and he is pleased with the flower costumes. The coats of arms of the Wagner Society towns genuinely surprise him, and he is pleased with the ceiling. In a mood of divine happiness, he strolls to the summer-house with me in the blue robe, and we exchange gold pens and little poems ! Our lunch table consists of : Standhartners 3 (with Gustav ! ) , Ritters (the parents) , the Count, Joukowsky, Boni, Lusch, and “ Fidi ” ; in the hall Eva, Loldi, Ferdi Jager, Julchen and Elsa ; the latter two have to slip-away unnoticed, so that the singing of the verse will float-down from the gallery. Siegfried speaks Stein's poem very well, splendidly proposing the health of eternal youth, and then, in a full-voice, Elsa movingly sings “ Nicht Gut noch Pracht ”, etc. , from above.

Over coffee, Faf from the Festival Theater appears with the program for this evening on his back. The dear good children act-out the little farces by Lope and Sachs magnificently, and Lusch speaks Wolz's linking epilogue particularly

well. To the conclusion of the Sachs play Joseph Rubinstein linked the Prelude to “ Die Meistersinger ”, and when Richard went into the salon, the children, in different costumes, sang his “ Gruß der Getreuen ” ; at the conclusion of the evening, after the meal, came the “ Kaisermarsch ”, with altered text. All splendidly done by the children, though we are not entirely successful in sustaining the mood. Before lunch, Richard was upset by the military band, which he (somewhat to my concern) had allowed to take-part, and it required Siegfried's toast to raise his spirits again. In the evening, he was irked by the dullness of our friends, he asked Standhartner to remain behind, without considering that the step-son (Gustav Schönaich) would also then remain, and the presence of this man whom he cannot bear kept him from expressing all that was in his heart, and that made him almost painfully unhappy. The successful parts are what delighted me - the fact that unbidden things intervene no longer bothers me, however much it once used to pain me : I keep remembering that “ all transient things are but an image. ” »

« His health weakened, his energy diminished - the doctors failed to ascribe his frequent chest-pains to a heart-condition - Wagner now worked more slowly. Cosima, who begins almost every entry in her diary with a sentence on how her husband had slept, still records a large number of nights disturbed by pains and discomforts of one kind or another, or by strange and often unpleasant dreams. But his will lost none of its power, and he still dominated the social evenings at “ Wahnfried ”. Old friends came - Carl Brandt, who was to control the stage machinery for “ Parsifal ” but who died before seeing his work accomplished ; the Munich painter Franz von Lenbach, who made a number of famous portraits of Wagner and his circle : Karl Ritter, from his Dresden days ; Doctor Standhartner from Vienna ; the Countess Marie von Schleinitz and her husband ; Liszt, of course, who stayed at the house for a number of days each time, and Malwida von Meysenbug. »

1882

**Monday, 6 November 1882 :**

« I have to wait a long time in St. Mark's Square for him (Wagner) , and when he arrives with the children, he tells me he had a very severe spasm (I wrote to Standhartner) . But he quickly recovers. »

Paul von Joukowsky described Wagner's death in a letter written on **Thursday February 22, 1883**, to Malwida von Meysenburg :

« It was as glorious as his life. We were all waiting for him to appear at table, for he had sent word to us to begin lunch without him. In the meantime, he had sent for the doctor on account of his usual spasms ; then, at about 2:30, he sent Betty to fetch “ Frau ” Wagner. The doctor came at 3:00, which made us all feel easier ; but, around 4 o'clock, since nobody had come-out of his room, we became worried ; then, suddenly, Georg appeared and told us simply that it was all over. He died at around 3 o'clock in the arms of his wife, without suffering, falling asleep with an expression on his face of such nobility and peace that the memory of it will never leave me. She was alone with him the whole of the first day and night, but then, the doctor managed to persuade her to go into another room. Since then, I have not seen her, and I shall never see her again ; nobody will, except for the children and Groß and his wife, since he is their legal guardian. She will live in the upper-rooms of the house, existing only for his memory

and for the children ; everything else in life has ceased to exist for her. So, write only to the children, for she will never read a letter again. Since her dearest wish, to die with him, was not fulfilled, she means at least to be dead to all others and to lead the only life fitting for her, that of a nun who will be a constant source of divine consolation to her children. That is great, and in complete accord with all else in her life ...

Certainly, Cosima's first intention was exactly as Joukovsky described it. In her desire for death, she refused all nourishment for many hours after Wagner died, then, yielding to the inevitable, cut-off her hair and laid it in Wagner's coffin. Hidden from sight in black robes, she accompanied her husband's body in the train back to Bayreuth. At "Wahnfried", it was carried to the grave at the bottom of the garden by Muncker, Peustel, Groß, Wolzogen, Seidl, Joukovsky, Wilhelmj, Porges, Levi, Richter, Standhartner, and Niemann. Daniela, Isolde, Eva, and Siegfried walked beside the coffin - Blondine, expecting her first child, was not present. Only after their friends had left did Cosima emerge from the house to join her children as the coffin was lowered into the grave. »

1883

« The hearse, drawn by 4 horses, moved-off on its mile-long journey down into the centre of the town, up past the old Margraves' Opera House and on to the Villa "Wahnfried". By the side of the carriage walked the 12 men who were to bear the body to its last resting-place - Feustel, Muncker, Adolf Groß, Wolzogen, Joukovsky, Anton Seidl, August Wilhelmj, leader of the Bayreuth Orchestra, Heinrich Porges, Hermann Levi, Hans Richter. Doctor Josef Standhartner from Vienna, and the singer Albert Niemann (the Berlin Tristan of 1876 and the first Siegmund at Bayreuth) . Crowds lined the route - men, women, even children. »

« The exertions necessary for the production of " Parsifal " had told severely on Wagner. It is said that at one rehearsal he fainted, and, on recovering, exclaimed " Once more, I have beaten Death. " Doctor Standhartner, one of his firm Viennese friends, examined him in the course of the summer, and found that a heart affection (sic) , from which the composer had long been suffering, had made dangerous progress. Wagner was not told of his exact condition, but he was warned that immediate rest and relief from care was absolutely essential. »

### Vienna : Old University building

Anton Bruckner will first enjoy working at the Old University of Vienna (« Alte Universität ») , home to the Austrian Academy of Sciences (« Österreichische Akademie der Wissenschaften ») , a complex attached to the Jesuit Church or University Church (« Universitätskirche ») on « Universitätsplatz » (« Doktor-Ignaz-Seipel-Platz ») in the city-centre - close to the Stuben Gate (« Stubentor ») . He will have a hard time leaving his small work-room when the construction of the new University Pavilion on the « Ringstraße » (by architect Heinrich von Ferstel) will finally be completed in 1884 (it was started in 1877) . Bruckner's beloved office was located on the 3rd floor of the « Jesuitenresidenz » , at « Bäckerstraße » Number 20. Separated by a wall, this room now houses the Jesuit archives and residence. The original conference-room also no longer exists.

### Vienna University : Bruckner's opening address

**Friday, 21 April 1876** : Beginning of the Semester at the University of Vienna. Lectures in harmony are scheduled on Mondays, from 5:00 pm to 7:00 pm.

**Wednesday, 26 April 1876** : During his opening address at the Faculty of Music of the University of Vienna, held in front of a packed auditorium, professor Anton Bruckner, aged 51, received a wild standing ovation from all the students present. It lasted for several minutes.

The occasion might well be compared to the first of Friedrich Schiller's lectures at Jena.

A noticeable absence, that of the professor of History of Music, Eduard Hanslick who teaches in the same room.

From the tribune, Bruckner speaks in an inspired way to the younger generation who embraces so enthusiastically his cause.

The « Magister » enjoys to nickname affectionately his pupils and admirers at the University : his « Gaudeamuses »

« Gentleman, just as it is the task of any branch of science to order and sift its material according to laws and rules, so the science of music, if I may call it that, as dissected its entire substance down to its very atoms and grouped its elements according to certain laws thus creating a theoretical structure which could also be termed the architecture of music. In my lectures, I shall endeavour to further understanding by precise exposition and to give life to the dry bones of theory by graphic examples bearing in mind the words of Gœthe :

“ All theory is grey but green the golden tree of life. ” »

Bruckner advocates making the topic of composition mandatory (except, of course, for women and industrialists) :

« Why should people be able to express themselves only in language and colours, and not also in music ? Composing brings profit for one's own self. »

Bruckner does not believe that women would have an interest in learning harmony and counterpoint. Even if the university program is open to everyone, he manages to interfere in his own way (a behaviour that is not surprising, considering the St. Anna « affair ») .

Bruckner was able to satisfy his insatiable curiosity for natural sciences by meeting daily his many colleagues (professors, deans and rectors) . Aware of their contribution, he was extremely grateful.

### Bruckner's university lectures

Anton Bruckner's lectures at the University of Vienna often exceeded 100 students (pilled-up in an inadequate room) and they seldom went down below 30. For the next 2 decades, the intellectual « élite » of the capital came to hear

this fat man with a rustic appearance and often disconcerting habits.

In 1876, the University still occupied for a few years the old building on « Universitätsplatz » (now, « Dr.-Ignaz-Seipel Platz ») in the centre of Vienna, not far from St. Stephen's cathedral. In 1882, new premises were inaugurated on the « Schottenring », where Bruckner held his lectures twice a week, from 6:00 pm to 8:00 pm, at Auditorium Number 8, right staircase, second floor. (Eduard Hanslick's lectures sometimes took place in the same room, or the adjoining one.)

The bland academic subjects were transfigured by Bruckner's profound knowledge, radiant personality, Upper-Austrian dialect, inspiring jokes, glorious improvisations, - always using Goethe's words as motto :

« Gray is every theory. Green alone life's golden tree. »

Many of the listeners felt the need to record their impressions in multiple articles and brochures.

Bruckner's lectures were published in 1950 by Ernst Schwanzara :

« Anton Bruckner : Vorlesungen Über Harmonielehre und Kontrapunkt an der Universität Wien », Österreichischer Bundesverlag (Lectures about Harmony and Counterpoint at the Vienna University ; 31 pages) .

Other notable testimonies came from Friedrich Eckstein, August Göllerich junior, Carl Hrubý, Friedrich Klose, Karl Kobald, Max von Oberleithner, Wladimir von Pachmann, Franz Schalk, Heinrich M. Schuster, and August Stradal.

The future theosophist, Rudolf Steiner, who followed the lectures for some time, has well-summarized them in a few words :

« What he said from the tribune was not extraordinary, but the way he presented it was quite original. »

Even if Bruckner was considered as a composer « out of the ordinary », his growing fame will benefit the University. Students came from all corners of the Monarchy and all walks of life and were not all destined for musical professions. Some students of the Conservatory (like Gustav Mahler) attended his lectures to perfect their art.

In the years to come, the Bruckner cause in Vienna was to attain such strength through the loyalty of these University students that the combined enmity of critics and musicians would have to bow before it in the dust.

To one of his students who had a doctorate in philosophy and aspired to become music-critic, he presented 1 or 2 small problems of modulations.

Looking at the poor results, Bruckner told him :

« You see, it's not as simple as you think. And what is it like, then, to write a Symphony ? If, one day, you succeed to Hanslick, I hope you will be a little indulgent towards us, poor composers. »

Bruckner had no grudge against his colleague.

One day, when his class was more crowded than usual, he insisted :

« Gentlemen, please. Hanslick also teaches in this institution. Go listen to him, so that he doesn't believe that I am forbidding it. »

For Bruckner, Johann Sebastian Bach was « universal and timeless ». Beethoven and Wagner came immediately afterwards. He called Schubert, for whom he had a very clear-sighted tenderness, his « favourite god-lair ». Bruckner was impressed by his harmonic audacity, and called him, in this field, the precursor of Wagner. He considered Mozart as one of the greatest contrapuntists (this was generally ignored at the time) .

He once quoted a mozartian harmonic development which, although forbidden, led to a brilliant result. He concluded :

« It's like Leporello : we recognize him even if he puts on Don Juan's mantle. »

Bruckner never stopped proclaiming the notion of « freedom » in the act of composing. One day, he even shouted to the bewildered attendees :

« We are free, gentlemen, long live freedom ! »

This assertion could have been perceived, at the time, as provocative and revolutionary.

Like his Master Simon Sechter, Bruckner took great pains to distinguish school exercises from pure creation. In this respect, the University « milieu » allowed him a much greater freedom than the Conservatory.

On the dictum of his own teachers :

« Our ear cannot tolerate pure intonation and that, for this reason, tempered tuning was invented. »

On tonalities :

« F-sharp minor is nostalgic ; F minor, melancholic ; D minor, solemn and mysterious ; A minor, sweet ; E minor, lyric. I like so much the D minor that I wrote my last Symphony in this key. Even though Beethoven composed his last Symphony in D minor, he will certainly have nothing to say against. »

Bruckner never hesitated to comment his own scores, giving colourful explanations about the source of his inspiration.

On the Trio of the 4th Symphony :

« So I thought, here are some country buddies ... and they began to play a “ Ländler ”. »

On his last Symphony :

« I wrote my last Symphony in D minor, just like Beethoven's 9th. Beethoven would have no objection. »  
Bruckner told the audience that Ludwig Speidel once said to him what Beethoven had thought of Bruckner's works and their bad critics !

### University student Ernst Schwanzara

Ernst Schwanzara will take notes during Bruckner's Monday lectures given at the University of Vienna.

« (Music) Professors recognize Bruckner's skills and fame. They respect him and admire him to the highest-point. In return, he thanked them warmly and personally for their support, since the first day he fought to obtain a position as Master lecturer. The Faculty members are moving away from the conservative and intractable position of Eduard Hanslick. They turn instead to the spirit of modernity which inhabits his lectures and compositions. The status of these internationally renowned musicologists goes beyond mere expertise. They appreciate Bruckner for his “ avant-garde ” and the timelessness of his music : he is truly perceived as a giant. »

« Anton Bruckner. Vorlesungen über Harmonielehre und Kontrapunkt an der Universität Wien : Herausgegeben von Ernst Schwanzara. » (Anton Bruckner. Lectures About Harmony and Counterpoint at the Vienna University) , edited by Erich Schwanzara, « Österreichischer Bundesverlag » , Vienna (1950) .

**Monday, 11 January 1892** (5:00 pm to 7:00 pm) : University student Ernst Schwanzara records the lecture of Anton Bruckner. The Master mentions that he is misunderstood (especially by Eduard Hanslick) like Beethoven was in his own time.

**Monday, 25 January 1892** (5:00 pm to 7:00 pm) : University student Ernst Schwanzara records the lecture of Anton Bruckner.

**Monday, 1 February 1892** (5:00 pm to 7:00 pm) : University student Ernst Schwanzara records the lecture of Anton Bruckner.

**Monday, 8 February 1892** (5:00 pm to 7:00 pm) : University student Ernst Schwanzara records the lecture of Anton Bruckner.

**Monday, 15 February 1892** (5:00 pm to 7:00 pm) : University student Ernst Schwanzara records the lecture of Anton Bruckner.

**Monday, 22 February 1892** (5:00 pm to 7:00 pm) : University student Ernst Schwanzara records the lecture of Anton

Bruckner.

**Monday, 21 March 1892** (5:00 pm to 7:00 pm) : University student Ernst Schwanzara records the lecture of Anton Bruckner.

**Monday, 2 May 1892** (5:00 pm to 7:00 pm) : University student Ernst Schwanzara records the lecture of Anton Bruckner.

**Monday, 16 May 1892** (5:00 pm to 7:00 pm) : University student Ernst Schwanzara records the lecture of Anton Bruckner. He reports that his lectures are based on Professor Simon Secher's text-book.

**Monday, 23 May 1892** (5:00 pm to 7:00 pm) : University student Ernst Schwanzara records the lecture of Anton Bruckner.

**Monday, 4 July 1892** (5:00 pm to 7:00 pm) : University student Ernst Schwanzara records the lecture of Anton Bruckner.

**End of Summer Semester 1892** (5:00 pm to 7:00 pm) : University student Ernst Schwanzara records his last lecture of Anton Bruckner.

We owe the creation of the complete family tree of the « Bruckners » thanks to the exhaustive research of Ernst Schwanzara. It was published in 1933.

### Vienna Conservatory : Final examinations (June 1876)

Anton Bruckners Schüler werden in der Prüfungsstatistik erwähnt :

Bei den Ausbildungsschulen ...

« Orgelschule des Herrn Professor Anton Bruckner :

I. Jahrgang

1. Grad : Hans Rott.

2. Grad : Vincenz Pritz, Christian Schröder.

II. Jahrgang

1. Grad : Hermann Steudner. »

Bei Musiktheorie ...

« Schule für Harmonielehre des Herrn Professor Anton Bruckner :

(6 Zöglinge.)

1. Grad : Carl Kapeller, Johann Kreuzinger, Benno Schönberger.

2. Grad : Peter Szöllösi, Carl Zobel. »

« Schule für Kontrapunkt des Herrn Professor Anton Bruckner :

(7 Zöglinge.)

I. Jahrgang

1. Grad : Heinrich Benkö, Rudolf Pichler.

2. Grad : Wenzel Pelikan.

II. Jahrgang

1. Grad : Ludwig Emanuel, Johann Winter.

2. Grad : Otto Reitingen. »

Als einziger Schüler, der in diesem Schuljahr im Fach Orgel absolvierte und ein Diplom erhielt, ist Hermann Steudner verzeichnet.

Bruckner asks for a « *extraordinarius* » professorship

**Wednesday, 26 July 1876** : Letter from Anton Bruckner to the Chief-Intendant, Prince Constantin Hohenlohe-Shillingstürst :

Anton Bruckner asks the Prince to intercede with Emperor Franz-Josef, so that he, Bruckner, be given an « *extraordinarius* » professorship (with a fixed annual endowment) to teach harmony and counterpoint at the University of Vienna.

Remembering the F minor Mass (WAB 28)

**1876** : In a lecture at the Vienna University, Anton Bruckner remembered (in thematisation of his Mass in F minor (WAB 28)) how his state of health was renewed during the creation of this work. The crucial point in this is the parallel that Bruckner experienced in looking-back on his condition then, and his current condition : he had written the Mass « as a sick man in Linz » , « at that time » , says Bruckner, it had « also been as bad for him as it is now » . « Now » refers to a time which was, at least, 9 years after that when he left Kreuzen « cured and healthy » .

### Free tickets for the first Bayreuth Festival

Anton Bruckner's favourite student Hans Rott was one of those 30 chosen young members of the Vienna Academic Wagner Society who received a free ticket for the first Bayreuth Festival and attended the world-premiere of the complete « Ring » .

### Sorrento : Hôtel Vittoria

The Wagners departed by ship for their next stop, Sorrento, where they set-up first in a cottage beside the Hôtel Vittoria, and then, in the hotel itself, for what would be the longest and most deliberately restful phase of the stay, some 33 days. There was little of art and monuments to concern them here. Of course, there were excursions to be taken : to Capri and to Pompeii. But much time was devoted to resuming lessons for the children. While evenings were often spent in joint reading (especially of Jean de Sismondi's « History of the Italian Republics ») or discussions of literature (Dante, Goethe, etc.) . There were, as well, unhappy moments, as Cosima was racked by torments over Wagner's erratic emotions and over a dream he had of her being executed. For his part, Wagner was recurrently gloomy over the mountainous deficit that the Bayreuth « Ring » had generated.

**Friday, 29 September 1876** : The Wagner family was lodging on the third floor of the Hôtel Vittoria in Sorrento, South of Italy.

Richard Wagner's personal barber and pedicurist Bernhard Schnappauf, who had served the Master as a « postillion d'Amour » during the last Festival (i.e. , dutifully delivering the composer's secret love-letters to the beautiful and cultured French admirer Judith Gautier) , also accompanied them. After he had completed his morning craftsmanship on Wagner, Schnappauf worked on the text of « Parsifal » , which was on the verge of completion.

...

Still, there was some social life and there were frequent visitors. One was a local resident, Malwida von Meysenbug, a friend of long standing to both Wagner and Cosima. Malwida was also a friend to the brilliant young philosopher, Friedrich Nietzsche, whose youthful intellectual admiration for Wagner, and personal devotion to him, was now waning. As it happened, and purely by coincidence, Malwida was already entertaining Nietzsche and his companion, Paul Rée, as her guests. When Malwida brought them all together socially, the viciously anti-Semitic Cosima discovered that Rée was Jewish, and promptly banned him from their company. Then, in private conversation, Richard tactlessly pressed upon

Nietzsche some of his religious ideas in connection with his plans for « Parsifal » . The result was the deepening of a rift between them that was never to be resolved and that turned Nietzsche into a bitter anti-Wagnerian.

These unhappy frictions may have prompted the Wagners' decision to leave Sorrento on November 7. They spent 2 nights back at the Hôtel Vittoria, the day in between spent in shopping, a little touring (« more delicious glimpses of folk-life ») , and a bit of theatre. On the evening of November 9, they arrived in Rome.

...

The Hôtel Vittoria was founded in Sorrento, in 1834, by the Fiorentino family - and the family's 5th generation is running the hotel today keeping alive a long tradition in the name of the Italian hospitality excellence. It is located in the town-centre and sits on a high-cliff with spectacular views over the Bay of Naples with Mount Vesuvius. Ruins of Roman Emperor Augustus' villa are said to lay beneath the property.

Easy to recognize when arriving to Sorrento from the sea, the hotel's 3 Classic-style 19th Century buildings are just above the town harbour. The property is surrounded by the lush greenery of a unique Mediterranean garden of 20,000 square-metres filled with citrus and olive groves. Over the years, in its long history, the Hôtel Vittoria has welcomed monarchs, politicians, artists and celebrities. Among others, Richard Wagner, Enrico Caruso and Oscar Wilde.

### Judith Gautier

Judith Gautier (1845-1917) was present at the first Bayreuth Festival in 1876 and she was the Master's muse during the event, although it's not clear if their love-affair was consummated or not. After the « Festspiele » , an intimate correspondence followed. Judith sent her letters to Richard Wagner's barber Bernhard Schnappauf, his « postillion d'Amour » , but after Cosima caught him burning some of the correspondence early in 1878, they had to put an end to the affair.

Wagner could not bear to have any coarse material against his skin, perhaps as the result of a medical condition, and, for many years, dressed in silk or satin underwear. During his later years, including the period during which he was working on the score of « Parsifal » , Wagner's working environment too was draped in silks and satins, in his favourite colours, and soaked in perfume. It was in these surroundings of extravagant sensuousness that the music of « Parsifal » , a work that apparently celebrates renunciation and chastity, was brought into the world. The music of « Parsifal » was to be at the furthest remove possible from that of the « Ring » , he told Cosima : the music was to have the softness and shimmer of silk, like cloud-layers that keep separating and combining again. Wagner's surviving letters include several in which he give instructions for the purchase of fabrics and perfumes. Care had to be taken that these letters did not fall into the wrong hands, since their publication would be an embarrassment. During the composition of « Parsifal » , many of these errands were performed by Judith Gautier.

It has been said that the muse of « Parsifal » was the young and beautiful Judith Gautier. She was an enthusiastic Wagnerian and attended the first Bayreuth Festival in 1876. During this Festival, there was, apparently, an emotional incident in her lodgings, when Wagner broke-down and, sobbing, was comforted by Judith. There followed a passionate

flame (at least on Wagner's side) that, although possibly the relationship was never consummated, was to continue to burn until it was extinguished by Cosima in **February 1878**.

**Saturday, 2 September 1876** : Note from Richard Wagner to Judith Gautier, written after her departure for Paris :

« “ Chère ”, I am sad ! There is another reception this evening, but I shall not be going to it ! I re-read a few pages of my life which I once dictated to Cosima ! She sacrifices herself to her father's habits - alas ! Could it have been for the last time that I held you in my arms this morning ? No !

I shall see you again.

I want to see you ! because I love you !

“ Adieu. ”

Be good to me ! »

**Thursday, 22 November 1877** : Letter from Richard Wagner to Judith Gautier :

« Something else ! I want a very beautiful and exceptional cover (for my “ chaise-longue ”) which I shall call “ Judith ” !

Listen ! try and find one of those silk fabrics called “ Lampas ” or - whatever ? Yellow satin background (the palest possible) with a floral pattern - roses ; not too large a design, it is not intended for curtains ; it is used, rather, for small pieces of furniture. If there is nothing in yellow, then very light blue.

(Foot-note : same white background, which will be easier to find.)

I shall need 6 metres !

All this for mornings well spent on “ Parsifal ”. This is an Arabian name. The old “ troubadours ” no longer understood what it meant. Parsifal ” means : “ parsi ”- think of the fire-loving Parsees - “ pure ” ; “ fal ” means “ mad ” in a higher-sense, in other words a man without erudition, but one of genius ... »

**Tuesday, 18 December 1877** : Letter from Richard Wagner to Judith Gautier :

« But now to more serious matters : first of all, the 2 chests which have not arrived. Well ! They will arrive, and I shall immerse myself in your generous soul. Cancel the pink satin entirely : there would be too much of it, and it would be good for nothing. Can I expect the 2 remnants that I mentioned in my last letter ?

The brocade can be reserved : I'm inclined to order 30 metres, but perhaps, the colours can be changed to flatter my taste even better ; in other words : the fawn striped material would be silver-grey, and the blue my pink, very pale

and delicate ... For the rest do not think ill of me! I am old enough to indulge in childish pursuits !

I have 3 years of “ Parsifal ” ahead of me, and nothing must tear me away from the peaceful tranquillity of creative seclusion ... »

**Wednesday, 6 February 1878** : Letter from Richard Wagner to Judith Gautier :

« The little bottle of rose-water was completely ruined by cold water ; and, in my clumsiness, I dropped the larger bottle as I was trying to arrange it with the alcohol : it broke, and its contents went all over the carpet ; what really surprised me was how little effect the smell had, since I would have expected it to give me 1,000 headaches ! Send me some more of it.

And don't forget the Rimmel Bengali rose-powders.

But, above all, be so kind as to let me know immediately and, in a word, if you have found the lilac satin (Ophelia !) since my decision to buy it depends upon your answer. Dearly beloved ! I have finished the 1st Act ; you shall have a sample of it as soon as I have dealt with a whole host of other matters which I have neglected of late (...)

Cosima continues as ever before filled with feelings of admiration and gratitude towards you on account of the Japanese dress and all the other things you have chosen for her. Would to God that our traditional quarrels on the subject of poor “ Parsifal ” might be over and done with ! Believe me, they are not worth the effort ... »

Attached to a page of Cosima Wagner's Diary for 1877 is a water-colour drawing with the caption :

Japanese « négligé » given to me by Richard, Christmas 1877.

Diary entry for **Monday, 24 December 1877** :

« All this has led to a long correspondence between him and Judith, during which it had unfortunately become clear that even the best of French people cannot overcome certain limitations ! For instance, Judith cannot believe that it is impossible to translate “ Parsifal ” into French ! But, of course, they do not know the other thing ! »

It seems that, during **January 1878**, Cosima caught Richard burning some of the long correspondence between him and Judith and the affair was brought to an end.

« Dear soul, I have asked Cosima to take charge of these errands from now on, or rather to make the final arrangements with regard to the various errands with which I have been troubling you for so long. I believe, at the same time, that I do well to entrust these last remaining problems to her (as a woman) , since there is no longer any surprise in store !

As for the rest, I am so overwhelmed with work at the moment (work which is not in the least agreeable) that I cannot find time any longer to continue working on “ Parsifal ”.

Take pity on me ! It will soon be over, and I shall rediscover those wonderful moments when I can enjoy talking to you about myself !

But do not worry about me : the things that annoy me will soon be over and done with !

Be considerate towards Cosima : write to her properly and at length. I shall be told everything. Do not stop loving me ! You will see me often [?] , and, after all, we shall see each other again some day !

Yours, Richard. »

Cosima, who probably knew of her husband's secret correspondence with Judith, wrote the following in her Diaries on **Tuesday, 27 September 1881** :

« Yesterday, I desisted from responding to Richard's remarks about Judith's character, which he finds embarrassing ; instead, I kept bringing the conversation back to the children. He is sad today about that, weeps, and says that if anything were to come between us, it would be all over with him ; I seek to explain to him in all mildness the feeling which makes me so intensely aware of this strange woman in our house that, yesterday, I had to leave the room for a moment. »

With a « twinge » of concern, she wrote on **Thursday, 29 September 1881** :

« When I come downstairs, I discover Richard at the piano with our friend Judith in rich, rather revealing finery :

“ I was taken by surprise ”, he tells me. (...)

In the evening he plays whist, the beautiful Judith sits down beside him, and then, declares that she wishes to play with him, and the group. (...)

At lunch, Judith and her friend “ Herr ” Benediktus-Israel, Richard's remark about the smooth, somewhat oily voice of the Israelite.

Judith and Benedictus left the following day. Neither Cosima nor Wagner were at the door to say goodbye. As for their negative opinion of Benedictus, it was articulated in one word, « Israel » , which is understandable since Wagner, as was the case with the great bulk of the German population, was a rabid foe of Jews. When Judith wrote to thank them for their hospitality, she questioned their absence at their departure. In Cosima's reply, she explained that it had been due to Wagner's « severe cough » .

Rather than striking at the heart of the problem, Wagner's penchant for Judith, she concluded with a fabricated courtesy :

« We now join together and press you to our massive Wahnfried heart, one and all, like God Almighty. »

In **July 1882**, Judith returned to Bayreuth to attend the opening of « Parsifal » and witness Wagner's apotheosis. At the banquet the day after the dress-rehearsal, on **Tuesday, 25 July 1882**, Wagner was seen « talking vivaciously to a young woman who answered him in melodious French, punctuated with peals of laughter. In contrast to the evening-dress of the other women, Judith wore a linen blouse “ à la matelote ”, with a brilliant red cravat around her neck » . The first 2 performances (on **Wednesday, 26 and Friday, 28 July**) were reserved for the patrons ; the general public was invited to the last 14. Judith, one of the elect, not only witnessed the acclamation of « Parsifal » , but was invited by Wagner to sit in his box.

Speculation arises as to whether or not Judith succumbed to the Master's passion for her. Based on his effusive letters expressing his love for her, certain critics opt for the positive, others, the negative. What cannot be ignored is that Judith, like an unplucked rose, was superbly desirable. Wagner's « rôle » in her life not only was extraordinarily flattering to her but came at a time when she yearned to be lifted-out of her painfully constructed universe - his passion being instrumental in restoring her to health. Wagner's attraction to and love for Judith, which manifested itself during her early visits to Tribschen, reached its « apogée » in her lodgings during the « Parsifal » period at the Bayreuth Festival of 1876, when Wagner « strained beyond endurance had fallen sobbing on the breast of the beautiful young Judith » . As soon as he « fairly settled himself in the mood he needed for “ Parsifal ”, he had no further illusions about Judith or use for her. » Clearly, she had for a time been his « anima » figure - his soul image, his dream and inspirational power.

### Vienna : « Heinrichhof »

**End of Summer or Fall 1876 - 15 November 1877** : Anton Bruckner will stay less than 1 year on the top-floor of the « Heinrichhof » , a huge new-style luxury apartment building directly opposite the Opera House on the « Ringstraße » (street location : « Opernring » Number 1-5 ; « Operngasse » Number 3 ; « Elisabethstraße » Number 2-6 ; « Kärntner-Straße » Number 42) .

...

An example of a purely speculative group on the « Ring » is the « Heinrichhof » , one of the first buildings on the new boulevard, erected between 1861 and 1863 from the designs of Baron von Hansen. This building is one of the largest residential blocks of houses-in-flats in Vienna, and is divided into 3 groups, each with its central court and rooms around. The ground storey is devoted to shops and « cafés » , the building being in one of the busiest parts of Vienna, and nearly opposite to the « Hofoper » .

...

This grandiose building in Vienna's 1st District was commissioned by the brick industrialist Heinrich von Drasche-Wartinberg and built between 1861 and 1863. The Danish architect, Theophil von Hansen, drew many buildings of the « Ring » . The fresco between the windows of the upper-floors is by Carl Rahl. Because it was standing right in front of the « Hofoper » , prominent opera-singers, including Leo Slezak, lived at the « Heinrichhof » . On the ground-floor,

there was a renowned « café » (« Café Heinrichhof ») . The city's first traffic lights were installed at this intersection. During the Second World War, some Nazi departments were housed here. The « Heinrichhof » was largely destroyed on March 12, 1945, during U.S. bombings. After long discussions on a possible reconstruction, the site was completely flattened in the 1950's.

The bombardment of March 12, 1945, also caused serious damage to other important buildings in the centre of Vienna such as the Vienna Museum of Art History, the « Burgtheater » and the « Albertina » . The Opera House and the nearby « Philippof » were also burning.

...

From « Europe After 8:15 » :

When the all clear sounded on March 12, 1945, at 2:30 pm, Hella Kinn stepped-out of her half-destroyed office building into another city. Bombs had sheared-off a corner of the Art museum and the statue in front had lost its head. Trees lay smashed and broken. When she looked down the other side of the « Ring » , she screamed. The Opera was on fire.

« For a moment, I lost it. “ I don't want to see it. ”, I shouted, and hid my face in my hands. Nevertheless, I ran in the direction of the flames, as if drawn by magic. As I ran, I heard myself say over and over “ the Opera is on fire ”. I didn't get very far. At Gøethe's statue, the “ Ring ” was closed. I tried to get into the inner-city by climbing-up the ramp to the “ Albertina ” but rubble blocked my way. »

Wherever she looked, buildings were on fire - the « Philliphof » across from the « Albertina » and the « Heinrichhof » across from the Opera, and, of course, the Opera itself.

« The fire swelled and grew and expanded until it engulfed heaven and earth. »

She closed her eyes again and remembered the first time her parents had brought her to Vienna from their home in Transylvania to see and hear « The Flying Dutchman » . Then and there, she had determined that she would live in this magic city for the rest of her life. « Fidelio » , « Don Giovanni » , « Meistersinger » .

The memories crowded her mind, « but when I thought of them, it seemed to me as if they too were shrouded in flames. Had I ever thought I would stand here and see this destruction ? Then, the great-hall collapsed with a terrible thunder. A true believer who sees the temple of his god burn cannot have felt any different than I did at that moment. »

She was not alone in feeling that loss of the Opera was the deepest wound war had inflicted on the city. Schöner called it « the blackest day for our beloved city and for me and our family » .

The cuckoo sang at 12:15 but nobody paid much attention. Vienna had not been subject to a major air-attack since February 21, and, indeed, the 2 hours or so he had spent in a cellar had not been very different from other air-raids. But when he called his father after the all clear, he learned that the Opera and the « Heinrichhof » (where the family owned a « café ») were on fire, and that another of their restaurants, the « Casa Piccolo », had been badly damaged.

He rushed downtown - on foot since no street-cars were running. The cupola of the Art museum was only a skeleton, and he thought it a miracle that the heavy façades had remained standing. The « Heinrichhof café » was beyond salvage. The « Casa Piccola » had been shattered, but the kitchen and the pantry had been left intact. When he first passed the Opera, it was still standing with black smoke billowing through the roof. Later, as darkness fell, he saw fire lunging-out from the stage and up onto the first floor where fire-fighters were silhouetted against the flames. It all appeared « so unreal and operatic » .

For Ernst Andreas, destruction of the Opera was the worst blow of a day that saw cultural landmarks fall like 9 pins - Opera, Art museum, the Imperial stables, the Spanish riding-school, the Academy of Fine-Arts, the stock-exchange on the « Ring » . A bomb had torn the balcony off the « Hofburg » where Hitler had harangued the multitudes in 1938. The « Burgtheater » and « Volkstheater » had been damaged, though not badly.

Nor was injury limited to the city's icons. Adele Hufnagel, a dental assistant in a city clinic, recorded the Opera's fall in her diary, but worried more about the ruined streets and houses in Ottakring and Hernals, working-class districts beyond the Gürtel.

« They carpet-bombed our neighbourhoods. “ Jörgerstraße ” is destroyed from the Gürtel to the public bath. Today is the anniversary of the “ Anschluß ” and that's why they attacked us so hard. »

A matter-of-fact resignation marked the recorded comments of most citizens. Stephanie Bamer, a young lawyer, noted that the Opera had burned, that the vestry of St. Stephen's had been destroyed.

« Many dead. The inner-city is on fire. »

Alfons von Regius wrote that the destruction was « such a great pity » .

...

On April 27, 1945, standing parts of the « Heinrichhof » were in flames, most probably due to arson.

Although a request for reconstruction was filed in July 1949, a notice of termination was filed to the family-owner on August 12, 1949.

A fierce dispute was raging inside the family : conservation of the « Heinrichhof » or erection of a new commercial

building.

On July 3, 1954, a demolition permit was issued.

In 1955, the « Opernringhof » was built by architects Carl Appel, Georg Lippert and Alfred Obiditsch.

...

Art des Bauwerks : Gebäude.

Jahr von 1861.

Jahr bis 1945.

Andere Bezeichnung : Opernringhof

Benannt nach Heinrich Drasche.

Architekt : Theophil Hansen.

Der Heinrichhof (eigentlich Heinrichhof) war ein Wiener Ringstraßengebäude, das im Jahr 1945 bei alliierten Bombenangriffen teilweise zerstört und nach längeren Diskussionen um einen möglichen Wiederaufbau in den 1950er Jahren abgerissen wurde.

Der Heinrichhof wurde vom Wiener Ziegelindustriellen Heinrich von Drasche-Wartinberg als Nobel-Zinshaus in Auftrag gegeben und 1861 bis 1863 errichtet. Als Architekt fungierte Theophil von Hansen, ein Däne, der noch einige andere bedeutende Bauwerke im Bereich der Ringstraße errichtete - die Börse, das Parlament, das Palais Ephrussi, das Palais Epstein und das Musikvereinsgebäude. Die Fresken zwischen den Fenstern der oberen Stockwerke wurden von Carl Rahl gemalt. Der Heinrichhof stand direkt gegenüber der Wiener Staatsoper. Im Erdgeschoß war das damals bekannte Café Heinrichhof untergebracht.

Während des Zweiten Weltkrieges waren hier einige NS-Dienststellen untergebracht. Bei dem amerikanischen Bombenangriff vom 12. März 1945, der auch an anderen bedeutenden Gebäuden in diesem Stadtbereich wie dem Kunsthistorischen Museum, dem Burgtheater und der Albertina starke Schäden anrichtete, wurden größere Teile des Heinrichshofs zerstört ; die Staatsoper und der benachbarte Philippof brannten ab. Am 27. April 1945 brannten Teile des Gebäudes aus vermuteter Brandstiftung ab. Größere Teile, etwa der Bereich Elisabethstraße Nummer 2 und Teile der Front zur Kärntner-Straße (mit rund 20 Mietern) blieben aber (auf Grund der sehr soliden Bausubstanz) weitgehend intakt. Obwohl noch im Juli 1949 ein Wiederaufbau des zerstörten Teils des Heinrichshofs angestrebt wurde, erging mit Datum 12. August 1949 ein Abbruchbescheid an die Eigentümer, und innerhalb der Eigentümerfamilie brachen Differenzen bezüglich eines Erhaltes oder Abrisses des Gebäudes aus. Aus denkmalpflegerischer Sicht erschien

ein Erhalt des Gebäudes, das als « schönstes Zinshaus von Wien » galt, wünschenswert, allerdings sprachen die exzellente Lage und die bessere kommerzielle Verwertbarkeit für einen Neubau. Am 3. Juli 1954 erging eine Abbruchbewilligung.

Im Jahr 1955 wurde an derselben Stelle nach Plänen der Architekten Carl Appel, Georg Lippert und Alfred Obiditsch der Opernhof gebaut.

...

Heinrichhof auf mehreren, dem Industriellen Heinrich Drasche gehörenden Bauparzellen, die er vom Stadterweiterungsfonds erworben hatte, ließ dieser 1861-1862 nach Plänen von Theophil Hansen drei Mietshäuser mit durchgehender Architektur erbauen. Der Heinrichhof war der erste von Hansen auf den Stadterweiterungsgründen errichtete Wohnbau. Er war seinem Charakter nach ein Zinshaus, dessen Außenscheinung aber palastartigen Anspruch erhob, und als solches trat er auch architektonisch mit Palastbauten in Konkurrenz. Der mächtige, nach allen Seiten freistehende Komplex mit den überhöhten Ecken schloß an eine alte, im Schloßbau entwickelte Hoheitsform, den « Kastelltypus mit vier Ecktürmen » an.

Das mittlere Haus bildete an zwei Seiten (Opernring und Elisabethstraße) einen Risalit und war ein Stockwerk höher. Mit dem flimmernden Oberflächencharakter steigert Hansen beim Heinrichhof die Möglichkeiten des romantischen Historismus, bündigt sie aber zugleich durch die Dominanz der Großform und schuf damit ein Werk, das deutlich an der Stilwende steht, die vom romantischen zum strengen Historismus wechselt.

Mit diesem Gebäude schuf Hansen einen für die Entwicklung Wiens bedeutenden Wohnblocktyp, der in der Ringstraßenzone Nachahmung fand :

In den Bauten vom Ingenieur- und Gewerbeverein in der Eschenbachgasse.

In den Ringhäusern gegenüber der Universität (Dr. Karl Lueger-Ring Nummer 10-12) .

In den meisten der Arkadenhäuser im Rathausviertel.

Hansen selbst hat diesen Typus mit den überhöhten Eckrisaliten in seinem Bau der Akademie der bildenden Künste wiederholt, ebenso an der Börse und beim Gruppenbau Schottenring Nummer 20-26 (erbaut von Hansen und Heinrich Förster) . Die Fresken zwischen den Fenstern des obersten Stockwerks malten Carl Rahl und August Eisenmenger.

Im Heinrichhof wohnten prominente Sänger der Staatsoper, darunter Leo Slezak.

Beim Großangriff am 12. März 1945, in dessen Folge auch die Oper und der Philipphof ausbrannten, wurde der Heinrichhof von drei Bomben getroffen und brannte zum größeren Teil aus. Mit Datum 12. August 1949 erging an die Eigentümer (das Gebäude befand sich im Eigentum der Familie Drasche-Wartinberg) ein Bescheid zum Abbruch der

beschädigten Gebäudeteile, mit Ausnahme der gassenseitigen Hauptmauern und jener Bauteile, welche zu deren Stützung für notwendig erachtet wurden. Der Teilabbruchauftrag kam man nicht nach ; es wurden aber auch keine baulichen Maßnahmen ergriffen, sodaß der weitere Verfall der Ruine durch Witterungseinflüsse rasch fortschritt. Der Teilabbruchbescheid von 1949 wurde in eine mit 7. Dezember 1951 datierte Aufforderung zum Totalabbruch abgeändert. Mit dem Abbruch wurde 1952 begonnen. Das gesamte Areal war Ende 1954 geräumt.

Der Neubau erhielt den Namen Opernringhof.

...

Der Heinrichhof entstand auf 6 Parzellen des Stadterweiterungsgrundes, die der Wiener Ziegelfabrikant Heinrich von Drasche frühzeitig erworben hatte und 1860 Theophil Hansen mit der Bebauung betraute. Drasches Ziegelwerke in Inzersdorf lieferten stark gefragte und für den Ringstraßenbau dringend benötigte Produkte - ihr Besitzer zählte bald zu den vermögendsten Privatpersonen Wiens.

Es war Hansens erstes Projekt an der Ringstraße. Seine Aufgabe war es, ein einheitliches Zinshaus zu bauen. Nicht ganz einfach - auf dem Bauplatz direkt gegenüber der Oper !

1861-1862 errichtete Hansen drei Häuser mit durchgehender Architektur, wobei das mittlere Haus an zwei Stellen einen Risalit bildete und ein Stockwerk höher war. Er wählte das Renaissance-Vorbild und wies damit auch die Richtung, die die Architektur der Ringstraße nehmen sollte.

Die ursprünglich aufgesetzte Balustrade mit der Aufschrift « Heinrich Drasche 1860 » wurde auf Wunsch von August Sicard von Sicardsburg und Eduard van der Nüll (den Erbauern der Oper) durch ein zusätzliches Stockwerk ersetzt und die Pavillons der Eckrisalite hochstrebender gestaltet, um der Oper ein geeignetes Gegenüber zu setzen.

An seiner Stelle steht heute der Opernringhof, der von den Architekten Carl Appel, Georg Lippert und Alfred Obiditsch in den Jahren 1955-1956 errichtet wurde.

### Café « Heinrichhof »

The Café « Heinrichhof » (set in the « Heinrichhof » building) was located at « Opernring » Number 3-5. It was the meeting-place for Operetta authors. In 1935, the « café » was remodeled by Carl Witzmann and Robert Kotas. It was completely destroyed in March 12, 1945, during the American bombardment on the inner-city.

...

In the afternoon you will find Bianca on the « Karntnerstraße » with her black-haired little maid. At 5 o'clock, she goes for « kaffeetsch'rl » to « Herr » Reidl's « Café de l'Europe », at the « Stefanplatz ». With her are always 2 or 3 « Beau Brummels » chatting incessantly about music and art, wooing her suavely with magnificent technique,

drinking coffee intermittently, and lavishly tipping the « *kellner* » .

These « *kaffeehäuser* » are the leading public institutions of Vienna. They take the place of private teas, culture clubs, dramatic readings and sewing circles in other countries.

All Vienna society turns out in the afternoon to partake of « *mélange* » , « *kaffee mit schlagobers* » , « *kapuziner* » , « *schwarzen* » , « *weckerln* » and « *kaisersemmeln* » . But no hard drinks, no vulgar pretzels and wursts. Only Americans order beer and cognac at the coffee-houses, and generally, after once sampling them, they follow the bibulous lead of the Viennese. Each « *kaffeehaus* » has its own « *côterie* » , its own « *habitués* » . Thus, at the « *Café de l'Europe* » , one finds the worldly set, the young bloods with artistic leanings. The « *Café de l'Opéra* » , on the « *Opernring* » , is patronized by the advocates and legal « *attachés* » . At the « *Café Scheidl* » , on the « *Wallfischgasse* » , foregather the governmental « *côterie* » , the army officers and « *Burgmeisters* » . The merchants discuss their affairs at the « *Café Schwarzenberg* » , on the « *Kartnerring* » . At the « *Café Heinrichhof* » , on the « *Opernring* » , one finds the leading actors and musicians immersed in the small talk of their craft.

Thus, it goes. In all the leading « *cafés* » (the *Habsburg*, *Landtmann*, *Mokesch*, *Gartenbau*, *Siller*, *Prückl*) , the tables are filled, and the coffee drinking, the « *baunzerln* » eating and the gossiping go on till opera time.

### The windows of the « *Heinrichhof* »

A friend of Bruckner recalls :

« What helped him, obviously, were not the usual cold- and hot-water treatments (which Sigmund Freud mocked at the beginning of his career) , but a kind of pathological self-control. He fell into a « *furious rage* » by counting the windows of a large building, again and again, until he decided to stop this strange ritual like if he had made a great discovery - Eureka ! He then went his way, satisfied, but, all of a sudden, obeying to the same compulsion, he turned around and began to observe or count again. »

(In hydro-therapy, the patient was either squirted with jets of cold water or wrapped in cold, wet sheets. And in the rest cure, patients lay in bed in a dark room for a month or more. They were fed bland foods and sometimes treated with small doses of morphine or chloroform that dulled their senses. In his early years as a physician, Sigmund Freud used some of these methods with his patients.)

Later, in Vienna, often in hours of deep melancholy and tribulation, as a result of his crushing defeats as a composer, the urge of counting flashed again and again ...

A student reported :

« Once, I was walking with Bruckner beside the great building called the “ *Heinrichhof* ”, opposite to the Opera House. He stopped and, suddenly, began to count the windows. At first, Bruckner was able to control himself, but began

anew, becoming more and more agitated, and he asked me to join him in this exercise until all the windows of the main-façade were counted. Then, he went to the other side and began the same arduous task. When we were passing in front of other large buildings, I witnessed the same thing. Bruckner was never able to explain such a behaviour. »

(August Göllerich - Max Auer, 1922.)

...

Als im Frühjahr 1867 sein Lebensgang immer mehr in eine Sackgasse geraten war, der berufliche Erfolg ausblieb und Versuche, eine Partnerschaft aufzubauen nicht minder erfolglos waren, Versuche, die ihn der Lächerlichkeit preisgaben, erkrankte der Komponist Anton Bruckner an einer schweren Depression, die ihn in die Kuranstalt Bad Kreuzen führt.

An einen Freund schreibt er über den Grund dieser Einweisung :

« (...) es war gänzliche Verdunkelung und Verlassenheit (...) ich befand mich in einem schrecklichen Zustand (...) ich bin verloren. » Was ihm half, waren offensichtlich nicht die üblichen Kalt- und Warmwasserkuren (worüber sich ja noch Freud zu Beginn seiner Tätigkeit mokierte) , sondern eine Art pathologische Selbsthilfe. Er verfiel in eine « Zählwut » , « indem er die Fenster eines großen Gebäudes immer wieder abzählte, bis er sich mit einem plötzlichen Entschluß und dem Ausdruck, als habe er eine große Entdeckung gemacht - Heureka ! - davon trennte. Er setzte dann seinen Weg befriedigt fort, um aber plötzlich einem Zwang gehorchend, wieder umzudrehen und die Betrachtung oder Zählung nochmals zu beginnen » .

Später in Wien, oft in Stunden tiefster Melancholie und Trübsal ob seiner vernichtenden Niederlagen als Komponist, flammte der Zählzwang immer wieder auf.

Ein Schüler berichtet folgendes :

« Einst ging ich in Wien mit Bruckner an dem Riesengebäude " Heinrichhof ", der Oper gegenüber, vorbei. Bruckner blieb stehen und begann plötzlich die Fenster zu zählen. Natürlich verrechnete er sich, begann von neuem, wurde immer erregter, und um ihm zu helfen, begann ich mitzuzählen, bis glücklich alle Fenster der Hauptfassade gezählt waren. Nun ging er aber auf die andere Seite des Hauses und begann dort wieder die beschwerliche Arbeit des Zählens. Auch bei anderen großen Häusern, an denen wir vorüber gingen, erlebte ich öfter diese Szene. Um die Ursache dieser Zählungen befragt, konnte Bruckner keinen Grund angeben. »

(August Göllerich - Max Auer, 1922.)

Vienna Conservatory : Academic Year 1876-1877

Wednesday, 20 September 1876 :

Am Wiener Konservatorium unterrichtet Anton Bruckner folgende Schüler :

Heinrich Benkö (Kontrapunkt) , Moriz Eckstein (Harmonielehre) , Robert Fischhof (Kontrapunkt) , Paul Lorenz (Harmonielehre) , Hans Rott (Orgel) , Heinrich Salzmann (Harmonielehre) , Benno Schönberger (Kontrapunkt) , Christian Schröder (Orgel) , Johann Schwegler (Kontrapunkt) , Friedrich Spigl (Harmonielehre) , Julius Bernhard Stern (Harmonielehre) , Franz Stiebitz (Harmonielehre) und Franz Weber (Harmonielehre) .

Im Kapitel « B. Unterrichtsleitung » des Jahresberichts ist zu lesen :

« 4. Lehrkörper :

(Fußnote, ohne Bruckner-Bezug.)

I. Ordentliche Lehrer.

(...)

4. Herr Anton Bruckner, Professor (Harmonielehre, Kontrapunkt und Orgel) . »

Und andere folgende Schüler dieses Schuljahres spielen in Anton Bruckners späteren Jahren noch eine Rolle :

Anna Gyurkovich, Mathilde von Kralik (« aus Linz, 18 Jahre - Komposition II. ») , Johann Kreuzinger, Rudolf Krzyzanowski (« aus Eger in Böhmen, 17 1/2 Jahre ») , Carl Lillich (« 14 1/2 Jahre ») , Gustav Mahler, Anton Meißner (« 14 Jahre ») , Ludwig Oblát (« aus Dödis, 15 Jahre - Klavier V. III. ») , Guido Peters (« aus Graz, 10 1/2 Jahre ») , Franz Schalk (« 13 Jahre ») , Franz Schaumann (« aus Stockerau, 24 Jahre » (recte : « 14 Jahre » ? vergleiche Schuljahr 1877-1878)) , Theodor Schwendt (« aus Winzendorf, 11 1/2 Jahre ») , Friedrich Spigl (« 16 1/2 Jahre ») , Julius Bernhard Stern (« 18 1/2 Jahre ») , Alfred Stroß (« 18 Jahre - Komposition I. , Chg. ») , Hugo Wolf (Seite 29 : im Schuljahr 1876-1877 « wegen Disciplinar-Vergehen » abgegangen) , Fräulein Marianne Zips (« 18 1/2 Jahre ») und Franz Zottmann (« aus Hainburg, 18 Jahre ») .

Als Orgelschüler sind Rudolf Krzyzanowski, Hans Rott, Christian Schröder (« aus Tolna, 27 Jahre ») , Franz Weber (« aus Raab, 19 Jahre - Orgel V. I. , Harmonielehre, Chg. ») und (Brüder ??) Wilhelm Weber (« 17 Jahre (in Wien geboren) - Orgel V. I. - halbbefreit ») überliefert.

...

Von den 5 Orgelschülern gehören 3 zur Ausbildungsschule.

Der « Übersicht der in den einzelnen Lehrfächern unterrichteten Schülerzahl. » ist zu entnehmen, daß von den Orgelschülern 1 Stiffling war und 2 halb und 2 nicht vom Schulgeld befreit waren, daß Harmonielehre als Hauptfach

(ohne Angabe des Lehrers) von 8 Schülern (davon 2 Stifflinge) und Kontrapunkt als Hauptfach von 1 Schüler gehört wurde - bei den 134 Harmonielehreschülern und 30 Kontrapunktschülern (jeweils im Nebenfach) ist keine Untergliederung angegeben.

Auszug aus der « Unterrichtsstatistik » :

« A.

In den Vorbildungsschulen ...

Orgel, 1. Jahrgang.

Schülerstand : systemisierter : 4 ; effectiver : 1.

Monatlich erteilte systemisierte Lehrstunden : 8, sonach im Jahre ... 80.

B.

In den Ausbildungsschulen ...

Orgel, 2. Jahrgänge.

Schülerstand : systemisierter : 4 ; effectiver : 3.

Monatlich erteilte systemisierte Lehrstunden : 8, sonach im Jahre ... 80.

C.

In der Musiktheorie ...

Harmonielehre, 1 Jahrgang.

(2 Parallelschulen.)

Effectiver Schülerstand : 29.

Monatlich erteilte systemierte Lehrstunden : 48, sonach im Jahre ... 480.

Kontrapunkt, 2 Jahrgänge.

(2 Parallelclassen.)

Effectiver Schülerstand : 18.

Monatlich ertheilte systemisierte Lehrstunden : 40, sonach im Jahre ... 400. »

### The « Graz School » of experimental psychology

Alexius Meinong (17 July 1853, Lemberg (L'viv, Ukraine) - 27 November 1920, Graz) was born to a Catholic noble family. He studied at the Academic « Gymnasium » in Vienna, and later, the University of Vienna where he studied history and philosophy as a pupil of Franz Brentano from 1875 to 1878.

Life-time friendships begun during Meinong's Viennese academic period - i.e. , musicologist Guido Adler, philosophers and pupils Christian von Ehrenfels, Alois Höfler, Adalbert Meingast, and Anton Ölzelt junior.

Professor Meinong managed the Chair of Philosophy at the University of Graz, where he taught from 1878 until his death in 1920. In 1894, he founded the Graz psychological institute, and also founded the « Graz School » of experimental psychology and object theory, the first laboratory for experimental psychology in Austria. He was the first to carry-out systematic experiments in « Gestalt » psychology.

Among his pupils : Stephan Witasek, Vittorio Benussi, R. Ameseder, Konrad Zindler, Wilhelm Maria Frankl, Eduard Martinak, Ernst Mally and F. Weber.

Meinong supervised the promotion of Ehrenfels (founder of « Gestalt » psychology) , as well as the habilitation of Höfler and Ölzelt junior.

### Anton Ölzelt junior

**Wednesday, 4 October 1876** (Emperor Franz-Josef's Name-Day) : Anton Ölzelt junior (1854-1925) picks-up Ernst Böck (2 listeners attending Anton Bruckner's Monday University lectures) to hear the afternoon organ recital at Klosterneuburg abbey church. (Böck was commissioned by Father Coloman Krieger.) Bruckner improvises on the « Siegfried » theme and the « Kaiserhymne » . On his way home, Ölzelt who was impressed by the virtuosity of Bruckner offers him one of his apartments at the « Hôtel de France » located on « Heßgasse » Number 7. Thus, Bruckner as a chance to leave his small apartment at the « Heinrichhof » .

Of all the Faculty of Philosophy students who come from abroad, only Ernst Böck is inscribed at Anton Bruckner's lectures.

University student Anton Ölzelt junior was inscribed at the 1879-1880 academic year (his 4th and 5th Semesters) but not with Anton Bruckner.

« Frau » Lisa Morscher, who is related to Ölzelt, is not mentioned by Theophil Antonicek.

**February 1877** : Letter from Anton Ölzelt junior (Leipzig) to Anton Bruckner (Vienna) :

After his return from Leipzig in 3 weeks, Ölzelt will take care of his housing-affairs. He is confident that Bruckner will receive an inexpensive apartment at the « Hôtel de France » located on « Heßgasse » Number 7.

**Wednesday, 7 February 1877** : Letter from Anton Bruckner to Anton Ölzelt junior (1854-1925) :

Since October 4th, 1876, Bruckner's veneration for Ölzelt is irrefutable. Based on what he understood from the last February letter, he does not have to look for another apartment for the time being, nor think of an interim solution (like temporarily moving at the Rothschild House) where space may be lacking for the existing furniture.

**Sunday, 10 June 1877** : Anton Bruckner stays in Klosterneuburg abbey, where he thankfully recalled his exchanges with Anton Ölzelt junior (1854-1925) (see : October 4, 1876 ; and February 7, 1877) .

**Monday, 11 June 1877** : Letter from Anton Bruckner to Anton Ölzelt junior (1854-1925) :

Congratulations on Ölzelt's Name-Day (13 June) . Yesterday in Klosterneuburg, Bruckner had a good thought for his benefactor. He invites Ölzelt for next Sunday, at 11:00 am. Bruckner will then conduct his Mass in F minor (**WAB 28**) and more, at the Vienna Court Chapel.

**Sunday, 17 June 1877** : Anton Bruckner conducts his Mass in F minor (**WAB 28**) , the Motet « Locus iste » (**WAB 23**) and the « Ave Maria » (**WAB 6**) at the Vienna Court Chapel. Anton Ölzelt junior (1854-1925) was invited by Anton Bruckner for a visit.

...

The Professor of philosophy and private tutor Anton Ölzelt junior Ritter von Newin was born on 13 January 1854 in Vienna and died on 15 February 1925 in Vienna's 1st District, at « Schottengasse » Number 10. He was buried in the family mausoleum in the town of Mauer. He was the son of the famous Austrian architect Anton Ölzelt senior.

He studied Philosophy at the University of Vienna where he met Alexius Meinong, Christian von Ehrenfels, Alois Höfler, Adalbert Meingast and musicologist Guido Adler.

He became a student of Meinong at the University of Graz (Professor Meinong presided the Chair of Philosophy there and founded the « Graz School » of experimental psychology and object theory) .

Ölzelt junior owned a beautiful Villa in the Lower-Austrian village of Mauer (literally : « wall ») , on « Kirchengasse » Number 4 (Consignment Number 183) . In 1859, it was already a hunting-house with a garden.

A Jasper mine was located in Mauer during the Neolithic. The first official mention of the village dates from 1210. Wine production began during the Middle-Ages (some of the most famous wine-makers of Vienna and Austria are based there today). The Society of Jesus controlled the village from 1609 to 1773. In Biedermeier times, Mauer was a favourite summer relaxation location for the Viennese. The first mayor took office in 1850, and the village was promoted to the status of market-town in 1902. After Adolf Hitler annexed Austria (« Anschluß ») in 1938, Vienna was expanded greatly, and Mauer became a part of the big city (23rd District, Liesing).

In 1886, Ölzelt junior donated the Villa to the local church. It was converted into a community centre for the poor. He was appointed honorary citizen on 19 November 1886. On 7 December 1911, the private garden besides the house was bequeathed to the town. It was remodeled into a public park and was inaugurated on 2 September 1932. On 23 February 1937, the park was officially named : « Dr.-Anton-Ölzelt-Park ».

In 1913, the large house was transformed into a cinema. Because of its growing popularity, a gallery was added in 1923, which increased the seating to 373.

### Park-Kino Mauer

Das Haus Kirchengasse 4 (heute Geßgasse, Ecke Ölzeltgasse, Ölzeltpark) gab es bereits 1859 ; es wird in einer Kaufurkunde des Gemeinderats und Ehrenbürgers von Mauer, Doktor Anton Ölzelt Ritter von Newin erwähnt. 1911 ging der Besitz in das Eigentum der (damals noch selbständigen und nicht zu Wien gehörenden) Gemeinde Mauer über. Bevor 1913 das Gebäude als Kino adaptiert wurde, war es ein Jagd- und Gärtnerhaus.

Die Eröffnung des Kinos erfolgte 1913. Das Etablissement erfreute sich immer größerer Beliebtheit, 1923 wurde eine Galerie errichtet, das Platzangebot damit auf 373 Sitze erhöht.

1931 spielte man den letzten Stummfilm : « Wer wird denn weinen, wenn man auseinandergeht » mit Paul Hörbiger. In den 30er-Jahren diente das Kino auch als Veranstaltungsort für Vorträge der ortsansässigen Musikschule, Singschule und Klavierschule. Das Kinobuffet hatte auch tagsüber geöffnet und war besonders bei den Schülern der umliegenden Schulen beliebt.

Am 15. Juni 1940 brach während der Vorstellung von « Feuerteufel » (sic !) im Operateurraum des Park - Kinos ein Brand aus. Im Nu standen 2.800 Meter Film in Flammen (damals waren die Filme aus Celluloid, ein hochbrennbares Material). Die eiserne Brandschutz - Klappen vor den Projektionslöchern zum Zuschauerraum schloßen sich allerdings sofort, sodaß mit Ausnahme des Aufleuchtens einer Stichflamme vom Publikum kaum etwas bemerkt wurde. Die Kinobesucher konnten sich in aller Ruhe entfernen. Der Kinooperateur mußte sich allerdings mit einem Sprung vom Balkon in den Garten retten.

Ab 1945 war Mauer russische Besatzungszone, es wurden viele russische Originalfilme gespielt, vor allem Jugend-, Märchen-, und Tierfilme. In einem Programmheft ist vermerkt : « Der Saal ist geheizt ! » Damals offensichtlich keine Selbstverständlichkeit.

In den 50er-Jahren gab es « Hausfrauennachmittage » mit Maxi Böhm, Carl Hruschka, Fritz Heller, Heinz Conrads und vielen anderen Künstlern sowie den Sängerknaben vom Wienerwald. Diese Veranstaltungen waren die Vorläufer der heutigen Quiz-Shows. Die Moderatoren unterhielten die Zuschauer mit Gesang, zusätzlich gab es Preise zu gewinnen, wie zum Beispiel ein Paket Omo oder Persil, Anker und Knorrprodukte, Doktor König Backpulver und einiges mehr (in der damaligen schlechten Versorgungslage der Nachkriegszeit durchaus notwendige und nützliche Dinge) . Die Moderatoren waren renommierte Künstler die in Dreh- und Aufnahmepausen aus den nahe gelegenen Rosenhügel - Filmstudios hierher kamen.

In dieser Zeit herrschte noch strenges Jugendverbot, Eintritt in das Kino gab es erst ab 18 Jahren.

Die Filmserie « Don Camillo und Peppone » war so erfolgreich, daß jede Vorstellung ausverkauft war - es mußten sogar Stühle vom angrenzenden Park Café ausgeborgt werden.

Für Stammgäste gab es immer die gleichen Sitzplätze. Je nachdem wer früher kam, wurde die 2. Karte umgebogen (Reservierungsvermerk) , damit ein Pärchen beisammensitzen konnte.

Am Montag, dem 10. Jänner 1966 brach um circa 5 Uhr in der Früh im Kino ein Brand aus (das Feuer glöste angeblich schon während der letzten Vorstellung am Sonntag Abend) - es wurde total vernichtet.

Der Brand wurde von einem überhitzten Kamin ausgelöst, an dem ein Balken der Dachkonstruktion knapp vorbeiführte und sich daran entzündete. 15 Löschfahrzeuge der Feuerwehr waren ausgerückt und konnten noch die wertvollen Filmprojektoren retten. Während der Löscharbeiten brach die Saaldecke ein. Das Kino sollte zwar wieder aufgebaut werden, es kam aber nicht mehr dazu, da zu diesem Zeitpunkt das langsame Sterben der kleinen Kinos durch die immer größere Verbreitung der Fernseher bereits einsetzte.

An diesem Montagmorgen sollte das Kino mit Kohlen beliefert werden, der Kohlehändler wurde aber an der Kreuzung Langegasse-Geßlgasse von einem Wachmann aufgehalten und meinte : « die brauchen keine Kohlen mehr, das Kino ist abgebrannt » .

So ging nach 53 Jahren die Ära des Park Kinos zu Ende.

### Vienna Conservatory : Final examinations (End of June 1877)

Anton Bruckners Schüler, denen der « I. Classificationsgrad » zuerkannt wurde, werden in der Prüfungsstatistik erwähnt :

Bei den Vorbildungsschulen ...

« Orgelschule des Herrn Professor Anton Bruckner :

Franz Weber. »

Bei den Ausbildungsschulen ...

« Orgelschule des Herrn Professor Anton Bruckner :

(3 Zöglinge.)

II. Jahrgang

Hans Rott, Christian Schröder. »

Bei Musiktheorie ...

« Schule für Harmonielehre als Hauptfach des Herrn Professor Anton Bruckner :

(13 Zöglinge.)

Moriz Eckstein, Paul Lorenz, Bela Mandl, Heinrich Salzmann, Friedrich Spigl, Franz Stiebitz, Julius Bernhard Stern, Franz Weber. »

« Schule für Kontrapunkt des Herrn Professor Anton Bruckner :

(6 Zöglinge.)

I. Jahrgang

Robert Fischhof, Benno Schönberger, Johann Schwegler.

II. Jahrgang

Benkö Heinrich.

Als Schüler, die in diesem Schuljahr im Fach Orgel absolvierten, sind Hans Rott und Christian Schröder verzeichnet. Beiden wurde das Diplom ausgehändigt. Rott wurde mit der Gesellschaftsmedaille ausgezeichnet.

Vienna Conservatory : Academic Year 1877-1878

Friday, 21 September 1877 :

Der Lehrplan (stand spätestens am 16. Juli 1877 fest (b)) lautet für Anton Bruckners Fächer :

« 6. Vorbildungsschule für Orgel.

Ein Jahrgang mit wöchentlich 2 Stunden für 4 Schüler.

Herr Professor Anton Bruckner.

Vorkenntnisse : Fertigkeit im Klavierspiele, entsprechend dem absolvirten 2. Jahrgange der Vorbildungsschule für Klavier ; Kenntniß der allgemeinen Musiklehre.

Alter : 13 Jahre.

Jährliches Schulgeld 100 Florins.

Lehrstoff : Übung im Manual- und Pedalspiele nach Christian Heinrich Rincks Practische Orgelschule.

7. Ausbildungsschule für Orgel. 2 Jahrgänge mit wöchentlich 2 Stunden für 4 Schüler.

Herr Professor Anton Bruckner.

Alter : 14 Jahre.

Jährliches Schulgeld 120 Florins.

Lehrstoff für beide Jahrgänge : Höhere Aufgaben des Orgelspiels : Fugen, Sonaten, Konzerte ; Übung im Generalbaßspiele.  
»

...

« 2. Schule für Harmonielehre.

Ein Jahrgang mit wöchentlich 6 Stunden.

Herr Professor Franz Krenn, Herr Professor Anton Bruckner : Parallelclassen.

Vorkenntnisse : Allgemeine Musiklehre ; Klavierspiel entsprechend dem Lehrstoffe des 2. Jahrganges der Schulen für Klavier als Nebenfach. (B. 3)

Jährliches Schulgeld 120 Florins (jedoch war für Gesang- und Instrumentalschüler Musiktheorie unentgeltlich) .

Lehrstoff : Intervalle und deren Umkehrungen, Accordlehre, Modulation. Harmonisierung gegebener Melodien, Erfindung im reinen 4stimmigen Satze (Choral) , Ausbildung der Melodie, freie Figuration. »

...

« 4. Schule für Kontrapunkt.

2 Jahrgänge.

1. Jahrgang mit wöchentlich 4 Stunden.

Herr Professor Franz Krenn, Herr Professor Anton Bruckner : Parallelclassen.

2. Jahrgang mit wöchentlich 2 Stunden.

Herr Professor Anton Bruckner.

Vorkenntnisse : Harmonielehre, entsprechend dem Lehrstoffe der Harmonielehre (C. 2) ; Klavierspiel, entsprechend dem Lehrstoffe des 3. Jahrganges der Schule für Klavier als Nebenfach. (B. 3)

Jährliches Schulgeld 120 Florins.

Lehrstoff :

Im 1. Jahrgange : einfacher und doppelter Kontrapunkt der Octave, Nachahmung, einfache Fuge.

Im 2. Jahrgange : drei- und vierfacher Kontrapunkt, Fuge mit mehreren Subjecten, Canon. »

...

Im Kapitel « B. Unterrichtsleitung » des Jahresberichts ist zu lesen :

« 4. Lehrkörper :

(Fußnote, ohne Bruckner-Bezug.)

1) Ordentliche Lehrer.

(...)

5) Herr Anton Bruckner, Professor (Harmonielehre, Kontrapunkt und Orgel) . »

...

Am Wiener Konservatorium unterrichtet Anton Bruckner folgende Schüler in Theorie :

Heinrich Eisner (« aus Ustron, 19 Jahre ») (Harmonielehre) ; Paul Janko (« Jankó Paul von, aus Totis, 21 Jahre ») (Harmonielehre) ; Carl Kehlendorfer (« 16 Jahre ») (Harmonielehre) ; Adolf Kmoch (« 14 Jahre ») (Harmonielehre) ; Ferdinand Löwe (« 14 Jahre ») (Kontrapunkt) ; Paul Lorenz (« aus Hradschin, 17 Jahre ») (Harmonielehre) ; Bela Mandl (« aus Zenta, 19 Jahre ») ; Heinrich Salzmann (« aus Temesvar, 22 Jahre ») (Harmonielehre) ; Josef Schalk (« 20 Jahre ») ; Richard Schultz (« 14 Jahre ») ; Franz Weber (« 20 Jahre ») (Harmonielehre) ; Hanns Winter (« aus Ebensee, 20 Jahre ») (Kontrapunkt) ; Josef Zschel (« 15 Jahre ») .

Als Orgelschüler sind Berthold Fröhlich (« aus Brünn, 25 Jahre ») ; Rudolf Krzyzanowski (« aus Eger, 19 Jahre ») ; Emil Langsfeld (« aus Pest, 16 Jahre ; Orgel V. I. , Harmonielehre ») ; Fortunato Luzzatto (« aus Triest, 21 Jahre ; Orgel V. I. , Komposition II. ») ; Robert Schleicher (« aus Ritzingen, 23 Jahre - Orgel A. I. , Kontrapunkt ») ; Franz Weber (« aus Raab, 20 Jahre ; Orgel A. I. , Kontrapunkt ») überliefert.

...

Und andere folgende Schüler dieses Schuljahres spielen in Anton Bruckners späteren Jahren noch eine Rolle :

Mathilde von Kralik (« aus Linz, 19 Jahre ») ; Johann Kreuzinger (« aus Jägerndorf, 20 Jahre ») ; Emil Lamberg (« aus Pest, 15 Jahre ») ; Carl Lillich (« 16 Jahre ») ; Ferdinand Löwe (« 14 Jahre ») ; Rudolf (Raoul) Mader (« aus Preßburg, 21 Jahre ; Harmonielehre, Klavier III. , General der Musik ») ; Gustav Mahler (« aus Iglau, 17 Jahre ») ; Anton Meißner (« 15 Jahre ») ; Ludwig Oblat (« aus Totis, 16 Jahre ») ; Rosa Papier (« aus Baden, 19 Jahre ») ; Guido Peters (« aus Graz, 11 Jahre ») ; Hans Rott (« 19 Jahre ; Komposition ») ; Franz Schalk (« 14 Jahre ») ; Franz Schaumann (« aus Stockerau, 15 Jahre ») ; Theodor Schwendt (« aus Winzendorf, 12 Jahre ») ; Friedrich Spigl (« 18 Jahre ») ; Julius Bernhard Stern (« 20 Jahre ; Komposition ») ; Alfred Stroß (« 19 Jahre ; Komposition ») ; Franz Zottmann (« aus Hainburg, 19 Jahre ») .

Von den 6 Orgelschülern gehören 3 zur Ausbildungsschule. Der « Übersicht der in den einzelnen Lehrfächern unterrichteten Schülerzahl. » ist zu entnehmen, daß von den Orgelschülern 1 halb und 5 nicht vom Schulgeld befreit waren. 8 Schüler (davon 1 Stiffling) hörten Harmonielehre als Hauptfach und 7 Kontrapunkt (davon 1 halb, 1 ganz befreit) . Als Nebenfächer wurden Harmonielehre von 114 und Kontrapunkt von 27 Schülern besucht.

...

Auszug aus der « Unterrichtsstatistik » :

« A.

In den Vorbildungsschulen ...

Orgel, 1 Jahrgang.

Schülerstand : systemisierter : 4 ; effectiver : 1.

Monatlich erteilte systemisierte Lehrstunden : 8, sonach im Jahre ... 80.

B.

In den Ausbildungsschulen ...

Orgel, 2 Jahrgänge.

Schülerstand : systemisierter : 4 ; effectiver : 2.

Monatlich erteilte systemisierte Lehrstunden : 8, sonach im Jahre ... 80.

C.

In der Musiktheorie ...

Harmonielehre, 1 Jahrgang.

(2 Parallelschulen.)

Effectiver Schülerstand : 21.

Monatlich erteilte systemisierte Lehrstunden : 48, sonach im Jahre ... 480.

Kontrapunkt, 2 Jahrgänge.

(2 Parallelclassen.)

Effectiver Schülerstand : 20.

Monatlich erteilte systemisierte Lehrstunden : 40, sonach im Jahre ... 400. »

...

August Göllerich junior (war weder am Wiener Konservatorium noch privat Anton Bruckners Schüler) besucht als einer der ersten Bruckner in seiner neuen Wohnung.

### Death of Johann Herbeck

Anton Bruckner was now well-established in 3 important Viennese cultural institutions : the « Hofkapelle », the Conservatory and the University. But the deficit was becoming more and more important between the quantity of new works and their public creation.

His hopes were re-kindled when « honorary » « Kapellmeister » (devotee and friend) Johann Herbeck took-over the helm of the Society of Friends of Music in Vienna (« Gesellschaft der Musikfreunde in Wien ») Concert Series.

After conducting the second performance of the Symphony No. 2 in C minor, on **Sunday February 20, 1876** (asking the composer to make several changes) , Herbeck decided, in a courageous gesture, to include the 3rd Symphony in the second Subscription Winter Concert of the « Gesellschaft » to be held on **Sunday December 16, 1877**.

**Friday, 12 October 1877** : Date at end of the score of the Adagio of the 3rd Symphony. Wilhelm Tappert is informed of the work's completion and the forthcoming performance.

Alas ! After announcing the first phase of his pro-Bruckner campaign, Herbeck died prematurely of pneumonia (he suffered from respiratory problems several times during his life) on **Sunday October 28, 1877**, aged 45 (10 months and 3 days) ; about 2 months before the premiere. He also rehearsed, 6 days before his death, choral works by Franz Schubert and Ludwig van Beethoven (the 9th Symphony) with the Vienna « Singverein » . Herbeck anticipated this concert with great interest.

Bruckner was strongly shaken by this tragedy. The same day, he conducted for the last time the Liedertafel « Frohsinn » and the Linz « Sängerbund » during a memorial concert at St. Florian monastery.

Everything seemed to be falling apart for Bruckner !

### Vienna : Steam-rolling « at Gause »

**Sunday, 28 October 1877** : Anton Bruckner acted promptly. He rushed to the well-know Viennese restaurant « Gasthaus und Bierkeller “ bei Gause ” » , located at « Johannesgasse » Number 12 in the 1st District, to meet the parliamentary of the « Reichstag » , August Göllerich « senior » . In his haste and clumsiness, the robust Upper-Austrian accidentally threw the man to the ground !

...

August Göllerich junior recalled in his biography that Bruckner had forced its way through « like a steam-roller » hustling servers and customers to finally arrive at the table occupied by his father. Very agitated, Bruckner begged him to intervene in collaboration with the Liberal politician and industrialist Nikolaus Dumba, who served as vice-president of the « Gesellschaft der Musikfreunde » , to save the premiere « in extremis » . Without thinking of the dramatic consequences, Bruckner « sacrificed » himself to replace Herbeck. The performance by the Vienna Philharmonic was re-scheduled. Everything was set ... for the great « débâcle » .

August junior, son of Austrian parliamentary (« Herr Reichsrat ») Göllerich senior, tells the story :

« As a music-student at the Conservatory, I met professor Bruckner (which my father had always cherished) for the second time during one of my first evenings “ at Gause's ” Restaurant.

Soon after we had settled-down at one of the few free tables, we saw Bruckner coming towards us like a steam-roller jostling customers and table boys.

In his haste and clumsiness, the rugged man accidentally threw my father to the ground !

Deeply grasped, my father endeavoured to comfort the poor man and agreed to do everything in his power to fulfill his wish, and, for a long time, rejoiced at the possibility that the composer would be able to conduct his own work on the 16th of December. »

Highly-agitated, Bruckner begged Göllerich senior to intervene along with Nikolaus Dumba, Vice-President of the « Gesellschaft der Musikfreunde » , and Karl Ritter von Stremayr, the Ministry of Culture, to keep the new Symphony on the programme, and offering, in his eagerness, to conduct the work himself.

After the disastrous premiere of the 3rd Symphony, August Göllerich junior will dismiss any attempts made by Eduard Hanslick, Max Kalbeck, and Doctor Theodor Billroth to approach Bruckner's private Circle.

### **WAB 103 : The disastrous concert evening**

The rehearsals of the 3rd Symphony were a fateful prelude to the evening itself. When the musicians of the Philharmonic saw the score, they were even less impressed and remained uncooperative until the end. The effusive dedication to Richard Wagner, « to the unreachable world-famous sublime “ Master of poetry and music ” » , prejudiced opinion from the outset. The allusions to Richard Wagner's music throughout (the famous cascading strings from the « Tannhäuser » Overture being the most obvious) compounded matters in a music capital that was stubbornly anti-progressive and anti-Wagner.

As the new Symphony took shape for the first time, in real instrumental sound, the peals of laughter ringing-out from the Philharmonic players' desks struck Bruckner full in the face. When the composer stopped the music and tried to make himself understood to the Orchestra, witty remarks began to be muttered and the high-spirited antics escalated.

Although a decent choir-Master, Bruckner was a barely competent and fluent orchestral conductor.

Bruckner never had a real friendly relationship with the Vienna Philharmonic. It is largely through the efforts of rich and powerful admirers of the composer (and the intervention of an influential Minister) that the Orchestra had to resign itself to play the programmed work, considered « unplayable » during rehearsals.

One of the composer's friends, Theodor Rättig, owner of the publishing-house « Bussjäger & Rättig », attended most of the rehearsals.

He wrote :

« It was a pitiful and scandalous spectacle to see how the young players in the Orchestra made fun of the old man's incompetent conducting. Bruckner had no real idea how to conduct properly and had to limit himself to giving the tempo in the style of a marionette. »

In frustration, just before the concert, Bruckner wrote to a friend in Berlin :

« I shall never submit any of my works to our Philharmonic again for they have rejected my offerings repeatedly. »

...

**Tuesday, 11 - Thursday, 13 December 1877** : The performance of the 3rd Symphony is advertised in the Viennese Press and the « Linzer Volksblatt » .

...

**Sunday, 16 December 1877** : Vienna, « Musikverein GroÙer-Saal » . Second concert of the season 1877-1878 of the Society of Friends of Music (« Gesellschaft der Musikfreunde ») consisting in a « Farewell Concert » honouring professor Josef Hellmesberger « senior » for his teaching career at the Conservatory. It is also the 107th anniversary of birth of Ludwig van Beethoven.

The soloists are Jacob Maurice Grün (Concert-Master) and the Austrian Opera singer, « coloratura » soprano Clementine Edle von Schuch-Proska (born Procházka) .

Music-critics Johann Sigmund Hahn, Theodor Helm, Eduard Hanslick, Eduard Schelle, Franz Gehring, Josef Königstein, Ludwig Speidel, Eduard Kremser, Hans Wörz and Doctor Hans Kleser were present.

Also presumably in the hall : Gustav Schönaich, Johannes Brahms, August Göllerich junior and Hans Rott.

The Viennese audience essentially bought a ticket to be part of this special event. Most were suspicious about the fact

that Richard Wagner himself approved the 3rd Symphony and that Bruckner's admiration for the « Master » was « unlimited » and even exaggerated.

## Programme

Ludwig van Beethoven : Overture from the incidental music for Goethe's tragedy « Egmont » , Opus 84.

Ludwig van Beethoven : Cantata for chorus and orchestra « Meeresstille und glückliche Fahrt » (Calm Sea and Prosperous Voyage) , Opus 112 ; based on verses by Johann Wolfgang von Goethe and dedicated to him.

Louis Spohr : Violin Concerto in D minor. Soloist : Jacob Maurice Grün.

Wolfgang Amadeus Mozart : Aria from « Le nozze di Figaro » . Soloist : « coloratura » soprano Clementine Edle von Schuch-Proska (born Procházka) .

Peter von Winter : Aria from the heroic Comic-Opera « Das unterbrochene Opferfest » (The interrupted Sacrifice) , originally planned to be performed on 11 December.

Carl Heinrich Graun : Aria.

What was supposed to be a memorable evening became a total failure, mainly because of the ambivalence and hostility of the musicians towards Bruckner.

## *Intermission*

The new « Musikverein » concert-hall on the « Karlsplatz » had begun to empty even during the intermission. Then, the 53 year old Anton Bruckner arrived at the podium.

Abridged version of the Symphony No. 3 in D minor, « Wagner Symphony » (the 3rd revision published in 1878 without incorporating the 1876 Adagio) (**WAB 103**) . Duration : 45 minutes.

The original (« unplayable ») 1873 score was later owned by Gustav Mahler. His widow Alma ensured she took it with her when fleeing the Nazi invasion of France, in 1940, for the United States. It will be published only in 1977 by Leopold Nowak.

The performance will prove to be long and painful. The atrociously obstinate musicians, irked by Bruckner's muzzy beat, played wrong notes and made rude faces. Josef Hellmesberger « senior » (markedly ambivalent to Bruckner's music) started to laugh loudly. Soon, another colleague got involved. Thereupon, most of the students of the Conservatory made antics. Then, many in the audience began to laugh, whistle and hiss, expressing their own disapproval. Then, more rose abruptly to leave the premises. This scenario was repeated after each movement (instead of applause like it was

the custom in the 19th Century) . A « mass-exodus » developed during the Finale, which actually consisted of the noisy departure of the Brahmsians followed by the ordinary public, because it was fashionable for the Liberal « bourgeoisie » to favour Brahms against Bruckner.

Most of the Orchestra vanished even before the last notes had died away, leaving Bruckner completely alone at the rostrum. A dozen or so of individuals who stayed until the end were still laughing and heckling, shouting : « da capo » and « bis » .

A handful of dedicated hardcore supporters and faithful students of the Conservatory (around 25 in total) standing in the back of the « parterre » , including Josef Schalk, Eduard Kremser, the 17 year old Gustav Mahler and his fellow-student Rudolf Krzyżanowski rushed towards the « Master » , with tears and broken heart, unsuccessfully trying to cheer him up with some consoling words.

(A music-critic who witnessed the scene mentioned the presence of this « little host of hardy adventurers » .)

Bruckner shouted to them :

« Leave me alone, I want to get-out of here. The Viennese public don't want anything of mine. »

Moreover, General-Secretary « Herr » Professor Leopold Alexander Zellner prevented them from handing-over a laurel wreath to their « Master » !!!

This was, no doubt, one of the saddest events in the history of music.

At the same moment, the music-publisher Theodor Rättig (one of the few who stayed until the end) approached the young supporters (like an Angel coming from Heaven ...) to praise the Symphony. Bruckner looked incredulously at this strange character who dared to show such courage at such a difficult moment. Rättig was even willing to risk publishing the score in his catalogue, at his own expense (3,000 « Gulden ») . According to the biographer August Göllerich « junior » , Bruckner will receive (in 1885) a sum of 150 Guilders as royalties.

Bruckner was mauled in the press when the reviews appeared 2 days later.

Most generous was the « Wiener Zeitung » , which only called the 3rd « audacious » and « peculiar » , if unrestrained and undisciplined.

The « Deutsche Zeitung » was baffled :

« We heard an utterly bizarre work which might rather be described as a motley, formless patch-work fabricated from scraps of musical ideas than anything that is signified by the melodious title “ Symphony ”. »

The influential and famously caustic 52 year old music-critic Eduard Hanslick writing in the « Neue Freie Presse », could not restrain his venom :

« It is not our wish to harm the composer whom we rightly respect as man and artist, for his artistic intentions are honest, however oddly he employs them. Instead of a critique, therefore, we would rather simply confess that we have not understood his gigantic Symphony. Neither were his poetic intentions clear to us — perhaps, a vision of how Beethoven's 9th made friends with Wagner's " Walküre " and ended-up under her horse's hooves nor could we grasp the purely musical coherence. The composer was greeted with cheering and was consoled with lively applause at the close by a fraction of the audience that stayed to the end for the flight of the rest. »

To honour his Mentor, Gustav Mahler and Rudolf Krzyżanowski prepared a piano reduction for 4 hands of the Symphony (supervised by his piano professor, Julius Epstein) . Mahler worked effectively (but with some restraint) on the first 3 movements. Aside from the Wagner sonorities, Mahler's ear has been caught by a funeral melody in the horns echoed by jollity in the strings, a hint that music has the potential to convey polar opposites. For its part, Krzyżanowski took care of the Finale, adding a touch of colour and playfulness. The result is superb and very faithful to the orchestral score.

Paul Stefan writes :

« His piano-score follows the orchestral one exactly, and attempts to keep the various parts in the characteristic pitch of the instruments, even at the expense of not being easily playable. »

Up to 1878, the various stories recorded may be assigned. Alma Mahler relates that when Mahler took Bruckner his reduction of the Symphony's first movement, « Bruckner was childishly pleased and said with a roguish smile : " Now, I shan't need the Schalks any more ! " »

The short-score finds a publisher in Rättig and, in appreciation of his efforts (as an arranger) , Bruckner presented to Mahler nothing less than the autograph of the 3rd Symphony's second version. Seeing him at lunch-time gnawing a roll with cheese rind, Mahler buys Bruckner a beer to wash it down. Mahler calls Bruckner his « father-in-learning » , overlooking his repeated disparagements of Jewishness. It is the price he has to pay for having a « Mentor » .

This edition of the Symphony, « one, of the first piano-duet arrangements of Bruckner's Symphonies » , was published in 1878 by Theodor Rättig (score, parts, piano excerpts for 4 hands, extract by Gustav Mahler and (4th movement) Rudolf Krzyżanowski) . It was Mahler's first publication.

But according to Henry-Louis de la Grange, the piano transcription was published on February 1880. He quotes Alma Mahler's statement that the Finale was not transcribed by Mahler but by Ferdinand Löwe (and, thus, not by Krzyżanowski - final clarification is required) .

Bruckner was so traumatised by the concert that he stopped composing for almost a year. He will make several

revisions of the 3rd, leaving-out significant amounts of music. He embarked on scrupulous revisions, « encouraged » and supported by his pupils Franz and Josef Schalk. The goals of the Schalks were an adaptation to Richard Wagner's orchestral sound ideal, a formal consensus with contemporary listening customs and a smoothening of the most radical compositional audacities. In the meantime, the now established Mahler visited his erstwhile harmony teacher and termed all of Schalks' revisions superfluous, indeed even detrimental to the work. He expressly urged Bruckner not to yield to his influential Circle who advised him to « adapt » the 3rd Symphony before popular pressure. The Schalks were desperate and jealous and, at Bruckner's behest (encouraged by Mahler) , the expensive printing plates of the « improvements » had to be scrubbed by the benevolent music-publisher Theodor Rättig, which finally exhausted the latter's financial means. After Mahler's departure, the psycho-drama continued. Now, the Schalks largely went on working on the 3rd Symphony on their own account behind Bruckner's back.

At the time of writing « Das klagende Lied » , Mahler certainly knew one score by Bruckner intimately, the 3rd Symphony. Bruckner may have discussed other works (including the 4th and 5th Symphonies, which he finished revising in 1878) with the young Mahler. Echoes of his music certainly found their way (along with much Wagner and some Brahms) into the one completed Symphony by Mahler's friend, Hans Rott. A work that, in turn, had extensive influence on the later Mahler. But it is safest to assume that the 3rd Symphony was the most likely source for such Brucknerian elements as are to be found in Mahler's Cantata.

It is doubtful that 1878 is the correct date of publication of the Symphony. It is more likely to be 1879 or 1880, whichever year it was, in fact, in which Theodor Rättig brought-out the score of Bruckner's 3rd Symphony.

In 1888 and 1889, against Gustav Mahler's advice, Bruckner made another thorough revision of the score for republication, with the assistance of his pupils Franz and Josef Schalk.

The 3rd Symphony in its more familiar 1889 version will be part of the 4th Subscription Sunday Concert by the « Philharmoniker » (conducted by Hans Richter) on **Sunday, December 21st, 1890**. Although this new « premiere » will greeted with « storms of applause » , the memory of the « débâcle » remained with Bruckner.

### Leopold Hofmeyer

Leopold Hofmeyer, who was to play an important role in Bruckner's life. Born in Steyr, in 1855, he had grown-up in the house of an instrument-maker. He regarded Bruckner, the composer and teacher, as the ultimate authority in all matters pertaining to music and he repeatedly sought his advice. Hofmeyer's most urgent need, at the time, was for a training in musical theory, as he was thinking of becoming a professional musician. At Bruckner's mention of the writings of Simon Sechter, he started-out by studying them on his own. Bruckner insisted on the importance of solid foundations, which would involve work with a « proficient instructor » ; he also counted on additional help from Arminger.

Putting aside any idea of continuing his idealistic strivings on a professional level, Leopold Hofmeyer elected to take-up a post as a civil servant in the record section of Steyr's municipal office. Yet, music remained important for him and

he regularly took part in amateur chamber music concerts and in diverse performances put on by Steyr's musical Societies. (It is most unfortunate that his compositions and / or sketches were destroyed after this death, on 17 March 1900.)

Hofmeyer soon won Bruckner's unqualified trust in musical matters ; occasionally, the composer even referred to him as his « secretary » . He was involved in the creation of the 8th Symphony from its conception. Nor was the intimate relationship exclusively confined to music. Social events and Bruckner's passion for home-made simple food were also involved, as can be seen from a reminiscence of Hofmeyer's daughter, Anna :

« As my father knew about Bruckner's partiality for stuffed veal breast (once, he made a tour of all the pubs in Steyr, inquiring of each waitress whether they had stuffed veal breast on the menu) , he repeatedly invited Bruckner to lunch. Mother, who was an excellent cook, then made his favourite dish. " Fleckerlspeis " (a gratin of small pasta squares and left-overs from the Sunday roast) was another favourite, so he was often invited to supper. »

### Moving to the « Hôtel de France »

**Thursday, 15 November 1877** : Celebration of the death of Johann Herbeck in the Great-Hall of the « Musikverein » .

On the programme : a Prelude for organ by Leopold Alexander Zellner ; a poem by Josef Lewinsky ; and Mozart's « Requiem » conducted by Josef Hellmesberger senior.

The soloists : Mrs. Marie Wilt (soprano) , « Hofoper » singer Miss Ernestine Gindele (Alto) , Gustav Walter (tenor) , Hans von Rokitansky (bass) , accompanied by the Vienna « Singverein » .

Hugo Wolf, Adalbert von Goldschmidt, Felix Mottl and Gustav Schönaich are in the audience.

Anton Bruckner gives up his cramped rooms at the « Heinrichhof » (« Opernring » Number 3) and moves on « Heßgasse » Number 7. Bruckner lived there until the summer of 1895. During this period, he composed some of his most famous pieces of music.

The « Hôtel de France » is an elegant 5 Star hotel in the very centre of Vienna on the famous « Ringstraße » , within walking distance of St. Stephen's Cathedral, the Hofburg, the Spanish Riding School, the « Hofoper » , the business and banking district.

This « Gründerzeitstil » building was designed on the « Schottenring » in 1872 by 2 architects, Franz Fröhlich and Anton Ölzelt senior (1817-1875) . The following year, a World Exhibition took place in Vienna. Therefore, the hotel which was part of a larger real estate complex was named « de France » , to promote international flair which was considered very elegant and chic at that time.

The owner was initially the « Wiener Lombard- und Escompte-Bank » , founded in 1873, which opened its first branch

on the ground-floor of the hotel.

During the Second World War, the « Hôtel de France » became an army-hospital. After the end of the War, the allied-forces occupied Vienna and divided it into 4 zones. The « Hôtel de France », which was situated in the French sector, was their head-quarter until October 1955.

### Inspiration and food

The security, Anton Bruckner bought at a high-price ; he lectured twice a week at the University, taught 16 hours a week at the Conservatory, and gave 12 private lessons a week. Since « week-ends » were unknown in Germany and Austria, his work amounted to 5 hours a day. It is an enormous load, even for a teacher whose imagination is not so full of ideas as Anton Bruckner's soaring musical mind must have been. All his lamentations about poor salaries, lack of recognition, and jealousy on the part of his colleagues do not move me so much as the idea of those 30 hours of teaching spent every week by an artist whose mental and physical powers should have been saved for creative work. Nothing interferes with a musician's creative abilities more than concern with music other than his own. He does not need to sit at a desk or at a piano to work ; his ideas may take shape while he is taking a walk or enjoying a bit of recreation or pursuing a hobby.

Bruckner once said, when he was asked how a certain beautiful melody had come to him :

« It came by itself while I was eating my favourite dish. »

There is no doubt about it, the composer's worst foe is giving music lessons.

### Bruckner's workload

In the « Neuer Krakauer Schreib-Kalender für das Jahr 1877 », entries illustrate the extent of Anton Bruckner's physical and mental work-load. He notes no less than 28 lessons University, Conservatory, and private students. Added to this, were the services in the « Hofkapelle », totaling about 40 working hours per week. Reports of his nervousness and impatience when teaching are, therefore, not surprising.

Private and professional matters, everyday joys and financial difficulties, triumphs and aggravations, everything is side by side. For example, there are notes on attendance at balls (with the names of dancing partners) immediately adjacent to entries about pupils' debts. Migraine attacks, which seem to have been very frequent at this time, are noted alongside household bills.

### Bruckner's health

Anton Bruckner bears the faithful image of the bold Upper-Austrian of peasant origin. Strong on his legs, which are well-anchored to the ground, his health is rather satisfactory. Modest and shy, he is not used to complaining. Physical activity does not really interest him (although he enjoyed swimming) . He is logical, methodical, and foresightful. He is

totally involved in his work but demonstrates morbid insecurity when it comes to his sentimental life. He perfectly sublimates this failure in the act of composing.

In spite of this apparent physical resistance, he sometimes decompensated, both physically and morally, which resulted in frequent chills and several depressive periods. Food and beer represented a precious refuge when it was time to deal with the daily frustrations.

He ate and drank more than necessary, causing overweight and metabolic disorders.

While his public reputation gained from day to day in prestige, his health, unfortunately, deteriorated seriously.

In fact, Bruckner felt the first symptoms of a poor health condition, which was never to leave :

Fatigue, ailments, sore throat, colds and, above all, an aggravation of his depressive tendencies from which he had never been completely free.

Main health problems that he will encounter during his life :

Frequent chills related to flu, sore throats, laryngitis, and panaris.

Obesity due to an overly rich diet and an alcoholic tendency.

Metabolic disorders : colitis, gastralgias.

Neurotic periods.

Depressive periods.

Migraines.

Edema of the lower limbs, pulmonary edema, pneumonia, pleurisy.

### Bruckner's hearing impairment

Anton Bruckner had a nevus at the earlobe sitting under the zygomatic arch : an expression of the hearing impairment. As probably all great composers, Bruckner has achieved the extraordinarily artistic height by over-coming his deafness.

### Bruckner's migraines

**Monday, 5 March 1877** : The first performance of Richard Wagner's « Die Walküre » , in Vienna, took place in the presence of Emperor Franz-Josef, but with many deleted passages which made the Opera difficult to understand.

**Sunday, 11 March 1877** : Anton Bruckner attended the third performance of « Die Walküre » . He marked the event in his pocket calendar :

« Sunday 11 March, migraine during the whole day and during “ Walküre ”. »

(« Sonntag 11. März, Migräne ganzer Tag und “ Walküre ”. »)

**Monday, 12 March 1877** : Pocket calendar entry by Anton Bruckner :

« Monday 12th, first painful migraine at the end of the day at the University. »

« 1. (Migräne-) Nachweh Montag 12. Schluß Universität. »

**Tuesday, 13 March 1877** : Pocket calendar entry by Anton Bruckner :

« Tuesday morning, second painful migraine at the Conservatory. »

« Tuesday evening, third migraine after hours “ at Gause ”. »

(« 2. Migräne- Nachweh Dienstag Vormittag Konservatorium. » - « 3. Nachweh Dienstag Abends “ Gause ”. »)

The popular Viennese guest-house (Restaurant and Beer-Hall) named « at Gause » (« Gasthaus und Bierkeller “ bei Gause ” ») was located in a basement at « Johannesgasse » Number 12 in the 1st District.

**Friday, 29 June 1877** : Pocket calendar entry of Anton Bruckner (beginning of a migraine attack) :

« June 29th, migraine in the evening : first warning - full back-pain already and moving.

(« Migräne Abends den 29. Juni : I. Vorboten - rückwärts schon voll und bei Bewegung Schmerz. » - « 29. Juni - erstes Fühlen. »)

**21-22-23 October 1879 (Tuesday, Wednesday, Thursday)** : Pocket calendar entry by Anton Bruckner :

« Tuesday, 21st : headache (migraine) until the evening. Wednesday, 22nd : first in the evening then at night. Headache lasts until the 23rd in the morning. »

(« Dienstag den 21. Kopfschmerzen (Migräne) bis Abends. Mittwoch 22. Abends und Nachts I. Nachkopfschmerz (dauert

bis zum Morgen des 23.) . »)

**Saturday, 21 February 1880** : Pocket calendar entry by Anton Bruckner (in April 1880) :

« Migraine in the morning ... »

**Wednesday, 28 April 1880** : Pocket calendar entry by Anton Bruckner :

« Migraine from morning of April 28th to morning of the 29th. »

(« Migräne Morgens 28. April bis Morgens 29. »)

**23-24 July 1880 (Friday, Saturday)** : Pocket calendar entry by Anton Bruckner :

« Migraine, Friday evening July 23 to Saturday evening. »

(« Migräne Freitag Abends 23. Juli bis Samstag Abends. »)

**Monday, 26 July 1880** : Pocket calendar entry by Anton Bruckner :

July 26 (date underlined) , weather observation, painful migraine 8 times during the day. (Rudolf Pichler)

(Wetterbeobachtung, Migräne-Nachweh und « 8. Mal 26. Juli. » (Rudolf Pichler) , Datum unterstrichen.)

**Thursday, 30 September 1880** : Pocket calendar entry by Anton Bruckner :

« Migraine from Thursday morning September 30th to Friday morning 10:00 am. »

« Migräne 30. September (Donnerstag) Morgens bis Freitag 10 Uhr Morgens. »

**Friday, 1 October 1880** : Pocket calendar entry by Anton Bruckner :

« Migraine until Friday 10:00 am in the morning. Another one at 3 o'clock in the afternoon until the evening. »

« (Migräne ...) bis Freitag 10 Uhr Morgens. Nachweh l. um 3 Uhr Nachmittag bis Abends. »

**From Saturday, 2 to Monday, 4 October 1880** : Pocket calendar entry by Anton Bruckner :

« Second painful migraine starting late Friday night until the next morning. And so on until Monday morning. »

« II. (Migräne-Nachweh von Freitag) Nachts bis Morgens - so fort bis Morgens 4. Oktober. »)

### Young men and « Eros matutinus »

According to Stefan Zweig, earlier European societies, where religion (i.e., Christianity) had a central role, condemned sexual impulses as work of the devil. The late-19th Century had abandoned the devil as an explanation of sexuality; hence, it lacked a language able to describe and condemn sexual impulses. Sexuality was left unmentioned and unmentionable, though it continued to exist in a parallel world that could not be described, mostly prostitution. The fashion at the time contributed to this peculiar oppression by denying the female body and constraining it within corsets.

We should not forget what the awakening of « Eros matutinus » meant for a young man of Gustav Mahler's generation. A good 20 years his junior, Stefan Zweig left a vivid and (in the circumstances) extremely outspoken account of this in his reminiscences. In Hugo Wolf, Hans Rott and Anton Krisper, Mahler now had no fewer than 3 deterrent examples of the dangers of venereal disease among his own immediate circle of friends. Fear of such diseases was so great that uninhibited contact with the opposite-sex was impossible outside marriage. Sex with a prostitute was accompanied by the constant fear of infection. As Zweig points-out, there was a notice on the door of every 6th or 7th house in Vienna that read « Specialist for Skin and Venereal Diseases ». Those infected had to undergo painful courses of treatment with little prospect of recovery. For weeks on end, their entire body was rubbed with mercury, with the inevitable side-effect that their hair and teeth fell-out, and yet, not even this could guarantee a complete cure: the insidious disease could break-out again at any time and lead to a « softening of the brain », as was the case with Rott and Krisper and probably also with Wolf. It was, by no means, unusual for young men diagnosed with syphilis to take their own lives. Zweig reports that he could not recall a single comrade of his youth who, at one time or another, did not come to him « with pale and troubled mien, one because he was ill or feared illness, another because he was being black-mailed because of an abortion, a third because he lacked the money to be cured without the knowledge of his family, the 4th because he did not know how to pay hush money to a waitress who claimed to have had a child by him, the 5th because his wallet had been stolen in a brothel and he did not dare go to the police ». Arthur Schnitzler says much the same in his early autobiography, while the « problem » is even more clearly spelt-out in his diaries. (He, too, had a friend Richard Tausenau - whose health was being undermined by syphilis.)

It is easy to imagine what all this must have meant for a young man like Mahler, even if he did not share Schnitzler's erotomania. Unlike Schnitzler, who repeatedly indulged his priapic desires in countless fleeting affairs with waitresses, seamstresses, ladies of more or less ill repute and married women and who was evidently extremely fortunate in never becoming infected, Mahler equally evidently pursued a very different course. Even if Alma was later to give the impression that it was she who roused him to manhood (or, perhaps, this was the impression that Mahler himself wanted her to give), this was not in fact the case. Conversely, there is no doubt that, as a young man, he was exceptionally reserved in the matter of sex. The reasons for this must be sought not only in his fear of infection but also in his feelings of world-weariness, in a scepticism unusual in one so young and in a seriousness of purpose that extended beyond mere morality and embraced his whole philosophy in life. Richard Wagner's character of Parsifal

preached not only respect for animals but also sexual abstinence, sex being regarded as sinful. And like Parsifal, Mahler will have felt obliged to keep his distance from many a seductive Flower-maiden, to say nothing of women like Kundry, a corrupter of morals whom Parsifal rejected just as surely as Mahler would have done - only in the case of Anna von Mildenburg did Mahler fail to emulate Parsifal.

### Mahler : « Art, love, religion »

Gustav Mahler had exclaimed in 1879 to Joseph Steiner that « art, love, religion » were all that was most sacred to him. Art and religious feeling inevitably fed upon his youthful love-life, which was intimately bound-up with his earliest significant compositions. Here, the mediation between private and public realms demonstrated revealing tensions and contradictions that require judicious interpretation. Were his works, in the language soon to be developed by Sigmund Freud, « sublimations » of unfulfilled sexual desire or cryptically polite allusions to secret passion ? Life and art merged here in a very particular way ; the life is essentially no more easy to « read » from surviving letters, gossip and anecdotes than the art. Was Mahler really as inexperienced in sexual matters as he would claim, at the age of 40, in the course of his affair with Alma Schindler ? The modern consensus is that he cannot have been. Biographers like Egon Gartenberg and de Henry-Louis de La Grange take their cue from Stefan Zweig, who makes it clear that public prudery in Vienna, at least for young men, was matched by private licence in the company of the prostitutes or lower-class girls who seemed to smile obligingly from any number of back-street windows in that city of easy pleasures.

By his 30's, Mahler had acquired a reputation as something of a womanizer, although some stories reinforce the suspicion that he might have been rather the reverse, and that intense, unconsciously homo-erotic relationships with close male-friends like Anton Krisper were complemented by equally intense idealizing friendships with women. Mahler may have been prone to forming « elective affinities » that tended towards yet failed quite to reach direct sexual expression. He also had a pronounced puritanical streak.

Alma Mahler relates the story of his having lectured a singer in Laibach on the subject of her « loose morals » :

« Whereupon she swung herself on to the piano and slapping her thighs informed him that the purity of his own morals aroused her utter-contempt. »

It is not improbable that Mahler might, had he visited prostitutes in the company of Hugo Wolf or one of his other student acquaintances, have behaved like Arthur Schnitzler's friend Adolf, « who after bestowing his favours on such a lady would follow it up by reproaching her, with unctuous lectures, for her profligate way of life » .

It is both difficult and dangerous to come to any dogmatic conclusion about Mahler's youthful sexual experiences. Their traces are comprehensively covered by the public manner of the gallantly idealistic, easily hurt Romantic Lover that we encounter in letters to, about and from the women in his life - as in the poetry and music that attended all the relevant hopes and disappointments. In 1879-1880, it had been Josephine, daughter of I. Poisl, the post-Master in Iglau. Mahler appears to have started writing about her to Anton Krisper in September 1879 (« A new name is now inscribed in my heart alongside yours ... ») , but, by Easter the following year, he was writing directly to his «

passionately beloved » Josephine :

« Just at a time when I am closer than ever to the goal of my desires when that which we (oh, would I could say - “ we ” both) so ardently longed for, would soon be fulfilled. »

In contrast to Hugo Wolf, Gustav Mahler, and many of his self-educated students, Anton Bruckner had no interest in European literature and philosophy. Heated debates about Arthur Schopenhauer and Friedrich Nietzsche left him cold. Some of his students drew the conclusion that he « had hardly any intellectual needs » - a totally misleading and incorrect claim which was hopelessly confused with a « lack of intelligence » .

### Hugo Wolf's « fatal wound »

Hugo Wolf's musical gift and his charm earned him attention and patronage as soon as he was introduced to Vienna society as a very young man.

Wolf was already known in other cultured circles, notably that of the composer and pianist Adalbert von Goldschmidt (which included music-critics Gustav Schönaich and Hans Paumgartner, and conductor Felix Mottl) . They adopted the young Wolf, took him to concerts and Operas, lent him books, music and money. But this fostering may also have proved fatal ...

According to Alma Mahler (her « Memoirs » being not always a reliable source) , Wolf had been infected during a visit to the brothel (a customary Viennese initiation) when he was 17. One of his rich bourgeois friends, pianist Adalbert von Goldschmidt, aged 29, gave him as a gift his « honorarium » for an evening :

« Hugo Wolf as a very young man was taken by Goldschmidt into the so-called “ Lehmgrube ” (brothel) , where Goldschmidt played dance-music for which he was often “ awarded ” with a young woman without charge. He presented this “ honorarium ” once to his friend Wolf, and Wolf took away with him “ the wound that will never heal ”. »

Since Friedrich Eckstein gave the same information in 1937 (before Alma Mahler's book was published) , dating the incident as 1877, there is little reason to doubt the accuracy of Alma Mahler's account. Eckstein further volunteered the information that Wolf was treated that year both by the well-known Vienna neuro-psychiatrist Doctor Josef Breuer (whose children were taking piano lessons from Wolf at this time) and by Breuer's friend and collaborator, Sigmund Freud.

From then on, Wolf often went into depression and was unable to compose.

Some Wolf's musicologists trace the agonized tone of his first important works, the songs of 1877-1878, to his infection. Ernest Newman felt that the « supreme Master of form in music » was not Beethoven or Wagner, but Hugo Wolf. Perhaps, this admiration is why Newman's 1906 biography of Wolf tells a story of progressive paralysis and

brain-disease, without mentioning the word that he knew applied to Wolf's condition : syphilis. Information on the progress of his disease is scarce, for, by social custom, syphilis was a taboo. They did not speak or write about it, partly also out of consideration for the composer.

As members of the Gabillon and Breuer families later recalled, Wolf began to avoid their dinner tables and their company - eating without cutlery (only with his hands) such food as could be conveyed directly to the mouth - bread, cheese, fruits. He also refused to travel in the same railway carriage as his hosts. Such conduct then seemed merely eccentric or boorish ; Breuer later came to believe that it was founded on medical advice (potential risks of infection) and consideration for others.

Even before the outbreak of the mental disease, Wolf was known to change mood rather often : after a bout of depression, when he would not write a single note for days, he suddenly became hyper-active, also in composing, lacking self-criticism, ungrateful towards friends, aggressive (he would kill birds if their singing « disturbed his peace ») , all due to, as he would claim, his demonic nature. His pre-psychotic behaviour was compared with the course of disease of Robert Schumann, the ingenious Romantic poet of the piano.

Schumann and Wolf may well have been suspicious about the nature of the primary infection - the medical knowledge of contemporary physicians was good enough to indicate to their patients the possible serious consequences of their sexual adventures. Hence, it may well have been more than the « typical » anxiety of the period that both Schumann and Wolf expressed their fear of becoming mad. In addition, they were very well-aware of the fates of their famous « co-patients » . Ironically, in a megalomaniac delusion, Wolf expressed his ambitions to cure Friedrich Nietzsche and was convinced that he was the director of his asylum, in Vienna. Schumann and Wolf must have had in mind the horrible vision of ending in an asylum ; they were by all accounts well-aware of the shortness of their remaining productive time. By all means, this alone, would have justified an intense concentration and condensation of their respective productive periods.

The less obvious role of their illness lies in the potential catalytic effect of the disease with respect to creativity. This is, by far, the more difficult question to answer. Several authors have speculated about the nature of the very wide mood swings and have proposed the diagnosis of bi-polar affective disorder in both composers to explain the marked mood swings and also fitting with periods of feverish creativity.

Aggressive behaviour was present by Schumann and Wolf, as well as focal seizures. Generalized seizures were also reported during their final days, along with pneumonia as the terminal illness. Already some time before marked « cachexia » was noted, incontinence was documented. Dysarthria was a very important and marked symptom in both composers, and pupillary abnormalities were observed by medical doctors before the onset of general paresis in Wolf's case and in Schumann's record from Eendenich sanatorium.

Both composer's writing ability deteriorated. Wolf's hand-writing became unintelligible from 1899 on. A late-document of his signature, from 1899, shows significantly disabled hand-writing. Robert Schumann, in contrast, could write quite well until 1 year before he died. His last letter to Clara shows clear hand-writing with only minor semantic errors.

Regarding the creative output, both composers did not manage to compose new « œuvres » .

Syphilis alone is definitely not a sufficient diagnosis to explain all of the remarkable extremes in creative output in Franz Schubert, Robert Schumann and Hugo Wolf. Whatever Schubert died of, it did not affect his genius. In clear contrast, in both Schumann and Wolf, neuro-syphilis was the due cause of the final termination in artistic output. Hence, we can only speculate about the possible link between neuro-syphilis and creativity through the severe organic disturbance of the neuronal networks including the limbic brain with its direct links to motivation. Likewise, a disease-mediated disinhibition of the frontal sub-cortical circuits might interfere with creativity.

...

Syphilis was perceived to be a consequence of immoral, improper, or promiscuous sexuality, the diagnosis resulting in severe social stigmatization. This fact most probably has led to many historical medical analyses being incomplete or misleading. The diagnosis of syphilis in these geniuses is still today not unanimously accepted by experts in the field of musical and medical history. Naturally, syphilis in Robert Schumann and Hugo Wolf cannot be confirmed retrospectively using modern diagnostic tools. Today, however, in large part made possible by the publication of Robert Schumann's medical records and the striking similarities with Hugo Wolf's case, we postulate that the diagnosis of syphilis in both composers can be made with reasonable certainty. Characteristically, in both Robert Schumann and Hugo Wolf euphoric surges of creative energy, associated with emotional highs, produced clusters of productivity resulting in quite phenomenal series of song composition. At the same time, Schumann and Wolf shared a lifelong fear of « becoming mad » .

...

The exact origin of syphilis is disputed. Syphilis was definitely present in the Americas before European contact, and it may have been carried from the Americas to Europe by the returning crewmen from Christopher Columbus's voyage to the Americas ; or it may have existed in Europe previously, but went unrecognized until shortly after Columbus returned. These are referred to as the Columbian and pre-Columbian hypotheses, respectively.

The Columbian hypothesis is best supported by the available evidence. The first written records of an outbreak of syphilis in Europe occurred in 1494 or 1495, in Naples, Italy, during a French invasion (Italian War of 1494-1498) . As it was claimed to have been spread by French troops, it was initially known as the « French disease » by the people of Naples. In 1530, the pastoral name « syphilis » (the name of a character) was first used by the Italian physician and poet Girolamo Fracastoro as the title of his Latin poem in dactylic hexameter describing the ravages of the disease in Italy. It was also known historically as the « Great Pox » .

The earliest known depiction of an individual with syphilis is Albrecht Dürer's « Syphilitic Man » , a wood-cut believed to represent a « Landsknecht » , a Northern European mercenary. The myth of the « femme fatale » (« poison women ») of the 19th Century is believed to be partly derived from the devastation of syphilis, with Classic examples in literature including John Keats' « La Belle Dame sans Merci » .

The artist Jan van der Straet painted a scene of a wealthy man receiving treatment for syphilis with the tropical wood « guaiacum » sometime around 1580. The title of the work is « Preparation and Use of Guayaco for Treating Syphilis ». That the artist chose to include this image in a series of works celebrating the New World indicates how important a treatment, however ineffective, for syphilis was to the European « élite » at that time. The richly coloured and detailed work depicts 4 servants preparing the concoction while a physician looks on, hiding something behind his back while the hapless patient drinks.

In the pre-antibiotic era, syphilis was an extremely common disease. During the 18th and the 19th Centuries, many artists became victims of the disease-menace, among them poets, painters, composers and philosophers. Many famous historical figures, including Franz Schubert, Arthur Schopenhauer, Édouard Manet, Charles Baudelaire, and Guy de Maupassant are believed to have had the disease. Gustave Flaubert found it universal among 19th Century Egyptian prostitutes. Friedrich Nietzsche was long believed to have gone mad as a result of tertiary syphilis, but that diagnosis has recently come into question.

In our days, neuro-syphilis is observed in 5 to 10 % of untreated patients and may occur at any stage of the disease. Psychiatric symptomatology is the most common clinical manifestation but radiologic differential diagnosis is not easy. In neuro-syphilis medium and small vessels are usually involved and in cases of invasion of the central nervous system, the most frequently involved arteries are the middle cerebral and branches of the basilar artery. Neuro-syphilis has been the cause of the 7 syphilitic Classical composers' loss of cognitive functioning and change in personality, dysarthria and tremor, loss of vibratory sense, impotence, paralysis, blindness and deafness. However, in spite of the severe neurological and psychological disorders, the creativity and the continued efforts for finishing their musical compositions never stopped. Even, towards the end of their lives, some of them into insane asylums or paralyzed or blind or deaf, they found a lucid interval to show their music genius and said their farewell with works reflecting their feelings and fears before death.

Mercury poisoning was another source of severe side-effects that tortured the syphilis sufferers. The only recommended remedy of the era was mercury, either orally, in vapour baths or topically, and, no later than 1910, Paul Erlich's chemo-therapeutic (« Salvarsan ») , was the first effective therapy against syphilis before penicillin was introduced. Headaches, nausea, loss of hair and teeth are attributed to the intoxication of a heavy metal such as mercury, and it seems probable that some drugs and medications might have affected the productivity and the creativity of the artists.

All the late works of the suffering from syphilis composers were created under the menace of definite loss of sense or during painful and uncomforted circumstances allow a unique view on music physiology. Syphilis has been a great stigmatization in the times of the great Classical composers of the 19th Century, and this stigma included the whole family. All the composers tried to hide the disease while in life, while the latter tried to keep the shameful secret, aftermath destructing sources (letters to close friends, personal diaries) , medical documents, and, in cases of autopsy, changing the findings, therefore, resulting to a general and indefinite diagnosis - i.e. , dementia or inventing imaginative illnesses such as the typhus of Franz Schubert, greatly disputed by historians. Syphilis was often the presumed etiology of progressive cognitive dysfunction in a young person.

Depression, anxiety, bi-polar disorders, despair intense maniac phases were common and during the latter, visual and auditory hallucinations, visions and paranoid ideas tortured the composers and influenced their musical scores. Tinnitus, hearing loss and « sounds » confused the harmony and punctuality of the compositions, although these experiences were often transformed to intense creations enriched with powerful sentiments. All these Classical composers gained the immortality they deserved by their divine music, still capable to inspire modern audiences.

Neuro-Syphilis has 4 different forms : asymptomatic, meningo-vascular, tabes dorsalis, and general paresis. In rare instances, active neuro-syphilis can mimic Alzheimer's disease.

Symptoms of neuro-syphilis include, but are not limited to the following :

Abnormal gait.

Blindness.

Confusion, disorientation.

Sudden personality changes.

Changes in mental stability.

Dementia.

Depression.

Headache.

Fecal and urinary incontinence.

Irritability.

Memory problems.

Mood disturbances.

Numbness in the toes, feet, or legs.

Poor concentration.

Psychosis.

Seizures.

Neck stiffness.

Tremors.

Visual disturbances. There may be the sign of Argyll Robertson pupils, which are bilateral small pupils that constrict when the patient focuses on a near object but do not constrict when exposed to bright light.

Muscle weakness.

Upon further diagnostic work-up, the following signs may be present :

Abnormal reflexes.

Muscle atrophy.

Muscle contractions.

### Adalbert von Goldschmidt

The Austrian composer Adalbert von Goldschmidt was born on 5 May 1848 in Vienna, and died on 21 December 1906 in Vienna - at the sanatorium located on « Raschgasse » Number 6, in the 13th District. He is buried at the Döblinger Cemetery.

His grand-nephew was the conductor Nicholas Goldschmidt.

Adalbert Goldschmidt lived on « Wohllebengasse » Number 17, in the 4th District. His « salon », located at « Opernring » Number 6 in the 1st District, was an important centre for Viennese musical life. Goldschmidt introduced the young Hugo Wolf to his circle, after his release from the Vienna Conservatory in 1877.

Initially, Goldschmidt, like his father, worked as a clerk for the Rothschild banking house in Vienna, but he abandoned his position to study composition with Friedrich Adolf Wolf. Possible (?) music studies at the Vienna Conservatory. Influenced by Richard Wagner, he combined the forms of the Oratorio and the Opera in his compositions. He first drew wide acclaim for his Cantata « Die sieben Todsünden » (The 7 Deadly Sins) dedicated to Franz Liszt (composed from 1873 to 1875, on texts by Robert Hamerling drafted by the composer) which was created in Berlin in 1876. The Vienna premiere was less successful ; the work earned Eduard Hanslick's disapproval as being imitative of Wagner. It was also performed in Paris. In 1880, Goldschmidt transcribed parts of the Cantata for his « Fantasie » piano piece.

Goldschmidt also created a trilogy of Operas which were written in a more personal style :

« Helianthus » (composed in 1883-1884 on texts by the composer) was premiered successfully in Leipzig in 1884.

« Gaea » , a satiric Operetta composed from 1888 to 1892.

« Die Fromme Helene » (based on a libretto by Wilhelm Busch) composed in 1897.

Thereafter, Goldschmidt wrote a dramatic tone-poem, a Symphonic-poem, around 100 songs, chamber music and solo piano works.

### Doctor Albert Neisser

The German physician, dermatologist, microbiologist and venereologist Albert (Ludwig Sigismund) Neisser was born on 22 January 1855 in the Silesian town of Schweidnitz (now, Świdnica in Poland) ; and died on 30 July 1916 in Breslau (now, Wrocław in Poland) . The son of a well-known Jewish physician, Doctor Moritz Neisser. Friend of Gustav Mahler, he discovered the causative agent (pathogen) of gonorrhoea, a strain of bacteria that was named in his honour (« *Neisseria gonorrhoeae* ») .

After he completed the elementary school in Münsterberg, Neisser inscribed in the St. Maria Magdalena School in Breslau. In this school, he was a contemporary of another great name in the history of medicine, Paul Ehrlich. He obtained the « Abitur » in 1872.

Neisser began to study medicine at the University of Breslau, but later moved to Erlangen, completing his studies in 1877. Initially, Neisser wanted to be an internist, but did not find a suitable place. However, he found work as an assistant of the dermatologist Oskar Simon (1845-1892) , concentrating on sexually transmitted diseases and leprosy. During the following 2 years, he studied and obtained experimental evidence about the pathogen for gonorrhoea, « *Neisseria gonorrhoeae* » .

Neisser was also the co-discoverer of the causative agent of leprosy. In 1879, the Norwegian physician Gerhard Armauer Hansen gave to young Neisser (who had visited him in Norway to examine some 100 leprosy patients) some tissue samples of his patients. Neisser successfully stained the bacteria and announced his findings in 1880, claiming to have discovered the pathogenesis of leprosy. There was some conflict between Neisser and Hansen, because Hansen had failed to culture the organism and demonstrate unequivocally its link to leprosy, although he had observed the bacterium since 1872.

In 1882, Neisser was appointed professor « extraordinarius » by the University at the age of 29, and worked as a dermatologist in the University hospital of Breslau. Later, he was promoted to the director of the hospital. In the following year, he married Toni Neisser, « née » Kauffmann.

In 1898, Albert Neisser published clinical trials on serum therapy in patients with syphilis. He injected cell-free serum from patients with syphilis into patients who were admitted for other medical conditions. Most of these patients were

prostitutes, who were neither informed about the experiment nor asked for their consent. When some of them contracted syphilis, Neisser argued that the women did not contract syphilis as a result of his serum injections but contracted the disease because they worked as prostitutes.

In 1905 and 1906, Neisser travelled to Java, in order to study the possible transmission of syphilis from apes to humans. He later cooperated with August Paul von Wassermann (1866-1925) to develop the famous diagnostic test for detecting « *Treponema pallidum* » infections, and also, in the testing of the first chemo-therapeutic agent for syphilis, « Salvarsan », which was discovered by his former school fellow Paul Ehrlich in 1910. In 1907, Neisser was promoted to professor « ordinarius » of dermatology and sexually-transmitted diseases at Breslau.

As a scientific leader, Neisser was also very active. In the field of public health, he promoted vigorously preventive and educational measures to the public, and the better sanitary control of prostitutes, in order to combat venereal diseases. He was one of the founder of the « Deutsche Gesellschaft zur Bekämpfung der Geschlechtskrankheiten » (German Society for the Fight Against Venereal Diseases) in 1902, and of the « Deutsche Dermatologische Gesellschaft » (German Dermatological Society) in 1888. Neisser died of septicemia on 30 July 1916, at the age of 61 years, in Breslau.

Neisser and his wife Toni were art-lovers and patrons. The Villa Neisser was richly endowed with art-treasures and cultural centre of the city of Wrocław. For friends of the couple included the architect Hans Poelzig, the sculptor Theodor von Gosen, the composer Gustav Mahler and Richard Strauß, the writer and Nobel Prize laureate Gerhart Hauptmann and the painter Eugen Spiro. In the villa were numerous works of art, by artist Fritz and Erich Erlen, among them the portraits of the couple Toni and Albert Neisser and famous guests of the villa. The collection also included paintings by Giovanni Segantini (« Lunch time in the Alps »), Arnold Böcklin (triptych « Venus Genetrix »), Oswald Achenbach, Hans Thoma, Frijts Thaulow, Eugen Spiro, and artworks by Constantin Meunier, Franz Stuck, Ignatius Taschner and Theodor von Goshen.

**Albert Neisser tried to save prostitutes from sexually transmitted diseases, but started a scandal instead**

Today, we take for granted the rules that govern medical experimentation. Yet, men of medicine from days gone by were governed by their own consciences rather than legal standards. So, sadly, the past is rife with atrocities, as in the case of Albert Neisser, would-be saviour of prostitutes turned purveyor of misery. The 19th Century physician totally devoted to sexually transmitted diseases and public health initiatives sure had a funny way of showing it.

Albert (Ludwig Sigismund) Neisser was born in Schweidnitz, Germany in 1855. His father, Moritz, was a beloved local physician and young Albert grew-up sharing his father's passion for helping others, perhaps, because his mother died when he was an infant. Albert entered medical school graduating in 1877. Afterwards, he found a job under the well-known physician Oskar Simon at a dermatological clinic in Breslau. It was while studying skin complications of gonorrhoea, leprosy and syphilis that Neisser's lifelong interest in sexually transmitted diseases was formed.

Neisser was an outstanding doctor from the start. In 1879, he made the discovery for which he would become famous - the bacterium responsible for gonorrhoea. For his efforts, the 21 year old received the dubious distinction of having

the bug named after him and so « *Neisseria gonorrhoeae* » was born.

Not content to rest on his laurels, Neisser turned his attention to leprosy, travelling to Norway and Spain in the early 1880's to study with some of the first bacteriologists of the time. One of them was Gerhard Hendrik Armauer Hansen, the eminent Norwegian physician. Leprosy (aka : Hansen's Disease) might just as easily have been named for Neisser, since he was the first to provide conclusive proof that the bacillus first identified by Hansen in 1873 and known as « *Mycobacterium leprae* » was, indeed, responsible for causing the devastating illness. Neisser published his findings in 1880, bickered with Hansen about credit for the discovery, and then, moved back home.

Back in Germany, Neisser's reputation had grown and, within a few years, he was awarded an assistant professorship at Breslau University. He was soon in charge of its dermatology clinic, eventually becoming director of the entire hospital. After a brief dalliance with research on lupus, Neisser turned his attention to syphilis - the sinister sexually transmitted disease responsible for so much insanity, disfigurement and death during the 19th Century.

Since the beginning of recorded medical history, syphilis was a plague affecting people world-wide, virtually exploding throughout Europe during the 15th Century, with no real effective treatment until the age of antibiotics. The suffering caused by this now relatively benign sexually transmitted disease can be hard to imagine, but it was arguably public health enemy Number One in 19th Century Europe ; medical historians estimate the mortality rate was between 20 and 40 % .

Perhaps, Neisser's interest in the disease was personal (his old friend turned foe Hansen suffered from syphilis his whole life) or, perhaps, it developed out of a desire to cleanse the world of its biggest bacteriological enemy ; either way, Neisser took the battle against the bug to heart. In fact, his efforts soon took on an obsessive and, eventually, even savage quality.

In 1903, Neisser witnessed a demonstration by biologist Elie Metchnikoff and bacteriologist Pierre Paul Émile Roux in which they infected apes with syphilis. So impressed was he that Neisser planned a trip to the remote Indonesian island of Java to study the origins of the disease and to pick-up a few apes so that he could continue to experiment. In Java, he also conducted research into the sexually transmitted diseases spread among humans, thanks to a population of randy Dutch sailors stationed there.

Though Neisser didn't identify « *Spirochæta pallida* » , the bacillus responsible for the disease (zoologist Fritz Schaudinn and dermatologist Erich Hoffmann claimed that distinction in 1905) , he did help create the first serological test to diagnose it alongside his countryman and bacteriological colleague August Paul von Wassermann in 1906. Neisser was also involved in the development of the first effective drug to treat it, « Salvarsan » , which hit the market in 1910. If this was all he had done, Neisser surely would have been remembered only for being one of the first bacteriologists of his day. However, this was not to be.

By the turn of the Century, Neisser had established himself as a supporter of public health initiatives. He opposed jailing prostitutes and promoted educating them and the public about sexually transmitted diseases, and even

suggested regulating the sex-trade. While many of his contemporaries were surely not as forward-thinking, Neisser's real trouble began in 1898, when, in his blind search for a syphilis cure, he began inoculating prostitutes, some of whom were minors, by injecting them with an infected serum without their knowledge.

Inspired in part by the explosion of interest in the work of Louis Pasteur and ape-infector Roux who developed the rabies vaccine in 1885, as well as German bacteriologist Emil Von Behring's successful inoculations against tetanus and diphtheria, Neisser theorized that the process should work equally well with syphilis. It didn't and many of his subjects came down with the disease.

It isn't known exactly how many patients were « inoculated » by Neisser. 4 victims went to trial and caused quite a scandal, though Neisser's colleagues mostly agreed with his practices. In 1910, he was publicly censured and forced to pay a huge fine, all of which eventually led to the adoption of moral and ethical research guide-lines in Prussia - among the first such directives to be implemented by the European medical community. From that point on, it was clearly stated that informed consent had to be obtained from patients prior to any experimentation or treatment, and that children and incompetent people were unable to give such consent.

Neisser died in 1916 and will mostly be remembered for the great contributions he made to the field of bacteriology. However, his methods also serve as a cautionary tale that should not be forgotten : informed consent is required of all study participants or patients in treatment ; the price of repeating the mistakes of the past is far too high.

### Perils of the Viennese skin-trade

There was, of course, a darker and exploitative side to the city's climate of sexual licence. Perhaps, because Vienna was a « Residenzstadt » (i.e. , where the ruling dynasty held its court) with many opportunities for domestic employment, it was usually awash with young females who were prepared to supplement their meagre earnings with quasi-professional prostitution. Around 1500, as certainly appears to be the case from contemporary wood-cuts, the public baths doubled as brothels, mostly situated in the so-called « Stubenviertel » , centred on the Wollzeile and Lugeck in the Inner-City (« Inner-Stadt ») , a red-light District by any other name. The « Stuben » , which had existed since Babenberg times, offered an attractive package of mixed-sex bathing and banqueting, with fornication thrown in. This thriving sex-trade was brought to an abrupt end by the advent of syphilis, which was probably imported into Central Europe by the Habsburgs' Spanish troops. University students soon had a tag alluding to the twin health hazards of city life : « Vienna ventosa vel venenosa » (In Vienna, either the wind or the pox is always raging) . However, closure of the baths actually meant that people were less clean than previously, and, therefore, less hygienic, as disgusted Turkish commentators were wont to remark. Nor did it put an end to prostitution.

From the late-14th Century, when brothels first appear in official records, and until the reign of Maximilian I (died in 1519) , the authorities had seemed to take an ambivalent, but generally pragmatic view of the skin-trade. Indeed, the city fathers taxed the pleasure houses and re-invested the proceeds - in one case to build a convent for nuns !

Medieval ordinances fixed a fee for the services provided in an attempt to avoid exploitation by brothel owners, and

even stipulated that :

« If a girl has a man by her for a night, she must give the house-owner I Kreuzer as “ sleeping money ” and no more. What the man gives her for herself she may keep. »

Maximilian closed-down the brothels inside the city-walls, and we next hear of such only in the 18th Century, when today's ultra-respectable Spittelberg quarter was populated with « Spittelberg nymphs » . Emperor Josef II was famously thrown-out of a Spittelberg brothel, whose owner failed to recognize him and objected to the way he handled the goods. The city's medieval prostitutes were theoretically all « foreigners » , since prostitution was officially forbidden to native Viennese girls, a prohibition which may, indeed, have given rise to the tradition of « enthusiastic amateurs » referred to by so many visitors.

The otherwise popular Maria Theresia aroused almost universal opposition when she attacked loose morals by instituting a « chastity commission » that sought to root-out and punish sexual infidelity among the married. Apart from the general inconvenience it caused, it was perceived as an unwarranted intrusion in the natural order of things, almost as unwelcome as Josef II's attempt to institute reusable coffins. Casanova, who was visiting Vienna when the chastity commission was at its most zealous, records his indignation at having his style cramped in this way.

That the medieval prostitutes were guaranteed a semi-official status is also demonstrated by the fact that they had their own entry in the bi-annual running races (on Ascension Day and St. Catherine's Day) instituted by Albrecht III in 1382. The race route from St. Marx to the River Wien passed through several vineyards and along what is still known as the « Rennweg » in the 3rd District. The race for « the public whores » was known as the « Scharlachrennen » , as the prize was a piece of scarlet cloth (for a « scarlet » lady ?) . The odium attached to the whores therefore seems to have been limited, and, indeed, a burgher could take one of them to be his wife without loss of social status ; the only condition imposed was that he must not have been acquainted with her in her former profession (presumably to guard against entrapment, but surely a quite unenforceable rule) . In the Middle-Ages, there was even a municipally funded home (also set-up by Albrecht III) for ladies who had been persuaded to retire from the profession. It was on the site of what is now the Franciscan Cloister on « Franziskanerplatz » , and burghers could, if they wished, select a willing bride from one of the inmates. This sensible practice spared the whores a raddled old age, and many modestly well-to-do widowers a lonely one.

The tradition of tolerance and pragmatism in dealing with prostitution continues in the present, where a region of the city along the « Gürtel » (« Ring » Road) has been set aside for legal, or, at any rate, tolerated, prostitution in the evening hours. Health checks are obligatory for the sex-workers, and the trade, while less blatant than that of the girls who sit in windows along the Amsterdam canals, is pursued with the same judicious mixture of discretion and openness that traditionally characterizes the dealings between authority and the individual in Austria.

The confining of sexual commerce to certain areas, and its disengagement from main-stream social life, represents a major change from the situation prevailing in the Vienna described by Stefan Zweig in his posthumous 1943 autobiography, « The World of Yesterday » . Just as Arthur Schnitzler's dramas revealed a pressure-cooker environment of

stifling convention and a politically dead-locked society that found an outlet in illicit sex, so Zweig attributes the libertinism of Vienna in his youth to social pressures that made « prostitution ... the foundation of the erotic life outside marriage » .

This was often a sordid matter, notwithstanding the cult of the « süßes Mädel » (sweet little girl) to be found in the impressionistic stories of Viennese life by Peter Altenberg, the un-official bard of turn-of-the-Century Vienna. More candid was Schnitzler's deconstruction of erotic relationships that only seemed to intensify the participants' sense of anomie, aporia and accidie. While Schnitzler concentrates on the self-disgust of the sexploiting classes, Zweig is blunt about the reality of these one-sided affairs for the under-privileged partners :

« Before the emancipation of women and their active participation in public life, it was only the girls of the very poorest proletarian background who were sufficiently unresisting on the one hand, and had enough freedom on the other, for such passing relationships without serious thoughts of marriage. Badly dressed, tired after a 12 hour day of poorly paid work, unkempt (a bathroom in those days was still only the privilege of the rich) ... these poor creatures were so much below the standing of their lovers that these, in turn, were mostly ashamed of being seen openly with them. But convention, always cautious, had invented its own measures for this painful situation, the so-called “chambres séparées”, where one could dine unseen with a girl ; the rest was accomplished in the dark-side streets in the little hotels which were equipped for these purposes exclusively. »

...

Before World War I, Vienna was a swinging and (in contrast to, say, Linz) downright depraved city with great sexual permissiveness. This permissiveness was tied to one's social status : it was practiced by aristocrats and artists, but also by the lower-classes. Whether farm hands and farm girls in the country, or unmarried workers and maids in the city, morals were loose.

One social group in Vienna was exempt from this sexual permissiveness, or, to be more exact, the wives of this social group : the middle-class and all those who aspired to be part of the middle-class. Bourgeois moral conventions, closely tied to the Catholic code, demanded from girls and women strict abstinence outside of marriage. In this regard, social pressure was so strong that young women had a chance of marrying well only if they were virgins, and « fallen girls » or women who had even given birth out of wedlock had forfeited their opportunities in life. Therefore, middle-class girls had to be protected from sex at all cost.

Young men, on the other hand, were allowed to, and even had to gain experiences in that area in order to « sow their wild oats » , as it was called, to free themselves of the vice of allegedly nerve-wracking masturbation, and to prepare for marriage. Yet, because they did not have the chance to have a romantic and physical relationship with girls of their own class, they were permitted (despite the public display of prudishness) to go clandestinely to prostitutes, basically as a necessity of health and « hygiene » . In 1912, a scholarly Viennese periodical asked young doctors about the first women they had ever slept with : only 4 % named a young woman who was a potential spouse, 17 % a maid or a waitress, and 75 % a prostitute. Prostitution was accordingly widespread.

Stefan Zweig reports that before 1914, Vienna's side-walks had been « so cluttered with working girls that it was more difficult to avoid them than to find them. ... At that time, women's goods were openly offered at any price and hour of the day, and a man really didn't have to invest more time and energy in buying himself a woman for a quarter of an hour, an hour, or a night, than in getting himself a pack of cigarettes or a newspaper » .

According to Zweig, prostitution was supposed to « channel the nuisance of extra-marital sex » :

« In a sense, it represented the dark cellar-vault over which the magnificent building of bourgeois society rose with an unblemished, clean and shining façade. »

Syphilis was rampant and the fear of infection ever present. No social class was exempt from the disease. Hans Makart, the « painter prince » died of syphilis. So did the last Emperor's father, Archduke Otto. Statistically, 1 or even 2 out of 10 men were infected.

Zweig wrote :

« In addition to the fear of infection, there was the horror of the uncomfortable and humiliating cures of the time. For weeks and weeks, mercury was rubbed into the syphilitic's body, which, in turn, made your teeth fall-out and led to other health damages ; the unfortunate victim of bad luck, thus, felt not only spiritually but also physically contaminated. »

The fact that most bourgeois men around 1900 had their first sexual encounters with prostitutes and sex was accompanied by the fear of infection, fundamentally influenced their image of woman and contributed to the general contempt for them.

There are no reliable data on prostitution in Vienna around 1900. All that is known is the minuscule percentage of those « controlled » by the vice-squad, who were at least 18 years of age and checked twice a week : in 1908, there were 1,516 of them in Vienna, a figure that remained approximately constant and was more than twice as high as it is today. According to official statistics on 1912, 29 pregnancies and 249 infections with syphilis were diagnosed during these check-ups. In other words, every year, approximately 1 out of 6 prostitutes was infected and no longer allowed to practice her trade. This typically meant that she disappeared in the huge army of the « clandestine ones » .

The number of « clandestine ones » was several times the number of those who were examined. The police checked neither the expensive and notorious VIP call-girls, who appeared at the race-courses and in the theaters with their customers, nor the occasional hooker in the flop-houses. Girls under 18 and the numerous prostitutes who were already infected and ill were arrested now and, then, during a raid, but once they were released after being briefly held in custody, they continued to solicit.

Prostitution in Vienna in the 19th Century

## Historical background

Over the Middle-Ages, there existed an uneasy association between those selling sex (usually women) on the one side, and Church and State on the other. While the practice was frowned on, it thrived, and was tolerated. The Habsburg Rudolph I of Habsburg (1273-1291) made it an offence to insult these « gelüstigen Frauen » in 1276. After all, they paid their taxes (2 Pfennigs a week) . On the other hand, on Sundays and during Lent, they were obliged to stay away from the towns.

The first recorded mention of the existence of brothels (« Freudenhäusern ») in Vienna can be found in a charter of Duke Albrecht III (1365-1379) . Some councilors wanted to set-up a charitable foundation for prostitutes who renounced their sinful life. However, very soon, councilors were actually establishing brothels and even supported a nunnery from the taxes.

...

Hügel, a medical doctor in Vienna, wrote a policy paper on the regulation of prostitution in 1865. Starting with a general look on the history of prostitution (from the temples of Venus and Adonis in antique Greece) , he finds the ever changing legislation from prohibition to acceptance quite inefficient. Ever since trying to regulate prostitution, different ways have been applied in Vienna : material (women's shelter) , moral (a penance shelter) or by police and clergy (commission) . 1395 was the year of the first license for a women's house (« Frauenhaus ») in the town of Vienna, next to « Josefsplatz » . A weekly payment to the city-council was kept apart for medical treatment and a spare week before Easter. Later on, the paid holidays of the women's house were extended to 3 weeks. Meanwhile, a penance shelter in a monastery existed for women quitting their work in the women's house. It was destroyed during the siege of the Turks, later on.

In the 15th Century, sex-workers were so-called « free daughters » (« freie Töchter ») or « common women » (« allgemeine Weiber ») . They had to wear a small yellow scarf on the shoulder to be recognized. They accompanied soldiers and were offered to high-ranking guests of the city-council then. Sexual services were part of the common hospitality. Evidence exists in the book-keeping of that time. Even if « free daughters » participated in public celebrations, some citizens of Vienna wanted the City Council to pass a law against marriage of « free daughters » . It was rejected because the way back into a bourgeois life should be kept open to « free daughters » and marriage was a matter regularized by the church anyhow.

In the middle of the 16th Century, again, 2 women's houses (« Frauenhäuser ») were established, one in the suburb and the other in the city-centre in « Tiefer Graben » . It was a common-house for « free daughters » to live and work in with the permission of the authorities. At that times, all moral issues were regulated by the church - i.e. , adultery, violence against women or gambling. With the reformation of Martin Luther and the scission of the church into Roman-Catholic and Protestant, the power of the church declined. In 1528, the responsibility for prosecution of these crimes was transferred to the vice-squad (« Sittenpolizer ») . Hügel points-out that a coherent way of legalization is the only way to safe-guard public health. Under the reign of Habsburgs Queen Maria-Theresia, a

commission was set-up to counter-act against immorality. It opened the way for denunciation and corruption because all immoral acts (i.e. , kissing of unmarried persons) were prosecuted. Even forced marriage was reported in order to keep sexual morality standards.

In 1850, a ministerial order installed the responsibility of police for registration and health checks of prostitutes in Vienna. Hügel, in the end, complains about the ambiguous situation between sufferance and punishment.

It is evident that prostitution existed in all major towns. Most probably, it was the same for Austria as well up to Medieval Ages even if we do not have evidence for it. For sure, the religious tradition was formative for the evolution of the existing laws and policies. Recapitulating an important point in the reception of prostitutes in society was the differentiation between decent, bourgeois (and married) women on the one side, and sex-workers on the other.

...

The last time prostitution was completely forbidden in Austria was under Maria Theresa of Austria (1740-1780) who shipped prostitutes along with other « anti-social » people down the Danube to Timișoara in the Banat region of Romania.

However, since this did little to reduce prostitution, Austrian laws changed to consider prostitution as a necessary evil that had to be tolerated but regulated by the State. In 1850, Doctor Nusser of the Vienna police suggested that prostitutes be required to register with the police, receive medical examinations twice a week, and obtain special health certificates. In 1873, Anton Ritter von Le Monnier, head of the Vienna police, reformed Vienna's prostitution law, and health certificates have been obligatory since that time. Prostitutes who complied with the requirements of registration and examinations were no longer prosecuted by the police. A newspaper article of October 27, 1874, reported that 6,424 prostitutes had received health certificates and were under observation by police and health authorities. According to police estimates, at least 12,000 more women lived on the proceeds of « free love » without being registered. Most of these were factory-workers who received so little pay that they needed the additional income. Of the registered prostitutes, 5,312 were unmarried, 902 widows, and 210 married. The youngest was 15 and the oldest 47 years old.

...

Vienna, the Habsburg capital and a Catholic stronghold, has a long history of measures against prostitution which, apart from serving as a model for other regions of the Empire, were also strongly shaped by the Imperial Court and the clerical « élite » . The first systematic (though unsuccessful) attempts to eradicate prostitution date-back to the late-18th Century and the rule of Empress Maria Theresia. In 1752, the Empress established what would become known as Chastity Committee (« Keuschheitskommission » , also « Keuschheitsgericht » and « Zuchtgericht ») , an institution that was dedicated exclusively to issues of prostitution, extra-marital sex, objectionable behaviour and homosexuality among the citizens of Vienna. At that time, particularly tough measures were introduced that dealt with prostitutes in tandem with other undesired groups such as tramps, vagabonds and women living in common-law marriage. The story

of the expulsion of all the prostitutes apprehended in Vienna (some estimates spoke of as many as 3,000 women) and their deportation down the Danube to Temesvár, in the Banat region in the Balkans, between 1744 and 1768, is legendary and often cited in literature on the history of prostitution in Central Europe. The result of such harsh measures was opposite from the desired : prostitution continued to thrive. While her son, Emperor Josef II, abolished the Chastity Committee along with a number of other historic public punishments for prostitutes such as public shaming, wearing of chains and the cutting of hair, the majority of the earlier laws forbidding prostitution remained in force and, until the middle of the 19th Century, prostitution remained in the jurisdiction of the criminal law.

Josef Schrank, the author of « Die Prostitution in Wien in historischer, administrativer und hygienischer Beziehung » (Prostitution in Vienna from Historical, Administrative and Hygienic Perspective, 1886) noted an unprecedented spread of prostitution during the 1848 Revolution and particularly drastic measures against it that were introduced in the years of the follow-up reaction from the 1850's to the 1870's. The ministerial decree of 30 December 1850, for example, requested the police not only to take prostitution into consideration, but also to tackle public health concerns that were connected to it. In 1873, the first comprehensive regulatory legislation was introduced and, consequently, prostitution became the prerogative of the moral police (« Sittenpolizei ») . From that time onward, prostitutes were legally requested to register and undergo regular medical examinations. Practically until 1911, when the first attempts to reform the regulatory system were introduced, the general tendency had been to maintain strict control over registered prostitutes operating in brothels and other tolerated establishments and ruthless elimination of illicit sex-trade via police actions, detention and expulsion. It took another 10 years until the prohibition of brothels was finally passed in 1921.

### Societal reaction and legislation against prostitution

Prostitution traditionally thrived in the city-centre, along the outer-ring « Gürtel » , the banks of the Vienna canal and the Danube, in the « Prater » as well as in the suburbs. New areas of sex-trade developed in the late-19th Century in more upper-class spaces and in the immediate proximity of the bourgeois residential districts. Of particular alarm was the « Prater » promenade, a place of Sunday « flâneurie » for the respectable society analogous to the « Ringstraße » in the inner-city, as well as the section of the « Gürtel » linking middle-class inner-suburb « Mariahilf » (« Mariahilfer Gürtel ») with a particularly notorious section of « Rudolfsheim-Fünfhaus » District, the so-called « Schmelz » . A military exercise ground used only occasionally, « Schmelz » became an area of criminal gangs of « Fünfhaus » , « Sechshaus » and « Neulerchenfeld » and prostitution networks they ran. The addresses in the Old Town were « Schottensteig » , « Tiefer Graben » , « Riemergasse » and « Postgasse » as brothel locations, whereas « Rotenturmstraße » , « Kartnerstraße » and the side-lanes were most frequently used for street-walking. Outside the inner-city, particularly dense, were the areas of « Spittelberg » , « Getreidemarkt » , « Mariahilferstraße » , « Alserstraße » , « Währingerstraße » and other areas in the districts of « Leopoldstadt » , « Wieden » , « Mariahilf » , « Neubau » and « Alsergrund » , which were frequented by the « better » class, whereas « Volkssprater » , the « Gürtel » and the inner-sections of the « Hietzing » and « Währing » districts were a domain of cheap prostitutes in the early-20th Century. Other areas in the suburbs, in particular « Favoriten » , « Simmering » and « Laaerberg » (the so-called « Fünfkreuzertanzlocale » : 5 Kreuzer dancing-halls) existed, too, but it is clear that most of the locations were very central and that the policy of the removal of prostitution from central districts was unsuccessful. In

1904, 430 women were convicted of « covert » prostitution in Vienna, whereas some estimates spoke of as many as 30,000 covert prostitutes.

Also, due to the proximity of the Imperial Court and traditional presence of the aristocracy, Vienna had socially much more diverse prostitution networks that were not limited to the poor and the under-class. The local dialect offered a number of terms to distinguish between different groups involved in the sex-trade in distinct locations, from the exclusive « Kokotte » (« cocotte ») to the lowest « niedere Dime » (lowly whore) . While « cocottes » (also known as « Lorettes » and « Demimondäne ») operated in prestigious theatres, bars, balls and the races, « Besseren » (the better ones) were to be found in coffee-houses, transient hotels and only rarely on the street. One of the most exclusive open-air locations was the public park « Volksgarten » . By contrast, the majority of the rest worked on the street and catered for socially distinct groups of men from the middle-class and the working-class. The latter were further distinguished by additional names such as « Prodahure » (« Prater » whore) , « blade Nelli » (fat Nelli) , « Asphaltswalbe » (asphalt swallow) , « Randsteinswalbe » (curb-stone swallow) , « Benzingretl » (petrol Gretel) , and finally « Nafke » (from Yiddish, defining both a prostitute and a woman card-player) in Jewish and « Kurva » in Slavic neighbourhoods. Pimps were usually referred to as « Strizzi » (from Czech « stryc » : uncle) , but also « Peitscherlbub » (whip-boy) . Another commonly used term was « Deckl » (cover) meaning an identity-card of a prostitute.

Between 1900 and 1911, there existed another, less stigmatized form of prostitution, the so-called « Discreten » (discrete prostitutes, also called « Geheimen » (secret) and « Winkeldirnen » (corner whores)) , among them also many dancers and waitresses, who practised the sex-trade largely invisible in the public space. They did not have permission to roam the streets, were not required to register for an identity health-card but were obliged to undergo regular medical checks. Sex could be bought « discretely » in select dance establishments (dance schools as well as dance-pubs) , transient hotels and flop-houses (so-called « Absteige » and « Stundenhotels ») , shops that functioned as fronts (especially, the first ground-floor tenants the recently constructed tenement houses) ; baths, art-studios and theatres, and finally on the street. It was common for flower girls (« Blumenmädchen ») who were equally subject of great works of « fin-de-siècle » literature and of ridicule, to be involved in some aspect of sex-trade, as well. Many of Vienna's famous suburban wine-taverns (« Heurigen ») were also prostitution locations.

Within the « discretetes » , Josef Schrank distinguished between « gallant ladies » (« gallante Frauen ») , women in manual work, female factory employees and domestic servants as those who were involved in the sex-trade in addition to their regular employment - usually to compensate for meagre earnings in their main professions. Domestic labour, especially domestic servants constituted a significant number of the urban labour force in late-19th Century Vienna, and a large number of migrant female labour force (especially, many Jewish and Czech women) was employed at home, either as domestic servants or in the city's large garment industry. The fact that a large proportion of prostitutes came from domestic service specifically is repeatedly stressed in literature. At the same time, given that it is difficult to trace their activity in the available sources, there is little evidence about their topographical distribution on the map of turn-of-the-Century metropolis.

In Vienna, there was also a significant overlap of sex-trade territories with ghetto areas and other places notorious for

poor migrant residence at the turn of the Century. The District of « Leopoldstadt » in Vienna, traditionally a place of concentrated Jewish residence and poverty, were notorious for the proliferation of both prostitution and petty criminality. Similarly, « Neulerchenfeld » and its surroundings, traditionally a place of extremely mixed residence, poverty and cheap bars, where prostitution thrived especially along « Lerchenfelderstraße » and « Thaliastraße ». Yet, it is significant that major areas in the inner-city that were traditionally associated with prostitution in the Medieval and Early Modern period remained remarkably enduring. Even after the major restructuring of Vienna that brought to existence the circular street « Ringstraße » and significantly altered residential patterns in the city, most of the inner-city locations for the sex-trade were still there in the early-20th Century. The scandal evolving the 1906 « Regine Riehl trial » revealed that « respectable » bourgeois areas such as « Alsergrund » were also locations of highly-secretive and, at the same time, prospering brothels, which were protected by connections within the police and the political « élite ». It also revealed the dark underworld lurking behind respectable façades that involved severe maltreatment of prostitutes by the « Madames », as well as a number of issues pertinent to nationalism and the « Jewish Question » in the Imperial capital city.

...

Prostitution was a visible part of life in « fin-de-siècle » Vienna's city-centre, from the ancient « Graben » to the edges of the newly-installed « Ringstraße ». Historian Karin J. Jušek has analyzed the tremendous social debate over prostitution during this period. Socialists, Catholic action groups, feminists, and medical experts argued for greater purity and/or venereal disease prophylaxis in Vienna, attacking both prostitutes and their « clientèle » as agents of racial and moral degeneration via syphilitic infection. During this time, the city side-walks were divided into sexual commerce zones, « marked-off by the police with an invisible line where prostitutes might carry-on their trade ». These « line girls » formed the least expensive and most obvious legion of prostitutes, and registered with the police at the rate of roughly 2,000 a year. Beginning in 1873, Vienna struggled under a system of semi-regulated prostitution that strove to sanitize (through compulsory health inspections of any woman on the street) the lowest ranks of venal sex-workers and turned a blind eye to less accessible brothels and clubs. The spectrum of syphilis prompted civil hygiene administrators to demand municipal registration and observation of prostitutes, yet Vienna, capital of Catholicism in central Europe, never officially legalized the sale of sex. Caught between these mandates were the bourgeois city fathers, who allowed the charade to limp along as best it could. For critics of the system, the hypocrisy of prostitution was merely a synecdoche for Viennese Liberalism.

The most dangerous aspect of venal sex according to the medical experts participating in « fin-de-siècle » prostitution debates was the risk of syphilitic infection. During this period, syphilis was understood as a multi-stage disease that began with sores on the genitals or swollen lymph nodes near the groin. These primary symptoms would quickly dissipate, but the micro-organisms that caused the disease, identified in 1905 by Berlin micro-biologists Fritz Schaudinn and Erich Hoffmann, remained in the blood-stream, and could invade the spinal cord and lining of the brain within a year. If the body's immune system did not conquer the *T. pallidum* organism, the patient could begin showing signs of neuro-syphilis speech problems, inability to raise the eye-lids, mania, dementia, and paralysis-sometimes a full-decade after the original infection. In 1906, German pathologist August Paul von Wassermann developed a blood-test for syphilis that could identify the disease at all stages. Syphilis research, treatment development, and moral sermonizing

were major discourses within the Viennese medical community. For the year 1901, the index of the prestigious « Wiener medizinische Wochenschrift », the Empire's oldest medical journal, listed syphilis as the most frequent subject for articles and book reviews. Recommended treatments ranged from simple courses of mercury massaged into the body and scalp to complex contraptions that blew hot air on the genitals of comfortably seated, still-clothed patients. In 1909, Berlin physician Paul Ehrlich announced that the chemical preparation « Salvarsan » blocked the development of primary and secondary syphilis, if used immediately after infection. In the face of this incurable disease, hygiene became the watch-word of concerned doctors, who increasingly advised the State in their roles as « Obersanitätsrath », « Sanitätsberichter », and even « Sectionschef und Sanitätsreferent » of the Imperial Ministry of Interior. The overarching message of the medical community « vis-à-vis » syphilis is reflected in a succinct aphorism from « Obersanitätsrath » Doctor Rudolf von Jaksch :

« The future of medicine lies in prophylaxis. The best prophylaxis is purity. »

Purity was also the maxim favoured by Catholic women's associations in late-Imperial Vienna. The women's movement in Vienna demanded the abolition of prostitution but was divided in its approach to the problem. The « Christlicher Wiener Frauenbund » (Christian League of Viennese Women), an anti-Semitic and anti-emancipation political league, campaigned for abolition in combination with the promotion of chastity and religious feeling. The anti-clerical « Allgemeine Österreichischen Frauenvereins » (Austrian Women's Association), a much smaller organization primarily dedicated to enlarging women's educational opportunities, favoured abolition on the grounds that prostitution represented an institutionalized method of class and gender exploitation. The « Allgemeine Österreichischen Frauenvereins » argued that only love could make a sexual relationship moral. Both groups formulated their opposition to hygiene regulation in ways modeled on Josephine Butler's campaign against the British Contagious Diseases Acts. Wrongful detention of women suspected of prostitution was decried, as was the hypocrisy of hygienic surveillance of prostitutes but not their clients. In addition, both groups argued that feminine sexuality should be returned to its « natural » sphere of marriage and motherhood. Beginning in 1907, the « Österreichischer Bund für Mutterschutz » (Austrian League for the Protection of Mothers) offered a more radical interpretation of sexuality for women. Free-union, supported by the « Deutscher Bund für Mutterschutz » president Helene Stöcker, was vigorously debated by the « Wiener Bund für Mutterschutz ». Stöcker called for a « neue Ethik » (new morality) that recognized human sexuality as natural and life affirming. Prostitution, defined by the « Bund für Mutterschutz » as any sexual relationship (including marriage) entered into for financial gain, was described as the inevitable result of moral corruption and inequality between the sexes. The « Österreichischer Bund für Mutterschutz », like its German counterpart, supported equal rights and State support for mothers regardless of their marital status. In the working-class District of « Ottakring », the « Bund für Mutterschutz » opened a charitable home to care for unmarried pregnant women before and after the birth of their children in 1908. Many of the « Bund für Mutterschutz's » members went-on to participate in the Viennese sex-reform movement.

...

Vienna as an intellectual centre had historically strong traditions of misogyny, which manifested itself clearly in the ideas of the 2 leading figures of the « fin-de-siècle » : Sigmund Freud and Otto Weininger. The latter went as far as

to claim that « great men » (presumably like himself !) have always « preferred women of the prostitute type » . Strongly influenced by the work of Italian criminologist and psychiatrist Cesare Lombroso on the now discredited theory of the hereditary nature of criminality and, by consequence, also of prostitution, Weininger distinguished between the 2 « types » of women, the mother and the prostitute, removing however at the same time the historically positive connotation of the mother. For Weininger, any woman who enjoyed sex for its own sake rather than for reproduction was essentially a prostitute. Such ideas were very persuasive in « fin-de-siècle » Vienna, and the increasing presence of women in the public sphere seems to only have strengthened them. At the same time, the spread of prostitution in Vienna as a consequence of urbanization resulted in an entirely new genre, or cult, of prostitute (« Dirnenkult ») at the turn of the Century that derided the supposed asexuality of « normal » middle-class women. Added the profound discord of the degree of sexual experience expected from men and women before marriage in a bourgeois society, and Freud's and others' belief in men's much stronger sexual desires and needs, the social and ideological pre-conditions for the blossoming of prostitution were, thus, there in place even in the early-20th Century.

In Vienna, attempts at introducing regulatory norms and legislation against prostitution were for decades strongly opposed by the clerical « élite » that saw it as a policy « legalizing the whores » . As a consequence of urbanization, also the turn-over of prostitutes between different establishments and cities within the Monarchy and beyond was comparatively high. In this situation, prostitutes remained one of the most heterogeneous and elusive urban groups. Prostitution was very actively discussed ; at the same time, regulationism clearly predominated as a policy within the government circles. The police regulation of 6 February 1873, for example, clearly delineated under which conditions prostitution would be tolerated in comparison with the earlier 1850 decree : definitions of tolerated sex-trade, registration mechanisms, health certificates as well as the jurisdiction of the moral police were specified there. Only prostitutes in possession of health-cards who would undergo regular (every third day) examinations would be hitherto tolerated. Those found to carry venereal diseases would be dispossessed of their health-cards and stationed in one of Vienna's 3 hospitals - or expelled from the city. The so-called « Vagabond law » (« Vagabundengesetz ») of 1885 introduced tougher punishments of illegal prostitution, up to forced labour in specifically designed establishments. Specific areas of the central 1st District were set to be controlled by detectives of the moral police operating in plain clothes.

A further 1894 police decree forbade prostitutes to entice their clients through the shop-doors in the side-streets, which had a simple consequence of bringing prostitution onto the street. Further restrictions included prohibition of the practising of the sex-trade in several Districts at the same time (1896) ; the establishment of further forced labour institutions for those convicted of covert prostitution (1898) ; police surveillance and medical inspection of all women suspected of working also as prostitutes including dancers and waitresses and official recognition (and regulation thereof) of tolerated brothels (1900) ; setting limits to the number of women to be inspected per police-doctor and the establishment of the Central Office for Tackling of the Trafficking of Women (« Zentralstelle zur Bekämpfung des Mädchenhandels ») and the so-called « Office of the agents of the moral police » (« Büro für sittenpolizeiliche Agenten » , 1905-1907) within it ; and setting limits to the minimal age to 18 and curbing the jurisdictions of the moral police (1911) .

Whereas the number of controlled prostitutes significantly increased before and especially during WWI, it is also clear

that clandestine prostitution proliferated due to a complex set of economic and social issues accentuated by the War. By the last years of WWI and influenced by the developments in Germany, a new consciousness of « social dangers » associated with prostitution especially in terms of the spread of infectious and venereal diseases in the army developed in Austria-Hungary. This resulted in a renewed vigour in attempting to eliminate prostitution in the immediate aftermath of the War. The health-cards were replaced by special identity-cards in 1920 and brothels finally prohibited in 1921. At the same time, however, women were obliged by the conditions of the post-War social contract to give place to the returning veterans in the job-market, which resulted in the unprecedented spread of female unemployment in Central Europe and elsewhere. As a consequence, many more women than before became involved in part-time sex-trade. A 1923 Austrian governmental report states, for example, that more than 51 % of covert prostitutes in Vienna were unemployed.

Attempts to understand prostitution from the social perspective and to deal with it in a more complex and comprehensive manner were in Vienna largely limited to the feminist movement. In 1892, Social-Democratic feminist writer and journalist Adelheid Popp founded the newspaper « Arbeiterinnenzeitung » (Female Worker) that argued for the right of women to work as well as their free-choice in family, lifestyle and their role in the public sphere. A year later, in 1893, feminist social reformers Auguste Fickert and Rosa Mayreder founded the « Allgemeiner Österreichischer Frauenverein » (Austrian women's association) , which published its own pro-reform bi-weekly « Dokumente der Frauen » between 1899 and 1902 that positioned itself strongly against the prevailing misogyny. Like many in their generation, Mayreder and other Viennese feminists were propagating full-emancipation of women which the collapse of the Habsburg Monarchy in 1918 seemed to be promising. Strongly opposing prostitution, they however refused to condemn it on moral grounds and advocated, instead, for the reformulation of sexual and family relations to conform to new modern standards as well as for the full sexual education for both boys and girls, which they somewhat naively believed would make prostitution obsolete.

### Government and public morals

The most important governmental instrument for the protection of public morals was the vice-squad. Its founder in Austria is thought to have been Ferdinand, who governed the German succession States from 1521 and who succeeded Charles V as the Emperor Ferdinand in 1556. His policy was aimed at the protection of the family and his first step in that direction was to impose stiff fines on all married men caught in brothels (« Frauenhäuser ») . In 1542, this was followed by a police decree that made prostitution and procuration criminal offences. Ferdinand also ordered the church to protect morals. The believers should be imbued with the necessity of so doing. His successors, however, paid less attention to public morals until Maria Theresa (1740-1780) took-up the struggle against indecency again. She went much further than Ferdinand. Her measures in the area of indecency contrast sharply with the enlightened policies that characterize the other domains of her policy. During her reign, police attention was directed first and foremost at loose women. They were the ones to be punished now. Her determined struggle against indecency reached its peak with the appointment of a Committee for Public Decency. Large-scale treachery and denunciation were the result. Prostitutes were now even employed as « agents provocateurs » in order to expose indecent citizens and lead them into the arms of the police. Conceivably, the committee was abolished during the reign of Josef II (1780-1790) , Maria Theresa's son, who had little ambition when it came to upgrading his subjects' morals.

When his advisers spoke-out in favour of placing the brothels under State control, he seems to have said :

« If one wished to implement a brothel system, one would have to bring the entire city under one roof. »

Grave concern about public morals does not show-up until the second half of the 19th Century. Children born-out of wedlock, a decrease in the number of marriages, and an increase in the number of concubines did cause a certain degree of concern, but the government paid far more attention to the problem of prostitution.

From 1850 on, a number of Viennese medical doctors advocated some kind of legislation with regard to prostitution instead of just prohibiting it, following the example of their colleagues in other countries. « Polizeiwundarzt » Doctor Nusser who raised the matter argued that prostitution was a very old phenomenon that could apparently not be eradicated. This unpleasant fact should, therefore, be faced and proper measures should be taken. The ban on prostitution should be replaced by legislation and control. The close link between prostitution and syphilis was emphasized. In order to restrict the terrible consequences of prostitution, it was deemed necessary to subject prostitutes to regular medical examinations. Doctor Nusser stated with remarkable frankness that he was in favour of legislation for 2 reasons, namely to limit the horrible consequences of contamination with syphilis and also to help doctors get work and appropriate pay. Nusser's proposal divided his colleagues into 3 groups. One agreed with him, the second found his proposals insufficient and argued in favour of « Kasernierung » (the obligatory housing of prostitutes in brothels) , and the third, a minority, was opposed to any form of legislation for a variety of reasons. They found that acceptance of prostitution was not in keeping with the dignity of the State and they doubted the effects of legislation in principle. The spokesman for this group, Doctor Massari, argued that the problem of venereal diseases and the problem of prostitution should be distinguished. The spread of venereal diseases was caused by loose men and women from all layers of society and legislation that did not address these groups would not, in his opinion, be very effective. He proposed sanitary measures instead, such as the extension of the university-clinic, obligatory hospitalization for contaminated people, penalties for men who knowingly spread the diseases (only women could be prosecuted for this) , and tighter controls within the army. Massari and his followers did not have a great deal of influence, but they addressed problems that their opponents did not wish to face from the very start of the discussion.

Legislation would take another 23 years. It was only because of the expected stream of foreign visitors to the World Exhibition in 1873 that a type of pass law was introduced. The police first opposed any form of legislation. They had their own way of keeping moral law and order, separate from all discussion in medical circles. The female sex, which, in the bigger cities, more or less surrendered to the extra-marital satisfaction of the libido, was seen as the main problem. A very detailed policy statement from the police, dating from 1851, states that the following women are a threat to public morals :

1) « The normal prostitutes » , who earn their living from prostitution.

2) « The occasional prostitutes » , recruited from the ranks of seamstresses, dress-makers, dancers and other theatre performers and further from factory-girls, servants etc. « The occasional prostitutes » usually turn into category One, « ordinary prostitutes » .

### 3) « Mistresses. »

### 4) « Concubines. »

Of interest are the police criteria with respect to the occasional prostitutes : they are women who were seduced by presents or invitations to satisfy the sexual needs of men without prospects or intention of marriage, but they did not associate with just any man, nor would they necessarily make prostitution their profession. In other words, every woman engaged in an extra-marital relationship was a whore or, in any case, an occasional prostitute. In contrast to all the learned gentlemen who were convinced of the slight sexual needs of respectable women, the police knew better. Occasional prostitutes were also those women who agreed to sexual relationships without accepting presents or money, but merely for the satisfaction of their immoral instincts. These women could be found in all layers of society : debauched daughters, unfaithful wives, and lecherous widows. Some even went so far as to seek-out men and pay them ! It is clear that the police had an insight into the hidden lives of the citizens that no other government body could match, and a know-how encompassing just about everything humanly possible. It was a good thing that many loose and sinful daughters, wives, and widows managed to stay-out of the hands of the police, otherwise, the enormous apparatus would have been in need of even further extension.

When medical examinations were finally introduced, the government was very careful not to legislate « the evil practice » . Prostitution was still banned, but a prostitute under medical control was not punished. Housing prostitutes who practised their profession at home remained illegal. As a consequence, the prostitutes had to pay exorbitant rents. Also, other forms of exploitation and black-mail were made possible due to contradictions in the law, and, of course, the prostitutes were the victims of this.

### Prostitution in Vienna : a case for the morality police

Sexual diseases and sexual promiscuity (a breeding ground for syphilis) had to be dealt with by the 19th Century equivalent of the vice-squad : the Morality Police.

After the middle of the 19th Century, it was longer the penal system but the Morality Police who were responsible for prostitution. The apparently sharp increase in prostitution, which was a danger to marriage and the family, was to be supervised, but not only on moral grounds. In addition, sexually transmitted diseases such as syphilis had to be brought under control. Even restricting the number of prostitutes in Vienna was a difficult undertaking. These women were, in fact, supposed to register officially and, thus, undergo regular health checks, but, at the same time, informal or « tolerated » prostitution flourished. The field of prostitution, thus, included « waged whores » and « casual strumpets » , « concubines » and « mistresses » . Most prostitutes came from the lower-middle-class and the lower-class. Many of them were professional women who took-up prostitution to supplement a small income or to bridge phases of unemployment. Their social predicament encouraged individual and informal street-walking. The Morality Police tried to counter this by setting-up « no-go areas » , for example near schools and churches, from which prostitutes were excluded. Customers of prostitutes were exempt from police supervision. The sexual desires of men, in this respect, were only discussed in public to the extent that they were expected to confine their supposedly stronger sexual drive to

inter-course within marriage so as not to expose themselves to the risk of syphilis. But they had no reason to fear legal consequences. There was also a more relaxed approach to the position of « high-class prostitutes », who (thanks to the social standing of their clients) enjoyed immunity from persecution by the police.

### Student Alfred Stroß wins a First Prize

**Wednesday, 27 June 1877 :**

Composition competition at the Vienna Conservatory (class of Franz Krenn) . Alfred Stroß wins a First Prize with a piano « impromptu » . Mathilde (Aloisia) von Kralik wins a 2nd Prize with the Scherzo of a Piano Quintet.

Members of the Jury :

Josef Hellmesberger senior, Heinrich Billing Edler von Gemmern, Johann Gänsbacher, Wilhelm Gericke, Johann Ruffinatscha, Hanns Schmitt, Doctor Josef Standhartner.

### Anton Meißner meets Bruckner

**End of June 1877 (or Wednesday, 19 September 1877 ? - official day of the entrance examination for the Vienna Conservatory) :**

Anton Meißner (1855-1932) meets Anton Bruckner for the first time.

Biographers August Göllerich junior and Max Auer described Meißner as « a devoutly Catholic young man » whom Bruckner had taken to because he stood-out against the prevailing « free-thinking and liberalism » . Meißner was to become Bruckner's secretary and assistant in his final years, writing letters on his behalf, even to his brother Ignaz, and helping to prepare manuscript pages for the Finale of the 9th by ruling bar lines and adding instrument names.

« Bruckner-Jahrbuch » (1987-1988) edited by Othmar Wessely :

Erich Wolfgang Partsch. « Anton Meißner, der letzte “ Sekretär ” Bruckners. »

Heinrich Salzer. « Erinnerungen an Anton Meißner. »

### Hotel reservations in St. Florian

**Friday, 24 August 1877 :** Letter from Johann Herbeck (Vienna) to Anton Bruckner (Linz) :

Herbeck tells Bruckner to make hotel reservations for 2 rooms in St. Florian for next **Sunday (26 August 1877)** . He will pick-up Bruckner in Linz at the « Zum Roter Krebs » inn.

Greetings from « Frau » Herbeck and Max.

### Moving and playing organ

**Thursday, 15 November 1877** : Organ recital by Anton Bruckner in the « Augustinerkirche » in Vienna.

The same day, he left his small flat at the « Heinrichhof » (Number 3 « Opernring ») and moved not far, next to the « Ringtheater » and near the « Votivkirche », in a 2 room apartment on the 4th floor of the « Hôtel de France » (Number 7 « Heßgasse ») under the management of Anton Ölzelt junior.

A commemorative plaque (created by Robert Ullmann in 1924) was offered by the « Wiener Schubertbund » (Schubert Choral Association of Vienna) ; it adorns the façade of the building.

Today, the « Hôtel de France » offers a « Bruckner Suite » .

### Vienna : A gift for the Votive Church

Anton Bruckner was placed in an embarrassing position when, in replacement of the ill Eduard Hanslick, he was mandated to grade the brand new organ which was delivered by the world renowned builder E. F. Walcker & Cie. from Ludwigsburg (Germany) at the Votive Church (« Votivkirche ») as a gift to Emperor Franz-Josef. Bruckner was personally questioned by His Majesty, who wanted to know the opinion of his « Hofburgkapelle » musician. Bruckner was fully-aware of the weaknesses of the instrument, but did not dare to tell the truth to the Imperial benefactor. He stuttered something about the technical specifications, dimensions, etc.

At that same moment, the director of the Conservatory, Josef Hellmesberger senior, who was also a member of this Commission, helped Bruckner to get-out of trouble by repeating the famous paraphrase from Richard Wagner (« One should not look a gift-horse in the mouth ») :

Hellmesberger turned to the Emperor and said apologetically :  
« Majestät, einer geschenkten Orgel schaut man nicht in die Gorgel ! »

(« Your Majesty, one should not look a gift-organ in the wind-pipe. »)

Franz Joseph smiled. He had understood without being offended.

### Mahler's eyesight

**1878** : First photo of Gustav Mahler, aged 18, wearing glasses.

Mahler almost certainly used these for reading and not for general vision. They are strong and, if Mahler had required

them for general vision, he would have had extreme difficulty seeing, and there is no evidence of that.

His right eye was about 50 % weaker than his left eye and had a moderate astigmatism (his left eye had none) .  
The relevant measurements (in diopters) are as follows :

| Spherical | Cylindrical | Axis |
|-----------|-------------|------|
|-----------|-------------|------|

|             |               |     |
|-------------|---------------|-----|
| Right eye : | + 6.50 - 2.00 | 100 |
|-------------|---------------|-----|

|            |        |  |
|------------|--------|--|
| Left eye : | + 4.00 |  |
|------------|--------|--|

Spherical : Measurement of the strength of the lens.

+ : Far-sightedness.

Cylindrical : Degree of astigmatism.

Axis : Direction of astigmatism.

### Bruckner, Liszt and ... crazy Hortense

August Stradal, who was a pupil of both Anton Bruckner and Franz Liszt, reports an anecdote passed on to him by Bruckner :

« I met Liszt in St. Michael's Square and he invited me to accompany him to Bösendorfer's. We'd taken only a few steps along the " Herrengasse " when a women threw herself at Liszt and cried-out in a loud voice :

“ My dearest Franz, when are we finally going to get married ? ”

Liszt was highly-agitated and, seizing me by the arm, said :

“ Bruckner, let's be on our way, it's a poor mad woman. ” »

The woman in question was Hortense Voigt, a by no means unknown figure in Vienna. She wrote letters to her idol that began :

« My passionately loved “ fiancé ”, my sweet and affectionate Franz. »

She was clearly disturbed, and yet, Bruckner seems to have believed her.

Bruckner exclaimed to Stradal :

« Goodness me, your Master must have been a “ Don Juan ”. »

Anecdotes like this one found a responsive audience and afforded further proof of the Latin proverb :

« Semper aliquid hæret »

(If enough mud is flung at a victim, some of it will stick.)

### Hortense Voigt

One can only be grateful to Hortense Voigt for not leaving any memoirs that might constitute « the other side » of « her » case. This name is unlikely to stir many memories, even among Liszt aficionados. Yet, for years, « Fräulein » Voigt went around calling herself Liszt's « fiancée », and became such a nuisance to him that the police were called-in. The facts of the matter may be summarized briefly. Voigt pursued Liszt to Hungary in **February 1874**, proclaiming her love for him. She lay siege to the house of Imre Széchenyi in Horpács for 4 days, hoping to catch a glimpse of her idol. Széchenyi was forced to get a restraining order from the authorities, barring her from the neighbourhood. She then went to Budapest, where she approached both a Catholic priest and a Protestant pastor to discuss her wedding with Liszt, unfortunately delayed « by intrigues of the blackest hue ». In a letter to Baron Augustz, Liszt spoke of « the intrusions of the “ fiancée ”, who qualifies for the mad-house ». Augustz alerted the Budapest police, who picked-up « Fräulein » Voigt for questioning. The commissioner of police, Elek Thaisz, sent an account to Augustz on **February 18** :

« My most esteemed friend :

Miss Hortense Voigt was here at 12 noon. I gently reminded her of the inappropriateness of her behaviour toward Liszt, to which her tears started showering like rain and she was able to excuse herself only by saying, “ Liszt will have to hold himself responsible for it. ” (“ Das wird sich Liszt selbst verantworten müßen. ”) After repeated attempts to convince her that nobody should be expected to tolerate intrusions similar to those of hers, and that everybody is entitled to police protection in such cases. I cautioned her very seriously that she should leave Liszt alone in the fixture or I should be compelled to use the most severe police measures against her.

Your sincere and devoted friend,

Elek Thaisz

Budapest, February 18, 1874. »

The warning does not appear to have had much cheer on Hortense. 3 years later, we find her writing to Liszt and signing herself « The loving bride » - a spectacular advance on her earlier modest claim to be merely his « fiancée ». Doctor Eduard von Liszt had something to say about Hortense Voigt in his book « Franz Liszt : Abstammung, Familie,

Begebenheiten » (1937 ; page 78) . The letter he quotes from her there has her addressing Liszt as « Mein heißgeliebter Bräutigam, mein Süßer, herziger Franz ! » (« My ardently loved bridegroom, my darling, lovely Franz ! »)

The only reason to recall the hysterical ravings of Hortense Voigt at this stage in the Janina saga is to point-out that Liszt attracted such emotional cripples all his life, and Olga Janina was but one of them. If she had not written her novels, and had simply faded into the sunset like Hortense and a dozen others of her ilk, it is unlikely that biographers would find it necessary to devote more than a couple of lines to her tenured soul.

...

**Tuesday, 4 February 1873** : Letter from Franz Liszt (Budapest) to Olga von Mayendorff, Schillingsfurst :

« ... As for local events, which are scarcely diverting, I inform you that “ Mademoiselle ” Hortense Voigt (of Weimar) has been staying in Budapest for about 2 weeks. She had taken care to send me ardent telegrams which I never read any longer and only open by mistake when the address is in another hand - a subterfuge to which “ Mademoiselle ” Hortense often has recourse, but without success. »

**Saturday, 31 January 1874** : Letter from Franz Liszt (Horpács) to Olga von Mayendorff, Schillingsfurst :

Napoléon I said to Larevellière-Lépeaux, the leader of the “ Theo-Philanthropists ” :

“ You want something sublime, Sir ; well, recite ‘ Our Father ’ . ”

I follow this advice very humbly and recite every morning and evening :

“ Forgive us our trespasses as we forgive those who trespass against us. ”

This prayer renders unnecessary much argumentation and redundancy.

Herewith, the letter from “ Madame ” Betty Schott (wife, or very close relation of Schott the patrician publisher, almost the peer of Breitkopf and Härtel ; and the Schotts even have the glory of having published, thanks to the subscription of the Emperor Alexander I of Russia, of King William III of Prussia, etc. , Beethoven’s Mass in D and the 9th Symphony !)

Take 30 shares of the “ Wagner Frauen Verein ” at 10 gros per share, half of which I will ask you to register in my name. I have no Prussian currency on hand, but I’ll send it to you immediately after my arrival in Pest. Also write “ Madame ” Betty Schott a few polite lines devoid of obsequiousness.

Weimar and its charms were poetically represented at Horpács today at the castle mass at half-past 8.

“ Mademoiselle ” Hortense Voigt (from the Aker Wand) appeared, very much unheralded. I took her immediately to the sacristy to entrust her to the care of the ecclesiastic, while excusing myself for not being able, in such circumstances of major absurdity, to attend mass. The said “ demoiselle ” won’t give-up the idea that she has the vocation of bringing about my matrimonial happiness in spite of myself !

I forget who it was who defined happiness as :

“ A blow which has more or less healed. ”

Alas ! Mine must forego these correctives.

Thank you for Taillandier’s and Nisard’s speeches. I read them with great interest, recalling Father Gratry.

Your

Franz Liszt »

**Sunday, 8 February 1874.** : Letter from Franz Liszt (Horpács) to Olga von Mayendorff, Schillingsfurst :

« Your comments on “ Mademoiselle ” Voigt are, as usual, most judicious. It could indeed be that behind her formal role, carried to the point of scandal, of being my imaginary and hostile wife, she may be discharging other and less exalted functions. Fortunately, I am entirely blameless in this whole too laughable and odious affair. I shall avoid calling-in the police as long as possible ; but, in Budapest, it will probably be necessary to have recourse to do this ... I learned yesterday in a letter from Budapest that having been evicted at my request from the Hotel Fohner, she brazenly camped at the Hotel Hungaria ; that she called on the Catholic priest and on the Protestant pastor, and that she parades everywhere as my wife, whose wedding, in a church or before the mayor, has unfortunately been hitherto delayed by intrigues of the blackest hue. »

**Sunday, 8 February 1874.** :

(...) On Ash Wednesday, February 18, I’ll be back in Pest.

The “ charms ” of Weimar, in the person of Mademoiselle Hortense Voigt, spent 4 or 5 days at Horpács, and menace me in Pest. As a consolation, please send me the “ Revue bleue ” which you forgot.

Apponyi asks me to convey to you his excuses for not having sent you the jubilee medallion, which is not yet on sale. He won't be the one who is late - and I am too early, alas, for the jubilee.

No less yours,

(unsigned)

P.S. : I re-open this letter, having just received yours. You are not going to be scolded for having exceeded my little instructions concerning the “ Damen Wagner Verein ” ; but neither would I want to encourage you in this too costly and inconvenient method.

Forgive me for having forgotten that you still had a few Thalers of mine ; why do you balk at making use of the 5 Thalers which I mentioned to you for this “ Verein ” ? Please do me the favour of asking at Seitz’s for the exact price of the “ History of Music ” by Ambros, published by Leuckart (Leipzig) , and of sending me Seitz’s bill, without yet buying the work. 3 volumes have, I believe, appeared ; imagine : the Vienna book-seller asked “ Madame ” Széchenyi 19 Florins for the first 2 volumes ! I pointed-out to her that this was either an error or a swindle.

Thank you for Veuillot’s letter. I shall note this statement, which applies to situations other than his :

“ On the roads which faith opens-up for us accidents, misfortunes, and pain are neither pain, nor misfortunes, nor accidents. One’s inner-feelings alter the meaning of words and the nature of things. ”

I am swamped by my epistolary task, which grows daily. If things go on like this, and I receive 50 to 60 letters a week, not counting manuscripts, I don’t know what will become of me.

Your comments on “ Mademoiselle ” Voigt are, as usual, most judicious. It could indeed be that behind her formal role, carried to the point of scandal, of being my imaginary and hostile wife, she may be discharging other and less exalted functions. Fortunately, I am entirely blameless in this whole too laughable and odious affair. I shall avoid calling in the police as long as possible ; but, in Pest, it will probably be necessary to have recourse to this ; and already at Horpács, Széchenyi had to do so in order to restrain “ Mademoiselle ” Voigt from prowling around his house more than 4 days.

I learned yesterday in a letter from Pest that having been evicted at my request from the Hotel Frohner, she brazenly camped at the Hotel Hungaria ; that she called on the Catholic priest and on the Protestant pastor, and that she parades everywhere as my wife, whose wedding, in church or before the mayor, has unfortunately been hitherto delayed by intrigues of the blackest hue.

Did you see that Gablenz has died ? I knew him in Como (in 1838) as a lieutenant, and have always had for him feelings of sincere affection and high-esteem. The manner of his suicide was most noble and military. »

**Friday, 26 December 1879** (Villa d’Este) :

« The parallel drawn by Lo between her letters and those of “ Mademoiselle ” Voigt is most amusing. The poor girl would tremble with pleasure at it, and would see in this the decisive confirmation of her fixed idea that only she is destined to make me completely happy. (...)

Yours ever,

Franz Liszt »

**Monday, 9 April 1883 (Weimar) :**

« “ Madame ” Voigt let me know yesterday that the apartment (on “ Marienstraße ”), about which you have already inquired, is available beginning May 15. I enclose herewith the letter which I suggested that “ Madame ” Voigt write to you. Please answer it without delay. The price seems to me exorbitant. Perhaps, one should have recourse to bargaining, which is something almost improper, but sometimes of practical value.

Yesterday, on her birthday “ Madame ” Sach deigned to receive at noon some 30 members of the Court. There was no official dinner. That evening, “ Madame ” Sach attended the performance of “ La jeune Fille de Perth ” (by Bizet), a “ Carmen ” that has only just blossomed, innocent of all guilt. Once and for all, I lack the taste needed to enjoy this kind of Opera, even “ Carmen ”. I feel obtuse and often out of place.

With regard to Count Beust (who is again very sick) asking when you are coming back, I replied that I was expecting you here only in June. I'll arrange my stay in Weimar and elsewhere so as to conform as much as I can to Lo's dictates.

From May 2 to 9, I'll be in Leipzig for “ Die Tonkünstler Versammlung ”, of which you'll receive the program, which is this time very rich. “ Monsieur ” Sach will put in an appearance in his role of sponsor of this institution, which is surviving successfully after 24 years despite many obstacles. It is not difficult to commemorate the illustrious dead with Mozart's “ Requiem ” and the Oratorios of Händel, Bach, and Mendelssohn, etc. , but except for the theatre, living composers can only wait, and ... die. Now, the particular function of the “ Tonkünstler Versammlungen ” is precisely to stress for the living their right to live.

Please return the issues of “ La Nouvelle Revue ” with “ Madame ” Sand's letters, to “ Monsieur ” Saissy, “ Directeur de ' La Gazette de Hongrie ' ”, Ferencz-József Rakpart, 10, Budapest (“ Hongrie ”) .

With all my heart, your very humble

Franz Liszt

I tell people about Clément's fine appearance, with his Russian fur-cap, and bearing the standard of the Artists' International Club in Rome at the celebration in honour of Raphael. »

**Tuesday, 17 April 1883 :**

« Gustchen pulled-off a small “ coup d'état ”. She simply decided to inform “ Monsieur ” de Hadeln that you are

reserving quarters at the Castel Helldorf, either on the ground-floor or the second floor (?) from July 1. You are subject to the short-term inconvenience of taking rooms at the Hotel Erbprinz, or “ Russie ”.

Rosenoff, not being here, was not able to transmit your message to “ Madame ” Voigt ; but Gustchen boldly took it on herself to go-off and find her in order to cancel the apartment which you had thought of renting. All things considered, in spite of the nuisance of several weeks at the hotel, it seems to me that you will be better off at the Castel Helldorf than elsewhere. Gustchen asked me to influence you in agreeing to this and is sending you details of her imperious negotiation.

With all my heart, your very humble and “ expectant ”

Franz Liszt

Herewith, 2 programs of the very successful concerts which lacked only your approbation and presence. »

### Liszt plays Bruckner at the piano

**Between Monday, 1 and Sunday, 7 April 1878** : Franz Liszt plays at the piano the 5th Symphony of Anton Bruckner (WAB 105) and expresses his congratulations to Prince Constantin zu Hohenlohe-Schillingsfürst.

Hugo Wolf and Felix Mottl unsuccessfully try to meet Franz Liszt.

### Rotterdam : Bruckner's organ concert

**1878** : Anton Ölzelt junior reads an article about an organ recital (with free improvisations) given by Anton Bruckner which took place in Rotterdam at the beginning of September 1871 (after the London concerts) . « Frau » Lisa Morscher, who is related to Ölzelt, also heard about this recital.

### Vienna : Forensic Medicine

**1878** : First publication of Eduard von Hofmann's « Text-book for Forensic Medicine » . For a long period of time, this was the standard reference-book for forensic medicine and was translated into French, Italian, Spanish and Russian.

Removal of forensic medicine specimens from the pathology association collection and transferred to its own, independent collection.

Forensic medicine and hygiene separated : Post-mortems ordered by the Court and health authorities were linked to the Director of the Institute for Forensic Medicine from 1875 and, from this time on, forensic medicine was no longer part of pathological anatomy.

## Vienna : 200 Years of Chairs of Forensic Medicine

The Department of Forensic Medicine in Vienna is one of the oldest forensic medicine establishments around the world. This field of study arose from the so-called State pharmacology (« Staatsarzneykunde ») of the former director of the Vienna General Hospital (« Allgemeines Krankenhaus ») , Johann Peter Frank. The German Emperor Franz II (1792-1806) , also Emperor Franz I of Austria (1804-1835) , set-up a dedicated chair for State pharmacology on 21 July 1804, to which Doctor Ferdinand Eberhard Vietz was appointed by Imperial decree as chair-person of Chair of Forensic Medicine on 24 February 1805. Vietz was tasked with holding both medical and legal lectures, turning forensic medicine into a separate examination subject at the medical and legal faculty.

As early as 1532, the « scrupulous procedure for the judgment of capital crimes » (« Constitutio Criminalis Carolina ») of Karl V required the involvement of doctors when judging medical issues in legal practice.

In 1768, the Theresiana (« Constitutio Criminalis Theresiana ») was established for all Austrian hereditary territories. Post-mortems were introduced on 30 March 1770. The doctor conducting the post-mortem had to be vetted by the medical faculty.

Following the establishment of the Vienna General Hospital (« Allgemeines Krankenhaus ») in the Alsergrund District (9th) in 1784, the responsibility for official post-mortem examinations was conferred to the 2 youngest hospital surgeons. Together with the city-surgeon, they made-up a commission whereby the city-surgeon carried-out the actual procedure.

In 1808, a decree was passed which stipulated that the Professor of Forensic Pharmacology should assume overall responsibility for post-mortems at which students could also be present. From 1812, all forensic post-mortems from the city and surrounding areas were carried-out at the Vienna General Hospital.

The second chair, Josef Bernt, set-up a practical teaching institute for forensic medicine with a mortuary and post-mortem amphitheatre.

The construction of the amphitheatre formed the basis for the future Vienna Institute of Forensic Medicine. In 1815, Bernt was sworn in as « Beschaumeister » by the city-council, equivalent to the modern-day expert witness. Bernt remained in this position until 1842.

His successors were Jakob Kolletschka (1843-1847) and Johann Dlahy (1848-1875) .

Together with Carl Freiherr von Rokitansky, Dlahy moved into the newly-built, 2 story church-yard building, known colloquially as « Indagandis Hof » , in 1862. The areas of work were in the North-wing of the first floor along with a chemical laboratory and a museum, while on the first floor there was the forensic post-mortem room, the forensic burial chamber and a commission-room.

His successor was Eduard Ritter von Hofmann, who held the position of chair from 1875 until his death in 1897. It was also, at this time, that a separation was made between forensic medicine and hygiene. Hofmann combined forensic and medical post-mortems to form the area of forensic medicine. During his time in this position, the building of the Institute of Forensic Medicine was extended, with a second floor being added to the Pathological Institute in 1883 and the construction of an extension to the lecture-hall. The work-spaces were moved to the South-wing of the first floor and the museum to the second floor. The lecture-hall, post-mortem room for forensic scientists and the laboratory were located in the southern half. Hofmann wrote the authoritative « Lehrbuch für Gerichtliche Medizin » (Course-book on Forensic Medicine) , which was first published in 1878. It remains today a core-text (11th edition by Albin Haberda, 1927) and has been translated into French, Italian, Spanish and Russian.

The death of Crown Prince Rudolf on 30 January 1889 and the investigation into the « Ringtheater » fire on 8 December 1881, in which more than 400 people died, occurred during Hofmann's tenure. The « Wiener Freiwillige Rettungsgesellschaft » (Vienna Voluntary Rescue Association) was founded as a result of the tragic event on 8 December 1881. The accident led to a number of key-insights for forensic medicine, such as the fact that during a fire, smoke intoxication can result in death. Moreover, it was proven that carbon monoxide (CO) is a clear indication that somebody was burned alive. When examining the bodies, modern methods of identification were used, such as determining identity on the basis of dental records.

Following the death of Hofmann, the pathological anatomist Alexander Kolisko assumed the chair. He dedicated himself primarily to the pathology of sudden-death and left the criminal side of the subject, court activities and lectures for lawyers to his first assistant, Albin Haberda. When the chair for pathological anatomy became available in 1916, Kolisko returned there, paving the way for Haberda to be appointed to the chair of forensic medicine « primo » et « unico loco » .

After the First World War, it became possible to extend the institute's building to the North in 1922 when the adjacent Military Pathological Institute of the « Garnisonsspital » became available. Since this time, the institute has been located at « Sensengasse » Number 2.

Haberda was succeeded first by Anton Werkgartner, and then, by Fritz Reuter, who was stripped of his position in 1938 for political reasons and was then only able to return to the University in 1945, his name having been cleared. Reuter set-up a dedicated chemistry laboratory for the institute. His successor was his former first assistant, Walter Schwarzacher, who created the Heidelberger Institute.

Leopold Breitenecker followed Schwarzacher, holding the position from 1958 to 1973. Under his stewardship, the old building underwent comprehensive renovation, with an additional floor being added to the side-wings and a new laboratory building being created by an extension to « Sensengasse » . He created 2 new departments : serology and anthropology. Furthermore, he gave the Museum of Forensic Medicine a permanent home in the listed central-wing of the main-building.

The creation of the collection of compounds can be traced back to Johann Peter Franck. In 1796, a decree was passed

following Frank's efforts, pursuant to which doctors at the Vienna General Hospital were obliged to supply every compound to the Museum of Pathological Anatomy (in the former Institute of Pathology) . In 1875, Hofmann assumed his lectureship in Vienna. He was able to remove the forensic medicine compounds from the Pathological Collection and to create an independent museum. The museum has been located in the Institute of Forensic Medicine at « Sensengasse » Number 2 since 1922. The museum houses more than 2,000 compounds, which were largely obtained during post-mortems for health and forensic purposes. A collection of crime tools, ranging from simple weapons from earlier decades to the very latest weapons, provide a good overview of the history of crime over the past 100 years. Many famous criminal cases are represented by means of exhibits, such as the file with which Empress Elisabeth was murdered in Geneva on 10 September 1898.

## Dates

**1044** : The Als river (Alserbach, from the Celtic « als » for stream (Bach) and « olsa » for alder (Erle)) , which is acknowledged in the name of Vienna's 9th District, Alsergrund, is mentioned for the first time in documents. In the 19th Century, the area became increasingly boggy, with the result that the Alserbach was re-routed underground between 1840 and 1846 for reasons of hygiene.

The village of Siechenals (the German name is a play on the languid flow of the stream) was located on the banks of the Alserbach.

The diseases brought during the crusades led to a large number of people requiring medical aid, and they were moved to infirmaries (« Siechenhäuser ») in the surrounding towns (e.g. , St. Johann an der Siechenals) .

**14th Century** : St. Lazar hospital was founded in the village of Siechenals to care for patients afflicted by leprosy.

**1302** : The first clearly documented and court-ordered post-mortem examination took place in Bologna.

**1365** : The University of Vienna was founded (« Alma Mater Rudolphina Vindobonensis ») .

The Faculty of Medicine is a founding member of the « Alma Mater Rudolphina Vindobonensis » .

**1399** : The first records of events at the Faculty of Medicine from May 1399 - see : university archive, « Acta Facultatis Medicæ Universitatis Vindobonensis » .

**1404** : The Italian professor Galeazzo di Santa Sophie (who died in 1427) performed the first post-mortem examination for the purposes of teaching and demonstration at the « Heiligen-Geist-Spital » . The hospital founded in the 13th Century was destroyed during the first siege of the Turks and was not rebuilt (today : Vienna University of Technology) .

**1452** : Dissection of a female corpse at the Faculty of Medicine.

**1530** : Hospital at Siechenals serves as a hospital for those afflicted by the Plague.

**1532** : « Constitutio Criminalis Carolina », the painstaking procedure for the judgment of capital crimes (« Halsgerichtsordnung ») of Emperor Charles V came into force stipulated the involvement of physicians in the judicial process when assessing medical questions.

**1621** : Paolo Zacchia (1584-1659) : « Quæstiones medico-legales » (1621-1650) - first systematic manual for forensic medicine.

**1630** : Deaths in the city were registered by the « Totenbeschreibeamt » records of external examinations dating back to 1648 are still held at the City and Regional Archive of Vienna.

**1656** : The « Bäckerhäusel » (close to today's « Boltzmannngasse / Währingerstraße ») was also used as a place for sick people to convalesce.

**1657** : The « Kontumazhof » (a hospital for diseases between today's « Währingerstraße » and « Van Swieten Gasse ») was built and later became the military garrison hospital of the City of Vienna.

**1693** : Johann Theobald Frankh dedicated his property on « Alsergasse im Schaffernack » (today « Alserstraße » Number 4 in Vienna's 9th District) to the construction of a hospital for soldiers.

**1694** : The Home for the Poor and Invalid was built on Frankh's land - completed in 1697 (today : first court-yard of the former general hospital) .

**1732** : The City of Vienna bought the land next to the « Kontumazhof » (a site for quarantined patients) and turned it into a cemetery.

**1756** : An Anatomic Theatre was opened at the University of Vienna (today : « Dr. Ignaz-Seipl-Platz » Number 2, 1010 Vienna - Academy of Sciences) .

**1761** : Giovanni Battista Morgagni published his seminal work « De sedibus et causis morborum per anatomen indagatis » (On the Seats and Causes of Diseases as Investigated by Anatomy) - this sentence was used by way of dedication on the gables of the Institute of Pathology.

**Saturday, 31 December 1768** : Archduchess Maria Theresia enacted the « Constitutio Criminalis Theresiana », a uniform penal code for Austria and Bohemia.

**Friday, 30 March 1770** : External examination of corpses became obligatory on the orders of Maria Theresia and only allowed to be carried-out by physicians. The medical examiners needed to be certified by the Faculty of Medicine.

The « Hauptsanitätsnormativ », a generally applicable health-care law for countries under the Monarchy, was introduced. The « Sanitäts- und Kontumazordnung » created uniformity across the health-care system. The health and well-being of the people becomes a State affair.

**1775** : Elements of forensic medicine were taught during lectures on surgery in order to familiarize students and physicians with external examinations of corpses.

**1783** : The garrison hospital was built on the former land of the « Kontumazhof » to care for wounded soldiers.

**1784** : Josef II (1741-1790) opened the Vienna General Hospital on 16 August 1784 to care for and provide solace to sick people (« saluti et solatio ægrorum ») based on the Home for the Poor and Invalid (today, court-yard Number 1 to Number 7 of the former General Hospital) . A mortuary was built at the north-east end of the facility next to the straw warehouse (hence, the German name « Strohhof » or « Leichenhof » ; court-yard Number 10 of today's former General Hospital) . Official post-mortems were transferred to the 2 youngest surgeons. Together with the city-surgeon, they formed a commission in which the city-surgeon performed the actual autopsy.

**1785** : On 7 November 1785, the surgical academy was opened (today : « Josephinum ») .

Forensic medicine lectures were held as an ancillary subject by the professor for surgery and obstetrics for students training to become physicians at the aforementioned Josephine Academy.

**1795** : Johann Peter Frank (1745-1821) , who had been holding lectures on forensic medicine and medical policing since 1785, was appointed a professor at the University of Vienna and also as director of the Vienna General Hospital.

Proposal : Setting-up a chair for State pharmacology.

Publication of the fundamental book « System einer vollständigen Medizinischen Polizey » (System of a complete medical policy) .

**Saturday, 21 July 1804** : The first independent university chair was established for State pharmacology (« Staatsarzneykunde ») by Emperor Franz II (1768-1835) .

**1805** : The Prussian Criminal Code was enacted with rules governing forensic external examinations and the performance of post-mortem examinations :

Explicit instructions that a post-mortem had to include the 3 cavities of the body (chest, abdomen and head) , and that the lungs of new-borns should be tested to ascertain if the child was dead or alive when it was born (part 2, chapter 2 sections 164 and 166) .

**Sunday, 24 February 1805** : Doctor Ferdinand Bernhard Vietz was appointed Chair of Forensic Medicine (Head of the

Institute from 1805 to 1813) .

Holding of medical and legal lectures.

Forensic medicine became a subject in its own right at the medical and legal faculty.

**1808** : A regulation was enacted which stipulated the Professor for State Pharmacology should be ultimately responsible for forensic post-mortem examinations, which students could now also attend.

**1812** : All post-mortems ordered by the courts and health authorities from the city and towns surrounding Vienna were carried-out at the Vienna General Hospital.

**1813** : Josef Bernt (Head of the Institute of Forensic Medicine from 1813 to 1842) .

Certified by the authorities as Master Inspector (corresponds to today's expert witness) in 1815.

Setting-up of a learning facility for forensic medicine with an autopsy room.

**1815** : The Office of the Official Head Medical Examiner of the City of Vienna was associated with the Chair of State Pharmacology.

**1818** : The prosector of pathology and anatomy was given responsibility for all post-mortems ordered by the health authorities and the courts. A forensic medicine remains part of pathological anatomy until 1875.

The dissection chamber was extended, creating an anatomical auditorium.

**1821** : An extraordinary chair for pathological anatomy was established and filled by Lorenz Biermayer.

**1833** : The University of Zürich was opened - official lectures in forensic medicine began.

The Practical Research Institute for State Pharmacology was founded in Berlin.

**1843** : Jakob Kolletschka (Head of the Institute of Forensic Medicine from 1843 to 1862) .

**1844** : Pathological anatomy was established as a dedicated discipline - Carl von Rokitansky was the first « ordinarius » Professor of Pathological Anatomy in Vienna.

**1855** : Enactment by the Ministries of Internal Affairs and Justice : Provisions for performing forensic external examinations.

Chair for Forensic Medicine was established at the University of Bern - a dedicated institute was only established in 1927.

**1859** : The Institute of Pathology and Anatomy (colloquially referred to as « Indagandis Hof » , in reference to the dedication « Indagandis sedibus et causis morborum » on the gables at the research of the seats and causes of diseases) was built on the site of the former mortuary. The working areas were located in the North-wing of the first floor, with a chemical laboratory and a museum. The forensic funeral chamber and a commission room were on the ground-floor.

**1862** : Johan Dlauhy (Head of the Institute of Forensic Medicine from 1862 to 1875) .

Together with Carl Freiherr von Rokitansky, Dlauhy moved to the newly-built single-floor « Leichenhof » building in 1862 (today : brain research-centre of the Medical University of Vienna) .

**1863** : The Institute of Forensic Medicine was founded at the Karl Franzens University in Graz.

**1869** : A consecration chapel was built on the edge of today's court-yard Number 10 of the former General Hospital.

Following the example of Vienna, a chair for State pharmacology was established at the University of Innsbruck - the first holder of this chair was the future Director of the Vienna Institute, Eduard von Hoffmann.

**1875** : Chair for hygiene was established upon the opening of a dedicated Institute of Hygiene in 1908 on « Kinderspitalgasse » .

Eduard Hofmann (Head of the Institute of Forensic Medicine from 1875 to 1897) .

Investigated the death of Crown Prince Rudolph on 30 January 1889.

Investigated the over 400 victims of the « Ringtheater » fire on 8 December 1881 :

First time identification was made using dental records.

Smoke inhalation was the cause of death.

Demonstrating that the presence of carbon monoxide (CO) is evidence that someone was burned alive.

First publication of Hofmann's « Text-Book for Forensic Medicine » (1878) . For a long period of time, this was the standard reference-book for forensic medicine and was translated into French, Italian, Spanish and Russian.

Removal of forensic medicine specimens from the pathology association collection and transferred to its own,

independent collection.

Forensic medicine and hygiene separated.

Post-mortems ordered by the court and health authorities were linked to the Director of the Institute for Forensic Medicine from 1875. From this time on, forensic medicine was no longer part of pathological anatomy.

**1898** : Alexander Kolisko (Head of the Institute of Forensic Medicine from 1898 to 1916) .

The dagger which was used to murder the Empress Elisabeth in Geneva on 10 September 1898 was included in the forensic medicine collection.

Following the death of Hofmann, the pathological anatomist Alexander Kolisko was appointed to the chair. He concentrated primarily on the pathology of sudden-death and left the criminological side of the field, working with the courts and holding lectures for lawyers, to his first assistant Albin Haberda. When the chair for pathological anatomy became vacant in 1916, Kolisko returned there, and Haberda was appointed to the chair for forensic medicine.

**1909** : Institute of Forensic Medicine established in Munich.

**1916** : Albin Haberda (Head of the Institute of Forensic Medicine from 1916 to 1935) .

The former military prosecutor building of the garrison hospital located at « Sensengasse » Number 2 (its role as a military hospital was abandoned following the collapse of the Austro-Hungarian Monarchy after the First World War) was converted to the Institute for Forensic Medicine in 1922, now the Department of Forensic Medicine.

**1935** : Fritz Reuter (Head of the Institute of Forensic Medicine from 1935 to 1938 : removed from office for political reasons) .

A chemistry lab for forensic medicine was set-up.

Anton Werkgartner (Interim Head of the Institute of Forensic Medicine in 1935) .

**1938** : Philip Schneider (Head of the Institute of Forensic Medicine from 1938 to 1945) .

(Image) Forensic Medicine in Vienna under National-Socialism from the German-language book by Ingrid Arias.

Anton Werkgartner (Acting Head of the Institute of Forensic Medicine following the so-called « Anschluß » (annexation of Austria to Germany) .

**1945** : Fritz Reuter (vindicated in 1945 : Head of the Institute of Forensic Medicine from 1945 to 1946) .

1946 :Walter Schwarzacher (Head of the Institute of Forensic Medicine from 1946 to 1958) .

### Mahler and the Pernerstorfer Circle

Gustav Mahler first came into contact with the Pernerstorfer Circle via Siegfried Lipiner. Victor Adler was hosting meetings at his home at the time that Mahler first entered the Circle. Apparently, Adler purchased a top-quality piano for his house so that Mahler could practice on it. Further, he worked to find piano pupils for Mahler, providing Mahler with income while he attended the Vienna Conservatory.

Mahler also played piano for Circle meetings. His friend Natalie Bauer-Lechner describes hearing him play Richard Wagner's « Die Meistersinger von Nürnberg » at Richard Kralik von Meyrswalden's house (the brother of Mathilde) .

Mahler's interest in the circle reflects intense philosophical and metaphysical interests that were an integral part of his work as a composer and conductor. Mahler was influenced to some degree by Friedrich Nietzsche ; he uses one of Nietzsche's poems in his 3rd Symphony. He changed his opinion of Nietzsche in his later life, though during his courtship of Alma Schindler, he reacted with some horror to finding Nietzsche's complete works on her book-shelf and demanded that she burn them immediately.

He certainly was influenced by Wagner. Besides conducting Wagner's work, Alma Mahler noted in her commentary on Mahler's letters that Mahler had often said that, except for Wagner in his book, Beethoven, only Schopenhauer in « The World as Will and Idea » had had anything worthwhile to say about the essence of music.

Mahler also shared with some other Circle members an interest in occult spiritualism. Mahler's residence in Steinbach is located opposite Nussdorf, where Victor Adler and Engelbert Pernerstorfer spend their summer holidays with their families.

...

In 1878, Gustav Mahler joined the Pernerstorfer Circle, a group whose origins lay in the sense of separation experienced by Austrian Germans in the late 1860's after Austria joined Napoléon III in an alliance against the Prussian Germans. Like the much larger « Leseverein der deutsche Studenten Wiens » , founded in 1871, the Pernerstorfer Circle looked to Germanic culture as a tool for the restoration of a pan-German political unity. While, for Mahler, the specific political aspirations of pan-German nationalism may later have evaporated, the cultural ideals with which it was associated remained with him throughout his life. The founding in 1873, by Guido Adler and Felix Mottl, of the « Wiener Akademischen Wagner-Verein » was, thus, a cultural event of political significance. One of its members, Siegfried Lipiner, was later to introduce Mahler into the Pernerstorfer Circle.

...

Mahler became a member of the Pernerstorfer Circle toward the end of the 1870's when he was brought into the

circle through his friendship with Siegfried Lipiner. At about the time, Mahler joined the group, it was undergoing important changes in its activities and outlook. When the government dissolved the « Leseverein der deutsche Studenten Wiens » to curb its advocacy of radical German nationalism, the circle was forced to redirect its political activities from a student environment to the tasks of Party organization and mass-movements. At the same time, the circle's relationship with Friedrich Nietzsche suffered when the philosopher took offense at Lipiner's awkward attempts to establish a close personal friendship. Although Nietzsche continued to wish his Viennese followers well (from a careful distance) and most of the circle's members remained committed to his ideas, the circle increasingly shifted its focus from philosophical discussion to the practical tasks of realizing its political and cultural goals.

That the members of the circle took seriously their goal of fostering genius is revealed, in Mahler's case, by the fact that Victor Adler went to the expense of buying the best piano he could find so that the impoverished Mahler could practice. He also set about locating pupils for the hours of piano instruction that constituted Mahler's chief livelihood while he was a student at the Vienna Conservatory. Mahler returned the favour by providing the piano accompaniment for the nationalist songs that the group performed at its political gatherings. With respect to Mahler's exposure to Nietzsche's thought, the evidence suggests that although the moment of the circle's closeness to Nietzsche had passed, Mahler's association with the group gave him a general knowledge and admiration of the philosopher's outlook that was expanded to a detailed understanding of Nietzsche's work at a later time.

For most members of the Pernerstorfer Circle, the encounter with Nietzsche's thought they experienced as university students significantly influenced the accomplishments of their mature years, but it was in the work of Gustav Mahler that the philosopher's ideas achieved their fullest artistic realization.

...

Mahler was a member of the Pernerstorfer Circle, on and off, until 1883, when he finally left Vienna to take-up his post in Olmütz. These 3 years and the circle itself were the most crucial of all in terms of Mahler's literary and philosophical formation and his whole outlook on life, so that a lengthy excursus is more than justified, not least because Siegfried Lipiner was of tremendous importance in Mahler's life, first in the years leading-up to the breach following his marriage to Alma Schindler, and again in the final years of Mahler's life. (The fact that Alma Schindler was born in the autumn of 1879, at the very time that Mahler was becoming involved in the Lipiner circle, also serves to underline the generation gap between Mahler and his wife.)

...

One legacy of Mahler's membership in the Pernerstorfer Circle was his interest in the political dimension of German culture rather than in Austrian particularism - although, like other former members, by 1906, he had long distanced himself from the circle's nationalist and conservative political ambitions. There was of course a powerful musical tradition of composing works for national occasions during the 18th and 19th Centuries. Throughout the 19th Century, Goethe and Schiller were the focal-points in a prolific discourse on the national functions of German literature. The last 3 decades of that Century in particular were marked by a lively debate that conceived of Goethe's « Faust » as a «

national » text - a debate in which Wagner and Nietzsche happened to be key-figures. Mahler's literary and philosophical interests were firmly rooted in his student days in the 1870's. In his critical reading of German cultural history, he ultimately takes a stance against the nationalist and conservative functionalization of art so characteristic of the cultural climate during his student days in general and the Pernerstorfer Circle in particular, a mobilization of art that, by 1900, had gained a clear anti-Semitic dimension.

### Pernerstorfer Circle

The Pernerstorfer Circle was a group of late-19th Century Viennese intellectuals who developed and shared a collective outlook. This outlook strongly influenced their individual activities within their own specialties, including politics, philosophy, poetry, music, and theatre. The core of the Circle was formed in the 1870's as a reading group in social-democratic literature. One can trace the development of common ideas within the group through the end of the Century, when the Circle divided into those most interested in political activism and those most inspired by Richard Wagner's aesthetic-religious path. By the first decade of the 20th Century, key-members of the group occupied prominent and influential positions in the cultural and political life of Austria, most notably Victor Adler and Gustav Mahler.

The Pernerstorfer Circle is one striking example among the numerous reading societies and discussion groups which were deeply integrated into the culture of 19th Century Vienna. Such groups facilitated a dynamic intersection between philosophy, politics, and the arts. The Circle provides a glimpse at the way in which numerous influential figures in turn of the Century Vienna were steeped in concerns and activity outside of their own realm of specialization via significant and influential contact with each other.

### Doctor Max von Gruber

The Austrian scientist, physician, botanist, physiologist, bacteriologist and hygienist Doctor Max Gruber was born on 6 July 1853 in Vienna and died on 16 September 1927 in Berchtesgaden, Germany. His brother was Franz von Gruber.

He influenced Austrian sanitary legislation. Was member of the Sanitary Council. In 1896, he discovered specific agglutination with his English colleague Herbert Durham (internationally recognized method : Gruber-Widal-reaction) for the detection of infectious diseases (typhoid fever) ; discovered the « specific agglutination » of typhoid bacteria. His main-interests were studying the hygiene and the sexual life.

Gruber participated as an officer in the Pernerstorfer Circle, and, like many members, he was also a participant and officer within the « Leseverein der deutsche Studenten Wiens ». He was among the group members who signed the letter to Friedrich Nietzsche indicating their readiness to dedicate themselves to his ideological vision. In his career as a doctor and researcher, he invented a method for detecting typhoid fever.

Gruber wrote that, for himself and others of his generation, there was a common bond of painful adolescent rejection of the values of his parents and the standing political, economic, religious, and cultural structures of the Habsburg

Empire. For Gruber, and certainly for other members of the Circle (almost all born in the early 1850's) , this common youthful bond remained a lifelong foundation of values and thinking.

Max von Gruber was the son of Ignaz Gruber (1803-1872) , a general practitioner and the first ear-specialist (otology) in Austria, and publisher of a 2 volume text-book on medical chemistry (1835) . He graduated from the « Schottengymnasium » in Vienna and studied medicine at the University of Vienna, receiving his medical doctorate in 1876. He then learned chemistry and physiology under Max von Pettenkofer (1818-1901) and Karl von Voit (1831-1908) in Munich and Karl Ludwig (1816-1895) in Leipzig. Also working under Pettenkofer was Hans Ernst August Buchner (1850-1902) , who encouraged Gruber to concentrate on bacteriology.

Unlike some of the great names of the time, among them Carl Wilhelm Nägeli, Theodor Billroth (1829-1894) , Ferdinand Cohn (1828-1898) , and Robert Koch (1843-1910) , Gruber recognized that bacteria possess a variability within limits partially determined by the culture medium. This theory was important for the differentiation of the categories of bacteria and gained significance for Gruber in his examinations of cholera vibrios, enabling him to distinguish them from other vibrios.

In 1882, Gruber was habilitated as a lecturer in Vienna, and, 2 years later, he became associate-professor (« Professor extraordinarius ») and head of the newly-established Institute for Hygiene at the University of Graz. On 23 March 1887, he became « ausser-ordentlicher » professor in Vienna, succeeding Josef Nowak, and, on 10 December 1891, he was appointed to the chair of hygiene established in 1875 at the University of Vienna. Karl Landsteiner became his assistant in 1896.

Another of his pupils, Alois Lode, in 1897, became the first professor in the new chair of hygiene at the University of Innsbruck. The working conditions in the Institute of Hygiene were so poor, that Gruber attempted to resign his chair and find employment as head of a laboratory in Munich or at the Jenner Institute in London, under Joseph Lister. It was while in Vienna, however, that Gruber, with his English student Herbert Edward Durham (1866-1945) , discovered the agglutination which gained him international fame.

Gruber eventually left Vienna in 1902, and, in October that year, he succeeded Hans Buchner as director of the Institute for Hygiene in Munich. He held the post until his voluntary retirement in 1923, on the occasion of his 70th birthday. On this occasion, he made a statement that described an outlook probably common to many members of the Pernerstorfer Circle :

« To realize a noble humanity myself and to help others realize it - that was actually, when I really consider it, always the ultimate aim of my longing. Problems of world-view and morality have always concerned me more than all other things. He described himself as having throughout his life a restless despair at the disparity between ideal and reality. »

In Vienna, Gruber was succeeded by Arthur Schattenfroh (1869-1923) , who held the chair from 1905 to 1923. During his last years, Gruber concentrated completely on his duties as president of the Bavarian Academy of Sciences.

With Max Rubner and Father Martin Ficker (1868-), Gruber published the « Hand-book of Hygiene », edited in 6 volumes by S. Hirtzel in Leipzig (1911-1913) .

As a leading racial hygienist, when he first met the Nazi dictator Adolf Hitler, he described him as a witness at court in 1923 :

« It was the first time I had seen Hitler close at hand. Face and head of inferior type, cross-breed ; low receding forehead, ugly nose, broad cheek-bones, little eyes, dark hair. Expression not of a man exercising authority in perfect self-command, but of raving excitement. At the end, an expression of satisfied egotism. »

...

Maximilian Franz Maria Gruber, seit 1908 Ritter von Gruber (geboren 6. Juli 1853 in Wien ; gestorben 16. September 1927 in Berchtesgaden) war ein österreichischer Mediziner, Botaniker, Physiologe, Bakteriologe und Hygieniker. Von Gruber gilt als einer der Begründer der modernen Hygiene und Serologie und beschäftigte sich zudem mit Themen der Rassenhygiene.

Max von Gruber, Sohn von Ignaz Gruber, einem der 1. Ohrenärzte Österreichs, wuchs in Wien auf. Nach Abgang vom renommierten Schottengymnasium studierte Gruber Medizin und Chemie an den Universitäten Wien, München und Leipzig. 1876 wurde er promoviert und war danach drei Jahre Assistent am Chemischen Institut in Wien. Seine weitere Ausbildung erhielt er in München unter Max von Pettenkofer, Carl von Voit und Carl von Nägeli. 1882 habilitierte er sich in Wien im Fach Hygiene, arbeitete dann ein Semester unter dem Physiologen Carl Ludwig in Leipzig und übernahm 1884 die Leitung des Hygiene-Instituts in Graz. Ab 1887 lehrte er in Wien, wo er zum Direktor des Hygienischen Institutes berufen wurde.

1896 entdeckte von Gruber, zusammen mit seinem englischen Kollegen Herbert Edward Durham, die sogenannte Agglutination und begründete damit die spätere Serologie. Fernand Widal zeichnete dafür verantwortlich, daß diese Methode en gros in der Praxis eingesetzt werden konnte (Gruber-Widal-Reaktion) .

1902 wurde von Gruber als Ordinarius für Hygiene und Nachfolger des mit ihm befreundeten Hans Bucher Direktor des Hygiene-Instituts in München. 1908 erfolgte die Erhebung in den bayerischen Personaladel. In seiner Münchener Zeit wandte er sich zunehmend rassenhygienischen Fragestellungen zu. Von 1910 bis 1922 war er Vorsitzender der Deutschen Gesellschaft für Rassenhygiene. Während des 1. Weltkriegs engagierte er sich als nationalistisch-politischer Redner für einen deutschen « Siegfrieden » und ein vergrößertes deutsches Kolonialreich. Von Gruber war Mitglied im Alldeutschen Verband. 1917 nahm er die Herausgeberschaft der von Julius Friedrich Lehmann gegründeten rassistisch-nationalistischen Zeitschrift Deutschlands Erneuerung an (unter anderem zusammen mit Houston Stewart Chamberlain) . Zusammen mit Lehmann gründete von Gruber die bayerische Sektion der Deutschen Vaterlandspartei. 1919 war er Mitbegründer der Deutschnationalen Volkspartei in Bayern.

Bekannte Familienmitglieder waren sein Bruder, der Architekt Franz von Gruber, und sein Sohn, der Geodät Otto von

Gruber.

Nach Max von Gruber wurde eine kleine Seitenstraße am Klinikum Schwabing in München benannt.

...

Nach dem Medizinstudium, der Promotion in Wien (1876) und einer Assistententätigkeit am chemischen Institut der Universität Wien (F. C. Schneider) erhielt Gruber seine weitere Ausbildung bei Pettenkofer, Voit und Naegeli in München. 1882 habilitierte er sich für Hygiene in Wien und arbeitete dann ein Semester bei dem Physiologen Carl Ludwig in Leipzig. 1884 wurde er zum außerordentlichen Professor der Hygiene in Graz ernannt und 1887 als außerordentlicher Professor und Direktor des Hygienischen Instituts nach Wien berufen (Mitglied des Obersten Sanitätsrates, 1891 Ordinarius). 1902 folgte er einem Ruf nach München, wo er als Nachfolger seines Freundes Hans Buchner den Pettenkoferschen Lehrstuhl bestieg. Eine erneute Berufung an seine Heimatuniversität Wien lehnte er ab. Über 20 Jahre wirkte er in München, bis er 1923 emeritiert wurde.

Gruber darf als Mitschöpfer der modernen Hygiene bezeichnet werden. Er hatte hervorragenden Anteil an der Sanitätsgesetzgebung in Österreich und Bayern, erwarb sich große Verdienste um die Bekämpfung der Volkskrankheiten (insbesondere des Typhus und der Cholera), beschäftigte sich mit den Problemen der Städtesanierung, der Schulhygiene und Jugenderziehung und nahm ausführlich Stellung zur Alkoholfrage und zu sexuellen Problemen. In den späteren Jahren wandte er sein besonderes Interesse der Bevölkerungspolitik und Rassenhygiene zu. Seine Hauptleistung liegt jedoch auf dem Gebiet der Bakteriologie und Immunitätsforschung. Die Entdeckung der Agglutination, die er zusammen mit Durham 1896 veröffentlichte (Münchener medizinische Wochenschrift 43 (1896); Seite 285f.), machte seinen Namen weltberühmt. Gruber erkannte sofort die große diagnostische Bedeutung dieser Reaktion, deren Grundprinzip darin besteht, daß das Blutserum eines Tieres oder Menschen nach überstandener bakterieller Infektion die Fähigkeit erhält, pathogene Mikroorganismen derselben spezifischen Art in Klümpchen (Agglutine) auszufällen. Damit begründete Gruber die Serologie. Widal machte kurz darauf diese Methode in großem Maßstabe der klinischen Praxis nutzbar (Gruber-Widalsche-Reaktion). Auf bakteriologischem Gebiet arbeitete Gruber ferner über das verwickelte Problem der Abwehrkräfte und Abwehrstoffe des Organismus einerseits und der Parasiten andererseits (Antitoxine, Opsonine). Von seinen vielen berühmten Schülern ist vor allem Landsteiner zu nennen.

## Genealogie

Vater : Ignaz Gruber (1803-1872), Doktor der Medizin, Otologe in Wien, Sohn des Forstmeisters Franz und des Juliane Mühlbacher ; Mutter : Gabriele (1814-1908), Tochter des Johann von Menninger (1780-1849), Börsensensal in Wien, und des Franziska Tenamberg ; Bruder : Franz Ritter von Gruber (österreichischer Ritterstand 1882, 1837-1918), Militärische- und Zivilarchitekt, Erbauer der Aspangbahnhofs, Ignaz Freiherr Gruber von Menninger ; verheiratet 1) Gnadwald 1878 Julie (1851-1888), Tochter des Anton von Aichinger (1795-1874), Spediteur, Burgmeister von Hall/Tirol, und des Auguste von Schorn, 2) Birmingham 1891 Alwine Friederike (geboren 1863), Tochter des Uhrenfabriker William Ehrhardt und des Dorothea Rugenstein ; 4 Sohn, 2 Tochter aus 1), und andere Otto, Wolfgang (geboren 1886), Chef-chemiker der Wacker Gesellschaft für Elektrochemische Industrie, Werk Burghausen ; Neffe : Richard von Gruber (1869-

1938) .

### Vienna Conservatory : Final examinations (Mid-June 1878)

**Wednesday, 19 June 1878 :**

Anton Bruckners Schüler, denen der « I. Classificationsgrad » zuerkannt wurde, werden in der Prüfungsstatistik erwähnt :

Bei den Vorbildungsschulen « Orgelklasse des Herrn Professor Anton Bruckner.

Fortunato Luzzatto. »

Bei den Ausbildungsschulen « Orgelklasse des Herrn Professor Anton Bruckner.

(2 Zöglinge.)

I. Jahrgang.

Rudolf Krzyzanowski, Franz Weber. »

Bei Musiktheorie « Klasse für Harmonielehre als Hauptfach des Herrn Professor Anton Bruckner.

(12 Zöglinge.)

Heinrich Eisner, Paul von Janko, Carl Kehlendorfer, Adolf Kmoch, Richard Schulz. »

« Klasse für Kontrapunkt des Herrn Professor Anton Bruckner.

(11 Zöglinge.)

Paul Lorenz, Ferdinand Löwe, Bela Mandl, Heinrich Salzmänn, Josef Schalk, Franz Weber, Hanns Winter, Josef Zschel. »

### Vienna Conservatory : Academic Year 1878-1879

**Saturday, 21 September 1878 :**

Im Kapitel « B. Unterrichtsleitung » des Jahresberichts ist zu lesen :

« 4. Lehrkörper :

(Fußnote, ohne Bruckner-Bezug.)

1) Ordentliche Lehrer.

(...)

5) Herr Anton Bruckner, Professor (Harmonielehre, Kontrapunkt und Orgel) . »

Zu Anton Bruckners Schülern am Wiener Konservatorium zählen :

Franz Brischar (« aus Jedlersee, 19 Jahre - Harmonielehre, Klavier III. ») (Harmonielehre) , Franz Burgarth (« aus Hamburg, 17 Jahre - Violin A. I. , Harmonielehre, Klavier II. ») (Harmonielehre) , Ernst Denhof (« 16 Jahre - Klavier V. III. , Harmonielehre, I. Sprach. ») (Harmonielehre) , Rudolf Dittrich (« aus Biala, 17 Jahre - Violin A. I. , Klavier II. , Kontrapunkt I. ») , Julius Korngold (« aus Brünn, 18 Jahre - Harmonielehre, Klavier II. ») (Harmonielehre) , Ferdinand Löwe (« 15 Jahre - Klavier A. III. , Komposition I. , Kontrapunkt II. , I. Sprach. ») (Kontrapunkt) , Bela Mandl (« aus Zenta, 20 Jahre - Klavier A. III. , Kontrapunkt II. , Komposition I. , Literaturgeschichte. ») (Kontrapunkt) , Anton Meißner (« 16 Jahre - Klavier V. III. , Harmonielehre. ») (Harmonielehre) , Karl Bernhard Öhn (« Karl B. Ehn, 25 Jahre - Harmonielehre, Klavier I. ») , Eduard Rosé (« Rosenblum Eduard, aus Jassy, 19 Jahre - Violoncello A. I. , Kontrapunkt I. ») , Franz Schalk (« 15 Jahre - Violin A. I. , Harmonielehre, Klavier III. ») (Harmonielehre) , Josef Schalk (Kontrapunkt) , Hans Peter Vergeiner (« aus Freistadt, Oberösterreich, 19 Jahre - Orgel V. I. , Harmonielehre, Klavier II. ») , Franz Weber (« aus Raab, 21 Jahre - Orgel A. II. , Kontrapunkt II. , General der Musik. ») (Kontrapunkt) , Alfred Zamara (« 16 Jahre - Harfe A. II. , Klavier III. , Harmonielehre. ») , Josef Zschel (« 16 Jahre - Klavier A. II. , Kontrapunkt II. , General der Musik. ») (Kontrapunkt) , vermutlich auch noch Richard Schultz (« 15 Jahre - Horn V. I. , Kontrapunkt I. , Klavier III. ») , der die Schule am 21. Februar 1879 verläßt.

Als Orgelschüler sind verzeichnet :

Emanuel von Kaczkowski (« 25 Jahre - Orgel V. I. , Kontrapunkt I. ») , Fortunato Luzzatto (« aus Triest, 22 Jahre - Orgel A. I. , Komposition III. , General der Musik. ») , Lorenz Ritter (« aus Mariazell, 14 Jahre - Orgel V. I. , Allgemeine Musiklehre, Klavier I. ») , Hans Peter Vergeiner (« aus Freistadt, Oberösterreich, 19 Jahre - Orgel V. I. , Harmonielehre, Klavier II. ») , Adolf Veith (« 14 Jahre - Orgel V. I. , Harmonielehre, Klavier II. ») und Franz Weber (« aus Raab, 21 Jahre - Orgel A. II. , Kontrapunkt II. , General der Musik. ») .

Und andere folgende Schüler dieses Schuljahres spielen in Anton Bruckners späteren Jahren noch eine Rolle :

Ferdinand Hellmesberger (« 15 Jahre ») , Robert Hirschfeld (« aus Groß-Meseritsch, 21 Jahre - Harmonielehre I. , Klavier II. , General der Musik. ») , Emil Lamberg (« aus Pest, 16 Jahre - Klavier V. II. , Harmonielehre. ») , Carl Lillich (« 17 Jahre ») , Theodor Lucca (Luka) (« 19 Jahre - Violoncello A. I. , Kontrapunkt I. ») , Rudolf (Raoul) Mader (« aus Preßburg, 22 Jahre - Klavier A. II. , Komposition I. ») , Josef Schalk (« 21 Jahre - Klavier A. II. , Kontrapunkt II. ») , Theodor Schwendt (« aus Winzendorf, 13 Jahre - Violin V. III. , Harmonielehre, Klavier II. ») , Friedrich Spigl (« 19 Jahre

- Klavier A. III. ») , Alfred Stroß (« 20 Jahre - Komposition A. III. ») und Franz Zottmann (« aus Hainburg, ? Jahre - Klavier A. III. ») .

Von den 6 Orgelschülern gehören 2 zur Ausbildungsschule. Der « Übersicht der in den einzelnen Lehrfächern unterrichteten Schülerzahl. » ist zu entnehmen, daß von den Orgelschülern 2 ganz und 3 nicht vom Schulgeld befreit waren, einer war « Stiffling » . 14 Schüler (beider Lehrkräfte) hörten Harmonielehre als Hauptfach und 5 Kontrapunkt (davon 1 Stiffling und 1 halb befreit) . Als Nebenfächer wurden Harmonielehre von 116 und Kontrapunkt von 23 Schülern besucht.

Auszug aus der « Unterrichtsstistik » :

« A.

In den Vorbildungsschulen ...

Orgel, I Jahrgang.

Schülerstand : systemisirter : 4 ; effectiver : 4.

Monatlich erteilte systemisirte Lehrstunden : 8, sonach im Jahre ... 80.

B.

In den Ausbildungsschulen ...

Orgel, 2 Jahrgänge.

Schülerstand : systemisirter : 4 ; effectiver : 2.

Monatlich erteilte systemisirte Lehrstunden : 8, sonach im Jahre ... 80.

C.

In der Musiktheorie ...

Harmonielehre, I Jahrgang.

(2 Parallelschulen.)

Effectiver Schülerstand : 36.

Monatlich erteilte systemisierte Lehrstunden : 48, sonach im Jahre ... 480.

Kontrapunkt, 2 Jahrgänge.

(2 Parallelklassen.)

Effectiver Schülerstand : 23.

Monatlich erteilte systemisierte Lehrstunden : 40, sonach im Jahre ... 400. »

### WAB 54 : Ölzelt junior's wedding

**Wednesday, 27 November 1878** : « Zur Vermählungsfeier » (For the wedding ceremony) (WAB 54) .

A 64 bar wedding song in D major for men's choir (TTBB) « a cappella » based on a text by Heinrich von der Mattig (Pseudonym of the Salzburg military doctor and amateur poet Heinrich Wallmann, 1827-1898) .

Bruckner composed the setting for the wedding ceremony of his beloved landlord Anton Ölzelt junior with Amalie (Amy) Edler von Wieser. The piece was intended to be performed during the ceremony in the church of the Klosterneuburg Abbey. However, the ceremony did not occur, because the groom was a Protestant.

The original manuscript is stored in the archive of the « Gesellschaft der Musikfreunde » in Vienna. It was first published in the Year-book of the Klosterneuburg Abbey (Vienna and Leipzig) in 1910. It has been re-edited by Josef von Wöb in 1921 together with the « Ave Regina cælorum » (WAB 8) . It is put in Volume XXIII/2, Number 30 of the « Gesamtausgabe » .

Zwei Herzen haben sich gefunden  
Und durch die Ehe sich verbunden.  
Gesegnet hat des Priesters Hand  
Das Paar, geknüpft das Liebesband.  
Hat euch vereint der Geist der Wahrheit,  
Habt ihr erfaßt die Pflicht der Klarheit,  
Dann ist der Ehe Heiligtum  
Ein himmlisches Elysium.

So möge euch fürs ganze Leben  
Der Himmel Heil und Segen geben,  
Auch mein Gebet ruft heute laut :  
Gott segne Bräutigam und Braut !

...

Two hearts have found each other  
And bound together in marriage.  
The hand of the Priest has blessed  
The couple, establishing their band of love.

If the spirit of truth has united you  
And you understood the duty of clarity,  
Then the sanctuary of marriage is  
A heavenly Elysium.

So may for your whole life  
Heaven give you holiness and blessing,  
Also my prayer calls today loudly :  
God bless groom and bride !

### Doctor Heinrich Wallmann

The Austrian military physician, surgeon, obstetrician, writer, poet and journalist Doctor Heinrich Wallmann was born on 10 July 1827 in Mattsee, Salzburg region ; and died on 4 July 1898 in Vienna where he practised for decades. Upon his request, he was buried in his home-town cemetery.

Wallmann was « Oberstabsarzt » 1st Class field-physician, head of the Garrison Hospital Number 16 in Budapest - the head-physician of the 6th Corps. « Oberstabsarzt » (OStArz or OSA) is a military rank in German speaking armed force. It describes a medical staff officer surgeon or medical staff officer dentist comparable to major (« Major ») or lieutenant commander (« Korvettenkapitän ») .

Other titles : Imperial-Royal field-physician ; lecturer at the Imperial-Royal University of Vienna ; « Emeritus » Prosector of the Imperial-Royal Josef's Surgical Academy (« Josephinum ») full-member (« ordinarius ») of the Imperial-Royal Society of Doctors ; full-member (« ordinarius ») of the Imperial-Royal Zoological and Botanical Society of Vienna ; member of the Society for Regional Studies of Salzburg ; member of the Carolina-Augusteum Provincial Museum of Salzburg ; corresponding-member of the Physical-Medical Society of Würzburg.

As early as 1855, Wallmann, then a young military doctor, returned regularly to his birthplace for his summer vacation. Through his contributions to newspapers, magazines and brochures, he made the town of Mattsee and its surroundings known to wider circles - he is considered the father of tourism there. He was mainly responsible for the construction of the first sea-side bathing resort (consisting of 3 closed cabins) , which was inaugurated on 18 August 1869 on the occasion of Emperor Franz-Josef I birthday.

Wallmann was a great nature-lover who wrote articles on the subject. From 1869 to 1871, he worked on a book entitled « Mattsee and its surroundings » which will soon be out-of-print after its publication. Another remarkable work was his Treaty on the lakes of the Alps.

He is also the author of various medical articles.

He published dialectical poems under the pseudonym « Heinrich von Mattig » .

He was made honorary citizen of the town of Mattsee. The house of his birthplace is now a guest-house.

### The « Hunt » Scherzo

**December 1878** : Anton Bruckner replaced the original Scherzo with a completely new movement, which is sometimes called the « Hunt » Scherzo (« Jagd Scherzo ») .

In a letter to the music-critic Wilhelm Tappert, of **October 1878**, Bruckner describes the new movement thus :

« The Scherzo represents the hunt, whereas the Trio is a dance melody which is played to the hunters during their repast. »

The original title of the Trio reads : « Tanzweise während der Mahlzeit auf der Jagd » (Dance melody during the hunters' meal) .

...

The « Hunt Scherzo » is a replacement for the rather boisterous but thoroughly enjoyable piece Bruckner originally composed (in 1874) as the third movement of this Symphony. This replacement, a product of his over-hauling the Symphony in 1878-1880, is tighter and generally more tautly dramatic. Its opening mirrors the beginning of the first movement, with horns (here, a whole section of them) proclaiming what Bruckner actually calls in the score a « Jagdthema » or Hunting Theme (quietly, as if from a distance) against a hushed accompaniment of string tremolos. Other brass instruments join in the hunt and, after considerable working-out and quite a lot of thrilling dissonance brought about by piling-up sonorities above pedal points, we arrive at the relaxing contrast of the Trio section. Again, we hear shades of Schubert in the charming « Ländler » that occupies this stretch, with oboe and clarinet (later, first violins) piping-out its innocent, bucolic melody before an abbreviated repetition of the Scherzo section. « The Hunting of the Hare » is what Bruckner called his Scherzo, with the Trio being a « Dance Melody During the Huntsmen's Meal » .

### The String Quintet and the « Riedhof » Restaurant

**December 1878** : Anton Bruckner starts the composition of his String Quintet (WAB 112) .

According to August Göllerich junior, Bruckner talks about the main-theme of his brand new chamber work during the evening in company of young physician Doctors at the pub of the « Gasthaus zum Riedhof » Hotel-Restaurant (« Zum Riedhof Wirtshaus ») located at the corner of « Wickenburggasse » Number 15 and « Schlößelgasse » Number 12 (14) , in the District of « Josefstadt » (8th) .

### Ternberg : « Gasthof Derfler »

**1879 and after** : Anton Bruckner and his friend organist Franz Xaver Bayer were frequent guests at the « Gasthof Derfler » (« Hauptstraße » Number 15) in the town of Ternberg. The inn is diagonally opposite to the parish church of St. Peter et St. Paul (« Pfarrkirche Heiligen Peter und Paul ») located at « Kirchenplatz » Number 1 (today, « Einbahnstraße » Number 1-11) .

The building is a traditional « Vierkanthof » (square-shaped farm with an open-air middle-courtyard) specific to Upper-Austria and Lower-Austria (within a quadrilateral formed by the towns of Linz, Wels, Steyr and Amstetten) .

The tavern was built in 1477 and served as the hunting-lodge of Count Lamberg.

In 1879, the « Sulzbach » Tavern was taken-over by Leopold Derfler.

The 6th generation of the Derfler family is now running the « Sulzbach » Tavern.

Since 1 January 1998, the « Marktwirt Derfler » is owned by Leopold Derfler junior.

### Vienna Conservatory : Final examinations (Mid-June 1879)

#### Monday, 16 June 1879 :

Anton Bruckners Schüler, denen der « I. Classificationsgrad » zuerkannt wurde, werden in der Prüfungsstatistik erwähnt :

Bei den Vorbildungsschulen ...

« Orgelklasse des Herrn Professor Anton Bruckner :

(4 Zöglinge.)

Hermann Vergeiner. »

Bei den Ausbildungsschulen ...

« Orgelklasse des Herrn Professor Anton Bruckner :

(2 Zöglinge.)

I. Jahrgang : Fortunato Luzzatto.

II. Jahrgang : Franz Weber. »

Bei Musiktheorie ...

« Klasse für Harmonielehre als Hauptfach des Herrn Professor Anton Bruckner :

(16 Zöglinge.)

Franz Brischar, Franz Burgarth, Ernst Denhof, Julius Korngold, Anton Meißner, Franz Schalk. » (Hermann Vergeiner hörte Harmonielehre bei Franz Krenn.)

« Klasse für Kontrapunkt des Herrn Professor Anton Bruckner :

(8 Zöglinge.)

I. Jahrgang : Rudolf Dittrich.

II. Jahrgang : Ferdinand Löwe, Bela Mandl, Josef Schalk, Franz Weber, Josef Zschel. »

Zum Abschluß seiner Ausbildung erhält Franz Weber ein Diplom und wird mit der Gesellschafts-Medaille ausgezeichnet.

### Student Alfred Stroß's Symphony

**Wednesday, 2 July 1879** : Composition competition at the Vienna Conservatory. Alfred Stroß received unanimously the First Prize for the first movement of his Symphonie in C major (dedicated to Anton Bruckner) . Bruckner's organ pupil Fortunato Luzzatto (from Trieste) will be awarded a 2nd prize for the first movement of a Piano Quintet.

**Sunday, 15 July 1879** : The first movement of the prize-winning Symphonie in C major by Alfred Stroß is performed during the second final concert which concluded the Spring Semester at the Vienna Conservatory.

### Altpernstein abandoned Castle

**Sunday, 17 August 1879** : Beginning of Anton Bruckner's summer vacation.

Bruckner and his friends Josef Greck (nicknamed « Engerl ») and Karl Zeitlinger visit the abandoned Altpernstein Castle (Micheldorf) in Carinthia (Upper-Austria) along with tour-guide Förster Wischenbart.

Bruckner climbed with some difficulty the steep road leading to the old castle. After a while, Greck and Zeitlinger had to carry him (Bruckner sitting on their hands) .

Bruckner prayed with great devotion in the chapel and even « tried » the low dungeon-cells, in order to better understand the agony of the former prisoners. A morbid ritual which lasted for more than a hour.

### Vienna Conservatory : Academic Year 1879-1880

**Monday, 22 September 1879 :**

Im Kapitel « B. Unterrichtsleitung » des Jahresberichts ist zu lesen :

« 4. Lehrkörper.

1) Ordentliche Lehrer.

(...)

6) Herr Anton Bruckner, Professor (Harmonielehre, Kontrapunkt und Orgel) . »

Zu Anton Bruckners Schülern am Wiener Konservatorium zählen Franz Brischar (« aus Jedlersee, 20 Jahre - Horn V. I. , Kontrapunkt. ») (Kontrapunkt) , Rudolf Dittrich (« aus Biala, 18 Jahre - Violin A. II. , Kontrapunkt II. , Klavier III. ») (Kontrapunkt) , Franz Ludwig (Fronz ?) (« Franz Ludwig, 20 Jahre - Harmonielehre. ») (Harmonielehre) , Carl Last (« 16 Jahre - Harmonielehre, Klavier II. ») (Harmonielehre) und Lorenz Ritter (Harmonielehre) .

Als Orgelschüler sind verzeichnet :

Josef Baßwald (« aus Bruck an der Leitha, 22 Jahre - Orgel V. Kontrapunkt. ») , Carl Luze (« aus Altenmarkt, 15 Jahre - Orgel V. , Klavier I. , A. M. ») , Lorenz Ritter (« aus Mariazell, 15 Jahre - Orgel V. (Rept.) , Harmonielehre, Klavier II. ») , Franz Seifert (« 21 Jahre - Orgel V. ») , Adolf Veith (« 15 Jahre - Orgel A. I. , Kontrapunkt I. Klavier III. ») und Hermann Vergeiner (« aus Freistadt, 20 Jahre - Orgel A. I. , Kontrapunkt, Klavier III. ») .

Und andere folgende Schüler dieses Schuljahres (vielleicht auch in Brucknerschen Kursen) spielen in Anton Bruckners späteren Jahren noch eine Rolle :

Ferdinand Hellmesberger (« 16 Jahre - Violoncello V. III. , Klavier II. ») , Robert Hirschfeld (« aus Groß-Meseritsch, 22 Jahre - Kontrapunkt. ») (bis zum 21. April 1880) , Carl Hrubý (« 10 Jahre - Violin V. C. , I. Abtheilung. ») , (« Leoš

Janáček, aus Hochwald, 25 Jahre - Komposition I. , General der Musik. ») , Paul Janko (« aus Totis, 23 Jahre - Klavier A. II. ») , Julius Korngold (« aus Brünn, 19 Jahre - Kontrapunkt I. ») (bis zum 3. Dezember 1879) , Emil Lamberg (« aus Pest, 17 Jahre - Klavier V. III. ») , Carl Lillich (« 18 Jahre - Violin A. II. ») , Theodor Luka (« 20 Jahre - Komposition A. I. ») , Rudolf (Raoul) Mader (« aus Preßburg, 23 Jahre - Klavier A. III. , Komposition II. , General der Musik. ») , Karl Bernhard Ehn (« 26 Jahre - Kontrapunkt I. , Klavier II. , General der Musik. ») , Franz Schalk (« 16 Jahre - Violin A. II. , Kontrapunkt I. ») (bis zum 21. November 1879) , Josef Schalk (« 22 Jahre - Klavier A. III. , General der Musik. ») und Theodor Schwendt (« aus Winzendorf, 14 Jahre - Violin A. I. , Kontrapunkt, Klavier III. ») .

Von den 7 (recte : 6 ?) Orgelschülern gehören 2 zur Ausbildungsschule. Der « Übersicht der in den einzelnen Lehrfächern unterrichteten Schülerzahl. » ist zu entnehmen, daß von den Orgelschülern 2 ganz und 3 (4 ?) nicht vom Schulgeld befreit waren, einer war « Stiffling » . 8 Schüler (beider Lehrkräfte) hörten Harmonielehre als Hauptfach und 8 Kontrapunkt. Als Nebenfächer wurden Harmonielehre von 114 und Kontrapunkt von 29 Schülern besucht.

Auszug aus der « Unterrichtsstatistik » :

« A.

In den Vorbildungsschulen ...

Orgel, I Jahrgang.

Schülerstand : systemisirter : 4, effectiver : 4.

Monatlich ertheilte systemisirte Lehrstunden : 8, sonach im Jahre ... 80.

B.

In den Ausbildungsschulen ...

Orgel, 2 Jahrgänge.

Schülerstand : systemisirter : 4 ; effectiver : 3.

Monatlich ertheilte systemisirte Lehrstunden : 8, sonach im Jahre ... 80.

C.

In der Musiktheorie ...

Harmonielehre, I Jahrgang.

(2 Parallelschulen.)

Effectiver Schülerstand : 24.

Monatlich erteilte systemisierte Lehrstunden : 48, sonach im Jahre ... 480.

Kontrapunkt, 2. Jahrgäng.

(2 Parallelclassen.)

Effectiver Schülerstand : 25.

Monatlich erteilte systemisierte Lehrstunden : 40, sonach im Jahre ... 400.

Dem gedruckten Stundenplan zufolge hatte Anton Bruckner folgende Unterrichtseinteilung :

Orgel : Dienstag von 10 bis 12 Uhr und Donnerstag von 10 bis 12 Uhr.

Harmonielehre als Hauptfach : Dienstag von 12 bis 14 Uhr (« 12-2 ») , Donnerstag von 12 bis 2 Uhr, Samstag von 12 bis 2 Uhr.

Kontrapunkt : Dienstag von 17 bis 19 Uhr (« V (= Vormittag ! Recte " N ") " 5-7 " ») , Donnerstag von 17 bis 19 Uhr.

Die in der rechten Spalte angegebenen Zahlen ermöglichen es, anhand des Orientierungsplans auf Seite 66 die Lage von Anton Bruckners Unterrichtsraum zu bestimmen.

**University of Vienna : Winter Semester (1879-1880)**

Students of the Faculty of Philosophy who inscribed in Bruckner's university lectures :

Josef Aichinger, Cyprian Galembski, Otto von Liebieg, Paul Müller, Josef Schnabl, Rudolf Steiner.

**WAB 106**

**Between Wednesday, 24 September 1879 and Saturday, 3 September 1881 : The Symphony No. 6 in A major (WAB 106) is dedicated to the beloved landlord and philosophy teacher Anton Ölzelt junior.**

**Vienna Conservatory : Fall Semester (1879)**

**November 1879** : Among Bruckner's students at the Vienna Conservatory during the Fall Semester :

Johann Evangelist Aichinger, Otto von Liebig, J. Schnabl et Rudolf Steiner.

Bruckner's ideas and his methods attracted many of the curious who nevertheless approached him with respect. Among his students were Alois Hofler, later professor of pedagogy at the University of Vienna, and Rudolf Steiner, the founder of anthroposophy.

...

Anton Bruckner's pocket calendar entries :

(Hans Rott's hand-writing) « Hans Rott, 1st District, " Rothenturmstraße " Number 16, 4th floor. »

(Anton Bruckner's hand-writing) « (Franz) Weber, 8th District, " Laudongasse " Number 14, 3rd stairs, 2nd floor, door Number 26. »

(Unknown hand-writing) « Anton Schmidt, " Goldschmidgasse " Number 11, first floor. »

(Anton Bruckner's hand-writing) « Rudolf Krzyzanowski, Wienhaus building, " Johannesgasse " Number 28. »

### « Ilse » : The Opera libretto

**Early 1880** : Anton Bruckner is interested by « Ilse » , an Opera libretto written by tenor Franz Schumann, which was performed in Leipzig by the Austrian conductor Josef Sucher. Unfortunately, Schumann was unsuccessful not only with Bruckner, but also with Hugo Wolf. (In 1883, Bruckner will ask again to see the libretto. Schumann promised him to write a new version.)

On **Monday, 15 December 1890**, Bruckner composed the song « Träumen und Wachen » (Dreaming and being awake) (**WAB 87**) . The text is from the end of Act I of Franz Grillparzer's drama « Der Traum ein Leben » . The piece was performed under Bruckner's baton at the « Grillparzer-Feier » , to celebrate the 100th anniversary of Grillparzer's birth (15 January 1891) by the « Wiener Akademisches Gesangverein » (Vienna Academic Choral Society) with tenor Franz Schumann in the ball-room of the University of Vienna. Bruckner dedicated the composition to his house-mate Doctor Wilhelm August Ritter von Härtel, the rector of the University of Vienna (1890-1891) . The piece, of which the original manuscript is stored in the archive of the performing choir (current name : « Universitätssängerschaft " Barden zu Wien " ») , was published in 1891 by Theodor Rättig, in Vienna, without Bruckner's authorization. Because of the encountered performance difficulties (humming voices) , Bruckner slightly revised the score on 4 February 1892. (The song is issued in Volume XXIII/2, Number 34 of the « Gesamtausgabe » .)

### Imperial Court Jeweller's new owners

**1880** : Heinrich and Theodor Köchert take-over the helm of the firm A. E. Köchert, Imperial Court Jeweller, as the third generation. There are already 50 goldsmiths employed at Köchert producing fine tiaras and colliers. Köchert is mentioned in the same breath as the other great jewellers of Europe, such as Mellerio, Bucheron and Cartier.

### 1880 : Bruckner cited in the « Deutsche Zeitung »

Anton Bruckner remained a puzzle in Vienna, with his old-fashioned peasant clothing, which included a large red handkerchief protruding from a pants pocket, and his rustic table manners. Children laughed and followed him in the street. One of his oddest preoccupations was the counting of windows in buildings, the type of repetitive behaviour that those suffering from OCD display.

### The Upper-Austrian look

Anton Bruckner gave special instructions to his personal tailor in St. Florian as to how to make his pants. He wore very ample and relatively short trousers : not very elegant. This helped his footwork when playing the organ, his leg movements and his steps on the dance-floor. He always took the time to transcribe in his personal agenda the most relevant information concerning his female partners during the village dance of the previous night.

His written comments included several nicknames given to the dresses of his charming ladies :

« Zottel » , « Gschnürleten » , « Gigerl » , « Blauen » , « Weichen » .

...

In later years, Bruckner visited his friends the Mayfelds at their country-house in Schwanenstadt. Their concern for Bruckner and desire that he should make his way socially in the Austrian capital occasionally led to some expressions of dismay at his sartorial habits ! In matters musical, however, Bruckner was clearly indebted to Mayfeld who, in his capacity as music-critic of the « Linzer Zeitung » , was one of the first to recognize and draw attention to the composer's creative gifts.

...

Bruckner never wore fashionable clothes. He never took any measurements. He simply made his new clothes according to the pattern of the old ones, which he had brought from Linz (and, before that, St. Florian) . Durable and comfortable, that is all he asked for. He wore a broad-brimmed hat on his always smoothly shaven mighty Cæsar's skull - but, most of the time, he kept the hat in his hand. He wore around his short neck a white reclining collar and a black bow-tie. The dark « loden » jacket with a blue or red handkerchief hanging-out from the pocket, and a pair of over-flowing pants (which stopped before the ankles) was completed by the rough half-boots made of seal leather. Despite repeated calls for change from his immediate entourage, this was his costume until the end of his life.

Once, some of his closest friends took Bruckner's measurements without he even noticed. Then, they asked a renowned Viennese tailor to make a series of best suits according to the latest cut. They were placed under the Christmas tree as a gift. The strategy proved to be a complete waste of time. Bruckner appeared in his horrible floor-shy pants.

However, after a wise analysis, Bruckner made this surprising statement :

« Das neumodische Ginklerwerk hab i z'erst amal unterm Brunn fest einweichen lassen, damit die steifen Bügelfalten vergengan, dann hab i die viel z'langen Hosen unt'abgschnitten und so werd'n s'jetzt kleinweis bequem die Anzüg ! »

And so it was !

...

Bruckner's physician, Doctor Richard Heller, has left a vivid description of his character as reported in Karl Kobald's « In Memoriam Anton Bruckner » (1924) :

« No one who saw Bruckner could ever forget the impression made by that characteristic head, reminiscent of a cinquecento bust, in combination with his almost comical physique. The resemblance between that striking profile and the head of a Roman Emperor was strengthened by his constant refusal to wear a beard, and, by his habit of cropping his thick, white hair almost to the skull. His body was small and thick-set. His feet were shod in broad, almost rectangular seal-skin ankle boots, of which he owned about 30 pairs. Above these, he wore a pair of immensely wide, bag-like trousers. His jackets were of a similar expanse and each one had its own name, so that his faithful house-keeper needed a good memory if she was always to bring the right one. One of them was called " Shaggy " because it was made of thick Loden material ; another was " the Cords " since it was made of worsted ; a third was " the Dandy ", or " the Bobby ", or " Fatty " and so on. Bruckner's hats were also given names. The " Hüadal " (a little hat) was the one he usually wore, a black, broad-brimmed slouch-hat ; his Sunday hat was simply " The Hat " ; while " The Top-Hat " was a collapsible Opera hat of prehistoric design, which he put on only for very special ceremonious occasions. The basic principle of his wardrobe was spacious and comfortable - which he carried to grotesque lengths. His way of living was as simple as he himself was, and anyone who saw the Master slurping-up his soup from the bowl would have thought that he was in the company of a farm-hand grown old in honourable service rather than a great composer. »

### Hans Rott's madness

The edge is narrow and the plunge is probable : the fine line between genius and madness. In 1872, a psychiatrist named Cesare Lambroso substantiated this theory with medical arguments that appear monstrous today. His work was called « Genio e follia » and it was to appear in German as « Genie und Irrsinn » (Genius and Madness) in 1887. This was 7 years after the abrupt fall of the Austrian composer Hans Rott into what the Romantics called a benighted state.

Chain of unfortunate accidents exerting a heavy psychic strain on Hans Rott caused an already lurking insanity to break-out.

**Thursday, 23 August 1877** : Hans Rott sends a letter to conductor Hans Richter. He announces his visit and wants to present him the Symphony in E major. (The meeting will finally happened on 14 October 1880.)

**Early September 1877** : Hans Rott attempted without success to get Hans Richter to perform his 1st Symphony. Hardly 2 weeks later, he paid a call on Johannes Brahms, who, together with Eduard Hanslick and Karl Goldmark, had to decide about the awarding of a State fellowship.

Brahms doubted that Rott was the author of the Symphony because « together with such beauty there was also so much triviality and nonsense in the composition that the former could not stem from Rott » .

Rott then made another try. In the meantime, he had good prospects for a post as music-director or choir-director with a Choral Society in the Alsatian town of Müllhausen (Mulhouse) but continued to cling to the hope that his Symphony might be performed.

**Monday, 17 September 1877** : Hans Rott pays a visit to Johannes Brahms.

**Sunday, 14 October 1877** : Hans Rott finally played his 1st Symphony on the piano for Hans Richter.

**Sunday, 21 October 1877** : Hans Rott's friends brought him to the train bound for Mulhouse (Mülhausen) , in the Alsace, where he had accepted a position as music-director and Choir-Master.

While stopping-over in Linz, Rott was disturbed by the sound of knocking on the walls of his hotel-room.

**Monday, 22 October 1877** : Back on the train, Rott continued his journey. He was convinced that people from Mühlhausen were inspecting how he used his travel money.

A fellow-traveller in his compartment wanted to light a cigar. Rott drew his revolver and threatened the man because he was endangering his life and that of all the others in the train. The reason for his conduct he gave was that « Brahms had fixed the train with dynamite ! » . He must have become convinced that Johannes Brahms was conspiring against him, jealous of his talents as a musician. Rott was taken-off the train at the border station of Simbach.

**Tuesday, 23 October 1877** : Rott was admitted for observation as a patient of the lowest, non-paying class to the Psychiatric Clinic « Landesirrenanstalt » ; insane asylum) of the General Hospital in Vienna « in a completely confused state » . It was thus that his death sentence was pronounced.

One year later, a diagnosis recorded « hallucinatory insanity, persecution mania-recovery no longer to be expected » .

Ironically, Rott did get his State scholarship but, by that time, he had been in a mental hospital for 6 months. At first, Rott was able to see his friends, but his condition soon deteriorated.

### Gustav Hueber's New Year greetings

**Thursday, 1 January 1880** : Letter from Gustav Hueber to Johann Nepomuk and Rosalia (« Sali ») Hueber (Vöcklabruck) :

New Year greetings to the parents.

### A giant pear on 2 legs

**Wednesday, 4 February 1880** :

« Anyone who sees this corpulent and triumphant man, wandering on the streets, as round as a balloon, the skull perfectly polished, remembers involuntarily a giant pear on 2 legs. (...) On the street, one notices it from afar because of its oscillating gait. When he meets a friend, it is as if he had just discovered a part of the world. The little round hat he wears gives him terrible headaches, so he has to resolve to hold it firmly in his hand. »

### Bruckner pays tribute to Hans Rott

**Friday, 12 March 1880** : Anton Bruckner makes a testimony for Hans Rott on his successful studies at the Vienna Conservatory, and, in particular, his performances as an organist.

**1880** : Hans Rott makes a « particell » (condensed score) transcript of the Andante of Anton Bruckner's second version of the 4th Symphony (**WAB 104**) .

### « Red Hedgehog » : Bruckner, Mahler, Krzyżanowski

**Tuesday, 27 April 1880** : Letter from Anton Bruckner to Gustav Mahler :

Bruckner asks Mahler and Rudolf Krzyżanowski to come at the Vienna Conservatory between 5:00 pm and 7:00 pm, or later in the evening, at « The Red Hedgehog » Restaurant-Hotel (« Gasthof Zum Roten Igel ») for an important meeting.

Max Graf :

Thus, musical history promenaded on the « Ringstraße » between noon and one o'clock. The greatest musicians of the new era were at home there. They had not yet become monuments, but enjoyed, like everyone who lived in Vienna, the beautiful city in which they worked and struggled, and from where their works went forth into the wide world. One

encountered the musical great at all kinds of social gatherings, at the Opera and concerts, on excursions, in the restaurants and taverns of Vienna. At the « Gause » or « The Red Porcupine », taverns in the inner-city, one could often see Brahms with his friends, a glass of light beer in front of him, and at another table, Anton Bruckner with his pupils, like Franz Schalk or Ferdinand Löwe, both of whom later became famous conductors. Bruckner would eat his beloved roast pork with a mountain of cabbage, and drink his « Pilsner » beer, just like other mortals, and would look anxiously, from time to time, toward Brahms' table. When Bruckner rose to go, he made the same kind of deep bow which, as organist of the St. Florian Monastery, he had made to the Archbishop Rüdiger of Linz, to Brahms, who laughed mockingly. As one of the Directors of the « Society of Friends of Music », Brahms was Bruckner's superior. The Conservatory where Bruckner was a poorly-paid teacher had been founded by the Society, and was its own school. Thus, we see that Brahms and Bruckner were also only human, and had not yet become historical figures.

### Vienna Conservatory : Final examinations (Mid-June 1880)

#### Wednesday, 16 June 1880 :

Anton Bruckners Schüler, denen der « I. Classificationsgrad » zuerkannt wurde, werden in der Prüfungsstatistik erwähnt :

Bei den Vorbildungsschulen ...

« Orgelklasse des Herrn Professor Anton Bruckner :

(3 Zöglinge.)

Josef Baßwald, Lorenz Ritter. »

Bei den Ausbildungsschulen ...

« Orgelklasse des Herrn Professor Anton Bruckner :

(2 Zöglinge.)

I. Jahrgang : Adolf Veith, Hermann Vergeiner. »

Bei Musiktheorie ...

« Klasse für Harmonielehre als Hauptfach des Herrn Professor Anton Bruckner :

(8 Zöglinge.)

Ludwig Fronz, Carl Last, Lorenz Ritter. »

« Klasse für Kontrapunkt des Herrn Professor Anton Bruckner.

(7 Zöglinge.)

I. Jahrgang : Franz Brischar.

II. Jahrgang : Rudolf Dittrich. »

### University of Vienna : Summer Semester (1880)

Students of the Faculty of Philosophy who inscribed in Bruckner's university lectures :

Cyprian Galembiawski, Adolf Grenzstein, Wilhelm Gruß, Gottfried Henning, Brother Raffael « Oddo » Loidol, Rudolf Steiner.

### Invitation from the landlord

**Monday, 21 June 1880** : Anton Bruckner is invited by his landlord Anton Ölzelt junior.

### Vienna Conservatory : Academic Year 1880-1881

**Tuesday, 21 September 1880** :

Im Kapitel « B. Unterrichts-Leitung » des Jahresberichts ist zu lesen :

« 4. Lehrkörper.

I. Ordentliche Lehrer :

(...)

6) Herr Anton Bruckner, Professor. (Harmonielehre, Kontrapunkt und Orgel.) »

Zu Anton Bruckners Schülern am Wiener Konservatorium ((?) bedeutet : bei Kontrapunkt kommt auch Franz Krenn als Lehrer in Frage) zählen :

Franz Bauer (« 17 Jahre - Violoncello V. I. , Harmonielehre. ») , Franz Brischar (« aus Jedlersee, 11 Jahre (recte :“ 21 Jahre ” ?) - Horn V. I. , Kontrapunkt II. ») (Kontrapunkt) , Paul Caro (« aus Breslau, 21 Jahre - Kontrapunkt I. ») , (?)

Emil Evers (« aus Hildesheim, 19 Jahre - Klavier A. III. , Kontrapunkt, General der Musik. ») , (?) Otto Findeis (« aus Brünn, 18 Jahre - Kontrapunkt, Klavier III. ») , Ludwig Fronz (« Franz Ludwig, 21 Jahre - Kontrapunkt I. ») , (?) Albert Grünwald (« aus Beissagol, 19 Jahre - Kontrapunkt, Klavier I. ») , (?) Eduard Hensen (« 18 Jahre - Kontrapunkt, Klavier II. ») , Rudolf Kleinecke (« 19 Jahre - Orgel V. ») (verließ am 30. Mai 1881 das Wiener Konservatorium wegen « Disziplinar-Vergehen ») , Moriz Kremer (« 16 Jahre - Klavier A. II. , Kontrapunkt I. ») , Emil Lamberg (« aus Pest, 18 Jahre - Orgel V. ») , (hat einen 2. Eintrag ! oder ein Namensvetter ?) Emil Lamberg (« aus Pest, 18 Jahre - Klavier A. I. , Kontrapunkt. ») , Carl Last (« 17 Jahre - Kontrapunkt I. , Klavier III. ») , Carl Luze (« aus Altenmarkt, 16 Jahre - Orgel V. , Harmonielehre, Klavier I. ») , (?) Carl Pöck (« 16 Jahre - Flöte A. I. , Kontrapunkt, Klavier III. ») , Ernst Pollak (« aus Boskowitz, 23 Jahre - Klavier A. II. , Harmonielehre. ») , Lorenz Ritter (« aus Mariazell, 16 Jahre - Orgel A. I. , Klavier III. ») , (?) Moriz Schirmann (« aus Lemberg, 21 Jahre - Kontrapunkt I. Sprache. ») , Anton Scholz (« aus Waidhofen an der Ybbs, 20 Jahre - Orgel, Harmonielehre, Klavier II. ») , Adolf Veith (« 16 Jahre - Orgel A. II. , Klavier III. , General der Musik, L. G. ») , Hermann Vergeiner (« aus Freistadt, 21 Jahre - Orgel A. II. , Komposition I. , General der Musik. ») , (?) Leopold Wikauril (« 17 Jahre - Flöte A. II. , Kontrapunkt II. ») , und (?) Josef Wöb (« aus Cattaro, 17 Jahre - Komposition A. II. , Kontrapunkt, I. Sprache, französische Sprache. ») .

Orgelschüler sind demnach :

Rudolf Kleinecke, Emil Lamberg, Carl Luze, Lorenz Ritter, Anton Scholz, Adolf Veith und Hermann Vergeiner.

Und andere folgende Schüler dieses Schuljahres (vielleicht auch in Brucknerschen Kursen) spielen in Anton Bruckners späteren Jahren noch eine Rolle :

Ernst Décsey (« aus Hamburg, 10 Jahre - Violin V. I. ») , Rudolf Dittrich (« aus Biala, 19 Jahre - Violin A. III. ») , Robert Erben (« aus Troppau, 18 Jahre - Klavier V. III. , Harmonielehre, I. Sprache. ») , Ferdinand Foll (« 13 Jahre - Klavier A. I. , Harmonielehre. ») , Carl Gianicelli (« aus Gaming, 20 Jahre - Cimbalo A. II. ») , Ferdinand Hellmesberger (« 17 Jahre - Klavier III. ») , Carl Hrubý (« 11 Jahre - Violin V. C. , II. Abth. ») , Paul Janko (« aus Totis, 24 Jahre - Klavier A. III. , Komposition I. , General der Musik. ») , Julius Korngold (« aus Brünn, 20 Jahre - Kontrapunkt. ») , Carl Lillich (« 19 Jahre - Violin A. III. ») , Ferdinand Löwe (« 17 Jahre - Komposition III. ») , Rudolf Mader (« aus Preßburg, 24 Jahre - Komposition A. III. ») , Guido Peters (« aus Graz, 14 Jahre - Klavier A. II. (Rept.) , Komposition II. ») , Theodor Schwendt (« aus Winzendorf, 15 Jahre - Violin A. II. ») und Josef Stritzko (« 19 Jahre - Komposition A. I. ») .

Von den 7 Orgelschülern gehören 3 zur Ausbildungsschule. Der « Übersicht der in den einzelnen Lehrfächern unterrichteten Schülerzahl. » ist zu entnehmen, daß von den Orgelschülern 2 ganz und 1 halb vom Schulgeld befreit waren, einer war « Stiffling » . 10 Schüler (beider Lehrkräfte) hörten Kontrapunkt als Hauptfach, einer Harmonielehre. Als Nebenfächer wurden Harmonielehre von 128 und Kontrapunkt von 21 Schülern besucht.

Auszug aus der « Unterrichtsstatistik » :

« A.

In den Vorbildungsschulen ...

Orgel, I Jahrgang.

Schülerstand : systemisierter : 4 ; effectiver : 4.

Monatlich erteilte systemisierte Lehrstunden : 8, sonach im Jahre ... 80.

B.

In den Ausbildungsschulen ...

Orgel, 2 Jahrgänge.

Schülerstand : systemisierter : 4 ; effectiver : 3.

Monatlich erteilte systemisierte Lehrstunden : 8, sonach im Jahre ... 80.

C.

In der Musiktheorie ...

Harmonielehre, I Jahrgang.

(2 Parallelclassen.)

Effectiver Schülerstand : 18.

Monatlich erteilte systemisierte Lehrstunden : 48, sonach im Jahre ... 480.

Kontrapunkt, 2 Jahrgänge.

(2 Parallelclassen.)

Effectiver Schülerstand : 28.

Monatlich erteilte systemisierte Lehrstunden : 40, sonach im Jahre ... 400.

Der Lehrplan lautet für Anton Bruckners Fächer :

#### « 6. Vorbildungsschule für Orgel.

Ein Jahrgang mit wöchentlich 2 Stunden für 4 Schüler.

Herr Professor Anton Bruckner :

Vorkenntnisse : Fertigkeit im Klavierspiele, entsprechend dem absolvirten 2. Jahrgange der Vorbildungsschule für Klavier ; Kenntniß der allgemeinen Musiklehre.

Alter : Das vollendete 13. Jahr.

Jährliches Schulgeld 100 Florins.

Lehrstoff : Übung im Manual- und Pedalspiele nach Johann Christian Heinrich Rinck's Orgelschule.

#### 7. Ausbildungsschule für Orgel.

2 Jahrgänge mit wöchentlich 2 Stunden für 4 Schüler.

Herr Professor Anton Bruckner :

Alter : Das vollendete 14. Jahr.

Jährliches Schulgeld 120 Florins.

Lehrstoff : Für beide Jahrgänge : Höhere Aufgaben des Orgelspiels : Fugen, Sonaten, Konzerte ; Übung im Generalbaßspiele. »

« C.

Schulen für Musiktheorie ...

(...)

2) Schule für Harmonielehre.

Ein Jahrgang mit wöchentlich 6 Stunden.

Herr Professor Franz Krenn, Herr Professor Anton Bruckner : Parallel-Klassen.

Vorkenntnisse :

Allgemeine Musiklehre ; Klavierspiel entsprechend dem Lehrstoffe des 2. Jahrganges der Schulen für Klavier als Nebenfach. (B. 3)

Jährliches Schulgeld 120 Florins.

Lehrstoff : Intervalle und deren Umkehrungen, Accordlehre, Modulation. Harmonisirung gegebener Melodien, Erfindung im reinen 4stimmigen Satze (Choral) , Ausbildung der Melodie, freie Figuration. »

« 4. Schule für Kontrapunkt.

2 Jahrgänge.

Erster Jahrgang mit wöchentlich 4 Stunden.

Herr Professor Franz Krenn, Herr Professor Anton Bruckner : Parallel-Klassen.

2. Jahrgang mit wöchentlich 2 Stunden.

Herr Professor Anton Bruckner :

Vorkenntnisse : Harmonielehre, entsprechend dem Lehrstoffe der Harmonielehre (C. 2) ; Klavierspiel, entsprechend dem Lehrstoffe des 3. Jahrganges der Schule für Klavier als Nebenfach. (B. 3)

Jährliches Schulgeld 120 Florins.

Lehrstoff :

Im 1. Jahrgange : Einfacher und doppelter Kontrapunkt der Octave, Nachahmung, einfache Fuge.

Im 2. Jahrgange : Drei- und vierfacher Kontrapunkt, Fuge mit mehreren Subjecten, Canon. »

**Paying the months of August and September**

**Monday, 2 August 1880** : Pocket calendar entry by Anton Bruckner :

« “ Frau Kathi ” (Katharina Kachelmayr) - payment of 14 Florins on April 16, for August and September. »

**The « S/X Admiral Tegetthoff »**

**August 1880** : Pocket calendar entry by Anton Bruckner about Julius von Payer's North Pole expedition on the « S/X Admiral Tegetthoff » :

« The “ Tegetthoff ” traveled 8,000 miles before finally meeting people from the North. »

...

In 1868, Julius von Payer was invited by the German geographer August Petermann to participate in the 1869-1870 2nd German North Polar Expedition (« Germania » under Carl Koldewey) .

In 1871, von Payer participated in the preliminary Austro-Hungarian expedition to Novaya Zemlya, with Karl Weyprecht.

From 1872-1874, he led the Austro-Hungarian North Pole Expedition with Karl Weyprecht, who was Commander at sea, while Payer was Commander at shore. During this voyage, he made the discovery of « Franz-Josef-Land » , however, upon his return to Vienna, many critics voiced doubts about its existence and about the experiences of other participants in the expedition. Payer could have proven his statements using testimonies, diaries and sketches, however, his efforts were thwarted, including his promotion to Captain. In 1874, he resigned from the army because of political maneuvers against him and his brother officers' doubts about his discovery and his sledge journeys. He was awarded 44 Austro-Hungarian Gulden on 1 October 1874 for the discovery of « Franz-Josef-Land » (about equal to the monthly salary of a Sub-lieutenant at the time) .

However, on 24 October 1876, Julius von Payer was elevated to the Austrian nobility which entitled him and his descendants to the style of « Ritter von » in the case of male and « von » in the case of female off-spring.

...

The « S/X Admiral Tegetthoff » with her crew of 24 left Tromsø, Norway in July 1872. At the end of August, she got locked in pack ice north of Novaya Zemlya and drifted to hitherto unknown polar regions. While drifting, the explorers discovered an archipelago which they named « Franz-Josef-Land » after Austro-Hungarian Emperor Franz-Josef I. Payer led several sledge expeditions to explore the new-discovered lands, on one of them reaching 81° 50' North.

In May 1874, boat-captain Weyprecht decided to abandon the ice-locked ship and try to return by sledges and boats. On 14 August 1874, the expedition reached the open-sea and, later, Novaya Zemlya where they were rescued by a Russian fishing vessel. On 3 September, they reached Vardø in Finnmark, Northern Norway.

The expedition returned to Austria by coastal steamer from Vardø, and by train from Hamburg. On the journey, they were met by crowds and invited to dinners hosted by local dignitaries and geographical societies in Norway, Sweden and Germany. They entered Vienna in triumph, welcomed, according to contemporary newspaper reports, by hundreds of thousands of people. Further festivities followed throughout Austro-Hungary as the individual explorers returned to their homes.

The expedition's discoveries and experiences made a significant contribution to polar science, especially the discovery of the Northeast passage by Adolf Erik Nordenskiöld. They also gave an impetus to International Polar Years, meaning a shift from sports-like races of single expeditions to world-wide scientific cooperation in exploring the polar regions.

The expedition yielded various results in the fields of meteorology, astronomy, geodesy, magnetism, zoology, and sightings of Aurora Borealis. They were published by the Academy of Sciences in 1878. The paintings by Julius von Payer (who also published a book entitled « The Austro-Hungarian North Pole Expedition 1872-1874 ») are probably the only paintings of a polar expedition created by the explorer himself.

### At the « Red Hedgehog » Inn before leaving for vacation

**Before Friday, 13 August 1880 (?)** : Pocket calendar entry by Anton Bruckner :

(with ?) « Doctor Weinstein, Doctor (Baron) August von Plappart (jurist and theatre intendant) at the “ Gasthof zum Rothen Igel ” before departure. »

Addresses of Doctor Johann Jakob Mendel (organist and music-director at the Bern Cathedral) and Gustav Weber (organist at the « Großmünster » in Zürich) may have already been recorded in Vienna in another note-book belonging to Bruckner.

### Bruckner and railroad travelling

Anton Bruckner preferred the railroad when he was travelling. In order to do it with style, he put on a « travel » top-hat. Initially rarely used, the black wool top-hat turned into a « faithful companion » .

Bruckner's letters show that he mostly traveled alone. Even the beautiful panoramas did not seem to interest him very much. Often, he booked a night-train for long distances.

But the number of his trips remained manageable.

Of 30 documented journeys, 10 of them lead to Bayreuth - to hear Wagner Operas. His other main-destination was the city of Munich : 5 times. Only twice as an organ virtuoso, he traveled to non-German-speaking foreign countries : England and France. During the summer of 1880, he undertook his longest holiday trip. It lead him to Switzerland. However, he won't repeat such a journey.

In short, Bruckner was no travel nut !

But that changed with the success of his 7th Symphony. No other work will make him travel as much as this one. The world-premiere took-place in Leipzig, for which he applied for an « extra » vacation as organist of the Austrian Imperial Court. Although he had not been to Leipzig before, he knew some friend-musicians who have settled there

and linked his stay with several visits. Because of the success of the 7th, Bruckner was invited to other performances in Munich, Bratislava and Berlin, which he gratefully accepts.

### Longest summer vacation

Anton Bruckner goes on summer vacation. It will be the longest one ever undertaken by the composer : a stop in Oberammergau, and then, a stay in Switzerland to visit several holiday resorts : Schaffhausen (Schaffhouse) , Geneva, Chamonix, Lausanne, Freiburg and Lucerne. The journey will end on September 11, with a few days spent in St. Florian. Organ concerts will be given in Geneva, Freiburg, Bern, Zürich and Lucerne. Its schedule will also include so-called « academic » stops in various Austrian universities.

Occasionally, Bruckner took the opportunity of playing the organ in the towns or cities he visited. His technique was much less secure by now but the power of his playing could still astonish and move his listeners. During his summer vacation in 1880, he fulfilled a long-cherished desire to visit Switzerland. His first « port of call » was Zürich where he played the organ in the cathedral on 28 August. His itinerary took him next to Geneva (29 August) , Chamonix (30 August - 4 September) , back to Geneva where he played the organ in the cathedral (5 September) , Lausanne (6 September) , Freiburg where he played in the cathedral after a concert given by Vogt, the resident organist (7 September) , Bern where he made a great impression on Doctor Jakob Mendel, the cathedral organist (8 September) and Lucerne (8-10 September) .

### St. Florian

**Friday, 13 August 1880** : Anton Bruckner leaves for a one week stay in St. Florian.

Pocket calendar entry by Anton Bruckner :

« 13 August, map of Switzerland on hand. Leaving for St. Florian. »

### Oberammergau : Marie Bartl

**Friday, 20 August 1880** : From St. Florian to Oberammergau.

Pocket calendar entry by Anton Bruckner :

« August 20, arriving at Oberammergau in the evening. »

**21 or 22 August 1880 (Saturday, Sunday)** : Anton Bruckner meets « Fräulein » Marie Bartl in Oberammergau.

**22 or 23 August 1880 (Sunday, Monday)** : Anton Bruckner attends the Passion Play of Christ in the town of Oberammergau, in Garmisch-Partenkirchen, Upper-Bavaria. This biblical representation is presented each 10 years and

lasts 6 hours !

The reputation of the Passion Play spread rapidly and, by 1880, the number of performances was increased to 39, thus achieving the impressive figure for the time of 100,000 visitors.

Pocket calendar entry by Anton Bruckner :

« 22 or 23 August, attended (Passion Play) . »

The name of Anton Bruckner does not appear in a hotel guest-book from Oberammergau, covering the years 1870 to 1890. It was auctioned in Munich at the end of April 1995 by Zisska & Kistner.

Despite his well-known piety, the middle-aged man was distracted by a pretty 17 year old Bavarian chorister who was part of the cast.

Her name : Marie Bartl.

She interpreted the minor role of a peasant woman alongside one of the « Daughters of Israel » . Once again, Bruckner mixed earthly love with divine love ...

He went to wait for Marie after the performance, and then, took his courage in his hands and followed her to her mother's house where she was staying. He spent the evening in her company, lingering till 11 o'clock in the evening.

Bruckner presented himself timidly to « Frau » Lina Bartl, the mother, in order to initiate a kind of mediation :

« I am Professor Anton Bruckner and I am an organist. » (He was not yet known as a composer.)

The next day, he came-back at the house to ask Marie's hand by offering her a collection of prayers and an autographed picture with the following words :

« To my dearest friend, Marie Bartl. »

The proposal was taken seriously. It seems that the young girl really fell in love with Bruckner.

But after 3 days in his charming company, the prudish and stingy composer (not wanting to pay for a second travel ticket) insisted on re-taking the route alone for Switzerland. The idyll with a sustained correspondence will last only a few months at the most.

**Before Tuesday, 5 April 1881** : Anton Bruckner sent a prayer-book and a music-review article (presumably of the 4th Symphony) to Marie Bartl in Oberammergau.

**Thursday, 9 September 1880** : Letter from « Fräulein » Marie Bartl to Anton Bruckner :

Marie sends a photograph of her to Bruckner (which includes a postscript-note written by her mother, Lina Bartl) .

**Before Sunday, 7 November 1880** : Letter from Anton Bruckner (Vienna) to « Fräulein » Marie Bartl (Oberammergau) :

Bruckner writes to Marie about his illness and mentions he will send her a picture.

**Thursday, 7 October 1880** : Photograph of Anton Bruckner with the following dedication :

« Anton Bruckner. Vienna, 7 October 1880. To the most beloved girlfriend : “ Fräulein Marie Bartl ” »

**Before Tuesday, 5 April 1881** : Anton Bruckner sent a prayer-book and a music-review taken from a newspaper article (presumably about the performance of the 4th Symphony on Sunday, 20 February 1881) to « Fräulein » Marie Bartl in Oberammergau.

**Tuesday, 5 April 1881** : Letter from « Fräulein » Marie Bartl (Oberammergau) to Anton Bruckner (Vienna) :

Marie thanks Bruckner for the prayer-book and the press-article. She is pleased about his offer to visit her in Oberammergau. But she still prefers to come to Vienna accompanied by her mother.

The moments of passion are reflected in the first extremely joyful movement of the 6th Symphony (**WAB 106**) . The brake-up earned us the sublime pages of the Adagio where resignation is transformed into prayer, and appeases itself in a conclusion of religious serenity.

Max Auer had rejected the idea of the existence of such a correspondence alleging that it was burned immediately after the rupture between Marie and Bruckner. This proved to be false.

The girl's and her mother's letters, up to **June 1881**, have survived and are now preserved in St. Florian.

Marie Bartl will appear on photos taken in Marienbad.

**Schaffhausen : « Rheinfall »**

**Wednesday, 25 August 1880** : Anton Bruckner left Munich and he is now heading for Zürich.

Pocket calendar entry by Anton Bruckner :

« 25 August, passing by Lindau and Winterthur, stopping at the Rhine Falls. In Zürich in the evening. »

The Rhine Falls (« Rheinfall ») is the largest plain waterfall in Europe. They are located on the High Rhine on the border between the cantons of Schaffhausen and Zürich.

The north side of the falls is a mill-site. In the 17th Century, a blast furnace for smelting iron ore found in the limestone was built. It was in operation until the first half of the 19th Century.

In 1887, the iron-works applied for permission to divert between one fifth to one half of the river's flow for electricity generation. The Swiss Alpine Club, the « Schweizerische Naturforschende Gesellschaft » (a nature group) and several scientific societies opposed the plan.

Tourists have been awed by the Rhine Falls for Centuries. In the 19th Century, the painter William Turner made several studies and larger paintings of the falls, and the lyrical poet Eduard Mörike wrote of the falls :

« Halte dein Herz, o Wanderer, fest in gewaltigen Händen !  
Mir entstürzte vor Lust zitternd das meinige fast.  
Rastlos donnernde Massen auf donnernde Massen geworfen,  
Ohr und Auge, wohin retten sie sich im Tumult ? »

...

« Hold your heart, oh traveller, tightly in mighty hands !  
Mine nearly collapsed, shivering with pleasure.  
Restlessly thundering masses thrown upon thundering masses,  
Ear and eye, whither can they save themselves in such an uproar ? »

In 1840, author Mary Shelley visited the Falls while on a tour of Europe with her son. She described her visit in a travel narrative that she published in 1844, Rambles in Germany and Italy.

She says :

« A portion of the cataract arches over the lowest platform, and the spray fell thickly on us, as standing on it and looking-up, we saw wave, and rock, and cloud, and the clear heavens through its glittering ever-moving veil. This was a new sight, exceeding anything I had ever before seen ; however, not to be wet through, I was obliged quickly to tear myself away. »

« Schloß Rapperswil »

**Thursday, 26 August 1880** : Anton Bruckner stays in Rapperswil for only one day.

In 1350, an attempted « coup » by the aristocratic opposition (a central person was Count Johann II) in the city of

Zürich was forcefully put-down, and the town walls of Rapperswil and the castle were destroyed by Rudolf Brun. Eiszwei-Geissebei, a Carnival festival hold in Rapperswil on Shrove Tuesday, may go back to the siege and destruction of the city of Rapperswil. The battlements and the castle were rebuilt by Albrecht II, Duke of Austria in 1352-1354.

After the extinction of the line of Habsburg-Laufenburg in 1442, the castle (« Schloß Rapperswil ») was given to the citizens of Rapperswil. Ending Old Zürich War, Rapperswil was controlled by the Swiss Confederation from 1458 to 1798 as a so-called « Gemeine Herrschaft », i.e. under control of 2 cantons of the Old Swiss Confederation and their representant, a Vogt, and Rapperswil castle became an administration site respectively military base and prison.

Over the course of time, the castle fell into disrepair. In 1870, the castle was leased for 99 years from the local authorities by a post-November 1830 Uprising Polish « émigré », Count Wladyslaw Broel-Plater (a relative of Emilia Plater, a heroine of the same 1830 Uprising), who had been in Switzerland since 1844. At his own expense, he restored the castle, and, on 23 October 1870, the Polish National Museum was established.

Rebuilt by Duke Albert II, since 1354, the castle forms an almost equilateral triangle, and each corner of the castle is reinforced with a tower. The highest tower in the southwest is the donjon, commonly called « Gügeliturm » in Swiss-German language, where the so-called « Hochwächter » warned the residents against approaching danger or fire. The 5 sided « Zeitturm », a clock tower in the east, houses 3 bells and beside a sundial and 2 large clocks. Between these 2 towers, the castle's 6 storey « palais » is situated. In addition, ramparts respectively battlements are leading to the third tower in the northwest, the so-called « Pulverturm » (Powder tower). From 1698 to 1837, there was a draw-bridge, at the present lower-gate towards the former castle chapel. The French revolutionary troops plundered the castle's interior in 1798.

Pocket calendar entry by Anton Bruckner :

« 26 August to Rapperswil. Visited the Polish Museum, and the Old Castle Church and Tower ; then, the Habsburg Tower. “ Retour ” (back) to Zürich by steam-boat ; terrible storm. »

## Zürich

**Friday, 27 August 1880** : Anton Bruckner stays in Zürich until Sunday.

Pocket calendar entry by Anton Bruckner :

« 27 and 28 August, Zürich. »

## Zürich : « Großmünster »

**Saturday, 28 August 1880** : Pocket calendar entry by Anton Bruckner :

« Cathedral organ (built by Carl Theodor Kuhn in 1876) played on August 28 ; water-powered. Polytechnic and University. »

(Address of organist Gustav Weber in Bruckner's calendar notes.)

### Gustav Weber

Organist Gustav Weber was born on 30 October 1845 in Münchenbuchsee, and died on 12 June 1887 in Zürich. The son of Johann Rudolf Weber who was a voice professor and primary school teacher, and Anna Maria « née » Hottinger. His brother Oskar was born in 1879. Gustav married Johanna Karolina Gujer in 1874. From 1861, he studied at the Leipzig Conservatory. In 1865, he studied under Vinzenz Lachner in Mannheim and, in 1869-1870, under Carl Tausig in Berlin. In 1872, Weber became organist at St. Peter's Church in Zürich and, in 1876, organist at the « Großmünster », where he regularly gave organ recitals. He contributed extensively to the music life of the city of Zürich by teaching singing, organ, theory and history of music at the Music Academy. From 1877 to 1886, he was the music-director of the Harmony Choir. He was also a music-critic for the « Neue Zürcher Zeitung ». From 1876 to 1883, he was the publisher of the « Schweizerisches Sängerbblatt » magazine which was founded by his father. His choral works composed in a Romantic style received a favourable reception in Switzerland and abroad.

### The organ

The construction of the « Großmünster » began in 1090 and most of it was completed by 1230, although the 2 distinctive towers were only added after a fire in 1781. The first organ is thought to have been built in the 14th Century. Documents from 1418 explain how the first known organist, Theodor Sebach, had to rub rat poison into the bellows. In 1505, the instrument was rebuilt - but the new organ didn't get much of an airing : in 1519, Ulrich Zwingli, a leading figure of the Reformation in Switzerland, became pastor of the « Großmünster » and began preaching ideas on reforming the Catholic Church. In 1524, he banned anything that wasn't sanctioned by the bible, and pictures, altars, sculptures and even the organ were all removed.

One of the greatest influences on the « Großmünster » was Ulrich Zwingli, a leading figure of the Reformation in Switzerland who, in 1519, became pastor of the Grossmünster and promptly threw out anything that wasn't sanctioned by the Bible, including music !

Not a peep was heard until **1876**, when an organ was installed by Swiss builders Carl Theodor Kuhn on which composers Camille Saint-Saëns and Anton Bruckner played.

### Kuhn organ-builders

The company was founded in Männedorf by Johann Nepomuk Kuhn (1827-1888) .

**1888** : Following the death of Johann Nepomuk Kuhn, management of the company passed to his son Carl Theodor

Kuhn (1865-1925) .

Carl Theodor Kuhn had completed his musical training at the School of Music in Zürich and learned the craft of organ building in his parents' work-shops. In order to further his education, he spent his journeyman years travelling and working in France, Germany and North America. The importance of an international approach, then, was recognized at Kuhn from very early in its history. Theodor was especially impressed by the work of Cavaillé-Coll, which led later to his decision to open subsidiaries in France, first at Bellegarde and Nancy, then at Lyon. Thanks to a combination of expert craftsmanship and commercial foresight, the House of Kuhn prospered.

**1927** : Reconstruction of the organ in « Großmünster » .

« Orgelbau Kuhn » started in 1864 when Johann Nepomuk Kuhn, a Master organ-builder, settled in Männedorf and founded his own company. A native of southern Germany, he first saw the shores of Lake Zürich in 1863 when he came as an employee of Eberhard Friedrich Walcker to build a new organ for the church in Männedorf, and was so taken by the region that he decided to stay. He soon began to acquire major orders, not least was for large instruments for the « Tonhalle » in Zürich (1872) and St. Gallen Cathedral (1875) . He only built mechanical cone chest organs and, to make his larger instruments easier to play, used the Barker pneumatic lever. In keeping with the fashion of the times, Nepomuk's organ cases were usually neo-Gothic, but he was also careful to integrate other revivalist styles. After Nepomuk's death, his only son, Carl Theodor, who had learned the craft in his father's shop, took-over management of the company in 1888. He had spent his journeyman years working in France, Germany and North America, and was especially impressed by the work of Cavaillé-Coll. Thanks to a combination of expert craftsmanship and commercial foresight, the House of Kuhn prospered. Around the turn of the Century and the increasing industrialization of the organ business, Kuhn switched to pneumatic actions for his organs.

### « Großmünster »

The « Großmünster » (Great minster) is a Romanesque-style Protestant church. The core of the present building near the banks of the Limmat was constructed on the site of a Carolingian church, which was, according to legend, originally commissioned by Charlemagne. Construction of the present structure commenced around 1100 and it was inaugurated around 1220.

The « Großmünster » was a monastery church, vying for precedence with the « Fraumünster » across the Limmat throughout the Middle-Ages. According to legend, the « Großmünster » was founded by Charlemagne, whose horse fell to its knees over the tombs of Felix and Regula, Zürich's patron saints. The legend helps support a claim of seniority over the « Fraumünster » , which was founded by Louis the German, Charlemagne's grandson. Recent archaeological evidence confirms the presence of a Roman burial ground at the site.

The twin towers of the « Großmünster » are regarded as perhaps the most recognized landmark in Zürich. Architecturally, the church is considered Romanesque in style, and thus, a part of the first pan-European architectural trend since Imperial Roman architecture. In keeping with the Romanesque architectural style, « Großmünster » offers a

great carved portal featuring medieval columns with grotesques adorning the capitals. A Romanesque crypt dates to the 11th and 13th Centuries.

Bollinger Sandstein was used for the construction. The 2 towers were first erected between 1487 and 1492. Originally, they had high wooden steeples, which were destroyed by fire in 1763, following which the present neo-Gothic tops were added (completed 1787) . Richard Wagner is known to have mocked the church's appearance as that of 2 pepper dispensers !

### Polytechnic School

The « Eidgenössische Polytechnische Schule » was founded in 1854 by the Swiss Confederation and began giving its first lectures in 1855 as a polytechnic institute. It was initially composed of 6 faculties : architecture, civil engineering, mechanical engineering, chemistry, forestry, and an integrated department for the fields of mathematics, natural sciences, literature, and social and political sciences.

### University of Zürich

The University of Zürich was founded on April 29, 1833, when the existing colleges of theology, the « Carolinum » founded by Huldrych Zwingli in 1525, law and medicine were merged with a new faculty of Philosophy. It was the first university in Europe to be founded by the State rather than a Monarch or Church.

In the University's early years, the 1839 appointment of the German theologian David Friedrich Strauß to its Chair of Theology caused a major controversy, since Strauß argued that the miracles in the Christian New Testament were mythical retellings of normal events as super-natural happenings. Eventually, the authorities offered Strauß a pension before he had a chance to start his duties. The university allowed women to attend philosophy lectures from 1847, and admitted the first female doctoral student in 1866.

**Sunday, 29 August 1880** : Anton Bruckner leaves Zürich (passing the Habsburg's gate) and is heading for Geneva.

Pocket calendar entry by Anton Bruckner :

« 29 August, Geneva. »

### Chamonix

**Monday, 30 August 1880** : Anton Bruckner arrives in Chamonix.

Pocket calendar entry by Anton Bruckner :

« 30 August to 4 September, Chamonix. »

Bruckner spends a few days at one of the most wonderful sites on earth : Chamonix and « La Flégère » (hill located on the heights of the Chamonix valley) . From the valley, the breathtaking view of the glacial peaks of « Mont Blanc » remains an unforgettable experience. Curiously, Bruckner's pocket calendar, which also serves as a diary, does not evoke at any moment the overwhelming majesty of the site. This tends to confirm the comments of Friedrich Klose to the effect that Bruckner was not really challenged by the beauty of nature (as was the case with Beethoven or Gustav Mahler) .

**Tuesday, 31 August 1880** : Rainy day. Anton Bruckner makes a trip to « La Flégère » , in Chamonix.

Pocket calendar entry by Anton Bruckner :

« 31 August, “ Flegere ”, rain. »

« Mont Blanc »

**Wednesday, 1 September 1880** : Anton Bruckner visits the Cave of the Bossons Glacier (« La Grotte du Glacier des Bossons ») in Chamonix. He will « refresh » himself at the « Chalet » not far.

Pocket calendar entry by Anton Bruckner :

« 1 September, “ Mont-Blanc ” Cave. »

« La Flégère »

**2, 3 September 1880 (Thursday, Friday)** : Excursion of Bruckner at « La Flégère » with nice weather and a breathtaking view of the « Mont Blanc » . He spends the night at the Inn of the « Cross of La Flégère » (Auberge de la « Croix de La Flégère ») .

Pocket calendar entry by Anton Bruckner :

« 2 September to 3 September, at noon-time, “ Flégère ” : nice weather. »

Geneva

**Saturday, 4 September 1880** : Anton Bruckner leaves Chamonix and is now heading for Geneva.

In the evening, he attends a recital by St. Peter's Cathedral organist, Anton Häring from Basel (1866-1886) .

The monumental symphonic instrument (4 tractioned manuals assisted by a « Barker machine ») which was built by the French firm « Merklin et Schütze » was inaugurated in 1866. Joseph Mooser was the previous organist at St.

Peter's ; disabled by deafness, he was forced to leave his post.

Pocket calendar entry by Anton Bruckner :

« 4 September, arrived in Geneva in the afternoon ; (...) organ recital by Häring in the evening. »

At the request of Häring, Bruckner will perform improvisations on this same instrument the following day.

**Sunday, 5 September 1880** : During the day, Anton Bruckner tours the city of Geneva. In the evening, he gives an organ recital (consisting of improvisations) at St. Peter's Cathedral. Anton Häring is attending.

Pocket calendar entry by Anton Bruckner :

« 5 (September) , visiting. Played the Cathedral organ. »

Anton Bruckner's organ concerts during this trip were not mentioned in the « Schweizerischen Musik-Zeitung » . We know there was an organ in St. Peter's in the 16th Century. But the first major instrument was the work of the renown organ-builder Samson Scherrer in 1757. It was a great organ with a « Positif de dos » and its instrumental part was based on the Classical French School.

### Anton Häring

Anton Häring was born in 1825 in Basel, Switzerland. He was named music-director at Æsch. He held the post of resident organist at St. Peter's Cathedral in Geneva from 1866 to 1886. He died prematurely in 1888. In 1887, a competition selected Otto Barblan to replace him.

### 1866

Dans l'histoire de la musique à Saint-Pierre, 1866 marque une charnière. Cette année-là, le temple fut doté à la fois de nouvelles orgues et d'un nouvel organiste.

Les constructeurs parisiens des nouvelles orgues de Saint-Pierre en firent l'essai, les 12, 13 et 14 mars, au cours de 3 « séances d'audition » ouvertes au public. Le professeur et organiste (aveugle) Charles-Victor Dubois, de Bruxelles, que l'on avait fait venir tout exprès, assura seul les 2 premiers programmes et se partagea le 3e avec les organistes Blanchet, de Lausanne, et Häring, de Liestal. Entre des morceaux de Franz-Josef Haydn, Felix Mendelssohn et Giacomo Meyerbeer, Dubois joua plusieurs de ses propres œuvres. Sa « Pastorale avec scène et orage » impressionna surtout l'auditoire, conquis d'emblée par la puissance et la qualité des nouvelles orgues.

L'inauguration même donna lieu, les 27, 28 et 29 juin 1866, à 3 concerts ainsi qu'à un concours inhabituel d'exécutants : le Chant sacré, la Société de chant du Conservatoire, la Cécilienne, les cantatrices Levier et Lardi, les

organistes Jakob Vogt, de Fribourg, Rudolf Lœw, de Bâle, Édouard Batiste, Renaud de Vilbac, tous deux de Paris, et Samuel de Lange, de Rotterdam, se produisirent aux côtés de l'organiste titulaire de Saint-Pierre : Anton Häring. L'organiste de Liestal venait d'être nommé en effet à Genève. Il allait tenir les grandes orgues de Saint-Pierre durant une vingtaine d'années, jusqu'à sa mort survenue prématurément en 1886. Ses 2 prédécesseurs Nicolas Scherer et Joseph Mooser n'avaient organisé ni donné aucun concert dont le programme se soit conservé. Ce fut le mérite d'Anton Häring d'introduire à Saint-Pierre le concert spirituel comme élément permanent de la vie locale et de gagner ainsi définitivement les Genevois à la musique religieuse.

### Les concerts d'Anton Häring

De décembre 1866 à mars 1886, Anton Häring organisa chaque année 3, 4 ou 5 grands concerts spirituels. Les programmes d'une cinquantaine d'entre eux nous sont connus par des affichettes ou des annonces de journal. Rien de régulier dans les dates de ces « grands concerts sacrés ». Häring les place en toute saison, de préférence au printemps ou en automne, tantôt le dimanche (à 4 heures de l'après-midi) , tantôt un jour de semaine (en soirée) . Dès 1875 cependant, l'habitude est prise d'en donner un durant la Semaine Sainte (le Vendredi-Saint généralement) , un autre le jour de Noël. L'entrée est toujours payante. Les places réservées coûtent 2 Francs, les autres 1 Franc. Lorsque le concert a lieu en hiver, le programme précise que « le temple sera chauffé et éclairé » .

Häring dans ses « grands concerts » ne joue jamais seul. Il s'associe parfois un autre organiste, son vieux maître Jakob Vogt, de Fribourg, Eduard Vogt, le fils de Jakob, Blanchet, de Lausanne, ou encore Eugène Gigout, de Paris. En 1882 et 1885, il fera jouer à ses côtés une de ses élèves, Madame Palliser, Irlandaise. La plupart des concerts sont donnés avec plusieurs solistes, des cantatrices surtout. Quelques rares virtuoses étrangers figurent à l'affiche : Moritz Kahnt, de Leipzig, 1er violoncelle de l'Orchestre de Bâle (17 avril 1869) , Léonce Valdec, baryton des concerts de l'Albert Hall de Londres (en 1872) , le jeune violoniste toscan Guido Papini (en 1873) , une cantatrice de Munich (23 mars 1873) , « Monsieur Rutling, un des noirs Jubilee-Singers » (1er février 1885) . Les autres solistes se recrutent à Genève même, les noms qui reviennent le plus souvent au programme étant ceux du violoncelliste Malignon (souvent accompagné de son épouse violoniste) , de Mademoiselle Bosson et de Madame Figleff, cantatrices, du violoniste Breitenstein. Häring, qui est professeur d'orgue au Conservatoire, fait volontiers appel à ses collègues : le ténor Sigmundt, qui se produit à répétées reprises, le violoniste Louis Henry, le violoncelliste Richter et le fameux Léopold Ketten. Häring peut aussi compter sur sa propre famille : sa femme, née Elisabeth Senn, a une jolie voix de soprano, qu'elle a transmise à leur fille Julia, née en 1859, dont le nom revient très souvent à l'affiche dès 1881 et qui sera qualifiée de « cantatrice de concert » dès 1884. Tous les solistes d'ailleurs ne sont pas connus, car de nombreux amateurs prêtaient leur concours et les programmes, conformément aux bonnes manières de l'époque, ne les désignent que par l'initiale de leur nom. Des ensembles vocaux agrémentent aussi les « grands concerts » de cette époque : la Société chorale de Genève (16 décembre 1866) , un « Quatuor vocal suédois » qui se produit à 2 reprises (11 avril 1875 et 5 juin 1884) et ne chante que de la musique nordique, le Chœur royal de la Cathédrale de Berlin (21 juillet 1879) et surtout, dès 1877, une « Société de chant composée d'artistes et d'amateurs distingués » qui pourrait bien avoir été formée par Häring lui-même. En une occasion, le concert fut donné avec le concours d'un véritable orchestre, celui de la Ville de Lausanne dirigé par Herfurth (26 février 1882) .

Les programmes de ces « grands concerts » offrent un choix assez large de compositeurs, car on y voit figurer les maîtres italiens de Palestrina et Alessandro Stradella jusqu'à Giuseppe Verdi, les maîtres allemands de Jean-Sébastien Bach jusqu'à Richard Wagner et Max Bruch, quelques Français : Dancla, Gounod, Massenet, ainsi que les principaux organistes-compositeurs de l'Europe du XIXe siècle : Batiste, Buck, Gigout, Lefébure, Lemmens, Merkel, Saint-Saëns, Töpfer, Widor. En fait de compositeurs suisses, on ne rencontre guère que le pianiste genevois Auguste Werner, dont Häring interpréta le 20 décembre 1874 « L'Apparition aux bergers, fantaisie pour orgue » - et Häring lui-même, qui à plusieurs reprises joua une œuvre de sa composition.

2 concerts méritent une mention particulière : celui du 8 mai 1885, entièrement consacré à des œuvres de Georg Friedrich Händel et de Jean-Sébastien Bach, à l'occasion du second Centenaire de leur naissance ; et celui de Noël 1885, qui comportait en seconde partie l'audition intégrale de l' « Oratorio de Noël » de Saint-Saëns (créé en 1869) . L'exécution d'une œuvre de cette ampleur reste en effet exceptionnelle dans les concerts spirituels d'Anton Häring. Comme au siècle précédent, le public exigeait manifestement une grande variété dans les programmes, de sorte qu'il était courant de donner un seul air, un seul mouvement d'une œuvre et de réunir en un même concert 10 ou 12 morceaux de compositeurs différents.

À côté de ces « grands concerts » , Anton Häring prit l'initiative de se produire à l'orgue tout au long de l'année, à raison de 2 concerts hebdomadaires en été, les mercredis et samedis à 7 heures du soir, et d'un concert par semaine en hiver, le dimanche à 4 heures de l'après-midi. Ces petits concerts, qui ne donnaient apparemment pas lieu à l'impression d'un programme, eurent rapidement du succès, puisque le Bulletin du Consistoire en date du 17 novembre 1868 constate que « le nombre des auditeurs s'est élevé à plus de 900 depuis le commencement de l'année » . Après divers changements d'horaire, le nombre de ces petits concerts fut porté à 3 par semaine en été (les lundis, mercredis et samedis, à 7 heures du soir) , mais réduit à 1 seul par mois en hiver (le 1er dimanche de chaque mois, à 3h30 de l'après-midi) .

### Lausanne

**Monday, 6 September 1880** : Anton Bruckner leaves Geneva and is now heading for Lausanne. There, he visits Notre-Dame Cathedral and probably meets the resident organist Louis Daniel Delessert.

Pocket calendar entry by Anton Bruckner :

« Lausanne Cathedral. Viewed at 7:00 in the morning. Rudolf of Habsburg (whose castle was seen on the left during the trip from Zürich to Geneva) was present at the consecration. »

### Freiburg

**Tuesday, 7 September 1880** : Anton Bruckner arrives in Freiburg. He goes to St. Nicholas Collegiate Church to hear the resident organist Eduard Vogt (1847-1911) play Johann Sebastian Bach's Toccata in D minor. Bruckner also plays the instrument.

The organ in the loft above the main-entrance brings together Classical and Romantic characters. At that time, the instrument with its 7,800 pipes (some of them 32 feet high) was considered a musical wonder and quickly attracted many famous musicians. Franz Liszt, for one, made it sing and thunder.

### Liszt plays at St. Nicholas

En 1836, Franz Liszt accompagné de Georges Sand et Marie d'Agoult se rendent à Fribourg pour entendre l'orgue de St. Nicolas construit par Aloÿs Mooser (1834) et « L'Orage » interprété par l'organiste Jacques Vogt.

Voici quelques extraits du récit, souvent teinté d'humour, de ce voyage par Georges Sand (Lettre n° VII) :

Nous entrâmes dans l'église de St. Nicolas pour entendre le plus bel orgue qui ait été fait jusqu'ici. (...)

« (...) En effet, Mooser, le vieux luthier, le créateur du grand instrument, aussi mystérieux, aussi triste, aussi maussade que l'homme au chien noir et aux macarons d'Hoffmann, était debout à l'autre extrémité de la galerie, et nous regardait tout à tour d'un air sombre et méfiant. (...)

(...) Aussi l'organiste de la cathédrale, gros jeune homme à la joue vermeille, confrère familier et quasi protecteur de notre ami, le poussait doucement à chaque instant, et prenant sans façon sa place, essayait, à force de bras, de nous faire comprendre la puissance vraiment grande, je le confesse, du charlatanisme musical. Il fit tant des pieds et des mains, et du coude, et du poignet, et je crois, des genoux (le tout de l'air le plus flegmatique et le plus bienveillant), que nous eûmes un orage complet, pluie, vent, grêle, cris lointains, chiens en détresse, prière du voyageur, désastre dans le chalet, pialement d'enfants épouvantés, clochettes de vaches perdues, fracas de la foudre, craquement des sapins, finale, dévastation des pommes de terre. (...)

(...) Ce fut seulement lorsque Franz posa librement ses mains sur le clavier, et nous fit entendre un fragment de son “Dies iræ”, que nous comprîmes la supériorité de l'orgue de Fribourg sur tout ce que nous connaissions en ce genre. (...) mais le perfectionnement est remarquable dans celui de Fribourg, surtout les jeux de la voix humaine, qui, perçant à travers la basse, produisirent sur nos enfants une illusion complète. (...) Jamais le profil florentin de Franz ne s'était dessiné plus pâle et plus pur, dans une nuée plus sombre de terreurs mystiques et de religieuse tristesse. (...)

(...) Grâce à ces effets inattendus de la lumière, la blanche et propre cathédrale de Fribourg paraissait encore plus riante que de coutume, et la figure du roi David, peinte en costume de théâtre du temps de Pradon, avec une perruque noire et des brodequins de maroquin rouge, semblait sourire et s'apprêter à danser encore une fois devant l'arche. Et cependant, l'instrument tonnait comme la voix du Dieu fort, et l'inspiration de notre grand musicien faisait planer tout l'enfer et tout le purgatoire de Dante sous ces voûtes étroites à nervures peintes en rose et en gris de perle. (...) »

### Eduard Vogt

Organist Eduard Vogt is the first director of the Freiburg Conservatory founded in 1904.

## The organ

**1824-1834** : Built by Aloÿs Mooser (1770-1859) .

This particular organ is considered his Masterpiece, and the « vox humana » , with swell mechanism, is its most famous characteristic. The organ was enlarged in 1912, but it has remained essentially Mooser's organ.

**1852-1966** : Additions and transformations by Haas, Kyburtz, Haller, Merklin, Kuhn, Wolf-Giusto, Pürro, Hartmann.

Built in the Gothic style on a rocky outcrop 50 metres above the river Saane, St. Nicholas' dominates the centre of the medieval town. The main-body of the church was started in 1283 on the site of a Romanesque style chapel which pre-dated the town's foundation in 1157. Construction was completed around 1430 and the West tower was completed in 1490. It is 76 metres tall and houses 13 bells - 11 of which are in the west tower and 2 are in the Bell Tower of the Choir.

The edifice of the building is from the Gothic period - as is the choir-gate, the baptismal fonts, the pulpit, the cross, and 2 sculptured portals. The high-Gothic south portal shelters statues of St. Nicholas, the martyr who is Freiburg's patron saint, and of the 3 maidens of his legend. Nicholas, a 4th Century bishop of Myra in Asia Minor, is said to have secretly provided dowries for the 3 daughters of an impoverished nobleman.

The « chevet » , the choir-arch with key-stones, coats of arms of Patrician families, decoration of the aisle arch-ways, the organ of Sebald Manderscheidt and the 6 chapels between the buttresses are from the Baroque period. The most important of the sculptures is a monumental burial scene from the early-15th Century called « The Burial of Christ » in the Holy Sepulcher Chapel in the apse behind the main-altar. It is a composition of 13 life-size figures in sandstone with faded colouring ; it shows Jesus being laid into the tomb in the presence of the Virgin Mary, Mary Magdalene and other grieving women, sleeping Roman soldiers, and angels. At least 3 unidentified artists executed the group with great realism.

The church began life as a parish church. In 1512, the church attained the rank of Collegiate Church with a provost (with mitre and crozier) dean, chanter and 12 canons. Since 1803, the church has been the property of the State of Freiburg and services are administered by the Roman Catholic Church.

...

The same day (**September 7**) , Anton Bruckner leaves Freiburg and is now heading for Bern.

## Bern

**Wednesday, 8 September 1880** : Anton Bruckner plays the organ of Bern Minster (« Berner Münster ») Cathedral. (St. Vincent's) . His style and virtuosity arouses great admiration from the resident organist, Doctor Jakob Mendel, who in

turn improvises a fugue on themes from Richard Wagner's « Ring des Nibelungen » .

The first organ in the Cathedral was built nearly 200 years after construction was completed. The first great organ was built in between 1726 and 1730. The town council voted to have the organ built on 5 June 1726. They hired Gottlieb Leuw from Bremgarten in September 1726. By January 1730, his work was nearly finished and the town began searching for an organist. While the main-organ was finished in 1730, the ornamentation and finish work continued until 1736. This first organ had 38 organ stops, with a breast and back work as well as an echo work with pedals.

In 1746, the council decided that the organ needed to be rebuilt. On 16 September 1748, they reached an agreement with Victor Ferdinand Bossart to do so. On 1 June 1752, they signed a contract with Johann August Nahl to do the exterior decoration on the new organ. The rebuilt organ had 43 organ stops, and was built in a late-Baroque style. It was renovated in 1827.

When the new organ balcony and screen were built in 1845-1848 above the western entrance by Beat Rudolf von Sinner, the organ was completely rebuilt and was known as the second organ. The organ-builder Friedrich Haas from Winterthur increased the number of stops to 55. The number of consoles was changed to three.

### Johann Jakob Mendel

The Swiss organist and voice teacher of German origin Johann Jakob Mendel was born on 8 September 1809 in Darmstadt, in the State of Hesse, Germany ; and died on 22 December 1881 in Bern, Switzerland.

Mendel came from a modest background. He received his basic musical training at the Hessian Court with organist Johann Christian Heinrich Rinck. From 1828, he studied with Luigi Cherubini at the Paris Conservatoire. Mendel was also teaching in Paris at the Royal Institute of Sacred Music under the directorship of Alexandre Choron.

On the recommendation of Rinck, Mendel was named organist and music-director at the Bern Minster (« Berner Münster ») Cathedral. He quickly shaped the city's musical life as choir-master of the Vocal Training Society, the Student Choir and the Choral Society, and by teaching music at the cantonal school, the municipal school for girls and the University of Bern. He also regularly conducted the « Musikgesellschaft » concerts. In 1842, Mendel received the Swiss citizenship. He participated in the creation of the new « Church Hymn Book of 1854 » by composing choral works, orchestral works and cantatas. In 1864, the University of Bern awarded him an honorary Doctorate, and, in 1875, he was appointed honorary professor.

Today, the music estate of Jakob Mendel is located at the « Burgerbibliothek » in Bern.

...

But Anton Bruckner also does some sight-seeing. He visits the Federal Palace, the « Bärengraben » (Bear Pit) , and the

« Zytglogge » (Clock Tower) . He meets attractive young ladies.

## Bear Pit

The city of Bern's relationship with its heraldic animal goes back many years. Legend has it that a bear was the first animal to be caught by city founder Berchtold V. von Zähringen during a hunting expedition in the area, and that he city owes its name to this.

The Bernese chronicler Valerius Anshelm described in 1513 how the Bernese returned home victorious from the Battle of Novara, carrying both the captured standards and a living bear as spoils of war in their triumphal procession. It was kept in the city moat in front of the « Käfigturm » (Cage Tower) .

The first bear pit remained at what is still called the « Bärenplatz » (Bear Square) , until it had to be moved in 1764 because of traffic problems. It was relocated to the « Schanzengraben » (Moat) in Bollwerk, in front of the gateway to the city.

The final, still visible bear pit is the 4th enclosure in the city. It was opened on May 27, 1857. 12 or more bears were intermittently kept in the 3.5 metre deep pit.

## Clock Tower

The « Zytglogge » is a landmark medieval tower in Bern. Built in the early-13th Century, it has served the city as guard tower, prison, clock tower, centre of urban life and civic memorial.

Despite the many redecorations and renovations it has undergone in its 800 years of existence, the « Zytglogge » is one of Bern's most recognisable symbols and, with its 15th Century astronomical clock, a major tourist attraction.

When it was built around 1218-1220, the « Zytglogge » served as the gate-tower of Bern's western fortifications. These were erected after the city's first west-ward expansion following its « de facto » independence from the Empire. At that time, the « Zytglogge » was a squat building of only 16 metres (52 feet) in height. When the rapid growth of the city and the further expansion of the fortifications (up to the « Käfigturm ») relegated the tower to second-line status at around 1270-1275, it was heightened by 7 metres (23 feet) to overlook the surrounding houses.

Only after the city's western defences were extended again in 1344-1346 up to the now-destroyed « Christoffelturm » , the « Zytglogge » was converted to a women's prison, notably housing « Pfaffendirnen » (priests' whores) , women convicted of sexual relations with clerics. At this time, the « Zytglogge » also received its first slanted roof.

In the great fire of 1405, the tower burnt-out completely. It suffered severe structural damage that required thorough repairs, which were not complete until after the last restoration in 1983. The prison cells were abandoned and a clock was first installed above the gate in the early-15th Century, probably including a simple astronomical clock and

musical mechanism. This clock, together with the great bell cast in 1405, gave the « Zytglogge » its name, which in Bernese German means « time bell » .

In the late-15th Century, the « Zytglogge » and the other Bernese gate-towers were extended and decorated after the Burgundian Romantic fashion. The « Zytglogge » received a new lantern (including the metal bell-man visible today) , 4 decorative corner towerlets, heraldic decorations and probably its stair-tower. The astronomical clock was extended to its current state. In 1527-1530, the clockwork was completely rebuilt by Kaspar Brunner, and the gateway was over-arched to provide a secure foundation for the heavy machinery.

The « Zytglogge's » exterior was repainted by Gotthard Ringgli and Kaspar Haldenstein in 1607-1610, who introduced the large clock faces that now dominate the east and west façades of the tower. The corner towerlets were removed again some time before 1603. In 1770-1771, the « Zytglogge » was renovated by Niklaus Hebler and Ludwig Emanuel Zehnder, who refurbished the structure in order to suit the tastes of the late-Baroque, giving the tower its contemporary outline.

Both façades were again repainted in the Rococo style by Rudolf von Steiger in 1890. The idealising historicism of the design came to be disliked in the 20th Century, and a 1929 competition produced the façade designs visible today : on the west façade, Victor Surbek's fresco « Beginning of Time » and on the east façade, a reconstruction of the 1770 design by Kurt Indermühle.

### Marie Studer

In the train heading for Lucerne, Bruckner will speak with « Fräulein » Marie Studer.

### Lucerne

**Thursday, 9 September 1880** : Anton Bruckner arrives in Lucerne in the morning. He meets the resident organist at St. Leodegar Church (« St. Leodegar im Hof » , « Hofkirche St. Leodegar ») , Father Ambros Meyer. They decided to play in succession on the stormy instrument.

At the same occasion, Bruckner meets Friedrich Haas who rebuilt the organ.

Father Meyer (Meier) comes from St. Urban's Cistercian Abbey. Born in 1814, he teaches music since August 1866.. He will act as resident organist at St. Leodegar from 1874 until his death in 1888.

**1640-1650** : A new organ is built by Johann Geißler from Salzburg after the church fire of 1633.

**1820** : Excavation of the mezzanine because the back-space has become ineffective.

**1858-1862** : Reconstruction of the organ by Friedrich Haas from Winterthur, who subsequently settled in Lucerne.

**1898-1899** : Conversion and pneumatization of the organ by Friedrich Goll, the business successor of Haas.

5 manuals (6 divisions) and pedal ; 103 stops ; 144 ranks ; electro-pneumatic action.

After the Lucerne « Hofkirche » had been devastated by fire in 1633 it was newly-built in Baroque style. Following 2 choir-organs (1637-1642) a large and, for those times, monumental organ with 2 manuals, pedals and 42 sounding stops was built on the west gallery (1640-1652) . It was constructed by Master organ builder Johann Geißler from Salzburg. The design for the case was made by a man of the same surname, but from Lucerne, Niklaus Geißler. Ever since, the show-piece has been its largest front-pipe, the low C of the Principal 32 ' (length : 970 centimetres ; diameter : 57 centimetres) .

Besides work on the instrument and a number of modifications, between 1857 and 1862, there followed substantial alterations by Friedrich Haas. He transformed the Baroque instrument into a Romantic concert organ. The « Rückpositiv » was removed, the slider wind-chests were replaced by cone-chests, the new mechanical action was fitted with Barker machines and an Echo organ was built-up in the roof space of the cathedral. Only the impressive main case with its front-pipes and about 15 further stops remained. Amongst the new stops were, most importantly, strings, harmonic pipes and all the reeds. The « Re-builder » of the organ was celebrated as triumphantly as Master Geißler had been over 200 years before.

The biography of the organ was, however, soon to be continued. The instrument was made pneumatic in 1895 by Goll Organ-Builders and, in 1945, it was fitted with electric systems. The organ movement saw to it that experts could no longer take much pleasure in the instrument and the traditional organ concerts were replaced more and more with the famous « storm fantasy » using the instrument's unique « rain machine » . As a result, in 1970, plans were made for substantial changes to be made to the instrument, although this caused in a bitter dispute over the direction to be taken. One party wished for a reconstruction of the instrument of 1652 whilst another favoured the Haas version. Others wished for the current instrument to be repaired. Finally, the argument was won by the majority, who simply wanted a new, contemporary organ, albeit with the complete incorporation of the remaining Baroque material and part of the « usable » material from the 19th Century. This plan also found favour with the Society for the Preservation of Ancient Monuments.

Our task was now to realize these basic ideas and wishes in a project which was also practical from the technical point of view. The « Rückpositiv » was reconstructed, although the « balustrade » of the gallery was not able to be changed back to its original size. The placing of 3 manual divisions and the pedal organ in the main case was not strictly according to historical guide-lines, but more defined by the space required by the new slider wind-chests with the mechanical action. The 5th manual (« Fernwerk » - echo organ in the roof) was handled in the manner of a restoration. The cone-chests remained, but the action was made electric. The most difficult task was, besides the scaling of the pipes, their voicing. A wholly unified sounding instrument needed to be formed out of the Baroque pipes of 1652, the Romantic pipes of 1862, and the new stops of 1977.

In 2001, there followed an expansion of the « Fernwerk » . 3 ranks of free reed pipes which had been stored away

since 1977 and which originated from the Friedrich Haas organ of 1862 were reincorporated into the spacious echo chamber of the « Fernwerk » : a Physharmonica 8 ', a Clarinette 8 ' and a Fagott 16 '. These stops stand on a newly-built cone-chest in a separate swell-box which functions parallel to the main swell-box of the « Fernwerk » . The action of the additional wind-chest is also electric. The Fagott is playable by the pedals (30 notes) and the other 2 stops on the 5th manual. Further ranks and part-ranks from both Geißler and Haas which were removed in 1977 are still stored in the roof-space of the cathedral.

...

Über dem Westeingang auf der Empore befindet sich die so genannt Große Hoforgel. Sie geht zurück auf ein Instrument, das in den Jahren 1640 bis 1648 von dem Orgelbauer Johann Geißler aus Salzburg erbaut wurde. Das Gehäuse wurde 1648 von Niklaus Geisler geschaffen und ist original erhalten. Diese Orgel hatte 48 Register (2.826 Pfeifen) auf 2 Manualwerken und Pedal. Im Zuge einer Emporenvergrößerung im Jahre 1820 wurde das Rückpositiv entfernt. In den Jahren 1858 bis 1862 wurde die Orgel durch den Orgelbauer Friedrich Haas auf 70 Register auf vier Manualen und Pedal erweitert. Das Instrument wurde zudem mit einem Fernwerk ausgestattet, welches auf dem Dachboden der Kirche untergebracht wurde.

Das Fernwerk hat ein besonderes, weltweit einzigartiges Effektregister, eine so genannt Regenmaschine. Es handelt sich dabei um eine Holztrommel, die mit Orgelwind angetrieben im Kreis gedreht wird. Die Trommel ist mit Blech ausgeschlagen. In der Trommel befinden sich Metallkugeln, die über so genannt Schikanen an die Blechwand der Trommel schlagen. Die Regenmaschine ermöglicht es, zusammen mit den tiefen Pedalregistern « Klanglawinen » bis hin zu « Orgelgewittern » zu erzeugen.

In den Jahren 1972 bis 1977 wurde die Orgel durch die Orgelbaufirma Kuhn umgebaut, restauriert und erweitert. Das Rückpositiv wurde rekonstruiert. Im historischen Prospekt der Orgel steht eine Pfeife aus dem Jahr 1648, welche die längste und schwerste Orgelpfeife der Welt aus dieser Zeit ist: Sie mißt 9,7 meters und wiegt 383 kilogramms. Einige Register wurden entfernt, und werden nun (2015) als Echowerk auf der nördlichen Empore wieder in das Orgelensemble eingebunden. 2001 wurden im Schallkanal des Fernwerkes, der so genannt Tonhalle, drei durchschlagende Zungenregister wiedereingebaut, die Haas im Jahre 1862 erbaut hatte. Es handelt sich dabei um romantische Klangfarben, die den Klängen eines Harmoniums oder eines Akkordeons ähnlich sind.

Das Schleifladen-Instrument hat heute 84 Register (5.949 Pfeifen) auf fünf Manualwerken und Pedal ; die Register des Fernwerkes stehen auf Kegelladen. Ohne das Fernwerk wiegt die Hauptorgel etwa 20 Tonnen. Ein Großteil der Register sind historischer Bestand aus den Jahren 1648 (19 Register) und 1862 (36 Register) . Die Spieltrakturen sind (mit Ausnahme der Trakturen der Register des Fernwerkes) mechanisch. Die Koppeln und Registertrakturen sind elektrisch.

...

In the 8th Century, there was already an abbey consecrated to St. Maurice on the current site of the church, which had been donated by Pépin the Short, and was known at the time as the « Monastarium Luciaría » . By the 12th

Century, the abbey was under the jurisdiction of the Murbach Abbey, whose patron saint was St. Leodegar. In 1291, the abbey was sold to the Habsburgs. In 1433, the city of Lucerne, no longer a member of the « Eidgenossenschaft », took control of the abbey, and, in 1455, it was converted from Benedictine to a « universal order » church. The monastery experienced a heyday during the time of the Reformation due to Luzern being a prominent city for the Swiss Catholic cantons. The papal nuncio, resident in Luzern, used the church as his cathedral during this time. In 1874, the parish church of St. Leodegar was founded and with that the church became simultaneously a monastery church and parish church.

### Father Ambros Meyer

Die Zahl der Conventualen der in den 40er Jahren aufgehobenen Schweizerischen Cistercienser-Klöster wird mit jedem Jahre kleiner. So starb am 20. December v. Jahr wieder ein Conventuale von St. Urban.

Wir entlehnen nachstehenden Nekrolog dem in Luzern erscheinenden Vaterland. Es schreibt : Mit Pater Ambros Meyer ist einer jener frommen, arbeitsamen und ideal angelegten Mönche zu Grabe getragen worden, deren die früheren Jahrhunderte viele gesehen und die auch heute, bei stark verändertem Zuge der Zeit, noch nicht ganz ausgestorben sind. Wie sein Vorgänger Pater Leopold Nägeli, begann auch Pater Ambros seine Laufbahn als Conventual im Cistercienser-Kloster zu St. Urban und endigte sie als Präbendar und Organist im Hof zu Luzern. Diese Männer wußten inmitten der Regelmässigkeit klösterlicher Gebräuche, neben ihren religiösen und priesterlichen Verrichtungen Herz und Sinn offen zu behalten für die Einflüsse der Kunst und als ausübende Musiker sich nicht nur eine seltene Fertigkeit zu erwerben, sondern auch ganz bedeutende Erfolge zu erzielen. Es geschah das Alles (wenn wir von den äussern Kundgebungen des Menschen auf seine innerlichen Motive schließen dürfen) nicht um des Glanzes und nicht um des Erwerbes willen, wohl aber zur Befriedigung eines tiefgewurzelten und höher strebenden Bedürfnisses, vor Allem zur Ehre des Schöpfers und den Mitmenschen zur Freude : dieses schöne Weihnachtsmotto war die Unterlage ihrer ganzen Wirksamkeit. Ein anspruchsloser, stets dienstbereiter, sittenreiner Priester, ein edler Mensch und hervorragender Künstler, dem es in seiner Bescheidenheit nie darum zu thun war, sich selbst über Andere zu stellen, der aber alles Gute in seiner Umgebung zu schätzen und zu loben verstand, eine Seele, von Friedfertigkeit und Wohlwollen überfließend - so ist Pater Ambros unter uns gewandelt.

Pater Ambros (sein Taufname war Placidus) wurde am 25. April 1814 zu Buttisholz, Kanton Luzern geboren. Seine körperliche und geistige Entwicklung war keine frühzeitige, selbst die Gabe der Sprache verdankte er einem nach seiner Überzeugung wunderbarem Eingriffe, zeitlebens blieb sein Gesundheitszustand ein schwächerer und vielen Zufälligkeiten ausgesetzt. Von seinem 12. Jahre an aber zeigte sich in ihm eine erstaunliche Leichtigkeit zur Erlernung nicht nur des Klavier- und Orgelspiels, sondern aller Arten musikalischer Instrumente, deren Einübung er denn auch mit Vorliebe und Ausdauer oblag. In den Benedictiner-Stiften Einsiedeln (1828-1831) und Engelberg (1832) machte er seine Gymnasialstudien, wo er zugleich treffliche Gelegenheit fand, seine musikalischen Fähigkeiten anzubilden und zu verwerthen.

Im Jahre 1833 trat der junge Meyer in St. Urban ins Noviziat und legte im folgenden Jahre am Feste Mariä Empfängniß die heilig Gelübde ab und erhielt den Namen Ambrosius. Nach Absolvierung der philosophischen und theologischen Studien wurde er dann 1840 zum Priester geweiht und feierte sein erstes heil. Messopfer am 5. Sonntag

nach Pfingsten. Hatte er während der letzten Jahre die Musik nicht vernachlässigt, so konnte er sich derselben jetzt fast ganz weihen ; aus dem Schüler war ein Lehrer geworden ; er mußte den Novizen und den Zöglingen des Lehrerseminars Unterricht ertheilen, nebenbei aber auch in der Pastoration sich hethätigen.

Man wird in alldem nichts besonderes und aussergewöhnliches finden und den Ruf, den unser musizirender Cistercienser unter seinen Mitbrüdern genoß, vielleicht nicht allzuhoch anzuschlagen geneigt sein. Das Eigenthümliche und nach unserem Erinnenen höchst Verdienstliche bestand aber darin, daß Pater Ambros sich die Kenntniß und Beherrschung der Orgel, Violine, Flöte, Oboe, des Cello, der Blechinstrumente, sowie in spätern Jahren der Erard'schen Harfe, nicht nur aus eigenem Antrieb, sondern auch sozusagen ohne fremde Beihilfe, jedenfalls ohne eigentlich methodischen Unterricht aneignete.

So verlebte Pater Ambros glückliche Tage in seinem schönen Kloster bis zum Jahr 1848, da dasselbe von der radikalen Regierung Luzerns aufgehoben wurde. Die Ordensbrüder trennten sich, der eine wandte sich dahin, der andere dorthin ; Pater Ambros liess sich in Willisau nieder, wo er die Stelle eines Cantors übernahm. In diesem kleinen Landstädtchen brachte er nun 26 Jahre zu, wohl ohne den ehrgeizigen Wunsch nach einem größern Wirkungskreise in sich aufkommen zu lassen. Anfänglich machte ihm die eigenthümliche Verquickung von Priesterthum und weltlich musikahscher Thätigkeit, wie sie in der Regel einem « Musik-kaplan » zugemuthet wird, sonderbar vorkommen. Indessen fand er sich rasch in seine neue Lage hinein und gewann sich Aller Herzen durch seine Leutseligkeit und die Bereitwilligkeit, womit er seine Dienste zur Verfügung stellte.

Einem Bittenden absehlägigen Bescheid zu geben, konnte er nicht über sich bringen. Es war ihm Beruf, mit den Trauernden zu klagen und mit den Froheu zu jubeln. Über dem geselligen Musiciren vernachlässigte er aber seine ernstern Übungeu keineswegs, sondern legte Werth darauf, sich trotz seiner verhältnissmässigen Vereinsamung auf der Höhe der Orgeltechnik und in Fühlung mit den neuen Erzeugnissen der Kunst zu erhalten. Dies gelang ihm so wohl, daß man nach dem Hinsehide seines Ordensbruders Pater Leopold Nägele im Jahr 1874 einen würdigeren Nachfolger nicht glaubte finden zu können, um die Schönheiten des neu restaurirten gewaltigen Orgelwerkes in der Stiftskirche zu St. Leodogar in Luzern dem sich immer zahlreicher zudrängenden heimischen und fremden Publikum zu erschliessen.

Mit Freude, aber zugleich mit charakteristischem Zagen, folgte Pater Ambros den ehrenvollen Rufe nach Luzern. In dem Studium der Hoforgel erblickte er von nun an seine Lebensaufgabe und der Sechziger gieng mit jugendlichem Euthusiasmus an die verlockende Arbeit. Wie manches Register wurde da gezogen und gestossen, wie manche Pedalübung vorgenommen, wie mancher gute Freund berathen, bis die Construction des Werkes dem neuen Spieler geläufig geworden, die passenden Compositionen ausgesucht, die Mischungen richtig gestellt und die Effecte ausgeglichen waren. Es dauerte einige Monate, ehe der ängstliche Mann mit seinem I. Concertprogramm hervorzutreten wagte. Seitdem hat er deren zu Hunderten abgespielt und, man darf es ungescheut aussprechen, der liebens-würdige klerikale Virtuose hat sich in den Herzen aller Musikfreunde in Stadt und Land ein bleibendes Denkmal gesetzt. Als Belege zu diesem Ausspruch würden sich ohne Zweifel in der Mappe des Verewigten zahlreiche Ergüsse vorfinden, die in Prosa und Versen der hohen Befriedigung Ausdruck geben, womit empfängliche Touristen der verschiedenen Weltgegenden den Orgelproductionen der letzten Jahre in der Luzerner Stiftskirche gelauscht haben. Es ist das schon an und für sich ein für den Künstler und für Luzern nicht zu unterschätzender.

Erfolg. Auf eine Beurtheilung der Leistungen vom Standpunkte der neuesten Schule gedenken wir keineswegs einzugehen. Nach den oben gegebenen Andeutungen wird Niemand darob erstaunt sein, wenn wir den Organisten aufrichtiger bewunderten in dem, was er aus seiner früheren klösterlichen Praxis auf die neuen Verhältnisse überzutragen in den Fall kam, als die großen Aufgaben, die er sich in seinem hohen Pflichteifer für die Orgelconcerte gestellt hat und die er mit musterhafter Ausdauer, dabei aber entsprechender physischer Anstrengung bewältigte. In freien Präludien, Versetzen und Zwischenspielen bei Vesper und Amt war Pater Ambros in seinem Elemente, geschmeidig, erfinderisch, elegant wie Wenige. Es war, als hätte er sich alsdann von den Fesseln befreit, die das Bewußtsein des Centrolirtwerdens, die Gegenwart kritischer Zuhörer, ihm anzulegen schien. Er lustwandelte da in seinem Revier, wo er jeden Ein- und Ausgang kannte. Alles trug das Gepräge seiner Zeit und war darum so behaglich anzuhören. Beschränktheit, ja Unmühsamkeit hiesse es, vom einzelnen Menschen zu verlangen, daß er Charakter und Styl mit jedem Jahrzehnt ändere, So trat auch die « cäcilianische » Kirchen-musikreform zu spät an Pater Ambros heran, als daß er sich näher damit hätte befreunden können. Er verhielt sich dagegen nicht sowohl feindlich als ablehnend, was sich aus den Traditionen, mit denen er aufgewachsen, gar leicht erklären läßt. Im Übrigen bewahrte der Verewigte für alle Verbesserungen ein offenes Auge, für jeden Nothstand eine bilfreiche Hand. Er war Activ- oder Ehrenmitglied der hauptsächlichsten städtischen Musikvereine, versäumte nie deren Concerte zu besuchen und wirkte selbst mit, so lange seine Kräfte es erlaubten. Besonders gern wurde allenthalben sein Harfenspiel entgegengenommen, während die Orchester-dirigenten sich des nützlichen Musikers beim Violin- oder Viola-pult versicherten. Auch bei Orgelexpertisen und in Prüfungskommissionen hat Pater Ambros als still beobachtendes Mitglied seinen Mann gestellt.

Nach den vorgerückten Jahren zu schliessen, in welchen Pater Ambros sein neues Amt in Luzern antrat, konnte seine Laufbahn hier keine sehr lange werden. Wirklich stellten sich allmählig die Beschwerden des Alters ein, Gehörsinn und Elasticität der Glieder nahmen zusehends ab, man hatte seit 4 oder 5 Jahren auf Ersatz zu denken. Schon bei Anstellung eines Hilfsorganisten äusserte sich der Verstorbene, daß nunmehr mit seinen « Exequien » begonnen werde. Mit Schmerzen und nur Schritt für Schritt, dem Unvermeidlichen weichend, zog er sich von seinem geliebten Instrumente zurück. Jetzt galt es, jene Tugend der Resignation zu üben, die in dem Repertoire der beifallverwöhnten Künstler so selten Platz findet, Da mußte der Ordensmann nachhelfen ! Mit welcher Milde und Ergebung der Kranke seiner Auflösung entgegensah, das wissen diejenigen zu beschreiben, die ihn auf dem Sterbelager gepflegt und besucht haben. Hat auch die nie ganz aufgegebene Hoffnung auf Wiedergenesung sich nicht erfüllt, so wird doch der festgegründete Glaube an eine Wiedererstehung um so weniger trügen, der da hinweist auf den Tag, wo alle Dissonanzen sich lösen, auf den Ort, wo himmlische Harmonien ewig fortklingen werden. R.I.P.

Pater Ambros überleben noch 5 Mitbrüder, 4 Priester und 1 Laienbruder, die jetzt alle hochbetagt sind. Das Kloster St. Urban zählte bei seiner Aufhebung eben viele junge Mitglieder. Es ist nur zu bedauern, daß damals und später nie ein Versuch gemacht wurde, den Convent wieder zu sammeln und anderwärts neu aufleben zu lassen. An Kräften hätte es nicht gefehlt, auch gebrach es nicht an materiellen Mitteln, da ja sämtliche Conventualen von der Regierung Pensionen bezogen, aber es mangelte vor allem ein Führer, ein tüchtiger unternehmender Oberer. Bald nach der Gründung der Mehrerau siedelten drei der ältern Conventualen von St. Urban dorthin über, woselbst sie Anfaues der sechziger Jahre gestorben sind und auf dem Klosterfriedhofe ihre Ruhestätte gefunden haben.

**Thursday, 9 September 1880** : In the afternoon, Anton Bruckner travels along Lake Lucerne by rack-train up to the town of Vitznau and stops at Mount-Rigi, the « Queen of the Mountains » on the Swiss « plateau » . He enjoys the panorama, the view to Küßnacht-am-Rigi, the sunset, and gets to know Babette Schreiber, the sister of the local in-keeper.

(Mark Twain also visited Rigi during his tour of Central Europe in the late-1870's, and wrote about his travels in Chapter 28 of his « A Tramp Abroad » .)

The rack-railway from Arth - Goldau and Vitznau is operated by the « Rigi Bahnen » . The « Vitznau-Rigi-Bahn » started operation on May 21, 1871, and was the first mountain railway in Europe. On June 4, 1875, the « Arth-Rigi-Bahn » was finished, allowing access from the other side of the mountain. They were electrified in 1937 and 1907 respectively, with the « Arth-Rigi-Bahn » becoming the first electrified standard gauge rack-railway in the world. Both lines go all the way to the summit, Rigi Kulm.

### « Tellskapelle »

Anton Bruckner takes time to visit the newly-built « Tellskapelle » (Tell's chapel, 1879) decorated with 4 frescos by Ernst Stückelberg (realized between 1880 and 1882) . It is located on the « Tellsplatte » or « Tellenplatte » (Tell's slab) on the shore of Lake Lucerne at the foot of the Axenberg cliffs. He also walks the trail of the « Hohle Gasse » .

The Catholic chapel marks the site where according to legend, William Tell during a storm leapt from the boat of his captors (the « Tellensprung » - Leap of Tell) and escaped, allowing him to assassinate the tyrant Geßler and initiate the rebellion that led to the foundation of the Old Swiss Confederacy. The « Tellenplatte » is first mentioned in 1470 in the White Book of Sarnen, as « Tellen blatten » .

There are traditions of a chapel built on the site as early as 1388, but the earliest reliable mention of the chapel dates to the chronicle of Heinrich Brennwald (1508-1516) . In 1561, a society was established which held an annual memorial service at the chapel. The chapel was enlarged or rebuilt in 1589 to 1590. In 1599, its altars were dedicated to St. Sebastian, St. William, the Holy Trinity, the Blessed Virgin Mary and All Saints. From the 17th Century, the annual service and the associated procession were officially sanctioned by the canton of Uri.

### Rigi railway

Aware of the scenic location of Mount Rigi, Swiss engineer Niklaus Riggenbach master-minded the construction of a railway from Vitznau, on the shores of Lake Lucerne and the southern flank of Mount Rigi, to a point close to its summit. He already had the technology as he had patented, in France in 1863, a system of toothed racks set between the railway tracks interlocking with cog-wheels fitted under the locomotives.

Jointly, with fellow-engineers Olivier Zschokke and Adolf Naef, he submitted an application to the Canton of Lucerne for permission to build a line from Vitznau to Rigi Staffelhöhe, a point somewhat below the summit of Rigi, but the

nearest point to the summit within that canton. The cantonal administration already knew of the success of the Mount Washington Railway and saw the advantages in this construction, granting permission on 9 June 1869.

The construction itself began in the following September, the limited liability company, which had offered 1,250 shares was greatly over-subscribed on the first day of issue. On 21 May 1870, Riggenbach's birthday, locomotive No. 1, named « Stadt Luzern », made its first trial run. Exactly 1 year later, the first mountain railway using rack and pinion technology was officially opened. Riggenbach, never noted for missing an opportunity, drove the first train to the upper-terminus at Rigi Staffelhöhe.

The line, from Vitznau to Rigi Staffelhöhe was 5 kilometres (3.1 miles) long and climbed a total of 1,115 metres (3,658 feet) to reach a height of 1,550 metres (5,085 feet) at its summit, the maximum gradient being 1 in 4 (25 %).

As originally built, the Vitznau-Rigi Railway only reached Rigi Staffelhöhe, as that was the cantonal boundary between the Canton of Lucerne and the Canton of Schwyz. The summit of Mount Rigi is situated in the Canton of Schwyz, along with the northern slopes of the mountain and the town of Arth on Lake Zug below.

In 1870, a committee made-up of 12 citizens of Arth were granted a concession from the Schwyz Cantonal Council for a railway to operate from Arth via Oberarth to Rigi Kulm, together with a second line to connect Rigi Staffelhöhe to Rigi Kulm. The same engineering team who were responsible for the Vitznau-Rigi Railway also undertook responsibility for the construction for these lines.

The Arth company started by building the line from Rigi Staffelhöhe to Rigi Kulm, and this was ready for opening in time for the summer traffic in 1873. This line made an end-on connection with that from Vitznau and the Vitznau company operated their trains over it, paying the Arth company a ground rent for its use.

The line from Rigi Staffelhöhe to Rigi Kulm, was just 1.8 kilometres (1.1 miles) long but enabled trains to reach the summit at Rigi Kulm, a height of 1,752 metres (5,748 feet) above sea-level, a climb of a further 202 metres (662.7 feet) from Rigi Staffelhöhe.

The high-level platform of the Arth-Rigi Railway at Arth-Goldau station, with main-line platforms underneath. By the time construction started on the main-line of the Arth-Rigi Railway, construction had also started on the Gotthard railway, and it was clear that this main-line railway would include a station in Arth, now known as Arth-Goldau station. It was clearly important that the Arth-Rigi line should connect with this station.

The concession to construct the Arth-Rigi Railway was ceded, in 1873, to the International Company for Mountain Railways in Aarau, a company founded by Riggenbach and this company carried-out the railway project as general contractor at a cost of CHF 4.2 million and also supplied 5 of the 6 steam-locomotives needed to operate it. Construction of the first section, that from Arth-am-See, a station by Lake Zug, to Oberarth commenced in 1873 and once the position of the railway station had been agreed with the main-line company, in 1874, construction work on

the second section began, the Arth-Rigi Railway becoming operational on 4 June 1875. The line offered only summer-time services until 1884 when year-round operation commenced.

The line from Arth to the junction at Rigi Staffelhöhe was 6.8 kilometres (4.2 miles) long, making the total length of the Arth line 8.6 kilometres (5.3 miles) . The maximum gradient is 1 in 5 (20 %) .

Whilst the Arth-Rigi railway was under construction, another line on the Rigi massif was also being built. This linked Rigi Kaltbad, on the Vitznau-Rigi line, with Rigi Scheidegg to the east. Unlike the previous 2 lines, the Rigi-Scheidegg Railway followed the contours near the top of the mountain, rather than climbing it, and was not a rack-railway. Also unlike the other 2 lines, it was built to 1,000 millimetres (3 feet 3 3/8 inches) metre-gauge rather than standard gauge, and so, never made a direct connection to the other lines. The line opened, in 2 stages, in 1874 and 1875.

...

**Friday, 10 September 1880** : Anton Bruckner leaves Rigi-Kulm and arrives in Lucerne in the afternoon. From there, he heads for Munich.

**Munich - Salzburg - Vöcklabruck - Linz**

**Saturday, 11 September 1880** : Anton Bruckner arrives in Munich at 7 o'clock in the morning. At 10:45 am, he takes the train for Vöcklabruck making a stop in Salzburg.

While in Traunstein (near Salzburg) , Bruckner gets to know the « very nice » « Fräulein » Wisbauer, the daughter of the local in-keeper.

Once in Vöcklabruck, he meets with the Braun family.

Finally, Bruckner arrives in Linz around 5 o'clock in the evening.

During this last journey, Bruckner's personal diary indicates a long list of names of young girls whom he stopped on his way. If the candidate was seen as worthy and honest to become his wife, he would listen. Then, he tried to get more information about her character, her family and the dowry. On many occasions, he will go so far as to ask a friend or relative to make a thorough investigation. He wanted to make sure that the beloved had enough money to ensure the viability of the marriage. He also took into consideration the possibility that, in the event of his death, he would have no obligation towards her. Of course, light women will remain a symbol of sin and damnation.

**WAB 106 : St. Florian**

**After Saturday, 11 September 1880** : Anton Bruckner spends the rest of the summer holidays in St. Florian.

**Monday, 27 September 1880** : Still in St. Florian, Bruckner finished the first movement of his 6th Symphony, started 1 year ago. Central movements are considered as a musical achievement of his impressions of Switzerland. The Adagio will be completed on November 22 at the University of Vienna. And the Scherzo, on December 17, 1880.

### Rott writes to Hans Richter

**Monday, 23 August 1880** : Letter from Hans Rott to Hans Richter :

Rott announces he will visit Richter and show him his Symphony in E major.

Finally, the meeting will take place on **Thursday, 14 October 1880**.

### Rott visits Brahms

**Friday, 17 September 1880** : Hans Rott, suffering from lack of both family and money, and from an unrequited love, submits his Symphony to the Beethoven Prize competition, and goes to play it to Johannes Brahms, who enters a cruelly harsh judgment :

« The composition contained besides such beauty so much triviality and non-sense that the former could not possibly stem from Rott himself. »

Brahms advises Rott to give-up composition. Rott's Symphony boldly combines the styles of several major German / Austrian composers and, in the last movement, contains a theme presented 3 times which sounds much like that from the last movement of Brahms's own 1st Symphony - Brahms may easily have misinterpreted the combination of that with Wagnerian-style material as a put-down. All this stress is too much for Rott and his mind snaps.

### Serious anomaly

**Thursday, 9 October 1880** : Back in Vienna, Anton Bruckner applies for the prestigious post of assistant choir-master of the « Wiener Männergesang Verein » (Vienna Men's Choir Society) . His application is refused.

During this time, a serious anomaly develops in Bruckner's feet and legs which in no way helps his morale.

### Nephew's confirmation

**Tuesday, 12 October 1880** : Gustav Hueber is confirmed by Bishop Franz-Josef Rüdiger at St. Ulrich parish church in Vöcklabruck. Anton Bruckner, the godfather, is not able to attend the celebration.

### Rott leaves Vienna

**Thursday, 21 or Friday, 22 October 1880** : Hans Rott leaves Vienna.

**Rott, the insane**

**Saturday, 23 October 1880** : Hans Rott is declared insane by a psychiatrist.

**Vienna : Hotel « Kummer » , Paul Caro**

**After Friday, 22 October 1880 ?** : Pocket calendar entry by Anton Bruckner :

« (Schüler) Herr (Paul) Caro, Hotel Kummer, Mariahilferstraße. »

**End of September 1880** : Paul Caro from Breslau, aged 21, entered the class of counterpoint (first year) of Anton Bruckner at the Vienna Conservatory.

**University begins**

**Monday, 25 October 1880** : Pocket calendar entry by Anton Bruckner :

« University begins. »

**Mahler starts to teach**

**Monday, 1 November 1880** : Gustav Mahler announces in a letter to his friend Emil Freund that the composition of the Cantata, « Das Klagende Lied » , has been completed.

**October-November 1880** : Mahler ekes-out a precarious living by teaching.

**Mahler knows about Rott's madness**

**Monday, 1 November 1880** : Gustav Mahler wrote in a letter to Emil Freund :

« (...) My friend Hans Rott has gone mad ! (...) »

**Vienna Conservatory : Fall Semester (1880)**

**November 1880** : Among Anton Bruckner's students at the Vienna Conservatory during the Fall Semester :

Johann Evangelist Aichinger, Otto von Liebig, J. Schnabl et Rudolf Steiner.

## Rejection of Rott and Stroß

**Tuesday, 14 December 1880** : Meeting of the Jury for the Beethoven Composition Prize. The Symphonie in C major (dedicated to Anton Bruckner) by Conservatory student Alfred Stroß and the Symphony in E major by Conservatory student Hans Rott are both judged « unworthy » - unanimously, in the case of Rott. (According to Hans Richter's written report in the Archives of the Society of Friends of Music in Vienna.)

## « Franzl » , Bruckner's pug dog

Anton Bruckner owned a pug that he nicknamed : « Franzl » (in honour of the Emperor Franz-Josef ?) . The little dog (and perhaps even obese) was always at his side, in the classroom, during the courses at the Vienna Conservatory (« Konservatorium der Gesellschaft der Musikfreunde ») .

At lunch time, when the Master went-out to take his hearty meal at one of his favourite restaurants, he asked his « dear students » (fervent Brahmsians, not really receptive to Wagner's music) to take care of his little companion during his absence. They took the opportunity to entertain the little animal while constantly feeding him with chunks of sandwiches. One of them was the prodigious young violinist Fritz Kreisler, aged 7. After 3 years at the Conservatory (1882-1885) , Kreisler received a gold medal.

The pug has a mostly sedentary life. He may be subject to obesity, although this is preventable through regular exercise and a healthy diet. But in the company of Bruckner, is it really possible ???

« Mops » (which means « angry ») is the German word associated with this dog breed, of Chinese origin, which was brought to Europe in the 16th Century.

It is a dog with a flat-face, known for his snoring, his purring and, surprisingly, his meowing. He is much appreciated for his sweetness and his joyful spirit as well as his vivacity. The pug is loved by young children, for whom he will always have energy.

He does not groan when he is fondled or picked-up. He is not aggressive. He can be very sporty or, on the contrary, very quiet.

...

Ivan Petrovich Pavlov completed his studies in Leipzig and Breslau. In his first year in Leipzig, Pavlov attended the world-premiere of Bruckner's 7th Symphony under Artur Nikisch on December 30, 1884. He was so impressed that, when travelling to Vienna for a brief sojourn, he visited Bruckner in early February 1885. In his memoirs (unpublished - Archive of the Medical Faculty, St. Petersburg) , Pavlov recalled to have arrived at Bruckner's apartment at « Heßgasse » Number 4 when Bruckner was just teaching an amazing violin player, just 10 years old. Though, without mentioning a name, this must have been Fritz Kreisler, who in fact turned 10 on February 2, 1885. Pavlov was

particularly impressed by Bruckner's pug, « Franzl » and his interaction with young Fritz. His observations formed the basis for his later experiments - in particular, the fact that the pug started to drool immediately when Bruckner said to Doctor Pavlov and Fritz Kreisler :

“ Geh ma alle zum (Roten) ' Igel ' (Gasthaus) was essen, i bin hungrig. ” »

(« Go to the (Red) “ Hedgehog ” (Hotel) to eat. I am hungry. »)

### Brahms and cats

The rumour says that cats got Johannes Brahms back-up. The composer spent much time at his window in his Vienna home trying to hit neighbourhood cats with a harpoon manufactured from a bow and arrow.

Supposedly, Brahms began cat-bagging after the Czech composer Antonín Dvořák gave him a « Bohemian sparrow slaying bow » .

« After spearing the poor brutes, he reeled them in to his room after the manner of a trout-fisher. Then, he eagerly listened to the expiring groans of his victims and carefully jotted down in his note-book their “ ante-mortem ” remarks. »

(Richard Wagner)

...

Brahms, so it is said, was an avowed enemy of the feline tribe. Unlike Domenico Scarlatti, who was passionately fond of chords of the diminished cats, the phlegmatic Johannes spent much of his time at the window, particularly of moonlit nights, practising counterpoint on the race of cats, the kind that infest backyards of dear old Vienna. Antonín Dvořák had made his beloved friend and Master a present of a peculiar bow and arrow, which is used in Bohemia to slay sparrows. In and about Bohemia, it is named in the native tongue, « Slugj hym inye nech » . With this formidable weapon did the composer of orchestral cathedrals spend his leisure moments. Little wonder that Wagner became an anti-vivisectionist, for he, too, had been up in Brahms' backyard, but being near-sighted, usually missed his cat. Because of arduous practice Brahms always contrived to bring down his prey, and then (O diabolical device !), after spearing the poor brutes, he reeled them into his room after the manner of a trout fisher. Then so Wagner averred - he eagerly listened to the expiring groans of his victims and carefully jotted down in his note-book their « ante-mortem » remarks. Wagner declared that he (i.e. , Brahms !) worked up these piteous utterances in to his chamber-music, but then Wagner had never liked Brahms (...)

### Bruckner, an anti-Semite ?

Anton Bruckner was good and naive enough to become set-up by the viennese newspapers as an anti-Semite, which could only damage him. One day, at « The Red Hedgehog » Restaurant-Hotel (« Gasthof Zum Roten Igel ») , just when

he had again been denounced in the newspaper as an anti-Semite, he met Doctor Josef Königstein, the music-critic of the « Illustriertes Wiener Extrablatt » (he used to sign « k. st. ») .

Bruckner addressed him :

« So, “ Herr ” Doctor, what it says in the newspapers is absolutely not true - I have absolutely nothing against the Israelite gentlemen ! »

### Vienna : The « Red Hedgehog » Inn

The site dates back from **1385**.

The « Red Hedgehog » was mentioned for the first time in **1571**.

**1703** : The editorial office of the « Wienerischen Diariums » (« Viennese Diaries ») , founded by book-printer Johann Baptist Schönwetter, occupied part of the building on « Wildpretmarkt » (« Tuchlauben » Number 550) , in Vienna's 1st District.

**1811** : The building was divided in 2 entities : one on « Tuchlauben » , and one on « Wildpretmarkt » . At the time, the city register mentioned the existence of a transit-door.

**1822** : The Society of Friends of Music (« Gesellschaft der Musikfreunde ») rents premises within the « Red Hedgehog » House (« Haus zum Roten Igel ») - location : « Tuchlauben » Number 558 (later, Number 12) .

**1829** : The Society of Friends of Music buys the « Red Hedgehog » House, the building it had formerly rented, planning to replace this with a new building bringing the diverse activities of the « Musikverein » together under one roof.

**1831** : The « Gesellschaft der Musikfreunde » opens the doors to its new premises on « Tuchlauben » . Designed by Franz Löbl, the building also contains a concert-hall for around 700 people. This is Vienna's first purpose-built concert-hall - previously, concerts took-place in « salons » or theatres that served multiple purposes.

Upon the death of Archduke Rudolph, the « Gesellschaft der Musikfreunde » inherits his music-library. With the arrival of 90 chests, each weighing 250 kilogrammes, priceless musical artefacts become part of the « Musikverein's » collection.

**1837** : A new building (located at « Wildpretmarkt » Number 1) replaced the old one.

**1838** : The famous « Red Hedgehog » Inn (« Gasthof Zum Roten Igel ») opened its doors - occupying the ground-floor and the first floor.

The « Gesellschaft der Musikfreunde » celebrates its 25th anniversary in the Imperial Winter Riding School. More than 1,000 people take-part in 2 concerts performing Franz-Josef Haydn's Oratorio, « The Creation » .

The « Red Hedgehog » Inn served as a bastion for Democrat militants during the Revolution of **October 1848**. It also affects the « Gesellschaft der Musikfreunde » . For 9 months, the Music Society gives no concert performances and teaching is temporarily suspended at the « Konservatorium » . The « Musikverein » faces a severe financial crisis.

The inn stood right next to the « Red Hedgehog » House (« Konservatorium ») . A « porte cochère » gave easy access to the « café-restaurant » which would soon become an important meeting-place for the fine society : artists (Austrian painter Moritz von Schwind) , musicians (Franz Schubert, Robert Schumann, Felix Mendelssohn-Bartholdy) , professors and students of the « Conservatorium » , and regular users of the music library. Conviviality and passionate conversations were accompanied by coffee, delicious meals, beer and alcohol.

**1851** : The « Gesellschaft der Musikfreunde » itself undertakes a comprehensive reform of the organisation to overcome the political crisis. The number of members continues to grow and the « Konservatorium » is able to resume its activities. Alongside streamlining the internal structure, a new artistic direction proves decisive : the Orchestra for the Society's Concerts is, from now on, to be no longer composed of practising members, i.e. amateurs, but rather of professional musicians. The « Gesellschaft der Musikfreunde's » professionalisation is also a response to the founding of the Vienna Philharmonic Orchestra in 1842.

**1858** : While orchestral music is put into the hands of professionals, the « Gesellschaft der Musikfreunde » takes another approach with choral music. This remains the domain of practising amateur members - albeit in a new and highly efficient form. Thus, the « Singverein » is founded as a branch society of the « Gesellschaft der Musikfreunde » , with rising star Johann Herbeck as its first choral director. Under his leadership, the choir soon develops into an outstanding vocal ensemble in much demand among composers.

Up to the present day (in principle, at least) , not much has changed. The « Singverein » of the « Gesellschaft der Musikfreunde » is an « amateur choir » , while also being one of the best concert choirs in the world.

**1859** : To provide the instrumentalists among their members with a forum of their own, the « Gesellschaft der Musikfreunde » founds a second branch society, the « Orchesterverein » . This too keeps the tradition of « practising members » alive. The « Orchesterverein » today remains an enthusiastic amateur orchestra with a very active role in concert life.

**1862** : The celebratory performance of the « Messiah » to mark the 50th anniversary of the « Musikverein » testifies to its extraordinary cultural importance. Emperor Franz-Josef I. and Empress Elisabeth attend the concert together with other members of the Imperial family and government representatives of the highest-level.

The inauguration of the « Musikverein » on the « Karlplatz » , on **Thursday, 6 January 1870**, didn't compromise the survival of the « Red Hedgehog » Inn because the regular « clientèle » remained faithful.

Anton Webern, a native of Klagenfurt, arrived in Vienna in 1902. He studied composition with Arnold Schönberg from 1904. He also became a fervent guest at the « Red Hedgehog » .

The « Red Hedgehog » Inn closed its doors in 1906. The demolition was due to the construction of a new building by architect Franz Rieß, which started in 1904. It was bought by the Austrian Industrial and Commercial Bank (« Österreichischen Industrie- und Handelsbank ») on March 19, 1918. On the top of its rounded outer-wall, at « Brandstätte » Number 8, the sculpted crest of a Red Hedgehog reminds us of the old iconic tavern.

(In the same vein, the building where Johannes Brahms lived in Vienna during the last 26 years of his life was curiously demolished in 1907, without any qualms - exactly 10 years after the composer's death.)

The « Amadeus » Hotel, located at « Wildpretmarkt » Number 5, now stands on the former site of the « Red Hedgehog » .

### « Zum Rothen Igel » : Crazy hours

Far from limiting oneself to the door of the amphitheatre, the relations between Master and disciples continued in the city life ; and Bruckner always brought a group of young people with him to the restaurant, where they talked late at night while eating good food and drinking mugs of « Pilsner » . Some establishments pride themselves on having been the theatre of these encounters which were among the highlights of the Viennese cultural life.

**Sunday, 4 April 1880** : Pocket calendar entry by Anton Bruckner at the guest-house « Zum Rothen Igel » :

Notes on a card-game (?) or similar ...

« On 4 April, the funniest people at the “ Hedgehog ” :

1) Rosner (Leopold Rosner ?) .

2) Wildner.

3) August (Göllerich or Stradal ?) .

4) Pruda.

5) “ Ego ” (me, Bruckner) .

### The left-handed cherub plying the lyre

**Saturday, 1 May 1880** : Inauguration of the impressive bronze monument (built on the initiative of the « Gesellschaft

der Musikfreunde ») to the memory of Ludwig van Beethoven - sitting on a chair. It is located in the 1st District, in front of the Academic « Gymnasium » (today, the « Beethovenplatz » between the « Christinengasse » and the « Fichtegasse » , not far from the « Konzerthaus ») .

Below, at the sides of the pedestal, sit 2 mythical characters :

On the right of the composer : a chained « Prometheus » which undergoes the assaults of a vulture that tries to cling to his wrist. « Prometheus » incarnates the first humanist in the history of mankind, the one who disobeyed the gods and who paid dearly for the price.

On the left of the composer : a winged « Nike » , the goddess of Victory, who holds in her right-hand a laurel wreath raised to heaven. She guides the heroes in the course of their exploits. It symbolizes eternal glory.

They both impersonate the suffering for the sake of humanity and eternal glory.

On the front and back of the pedestal is a ring of 9 cherubs symbolizing the composer's gift to the world : 5 in front and 4 in back, who represent (on one level) the 9 Symphonies.

They may also stand for the different aspects of Beethoven's music : heroic, pastoral, elegiac, tragic, idyllic, painful, pastoral.

In the centre of the front-group, the only cherub with wings, a left-handed (!) lyre-player (the instrument of Orpheus) , with a knee on the ground, is balanced by the figure of a swan on the verso of the monument - possibly a literal reference to Beethoven's « swan song » of the 9th Symphony.

Hans Commenda, a close friend of Bruckner, recounts this anecdote :

An enthusiastic Bruckner went to see the sculptor Caspar Clemens von Zumbusch to congratulate him and to tell him all the admiration he had for the composer he had just celebrated. But what was his disappointment when one of his students at the Conservatory pointed-out to him that the cherub in the centre of the pedestal played the lyre ... with his left-hand !!

He then immediately left the classroom to go on site to check the statement of his pupil. It was with anger and dismay that he realized that the latter had said justly.

He returned to his class, quite disturbed, and sighed :

« Alas, you are right ! »

...

After a performance of Beethoven's 9th Symphony at the « Musikverein », Bruckner exclaimed :

« Oh, what a great work ! How much do I weigh next to him ? »

His colleague from the Conservatory, Professor Julius Epstein, heard Bruckner and said :

« You are among the greatest. »

The composer's reply did not wait :

« No, I feel like a little puppy who is trying to chase him. »

### Caspar Clemens von Zumbusch

The German sculptor Kaspar (Clemens Eduard) Zumbusch was born on 23 November 1830 in Herzebrock, Westphalia ; and died on 27 September 1915 in Rimsting, Bavaria. He became a pre-eminent sculptor of neo-Baroque monuments in Vienna.

In 1873 he was called to Vienna as professor at the Academy, a post he held until he was made « Professor Emeritus » in 1901.

Zumbusch also modeled many private funeral monuments, decorative works, and portrait busts, including one of Richard Wagner.

**1888** : Ritter von Zumbusch (a nobiliary particle) .

His brother Julius Zumbusch was a sculptor and one of his sons, Ludwig von Zumbusch, was a graphic artist and painter. Another of his sons, Leo von Zumbusch was a dermatologist known for his contribution to the identification of generalized pustular psoriasis.

### Steyr : Summer vacations

**1880's** : When Anton Bruckner spent part of his summer vacations in Steyr, he particularly enjoyed the company of 3 music-loving businessmen : Karl Almeroth, Isidor Dierkes and Karl Reder who indulged the composer in 2 of his favourite pursuits : coach-riding and « Pilsner » beer-drinking. The friendly trio was involved in a short-lived scheme to provide Bruckner with some financial help.

The trio was involved in a short-lived scheme to provide Bruckner with some financial help.

...

Bruckner paid a number of short-visits to Steyr, at different times during his lifetime. The earliest were probably during the 1843-1845 period when he was assistant school Master at Kronstorf, and he gave recitals on the parish church organ on at least 2 occasions during the 1870's. But it was the friendship and support of various friends, including Karl Almeroth, a businessman and amateur musician ; Leopold Hofmeyer, one of his most reliable copyists ; and the 2 parish priests, Georg Armingier and Johann Aichinger, that caused him to spend more of his summer vacation time in the quiet atmosphere of the Steyr rectory and less time at St. Florian, from 1884 onwards.

...

Karl Almeroth was a friend and one of Bruckner's sponsors. An affluent merchant and factory owner, he had close personal and commercial ties to Steyr : his father had been a member of the prestigious « Innerberger Hauptgewerkschaft » , in Steyr ; the well-known Almeroth blade factory was located in Neuzeug, the birth place of Bruckner's mother ; the family owned a villa in Steyr. Almeroth introduced the composer to influential circles, where he met the likes of Karl Reder, a wood merchant and land-owner, and the merchant Isidor Dierkes. This led to the formation of a « Steyrer Circle » which met on a regular basis in the Vienna of the 1880's. Reder was to play an important role in organizing financial support for Bruckner as part of the activities of the so-called « Steyrer Consortium » .

The contact with Almeroth was close enough for Bruckner to dedicate to him on 13 January 1878 the romantically inspired male-voice « Abendzauber » (WAB 57) .

### Franz Xaver Bayer

Franz Xaver Bayer, director of the parish church choir of the village of Steyr, from the **late-1880's**, was an enthusiastic advocate of Anton Bruckner's music and was responsible for several daring performances of his sacred works.

On one such occasion (a performance of his D minor Mass in Steyr Parish Church, on 2 April 1893) , Bruckner played the organ-part ; at a special reception after the performance, the delighted composer paid tribute to conductor and performers for their exemplary preparation of the work.

### Rott : From one lunatic asylum to the other

**Wednesday, 16 February 1881** : After a first suicide attempt, Hans Rott is transferred from the psychiatric wing of the General Hospital (« Allgemeines Krankenhaus ») to the Provincial Lunatic Asylum of the Crown land of Lower-Austria, near Vienna.

The diagnosis was : insanity, hallucinatory madness and paranoia. He continued composing at the asylum, later on, however, he gradually developed a deep depression and destroyed some of his compositions.

But Rott continues to compose and uses his manuscripts for toilet paper, saying :

« That's what human works are worth. »

Even when Rott was in the insane asylum, he answered as follows when asked if he could remember his friend Gustav Mahler :

« Certainly, certainly, Mahler is a genius. »

(According to the notes of his friend Joseph Seemüller.)

### Brünnefeld : Provincial Lunatic Asylum of Lower-Austria

The Provincial Lunatic Asylum of the Crown land of Lower-Austria in Brünnefeld (« Niederösterreichische Landesirrenanstalt am Brünnefeld ») was the first « real » asylum for the mentally ill in Vienna. It took-over from the « Narrenturm » (Fool's Tower) built under the reign of Emperor Josef II which was part of the General Hospital complex. Targeted clinical treatments only began with the arrival of the Lower-Austrian Provincial Lunatic Asylum.

At the time, the necessity to treat the mentally ill and stop to isolate them like real criminals was imperative.

In 1821, Prince Josef von Schwarzenberg (1769-1833) acquired from Doctor Leopold Pläsch von Seinsberg the Brünnefeld area known for its healing springs (located between the old General Hospital and the « Linienwall » - outer-line of fortifications for the city of Vienna which lay between the city's suburbs and outlying villages) and the agricultural cadastre « Number 27 » which was part of the estate of Brünnebad since 1805 (to become later Number 27 « Alserbachstraße » ; today, Number 16 « Lazarettgasse ») , in order to erect a modern mental health-centre. The project was temporarily delayed. Finally, on 14 February 1823, the Prince came to an agreement with the Austrian State. The new hospital (comprising 33 rooms for patient) will extend over 1,152 square-feet (10.23 hectares) .

Another project for a modern asylum was developed by Cajetan Josef Schiefer (born on 12 March 1791 in Komotau, Bohemia ; died on 12 November 1864 probably in Vienna) in collaboration with physician Doctor Johann Nepomuk von Raimann.

In 1820, Raimann had already been commissioned by the Austrian government to study such contemporary installations elsewhere which influenced his final proposal. It offered decent quarters for the sick, therapeutic facilities, an auditorium for theatrical performances and music concerts. The court-yard was surrounded by 4 different wings : one for the female patients, one for male patients, one for violent patients and one for quiet patients. But despite its approval by the Emperor, the project could not be realized due to lack of money.

Later, similar projects were designed by Doctor A. Leopold Köstler who was the head-physician of the mental department at the General Hospital of Vienna - chief of the « Narrenturm » from 1836 to 1839. But Köstler was not able not finalize his plan since he died before.

Until 1869, Köstler planned to purchase and expand the private clinic of the Austrian psychiatrist Doctor Bruno Görge (founded in 1820 in Döbling, near the « Narrenturm ») .

Köstler's successor, Doctor Michael von Biszanik used a different approach to bring the case to a successful conclusion. He undertook negotiations with Doctor Görge in order to acquire his private clinic. But the plan failed.

Due to the lack of space at the « Narrenturm » , the Imperial-Royal Provincial Building Department became involved in 1840 and, in turn, prepared plans for the long-overdue construction of a new facility. Further plans came from the Court architects Paul Wilhelm Eduard Sprenger and Ferdinand Fellner senior. Fellner's proposition, based on sketches by Counsellor Nádherný, were accepted by the Committee who asked him to draw-up the detailed plans. They were approved by Emperor Ferdinand I.

The construction (located at Number 26 « am Alserbach » ; today : Number 14 « Lazarettgasse ») began in April 1848. The new building was originally named « Imperial-Royal Lunatic Asylum » and was completed in October 1852. The sick were admitted as soon as 1 August 1853. The hospital will be later renamed : Provincial Lunatic Asylum of the Crown land of Lower-Austria in Bründlfeld.

On 17 February 1864, the administration of the Fund of the Lunatic Asylum was transferred to the Province of Lower-Austria, which facilitated the implementation of reforms.

On 1 July 1870, the Minister of Education Karl von Stremayr approved the highest-resolution of the establishment of the first Psychiatric University Clinic. Doctor Theodor Meynert was named Chairman of the Board.

(Doctor Carl von Rokitansky help Meynert in supplying a prosector facility, then, the Psychiatric University Clinic.)

During the construction of the metropolitan railway network of the city of Vienna, a commuter-station and freight-station were planned in Michelbeuern (today : Alsergrund, 9th District of Vienna) . Also, the local market-hall would be transformed into a central-market for sponges and berries. The Provincial Medical Officer of Lower-Austria filed a notice of opposition about the location of the future stations. The noise caused by the railway should not interfere with the sick during their sleep.

The solemn inauguration of the Michelbeuern station took place on 9 May 1898 in the presence of Emperor Franz-Josef.

Among the most prominent patients : physician Doctor Ignaz Philipp Semmelweis (who died in 1865) and sculptor Anton Dominik Fernkorn (who died in 1878) .

Gustav Mahler's last residence was close-by in the 9th District of Vienna.

The death-beds of Antonio Vivaldi, Anton Bruckner, and Johann Strauß are in the direct vicinity of the Vienna University

Technical School.

Expansion projects at the Lunatic Asylum were carried-out in 1876-1877, 1888 and 1903. But the institution won't be able to cover the increasing demand for beds. In 1902, the Lower-Austrian Assembly decided to sell the Brünnefeld Asylum. It was approximately where the clinical complexes of the New General Hospital now stand.

### Directors

**1853-1869** : Josef Gottfried von Riedel.

**1869-1872** : Karl Spurzheim.

**1872-1885** : Ludwig Schlager.

**1885-1895** : Moritz Gauster.

**1895-1907** : Adalbert Tilkowsky.

Josef Berze was temporarily named until the relocation of the institution.

### Prominent Doctors

**1883** : Julius Wagner-Jauregg received psychiatric training from Doctor Maximilian Leidesdorf at the first Psychiatry Clinic at Vienna University.

**1886** : The « Schlagergasse » in Alsergrund (Vienna's 9th District) was named in honour of Director Ludwig Schlager.

### The development of Viennese « care for the insane »

The 18th Century saw the creation of numerous asylums which continued into the 19th Century and which provided the material structure for the future development of psychiatry :

Bologna (1710) ; Warsaw (1726) ; Berlin (1728) ; Dublin (1745) ; Ludwigsburg (1746) ; London (1759) ; Deventer (1760) ; Manchester, Copenhagen (1766) ; Williamsburg (1773) ; Vienna (1784) ; Frankfurt on Main (1785) .

Abraham Joly in Geneva (1787) ; Philippe Pinel in Paris (1793) ; Quaker William Tuke in York (1796) ; Vincenzo Chiarugi in Tuscany (after 1788) ; Johann Gottfried Langermann in Bayreuth (1805) , struck-off the chains from the insane.

Langerman was super-intendent of an asylum near Bayreuth. It was largely due to his efforts that other humanitarian

hospitals were established at Seidburg and Leubus, in Prussia.

From the early 19th Century, the city of Leipzig played an important part in the development of psychology and psychiatry.

In the course of the 19th Century, psychiatric hospitals were established in all Austrian provinces, which, in addition to university clinics for psychiatry, provide most of the in-patient psychiatric care in Austria.

From 1784, the « insane » of Vienna were accommodated in a circular 5 storey building. Emperor Josef II, at whose instigation the asylum had been built, thus marked the beginning of the « care of the insane » in Europe. Fully in keeping with the « Enlightened » reasoning that was typical of this Century, in a Court decree of 1781, he laid-down who he thought should be detained in the tower, namely :

« Those who cause damage or disgust, ... insane persons or those affected by cankers or similar disfigurements, who must be removed from society at large and from the eyes of its people ... »

The « Narrenturm » (Fools' Tower) , which, even today, is still jocularly referred to by the Viennese as the « Gugelhupf » (a type of tall round cake) on account of its distinctive circular appearance (used to classify patients) , stood beyond the city-walls and at the most remote point within the Vienna General Hospital complex. It was the only building in the immediate area that was entirely newly-constructed. It was paid for by Emperor Josef II, who also gave instructions as to its design. Access is only by one door. Behind thick doors of wood and steel bars, in 139 small single-cells, the insane were detained, excluded and separated from society.

The main difference between the « Narrenturm » and the « Panopticon » (institutional prison designed by the English philosopher and social theorist Jeremy Bentham in the late 18th Century) was that the supervision was carried-out from a guards' building which bisected the « Narrenturm » rather than a round tower at the centre.

Isidor Canevale created a cylindrical building whose exterior was originally entirely rusticated. The slit-like windows give the building the appearance of a fortification, and similar designs are more commonly to be found in prison architecture than in hospital design. Behind the narrow openings for daylight, there are the radially arranged cells, with a walk-way connecting with the court. They can only be reached through the guardians' wing which divides the court in 2 sections. Through this arrangement, the care and supervision of patients could be maintained with a minimum level of staffing.

The circular architecture of the « Narrenturm » allowed strict observation of inmates from all sides. The « exclusion of irrationality » was then one of the tasks of the « Medical Police » , who were required to provide for public security, since the immediate responsibilities of medicine were not at all clear in the 18th Century. For this reason, the total number of the insane was also small since there was still no pathological or psychiatric expertise in this field. Whether lunatics, beggars or loiterers, they were all included in the group of the « poor » . It was only with the building of poor-houses, correctional institutions, work-houses, foundling homes and the « Narrenturm » that there began, step by

step, a process of social differentiation. Abnormal and asocial people were supposed to be resocialized as far as possible, using appropriate measures. Subsequently, a distinction was made between « curable » and « incurable » cases of insanity. The incurable remained incarcerated in the « Narrenturm » .

With all these establishments, institutions and instruments of control, the State sought to gain the most precise information about the population. This central surveillance and social discipline « from above » characterized the enlightened absolutism of Emperor Josef II. It was only in the 19th Century that the term « mental ill » appeared and with it a new status. The insane person was adopted into medical discourse and became a potentially curable patient.

...

Until the 18th Century, it was customary to isolate the insane from the healthy and to keep them beast-like in penitentiaries, prisons, or poor and sick-houses. In Austria, « care for the insane » proper began under Emperor Josef II in 1784 when the « Narrenturm » (Fools' Tower) was erected in Vienna's General Hospital. Only in the mid-19th Century did « madness » come to be regarded as an illness.

**1784** : « Narrenturm » (Fools' Tower) erected in Vienna's General Hospital under the reign of Emperor Josef II.

**1853** : Use of the « Narrenturm » ceased. The newly-built Lower-Austrian Lunatic Asylum opened in Brünnefeld (today's 9th District of Vienna) .

**1859** : With his book « On the Origins of Species by Means of Natural Selection or the Preservation of Favoured Races in the Struggle for Life » , the English naturalist Charles Darwin (1809-1882) revolutionizes the natural sciences. Subsequent scientists and ideologues apply Darwin's theories, especially about the survival of the fittest through selection in the « struggle for life » not only to animal and plant species, but also to human society (Social Darwinism) .

**1868** : The German zoologist and natural philosopher Ernst Hæckel (1834-1919) promotes Social Darwinist ideas in his work « Natürliche Schöpfungsgeschichte » (Natural History of Creation) .

**1883** : Francis Galton, a cousin of Charles Darwin, introduces the idea of eugenics into scientific discourse. He advocates systematic incentives by the State to encourage the English elite to marry early and beget numerous offspring ; in this manner, the « number of the excellent » could increase from generation to generation.

**1895** : Alfred Plöetz (1860-1940) , main proponent of German racial hygiene, publishes his major work « Die Tüchtigkeit unserer Rasse und der Schutz der Schwachen » (The Excellence of our Race and the Protection of the Weak) , which calls for a « genetic improvement » - i.e. , a radical restructuring of society along socio-biological and racist principles. In contrast to the « eugenicists » , the « völkisch » nationally orientated advocates of racial hygiene around Plöetz also postulate a genetic hierarchy of the various « races » (Aryans forming the top) .

**1903** : The physician Wilhelm Schallmayer (1857-1919) publishes his treatise « Vererbung und Auslese im Lebenslauf der Völker » (Heredity and Selection in Peoples' Generations) , which becomes the leading standard work on eugenics.

**1904** : Alfred Plöetz launches the magazine « Archiv für Rassen- und Gesellschaftsbiologie » (Archive for Racial and Social Biology) , which is distributed internationally.

**1905** : Plöetz establishes the Society for Racial Hygiene in Berlin, and the German Society for Racial Hygiene in 1910.

**Friday, 18 October 1907** : The « Niederösterreichische Landes-Heil- und Pflegeanstalt für Geistes- und Nervenkrankte “ Am Steinhof ” » is opened. It comprises 34 pavilions (clinic, nursing home, sanatorium) and has an overall capacity of 2,200 beds.

**1914-1918** : In the course of World War I, almost 2,800 « Steinhof » patients succumb to infectious diseases and the drastic scarcity of food.

**1920** : The expert in penal law, Karl Binding (1841-1920) and the psychiatrist Alfred Hoche (1865-1943) are the first to coin the term « lebensunwert » (unworthy to live) in their paper « Liberalising the Destruction of Unworthy Lives. Scope and Form. » , in which they advocate the right to kill the incurably sick. The paper triggers a vehement discussion on euthanasia in the Weimar Republic.

**1924-1925** : Foundation of the Viennese Society for Racial Hygiene. The first president is Professor Otto Reche, who has been called from Hamburg to Vienna to become head of the university's Department of Anthropology. His deputy is the hygienist Professor Heinrich Reichel. The Society plays a central role in the promulgation of eugenicist ideas at the universities and in public even before 1938. The members, some of them notable scientists, largely come from the German « völkisch » and anti-Semitic academic « milieu » .

**1927** : Publication of the book « Sterilisation by Law of Mentally Handicapped People » by the Catholic theologian Joseph Mayer, who argues that the sterilization of mentally sick people is compatible with the principles of Catholic moral theology. With this theological opinion, Mayer remains in a minority position within the Catholic church.

**1928** : In a speech for the « Österreichischer Bund für Volksaufartung und Erbkunde » , the Social-Democrat Julius Tandler, Viennese City Councilor for Welfare, advocates the « sterilization of the inferior » . The Social-Democrats also discuss questions of population policies which despite their social focus aim at « hygienizing » society and eliminating fringe groups.

**1931** : The « Wiener Klinische Wochenschrift » , published by the Viennese Society of Physicians, publishes a contribution of Heinrich Reichel's on « Alfred Plöetz and the Contemporary Eugenic Movement » . Eugenic ideas are published in respectable media by eminent scientists such as Nobel laureate Julius Wagner-Jauregg. The latter's essay « Modern Eugenics » (1935) shows numerous parallels with the Nazi health policies carried-out since 1933.

**1931** : The « Centralausschuß der Evangelischen Inneren Mission » establishes an expert conference on « Eugenics and Welfare » . At the first conference in Treysa, from 18-20 May 1931, the sterilization of mentally sick people is described as « religiously and morally justifiable » in certain cases.

**Monday, 30 January 1933** : Adolf Hitler becomes chancellor of the German « Reich » . The National-Socialists seize power in Germany. Racism and racial hygiene are now part of State ideology and form a central component of Nazi policy.

**Friday, 14 July 1933** : The « Law for the Prevention of Hereditary Sick Progeny » is passed, on the basis of which almost 260,000 people in the German « Reich » are subjected to forced sterilizations until 1940 alone.

**Tuesday, 3 April 1934** : The « Law for the Standardization of the Health System » enables the creation of a nationwide net of public health offices in charge of carrying-out « genetic and racial hygiene » .

**Sunday, 15 September 1935** : The Nuremberg Laws are decreed at the Nuremberg Rally : the « Gesetz zum Schutz des deutschen Blutes » , or « Blutschutzgesetz » , criminalizes inter-marriage of « Jews » and « non-Jews » and any extra-marital sexual inter-course between « Jews » and « citizens of German blood » . It also forbids female German citizens under 45 to be employed in a « Jewish household » . According to the « Reichsbürgergesetz » , only « citizens of German or racially related blood » now count as citizens of the « Reich » ; « Jews » are merely classified as citizens who no longer have a claim to civil rights. The « Reichsbürgergesetz » forms the legal basis for countless further anti-Jewish and racist laws and regulations. Already at the Nuremberg Rally, Adolf Hitler announces the extermination of handicapped, mentally ill and non-conformist people (« millstone existences » and « useless eaters ») in a conversation with « Reichsärzeführer » Gerhart Wagner.

**Friday, 18 October 1935** : The « Gesetz zum Schutz der Erbgesundheit des deutschen Volkes » (Marriage Health Law) enables the public health offices to prevent marriages deemed undesirable from the point-of-view of genetic and racial hygiene.

**Saturday, 12 March 1938** : Annexation (« Anschluß ») of Austria with the German « Reich » . the former Austrian health-system begins to be restructured on the model of the « Altreich » . Vienna's public health offices start a genetic « stock-taking » of the city's population by means of a « genetic file » supposed to register all « inferior » people. By 1945, more than 700,000 file-cards have been compiled.

With the « Anschluß » , the Jewish population begins systematically to be driven-out of all areas of the health- and welfare-system. The anti-Jewish laws and regulations now also coming into force in Austria gradually ruin the social and economic existence of Jewish doctors. A majority of these succeed in escaping abroad, mainly to the United States and Great Britain. Also affected by the expulsion are Jewish university teachers ; they are largely replaced by doctors coming from the Nazi movement.

**July 1938** : Jewish doctors lose their contracts.

**Friday, 30 September 1938** : The « 4th amendment » to the « Reichsbürgergesetz » annihilates Jewish doctors' licences. Only Jewish « Krankenbehandler » are permitted for the remaining Jewish population. There now live 370 Jews in Vienna, and, by 1945, the number is reduced to almost zero through expulsion and deportations to concentration camps and ghettos.

**Summer 1939** : « The Knauer case » . The parents' request to Adolf Hitler to sanction « mercy killing » of their severely handicapped « child K. » initiates the practice of « children's euthanasia » .

**Friday, 18 August 1939** : A secret decree of the « Reich » Ministry of the Interior obliges all mid-wives and senior doctors in maternity wards to report to the respective public health offices any case of deformity (idiocy, mongolism, micro-cephaly, hydro-cephalus, misshapen limbs) and infants up to the age of 3 suffering from these. This decree can be seen as the prelude to « children's euthanasia » .

**Friday, 1 September 1939** : German attack on Poland. Start of World War II. Adolf Hitler's « authorization » to grant « mercy killing » to the « incurably sick » bears the date of the outbreak of War - it was presumably given at a later date and antedated. The chief of the « Führer's » Chancellery, « Reichsleiter » Philipp Bouhler, and Hitler's doctor, Karl Brandt (who had both been put in charge of organizing « children's euthanasia » several months earlier) are appointed to carry-out the « euthanasia » programme. Because the « Führer's » Chancellery must, on no account, be connected with the euthanasia killings Bouhler, Brandt and Herbert Linden of the « Reich » Ministry of the Interior create several « front-organizations » whose headquarters (« Zentraldienststelle ») is located at Number 4 on « Tiergarten-Straße » , in Berlin. The « Zentraldienststelle » reports direct to Main Office II of the « Führer's » Chancellery, headed by Viktor Brack. The abbreviation « T4 » is soon used by everyone involved as a designation for the « Zentraldienststelle » and a code-name for the killing programme targeted especially at the patients in clinics and sanatoria.

### Vienna General Hospital : the « Fool's Tower »

The « Narrenturm » (Fool's Tower) in Vienna is continental Europe's oldest building for the accommodation of mental patients. Built in 1784, it is next to the site of the old Vienna General Hospital (today, a university campus) , and is now home to the Federal Pathologic-Anatomical Museum, Vienna (« Pathologisch-anatomisches Bundesmuseum Wien ») .

The « Narrenturm » was constructed by Isidore Canevale in 1784, under Emperor Josef II. It consisted of a 5 storey, fortress-like circular building with 28 rooms and a ring of slit windows, plus a central chamber aligned north-south. There were in total 139 individual cells for the inmates. The building of the « Narrenturm » was prompted by the discovery of underground dungeons used by the Capuchin monks of Vienna for housing their mentally ill brethren ; another factor was that Josef II had learned about similar institutions in France during his travels there. The construction of the « Narrenturm » points to a new attitude towards the mentally ill - they began to be distinguished from the rest of society, and not simply classified among the general category of « the poor » .

Each cell had strong, barred doors as well as chains for restraining inmates. With its barracks-like appearance, the

tower was a visible expression of the segregation, stigmatization and criminalization of socially deviant forms of behaviour.

By the late-1790's, the tower had already been made fully-obsolete by innovations in the treatment of mental patients. Despite appearances, the « Narrenturm » was not an implementation of Jeremy Bentham's hypothetical panopticon, as the cells could not be monitored from a central post.

The tower's round shape is the source of the Viennese slang word « Gugelhupf » (a type of tall round cake) for mental asylums and psychiatric clinics.

When it was first built, the « Narrenturm » had a lightning rod (or « lightning catcher ») installed on the roof-ridge. 2 of the supporting fixtures can still be seen in the inner-chamber. In that time, Václav Prokop Diviš, a clergyman in Přímětice near Znojmo, had studied plant growth and healing with electrical currents present, publishing his findings to the medical community. He was not the only person who believed electricity to have health benefits - however, it is not known whether the lightning rod in the « Narrenturm », whose remnants are probably the oldest surviving pieces of such a device in the world, was used in the treatment of patients.

The tower is currently home to the Federal Pathologic-Anatomical Museum, founded by Emperor Francis II in 1796 as the « Museum of the Pathologic-Anatomical Institute ». It has been a national museum (« Bundesmuseum ») since 1974.

Parts of the former Electro-Pathological Museum, founded in 1936 by Stefan Jellinek, are housed here. Jellinek was forced to leave the country in 1939, but regained his old collection after the War. A new exhibition was created after Jellinek's death, in 1968, by his colleague Franz Maresch. In the 1980's, the « Technisches Museum Wien » took-over a large part of the collection, while its preserved human and animal exhibits were transferred to the Pathologic-Anatomical Museum.

### Brahms's darkest secret

Johannes Brahms played in Hamburg's water-front bars in his early teens. The prostitutes molested him. He was traumatized by the experience. It wrecked his relations with women. He told his story to Clara Schumann in his 20's. In middle-age, he told it to his surgeon friend Doctor Theodor Billroth. In old age, he told it to music-critics Hans Gal and Max Graf, to friend Max Friedlander - and to Max Kalbeck. (Jan Swafford)

...

In 1855, Johannes Brahms wrote the pianist Clara Schumann a naked cry of frustration :

« I can do nothing but think of you ... What have you done to me ? Can't you remove the spell you have cast over me ? »

The situation between them at the time was messy - very messy. Clara was 35, Brahms 21, she famous, he rather more infamous. She was married to the composer Robert Schumann, and the pair had 7 young children. On the other hand, for more than a year, Clara's husband had been in an asylum and Clara had not been allowed to see him. When Robert fell off the edge, Brahms had hastened to her side.

Now Brahms, Robert's « protégé » and discovery, was helplessly in love with Robert's wife. They had not expected it, didn't want it, and so on. Brahms loved and admired Robert. Shortly before jumping in the Rhine to escape the demonic Oratorios in his head, Robert had made the name Brahms known across Europe, declaring this student from Hamburg the coming saviour of German music.

Brahms, meanwhile, was living with Clara and the children - his bedroom on a separate floor, to be sure, but spending most of his time consoling her, helping with the children, and going nearly out of his mind with yearning.

In those years Brahms was slim, beardless and drop-dead handsome. Gossip was sizzling in musical circles. Clara was yearning mightily, too, but as with Brahms, her feelings were tangled-up with anxiety and guilt. Robert and Clara had been, after all, the supreme musical romance of the Romantic period. Clara was the love of Robert's life, his prime musical champion, the heroic force that had held together his splintering mind longer than anyone could have imagined.

There are more ironies in this first and greatest, if not precisely last, love of Brahms's life. If he would not marry Clara, neither would he marry anybody else - in his heart, he could never leave Clara, nor she him. For the rest of their lives, they would maintain their strange but inescapable connection. They spent holidays together. They hugged and kissed.

Their love may never have been consummated. This may seem absurd. But these were different times : no birth control, lots of disease. Proper women shunned affairs. In later years, Brahms told an acquaintance that he had never compromised a respectable woman, and for him, the definition of a respectable woman was Clara. He once described the aged Clara to a friend thus :

« Virginal as ever. »

It is hardly a question of Brahms or Clara being sexless. Brahms was famously devoted to prostitutes ; for his purposes, he seemed to relegate sex to the professional variety. During their marriage, Clara and Robert had maintained a kind of short-hand sexual diary, for medical reasons, which revealed that they were startlingly active throughout. Recall the 7 children. And some years later, Clara had a brief, unhappy affair with Theodor Kirchner, one of Brahms's best friends. The latter business did not emerge until recent years, and, as far as we know, Brahms never suspected. At one point, he wrote to Clara that Kirchner was talking about killing himself. Never mind, Clara replied, he says that all the time. We may presume this was after the love-affair.

In short, it was all a splendid mess. What seems to have motivated the rest of Brahms's life, Romantic and otherwise, was no more mess. He kept to a life of composing and performing, fought with his friends, tried with imperfect success

to keep women at bay, and fled real-life drama whenever it appeared. But the real mess, and a big one, lay inside Brahms himself, in his relations to women and to emotional life in general.

The chaos, the divided nature, likely started at a vulnerable time. At age 13, Brahms was already a phenomenon, with his teachers predicting great things. His parents were supportive, but they were also limited and naive. At some point, money was short, so the boy was sent to earn his keep playing piano in some water-front establishments where his father had worked in his own youth. Maybe these places had been something of a lark to the father. They were not to Brahms.

Popular with sailors, these joints combined the services of bar, restaurant, dance-hall and brothel. Brahms was delicately pretty and bad things happened to him in the bars. Mostly, he only hinted at what they were (to Clara among others), but for the rest of his life, he talked about it, with rage and anguish and sometimes with a fierce pride, for having survived. It steeled him, he said. And this is true. Brahms reached maturity tough as nails.

He said that these experiences ruined women for him. One night, in his cups, he broke-up a party by branding all women with a word so sordid that nobody would repeat it.

To the friend delegated to sober him up in the park, Brahms raved :

« You tell me I should have the same respect, the same exalted homage for women that you have. You expect that of a man cursed with a childhood like mine. »

In our terms, German culture at that time was thoroughly misogynistic. Brahms was more so. He relegated sexuality to prostitutes, joked constantly about lady musicians. One woman recalled watching him at a party, stroking his moustache and leering at the girls « as a greedy boy stares at jam tartlets » .

Yet, if you happened to be female and happened to have talent, there was nobody you would rather have in your corner than Brahms. To a number of women performers, he gave extravagantly of his time and money and influence. One was the teenage violinist Marie Soldat, whom he sent-off to study with his friend Josef Joachim.

When at 20, Soldat made a sensation in Vienna with his Violin Concerto, Brahms was heard shouting from the balcony :

« Couldn't she hold her own with 10 men ? »

Did he love Marie ? Probably. How did he squire her ? He took her to Vienna's « Prater » fun-fair for the merry-go-round and puppet-show.

So, Brahms was paradoxically divided about women, as he was about many things.

He fell in love periodically after Clara, usually with singers. With the first, Agathe, he exchanged rings, but then, sent

her a brutal note :

« I love you ! ... But I can't wear chains. »

Agathe was not the sort you wrote that to. She broke it off and grieved for years.

He admitted to friends :

« I have played the scoundrel with Agathe. »

Brahms understood himself and his divided nature with un-sentimental clarity. He was a classicising Romantic, a loner who was a creature of the musical main-stream, a backward-looking artist who anticipated and inspired the future of music. Brahms scorned women and loved them and fled from them, but inescapably needed them.

Whatever the chaos in Brahms's mind (« chaos » : his own word, describing his feelings as a teenager) , he negotiated his life with extraordinary discipline, common sense, integrity and honesty. The chaos of emotion shackled and subdued by a relentless sense of form and discipline : that is Brahms's art in a nutshell. Likewise, his life.

...

Brahms had a lifelong adoration of Clara Schumann, a succession of infatuations with young singers followed by broken marriage proposals, and habitual transactions with prostitutes. He was deliberately secretive about his life and feelings. He wrote almost nothing about himself, and what he did write he destroyed.

Life was hard in the slums of Hamburg. To increase the family income, Brahms's father found him jobs playing piano in the neighbourhood taverns. Slight, blond, and beautiful, the young teenager spent nightmare evenings at the piano, surrounded by drunken sailors and prostitutes who made him witness sexual and violent acts. They would even undress him and pass him around the room to be fondled as they pleased.

Brahms was profoundly affected by 3 years of these emotionally maiming experiences. Psychologically and spiritually wounded, he was sent to live with a relative in the country-side to recover. There, he discovered the beauty of nature and was able to bury the trauma. But he was left with emotional and physical scars : He remained small and under-developed into his late-20's. He had no facial hair and looked like a lovely blond boy, undoubtedly mortifying for a young man trying to make it in the world as a composer and pianist.

The profound psychological polarities in Brahms's personality and the traumatic experiences of his youth influenced his life choices. He could not reconcile his discomfort at being constrained by any system or relationship with having a bourgeois lifestyle, wife, children, and steady job. Despite the large amounts of money he earned, he was frugal to a fault. His home was modest. He ate in the cheapest restaurants and dressed like a vagrant, with a large safety-pin holding his coat together.

...

To supplement his income, Brahms, the teenager, played in taverns. His parents were an ill-matched couple and he frequently witnessed their violent arguments as a child. Brahms never married and seems to have resorted to prostitutes when the need arose.

In the 1880's, so the story goes, Brahms entered a somewhat dubious establishment and was accosted by a well-known prostitute with the greeting « Professor, play us some dance music. » , whereupon the great composer sat down at the piano and entertained the assembled company. Brahms sublimated his love and desire for women in his music.

Recognizing his awkwardness with women, he said :

« At least, it has saved me from Opera and marriage. »

...

Max Friedländer, an acquaintance of Brahms, attended a birthday party for the composer in 1880. After multiple glasses of champagne, the conversation turned to an admired woman known to everyone at the gathering. When Brahms was asked what he thought of her, he « broke-out into a horrible, coarse tirade against this lady, broadening out to include women in general, and actually ended by applying to them all an incredible, unspeakable epithet. »

The party quickly broke-up after this sobering outburst and Friedländer was tasked with walking the now heavily intoxicated Brahms back home. In their conversation, Brahms broke-out in another rant :

« You tell me I should have the same respect, the same exalted homage for women that you have ! ... You expect that of a man cursed with a childhood like mine ! »

Friedländer summarized how Brahms' father would « drag him from bed to play for dancing and accompany obscene songs in the most depraved dives » .

Brahms, recounting the horrors to Friedländer, continued :

« When the sailing ships made port after months of continuous voyaging, the sailors would rush-out of them like beasts of prey, looking for women. And these half-clad girls, to make the men still wilder, used to take me on their laps between dances, kiss and caress and excite me. That was my first impression of the love of women. And you expect me to honour them as you do ! »

Brahms was not only mentally affected by these events ; he lost weight, became anemic, developed insomnia, and severe and debilitating migraines. Although, later in life, Brahms described this time as character building, it no doubt had a lasting negative impact on him, precipitating his lifelong antagonistic views toward women. Instead of seeking-

out meaningful Romantic relationships, Brahms sought prostitutes to fulfill his sexual desires.

According to Eduard Hirschmann's 1933 article, « Brahms und die Frauen » :

« The objects of Brahms' sexuality were only girls of the people, mostly paid prostitutes. »

He treated the girls well and they returned his affection.

And Brahms was not shy about this fact. In his biography, Schauffler claims that Brahms was indeed « proud of never having broken-up households or seduced girls of good family » .

When hailed by a prostitute after a concert with friends, he turned to « Frau » Professor Brüll, the wife of the acclaimed Viennese pianist and close confidant Ignaz Brüll, and declared boastfully to have « never made a married woman or a “ Fräulein ” unhappy » .

...

After his death, when asked about his love-life, his house-keeper would only say :

« He was a very naughty old gentleman. »

### Brahms and Doctor Theodor Billroth

**Tuesday, 17 October 1876** : Letter from Johannes Brahms to Doctor Theodor Billroth :

« Dear friend,

(...)

I dislike writing too much, otherwise I would tell you in greater detail that in its form and manner, the invitation to Düsseldorf had to be most gratifying to me. The best men took the most sympathetic interest in it, and their letters were such that they had to silence any misgivings. My main reasons against it, on the other hand, are childish in nature and must remain unspoken. Maybe it's the good taverns in Vienna, the harsh, disagreeable Rhenish speech (particularly in Düsseldorf) and while remaining a bachelor in Vienna is not an issue, in a small-town, an old bachelor is a caricature. I no longer want to marry and, indeed, have reasons to fear the fair-sex.

In Karlsruhe for the Symphony, I do hope to see (Wilhelm) Lübke. My belated best thanks for your kind letter to Rügen. I did, meanwhile, hear about you occasionally through others. Were I to do what is proper for my body, I should probably run into you sometime ! Maybe in Karlsbad ! But now, good night and forgive the scrawl, I just had the desire to send you greetings, and now I ask you to also convey them to your wife and our friends.

Affectionately your,

J. Brahms. »

...

**Monday, 14 March 1881** : Private concert with Doctor Theodor Billroth, Johannes Brahms and Josef Hellmesberger senior.

As a surgeon, Theodor Billroth is generally regarded as the founding father of modern abdominal surgery. As a musician, he was a close friend and confidant of Johannes Brahms, a leading patron of the Viennese musical scene, and one of the first to attempt a scientific analysis of musicality.

...

Theodor Billroth lived in Zürich when he heard Johannes Brahms playing. The 2 men made friends rapidly. As Billroth lived in Vienna, he belonged to the closest Circle of friends of the composer. The lively correspondence between the 2 friends is published in parts and bespeaks their deep friendship. Richard Heuberger quoted in his memories of Johannes Brahms that Brahms was very cautious concerning the publication of confidential letters : Brahms told Heuberger that he had held Billroth's best letters back. They went together to concerts and, as Billroth was an excellent musician himself, Brahms regarded his opinion about musical matters as very serious. At Billroth's apartment on « Alserstraße » Number 20, Brahms's works were often performed for the first time during private concerts. They also went traveling with Billroth's family. Brahms took his first trip to Italy with the surgeon, for instance. In summer, they visited each other at their summer domiciles.

...

Theodor Billroth also had an appetite for music which he followed along with practicing medicine. He was a talented violinist and pianist and was close friend to the famous Viennese composer Johannes Brahms. Brahms used to send his compositions to Billroth for opinion before sending them for publishing. Billroth was a regular participant in rehearsals of Brahms's chamber works. They were also close to the famous Viennese music-critic Eduard Hanslick and the trio formed the core of musical conservatives. They thoroughly opposed the musical innovations of Franz Liszt and Richard Wagner and their conflicts are known as the « War of the Romantics » .

...

Theodor Billroth was a talented amateur pianist and violinist. He met Johannes Brahms in the 1860's, when the composer was a rising star of the Viennese musical scene. They became close friends and shared musical insights. Brahms frequently sent Billroth his original manuscripts in order to get his opinion before publication, and Billroth participated as a musician in trial rehearsals of many of Brahms' chamber works before their first performances. Brahms dedicated his first 2 String Quartets, Opus 51, to Billroth.

Billroth and Brahms, together with the acerbic and influential Viennese music-critic Eduard Hanslick, formed the core of the musical conservatives who opposed the innovations of Richard Wagner and Franz Liszt. In the conflict, known as the « War of the Romantics », Billroth supported Brahms, but was always fair and measured in his comments.

« Wagner was indeed a very considerable talent in many directions. », he wrote in 1888.

Billroth started an essay called « Wer ist musikalisch ? » (Who is musical ?), which was published posthumously by Hanslick. It was one of the earliest attempts to apply scientific methods to musicality. In the essay, Billroth identifies different types of amusicality (tone deafness, rhythm-deafness and harmony-deafness) that suggest some of the different cognitive skills involved in the perception of music. Billroth died before he could complete the research.

Excelling at both his vocation and his avocation, Billroth never saw science and music as being in conflict. On the contrary, he considered the 2 to complement each other.

He wrote in a letter :

« It is one of the superficialities of our time to see in science and in art 2 opposites. Imagination is the mother of both. »

...

Theodor Billroth not only had a steady hand and strong stomach, he also had a burning love for music. He was a talented amateur pianist and violinist and, during his stay in Switzerland, he served as the music-critic for the « Neue Züricher Zeitung » for 7 years. He also guest-conducted the Zürich Symphony Orchestra and tried his hands at composition. Yet, in the musical world, he is primarily remembered for his friendship with Johannes Brahms. Billroth came to Vienna, in 1867, on appointment from the Austrian Emperor Rudolf and he quickly thanked him by designing a maternity hospital, the « Rudolfinum », which today serves as a student dormitory. Brahms arrived in 1869 after having been rejected for a conducting post in his hometown of Hamburg, and he decided to make Vienna his home. Brahms had never gone to University (a fact he preferred to keep a closely guarded secret) and, as a result, always surrounded himself with highly-educated people. His friendship with Billroth, however, was genuine enough and lasted for decades. Much of Brahms's chamber music for strings was first performed in Billroth's home, with the surgeon participating as a musician in trial rehearsals. Brahms would frequently send Billroth his original manuscripts for evaluation prior to publication.

Of course, Brahms being Brahms, he happily kept ignoring all of Billroth's suggestions. Nevertheless, Brahms did dedicate the 2 String Quartets, Opus 51, to his surgeon friend who wrote :

« I am afraid these dedications will keep our names longer in memory than the best work we have done. For us, not very complimentary, but beautiful for humanity, which with the right instinct considers art more immortal than science. »

For 12 years, Brahms spent his summer holidays in the resort and spa-town of Ischl, which also served as the summer residence of Emperor Franz-Josef I of Austria. Billroth was never far behind and, while Brahms was composing his latest Masterpiece, Billroth busily designed and build 5 stately houses in the nearby town of St. Gilgen. You can still visit and stay at one of his creations, the « Parkhotel Billroth » . On occasion, the 2 friends also shared a bit of laughter. Mathilde Wesendonck (once romantically entangled with Richard Wagner) sent a poetic text to Brahms, in 1874, in the hope that he would set it to music. The ode in question dealt with cremation, a highly-controversial subject at the time, and Brahms was asked to compose a Cantata for chorus and soloists. Brahms derived much amusement from her request, as did Billroth and a whole host of other friends who were privy to the « Cremation Cantata Project » . Towards the end of his life, Billroth attempted to apply scientific method to the subject of music, and drafted an essay entitled « Wer ist musikalisch ? » (Who is musical ?) . This scientific investigation of musicality (which was completed and published by the highly-influential music-critic Eduard Hanslick after Billroth's death) also received some pointers from Johannes Brahms.

Billroth specifically wanted to know what makes a melody beautiful.

« This morning, I spent 2 highly-interesting hours with Brahms. He spoke to me with great animation about the formation of melodies, and demonstrated the musical beauty of the Bach Sarabandes. In these moments, he can be so warm and amiable that one regrets that he is not always so. When I asked him about the indicators of beauty in a melody, he countered with a poem by Gœthe and provided the most interesting analysis. It all confirmed the opinion that I had already developed. As to the final cause of whether something is poetically or musically beautiful, one can make no assertion, because it is a case of individual perception. »

Brahms, however, clearly knew that beauty is not « in the eye of the beholder » , and that musical technique and specific artistic beauty are inseparably bound. Beauty, as we all know, is always apprehended by the mind, that is, it resides in an idea and not with a « feeling » . Surely, that is the reason why Brahms steered Billroth towards poetry in the first place ! Maybe it's time to follow Brahms's suggestion and read a bit more poetry ?

...

At the age of 19, the talented pianist Theodor Billroth had been persuaded by his parents to pursue medicine as a career instead. As it turned-out, Billroth devoted an equal energy to both his lifelong pursuits and credited music with providing him the inspiration and wherewithal for his remarkable scientific achievements. Throughout his furiously busy career as a surgeon, he made considerable time for his musical pursuits.

By the time he was in Zürich (1860-1867) , he had taught himself the violin and viola and had become proficient in both. He was sufficiently well-recognized as a musician to be offered to guest conduct the Symphony Orchestra in Zürich. This was also where he was introduced to the great Austro-German composer Johannes Brahms.

When Billroth moved to Vienna, at the age of 38, he immediately sought-out Brahms. Within a few months, Billroth had converted a large room in his home into an ornately decorated musical studio.

Several decades earlier, the same house was visited by Beethoven, and Billroth wrote in a letter to Brahms :

« It is interesting to me that Johann Peter Frank and Beethoven met in my house and that a similar relation (let us not be arrogant !) exists between you and me, 100 years later. Beethoven wandered in this direction : must not Haydn, too, have had rehearsals in this house ? What a noble triad : Haydn, Beethoven, Brahms ! »

For the next 3 decades, Billroth's home was the regular meeting-place of Brahms himself, together with Billroth and a few other musicians, who played together in a musical Quartet. Brahms would send his compositions first to Billroth for his comments, before considering it for performance - so great was his regard for his musician-surgeon friend. In deep appreciation, Brahms dedicated 2 of his 3 String Quartets (the A minor and C minor Quartets) to Billroth. They would also allow aspiring, talented artists to perform Brahms's compositions in the home studio - and it was said that if the performance was outstanding, champagne would be passed round (if less than overwhelming, beer was the standard drink !).

Toward the latter few years of his life, Billroth started work on a new investigation into the « Physiology of Music » and the book was published, posthumously, by his musician friends after his death.

Billroth, of course, is only one of several examples of scientists and surgeons who have found inspiration for their scientific work, in the arts and humanities. In a letter to his art historian friend Lubke, Billroth wrote :

« It is one the superficialities of our time to see in science and in art, 2 opposites. Imagination is the mother of both. »

...

Johannes Brahms' great friend, Doctor Theodor Billroth, was a distinguished professor of surgery on the staff of Vienna General Hospital where Sigmund Freud was studying cerebral anatomy.

Billroth's love of music was second only to his devotion to medicine. He had studied violin and he played viola with professional musicians in private performances of Beethoven's Quartets and Brahms' Sextets. He could play the piano, was a good sight-reader, and as a music-critic occasionally wrote for the newspapers.

In 1882, Brahms and Billroth went for a 3 week tour of Italy. By all accounts, Billroth was an extrovert, who loved life and was a great teacher. He had a tremendous wealth of knowledge not only of his own profession, but of music and literature as well. One wonders what the 2 men talked about.

« Good news, Brahms ! We've found a way to remove that tune stuck in your head ... »

When Billroth died in 1894, his funeral procession was attended by huge crowds of people, with Brahms among the on-lookers smoking his customary cigar.

Billroth's last words, written a few hours before his death, reveal his humanity as well as a deeply poetic nature :

« It is night and everything has been quiet for a long time, and now, I am very calm. My mind begins to wander. An ethereal blue sky envelops me. My soul soars upwards. The most beautiful harmonies of invisible choirs are audible - in soft undulations like the breath of eternity !

I also recognize voices and the gentle whisperings :

“ Come, tired man, we will make you happy. In the charm of these spheres, we will free you of the thoughts which may have been of the greatest joy or deepest sorrow. You have felt yourself as a part of the universe, now, be distributed throughout the universe and comprehend the whole. ” »

In the court-yard of the University of Vienna, there is a statue of Billroth to which few passers-by pay attention. He is buried in Vienna's Central Cemetery, not far from the graves of Beethoven, Schubert, and his great friend Brahms. A fitting monument to a man whose life was devoted to making music and relieving pain.

### Surgery and national identity in late-19th Century Vienna

For historians of medicine, professor Theodor Billroth of the University of Vienna was the leading European surgeon of late-19th Century and the personification of intervention by organ or body-part removal. For social and political historians, he was a German nationalist whose book on medical education heralded the rise of anti-Semitism in the Austrian public sphere. The following text brings together and critically re-assesses these 2 hitherto separate accounts to show how, in a period of dramatic social and political change, Viennese surgery split into 2 camps. One, headed by Billroth, was characterized by an alliance with the German educational model, German nationalism leading to racial anti-Semitism and an experimental approach to the construction of surgical procedure, which heavily relied on the methods of pathological physiology. The other, which followed a long Austrian tradition, stood for a clinically-oriented and strictly organized medical education that catered to an ethnically and socially diverse population and, simultaneously, for an anatomically-oriented surgery, largely of the « locomotor apparatus » . This study shows how, in a major centre of medical education and capital of a multi-ethnic Empire, surgical and national identities were forged together.

In 1876, Theodor Billroth, professor at the Vienna School of Medicine and Europe's leading surgeon, authored a book on medical education at German-speaking universities. This « cultural historical » study caused a scandal. The Liberal press savaged Billroth's manifest admiration for German academia and his derogatory remarks about the Jewish students, largely from the eastern provinces of Galicia and Bukovina. But student associations that by the mid-1870's had over-whelmingly embraced German nationalism and anti-Semitism hailed him as a hero. For social and political historians, the reception of Billroth's book has heralded the rise of anti-Semitism, which in the economic depression after the 1873 stock-market crash flourished across social strata. But while Billroth's book is mentioned in practically all histories of anti-Semitism in Vienna, we know little about how the political rifts played-out in medicine. In medical historiography, Billroth is known as a leading surgeon of the late-19th Century who pioneered bold procedures of

organ or body-part resection (removal) , while his political views are either not mentioned or treated as separate and secondary to his professional medical identity. By bringing together and critically examining these diverse accounts, I reveal deep divisions within the Viennese professoriate. The views on Galician Jewish medical students were part of much broader differences in the ways in which the professors argued about scientific research, university organization and education as well as, more generally, about Austrian identity, the future of the Empire and strategies for dealing with the growing nationalisms. Academic papers on surgical procedures and essays on educational strategies were, as I shall argue, as politically committed as party manifestos.

The article is organized in 4 sections. In the first, located around 1870, Billroth's early career is set against the background of the Vienna School of Medicine, in particular surgery, pathology and anatomy between the late-18th and late-19th Centuries. In the second section, I analyze what made Billroth's surgery innovative. The third section centres on Billroth's views about medical education, expressed in his controversial book, and their reception in professional circles, in particular by Billroth's counterpart at the first Surgical Chair, Johann von Dumreicher. Provoked by an apparent German intellectual invasion of Austrian academia, Dumreicher called for a return to an older model, in his opinion better suited for Austrian conditions. In the final section, I look at debates around the appointment to the surgical chair after Dumreicher's death in 1880. At the end of the Liberal era, each empty chair became an arena for embattled fractions that represented opposing orientations in national politics as well as in teaching and research.

While the study is set in the Viennese medical world between 1867 and 1881, I hope to draw some more general conclusions. First, I want to contribute to historical writing on nationalism, especially on the construction of an Austrian national identity. Its fragile existence has given rise to extensive scholarship. Historians generally agreed that Austrian identity was formed in opposition to German identity, tradition and values, but have diverged on which historical period, social group or process played the crucial role. While many aspects of social and political life have been examined to understand how « der Österreicher » was constructed, medicine and science have hitherto largely remained out of sight. But precisely because these fields were not explicitly engaged in national politics, they may offer interesting insights into how being Austrian or German informed seemingly neutral, non-political activities. Carl Schorske famously argued that, from the 1880's, the rise of nationalist mass-politics on the ashes of Liberalism forced the second generation of the Viennese middle-class to withdraw into the arts and literature and there to create an a-historical modernist culture, yet, his critics have warned how nationalism played a major role in the Liberal politics through its heyday in the 1860's and 1870's. I show how, in this period, conservative and Liberal professors mobilized nationalism to build competing programmes for teaching and research and how, by so doing, they split into 2 camps. Disintegrative processes within the professoriate were not an Austrian peculiarity : in Wilhelmine Germany, professors split into traditionalist mandarins, who sought to preserve their privileged but increasingly challenged position in the changing society by defending the traditional value of « Bildung » , and minority progressives, who embraced industrialization and modernization. While Ringer's study was based on humanities professors, geneticists were split along similar lines. As I shall show, division within the Austrian medical professoriate shared some features with the German case. Many in the « Austrian » camp stood for tradition and Monarchy, and in the « German » for modernization in medicine as well as politics. But the central issues in Vienna are ethnic differences and national identity.

Second, this is a history of surgery. The dominance of the anatomical view of the body was tightly connected with the social and professional rise of the surgeon in the 18th Century. Theories of disease aetiology that attributed the causes of pathological processes to circumscribed changes in bodily tissues, rather than imbalances of bodily fluids, came-out of the surgical approach. Surgical therapy, however, started to make serious inroads into the physician's domain of « internal diseases » only in the second half of the 19th Century. This was traditionally ascribed to technological innovations (anæsthesia and antiseptis/asepsis) but their uptake into clinical practice was more contested and protracted than is often assumed. Surgical invasion of the bodily interior had commenced before they became standard parts of the practice. The contribution of surgery in the rise of a medicine founded on pathological and histological observation and, in the making of experimental physiology in France around 1800, has been duly acknowledged. Yet, we need a stronger recognition of the role that new disciplines that flourished around the mid-19th Century (experimental and pathological physiology, but also those built primarily around the microscope, such as histology) played in the construction of operating procedures. Modern surgical history was recently divided into « anatomical » (1860's - early-20th Century) , « physiological » (World War I - 1950's) and « systemic » (1950's - late- 20th Century) periods. Here, « anatomical » (or localistic) surgery is characterized by removal of the diseased part and « physiological » by focus on the restoration of impaired function. My study argues that concerns about restoration of the function appeared as early as the 1850's. Billroth voiced the opinion of his generation of surgeons when he wrote that « surgery of the 19th Century in Germany owes its greatest upswing to the circumstance that it aims to unite all medical knowledge in itself on the basis of a sound anatomical and physiological foundation » (Billroth, 1876) . The juxtaposition of Billroth's approach with that of his counterpart at the other Vienna surgical chair should help explain the constitutive elements for this transformation. Finally, by relating these 2 approaches to educational manifestos, national politics and academic appointments, I hope to show how, in the heated atmosphere of the 1870's Vienna, the knowledge and practices that Billroth brought from Germany came to stand as « German » , in opposition to « Austrian » , surgery.

### Theodor Billroth and the Vienna School of Medicine

The 1867 appointment of Theodor Billroth to the 2nd Surgical Chair vacated by the death of Franz Schuh (1804-1865) was triumphal. After a successful 7 year stint in Zürich, the 38 year old came to Vienna with the reputation of the likely successor to the renowned Berlin professor Bernhard von Langenbeck. Apart from Billroth's professional merits, a perhaps even more attractive reason for medical professors and State administrators to hire him was his Prussian origin. In the aftermath of the Prussian 1866 victory at Sadova near Königgratz (Hradec Králové) , which cost Austria the leadership of and even participation in a unified Germany, winning the best young Prussian surgeon for Vienna was a sweet revenge. Within a decade, he would establish himself as the world's top-surgeon ; his operations in the neck, thoracic and abdominal regions, devised in collaboration with a circle of devoted disciples, would be accepted as standard procedures. While he would soon become a symbol of the Vienna Medical School, his educational and generational backgrounds were different from those of the majority of his colleagues.

The medical faculty that Billroth found in 1867 was unlike those he knew in Switzerland and Germany. First, most of his colleagues had obtained their professorships in the 1840's, so, by the late 1860's, were approaching retirement. The centre of the « Second Vienna School » , the influential pathological anatomist Carl Rokitansky (1804-1878) was 63 ;

his close clinical collaborator and ally, the professor of internal medicine Josef Škoda (1805-1881) 62, while even the younger ones, such as the dermatologist Ferdinand Hebra (1816-1880) and Billroth's counterpart at the first Department of Surgery, Johann von Dumreicher (1815-1880), were in their 50's.

Second, the laboratory revolution that would, by the 1870's, turn the Universities of Imperial Germany into world-leading centres of medical research, had less impact on the Habsburg capital. The close collaboration between the pathological anatomist and clinician, established by Rokitansky and Škoda in the 1830's, was still the dominant research model. From his modest institute in the General Hospital, Rokitansky presided over all hospital and forensic autopsies and distributed dissectible bodies to other chairs. Cadavers were the central research resource not only for normal and pathological anatomists, but also for gynæcologists, surgeons and obstetricians, who experimented on them and collated the results with those collected from numerous and compliant patients.

The long domination of pathological anatomy can be ascribed to the strong personal influence of Rokitansky, who between 1848 and 1875 occupied all important academic offices. The « Second Vienna School », or the compact group around him, was held together by not only generational also class and ethnic ties : they were all lower middle-class Czechs. But the pathological-anatomical view of the body also followed a longer tradition going-back to the late-18th Century, when, with the support of the utilitarian Emperor Josef II and capable organization by Gerhard van Swieten, Vienna became home to innovative medical institutions that catered to the diverse population of an expanding Empire. The university medical school received dissectible bodies from the gigantic teaching General Hospital (1784), while Josef's brainchild, the new military medical academy nicknamed the « Josephinum » (1785), was equally richly supplied with research and teaching resources : patients and cadavers from the nearby Military Hospital and a collection of wax anatomical models from Florence. Many of Josef's reforms were revoked in the conservative period between the 1790's and 1848, but medicine continued on the surgical-cum-anatomical path. The « Kaiserlich und Königlich Operateursinstitut » (Imperial and Royal Operators' Institute) (1807) provided 2 year theoretical and practical instruction at State expense to, initially, 6 of the best students.

Experimental disciplines were institutionalized in Vienna somewhat differently from the universities of other German lands. In 1849, Johannes Müller's student, the Brandenburg-born Ernst Brücke was appointed to the physiological chair created by the re-organization of the chairs of gross anatomy and of higher anatomy and physiology into the chairs of anatomy and physiology. Brücke's task was to promote a discipline deemed to be much more developed at German than at Austrian Universities. While the previous occupant was a morphologist, Brücke came from a group of young researchers who aimed to reduce the physiology of the living organism to physical laws verified in experiments on animals. His successful research career in Vienna spanned a variety of topics and collaborators, from digestion to speech physiology and from laryngologists to linguists. In 1855, the « Josephinum » hired Carl Ludwig (1816-1895), another successful physicalist physiologist of German origin, who also quickly became known as a superb teacher. Importantly, in the same period, the experimental approach found a home at surgery too. The second chair was established in 1842 (officially in 1849) and filled with Franz Schuh, who conducted animal experiments to construct a safe and precise procedure for opening pleural space to empty fluid produced in inflammation or trauma. Schuh's experimental direction was part of the reason why, 20 years later, Billroth would be invited for his successor.

But experimentalists received only limited support. Ludwig left for Leipzig after an argument with the « Josephinum's » director Karl Heidler Ritter von Egeregg, for whom the academy was a clinical training-centre, and thus, required little investment in pre-clinical disciplines. Salomon Stricker (1834-1898) was appointed in 1868 to the new university Institute (later Chair) of General and Experimental Pathology, to compensate for the lack of experimental training in Vienna created by Ludwig's departure and for the strongly anatomical orientation of pathology under Rokitansky. Stricker was a productive scientist and popular teacher, but struggled in the make-shift premises inherited from the « Josephinum ». And while in Vienna's chief-competitor, Berlin, in 1877, Émil du Bois-Reymond was granted a palatial institute in which all students could be trained in microscopy and experimental method, Brücke obtained nothing of the kind. Until 1904, his institute in an 18th Century ex-rifle factory consisted of « 1 lecture-hall, 1 room with 2 windows, 2 cabinets with 1 window each, and 2 hall-ways that had only indirect light from the corridors ». While in 1886 anatomy got an imposing new building, physiology had to wait until 1904. This lack of material support for experimental medicine is indicative not only of Austria's stagnant economy but also of the ambivalent place these subjects occupied in the school's informal hierarchy.

Yet, by the late-1860's, the power relations in the faculty had started to change. This was partly a result of political relaxation in the 1860's, with newly-proclaimed freedoms of association, religion and movement for all ethnic groups. Moreover, the « Josephinum » was closed around 1870, so, many professors were taken-over by the medical faculty. Finally, 1867, like 1849, was in Austria-Hungary a year of reflection, of taking stock after tumultuous events, of choosing a future direction. It is no coincidence, then, that on both occasions talented Prussians were hired in the medical faculty.

Theodor Billroth certainly brought some fresh air. He was born in 1829 on the island of Rügen in Western Pomerania as the son of a protestant pastor, but moved to Greifswald with his family at the age of 5 after his father's death. Billroth started his medical studies there before leaving for the famous University of Göttingen. With his close friend Georg Meißner, he worked on the histology of nerve endings under the supervision of the famous morphologist, Rudolph Wagner. But while Meißner stayed in Göttingen to complete his dissertation on nerve receptors (on the strength of which he got the Basel professorship in anatomy and physiology), Billroth moved in 1851 to Berlin. For his medical dissertation, he chose to work on « Nature and cause of pulmonary affections arising from the dissection of the vagus nerve » under the supervision of Ludwig Traube (1818-1876). During his research, he conducted 28 animal experiments, on dogs, rabbits, doves and ducks.

Billroth's mentor, Traube, shared with his Berlin contemporary and colleague Rudolf Virchow (1821-1902) the notion that pathology must be reformed as an experimental science in order to become the foundation of medicine. But they diverged on the questions of what is the place of the experiment in a pathological study; how such a study should be constructed; and what indeed counts as an experiment in pathological research. 2 kinds of animal experiments were recognized in pathology of the period. In one, « the pathological-anatomical experiment », the artificial production of disease was followed by sacrificing the animal to observe the effects on the organs macro- and microscopically. In the other, « the pathological-physiological experiment », these effects were first observed in living animals, using complex methods and instruments for registering physiological functions. Only at the end would animals be subjected to pathological-anatomical examination. Virchow primarily relied on the first type of the experiment;

furthermore, the results obtained experimentally had to be further supplemented by those collected through clinical observation, pathological autopsy and accepted physiological knowledge. By contrast, for Traube, observation of the lesion in a sacrificed animal counted little : the experiment on the living animal was the quintessence of pathological research. The results of an experimental series often led to more experiments that aimed to distinguish the « real » from « possible » causes of diseases, never accepting analogy as an option and always looking for the firm confirmation of a hypothesis exclusively through the experiment on the living organism. These 2 pathologists differed not only in their approaches but also in their academic successes : while Virchow's career in the 1840's and 1850's went from strength to strength, Traube's Jewish background closed the doors of German academia before him.

Working with Traube greatly influenced Billroth's idea of research in pathology and in practical medicine. Although upon graduation, he accepted the position of « Assistentarzt » under Langenbeck, he continued to work in pathological physiology and histology in his free-time and to keep an eye on academic posts in pathology. He had hoped to be offered the job that, in 1856, went to Rudolf Virchow, but when invited to a pathological anatomy post in Greifswald, in 1858, he declined because of the low-salary and institute budget. In the same year, Billroth published « Contributions to pathological histology » (« Beiträge zur pathologischen Histologie ») , a summary of his research on microscopical appearances of and differences between inflammations and tumors. He cited extensively from Virchow's recently published « magnum opus » , yet, criticized him for being too reductionist, for focusing on localized lesions and failing to take into account changes in the organism. These criticisms should be read in the context of Billroth's strongly pathological physiological approach developed under Traube's mentorship.

In 1860, he was called to the chair of surgery in Zürich. The new and fairly small university managed to attract an unusually dynamic and ambitious faculty by being politically Liberal and unafraid to take a risk by employing an inexperienced or controversial hand. Zürich gave Billroth space and visibility so that he caught the attention of the Vienna Faculty who, after Schuh's death in 1865, invited him to introduce to Vienna the innovative approach of the Langenbeck school. Langenbeck had built-up a remarkable reputation in the 1840's and 1850's as one of the first to conduct planned operations under narcosis. Anæsthesia created conditions for surgeons to invade parts of the body hitherto largely in the province of internal medicine, notably the thorax and abdomen. But how to move from the surface into the interior of the body was not obvious. The cadaver was the traditional educational and research tool for surgeons, but, to Billroth, it failed to offer an adequate platform for the construction of invasive procedures : compared to animal experiments, it provided little information on how removal of an organ affects the organism and how to restore the function of the organ.

Billroth's approach differed greatly from that of Johann von Dumreicher, the professor at the first Surgical Chair. A member of the « Second Vienna School » , he was an aristocrat who made an unusual career choice by becoming a surgeon rather than a military officer or diplomat. He worked within the pathological-anatomical tradition and on « traditional » surgical problems such as traumas and conditions of the « locomotor apparatus » . Still, Dumreicher's clinical assistant and successor Eduard Albert (1841-1900) studied, with Stricker, patho-physiological problems of surgical interest : causes of infectious diseases, blood pressure and volume replacement by saline or blood. Albert's experiments had practical application to surgery : he supported Louis Pasteur's theory of microbes as specific causes of infection and, consequently, was the first in Vienna to introduce Joseph Lister's antiseptics into his operating theatre. Yet,

these experiments were not directed towards innovation in operative methods. The thrust of surgical research and practice at the first Chair remained within « traditional » surgery : from amputations, fracture treatment and other classical trauma surgery, towards, using bio-mechanical calculations, a new discipline of orthopædics. The strict division of domains between physicians, who reigned over the interior of the body, and surgeons, who remained on the outside, may have been re-inforced in Vienna by the close professional and social ties among the members of the Second Vienna School. Billroth, an outsider, had far less to lose.

While Billroth's approach differed greatly from that of his first Chair counterpart, it did follow-on from the tradition established by his predecessor at the second Chair, Schuh. But Billroth's surgery encompassed much more than occasional experiments. Its novelty lay in the consistently central place that experimental physiology and pathophysiology had in all aspects of surgery. I shall show, in the next sections, surgeons had to think like physiologists, be trained like physiologists, and construct their procedures as physiological experiments.

### Surgical education, operative procedures and animal experiments

In the history of medicine, Billroth stands for the era of bold surgical intervention by organ or body-part resection. He constructed and successfully performed a range of procedures for removing diseased organs. His invasion of the abdomen was an audacious step when few dared to cross the peritoneum. In Zürich, Billroth followed the British surgeon Thomas Spencer Wells in performing human ovariectomies. In Vienna, where treatment of the female genital tract fell within the remit of the gynaecologists, Billroth focused on the neck and upper-abdomen, extirpating parts or all of the thyroid, œsophagus, larynx, and then, in the 1880's, developing innovative procedures for resection of the stomach, operations that were named Billroth I and Billroth II. Yet, he did not mean to focus narrowly on the lesion : how both the organ and the organism functioned post-procedure was of great significance. Using the example of one of the earliest procedures invented by Billroth's Vienna surgical team, of larynx extirpation and its replacement with an artificial organ, I will show how experimental methods were applied to construct the procedure, and how surgeons worked with physiologists, clinicians and instrument-makers to restore the lost function. Training young surgeons in the spirit of « physiological surgery » was of primary importance. Surgical candidates were selected on the basis of scientific talent and, as postgraduate trainees, experimented extensively on animals before trying-out the procedure in the operating theatre.

Upon arrival in Vienna, Billroth found at the institute a group of 6 trainees selected by Schuh, but he went on to hand-pick his closest circle. Not only did he bring his own assistant from Zürich, he also hired a young doctor after hearing him lecture on physiology. Vincenz Czerny had no surgical experience, indeed, no plans to become a surgeon. On the contrary, he enrolled in the medical school intending to become a scientist and spent every afternoon microscoping and experimenting, first in the physiological laboratory where he worked on histology and physiology of the eye ; then, at ophthalmology, investigating eye pathology ; and finally, in the experimental pathology laboratory, on anatomy and physiology of the spleen.

The way that Billroth selected indicates the talents he reckoned indispensable for a good surgeon. Downplaying the importance of manual skill in favour of medical knowledge, clinical judgment and patient management was

characteristic for the rising surgeon from the 18th Century on, but Billroth went beyond that, appreciating Czerny's understanding of and interest in scientific research. His « job interview » may be compared to the process of recruitment in anatomy in Vienna in the same period. Around 1869, the anatomist Josef Hyrtl was alerted by his institute attendant to an unusually dexterous young student who made beautiful preparations. The student, Emil Zuckerkandl, was soon appointed an anatomical Demonstrator (student-instructor) , and later, became professor of anatomy in Graz (1881) and Vienna (1888) . By contrast, Carl Langer, professor of anatomy at the « Josephinum » (1856-1870) and the first occupant of the second Anatomical Chair (1870-1888) , invited the first year student Adolf Lorenz to become a demonstrator after hearing him explain osteology to his fellow-students. Josef Hyrtl was famously conservative both in his anatomy and in his politics. The younger Langer, by contrast, believed that anatomy should aspire to the standards of « Wissenschaftlichkeit » proposed by experimental physiologists. At the « Josephinum » , Langer closely collaborated with Carl Ludwig and conducted research in the field of physiological or mechanical anatomy. Billroth's methods of recruitment were obviously closer to Langer's than Hyrtl's.

By 1870, Billroth succeeded in re-organizing the « Operateursinstitut » by adding the scientific study of surgical problems to the instruction in surgical theory and practical exercises to develop operating skills. Tellingly, he called the students « assistants » rather than « operators », because « the term “ operator ” is unintelligible to the reader of medical literature in the German Empire » . Perhaps, more than any of his Viennese contemporaries, Billroth surrounded himself with a close-knit group of disciples who, working together on new procedures, developed a common approach. 9 of his assistants went on to occupy surgical chairs across German-speaking Europe.

The first big project of the Billroth school in Vienna was the surgical treatment of laryngeal carcinoma, a disease that had hitherto fallen within the remit of laryngology. The field had a strong tradition in the Austro-Hungarian Empire : much of the innovation in physical examination of the throat was produced in close collaboration between clinicians and physiologists within the Vienna - Prague - Budapest triangle. Johannes Czermak (1829-1973) is today credited with opening the fields of speech physiology and laryngology by applying a version of the laryngeal mirror, pioneered by the English voice coach and music professor Manuel Garcia, to look into the throat. Yet, laryngologists were limited by how far they could reach into the mouth, and by what they could see using reflected light.

In 1870, Czerny published a paper on laryngeal extirpation in 5 dogs in the leading local medical journal, « Wiener Medizinische Wochenschrift » (Czerny, 1870) . The laryngological literature had previously repeatedly asserted that tumours could only be controlled by removing the whole or half of the larynx. No surgeon had tried to tackle this operation, so Czerny, only a few years into his training, decided to attempt it on animals. The procedure was simple : the dog was tied on its back, the larynx and trachea exposed from the front and separated first from the soft tissue and muscles, and then, from trachea and epiglottis, and finally, a rubber tube was inserted to secure respiration.

In Czerny's article, most of the discussion is devoted to the restoration of the physiological functions (respiration, swallowing and voice production) after total laryngectomy. An artificial larynx had already been constructed by Czermak in 1859, for a patient with laryngeal stenosis who had undergone tracheotomy. Czerny's device with 2 tubes, one for inspiration and the other for expiration and sound production, expanded on the original model.

The animal model offered an obvious advantage to a physiologically minded surgeon : while dogs had different anatomical topography from humans, they could nevertheless provide answers on general physiological processes : bleeding, healing, scarring ; or those more specifically related to the organ in question, such as voice production or respiration. The first human operation soon followed. In 1874, another Billroth disciple, Carl Gussenbauer, reported on laryngeal extirpation and artificial larynx implantation in a 36 year religion teacher with epithelial carcinoma (Gussenbauer, 1874) . The report was first presented at a meeting of the German Surgical Society, and then, published in the « Archiv für klinische Chirurgie » , a journal established in 1860 by Langenbeck and his former students Billroth and Ernst Gurlt as a forum for German-speaking surgeons, who had hitherto published in general clinical periodicals. The procedure and minor ensuing complications were described in more detail than in Czerny's article. Importantly, an equally detailed discussion was dedicated to the restoration of laryngeal functions. Respiration could easily be secured by a simple rubber tube connecting mouth and trachea, in place of the larynx ; swallowing, even in the absence of epiglottis, could be learnt by the patient who would teach himself to draw-back the base of the tongue to prevent the food from slipping into the wrong hole. But how to repair speech was a challenge that brought together surgeons, physiologists, laryngologists and instrument-makers. Brücke, with the instrument-maker Josef Leiter, and then, the laryngologist Carl Störck with the instrument-maker Heinrich Reiner produced an instrument which the patient would insert directly into their mouth when they wished to speak. Gussenbauer deemed this device impractical and constructed, with the instrument-maker Thürriegel, a version of Czerny's T-shaped tube. While information on Thürriegel and Reiner is scarce, Josef Leiter (1830-1892) was a leading European medico-surgical instrument-maker, who would later earn international fame for his endoscopic apparatus. So, the project of laryngeal functional replacement brought together the world-leading authorities in laryngeal pathology and therapy, speech physiology (Czermak had died in 1873) , instrument-making and surgery.

An anecdote tells of how Billroth, upon arriving in Vienna, was shocked to find a cadaver, left from student operations, on the table in the operating theatre. This has been interpreted as directed against the danger of infection that such a practice would entail. Yet, as mentioned earlier, Billroth, for a long time, did not fully-subscribe to Pasteur's theory of microbial disease causation and accepted Lister's antiseptics reluctantly and late. Here, I propose that Billroth's abhorrence of the cadaver in the operation theatre did not result (exclusively) from his disgust with Viennese hygiene, but also his disagreement with the research methods. The cadaver, although an indispensable tool for surgical education, symbolized anatomy, but Billroth worked in a physiological paradigm. Looking back from the vantage point of the 1920's, his student Anton von Eiselsberg might have seen surgery of the 1870's and 1880's as the era of « ignorant assaults » (« ahnungslose Übergriffe ») , but his own approach (indeed his interest in the epitome of physiological surgery, organ transplantation) owed much to his early training with Billroth.

### Medical education and the State

In 1876, Billroth authored a book on the history and future of medical education at the German Universities (Billroth, 1876) . It had an enormous impact : controversial for its politics, it nevertheless became an important source on German tradition of medical education. In 1924, almost 50 years after its publication, William Henry Welch, one of the leaders of American medical educational reform in the early- 20th Century, translated it into English as « The medical sciences in the German Universities : a study in the history of civilization » . In the preface to the translation, Welch

briefly, mostly neutrally and in places sympathetically, referred to the book's controversial political stance. Yet, at the time of original publication, Billroth's politics, for a period, over-shadowed his surgical activity. Here, I contrast them with those of Johann von Dumreicher, to show how, in this era of radical social, political and demographic change, conflicting views on education were tightly linked to opposing views on relations between the University and the State, and on the identity of the Austro-Hungarian Empire and of the Austrian nation.

Economic growth and constitutional freedoms in the late-1860's attracted a wave of immigrants to Vienna, mostly Czechs from Bohemia but also Jews from Galicia and Bukovina. Most worked in factories or ran small businesses, but some, especially in the second generation, used the university as a social ladder. As the city population increased, students not only grew in number but also diversified ethnically and socially. Medicine was equally attractive to the middle-class Viennese interested in academic posts, rural Slavs looking forward to a career in the military or in local health bodies, and Jews from the East to whom private medical practice offered a lucrative and respectable alternative to the still inaccessible state jobs. Yet, economic growth was cut short by the crisis that followed the 1873 stock-market crash. As unemployment grew and wages fell, anti-Jewish feelings, dormant for some decades, re-emerged with full-force. This time, racial anti-Semitism replaced old attitudes grounded in religious intolerance. Rapid assimilation and conversion to Christianity now mattered little.

The university and the medical school were not isolated from the social turmoil. With the transfer of the « Josephinum » staff to the university and a wave of retirements (and deaths) , most chairs gained new occupants by mid-1870's. The pressure on the lecture-halls, still in over-crowded make-shift premises to which the university had been condemned after 1848, was at least partially relieved by completion of the university reform. The reform based on the German model, which had begun in the heady post-revolutionary days of 1849, unified medical and surgical degrees, transformed the faculty from a corporate into a State institution, and introduced teaching and learning freedoms. Yet, State politics and inter-faculty conflicts delayed its completion until 1872, when examinations were finally reformed and compulsory lecture attendance abolished. By the mid-1870's, the reform was criticized for having failed to produce satisfactory results. The attendance and examination results were poor and a fall in the standards of medical practice was feared. At the same time, ethnic German students from Austria and Bohemia became increasingly out-numbered by Jews, Slavs and Magyars, so nationalist feelings heightened and student associations closed to all ethnic non-Germans.

It was probably this atmosphere of change, interpreted by some as a crisis, as well as the space opening by Rokitsky's retirement, that inspired Billroth to publish his book. Subtitled « a cultural-historical study » , it was a combination of Billroth's own views on medical education (the curriculum, regulations, examinations, students, teachers, the relationship between the University and the State, the place of scientific versus clinical subjects) and some rather detailed historical and contemporary information on these topics, mainly focused on the University of Vienna but enriched with comparative data on other German-speaking universities. Billroth was a staunch advocate of the German educational model and, in particular, of the freedoms of teaching and learning : lack of compulsion in the order, choice and duration of studies other than that imposed by examinations ; free student migration between universities ; and the strong position of natural sciences in the curriculum. In 1876, his book read as an affirmation of the recent university reform.

Billroth responded to the critics who proposed to limit radically the share of natural sciences in the curriculum because « physicians do not need to be scholars, since their first business is to learn to treat the sick » (Billroth, 1924) , arguing that those who were not trained to think analytically and scientifically would make poor medical practitioners (Billroth, 1924) . Moreover, physician had to represent the culture, to be the best-educated member of his community.

« To neglect the education of these leaders, to lower their intellectual and scientific standards, to educate them in such a way that the people will regard them as of their own kind - as just so many more artisans, like the cobblers, tailors and comb-makers, that, in my judgment, would mean the repression of our whole national cultural development. » (Billroth, 1924.)

The other important criticism related to the learning freedoms, students' right to arrange their own studies. It was argued that more discipline was needed, but Billroth believed that disciplinary measures appropriate for teenagers in « Gymnasias » would not be useful, indeed would harm students' self-respect.

« I do not believe that marked talents are hampered or stifled in their development by a strict discipline such as formerly existed at several German Universities, especially if the students have the means to carry-on their scientific work as they please after completing their professional studies. But neither do I think it possible to make energetic, industrious, intelligent physicians out of slack, lazy, stupid students, by means of school-like discipline at the universities. » (Billroth, 1924.)

So, if the educational model was faultless, why were the examination results not better and future medical practitioners more competent ? For Billroth, the answer was clear : the students.

Unashamedly elitist, he believed that :

« Higher scientific education demands not inconsiderable financial means, so that only the propertied, well-to-do classes of the population can gain it. » (Billroth, 1924.)

The estimated cost of educating a physician was, according to Billroth, considerable :

« During 5 years of study in Vienna 1,000 Florins per year ; for the examination year and for travel in the interest of science, 2,000 Florins ; for 2 years of practical work at a hospital, 1,000 Florins per year ; for the first 6 years of his independent practice, 500 Florins per year. Altogether, for 14 years, he needs 12,000 Florins, or 24,000 Marks. This is certainly the minimum and it is based on the assumption that the student will not early in his career commit the folly of marrying a poor girl. » (Billroth, 1924.)

That Billroth's standards were high may be shown by the fact that a demonstratorship, the job offered only to the best students and regarded benevolently by the university authorities, occupied every afternoon through the academic year and paid only 200 Florins in 1872, raised to 300 in 1877, a sum considered luxurious by poor, self-supporting

students.

Yet, money did not suffice to produce a good student, and then, a good doctor ; the other compulsory element was breeding. German students from « respectable homes » with university-educated fathers were raised in an atmosphere that prepared them for the university, even when they were financially not well-off. Billroth himself enjoyed elite culture : he cultivated close friendship with the famous composer Johannes Brahms (1833-1897) , with whom he shared not only passion for music (Billroth almost studied piano instead of medicine) but also the social experience, as Brahms too was a Northern German who permanently settled in Vienna in 1868. Several among Billroth's disciples came from aristocratic families : Alexander von Winiwarter, Johannes (« Jan ») von Mikulicz-Radecki and Baron Anton von Eiselsberg. And while Vienna had « a large and constantly growing group of very well-bred and well-trained young men » , it also had « undesirable elements, larger in proportion than anywhere else » (Billroth, 1924) . These were young, mostly Jewish, men from Hungary, Galicia and Bukovina, with hardly a Florin in the pocket, who relied on the large and dynamic Viennese job market to help support them through the medical school. They, wrote Billroth, « have absolutely nothing and have conceived the insane idea that they can earn money in Vienna, by teaching, through small jobs at the stock-exchange, by peddling matches, or by taking employment as post office or telegraph clerks in Vienna or elsewhere, and at the same time study medicine » (Billroth, 1924) . These poor students from the eastern provinces, he continued, who spoke inadequate German, had inferior up-bringing and education and lacked the money needed to support themselves through university, should stay away from medicine.

« Such empty-headed strivers, with their purblind eyes, hands like lead, and brains like clay, with a dictionary knowledge and pathetic incompetence are to be found in large numbers, especially among these poor medical students. They tremble when they are spoken to during examination and lose their mite of intelligence completely when one looks at them. They often understand so little German that they can grasp neither the language nor the sense of the questions, and are quite incapable of expressing their thoughts either in German or in any other tongue. Are academic freedom and the scientific method of instruction to be held accountable for failing to make good physicians out of such material ? » (Billroth, 1924.)

Many contemporaries and historians interpreted this as racial anti-Semitism. Assimilated Viennese Jews were strongly offended and Liberal newspapers attacked Billroth for what they saw as a travesty of Liberal ideas. By contrast, students gathered around the « Leseverein der deutschen Studenten » (from 1871) warmly applauded Billroth when he entered the lecture-hall. With Jewish and other Austrian students outraged, surgical lectures turned into a series of protests and brawls between opposed camps. Billroth, however, felt misunderstood. Not only would he never express similar views, but, in 1892, he would become a founding member of the « Verein zur Abwehr des Antisemitismus » , a society composed of prominent Christian personalities who opposed anti-Semitism. Historians who present Billroth as a racial anti-Semite usually do not comment on this conversion or simply state that he changed his mind. I agree with Boyer for whom Billroth was « more a socio-cultural elitist than an anti-Semite » , who wanted to exclude Hungarian Jews because of their poverty, urgent quest for social mobility and low educational level. This reading would explain why he distanced himself from anti-Semitism when it became an acceptable political stance, and even publicly crossed to the other side.

Billroth's most active opponent in the faculty was his counterpart, Johann von Dumreicher of the first Surgical Chair, author of a booklet « On the necessity of educational reforms at the medical faculties of Austria » (Dumreicher, 1878). He agreed that the school was in crisis, manifested in inadequate results at final examinations : poorly prepared students made incompetent physicians, and therefore, endangered the health of the population. But, for Dumreicher, the problem was the educational system that failed to meet the needs of a varied student body and equally diverse population. Introducing « Lern- and Lehrfreiheiten » was wrong and so was the increased emphasis on experimental disciplines. Dumreicher tried to push his ideas through official channels, first by organizing a committee that submitted a proposal for reform of the final examinations, then, requesting permission to submit another memorandum when the first was only partially accepted. In the end, he addressed this pamphlet to the public.

So what were, in Dumreicher's opinion, the Austrian circumstances and what kind of medical education did they require ? Students from Galicia, Istria, Dalmatia and Transleithania received poor « Gymnasium » instruction in mathematics and natural sciences and spoke inadequate German. Once at the university, they had only 4 years to master medicine, because 1 year was spent in the military service. Even these 4 years were not entirely free, as many students had to support themselves. Demands of the curriculum loaded with difficult and often redundant science subjects ; the liberties secured by the reform ; the high-cost of Vienna life - all this made students limit their studies to the few compulsory courses and then cramming before the examinations. There were good reasons, argued Dumreicher, behind the traditionally clinical-practical orientation of Austrian medical education and they were grounded in the nature of the empire and of its population. A fixed curriculum, compulsory lecture attendance and low-ratio of non-clinical to clinical subjects were the answers : a version of the « Josephinum » , not the University of Berlin, was what Austria needed.

The main-point of divergence between Dumreicher and Billroth was the role of the University and its relationship with the State. Dumreicher's booklet is brimming with mentions of « responsibility » and « duty » : for him, the University was first and foremost to serve the (practical) needs of the Empire. The duty of medical faculties was not just to advance science ; not even to educate future practitioners : implicitly, their duty, to the State, was to provide education as a means of social mobility to the hitherto underprivileged classes and ethnic groups, however poorly they were prepared.

For Billroth, by contrast, this was extremely problematic. He reviewed the history of the University of Vienna to show how, until the 16th Century, the State had expressed limited interest. Only after the turmoils of Reformation and Counter-Reformation, which saw Lower-Austria going back and forth between the 2 religious camps and the University becoming a centre of Protestantism, did the State begin to occupy the combined positions of financial sponsor, regulator, administrator and curriculum supervisor.

« But who is the State ? What is the State ? Why should the State alone be considered stable in an eternally changing world ? » , asked Billroth, arguing, on the example of Metternich's Austria where « it went so far as to prescribe to the teachers at the Universities precisely from what book or notes they had to “ read ” , i.e. “ lecture ” , that the State's close supervision of the University was a sign of its weakness. » (Billroth, 1924 ; page 96) .

He quoted, in full-agreement, the words of an unnamed Viennese professor and State minister :

« The University remains a State institution in the sense that it is supported, protected and supervised by the State. It must, however, administer its most important and intimate affairs altogether autonomously. The University must, therefore, have neither an ecclesiastical nor a governmental colouring, but must be purely scientific in character. »  
(Billroth, 1924.)

While Dumreicher's call for a return to the older model was not accepted and Austrian medical education remained organized according to the German model, the teaching styles of professors in the « Austrian » and « German » camp diverged. I have already mentioned personnel selection ; lectures offer another good example. The talent to educate, entertain and charm undergraduates, who were not only unsurprisingly uninterested but often could not quite understand the lecturer as their German was too poor, was traditionally held in high-opinion by Viennese professors and administrators. The anatomist Josef Hyrtl built much of his reputation on captivating lectures that combined theatrical performance with demonstration of artistically prepared objects. By contrast, Billroth's lectures were dry and uninspiring. The surgeon Adolf Lorenz unfavourably compared Billroth's lecturing style with that of Dumreicher's successor Eduard Albert, stating that while Albert's technical skill was admittedly inferior to Billroth's, he filled his auditorium while Billroth often spoke to empty benches. When, post-1872, the student attendance across the school fell to its all-time low, Billroth was said to have advertised his course in vain, as no one showed-up. Albert's lecturing skills, by contrast, were compared to those of Hyrtl. Interestingly, the other Prussian in the faculty, Ernst Brücke, had an equally bad reputation as a lecturer ; in the post-reform years, students were there only if they had not obtained old lecture notes (« Skripta ») , as he was a notoriously harsh examiner. In anatomy, a chair that came to be divided along the same lines as surgery, the « German » Carl Toldt was notoriously dry, while the « Austrian » Emil Zuckerkandl was so well remembered for his lectures that his sculpture, produced 15 years after his death, shows him gesticulating to convey his animated lecturing style.

Divisions between 2 emerging camps, then, stretched far beyond the surgical departments and into educational politics. Billroth subscribed to what he and his Viennese contemporaries saw as German values : of academic excellence, pursuit of science (or more broadly, « Wissenschaft ») without the burden of practical application, and German culture. Dumreicher, by contrast, sought to recover an Austrian tradition, in which medical schools were educational rather than research institutions, dispensing knowledge democratically to all social and ethnic groups of the Empire. In the year von Dumreicher published his pamphlet, the Berlin congress bestowed Bosnia on the Empire, and thus, both cemented its political orientation to the European south-east and increased the share of non-Germans in the Austrian half. In 1879, the Liberals fell from power and opened an era of unstable and short-lived governments, with the court balancing between Slavs, pan-Germans and conservative Austrian Parties. In 1882, the University of Prague, historically closely linked to Vienna, split into Czech and German parts.

### Politics of professorial appointments

In November 1880, von Dumreicher suddenly died and the faculty had to find a new occupant for the prestigious chair. 2 names immediately came-up : Albert, now professor of surgery in Innsbruck, and Czerny, by then professor in

Heidelberg. The « Wiener Medizinische Wochenschrift » , Billroth and his circle supported Czerny, while the group in the faculty previously close to Dumreicher favoured Albert. Billroth's group argued that Czerny was a superior researcher and surgeon ; Dumreicher's friends that Albert represented the Austrian school of surgery. But how to assess the quality and suitability of the candidates and what, in fact, the Austrian school of surgery was, became matters of contention. Just 2 years after Dumreicher's book, in the politically turbulent era of unstable governments and rising nationalist movements, the appointment to a prestigious chair came to signify the direction that the school would take. Both candidates were approaching their 40th birthday ; both came from Bohemian lands ; both were educated in Vienna ; both had published widely ; and both gained their first professorship just after they had turned 30. But this is where the similarities stop. The surgeries they practised, the educational strategies they represented and the national politics they supported were dramatically different.

Vincenz Czerny (1842-1916) was born into a middle-class pharmacist's family in Tratenau (Trutnov) in Bohemia. In spite of their Czech-sounding name, the Czernys were Germans, settled in Bohemia since at least the 17th Century. Czerny's recollections of his early life closely follow the canons of the 19th Century scientist's memoirs : the idyllic childhood, early interest in exploration of the natural world (in his case, stimulated by the family's habit of spending afternoons collecting herbs for the pharmacy) and reading books on nature. But, unusually, the text is heavily interspersed with references to the increasingly tense relations between Czechs and Germans. And while Czerny did not declare himself opposed to the Roman Catholic Church, it is obvious that neither he nor his father were zealous church-goers, as the father preferred to send his son to a State school in a Czech town than to a monastery establishment in a German town. This, however, did not mean that Czerny's Czech ever improved beyond « küchenböhmisch » (kitchen Bohemians) : in the 1850's, instruction in State schools was in German, the language of all official communication. By 1860, when Czerny arrived in Prague to study medicine, tensions were palpable ; not feeling at home, he decided to transfer to Vienna. As described earlier, after graduation, he obtained a surgical assistantship, whence on Billroth's and Rokitansky's recommendations he moved to the chair of surgery in Freiburg. At the time, Freiburg was a small, strongly Roman Catholic university unpopular with Northern Germans and relatively neglected by the Baden government who favoured Heidelberg. Still, it proved a good spring-board, as Czerny, in 1877, moved to Heidelberg and successfully continued his work in experimental surgery of the neck and abdomen, increasingly focusing on cancer.

By contrast, Albert (1841-1900) came from a poorer background. He had worked as a house tutor (« Hauslehrer ») before enrolling in the medical school in 1861. In contrast to Czerny, he was a native Czech speaker, and indeed, one who remained in touch with his native country and culture his entire life : he even translated poems from Czech into German. After graduation, he had first worked as Dumreicher's assistant, and then, took-up the surgical professorship at the new University of Innsbruck. As mentioned earlier, he worked closely with Salomon Stricker on the causes of wound fever and was an enthusiastic and early supporter of antiseptic surgery. While as the professor of general surgery, he had to perform a full-range of operations, his own interests were in the field of joint mechanics and conditions such as congenital hip dislocation, scoliosis and acquired diseases of the joints and bones. It was Albert's non-invasive, generally conservative approach to the treatment of osteological conditions that influenced the distinctive direction in orthopaedics, of so-called bloodless, non-operative surgery of Adolf Lorenz.

Speculations and discussions on who would succeed Dumreicher started immediately after his death. In early December, the medical faculty elected a committee to form a Terna, a list of 3 candidates in order of preference. The committee consisted of professors of surgical disciplines : general surgery, urology, ophthalmology and gynaecology with obstetrics, chaired by the dean Eduard Hoffman, professor of forensic medicine. Yet, after a month of deliberations, they failed to agree : Hoffman, a Czech, supported Albert and the rest Czerny. The decision was then returned to the faculty to vote at its meeting on 15 January 1881. Czerny won with a small majority, but instead of proposing him as the first choice candidate (« primo loco ») and Albert as the second ranked (« secundo loco ») , the faculty decided to go with Czerny as the only (« unico loco ») suggestion. But the final decision lay with the Minister of Religion and Education and the Emperor Franz-Josef.

All the while, the « Wiener Medizinische Wochenschrift » cheered for Czerny. It was said that Albert had been trying to leave Innsbruck for a bigger centre for a while : with Prague University splitting he was considered for its first Surgical Chair, yet, he was « too Czech for Germans, too German for Czechs » . Then, he applied for a high clinical position in the General Hospital, but, while still under consideration, Dumreicher died and Albert became a candidate for the Vienna professorship. He enjoyed the reputation of a true heir to Dumreicher school, an excellent teacher (« the Hyrtl of surgery ») who had full lecture-halls and wrote popular text-books, « Diagnostik der chirurgischen Krankheiten » (1876) and « Lehrbuch der Chirurgie und Operationslehre » (1877-1880) , the latter the first text-book based on the use of antiseptics. But the « Wiener Medizinische Wochenschrift » was critical of all Albert's supposed recommendations and talents.

He could not represent Dumreicher's school, they argued, because « Von Dumreicher was known as an opponent of antiseptic methods ; Albert belongs to those surgeons who since their acquaintance with them have held Lister's flag high, and he never fails to explain his operative successes with it. »

Albert, the journal conceded, was a talented and competent surgeon, but he could not stand comparison with a genius such as Czerny. He, they continued, did not possess such breadth of surgical knowledge ; this was confirmed in the review of his « Lehrbuch in the Centralblatt für Chirurgie » , which, while sympathetic, did not conceal the errors.

These speculations were cut short by the ministerial decision. The report to the Emperor opened with a brief discussion of the decisions of the faculty and a comparison of the candidates' recommendations for the job. Both were deemed perfectly suitable, but the minister supported Albert. The direction pursued by Czerny was already represented in Vienna by Billroth, he recalled. The Vienna surgical department should not focus itself exclusively on big and difficult operations, he argued further, but also on the so-called « small surgery » , procedures that were perhaps scientifically less interesting but were of large practical importance. Dumreicher believed that the first task of the medical school was to educate students in the needs of practising physicians ; and he himself saw Albert as his best student and most qualified successor. And Albert had already proved himself as a good professor : in the short time he spent in Innsbruck, he managed not only to practise and publish but also to create a small but active group of young surgeons. The Emperor approved the ministerial proposal and appointed Albert.

Albert's appointment had multiple consequences. It has been argued that trauma surgery was a « Cinderella of modern

surgery » , because the progress of modern surgery pushed this traditional surgical field of injury management to the side-lines. Only compulsory medical insurance brought accident victims back to surgical clinics. In Vienna, this foreseeable course of events was cut short by a political decision. With Albert at the first Chair, the traditional surgical domains were given a firm institutional footing that helped them not only resist but transform into new fields. By the early-20th Century, Vienna was a leading centre for orthopædics.

Albert's appointment also had significance in the 1880's when the conflict between « German » and « Austrian » culture, between elitism and populism, deepened across diverse spheres of public life. Christian-Socials, who came to power in Vienna in the late-1890's as the first mass political Party in the Empire, owed much of their success to the skilful use of populist rhetoric. Famously, the journalists close to them criticized the music of Billroth's friend Brahms for its lack of popular appeal and supposedly excessively rational nature, while praising the emotional and inspiring qualities of the Symphonies written by the (Austrian-born) Anton Bruckner (1824-1896) (Notley, 1993) . In the medical faculty, surgeons were the first but certainly not the last to divide. With Albert's appointment, the « Austrian » camp received a strong boost as he tirelessly campaigned to appoint young Austrians of his political, educational and research bent every time a chair was vacated. But his success was mixed and depended on external circumstances. In pre-clinical disciplines, Vienna had little to offer established or ambitious Germans, so Austrian candidates faced almost no competition. Immediately upon his appointment, he started lobbying to fill the 2nd Anatomical Chair, vacated for various reasons for years, but his candidate, Emil Zuckerkandl, lost to the Austrian-born but German-oriented Carl Toldt. Yet, as soon the first Chair came-up for appointment in 1888, Zuckerkandl got another chance : the minister conceded that the candidate proposed by the « German camp » , Gustav Schwalbe, was probably a superior researcher, but as an institute director and lecturer Zuckerkandl was a better fit for Vienna. The 2 characteristics that went into his favour were his Austrian nationality and his education with Hyrtl, so that the minister conceded that he could not justify « giving preference to a foreigner over such a distinguished representative of the school that brought fame to the Vienna School of Medicine » . When Albert opposed the appointment of the famous German professor of internal medicine Hermann von Nothnagel, he was accused of irrational hatred of Germany and Germans.

« Why should we not call a German professor ? Are we perhaps at war with Germany, or do we not consider the German Empire as the most loyal friend and ally of Austria ? Should we not be allowed to trust such a loyal ally enough to be able to allow its established teachers to teach our university students ? » (« Wiener Medizinische Wochenschrift »)

The conflict between the 2 camps came to a head in 1894, after Billroth's death. The committee, chaired by Albert, agreed that they wanted a successor who would continue Billroth's approach to teaching, practice and research and so drew-up a list composed exclusively of his former Viennese assistants who had built illustrious careers elsewhere. A Terna was produced and Czerny came top of the list, ahead of Johann von Mikulicz-Radecki, professor at Breslau, and Carl Gussenbauer, professor at Prague. Czerny initially accepted, on condition he received a new building for his surgical clinic. He paid a short visit to Vienna during which he negotiated immediate commencement of the building works based on plans prepared by Billroth ; a 5,000 Florin annual salary ; the title of « Hofrat » ; and, at least, another 20 years in service. Yet, immediately upon his return, he changed his mind, claiming that he realized that he would be facing constant opposition from « Albert and his party » : during Czerny's visit to Vienna, Albert left the city

and returned only after his colleague's departure. The conflict was partly explained by Albert's jealousy, as he had expected to obtain a new building first, but partly had much longer and deeper roots. The minister eventually appointed Gussenbauer.

The divergence between the 2 chairs developed, in the 1870's, around different styles in surgery and different views on medical education, but now, against the background of rising nationalist movements, it increasingly corresponded with ethnic divisions. Towards the end of the Century, ethnic Germans increasingly turned away from the Habsburgs and Roman Catholicism, while the governments survived by forging alliances with Slavs and the Church. Adherence to the old Imperial ideals was the political choice for Jews, Czechs and other non-Germans who did not subscribe to secessionist or Zionist ideas. In the university lecture-halls and surgical theatres, this political split took the form of 2 surgical orientations : the « German » , more invasive and focused on the bodily cavities, especially the abdomen, and the other more conservative, focused on the « locomotor » system.

## Conclusion

In 1858, Billroth criticized Virchow for restricting his attention to localized lesions and failing to take into account changes in the organism. Yet, later medical historiography would perceive Billroth, the pioneer of bold procedures that removed organs and body-parts, as the surgical embodiment of the reductionist approach. I have argued that this view of Billroth is incomplete. Starting with his early training under Traube that taught him to solve his research problems through series of (pathological) physiological experiments, Billroth remained focused on the functional effects that both a disease and a surgical intervention produced in the living organism. This is evident from his research interests, the educational demands he placed on his students and his commitment to an experimental approach to surgical innovation. The example of the procedures of laryngeal extirpation and replacement with an artificial device illustrate his interest in restoration of the function. It was under the influence of the training with Billroth, I argue, that the generation of surgeons practising around 1900, headed by von Eiselsberg and Mikulicz-Radecki, would produce innovations in the areas of transplantation, shock, blood circulation and asepsis. Looking closely at how surgeons were trained and the resources they used to construct surgical procedures may help us build a richer picture of both 19th Century surgery and of the relationship between the laboratory and the clinic.

Billroth was invited to Vienna to continue the experimental approach of Franz Schuh at the 2nd Surgical Department. Although the research programmes of the 2 Viennese surgical chairs diverged as early as the 1840's, it was only with Billroth's appointment in the late-1860's that they came to be seen as scientifically, educationally and politically opposed. The surgical and political identities of « Austrians » and « Germans » were mutually dependent and defined in opposition to each other. Billroth's surgery (a physiologically based approach that invaded bodily cavities and favoured elitist education) came to be identified with the German educational model and German values only in a constant conversation and comparison with the more conservative and inclusive model that positioned itself as the direct successor to the long and glorious Austrian tradition. This process should be regarded in the broader context of the growing nationalisms, disintegration of the middle-class and construction of the Austrian identity. The latter evolved in a continuous negotiation with the model of German identity across the border. What counted as Austrian differed from one field to the next, yet, certain common characteristics emerge across diverse areas of human activity. One was

a strong bond with the longer Austrian history - in the case of surgery, exemplified by Dumreicher's and Albert's focus on orthopedics and bio-mechanical research building upon long pathological-anatomical tradition. The other was the commitment to a broader appeal. To be great, one had to be popular ; restricting the accessibility of one's work risked its failure. This applied equally to Bruckner's Symphonies, Christian-Social political rhetoric and Dumreicher's vision of medicine suited for the Empire.

### A « thaler » for a beer

**Before Sunday 20 February 1881** : A performance of the 4th Symphony (**WAB 104**) was planned in Cologne by Doctor Hans Kleser but failed due to Ferdinand Hiller's disapproving attitude.

The « Romantic Symphony » (originally composed in 1874 but much revised) was not performed until 7 years had elapsed. This time, the famous Hans Richter was conducting. He held a prominent position in Vienna as Opera and Concert director, and he did a great deal for Anton Bruckner, although he was not among his closest friends. The composer often complained that Richter did not do enough for him. But when this authority actually conducted the work, Bruckner happily demonstrated an extreme degree of devotion for him during the rehearsals.

After the last rehearsal of his 4th Symphony, the well-meaning Bruckner tipped the conductor Hans Richter who related :

« The “ thaler ” is the memento of a day when I wept. For the first time, I conducted a Bruckner Symphony, at rehearsal. Bruckner was an old man then. His works were performed hardly anywhere. When the Symphony was over, Bruckner came to me. He face beaming radiant with enthusiasm and happiness. I felt him press a coin into my hand and said :

“ Take this, and drink a mug of beer to my health. ” »

Richter, who did not want to hurt the naive old soul, accepted the coin (an Empress Maria Theresa « thaler » - a 3 Mark piece) and wore it on his watch-chain ever after.

**Sunday, 20 February 1881** : Concert of the Vienna Philharmonic sponsored by the Wagner Society in favour of the German School Association.

Programme :

Ludwig van Beethoven : Piano Concerto (Hans von Bülow, soloist) .

Hans von Bülow : Chamber work (Hans von Bülow, piano ; Hans Richter, viola ; Josef Sulzer, cellist) .

Anton Bruckner : 4th Symphony (**WAB 104**) ; world-premiere.

Are present : Organist Johann Lohr from Budapest, Marie Lorenz. Music-critics Theodor Helm, Wilhelm Frey, Eduard Hanslick, Doctor Franz E. Gehring, Hans Paumgartner, Eduard Moucka, Max Kalbeck, Eduard Schelle, Ludwig Speidel, Eduard Kremser. (Hugo Wolf was probably also there.)

After the concert, Bruckner was called-out for a bow after each movement. Richter put this work on the same level as Beethoven's Symphonies. Josef Weilen presented Bruckner with the libretto for an Opera. This premiere actually drew praise from some quarters of the Viennese press. This was by no means universal, but Bruckner was overjoyed to be understood at all. Soon afterwards, he began work on the « Te Deum » .

### Rudolf Krzyzanowski's sister-in-law

**Saturday, 23 April 1881** : Letter from Anton Bruckner (Vienna) to Marie Lorenz, Rudolf Krzyzanowski's sister-in-law (Eger) :

Bruckner thanks Marie for the flowers and her recognition of his compositions - especially, the « Romantic Symphony » (WAB 104) .

### « Prater » : May Wine Festival

**Sunday, 1 May 1881** :

Anton Bruckner goes with Amand Loidol to the « May Wine Festival » which takes place at the « Prater » park. Back home (on the same day ?) , he plays his « Te Deum » (WAB 45) to Loidol at the piano.

### Vienna Conservatory : Final examinations (June 1881)

Anton Bruckners Schüler, denen der « I. Classificationsgrad » zuerkannt wurde, werden in der Prüfungsstatistik erwähnt :

Bei den Vorbildungsschulen ...

« Orgelclassse des Herrn Professor Anton Bruckner :

(4 Zöglinge.)

Emil Lamberg, Carl Luze, Anton Scholz. »

Bei den Ausbildungsschulen ...

« Orgelclassse des Herrn Professor Anton Bruckner :

(3 Zöglinge.)

I. Jahrgang : Ritter Lorenz.

II. Jahrgang : Adolf Veith, Hermann Vergeiner. »

Bei Musiktheorie ...

« Klasse für Harmonielehre als Hauptfach des Herrn Professor Anton Bruckner :

(5 Zöglinge.)

Franz Bauer, Carl Luze, Ernst Pollak, Anton Scholz. »

Und ...

« Klasse für Kontrapunkt des Herrn Professor Anton Bruckner :

(9 Zöglinge.)

I. Jahrgang : Paul Caro, Ludwig Fronz, Carl Last, Moriz Kremer Moriz.

II. Jahrgang : Franz Brischar. »

Adolf Veith und Hermann Vergeiner haben mit diesem Schuljahr ihr Hauptfach Orgel absolviert, worüber sie ein Diplom erhalten. Vergeiner wird mit der Gesellschafts-Medaille ausgezeichnet.

### Weimar : Franz Liszt's accident

Throughout his life, Franz Liszt had been an extraordinarily healthy man in spite of his style of life.

**Saturday, 2 July 1881** : Franz Liszt had a terrible accident at the Hotel Hofgärtnerei in Weimar. He fell-down the hotel stairs and was not able to walk for 8 weeks. Though friends and colleagues had noticed swelling in his feet and legs when he had arrived in Weimar the previous month (an indication of possible congestive heart failure) , he had been in good health up to that point and was still fit and active. His body retained the slimness and suppleness of earlier years.

He was left immobilized for 8 weeks after the accident and never fully-recovered from it. A number of ailments manifested themselves - dropsy, asthma, insomnia, a cataract of the left eye and heart-disease. The last-mentioned eventually contributed to Liszt's death. He became increasingly plagued by feelings of desolation, despair and

preoccupation with death - feelings which he expressed in his works from this period.

As he told Lina Ramann :

« I carry a deep sadness of the heart which must now and then break-out in sound. »

...

Liszt's biographer Alan Walker documented that his « decline into the infirmities of old age can be traced » from 2 July 1881 :

« The accident seemed to trigger a number of ailments that until then had been lying dormant within him - including dropsy, asthma, insomnia, a cataract of the left-eye, and chronic heart-disease. This latter illness would kill him within 5 years. »

His symptoms included « swelling of the ankles, loss of appetite, feelings of nausea in the mornings, a serious open wound in the right-thigh ... 2 fractured ribs with the possibility of bruising of the lungs, and pleurisy » .

### A copy of the 6th Symphony

**After Saturday, 3 September 1881** : Bruckner's Vienna copyist Franz Hlawaczek makes a copy of the 6th Symphony (WAB 106) which is dedicated to Anton Ölzelt junior.

### Leopoldine Werndl

**Thursday, 15 September 1881** : Anton Bruckner offers an autographed picture to Leopoldine (« Leo ») Werndl.

### WAB 95/2 : The « Sierninghofen » tavern

**1850** : Anton Bruckner wrote the motto « Des Höchsten Preis » (« The Most Sublime Prize ») (WAB 95/2) for the Liedertafel Sierning who always rehearsed and performed at the « Sierninghofen » tavern - today, « Freisitz Wahlmühle » , located on « Steyerstraße » Number 41, in the Upper-Austrian district of Steyr-Land.

Des Höchsten Preis, des Vaterlandes Ruhm,  
Der keuschen Minne zartes Heiligtum,  
Der frohen Lust, des herben Leides Drang  
Verkündet laut der deutschen Männer Sang.

Secular cantata (17 bars) in C major for 4 part « a cappella » male-choir (TTBB) (« Wahlsprüche » (motto) Number 2 ; Volume XXIII/2, No. 22.

Composed in Linz, the work is based on the German text « Des Höchsten Preis, des Vaterlandes Ruhm » (« The Most Sublime Prize, the Glory of the Fatherland ») by Andreas Mittermayr (1808-1880) .

Better-known as the older « motto » of Sierning Singing Society, in the complete edition, this one was dated at « 1868 at the latest » . But, according to a report in the « Linzer Tagespost » , of 29 October 1896, Bruckner is said to have written the composition « as the first motto for Sierning Singing Society, in Sierninghofen, in 1850 » . Hans Poscher published this « motto » , as Number 89, in his edition « Wahl- und Sängersprüche, SängergriÙe, Fest- und Trinksprüche » . The autograph is lost, but a copy by Altman Kellner can be found in the Austrian National Library.

G/A (August Gllerich / Max Auer) : III/2 (1930) , page 159.

NGA (« Neuen Gesamtausgabe ») : « Anton Bruckner Smtliche Werke » (ABSW) XXIII/2, Musikwissenschaftlicher Verlag, dition Angela Pachovsky - Anton Reinhaller, Vienna (2001) ; « Weltliche Chorwerke » , page 92.

...

The « Walhmull » was mentioned for the first time in 1456, as a noble residence, in the book of King Ladislaus Posthumus, when the Welzer brothers (Moritz, Hanns and Andres) were the owners.

In 1485, Hanns Welzern von Kaufweg sold the property to Hanns von Hohenegg.

In the 17th Century, the « Walhmull » was the property of the Spindler family.

In 1653, Johann Paul Spindler von Hofegg sold the « Walhmull » and the « Spiegelhaus » to Heinrich von Hchau and his wife Sophia (born Rohrbach) .

In 1657, Hanns Adam von Hoheneck sold the property to Hagenberg von Steinbach and his wife Susanna (born von Gera) .

In 1668, Leonhard Leichtmayr and Pflieger von Riedau bought the « Walhmull » and the « Spiegelhaus » .

Another owner was the Schmidtauer family from the « Oberwallsee » .

The engraving by Georg Matthus Vischer taken from his 1674 « Topographia Austrie superioris moderne » shows the « Freye Wallmihl » as a fortified site with a residential wing, a clock-tower, an inner-courtyard, a palisade fence, and a fruit garden.

In 1699, King Leopold I granted to the Jobst brothers (Christoph and Georg) and the Ehrenreich brothers (Christoph and Tobias) the honourable country estate with full-jurisdiction.

Christoph Jobst von Schmidtauer set-up a tavern here. This led to conflicts with the Losensteiner (from Losenstein) and Gschwendt families.

The « Wahlmühle » is a 2 storey building, in which a brewery was operated. The hook-shaped construction is equipped with wrought-iron window baskets. The year 1699 can be seen above the entrance-gate.

After the death of Christoph Jobst von Schmidtauer, in 1701, the family property passed to Hanns Jörg Füger von Erbweg who was married to Eva Maria Spindler von Hofegg (a sister of von Schmidtauer's widow) .

In 1741, the Gschwendt family became the sole owner of the « Walhmull » and the tavern of Carl Franz von Auersperg (owned by the Losenstein and Gschwendt families) .

The tavern, and later also the castle, were subsequently leased to breweries - and eventually sold.

In 1767, the owner was Johann Paul Krößwang. In 1792, the owner was Johann Nepomuk Wagner.

### Vienna Conservatory : Academic Year 1881-1882

#### Wednesday, 21 September 1881 :

Im Kapitel « B. Unterrichts-Leitung » des Jahresberichts ist zu lesen :

« 4. Lehrkörper.

I. Ordentliche Lehrer :

(...)

6) Herr Anton Bruckner, Professor, Kaiserlich-Königliche Hof-Organist (Harmonielehre, Kontrapunkt und Orgel.) »

Zu Anton Bruckners Schülern am Wiener Konservatorium gehören Sigmund Auspitzer (« aus Brünn, 20 Jahre - Harmonielehre, Klavier I. , I. Sprache. ») , Ciro Cavalieri (« aus Triest, 17 Jahre - Orgel V. I. , Harmonielehre, Klavier III. ») , Ferdinand Czerwenka (« aus Tyrnau, 29 Jahre - Orgel V. I. , Harmonielehre, Klavier I. ») , Rudolf Dittrich (« aus Biala, 20 Jahre - Orgel A. II. ») , Ferdinand Foll (« 14 Jahre - Klavier A. II. , Kontrapunkt I. ») , Ludwig Fronz (« 22 Jahre - Komposition A. I. , Kontrapunkt II. ») (trat am 3. Dezember 1881 aus) , Carl Führich (« aus Jamnitz, 16 Jahre - Orgel V. I. , Harmonielehre, Klavier II. ») , Franz Höfer (« aus Baden, 19 Jahre - Fagott A. I. , Kontrapunkt I. ») , Franz Johnscher (« 16- Jahre - Orgel V. I. , Harmonielehre, Klavier II. ») , Moriz Kremer (« 17 Jahre - Klavier A. III. , Kontrapunkt II. , General der Musik. ») , Emil Lamberg (« aus Pest, 19 Jahre - Orgel A. I. ») , (hat einen 2. Eintrag, oder Namensvetter :) Emil Lamberg (« aus Pest, 19 Jahre - Klavier A. II. , Harmonielehre. ») , Carl Last (« 18 Jahre - Komposition A. I. , Kontrapunkt II. , I. Sprache, P. und M. ») , Carl Luze (« aus Altenmarkt, 17 Jahre - Orgel A. I. ,

Kontrapunkt I. ») (verließ das Wiener Konservatorium am 13. Januar 1882 « wegen Disziplinarvergehen ») , Josef Meyer (« 14 Jahre - Klavier A. I. , Harmonielehre. ») , Wilhelm Prantner (« aus Partschins, 20 Jahre - Orgel V. I. , Harmonielehre, Klavier II. ») , Lorenz Ritter (« aus Mariazell, 17 Jahre - Orgel A. II. , Kontrapunkt I. , Klavier III. , Gesellschaft der Musikfreunde. ») , Anton Scholz (« aus Waydhofen an der Ybbs, 21 Jahre - Orgel A. I. , Kontrapunkt I. , Klavier III. ») und Sigmund von Tucher (« aus Nürnberg, 35 Jahre - Klavier A. II. , Harmonielehre. ») .

Und andere folgende Schüler dieses Schuljahres (vielleicht auch in Brucknerschen Kursen) spielen in Anton Bruckners späteren Jahren noch eine Rolle : Ernst Décsey (« aus Hamburg, 11 Jahre - Violin V. II. , Klavier I. ») , Robert Erben (« aus Troppau, 19 Jahre - Klavier A. I. , Kontrapunkt. ») , Ludwig Grandé (« aus Teltsch, 16 Jahre - Klavier V. II. , A. M. , französische Sprache. ») , Ferdinand Hellmesberger (« 18-jährig - Violoncello V. III. (Rept.) , Klavier III. ») , Carl Hrubý (« 12 Jahre - Violin V. I. ») , Guido Peters (« aus Graz, 15 Jahre - Klavier A. III. , Gesellschaft der Musikfreunde. ») , Marie Pohoryles (« aus Tarnopol, 13 Jahre - Klavier V. III. ») , Theodor Schwendt (« aus Winzendorf, 16 Jahre - Violin A. III. ») , Charlotte Steutter (« 17 Jahre - Klavier V. III. ») , Josef Venantius von WöB (« aus Cattaro, 18 Jahre - Komposition A. III. , Gesellschaft der Musikfreunde. ») und Heinrich Wottowa (« 14 Jahre - Klavier V. III. ») .

Von den 10 Orgelschülern gehören 5 zur Ausbildungsschule. Der « Übersicht der in den einzelnen Lehrfächern unterrichteten Schülerzahl. » ist zu entnehmen, daß von den Orgelschülern 3 halb vom Schulgeld befreit waren. 3 Schüler (beider Lehrkräfte) hörten Kontrapunkt als Hauptfach, 11 Harmonielehre. Als Nebenfächer wurden Harmonielehre von 109 und Kontrapunkt von 24 Schülern besucht.

Auszug aus der « Unterrichtsstatistik » :

« A.

In den Vorbildungsschulen ...

Orgel, I Jahrgang.

Schülerstand : systemisirter : 4 ; effectiver : 4.

Monatlich ertheilte systemisirte Lehrstunden : 8, sonach im Jahre ... 80.

B.

In den Ausbildungsschulen ...

Orgel, 2 Jahrgänge.

Schülerstand : systemisirter : 4 ; effectiver : 3.

Monatlich erteilte systemisierte Lehrstunden : 8, sonach im Jahre ... 80.

C.

In der Musiktheorie ...

Harmonielehre, I Jahrgang.

(2 Parallelklassen.)

Effectiver Schülerstand : 23.

Monatlich erteilte systemisierte Lehrstunden : 48, sonach im Jahre ... 480.

Kontrapunkt, 2 Jahrgänge.

(2 Parallelklassen.)

Effectiver Schülerstand : 18.

Monatlich erteilte systemisierte Lehrstunden : 40, sonach im Jahre ... 400.

### Bruckner's dream

**Friday, 23 September 1881** : Anton Bruckner set-down his first ideas for the 7th Symphony. Apparently, the Symphony's wonderful opening melody came to Bruckner in a dream : the conductor Ignaz Dorn, a friend from Bruckner's younger days, appeared to him and played the theme on a viola, with the words :

« This will bring you success. »

As it turned-out, the first performance of the 7th Symphony (significantly, not in conservative Vienna, but in the much more progressive city of Leipzig) was one of the greatest successes of Bruckner's life.

### Bruckner is welcomed at the « Riedhof »

**After Thursday, 15 September 1881** : Pocket calendar entry (undated) by Anton Bruckner :

Physician Doctor Carl Rabl (from Wels) introduces his friend Anton Bruckner to the round-table of eminent physician Doctors at « Gasthaus zum Riedhof » Hotel-Restaurant (« Zum Riedhof Wirtshaus ») located at the corner of « Wickenburggasse » Number 15 and « Schloßelgasse » Number 12 (14) , in the District of « Josefstadt » (8th) .

## Vienna : « Gasthaus zum Riedhof »

The « Riedhof » (House of « Herr » Reid) was initially a popular Beer-Hall (with a beautiful and exceptionally large garden with a glass-veranda) particularly frequented by physicians, officers and officials ; especially, in the 1860's and 1870's.

The house was named after its builder, the grocer and inn-keeper Josef Ried (1817) . Until 1850, the « Riedhof » was a small-inn, where you could hear a drummer playing during the Sunday dances. In 1850, the renowned « restaurateur » Johann Benedickter took-over the « Riedhof » and transformed it into an elegant Hotel. For the next 25 years, it welcomed high-ranking Officers and Officials on Emperor Franz-Josef's birthday (18 August) . Other major festive events were held there ; among them, the International Agricultural and Forestry Congress of 1890 ; the International Road and Small Train Congress of 1894. Members of the Viennese Medical School regularly visited the « Riedhof » as did the later mayor of Vienna, Baron Cajetan von Felder, who recalled in his « Memoirs » that the « Riedhof » Hotel as a political meeting-place for the citizens of « Josefstadt » . Austrian composer Anton Bruckner and one of his personal physicians, the eminent surgeon and friend Doctor Theodor Billroth, were frequent guests on official and un-official occasions. A student of Billroth, Baron Anton von Eiselsberg (author of « From the diary of a surgeon ») , and Professor Adolf Lorenz, nicknamed the « bloodless surgeon of Vienna » (author of the autobiographic novel « I was allowed to help ») were also regular visitors.

In the 19th Century, Vienna had lured many foreign doctors during the so-called « Second Medical School » period. At the time, the City bore the title of « Mecca of Medicine » . Relations between physicians of the United States and the Austro-Hungarian Empire were intense and well-documented. At the time, Johns Hopkins University was represented by « 4 Great Icons » , namely : gynecologist Howard Atwood Kelly, pathologist William Welch, surgeon William Halsted, and Canadian-born Sir William Osler. Although all of them worked in Vienna, the 4 months spent by the internist Osler at the General Hospital (« Allgemeines Krankenhaus » , or AKH) , in 1874, produced the famous article, « Back in Vienna after 34 Years » , published in the Journal of the American Medical Association. The popular meeting-point of the medical profession was the « Riedhof » Hotel, near the Hospital ; therefore, courses were offered in English. But the members of the Faculty complained to the Imperial and Royal Ministry of Health of a serious lack of financial resources on their part. In 1879, Ernst Fuchs, professor of ophthalmology, arranged such extraordinary lectures in his internal clinic on the « Alserstraße » side of the Institution.

The « Riedhof » Hotel was finally demolished to make place for the « Therese-Schlesinger-Hof » : a modern urban housing-estate of 84 apartments (originally planned for 90 apartments) supervised by Therese Schlesinger based on plans by architect Cesar Poppovits. It was erected between 1920 and 1930. The pure design of the façade corresponded to the new architectural style (« Wiener Werkstätte ») of the time.

...

Since the beginning of the 1880's, Anton Bruckner took part with great curiosity in Doctors' round-tables. Sitting beside the famous anatomist Doctor Carl Rabl (whom he had met in Wels, and for whose sister he always proposed

marriage without any success) , he was considered a very special-guest at the « Riedhof » Hotel-Restaurant in the District of « Josefstadt » which was located near Vienna's General Hospital. He was surrounded by eminent members of the University Faculty of Medicine but also by visiting-professors of national and international renown : they all represented the main « clientèle » of the place.

There was not much talk about music. Bruckner really wanted to learn everything about the topics that were on the agenda : for him, it was a fantastic and exclusive opportunity to explore the human body from within the organic functions ... and malfunctions. He never stopped asking questions on their history. When the doctors started to share their personal frustrations, defeats and limitations facing diseases and death, he deeply mourned with them. But, in his case, Bruckner prefer to receive objective information then morbid diagnostics. If someone adressed other scientific fields, such as electrical engineering, he was as passionate. He basically kneeled in front of the high-priests of « Science » like a shy and devout follower. But this did not prevent him from taking 10 or 13 large Bavarian « Seidel » glasses of « Pilsner » beer (one of the largest glasses made for beer, and as such, is good for lower-gravity beers ; the handle helps the drinker hold the large glasses without dropping them or spilling) , even wine, because he stayed as late as 10 o'clock in the evening.

The Bavarian « Seidel » are the massive 1.5 litre large mugs which were made famous by « Oktoberfest » celebrations. They now exist as thick glass, but are descendants of simple krugs (the « Maßkrug » made of earthenware, stoneware, porcelain, glass, silver and pewter ; with or without hinged lid, originally to keep-out the flies) that were used since the 15th Century as drinking-mugs. As glass-cutting and forming techniques became more advanced in the 19th Century, round dimples or other patterns began to show-up in these tanks. Almost obviously, these Classic mugs are reserved for session beers such as Pilsners, Helles, Märzen, Vienna and, of course, « Oktoberfest » beers.

(At that time, in « cafés » and taverns, beer glasses began to replace terra-cotta mugs, which gave more importance to the appearance of the product. Limpidity and colouring became essential factors.)

Altogether, Bruckner had mixed feelings : he was ashamed but also anxious about his present physical condition, the doctors (in whom he put all his confidence) placed him against his excesses and their bad consequences. Hearth problems was in the making but, for now, the lecturer of Harmony and Counterpoint was essentially interested in being part of this « élite » group of geniuses.

Bruckner never got drunk, but many observers believe too much beer precipitated the attack of his illness. When the doctors forbade all these harmless little pleasures, he complained bitterly. These were the only joys in life the modest fellow had left.

...

The « Völkischer Beobachter » (the newspaper of the National-Socialist German Workers' Party) contributors provided a number of anecdotes to fill-out the picture of Bruckner as a naively « völkisch » genius, some of which involved

descriptions of his drinking habits. According to Josef Stolzing, the composer « definitely had one weakness : he loved to drink » . But the National-Socialist cultural critic did not seem to consider this much of a problem ; indeed, in one instance, he wrote without reservation about Bruckner vomiting after drinking excessively, complete with details about the nearby devotee who kept as a memento of this brush with « völkisch » genius a set of clothes which had been splattered by the composer.

### « Doctores medicinæ » : Doctor Alexander Fränkel tells us about Bruckner

Anton Bruckner wanted to be part of a circle of « real » doctors ; his project took an almost « institutional » proportion. He finally succeeded but still considered these people as « aliens » : they are of the Doctors in Medicine (« Doctores medicinæ ») .

In 1881, the Upper-Austrian compatriot, the anatomist Doctor Carl Rabl, introduced Anton Bruckner to the round-table of doctors which met regularly at the Restaurant of the « Gasthaus zum Riedhof » (run by inn-keeper Johann Benedickter) located near the Vienna General Hospital.

It is not surprising to see Bruckner in company of physicians discussing macabre and horrible topics like corpses and skulls. In this regard, he was able to obtain all the information he wanted from the medical profession. However, what Bruckner gained on the scientific level from these evenings at the « Riedhof » was small compared to the social benefit which he could draw from them.

One of the physicians, Doctor Alexander Fränkel, gave a detailed account of the importance that Bruckner gave to his friendly relationship with the doctors :

« On the other hand, the reason why Anton Bruckner was attracted to our Society table was not for academic reasons but for the pleasure of sharing an exquisite “ Pilsner ” beer (which was not a futile reason for him) . In terms of personal exchanges with Bruckner, it became more and more obvious that the human aspect was of the utmost importance. I believe that he was quite reluctant to oppose professional musicians (except when he was in company of his few loyal disciples who already admired him at that time) . Again and again, in his position as teacher, he insisted on the great satisfaction of exchanging with his young students, which he nicknamed his “ Gaudeamus ”. When sitting at our table, he embarrassed everyone with his great modesty ; again and again, he considered himself privileged, as a “ poor musician ”, to rub shoulders with kind, considerate and friendly educated people like us. He listened attentively to our medical discussions with most anxiety and sympathized with emotions with the people whose diseases, operations, etc. , were exposed. (...) When he sought medical instruction, Bruckner was, by no means, satisfied with light answers ; he wanted to be thoroughly informed, and so, illustrations were used most of the time to help, especially when it came to the anatomy. When we gave him the opportunity to explore inside of the human body, we opened-up a new world of which he had no clue ; however, Bruckner expressed a lively interest not only in our medical discussions (even if they were strictly academic) but also sought enlightenment in this sphere, he demonstrated great interest in all facets of knowledge ; to stay level, he asked us, erudite “ Areopagus ” (as we were often called) , many questions about the various intellectual issues of the day. That Bruckner had only a modest degree of what is

commonly called “ education ” must be readily admitted. His years of training did not had much to his intellectual development. But whoever knew him better soon realized how much intuitive and adaptive his mind was. Of course, he was not a writer ; but he was capable of understanding the outside-world, and what he could, as it were, learn peripatetically, he did so with great ease. Even though the sum of his knowledge was of no great importance, his intelligence was far superior to the average. »

...

Original German text :

Anton Bruckners Bedürfnis, sich in den Kreis von « lauter Doktoren » aufgenommen zu sehen, nahm beinahe « institutionellen » Charakter an, sofern es ihm nämlich gelang, sich einer bestimmten species von Doktoren zu integrieren, die für ihn und für die er wahrlich « fachfremd » war : die « doctores medicinæ » . Im Restaurant « Riedhof » in der Josefstadt traf sich regelmäßig eine Tafelrunde von Ärzten, in die Bruckner 1881 von einem oberösterreichischen Landsmann, Doktor Carl Rabl aus der Anatomie, eingeführt wurde. Bruckner in einer solchen Gesellschaft zu finden, überrascht jedoch nicht mehr allzusehr, wenn man weiß, wie sehr ihn Makabres, Horribles, Anatomisches, Leichen, Totenschädel ... zu bannen vermochten. Diesbezüglich konnte er sich im Kreise der Mediziner jegliche Information verschaffen. Der wissenschaftliche Ertrag aus den Abenden im « Riedhof » war aber gering im Verhältnis zum gesellschaftlichen Gewinn, den Bruckner aus der Ärztterunde schöpfen konnte. Einer von ihnen, Doktor Alexander Fränkel, berichtet ausführlich und analysiert trefflich, was der freundschaftliche Umgang mit den Ärzten für Bruckner bedeutete :

« Was andererseits Anton Bruckner an unseren Tisch und diese ihm im Ganzen doch recht ferne stehende Gesellschaft anzog, war, ganz abgesehen von den recht banalen Motiven des ihm auch sonst angenehmen Lokales, in dem wir uns zusammenfanden, und der vielgerühmten Vorzüglichkeit des dort verzapften Pilsner-Bieres (das spielte ja bei Bruckner keine untergeordnete, ja eine nurallzugroße Rolle) vorallem der akademische Charakter der Gesellschaft, die er dort vorfand. Es erwies sich im intimeren Verkehr mit Bruckner immer deutlicher, einen wie großen Wert er in seinem Umgang gerade darauf legte. Ich glaube, daß er mit Berufsmusikern (die wenigen Jünger, die schon damals in verehrungsvoller Treue zu ihm hielten, ausgenommen) nur recht ungern verkehrte. Immer wieder betonte er die große Freude, die ihm seine Stellung als Lehrer an der Universität bereite und der Verkehr mit der akademischen Jugend, seinen “ Gaudeamus ”, wie ersie nannte. Er war als unser Tischgenosse uns gegenüber von einer geradezu peinlichen Bescheidenheit ; immer wieder glaubte er hervorheben zu müßen, daß er es sich zur großen Ehre anrechne, als “ armer Musikant ” von so “ gelehrten ” Herren so freundlich, rücksichtsvoll und freundschaftlich aufgenommen zu sein. Unseren medizinischen Gesprächen lauschte er mit gespanntester Aufmerksamkeit und mit rührendem teilnahmsvollen Interesse um die Menschen, von deren Krankheitszuständen, Operationen, etc. wir sprachen. (...) Bruckner gab sich, wenn er medizinische Belehrung suchte, keineswegs mit leichthin gegebener Auskunft zufrieden ; er wollte gründlich unterrichtet sein und so mußte oft genug, zumal wenn es sich um anatomische Information handelte, auch die Illustration helfen. Der ihm auf diese Weise vermittelte Einblick in den Bau des menschlichen Körpers eröffnete ihm förmlich eine neue Welt, von der er bis dahin auch nicht eine Ahnung hatte ; Bruckner bekundete aber nicht nur für unsere medizinischen Gespräche (auch dann, wenn sie streng wissenschaftlicher Art waren) lebhaftestes Interesse und

suchte auf diesem Gebiet in unserem Kreis Aufklärung, sondern war für alle Zweig edes Wissens von größter Aufnahmefähigkeit, und da er uns schon für seinen gelehrten Areopag hielt, waren wir oft berufen, so gut wir es eben konnten, gegenüber manchen Fragen Stand zu halten, die er den verschiedensten Zweigen der zeitgenössischen geistigen Bestrebungen entnahm. (...) Daß Bruckner über das, was man gemeinhin " Bildung " nennt, nur in bescheidenstem Maße verfügte, muß ohne weiteres zugegeben werden. Soweit Bildung mit Angelerntem identifiziert wird, konnte er ja seinem ganzen Entwicklungsgang nach nicht viel davon besitzen.

Wer ihn aber näher kannte, dem wurde es bald klar, wie sehr enweiterungsfähig sein geistiger Horizont und wie anpassungsfähig sein Intellekt war. Ein Büchhenssch war er freilich nicht ; er nahm aber verständnisvoll auf, was die Außenwelt seinen Sinn zuführte und was er gleichsam peripatetisch erlernen konnte, das eignete er sich mit großer Leichtigkeit an. Wenn auch die Summe des Wissens, das er mit sich führte, kein großes Gewicht hatte, so war seine Intelligenz eine die Durchschnittsbegabung weit überragende. »

### University of Vienna : Medical Faculty

As the founding member of the « Alma mater Rudolphina » (University of Vienna) founded in 1365, the Medical Faculty was already widely renowned in medieval times as an authority in medicine. Faculty records from as far back as 1399 document its mediation in disputes between barber surgeons, mid-wives, and local land-owners. During the reign of Maria Theresia, Viennese medicine first attained international significance. The Habsburg Monarch summoned the Dutch physician, Gerard van Swieten, to Vienna. He, in turn, laid the foundation for the Vienna Medical School and paved the way for other leading figures. Anton de Haen, Maximilian Stoll, Lorenz Gasser, Anton von Störck, and the discoverer of the percussion technique, Leopold Auenbrugger, all taught and conducted research in the Imperial City. Based on long-standing traditions, what now is referred to as « bedside teaching » also became the paradigmatic educational method during this period.

When the Vienna General Hospital opened in 1784, physicians acquired a new facility that gradually developed into the most important research centre. During the 19th Century, the « Second Viennese Medical School » emerged with the contributions of physicians such as Carl Rokitansky, Josef Škoda, Ferdinand von Hebra and Ignaz Philipp Semmelweis. Basic medical science expanded and specialization advanced. Furthermore, the first dermatology, eye, as well as otolaryngology clinics in the world were founded in Vienna.

At the beginning of the 20th Century, Viennese Medicine belonged to the first-class internationally. Clemens von Pirquet defined the concepts of « allergy » and « serum sickness » , Ernst Peter Pick conducted significant experiments on the chemical specificity of immunological reactions, and the Vienna School of Dentistry (founded by Bernhard Gotlieb) reached its zenith in the 1920's. All 4 Nobel Prizes, which were granted to (former) Viennese physicians during the next decades (Robert Bárány (1914) , Julius Wagner-Jauregg (1927) , Karl Landsteiner (1930) , and Otto Loewi (1936)) were the result of work undertaken at this time. The excellent tradition and research extended well into the First Austrian Republic. Under the auspices of the Medical Association of Vienna, which was founded in Vienna, well-received post-graduate courses for doctors world-wide were organized into the 1930's.

With the annexation of Austria by National-Socialist Germany (« Anschluß ») , on 13 March 1938, the darkest phase in Viennese medicine began. More than half of the University medical instructors, mostly those of Jewish descent, and 65 % of Viennese physicians were dismissed. Many renowned researchers, physicians, and students were forced to emigrate or died in concentration camps and under other tragic circumstances.

...

The Vienna Faculty of Medicine has been in existence since the foundation of the University in 1365. It was in the reign of Maria Theresia that it first achieved world-wide significance. It attracted Boerhaave's pupil Gerard van Swieten from Leyden to Vienna, and it was he who reformed the teaching of medicine and laid the foundations of the « First Vienna School of Medicine » . It was home to such distinguished figures as Anton de Haen, Maximilian Stoll, Lorenz Gasser, Anton von Störck and Leopold von Auenbrugger - the inventor of (anatomical) percussion. From this time on, particular importance was attached to bedside teaching.

...

The quality of medical training attracted students to Vienna from all over Europe, whether already established figures or unknowns such as the young Arthur Conan Doyle who came to improve his knowledge of ophthalmology. All flocked to the city to seek inspiration from the world's greatest specialists and attend daring and innovative surgery.

In 1841, the German physician Carl August Wunderlich reported :

« There was always something to learn in Vienna ; you saw things there that you would have looked for in vain elsewhere. »

The image of Viennese excellence leap-frogged frontiers, in particular into France where the physician Théophile de Valcourt published his « Impressions of a traveling physician » in the « Gazette Médicale de Paris » :

« Every educated Frenchman should prepare for the future by learning German and getting to know Germany ; in our current circumstances, should we not be giving preference to the “ Vienna School ” and requiring French students to undertake part of their training there ? »

Although this view was somewhat one-sided, in so far as both Paris and Berlin could claim to challenge the hegemony of the « Vienna School » , it reflected the historic rise of the capital of « Mittel-Europa » that, within a few decades, had become a mandatory stop on every aspiring physician's career trajectory.

### Illustrious pariah : Franz Anton Mesmer

While the Academy showered some physicians with honours, it cast others into the wilderness for their novel and anti-conformist ideas. The history of Viennese medicine is also that of the celebrated pariahs whose names remain as intimately associated with the Imperial Capital as those of their glorious colleagues, along with a strong whiff of

scandal. Franz Anton Mesmer remains without doubt the most scandalous of these physicians. On his death in 1815, at the dawn of the 19th Century, he left behind the foundations of a new discipline, at the interface between the science of the occult and psychology, which was to spread across the whole of Europe.

Before becoming the disruptive prophet of magnetism and the darling of Paris salons, Mesmer had made every effort to obtain the recognition of his peers. When he defended his doctoral dissertation at Vienna University's Faculty of Medicine, on 27 May 1766, he did so before a committee chaired by the celebrated Gerard van Swieten, the Dutch physician whom Empress Maria Theresa had brought in to re-organize medical education. Mesmer, thus, placed himself under the protection of the father of the « First Vienna School », obtaining the seal of his scientific authority for the ideas expounded in « De planetarum influxu in corpus humanum » (On the influence of the planets on the human body) . This physico-medical work on the influence of the planets heralded his subsequent research direction, but it wasn't until the end of the Century that Mesmer established the doctrine of animal magnetism, stating that « man possesses properties similar to that of magnets » .

This prompted his break from the « Vienna School » whose physicians poured scorn on his miracle cures and compared his treatments to conjuring shows. Mesmer was deeply bitter in 1777 on leaving faithless Vienna for libertarian Paris.

2 years later, on looking-back over this painful period in his « Mémoire sur ses Découvertes » , he described himself as the victim of jealous colleagues :

« The first cures achieved in some patients regarded as incurable aroused envy and even produced ingratitude, ... such that many physicians banded together to bury or, at least, pour scorn on the discoveries that I made in this field : I was accused on all sides of being an impostor. »

Mesmer was to spend his life trying to achieve scientific status for his doctrine, and continued to express his need for recognition by presenting himself as a « Doctor of Medicine from the Faculty of Vienna » .

### The « Mecca » of Medicine

Viennese medicine reached a pinnacle in the 19th Century. It was the embodiment of the Habsburg Empire and drew its strength from the Empire's multi-cultural base. Its leading figures (those writ large in its history) converged on the capital from the 4 corners of the Empire to endow the School of Medicine with international influence.

Jean-Paul Bled summed-up the concentration of minds in his « History of Vienna » :

« Bohemia and Moravia contributed the pathologist Carl Rokitansky and the internist Josef Škoda. ... The obstetrician Ignaz Philipp Semmelweis came from Hungary, and Józef Dietl from Galicia. ... The great surgeon Theodor Billroth arrived from Prussia 1 year after Sadowa ; the psychiatrist Theodor Meynert, a precursor of Sigmund Freud, came from Dresden. »

...

The Vienna General Hospital, which was opened in 1784, together with its various clinics gradually became the most important centre for medical research in Vienna. The many great figures who worked here established the world-wide reputation of the « Second Vienna School of Medicine » in the 19th Century.

Particularly important were the following :

Carl Rokitansky (1804-1878) , Josef Škoda (1805-1881) , Ferdinand von Hebra (1816-1880) , Ignaz Philipp Semmelweis (1818-1865) , Ludwig Türck (1810-1868) , Johann Nepomuk Czermak (1828-1873) , Leopold von Dittel (1815-1898) , Theodor Billroth (1829-1894) , Hermann Nothnagel (1841-1905) , Rudolf Chrobak (1843-1910) , Adolf Lorenz (1854-1946) , as well as the winners of the Nobel Prize for Medicine Karl Landsteiner (1868-1940) , Robert Bárány (1876-1936) and Julius Wagner-Jauregg (1857-1940) .

(Original lithograph in the Archive of the University of Vienna.) The Professors of the Vienna Faculty of Medicine (1849-1850) :

Portraits of some of the most important professors of the Vienna Medical School of the 19th Century.

From left to right, seated : Dumreicher, Škoda, Rokitansky, Rosas, Schuh.

Standing : Dlauhy, Hebra, Helm, Oppoltzer, Brücke, Haller, Unger, Redtenbacher, Sigmund, Hyrtl.

The University of Vienna achieved world-wide recognition in this period in the area of medical research. Almost all of those portrayed here were of influence in the school.

...

The Vienna of the time exerted un-precedented influence as the embodiment not only of the artistic « avant-garde » , but also of scientific progress, thanks to its renowned University. Its star shone with a special brightness in medicine, to the extent that none other than the Berlin anatomist Rudolf Virchow labeled it the « Mecca of Medicine » . The pagan « Mecca » , visited by pilgrim physicians from all over the world, played host to a succession of the most eminent practitioners of modern medicine.

...

In the 19th Century, the heart of medical science beat strongest in Vienna, described by the anatomist Rudolf Virchow as « the Mecca of Medicine » . Its University exerted international influence thanks to talent drawn from all corners of the Habsburg Empire. This period was the high-point of the « Second Vienna School » , personified by Carl von Rokitansky and Josef Škoda, who drilled the Imperial Capital in the doctrine of « therapeutic nihilism » . Their approach sought to re-invent medical knowledge from the bottom up. It went hand in hand with a distrust of the pharmaceutical remedies available at the time, which they dismissed as ineffective. Although they attracted criticism and were accused of favouring science over their patients, Rokitansky and Škoda were the key-contributors to the School's

renown, along with Theodor Billroth who laid the foundations of modern surgery in the city. But Vienna offered little welcome to certain other innovators, forcing Franz Anton Mesmer, the inventor of animal magnetism, into exile, attacking the work of Sigmund Freud, the father of psychoanalysis, and driving Ignaz Semmelweis, the founder of hospital hygiene, to an early death. Spanning the spectrum between light and darkness, Viennese medicine was also an inspiration to writers and artists, in particular to the former doctor Arthur Schnitzler, and a recurrent reference for the paintings of Gustav Klimt. Pioneering, bold, and riven by scandal, the « Second School » made Vienna the scientific capital of « Mittel-Europa » .

...

The Viennese medicine of the 19th Century excelled not only in its technical prowess and innovations, but also in its ideology, which became so characteristic of its practitioners that it served as their signature. Known as « therapeutische Nihilismus » (therapeutic nihilism) , the method defined the « Second Vienna School » under the leadership of Carl von Rokitansky and Josef Škoda. The « First School » had laid the foundations of the method at the end of the 18th Century thanks to the reforms of Gerard van Swieten and the emphasis on diagnosis. The influence of Schopenhauer's « Naturphilosophie » was also visible in the deep skepticism expressed by the Viennese physicians toward the pharmacological treatments available at the time. Instead, they advocated non-intervention, trusting in Nature's powers of recovery. This shifted the therapeutic vocation of medicine temporarily into the background, in favour of an over-riding concern to first understand how the human body worked before seeking to heal it.

The words of Józef Dietl, a pioneer urologist and fervent advocate of therapeutic nihilism neatly sum-up the change in emphasis :

« While the “ old school ” carried on therapy before engaging in research, the “ new school ” began researching in order to be able to understand therapy. ... Our strength lies in knowledge, not in action. »

Up until the « Age of Enlightenment » , diagnosis had been based mainly on Hippocratic signs and symptoms. In the 19th Century, it was dethroned by the modern science of morbid anatomy that introduced radical change by shifting the physician's gaze from the bedside to the autopsy-room. Rokitansky was said to have performed around 85,000 autopsies by 1844 when a chair of morbid anatomy was established in Vienna.

The names of Viennese physicians live on in eponymous conditions such as « Mayer-Rokitansky-Küster-Hauser » (MRKH) syndrome (« Müllerian agenesis ») in gynecology.

But at the time, they were celebrated primarily for their doctrine of therapeutic nihilism, as described by William M. Johnston in « The Austrian Mind » :

« By 1850, skepticism toward traditional therapy had so taken root that the only medicament used in the General Hospital was cherry brandy. For fear of distorting symptoms, doctors refused to prescribe any remedies. »

It may be surprising that the most eminent specialists should have concentrated less on the patient than on building

up a body of knowledge, but their approach served the purpose of medical progress as it sought to shake-off the traditional remedies that had been in use for Centuries with nothing but un-questioning belief in their favour :

« A profusion of clinical evidence, including the rarest maladies, encouraged Vienna's physicians to exploit observation as a tool for exploding medical myths. »

However, even in the 19th Century, the proponents of therapeutic nihilism themselves came under attack, in particular from 2 celebrated figures : the biologist Ernst Hæckel and physiologist Hermann Helmholtz.

The latter was scathing in his criticism of the cruelty of Josef Škoda, whom he accused of instrumentalizing patients for the greater good of science :

« And one degraded the patient who was, after all, a human being, and disgraced him, as if he were a machine. »

Even foreign observers were taken aback by his insensitivity, as shown in the « Journal de Médecine, de Chirurgie et de Pharmacologie » published by the Brussels Society of Medical and Natural Sciences in 1858 :

« Rarely, if ever, has medicine seen as absolute or as fervent a doubter. ... On the 28 sick in his care (or rather on his long-suffering patients) , he deploys a succession of all the most traditional and vaunted medicines, and do you know to what end ? ... With the sole intention of demonstrating to his students that all these medicines are in every case completely ineffective. »

Although therapeutic nihilism came to be called into question in the second half of the Century, it remained intimately associated with the « Vienna School » , characterizing the fields not only of clinical medicine and morbid anatomy, but also of surgery, whose undisputed champion was Theodor Billroth.

According to the « Father of modern surgery » :

« Reliance on excising a diseased part accorded with stress on pathological anatomy and skepticism toward drugs. »

Billroth was a pioneer in the history of surgical science, performing the first total laryngectomy and undertaking a number of cancer resections that had never previously been attempted, such as partial cystectomy via a supra-pubic approach. His prodigies on the operating table helped push-back the frontiers of human knowledge and caused the « Vienna School » to shine evermore brightly in the scientific firmament.

### Illustrious pariahs : Freud and Semmelweis

Sigmund Freud offers a similar instance of the mixed attraction and repulsion aroused by the city of Vienna in someone faced with the hostility of his peers. The Austrian capital may well pride itself today on having been the birthplace of psychoanalysis, but it was not always so welcoming to Freud's theories and showed its hostility on several levels :

« In infancy, it was Vienna that dragged him away from the green paradise of Freiberg ; in adolescence, it exposed him to anti-Semitic hostility ; during his engagement, it kept him back from Martha in Hamburg ; during his years of research, it withheld the scientific recognition he craved. »

Freud was at University in the second half of the 19th Century in an era when the Medical School was personified by Škoda, Rokitansky, and Billroth. Although he too went through a period of therapeutic nihilism in his youth while training in the various departments of Vienna's General Hospital, he was to develop his approach to the treatment of mental disorders in opposition to the prevailing orthodoxy. At a time when psychiatric patients were condemned to trepanation or to confinement in the « Fools' Tower » (« Narrenturm ») , Freud's preference for a talking-cure over the trephine led to him being outcast by his colleagues.

His fate bears astonishing resemblance to that of Franz Anton Mesmer in that it was in Paris that he too sought refuge from the sustained hostility. In Vienna, Freud's professor Theodor Meynert, who headed the department of psychiatry, looked down on his work, whereas in the Parisian medical world, Freud found fresh prospects beckoning. In 1885, he trained in hypnosis under Jean-Martin Charcot at the Salpêtrière Hospital and began translating his works for the benefit of his compatriots. Yet, when he returned to Vienna the following year and presented a report on male-hysteria to the Society of physicians, he found himself, once again, the butt of criticism and ridicule. As a man of science, he experienced frustration on 2 levels : not only were his innovative theories treated with scorn, but he was kept pinned down to the post of « Dozent » , unable to advance higher up the university ladder. Freud also took it as evidence of the anti-Semitism rife throughout the Medical School, scathingly portrayed on stage by Arthur Schnitzler in « Professor Bernhadi » , and that was eventually to drive him into exile in 1938.

Freud managed to survive Vienna and his colleagues' hostility, but not everyone in the 19th Century was so lucky. Despite revolutionary discoveries that were to transform clinical practice and the history of medicine, Ignaz Semmelweis fell victim to the City. His fate was sealed in 1846 when, as a young Master of surgery, he joined Professor Johann Klein's department of obstetrics at the Vienna General Hospital. He was astonished to observe that the mortality of young mothers was much higher in this department than in the adjoining department of Professor Bartsch. He eventually worked out why. After various experiments, he established that it was the medical students training under Professor Klein who were passing fatal infections on to the patients : by going straight from the autopsy-room to the labour-ward, they were spreading the puerperal fever that caused the young mothers to flee the hospital, sometimes even to deliver in the street. By making the students wash their hands in chlorinated lime solution, Semmelweis significantly decreased the mortality rate. Yet, his colleagues remained skeptical and maintained that his hand-washing protocol was too restrictive in practice. But, in reality, just as with Mesmer and Freud, Semmelweis was challenging the doctrine of therapeutic nihilism, thereby, blocking all hope of future promotion. Even the support he received from his fellow-Hungarian, Josef Škoda, proved of no avail in preventing his disgrace.

Following this bitter failure, Semmelweis left Vienna for Budapest, entrusting his colleague Professor Ferdinand von Hebra with the job of publishing his research in the « Journal de la Société Impériale et Royale de Médecine » , which the professor duly did, not without some errors. It was only in 1861 that Semmelweis himself put pen to paper to lay the foundation of modern aseptic technique in his book « Die Ätiologie, der Begriff und die Prophylaxis des

Kindbettfiebers » (Etiology, concept and prophylaxis of child-bed fever) .

In 1862, in an open-letter to professors of obstetrics in Vienna, he gave vent to his anger and bitterness :

« I would be committing a crime if I kept silent any longer and did not publish the results of my experience. I have the intimate conviction that, since 1847, thousands of women and children have died who would still be alive had I not kept silent. »

Semmelweis succumbed to depression and mental illness before dying in 1865 at the Provincial Lunatic Asylum of the Crown land of Lower-Austria in Bründlfeld (« Niederösterreichische Landesirrenanstalt am Bründlfeld ») located on « Lazarettgasse » (« Landes-Irren-Anstalt in der Lazarettgasse ») . Modern history books often refer to Semmelweis as a « Viennese obstetrician » , but it is important to remember that he paid for this title with his life.

### Vienna : General Hospital

#### For the benefit and comfort of the sick

Based on the model of the French central hospital « Hôtel Dieu » in Paris, which Josef II had come across in the course of his travels, the poor-house in Vienna was now to be rebuilt as a General Hospital. In fact, the construction of a large-scale hospital was hotly debated at the time. The high-risk of infection and the « hospital fever » , of which many patients in the Paris Central Hospital died, alarmed the Viennese doctors, and, for this reason, they argued repeatedly for small hospitals. The « Hôtel Dieu » , at that time, could accommodate 5,000 sick people in some 1,200 beds, which meant that 3 or 4 people had to share so-called « large beds » . Josef II, who was aware of these circumstances, was concerned to ensure that each patient had his or her own bed. When the General Hospital was opened in 1784, there were 2,000 beds available for patients. The General Hospital was, therefore, one of the largest and most modern hospitals in Europe.

With this medical institution, the transition was completed in Austria from the fragmented church and civic provision to a system of health-care organized centrally by the State. The hospital was open to all, and the payment of sickness benefit led to social differentiation into a 1st, 2nd and 3rd class of patient. For the last of these, a minimum level of hygiene was guaranteed. The General Hospital, on its central site, now incorporated 5 divisions : the General Infirmary, the Maternity and Foundling Home, the Asylum, and the Houses for Incurables, which were a type of quarantine station designed to protect the population from infectious diseases and possible epidemics.

...

A stroll through the Vienna's Old General Hospital is a journey through more than 200 years of medical history. Almost all the greatest medical discoveries took place at the « General » . Anonymous births were also possible here since the opening of the hospital in the 18th Century.

The Old General Hospital is a unique ensemble of 10 court-yards and gardens, built between the 17th and the 19th Centuries. In 1993, its last medical wards moved into the « new » General Hospital. Both hospitals are in Vienna's 9th District, the traditional « medical and hospital District » of the city.

In 1988, the city of Vienna, owner of the old hospital (« Allgemeines Krankenhaus », or AKH), presented it to the Austrian State provided that it was preserved and restored. After years of renovation, the « Allgemeines Krankenhaus » has recovered its former splendour and white faces, while its wards and medical departments were turned into lecture-rooms, libraries, and institutes. The dedication by Emperor Franz-Josef, « Saluti et Solatio ægrorum » (« To the healing and alleviation of the sick »), still hangs over the arch of the Classical front-gates. These open on the main-yard where an impressive statue of Doctor Theodor Billroth, Vienna's most famous surgeon of the 19th Century, welcomes visitors. His famous clinic was located at court-yard Number 1.

The old « Allgemeines Krankenhaus » now also hosts shops and restaurants, including a small brewery and typical « Schanigarten » serving wine and beer. It is an excellent example of reuse of a disused hospital as well as an addition to the city's unique and prestigious medical heritage.

### Wisconsin : Michael Ruckengruber

In the 19th Century, the city of Milwaukee was called « German-Athens » because of the many people who came from Germany and also Austria to live in the state of Wisconsin. Of course, they brought with them not only their beer but also their culture and music, including a knowledge of Anton Bruckner.

In St. Florian, Anton Bruckner got to know a priest from Upper-Austria who had been living in the state of Wisconsin since 1866. Bruckner probably asked the priest, whose name was Michael Ruckengruber, to establish contacts in the United States on his behalf, and Ruckengruber duly obliged.

Ruckengruber wrote about the possibility of publishing or performing Bruckner Symphonies in Milwaukee.

Back in Wisconsin, Ruckengruber wrote :

« Therefore, I went at the first opportunity to one of the leading music businesses in Milwaukee in order to discuss your Symphonies. The name of Bruckner was already well-known to the owner of the music-shop. »

**Before Tuesday, 8 November 1881** : Letter from Michael Ruckengruber to Anton Bruckner :

Ruckengruber recalls their meeting in St. Florian during last summer (Thursday, 25 August to Thursday, 1 September 1881) .

Publisher William Rohlfing had already known about Bruckner through one of his pupils, a certain Walker.

Ruckengruber asks Bruckner to send him one of his scores and also newspaper articles about the « Musikverein » . He will encourage « Musikdirektor » Eugen Luening to perform it.

Ruckengruber informs Bruckner that music doctorates are granted by the University of Philadelphia.

Emil Knotzer, the editor of the Milwaukee « Seebote » (Messenger) newspaper, who also knew from Bruckner, will be informed in this respect after November 8 (Election Day) .

What can be learnt from this special letter ?

It is a very good example of how much information such a document can contain. It has prompted a study of musical life in Milwaukee in the 19th Century, which was dominated by the German inhabitants. There were also close contacts between the diocese of Linz and Milwaukee. Friedrich Katzer, the third Archbishop of Milwaukee, was born in Upper-Austria. This letter shows that there are probably more documents in existence in the United States and elsewhere.

There were no performances of Bruckner's music in Milwaukee until 1897, one year after the composer's death, when the « Musikverein » performed his « Te Deum » (WAB 45) .

According to the « Süddeutsche Zeitung » newspaper (7 November 2000, page 2) : since 1845, « Election Day » took place on the Tuesday after the first Monday in November.

William Rohlfing (1830-1908) , from Osnabruck, established his Milwaukee music-publishing firm in 1878 and published both Classical and Salon music by American and European composers. Milwaukee composers such as Hugo Kaun, Eugen Luening, Christoph Bach, Joseph Clauder, and Charles K. Harris were all represented in the Rohlfing catalog.

Rohlfing's firm had strong connections to European music-publishers. It is common on a Rohlfing publication to see a second imprint, particularly from a Leipzig music-publisher, indicating that the music was simultaneously published and distributed in Germany.

### Anton Meißner at the University

**December 1881** : Anton Meißner meets Anton Bruckner at the University of Vienna.

### The « Ringtheater » fire

**Thursday, 8 December 1881** : Anton Bruckner witnesses the greatest incendiary catastrophe in the history of the city of Vienna. And he probably thanked the « Providence » , despite the post-traumatic effect !

Thursday is a day of celebration : the feast of the Immaculate Conception of the Virgin. In the evening, the Opera of the Court is presenting the second performance of « The Tales of Hoffmann » by Jacques Offenbach. The night before,

Johann Strauß (aged 56) had attended the premiere.

Sigmund Freud has tickets for tonight's performance.

Bruckner also holds 2 tickets but rather decides to stay home. He doesn't feel well enough (migraine ?) , and also dislike the work. So, he changes his mind at the last minute.

(As Bruckner will later tell his sister, Rosalia Hueber, he did not go to the Theatre as planned because of the program change.)

Shortly before the beginning of the Opera, fire breaks-out on stage.

From his window at the « Hôtel de France » next by, Bruckner sees the stage collapsing in the blaze.

A striking entry in his diary describes the scene with choking horror :

« On both sides, numerous corpses. Most between the second and third floors. »

At **7:00 pm**, the collapse of a wall forces to suspend the operations of debris removal.

Among the dead are Heinrich Nachod and his wife, an uncle of Mary Vetsera, aunt and uncle of Arnold Schönberg (aged 7, at the time) . Their 2 children will be adopted by the Schönbergs.

A Red Cross wagon carries corpses and body parts. At this point, Bruckner comes down to take a closer look at the relief operations and the clearance of the dead.

At **7:05 pm**, the first fire-fighters arrive with their ladders and manage to save a large number of persons. Drapes are stretched under the windows. More than 60 people jump from the third floor.

More horse-drawn fire-wagons arrive at full-speed and crush several citizens who are part of the large crowd surrounding the Theatre.

Some fire-fighters try to get inside. Since the doors open inward, they must first remove bodies that are blocking the exits. These victims have suffocated during the commotion without being able to escape.

Many of those who were injured could have been saved, but ultimately died of their burns and of smoke intoxication because no medical aid was available at the scene of the fire.

The fire brigade also realize very quickly the need to protect the neighbouring buildings - like the Vienna Stock-Exchange on the « Ringstraße » (« Schottenring » Number 16) . On his part, Bruckner is very worried about all his

musical manuscripts (his only treasure !) laying inside the apartment.

Between 386 and 436 deaths, of which 180 by defenestration.

The bodies are laid-out in the court-yard of the Main Police Station on the « Schottenring » nearby.

Later, municipal workers transport them to the Vienna General Hospital in horse-drawn carriages and on stretchers. The number of family members is so great that the soldiers and the police must ensure public order.

At the time of the tragedy, Emperor Franz-Josef is at his summer residence in Gödöllő, Hungary. Learning the news, he rushes back to Vienna. The city now enters a great period of mourning.

Living alone, Bruckner is fortunate that 2 of his pupils, who came from his own part of Austria, went to see him and stayed until morning. One of them is Josef Vockner's brother-in-law, Richard Schönberger.

« I shall never, ever forget it ! » , he would say whenever speaking of the horror of that night.

The next day, with a child-like mixture of fear and curiosity, Bruckner goes to the mortuary at the police station and views the dreadfully maimed victims. He becomes « abnormally over-excited » ...

**Between Thursday, 8 December 1881 and Monday, 12 December 1881** : Letter from Anton Bruckner (Vienna) to Felix Mottl (Karlsruhe) :

The correspondence essentially focuses on the tragedy of the « Ringtheater » .

**Friday, 9 December 1881** : Anton Bruckner visits the corpses at the police station.

**Sunday, 11 December 1881** : Letter (correspondence-card) from Anton Bruckner to his brother-in-law Johann Hueber :

Due to the proximity of his apartment, Bruckner tells his brother-in-law that he is still horrified by the tragedy.

After that inferno, Bruckner was afraid of fire. He would no longer use a petroleum lamp for fear of an explosion, and would only burn candles. When going-out in the evening, he would put the candle out very carefully and dash back into his room a couple of times to check that the wick had stopped smouldering. It took a longish period of recuperation in St. Florian to restore his equanimity.

...

The « Ringtheater » was a popular theatre in Vienna. It was located at « Schottenring » Number 7, on the northern stretch of the « Ringstraße » in the 1st District. It was destroyed in a fire, in 1881, and, today, the site is the federal

headquarters of police for Vienna.

The « Ringtheater » was built between 1872 and 1874 by Heinrich von Förster, following plans by Emil Ritter. It opened on January 17, 1874, under the direction of Albin Swoboda senior as an « Opéra-Comique », antithetical to the « seriousness » of the Vienna State Opera, then called the Court Opera (« Hofoper »). However, in September 1878, the focus was shifted to spoken plays, German and Italian Opera and variety, and the name was changed to the « Ringtheater ».

Given that the foot-print of the theatre was small (and the theatre was intended to hold an audience of 1,700), the architect was forced to build high, but with disastrous consequences. On December 8, 1881, a fire broke-out shortly before a performance of Jacques Offenbach's Comic-Opera « Les Contes d'Hoffmann ». The so-called « Ringtheaterbrand » (« Ringtheater » Fire) totally destroyed the theatre, and killed at least 384, according to official figures. (The following year, a new law was passed, regarding the outfitting and safety provisions, including safety curtains, outwards-opening doors and fire-proofing of the set.)

A so-called « Sühnhaus » was built on the site of the « Ringtheater », out of the Emperor's private funds; it was a private residence, which supported worthy causes. This was badly damaged, in 1945, and eventually fell-down, in 1951; between 1969 and 1974, an office block was erected on the site, in which the federal headquarters for police, in Vienna, and the general inspectorate of the federal security guards, and the now police commandos are housed. The fire is commemorated on a plaque situated on the west-side of the Austrian Federal Police Headquarters, Vienna section (« Bundespolizeidirektion Wien ») built from 1969 to 1974. The Attic style statues, which had stood on the pilasters, are now in the « Pötzleinsdorfer Schloßpark ».

...

The « Ringtheater » was unveiled on January 17th, 1874, as the « Wiener Theater », an « Opéra-Comique », providing a counterpoint to the seriousness of the « Kaiserlich-Königlich Hofoperntheater » (later called, the « Wiener Staatsoper »). In September 1878, however, the artistic focus of the « Wiener Theater » shifted to spoken plays, German and Italian Opera, and Variety, and it was renamed the « Ringtheater ».

Given that the foot-print of the « Ringtheater » was small and that the building was intended to hold an audience of 1,700, the architect Emil von Förster (1838-1909) was forced to build high and narrow, but with disastrous consequences. On **December 8, 1881**, a fire broke-out shortly before a performance of Jacques Offenbach's Comic-Opera « Les Contes d'Hoffmann ». Known, thereafter, as the « Ringtheaterbrand », it gutted the building within a few hours, killing at least 384 people in the process.

The cause of the fire remains a mystery, although it is known that the stage lamps were lit at 6:45 pm, while the curtain was still down, in readiness for the performance to begin. Perhaps, one of these lamps, which could raise the temperature of wooden stage scenery to 70 C° (Celsius) was to blame? For reasons unknown, the safety curtain was not lowered and the flames burst quickly out into the front seats. In the ensuing panic, the theatre's telegraph system

was not used to summon the fire brigade, nor were the water taps on the stage activated.

At this point, what began as a manageable accident turned quickly into a human catastrophe. So, as not to quicken the spread of the fire, the management switched-off the flickering gas jets, which were used for illumination in theatres, at the time. The emergency oil lighting, in the narrow and windowless hallways, which led to the theatre's 4 galleries, had been left inoperable after recent repair work. Those trying to escape the flames were consequently plunged into darkness.

Whilst most of the performers were able to make their escape through the back of the building, the terrified theatre-goers stumbled « en masse » towards the exit on « Schottenring » . Here, they became trapped, since the main-doors only opened inwards. The scene was horrific, as recorded later in gruesome detail by the world's press. With the doors firmly closed and the fire raging behind them, those that didn't succumb to the flames were soon asphyxiated.

Within an hour, the building was like a furnace, fuelled by the lavish internal decorations that were made of highly-combustible light wood and « papier-mâché » . The upper-most gallery, containing the cheapest seats, had no windows opening directly outside, so rescue by ladder was impossible. By contrast, some 50 people from the more exclusive first floor gallery were saved by their jumping from the windows onto sheets held-out by the fire brigade, on the pavement below. Here, a surreal scene was unfolding as bodies slowly piled-up and it began to snow.

By 11:30 pm, only the outside walls of the theatre remained standing. By this time, those still unaccounted for had undoubtedly been reduced to cinders. Bizarrely, the ornate façade of the theatre, with its confident statues of theatrical muses, was still intact. It is a little-known fact that these Classical-style statues were later taken-down and used to adorn the « Pötzleinsdorfer Schloßpark » , where they can still be found today.

As the « Ringtheater » burned, Emperor Franz-Josef I was at his Hungarian summer residence, in Gödöllő. Upon hearing the shocking news, he rushed back to Vienna and the city went into a period of deep mourning. In the immediate aftermath of the fire, the pioneer of modern forensic pathology, Eduard von Hofmann, a professor at the University of Vienna, was brought in to examine the bodies. His autopsies deemed carbon monoxide poisoning to be the primary cause of many of the deaths.

Those who had lost family members were offered financial assistance, and a considerable amount of money was raised at the city's Stock-Exchange (« Börse ») , which stood almost directly opposite the burned-out ruins. The Imperial family also contributed and, in time a so-called « Sühnhaus » (House of Atonement) was built on the former theatre site at the Emperor's expense. Used for charitable purposes, it was demolished in 1951, after being damaged during the Second World War, and was replaced by Vienna's Federal Police Headquarters (a plaque commemorating the « Ringtheater » fire can be seen on the building, today) .

Blame for the failure to halt the « Ringtheater » fire and for not saving more lives was laid at the feet of 2 men. One of them, the « Ringtheater's » newly-ennobled director, Franz Jauner, was held responsible for the lack of emergency oil lighting and for failing to keep the theatre's fire buckets filled. The Emperor stripped him of his title

(awarded for directing the « Kaiserlich-Königlich Hofoperntheater » , between 1875 and 1880) and had him thrown into prison for 3 months. Returning to the theatre, in later life, Jauner eventually shot himself after falling victim to financial mismanagement.

The second potentially guilty party was the Austrian Prime Minister and chief of secret police, Count Eduard von Taaffe. Ironically, he had ordered an investigation into the safety of all Vienna's theatrical venues, following the burning of the « Théâtre Royal » in Nice (France) , on March 1881.

That particular fire, which had been caused by a faulty gas main, had claimed the lives of 92 people. Von Taaffe's report concluded that existing building and fire regulations in Vienna were woefully inadequate. Numerous urgent improvements were deemed necessary : emergency exits should be clearly marked and fitted with emergency oil lighting, in the event of the gas supply being switched-off ; the wire-mesh safety curtain (made today of iron) separating the stage from the auditorium should be lowered at all times, except during rehearsals and performance ; separate gas mains should be used for the stage and for the auditorium ; and all doors serving as exits for the audience should open outwards. By the time of the « Ringtheater » fire, it was clear that not all of these improvements had been instigated.

Von Taaffe's recommendations finally became law, in 1882, and were emulated in theatres around the globe. At the same time, Vienna's network of fire alarms and water-hydrants was improved, and outward opening-doors became common-place in all buildings accessible to the public, from the grandest of theatres to the most modest of corner-shops. To some of today's visitors from outside continental Europe, this author included, outward swinging-doors are still quite a novelty to behold.

The effect of these new regulations was felt quickly. On 16th May 1884, for example, the « Wiener Stadttheater » set alight and its interior was gutted. A proposal to rebuild a theatre on the same site was refused by the Lower-Austrian authorities, on the basis of the new fire regulations : in this case, the access to the site was not deemed good enough. Consequently, in March 1887, the ruin was sold to Anton Ronacher, who built an eponymously-named concert-hall and ball-room, on the site, with tables where the theatre stalls had once been. Similarly, when Vienna's « Volkstheater » was unveiled, in 1889, the new regulations were clearly reflected in the architecture of the building, which was given an isolated site and exhibited a clear structural separation between auditorium and stage, which were given separate roofs. The « Volkstheater » also featured a fire-proofed iron stage and electric lighting.

By 1908, the improved situation in Europe even warranted an article in the « New York Times » , bemoaning the fact that the cities of the « New World » were suffering more fires each month than those of London, Paris, Berlin and Vienna were in 6 months. Regarding Vienna, it stated the following :

« There is no case known in this city where a conflagration has extended beyond the building in which it originated, and even hardly any cases are known where a fire extended beyond the floor on which it originated. This is prevented by the solidity of the buildings, by strict fire regulations, and by a pretty well-trained Fire Department.

“ Why Should America Have So Many More Disastrous Fires Than Europe ? ” »

(« New York Times » , 1908.)

It would be another 3 decades, and the appearance of Allied bombers in the skies over the city, before well-built Vienna and its well-trained firemen would again face the threat of destruction by fire.

### Eduard von Hofmann

A short distance past the station « Schottentor » , a memorial plaque at « Schottenring » Number 7, on the left-hand side of the « Ring » , commemorates one of the great fire catastrophes of the 19th Century. In the « Ringtheater » that once stood at this spot, on 8 December 1881, shortly before a performance of Jacques Offenbach's Comic-Opera « The Tales of Hoffmann » , a fault in the electro-pneumatic ignition system for the gas lighting started an appalling fire. The number of dead was estimated at over 400. In identifying the corpses, the forensic doctor Eduard von Hofmann (under whom Viennese forensic medicine achieved a leading position in the world) used modern methods such as examining the teeth of the victims. The charred head of a victim of the « Ringtheater » fire is still kept today in the Museum of Forensic Medicine, in Vienna, and a further one is exhibited in the Crime Museum in the « Leopoldstadt » . Hofmann's suspicion that, in many cases, the victims of a fire die through poisoning by smoke rather than burning could be proved through these corpses. He also succeeded in proving the existence of carbon monoxide (CO) in the blood of the victims. For forensic medicine, this was a most important discovery. In the case of a murder after which the body of the victim is burned, it could now be proved that, if there was no carbon monoxide in the blood, the victim had already been dead before being burned, or, on the other hand, if carbon monoxide was found in the blood then this showed that victim had been burned while still alive. This catastrophe brought with it a new awareness, not just for the field of forensic medicine. In addition to changes to the building regulations concerning Theatres and Opera Houses - the fire curtain and emergency lighting became compulsory items and, since then, entrance doors always have to open outwards the shock caused by this disaster led to the establishment of the « Wiener freiwillige Rettungsgesellschaft » (Viennese Voluntary Rescue Society) .

...

The Austrian physician Eduard (Ritter) von Hofmann was born on 27 January 1837 and died on 27 August 1897 in Opatija. A native of Prague, he was a pioneer of modern forensic pathology.

In 1861, he earned his medical doctorate at Charles University, in Prague, and, in 1869, became a professor of « Staatsarzneikunde » (State Medical Research) at the University of Innsbruck. He obtained this position with assistance from Carl Rokitansky (1804-1878) . In 1875, he became a professor of forensic medicine at the University of Vienna.

Hofmann is remembered for his diligent work in development of forensic medicine as a separate scientific entity. He is credited for introducing and expanding methodologies such as microscopy, spectroscopy and laboratory animal experimentation into forensic medicine, at Vienna. He wrote 2 important books : « Lehrbuch für gerichtliche Medizin »

(Textbook of Forensic Medicine) ; and « Atlas der gerichtlichen Medizin » (Atlas of Forensic Medicine) ; both of which have been translated into different languages.

Hofmann was instrumental in autopsy studies of the nearly 400 victims who perished at the Viennese « Ringtheater » fire which happened on December 8, 1881, where carbon monoxide poisoning was deemed to be an underlying cause of death. Also, he conducted the report on the controversial death of Crown Prince Rudolf of Austria (1858-1889) at Mayerling.

With Hermann Reinhard (1816-1892) , Eduard von Hofmann was one of the founders of forensic entomology.

...

Following the example of Vienna, a chair for State pharmacology was established at the University of Innsbruck. The first holder of this chair was the future Director of the Vienna Institute, Eduard von Hoffmann.

**1875** : A chair for hygiene was established upon the opening of a dedicated Institute of Hygiene, in 1908, on « Kinderspitalgasse » .

Eduard Hofmann (Head of the Institute from 1875 to 1897) .

Investigated the death of Crown Prince Rudolph, on 30 January 1889.

Investigated the over 400 victims of the « Ringtheater » fire, on 8 December 1881 :

first time identification was made using dental records.

Smoke inhalation was the cause of death.

Demonstrating that the presence of carbon monoxide (CO) is evidence that someone was burned alive.

**1878** : First publication of Hofmann's « Text-book for Forensic Medicine » . For a long period of time, this was the standard reference book for forensic medicine and was translated into French, Italian, Spanish and Russian.

Removal of forensic medicine specimens from the pathology association collection and transferred to its own, independent collection.

Forensic medicine and hygiene separated : Post-mortems ordered by the Court and health authorities were linked to the Director of the Institute for Forensic Medicine from 1875 and, from this time on, forensic medicine was no longer part of pathological anatomy.

...

One of the most remarkable works belonging to Austrian literature concerned with the termination of pregnancy is a text-book of juridical medicine, from 1878, with special regard to Austrian and German legislation (« Lehrbuch der Gerichtlichen Medizin mit besonderer Berücksichtigung der österreichischen und deutschen Gesetzgebung ») . It was written by Austrian physician and pioneer of modern forensic pathology, Eduard Ritter von Hofmann, and provides exhaustive insight into methods of traditional and main-stream medical practice. This work was repeatedly reprinted and it was translated into several languages. It is significant not only because of its focus upon relevant German and Austrian law, but also because of the information it provides regarding forbidden methods of intervention entirely missing from gynecological literature of the day. Hofmann earned high-honours at the Vienna University for continuing the tradition of the « Vienna School of Forensic Medicine » . He directed an open and modern institute that attracted individuals from all over the Empire. He introduced microscopy and animal experimentation to forensic medicine. He was also renowned for identifying the casualties of Vienna's « Ringtheater » fire, as well as his autopsy of Crown Prince Rudolf. He was decorated with innumerable medals for his accomplishments, achieved knighthood, and was laid to rest in an honorary grave in Vienna's Central Cemetery.

### Doctor Jaromír Mundy

The Austrian physician, army officer and philanthropist Doctor Jaromír Mundy was born on 3 October 1822 in Eichhorn Castle, Moravia (today : Burg Veverří, Czech Republic) . Founder of the ambulance service called the Vienna Volunteer Rescue Association (« Wiener Freiwilligen Rettungsgesellschaft ») . He pioneered a humanistic therapy for the mentally ill.

Jaromír was the youngest of 4 sons of the wealthy cloth manufacturer Baron Johann von Mundy and Countess Isabella Kálnoky von Köröspatak, and was the grandson of Wilhelm von Mundy. During his childhood, he was able to flirt with the medical profession, reporting at every opportunity to a voluntary medical service during the cholera epidemics of 1832 and 1838. He was a permanent assistant to the resident physician in case of accident or disaster.

Jaromír Mundy received an autocratic education. His parents forced him to study theology at the seminary of Brno (Brünn) and attain priesthood. He accepted with reluctance, and soon left. Angered, his father ensured that he entered the Imperial-Royal Army as a cadet. He served for many years (participating as an officer in the 1848 and 1849 campaigns) and occupied himself with medical science in his spare time. During his stationing at the Alser barracks (« Wiener Alserkaserne ») , he spent most of his spare time at the Vienna General Hospital (« Wiener Allgemeinen Krankenhaus ») where he studied medicine. In 1852, he was promoted captain, and, in 1855, he turned his back on the unloved army career.

At the age of 33, he completed his medical degree in Würzburg. In 1857, he was admitted for the doctoral examination after only 4 semesters ! He wrote his dissertation thesis on the topic « About the Family Treatment of Insane In the Lunatic Settlements » (« Über die Familien-Behandlung von Irren in Irren-Kolonien ») . From 1859, he devoted himself to the study of neurology, psychiatry and forensic medicine and gained practical experience in

Heidelberg, Leipzig and Berlin to improve the treatment of mentally ill people.

Endowed with a technical aptitude, he conceived a humanistic first-care service for the wounded. As a military doctor on various battlefields, he distinguished himself by a self-sacrificing willingness to help on the front-line, providing the logistical provision of medical instruments, activating assistance, assuring primary care and organizing transport of the wounded. Mundy fought for an improvement of the conditions on the battlefields during the late-19th Century, which were mostly characterized by poorly-organized rescue operations. His longtime friend surgeon Doctor Theodor Billroth described Mundy as « one of the greatest practical humanists of his Century » .

In 1859, Mundy was summoned to Piedmont by a former military superior, Count Franz Chulai, to serve as a physician on the battlefield during the Sardinian War. Since that time, he has been continuously practising different martial arts. On June 24, 1859, he met the Swiss businessman, Henry Dunant, in the battle of Solferino with thousands of dead and wounded. As a privileged eyewitness, Dunant experienced the inadequate care of the wounded, and, since that time, has been committed to humanism during wartime. He is considered the originator of the Geneva Convention, founded in 1864, whose basic idea is to improve the care of wounded and prisoners of war. Dunant was the founder of the International Red Cross and Red Crescent movement.

In the 1860's, criticism of the traditional medical care of the insane and of the asylum institution grew stronger. Among the alternatives proposed to the closed institutions, « oubliettes » in which those in need of a cure were left to die, the family care system became strongly advocated by reformists. After the Sardinian War, Mundy traveled to the small Flemish town of Gheel in Belgium to look at the then famous lunatic settlement composed of 1,500 patients. The insane were living among the population, hosted by foster families, under a medical and governmental supervision. There, patients were living among the citizens, showing the efficiency of a logic of integration of madness rather than its exclusion : soon, Gheel became a symbol of « anti-asylum » . For Mundy, this was the most dignified form of treatment.

In the conflict opposing traditionalists, defending the asylum institution and therapeutic constraint, and reformists, believing in « boarding-out systems » , Doctor Mundy stands-out. This physician of noble ascent became the strongest advocate of the private dwelling system, which he relentlessly and passionately defended across the continent. From 1860 to 1867, he gave lectures on this subject in different European capitals while visiting numerous mental hospitals. He gained international fame as a representative of the reform of the lunatic health system and of a modern lunatic legislation.

During the Austro-Prussian War (7 Weeks' War) of 1866, Mundy volunteered for the first time as rescue aid (paramedic) at the field hospital of Pardubice (Pardubitz) , in Bohemia. During the battle of Königgrätz, he worked on the improvised ambulance-trains that brought wounded soldiers from Bohemia to Vienna. Back in Vienna, he was named deputy-chief of the military hospital based in the « Prater » . After 1866, his main goal was to reorganize the medical system in the Austrian army.

At the Paris World Exhibition of 1867, Mundy had a model-house built at his own expense to demonstrate the practice

of decent and liberating lunatic treatment. As an Austrian delegate of the Ministry of War, he took-part in congresses and commissions, participating the same year in the first Red Cross conference in Paris, which discussed the application and implementation of the Geneva Convention, and advocated the implementation of Dunant's wishes and the improvement of care to the wounded. Technically very gifted, Mundy constructed during this period different stretchers, ambulances and completely equipped medical trains to ensure the proper transport of the wounded. These were ground-breaking innovations in the medical field. Catastrophic, undignified emergency transports were the topic of the day, in which patients continuously died. Together with engineer Hugo Zipperling, Mundy also developed the equipment for ambulance-trains. In 1870-1871, Mundy worked in Paris hospitals and organized the ambulance service. He particularly affected the debates among the French psychiatrists, thus, giving new elements on the history of 19th Century psychiatry.

From the middle of 1870 until the end of 1872, Mundy participated as « neutral » physician in the Franco-Prussian War, more exactly in the besieged city of Paris. This way, he ensured human medical assistance to the wounded. For his implication, he was the first foreigner to receive the French military medal for Bravery. In 1871, he met local volunteering sisters from the Paris Jesuit community in an ambulance-car. Thanks to his efforts, the community decided to establish itself in Vienna, in 1873, at the « Rudolfspital » located in the 3rd District.

From 1866 to 1870, Doctor Jaromír Mundy gave numerous lectures as associate-professor in different prestigious Viennese institutions (University of Vienna, Vienna General Hospital, « Josephinum » Academy, Academy of Sciences) on the topics of psychiatry, forensic medicine, health education and military ambulance service. He was finally appointed full-professor at the University of Vienna in 1872 on the topic of military ambulance service.

When he returned to Vienna after the Franco-Prussian War, Mundy was frustrated at the lack of medical progress in his own hometown. At that time, he lived at « Harmoniegasse » Number 3, in the 9th District.

His many years of efforts, his numerous proposals and « memoranda » directed to the public authorities went unheeded. Therefore, he concentrated again on the promotion of voluntary assistance during wartime.

At the Vienna World Exhibition of 1873, Mundy commissioned the French Society of the Red Cross to build a prototype of ambulance-train based on his own blue-prints. Together with Doctor Billroth, he organized an « International Congress for Welfare during Wartime » without any support from the public authorities.

From 1875, Mundy began to work tirelessly, as general chief-physician of « The Order of Malta » , on reforming the public and military medical systems in Vienna, and also to set-up a First-care network - but he failed again.

He served (on the Serbian side) during the Serbian-Turkish War of 1876-1877, but also organized the « Red Crescent » Association in Constantinople. Then, he served in the Turkish-Russian War of 1877-1878. When the ambulance-trains of « The Order of Malta » started to run, he remained at the front until the end of the evacuation operations.

Mundy wrote a number of important works between 1875 and 1882.

With his friend Theodor Billroth, Mundy contributed to the founding of the « Rudolfinerhaus » in Vienna.

In June 1870, the Austrian Parliament decreed that the responsibility for fire-fighting be transferred to the regional municipalities, each with its own police force and fire chief. The Lower-Austrian fire brigade federation was founded 1 year later and, in 1873, Vienna's first steam-powered fire engine (« Dampf-Spritzenwagen ») was demonstrated at the World Exhibition in the park of the « Prater ». Despite such readiness, however, some of Vienna's buildings remained perilously unprepared for a fire.

On 8 December 1881, the tragic fire of the « Ringtheater » in Vienna made around 400 victims. This unprecedented disaster clearly showed the weaknesses of the national public health system and its harsh transport methods. So, the next day (December 9th), Doctor Mundy founded the « Wiener Freiwillige Rettungsgesellschaft » (Volunteer Rescue Society of Vienna) together with Doctor Billroth, Count (Johann Nepomuk) Hans Josef Wilczek (1837-1922) and Count Eduard Lamezan-Salins (1835-1903; lawyer and judge, president of the municipal court). Lamezan was elected President, Wilczek was elected Honorary President (he was not available because of a planned expedition to the North Pole) and Mundy, General Secretary and Chief-Physician. In January 1882, the Founding Committee of 12 members wrote an official letter to the Emperor arguing that the city of Vienna needed an institution providing first-aid by physicians and medically trained personnel anywhere - in the streets, in offices, in homes and in ambulance-cars on the way to the hospital. Franz-Josef gave his full support. 1 month later, the Lower-Austrian Imperial-Royal Chancellery approved the articles (constitution) of the newly-created entity.

On April 1882, the ambulance service started its operations in Vienna. The wealthy land-owner Count Hans Josef Wilczek who financed the creation of the society offered rooms of his villa on « Herrengasse » becoming the acting headquarters.

On November 1882, Volunteer Rescue Society's chief-surgeon Albert Moseitig of Moorhof started holding national lectures on the training of medical personnel.

On 1 May 1883, opening of the first emergency station (consisting of 2 rooms) located at « Fleischmarkt » Number 1. Direct phone-line to police. Telegraph line. Hospitals reported the number of available beds (via telegraph) twice daily. 4 ambulance-cars. Access to 97 medical students, 36 non-medical practitioners who provided their services as paramedics. Doctor Mundy himself worked as a physician or a paramedic (sick carrier or coach-man) depending on the situation.

1885-1886 : Doctor Mundy participated (on the Serbian side) in the Serbian-Bulgarian War.

1889 : Opening of the first real headquarters with 4 physicians, 8 emergency medical technicians, 4 coach-drivers available 24/7; and 17 ambulance-cars. The society dispatched well-equipped medical teams to disasters.

1890-1900 : The Volunteer Rescue Society of Vienna helped to establish similar societies in various cities in the Austrian-Hungarian Empire (Linz, Klagenfurt, Salzburg, Prague, Brno, Lemberg, Krakow, Budapest, Czernowitz, Trieste) but

also in other countries (Amsterdam, Copenhagen, Frankfurt-am-Main, Johannesburg, Kiev, Helsinki, Odessa, Reichenberg, São Paulo, St. Petersburg, Warsaw) . These societies were the first emergency medical services in the world.

The Vienna society was financed by donations and charity events. Mundy who never married and lived in moderately priced hotels, tirelessly continued to raise funds, until his own house could finally be built near the Aspern Bridge (« Aspernbrücke ») .

Because of his family connection with Carl Sacher (1849-1929) , Jaromír Mundy lived for many years at the « Hotel Central » located at « Taborstraße » Number 8, a few minutes' stroll from St. Stephen's Cathedral. An educated and well-read man, he spoke 12 languages and met with many interesting personalities. He was admired in his circles as a brilliant colleague, who also liked (when in a good mood) to sing arias from Operettas or Operas.

Invoking « bad health » , Doctor Mundy resigned as Secretary of the society on March 5, 1892. The board refused his resignation, but gave him « leave until he has restored his health » .

Mundy was physically drawn by age because of severe asthma and abdominal problems. After a water-cure stay at « Bad Tüßer » , he spent the last months of his life at Carl Sacher's « Curanstalt Helenenthal » (Helenenthal Spa Clinic) located on the outskirts of Baden, on the edge of Vienna Woods.

(Today, the « Sacher Hotel Baden » enjoys a beautiful setting in the picturesque Helenenthal Valley. First opened in 1881, this hotel kept its unique old world charm. It is set among lovely gardens. The property also features a quaint outdoor coffee-shop and « café » , and a restaurant. There is also a ball-room where guests can hold events and parties. Leisure activities available on-site include sauna and spa facilities.)

On 6 February 1894, his long-time friend and companion Doctor Theodor Billroth died. During a phase of depression, Mundy put an end to his life by drowning himself on 23 August of the same year. His grave is located at the Central Cemetery in Vienna. The « Mundygasse » was named after him in 1932. Today, a bust of Doctor Jaromír Mundy (created by sculptor Teresa Feodorowna Ries) stands in front of the headquarters of the Vienna Rescue Service located on « Radetzkystraße » in the « Landstraße » District (3rd) .

...

During a presentation of « The Tales of Hoffmann » by Jacques Offenbach on the evening of 8 December, 1881, a terrible fire broke-out at the « Ringtheater » of the City of Vienna. There was an audience of 1,760 people at the theatre on that evening. The fire was caused by a gas-lamp hanging-over the stage. While the singers were able to escape to safety through the stage exit, the audience was engulfed in deadly chaos. When the theatre lights went-out, the chaos grew even worse, and the panic-stricken audience was trapped in the pitch-dark theatre, groping frantically for the exit. The main theatre exit, however, was constructed to open towards the inside only. Therefore, the first ones to reach the entrance could not open the doors against the giant crowd of people pressing forward behind them. Many fell and were trampled to death or suffocated.

As a result, those fleeing from the fire were unable to get outside to save themselves and the firemen were unable to overcome the wedge of trampled corpses and get inside the burning theatre. Some of those trapped inside hurried-out to the balcony, desperately crying for help, or jumped-down in panic to the Vienna « Ringstraße » , the street below, to escape. The raging fire, however, had already reached the « Ringstraße » . Most of those who jumped were either killed or severely injured. Those who remained in the theatre were soon completely surrounded by flames, without even a slim chance of survival.

The entire city of Vienna was panic-stricken by that devastating fire, which claimed as many victims as a major battle. Many of those who were injured could have been saved, but ultimately died of their burns and of smoke intoxication because no medical aid was available at the scene of the fire.

The bodies were laid-out in the court-yard of the Main Police Station on the « Schottenring » nearby. Later, municipal workers transported them to the General Hospital in horse-drawn carriages and on stretchers.

While the city of Vienna was still in a state of fear and shock, Doctor Jaromír Mundy knew it was time for his long-coveted dream of a medical ambulance service to become reality. On 9 December 1881, 1 day after the fire, he founded the « Volunteer Ambulance Service of Vienna » together with Count Hans Wilczek (1837-1922) and Count Eduard Lamezan (1835-1903) . Mundy had gathered a great deal of experience on various battlefields all over Europe, where he had worked as a care provider for the military, constantly striving to expand the radius and to improve the quality of care. Mundy's immense experience was an enormous advantage for the new civilian ambulance service.

Mundy was born on 3 October 1822 at Eichhom Castle in Moravia, a province of today's Czech Republic. He was the

youngest son of Baron Johann von Mundy and the Hungarian Countess Isabella Kalnoky von Korospatak. His mother doted on him, but his relationship with his father, a harsh and tyrannic man, was not close at all. It was Mundy's father who forced him to study theology. Before long, however, Mundy decided to leave boarding-school in Brno, where he was supposed to be studying theology and attain priesthood. To Mundy, whose love and interest were devoted to medicine, the idea of spending life as a priest was not attractive at all. His enthusiasm for medicine had become obvious during his boyhood, when he had loved nothing more than accompanying the country doctor and learning from him on his patient rounds. Enraged by that, Mundy's father forbade him to study medicine. Young Jaromír protested vehemently, but in vain - his father enrolled him as a cadet with the 49th Infantry Regiment at the Alser Barracks in Vienna.

Not even his father's decision could stop Mundy from devoting his interest to medicine. During his stay in Vienna, he paid regular visits to the clinics of the General Hospital. In 1848, after 5 years with the military, Mundy became Imperial First Lieutenant in Italy. He spent every minute of his spare time on medical research.

In early 1852, he became Imperial First Captain of the 6th Infantry Regiment. After the Crimean War in 1855, and 12 years with the military, Mundy decided to end his military career. At the age of 33, he fulfilled his greatest wish in life and began studying medicine. He moved to Würzburg, where several famous scholars were teaching at that time. One of those scholars was Rudolf Virchow (1821-1902), who discovered the importance of cellular changes for the development of diseases. Mundy was very much impressed by the fact that Virchow was not only a physician and a scientist, but a politician and social reformer as well. Virchow's opinion that physicians should be advocates of the poor corresponded perfectly with Mundy's intent and initiative to help the poorest of the poor, the sick.

His talent and diligence as well as his years of experience and research with the military enabled Mundy to graduate from medical school after only 4 semesters. In those days, to work as a physician was frowned upon in aristocratic circles. Therefore, Mundy always remained an outsider in the eyes of his fellow-aristocrats.

He left Würzburg shortly after his graduation from medical school on 23 March 1859. After increasing his knowledge in Heidelberg and Leipzig, Mundy moved to Berlin, where he focused his interest on the therapy of mental diseases. Additionally, Mundy repeatedly returned to his former unit as an Imperial Captain. He worked as a physician on several battlefields, including Solferino, where he met the Swiss writer Henri Dunant on 24 June 1859.

In those days, Solferino on Lake Garda in Italy belonged to Lombardy, which was under Austrian rule. Napoleon III of France had instigated the Lombards against the Austrians. After an ultimatum had expired, the war finally broke-out. Approximately 190,000 men on the Austrian side were fighting approximately 180,000 men on the Italian/French side. Slowly but surely, the battle escalated into a massacre. Chaotic mismanagement and conflicting orders worsened matters even more. In the end, 42,000 men had fallen or been severely injured in the terrible Battle of Solferino and were left lying helplessly on the battlefield.

Henri Dunant (1828-1910), who was in Solferino of his own accord and as a newspaper correspondent, became an eyewitness to the goriest battle of the 19th Century and to the greatest failure and lack of care for the injured. He

saw how they were left behind on the battlefield, helpless prey to thieves and looters.

In his « Recollection of Solferino » , published in 1912, Dunant wrote :

« (...) lamenting, screams of fear and pain, and heart-rending calls for help rang-out in the dead of the night. Who could ever describe the agony of that horrible night. »

The Solferino experience marked the beginning of Dunant's fight for humanity during wartime. He became the force behind the Geneva Convention, which convened on 22 August 1864 to improve the situation of injured soldiers and prisoners of war. Moreover, Dunant became the founder of the International Red Cross. On 10 December 1901, Henri Dunant was awarded the Nobel Prize for peace.

As an Austrian delegate, Mundy took-part in the Paris Conference, held on the occasion of the Paris World Exhibition to discuss the realization of the Geneva Convention. He was a mesmerizing speaker and did everything in his power to support Dunant's cause and to improve social aid for the injured.

While Mundy was on an educational journey through England, the Austro-Prussian War broke-out on 7 July 1866. Mundy immediately contacted the Ministry of War to volunteer as a physician. He treated injured soldiers in the Battle of Königgrätz and supervised their transport to Vienna. The injured were bedded on straw and transported back to Vienna from the battlefield in cattle cars without any medical care at all. They were brought to the « Prater » park grounds, where a casualty clearing station had been set-up under Mundy's supervision. Almost as many soldiers died during transport as on the battlefield. Mundy realized that the means of transport were unsatisfactory and racked his brains how to improve this intolerable situation. Thanks to his initiative, freight-cars were equipped with shock-proof stretchers and the trains began carrying physicians and nursing personnel as care providers en route for injured soldiers.

Moreover, Mundy worked on the constructing of stretchers, ambulances and giant spotlights for the transport of injured soldiers from the battlefield in the dark. Again and again, Mundy criticized the municipal medical aid in Vienna, because he believed that all patients transported from the scene of an accident should be accompanied by medical personnel and because there was no such thing as medical personnel trained to deal with potential disasters. All his warnings had been ignored, however, until the great fire broke-out in the Vienna « Ringtheater » .

An action committee was founded at a meeting on 10 December 1881. Wilczek was made President of Honour, Lamezan President and Mundy Secretary and Chief-Physician of the Ambulance Society.

On 2 January 1881, Wilczek and Lamezan submitted their « most humble plea for shelter and protection and for gracious expedition of the official decrees » to Emperor Franz-Josef I. One month later, the Imperial Governorship of Lower-Austria certified the statutes and the Volunteer Ambulance Society of Vienna officially took office. Wilczek donated the funds for the Ambulance Society and repeatedly provided financial support in the following years.

The foundation of the « Volunteer Ambulance Society of Vienna » marked the birth of an institution providing first-aid by physicians and medically trained personnel anywhere - in the streets, in offices, in homes and in ambulances.

Almost at the same time, Jaromír Mundy, Hans Wilczek and the surgeon Theodore Billroth founded the « Rudolfinerhaus » under the protectorate of Crown Prince Rudolph. Though at first, it was merely a small hospital pavilion with wooden barracks to accommodate the patients, the « Rudolfinerhaus » was soon to become famous. Mundy insisted that Billroth, who was quite reluctant initially, join the « Rudolfiner » Society. That marked the foundation of the first Classic nursing-school for the laity in Austria. Nurses were trained directly at the operating-table by surgeons. Billroth's supervision and expertise led the institution to international fame. During the First World War (1914-1918) , the « Rudolfinerhaus » became a Red Cross Hospital and thousands of injured soldiers were treated there. After the war, the hospital faced serious problems for many years, and more than once, it was in danger of being shut-down completely. Today, the « Rudolfinerhaus » is Vienna's leading private hospital.

The first outpatient service for the patients brought in by ambulance opened its doors in Wilczek's private villa. Since volunteers for the day-shifts were difficult to find at first, the Ambulance Society decided to recruit medical students for the work.

The citizens of Vienna were encouraged to support the new institution, both financially and personally. Even the Emperor made a donation to the Society. Over the years, several charity balls and other events were organized for the benefit of the new institution for the sick and injured. The famous composer Johann Strauß wrote the « Freiwillige vor » (volunteers forward) march for the Ambulance Service and the « Jakob Lohner Company » built 3 electrically powered ambulance-cars according to Mundy's own blue-prints.

On 1 May 1883, the first ambulance-station was established on the « Fleischmarkt » in the heart of Vienna. Its car-park included 4 ambulance-cars, 3 horse-drawn carriages, 2 cars for the mentally ill and 2 cars for contagious patients. The Ambulance Society was called directly or telegraphically, and later via a direct telephone line to the police. In August of 1889, the Main Ambulance Station moved into a new facility at « Stubenring » Number 1. It had its own coach-house with stables for the horses and the number of cars increased to 17. In July 1894, 10 more supervising physicians were engaged so that 4 physicians could be on duty around the clock. In response to every call, 1 physician and 2 medically trained assistants (comparable to today's emergency technicians) drove to the scene of the accident.

Mundy, who had been suffering from depression for many years, committed suicide on 23 August 1894. He walked down to the bank of the Danube Canal under the « Sophien » Bridge and shot himself in the head with his own pistol. Apparently, Mundy had hoped he would tumble head over heels into the Danube Canal and drift down-stream. Instead, he fell backwards into a bush. Shortly thereafter, a woman found him there with his feet dangling down into the water, his face and beard covered in blood from the shot wound behind his right-ear. She hastened to call a policeman, but neither he nor any of the onlookers had any idea who the dead man could be. Later, a man who lived nearby was able to identify Mundy for the police. He had seen the Baron several times at accidents and fires and even knew his first name, Jaromír. The embroidered initials J.M. were found on the dead man's clothing. The City of

Vienna provided a grave of honour, and he was buried at the Central Cemetery.

In 1897, the Ambulance Service had to clear its facility on « Stubenring » to make room for the new subway. Emperor Franz-Josef I designated a piece of land on « Radetzkystraße » for the erection of a new Central Ambulance Station, which has remained at that location to this day.

Following the example of the Volunteer Ambulance Society of Vienna, other ambulance societies were founded by several European cities including Prague, Crakow, Trieste, Lemberg and Budapest. The Vienna Ambulance Service also supported similar organizations in Czemowitz, Johannesburg, Kiev, Odessa, St. Petersburg and Warsaw, as well as volunteer ambulance departments in the Austrian cities Linz, Klagenfurt and Salzburg.

The Society also trained its own emergency technicians. The curriculum included 8 x 2 hours lectures on anatomy, physiology, so-called « sudden illnesses » , first-aid for intoxications, correct handling of hemorrhage, fractures, contusions, sprains and dislocations, transport of accident victims, nursing and hygiene.

On 1 February 1905, the Vienna Ambulance Service opened a second office at « Mariahilfer Gürtel » Number 20. On that same day, the first automobile ambulance went into use.

The Vienna Ambulance Service dispatched well-equipped medical teams to disasters far beyond the city limits of Vienna, such as the earthquake in Ljubljana (1895) , the flood in Prague (1897) and the earthquake in Sicily (1908) . During World War I, the Ambulance Service equipped a hospital-train with 138 beds and organized transportation from the railway stations to the hospitals, so that injured soldiers could not only be transported directly from the front to the hospitals, but also treated « en route » the entire way. At the age of 77, Count Wilczek took command over the hospital-train, which was under the authority of the Ministry of War.

After the Nazis took power over Austria in March 1938, Jewish physicians were forbidden to serve in the Ambulance Society. Because of the Society's financial problems and needs, the Fire Brigade of the City of Vienna took-over in September of that same year. Shortly thereafter, the Society was integrated into the Ambulance Service of the City of Vienna under the authority of the Municipal Department of Health. At that time, there were 5 Ambulance Stations and 7 ambulances for the entire city of Vienna.

On Christmas Eve 1944, the ambulance responded to 42 calls to people who had attempted to commit suicide with carburetted hydrogen because of the war. By the end of World War II, most of the ambulance stations and cars had been destroyed. Reconstruction progressed with the help of the Allies and the International Committee of the Red Cross in Geneva, which provided ambulance-cars.

Today, the Vienna Ambulance Service has roughly 650 employees, including 70 physicians. Doctor Alfred Kaff has been in charge since 1984.

Wiener Freiwillige Rettungsgesellschaft

Die Wiener Freiwillige Rettungsgesellschaft war die 1. Rettungsorganisation in Wien. Sie wurde 1881 auf Privatinitiative gegründet und war bis 1938 tätig. In der Folge wurden ihre Aufgaben von der Stadt Wien übernommen.

An die Spitze der neuen Organisation traten die 3 Gründer :

Johann Nepomuk Graf Wilczek als Ehrenpräsident.

Eduard Lamezan-Salins als Präsident.

Jaromír Mundy als Generalsekretär.

Unterstützt wurden sie von einem neunköpfigen Aktionskomitee.

Während Jaromír Mundy die Statuten ausarbeitete, überreichten Wilczek und Lamezan bei einer Audienz Kaiser Franz-Josef I. eine Denkschrift und baten ihn um Schutz und Protektion für die Rettungsgesellschaft, die dieser auch gewährte.

Die am 9. Jänner 1882 bei der Kaiserlich-Königliche niederösterreichischen Statthaltereie eingereichten Statuten der Gesellschaft wurden bereits am nächsten Tag genehmigt. Unverändert angenommen wurde auch der von der Wiener Freiwilligen Rettungsgesellschaft gemachte Vorschlag zum Verhältnis der Rettungsgesellschaft zu den verschiedenen Behörden.

Zwecks Mitgliederwerbung wurden in der Stadt Plakate mit der Aufforderung, der Rettungsgesellschaft beizutreten, affiziert und in Wohnhäusern Formulare zur Beitrittserklärung verteilt. Die Zahl der Beitrittswilligen blieb jedoch hinter den Erwartungen zurück. Zu den neuen Mitgliedern des freiwilligen Sanitätsdienstes zählten vor allem Mitglieder der Freiwilligen Feuerwehren aus den (zehn Jahre später eingemeindeten) Vororten Wiens (150 Mann) , Angehörige verschiedener Ruderklubs (80 Mann) und 60 Turner des 1. Wiener Turnvereins.

Zur 1. Versammlung der fast 400 angemeldeten Mitglieder am 18. Mai 1882 erschienen 232. Bei einer weiteren Sitzung am 21. Oktober im Akademischen Gymnasium fand sich niemand, der bereit war, zur Tageszeit Dienst zu tun, und lediglich ein Mann war bereit, seinen Sonntag zu opfern. Von dieser Personalnot gezwungen, rief die Rettungsgesellschaft Medizinstudenten dazu auf, sich am Dienst in den zukünftigen Rettungsstationen zu beteiligen.

Ab November 1882 hielt Albert Mosevig von Moorhof als Chefchirurg der Rettungsgesellschaft die österreichweit 1. Samaritervorträge zur Ausbildung von Sanitätspersonal für die Rettungsgesellschaft.

Im Dezember 1882 wurde mit dem Kaiserliche und Königliche Reichs-Kriegsministerium eine Vereinbarung über die Unterstützung der Militär-sanitätspflege und am 12. Jänner 1883 ein weiteres Abkommen mit dem Kaiserlich-Königliche Handelsministerium über die Hilfeleistung bei Eisenbahnunfällen getroffen. Im Rahmen dieser Vereinbarung wurden den Bahnhöfen Wiens kostenlos 100 Tragbahnen zur Verfügung gestellt.

Nach der erfolgten Ausbildung der I. Samariter wurden im Haus Fleischmarkt Nummer 1 (Ecke Rotenturmstraße, nahe dem Schwedenplatz) im 1. Bezirk 2 Räumlichkeiten angemietet und darin die 1. Sanitätsstation eingerichtet. Erstmals besetzt wurde diese Station am 1. Mai 1883, erstmals wegen eines Unfalls in Anspruch genommen wurden die dort stationierten Sanitäter am 2. Mai. Zur Erleichterung der Alarmierung erhielt die Sanitätsstation später auch eine direkte Telefonverbindung mit der Polizeidirektion.

« Am 8. December 1881 dem Tage nach dem furchtbaren Brande des Ringtheaters bei welchem viele hunderte von Menschen zugrunde gingen, wurde von dem Kaiserliche und Königliche wirklichen Geheimen Rathe HANS GRAFEN WILCZEK die WIENER FREIWILLIGE RETTUNGS - GESELLSCHAFT gegründet. Dieselbe eröffnete in diesem Hause am 1. Mai 1883 die 1. Sanitäts-Station, durch welche bei Tag und bei Nacht bis zum 1. Mai 1889 mehr als 25.000 Hilfsbedürftige den 1. Beistand fanden. Am 20. Januar 1884 geruhten seine Kaiserliche und Königliche Apostolische Majestät Kaiser FRANZ-JOSEF I. und am 2. April 1884 seine Kaiserliche und Königliche Hoheit Erzherzog CARL LUDWIG die Sanitäts Station mit ihren allerhöchsten Besuch zu beglücken. Am 1. Mai 1889 verließ die Gesellschaft dieses Haus um ihre erspriesslichen Thaetigkeiten in ihrem eigenen Heime 1. Bezirk, Stubenring Nummer 1 fortzusetzen. »

(Text der Gedenktafel im Haus Fleischmarkt Nummer 1.)

Eine 2 Sanitätsstation wurde im Haus Giselastraße Nummer 1 (heute Bösendorferstraße ; Ecke Kärntner-Straße, nahe der Wiener Staatsoper) , ebenfalls im 1. Bezirk, eingerichtet und am 20. Mai 1885 eröffnet.

Trotz des Wohlwollens, das Kaiser Franz-Josef I. und andere hochgestellte Persönlichkeiten, beispielsweise Kronprinz Rudolf, Erzherzog Rainer, Erzherzog Wilhelm, Erzherzog Karl Ludwig, die deutsche Kaiserin Augusta, Ismail Pascha, König Milan von Serbien und der japanische Kronprinz, der Wiener Freiwilligen Rettungsgesellschaft entgegenbrachten, wurde diese immer wieder in ihrer Entwicklung behindert. Von der Gemeinde Wien etwa wurde nur in der Gründungszeit eine niedrige Subvention gewährt, die später gänzlich eingestellt wurde. Teile der Ärzteschaft sahen in der neuen Organisation zunächst eine Konkurrenz, die den eigenen Interessen schadete.

Ab 1886 wurden an 20 belebten Orten der Stadt Tragbahnen für den öffentlichen Gebrauch aufgestellt, um im Notfall für plötzlich Erkrankte oder Verunfallte rascher Transportmittel zur Verfügung zu haben.

1889-1896 : Zentralsanitätsstation Stubenring.

Steigender Platzbedarf in den beiden Rettungsstationen am Stubenring und in der Giselastraße sowie die steigende Belastung durch die Mietzinse führten schließlich zur Errichtung der 1. Rettungszentrale.

1889 wurde die Zentralsanitätsstation am Stubenring Nummer 1 (dem späteren Bauplatz des Kaiserliche und Königliche Kriegsministeriums) eröffnet. Sie wurde nach Plänen des Architekten Ferdinand Hrach vom Stadtbaumeister Josef Tischler errichtet. Noch vor der Fertigstellung der Zentralsanitätsstation wurden die beiden bisherigen Rettungsstationen geschlossen und provisorisch in Baracken in der Nähe des künftigen Standortes untergebracht.

Am 25. März 1890 besichtigte Kaiser Franz-Josef I. die neue Zentrale. Noch im gleichen Jahr folgten Besuche durch Erzherzog Carl Ludwig, Prinzessin Stephanie sowie den damaligen Prinzen von Wales. Nach seinem Selbstmord wurde Jaromír Mundy 1894 hier aufgebahrt.

Die Eingemeindung der Vororte 1892 vergrößerte den Zuständigkeitsbereich der Wiener Freiwilligen Rettungsgesellschaft. Dazu wurde das Personal in der Zentralsanitätsstation aufgestockt. Provisorisch wurden einige Baracken als Dependence eingerichtet.

Das Wiener Stadtbauamt riet von der baulichen Erweiterung der Sanitätszentrale ab. Diese würde in einigen Jahren der Errichtung neuer Verkehrsanlagen ohnehin zum Opfer fallen. Der Wienfluß war damals nämlich noch nicht fertig reguliert, der Stubenring nicht in seine definitive Lage gebracht, weil auf der anderen Straßenseite noch die Franz-Josef-Kaserne im Weg war, die Wiener Stadtbahn, die das Grundstück unterqueren sollte, war noch nicht gebaut.

Anfang 1896 schließlich wurde die Wiener Freiwillige Rettungsgesellschaft darüber informiert, daß das Areal, auf dem sich die Zentralsanitätsstation Stubenring befand, bis Jahresende vollständig geräumt werden mußte. Grund dafür war der Bau der Wiener Stadtbahn.

Auf Intervention von Kaiser Franz-Josef I. wurde vom Wiener Stadterweiterungsfonds jenseits des Wienflusses an der Radetzkystraße eine Parkanlage als Ersatzgrundstück zur Verfügung gestellt. So wie schon die erste Zentralsanitätsstation wurde auch diese von Ferdinand Hrach geplant. Errichtet wurde sie von der Wiener Union-Baugesellschaft. Am 18. Juni 1897 konnte das neue Gebäude im 3. Bezirk, Radetzkystraße Nummer 1, in unmittelbarer Nähe zum Stadtzentrum, eingeweiht werden. Die Weihe erfolgte durch Titularerzbischof Eduard Angerer in Gegenwart des Kaisers und weiterer hoher Würdenträger. Die Station ist bis heute in Betrieb.

Mit der Eröffnung der Wiener Stadtbahn stellte die Rettungsgesellschaft 1900 einen vom Eisenbahnministerium zur Verfügung gestellten und entsprechend adaptierten Eisenbahnambulanzwagen in Dienst. Stationiert wurde dieser mit acht Liegeplätzen und Sanitätsmaterial ausgestattete Waggon als Bestandteil des technischen Hilfszuges in der der Zentralsanitätsstation nahegelegenen Station Hauptzollamt der Stadtbahn. Zum Einsatz kommen sollte dieser Eisenbahnambulanzwagen bei Unglücksfällen im Netz der Wiener Stadtbahn. Am 21. November 1900 wurde dieser Waggon dem Kaiserlich-Königliche Ministerpräsidenten Ernest von Koerber, Kaiserlich-Königliche Eisenbahnminister Heinrich von Wittek, Kaiserlich-Königliche Statthalter Erich Graf von Kielmansegg und weiteren Gästen vorgeführt.

Aus Anlaß des 20-jährigen Bestandsjubiläums der Rettungsgesellschaft wurde 1901 an neun Orten an der Donau und dem Donaukanal Rettungsgerät zur Rettung Ertrinkender installiert. Zusätzlich wurden an Häusern Blechtafeln mit Instruktionen zur Wiederbelebung Ertrinkender angebracht.

In einer Sitzung am 30. September 1903 wurde wegen der großen räumlichen Ausdehnung Wiens die probeweise Einführung von Automobilen, aber auch die Errichtung von Filialen in den Außenbezirken beschlossen. Das 1. Filialgebäude wurde am 1. Februar 1905 in Betrieb genommen. Am gleichen Tag wurde der neue Ambulanzwagen der Österreichischen Daimlermotoren-Gesellschaft in Wiener Neustadt, das 1. Rettungsauto, in Dienst gestellt und in der

Zentralsanitätsstation stationiert.

Einem Beschluß vom 30. September 1903 folgend, wurde auf einem Baugrund am Mariahilfer Gürtel nach Plänen des Architekten Bernhard Pichler von der Union-Baugesellschaft unter der Leitung des Architekten Ritter Humbert Walcher von Moltheim die I. Filialsanitätsstation errichtet. Der Spatenstich erfolgte am 20. Juli 1904. Dem Sanitätsdienst übergeben wurde das Gebäude am 1. Februar 1905.

1905 : Filialsanitätsstation « Graf Hans Wilczek » , Mariahilfer Gürtel, heute meistbeschäftigte Wiener Rettungsstation.

Nathaniel Meyer von Rothschild, der die Wiener Freiwillige Rettungsgesellschaft immer wieder mit großen Summen unterstützte und ihr so wie sein Nachfolger Alfons von Rothschild auch jahrelang die Erträge aus der Besichtigung seiner Glashäuser zukommen ließ, unterstützte auch die Errichtung dieser Filialsanitätsstation finanziell.

Aus dem sogenannten Graf-Wilczek-Stiftungshaus entwickelte sich die heutige Rettungsstation Mariahilf der Wiener Berufsrettung. Sie zählt zu den meistfrequentierten Rettungsstationen Österreichs und liegt auch im europaweiten Vergleich im Spitzenfeld.

Am 1. November 1906 verfügte das Kaiserliche und Königliche Reichs-Kriegsministerium, in Ausbildung stehende Militärärzte zur praktischen Ausbildung in I. Hilfe bei Unfällen turnusmäßig den beiden Sanitätsstationen der Rettungsgesellschaft zum Dienst zuzuteilen.

Während des I. Weltkriegs organisierte die Wiener Freiwillige Rettungsgesellschaft entsprechend dem Abkommen vom Dezember 1882 mit dem Kriegsministerium sowohl den Transport von Verwundeten zwischen den Bahnhöfen, Krankenhäusern und Sanitätsanstalten in Wien als auch die Verpflegung der Verwundeten durchreisender Truppen auf dem Nordwestbahnhof.

Außerdem organisierte die Rettungsgesellschaft einen eigenen Lazarettzug mit 138 Plätzen, um Verwundete aus dem Kriegsgebiet in Krankenhäuser im Hinterland zu bringen. Das Kommando über diesen Lazarettzug hatte Hans Graf Wilczek inne. Auf insgesamt 165 Fahrten wurden 44.821 Verwundete transportiert und eine Strecke von 159.640 Kilometern zurückgelegt.

Nach Kriegsende wurden Kleidersammlungen für Bedürftige organisiert und öffentliche Ausspeisungen beim Stadtpark abgehalten.

1918-1938 : Finanzielle Probleme.

Infolge der Auflösung der Monarchie kam die Wiener Freiwillige Rettungsgesellschaft um zahlreiche finanzkräftige Großspender, was die von Spenden abhängige Organisation in wirtschaftliche Schwierigkeiten brachte. Mit der Gemeinde Wien wurden mehrfach Verhandlungen über eine Übernahme geführt, doch dies wurde von der Gemeinde immer abgelehnt. Lediglich finanzielle Unterstützungen wurden gewährt.

Im Jahr 1922 wurde die Wiener Freiwillige Rettungsgesellschaft als Verein neu organisiert.

Am 16. März 1938 wurden in einem Schreiben alle Mitglieder der Wiener Freiwilligen Rettungsgesellschaft aufgefordert, ihre eigenen Tauscheine und jene ihrer Eltern bis zum 31. März 1938 zur Kontrolle vorzulegen. Ein Verbot von Spendensammlungen durch Vereine oder Verbände brachte die Rettungsgesellschaft in Schwierigkeiten.

Durch einen Beschluß des NS-Bürgermeisters Hermann Neubacher wurde die Wiener Freiwillige Rettungsgesellschaft am 1. September 1938 ebenso von der Wiener Berufsfeuerwehr übernommen wie am 15. Oktober des gleichen Jahres die Städtische Sanität (damals Magistratsabteilung 26). Am 1. April 1940 wechselte die Betriebsführung des Rettungs- und Sanitätsdienstes als Gemeindeverwaltung des Reichsgaues Wien Rettungsdienst zum Gesundheitsamt der Stadt Wien.

Heute wird der Rettungsdienst von der Magistratsabteilung 70 - Wiener Berufsrettung wahrgenommen.

Beim Bau der Zentralsanitätsstation Radetzkystraße wurde auch ein Vortrags-Saal eingerichtet, um eine Samariterschule einrichten zu können. Eröffnet wurde diese am 23. November 1897 durch einen von Friedrich von Esmarch gehaltenen Festvortrag.

Die hier abgehaltenen Kurse bestanden aus acht Vorträgen. Deren Themen spezialisierten sich neben allgemeinen Unterweisungen auch auf die verschiedenen Berufskategorien (Feuerwehrleute, Polizisten, Lehrer, Eisenbahnbedienstete ...) und entsprechende berufstypische Unfälle und Verletzungen.

Die Wiener Freiwillige Rettungsgesellschaft leistete nicht nur in Wien Hilfe, sondern auch außerhalb der Stadt und im Ausland.

**1895** nach einem Erdbeben in Laibach.

**1897** bei einer Überschwemmung in Prag.

**1898** nach einem Erdbeben auf Sizilien.

In den Statuten hatte sich die Wiener Freiwillige Rettungsgesellschaft auch die Gründung und Förderung ähnlicher Gesellschaften an anderen Standorten zum Ziel gesetzt. Zu diesem Zweck wurden komplett eingerichtete Sanitätsstationen und Sanitätswagen geschenkwise zur Verfügung gestellt. Eigene Funktionäre halfen den neu gegründeten Gesellschaften dabei, die Anfangsprobleme zu überwinden.

Auf diese Art der Gründungshilfe gehen das am ...

**13. September 1890** gegründete Prager Freiwillige Rettungskorps.

**24. März 1891** gegründete Sanitätsabteilung des Brünner Turnvereins.

**5. Juni 1891** gegründete Krakauer Freiwillige Rettungsgesellschaft.

**16. Juni 1891** gegründete Triester Freiwillige Rettungsgesellschaft.

« Ringtheater » : post-traumatic stress disorder

Friedrich Klose's memoirs, in which the traumatic event as trigger is clearly perceptible and the resultant development of Anton Bruckner's control obsessions (in the sense of a post-traumatic stress disorder, which later becomes chronic) are also verifiable. In December 1881, Bruckner was witness to the conflagration of the Vienna « Ringtheater », in whose immediate vicinity his home lay. As a result of this experience (according to Klose's observation of 1886), Bruckner changed from paraffin lamps to the old-fashioned but, in his opinion, less flammable candle-light. So now, when Bruckner went-out, he didn't blow the candles-out, but pinched them between his fingers; and, then, when he left the building, he travelled repeatedly back to make sure, once again, of the impossibility of reignition of the wicks. The compulsive fear which is initially directed at the danger of fire, or the compulsion to control directed at it, meanwhile soon shows that generalization that is characteristic of control compulsion. That is to say, the compulsion to prevention fire danger extends soon to dangers of all sorts.

...

Bruckner's road-secretary Friedrich Eckstein recalls :

When going-out together, they had already left the house and reached the stairs, when Bruckner, suddenly overcome by anxiety, asked whether he had forgotten to turn-off the tap in the kitchen. Eckstein's attempt to reassure him failed. He was quite sure :

« The water's running ! »

Not to be dissuaded from this fixed idea, Bruckner returned, and initially investigates the kitchen with great care, from thereon all the rooms in the apartment and carries-out an inspection of the locks of all the apartment doors, whereby he does a final check by shaking them all. Once more coming to the stairs, a new anxiety attack :

Whether or not, in the study-room, gas is escaping. How dangerous that would be ! Eckstein manages to prevent Bruckner from turning-back. But once down at ground level, already in the hall-way, Bruckner declares again, he must go back into the apartment. Bruckner (very agitated) climbs, once again, the 4 storeys. Once again, at the bottom (out of breath and beaded with sweat) , he confesses to Eckstein that he had to cover the manuscript with the « Deutsche Michel » theme from the Scherzo of the 8th Symphony (that had lain open on the table) with a sheet of paper.

At the time of this event recorded by Eckstein, the « Ringtheater » fire lay 5 to 7 years in the past. A conflagration is, without doubt, an extraordinarily threatening situation, which will trigger a disturbance in almost all who witness it. But in how many of the thousands of human beings who daily (and at any point in the world) are witnesses to a conflagration, does this effect a permanent behavioural change in the sense of control compulsions ? That is to say, the growth of a behavioural disorder of the sort that Bruckner developed requires definite pre-morbid parts of the personality, such as definite personality traits that lower the threshold for the development of this syndrome.

### Christmas Tree Ceremony

**Before Saturday, 24 December 1881** : Anton Bruckner opens the Christmas Tree Ceremony sponsored by the Catholic Orphan Charity Association with an organ improvisation in the Great Hall of the « Musikverein » .

### 1881 : Bruckner's Christmas

**Christmas 1881** : August Göllerich junior gives Anton Bruckner the scores of Beethoven's last String Quartets.

On the invitation of Prelate Franz Moser, Anton Bruckner spends the winter holidays in St. Florian.

### Vienna Conservatory : Final examinations (June 1882)

Anton Bruckners Schüler, denen der « I. Classificationsgrad » zuerkannt wurde, werden in der Prüfungsstatistik erwähnt :

Bei den Vorbildungsschulen ...

« Orgelclassse des Herrn Professor Anton Bruckner :

(5 Zöglinge.)

Carl Führich, Franz Johnscher. »

Bei den Ausbildungsschulen ...

« Orgelclassse des Herrn Professor Anton Bruckner :

(4 Zöglinge.)

I. Jahrgang : Anton Scholz.

II. Jahrgang : Rudolf Dittrich, Lorenz Ritter. »

Bei Musiktheorie ...

« Klasse für Harmonielehre als Hauptfach des Herrn Professor Anton Bruckner :

(10 Zöglinge.)

Sigmund Auspitzer, Carl Führich, Franz Johnscher, Emil Lamberg, Josef Meyer, Sigmund von Tucher. »

« Klasse für Kontrapunkt des Herrn Professor Anton Bruckner :

(6 Zöglinge.)

I. Jahrgang : Ferdinand Foll, Franz Höfer, Anton Scholz.

II. Jahrgang : Moriz Kremer, Carl Last. »

Lorenz Ritter absolviert in diesem Schuljahr sein Hauptfach Orgel und erhält ein Diplom.

**1882 : Hot in Vienna !**

**Sunday, 28 May 1882** (Pentecost Sunday) : Pocket calendar entry by Anton Bruckner :

« May 28th, at half past 7 in the evening : 31°Ré (Réaumur scale) in the sun. »

The « Réaumur » scale (°Ré, °Re, °r) , also known as the « octogesimal division » , is a temperature scale for which the freezing- and boiling-points of water are defined as 0 and 80 degrees respectively. The scale is named for René Antoine Ferchault de Réaumur, who first proposed a similar scale during 1730.

Réaumur's thermometer contained diluted alcohol (ethanol) and was constructed on the principle of using 0° for the freezing temperature of water, and graduating the tube into degrees, each of which was 1/1,000 of the volume contained by the bulb and tube-up to the « 0 » mark. He suggested that the concentration of alcohol employed be such that it began boiling at 80 °Ré - that is, when it had expanded in volume by 8 % . He chose alcohol instead of mercury because it expands more visibly, but this posed problems : his original thermometers were very bulky, and the low boiling-point of alcohol made them unsuitable for many applications. Instrument-makers generally chose different

liquids, and then, used 80 °Ré to signify the boiling-point of water, causing much confusion. During 1772, Jean-André Deluc studied the several substances then used in thermometers and concluded that mercurial thermometers were the best for practical use ; for example, if 2 equal amounts of water at x and y degrees were mixed, the temperature of the result was then the average of x and y degrees, and this relationship was only reliable when mercury was used. From the late- 18th Century, mercury was used almost without exception.

The « Réaumur » scale was used widely in Europe, particularly in France, Germany and Russia, and was referenced in the works of Dostoyevsky, Tolstoy, and Nabokov. By the 1790's, France chose the « Celsius » scale for the metric system instead of the « Réaumur » measurements, but it was used commonly in some parts of Europe until at least the mid-19th Century.

**Sunday, 25 June 1882** : Pocket calendar entry by Anton Bruckner :

« June 25th, 5:30 in the afternoon : 30°Ré (Réaumur scale) in the sun. »

**Wednesday, 5 July 1882** : Pocket calendar entry by Anton Bruckner :

« July 5th, 1/4 to 7 o'clock in the evening : 33°Ré (Réaumur scale) in the sun. »

**Saturday, 8 July 1882** : Pocket calendar entry by Anton Bruckner :

« July 8th, 3/4 to 4 o'clock in the afternoon : 35°Ré (Réaumur scale) in the sun. »

**Sunday, 9 July 1882** : Pocket calendar entry by Anton Bruckner :

« July 9th, 7:30 in the evening and still 34°Ré (Réaumur scale) in the sun. »

**Sunday, 16 July 1882** : Pocket calendar entry by Anton Bruckner :

« July 16th, 3/4 to 6 o'clock : 39°Ré (Réaumur scale) in the sun. »

### The sweaty Bruckner

Anton Bruckner was a man who sweated a lot. He always had to change his clothes. On warm days, he composed at home wearing only a swimsuit. He drank large quantities of cold coffee and, from time to time, put his head under the water pipe.

### WAB 106 : The ornamented title-page

**Tuesday, 13 June 1882** (Feast of St. Antony) : Anton Bruckner is planning the publication of his 6th Symphony (WAB

106) dedicated to his landlord and philosopher Anton Ölzelt junior. The final score is put-down by the Viennese copyist Franz Hlawaczek. The artwork of the title-page (price : 50 Florins) is created by the Linz calligraph, painter and writer Josef Maria Kaiser (a friend of Adalbert Stifter) - it must be finished by May the 20th. The score, in portrait format, is produced by the book-binder Pruscha.

### Josef Maria Kaiser

The calligrapher, painter and writer Josef Maria Kaiser was born on 1 February 1824 in Kremsmünster, Upper-Austria ; and died on 6 May 1893 in Linz. He was the son of engraver Georg Kaiser (1781-1874) . He studied at the Vienna Academy of Fine-Arts. In 1848, he started to teach art at the Linz secondary school (« Gymnasium ») . In 1853, he exhibited his works at the Art Association of Upper-Austria. In 1867, he was elected its secretary and, in 1874, Board member.

In 1880, he was named curator of the Museum Francisco-Carolinum (Upper-Austrian Provincial Museum) in Linz. (He even elaborated an architecture plan for the erection of a new building.)

In 1892, Kaiser became Board member of the Imperial and Royal Central Council Commission for research and conservation of art and historical monuments. He was a talented draftsman with remarkable delicacy and exactness, particularly in the field of historic-topographic reproductions. He was recognized as a top-calligrapher during his lifetime. As a writer, he also published a book on the History of Upper-Austria.

...

Josef Maria Kaiser, Maler und Schriftsteller : geboren 1. Februar 1824 in Kremsmünster, Oberösterreich ; gestorben 6. Mai 1893 in Linz an der Donau. Sohn des Graveurs Georg Kaiser (1781-1874) . Studium an der Wiener Akademie der bildenden Künste und wurde 1848 Zeichenlehrer am Linzer Gymnasium. Seit 1853 stellte Kaiser im Oberösterreichischer Kunstverein aus, dessen Sekretär er 1867 wurde. Seit 1874 Mitglied des Verwaltungsrates, seit 1880 Kustos am Museum Francisco-Carolinum (Landesmuseum) in Linz. 1892 Kaiserlich-Königlich Rates Korrigiert Mitglied der Zentralkommissar für die Erforschung und Erhaltung der kunst- und historische Denkmale. Als Zeichner von besonderer Zartheit und Genauigkeit, insbesondere in der historische-topographische Wiedergabe, auch als Kalligraph zu seiner Zeit viel bewundert, veröffentlichte Kaiser auch Abhandlung über Oberösterreich und versuchte sich sogar als Architekt (Projekt für den Neubau des Landesmuseum) . Kaiser war mit Adalbert Stifter befreundet und stand mit Anton Bruckner in Briefwechsel.

...

Josef Maria Kaiser, akademischer Maler, Ritter des herzoglich Sachsen-Ernestinischen Haus-Ordens II. Classe, Besitzer des goldenen Verdienstkreuzes mit der Krone, der großen goldenen Medaille für Kunst und Wissenschaft und der goldenen Ehrenpreis-Medaille für Kunstgewerbe, Comité-Mitglied und Secretär des oberösterreichischen Kunstvereines, Directions-Mitglied und Schulobmann des oberösterreichischen Gewerbevereines, correspondirendes Mitglied der Kaiserlich-Königliche

Central-Commission zur Erforschung und Erhaltung der Kunst- und historischen Denkmale, wirkliches Mitglied der Kaiserlich-Königliche heraldischen Gesellschaft « Adler » in Wien etc. , Custos und Bibliothekar des Museums, Fachreferent für moderne Kunst und Heraldik.

## Shopping for his Master

**July 1882** : Pocket calendar entry by Anton Bruckner (list of expenses for « Frau » Katherina Kachelmayr - household and medicines) :

« Coffee, paper, wood spirit. Laundry ... 8 Florins “ Frau Kathi ”. **Cigars**, tooth-brushes, tobacco, Opera tickets. »

**Summer 1882** : Pocket calendar entry by Anton Bruckner :

« ... Laundry of linen clothes. Monthly amount for February (“ Frau Kathi ” : Katherina Kachelmayr) . **Cigars** (...)

### The virtuoso from Budapest

**Summer 1882** : The great organ virtuoso Johann Lohr from Budapest gave a recital on the great organ of St. Florian. To conclude, he played a free improvisation on a very moving theme, in an almost masterfully way.

The « Regens Chori » who was sitting beside Anton Bruckner, was greatly impressed by this last number.

At the end, he said to Bruckner :

« This man knows how to play the organ ! »

Bruckner felt affected by the sharpness of this comment. He hurried straight-up to the organ bench, threw-off his coat and shouted :

« Now, I will show that I can play the organ ! »

So, Bruckner played. He played technically and thematically so beautifully and fully that Lohr welcomed Bruckner, at the end of the chorale, on his knees :

« I bow ! »

Then, Bruckner grabbed Lohr violently by the neck, stretched-out both his arms and made him stand-up.

### Bayreuth : Premiere of « Parsifal »

**July 1882** : The very idea of Bayreuth must have excited Anton Bruckner, for he was always nervous before he even arrived at the train-station.

For the occasion, a thief at the station picked-up 300 « Gulden » out of Bruckner's over-coat.

Also attending the Festival : Guido Adler, Richard Strauß, Franz Liszt, Camille Saint-Saëns, August Göllerich junior,

Heinrich Hengster, Carl Friedrich Glasenapp, Friedrich von Hausegger, Alois Höfler, Carl V. Lachmund, Friedrich Klose, Friedrich Eckstein, Engelbert Humperdinck.

**Bayreuth : « Gasthaus Johann Gurt »**

**End of July 1882** : While in Bayreuth, Anton Bruckner and Austrian Court actor Alois Wohlmuth stay at the « Gasthaus » owned by Johann Gurt.

At noon, Bruckner eats in company of family members and supporters, including tenor Georg Unger, bass-baritone Franz Betz, bass-baritone Emil Scaria, bariton Theodor Reichmann and conductor Felix Mottl. In the evening, Bruckner is often a guest at « Haus Wahnfried » .

Bruckner is enthusiastic about Henriette Sammet, who admires her photography.

Bruckner attended the premiere of « Parsifal » conducted by the same Hermann Levi who was destined to realize the full « grandeur » of the Symphony Bruckner had begun some 10 months earlier.

For its part, Houston Stewart Chamberlain attended the premiere and the following 5 performances.

An excerpt from a letter reveals Bruckner's fawning hero worship :

« In 1882, the Master, who was then already suffering, took me by the hand and said :

“ You can be sure that I myself will perform the Symphony (No. 3) and all your works. ”

“ Have you been to ' Parsifal ' ? How did you like it ? ”

While he held my hand, I got down on my knee, kissing and pressing his noble hand to my mouth, and said :

“ Oh Master, I worship you ! ”

The Master replied :

“ There, there, calm yourself Bruckner ; good night ! ”

The next day, the Master, who was sitting behind me at “ Parsifal ”, rebuked me once because I was applauding too violently. (...) It is my most precious legacy-until up there !!! »

Embarrassed, Wagner will reconstitute (in his own way) this anecdote in a most fascinating dream :

« One night, the Holy Father came to visit me. I wanted to welcome him with dignity and respect, but he suddenly reversed the roles. He humbly leaned towards me to kiss my hand. Then, he grabbed a bottle of cognac and disappeared ! The sovereign Pontiff looked strangely like Anton Bruckner. »

What is certain is that Wagner's death raised Bruckner's personal Wagnerian cult to the religious status to which it had already been tending.

**27 (?) , 31 July 1882** : Even outside official reception hours, Bruckner as the chance to meet Richard and Eva Wagner and even « Wahnfried's » household servant, Georg Lang.

**Monday, 31 July 1882** : Friedrich Eckstein reports that, after the third performance of « Parsifal » , he met Richard Wagner, Baron Hans Paul von Wolzogen, Carl Friedrich Glasenapp, Professor Alois Höfler, and Baron Christian von Ehrenfels.

Wagner's death raised Bruckner's personal Wagnerian cult to the religious status to which it had already been tending.

Hearing « Parsifal » , Gustav Mahler recorded :

« When I came-out of the “ Festspielhaus ”, I realized that I had undergone the greatest and most soul-searching (...)  
»

### The girl from Bayreuth

During a walk through Bayreuth's Imperial Garden (« Hofgarten ») , Anton Bruckner suddenly stopped his companions. Hurrying across the lawn, leaping over trenches and hedges, collapsing and rising again, he was heading towards a completely unknown but beautiful woman which had aroused his enthusiasm. However, when he finally stood before her and noticed that her silhouette was not so delicate as he expected, his excitation died on the spot.

He said to himself, still out of breath from running :

« Be nice, please be nice. »

He then ask her where he could find the Villa « Wahnfried » .

A better motive had not occurred to him, due to his haste ; in fact, he had not visited « Wahnfried » for years.

Somewhat a little surprised, she replied by pointing to the next garden entrance :

« Of course, it is just in front of you ! »

Bruckner stuttered, suffering from multiple deep bruises :

« Oh, I kiss your hand and beg a thousand times for your apology ! »

This love-adventure ended as quickly and unexpectedly as it had begun.

### Hans Rott attempts another suicide

**1882** : Another attempt of suicide by Hans Rott. The diagnosis was incurable : schizophrenia.

We all search for the causality of becoming mad, because only this can take-away our fear of its unpredictability. Someone, something must be to blame. In the case of Rott, many people and a great deal came into question. Johannes Brahms, who had ostensibly refused to acknowledge him. The professors of the Vienna Conservatory who had mocked his Symphony in E major (1880) at the final examination. His mother, who had given birth to him illegitimately as the son of a man married to someone else, and who thus infected him with the idea that he would have to « make amends, through purity, for the fault of his parents » . His half-brother Karl was, already as a very young man, a seducer with many love-affairs ; as the « bastard » of an archduke, he was also impure and, moreover, in love with the same 17 year old girl as Hans. This love, that was celebrated by Hans Rott as an eternal and chaste love that could not be lived. Then, there were the debts and Hans Rott's incapability of dealing with money. The excessive smoking and drinking. Even the dog presented as a gift, who ran away ...

### Bruckner's Steyr supporters

**Around August - September 1882** : Anton Bruckner spends some of his summer vacation in Steyr, where he comes together with Leopold Hofmeyer and Therese von Jäger (from Vienna ?) and gets to know Karl Almeroth, Isidor Dierkes and Karl Reder. Through Almeroth's mediation, Bruckner will be introduced to 2 other Steyr's friends : Count Vincent Egon zu Fürstenberg and Duke Max Emanuel.

Karl Reder reported about the frequent evenings at the popular Viennese guest-house (Restaurant and Beer-Hall) named « at Gause » (« Gasthaus und Bierkeller “ bei Gause ” ») was located in a basement at « Johannesgasse » Number 12 in the 1st District.

### Vienna Conservatory : Academic Year 1882-1883

**Thursday, 21 September 1882** :

Im Kapitel « B. Unterrichts-Leitung » des Jahresberichts ist zu lesen :

« 4. Lehrkörper.

## I. Ordentliche Lehrer :

(...)

### 5) Herr Anton Bruckner, Professor, Kaiserlich-Königliche Hof-Organist (Harmonielehre, Kontrapunkt und Orgel.) »

Zu Anton Bruckners Schülern am Wiener Konservatorium gehören Sigmund Auspitzer (« aus Brünn, 21 Jahre - Kontrapunkt I. ») , Anton Bayer (« Kontrapunkt I. » - siehe Anmerkung) , Ciro Cavalieri (« aus Triest, 18 Jahre - Orgel V. I. (Rept.) , Harmonielehre, Klavier III. ») , Ferdinand Foll (« 15 Jahre - Klavier A. III. , Kontrapunkt II. , General der Musik. ») , Carl Führich (« aus Jamnitz, 17 Jahre - Orgel A. I. , Kontrapunkt I. , Klavier III. ») , Josef Großmann (« 16 Jahre - Klavier A. I. , Harmonielehre. ») , Eduard Hamlich (« aus Sluschowitz, 19 Jahre - Klavier A. II. , Harmonielehre. ») , Franz Höfer (« aus Baden, 20 Jahre - Fagott A. II. , Kontrapunkt II. ») , Otto Höhmann (« aus Neunkirchen, 18 Jahre - Posaune A. I. , Kontrapunkt II. , Klavier I. (Rpt.) . ») , Franz Johnscher (« 17 Jahre - Orgel A. I. , Kontrapunkt I. , Klavier III. ») , Emil Lamberg (« aus Pest, 20 Jahre - Orgel A. II. ») , (es gibt wie in den Vorjahren einen zweiten, eigens nummerierten Eintrag, einen Namensvetter ?) Emil Lamberg (« aus Pest, 20 Jahre - Klavier A. III. , General der Musik. ») , Josef Meyer (« 15 Jahre - Klavier A. II. , Kontrapunkt I. ») , Franz Schlott (« aus Preßburg, 19 Jahre - Kontrapunkt A. I. , Klavier II. ») , Anton Scholz (« aus Waydhofen an der Ybbs, 22 Jahre - Orgel A. II. , Kontrapunkt II. , General der Musik. ») , Heinrich Schoof (« 17 Jahre - Posaune A. I. , Harmonielehre, Klavier I. ») , Josef Skalitzky (« aus Wischau, 19 Jahre - Orgel A. I. , Harmonielehre, Klavier II. ») .

Und andere folgende Schüler dieses Schuljahres (vielleicht auch in Brucknerschen Kursen) spielen in Anton Bruckners späteren Jahren noch eine Rolle :

Gottfried Brzibohaty (« 13 Jahre - Fagott V. I. ») , Ernst Décsey (« aus Hamburg, 12 Jahre - Violin V. III. , Klavier I. (Rept.) ») , Robert Erben (« aus Troppau, 20 Jahre - Klavier A. II. , Komposition I. , General der Musik. ») , Rudolf Fitzner (« aus Ernstbrunn, 14 Jahre - Violin II. V. , Klavier I. ») , Ludwig Grandé (« aus Teltsch, 17 Jahre - Klavier V. III. , Harmonielehre. » (in der Klasse Franz Krenn)) , Ferdinand Hellmesberger (« 19 Jahre - Klavier III. , Harmonielehre. ») , Carl Hrubý (« 13 Jahre - Violin V. II. , A. M. , Klavier I. ») , Marie Pohoryles (« 14 Jahre - Klavier A. I. , Harmonielehre. ») , Charlotte Steutter (« 18 Jahre - Klavier V. III. , Harmonielehre. ») , Josef Stritzko (« 21 Jahre - Komposition A. II. ») und Heinrich Wottowa (« 15 Jahre - Klavier A. I. , Harmonielehre. ») .

Von den 6 Orgelschülern gehören 5 zur Ausbildungsschule. Der « Übersicht der in den einzelnen Lehrfächern unterrichteten Schülerzahl. » ist zu entnehmen, daß von den Orgelschülern einer halb vom Schulgeld befreit war. 10 Schüler (beider Lehrkräfte) hörten Kontrapunkt als Hauptfach, 6 Harmonielehre. Als Nebenfächer wurden Harmonielehre von 109 und Kontrapunkt von 10 Schülern besucht.

Auszug aus der « Unterrichtsstistik » :

« A.

In den Vorbildungsschulen ...

(...)

Orgel, I Jahrgang.

Schülerstand : systemisierter : 4 ; effectiver : 1.

Effectiver Schülerstand : 25.

Monatlich erteilte systemisierte Lehrstunden : 40, sonach im Jahre ... 400. »

## Rott composes at the asylum

**Sunday, 24 December 1882** : On Christmas Eve, Joseph Seemüller visits Hans Rott at the Provincial Lunatic Asylum of the Crown land of Lower-Austria in Bründlfeld (« Niederösterreichische Landesirrenanstalt am Brünlfeld ») .

At the beginning of the conversation, Seemüller says :

« ... I was with “ Herr Doktor ” (Ludwig) Schlager. He told me that he had encouraged you to write something for Professor Anton Bruckner. You have written and played 2 lines of notes, but you have not gone beyond them. »

Doctor Ludwig Schlager was director of the asylum during the entire period of Hans Rott's hospitalization. Professor Schlager was one of the most distinguished alienists in Austria.

## Doctor Ludwig Schlager

The Austrian psychiatrist and mental health physician Doctor Ludwig Schlager was born on 19 August 1828 in St. Florian am Inn, Upper-Austria ; and died on 24 July 1885 in Bad Gastein (Wildbad Gastein) , aged 57. He was buried in Salzburg (Matzleinsdorfer Evangelical Cemetery) .

The step-son of the mayor of St. Florian am Inn, Ludwig Schlager graduated from the Linz « Gymnasium » (high-school) . In 1846, he went to study medicine in Vienna (as military physician) at the Medical-Surgical Josef-Academy (« Josephinum ») . During his studies in 1848-1849, he worked as an assistant in military hospitals located in Upper-Italy, taking-part in the campaigns of field-marshal Josef Radetzky (in the context of defeat ...) , especially at the siege of Venice (Venetian Revolution) . After his return, he resumed his studies and was awarded a doctorate in Medicine in 1852, then became a temporary secondary physician (externalist in endoscopic surgery) at the Military Medical Institute led by Josef Gottfried Riedel (a former plague-house which took-up insane patients from the higher-classes) .

Ludwig Schlager became a member of the College of Physicians of Vienna. As early as 1858, he was habilitated in the field of psychiatry and forensic psychology. Until 1860, he developed a concept of care and treatment of mentally ill without using coercive measures. In 1865, he was appointed associate-professor (« Professor extraordinarius ») , and, in 1878, he became a full-professor (« Professor ordinarius ») of psychiatry. In 1869, he took-over the management of the so-called observation department for doubtful mental disorders at the General Hospital of Vienna.

In 1853, Doctor Schlager started to work at the newly-built Provincial Lunatic Asylum of the Crown land of Lower-Austria in Bründlfeld (« Niederösterreichische Landesirrenanstalt am Brünlfeld ») located on « Lazarettgasse » Number 14, in the 9th District. During the cholera epidemic of 1873, he was appointed Director. He held this position until his death in 1885. Doctor Schlager was a fervent advocate of occupational therapy (wood-carvings, crafting artificial flowers, drawing, painting, attending social evenings and balls) to fight familial and colonial mistreatment ; a practice supported by Doctor Jaromír von Mundy. During his administration, he came into direct conflict with his colleagues pathologist Carl von Rokitansky and psychiatrist Theodor Meynert who promoted purely organic-oriented practice. It

was a confrontation between institutional and academic visions. Doctor Meynert's clinic was a department inside the asylum. To offer an alternative, Schlager created in 1875 a 2nd university-clinic of psychiatry. He contributed a great deal to the general acceptance of his therapeutical approach.

From 1860 to 1872, Ludwig Schlager was appointed lecturer in psychiatry at the University of Vienna. During that same period, he worked for the District Court of Vienna as a national expert in psychiatry on criminal matters. From 1860 to 1865, he undertook an extensive study-trip to Central and Western Europe, visiting mental institutions in Switzerland, Italy, Germany, Holland, France, England, Scotland, Denmark and Sweden, in order to understand their own State legislations. When he returned in Vienna, his goal was to improve (unsuccessfully in the beginning) the legal bases in Austria. Grant of the Civil Law of the City of Vienna in 1879. From 1866 to 1879, Schlager was a Liberal Party member of Vienna's City Council. There, he established himself calling for the improvement of the mental care system. His efforts to reform the legislation concerning institutions for insane did not lead to a law, but, in 1874, to a ministerial decree. As a result, from 1879 until his death in 1885, he was a member of the Supreme Medical Council and received the title of High-Councilor for Hygiene. A year earlier, in 1878, he had been appointed Government Councilor.

Doctor Schlager also wrote in collaboration with Otto Roquette the libretto of « Prinz Heinrich und Ilse » a Romantic Opera in 4 Acts composed by Hans Schläger, which was premiered at the Salzburg « Stadttheater » in 1868.

**1886** : The « Schlagerstraße » in Vienna-Alsergrund (9th District) has been named after him.

## Vienna : Bruckner's « Hôtel de France » apartment

August Stradal, in his « Erinnerungen » (Souvenirs) on Anton Bruckner, has given us a clear description of the composer's home. It should be better known.

He says :

« At the beginning of **January 1883**, I went-up to Bruckner's apartment of the “ Wohnhaus ” and became his pupil. He was living in 2 rooms on the top-floor of Number 7 on “ Heßgasse ”. In the middle of the first room, there was a very old Bösendorfer grand-piano, and its white-keys could scarcely be distinguished from its black-keys as a consequence of dust and snuff. Against one wall was an American cottage organ a pedal-harmonium with 2 manuals. Against another wall, there was a bed with a large crucifix hanging above it ; and, in front of the window, stood a little table which was used for writing and, in later years, for dining too. Next to the door and hardly visible was a small wash stand. There was nothing in the room except the bare necessities for daily living. The furniture in the apartment was a lesson in renunciation. »

« Pieces of music were piled on the piano. I was impressed by the many scores by Johann Sebastian Bach, Ludwig van Beethoven, Franz Schubert, and Richard Wagner. Anton Bruckner had only 2 books at that time : the Bible and a biography of Napoléon. The Master often studied both of these and he was so well-versed in the Scriptures that he was a match for any theologian, as far as knowledge of the Bible was concerned. The Master shared Beethoven's enthusiasm for Napoléon, and Beethoven, as is known, had a great admiration for Bonaparte before he became Emperor. »

« The second room was completely bare of furniture and was not used. But, in one corner, bundles of criticisms, papers, and letters were lying in a heap. Manuscripts of his Symphonies and Masses lay mixed-up with newspaper articles and letters from Hermann Levi, Athur Nikisch, Hans Richter and others. Anton Bruckner once asked me to help him find his (String) Quintet in the mass of papers. On this occasion, I discovered the manuscript of the only piano composition the Master ever wrote. Its name : « Erinnerung » (Souvenir) . He gave me the little work when I asked him for it. Unfortunately, he could not remember when he had written it. »

Other eye witnesses have mentioned an anti-chamber with a bath-tub and a bust of Bruckner. He sometimes stroked the bust with his hand and said :

« Good old fellow. »

All agree that his room was in terrific disorder. His former teacher Otto Kitzler was actually alarmed when he called. In this respect, at least, Bruckner was something of a Bohemian.

Friedrich Klose, who became Anton Bruckner's pupil in 1886, gives us a similar description of the composer's home. He says clothes as well as music were strewn over the piano. When he used to call on Bruckner at night, the room would

be lighted by only 2 tall candles. The reason for this strictly observed custom was Bruckner's fear of fire.

### Vienna : Josef Schalk on mission to the « Hotel Kaiserin Elisabeth »

**Tuesday, 9 January 1883** : Letter from Anton Bruckner to Josef Schalk :

Anton Bruckner asks Josef Schalk to lend the piano reduction of the 5th Symphony (**WAB 105**) , with clearly written improvements, to his friend Moritz Mayfeld who is always staying during the cold winter months with his wife Barbara (« Betty ») at the « Hotel Kaiserin Elisabeth » on « Weihburggasse » .

### Ignaz wants a watch

**February 1883** : Ignaz asks his brother Anton to buy him a good watch. Bruckner will send him a watch which he bought in Vienna for the sum of 18 Florins.

### Wagner's « pied à terre » in Venice

Richard Wagner stayed in Venice 6 times between 1858 and his death. He arrived in Italy on his final trip not long after performances of his Opera « Parsifal » premiered at the second Bayreuth Festival.

Wagner has rented for an annual fee of 6,000 Francs a great Renaissance structure on the Grand Canal : the entire « piano nobile » level (a mezzanine consisting of 15 ornate rooms) of the « Ca' Vendramin Calergi from Count de' Bardi » before his departure and arrived on **Saturday, 16 September 1882** with his wife Cosima Liszt, 4 children (Daniela von Bülow, Isolde, Eva and Siegfried Wagner) , the governess for the 2 girls, a tutor for young Siegfried, 2 longtime servants from Bayreuth (valet and chamber-maid) augmented by a cook and, at least, one more servant. The retinue also included Joseph Rubinstein. Wagner has redecorated some of the rooms, with silks and his favourite velour.

The building had a porter and 2 gondoliers were engaged to be ready with their services. There was a barber coming every day at noon ; there was an afternoon hot chocolate or tea and/or a cognac at the « Caffé Lavena » , a fashionable coffee-shop on the north-side of Piazza San Marco (still there today) , and « preserving the little table on which he was served and the chair the great man used every day » , as reported by Giuseppe Norlenghi in his time.

### Wagner : The final days

Henry Perl recounts the days of Wagner in the last month or so of his life.

At first, it seemed to be improving :

« (...) His breathing difficulties occurred less frequently, although some people with whom he had close contact knew that, on a few occasions during this final period, at intervals of about 8 days, he suffered fainting spells. One such

occurrence befell the Master at the confectioner “ Lavena ”, another time with his banker, “ Herr ” Reitmeyer. Both times, as soon as the distress receded, he hastened to rejoin his gondola, which was awaiting him at the closest “ riva ”, and he instructed people that no one should make any mention of these situations to his family. »

These occurrences, which Wagner thought resulted from his exaggerated nervous state, failed to alarm him, says Perl. His confidence was communicated to his family and to those around him, while Doctor Friedrich Keppler maintained his faith in Wagner’s inherently robust constitution and his strong will. Wagner’s intellectual strength was irrepressible, too, and was furthered as he regularly took his young son on his promenades. Siegfried’s fascination with architectural monuments not only complemented that of his father but also boded well for the expectation that the boy was aiming at a career as an architect.

Perl is ready to move us on to the long-anticipated climax. She begins, however, by completing a theme already introduced - one that, once again, stresses her own capacity as an eyewitness :

« The final days of Carnival came on and the wild merriment reached its pinnacle ; Shrove Tuesday ( “ Faschingdienstag ”) fell on **February 6**.

In the literal sense of the word, the Piazza San Marco swam in a sea of light and offered a prospect of fairy-land beauty. 2 bands of musicians played merrily and in very brisk tempo ; there was jolly dancing on the platform. Innumerable masks and processions of maskers moved about with Italian vivacity and obligatory vocalizing under the “ Procuratoria ”, crowded into the “ cafés ”, and performed improvised comic pieces in the midst of the San Marco Piazza. Their harmless merriment, so inherently generated, challenged northern on-lookers, who stood among them as if wanting to say :

We are all too solemn to do this sort of thing, we live a life much too serious, we have meditated much too much, too much perused the pages of Kant, Schopenhauer, Darwin, and Hegel. These simple folks here do nothing like that, and who knows on which side we wisdom lies ?!

Perhaps, similar thoughts passed through the mind of the great Master in this last Shrove-night ; in any case, his thoroughly artistic nature gained the upper-hand, for he mingled in unaccustomed jollity with the surging crowds.

We have seen him with our own eyes. It was the last time, and his appearance has remained indelible in our recollection.

Wagner took his daughter Daniela by the arm and, with her, pushed through the midst of the most rowdy of the crowd of maskers. His step was springy, even youthful, his head held high. Anyone could see that this man, who regularly turned his back on general sociability, felt himself perfectly comfortable among this merry-making crowd, effectively participating in this “ Mardi Gras ” nonsense ; that he, an unmasked man, imagined himself masked in the midst of this masquerading, childish mob. And, in a certain sense, in that moment, he was just that, since he felt himself a participant in this wild charade.

Just like all the others, he would be on hand for the extinction of the Venetian Carnival.

It was just before midnight and Wagner took unmistakable pleasure in the traditional moment in which “ Mardi Gras ” and Lent, that is, indulgence and renunciation, joined hands fraternally ; from the highest-level bacchanal to deepest penitence - a single brief step !

Midnight was tolled by the gigantic Campanile di San Marco, and ceremoniously those venerated bell-tongues took-up the melodious rhythms they repeat each day. Wagner listened to them with head uplifted. Then, with the flickering lights suddenly extinguished as if, by the command of some higher-power, darkness surrounded the jolly mob and sacred hymns resounded all around in the air !

It was a theatrical touch, but Wagner knew how to appreciate it !

The image visibly pleased him, and we saw the Master enter the rooms of the “ Al Bianco Cappello ” restaurant in an elevated mood.

It was perhaps the last evening of care-free cheerfulness in Wagner's life - no, not “ perhaps ”, it certainly “ was ” ! An hour later, Wagner went home still fully caught-up in the immediate impressions of these fresh experiences.

“ Arnico mio ”, he said to the aged porter who, because the Master was out of the house, had not yet gone to bed ; “ Amico mio, the Carnival is ended. ” (“ il Carnevale è andato !”) With that he clapped the old man on the shoulder. It was a scene that this servant, obviously favoured by Wagner, never tired of telling, over and over, so deep was the impression that this made on the old man, especially with the Master's death ensuing so abruptly thereafter. »

We can contrast Perl's testimony with that of Cosima's, not so much to use one to discredit the other, but to observe 2 very different perspectives on the same episode. After reporting in her diary entry for February 6 that Wagner had happily spent some time that Shrove Tuesday morning sitting beside the Doge's Palace in fine weather, Cosima says that :

« (...) at around 9 o'clock, we set-out to the Square for Shrovetide celebrations. Richard does this to please the children, who reward him with their gaiety. The impression is mixed ; Richard finds something touching about the procession carrying carnival to the grave. With its melody which he thinks to be an old one, but after going to the podium with the children, he returns to me in the “ Cappello Nero ” looking sad. He says poor artisans were hopping around there without really understanding why. But the midnight bells and the extinguishing of the flames produce another fine effect. (...)

We return home toward 1 o'clock. Richard not entirely dissatisfied, but as I go to sleep, I hear him say :

“ I am like Othello, the long day's task is done. ”

He asked me earlier whether I still care for him - he is so difficult ! »

That the accounts of Perl and Cosima are not irreconcilable was demonstrated long ago by Wagner's biographer, Carl Friedrich Glasenapp, who drew on both and made a comfortable synthesis of the two, freely using Perl's details (and even verbiage) in particular.

A further contrast of accounts may be found for the very next day, February 7.

Cosima reports tersely an excursion that was seemingly aborted :

« (...) Toward 1 o'clock, we set-out for the cemetery island of San Michele, but Richard is not feeling well, and we return home immediately. He feels uncomfortable at lunch - he probably caught a cold yesterday. (...) »

For her part, however, Perl gives a very different account, one very much focused on the gondolier, Luigi Trevisan, from whom (probably as one of her important informants in general) she must have had this direct and quite contrasting account :

« On the day following (the carnival finale) , on Ash Wednesday, Wagner felt disposed to make use of the lovely weather and to undertake a prolonged journey by water. As always, he again asked Luigi, his first gondolier, who would in such instances be his adviser :

“ Where do Venetians go today ? ”

And this well-informed guide replied :

“ To San Michele, illustrious Sir. ”, whereupon he steered Wagner to Venice's splendid, recently built necropolis.

A magnificent view toward the Paduan and Vicenzan mountains makes this outing to the island that lies near Murano particularly rewarding. The weather was seductively beautiful, the Master left the gondola and, accompanied by the brightest sunshine, made a stroll through the imposing necropolis of the Lagoon City, which he recognized for its treasured and admired merit. When he settled into the gondola in order to return home, Luigi asked his master whether the promenade had satisfied him.

“ Absolutely ”, responded Wagner.

And added to it :

“ Soon I, too, will take my rest in a similar place of repose ! ”

Certainly, on that morning, his old, ravaging enemies had made themselves especially evident in the Master's breast

and prompted him to this prophecy - sadly, to be fulfilled so soon thereafter.

Perl's account of this episode is in conflict not only with Cosima's entry but also with the report by Giuseppe Norlenghi, who confirms Cosima in quite vivid details that were certainly obtained from Trevisan himself. It is possible that Perl (or Luigi himself) confused this incident of February 7, 1883, with an earlier and more successful excursion made to San Michele (Cemetery and church) that Cosima records for October 19, 1882.

Perl proceeds from here to report on what was to be the last week of Wagner's life. Cosima notes that the soprano Pauline Lucca had hoped to visit Wagner during a one-day stop-over she was making in Venice, but that the composer's health did not allow it. A more significant visitor was the conductor Hermann Levi, whose arrival Perl places « between Friday and Saturday » (i.e., February 9-10), but which Cosima sets more authoritatively on the afternoon of Sunday February 4. Cosima's references thereafter to his stay in Venice are mostly concerned (beyond sneers at his Jewish identity) with the ill-health Levi was suffering. Perl, on the other hand, makes much of the prolonged discussions that Wagner had with Levi, of such intensity that they stirred the composer to renewed agitation. This prompted Doctor Keppler's concern, but Wagner proposed to find relief in a little excursion with Siegfried, and the physician suggested either Verona or Bologna, conveniently within reach by train. This idea was approved, though it is never mentioned by Cosima. Scheduling it proved difficult. The idea was broached on Saturday the 10th, but the next day, the 11th, it rained all day (as Cosima confirms). This, says Perl, put Wagner in a bad humour (which Cosima does not indicate); he spent « the greater part of the day » working in his study (which Cosima confirms if reduces).

Fretting over the weather, says Perl, Wagner finally decided to go-out for a walk alone but returned after 10 minutes clutching his chest and breathing with difficulty. His irritability continued through the day, but his mood improved in the afternoon and Doctor Keppler found him restored to good condition. In one of the discussions the 2 enjoyed so much, they renewed the idea of the excursion, expecting that improved weather would allow it within the next few days. Of all this, Cosima says nothing; in fact, she reports Wagner spending time, and joking, with his barber; but Glasenapp accepted Perl's information, blending it in with Cosima's report.

Henry Perl gives an account of Wagner's activities on the next day - Monday, February 12, to be the last full-day of his life. It is an account rather divergent from Cosima's. And here, Perl explicitly states that a lot of her detail came to her directly and immediately from Doctor Keppler. She reports that, in the morning, Wagner arose feeling unusually well in health and spirits following a night of « restful sleep without interruption ». (Cosima reports that he awoke once during the night and was annoyed at not being able to find his check-book.) Since the rain had ended and a sunny day was in prospect, he particularly pleased Siegfried, Perl says, by proposing to go to his banker to secure the money needed for their projected little journey. For that purpose, says Perl, Wagner set-out (presumably alone, at what time not specified) for San Marco. Usually, when he had errands to run in the city-centre, he would stop at Reitmeyer's bank, partly as a resting-point should he have problems of breath or nerves. This time, he went there for business (perhaps that was why he had been looking for his check-book, as Cosima reported) and was feeling so well that he lingered for about a half-hour, chatting amiably with members of the bank-staff.

Now, for her part, Cosima reports the departure that morning of Hermann Levi, still not quite well (of whom Perl says

nothing here) . Cosima notes that Wagner spent the morning working on his article, and adds that, at lunch, he entertained Joukowsky with « some very drastic jokes and anecdotes » . She then states that Wagner went-out in the afternoon with Eva (without Cosima herself, who was awaiting a visit from Princess Hatzfeldt) and « gave Eva some chocolate » .

But Cosima says nothing about what would have been Doctor Keppler's final house-call, made according to Perl at the accustomed hour of 6 o'clock. In the process of reporting that visit, however, Perl is able to introduce herself. Cosima reports that she met Doctor Keppler later that evening, when he told her of his visit and passed on to her a joke that Wagner had told him that day. From this episode, Perl concludes, among other things, that a jocular Wagner certainly felt well the day before his death.

### Bruckner's premonition

Letter from Anton Bruckner to conductor Felix Mottl :

« Once, I came home and felt very sad. I did not think the “ Master ” would live much longer. Then, I conceived the Adagio in C-sharp minor. »

When speaking to Doctor Theodor Helm some time later, Bruckner was still emotional on the subject :

« Yes, I wrote the Adagio for the death of the great, unique one (“ des Großen Einzigen ”) : partly in premonition, partly as funeral music after the catastrophe. »

Göllerich-Auer reports that Bruckner had had a premonition at the New Year of 1883, and had written to Mottl to warn him that « the Master cannot live for much longer » , but if this was the case, the letter has not survived.

### Death of Richard Wagner

It was a dark and stormy day, allowing no thought of anyone venturing-out, and forcing postponement of the planned excursion (to Verona) . Wagner did, however, schedule his customary gondola ride for 4 o'clock that afternoon.

« He had risen from bed at 6 o'clock and he set to work, presumably to distract himself without interruption for the entire morning. »

Here, Perl seemingly contradicts the conventional picture of Wagner working that morning on his essay - a picture carried-over from Cosima's explicit statement to that effect for the previous morning. Instead, Perl states that he was occupied in plans for the revival of « Parsifal » the coming summer, whose every detail he was supervising directly. That had been, she says, the reason for Levi's visit, so that they could exchange ideas in person.

Perl says nothing about Cosima taking breakfast with her husband that morning - much less anything about any

argument between them. Instead, as she would have it, all was business :

« (...) On this very morning, Wagner made clear that, up to the 2 o'clock hour set for meal-time, he did not wish any further disturbance, a desire that even " Frau " Cosima always took very seriously, and, in such a case, she never entered her husband's room.

Nevertheless, she ordered Betty, household servant trusted over many years, to remain in an adjacent room, since the Master that morning had mentioned that he did not feel altogether well, and, should he have need of something, he would always prefer to receive it from the hands of this loyal servant. These instructions were neither something exceptional nor dictated by any particular anxiety, but were, on the contrary, a long-established practice, recognized as appropriate.

Thus, as on all other days during these hours when the Master wished to remain alone in his study, Betty Bürkel sat in the neighbouring room, occupied with her needle-work. The hours before mid-day passed one after the other without Wagner having expressed any sort of wish. " Frau " Cosima came more than once and received each time the same response :

" The Master is working, he walks back and forth through the room following his custom, and he has not required anything. "

Around 1 o'clock, Wagner rang and asked the servant as she entered :

" Is the gondola set for 4 o'clock ? "

The servant said it was so.

" Good. In addition, I want to eat in my room ; some soup will do. I don't feel well. "

This, too, was nothing exceptional : when Wagner was particularly immersed in his work or did not feel entirely well, it frequently happened that he partook of a tiny portion in his room and, in time for dessert, he joined his family.

A few minutes later, the servant brought the requested soup. For a while, all remained quiet in the room ; suddenly, Betty Bürkel heard the sound of hasty movement back and forth, and thereupon, a repeated and persistent coughing. Become attentive, she put her work aside and with silent steps approached the door. It would not have been long before she also heard groans of pain, which plunged her into great anxiety. For all that, she lacked the courage to disobey the Master's order and to go in without being summoned ; but her apprehension would allow her to delay no further and she was on the verge of the decision to go to " Frau " Cosima when there came to her ear the soft cry. " Betty. "

Frightened to death, the servant plunged immediately into the room, which, as already described, was divided by a

curtain into 2 sections. Behind this curtain, however, she saw the Master laid-out on his sofa, half-covered by his furs and his feet propped on an adjacent arm-chair.

As the girl later reported, the Master's facial lines were frightfully distorted. While weakly and painfully the words escaped from his lips :

“ Call my wife and the doctor. ”

These were his last words ! »

In frightful dismay, the terrified servant ran to “ Frau ” Cosima. The latter in her turn rushed, stricken with dread, into the room of her husband, whose appearance forced upon her the great extent of his peril.

“ To the doctor, quickly to the doctor, call Doctor Keppler. ” was all that she could issue in the circumstances in which she was occupied with the suffering man, who lay insensible to all that was going on around him.

Within the Master's breast, the pain strove and raged quite horribly, but he was incapable of giving expression to it other than in some pitiful groans and gasps. “ Frau ” Cosima, herself near to unconsciousness, held her husband's hands and attempted to provide relief with all the measures that, more than once before, had proved helpful in similar convulsive seizures. Though frightened to death, she had never perceived the full-extent of the peril in which her most dearly beloved husband was now caught. She no longer attempted to revive him, especially when he suddenly became more quiet and his head sank on her shoulder. The spasm appeared to have passed, his breathing was light, and “ Frau ” Cosima believed him to have settled into sleep. She took this for a good sign : she tried not to breathe herself so as not to disturb her dear one. And with immovable eyes, she looked only to the door, through which, at any moment, the doctor would enter and, as she firmly hoped, would bring aid.

The confusion in the house upon the report of the Master's sudden indisposition was so great that all quite lost their heads over it. 3 messengers were dispatched one way or another to the doctor : the terrified children came to the door and dared not enter into the room where all was silent and their father was, as they believed, asleep. A painful hour passed before someone was able to locate Doctor Keppler and the latter could be brought-back to the palazzo. With his entrance (this was the first time he had set foot in this phantasmagoric, tapestry-filled room) , he found Richard Wagner still in the same position in which he lay fallen when Betty Bürkel rushed into the room upon his weak cry for help. (He had rested his head on the breast of his wife, who held him in both arms in a tender embrace.) The stricken man appeared to sleep ; “ Frau ” Cosima, who had not ventured to speak so as not to awaken the sufferer, conveyed to the doctor, through a sign only, the understanding that her husband was sleeping after the attack.

The physician gave not a moment's credit to this illusion and had immediately recognized that he was not dealing with a sleeper. He approached Wagner, examined pulse, heart, and head, and confirmed the horrible reality.

Richard Wagner had ceased to be.

Death must already have occurred quickly, without the unfortunate wife having even suspected the awful truth.

Himself deeply stricken by this unexpected disaster, Doctor Keppler spoke not a word. But raised the corpse in his strong arms and set it on the magnificent lounging bed. As soon as the deceased lay peacefully on the bed where he loved to rest, the physician found the right words to communicate the lamentable fact to the unfortunate wife, who had not yet fully-understood the horrible reality.

No sooner had « Frau » Cosima heard pronounced the words « He is dead ! » than, emitting a heartrending shriek, she flung herself on the corpse of her husband and, embracing it, collapsed as one insensible.

All of the doctor's efforts to pull the unfortunate wife from the dead man's neck remained futile, and, even when she returned to consciousness, she was impervious to all consolation. To Doctor Keppler now fell the dismal obligation of communicating to the children, who had been awaiting at the door in deathly anguish, the cruel misfortune that had befallen them with such pitiless force.

Who could dare to describe the dreadful lamentation, the heartrending grief, that this unexpected news of tragedy elicited from these young spirits who, conditioned by the radiance of good fortune, had idolized their father !

Perl here pauses to suggest the mental framework of the Wagner youngsters, who had seen him age but could not conceive of his dying : a genius of such lofty status had to be immortal. The news of his death left them stupefied. They could only think, instead, of their mother. She had been inseparable from Wagner, deeply apprehensive over his health during their travels. They would have recalled now, Perl imagines, an occasion when they had been at a transfer station 4 years before. Counting over 90 railroad carriages in one long train, they had jokingly told their mother that such was to be the number of their father's years.

« (...) and now - now all that came to naught, all that turned to mockery. The great, the unique, the idolized man, and above all their father, who yesterday had moved happily among them, was dead, dead, - dead !

“ And our mother ? ”, they asked repeatedly of the physician, and thus, summoned him to recollection of the strong obligation that he now owed to the unfortunate widow. Thereupon, the children joined with him and sought, in concert with him, to remove from their father's corpse the wife who, as if frozen in grief, was resisting any consolation.

A supremely dramatic vision :

This chamber that belied the situation (glistening and bristling with gold brocade and with shimmering, smooth silk) mocking in its colours of the rainbow, sparkling in artificial beams of unwavering sunshine. And, in the midst of all this, on his bed of life's pleasures and joys he alone could imagine, was He, the great deceased. Bent over him, disheveled in grief, cursing her own life and enduring only for the sake of her, and of her children's wishes, was the

widow, the wife, who but a few hours before, hanging upon his neck, had received and returned his life-warming kisses, with no thought of their separation !

The children circled about, so greatly blessed in spirit, so like their parents, and crushed by grief, over-powered for the first time by the frightening perception of endless emptiness !

What a “ tableau ”, unforgettable to anyone who had seen it ! And outside, the crowd of the curious was growing minute by minute. The report of the Master's sudden, serious illness had spread like wild-fire through Venice. Already, the wire-service report was flying-out into the wide-world and announced the likely passing of the meteor that, throughout the decade, had enthralled the whole world's cultivated people. Already, the interested and the curious were making a pilgrimage to the palazzo's portals ; they questioned, they besieged, and had to be content with a shoulder-shrug, with a raised glance, from the household servants.

“ Richard Wagner has become very ill and the physician is now at his bedside. ”

Up to 3:30 pm on the afternoon of **February 13**, no one in Venice knew more. Finally, Doctor Keppler descended the stairs in the “ cortile ” (inner-court) .

“ The physician, the physician ! ”, was heard from all sides and everyone drew near to him, awaiting his statement.

“ Richard Wagner has died one hour ago as a result of heart failure. ”, said the doctor, profoundly moved and with bared head, to the tensely expectant crowd : whereupon, he immediately hastened away, for there were many sad duties he was required to fulfill in the next 36 hours. The helpless family, home-down by grief, he had meanwhile passed-on to the care and keeping of their best friend, the painter Paul von Jukowski, so beloved by the Master.

“ Richard Wagner dead, dead. ”

(whispered everyone in confusion, and outward rolled the speedy waves that always become the bearers of evil news) outward into the broad stream of public life, where it resounds stormily with all its inherent, elemental force, so that the ground on which it falls moans and groans. One hour later, the sad news had spread over the entire city ; in the coffee-houses, on the street-corners, people cried-out :

“ Riccardo Wagner, il famoso tedesco, Riccardo Wagner il gran Maestro del Vendramin è morto ! ”

(Richard Wagner, the famous German. Richard Wagner, the great Master of the Vendramin, is dead !)

As to that, however, an indescribable and, from an Italian stand-point, inexplicable excitement was generated, that confirmed still further the power of Genius. »

Since the death of Giuseppe Garibaldi (June 2, 1882) , no news had made such an impact upon the general

population as did the sudden-death of the great Master ; and here, his greatness was little more than suspected, not recognized.

The rain fell in torrents, from a distance the thunder rumbled, as in summer-time, and for an instant, the lightning illuminated the angry firmament. The wire-service laboured without ceasing and carried to all points of the compass the heart-breaking intelligence of the demise of one of the mightiest spirits of all time.

And we (Perl herself) also were, at that time, at the telegraph office that was besieged by people from all regions. We had the opportunity to speak with Luigi, the Master's gondolier, who was at the point of sending dispatches of the Wagner family to Munich and Berlin.

Luigi's emotions hardly allowed him to speak : in his haste and confusion, he had taken Wagner's umbrella and showed it to us with the words :

“ And to think, that he had carried it yesterday, the good, gallant, special man, who never had a nasty word for us, even when he was so miserable. Here, here, look at his name. ”

And he showed us the ivory handle with the initials R.W.

“ And now, he had to die, ' per bacco ' (by Jove) , how many would leave the world in his place ! ' Poveretto, Poveretto ' ! ”

And the man gave himself over without restraint to his naive but genuine grief.

Since his sending of the dispatches required a good bit of time - 5,000 dispatches with reference to Wagner's decease were sent during the night of **February 13-14**, and, on the following day, from Venice to the most distant destinations.

Luigi, the loyal servant, turned to us once more, and continued in his need for communication :

“ Even his little cat. ”

Wagner first acquired it 2 months ago, and he came just at the right time to save it from drowning, it would not touch anything today, the animal knew what he had lost, he was continually following the Maestro close behind. ”

Perl launches next into a purple-prose description of what she calls « the final act of the sorrowful tragedy » , noting in the process the world-wide grief over Wagner's death :

« He himself, the King of musical art, yet lay pale and motionless on the precious pillows of his grandiose bed ; near him, overcome by grief, her thick, long, blond hair let loose (as he had loved it) wife.

Her eyes fixed immovably on him, her breath warming his death-chilled countenance and his hands (with her hair, that had been so dear to him, soaking-up the tears flowing so bitterly, insensible and inaccessible to any impact of the outside-world, and insensible to any word, even that came from the lips of her children) thus, she lay beside the benumbed corpse of that man who, for her, had been no man but a god !

And through the entire long night, she remained by his side, alone with him, without speaking, without taking a drop of refreshment - always whispering softly to him what her love, the immensely profound feeling which she felt for him, could inspire in her in the hour of their separation.

Not alone should he spend his first night in the realm of death (not alone) , she would watch over him, to gaze on his beloved countenance, as long as no one could remove his mortal body, as long as she could have access to his countenance. The others would fulfill their sad obligations, of which she was not capable.

She knew only one obligation, to remain by him whom, in life, she had loved so indescribably and so unalterably, whose great, deep heart she had possessed so fully and totally !

Each passing hour strengthened her resolve, she held vigil the whole long night with him, she relinquished him not for a minute with the coming of day, she took nothing for herself, she said nothing, she ignored the children whom she forgot she genuinely loved.

For 26 full hours, she would not be torn from his body, and who knows whether she would have ever left her dead husband had she not been laid low by a physical break-down that rendered her unconscious - an exhaustion that allowed Doctor Keppler and the children to pull her arms from the deceased and administer some drops of strengthening wine.

Nevertheless, when her consciousness eventually returned and she was able to grasp anew the bitterness of her destiny, she spoke again for the first time and with the following words :

“ It is shameful that I still live, were I to have died, Richard would have immediately killed himself ! ”

That was the kind of marital devotion that united these 2 extraordinary people. “ Frau ” Cosima's grief was quite striking, and fully worthy of this man to whom it was tendered.

With him, with the great man whom she had been so happy to call her very own through the years, with him also was extinguished the light of her life, the sunshine withdrawn from her existence.

And while the grieving lady, brooding in her heavy sorrow, forgot time, place, and the draconian necessity of the final separation from her beloved deceased, in the broad palazzo-hall, friends and admirers hastily ran up and down to prepare everything for a grand ceremony worthy of him who lay there mute and cold.

The magnificent sarcophagus, meanwhile, was ordered from Vienna.

Doctor Keppler was entrusted with the embalming ; he expected the ambassador of the King of Bavaria at any hour.

The deputation of the city of Venice was sent to the palazzo in order to transmit to the widow of the great composer and poet, in the name of the city, a message of condolence that attempted to express the sympathy with which it shared her sorrow, and, at the same time, communicated that the city had proposed a funeral ceremony worthy of the great deceased.

“ Frau ” Cosima conveyed through her true friend and admirer Paul von Jukowski her heartfelt thanks for these fine gestures, she explained at the same time that she had decided to transport her dead husband with total restraint.

Funeral “ crowns ” (wreaths) of the most splendid kind were delivered to the palazzo, of which the most exceptional was the commemorative wreath of the King of Bavaria and a black-gold one from the King of Italy ; also, a rich wreath from the “ Circolo Artistico ”, with the inscription “ Venezia a Riccardo Wagner ”.

Countless floral gifts from other societies and private parties arrived, among them, wreaths from the Princess Hatfeldt and her daughter. The aforementioned lady and Hans Richter of Vienna were the only outsiders who were allowed to see the Master in death.

Princess Hatzfeldt, herself in advanced years, and an ardent admirer of Wagner, upon the sudden news of his death, which was brought to her on **Tuesday, February 13**, just as she was about to sit-down to table, was taken with a serious fainting spell. Notwithstanding, however, she hastened, as soon as she had recovered consciousness, to her dead friend at the Palazzo Vendramin.

According to the wish of King Ludwig II of Bavaria, the corpse of Richard Wagner was not to be touched before the arrival of his ambassador.

“ Herr Groß ” (Adolf von Groß) , the banker, one of the co-founders of the Bayreuth Theatre, was therefore chosen to carry-out the wishes of his king with regard to the arrangements for his dead friend. But the unhappy wife's state was so despairing that she was in no condition to receive anyone, not even the king's ambassador.

“ Fräulein ” Daniela von Bülow, Paul von Jukowski, and Doctor Keppler received “ Herr Groß ”, even as they were receiving the numberless messages of condolence and dispatches and were preparing the necessary arrangements for the funeral and departure.

Special correspondents and reporters from all regions were meanwhile arriving in Venice and had settled themselves in the spacious halls of the princely Palazzo Vendramin, hastily putting on paper all that they saw and heard.

Up to his very death, however, nobody entered, nor had anybody even seen, the rooms as they were at the time when

the Master resided there. From hour to hour, the family expected the arrival of the son-in-law, Graf Gravina, from Palermo, and Franz Liszt from Pest. Both, however, were unfortunately not in a position to reach Venice immediately.

In the interim, Richard Wagner's death-mask was made by the locally very important sculptor Augusto Benvenuti. Doctor Keppler, however, with the help of his assistants transferred to the next room the corpse which, until the arrival of King Ludwig's ambassador, had been untouched. There, they carried-out its embalming, following the "Wickersheim method" - a highly-respected procedure.

After the embalming was completed and the Master lay in his expensive coffin clad in his black silk frock-coat with the black velvet beret on his head, he looked truly handsome. "Frau" Cosima knelt in silent despair at the foot of the bier. This was on Thursday, February 15, in the later evening hours (she had just cut-off her precious long blond hair, which Richard Wagner had loved so very much, and had laid this on his breast in a red silk cushion), she herself, up until that time, had not taken either food or drink, which certainly put her in a critically serious condition.

And now, the inevitable moment could no longer be deferred. The departure would take place on Thursday night. Outside the railroad station, in readiness for the past 24 hours, stood the carriage that was to carry the great departed homeward over the Alps. But many things still remained to be done and, therefore, the departure was settled for Friday the 16th, at 2 o'clock in the afternoon.

The last night at the Palazzo Vendramin would remain something unforgettable for all who shared the experience; the entire family waited together at the open sarcophagus of the irreplaceable man and they all did not weary of looking at him over and over, in the very brief time still allowed them, to imprint on their minds the features of the departed.

The children cast shy, anxious glances at their mother and dared not, even with a single word, disturb that lady who sat there, a picture of despair, bereft of her hair ornaments, as if all life had been drained-out of her.

And he, who had been everything to her, who had shared with her even the smallest anxiety, he looked-out indifferently and softly slept "the long sleep of the weary", unmoved by all her sorrow and grief!

On Friday, the sun gleamed and glittered already at early morning and the sky was as if scrubbed clean.

In the court-yard of the Palazzo Vendramin, an agitated activity prevailed, the household staff rushed about in deep mourning; the representatives of both the Italian and the foreign press attentively observed every incident and vainly sought to arrange entry for themselves into the death-chamber.

Among the musicians we particularly noted were Hans Richter from Vienna, Angelo Tessarin from Milan, the director of the Conservatory, Count Contin of Castelseprio, and violin professor and conductor Raffaele Frontali. We heard the last-mentioned direct a request to Jukowski, that he might see the Master one last time and kiss his hand. (Frontali had dealt extensively with the Master in connection with the recently held performance here of Wagner's "Youth Symphony

”). We, thereupon, observed how Paul von Jukowski withdrew and then, after scarcely a few moments, returned to express his regrets to Frontali that his wish, so understandable to him, could not be granted.

Also, the representatives of the Municipality appeared, in order to propose anew, in the name of the City of Venice, an escort-guard worthy of the great deceased ; but “ Frau ” Cosima declined this gesture of tribute, as she had the first time, and again with thanks, confining her requests to the closing of the railroad station and the cessation of any kind of funeral music, which she anxiously discouraged in view of her indescribable misery.

Quite unwillingly did the Municipality follow the unshakable wishes of “ Frau ” Cosima and renounced, although regretfully, their elaborate plans and testimonial of sympathy, through which they had intended to honour the memory of Richard Wagner.

The palazzo was surrounded by security-guards on the street-front, because of the crowding of members of the public.

Doctor Keppler was at the palazzo by early morning, in order, in concert with “ Messieurs ” Paul von Jukowski, Adolf von Groß, Ludwig Passini, and Franz Ruben, to help make the many necessary arrangements for the transportation of the body and the departure of the family.

Around 12 o'clock began the dispatch of the chests and trunks, which were brought to the railroad station on specialized gondolas, since the family had decided to take immediately to Bayreuth all the property they had brought with them.

Several pieces of furniture that had served the special needs of the Master and now were treated as precious relics, were next brought down ; these were ; a red damask sofa, upon which lay a particular fur with which Richard Wagner had been covered during the last hours of his life ; further, the arm-chair on which the dying man rested his feet, and finally the waste-paper basket from his study. These objects required a gondola all of their own and had to be brought along in a passenger carriage, in order that they might travel to the North at the same time as the family.

A few minutes later was brought down also the bed in which the Master had rested during these last months of his life and which, henceforth, would remain the resting-place of his widow. In addition to the bed, one could also see, however, a large, wooden rack, as wide as it was long - this was the frame for that costly lounging ottoman that had formed the central-point of Richard Wagner's study.

In the midst of all this, telegraph messengers were observed arriving every minute with dispatches, for from the outside-world during these 3 days came messages of condolence, and, indeed, by the second day after Wagner's death, their total ran-up to 318 telegrams.
