Amid these preparations, as the hour of 1:30 in the afternoon approached, the sun beamed and the water shimmered in alluring green. The few people standing in the inner-court (“ cortile ”) of the palazzo, participants connected in one way or another to the proceedings, began to form a lane. As the hand of the clock indicated, there could be only

minutes remaining before the great moment in which the deceased would be brought down through the halls and entrusted to the sparkling waves.

The last ceremony within the magnificent building, whose honour in part had been to shelter the lofty genius through so many months, commenced.

The foot-falls were audible and 8 men, among them Hans Richter, Paul von Jukowski, Doctor Friedrich Keppler, Ludwig Passini, Franz Ruben, Count Contin of Castelseprio, and Raffaele Frontali, advanced down the wide-stairs with the heavy, splendid bronze sarcophagus, decorated with 4 lion heads, and brought it down.

In reverential silence, the men strode with their illustrious burden through the solemn tanks and carefully bore the deceased to the gondola. After them came the servants of the house with countless wreaths and floral offerings, with which the sarcophagus was decorated and a second gondola was quite filled.

A solemn pause ensued, each person had the anxious feeling that he must endure a sight that would wrench his heart, since the friends who became the deceased's escort of honour were already returned to the chamber of desolation, in order to collect the widow and children for this last mournful journey through the city that had become so beloved to them and in which they would endure such a mournful event !

After a brief interval, " Frau " Cosima appeared on Doctor Keppler's arm, leading by the hand the young Siegfried, the Master's only son. Their closely contained, maturing, otherwise quite upright aspects seemed altogether shattered. Passini with Wagner's daughter Daniela, followed them, " Herr " Jukowski and Ruben led the 2 other daughters, Isolde and Evchen.

In solemn silence, the bereaved moved through the respectful space made by the obviously quite emotional crowd, in consideration of the mourners' grief. Silently, they entered into the black-bedecked gondola, silently, in the lifeless vessel, they glided through the long watery planes of the Grand Canal, their eyes directed steadily toward the little boat that floated before them and that carried the sarcophagus, richly decorated with laurels and palms, in which rested the dear departed.

The sun shone brilliantly on the day of **February 16**, it sparkled wantonly in the green-and-blue flow of water, thoroughly warmed by the sun ; sadly, the trees, agitated by the wind in the garden of the Palazzo Vendramin, bent their branches, as if to offer their farewell salute to the great dead man. From the distance sounded the bells of one of the towers of this city so rich in " campanili ", it was the only music that the widow's ear, become so sensitive and intolerant, was unable to exclude. A fearfully sad tolling, with which her tears began anew to flow uncontrollably and her heart almost stopped in its anguish.

How often had she taken this route at his side - how often did she make rapturous exclamations over this magical city ! Yes, not only did the sun shine warmly then, but she perceived its warming rays, she rejoiced in them and was made happy by that, since she still was by his side !

Today, he was taken from her - the magnificence of the day was an insult, the glorious buildings of the unique city were distortions !

And finally, they arrived at the place from which they would take the blustering steam train to the solid earth (i.e. , the “ terra-ferma ”) , through valleys and meadows, over hills and mountains to their German homeland, to the soil of their fatherland, in order to restore the sovereign of 2 artistic realms to the earth that proudly would take him as its own.

In accordance with the widow's wish, the railroad station was closed-off, and the only ones present were a few administrative officials who did not lose the opportunity to take-part in this final gesture of respect to the great poet-composer.

The magnificent funerary carriage, decorated in black, which the “ Concordia ” Undertakers Society of Vienna had sent to Venice, stood ready for the reception of the corpse. To this was adjoined the salon carriage in which the family, accompanied by their friends who would give the mourners an escort part of the way, took their place. Both carriages were attached to the express-train departing around 2 o'clock. The funeral transport would then pursue its path, by means of a pre-arranged special-train, first by way of Vicenza, then through Verona, Ala, Kufstein, and Munich, on to Bayreuth, the Master's final resting-place.

After the bereaved had taken their places with their companions in the 2 (sic) salon-carriages, the curtains on the windows were carefully closed, the final bell strokes sounded and, thereupon, began the progress that carried the dead Richard Wagner from the Lagoon City on homeward over the Alps.

A feeling of unending anxiety bore-down upon our soul - only now did we feel the painful, irreparable loss in its full-scope, which we and, with us, the world now suffered.

“ Yet, his works are immortal ! ”

We and the numberless host of his admirers have said it to ourselves. And yet, we are unable to pull our mind back from the powerful happenings of these last days, to find any comfort for our heart !

Involuntarily, our steps turn-back to the palazzo-halls where the great deceased dwelt, and we request permission, once again, to be allowed to pass through the chambers in which each and every thing brings back reminders of him, of the last days of his earthly pilgrimage. Quite absorbed in his image, we walk through the long apartments in which still prevails the fragrance of roses - the Master's favourite perfume. With the feeling of deepest melancholy, we tarry in his room, now stripped of its magnificence, in which Richard Wagner had laboured-up until the last moment of his earthly presence.

Betty Bürkel, the loyal maid-servant of the Wagner household, was the only one who yet stayed behind, and was busily engaged in packing the many possessions still remaining : that same maid-servant who had been destined by fate to

receive the last words of the dying man, the same one who peered into his blurred eyes when he was looking all round for help.

As Doctor Keppler assured us, the Master's death-struggle had been an extremely difficult one, especially aggravated by the fact that he was entirely deprived of speech.

“ Redemption to the redeemer ! ”

These judiciously grand words from the sublime “ Parsifal ” poem the Vienna Wagner Society wrote as inscription on the wreath that it had placed on the coffin of Richard Wagner, and are also those that comforted us amid our thoughts of his death agonies. And, as we departed the celebrated building in a mood of reverent grieving, the place and its recollections awoke within us as we boarded the gondola that would take us homeward along the Grand Canal. Already, the numberless stars twinkled in the arch of the heavens, and we must involuntarily think of that autumn night on which we, our breast swelling with happy expectation, mounted the stairs of that magnificent building that had been destined to shelter the great Master and also, sadly, to entomb him in its walls.

Yet, only the earthly shell of Richard Wagner has been taken to his grave, he himself, however, will live on and will give confirmation the truth that he, himself (intoxicated by his own Genius, drunk with the exultation of an enthusiastic crowd) , spoke in Zürich to the great Russian musician Alexander Serov :

“ We are the gods of this earth ! ”

And not only in his immortal works will the regenerator of German artistic criticism live on, but also in the remembrance of anyone who has had the good fortune to associate with him, to explore the full-treasure of his intellectual profundity.

From now on, however, the facade of the Palazzo Vendramin in Venice will be decorated with a marble panel as a permanent marker, a visible testimony to the remembrance of Richard Wagner's residence and death ! A pilgrimage site for the pilgrims of sacred art from all countries ! »

Perl's account of the aftermath of Wagner's death obviously drew her into a good deal of fanciful, even fictionalized writing. How could she know the thoughts and feelings she attributes to Cosima and the others ? Yet, her apparent sources among the servants must have provided her with so much of what she uniquely describes. Nowhere else do we learn fascinating little details : the story of the little cat Wagner had adopted ; the Countess Hatzfeldt's receipt of the news of Wagner's death ; Cosima's ostentatious pronouncement on what her husband would have done had she been the one to die. Especially in Perl's portrayal, Cosima's behaviour in general can easily strike us as a theatrical show. Yet, there is no doubting Cosima's devotion to Richard, for all the tensions between them. In an era that loved melodramatic display, Perl's picture of Cosima's grief does not seem really incredible - no less than her vignette of the poor gondolier's grief. And where else do we learn the important little atmospheric fact that it was raining heavily on **February 13 ?**

Perl goes well beyond the newspaper accounts in her detailed picture of the tumult that marked the 3 days following Wagner's death. One can be sure that Perl herself was in the palazzo confines (perhaps thanks to her connection with Doctor Keppler) and was an eyewitness to what she describes. She is not the only eyewitness to Frontali's vain request, but her picture is a touching one. Above all, she reports most fully the removal for shipping of the Wagner family possessions, and the harvesting of relics from the death-room : not only the sofa, but the arm-chair with its fur, and the great bed and the ottoman frame. (Were these furnishings ones the Wagners bought themselves during their stay, or were they part of the palazzo's own inventory ? If one believes the Italian newspaper report about Cosima's wish to purchase the gondola and the funeral carriage, one might conclude that she made the distinction between taking what she owned and buying what she did not.) Perl alone tells us that Betty Bürkel remained behind to arrange transfer of remaining possessions.

Following her little slip over the number of salon-carriages, Perl tapers off her account as the funeral train leaves Venice ; even though Doctor Keppler, who rode in it as far as Vicenza, could have reported on that much of the trip. Of the obsequies in Germany, and at Bayreuth, she did not trouble herself to learn or report. Instead, however, she gives us a highly personal bit of final eyewitness testimony, something remarkably vivid. Amid her lofty grieving for the departed German genius, she tells of returning to the Vendramin, to which she gained admittance (from Betty herself ?) in order to brood her way through the empty rooms and their lingering associations. And, in the midst of that, she seems to suggest that she might, have, after all, visited the palazzo in the previous autumn. (Of course, had she met the Master at the time, she surely would have told us about it ! Might she have been scouting the servants while the boss was away ?)

For all her professions of German cultural pride and ardent adoration for Wagner, we are still left with some question about Perl's motivations. Her interest in the composer (opportunistic or otherwise, and probably in play from an early point in his stay in Venice) was fundamentally journalistic. Wagner was a world-class celebrity. Then, in the weeks following his death, there was a sudden market for the latest news about the Master's final days. Perl does not seem to have had more than passing knowledge of his Operas, and she shows little interest in musical matters themselves. Her real concern is with biographical anecdotes and observations that can make-up her " mosaic ". Given the idolatrous German audience she was addressing, she has nothing critical to say about the " genius " she is so eager to glorify. In her portrayal, hardly any warts are on display. Everything possible is done to present Wagner as a warm and human individual, with particular stress put on the blissful happiness and mutual affection rampant within the composer's family circle. The constant preoccupation she displays with Wagner's health, even allowing its anticipatory ties to his death, obviously resulted from her friendship with Doctor Keppler, the family physician. To that connection was added, as has repeatedly been noted, some degree of access, whether through Keppler or on her own, to at least a few members of the household staff. Indeed, one may often presume that, when any of them were featured in some narrative, those servants themselves were her source. Certainly, her account of every episode involving Doctor Keppler's presence would have been derived from his own reports to her.

Perl's dependency upon Keppler as a source might be viewed in another way, however, serving actually to invert what we understand about her book. It has been suggested that Keppler may have been a source, or the only source, for the description of the family scene in the hours after Wagner's death, as published in the « LGdV » on **February 15,**

or its like. It has been suggested further that Keppler was discreetly but firmly reprimanded for breaching family privacy in so doing. This opened an eventual rift between the doctor and the family circle, generating the latter's conclusion that Keppler was « an acknowledged Charlatan » whose treatment was actually responsible for Wagner's death. Accordingly, Keppler retaliated by freely providing Perl with information for her book.

Indeed, one might carry this picture of things one step further. Could it be that Doctor Keppler's determination to defend and vindicate himself from insinuations of « malpractice » in Wagner's case have itself become one of the reasons, if not the central reason, for Perl's writing the book in the first place ? Was she his tool, rather than he her resource ? Obviously, she had her own literary aspirations and opportunistic goals in undertaking the book on her own, but hers and the doctor's agendas could well have become complementary in generating the project. It is worth remembering that « only » in the preface to that book did Keppler publish his pseudo-autopsy report after Wagner's embalming ; while the recurrent excursions on Wagner's illnesses and Keppler's treatment run through the book on a more than coincidentally massive scale. Seen thus from the doctor's perspective, Perl's book might well be viewed as a work of polemic on his behalf.

Those are questions that can never be definitively resolved. And, if Perl's motivations must be scrutinized critically, so too must be the credibility of whatever she reports. Still, her account can by no means be dismissed out of hand. We have noted some instances of clear or apparent inaccuracy, particularly at odds with newspaper reports of the moment. (One must wonder sometimes how much she read the local Venetian journals, if at all !) And there are often statements made for which one would wish corroboration. Nevertheless, in the final judgment, Perl's little book deserves not only what limited acceptance it has already achieved but still more serious attention and respect in the literature on Wagner. For all her stylistic quirks, her little « mosaic » stands as both a crucial source and an interesting, even charming period piece in its own right.

...

Richard Wagner suffered for years from cardiac problems. Reading his doctor's reports one is struck by the inability of medicine of the time to help him. Today, Wagner's health could be easily controlled and he could have lived many more years and surely produced more music.

He sabotaged efforts to deal with his heart-condition, according to his doctor, Friedrich Keppler :

« He suffered from advanced hypertrophy of the heart, especially in the right-ventricle, with consequent degeneration of the cardiac tissues. There was also a fairly extensive dilation of the stomach and an inguinal hernia on the right-side ; this had been greatly aggravated for a long time by an unsuitable truss, so that the first thing I did was to order him a better one.

The pains from which he suffered in the last months of his life came principally from disorders of the stomach and bowels, and particularly from advanced matorism : these occasioned (though secondarily, by direct mechanical constriction of the chest as a result of much gas in the stomach and intestines and by reflex action of the nerves of

the stomach and heart) painful derangements of the heart's action, leading eventually to a rupture of the right-ventricle. It is self-evident that the innumerable psychical agitation to which Wagner was daily disposed by his peculiar mental constitution and disposition, his sharply defined attitude towards a number of burning questions of art, science and politics, and his remarkable social position did much to hasten his unfortunate end.

There was a rumour in Venice that Wagner was having a love-affair with a « Flower Maiden », Carrie Pringle. She did write to him and he did meet her in Venice, but he was probably too sick for sex at this point in his life, though he certainly enjoyed the adulation of a fan who was also a lovely young woman. There was also Judith Gauthier, an old fan and girlfriend who lived in Paris and who had visited him in Bayreuth and Venice.

Wagner was working on an essay, « On the Feminine in Humanity », when he collapsed. A servant ran to Cosima, who immediately sent for the doctor. By the time he arrived, Wagner was dead in Cosima's arms. She clung to his body for several days, yearning to die with him. Finally, her family was able to pry her of Wagner's corpse so that she could be fed and he could be prepared for burial.

**Tuesday, 13 February 1883** : Cosima Liszt von Bülow Wagner makes the last entry in her diary ...

**15h30** : Wilhelm Richard Wagner dies in the Palazzo Vendramin, in Venice, of a heart-attack, in the arms of his wife, aged 69 years, 8 months and 22 days.

His Venetian doctor, Friedrich Keppler, writes :

« It is self-evident that the innumerable psychical agitations to which Wagner was daily disposed by his peculiar mental constitution and disposition, his sharply defined attitude towards a number of burning questions of art, science, and politics, and his remarkable social position did much to hasten his unfortunate end. »

A memorial plaque on a brick-wall adjacent to the building is inscribed with a tribute by novelist and poet Gabriele d'Annunzio that reads :

« In questo palagio  
l'ultimo spiro di Riccardo Wagner  
odono le anime perpetuarsi come la marea  
che lambe i marmi. »

...

Did Wagner attempted to poison himself at a time when he knew he was dying ?

As the German doctor, Friedrich Keppler, wrote :

« It is self-evident that the innumerable psychological agitations to which Wagner was daily disposed by his peculiar mental constitution and disposition, his sharply defined attitude towards a number of burning questions of art, science, and politics, and his remarkable social position did much to hasten his unfortunate end.

The actual attack that resulted in his so sudden death must have come from such cause, but I cannot venture any surmise as to that.

The medical treatment I gave him consisted of massage of the abdomen and the fitting of a proper truss ; I avoided medicinal treatment as much as possible, since Wagner had a bad habit of taking promiscuously, and in considerable quantities, many strong medicines that had been prescribed for him by physicians whom he had previously consulted. »

Doctor Keppler may be suggesting here that Wagner's habitual use of medications may have been self-destructive, and, for that reason, the doctor avoided prescribing dangerous drugs. Doctor Keppler also refers to « innumerable psychological agitations to which Wagner was daily disposed by his peculiar mental constitution » .

And what of Cosima ? Did she ever attempt suicide ? We know that, at one point during her marriage to Hans von Bülow, she had entered a suicide pact with Wagner's friend Karl Ritter. Ernest Newman, in the third volume of his still definitive biography of Wagner, reports about this scene :

« There was a wild strain in Cosima which, in her earlier years, was liable to break through the restraints she had learned even by then to impose on her feelings ... At Geneva, it seems, there had been a passionate scene with Karl (Ritter) , Cosima had asked him to kill her : he, who was unhappy in his own marriage, offered to die with her. She wanted to throw herself from a boat into the Lake, and desisted from her purpose only because he swore to follow her. »

It is also interesting to note that, when Wagner died in Venice, Cosima refused to leave his body. As Ernest Newman describes the scene :

« All that night, Cosima sat alone with the body, murmuring incoherent words of love into the deaf ears. She refused all care, all nourishment : she had lived in him and for him, and now, she wanted to die with him. It was not until the late-afternoon of the following day, 25 hours after he had died, that they succeeded in parting her from him.

While Cosima was in this desperate state with the body of Wagner, her former husband Hans von Bülow sent her a telegram which said :

« Sœur, il faut vivre ! »

(Sister, one must live !)

Could Hans, who knew her so well after the years of their unhappy marriage, have feared that she would commit

suicide because of her grief over the death of Wagner ? That is clearly implied in his telegram to her in Venice in 1883.

And, indeed, her family feared for her life right after the death of the composer, though luckily she lived many more years and served to make the Bayreuth Festival the annual event it is now.

...

The news of Wagner's death was all over Venice in an hour.

At every street-corner, people were saying :

« Richard Wagner is dead. »

5,000 telegrams relating to this event were despatched from Venice in 24 hours. Henry Perl met the Master's gondolier , Luigi Trevisan, at the station, with a bundle of telegrams in his hand, and almost speechless from grief, but gasping out something about « the good, noble, only man, who never spoke an unkind word to us, however ill he was » . A despatch arrived from King Ludwig, requesting that the body should not be touched until his messenger had arrived. Deputations came, offering a grand and becoming funeral pageant on the part of the city of Venice ; but the widow could not endure the thought of it, and declined the kind offer. Among the wreaths sent were 2 from King Ludwig and the King of Italy. King Humbert's wreath was trimmed with black, red, and gold ribbons. King Ludwig's was tied with blue and white satin streamers, with this inscription in golden letters :

« To the Master, Richard Wagner, from his devoted admirer and King, Ludwig. »

« Herr » Adolf von Groß of Bayreuth came as the King's messenger to superintend the transfer of the body to German soil. Franz Liszt fainted when the death-message was brought to him at Pesth, and his prostration was so great that he could not come to Venice. Hans Richter came from Vienna, whence also a superb sarcophagus had been ordered. In the meantime, the city of Venice had made a second offer of an official funeral, which, again, was declined by the widow. The Palace had to be surrounded with guards to keep-off the crowd. To the room where the body lay no one was admitted except a few friends, including Doctor Friedrich Keppler, Hans Richter, and the Countess von Hatzfeld. Cosima, in the agony of her grief, had cut-off her long blonde hair, which her husband had always loved to have her wear loose over her shoulder, and placed it on a red satin cushion under his head, to be buried with him. Cosima did not wish a death-mask, but it was taken, nevertheless, by the sculptor Augusto Benvenuti, without her knowledge.

It was on a sultry, rainy day, with thunder and lightning, that Wagner had died.

Reactions to Wagner's death

**Wednesday, 14 February 1883** : Anton Bruckner receives at the Vienna Conservatory a telegram from Venice (sent by Luigi Trevisan, the Master's condolier) announcing the death of Richard Wagner. He is currently composing, in his office, the Adagio movement of his 7th Symphony, he concludes the work with funeral music in honour of his mentor. (He had planned to go to Bayreuth with his road-secretary Friedrich Eckstein, but fell sick on the day of the departure.)

« When I heard the tragic news, I wept. God, how I wept ! »

(Bruckner's evening prayer records are unusually extensive.)

Doctor Theodor Helm remembered that Bruckner then :

« ... went to the piano and sounded the last bars of the great climax (bar 177) , and then, also played the ensuing diminuendo.

“ You see, I had come just this far when the dispatch from Venice arrived at the Conservatory, and then, I wept - oh, how I wept ! - and only then ...” (here, he intoned the wind melody) “ did I write the actual elegy for the Master ! ”  
»

Awkwardly, the autograph manuscript (Mus. Hs. 19.479 in the « Österreichische Nationalbibliothek ») carries the date « 22. Jänner 883 / Scitze / Vollendet : 21. April 1883. A. Bruckner, m.p. » , which implies that the movement had been completed in sketch, coda and all, several weeks before Wagner died. It may be that Bruckner was, in later years, carried away by the depth of his emotion, and the story told to Helm is not consistent with his statement to Father « Otto » Loidol that he had composed the Adagio « a week before Wagner's death » .

Pocket calendar entry by Anton Bruckner :

« 15 February. Music lesson (Emil) Lamberg. »

Upon hearing the news of Wagner's death, Hugo Wolf plays the funeral march from « Götterdämmerung » , then spends the rest of the day on a tree, crying.

Jacques Manheit, a baritone in the Olmütz Opera, will recall :

« Just as I was going from my home to the Theatre, I saw a man running through the streets ; he was quite distraught, sobbed loudly, and pressed his handkerchief against his eyes ; I recognized Gustav Mahler (aged 22) with difficulty. I went up to him anxiously and asked him quietly :“ In heaven's name, has something happened to your father ? ”. He howled at the top of his voice :“ Worse, worse, much worse. The worst, the worst has happened, the Master has died.” After that, it was impossible to talk to Mahler for days. He came to the Theatre for rehearsals and performances, but was inaccessible to everybody for a long time. »

On hearing of the death of Richard Wagner, Giuseppe Verdi writes to his publisher :

« Sad. Sad. Sad ! Wagner is dead ! When I read the news yesterday, I may truly say that I was crushed ! It is a great individual who has disappeared ! A name that leaves a powerful imprint on the history of art ! » (Theodore T. Barker, page 284.)

Hans Richter was conducting « Der widerspenstigen Zähmung » (The Taming of the Shrew) by Hermann Gøetz.

In his diary, he wrote :

« After the performance, I heard rumors of Richard Wagner's death ; I could not believe them but I could not get any proof at the telegraph office. »

He sent a telegram to Siegfried Wagner :

« The shocking news unbelievable. How is the honoured Master ? Reply paid by “ Hofoper ”, Vienna. Hans Richter. »  
**After 14 February 1883 :**

Letter from Anton Bruckner (Vienna) to Cosima Wagner :

Bruckner offers his sincere condolences to Cosima on the death of Richard Wagner.

(Bruckner had a picture of Wagner taken by the « Hof-Photograf » Josef Albert from Munich.)

**Thursday, 15 February 1883 :** The awful truth is confirmed and Hans Richter set-off at once for Venice, where the composer had died, arriving in the early afternoon.

**Friday, 16 February 1883 :** The city of Venice offered a public funeral, but Cosima declined it.

Silently through the canals went a draped gondola with the body. The funeral « cortège » left on its sad journey by train for Bayreuth, Hans Richter sending telegrams ahead to organize the solemn ceremonial reception of the coffin.

When the body was to be taken to Germany, the sun shone brightly in the blue sky. At 2 o'clock, 8 men, including, Richter, Keppler, and Joukowsky, bore the coffin from the Palace down to the black gondola, followed by servants with the wreaths. The family soon followed, and boarded other black gondolas. It was the widow's express wish that there should be no funeral music ; she feared it would rend her heart in twain. So, the procession moved along the canal in solemn silence, broken only by the tolling of a distant bell. The canal was lined with hundreds of gondolas filled with sympathetic Italians who regretted that the widow had refused the offer of an official funeral.

By order of the city authorities, the railway station had been shut-off to all but passengers, the official representatives

of Venice, and the funeral « cortège » . The coffin was placed in a special mourning car, draped in black, which had been sent from Vienna ; a parlour-car behind it was reserved for the mourners. These cars were attached to the regular express-train as far as Vicenza, whence they were taken as an extra train « via » Verona and Munich to Bayreuth. Special orders had been given by the Italian, Austrian, and German government officials that the train should not be detained or examined at the frontiers.

...

The small funeral party, which, besides the Wagner family, included Paul von Joukowsky (designer of « Parsifal ») , Bayreuth banker Adolf von Groß, Doctor Friedrich Keppler (Wagner's physician) , Wilhelm Kienzl (music-critic and composer) and Richter, arrived just before midnight on **17 February** ; « en route » , Hermann Levi had joined it in Munich.

**Saturday, 17 February 1883** : Nowhere had the news of Wagner's death produced more consternation than at Bayreuth, the city rejuvenated by his genius. A special mourning car carried the remains. The whole town was draped in mourning. Before the arrival of the funeral train, the hotels had again filled-up, as during Festival days. A black flag floated over the theatre on the hill, black flags darkened the windows along the main avenues, and the street-lamps were draped in black. Representatives of various German princes, of theatres, of the leading Wagner Societies, eminent conductors and other musicians and friends of the deceased were present to do him the last honour. It was the widow's desire that the body should be buried in presence of only a few intimate friends, and without any address or music.

On the arrival of the funeral train at the railway station, after the coffin had been removed from the car to a tribune, a public ceremony took place. The proceedings began at 4 o'clock with the playing of « Siegfried's Funeral March » .

Theodor von Muncker, the legally trained « Bürgermeister » of Bayreuth (1863-1900) , then delivered a brief and touching address :

« The “ Festspielhaus ” is the most famous site in the city of Bayreuth. Where would it be without Richard Wagner ? It is the driving force of tourism. This great Master was a true blessing to our city. He is to be thanked when the name of Bayreuth is quoted with reverence by the educated people of the whole world. »

Banker Friedrich von Feustel followed :

« Future generations will find it difficult to believe what they will read about the impediments that were placed in this great man's way in his efforts to attain his ideal. »

« The performance of “ Parsifal ” this year will be the most dignified memorial service for the deceased. »

Feustel had said in his speech at the station that Bayreuth's most dignified tribute to the memory of the dead Master

would be the « Parsifal » performances in the coming summer.

These speeches were given, but without the presence of the widow. She secluded herself even from Franz Liszt, her father. (But, the following year, she took-up the task of continuing the Festivals, which have lately reflected her ideas as to the proper method of interpreting her husband's Masterpieces.)

A special touch of reminiscent pathos was then given with the performance by the chorus of Wagner's arrangement of the Bayreuth « Liederkranz » on motives from Carl Maria von Weber's Operas (written for the burial of the composer in Dresden) .

The procession was then marshalled into line : first a military-band, then a carriage loaded with wreaths. This was followed by the hearse, drawn by 4 black horses, attended by all the local clergymen, and the pan-bearers, including Albert Niemann, Anton Seidl, August Wilhelmj, Heinrich Porges, Fritz Brandt, Hermann Levi, and others. Behind the hearse came King Ludwig's representative, Count Pappenheim ; then friends of the family, deputations of cities, theatres, and Wagner Societies ; artists, journalists, and officers ; then another band followed by the citizens of Bayreuth, thousands of whom had assembled at the station.

At 5:30 pm, the procession moved through the city towards the Villa « Wahnfried » , to the funeral dirges of the bands, deepened by the doleful sounds of all the bells in the city. Half-way down the « Rennweg » (now, Richard-Wagner-Straße) , the music stopped, and the villa was reached in silence. The coffin was lifted-off the carriage and carried into the garden, where Eva and Siegfried Wagner awaited it. It was then carried to the grave behind the house, followed by members of the family, friends, artists, and journalists. At the open grave, Deacon Kesselmann spoke a short prayer during which a touching incident occurred. 2 of Wagner's large black dogs had followed the procession, and as Eva and Siegfried sank down on their knees, one of them came and licked their faces, as if sympathizing with their grief ; and why should he not ? Had he not also lost his best friend ? After the prayer, all but the children left the grave, such being the desire of Cosima, who now joined her family to weep her tears unobserved by other eyes.

Meanwhile, a party of about 30 had collected on the stage of Wagner's Opera House on the hill. Richter led the speeches after which a collective resolution was taken by all present to preserve and further the Master's cultural legacy.

From Bayreuth, Richter sent a telegram to Marie in Vienna :

« The children are already more composed. Cosima, inconsolable. »

Wagner's last letter to Richter, written from Venice 2 weeks before his death, was largely about the baritone Karl Sommer who wished to come to Bayreuth to study the roles of Klingsor and Amfortas. Wagner welcomed the idea and suggested the singer should arrive by 20 June and observe the rehearsals and performances scheduled for July.

He was always « delighted to meet new young talent and to develop them in my style. (...)

Adieu ! Good Hans ! Greetings from the heart. Your good old Richard Wagner. »

**1876** : One moonlit night, Richard and Cosima went to inspect their new house, which was still in the process of being built, and he showed her the spot he had chosen for their grave. « Mood serious and light-hearted together » , she recorded. The worthy Mayor Muncker was very alarmed when Wagner discussed the grave in the garden with him, « but Richard explained to him the serenity with which we look forward to our eternal rest » .

For months and years, Cosima watched and wept over this grave every evening. The « Parsifal » Festival was again held in the summer, but she was not accessible to artists or visitors - not even to her father, Franz Liszt. The pleasant duty of thanking the artists, after the last performance, for their continued devotion, devolved on her children. Before the next Festival was due, however, she had made a heroic effort to subdue her grief sufficiently to begin what was to be the work of her life - the attempt to carry-out Wagner's intentions as to the periodical model performances of all his works at Bayreuth. The grave, too, which had been jealously guarded from stranger-eyes, was made accessible.

### Wagner's funeral

**Sunday, 18 February 1883 (4:00 pm)** : Grandiose national funeral of Richard Wagner in Bayreuth. For the occasion, Anton Bruckner will have the privilege of touching the organ. The pall-bearers of the polished metal coffin will be Anton Bruckner, Hans Richter, and 2 Jewish musicians : Wagnerian conductor Hermann Levi and Russian pianist Joseph Rubinstein.

### Music and nationalism

An electoral reform in **1882** initiated a gradual transition to universal male suffrage, followed by the eventual formation, in **1889**, of political parties to represent the interests of the lower-middle and working classes. From mid-Century, the established political groups had been the Liberals, the party of educated German and German-Jewish middle- and upper-middle classes (there was a special bond between the Liberal Party and Vienna's Jews) , and the Conservatives, associated with the Church, Slavs, and aristocracy. Even after a Conservative coalition gained control of the central government in **1879**, Vienna itself had remained a stronghold of the Liberal Party. By the end of the Century, the new mass parties would succeed in virtually destroying Viennese Liberalism.

In Austria, Liberalism had briefly appeared to offer a solution to the Imperial predicament : a strengthened central government that retained the traditional Monarch and added a constitution ostensibly guaranteeing all citizens equal rights before the law. Political Liberalism did not hold sway for long in Austria because its own internal inconsistencies compromised it, but also because of the very belatedness of its development. Other aspects of the Liberal « Weltanschauung » developed earlier and deeper roots. These included faith in reason, education, and the primacy of German culture, beliefs that compensated for the common Liberal view that religion should be concerned with ethics and nothing else.

In an **1894** memoir, Eduard Hanslick described his own religious upbringing in those terms :

« The essence and foundation of religion should be only ethics ; all faiths with the same moral principles were of equal worth. We became acquainted with the Biblical stories only from their amiable, tender-hearted, and poetic side, with the “ miracles ” only as allegories. »

More clearly than many of his colleagues, Hanslick exemplified the contradictions of Liberalism. In 1883, Hanslick, along with Doctors Hermann Nothnagel and Theodor Billroth, geology professor and Liberal politician Eduard Sueß, and others, had signed the open-letter against establishing a Czech-language elementary school in Vienna. Yet, he had grown-up in Prague. Being a well-educated, middle-class person in Bohemia in the « Vormärz » period of Hanslick's youth had meant rejecting the Czech language in favour of German.

He noted that although his father knew both languages, he spoke only German with his friends :

« Naturally, since they always conversed about learned things, about art and politics. »

And he quoted a Prague native from a background like his own reacting to the Czech-nationalist movement that had developed after mid-Century.

In that person's words :

« Since one is nothing as an individual, one exaggerates one's race in order to feel vain about being part of it ; that is nationalism. »

In an apparent « non sequitur » , Hanslick remarked on how surprised those living in « Vormärz » Prague would have been to see the splendid advances that Czech-language culture made in the second half of the Century. Enumerating such « brilliant achievements » as a Czech theater, a Czech university, and a Czech academy of sciences, he also made it clear that these accomplishments had come about at the expense of friendly relations.

Before mid-Century, « Germans and Czechs got along peacefully, since the latter knew that anything they possessed in art and science, industry and even social graces derived from German culture. »

Hanslick recognized Czech nationalism and certain forms of German nationalism, but he did not acknowledge nationalism in himself.

While the dominance of the Liberals had played a crucial part in establishing the preeminence of Johannes Brahms in the city, the fresh challenges to the Liberal establishment in the 1880's on both the Right and Left worked to Bruckner's advantage. He, of course, had strong ties to the Church and received warm praise from the ultra-conservative Catholic newspaper « Das Vaterland » ; the resurgence of Catholicism attending the rise of the Right-wing Christian-Socials helped his cause (the Liberals had always been antagonistic to the Church) . His humble background made him an attractive figure not only to the Christian-Socials, a party that appealed to the lower-middle classes, but also to the Leftist workers' party, the Social-Democrats. Certain founders of the Social-Democratic Party, most notably

Viktor Adler and Engelbert Pernerstorfer, were passionate Wagnerites. According to William McGrath, « there is little evidence that Wagnerian cultural theory penetrated deeply into the Austrian socialist movement or that it retained a lasting influence on Austrian socialist tradition » , although Johann Seidl has presented considerable evidence to the contrary. In any case, the Party's newspaper, the « Arbeiter-Zeitung » , founded in **1889**, did not feature music reviews or other coverage of cultural events until **1895**.

Wagnerian æsthetics and populist politics converged most naturally in the outlook of a third party, like the Christian-Socials anti-Semitic and reactionary : the Pan-Germans led by Georg von Schönerer. As young men, Adler and Pernerstorfer had followed Schönerer ; they broke with him in **1883** when he veered to the Right and openly espoused racist views. Anton Bruckner himself had close professional and personal ties to a group of musicians and critics whose peculiar idealism combined a commitment to reforming the musical life of the city with the anti-Semitism, radical German nationalism, and crack-pot populism of the Pan-Germans.

...

Too often musicologists have characterized the Brahms - Bruckner critical debate of the 1880's (the focus up to now of most studies on the intersection of music and politics in late-19th Century Vienna) in terms of a Liberal and anti-Liberal divide rather than in terms of an evolving Liberalism, often along generational lines, with perspectives running from the « deutsch-liberal » to the « national-liberal » to the « deutsch-national » . It has been insufficiently recognized, on the one hand, that the older German Liberal nationalists' « problem » with Czech nationalism had largely to do with their understanding of it precisely as an anti-Liberal ideology, and, on the other, that the younger « deutsch-national » critics frequently praised Bedřich Smetana as a model to be emulated by their own imagined community of « German » composers, into which, it sometimes seems, Brahms was no more welcomed than Karl Goldmark. Finally, it has been too easy to forget the uncomfortable truth that racialist nationalism was once thought to be a progressive ideology, and so, is resistant to assignment to either the Left or Right wings of the ideological spectrum. Examination of the work of 3 generations of music-critics offers insight into the diverse ways in which educated German Austrians conceived of Germanness in music and understood their relationship to the « non-Germans » in their midst.

### Bruckner and Blaise Pascal's Wager

The position of Anton Bruckner on Blaise Pascal's Wager dates from the 1880's.

To an atheist friend who was astonished that he added faith to the immortality of the soul, Bruckner replied :

« I understand your point, but you see :

If the thing is true, it is so much the better for me. If it is not true, praying can not hurt me ! »

The Wager uses the following logic (excerpts from « Pensées » , part III, § 233) :

God is, or God is not. Reason cannot decide between the 2 alternatives.

A Game is being played ... where heads or tails will turn-up.

You must wager (it is not optional) .

Let us weigh the gain and the loss in wagering that God is. Let us estimate these 2 chances. If you gain, you gain all ; if you lose, you lose nothing.

Wager, then, without hesitation that He is. (...) There is here an infinity of an infinitely happy life to gain, a chance of gain against a finite number of chances of loss, and what you stake is finite. And so, our proposition is of infinite force, when there is the finite to stake in a game where there are equal risks of gain and of loss, and the infinite to gain.

But some cannot believe. They should then « at least learn your inability to believe ... » and « Endeavour then to convince » themselves.

### Beethoven's Opus 131 at the organ

**1883** : Anton Bruckner improvises for almost 30 minutes on the organ of the Imperial Chapel in Vienna on a theme taken from the String Quartet No. 14 in C-sharp minor, Opus 131, by Ludwig van Beethoven. He drew from it sublime melodies. (August Stradal)

Max Graf :

« The Court Chapel, where Anton Bruckner was organist, is the real Bruckner Church. This small Gothic chapel is directly in the Imperial Castle. Here, I often saw Franz-Josef, Sundays, praying in his box, right above the altar. In the 2 galleries, sat the members of the Austrian nobility, raised above the people who stood in the chapel nave. In the third gallery was the organ, presided over by Bruckner, and the orchestra and chorus which played under the baton of the broad-shouldered and dignified Hans Richter. Before Mass began, the musicians assembled in the court of the chapel. Here came the “ Sängerknaben ” (Boys’ Choir) in their embroidered uniforms, small swords at their waists ; and the opera singers who were soloists. »

« Starting a musical stroll at St. Stephen’s Cathedral, from whose open “ Giant Door ” comes the sound of the old organ, one remembers, perhaps that in its choir Haydn and Schubert sang as boys ; and that on a stormy winter’s day, at the south door, Mozart’s shabby coffin was blessed. I saw Anton Bruckner seated at the organ there, his short legs treading the pedal. On the manual, his bony fingers improvised variations on the Austrian national hymn, and his clear-cut, patriarchal face shone when the sound of the organ streamed forth, growing in strength, finally rising to a brilliant “ Gloria ”. Ever since the 16th Century, when the famous Paul Hoffheymer played his “ Te Deum ” on the organ while Emperor Maximilian knelt praying, great musicians were at home in St. Stephen’s. »

## Bruckner and the « Resurrection » Symphony

Friday, 15 June 1883 : Pocket calendar entry by Anton Bruckner :

« 15th of the month. “ Herr ” Gustav Mahler. Music-score of Symphony Number 2. »

## Vienna Conservatory : Final examinations (June 1883)

Anton Bruckners Schüler, denen der « I. Classificationsgrad » zuerkannt wurde, werden in der Prüfungsstatistik erwähnt :

Bei den Vorbildungsschulen dieses Jahres keiner ...

Bei den Ausbildungsschulen ...

« Orgelklasse des Herrn Professor Anton Bruckner :

(3 Zöglinge.)

I. Jahrgang : Carl Führich. »

Bei Musiktheorie ...

« Klasse für Harmonielehre als Hauptfach des Herrn Professor Anton Bruckner.

(6 Zöglinge.)

Josef Großmann, Eduard Hamlisch, Heinrich Schoof, Josef Skalitzky. »

« Klasse für Kontrapunkt des Herrn Professor Anton Bruckner.

(7 Zöglinge.)

I. Jahrgang : Carl Führich, Franz Schlott.

II. Jahrgang : Ferdinand Foll. » (\*)

Fräulein Marie Pohoryles konnte wegen Erkrankung an der Prüfung nicht teilnehmen.

## July 1883 : Hot in Vienna !

**Thursday, 12 July 1883** : Pocket calendar entry by Anton Bruckner :

« July 12th, before 5 o'clock in the afternoon : 35°Ré (Réaumur scale) in the sun. »

### Hugo Wolf, the music-critic

**1883** : Hugo Wolf was appointed the music-critic of the « Wiener Salon-Blatt » . His weekly reviews provided considerable insight into the Viennese musical world of his day.

### The 1883 « Parsifal »

**Around end of July 1883** : Anton Bruckner is in Bayreuth to hear « Parsifal » . He meets Wilhelm Tappert, who asks him for articles and music-critics's reviews about his works.

Gustav Mahler is in Bayreuth for the first time. He wrote to a friend :

« I can hardly describe my present state to you. When I came-out of the “ Festspielhaus ”, completely spellbound, I understood that the greatest and most painful revelation had just been made to me, and that I would carry it unspoiled for the rest of my life. »

Hugo Wolf (who saw « Parsifal » twice in 1882) reiterated his view in a postcard from Bayreuth :

« “ Parsifal ” is without doubt by far the most beautiful and sublime work in the whole field of Art. »

### Vienna Conservatory : Academic Year 1883-1884

**Thursday, 20 September 1883** :

Im Kapitel « B. Unterrichts-Leitung » des Jahresberichts ist zu lesen :

« 4. Lehrkörper.

I. Ordentliche Lehrer :

(...)

6) Herr Anton Bruckner, Professor, Kaiserlich-Königliche Hof-Organist. (Harmonielehre, Kontrapunkt und Orgel.) »

Zu Anton Bruckners Schülern am Wiener Konservatorium gehören Hermann Abheiter (« 16 Jahre - Klavier V. II. , Harmonielehre, Chg. ») , Carl Führich (« aus Jamnitz, 18 Jahre - Orgel A. II. , General der Musik und Kontrapunkt II. »)

, Ludwig Großbauer (« aus Losenstein, 22 Jahre (recte : « 12 Jahre » ? Vergleiche 1884-1885) - Harmonielehre (Rept.) , Klavier II. , Chg. ») , Franz Heinrich (« 15 Jahre - Violin A. I. , Harmonielehre, Klavier II. ») , Carl Hrubý (« 14 Jahre - Violin V. III. , Klavier II. , Harmonielehre. ») , Cyrill Hynais (« 21 Jahre - Klavier A. II. , Kontrapunkt I. , Chg. ») , Doktor Franz Marschner (« aus Prag, 30 Jahre - Kontrapunkt I. , Chg. ») , Josef Meyer (« 16 Jahre - Klavier A. III. , General der Musik, Kontrapunkt II. ») , Rudolf Paradieser (« 18 Jahre - Posaune A. I. , Klavier II. ») , Franz Schlott (« aus Preßburg, 20 Jahre - Komposition A. I. , Kontrapunkt A. II. , Klavier III. ») , Franz Steiner (« aus Mies, 20 Jahre - Orgel V. I. , Chg. ») (starb am 12. Oktober 1883) , Hugo Troizsche (« 16 Jahre - Harfe V. III. , Klavier II. , Chg. ») , Rudolf Wilfert (« 17 Jahre - Orgel V. I. ») , Heinrich Wottowa (« 16 Jahre - Klavier A. II. , Harmonielehre. ») , Thimothé Xanthopoulos (« aus Smyrna, 18 Jahre - Orgel V. I. , Klavier III. , Komposition I. ») und Peter Zachariadis (« aus Constantinopel, 23 Jahre - Harmonielehre, Klavier II. , Chg. ») .

Und andere folgende Schüler dieses Schuljahres (vielleicht auch in Brucknerschen Kursen) spielen in Anton Bruckners späteren Jahren noch eine Rolle :

Gottfried Brzibohaty (« 14 Jahre - Fagott V. II. , Klavier I. ») , Robert Erben (« aus Troppau, 21 Jahre - Klavier A. III. , Komposition II. ») , Rudolf Fitzner (« aus Ernstbrunn, 15 Jahre - Violin V. III. , A. M. , Klavier I. , Chg. ») , Ludwig Grandé (« aus Teltsch, 18 Jahre - Klavier A. I. , Chg. ») , Johann Ostariasch (« 18 Jahre - Fagott V. II. , Klavier I. ») , Marie Pohoryles (« aus Tarnopol, 15 Jahre - Klavier A. II. , Chg. ») und Theodor Tschöpe (« aus St. Veit, 18 Jahre - Cymbalom V. II. , A. M. , Klavier I. , Chg. ») .

Von den 5 Orgelschülern gehört einer zur Ausbildungsschule. Der « Übersicht der in den einzelnen Lehrfächern unterrichteten Schülerzahl. » ist zu entnehmen, daß von den Orgelschülern 2 halb vom Schulgeld befreit waren. 5 Schüler (beider Lehrkräfte) hörten Kontrapunkt als Hauptfach, 4 Harmonielehre. Als Nebenfächer wurden Harmonielehre von 134 und Kontrapunkt von 16 Schülern besucht.

Auszug aus der « Unterrichtsstatistik » :

« A.

In den Vorbildungsschulen ...

Orgel, I Jahrgang.

Schülerstand : systemisirter : 4 ; effectiver : 3.

Monatlich ertheilte systemisirte Lehrstunden : 8, sonach im Jahre ... 80.

B.

In den Ausbildungsschulen ...

Orgel, 2 Jahrgänge.

Schülerstand : systemisirter : 4 ; effectiver : 1.

Monatlich ertheilte systemisirte Lehrstunden : 8, sonach im Jahre ... 80.

C.

In der Musiktheorie ...

Harmonielehre, I Jahrgang.

(2 Parallelclassen.)

Effectiver Schülerstand : 28.

Monatlich ertheilte systemisirte Lehrstunden : 48, sonach im Jahre ... 480.

Contrapunct, 2 Jahrgänge.

(2 Parallelclassen.)

Effectiver Schülerstand : 21.

Monatlich ertheilte systemisirte Lehrstunden : 40, sonach im Jahre ... 400.

### Bruckner and student Anton Meißner

**1883** : Anton Bruckner as more frequent contacts with his student Anton Meißner, to whom he presents the « Te Deum » (**WAB 45**) and the 7th Symphony (**WAB 107**) . Meißner plays on the piano the Scherzo of the 3rd Symphony (**WAB 103**) , also works by Frédéric Chopin and a Franz Liszt's arrangement of a piece by Niccolò Paganini.

...

**August 1883** : Anton Bruckner will bring Anton Meißner in Bayreuth to hear the « Ring » .

Amalie Klose, sister of pupil Friedrich Klose, mentioned in her Memoirs about Bruckner expounding the programme of the 8th Symphony and heard him play the Scherzo. His broad and rhythmically emphatic style led her to criticize conductors who take it too quickly, which ties in with Anton Meißner's quoted remarks about the Scherzo of the 3rd Symphony, « which he felt conductors always performed too quickly » .

## Bruckner writes to a « dear friend »

**Tuesday, 13 November 1883** : Letter from Anton Bruckner to a « Dear Friend » (Gustav Mahler ?) (Bruckner does not know the address nor the person who wrote) :

Thank you very much for your letter. Bruckner complains that his friends have left him. Hans Richter would call him a « musical fool » and refuse to conduct his works. Wishes the author a better destiny.

## Bayreuth : « Gasthaus zur Eule »

**1883 or 1884** : Anton Bruckner meets in Bayreuth the jurist (and later, music-director) of Ansbach, Edmund Hohmann, at the « Gasthaus zur Eule » Restaurant located at « Kirchgasse » Number 8.

## Dates

**1444** : The house owned by Kuntz Kröpfel is first mentioned in the town records. A certain Tuchscherer will be the next owner. Then, the place is inhabited by a trumpeter, a baker, a weaver, a bath-house assistant, and a school-master.

The house is partly damaged during the town fires of **1605** and **1621**.

**After 1621** : The house is successively inhabited by a saddler, a cobbler, a tailor, and a bag-maker.

Then, shoe-maker master Johann Matthäus Eule begins a partnership with the local brewer. Consequently, a new guest-house called « Gasthaus zur Eule » opens on the « Ochsen-gasse » (today's « Kirchgasse ») . It became the official « traiteur » for the justice department, cooking meals for large and small events.

**1739** : H. Roming plays chamber music at the « Gasthaus zur Eule » .

**1843** : Ursula Eule and William Adler (Johann Matthäus's son-in-law) take-over the business.

**1871** : Richard Wagner comes from Switzerland to Bayreuth and is a welcomed guest at the « Gasthaus zur Eule » . His favourite beer is the « Dämmer-schoppen » produced by the Austrian brewer « Zwettler » .

However, Wagner most often goes at « Angermann's » pub on « Kanzlerstraße » :

« If you don't see me at home, I am certainly at Angermann's. »

Wagner always arrived between 5 and 6 o'clock, and preferably sat at the coach-man's table.

But when « Angermann's » had to give way to the construction of a new post-office building, Wagner adopted the « Gasthaus zur Eule » pub to drink his beer.

(Image) Richard Wagner accompanied by operatic singers Albert Niemann (tenor) and Eugen Gura (baritone) at the « Angermannsche » Restaurant in Bayreuth.

**1 February 1893** : Inn-keeper Hans Meyer becomes the new owner of the « Gasthaus zur Eule » .

The « Gasthaus zur Eule » was Siegfried Wagner's favourite restaurant, which Adolf Hitler visited during the 1925 Bayreuth Festival.

...

**1444** ist das Haus das erstmal in den Aufzeichnungen erwähnt mit dem Bewohnern Kuntz Kröpfel, danach kamen Tuchscherer, Trompeter, Bäcker, Weber, Badmagd, Schulmeister.

**1605 und 1621** ist das Haus bei den Stadtbränden abgebrannt.

Danach gab es Sattler, Schuster, Schneider, Beutler.

**1739** sogar schon einen Kammermusicus, mit Namen H. Roming.

**1813** Richard Wagner wurde in Leipzig geboren.

**12. Juni 1838** Hat der Schuhmacher-Meister.

Johann Matthäus Eule zum Bierwirt umgesattelt und besaß auch ab da die Traiteur-Gerechtigkeit.

**1843** traten seine Ehefrau Ursula Eule und sein Schwiegersohn Wilhelm Adler in seine Fußstapfen.

**1869** Siegfried Wagner wurde in Luzern geboren.

**1871** kam Richard Wagner nach Bayreuth und war gern gesehener Gast in der « Eule » .

**1872** Grundsteinlegung zum Festspielhaus.

**1876** Eröffnung der Festspiele mit dem Ring des Nibelungen.

**1893** Übernahm der Gastwirt Hans Meyer am 1. Februar die « Eule » . Unter seiner Regie ging.

**1908** der Stern der « Eule » als Künstlerkneipe auf, weil das Künstler-lokal Angermann in der Kanzleistraße schloß.

Künstler wie Kammersänger Hans Breuer, Loisl Burgstaller und Heldentenor Julius Kniese gründeten den Ruf der « Eule » als Künstlerkneipe.

Seine Frau Anni führte das Lokal als begnadete Wirtin und Köchin weiter bis **1967** am 22. August hat Johanna Heise die « Eule » kaufte.

**2009** kaufte die GEWOG das Gebäude und renovierte es aufwändig.

**Juli 2012** ist Harald Kaiser der neue Eulenkneipenwirt.

Harald Kaiser ist seit **1982** ein Bayreuther Gastronom und hat Schloß-Hotel Thiergarten und die Stadthalle Bayreuth bewirtschaftet.

...

Seit Richard Wagners Zeit war « Die Eule » in der engen Kirchgasse für Sänger, Musiker und Wagnerianer der Inbegriff des Künstlertreffs. Generationen von Wagnerianern saßen in dunklen, holzgetäfelten Gasträumen zusammen und diskutierten über Dirigenten, Sänger und Inszenierungen. Im « Richard-Wagner-Eck » der « Eule » soll der Meister persönlich sein Bier getrunken haben. Ob sich Friedrich Nietzsches Zitat « Irgendwann sitzen wir alle in Bayreuth zusammen und begreifen gar nicht mehr, wie wir es anderswo aushalten konnten » auf die « Eule » bezieht, ist zwar nicht verbürgt, könnte jedoch vermutet werden.

Bleiben wird in der « neuen » « Eule » jedoch das historische Ambiente : Wie eh und je werden hunderte, nostalgischer Schwarz-Weiß-Fotografien der unvergessenen Wagner-Interpreten auf die Besucher blicken. Und der neue Eulenkneipenwirt Harald Kaiser serviert « Senta's Traum », « Goldschatz im Rhein » oder « Blaue Zipfel, so wie Richard Wagner sie gern gegessen hat » .

« Wer in Bayreuth war und hat die “ Eule ” nicht besucht, hat etwas versäumt in seinem Leben » - dieser Eintrag im Gästebuch aus dem Jahr 1893 gilt ab sofort wieder. Die « Eule » heißt ihre Gäste herzlich willkommen !

...

Das traditionsreiche Stamm-lokal der Wagner-Begeisterten wurde nach seiner Schließung **2007** aufwendig saniert. Nach dem Ende der teuren Arbeiten am morbiden Gebäude zeigt sich : Es hat sich gelohnt.

**1444** wurde das Haus im Kern der Bayreuther Innenstadt das I. Mal urkundlich erwähnt : ein gewisser Kuntz Kröpfel wohnte damals dort. Danach wechselten sich Tuchscherer, Trompeter, Bäcker, Weber, Badmägde und Schulmeister ab. Zweimal wurde es Opfer von Flammen : bei den Stadtbränden **1605** und **1621**. Danach wieder Handwerker : Sattler,

Schuster, Schneider, Beutler. 1739 dann der I. Notenkundige : Kammermusicus H. Roming. Knapp 100 Jahre später kommt das Haus in der heutigen Kirchgasse zu seinem Namen : der Schuhmacher-Meister Johann Matthäus Eule sattelt um zum Bierwirt und begründet die gastronomische Tradition in der damaligen Ochsen-gasse. Er besaß ab diesem Zeitpunkt auch die sogenannte Traiteur-Gerechtigkeit, durfte also Mahlzeiten für große und kleine Feierlichkeiten kochen. Auf bayreutherisch also : « a Wärdshaus » betreiben. 1871 kommt Richard Wagner aus der Schweiz nach Bayreuth. Von dort bringt er seine Vorliebe für süffiges Bier und den täglichen Dämmer-schoppen mit. Allerdings wird zunächst der « Angermann » in der Kanzleistraße sein Stamm-lokal (« Triffst Du mich nicht zu Hause an, bin ich gewiß beim Angermann ») . Überliefert ist, daß Wagner stets zwischen 17 und 18 Uhr erschien und am liebsten am Kutschertisch Platz nahm. Im Sommer wird der Meister mit seiner Familie auch oft auf dem Angermann'schen Keller an den 99 Gärten gesichtet, wo man im Schatten einer Laube entspannt Picknick machen kann. Doch dann muß der « Angermann » dem Neubau des Bayreuther Postgebäudes weichen, und Wagner trinkt sein Bier daraufhin auch in der « Eule » . Das damals führende Festspiel-lokal von Christian Sammet im Alten Schloß schließt 15 Jahre später und der Stern der seit 1893 von Gastwirt Hans Meyer geführten « Eule » als Künstlerkneipe geht daraufhin endgültig auf. Bierfreund Wagner ist da schon längst tot. Es sind aber Kammersänger wie Hans Breuer, Loisl Burgstaller oder der Heldentenor Julius Kniese, die halfen, diesen Ruf zu begründen und zu verfestigen.

Die « Eule » wurde zu Stammkneipe von Wagners Sohn Siegfried. Später dann, beim Neubeginn der Festspiele 1924 ist sie « alleinige Wagner-Gaststätte » , beliebter Treffpunkt von Sängern, Musikern, Dirigenten und Wagner-Enthusiasten - vor allem während der Festspielzeit nach den Vorstellungen. Das « Neu-Bayreuth » des Brüderpaares Wieland und Wolfgang Wagner führte dann in den 1950-er-Jahren zu einer erneuten Renaissance der Künstlerkneipe. Da führte die legendäre Wirtin Anny Meyer das Lokal, verwöhnte das Künstlervolk, traf den richtigen Ton bei der Politprominenz und platzierte auch schon mal Intimfeinde wie Franz-Josef Strauß und « Spiegel » « Chef » Rudolf Augstein ganz bewußt an einen Tisch.

1967 erwarb dann Johanna Heise die « Eule » und brachte sie noch einmal zum Glänzen. Doch das Wirtshaus hatte seine besten Jahre hinter sich, es begann der Niedergang. Es wurde schließlich zum Sanierungsfall, bis hin zur diagnostizierten akuten Einsturzgefahr. Die städtische Wohnungsbaugesellschaft Gewog mußte in die Bresche springen und die « Eule » 2009 kaufen, um das morbide Gebäude vor dem endgültigen Verfall zu retten.

Die Sanierung wurde beinahe zu einem Alptraum für Projektleiter Andreas Baier und sein Team. Nahezu täglich stießen sie bei den Sicherungsmaßnahmen auf neue unliebsame Überraschungen. Die verfaulte Dach-konstruktion entpuppte sich als gefährlich marode : Es grenzte an ein Wunder, daß die « Eule » überhaupt noch stand. Die Wände hatten sich unter der Last stark verformt. Dazu tauchten vergessene Keller und Gewölbe wieder auf - wie etwa eine Treppe die heute in einen Weinkeller führt. Sanierung und Umbau des denkmalgeschützten Hauses kostete die Gewog insgesamt 2,4 Millionen Euro.

Koch und Küchenmeister Harald Kaiser, ein gebürtiger Röslauer, arbeitet daran, die « Eule » wieder zum Kult machen. Die Speisekarte des neuen Patrons ist inspiriert von den Hunderten zwischenzeitlich eingelagerten Bildern von Stars und Prominenten, die (versehen mit handsignierten Widmungen) wieder an den Wänden des Restaurants hängen : Wilhelm Furtwängler, Arturo Toscanini, Hans Knappertsbusch, Herbert von Karajan, Martha Mödl, Anja Silja, René Kollo,

Peter Hofmann. Die Menüauswahl ist aber auch angelehnt an Christian Sammets Künstler-lokal « Café im Alten Schloß » von 1892 : So gibt es in der Richard-Wagner-Stube, im Cosima-Wagner-Zimmer oder im gerade neu eröffneten Biergarten Kreationen wie « Nibelungensuppe » , « Goldschatz im Rhein » , « Sentas Traum » oder die berühmten Bayreuther « Blauen Zipfel » , die Leibspeise Richard Wagners.

...

Immer wieder kommen Gäste, die das Restaurant « Eule » in der Bayreuther Altstadt wie eine Kathedrale betreten. « This is Richard Wagner » , flüstern sie voller Ehrfurcht. Sie kommen aus Japan, China und der Schweiz, aus Chile, den USA oder aus Frankfurt-am-Main. Tief bewegt lassen sie sich des Mæstros Stammplatz zeigen und auch das Stammeckchen seines Sohnes Siegfried (1869-1930) , der Enkel von Franz Liszt war.

« Wer in Bayreuth war und hat die “ Eule ” nicht besucht, hat etwas versäumt in seinem Leben » - dieser alte Eintrag aus dem Gästebuch gilt bis heute als Motto des Hauses. Die « Eule » ist ein unverzichtbarer Bestandteil der Bayreuther Wirtshaus-kultur - nicht nur zur klassischen Festspielzeit vom 25. Juli bis zum 28. August.

Als Richard Wagner 1871 nach Bayreuth zog, pflegte er seinen Dämmerstübchen im « Angermann » zu nehmen :

« Triffst du mich nicht zu Hause an, bin ich gewiß beim Angermann. »

Bevor der « Angermann » abgerissen wurde, wechselte Wagner in die « Eule » , wo er ab 17 Uhr, meist in Begleitung seines Neufundländers « Marke » , zu erscheinen pflegte. Seine Tischrunde bestand aus Verehrern, die glücklich waren, den gesächselten Monologen des Meisters lauschen zu dürfen.

Eine Buffetuhr in der « Eule » zeigt die Sterbestunde Richard Wagners am 13. Februar 1883 um 15.30 Uhr in Venedig. Richtig berühmt wurde die « Eule » aber als Stammkneipe des Wagnersohnes Siegfried, der die Festspiele 1924 nach zehnjähriger Pause wieder eröffnen konnte. Solisten, Dirigenten und Wagnerfreunde machten die « Eule » zur « ultimativen Wagner-Gaststätte » . Ein erneuter, lang anhaltender Aufschwung kam ab 1950 durch die Brüder Wieland und Wolfgang Wagner.

2009 mußte das Haus (1444 erstmals erwähnt) nach zweijährigem Leerstand komplett saniert werden - ein denkmalpflegerischer Alptraum, denn das Dachgebälk war verfault. « Hier ist immer noch alles krumm, schief und in Bewegung » , sagt Harald Kaiser (58) , der die « Eule » am 1. Juli 2012 übernommen hat, « darum fühlt man sich auch sofort wohl » . Man suchte einen versierten, fränkischen Wirt - na, der Stammbaum der Freien Familie Kaiser reicht bis ins 14. Jahrhundert zurück.

Harald Kaiser bewirtschaftete zuvor das Schloß-Hotel Thiergarten und die Stadthalle in Bayreuth. Er hat es verstanden, die « Eule » wieder zu jener Wagner-Kultstätte zu machen, die sie jahrzehntelang war. Hunderte signierte Fotos an den Wänden zeigen Persönlichkeiten, die hier eingekehrt sind : Wagner-Heroen wie Peter Hofmann und René Kollo, die « 3 Nachkriegs-Primadonnen » Martha Mödl, Birgit Nilsson und Astrid Varnay, Dirigenten wie Wilhelm Furtwängler, Arturo

Toscanini, Hans Knappertsbusch und Herbert von Karajan.

Für die « liebevoll gekochte, fränkische Küche » hat Harald Kaiser einen jungen Koch, Patrick (23) , eingestellt, obwohl er selbst Küchenmeister ist. Der « Chef » muß den Service machen :

« Da gibt es engagierte Gespräche über die Tische hinweg, sogar zwischen der Richard-Wagner- und der Cosima-Wagner-Stube. »

Besonders zur Festspielzeit « sprudeln die Gäste über » . Nette, junge Servicekräfte kennen weder Anekdoten noch die alten Künstler und Haudegen. Sie könnten auch keine Wagnerfragen beantworten.

Natürlich ist die Speisekarte vollkommen auf das musik-dramatische Gesamtkunstwerk ausgerichtet : Nach dem Federstahl (Aperitif aus fränkischem Secco) , gibt es etwa eine Nibelungensuppe aus Mimes Zaubertopf serviert, Isoldes Kartoffelpuffer mit Räucherlachs und Kräuterschmand.

Richard Wagners Leibspeise, der fränkische Sauerbraten mit Lebkuchensoße und Kartoffelklöß und die Blauen Zipfel, exakt so, wie der Meister sie immer gern gegessen hat, empfehlen sich als Hauptgang. Zum Schluß vielleicht « den kleinen Fafner » , eine Portion Käse oder, wer es süß mag, den « Goldschatz im Rhein » , eine Art Mandelpudding im Weckglas mit Erdbeermus.

Ausgeschenkt werden Mönchshof und Kapuziner aus Kulmbach, Spezialitäten wie das Jean-Paul Bier vom Lang-Bräu (Wunsiedel) oder Marc's Chocolate Bock von Maisel (Bayreuth) . Auf der Weinkarte finden sich ein eigener Eulentrunke (weiß und trocken) und die « Bayreuther Sinfonie » , ein kräftiger Bordeaux, wie ihn der Meister in großen Mengen liebte, da ja sein Gönner Ludwig II. diese beachtlichen Rechnungen zu bezahlen pflegte.

Auch Lortot und Evelyn Hamann waren in der « Eule » (Viktor von Bülow gehörte zur Verwandtschaft von Cosima Wagners erstem Mann, Hans Freiherr von Bülow) , ein fotokopierter Stammbaum der Nachkommen Wagner-Liszt liegt in der « Eule » aus.

Wirt Harald Kaiser liebt sein Restaurant, das die Titelseite des Buches « 50 Historische Wirtshäuser in Oberfranken » zielt, über alles :

« Die Eule ist mein Lebenstraum » , sagt er. Wagner hat die Tür zur modernen Musik aufgestoßen - oder eingetreten ?

**Rott's latest compositions at the asylum**

**Winter 1883-1884 (?) (or 1884-1885 ?)** : Anton Bruckner inquires with Joseph Seemüller about the latest compositions of Hans Rott.

### The nephews come to visit

**December 1883** : Anton Bruckner's nephews Gustav and Theodor Hueber come to visit Bruckner in Vienna.

### « Sali » reproaches her brother

**December 1893 (?)** : Letter from Rosalia (« Sali ») Hueber (Vöcklabruck) to Anton Bruckner (Vienna) :

Rosalia asks her brother why he did not store properly the food that was sent to him. This way, he puts his health at risk. She also asks why he did not visit her in Vöcklabruck during the last year. Did he receive her last letter ?

### The brother replies

**Sunday, 23 December 1883** : Letter from Anton Bruckner (Vienna) to Rosalia (« Sali ») Hueber (Vöcklabruck) :

Bruckner thanks Rosalia for her last shipment. He complains about time and money shortage. He adds 15 Florins as a Christmas present and gives his New Year's Greetings.

...

Compared with the incomes of a civil servant (ranging between 600 and 1,000 Florins per year, but with additional supplements) , a teacher (600 Florins in 1870 rising to 800 Florins in 1874) , and a manual worker (ranging between 420 and 850 Florins) in Vienna in the 1870's, Anton Bruckner's starting salary of 800 Florins at the Conservatory can be seen as quite acceptable. In addition, he requested (from the Ministry of Education and Culture) 1 off-payments to enable him to devote more time to composition and was granted sums of 500 Florins, 400 Florins and 500 Florins at the end of 1868, end of 1870 and beginning of 1874. When one also bears in mind that he received additional income from St. Anna's Teacher Training Institute from 1870 until 1873, from private lessons, from the « Hofmusikkapelle » (occasionally from 1868, and regularly from 1875) and the University (unpaid in 1875 and for a few years thereafter, but paid from 1880 onwards) , it can be seen that Bruckner had a reasonably comfortable life-style from the mid-1870's. Nor did he have any real reason for financial anxiety either then or, in his later years, as he received substantial help in securing the publication of several of his works, including a private donation from Emperor Franz-Josef towards the printing of the 1889 version of the 3rd Symphony, a substantial donation from Duchess Amélie towards the printing of the 8th Symphony in 1892, pensions from the Conservatory (from 1891) and the « Hofmusikkapelle » (from 1892) , honorary annual gifts from the University (150 Florins in 1894, 600 Florins in 1895) , and regular subventions from erstwhile pupils and private consortia. Bruckner's liquid assets at his death amounted to nearly 17,000 Florins should, once and for all, dispel the myth that the composer was living in straitened circumstances.

### Combining business with pleasure

**Wednesday, 16 Januar 1884** : Letter from Anton Bruckner to Josef Schalk :

Anton Bruckner hopes that 2 movements of his Symphony (the 4th to be performed on 29 January, or less possibly, the 7th on 27 February) would be played on 2 pianos by Josef Schalk and Ferdinand Löwe. He would like to hear them in the previous tempi.

In the evening, meeting « at Gause » , the popular guest-house (« Gasthaus und Bierkeller “ bei Gause ” ») located in a basement at « Johannesgasse » Number 12 in the 1st District.

### Hugo Schenk

During the Habsburg years of the Monarchy (1809-1918) , crime seems to have been limited to common robberies going wrong or wretches with rat poison doing away with their husbands or rivals for the attention of a gentleman. Often charges were complimented by sorcery accusations. Executions of violent offenders of either gender were rather common-place.

Hugo Schenk was born on 11 February 1849.

He is considered, at least on record, as the first Austrian serial killer.

Characteristics : Rape - Robbery.

Location : Vienna.

Schenk began his criminal career with petty frauds at the age of 21. He was sentenced but later pardoned and when he teamed-up with Karl Schloßarek, whom he met in prison, murder was not too far away.

Together, the pair murdered 4 domestic helpers. A handsome lad, Schenk had no trouble attracting the attention of the ladies. Charming them into believing his intentions were honourable was not a difficult task for the experienced conman. During a puritanical time when such affairs of the heart needed to be conducted in secrecy, he could move in the shadows.

His method was simple. He would charm the girl, make her believe marriage was imminent and ask her to gather all her belongings (including all of her savings) and meet him at a remote part of the city, or indeed, in the country-side. Then, he would rape and rob her. With Schloßarek's help, he would then murder the woman and conceal her body in the wilderness or throw it into the Danube.

...

Known as « the girl murderer with the gentle face » , Schenk had no trouble wooing Viennese house-maids in the

mid-1800's. Donning a Polish accent, Schenk told women that he was a count named Winopolsky. If they were impressed, he would quickly court them, eventually inviting them to a secluded picnic spot for a bit of « romance ». Unfortunately, Schenk's idea of romance was deadly.

Schenk would rape his victim, steal whatever scant belongings she might have, tie a boulder to her feet, and toss her into the icy Danube. Sometimes, his brother acted as his accomplice ; other times, he worked alone. Raping, murdering and stealing was a full-time occupation for Schenk, who was plotting against his next victims before he has even disposed of his current one.

Though drowning was Schenk's preferred method of disposal. On at least one occasion, he got more creative. During one of his doomed picnics, Hugo Schenk taught a house-maid, Theresia Ketterl how to play the light-hearted game of Russian « Roulette », with an empty gun, ... of course. He told Theresia to give it a try, but not before secretly loading the gun. The poor house-maid did the dirty work for him.

Method of murder : Shooting - drowning.

Number of victims : 4-6 or more.

Identified victims : Josephine Timal ; Katharina Timal ; Theresia Ketterl ; Rosa Ferenczy.

Date of murders : **May-December 1883.**

**Thursday, 10 January 1884** : Arrest by police of Hugo Schenk, nicknamed « the Viennese house-maids killer ». It was discovered that he had been corresponding with at least 50 women, all of whom he no doubt considered future victims.

His accomplice, Karl Schloßarek (born in 1858) , was arrested the day after (Tuesday) . Both will be condemned to death by hanging.

**Tuesday, 5 February 1884** : Article from the « New York Times » :

Before being delivered up to justice, Hugo Schenk confessed to the police that he had planned 5 murders for last week, which were to provide him with 30,000 Florins. With this sum, he intended to escape to America with Emily Höchsmann.

Two of his intended victims are daughters of respectable families. One is a servant to the Baroness Malfatti, whose chamber-maid he had induced to steal pearls worth 20,000 Florins, which the Imperial family had presented to Doctor Malfatti for attending Napoléon's son, the Duke of Reichstadt, during his last illness.

This maid, who had lived in the family for 12 years, was so thoroughly trusted that the pearls were not missed until

Schenk's arrest gave the clue to the robbery. She had prepared everything for Schenk and his accomplice's reception in the house on the very night he was arrested.

Schenk said to her he would give all the inmates, herself included, a dose of morphia ; but he has confessed that his real intention was to murder them all. If he had not been arrested on **January 10th**, this crime would have been added to the others.

The Baroness Malfatti had about 10,000 Florins' worth of plate and jewels, besides much cash, in the house, a solitary villa in an out-lying suburb. She is a most generous old lady, who founded and keeps up an asylum for old women. Her pearls were pawned in Linz. The maid's deposition confirmed Schenk's confession.

Every step that the police take serves to reveal fresh crimes of the brothers Schenks and their accomplice, Schloßbarek. Schenk acted by minutely prepared plans, and, several times, he plotted against one girl even before he had disposed of another, who seemed ready to give-up all to him.

He is tall, handsome, well-mannered, speaks fluently several languages, and has the bearing of a gentleman.

His brother has confessed to having helped him to murder the cook Ketterl, whom they shot dead and threw into the Danube early in August, 1883. This is the 5th murder which seems, so far as we may say so before actual convictions, to be established, but 3 others are probable.

Hugo Schenk's wife and his child have disappeared altogether. A man answering his description was seen from a railway train near Lundenburg, on the Northern Railway, wrestling with a woman, whom he seemed to stab.

This affair was not cleared-up, because the police sent from the station where the train stopped could find no trace of murderer or victim. Schenk confesses to having murdered a woman near Lundenburg, but refuses to give details.

The principal witness against Hugo Schenk will be his sweetheart, Emily Höchsmann, whom he first enticed, like his other victims, but finding her poor, yet attractive, spared her life, and even spent upon her much of the money obtained by his terrible crimes.

She offered herself as a witness when she heard who her lover really was.

His acquaintances were all made by means of advertisements in the local papers.

Schenk made the women believe that he was a Nihilist agent, a Polish Count with untold gold, that he had uncles in America, and noble relations who would not hear of a marriage with a servant.

Clandestine marriage was always the excuse for leaving Vienna, and, once « en route » with the girl's money safe in her bag, he got-out at some romantic spot, where he met his accomplices, and, after murdering his victim, returned by

next train.

In **March 1883**, he was released after 2 years' imprisonment. In **May**, he murdered the 2 Timals, after 4 weeks' acquaintance.

In **August**, the cook Ketterl was murdered, and, in the **last days of December**, when the police had already traced him, he killed Rosa Ferenczy. During all this time, he professed to be in love with 2 girls, and corresponded with at least 50 others.

Last **August**, he left Emily Höcksmann for one day, promising to meet her at night in a certain public garden. She waited for him with her relations, and when he came, his merriment kept him busy all day, and had them surrounded by dozens of people, gave Emily Höcksmann a watch, bracelets, and rings which he had taken from the murdered Ketterl 3 hours previously.

Next day, he started on a Swiss-tour with his sweetheart, and only left her when money fell short.

The most pitiable of his victims was his last, Rosa Ferenczy. The illegitimate daughter of a Hungarian nobleman, she was full of fanciful ideas, and when, at the age of 30, this handsome man offered her his hand and heart she believed fate had turned at last, and leaving service followed him.

He took some of her money, 1,800 Florins in all, and lodged her in a remote suburb, visiting her sometimes. The landlady states that Rosa Ferenczy suspected him when absent, but whenever he showed himself, she always believed him.

At Christmas, he took her to the theatres and the opera, promising to visit his sister in her company soon.

She prepared for departure, and said, crying, to the landlady :

« You'll either see me happy and married, or never again. »

The landlady recognized Schenk and Schloßarek as the 2 men with whom Rosa drove to the station. Next day, her body was found in the Danube, near Preßburg.

The sums which Schenk obtained by his murders, and which he must have divided with his brother and his accomplice Schloßarek, do not amount to 6,000 Florins. But he never worked, and lived comfortably, often travelling, for 3 years at least, as also did his accomplices.

He must, therefore, had obtained money by other means, or many other murders, to which no clue is as yet obtained, were his work.

The Pesth police have asked for his likeness, several girls having been abducted from that city of late years in a similar manner to that practised by Schenk.

### The trial of Hugo Schenk

Anton Bruckner was reading about murder cases, executions and criminal affairs in the newspapers. He attended numerous murder trials. As the day of the execution was approaching, the composer became « abnormally over-excited » .

He showed a special interest for the crimes which he recorded in his personal diary, focusing in particular on the final moments of a man condemned to death.

Pianist August Stradal, a favourite pupil, recalled Bruckner's appetite for news about trials and executions :

« Bruckner was consumed with nervous greed. (...) Sometimes, I had to bring him half a dozen newspapers, in which he would seek detailed descriptions of some morbid court affairs before a jury - like murder cases. In a state of over-excitation, Bruckner would not be able to sleep before the day of the execution. »

(August Stradal)

**Thursday, 13 March 1884** : Beginning of the trial against Hugo Schenk. Anton Bruckner showed great interest in this highly-publicized court case until the execution of the convicted murderer on April 22.

« When the trial against the notorious female-killer Hugo Schenk began, Bruckner pleaded that I should intervene with a friend, the State attorney Gürtler von Kleeborn, so that he would be allowed to attend the trial and, if possible, the execution (...) So, I led the “ Master ” inside the court-room (...) but Bruckner could not control himself (...) He raised continuously from the bench to get a better view of the murderer. His awkward behaviour was disturbing the peace. A constable came to meet us to demand silence. »

(August Stradal)

...

Klaus Petermayr. « Im Banne des Madcheanrders. Anton Bruckner und Hugo Schenk. »

According to his composition pupil, August Stradal, Bruckner was insistent that he ask one his friends, a public prosecutor, to make it possible for him to attend the trial and execution. While the latter was out of the question, Bruckner was able to gain access to, at least, some of the trial proceedings. Petermayr also compares Stradal's account with similar accounts of Bruckner's seemingly child-like attraction to the sensational by Hans Commenda, Anton Meißner and others. But hand in hand with this unusual attraction to the morbid was Bruckner's concern, as a devout Catholic,

for the soul of the murderer.

### A « Schnitzel » from the « Riedhof »

**Monday, 21 April 1884 :**

« On the evening before the execution of Hugo Schenk (**Monday, 21 April**) , me and Bruckner sat down at the “ Riedhof ”, a restaurant near the District Court House. There were also some young and playful physicians in our company who, with the “ funny old man ”, as they say in Vienna, were forming a very wild bunch.

And so, one of these doctors told me that Hugo Schenk expressed the wish to eat a “ Schnitzel ” from the “ Riedhof ” on the evening before his execution. And that the owner had just sent this “ Schnitzel ” to the District court-house.

Bruckner immediately asked the owner to prepare him a piece of that same piece of veal (...) . Bruckner stayed awake all night long, and prayed for the murderer. »

(August Stradal)

The German word « Schnitzel » (Middle High German : « Snitzel ») is a diminutive of « Sniz » (slice) . The term « Wiener Schnitzel » itself dates to at least 1845.

The « Wiener Schnitzel » is a popular part of Viennese cuisine. It is made of veal and is traditionally garnished with a slice of lemon and either potato salad or potatoes with parsley and butter.

The term « Wiener Schnitzel » is a protected geographical indication in Austria and Germany and can only be made of veal. When pork is used, the dish must be called « Wiener Schnitzel vom Schwein » or « Schnitzel nach Wiener Art » to differentiate it from the veal original.

**Tuesday, 22 April 1884 :** Hugo Schenk was executed by hanging in Court No. I of the Vienna Regional Court. His skull sits in the Vienna's Crime Museum (« Kriminalmuseum ») to this day.

### Vöcklabruck : « Frau Hartmann »

**Summer 1884 :** Anton Bruckner began working upon a new Symphony. His sister, in whose house in the little town of Vöcklabruck he was vacationing, says he would show her a stack of music-paper covered with pencil marks, saying that these scribblings would become another Symphony. In order to be able to set-down, undisturbed, the ideas that came to him during frequent walks in the surrounding woods, he rented a room with a piano in a house nearby, just for composing.

When he heard that the owner of this house had a young and pretty daughter, he said :

« I'm glad. Now I'm sure I'll be able to compose here. »

Every day, he would bring this girl, a « “ Frau ” Hartmann », a bouquet of flowers. The presence of the younger fair-sex seems to have been always a source of happiness to the composer. He was then over 60 years old.

**Munich : « Hotel Vier Jahreszeiten » : 2 famous guests during summer**

**Wednesday, 30 July 1884** : Part of the list of guests at the « Hotel 4 Jahreszeiten » in Munich :

« (...) Count Vincent Egon von Fürstenberg, Vienna ; Anton Bruckner, Professor, Vienna (...) »

**July 1884 : Hot in Vienna !**

**Sunday, 13 July 1884** : Pocket calendar entry by Anton Bruckner :

« Sunday 13 July, 6:30 in the evening : 40°Ré (Réaumur scale) in the sun. (/) 7:30 pm : 37°Ré. »

**« My stomach ! »**

In the early 1880's, Anton Bruckner began to be preoccupied with his health and, in general, with that of everyone he knew. Since his break-down, in 1867, he had never been completely well. In 1883, in wishing everything good to a friend, he wrote that, above all else, was good health, upon which he expounded for the remainder of the paragraph. The same can be seen in one of his longer letters, from around 1884, where he ended with the 2 words :

« Mein Magen ! » (My stomach !)

**Bruckner and the « Eroica »**

**1884** : Anton Bruckner's reaction after hearing Beethoven's « Eroica » in the Great Hall of the « Musikverein » is quite revealing.

University student Carl Hrubý attended the concert with Bruckner who used to stand right behind the podium.

After the concert, the 2 men went to one of Bruckner's favourite restaurant, « at Gause », the popular guest-house (« Gasthaus und Bierkeller “ bei Gause ” ») located in a basement at « Johannesgasse » Number 12 in the 1st District.

(In 1825, Ludwig van Beethoven housed at « Johannesgasse » Number 969.)

Carl Hrubý says :

« Every nerve was moving inside him. After plunging a moment into his thoughts, his eyes turned inward, he suddenly broke the silence :

“ Not true, ' Herr ' Beethoven, my 7th is not so bad, while some present you as a role model and consider me a fool. I think that I would like Beethoven to take me by the hand and say :

' My dear Bruckner, do not worry, for me it has not been better, these men have understood nothing of my Quartets.  
'  
I would say to him again :

' Excuse me again, ' Herr ' Beethoven, for having exceeded the form, but I think in all cases that an authentic artist can create a form for his works and then stick to it. ' ” »

**Rott : « From an Artist's Life »**

**Monday, 26 May 1884** : Article on Hans Rott entitled « From an Artist's Life » (« Aus einem Künstlerleben ») is published in the « Illustrierten Wiener Extrablatt » Number 145, at page 2.

**Vienna Conservatory : Final examinations (June 1884)**

Anton Bruckners Schüler, denen der « I. Classificationsgrad » zuerkannt wurde, werden in der Prüfungsstatistik erwähnt :

Bei den Vorbildungsschulen dieses Jahres ...

« Orgelklasse des Professor Herrn Anton Bruckner :

(3 Zöglinge.)

I. Jahrgang : Rudolf Wilfert, Thimothé Xanthopoulos. »

Bei den Ausbildungsschulen ...

« Orgelklasse des Professor Herrn Anton Bruckner :

II. Jahrgang : Carl Führich. »

Bei Musiktheorie ...

« Klasse für Harmonielehre als Hauptfach des Professor Herrn Anton Bruckner :

(11 Zöglinge.)

Hermann Abheiter, Ludwig Großbauer, Franz Heinrich, Carl Hrubý, Rudolf Paradiser, Hugo Troizsche, Heinrich Wottawa, Peter Zachariadis. »

« Klasse für Kontrapunkt des Professor Herrn Anton Bruckner :

(5 Zöglinge.)

I. Jahrgang : Cyrill Hynais, Doktor Franz Marschner.

II. Jahrgang : Carl Führich, Josef Meyer, Franz Schlott. »

Carl Führich absolviert sein Hauptfach Orgel, erhält hierüber ein Diplom und wird mit der Gesellschafts-Medaille ausgezeichnet.

### Death of Hans Rott

**Wednesday, 25 June 1884** : Living in the Lower-Austrian State Insane Asylum, Hans Rott, not yet 26 years old, dies after several suicide attempts from either lung cancer or tuberculosis ; the most tragic result of the Brahms-Bruckner dispute.

Pocket calendar entry by Anton Bruckner :

« † » (prayer for the death, presumably for Hans Rott) .

Composer Hans Rott's funeral at the « Zentralfriedhof » in Vienna was attended by Anton Bruckner, who arrived early and spent a significant amount of time alone with the coffin of his young friend and student. At the funeral itself, Bruckner was seen crying, and stated openly that Brahms' uncalled-for, harsh treatment of an already isolated young composer was to blame for his demise.

Only his closest friends mourned Rott in Vienna : Gustav Mahler, Carl Hrubý, Friedrich Eckstein, Franz Marschner, and Cyrill Hynais.

Anton Bruckner was devastated :

« Already an hour before the funeral began, Bruckner stood at the coffin, lost in dreams, looking down into the pale face of his dear student, and could not tear himself away. When the coffin was put into the hearse, tear upon tear fell from the Master's eyes. »

The « great future » Bruckner had predicted for him was not to be, and instead Rott seemed fated to be a foot-note in biographies of Bruckner and Mahler : a talented figure, no doubt, but one who had fallen by the way-side too early to realize whatever potential he may have had.

...

The great hopes and expectations his friends had entertained of him, had been a matter of the past for some time already. Almost 4 years lasted the tragic epilogue of the musician's life who had been suffering from « hallucinatory insanity and persecution mania » and had been given-up by the physicians. As a student of the Vienna Conservatory, he had gained Anton Bruckner's recognition and as a composer and the admiration of a small, however select, circle of friends to which also Gustav Mahler belonged during his early years in Vienna.

...

From the view-point of Hans Rott's fellow-student Gustav Mahler, things were completely different. Although the 2 students had quarreled horribly about whether one needed a roast for composing or might not rather make do with some cheese (« Quargel » : a variety of « Harz » cheese) , the disputes between the « roast-beef » composer Rott and the « cheese-composer » Mahler never went so far that their mutual estimation would have suffered for it.

Mahler on Rott :

« What music has lost with him cannot at all be measured :

His genius rises to such soaring already in his 1st Symphony, which he wrote as a 20 year old and which (it is not too much said) made him the founder of the “ new Symphony ” as I understand it. That which he wanted, however, has not yet been reached entirely. It is as when somebody gears-up to throw something as far as he can and, still unskilfully, does not completely reach the goal. But I know where he is aiming. Yes, it is so related to my very own that he and I seemed to me like 2 fruits from the same tree, which the same soil has produced, which the same air has nourished. I could have obtained infinitely much from him, and, perhaps, we too together, in a certain way, would have exhausted the content of this new time which was dawning for music. »

(Gustav Mahler in the Memoirs of Nathalie Bauer-Lechner.)

**Wednesday, 31 March 2004** : The « Internationale Hans Rott Gesellschaft » put-up a commemorative plaque at the hitherto anonymous burial place. Location plaque : 23-2-59.

**Rott : « Post-mortem »**

To the credit of those who treated Hans Rott, it must be said that he held-out relatively long. Robert Schumann lasted exactly 2 years and 5 months in Eendenich, and Friedrich Hölderlin in all likelihood would not have managed to

survive so long in the Autenrieth Clinic in Tübingen if he had not been brought in time to master joiner Zimmer's tower. Who would have wanted to wear the Autenrieth mask, which was supposed to keep clinic patients from shouting. Who would have wanted to survive even only one day while wearing such an inhumane device if he was not a genuine psychopath ?

Here, an « excursus » on the state of psychiatry in 1880 seems to be in order.

« The classification of mental illnesses ... cannot yet be made on an anatomical basis » , so we read in the then most up-to-date encyclopedia. Under the same heading, it is also stated that « mental illness » concerns « those illnesses which announce themselves by disturbances in the area of sense impressions, of the imagination, volition, or action » . The tenor of all these remarks is that « delusions » , « insanity » , and « persecution-mania » are in principle incurable, while « psychiatry » (unabashedly) admits of definition as the « science of the healing of the mind » .

Every abnormality, even if it is nothing more than the abnormality of feeling a special calling within oneself, can be interpreted as as an illness and accordingly treated by having the person concerned locked up :

« Every over-exertion of the brain, excessive mental and emotional excitement, is to be avoided ; on the other hand, the development and exercise of physical strength very particularly should be kept in mind ; the goal must always be to work as much as possible toward the simplest, most ordered external relations, toward the avoidance of all passionate excitements, toward the accustoming to subordination under objectively given circumstances. »

What here sounds like a caricature consists of excerpts from the 4th edition of Joseph Meyer's « Konversations-Lexikon » , which came-out on the market 4 years after Rott's death. Here, we find the treatment ideas of a clique which (undisturbed by any and all scientific knowledge) , for many years, had been licensed to maintain the status quo, which amounted to seeing to « the accustoming to subordination under objectively given circumstances » , whether Social-Democrats or large-format crazies like artists were concerned. The Gulag was everywhere.

This does not mean that normal behaviour includes resorting to armed force to keep a smoker from his pleasure. But the lack of diagnostic acumen distinguishing the guild of self-appointed psyche-plumbers is also quite evident in the case of the unfortunate Hans Rott. What would have happened if, for example, a few friends of the most profoundly insecure composer had kidnapped him, taken him off to the Styrian Salzkammergut, provided him with a piano, a stack of music-paper, a couple of cubic meters of firewood, and a lumberjack's ax, if they had given him the opportunity for mental and physical activity in quiet surroundings ? But as things were, surrounded by people suffering from genuine and imagined mental illnesses, Rott had to lose his marbles, like Robert Schumann before him.

2 things here are cause for alarm. The arbitrariness with which the supposed diagnoses are passed on in the secondary literature, and the self-glorification of the diagnosticians, who always recognize the symptoms but never the possible causes. And it is precisely the causes that would be interesting to investigate. Why is it that Robert Schumann as well as Hans Rott and Hugo Wolf all meet under the rubric of « Johannes Brahms » ? Is this really only a biographical coincidence ?

Anton Bruckner must have been of another opinion, given the fact that at the coffin of his favourite pupil Rott he made such heavy accusations against his local rival Brahms that even Rott's friend Friedrich Loehr, the father of the aforementioned journalist Maja Loehr, saw himself forced to do some fancy argumentative foot-work :

« I believe Brahms behaved in this way in his rebuke toward the beginner who enlisted all the expressive means of his art, with a good educational intention ; given the experiences and convictions of his own artistic formation and nature, he could not do otherwise, and I believe that, in doing so, he objectively committed a most genuine artistic injustice. At the time, however (it was just before his illness manifested itself) , Rott could no longer at all be saved and had fallen victim to his bitter fate : his illness, caused by very different psychic and emotional factors, had already been long in preparing » (Friedrich Loehr. « Die Musik » , 1903-1904) .

Loehr's exertion here was no success, first, because he suppressed the « very different factors » and, second, because he over-looked other cases and incidents from the Brahms's files :

Heinrich von Herzogenberg, over many years, attempted to gain recognition from the Master.

Max Bruch had to put-up with the question about where he had obtained such nice score-paper.

Ethel Smyth, truly a tougher operator than Rott or Schumann, did not exactly have flattering thing to report about him.

Moreover, one should recall what Hans Richter, a friend of Brahms, did to Hugo Wolf's « Penthesilea » :

He tore it to pieces because the young Wolf had attacked the great Brahms in his reviews.

Our purpose here is not to find fault with Johannes Brahms ; his works render him immune from prosecution. But one should perhaps consider the fact that Wolf and Rott, like Gustav Mahler, were pupils of Anton Bruckner and were not situated on the Classicistic line that played the « coquet » with the status quo. At best, one might be willing to accept the hypothesis that the whole thing was nothing more than a perpetuated misunderstanding, in other words, that Brahms did not understand the meaning of the trivialities that do indeed gambol about in Rott's Symphonic score. This would be an acceptable way-out of the bind, in as much as one could cite, so to speak, the fate of Mahler's « œuvre » as a star witness.

How long did it, indeed, take until the disparate substances of his works were recognized for that which they really are - parts of those worlds that in his view Symphonies had to be ?

As far as Brahms is concerned, he who would have had to have been an idiot not to have immediately discovered what kind of mirror the young student of his rival was holding-up to him on **September 16 or 17, 1880** : a Symphonic world map of the 19th Century on which he himself, the Northern German Viennese-by-choice, had his place as one of the many famous greats of the past and present.

In the Finale, Rott really went too far. After he lets the previous events pass in review very much in the manner of Bruckner's 5th Symphony, he chooses a melody that (unintentionally) does its provoking : its proximity to the Finale theme from Brahms's 1st Symphony is so obvious (4 min. 40 sec.) that the evaluator perhaps may have felt that Rott was poking fun at him. The repetitions (8 min. 20 sec. and 12 min. 25 sec.) would only have intensified the unfavorable impression. And the fact the Rott had the quasi-quoted Brahms end-up proceeding into Valhalla with the gods was clear evidence of his mental state : Rott had fallen victim to the « primary insanity » which affects « mostly young individuals of 17 to 25 or older ones, namely women, of 40 to 50 years of age » .

### Bruckner's young fans

**Wednesday, 6 August 1884** : Message from Anton Bruckner to conductor Arthur Nikisch :

« Requesting postponement of the concert till student term begins. I expect to gain many supporters among the young people. “ Gaudeamus igitur ”. I have begun my 8th Symphony ... »

### « Schlaraffia » : a World Society

Roast sucking pigs, with knives and forks conveniently growing in their sides, bask and grunt contentedly in « Schlaraffia » . In « Schlaraffia » , the streams flow with milk and honey - or other beverages to the taste. In « Schlaraffia » , there is only one law : that everybody must and shall be happy. In fact, the « Schlaraffian » police arrest anybody who frowns or is the cause of a frown in another. « Schlaraffia » is the mother country of various colonies throughout the not-too-civilized world. These colonies endeavor to plant, amid the grind and worry of our big cities, certain small oases of rest where the spirit of fun shall reign unquestioned and unresisted.

Somewhere in his writings, Washington Irving says that « humor is the oil and wine of a merry meeting, and there is no jovial companionship equal to that where the jokes are small and the laughter abundant » . Mister Irving died in November, 1859, about 4 weeks after the foundation of the « Schlaraffia » in Prague, and, therefore, could not have heard of its doings, its aims, or even its existence. But, for that matter, how many Americans have heard of it even today ? Yet, many of its lusty off-spring have reached our shores, and are scattered between Sandy Hook and the Golden Gate.

This is rather remarkable, for a humorous Society is, by the nature of things, localized.

Like many similar institutions, the « Schlaraffia » had its precursors in humorous Societies, such as the « Grüne Insel » (Green Island) and the « Ludlamshöhle » (Ludlam's Cave) , which recruited their members from the most intellectual circles, and flourished in Vienna until the turbulent times that followed the political events in Europe of 1848, when everything in the nature of Societies or meetings met with suspicion on the part of the authorities, and was subjected, to such rigorous supervision as to prevent the achievement of the most innocent object.

In fact, « Schlaraffia » is the indirect outcome of the great reaction which came in the wake of these events, and was

created by its founders with the idea of giving the members a chance of assembling for the purpose of innocent amusement, without exciting distrust in the eyes of the Austrian Government, whose spies scented political crime and treason in every gathering of men.

The earliest history of the Society is, however, intimately connected with that of the German Theater in Prague, in which city it first saw the light of day, or rather night.

At that time, in 1859, there existed in the capital of Bohemia a Society of artists and art-lovers, called the « Arcadia » , consisting of the cream of German intellect, among the members of which, however, the so-called « Protzenthum » (money-proud class) was numerously represented.

It was at one of the meetings of the « Arcadia » , in the spring of 1859, that Director Franz Thomé of the German Theater proposed one of his foremost actors, a notoriously poor man, for membership. In the discussion which preceded his ultimate rejection, the word « Proletarian » was uttered in connection with this actor, and Director Thomé, indignant at the epithet and the result of his proposal, immediately resigned his membership, which example was followed by the few actors of his company who belonged to the Society.

Thomé and his friends, at that time, were also in the habit of attending, in a certain restaurant, the informal meetings of a group of intellectual men, inclined to Bohemianism ; and when, at one of these gatherings, the story of the black-balling of one of Prague's most famous artists was told, the indignation was so general that the same evening saw, as a protest against the action of the « Arcadia » , the metamorphosis of the round-table, until then nameless, into the « Proletarian Club » .

This club proved to be the original gem of the « Schlaraffia » , and its caliber may fairly be judged when the fact is stated that the same evening also saw the writing of the words and music of the « Proletarian Song » by one of its members, Albert Eilers, a noted Opera « basso » , and the singing of it by an improvised quartet.

In the meetings of the « Proletarian Club » , everyone contributed his share toward the entertainment, and there were no drones, for even the members outside the arts and professions were men of various talents, the principal requisites of membership being brains and appreciation of humor and art.

When conditions, in the fall of 1859, made a change of the Club name desirable, the choice fell upon « Schlaraffia » , the name of a mythical country where everyone is happy. In mockery of feudal customs and the ridiculous claims of the aristocracy of birth and money, an oligarchy and a ceremonial for the meetings was established which, in its parodical quaintness, proved irresistibly amusing.

From the start, the principal object of the « Schlaraffia » was to create a true democracy of mind, and the qualifications for membership were confined to unblemished reputation and ability to contribute an equable share to the entertainments, or, at least, to fully-appreciate the efforts of others. Birth, social standing, wealth, religion, politics, and nationality carried no weight whatever in the applications for membership, the cardinal requirement only being

considered, and an educated or talented cab-driver had the same chance of admittance as a prince of the royal blood. In the « Schlaraffia », all were alike, and on its banner were placed the words « Brotherly Love and Friendship among Men » in addition to the device of the « Proletarian Club », which was « For Art and Humor » .

In order to avoid the possibility of disagreements and heated discussions, all topics of conversation which might give rise to them, such as religion, nationality, business, politics, etc. , were tabooed in the meetings. Card-playing and the reading of newspapers also were prohibited. As the official language of the « Schlaraffia », German was naturally adopted. In fact, the « Schlaraffia » came in time to be looked upon as a stronghold of German culture and ideas, especially after the Society had spread to foreign countries, where, in many cases, it served as the only intellectual refuge for its members.

In Prague itself, with a surrounding hostile Czechish element, the mother Society frequently laboured under difficulties which, shortly after the « Schlaraffia » had moved into a home of its own, culminated, during an anti-German riot, in an attack on the « Schlaraffen » Castle by a Czechish mob. In consequence of this attack, the doors and windows of the house are now protected by heavy iron gratings and shutters, which give it, more or less, the aspect of a medieval fortress.

In spite of the early vicissitudes, the « Schlaraffia » in Prague continued to develop. In its meetings the vanities and follies of the outer-world were mocked by means of a ridiculously solemn cult, for which a strictly observed ceremonial was devised. From the moment a « Schlaraffia » entered the castle, he was supposed to leave behind him all the profane cares of existence, to step, for the time being, out of his mortal shell, and to live solely for the enjoyment of humor, art, and friendship among men. To aid in this imagination, the members pretended to live in the Middle-Ages, and adopted humorous armorial bearings, wooden swords and a supposed helmet of satin or velvet which resembled a fool's cap with bells and ears. They applied ancient and obsolete names to every-day actions and things, greeted and drank each other's health in a different manner from usual, and adopted, for exclusive use during the meetings, odd individual names which generally bore some humorous reference to their vocations or to certain characteristic peculiarities.

Out of all this developed a grotesque knighthood with gradations of nobility, and an infallible despotism, conceded to the elected rulers, to which the knights bowed in submissive reverence. The 3 « Oberschlaraffen » (Supreme « Schlaraffs ») were supposed to be endowed with special virtues by « Uhu » (the horned owl) , which bird of Minerva had been chosen as tutelary deity. They took turns presiding over the meetings, and the one who was temporarily chairman was recognized as being directly inspired by « Uhu » , and therefore, infallible.

« Uhu » , the protector of the « Schlaraffia » , was worshiped in 2 forms ; as « Aha » in moments of untamed enjoyment, when everything was harmony and love, and as « Oho » at times when discord threatened the peace of the meeting. In both cases, libations were offered to the deity in form of mighty steins of beer, called « Quell » , or bumpers of wine, called « Lethe » , which found their way to the right spot in the anatomy of the knights, and created that feeling of good-fellowship to attain which the German needs his native drink and pipe.

It must be said though that, while, according to German custom, drink is a necessary adjunct to jovial companionship, in the meetings of the « Schlaraffia » all excess is tabooed, and that, in spite of the respectable capacity of the average Teuton, cases of over-indulgence are unknown. A still more remarkable thing in relation to the « Schlaraffia » may be quoted in the fact that the members are bound to refrain absolutely from lewdness of speech, immoral language, and questionable jokes, all of which are punished by cash fines for the benefit of the treasury, or by cruel confinement in the castle dungeon.

As a further satire against the weaknesses and foibles of the outer-world, the « Schlaraffia » established high-sounding titles and glittering decorations which were conferred for fidelity to the Society, regular attendance at the meetings, special brilliancy and other meritorious conduct. Blue blood was infused into the members by conceding to those who deserved it ancestors in the shape of small stamped metal plates, to be worn on the helmet or the bandolier, and some of the knights are thus enabled to show an ancestry against which that of a scion of the Wittelsbachs or Colonnas sinks into insignificance.

From 1859 to 1865, the « Schlaraffia » in Prague preserved a local character, but the latter year witnessed an event which had a momentous effect on its future development as a world Society. Some time before that, one of its members, the well-known author Eduard Schmidt-Weissenfels, known in the « Schlaraffia » as Knight Plato, had moved to Berlin. His attachment to the Society was, however, so strong that he kept in constant touch with Prague, and, at last, his longing for a similar institution in Berlin induced him to seek suitable material among the men of art and letters in the Prussian capital, with which he founded a Society which, like the « Praga », called itself « Schlaraffia », but, while following in principle the example of the original institution, adopted a dual form of government and was ruled by a « Mikado » and a « Taikoon ». The event was greeted by the mother Society with acclamation, and, in 1867, the branch was recognized as a legitimate daughter of the « Praga ».

Again, 7 years passed before another altar of « Uhu » was erected. This time, it was in Leipzig where a knight of the « Praga » and one of the Berolina jointly founded a new « Schlaraffia » under conditions similar to those of the first branch. One year later, in 1873, « Uhu » spread its wings over Graz, in Austria, and, up to 1875, in Vienna and Hamburg preliminary work was done toward the establishment of further branches.

During all these years, a lively inter-course, by correspondence and mutual visits, was kept-up between the different Societies, and the desire to get in closer contact with each other grew apace until, in 1876, it resulted in the first great « Schlaraffen » Council of Leipzig. All 4 Societies, which then numbered together one 189 members, were well-represented, and it was at this council that, after the Berolina had graciously relinquished its special form of government, the great idm of « Allschlaraffia » (« Pan-Schlaraffia ») was born, and the « Praga » unanimously recognized as the « Allmutter » (All-mother), which honour she bears since then.

It was here too that the « Spiegel » (Mirror), the guiding law code of « Allschlaraffia », was formulated and the ceremonial revised. This, with a few changes at later councils, is today the code of the world Society. It was further decided to hold periodical councils of « Allschlaraffia » every 5 years. The « Schlaraffen » era was put-back just 300 years, and the duration of the « Schlaraffen » year made to begin officially in October and end in May. The festivals

were divided into movable and immovable. To the first belonged the « Ladies' Evenings » , the « Festival of the Orders » , and those given in honour of dead heroes of literature and art ; to the latter, the Foundation Anniversary, the « Schlaraffiad » , or monthly business meeting, Christmas, and the last evening of the calendar year. Shortly after the Leipzig Council, « Schlaraffia » began to develop in a most unexpected manner. The idea was carried by enthusiastic errant members all over Austria, Germany, Switzerland, Holland, Russia, and Hungary, and at the next council, which was held in Prague, « Allschlaraffia » was represented by 36 « realms » , as the full-fledged individual Societies were now called, and by several colonies, by which name those were known which still were in a period of probation. The approximate number of « Schlaraffs » at this time was over 1,000.

It is not to be inferred though from this rapid growth that « Schlaraffen » colonies could be created indiscriminately. The « Spiegel » provides that only members of knightly rank in good standing, who have lived over 1 year in an « Uhu » forsaken town, may, with the help of at least 10 native citizens, found a new colony, for which the sanction of the « Praga » has to be gained before it is recognized by the realms and sister colonies. A period of probation, generally from 1 to 2 years, during which it is strictly supervised by the mother realm to which the founding knight belongs, is imperative for the colony before it is created by the « Allmutter » a full-fledged Society and receives its bull of sanction.

Neither can a « Schlaraffe » visit Societies other than his own without being provided with a regular passport, signed and vise by an « Oberschlaraffe » and the chancellor of his realm, in which his visit is recorded by the chancellor of the realm whose guest he was.

In the years following the second council of « Allschlaraffia » up to the present, the number of branch Societies increased to nearly 160, with a membership of approximately 5,000, and efforts were made to establish colonies in such out-of-the-way places as Singapore, Auckland, New Zealand, and Alexandria, Egypt, all of which, however, soon disappeared again on account of lack of closer geographical connections. Some 10 years ago, the Russian Societies too disappeared, being suppressed by the Muscovite authorities, and 1 or 2 Austrian realms were stricken from the list of « Allschlaraffia » on account of political meddling and religious intolerance, but all occurring breaches are soon filled-up by newly-founded colonies.

In 1883, « Uhu » took its first flight across the Atlantic, when Knight Columbus the Pathfinder, an actor member of the Bemlina, founded the « Schlaraffia » in San Francisco. This is known as the « Franziscana California » . It may be stated here, by the way, that the custom of giving the realms Latinized names has become general, and whenever a city in which a « Schlaraffia » is located has an ancient historic name this is adopted in lieu of its modern one. Thus, for example, Vienna bears its former Roman appellation, « Vindobona » , Cologne that of « Colonia Agrippina » , London becomes « Londinium » , etc.

While, in the nature of things, « Uhu's » advance on this side of the Atlantic has not been so rapid as abroad, altogether a dozen « Schlaraffias » have been founded in the United States since 1883. San Francisco was followed by the « Nova Yorkia » , « Milwaukia » , « Chicagoana » , « Ludovica Missouriia » (St. Louis) , « Cincinnatia » , « Newarka » , « Sylvana » (Cleveland) , « Brooklynia » , « Filadelfia » , « Camrea » (Jersey City) , « Bostonia » , and

« News Portus » (New Haven) .

These American Societies are mostly in flourishing condition, but whatever increase there is to come is naturally confined to the larger cities of the East and Middle-West, as only there can the proper material for the make-up of new realms be found. It may be remarked in this connection that, while the American members are fully as loyal to the « Allschlaraffia » as the others, they exhibit a certain pride in their newly-adopted country, and, some years ago, there was a slight tendency, in view of the different conditions of life, manners, and customs in the United States, to form a coalition of the American Societies which, while acknowledging allegiance to « Allschlaraffia » , was to govern itself according to local conditions. This tendency has, however, absolutely vanished.

The « Schlaraffias » in America keep-in even closer touch with each other than those abroad and their meetings are better attended for the reason that German intellectual club life is much rarer here, and that, in the sea of Yankee materialism and tremendous business activity, a Society of this kind is often the sole isle of refuge of the members, to whom jovial companionship is a necessity.

The mental caliber of the American « Schlaraffas » compares favorably with that of their European brethren, and is, perhaps, slightly superior ; at least, it would seem so from the quality and number of their contributions to the Society organ, the « Schlaraffia Zeyttungen » (« Schlaraffen » Gazette) , a periodical published during the active months of the « Schlaraffen » year, and exclusively edited, written, and illustrated by members. Its existence dates back more than a quarter of a Century, and it receives an annual subsidy from all realms through the treasury of the « Allmutter » « Praga » . Aside from literary contributions, it prints all official proclamations and other news of « schlaraffic » interest.

While the « Franziscana California » , on account of the distance, remains somewhat isolated, the groups of Eastern and Middle-Western « Schlaraffias » in the United States frequently visit each other and arrange the so-called « Summer Festivals » which are attended by delegations from the various realms and during which the rigor of the ceremonial is relaxed to give the members and their ladies, if possible, a better time.

It may interest the reader to pay an imaginary visit to one of the « Sippungen » , as the official weekly meetings are called, and get a closer view of the doings of the jolly crowd. The « Sippung » to which the reader is to be taken is typical of any of the American Societies.

The « Schlaraffia » is chary with its invitations to outsiders, and « Pilgrims » (guests) can be introduced only, after previous notice, by members of the highest-grade, the knights ; but once within the walls of the castle, the stranger feels that the hospitality extended to him is hearty and genuine.

Arrived in the « Vorburg » (the ante-room) before the « Sippung » begins, the visitor generally encounters the members in the act of exchanging their street garb for helmet, bandolier and sword, to which, on special occasions, are added a knightly flowing cloak and such orders and decorations as the wearer may possess, and be inclined to wear.

The sound of a tom-tom is the signal for entry into the castle proper. Near the entrance stands the altar with a stuffed image of the bird of Minerva. Before it members and guests bow deeply, uttering at the same time a solemn « Uhu » . Then, everyone bows before the throne on which are seated the 3 « Oberschlaraffs » with the insignia of their office, after which the « Sippung » begins.

The castle is quite remarkable in its arrangement and furnishings. At one end of the spacious hall extends a carpet-covered platform, surmounted by a canopy of rich hangings, and backed by the coat of arms of the realm. On the table, in front of 3 high-backed chairs, are scattered books, a silver box containing « ancestors » , and a couple of large candle-sticks. This is the throne.

On the opposite side of the hall is « Uhu's » altar, on which rest the sword of the realm, the challenging gauntlet, and several elaborate mugs, each of which is destined for use on certain special occasions. The « Aha » mug is used only by knights at the reception of visiting knights-members of the lower-grades are only permitted to smell at this. The « Lulu » mug is used for greeting the Pilgrims, the « Dudu » for exchanging brotherly vows.

Near the altar hang the large portraits of « Schlaraffs » who are resting in « Ahalla » , the « schlaraffic » heaven ; in one corner threaten the heavy gates of the dark and gruesome dungeon ; in another rises the « Periculum » , the rostrum from which flows the wit, humor, and wisdom of the members. In its vicinity the « clavicymbalum » (piano) generally finds its place. The walls are covered with pictures of poets and composers, photographs and armorial bearings of the knights, etc.

2 long tables with rows of chairs, patterned after the German fashion of the 16th Century, extend on 2 sides through the whole length of the hall. One of these is for the knights, the other for the « Younkers » and « Knappen » , the lower-grades of membership. The latter are known only by numbers, and theirs is the first rung of the ladder reached by the « Prüfling » (probationer) after he has proven, during a hard trial of at least 6 weeks, his mental caliber and worthiness of becoming a « Schlaraff » . Their table is presided over by the « Younkermeister » , who, with his heavy cat-o'-nine-tails, keeps order among the unruly youngsters (some of whom are 60 or 70 years old) , and teaches them the « Spiegel » and the ceremonial.

At the head of the knights' table sits the « Reichsmarschall » . He only, at the command of the throne, is entitled to sound the tom-tom, at the tones of which absolute stillness has to reign in the castle. Between the « Reichsmarschall » and the throne is the desk of the « Kantzellar » , the chief of all departments, who, next to the « Oberschlaraffs » , is the most important of « Schlaraffia's » oligarchy.

The meeting is always opened with a short speech by the presiding « Oberschlaraffe » , who is addressed as « Eure Herrlichkeit » (Your Magnificence) . The « clavicymbalum » Master touches the keys of his instrument, and the strains of the « Opening Song » , an inspiring melody, sung by all members, fill the hall. It should be mentioned here that the « schlaraffic » song-book, consisting of 2 big volumes, contains almost exclusively original songs and compositions of members, some of which are works of the highest artistic merit.

The song finished, cigars and pipes are lit, the mugs are filled, and the « Protocollant » is called upon to read the minutes of the last meeting. This is done in humorous verse or prose, according to the choice or ability of the man, and gives the best chance for good-natured satire. Variation is secured by a weekly change of this official, who is appointed by the throne.

After the reading of the protocol, the chancellor reads the letters which have been received during the week from the various realms and colonies abroad and in America. Meanwhile, the « Reichsmarschall » has handed the throne a list of those members who have volunteered or may be commanded to deliver speeches, poems, essays, or musical selections for the entertainment of the evening. Such a command has to be cheerfully responded to with the words « With pleasure and at once » . The chancellor having finished, the guests are « dragged » before the throne, where they are welcomed by a humorously impressive speech and the tender of a huge bumper, to which, if they feel so inclined, they may « stutter » a humble response.

The « Reichsmarschall » now reads the list of the members in their « schlaraffic » names, to which, if present, they respond with a loud « Here » . Absentees have to furnish a plausible excuse, as 4 weeks' truancy may be punished with loss of membership. After the roll-call, the real entertainment begins. Speeches, repartee, songs and instrumental productions follow each other in rapid and brilliant succession. These are generally greeted with vociferous « Lulus » , as signs of acclamation, though, sometimes, an ominous « Ul-ul » is heard, which means disapprobation.

Such an « Ul-ul » is often followed by a challenge to mortal combat. The duello may be fought-out in 2 ways. One is called the « mental » , the other the « material duel » . The mental duel may be « plain » or « with sharp weapons » . In the first case, the duelists choose a theme for themselves, generally suited to their own individual abilities. The theme may consist of prose, poetry, music, painting, sculpture, or other artistic work. Thus, one of the combatants may produce in the next meeting an original poem, the other one an original musical composition or a sketch on canvas, on the relative merits of which the knights are called upon to vote. The vote is secret, and the combatants must remain in the ante-room during the ballot. A majority of the votes constitutes a victory. In a duel with sharp weapons, the throne gives-out the subjects to be treated, all other conditions remaining the same as in the plain duel. The victor receives, in acknowledgment of his valor, an ancestor.

The material duel is rarely chosen. It is a bout between the 2 combatants and 3 seconds on each side, in which the party who empties a stein of beer in the shortest time and without spilling a drop is declared victor. This form of duel is considered a sign of cowardice when chosen by the challenged party.

At times, passion runs so high that no delay is brooked, and the valiant challenger and his adversary insist on immediate satisfaction. This action involves rare ability, as the duelist must be prepared to deliver his blow on the spot either in prose or poetry, as the challenged party may desire, and, in case of sharp weapons, on any theme given by the throne. To the honour of the « Schlaraffia » , it may be said that those impromptu duels are by no means rare, and often result in the most brilliant efforts.

Sometimes, it will happen, though, that in the course of the evening, a member may speak uninterestingly, or too long,

on a subject, in which case a warning may be given him by shoving under his nose a huge-extension pair of wooden scissors as a hint of cutting it short. If the hint is not taken within a reasonable time, the ambulance may be called in service, when the offender is bodily removed from the « Periculum » by several stout « Younkens » and « Knappen » , and carried on a stretcher into the « Vorburg » . Hardened sinners will be put in the dungeon, from where their dismal howls for « Quell » can be heard through the heavily grated window. In extreme cases, even decapitation may be inflicted, after which punishment the victim appears only as ghost during the balance of the evening, his presence being ignored, though he may exercise his privilege as specter to play all sorts of pranks, until, by the supreme power of the infallible « Oberschlaraffe » , he is brought back to life again.

Twice during the evening, the entertainment is interrupted by a « Schmuspause » , a short recess during which the « Schlaraffs » leave their seats, and stand around in groups, laughing and joking, smoking, and eating or drinking.

After the second recess, the closing-part of the « Sippung » begins, and the humor of the members reaches its climax. Witty speeches tend to increase the general hilarity, and this is the time when slight infractions of the rules give the « Kneifer » (Pincher) , an important official with an alms-bag at the end of a long rod, a chance to shove his instrument before the face of the offenders, and gather in a lot of nickels and dimes, which go to swell the treasury of the realm, or a charity fund to be distributed at Christmas time. Frequently, special contributions are requested, for the « Schlaraffia » , although not of the character of masonic lodges or mutual benefit Societies, having for its aim solely the mutual entertainment and mental improvement of its members, contributes its obolus toward any worthy object.

At last, about midnight or a little later, the time for closing the « Sippung » arrives the music of the beautiful « Farewell Song » fills the castle, members and guests pass in single file before the throne, shaking hands with the 3 « Oberschlaraffs » , and, amidst general hand-shaking and hearty « Lulus » , the « Sippung » is declared closed. The « Schlaraffs » and their guests bow once more before « Uhu's » altar, and the castle is deserted until 1 week later, when joy and hilarity again reign supreme.

### Vöcklabruck : « Gasthof Forsthuber »

Anton Bruckner meets Franz Stelzhamer (1802-1874) in Vöcklabruck at the « Paixhanslia » Lodge (« Paixburg ») (a branch of the « Schlaraffia » movement) located in the basement of the multi-storey building at « Stadtplatz » Number 22, 22a. A 17th Century statue of the Virgin Mary placed on the façade in a niche on the upper-floor is remarkable. Near the old Town Hall (« Alte Rathaus » , Number 15, 17) , the building (which formerly housed the Court of Justice) is only 20 meters away from the « Burgtor » (City Tower) .

Originally, the « Stadtplatz » Number 22 was occupied by the « Gasthof Forsthuber » where the lodge was founded in 1855.

Anton Bruckner (nicknamed « Es Credo ») , Franz Stelzhamer (nicknamed « Es Piesenham ») and Rudolf Jungmair (nicknamed « Es Friedhof ») are famous honorary members of the local « Paixhanslia » .

The Austrian writer, novelist and poet Franz Stelzhamer often came to Vöcklabruck, especially during the summer time. There, he frequently stayed with his friends at the « Paixhanslia » headquarters (nicknamed « Lucke ») .

### « Lucke »

Im Jahre 1855, in einer politisch sehr bewegten Zeit, lag das gesellige Leben in Vöcklabruck im Allgemeinen vollständig darnieder.

Es bestand damals im Gasthaus « Zur alten Post » der Frau Rochart (nachmals Johann Fruhstorfer-Menschik, später Karl Lenzeder, jetzt Volkskreditbank) eine Tischgesellschaft, welche sich die « fröhliche Sippschaft » nannte. Diesem kleinen Kreis gehörten die Brüder Martin und Isidor Braun aus Schöndorf, der Urgroßvater des heutigen Ritters Isidor, Leopold Braun aus Puchheim, die akademischen Maler Blumauer und Wallhammer, Lehrer Jungwirth, Postmeister Winkler und Gastwirt Bartsch an.

Gleichzeitig bestand auch im Gasthof « Zu den drei Mohren » (neben Gasthof « Zur alten Post ») der Ehegatten Forsthuber ein kleiner Kreis lebenslustiger junger Männer, bestehend aus Doktor Huber, Doktor Plattner, Doktor Glanz, ferner Sieghart und von Payr.

Beide Tischgesellschaften verfolgten den gleichen Zweck, und zwar die Pflege der Freundschaft und Geselligkeit, unter Vermeidung jedweder politischer Erörterung. Dieser gemeinsame Zweck brachte die beiden Gesellschaften einander nahe und vereinigte sie im Jahre 1855 zu einer Sippe.

Als Stammlokal wählte sich die Paixhanslia die « Lucke » im Gasthaus Forsthuber.

In den ersten Jahren blieben die Luckenbrüder der Paixhanslia schon wegen des Mißtrauens, welches die Behörden dieser Gesellschaft entgegen brachten, streng unter sich.

Der Wahlspruch : « Deutsch, frei und ehrenhaft » , den die Paixhanslia auf ihre Fahnen schrieb, die Zeremonien bei feierlichen Anlässen, Trompetenschall und die Detonationen der kleinen Paixhanslia Kanone bei den Taufen neuer Mitglieder, die oft aus der Lucke erschallten, gaben Anlaß zu diesem Mißtrauen und zu strenger Überwachung durch die Gendarmerie. Den Paixhansln aber lag nichts ferner als Politik in ihrem Freundeskreis und als die aufgestellten Horchposten dies melden konnten, schwand auch alsbald das Mißtrauen der Behörde.

Die Sechziger Jahre des 19. Jahrhunderts waren die Glanzepoche der Paixhanslia.

Im Jahre 1862 trat die Paixhanslia in die Öffentlichkeit. Anfangs 1862 erfolgte der Eintritt des späteren Bürgermeisters, Doktor Alois Scherer, und dieser gab als Empfangsmeister der Tätigkeit der Paixhanslia eine ganz neue Richtung nach außen hin.

Die großartigen Feste, welche den Ruf der Paixhanslia begründeten, fallen in diese Zeit. Zum Beispiel die Aufführung des

antiken Trauerspieles « Kaiser Nero » im Fasching 1864, dem der ganze Stadtplatz als Theaterbühne diente.

Große Feste der Paixhanslia bildeten die Tagungen des vereinigten Tiroler Oberösterreich Landtages, einer humoristischen Gesellschaft, in Vöcklabruck von 1864 bis 1870, an denen über 100 Gäste teilnahmen.

Das Faschingsfest im Jahre 1867 fand im Zeichen einer großen Weltausstellung statt, die durch Napoléon III. persönlich eröffnet wurde. Auch die siebziger und achtziger Jahre weisen eine sehr große Zahl von Veranstaltungen auf.

Über die Silvesterfeier 1886-1887 heißt es in der damaligen Lokalpresse, dem « Oberösterreich Gebirgsboten » :

« Es waltet ein günstiger Stern über den Arrangements der Paixhanslia - sie mag was immer in die Hände nehmen, alles gelingt. »

Der Ertrag solcher Veranstaltungen kam laut den Berichten den Stadtarmen zugute.

Im Zeitungsbericht über den Ausflug der Paixhanslia auf den Gaisberg im Sommer 1887 kommen das Wesen der « alten » Paixhanslia und die augenscheinliche Parallele zur Schlaraffia ganz besonders schön zum Ausdruck :

« Der Ausflug der Paixhanslia ist gleichbedeutend mit einem Fest, wo Gemütlichkeit und Fröhlichkeit vorherrscht und Jokus seine Schellenkappe schwingt und wo jeder an einem solchen Tage Sorge und Kummer bei Seite setzt und sich der ungetrübten Heiterkeit hingibt. Aus den heiteren Mienen war zu lesen, daß ein Jeder seinen Humor in der Westentasche mitbrachte und fröhlich mit den Fröhlichen einen glücklichen Tag erleben wollte. »

An den Veranstaltungen der Faschingszüge und Theateraufführungen hatte Isidor Braun, der lustige Stabtrompeter Hämmerle, hervorragenden Anteil.

Die Jahre 1890 bis 1910 waren die ruhigsten während des Bestandes der Paixhanslia.

Am 9. November 1898 ist der Mitbegründer und erste Hauptmann der Paixhanslia, Fabrikant Martin Braun, gestorben. Er war der Paixhanslia durch 43 Jahre ein treuer und erfolgreicher Führer.

Als Nachfolger wurde sein Bruder, Isidor Braun, gewählt, der am 23. Juni 1907 gestorben ist. Dessen Sohn, Ingenieur Isidor Braun (der Großvater von Ritter Isidor) , folgte als dritter Hauptmann der Paixhanslia und war an deren Wiederaufstieg, in den Jahren 1911 bis zu seinem am 1. März 1925 erfolgten Ableben, erfolgreich tätig. Von 1909 bis 1911 kam wieder frisches Leben in die Paixhanslia ; der Mitgliederstand verdoppelte sich und am 7. Feber 1911 fand bereits im Saale des Gasthofes « Zu den drei Mohren » ein Familienabend statt.

...

Das Vorgängerhaus und der Keller (Burg) wurden laut Bualtersplan des Bundesdenkmalamtes zwischen 1575 und 1625

erbaut. Die Paixburg ist demnach an die 400 Jahre alt. Laut einer Zeichnung aus 1700 war es ein stattliches Doppelhaus mit 2 Giebeln und 2 Einfahrten. Daraus erklärt sich auch der Grundriß unserer Burg, die eigentlich aus 2 Kellern besteht : Die Vorburg war der Keller des rechten Hauses und die Hauptburg der Keller des linken Hauses (vom Stadtplatz aus gesehen) . Später sind dann die beiden Keller mit einem schmalen Durchgang verbunden worden. Dieses Haus, das mehrfach den Eigentümer wechselte, diente als Bürgerhaus, Kaserne, Schule, städtisches Theater, Bezirkshauptmannschaft und Bezirksgericht.

Der Keller fand demnach Verwendung als Lagerraum für Waren aller Art, Waffen, Ausrüstung und Vorräte und zuletzt als Kohlenkeller und Rumpelkammer.

1978 bis 1982 wurde das Haus neu errichtet. Der Keller blieb erhalten.

Trotz einiger Innenveränderungen im Laufe der Jahrhunderte dürften die beiden Keller von Anfang an die derzeitige Größe und Gestalt gehabt haben, wofür die Bauweise des Gewölbes und die einheitlichen Baumaterialien sprechen. Alle Teile ohne Gewölbe sind 1978 bis 1982 neu erbaut worden (Eingang, Garderobe, Toiletten und Küche) .

### Bruckner and « Paixhanslia »

**Wednesday, 3 September 1884** : Anton Bruckner becomes an honorary member of Vöcklabruck's « Paixhanslia » Chapter, the local branch (« Reych ») Number 315 of the « Schlaraffia » movement.

Good food, beer and music were always at the « rendez-vous » !

Doctor Franz Leitner is the author of « Anton Bruckner in Vöcklabruck » , published in 1996.

The origin of the word « Paixhanslia » comes from the military cannon « Paixhans » which will be used as a militant symbol : the pleasant and satyric spirit allows its members to shoot with red cannonballs creating a breach in the ramparts of hypocrisy. Ceremonies are parodies of military rituals.

The members have purely imaginary names. This social-club « for men only » (usually middle-aged and occupying secure positions) will promote the arts, tolerance, friendship and « joie de vivre » . Incidentally, there is a certain resemblance to Freemasonry.

Bruckner's association with « Paixhanslia » is due to the fact that Friedrich Hueber, his grand-nephew (known as « Trawi Trawi ») , was a « Knight » of the local club. The Master of St. Florian will be nicknamed « Es Credo » (« Non confundare in æternam ») because of his « heavy tendency » for piety and devotion.

Bruckner (« Es Credo ») , Franz Stelzhamer (nicknamed « Es Piesenham ») and Rudolf Jungmair (nicknamed « Es Friedhof ») are the 3 famous honorary members of the « Paixhanslia » Lodge.

« Paixhanslia's » ancestor was called « Lucke » . Cheerfulness, good mood, music and singing were the key elements.

« Paixhanslia » was founded in 1855 (4 years before his big brother « Schlaraffia ») . Martin Brown, a business-owner, was elected as its first president - his nickname : « Captain Schnautzle » .

The headquarters of the Vöcklabruck Lodge replicates, on a small scale, a medieval castle that looks like a tavern : « Paixburg » Castle. The foundation manuscript (« Luckenbrief ») adorns its walls. It is located in the double-basement at « Stadtplatz » Number 22 and 22a. The patrimonial building has been scrupulously preserved according to the architectural standards established between 1575 and 1625.

A 17th Century statue of the Virgin Mary placed on the façade in a niche on the upper-floor is remarkable. Near the old Town Hall (« Alte Rathaus » , Number 15, 17) , the building (which formerly housed the Court of Justice) is only 20 meters away from the « Burgtor » (City Tower) .

By consulting a map dating back from 1700, it can be described as an imposing « semi-detached » manor with its 2 gables, its 2 entrances ... and its 2 cellars. The secondary part of the « castle » occupies the right-side cellar while the main-part occupies the other - on the main-square side, or « Stadtplatz » . Later, the 2 spaces will be connected by a narrow passage. The building has changed several times of owner. It served as a community centre, barracks, school, Municipal Theatre, District Office and Court of First Instance. The unvaulted parts of the structure underwent multiple renovations between 1978 and 1982, but the double stone cellar has remained in its original state. Prior to the arrival of « Paixhanslia » , the basement was used as a warehouse for goods, for weapons, for coal, and as a storage-room.

A humorous poem of 8 stanzas, created on July 19, 1862, by writer, novelist and composer Franz Stelzhamer (1802-1874) , entitled « A lustige Eicht » (a Merry Stallion) , became the official hymn of « Paixhanslia » . The motto uses first stanza.

Stelzhamer, the author of the National anthem of Upper-Austria who wrote more than 270 poems, resided in Salzburg during the winter, but spent his summers in the town of Vöcklabruck.

Anton David (born on 25 May 1832 in Mauerkirchen) , a member of the « Paixhanslia » Chapter (nicknamed « Paixhans Blasele ») who is also the choir-master of the Vöcklabruck Liedertafel, composed an unskillful music adaptation for men's choir of the poem. Fortunately, Bruckner will had its touch to slightly improve the score.

(The carillon of the town of Ebelsberg plays Anton David's melody.)

That same David/Bruckner arrangement still opens each meeting of the brotherhood.

« A lustige Eicht »

« A lustigö eicht da herrgott selm gweicht » : singende jugend, G131 (1948) .

A'lustig Eicht

Hat da Hergott selm gweicht,  
Selm gweicht und selm gsöngt,  
Ruck'n Huat, wannsta gögnt.

Und da sei aft der Narr nöt,  
Der ziftert und zöhlt,  
Der'n Apfel eh arn anbeißt,  
Zerst speidelt und schölt.

Vothua da koan - lazt  
Zwögna - Nachat und Aft,  
Hau, dö Bira, weil s' 'n hat,  
Dadl laßt s' 'n, san Saft.

Zwanzger is Zwanzga.  
der erst wie da löst  
Floigt gern ab als wia's Vögerl  
Bald's kann, aus'n Nöst.

Da erst und da löst  
Hat ain'n Klang und ain'n Glanz,  
Und vospielet oda gwunga,  
Ganz ausggspielt wird d'Schanz.

Hat'n d'Kellnerin kripst,  
Kringnt'n Spielleut, ain Ding !  
Kains derf kenna, mein Geldkatz  
Is s'schwar oda gring.

Mit an Juchatza kimmi  
Mit an Kreuzsprung gehts furt,  
« Schlick einö ! » « schleck obi ! »  
Hm, Hadern ain Burd.

Drum a'lustigö Eicht  
Hat da Herrgott selm gweicht,  
Selm gweicht und selm gsöngt

Und a'Glück is 's, wenn s'gögn't.

(Vöcklabruck, 19 July 1862.)

The manuscript is now at the Upper-Austrian Library.

Personalities (and their nickname) which are members of « Schlaraffia »

Beethoven, Ludwig van : « Florestan » .

Erhardt, Heinz : « Alberich von Schalk » .

Ginzkey, Franz Karl : « Jakobus vom Attersee » .

Göthe, Johann Wolfgang : « Faust » .

Grillparzer, Franz : « Jaromír » .

Haydn, Franz-Josef : « Symphonie » .

Jungmair, Rudolf : « Freidhof » .

Kaplan, Viktor : « Turbine » .

Löns, Hermann : « Mümmelmann » .

May, Karl : « Kara Ben Nemsí » .

Mozart, Wolfgang Amadeus : « Don Juan » .

Petzelt, Otto : « Daheim » .

Rosegger, Peter : « Heimgarten » .

Rubens, Peter Paul (Oder) : « Malerfürst » .

Schiller, Friedrich : « Funke » .

Schubert, Franz : « Erbkönig » .

Stifter, Adalbert : « Hochwald » .

Stelzhamer, Franz : « Piesenham » .

Stolz, Robert : « Servus Du » .

Wagner, Richard : « Parsifal » .

## « Lucke »

Im Jahre 1855, in einer politisch sehr bewegten Zeit, lag das gesellige Leben in Vöcklabruck im Allgemeinen vollständig darnieder.

Es bestand damals im Gasthaus « Zur alten Post » der Frau Rochart (nachmals Johann Fruhstorfer-Menschik, später Karl Lenzeder, jetzt Volkskreditbank) eine Tischgesellschaft, welche sich die « fröhliche Sippschaft » nannte. Diesem kleinen Kreis gehörten die Brüder Martin und Isidor Braun aus Schöndorf, der Urgroßvater des heutigen Ritters Isidor, Leopold Braun aus Puchheim, die akademischen Maler Blumauer und Wallhammer, Lehrer Jungwirth, Postmeister Winkler und Gastwirt Bartsch an.

Gleichzeitig bestand auch im Gasthof « Zu den drei Mohren » (neben Gasthof « Zur alten Post ») der Ehegatten Forsthuber ein kleiner Kreis lebenslustiger junger Männer, bestehend aus Doktor Huber, Doktor Plattner, Doktor Glanz, ferner Sieghart und von Payr.

Beide Tischgesellschaften verfolgten den gleichen Zweck, und zwar die Pflege der Freundschaft und Geselligkeit, unter Vermeidung jedweder politischer Erörterung. Dieser gemeinsame Zweck brachte die beiden Gesellschaften einander nahe und vereinigte sie im Jahre 1855 zu einer Sippe.

Als Stammlokal wählte sich die Paixhanslia die « Lucke » im Gasthaus Forsthuber.

In den ersten Jahren blieben die Luckenbrüder der Paixhanslia schon wegen des Mißtrauens, welches die Behörden dieser Gesellschaft entgegen brachten, streng unter sich.

Der Wahlspruch : « Deutsch, frei und ehrenhaft » , den die Paixhanslia auf ihre Fahnen schrieb, die Zeremonien bei feierlichen Anlässen, Trompetenschall und die Detonationen der kleinen Paixhanslia Kanone bei den Taufen neuer Mitglieder, die oft aus der Lucke erschallten, gaben Anlaß zu diesem Mißtrauen und zu strenger Überwachung durch die Gendarmerie. Den Paixhansln aber lag nichts ferner als Politik in ihrem Freundeskreis und als die aufgestellten Horchposten dies melden konnten, schwand auch alsbald das Mißtrauen der Behörde.

Die Sechziger Jahre des 19. Jahrhunderts waren die Glanzepoche der Paixhanslia.

Im Jahre 1862 trat die Paixhanslia in die Öffentlichkeit. Anfangs 1862 erfolgte der Eintritt des späteren Bürgermeisters, Doktor Alois Scherer, und dieser gab als Empfangsmeister der Tätigkeit der Paixhanslia eine ganz neue Richtung nach außen hin.

Die großartigen Feste, welche den Ruf der Paixhanslia begründeten, fallen in diese Zeit. Zum Beispiel die Aufführung des antiken Trauerspiels « Kaiser Nero » im Fasching 1864, dem der ganze Stadtplatz als Theaterbühne diente.

Große Feste der Paixhanslia bildeten die Tagungen des vereinigten Tiroler Oberösterreich Landtages, einer humoristischen Gesellschaft, in Vöcklabruck von 1864 bis 1870, an denen über 100 Gäste teilnahmen.

Das Faschingsfest im Jahre 1867 fand im Zeichen einer großen Weltausstellung statt, die durch Napoléon III. persönlich eröffnet wurde. Auch die siebziger und achtziger Jahre weisen eine sehr große Zahl von Veranstaltungen auf.

Über die Silvesterfeier 1886-1887 heißt es in der damaligen Lokalpresse, dem « Oberösterreich Gebirgsboten » :

« Es waltet ein günstiger Stern über den Arrangements der Paixhanslia - sie mag was immer in die Hände nehmen, alles gelingt. »

Der Ertrag solcher Veranstaltungen kam laut den Berichten den Stadtarmen zugute.

Im Zeitungsbericht über den Ausflug der Paixhanslia auf den Gaisberg im Sommer 1887 kommen das Wesen der « alten » Paixhanslia und die augenscheinliche Parallele zur Schlaraffia ganz besonders schön zum Ausdruck :

« Der Ausflug der Paixhanslia ist gleichbedeutend mit einem Fest, wo Gemütlichkeit und Fröhlichkeit vorherrscht und Jokus seine Schellenkappe schwingt und wo jeder an einem solchen Tage Sorge und Kummer bei Seite setzt und sich der ungetrübten Heiterkeit hingibt. Aus den heiteren Mienen war zu lesen, daß ein Jeder seinen Humor in der Westentasche mitbrachte und fröhlich mit den Fröhlichen einen glücklichen Tag erleben wollte. »

An den Veranstaltungen der Faschingszüge und Theateraufführungen hatte Isidor Braun, der lustige Stabtrompeter Hämmerle, hervorragenden Anteil.

Die Jahre 1890 bis 1910 waren die ruhigsten während des Bestandes der Paixhanslia.

Am 9. November 1898 ist der Mitbegründer und erste Hauptmann der Paixhanslia, Fabrikant Martin Braun, gestorben. Er war der Paixhanslia durch 43 Jahre ein treuer und erfolgreicher Führer.

Als Nachfolger wurde sein Bruder, Isidor Braun, gewählt, der am 23. Juni 1907 gestorben ist. Dessen Sohn, Ingenieur Isidor Braun (der Großvater von Ritter Isidor) , folgte als dritter Hauptmann der Paixhanslia und war an deren Wiederaufstieg, in den Jahren 1911 bis zu seinem am 1. März 1925 erfolgten Ableben, erfolgreich tätig. Von 1909 bis 1911 kam wieder frisches Leben in die Paixhanslia ; der Mitgliederstand verdoppelte sich und am 7. Feber 1911 fand

bereits im Saale des Gasthofes « Zu den drei Mohren » ein Familienabend statt.

...

Das Vorgängerhaus und der Keller (Burg) wurden laut Baualtersplan des Bundesdenkmalamtes zwischen 1575 und 1625 erbaut. Die Paixburg ist demnach an die 400 Jahre alt. Laut einer Zeichnung aus 1700 war es ein stattliches Doppelhaus mit 2 Giebeln und 2 Einfahrten. Daraus erklärt sich auch der Grundriß unserer Burg, die eigentlich aus 2 Kellern besteht : Die Vorburg war der Keller des rechten Hauses und die Hauptburg der Keller des linken Hauses (vom Stadtplatz aus gesehen) . Später sind dann die beiden Keller mit einem schmalen Durchgang verbunden worden. Dieses Haus, das mehrfach den Eigentümer wechselte, diente als Bürgerhaus, Kaserne, Schule, städtisches Theater, Bezirkshauptmannschaft und Bezirksgericht.

Der Keller fand demnach Verwendung als Lagerraum für Waren aller Art, Waffen, Ausrüstung und Vorräte und zuletzt als Kohlenkeller und Rumpelkammer.

1978 bis 1982 wurde das Haus neu errichtet. Der Keller blieb erhalten.

Trotz einiger Innenveränderungen im Laufe der Jahrhunderte dürften die beiden Keller von Anfang an die derzeitige Größe und Gestalt gehabt haben, wofür die Bauweise des Gewölbes und die einheitlichen Baumaterialien sprechen. Alle Teile ohne Gewölbe sind 1978 bis 1982 neu erbaut worden (Eingang, Garderobe, Toiletten und Küche) .

**Vienna Conservatory : Academic Year 1884-1885**

**Saturday, 20 September 1884 :**

Im Kapitel « B. Unterrichts-Leitung » des Jahresberichts ist zu lesen :

« 4. Lehrkörper.

I. Ordentliche Lehrer :

(...)

Herr Anton Bruckner, Kaiserlich-Königliche Hof-Organist, Professor. (Harmonielehre, Kontrapunkt und Orgel.) »  
Zu Anton Bruckners Schülern am Wiener Konservatorium gehören Victor Abeles (« 15 Jahre - Harmonielehre, Klavier II. ») , Hermann Abheiter (« 17 Jahre - Klavier A. I. , Kontrapunkt I. ») , Ludwig Großbauer (« aus Losenstein, 13 Jahre - Kontrapunkt, Klavier II. , Chg. ») hörte Kontrapunkt bei Professor Franz Krenn, Max Herold (« 14 Jahre - Harmonielehre. ») , Carl Hrubý (« 15 Jahre - Violin A. I. , Klavier III. , Kontrapunkt I. ») , Cyrill Hynais (« 22 Jahre - Klavier A. III. ») , Alexander Krauß (« aus St. Martin, 13 Jahre - Violin V. III. , Harmonielehre. ») , Doktor Franz Marschner (« aus Prag, 30 Jahre - Kontrapunkt II. ») , Josef Meyer (« 17 Jahre - Orgel V. I. ») , Johann Müller (« aus Maustrenk, 28 Jahre -

Harmonielehre, Klavier I. , Chg. ») , Carl Paur (« aus Moor, 23 Jahre - Orgel V. , Harmonielehre, Klavier I. , Chg. ») , Anton Steibl (« 17 Jahre - Violin A. II. , Harmonielehre. ») , Adolf Steininger (« aus Altmannsdorf, 16 Jahre - Orgel V. , Harmonium, Klavier II. , französische Sprache. ») , (?) Hugo Troizsche (« 17 Jahre - Harfe A. I. , Kontrapunkt, Chg. ») , Carl Weber (21 Jahre - Orgel A. I. , Kontrapunkt I. , Klavier II. ») , Rudolf Wilfert (« 18 Jahre - Orgel A. I. , General der Musik. ») , (?) Heinrich Wottowa (« 17 Jahre - Klavier A. III. , General der Musik. ») , Thimothée Xanthopoulos (« aus Smyrna, 19 Jahre - Orgel A. I. , (separater Eintrag :) Klavier A. II. ») und Peter Zachariades (« aus Constantinopel, 24 Jahre - Kontrapunkt I. , Chg. ») .

Und andere folgende Schüler dieses Schuljahres (vielleicht auch in Brucknerschen Kursen) spielen in Anton Bruckners späteren Jahren noch eine Rolle :

Gottfried Brzibohaty (« 15 Jahre - Fagott V. III. , A. M. , Klavier I. ») , Josef Chimani (« 11 Jahre - Violin V. C. II. ») , Robert Erben (« aus Troppau, 22 Jahre - Komposition A. III. ») , Rudolf Fitzner (« aus Ernstbrunn, 16 Jahre - Violin A. I. , Harmonielehre, Klavier II. ») , Ludwig Grandé (« aus Teltsch, 19 Jahre - Klavier A. II. , Chg. ») , Carl Lasner (« 19 Jahre - Violoncello V. III. , Klavier I. ») , Johann Ostariasch (« 19 Jahre - Fagott V. III. , A. M. ») , Marie Pohoryles (« aus Tarnopol, 16 Jahre - Klavier A. III. , General der Musik. ») , Theodor Tschöpe (« aus St. Veit, 19 Jahre - Cymbalom V. II. (Rept.) , Klavier II. , General der Musik. ») , Georg Valkler (« 18 Jahre - Komposition A. I. ») .

Von den 6 Orgelschülern gehörten drei zur Ausbildungsschule. Der « Übersicht der in den einzelnen Lehrfächern unterrichteten Schülerzahl. » ist zu entnehmen, daß von den Orgelschülern zwei halb und einer ganz vom Schulgeld befreit waren. 6 Schüler (beider Lehrkräfte) hörten Kontrapunkt als Hauptfach, 12 Harmonielehre. Als Nebenfächer wurden Harmonielehre von 147 und Kontrapunkt von 21 Schülern besucht.

Auszug aus der « Unterrichtsstatistik » :

« A.

In den Vorbildungsschulen ...

Orgel, I Jahrgang.

Schülerstand : systemisirter : 4 ; effectiver : 3.

(2 Parallelklassen.)

Effectiver Schülerstand : 26.

Monatlich erteilte systemisierte Lehrstunden : 40, sonach im Jahre ... 400.

### Brothers « Gaudeamus » !

While Anton Bruckner humbled himself at the « Riedhof » Hotel restaurant, seating beside eminent doctors and physicians, he behaved like a gang-leader among his students and disciples at Vienna's 1st District popular guest-house (Restaurant and Beer-Hall) named « at Gause » (« Gasthaus und Bierkeller “ bei Gause ” ») located in a basement at « Johannesgasse Nummer 12 » (or sometimes, at the « Red Hedgehog » and other known inn-restaurants) . They had to spend the full-evening at his service, essentially to please him. Individual punishment was given for any early departure. The desire to go to the Opera, the Concert, or the Theatre was absolutely inexcusable ! The crowded place made him sweat like a pig. He unsuccessfully tried to cool himself by waving his multi-coloured handkerchief. Seated, surrounded by thick smoke, he ordered for everyone and mostly for himself so that the « Pilsner » beer-mug would arrive fresh and foamy. A team of selected waiters was especially assigned to his table. Friedrich Klose mentions that, now and again, the meat, superficially touched by the utensils, passed through his greasy fingers before ending in his mouth. Even the clothes of the surrounding « clientèle » were not safe in front of this broad, gossipy, humorous bunch of people. Discussion topics that not tied Bruckner were rejected ; same thing for friends or new-comers with displeasing or inappropriate behaviour misconduct. In spite of the fear of upsets and outbursts, everyone present was fascinated by this teacher, an old student of Simon Sechter, purely motivated by goodness. Each student had enjoyed

the lessons by Bruckner until the end.

...

Some students gave weird nicknames to Bruckner, just for fun. For example : « You Stocking ! » or « You Garter ! » . But if one of them mischievously ridiculed him, Bruckner would take the young man by the hand, accompany him right to the door-step of the classroom, then make him stand outside for a little while. After 15 minutes, Bruckner would open the door and allowed the pupil back inside.

Once, the young Felix Mottl was asked to get-out of the class but he was reluctant to do so. So, Bruckner spoke to him in a comfortingly way :

« Do you think that “ Herr ” Felix can also stand outside ? »

...

Observers have reported Anton Bruckner's instruction as more inspiring than useful in practice. But all music instruction is like that. The pupil must add from his own resources that which cannot be taught by anyone.

Bruckner demanded respect and conscientious application from his pupils. Occasionally, he spoke to them bluntly and even roughly, but his lovable nature prevented anyone from feeling hurt, with perhaps 1 or 2 exceptions.

He once noticed a girl among his students.

« Are ladies interested in counterpoint now ? » , he asked.

He repeated the question at the following lessons until the girl stayed away. His students remonstrated.

On another occasion, when he entered the classroom, he noticed a Jewish boy sitting in the front-row.

He looked at him for a while, put his hand on the boy's head, and asked, almost with compassion :

« My dear boy, don't you really believe that the Messiah has already come to earth ? »

Professor Bruckner's originality, charisma, familiar anecdotes and touches of humour were seen as « quasi-revolutionary » in the venerable auditorium of the University of Vienna. In response to questions from his students (such as Hanslick's vicious attacks against him) , he used the piano to reply. The « Gaudeamus » became a privileged audience which heard excerpts of his recent compositions. Although the atmosphere in the classroom was sometimes a bit too lively, the magnetism and good-nature of this brilliant musician always managed to set the « right tone » .

...

Anton Bruckner's odd way of speaking isolated him, but he had close and rather patriarchic relationships with young people and with his pupils. They constituted a group of equal minded and equal ranking men who worked on the prejudiced public and held high the banner of musical progress.

Bruckner himself once remarked :

« I owe my success to my students. They go around and tell other people about my music. »

The picture of Anton Bruckner's relations with his pupils is of heart stirring character. His pupils repaid him for many things he could not enjoy as did his contemporaries. They are the most immediate sources of information about the man. Their reports are far more reliable than later conjectures and artificial or arbitrary constructions erected by many a wishful thinker.

Anton Bruckner's lectures at the University were somewhat popular in character, since he thought it impossible to teach harmony in one semester. They were well-attended, partly by students who were impressed by his prominence and partly by persons who wanted to demonstrate their fealty to the Wagner Party. His extreme, even humorous, figures of speech and analogies, with the help of which he illustrated the secrets of chord relationships, were very appealing although quite unusual in the auditorium of a University. Sometimes, Bruckner referred to personal matters, such as the attacks he had to endure from Eduard Hanslick, and he demonstrated on the piano how right he was and how wrong his opponent. Another time the « Gaudeamus » , as he called his students, were the first audience in Vienna to enjoy the music he had been writing when he left his desk for the lecture-hall. He played a portion of it for them. Though the atmosphere of the class was sometimes rather too animated, the magic of the genial musician and his good nature soon established the desired mood.

Anton Bruckner's fundamental thesis was :

« First the rule, then free creation. »

He started the first lesson by writing one note on the black-board, saying :

« First, God made Adam. »

Then, he added the 5th and went on :

« He soon gave him Eve, and the 2 did not remain alone. »

With that, he put down the 3rd.

The 2nd was :

« A poor devil, since nothing is left for him. »

In order to explain the liberties of single tones which build the dominant 7th, he called the fundamental :

« The house father, to whom is given the greatest liberty. »

The 7th was :

« His wife. »

The first :

« The little daughter. »

And the 5th :

« Mister Son, who has more liberty of motion. »

The diminished chord was characterized as :

« A poor thing, because of its tight nature. »

The 7th, if not prepared, became :

« The aunt, since she drops in unexpectedly ! »

At the Conservatory, Anton Bruckner's methods met with opposition from his colleagues. Such opposition to progressive musicians was typical of the Conservatories and music-schools at the time. Their practice was the observance of « tradition » .

Bruckner taught the rules of harmony as axioms, without explaining their origin or foundation. He thought 3 years of study necessary for this course alone. In fact, a pupil not familiar with the foundations of harmonic principles, will need a longer time of training than the student who knows something about their origin and purpose.

Observers have reported Bruckner's instruction as more inspiring than useful in practice. But all music instruction is like that. The pupil must add from his own resources that which cannot be taught by anyone.

Though Anton Bruckner's instruction at the Conservatory was thorough, it was his private pupils who felt its full-weight.

Anyone who wanted to take private lessons had to take a sort of « examination » . If he passed, Bruckner would suggest he start his study of harmony from the very beginning anyway and advance slowly.

Fellow faculty members at the Vienna Conservatory were often rude and cruel to Bruckner. Some ignored him altogether ; but, generally, the students loved him and his music.

...

« De Brevitate Vitæ » (On the Shortness of Life) , more commonly known as « Gaudeamus Igitur » (So Let Us Rejoice) or just « Gaudeamus » , is a popular academic commercium song in many Western countries, mainly sung or performed at university graduation ceremonies. Despite its use as a formal graduation hymn, it is a jocular, light-hearted composition that pokes fun at university life. The song is thought to originate in a Latin manuscript from 1287. It is in the tradition of « carpe diem » (seize the day) with its exhortations to enjoy life. It was known as a beer-drinking song in many early universities and is the official song of many schools, colleges, universities, institutions, student societies.

The lyrics reflect an endorsement of the bacchanalian mayhem of student life while simultaneously retaining the grim knowledge that one day we will all die. The song contains humorous and ironic references to sex and death, and many versions have appeared following efforts to bowdlerise this song for performance in public ceremonies. In private, students will typically sing ribald words.

The song is sometimes known by its opening words, « Gaudeamus igitur » or simply « Gaudeamus » . The Centuries of use have given rise to numerous slightly different versions.

The proposition that the lyrics originate in 1287 is based on a manuscript held in the « Bibliothèque nationale de France » in Paris. A poem starting with the words « Subscribere proposui » (I have suggested signing it) has 2 verses that closely resemble the later « Gaudeamus igitur » verses, although neither the first verse nor the actual words « Gaudeamus igitur » appear. The music accompanying this poem bears no relation to the melody which is now associated with it. A German translation of these verses was made in about 1717, and published in 1730 without music. A Latin version in a hand-written student song-book, dating from some time between 1723 and 1750, is preserved in the Berlin State Library (formerly located at Marburg) ; however, this differs considerably from the modern text. The current Latin lyrics with a German translation were published by Halle in 1781 in « Studentenlieder » (Students' Songs) written by Christian Wilhelm Kindleben (1748-1785) , who admitted to making important changes to the text.

Kindleben's 1781 Latin version, with a translation to English :

(The pseudo-Latin word « antiburschius » refers to opponents of the 19th Century politically active German student fraternities. The letter « j » , used in some modern transcriptions, does not occur in Classical Latin.)

Gaudeamus igitur  
Iuvenes dum sumus.  
Post iucundam iuventutem  
Post molestam senectutem  
Nos habebit humus.

Ubi sunt qui ante nos  
In mundo fuere ?  
Vadite ad superos  
Transite in inferos  
Hos si vis videre.

Vita nostra brevis est  
Brevi finietur.  
Venit mors velociter  
Rapit nos atrociter  
Nemini parcetur.

Vivat academia !  
Vivant professores !  
Vivat membrum quodlibet ;  
Vivant membra quælibet ;  
Semper sint in flores.

Vivant omnes virgines  
Faciles, formosæ.  
Vivant et mulieres  
Teneræ, amabiles,  
Bonæ, laboriosæ.

Vivat et res publica  
et qui illam regit.  
Vivat nostra civitas,  
Mæcenatum caritas  
Quæ nos hic protegit.  
Pereat tristitia,  
Pereant osores.  
Pereat diabolus,  
Quivis antiburschius  
Atque irrisores.

Quis confluxus hodie  
Academicorum ?  
E longinquo convenerunt,  
Protinusque successerunt  
In commune forum.

Vivat nostra societas,  
Vivant studiosi ;  
Crescat una veritas  
Floreat fraternitas  
Patriæ prosperitas.

Alma Mater floreat,  
Quae nos educavit ;  
Caros et commilitones,  
Dissitas in regiones  
Sparsos, congregavit.

...

Let us rejoice, therefore,  
While we are young.  
After a pleasant youth  
After a troubling old age  
The earth will have us.

Where are they who, before us,  
Were in the world ?  
Go to the heavens  
Cross over into hell  
If you wish to see them.

Our life is brief  
Soon it will end.  
Death comes quickly  
Snatches us cruelly  
To nobody shall it be spared.

Long live the academy !  
Long live the professors !

Long live each student ;  
Long live the whole fraternity ;  
For ever may they flourish !

Long live all girls,  
Easy (and) beautiful !  
Long live (mature) women too,  
Tender, lovable,  
Good, (and) hard-working.  
Long live the state as well  
And he who rules it !  
Long live our city  
(And) the charity of benefactors  
Which protects us here !

Let sadness perish !  
Let haters perish !  
Let the devil perish !  
And also the opponents of the fraternities  
And their mockers, too !

What a gathering  
of academics is there today ?  
From far away they gathered,  
Immediately they advanced  
Into the public forum.

Long live our fellowship,  
Long live the students ;  
May truth alone thrive  
May brotherhood flourish  
(and) the prosperity of the country.

May our Alma Mater flourish,  
Which has taught us ;  
Dear ones and comrades,  
(And) the scattered into places  
Various, she congregated.

Felix Mottl : The bad student

Felix Mottl was admitted to the Vienna Conservatory in 1870. He studied music theory and counterpoint with Anton Bruckner ; composition with Otto Dessoff ; and conducting with the director, Josef Hellmesberger senior, who denotes very early-on his full-potential. His passage there will be marked with success.

One day, Professor Bruckner gave back to the student Mottl an exercise which he considered « too freely executed » , and said :

« Here, at the Conservatory, everyone must follow the rules. It is forbidden to write a single note that is not in its place. But once outside these walls, if you compose according to the method, I will expel you from the class ! »

### Student Josef Schalk : « Herr Generalissimus »

With younger brother Franz, Josef Schalk was a student of Anton Bruckner at the Vienna Conservatory, and a friend of composer Hugo Wolf also a student of the Master. As President of the Vienna Wagner Society, Schalk was active in arranging performances of Anton Bruckner's work. He also popularized his teacher's music by arranging it for piano performance, writing articles and arranging for its publication. He played a comparable role in popularizing Hugo Wolf's music.

Bruckner is said to have referred to him as « Herr Generalissimus » .

### Standing-room at the Opera House

**1890** : Diminutive in stature, the 30 year old Hugo Wolf became a cult-figure to the next generation of music students.

Music-critic and composer Max Graf wrote in his memoirs :

« Hugo Wolf belonged to us and we belonged to him. We stared at the pale man who stood in the standing-room section of the Vienna Opera House, just like ourselves, while Johannes Brahms sat in a box like God sitting on the clouds. »

...

Max Graf's description of musical politics of the 1890's (when Hugo Wolf was « a slender man in his thirties ») , characterized by Wolf's presence in the standing-room section of the Vienna Opera House with Graf and other young musicians, devoted to Wagner, fanatical believers in modern music at a performance of Bruckner's 4th Symphony, music about which Wolf, Graf, and their company were all excited, « while Brahms sat in a box like God sitting on clouds » .

Max Graf :

We students were anxious to have Bruckner's opinion of Brahms and went to a Philharmonic concert at which one of Brahms' Symphonies was performed. Brahms was enthroned as usual in the director's box while Bruckner stood among his students quite far back in the standing-room section.

When the concert was over, we asked Bruckner how he liked Brahms' music, and he answered :

« Doff your caps, gentlemen. He is Doctor Brahms - I like my music better. »

### University student Max Graf

In 1890, I entered the University of Vienna, where Anton Bruckner was teaching harmony and composition. That great composer who, with Johannes Brahms, had brought the tradition of the Classical Symphony to a close, was at that time still unrecognized.

The most influential music-critic of Vienna, and the great adversary of Richard Wagner, Eduard Hanslick, tenaciously opposed any music in which he scented the Wagneresque. He failed to understand Anton Bruckner's music, which proceeds, essentially, from other sources than the Wagnerian, and is imbued, in a Catholic spirit, with the sacredness of the Mass.

« Do come to Bruckner's lecture to-day - there's always lots of fun ! » , said one of my fellow-students, and I promptly agreed to come.

It was the first time I had heard the name of Anton Bruckner. But the prospect of having « lots of fun » was irresistible for a freshman aged 18. I arrived in good time at the lecture-room of the Philosophical faculty where this musician, of whom I knew nothing up to that time, gave his lectures on counterpoint. My colleague had described him as a « queer fool » and I expected to be amused.

I knew the room in which the entertainment was supposed to take place. It was the same room in which Professor Eduard Hanslick gave his lectures on musicology, for which I had registered. How well I remember the quaint, old-fashioned piano next to the reading-desk. How well, too, I recall the expectant tension with which I had been looking forward to the famous critic's first lecture - and how distinctly I remember my disappointment ! The little old man who had dared fight Richard Wagner, the mightiest genius of modern music, with the graceful periods of a drawing-room hero, mounted the podium without raising his eyes, almost timidly. He drew a manuscript from his pocket and, in a high-pitched voice, read us a lecture which dealt with the life of Beethoven in a most superficial way, bare of scientific foundation. Now and then, he interrupted his monotonous report, tripped to the piano, played some passages from one of Beethoven's compositions with a very out-of-date fingering, and thereafter, resumed the dull ripple of his lecture.

Previous to this, I had attended courses of several important men of the University of Vienna, and I was well aware how much inspiration and stimulation the fascinating courses of brilliant teachers could convey to the students. I had

become enthusiastic over the elegantly-phrased and witty lectures of Adolf Exner, who, through the description of a Roman journey, had introduced us to the field of Roman Law ; and I had been captivated by the stogy declamation of the idealistic philosopher Franz Brentano. Edmund Bernatzik's lectures on anarchism, Reich's lectures on Ibsen and Menger's on questions of social politics had introduced me to the spiritual movements of the time. I was most eager to learn and went about listening to all sorts of courses without, as yet, knowing where I would finally settle-down. Eduard Hanslick, however, had neither the slightest gift of speech nor the ability freely to communicate with his students. He, therefore, did not appeal to me and I never attended another of his lectures.

Anton Bruckner had become a lecturer on theory of music at the University of Vienna contrary to Eduard Hanslick's wishes.

Bruckner exclaimed, again and again :

« That's what he'll never forgive me ! »

Hanslick, extremely touchy like all vain little men, actually never forgave Bruckner in spite of all the bowing and scraping the latter indulged in whenever he encountered the dreaded critic.

The small lecture-room where I sat with my colleague awaiting the merry performance soon was crammed, and, after the academic quarter had elapsed, there entered a crowd of people : first Anton Bruckner, bowing again and again, and behind him, like a rustling train, old and young men, and a very pretty girl, too. All of us greeted the queer musician by solemn trampling which my friend and I prolonged for fun, much to Bruckner's joy. We were highly-amused at his bows and appearance. Of course, he wore his Upper-Austrian loose jacket, comfortably cut-out of home-woven fabric. His trousers were loose and baggy. The big head was close shaven, and innumerable wrinkles furrowed his face. When he began telling us a lengthy story in Upper-Austrian dialect, he reminded me of an old peasant, battered by wind and weather.

Bruckner glanced about furtively when he told us :

« Just imagine, gentlemen, one of the honourable critics wrote that I was a second Beethoven ! Good Lord, how can anyone dare say such a thing ! » , and he quickly made the sign of the cross on his forehead as if to avert the sin.

The « fun » I had expected during that first lecture was only partly realized, for suddenly something happened that I can never forget. From a nearby church, the « Angelus » sounded and when that little bell rang, Anton Bruckner interrupted his lecture, knelt-down and began to pray : « Ave Maria »

Having finished his prayer, Bruckner stepped-up to the music black-board on the wall, and began his lecture.

Bruckner had been a pupil of Simon Sechter, that mighty fortress of counterpoint to whose home he made a pilgrimage every week from Linz, where Bruckner was cathedral organist at the time. Sechter's entire life was dedicated

to counterpoint. Every day, after he got-up, he sat at his writing-desk, working-out a new fugue. Not before having finished the last organ-point, over which the 4 voices streamed to the final chord, did he have his breakfast.

Sechter's doctrine, which was delivered to us by Bruckner like a holy heritage, was built upon 2 strong pillars. The one which inspired Bruckner with greatest respect was the theory of the « Fundamental Bases » , a world of spirits in the bass, which accompanied the harmonies like shadows in the depths ; and the theory of « natural harmonies » which form the laws of all beauty of harmonic progression. Everywhere, there was law and order, even holiness. The fundamental steps of the bass which Bruckner invariably noted in his scores under the last line of the staff, had cosmic importance. Thus, we understood the greatness and sometimes, the rigidity and solemnity of Bruckner's harmonies. Bruckner, the pupil of Sechter who was a kind of architect of harmonies, pondered over chords and chord associations as a mediæval architect contemplates the original forms of a Gothic cathedral. They were his path to the Kingdom of God.

Bruckner explained Sechter's principles to us by using many comparisons, taken from everyday life, in the dialect of Upper-Austria. He sounded like a peasant telling humorous stories to the children in a farm-house. For instance, he compared an unexpected dissonance in music with a « dear auntie » who unexpectedly came on a visit, spreading terror and confusion in the household until she is cajoled-out of the place again.

« Where is dear auntie, where is dear auntie ? » , he shouted, bending-over the piano-keys.

He struck a chord, again and again, until the necessary missing-note was sounded. Then, Bruckner would beam and bow and exclaim :

« Oh, there she is, our dear auntie ... ! »

The interval of a 2nd was a « poor fellow » who had « to wait in a corner till he was called » ; and the 7th, a « damned wretch whom you may not trust » .

Such metaphors were inter-mingled with memories from Bruckner's life or complaints about Hanslick. One might find such intermezzi scurrilous or naive, but they were the stannings of a child-like soul in an artificial and complicated world which this pure and saint-like man could not comprehend. It was difficult not to become aware of the radiance in Bruckner's face. There was something in the mobile features of this old man which was far greater than the erudition, knowledge and profundity which we found in other professors at the University.

One time, with infinite care, Bruckner wrote some chords on the black-board and pointed-out a certain dissonant sequence which he said was « quite wrong, perfectly incorrect » and « strictly forbidden » . Remarking that this very dissonance which he had just criticized so harshly had been used only twice, once by Beethoven, once by himself, he sat-down at the piano and began playing a passage from the Adagio of his 7th Symphony, where this « perfectly incorrect » and « strictly forbidden » dissonance occurred. It was the first of Bruckner's music I ever heard.

During my 4 years of University studies, I did not miss a single one of Bruckner's lectures. I had been led to him, first, by the prospect of « having fun » . I had been disappointed in this expectation. The new « Brother “ Gaudeamus ” » (that was Bruckner's name for his students) , had forgotten how to laugh in this first lecture, but he had been taught how to admire ingenious creative power.

Meeting this humble genius in Vienna was the greatest experience of my life. I let elegant Viennese society laugh about Bruckner.

### University student Rudolf Steiner

Rudolf Steiner greatly admired the Austrian composer Anton Bruckner, remarking that « something essentially spiritual, which is the foundation of all music, still lived in Bruckner » .

In « Bruckner Propositions III » , Constantin Floros writes :

« In the 1920's especially, Bruckner was celebrated as a mystic “ par excellence ” as a composer whose work could be grasped from the stand-point of the mystical experience behind it. He was claimed by anthroposophists and theosophists as one of their own. »

...

Throughout his life, Steiner held Anton Bruckner in high-esteem. This inspired Erich Schwesbch to write a book entitled « Anton Bruckner. Ein Beitrag zur Erkenntnis von Entwicklungen in der Musik » (Anton Bruckner : A Contribution to the Perception of Developments in Music) . In 1922, Schwesbch lectured on « Bruckner's Musical Mission » at Steiner's Nest-East Congress, in Vienna. Both here and in his book, he considers the significant part which the zodiac plays in the scheme of things :

« ... The keys in music represent space in soul and spirit, and, depending on the key, experiences can differ. They (keys) determine in a way the constellation of a theme in a Symphony, the law by which it enters in, and assert their will, just as the constellations of the zodiac determine the rhythm of 12 months of the year, each with its special nature and its special effect upon the human soul. »

...

Rudolf Steiner inscribed for Bruckner's lectures on the theory of harmony at the University of Vienna in the Winter Semester of 1879 and the Summer Semester of 1880. He became a philosopher, teacher, seer and investigator of the spiritual world, which was as real to him as the material world. Steiner was the founder of anthroposophy, or spiritual science. It involves such subjects as the nature of the human being, reincarnation and karma, esoteric Christianity, education, curative education, medicine, bio-dynamic farming and much more. Steiner would refer to many scientists, philosophers, writers, and occasionally composers when speaking of art and music. Beethoven, Schubert, Wagner and

Bruckner were mentioned as representing a bridge to the world of Spirit.

An understanding of what Steiner had to say can only really be gleaned from his lectures and books, particularly « The Inner Nature of Music and the Experience of Tone ». According to his biographer Günther Wachsmuth, he called attention to the idea that, at early stages in the evolution of humanity, « the musical experience blended with a religious experience ». Then, there was still a consciousness that the action of the Godhead was expressed in the intervals of the 7th, the 5th, the 3rd. Man still shared in the experience of the « cosmic sound of jubilation of the gods » and the « cosmic mourning of the gods ». But, in the last few Centuries, the human being has more and more lost this experience and is for that reason in danger of becoming unproductive in music.

In the lecture cycle « True and False Paths in Spiritual Investigation », Steiner speaks of Bruckner's music :

« The Christ Impulse can be found in music. And the dissolution of the Symphonic into near-dissonance, as in Beethoven, can be redeemed by a return to the dominion of the cosmic in music. Bruckner attempted this within the narrow limits of a traditional framework. But his posthumous symphony (i.e. , the 9th) shows that he could not escape these limitations. »

It is emphasized that he is not criticizing Bruckner's music « per se » ; he considered that Bruckner came near to realizing the spiritual in music.

...

Richard Wagner, Franz Liszt, and Anton Bruckner became subjects for discussion at many cultural gatherings. Fritz Lemmermayer, who had the necessary connections, even went to Bayreuth to attend the dress-rehearsal of Richard Wagner's « Parsifal ». But people were also moved by Bruckner's Masses, performed on Sunday mornings in the Chapel of the Imperial Palace (« Hofburgkapelle ») , with the composer himself playing the organ. Rudolf Steiner had several conversations with Anton Bruckner. He took an intense interest in the visual arts (the paintings of Arnold Böcklin, for instance, touched him deeply) and with the basic questions of æsthetics he had addressed in the final Chapter of Gæthe's Theory of Knowledge (« Knowledge and Artistic Creation ») . He made an impression on his audience when he developed his thoughts on this theme in a public lecture, on November 9th, 1888, given to the Vienna Gæthe Society, at the invitation of Karl Julius Schröer.

...

Vienna, 4 years after the fall of the multi-national Empire : the former capital city and residence of the Habsburg Monarchy was in chaotic confusion, having lost its identity, and loudly screaming its desperation ! There was the misery of refugees, corruption of officials, poverty and beggars at every street-corner. The monetary standard suffered ceaseless devaluation : 1,000 « Kronen » bill and, in exchange for it, barely more than a meager breakfast ! 10 times that amount, and it was not even enough for a Theatre ticket ; 50 times that, and it was just enough for paltry lodgings in an inn !

On the streets of the inner-city, past the Palaces of the aristocracy where the patrons of Beethoven had resided, in whose magnificent halls Mozart had given concerts - there, the young Rudolf Steiner, too, had walked at one time. He had strolled along the Belvedere to the « Technische Hochschule » (the Technical College) ; had walked-down the « Ringstraße » to the University to listen to a music conference given by professor Anton Bruckner ; or had stood at the « Hohe Markt » on his way to the nearby apartment of Karl Julius Schröer.

It was 33 years since he had left Austria to move first to Weimar and, then, to Berlin, until he finally established the last centre of his international activity in Western Switzerland, in an area where 3 countries meet. Now, 33 years later, he was returning to Vienna with his world-wide and growing spiritual movement. The famous building of the « Musikverein » , with all its side-rooms, meeting-halls, study-rooms, and all its personnel had been put at his disposal for 2 weeks.

There, in the largest building of this musical city, this city whose music and lyric art had united nations, there a festive, joyful Whitsun mood ruled the meeting entitled « For the Comprehension of Western and Eastern World Contrasts » . How to build the bridge between West and East out of the new spirituality, the bridge destroyed by the past's lack of spirit - this was what the 2,000 listeners were to focus on for 12 days ! 12 days of Pentecostal contemplation !

The beauty of Providence appeared to have chosen Vienna as the city for the second Congress of the Anthroposophical Movement. During these spring days, the genius of this locality seemed to harmonize with the blessings of the spirit of Whitsuntide. A multi-national union of musical artists had reigned in Vienna for Centuries, mysteriously called there by fate. The creative beauty of sounds reconciled the geniuses of all nations, for the language of music is common to all people. It defies all borders. It requires no rights of translation. It represents the universal bridge over the chasm torn open by materialism and agnosticism.

The faces of those who sit in a concert-hall often appear up-lifted as if by an inner-light. There is no colour to look at with their eyes ; there is nothing tangible to touch with their hands. There is no taste to titillate their palates ; there is no smell to tempt their noses. Yet, they sit devoutly without stirring, as if involved in a preliminary, spirit-training exercise of concentration. Concert-halls, where the Classic-Romantic art of music found its domicile, could become sites for new temples through the benevolence of spiritual geniuses, temples where people can receive a premonition of their inner-soul being, though still immersed, dream-like, in the starry night's kingdom of rhythms with which the soul harmonizes in sleep.

In the course of the past Centuries, had not Vienna been to the development of music what Athens had once been to the creation of sculpture and architecture ? Both cities : seed-beds for gifted geniuses ! Yet, just as Plato and Aristotle appeared only after the arts had come into full-flower, so it was only after Bruckner's great accomplishments that the young Steiner left Austria, for the end of the Classical and Romantic epoch of music coincided with the beginning of the Michael age, which led to the birth of anthroposophy.

...

It is always a great experience when a composition by an artist who basically lives completely in the element of music, such as Anton Bruckner, is played on the piano. In Bruckner's composition, the piano seems to disappear from the room ! One forgets the piano and thinks that one is hearing other instruments ; this is, indeed so, in Bruckner's case. It proves that something of the essentially spiritual, which lies at the basis of all music, still lived in Bruckner, though in a very instinctive way.

...

In the spring of 1923, Rudolf Steiner stayed in Stuttgart several times. On February 27th and 28th, as well as on March 6th and 7th, eurythmy performances took place, and Rudolf Steiner gave an address before each of them. The Domach eurythmists, who were in Stuttgart just at that time, were able to attend both lectures, which were held for Waldorf school teachers and musicians on March 6th and 8th, in « The Inner Nature of Music and the Experience of Tone » . In the lecture on March 8th, he gave first the spatial forms for the intervals and stressed that these are all contained in his « standard forms » . In addition, Rudolf Steiner spoke, in the same lecture, about the « spiritual origin of the musical instrument » .

It is to be assumed that he visited the « Eurythmeum » before March 8th, as was his custom on his trips to Stuttgart. (The leadership and management of this Conservatory was incumbent upon Marie Steiner.)

During one of these visits, Hedwig Köhler, who taught tone eurythmy, did a performance with her students of an arrangement of the orchestral movement from the 8th Symphony by Anton Bruckner. After this performance, Rudolf Steiner drew the spatial arrangement for a « eurythmic orchestral » piece, with quite differentiated forms for the string instruments, the reed instruments, and the brass. (An original is not available.) The lemniscate is the basis for the string instruments ; the form of the instrument is the basis for the woodwinds. The percussion instruments stand on a raised platform, in the centre.

...

Much more so than in Stuttgart, the musical element was a fully-integrated part of the activities at the Vienna Congress. This became evident in the distinctive artistic performances, scheduled for the afternoons and culminating on Whit-Monday in the Bruckner celebration to be presented by members of the Vienna Philharmonic Orchestra, the Bruckner-Choir (« Wiener Bruckner-Chor ») under the direction of Professor Ignaz Leo Weber and, also, the Maireck-Buxbaum String Quartet. In addition to the 2 String Concerts by the Thomastik Quartet, 2 eurythmy presentations under the direction of Marie Steiner took place in the « Volksoper » . A performance of recitation, an evening of arias and songs by Valborg Svardstrom-Werbeck, and 2 lectures : one by Albert Steffen entitled « The Position of the Artist Between East and West » ; and the other by Erich Schwebsch called « Anton Bruckner's Musical Mission » were also on the program.

...

The eurythmy performance on 27 August 1923 opened with « The Rune of the 4 Winds » by Fiona Macleod, first published in 1896, in : « From the Hills of Dream » .

In the eurythmy performance, there followed another poem by Fiona Macleod, « The Moon-Child » and, then, a Prelude by Johann Sebastian Bach, a couple of poems by Albert Steffen, a piece by Anton Bruckner, the song « April, April » by William Watson, and theme and variations from Wolfgang Amadeus Mozart's Violin Sonata.

After an interval, the second part began with 2 Intermezzos by Johannes Brahms and a poem by Eduard Mörike. Then, came the fairies' lullaby « You spotted snakes with double tongue » from « A Midsummer Night's Dream » by Felix Mendelssohn and the song « When daisies pied and violets blue » from « Love's Labour's Lost » . The whole performance was concluded with further musical pieces by Piotr Ilitch Tchaikovsky and Robert Schumann.

...

The Whitsun presentation, in the morning, tried to free religion as an element of humanity from the spell of dogmas, and something similar happened in the afternoon when Erich Schwesbch spoke of « Anton Bruckner's Musical Mission » . Bruckner had started as a church musician, but soon crossed from the monastic confines to the free artists' world of his Symphonic inspirations.

Schwesbch wrote in an essay he had published before the Vienna Congress in the weekly « Das Gœtheanum » :

« Nobody would consider the late “ 150th Psalm ” a church creation, and someday comprehending the “ Te Deum ” will depend not on grasping the traditional church concepts but on the super-sensible, cosmic experience of reality contained in it. »

Erich Schwesbch's lecture given that Whitsun Sunday, between the afternoon's artistic presentations, was intended as a preparation for the great Anton Bruckner Concert scheduled for the afternoon of Whit-Monday. This is why Schwesbch referred particularly to the mighty Mass in F minor, the String Quartet in F major and the « Te Deum » . Schwesbch, the art-instructor of the 11 per classes of the Stuttgart Waldorf School, had just recently published a biography of Bruckner. On the basis of the foundations of spiritual-scientific biographies, he was able to point to the spiritual background of these 3 musical works. The Mass was composed after completion of the 1st Symphony and after Bruckner's recovery from a difficult, critical illness. The String Quartet was conceived around the year 1879, between completion of the 5th Symphony and the beginning of work on the 6th Symphony. The « Te Deum » belongs to the time of Bruckner's final period of maturity.

Just as Rittelmeyer, a former Protestant preacher, succeeded in reaching the hearts of the Catholic Viennese, so Schwesbch, a former school inspector of a Prussian high-school in Berlin, was able to illustrate how Bruckner, a man who grew-up among the peasantry in Upper-Austria, rose to the heights of unique creative genius. Here, through anthroposophy's view of the human being, a cosmopolitan spirit had become active in an exemplary way !

Then, Sunday evening approached to which I was looking forward with the greatest anticipation because the 4th lecture by Rudolf Steiner was scheduled for that time. In the program, the lecture's title was « Anthroposophy and World Evolution from the Stand-point of Geography » . The lectures describing the relationship of anthroposophy to natural science, psychology, and history had preceded this one. The inner-theme revolved around a new teaching of the earth's life, a geography of the etheric containing at the same time a higher-ethnology.

...

The entire building was occupied by many scientific or artistic programs. For instance, in one hall, there were discussions in the fields of chemistry and physics ; in another, in those of biology or psychology, medicine or pedagogy, sociology or economics ; while, in another, the interpretation of the German lectures was proceeding in French or English. For persons had come from various parts of Europe and from great distances, including America. It was really a great gathering of companions at the very time when mutual understanding in the outside-world had sunk to its lowest-level. The good spirit which worked at the « Goetheanum » was here also to teach the human beings in the Congress of Vienna mutual understanding.

Side by side with the scientific undertakings of the Congress, one experienced the religious questions and the artistic impulses. On Pentecost Sunday, June 4th, Doctor Friedrich Rittelmeyer spoke on « The Spirit of Pentecost and Religious Renewal » . The artistic part of the conference was introduced by Albert Steffen in a lecture on « The Position of the Artist between West and East » and a lecture by Doctor Erich Schwebisch on « Anton Bruckner's Musical Mission » . Out of Albert Steffen's lecture was later developed one of his most beautiful literary productions, and Doctor Schwebisch, inspired by Rudolf Steiner's long-continued high-evaluation of Bruckner, produced later a book which helped greatly in expanding the appreciation of this composer. During the Congress, there was a magnificent production of Bruckner's great Mass in F minor by a combination of 3 musical organizations of Vienna. Classical music was represented by a program produced on modern instruments built by the violin-maker Thomastik. All of this artistic production came to a conclusion in the lecture of Rudolf Steiner.

### Bruckner's cosmic musical background in relation to the Zodiac

(Raymond Cox)

Rudolf Steiner was the founder of the Anthroposophical Society. His vast survey of the spiritual evolution of man included many diverse subjects and disciplines - the nature and spiritual background of music and the other arts among them. Steiner's teachings arose-out of his personal and clairvoyant research into the world of spirit. In his early (1906) lecture series « Concerning Music » , the effect of music upon man was discussed. Steiner explained that the individuality of a musician unites in a karmic \* way with the physical characteristics of his heredity. Steiner's most important lectures on music came in 1923. They included « The Experience of Tone in the Human Being » and « The World of the Hierarchies and the World of the Tones » as well as the seminal course, « The Arts and Their Mission » .

\* karma (Sanskrit) : Sum of person's actions in one of his successive states of existence, viewed as deciding his fate in the next ; destiny.

Throughout his life, Steiner held Bruckner in high-esteem. This inspired Erich Schwebsch to write a book entitled : « Anton Bruckner. Ein Beitrag zur Erkenntnis von Entwicklungen in der Musik » (Anton Bruckner : A Contribution to the Perception of Developments in Music) . In 1922, Schwebsch lectured on « Bruckner's Musical Mission » at Steiner's West-East Congress, in Vienna. Both here and in his book, he considers the significant part which the zodiac plays in the scheme of things :

« The keys in music represent space in soul and spirit, and, depending on the key, experiences can differ. The keys determine in a way the constellation of a theme in a Symphony, the law by which it enters in, and assert their will, just as the constellations of the zodiac determine the rhythm of 12 months of the year, each with its special nature and its special effect upon the human soul. »

Stuart Easton, in « Man and the World in the Light of Anthroposophy » (New York, 1975) , describes Steiner's insights into the arts from various points of view. Easton finds the zodiacal implications of great importance. In a section dealing with music, he quotes Steiner as saying that Pythagoras' « Music of the Spheres » is a reality, and that there is an area of the spiritual world into which an initiate enters and becomes « clairaudient » . Some of the great composers, including Bruckner, have been able to enter this world. They could capture and retrieve the sounds they heard in a way that could be sung by human voices or played by human beings on musical instruments. The 12 signs, or constellations, of the zodiac have been connected by tradition with the 12 parts of the human organism. But they also have a connection with the original 12 consonants, from within which the vowels sound forth to create human speech and song. Similarly, in the cosmos or macrocosm, the planets play the part of the vowels and sound forth through the « fixed » stars of the zodiac in greatly varied tones. Man after death experiences (actually, sees and hears) the world of stars and planets as qualities of soul and spirit belonging to the different constellations.

Steiner likens sound to « a window opening on to a spiritual world. In the future, we shall try to penetrate behind the sounds - each sound, in itself, will have a moral and spiritual value. » He always said that we do not experience musical notes as such and that our souls create within us the intervals between the notes. This is what Elsie Hamilton, a student of Steiner, calls the « spiritual experience in time between the 2 notes » . One cannot help recalling, in this respect, the significance of the pauses and spaces which are so characteristic of Bruckner's Symphonic movements.

With regard to the zodiac, special attention must be given to the thoughts of Anny von Lange and, particularly, her book called « Man, Music and Cosmos » (Rudolf Steiner Press, 1992) . Here, Bach, Wagner and Bruckner are prominent figures, Bruckner taking-up the whole of the concluding chapter. One of the book's striking features is the description of the relation of the various major and minor keys to certain qualities in human beings that are expressed through them - together, with the connection with the zodiac. (Minor-keys represent the return of the soul to its own inner-world ; major-keys, the movement of the soul forward to a world outside itself.) Bruckner's use of the key of D minor is touched upon twice, as is its place in the zodiac : the Ram, « Aries » . When it occurs in Bruckner's 3rd Symphony, it denotes a process of development towards individuality and earthly existence seeking expression :

« Man stands “ between heaven and earth ”. He grasps the possibility of mentally combining both regions. »

The second occurrence is in Bruckner's « uncompleted » 9th Symphony, which offers a parallel with Bach's « The Art of Fugue » . Bruckner's process of development would have ended with the crowning Finale of the 9th. According to von Lange, Bruckner trod an unconscious path from his 1st Symphony onwards, united as an artist with the world of divine origin, and protected from any deviation as one « who knew himself to be a child of God » .

Von Lange does not include in her study Bruckner's early F minor and D minor (« Die Nullte ») Symphonies, and she indicates that the process of spiritual development, for Bruckner, really began with the 3rd. What, then, of the 2 C minor Symphonies, Nos. 1 and 2 ? These are represented by « Gemini » (the Twins) and show the composer setting-out to gain Mastery in his creative activity. The 1st Symphony finds joy in this creation and was written as the « outer » world sounding through the composer, while the 2nd was composed more from within. C minor is described as the world of Capability. The Twins operate between the duality of right and left in the body, between active and passive existence, between giving and receiving. When Bruckner reaches another Symphony in C minor, the 8th, it is in a higher-sense of creation (von Lange says : « creative play ») and he is now Master of this realm :

« It is the control of the unity of content and form in which one's every faculty works without question. »

We are left with the major-key Symphonies to consider. No. 4 in E-flat has « Aquarius » (the Waterman) , as its zodiacal counterpart. It is described by von Lange as an « Equilibrium » . Here, the attainment of the sphere of E-flat confirms the discovery of the « I » : Bruckner is growing mature in a cosmic world-consciousness. The E-flat element forms an axis in the zodiac with the « Feeling » element of A major, the key of Bruckner's 6th Symphony. In this axis, the soul is said to be connected to the regulating power of the harmony of the spheres. The 6th Symphony is represented by « Leo » (the Lion) , and it reveals the power of love. Highly-inspired though it is, the 6th remains a preliminary trial for the next stage of the process, which is found in the 7th.

Erich Schwebsch remarks of the 6th :

« Through the 12 spaces, which, as zodiacal spaces, form the whole heaven of sound for our music today, Bruckner lets the phases of the main-theme ring through all 12 keys. »

The 7th Symphony brings a new experience in the round of the zodiac. Its key of E major is a key of light and illumination. The word is « Contemplation » and the sign is that of « Virgo » (the Virgin) . Anny von Lange provides another poetic description :

« A feeling of freedom arises like a sigh of relief, clear and light, as though one were standing before a wide sunlit landscape. The relationship between the “ I ” and the universe, illumined by a knowledge which is still strongly united with feeling, is connected with the warmth of the sun and leaves a happy impression of undefiled purity. A work of resounding light has to be developed. On this path to the heights, dimensions are attained which sound in a divine, star-like way to the (by now, clairaudient) ear of the maturing Master. »

Bruckner's 5th Symphony lies on the axis of « equilibrium » between his 4th and 6th Symphonies. The sign is « Pisces » (the Fishes) , and the description is « Destiny » . The « angel-consciousness » of the 4th Symphony was such that it had to be acquired anew, step by step. B-flat, the key of the 5th, is the natural progression from E-flat. The B-flat Symphony represents Bruckner's complete achievement of outward Mastery.

To quote von Lange again :

« It must prepare the way to a conquest of the personal realm and to a powerful all-embracing love. The difficulty, the solitude and the responsibility of an overwhelming artistic destiny must be made to sound but, also, the up-lifting grace it brings. »

At the 1922 Anthroposophical Congress, in Vienna, Professor Ignaz Leo Weber directed the Vienna Bruckner-Choir (« Wiener Bruckner-Chor ») in performances of Bruckner's Mass in F minor and « Te Deum » .

At a « matinée » concert in the Leipzig Conservatory, on 13 October 1940, an address by Erich Schwesbch preceded the first performance of Bruckner's String Quintet, in its original form by the Strub Quartet of Berlin with Emil Seiler. The concert also featured Franz Schubert's Quartet Movement (« Quartettsatz ») in C minor and the premiere of Bruckner's 2 discarded sketches for the Trio of his 9th Symphony, arranged by Armin Knab.

### Rudolf Steiner and Friedrich Eckstein

Alfred Percy Sinnett's « Esoteric Buddhism » , the first theosophical work to come into Rudolf Steiner's possession through a friend, made a repugnant impression on him. It was only in Friedrich Eckstein that he first met a great scholar of Classical occultism and of the Cabbala.

« Towards the end of the first chapter of my life, I felt an inner-need to attain clarity concerning certain orientations of the human soul. One of these orientations was mysticism. I found it difficult to gain any relation to mysticism as it appeared in the various epochs of mankind's spiritual development, in “ Oriental wisdom ” (Marie Lang) , “ Neo-Platonism ” (Friedrich Eckstein) , the “ Christianity of the Middle-Ages ” (the circle around Marie Eugenie delle Grazie) and in the strivings of the Cabbalists. »

...

In 1889-1890, just before leaving Vienna, Rudolf Steiner spent time with another group of people who would play an important part in his life, up to his departure for Weimar. This group met for spiritually inspiring conversations at the house of the theosophist Marie Lang. It included prominent and spiritually open-minded people such as Friedrich Eckstein, an expert in ancient occult knowledge who was personally acquainted with Helena Petrovna Blavatsky, the founder of the Theosophical Society. Eckstein was just 10 days younger than Rudolf Steiner. Their very dissimilar paths did not cross for the first time at Marie Lang's house. Eckstein grew-up in Perchtoldsdorf, near Brunn, the son of a wealthy factory-owner. In Vienna, he was widely known as a worldly and financially independent genius. He was at

home among the upper-classes, highly-educated in philosophy and well-versed in the natural sciences. He discussed specialized issues (the time-space problem, for instance, that occupied Rudolf Steiner so deeply) with eminent scholars such as the mathematician Oskar Simony or the physicist Ernst Mach.

Eckstein was a knowledgeable patron of modern art. He had studied with composer Anton Bruckner, acting as his private secretary for a period of time and, later, made friends with the writers Hugo von Hoffmannsthal, Karl Kraus, and Hermann Bahr and, also, with Sigmund Freud. Rudolf Steiner met Eckstein frequently in Eckstein's « haunt », « Café Griensteidl » and, later, at the « Hôtel Impérial », often joining him at his table. After Eckstein had called on Helena Petrovna Blavatsky in Oostende, toward the end of 1886, talking with her over several days, she made him President of the Vienna-branch of the Theosophical Society. Rudolf Steiner consulted him for more information about the spiritual stream represented by Blavatsky. That Eckstein possessed an impressive knowledge of esotericism and occult traditions was known to Rudolf Steiner from earlier encounters in the circle around Karl Julius Schröer, where they had discussed the symbolism and esotericism in the works of Gœthe. Friedrich Eckstein, in turn, was interested in Steiner's book on Gœthe's « Theory of Knowledge » and his introductions to Gœthe's scientific writings, which were discussed in various artistic and intellectual circles in Vienna. (« What was created there had been unknown before : an amazing picture of Gœthe's view of the world. » - Fritz Lemmermayer)

Now, in Steiner's final year in Vienna, they met regularly as part of the circle around the sophisticated theosophist and later suffragette Marie Lang with whom Friedrich Eckstein had been in contact since 1887.

...

Rudolf Steiner's former « mentor » and now friend, Professor Karl Julius Schröer, had initially encouraged his interest in Gœthe and, perhaps, importantly to Gœthe's esoteric symbolism, now, also, introduced him to Friedrich Eckstein and, thus, ultimately, to many others within the Lang circle. Notably, Friedrich Eckstein mediated between the 2 worlds in which Rudolf lived, the outer-world, the cultural circles of Vienna ; and, the inner-world of Felix and the « Master » . One of the most knowledgeable men of his age, Eckstein was a chemist, industrialist, music-lover, alpinist and traveller ; also, he had a profound knowledge of traditional occultism. It was to him that Steiner could go if he wanted any exposition of occult (hidden) facts :

« Steiner was in complete harmony with Gœthe's way of looking at nature, but it was Eckstein who could explain to him the symbolism and occult (hidden) terminology in the poet's writings. »

And, as Nicholas Goodrick-Clarke says :

« Steiner had read Sinnett's " Esoteric Buddhism " , soon after its German translation (1884) , and asked Eckstein to explain the secret doctrine. In due course, Eckstein introduced Steiner to Rosa Mayreder and the theosophical circle of Edmund and Marie Lang. Steiner perceptively described them as " homeless souls from Wagnerland " but, nonetheless, however, empathized with the subjective pietism of Marie Lang and remained the lifelong friend of Eckstein, who had shown him the occult key to Gœthe's symbolism. Under the influence of the circle, Steiner studied Oriental thought,

Medieval mysticism, neo-Platonism and the Cabala. By the time Steiner left Vienna, in 1890, to take-up his post as editor of Goethe's scientific works, in Weimar, his interest in both theosophy and German idealism was firmly established. »

Although Eckstein outlived Steiner, it is clear from his autobiography that Rudolf Steiner never unveiled to him the insights, which he had already gained.

...

Because of the way it mingled material and spiritual realities, as well as other obvious short-comings, the theosophy of Franz Hartmann had not convinced Rudolf Steiner when he came across it, in Vienna, in the circle around Marie Lang and Friedrich Eckstein. (« He simply declared it to be spiritually feeble. ») Yet, Rudolf Steiner had, at the time, appreciated Marie Lang's and Friedrich Eckstein's obvious spirituality - as he had the circle of truly seeking individuals who gathered around Marie Lang. Toward the end of his time in Vienna, he read the first theosophical books (Mabel Collins' « Light on the Path » and Alfred Percy Sinnett's much discussed « Esoteric Buddhism »), but he probably did not go much further than that. (« I met various theosophists but nothing in what they had to say induced me to develop an interest in the kind of writings propagated by this Theosophical Society. »)

Rudolf Steiner stayed in touch with Eckstein and Lang after leaving Vienna ; he also read new theosophical publications while he was in Weimar, writing critical reviews in which he dealt with the, then, controversial phenomena of hypnosis and spiritism (they were for him as justified as they were problematic) as well as the dangers of taking on without reflection the Eastern spirituality favoured in theosophical circles. In a book review of 1892, he wrote that he did indeed think highly of the « intuitive Eastern wisdom » and its imagery. (« It is characteristic of the Eastern spiritual life that it creates images that express in the most detailed and pictorial way the great thoughts of humanity. ») At the same time, he spoke of the (entirely different) role that fell to Central Europe that consisted in the conscious taking hold of the « I ». This task could not be by-passed by borrowing from ancient Eastern wisdom or by making recourse to « spiritistic suggestions ». (« In basing their doctrine on the suggestions of a consciousness that is detached from the " I ", the spiritists are mocking science, because science can only rest on judgments formed by the " I ". By adopting views suggested to them from outside, they place themselves on the same level with those who believe in Revelation. It shows the dullness and cowardice of today's rationality that people often seek to gain knowledge of the world without thinking. ») In Berlin (3 years before he gave his first lectures at the Brockdorff's house) Rudolf Steiner occupied himself again with the theosophist Franz Hartmann, who enjoyed great popularity in Germany and Austria. When Hartmann founded the « International Theosophical Brotherhood » and published a German translation of the « Bhagavad-Gita », Rudolf Steiner wrote in 1897 (in his « Magazin für Litteratur ») that the theosophists failed to recognize the responsibility of Central Europe for the advancement of knowledge and referred to the followers of Hartmann as ignorant and arrogant :

« They shrug their shoulders at the European approach to science, deriding its reliance on reason and insisting that the truth can only be found on the Oriental path. Nothing but empty phrases borrowed from Eastern writings without a trace of substance. Their inner-experiences are mere hypocrisy. Adopting phrases from writings that in themselves

constitute profound literature, and using them to declare the entire Western striving for knowledge to be worthless, is nothing short of impertinent. The Theosophists know nothing of the depth and inwardness that pertains to the Western approach to science and, yet, they reject it as superficial and purely conceptual.

Their talk of highest-knowledge (which they do not possess) and their mystifying way of citing foreign knowledge without comprehension nonetheless seems to mesmerize a number of people today. The Theosophical Society is spread all over Europe and has followers in all the major cities. Their opaque ramblings about experiencing the divine within seem to attract many more people than the clear, bright, conceptual knowledge of the West. »

...

In late-March 1925, Rudolf Steiner lay on his sick-bed in the studio of the joinery work-shop, in Dornach. It was a high-ceilinged room with a skylight. At the foot of his bed soared the wooden sculpture which he had carved with the aid of his pupil, the sculptress Edith Maryon. It depicted the « Representative of Humanity » striding between the adversary powers of Lucifer and Ahriman. Steiner was working on the book, later published as his autobiography, which appeared in weekly instalments in « Das Göttheanum » magazine. Books and periodicals lay around on tables and stands. These probably included a book by Friedrich Eckstein, whom Steiner, in his autobiographical reminiscences published on 25 January 1925, had mentioned warmly ; at this, in gratitude, Eckstein had sent him his book entitled « Erinnerungen an Anton Bruckner » (Memories of Anton Bruckner) with the dedication :

« In memory of long-past days of joys of the spirit. »

For Steiner, this was a warm greeting recalling his youthful experiences in Vienna, when he had met Eckstein. In a letter to Eckstein, at the end of November 1890, Rudolf Steiner had said that the importance of this meeting for his own development was equalled only by one other of that time, about which however he must remain silent :

« There are 2 experiences in my life which I count among the most important of my existence, so that I would be a quite different person if they had not occurred. Of one I must remain silent ; the other is the fact that I became acquainted with you. »

There can be no doubt that the first of these 2 experiences refers to Steiner's encounter, at the age of 19, with his Master, which he later described to Edouard Schuré.

### Rudolf Steiner at the coffee-houses

Goethe's « Theory of Knowledge » as well as the introduction to the second volume of Goethe's scientific writings were written by Rudolf Steiner in various locations : in Richard Specht's house, in his parents' house in « Brunn am Gebirge » , in the room where he moved to in 1886, at « Kollingasse » Number 5, close to the Specht's, and, not least, in the Griensteidl coffee-house, where he spent much of his time :

« In the days when the “ café ” was still free from clamour and the smell of beer, wine or food ; when the aroma of freshly roasted coffee and Turkish tobacco, which many guests smoked in long pipes, wafted through all the rooms ! Loud words were not tolerated since they might disturb the readers »

(Friedrich Eckstein)

« The Orient, too, lent its colourful sounds to Viennese music. Turkish merchants, wearing turbans and silk robes, were no unusual sights in Vienna even during Mozart’s time. When he wrote his opera, “ The Abduction from the Seraglio ” where, right at the beginning, Turkish cymbals, drums and triangles conjure up the fairy-tale atmosphere of the Orient, 100 years had already passed since Sultan Soliman’s Turkish army had pitched its tents around Vienna. As the army withdrew, the first coffee-house was opened in Vienna, and coffee was served in the Turkish way, brewed heavy and fragrant. Since that time, Vienna remained an oriental coffee-house city, where one dreamed, planned and did business while having coffee. Tobacco, too, came from Turkey, and still in the time of Franz-Josef, one saw in all stores where tobacco was sold, the picture of a Turk with a long pipe in his hand, puffing forth clouds of smoke. Vienna was near the Orient, and Count Metternich liked to have it said that the Orient began right outside the eastern city limits. Therefore, it is no wonder that Mozart and Beethoven wrote Turkish Marches, and that Goldmark became one of the masters of modern oriental painting in music. »

(Max Graf)

### University student Christian von Ehrenfels

Christian von Ehrenfels, who studied composition under Anton Bruckner from 1880 to 1882, recounted his teacher’s « naïveté » . Once, Ehrenfels arrived to find the Master reading Friedrich Schiller’s « Wallenstein » .

Pacing-up and down, he queried the student :

« It is really true that Wallenstein wanted to betray the Emperor ? »

...

The Austrian philosopher Christian von Ehrenfels (Maria Christian Julius Leopold Freiherr von Ehrenfels) was born on 20 June 1859 in Rodaun, near Vienna ; and died on 8 September 1932. He is known as one of the founders and precursors of « Gestalt » psychology.

Ehrenfels grew-up at his father's Castle at Brunn-am-Walde in Lower-Austria. He joined secondary school in Krems and first studied at the « Hochschule für Bodenkultur » in Vienna, and then, changed to the University of Vienna.

There, he studied philosophy, was a pupil of Franz Brentano and Alexius Meinong, promoted under the supervision of Alexius Meinong, following him after his move to the « Karl-Franzens-Universität » in Graz in 1885, on the topic of «

Größenrelationen und Zahlen. Eine psychologische Studie » (Relations of magnitude and numbers. A psychological study) . He obtained his habilitation in 1888 in Vienna with the work « Über Fühlen und Wollen » (On feeling and willing) . From 1896 to 1929, he was professor of philosophy at the German university of Prague. Interested in his lectures were among others Max Brod, Franz Kafka and Felix Weltsch.

The idea of « Gestalt » has its roots in theories by Johann Wolfgang von Goethe and Ernst Mach. Max Wertheimer is to be credited as the founder of the movement of « Gestalt » psychology. The concept of « Gestalt » itself was first introduced in contemporary philosophy and psychology by Ehrenfels in his famous work « Über Gestaltqualitäten » (On the Qualities of Form, 1890) . Both he and Edmund Husserl seem to have been inspired by Mach's work « Beiträge zur Analyse der Empfindungen » (Contributions to the Analysis of the Sensations, 1886) to formulate their very similar concepts of « Gestalt » and « Figural Moment » , respectively.

His analysis of the transition of a melody to another key became famous. Ehrenfels explained that a melody consists of individual sounds, but that it is considerably more than the sum of these notes. The individual notes would be able to join themselves for completely different melodies, while the melody would remain the same, if transposed into another key and containing single tones. This new opinion, that came-up to a « perception of the whole » compared to its « parts » Ehrenfels called « Gestaltqualitäten » (Figure qualities) .

« In the case of all things that have several parts and in which the whole is not like a heap, but is a particular something besides the parts, there must be some such uniting factor. »

In the 1890's, Ehrenfels (who was a passionate fan of Richard Wagner) befriended a fellow-Wagnerite, the British born German « völkisch » thinker Houston Stewart Chamberlain, « the Evangelist of Race » . Ehrenfels, who despite being a Wagnerite and a friend of Chamberlain's did not generally associate himself with the more extreme racist and anti-Semitic wing of the Wagner movement that Chamberlain came to be the leader of. Ehrenfels never accepted Chamberlain's anti-Semitism, but he was influenced by Chamberlain's theory that the Aryan race was the greatest and best race of them all. Chamberlain was later to have a love-affair with Ehrenfels's wife, Baroness Emma von Ehrenfels.

Ehrenfels argued in numerous cultural-scientific and sexual-political writings against the cultural harmfulness of monogamy and for the utopia of a polygynian social order. He defended the opinion that monogamy would hinder a Darwinistic reproduction (logic and procreation) selection, which would have a devastating effect on society in a cultural-biological way and, therefore, monogamy should be combated. With those theories, Ehrenfels exposed himself to massive criticism, because he offered with his theories unimaginable thoughts to contemporary Western conventions. The basis of Ehrenfels's thinking about a new sexual order were expressed in a series of essays published in several academic journals in Germany and Austria between 1902 and 1910. In his essays, Ehrenfels began with the argument that men are not naturally monogamous, and that monogamy was something that had come to Europe with Christianity. Ehrenfels stated through monogamy had some useful functions such as the « iron discipline » it imposed on European men, on the whole Europeans had suffered terribly from the un-natural condition of monogamy, which had seriously interfered with the Darwinian progress of ensuring the survival of the fittest (Ehrenfels was an avid Social Darwinist) . Ehrenfels believed polygamy was what nature had intended for men as it allowed the « fittest »

men to father as many children as possible with as many as women as possible in a process of « virile selection » . Ehrenfels wrote with disgust that monogamy was « that type of sexual life ... that corresponded to the needs and capacities of women, at the cost of men » . By contrast, Ehrenfels believed that women were naturally monogamous, and that all that women desired was one good husband to look after them. Ehrenfels further believed that all social problems were caused by un-natural state of Christian monogamy, which caused a « splitting » between a man's « day consciousness » when he professed to believe in Christian marriage, and his « night consciousness » , when a man's naturally aggressive, animistic sex-drive come into play. Ehrenfels argued that this « splitting » within men between their « day consciousness » and « night consciousness » caused men all sorts of psychological trauma, and led to men acting in irrational, often violent ways. The specific example of the sort of male irrationality brought-up by Ehrenfels concerning this « splitting » was that of men abusing the prostitutes they visited. Additionally, Ehrenfels argued this psychological « splitting » led to men to treat their wives badly as men were forced into the un-natural condition of monogamy, and that the feminist movement and the entire « Women's Question » had arose as a response ; Ehrenfels believed the « Women's Question » would naturally resolve itself if only husbands would learn to treat their wives better. Finally, Ehrenfels argued that the monogamy was at the root to the « Social Question » (by which meant Ehrenfels meant the rise of the Austrian Social-Democratic Party) as it encouraged men to leave their fortunes to their children, something that Ehrenfels believed to be natural, but also something that « very often contradicts the demands of social justice » . As a result of wealth being spread by « privilegistic » means as opposed to « meritocratic » means, the poor felt resentment and were voting for socialist Parties, which promised to abolish inequality. Ehrenfels believed that humanity was naturally unequal, and the demand for universal human equality had to be fought as it totally un-natural. In a 1908 essay, the proud aristocrat Baron von Ehrenfels called the demand for universal equality being made by the Social-Democrats « preposterous » .

Moreover, Ehrenfels was obsessed with the fear of the « Yellow Peril » , and believed that Asian peoples were a deadly threat to European civilization. Ehrenfels believed that Asians were especially dangerous enemies of the Europeans because in East Asia, polygamy was accepted as a natural part of the social order. Ehrenfels warned that this process of « socially victorious » Chinese men taking as many wives as possible was ultimately a grave threat to the West. As a result of polygamy, genetically superior Asian men were fathering as many children as possible with as many women as possible while genetically superior European men were fathering children by only one woman. As a result of European monogamy and Asian polygamy, the Europeans were losing-out to the Asians, and it was only a matter of time before this genetic edge allowed the Asians to destroy European civilization. As a Social Darwinist and a racist, Ehrenfels saw all history as an endless racial struggle with the fittest « races » surviving. Ehrenfels took it for granted that the whites and Asians were natural enemies, and always would be. In Ehrenfels's view-point, the fact that Chinese were capable of working hard while eating less than Europeans were an important sign that the Asian « race » was thanks to polygamy was starting become the stronger « tougher race » .

Ehrenfels wrote with alarm that :

« The average constitutional strength of the Chinese, their resistance to over-work and ... noxious and prejudicial influences of all kinds ... exceeds that of the civilized peoples of the West to an astonishing degree. »

Ehrenfels warned that if this progress was allowed to continue, then the « beautiful Aryan race » to whom Ehrenfels compared to « clear mountain streams » and « purest white milk » would be swept away by the Asian « torrents of mud » . Ehrenfels stated that racist anti-Asian immigrant laws like the Chinese Exclusion Act in the United States were a good first step, but were insufficient to stop the rise of the « tough, fecund Mongol race » .

Ehrenfels proposed solution was to do away with monogamy, and create a new social order based on polygamy. To begin with, the State would take complete control of human sexuality. In Ehrenfels's new society, the « highest goal » would be the « improvement of the human constitution » by allowing only the fittest white men to breed. In Ehrenfels's new society, only those white men who proved themselves to be social « winners » would be allowed to marry, and the number of wives a man could have would be based upon his degree of success. The more successful the man, the more wives he would have. The State would assign a man his wives after determining his social success and other features such as health, looks, morality and intelligence. Women, by contrast, would be allowed only one husband at a time. All women would be forced to live in communal barracks at the expense of the State, where they would help each other raise their children and where their husbands would visit for sex. In this proposed new society, Romantic love would be done away with, and relations between men and women would be only sexual. For men who were « social losers » , a certain number of the genetically less fit women would be sterilized and turned into the « courtesan class » who would be set aside for the sexual use of the « loser » men in brothels. Since in Ehrenfels's view-point, all that men really wanted from women was sex, not love, in this new society men would not suffer the psychological problems caused by monogamy, thus ending the « splitting » . Since this new society would be meritocratic, this would solve the entire « Social Question » as there would no more inherited wealth and privilege. Furthermore, in this new society, women living in their communal barracks would help each other with raising children, so women would have more time for leisure, and as such Ehrenfels believed that women would come to see this new society as a huge improvement over the previous monogamist society. Their husbands now free of monogamy would treat them better, and so the entire « Women's Question » would dissolve as women would lose interest in feminism (which Ehrenfels saw as very un-natural) . To end the « Yellow Peril » once and for all, Ehrenfels suggested that the « white nations » band together to conquer all the Asian nations before it was too late, and create a new world racial order with a hereditary, racially determined « caste system » . In Ehrenfels's vision, whites would serve as the oligarchic « Aryan » military and intellectual castes and the Asians and blacks as the slave castes supporting the whites. To prevent Miscegenation, interracial sex would be a capital crime with offenders to be publicly hanged.

Until the Russian-Japanese War of 1904-1905, Ehrenfels believed that these sort of radical changes would only happen sometime in the far-future, or as Ehrenfels put it in 1902 :

« The Aryan will only respond to the imperative of sexual reform when the waves of the Mongolian tide are lapping around his neck. »

After Japan's victory over Russia in 1905, Ehrenfels wrote :

« The absolute necessity of a radical sexual reform for the continued existence of the western races of men has ... been raised from the level of discussion to the level of a scientifically proven fact. »

In a 1907 essay, Ehrenfels wrote that radical sexual reform was « now a question of “ to be or not to be ”... We have no time to lose » .

Ehrenfels suggested as a starting-point, the Austrian government begin to allow soldiers upon completing their military service to have polygamous marriages, with those soldiers who proven themselves especially intelligent, brave and physically fit to have the largest number of wives. Subsequently, Ehrenfels made a public appeal to « manly Aryan men » who had proved themselves to be both « social winners » and « studs » to disregard monogamy and marriage, and to start impregnating as many women as possible to give the « white race » a genetic edge in the coming war against the « Yellow Peril » . Before the Russian-Japanese war, it has been the Chinese who had personified the Asian threat to Ehrenfels ; after the war, the Asian enemy of the future was the Japanese.

In his essays in 1907-1908, Ehrenfels wrote that the Chinese lacked « all potentialities ... determination, initiative, productivity, invention and organizational talent » .

While the Chinese were now a listless mass of allegedly mindless Asians, Ehrenfels wrote that Japan was « a first rate military power » , and should the Japanese conquer the Chinese, the Japanese would engage in selective breeding to create a race of « healthy, sly, cunning coolies, virtuosos of reproduction » in China. Once that happened, Ehrenfels warned that a vast Sino-Japanese army would set to conquer the world consisting of genetically superior soldiers whom the Western powers would be unable to stop.

Ehrenfels's ideas were not widely accepted by the public, but the very fact that he was allowed to publish essays on his new society in intellectually prestigious, learned academic journals in Germany and Austria show that his ideas were part of the intellectual main-stream in the first years of the 20th Century. Social Darwinism and racism were part of the intellectual main-stream in the West as was the widespread belief that white men were starting to become « soft » , and if white men continued to lose their masculine « hardness » , inevitably this would lead to process of « racial degeneration » , which would end with the whites becoming enslaved to the « Yellow Peril » .

However, Ehrenfels's ideas did meet with disagreement. In December 1908, Sigmund Freud invited Ehrenfels to give a lecture on his proposed new society. The audience generally offered polite dissent from Ehrenfels with one participant calling his new society an « adolescent sexual fantasy » . Ehrenfels's proposed new society earned him criticism from the Catholic Church which objected to his attacks on Christian monogamy ; from feminists who were offended by his idea that women should be kept essentially as chattels and treated as sex objects by men ; and from the Romantic everywhere who were upset about his plans to abolish Romantic love. The American historian Edward Ross Dickinson wrote the « pieces » of Ehrenfels's thinking were all main-stream, but the way he brought them together was « idiosyncratic » . Dickinson suggested that these ideas were rooted in Ehrenfels's own tormented sexuality as he was both fascinated and repulsed by sex. Ehrenfels had been brought-up in an extremely conservative, sexually repressive Roman Catholic family, and from his teenage years onwards, always felt deep shame and guilt about his sexual desires. Despite his obsession with sex, Ehrenfels was enraged by pornography (which he wanted to see ruthlessly stamped-out) and by the « indecent » popular culture of Vienna, which he saw as far too sexualized. Ehrenfels was especially offended by the « Animier-kneipen » (hostess bar) , a type of popular bar in Austria where the buxom waitresses wore

very low-cut dresses and were encouraged to flirt with the male customers in order to get them to buy more drinks ; in the « Animier-kneipen » , the waitresses were paid commissions based on their nightly sales of alcohol. Ehrenfels was deeply disgusted by the sight of women flaunting their sexuality to manipulate men, and wanted the « Animier-kneipen » banned. Besides for that, Ehrenfels complained constantly about « indecent puns » used by ordinary people, the « courtesan style » in modern fashion and by the « pornography of the humorous weeklies, in comic songs, farces and Operettas » .

Dickinson wrote that when Ehrenfels wrote about men suffering from what he called the « tortuously shackled animal personality » created by monogamy, he was almost certainly writing about himself. Dickinson suggested that based upon a reading of Ehrenfels's private letters, that his concerns about psychological « splitting » within men were based upon his own visits to prostitutes, where he saw johns abusing the prostitutes, and that he may himself had badly treated the prostitutes he had sex with (his letters are somewhat ambiguous on this point) . The frequently which Ehrenfels brought-up the example of how psychological « splitting » was causing men to abuse prostitutes may very well had reflected a guilty conscience on his part about past abuse that he had inflicted on the prostitutes whose services he had used.

In a 1908 essay entitled « The Yellow Peril » , Ehrenfels wrote that 13 years earlier in 1895, he « arrived, on the basis of personal experience, which it would be superfluous to recount here, at the following 2 alternatives :

“ Either I am an individual of totally corrupt sex instincts, or our monogamous sexual order is an institution with completely corrupting tendencies. ” »

In the late-19th Century, what the British historian John Tosh called the « flight from domesticity » novels became very popular, which were a major influence on Ehrenfels. The « flight from domesticity » novels typically dealt with a ruggedly tough male who lived life on his own terms, usually alone and always in some remote frontier place, and who almost never had a relationship with a woman or children. The heroes in the « flight from domesticity » novels were usually a frontiersman, a hunter, a cowboy, a scout or some other suitably adventuresome, manly occupation. Because the heroes in the « flight from domesticity » novels lived in the wild in harmony with nature, they were always portrayed as being more morally purer and authentic than the people who lived in modern civilization. The hero in the « flight from domesticity » novel was always the « strong silent type » , the taciturn tough guy who lived uncompromisingly by his own code of honour and who embodied typical male values like courage and self-reliance far better than did the men who lived in civilization. Typical of the « flight from domesticity » novels were the Allan Quatermain novels by the British novelist Henry Rider Haggard dealing with the adventures of a British frontiersman in 19th Century South Africa ; the Western novels by the German novelist Karl May dealing with the adventures of the German immigrant cowboy Old Shatterhand and his Apache best friend Winnetou in the American Old West ; the Scott Allen Cameron novels by the Canadian novelist Ralph Connor about a Mountie singly-handedly upholding the law in the Rocky Mountains ; and Western adventure novels by the Irish-American novelist Thomas Mayne Reid.

The typical hero in Reid's novels which were extremely popular in the United States and Europe was described as

being :

« gallant, skillful at arms, far more at ease around men than around women, has lots of time for trappers and soldiers but little for the upper-classes and intellectuals, and is much happier hunting and killing than thinking » .

Tosh argued by the end of the 19th Century, the burdens of being a husband and a father in a modern, industrialized, urban society were such that many men fantasized about « chucking it all » to escape domesticity ; to live a life unburdened by the demands of a job, children, a wife or any other social obligation. Hence the popularity of the « flight from domesticity » novels, which celebrated the « masculine primitive » . Ehrenfels's ideas about his new society where men would live apart from women and children, would not participate in raising their children and whose relationships with their wives would be entirely sexual bear a very strong resemblance to the themes in the « flight from domesticity » novels. Significantly, Ehrenfels believed that in his new society where men would not be burdened by the demands of family life would allow them to live more fuller and adventuresome lives like the type depicted in the « flight from domesticity » books. Ehrenfels's own fantasies about manly Aryan heroes battling the « Yellow Peril » who would single-handedly kill hundreds of the « evil » Asians while sleeping with every white women in sight, but never having a relationship or raising children appeared to be a sexualized version of the macho fantasies found in the « flight from domesticity » novels. It should be noted that not all of the « flight from domesticity » writers took the same racist line as did as Ehrenfels, with May in particular being very sympathetic towards the plight of Native-Americans in his Old Shatterhand novels. In many of the « flight from domesticity » books, non-white peoples like the Zulus and the Apache were depicted admiringly if rather patronizingly as « noble savages » who in their primitive state had preserved certain spiritual qualities that people in the industrialized West had long since lost. What Ehrenfels like many other men at the time seemed to have liked in the « flight from domesticity » novels was the celebration of the « masculine primitive » ; a purer, rawer, tougher form of masculinity that was alleged to exist in the wild than that found in civilization.

In April 1895, the German Emperor Wilhelm II had a nightmare where all the nations of Europe appeared as « prehistoric warrior goddesses » who were protected by Germany which took the form of the Archangel Michael. To the East, they were threatened by a dark, stormy cloud in which a Chinese-style dragon carried a Buddha wreathed in fire under which marched millions of Asians who destroyed all in their path, killing all whites. After his nightmare, which Wilhelm regarded as a message from God about the coming, apocalyptic great « race war » between Europe and Asia which would decide the future of the 20th Century, he had a painting of his nightmare done by his Court painter Hermann Knackfuß in September 1895. The painting, which was known as the « Yellow Peril » painting was very popular in its time. Ehrenfels saw the « Yellow Peril » painting in December 1895 and was greatly impressed. From 1895 onwards, Ehrenfels was greatly influenced by the « Yellow Peril » propaganda put-out by the German government, in which Wilhelm repeatedly warned of the alleged Asian menace to the West. As a Wagnerite who deeply involved in the various Wagner Societies in Vienna, Ehrenfels got to know Prince Philip von Eulenburg, the German ambassador to Austria-Hungary and an anti-Asian racist who promoted the fear of the « Yellow Peril » to anybody who would listen. More broadly, Ehrenfels's « Yellow Peril » anti-Asian racism was part of an environment in which non-white men were depicted as threatening to rape white women. In this racist view-point, to protect their women from being raped, white men would have to wage a « primitive » and « primordial » racial war against the « Yellow

Peril » , which justified both white supremacy and male supremacy. The same sort of language and imagery was always frequently invoked with the fears about a « race war » with the blacks and the Jews. European racists often considered the Jews to be a race apart from the rest of humanity, and so the Jews were lumped in with the blacks and the Asians.

Dickinson noted that for Ehrenfels, the fear of the « Yellow Peril » was always expressed in water imagery ; noting how Ehrenfels warned of a « flood » of Chinese coming to the West, that the Chinese were a « torrent of mud » in which Europe was drowning in, that the Japanese were a « polluting liquid » , and that Europeans would not respond to this menace until the « waves » of Asians were up to their neck. The German historian Klaus Theweleit wrote that the same threatening water imagery was frequently used in the writings of « Freikorps » men during the inter-War period, but the only threats were the Jews and the Communists (usually the same thing in these writings) rather the Asians which threatened to subsume German men. Theweleit wrote that Right-wing German men who had served in the « Freikorps » during the inter-War period were obsessed with proving their masculinity by establishing their « hardness » , and that the water imagery reflected their fear of women, the erotic, love, intimacy, and of dependence, all things that threatened to make them less than manly. Theweleit argued in his 1977 book « Männerphantasien » (Male Fantasies) that the water imagery was associated with sexuality and a loss of self-control.

Reviewing Theweleit's book in 1987, the American historian Paul Robinson wrote that :

« ... one can't read it without feeling that Mr. Theweleit is onto something : the piling-up of examples eventually begins to take its toll on even the most skeptical. »

Dickinson argued that men like Ehrenfels felt the same sexual anxieties about their masculinity as did the writers examined by Theweleit, but only he projected these anxieties onto the « Yellow Peril » rather than « Judeo-Bolshevism » . To be in love can often mean a certain loss of self-control as those in love often invoke the images of being « swept away » or « swallowed-up » . Dickinson argued that for Ehrenfels, a self-proclaimed macho « manly man » and Aryan « alpha » male, the prospect of being in love with someone was terrifying as it meant the possibility of losing control, and he projected those fears (which were always expressed in the water imagery) onto the Asians.

Ehrenfels often denied quite vehemently that marriage had anything to do with love, writing before his own marriage that marriage was :

« (...) in the final analysis the sexual provision for 2 persons of the opposite-sex through mutual, exclusive and contractual agreement to inter-course. Our morality tries to cover the matter ... instead of sexual provision we speak of a unity of souls and the contractual agreement to coitus ... is more or less transparently veiled by the term “ community of bed and table ”. »

Dickson wrote that Ehrenfels's efforts to deny that a man could ever love a woman suggested a huge fear of emotional dependence on his part.

Dickinson noted that Ehrenfels's intense bouts of depression together with periods of manic activity suggested a degree of emotional instability on his part, adding :

« A number of prominent men of the period more or less conform to the same pattern. Gail Bederman has described related personality structures in Granville Stanley Hall and Theodore Roosevelt. Both exhibited manic restlessness, quasi-messianic self-regard, insecure masculine sexuality, a fear of racial degeneration and bizarre theories regarding the regenerating evolutionary power of masculine sexuality and the genocidal instincts of all males - who, each believed, naturally sought to exterminate men of other races as part of the struggle for the survival of the fittest. Emperor Wilhelm II of Germany, while probably closer to outright mental illness, exhibited similar traits-including manic activity, intellectual eclecticism, megalomania, occasional nervous break-downs, genocidal cogitations, and concern with the “ Yellow Peril ”. »

Ehrenfels projected feminine qualities onto the Chinese, always using feminine verbs when writing about the Chinese, and always compared China to a woman after 1904. The German language has 3 sorts of verbs : masculine, feminine and neutral. Ehrenfels's fear of the Chinese reflected his fear of the feminine which might overwhelm the masculine through the powers of love and sex. By contrast, Ehrenfels always used masculine verbs when writing about the Japanese, and he often compared the Japanese to a rival male that was seeking to dominate the « woman China » in competition to the European powers that were also compared to males. Dickinson argued that Ehrenfels's constant use of this sort of sexualized language of power, aggression and domination when writing about China reflected his own fear of sex, love, sexual dependence, his sexual adequacy as a man, and most of all, emotional dependence. Dickinson further noted the great irony of Ehrenfels's life, namely that his own biography disapproved his theories about men as sex-crazed animals incapable of love for either the women in their lives or their children. By all accounts, Ehrenfels did indeed deeply love his wife and his 2 children.

Dickinson noted that many of Ehrenfels's ideas seem to anticipate National-Socialism, but this was not the case. Within the first decade of the 20th Century, some of the more radical members of the eugenics - Social Darwinist movement in Germany were already advocating killing the physically and/or mentally disabled as the best way of improving the Aryan race. Ehrenfels was deeply horrified by these ideas, and made it clear that in his proposed new society, the mentally and physically disabled would be prevented from marrying, and this was enough. Had Ehrenfels lived long enough, he would have been appalled by the Action T4 programme launched by the German government in January 1939 to exterminate all physically and mentally disabled people in the « Reich » (which by that included Austria) . Likewise, Ehrenfels was opposed to anti-Semitism, writing there was no « Jewish bogey » threatening the « Aryan race » ; called anti-Semitism « silly » and argued that the Jews would be very useful allies for the Aryans in the coming war with the Asians. In this, Ehrenfels parted company with his friend Houston Stewart Chamberlain who believed in the coming great « race war » that the Asians together with the blacks would fight under the leadership of the Jews against the Aryans.

### Baroness Emma von Ehrenfels

Ehrenfels's wife Emma was befriended by Houston Stewart Chamberlain. His daughter was the author Imma von

Bodmershof and his son Rolf, a professor of anthropology who converted to Islam in 1927 and assumed the name Omar. Omar Rolf's wife, Elfriede von Bodmershof, was a literary person. As well, she registered the pseudonym « Kurban Said » as belonging to her for the novels « Ali and Nino » as well as « Girl from the Golden Horn » .

However, Lucy Tal whose company E.P. Tal had published « Ali and Nino » wrote her lawyer saying :

« I had never heard of the Baroness ... Also my late husband's right hand and secretary knew nothing of the Baroness. Only much later, when for some reason, we looked at the “ Buchhändler Börsenblatt ”, we discovered the Baroness as “ Kurban Said ”. Of course, under the Nazis pseudonyms were born, people unrightful had themselves as authors ... »

The Czech Zionist, philosopher and friend of Kafka, Felix Weltsch, wrote many essays and memos about Ehrenfels, who himself was of partly Jewish descent. Weltsch was one of Ehrenfels's most important pupils.

## Works

« Hadmar von Kuering » , bourgeois tragedy.

« Brutus » , bourgeois tragedy.

« Richard Löwenherz » , bourgeois tragedy.

« Die Brüder von Hartenstein » , drama) ; Graz (1885) .

« Der Kampf des Prometheus » , libretto.

« Metaphysische Ausführungen im Anschluße an Emil du Bois-Reymond »

Über Fühlen und Wollen : Eine psychologische Studie, Carl Gerold & Sohn, Vienna (1888) .

### University student Josef Laser

Professor Bruckner always required respect and full implication from his pupils. He spoke to them rather bluntly (sometimes in an abrupt and awkward manner) , but his good nature prevented them from feeling a certain discomfort.

This ambiguity is illustrated by the story from Johann Kerschagl's reminiscences of attending Bruckner's lectures at the Vienna Conservatory, the occasion when Bruckner entered the classroom and noticed a small Jewish boy sitting in the front row, gazed a while at him, then put a hand upon his head and said to him, « almost compassionately » :

« Dear child, do you really believe that the “ Messiah ” has not yet come to earth ? »

According to Kerschagl's memoir, as retold by August Göllerich (Göllerich / Auer, Band IV.1 ; pages 532-533) , the whole place burst into laughter, but Bruckner was altogether serious.

Kerschagl identifies the student in question as the cellist Josef Laser, who later played in the premiere of Bruckner's 9th Symphony under the baton of Ferdinand Löwe in Vienna, in 1903 ...

**Wednesday, 11 February 1903 (7:30 pm) : Vienna, « Musikverein Großer Saal » . Ferdinand Löwe conducts the « Wiener Symphoniker » and the « Singverein der Gesellschaft der Musikfreunde » mixed-choir.**

Soloists : Agnes Bricht-Pyllemann, soprano ; Gisela Körner, alto ; Hermann Winkelmann, tenor ; Richard Mayr, bass.

**Anton Bruckner : Symphony No. 9 in D minor (unfinished) , Ferdinand Löwe's retouched version of 1903 (WAB 109) .**

Anton Bruckner : « Te Deum » for soloists (SATB) , mixed-choir, orchestra and organ « ad libitum » (1884) (WAB 45)

According to Laser, Löwe rehearsed with parts made from the original manuscript, but made numerous alterations in the course of the rehearsals, which eventually resulted in a comprehensive revision.

### University : Bruckner and female students

Another somewhat negative aspect of Bruckner's role at the University must be noted. He did not believe that women would have any interest in learning harmony and counterpoint.

Although regulations allowed full-access to the « fair sex » , he managed to oust them.

Bruckner said :

« Ladies are now interested in counterpoint ? »

He will put this kind of pressure during each lecture until the female student decides to leave. The class will admonished him about this objectionable behaviour.

### Female student Elisabeth Rotter

Elisabeth (« Elsa ») Noé von Nordberg, born Rotter (1879-1937) , was a famous harpist and student of Anton Bruckner. Rumour said that she was able to play a score by heart after only having read it once before. In still medieval times for women's rights, this gifted musician was not allowed to play with the Vienna Philharmonic Orchestra, a male domain back then.

Her husband was Karl Noé von Nordberg, a psychiatrist heading a sanatorium. Highly-talented but bi-polar, « Elsa » received treatments for her mental condition.

### Female student Laura Kahrer (Rappoldi)

The distinguished Austrian composer, virtuoso pianist and piano teacher Laura Rappoldi, « née » Kahrer, was born on 14 January 1853 in Mistelbach near Vienna, Lower-Austria ; and died on 2 August 1925 in Dresden, Germany (« Alter Katholischer Friedhof, Friedrichstraße ») .

Laura Kahrer was only 11 years old when she played her own compositions for Benedikt Randhartinger, who had been a friend of Franz Schubert.

From 1866 to 1869, she studied in Vienna at the « Konservatorium der Gesellschaft der Musikfreunde » under Josef Dach (piano) , Otto Dessooff (composition) and Anton Bruckner (counterpoint) . She took the First Prize at the age of 16.

After travelling as a concert-player through the principal towns in Germany, studied under Franz Liszt and Hans von Bülow, and rose to the front-rank of German pianists. She undertook many concert tours and performed in Prague, Berlin, St. Petersburg, Moscow and other cities.

In 1874, she married the violinist Eduard Rappoldi. Their son Adrian was born in 1876 and he became a violinist like his father. In 1880, Laura gave-up travelling on request of her husband. She continued to perform in Dresden and became a professor at the Conservatory in that city in 1890. In 1921, she led a Master-class for the piano.

### Female student Marie Pohoryles

Anton Bruckner proposed marriage to his pupil Marie Pohoryles, a Polish Jewish young woman who seems to have taken lessons from him for almost 10 years.

### Female student Mathilde (Aloisia) Kralik

Mathilde Kralik was the daughter of Bohemian glass industrialist Wilhelm Kralik von Meyrswalden (1807-1877) from Eleonorenhain. After the death of his first wife Anna Maria Pinhak (1814-1850), he married Louise Lobmeyr (1832-1905) on 28 May 1851. Mathilde was the 4th of 5 children from his second marriage to Louise « née » Lobmeyr. Her brother was Richard Kralik von Meyrswalden, the poet philosopher, historian and arts administrator.

Her first compositions were lyrical poems and hymns based on her brother's works. The family regularly had music in the house, as her father William played the violin and her mother Louise played piano. In this way, the musically gifted children not only learned the milieu of Classical chamber music, but, also, string orchestra furnished music of the time by Haydn, Mozart and Beethoven. Early on, the parents recognized the musical gifts of their daughter, and the financial circumstances of her father allowed Mathilde the best music teachers of her time.

Mathilde Kralik took piano lessons from her mother, and, later, was a pupil of Anton Bruckner, Franz Krenn and Julius Epstein. She passed the 1876 entrance examination for the Conservatory of the Society of Friends of Music, and studied at the Conservatory, from 1876 to 1878. She won the 2nd prize for a Scherzo for piano quintet and received First Prize for her thesis, « Intermezzo from a suite ». Kralik graduated from the Conservatory with a diploma in composition and the Silver Society Medal.

Mathilde Kralik's works became popular in the concert scene of Austria. On 19 April 1894 and on 19 April 1895, her compositions were performed at the « Kleine-Saal » (« Brahms-Saal », 598 seats) of the « Musikverein ». In the 1889-1899 season, the Quartet Duesberg presented her 1880 composed Piano Trio in F major (1880). On 12 January 1900, Josef Venantius von Wöb hosted a concert in the « Große-Saal » (2,063 seats) of the « Musikverein » where Matilda took « The Baptism of Christ » after a poem by Pope Leo XIII was presented. Her « Christmas Cantata » for solo, choir and orchestra was also staged. On 20 March 1908, in the « Kleine-Saal », a concert included 4 songs and arias from her fairy-tale Opera « Blume and Weißblume ».

Mathilde was Honorary President of the Women's Choir Association Vienna, and a member of the Vienna Bach community, the Austrian Composers, the Association of Writers and Artists Club of Vienna and the Viennese Musicians.

In October 1905, her mother Louise died at age 74. The death of her mother affected Kralik and her work stagnated for half a year. From 1912 onward, she lived in their home alone until she took an apartment in Vienna with Doctor Alice Scarlat (1882-1959) .

The Opera « Blume und Weissblume » was presented in 1910, in Hagen, Westphalia, and, in 1912, in Bielsko, and was popular not only because of these 2 performances, but also because of sensationalist coverage in the press. The former Capuchin friar Nicasius Schusser had written an Opera called « Quo Vadis » , in which he took 52 pages from Mathilde Kralik's Opera, note for note. Mathilde responded in the press, but gave-up legal action against Schusser. After World War I, the popularity of Mathilde Kralik's work declined, and she died on 8 March 1944, in Vienna.

...

Born into a highly-cultured and musically accomplished upper-class family, she took on the « official » full-name of Mathilde Aloisia Kralik von Meyrswalden after the Austrian Emperor elevated her father, a wealthy Bohemian industrialist, to the minor nobility as Wilhelm Kralik Ritter von Meyrswalden. Louise, her mother, provided her early piano training ; and the entire family made music at home together. After moving to Vienna in 1870, Mathilde's parents saw to it that their precocious daughter studied with the very finest musical pedagogues - including private counterpoint lessons with Anton Bruckner, who was later one of her professors after she was admitted to the Vienna Conservatory in 1876. While there, she became a part of the musical circle that included Gustav Mahler.

After completing her formal studies there with great distinction in just 2 years, Mathilde and her older brother and champion, Richard (a noted poet, philosopher and cultural historian) soon rose to the fore-front of Vienna's artistic life. She was particularly close to Richard. Despite being trapped in an era of pervasive, male-dominated artistic chauvinism, Mathilde soon established her reputation as a pianist and composer of particular ability. The siblings' regular musical and literary « salons » consistently attracted the city's intelligentsia and artistic « élite » .

Even Eduard Hanslick, the notoriously vicious Viennese critic, found Mathilde to be :

« A genuine, original talent which holds great promise for the future. »

While she composed in multiple genres, she was best-known during her lifetime for her smaller-scale works like Lieder, piano and chamber music, and sacred choral pieces. Her larger-scale works were seldom heard, one exception being her fairy-tale Opera, « Blume und Weißblume » : one of her 3 works in that genre. She remained musically active throughout her long life, though her deeply Romantic style went-out of fashion as the 20th Century unfolded.

**Hugo Wolf : the expelled student**

Hugo Wolf entered the Vienna Conservatory in **September 1875**, studying harmony with Robert Fuchs, piano with Wilhelm Schenner, and composition with Franz Krenn. His stay at the Conservatory was short. He left in 2 years, dismissed, the official records say, on account of a breach of discipline. It appears that he was more sinned against than sinning. Some wild youth had sent to Josef Hellmesberger senior, the head of the Conservatory, a letter warning him that he had only one more Christmas to enjoy, after which his end would come ; the missive was signed with the name of « Hugo Wolf » . According to the account that seems most to be relied on, that of Paul Müller, who had the story from the composer himself, Hugo went to Hellmesberger to explain that the joke was not his. The scared Director raised an alarm ; Wolf tried to establish his innocence by producing a specimen of his own hand-writing, but could not obtain a hearing. Hellmesberger was firmly convinced that his life was in danger, and, for some time, the terrible Wolf, a desperate villain of 17 or so, was kept under the eye of the Vienna police. He was of course, at once, banished from the Conservatory.

(In a letter to Oskar Grohe dated **Friday, 2 May 1890**, Wolf says he stayed 1 year at the Vienna Conservatory, where he learned very little. He educated himself, he adds.)

Both Hugo and his father were greatly downcast at this turn of events ; succeeding as it did so many records of failure at other schools, this dismissal seemed to set the seal of the vagabond upon the boy. He himself raged furiously at the authorities for placing on him the stigma of dismissal from an institution which he was only too anxious to leave ; he talked, indeed, of bringing an action against them. But the fact remained that he was now outside the great Vienna Conservatory, and that it would probably not have been easy for him to enter another even had he desired to do so. The boy had, henceforth, no other schools and no other Masters than those he made for himself. Both in literature and in music, he took his education into his own hands. He read voraciously everything he could get hold of, being guided by a singularly sure and catholic taste. He took-up the study of music with intense earnestness, mostly extracting for himself the principles of structure and other points of technique directly out of the works of the great Masters. The concerts at Vienna gave him plenty of material to reflect upon ; we find him begging Felix Mottl to get him some pupils, so that he may live decently and be able to stay in Vienna, instead of spending the winter in Windischgrätz where he will hear no music. The 2 brothers, Josef and Franz Schalk (the former died in 1900) done good service in Wolfs cause ; the latter, the well-known Vienna conductor, befriended him and placed their musical possessions at his disposal. He spent day after day in the big Vienna Library, absorbed in music of every kind, but chiefly that of Beethoven and of Bach, dissecting it, committing it to memory. One day, in later years, his friend Paul Müller called upon him and happened to see in his room a dilapidated copy of Beethoven's Piano Sonatas. Turning the leaves over, he noticed many indications on them of careful study, and remarked upon them to Wolf.

Wolf said very seriously :

« Yes, those were bad days. I lived at that time in a garret, and had no piano ; so, I used to take-out the Sonatas separately, and go and study them in the “ Prater ”. »

**Alfred Stroß : the troubled student**

Alfred Stroß (1858-1886) : Estimable pianist and composer of keyboard music. His unfortunately early death in Vienna came as a result of his insanity (at the time, the neuro-pathologist Doctor Theodor Meynert was treating him) . Stroß had been one of Anton Bruckner's students and an acquaintance of Gustav Mahler, Hugo Wolf, Friedrich Eckstein, Rudolf Steiner and Fritz Lemmermayer.

Rudolf Steiner was present during Bruckner's lectures on harmony and counterpoint at the University of Vienna. He joined the Master at the « Café Griensteidl » , during the period 1886 to 1890.

Alfred Stroß devoted a Symphonic work to Anton Bruckner.

From Rudolf Steiner auto-biography :

« Alfred Stroß, the composer, was a gifted man, but one tinged with a profound pessimism. When he took his seat at the piano in “ delle Grazie's ” home and played his “ études ” . One had the feeling ; Anton Bruckner's music reduced to airy tones which would fain flee this earthly existence. Stroß was little understood ; Fritz Lemmermayer was inexpressibly devoted to him.

Both Lemmermayer and Stroß were intimate friends of Robert Hamerling. Through them, I was led later into a brief correspondence with Hamerling. Stroß finally died of a serious illness in spiritual darkness. »

...

« We often had the opportunity to hear also the 4 women artists of the Austrian Tschamper Quartette ; there, Fritz Lemmermayer melodramatically recited Hebbel's “ Heideknabe ”, to a fiery piano accompaniment by Alfred Stroß. »

...

« Besides these, the Saturday evening callers were the historian of the Church and other theologians, and, in addition, I met now and then the philosopher Adolf Stöhr, Goswine von Berlepsch, the emotionally moving story-teller Emilie Mataja (who bore the pen-name of Emil Marriot) , the poet and writer Fritz Lemmermayer, and the composer Stroß. Fritz Lemmermayer, with whom I was later on terms of intimate friendship, I came to know at one of delle Grazie's afternoons. A highly noteworthy man. Whatever interested him he expressed with inwardly measured dignity. In his outward appearance, he resembled equally the musician Rubinstein and the actor Lewinsky. With Hebbel, he developed almost a cult. He had definite views on art and life born-out of the sagacious understanding of the heart, and these were unusually fixed. He had written the interesting and profound romance, “ Der Alchemist ”, and much besides that was characterized by beauty and depth. He knew how to consider the least things in life from the view-point of the most vital. I recall how I once saw him in his charming little room in a side-street in Vienna together with other friends. He had planned his meal : 2 soft-boiled eggs, to be cooked in an instantaneous boiler, together with bread. He remarked with much emphasis while the water was heating to boil the eggs for us : “ This will be delicious ! ” In a later phase of my life, I shall again have occasion to speak of him.

Alfred Stroß, the composer, was a gifted man, but one tinged with a profound pessimism. When he took his seat at the piano in delle Grazie's home and played his " études ", one had the feeling : Anton Bruckner's music reduced to airy tones which would fain flee this earthly existence. Stroß was little understood ; Fritz Lemmermayer was inexpressibly devoted to him.

Both Lemmermayer and Stroß were intimate friends of Robert Hamerling. Through them I was led later into a brief correspondence with Hamerling, to which I shall refer again. Stroß finally died of a serious illness in spiritual darkness.

»

### Stroß's piano compositions

There are 2 extensive works by Stroß, who are still little mentioned in the world of art, to be considered as Opuses :

**Opus 1** : 20 « Silhouettes » . The work is consistently harmonious and rhythmically unusual, and interesting in many aspects.

The natural course of the melody, however, suffers quite often of the undeniably deliberate intention of the harmonic sequences, but it can not be denied that the talent of the composer, apparently still in the « Sturm und Drang » period, is quite considerable.

If « Herr » Stroß succeeds in shaping his style more naturally, then, his compositions may penetrate more and more into all circles.

The « Silhouettes » are only accessible to those players whose musical skills are not only outstanding in pianistic and technical terms, but are also of particular musical significance. Their interpretations demand a real music sense.

**Opus 2** : « Fantasy Pieces » (« Fantasiestücken ») .

In the « Fantasiestücken » , whose dance rhythms contribute significantly to each piece, there are many appealing moments.

It seems as if the composer was more careful here in his harmonies. In addition to the choral accords which are quite sought-after, no trivial passages are encountered.

Undoubtedly, the composer will still speak of himself. At any rate, his first works are seriously pointed-out, for they deserve whole-hearted attention.

### Doctor Theodor Meynert

The German-Austrian psychiatrist, neuro-pathologist and anatomist Theodor Hermann Meynert was born on 15 June

1833 in Dresden and died on 31 May 1892 in Klosterneuburg near Vienna.

Meynert treated pianist Alfred Stroß, friend of the young Rudolf Steiner (Fritz Lemmermayer. « Erinnerungen an Rudolf Steiner, Franz Brentano, Anton Bruckner, Fercher von Steinwand, Robert Hamerling » ; page 39) .

...

Theodor Meynert was a Professor of Psychiatry at the University of Vienna while Sigmund Freud studied there. He doesn't make much of a splash in « The Interpretation of Dreams » , but he does appear briefly (in disguised form) in one of the dreams featuring Freud's father. While interpreting this apparently « absurd » dream, Freud comes to the realization that the father-figure in it isn't his real father - it's totally « Teddy » Meynert.

As Freud writes :

« Here, the figure for whom he (his father) stood was no less a person than the great Meynert, in whose footsteps I had trodden with such deep veneration and whose behaviour towards me, after a short period of favour, had turned to undisguised hostility. »

As with so many of the other colleagues who appear in Freud's dreams, Meynert's presence opens up intriguing questions about the role that various father-figures played in Freud's professional and personal life.

...

Thanks to Theodor Hermann Meynert the Vienna School of Medicine came to rival that of the Salpêtrière and Queen's Square. He inspired the work of Paul Emil Flechsig (1847-1929) , Karl Wernicke (1848-1905) and Auguste-Henri Forel (1848-1931) , and influenced Sigmund Freud (1856-1939) . He may be seen as a prophet of things to come.

Meynert was born in Dresden to a writer and an Opera singer. The artistic background and certain Bohemian characteristics never left him. The family moved to Vienna when he was 8. Here, he spent long and rather wild student days and received his medical doctorate in 1861. Sobering down, and driven by an intense desire to emulate his teacher, Carl von Rokitansky (1804-1878) , he was habilitated as « Dozent » in 1865, and then, began lecturing on the anatomy and function of the brain. In 1866, he was named prosector of the « Wiener Landesirrenanstalt » , and, in 1870, was appointed director of the psychiatric clinic and professor « extraordinarius » of psychiatry. In 1873, he became full-professor of nervous diseases. From 1885, he held the title of « Hofrath » . He was succeeded in the chair by Richard von Krafft-Ebing (1840-1902) , remembered for, among many things, coining the term « sadism » .

Meynert's main-achievements were in research on the anatomy and the physiology of the brain. He formulated a new theory of brain functions, which he attempted to bring in accord with pathological observations. He is now chiefly remembered for his 1869 description of dorsal tegmental decussation or « fountain decussation » .

Meynert's ideas drew many visitors to Vienna even though he had the reputation of being a poor teacher. Auguste-Henri Forel (1848-1931), who spent 7 months (1871-1872) with Meynert at the old insane asylum on « Lazarettgasse », had to hold back his great disappointment in Meynert's lectures and laboratory. His department, Forel relates, was disorderly and filthy, not unlike the Oriental Quarter of Vienna, and through it all romped Meynert's 2 children.

Bernard Sachs (1858-1944), as a novice attempting to learn neuro-anatomy in Meynert's laboratory in 1892, found it disconcerting that he had to struggle alone with a series of brain sections for a month before the Master would show the least interest in him. « A very stormy day », said Sachs to Meynert on greeting him one morning. « I have not yet had time to think about it », was the reply; and Sachs remarked to himself, « That settled that. » Meynert tried to be amiable to his assistants, but was seldom cordial. Urbanity was a luxury in which his brilliant mind would not allow him to indulge.

Meynert was described as having a massive head surmounting a short body, a sprawling bushy beard, and mane-like hair which had the habit of falling down into his eyes. He had an expression of melancholy; his wife had died early, and death had robbed him of his 17 year old son. Despite his troubles, or perhaps because of them, there was robustness in his poetry, regarded highly by the critics of that day. The same may be said about his drawings of the brain, to be found in the Neurological institute of Vienna to this day.

Meynert was also active as a journalist, being editor of the « Wiener Jahrbücher für Psychiatrie » as well as co-publisher of the « Archiv für Psychiatrie und Nervenkrankheiten » (Berlin). With Max Leidesdorf (1818-1889), he was co-publisher of « Vierteljahrsschrift für Psychiatrie » (Neuwied and Leipzig). He was for 1 year president of the « Wiener Verein für Psychiatrie und forensische Psychologie ».

« The main-function of the central organ is to transmit the fact of existence to an ego gradually shaping itself in the stream of the brain ... If we look upon the cortex as an organ functioning as a whole then the information that it subserves the processes of the mind is all that can be said ... to think further about the cortex is impossible and unnecessary ... But our hope to understand eventually the function of the hemispheres is raised again by the opposite assumption which leads us straight to an organology of the central surface .... Between these 2 theoretical possibilities, the facts have to decide. »

...

The father of Theodor Meynert was a writer and his mother a singer at the Court Opera. Meynert, a « curious mixture of artist and naturalist », became a doctor of medicine in 1861 and, in 1865, he presented a thesis that authorized him to teach in third level education: « Bau und Leistungen des Gehirns und Rückenmarks mit Beziehung zu deren Erkrankungen » (Structure and activity of the brain and spinal cord in relation to their pathology). In 1868, his authorization was extended to include psychiatry. An experienced dissector, he was appointed director of a psychiatric hospital in Lower-Austria in 1870. By 1873, he occupied a chair of psychiatry and, in 1875, he became the director of the psychiatric clinic attached to the University of Vienna.

Meynert's scientific contributions are related to his work on the pathology of the brain, such as mapping the topography of the sensory and motor pathways and identifying the nerve endings in the cerebral motor cortex and the linking pathways of the « cerebellum », as well as functional antagonisms that are important for the history of the evolution between the cerebral cortex and the rest of the brain. Meynert is recognized as the founder of the cyto-architectonics of the cerebral cortex. He devoted himself to establishing psychiatry as an exact science based on anatomy. He formulated the antagonism between the cortex and the sub-cortical zones as being the key to the abnormal function of cerebral mechanisms in mental illness. He left his mark on theories concerning the causal links between cerebral pathologies and psychoses as a result of deficits in cerebral nutrition related to vaso-motricity. His article « Amentia » (1890-1983) describes and demonstrates the interaction between organic and psychological factors.

In July 1882, when he entered the General Hospital of Vienna as an intern, Sigmund Freud had already abandoned his career as a researcher with Ernst Brücke for financial reasons. Having worked as an assistant physician in Meynert's clinic, from May 1 to September 31, 1883, he continued his laboratory research into the anatomy of the brain for another 18 months. However, his initial high-esteem for Meynert was transformed into a critical distance with regard to the « idol Meynert enthroned in the heavens ». Meynert later distanced himself from Freud because of the latter's interest and experience with Jean-Martin Charcot's ideas in Paris and his therapeutic involvement with hypnotism.

...

Theodor Meynert believed that disturbances in brain development could be a predisposition for psychiatric illness and that certain psychoses are reversible.

In 1861, Meynert earned his medical doctorate, and, in 1875, became director of the psychiatric clinic associated with the University of Vienna. Some of his better-known students in Vienna were Josef Breuer, Sigmund Freud, who, in 1883, worked at Meynert's psychiatric clinic, and Julius Wagner-Jauregg, who introduced fever treatment for syphilis. Meynert later distanced himself from Freud because of the latter's involvement with practices such as hypnosis. Meynert also ridiculed Freud's idea of male-hysteria ; though some authors believe this to be due to his own hidden suffering of the illness, prompting a reconciliation with Freud near to his death. Other famous students of Meynert's were Russian neuro-psychiatrist Sergei Korsakoff (1854-1900) , German neuro-pathologist Carl Wernicke (1848-1905) and Swiss neuro-anatomist Auguste-Henri Forel (1848-1931) . Meynert's work was an important influence in the career of German neuro-pathologist Paul Flechsig (1847-1929) .

Meynert's work was largely focused on brain anatomy, pathology and histology, including the mapping of its intricate pathways and topography. He made many contributions involving the study of the cellular architecture of the brain and is often considered to be the founder of cerebral cortex cyto-architectonics.

Meynert developed theories in regards to correlations between neuro-anatomical and mental processes. He conceptualized that a coupling between one mental association and its temporal successor as a literal contact between cortical nerve cells linked to one other by nerve fibres, and a series of cortical associations could, therefore, be construed as being a « train of thought » . He also theorized that ideas and memories are to be envisioned as being

attached to specific cortical cells.

In regards to mental illness, Meynert conceptualized that a conflict existed between the cerebral cortex and the sub-cortical regions as the primary cause for abnormal function of cerebral components. Also he formulated that a causal connection existed between cerebral pathologies and psychoses due to a lack of « cerebral nutrition » related to vasomotor functionality. Meynert's aim was to establish psychiatry as an exact science based on anatomy. In his 1884 text-book, « *Psychiatrie. Klinik der Erkrankungen des Vorderhirns* », Meynert forewords with the statement :

« The reader will find no other definition of “ Psychiatry ” in this book but the one given on the title-page : “ Clinical Treatise on Diseases of the Forebrain ”. The historical term for psychiatry, i.e. , “ treatment of the soul ”, implies more than we can accomplish, and transcends the bounds of accurate scientific investigation. »

He has several anatomical structures named after him, including the basal optic nucleus of Meynert, the « *substantia innominata* » of Meynert and « *Meynert cells* », which are solitary pyramidal cells located in the cerebral cortex near the calcarine fissure. In 1869, Meynert described the dorsal tegmental decussation of the left and right tectospinal and tectobulbar tracts, located in the « *mesencephalon* » (mid-brain) . This was to become known as « *Meynert's decussation* » or as « *fountain decussation* » .

### University of Vienna : Inauguration of the Renaissance style main-building

**Saturday, 11 October 1884** : Emperor Franz-Josef inaugurates the Renaissance style main-building on « *Franzensring* » (today known as « *Universitätsring* ») by architect Heinrich von Ferstel.

**Sunday, 19 October 1884** (letter presumably completed on October 20) : Letter from August Göllerich junior to his mother and sister who live in Wels :

« (...) Today, I have assisted to the first lecture of Professor Anton Bruckner at the new Vienna University (...) »

The construction of the main-building took place between 1877 and 1884, according to plans by the architect Heinrich von Ferstel that combined the forms of the Renaissance and the monumentality of the Baroque era. On the site of the former military parade area on Vienna's splendid new « *Ringstraße* », the Parliament, the City Hall and the University were all built at the same time. The architecture of these 3 monumental buildings echoes the democracy of the Greeks (in the Ancient Grecian style of the Parliament) , the aspirations of the bourgeoisie in the Middle-Ages (in the Gothic City Hall) , and the flowering of Humanism (in the Renaissance style of the University) . In 1871, Ferstel had studied the older university buildings in Bologna, Padua, Genoa and Rome during a trip to Italy. In the creation of the arcaded court-yard, the architect used the model of the « *Palazzo Farnese* » in Rome. It was intended to be a « *campo santo* » to commemorate renowned university teachers and a recreation area for young people engaged in studies. The first memorial was erected in 1888 to commemorate the lawyer Julius Glaser. Today, there are some 150 sculptures and reliefs of Viennese scholars, and among them (as the only woman) is the poet and honorary doctor of the University, Marie von Ebner-Eschenbach. Especially noteworthy is the commemorative group by the sculptor Carl

Kundmann (1892) , which is dedicated to the Austrian educational reformers Leo Graf Thun-Hohenstein, Franz Exner, and Hermann Bonitz. There are also remarkable sculptures by such important artists as Franz Xaver Messerschmidt, Caspar Zumbusch, Richard Kauffungen, Josef Tautenhayn junior, and others. The centre of the court-yard has been occupied since 1910 by the Kastalia Fountain, the « Spring of Wisdom » , that was created by Edmund Hellmer. In 1926, it was decreed that a term of 10 years must pass between the death of a scholar and the erection of a memorial in the arcade.

In spite of the grand proportions of the whole complex (with a ground-plan of 161 metres by 131 metres) , the original intention of accommodating all bodies (faculties) of the University in one central building could not be fulfilled. In addition to the official rooms of the Rector, 2 ceremonial halls and the central administration the building was able to accommodate the 4 Deans, the University Library and many departments and lecture-halls. But a considerable proportion of the University's institutions had to be located in many other buildings away from the centre.

### WAB 102 : Liszt says NO

**October 1884** : During his stay in Vienna, Franz Liszt will refuse the dedication of Bruckner's 2nd Symphony (**WAB 102**) .

### Death of Bishop Franz-Josef Rüdiger

**Monday, 29 November 1884** : Death of Bishop Franz-Josef Rüdiger. His final words were the last verses of the « Stabat Mater » :

« Christe, cum sit hinc exire, da per matrem me venire ad palmam victoriae. Quando corpus morietur, fac, ut anime donetur. Paradisi gloria. »

His breathing ceased and he died without having uttered the « Amen » . His remains were interred at the Linz Old Cathedral but, in 1924, moved to the new cathedral he had commissioned back in 1855.

### Viennese premiere of Berlioz's « Te Deum »

**Sunday, 14 December 1884** : Hans Richter conducts the Viennese premiere of Hector Berlioz's « Te Deum » at the « Musikverein » .

Anton Bruckner's pupil and friend, August Göllerich junior, recalls the evening spent with the composer :

« I climbed to the organ gallery, the cheapest section of the “ Großer Musikvereinsaal ”, and stood with Bruckner (...) through a badly cut and poorly prepared performance of the Berlioz “ Te Deum ” (...) . The Master was completely captivated, though he had a threatening expression on his face. After the concert, although the work had clearly made an impression, not a word escaped his lips for a long time. He quickly and firmly grabbed my arm and stormed off to

the restaurant “ Stadt Frankfurt ” where he invited me to his favourite meal at the time : (roasted) capon and apple “ purée ”.

(Capon is the name given to a castrated rooster. The capon dates back to the time of the Greeks and Romans. This bird is known for its over-sized, meaty breast and tender, super-moist texture.)

Suddenly, he gave me a hefty poke on the side with his elbow, and burst-out with a summary of his conflicting deliberations :

“ And ecclesiastical, it isn't !! ” »

Bruckner had criticized the work in part because the performance he attended did not take place in a church.

That concert came at a time when Bruckner was completing his own setting of the « Te Deum » . Presumably, his remark indicates he thought Berlioz had crossed the line separating the sacred from the profane. Bruckner did not endow his « Te Deum » with gigantic proportions, as Berlioz done with his own (1855) .

...

August Göllerich junior relates this anecdote in his chapter about Viennese concert life and Bruckner's work on his own « Te Deum » in 1884. In the context of a discussion of Bruckner's large sacred compositions, while admitting the futility of trying to read the composer's mind through Göllerich's filter, it is tempting to speculate as to the nature of the deliberations inspired by Berlioz's monumental work. At the very least, it is safe to say that « And ecclesiastical, it isn't ! » states the obvious : the Berlioz performance had not taken place in church. Göllerich's narrative suggests a more critical stance on Bruckner's part. Perhaps, the composer was pondering issues of musical style : had Berlioz, whom he admired, provided an appropriate setting for a sacred Latin text - a text that had been very much on Bruckner's mind in recent months ? Or by « kirchlich » did he mean « liturgical » , thus questioning the appropriateness of the Berlioz work for use as service music ? Perhaps, venue and content intersected in Bruckner's mind, and the Berlioz performance caused him to deliberate on broader, one might say Wagnerian, issues of where and how sacred and secular overlap. He had already been accused himself of turning the « Credo » of the F minor Mass into a religious « Wolf's Glen Scene » . Given that he would finish his career with a Symphony dedicated to God, and propose his « Te Deum » as a suitable Finale, it may not be far fetched to speculate that weighty æsthetic questions of meaning and function in sacred as opposed to secular music were on his mind as he climbed to and from the organ gallery that evening in 1884.

## Capon

A capon (from the Latin : « caponem ») is a cockerel or rooster that has been castrated to improve the quality of its flesh for food.

The origins of caponized chickens are contested. Such culinary practices existed Far-East within ancient China as well

as Europe from Greek and Roman Empires.

One of the earliest records of caponization occurred during the time of the Roman Republic. The « Lex Faunia » of 162 B.C. forbade fattening hens to conserve grain rations. To get around this, the Romans instead castrated roosters, which resulted in a doubling of size. It was also practised later throughout medieval times with gastronomic texts describing capons as preferred poultry since the ordinary fowl of the farm-yard was regarded as peasant fare and « popular malice crediting monks with a weakness for capons » .

William Shakespeare mentioned capon in the famous « All the world's a stage » monologue from his play « As You Like It » (written around 1600) . He similarly describes capon as a food of the wealthy. The monologue describes human life as consisting of 7 stages, and the 5th stage is a middle-aged man who has reached the point where he has acquired wisdom and wealth.

The monologue describes the 5th stage as :

« The Justice, In fair round belly, with a good capon lin'd. »

### Vienna : Restaurant-Hotel « Zur Stadt Frankfurt »

**1380** : First mention of the building located at Conscription Number 1086.

**1490** : The Freyswald family was the owner.

**1522** : The building was temporarily confiscated until 1525, then sold after the return of the owner.

**Second half of the 15th Century** : First mention of the building located at Conscription Number 1087.

...

The Hotel « Zur Stadt Frankfurt » (At the City of Frankfurt) (located at « Seilergasse » Number 14, in the inner-city) was first mentioned in **1567** as « Wirtshaus “ Zum goldenen Ochsen ” » , « At the Golden Ox » tavern.

Giacomo Girolamo Casanova recalled that he stayed « At the Red Ox » Hotel in **1766**. Later, the German writer, philosopher, dramatist, publicist and art-critic, Gotthold Ephraim Lessing also stayed there.

**Beginning of the 19th Century** : « At the Golden Ox » (« Zum goldenen Ochsen ») was one of the most distinguished hotels in Vienna - on par with « At the Wild Man » (« Zum wilden Mann ») located on « Kärntnerstraße » .

Although the restaurant « At the Golden Ox » Hotel was considered one of the finest in Vienna, it was renamed « Zur Stadt Frankfurt » in **1830**. During this period, it was sometimes erroneously called « Gasthof “ Zum roten Ochsen ” » , « At the Red Ox » Inn.

**1843** : The « Handbook for Travellers of Southern Germany » described the « Zur Stadt Frankfurt » Hotel as :

« Good, clean and comfortable, with excellent restaurant. »

**1844-1845** : The building located at Conscription Number 1087 was purchased by the owners of the « Zur Stadt Frankfurt » . The hotel was expanded during a reconstruction project.

**1870's** : The restaurant was a cherish meeting-place for Vienna's upper-bourgeoisie.

**Sunday, 12 July 1896** : The hotel was closed.

The site was then transformed into an apartment building.

**1905-1911** : The owner was Alexander von Pallavicini.

### Christmas and New Year greetings

**Wednesday, 24 December 1884** : Letter from Anton Bruckner to Rosalia (« Sali ») Hueber (Vöcklabruck) :

Christmas and New Year greetings. 10 Florins are enclosed. Greetings to his brother-in-law Johann Hueber.

### Leipzig : Hôtel « Hauffe »

**Thursday, 25 December 1884** : Letter from Josef Schalk to his brother Franz :

Anton Bruckner will leave tomorrow morning with the North Western Railway. Franz Schalk could expect him to be on his way home (in Olmütz ?) on Saturday morning. He was to leave for Leipzig on Monday, because on this day (**Monday, 29 December 1884**) , the dress-rehearsal of the 7th Symphony (**WAB 107**) took place. Bruckner was expected to descend to Josef's recommendation at the « Hôtel Hauffe » (located at « Roßstraße » Number 15) . Franz should be told by Bruckner of the concert by the Wagner academic Society of Vienna (on **Monday, 22 December 1884**) , in which singer Richard Hirsch had polished his « Wotan » monologue. Greetings to Arthur Nikisch.

For over 70 years, the « Hôtel Hauffe » was one of the leading hotels in Leipzig. Built in 1869, it was the corner-house from the « Roßstraße » to the « Roßplatz » (Today, the place corresponds to the passage through the « Ringbebauung » to the « Auguste-Schmidt-Straße » , the former « Roßstraße » .)

This 4 storey building presented 19 windows on the « Roßstraße » and 5 on the « Roßplatz » . 12 axes on the « Roßstraße » offered a basement. The attic was fully-organized for staff-accommodation. It had more than 100 rooms, lounges and function-rooms as well as restaurants. It also offered single rooms with bathrooms.

The « Hauffe » received numerous well-known personalities :

Richard Wagner stayed here.

Johannes Brahms had a grand piano installed in his room during his stay.

Pyotr Ilyich Tchaikovsky stayed here during the winter of 1888.

The presence of Eugène d'Albert is documented by his signature on a sheet of writing paper (dated 29 October 1900) with the letter-head of the house.

**Wednesday, 5 August 1891** : The world's first American Express Travelers Check (with a counter-signature, a newly-patented procedure) was paid-out (the amount : \$ 50) at « Hôtel Hauffe » . The redeemer : William C. Fargo, nephew of William G. Fargo, one of the 3 founders of the American Express Company.

**March 1898** : German dramatist and novelist Gerhart Hauptmann stayed at « Hôtel Hauffe » .

**Around 1900** : A leaflet says :

Its facilities are quite up-to-date and offers the utmost comfort to international visitors. (...) The hotel is also chosen by the highest-circles of society. (...) Through all the rooms, which were designed with the greatest of care, elegance goes together with practicality. We find this expression in the large salons on each floor as well as in the series of individual rooms, and extends to the very impressive interior of the bathrooms, which the hotel possesses.

Renowned writer Karl May was also a guest at « Hôtel Hauffe » ...

**Tuesday, 19 August 1902** : Karl and Emma May accompanied by Klara Plöhn arrived in Leipzig. Until August 21st, they stayed in 3 adjoining-rooms, where Klara was quartered between Emma and Karl. Klara Plöhn's mother, Wilhelmine Beibler, who also lived at the hotel, was called by her daughter to mediate between the disputed spouses. However, their efforts remain unsuccessful. According to a later statement by Emma May, Karl and Klara broke the marriage in Leipzig.

Algernon Bastard's « Gourmet's Guide to Europe » of **1903** rated the « Hôtel Hauffe » the second best place to eat in Leipzig, and Bastard's first choice perhaps had not yet opened in 1880.

« That evening, perhaps uniquely during his time in Leipzig, Swiss semiotician Ferdinand de Saussure invited 2 of his fellow-linguists to the sort of dinner he was accustomed to in aristocratic homes, though not in restaurants on his modest allowance. It made such an impression on one of his guests, Brugmann, that he recalled it in detail nearly 40 years later :

“ The evening of the day of his doctoral oral examination, Johann Baunack and I were invited by him to a most exquisite supper (just us 3) at the ' Hôtel Hauffe ' : there was very fine red wine and I especially remember the

phenomenally thick asparagus we had. ” »

**Thursday, 11 May 1916** : Max Reger studied various compositions at the « Hôtel Hauffe » on the evening of his death (victim of a heart-attack) . The proofs of « Acht geistliche Gesänge » , including « Der Mensch lebt und bestehet nur eine kleine Zeit » , were found next to his bed.

**1930's** : The « Hauffe » became Adolf Hitler's headquarters establishment in Leipzig.

**1940** : Closure of the « Hôtel Hauffe » . Appropriation of the facilities by the District government of Leipzig.

**Saturday, 4 December 1943** : During a bomb-attack on Leipzig, the building was completely destroyed.

**1953-1956** : The site where « Hôtel Hauffe » was erected was used for the construction of the « Ring » promenade.

**Leipzig : Hotel « Stadt Rom » and « Hôtel de Russie »**

**Saturday, 27 December 1884** : Beginning of the granted Christmas pause for Anton Bruckner. He arrives in Leipzig at 11:00 am. In the evening, he hears a performance of Wagner's « Tristan und Isolde » (conducted by Arthur Nikisch ?) . After the representation, he is invited by the Leipzig Theatre to attend a reception held at the Hotel « Stadt Rom » which offered at the time a coach service to the « Dresdner Bahnhof » .

**From Saturday, 27 December 1884** : Anton Bruckner will meet in Leipzig the German chorus-master Carl Hansel, the conductor and composer Carl Riedel, the Luxembourg conductor and composer of German origin Gustave Kahnt, and perhaps, Hans von Bülow at the « Hôtel Hauffe » . (The « Hôtel de Russie » or « Russischer Hof » , located on « Peterstraße » Number 19-20, is also mentioned as possible meeting-place.)

**« Wiener Salonblatt » : Wolf's on Bruckner's 7th Symphony (1884)**

Hugo Wolf obtained his position as music-critic for the « Wiener Salonblatt » through the influence of the Köcherts, who were influential advertisers.

The newspaper was published each 2 weeks between 1870 and 1938.

**Sunday, 28 December 1884** : Music-critic Hugo Wolf, aged 24, writes in the « Wiener Salonblatt » (number 53, page 6) about a recital given in the afternoon. He insists on the performance of the Finale of Bruckner's 7th Symphony (**WAB 107**) in the version for 2 pianos, 4 hands. The article fuels firm discussions between Wolf, Josef Schalk, Ferdinand Löwe and Friedrich Eckstein.

« Bruckner evening, organized by “ Messieurs ” Ferdinand Löwe and Josef Schalk.

Bruckner ? Bruckner ? Who is he ? Where does he live ? What can he do ?

Such questions can be heard in Vienna (...) . So, it was worth the effort to give a little more attention to this brilliant musician than it has been the case, and it is a truly disturbing sight to see this extraordinary man banished from the concert-hall, who is among the now living composer (Franz Liszt excluded, of course) the first and greatest claim to be performed and admired.

Hugo Wolf. »

### Rott's ultimate compositions

**Winter 1884-1885** : Anton Bruckner would have been interested in Hans Rott's compositions before his death on 25 June 1884.

### Bruckner-Wolf friendly association

**Beginning in 1885** : Hugo Wolf was one of the unconditional supporters of Anton Bruckner. After their joint-concert in Berlin on **Monday, 8 January 1894**, there ensued a friendly association.

### Bruckner writes to his student Alfred Stroß

Anton Bruckner had not found a music-publisher in Leipzig. Alfred Stroß, when he wrote to Professor Alexander Winterberger, asked the theme in B minor, which was based on an improvisation played at the organ of the new Leipzig « Gewandhaus » .

**Thursday, 15 January 1885** : Letter from Anton Bruckner (Vienna) to Alfred Stroß (Vienna) .

« Dear Good Friend !

I have “ not ” found a publisher. If you write to Professor Winterberger, would you ask him about the theme in B minor that he gave me at the “ Gewandhaus ” (in Leipzig) .

Sincere thanks for your kindness, noble friend !

Yours,

Bruckner

P.S. : Monday's “ Extrablatt ”, terrible. Wednesday's “ Deutsche Zeitung ”. »

Critic by Doctor Josef Königstein in the « Illustrierten Wiener Extrablatt » (12 January 1885) : « terrible » .

Critic of the String Quintet (WAB 112) by Doctor Theodor Helm in the « Deutsche Zeitung » (14 January 1885) : « very well » .

...

Autograph Letter about the 7th Symphony : Elusive autograph signed letter and envelope from the influential Austrian composer and organist Anton Bruckner who writes regarding the world-premiere of his 7th Symphony. Autograph material of any kind from Bruckner is extremely rare. Sold together with a vintage postcard photograph.

1 page, double-sheet, 8vo. Dated « 15.01.1885 » . To the composer Alfred Stroß, envelope post-marked Vienna. In fine condition, tiny tears to 2 edges, envelope torn along the right edge.

Translation :

« Dear, good friend ! I've found NO publisher. When you write to Professor Winterberger, you will want to ask him for the theme in B minor that he gave me in the “ Gewandhaus ”. Thank you for your support, dear noble friend. Your Bruckner » , and adding a postscript : « Special edition from Monday was terrible. The German newspaper by Wednesday, very good. »

The composer is referencing reviews of his 7th Symphony which was first performed on December 30, 1884. The premiere, given under Arthur Nikisch and the « Gewandhaus » Orchestra in the Opera House of Leipzig brought Bruckner the greatest success he had known in his life. The Symphony was eventually published by Albert J. Gutmann, in 1885.

### Bruckner writes to his sister « Sali »

Anton Bruckner's intimate feelings are sometimes hidden in his wishes for the good health of everyone, but they are always present. He worried about his own health nearly enough to make himself ill.

Bruckner was reasonably well and wished to stay so. At times, Rosalia would send her brother packages - parcels of meat, as is apparent in later correspondence. Anton had particular problems with his stomach and could not eat smoked meat, which was the customary method of preserving it ; this was the only type that could be sent to him during this era. Of course, he was concerned about Rosalia's health, too, and wished her a speedy recovery.

On **Monday, 9 February 1885**, Anton Bruckner wrote to his brother-in-law, including his sister's name in the salutation ; however, the letter really was to Johann Napomuk Hueber (the husband of « Sali ») . The message is newsy and mostly about the Symphonies, but a few other details stand-out :

Letter from Anton Bruckner (Vienna) to couple Johann Nepomuk and Rosalia (« Sali ») Hueber (Vöcklabruck) :

« My Dear Brother-in-law and “ Sali ” !

Thank you for the letter. “ Sali ”, do not send anything. Here is 10 “ Gulden ”. I am well and wish that “ Sali ” may also be healthy soon ! The good woman has no idea of what I have to do ! Then, the correspondence from at home and abroad !!! Now, “ Holland ” is added to the list, where, on the 4th of this month, my 3rd Symphony was performed with very great success. In Leipzig, on January 28th, the second performance of my 7th Symphony was given before the Royal couple. The newspapers are full of admiration just like the Dutch (papers) . In “ March ”, it (Symphony No. 7) is going to “ Munich ”. (The performance in Hamburg is, likewise, imminent.) Unfortunately, I need a great deal of money. In The Hague (in Holland) , they really want to see me “ in person ”.

Hearty farewell ! Greetings to all !

Your brother and brother-in-law,

Anton Bruckner »

Bruckner's brother-in-law and younger married sister. Bruckner was the eldest of 11 children, most of whom died either at birth or in infancy. He remained close to his sister Maria-Anna, who served as his house-keeper in Vienna, his sister Rosalia, who was married to Johann Nepomuk Hueber and lived in Vöcklabruck, and his brother Ignaz, who lived in St. Florian. Little is known of his sister Josefa.

From time to time, Bruckner would receive gifts of food from Ignaz. Here, he may be referring to food. His stomach gave him problems, and he may be saying that he has to watch his diet.

Bruckner always reimbursed family members when he received gifts of food or services from them. The sum of 10 « Gulden » is a generous one for the time ; perhaps, the value of \$ 20, today.

**Bruckner writes to Arthur Nikisch**

**Wednesday, 25 February 1885** : Letter from Anton Bruckner (Vienna) to Arthur Nikisch (Leipzig) :

« Dearest, Most Noble Friend !

Accept my inexpressible thanks, for that which I am most kindly indebted to you. May God reward you for the very noble and brilliant deed which you have done for me. If only I knew how I could give you a little joy. Just write and tell me how ! A few days ago, I received the “ Leipziger Nachrichten ” with the wonderful articles by Professor Vogel. When you see him, please tell him of my heartfelt thanks ! Take care of your health ! I kiss the hands of your noble “ fiancée ”. Likewise, the gracious wife of the Director. Again, I thank the Director from my heart for his great noble-

mindedness and for the sublime kindness to me ! Has the Director already been in Vienna ? I was unable to find-out and would like to see him. “ Herr ” Levi still has the better score of the 4th ( “ Romantic ” ) Symphony. What is going on with the 7th ? Have you most kindly had the parts corrected ? “ Please, send me the bill. ” Have you sent the parts to Hamburg ? Or will it be later ? Or does “ Herr ” Levi have them already ? I am as ill-informed as a child ? The 3rd Symphony in D minor was performed in The Hague (Holland) ; I received magnificent letters about it. Are publishers, in fact, not to be found ? Everything on earth has already happened to me, and I am becoming entirely indifferent toward noble mankind. I know nothing from Munich. How are the 2 movements which were recently received ?

Most sincerely thankful, once more, I am, with greatest respect and admiration,

Eternally gratefully yours,

Anton Bruckner »

Othmar von Türk

**Monday, 2 March 1885** : Anton Bruckner (Vienna) sends his photograph to Marie Demar (Vienna) , with this inscription :

« For my highly-respected, dearest friend and admirer of the arts, “ Fräulein ” Marie Demar, as a little remembrance.

Anton Bruckner »

Marie Demar (1865-1946) : Female friend of Bruckner. He greatly admired her, so much so that their friendship became quite a serious matter (in 1885-1886) , and it was reciprocal.

Portrait of Anton Bruckner taken on **Monday, 2 March 1885** at the studio (« Atelier ») of the photographer of Slovenian origin Othmar von Türk, located at Number 4 « Breite-Gasse » in Vienna's 7th District.

1 autographed letter, 2 sheets of white paper of 22.3 x 14.5 cm ; 1 autographed photograph of 11.7 x 6.6 cm with text by the composer. These documents are now at the Austrian National Library.

Othmar von Türk was born in 1843 in Landstraß, Lower-Carniola in southern Slovenia (« Kostanjevica na Krki » which could be translated as « Kostanjevica on the Krka River ») which is part of the Austro-Hungarian Empire. Around 1870, he opened his studio in Vienna. In 1875, he received the title of Imperial-Royal photographer of the Austrian Court. Well-known by all the Viennese, he photographed numerous celebrities from all walks of life (monarchy, nobility, politicians, artists, musicians, composers, etc.) . He died in Vienna around 1904.

(He is also known as : Othmar Türk, Otmar von Türk, Otmar Türk, Othmar von Tuerk, Otmar von Tuerk, Othmar Tuerk, Otmar Tuerk, Otmar Türk von Ramstein, Othmar Türk von Ramstein, Othmar von Türk-Ramstein, Othmar von Tuerk-Ramstein, Othmar von Ramstein Türk, Othmar von Türk-Ramstein.)

### **WAB 107 : The Munich trip**

**7-8 March 1885** : Anton Bruckner leaves Vienna for Munich on Saturday night, by train. (Levi sent Bruckner money for the trip.)

Gap in Bruckner's prayer records from the evening until **Sunday, 15 March 1885**.

Karl Almeroth who promised to accompany Bruckner, could not postpone a planned event with the Werndl family. So now, secretary Friedrich Eckstein is accompanying the Master.

Bruckner won't sleep during the whole night.

They arrive in Munich on Sunday morning, at **7:00 am**.

After a visit at the Theatine Church of St. Cajetan (« Theatinerkirche St. Kajetan ») and a breakfast « café » and accommodation at the « 4 Seasons » Hotel on « Maximilianstraße » (with a special rate of 2.50 Marks !), both go to Hermann Levi's apartment for a short piano rehearsal of some parts of the 7th Symphony (**WAB 107**).

Levi sat-down at the piano and played the work for Bruckner, asking for advice on how to interpret it.

It was beautiful, he said, but the Finale needed modification.

Together, they made some changes in dynamics and phrasing.

And then, they take the direction of the « Odeon-Saal ».

**11:30 am** : Rehearsal of the Symphony with the Court Orchestra. Franz Strauß (father of Richard Strauß) proved to be the best brass-player.

Levi paused often to ask the composer what he thought, listening patiently to Bruckner's suggestions. The composer was delighted because, in Vienna, Hans Richter had not involved him in rehearsals at all, assuring Bruckner that he knew best how to present music.

Following the rehearsal, Levi invited Bruckner and Eckstein to his home for lunch and offered to let them stay with him. Both turned the offer down.

...

When the Schwabinger Gate was broken down in 1817, the « Theatinerkirche » became a major visual-point with the construction of the « Ludwigstraße ». The façade of the « Ludwigskirche » with 2 steeples was later constructed as balance to the « Theatinerkirche », which stands diagonally opposite.

A small chapel in the « Theatinerkirche » contains the tombs of King Maximilian II (who reigned from 1848 to 1864) and his consort Queen Marie.

The crypt also contains the Prince's Tomb, where among others these members of the Bavarian Royal Family were buried :

Tomb of Queen Marie of Bavaria.

Princess Henriette Adelaide of Savoy.

Ferdinand Maria, Elector of Bavaria (reigned from 1651-1679) .

Maximilian II Emanuel, Elector of Bavaria (reigned from 1679-1726) .

Charles VII, Holy Roman Emperor (reigned from 1726-1745) .

Maximilian III, Elector of Bavaria (reigned from 1745-1777) .

Charles Theodore, Elector of Bavaria (reigned from 1777-1799) .

King Maximilian I Joseph of Bavaria (reigned from 1799-1825) .

King Otto of Greece (reigned from 1832-1862) .

Luitpold, Prince Regent of Bavaria (reigned from 1886-1912) .

Princess Alexandra of Bavaria.

Rupprecht, Crown Prince of Bavaria.

Duchess Maria-Anna Josepha of Bavaria.

Duchess Marie Gabrielle in Bavaria.

Prince Heinrich of Bavaria.

The « Theatinerkirche » has 2 organs :

The older side-organ which has the function of a choir-organ (built by Anton Bayr in 1782) is located opposite the pulpit.

The (newer) main-organ is located in the jube (back-gallery) . The instrument, like much of the city of Munich, suffered damage during the Allied bombings of World War II.

Another organ predates both and was built in 1686 when the church was initially constructed.

Between 1947 and 1950, the side-organ was re-built by local organ-builder Carl Schuster.

In 1960, a modern main-organ was built by Eisenbarth from Passau, generally over-hauled in 2009 by organ-builder Schingnitz from Iffeldorf.

...

The « Münchner Fremdenblatt » (Number 69) , page 7 :

« Guests arrived at the « 4 Seasons » Hotel. (...) Bruckner, Professor, Vienna (...) »

### **WAB 107 : Hermann Levi's toast**

**Tuesday, 10 March 1885** : Munich premiere of Bruckner's 7th Symphony.

(The creation was given in Leipzig, in December 1884, under Arthur Nikisch.)

**7:00 pm** : Second subscription-concert by the Royal Court Chapel Orchestra conducted by Hermann Levi at the « Odeon-Saal » .

The rather extensive « programme » risks to have a deterrent effect on the audience ...

Robert Schumann : 5 Songs (partly on texts by Justinus Kerner) for voice and piano (sung by Lili Dreßler) .

Johannes Brahms : Romances from Tieck's « Die schöne Magelone » for voice and piano (sung by Eugen Gura) .

Friedrich Sander : « Legend and Capriccio » , 2 « études » for violin and orchestra.

Étienne Nicolas Méhul : Overture « La chasse du jeune Henri » (Young Henri's hunt) .

Giovanni Battista Viotti : Concerto No. 22 in A minor for violin and orchestra (soloist : Benno Walter) .

Anton Bruckner : Symphony No. 7 in E major (WAB 107) .

The applause are rapturous.

After each movement, the audience calls the composer out onto the stage several times.

A funny thing happens during the « Adagio » movement : when the cymbal is struck at the dynamic high-point of the movement, Riehl, a professor for æsthetics, gasps « Ugh ! » to which Levi turns around and hisses « Shush ! » .

At the end, Bruckner receives laurel wreaths from 2 different associations, one comes from the « Allotria » Society. In the audience that evening :

Hermann von Kaulbach, Franz von Defregger, Fritz von Uhde, Paul Heyse, Joseph Karl Stieler, Konrad Fiedler, Baron Karl von Ostini, Franz Fischer, Josef Schalk, Ferdinand Löwe, Friedrich Eckstein, Karl Almeroth, a young man named Busch, Hans Schilling (music-student of professors Thoms, Ranftler and Horbelt who play in the Orchestra) , probably Franz von Lenbach, and perhaps Ferdinand von Piloty.

Bruckner enjoys what is probably the greatest triumph of his life - currently basking in his own golden era.

The work is received warmly by the Munich press.

The « Süddeutsche Presse » founds the concert a significant milestone in music :

« Writing today about the music academy's second subscription-concert, we feel that a remarkable incident, something great, has taken place, and we are still captivated by it. Rapturous, enthusiastic applause escalated to an ovation. (...) The composer was called-out on to the stage, again and again, to accept the audience's thanks. But they were thanking Royal Conductor Hermann Levi as well, who, with true congeniality, knew how to present this work. It is to his merit that we know of the work at all. Under his charming verve, the Orchestra performed very well, as if magnetic current flowed from the conductor to the musicians and from the musicians to the audience. »  
Post-concert celebrations for Levi and Bruckner which bring together the musicians and a large part of the intellectual and cultural « élite » of the Bavarian capital are held by both Societies in their respective green-room.

The banquet of the « Allotria » Society, organized by the Fiedlers, includes Kaulbach, Defregger, and Heyse.

(Because of his imposing and unique features, Munich's artists were keenly interested in painting Bruckner.)

Still under the shock, Levi pronounces a very glowing speech, describing his author as :

« The sole heir of Beethoven. »

He gives Bruckner a « toast » :

« This is the most significant Symphonic work since Beethoven's death. »

In gratitude for the presentation of his work in Munich, Bruckner decided to dedicate Symphony No. 7 to the King of Bavaria and asked Levi to intervene on his behalf. Levi turned to Perfall, and Perfall wrote to the King. A few weeks later, Levi was able to tell the composer that the dedication would be accepted. On **May 10**, Bruckner sent a letter of dedication to Ludwig II, « the truly royal benefactor of the immortal Master, the ideal German monarch », who was always in his thoughts. Levi suggested playing the Symphony again in a private performance for the King, but never did because one month after receiving Bruckner's letter of dedication, Ludwig II was declared incompetent and deprived of the right to rule and Luitpold, the third son of Ludwig I, was made Prince Regent of Bavaria. On **13 June 1886**, Ludwig II was found dead in Lake Starnberg.

### Hermann von Kaulbach and Bruckner's nose

**Wednesday, 11 March 1885** : Friedrich Eckstein accompanies Anton Bruckner at the Munich studio of German painter Hermann von Kaulbach (1846-1909) .

Kaulbach will produce a life-size (but not completely successful) portrait of Bruckner, seen from profile, without taking into account the composer's pressing request :

« Please, make my nose a bit smaller ! »

(Oil on cardboard, 74 cm x 56 cm.)

Bruckner was 5 feet 9 inches tall, was wearing wide-necked shirts, loose pants and never tied his jacket.

The work is on display at the Upper-Austrian National Museum, at Linz Castle (« Oberösterreichischen Landesmuseum - Schloßmuseum, Linz ») .

Kaulbach is renowned for his high-society portraits. He often paints people (Germans and even Americans) , in the French taste of « fin-de-siècle » . He became one of the best paid portraitists in the German Empire.

At lunch time, German painter Joseph Karl Stieler joins Bruckner and Eckstein at Kaulbach's apartment.

Bruckner plays at the piano excerpts from the 7th Symphony (**WAB 107**) and the « Te Deum » (**WAB 45**) .

## Tears in homage to Wagner.

**Thursday, 12 March 1885** : Anton Bruckner attended a performance of Richard Wagner's beloved « Die Walküre » at the « Odeon Hoftheater » . Conductor Hermann Levi indulgently replaced the scheduled Opera, Victor Ernst Nessler's « Der Trompeter von Säkkingen » (The Trumpeter of Säkkingen) , to please his famous guest.

Princess Amalie Maria of Bavaria and Josef Schalk are in the audience. Bruckner and Eckstein sit next to Levi in the orchestra pit. Levi pointed-out particularly nice passages during the performance. Bruckner's interest was in the music, not in the stage-play.

During intermission, Levi had the 4 tuba players repeat a few characteristic passages from the 7th Symphony (**WAB 107**) .

When the Opera performance was over, Levi asked the musicians to remain seated until the last concert-goer had left the hall.

Bruckner then asked Levi to perform the Adagio in homage to Wagner.

Levi honours his guest and address the Orchestra :

« In these halls, we have often enough played for the King alone. We have among us today a Prince of music. I ask you to please play, once again, the Adagio of his Symphony, just for him. »

The brass-section (tubas and horns) play 3 times in a row the « Trauermusik » from the coda. Bruckner sat listening, with tears streaming down his face.

He wrote to a friend :

« I can't describe the scene inside this dark Royal Theatre. »

...

The day before leaving Munich, Bruckner improvised on the organ at a church for all of his newfound friends. Bruckner left Munich a very happy man.

From Vienna, he wrote :

« My mind is still wholly in Munich, it has become my artistic home. »

Munich will become the crossroads of the Bruckner « cult » in Germany.

## Back in Vienna

**Sunday, 15 March 1885** : Letter from Anton Bruckner (Vienna) to Arthur Nikisch (Leipzig) :

« Dearest Friend ! Noble Benefactor !

I have just returned from Munich where, on the 10th of the month, there was an extremely magnificent performance of my 7th Symphony. The audience received it very “ enthusiastically ” ; the conductor and the Orchestra also applauded vigorously. 2 laurel wreaths. Next performance, in the autumn. The reviews very good. Also, especially splendid : “ Neueste Nachrichten ”, “ Suddeutsche Presse ”, and such.

At a large reception for musicians, “ Herr ” Levi declared :

“ This is the most significant Symphonic work since Beethoven’s death. ”

He added that the performance of this work is going to be the pride and high-point of his artistic career. And the banquets ! The king will also be informed. The Intendant' likewise sent for me. My portrait was painted by (Hermann von) Kaulbach and I was photographed “ twice ”.

Upon your request, “ Herr ” Levi will send you the 4th Symphony.

Please, give my compliments to my benefactors, especially to the Director and “ Herr ” Vogel, and hand-kisses for the ladies. I “ kiss you a thousand times ”, as the source of all good for me ! And thank you, thank you in all eternity ! Herewith, I send only the review from the “ Neueste Nachrichten ” ; when you have read it, I ask you most graciously to pass it on to “ Herr ” Vogel with my most sincere request about publication - if, at all, feasible. Perhaps, this will make a good impression on the publishers ! After the performance of “ Die Walküre ”, “ Herr ” Levi had the funeral music from the “ Adagio ” of my (7th) Symphony played, for me 3 times, by the tubas and horns. You will get a chuckle-out of this.

How are you ? So, write back to me. I kiss the hand of your dear “ fiancée ”.

Filled with gratitude and respect and admiration for you, most noble benefactor, I am and remain  
Your most thankful

Anton Bruckner

N.B. : To “ Herr ” von Vogel, my respect and thanks for his kindness in the press. »

A portrait and 2 photos

**Monday, 16 March 1885** : Letter from Josef Schalk to his brother Franz about the 7th Symphony performed in Munich :

« The success was truly splendid. Levi showed a remarkable amount of understanding and care. We were very pleased with the performance. Bruckner is overjoyed. All in all, the whole “ Munich-affair ” looks like a triumphant procession for Bruckner. He has been honoured, to a surprising extent, in all artistic circles (banquets, laurel wreaths) . (Hermann von) Kaulbach has painted his portrait ; (Edgar) Hanfstängl has taken his photograph. »

**Wednesday, 18 March 1885** : Letter from Anton Bruckner (Vienna) to Baron Hans von Wolzogen (Bayreuth) :

« Right Honourable Baron !

Please, permit me to tell you something of the happiest week of my life, due to the glorious events in Munich. The performance took place on the 10th of this month. I was at the last 2 rehearsals. In the beginning, the Orchestra was hostile, but, then, enthusiastic for me. The performance was ideal and excellent beyond all measure.

The reaction was, as they say, indescribable jubilation and enthusiasm ; even the conductor and the Orchestra applauded most vigorously. No one could remember such a scene in the “ Odeon ”. At the reception for the musicians, “ Herr ” Levi toasted me :

“ To the most important ' Symphonic ' work since Beethoven's death ! ”

And he continued :

“ The performance of this splendid work ” (as he called it) “ is the crown of his artistic activity ! ” (as far as concert life is concerned, of course) . 2 magnificent laurel wreaths !

What a disparity on the part of “ Herr ” Richter who is said, 2 weeks ago, to have declared me a crazy person “ without form ” ; and, then, as these witnesses maintain, he declared the Brahms 3rd Symphony (which is said to have failed, again, on Sunday) to be the new “ Eroica ” (naturally, Hanslick liked it) . My Symphony (No. 7) remains in Munich. “ Herr ” Levi is not allowing them to ruin me, in Vienna. He wants to take care of the publication. He and the Intendant want to refer the matter to the King and the Symphony is to be performed, again, in November. On the 11th of the month, my friends from Vienna and I attended a performance of “ Die Walküre ”, in Munich. Magnificent, as I had not heard this wondrous work in its entirety, since 1876. And, after the audience had left, “ Herr ” Levi, upon my request, had the “ Trauergesang ” from the second movement of the 7th Symphony performed 3 times, by the tubas and horns, in remembrance of the late, highly-beloved, immortal “ Meister ” Wagner, whereupon innumerable tears flowed. I cannot describe the event in the darkened “ Hoftheater ”. “ Requiescat in pace !!! ” The reviews are all glorious ; many say “ marvelous ”. The finest was in the “ Neueste Nachrichten ” (through “ Herr ” Forges, as I hear) and the “ Süddeutsche Presse ”. Thank God, I now have Munich ; in it, I have enough success to last me the rest of my life. I permit myself to send you only one review ; it is from the “ Neueste Nachrichten ”.

In veneration, I kiss the gracious hand of the Baroness. Right Honourable Baron, I beg for your further favour and affection. I have your article to thank for the performance in Holland (The Hague) , as well as innumerable others !  
Endless thanks !

With deepest respect, I remain

Your most thankful servant,

Anton Bruckner

P.S. : In Holland, they want all of my Symphonies. »

### Edgar Hanfstängl

Chief-Clerk, Commercial Purchaser and Art-Publisher Edgar Hanfstängl was born on 15 July 1842 in Munich ; and died on 28 May 1910 in Munich. He is a significant figure because he was the son of a famous Bavarian Court photographer connected with the circle of Ludwig II, and became a close confidant of the Duchess Sophie-Charlotte in Bavaria. He was also the father of Ernst Hanfstängl, the political figure.

Edgar Hanfstängl was the son of the photographer Franz Hanfstängl (1804-1877) and his first wife « Frau » Franziska Hanfstängl-Wegmeier (1809-1860) . Edgar completed a training as commercial purchaser in Stettin and with a London wholesaler. At the beginning of the 1860's, Edgar set-out for Asia, to work as financial clerk to the « Clark Tea Wholesaler's Company » . In 1867, he returned to Munich to his father's Art-business, where he was put to work as head-clerk. In the same year, he embarked upon a love-affair with the « fiancée » of Ludwig II of Bavaria, Princess Sophie-Charlotte. On November 12, 1868, Edgar took-over the photographic work-shop and expanded the business to the « Franz Hanfstängl Art Publishing-House » .

The engagement between Sophie in Bavaria and Ludwig II was arranged at the behest of her father Duke Max Josef, even though the King, considering his own distinctly homosexual character, was concerned that she would not be happy in the union. The engagement was agreed upon, on 22 January 1867. 3 days later, Sophie met Edgar in his father's photographic studio, where he had recently arrived as senior clerk after his travels abroad. Possibly, they had known each other since childhood, when Franz Hanfstängl was a readily welcomed guest in the artistic circle of Duke Max.

The many photographs of the Royal bride which, then, had to be prepared, and additional work which brought Edgar regularly to Possenhofen Castle, brought them more closely together and they fell in love. Their meetings, attended by the utmost secrecy, occurred in the Pähl Castle, the Palace in Munich, and even at Possenhofen. 5 love-letters, which Sophie-Charlotte wrote to Edgar Hanfstängl, between July and September 1867, have been preserved. The wedding was called-off by Ludwig, in October.

Edgar was not able to make-up his mind to marry, until 1882. Edgar's wife, the Berlin-born Katharine Wilhelmina Heine (1859-1945) , produced for him 5 children : Edgar (1883-1958) ; Egon (1884-1915) ; Erna (1885-1981) ; Ernst « Putzi » (1887-1975) ; and Erwin (1888-1914) . From 1907, the eldest son Edgar took control of his father's Art-business.

Edgar's only daughter Erna found, after her father's death, an envelope with the hand-written endorsement by her father :

« Letters of Princess Sophie-Charlotte - burn these unread. Edgar. »

Erna did not carry-out her father's wishes but, instead, handed-over the letters, in February 1980, to the author Heinz Gebhardt, in order « once (for all) to set the record straight » and he published details of the love-affair with excerpts from the correspondence in his history of the Hanfstängl family business.

Edgar Hanfstängl, Sophie's « dear, beloved friend » , died on 28 May 1910. He was buried in the old Munich south cemetery in the Hanfstängl family-plot.

## Josef Löwy

Anton Bruckner was photographed at the studio of Josef Löwy in Vienna at the beginning and at the end of his career (1854 and 1894) .

The Austrian painter and photographer Josef Löwy was born on 16 August 1835 in Preßburg (today, Bratislava in Slovakia) ; and died on 24 March 1902 in Vienna. He is buried in Viedeň, Rakousko.

Son of Hermann and Rosalia Löwy.

Mathilde Löwy (1854-1908) had married Josef, in 1875.

Brother of Ignaz Löwy, Marie Weinberger and Babette (« Betty ») Buchwald.

Active in Vienna from 1860's to the 1880's, at « Weihburggasse » Number 31 and « Parkgasse » Number 17. He also worked from 1856 to 1902 in Baden.

Löwy was a very prominent and talented Viennese photographer whose studio became one of the leading establishments in the Austrian capital city between the decades 1870 and 1900. Trained as a lithographer and having received an artistic education at the Vienna Academy, Löwy eventually entered the field of photography in 1861. Since 1864, he regularly exhibited in photographic salons, leading to his participation in the 1873 Vienna World Exhibition, where his work was awarded with medals. This exposure led to his appointment as an official photographer to the Austrian Court, in the same year. Member of the « Société française de photographie » , from 1874 to 1885.

Löwy had varied interests in photography. His studio production was highly-multifaceted. It included a wide-range of subjects - from Royal portraits to documentation of industrial sites. Of particular interest are the Löwy studio's studies of Theatre actors and Opera singers, which stand-out due to their expert use of « mise en scène » (staging) and performance. After the photographer's death, the studio was taken-over by his widow, Mathilde, who run the operation until 1908. It was then purchased by Löwy's nephew and (presumably) assistant, Gustav Löwy who renamed the business into « Art Institute J. Löwy » .

### Bruckner writes to Kaulbach

**Thursday, 26 March 1885** : Letter from Anton Bruckner to painter Hermann von Kaulbach :

« High-Master “ Herr ” von Kaulbach.

I allow myself thereby to send you the requested Hymn from my choral-book.

I am still fully in the spirit of Munich, which is my now my musical home, and where I was so completely happy. It is the Metropolis of art ! I sit at your magnificent table, sipping the most precious wines.

(Page 2 :) With my charming amiability, I kiss the hands of your wonderful lady who is sitting next to me ! I still see your High-Master, the most famous artist, painting my picture splendidly ! What an honour for me ! I can still hear our lady singing so splendidly !

Thanks for everything ! This was the most beautiful week of my life ! Even now, I am looking forward to the time when I will be back in Munich to listen to the best conductor and the best Orchestra in the world ! And with my high-patrons !

(Page 3 :) With the expression of deepest gratitude and respect, I am in the most heartfelt reverence.

High-Master, I thank you,

Anton Bruckner, m.p.

Vienna, 26 March 1885.

N.B. : My Quintet will be played in Munich on Tuesday. May it be so, as in Vienna !

N.B. : The “ Libera ”, a true Gregorian chant, is taken from the “ Missale ”.

N.B. : Please do not forget “ Herr ” Doktor (poet of a Romantic Opera text “ à la Lohengrin ”) .

(Page 4 :) And do not forget ! “ Herr ” Landgraf greets you sincerely and will soon come to Munich. »

### WAB 108 : Marie Demar and « Linzer-Torte »

The 8th Symphony was dedicated to Emperor Franz-Josef I although, at one stage, the repeatedly lovelorn 63 year old Bruckner sought to dedicate it to a young girl he met at the Opera, Marie Demar.

The Adagio is the huge, generous heart of the Symphony ; a consoling, palpitating dream in D-flat major whose opening is the closest Bruckner ever came to an evocation of the erotic.

« Looking deeply into a young girl's eyes. » : a statement that would seem to offer more psychological scope than his statement to Carl Hrubý that the theme had come to him « after a glass of “ Pilsner ” beer » .

...

Anton Bruckner was 61 when writing the Adagio of the 8th Symphony, and according to Max Auer, in love « zu einem jungen, schönen, kaum der Schule erwachsenen Mädchen » (a pretty young girl barely out of school) or « kaum dem Kindesalter entwachsene Marie Demar » (hardly more than a child, Marie Demar) - although, giving no reference, Constantin Floros says she was 20 years old. They met-up during the intervals in the 4th gallery at the Vienna Court Opera, where they would discuss together the Richard Wagner Opera and he would ply her with « Linzer-Torte » (reputedly one of the oldest cakes, for which Linz is famous and of which the « Bakewell Tart » is a distant relative.) She was obviously very musical to have gone willingly to the Opera and, later, a student at the « Conservatoire » , and was apparently very taken with Bruckner, no doubt much flattered that the famous organist, University professor and composer should take time-out to talk with her. Looking through the « Hofoper » programmes, I see, for example, that Lilli Lehman sang Isolde, on **16 January 1885**, and it could well have been that they both were there. The image that Max Auer describes is of the couple walking in the **spring of 1885** in the large Vierma amusement park, the « Prater » , with her parents behind, and Bruckner whistling the « Dance of the Apprentices » from « Die Meistersinger von Nürnberg » , as Marie danced around him.

...

The « Linzer-Torte » (or « Linzertorte ») is an Austrian torte with a lattice design on top of the pastry. It is named after the city of Linz.

The « Linzer-Torte » is a very short, crumbly pastry made of flour, unsalted butter, egg yolks, lemon zest, cinnamon and lemon juice, and ground nuts, usually hazelnuts, but even walnuts or almonds are used, covered with a filling of redcurrant jam or, alternatively, plum butter, thick raspberry, or apricot jam. It is covered by a lattice of dough strips. The dough is rolled-out in very thin strips of pastry and arranged to form a criss-cross design on top of the preserves. The pastry is brushed with lightly beaten egg whites, baked, and sometimes decorated with sliced almonds.

Another historical characteristic of traditional « Linzer-Torte » is its lack of a leavening agent. Baking powder did not

exist in the 18th Century, so the dough recipe very much resembles that of unleavened cookie dough.

The « Linzer-Torte » is a holiday Classic in the Austrian, Hungarian, Swiss, German, and Tirolean traditions, often eaten at Christmas. « Linzer-Torte » is often made like small tarts or cookies in North American bakeries.

The « Linzer-Torte » is said to be the oldest cake in the world. For a long time a recipe from 1696 in the Vienna « Stadt- und Landesbibliothek » was the oldest one known. In 2005, however, Waltraud Faißner, the library director of the Upper-Austrian « Landesmuseum » and author of the book « Wie man die Linzer Dortten macht » (How to make the « Linzer-Torte ») found an even older Veronese recipe from 1653 in Codex 35/31 in the archive of Admont Abbey.

The invention of the « Linzer-Torte » is subject of numerous legends, reporting on a Viennese confectioner named Linzer (as given by Alfred Polgar) or the Franconian pastry « chef » Johann Konrad Vogel (1796-1883) , who, about 1823 at Linz, started the mass-production of the cake that made it famous around the world.

The Austrian traveller Franz Hölzlhuber in the 1850's allegedly brought the « Linzer-Torte » to Milwaukee, whence the recipe spread over the United States.

« Linzer-Torte » was first served in the 18th Century, when Linz was part of the vast Austro-Hungarian Empire. Now sharing borders with 6 countries, including Italy and Hungary, Austria has a cuisine influenced by the spices of the Mediterranean and the Far-East. Traditional « Linzertorte » showcases 2 of these : cinnamon and cloves.

The city of Linz can enjoy traditional Austrian food at restaurants, street-side sausage stands and, of course, « cafés » and bakeries, where « Linzer-Torte » is a popular speciality.

### **WAB 108 : « Micherl » dreams**

Concerning the Trio of the Scherzo of the 8th Symphony, which Anton Bruckner loved, he said :

« “ Micherl ” dreams »

Bruckner was so fond of the picture of German Michael that the figure almost attained physical reality in his imagination. One night, after he had left his apartment, he ran back and climbed the 3 flights of stairs to cover the page on which he had put down the theme of German Michael with a blank piece of paper.

He said :

« I must cover Michael lest he catch cold. Sleep well, Michael. »

He made other remarks about his Michael, too, such as :

« Here, Michael wants to sleep but they won't let him alone. There he is, taking-up the fight against his adversaries and beating them. His situation is bad but, at the end, he will be on top. In the Trio, Michael looks dreamily over the country. »

...

Although Anton Bruckner was not exactly seductive in appearance, his friends considered him quite imposing during the best years of his life. He made enough money to support a modest and economical couple. He would have been a good natured, faithful husband for the girl lucky enough to be his bride. Why did all the girls he approached refuse him ? Women instinctively feel the part they are to play in matrimony. Bruckner was evidently unable to conceal his inner-exclusiveness and, quite clearly, did not long for companionship. Only a high-minded, self-sacrificing woman will share the lot of a man who dedicates every waking hour to his work. We hear of no such woman in Bruckner's life. The girls he loved were simple, primitive souls ; they felt the difference in inclination, education, and general interests between themselves and him and were afraid of being tied down to a man who lived on a level foreign to their own. They rejected him because they knew him better than he knew himself.

### The Köchert family

**1885** : Numerous aristocrats and families of the nobility are now regular customers at the Imperial Court Jewellers A. E. Köchert. The Köchert family use their cultural awareness to maintain close contact to fine artists and composers such as Johannes Brahms and Anton Bruckner - or Hugo Wolf, who is largely sponsored by Heinrich and Melanie Köchert.

The solid middle-class edifice opposite the « Donnerbrunnen » came into the possession of the violin virtuoso and composer, Josef Mayseder (1789-1863) in 1848. His son-in-law, Alexander Köchert, would open a jeweler's shop there in 1851 which still exists. Köchert's services as a goldsmith were much in demand. He created, for example, the Iffland Ring and a baton for Richard Strauß ; while leading his own quartet as a musician. His sons Heinrich (1854-1908) and Theodor (1859-1937) continued the professional and musical traditions set by their father. Both were benefactors of Hugo Wolf and Theodor became President of the Viennese « Konzerthaus » Society. Heinrich Köchert wed Melanie Lang in 1878. Their daughter, Hilde, would marry the son of uncle Paul Wittgenstein, Doctor Karl Paul Wittgenstein. They would separate in 1927 but she would continue to live in the house of her father-in-law at « Salesianergasse » Number 7. Melanie's younger sister, Henriette, would marry into the family of Baron von Schey in the 1880's.

Theodor Köchert's first wife was Marie Lang (1858-1934) , whom Rosa Mayreder would introduce to the circle around the Association of Austrian Women, the leading organization of middle-class feminists in Old Vienna. She would become a committed member of that illustrious group, which included such figures as Auguste von Littrow-Bischoff, Auguste Fickert and Marianne Hainisch. From 1899 to 1903, she would edit its publication « Womens' Documents » . Like her second husband, Edmund Lang (who was the brother-in-law of Theodor Köchert) a close friend of Hermann Bahr, Peter Altenberg, Friedrich Eckstein, Rudolf Steiner, Stefan Großmann, Egon Friedell as well as Adolf and Lina Loos. Her commitment on behalf of the middle-class women's movement (which differed from working-class feminism with respect

to crucial issue of work, the bourgeois ladies hoping to escape gilded confinement in their « palais », their proletarian counter-parts seeking to have the curse of badly paid, long hours of toil lifted from them) as well as her friendship with people in that circle ceased upon the suicide of her eldest son in 1904, at the age of 19. He had taken his life on account of an unfortunate attachment to Lina Loos. We find the magic event recorded in Hugo von Hofmannsthal's note-books and it figures centrally in Arthur Schnitzler's mini-drama, « The Word » .

Marie Lang's second son, Erwin, was a painter and friend of Heitnito von Doderer. Her daughter-in-law was the famous dancer, Grete Wiesenthal.

Following a letter (March 11, 1890) from Marie Lang to Rosa Mayreder, they developed a friendship between Mayreder and Rudolf Steiner. In this letter, Marie Lang spoke enthusiastically of Steiner and offered to arrange a meeting between them. Steiner and Rosa were to some great extent of like mind and soon they became close friends.

Steiner confides that :

« Rosa Mayreder is one of those whom I have always held in great-esteem and whose development I have followed with deep interest. It is easy to imagine that what I have to say would not particularly please her ; nevertheless, it expresses my feelings about what entered my life through her. »

This may sound somewhat mysterious to one now, for what aspect of their close friendship (related by him here in retrospect) could it be that « ... would not particularly please her ... » and yet, which could prove pleasing and valuable to Steiner. Perhaps, the answer could be contained in the time-scale. During that time, the early-part of their friendship, nothing of her writings which later would provide her a conspicuous place in literature « had yet appeared » all was still in the process of creative formulation - as indeed was Steiner's own seminal work, « Philosophy of Freedom » . Rosa was a warm-hearted protagonist of that struggle for women's liberation that is hardly talked about today, and that yet cleared the way for the equality of the sexes. Rosa Mayreder was a completely different woman in nature than Eugenie delle Grazie, but was for Steiner no less significant.

Rosa Mayreder's optimism was by way of complete contrast to Marie Eugenie delle Grazie's pessimism. In fact, Rosa was an extrovert with a powerful, positive creative urge (working for women's freedom, though not the typical « suffragette ») , she was a woman of her time and confidently tackled the task that fell to her. Without doubt, she found in Steiner a kindred soul in her struggle for freedom. So, bearing this in mind's consciousness, Steiner perceived a burgeoning spirituality that what was later to be revealed in Rosa's writings actually at that time lived within her, as he says :

« In a spiritual form of expression, one to which I had to turn with the very strongest sympathy ... in their harmonious interaction, they formed a proper expression of the truly human (...) The stories she published at the beginning of her literary career demonstrate a perfect harmony between personal struggling and entirely objective consideration. »

Such « objective consideration » then, for Steiner, was an important distinctive feature that ran throughout all of Rosa's writing and becoming a more prominently revealed characteristic within her later works which most clearly of all comes to light, he says :

« ... in 2 volumes, " Kritik der Weiblichkeit " (Critique of Womanliness) . I believe it benefited my life greatly to have spent ... so much time in the company of Rosa Mayreder during her years of seeking and soul struggles ? »

All of the Langs and the Köcherts had already, for decades, collectively adopted the composer Hugo Wolf (1860-1903) , who commemorated them in the first of the 24 songs to poems by Paul Heyse in his second book of Italian songs, « I no longer eat my bread dry. » .

The composer was always a welcome guest at the Köcherts' : on « Neuer Markt » , in their Döbling home at Number 68 « Billrothstraße » (« Hirschengasse ») , at their country homes in Rinnbach or Traunkirchen. He withdrew to the « Hôtel Bellevue » , in Grinzing, with the Langs, Eckstein and Mayreder in the summer. Sigmund Freud, whose patient Emma Eckstein was, would completely interpret a dream here for the first time, on the 24th of July 1895. Edmund Lang's study at Number 9 « Belvederegasse » would regularly be Wolf's place of lodging. His continually changing apartments in the 4th District's « Mühlgasse » , « Schleifmühlgasse » , « Mozartgasse » , « Wiedner Hauptstraße » , and « Schwindgasse » would be provided and paid for by the Lang and Köchert families. He also obtained his position as music-critic for the « Wiener Salonblatt » through the influence of the Köcherts, who were influential advertisers.

### Köchert, Familie

Alexander Emanuel Köchert, Juwelier und Musikmäzen. : geboren 17 März 1825 in Wien ; gestorben 3. September 1879 in Altmünster, Oberösterreich. Sohn eines Goldschmieds, wurde er 1848 Meister, 1851 Teilhaber im Geschäft seines Vaters und nach Eröffnung einer eigenen Werkstatt Hof- und Kammerjuwelier. War Schüler von J. Mayseder, dessen Tochter Karoline er 1850 heiratete. Hatte ein eigenes Quartett. Juweliere wurden auch seine Söhne Heinrich (1854-1908) und Theodor (1859-1937) . Heinrich und seine Frau Melanie (geborene Lang, 1858-1906) waren seit 1882 eng mit Hugo Wolf verbunden, luden ihn in ihre Sommerresidenz am Traunsee (Rindbach, Oberösterreich) ein und unterstützten ihn sowohl ideell als auch materiell. Heinrich Köchert vermittelte und finanzierte die Kritikerstelle beim Wiener Salonblatt und Melanie Köchert spielte, wie die zahlreichen Briefe Wolfs bezeugen, für dessen Schaffen eine wesentliche Rolle. Theodor Köchert war Mitbegründer und Präsident der Wiener Konzerthausgesellschaft. Dessen Sohn Erich Köchert (1882-1940) und dessen Gattin Gertrude waren mit Josef Matthias Hauer 1924-1959 befreundet. Sie interessierten sich für Hauer's Zwölftonmusik und unterstützten ihn mit einer monatlichen Rente, wofür sie Manuskripte und Widmungen erhielten.

...

Nach Alexander Köcherts Tod übernahmen seine Söhne Heinrich (1854-1908) und Theodor (1859-1936) den Betrieb. In den 1880er und 90er Jahren wurden zum Beispiel für die Hochzeit von Kronprinz Rudolf mit Stephanie von Belgien oder die Geburt von kaiserlichen Kindern Juwelen in Auftrag gegeben. Nach dem Selbstmord des Kronprinzen und der

Ermordung der Kaiserin ging die Zahl der Bestellungen jedoch stark zurück. Bestellungen für Tauf- und Hochzeitsgeschenke in der kaiserlichen Familie sowie für die Schauspielerin Katharina Schratt gab es aber noch vom Kaiser. Auch die Thronfolger Franz Ferdinand und später Kaiser Karl I. gaben Werke bei Köchert in Auftrag. 1916 brachte Köchert die Kronjuwelen für die Krönung von Karl I. in Ordnung.

Neben Hof und Adel zählte zunehmend das gehobene Bürgertum zur Kundschaft wie Wittgenstein, Haas, Sacher, Todesco, Dreher, Epstein und Mauthner. Mit der wachsenden Beliebtheit des Wiener Jugendstils arbeiteten nun Köchert und die Wiener Werkstätte zusammen. Die Architekten Josef Hoffmann und später Oswald Hærdtl entwarfen Schmuckstücke.

### Looking for an apartment

**Sunday, 5 April 1885** (Easter Sunday) : St. Florian's organist Josef Gruber met Anton Bruckner on his way to the waiting-room near the prelate's office. A conversation engaged between the 2 men. Gruber mentioned that he intended to marry and is here to ask for an apartment inside the monastery.

Bruckner said :

« I too want to get an apartment from the Highly-Revered Prelate ! »

Noticing Gruber's astonishment, he continued his little story :

« I want to be buried in the crypt and asked permission today. »

The request was granted to Bruckner.

### Bruckner writes to Eva Wagner

**Friday, 10 April 1885** : Letter from Anton Bruckner (Vienna) to Eva Wagner (Bayreuth) .

« Dear Gracious “ Fräulein ” !

Having just arrived in Vienna from my home in Upper-Austria, I must ask for gracious indulgence. Already in September of last year, I sent the desired letter from your dear, late “ Papa ” to Managing Director Groß, in “ Bayreuth ”, that is, a “ copy ”. I have also enclosed other distinctions received orally throughout the years from the immortal Emperor of music. Now, I permit myself to send a copy of my precious relic to “ Fräulein ” Eva. I must have been distracted to the utmost that I cannot recall your entire instructions at all. Please, “ pardon ” me ! I immediately wrote to Otto Bach.

“ Fräulein ” Eva will probably have learned of the enthusiasm for my 7th Symphony, in Munich, through Baron von Wolzogen. Following “ Die Walküre ”, the funeral music from the second movement of my 7th Symphony was

performed, with the 4 new tubas, the “ contrabass tuba ”, and the horns, played “ 3 times ” in the “ darkness ” of the Court Theater. I wrote it to the memory of “ my unattainable ideal ” directly in that very sad time of mourning, carried-out, and, indeed, to the memory of the “ Beloved, Immortal Master of all Masters ! ”

How deeply moved we all were !

I am very disturbed over the unsettled status of your health and wish, from my entire soul, imminent and continual recovery ! Thank you very much for your very esteemed letter ; it is for me a precious gem. “ 3 Cheers ” to your “ gracious Mama ”.

“ Cheers ” to the young ladies. “ Cheers ” to “ Herr ” Siegfried ! “ Cheers ” to you, “ Fräulein Eva ” !

My noble patroness !

With thanks and respect,

Anton Bruckner »

Bruckner unable to appear at the funeral

**Wednesday, 22 April 1885** : Letter from Anton Bruckner (Vienna) to Felix Mottl (Karlsruhe) :  
« Dear Highly-Esteemed Friend !

Upon becoming aware of the public report, I was both grief-stricken and horrified. Please, accept my most sincere sympathy ! It is very painful to all of us ! Please, be kind enough to apprise your respected “ Frau Mama ” also, and all the dear members of your noble family just how difficult for me is the loss of my dear friend, and that I am taking part in the same deep sorrow. I will tell you more when we meet. I am truly afflicted because I am unable to appear at the funeral, since I have 7 classes to give at the Conservatory ; please, kindly pardon me for this reason. I will certainly perform my obsequies for this noble friend in the Church ! “ Requiescat in pace ” !!

With sincerest respect,  
Your friend who grieves with you,

Anton Bruckner »

The same day, Bruckner dedicates a photograph from Edgar Hanfstängl's « Atelier » to Friedrich Eckstein : « to commemorate the glorious days of Munich » .

Death of Fritz Mottl

**Wednesday, 29 April 1885** : Letter from Anton Bruckner (Vienna) to Felix Mottl (Karlsruhe) .

« Dear Friend !

Herewith, I am sending you the Orchestra parts (for Symphony No. 7) . You will be receiving the full-score from Hermann Levi. At X, in the “ Adagio ” (“ Funeral Music ” for tubas and horns) , I beg you most sincerely (3 measures before Y) to increase the “ crescendo ” to “ fff ” by the next measure (about 1 measure before Y) , in order to allow a “ decrescendo ” on the third quarter-note. Be sure to use the Wagner tubas. (In no case are horns to replace these tubas.) Would it not be desirable to introduce the Scherzo with Trio also ? (In particular, for the laymen ?)

I have kept my funeral music especially for the “ Schotten-Kirche ”. Dear old departed Fritz wanted to visit me “ at Gause ” !!!

Now, again, I appeal most sincerely to your “ undivided artistic strength ”, on behalf of my “ 7th child ”. Keep in touch. Take care !

Your old friend,

Anton Bruckner »

The popular Viennese guest-house (Restaurant and Beer-Hall) named « at Gause » (« Gasthaus und Bierkeller “ bei Gause ” ») was located in a basement at « Johannesgasse » Number 12 in the 1st District.

### **WAB 45** : Bruckner takes command

**Before Saturday, 2 May 1885** : Anton Bruckner took-over the rehearsals of the « Te Deum » (**WAB 45**) which take-place twice a week. They were initially under the direction of Eduard Schütt, the conductor of the « Wiener Akademische Wagner-Verein » . Doctor Franz Marschner and Johann Venantius von Wöb reported on the progress of the rehearsals and Bruckner's own conducting abilities. (The chorus soprano Hildegard Zweigelt, the later wife of August Stradal, will also recount these thorough rehearsals.)

Following the rehearsals, Wöb was also able to discover Bruckner's eating and drinking exaggerations at the popular guest-house (Restaurant and Beer-Hall) named « at Gause » (« Gasthaus und Bierkeller “ bei Gause ” ») located in a basement at « Johannesgasse » Number 12 in the 1st District.

**Saturday, 2 May 1885** : A setting of the « Te Deum » for chorus and 2 pianos is conducted in Vienna by Bruckner himself. This premiere is given in a semi-private concert of the « Akademischer Wagner-Verein » (Academic Wagner Society) .

### **Arthur Nikisch's wedding**

To Arthur Nikisch, in regard to his forthcoming wedding, Anton Bruckner wrote on **Thursday, 7 May 1885** :

« You were my first apostle who made known in Germany, with the fullest dignity, my hitherto unknown expression. For that reason, be thanked in all eternity not only by me but also by my true friends. May God repay you for it !!!

Therefore, it is only natural that I take the liveliest interest in the events in your life. The greatest joyfulness now is your wedding. Take along my deepest-felt, most sincere congratulations !

God bless your marriage ! and permit you to enjoy this great good fortune in the best good health until the profoundest old age, arrayed with the first musical honours !

I offer your gracious young lady my congratulations and a kiss on the hand. »

**Wednesday, 1 July 1885** : Arthur Nikisch married Amelie Heussner (1862-1938) , a singer and actress, who had been engaged the preceding years at the Kassel Court Theatre with Gustav Mahler. Their son Mitja (1899-1936) later became a noted pianist.

**Tuesday, 7 July 1885** : Letter from Anton Bruckner (Vienna) to Arthur Nikisch (Leipzig) .

« Sublime Great Benefactor and Friend !

You were my first apostle who made known in Germany, in highly-brilliant art and, with the fullest energy and dignity, my hitherto unheard expression. In eternity, you will be praised because your eminent, great genius has shone forth to illumine the misunderstood and deserted ! For that reason, be thanked in all eternity not only by me but, also, by my true friends. May God repay you for it !!

Therefore, it is only natural that I take the liveliest interest in the events in your life. The greatest joyfulness now is your wedding. Take along my deepest-felt, most sincere congratulations ! God bless your marriage ! and permit you to enjoy this great good fortune in the best good health until the profoundest old age, arrayed with the first musical honours ! Although unacquainted with her, I offer your gracious young lady my congratulations and a kiss on the hand. I am soon going to the town of Steyr, in Upper-Austria, where I shall work industriously. Where and when, I wonder, will you encounter my letter ? Fare thee well !

With gratitude,

Your Bruckner »

### The conversion of Franz Liszt

**May 1885** : After rejecting the dedication of the 2nd Symphony in **October 1884**, Franz Liszt invited Anton Bruckner to

attend a performance in Karlsruhe of the Adagio of the 7th conducted by Felix Mottl.

A former gifted pupil of Bruckner at the Vienna Conservatory, Mottl has thrown so much spiritual fire into the Adagio that even the venerable composer with white hair, who was seating among the distinguished audience, instantly became a « convinced Brucknerian » .

According to Max Auer, Liszt (whose idealism and altruism were unprecedented !) had shown great interest in the 7th Symphony (more than anything that preceded) - but without really understanding the music.

According to August Stradal, this conversion is all the more remarkable. Liszt had long remained of ice (despite his pro-Wagnerian allegiance) in front of Bruckner's compositions, partly because of his unbearable bombastic manners and unorthodox way of dressing.

« One morning, when Doctor Standhartner, the long-standing friend of Wagner, Schönaich, the well-known writer on music, and I were at the Master's (Franz Liszt) . Anton Bruckner appeared. He was wearing an old-fashioned tail-coat and, in his hand, held an Opera hat. His clothes were not quite up to date, for, with the coat, he wore short grey leggings out of which peeped a pair of enormous boots. A smile came over all faces, especially when Bruckner addressed Liszt humbly with the words, "Your Grace, ' Herr ' Canon ". He had come to ask Liszt to recommend a performance of his 7th Symphony at the " Karlsruhe Tonkünstler-Versammlung " (under Felix Mottl) . Liszt apparently found Bruckner's request difficult to refuse. It was no longer possible to include the whole work, however, as the programme had already been drawn-up. Otherwise amenable to all requests, he seemed to find Bruckner's reiterated entreaties disagreeable. At this short meeting between the 2 Masters, I felt that Liszt had no great liking for Bruckner as a composer. To be sure, I remember that, on saying farewell, he showed Bruckner great friendliness, promising that, if it were still possible, he would comply with his request. But at the " Tonkünstler-Versammlung ", only the Adagio of the Symphony was played. After the return from Karlsruhe to Weimar, Liszt did indeed express a favourable opinion of the Adagio, but, all the same, one had the impression that the work did not impress him particularly.

Before leaving Vienna, Bruckner visited the Musicians' Society (« Gesellschaft der Musikfreunde ») . Anton Rubinstein, who was in the Austrian capital to attend rehearsals of his Opera " Nero ", also turned-up that evening, as did Johannes Brahms, the Society's honorary president. »

### Prague : The Emperor visits the Burghers' Brewery

Words of praise as the Emperor Franz-Josef visits the Burghers' Brewery of Plzeň, in **1885** :

« It is rather odd that no brewery has been able to duplicate the singular and delicious taste of " Pilsner " beer. The breweries at Schwechat and St. Marx have really invested much effort into their brewing undertaking. »

Since this historical visit, the Emperor drank no other beer than « Pilsner Urquell » .

The neighbouring First Joint-Stock Brewery is also flourishing : its premises are expanding and it is buying railway wagons for exports.

...

A curious example of a man with a champagne income who rarely drinks anything but beer is the Emperor Franz-Josef.

Even at the grandest State banquets at the Court of Vienna, he is served with his favourite beverage, « Pilsner » beer. He rarely drinks wine of any kind, although his cellars are the most celebrated in the world. But the Emperor is not a heavy beer-drinker, either.

He is accounted by European students of social habits as one of the 3 Monarchs who have made intemperance unfashionable. The others are Queen Victoria and King Humbert (the latter only drinks a little wine diluted with water)

.

...

During Emperor Franz-Josef's lunches, beer was always served with the soup.

His personal valet always made sure that French Cognac, Red Hungarian wine and « Pilsner Urquell » beer were, always on hand !

When it came to drinks, the Emperor was a « Feinschmecker » !

« Feinschmecker » is a German expression for « gourmet » , a person who is an excellent judge of fine food and drinks. When it came to food, he ate anything they gave him.

From history archives, recorded during the Emperor's long span of the rail travel :

« During Franz-Josef's short trips on the rail in his saloon-cars, he only ate the meals brought from various station restaurants, along the way. The kitchen and dining-cars were used only on a long official journey.

The reason was not just the Emperor's notorious thrift, but also his infamous reputation to eat anything that was served. »

« Court Master saw to it directly that, in the Emperor's saloon-car, there was always a bottle of French Cognac available, as well as a bottle of Hungarian red wine and a bottle of Munich, and “ Pilsner ” beer. »

...

« On one of these trips to Ireland (Empress Elisabeth visited it both in 1879 and in 1880) , luncheon had been taken at Dover, as usual, shortly after arrival ; tea had also been served in the saloon at Crewe, but on the train stopping to take water at Prestatyn, I was instructed to wait awhile as the Countess desired to have some beer ! - which was accordingly brought from a little public-house adjacent to the station. Beer ! it was rather a startling idea for an Empress to an Englishman's mind, but I have since seen it stated that " Pilsner " beer is the usual drink of Emperor Franz-Josef himself, and, in this respect, the custom may be an Imperial one. »

### Bruckner toasted at the Bishop's table

**Monday, 18 May 1885** : Letter from Anton Bruckner (Vienna) to Johann Baptist Burgstaller (Linz) :

« Reverend Vicar !

Although I have only my times of rest for composing, and not even these for a long time !!! Even so, I have kept my promise and send you under separate cover the new " Ecce sacerdos magnus ".

The " Te Deum ", as I hear, will be published. The Mass (in E minor) , dedicated to the late most venerable Bishop, belongs to the " Dombau-Verein ". I have undertaken revisions, and might they now be copied into the parts, since a new Bishop is reigning ? The Mass is vocal-music, with woodwinds and brass-ensemble accompaniment without strings. In 1869, I rehearsed the Mass and conducted it on the most magnificent days of my lifetime at the consecration in the votive chapel. The Bishop and the Governor toasted me at the Bishop's table.

With sincerest respect, I remain

Most devotedly,

Anton Bruckner

It was not required of me to write-out the " Sicut erat ", but I have made note of it in the chorale. »

### Hans Paumgartner on the 7th Symphony

**Saturday, 30 May 1885** : The Adagio of the 7th Symphony is performed in Karlsruhe.

Hans Paumgartner criticizes the « learned musicians at the Court Opera Orchestra » for their inability to evaluate the true worth of Bruckner's Symphonies and for forcing him to « eat the bread of artistic exile » as a result of their refusal to perform his works.

### Vienna : Opera projects for Bruckner

**Thursday, 4 June 1885** (« Corpus Christi ») : Anton Bruckner and Friedrich Eckstein go to Klosterneuburg. Bruckner plays the organ at the abbey church during High-Mass.

At the invitation of Prelate Ubald Kestersitz, Bruckner and Eckstein stay for dinner. Then, they leave to return to Vienna.

At 5 o'clock, Bruckner and Eckstein join the Schalk brothers, Ferdinand Löwe, Cyrill Hynais, Julius Mayreder and (for the first time) Hugo Wolf. They pick a good « Gasthaus » to spend a festive evening together. There, they talk of Johannes Brahms, Hans Richter, the 7th Symphonie (**WAB 107**) , Gustav Schönaich and future Opera projects - Eckstein had considered 2 libretti for Bruckner : « Libussa » by Christian von Ehrenfels and « Ingo » (from ?) .

### Marie Reinhardt

**Thursday, 11 June 1885** : Letter from Marie Reinhardt to Anton Bruckner :

Congratulations on last Name-Day (June 13) . Marie asked Cyrill Hynais about Bruckner's health condition. (Was Bruckner angry with her ?) Mary reminds Bruckner of the promised visit.

### Vienna Conservatory : Final examinations (June 1885)

Anton Bruckners Schüler, denen der « I. Classificationsgrad » zuerkannt wurde, werden in der Prüfungsstatistik erwähnt :

Bei den Vorbildungsschulen dieses Jahres ...

« Orgelklasse des Professor Herrn Anton Bruckner.

(3 Zöglinge.)

Josef Meyer, Carl Paur, Adolf Steininger. »

Bei den Ausbildungsschulen ...

« Orgelklasse des Professor Herrn Anton Bruckner.

(3 Zöglinge.)

II. Jahrgang : Carl Weber, Rudolf Wilfert, Thimothée Xanthopoulos. »

Bei Musiktheorie ...

« Klasse für Harmonielehre als Hauptfach des Professor Herrn Anton Bruckner.

(9 Zöglinge.)

Victor Abeles, Max Herold, Alexander Krauß, Johann Müller, Carl Paur, Anton Steibl, Adolf Steininger. »

« Klasse für Kontrapunkt des Professor Herrn Anton Bruckner.

(9 Zöglinge.)

I. Jahrgang : Carl Weber.

II. Jahrgang : Cyrill Hynais, Doktor Franz Marschner. »

Die « Gesellschafts-Medaille » erhielten und andere Fräulein Marie Pohoryles und Heinrich Wottawa.

### Mahler's sore throat episodes

One of our earliest indications of Gustav Mahler's extreme susceptibility to sore throats is a letter that he wrote to his friend Friedrich Lohr in the **summer of 1885**, when he was 25. He was staying in Iglau and mentions that he has just recovered from a sore throat. It is never entirely clear what he understood by this term : was it a simple inflammation of the pharynx (pharyngitis) , streptococcal angina (an acute inflammation of the tonsils and pharynx) or a specific inflammation of the pharyngeal and/or palatine tonsils ? Tonsillitis has long been treated by antibiotics and by a routine operation involving either a tonsillectomy (removal of the palatine tonsils) or an adenotomy (removal of the pharyngeal tonsils) as such illnesses often recur ; and, in the case of pathologically altered tonsils that frequently become infected, the pathogens may enter the blood-stream, causing other organs to become infected and leading to rheumatic disease, pyelitis and endocarditis. In some cases, this may also mean the valvular heart defect from which Mahler suffered. It is more than likely that, at some point in his life, one of Mahler's illnesses pursued a course of this nature, and his biggest mistake, for which he himself must take full-responsibility, is that he never underwent a tonsillectomy, which would have been entirely possible at this time, even if expensive and not without risk. A painful convalescence would also have been involved.

### Steyr : In quest of tranquility

**Mostly between 1885 and 1895** : Anton Bruckner enjoyed spending his summer vacations in Steyr as a guest at the parish presbytery (« Stadtpfarrhof ») .

The death in **1884** of parish priest Georg Armingier (who was also Dean) will mark the end of an era. Johann Evangelist Aichinger (a great music-lover) will become his successor.

Armingner promises to Bruckner long and soothing conversations around the dining-room table. The place had already witnessed such memorable one-on-one meetings.

**Wednesday, 1 July 1885** : Anton Bruckner writes to Georg Armingner's successor, Johann Evangelist Aichinger :

« I am looking for no more than coolness and quietness, as I have to work very diligently on my 8th Symphony. »

« If I may be so bold, I will take the liberty of asking your Reverence whether I might, in the holidays, sometimes install myself (as a paying guest, of course) in your wonderful rectory ? »

**July 1885** : It is in the parish presbytery that Bruckner will finish the sketch of the first movement of his 8th Symphony which concludes with a triumphant « Hallelujah ! » in the key of major. The Symphony (original version of 1887) will be completed in the month of **August**.

**Sunday, 28 June 1908** : On the occasion of the 50th anniversary of the « Männergesangsverein Kränzchen » , a commemorative plaque (inspired by Franz Bayer and designed by Ludwig Simon) honouring Bruckner is unveiled in front of the presbytery in the presence of pastor Johann Strobl. A speech is given by professor Gregor Goldbacher (instead of the one by August Göllerich junior, which was originally planned) . Franz Bayer conducts for the occasion the patriotic choral piece « Germanenzug » (**WAB 70**) .

Hier schuf

Dr. Anton Bruckner

In den Ferienmonaten

Der Jahre 1886 - 1894

Seine letzten großen Werke

Seinem Ehrenmitglied der MGV « Kränzchen »

A.D. 1908

The dear biographer

Though very humble and usually unable to speak highly of himself or his work, Anton Bruckner was indescribably pleased that August Göllerich junior was writing his biography.

Bruckner would have been thinking of his schedule at the Vienna Conservatory ; and he knew that he would have

little time to spend with Göllerich ; but there is still that flavour of wanting to insure the welfare of another, in this case, Göllerich (and, in particular, his finances) .

**Sunday, 20 September 1885** : Letter from Anton Bruckner (Vienna) to August Göllerich junior (Vienna) :

« My Dear Biographer !

Have you read the “ Berliner Tagblatt ” of August 10 ? Thereupon, “ Bote und Bock ” of Berlin offer to be my publisher. Dear Friend ! I think that the biography can wait ; you ought not to undertake expense on its behalf. In addition, Conservatory classes begin already on Tuesday. Do as you see fit. Sincerest greetings.

Yours,

Bruckner »

**Vienna Conservatory : Academic Year 1885-1886**

**Monday, 21 September 1885** :

Im Kapitel « B. Unterrichts-Leitung » des Jahresberichts ist zu lesen :

« 4. Lehrkörper.

I. Ordentliche Lehrer :

(...) (erst bei Drucklegung des Jahresberichts, nach Juli 1886, zutreffend :)

Herr Anton Bruckner, Ritter des Franz-Josef-Ordens, Kaiserlich-Königliche Hof-Organist, Professor. (Harmonielehre, Kontrapunkt und Orgel.) »

Zu Anton Bruckners Schülern am Wiener Konservatorium gehören Victor Abeles (« 16 Jahre - Kontrapunkt I. , Klavier III. Chg. ») , Hermann Abheiter (« 18 Jahre - Klavier A. II. , Kontrapunkt II. ») , Gottfried Brzibohaty (« 16 Jahre - Fagott A. I. , Harmonielehre, Klavier III. ») , (?) Heinrich Grünecke (« aus Orowitza, 18 Jahre - Harfe A. II. , Kontrapunkt I. ») , Max Herold (« 15 Jahre - Kontrapunkt. ») hörte Kontrapunkt bei Professor Franz Krenn, Carl Hrubý (« 16 Jahre - Violin A. II. , Klavier III. , Kontrapunkt II, Klavier III. , (Rept.) , General der Musik. ») , Josef Klein (« 15 Jahre - Violin A. I. , Harmonielehre, Klavier III. ») , Josef Meyer (« 18 Jahre - Orgel A. I. , Komposition I. ») , Johann Ostariasch (« 20 Jahre - Fagott A. I. , Harmonielehre, Klavier III. ») , Carl Paur (« aus Moor, 24 Jahre - Orgel A. I. , Kontrapunkt I. , Klavier III. ») , Adolf Steininger (« aus Altmannsdorf, 17 Jahre - Klavier A. I. , Kontrapunkt I. , 2. Zeile mit eigener Nummer : Orgel A. I. ») , Carl Weber (22 Jahre - Orgel A. II. , Kontrapunkt II. , Klavier III. ») , Rudolf Wilfert (« 19 Jahre - Orgel A. II. , 2. Zeile mit eigener Nummer : Klavier A. III. ») und Thimothée Xanthopoulos (« aus Smyrna, 20 Jahre - Orgel A. II. , separater Eintrag in 2. Zeile : Klavier A. III. , General der Musik. ») .

Und andere folgende Schüler dieses Schuljahres (vielleicht auch in Brucknerschen Kursen) spielen in Anton Bruckners späteren Jahren noch eine Rolle :

Hedwig Abel (« aus Budapest, 15 Jahre - Klavier A. II. , Harmonielehre. ») , Josef Chimani (« 12 Jahre - Violin V. I. ») , August Duesberg (« aus Gelsenkirchen, 18 Jahre - Violin V. III. , A. M. , Klavier I. ») , Rudolf Fitzner (« 17 Jahre - Violin A. I (Rept.) , Harmonielehre, Klavier III. ») , Carl Führich (« aus Jamnitz, 20 Jahre - Komposition A. III. ») , Ludwig Grande (« aus Teltsch, 20 Jahre - Klavier A. III. , General der Musik. ») , Carl Lasner (« 20 Jahre - Violoncello A. I. , A. M. , Klavier II. ») , Georg Valker (« 19 Jahre - Komposition A. II. , Chg. ») und vielleicht Alexander Zemlinsky (« 14 Jahre - Klavier V. II. , A. M. ») .

Von den 6 Orgel-schülern gehörten alle zur Ausbildungsschule. Der « Übersicht der in den einzelnen Lehrfächern unterrichteten Schülerzahl. » ist zu entnehmen, daß von den Orgel-schülern drei halb und einer ganz vom Schulgeld befreit waren. 8 Schüler (beider Lehrkräfte) hörten Kontrapunkt als Hauptfach, 4 Harmonielehre. Als Nebenfächer wurden Harmonielehre von 120 und Kontrapunkt von 16 Schülern besucht.

Auszug aus der « Unterrichts-statistik » :

### Wolf's « Penthesilea » fiasco

**Thursday, 15 October 1885 :**

Symphonic-poem based on Heinrich von Kleist's « Penthesilea », a drama which (like « Faust » , and perhaps for the same reason) had long been an obsession of Hugo Wolf ; its theme is the injuries inflicted by women on men through sexual passion. In Lisztian style, it seeks to develop and integrate small-scale motifs into the orchestral tone-poem frame.

The ambitious Symphonic-poem was put on a public trial-reading by the Vienna Philharmonic Orchestra. It seemed that Wolf was about to achieve the breakthrough he was seeking. Although it was regarded as a rule that the composer was not allowed to attend the test-rehearsal of his work, Wolf succeeded in entering the hall and listening.

Its rehearsal was a complete fiasco. The famous conductor Hans Richter made no effort to control the Orchestra as it mangled the difficult score. And the Orchestra decided against the performance of the work.

Richter made some disparaging remarks (which Wolf over-heard) about people who dared to criticize so great a Master as Brahms :

« Gentlemen, I ask your pardon for having allowed this piece to be played to the end ; but I wanted to know what manner of man it is that dares to write such things about the Master, Brahms. »

Such comments were wholly predictable and unsurprising. In disregard of all good taste, amid shouts of laughter.

Even days later, Wolf was beside himself with indignation at the treatment of « Penthesilea » . His critiques continued with unabated vigour ; but his own music was aborted or stillborn.

It was fortunate for Wolf that his hounding by Richter and other establishment figures came to win him the

unequivocal support of the Viennese Wagner Society.

### Bruckner's female admirers

Anton Bruckner wrote to his friend Moritz von Mayfeld about the ladies who pursued him. It was fortunate that he was wise enough to realize that his celebrity-like status was behind their seeming admiration. He gave only a glimpse of illness in a letter to him.

**Friday, 6 November 1885** : Letter from Anton Bruckner (Vienna) to Moritz von Mayfeld (Linz) :

« Dear “ Herr ” Councilor !

I protested against the performance of my 7th Symphony because, in Vienna, this has no purpose because of Hanslick and his associates. If the Philharmonic does not heed my protest, then, it can do as it will. In no case, can anything be done before January because the parts have not been printed yet. Actually, the full-score, etc. (piano arrangement) will take an even longer time to get into print, so I hear. 2 orders arrived from foreign countries ; 3 from America.

Concerning my marriage, “ I still have no bride-up to this date ” ; if only I could find a properly becoming sweetheart ! To be sure, I have many female friends ; for, in recent times, the darlings pursue me quite extensively, and they think that they have to treat me in an idealistic manner. It's terrible if one is not well ! Entirely forsaken !  
A hand-kiss to your gracious lady !

Respectfully yours,

Anton Bruckner »

### A Bruckner female student eats « at Gause »

The Austrian physician, writer, dramatist and poet Friedrich Wallisch was born on 31 May 1890 in Mährisch-Weißkirchen, Moravia (now Hranice, in the Czech Republic) ; and died on 7 February 1969 in Vienna's 1st District.

Born of an affluent family, he served in the Austro-Hungarian navy and was in Albania in 1914 to report on the ephemeral reign of Prince Wilhelm zu Wied (1876-1945) , where he acted as head of the academic section of the Austrian Fleet Association. After the First World War, he studied medicine and, although he finished a doctorate, he never seems to have exercised this profession. In the spring of 1923, Wallisch founded a publishing-house called « Europäischer Verlag Doktor Friedrich Wallisch » (European Publisher Doctor Friedrich Wallisch) in Vienna and was particularly active, in the following years, with it and with his writings and numerous publications. He was the author of German-language poetry, essays, short-stories, biographies, travel-books and plays. In 1929, he also founded an « Österreichisch-Albanische Gesellschaft » (Austrian-Albanian Society) .

In September 1963, Wallisch published a short article entitled « Symphonie in E-Moll » in the « Deutsche Rundschau » newspaper, in which he presented a charming account of how Johannes Brahms had found the inspiration for completing the final movement of his 4th Symphony by watching Wallisch's mother (a beautiful and highly-musical lady who had studied with Anton Bruckner) as she was enjoying a meal « At Gause » famous Viennese restaurant with the author, then a young child. Brahms had afterwards found-out where she lived and had even written her a letter (which Wallisch prints in full) , in which he explained what had happened and invited her to visit him so that he might play for her the Symphony « which has been completed with your help » .

1885 : Last day of November - mild !

**Monday, 30 November 1885** : Pocket calendar entry by Anton Bruckner :

« 30 November, 9:00 am, over 12°Ré (Réaumur scale) warm. (/) Up to 15°Ré at 3 o'clock in the afternoon ! »

Baroness Marie Anna Lederer

Marie von Czerny, born Baroness Zobel, died on **Sunday, 27 December 1885**, in Linz, a place that Bruckner knew and loved. He would have known Baroness Lederer as a young girl and probably still pictured her thus ; and, so, he addresses her as « Fräulein » in the letter of condolence. It was not unlike him to be attracted to young girls in his quest for a wife, although he always knew his place and was circumspect.

Baroness Lederer appeared to be pleasantly surprised that Anton Bruckner had written his letter to her already on December.

**Thursday, 31 December 1885** : Letter from Anton Bruckner (Vienna) to Baroness Marie Anna Lederer (Amstetten) , the wife of Baron Lederer of Amstetten and daughter of Marie Freiin von Czerny :

« Highly-Honoured Baroness Marie Anna !

I am so deeply and profoundly moved that it is barely possible for me to arrange words of comfort and condolence. Allow me to say, “ Fräulein ”, only that I ask God that He grant you the needed strength in this most grievous sorrow.

Yesterday, like the day before, a holy Mass was read at the “ Schottenkirche ” in her highly-blessed memory !

Those were my obsequies.

May the New Year assuage your greatest sorrow.

I send my sincere condolences to all of the ladies of your noble family.

Sorrowfully, I kiss your hand.

Your mourning friend,

Anton Bruckner »

« Wiener Salon-Blatt » : Wolf on Bruckner's Quintet

**Sunday, 10 January 1886** : Music-critic Hugo Wolf writes in the « Wiener Salonblatt » (number 2, page 8) about a performance of Bruckner's Quintet (**WAB 112**) by the Hellmesberger Quartet :

« Anton Bruckner's String Quintet is one of those rare artistic phenomena blessed with the capacity to utter a profound secret in a simple, sensible way, in contrast to the usual procedure, much favoured by our modern "Masters", of clothing simple, everyday thoughts in the enigmatic utterances of oracles. Bruckner's music flows full-bodied and rich from the clear fountain of a child-like spirit.

One can say with Wagner's Hans Sachs :

“ It sounded so old, and was yet so new. ”

This is thanks to a strong, popular strain that emerges everywhere in his Symphonic compositions, sometimes overtly, sometimes hidden. How charming, for example, is the “ Ländler ”- like Trio of the Quintet ! How well the composer, for all his earthiness, knows how to play the gentleman of distinction, sometimes by a harmonic deviation or a bit of ingenious counterpoint, by a more richly-coloured instrumentation or a surprising inversion of themes, etc.

Never is Bruckner common place or banal, a virtue he shares with Schubert. But neither do Bruckner's compositions ever seem to be contrived. His harmonies are bold and new, and they lend the melody an utterly characteristic finery, a definite physiognomy that impresses itself with adamantine incisiveness upon the listener's sensibility. His thematic invention is the product of an extraordinarily fertile fantasy and a glowing perceptiveness, hence, the lucid imagery of his musical language. »

...

« **Konzerte.**

Quartett Hellmesberger.

Anton Bruckner's Quintett ist eine jener seltenen künstlerischen Offenbarungen (...)

Daß diese Komposition Bruckner's bei ihrer Wiederholung mit gesteigertem Beifalle aufgenommen wurde, gereicht dem Publikum nicht minder zur Ehre als dem Komponisten.

(... über die weiteren Programmnummern und andere Konzerte ...)

Hugo Wolf. »

### Munich : « Te Deum » (WAB 45)

**Saturday, 23 January 1886** : Letter from Barbara (« Betty ») von Mayfeld to Anton Bruckner (the « worthy successor to Beethoven » , as she called him) :

After listening to the somewhat « ordinary » works of Franz Schubert and Heinrich Schütz, the Mayfeld couple was quite enthusiastic about the execution of the « Te Deum » (WAB 45) . « Betty » would have liked to congratulate Bruckner personally at their Munich apartment (« Hotel Vier Jahreszeiten ») .

### Happy Thursday « at Gause »

**Thursday, 25 February 1886** : Pocket calendar entry by Anton Bruckner (6 March 1886) :

« 25 February 1886, Nightingale. “ Gause ”. »

The popular Viennese guest-house (Restaurant and Beer-Hall) named « at Gause » (« Gasthaus und Bierkeller “ bei Gause ” ») was located in a basement at « Johannesgasse » Number 12 in the 1st District.

### Bruckner writes to King Ludwig II of Bavaria

Anton Bruckner wrote to King Ludwig II of Bavaria asking for permission to dedicate the 7th Symphony to him. After much ritualistic rhetoric, Bruckner informed the King of his problems with finding time to compose :

« I am all the more fortunate that, likewise, the golden rays of the Royal grace touch me, as I, nearly 61 years old, in addition to all of my many school periods at the Vienna Conservatory, must also give private instruction in music, so that not very many residual hours remain left to me for musical composition. Because, at the present time, I feel myself honestly vigorous enough to create my best and would like to turn with pleasure toward dramatic composition, this lack of time fails heavily on my heart ! »

### 1886 : Cold to begin March

**Monday, 1 March 1886** : Pocket calendar entry by Anton Bruckner :

« 10°Ré (Réaumur scale) cold. »

### WAB 107 : Austrian premiere

**Sunday, 14 March 1886** : The Austrian premiere of Bruckner's 7th Symphony (dedicated to King Ludwig II of Bavaria)

was performed in the presence of the composer, at the « Congress Graz Stefaniensaal » , by the young conductor Karl Muck.

Following this triumph, Vienna was forced to capitulate - much to the dismay of Hanslick's « Circle » .

Immediately after the concert, Bruckner improvised on the organ in front of a select group.

Bruckner will then have the opportunity to meet 2 important figures :

- The music-critic, musicologist, and Wagnerian of the first hour, Doctor Friedrich von Hausegger (26 March 1837 - 23 February 1899) . He will « toast » Bruckner, Muck and this wonderful concert.

Von Hausegger is the author of important writings on music including « Anfänge der Musikanthropologie : Die Musik als Ausdruck » (1887) et « Gedanken eines Schauenden » (1903) .

- His son, the composer and conductor Siegmund von Hausegger (1872-1948) .

Doctor Muck's female student, Antonia Brico, remembers :

« He (Muck) was passionately fond of Bruckner and Mahler, and was deeply hurt over the neglect of these composers. He sponsored the cause of many a composer who is today well-known. When he first produced Bruckner's great 7th Symphony in Berlin, the composer came to him afterwards weeping, declaring that he had never hoped to hear his Symphony so beautifully played. »

Karl Muck was a brilliant interpreter of the music of Richard Wagner and one of the great pioneers of Anton Bruckner's Symphonies (and he never made any cuts) . He had a reputation for being insensitive to modern music. But a return on his career reveals that he programmed works by Gustav Mahler, Claude Debussy, Jean Sibelius, Arnold Schönberg and Anton Webern. In the 1920's, Muck produced legendary acoustic and electric recordings of the great Symphonic repertoire.

### **WAB 107 : A laurel wreath at Vienna's premiere**

**Sunday, 21 March 1886 :**

When the 7th Symphony was introduced to Vienna, it had become a sort of obligation upon the composer's adopted city. Sensational reports of some of the performances elsewhere reminded Vienna that the composer they had hardly noticed through the years was being discovered as a Symphonist to be reckoned with. Thus, Bruckner was, for the first time, included in the subscription programs of the Vienna Philharmonic Orchestra. Circumstances were otherwise unfavourable, for the Wagner haters were necessarily Bruckner haters, and a success such as the new Symphony had had in Leipzig, Munich and Graz could not be countenanced. The concert began at 12:30 (What was lunch-time in

Vienna ?) and traversed an Overture by Étienne Nicolas Méhul and a Piano Concerto of Beethoven before the audience was subjected to the difficult « new work ». It was evident when the first movement had ended that the audience had passed judgment in advance and that that judgement was not undivided. There were demonstrations of applause, but also, many departures. After the long Adagio and after the Scherzo, both the applause and the exodus increased. At the end, Bruckner was called-out 4 or 5 times.

He beamed with joy and made short and awkward bows, murmuring :

« Kuß d'Hand, Kuß d'Hand »

A laurel wreath was presented by the « Wagner-Verein » .

Were present at the concert :

Music-critics Emerich Kastner, Doctor Josef Königstein, Emil von Hartmann, Doctor Theodor Helm, Doctor Hans Paumgartner, Hans Puchstein, Hugo Wolf, Gustav Dömpke, Eduard Hanslick, Wilhelm Frey, Doktor Robert Hirschfeld and Max Kalbeck, Caricaturist Heinrich Gröber (1850-1934) , Professor Bernhard Deubler and Prelate Ferdinand Moser from St. Florian, Friedrich Klose, Carl Hrubý, Johann Strauß junior and Adele Strauß, Ferdinand Löwe, Josef Schalk, Adalbert von Goldschmidt, Friedrich Eckstein, Ludwig Grande, Pius Richter, Amand Loidol and Father Raffael « Oddo » Loidol.

At a « Fest-Bankett » given in the « Spatenkeller » by that Society, Hans Richter admitted in a congratulatory speech that he had approached the new Symphony with mistrust which was replaced by glowing enthusiasm, a feeling shared by every player from the concert Master to the timpanist as they had given the best they knew in the performance. Bruckner shed tears when he was presented with a bust of his god, Richard Wagner.

A telegram from Johann Strauß junior was read :

« I am much moved - it was the greatest impression of my life. »

### Tears and a bust of Wagner

At a « Fest-Bankett » given in the « Spatenkeller » by the Wagner Society, Hans Richter admitted in a congratulatory speech that he had approached the new Symphony with mistrust which was replaced by glowing enthusiasm, a feeling shared by every player from the concert Master to the timpanist as they had given the best they knew in the performance. Bruckner shed tears when he was presented with a bust of his god, Richard Wagner.

### Bruckner irritated by Josef Schalk

The first published edition of the 7th Symphony represents the high water-mark of Bruckner's relations with Josef Schalk, before the relationship was clouded by increasing suspicion on one hand, and increasing high-handedness on

the other. But at the centre of the relationship there was a fundamental clash of personality ; something about the « Generalissimo » irked Bruckner, for all the efforts Josef was making on his behalf, and, in the following years, his imitation broke-out in public disagreements that brought forth a new, frightening Bruckner, outspoken, threatening, and sarcastic.

**Sunday, 21 March 1886** : Anton Bruckner had a vigorous squabble with his disciple Josef Schalk who dared to write a programme-note of doubtful taste about the Scherzo of the 7th Symphony. Inspired by allegoric images, it earned itself notoriety :

« A distant heavenly chamber, where good demons lead each other in heavenly rounds. »

According to Carl Hrubý, the reaction of Bruckner could not wait and was exceptionally strong :

« Why he picked-out my 7th to write poetry about ? that “ Locherl ” (a rough form of disapprobation) only knows. He knows perfectly well what I was thinking about when I wrote it - the couple of hundred Gulden I could get from a publisher. »

### Bruckner, the drunkard

**Monday, 22 March 1886** : Music-critic Gustav Dömke wrote in the « Wiener Allgemeine Zeitung » about the concert :

« We recoil in horror before this rotting odor, which rushes into our nostrils from the disharmonies of this putrefactive counterpoint. His imagination is so incurably sick and warped that anything like regularity in chord progressions and period structure simply do not exist for him. Bruckner composes like a drunkard ! »

### A Wagnerian Baron writes poetry to Bruckner

**Thursday, 25 March 1886** : Letter from Anton Bruckner (Vienna) to Baron Hans von Wolzogen (Bayreuth) :

« Noble Baron ! Most Honourable Patron !

A thousand thanks for your kind visit ; I was sincerely sorry that I did not know, and that I was unable to make a return visit, in particular, however, that I had to miss Your Grace's distinguished speech. (Once again, I'm in the same state of affairs.)

Your letter, which honoured me so and was so highly-ingenuous, cheered me greatly ! Sincerest thanks ! The poem is magnificent ! Unfortunately, I am now buried in the 8th Symphony and have almost no time for composition. On the 14th of this month, I was in Graz for the performance of my 7th Symphony. The performance, under the genial Doctor Muck of Würzburg, was first rate (14 rehearsals) ; the reception, marvelous beyond description. After the Finale, they received me with great honours.

On the 21st of this month, the same Symphony, performed in Vienna by the Philharmonic under Richter's direction, was completely excellent : the success, indescribable jubilation, already after the first movement, 5 or 6 impassioned curtain calls. At the conclusion, endless enthusiasm and curtain calls ; a laurel-wreath from the " Wagner-Verein " and a festive banquet. My wreath was placed around the neck of the portrait (bust) of the noble, immortal, unparalleled Master.

Indeed, very clever. I made my speech relevant to that event and began weeping bitterly, as I did in the morning, when, through my German student Doctor Behn, living in Vienna, I received from Dresden the bust of my dearly beloved Master and Ideal, which I kissed tearfully.

However, the " 5 hostile newspapers " will, according to Hanslick's wishes, make sure that these successes are destroyed for the public far away.

With thanks and deepest respect, I remain

Highly-indebted,

Anton Bruckner »

« Wiener Salonblatt » : Wolf's on Bruckner's 7th Symphony (1886)

**Sunday, 28 March 1886** : Music-critic Hugo Wolf writes in the « Wiener Salonblatt » (number 13, page 10) about a performance (in Hanover !?) of Bruckner's 7th Symphony (**WAB 107**) :

« Opera and Concert.

For a full month, no work by Richard Wagner has been performed in our Opera Theatre, but the " Trompeter von Säkkingen " rises proudly and handsomely 3 times a week over the boards of our Opera stage. (... thanks to a guest-singer, now " Lohengrin "...) Anton Bruckner's Symphony in E major became, after (...) still a " Cimborasso " against the mole hills of Brahms's Symphonies.

(...)

Hugo Wolf. »

Munich : Bruckner stays at the « 4 Seasons »

**Wednesday, 7 April 1886** : The « Süddeutschen Presse und Münchener Nachrichten » reports a list of guests staying at the « 4 Seasons » Hotel, including :

« Bruckner, Professor, Wien. »

## Taking the train and booking a room

**Tuesday, 13 April 1886** : Letter from Anton Bruckner (Vienna) to Wilhelm Floderer (Linz) :

« Dear Sir !

It pains me that you have to work so hard ! Naturally, I agree with everything. Tomorrow evening (Wednesday) , toward 10:00, I will once more depart on the express train from Vienna, to my ... (incomplete thought) . May I ask to have a room reserved for me at the " Kanone " ? It may be that one of the young German men, who came to Vienna to study with me, will come along.

May I be permitted to ask that the praiseworthy " Liedertafel " , which once more has written so kindly, be given notification of my arrival ?!

With all respect

Yours,

Anton Bruckner

P.S. : (Later, I will probably go to London with Richter.) Where will the rehearsal be ? (I shall probably be able to find-out when I get to the " Kanone ".) »

The « Gasthaus Zur goldenen Kanone » , located at « Landstraße » Number 18-20 in Linz, was a restaurant-inn frequented by Anton Bruckner and his friends.

## « Frohsinn's » 41st anniversary

**April 1886** : The « Frohsinn » Choral Society decided to mount a special Bruckner concert to commemorate its 41st anniversary.

A special poetic greeting to Bruckner by Karl Kerschbaum, a local poet, appeared in the « Linz Tages-Post » , on **Tuesday 13 April**, and the concert took place 2 days later.

It was certainly a most ambitious concert by Linz standards, consisting of « Germanenzug » (**WAB 70**) ; « Um Mitternacht » (**WAB 90**) ; the Adagio from his 3rd Symphony ; and the « Te Deum » (**WAB 45**) . Wilhelm Floderer conducted and Bruckner, who was present, later wrote to « Frohsinn » to express his heartfelt gratitude. A special ceremony was held in his honour after the concert, and glowing reports appeared in the « Tages-Post » , the « Linzer Zeitung » and the « Volksblatt » .

## Prague : Mahler conducts Bruckner

**Sunday, 18 April 1886** (Palm Sunday) : Benefit-Concert in aid of the (newly-founded) Society of needy German law-students. As part of a special concert given before lawyers in the « Grand Hotel Bräuer » (capacity : 1,800 seats) in Prague, Gustav Mahler performs the Scherzo of Anton Bruckner's 3rd Symphony (**WAB 103**) with the augmented Orchestra of the « Neues Deutsches Theatre » .

According to the « Prager Tagblatt » (20 April 1886) , the « genius » Mahler conducted everything by heart « and with admirable skill » .

### Program :

Works by Luigi Boccherini, Peter von Winter, Franz-Josef Haydn, Wolfgang Amadeus Mozart, Franz Schubert, Robert Schumann, Johannes Brahms, Joachim Raff, Edvard Grieg, Wilhelm Heinefetter, Giacomo Meyerbeer, Richard Wagner.

### Anton Bruckner :

Scherzo from the 3rd Symphony (**WAB 103**) .

### Mahler :

« Lied Ging heut' Morgen über's Feld » (from « Lieder eines fahrenden Gesellen »)

« Frühlingsmorgen » (from « Lieder und Gesänge aus der Jugendzeit »)

Premiere : « Hans und Grethe » (from « Lieder und Gesänge aus der Jugendzeit »)

Soloists : Gustav Mahler, piano ; Johannes Elmlad, bass ; Betty Frank, soprano ; Marie Renard, mezzo-soprano ; Carl Halir, violin.

The history of the « Neues Deutsches Theatre » (New German Theatre, currently known as the Prague State Opera) dates back to the late-19th Century. While often over-shadowed by the more prominent National Theatre of Prague, the company has its own distinct history. The birth of a magnificent Czech Theatre, the National Theatre, in 1883 indirectly created a longing among the Prague German community for a German-speaking Opera House of its own. At that time, the Czech lands were part of the Austro-Hungarian Empire and there was a large German minority living in Prague. On 4 February 1883, the « Deutscher Theaterverein » was founded with the goal of raising funds for the new theatre. The plans were developed by the well-known Viennese firm Fellner & Helmer along with Karl Hasenauer, architect of the « Burgtheater » in Vienna. The resulting « Neues Deutsches Theatre » was designed by the Prague architect Alfons Wertmüller and built within 20 months. With its spacious auditorium and elaborate neo-Rococo décor, the theater was one of the most beautiful in Europe.

Performances commenced on 5 January 1888 with Richard Wagner's Opera « Die Meistersinger von Nürnberg » . The first director became Angelo Neumann, who brought there distinguished musicians and set high artistic standards so that the Theatre reached soon international recognition. Neumann's successors were Heinrich Teweles, Leopold Kramer, Robert Volkner, Paul Eger, and Pavel Ludikar. Artists associated with the theatre in its first phase included Kurt Adler (Conductor) , Alexander Zemlinsky, Georg Széll, Erich Kleiber, Otto Klemperer, Alfred Piccaver, Hans Hotter, Kurt Baum, and Wilhelm Elsner. Guest-artists included Nellie Melba, Enrico Caruso, Emma Calvé, Lilli Lehmann, Selma Kurz, Maria Jeritza, Richard Tauber and Leo Slezak.

In the 1930's, with the growing Nazi threat, the New German Theatre in Prague was among the bastions of democracy, serving as a refuge for artists fleeing from Germany. Political developments shortly before signing of the Munich Agreement along with financial problems however led the German Theatre Association to close the theatre in September 1938.

The Czechoslovak State expressed an interest in the building. But the Nazi occupation of Czechoslovakia, on 15 March 1939, and establishment of the « Protectorate of Bohemia and Moravia » thwarted its plans. Under the new title « Deutsches Opernhaus » (German Opera House) , the theatre served for political assemblies of the Nazi Party, and for the occasional guest presentations by ensembles from the 3rd « Reich » .

### Prague : « Grand Hotel Bräuer »

« Grand Hotel Bräuer » (now, « ATS hostel Jednota ») : Number 38 on Opletalova Street, « Nové Město » , Prague.

The building is a student residence : the « Jednota Residence » . « Hotel Jednota » is located in the city-centre of Prague, at 5 minutes of walking distance from Wenceslas Square. For its location, the hotel makes an excellent point of departure for walks through the historical centre and to visit the main-sights. The main train-station (« Hlavni nadrazi ») and bus-station (« Florenc ») are in a walking distance from the hotel.

### I lost my hat !

An incident greatly disturbed Anton Bruckner.

On his way back from Bayreuth to Vienna, a lieutenant sat with him in the wagon compartment. This « alien » presence prevented the composer from sleeping in peace. Bruckner only began to awake when the train entered the station where he must get-off. He hastily grabbed his luggage and hurried out the wagon. Bruckner looked for his Black wool winter traveling-hat when he was far away from the station, realizing that it must have probably slipped into the lieutenant's luggage. After his arrival in Vienna, he decided to write a letter to the railway company and asked them to find his beloved topper and send it back to him.

**Saturday, 24 April 1886** : Letter from Anton Bruckner (Vienna) sent to the administration of the German Railways (St. Florian, near Linz) :

« On the trip from Vienna to Munich on the departure from Vienna, April 5, at 9:50 in the evening ; arrival in Wels at about 2:00 am, April 6 ; passed about 2h30 in Car Number ? (...) 2nd Class Compartment Letter ? , I lost the following object (accurate description) : Black wool winter traveling-hat. A young lieutenant (I believe from the nobility) , who often travels to Vienna on the same express-train, could (in a hurry, and just roused from sleep) have carried this cap with his own luggage unwittingly ; and I request a thorough inquiry and forwarding to accurate address and place of residence.

Anton Bruckner, Professor.

“ Heßgasse Number 7  
Wien I ”

(Signed : Anton Bruckner)

N.B. : I gave my card and address to the conductor. »

But that's not the end of the story !

Bruckner was so attached to his « faithful travel companion » that he asked two of his friends to contact the company to find-out if the hat had been found.

Whether this large-scale search operation was successful, we still do not know ...

**Sondershausen : « Hotel Münch »**

**Sunday, 6 June 1886** : Chamber music « morning-concert » (from 11:00 am to 2:00 pm) in the hall of the « Hotel Münch » , as part of the Sondershausen Music Festival. Performance of Anton Bruckner's String Quintet (**WAB 112**) by the Halir-Grützmacher-Quartett (Carl Halir, Theodor Freyberg, Leopold Grützmacher, Carl Nagel and Carl Hager, 2nd viola) .

Also on the programme :

Eugène d'Albert performs his own works.

Julius (Gyula) von Beliczay : Lieder sung by alto Elisabeth Exter.

Albert Fuchs and Ferdinand Præger : Lieder sung by tenor Gustav Trautermann.

Giovanni Sgambati : ?

Anton Rubinstein : « Polonaise » played by pianist Gertrud Hertzner from Straßburg.

Hans Sommer : Lieder sung by baritone Karl Hill.

Anton Urspruch : Piano Quintet performed by the Halir String Quartet and Anton Urspruch at the piano.

Franz Wüllner and Richard Wagner : Lieder sung by alto Elisabeth Exter.

### Vienna Conservatory : Final examinations (June 1886)

Anton Bruckners Schüler, denen der « I. Classificationsgrad » zuerkannt wurde, werden in der Prüfungsstatistik erwähnt :

(diesmal kein Schüler in den Vorbildungsklassen)

Bei den Ausbildungsschulen « Orgelclass des Professor Herrn Anton Bruckner.

(6 Zöglinge.)

I. Jahrgang : Josef Meyer, Carl Paur, Adolf Steininger.

II. Jahrgang : Carl Weber, Rudolf Wilfert, Thimothée Xanthopoulos. »

Bei Musiktheorie « Classe für Harmonielehre als Hauptfach des Professor Herrn Anton Bruckner.

(5 Zöglinge.)

Gottfried Brzibohaty, Josef Klein, Johann Ostariasch. »

« Classe für Kontrapunkt des Professor Herrn Anton Bruckner.

(6 Zöglinge.)

I. Jahrgang : Carl Paur, Adolf Steininger.

II. Jahrgang : Carl Weber. »

### Bruckner's « Last Supper »

Fritz von Uhde's « Last Supper » (« Das Abendmahl » , 1886)

Oil on canvas on a Biblical theme : Jesus having the last supper with contemporary, working-class, disciples.

Dimensions : 206 x 324 cm (81.1 x 127.6 in) .

« Staatsgalerie » Stuttgart, Germany. (A copy exists at the old school of Bruckner in Ansfelden.)

The great German painter Fritz von Uhde was deeply impressed by Anton Bruckner's appearance but he could not get the composer to come to his studio to sit for a portrait. He wanted to paint Anton Bruckner as one of Christ's disciples in his picture of « The Last Supper » (« Das Abendmahl ») of 1886. He had to resort to a photograph and paint from that. When Bruckner later saw himself in the picture, he looked at his portrait for a long time and was deeply moved but he felt unworthy of appearing in the company of the Apostles.

When Uhde presented his « Last Supper » in 1886, people were speechless. Simon (Anton Bruckner) , the most faithful of the 12 disciples, appeared in a striped costume. A monstrosity ! An art-critic immediately described the Apostle as a « penitentiary boy with the physiognomy of a murderer » . Others mocked the « proletarian atmosphere » of the scene.

The « Last Supper » is certainly a remarkable picture. The room in which the Saviour and his disciples are sitting at supper is entirely modern, as is also the appearance of the men, although the long mantle of Christ somewhat resembles the clothing of his time, and his delicate, worn, intellectual features are in strong contrast with those of the rude, lowly men who surround him. The scene is altogether of today, with no symbols of divinity about it. The sincerity of his treatment of the subject, the earnestness and self-surrendering love depicted in the faces and postures of the toil-worn, lowly disciples, raise this picture of von Uhde's far above the common place.

In 1887, 3,000 persons viewed von Uhde's « Last Supper » in Munich during 5 consecutive days.

Looking at the « Last Supper » , Emperor Frederick III exclaims :

« This a “ Last Supper ” ? Come on, it's a feast of anarchists ! »

Von Uhde also exhibited at the Viennese Secession. The Jewish Hungarian journalist and author Ludwig Hevesi said of him :

« Fritz von Uhde, whose magnificent painting the “ Last Supper ”, one of his Masterpieces that we already knew from Munich, is generally considered his best work. It will also be celebrated. »

Von Uhde will frequently be compared to Rembrandt. This will be the case in particular with the « Last Supper » which Uhde will exhibit in Paris in 1887, and which François Thiébault-Sisson analyzes, thus :

« The artist represented them, these disciples, as Rembrandt had already done, very poor, very humble, very naive.

They are craftsmen and rustics, wrapped in brown robes, but transfigured by faith, illuminated by an inner flame. Christ is himself also humble but radiates goodness. And all this is alive, poignant, truly beautiful ! »

Even in the reactionary « Journal de Paris » , praiseworthy terms appeared in the pen of Catholic critic J. de Tarade, admiring the Protestant Uhde and his way of representing the disciples in a non-idealized way as simple peasants :

« It is impossible not to be moved in front of a work as sincerely expressed as the “ Last Supper ” ! What “ grandeur ” in these highly charged and experienced men ! What anointing and what religious poetry ! One is penetrated with piety and faith awakens at the sight of all these so expressive and so talking figures. »

Uhde's work was often rejected by leading public opinion and the official art-criticism who sometimes considered his representations of ordinary scenes as « vulgar » or « ugly » . Nevertheless, his paintings also attracted the attention of others like Vincent van Gogh. Revivalist of the practice of treating Biblical episodes realistically by transferring them to modern days, Uhde's work was also appreciated by Christians who praised his symbolic message and sense of evangelical morality.

### Bruckner writes to Kietz's daughter

**Thursday, 17 June 1886** : Letter from Anton Bruckner (Vienna) to « Fräulein » Elisabeth Kietz, daughter of sculptor Gustav August Kietz (Bayreuth) :

« Honourable “ Fräulein ” ! Most Noble Friend !

Never yet has a “ Fräulein ” so dearly and honorably taken action for me as you have ! A thousand thanks for it ! Never, will I forget this. How often I think, with longing, of your noble essence, which fills me with deep admiration. And your sincere letter ! The Privy Councilor did not show me any kindness, as Levi would have done - etc. , etc. ; he has written nothing to me, and my request, in relation to the king, is not being implemented as he promised.

And to make matters worse : King Ludwig !!!!!

May you remain in good health, “ Fräulein ” ; and, once again, please accept my most sincere thanks and the most sincere hand-kiss ! My respects to “ Herr Papa ”. In heartfelt respect and admiration, I remain

Yours,

Anton Bruckner »

Elizabeth Kietz is the daughter of the German sculptor Gustav Adolf Kietz (1824-1906) . Bruckner met the latter in Bayreuth, more specifically during his famous visit to Richard Wagner at Villa « Wahnfried » in August 1873.

Kietz was a witness to the conversation of Bruckner and Wagner concerning the famous blue paper containing the signatures of both men, and he remembered Bruckner's anxiety the following morning. Bruckner had forgotten which Symphony dedication Wagner had accepted : the one to the 2nd ; or the one to the 3rd Symphony. The returned note cleared-up the matter and refreshed Bruckner's memory that it had been the 3rd.

This was all recorded in a letter written to Marie by her father.

Elizabeth will meet Bruckner himself for the first time during the fall of 1885 in Vienna. She was beautiful but young enough to be Bruckner's daughter. He was very much taken with her. However, he was too religious to pursue her inappropriately. She had been kind to him, and he is simply admiring her on paper and saying his thank you.

« Herr Papa » was a recognized German sculptor, who made several images of Richard Wagner, ultimately becoming his friend. It was Kietz's wife, Marie, who recorded his reminiscences of Wagner and published them.

### Bruckner receives the Order of Franz-Josef

**Thursday, 1 July 1886** : Letter from Josef Hellmesberger senior to the High-Minister of the Imperial Court :

Anton Bruckner has proved to be a Master of composition. The Imperial Chapel has 2 of his Masses to its repertoire. His Symphonies have achieved a sensational success in Vienna, Munich and Leipzig, not to mention the String Quintet. Therefore, Hellmesberger proposed the name of Bruckner as candidate for the Order of Franz-Josef, which is accompanied by an annual grant of 300 Florins.

**Thursday, 8 July 1886** : Letter from the High-Minister of the Imperial Court to Anton Bruckner :

The Emperor awards you with the Knights' Cross of the Order of Franz-Josef, by resolution of **July 8, 1886**, and also grants you a personal allowance of 300 Florins per year, which is to be paid starting on **August 1, 1886**. Signed by Prince Hohenlohe-Shillingstürst.

« (Gedruckter Briefkopf :)

Von Seiner  
kaiserlichen und königlich  
Apostolischen Majestät  
Obersthofmeisteramte

(ab hier handschriftlich :)

An  
das Mitglied der Hofmusikkapelle,

Herrn Anton Bruckner.

Seine Kaiserliche und Königlich Apostolische Majestät haben mit Allerhöchster Entschliebung vom 8. Juli des Jahr Ihnen das Ritterkreuz des Franz Josef-Ordens allergnädigst zu verleihen und eine Personalzulage jährlicher Dreihundert Gulden huldreichst zu bewilligen geruht.

Von diesem Allerhöchsten Beschlusse werden Sie unter Anschluß der Ordensdekoration und des Statutenbuches mit dem Beifügen in Kenntniß gesetzt, daß Ihnen die Personalzulage jährlicher 300 Gulden beim Kaiserliche-Königlich Hofzahlamte.

(2. Seite :) vom 1. August des Jahr an, flüssig gemacht wird (...) »

...

Pocket calendar entry by Anton Bruckner :

« On July 9th, by His Excellency Prince Hohenlohe, Order of Franz-Josef, around 1:00 pm. »

Other (undated) calendar entry (probably related to the award ceremony) :

« Hohenlohe-Schillingsfürst Constantin, Prince, Imperial High-Minister of His Majesty the Emperor, Imperial-Royal Private Counselor, Colonel of the Imperial-Royal Bodyguard. »

**Friday, 9 July 1886 (around 1:00 pm)** : Anton Bruckner is made Knight of the Order of Franz-Josef (« Kaiserlich-Österreichische Franz-Josef Orden ») by Prince Constantin Hohenlohe-Shillingstfürst.

The Knights' Cross of the Order of Franz-Josef is the highest honour given to an Austrian citizen.

Attending the ceremony are several of his students as well as members of the aristocracy, including Count Carl Pückler. Bruckner will be overwhelmingly proud of this medal. He will love to wear it on official occasions until the end of his life.

Letter from Anton Bruckner to Princess Amalie Maria of Bavaria :

Bruckner thanks Amalie for receiving the honour of joining the Emperor's select group. Name-Day Congratulations (10 July 1886) .

Letter from Rudolf Weinwurm to Anton Bruckner :

Weinwurm congratulates Bruckner on this long-deserved award.

Letter from the High-Minister of the Court to the Imperial Chapel :

The Chapel is informed about the Franz-Josef Order and the annual allowance which were awarded to Bruckner. A copy of the decree accompanies the letter. Signed by Theodor von Westermayer and Anton Bruckner.

### Portrait by Josef Büche

By order of the Emperor, Josef Büche (1848-1918) , the portraitist of the Court, will paint Bruckner on canvas, standing nobly, wearing the insignia of the Order of Franz-Josef.

During the pose sessions, Bruckner kept making counting gestures.

**Friday, 11 August 1893** : At the last session, Bruckner described Büche's oil painting (Iconography : IKO 66) as his best portrait.

The work is exhibited at the « Anton-Bruckner-Museum Ansfelden » , the old town's primary school which was the birthplace of the composer.

During his career, Büche will paint mainly military and « genre » scenes, portraits for the Imperial family and the Austrian aristocracy. (He also painted a portrait of his wife.)

### Liszt's ophthalmic surgery

The evaluation and treatment of Franz Liszt's failing vision gives us a fascinating insight into clinical ophthalmology of the late-19th Century. Like many of the elderly, he was affected by multiple indispositions which were the ramifications of the age process and the habits and stresses of a lifetime.

According to Lina Ramann, Liszt first sought medical care in 1881, he was suffering from « dropsy » and from « water on the lungs » , these were early manifestations of cardio-respiratory disease which was to precipitate his death.

Liszt's illness was prefigured by depression which was in part situational, 2 of his children, who had shown great promise, had died young and he had not secured the appointment in Rome he had sought which would have given him access to an Orchestra. He began to experience grief, regret and self-doubt. From this period comes the late-music which prefigures the music of our own Century, the music is the antithesis of Romanticism and we hear the first echoing of the uncertainties of our own age.

The sparse nature and economy of these compositions, the consistent use of the whole tone scale and the trend toward atonality prefigures both Béla Bartók and Alban Berg.

Liszt began to drink cognac rather heavily and was warned to decrease his intake by his physicians. Liszt also smoked

Havana cigars.

At about the same time, he noted a gradual decline in the vision of the left-eye. He had worn a presbyopic correction to read and to annotate music for many years, otherwise, there was no past ocular history.

We know from Borodin's correspondence that Liszt's once phenomenal ability to sight read was impaired by 1882. He made several slips whilst score reading a Borodin Symphony from manuscript due to his diminishing vision. It is well-documented by Borodin and others that he now often played « secundo » piano as a concession to his failing vision.

Liszt consulted Alfred Karl Græfe, an ophthalmologist who practised at Halle. He made the trip from Weimar where he held yearly Master-classes for aspiring young pianists.

Alfred Græfe (1830-1899) belonged to the distinguished Grafe family of Prussian and Polish origins. His cousin was the Alfred von Græfe of Berlin (1828-1870) whose untimely death from tuberculosis was a great tragedy to ophthalmology.

Græfe examined Liszt and told him that he had a cataract (the contemporary term used in Lina Ramann's « Lisztiana » is « grauer star » which is synonymous with cataract) . He declined to operate, presumably because of the problem of unilateral aphakia. The most satisfactory result for both patient and doctor was the removal of cataracts which severely diminished acuity and which were bilateral. There was also some cataract and present in the right-eye, these were typical senile cataracts. Græfe wisely advised a conservative approach to the problem.

Græfe saw the composer on occasion, it was not until 1886 that Liszt's vision had declined to such an extent that operation became imperative. The operation was scheduled for September 1886, Liszt wrote that he found the idea of an eye-operation extremely « disagreeable » . The operation did not take place due to death.

Liszt's health had markedly declined, his vision was poor. In London, in 1886, Jenny Churchill wrote that she had to help Liszt eat asparagus at a public banquet because he could not see the plate ! He could write and notate music only with greatest difficulty. When he played, he was often led to the concert platform on the arm of another person - his mobility was poor due to his vision and « dropsy » (pedal œdema) and probably also to osteoarthritis of the hips.

We are reliably told that Liszt still played remarkably well and people were often moved to tears by the great pianist's playing.

The influence of Liszt's declining vision on his playing was probably confined to his impaired score reading, there is much testimony that Liszt scarcely looked at the keyboard whilst playing at other times. Conductor Felix Weingartner does however say that Liszt adopted a hand-position closer to the keys than that of his youth, a possible concession to declining vision.

In the last year of Liszt's life, there was a new component to his eye-disease namely a severe type of blepharitis, we are told that it made his eyes stream profoundly, especially in cigar smoke filled rooms. His eyes looked red, and the condition was aggravating. Græfe prescribed drops, of the anti-bacterial sublimate which he characteristically used as a prophylactic for endophthalmitis and Liszt was advised to avoid cigar smoke which exacerbated the blepharitis, characteristically he ignored the advice preferring to smoke copiously.

The external eye-disease is seen if one looks carefully at late-photographs of the composer.

The famous photographs by Louis Held and by Paul Nadar show thickening, blunting and discolouration of the lid margin. These are high-quality portraits which have been well-produced.

Nadar's photographs of March 1886 also show « arcus senilis » and, in profile, one sees peripheral corneal lesions presumably due to staphylococcal hypersensitivity keratitis, a small left « exotropia » is present, presumably due to the cataract.

The clinical approach to Liszt's eye-problem illustrates much about the Græfes and their approach to ophthalmology.

The approach was conservative and scientifically based.

Græfe's technique of cataract extraction was based upon that of his cousin, namely he performed an extra-capsular extraction with a broad or sector iridectomy.

The main complication being retained soft lens matter. Anterior « uveitis » was also relatively common. If the posterior capsule opacified post-operatively or there was axial soft lens matter left behind after the operation a secondary capsulotomy was performed using a fine needle.

The spatulate Græfe-knife and the approach to the anterior chamber are still well-known. These were also developments fostered by Albrecht von Graefe.

Local anaesthesia was widely used by 1886. This was in the form of cocaine drops. Initially adopted by Karl Koller in 1884, their use in German ophthalmology became almost universal after the famous Heidelberg conference.

Sections were almost never sutured with the consequence that post-operative astigmatism was usually against the rule. The « ab externo » with the Græfe-knife approach usually used ensured good wound construction and minimal astigmatism given the limited technology of the time.

Edward Nettleship (1845-1913), a contemporary British ophthalmologist, succinctly outlined the technique of extra-capsular cataract extraction in the Græfe's now widely in use throughout Europe in his « Students Guide to the Diseases of the Eye » (1884).

« All operators for hard cataract agree in the following points :

- (1) An incision is made in the cornea at the junction of the cornea and sclerotic, or even slightly in the sclerotic, large enough to give exit to the crystalline lens unbroken, but not altered in shape. The knife now almost universally employed is the narrow thin straight knife of Von Græfe.
- (2) The capsule is freely opened with a small, sharp pointed instrument (cystitome or pricker) .
- (3) The lens is removed through the rent in the capsule (the latter structure remaining behind) either by pressure and manipulation outside the eye or by means of a traction instrument (scoop or spoon) passed into the eye just behind the lens. Most operators have abandoned the use of the scoop, reserving it for certain emergencies and special cases.
- (4) Iridectomy is very often performed as the second stage, not with the primary object of facilitating the exit of the lens, but to lessen the after risks of iritis. »

Nettleship, incidentally, was a pioneer of domiciliary cataract extraction using cocaine drops. The favoured mydriatic was atropine. Nettleship writes that visual rehabilitation takes about 6 to 8 weeks.

His post-operative regimen, designed to minimize astigmatism and to facilitate wound-healing consisted in the following. 3 days of bed-rest were followed by 2 weeks of nursing in a darkened room. The patient was then allowed to ambulate and was allowed to go outside wearing dark glasses. After about 8 weeks, glasses were prescribed. These were aphakic glasses which incorporated a cylinder. The problems of aphakia were well-described by Franciscus Cornelis Donders and others, and, by the late-19th Century, these glasses incorporated a cylinder (toroidal lenses) .

It is also interesting to note that extra-capsular cataract extraction, proposed initially by Albrecht von Græfe of Berlin, fell-out of favour for senile cataract and was replaced with intra-capsular cataract extraction. The technique was revived by Harold Ridley (London) in 1949 to facilitate intra-ocular lens implantation and has remained popular since then.

To return to Liszt's ophthalmic surgeon, it is interesting to reflect that Liszt was the progenitor of a musical dynasty through his second daughter Cosima who married Richard Wagner. The Græfe family, of Polish and Prussian extraction, were no less illustrious in the field of medicine.

Liszt's ophthalmic problems are illustrative of many features of late-19th Century ophthalmic surgery. An era, like our own, of rapid innovation, improvement and change. The meeting of Alfred Græfe and his distinguished patient Franz Liszt is also a fortuitous meeting of two of mankind's most brilliant, generous and productive benefactors. Parallel lives of extraordinary productivity in both music and medicine.

Alfred Karl Græfe

Alfred Karl Græfe was born on 23 November 1830 in Martinskirchen on the Elbe. He studied medicine at Halle, Heidelberg, Würzburg, Leipzig and Prague.

He graduated as Doctor of Medicine in Halle, in 1854, with the thesis « De canalulorum lacrymalium natura ». He was appointed assistant-physician at his cousin Albrecht von Græfe's clinic in Berlin, in order to perfect his knowledge of ophthalmology.

At this time, he married the daughter of a city-counsellor of Halle and lived an exceedingly happy domestic life.

Alfred Karl Græfe was the co-author with Theodor Sæmisch of the multi-volume lexicon « Handbuch der Gesamten Augenheilkunde » which became the prototype of the many large works which characterize the speciality, most notably Sir Stewart Duke Elder's « System of Ophthalmology ». The first edition of this seminal work appeared in 1854. Græfe is recorded as being one of the most outstanding ophthalmologists and skilful surgeons of all times. All who worked with him stressed both his humanitarian and unselfish nature.

Græfe was a pioneer of aseptic ophthalmic surgery. The Greeks in Antiquity had recommended clean bandages when dressing the eye. It was an Arabic maxim that if you operate cleanly you will have success.

Lister dressing could not be applied to the eye, and so, a search for an improved method of wound closure and dressing was made. The rate of endophthalmitis was 3 % of lens extractions prior to Græfe.

The search to find improvements in wound closure involved many contemporary ophthalmologists, these included not only Græfe but Theodor Leber, Louis-Auguste Desmarres, Johann Friedrich Horner and Jacobson of Königsberg. A « current controversy in ophthalmology » clearly demanding rapid international attention. In the event, it was Græfe who developed the best solution to the problem.

Græfe noted that antiseptic dressing of the lids was the most important part of antibacterial prophylaxis, he also used a sublimate solution so that he had reduced his rate of post operative infection such that in a series of 440 lens extractions he had not a single case of endophthalmitis. Græfe's clinical work was soundly based upon the contemporary scientific experimentation of Koch and Sattler.

Græfe reported 2 cases of fatal meningitis following enucleation, both died on the 5th post-operative day. A post-mortem revealed that inflammation extended via the pial sheaths to the central nervous system. Græfe recommended evisceration as an alternate procedure to relieve the pain of panophthalmitis and that, after evisceration, his antibacterial sublimate be instilled into scleral remnant of the eye.

Other contributions to Ophthalmology :

These include descriptions of essential blepharospasm, of paralytic strabismus, retinal infarction, hemianopia, luetic iritis, intra-ocular tumours, latent strabismus, accomodative disturbance and asthenopsia, torticollis and head postures. There

is also an early dissertation of the horopter concept. The diverse work of an unusually fertile, precise and far reaching mind. Græfe's original monograph on strabismus, written as an assistant-physician only 28 years old, is regarded by many as an original contribution to ophthalmology ranking with Donders work on refraction.

Græfe's later years were marred by presbycusis which impaired his conversations and made consultations slow and difficult. Græfe retired to Weimar shortly before his death, a town forever associated with the artistic glories Gøthe, Schiller and of his former patient, Franz Liszt.

Græfe's distinguished students and colleagues included Carl Schweiger, Konrad Frolich, Eugen von Hippel and Paul Bunge.

Professor Kunht wrote of Alfred Græfe in his obituary (1899) :

« Only rarely will nature combine in such a harmonious way intellect, temperament and a fascinating personality in order to create the model of a true physician as it was in the case with Alfred Græfe. »

### Doctor Richard von Volkmann

Doctor Richard von Volkmann was the head of surgery at Halle. Franz Liszt had consulted him in June 1886, when Volkmann had prescribed a water-cure at Bad Kissingen, to precede the operation for removal of a cataract of the left-eye recommended by Doctor Alfred Græfe of the same hospital. This cure had already been scheduled for August, immediately following Liszt's visit to Bayreuth ; the operation itself was scheduled to take place at Halle in September, but his death intervened.

...

The prominent German surgeon and author of poetry and fiction Richard von Volkmann (pseudonym : « Richard Leander ») was born on 17 August 1830 in Leipzig and died on 28 November 1889 in Jena.

The son of physiologist A.W.Volkmann, Richard entered medical school in Berlin and graduated in 1854. In 1867, he was appointed Professor of Surgery and Director of the Surgical Clinic at Halle where he remained until retirement. He was one of the most prominent surgeons of his day.

**1858** : He wrote « Bemerkungen über einige vom Krebs zu trennende Geschwülste » .

**1865-1872** : He contributed to Franz von Pitha and Theodor Billroth's « Handbuch der Chirurgie » a section on diseases of the locomotory organs.

**1870-1889** : He edited « Beiträge zur Chirurgie » .

**1878** : He performed the first excision of carcinoma of the rectum.

**1881** : He described Volkmann's Ischæmic Contracture.

He devised a splint and a spoon which bear his name.

His treatment of articular tuberculosis heralded attempts at preventive surgery.

**1894** : He described 3 patients with scrotal cancer who worked with paraffin and tar.

He was an early supporter of Joseph Lister, and helped the introduction of antiseptic surgery throughout Germany.

He invented the surgical retractor, now known as the Volkmann Retractor.

Under the pseudonym « Richard Leander », he wrote :

**1871** : « Träumereien an französischen Kaminen » (« “ Rêveries ” at French chimneys ») (24th edition, 1894) - a work for young people.

**1876** : « Aus der Burschenzeit » (From boyhood) .

**1885** : « Gedichte » (Poems) - 3rd edition.

**1888** : « Kleine Geschichten » (Little stories) - 2nd edition.

**1890** : « Alte und neue Troubadourlieder » (Old and new troubador songs) - 2nd edition.

### Surgeon and Renaissance Man

Richard von Volkmann, one of the most important surgeons of the 19th Century, is regarded as one of the fathers of orthopædic surgery. He was a contemporary of Langenbeck, Esmarch, Lister, Billroth, Kocher, and Trendelenburg. He was head of the Department of Surgery at the University of Halle, Germany (1867-1889) . His popularity attracted doctors and patients from all over the world. He was the lead-physician for the German military during 2 wars. From this experience, he compared the mortality of civilian and war injuries and investigated the general poor hygienic conditions in civilian hospitals. This led him to introduce the « antiseptic technique » to Germany that was developed by Joseph Lister. His powers of observation and creativity led him to findings and achievements that, to this day, bear his name : Volkmann's contracture and the Hueter-Volkmann law. Additionally, he was a gifted writer ; he published not only scientific literature but also books of children's fairy-tales and poems under the pen-name of « Richard Leander » , assuring him a permanent place in the world of literature as well as orthopædics.

« He walked towards us, tall and lean, with a mighty red beard, wearing tartan coloured pants, a colourful embroidered waist-coat and a flying red tie - the kind an artist would wear ... »

Richard von Volkmann was one of the founders of the German Society of Surgeons and one of the most famous surgeons of the 19th Century. Terms such as Volkmann's contracture and the Hueter-Volkmann law have immortalized his name. Daring to paint his portrait with only a few words, we would describe him as extremely passionate about his work, filled with energy, self-confident, striving indefatigably for knowledge, and intolerant of his own mistakes and those of colleagues in surgical and scientific matters. His way of thinking was greatly influenced by the classic humanitarian school and his patients were always at the centre of his attention.

Early in his career, Volkmann earned himself a legendary name, and, in the later years, the rich and famous would become his patients. His love of surgery dictated the relationships with his colleagues and his behaviour with them. His knowledge and abilities, paired with his charming personality, made him many friends. These friends sometimes were confronted with the contrary parts of his personality.

As was stated in an obituary :

« (...) von Volkmann was in all terms an eccentric person. He was not an everyday person. Everyone who met him, even if only for a short moment, knew that straight away. There were surely only a few friendships that went on without any thundering, but those friends he made were to a great portion, even in those moments, so fascinated by his personality, that these moments had no effect on the friendship. »

Friedrich von Trendelenburg said :

« (...) He was picturesque in speech and always ready to intervene in a debate. Even when listening, he was full of emotions and life that would show in his face. Being slim and " elastic ", he looked more like an artist than a doctor in his velvet-coat with a big colourful tie. »

His temper caused him problems as seen through his friendship with Theodore Billroth. Their friendship lasted 20 years but ended one day because of a scientific dispute about the source and the therapy of wound infections.

Volkmann was quoted as saying :

« People easy accept the superior and even the inferior, but not the different one. I have often experienced this in my life. »

Volkmann was an exact and ingenious surgeon ; a sympathetic, understanding doctor ; a successful scientist with sharp analytic capabilities ; a didactically talented teacher ; and an artist and poet. His collection of simple stories and poems (« Dreams at French Firesides ») makes us smile and confirms he was open to the gentle moments in life, full of spirit and soul.

The second child of 12, Richard von Volkmann was born on August 17, 1830, in Leipzig. His father, Doctor Alfred Volkmann (1801-1877), University Professor of Physiology and Anatomy at Halle, was a noted university lecturer of experimental physiology and described the transverse canals (Volkmann's canals) in the Haversian system of bones.

His mother, Adele, was the daughter of Gottfried Christoph Härtel, the owner of a book and music instrument shop and co-owner of the publishing house, Breitkopf and Härtel. (This company, renowned for publishing musical scores, would later publish Volkmann's journal.) The education of young Richard began at home by a house-teacher. At 13 years of age, he attended the Grand-Ducal School in Grimma for 6 years. Although he was interested in the old languages, he obeyed his father's wishes and began studying medicine. He studied in Gießen, Halle, possibly Heidelberg, and finished his studies in Berlin. His medical school was at Halle, with graduation in August 1854. His interest in surgery was awoken through his friendship with Theodore Billroth and under the guidance of Bernhard von Langenbeck, who at that time was the most famous surgeon in Germany.

In the summer of 1855, Volkmann became the « Medicus secundarius » of the surgical clinic led by Professor Blasius. Because of the latter's eye-sight problems, Volkmann became the clinic leader and chief-surgeon. He left this surgery clinic and began a private practice as a general practitioner in Halle (1857-1867). Although he was not initially on the teaching staff at the university, with some help from his father, he began lecturing « pro bono ». He gave his students fascinating insights into the world of microscopy and stunned them with didactic skills and passionate excursions. The students loved and adored him.

Volkmann also had a very good reputation for hard work as a general practitioner. With indefatigable energy, he served his patients during the day, pursued scientific studies, and prepared his readings in pathologic anatomy for the university.

From this time, there is one saying of his that is often quoted :

« (...) either a doctor has no bread or he has no time to eat it. »

However, he did manage to find time to marry. On May 28, 1858, he married Anna von Schlechtendahl, daughter of the Professor of Botany and Head of the Botanical Gardens at Halle. They would have 11 children together.

In 1862, the young 32 year old surgeon published his thoughts about the growth of immature bones.

Volkmann observed :

« The child's skull grows in such a way that the bones are never over-stressed, ... the periosteum places new bone layer by layer, while on the inside increasing pressure pushes away the old bone which atrophies ... »

He also « suggested alterations in the growth of long bones as a result of tension and compression on the epiphyseal plate » .

That same year, Carl Hueter (1838-1882) while in Paris described the remodeling of bone in the ankle and sub-talar joints of infants and adults.

He noted :

« The changes of the joint surfaces are preferentially caused by relatively greater growth of the bony parts which are relatively less pressure. »

Later, Volkmann would create a link between his theories and the studies of Hueter, leading to an orthopædic concept, the so-called Hueter-Volkmann law. In 1949, Blount and Clarke, in their discussion of epiphyseal stapling, referred to the works of Hueter and Volkmann from 1862. The first English language reference that specifically uses the term Hueter-Volkmann law was Arkin and Katz's 1956 article in « The Journal of Bone and Joint Surgery » .

Around 1864, Theodore Billroth (1829-1894) and Franz Baron von Pitha (1810-1875) requested he write a chapter entitled, « Dysfunctions of the musculo-skeletal system » for their « Hand-book of Basic and Special Surgery » . Volkmann wrote 700 pages, his own text-book, within the hand-book. Published initially in 1865 (2nd edition in 1872) , it quickly became the most popular surgical text-book of its time.

In one chapter, he described, for the first time, his ischemic muscle contracture :

« The severe contractions, after applying too tight of a bandage on the fore-arm for a fracture, are at least partially due to infectious muscle contraction and not all cause pressure induced primary nerve lesions. »

As a civilian and free-lance surgeon, Volkmann took charge of the military field hospital during the Prussian-Austrian War in 1866. (The War resulted in Prussian control over all modern German States.) Because of his War efforts in March 1867, at age 36, he was appointed a Professor of Surgery at the University of Halle.

In April 1870, in cooperation with many colleagues from Germany, he founded « Volkmann's Collection of Clinical Reports » . This journal covered the most important aspects of medicine of the time and made the name Richard von Volkmann famous. (362 issues were published until his death.)

In August 1870, he again was given leave to join the armed forces for the Franco-Prussian War. He assumed the rank of Surgeon General for the War. Volkmann was responsible for all 12 army hospitals and 1442 beds. During the 4 month siege of Paris, Volkmann found time to write his « Dreams at French Firesides » , which he sent home to his family. These fairy-tales were edited under his pen-name « Richard Leander » . This fairy-tale collection appeared in more than 300 editions, with more than 1 million copies sold. One poem, « Memory » , was set to music by Gustav Mahler, the famous Austrian composer (1860-1911) , for his song « Songs from the Youth » (« Lieder und Gesänge : Aus der Jugendzeit ») .

After the War when he returned to his own hospital, he found catastrophic numbers of infectious diseases spreading

throughout the ward.

Later, he wrote :

« The mortality after large amputations and complicated fractures grew year by year. In the summer of 1871, during my absence on the battle-field, the clinic was crowded by a large amount of injured. For 8 months, in the winter 1871 to 1872, the numbers of blood poisoning and rose disease victims were so great, that I considered applying for a temporary closure of the facility. Without a morgue, the dead stayed in the cellar beneath the wards until the funeral, even in the summer. »

In 1872, Bernhard von Langenbeck (1810-1887, Berlin) , Gustav Simon (1824-1876, Heidelberg) , and Richard von Volkmann (Halle) founded the German Society of Surgeons. Volkmann was the secretary of the Society for 14 years and president from 1886 to 1887. Volkmann's paper « Comparing Mortality Statistics of Analogous War and Peace Injuries » headed the first conference with the subject. During the presentation, he explained how gun-shot fractures had a lower mortality (24 %) than open leg-fractures in civilians (39 %) . His interest in these results led him to Lister's work in England.

Joseph Lister (1827-1912) developed his « antiseptic system of treatment » in 1867 as a prophylactic method to prevent wound infections. Volkmann sent his assistant, Max Schede, to Lister's clinic, and, soon after his return, Volkmann began using Lister's method.

On February 16, 1873, he wrote to Billroth :

« (...) since autumn of last year (1872) , I have been experimenting with Lister's method. ... Already, the trials in the old " contaminated " house, show wounds healing, uneventful, without fever and pus. »

During the Third Congress of the Surgeon's Society, in April 1874, Volkmann was the first to present a lecture about « the antiseptic occlusive-bandage and its influence towards the healing process of the wounds » . Volkmann's presentation became famous.

Bergmann years later remarked (1890) about this presentation :

« It was at this point, during our Third Congress, that von Volkmann mentioned for the first time, the influence of Lister's method on the wound-healing process. His report had effects all over the country and caused emotions ranging from enthusiastic applause to critical opposition. As well, it led to the fact that the method was established faster in Germany than in any other developed country. »

Lister agreed as he wrote the preface to one of Volkmann's papers :

« Volkmann appreciating the paramount importance of the antiseptic principle, carries it out with an intelligent care

such as can alone ensure success. »

The new closed therapy of wounds had many advantages compared with open treatment. The skin of the patient, the surgeon's hands, all instruments, and all bandages were disinfected with 5 % carbolic acid. A 2 % solution of carbolic acid was used continuously during the procedure. Volkmann used 3 to 4 centimetres drains for all wounds. In most cases, the wounds were not closed. Changing the bandages was always performed using carbolic acid sprayers. The treatment of open-fractures especially benefited from this new method.

Volkmann reported :

« Until a few years ago, open-fractures were potentially deadly injuries. Acute septicemia and pyremia killed a majority of the patients, especially in hospitals. France and Germany suffered immensely due to this problem. Even in the simplest case of an open-fracture, when a bone particle would spear the skin during the injury and then go back in place or re-position, no surgeon could say if the patient would survive. »

In 1877 and 1878, he twice received large pay increases to remain at Halle.

The Minister justified this increase in salary with the following words :

« Professor Volkmann is undoubtedly one of our supreme surgeons and the introduction of Lister's method is mainly his credit. For this reason, he already earns a great deal of the enormous evolution that surgery has made in recent years. Also, he is a gifted lecturer who fascinates and ties his listeners with his personal liveliness. »

In 1878, he described the first mentioned transsacral extirpation of the rectum. In 1880, he became editor of the « Zentralblatt für Chirurgie » with Franz König from Göttingen and E. Richter from Breslau.

He participated in the International Medical Congress in London (1881) with his key-note presentation entitled, « The Modern Surgery » :

« (...) through systematical procedures, we are able to stop the foul work of these micro-organisms. Instead of fortune and misfortune, that used to be a big part of the daily routine of a surgeon, now knowledge and ignorance, personal capability and non-capability, precision and carelessness are the factors that matter ... »

« In this modernized surgery, we can now perform elective surgery on the joints, the bones and internal organs without fearing the sure death of the patient. ... Also now, we have to take responsibility for the outcome of the operation and the further development of the sickness. »

He chose words that are more accurate today than they ever were :

« ... not long ago, after ending a bloody operation, the surgeon was in the same situation as a farmer after

cultivating his fields. He had to live with whatever occurred and was powerless toward the elements that could bring him rain and sunshine or storm and hail. Today, the surgeon is a manufacturer from whom good articles are expected.  
»

This was a radical change in the approach to surgery, which until this point was a treatment of last resort because of the high-likelihood of infection.

As a result of his poor health, he declined succeeding von Langenbeck in Berlin. Later, in 1882, he was made an honorary citizen of Halle. His international reputation was flourishing as one of the leading physicians in Europe. Even Pope Pius IX consulted him for a foot-ailment in 1885.

In November 28, 1889, Richard von Volkmann died at 59 years of age in the Neurologic Clinic of Professor Binswanger in Jena. He had suffered for almost 20 years from a painful spinal cord malady, which, to this day, cannot be clearly identified. Although suffering from this and paralysis of his limbs and surviving on a liquid diet, he tried to face all his duties. His stern self-discipline was evident even on his death-bed when his colleagues met at his home to plan the next conference.

His push for sterility in the operating-room following Lister's principles advanced surgery as a specialty. Furthermore, Volkmann's powers of observation and creativity, as a seasoned practitioner, led him to important accomplishments that to this day bear his name. Volkmann was one of the first to publish clinical case histories. He was certainly one of the fathers of orthopædic surgery, with many important papers on limb growth, surgery for muscular torticollis, hypertrophy of capital femoral epiphysis, a gonio-meter, ischemic limb contracture, knee and hip osteotomies, penetrating injuries of the knee, loss of motion of the fore-arm, Esmarch's bloodless hip-surgery, treatment of septic bone and joints, great toe exostosis, gun-shot injuries, bone and joint resection for neoplasm, and the etiology and treatment of congenital club-feet. He recommended simple Achilles tenotomy and casting and to try at all costs to avoid major operations on the foot. Today, his name is immortalized by Volkmann's contracture and Hueter-Volkmann law.

Volkmann's personality and leadership led to the development of the German Society of Surgeons and the journal « Collection of Clinical Reports ». His evidence-based medicine study « Comparing Mortality Statistics of Analogous War and Peace Injuries » led to operating-room sterility 130 years before it became popular. His efforts, science, and leadership led antiseptic principles in German operating-rooms before Lister was able to accomplish the same in Britain. His many papers on orthopædic topics, especially treatment of gun-shot wounds and open-fractures, certainly justify considering him one of our orthopædic fathers. Volkmann was truly a remarkable individual who has left his mark and name in medicine as well as literature.

...

Doktor Richard von Volkmann (vor 1885 Richard Volkmann) (Pseudonym : « Richard Leander ») , deutscher Chirurg und Hochschullehrer sowie Poet und Märchendichter : geboren 17. August 1830 in Leipzig ; gestorben 28. November 1889 in Jena.

Richard Volkmann wurde als zweites von zwölf Kindern des Physiologen und Anatomen Alfred Wilhelm Volkmann und dessen Ehefrau Adele, geborene Härtel, geboren und besuchte die Fürstenschule Grimma von 1845 bis 1851. Ab 1850 studierte er dem Wunsch seines Vaters entsprechend Medizin an der Friedrichs-Universität Halle, der Hessischen Ludwigs-Universität in Gießen und der Friedrich-Wilhelms-Universität Berlin, an der er (wie alle preußischen Ärzte) 1854 das Staatsexamen ablegte und zum Doktor der Medizin promoviert wurde. 1851 wurde er Mitglied des Corps Starkenburgia und des Corps Marchia Halle.

Er trat eine Assistentenstelle bei Ernst Blasius an der alten Chirurgischen Universitätsklinik am Domplatz in Halle an und habilitierte sich 1857. Während einer langen Erkrankung von Blasius vertrat er ihn in der Leitung der Klinik. Wegen der zunehmenden Spannungen mit dem zurückgekehrten Blasius verließ Volkmann die Klinik und den Lehrkörper der Universität und ließ sich in Halle als praktischer Chirurg nieder. 1863 kehrte Volkmann als außerordentlicher Professor an die Universität zurück.

Am Krieg gegen Österreich 1866 nahm er als Chefarzt des Lazarets Trautenau in Böhmen teil. 1867 wurden Volkmann das Ordinariat für Chirurgie und die Leitung der Chirurgischen Universitätsklinik übertragen. Während des Krieges gegen Frankreich 1870-1871 war er als konsultierender Generalarzt beim IV. Armee-Korps, später an der Maas und bei der Südmarmee eingesetzt. Im Krieg zog er sich eine Syphilis zu, die zur Tabes dorsalis führte.

1885 von Preußens König Wilhelm I. nobilitiert, starb er an einer Pneumonie. Sein Grab befindet sich auf dem hallischen Stadtgottesacker.

Von Volkmann war verheiratet und hatte sieben Kinder. Er hatte rotes Haar und blaue Augen.

Volkmann zählt zu den bedeutendsten Chirurgen des 19. Jahrhunderts. Er entwickelte neue Methoden zur Resektion der Gelenke, zur Operation komplizierter Brüche sowie zur Chirurgie und Orthopädie der Wirbelsäule und der Extremitäten. Er führte als erster deutscher Arzt die antiseptische Wundbehandlung mit Karbol (nach Joseph Lister, I. Baron Lister) ein, wodurch die Überlebenschance bei Operationen sprunghaft anstieg und Bauchchirurgie im eigentlichen Sinne erst möglich wurde. Volkmann selbst entwickelte Verfahren zur Resektion von Mastdarmkrebs.

...

Richard von Volkmann sei die « Zierde der medicinischen Fakultät », so Theodor Keil (1822-1894), Rektor der Universität Halle, im Jahr 1882. Wenige Tage nach der Feier zu Ehren Volkmanns im « Neuen Theater » von Halle beging er seinen 52. Geburtstag. Zu diesem Zeitpunkt war Volkmann auf dem Zenit seiner beruflichen Karriere: Seit 1877 war er ordentlicher Professor der Chirurgie und Direktor der Chirurgischen Klinik, 1879 wurde der von ihm angeregte Neubau der Chirurgischen Klinik in Halle eingeweiht und die von ihm beförderte antiseptische Methode galt als Meilenstein in der Medizin. Doch Volkmann war nicht nur Mediziner und 1872 Mitbegründer der « Deutschen Gesellschaft für Chirurgie », sondern ein Literat, dessen Märchen, die « Träumereien an französischen Kaminen », weltweit unzählige Erfolge feierten. Unter dem Pseudonym « Richard Leander », der griechischen Übersetzung von Mann des Volkes, führte er ein Leben als Chirurg und Literat.

Richard von Volkmann wurde am 17. August 1830 in Leipzig geboren. Von seiner Mutter Adele Volkmann (1808-1864), einer Tochter des Inhabers der renommierten Buch- und Musikalienhandlung Breitkopf & Härtel in Leipzig, hatte er seine Liebe zur Kunst. Seine berufliche Laufbahn hingegen wurde von seinem Vater Alfred Volkmann (1801-1877), dem Professor für Physiologie und Anatomie in Halle und mehrfachen Rektor der Universität, geprägt. Zunächst besuchte Richard die Lateinische Hauptschule in den Franckeschen Stiftungen und wechselte anschließend an die Fürstenschule in Grimma. Vielleicht entstand hier sein Wunsch, klassische Philologie zu studieren, doch sein Vater ließ ihn für das Sommersemester 1850 an der Medizinischen Fakultät in Halle immatrikulieren. Volkmann studierte in Halle und Gießen, bevor er 1854 für die Staatsexamensprüfung nach Berlin zog. An der Charité-Chirurgie lernte er Bernhard von Langenbeck (1810-1887) kennen und wurde sein Schüler. Bereits am 26. August 1854 wurde er mit der Arbeit « De pulmonum gangræna » promoviert und bestand im Mai 1855 das Staatsexamen. Anschließend kehrte Volkmann nach Halle zurück, um im Sommer desselben Jahres eine Assistentenstelle bei Ernst Blasius (1802-1875) an der Chirurgischen Klinik am Domplatz anzutreten.

Fotostelle Universitätsklinikum Halle (Saale) : Richard von Volkmann (1830-1889) Bernd Göbel (geboren 1942), Freiberg, Bronzeguss 2008-2009 ; Lehrgebäude des Universitätsklinikums Parallel zum Alltag in der Klinik, die er in Vertretung von Blasius zwischenzeitlich leitete, arbeitete er an seiner Habilitation « Observationes anatomicæ et chirurgicæ quatuor ... ». Diese verteidigte er am 26. Juni 1857, war anschließend als Privatdozent an der Chirurgischen Klinik tätig und hielt Vorlesungen « Über die Krankheiten der Gelenke ». Am 28. Mai 1858 heiratete er Anna von Schlechtendal, die Tochter des Direktors des Botanischen Gartens in Halle, mit der er elf Kinder hatte. In den folgenden Jahren veröffentlichte Volkmann 18 wissenschaftliche Beiträge - beispielsweise über die « Penetrierende Kniegelenkswunde » oder das Coxangyrometer, das zur Vermessung des Hüftgelenks diente. In diese Zeit fiel auch die Anfrage von seinem Studienfreund Christian Billroth (1829-1894), einen Beitrag für das I. deutsche « Handbuch der allgemeinen und speciellen Chirurgie » zu schreiben, der nicht zuletzt seinen Ruhm begründen sollte. Seine umfassenden Tätigkeiten honorierte die Universität Halle 1863 mit einer außerordentlichen Professur an der Medizinischen Fakultät und als er im März 1867 aus dem preußisch-österreichischen Krieg zurückkehrte, erhielt er die Ernennung zum ordentlichen Professor und Direktor der Chirurgischen Klinik in Halle.

Nach seiner Rückkehr aus dem deutsch-französischen Krieg 1870-1871 erwarteten ihn in der Klinik enorme Schwierigkeiten : Die Wundinfektionen nahmen derart zu, daß 1872 zeitweise die Schließung der Klinik drohte. In dieser Situation entschloß sich Volkmann zur Prüfung der neuesten Lister'schen Methode. Danach mußten die Haut des Patienten, die Hände der Operateure, alle Instrumente, Schwämme und Verbandstoffe mit 5%iger Carbollösung desinfiziert, die Operationswunde kontinuierlich mit 2%iger Lösung besprüht und die « Luftkeime » im Operations-saal mit einer 4%igen Lösung bei Verwendung von Wasserdampf vernichtet werden. Volkmann, der die Methode modifizierte, war vom I. Erfolg vollkommen überrascht und durch weitere Experimente von Listers Methode überzeugt. Fortan wurde er zum glühenden Verfechter des antiseptischen Verfahrens und es ist vor allem ihm zu verdanken, daß sich die Antisepsis schnell in den deutschen Krankenhäusern durchsetzte. Federführend war Volkmann aber auch bei der Planung und Durchführung des Klinikneubaus auf dem Gebiet der Maillenbreite. Als Bauherr der Chirurgischen Klinik konnte er am 12. Juli 1876 den Grundstein legen und diese 1879 feierlich eröffnen.

Bereits während seiner Studienzeit hatte Richard von Volkmann aber auch I. Schreibübungen unternommen, die unter

dem Titel « Aus der Burschenzeit - Ein Idyll » erschienen. Vor allem die familiären Vorbilder, so beispielsweise seine Märchen schreibende Tante Clara Fechner (1809-1900) , inspirierten seine Lust am Schreiben. Den literarischen Durchbruch erlebte Volkmann mit seinen Märchen, die er im deutsch-französischen Krieg als Briefe an seine Kinder geschrieben hatte. Diese führte er zu einer Sammlung aus 22 Texten zusammen und veröffentlichte sie unter dem Titel « Träumereien an französischen Kaminen » . Der Erfolg ist bis heute deutlich : Das Buch wurde in Hunderten von Auflagen immer wieder neu verlegt und in viele Sprachen übersetzt. Eine 1878 verfaßte Prachtausgabe mit Illustrationen von Olga von Fialka (1848-1930) sandte er an die Frau von Wilhelm I. als Weihnachtsgeschenk. Der Kaiser hob Volkmann am 4. Mai 1885 in den Adelsstand. In den folgenden Jahren erhielt er auf verschiedenen Ebenen Anerkennung für seine Arbeit. 1877 wurde er zum Geheimen Medizinalrat ernannt, ein Jahr später zum Rektor der Universität Halle gewählt und 1880 als Mitglied in die Deutsche Akademie der Naturforscher Leopoldina aufgenommen. Bis zu seinem frühen Tod führte er Operationen durch, hielt Vorlesungen und widmete sich der wissenschaftlichen Arbeit. Zuletzt suchte er an oberitalienischen Seen und in der Privatklinik von Otto Binswanger (1852-1929) in Jena Linderung. Dort starb Richard von Volkmann am 28. November 1889 im Kreis seiner Familie.

...

Richard Volkmann wurde in Leipzig als Sohn eines Universitätsprofessors geboren, besuchte die Fürstenschule in Grimma und studierte ab 1850 Medizin in Halle, Gießen und Berlin. In Halle war er Mitglied des Corps Marchia, in Gießen des Corps Starkenburgia. Nach der Promotion zum Doktor der Medizin (1854) wurde er Assistent an der chirurgischen Universitätsklinik in Halle. 1857 wurde er habilitiert, 1867 Ordinarius für Chirurgie und Leiter der Chirurgischen Universitätsklinik. Er gehörte zu den Gründern der Deutschen Gesellschaft für Chirurgie und war deren langjähriger Vorsitzender.

Unter dem Pseudonym « Richard Leander » gab Volkmann die Märchensammlung « Träumereien an französischen Kaminen » heraus, die während seiner Teilnahme am Deutsch-Französischen Krieg als konsultierender Generalarzt beim IV. Armee-Korps entstand. Carl Reinecke verwendete das Werk als Vorlage für seine Kinder-Märchenoper « Glückskind und Pechvogel » .

Volkmann wurde 1882 zum Ehrenbürger der Stadt Halle ernannt und 1885 in den preußischen Adelsstand erhoben. Er starb am 28. November 1889 in Jena und wurde auf dem Stadtgottesacker in Halle beigesetzt. Sein Denkmal befindet sich vor der chirurgischen Klinik in Halle.

...

Richard Volkmann besuchte die Fürstenschule Grimma, ab 1850 studierte er Medizin an den Universitäten Halle, Gießen und Berlin, wo er 1854 zum Doktor der Medizin promovierte. Er trat eine Assistentenstelle in Ernst Blasius' chirurgischer Universitätsklinik an und habilitierte sich 1857 mit der 1858 veröffentlichten Abhandlung « Bemerkungen über einige vom Krebs zu trennende Geschwülste » . Während einer lang andauernden Erkrankung Blasius' vertrat er diesen in der Leitung der Klinik. Wegen der zunehmenden Spannungen mit dem zurückgekehrten Blasius verließ Volkmann die Klinik und den Lehrkörper der Universität und ließ sich in Halle als praktischer Chirurg nieder. 1863

kehrte Volkmann als außerordentlicher Professor an die Universität zurück. Am Krieg gegen Österreich nahm er als Chefarzt des Kriegslazarettes Trautenau in Böhmen teil. 1867 wurden Volkmann das Ordinariat für Chirurgie und die Leitung der chirurgischen Universitätsklinik übertragen. Während des Krieges gegen Frankreich war er als konsultierender Generalarzt beim 4. Armeecorps, später an der Maas und bei der Süarmee eingesetzt. Volkmann, der zu den bedeutendsten Chirurgen des 19. Jahrhunderts zählt, entwickelte neue Methoden zur Resektion der Gelenke, zur Operation komplizierte Brüche sowie zur Chirurgie und Orthopädie der Wirbelsäule und der Extremitäten. Er führte als erster deutscher Arzt die antiseptische Wundbehandlung mit Karbol (nach Lister) ein, wodurch die Überlebenschance bei Operationen sprunghaft anstieg und Bauchchirurgie im eigentlichen Sinne erst möglich wurde (Volkmann selbst entwickelte Verfahren zur Operation von Mastdarmkrebs). Volkmann wurde 1885 geadelt, Rufe nach an die Universitäten Berlin, Erlangen, Breslau, Heidelberg und Würzburg lehnte er ab, nicht zuletzt deshalb, weil er den Neubau der chirurgischen Universitätsklinik Halle selbst konzipiert und nach seinen Vorstellungen eingerichtet hatte. Volkmann gehörte zu den Gründern der Deutschen Gesellschaft für Chirurgie und war lange Jahre ihr Vorsitzender. Neben zahlreichen wissenschaftlichen Veröffentlichungen (und andere « Beiträge zur Chirurgie », 1875) veröffentlichte er unter dem Pseudonym « Richard Leander » literarische Arbeiten. Zum Erfolg wurden seine während des Kriegseinsatzes verfassten Märchen « Träumereien an französischen Kaminen », 40. Auflage 1910). Der Hochdekorierte (und andere Roter Adler-Orden 3. Klasse, Kronen-Orden 2. Klasse, Kommandeur II. Klasse des anhaltischen Hausordens Albrechts des Bären, Kommandeur des Gustav-Wasa-Ordens, Ehrenmitglied der « Société Royale » Belgiens) erkrankte 1886 an Paralyse. Er starb in der Biswangerschen Klinik in Jena.

...

Nach ihm benannt sind das Volkmann-Dreieck (beim Knöchelbruch : vorderes und hinteres V.-D.) , ein scharfer Löffel (auch Volkmann-Löffel oder Scharfer Löffel (nach) Volkmann) , die Volkmann-Schiene (Beinschiene) und das Volkmannsche Gehbänkchen, eine Vorform des heutigen Rollators.

Rufe der Friedrich-Wilhelms-Universität zu Berlin, der Friedrich-Alexander-Universität, der Schlesischen Friedrich-Wilhelms-Universität, der Ruprecht-Karls-Universität Heidelberg und der Julius-Maximilians-Universität Würzburg lehnte er ab, nicht zuletzt deshalb, weil er den Neubau der chirurgischen Universitätsklinik Halle selbst konzipiert und nach seinen Vorstellungen eingerichtet hatte. Volkmann gehörte 1872 zu den Gründern der Deutschen Gesellschaft für Chirurgie und war viele Jahre ihr Vorsitzender.

### Medizinische Schriften

**1865** : Krankheiten der Bewegungsorgane.

**1875** : Beiträge zur Chirurgie.

### Literarische Arbeiten

Von Volkmann, in dessen Haus auch Künstler wie Wilhelm von Kügelgen sowie Robert und Clara Schumann verkehrten,

veröffentlichte seine literarischen Werke unter dem Pseudonym « Richard Leander ». Während seine Gelegenheitsschriften, wie Gedichte, Lieder und Geschichten heute weitgehend vergessen sind, wurden die während des Kriegseinsatzes 1870-1871 verfassten Märchen Träumereien an französischen Kaminen mit mehr als 300 Auflagen zu einem großen schriftstellerischen Erfolg.

**1871** : Träumereien an französischen Kaminen (Märchen) .

**1876** : Aus der Burschenzeit (Dichtung) .

**1878** : Gedichte.

**1885** : Kleine Geschichten.

**1889** : Alte und neue Troubadour-Lieder.

In der 1887 von Karl Emil Franzos herausgegebenen Deutschen Dichtung äußert sich ein Kritiker begeistert über die Träumereien :

« Ein Erstlingswerk, das erste Zeugnis eines Mannes, dessen Hand bisher nur das Messer und die Feder bloß zur Abfassung chirurgischer Fachschriften geführt - und welche Treffsicherheit des Stiles, welche künstlerische Glätte, welche fein abgewogene Zartheit oder Kraft der Farbengebung ! Alles fertig, rund, sicher, zuweilen höchstens ein Wort zu wenig, aber niemals eins zuviel, Inhalt und Form so vollständig zueinander passend, daß das kritische Auge kaum Gewand und Körper voneinander zu trennen vermag. » (N.N.)

## Märchen

Die künstliche Orgel.

Goldtöchterchen.

Vom unsichtbaren Königreiche (hierauf beruht die Oper Der Traumgörge von Alexander Zemlinsky) .

Wie der Teufel ins Weihwasser fiel.

Der verrostete Ritter.

Von der Königin, die keine Pfeffernüsse backen, und dem König, der kein Brummeisen spielen konnte.

Der Wunschring.

Die drei Schwestern mit den gläsernen Herzen.

Sepp auf der Freite.

Heino im Sumpf.

Pechvogel und Glückskind.

Die Alte-Weiber-Mühle.

Das Klapperstorch-Märchen.

Wie sich der Christof und das Bärbel immer aneinander vorbeigewünscht haben.

Die Traumbuche.

Das kleine bucklige Mädchen.

Der kleine Vogel.

Die himmlische Musik.

Der kleine Mohr und die Goldprinzessin.

Von Himmel und Hölle.

Der alte Koffer.

## Ehrungen und Auszeichnungen

**1877** : Geheimer Medizinalrat.

**1880** : Wahl zum Mitglied der Deutschen Akademie der Naturforscher Leopoldina.

**1882** : Ehrenbürger der Stadt Halle.

**1895** : Nobilitierung durch Wilhelm II als König von Preußen.

Roter Adlerorden 3. Klasse.

Königlicher Kronen-Orden (Preußen) 2. Klasse.

Hausorden Albrechts des Bären, Kommandeur II. Klasse.

Wasaorden, Kommandeur.

« The Royal Academies for Science and the Arts of Belgium » , Ehrenmitglied.

### Denkmal

Der in Rom ansässige Bildhauer Artur Volkmann, ein Neffe Richards von Volkmann, schuf ein Marmor-Sitzbild des bekannten Arztes und Dichters, das am 1. August 1894 in Halle (Saale) vor der Chirurgischen Universitätsklinik an der Magdeburger Straße feierlich enthüllt wurde.

### Medaille

Die Mitteldeutsche Chirurgenvereinigung verleiht die Volkmann-Medaille alljährlich an verdiente Chirurgen.

### Bayreuth : Café Sammet

**Monday, 26 July 1886 (?)** : After a performance of « Parsifal » in Bayreuth, the conductor and composer August Scharer met in the evening Anton Bruckner at the Café Sammet. Bruckner talked about his 7th Symphony under Arthur Nikisch and his private audience with Emperor Franz-Josef (where he beg to do something about the wickedness of Eduard Hanslick against him) . Bruckner begged Scharer to come the next day at St. Georgen abbey-church (?) to see him improvise at the organ for an hour.

During the first Bayreuth Festival, in 1876, the « Café » Sammet-Angermann offered « Flosshilde Soup with Alberich Morsels, Wotan Ham “ à la ” Walhall, Stuffed breast of Swan “ à la ” Lohengrin, Siegmund Asparagus Spears and Nibelungen Dumplings » .

### Bayreuth Festival : tie-in products

The city of Bayreuth became a veritable industry of tie-in merchandise !

The firm of Moosdorf & Hochhäusler, from Berlin, advertised their « wave-maker bath-tub » with the help of the Rhine-Maidens from « Das Rheingold » !

Richard Wagner was used to promote Liebig's meat-extract paste. Wagner's sponsorship of what was actually the forerunner of the « Oxo » cube has an extra-dimension, however, as the founder of the Liebig's Extract of Meat

Company was organic chemist Justus von Liebig (1803-1873) who was one of young King Ludwig II's science teachers. Ludwig held him in high-regard.

Romain Rolland observed on his visits to Bayreuth, at the turn of the 20th Century :

« The Wagner shops. Nibelung pins with Fricka's rams, Grane. Table crockery with Wagner's stubborn features. Busts : bare or black-draped. Wagner cravats : a black cravat with a photograph stuck in the middle. A picture of a Wagner "soirée" decorating a visiting-card case. A dozen plates with scenes from the dramas. Wagner at the hair-dressers'. Wagner at the cobblers'. (...) »

### Liebig's meat-extract

Liebig's Extract of Meat Company was the producer of LEMCO brand Liebig's Extract of Meat and the originator of Oxo meat-extracts and Oxo beef stock cubes. It was named after Baron Justus von Liebig, the 19th Century German organic chemist who developed and promoted a method for industrial production of beef extract.

Liebig's meat-extract is a molasses-like black spread packaged in an opaque white glass bottle, which contains reduced meat stock and salt (4 %) . The ratio of meat to meat-extract is generally reported to be about 30 to 1 : it takes 30 kilograms of meat to make 1 kilogram of extract. The extract was originally promoted for its supposed curative powers and nutritional value as a cheap, nutritious alternative to real meat. As subsequent research brought its nutritional value into question, its convenience and flavourfulness were emphasized, and it was marketed as a comfort food.

Colourful calendars and trading-cards were also marketed to popularize the product (« Famous Composers » : Richard Wagner ; « Heroes of Wagner Operas » ; « Heroines of Wagner Operas ») . Liebig produced many illustrated advertising products : table-cards, menu-cards, children's games, free trading-card sets, calendars, posters, poster stamps, paper and other toys. In 1872, they began to include sets of trading-cards featuring stories, historical tidbits, geographic tidbits, and so on. Many famous artists were contacted to design those series of cards, which were first produced using true lithography, then litho-chromo, chromo-lithography, and finally offset printing. The cards remain popular with collectors and are often collected in albums.

In 1847, Justus von Liebig developed a concentrated beef extract in hopes of providing a cheap and nutritious meat substitute, « Extractum carnis » Liebig, for those unable to afford the real thing. His method was to trim the fat from the meat, break the meat into small particles, boil it with water to form a liquid of 6-8 % solids, and then, stir it over low heat, until it was reduced to a paste of 80 % solids. However, in Europe meat was too expensive to economically supply the necessary raw materials to create the extract.

Liebig made his process public, publishing the details in 1847. Liebig clearly stated of his process that « the benefit of it should ... be placed at the command of as large a number of persons as possible by the extension of the manufacture, and consequently a reduction in the cost » . A variety of companies produced small batches of meat-extract based on Liebig's ideas, often using his name on their products.

In 1862, George Christian Giebert, a young Belgium railway engineer visiting Europe, read Liebig's « Familiar Letters on Chemistry ». Convinced that the process could be industrialized, he wrote to Liebig to suggest opening a manufacturing plant in South America. Using the flesh of cattle that, before the popularity of canning or freezing meat, would otherwise have been killed for their hides alone, he hoped to produce meat-extract at 1/3 of the European cost. He visited Max Joseph von Pettenkofer's Royal Pharmacy in Munich, and Friedrich Mohr's laboratory in Koblenz, where small amounts of extract were being produced.

### Liszt's final days

**Wednesday, 13 January 1886** : While Claude Debussy was staying at the Villa Medici in Rome, Franz Liszt met him there with Paul Vidal and Victor Herbert. Liszt played « Au bord d'une source » from his « Années de pèlerinage », as well as his arrangement of Franz Schubert's « Ave Maria » for the musicians. Debussy, in later years, described Liszt's pedalling as « like a form of breathing ». Debussy and Vidal performed their piano duet arrangement of Liszt's « Faust » Symphony ; allegedly, Liszt fell asleep during this.

As an indication of the general interest aroused by the coming of Franz Liszt, Mister Punch burst forth in the following strain :

« A Brilliant Variation -

Mr. and Mrs. Littleton's reception of the “ Abbé ” Franz Liszt, at Westwood House, Saturday night last, was an event never to be forgotten. But it was not until all the Great 'uns had left the Littletons that the Greatest of them all sat at the piano in the midst of a cosy and select circle, and then, when Mister Punch had put on his Liszt slippers but to say more were a breach of hospitality. Suffice it that on taking-up his sharp-and-flat candlestick in a perfectly natural manner the “ Abbé ”, embracing Mister Punch, sobbed-out :

“ This is the ' Abbé Liszt ' evening I've ever had. ' Au plaisir ! ' ” »

(Extract from a Distinguished Guest's Diary. Privately communicated.)

« Although he was in his 76th year at the time of this, his last sojourn in England, his pianoforte technique astonished those who were capable to form an opinion, and who were amazed that he did not “ smash the pianoforte, like his pupils ” ! He was immensely gratified at his visit, and in parting with Mister Alfred and Mister Augustus Littleton, at Calais, he said :

“ If I should live 2 years longer, I will certainly visit England again ! ” »

Given the extent of Liszt's travels in 1886, which were nearly non-stop from mid-March until mid-May 1886, encompassing London, Vienna, Liège, Antwerp and 2 trips to Paris, the relative absence of complaints about the physical demands they put on him is noteworthy. It seems significant that he travelled to hear performances of his music. Yet,

even before his travels began, Liszt's concerns about his ever-weakening eye-sight had intensified. Starting in February, he requested that both correspondents write in large letters, because, though his eyes did not cause him pain, it was almost impossible for him to read and write, « even notes which are easier for me than letters » . He composed only to provide an orchestral accompaniment for his song « Die Vätergruft » (N. 22) , performed by Georg Henschel on 9 April in a concert of Liszt's music at St. James's Hall, in London.

After returning to Weimar in **mid-May**, Liszt went to Halle on **Tuesday, 1 June** to consult with 2 prominent physicians.

2 weeks later, on **Monday, 14 June**, he wrote to Carolyne :

« For about 12 days, the weakening of my sight is such that I have had to dictate all my letters and will continue to do so this week. In addition, I don't know what sort of leg-ailment has come-back. Without making me suffer in the least, it manifests itself through a little bit of swelling. The result of my consultation with 2 illustrious doctors in Halle, Volkmann and Græfe, was hardly agreeable. To heal the legs, Volkmann prescribes a cure in Marienbad or some other place that he will tell me about later ; afterwards, Græfe considers it probable that I would have to undergo an operation, quite harmless, he assures me. You know my dislike for water-cures, which I used only one time at Aix-la-Chapelle, more than 30 years ago. The operation of the left-eye almost appeals to me more ... »

« **July 2**, Bayreuth.

Please ask the most illustrious (Richard) Volkmann the names of the 2 doctors in Kissingen to whom he was so good as to recommend me. (August) Stradal will go to Kissingen 10 days or so before me to reserve my rooms, and I would like to give him the names of these 2 doctors. Daniela is to be married tomorrow, Saturday, at " Wahnfried " before the civilian authorities - the Mayor and the notary, plus the witnesses. The following day, Sunday, the religious wedding will take place in the Protestant church. The same evening, the couple will leave for Switzerland and will pay a call on the father and father-in-law, Baron Hans von Bülow.

Monday evening your " umilissimo servo ", Franz Liszt, will be at Colpach (Grand Duchy of Luxemburg) . »

The diagnoses were cataracts and dropsy, the latter characterized by swelling due to fluid accumulation. In addition to this willingness to undergo cataract surgery, Liszt informed Olga in a **Friday, 2 July** letter that he intended to follow Doctor Richard von Volkmann's recommendation for treatment of the dropsy. But the closing of the **Monday, 14 June** letter to Carolyne confirmed his determination not to let the doctors' diagnoses deter him from pursuing his travel plans in the meantime :

« Distribution of my time : (**Monday**) **28 June**, I will be in Dornburg for the celebration of the Grand-Duke and, **3 July**, in Bayreuth for Daniela's marriage. Until (**Wednesday**) **30 June**, I will remain in Weimar. Do not worry, I promise you to conduct myself very reasonably. 2 of my piano disciples (male) read to me several hours each day.

“ Your most humble slave ”, to whom the physicians promise long life, provided that he takes care of himself. »

The last letter that Liszt indited with his own pen is addressed to « Frau » Sofie Menter, and is dated Bayreuth, **Saturday, 3 July 1886**. What proved to be almost a death-bed epistle runs as follows :

« Tomorrow, after the religious marriage of my grand-daughter Daniela von Bülow to Professor Henry Thode (art-historian) , I betake myself to my excellent friends the Munkácsys, “ Château ” Colpach, Grand Duchy of Luxemburg. On the **(Tuesday) 20th July**, I shall be back here, again, for the first 7 or 8 performances of the « Festspiel » ; then, alas ! I must put myself under the, to me, very disagreeable cure at Kissingen and, in **September**, an operation for the eyes is impending for me with Græfe at Halle. For a month past, I have been quite unable to read, and almost unable to write, with much labour, a couple of lines. 2 secretaries kindly help me by reading to me and writing letters at my dictation. How delightful it would be to me, dear friend, to visit you at your fairy castle at Itter ! But I do not see any opportunity of doing so at present. Perhaps, you will come to Bayreuth, where, **from (Tuesday) July 20 to August 7**, will be staying. Your sincere friend, Franz Liszt. »

The Master was spared the infliction of the cure he dreaded at Kissingen, and « Frau » Menter did not meet him at Bayreuth for, on **Saturday, July 31**, Liszt died.

« To whom the physicians promise long life » would prove as inaccurate a diagnosis as the oculist’s assertion in February 1884 that Liszt need not fear cataracts. After the first stay in Bayreuth, Liszt did not return to Weimar, but travelled instead to Luxembourg as the guest of the Munkácsys at the Château of Colpach in Luxemburg, remaining there **from Monday, 5 to Monday, 19 July**. He reported contentedly on his reunion with Cardinal Lajos Haynald (1816-1891) , as well as a dinner at which Haynald and the Bishop of Luxemburg were present. Otherwise, he wrote of a fairly uneventful and unremarkable daily routine :

Nothing has happened here after last Wednesday’s dinner with Cardinal Haynald and the Bishop of Luxemburg. The days follow and resemble each other. Munkácsy is working here on a fairly large painting representing his studio in his house, with three young ladies and a view of the garden. He has one thing in common with me, which is that work makes him surly and sleepy.

« (...) As for me, I play only 2 or 3 hands of “ whist ” in the evening with 3 ladies, and go to bed at 10:30 after the prescribed massages, infusion, and bathing of my eyes (not very effective) .

Stavenhagen writes German letters very well indeed, under my dictation, and “ Madame ” Munkácsy.

Next Monday, I shall spend a few hours in Luxemburg, and, on the following day, will return to Bayreuth. »

**Monday, 19 July 1886** : The Luxemburg Music Society gave a concert at the Casino Bourgeois in honour of Liszt, at which he played several numbers, a last, minor lapse in his vow of 1877 about public performance.

But 2 days before, on **Saturday, 17 July**, he had reported to Olga, still with a trace of irony, that he was already seriously ailing :

« To my physical condition, already so pleasant, has now been added these 5 days a most violent cough which plagues me day and night. To comfort me, the doctor says that this type of cough is very tenacious. So far, neither cough medicine nor infusions, nor “ mustard plasters ”, nor foot-baths have rid me of it. »

Liszt did not keep his promise to Carolyne to take care of himself, and held to his travel plans, leaving for Bayreuth on **Tuesday, 20 July**, arriving there the next day, with no inkling that it would be his final journey. Our main witness to his final days is Lina Schmalhausen, a former pupil who had served as his house-keeper in Budapest and with whom he had remained close. She arrived in Bayreuth the same day as Liszt ; other pupils gathered around him in the days to come, as they typically did when he travelled. August Göllerich junior, another pupil, also recorded his impressions.

When Liszt arrived at « Wahnfried » in Bayreuth on **Wednesday, 21 July 1886**, in company with a persistent young Parisian lady (the paramount passion not quite extinguished) , he had difficulty in breathing, and he was obliged to take to his bed with a high-fever and a racking cough. Once more, he rented rooms at the Fröhlich house, where he had stayed 2 weeks earlier. Cosima, who was heavily involved in the Wagner Festival, brought his coffee across from « Wahnfried » at 6 o'clock every morning and chatted with him for an hour or so ; she would then leave for the « Festpielhaus » and remain there for the rest of the day. She had also arranged to have Liszt's meals prepared at « Wahnfried » . The idea was that he could walk across the road for them ; but as he was ill, that proved to be impossible, so they were sent over to him. For the first day or 2, Liszt confined himself to his room, and scarcely anybody knew that he had arrived. His more adoring pupils August Göllerich, Alexander Siloti, Thomám, and Bernhard Stavenhagen tried to keep him amused with games of « whist » , but his hands trembled so badly that he could hardly hold the cards, much less order them. He often lapsed into fitful slumber from which he was amused by yet another bout of coughing. Lina Schmalhausen had arrived in Bayreuth the same day as Liszt, in response to his « télégramme » asking her to join him there, and she was shocked when she observed his condition. It is from her unpublished diary, in fact, that we have our best account of what took place during his final days.

**Thursday, 22 July 1886** : That morning, Lina went to see Liszt at the Frölich's, where he had again taken rooms. She was shocked when she saw him :

« The Master looked as if he were suffering a great deal and coughed terribly. »

Lina Schmalhausen, August Göllerich (junior) and Liszt's manservant Mihály (« Miska ») Kreiner saw to the patient's needs, kept him company while he played « whist » (his favourite card-game) and read to him. But they had to keep breaking-off « because the Master continually coughed, and his whole body shook violently. His head became blood-red and he probably spat-out 4 handkerchiefs of phlegm during 2 hours. »

Once a day (generally first thing in the morning) , Cosima Wagner called on her ailing father and remained for about

an hour, drinking coffee. He initially took his meals with the Wagners at the Villa « Wahnfried », but when his condition continued to deteriorate, Cosima sent round food to the Frölichs. Since Liszt was suffering from problems with his teeth and gums, he was unable to eat the veal fillets, cutlets and steaks that Cosima provided. Mostly, he poked at his food with a fork and ate a few mouthfuls of rice. He had, in any case, very little appetite.

He is said to have exclaimed in his despair :

« If only I had fallen ill somewhere else, but to have to be ill right here, amid all this clamour, is really too stupid. »

**Friday, 23 July 1886** : Linz attended the opening-night of « Parsifal » .

**Saturday, 24 July 1886** : Anton Bruckner arrived in Bayreuth to attend performances of « Tristan und Isolde » and « Parsifal » .

The picture of the dying Master surrounded by his disciples, hardly any of whom had grasped the fact that he was so seriously ill he was soon to pass-away, etched itself deeply on the mind of Adelheid von Schorn, who arrived in the middle of that scene, which took place on **July 24**.

« Liszt was sitting on the sofa holding his cards in his hand and surrounded by a number of his pupils who were playing whist with him ... He coughed, fell asleep for a moment, then went on playing. He hardly knew who was there and could scarcely sit upright. Deeply depressed, I left knowing that there was nothing we could do for the Master we loved. »

**Sunday, 25 July 1886** : From time to time, the pupils would take turns to give Liszt a spoonful of the cough medicine his doctor had prescribed for him. Since it contained morphine, it not only helped to suppress the cough but also exacerbated the chronic drowsiness from which he now suffered. At one point, Lina heard him complaining to Göllicher about his weak eyes and his swollen body. And Lina added that a look of inexpressible gloom passed across his face as he made the remark.

(Liszt had fallen once more into a deep depression, and there is some circumstantial evidence to suggest that he may have entertained thoughts of suicide. According to Gottschalg, one of the Stahr sisters told him that Liszt broke a window-pane with a seltzer glass so that the cold night air would hasten his end.)

His coughing was by now so chronic that he feared that he would be unable to get to the Theatre. A local physician, Doctor Karl Landgraf, was summoned by Cosima. He subjected Liszt to a thorough examination and had the manservant, « Miska », show him the chamber-pot so that he could inspect Liszt's urine and stool.

The doctor told Liszt :

« It is considerably better than before. The urine is much lighter, and, in a few days, you will have overcome this little

cold. »

Lina, who was also present, later reported that she was thoroughly alarmed to see what looked like ink in the chamber-pot, an indication that Liszt was passing blood.

But « Miska » told her that it meant nothing :

« It has been like that for 3 weeks already. »

Lina caught-up with the doctor in the hall-way. He re-assured her that there was nothing to worry about, that Liszt should not speak too much or meet too many people, otherwise the illness could turn into pneumonia.

When she reported that conversation to Liszt, he remarked ironically :

« But I thought that I already “ had ” pneumonia. »

From that moment, they lost faith in his medical treatment.

Liszt's problems were further compounded by the fact that no one seemed to understand that he could not eat the food prepared for him at « Wahnfried » . His dentures caused him discomfort, so he never wore them, with the consequence that he could not chew meat or solid foods. Some smoked veal cutlet covered in apricot sauce had been sent across, but Liszt gave it to Lina's dog, and Lina prepared some clear broth, which seemed better suited to his condition. In order to get some rest, Liszt instructed « Miska » not to admit anyone to his rooms except Lina and Göllerich, whom he now wanted to read to him. Göllerich chose some passages from the literary works of Wagner, and Liszt was soon asleep. He was disturbed by a visit from Henriette Liszt, the widow of his cousin Eduard, who insisted on seeing him, brushed « Miska » aside, and, according to Lina, bent his ear with idle chatter for an hour or so. No sooner had « Frau » Liszt departed than Sophie Menter arrived in the company of friends. It was an impossible situation for Liszt ; he needed to be left alone, but he knew that as long as he was in Bayreuth, he would be expected to hold court and remain a centre of attention.

Cosima's ban on visitors to her father's bedside was in Liszt's best interests, but her motive in banning Lina, who had acted as Liszt's nurse and who could have gone on tending him, appears to have sprung from extreme dislike of this young lady. Lina's diary tells us why. While Cosima was in Lisa's bedroom, her father had lapsed once more into delirium and had mistaken her for Lina. His failing eye-sight had done the rest. Unable to see Cosima properly, he addressed some intimate remarks to her that were really intended for Lina. Cosima resolved there and then to dismiss her.

Doctor Landgraf was sufficiently unconcerned to permit Liszt to attend « Tristan und Isolde » that evening, simply cautioning him to rest as much as possible and temper his speaking so that his condition did not deteriorate into pneumonia.

Bayreuth premiere of « Tristan und Isolde » , which Liszt had promised Cosima he would attend. He withdrew into the shadows of his box. He was accompanied by conductor Felix Weingartner. Throughout the entire evening, he slept from absolute exhaustion and held a handkerchief clasped to his mouth in an attempt to stifle his coughing. He moved forward only to show himself during the intermissions and acknowledged the applause at the end in company of Cosima.

**Monday, 26 July 1886** : Franz Liszt's condition becomes worse. He sees himself deprived of his daily cognac by the doctors. At the beginning, the Master is surrounded by some of his students who worship him. Among them, Arthur Friedheim, Alexander Siloti and Bernhard Stavenhagen. They are refused access to his room by Cosima when his condition worsened.

The year 1886 begins on a Friday. Liszt's birthday falls that year on a Friday. When tremors and delirium strike ; the superstitious Liszt (like the Italians) now fears death.

...

Liszt sat slumped on the sofa coughing, his forehead mottled blood-red with the effort. Every 5 minutes or so, he drifted-off to sleep. Since Göllerich was also ill (he had taken to his bed the previous day) , and since « Miska » had disappeared on some errands, Liszt was alone for much of the time. Then, word was sent across from « Wahnfried » that in fixture, broth would only be served twice a week, so Liszt had nothing to eat. Lina finally arrived, and Liszt begged her to keep watch on « Wahnfried » , and then, when everyone « over there » had left for the Theatre, to come and keep a vigil beside him. This was a revealing statement, which indicated that he wanted to place some distance between himself and the Wagners. Lina did his bidding, kept watch until the Wagners had left, and then, returned to Liszt. He asked her to help him to bed. With difficulty, she got him to his feet.

« His body was as heavy as lead. Finally, I had him standing-up. He embraced me, with a thankful gaze that was both heavenly and “ deeply sad ”. Then, he pressed a long kiss on my neck. I carried him closer to the bedroom (he could hardly place one foot in front of the other from weakness) , and he immediately fell onto the chair in front of his bed. »

Liszt called for « Miska » to undress him and put him to bed, but the house was deserted and his servant was nowhere to be found. Lina offered to undress him, but Liszt muttered :

« That is exactly why they hate you and gossip so much about us ; they begrudge your help. »

When Lina protested that he was ill, and that no one could possibly object, Liszt replied :

« The whole of Bayreuth would be full of gossip tomorrow. »

He was right. Liszt's inner-circle had not failed to notice the little attentions that he and Lina had given one another

ever since the young woman had served as his house-keeper in Budapest. Liszt knew that the outside-world might easily misunderstand their arrangement, and he was nervous of compromising her reputation at this moment. So, Lina left in search of « Miska », tracked him down in the neighbourhood, and had him put his Master to bed. Lina then sat by Liszt, holding his hand, and read to him. At 8:00 pm, « Miska » returned with Liszt's supper, chicken and rice, but Liszt could hardly touch it. Lina noticed that his whole body was boiling hot and that he was intermittently delirious.

He would abruptly wake-up and tell her :

« I know that I'm saying a lot of confused things ; I have a high-fever. I always feel as if a wave is coming and I am in the water, and yet, I know that I'm lying in bed. »

Later that evening, the doctor came, and, after declaring that there was nothing wrong with Liszt except a severe cold, he departed. Lina wanted to sit-up with Liszt all night, but he would not allow it. At 11, she put-out his night-light (« Extinguish it, I am not used to it. », he told her) and departed with a promise that she would come-back at 7:30 the following morning.

**Tuesday, 27 July 1886** : When Lina returned after breakfast, she found « Miska » in a highly nervous state. Liszt had hallucinated the whole night, no one had been to see him, and « Miska » did not know what to do.

In a lucid moment Liszt had said :

« If only I had fallen ill somewhere else ! But to have to be ill just here, where everything throngs around me, is really too stupid. »

Cosima then arrived and spent more than an hour in Liszt's room. For the first time, she seemed to realize the full-seriousness of her father's condition. When she walked-out, she looked neither at Stavenhagen (who had meanwhile returned to the house) nor at Lina Schmalhausen, but went straight-up to « Miska » and firmly instructed him to forbid anyone to see her father. This was easier said than done ; Cosima put no one in charge of her father's welfare, and since the students were now the only contact he had with the outside-world, they continued to minister to his needs in defiance of Cosima's ban. At 4:00 pm, however, as Lina came-back to « Siegfriedstraße » from some small errand, she encountered « Miska », who told her that everybody (Stavenhagen, Göllicherich, and Lina herself) had been formally excluded from Liszt's presence, that Cosima herself was now nursing her father.

### Death of Franz Liszt

« I have never wished to live long. In my early youth, I often went to sleep hoping not to awake again here below. »  
(Franz Liszt)

After seeing her father's poor condition earlier in the day, Cosima had called in one of the best physicians from

Erlangen University, Doctor Richard Fleischer, who examined Liszt the next day and diagnosed pneumonia. The students hovered outside the house, offended by Cosima's ban but uncertain what to do next. A great reception was held at « Wahnfried » that afternoon, at which Cosima played the hostess while her father lay dying across the street. To do her justice, however, she had left instructions that a bed be set-up for her next to Liszt's room so that she could start to keep watch over him during the night.

On **Thursday, July 29**, she carried blankets, sheets, and pillows across the road and established herself in a room next to Liszt's. « Frau » Fröhlich, the land-lady, was highly critical of this move ; she complained to Lina that Liszt's illness had already caused her enough inconvenience. Moreover, « Frau » Fröhlich went on, she herself could not sleep at night.

Her bedroom was directly above Liszt's and his moaning and rattling cut her to the quick :

« Last night, he moaned terribly, and I wept on bedside, closed the door and retired to her room. At 2:00 am, there was a dramatic scene. Liszt suddenly leaped-up in a frenzy, clutched his chest, and shouted “ Luft ! Luft ! ”. He was gasping for air. “ Miska ” tried to restrain him, but Liszt had incredible reserves of energy and hurled him aside. His cries of pain lasted for half an hour and could be heard across the neighbourhood. Cosima dressed hurriedly and called Doctor Landgraf, who did not appear for an hour and a half, by which time Liszt had collapsed diagonally across the bed.

Landgraf at first declared :

“ He is dead. ”

But he massaged Liszt's ice-cold body until the limbs warmed-up, and gave him Hoffmann's drops. From then on, Liszt remained in a coma. »

**Saturday, 31 July 1886** : Liszt suffered an apparent heart-attack at 2:00 am calling-out in pain for a half hour, then lapsing into a coma. In the morning, Cosima wired an Erlangen physician named Richard Fleischer, who got to Bayreuth in the early afternoon. The whole Wagner family (Cosima, Daniela, Eva, Isolde, and Siegfried) was gathered in the salon outside Liszt's room. Fleischer informed them that the coming night would be crucial. He now considered it to have been a mistake to forbid Liszt all alcohol, and he prescribed a cocktail of heavy wines and champagne in an attempt to revive the patient. As the mixture was forced into Liszt's mouth, he came to for a few seconds. He tried to speak, but although Cosima bent over him, she could not catch the words. The Wagners then left, since Cosima had arranged a supper party at « Wahnfried » in the evening.

Doctor Fleischer was now joined by Doctor Landgraf. Throughout the evening, Fleischer sat by Liszt's bed, continually taking his pulse with one hand and checking it against a pocket-watch in the other. At 10:30 pm, Liszt stopped moaning but continued to breathe heavily. About 11:00, both doctors leaned over the bed, holding 2 large silver candelabras, and examined Liszt closely. At 11:30, Liszt was given 2 injections in the region of the heart. Some sources

have claimed these were injections of morphine. Others have claimed the injections were of camphor, shallow injections of which, followed by massage, would warm the body. An accidental injection of camphor into the heart itself would result in a swift infarction and death.

(Some sources say that these were injections of morphine ; others say camphor. Lina Schmalhausen, from her vantage-point just outside the open windows of Liszt's room, smelled the aroma of the injections as it drifted towards her, and morphine has no perceptible smell. Camphor was sometimes used to counter the effects of hypothermia, and shallow injections beneath the surface of the skin, followed by massage, were known to warm the body. But an accidental injection of camphor into the heart itself would have resulted in a swift infarction, and death.

It is a small detail, but the death-register puts the official time of death at 11:15 pm, while Lina Schmalhausen observed the 2 doctors give the injections at 11:30 pm.

Doctor Karl Landgraf is memorably called « the bungler of Bayreuth » .)

The effect was dramatic ; Liszt's body was shaken by convulsions ; the bed-covers flew violently up and down ; and then, he became still, his left arm falling by the side of the bed. Once more, the doctors bent over him, then left the room without exchanging a word.

Franz Liszt died in the arms of his daughter Cosima, as a result of pulmonary congestion.

His last word will be :

« Tristan »

(There is not a shred of evidence to support the statement that the last word Liszt uttered just before his death was « Tristan » . After the heart-attack that led to his coma, in the early hours of July 31, he was unable to speak. It doubtless suited the Bayreuth Circle to think that, even in death, Liszt had been thinking of Wagner's Masterpiece.)

Questions have been posed as to whether medical malpractice played a part in his death.

...

This series of events is exactly what Lina Schmalhausen describes in the eyewitness account in her private diary, the most detailed source regarding Liszt's final illness.

Lina was initially unsure what to make of all this, especially since no words were exchanged. Neither mother, daughter nor the 2 doctors spoke. The silence was eerie. Once Isolde and the 2 doctors had left the room, Cosima lay diagonally across Liszt's lower limbs, then, after a while, went to sit in the chair at the foot of the bed and again folded her hands. She then fell asleep, her head nodding back and forth and up and down. From time to time, she

would wake-up, only to doze-off again. When morning came, Lina left the Frölichs' garden since she was afraid of being discovered there. She felt relieved as she thought that Liszt had received a sedative injection and that he had spent the night asleep. Any other interpretation seemed impossible. The thought that Liszt was dead and that Cosima had simply fallen asleep beside her dead father seemed so absurd that she assumed the Master was still alive.

...

Cosima entered the room shortly afterwards and knelt before the bed. Completely calm, showing no trace of emotion, she gazed for a long time at the body and lovingly caressed Liszt's left-arm. She then laid herself diagonally across his feet, and remained in this position for several minutes, as if in prayer. Isolde came in, knelt before the bed, embraced her mother, and left the room. Cosima then sat-down on a chair at the foot of the bed and remained there for a long time, looking at her father ; she eventually drifted-off to sleep. Lina, who had observed every detail of this dramatic scene from just outside the window, did not know at that moment that Liszt was dead. In fact, she was convinced that he was resting, else why would Cosima be sleeping ? She stood in the garden observing this strange tableau until 4:30 am, and crept back to her lodgings, chilled to the bone, just as the first grey light of dawn was breaking. It was not until breakfast that her landlady came to arouse her with the news « So, Liszt is dead » . Lina rushed back to « Siegfriedstraße » , pushed her way past « Miska » , and entered Liszt's room. He lay fully-clothed on his bed, dressed as an « abbé » , a rosary in his right-hand ; his face was a waxen yellow, his body like a shell. The face wore a strange expression, but it looked 10 years younger, gaunt but peaceful. Liszt had often asked Lina to pray for him after his death. This, she now did as she knelt at his bedside. Cosima then entered and gave her Liszt's prayer-book. She also gave her permission to remove a lock of Liszt's hair. Whatever hostility Cosima had shown the young woman on previous occasions was forgotten in the trauma of her father's death. After Lina had returned to her lodgings, she went into the garden, picked a small bunch of forget-me-nots, ran back to Liszt's room with them, and placed them in his left-hand. It was a hot day, and some flies had started to attach themselves to Liszt's face. Lina went-out and got a small bottle of pine-essence, which she rubbed onto his face, throat, and hands. She closed his left-eye, which had remained partially open, kissed him for the last time, and then, covered the body with muslin. Although Liszt was a Roman Catholic cleric, no priest had been called in during his illness, and he had not been given extreme unction. It was only now that the local priest was summoned and a service held at the bedside for the Wagner family alone ; Liszt's friends, pupils, and close associates were excluded. After the service, a death-mask was taken by the sculptor Weißbrod, in the presence of Paul von Joukowsky and Wagner's old « factotum » Bernhard Schnappauf. (The death-mask was later sent to Weimar, where it was photographed by Louis Held.) While this was happening, Lina went-off in search of a photographer and returned with Hans Brand, who took 3 pictures. The first one did not come-out very well, because the warm wax used for the death-mask had raised the features, but the other 2 were excellent.

These 2 photographs provide us with a piece of evidence that is impossible to ignore, for it conclusively supports Lina's testimony. They show Lina's forget-me-nots in Liszt's left-hand, and the lock of Liszt's hair, just as she described them in the brief interval separating the taking of these images. The hands were moved in accordance with Lina's request to feature them more prominently in the picture, and this change of position is also reflected in the photography.

(Photo) « Liszt A. D. Sterbebeff » : Portrait of the remains of Franz Liszt in the form of a postcard, due to Berlin photographer Ramme. We see the composer on his death-bed, dressed in a dark costume, seizing a bouquet of flowers in his left-hand.

At 10:00 am, Cosima gave permission for the corpse to be viewed. Word spread quickly throughout the small town that Liszt had died the previous night, and crowds of people turned-up at the house. Some were legitimate mourners who wanted to pay their last respects ; others were morbid sight-seers - a few of whom even trooped into the room with their small children.

Later in the day, there was an attempt to embalm Liszt's body. We have few details, but according to Schmalhausen's account, the procedure was bungled, and the corpse was cut apart so badly that the body and face were bloated almost beyond recognition. Consequently, it was forbidden to view the distorted remains, which were covered in gauze. Cosima locked the door to the death-room and the body remained in darkness all night.

The following day, **Monday, August 2**, Lina went-back to « Siegfriedstraße » . All round the death-bed stood bowls of chlorine, and the doors were wide open to ensure a supply of fresh air. A young man was scrubbing the floor around the body in an attempt to clean the area around the bed. As Lina left the house, she encountered a boy rolling the coffin along the street on a hand-cart.

The coffin was made of brown metal and bore the inscription :

« The Lord Jesus Christ »

« Frau » Fröhlich insisted that the corpse be put into the coffin at once, since the body was starting to decompose and her other tenants objected to the odour. Cosima was so angered by this that she and Schnappauf put Liszt's body into the coffin themselves.

...

« Doctor Liszt died in the night. » , Weingartner was informed by his Swabian maid on the morning of **Sunday, August 1st**. He dressed and made his way to the house of mourning, which was already seething with activity. Bernhard Schnappauf and « Miska » had draped the room in black and decorated it with flowers. Liszt's body had already been laid on a bier. At its head, significantly, was a bust of Richard Wagner, at its foot a crucifix.

Weingartner described the scene :

« His face had fallen in and his hair had been smoothed down - he looked a little old man, and it was hard to recognize in his lifeless body the man he had been so shortly before, the man who had created the “ Faust ” and the “ Dante ” Symphonies. »

By now, Lina Schmalhausen had learnt the news from her land-lady. She found it hard to grasp what had happened, since only a few hours earlier she thought that Liszt had fallen into a restful sleep. When she arrived at the house, a Catholic priest was blessing the body.

« Not one of the 3 grand-daughters nor Siegfried shed a single tear. Cold, without the slightest trace of melancholy, they stood around the death-bed. »

Cosima had also refused to allow her father, an « abbé », to receive the last rites, a decision that the priest found inexplicable.

But the « dance of death » was not yet over. Since Cosima was unwilling to have her father's body in « Wahnfried » (she had arranged for an official supper to be held there that evening), the body was simply left at the Frölichs.

According to Schnappauf :

« “ Frau ” Frölich expressed her disapproval of the fact that the body was being laid-out in her house without so much as a by your leave. »

Her annoyance increased when a large crowd of on-lookers gathered outside the house. Even on his bier, Liszt remained a tourist attraction.

Lina noted in her diary :

« The public now arrived “ en masse ”. The inhabitants of Bayreuth brought along their 3 and 4 year old children in their arms. Few of them were sincere in their grief. They were mostly driven by curiosity. »

When the body began to putrefy on account of the high-temperature and Isolde became ill with the smell, Frölich finally lost his temper, laying into Schnappauf and ordering him to remove the body forthwith as he and his wife had other tenants and had no wish for an epidemic to break-out within their 4 walls. Unless Liszt's body was taken-away, he would call the police.

Schnappauf recalled :

« I immediately hurried-off to find “ Frau ” Cosima. She was still in bed. I told her what had happened and was instructed to transfer the body to “ Wahnfried ” once it had been placed in a coffin and the coffin had been sealed. »

Cosima dressed quickly and accompanied Schnappauf back to the Frölichs. Franz Liszt's mortal remains were finally collected in an ordinary hand-cart.

« “ Frau ” Cosima took the feet and I took the head. The coffin was wheeled into “ Wahnfried ” through a side-

entrance and placed on an improvised trestle in the hall, where it was covered in black material taken from the room's existing decor. »

It was above all Liszt's many friends and pupils who were dismayed at such a service. Almost as bad was the fact that the Wagner family did not attend.

« A " Requiem " Mass or a reception for the German crown prince - that was the alternative they faced. »

The Wagners showed no other signs of mourning - quite the opposite in fact.

According to Felix Weingartner :

« Everything was made to look (as if on purpose) that Franz Liszt's passing was not of sufficient importance to dim the glory of the Festival even temporarily by a veil of mourning. »

Nothing was allowed to disrupt Cosima's inscenation of Wagner's legacy, and so, life went on as usual in Bayreuth. On the evening of the « Requiem » Mass, she held another of her « soirées » at « Wahnfried » .

Even her favourite conductor, Felix Mottl, was repulsed by the spectacle :

« " Wahnfried ". Food. In the entrance-hall, there was still the smell of mortality emanating from Liszt's dead body ! »

The lack of respect that was shown to Liszt in death proved a rallying call for those contemporaries who were already critical of the Wagner family and of Bayreuth. They wondered why Liszt had been buried in a town where he had never lived and where he had died more or less by chance. The answer was simple : Cosima Wagner wanted it so. Even so, family reasons were secondary. Now in sole charge of the Bayreuth Festival, she regarded the deceased celebrity as a kind of relic or, worse, a trophy. Bayreuth was the epi-centre of Wagnerolatry, and she reckoned that Liszt's grave could be effortlessly integrated into the local cult : Liszt was another jewel in Wagner's crown.

In implementing her plan, Cosima skilfully took advantage of a certain confusion concerning her father's final wishes, a confusion to which he himself had contributed. His will of 1861 had failed to mention where he wanted to be buried, and, in the years that followed, he had made only contradictory remarks on the subject : in 1863, he had expressed the wish to be interred in Rome, whereas 3 years later, he had spoken of Blandine's grave in the Maritime Cemetery at Saint-Tropez. Tivoli and Hungary had also been mentioned.

**Tuesday, 3 August 1886** : Franz Liszt's death in the midst of the Bayreuth Festival made something low-key out of the question, even assuming that Cosima knew of his wishes.

In accordance with his wishes, Liszt was buried in Bayreuth's municipal cemetery but in haste (that he might not interfere with the current Wagner Festival) . No doubt, he is mourned at leisure.

The funeral « cortège » of hearse, friends and dignitaries on foot, and carriages travelled along the « Maximilianstraße » to the city cemetery, the street lined with spectators. Olga was there to witness it, Carolyne was not.

It would not be inaccurate to describe the funeral as a combination of State occasion and social spectacle. The deceased's closest friends and family members met at « Wahnfried » at 10:00 in the morning. Liszt's friend of many years' standing, Olga von Meyendorff, fainted and had to be revived with a glass of red wine. A priest again blessed the body, after which the « cortège » set-off for the cemetery headed by a delegation from the volunteer fire brigade followed by an imposing carriage festooned with flowers. After it came the local clergy, 3 precentors and « Miska » Kreiner, who carried Liszt's numerous orders on a velvet cushion. Then came the catafalque with its gilded coffin.

Felix Weingartner recalled :

« We, his latest pupils and friends, were his pall-bearers. Low clouds hung-down, creating a bleak impression, but there was only light rain. »

Immediately behind the coffin came the Wagner family - Siegfried Wagner and Henry Thode were on foot, while Cosima Wagner and her daughters rode in a carriage. Behind them walked representatives of the various German Courts, the Town Council, the Regional Council, the officer corps, the Festival artists and thousands of townspeople. Bayreuth was in mourning.

According to the local paper, the « Bayreuther Tagblatt » :

« All of the gas lamps were lit and, draped with black crepe, they shed a sombrely muted glow that added to the mood of grief. »

Half an hour later, the « cortège » reached the cemetery, where, following the service, the local mayor, Theodor Muncker, and Liszt's old friend, Carl Gille, both gave moving speeches.

A new terror was added to death by the ugly tomb of the dead man, designed by his grandson, Siegfried Wagner ; said to be a composer as well as an amateur architect. Victories usually resemble each other ; it is defeat alone that wears an individual physiognomy. Liszt, with all his optimism, did not hesitate to speak of his career as a failure. But what a magnificent failure ! « To die and to die young - what happiness » , was a favourite phrase of his.

According to his pupil Alan Walker, the choice of the burial site gave rise to numerous disputes and requests for repatriation from the cities of Weimar and Budapest.

The tragedy was that Franz Liszt lived to hear himself denounced as an imitator of Richard Wagner ; butchered to make a Bayreuth holiday. The day after his death, in 1886, the news went abroad in Bayreuth that the « father-in-law of Wagner » had died ; that his funeral might disturb the success of the current music Festival ! Liszt, who had begun his career with a kiss from Ludwig van Beethoven ; Liszt, whose name was a flaring meteor in the sky of music when

Wagner was starving in Paris ; Liszt the path-breaker, meeting the usual fate of such a Moses, who never conquered the soil of the promised land, the initiator, at the last buried in foreign soil (he loathed Bayreuth and the Wagnerians) and known as the father-in-law of the man who eloped with his daughter and had borrowed of him everything from money to musical ideas. The gods must dearly love their sport.

When attacked by his last illness at Colpach, where Franz List had gone to visit Munkacszy, the painter, Miss von Schorn went to Bayreuth to look after him. There, at the door of his bed-chamber, she was refused admittance, « Madame » Cosima Wagner, through a servant, telling her that the daughter and grand-daughters of Franz Liszt would care for him. The truth is that « Madame » Wagner had always detested the Princess Wittgenstein and saw in the Weimar lady one of her emissaries. Miss Von Schorn left Bayreuth deeply aggrieved. After Liszt's death, her correspondence with the princess abruptly ceased. She tells all this in her book. Even Liszt had shown her his door at Weimar, several years before he died. He detested gossips and geese, he often declared.

### Funeral Mass of Franz Liszt

**Tuesday, 18 March 1879** : Liszt had rehearsed for Carolyne, at her request, his wishes for his own funeral and disposal of his belongings. He wanted to be buried without « any fracas, with no other funeral service than a low-Mass - consequently, without music » .

**End of November 1879** : Finally, Franz Liszt had written to Carolyne von Sayn-Wittgenstein :

« I want no other resting place for my body than the cemetery that is in use in the place where I die, nor do I want any other church service apart from a silent Mass (not a sung “ Requiem ”) in the parish church. »

**Wednesday, 4 August 1886** : A « Requiem » Mass was held in Bayreuth's Catholic church (« Schloßkirche ») (though Franz Liszt would have preferred « no fracas ») .

At Cosima Wagner's behest, Anton Bruckner (who had been in Bayreuth since **24 July**) performed at the organ (3 manuals, 64 stops, 47 registers and 3,268 pipes) .

He played the « “ Requiem ” for organ » from 1883 (S. 266) - which is based on the « Requiem » (S. 12) composed between 1867 and 1871.

It is in 7 movements :

Dies iræ / Ricordare piu Jesu ! / Sanctus / Benedictus / Agnes Dei / Postludium.

Bruckner also played his own improvisations on themes taken from « Parsifal » .

If there had to be music, « Parsifal » , which he considered the most sublime work of his age, might well have pleased Liszt.

Pianist Bernhard Stavenhagen, a pupil and disciple of Liszt, read the funeral oration.

The church choir sang a number of simple occasional compositions. The rest of the interminable service was made-up of nasal chanting by 2 or 3 priests in response to the choir.

Bayreuth's large Symphony Orchestra also performed during the celebration.

Conductor Felix Mottl, an admirer of Berlioz, Liszt, Wagner and Bruckner, was present.

Lina Ramann noted in her diary :

« The church was full of artists. They breathed a sigh of relief when he began as they expected something highly-artistic and worthy of Liszt. Unfortunately, it wasn't to be. »

Anton Bruckner's playing was « monotonous, endless, wearisome. When Liszt's pupils, unable to conceal their dismay, asked him why he had not based his improvisations on a theme from one of Liszt's own compositions, he replied that, unfortunately, he did not know any - they should have given him one » .

In his obituary to Liszt, Hugo Wolf wrote poignantly :

« The eye of this brilliant phenomenon is forever closed, but it was the eye of an immortal. »

Professor Frederick Niecks said :

« Liszt has lived a noble life. Let us honour his memory. »

When Liszt died, there was a heartfelt outpouring of grief throughout Europe.

Composer Camille Saint-Saëns, an old friend, whom Liszt had once called « the greatest organist in the world » , dedicated his Symphony No. 3 « Organ Symphony » to Liszt ; it had premiered in London only a few weeks before the death of its dedicatee.

**July 1994** : A commemorative plaque by artist Rudolf Holler is unveiled on the front of the « Schloßkirche » :

« The large Symphony Orchestra and organist Anton Bruckner (1824-1896) performed on August 4, 1886, the “ Requiem ” by Franz Liszt at the invitation of Cosima Wagner. Bruckner, a fervent admirer of Richard Wagner, regularly attended the Bayreuth Festival until 1892. »

**Bruckner, the alpinist**

« A Famous Alpinist » : A recollection by August Stradal.

**Summer of 1886** : Anton Bruckner travelled to Bayreuth for the first production of Richard Wagner's « Tristan und Isolde » to be staged at the Festival Theatre. Hardly had he reached his destination that Franz Liszt died. Cosima Wagner, Liszt's daughter, wanted Bruckner to play the organ at a memorial service but, for once, inspiration deserted him. August Stradal (1860-1930) , who studied composition with Bruckner and piano with Liszt, recalls Bruckner's return to Austria.

At the railway station, I met the Hungarian music-publisher Nándor Táborzsky (Táborzsky & Parsch was founded in 1869 by Nándor Táborzsky, 1831-1888, and József Parsch who died in 1895) , an old friend of Liszt's who had missed the funeral and was now returning to Pest via Munich. I invited Táborzsky to travel with me and told him that Anton Bruckner would be going to Munich by the same train, never suspecting the catastrophe that I was about to unleash. Bruckner dashed-up at the last minute, carrying an enormous travelling-ease with a floral design ; I promptly introduced Táborzsky to him as Liszt's most loyal friend. But the peeved composer bellowed, with every sign of impatience :

« Don't give me that friendly smile, “ Herr ” Táborzsky, you haven't published anything by me ! Oh, and “ Herr m” Stradal, here, is just the same as his Master was. He must have company day-in, day-out and never be on his own. All that's missing are the lady friends - how piquant that'd be ! »

When we reached Weiden, the train had a longish wait. All of a sudden, 2 tankards of beer bobbed-up in front of our carriage window and Bruckner, who was holding them aloft, called :

« Prosit Stradal, prosit Táborzsky ! Here's your beer, and allow me to join you ! »

We emptied the huge glasses in great delight, drinking to the Master's health, and peace was fully-restored. Bruckner became very loquacious, talking about his 8th Symphony, about the passing-bell imitated in the music at the end of the first movement, the « deutsche Michel » whom the Scherzo shows dancing, the Cossack-riders (beginning of the Finale) and the mighty theme for winds representing the 2 rulers.

But, suddenly, right in the middle of his account, Bruckner fell silent again. For Táborzsky suffered from asthma, which made his breathing noisy, and this was getting more and more on Bruckner's nerves. After a period of silence had elapsed he said that, while « Herr » Táborzsky had his complete sympathy, he couldn't stand his wheezing, and he left the compartment once more, taking his florid travelling-ease with him.

We reached Munich by evening. « Herr » Táborzsky travelled straight-on, but Bruckner had not decided whether to go on to Linz overnight or to stop-over in Munich. We had supper together in the station restaurant. Suddenly, Bruckner asked me where to go to see the « Großglockner » : he had always wanted to see Austria's highest-peak. Somewhat distracted by all the excitement of the previous days, I told him that he only needed to travel to Zell am See. On hearing this and in my distraught state, I had got the « Großglockner » confused with the « Kitzsteinhom » -

Bruckner became very keen on the idea and caught the night train for Worgl and Zell am See. When I next visited the composer in Vienna, I was given a very frosty reception. Asked what had put him out, Bruckner answered :

« You “ Viechskerl ”, you “ Halawachel ” (2 of his favourite Upper-Austrian expressions) , that was a fine trick you played on me ! At 4 in the morning, there I am getting-off the express in Zell am See and asking the station-Master where to look for the “ Großglockner ”, and he laughs at me and says you can’t see it from here ; it would take 4 hours of clambering-up the “ Schmittenhöhe ”, because you can see the “ Großglockner ” from the top, on a clear day. Meanwhile, the train had left without me and I had to wait for the next express in the afternoon ! The deuce take your “ Großglockner ” ! »

Bruckner often told this story against me, and whenever our friends were discussing mountain hikes he would remark with irony :

« “ Herr ” Stradal is a famous Alpinist. »

### Vienna Conservatory : Academic Year 1886-1887

**Monday, 20 September 1886 :**

Im Kapitel « B. Unterrichts-Leitung » des Jahresberichts ist zu lesen :

« 4. Lehrkörper.

I. Ordentliche Lehrer :

(...)

Herr Anton Bruckner, Ritter des Franz-Josef-Ordens, Kaiserlich-Königliche Hof-Organist, Professor. (Harmonielehre, Kontrapunkt und Orgel.) »

...

Zu Anton Bruckners Schülern am Wiener Konservatorium gehören :

Victor Bause (« 21 Jahre - Klavier A. II. , Harmonielehre. ») , Gottfried Brzibohaty (« 17 Jahre - Fagott A. II. , Kontrapunkt. ») , Albert Dörnhöfer (« 17 Jahre - Harmonielehre, Klavier II. ») , Hermann Haböck (« aus Hall, 17 Jahre - Orgel V. I. , Harmonielehre. ») (siehe auch) , Leopold Materna (« aus Graz, 16 Jahre - Harmonielehre, Klavier I. ») , Rudolf Merwald (« aus Gmunden, 20 Jahre - Orgel V. I. , Kontrapunkt I. , Klavier II. ») , der noch während des Schuljahres verstarb , Josef Meyer (« 19 Jahre - Orgel A. II. , Komposition II. ») , Carl Paur (« aus Moor, 25 Jahre - Orgel A. II. , General der Musik, Klavier A. I. , Kontrapunkt II. ») , Jacob Schmalhofer (« 17 Jahre - Violin A. II. ,

Harmonielehre. ») , Nicolaus Scordelli (« aus Kiew, 22 Jahre - Orgel V. I. , Harmonielehre. ») , William Sichel (« aus Hannover, 18 Jahre - Klavier A. II. , Kontrapunkt, Komposition I. ») , Josef Steinberger (« aus Schaboglück, 36 Jahre - Orgel V. I. , Harmonielehre. ») , Adolf Steininger (« aus Altmannsdorf, 18 Jahre - Klavier A. II. , 2. Zeile mit eigener Nummer : Orgel A. II. , Kontrapunkt II. , General der Musik. ») , Theodor Tschöpe (« aus Weinburg, 21 Jahre - Cymbalom A. II. , Orgel V. I. ») und Theodor Vogl (« aus Raab, 19 Jahre - Harmonielehre, Klavier I. ») .

...

Und andere folgende Schüler dieses Schuljahres (vielleicht auch in Brucknerschen Kursen) spielen in Bruckners späteren Jahren noch eine Rolle :

Hedwig Abel (« aus Budapest, 16 Jahre - Klavier A. III. , General der Musik. ») , Josef Chimani (« 13 Jahre - Violin V. II. ») , Marie Demar (« aus Comorn, 22 Jahre - Gesang V. II. , Mündlicher Vortrag, Poetik und Mythologie. ») (siehe auch) , August Duesberg (« aus Gelsenkirchen, 19 Jahre - Violin A. I. ») , Rudolf Fitzner (« 18 Jahre - Violin A. II. ») , Carl Hrubý (« 17 Jahre - Violin A. III. , Komposition I. ») , Carl Lasner (« 21 Jahre - Violoncello A. II. , Harmonielehre, Klavier II. ») , Gisela Röhrenbacher (« 22 Jahre - Gesang A. II (Op. II.) , General der Musik , Musik und Theorie. ») , Georg Valker (« 20 Jahre - Komposition A. III. , General der Musik. ») , Peter Zachariades (« aus Constantinopel, 26 Jahre - Komposition A. I. ») und vielleicht Alexander Zemlinsky (« 15 Jahre - Klavier V. III. ») .

Von den neun Orgelschülern gehören 4 zur Ausbildungsschule, 5 zur Vorbildungsschule. Der « Übersicht der in den einzelnen Lehrfächern unterrichteten Schülerzahl. » ist zu entnehmen, daß von den Orgelschülern 3 halb und einer ganz vom Schulgeld befreit waren. 2 Schüler (beider Lehrkräfte) hörten Kontrapunkt als Hauptfach, neun Harmonielehre. Als Nebenfächer wurden Harmonielehre von 98 und Kontrapunkt von 19 Schülern besucht.

...

Auszug aus der « Unterrichtsstatistik » :

« A.

In den Vorbildungsschulen ...

(...)

Orgel, I Jahrgang.

Schülerstand : systemisirter : 4 ; effectiver : 4.

Monatlich ertheilte systemisirte Lehrstunden : 8, sonach im Jahre ... 80.

(Die von der Ausbildungsschule deßelben Faches weniger in Anspruch genommene Unterrichtszeit kam diesen Schülern

zu Statten.) (...)

B.

In den Ausbildungsschulen ...

(...)

Orgel, 2 Jahrgänge.

Schülerstand : systemisierter : 4 ; effectiver : 3.

Monatlich erteilte systemisierte Lehrstunden : 8, sonach im Jahre ... 80.

(Die hier weniger in Anspruch genommene Unterrichtszeit kam den Vorbildungsschülern dieses Faches zu Statten.) (...)

C.

In der Musiktheorie ...

Harmonielehre, I Jahrgang.

(2 Parallelclassen.)

Effectiver Schülerstand : 32.

Monatlich erteilte systemisierte Lehrstunden : 48, sonach im Jahre ... 480.

Kontrapunkt, 2 Jahrgänge.

(2 Parallelclassen.)

Effectiver Schülerstand : 21.

Monatlich erteilte systemisierte Lehrstunden : 40, sonach im Jahre ... 400. »

...

Marie Demar wird in diesem Schuljahr Schülerin Ferdinand Löwes am Wiener Konservatorium. Anton Bruckner erneuert die Bekanntschaft mit ihr und bietet ihr (nach der Fertigstellung) die Widmung der 8. Symphonie (**WAB 108**) an und

deutet auch seine Heiratsabsichten wieder an.

Ludwig Grande wird Kontrapunkt-Schüler Anton Bruckners (bis Sommer 1888) (vermutlich privat, da er in der Schülerliste des Wiener Konservatoriums nicht verzeichnet ist) .

Hermann Haböck studiert von 1886 bis 1889 (?) bei Anton Bruckner Orgel und Kontrapunkt.

### Bruckner and Freud : close neighbours (1886-1891)

Anton Bruckner felt abandoned in his « Heßgasse » flat on the 4th floor, at the onset of the fall in Vienna. His sometime ally, Gustav Mahler, was away, struggling to re-organize the Budapest Opera. Hugo Wolf, another occasional friend, was engrossed in his surreptitious love-affair and in his own work. Bruckner abided in isolation, just like Sigmund Freud, right across the street ...

**Friday, 1 October 1886** : Sigmund Freud set his medical practice in his Viennese apartment of the so-called « Sühnhaus » (House of Atonement - which opened on December, 8, 1885) located on « Maria Theresienstraße » Number 8, by the « Ringstraße » . His family lived there, until 1891. Emperor Franz-Josef had this house built on the grounds of the former « Ringtheater » , destroyed by a violent fire on December 8, 1881. In the course of this tragic event, 386 people had been killed.

The Freuds had been entitled to think that their investment in a good address would pay-off. A neighbourhood of arrived doctors and distinguished professionals. Anton Bruckner lived opposite at the « Hôtel de France » on « Heßgasse » Number 7. But if the old musician ever troubled to look-down from his 4th floor clutter to the young doctor's orderly household on the second floor across the street, he would have seen a precious few patients in the waiting-room.

### Freud's dream about Hugo Wolf

In his « Interpretation of Dreams » , Sigmund Freud discusses a dream that alludes to Hugo Wolf. The dreamer is identified only as a woman of Freud's acquaintance, assuming that she was a daughter of Freud's early collaborator, Doctor Josef Breuer, some of whose children were Wolf's devoted pupils in the early 1880's. In the dream, a man with the features of conductor Hans Richter paces back and forth in a violent sweat on the caged-in top of a tower. He is trying to conduct a Richard Wagner Opera that has lasted all night. Freud is able to identify the man as Wolf, and he gives a fascinating account of the dream as an expression of the dreamer's predicament. It is also, however, an expression of Wolf's predicament, an astute insight from a pupil who has once loved her teacher. What we have here is a rare opportunity to turn a psychoanalytic dream analysis into music-criticism.

### Doctor Josef Breuer

As Josef Breuer's biographer Albrecht Hirschmüller has correctly noted, Breuer certainly has remained among the less

famous men of this period. Despite his important contribution to the beginnings of psychoanalysis as a collaborator of Sigmund Freud and co-author of the « Studies on Hysteria » published in 1895, he has been over-shadowed almost entirely by the latter. He was also a leading physiologist as well as the father-in-law of Professor Robert A. Kann. Breuer's family history and career reflect many aspects of the upward mobility experienced by Jews in Vienna during the 19th and early 20th Centuries.

Josef Breuer's father, Leopold Breuer, was born in Karlsburg in Hungary on January 8, 1791. Leopold's father had been an impoverished village surgeon and had died at an early age, while the mother was alive still in the 1830's. Leopold attended the rabbinical school in Mattersburg near Preßburg. From here, he accompanied his famous teacher, the rabbi Moshe Sofer, to Preßburg where the largest rabbinical school of the monarchy was located. Here, students were trained to become orthodox rabbis. From Preßburg, Leopold Breuer continued to Prague at the age of 15 to acquaint himself with additional branches of learning. He then became a tutor for Leon Pollak in Pest while concurrently busying himself with issues in pedagogy, Bible exegesis, and history of religion ; he also learned Latin and Greek.

In 1836, Breuer obtained a position as instructor of religion at the Vienna « Kultusgemeinde » , presumably through the helpful intervention of his friend, the Viennese rabbi Mannheim. He taught there for 22 years, meanwhile building-up the school library and writing a number of books, which were recommended by the ministry of education to be used as text-books. As an instructor in religion, Breuer was not un-controversial, especially after the 1848 Revolution, « when Vienna was inundated by relatively uneducated and impoverished “ Ostjuden ” » . Being rigidly orthodox, these « eastern Jews » wanted to see parochial schooling limited to religious instruction and the learning of the Hebrew language, whereas Breuer, along with other enlightened and assimilated Jews wanted to prepare modern Jewish children for a scholarly or bourgeois life and its demands even in the context of religious training. When, in 1849, a second instructor in religion was hired, Breuer of his own accord resigned from his position because of these differences. In 1840, Leopold Breuer had married the 22 year old Bertha Semler who came from an old, long resident « tolerated » Viennese Jewish family. Bertha's father was a merchant of silk goods, and her brother, Salomon, was a merchant of spirits. The latter belonged to the so-called « Ludlamshöhle » , « an organization, in which a number of members of the educated bourgeoisie (in particular, however, writers, musicians and actors) came together and indulged in harmless, often child-like high-spirited pastimes » . The marriage of Leopold and Bertha produced 2 sons : Josef, born on January 15, 1842, and Adolf, after whose birth in 1844 the mother died. The maternal grandmother assumed the responsibility of raising the children. Leopold Breuer never married again. When Josef set-up house, Leopold moved in with him. He died on August 24, 1872. Adolf died in 1874 at the age of 30.

Because his father taught him at home, Josef Breuer did not attend any primary school. At the age of 4, he was able to read. In 1850, he began attending the « Akademisches Gymnasium » , one of Vienna's most traditional and prestigious secondary schools. His favourite subjects were German and the natural sciences. He was an excellent student and passed his final exams with honours on July 22, 1858. He had decided already at an early age to become a doctor. In the Winter Semester of 1858-1859, since his father recommended that he begin with 1 year of general studies, he inscribed at the University in the Liberal arts curriculum. It was the heyday of the Second Vienna School of Medicine, whose point of departure was Carl Rokitansky's new school of pathology. In the Winter Semester of 1859-1860, Josef Breuer started studying medicine under Rokitansky as well as others such as Josef Škoda, Ernst Brücke,

Johann Oppolzer and Ferdinand von Hebra. The psychologist Ernst Brücke (1819-1892) and the internal specialist Johann Oppolzer (1808-1871) exerted the strongest influence on Breuer. After the prescribed minimum 10 semesters of study, Breuer completed his final examination in the Summer Semester of 1864 and became Doctor of Medicine on July 1st of that year. In 1877, he also obtained a doctorate in surgery, which at that time still existed as a separate field and which, along with a Master's degree in obstetrics, was required for public positions.

On January 26, 1867, Oppolzer proposed Breuer to the faculty as a candidate for the position of assistant, since his predecessor, Doctor Johann Schnitzler, the father of Doctor Arthur Schnitzler, had resigned from the position. Breuer became Oppolzer's best collaborator, but did not plan, initially, to seek a « Venia legendi ». After Oppolzer's unexpected death from typhus, Breuer might have become his successor, since he had the best qualifications, but preference was given to an otherwise weaker candidate who, however, was a Dozent. Breuer subsequently left the clinic in 1871 and settled in Vienna's 1st District as a general practitioner.

In 1873-1874, Breuer published his findings on a sensational discovery, namely, the function of the semi-circular canals in the inner-ear and their relation to positional sense or balance. At this juncture, he did apply for his « Venia legendi », which was approved by the ministry on March 20, 1874. From the Winter Semester of 1875-1876 to the Summer Semester of 1885, Breuer lectured on various topics in internal medicine, sometimes with accompanying demonstrations. Unlike the « Ordinarien », « Privat-dozenten » could only with great difficulty obtain the few patients needed for live demonstrations. Therefore, Breuer gave-up his « Dozent » position in 1885 - a move which was then unprecedented ; subsequently, a « Dozent » position was to be rejected also by the surgeon Moritz Schuster (1855-1920) in the 1890's, in this case, in order to change professions altogether. Also in 1885, an initiative undertaken on Breuer's behalf to secure for him a position as head of the 3rd Medical Department of the Vienna General Hospital failed. Breuer then devoted himself exclusively to his thriving private practice and studies in which he achieved the significant physiological discoveries that are named after him.

Josef Breuer had a large circle of patients and friends. He had known Sigmund Freud since 1878. In 1882, he introduced Freud to the case of « Anna O. » (Bertha Pappenheim) , whom Breuer had treated by himself between 1880 and 1882. For many years subsequently, Breuer and Freud worked together on developing psychoanalytic theory. The article « On the Psychic Mechanisms of Hysteric Phenomena : A Preliminary Report » (1893) was developed by the 2 of them, and they appeared as co-authors of the 1895 « Studies in Hysteria » . However, because Breuer did not fully accept Freud's strong emphasis on the role of sexuality in the development of neuroses and for other reasons, their previously close and friendly relations were broken afterwards \*.

\* Albrecht Hirschmüller (« Physiologie und Psychoanalyse » , pages 202-256) discusses the intellectual and personal relationship of Breuer and Freud in great detail. The break between the 2 men might date more exactly to October 1895, when Breuer reacted to Freud's further presentation of his theories « Über Hysterie » in a way that Freud found disappointing (pages 231-232) .

Another of Breuer's particularly good friends was the pathologist Ernst Fleischl von Marxov. Moreover, his circle included, among others, Sigmund Exner, Anton von Frisch, and Carl Bettelheim. His teachers Ernst Brücke, Johann von

Dumreicher, Theodor Billroth, Carl Kaposi and others were his patients. Breuer acted as friend and for many decades as family doctor in the Wertheimstein and Gomperz families, who were the leading Viennese Jewish families after the « unreachable » Rothschilds. He had contacts with the young Hugo Wolf for several years. His friendship with his patient Marie von Ebner-Eschenbach was particularly close ; their rich and steady correspondence (which spanned a period of almost 27 years) was later published by Robert A. Kann.

In 1868, Josef Breuer had married Mathilde Altmann, 4 years his junior and the youngest daughter of the wealthy spirits merchant Salomon Altmann ; Mathilde's brother Leopold supported penniless artists. The happy marriage of Josef and Mathilde produced 5 children : 2 sons and 3 daughters. The oldest son, Robert Breuer (1869-1936) , followed in his father's foot-steps to become a doctor. He was Professor Hermann Nothnagel's assistant in 1898, obtained his « Venia legendi » in 1902, and, in 1904, became head of the clinic at the IKG hospital - a position that he held until his death. He was a great music aficionado and held the final vigil at Johannes Brahms' death-bed. (He saw the opened score of a Bach Motet on the piano.) In 1906, Robert Breuer married Johanna (1883-1965) , the daughter of the pianist and composer Ignaz Brüll. The oldest child of this marriage was the daughter Marie born on August 30, 1907. Her nickname was « Mariedl » . Her younger and only brother Josef, born in 1913, became a doctor like his father and grandfather before him. Marie married Robert A. Kann in 1937, and their children Peter and Marilyn were born in 1942 and 1948, respectively - already in America. Marie's mother and brother also came to the United States ; they died in New York in 1965 and 1999, respectively.

« Gasthaus zum Riedhof » : difficult fasting

**Sunday, 24 October 1886** : Anton Bruckner writes in his pocket calendar (prayer-notebook) a note on the importance of observing fasting, especially on the occasion of the Jubilee. He goes to the wine-cellar of the « Gasthaus zum Riedhof » , near the Vienna General Hospital, run by inn-keeper Johann Benedickter.

He is back before midnight :

« Evening at “ Riedhof ”. Supper at 9:40 pm. Returned home at 11:45. **Did not eat anything more.** »

The « lean » Friday menu

On « Lean » Friday, Anton Bruckner had to settled for 1 fish and 8 eggs !

New Year greetings to Nikisch

**Saturday, 1 January 1887** : New Year letter from Anton Bruckner (Vienna) to Arthur Nikisch (Leipzig) :

« Vienna, “ New Year's Day ”, 1887.

Most Noble Friend !

At the opening of the year, permit me once more to render my most fervent thanks for you great, most highly-artistic kindness toward me. Accept my most fervent thanks ! together with the most sincere wish that God may preserve your irreplaceable health, to the renown of German musical art. Give my best also to the gracious Theatre Director, and to his gracious wife, my renewed thanks and my “ New Year’s ” greeting. I implore you to spare your health ! Be so good as to let “ Kapellmeister ” Mahler have my card.

I kiss the hand of your gracious wife, and I also wish her everything good !

Forever and ever, I ask that you give a kiss to your dear son in place of my own, that I shall never have. To Bernhard Vogel, again, my sincerest thanks, etc.

My leave-taking from you, in Bayreuth, was very difficult for me. A fond farewell !

With heartfelt kisses and thanks,

Yours,

Anton Bruckner »

### Bruckner threatens to call the police

**January to April 1887** : Josef Schalk worked « in secret » on the 4 hand version of Bruckner's 5th Symphony. His great error was to prepare the premiere, inviting Bruckner only to the final rehearsal !

**Saturday, 26 March 1887** : Around a table « at Gause's » pub-restaurant, Josef Schalk reports that he and Franz Zottmann are planning to perform on Tuesday, April 12 (right after Easter) , the 5th Symphony in an arrangement for 2 pianos. The creation will take place at the « Bösendorfer-Saal » during an evening concert sponsored by the Wagner academic Society of Vienna. A Piano Quartet by Hans Paumgartner is also on the programme.

Bruckner was, apparently, offended by the assumption that his input would be required only at the final stage (i.e. , dress-rehearsal) .

Friedrich Klose and Adalbert von Goldschmidt will witness a violent discussion between the Master and Schalk because of the forthcoming performance. Bruckner insists on cancelling the concert, unless Schalk and the other pianist, Franz Zottmann, held additional rehearsals under his direction. At one point, he even threatened to call the police to stop the performance taking place.

The popular Viennese guest-house (Restaurant and Beer-Hall) named « at Gause » (« Gasthaus und Bierkeller “ bei Gause ” ») was located in a basement at « Johannesgasse » Number 12 in the 1st District.

**Friday, 25 March 1887** : Bruckner put his feelings into words in a calm but firm letter to Josef Schalk :

« Dearest, most honourable friend !

Yesterday, I came to the firm decision that I would resolutely decline with thanks all performances of my works, unless they were preceded by one or more weeks of thorough rehearsal - moreover, rehearsals in my presence.

I would, therefore, ask you to choose something other than my 5th Symphony. But, please, arrange rehearsals in the course of April and May, when I will tackle the work with you myself. With heartfelt sympathy and appealing to our old friendship. »

**Wednesday, 20 April 1887** : The first performance of the 5th Symphony in a 2 piano version played by Josef Schalk and Franz Zottmann finally took place at the « Wagner-Verein » after some problems, such as severe difficulties with Bruckner before the concert. (This occasion typified Bruckner's often-stubborn character.)

Afterward, at the celebration in Gauze's restaurant, Bruckner treated all to the finest wine. At this point, one can detect a radical mood shift, which more details of these incidents prove. Schalk was responsible for the copying of Bruckner scores and also making piano reductions.

### Bruckner writes to Theodor Helm

**Friday, 22 April 1887** : Letter from Anton Bruckner (Vienna) to Theodor Helm (Vienna) :

« Right Honourable Doctor !

Greetings ! As the only representative of my work in Vienna, I thank you for allowing my 5th Symphony to be recommended. At your request, I have consented to the preliminary performance. The chorus, " Um Mitternacht " is new, the 3rd with the same title. The Society has returned from Straßburg (in the region of Alsace) , no doubt by the shortest route from the " Schottenring " ? I am allowing myself to send you the newspaper. In thankful respect and with a thousand Cheers, please permit me to send you this wine, that most graciously will not be disdained ! There is that already-mentioned circumstance in regard to my sending it to you but, by no other means, can I present the spring draught with my toast to the honorable doctor.

With great thanks and respect,

Anton Bruckner »

### Wolf resigns

**Sunday, 24 April 1887** : Hugo Wolf presented his resignation as music-critic to the management of the « Wiener Salon-Blatt » in order to devote himself entirely to composition, once more.

Wolf wrote perceptively on many aspects of Viennese concert-life in the mid-1880's during his brief stint as music-critic for the « Wiener Salon-Blatt » considered as a weekly social and gossip organ, not a daily political newspaper. For all his strongly held opinions about musical politics, he had little to say about socio-political issues.

### Death of Hugo Wolf's father

**Monday, 9 May 1887** : Death of Wolf's father in Windischgrätz. Hugo is devastated. For a time, he was inconsolable.

What was it to him now, he cried, if his songs were published, since no success now could bring him any cause for rejoicing ? No longer could he hope to prove to his father that he had been justified in disregarding his advice and insisting on being a musician.

Wolf experienced his first severe depression. He did not compose for the remainder of the year and continued to give music lessons.

### Bruckner and the « the 3 Bs »

**1887** : One evening, in a Vienna inn, Anton Bruckner was told the expression « the 3 Bs » (that had been going-on in some Viennese musical circles) which included his own name with those of Beethoven and Brahms.

This formula did not please him at all. On the contrary, Bruckner believed that he could not be placed on the same level as his Master, Beethoven, and that he did not wish to be compared to his fierce opponent Johannes Brahms.

### St. Florian's generous welcome

**Friday, 17 June 1887** : Letter from Anton Bruckner to Bernhard Deubler :

« Thank you very much for the remembrance and honour to my humble self, and I wish you everything good.

In addition, I rejoice to be able to be at St. Florian, where I can engage in composition peacefully. Only one thing weighs me down heavily : having to place the burden of my being there, on the praiseworthy Monastery. If only I myself could pay for my board, I would be more at ease staying there because every good has its limit ! »

### Richter's not-so-funny joke

Anton Bruckner never became a close friend of Hans Richter, the conductor was too down-to-earth to understand such a man as Bruckner. Richter often irritated the composer by taunting him with plain untruths. One such occasion took place in the **summer of 1887**, when the first version of the 8th Symphony (**WAB 108**) was finished. Bruckner was invited to Nasswald, the Richter family's annual summer holiday retreat. They all returned together whereupon Richter, in full Nasswald costume, blew the horn-calls from the 7th Symphony on the post-coach horn.

Bruckner's friend Professor Reinhold Lichtenberg was told by the composer that, on a walk in the woods with Richter during the holiday, he asked the conductor which Opera was his favourite, « Tristan » or « Meistersinger » .

Richter replied :

« “ Dutchman ”, because I don't have to conduct it. »

This quite deliberate provocation on Richter's part drove Bruckner into a fury, though it is doubtful if he showed it to Richter at the time.

### Gustav Mahler meets Richard Strauß

**Thursday, 13 October 1887** : Gustav Mahler meets Richard Strauß for the first time.

### Eduard Marxsen's last years

Eduard Marxsen's last 4 years were marked by physical deterioration. According to the 1937 article in the « Altonaer Nachrichten » and Albert Dietrich's 1953 article, he suffered from asthma and ailing kidneys.

On **Friday, 4 November 1887**, 14 days before his death, Marxsen attended a performance of Beethoven's 9th Symphony. His friend, Josef Sittard, reported that Marxsen wanted to take his departure from life with the Master's most powerful work. At the concert, he extended his trembling hand to Sittard and said :

« Today, I come for the last time. »

In another final tribute to Beethoven, Marxsen sent money to Vienna to « add a glass a champagne » for the occasion of the annual musicians' dinner, in Vienna, held on Beethoven's birthday, December 16. It had been Marxsen's legacy that had initially founded the dinner for the professors at the Vienna Conservatory, in memory of his studies there with Ignaz von Seyfried and Carl Maria von Bocklet. Brahms was a regular honoured guest, and Joachim attended on this particular occasion. The dinner continued to be held, at least until 1892.

### Bruckner writes to « Frau Barbara »

**Friday, 27 January 1888** : Letter from Betty von Mayfeld (Schwanenstadt) to Anton Bruckner (Vienna) about the last performance of the 4th Symphony :

« At long last, our compatriots are beginning to understand your music and the critics are becoming aware of your genius !!!!! What a miracle and illumination from above !

I am full of pride that I have always recognized you and that I am sufficiently musical to understand your music and

have a feeling for it. 3 Cheers for you, and may our Beethoven of today continue composing for a long time, so that your music will resound not only in Austria but throughout the world !!! »

Baron Moritz and Baroness Betty von Mayfeld were friends of Bruckner ; he often visited with them at Schwamenstadt, and this letter may well refer to one of those occasions. Nevertheless, they showed him so many kindnesses that it is impossible to be certain, for the letter also contains a number of details about forthcoming performances of his Symphonies.

**Monday, 30 January 1888** : Anton Bruckner writes to his friend « Frau » Betty von Mayfeld (Schwannenstadt) that « the 8th Symphony is far from done » and needed « major alterations » :

« Gracious Lady !

Thank you from the bottom of my heart for your graciousness, as well as that of your husband, the Government Councillor. The 8th Symphony is far from finished ; I have many proposed changes and too little time for working at them. On the 22nd of the month, Crown Princess Stefanie bestowed upon me her utmost esteemed congratulations. During the course of March, the 4th Symphony (the “ Romantic ”) will be performed in Munich. In London, Boston, and Prague, the 7th Symphony has had enormous success.

With a hand-kiss and with great respect,  
Anton Bruckner »

He also gives only a glimpse of his illness :

« It's terrible if one is not well ! »

**Sechter's nephew**

**Summer 1888** :

Anton Bruckner meets the teacher and writer Moritz Sechter (a nephew of Simon Sechter) in Vienna's « Prater » park during the Commercial Exhibition. Bruckner had already given several organ-concerts on this site.

After an « unsuccessful » contact with a young girl, Bruckner spends the evening with Moritz at the restaurant « Griechenbeisl » located at « Griechengasse » Number 9 and « Fleischmarkt » Number 11, near the Holy Trinity Greek Orthodox Church.

Moritz Sechter also reported (without specifying the dates) meetings with Bruckner (accompanied by Ferdinand Löwe, the Schalk brothers, Josef Vockner and Jordan Kajetan Markus) to the restaurant « Zur goldenen Kugel » at « Am Hof Platz » Number 11, the « Gasthaus zum Kühfuß » at « Kühfußgasse » Number 2 (« Tuchlauben » Nummer 10) near the « Petersplatz » (1st District) , and the restaurant « Schweizerhaus » in the « Prater » .

The teacher and writer Moritz Sechter was born on 9 September 1854 in Frymburk, South of Bohemia (now, Český Krumlov, Czech Republic) ; and died on 26 January 1924 in Vienna. He is the nephew of Professor Simon Sechter.

### Vienna : Restaurant « Griechenbeisl »

The « Griechenbeisl » (since 1447) is one of Vienna's oldest inns. Artists, scholars and politicians would congregate in the « Griechenbeisl » to eat, drink, debate and reflect - often into the early hours. From the world famous balladeer « Der lieber Augustin » to later figures of the stature of Ludwig van Beethoven, Franz Schubert, Richard Wagner, Johann Strauß, Johannes Brahms, Ferdinand Georg Waldmüller, Moritz von Schwind, Feodor Chaliapin, Mark Twain, Franz Grillparzer, Johann Nestroy, Karl Lueger, Graf Zeppelin have all appreciated its traditional Viennese cuisine and creature comforts. The framed autographs on the walls of the famous « Mark Twain Room » ensure that their presence lives on here.

The picturesque building situated at the corner of « Fleischmarkt » and « Griechengasse » , which houses the « Reichenberger Griechenbeisl » on its ground-floor, is generally considered to be one of the oldest in Vienna.

The « Griechenbeisl » stands just where the straight line of the « Fleischmarkt » , following the historical plot boundary, turns into a shallow arch curving towards the opening of the « Griechengasse » . This arrangement provides the attractive « ambiente » that gives the location its charm, and this is also where we have our Romantic outdoor dining area during the summer months.

The first historical record of the house dates to 1350, when it belonged to Lienhart Poll, an important and wealthy burgher, who in addition had the status of a knight. The next mention in the sources is of the sale of what by then appears to have been a fairly prestigious building to the abbey of Lilienfeld (in Lower-Austria) in 1385. In 1550, the house is extensively refurbished and partially expanded : the residential tower, still clearly distinguishable in the courtyard, appears to have become part of the structure at that point. It is possible that the lower-levels of this tower served as a store-room for one of the Levantine merchants who are known to have resided in this quarter from the late- Middle-Ages. It seems that the upper-floors were used as habitation even then. The tower has often been confused with the so-called « Hafnerturm » , a component of the city-walls, and has erroneously been considered part of the medieval fortifications, but this was never the case. It is also not true (although this has often been claimed) that the whole building lies on top of the medieval city-wall. It is rather the case that it is an organic whole which has grown by incorporating various elements in the course of the Centuries, hand in hand with urban development.

This continuous activity of restructuring and extending the building, and of incorporating elements into it, has left its mark on its deep and labyrinthine cellars. Their oldest part lies in the lower-section of the « Griechengasse » . There one can still see a walled-up, rectangular opening in its ceiling ; perhaps, stairs led-down from there once. Direct access from the outside would have made it easier for customers to visit the cellar when wine was sold to the public there.

There is no evidence, though, for a commercial tavern with a proper name in the « Griechenbeisl » house during the Middle-Ages, but we can be sure that a seasonal trade in wine for drinking on the premises (as it is well-documented

for medieval Vienna) took place, and that this would have been an occasion for communal eating and drinking. This activity can be considered the nucleus of the present-day restaurant.

The first commercial tavern in this place, by the name of « Zum gelben Adler » (The Yellow Eagle) , is documented for the early-16th Century. During the 17th and 18th Centuries, the name changes to « Zum goldenen Engel » (The Golden Angel) , and then, to « Zum roten Dachl » (The Red Roof) , until after the mid-19th Century the name « Griechenbeisl » (Tavern of the Greeks) , or also « Reichenberger Griechenbeisl » , prevails. Both refer to the popularity the tavern enjoyed with the Levantine and Greek merchants, who had flocked to Vienna in great numbers from about the 17th Century and settled in the vicinity of the « Fleischmarkt » - as did the cloth merchants from Reichenberg in Bohemia, who also liked to gather here.

...

The « Griechenbeisl » is the oldest restaurant in Vienna, founded in 1447.

Restaurant derives its name from the Levante merchants, who lived in the vicinity of the building, and the intensive trade relations between Vienna and the Orient since the time of the Babenberger period.

The first documentary mention of the « Griechenbeisl » dates back to 1447. Around 1500, the present Greek settlement was called « Zum gelbe Adler » (To the Yellow Eagle) . Later, the building appears to be a inn (« Gasthaus ») - this house name is related to a tower dating back to around 1200 from the former town fortification, possibly already incorporated into the Late-Gothic building in the residential tower in the 14th Century. Also today, the « Griechenbeisl » appeared with the name « Zum Goldenen Engel » (1762) or « Reichenberger Beisl » . When Greek and Levantine merchants settled around the middle of the 17th Century, the area they inhabited was called the Greek quarter. Thus, the guest-house received its present name of Greece. But there was always the Viennese cuisine.

Historically important is the year 1852 when the host Leopold Schmied decided to bring the completely new « Pilsner Urquell » from Plzeň in Bohemia to Vienna for the first time.

In the 17th Century, the singer and bag-piper Marx Augustin regularly appeared here.

...

The « Griechenbeisl » restaurant is located in a historical building that is hundreds of years old. According to the restaurant description, the 1350 City of Vienna register, this building was listed as the home of a rich citizen and knight-commoner Lienhart Poll. By 1447, it was mentioned as an inn called « Zum Gelben Adler » (The Yellow Eagle) . From this time on, though the names changed, it has been an inn. In 1852, the inn-keeper Leopold Schmied introduced the « Pilsner Urquell » as the inn's beer.

...

Dating from 1447 and frequented by Ludwig van Beethoven, Johannes Brahms, Franz Schubert and Johann Strauß among other luminaries, Vienna's oldest restaurant has vaulted rooms, wood panelling and a figure of Augustin trapped at the bottom of a well inside the front-door.

Its warren of rooms include the oldest section, the « Zither Stüberl », and the « Mark Twain Zimmer » (named for another former guest) , inscribed with the autographs of Twain and others, which has been granted heritage status.

### The battle cry of Hugo Wolf

Max Graf :

**1888** : It was in the standing-room section at the Philharmonic Concerts that I met Hugo Wolf for the first time. He stood there during one of the rare performances of Anton Bruckner's 4th Symphony, leaning with his back to the great mirror which ornamented the rear wall of the great concert-hall. He was a slender man in his 30's, dressed in a brown velvet jacket, a wide black artist's tie around his neck, extremely pale in the face and with eyes which burned like live coals - the eyes of a fanatic.

Around him stood young people, enthusiastic followers of Wagner, Liszt and Berlioz, the storm-troopers of the new musical generation. Many of them had long, streaming hair and wild looks. All excitedly awaited the appearance of Hans Richter, the conductor whose baton was the magic wand that exorcized the ghosts of great music. Everyone discussed music with enthusiasm. Some held scores which they studied like mystical books.

An excited Hugo Wolf jumped-up and shouted before the beginning of the 4th movement of the « Romantic » Symphony, menacingly and imperiously raising his fist :

« Attention ! Now, the sublimest part is starting. »

Bruckner's University student Max Graf later reported :

« It sounded like a battle cry. »

Shortly after seeing Wolf for the first time, Graf was given the welcome opportunity of making his acquaintance.

### Hugo Wolf at Oberammergau

**Summer 1888** : During this summer of reprieve, Hugo Wolf took a leave of absence from the Oberammergau « Passion Play » with Melanie Köchert.

She read his furlough notice in the personal-advertisements column of the Vienna « Neue Freie Presse » :

« With a heartfelt wishes a letter is sent to you today, sweet friend. »

## University of Vienna : Summer Semester (1888)

Students of the Faculty of Philosophy who inscribed in Bruckner's university lectures :

Johann Fegerl, Reinhold Lichtenberg, Anton Loose, Guido Peters and Innocenz Tallavania (from Linz) .

### Bruckner's « pince-nez »

**Thursday, 21 June 1888** (4:00 pm) : The remains of Ludwig van Beethoven are exhumed from the Währing Cemetery in outer Vienna. The casket is opened for inspection by experts (doctors and scientists) . Prior to a reburial in a belated Grave of Honour at the Central Cemetery (« Zentralfriedhof ») in Vienna, skeletal measurements are taken by 7 anthropologists - their calipers ascertain curvature and depth of the brain cavity. The skull is photographed and a plaster cast is made. A commemorative appreciation is pronounced by the Mayor's representative.

Anton Bruckner, the tenor Benedict Randhartinger, Carl Hrubý, Ludwig Grande and other pupils are present.

At half past 5, the officials want to replace the remains in the coffin. Against the protest of a policeman, an uninvited Anton Bruckner had barged into the Währing chapel. When he saw Beethoven's open casket, he brushed past horrified specialists at work, greatly excited, and insists on touching the head « of the Master » . Clamping on his « pince-nez » , he grasps with both hands the forehead. A doctor tries to interfere but Bruckner, at 64, still has the single-minded enthusiasm of a boy.

Staring into the empty sockets of the skull as if he were trying to divine the sublime riddle of genius, he declaimed in his heavy Upper-Austrian dialect :

« Ain't it true, dear Beethoven, that if you were alive today you'd allow me to touch you ? And now, them strange gentlemen here want to forbid me that ! »

Bruckner had to be forcibly removed.

On the way home, he realizes that his « pince-nez » now has only one lens.

« It must have fallen in when I stooped over the casket. » , he says to his companion, Carl Hrubý.

He seems « quite happy » about it.

He can't be sure, though. The lens might have dropped-out at home. « Frau Kathi » conducts one of her grim searches through Bruckner's 4 rooms at « Heßgasse » Number 7. She detests the barn-like dishevelment of the place which defies all her attempts at order. She plows through heaps of manuscripts, score-sheets, books, and God knows what else under which the Bösendorfer grand piano, the Matthäus Mauracher pedal-harmonium, even the desk are

buried. She assaults similar piles in the bedroom where an ever-proliferating chaos of paper spilled across the bed, the only furniture. In vain. The lens is gone. Kachelmayr glowers. Bruckner rejoices !

Carl Hrubý, who was a pupil of Bruckner, described the scene in « My Recollections of Anton Bruckner » (1901) :

« The day Beethoven's remains were exhumed, Bruckner invited me to go with him to the old Währing Cemetery. Those who took part in the ceremony will undoubtedly remember the unforgettable moment when, just as the coffin was being lifted up and solemn silence had descended all around, a nightingale suddenly launched into a torrent of sobbing notes from a nearby tree - as if in final tribute to the great " Meistersinger ". The powerful effect was soon spoiled when the representatives of the City of Vienna began squabbling about whether the coffin should be opened in the cemetery or later, in the chapel. In the end, they decided on the first option. Bruckner stood in front of me and stared into the coffin, deeply moved. On the way home, his mood was serious. The gloomy solemnity of the occasion appeared to have shaken him to the core. Suddenly, he noticed that one of the lenses had fallen out of his " pince-nez ". " I think ", he said, brimming over with joy, " it must have fallen into Beethoven's coffin while I was leaning over ". It delighted him to know that his eyeglass was buried with Beethoven. »

A Vienna correspondent of the « Times » telegraphing on **June 21, 1888** :

« I was present this afternoon at the private exhumation of Beethoven's remains in the pretty suburban cemetery of Währing. The composer died in 1827, and his tomb is close to that of Franz Schubert, who died in the following year at the age of 21. Beethoven's remains have not lain undisturbed since their first internment, for in 1863, some of his admirers, having subscribed to place a monument over his grave, obtained leave to transfer his body from the wooden coffin in which it had been buried into a new coffin in zinc. Beethoven was deaf during the greater part of his life, and, at his death, a distinguished anatomist of the period, Professor Wagner, was allowed to amputate his ears, with the whole of the 2 aural cavities, in order to investigate the causes of the deafness. The ears were placed in 2 glass jars full of spirits of wine : but Wagner died before he had finished his examination of them, and soon afterwards, the jars mysteriously disappeared. The story goes that they were bought from Wagner's servant by an English doctor and removed to England. The ceremony of to-day was rendered necessary by a scheme of municipal alterations, under which the cemetery of Währing is to be cleared away altogether. The destruction of the cemetery is to be much regretted, for it is a beautiful place, full of trees and flowers, and containing many tombs of historical interest. Very few persons witnessed the exhumation, and most of these were officials. All heads were bared as the coffin was lifted and placed on a settle, where the metal lid was at once prised open and removed. The skeleton then became exposed to view. The bones were damp and of a brown colour, showing that moisture must have penetrated into the coffin. The cranium had become detached from the face of the skull, and one of the by-standers took it up in his hand. It looked unusually large. The entire lower-row of teeth was complete, and very fine, strong teeth they were ; but all the front teeth of the upper-row had fallen-out. The leg bones were long ; the hands had quite crumbled into dust. The skeleton remained exposed for less than 10 minutes ; but already, a gentleman who held a portable camera had taken a photograph, while another gentleman, who belongs to an anthropological society, entered into an altercation with the officials, who refused to let him take some measurements and a plaster cast of the skull. The lid having been replaced, the coffin was transferred to an iron shell, and slowly borne towards the chapel of the cemetery by 6 undertaker's

men in black uniforms, with cocked hats. The officials and other persons present followed in a procession two and two.

The chapel is very small, and it was quite full of bouquets and floral wreaths sent by different musical societies in Austria. To-morrow (Friday) , the composer's remains will be carried to the central cemetery in Vienna, and there, re-interred with great pomp ; and soon, a new monument worthy of Beethoven's fame will be erected over his grave. 5 directors of the Society of the Vienna Friends of Music and 5 professors at the Vienna “ Conservatoire ” will carry the coffin to the grave. Bishop Angerer, who, as a boy of 11, attended Beethoven's funeral, will read the service, and the Vienna musical societies will sing in the choir. »

#### AT BEETHOVEN'S GRAVE.

Removal of the Remains of the Great Composer.

#### THE PLACE WHERE THEY LIE.

Beethoven and Schubert Buried Side by Side.  
But Mozart's Last Resting Place  
is Unknown.

*Chicago Tribune.*

« **Thursday, June 21**, the remains of Ludwig van Beethoven were removed from the grave in the Währing Cemetery, near Vienna, where they have rested since 1827, to that portion of the great Central Cemetery of Vienna reserved for the reception of Austria's illustrious dead. The ceremonies connected with the removal have been briefly described in the cable despatches, but so far as we can learn, the musical world will possibly regret that the remains were ever touched. Ludwig van Beethoven was buried in a most beautiful place, near to the surroundings among which he had lived when in life, near to the places where he had written some of his greatest works. And to think that a scandal should have taken place about the grave during the removal, “ A painful scene occurred ”, says a cable despatch, “ at the Währing Cemetery during the exhumation of Beethoven's body, caused by some of the professors of the medical faculty of the University wishing to take measurements of the great composer's skull. The representative of the Government present would not permit this ; a heated discussion arose, and only the intervention of the ' Burgmeister ' put an end to the painful scene. ”

One could really wish, in view of such scandal, that Beethoven's grave had been unknown, like that of Mozart, who was buried in the St. Mary's Cemetery in Vienna. In this connection, some remarks by the author of the charming book, “

The Rambler Among the Musicians of Germany”, seem to be well worth quoting. The author visited the “ Abbé ” Stadler the “ young and dear friend of Mozart ” and of this visit, he says :

“ In the ' Abbé ' Stadler, I saw the real tomb of Mozart, and few of those who have lived in marble for 200 years may boast of such an honour as to have their remembrance last fresh and ardent in the warm bosom of a human being for 40 years. The acquaintance of the ' Abbé ' with Mozart commenced when the latter was 9 years old, but in less than 40 years, so completely has every bodily trace of Mozart vanished from the minds of the people of Vienna that there is not a soul there who can tell even the place in which he was buried. By some strange accident, the ' Abbé ' does not even know it. There is no rude memento no sculptured stone to indicate that the divine Mozart once sojourned in Vienna, and, as for the spot of his interment, it may not be thought too fanciful to suppose that Earth, the general mother, jealous of her production, has hidden him again in her womb, lest celestial beings should claim him as their own. This is perhaps a poetical apology for what is in fact a piece of neglect everlastingly disgraceful to the Viennese, who, lam afraid have more joy in the pageant of a funeral than they have sorrow for the loss of great men. ”

The resting place of Beethoven's body has been, up to the present time, in the Währing Cemetery, near to the grave of Schubert, who was buried in 1828. It has frequently been described.

The “ Rambler ”, above quoted, who visited Vienna in 1828, says :

“ As Beethoven was at my visit no longer to be found in the body, I resolved to make a pilgrimage to his tomb ; and the reader will pardon me for lingering over the grave of this great man with some of those tender yearnings of spirit which Old Mortality feels for his friends, and which all should feel for those who have given them great pleasure. Beethoven resided in one of a row of tall white houses overlooking the city walls, on the road to Währing, the prettiest outlet of Vienna. In the cemetery of this quiet little village, in a corner against a low wall, whence an infinite deal of country may be seen, he reposes close to the nephew of an English Ambassador, who was suddenly killed upon the ' Prater ' by falling from his frightened horse.

Here, among rustic chapels, wooden crucifixes, mounds of earth with flowers growing on them (such are the simple memorials) “ one might become half in love with easeful death ”. The place itself might have been in Beethoven's lifetime his study, for it was in the green lap of Nature and among the old trees that the composer wove his fancies ; not by the flickering of a night lamp. It is much more pleasant to the imagination that a poet or musician should rest from his labours where the atmosphere is pure above than that he should be buried forever in the cold depths below the pavement in a cloister. A monument is preparing for Beethoven, and a huge unmarked stone covers the spot of his interment until that shall be ready.

Professor Ella, the well-known London musical leader, writes an account of a visit to Beethoven's tomb.

He says :

“ The 19th of November, the late esteemed publisher of music, Signor Mechetti, invited me to accompany him to the Cemetery of Währing, a small village on the outskirts of the city. When we reached the left extremity of the cemetery, Mechetti suddenly directed my attention to the dazzling ' grandeur ' of the scene that presented itself below the eminence where we then stood. The glittering rays of the setting sun behind the gilded spire of St. Stephen's Cathedral, with the fine Kahlenberg on our left, the vast plain of the Danube stretching as far as the eye could discern, and the Styrian Mountains in the distance, formed a grand panorama of natural scenery. Whilst gazing at this prospect in silent admiration and thinking over the lives of the triumvirate of musical genius (Haydn, Mozart, and Beethoven) as they pursued their professional career in the Imperial city, Mechetti gently placed his arms about my waist and turned me round with my face toward the East, saying : ' Ecco, la tomba di Beethoven ! ' This unexpected gratification of being on the spot where thousands of musical pilgrims had paid tribute to the genius of the immortal musician at his funeral in 1827 quite over-powered my feelings, and I am not ashamed to say that I kissed the flagstone that covers his remains and plucked a bunch of fern which grew at the base of the monument, a memento that I still preserve. Whilst preparing to make a sketch of the tomb, a mass of persons attired in black gradually approached the spot where Mechetti and I stood. As the procession advanced, we moved a few paces, where we observed a general halt and uncovering of heads, close to the tomb of Beethoven. My curiosity became excited to know the meaning of this dumb show, for not a word was uttered during the whole of the ceremony. Mechetti, at first ignorant as myself of the cause of this gathering, suddenly recollected that the 19th of November was the anniversary of the death of Schubert, whose mortal remains lie buried beside those of Beethoven. From among the crowd, I observed a grave black-bearded person step forward, and, with bended knees, place on the tomb a wreath of laurel entwined with a blue ribbon, in which was printed in letters of gold “ To the Father of German Song ”. As musical ceremonies are forbidden in Catholic cemeteries, the party retired as they came, with measured step, and without uttering a word. This silent language to musical genius threw me into a state of ' rêverie ' and I found myself involuntarily following in the train of these votaries of music. Mechetti quickly pursued and bade me return to the spot where the wreath of laurel was deposited. Presently, we saw the same party, assembled outside the cemetery, immediately behind Schubert's tomb, and a choir of fresh, well-chosen voices sang a vocal quartet with such pathos and solemnity of expression as moved every one present to tears. ”

(...)

The skulls of great composers, not excepting that of Beethoven, seem at all times to have been tempting objects to the scientific world. At the Bologna Exhibition is to be found the skull of Donizetti, the composer, to which is attached a printed statement to the effect that it was rescued from the house of a pork-packer of Bergamo, whose children had used it as a money-box. The skull of Haydn, who is buried in Vienna, was for a long time missing, and it was eventually found in the possession of a medical man. A strong feeling manifested itself to have the bodies of Beethoven and Schubert exhumed. In the “ Life of Beethoven ”, edited by Moscheles, it is stated that a few days after the funeral of the composer, a considerable sum of money had been offered to the custodian of the cemetery at Währing if he would bring the head of Beethoven to a place specified in Vienna. On this account, the grave was watched every night for some time. In 1863 (36 years after his burial) , a committee was formed and, in the presence of (Josef) Hellmesberger, students of the “ Conservatoire ”, and other persons, the graves of Beethoven and Schubert

were opened and the bodies found intact. A minute description was published of the actual appearance of the remains.  
»

**Friday, 22 June 1888 (or Saturday, 23 June 1888 ?)** : Transfer and restoration of Beethoven's remains at the Vienna Central Cemetery (« Zentralfriedhof ») .

Representatives of all the major musical institutions in Vienna are taking part in the ceremony : the Vienna Academic Choral Society (« Wiener Akademischen Gesang-Verein ») , the Vienna Schubert Association (« Wiener Schubertbund ») , and the Vienna Men's Choral Society (« Wiener Männergesangverein ») .

Professor Hermann Grädener, executive vice-deputy Lieger, committee member Doctor Schindler laid a wreath on the Tomb of the Immortal. Berlin concert impresario Hermann Wolff is also attending.

The grave-stone (Grave Number 29 ; Group 32a) is a copy of the original from the first cemetery. Written on it are the following words (translation) :

« This grave-stone was built to the same design as the original in the “ Währinger Ortsfriedhof ” and erected by the Association of Friends of Music in 1888 with financial help from the Imperial City Development Fund of Vienna and the Philharmonic Association. »

Beethoven and Schubert were exhumed so they could be reburied in more secure coffins (grave-robbers were a persistent threat in the 19th Century) . The composer's skull stayed above ground for 9 days of tests and measurements, and Doctor Gerhard von Breuning was the only one left alone with the skull. As a friend of Beethoven's who once visited him so often, the composer nicknamed him « trouser buttons » (because Bruening stuck to him the way a button does to clothing) , he may not have been able to resist slipping a memento or two into his pocket.

### « Fräulein » Biellohaubek

**July 1888** : Anton Bruckner still appreciates social pleasures such as making the acquaintance of the pretty glove-maker's daughter, « Fräulein » Biellohaubek, whom he met at the « Annenfest » in Vienna.

### The « Annafest »

The « Annafest » was a popular festival celebrating St. Anna and all the girls having this first name. It was an important cultural event especially in the 18th and 19th Centuries. It consisted among others of theatrical performances, singing and beauty competitions, fireworks, and gift-giving.

St. Anna Day (« Annetag ») which was celebrated on July 26th, was an official holiday until the late- Maria-Theresa period.

Since 1776, Johann Georg Stüwer organized on St. Anna Day one of his iconic fireworks in the « Prater » including other various attractions. For example : ascent of air-balloons (1784, 1785) and aerostatic figures (1789) .

Johann Hieronymus Löschenkohl often produced special gift-wrapping paper-sheets (at different prices) for St. Anna Day.

The oldest detailed description of the « Annafest » dates from 1787.

In 1788, Joachim Perinet mentions the « Annafest » in his « Annehmlichkeiten in Wien » (Amenities in Vienna) .

Wolfgang Amadeus Mozart, Johann Strauß senior, Johann Strauß junior, Joseph Lanner paid tribute to the « Annafest » by composing Polkas and Quadrilles.

The dance-hall of « The Golden Pear » (« Zur goldenen Birne ») was called « Anna's Viennese Temple » (« Wiener Annentempel ») by its inhabitants because of the numerous related events that were organized there.

In the mid-19th Century, during the « Annafest » , a beauty competition was held between girls which first name was Anna. It took place on the Kahlenberg hill, in the Vienna Woods. The creator of this event was Anna Ziegler whose plaster bust was installed around 1830 in the one-storey « Ziegler-Villa » , located east of the « Josefskirche » .

...

Das Annafest, das zu Ehren der heiligen Anna für alle Mädchen mit diesem Vornamen in Form eines Volksfests begangen wurde, hatte vor allem im 18. und im 19. Jahrhundert Bedeutung (Theateraufführungen, Serenaden, Feuerwerke, Geschenkvergabe unter anderem) ; der Annentag (26. Juli) war bis in die spätmariatheresianische Zeit ein offizieller Feiertag. Seit 1776 veranstaltete Stüwer am Annentag eines seiner Feuerwerke im Prater, verbunden mit verschiedene anderen Attraktionen (1784 und 1785 Aufstieg von Luftballons, 1789 von aerostatischen Figuren und so weiter) . Löschenkohl produzierte zum Annentag häufig « Geschenkblätter » und Fächer in verschiedene Preislagen. Die älteste eingehende Schilderung des Annafests ist aus 1787 erhalten ; Perinet erwähnt es 1788 in seinen « Annehmlichkeiten in Wien » . Auch die Musik (von Mozart bis zur Annenpolka von Johann Strauß) nahm auf das Annafest Bezug. Der Tanz-Saal « Zur goldenen Birne » wurde von der Bevölkerung « Wiener Annentempel » genannt, weil dort das Namensfest der Wiener Annen gefeiert wurde. Auch auf dem Kahlenberg wurde am Annentag ein Annenfest abgehalten, das mit einer Schönheitskonkurrenz der erschienenen Mädchen und Frauen verbunden war ; die Begründerin dieses Annentages war Mitte 19. Jahrhundert Anna Ziegler (deren Gipsbüste seinerzeit in der einstöckigen, um 1830 östlich der Josefskirche auf dem Kahlenberg erbauten Zieglervilla angebracht wurde) . Bedeutende Komponisten trugen der Annenverehrung durch Annapolkas und -quadrillen Rechnung (Johann Strauß senior, Joseph Lanner, Johann Strauß junior und andere) ; es gab auch Theaterstücke und Singspiele, die mit Erfolg aufgeführt wurden.

Paying 3 months in advance

**Monday, 2 July 1888** : Pocket calendar entry by Anton Bruckner :

« 1888 July 2. “ Frau Kathi ” for July, August and September : 21 Florins. »

### Henrietta Sammet

**July 1888** : Hugo Wolf had left for Bayreuth with the Wagner Society charter-train. Anton Bruckner boarded the same train and, for him, the departure from Vienna was a still more distinct summer tide relief. He could escape from his house-keeper harpie « Frau Kathi » Kachelmayr who caught-up with him at the Western Railway terminal, irate because he had forgotten his snuff-box. Bruckner could arrive in Bayreuth and have his gray fringe cut by « Herr » Bernhard Schnappauf, the late- « Master's » barber (and pedicurist) ; and he could indulge in another of his frequent young girl crushes, this one on Henriette Sammet, the daughter of « Herr » Christian Sammet who owned the « café » where Wagner had once sipped mocha.

**End of July 1882** : Anton Bruckner was enthusiastic about Henriette Sammet. He admired her photography.

### Schubert's remains

**Saturday, 22 September 1888** : Transfer and restoration of Franz Schubert's remains at the Vienna Central Cemetery (« Zentralfriedhof ») . Professor Anton Bruckner and representatives of the « Gesellschaft der Musikfreunde » are in attendance.

At noon, Bruckner puts on his best black suit with its trousers too short and too wide, his Sunday St. Florian jacket, and his top-hat which his house-keeper, the formidable « Frau Kathi » Kachelmayr refuses to brush because, she says, it is no use, the « Herr » Professor had let it get wet again, the night before. So, Bruckner brushes it himself at great length.

At 3:00 pm, he boards the horse-tramway out to Währing, to the District cemetery located in outer Vienna. (Schubert was buried as close to his idol as was possible - 4 graves to Beethoven's left.) A number of officials from different musical organizations has already gathered at the grave-site, together with some doctors and anthropologists. Bruckner takes his place in the front-row. At 3:45 pm sharp, the cemetery workers start digging. Within minutes, the vehicle of the visitor rises into view : a crane lifts the heavy sarcophagus from the tomb, and transports it to the chapel where only Bruckner and a few officials and scientists are admitted. In the chapel, the coffin lid is opened. Anton Bruckner stands face to face with Franz Schubert, now 60 years dead.

As in his earlier confrontation with Beethoven, Bruckner starts forward, but is restrained. First, others have their turn. The Mayor's representative delivers an address praising the bones that has produced such beautiful melodies. Today, he intones, these exalted remains have been exhumed not only to give them a more dignified resting place in the Central Cemetery but, also, to afford scientists a chance to examine the physical evidence of genius.

Everything proceeds with characteristic Viennese ritual. On a small table covered by a black piece of velvet, Schubert's skull is placed, as ceremoniously as though it was a priest's monstrance. Doctor Langl photographs it 4 times,

especially the profile on the right-side, which is much better preserved. A secretary in top-hat takes down minutes of the event. It is noted that Schubert's head is a deep yellow ; that his teeth are still in excellent condition (much better than Beethoven's as observed in the similar procedure in June) and that only one molar is missing ; that the face is strongly developed in proportion to the skull-top ; and that some clothes and hair are still present.

Bruckner clutches the skull until the Mayor's representative has to dislodge his hold gently (with some mild physical force) . But he is permitted to put the skull into the coffin. Thus, Bruckner becomes the last man to touch Schubert.

Bruckner goes home again in the horse-tramway while Schubert wends his way toward the Central Cemetery in a black coach (plot : Group 32 A, Number 28 ; between Beethoven and Johann Strauß junior) .

It is hard to say who was more fulfilled ...

...

With age, Bruckner started to show a very strange inclination and a strong, over-reacting curiosity towards death and the dead. He was dreaming about ghosts, seeing ghosts of the dead people in his dreams. He used to go to cemeteries, once crying and crying on Richard Wagner's grave, studying graves epitaphs, showing and counting dots on epitaphs.

### Face-to-face at the « Musikverein »

**Fall 1888** : Anton Bruckner and Johannes Brahms would pass one another, face to face, in the building of the « Musikverein » . Bruckner might be on his way to one of his Conservatory classes, Brahms coming from a session of the high-council of the organization. Along the corridors, people would slow down to watch. They'd see Brahms nod with clipped courtesy. Bruckner would bow elaborately :

« Most obedient servant, “ Herr ” President ! »

A fraught encounter, a loaded greeting. By « “ Herr ” President » , Bruckner let drop the implication that he recognized Brahms as president of the Composers' Association ; that it was the bureaucratic title which warranted his salute, not necessarily the talent.

### Bruckner writes to Karl Waldeck

**Saturday, 3 November 1888** : Anton Bruckner communicated with Karl Waldeck, one of his former students and his successor at Linz Cathedral, writing :

« Dear Friend !

May you receive the sincerest renewal of my deeply felt congratulations on your Name-Day ! Notwithstanding the

highly-delightful fruits of your artistic work (for which I heartily congratulate you) , it is your physical well-being, your health, that I desire with my whole being from the all bountiful heaven. God grant you many, many healthy years to come !

Your old friend,

Anton Bruckner »

### Bruckner writes to « Fräulein » Martha Rauscher

In 1888, there are 2 letters to a women identified as « Fräulein M » . She was further identified as « Fräulein Martha » . Bruckner had met her during his trip in Upper-Austria ; obviously, he was enchanted with her. She did send him her portrait, but nothing more is heard from or about her.

**Monday, 5 November 1888** : Letter from Anton Bruckner (« Heßgasse » Number 7, Vienna's 1st District) to « Fräulein » Martha Rauscher (Vienna) :

« Highly-Respected “ Fräulein ” !

What will you think of me ? I felt indescribably joyful over your dear, sweet letter and put it immediately in my pocket next to my heart, where it was to stay until “ Fräulein ” Martha can come to Linz. Suddenly, I can find my jewel no more. Perchance, my house-keeper “ Kathi ” is at fault. But, we seek in vain. Therefore, I am using this address, which I picked-out just now.

I thank “ Fräulein ” Martha very sincerely for this distinction, and request her beautiful photograph right away. Unfortunately, I cannot see you now (I mean, in reality) . For that reason, I want to look upon your picture often and with pleasure.

I have dreadfully much to do and am a little desperate for this reason. Stay in genuinely good health. As for myself, I am not completely well and will visit Professor Schrötter in the very near future, because of my larynx.

To the gracious wife of the State Councilor, a hand-kiss ; to the Councilor, my respects ! You remain my honoured friend.

With a kiss on the hand and affectionate compliments,

Yours, with highest-esteem,

Anton Bruckner »

Bruckner had lost the treasured letter he had received from Martha.

Professor Hermann von Schrötter was Anton Bruckner's physician.

Bruckner wrote to Martha Rauscher thanking her for her portrait. In those days, one sent one's portrait to another for whom one had the highest-regard. The conclusion remains that she did, at least, respect him - and, a little more, he may have hoped.

**Friday, 23 November 1888** : Letter from Anton Bruckner (« Heßgasse » Number 7, Vienna's 1st District) to « Fräulein » Martha (Vienna) :

« Highly-Respected “ Fräulein ” !

I cannot express my great joy at receiving your magnificent portrait. Thank you for it, from the bottom of my heart ! That, being portrayed through this very well-done likeness, is not a trivial thing ; you are such a highly-intelligent, splendidly turned-out, beautiful young lady, proclaimed with the most noble feminine virtues. Whoever knows you better can only admire you ; and, please, God, that you remain so ! Once more, thank you very much. (I do not have your address.) I kiss the hand of the assistant Councilor's gracious wife, as well as yours, my honourable friend. To “ Herr ” Councilor (“ Ehepaar ”, Moritz von Mayfeld) , my respects ! With the most sincere respect, I remain

Your admiring old friend,

Anton Bruckner »

### Doctor Leopold Schrötter

A committee of prominent Viennese physicians and laryngologists has recently been formed to commemorate the Centenary of the birth of the man, equally illustrious as laryngologist and physician, whose full-name and titles were « Hofrat Professor Doktor » Leopold Bitter Schrötter von Kristelli. He was born at Graz on February 5, 1837, the son of the eminent chemist who discovered amorphous phosphorus. He studied medicine at Vienna, where he qualified in 1861. From an early stage in his career, he took a keen interest not only in diseases of the chest, which he had an unrivalled opportunity of studying under Professor Josef Škoda (1805-1881) , the great authority on this subject, but also in laryngoscopy, the importance of which to the physician he was the first to emphasize. During his subsequent career, he occupied the important positions of director of the first laryngological clinic to be established and, later, the chair of clinical medicine at the University of Vienna. His principal work was a book on diseases of the larynx, trachea, nose and throat, which for a long time was the standard publication on this subject. He also contributed important articles to various systems of medicine on diseases of the heart and pericardium and syphilis of the larynx. Lastly, he deserves recognition as being one of the first to introduce sanatoria for the treatment of pulmonary tuberculosis, and to combat the pessimistic outlook of the medical profession regarding the cure of this disease.

...

The Austrian internist and laryngologist Leopold Anton Dismas Schrötter von Kristelli (name often given as Leopold von Schrötter in medical literature) was born on February 5, 1837, in Graz. He was the son of chemist Anton Schrötter von Kristelli, and father to physician Hermann Schrötter-Kristelli (1870-1928). Leopold Schrötter Ritter von Kristelli studied at the « Akademisches Gymnasium » in Graz. In 1861, he received his medical doctorate from the University of Vienna, and, following graduation, remained in Vienna as an apprentice-surgeon to Franz Schuh (1804-1865). From 1863 to 1869, he was an assistant to Josef Škoda (1805-1881), receiving his habilitation in 1867. Following the death of Ludwig Türck (1810-1868), he attained the 1st chair of laryngology at Vienna, and, 3 years later, became director of the world's first laryngological clinic at the Vienna General Hospital (« Allgemeines Krankenhaus »). In 1875, he became an associate-professor (« Professor extraordinarius ») of laryngology, and, from 1875 to 1881, he was head of the department of internal medicine. In 1881, he was appointed « Primararzt » (primary physician) at the General Hospital, and, in 1890, was named professor and director of the 3rd medical clinic in Vienna. In addition to his expertise in the field of laryngology, Schrötter is remembered for his work involving diseases of the heart and lungs. He was a driving force in construction of the « Alland Lungenheilanstalt » (Alland Lung Clinic), an institution that began attending to patients in 1898. With British surgeon James Paget (1814-1899), the eponymous « Paget - Schrötter » disease is named. This disorder involves primary thrombosis of the axillary vein or subclavian vein.

Leopold Schrötter died in Vienna on April 22, 1908. He was buried at the Central Cemetery (« Zentralfriedhof ») : Group 14 A ; Number 19.

...

Austrian internist and laryngologist, born February 5, 1837, Graz ; died April 22, 1908, Vienna.. The name is also given as Leopold Schrötter Ritter von Kristelli.

Leopold Schrötter Ritter von Kristelli (commonly named : Leopold von Schrötter) was the son of the famous chemist Anton von Schrötter who, in 1845, discovered amorphous, or red, phosphorus, which led to the safety match. He studied in Vienna and received his doctorate at that University, in 1861. He was subsequently, for 2 years, apprentice in surgery under Franz Schuh, then assistant under Josef Škoda (1805-1881). Already at this time, he concerned himself with laryngoscopy and the study of diseases of the heart and chest, giving lectures on diseases of the chest under consideration of laryngology. He was habilitated as private lecturer (« Privatdozent ») for laryngology, in 1869.

Following the death of Ludwig Türck (1810-1868), he was appointed to the first chair in laryngology at the newly-established clinic for laryngology and, from 1871 to 1873, he published the annual reports of his clinic. In 1875, he became professor « extraordinarius » for diseases of the throat and chest and, from 1877 to 1881, headed the department of internal medicine in the « Rudolfsspital ». In 1881, he became primary physician (« Primararzt ») in the « Wien allgemeines Krankenhaus » and, soon afterward, received the « venia legendi » for the entire field of internal medicine. In 1888, he was called « zum Consilium » to San Remo, to the sickbed of the German crown prince. Schrötter, in 1890, was appointed full-professor and head of the 3rd medical clinic and, in 1896, he became « Hofrat

» . He was a member of several learned Societies.

Schrötter occasioned the establishment of special health institutions for people with diseases of the chest, a demand for which he had set forth in his paper « Das kranke Krankenhaus » (The Sick Hospital) , in 1883. The large institution Alland owes its foundation to Schrötter. Schrötter also arranged for holiday resorts for poor « Gymnasiasten » (high-school pupils) and a hospital for poor students. He designed the first modern equipped lecture-room (« Hörsaal ») , with a laboratory to match it.

His son, Hermann Schrötter-Kristelli (1870-1928) worked in a wide field of medical scientific topics. In 1894, he designed an oxygen mask with which the meteorologist Artur Berson (1859-1942) set an altitude record of 9,150 metres (30,000 feet) .

Schrötter published on diseases of the heart in Hugo Wilhelm von Ziemssen (1829-1902) , et al. : Ziemssen's « Handbuch der speciellen Pathologie und Therapie » in 17 volumes, Leipzig (1875-1885) , later published by Carl Wilhelm Hermann Nothnagel (1841-1905) ; and on syphilis of the larynx in Maximilian Zeißl's (1853-1925) « Handbuch » .

### Bruckner and Josef Schalk at the « Zur goldenen Kugel »

**Monday, 26 November 1888** : Letter of Josef Schalk to his brother Franz :

« I was recently quite alone with him (Bruckner) in the “ Kugel ”, and he was never weary of telling me his heartfelt affection for you, so that I was quite moved. He would like to submit all of the many changes, which he is now with quite extraordinary industriousness making to the 8th and the 3rd, to your assessment (“ Urtheil ”) . »

Bruckner loves the Viennese restaurant « Zur goldenen Kugel » located at « Am Hof Platz » Number 11. He enjoys his « Pilsner » and his favourite dish, rich in protein : the roast pork with cabbage.

### Franz Schalk has a good thought for Bruckner

**Tuesday, 18 December 1888** : Letter from Franz Schalk (Reichenberg) to Anton Bruckner (Vienna) :

« Most Sincerely Honoured Master !

In remembrance of all the beautiful hours in which I enjoyed the good fortune and blessing of your instruction and intimate conversation, I ask that you accept me into the circle of those who enthusiastically and from their hearts are permitted to express their best wishes to you, dear Master, in these days. For me, it is probably the most painful deprivation no longer to be able to participate in your work personally.

Therefore, I have to envision how a new work is growing robustly, so that it shall fill living and future generations

with awe ; and I hope that it shall be granted us to hear your works, perhaps, in the coming spring time.

Until then, of course, I have to be contented with wishing you a splendid, prosperous year in which the “ Muse and Spirits ” remain with you for the completion of the 9th Symphony, for the sake of us all. On New Year’s Eve, I will think of you, my dear Master, in most thankful affection ; and, on behalf of the prosperity of the 9th, I will not fail to drink a toast.

In deep reverence and gratitude,

Francisce »

### Hugo Wolf's highly-productive period

The years **1888 and 1889** proved to be highly-productive for Hugo Wolf. He published a lot of his works during this period. His works received positive reviews and he was very happy with his own compositions. However, again, he began suffering from ill health and went into depression.

...

Though, he had several bursts of extraordinary productivity, particularly in **1888 and 1889**, depression frequently interrupted Hugo Wolf's creative periods, and his last composition was written in **1898**, before he suffered a mental collapse caused by syphilis.

### 1888 : Bruckner feels sad around Christmas time

Opposite the Freuds, on the top-floor of « Heßgasse » Number 7, all was dark, all quiet at the Bruckner flat. « Frau Kathi » Kachelmayr need not fret over her frowsy « Herr » Professor. He had left town for a while, to overcome his old-bachelor loneliness during Christmas. The Abbot of Kremsmünster, in Styria, had invited him. Around the monastery, snow hung on the rolling woods. Inside, the monks sat in awe as Bruckner played the organ at Midnight Mass, improvising far beyond the printed note into great godly dreams of sound. Afterward, they prayed and gave him a little roast pork and more « Pilsner » , and much love.

...

When he did go out, Johann Strauß avoided the carnival and went to the Ronacher, the big cabaret-revue theatre. « Unfortunately, I've already ordered a box at the Ronacher. » , he wrote his friend Adalbert von Goldschmidt who had proposed a dinner with Anton Bruckner.

« I would like to cancel it for your and Bruckner's sake. But I cannot change my plans because I have a “ rendez-vous ” there (at the Ronacher) with friends. I hate the very idea of such an evening. Just now, I have a lot of work,

and such get-togethers always last much longer than seems necessary. They keep me from my task. Evenings like this start at the Ronacher and end at Brady's (Brady's "Wintergarten", a popular night-club) and, usually, don't see me returning home before dawn - which I hate. Then, I get very upset over my frivolity, and get so very angry at what can no longer be undone that I can't accomplish a thing in the days which follow. I just pace up and down in my study and can't concentrate. I can only work when I have no petty upsets. »

The carnival lit-up Professor Bruckner's isolation. After his Christmas sojourn at Kremsmünster, he was back in Vienna, teaching at the Conservatory, playing the organ at the Imperial Chapel, re-reworking the 3rd Symphony, sketching-out the 9th, and being alone. He saw very few of his colleagues. Johann Strauß was one of his remote celebrity acquaintances ; but when plans were made for a meeting, something always happened to abort them.

He suspected that « something » might be the Brahms - Hanslick clique, his shrewd enemies with whom Johann Strauß cultivated friendships. He feared he wouldn't feel welcome at most of the city's « Fasching » (Carnival) affairs. He felt very awkward with the sophisticated dissipation at which Vienna was so good.

On **Friday, 11 January 1889**, Bruckner did go to one affair : the Upper-Austrian Foresters' Ball at the « Blumen-Saal » . As the city's most prestigious Upper-Austrian, he had been invited as honorary guest. For the occasion, he had asked his « Frau Kathi » Kachelmayr to fish-out black socks instead of the customary white from the disorder of his clothes cup-board. The foresters were mostly employees of Viennese magnates with Upper-Austrian possessions. In a way, they were salaried hicks like himself ; they spoke his dialect. At their urging, he finally took a « dirndled » \* maiden by the waist and, for the length of an oom-pah-pah « Ländler » , bobbed around the hall with her.

\* « Dirndl » : Type of traditional dress worn in southern Germany (especially Bavaria) , Switzerland, Liechtenstein, Austria and South Tyrol, based on the historical costume of Alpine peasants. Dresses that are loosely based on the « dirndl » are known as « Landhausmode » (country-inspired fashion) .

Then, he was done, thank God. That **January 1889**, he was more uncertain with women than ever. During his Christmas stay at Kremsmünster, another adorable young girl had confounded his blood. Her name was Mathilde Feßl, a lawyer's daughter, and she had asked him nice questions about music in the most pleasing way. But then they'd started talking about the period of Lent. And he couldn't believe his ears. She was a free-thinker ! An infidel ! An atheist girl of 17 ! To Bruckner, the world was more incomprehensible than ever. No wonder it was the kind of world that celebrated Brahms but acted so meanly towards him. It was not the kind of world which set him dancing.

Brahms did no dancing at all, this countless ball invitations notwithstanding. « Fasching » amused him, as the Viennese did in general, but it was much too unbuttoned a joy for his North-German temper. Besides, he never changed his regimen of rising at 5:00 am. And even if the carnival had kept more sensible hours, say, right after his nap in the early afternoon, Brahms would still have been too busy for extra-curricular gaieties, in **January 1889**.

There was fancy work to be done. Josef Joachim, the violin virtuoso, was in town again, preparing, another Brahms concert. The composer himself would accompany on the piano in his newly-published Violin Sonata in D minor. For

such personal appearances, Brahms left absolutely nothing unprepared, down to the bows, he planned to take. For these, he preferred the conductor to pull him, with gentle force, out of his hiding place behind the curtain. He liked to tune his applause as if it were a fine piano. That was his carnival.

During « Fasching », Doctor Sigmund Freud hid himself with much more conviction. He was more of an outsider than ever, taking no part at all in the carnival. The city sang with a million throats, danced with millions of legs, but he was deaf to rhythm. Quite literally, « Frau » Freud suggested that they take advantage of post-Christmas sales and buy a piano, so that little Mathilde could play it, one day. But the Master of the house laid down a veto which lasted into his most prosperous years. No piano, no violin, nothing of the kind. He proscribed music in the world's most musical city.

Carnival disrupted his one conviviality, the Saturday tarok game. Doctor Rie and Doctor Königswürt, card-partners and fellow-physicians at the Pediatric Institute, went to balls on some tarok nights. Freud had no room for « Fasching » in his budget. He had to husband money and time for more essential concerns. At this season, his late-afternoon walks around the « Ringstraße » often took place in a darkness crowded and brightened by people in evening dress, on their way to excitement :

« What a stage for the sparkling, beauty-minded, thoughtless world. It's a marvelous tumult in which to be alone. »

A teenage Freud had written that about Vienna's World's Fair, in 1873. Now, it was still true for him as he strode through the carnival of 1889. He'd arrive in his study on « Maria Theresienstraße », a continent away from the masked faces that passed laughing below his second floor window. And the paper on hysteria, waiting for him at his desk, removed him still further. Not even friendly colleagues, like Josef Breuer or Rudolf Chrobak, could keep him company here. His paper took him on a journey longer and more unauthorized than he realized himself.

### New Year's Eve : Wolf writes to his mother

**Sunday, 30 December 1888** : Hugo Wolf wrote on New Year's Eve :

« Dear, good mother !

Best wishes for the New Year. If my success gives you joy, please think as I do of the incredible miracle of the past year. It was the most fertile and, therefore, the happiest year of my life. In this year, I composed no less than 92 songs and ballads, and not one is a failure. I think I may be satisfied with the year 1888. What will 1889 bring ? In that year, the Opera whose execution I will start in a few days will be finished. \* If my success can colour your life in a friendlier hue, then, you should see everything in the rosiest glitter. My young fame is now powerfully ascendant and, perhaps, I will soon play the leading role in the musical world. True, it may take reviewers long to understand my thoughts because my art is too new. But I have already gained an unprejudiced public. I have every right to call 1889 : a year that augurs luck. »

(\* The Opera « Der Corregidor » would not be written until 1895.)

## Hugo Wolf and Doctor Josef Breuer

Until now, there has been no biography in English of Josef Breuer. « The Life and Work of Josef Breuer » triumphantly fills that gap. Translated from the original German edition, revised, and updated, it offers a comprehensive and engaging story of the intriguing life of one of the key-figures in the history of psychoanalysis, a man whose contributions in psychoanalysis and physiology have been over-shadowed by the work of Sigmund Freud. Based on documents from many sources, including letters with Breuer and August Forel, Freud, Wilhelm Fließ, and Hugo Wolf, and personal recollections of family, friends, and clients, Albrecht Hirschmüller provides a new picture of Breuer's life and work, including his family origins and home, his school and student days, his professional career, and a complete assessment of his scientific achievements. For the first time, we are given the complete story of the treatment of Bertha Pappenheim. Returning to primary sources, including letters from Breuer, the patient, her mother, and her cousin, Hirschmüller places this case on new and broader foundations and dispels some of the myths surrounding her treatment. Hirschmüller also uncovered notes and letters regarding other patients treated by Breuer, some of whom were referred by Freud.

Albrecht Hirschmüller. « The life and work of Josef Breuer : Physiology and psychoanalysis » , New York University Press New York City (1989) ; xiv, 514 pages.

...

Josef Breuer had a brilliant reputation as a practical physician. He was the physician of many prominent contemporary scholars, with whom he also partly maintained close friendships, such as with Marie von Ebner-Eschenbach, with whom he conducted an extensive correspondence, or with the physicist and philosopher Ernst Mach, with the philosophers Friedrich Jodl and Franz Brentano, with the musician Hugo Wolf. He took care of the « Wertheimstein and Gomperz families » , the first Viennese Jewish families (Hirschmüller, 1978, page 50.) . As well as Johannes Brahms in his last months of life. As a special honour of his competency, it can be considered that « a number of the most important professors of the Faculty of medicine, who had partly been his teachers, later chose him as their dormitory, and regarded him as worthy of their friendship, especially Ernst Bridge, his most important teacher » .

## The mistake of the « Gaudeamuses »

Contemporary letters and the subsequent memoirs of the « Gaudeamuses » portray a lively circle.

**Wednesday, 2 January 1889** : Josef Schalk wrote to his brother Franz (then in Reichenberg) to tell him how Anton Bruckner had joined his young friends for New Year's Eve drinks at the « Zum Roten Igel » , on the « Wildpretmarkt » , where Bruckner had proposed a solemn toast to Franz, before « wandering-off together » for some punch at Griensteidl's « café » on the « Michælerplatz » . By this time, however, strains had begun to show in the relationship. From the outset, Bruckner's relationship with his « Gaudeamuses » had been subtly undermined by an insidious class difference, taking the form of a corrosive mixture of awe for the creative genius they genuinely revered, and pity for his social ineptitude and apparent intellectual short-comings ; the mistake of the « Gaudeamuses » was to confuse

Bruckner's inability to formulate and articulate abstract argument with an inability to view his own creative output critically, failing to appreciate that Bruckner had achieved just this, at a sophisticated level, with his 1877 revision of the 3rd Symphony.

But there are cliques within cliques, and the 2 members of this circle who were tied most closely together were the brothers Josef and Franz Schalk. The family relationship explains how the brothers developed a joint outlook ; they operated on the basis of a shared way of looking at the world, and they felt free to act as they later did, and had the courage to act as they did, because each had the other for support.

### Wolf on Brahms

Hugo Wolf was a highly-esteemed music-critic in Vienna. The Viennese loved, above all, his malicious and aphoristic talent. He was the brilliant spokesman of the Brahms opponents in Vienna. He always wrote snappy articles, which Brahms gladly read to his friends at the « Red Hedgehog » (« Zum Roten Igel ») .

« Doctor Brahms is champion in composing works without thoughts. »

### Budapest : Mahler escapes a fire

**Saturday, 26 January 1889** : Shortly after the music begins in the Hungarian Opera House in Budapest, a fire starts in the prompter's box. Gustav Mahler is forced to stop the music as firemen douse the flames. 30 minutes later, the performance resumes. At the end the audience is ecstatic, both with Mahler and with the production.

### Mathilde Mayr (born Feßl)

During his Christmas stay at Kremsmünster (1888-1889) , another adorable young girl had confounded Anton Bruckner's blood. Her name was Mathilde Feßl, a lawyer's daughter. At a certain point, she asked Bruckner nice questions about music in the most pleasing way. But then, they had started talking about Lent. And he couldn't believe his ears. She was a " free-thinker " ! An infidel ! An atheist girl of 17 ! To Bruckner, the world was more incomprehensible than ever.

...

Anton Bruckner was allowed to visit (for musical purpose only) the, then, 17 year old Mathilde Feßl.

These anecdotes (originating from a pencil-note taken by an unknown hand was, then, transferred in typed text) come from a concert in Vienna :

« On **(Thursday) February 24, 1889**, the 7th Symphony of Bruckner is played at the " Bösendorfer-Saal ", under conductor Hans Richter. The concert was organized by the Wagner Society of Vienna. »

Apparently, Mathilde arrived in the hall at the last minute. She wanted to go to her place but, unfortunately, got lost. Finally, she arrived in front of the last door that was open in the hallway.

She writes :

« In search for a hidden-place, my eyes fell on an old gentleman, in a front-corner. He was not dressed festively, slightly obese, bald and extremely trustworthy.

I said to myself :

“ For sure, I will present myself to this old gentleman. ”

I went-up to him and stood behind him. He, then, turned around and looked at me and said, in surprise :

“ Yes, how come you are alone ? ”

“ I know that this is not my seat. I agree that I committed myself. But I can go elsewhere immediately if you want. I'll find my place in the concert-hall. ”

He protested vividly :

“ No, no, no, nobody's there. It is quite right for me. ”

So, the concert really began. Then, I forgot everything. I was in a weird situation : an old man with a black tail-coat - and the music.

Then, the first movement was over, the old man turned around and asked :

“ Did you liked it ? ”

I stayed still, feeling like in a daze :

“ Wonderful ! It's Bruckner ! ”

He replied, pointing at himself :

“ Well, yes, it's me. ”

I was speechless. Not that my imagination already visualized the persona of Bruckner but he was anything but the imposing type. He was almost a comical old man ; him, the creator of this wonderful musical work. I could not put

myself together. Since the next movement began (Adagio) , I dreamed having angel wings ! And soon, I saw everything in a different light and was shaken to the core, that such a simple man was chosen to give us this divine music.

During the next pause, he again talked to me. As soon he looked down at his clothes, he said :

“ Being highly-graded, I have to wear this old garment again. ”

Then, he reached into his neck :

“ This collar is killing me. I would gladly remove it to feel more comfortable. However, I am glad you came by. I feel proud having attracted something beautiful.

He asked my name, who I was, and where I came from. I said to him that I come from Kremsmünster, in Upper-Austria, that I was the daughter of the lawyer Doctor FeBl, and so on.

He said very pleased :

“ I come from Upper-Austria. But I now live in Vienna, here's my address. People on the street notice me. It makes me happy. They say : it's Bruckner. ”

I never saw him again in Vienna. But, after 2 years, he really came to see me in Kremsmünster. I was already engaged. One day, I was sitting at the table, near the window, working on the sewing-machine. There was a knock, a gentleman was at the door and presented himself with respect. I immediately recognized the voice of Bruckner.

As he saw me, he cried pleased :

“ Yes, it's me ! ”

Bruckner's companion for the occasion, the organist Leitenmayr, later told me that it was a rather eccentric presentation.

In fact, Bruckner was talking of St. Florian's monastery when he was permitted to enter :

“ I have met a daughter of Doctor FeBl in Vienna. I have to see her again. ”

The servant laughed and said :

“ This will be difficult. ' Herr ' FeBl has 5 daughters. ”

Bruckner said :

“ It does not matter. Mathilde already knows me. ”

I jumped from my chair, went to meet him and shook his hand. He turned to his friend organist and said :

“ I am grateful you accompanied me to visit this beautiful girl. ”

He took us for a snack at a coffee-shop. There, he also played the piano for a long time.

I had to sit next to him while playing. Suddenly, during a particularly beautiful moment, he turned to me and said quietly :

“ This is not from me, it is a Viennese piece. ”

He often told me something about counterpoint and the laws of harmony and the like, and I said :

“ I see nothing of that sort. If only my sister was here. ”

He did not let me finish and protested strongly, immediately :

“ Well, well, well, your sister ! She seems quite capable. She could share with me her music knowledge and her own compositions. ”

Often, he held my hand and stroked it tenderly.

I became a little bit concerned. Can I allow a stranger to become my husband ? I withdrew my hand from him and even left the room. My dear father who saw the whole scene, came to me and said :

“ But my child, do not be punctilious. You cannot measure a man like Bruckner which has higher-standards compared to the rest of the people. By being in company of such a genius, for few exquisite hours, you will keep this beautiful moment for the rest of your life. ”

I went straight back to the piano-room and sat-down next to him. In his innocence, Bruckner had noted nothing of this little interlude. He, again, took my hand and stroked it. I looked at my father and he was glad. He nodded at me, and also smiled. We also went on a walk across the meadows which offered a beautiful view of the mountain. Bruckner followed us and told me about his life in Vienna.

His modesty was great. He said, for example :

“ The fact that I am a composer, I know exactly what it takes ! Today's young guys, only aged 20, want to learn just a little bit of piano because they want to try to compose immediately ! But, in reality, nothing will come-out of this

approach. »

The evening gradually came to an end, and he had to go back to the monastery. He said goodbye and, with increasing sadness, I watched him go. I anticipated that I would not see him again because, after a few years, he left his earthly home with a place in heaven. To me, he was always joined by his divine music.

The book entitled « Memories of Upper-Austria / Encounters with Anton Bruckner » written by Mathilde Mayr, « née » FeBl, was published by Professor Wilhelm Formann. It relates conversations of the composer with young girls (these recollections come from Mrs. Magda Preibsch, of Neuhofen-an-der-Krems. She is a grand-niece of Mathilde) .

### Bruckner and the Tragedy of Mayerling

**February 1889** : In the week after the tragedy at Mayerling in which the 30 year old Crown Prince Rudolf of Austria and his mistress Marie Vetsera were found dead (around 6:00 am on January 30th) inside the hunting-lodge in mysterious circumstances, Anton Bruckner and his private secretary Friedrich Eckstein traveled to the monastery of « Stift Heiligenkreuz » to ask the abbot there for details of what happened.

...

Bruckner was not merely affected by the « The Mayerling Incident » . He was consumed by it !

On an icy mid-February morning of 1889, somebody knocked at the door of Bruckner's young musician friend, Friedrich Eckstein. Outside stood the Master's house-keeper, the incomparable and much-trying « Frau Kathi » Kachelmayr. She had a message. Professor Bruckner had got it into his head to go sleigh-riding in the Vienna Woods with « Herr » Eckstein, if « Herr » Eckstein would share the expense, and that's why she had to go chasing through the cold streets at this unearthly hour. What did « Herr » Eckstein say to such an idea ? The Professor was dying to know in his usual sudden fashion.

« Herr » Eckstein had a well-to-do father, as well as an unquestioning reverence for genius. He was one of Bruckner's very few true friends. An hour and a half later, the 2 boarded a train at the Southern Railway terminal. Bruckner, in his usual broad-brimmed hat and « loden » cape, pulled at his enormous scarf and, peculiarly distracted, exclaimed over and over again at how wonderful the fresh snow looked and how marvelous the landscape would be still deeper in the woods. They got-out at Baden. Here, Bruckner fussed tremendously over the right kind of horse and the suitable sort of sleigh, and it was not until he told the driver to head toward the Monastery of Heiligenkreuz that Eckstein grasped the reason behind the frenzy.

Eckstein wrote in his memoirs :

« Here, it became obvious what the true subject of Bruckner's thought was, and the object of his trip. It was about the event that had occupied him so much during the last few days, the entirely unexpected death of Crown Prince

Rudolf, the catastrophe of Mayerling. It was barely a week since these things had happened that had filled Bruckner with the deepest horror. Now, he began once more, perhaps for the 100th time, to discuss the matter with me and to ask my opinion of it. He confessed that the true purpose of the sleigh-ride was not his need to breathe fresh air or to enjoy the winter scenery, but the insatiable, overwhelming desire to visit the site of all these horrors, to inspect closely the area itself, and, if possible, to learn from persons living there details about the uncanny events.

Therefore, he had decided to visit first the Monastery of “ Heiligenkreuz ”, to find-out details from some of the monks or, perhaps, even from the Abbot himself, who was his personal friend, and of whom it was said that he had performed the last rites over the corpse.

After lunch, we entered the monastery. Bruckner asked a monk to announce him to the Abbot, who greeted Bruckner very respectfully. The Abbot asked him to play the organ. He obliged with one of his memorable improvisations on a chorale theme.

The conversation was general at first : the seriousness of the times, certain ecclesiastical issues, the musical situation in Vienna, etc. Not a word about the Crown Prince or the catastrophe of Mayerling. Bruckner began to show obvious signs of impatience. I saw that he was getting tired of all this diplomacy. And, sure enough, he burst-out. Really ! Would the Abbot not ever mention anything about those certain occurrences ! Those critical days at Mayerling ?

The Abbot, so suddenly interrupted in his small talk, actually seemed not to have heard the question. But Bruckner repeated it and became more importunate. The Abbot, at bay, had to give a serious reply.

Yes, he said, he had given final blessings to a corpse under unusual circumstances, at an unusual hour ; but he was still so shaken by the events that it was entirely impossible for him to talk about it. (This was the Abbot who had buried Mary Vetsera. In addition, he could not grossly violate the silence to which he had been sworn.)

Bruckner, very disappointed, now gave-up his effort. We returned to small talk, and before taking our leave, Bruckner had to agree to the Abbot's request to play the great organ of the monastery for the evening's blessing.

Soon afterward, I had the good fortune to hear the Master make this venerable powerful instrument come alive in the deepest silence of the forest. Bruckner fantasized for a while variations on a choral theme which preoccupied him just at that time, and he knew how to get the most moving effects out of this very simple melody.

At 6:00 pm, we climbed into the sleigh again, but, to my surprise, Bruckner asked the driver not to return to Baden, but to drive first to Mayerling itself. We reached it after a marvelous journey through wooded gorges, now swathed in darkness. Bruckner had hoped to meet a local, here or there, and to get him to talk, or to look at the site of these murderous events, from up close. Again, he was disappointed. The sequestered hunting-lodge was quite dark, all entrances locked and barricaded, no human being anywhere. We climbed-out of the sleigh to look at the place more closely, but saw no movement. But, as we walked along the building, we noticed a feeble light in the last window on the ground-floor. Inside, we spied a few nuns in black veils who were reading their breviaries by candle light or

whispering prayers. This unexpected sight was so spooky that Bruckner vehemently clasped my arm.

Now, it was obvious that we had no business being there, and that we had no alternative but to return with our purpose unfulfilled. Silently, we returned to our monastery, in order to warm and fortify ourselves with its wine. This drink chased away the ghosts of night.

They did not stay chased very long and went back to Vienna.

2 weeks after the Crown Prince's death, Franz-Josef took a number of steps which proved Doctor Sigmund Freud a precise case-historian of Mayerling and, incidentally, Anton Bruckner an accurate spy. Rudolf's testament bequeathed Mayerling to his little daughter, Elisabeth. The Emperor lost no time in buying it from her, very quietly, sometime in mid-February. A few days later, the Lord Marshal's Commission, still taking inventory at the lodge, found itself interrupted again. Now, it was not the Papal Nuncio but another spiritual personage : Maria Euphrasia Kaufmann, Prioress of the order of Discalced Carmelites at Baumgarten, near Vienna. She was accompanied by the architect Josef Schmalzhofer. It was His Majesty's command, " Herr " Schmalzhofer said to build a new Carmelite nunnery on the site. For that purpose, he had to do some surveying here. And, very soon, even before the arrival of masons, the Carmelite Sisters began to take-over Mayerling. Bruckner had glimpsed their dark, hooded figures that winter night. He may have been among the first outsiders to know a fact which was not announced until April 9. The architect's instructions were to bury the hunting-lodge under the convent. The walls of the bedroom, that had enclosed Rudolf's end, were pulled-down, and the parquet floor ripped-up. The spiral staircase was demolished together with the rarely used matrimonial bedroom to which it led. On the roof, the chimneys were plucked away. All the outer-contours of this wing were changed and enlarged so that it might serve as the convent church, with altar, sacristy and side-chapel. Suitable remodeling in the rest of the building provided for the nuns' dormitory and for dining and reception rooms, etc. Even the garden was replanted and its dimensions changed. All the fences around the property were rebuilt to a greater height. »

### A deadly duel

**Wednesday, 13 March 1889** : 2 of young Arthur Schnitzler's crowd, both bucks of the « haute-bourgeoisie » , clashed blades in fencing practice. The exchange grew heated. The foil-tip of one partner (Max Friedmann) broke through his opponent's mask, punctured an eye, pierced the brain, and killed the man on the spot.

Schnitzler wrote :

« At the time, Max Friedmann and I were seeing a lot of each other. Often, we went to masked balls together. I, therefore, considered it my duty to visit him the day after the accident and to commiserate with him. I was strangely affected by the fact that, not only in conversation with me, but also with others, Max dealt hardly at all with his unfortunate victim but seemed solely occupied with the question of whether or not the courts would find him in any way delinquent. The investigation was terminated a few days later because of a lack of incriminating evidence ; and, sooner than any of us would have thought possible, friend Max was back in the fencing arena. »

Newspaper reports of the incident struck Bruckner, who knew none of the parties involved but was a connoisseur of death. His niece had just died and, on **Thursday, 14 March 1889**, he wrote a short note to his sister, enclosing 20 Florins to help meet expenses for the funeral.

Letter from Anton Bruckner (Vienna) to Rosalia Hueber (Vöcklabruck) :

« Please accept my heartfelt sympathy at the deepest, saddest loss of your only daughter ! God give you two-fold strength ! For the departed (our dear niece) , however, eternal peace ! A week ago, I attended a High-Mass at the “ Schottenkirche ” for the deceased Johanna ; I am sending the enclosed 20 “ Gulden ” to help with the cost of the funeral. Let us pray regularly for the dear one who has gone before us ! »

Bruckner also had a fascination, almost a preoccupation, with death. After his signature, at the very end of the same letter, he mentions with no logical connection to his preceding lines :

« P.S. : Yesterday (Wednesday) , a young officer son of a very rich “ burgher ” was stabbed to death at a fencing exercise. »

What such a statement is doing at the bottom of a letter of condolence regarding the death of Johanna (his niece) , only daughter of Rosalia (« Sali ») Hueber, is hard to understand except in psychological terms. However, by now, Bruckner's problems must have been making themselves obvious again to his family. Unfortunately for Bruckner, this incident illustrates only one of his strangenesses.

By 1885, Anton Bruckner had only 2 surviving siblings, Rosalia (Hueber) to whom he often referred as « Sali » , and his brother Ignaz. Bruckner's deep feelings for members of his family do not manifest themselves often in his letters, but he loved them and never forgot them in times of need.

**WAB deest 9 : « At Gause » inherits a song**

**Monday, 29 April 1889 : (WAB missing)** - « Heut kommt ja Freund Klose “ zum Gause ” » , secular chorus (canon) in C major (4 measures) for mixed vocal quartet (SATB) quoting Bruckner's friend Friedrich Klose at one of his favourite pub-restaurant :

« Heut kommt ja Freund Klose zu Gause / Und geht nach der Jause nach Hause. »

(Today, our friend Klose comes “ at Gause ” / And go home after the snack.)

The popular Viennese guest-house (Restaurant and Beer-Hall) named « at Gause » (« Gasthaus und Bierkeller “ bei Gause ” ») was located in a basement at « Johannesgasse » Number 12 in the 1st District.

**Mahler : First operation for hemorrhoids**

**Wednesday, 17 July 1889** : Gustav Mahler undergoes an operation for hemorrhoids in Munich.

**Saturday, 27 July 1889 - Tuesday, 20 August 1889** : Mahler stays 3 weeks at the Spa facility of the « Englischer Hof » in Marienbad (nowadays Sofia) to recuperate from his operation. The house is located on « Kaiserstraße » - today, at Number 52 « Hlavni » (Main) Street (« Hlavni trida » , cp. 52) .

### Numeromania relapse

As time progressed, Anton Bruckner's mental state worsened and his old aberrations, from 1867, began to recur.

After having investigated himself the tragedy of Mayerling, accompanied by his private secretary Friedrich Eckstein, Anton Bruckner returned to Vienna. He stood in front of the Imperial Palace and counted, over and over again, its many hundreds of windows.

At home, he tried to find a letter from his friend August Göllerich junior in Regensburg. It had answered his request to total-up the exact number of embellishments on Regensburg Old City-Hall (« Altes Rathaus ») : turrets, weather vanes, gargoyles, etc. Bruckner's counting-mania had come upon him again, as it sometimes did in times of stress : the need somehow to order and structure and contain a great amorphous doom.

The building of the Town Hall of Regensburg, which was partially built in the middle of the 13th Century, has an architecture similar to that of the patrician houses, which were very influential at the time.

**Monday, 12 August 1889** : Letter from Anton Bruckner (Vienna) to August Göllerich junior (Bayreuth) :

« I wish to know of what the spires above the dome of the city towers, where we were, consist. Next to the dome is a) the stud ; then, b) the weather-vane with ornament ; isn't it ? Then, c) a cross ??? And a lightning rod or what else ? Is there a cross ?

What is on the spire of the Catholic church ? I believe only a weather-vane without a cross ?

Excuse me many times, and I thank you in advance. Please, make a note of “ everything ” ; in the autumn, I shall ask for clarification. »

Since Bruckner was asking about Bayreuth, he could not easily check for himself.

Nevertheless, this is a very unusual request for information, seemingly of no real significance, except to a victim of what looks like an obsessive-compulsive disorder.

Bayreuth : « Stadtkirche »

The first Church was built in 1194, but was destroyed during the Hussite Wars in 1430. In the crypt under the North tower remained the Foundation of its initial construction. The construction of a new Church began in 1437, and its towers, constituting 50 meters in height, was completed only in 1529. Interestingly, the care-taker lived inside the tower until 1934, it preserved « house » on the tower, dated 1448 year. From 1668, the top of the towers are connected by a stone corridor.

In 1528, the Margrave of the city announced the transition to Protestantism, and from that moment, the Church became Evangelical. In the early-17th Century, the Church suffered 2 fires, and, in 1634, during the Thirty Years War, a cannonball broke a window in the choir loft, and inside it was a lot of people, but fortunately, all survived. This miraculous event was immortalized in the following way : inserted the new glass looked broken, and it was the year of the accident.

Until the mid-18th Century, the town Church was also the Margrave tomb - their graves are in the crypt under the choir. In the 19th Century, the Church was restored several times, was added a Baroque and neo-Gothic elements. Inside the Church special interest is the altar 1615, tricuspid reminiscent of Gothic altars. The font, benches and a pulpit was made in 1871-1872 year in neo-Gothic style. It is worth noting that the font is decorated with alabaster reliefs 1615, the author of which was the Nuremberg Master, the Creator and also the main altar of the Church.

In addition to urban electors in the Church was buried by other no less eminent a person, inside it is a lot of tombstones and epitaphs in the 17th and 18th Centuries and even earlier, more wooden tombstones belonging to the « Burgmeisters » (mayors) , priests and super-intendents.

The towers have 8 bells, some of them preserved since 1624, and the rest was replaced in 1961. The largest bell weighs 2,300 pounds.

### Payment for September

**Saturday, 17 August 1889** : Viennese pocket calendar entry by Anton Bruckner :

« 17 August, “ Frau Kathi ” - 7 Florins for September. »

### Luise Blümelhuber

**Friday, 23 August 1889** : Bruckner's pocket calendar entry for September 1889 (unknown hand-writing) :

« “ Fräulein ” Luise Blümelhuber, Enge-Gasse Number 17. Steyr, 23 August 1889. »

### « Enge-Gasse » Number 17

Dieses fünfachsige und zweistöckige, mit einem Scheingiebel versehene Haus wurde schon 1974 in die Fassadenaktion

der Stadt Steyr einbezogen und trägt nunmehr durch seine alten, trotzdem fast modern anmutenden Sgraffiti (vergleiche Ennskai Nummer 5) , den Fenstergewänden im ersten Stock und der Scheinarchitektur zum Schmuck der Engen Gasse in Steyr bei.

Das Haus Enge Nummer 17, deren Besitzer die Grundabgaben durch Jahrhunderte dem Bürgerspital zu leisten hatten, wird um 1491 dem Tyboldt Rarmoser gehörig bezeichnet. Weitere Mitglieder dieser Familie werden mit Berchtold (1441, Berggasse Nummer 79) und Hans (1455) und Chunrad (1567, Enge Nummer 27) genannt.

Um 1505 gehörte das Haus dem Thomas Selzam und in den Vierziger Jahren der Witwe nach Andreas Rosenstingl. Das Stammhaus der Familie Selzem ist Enge Nummer 4 (Berggasse Nummer 3) . Ab der Mitte des Jahrhunderts hatten Vorderhaus (Enge Nummer 17) und Hinterhaus (Endskai Nummer 9) verschiedene Besitzer. Auf Enge Nummer 17 waren angeschrieben : der Schneider Stephan Artmann (1567-1609) , der Goldschmied Wolf Hauser (1609 bis 1620) , Margarete Seyder (vor 1651) und der Bäckermeister Hans Hornhuber (um 1651) .

Wolf Hauser hatte am 3. Juli 1609 die Artmann'sche Behausung gekauft (600 Gulden) . Erst am 9. April 1611 wird die halbe Währung (300 Gulden) als bezahlt bezeichnet. Er starb am 11. November 1620 im 63. Lebensjahr. Wolf Hauser hat eine schöne Ansicht von Steyr in Kupfer gestochen. Die Jahreszahl « 1584 » wurde nachträglich in die Bildaufschrift eingesetzt. Doktor Josef Ofner datiert die Entstehung des Hauser-Stiches um 1610. Diese Datierung wurde den archivalischen Aufzeichnungen eher entsprechen als 1584 ! Das Hinterhaus (Ennskai Nummer 9) ging von dem Nestler Wolfgang Erlinger (1567 bis 1586) an seinen Berufskollegen Georg Gallenberger (um 1597) , dann an dessen Witwe Catharina (um 1625) , von deren Erben an die Bäckerin Gertraud Knabl (um 1645) über, bis dann Hans Hornhuber 1651 beide Hausteile gemeinsam bis 1669 besaß.

Im Jahre 1669 kam es zu einer neuerlichen Besitzteilung. Das Hinterhaus wurde von Hornhuber an den Schuhmacher Christoph Korner verkauft. Im Vorderhaus folgten nach Horuhuber Valentin Aigner und von 1710 bis 1715 N. Niss (vielleicht Josef Franz) , im Hinterhaus auf Christoph Korner der Bäcker Andreas Peyrl (um 1684) und dann die schon oben Genannten, der Maurermeister Georg Aigner und ab 1715 N. Niss. Der Handelsmann Niss vereinigte 1715 endgültig beide Hausteile in einer Besitzerhand. 1731 kaufte Johann Christian Hirth das durch den Brand von 1727 zerstörte Haus. Der Eisenhändler Michael Ruebacher und dann seine Witwe Maria-Anna besaßen das Haus bis 1788. Dann ging dieses zwar an den Obervorgeher der Innerberger Hauptgewerkschaft in Weyer Engelbert von Wintersberg über. Doch das Eisenhandelsgewerbe blieb weiterhin der Verkäuferin vorbehalten.

Die grundbücherlichen Aufzeichnungen weisen als nächste Besitzer den Eisenhändler Franz Schontban (1797 bis 1802) , den Stadtkassier Franz Xaver Gruber (1802 bis 1810) und dann den Lehrer Joseph Sengt (1810 bis 1814) als Besitzer aus. Am 30. August 1814 kam die Fabrikantenfamilie Schlager durch den Kauf um 9.000 Florins in den Besitz des Hauses Enge Nummer 17. Die Hälfte des 1824 wiederum abgebrannten Hauses kam 1829 als mütterliches Erbteil an den Sohn Johann Baptist, nach dem Tode des Vater 1832, dessen Teil über die Witwe Anna wiederum an den Sohn als nunmehrigen Gesamterben (bis 1866) .

Die radizierte Eisen-, Geschmeid- und Nagelhandlungsgerechtigkeit wurde schon 1801 über Ansuchen von Franz

Schöntban auf das Haus Stadtplatz Nummer 9 (Meditzhaus) übertragen.

### Little Schnabel

**1889** : Professor Teodor Leszetycki advised Artur Schnabel's mother (Ernestine Taube, « née » Labin) that her 7 year old son should have lessons in composition. So, she took him to the house of Anton Bruckner in Vienna, knocked on his door and said she wanted to give lessons to her son in theory. He replied : « I don't teach children. » , and shut the door ! Following that failed initial approach to the old Master of St. Florian, Artur Schnabel studied for 7 years music theory and composition under professor Eusebius Mandyczewski.

Through Mandyczewski (a friend and assistant to Johannes Brahms) , Schnabel was introduced to the composer's Circle. He was often in his presence ; taking Sunday walks with him. The young boy once heard Brahms play in a performance of his 1st Piano Quartet ; for all the missed notes, said Schnabel, it « was in the true grand manner » . Schnabel's mother remained in Vienna after the « Anschluß » and, at the age of 83, in August 1942, was deported to Theresienstadt concentration camp, where she died 2 months later. Artur Schnabel never returned to Germany or Austria after the War.

### « Café Griensteidl » : Hugo Wolf

**Autumn 1889** : After his summer's rest, Hugo Wolf began work on a new set of songs - those of the « Spanisches Liederbuch » of Paul Heyse and Emanuel Geibel. To these, as well as the « Italienisches Liederbuch » of Heyse, he seems to have been introduced some time before by Doctor Franz Zwegbrück. Friedrich Eckstein had taken Wolf up to Zwegbrück in the « Café Griensteidl » and asked the writer if he knew of any good poetry for his friend to set to music.

### Doctor Justinus Kerner

Hugo Wolf's mastery of the art of the « Lied » is universally acknowledged. His power to wed and weld song and thought is fabulous. Every syllable is weighed in the finest balance. His choice of poets is faultless. The Mörike poems might be the envy of every language, and even so they are transcended in the Wolf settings.

Justinus Kerner was a doctor of medicine and thereto something of a mystic, his wife being a « clairvoyante » . The mystic's resort to paradox is evident in the poem : « Nacht muß es sein, / Daß Licht mir werde » ; and « Glanz der tiefsten Nächte » . The unseen is more-real than this world. The poem breathes the metaphysical atmosphere of the age of Hegel, and no such poem is conceivable in any other western European language.

...

The German poet, practicing physician, and medical writer Justinus Andreas Christian Kerner was born on 18 September 1786 at Ludwigsburg, in Württemberg ; and died on 21 February 1862 in Weinsberg.

After attending the Classical schools of Ludwigsburg and Maulbronn, Kerner was apprenticed in a cloth factory, but, in 1804, owing to the good services of Professor Karl Philipp Conz, was able to enter the University of Tübingen. He studied medicine but also had time for literary pursuits in the company of Ludwig Uhland, Gustav Schwab and others. He took his doctor's degree in 1808, spent some time travelling, and then settled as a practising physician in Wildbad. Here, he completed his « Reiseschatten von dem Schattenspieler Luchs » (1811) , in which his own experiences are described with caustic humour. He next collaborated with Ludwig Uhland and Gustav Schwab in the « Poetischer Almanach » for 1812, which was followed by the « Deutscher Dichtewald » (1813) , and in these some of Kerner's best poems were published. In 1815, he obtained the official appointment of District medical officer (« Oberamtsarzt ») in Gaildorf, and, in 1818, was transferred to Weinsberg, where he spent the rest of his life.

His house, the site of which at the foot of the historical « Schloß Weibertreu » was presented to him by the townspeople, became a mecca for literary pilgrims, all of whom were made welcome. Gustav IV Adolf of Sweden came with a knap-sack on his back. The poets, Christian Friedrich Alexander von Württemberg and Nikolaus Lenau were constant guests, and, in 1826, Friederike Hauffe (1801-1829) , the daughter of a forester in Prevorst, a somnambulist and « clairvoyante » , arrived ; she forms the subject of Kerner's famous work « Die Seherin von Prevorst, Eröffnungen über das innere Leben des Menschen und über das Hineinragen einer Geisterwelt in die unsere » (The Seeress of Prevorst, revelations of the human inner-life and about the penetrations of the spirit world into ours (1829) ; 6th edition, (1892)) . In 1826, he published a collection of Gedichte which were later supplemented by « Der letzte Blütenstrauß » (1852) and « Winterblüten » (1859) . Among others of his well-known poems are the charming ballad « Der reichste Fürst » ; a drinking-song, « Wohlauf, noch getrunken » , and the pensive « Wanderer in der Sägemühle » .

In addition to his literary productions, Kerner wrote some popular medical books, dealing with animal magnetism, the first treatise on sebaceous acid and botulism, « Das Fettgift oder die Fettsäure und ihre Wirkung auf den tierischen Organismus » (1822) , and a description of Wildbad and its healing waters, « Das Wildbad im Königreich Württemberg » (1813) . He also gave a vivid account of his youthful years in « Bilderbuch aus meiner Knabenzeit » (1859) and, in « Die Bestürmung der württembergischen Stadt Weinsberg im Jahre 1525 » (1820) , showed considerable skill in historical narrative.

In 1851, he was compelled, owing to increasing blindness, to retire from his medical practice, but he lived, carefully tended by his daughters, at Weinsberg until his death. He was buried beside his wife, who had died in 1854, in the grave-yard of Weinsberg, and the grave is marked by a stone slab with an inscription he himself had chosen : « Friederike Kerner und ihr Justinus » .

« Red Hedgehog » : Smoked ham and dumplings !

**Friday evening, 25 October 1889** : Personal friends and supporters of Anton Bruckner and Johannes Brahms, hoping to end the ugly quarrel between the 2 Masters, agreed to bring them together at the Viennese restaurant called the « Zum Roten Igel » (The « Red Hedgehog » Inn) ,, located on « Tuchlauben » Number 12, « Brandstätte » Number 8-10, « Wildpretmarkt » Number 1.

Bruckner, quite amicable, had arrived early (7:00 pm) accompanied by 2 of his friends. The waiters were astonished. Usually, the peasant Mæstro ate elsewhere, at the restaurant « Zur goldenen Kugel » on the « Am Hof Platz ». Bruckner already had 2 or 3 portions of « Nudel » soup. And the wonders of the night had only begun. A few minutes later, Johannes Brahms marched-in, complete with white beard, nimbus and a retinue of 3. After a stiff greeting, he took a seat at the opposite end of a long table.

« Stiff and cold, they faced each other across the table. » , related one of those present.

It was an uncomfortable situation and the well-meaning conspirators were highly-disappointed.

Even though this was his regular restaurant, whose dishes he knew by heart, Brahms decided to brake the silence by demanding the menu, quick !!

With a forced display of good nature, he cried-out :

« Now let's see what there is to eat ! »

He glanced along the list of courses, suddenly looked-up, and ordered :

« Waiter, bring me smoked ham and dumplings ! »

Bruckner tried to match the other man's fierceness by yelling for the same thing in his Upper-Austrian dialect.

He joined-in, shouting :

« That's it, Doctor ! Smoked ham and dumplings. At least that's something on which we can agree on ! »

The effect of this remark was instantaneous. The table dissolved into laughter. The ice was broken and the remainder of the evening proved to be friendly and jolly.

Bruckner explained the situation thus :

« He is Brahms (hats off ! ) ; I am Bruckner ; I like my works better. He who wants to be soothed by music will become attached to Brahms ; but whoever wants to be carried-away by music will find but little satisfaction in his work. »

Brahms himself had declared before joining the Eduard Hanslick camp :

« Bruckner is the greatest Symphonist of the age. »

Once after listening to a Bruckner Symphony, Brahms approached the composer, saying :

« I hope you won't feel hurt about it, but I really can't make-out what you are trying to get at with your compositions. »

Bruckner answered :

« Never mind, Doctor. That's perfectly all right. I feel just the same way about your things. »

### Otto Böhler : Brahms' silhouette

The « silhouette » artist Otto Böhler will immortalize the composer Johannes Brahms as he walks, smoking the cigar, crossing a little « red hedgehog » (the icon of his favourite restaurant) that will eventually symbolize the composer's « edgy » personality as well.

Brahms was a man of society. The composer was also a man who loved life's pleasures. In 1871, his physical appearance was described as « of medium height, broad, well-built, still with no tendency of over-weight » which he developed over the years. There are pictures and photographs which show how well-being, « soupés » , dinners and feasting in a society of the exuberant late 19th Century among the rich paved the way for Brahms' risk factor and obesity. One of the pictures shows the virtuoso whose prominent belly seems almost to keep him at distance from the concert piano.

### Brahms' eating habits

Anton Bruckner was a pathetic joke to many Viennese. Johannes Brahms was their marvel. They admired his very quirks. Brahms was the only notable in town to rise almost as early as Emperor Franz-Josef. He left bed at 5 am. After that, he marched through his day's program with a self-assurance as solid and axiomatic as the Emperor's.

A son of a poor family in the poor neighbourhood from North Germany, Brahms was humble and never extravagant on food. However, His love of food was well-recorded in many biographies and anecdotes.

Brahms' contemporaries often mentioned his love of food and drink in their remembrances of him. Indeed, we know quite a lot about his eating preferences, favourite restaurants, and drinking habits ... and let's just say that the evidence is almost exactly the opposite of what one might expect of a famous « Herr Doktor » who rubbed shoulders with the « élite » of Viennese society.

« I live in Vienna as if I were in the country » , Brahms once told a friend.

A keen walker and lover of nature, he often went walking in the woods around Vienna, when he often brought penny-candy with him to hand-out to children. He also enjoyed walking holidays in Italy. The press noted his style of walking

with his hands firmly behind his back.

His proletarian taste also revealed itself in the homes of those who hosted him.

The Max Kalbeck family noted Brahms' fondness for « Silsalat » (an Austrian herring salad) .

« There at the head of the table sits the ' Uncle ' with the long, white flowing beard. The laughter with which he signs receipts for jokes, roars its way out to us. Yes, Uncle Brahms can drink and eat ! »

(Flore Kalbeck, daughter of the music-critic Max Kalbeck, on her memories of Brahms visiting their family home for supper.)

During Otto Dessoff's tenure with the Vienna Philharmonic, « Brahms was invited to dinner in his home after every Sunday concert - " Frau Frederike " (Dessoff's wife) was a good cook. »

Once, Brahms was gravely disappointed when he contracted an illness for which his doctor prescribed a strict diet.

He protested :

« But this evening, I'm dining with (Johann) Strauß and we shall have chicken paprika. »

« Out of the question. » , the doctor ruled.

Brahms replied :

« Very well, then, please consider that I did not come to consult you until tomorrow. »

### The daily routine

According to his habits and personality, Johannes Brahms had a relatively calm life, when compared to some famous actors and musicians of his time. His daily life in Vienna was all that is more routine.

An early riser, Brahms made his own special dark coffee (accompanied by a few sweet buns) with beans sent to him by an admirer in Marseilles.

After this simple but satisfying breakfast, he took his early-morning walk. Then, settled-down to composed the whole morning and sometimes, in the afternoon.

His desk-work followed a seasonal routine. All his actual composing was done during the hot months. From September to December, he re-drafted, modified, prepared for publication the music born during his Swiss summers.

Brahms worked till noon. Then, he allowed « Frau » Celestina Truxa, who had arrived meanwhile, to help him into his over-coat. Fingers intertwined authoritatively behind his back, he started to walk north, toward the inner-city. He crossed the « Ringstraße » with his massive figure, his powerful profile, his dynast's beard, his stunning gray mane. Children followed him as he moved down the « Karntnerstraße » . There was always candy in the great man's pocket. It didn't matter that he talked with a harsh North-German accent in a surprisingly thin high-voice. He was so kind, handing-out sweets. He knew how to lace distinction with affability.

Like his great predecessor Ludwig van Beethoven, Brahms loved to take long afternoon walks around Vienna. One of its favourite spots was the « Prater » park, which attracted many visitors since the Universal Exhibition of 1873. (The famous Ferris wheel will be erected 1 or 2 years after its death.)

Brahms worked little in the evenings, preferring to spend time with friends and admirers on the unpretentious second floor dining-room of the « Zum Roten Igel » on the « Wildpretmarkt » .

Brahms enjoyed eating-out in Vienna's cheap « cafés » and restaurants, but for him, the « Roten Igel » was his second Viennese home. There, he would drink strong coffee (so strong only he could make it to his satisfaction) . He was also known to have a special weakness for « Rindspilaw » (beef-pilaf) , a simple peasant dish.

He first passed by the main dining-room frequented by higher-government officials. A « Stube » farther back was his favourite ; coachmen cut into their goulash here, and here, a corner-table was famous for being the Brahms lunching place.

In fact, Brahms never ate alone ; he always had « 2 or 3 acquaintances » with him (like the Hungarian physician Doctor Ignaz Semmelweis) , and the meal could be accompanied by 1 « Pilsner » or 2, card-games, jokes and prickly insults of all sorts. Brahms was evidently fond of a « highly-seasoned meat course » there (like goulash beef or roast pork and « sauerkraut ») . The staff at the « Roten Igel » kept in the cellar a small barrel of the finest Hungarian « Tokay » for his private consumption. He was also known to have a special weakness for « Rindspilaw » (beef-pilaf) , a simple peasant dish.

« Sauerkraut » dates back to around 200 B.C. China where the workers building the « Great Wall » ate it as a supplement to their normal diet which consisted mainly of rice. Admittedly, it was made with wine at that time, but nevertheless, it was the origin of today's recipe.

...

Max Graf :

« Brahms loved to sit in the garden of the inn, under the shadowy trees, drinking coffee. He would beam with delight and contentedness, so pleased was he with his surroundings. The lovely graciousness of the Viennese landscape was in direct contrast to his own severe nature. He had come here from a land of fog where the sea raged and the brown

heath stretched for miles on end, and like all northerners, he longed for sunshine and gaiety. »

« One of Brahms' friends, the theorist and musicologist (Eusebius) Mandyczewski, told me a story of Brahms' strolling in the Vienna woods. After many hours of wandering he and his friends had come to an inn and asked for black coffee. The coffee was made with chicory (an economy exercised by many cooks) and Brahms did not like chicory in his coffee.

He called the proprietress to his table and said :

“ My dear old lady, have you some chicory ? ”

When she said she had, he continued in an even more gracious tone :

“ It's not possible ! May I see it ? ”

The old woman retreated to the kitchen and returned with 2 packages of chicory which she handed to Brahms.

He looked them over solemnly and inquired :

“ Is that all you have ? ”

When she said yes, he pocketed both boxes and said :

“ Well, now you can go back and make us some black coffee.” »

...

Brahms never enjoyed a meal in total solitude. He was fond of peasant gastronomy, especially of very seasoned meat dishes. Sometimes, he asked his music-publisher Fritz Simrock to send him, from Hamburg or Holland, delicious pieces of meat which the « chef » of the « Red Hedgehog » inn would prepare for supper. Finally, to end the evening on a high note, he enjoyed playing cards surrounded by his friends in the modest dining-room located on the second floor.

A Dutch professor sitting at the « Red Hedgehog » witnessed Brahms' repeated « loud demands » for fried whitebait (a favourite meal of the dock-workers at the port of Hamburg) , accompanied by a dish of potatoes and a salad. But this kind of fish was not always available in Vienna. The « chef » replaced it either with cat-fish, trout, pike or walleye.

The menu also proposed :

Hungarian goulash.

Pumpernickel bread.

Tokay wine.

Bavarian « Tort » .

And, of course, German Beer !

According to the autobiography of the English Operatic soprano and composer Liza Lehmann, when she met Brahms, she was left unimpressed by his bluff and coarse manners, particularly when he gobbled-up a whole tin can of sardines at breakfast, and then, drank the oil directly out of the can !

The restaurant staff had specially set aside for Brahms, in the cellar, a small barrel of « Tokaji » - a Hungarian wine.

Tokaji or Tokay is the name of the wines from the Tokaj wine region (also Tokaj-Hegyalja wine region or Tokaj-Hegyalja) in Hungary or the adjoining Tokaj wine region in Slovakia. This region is noted for its sweet wines made from grapes affected by noble rot, a style of wine which has a long history in this region. The « nectar » coming from the grapes of Tokaj is also mentioned in the national anthem of Hungary.

The Slovak wine region of Tokaj may use the Tokajský/-ák/-é label (« of Tokaj » , in Slovak) if they apply the Hungarian quality control regulation. This area used to be part of the greater Tokaj-Hegyalja region within the Kingdom of Hungary, but was divided between Hungary and Czechoslovakia after the Treaty of Trianon.

Today, a specialized store in the town of Winsen offers a bottle of wine called « The Johannes Brahms of the Red Hedgehog » .

...

Leaving the « Roten Igel » , Brahms walked-back to the « Ringstraße » , toward another table reserved for him at the « Café Heinrichhof » , opposite the Opera. There, he reclined in a chair by the window and often would doze-off after his mocha. Passers-by would pause to admire the Brahms monument which sat there behind the glass pane with closed eyes. It was a thrill to watch the statue come alive and tip the waiter.

« (...) on his way back from the “ Igel ” or the “ Kochschule ”, he would stop at the Casino in the “ Stadtpark ” for relaxation. There, I found him, with Doctor (Sigmund) Münz, seated at a little marble table on the high-terrace, sipping his coffee seasoned with a glass of cognac and eagerly reading the daily papers fixed on a stick, Viennese fashion. »

(The Polish composer and pianist Sigismond Stojowski, 1870-1946.)

The « Zum Roten Igel » no longer exists (it was a stronghold of the Democrats during the October Revolution of

1848) . In its heyday, the « Igel » hosted musical performances and was also favoured by Franz Schubert. Today, the Hotel « Amadeus » occupies the site of this famous tavern located at « Wildpretmarkt » Number 5, a 2 minute walk from St. Stephen's Cathedral.

Paradoxically, the building where Brahms lived for the last 26 years of his life was demolished unceremoniously exactly 10 years to the date after he died there (1897) . The structure now on that site is a wing of the city's Technical University.

### Doctor Ignaz Semmelweis

The Hungarian physician of ethnic-German ancestry Ignaz Philipp Semmelweis (Semmelweis Ignác Fülöp) was born on 1 July 1818 in Tabán, neighbourhood of Buda (today, part of Budapest) , Hungary ; and died on 13 August 1865.

He was the 5th child out of 10 of the prosperous grocer family of József Semmelweis and Teréz Müller.

His father was an ethnic German born in Kismarton, then part of Hungary, now Eisenstadt, Austria. He achieved permission to set-up a shop in Buda in 1806 and, in the same year, opened a wholesale business for spices and general consumer goods. The company was named « zum Weißen Elefanten » (at the White Elephant) in Meindl-Haus in Tabán (today's 1-3, Apród Street, Semmelweis Museum of Medical History) . By 1810, he was a wealthy man and married Teréz Müller, daughter of the coach (vehicle) builder Fülöp Müller.

Ignaz Semmelweis began studying law at the University of Vienna in the autumn of 1837, but, by the following year, for reasons that are no longer known, he had switched to medicine. He was awarded his doctorate degree in medicine in 1844. Later, after failing to obtain an appointment in a clinic for internal medicine, Semmelweis decided to specialize in obstetrics. His teachers included Carl von Rokitansky, Joseph Škoda and Ferdinand von Hebra.

Semmelweis was appointed assistant to Professor Johann Klein in the first Obstetrical Clinic of the Vienna General Hospital on July 1, 1846. His duties were to examine patients each morning in preparation for the professor's rounds, supervise difficult deliveries, teach students of obstetrics and be « clerk » of records.

Maternity institutions were set-up all over Europe to address problems of infanticide of illegitimate children. They were set-up as « gratis » institutions and offered to care for the infants, which made them attractive to under-privileged women, including prostitutes. In return for the free-services, the women would be subjects for the training of doctors and mid-wives. 2 maternity clinics were at the Viennese hospital. The First Clinic had an average maternal mortality rate of about 10 % due to puerperal fever. The 2nd Clinic's rate was considerably lower, averaging less than 4 % . This fact was known outside the hospital. The 2 clinics admitted on alternate days, but women begged to be admitted to the 2nd Clinic, due to the bad reputation of the First Clinic. Semmelweis described desperate women begging on their knees not to be admitted to the First Clinic. Some women even preferred to give birth in the streets, pretending to have given sudden birth « en route » to the hospital (a practice known as street-births) , which meant they would still qualify for the child-care benefits without having been admitted to the clinic.

Semmelweis was puzzled that puerperal fever was rare among women giving street-births :

« To me, it appeared logical that patients who experienced street-births would become ill at least as frequently as those who delivered in the clinic. (...) What protected those who delivered outside the clinic from these destructive unknown endemic influences ? »

Described as the « saviour of mothers » , Semmelweis discovered that the incidence of puerperal fever (also known as « child-bed fever ») could be drastically cut by the use of hand-disinfection in obstetrical clinics. Puerperal fever was common in mid-19th Century hospitals and often fatal. Semmelweis proposed the practice of washing hands with chlorinated lime solutions in 1847 while working in Vienna General Hospital's first Obstetrical Clinic, where doctors' wards had 3 times the mortality of mid-wives' wards. He published a book of his findings in « Etiology, Concept and Prophylaxis of Child-bed Fever » .

Despite various publications of results where hand-washing reduced mortality to below 1 % , Semmelweis's observations conflicted with the established scientific and medical opinions of the time and his ideas were rejected by the medical community. Semmelweis could offer no acceptable scientific explanation for his findings, and some doctors were offended at the suggestion that they should wash their hands. Semmelweis's practice earned widespread acceptance only years after his death, when Louis Pasteur confirmed the germ theory and Joseph Lister, acting on the French microbiologist's research, practiced and operated, using hygienic methods, with great success. In 1865, Semmelweis was committed to an asylum, where he died at age 47 of pyæmia, after being beaten by the guards, only 14 days after he was committed.

Semmelweis was severely troubled that his First Clinic had a much higher mortality rate due to puerperal fever than the 2nd Clinic :

« It made me so miserable that life seemed worthless. »

The 2 clinics used almost the same techniques, and Semmelweis started a meticulous process of eliminating all possible differences, including even religious practices. The only major difference was the individuals who worked there. The First Clinic was the teaching service for medical students, while the 2nd Clinic had been selected in 1841 for the instruction of mid-wives only.

He excluded « over-crowding » as a cause, since the 2nd Clinic was always more crowded, and yet, the mortality was lower. He eliminated climate as a cause because the climate was the same. The breakthrough occurred in 1847, following the death of his good friend Jakob Kolletschka, who had been accidentally poked with a student's scalpel while performing a post-mortem examination. Kolletschka's own autopsy showed a pathology similar to that of the women who were dying from puerperal fever. Semmelweis immediately proposed a connection between cadaveric contamination and puerperal fever.

He concluded that he and the medical students carried « cadaverous particles » on their hands from the autopsy-

room to the patients they examined in the first Obstetrical Clinic. This explained why the student mid-wives in the 2nd Clinic, who were not engaged in autopsies and had no contact with corpses, saw a much lower mortality rate.

The germ theory of disease had not yet been accepted in Vienna. Thus, Semmelweis concluded some unknown « cadaverous material » caused child-bed fever. He instituted a policy of using a solution of chlorinated lime (calcium hypochlorite) for washing hands between autopsy work and the examination of patients. He did this because he found that this chlorinated solution worked best to remove the putrid smell of infected autopsy tissue, and thus, perhaps destroyed the causal « poisonous » or contaminating « cadaveric » agent hypothetically being transmitted by this material.

The result was the mortality rate in the First Clinic dropped 90 % , and was then comparable to that in the 2nd Clinic. The mortality rate in April 1847 was 18.3 % . After hand-washing was instituted in mid-May, the rates in June were 2.2 % , July 1.2 % , August 1.9 % and, for the first time since the introduction of anatomical orientation, the death-rate was 0 in 2 months in the year following this discovery.

Semmelweis demonstrated that the incidence of puerperal fever (also known as child-bed fever) could be drastically reduced by appropriate hand-washing by medical care-givers. He made this discovery in 1847 while working in the Maternity Department of the Vienna Lying-in Hospital.

While employed as assistant to the professor of the maternity clinic at the Vienna General Hospital in Austria in 1847, Semmelweis introduced hand-washing with chlorinated lime solutions for interns who had performed autopsies. This immediately reduced the incidence of fatal puerperal fever from about 10 % (range : 5 to 30 %) to about 1 to 2 % . At the time, diseases were attributed to many different and unrelated causes. Each case was considered unique, just as a human person is unique. Semmelweis's hypothesis, that there was only one cause, that all that mattered was cleanliness, was extreme at the time, and was largely ignored, rejected, or ridiculed. He was dismissed from the hospital for political reasons and harassed by the medical community in Vienna, being eventually forced to move to Budapest.

Semmelweis was outraged by the indifference of the medical profession and began writing open and increasingly angry letters to prominent European obstetricians, at times denouncing them as irresponsible murderers. His contemporaries, including his wife, believed he was losing his mind, and, in 1865, nearly 20 years after his breakthrough, he was committed to the Provincial Lunatic Asylum of the Crown land of Lower-Austria in Bründlfeld (« Niederösterreichische Landesirrenanstalt am Bründlfeld ») . He died there of septicæmia only 14 days later, possibly as the result of being severely beaten by guards. Semmelweis's practice earned widespread acceptance only years after his death, when Louis Pasteur developed the germ theory of disease, offering a theoretical explanation for Semmelweis's findings. He is considered a pioneer of antiseptic procedures.

Semmelweis's observations conflicted with the established scientific and medical opinions of the time. The theory of diseases was highly-influenced by ideas of an imbalance of the basic « 4 humours » in the body, a theory known as dyscrasia, for which the main-treatment was blood-lettings. Medical texts at the time emphasized that each case of disease was unique, the result of a personal imbalance, and the main-difficulty of the medical profession was to

establish precisely each patient's unique situation, case by case.

The findings from autopsies of deceased women also showed a confusing multitude of physical signs, which emphasized the belief that puerperal fever was not one, but many different, yet unidentified, diseases.

The rejection of Semmelweis's empirical observations is often traced to belief perseverance, the psychological tendency of clinging to discredited beliefs. Also, some historians of science argue that resistance to path-breaking contributions of obscure scientists is common and « constitutes the single most formidable block to scientific advances » .

As a result, his ideas were rejected by the medical community. Other, more subtle, factors may also have played a role. Some doctors, for instance, were offended at the suggestion that they should wash their hands, feeling that their social status as gentlemen was inconsistent with the idea that their hands could be unclean.

Semmelweis's results lacked scientific explanation at the time. That became possible only some decades later, when Louis Pasteur, Joseph Lister, and others developed the germ theory of disease.

During 1848, Semmelweis widened the scope of his washing protocol, to include all instruments coming in contact with patients in labour, and used mortality rates time series to document his success in virtually eliminating puerperal fever from the hospital ward.

*Streptococcus pyogenes* (red-stained spheres) is responsible for most cases of severe puerperal fever. It is commonly found in the throat and naso-pharynx of otherwise healthy carriers.

Toward the end of 1847, accounts of Semmelweis's work began to spread around Europe. Semmelweis and his students wrote letters to the directors of several prominent maternity clinics describing their recent observations. Ferdinand von Hebra, the editor of a leading Austrian medical journal, announced Semmelweis's discovery in the December 1847 and April 1848 issues of the medical journal. Hebra claimed that Semmelweis's work had a practical significance comparable to that of Edward Jenner's introduction of cow-pox inoculations to prevent small-pox.

In late-1848, one of Semmelweis's former students wrote a lecture explaining Semmelweis's work. The lecture was presented before the Royal Medical and Surgical Society in London and a review published in « The Lancet » , a prominent medical journal. A few months later, another of Semmelweis's former students published a similar essay in a French periodical.

As accounts of the dramatic reduction in mortality rates in Vienna were being circulated throughout Europe, Semmelweis had reason to expect that the chlorine washings would be widely adopted, saving tens of thousands of lives. Early responses to his work also gave clear signs of coming trouble, however. Some physicians had clearly misinterpreted his claims. James Young Simpson, for instance, saw no difference between Semmelweis's ground-breaking findings and the British idea suggested by Oliver Wendell Holmes in 1843 that child-bed fever was contagious (i.e. that infected persons could pass the infection to others) . Indeed, initial responses to Semmelweis's findings were that he

had said nothing new.

In fact, Semmelweis was warning against all decaying organic matter, not just against a specific contagion that originated from victims of child-bed fever themselves. This misunderstanding, and others like it, occurred partly because Semmelweis's work was known only through second hand reports written by his colleagues and students. At this crucial stage, Semmelweis himself had published nothing. These and similar misinterpretations would continue to cloud discussions of his work throughout the Century.

Some accounts emphasize that Semmelweis refused to communicate his method officially to the learned circles of Vienna, nor was he eager to explain it on paper.

In 1848, a series of tumultuous revolutions swept across Europe. The resulting political turmoil would affect Semmelweis's career. In Vienna, on 13 March 1848, students demonstrated in favour of increased civil rights, including trial by jury and freedom of expression. The demonstrations were led by medical students and young faculty members and were joined by workers from the suburbs. 2 days later, in Hungary, demonstrations and uprisings led to the Hungarian Revolution of 1848 and a full-scale war against the ruling Habsburgs of the Austrian Empire. In Vienna, the March demonstration was followed by months of general unrest.

No evidence indicates Semmelweis was personally involved in the events of 1848. Some of his brothers were punished for active participation in the Hungarian independence movement, and the Hungarian-born Semmelweis likely was sympathetic to the cause. Semmelweis's superior, professor Johann Klein, was a conservative Austrian, likely uneasy with the independence movements and alarmed by the other revolutions of 1848 in the Habsburg areas. Klein probably mistrusted Semmelweis.

When Semmelweis's term was about to expire, Carl Braun also applied for the position of « assistant » in the First Clinic, possibly at Klein's own invitation. Semmelweis and Braun were the only 2 applicants for the post. Semmelweis's predecessor, Breit, had been granted a 2 year extension. Semmelweis's application for an extension was supported by Josef Škoda and Carl von Rokitansky and by most of the medical faculty, but Klein chose Braun for the position. Semmelweis was obliged to leave the obstetrical clinic when his term expired on March 20, 1849.

The day his term expired, Semmelweis petitioned the Viennese authorities to be made docent of obstetrics. A docent was a private lecturer who taught students and who had access to some university facilities. At first, because of Klein's opposition, Semmelweis's petition was denied. He reapplied, but had to wait until 10 October 1850 (more than 18 months) , before finally being appointed docent of « theoretical » obstetrics. The terms refused him access to cadavers and limited him to teaching students by using leather-fabricated mannequins only. A few days after being notified of his appointment, Semmelweis left Vienna abruptly and returned to Pest. He apparently left without so much as saying good-bye to his former friends and colleagues, a move that may have offended them. According to his own account, he left Vienna because he was « unable to endure further frustrations in dealing with the Viennese medical establishment » .

During the period 1848-1849, some 70,000 troops from the Habsburg-ruled Austrian Empire thwarted the Hungarian independence movement, executed or imprisoned its leaders and in the process destroyed parts of Pest. Semmelweis, upon arriving from the Habsburg Vienna in 1850, likely was not warmly welcomed in Pest.

On 20 May 1851, Semmelweis took the relatively insignificant, unpaid, honorary head-physician position of the obstetric ward of Pest's small Szent Rókus Hospital. He held that position for 6 years, until June 1857. Child-bed fever was rampant at the clinic ; at a visit in 1850, just after returning to Pest, Semmelweis found one fresh corpse, another patient in severe agony, and 4 others seriously ill with the disease. After taking-over in 1851, Semmelweis virtually eliminated the disease. During the period 1851-1855, only 8 patients died from child-bed fever out of 933 births (0.85 %) .

Despite the impressive results, Semmelweis's ideas were not accepted by the other obstetricians in Budapest. The professor of obstetrics at the University of Pest, Ede Flórián Birly, never adopted Semmelweis's methods. He continued to believe that puerperal fever was due to uncleanness of the bowel. Therefore, extensive purging was the preferred treatment.

After Birly died in 1854, Semmelweis applied for the position. So did Carl Braun (Semmelweis's nemesis and successor as Johann Klein's assistant in Vienna) and Braun received more votes from his Hungarian colleagues than Semmelweis did. Semmelweis was eventually appointed in 1855, but only because the Viennese authorities over-ruled the wishes of the Hungarians, as Braun did not speak Hungarian. As professor of obstetrics, Semmelweis instituted chlorine washings at the University of Pest maternity clinic. Once again, the results were impressive.

Semmelweis declined an offer in 1857 to become professor of obstetrics at the University of Zürich. The same year, Semmelweis married Maria Weidenhoffer (1837-1910) , 19 years his junior and the daughter of a successful merchant in Pest. They had 5 children : a son who died shortly after birth, a daughter who died at the age of 4 months, another son who committed suicide at age 23 (possibly due to gambling debts) , another daughter who would remain unmarried, and a third daughter who would have children of her own.

Semmelweis's views were much more favourably received in the United Kingdom than on the continent, but he was more often cited than understood. The British consistently regarded Semmelweis as having supported their theory of contagion. A typical example was W. Tyler Smith, who claimed that Semmelweis « made-out very conclusively » that « miasms derived from the dissecting-room will excite puerperal disease » . One of the first to respond to Semmelweis's 1848 communications was James Young Simpson, who wrote a stinging letter. Simpson surmised that the British obstetrical literature must be totally unknown in Vienna, or Semmelweis would have known that the British had long regarded child-bed fever as contagious and would have employed chlorine washing to protect against it.

In 1856, Semmelweis's assistant Josef Fleischer reported the successful results of hand-washing activities at St. Rochus and Pest maternity institutions in the Viennese Medical Weekly (« Wiener Medizinische Wochenschrift ») . The editor remarked sarcastically that it was time people stopped being misled about the theory of chlorine washings. 2 years later, Semmelweis finally published his own account of his work in an essay entitled, « The Etiology of Child-bed Fever

» . 2 years later, he published a second essay, « The Difference in Opinion between Myself and the English Physicians regarding Child-bed Fever » . In 1861, Semmelweis finally published his main-work, « Die Ätiologie, der Begriff und die Prophylaxis des Kindbettfiebers » (The Etiology, Concept and Prophylaxis of Child-bed Fever) .

In his 1861 book, Semmelweis lamented the slow adoption of his ideas :

« Most medical lecture-halls continue to resound with lectures on epidemic child-bed fever and with discourses against my theories. (...) In published medical works, my teachings are either ignored or attacked. The medical faculty at Würzburg awarded a prize to a monograph written in 1859 in which my teachings were rejected. »

In a text-book, Carl Braun, Semmelweis's successor as assistant in the first Clinic, identified 30 causes of child-bed fever ; only the 28th of these was cadaverous infection. Other causes included conception and pregnancy, uremia, pressure exerted on adjacent organs by the shrinking uterus, emotional traumata, mistakes in diet, chilling, and atmospheric epidemic influences. The impact of Braun's views is clearly visible in the rising mortality rates in the 1850's.

At a conference of German physicians and natural scientists, most of the speakers rejected his doctrine, including the celebrated Rudolf Virchow, who was a scientist of the highest-authority of his time. Virchow's great authority in medical circles contributed potently to Semmelweis' lack of recognition. Ede Flórián Birly, Semmelweis's predecessor as Professor of Obstetrics at the University of Pest, never accepted Semmelweis's teachings ; he continued to believe that puerperal fever was due to uncleanliness of the bowel. August Breisky, an obstetrician in Prague, rejected Semmelweis's book as « naive » and he referred to it as « the Koran of puerperal theology » . Breisky objected that Semmelweis had not proved that puerperal fever and pyæmia are identical, and he insisted that other factors beyond decaying organic matter certainly had to be included in the etiology of the disease. Carl Edvard Marius Levy, head of the Copenhagen maternity hospital and an outspoken critic of Semmelweis's ideas, had reservations concerning the unspecific nature of cadaverous particles and that the supposed quantities were unreasonably small. In fact, Robert Koch later used precisely this fact to prove that various infecting materials contained living organisms which could reproduce in the human body ; that is, since the poison could be neither chemical nor physical in operation, it must be biological.

It has been contended that Semmelweis could have had an even greater impact if he had managed to communicate his findings more effectively and avoid antagonising the medical establishment, even given the opposition from entrenched view-points.

Beginning in 1861, Semmelweis suffered from various nervous complaints. He suffered from severe depression and became absentminded. Paintings from 1857 to 1864 show a progression of aging. He turned every conversation to the topic of child-bed fever.

After a number of unfavourable foreign reviews of his 1861 book, Semmelweis lashed-out against his critics in a series of Open Letters. They were addressed to various prominent European obstetricians, including Späth, Scanzoni, Siebold, and to « all obstetricians » . They were full of bitterness, desperation, and fury and were « highly polemical and superlatively offensive » , at times denouncing his critics as irresponsible murderers or ignoramuses. He also called

upon Siebold to arrange a meeting of German obstetricians somewhere in Germany to provide a forum for discussions on puerperal fever, where he would stay « until all have been converted to his theory » .

In mid-1865, his public behaviour became irritating and embarrassing to his associates. He also began to drink immoderately ; he spent progressively more time away from his family, sometimes in the company of a prostitute ; and his wife noticed changes in his sexual behaviour. On July 13, 1865, the Semmelweis family visited friends, and during the visit Semmelweis's behaviour seemed particularly inappropriate.

The exact nature of Semmelweis's affliction has been a subject of some debate. According to Kay Codell Carter, in his biography of Semmelweis, the exact nature of his affliction cannot be determined :

« It is impossible to appraise the nature of Semmelweis's disorder. ... It may have been Alzheimer's disease, a type of dementia, which is associated with rapid cognitive decline and mood changes. It may have been third stage syphilis, a then-common disease of obstetricians who examined thousands of women at “ gratis ” institutions, or it may have been emotional exhaustion from over-work and stress. »

In 1865, János Balassa wrote a document referring Semmelweis to a mental institution. On July 30, Ferdinand Ritter von Hebra lured him, under the pretense of visiting one of Hebra's « new Institutes » , to the Provincial Lunatic Asylum of the Crown land of Lower-Austria in Bründlfeld (« Niederösterreichische Landesirrenanstalt am Bründlfeld ») located on « Lazarettgasse » (« Landes-Irren-Anstalt in der Lazarettgasse ») . Semmelweis surmised what was happening and tried to leave. He was severely beaten by several guards, secured in a strait-jacket, and confined to a darkened cell. Apart from the strait-jacket, treatments at the mental institution included dousing with cold water and administering castor oil, a laxative. He died after 2 weeks, on August 13, 1865, aged 47, from a gangrenous wound, possibly caused by the beating. The autopsy gave the cause of death as pyæmia - blood poisoning.

Semmelweis was buried in Vienna on August 15, 1865. Only a few people attended the service. Brief announcements of his death appeared in a few medical periodicals in Vienna and Budapest. Although the rules of the Hungarian Association of Physicians and Natural Scientists specified that a commemorative address be delivered in honour of a member who had died in the preceding year, there was no address for Semmelweis ; his death was never even mentioned.

János Diescher was appointed Semmelweis's successor at the Pest University maternity clinic. Immediately, mortality rates jumped sixfold to 6 % , but the physicians of Budapest said nothing ; there were no inquiries and no protests. Almost no one (either in Vienna or in Budapest) seems to have been willing to acknowledge Semmelweis's life and work.

His remains were transferred to Budapest in 1891. On 11 October 1964, they were transferred once more to the house in which he was born. The house is now a historical museum and library, honouring Ignaz Semmelweis.

Semmelweis' advice on chlorine washings was probably more influential than he realized. Many doctors, particularly in

Germany, appeared quite willing to experiment with the practical hand-washing measures that he proposed, but virtually everyone rejected his basic and ground-breaking theoretical innovation - that the disease had only one cause, lack of cleanliness. Professor Gustav Adolf Michaelis from a maternity institution in Kiel replied positively to Semmelweis' suggestions - eventually, he committed suicide, however, because he felt responsible for the death of his own cousin, whom he had examined after she gave birth.

Only belatedly did his observational evidence gain wide acceptance ; more than 20 years later, Louis Pasteur's work offered a theoretical explanation for Semmelweis' observations - the germ theory of disease. As such, the Semmelweis story is often used in university courses with epistemology content, e.g. : philosophy of science courses - demonstrating the virtues of empiricism or positivism and providing a historical account of which types of knowledge count as scientific (and thus, accepted) knowledge, and which do not. It has been seen as an irony that Semmelweis' critics considered themselves positivists, but even positivism suffers problems in the face of theories which seem magical or superstitious, such as the idea that « corpse particles » might turn a person into a corpse, with no causal mechanism being stipulated, after a simple contact. To his contemporaries, Semmelweis seemed to be reverting to the speculative theories of earlier decades that were so repugnant to his positivist contemporaries.

The so-called Semmelweis reflex (a metaphor for a certain type of human behaviour characterized by reflex-like rejection of new knowledge because it contradicts entrenched norms, beliefs, or paradigms) is named after Semmelweis, whose ideas were ridiculed and rejected by his contemporaries.

Other legacies of Semmelweis include :

Semmelweis is now recognized as a pioneer of antiseptic policy.

Semmelweis University, a university for medicine and health-related disciplines (located in Budapest) , is named after him.

The Semmelweis « Orvostörténeti Múzeum » (Medical History Museum) is located in the former home of Semmelweis.

The Semmelweis « Klinik » ; a hospital for women located in Vienna.

The Semmelweis Hospital in Miskolc, Hungary.

In 2008, Semmelweis was selected as the motif for an Austrian commemorative coin.

### Brahms' favourite dishes at the « Red Hedgehog »

Hungarian beef goulash (a peasant dish with « paprikás » and « pörkölt » , which became part of the bourgeois gastronomy during the 19th Century) with Viennese sour cream accompanied by a dish of bread or potato dumplings.

Otherwise, the Viennese version of the goulash : a mixture of beef (diced) , peppers, onions and spices.

Beef shoulder (« Kruspelstiz ») served with horseradish and potato pancakes (« Erdapfelschmarrn ») .

The « Apfelmeerrich » (boiled beef, dressed with southern spices, served with roasted potatoes) brought the composer into ecstasy after grueling hours of rehearsal with the Women's Choir.

The Viennese breaded cutlet with a potato salad.

Herring with fried potatoes accompanied by rings of shallots and salad.

The « Silsilat » : an Austrian herring salad.

The « Rindspilaw » : a kind of beef-pilaf always accompanied by coffee or cognac.

Stuffed tomatoes on bread sticks served with garlic butter, onion or herbs.

Bacon and beans.

Pears or apple strudel with whipped cream, served in a cup or bowl.

After the wine, the homemade pastries accompanied by a coffee-cream brought Brahms back on his feet.

### Brahms's sleeping disorder

By all accounts, he was a short, bad-tempered, bearded fat guy who frequently drank too much, and who, later in life, acquired the habit of falling asleep in Vienna pastry-shops at tea-time, much to the amazed glee of passing tourists.

This was Johannes Brahms ?

Too true, said researcher Mitchell Margolis. All of these well-documented Brahmsian traits, Margolis said, suggest that the composer of history's most famous lullaby suffered from obstructive sleep apnea - a sleeping disorder.

« The disorder was not known to medical science at the time, and he clearly went undiagnosed » , Margolis said.

« It had been described for decades or even Centuries, but it was not recognized as an adverse health disorder. »

But it is. Obstructive sleep apnea, Margolis said, occurs when someone's upper respiratory tract closes off during sleep, often because fatty tissue compresses the airway.

When it happens, most commonly with a supine sleeper, the victim will gurgle and snort, gulp, wake-up halfway and go back to sleep, usually snoring like a train, only to lurch again into semi-consciousness a few minutes later. This is not restful.

Margolis, a pulmonary physician at the University of Pennsylvania Veterans Affairs Medical Center in Philadelphia, is one of a significant group of scientists who, as a sidelight, study the illnesses of history's giants. In the case of Brahms, Margolis said, he sought a « further understanding of his life and music » .

Life, as Margolis pointed-out, could be fairly dreary after a night of apnea. It probably pushed Brahms toward chronic ill temper, general irritability, intermittent depression and a habit of nodding-off inconveniently during the day.

### Brahms records his own music

**End of 1889** : Few years ago, the Herzogenbergs had introduced Johannes Brahms to Thomas Edison's phonograph, and now, the Fellingiers had a wax cylinder machine at their home.

It was at a party, in those years, that Brahms heard a young American woman playing a ragtime tune on a banjo. To a friend, he recalled the evening wistfully, humming a few bars of what may have been, « Hello, Ma Baby » . He was fascinated by the effect of the instrument, and by the dancing syncopations of this new American Style. Instinctively, he saw its rhythm as a fresh resource, as gypsy music had been for his generation. But, now, he was too old to do anything about it.

« I have had the opportunity of hearing it often and quite pleasantly. » , Brahms wrote Clara Schumann.

« You must have read about this new miracle. It's like being in fairy-land again. »

In **November**, Brahms met Edison's associate and representant in Europe the American Adelbert Theodor (« Theo ») Edward Wangemann at the Fellingiers. Edison had dispatched Wangemann to record famous Europeans. Doctor Fellingier, who was the general-director of Siemens & Halske, in Austria, invited Wangemann to take the recording.

Brahms returned to the Fellingiers' residence a few days later (**Saturday, 2 December**) . He had prepared his « Rhapsody » in G minor, Opus 79/2, but as he became unpatient by the protracting preparations for the recording procedure, he played a shortened version for solo piano (measures 13-72 of the 1872 arrangement) of his 1st « Hungarian Dance » , WoO 1/1. The second piece he played was a paraphrase on the « Polka Mazur » « Die Libelle » (The Dragon-Fly) , Opus 204 by Joseph Strauß.

At first, Brahms sat paralyzed by nerves when confronted by the apparatus, then suddenly, he went to the « J. B. Streicher & Sohn » grand piano. « Herr » Wangemann scrambled to get the machine going.

The spoken text, at the start of the cylinder recording, has been wrongly attributed as belonging to Brahms. Numerous writers, scholars and amateurs alike, have presumed that Brahms introduces himself with the words :

« I am Doctor Brahms, Johannes Brahms. »

However, a number of factors raise serious doubts as to who is speaking. The only mention of the recording by someone who was present (in the published memoirs of Fellingner's son) states that Brahms was introduced. Considering the time between the announcement and the start of the music, it seems improbable that the same person could segue from speech to playing so quickly particularly given the technological limitations.

The denoised excerpts reveals enough of the speech to suggest that the speaker (probably, Theo Wangemann) introduces Brahms as follows :

« ... Dezember Achtzehnhundertachtundneunzig. Haus von Herrn Doktor Fellingner, bei mir ist Doktor Brahms, Johannes Brahms. »

(... December 1889. House of " Herr " Fellingner, with me is Doctor Brahms, Johannes Brahms.)

The recording is extremely noisy and the piano is barely audible. Brahms reveals a rhythmically free, bass-heavy kind of playing - playing dotted quarter and 8th rhythms as something more like triplet figures in the context of this piece.

Brahm's piano is a cross-strung, ebonized and 240 centimeter long grand has Viennese action and bears the inscription « J. B. Streicher & Sohn » . The piano with the serial number 8105 was sold, in 1880, to Doctor Richard and Maria Fellingner, who had their residence in the so called « Arenbergschlössl » in Vienna 3rd District, on « Apostelgasse Nummer 12 » . The Fellingners belonged to Brahms' closest friends in Vienna and he always enjoyed staying with them, especially when playing chamber music with Vienna's most talented musicians, e.g. , the clarinet player Richard Mühlfeld or cellist Robert Hausmann.

...

On **Saturday, 15 June 1889**, Adelbert Theodor Edward (« Theo ») Wangemann, Thomas Alva Edison's emissary for the introduction of the improved phonograph, started-out on a trip to Europe. (1) On **Friday, 25 October 1889**, after visiting Paris and Berlin, he arrived in Vienna, where he stayed at the Grand Hotel. The bearded Wangemann is seen standing behind Edison on an image taken in **mid-June 1888**.

In the forenoon, the phonograph was reserved for important artists and academics to make the instrument known and, of course, to make recordings, which Wangemann afterwards performed for free to notables and at public gatherings. 6 persons could always hear the phonograph, at the same time, through ear-phones. Demonstrations with mounted horn were also performed occasionally, but the sound was less true to the original, being much lower and metallic.

The visit of Johannes Brahms at the Vienna Grand Hotel, on **Wednesday, 30 October 1889**, was especially highlighted by the press. (2) Brahms heard, among other things, an aria sung by Lili Lehmann, a spoken telegram by Werner von

Siemens and a piano piece.

Filled with enthusiasm, he wrote to Clara Schumann :

« It's as though one were living a fairy-tale. » (3)

And presented Wangemann a dedicated picture of himself. 3 days later, the mezzo-soprano Rosa Papier(-Paumgartner) recorded Brahms' « Sapphische Ode », which was soon afterwards performed to the Austrian Emperor Franz-Josef I. A press report mentions the recording of some of Brahms' dances by the famous pianist Alfred Grünfeld with a newly-introduced funnel, on **Thursday, 14 November 1889**, which was mounted at the underside of the instrument. (4) On **Monday, 2 December 1889**, a few days after a private gathering at the house of industrialist Richard Albert Fellingner, the head of the Vienna branch of the firm of Siemens & Halske, Wangemann came-back to demonstrate some of his latest cylinders and to record Johannes Brahms, as arranged with him before.

Richard Fellingner, one of Doctor Fellingner's sons, described the order of events :

« At first, Brahms was so excited that he felt unable to perform. When he was ready, he couldn't wait and teased poor Wangemann and his assistant, the mechanic Devrient of Siemens & Halske in Berlin, to hurry. As with Grünfeld, the funnel was mounted at the underside of the piano. Wangemann spoke an introduction in German.

Suddenly, Brahms interrupted him calling-out :

“ Gespielt von ' Frau ' Doktor Fellingner ! ”, and began playing. » (5)

A close inspection of the announcement on the Brahms cylinder revealed a most interesting result which supports Richard Fellingner's testimony ! Wangemann firstly named the date : « Dezember 1889. » Shortly afterwards, the recording was interrupted and restarted after an unknown period of time. This time, it was clearly another, audibly excited and nervous voice which shouted :

« Im Haus von Herrn Doktor Fellingner, bei (by ?) Herrn Doktor Brahms, Johannes Brahms. »

This kind of announcement, for example naming the recorded person twice, is unparalleled in all-known recordings under the supervision of Wangemann. The Fellingners surely kept the remembrance of the adored Brahms recording in their music-room alive. Even if we must take into account that Richard Fellingner wrote down his memories more than 40 years later, I cannot imagine that he errs in the important detail of Brahms announcing his own recording.

The use of « by » instead of the German form « von », has already led to much speculation about the identity of the announcer in the past. In case it is really « by » and not a slip of the tongue (« bei »), I cannot provide a solution but a possible explanation. Brahms heard a larger number of cylinders before he himself recorded. Wangemann probably recorded hundreds of notables during his stay in Europe and only a small fraction of their recordings came

down to us. One of these could be important to solve the mystery, because « by » (« bei » ?) is also heard in Wangemann's announcement of the recording of the baritone Karl Mayer, accompanied by the pianist Franz Wüllner, in January 1890, in Cologne. I treat this and other recordings in my essay. Could it be that Brahms adopted Wangemann's diction in this detail ? I am, of course, open for further discussions on this matter.

The Brahms cylinder, presented by Wangemann to Doctor Fellingner on this evening, was long forgotten by the public when his son Richard Fellingner noted in his memoirs that it was extremely difficult to reproduce, because the sound was too weak and, despite of several attempts, a suitable method hadn't yet been found. (6) Obviously, the cylinder was played more than once on a phonograph the family had bought for that purpose. Early cylinders are comparatively soft, requiring a light-weight reproducer like the Edison « Standard » speaker, and are usually reproduced by ear-phones. The family members certainly had no clue about such technical refinement and stressed the groove with each play-back. Later, the phonograph was equipped with an electric reproducer, but the damage was already done.

### Notes

(1) I wrote an essay about Wangemann's travels in Europe, between June 1889 and February 1890, in both English and German. The essay comprises a dozen sound files taken from cylinders recorded during Wangemann's trip, including the only recordings of Prince Otto von Bismarck and Count Helmuth von Moltke.

### Bruckner praises his copyist from Steyr

Even to one of his paid copyists, Leopold Hofmeyer, Anton Bruckner wrote a business letter containing his wish not to take liberties in regard to possible future requests.

**Sunday, 2 February 1890** : Letter from Anton Bruckner (Vienna) to his dear copist Leopold Hofmeyer (Steyr) :

« Dear Friend !

You have written everything wonderfully. Sincere thanks, and I shall look highly upon your splendid copy, as a gift from heaven. I will later inconvenience you again, if I may enclosed, please find 5 “ Gulden ”.

To your gracious lady, my deepest respect !

To “ Polderl ”, my kiss !

Yours sincerely,

Anton Bruckner »

### Ignaz's meat poisoning

It appears that Ignaz Bruckner had stomach problems similar to those of Anton. Bruckner mentions that his sister, Rosalia (« Sali ») Hueber, complained of having to pay the doctor so much money for their brother's treatment. Bruckner inquires as to whether or not Ignaz knows anything about this situation, for his inquiries have so far netted no information.

Nevertheless, he sent Ignaz a bit of money anyway. Bruckner always looked to the financial situation of his family members, supporting all of them at one point, as a young teacher giving music lessons in addition to his other duties.

Bruckner was bereft when his brother almost died in 1890. His message in the letter is one of joy at the recovery of Ignaz.

**Monday, 3 February 1890** : Letter from Anton Bruckner (Vienna) to his brother Ignaz (St. Florian, near Linz) :

« Dear Brother !

How very alarmed I am over your misfortune, you can only imagine. We thank God out of fullest heart that “ He ” has saved you so wonderfully. All the same, be really careful about what you eat, and inspect each bite you intend to eat. “ Frau Kathi ” and I congratulate you on your life's being saved ! Please, find 10 “ Florins ” enclosed. Be careful later about eating smoked meat, and I will be grateful. “ So, be really careful ! ” “ Sali ” complained that she had to give the doctor 45 “ Florins ”. Do you know anything of that ? “ I received no answer. ” Farewell !

Your Brother,

Anton

Talk has it, in Vienna, that there is a teacher whose name is Anton Bruckner ; and he pretends to be my brother.

Thank you very much ! »

### « Hôtel de France » : Apartment pictures

**1890** : Ludwig Grillich, Imperial Court photographer (« Hof-Photograph ») since 1888, takes pictures of Anton Bruckner at his flat on « Heßgasse » Number 7 : one sitting nobly in his chair in the living-room and one besides his Bösendorfer piano. The 4 room apartment is located on the 4th floor of the residential building (renamed « Hôtel de France ») which is owned by his beloved friend philosopher Anton Ölzelt junior.

Grillich was born on 2 December 1856 in Vienna ; and died on 21 May 1926 in Vienna. He was a professional portrait photographer during the heyday of the Vienna pre-War period of the 19th Century. He opened his first studio in Vienna in 1885 - then, one at Number 91 on « Währingerstraße » , in the 18th District ; and one at Number 12 on « Wiedner-Hauptstraße » , in the 4th District (now occupied by the Hotel « Das Triest ») . From 1886 to 1900, he also operated a studio at 150 kilometres west of Prague in the spa-town of Franzensbad (Františkovy Lázně) , in West Bohemia. He became the Court photographer of Greece in 1892. Some other notables who appeared before his lens were Johann Strauß junior, Johannes Brahms (at the composer's apartment in 1892) , mayor Karl Lueger, and Doctor Sigmund Freud. He was also responsible for a series of postcards depicting famous buildings in Vienna.

### « At Gause » : Bruckner's fist

**Monday, 10 March 1890** : Anton Bruckner affixed his signature and the date on the score of the revised version of the 8th Symphony with the mention « fully-completed » . Emperor Franz-Josef accepted the dedication.

Josef von Wöb (1863-1943) insists that this revision is entirely from the hand of the Master. He recalls in his Memoirs the firmness with which Bruckner refused to make any proposals for alterations on the part of his pupils and disciples.

« I have simply scored it this way, and if you rascals (“ Viechkerln ”) keep arguing with me ... »

Wöb denied that the revision of the 8th was compromised in this way and offered a reminiscence of Bruckner's steadfastness in the face of unwanted editorial advice :

« At a gathering at “ bei Gause Gasthaus ”, at the time of the revision of the 8th, Bruckner took-out a page, pointed-out to the students a passage for wind instruments and said :

At that moment, he angrily raised his clenched fist like Zeus hurling lightning bolts. »

The popular Viennese guest-house (Restaurant and Beer-Hall) named « at Gause » (« Gasthaus und Bierkeller “ bei Gause ” ») was located in a basement at « Johannesgasse » Number 12 in the 1st District.

### Bruckner consults 2 physicians

**Sunday, 30 March to Saturday, 5 April 1890** : A diary entry by Anton Bruckner mentions that he had consulted Doctor Ottokar Chiari (laryngologist) concerning « chronic catarrh of the throat and larynx », and also Doctor Gustav Riehl senior (dermatologist and laryngologist) , complaining of « extreme nervous agitation » .

A clinical study on the common manifestation of lupus of the larynx was written by Doctors Ottokar von Chiari (professor of laryngology in Vienna) and Gustav Riehl senior (dermatologist, head of a laryngological clinic in Vienna) .

### Doctor Ottokar Chiari

The Austrian laryngologist Baron Ottokar von Chiari was born on 1 February 1853 in Prague (Czech Republic) and died on 12 May 1918 in Puchberg-am-Schneeberg (Lower-Austria) . He developed the most important operating methods in his field and succeeded in having the new laryngological clinic built in Vienna.

In Vienna, he was an assistant to Leopold von Schrötter (1837-1908) and, later, succeeded Karl Störk (1832-1899) as director of the laryngological clinic. He was the son of gynecologist Johann Baptist Chiari (1817-1854) , a younger brother to pathologist Hans Chiari (1851-1916) , and grandfather of Karl Chiari.

Ottokar Chiari was a specialist in the field of rhinolaryngology, and is credited for advancing new surgical procedures at the laryngological clinic, in Vienna. In 1912, he introduced the transethmoid trans-sphenoid operation.

### Doctor Gustav Riehl senior

The Austrian dermatologist Gustav Riehl senior was born on 10 February 1855, in « Wiener Neustadt » and died on 7 January 1943 in Vienna.

From 1872, he studied medicine at the University of Vienna, where he later worked as an assistant in the clinic of skin diseases and syphilis under Ferdinand Ritter von Hebra and Moritz Kaposi. In 1896, he became an associate-professor (« Professor extraordinarius ») of dermatology and syphilology at the University of Leipzig, attaining a full-professorship in 1901. In 1902, he returned to the University of Vienna, where in 1921-1922, he served as academic rector.

He made contributions in his work involving skin tuberculosis, severe burn therapy, leishmaniasis, mycosis fungoides, radiation therapy, et al. In 1886, with Richard Paltauf, he described « tuberculosis verrucosa cutis » , and, in 1917, described a type of hyper-pigmentation known today as « Riehl melanosis » . At the Vienna General Hospital, he established a radiation treatment ward.

...

Gustav Riehl senior, recognized in his generation as one of the leaders of Viennese dermatology in particular, and German dermatology in general, was born in Vienna, completed his higher-education at the university, and received his

doctorate in Medicine in 1879. After a short internship in Bamberg, he trained in his specialty for 4 years, first under Hebra and later under Kaposi. In 1896, Riehl was called to Leipzig to direct the recently organized University clinic on skin and venereal diseases ; 6 years later, upon the retirement of Kaposi, he returned to Vienna. In bringing to the outstanding post in dermatology in central Europe the rich heritage of his academic forebears, Riehl added his varied interests which included bacteriology, mycology, histology, and a superlative capacity for diagnosis and treatment. His lectures to under-graduate and graduate students were in great demand ; his management of the sick exemplified the kindly physician who possessed skill.

### Functions

**1911-1912** : Senator of the Faculty of Medicine.

**1912-1913** : Senator of the Faculty of Medicine.

**1913-1914** : Senator of the Faculty of Medicine.

**1914-1915** : Senator of the Faculty of Medicine.

**1915-1916** : Senator of the Faculty of Medicine.

**1916-1917** : Senator of the Faculty of Medicine.

**1917-1918** : Senator of the Faculty of Medicine.

**1918-1919** : Senator of the Faculty of Medicine.

**1919-1920** : Senator of the Faculty of Medicine.

**1920-1921** : Senator of the Faculty of Medicine.

**1921-1922** : Rector of the Faculty of Medicine.

### Honours

**1954** : Monument - Faculty of Medicine (Medicine, Dermatology, Syphilidology) in the arcaded court, University of Vienna.

### Berlioz's « Requiem » and Cosima

**Sunday, 9 March 1890** : Fourth « Gesellschaft » concert of the season. Hans Richter conducts Hector Berlioz' «

Requiem » . Cosima Wagner is « truly horrified » by the « monstrosity » of the work.

### **WAB 108 : Emperor Franz-Josef**

By **January 1888**, Anton Bruckner had come to agree with conductor Hermann Levi that the 8th Symphony (**WAB 108**) would benefit from further work. He began work on the revision in **March 1889** and completed the new version of the Symphony in **March 1890**. Once the revision was completed, the composer wrote to Emperor Franz-Josef for permission to dedicate the Symphony to him.

**Probably after Friday, 14 March 1890** : Letter from Anton Bruckner to Emperor Franz-Josef (dated March 1890) :

Bruckner asks the Emperor if he would accept the dedication of the 8th Symphony.

Hans Richter accompanied Bruckner to an audience with the Emperor at which the composer presented him with a bound score of the new version of the 8th Symphony (**WAB 108**) . Richter recalled that Bruckner was asked by Franz-Josef if he had any requests and that the composer responded by a desire to be relieved of his duties as an organist at the Court Chapel and to receive financial support for his remaining years. The Emperor could not grant such a request officially but offered to dip into his private coffers, which Bruckner graciously refused. In later years, when the offer was renewed, Bruckner once again refused though he did ask for, and was granted, money to travel to hear his works performed elsewhere. Richter was very moved by this incident, for he had not expected the old man to use such well-chosen and touching words when speaking to his Emperor.

**Wednesday, 16 April 1890** : Letter from the Office of the Imperial and Royal Treasurer to Anton Bruckner :

Emperor Franz-Josef has accepted the dedication of the 8th Symphony.

**Sunday, 20 April 1890** :

« Das Vaterland » reports that Emperor Franz-Josef has accepted the dedication of the 8th Symphony. It would no longer be possible for Eduard Hanslick to prevent the performance of Bruckner's works.

**Wednesday, 23 April 1890** :

The « Welser Anzeiger » Number 16 writes on page 6 :

« Award. The Emperor has accepted the dedication of the 8th Symphony in C minor by Anton Bruckner. »

**Thursday, 24 April 1890** :

The « Steyrer Zeitung » Number 32 reports on page 3 about the dedication of the 8th Symphony by Emperor Franz-

Josef :

« An award for our compatriot Bruckner. His Majesty the Emperor has accepted the dedication of the 8th Symphony of the Imperial and Royal Court Organist Anton Bruckner. »

### Paying the month of May

**Wednesday, 16 April 1890** : Pocket calendar entry by Anton Bruckner :

« “ Frau Kathi ” (Katharina Kachelmayr) - payment of 7 Florins on April 16, for the month of May. »

### Wedding of Archduchess Marie Valérie

**Saturday, 21 June 1890** : Letter from Anton Bruckner (Vienna) to « Kapellmeister » friend Franz Bayer (Steyr) :

« Most Worthy Friend !

Monastery Organist “ Herr ” Gruber wrote me of late, the following : Choir Director “ Herr ” Bayer in Steyr will, by the earliest post (on a matter of importance) , make a joyous announcement to you. Also, a priest writes me from St. Florian’s Monastery touching on this. I ask most courteously for clarification, for I cannot understand what it is supposed to mean. At St. Florian’s, I am very embarrassed. In the future, please do not say anything about me. Has your daughter, the vocalist, married the Master-baker yet ? Many compliments to your gracious lady.

Yours,

Bruckner

On July 31, in (Bad) Ischl, I have to play the organ for the Holy-Wedding. Thus, the request comes “ from high ”. »

**WAB missing (before 31 July 1890)** : « Improvisationsskizze » (Ischl) , sketch of an improvisation in C minor for organ based on the final movement of the 1st Symphony.

**Thursday, 31 July 1890** : During the festivities in Ischl, Anton Bruckner had the honour of playing on the « Kaiser Jubiläums Orgel » at St. Nicholas parish church for the Imperial wedding of Archduchess Marie Valérie (aged 22) with her cousin, Archduke Franz Salvator of Habsburg-Tuscany (aged 24) , which she met in 1886.

Bruckner first improvised on the final movement of his Symphony No. 1, then on the « Emperor's Hymn » (« Kaiserhymne » or « Kaiserlied ») , and finally, on Georg Friedrich Händel's famous « Halleluja » chorus from « Messiah » . He will receive the sum of 100 ducats for his services.

The original organ, which probably dates from the Gothic period, was transferred in 1870 to St. Nicholas. A second instrument was built by Simon Anton Hötzel in 1825. The present organ, which dates from 1888, is the work of Matthäus Mauracher. It is considered one of the best instruments of the Austro-Hungarian Empire. Extension work on the registry was undertaken from 1908 to 1910. The electric traction instrument has a set of 60 registers on 3 keyboards and 1 pedal-board.

In 1960, a commemorative plaque by artist Francis S. Forster was unveiled outside the church, recalling Bruckner's visits to St. Nicholas during the period from 1863 to 1890.

The Imperial couple will settle at Wallsee Castle. While the marriage of Marie Valérie and Franz Salvator was harmonious at first, it became less so with time. Franz had many love-affairs, including one with a ballet dancer of the Vienna Opera, Stephanie Richter (1891-1972). To stifle the scandal, she hastily married in London a prince of Hohenloe who agreed to endorse this adulterous paternity and named the child Franz-Josef (born in 1914). Valérie faced these blows stoically, confiding only in her journal.

Stephanie Richter was later known as « Hitler's Spy Princess » for her espionage activities before and during World War II.

### The wedding banquet

The wedding banquet was held at « Hotel zur Post » just in front of St. Nicholas, at about 200 metres from the famous « Zauner » pastry-shop ; about 150 metres from the spa ; about 300 meters from the thermal station ; and about 300 meters from the « Kaiservilla » .

The greedy Bruckner was invited to take place at the table of honour ...

Emperor Franz-Josef was in excellent mood. He placed in front of his Court organist a succession of delights and delicacies, and warmly encouraged him to start serving himself.

Bruckner first resisted but finally admitted :

« It's now or never ! »

The Emperor had been waiting patiently for this moment.

Later, a tasty and perfectly roasted duck came to Bruckner.

Already with a full belly, Bruckner looked with envy at this dream dish.

The smiling Emperor took a deep breath, seized a knife and a fork, and took half of the bird, saying :

« I believe you can not take one more bite. »

Bruckner candidly replied :

« Your Majesty, your famous musician is like St. Stephen's cathedral ! »

Intrigued, the Emperor wondered :

« Isn't that a somewhat strange comparison ? »

Bruckner answered :

« At first glance, St. Stephen's cathedral may seem to be full but there is always room for more - like it is the case for the roasted duck ! »

(Bruckner's pupils at the Vienna Conservatory reported that he always interrupted the class to kneel at the sound of the « Angelus », coming from the nearby St. Stephen's cathedral.)

Max Graf :

This Viennese Catholicism is different from Spanish or Italian Catholicism. It was not sombre like that of Spain, nor was it theatrical or operatic like that of Italy. It was a friendly, comfortable Catholicism which gave free-play to the Viennese joy of living and its hilarious spirit of life. On the many Catholic holidays which the Viennese celebrated, the festival meal was the most important. On the feast-day of St. Martin, when one said the prayer : « You shall multiply the geese and also the cool wine » , the first geese were slaughtered. On this day, too, emissaries came from Preßburg, bringing geese to the Emperor. This was an old Austrian Court custom.

**Saturday, 2 August 1890** : Anton Bruckner gives a private organ recital at Ischl.

**Saturday, 9 August 1890** : The « Welser Anzeiger » Number 32 reports on page 4 :

« Imperial gift.

Professor Bruckner received from His Majesty the Emperor a gift of 100 Ducats for his organ playing before and after the wedding of Archduchess Marie Valérie with Archduke Franz Salvator. »

**August - September 1890** : Bruckner tells Betti Bauer, the notary of Linz, that he was stunned when he received the Imperial gift of 100 Ducats concerning his organ improvisation (« Improvisationsskizze ») based on the final movement of the 1st Symphony.

## Ischl : « Hôtel zur Post » (« Gasthof zur Post, Posthof »)

The former « Hôtel zur Post » in Bad Ischl, Upper-Austria (originally named : « Gasthof zur Post » , or « Posthof ») , was the oldest hotel in the Salzkammergut. The building is located in the city-centre between the parish church of St. Nicholas and the Lehar Theatre. The hotel was built in 1827-1828 by Franz and Magdalena Koch, which is reminded to us by a marble portal. Koch (who died in 1849) was previously post-Master in Ebensee and had operated in Ischl since 1826 - more precisely at the Inn « Zum Goldenen Hirschen » (today : « Sparkasse ») . The « Schenkrecht » and the post-office were transferred from the inn to the newly-built hotel. The Imperial-Royal Post-Office, which was operating there until 1895, also included stables in the North-wing for up to 120 horses, which were used by the postal service in Ebensee, Aussee and Salzburg. Since 1862, the « Postalm » (formerly called : « Till » and « Holzalm ») , the pasture area for the animals, stretched-up to the town of Strobl. In 1833, the son of the builders, Franz Koch junior (who died in 1871) , continued to operate the Hotel and Post-Office. The following owners were Ludwig Koch (who died in 1919) and Doctor Ludwig Koch (who died in 1939) . The hotel was expanded several times during the 19th Century : for example, in 1840-1841, it acquired the former « Pfründnerhaus » (Prebendary's House, built in 1787) and the « Wirerspital » (hospital built in 1828) . The dining-hall wing was added in 1864. The prestigious (now patrimonial) façade was added in 1895. In the former large dining-room, the original wall-coverings in « stucco lustro » and the ceiling with its framed patterns and medallions were preserved - each of them showing arabesques, fantastic animal figures and fruits. A lift was installed only after 1900. The rear-wing of the hotel (« Dependance Posthof ») on today's « Schulgasse » (School Alley) was demolished in 1964 to create a garden. The « Kaiser-Franz-Josef-Straße » , where the building is located, was named officially « Landstraße » before 1898 and « Poststraße » from 1898 to 1951.

...

Das ehemalige Hotel zur Post (ursprünglich Gasthof zur Post oder Posthof) in Bad Ischl, Oberösterreich, war das älteste Hotel des Salzkammergutes. Das Gebäude liegt im Stadtzentrum zwischen der Pfarrkirche St. Nikolaus und dem Lehartheater.

Das Hotel wurde 1827-1828 von Franz und Magdalena Koch errichtet, woran noch heute das datierte Marmorportal erinnert. Koch (gestorben 1849) war zuvor Postmeister in Ebensee und hatte seit 1826 in Ischl das Gasthaus Zum Goldenen Hirschen (heute Sparkasse) betrieben. Von hier wurden das Schenkrecht und das Postamt auf das neu errichtete Hotel übertragen. Zum kaiserlich-königlichen Postamt, das bis 1895 im Hause betrieben wurde, gehörten auch Stallungen für bis zu 120 Pferde (Nordtrakt) , die im Postdienst nach Ebensee, Aussee und Salzburg eingesetzt waren. Als Weidegebiet für die Tiere gehörte ab 1862 die sogenannte Postalm (früher Till- oder Holzalm) oberhalb von Strobl zum Haus. Ab 1833 führte Franz Koch junior (gestorben 1871) , ein Sohn der Erbauer, den Hotel- und Postbetrieb fort. Ihm folgten Ludwig Koch (gestorben 1919) und Doktor Ludwig Koch (gestorben 1939) in der Führung des Hauses nach. Das Hotelgebäude wurde im 19. Jahrhundert mehrmals erweitert, so auch 1840-1841 unter Einbeziehung des ehemaligen Pfründnerhauses (1787) beziehungsweise des Wirerspitals (1828) . 1864 wurde der Speisesaaltrakt angebaut, 1895 erhielt das Gebäude eine repräsentative (heute unter Denkmalschutz stehende) Fassade. Im ehemaligen großen Speisesaal erhielten sich die originalen Wandverkleidungen in stucco lustro sowie die Decke mit Kassettengliederung und

Medaillons, deren einzelne Felder Arabesken, phantastische Tiergebilde und Früchte zeigen. Erst nach 1900 wurde ein Lift eingebaut. Der rückwärtige Hotelflügel in der heutigen Schulgasse (Dependance Posthof) wurde 1964 zwecks Schaffung eines Gartens abgetragen. Die Kaiser-Franz-Josef-Straße, in welcher das Haus liegt, hieß vor 1898 Landstraße und von 1898 bis 1951 amtlich Poststraße.

## Gäste

Das Haus wurde von vielen bekannten Persönlichkeiten besucht,

Mitglieder des europäischen Hochadels :

Kaiser Ferdinand, Kaiser Franz-Josef, König Wilhelm I. von Preußen, König Otto I. von Griechenland, Königin Therese von Bayern, König Max Josef von Bayern, Großherzog Ludwig von Hessen, Großherzog Carl Alexander von Sachsen-Weimar, Prinz August von Württemberg, Erzherzog Johann, Marie Thérèse Charlotte de Bourbon, Fürst Lichnowsky.

Hochrangige Militärs :

Feldmarschall Haugwitz, Feldmarschall Moltke, Admiral Edward Hamilton.

Politiker : Eduard Graf Taaffe, Otto von Bismarck, Theodor Herzl.

Industrielle und Bankiers : Johann Anton Farina, Lionel Nathan Rothschild.

Wissenschaftler : Doktor Theodor Billroth.

Literaten : Nikolaus Lenau, Arthur Schnitzler, Felix Dahn.

Komponisten : Anton Bruckner, Carl Michael Ziehrer.

Schauspieler und Regisseure :

Alexander Girardi, Greta Garbo, Marlene Dietrich, Magda Schneider, Karlheinz Böhm, Romy Schneider, Rudolf Prack, Sonja Ziemann, Gustav Knuth, Josef Meinrad, Luchino Visconti, Franz Antel, Helmut Berger und vieles andere.

Maler : Josef Kriehuber, Friedensreich Hundertwasser.

Am 31. Juli 1890 fand im Hotel ein Dinér anlässlich der Hochzeit von Erzherzogin Marie Valérie mit Erzherzog Franz Salvator von Toskana statt.

Steyr : « Zeilberger's Gasthof Rother Krebs »

**August - September 1890** : Parish priest Johann Aichinger invites Anton Bruckner to stay at the presbytery during his summer vacation in Steyr. But due to his current illness (a stomach affliction) , Bruckner must resign himself (except during the holding of special events) to stay at « Zeilberger's Gasthof Rother Krebs » (Zeilberger's Red Crab Inn) located on the « Stadtplatz » at Number 44.

At a certain time, the inn was also named : « Rottner's Gasthof Rother Krebs » and « Lugmayr's Gasthof Rother Krebs » .

The owners of the house had been ship-masters and inn-keepers since the end of the 17th Century - and only inn-keepers since 1773. According to Krenn, the name « Roten Krebsen » (Red Crabs) is mentioned for the first time in 1809. According to Kastner, the exterior ornamented sign could dated from 1760. It shows a moulded red-painted crab surrounded by curved elements in a thin frame.

« Here is a fine example of Baroque iron-work. Why the crab has been chosen to represent the house is hard to explain. In any case, the figurative motif is particularly well-suited for ornamental representation in its decorative form. »

(Jörg Reitter, 1948)

### The Lang family

**Around Tuesday, 16 September 1890** : On his way back to Vienna, Anton Bruckner stops to visit the Lang family in Linz who lives at « Landstraße » Number 21. He recounts his recent stay in Ischl insisting on the fact that Prince Constantin Hohenlohe-Shillingstfürst did not understand the structure of his organ improvisation (« Improvisationsskizze ») until hearing the « Kaiserhymne » : « Gott erhalte Franz den Kaiser » (God Save Emperor Josef) .

### Private audience with the Emperor

Pocket calendar entry by Anton Bruckner :

« 23 September around 11:15 am (after 11 o'clock) , an audience with His Majesty the Emperor. »

**Thursday, 23 September 1886** : For the first time in his life, Anton Bruckner was granted a private audience by the Emperor.

As a sign of acknowledgement of his work, Franz-Josef offered him an annual grant of 300 Florins, and (with an engaging smile ...) an Imperial snuff-box !

When the Emperor asked Bruckner what special favour he might show him, Bruckner replied :

« Would Your Majesty be kind enough to tell “ Herr ” Hanslick not to write such bad criticisms of my work ? »

Aside from the unrivalled « naïveté » of this request there is a tragic undercurrent, for these words came from a tortured heart. Hanslick was the Demon in Bruckner’s eyes. The composer felt persecuted and was convinced the critic exercised pernicious power over his career. Hanslick was the topic of all his complaints to friends, to pupils, and even to « Frau » Kathi, his house-keeper. He was actually afraid Hanslick might « annihilate » him.

Bruckner reported on the course of the audience to privy councillor Dlabac, and later to « Frau Kathi » Kachelmayr.

Max Graf :

« When Bruckner’s Symphonies were finally performed, the public was so antagonistic and the criticisms so spiteful that Bruckner writes in a letter :

“ They scared me to death in Vienna. ” »

« It must have been a singular scene when the 62 year old Bruckner went for an audience with the old Emperor, to thank him for the kindness he had shown his Court organist. Bruckner had to put on his frock-coat which scarcely fitted his broad, short figure, when he went to the Imperial Palace. Franz-Josef held such audiences one day each week. In the great anteroom of the palace were assembled the high-ranking officers who had received honours, priests who had to introduce themselves to the Emperor, or to thank him for a donation, industrial magnates who had been raised to the peerage or who had received a Court title, and male and female peasants from the provinces, dressed in coloured national costumes, who had some favour to beg of the Emperor. (Baron Prileský, the Court official who arranged these audiences, told me that Franz-Josef was highly-irritated if too few people sought an audience.) In the Baroque hall stood the Emperor’s guards in red coats, embroidered with gold thread, flowing white plumes in their helmets, swords in hand.

Bruckner made a deep, clumsy bow before each one of these guards. Finally, the door opened to the room where Franz-Josef stood at his desk on which the papers lay with the names of the people who had come for an audience. The Emperor, with cordiality, came toward Bruckner, who stammered a few words of thanks.

The Emperor asked Bruckner if he had any further wish, and the composer replied :

“ Please, Your Majesty, can you not put in a little word with Councilor Hanslick so that he will criticize me better ? ”

Bruckner himself told us this story. But I do not know whether the Emperor was able to fulfill this wish. The critic was never so kindly disposed to Bruckner as was the Emperor.

What Franz-Josef did for music and musicians, and to that belongs the conferring of high-orders on Brahms and Bruckner - he did, not out of an active relationship with music but as a correct fulfilment of his regal duty which

was regulated by the Spanish Court Ceremonial, his Catholic piety, and by the documents on his writing desk. »

### The Emperor is a quick eater

30 kilograms of salami or how much does an Emperor eat ? How the Court was supplied with food.

It is well-known that Franz-Josef was a quick eater, who could down a meal in a few minutes ; but could he eat 30 kilograms of salami all by himself ?

30 kilograms of salami.

60 kilograms of streaky pork loin.

70 kilograms of smoked pork belly.

103 kilograms of ham.

40 kilograms of loin of Prague ham.

This was an order placed by the Court with Weishappel's the butchers in 1914. The salami alone would be enough to fill 460 rolls or sandwiches. The Court Kitchen was responsible for the procurement and preparation of meals. The Court « chef de cuisine » (« Hofküchenchef ») or personal « chef » (« Mundkoch ») drew-up the daily lists of the food required and the head-cook (« Oberstküchenmeister ») was responsible for making sure that all the goods needed were ordered in time. An exact record was kept of all purchases - both by the day and by the week. Finally, the Court Inspector (« Hofkontrollor ») checked all purchases and if necessary pointed-out where savings could be made. After all, a Court dinner with 50 to 100 guests was reckoned to cost between 2,000 and 3,000 Gulden, with imported specialities being particularly expensive. By way of comparison, in 1870, 1 kilogram of beef cost about 0.5 Gulden ; at this time, a female laundry worker earned about 3 Gulden per week, while a building worker's shirt cost 2.5 Gulden.

The Court kitchen was repeatedly told to be as economical as possible. Since the members of the Imperial family and people who were catered for by the Court were not prepared to make any savings themselves when it came to dining, attempts were made to keep the price of the food purchased as low as possible. It was planned to invite suppliers to undercut one another with their bids, so that the Court could make its purchases as cheaply as possible.

The plan failed because none of the suppliers was prepared to take-part in such an auction. A new strategy for the procurement of food stuffs was needed and so the so-called price discussions were introduced. This meant that would-be suppliers had to make monthly applications for contracts to a Court commission, with either their price offers being accepted or price reductions being demanded.

## The Emperor's dining habits

An account of the daily habits of the Emperor may be of interest to our readers. He is, like most other German sovereigns, an early riser, and always takes his first breakfast, winter and summer, at 5:00 am, the meal consisting of a cup of « café au lait » , a roll, and cold meat. The Emperor is very independent, and always shaves himself. For the next 7 hours, the Emperor takes no refreshment, his next meal being luncheon, which is served at 12 o'clock, and which consists of soup and a roast, with which beer is drunk.

When « His Majesty » is alone, he has dinner at from 3 o'clock to 3:30, when the dinner consists invariably of 6 courses : soup, fish, 2 successive roasts, a pudding and dessert, when beer, and later a little wine, is drunk by the sovereign. The Emperor's favourite beer is the dark Bavarian, which he has now drunk for a great number of years, and he always has an orthodox Bavaria « Seidel » out of which to drink it.

After dinner, the Emperor eats nothing more, not even when he goes to the theatre, and he finds this frugal diet suits him excellently. The Emperor, as a rule, retires to bed every night at 9 o'clock. By this simple life, he has obtained his Golden Jubilee.

...

In 1905, Henri de Weindel authored « The Real Franz-Joseph » based on the insights of a palace staffer who refused to be identified. The recollections show the life of an ageing Emperor saddened by the murder of his wife, Empress Elisabeth, and the suicide of his son and heir to the Habsburg throne, Crown Prince Rudolph.

Of Emperor Franz-Josef's dining habits, he revealed :

« Fond as he once was of ceremony, nowadays, he has made for himself a quiet, bourgeois life, like that of some old bachelor who takes delight in the mere fact of living. Many of his pleasures have been cut-off, but those of the table, which were always a weakness with him, afford him compensation. His day's menu is surprising. He goes to bed early and rises early - between 4:00 and 5:00 am. Immediately, an attendant, who is waiting for his Master's summons, brings him a first breakfast, of respectable dimensions. The Emperor then rises and goes to his study to work.

At 8 o'clock, he has a second breakfast, which consists regularly of soup, joint, vegetables, “ entre-mets ” (the great triumph of Viennese cookery) , and dessert. His private secretary now appears, and the morning's mail is opened. At noon, there is a third meal, similar to the second. Then follows either a short walk in the park at the “ Hofburg ” or at Schönbrunn, according as the Court is at one place or the other, or a drive ; for his favourite exercise of riding is now forbidden, or almost entirely so. Between 4:00 and 5:00 in the afternoon is the fourth meal. One guest, and one only, is present at that - either an “ aide de camp ” or some high Court dignitary.

This dinner consists of at least 6 courses - thick soup, beef (which always comes next to the soup) , fish, a roast (fowl or game) , “ entre-mets ”, and dessert. The Emperor has one abundant helping of each dish, and, generally, a second

also. At 8:00 in the evening, there is the fifth meal, of tea, bread and butter, and cold meat, and at 9:00 or 9:30, this well-fed monarch goes to bed to seek in sleep recuperation of the strength which he has not wasted.

If he eats a great deal, however, he drinks little, although the cellars of the “ Hofburg ” are among the finest in Europe. There may be met the best vintages of Lower-Austria and of Hungary (so rich in vineyards) , of Bordeaux, Burgundy, Champagne, Moselle, and the Rhine.

There is even to be found genuine Tokay, rarest of all wines, the vineyards of the Hegyala from which it comes having been totally ruined by phylloxera. So near such treasures of the grape, the Emperor is content to wash down his meals with “ Pilsner ” beer, only allowing himself at the end of his dinner a glass of excellent Bordeaux. His meals are served on very beautiful silver dishes. The famous golden table-service (of which the central epergne alone is worth £ 6,400) is hardly ever seen, because big dinner-parties are now very few at the “ Hofburg ”, and State banquets are no longer given.

In the huge dining-hall, where the footmen are more numerous than the guests, and where, since the Empress's death, no more flowers decorate the table, the Emperor is fond of describing to his only companion the gorgeous days of the grand State dinner-parties ; and it is not without emotion that the old man peoples the solitude with the imaginary crowds of old. He still seems to hear the 3 raps on the floor from the stick of the Grand Chamberlain, the Imperial master of ceremonies, to announce the entrance of “ Their Majesties the Emperor and Empress ”. »

#### « Tafelspitz » : The Emperor's favourite dish

Many of the famous Austrian delicacies such as the « Sachertorte » , the « Tafelspitz » or the « Sacherwürstel » achieved great popularity due to the Monarch's culinary tastes.

The « Tafelspitz » (boiled beef) in particular, which literally means the « end of the table » where the Emperor used to sit, was Franz-Josef's favourite.

It is written in an official cookery school text-book from 1912 :

« Nie fehlt an der Privattafel Seiner Majestät ein gutes Stück gesottenes Rindfleisch, das zu seinen Lieblingsgerichten zählt. »

(« His Majesty's private table is never without a fine piece of boiled beef. »)

Franz-Josef preferred his boiled beef accompanied with freshly grated horseradish, cabbage and stale bread for absorbing the remaining sauce. Except on days of fasting, boiled beef could be found on the Imperial family's menu every day. Not only the Emperor developed this distinct love for beef, but the dish was of great significance for the diet of all social classes.

« His Majesty's private table is never without a fine piece of boiled beef. »

The name « Tafelspitz » , literally meaning tip for the table, derives from the Austrian term for the meat cut. Usually from a young ox, the cut comes from the top hind end of the cattle, the « Musculus gluteoabiceps » . Pinzgauer Rind, Almenland Almochse, Ländle Kalb or Wienerwald Weiderind are some examples among cattle breeds which are popular for this cut.

The meat itself and the way it is prepared have hardly changed since the 19th Century. Still nowadays, boiled beef is classically served with extra-crispy fried potatoes, apple-horseradish and chive sauce. Very special is the tasty soup that results from boiling beef and vegetables. It can be served before the main course, garnished with dumplings, noodles or soup vegetables.

...

« Tafelspitz » was typically served with creamed spinach and roasted potatoes with various sauces in particular, horseradish and apple, and many in the Austro-Hungarian Empire adopted this meal as a sign of loyalty, along with the fashion for mutton chop whiskers.

The meal of boiled beef with the appropriate trimmings (« Tafelspitz ») , followed by cherry dumplings features repeatedly in Joseph Roth's novel « The Radetzky March » (1932) . The slow decline of the Habsburg Empire can be seen in the changing approach to « Tafelspitz » through 3 generations of the von Trotta family from the mid-19th Century to early-20th Century.

Extract of the novel :

« Jacques disappeared and returned after a time wearing white gloves, which seemed to utterly transform him. They reflected a further snowy sheen over his pale face, his already white muttonchop whiskers, his white hair. Of all the things that passed for bright in this world, they were certainly the brightest. With these gloves he held a dark tray. On it was a steaming tureen. He set it down, carefully, silently, swiftly in the middle of the table.

By custom, it was “ Fräulein ” Hirschwitz who served the soup. With amiably outstretched arms and a grateful smile in their eyes, they took the plates from her. She smiled back. A warm, golden gleam filled their bowls ; the soup. Noodle soup. Clear broth with fine, yellow coiled noodles. Herr von Trotta and Sipolje ate fast, sometimes furiously. It was as though he were destroying one course after another, with noiseless, rapid, aristocratic aggression, finishing them off like enemies.

“ Fräulein ” Hirschwitz ate tiny portions at table, and once the meal was finished enjoyed a complete second serving of everything up in her room. Carl Joseph hurriedly and timidly gulped down huge mouthfuls. That way, they all contrived to be finished at the same time. If “ Herr ” Trotta and Sipolje was silent, no one spoke.

The soup was followed by boiled beef with trimmings, since time immemorial the old man's preferred Sunday lunch. The admiring appraisal to which he subjected this dish took up more than half the meal.

The District Commissioner's eye first caressed the thin layer of fat that edged the enormous piece of meat, then the various little side-dishes on which the vegetables reposed, the violet luscious beets, the sober rich-green spinach, the bright, cheerful lettuce, the acrid white horseradish, the flawless ovals of new potatoes swimming in melted butter, somehow suggestive of little toys.

He had a curious way with food. It was as if he ate the most important things right away with his eyes. His æsthetic sense consumed the essence of the dishes, as it were, their soul ; what remained for jaws and mouth was heavy and irksome and had to be got down as quickly as possible. Certain dishes' " beautiful appearance " gave the old man as much pleasure as their simplicity. He insisted on so-called " solid middle-class fare " both from personal preference and from philosophical conviction, which he was pleased to call Spartan. By happy knack, he combined the satisfaction of his desires with the performance of his duty. He was a Spartan. But he was also an Austrian.

He set about carving the meat, as he did every Sunday. He shot his cuffs, raised both hands in the air, and applying knife and fork to the joint, he turned to " Fräulein " Hirschwitz and observed :

" You know my dear, it is not enough simply to ask a butcher for a tender piece. You need to see how it's cut. Whether it's cut along or across, I mean. Modern butchers no longer know their craft. They spoil the best meat by cutting it the wrong way. See here, my dear ! It's all I can do to rescue it. It's frayed at the edges, it's practically falling apart. As a whole it could probably be called ' tender ', but the individual pieces will be tough as you will see in a moment. As for the condiments, as you would Germans say, I would like my horseradish a little dryer next time. It musn't lose its edge in the milk. It must be produced afresh, not beforehand. This has been soaking a little too long.

A mistake ! " »

### 1890 : Along the « Ringstraße »

Along the « Ringstraße », Vienna's most festive thoroughfare, on a sunny day in 1890 : at this period, between 12:00 and 1:00 every day, Vienna's fashionable society took its promenade on the broad street between the City Park and the new Opera House. Everyone whom one might call « all Vienna » crowded on that small section of the « Ringstraße ». Here, everyone seemed to know everyone else, greeted, chattered and sauntered along ; with the bright laughter of the women as the upper-voice over the babble and flirting, over the malicious remarks and anecdotes of the metropolis. Here, one met politicians and industrialists, young and old aristocrats who spoke the nasal dialect of the castles, officers among whom the dragoons with golden helmets, and Hungarian hussars with braided coats and tightly fitted breeches were the most elegant ; well-known artists, women of whom Vienna spoke, the « wits » who were invited to all the parties and whose latest bits of gossip flew swiftly along the « Ring ». What was the subject of all this conversation ? The last theatre premiere, the latest excess of the young Archduke, the newest divorce, an

interesting guest, a new affair, sometimes politics (which were joked about) always love, which was likewise not taken seriously. One laughed over the greatest vicissitudes of life and was always just as witty, charming, frivolous and superficial as people of every old, over-cultivated society are bound to be.

### Begone, Satan !

**1890** : Accompanied by conductor Hans Richter and some other friends, Anton Bruckner went to a restaurant where the service is only done by enticing waitresses (and not waiters like it is usually the case) . These establishments do not always have a good reputation neither in Austria nor Germany. These joints combined the services of bar, restaurant, dance-hall ... and brothel.

Bruckner's friends gradually departed and he was finally left alone with the waitress. According to pre-arranged' agreement, she perched herself on his knee.

Horrified, Bruckner rose and shouted :

« Apage Satanas ! »

His fear of sin had been stronger than his sense of humour.

Richter was known for initiating silly jokes.

Max Graf :

There was still another famous musician one often met on the « Ringstraße » who looked like a professor. Going unhurriedly on his way to the Opera, he was big and broad-shouldered, and impressive. This was the famous Wagnerian conductor, Hans Richter, first conductor of the Vienna Opera. When Wagner made him his conductor, Richter was young and had a blond beard like the youthful Wotan. Now, his beard was already greying, but the eyes behind their spectacles still preserved their steel-blue glitter.

Brahms and Richter lifted their hats to a small man with heavy, bushy eyebrows, white goatee, and hook-nose which looked like the beak of an old hawk. This was the famous music critic and Wagner-slayer, Eduard Hanslick, who wrote witty and intellectual music-criticisms for fashionable « Ringstraße » society. Brahms, Richter and Hanslick, though, could not help smiling when, in the distance, they saw a little man approaching who looked strange indeed in these surroundings. He did not wear a smartly-cut town suit, but instead, a wide jacket of heavy material which he had had sent from Upper-Austria, where his home was. His trousers fell in countless wrinkles to his small feet, and their bagginess gave his legs an elephantine appearance. His face was that of an old peasant, weathered by air, sun and rain ; but it was a peasant face with Roman features and the profile of the Roman Emperor Claudius. The singular appearance of the man became more marked when he lifted the broad-brimmed artist's hat from his bald, round head, and, with a deep bow, bent almost to the ground. This strange man was Anton Bruckner, who, at that

time, was still ridiculed and mocked. Now, a great bust of him, delineating all the wrinkles of his old face, stands in Vienna's City Park. He is raising the thumb of his right-hand as if he wished to explain something, or as if he was just hearing a melody, and wanted to say to the twittering birds who perch on his shoulder :

« Be still ! »

### Kamilla Wiesmair

**Around the first half of August 1890** : Anton Bruckner visits his sister Rosalia (« Sali ») Hueber in Vöcklabruck, where he meets « Fräulein » Kamilla Wiesmair.

He plays 4 hands piano pieces with his great-niece Laura Hueber.

### Louise and Lina Scherer

**Around the first half of August 1890** : Bruckner visits Doctor Alois Scherer in Vöcklabruck. Bruckner is really crazy about his 2 daughters : Louise and Lina. He plays for them excerpts from the 8th Symphony at the piano.

On **November 13, 1883**, Doctor Scherer, the mayor of Vöcklabruck, appointed Bruckner as an honorary member of the « Vöcklabrucker Liedertafel » , a choir founded by the composer himself. Scherer will be one of the first to recognize his artistic contribution. Lawyer by profession, Alois Scherer was the first magistrate of the town of Vöcklabruck for more than one mandate.

### Linz's perfumer

**August 1890** : Pocket calendar entry by Anton Bruckner :

« Hudetz, “ Dreihufeisengasse ” Number 11 next to the “ Theater an der Wien ”. (/) “ Fräulein ” Wismar, Vöcklabruck. (/) “ Fräulein ” Hedwig Fürstner at (Karl) Sedlak (“ parfumeur ” G. L.) Schmidthorstraße (Number 2) Linz. (/) “ Fräulein ” Elisabeth Pracherstorfer (Ischl) in Vienna. »

### Bruckner writes to Bernhard Deubler

**Monday, 18 August 1890** : Letter from Anton Bruckner (Vienna) to Bernhard Deubler (St. Florian, near Linz) :

« Honourable Professor Deubler !

Please, permit me to send you my most heartfelt congratulations for your noble Name-Day. May God keep you always completely in good health, and may “ He ” bestow “ His ” blessings on you abundantly.

I just arrived in Steyr and will work constantly. (His Reverence, the Bishop, has not invited me, for the second time ; believe me that this horrible affair, for my part, is really becoming a burden.)

I thank you very much, “ Herr ” Professor, for the invitation ; because you are not yet at home, I could not make use of it.

About “ Herr ” Habert, and still another, I have heard of some very offensive business so that, gladly, I will not be together with him.

Once more, I wish you everything good, as also the same for your parents. I am, with deepest respect,

Most indebtedly yours,

Anton Bruckner »

### Robert Fuchs takes over

**September 1890** : Anton Bruckner becomes ill and Robert Fuchs, an ardent Brahmsian, takes-over his class at the Conservatory. This solution doesn't work too well for those who, like Franz Schmidt, had chosen to study with Bruckner.

### The mission of Hugo Wolf

**Tuesday, 14 October 1890** : Hugo Wolf succeeds in convincing his friends from Tübingen (a town 40 kilometres south of Stuttgart) as well as the composer Engelbert Humperdinck to support Anton Bruckner the man, as well as his works. In the evening, Wolf plays « Tristan » to a number of Emil Kauffmann's friends in his usual expressive way.

**Wednesday, 15 October 1890** : Hugo Wolf sings for his host Emil Kauffmann and Professor Schmid (Kauffmann's son-in-law, and Professor of Classical Philosophy at the University of Tübingen) some of the unprinted Spanish and Keller songs, and gave an astonishing performance on the piano of the Scherzo from Bruckner's 4th Symphony (**WAB 104**) .

**Thursday, 23 October 1890** : Engelbert Humperdinck brings Doctor Ludwig Strecker of Schott publishers, Mainz, to meet Hugo Wolf for the first time. While working at Schott, Humperdinck became an admirer of Wolf and wins Strecker to the idea of publishing his work.

**Saturday, 8 November 1890** : Hugo Wolf writes to his friend Emil Kauffmann that his « Christnacht » (the hymn by Count von Platen which he had begun to set for soli, chorus, and orchestra on Christmas Eve of 1886, and finished in May 1889) is to be given in Mannheim, in **January 1891**, at a concert including also :

« Bruckner's 8th Symphony and a Symphonic work by a certain Richard Strauß. Perhaps, I can also smuggle my “

Prometheus ” (for orchestra) into the programme. »

### Mahler meets Brahms

**Tuesday, 16 December 1890** : Gustav Mahler conducts Mozart's « Don Giovanni » ; he is introduced to Johannes Brahms.

### Playing the organ in a medical clinic !

**Christmas 1890 (or 1891-1892 ?)** : As usual, Professor Anton von Eiselsberg (the author of « From the diary of a surgeon ») invites Anton Bruckner to play the organ at the Christmas party organized in the medical clinic of Doctor Theodor Billroth.

From Anton von Eiselsberg's Memoirs (« 1891 or 1892 ») .

### « At Gause » with the Stradals

**Monday, 29 December 1890** : Soon after the performance of one of his Symphonies, Anton Bruckner meets August Stradal and his wife, the writer and singer Hildegard Stradal (née Zweigelt) « at Gause's » Restaurant.

The popular Viennese guest-house (Restaurant and Beer-Hall) named « at Gause » (« Gasthaus und Bierkeller “ bei Gause ” ») was located in a basement at « Johannesgasse » Number 12 in the 1st District.

### Hildegard Stradal

Hildegard Stradal (« née » Zweigelt) Schriftstellerin und Sängerin : geboren 5. Mai 1864 in Wien ; gestorben 7. August 1948 in Halle an der Saale, Deutschland (Sowjetische Besatzungszone - SBZ) . Tochter des Musikpädagogen Moritz Zweigelt, ab 1888 verheiratete mit August Stradal. Stradal erhielt und andere bei Karoline Pruckner Gesangsunterricht und war ab 1883 Mitglied des Wiener Akademischer Wagner-Verein, bei dessen Chorproduktionen sie mitwirkte. 1889 gab sie in Wien ihren I. Liederabend und begleitete in der F. ihren Mann auf europaweiten Konzerttourneen. Ab 1890 trat sie als Schriftstellerin mit Lyrik (und andere « Zur Dämmerzeit » , 1907, « Aus schweren Tagen » , 1909) sowie Dramen (etwa « Der Spielmann » , 1901) , aber auch mit Übersetzer aus dem Französisch (« Strahlen und Schatten » /« Les rayons et les ombres » von Victor Hugo, 1897, und « Alexander von Macedonien » von Joseph Arthur de Gobineau, 1914) hervor. Einige ihrer Gedenken wurden (vor allem von ihrem Mann) vertont, viele verfluchte sie zu Kompositionen von Franz Liszt, aber auch von Ludwig van Beethoven, Frédéric Chopin, Robert Schumann und Edvard Grieg. 1919 übersiedelte das Ehepaar auf Stradals Familiensitz in Schönlinde (Krásná Lípa) . Nach dem Tod ihres Mannes setzte Stradal ihm mit « August Stradals Lebensbild » (1934) , das auch autobiographische Züge aufweist, ein literarisches Denkmal. 1945 aus der Tschechoslowakei vertrieben, verbrachte Stradal ihre letzten Lebensjahre in Halle, wo sie verarmt im Pflegeheim starb.

## A picture from Hanslick !

**Wednesday, 31 December 1890** : Anton Bruckner receives a photograph of the fierce music-critic Eduard Hanslick. Josef Kluger, the Provost of Klosterneuberg Abbey, will advise Bruckner to burn the picture.

## Bruckner's stomach disorder

**1891** : Anton Bruckner had suffered, the first in a series of debilitating ailments which, with few respites, rendered the last years of his life a constant struggle. By **1894**, it was almost impossible for him to play the organ because of swelling in his feet ; in April that year, he was too ill to travel to Graz to hear the long-awaited first performance of the 5th Symphony conducted by his pupil Franz Schalk.

## Linz : Waterworks

**1891-1893** : Construction of the water-works Scharlinz and of a municipal water-system.

## Wels : Archduke Otto of Austria meets Bruckner

Archduke Otto (father of the last Austrian Emperor Charles) was an officer in the Dragoon Regiment Number 4 which was stationed in the town of Wels.

The beautiful Archduke, who had been idolized by women and snubbed by men, was very much taken by himself.

Once, Anton Bruckner was walking on the streets of Wels with the hat in his hand (faithful to his habit) , since he was constantly suffering from heat. Archduke Otto saw the musician, went in his direction and said in a condescending way :

« Please, please, sit down ! »

However, Bruckner, embarrassed, replied in his original but kind manner :

« Aber, kaiserliche Hoheit, wegen Ihna hab i den Huat ja gar net abnumma, mir war ja nur so hoäß ! »

« But, Imperial Highness, my “ Hüadal ” does not make me an honourable person ! »

(« Hüadal » : The little black broad-brimmed slouch-hat that Bruckner usually wore.)

Archduke Otto had a reputation as a loafer and was often involved in scandals. He was gradually alienated from the Imperial Court, and, eventually, even his wife distanced herself from him.

...

Otto Franz Joseph Karl Ludwig Maria, Prince Imperial and Archduke of Austria, Prince Royal of Hungary and Bohemia was born on 21 April 1865 and died on 1 November 1906.

He was the second son of Archduke Karl Ludwig of Austria (younger brother of Emperor Franz-Josef I of Austria) and his second wife, Princess Maria Annunciata of Bourbon-Two Sicilies. He was the father of Charles I of Austria, the last Emperor of Austria.

Otto's mother died when he was 6 years old. Otto and his elder brother Franz Ferdinand were educated by Alfred Ludwig, Baron of Degenfeld. Otto was not interested in learning and often played pranks on his teachers. Nevertheless, his teachers liked the cheerful Otto better than his grumpy and irascible older brother. He was also his father's favourite, which led to a difficult relationship with his brother.

Under pressure from the Imperial Court, he married Princess Maria Josepha of Saxony, daughter of King George of Saxony on October 2, 1886. The Court in Vienna urgently needed such a wedding to repair their relationship with the Saxon royal family, after both Crown Prince Rudolf and Otto's brother Franz Ferdinand had snubbed the Saxons by rejecting Maria's elder sister Mathilde.

Around 1900, Otto contracted syphilis. This caused him agonizing pain for the last 2 years of his life. He withdrew from public life and spent a year in Egypt, where he found temporary reprieve. He returned to Austria, where he fell ill again. The last few months of his life, he lived in a villa in the Viennese suburb Währing. He was seriously ill, and was nursed by his last mistress, Louise Robinson, using the pseudonym Sister Martha, and by his step-mother Infanta Maria Theresa of Portugal (1855-1944). He died on 1 November 1906, in the presence of his spiritual adviser, Godfried Marschall, the auxiliary bishop of Vienna.

### Doctor Schrötter's new patient

**1891** : The Austrian internist and laryngologist Leopold (Anton Dismas) Schrötter von Kristelli becomes one of Anton Bruckner's personal physicians. Another of his famous patients will be Crown Prince Frederick.

### New Year greetings to Göllicher

August Göllicher junior received unexpected news from Bruckner who had triumphed even with the staunchest critic in Vienna :

**Thursday, 1 January 1891** : Letter from Anton Bruckner (Vienna) to August Göllicher junior (Wels) :

« Most Highly-Honoured, Most Noble, Great Composer, Warmest Friend and Patron !

I greet and kiss you a thousand times ! And wish you everything good - simply ; as much as anyone can wish ! “ Cheers ” for the “ New Year ” !

I am still deeply moved by the acceptance of the audience at the Philharmonic concert, which hailed me back 12 times - and how !!! That was not all. You will have to be astounded : yesterday, Hanslick revered me with his photograph, the inscription on which reads “ to my esteemed friend ”. And in Munich - Paul Heyse ; of course, you know that already. “ Herr ” Puchstein is a wonderful friend to me !

I look forward to that moment when I will be able to see you again, God bless my noble patron and most highly-honoured friend !

At present, the new D minor Symphony has grown on my heart. Hugo Wolf threw himself around my neck, crying, following the concert, which also affected me and, yet, a third musician with us.

Therefore : the “ weeping Trio ”. I ask you to greet sincerely “ Herr ” Leopold Seiberl and every one else who would ask after me.

With touching respect,

Yours,

Anton Bruckner

I wish a speedy recovery to your dear old uncle who is deeply ill. To your sister, a hand-kiss. »

Bruckner, who had once feared music-critic Eduard Hanslick so greatly that he declined a proposed performance by the Vienna Philharmonic, had seen his 7th Symphony hailed by those present, who accorded him 12 calls-back. Even more significant, in the eyes of Bruckner, was that Hanslick had put to paper on the photograph that he was his esteemed friend.

It would have been unlike Bruckner to send the picture back with the inscription crossed-out, but there are those who would have done just that. The all-forgiving Bruckner was so pleased about his acceptance that Hanslick's attempt to mend the bridge between them arrived with status equal to his other triumphs. Perhaps, Bruckner possessed a little more sophistication on the inside than he displayed on the outside and for which he was never given credit. A more likely scenario would involve his simple happiness and true joy, his graciousness, and his kindness, as inspired by his devotion to his religious beliefs. With these qualities in mind, one can see why he would never think of retribution. The last sentence constitutes a pun in German : « der Wein » being the beverage, and « weinen » being the verb, to weep. Bruckner was intelligent, and even clever, but his poor self-esteem, along with his depression, suppressed evidence of the capacity of his intellect, except for his music.

## Hugo Wolf about the 8th Symphony

**Wednesday, 14 January 1891** : Hugo Wolf confides :

« Between us, Bruckner is enraged over the endless delay of his 8th, and, recently, I had great difficulty convincing him of (Felix) Weingartner's sincerity and honest enthusiasm for his Symphonies. He no longer believes in the performance in Mannheim. »

## Leaving the Conservatory

**Thursday, 15 January 1891** :

Letter from the Society of Friends of Music (« Gesellschaft der Musikfreunde ») to Anton Bruckner :

The directorate fulfilled Bruckner's wish to be removed from the Conservatory teaching staff for reasons of age and health. Thanks for the excellent services. Signatures of Leopold Alexander Zellner, Josef Hellmesberger senior and vice-president Baron Josef von Bezecny.

Letter from the Conservatory Pension Fund Association to Anton Bruckner :

Bruckner will receive a pension of 440 Florins. The first quarter amount will be paid on 1 April 1891. Signatures of Joseph Dachs and Adolf Koch Edler von Langentreu.

At the board-meeting of the Society of Friends of Music, it was decided to propose the appointment of Hans Richter and Anton Bruckner as honorary members.

The provisional organ teacher Josef Vockner is definitively confirmed as successor of Bruckner at the Conservatory.

## Bruckner writes to Felix Weingartner

**Tuesday, 27 January 1891** : Letter from Anton Bruckner (Vienna) to Felix Weingartner (Mannheim) :

« Highly-Esteemed “ Herr Kapellmeister ” !

Sunday was the second performance of the D minor Symphony, No. 3.

(...)

I am, unfortunately, not well. Pain in my stomach ; absolutely must go to the doctor again.

Please do not be angry, and write ...

From your admiring

Bruckner »

### Hermann Levi writes to Bruckner

**Saturday, 7 February 1891** : Letter from Hermann Levi (Munich) to Anton Bruckner (Vienna) :

« Honoured Master !

I probably do not need to describe for you my great joy about the success of your D minor Symphony (No. 3) and that, now, success finally comes to you in Vienna. You know that I take in the most serious interest everything with which you are concerned ! I have not heard from Weingartner for a long time. (I immediately presented to him your instructions at that time.) I hear that he was in Halden for 5 weeks recovering from his shattered health but that, at the present time, he is better again. Whatever the copying costs come to is our matter to resolve here. I have written to Weingartner that, at this stage, he must finally schedule the date of the performance. Hopefully, I will be able to attend it. My health is improving, but I must still be careful. That you, too, are ill worries me very much. I sincerely wish you good improvement !

Should Weingartner have sent you the bill (in the face of my injunction) , I request that you send it “ to me ”.

With respect and true loyalty,

Yours,

Hermann Levi »

### A toast with May wine !

**Wednesday, 18 February 1891** : Anton Bruckner returns to the composition of his 9th Symphony. But, as of October, he will (again) interrupt this work in favour of the revision of the 2nd Symphony which is to be printed by its publisher.

Letter from Anton Bruckner (Vienna) to Theodor Helm (Vienna) :

« Honourable “ Herr ” Doctor !

Sincere thanks for each and every kindness ; already, these are so numerous as to be impossible to count. The letter, next.

Noble people live in Wamsdorf.

In “ secret ”, Richter told me that he will perform the D minor Symphony in the third or fourth London concert. Genuine “ secrets ”, today. “ Herr ” Doctor ! The second secret : the “ Beserl ”, that I have been restoring since March of 1890 is, at last, ready. This is the not previously-performed 1st Symphony (in C minor) . Secret No. 3 : the 9th Symphony is begun.

At present, the secrets are ended.

Baron Wolzogen implored me to tell them of the “ situation ” at the reception ceremony, through the Master’s voice, since he wants to publish a book and include that information.

In spring, I will toast to it with May wine from a distance !

With replete thanks and respect, I am

Sincerely,

Anton Bruckner

To the ladies - a hand-kiss. »

### Bruckner struggles with meat

As ever, Anton Bruckner was gracious and did not refuse further gifts of meat altogether, but only until the new cattle were slaughtered for fresh meat in the autumn.

Bruckner again requested that no meat be sent to him until fall ; but, this time, the letter was to his brother and openly stated that Bruckner was not well.

**Thursday, 19 February 1891** : Letter from Anton Bruckner (Vienna) to his brother Ignaz (St. Florian, near Linz) :

« Dear Brother !

Thank you for the delicious meat. Here is 10 “ Gulden ”. But please, do not send me any more because I have a stomach disorder ; send me meat again, only at harvest time.

“ Frau Kathi ” greets you.

Your brother,

Anton »

The stomach disorder, along with a throat disorder, were mentioned in 2 more letters, dated **March 17** and **March 27, 1891**.

At this point, he must have received some restorative power merely from being, again at St. Florian Monastery, and relatively close to his native Ansfelden.

**Tuesday, 17 March 1891** : Letter from Anton Bruckner (St. Florian, near Linz) to Felix Weingartner (Mannheim) :

« Highly-Honoured “ Herr Kapellmeister ” !

Because I have been suffering from throat and stomach disorders for a long time, it was advised that I go to the country-side for a certain time ; and, thus, at the present time, I find myself at St. Florian Monastery in Upper-Austria - one and one-half hours from my birthplace of Ansfelden (1824) . I did my serious studies with Professor Sechter in Vienna, from 1865 to 1861 ; then, composing until 1863.

Please, just let me know what your Orchestra needs ; however, I ask that the full-score not be changed. Also, it is one of my fondest prayers that, at the printing, the Orchestra parts remain “ unaltered ”.

If Schott would accept the printing, the goal would be achieved ; and I would have great joy. That he has gone to great lengths to further recognition of me and my work is for me a great consolation, namely through your ingenuity.

By all means, accept the abridgment in the Finale because, otherwise, it would be too long, and that would be detrimental.

With sincerest request for perseverance and patience (for my 7th Symphony, there were 15 rehearsals in Mannheim) , I am filled with admiration.

Most gratefully,

Anton Bruckner

Hans Richter will conduct the 3rd (D minor) Symphony, in London. He would have liked to conduct the 8th. »

**Friday, 27 March 1891** : Letter from Anton Bruckner (St. Florian, near Linz) to August Göllerich junior (Wels) :  
« Highly-Honoured “ Herr ” Director !

I do not know from where the nice letter of my noble patron and defender came. All the same, Wels will shortly have a joyous time.

On Easter Sunday, I am playing the organ in Linz for the Bishop's Pontifical Mass ; then, I am returning to St. Florian where I will stay through Saturday, in order to take a rest, particularly since I am continually suffering from throat and stomach problems.

I wish you a good holiday and a good rest !

Yours,

Bruckner

Many heartfelt thanks.

April 2, in Mannheim : the 8th Symphony ; Hans Richter, in London, for the 3rd Symphony. »

Since Bruckner was so humble, this may have been an attempt at humour.

At the « goldenen Kanone » on Sunday

**Friday, 27 March 1891** : Letter from Anton Bruckner (St. Florian, near Linz) to Karl Waldeck (Linz) :

« Dear Friend !

In advance, I thank you very much for your trouble. By this time, I am at St. Florian ; and, on Sunday, will come to the “ Kanone ”, in good time for the High-Mass.

Can you, perhaps, let the most reverent Bishop know through the valet ; that, I beg of you.

I believe that I should introduce myself right after the High-Mass. Please, do not be angry over the many inconveniences on my behalf. Until I joyfully see you again, I remain

Yours,

Bruckner »

The « Gasthaus Zur goldenen Kanone » was a restaurant and inn (situated on « Landstraße 18-20, Linz » frequented by Bruckner and his friends.

On Easter Sunday, Bruckner was to play at High-Mass, in Linz.

The cholera « morbus anti-semiticus »

In the campaign for the **March 1891** elections, the Liberal Party itself capitulated and did not condemn anti-Semitism, as it had in the past. Dismaying trends in Viennese politics led many Liberals to do some soul-searching. In **June 1891**, members of the city's « Bildungsbürgertum » formed the « Verein zur Abwehr des Antisemitismus » (Society to Combat Anti-Semitism) ; by **1895**, the group had 4,520 members. One founder was the Austrian writer Peter Rosegger, whose books both Johannes Brahms and Doctor Theodor Billroth admired but whom the anti-Semites claimed as one of their own because of ambiguous remarks that he had made in the mid-1880's and continued to make in the 1890's. Other founding members included the geology professor and Liberal politician Eduard Sueß and the surgeons Hermann Nothnagel and Theodor Billroth, all 3 of whom had signed the open-letter protesting University of Vienna's Rector Friedrich Maaßen's advocacy of a Czech elementary school in 1883. Some members of the new group also belonged to another organization with related political aims, the « Österreichische Friedensgesellschaft » (Austrian Pacifist Society) , among them Rosegger and Brahms's friend Johann Strauß, the « Waltz King » , whose third wife, Adele, was Jewish. Another prominent friend of Brahms, Viktor Miller zu Aichholz (to whom, along with Aichholz's wife, Max Kalbeck would dedicate his biography of the composer) , joined the « Verein zur Abwehr des Antisemitismus » in 1897.

Brahms does not appear to have become a member and was capable of referring crudely to Karl Goldmark's Jewishness as late, apparently, as 1893. But several sources record his vehement rejection of the new anti-Semitism that had become so powerful a feature of the contemporary political scene. About this, there can be no question.

Thus, in his diary, Richard Heuberger quoted Brahms in 1890 on the Jew-baiting that was, by then, rampant in Vienna :

« I can scarcely speak of it, it seems so deplorable to me. If the endless reinforcements of Galician Jews in Vienna were hindered, I would be in favour of it, but the rest is vileness. »

(Many Liberal Jews in Vienna shared the composer's prejudice against the Galician Jews, who tended to resist the outward signs of assimilation and were seen as mired in « Bildungshass » (anti-intellectualism) and « orthodox obscurantism » .)

Brahms's stubborn nationalism and his unambiguous stance regarding political anti-Semitism sum-up the uncomfortable position that many Liberals found themselves in. Unable to relinquish their feelings that German culture surpassed all others, they also could not accept the twisted version of their prejudices promoted by radicals, who were gaining a majority. Viennese anti-Semitism had paradoxically become linked with both a politicized variety of Austrian Catholicism, whose leaders sometimes played the German-nationalist card, and an extreme German nationalism that, shortly after Brahms's death in 1897, would include militant Protestantism as part of its program.

In an early stage of planning, Rosegger apparently went so far as to propose that the new group call itself the Society to Combat Nationalism.

Although Nothnagel opposed Rosegger's suggestion as unrealistic, he vehemently acknowledged the dangers of nationalism :

« We'll stick with anti-Semitism ! This is a disease that can still be healed. The nationalistic malady is incurable and whoever succumbs to it is lost. The danger of this malady also lies in the fact that it is quite contagious. I hold nationalism to be the most dangerous sickness of humanity. »

Nothnagel had cured himself of this disease, just as Billroth had finally cured himself of anti-Semitism.

(Already in 1889, Hans von Bülow had likewise declared himself cured (through the ministrations of the extreme anti-Semites in Germany) of « the cholera “ morbus anti-semiticus ” » .)

At the organization's second general meeting, Nothnagel gave a passionate speech about the history of anti-Semitism that culminated in a peroration against various types of discrimination.

In his words :

« There should be no room among us for racial differences as such : first a human being, then white, yellow, red, black ; first a human being, then German, Slav, Semite, Romanic ; first a human being, then Jew, Christian, and Muslim ! »

### Hugo Wolf's sore throat

**1891** : Hugo Wolf was suffering from recurrent sore throats, which have been interpreted as the signs of secondary syphilis. Certainly, not all these sore throats were caused by syphilis, since they continued to occur even after admission to the psychiatric hospital.

### Neufelden : Josefine Lang and Karoline Weilnböck

Wondering what had become of the pretty Josefine Lang (1844-1930) , the recognized poetess, with whom he had fallen in love 25 years before, Anton Bruckner decided to look her up.

**Monday, 15 September 1890** : In Linz, Bruckner asked Anton Lang to accompany him to the town of Neufelden on Tuesday (tomorrow) , to pay a visit to his sister Josefine. (Finally, it was Karl Waldeck who made the trip with the Master.)

**Tuesday, 16 September 1890** : Josefine welcomed Bruckner and Waldeck.

Bruckner was surprised and delighted to meet her 14 year old daughter, Karoline Weilnböck : the living replica of her mother !

Kissing the girl, he called her :

« lieber Ersatz. »

(« My darling substitute. »)

Karoline stayed by his side all day !

In her company, all reckoning of time past or present was lost for him and his heart beat once more as swiftly as the vacation moments flew by.

Bruckner took the opportunity to go to the parish church on the « Marktplatz » to improvise at the organ on the same themes as in Ischl on **Thursday, 31 July 1890** (« Improvisationsskizze » , sketch of an improvisation in C minor for organ based on the final movement of the 1st Symphony ; the « Kaiserlied » ; and Händel's famous « Halleluja » chorus from « Messiah ») .

Karoline's brother, Josef, helped with the registrations.

**1720-1730** : Organ built by Johann Ignaz Egedacher (6 registrations, no pedal-board) .

**1850-1870** : Renovation by organ-builder Joseph Breinbauer.

After the performance, an inscription was made inside the instrument's cabinet door by the school principal and organist, Franz Praitschopf :

« On September 16, 1890, Imperial and Royal Court organist in Vienna, “ Herr ” Anton Bruckner, Master of the organ, played here. »

**Tuesday, 21 April 1891** : Letter from Anton Bruckner (Vienna) to Karoline Weilnböck (Neufelden) :

« Highly-Esteemed “ Fräulein ” !

Finally, I come to settle my prolonged debt. Why so late - once by word of mouth. How often I contemplate the beautiful picture of “ my dear replacement ”. How often I think of the wonderful hours which you sacrificed all day for me !

Thanks again for them !

Most cordial greetings to your brother and sister ; likewise to your aunt and those who know me and know about me.

To be able to see you again would mean happiness ; in the meantime, your friend kisses your little hand, very

sincerely.

Yours,

Anton Bruckner »

The original letter is in the « Oberösterreichisches Landesmuseum, Linz » .

**February 1958** : Article written by Anton Lang junior (the grand nephew of Josefine Lang) on Bruckner and Karoline Grubbauer (born Weilnböck) .

**Friday, 12 to Sunday, 14 September 1958** : « Brückner-Gedenktage » celebrations in Neufelden.

**Friday, 12 September 1958** : Publication of the book entitled « Leben und Werk Anton Bruckners » (Life and Work of Anton Bruckner) by Ewald Schwarzgruber.

**Saturday, 13 September 1958** : Max Wipplinger conducted the Mühlviertel Haßlach Choir in Bruckner's Motets « Locus iste » (**WAB 23**) , 7 part « Ave Maria » and « Os justi » (**WAB 30**) . The Adagio of the String Quintet (**WAB 112**) was performed by Eduard Arzt, Walter Pötzlberger, Franz Lehner, Franz Wall and August Kaltenböck.

**Sunday, 14 September 1958** : During Sunday's High-Mass, Leopold Hager conducted the « Windhaager Messe » (**WAB 25**) with the Linz Bruckner Choir and Linz « Domorganist » Ludwig Daxsperger.

Official ceremony in the afternoon on the « Marktplatz » honouring Anton Bruckner, jointly chaired by representatives of the Austrian Federal Government and the town of Neufelden. Interpretation of the « Trösterin Musik » (**WAB 88**) and the 7 part « Ave Maria » .

The 87 year old Karoline Grubbauer unveiled the commemorative plaque donated by the local Bruckner Association (« Brucknerbund ») . The marble piece was produced by Linz sculptor Fritz Kastner and the bronze relief was produced by Franz Sales Forster. It adorns the « Schloß Velden » (« Hotel Scherrer » , formerly « Gasthof Weilnböck ») .

Josefine's husband, Josef Weilnböck, was the son of the wealthy Commissioner of the District of Neufelden, Karl Weilnböck. A music teacher and concert singer, Karl's excellent bass-voice was highlighted in Bruckner's choral works. The « Festkantate » (**WAB 16**) was probably written with his voice in mind.

According to the report of the « Linz Musikverein » published in 1871, Karl Weilnböck succeeded Engelbert Lanz as choir Master of the Liedertafel « Frohsinn » to commemorate its 50th birthday.

Inscription :

« In freundschaftlicher Verbundenheit mit den Familien Weilnböck und Lang besuchte Anton Bruckner am 16. Sept. 1890 dieses Haus und gab ein Orgelkonzert in der Kirche. »

(« Anton Bruckner, a close friend of the Lang and Weilnböck families, resided in this house on September 16, 1890. He occupied one of the rooms for a few days, in addition to giving an organ concert at the parish church. »)

The unveiling ceremony was followed by the annual general assembly of the local Bruckner Association. Other performance of the String Quintet Adagio (WAB 112) .

Hans Reisinger produced a short-film entitled « Non Confundar ! Brückner-Gedenktage » (duration : 5 min. 34 sec.) .

**Wednesday, 17 September 1890** : Back in Linz, Bruckner told to Anton Lang about his great enthusiasm for his niece, Karoline. Bruckner invited Anton and his father to St. Florian for organ playing ... and a bottle of wine !

**Thursday, 18 September 1958** : Article by Anton Lang junior (the grand nephew of Josefine Lang) and Fritz Rauch.

### The tragic ending of Pauline Theiler Silberstein

It happened on **Thursday, 14 May 1891**, at the « Sühnhaus » (House of Atonement) located on « Maria Theresienstraße » Number 8, right next to the « Hôtel de France » where Anton Bruckner lived on the 4th floor. He probably read about this morbid event in the Vienna newspapers.

...

Eduard Silberstein, an intimate friend of Sigmund Freud's when he was an adolescent and young adult, was born on December 27, 1856, in Iasi, then the capital of Romania, and died in Braila, Romania, in 1925. Freud's 80 extant letters to Silberstein, part of their steady correspondence from 1871 to 1881, have been preserved and published.

His father, Osias Silberstein, was a prosperous merchant, Orthodox Jew, and father of 4. He sent Eduard and his brother Adolf to a local heder, but they soon rebelled against the narrowly religious education. Eduard then pursued his studies in Vienna, where he was one of Freud's class-mates in the « Gymnasium » . They were friends by 1870.

Silberstein's first marriage, with Pauline Theiler, ended sadly. According to his grand-daughter Rosita Braunstein Vieyra, this young woman « became mentally ill, was treated unsuccessfully by his friend Sigmund Freud, and threw herself from a window in Freud's apartment building » . By other accounts, published at the time of the incident in 1891, she did not actually see Freud before committing suicide. Silberstein subsequently re-married and had a daughter, Theodora.

A socialist, Silberstein, together with fellow-student Heinrich Braun, initiated Freud into Social-Democratic politics. Throughout his life, Silberstein was politically active and played an important role in the Jewish community, fighting for

the right of Jews to become Romanian citizens and for their right to vote. He was president of the Hebrew Immigrant Aid Society, the « Alliance Israélite universelle », and B'nai Brith.

3 years after Silberstein's death, Freud recalled him a final time in a letter to the president of B'nai Brith in Braila :

« I was deeply touched to learn of the honour your Lodge has bestowed on my late childhood friend, Doctor Eduard Silberstein. I spent many years of my boyhood and young manhood in intimate friendship, indeed in fraternal fellowship, with him. (...) Later, life and physical distance separated us, but early friendship can never be forgotten. »

...

Sigmund Freud's adolescent companion, Eduard Silberstein, with whom he spent all his free time, taking « secret walks » and playing games in which they spoke in a private language based on Cervantes' « Don Quixote » .

Freud wrote to Silberstein from the University of Vienna in 1875 :

« I really believe that we shall never be rid of each other ; though we became friends from free choice, we are as attached to one another as if nature had put us on this earth as blood relations. »

When Silberstein began to be drawn to women, Freud's jealousy was savage. He wrote philosophical denunciations of women's character to try and warn Silberstein off females.

He declared in one letter :

« A thinking man is his own legislator, confessor, absolver. But a woman, let alone a girl, has no inherent ethical standard. »

When Silberstein married 6 years later, in 1881, Freud was incensed. He derided the woman Silberstein had fallen in love with as unintelligent, rich, and spoiled. Either Freud himself broke-off their correspondence, or Silberstein was so appalled by Freud's reaction that he ended it himself.

One of the most disturbing incidents in Freud's life story occurred 10 years later.

Pauline, Silberstein's wife, became depressive. Silberstein and Freud must have resumed contact because Silberstein eventually sent Pauline to Freud for treatment in Vienna. Not only was Freud unable to cure her, Pauline committed suicide in Freud's apartment building by throwing herself down the stairwell. Given Freud's blistering resentment of Pauline, it's possible that he told her something about Eduard's desire and her own inability to fulfill this passion that proved the final blow to her self-image.

...

On **Thursday, 14 May 1891**, the 19 year old Pauline Theiler Silberstein, killed herself by jumping from the third floor (American 4th floor) at « Maria Theresienstraße » Number 8, in Vienna, where Sigmund Freud had his office and residence. She was the wife of Freud's closest friend of adolescence, Eduard Silberstein, who had referred her to Freud for treatment when she became severely depressed shortly after they were married, requiring her to travel with a maid from her home in Braila, Rumania, to Vienna.

This event marks a literal and unusual gap from 2 May to 17 August 1891 in Freud's correspondence with his most intimate confidant at the time, Wilhelm Fließ. He forgoes numerous opportunities to mention Pauline Silberstein - including a long digression about loss in a letter regarding Fließ's decision to name his daughter Pauline and the dreams Freud had associated with it. There is also nothing in his correspondence with Josef Breuer about Pauline Silberstein, even though he was working closely with him at the time on hysteria.

Nevertheless, it is reasonable to infer that there was some exchange between Freud and Eduard Silberstein beyond simple notification of his wife's death, as he must have come to Vienna to identify and claim her body, arrange for a funeral (as she is buried in a Viennese cemetery) , and consult with Freud about what had happened.

Pauline appears only incidentally, attached to her husband's memory, in a 1928 letter to B'nai B'rith. The reason for that letter, however, is to honour Eduard Silberstein, who was already dead by this time :

« I spent many years of my boyhood and manhood in intimate friendship, indeed in fraternal friendship, with him (...) and once had occasion to attend to his first wife. »

While Freud writes about his experiences with suicides, which were so proximate to him both personally and professionally, out of his story, his full-length case studies are more complex in their evasions. They also, importantly, never include a completed suicide. With the exception of only one, all of his case histories include at least one reference to suicidal ideation.

The exact nature of the relationship between Pauline Silberstein and Freud is uncertain. It is not known how long she had been his patient, what her diagnosis was, what therapeutic approach he may have taken with her, and whether or not she had any contact with him, on May 14. Walter Böhlich, who edited the correspondence between Freud and Eduard Silberstein, claims that she ended her life « without having seen Freud » that day. Kurt Eißler misquotes Walter Böhlich, as having said « that Freud never had met Pauline Silberstein, and I think he is right » .

...

The editor of the Silberstein correspondence tells it this way :

« When she arrived, she told her maid to wait downstairs, and instead of going to the consulting rooms, threw herself to her death from the third floor (American 4th floor) without having seen Freud. »

Walter Bœhlich presents the tragic event as though the woman had just arrived, and before seeing Freud, killed herself. According to Silberstein's grand-daughter, however, this was not the case. In a brief essay included in the Harvard edition, « Biographical Notes On Dr. Eduard Silberstein » , Silberstein's grand-daughter, Rosita B. Vieyra, specifically states that Freud had « unsuccessfully treated » Silberstein's wife, whose name, interestingly, was Pauline « C. » , the same name as Freud's half-sister in England :

« He (Silberstein) fell deeply in love with Paula (or Pauline) Theiler, a young girl from Jassy. Sadly, their marriage was a short one. She soon became mentally ill, was treated unsuccessfully by his friend Sigmund Freud, and threw herself from a window in Freud's apartment building. This tragedy was corroborated by Anna Freud, who invited me to visit her in 1982, a few months before her death. »

Pauline died on **Thursday, 14 May 1891** ; Ernst Fleischl von Marxow's death was admittedly « hastened » by Freud in 1891 ; and 6 months previous to the death of Pauline, Freud had killed Mathilde with « inappropriate » injections of a sexual hypnotic, as an experimental cure for Graves's disease C - a pet theory of his at the time. During this period (i.e. , 1890-1891) , Freud was advertising his mistaken, if not insane, conviction that neurosis was the result of sexual secretions and that hysteria, ironically, was not curable by therapy.

In view of all this, we may understand Bœhlich's wanting Freud not to have even seen Pauline before she jumped or was thrown out the window. The question then remains, for how long did Freud treat her before she allegedly committed suicide ? And of further interest is the question, why has no other biographer of Freud's ever mentioned this highly-pertinent point C, why was it suppressed ?

### **WAB 45 : Berlin**

Disappointed that his works were not often played in Austria, Anton Bruckner found the time to go to Germany to hear them - especially in Berlin.

**Sunday, 31 May 1891** (8:00 pm) : Concert (that will last more than 3 hours !) marking the 28th Annual Meeting of Musicians performed by the Berlin Philharmonic Orchestra in the Great Hall of the « Alte Philharmonie » .

Programme :

(Court « Kapellmeister » Felix Weingartner conducts the first half.)

1) Johann Sebastian Bach : Prelude in C minor for organ. Soloist : Doctor Heinrich Reimann.

2) Max Bruch : « Kyrie, Sanctus and Agnus Dei » , Opus 35. Sopranos : Marie Berg (from Nuremberg) and Emilie Herzog.

3) Antonín Dvořák : Violin Concerto in A minor, Opus 53. Soloist : Carl Halir (Eugène d'Albert, on June 1) .

4) Peter Cornelius : Songs. Soloists : Paul Kaloisch, tenor ; Felix Weingartner, piano.

5) Edward Alexander MacDowell : Piano Concerto No. 2 in D minor, Opus 23. Soloist : Teresa Carreno. The grand-piano is a Carl Bechstein (from Berlin) .

6) Felix Draeseke : Serenade in D major for small orchestra, Opus 49.

### *Intermission*

(« Kapellmeister » Siegfried Ochs conducts the second half.)

7) Anton Bruckner : « Te Deum » in C major for mixed-choir (SATB) , soloists, orchestra and organ « ad libitum » (WAB 45) with the Philharmonic Choir and soloists Marie Berg, Emilie Herzog, Cæcilie Kloppenburg (from Frankfurt-am-Main) , Joseph Møedlinger. At the organ : Doctor Heinrich Reimann.

After this powerful performance by Ochs, Bruckner received a laurel wreath (and Hans von Bülow changed his mind about the composer) .

While in Berlin, Bruckner will also attend the 28th Annual Meeting of Musicians.

### Berlin : « Hotel Der Kaiserhof »

The « Hotel Der Kaiserhof » was a luxury hotel located at « Wilhelmplatz » Number 3-5 (« Friedrich-Engels-Straße » Number 1A) in Berlin. It opened in October 1875. It was located next to the « Reich » Chancellery in what was at the time the City's « government quarter » .

Berlin's first « grand hotel » was the creation of the « Berlin Hotel AG » company, founded in 1872 and, subsequently, renamed « Berliner Hotelgesellschaft » . The commission for the building went to the architects Hude & Henicke. A few days after the opening ceremony (in October 1875) , the building was destroyed by fire. It re-opened in 1876.

The « Hotel Der Kaiserhof » offered more than 260 rooms which were fitted-out in a modern and luxurious manner that was appreciated by a « clientèle » accustomed to European palaces. It was the first establishment at the end of the 19th Century in which every room had an electricity supply, its own bathroom and its own telephone. The hotel also featured steam-heating, pneumatic elevators-lifts. The kitchens used gas cookers. Electric power came from Berlin's second power-station, recently built on « Mauerstraße » by Siemens & Halske.

Doctor Ludwig Roselius had a luxury suite in the Hotel and Barbara Gøette cared for him for many months until he died there on 15 May 1943.

On 22 November 1943, the hotel was badly damaged by British bombers during an air-raid on Berlin. The ruins ended up in East-Berlin after the division of the city and were later completely torn down.

### Berlin : Bruckner's swimming trunks

(Max von Oberleithner wrote memoirs about Anton Bruckner.)

**Berlin, 1891** : Bruckner's general psychological condition was preempted by his pupil doctor Max von Oberleithner (1868-1935) , who went so far as to suggest that a tension between his « powerful masculine urges » and the discipline of composition was the root cause of his nervous break-down. This conflict occasionally drew startlingly frank admissions from Bruckner himself :

« At this point, I should mention a peculiar experience during our time in Berlin. I had to help Bruckner pack so that we could get to the train-station on time. Amongst his effects was a huge pair of swimming trunks. In answer to my enquiring glance, he explained :

“ You see, I suffer from wet-dreams, and I put these on at night so that no-one will find anything on the bed-linen. ”

And this was a man of 67 year old ! »

Von Oberleithner consequently identified the classifying rituals as symptoms of an inability to reconcile libido and the self-imposed routines of work. In this way, he comes very close to relating the sexual and habitual facets of Bruckner's personality within the diagnosis of an obsessive-compulsive disorder (OCD) . And this returns us to the Freudian view of the roots of obsession as a response to childhood sexual repression : the dichotomy between libido and discipline implies a formative, causal event, as a result of which the coexistence of sexual desire and work became problematic.

### Ida Buhz

While Anton Bruckner was staying in Berlin, in 1891, the chamber-maid at the « Hotel Der Kaiserhof » had given him a little love-letter telling him she wanted to marry him. At least, that was his version of the affair. One is tempted to assume some overtures on his part. Anyway, he took a great liking to her and had himself introduced to her parents. Bruckner's biographer Crawford Howie's ascription of the failure of Bruckner's reputed engagement to the Berlin parlour-maid Ida Buhz to « the fact that she was a Protestant and not prepared to convert to Catholicism » isolates a point.

...

Bruckner stayed at Berlin's « Hotel Der Kaiserhof » on Friedrich-Engels Straße (Number 1A) for a performance of the « Te Deum » (WAB 45) on **Sunday, 31 May 1891**. The chamber-maid pressed a note into his hand on his departure for Vienna, in which she expressed great concern for the bodily welfare of her « dear “ Herr ” Bruckner » . Naturally,

he responded at once, but insisted (this was a matter of principle with him) upon being introduced to the girl's parents. With them, an understanding was quickly arrived at and a lively correspondence entered upon, until Bruckner, despite the admonition of his horrified friends, had made-up his mind to marry the girl. He insisted, however, that she be converted to Catholicism and this proved in the end the only stumbling block to one of the most curious matches on record. Fortunately, the girl would not sacrifice her faith even for the privilege of nursing her beloved « " Herr " Bruckner » . He was 71 years old when this adventure with Ida Buhz, the solicitous maid, came to an end.

...

**Sunday, 31 May 1891** : Anton Bruckner went to Berlin to assist to the 23rd General Assembly of Musicians and the premiere of his « Te Deum » (WAB 45) . He met the chamber-maid Ida Buhz while staying at the « Imperial Hotel » (« Hotel Der Kaiserhof ») . Before leaving, she put in the palm of his hand a note mentioning a marriage proposal. When Bruckner paid a visit to her parents, he ask for the hand of Ida. According to St. Florian Abbey's church organist Josef Gruber, he allowed them a full-year to think it over, before giving their final answer. The composer was engaged in an epistolary relationship with Ida Buhz until his second trip to Berlin, in **January 1894**. He saw her again, during a concert performance of the 7th Symphony, on **January 6**. She was sitting next to him in a lodge. The following day, Bruckner and Hugo Wolf appeared together at an afternoon concert featuring the Berlin Philharmonic Choir. In the evening, the subject of engagement with Ida Buhz took place in the family's circle. The following day, the couple assisted, in the same lodge, to another concert by the Philharmonic Choir.

**After Monday, 4 July 1892** : Letter from Ida Buhz (Berlin) to Anton Bruckner :

They both talk of plans to marry.

**After Thursday, 14 July 1892** : Letter from Anton Bruckner to Ida Buhz (Berlin) :

Bruckner re-assures Ida about her worries by insisting on mutual involvement in the wedding project.

**Thursday, 17 November 1892** : Letter from Ida Buhz (Berlin) to Anton Bruckner (Vienna) :

Ida talks about performances of the « Psalm 150 » and the 8th Symphony. Bruckner is supposed to come to Berlin to relax.

**Wednesday, 15 March 1893** : Letter from Ida Buhz to Anton Bruckner :

Ida is concerned about Bruckner's health. Perhaps, she could once again admire his works in his company.

**Saturday, 6 May 1893** : Letter from Ida Buhz (Berlin) to Anton Bruckner (Vienna) :

Bruckner as to tell Ida in time when he will come to Berlin. For sure, he should stay there for 2 weeks.

**January 1894** : Bruckner's engagement to Ida Buhz was actually celebrated in the Buhz home. He was 70 years old and he would have married the young woman had she acceded to his wishes and become a Catholic convert. He could not buy worldly happiness for himself at the price of « sin » .

**Tuesday, 13 February 1894** : Letter from Ida Buhz (Berlin) to Anton Bruckner (Vienna) :

Ida hopes that her photography would please Bruckner and regrets not having accompanied him to the train-station (around 16 January 1894) . She thanks her mother for letting her spend a beautiful evening with Bruckner. The concert of the Berlin Philharmonic (« Te Deum » (**WAB 45**) on January 8th, 1894) will remain unforgettable for Ida. Greetings to house-keeper « Frau Kathi » Kachelmayr , who his taking good care of Bruckner.

**Saturday, 21 July 1894** : Last received letter from Ida Buhz to Anton Bruckner :

Ida rejoices that Bruckner finds such beautiful recreational possibilities in Steyr, and wishes to be able to take care of him and chat with him.

**Thursday, 20 September 1894** : Karl Muck's wife Anita hasn't heard from Ida Buhz for a long time. She fears that she will not convert to Catholicism.

Letter from Anita Muck (Wiesbaden) to Karl Muck :

« I waited for Ida during the whole season of spring. She did not show-up and I heard nothing from her. I suspect some strong opposition coming from the circle to persuade her not to convert to Catholicism. »

Perhaps, we had better say his faith in the Catholic Church saved him from disappointment. Later, in his bitterness, Bruckner referred to Ida as « the Prussian girl » .

**March 1895** : Bruckner's pocket calendar entries :

Anton Meißner's hand-writing : « Marta Schmitt, the Bohemian Aicha (/) “ Gonzagagasse ” Number 9, Vienna, 1st District. »

Anton Bruckner's hand-writing :

« Ida Buhz, Berlin Christ Hospice, “ Königgrätzerstraße ” Number 5 ; or : Frankfurter-Allee Number 56. (/) N.B. : I have no full-part of “ Helgoland ” » (**WAB 71**)

After Bruckner's death, Ida Buhz became a deaconess (female diaconate) .

**Berlin : The Prater Beer Garden**

The « Prater » (restaurant, theatre and beer-garden) is a fixture of the city of Berlin. People began drinking here in 1837, back when the city-limits were down at Rosenthaler Platz and the « Prater » was a day trip into the countryside, a place of escape and refuge from the city. Berlin would break-out over the next 70 years, swallowing the beer-garden and surrounding it with streets and buildings, but it would remain not only a place of leisure and Sundays free from cares and worries but also, reflecting its position in the heart of the new working-class districts providing the labour for Berlin's rapid industrialisation, a place of political gatherings and agitation as well.

In the 1860's, the founding of the first German labour party, the German Worker's Association, was celebrated in the « Prater » , and after Bismarck unified Germany and then, in the 1890's, banned political gatherings in order to solidify his control, the beer-gardens such as « Prater » became good cover for meetings and gatherings. By the beginning of the 20th Century, the « Prater » had become the centre-point for May Day celebrations in the neighbourhood, which would survive through to the inter-war years.

The Nazis clamped down hard on political gatherings that were not to their taste, and war brought closure to the beer-garden just after it celebrated its 100th anniversary.

The bombs that fell on Berlin over the next 6 years would somehow spare the « Prater » . The Soviet military administration ordered the opening of a cultural establishment in « Prater » , and the first hungry dancers and clowns appeared as early as the summer of 1945.

Berlin's « Volksbühne » moved to « Prater » in 1946.

### The early boom years

The first recorded political gathering was a party celebrating the foundation of the General German Workers' Association. Set-up by Ferdinand Lasalle in 1863, it was Germany's first labour party. It marked its 8th birthday with a mixture of agitation, beer and dance-music.

There was also Doctor von Schweitzer's play « Goose - A Dramatic Conversation on the Extension of the Female Job Market » (« Eine Gans - Dramatisches Gespräch über die Erweiterung des weiblichen Arbeitsmarktes ») . In 1878, Bismarck's social legislation banned all gatherings and celebrations that had an overtly political character.

But the politically active proletariat started singing, sport and other cover associations ; using « Prater » to continue their celebrations and agitations. After 1891, the local on « Kastanien-Allee » became a central venue for the annual May Day festivities.

It was non-political amusement that had pride of place in « Prater » , however. Paul Kalbo II put on special performances daily during the summer. These included musical comedies, burlesque shows, Operettas, pantomimes, and puppet-shows.

Most of the theatrical offerings tended towards patriotism - marching music to honour the Battle of Leipzig, or pieces like « Les Dragons de Villars ». In winter, the ball season commenced. It attracted a mixed « clientèle » that included merchants, civil servants, maids, respectable families, workers and soldiers.

### WAB 107 : Max von Oberleithner and Ferdinand Löwe

**Monday, 1 June 1891** : Letter from Max von Oberleithner to Ferdinand Löwe :

Oberleithner informed Löwe of the magnificent success of the 7th Symphony (WAB 107) in Berlin on **January 6**, one of Anton Bruckner's « most joyful experiences » :

« His work as well as his personality won him all hearts, he was received with great applause. »

### The illiterate « Frau Kathi »

**Saturday, 27 June 1891** : Letter from Anton Bruckner (Vienna) to Emil Breslaur (Berlin) , editor of the « Musikpädagogischen Zeitschrift » :

Bruckner apologizes for the misunderstanding about mail delivery. Because house-keeper « Frau Kathi » Kachelmayr cannot read, she decided to return the music journal.

Bruckner thanks his patrons in Berlin.

« Kapellmeister » Siegfried Ochs wants absolutely to meet him (to discuss the music-reviews on the Berlin premiere of the « Te Deum » ?) .

### Cäcilie Kloppenburg

**Wednesday, 1 July 1891** :

Anton Bruckner sends an autographed photograph to Cäcilie Kloppenburg from Frankfurt.

Pocket calendar entry by Anton Bruckner :

« 1 July, “ Frau Kathi ” (Katharina Kachelmayr) - 14 Florins for August and September. »

### Always great beer at the « Zur goldenen Kugel »

**Monday, 6 July 1891** :

Max von Oberleithner and (probably) Anton Bruckner spend the whole evening at the Viennese restaurant « Zur goldenen Kugel » located at « Am Hof Platz » Number 11.

**Tuesday, 7 July 1891 :**

Letter from Max von Oberleithner to Ferdinand Löwe :

For this evening's meeting, Anton Bruckner has (again) chosen the « Zur goldenen Kugel » .Yesterday, the beer was « excellent » .

At the « Kugel » , Bruckner always enjoys his « Pilsner » and his favourite dish, rich in protein : the roast pork with cabbage.

### The « Referendarius »

**Sunday, 12 July 1891 :** Anton Bruckner spends the afternoon and the evening at the « Prater » in company of Josef Schalk and a « Referendarius » (apprentice-teacher during the period of training) .

**Tuesday, 14 July 1891 :** Letter from Josef Schalk to Max von Oberleithner :

The excursion to Dornbach (probably made last Saturday, July 11) saw Anton Bruckner in a very good mood. On Sunday, he went with Josef Schalk and the apprentice-teacher to the « Prater » . This evening, Schalk will meet Bruckner at the « Zur goldenen Kugel » and transmit greetings from Oberleithner. Bruckner will bring the scores to Bayreuth and will arrive only on the evening of the 18th. Oberleithner could possibly meet Bruckner at the hotel, the hall of the « Gesellschaft Frohsinn » or at « Café Sammet » . Robert Lienau has not yet written. Expecting to receive something later at Bayreuth's Post Office.

### 1891 : Bruckner goes to Bayreuth

**Mid-July 1891 :** Anton Bruckner attends performances of « Parsifal » , « Tannhäuser » and, certainly also, « Tristan und Isolde » at the Bayreuth Festival.

Singers for « Parsifal » : Theodor Reichmann (Amfortas) , Amalie Materna (Kundry) , Ernest van Dyck (Parsifal) and Pauline de Ahna, wife of Richard Strauß (a Flower Maiden) .

Other guests at the Festival : Hermann Levi, Heinrich Porges, Felix Mottl, Hans Paumgartner, Josef Schalk, Franz Schalk, Ferdinand Löwe, Max Morold, and Max von Oberleithner.

Bruckner meets C. A. Barryn from the « Musical Times » , in Bayreuth and thanks him for introducing the 3rd Symphony (**WAB 103**) in London (June 29, 1891) .

August Göllerich junior and Richard Strauß play the first movement of the 4th Symphony (**WAB 104**) in the version for 2 pianos, 4 hands.

Hugo Wolf stays in Bayreuth from **Saturday (18 July)** to **Thursday (23 July)** - on « Brandenburgerstraße » Number 3 - and meets Engelbert Humperdinck.

### Altheim : Meeting the Reischls

Anton Bruckner's letters to young women are always a source of interest. In his later years, Bruckner wrote many more letters to young women. He asked friends for addresses and more details about the girls - about their families and their financial circumstances, which seemed to be very important to him.

Biographer August Göllerich junior reports that Ida Buhz will not be the last « flame » in Bruckner's life, yet, he remained celibate to the end of his life. During his visit to Berlin, the elderly man will also meet the young and pretty Minna Reischl with roguish eyes (she is only 18 years old) , who works as a cleaning lady at the residence of Ida Buhz. Daughter of a merchant of Altheim, in Upper-Austria, she is notably endowed with a good musicality. She, of course, must have been merely amusing herself at Bruckner's expense because she went as far as to bring the composer home to her parents.

...

Bruckner started a relation (by no means serious) with the beautiful 18 year old singer Minna Reischl (born in Altheim, Upper-Austria) who was staying with relatives in Steyr. Based on a letter written by Bruckner on **Saturday, 5 September 1891**, the parents soon invited him to Altheim.

The sojourn lasted 2 full-days (**from Saturday 5th to Monday 7th**) during which Bruckner solicited the hand of the young and beautiful singer.

**Saturday** : Pouring rain.

**Saturday evening** : Bruckner and the Reischls go to Peyrer's summer cellar.

**Sunday morning** : Altheim parish church - performance during High-Mass of the Sunday-Mass No. 2 in B by Franz Schöpf. Bruckner plays a long « Postludium » but has to stop before the end of the piece due to trembling all over his body.

**Sunday afternoon** : Worshipping by Bruckner along with the assistant-organist. He talks about the dedication of the « Te Deum » . Minna Reischl is absent.

Occurrence of counting mania and self-control problems (church tower window, lightning rod) .

**Sunday evening** : Bruckner and the Reischls go to Mairinger's summer cellar.

Once again, his wishes to marry are not fulfilled.

**Monday** : Departure for Linz.

When Bruckner arrives in Linz, his acquaintances guessing the truth, tease him, saying :

« Aha ! So you have been out marrying again ! »

The Reischls, sensible people of the world, awakened Bruckner out of his dream.

**Wednesday, 16 September 1891** : Letter from Minna Reischl (Altheim) to Anton Bruckner (Vienna) :

« Dear Right Honourable “ Herr ” Professor !

I very much regret not being able to accept your flattering proposal, and may you allot this to my youth alone. Likewise, I ask you to hold no hope for the future.

Yours respectfully, and most of all,

Devotedly,

Minna Reischl »

**Friday, 23 October 1891** : Letter from Anton Bruckner (Vienna) to Minna Reischl :

Bruckner thanks Minna (with delay !) for her photograph. He will now send one of himself. Emperor Franz-Josef had confirmed his appointment as honorary doctor. Greetings to the parents.

**Saturday, 7 November 1891** : Letter from Minna Reischl to Anton Bruckner (Vienna) :

Minna thanks Bruckner for the sent photograph. She also asks for the promised « Tanto ergo » .

**Tuesday, 6 December 1892** : Letter from Anton Bruckner to Minna Reischl :

Congratulations on the hopefully complete recovery of Minna. Bruckner himself was not healthy. He went-out because he had much-to-do with the premiere on the 18th of the 8th Symphony dedicated to Emperor Franz-Josef.

In 1893, Minna's friendship with Bruckner ceased.

**Before Thursday, 12 October 1893** : Letter Minna Reischl (Altheim) to Anton Bruckner (Vienna) :

« My Dearest “ Herr Doktor ” !

Certainly, this little letter still does not bring a decisive “ Yes ”, yet, I hope, at the current time, to obtain consent from my parents.

(Announcements about local events follow. She is going to sing Franz Schubert’s “ Wanderer ” in a concert. She has also learned the “ Tantum Ergo ”, and it sounds very good.)

Be delighted once again, my dear “ Herr Doktor ”, through these few lines.

Yours devotedly and highly-respectfully,

Minna Reischl »

**1895-1896** : Anton Bruckner welcomed Minna Reischl and her mother in Vienna, at the « Kustodenstöckl » on the Upper-Belvedere. The composer remained very friendly until the end.

5 years after Bruckner’s death, Minna was now married to a wealthy manufacturer but unhappy in life. If we believe reports from this period, each party was looking for a deeper relation.

### The « Amen » from the Emperor

**Saturday, 4 July 1891** : Faculty Dean, Doctor Wilhelm Dlahuy (brother-in-law of Heinrich Köchert) , proposes a motion during a meeting of the Faculty of Philosophy of the University of Vienna to award to Professor Anton Bruckner an honorary Doctorate. The Board approves the motion.

Doctor Baron Paul Gautsch von Frankenthurn, Minister for Culture and Education (5 November 1885 - 11 November 1893) says : « Yes »

The Emperor Franz-Josef says : « Amen »

Once again, the Israelite conductor Hermann Levi gives his unwavering support to the project. His letter of recommendation is unequivocal :

« Bruckner is, in my opinion, by far the most important Symphonist of the post-Beethoven period. That he has not yet been generally recognized as such lies in the fact that our time has deviated quite far from the great tradition of our Classics and that the so-called “ Romantic ” trend represented by Mendelssohn and Schumann (and Brahms) has almost exclusively dominated concert programmes and repressed the taste for the big monumental style. »

(The « generic » Doctoral degree in Philosophy is the basic title which every Austrian intellectual must earned ; it is part of his civil status - so to speak. It requires only a relatively brief dissertation. But Bruckner never had the opportunity or the possibility to write one.)

### Neuwaldegg : « Rohrer-Hütten » Inn

**Autumn 1891** : One evening, Anton Bruckner sat comfortably with half a dozen faithful University colleagues, also members from the Vienna academic Wagner Society, at a table of the « Rohrer-Hütten » Inn (owned by Karl Rohrer, 1850-1902) at Neuwaldegg, in the 17th District, which was a picturesque excursion destination in the Vienna Woods. Then, Faculty Dean, surgeon Wilhelm Dlauhy, brought the good news, that Emperor Franz-Josef had confirmed the honorary Doctorate to Bruckner. The composer stood-up, threw his hat high into the air and pushed-out a loud-sounding hurra. Like a true Upper-Austrian, he welcomed the new academic dignity in the ancestral expression of supreme joy.

### Doctor Wilhelm Dlauhy

The physician and surgeon Doctor Wilhelm Dlauhy was born on 1 March 1866 in Vienna and died in 1898 in Vienna.

He was the brother-in-law of Heinrich Köchert, co-owner of the firm A. E. Köchert, Imperial Court Jeweller.

He was also a member of the Vienna academic Wagner Society.

Letter from Hugo Wolf to Doctor Wilhelm Dlauhy in Vienna, brother-in-law of his friend and benefactor Heinrich Köchert.

In part (translated) :

« I can hardly grasp the emotion I feel when collating your copies. I keep thinking of the pious monks of old, copying the Holy Books in the sweat of their brow (...) If anything might serve me as proof that you believe in my art, it is the truly touching care and anxiousness of your work. Nothing, nothing at all, has escaped your fine instinct, and how many errors of negligence have I not had opportunity to correct in the originals, following your pointers ! I am urged to repeat my thanks for your selfless and assiduous courtesy. »

Wolf was supported by a large circle of friends. In Vienna, his principal benefactors were the Lang, Köchert, and Werner families.

...

The General Assembly of the « Wagner-Verein » took place on January 31. After re-imbusement of the annual report, the Assembly approved the elected Board of Directors for the year 1907, which had the following result :

Chairman : Theodor Köchert.

Vice-Chairmen : Doctor Wolfgang Rigler, Walter Bokmayer.

Artistic Director : Professor Ferdinand Foll.

Secretaries : Doctor Rudolf Billek, Felix Groß, Doctor Heinrich Werner.

Treasurer : Karl Juritsch.

Archivist : Emil Halauska.

Advisory Board : Doctor Wilhelm Dlauhy, Albert Ernst, Professor Doctor Alois Höfler, Paul Petričević, Franz Schaumann, Doctor Max Vancsa.

Doctors August Nüchtern and Anton Dietz were re-elected as accounting auditors and Doctor Wilhelm Dlauhy, as in previous years, was entrusted as administrator of the « Verein » Choir.

On the occasion of the resignation of Committee members Professor Doctor Karl Pichler and Ernst Korschan, the Assembly expressed their warmest thanks for their many years of loyal service. For their part, Doctor Wilhelm Dlauhy, Doctor Josef Frühwald, Doctor Klemens Kreihig, Doctor August Nüchtern and Doctor Robert Steinhauser were masterly portrayed on canvas in honour of their 25 years of membership to the Society.

Finally, our faithful friend, Professor Moritz Frauscher, was honoured under the unanimous (and loud) approval of the Society's honorary members for organizing our private evening concerts and Thursday concerts.

### Bruckner, the « professional » Symphonist

**Monday, 19 October 1891** : Anton Bruckner sends a letter to the Dean of the Faculty of Philosophy at the University of Vienna (1890-1891) , Doctor Leo Simon Reinisch, about the official text that will be pronounced during the award ceremony of his honorary Doctorate. It is about his ascension in the Austrian capital :

« On his arrival in Vienna, Anton Bruckner took an important step in his “ career as a professional Symphonist ”. »

Reinisch will become Rector of the University in 1896-1897.

### Invitation to Hôtel Sacher

Despite Eduard Hanslick's negative campaign, the 67 year old Anton Bruckner became the first musician to receive an honorary Doctorate in Philosophy from the University of Vienna. The composer strongly urged the Rector not to forget

to mention on the certificate the qualifier « as a Symphonist » , because it was in this musical genre that he accomplished himself.

**Saturday, 7 November 1891** : In the Senate meeting-room of the University of Vienna, Rector Doctor Adolf Exner showed to Anton Bruckner the doctoral degree, with the date : « 29 September 1891 » .

Professor Exner and Professor Josef Stefan (the physicist, mathematician, and poet who proposed to give Bruckner an honorary Doctorate) made a speech to which Bruckner answered in a touchingly awkward way.

Were present in the room for the occasion :

Friends of the Steyr circle : Count and Countess Lamberg (the donors of the doctoral ring) , Karl Almeroth and Karl Reder ; and also Karl Lorenz from the « Wiener Akademische Gesangverein » .

After the meeting, Almeroth and Bruckner went to the studio of sculptor Viktor Tilgner, where the initial posing-session took place for the making of another honorific bust. (The first one stands on the « Bruckner-Platz » in the town of Steyr.)

Then, Almeroth brought Bruckner « at Gause » (« Gasthaus und Bierkeller “ bei Gause ” ») , located in a basement at « Johannesgasse » Number 12 in the 1st District.

Finally, Almeroth took the composer home at his « Heßgasse » apartment.

Pocket calendar entry by Anton Bruckner :

« 7 November . Promotion as an honorary Doctorate of Philosophy at the University of Vienna. »

Planning the notice about the honorary Doctorate in the Vienna « Neue Freie Presse » .

The same evening, Bruckner is invited by the « Steyr consortium » (the Lambergs, Rede and Almeroth) at the luxurious « Hôtel Sacher » in the 1st District, « vis-à-vis » to the « Hofoper » .

Bruckner most certainly ordered the specialty of the house : the « Sacher-Torte » - a chocolate cake with apricot filling topped with whipped cream.

It was 1832 when Prince von Metternich instructed the 16 year old apprentice Franz Sacher to create a cake for his discerning guests. The sweet Masterpiece was to be made with chocolate, apricot jam, and whipped cream. Today, the « Original Sacher-Torte » stands as one of Vienna's best-known symbols.

To quote the German daily « Süddeutsche Zeitung » :

« The “ Sacher-Torte ” is widely accepted as a currency of inter-personal relationships around the world. »

## Hôtel Sacher

The hotel was founded in 1876 as a « maison meublée » at the site of the demolished « Theater am Kärntner » by the « restaurateur » and Imperial-Royal purveyor to the Court, Eduard Sacher (1843-1892) . His father, the confectioner Franz Sacher (1816-1907) had become famous for his « Sachertorte » , which he allegedly created for a reception given by Austrian State Chancellor Klemens von Metternich in 1832. Eduard Sacher did an apprenticeship at the « pâtisserie » Demel and, in 1873, opened his first restaurant on « Kärntner-Straße » .

In 1880, he married Anna Sacher « née » Fuchs (1859-1930) , who became managing director after his death. She quickly earned a reputation for both her commercial skills and her eccentricity, never been seen without her French Bulldogs and a cigar. Under her management, Hôtel Sacher became one of the finest hotels in the world, where the aristocracy and diplomats would meet.

## Dates

**Monday, 16 December 1816** : Franz Sacher is born as the son of a Viennese citizen. He works as a kitchen apprentice in various houses (including at the court of Prince Metternich, later Esterhazy) . At the court of Metternich, he invented a chocolate cake, later known as « Sacher-Torte » . He died on 11 March 1907.

**Tuesday, 6 October 1840** : Franz Sacher marries Rosa Wieninger. He works in Bratislava (« chef » at Adeligen Casino in Preßburg, Slovakia) , operates the kitchens of the Danube Steamship Company (« Donau Dampschiffahrtsgesellschaft ») and, later, runs his first own restaurant, the « Casino » in Budapest.

**Wednesday, 8 February 1843** : Birth of Eduard Sacher.

**1849** : Franz Sacher returns to Vienna and opens a « Trätieur-Shop » (delicatessen) , at the corner of « Weihburggasse » and « Rauhensteingasse » in the inner-city. According to some sources, it was there where he invented the « Sacher-Torte » . Other sources say it was already at the court of Prince Metternich.

Eduard Sacher works in London at the Royal Hotel ; in Paris at the « Grand Hôtel » ; and also in Berlin and in Hamburg.

**1866** : Eduard Sacher opens a small restaurant at the Palais Todesco on « Kärntner-Straße » , opposite to the « Hofoper » .

**1867** : Eduard Sacher operates the Dreher « Bierhalle » at the Paris Exhibiton and earns himself a great reputation as an exquisite « restaurateur » . An interesting foot-note in this respect : at the 1873 exhibition in Vienna, Swiss Cesar Ritz works as a waiter.

**1876** : Eduard Sacher opens an exclusive luxury hotel in the heart of Vienna under the name « Hôtel de l'Opéra » .

**1880** : Eduard Sacher marries Anna Maria Fuchs, a butcher's daughter, who quickly turns the Hôtel Sacher into Vienna's most sought-after hotel and a favourite meeting-place of celebrities and high-society.

**1892** : Eduard Sacher dies, leaving the establishment to his wife Anna, who officially takes over responsibility for the destiny of the hotel. Her management style is strict but fair.

This « grande dame » becomes known for her cigars, which she allegedly always had in her mouth, as well as her hobby of breeding French bulldogs. Anna Sacher becomes the synonym for the Hôtel Sacher in Vienna. She meets the trustee of the Rothschild estates, « Herr » Schuster, her true and great love. After Schuster's death after World War I, the desperate Anna Sacher takes to horse-betting, and within no time, she is deep in debts.

**1914** : World War I puts a stop to tourism in Vienna.

**1918** : The end of the Monarchy is also a turning-point for the select meeting-place of figures from the worlds of politics, business, and art. In the years to come, Anna Sacher gradually relinquishes control over the hotel's operations.

**Saturday, 16 March 1929** : Anna Sacher is placed under disability.

**1930** : Anna Sacher dies in her hotel room. Tens of thousands of Viennese pay her their respects on her funeral procession to the Augustinian Church.

**1934** : Hans Gürtler and his wife Poldi, along with the Siller family, take over the traditional Viennese institution and renovate the venerable building. The Sacher is restored to the first-class hotel of earlier days.

**1938** : World War II puts a stop to tourism in Vienna.

**1945** : After World War II, the Sacher falls first into Russian hands, then into British ones. The Gürtler and Siller families only regain control over the hotel 6 years later. The Hôtel Sacher is renovated for the second time.

**1949** : Co-owner Josef Siller dies, leaving his share of the Hôtel Sacher to his wife Anna.

### Bruckner thanks the Committee

**Wednesday, 25 November 1891** : Letter from Anton Bruckner (Vienna) to the Concert Committee of the Philharmonic Society (Vienna) :

« Highly-Laudable Concert Committee of the Philharmonic Society !

I am deeply touched and honoured by the kind interest in my academic honour from the University, on the part of such a highly-artistic student society. Permit me, herewith, to express my most sincere and warmest thanks to the laudable Committee of the Philharmonic, as well as to all the members of the Court Opera Orchestra.

With the expression of fullest admiration,

Anton Bruckner »

Fellow faculty members at the Vienna Conservatory were often rude and cruel to Bruckner. Some ignored him altogether ; but, generally, the students loved him and his music.

### Ceremony at the « Sofiensaal »

**Wednesday, 9 December 1891** : Letter from Baron Hans von Wolzogen (Bayreuth) to Anton Bruckner (Vienna) :

« Highly-Honoured Professor !

I cannot allow myself to pass-over the day of your Testimonial Banquet without saluting you on my part, as well, and congratulating you for the recognition you have received from the University of Vienna. I sincerely regret not being able to be in Vienna on these days, to attend the performances of your works, particularly the “ Te Deum ”. I want the enclosed book to act on my behalf ; it is a compilation of various lectures given in Vienna, wherein I also then interwove notes (through your kindness) about your connection to Wagner. You will find this passage on pages 28 through 29, and I have certainly put to the test my rule of never including Wagner’s sayings that I, myself, have not been present to hear. I believe, however, that in such a memorial booklet, leaving-out your name would be sinful. With deepest respect, I remain

Yours very devotedly,

Baron Hans Paul von Wolzogen »

**Around December 1891** : Letter from Hermann Levi (Vienna) to Anton Bruckner (Vienna) :

« Honoured Friend !

Unfortunately, I cannot see you at this point (in the evening, I am at the Theatre and, tomorrow, I travel) but you will be hearing from me soon !

1st Symphony, “ wonderful ” ! It must be published and performed (but please, please, change little if anything) it is entirely good as it is. The instrumentation, too !

Please, please, do not retouch much !

Löwe performed it magnificently.

In haste, these few lines. Please, continue to think well of me.

In sincere friendship and respectfully yours,

Levi »

**Around December 1891** : Letter from Anton Bruckner (Vienna) to Otto Kitzler (Brünn) :

« “ Calling-Card ”

Professor Anton Bruckner  
Honorary Doctor of Philosophy  
of the Imperial Royal University of Vienna  
Knight of the Franz-Josef Order  
Imperial Royal Court Organist

thanks his highly-honoured teacher for his sincere congratulations.

Doctor Anton Bruckner »

**11, 13 December 1891** : Special evenings honouring Anton Bruckner are held in Vienna. This will move the composer to tears.

The « Sofiensaal » is situated on the « Marxergasse », in the 3rd District (« Landstraße ») . The building was completed in 1826. It was named after Princess Sophie of Bavaria, the mother of Emperor Franz-Josef I. It was originally used as a steam bath and known as the « Sofienbad » . Between 1845 and 1849, it was converted by the architects August Sicard von Sicardsburg and Eduard van der Nüll into a dance-hall and renamed the « Sofiensaal » . Johann Strauß I performed there regularly and conducted at the opening ball of the house in 1848. Many of the Strauß family's waltzes were first performed there.

The building's large, vaulted ceiling, and the pool beneath the floor, gives the hall excellent acoustic properties. For this reason, « Decca Records » adopted the building as its principal European recording venue for monophonic recording from 1950, and for stereophonic recording from 1955 to the mid-1980's.

**Friday, 11 December 1891** : Ceremony in honour of Anton Bruckner before an audience of 3,000 people at the « Sofiensaal » .

Presence of the noisy « Bruckner-Commers » : the student fraternities entirely devoted to the composer.

The celebration of the « Akademischer Gesangverein » was intended as a mass-demonstration of a nationalist kind. How far Bruckner was aware of this is unknown. The explosive nature of the event could have been considerably defused had the earlier chairman of the « Verein » , Franz Schaumann, read the ceremonial address instead of the well-known German Nationalist militant August Göllerich junior.

The Rector « magnificus » , Doctor Adolf Exner, holds the red tube with a gold ribbon containing the parchment marked with the seal of the University of Vienna.

« ARTIS SYMPHONICÆ PERITISSIMUM REGIUM MELOPOEUM ATQUE PRÆCLARIS EIUSMODI OPERIBUS COMPOSITIS MAGNAM APUD HOMINES ELEGANTIORIS SENSUS FAMAM CONSEUTUM HONORIS CAUSA PHILOSOPHIÆ DOCTORIS NOMEN IURA ET PRIVILEGIA CONTULIMUS »

He concludes his address with these words :

« Wo die Wissenschaft Halt macht, wo ihr unübersteigliche Schranken gesetzt sind, da beginnt das “ Reich ” der Kunst, welche das auszudrücken vermag, was allem Wissen verschloßen bleibt. Ich (scilicet der “ Rector magnificus ” der Universität) beuge mich vor dem ehemaligen Unterlehrer von Windhaag. »

« Where science must come to a halt, where its progress is barred by unsurmountable barriers, there begins the realm of art which knows how to express that which will ever remain a closed book to scientific knowledge. I, “ Rector magnificus ” of the University of Vienna, bow before the former assistant teacher of Windhaag. »

Choked with emotion, the « Candidatus Philosophiæ » replies :

« I cannot thank you as I would like. But if there was an organ here, I would have already answered you. »  
It is the greatest reward that Bruckner could ever hope to receive ; not to be named Doctor of music but Doctor of philosophy.

Never in the history of this prestigious institution such an honour had been bestowed upon a musician.

Bruckner is then carried in triumph by the « Commers » all around the hall.

Once in the car that drives him back home, he bursts into tears, repeating :

« It's too much, too much ! »

He will express his deepest gratitude to the University by dedicating the recently revised version of the 1st Symphony (March 1890 - April 1891) .

Bruckner felt highly-honoured by this title and wanted everybody to show it a like respect. Even his house-keeper « Frau Kathi » Kachelmayr was to use it in speaking to him about everyday matters.

As for his enemies, they will remain indifferent.

12 years before, Brahms had ridiculed Bruckner about his insane obsession : begging for diplomas and certificates of all kinds.

Richard Heuberger recalls the sarcastic mood of Brahms, following this award :

« Ob man jemanden als Künstler überschätzt, das ist eine Sache für sich. Aber daß man einen total ungebildeten Menschen zum Doktor macht, das ist eigentlich ziemlich stark. Schon vor Jahren war es geplant, da widerriet Hanslick. Nun wurde es aber doch durchgesetzt. Ich war das Versuchskaninchen für den Musikdoktor und jetzt wird das so allgemein ! Hegar, Reinicke, Jadassohn, Munzinger, etc. - lauter Doktoren ! »

« To over-estimate someone as an artist is one thing. But to make an uneducated man a doctor is quite surprising ; even a sad reality. A few years ago, I was targeted as a candidate but Hanslick put a stop to it. Today, receiving this title has become a banality ! Hegar, Reinicke, Jadassohn, Munzinger, etc. , will they all become doctors ? »

This weakness for the « glitter » (a rule that is incompatible with true greatness) always brought Bruckner closer to his first years spent at St. Florian, a place where titles and decorations were considered the highest marks of honour.

### Göllerich's censored speech

When Anton Bruckner received an honorary Doctorate from the University of Vienna, August Göllerich junior had been his official biographer for some time. As such, he was an obvious choice to speak at a celebratory gathering of students (« Commers ») on **December 11, 1891**. Because Göllerich's outspoken anti-Semitism made him too controversial, the University eventually asked him to withdraw.

Göllerich published the first part of his censored speech in the Sunday morning edition (**13 December 1891** - 3rd Advent Sunday) of the « Deutsches Volksblatt » Number 1056, pages 1 to 4 , under the title :

« Anton Bruckner. The formal address by August Göllerich not given at the Bruckner celebration. »

Beginning with its paean to the German spirit, Göllerich's speech was a tribute that a Wagnerian fundamentalist might be expected to conjure-up for such an occasion. Peppering his presentation with unattributed quotations from « the Master » (for instance, « only the purposeless is beautiful ») and with such Wagnerian key-words as « educatedness » (« Gebildetheit ») , « guilelessness » (« Harmlosigkeit ») , and « necessity » (« Nothwendigkeit ») , he exposed the topics in a straightforward discursive manner. But when he began to discuss the historical significance of Bruckner's Symphonies, he suddenly started to make a Wagnerian montage, splicing together excerpts from at least 6 different

essays with little connecting material between them.

« Anton Bruckner.

(Die beim Bruckner-Commerz nicht gehaltene Festrede von August Göllerich.)

Verehrte, liebe Festgenossen !

Zu allen Zeiten haben in hervorragender Zahl Deutsche der Ostmark tapfer mitgeholfen an der Gewinnung jenes geistigen Alldeutschland, das durch keine politischen Grenzen beengt, das echtste Schaffen unseres Volkstums auf allen Gebieten der Kunst und des Lebens bergend, ein ideale Macht geworden, der sich heute die ganze Culturmenschheit beugt.

In Kampf und Streit, in Lust und Leid waren es oft und oft der Ostmark deutsche Söhne, die den eingeborenen deutschen Geist hoch und rein erhielten im Ansturme fremder Art, die in rechtem Überzeugungsmuthe mit ihm fochten, bis er, in Reine treu bewahrt, siegend und von Fesseln frei, sein beseeligendes Licht auf's Neue ergießen konnte. Einem solchen Kämpfer, einem solchen deutschen Helden gilt unsere heutige Feier. Auf dem Felde deutscher Bethätigung, im Reiche der Musik, hat er gerungen und erreicht, daß das Edle, Schöne nicht um des Ruhmes und Vortheiles wegen in die Welt tritt, daß es deutsch sei, eine Sache, die man treibt um ihrer selbst willen und aus Freude an ihr zu treiben. Dieser Glaube hat unseren Meister Anton Bruckner zeitlebens durchglüht, gestählt und erhalten ! - Unbeachtet, aber auch unstörbar brachte er seine Originalität zur herrlichsten Entwicklung. Abseits vom Geräusche des Lebens, lauschte er einzig den Harmonien seines Inneren und sprach, ein zäher Oberösterreicher, zu einer Welt, die ihm Nichts zu sagen hatte, nur aus seiner Tiefe, ganz bei sich, ganz in sich.

(... ausführliche und ausgeschmückte Angaben zur Biographie (teilweise mit falschen Jahreszahlen) : Seite 1 bis Windhaag ; Seite 2 Kronstorf bis Linz 1864, Reise zur " Tristan " -Aufführung ; Seite 3 1865 Wagner, Linz bis Wien 1868, Nancy, London, 1875 Lektor ; Seite 4 ab 1885 Siegeszug, seit 1890 Unterstützung durch Freundeskreis, ... über das phänomenale Orgelspiel und die Improvisationskunst und -phantasie ...) wer ihn schauen konnte, wie er, ein König der Töne, über alle Welt erhaben und Alles ihr Angehörnde weit unter sich, ganz seinen Verzückungen sich hingab, der weiß wohl , was Bruckner ist, der hat ihn kennen gelernt.

(Schluß folgt.) »

Part 2 of the speech was published in the Tuesday edition of the « Deutsches Volksblatt » (15 December) Number 1058, pages 1 to 4 :

« Anton Bruckner.

(Die beim Bruckner-Commerz nicht gehaltene Festrede von August Göllerich.)

(Schluß.)

Lange hatte sich Bruckner's Genius nur auf der Orgel entfaltet, da trat das Leben, Erleben, diese ganze Summe von Hoffnungen, Enttäuschungen, Erfahrungen an ihn heran und trieb ihn, sein Inneres in symphonischen Gebilden auszusprechen, uns in ihnen das Sein nach seiner eigentlichen Wesenheit schildernd. (... wie Johann Sebastian Bach fand Bruckner in seiner Umgebung nichtssagende ästhetische Masken-Musik vor, dennoch wurde er kein Umstürzler. Gegen den Zwang der Konvention setzte er die " ungehemmte Entfaltung seines inneren Genius ", mußte aber wie ein Architekt einen Bauplan erhalten. Ohne Zugeständnisse an " mundus vult schundus " (Ausspruch Liszts) . Daher Unverständnis bei den Kollegen und Kritikern. ... Seite 2 : ... Bruckner ist nicht einzuordnen, hat wahre Bildung, aber keine künstliche Verbildetheit, keine Unbildung. " So blieb Bruckner in seiner Un-Verbildetheit immer ganz eigen, immer ganz frei ! " ... wahrhaftige Harmlosigkeit, " göttliche Naivetät ", Grundsatz der Ästhetik " nur das Zwecklose ist schön ! " ... auch Mozart und Beethoven stießen auf Unverständnis ; mit der Verurteilung, er komponiere " Nichts als Hochverrath und Tyrannenmord ", befinde sich Bruckner in bester Gesellschaft. ... Seite 3 : ... die Frömmigkeit helfe Bruckner über die Widrigkeiten hinweg ... neben Liszt der einzige ernst zu nehmende Kirchenkomponist ... der echtteste Wagnerianer, weil er dessen " Errungenschaften schaffend erfüllte " ... über Bruckners eigene Merkmale, seinen persönlichen Stil ... Bruckners Qualitäten als Lehrer ; die Liebe zur Jugend ...) Dem Lehrer Bruckner kann gar nicht genug gedankt werden. Er kleidet die zu behandelnden Aufgaben in ein so köstliches und anziehendes Gewand humoristischer Weltanschauung, daß alle sonstige Trockenheit derselben in Genuß aufgeht. In diesen Vorlesungen kann denn auch Jedermann den über Alles liebenswerthen und bescheidenen Menschen Bruckner kennen und lieben lernen, der jede kleinste Gelegenheit benützt, seinen Zuhöreren Achtung aller großen Meister der verschiedenen Zeiten und Stile an's Herz zu legen, der Jugend gesundes Blut, offenen Sinn und die Losung einzuimpfen : " Selbst zusehen und selbst urtheilen. " (... Seite 4 : ... über den spät eintretenden Ruhm ; Bruckner (wie Friedrich der Große) im Alleingang an vorderster Front, hat mit Hilfe weniger Begeisterter den Weg zum Sieg sich gebahnt ... " unwahrhaftige Musik " führe zum Erlöschen ...) So hat das ganze deutsche Volk Bruckner, diesen Titanen im Kampfe mit den Götter (sic) , zu ehren, zu lieben und zu preisen !

So wollen auch wir denn nimmermehr müde werden, den Ruhm des Tapferen, der Alles aus sich, Alles durch sich geworden, zu verkünden, für die Aufführungen seiner Werke zu wirken und vor Allem uns zusammenthun, eine würdige Gesamtausgabe aller seiner Werke, als dauerndstes Denkmal seines hehren Waltens zu errichten. Vieles und Höchstes seiner Schöpfungen kennt unser Volk noch gar nicht. Der Ruf, die Kenntnis all' dies Große (sic) vermitteln zu helfen, dringe in alle Gaue ! Pflicht der deutschen Jugend der Ostmark ist es, zu sorgen, daß dem heimatlichen Meister echtst-deutscher Tonkunst sein Volk damit lohne, die Pflege seines Schaffens als Ehrenpflicht zu ersehen. Der Meister aber schenke unserem ehrlichen Wollen seine Liebe auch fürderhin. Immer fühle er sich umgeben von der Liebe seiner Gaudeamus, die aus voller Brust begeistert einstimmen in die Worte des Bruckner-Liedes, welches vor sechs Jahren sein Heimatland ihm zugesungen :

Wie ist des Meisters Herz so mild,  
Sein Sinn so rein, so schlicht !  
Doch steht er als ein Fels im Meer,  
D'ran Feindes Brandung bricht !

Seh'n wir den edlen Barden steh'n,  
So kühn, so unentwegt,  
Da tönt die Bitt' wohl hell und laut,  
Daß sie zum Himmel schlägt :

O Gott, nimm ihn in Deinen Schutz  
Sei seiner Werke Hort,  
Sein Ruhm, sein Name und sein Werk  
Erblih' und grüne fort !

Unserem herrlichen, geliebten Dr. Anton Bruckner  
Heil ! Heil ! Heil ! »

...

In 1884, Göllerich had made a elaborate exegesis on the vulnerable key-issue of Bruckner's Symphonies, this time, he chose to create a distracting barrage of Wagneriana :

(Phrases taken verbatim from Wagner's essays are in bold.)

« It would have been a rational process if he had consciously overthrown the received architectural forms of music ; we find, however, not a trace of that in his works. His rebellion against every constraint of convention lay in nothing but the unfolding of his inner-genius (exuberantly free, not to be restrained by anything, even those forms) which allowed us to approach a completely new world in almost completely identical, merely amplified forms. For the same reason that an architect cannot move the pillars of his building at his discretion, nor indeed use the horizontal parts as vertical, Bruckner, too, changed nothing in the structure of the Beethovenian Symphony ; in that, he simply installed expanded and sundry themes and counter-themes on that legitimate foundation, out of which he built increasingly majestic buildings. At the same time, he took these apart into their smallest components, to which he gave now predominantly rhythmic, now harmonic significance, allowed them to grow here like a stream in ever new patterns, to disperse there in a whirlpool - always, however, so enthralling through their vivid movement, that the hearer can at no moment avoid its effect, but rather, strained with the most intense interest, must recognize a melodic significance in every harmonic tone, indeed every rhythmic pause. Wagner says that, often, the real essence of art today is only industry ; its moral purpose, the acquisition of money, its æsthetic pretext, the entertainment of the bored. And many of today's composers follow quite intentionally the maxim, « the world wants to be deceived » , which Liszt once delightfully rendered as « the world wants trash » , and which we see observed sometimes by even the truly thoughtful with the aim of achieving the desired popularity. Since, moreover, nowadays, there is a great deal of traveling, many of the most estimable current Symphonists bring back unpliant melodies that have made no impression on others. And we are on our fine way toward having our painting and art exhibitions or our newspaper articles set flatly in music, and downright peculiar instrumental effects and surprising harmonizations based on such a foundation, so that stolen melodies are made unrecognizable and played to the astonished world as Classical-vivid

music. »

...

August Göllerich's conversion to Bruckner's cause almost coincided with the death of Richard Wagner. « Enthusiastically absorbed » in Wagner's writings from an early age, Göllerich rivaled Baron Hans Paul von Wolzogen in his devotion to « the Master's » world-view. He had known about Bruckner as well since childhood, but the performance by the Vienna Philharmonic of the middle-movements of the 6th Symphony, on 11 February 1883 (2 days before Wagner's death) , gave him « the occasion (...) to be more intensively engaged with Bruckner » . In 1884, he began to attend the composer's university lectures, and then, became his official biographer.

Göllerich described his article in the « Deutsche Worte » as a tribute « to the 71st birthday of Richard Wagner » . A daring reinterpretation of Wagner's reception of Beethoven began with a quotation from the 1870 Centennial essay : « Beethoven never fundamentally changed any of the established forms of instrumental music ; the same structure is to be detected unequivocally in his last works as in his first (...) Here emerges again the peculiarity of the German nature, which is so intrinsically deep and richly talented that it can imprint its essence on every form, transforming from within, and therefore, spared the necessity of external revolution. »

Göllerich immediately applied Wagner's words to Bruckner, likewise « so intrinsically deep and richly talented, so German, and therefore, so specifically a musician, that it is completely natural that he is satisfied by the outward form of the Symphony » .

Turning to that most problematic essay, « Über die Anwendung der Musik auf das Drama » (1879) , Göllerich cited both Wagner's claim that Beethoven had changed nothing in the form as found in Haydn and his comparison of the Symphony's formal constraints to structural « pillars » . Göllerich asserted that « Bruckner, too, has not changed the pillars of the Symphonic structure, but rather has shown for the first time (and that is his place in music history) the expansion and enrichment still possible in the Symphonic form with the new resources after Wagner and Liszt, what splendours can be created in it (...) without its having to become a Lisztian “ Symphonic-poem ” . »

Göllerich finally quoted Wagner from the same essay on the historical absence of « the right Beethoven » who would have known how to proceed in the earlier, Classical Symphonic style using recent harmonic and thematic innovations. He then identified Bruckner as « that second Beethoven longed for by Wagner » , an astonishing claim since Wagner already knew of Bruckner and his Symphonies in 1879.

Despite the cavernous hole in his argument, Göllerich seems to have been proud of this article, as he reprinted it in his biography of Bruckner and used it again in a review of a performance of the 7th Symphony in 1889. The immediate aim of this exegesis was to justify Bruckner's cultivation of the Symphony rather than the Symphonic-poem ; its ultimate objective was to claim, using the full-weight of Wagner's authority, a truly exalted place in music history for the Symphonist. Göllerich wrote in 1891 that, while Bruckner had been found to lack that « splendid “ educatedness ” » prized in Liberal-Jewish circles, he in truth possessed a « genuine culture not only in the domain of

learning but also in that of the heart. (...) Modest and simple all his life, he had sought only true culture, and avoided an artificial, “ deforming educatedness ” ( “ künstliche Verbildetheit ” ) » .

### **WAB 101 : Vienna version**

Hans Richter premieres the new version of Bruckner's 1st Symphony - dedicated to the University of Vienna. The concert receives a huge critical success !

**Sunday, 13 December 1891** (3rd Advent Sunday) : Vienna, « Musikverein Großer Saal » . Third Subscription Concert of the season by the Vienna Philharmonic Orchestra. Hans Richter conducts the « Wiener Philharmoniker » .

Ludwig van Beethoven : « Namensfeier » (Feastday or Name-day) , Symphonic Overture in C major, Opus 115.

Louis (Ludwig) Spohr : Concerto No. 8 in A minor for violin and orchestra, « in the style of an Operatic Aria » (« Gesangsszene ») , Opus 47. Soloist : Johannes Wolff.

**Anton Bruckner : Symphony No. I in C minor, « Vienna version » (WAB 101) .**

Attending the concert :

Adolf Exner, (Heinrich Rietsch ?) , Hugo Wolf, Gustav Schönaich. The music-critics Josef Königstein, Theodor Helm, Hans Paumgartner, Max Kalbeck, Robert Hirschfeld, Max Dietz, Richard Heuberger, Hans Puchstein, and Ludwig Speidel.

The Wagner Society handed over a laurel wreath to Bruckner with the inscription :

« Dr. Anton Bruckner of the Vienna academic Wagner Society,, on the first performance of the 1st Symphony in Vienna, December 13, 1891. »

(« Dr. Anton Bruckner der Wiener Akademische Wagner-Verein zur I. Aufführung der I. Symphonie in Wien, 13. Dezember 1891 »)

After the concert, a reception is held at the Hotel « Elisabeth » . Speeches are made by Doctor Viktor Boller, the president of the Vienna academic Wagner Society, and by Max von Oberleithner who represents the student body of the University of Vienna.

The young Hugo Wolf still could not seize the Symphonic art of his Master, as evidenced by a letter written to a friend in which he said :

« Last Sunday, the (Vienna) Philharmonic Orchestra played Bruckner's 1st Symphony (in its revised version) with the exception of the Scherzo and parts of the first movement. I did not understand much. »

That same year, Bruckner wrote to his friend and biographer August Göllerich junior :

« The new Symphony in D minor (the revised version of the 1st) is now dear to my heart. Hugo Wolf kissed me after the concert, while weeping abundantly. It was the third musician to behave in such a way. »

Initially, the Philharmonic was not very enthusiastic about this dedication, because of the costs incurred for copying the parts. Bruckner himself offered to pay. An invoice in the amount of 59 « Gulden » and 22 « Kreuzer » will be sent to him. Informed about this, Richter became furious, telling the Orchestra Committee that this kind of behaviour had never been seen before (« Unerhört ») and that it would be too much of a burden for Bruckner to pay for it (« Es wäre zu viel das Bruckner Diess zahlen soll. ») . Richter will propose to settle the note personally.

A commemorative plaque located in the arcaded court-yard of the main pavilion of the University of Vienna reminds us that Bruckner has lectured there and received, in 1891, an honorary Doctorate :

« Anton Bruckner - Doctor Honoris Causa from the University of Vienna (1824-1896) - Non confundar in æternum - Academic Choral Society of Vienna. »

...

In search of possibly overlooked music by Bruckner, Hans Richter called upon the latter at his lodgings in Vienna. Bruckner obligingly pulled from its place upon a shelf his First Symphony and handed it to the conductor for examination.

Richter turned the pages of the score with increasing wonder and surprise and finally exclaimed :

« Professor, you must have been madly in love when you wrote this Symphony ! »

« Yes, I was always madly in love in those days. » , said Bruckner.

Deciding that he had found the very thing he was looking for, Richter tucked the music under his arm and was making-off with it when Bruckner restrained him, saying :

« But “ Herr Kapellmeister ”, “ das kecke Beserl ” must first be polished ! »

This term, by which the Symphony has since been known, is an Austrian expression for which an English equivalent is not easily found.

The composer's biographer, Gabriel Engel, has translated it :

« The fresh young girlie. »

Some commentators believe that Bruckner had facetiously bestowed upon his Symphony a name given by Viennese students to snappy young girls of the town. It was Engel's belief that the elderly composer was reminiscing when he spoke the words and that he had in mind the 17 year old Josefina Lang, who was his current « crush » in 1865, when the Symphony was begun.

### Bruckner and caviar

Anton Bruckner was not comfortable in society or with the Vienna Conservatory's governing board, or even its faculty as Brahms was. In addition, Brahms was a favoured presence in the leading high-culture salons of Vienna. Bruckner was ill, at ease, in such situations. He embarrassed himself at one formal dinner-party attended by nobility, leading business people and artists when he exclaimed his horror in his usual colourful Linz dialect after having been served caviar, which he simply calls ... « raw fish eggs » .

### Bruckner and Waldeck on marriage

**November 1891** : Letter from Anton Bruckner (Vienna) to his friend Karl Waldeck (Linz) :

(The invigorated composer mentions that the young contenders lined-up for him.)

« Just yesterday, a letter from a young 18 year old from Berlin who wants me at all costs ! No kidding ! In Vienna, 6 other candidates. I remain confident ! »

It's hard to believe ! The Bruckner of the recent wedding proposals is now old and sick - a bit sad too. The acknowledged celebrity, his involvement with great conductors of the time and with the Viennese high-society, his honorary Doctorate from the University of Vienna - all this seems to fall in place.

But the intoxication brought about by success and gratitude (which inevitably attracts these young ladies ...) will not erase the image of the humble peasant. Bruckner's vanity seems to be gaining momentum here.

**Wednesday, 11 November 1891** : Karl Waldeck was supposed to be acting as a go-between but, as an old friend, he had doubts about Bruckner's plans for marriage :

« As an old acquaintance and friend, I have sympathy and high-esteem for you as a noble and famous man ; but I cannot break a lance for you because of the age difference - in a case such as this, the decisive factor is the affection of the bride, which should eliminate all other considerations. »

**Sunday, 20 December 1891** : Anton Bruckner replies to Karl Waldeck :

« The question has to be asked : do you want to agree, or don't you ? (i.e. , to marry Bruckner) Yesterday, I got another letter from a girl in Berlin (18 years of age) . She wants to have me at any price ... »

## Hugo Wolf on Bruckner

Hugo Wolf frequently discusses Anton Bruckner's works in his correspondence with his friend Emil Kauffmann (see the letters of **Tuesday, 15 December 1891 ; Friday, 23 December 1892 ; and Friday, 10 March 1893**) .

Though Hugo Wolf passionately admired Anton Bruckner and knew him personally, he kept an open mind towards his music, and criticized it with a good deal of coolness and detachment :

« It is a deficiency on the intellectual side, notwithstanding all their originality, greatness, imagination and inventiveness, that makes the Bruckner Symphonies so hard to understand. Everywhere a will, a colossal purpose, but no satisfaction, no artistic solution. »

On the whole, however, Wolf thought Bruckner the greatest figure that had appeared in the Symphony since Beethoven an opinion in which he became more and more confirmed as time went on.

## Vienna : Restaurant « Zum Weingartl »

**After Tuesday, 1 March 1892 (Lent)** : At the request of his private secretary Anton Meißner, Anton Bruckner plays the organ at the Augustinian Church in Vienna during a « Men's preaching » celebration under the Jesuit priest Father Heinrich Josef Maria Abel. He improvised on different themes including one from Richard Wagner's « Parsifal » . Afterwards, Bruckner and Meißner, along with Max von Oberleithner and Michael Hofbauer, go to the Restaurant « Zum Weingartl » located at « Getreidemarkt » Number 5, in the 6 District. According to Meißner, Bruckner is said to have participated in these fasting preachings on a period of 2 years, presumably in 1891 and 1892 and not in 1893, as Bruckner was then ill.

The Restaurant « Zum Weingartl » was founded in 1797 (supposedly, the oldest « Pilsner » beer-hall in Vienna) . It became the official hang-out of local artists of the nearby « Theater an der Wien » .

Among them :

Ludwig Anzengruber, Alexander Girardi, Ludwig Martinelli, Carl Millöcker, Johann Strauß und Franz von Suppé, as well as Anton Dominik von Fernkorn, Johann Nepomuk Vogl and Johannes Gabriel Seidl.

On the first floor, the « Fledermaus » Theatre-Club had its own table. The Restaurant also hosted the meetings of the « Grüne Insel » (Green Island) , a comic-chevalresque Society formed in Vienna in 1855. The language used at their meetings was a parody on the knightly style as it was supposed to have been ; its object was merely amusement though it rendered good service to literature and art. The Society reckoned many actors and literary men of note among its members. Whence it took its name is not clear, but it appears to have been a revival of the Order of Knights founded in 1771.

The secret Societies of Vienna are worthy of special mention. One of these was called « Ludlamshöhle » (Ludlam's Cave) , after a not very successful drama of Adam Gottlob Öhlenschläger. It had many distinguished men in its membership. The members were called « Bodies » , the candidates « Shadows » . Though mirth was the only object, the police thought it best to suppress the Society in 1826. Another Society, the « Allshlaraffia » , was founded in Prague in the 1850's, which, in 1885, had 85 affiliated societies in Germany, Austria, Switzerland and other countries. A congress of the leagued Societies met in Leipzig in 1876, and another in Prague in 1883. The president of each « Schlaraffenreich » (or Society) was called « Uhu » , but, on festive occasions, was « Aha » , and, in condemning offenses against the « Allshlaraffia » , « Oho » .

...

Getreidemarkt (1, 6) , benannt (10. Oktober 1866) zur Erinnerung an den bis 1864 hier abgehaltenen Markt für Getreide und das bis 1900 in der Nähe befindliche städtische Getreidemagazin (6. Bezirk, Rahlgasse Nummer 3 ; « Zum goldenen Metzen ») , das neben der späteren Getreidemarktkaserne lag.

...

**Nummer 1** (Ecke Linke Wienzeile) : 1869-1875 wohnte hier während ihrer Direktionszeit am Theater an der Wien Marie Geistinger. Siehe auch « Café Dobner » .

**Nummer 3** : Hier wurde am 30. September 1833 der Dichter Ferdinand von Saar geboren (Gedenktafel) . Die kleinen Vorgärten bei den Häusern Nummer 1 bis 5 sind ein Rest des alten Erscheinungsbilds der Vorstadt Laimgrube.

**Nummer 6** : Rückseite der Akademie der bildenden Künste (Eingang : Schillerplatz) .

**Nummer 9** : Der alte Jesuitenhof wurde nach Aufhebung des Ordens (1773) zu einer Kaserne umgestaltet ; 1862-1865 wurde ein Gebäude errichtet, in das 1868 das Technische und administrative Militärkomitee, ein wissenschaftliches Hilfsorgan für das Reichskriegsministerium einzog, die Kaiserlich und Königlich Geniedirektion ; nach 1918 Institutskomplex der Technischen Hochschule Wien (Chemiehochhaus) . An der Mauer des Jesuitenhofs wurden von der französischen Besatzungstruppe am 24. Juni 1809 der Anführer der Wiener Bürgermiliz (der Tischler Peter Teil) beziehungsweise am 26. Juni der Bürger Jakob Eschenbacher erschossen.

**Nummer 10** : Wohnung des Komponisten Alfred Grünfeld (Gedenktafel) .

**Nummer 11-17** : Die Häuserzeile im sechsten Bezirk, fünfgeschoßige Miethäuser zwischen Gumpendorfer Straße und Mariahilfer Straße, entstand im Stil der Gründerzeit.

...

Der Getreidemarkt bildet zwischen Mariahilfer Straße im Norden und Linker Wienzeile im Süden die Grenze zwischen

dem 1. und dem 6. Bezirk. Im 16. Jahrhundert gehörte das Gebiet zum Glacis. Am Getreidemarkt befand sich seinerzeit auch ein militärischer Richtplatz (letzte Justifizierung am 28. Jänner 1747) . Bereits 1759 wird die Verkehrsfläche als « Getraidt Markt » bezeichnet, 1780-1783 wurde an der äußeren Grenze des Glacis die Fahrstraße Am Glacis angelegt, die vom Wienfluß in Richtung Kothgasse (Gumpendorfer Straße) verlief, sich dort bis in die heutige Rahlgasse verbreiterte, um sodann die Laimgrubengasse (Mariahilfer Straße) zu erreichen.

In der Nähe des Wienflusses stand im 14. Jahrhundert ein Frauenhaus, in der Gegend der heutigen Rahlstiege das Spital « Zum heiligen Martin » . Dort befanden sich bis 1900 das bereits erwähnte städtische Getreidemagazin beziehungsweise seit Mitte des 18. Jahrhunderts die Getreidemarktkaserne (1903 abgebrochen) . 1850 wurde die Gegend um den Getreidemarkt im Zuge der Eingemeindung der Vorstädte in die Stadt Wien einbezogen.

Der Getreidemarkt ist seit der Anlage der Ringstraßenzone ein Teil der inoffiziell als Lastenstraße beziehungsweise später als Zweierlinie bezeichneten « Äußeren Ringstraße » . Die heute als Richtungsfahrbahnen definierten Verkehrsflächen zu beiden Seiten der Secessions tragen den Namen Getreidemarkt.

### The anti-Semite Heinrich Josef Maria Abel

The Catholic priest and Jesuit, Father Heinrich Josef Maria Abel was born on 15 December 1843 in Passau and died on 23 November 1926 in Vienna. He was buried in the chapel of the Augustinian Church, where Abel founded the « Marian congregation “ Mater Admirabilis ” for merchants » .

Abel was the son of a customs officer in Passau. He grew-up there. He entered the Jesuit Order at the age of 20 and, until 1891, worked as an educator and teacher (mainly in History) at the Kalksburg Jesuite College near Vienna (also known as College of the Immaculate Virgin) .

In 1891, Father Abel worked as a successful preacher and founder of congregations (he was the co-founder of the Catholic students' fraternity « Austria ») . He began his legendary men's sermons mainly in Vienna. That is why he was called the « Men's Apostle of Vienna » (« Männerapostel von Wien ») . Then, he began annual pilgrimages to Mariazell (starting in 1893) and Klosterneuburg (starting in 1904) .

**Saturday, 17 to Monday, 19 July 1897** : The 5th Viennese Men's pilgrimage to Mariazell took place.

Father Abel prompted Karl May's song « Ave Maria » to be sung in the evening of **July 17** by 2,000 pilgrims in Mariazell.

(The composition was published in **June 1897** in the « Deutsche Hausschatz » . It is set for male-choir and is in E-flat major. The editor mentions that a new version of the « Ave Maria » by Karl May will soon be published. In **August 1897**, a setting of the « Ave Maria » by Joseph Schildknecht was released.)

Abel gave a speech which announced the song with the words : « My dear men ! Follow the poet ! »

Es will das Licht des Tages scheiden ;  
Nun bricht die stille Nacht herein.  
Ach, könnte doch des Herzens Leiden  
So, wie der Tag vergangen sein !  
Ich leg' mein Flehen dir zu Füßen ;  
O, trag's empor zu Gottes Thron,  
Und laß, Madonna, laß dich grüßen  
Mit des Gebetes frommem Ton :  
Ave, ave Maria !

Es will das Licht des Glaubens scheiden ;  
Nun bricht des Zweifels Nacht herein.  
Das Gottvertrau'n der Jugendzeiten,  
Es soll mir abgestohlen sein.  
Erhalt', Madonna, mir im Alter  
Der Kindheit frohe Zuversicht ;  
Schütz' meine Harfe, meinen Psalter ;  
Du bist mein Heil, du bist mein Licht !  
Ave, ave Maria !

Es will das Licht des Lebens scheiden ;  
Nun bricht des Todes Nacht herein.  
Die Seele will die Schwingen breiten ;  
Es muß, es muß gestorben sein.  
Madonna, ach, in deine Hände  
Leg' ich mein letztes, heißes Fleh'n :  
Erbitte mir ein gläubig Ende  
Und dann ein selig Aufersteh'n !  
Ave, ave Maria !

Abel's closeness to the Christian-Social movement is initially visible in his orientation towards the small bourgeoisie. Thus, the merchants' congregation played the most important role within all Abelian foundations, for example as the bearer of the pilgrimages to Mariazell. Furthermore, Abel's sermons are characterized by a social rhetoric, which makes the proximity to the Christian-Socialists clear. And finally, it connects him to the anti-Semitism of Karl Lueger and his Party.

Abel was instrumental in the breakthrough of the Christian-Social Party under Karl Lueger.

Christian-Social journalist Friedrich Funder wrote :

« Lueger leadership in this popular movement was supplemented by Prince Alois Liechtenstein and Father Heinrich Abel. The success of none of the three is conceivable without the success of the group. »

A monument was erected in his honour in Mariazell in 1932.

...

Heinrich Josef Maria Abel SJ, katholischer Priester und Jesuit : geboren 15. Dezember 1843 in Passau ; gestorben 23. November 1926 in Wien.

Vater : Josef Abel, Oberzollinspektor, Freimaurer, dann katholisch ; Mutter : Karolina Benker, evangelisch ; Ov. : Carl von Abel.

Ab den 1890er-Jahren wirkte er vor allem in Wien als erfolgreicher Prediger und Gründer von Kongregationen. Da er sich hauptsächlich an Männer wandte, erhielt er den Beinamen « Männerapostel von Wien » . Sein Wirken war von einem Antisemitismus christlichsozialer Prägung gekennzeichnet.

Abel wurde als Sohn eines Zollbeamten in Passau geboren und wuchs in der Stadt auf. Er trat mit 20 Jahren in den Jesuitenorden ein und wirkte bis 1891 als Erzieher und Lehrer, hauptsächlich für Geschichte, im Jesuitenkolleg Kalksburg bei Wien.

Im Jahr 1876 war er maßgeblich an der Gründung der K.Ö.St.V. Austria Wien beteiligt und wurde später auch Ehrenmitglied der K.Ö.St.V. Rudolfina Wien, beide im ÖCV. 1890 rief er die « Marianische Kongregation Mater Admirabilis für Kaufleute » ins Leben, die seine bedeutendste Gründung war. Im Laufe der Jahre kamen noch zahlreiche weitere Kongregationsgründungen hinzu, etwa für Mittelschüler, Arbeiter oder für Frauen von Kaufleuten.

Im Jahr 1891 begann Abel mit seinen legendären Männerpredigten in Wien, schließlich regte er jährliche Männerwallfahrten nach Mariazell ab dem Jahr 1893 sowie nach Klosterneuburg ab dem Jahr 1904 an.

Nach seinem Tod am 23. November 1926 wurde Pater Abel in der Loretokapelle der Wiener Augustinerkirche bestattet, dem Versammlungsort der von ihm gegründeten « Marianischen Kongregation Mater Admirabilis für Kaufleute » .

Abel war berühmt für seine volkstümlichen, außerordentlich gut besuchten Predigten, die er hauptsächlich in Wien (St. Augustin) hielt, aber auch bei « Volksmissionen » im gesamten Gebiet der Monarchie, insbesondere in den sogenannten Sudetenländern.

Abel war maßgeblich am Durchbruch der christlichsozialen Partei unter Karl Lueger beteiligt. Der christlichsoziale Publizist Friedrich Funder schrieb :

« Luegers Führung ergänzten in dieser Volksbewegung Prinz Alois Liechtenstein und Pater Heinrich Abel. Der Erfolg

keiner der dreien ist ohne den Erfolg der anderen denkbar. »

Brigitte Hamann nennt Abel « Luegers erfolgreichsten Helfer » . Gleichzeitig unterhielt Abel gute Kontakte zum kaiserlichen Hof, der den Christlichsozialen eigentlich feindlich gegenüberstand, ein Umstand, der auf Abels diplomatisches Geschick hinweist. Am engsten war Abels Verhältnis zur Kaisertochter Marie Valérie. Ebenso bestätigt ein Zitat des deutschen Gesandten Eulenburg aus dem Jahr 1897 Abels Präsenz am Hof. Eulenburg bezeichnet Abel in einem Bericht nach Berlin als « sehr genial » , jedoch seine, den « Klerikalismus » fördernde Präsenz am Hof auch als « sehr gefährlich » .

Abels Nähe zur christlichsozialen Bewegung wird zunächst sichtbar an seiner Orientierung am Kleinbürgertum. So spielte die Kaufleutenkongregation die wichtigste Rolle innerhalb aller Abelschen Gründungen, etwa als Trägerin der Wallfahrten nach Mariazell. Weiters sind Abels Predigten von einer sozialen Rhetorik geprägt, die die Nähe zu den Christlichsozialen deutlich macht. Und schließlich verbindet ihn mit Lueger und den Christlichsozialen der Antisemitismus.

Friedrich Heer, Erika Weinzierl, Brigitte Hamann, Peter Pulzer und andere charakterisieren Abels Wirken als antisemitisch. Bemerkungen gegen das Judentum gehörten ohne Zweifel zum Standardrepertoire der Abelschen Predigten.

Im Jahr 1899 rief Abel seine Zuhörer in der Wiener Augustinerkirche dazu auf, an der Osterprozession teilzunehmen und begründet diesen Aufruf mit :

« Möge das der Protest sein, den wir christliche Männer gegen die Juden und diejenigen erheben, von denen Christus der Herr gesagt hat : Wehe Euch, Ihr Juden und Pharisäer, und Ihr, die Ihr überall Proselyten macht, die noch vielmal schlechter sind als ihr selbst ! »

Abels Vater schlug einmal einen Juden mit einem Stock, der erst an eine Baronin Tschovanelli versteigert wurde. Die gab ihn später an Abel, der sich wiederum rühmte, diesen Stock dem hochrangigen, christlichsozialen Politiker « Doktor Psenner als wackerem Antisemiten zum Geschenk » gemacht zu haben.

Schließlich existiert eine Quelle (ein Brief des Privatgelehrten Arthur Kaufmann an seinen Freund, den Schriftsteller Arthur Schnitzler) wonach Abel im Jahr 1918 in Mariazell auch zur Ausrottung der Juden aufrief.

Nach seinem Tod wurde Abel im Jahr 1928 in Mariazell ein Denkmal errichtet. Im Jahr 1937 wurde auf dem heutigen Ignaz-Seipel-Platz in Wien-Innere Stadt ein Abel-Denkmal eingeweiht, das aber im Krieg zerstört und nicht wieder aufgebaut wurde. An Abels Geburtshaus in Passau, Domplatz 5, hängt eine Erinnerungstafel, ebenso in der Stiftskirche von Klosterneuburg und an der Außenmauer von St. Augustin, Wien. Der heutige Friedrich-Engels-Platz in Wien hieß von 1934 bis 1946 Pater-Abel-Platz, es gibt in Klosterneuburg eine Pater-Abel-Straße und in Mariazell einen Pater-Heinrich-Abel-Platz.

In der Einfahrt zum Gebäude der Confraternität, 1080 Wien, Skodagasse 32, Abels Wohn- und Sterbehäus (er verbrachte hier die Jahre von 1895 bis zu seinem Tod 1926) , erinnert eine unkommentierte Gedenktafel an ihn.

Am 2. Dezember 2008 wurde beim Abel-Gedenkstein in der Wiener Augustinerkirche eine kommentierende Zusatztafel durch die « Provinz der österreichischen Jesuiten » errichtet. Darauf wird auf Abels Antisemitismus hingewiesen, es werden Gott und die Juden um Vergebung ersucht und dem Wunsch nach einer aufrichtigen und respektvollen Beziehung zum Volk des Ersten Bundes Ausdruck verliehen. Am 28. Mai 2009 wurde auch am Denkmal in Mariazell eine Zusatztafel mit einem gleichlautenden Text angebracht.

Vom 17. bis 19. Juli 1897 fand die Fünfte Wiener Männerwallfahrt nach Mariazell statt. Heinrich Abel veranlaßte, daß Karl Mays Lied Ave Maria am Abend des 17. Juli von 2.000 Pilgern in Mariazell gesungen wurde und hielt eine Ansprache dazu, die das Lied mit den Worten ankündigte :

« Meine lieben Männer ! Folget dem Dichter ! »

### Benennungen

Klosterneuburg : « Pater-Abel-Straße » .

Mariazell : « Pater-Heinrich-Abel-Platz » .

Wien : Der heutige Friedrich-Engels-Platz hieß von 1934 bis 1946 « Pater-Abel-Platz » .

### Hugo Wolf : First recital in Berlin

**Thursday, 3 March 1892** : The first Hugo Wolf's recital in Berlin, with the local tenor Grahl (replacing the indisposed Jäger) and the mezzo-soprano Friedrike Mayer, was enthusiastically received, though it was not a financial success. Wolf made many new friends including his patron Baron Franz von Lipperheide, the chorus Master Siegfried Ochs, the critic Richard Sternfeld (who wrote his laudatory article « Tin neuer Liedesfraling' » on 12 March) , the Opera singer Emilie Herzog-Welti (who gave a successful Wolf recital on 12 April) and the librettist Richard Genée. As a suitable Opera text for Wolf, he recommended Juan Ruiz de Alarcón's « El niño de la bola » , translated into German as « Manuel Venegas » . This project preoccupied Wolf to the last.

On his return from Berlin, Wolf again fell victim to the feverish throat inflammation (no doubt a symptom of secondary syphilis) to which he had been prone since 1891.

...

A project was now set on foot to give a series of Hugo Wolf recitals in various towns. It was resolved to begin with Berlin. Doctor Ludwig Strecker, of Schotts, interested himself in the scheme, and negotiations were opened with the Berlin concert agent Hermann Wolff, who obtained from Hugo, not without a few grimaces, the necessary biographical details for the preliminary advertising. The Berlin concert was arranged for the 15th March 1892 (the date was afterwards altered to 24th February) , the singers to be the ever-faithful Ferdinand Jäger and « Fräulein » Friederike Mayer, of Salzburg. On the 13th (Wolf's birthday) , the « Elfenlied » was to be given at the « Gesellschaft » concert. It was thought advisable that Wolf should pay a short visit to Berlin, some weeks before the concert, in order to make acquaintances and generally ingratiate himself to spy-out the land, as he put it in a letter to Emil Kauffmann of the 30th December. He accordingly went to Berlin towards the end of February, taking his mission half seriously, half humorously, and wearing a noticeably new and well-fitting frock-coat ; if the songs did not impress the Berliners, he said, the coat certainly would. Armed with letters of introduction from Kauffmann, Oskar Grohe's wife, Volbach, and others, he first sought-out some of the Austrian colony resident in Berlin, and was particularly befriended by the veteran Opera composer Richard Genée. Among old acquaintances whom he met was Felix Weingartner (who had recently become second conductor at the Berlin Opera) and, among the new ones he made, were the Baron Franz Lipperheide (a wealthy amateur, who later on showed the composer many kindnesses) , Siegfried Ochs, the conductor of the Philharmonic chorus, Heinrich Welti, the writer on musical subjects, and his wife Emilie Herzog-Welti, a singer at the Berlin Opera. Wolf was in one of his unfortunate moods when he called on Welti, and everything went wrong until « Frau » Herzog, struck with the beauty of the « Elfenlied » (not the choral work that was to be given in Berlin, but the song, the 16th, in the Mörike volume) sang it at first sight without a single error. This drew Wolf out of his cloud, and the 3 spent a happy evening over the Mörike songs.

Shortly before the date arranged for the recital, Jäger fell ill and telegraphed that he could not come to Berlin, then, « Fräulein » Mayer became too hoarse to sing. Wolf was in despair, but there was nothing to do but postpone the concert, which was accordingly fixed for the 5th March. Meanwhile, in order to prepare the way for a better understanding of Wolf's songs, the Berlin « Wagner-Verein » , through Doctor Richard Sternfeld, arranged a semi-private recital of them by Wolf himself. An afternoon was chosen instead of an evening, so that the hard-worked musical critics might be able to attend. Of the 100 persons invited, only a dozen appeared and, among them, not a single

critic. In the audience, however, was a certain Paul Müller, a teacher at one of the Berlin colleges. The songs made a profound impression on him ; he, henceforth, laboured incessantly with pen and voice in Wolf's behalf, and to him was due the foundation, at the end of 1895, of the first « Hugo Wolf-Verein » , which did so much for the spreading of the composer's fame. Paul Müller has given, in the issue of « Die Musik » for March 1903, his impression of the evening. In the early days of 1892, he had read in a newspaper an announcement that a certain « Herr » Hugo Wolf, from Vienna, would shortly give a recital, in the Berlin « Sing-Akademie » , of songs of his own, composed to poems by Gœthe, Eichendorff, Mörike, Keller, and others from the « Spanisches Liederbuch » of Heyse and Geibel. Müller dimly remembered having heard Wolf's name mentioned once, with the casual remark that, « his accompaniments were very difficult » ; but he knew nothing of the songs. What particularly struck him now was the excellence of the poets whom the composer had chosen to set. He immediately went-off to a music-shop and bought a number of the songs ; on his return home, he found a card from Sternfeld, inviting him to the recital by Wolf, at 5 o'clock that same afternoon.

He went, and was introduced to Wolf, whom he was fortunate enough to please, at once, by a remark that he was glad to make the acquaintance of a musician who only set good poets to music ; there was no surer way into Wolf's affection than to approach his own music through the poems. Müller describes him in these terms :

« A small, almost delicate figure, rather stooping, and with the shoulders bent forward. The face pale, with clear traces of heavy spiritual troubles ; the hair ash-coloured, erect, and not very abundant ; slight moustache and pointed beard ; a pair of wonderful deep brown eyes, full of grief and a thirst for beauty. »

He was in a good humour that day, and seemed quietly confident of the impression his songs would make. The tenor engaged instead of Jäger was not at home in the music, and did rather badly in the few songs he sang. He had to leave soon however and, after his departure, Wolf himself rendered the songs. Before touching the piano, he would read the words, and call the attention of the audience to the beauty of them. Then, he would sing the song in a small, uncultivated voice, but with the most penetrating expression, while he played the piano part in a way that brought everything into the proper focus, the themes standing-out with extraordinary clearness, and even the very harmonies taking on peculiar meanings. He sang « Der Musikant » , « Der Schreckenberger » , and « Der Glücksritter » , from the Eichendorff set ; « Der Tambour » , « Auf ein altes Bilde » , and « Der Feuerreiter » from the Mörike set ; and « Anacreons Grab » from the Gœthe set. Only twice in the afternoon did he show any annoyance when a disturbing noise was heard in the hall, and when a certain bass-singer asked him to write something for him, a request that met with a curt refusal.

(Max Friedländer, whom Wolf had met in Mainz a year before, was among the audience ; and, from a remark of Doctor Ernst Décsey, it seems probable that it is he who is referred to in Müller's story, which, however, Doctor Décsey does not print in his own volume.)

The concert took place on the 5th March and was a great success, in spite of the inefficiency of the tenor and the bad singing of « Fräulein » Mayer. The lady happening to take some liberties with one of the songs, or to offend him in some other way, he spoke angrily to her while he was still accompanying ; and although the audience wanted to

encore the song, he refused to repeat it. In the artists' room, he walked up and down excitedly with his hands in his pockets and would not speak to her. She left the town immediately after the concert, and they never met again. The critics were friendly and patronizing but, for the most part, showed no signs of having plumbed the depths of the music. Wolf, said one of them in all seriousness, resembled Adolf Jensen more than Johannes Brahms ; another found fault with his rhythms, and gravely advised him to go on a little further with his studies in this direction. Only 1 or 2 of the writers scented the real significance of the music they had heard. Still, the concert had decidedly advanced his prospects in Berlin, and arrangements were made for another in November, at which « Frau » Herzog was to sing. On the material side, the evening was a failure, the receipts being about £ 11 and the expenses, £ 25.

### An invitation from Gisela

**Wednesday, 16 March 1892** : Letter from Gisela Thomas (« née » Thöhrenbacher) to Anton Bruckner :

Gisela asks Bruckner to visit her at home on « Ungargasse » Number 63.

### Bruckner's 3 new physicians

**Tuesday, 3 May 1892** : Beginning of a new treatment period for Anton Bruckner. The attending physicians are Doctor Guido von Török, Doctor Friedrich Kraus and Doctor Otto Kahler.

### Doctor Guido von Török

Doctor Guido von Török was a well-known Austrian military surgeon who was Theodor Billroth's assistant from 1877 to 1880.

### Doctor Friedrich Kraus

The Austrian internist Friedrich Kraus was born on 31 May 1858 in Bodenbach, Bohemia, and died on 1 March 1936 in Berlin. He is remembered for his achievements in the field of electro-cardiography and his work in colloid chemistry.

He studied medicine at the « Gymnasium » in Prague and, after, at their Universities. From that time until March of 1885, he was assistant in the Physiological-Chemical Institute of Prague and, in November of the same year, he took a similar position at the Prague Pathological-Anatomical Institute. He obtained his M.D. Degree in 1882, in Vienna. He subsequently worked as an assistant at Otto Kahler's (1849-1893) medical clinic. In 1888, he was appointed « Privat-docent » in internal pathology at the University of Prague, a position which he held until 1890, when he became assistant to Kohler at the clinic of the « Allgemeines Krankenhaus » , in Vienna. In 1890, he obtained his habilitation and, not long afterwards, was appointed director of the « Rudolph-Spital » , in Vienna. Kraus was made assistant professor in the University of Vienna, in 1893. In 1894, he relocated to the University of Graz as a full-professor of medical pathology and therapeutics of the indoor clinic.

After the first professorship in Graz (foundation of the constitution research) , Kraus was appointed in 1902, in replacement of Carl Gerhardt (1833-1902) , director of the 2nd Medical Clinic of the « Charité » Hospital in Berlin, where he worked-up to his discharge from the active service, in 1927. At Berlin, his assistants included Theodor Brugsch (1878-1963) and Rahel Hirsch (1870-1953) .

Kraus is credited for introducing electro-cardiography and functional diagnostics into German medicine. He made important contributions in the field of electro-cardiology.

From 1906, he dealt with electro-cardiological problems, mainly together with his assistant Georg Friedrich Nicolai (born : Lewinstein) (1874-1955) . In 1910, the first monography, « Das Elektrokardiogramm des gesunden und kranken Menschen » (The Electro-cardiogram of the Healthy and Ill Individual) , was published. After World War I, Kraus dealt with the « Special Pathology and Therapy of Internal Diseases » and the « General and Special Pathology of the Person » . In the theory of the depth person, being ahead of the time, psychosomatic connections were explained.

Kraus researched the relationship of the nervous system's functional nature with mechanistic concepts. He demonstrated that living matter contained colloids and mineral salts, that when dissolved in a solution are electrolytes. He postulated that a type of bio-electrical system is present within the body that acted like a relay mechanism storing electrical charge (energy) and recharge (action) . He explained this proposition in his book « Allgemeine und spezielle Pathologie der Person » (General and Special Pathology of the Individual) . Kraus' theory on bio-electrics is considered to be a forerunner to psychologist Wilhelm Reich's work with bio-physics and body psychotherapy (vegeto-therapy) .

Kraus, who has made a specialty of the study of alkalis and the oxidation of sugar in the blood, is the author of :

« Über Ermüdung als Mass der Constitution und über Säure Autointoxication »

« Krankheiten der Mundhöhle und Speiseröhre »

« Krankheiten der Sogenannten Blutdrüsen »

He is the author also of a number of articles on similar subjects in specialist magazines.

The 50th anniversary of the death of Friedrich Kraus (31 May 1858 to 1 March 1936) was the occasion to remind of the merits of this internist for the development of the functional diagnostics and the spreading of the electro-cardiography in Germany.

### Doctor Otto Kahler

The Austrian physician and pathologist Doctor Otto Kahler was born on 8 January 1849 in Prague and died on 24 January 1893 in Vienna.

In 1871, Kahler obtained his medical doctorate in Prague, and following an educational trip to Paris, returned to his hometown as an assistant to Joseph Halla (1814-1887) at the internal clinic. In 1882, he became an associate-professor (« Professor extraordinarius ») at the « Karl-Ferdinands-Universität », and, a few years later (1886), was a full-professor of pathology and therapy. In 1889, he relocated to the University of Vienna, succeeding Heinrich von Bamberger (1822-1888) as professor of special pathology. After a year in Vienna, he developed tongue cancer and his assistant, Friedrich Kraus (1858-1936), subsequently, took-over his lectures.

He is best-known for describing multiple myeloma, a hematological malignancy, which is called « Kahler's disease » in his honour in several countries. Additionally, he made various important discoveries in the field of neurology, such as describing syringomyelia, and the arrangement of the posterior columns in the spinal cord (the Kahler-Pick law, with Arnold Pick) .

...

Multiple Myeloma has been recognized since Ancient Times. The first well-documented case was reported in 1844 by Samuel Solly. The most commonly recognized case is that of Thomas Alexander McBean, a highly-respectable tradesman from London in 1850. Mister McBean excreted a large amount of protein that was described by Henry Bence Jones in the middle of the 19th Century. Jones was a well-known physician and made many contributions to medicine. One of the best-known cases of multiple myeloma was that of Doctor Loos that was reported by Doctor Otto Kahler. The recognition of plasma cells and subsequently their product, a monoclonal protein has been described in detail. The authors have reviewed the treatment of multiple myeloma including the novel agents, thalidomide, bortezomib and lenalidomide.

...

Otto Kahler was the son of a well-known physician in Prague. After receiving his M.D. degree from the University of Prague in 1871, Kahler studied in Paris, where he met the French neurologists Jean-Martin Charcot (1825-1893) and Guillaume-Benjamin-Amand Duchenne (1806-1875) . Kahler became interested in neurology, particularly in neuroanatomy. He contributed to the understanding of the pathological anatomy of tabes dorsalis, localization of parietal central oculomotor paralysis, and the symptoms of gradual compression of the spinal cord. He, then, returned to Prague where he became head of the 2nd medical clinic at the German University of Prague. In 1889, Kahler succeeded the Austrian internist Heinrich von Bamberger (1822-1888), as Professor at the University of Vienna. Kahler finished his inaugural address in Vienna on May 13th, 1889, with a statement, « Ars longa vita brevis » (The art (of medicine) is long ; life is short) , words that proved prophetic in 1889, when he developed a malignant tumor of the tongue. Despite an attempted excision, carcinoma of the tongue recurred the following year, and Kahler died on January 24th, 1893. Kahler was known for being extremely kind to his patients and an excellent teacher. Incidentally, his obituaries and eulogies made no mention of his famous case report of Doctor Loos ; the contributions of both Henry Bence Jones and Otto Kahler to multiple myeloma were not recognized during their lifetimes.

...

Otto Kahler, the son of a physician, studied in his native city of Prague and obtained his doctorate in 1871. Following an educational journey to Paris, Kahler became assistant at the internal clinic of Joseph Halla (1814-1887) in Prague, and was habilitated as « Dozent » for internal medicine at the German university in Prague, becoming « ausserordentlicher » professor in 1882, « ordinarius » of special pathology and therapy and head of the 2nd medical clinic at the German university in 1886.

Kahler preached the gospel of Jean-Martin Charcot's (1825-1893) approach to clinical medicine and neurology to Middle-Europe. When, in 1889, he moved to Vienna to succeed Heinrich von Bamberger (1822-1888) as « ordinarius » of special pathology and head of the medical clinic, he took Friedrich Kraus (1858-) with him as assistant.

After a year in Vienna, Kahler developed cancer of the tongue. Kraus took-over his lectures and established himself as a brilliant teacher, laying the foundation for his appointment to Berlin.

Despite his short life-span, by his literary activity Kahler obtained a reputation as one of the important clinicians in his time.

The Czechoslovakian neurologist and psychiatrist Arnold Pick (1851-1924) was a close associate of Otto Kahler. Together, they had worked-out what, in 1880, became known as Kahler-Pick law. It concerned the respective arrangement of incoming posterior root fibres in the posterior columns of the spinal cord. An ingenious injection technique enabled them to demonstrate that the fibres at higher-levels displace to progressively more medial planes those that enter at lower levels.

### Written works

« Beiträge zur Pathologie und pathologischen Anatomie des Centralnervensystem. » (Contributions to the pathology and pathological anatomy of the central nervous system) , with collaboration of Doctor Arnold Pick (1879) .

« Über die Diagnose der Syringomyelie » (On diagnosis of syringomyelia) in : « Prager medicinische Wochenschrift » , Prague, (1889) .

« Zur Symptomatologie des multiplen Myeloms. Beobachtung von Albumosurie. » (Symptomatology of multiple myeloma. Observation of albumosuria.) in : « Prager medicinische Wochenschrift » , Prague (1889) .

...

Otto Kahler studierte in seiner Vaterstadt Medizin und wurde 1871 promoviert. Das wohlhabende Elternhaus bot ihm neben einer gediegenen Allgemeinbildung auch die Möglichkeit zu einer Studienreise nach Paris, wo sich Kahler während mehrerer Monate besonders bei Jean-Martin Charcot und Guillaume-Benjamin-Amand Duchenne de Bologne weiterbildete. Seither galt sein besonderes Interesse der Klinik und pathologischen Anatomie des Zentralnervensystems. An der Prager Medizinischen Klinik bei Joseph Halla Assistent geworden, fand er in dem damaligen Sekundararzt der Prager

Irrenanstalt Arnold Pick, der gerade aus der Schule K. F. Westphals zurückgekehrt war, einen gleichgesinnten Mitarbeiter. Ein « frisch-fröhliches Forschen » der beiden zeitigte nach 4 Jahren als Frucht die « Beiträge zur Pathologie und pathologischen Anatomie des Centralnervensystems » (1879). Abgesehen vom Einzelwert der kasuistischen Arbeiten wirkte besonders die Abhandlung über die Systemerkrankungen wie ein Gärstoff auf die zeitgenössischen Untersuchungen über die Tabes dorsalis. Das Kahler-Picksche Gesetz (über den Verlauf der sensiblen Fasern im Hinterstrang des Rückenmarks, der durch immer neu hinzukommende bestimmt wird) erinnert heute noch an diese Arbeitsperiode. 1875 habilitierte sich Kahler in Prag, 1882 erhielt er den Professor-Titel und wurde 1887, nach Emeritierung seines Lehrers Halla, Vorstand der II. Medizinischen Klinik der Deutschen Universität Prag. 1882-1883 war die Abspaltung einer Böhmisches Universitäts dortselbst erfolgt, woraus sich Schwierigkeiten ergaben. Die damit verbundenen finanziellen und räumlichen Einschränkungen glich Kahler mit seinem Organisationstalent und seinem Fleiß aus. 1888 erschien seine Untersuchung « Über die Diagnose der Syringomyelie » (in : Prager medizinische Wochenschrift, Band 13 ; Seiten 45-47, 63-65) mit der I. vollständigen Beschreibung dieses Leidens und 1889 seine grundlegende Arbeit « Zur Symptomatologie des multiplen Myeloms » (Prager medizinische Wochenschrift, Band 14 ; Seiten 33-35, 44-49) , das seither als « Kahlersche Krankheit » in das medizinische Schrifttum eingegangen ist. Im gleichen Jahre erreichte ihn die Berufung nach Wien, wo seit dem Tode Heinrich von Bambergers die II. Medizinische Klinik verwaist war. Dadurch in die Nähe des damals bedeutendsten Internisten der österreichisch-ungarischen Monarchie, Carl Wilhelm Hermann Nothnagel, versetzt, zollte er diesem schon in seiner Antrittsvorlesung « Über das Wesen und die historische Entwicklung unserer Diagnostik » hohe Anerkennung. Beide verband fortan Freundschaft und gegenseitige Verehrung. Als Arzt brachte Kahler « Sonnenschein in die Krankenstuben » , als Lehrer fesselte er die Studenten mit seinem « klaren, anschaulichen und durchsichtigen » Vortrag. Alle wollten in ihm das Wesen Oppolzers wieder erkennen, dessen 2. Nachfolger er war. Da brach wenige Monate nachdem er in Wien heimisch geworden war, seine Todeskrankheit aus : ein Zungenkrebs. Von seinen Kollegen Theodor Billroth und Karl Gussenbauer mehrmals operiert, starb er wenige Wochen nach seinem 44. Geburtstag.

...

Otto Kahler, hervorragender Kliniker zu Wien, 1849 in Prag geboren, studierte auch dort, war Assistent an der Klinik von Halla, wurde 1871 promoviert, 1878 Dozent an der deutschen Universität in Prag, 1882 Professor e.o. , 1886 ordinarium Professor für specielle Pathologie und Therapie und Vorstand der II. medicinischen Klinik an der deutschen Universität und war schließlich seit 1889 als Nachfolger Bamberger's in gleicher Eigenschaft in Wien thätig, wo er jedoch bereits am 24. Januar 1893 starb. Trotz seines frühen Todes hat Kahler durch seine litterarische und Lehrthätigkeit sich den Ruf eines der bedeutendsten Kliniker der Neuzeit begründet. Er hat in verschiedenen Archiven und Zeitschriften zahlreiche Arbeiten aus verschiedenen Gebieten der inneren Medicin, vor allem aus dem der Neurologie, klinischen, anatomischen und experimentellen Inhaltes verfaßt, das Capitel « Centralnervensystem » in dem Lehrbuche der Histologie von Carl Toldt (3. Auflage Stuttgart 1888) bearbeitet und war Redacteur der Prager Medicinischen Wochenschrift seit 1878. Namentlich verdankt ihm die Lehre von der Tabes und von den combinirten Systemerkrankungen des Rückenmarks wesentliche Förderung. Ebenso hat Kahler Studien über die Basedow'sche Krankheit, über Rückenmarksverletzungen, über die acute, aufsteigende Paralyse, perniciose Anämie, Darmverschluss, Venenpuls, Pleurapunction etc. gemacht respektive veröffentlicht. Am 2. Juli 1904 wurde Kahler's Büste in den Arkaden der Wiener Universität feierlich enthüllt, wobei Professor Friedrich Kraus (Berlin) die Rede hielt.

Basedowii, über Rückenmarksverletzungen, über die akute, aufsteigende Paralyse, perniziöse Anämie, Darmverschluss, Venenpuls, Pleurapunktion etc. gemacht respektive veröffentlicht.

### Genealogie

Vater : Josef (1810-1870) , Doktor der Medizin, Stadtarzt in Prag, Sohn der Landwirts Johann in Großdorf bei Braunau/Böhmen und der Barbara Rosenberg ; Mutter : Anna (1827-1897) , Tochter der Wirtschaft-Bes. Josef Souček in Lichtendorf und der Anna Stech ; verheiratet Prag 1876 Amalie (1855-1914) , Tochter der Carl Constantin Ritter von Zdekauer (1819-1873) , Doktor der Rechtswissenschaften, Bankier, Präsident der Böhmisches Eskomte-Bank in Prag, und der Anna Artus, Präsidentin der Prager deutsche Frauen-Erwerbsversicherung ; Schwager Konrad Ritter von Zdekauer (1847-1929) , Schriftsteller (Ps. Curt von Zelau ; Brümmer) ; 2 Sohn, 2 Tochter, und andere Otto (1878-1946) , Professor der Hals-, Nasen- und Ohrenheilkunde in Freiburg, Hermann (1891-1951) , Dozent für innere Medizin und Krankenhaus-Primarius in Wien, Lilli (verheiratet Richard Wiesner, 1875-1954, Professor der Pathologie in Wien) .

### Bruckner's swollen feet

**Wednesday, 1 June 1892** : Letter from Anton Bruckner (Vienna) to Father Raffael « Oddo » Loidol (Kremsmünster) :

« Reverend Sir and Highly-Honoured Friend !

The heat is intensive ! Everyone is fleeing from Vienna. But I must thank Your Grace most deeply - as much as it pains me (because I would with pleasure be in Kremsmünster) - on behalf of the invitation honouring me so. My feet, particularly the right, are swollen so much (by edema) that I am able to walk only ponderously and cannot play the organ at all. Please, be informed. Your Grace, of my deepest respect and thanks ; perhaps, Your Grace may permit me to pay a visit some time later. Please, remember me to the Reverend Chapter, especially Professor Romuald. Heartfelt greetings.

Yours,

Anton Bruckner »

**Tuesday, 14 June 1892** : Letter from Anton Bruckner (Vienna) to Bernhard Deubler (St. Florian, near Linz) :

« Reverend Sir, Right Honourable Professor !

“ Cheers ” ! for the performance of the “ Vexilla regis ” ;

“ Cheers ” ! for the nice congratulations honoring me ;

“ Cheers ” ! for my noble patron !

I was really sorry that I was unable to be at St. Florian. Since April 25th, I have been suffering from pain and swelling in my feet (edema) , I cannot and dare not play the organ. In particular, the right foot is distended every day. “ Post molestam senectutem ” , etc. Also, I wish everything good to “ Herr ” Gruber, as well as to my brother Ignaz. Tomorrow evening, the 15th at 8:00 pm, my 4th Symphony will be performed in concert. Later, the 3rd. Perhaps, the 7th as well.

With the expression of most sincere thanks and respect,

Anton Bruckner »

Vienna : « Gasthaus Zur blauen Kugel »

**Thursday, 16 June 1892** (« Corpus Christi ») : Anton Bruckner and August Stradal talk about the performance of the 4th Symphony (**WAB 104**) at the Viennese restaurant « Gasthaus Zur blauen Kugel » (the Blue Ball Inn) , located at « Annagasse » Number 16 - « Krugerstraße » Number 13A (Conscription Number 997) in the 1st District (near the « Hofoper » and the Imperial Crypt) .

**End of Summer Semester 1892** : University student Ernst Schwanzara records his last lecture of Anton Bruckner. They spend the evening celebrating at the « Gasthaus Zur blauen Kugel » .

## History

The owners of the initial house that was previously occupying this site can be fully-documented from 1437 onwards. This contradicts the statement by the City of Vienna that it formerly belonged to the monastery of St. Clara. In 1671, the house was acquired by the Court Chamber Chancellor Johann Hueber, who demolished it in 1684, and built the present structure on a floor-space of 255 square-meters (according to other sources, it was built only in 1710) . It is a wonderful example of Baroque architecture. Like the old one, the new building also received the name « Zur blauen Kugel » . In 1700, it became the property of the Imperial Court Chamber Registrar Johann Andreas Kaimb.

At the top of the 4 storey building, the Imperial Colonel and City's chief-engineer Leander von Anguissola has set-up an observatory. After his death, the Imperial School of Engineering (founded in 1718 and whose first director was Anguissola) moved in. The institution remained there until 1754, then moved to the « Königseggpalais » in Gumpendorf.

In 1775, the building was owned by the Camesina family. In 1806, Albert Camesina was born ; he lived there until his death on June 6, 1881.

Finally, this small Baroque palace was transformed into a hotel in 1904 : the 4 Star Hotel « Zum römischen Kaiser » (Roman Emperor Hotel) . It has been run by the same family since its inauguration.

...

Die Besitzer des früher auf diesem Grundstück gestandenen Gebäudes lassen sich ab 1437 lückenlos belegen. Dies widerspricht der Angabe im Stadturbar, daß das Objekt ehemals dem Clarakloster gehört habe. 1671 wurde es vom Hofkammerkanzlisten Johann Hueber erworben, der es 1684 demolieren und auf einer Grundfläche von 255 Quadratmetern das heutige Haus errichten ließ (laut anderen Angaben wurde es erst 1710 erbaut) . Wie schon das alte Gebäude erhielt auch der Neubau den Namen « Zur blauen Kugel » . 1700 kam er in das Eigentum des kaiserlichen Hofkammerregistrators Johann Andreas Kaimb.

Im Aufsatz des vierstöckigen Hauses soll sich der kaiserliche Oberst und städtische Obergeringieur Leander von Anguissola ein Observatorium eingerichtet haben. Nach seinem Tod wurde hier die 1718 gegründete kaiserliche Ingenieursschule untergebracht, deren 1. Direktor Anguissola gewesen war. Sie blieb bis 1754 in diesem Gebäude und wurde danach in das Königseggpalais in Gumpendorf verlegt.

1775 kam das Haus in den Besitz der Familie Camesina. 1806 wurde hier Albert Camesina geboren, der sein ganzes Leben lang in diesem Gebäude lebte, in dem er auch am 6. Juni 1881 starb. Später wurde das Haus zu einem Hotel umgebaut, das den Namen « Zum römischen Kaiser » führt.

### 1892 : Bruckner goes to Bayreuth

**Between Friday, 15 and Tuesday, 19 July 1892 (?)** : Anton Bruckner goes to Bayreuth for the last time. He travels by train with members of the Vienna academic Wagner Society.

Leaving the Bayreuth station, he forgets to wait for the porter to whom he had given his baggage.

Along with his supporters, Bruckner go to the « Gasthaus » owned by Johann Gurt. There, he notices the loss of his travel-bag which contains, in other things, manuscripts of the first movement of his 9th Symphony. Greatly alarmed, he sets off in search of the man, who, in the meantime, had deposited his effects at the police-station.

In the evening, Felix Mottl's mother talks to Bruckner about the incident.

Bruckner attends performances of « Parsifal » and « Tannhäuser » . He also goes to pray at the grave of Richard Wagner, in the garden of « Haus Wahnfried » .

Doctor Rostorn from Prague provides him with medical assistance during his stay in Bayreuth.

Bruckner returns to Vienna via Nuremberg and Passau.

### Bruckner's pretty table companion

Anton Bruckner was neither a world-class talker nor a so-called « good companion » . In the high-standing circles and even in the company of ladies, he did not feel at home at all. He even behaved with a stirring awkwardness. One day, he was sitting in front of a gracefully dressed girl, while a meal was served to him. Again and again, the beautiful woman tried unsuccessfully to start a conversation with her famous table companion. Embarrassed, Bruckner whirled on his arm-chair, ate like a little bird, limited himself to monosyllabic answers and did not even dare to look into the lovely girl's eyes.

Finally, frustration took-over, she complained :

« But, dear Professor, you hardly look at me, and I am left alone in this conversation. Especially since I made myself honourable and beautiful by wearing my newest dress ! »

Even more embarrassed, Bruckner stuttered :

« But my liable “ Fräulein ”, you don't need anything from me at all ! »

The lady blushed ; Bruckner kept silence. The conversation was over.

### « Fräulein C. »

**Wednesday, 20 July 1892** : Anton Bruckner meets former Vienna Conservatory student « Fräulein C. (Cl.) » at the « Volksgarten » and invites her to visit him once, even though his house-keeper « Frau Kathi » Kachelmayr is at home.

Josefine Lang (1844-1930) married Josef Weilnböck, a merchant, in 1870. On 21 April 1891, Bruckner wrote to Caroline, recalling the pleasant day he had spent, as well as to her mother.

See : « Harrandt - Schneider Anton Bruckner Briefe » (HSABB) Band 2, page 134 for the texts of both letters ; the originals are in the « Oberösterreichisches Landesmuseum » , Linz. See, also : « Harrandt - Schneider Anton Bruckner Briefe » (HSABB) , Band 2, pages 157 and 160-161, for an exchange of letters between Karl Waldeck and Bruckner,

dated : Linz, 11 November and Vienna, 20 November 1891 respectively, in which « Fräulein C » is almost certainly a reference to Caroline, and « A. Lang » a reference to Anton Lang, Caroline's uncle ; the original of Waldeck's letter is in St. Florian and the original of Bruckner's letter is not extant but « Musikwissenschaftlicher Verlag » , Vienna possesses a copy.

**Thursday, 21 July 1892** : Wilhelm Zinne from Hamburg visits Anton Bruckner at his « Heßgasse » apartment in Vienna. « Fräulein C. (Cl.) » is present.

Bruckner talks about Eduard Hanslick, Hans von Bülow, Siegfried Ochs, Ida Buhz and August Göllerich junior ; and also the exhumation of Beethoven and Schubert.

Zinne noticed Bruckner's strong tremor and the absence of many teeth (due to diabetes) .

It was now the « Fräulein's » turn to invite Bruckner.

Carl Wilhelm Zinne (1858-1934) : A Hamburg elementary school teacher and music-critic for the « Neue Hamburger Zeitung » , the « Hamburger Anzeiger » and the « Hamburger 8 Uhr Abendblatt » . Although very humble about his own musical endowments, he was true friend to Bruckner and a devoted champion of his work. Also a supporter of Gustav Mahler, in Hamburg. His friendship with Mahler was based on their mutual love of Bruckner and ... bicycling !

#### Vienna : Female ballet-dancers of the Hamburg Opera

**Friday, 22 July 1892** : Anton Bruckner invites 2 female ballet-dancers of the Hamburg Opera (on tour) to join him tomorrow evening (around 10 o'clock) alongside his compatriot Wilhelm Zinne.

**Saturday, 23 July 1892** : Anton Bruckner and Wilhelm Zinne attend a performance of the Hamburg Opera in Vienna.

Doktor Richard Paltauf, who is concerned about Bruckner's health, invites Aurelia Stolzar to sit in his company and with Professor Hans Rabl from Prague.

Bruckner is talking with Aurelia.

At about 10 o'clock, Bruckner and Zinne meet with female ballet-dancers of the Hamburg Opera who propose to join them at the « Schweizerhaus » (Swiss House) in the « Prater » , Leopoldstadt.

#### Prater : « Schweizerhaus »

**1766** : The « Schweizer Hütte » (Swiss Lodge) is mentioned for the first time in Vienna. The « Prater » was not yet a public park. The name can originate from the typical wooden construction. Another theory relates to the Swiss huntsmen, entertaining « gentlemen » on the Imperial hunting grounds, who had a shelter there.

**1800** : The « Gasthaus zur Tabakspfeife » (The Tobacco Pipe Inn) is located on the site of the « Schweizer Hütte » . The establishment is considered as a meeting place for smokers, because tobacco smoking is banned by the high-society.

**1814** : During the Congress of Vienna, the house is reputedly renamed « Zum russischen Kaiser » (At the Russian Tsar Inn) .

The name « Schweizerhaus » (literally : « Swiss House ») derives from a « Schweizer Meierei » (Swiss dairy farm) which opened at the « Prater » in **1868**. Switzerland had been, for Centuries, associated with opulence and sophisticated gastronomy.

**1880** : There is already a restaurant at the « Prater » (civic address : Number 16) - the « Schweizerhaus' » actual site. It is owned by Boruslav Straßnicky, a representative of the Citizens' brewery of Plzeň (Pilsen) , in Bohemia.

**1883-1884** : At the beginning, the restaurant is owned by Gustav Pach. Then, the Pach brothers (Gustav and Hermann) create their own company. So, during the summer season, they operate the « Schweizerhaus » and, during the winter season, they work at the conversion of Vienna's « Sofienbad » (a public bath-house) into the « Sofiensaal » (a new dance-hall) .

**1899** : The Pach brothers sell the « Schweizerhaus » to the « restaurateur » Karl Hysam.

**1906-1907** : Julius Maly, who owns the « Hotel Germania » (on « Kaiser Ferdinand-Platz » in the 1st District) , operates the « Schweizerhaus » .

**1907-1920** : The « Schweizerhaus » restaurant is owned by the in-keeper Jan Gabriel.

**1920** : The 19 year old Karl Kolarik (the father of today's owner) takes over the « Schweizerhaus » . It will become a family business.

**1925** : The « Schweizerhaus » is the first Viennese restaurant to offer « Fish & Chips » . The rustic potato-chips are produced there.

**1926** : The « Schweizerhaus » offers the original « Budweiser Budvar » beer from Bohemia.

**1929** : Karl Kolarik builds the first kitchen which is opened to the public. A few years later, other restaurants will follow the same original concept.

**1945** : The « Schweizerhaus » is completely destroyed by Allied bombings.

**1947** : Karl Kolarik and his wife Else rebuild the « Schweizerhaus » by transforming an old wagon from the « Prater's

» ferris-wheel into a tiny wooden hut.

...

Der Name Schweizerhaus leitet sich von einer 1868 im Prater eröffneten Schweizer Meierei ab. Es soll aber bereits 1766 als Schweizer Hütte im damals noch nicht öffentlichen Prater bestanden haben und 1814 in Zum russischen Kaiser umbenannt worden sein. Auch kann der Wortteil Schweizer im Kompositum Schweizerhaus auf der für die exponierte Lage und ursprüngliche Verwendung zurückgehende typische Ausführung in Holz beziehungsweise dem Schweizerstil beruhen. Eine andere Theorie bezieht sich auf die im kaiserlichen Jagdgebiet tätigen schweizerischen Jagdhelfer, die dort eine Schutzhütte hatten.

1880 gab es am heutigen Standort (Prater Nummer 16) bereits eine Gaststätte, geführt von Boruslav Straßnicky, Vertreter des bürgerlichen Brauhauses in Pilsen. 1883-1884 kam der Betrieb zunächst an Gustav Pach, später an die von Gustav und Hermann Pach gegründete Firma Gebrüder Pach, die, saisonal alternierend, im Sommer das Schweizerhaus und im Winter die Restauration des Sofienbades beziehungsweise der Sofiensaal führten. Die Gebrüder Pach verkauften den Betrieb 1899 an den Restaurateur Karl Hysam.

1906-1907 war Julius Maly, Inhaber des Hotel Germania (Schwedenplatz Nummer 4, Wien-Innere Stadt), Betreiber des Schweizerhauses. 1907 bis 1920 wurde die Gaststätte von Johann Gabriel geführt, wonach sie Karl Kolarik übernahm und zu einem Familienbetrieb machte.

Das Lokal verfügt über einen groß angelegten Biergarten, der in kleinere Bereiche unterteilt ist, die nach den Wiener Gemeindebezirken benannt sind. Eine Ausnahme stellt der Bereich bei der Schank selbst dar, dessen Bezeichnung Franz-Josefs-Bahnhof dem gleichnamigen Wiener Bahnhof entlehnt ist, sowie die nach bekannten Wiener Stadtteilen benannten eigenständigen Bereiche Oberlaa und Kaisermühlen. Dieser Aufbau soll vor allem der leichteren Orientierung innerhalb des Areals dienen, doch die verschiedenen geografischen Bezugspunkte sollen auch für das Personal eine gute Hilfe sein.

Neben klassischen Wiener Küchenspezialitäten wie Gulasch oder Schnitzel gelten vor allem die im Schweizerhaus angebotenen Schweinsstelzen sowie die Erdäpfelpuffer als Markenzeichen der Gaststätte.

...

**1766** die « Schweizer Hütte » wird erstmals urkundlich erwähnt. Schweizer Jagdtreiber bewirten hier schon vor bald 250 Jahren die kaiserlichen « Herrschaften » .

**1800** stand an gleicher Stelle das Gasthaus « Zur Tabakspfeife », so benannt, weil es damals als Treffpunkt der Raucher galt, denn Tabakrauchen war zu dieser Zeit in der sogenannten guten Gesellschaft verboten.

**1814** Während des Wiener Kongresses wurde das Gasthaus der Zeit gemäß « Zum russischen Kaiser » umbenannt.

**1868** entstand auf diesem historischen Boden die Schweizer Meierei und diese erhielt später den heutigen Namen « Schweizerhaus » .

**1920** übernahm Karl Kolarik, der Vater der heutigen Inhaber, das Schweizerhaus. Der Wiener war damals ganze 19 Jahre alt.

**1925** « Erste Wiener Fischbraterei » und Erzeugung der Rohscheiben.

**1926** « entdeckt » er in Böhmen das original Budweiser Budvar Bier.

**1929** errichtete er die erste Gästeschauküche. Erst - zig Jahre später folgten andere seinem Beispiel.

**1945** wurde das Schweizerhaus, infolge der Kriegshandlungen vollkommen zerstört.

**1947** mit einem alten Riesenradwaggon und einer winzigen Holzhütte begannen Karl und Else Kolarik den Wiederaufbau.

**1954** wurde eine Schauküche aus Holz errichtet. Dies war die Entstehung des heutigen Gassenverkaufs mit Rohscheiben und Kartoffelpuffer.

### Aurelia Stolzar

One problem still continued to preoccupy Anton Bruckner :

« As far as marriage is concerned, I still have no bride. If only I could find a really suitable charmer. »

One day, sitting in a restaurant at the « Prater » gardens with his friends, he flirted with the waitress :

« You're a pretty child, Aurelia. My whole life, I've never had a real affair but I'm always happy when I see such an open and honest face. »

The waitress' answer has also been recorded :

« Then, I expect you're alone in the world in that regard ! »

**Before Monday, 22 December 1890** : Pocket calendar entry by Anton Bruckner :

« “ Fräulein ” Aurelia Stolzar. Coffee-Shop, “ Florianigasse ” Number 33. »

**Saturday, 6 August 1892** : Letter from Wilhelm Zinne (Naples) to Anton Bruckner (Vienna) :

Greetings from Naples. In Rome, Zinne has found ladies whose beauty exceeds that of Aurelia Stolzar.

**Monday, 8 August 1892** : Letter from Wilhelm Zinne (Naples) to Anton Bruckner (Vienna) :

« From the 10th : in “ Birreria Cambrinus ”.

Dear Professor !

Most splendid greetings from the most beautiful region. So far, everything has proceeded according to desire and schedule. Yesterday, in Pompeii (the ancient city) ; from there, today, “ Vesuvius ”, tiring ascent in lava and ash, but the highest pay-off : remarkably majestic crater ; it always roared when granular lava and steam would thrust outward. I permitted myself to stand on the edge of it, for a whole hour. In Rome, for 8 days ; there, I found the most beautiful women I know, “ Aurelia ”, herself, returns there ! Naturally, I will marry only a Roman lady after all.

Heartfelt greetings.

Yours,

Wilhelm Zinne »

« Aurelia » : Latin word meaning golden. Hence, a beautiful lady's name.

**Before Wednesday, 17 August 1892** : Letter from Anton Bruckner to Aurelia Stolzar :

Bruckner sends a photograph of him to Aurelia with a dedication on the back :

« To my dear friend, “ Fräulein ” Aurelia

Anton Bruckner, m.p. »

**Wednesday, 17 August 1892** : Letter from Aurelia Stolzar to Anton Bruckner :

Aurelia thanks Bruckner for sending his photograph. (Perhaps, this picture has been taken by Aurelia herself.)

**Tuesday, 23 August 1892** : Letter from Anton Bruckner to Aurelia Stolzar :

Bruckner thanks Aurelia for her letter and picture. He was already worrying that she was ill. During this time, he worked diligently on the 9th Symphony.

Bruckner must be in Vienna for the beginning of September. He will attend on the 18th a performance of his « Psalm

150 » during the German Music Festival (which is part of the Music and Theater exhibition) . He would then visit Aurelia.

### The « Te Deum » dedicatee

By the time Anton Bruckner completed his « Te Deum » , the indignation of his many adversaries reached a climax.

One of them asked mockingly :

« So, why did you just now complete the “ Te Deum laudamus ” ? »

Bruckner replied in a serious manner :

« Out of gratitude to God, because my enemies have not yet managed to kill me ! »

During the evening, over a glass of « Pilsner » at the « Gasthaus » , he told the same story ... and much more :  
« Hellmesberger said that I should dedicate the “ Te Deum ” to the Emperor, I replied to him that I have already suffered enough from the attacks in Vienna ! »

(« I hab ihm aber gsagt, es is nimmer frei, i hab's schon dem oben zugsagt aus Dank für in Wien ausstandene Leiden ! »)

He concluded thoughtfully :

« I believe I would like to give the score of the “ Te Deum ” to our Lord, and say to him :

“ Look, I've done it all by myself, for you alone ! ”

After that, I would be already sleeping ! »

### A medical certificate

**Monday, 11 July 1892** : Anton Bruckner submits a medical certificate (jointly signed by Doctors Guido von Török, Friedrich Kraus and Otto Kahler) to the Vienna « Hofkapelle » authorities when requesting permission to retire.

He had been treated by these physicians since the summer of 1890, most recently since 3 May 1892.

Bruckner's ailments are listed in the medical certificate signed by Doctors Guido von Török and Friedrich Kraus, as reported by Theophil Antonicek (pages 118-119) :

General sclerosis of the arteries (« endarteritis chronica deformans ») , with consequent weakening of the heart muscles and valves, edema in the lower-extremities and varicose veins.

Atrophy of the liver (« cirrhosis hepatitis ») with persistent digestive problems.

Excess of sugar in the urine (« diabetes mellitus ») .

These diseases are incurable. The composer needed the utmost care and was incapable of any service. He gradually withdrew from active musical life. He had already left his post at the Vienna Conservatory in 1890.

« After his serious illness, Bruckner had given-up smoking and now took snuff in considerable quantities. »

(Doctor Richard Heller)

The most significant symptoms however were of poor circulation, swellings in his feet and general debility. His depression also became more marked. Playing the organ became difficult, and the flights of stairs to get to his flat on the 4th floor of the « Hôtel de France » (« Heßgasse » Number 7) increasingly became a trial. These symptoms indicate atherosclerosis or hardening of the arteries, a disease that normally progresses slowly but that can advance rapidly in cases of diabetes. Atherosclerosis can weaken the muscles of the heart (heart failure was to be the immediate cause of Bruckner's death) and can also limit the supply of blood to the brain, giving rise to multi-infarct dementia, a possible reason for the mental confusion reported by Doctor Richard Heller and others in the last months of Bruckner's life. Gradually, lucidity with moments of confusion gives way to confusion with windows of lucidity, and eventually to total mental collapse.

### Meeting Doctor von Török at the « Riedhof »

**Probably July 1892 (Vienna)** : Autograph note signed « ABR » mentioning the « Te Deum » (**WAB 45**) , inscribed on the back of a 47 mm x 77mm printed visiting-card of Bruckner (« Professor Anton Bruckner Ehren Doctor der Philosophie der Kaiserlich-Königlich Universität in Wien, Ritter des Franz-Josef Ordens, Kaiserlich-Königlich Hoforganist ») to « Edler Doktor in Spe ! » (« Noble Doctor, in hope ! ») , possibly Doctor Friedrich Kraus, telling him that Doctor Guido von Török has written to him, suggesting meeting at the « Riedhof » restaurant that very day and, probably, it would be possible after finishing the matter of the « Te Deum » (« Vielleicht nach Vollendung der “ Te Deums ” Angelegenheit ») .

This note is possibly connected with the medical certificate Bruckner sought from the eminent Viennese doctors Friedrich Kraus and Guido von Török, in **July 1892**, which he then submitted to the « Hofkapelle » , requesting permission to retire. Friedrich Kraus (1858-1936) , an eminent cardiologist, may be the recipient of Bruckner's message. Bruckner's printed visiting-card refers to his Honorary Doctorate of Philosophy, which he was awarded on 7 November 1891. The « Zum Riedhof Wirtshaus » (at the corner of « Wickenburggasse » Number 15 and « Schließelgasse » Number 12 (14) , in the District of Josefstadt - 8th) was a Viennese hotel restaurant and brasserie with a garden

frequented by Bruckner and many doctors, including Billroth (the dedicatee of Brahms' String Quartet in C minor, Opus 51, No. 1) , who was a friend of von Török's. Bruckner's « Te Deum » (WAB 45) was one of his most successful works, receiving around 30 performance during his lifetime.

In 1871, Baron Doctor Guido Karl (Carl) von Morpurgo (1846-1923) married Judith Hermine von Török (1853-1920) .

### Doctor Theodor Billroth

Honorary members of the Vienna Academic Choral Society (« Wiener Akademischen Gesangverein ») :

Richard Wagner, Johannes Brahms, Anton Bruckner, Theodor Billroth, Julius Wagner-Jauregg, Josef Viktor von Scheffel, Georg Reimers, Johannes Schober, Otto Tessler.

Surgeon and amateur musician, Christian Albert Theodor Billroth was born in a family of Swedish origin, on 26 April 1829 at Bergen auf Rügen, in the Kingdom of Prussia ; and died on 6 February 1894 in Opatija, Austro-Hungarian Empire.

Billroth was a great surgeon who invented many surgical procedures. He is remembered for the important role he played in establishing the first modern school of thought in surgery.

As a surgeon, he is generally regarded as the founding father of modern abdominal surgery. As a musician, he was a close friend and confidant of Johannes Brahms, a leading patron of the Viennese musical scene, and one of the first to attempt a scientific analysis of musicality.

Education : Georg-August University of Göttingen ; Humboldt University of Berlin ; Ernst Moritz Arndt University of Greifswald.

Billroth went to school in Greifswald. He was an indifferent student, and spent more time practicing piano than studying. Torn between a career as a musician or as a physician, he acceded to his mother's wishes and inscribed himself at the University of Greifswald to study medicine. He then followed his professor, Wilhelm Baum, to the University of Göttingen, and completed his medical doctorate at the University of Berlin. Along with Rudolph Wagner (1805-1864) and Georg Meißner (1829-1905) , Billroth went to Trieste to study the torpedo fish.

Billroth worked as a doctor from 1853 to 1860 at « La Charité » , in Berlin. In Berlin, he was also apprenticed to Carl Langenbuch. From 1860 to 1867, he was Professor at the University of Zürich and director of the surgical hospital and clinic in Zürich. While in Zürich, Billroth published, in 1863, his Classic text-book, « Die allgemeine chirurgische Pathologie und Therapie » (General Surgical Pathology and Therapy) . At the same time, he introduced the concept of audits, publishing all results, good and bad, which automatically resulted in honest discussion on morbidity, mortality, and techniques - with resultant improvements in patient selection. He was appointed professor of surgery at the University of Vienna, in 1867, and practiced surgery as chief of the 2nd Surgical Clinic (located at court-yard Number

l) at the « Allgemeine Krankenhaus » (Vienna General Hospital) .

He was directly responsible for a number of landmarks in surgery, including the first esophagectomy (1871) ; the first laryngectomy (1873) ; and, most famously, the first successful gastrectomy (1881) for gastric cancer, after many ill-fated attempts. Legend has it that Billroth was nearly stoned to death in the streets of Vienna when his first gastrectomy patient died after the procedure.

Billroth was instrumental in establishing the first modern school of thought in surgery. Among his disciples were luminaries such as Alexander von Winiwarter, Jan Mikulicz-Radecki and John Benjamin Murphy. William Halsted's pioneer surgical residency program was greatly influenced by Billroth's own methods of surgical education.

...

Christian Albert Theodor Billroth is remembered as one of the most innovative medical surgeons and educators of 19th Century. He was a leading patron of Viennese musical scene and contributed to both surgical and musical field. Billroth is regarded as the father of modern abdominal surgery and was the first person to attempt to do a scientific analysis of music. He completed his doctorate studies in medicine and became a successful surgeon. Being a passionate learner, Billroth visited many medical Universities, as part of his educational tour. His amazing presence of mind and cool temper made him one of the most distinguished surgeons of his time. He penned many papers and books in medicine and also served in a military hospital during Franco-German War. He is remembered for his important role in establishing the first modern school of thought in surgery.

He attended school in Greifswald and, later, inscribed in the University of Greifswald for medicine. He was student to Wilhelm Baum and moved to the University of Göttingen along with his professor. Billroth completed his doctorate studies from University of Berlin and then he, along with his friends Rudolph Wagner and Georg Meißner, went to Trieste to study about the electric ray « Torpedo » . In 1852, after completing his doctorate studies, he started for an educational tour, visiting many medical schools in Prague, Vienna, London, Paris and Edinburgh.

Billroth had an amazing ability to carry-out or even invent new procedures and this gained him the appellation of « surgeon of great initiatives » . He worked as a doctor at « La Charité » , in Berlin, from 1853 to 1860, where he was working under Carl Langenbuch as apprentice. He served as professor at the University of Zürich, from 1860 to 1867, and also served as the director of the surgical hospital in Zürich. Because of his interest in military surgery, he volunteered to work in Mannheim and Weissenburg hospitals during the Franco-German War. He put in great efforts in improving the transportation facilities and treatment for the wounded people in War and gave his famous speech on War Budget, in 1891, emphasizing the need of effective ambulance system. In 1867, he was appointed by the University of Vienna as a professor of Surgery. He also practiced surgery at the 2nd Surgical Clinic (located at courtyard Number 1) at the Vienna General Hospital. He penned many papers and books in medical domain and his book, « Die Allgemeine chirurgische Pathologie und Therapie » (General Surgical Pathology and Therapy) , published in 1863, was translated into many languages. He was the first person to do esophagectomy (1871) ; laryngectomy (1873) ; and gastrectomy (1881) . He achieved this after many ill-fated attempts and it is said that his first gastrectomy surgery

was such a failure that the patient died during post procedure and Billroth was almost stoned to death in the streets of Vienna. By 1881, Billroth successfully did an excision of a cancerous pylorus (the lower-end of the stomach) which became a great sensation. This initiated the modern era of surgery in the field of allopathic medicine. Modified versions of his surgical removal methods remained in use for many years. He was specialized in plastic surgery as well, especially of the face.

Billroth had a severe lung infection during the spring of 1887. He suffered from cardiac problems as well, towards his last years. Billroth died on 6th February 1894 in Abbazia, Austria-Hungary. He was buried in Vienna with « princely » honours. There is a memorial for him in the arcade square at the University of Vienna, which was unveiled on November 7, 1897.

Positions held :

Doctor at « La Charité » , in Berlin.

Director of a surgical hospital, in Zürich.

Professor of Surgery, University of Zürich.

Professor of Surgery, University of Vienna.

**1852** : Billroth completed his doctorate studies from University of Berlin. He started an educational tour and visited many medical schools in Prague, Vienna, London, Paris and Edinburgh.

**1853** : Billroth worked as a doctor at « La Charité » in Berlin until 1860.

**1860** : He became Professor at the University of Zürich and remained in this post until 1867.

**1863** : Billroth's book, « Die Allgemeine chirurgische Pathologie und Therapie » (General Surgical Pathology and Therapy) , got published and was translated into many languages.

**1871** : Billroth successfully did his first esophagectomy.

**1873** : Billroth successfully did his first laryngectomy.

**1881** : Billroth successfully did his first gastrectomy. The same year, he successfully did an excision of a cancerous pylorus (the lower-end of the stomach) . This initiated the modern era of surgery in the field of allopathic medicine.

**1891** : Billroth gave his famous speech on the « War Budget » , in 1891, emphasizing the need of effective ambulance system.

...

Doctor Theodor Billroth was appointed professor of surgery at the University of Vienna, in 1867, and practiced surgery as chief of the at the « Allgemeine Krankenhaus » (Vienna General Hospital) .

Billroth was a great surgeon who invented many surgical procedures. He is remembered for the important role he played in establishing the first modern school of thought in surgery.

He was directly responsible for a number of landmarks in surgery, including the first esophagectomy (1871) ; the first laryngectomy (1873) ; and, most famously, the first successful gastrectomy (1881) for gastric cancer, after many ill-fated attempts. Legend has it that Billroth was nearly stoned to death in the streets of Vienna when his first gastrectomy patient died after the procedure.

...

Toward the latter few years of his life, Billroth started work on a new investigation into the « Physiology of Music » and the book was published, posthumously, by his musician friends after his death.

Billroth, of course, is only one of several examples of scientists and surgeons who have found inspiration for their scientific work, in the arts and humanities. In a letter to his art historian friend Lubke, Billroth wrote :

« It is one the superficialities of our time to see in science and in art, 2 opposites. Imagination is the mother of both. »

Much before Billroth's famous letter to Lubke, the great English poet-surgeon, John Keats (1795-1821) had written in a letter to his brother George :

« I am certain of nothing but the truth of the imagination. »

And, in more recent times, Albert Einstein himself wrote, that for creative work in science, « imagination is more important than knowledge. Knowledge is limited ; imagination encircles the globe. »

« After a certain high-level of technical skill is achieved, science and art tend to coalesce in esthetics, plasticity, and form. The greatest scientists are artists as well. »

...

In the Vienna of the latter half of the 19th Century, the German immigrants to the once-mighty seat of the Austro-Hungarian Empire, recognized Vienna's eminence in the sciences, but also in the arts. It was this combination of the creative pursuits of mankind that acted like a magnet, drawing in perhaps the leading surgeon of the 19th Century,

Christian Theodor Billroth (1829-1894) , to take-over the chair of surgery in Vienna, in 1867.

Billroth quickly brought in new methods of investigation and practice to the Viennese school, some of which he had learned as a pupil of the famed German school of surgery under Bernard von Langenbeck. Moving away from a simplistic understanding of disease based on cadaveric dissection, Billroth advocated to his devoted surgical disciples, an understanding of surgical disease based on anatomy and surgical physiology and pathophysiology. It is well-known, of course, that he introduced bold, new operations on the larynx, the esophagus and the stomach (we still speak of « Billroth 1 and Billroth 2 gastrectomies ») , but he also insisted that his students practice first on doing the same operations safely, on animals. Very uniquely for his time, he introduced an audit of his own results - and famously stopped doing thyroidectomies when he realized the mortality rate in his cases was unacceptable (he started doing them again, several years later, after another of Langebeck's pupils, Theodor Kocher, had made thyroidectomies safer than ever before) . We, in North America, have a direct link to Billroth as well, since William Halstead brought back to Baltimore the residency system of surgical training which he had learned from Billroth and from the German surgical school.

...

Outstanding surgeon of the Viennese medical school, from 1867 on, professor at the University of Vienna. In 1882, Christian Albert Theodor Billroth founded the first private institute for laic nurses with integrated hospital (« Rudolfinerhaus ») under the auspices of Prince Imperial Rudolf (1858-1889) . On his initiative, an own house was built in 1893 for the « Gesellschaft der Ärzte » (Physician Society) , in Vienna, which president he was since 1888. Billroth refused 2 chairs in Berlin because of his love of music and visual art (he was friends with Johannes Brahms and Eduard Hanslick) .

He studied medicine in Greifswald, Göttingen and Berlin. After obtaining of a doctorate, he was assistant of Langenbeck, in Berlin. He concerned himself already early with music and neglected therefore his medical studies for a long time. In 1860, he was appointed professor in Zürich. In the mid-1860's, he met Brahms, there. In 1867, he accepted a call to the University of Vienna to be in the second surgical chair. Despite calls to the University of Berlin, he left Vienna never again.

In Vienna, he started developing systematically almost inaccessible fields of the medicine till then. He showed new methods of operation or developed them, such as for example operations of the liver, the spleen, the urocyt and so on. But his principal merit is to have ventured on operations in the area of the stomach and the intestines and to have developed their technique.

His humanitarian efforts are a monument to the famous surgeon at the « Rudolfinerhaus » , which had to serve and serves already today in an exemplary manner the teaching of the nursing. He was equally important as scholar and scientist, as clinical teacher and Master of the operative technique, and all this made him the most important surgeon before the turn of the 20th Century.

## The Nicodés pay a visit

As a conductor, Jean-Louis Nicodé zealously championed the modern composers of his day, especially Anton Bruckner, Franz Liszt, Richard Strauß and Richard Wagner.

**March 1891** : The conductor and piano teacher at the Dresden Conservatory, Jean-Louis Nicodé, accompanied by his wife (who died prematurely) , decides to visit his former teacher at the Vienna Conservatory, Anton Bruckner, to his apartment on the 4th floor at « Heßgasse » Number 7. Bruckner is working on the composition of his 9th Symphony. Although over-worked, he welcomes the couple and offers to visit his vast apartment. On arriving in the bedroom, he proudly shows the portraits of Ludwig van Beethoven and Richard Wagner, which he had carefully placed just above his large brass bed (which was offered by an English admirer) .

Nicodé recalls the words of his former teacher :

« “ Here are my dear Masters ”, said Bruckner making a full movement of deference, kneeling almost before his icons. »

Nicodé recalled later that Bruckner wanted his « Te Deum » (**WAB 45**) to serve as the Finale to his incomplete 9th Symphony, « though I wouldn't swear to it » .

## Jesus, Mary, Joseph !

**May 1891** : University student Max Graf recounts that after the triumphal « Te Deum » (**WAB 45**) performed in Berlin, Anton Bruckner addressed his students in these words :

« Gentlemen, a music-critic wrote that I am a second Beethoven. Jesus, Mary, Joseph, we can not say such a thing. »

Graf continues :

« And he made a sign of the cross on his face and on his chest as if to keep sin away. »

## A new doctor to treat influenza

It was not odd that Anton Bruckner would write to his friend Professor Deubler for this favour, for Ignaz who was ill again resided in the town of St. Florian and was associated with the Monastery. In addition, Bruckner was not asking for himself, and he knew Deubler would be understanding and kind to find a new doctor for his brother.

**Sunday, 14 June 1891** : Letter from Anton Bruckner (Vienna) to Professor Bernhard Deubler (St. Florian, near Linz) :

« Most Venerable “ Herr ” Professor !

Sincerest thanks for your utmost kind-hearted letter, through which I perceive myself very honoured. Berlin (most incredibly) is, again, going to present the “ Te Deum ” this winter (even the Imperial Couple is supposed to appear) , and 1 or 2 of my Symphonies ; von Bülow has recommended the “ Te Deum ”.

Thus, also in Dresden, Stuttgart, Christiania, and other places. In London, the “ D minor ” Symphony will now be performed.

My brother, as he writes to me, has been afflicted with influenza for a week.

Might I not request the most venerable “ Herr ” Professor (on my account) to arrange for a replacement and doctor for him, because this insidious disease, when it is neglected, often leaves behind bitter consequences.

Again, very much pleading, with thanks in advance and deep respect,

Anton Bruckner »

« Christiania » : The old name for the city of Oslo, in Norway.

Bruckner's favourite wine

**Monday, 15 June 1891** : Letter from Anton Bruckner (Vienna) to Theodor Helm (Vienna) :

« Right Honourable “ Herr ” Doktor !

Your noble High-mindedness has caused me the greatest pleasure. Please, receive my heartfelt thanks for that reason. “ Herr Doktor ” ! Be and remain, as I perceive, my greatest patron. Therefore, once more : “ 3 Cheers ” to the close of spring.

(It will follow.)

Anton Bruckner »

« It will follow. » : A package of Bruckner's favourite wine from the monastery of Klosterneuburg arrived shortly. Professor Helm had to accept the gift because Bruckner's feelings would have been hurt if Helm had not. There was, however, the matter of a fee which had to be paid by the recipient.

**1891 (unreadable date)** : Letter from Anton Bruckner (Vienna) to Theodor Helm (Vienna) :

« “ Calling-Card ”

Telegram from Salzburg : “ D minor Symphony ”, yesterday ; marvelously sensational success.

A toast ! With May wine ! To my noble patron. »

### Wine from Klosterneuburg monastery

Max Graf :

The cloisters of Vienna, Klosterneuburg, Melk and Gottweih, provided wine for the Viennese. Each of these ancient monasteries had its wine-cellar in Vienna proper where the people went to drink « cloister wine » . Here, the behaviour was not on a very pious level, and the laughter of Viennese girls rang-out in the low-ceilinged rooms. On St. Leopold's Day, hundreds of Viennese went with their wives and children to Klosterneuburg to drink wine in honour of the good saint, who is buried there in the famous altar of Verdun. The monks provided good food and sweet wine, and they did not hesitate to sit down with the Viennese and join the celebration. This was Viennese Catholicism. All the pilgrimages ended-up at the inns, after the religious ceremonies. The same held true for funerals. Near every Catholic cemetery, even to-day, in Vienna, there is an « Inn of the Eye of God » where God can look down on the Viennese, who, after a funeral, enjoy life and their drinking.

...

The country's largest privately owned winery, « Stift Klosterneuburg » , has played a formative role in Austrian wine. With a modern management and a contemporary technological infrastructure, this example will be used as a role model for the future, along with the « Bundeslehranstalt für Wein und Obstbau » (Federal institute for viticulture and pomology) , the world's first viticultural and oenology school (founded in 1860) , and today is a leading wine institution with internationally recognized standards for future wine-making generations. The wineries of Klosterneuburg cover a wide-range of viticultural activities, from the small, family owned Heuriger to the large Sekt, or sparkling wine producers, all at the door-step of Austria's capital city Vienna.

...

The history of the Klosterneuburg monastery winery dates back to the founding year of the monastery. Traditionally associated with scholarship and art, viticulture matured under the watchful eyes of the Augustinian canons into the most important economic sector in Klosterneuburg. Roughly 900 years old, the Klosterneuburg monastery winery is not only one of the oldest wine Estates in Austria, but also one of the largest with its 108 hectares (267 acres) of cultivated land. The varieties of « terrain » are unique : the wines of the Klosterneuburg monastery winery grow in choice vineyards in Klosterneuburg, Vienna, Gumpoldskirchen and Tattendorf, 4 wine-growing areas of varying characteristics.

« Stift Klosterneuburg » Winery : Great Wines since 1114 !

Much has changed since our foundation in the year 1114, but the most essential things have remained the same :

Our symbiotic work with nature.

Our respect for humankind and the environment.

Our openness for new ideas.

Our efforts to create unique and memorable wines !

On the winery tour, you see how state-of-the art wine-making is seamlessly integrated in the stunning and expansive Baroque cellar. An extensive old wine archive is kept in the historic cellar which descends three stories and 36 meters under the earth's surface.

A wine tasting of the monastery's award winning wines completes the tour.

### Wine Estate

Top vineyard sites in 4 different wine villages, one of the most fascinating cellars in Austria, an unbroken wine growing tradition for nearly 900 years and quality without compromise are the attributes of the « Stift Klosterneuburg » winery. Since its foundation in the year 1114, « Stift Klosterneuburg » has produced wine, making it the oldest winery in Austria. With a total vineyard area of 108 hectares, it also counts among the largest and most famous wineries in the country.

Centuries of experience, thoughtful vineyard cultivation in harmony with nature, and openness for new ideas make it possible to create truly great wines each year. « Stift Klosterneuburg » is dedicated to producing authentic wines of character, wines with a sense of place. Purposeful specialization in autochthon grape varieties, conscientious handling of fruit and gentle vinification serve this goal. Highest international accolades for our wines deliver confirmation of quality efforts each year. « Stift Klosterneuburg » is also a leader in sustainability and environmental protection and was the first carbon neutral winery in Austria.

### Wine Cellar

An extensive cellar from the Baroque period serves as the vinification facility at the Klosterneuburg Monastery. The vaulted cellar extends over 4 levels to a depth of 36 metres (118 feet) . State-of-the-art technologies are put to work for the production of high-quality wines in this historic venue. Prolonged, temperature-controlled white wine vinification highlights typical varietal aromas and fresh, crisp fruit. Red wines are fermented warmer to enhance optimal extraction of colour and tannin. Minimal intervention is practiced after fermentation to preserve varietal, vintage, and single vineyard character of the wines. Maturation and storage take place in the 4 story vaulted cellar directly under the monastery.

## Brahms and Bruckner (Natalie Bauer-Lechner)

Gustav Mahler and his brother Otto were talking about Brahms and Bruckner. Otto insisted on ascribing greater importance to Bruckner ; in his view, the content of Bruckner's works unquestionably excelled that of Brahms's, though Brahms did achieve greater perfection of form.

Mahler said :

« In order to judge a work, you have to look at it as a whole. And, in this respect, Brahms is indisputably the greater of the two, with his extraordinarily compact compositions which aren't at all obvious, but reveal greater depth and richness of content the more you enter into them. And think of his immense productivity, which is also part of the total picture of an artist ! With Bruckner, certainly, you are carried away by the magnificence and wealth of his inventiveness, but, at the same time, you are repeatedly disturbed by its fragmentary character, which breaks the spell. " I " can permit myself to say this, because you know how deeply I revere Bruckner in spite of it, and I shall always do whatever is in my power to have his works played and heard. That is what is so sad ; that Bruckner never received his due in his lifetime, from his contemporaries. Now that he is just beginning to emerge from obscurity, he is over 70 ; and posterity, which inherits only what is complete and perfect in itself, will love and understand him still less. Look at Jean Paul, who is, after all, such an extraordinary person, wittier and more extravagantly gifted than anyone else ; yet, who reads or even knows of him today ? »

« No, it isn't enough to judge a work of art by its content ; we must consider its total image, in which content and form are indissolubly blended. It is this which determines its value, its power of survival, and its immortality. »

## Otto Mahler quits

**April 1892** : The 18 year old Otto Mahler leaves the Vienna Conservatory without graduating and, perhaps, even without Mahler knowing.

## Hugo Wolf catches a catarrh

**Monday, 2 May 1892** : After his return to Vienna, Hugo Wolf writes to Oskar Grohe asking him to pray for his poor soul :

« I have not the least idea of composing ; heaven knows how this will end. »

A few days afterwards, Wolf caught a catarrh. On the doctor's recommendation, he went to Unterach, where, however, he recovered very slowly, in spite of his delight in the beauty of the scenery.

## Richard Strauß's pneumonia

The clear « rapprochement » between Mahler and Strauß in 1891 suffered an interruption.

**Friday, 6 to Sunday, 8 May 1892** : The 26 year old Richard Strauß becomes seriously ill with pneumonia and must be hospitalized. His life is actually in danger for 6 days.

Cosima Wagner visited him during his convalescence at Feldafing and walked in the garden with Franz Strauß ! On **1 July**, Richard went to Bayreuth, stayed in « Wahnfried » and met Romain Rolland for the first time. His relationship with Pauline at this time was that of « Master and pupil » and had undergone a minor upheaval just before his illness when she had made mistakes during one of Eduard Lassen's works while the composer was conducting.

Strauß wrote :

« You are now so set on going your own way that my presence and the influence it inevitably exercises could only seem a burden to you. I regret therefore that I must gratefully decline your kind invitation both today and in the future. »

After his leave from the hospital, Richard Strauß spends almost the whole of the following year in the Mediterranean region (Greece and Egypt) to recuperate. Moreover, he gained new impressions and ideas. The journey was followed by the creation of his first Opera, « Guntram » (Opus 25) .

...

After 2 serious illnesses, Richard Strauß still had only music in his head. Pauline was the one who pushed him to be better aware of his health. She saw to it that he eat regular meals, that he go on his daily walks, and have an afternoon nap. However she was unable to steer him away from smoking.

In 1892 as well as in 1907, Strauß suffered from serious medical emergencies. As a 26 year old, he had pneumonia that healed badly, while at the age of 42, he experienced cardiac weakness - the cause remained under investigation.

On many occasions, his father would try to speak to him and work on his conscience :

« We are very saddened to see how you are sabotaging your health, and trying to build your fortune so that your later life can be spent only composing. Do you think that a sick body is able to achieve anything intellectual ? »

His son fought-back :

« Too much work has never made anybody sick, if they have lived well and solidly, which is what I do. »

Smoking as a vice until old age.

Although she was unable to put a stop to the nightly nicotine - filled skat parties, Pauline was the only one who was able to make Strauß realize the importance of taking care of his health. She was aware of Strauß' relapse-prone lungs and insisted on 2 daily walks to also even-out the effects of the smoking. (Strauß renounced this vice at the age of 75 and had « nasty mood » for many weeks.)

One hour before lunch and dinner, Pauline would take her husband away from his work and into the fresh air. She also supervised the strict observance of daily afternoon naps.

A letter written by Gustav Mahler to Alma :

« I was at Strauß' yesterday afternoon. She greeted me at the door with :

Shh ! Shh ! Richard is sleeping (...) »

### Preference for home cooking - gladly with edges of fat

Richard Strauß did not eat much, but he did so with great satisfaction. He despised long drawn-out banquets but he knew how to appreciate fine foods and meals. (« I starve at “ lunch ” and “ dinner ”. ») However, Strauß preferred home-cooking over everything else. He meticulously noted-down recipes that appealed to him and gave them to Pauline and the loyal house-keeper « Anni » . He also wrote-down lists of what to buy and how to prepare certain dishes.

His favourite dishes were beef with « G'schlader » (fatty edge) , porcini mushrooms with dumplings, kidney and veal roast. His favourite desserts were « Anni's » vanilla biscuits, « Punsch-torte » and pre-served rose-hip jam (the only jam that is honoured in his Opera « Intermezzo » .) According to tradition, chocolate was one of his favourite sweets.

Pauline was a passionate cook who left behind a hand-written cook-book with recipes from all over the world. She also enjoyed going-out to fine-restaurants, or even having these deliver to her house on special occasions.

### Father « Oddo » Loidol's illness

Letter to Father Raffael « Oddo » Loidol, at Kremsmünster, in which Bruckner stated his regrets at not being able to accept the invitation to visit the Monastery. All in all, a sad letter. Bruckner could no longer play the organ due to the swelling in his legs, which allowed him to walk only ponderously.

**Wednesday, 1 June 1892** : Letter from Anton Bruckner (Vienna) to Father Raffael « Oddo » Loidol (Kremsmünster) :

« Reverend Sir and Highly-Honoured Friend !

The heat is intensive ! Everyone is fleeing from Vienna. But I must thank Your Grace most deeply - as much as it

pains me (because I would with pleasure be in Kremsmünster) - on behalf of the invitation honouring me so. My feet, particularly the right, are swollen so much (by edema) that I am able to walk only ponderously and cannot play the organ at all. Please, be informed. Your Grace, of my deepest respect and thanks ; perhaps, Your Grace may permit me to pay a visit some time later. Please, remember me to the Reverend Chapter, especially Professor Romuald. Heartfelt greetings.

Yours,

Anton Bruckner »

« Herr » Professor Romuald (of the Chapter-House in Kremsmünster Abbey) was a special friend of Bruckner.

At this time, Bruckner was himself quite ill with liver and stomach ailments and persistently swollen feet. He and Father Loidol had a friendship that defied age and time, so it is not surprising that Bruckner, though sick himself, would write a consoling letter which included his prayer for Father Loidol's recovery. It was not to be so, for Father Loidol died the next year.

**Tuesday, 2 August 1892** : Letter from Anton Bruckner (Steyr) to Father Raffael « Oddo » Loidol (Kremsmünster) :

« Most Venerable, Most Noble Friend !

To my sadness, I heard that you, the Right Reverend Father, are still sick. I want most sincerely to beg God that “ He ”, through His divine goodness, take away this difficult affliction and grant you the best of health ! I am in Steyr, likewise a patient ; I have liver, stomach, and foot ailments (swollen feet) and must avail myself of the “ Karlsbad Cure ”. “ Post molestam senectutem. ”

Repeating my most heartfelt wish, I ask again that you allow me to know how you are.

Your admiring, warmest friend,

Anton Bruckner

The “ 150th Psalm ” is finished. »

Anton Bruckner was himself quite ill with liver and stomach ailments and persistently swollen feet. He and Father « Oddo » Loidol had a friendship that defied age and time, so it is not surprising that Bruckner, though sick himself, would write a consoling letter which included his prayer for Father Loidol's recovery. It was not to be so, for Father Loidol died the next year, at Kremsmünster Monastery, on **31 January 1893**.

Eating at the Eibenschutts

**Summer 1892** : Johannes Brahms went on holiday in Ischl, calling on the Eibenschutz family. « Frau » Eibenschutz warned Brahms that he must expect only a plain lunch.

He shot back :

« When I come to you, I am happy to eat goulash and drink water. But when I dine with millionaires who care nothing for music and only invite me because I am successful, I am very angry if they do not serve me caviar and champagne. »

**Steyr : The « Karlsbad Cure »**

**Wednesday, 27 July 1892** : Letter from Anton Bruckner (Vienna) to Adolf Koch Edler von Langentreu (Vienna) :

« Right Honourable “ Herr ” Doctor !

Thank you very much for the account from Bronsart's decree. It is a cunning piece of writing, by which the German gentlemen, themselves, can spread their influence all the easier. It refers to a choral work from last year ; but things are the same today, and I am usually considered a Symphonic composer. I will not so soon again disturb the German gentlemen ; indeed, this year, it is my fondest wish to remain in my homeland. Could you give me a single hour ? The “ Psalm ” belongs precisely at the closing of the Festival. I beg you. “ Herr ” Director, once more for your intercession. If the German gentlemen don't want to talk with you, then, they will have to be happy with me. In Munich, Levi's wanted to perform the 7th or 8th Symphony at this Festival, as he wrote to me. Now, I will go to the Steyr town rectory and continue my “ Karlsbad Cure ”, there. Again, my request.

With thanks and respect.

Doctor Anton Bruckner »

**Wednesday, 27 July 1892** : Letter from Anton Bruckner (Vienna) to his brother Ignaz (St. Florian, near Linz) :

He congratulates Ignaz in anticipation of his Name-Day on the 31st and sends him 10 Florins. On vacation, Bruckner continues the « Karlsbad treatment » from Steyr. He still cannot play the organ.

**Thursday, 18 August 1892** : Letter from Anton Bruckner (Steyr) to Professor Bernhard Deubler (St. Florian, near Linz) :

« Your Reverence, Right Honourable Professor !

Once again, in honour of your noble Name-Day, I have made bold to lay at your feet the feelings of my heart, which consist primarily in praying that God may bless Your Reverence at all times, and guard and protect you ! Good health, and with it physical and spiritual strength, toward the realization of your high-calling ; may “ He ” never deny you

well-being in any respect.

I am in Steyr with swollen feet and “ may not do any organ playing ” ; on the contrary, I require the “ Karlsbad Cure ”. In September, I must go to Vienna for the German “ Musik-Fest ”, since, according to letters from Weimar, they want to perform my new composition, the “ 150th Psalm ”.

Again and again, my most sincere wishes and with deepest respect, I remain,

Yours devotedly,

Anton Bruckner »

**Saturday, 3 September 1892** : Letter from Anton Bruckner (Steyr) to his house-keeper « Frau Kathi » Kachelmayr (Vienna) :

The Vienna Music Festival is canceled that is why Bruckner is still on vacation in Steyr. He asks « Frau Kathi » to buy him snuff and cigars before his return in the capital.

**Tuesday, 6 September 1892** : Bruckner was still residing in Steyr, from which location he wrote to Cyrill Hynais ; this means that he had not left between **Thursday, August 18** and **Tuesday, September 6**, due to his poor physical condition.

Letter from Anton Bruckner (Steyr) to Cyrill Hynais (Vienna) :

« The second full-score is meant only for me, and is to be written at my expense. Of course, it doesn't have to be beautiful ; just correct. (Otherwise, copy nothing.) Think of it ; “ Herr ” Gericke wrote to me saying that he intends to put the “ Psalm (150) ” on the first “ Gesellschaft ” concert program. I did not answer him. I would have believed that he would be permitted to do that only with the permission of the Directorship. Please speak about this with “ Herr ” Director Gutmann, whom I most highly-recommend.

My feet are much better, but are not yet healthy.

I shall, thus, be staying in Steyr.

Yours,

Bruckner »

**Around September - October 1892 (?)** : Anton Bruckner visits his sister Rosalia (« Sali ») Hueber in Vöcklabruck, which he can now support better financially.

## Anna Rogl

August Göllerich junior relates in the second volume of his monumental biography on Bruckner (page 311) one of these typical episodes featuring the old Master who is (again) attracted by a pretty young girl, this time from the Amstetten region.

**End of August - September 1892 (?)** : Anton Bruckner spent a few days in St. Florian. He frequently walked around the local public market or in the neighbourhood of the monastery usually accompanied by his brother Ignaz or his colleague, the copist Karl Borromäus Aigner who teaches music there. Once, the Master's eyes turned suddenly to a pretty 16 year old teenager who was entering the Municipal Court House. Bruckner and Aigner stood a long time in front of the building. Then, they saw the young lady again, this time in the garden just opposite. It was Anna Rogl, the town jailer's daughter. He went in her direction and introduced himself with his usual kindness. He spoke affectionately to Anna. It became his practice always to desire to tell her about his 9th Symphony which was in progress.

From St. Florian, Bruckner went-back to Steyr to continue his « Karlsbad Cure » . On her part, Anna left for Amstetten as she was hired by Baron Lederer as chamber-maid.

In Vienna, Bruckner succeeded to trace Anna Rogl through another acquaintance. He wrote to her for permission to visit despite the fact that he did not know the Baron at all ! Rogl's landlady was very approving and sanctioned his coming. Since Bruckner was between trains, he could not stay long but was very happy to see her again.

**Saturday, 1 October 1892** : Letter from Anton Bruckner (parish church's presbytery of Steyr) to Anna Rogl (Steyr) :

« Court Church Rectory  
In the City of Steyr

Highly-Honoured Lady !

In accordance with my promise, please accept my portrait. I beg for one of you. On Wednesday, October 5, I will be coming to Amstetten on the noon train, arriving around 2:00 to 3:00. Shall I call on you “ then ”, first of all, or later ? Please, write to me concerning this. With a hand-kiss,

Yours,

Bruckner »

**Wednesday, 5 October 1892** : Bruckner is received in Baron Lederer's drawing-room where he met Anna Rogl and stayed until time to leave for the next train to Vienna ; and the young girl was permitted to accompany him to the train.

Bruckner visited Anna several times. Her parents did not stop Bruckner from seeing her because he was highly-respected in St. Florian, and his peculiar behaviours were no surprise to the townspeople.

**After Wednesday, 5 October 1892** : Another (missing) letter from Anton Bruckner to Anna Rogl :

Bruckner gives his address and also the assurance that his house-keeper « Frau Kathi » Kachelmayr would meet Anna (and her mother) on the train-station dock. The old Master wanted to show her the most beautiful sites in Vienna.

Despite repeated letters, the girl never wrote back.

### A 10th Symphony

**1892** : It is a fact that Anton Bruckner wanted to write a 10th Symphony : his « Gothic » . At some point during the year, he walked for hours and days in and around the Vienna « Stephansdom » Cathedral to find inspiration.

### Mahler flees a cholera epidemic

**Saturday, 27 August 1892** : While returning to Hamburg via Berlin, Gustav Mahler learns about the cholera epidemic in Hamburg and heads back to Berchtesgaden.

### University of Vienna : Winter Semester (1892-1893)

**Monday, 17 October 1892** : First university lecture of Anton Bruckner for the Winter Semester.

Emil Czerlunckiewicz, Eugen Herzog, Rudolf Prisching and Georg Stingl inscribed in the Faculty of Arts but were after deleted from the list.

### Wolf's usual propaganda

**Thursday, 27 October 1892** : After 4 days' stay in Cologne, Hugo Wolf reached Frankfurt-am-Main where he was Engelbert Humperdinck's guest for 2 days. He made his usual propaganda on behalf of Anton Bruckner, succeeding in interesting Humperdinck in the Vienna composer by playing the 3rd Symphony (**WAB 103**) with him as a piano-duet. Humperdinck, in his turn, recommended Wolf's songs to Julius Stockhausen ; it is comical to note Hugo's naive wonder that the great singer should really take to his songs, for was not Stockhausen one of the most notorious of Brahmsians ?

### « At Gause » with very bad swollen feet

**After Monday, 21 November 1892** : One evening, Anton Bruckner limped into « Gause's » restaurant to tell his disciples that he could hardly walk because his feet were so swollen.

The popular Viennese guest-house (Restaurant and Beer-Hall) named « at Gause » (« Gasthaus und Bierkeller “ bei Gause ” ») was located in a basement at « Johannesgasse » Number 12 in the 1st District.

### Consulting Doctor Schrötter

The next day, Bruckner decides to consult the Austrian internist and laryngologist Professor Leopold (Anton Dismas) Schrötter von Kristelli. He is diagnosed with cardiac insufficiency, heart enlargement and cirrhosis of the liver. The underlying cause is diabetes. Dietary restrictions are the only treatment available at that time.

Doctor Schrötter orders the strictest prevalence and reduction of alcohol consumption insisting that Bruckner should replace his beloved « Pilsner » beer by milk !!

The once plumpish composer became emaciated, and he suddenly seemed older. His hands shook, and he appeared to have lost many of his teeth. He was also afflicted with a chronically sore throat.

Bruckner complained bitterly about his critics but hardly complained at all about his declining health :  
« Professor Schrötter ordered me to bed and, for weeks, I was'nt allowed anything but milk without bread or beer, etc. Also, there is little water left in my stomach. Better in the stomach than on the brain. »

### Kremsmünster : The mill-owner's daughter

**September 1892** : Anton Bruckner is noticed by the mill-owner's daughter from Kremsmünster. Her name : « Fräulein » Mayer.

Some people appeared to know about this « affair » ...

**Saturday, 26 November 1892** : Letter from friend Josef Leitenmaier (Kremsmünster) to Anton Bruckner (Vienna) :

Leitenmaier confirms to Bruckner the identity of the mill-owner's daughter from Kremsmünster.

It seems that Bruckner will marry Ida Buhz soon.

« What about “ Meister ” Bruckner's Berlin girl ? When are you going to marry her ? I have been told here in Kremsmünster that Doctor Bruckner will be getting married ! Is it true ? »

On her part, Mathilde Feßl announced she will marry next spring.

The health-condition of Father Raffael « Oddo » Loidol is unchanged.

### Hanging the doctor's note

**Monday, 28 November 1892** : Anton Bruckner hangs a note in the lecture-hall of the University of Vienna (based on the medical order by Doctor Leopold Schrötter) that he cannot hold his weekly lecture.

**Monday, 5 December 1892** : During his lecture at the University of Vienna, Anton Bruckner talks to the audience about his illness and the indications he received from Doctor Leopold Schrötter.

### Offering 48 « krapfen » to Hans Richter

Again, one of the most glorious moments in the history of music ended with an anecdote of disarming « naïveté » .  
The witness : Hans Richter.

When Emperor Franz-Josef went off on a hunting-trip instead of attending the premiere, Richter consoled the disappointed Anton Bruckner with the words, « that doesn't matter, the Symphony will still be performed » .

**Sunday, 18 December 1892** : Vienna, « Musikverein Großer-Saal » . 4th Subscription Concert of the season by the Vienna Philharmonic Orchestra. Hans Richter conducts the « Wiener Philharmoniker » .

**Anton Bruckner : Symphony No. 8 in C minor, 1892 version edited by Haslinger-Schlesinger-Lienau (WAB 108) .**

Triumphant premiere of the 8th Symphony in the « Schalk » version. It is among Bruckner's most successful evenings in Vienna. Hans Richter gave the work a committed performance which did it full-justice and it was a sensational triumph. The audience booed the infamous music-critic Eduard Hanslick and chased him out of the concert-hall.

The press is almost unanimous in their praise.

While the « Musikverein » was full of the great and good, including the Royal family, Crown Princess Stephanie, Archduchess Marie Valérie, Archduchess Maria Theresia, Johann Strauß, Hugo Wolf, Siegfried Wagner and Bruckner's partisan supporters out in force, the nay-sayers were there as well.

The composer was called on to the stage at the end of each of its 4 movements to receive an ovation from the audience. Johannes Brahms stayed in his director's box. Music-critic Eduard Hanslick left before the Finale with the adulation of the composer's supporters (intensified when his departure was spotted) ringing in his ears. « Old Beckmesser » now had to acknowledge his own defeat and Bruckner's triumph.

Hanslick wrote grudgingly :

« In each of the 4 movements, especially the first and third, some interesting passages, flashes of genius, shine through - if only the rest of it was not there ! It is not impossible that the future belongs to this nightmarish hang-over style - a future we, therefore, do not envy ! »

Hugo Wolf wrote simply :

« This Symphony is the work of a giant and surpasses the other Symphonies of the Master in intellectual scope, awesomeness, and greatness. Its success was a complete victory of light over darkness. »

Johann Strauß junior telegraphed to Bruckner :

« I am completely shaken. It was one of the greatest impressions in my life ! »

When Richter left by the stage-door, Bruckner awaited him behind the scenes with an enormous tray of 48 steaming hot crunchy « krapfen », a strange but typically eccentric reward for the exhausted conductor.

A « Berliner Pfannkuchen » (shortly called, « Berliner ») is a traditional North German pastry similar to a doughnut with no central hole made from sweet yeast dough fried in fat or oil, with a marmalade or jam filling and usually icing, powdered sugar or conventional sugar on top. They are sometimes made with chocolate, champagne, custard, mocha, or « advocaat » filling, or with no filling at all.

The terminology used to refer to this delicacy differs in various areas of Germany. While called « Berliner » (« Ballen ») in Northern and Western Germany as well as in Switzerland, the Berliners themselves and residents of Brandenburg, Western Pomerania, Saxony-Anhalt and Saxony know them as « Pfannkuchen », which in the rest of Germany generally means pancakes ; pancakes are known there as « Eierkuchen » (egg-cakes) .

All of these are essentially identical preparations :

In parts of southern and central Germany (Bavaria) , as well as in much of Austria, they are a variety of « Krapfen » (derived from Old High-German « kraffo » and, furthermore, related to Gothic language « krappa ») , sometimes called « Fastnachtskrapfen » to distinguish them from « Bauernkrapfen » .

In Hesse, they are referred to as « Kräppel » or « Kreppel » .

Residents of the Palatinate call them also « Kreppel » or « Fastnachtsküchelchen » (little carnival cakes) , hence, the English term for a pastry called « Fasnacht » .

Further south, the Swabians use the equivalent term in their distinctive dialect : « Fasnetskiachla » .

In the Netherlands, it is called « Berlinerbol » .

In Belgium, it is called « boule de Berlin » .

In Slovakia, it is called « šiška » .

In Slovenia, it is « Trojanski krof » .

In the Czech Republic, as « koblíha » .

In Croatia, « krafni » .

In Bosnia and Serbia, « krofne » .

In Hungary, it is called « bécsi fánk » .

In Poland, they are known as « pączki » .

In the southern parts of Italy, it can be referred as « bomba » or « bombolone » .

In Finland, it is called « hillomunkki » or (glazed) « berliinimunkki » .

In Norway, it is called « berlinerbolle » .

### Johann Strauß II invites Bruckner for a drink

**Monday, 19 December 1892** : Johann Strauß junior called on the street a friend of Anton Bruckner :

« Hey, yesterday, I heard a Symphony by Bruckner ! It was simply great ! Bring him to me one of these days ! »

The famous composer of waltzes expressed the desire to meet Bruckner and invited him for a drink at his Viennese home in the presence of sculptor Viktor Tilgner and composer Adalbert von Goldschmidt.

Feeling honoured, Bruckner accepted the invitation of the most-performed composer in music history and addressed Johann Strauß in his well-known submissive manner with « Großmeister » (grand Master) . Yet, Strauß staved-off the subservience with his usual poise and adroitness and replied in a respectful, collegial tone :

« Now, now, you are the grand Master. I'm just a simple sub-urban composer. The Symphony was truly wonderful ! »

The 2 men immediately sympathized.

In the presence of sculptor Viktor Oskar Tilgner, who created Bruckner's bust, the evening reached convivially Symphonic dimensions. It ended very late ...

### Otto Kitzler conducts the « Romantic »

Anton Bruckner's preoccupation with physical health is obvious. In his own case, it was truly justified at this point, for he would never fully-recover from his maladies. In the case of Otto Kitzler, who was in good health, it was Bruckner's hope that his friend not miss any good part of life, either on the personal or professional level.

For more than one reason, Bruckner was very much aware that he might not be able to attend a proposed performance of his 4th Symphony.

**Tuesday, 27 December 1892** : Letter from Anton Bruckner (St. Florian, near Linz) to Otto Kitzler (Linz) :

« Highly-Respected “ Herr ” Professor and Friend !

Thank you very much for your kind participation, and I wish you and your gracious lady a very Happy New Year. Also, thank you very much for your proposal with regard to conducting the 4th Symphony. Whether I am actually able to come depends on my constantly precarious state of health ; and the performance of one of my own works always agitates me. Stay very healthy.

My compliments to you.

Your former student,

Doctor Anton Bruckner »

### The Viennese's collective consciousness

Now placed alongside the great composers who lived in the capital of European music, the name of Bruckner was part of the Viennese's collective consciousness. When the old Master passed along the street, one could hear voices whispering with admiration :

« Here comes Anton Bruckner ! »

### Vienna : Bruckner, Mahler and the right-wing movement

As historian Fritz Stern observes :

« The very term anti-Semitism was first “ invented ” in Germany (and Austria) in the 1870's. »

That decade marks the emergence of Vienna as a centre of the « new dogma » .

In addition to the city's overtly anti-Semitic government, the geographical situation in Vienna made it a particularly explosive space for political life. Being the Western city furthest east, it became a gateway for all immigrants fleeing

persecution, becoming a stop-over point for some, a permanent home for many others. The rise in Jewish (but also other ethnic) immigration to Vienna after the 1867 emancipation, particularly after the 1881 assassination of Czar Alexander II and the ensuing Russian pogroms, may have contributed to the success of Lueger's anti-Semitic platform.

Anton Bruckner's activities as a teacher and composer in Vienna in the context of the social and cultural history of the period was marked by a threefold increase in the population of the city, including the dramatically huge immigration of nearly 700,000 people from Bohemia, Moravia and Hungary in the final years of the 19th Century. Vienna's heterogeneity would have been a significant factor in the musical creativity of Bruckner, Mahler, and Schönberg, who lived and worked in the city during a time of great social and political upheaval and artistic and cultural transformation when there was a heady mixture of « endogenous » and « exogenous » elements, and whose music perhaps reflects some of the contrasts, contradictions and ruptures that characterised « fin-de-siècle » Vienna.

During the rise of German nationalism, young supporters who were keen Wagnerites also adopted Bruckner as one of their own.

The conservative Austro-German streak in modern Austrian politics linked to Anton Bruckner dates from the 1880's. It encompasses the views of contemporaries of Bruckner such as Georg von Schönerer and Prince Aloys Liechtenstein as well as the Christian-Socialism of Karl Lueger. Austro-German cultural chauvinism presents a continuous ideological framework for the political appropriation of Bruckner dating-back to his lifetime.

In his last years, when his health was declining, Bruckner was taken-up as a « special cause » by the newly-emergent Austrian Christian-Social Party (« Christlichsoziale Partei »), whose right-wing, nationalist views, championship of « the little man ». Its leader, Karl Lueger (1844-1910) was committed to a pro-Catholic, German-centred, anti-capitalist, and aggressively anti-Semitic platform. He was strongly admired by Adolf Hitler. The unworldly Bruckner is unlikely to have felt any special sympathy with Lueger's views, but that doesn't seem to have bothered Hitler overmuch.

...

Lueger started to use the anti-Semitic atmosphere for his own political interests. He built his Christian-Social Party and the political machine that controlled the city on the basis of the new, lower-middle classes. Known as « Der schöne Karl » (handsome Karl) for his erect posture and square blond beard, Lueger appeals to the « little man », canvassing in taverns and promising a free cab-ride home for « every citizen who has caroused through the night ».

At mass-rallies, « he (Lueger) transfers his will onto others in an almost super-natural way ». His racism, selective and at times quiescent, can be whipped-up at will against the « money and stock-exchange Jews », the « beggar Jews », the « ink Jews » (intellectuals), and, perpetually, the « press Jews ».

« Without the Jewish newspapers, there would be no anti-Semitism. », Lueger proclaims, accusing the Jews of controlling the mass-media.

Lueger coins a classic equivocation :

« Wer Jude ist bestimme Ich. »

(I decide who's a Jew.)

Unlike Georg Schönerer, the head of the Pan-Germans, whose rabid version of anti-Semitism was too much even for the Viennese, Lueger was a consensus builder who used anti-Semitic feelings to unite « aristocrats and democrats, artisans and ecclesiastics, by confining the uses of racist poison to attacking the Liberal foe » .

When Gustav Mahler came to Vienna as a student in 1875, the City Council was dominated by anti-clerical Liberals, exemplified by Cajetan Felder (1814-1894) , Vienna's mayor from 1869 to 1878. Mahler's appointment to 2 prestigious Viennese posts exposed the most virulent affliction in the critical community : anti-Semitism, which had also raised its ugly head in the Viennese political arena with the candidacies of Karl Lueger as mayor of Vienna. 3 times, this Christian-Socialist had the requisite number of votes to be mayor, and 3 times, Emperor Franz-Josef declined his approval, in part because of Lueger's hateful anti-Semitic rhetoric. But on April 8, 1897, the day of Mahler's promulgation, Lueger, mobilizing an electoral coalition, is elected mayor of Vienna for the 4th time. Under threat of riots, and after a week's deliberation, the Emperor finally awards him the chain of office. Under Lueger, Vienna becomes the first modern city to make hating Jews municipal policy.

The Austro-German amalgam of progressive and reactionary idealism was an indispensable pre-condition for the success of the radical, anti-Liberal Viennese politics of Christian-Socialism and Karl Lueger in the 1890's.

His radical and reactionary rhetoric and his deft manipulation of a conservative nostalgia for the era which preceded economic rationalization, industrialization, and demographic cosmopolitanism revealed Vienna's most charismatic political figure.

As Klaus Fischer comments :

« Vienna was probably the most racially paranoid capital of Europe. It was here that fears of Slavic encirclement and rumors of Jewish conspiracies combined to produce a very volatile atmosphere that could easily be exploited. »

« Between 1880 and 1910, Vienna's population almost doubled » , creating housing and food shortages and over-stressing the vastly under-developed Viennese infrastructure.

Lueger, as mayor, spear-headed the city's long-delayed but remarkable modernization of transport, sewerage systems, water-supply, and public facilities. His favourite architect was none other than the great Otto Wagner (1841-1918) whose apartment houses, institutional buildings, and railway stations helped shape the distinct modernist architectural aesthetic of turn-of-the-Century Vienna. Once again, in Vienna, reactionary politics and progressive aesthetics flourished side-by-side.

Vienna (the 6th largest city of the world by 1908) did not lag in public confrontational politics. The inauguration of Karl Lueger's Christian-Socials and the continued progress of the Marxian Socialists set the stage for episodic confrontations that would finally culminate in civil war by 1934.

...

Social Liberalism had suffered a decisive set-back. One can imagine how the synergy of events could only have worked against Mahler ; a populist demagogic mayor representing the « Volk » versus the Jewish « Opernkapellmeister » representing the elitists of Social Liberalism. Despite the conductor's nominal conversion to Catholicism, the City Council of Vienna declined to accept a concert by the Opera Orchestra if Mahler insisted on conducting it. The Jews of the dual monarchy had a vested interest in a tolerant pluralism. In this set of circumstances, it is a wonder that Mahler was able to survive in his position for the next 10 years.

Right-wing commentators view Mahler's appointment as a political counter-weight to Lueger's, one of the checks and balances of a bumbling constitution.

Scholars have acknowledged that Mahler was attacked by the anti-Semitic press as soon as his appointment as director of the « Hofoper » was made public.

The « Deutsche Zeitung », which characterized itself as « the only anti-Semitic German Nationalist daily-paper in Vienna », wonders why it « is opportune to appoint a Jew to the German Opera of a city with a strong movement against the fearsome “ Jewification ” of art is just cutting a path ? » :

« We still have a few things to add for the clarification of what we have published about the appointment of Mahler to the Court Opera. Someone seems to have become conscious that the appointment of a “ Jew ” would be most unpopular, that it would amuse sensation and justified opposition. It seems to have occurred even to Mahler himself, because 3 weeks ago, and thus at a time when, in any case, he already knew of his imminent appointment, “ he had himself baptized ” ! Of course, that does not change the facts at all, that at this stage in one of the few non-Jewish artistic institutions in Vienna from now on a “ Jew ” will be in a position to call the tune. The consequence will be inevitable : the Viennese public will not be held to blame for the proper response to this violation of its patent wishes. Then, we shall also see whether it was right to settle such an important engagement without even asking Hans Richter. It looks precisely as if the appointment of Mahler will have been the last sneering deed of the departing cabinet of Wilhelm Jahn ; it is the fitting leave-taking of a reprehensible system. »

The « Reichpost » warns that it will not be long before Mahler « starts his Jew-boy antics on the podium » .

Another German nationalist paper was the « Ostdeutsche Rundschau », whose critic signed himself in Wagnerian form as Hagen :

« The appointment of the Jew Mahler is a triumph for artistic Jewry, but (rejoice, Geßmann !) also a triumph for the

Catholic Church. A very short time before his nomination, Mahler had himself “ done ” and with that cheated what is not only founded in law, but also a wise tradition, that no Jew be tolerated in the service of the Court. Indeed, baptizing Jews is extremely practical, for the people of Israel as for the clerics. »

The focus on such overt attacks, however, has obscured the much more insidious tacit anti-Semitism. In 19th Century Europe, the term « Jew » was not a religious category but a racial one : being Jewish had nothing to do with belief and everything to do with their immutable difference from other « peoples » .

Mahler's advent is dressed-up as an insult to conductor Hans Richter, whom Mahler tries to mollify :

« From my earliest youth, you have been the model I have tried to emulate. (...) When in doubt, I ask myself, what would Hans Richter do ? »

Wagner's acolyte huffily assures Mahler :

« You will not find me a hostile colleague (...) once I am convinced that your work will benefit the Imperial institution and advance our noble art. »

Mahler dubs him « honest Hans » and determines to get rid of him.

The production of Wagner's « Ring » has not changed since 1877, but with Mahler in the pit, the drama feels recharged. There is urgency to the acting, extra-brilliance to the sound, and an integrity to the text.

Hugo Wolf exclaims :

« In this “ Ring ”, one could hear things that nobody had heard before, things one had given-up all hope of hearing. »

Mahler, feeling threatened, does what Jews have done down the ages : he huddles in a ghetto of close friends, almost all of them Jewish, and keeps his head down. He does not need to do much to get noticed. Older students, sensing talent, seek his company. Rudolf Krzyzanowski and his brother Heinrich make sure he has something to eat each day. Anton Krisper shares his essays. Friedrich Lohr, an archæology scholar, takes him to exotic lectures. Guido Adler, the Wagnerian, helps him find work. Emil Freund, a law student, gives financial advice. Natalie Bauer-Lechner, a plain-faced book-seller's daughter, flutters her eye-lashes. In mid-winter, she sees him coatless in the street, correcting a sonata as he runs along, unaware that the sheets are scattering behind him. Someone should look after the lad, she thinks.

The combination of Mahler and Vienna gives us a glimpse of something that might otherwise (in a less public place, with a less prominent figure) remain hidden. No one, of course, doubts that Mahler's tenure at the Vienna Court Opera from 1897 to 1907 was made extremely unpleasant by the anti-Semitic press.

Mahler arrived at the Court Opera in time for the Badenyi riots - a series of German nationalist demonstrations that may have led him to produce Bedřich Smetana's Opera « Dalibor » on the Emperor's name-day as a show of support for the government's pro-Czech policies. Mahler would witness the struggle over the planned torch-light celebrations for Karl Lueger's 60th birthday in 1904, which had to be canceled because of Socialist counter-demonstrations. In November 1905, he could witness 200,000 Socialist sympathizers occupy the « Ringstraße » to call for equal male suffrage. Until 1907, suffrage for the parliament of the Austrian half of the Empire (so-called Cisleithania) was based on electoral colleges or « curiæ » weighted by voters' wealth.

Many scholars have pointed-out that the Vienna in which Mahler lived from 1897 to 1907 was far from being a typical European city.

As Stephen Beller has noted :

« Vienna was the only European capital at the time to have an elected anti-Semitic municipal government. »

### Theodor Helm pays tribute to Bruckner

**Thursday, 5 January 1893** : Viennese music-critic Doctor Theodor Helm recalled the premiere of the second version of the 8th Symphony (WAB 108) in Vienna, in December 1892 :

« Sometimes, I am really doubtful as to who is the greater : Bruckner, the “ Master of the Symphony ” or Bruckner, the “ Master of Church Music ”. Let us be happy to have both. »

### Returning to the « Red Hedgehog »

**Around the beginning of January 1893** : Anton Bruckner meets Johannes Brahms at the « Red Hedgehog Inn » (« Gasthaus Zum Roten Igel ») on the « Wildpretmarkt » . He asks Brahms's opinion about the 8th Symphony.

According to Theodor Hämmerle, the Austrian textile industrialist and patron of the arts :

After the premiere of the 8th Symphony, Brahms was supposed to have said to Doctor Steger that Bruckner was a great genius.

### Bed rest and diet

**Tuesday, 17 January 1893 (or Tuesday, 24 January 1893 ?)** : Due to increasing wateriness, heart weakness, and dyspnoea, Doctor Leopold Schrötter. prescribes bed rest and diet to Anton Bruckner.

From then on, the patient is visited 3 times a week by Schrötter's assistant, Doctor Alexander Ritter von Weismayr.

A certain « Herr H.S. » also reports to have visited the sick composer.

Bruckner was entertained by Eduard Hanslick's articles on the Italian composer Pietro Mascagni. (Bruckner heard only one of his Operas.)

House-keeper « Frau Kathi » Kachelmayr recalls that, at the beginning of his illness, Bruckner had also consulted Doctor Wilhelm Dlauhy and German surgeon Professor Gustav Riedel plus other physicians and specialists who were part of the « Riedhof » Circle.

### Doctor Carl Riedel

The German surgeon Bernhard Moritz Carl Ludwig Riedel was born on 18 September 1846 in Teschentín (Laage) , in the Grand Duchy of Mecklenburg (« Großherzogtum Mecklenburg ») ; and died of lung cancer on 12 September 1916 in Jena.

The son of a parson, Riedel studied medicine at Jena from 1866, but, in 1868, moved to Rostock. Just before the Franco-Prussian War broke-out, he took an emergency degree and went to Glogau in military service as a corpsman with a rank of corporal and he remained in the medical corps until the end of the War, during which he saw service both at the front and in military hospitals.

After the War, he returned to Rostock and completed his medical examinations, graduated from the University in 1872 - topping his class. For the next 3 years, he was prosector to the anatomist Friedrich Siegmund Merkel (1845-1919) in Rostock.

In 1875, he became an assistant to Franz König (1832-1910) in Göttingen, where he was habilitated for surgery in 1877. In the ensuing years, he studied surgery with Bernhard Rudolf Konrad von Langenbeck (1810-1887) , Heinrich Adolf von Bardeleben (1819-1895) and Hermann Eberhard Fischer (1831-1919) . After Franz König was appointed professor of surgery at Göttingen, Riedel returned to Göttingen to work with him there. In Göttingen, he studied wound healing and joint effusions and commenced his interests in gastric surgery and cholelithiasis.

From 1877 to 1881, Riedel was « Dozent » of surgery in Göttingen. In 1881, he became head-physician at the surgical department of the « Städtisches Krankenhaus » in Aachen, and, in 1888, he succeeded Heinrich Braun (1847-1911) as full-professor (« Professor ordinarius ») of surgery and director of the surgical clinic at the University of Jena.

Riedel was a pioneer in the surgical treatment of appendicitis and cholecystitis. In 1888, he performed the first choledochoduodenostomy (anastomosis of the common bile duct to the duodenum) .

Riedel was named « Professor emeritus » in 1910.

Late in life, Riedel had to have his leg amputated at the knee as a consequence of a painful leg condition secondary

to atherosclerosis. Despite this, he resumed full-activities when World War I broke-out in 1914.

Riedel was one of the pioneers in surgical treatment of appendicitis and strongly advocated « the earliest early operation ». He was the first to demonstrate that the abscess, which occurs after appendicitis, may be removed with an incision in the free abdominal cavity without danger to the patient, as long as it has not spread too much.

For acute cholecystitis in the late-19th Century and early-20th Century, the diagnosis was difficult and the management not defined.

Riedel documented his patients, analysed his results, and described his method of cholecystectomy.

Riedel advocated early operation for acute cholecystitis when the conditions were favourable, as for acute appendicitis. He stressed the importance of good lighting, an experienced surgeon and trained assistants. He advocated conservative treatment for minor cholecystitis (biliary colic) until the diagnosis was certain, followed by elective cholecystectomy to reduce the risk of subsequent acute cholecystitis or bile duct stones. Caution was advised when analysing previous statistics, to ensure appropriate patient comparison.

« Anatomy and more anatomy is the essence of surgery. »

(Doctor Carl Riedel)

## Eponyms

**Riedel thyroiditis** (sometimes called : ligneous thyroiditis, invasive fibrous thyroiditis or struma fibromatosis) : An uncommon thyroid disease in which the thyroid gland is replaced by extensive fibrosis. first described by Riedel in 1896.

**Riedel's lobe** : A tongue-shaped process of the liver, often found protruding over the gallbladder in cases of chronic cholecystitis.

**Riedel's disease**

**Riedel's operation**

**Riedel's tumour**

...

Deutscher Chirurg Doktor Bernhard Moritz Carl Ludwig Riedel : geboren 18. September 1846 in Teschentin (Laage) , Großherzogtum Mecklenburg ; gestorben 12. September 1916 in Jena.

Riedel begann an der Universität Jena Medizin zu studieren. 1867 wurde er im Corps Thuringia Jena aktiv. Als Inaktiver wechselte er an die Universität Rostock. Er legte 1872 in Rostock das Staatsexamen ab und wurde zum Doktor der Medizin promoviert. Nach 3 Jahren als Assistent und Prosektor am Anatomischen Institut in Rostock bei Johann Friedrich Sigmund Merkel wechselte er 1876 an die Chirurgische Klinik in Göttingen als Assistent von Franz König, wo er sich 1877 habilitierte und 1880 zum außerordentlichen Professor ernannt wurde. Nach weiteren sechseinhalb Jahren als Oberarzt und Leiter der chirurgischen Abteilung des Mariahilfshospitals in Aachen wurde Riedel 1888 als Nachfolger von Heinrich Braun Ordinarius für Chirurgie an der Universität Jena und Direktor der Chirurgischen Klinik in Jena. 1910 wurde er emeritiert.

Sowohl Arbeiten auf histologischem und embryologischem Gebiet als auch experimentell-chirurgische Forschungen zu Narbenbildungen an ligierten Gefäßen und zur Fettembolie gehörten zu seinem wissenschaftlichen Arbeitsgebiet. 1882 gelang ihm als erstem deutschen Chirurgen die blutige Reposition des spontan luxierten Hüftgelenks, 1884 die des traumatisch luxierten. Er wies als Erster nach Knochenbrüchen Eiweiß und Zylinder im Harn nach. Von ihm stammt eine Methode der Sequestrotomie. Er wies zuerst nach, daß die am Kieferwinkel gelegene Kiemengangsfistel mit dem Mittelohr kommunizieren könne.

...

Bernhard Moritz Carl Ludwig Riedel studierte in Jena und Rostock Medizin, wo er 1872 die ärztliche Staatsprüfung ablegte und promoviert wurde. 1873-1875 arbeitete er als Assistent und Prosektor am Rostocker Anatomischen Institut, dann bis 1882 an der Chirurgischen Klinik Göttingen unter Franz König. Riedel habilitierte sich 1877, wurde Privatdozent und 1880 außerordentlicher Professor. 1881 übernahm er die Leitung der Chirurgischen Abteilung des Mariahilfshospitals Aachen. 1888 erfolgte die Berufung zum Ordinarius für Chirurgie und Direktor der Chirurgischen Klinik an der Universität Jena (1910 em.) .

Riedels wissenschaftliche Arbeiten umfassen histologische und embryologische Fragestellungen ebenso wie experimentell-chirurgische Forschungen zu Narbenbildungen an ligierten Gefäßen und zur Fettembolie. Er entdeckte und andere, daß Kiemengangsfisteln am Hals mit dem Mittelohr kommunizieren können. Wichtige Untersuchungen lieferte er zu Erkrankungen des Magens, der Gallenblase und des Pankreas. Die akute Pankreatitis wurde als « Riedel'scher Tumor » bezeichnet, eine zungenförmige Ausziehung der Leber vor der Gallenblase bei Cholelithiasis als « Riedel-Lappen » . Von großer Bedeutung waren Riedels Arbeiten zur Appendizitis und die daraus resultierende Forderung nach einer Frühappendektomie mittels Wechselschnitt. Bis heute ist die Bezeichnung « Riedel-Struma » für eisenharte Struma geläufig. Als erstem deutschen Chirurgen gelang Riedel 1882 die blutige Reposition des spontan und 1884 des traumatisch luxierten Hüftgelenkes.

## Genealogie

Vater : Johann Carl, Konrektor, evangelist Pfarrer ; Mutter : Mariana Dorothea Krause ; verheiratet 1883 Emma Heräus (geboren 1859) ; 2 Sohn, 2 Tochter.

## Auszeichnungen

Mitglied der Deutschen Akademie der Naturforscher Leopoldina (1888) .

Nach Riedel wurden die Riedel-Struma, eine Schilddrüsen-Erkrankung, der Riedel'sche Fortsatz der Leber oder auch Riedel-Lappen, die Stirnhöhlen-Operationen nach Riedel und der Riedel'sche Tumor benannt.

Vorsitzender der Deutschen Gesellschaft für Chirurgie (1907) .

Geheimer Medizinalrat.

Ehrenmitglied des Corps Thuringia Jena.

## Schriften

Erfahrungen über die Gallensteinkrankheiten mit und ohne Icterus, Berlin (1892) .

Anleitung zum Operieren an der Leiche und am Lebenden mit Rücksicht auf der ärztl, Praxis (1896) .

Die Pathogenese, Diagnose und Behandlung des Gallensteinleidens (1903) .

## Death of Father Loidol

Although much younger than Bruckner, Father « Oddo » Loidol would die early in 1893.

« Being thankful from the bottom of my heart, I beg God above all for your health ! Alas ! If I knew how to help !

Doctor Anton Bruckner »

This « communiqué » (dated **Wednesday, 4 January 1893**) may have been a telegram. It demonstrates Bruckner's grief at the illness, eventually proving fatal, that Father Loidol was experiencing.

Nevertheless, it clarifies Bruckner's feelings, thus demonstrating that, in the face of his own deteriorating health, he was even yet very much concerned about the welfare of others - especially, one who was a beloved friend.

**Tuesday, 31 January 1893** : Death of Father Raffael « Oddo » Loidol in Kremsmünster Abbey of a lung disease. Father Sebastian Mayr notifies Anton Bruckner by sending him a telegram.

In his diary, Father Franz Schwab writes down an appraisal of the deceased :

« He is a pupil of the famous composer Doctor Anton Bruckner, with whom he was attached with fatherly devotion. He played the organ like the piano with true Mastery, and was a “connoisseur” of musical literature. He was a brilliant musician both as a theoretician and as a practitioner. »

Bruckner who made several visits to his sick friend enjoyed his company right until the end.

Loidol's « Festchor » (Festive chorus) written for to the inauguration of the new « Gymnasium » in Kremsmünster must be considered one of his best compositions.

**Wednesday, 1 February 1893** : Letter from Anton Bruckner (Vienna) to Father Sebastian Mayr (Kremsmünster) :

Condolences on the death of Father Raffael « Oddo » Loidol. Greetings to the Abbot and Provincial Governor Leonhard Achleuthner and the entire chapter.

Bruckner had been sick for about 8 days. Today, for the first time, he was out of bed. Doctor Leopold Schrötter treated him.

### Back on his feet

**Friday, 24 February 1893** : The « Linzer Zeitung » reports that Bruckner's physician, Doctor Leopold Schrötter, sees an improvement in the composer's condition, and that Bruckner promised his friend « Kapellmeister » Franz Bayer to play the organ at the Steyr performance of the Mass in D minor (**WAB 26**) on April 2nd.

### Bruckner's upper-arm dislocation

**Sunday, 12 March 1893** : Letter from August Göllerich junior to music-critic Hans Puchstein :

Bruckner asked his personal biographer to ask Puchstein to forbid Camillo Horn to talk about him (Bruckner) and his works.

If Bruckner's upper-arm dislocation is not too serious, he will come to Vienna for the performance of the Mass in F minor and stay with his cousin Doctor Nowotny.

**Monday, 13 March 1893** : Last university lecture of the Winter Semester. Due to his upper-arm dislocation, Bruckner assigns an alternate teacher who behaves more like a school Master. The audience doesn't really listen to him.

### Bruckner gives news to Kitzler

**Tuesday, 14 March 1893** : Letter from Anton Bruckner to his former teacher Otto Kitzler :

In the middle of January, Bruckner had been assigned to bed for a water treatment, and had been placed on a strict diet by Doctor Leopold Schrötter. His life is not in danger. His obligations to the Imperial Court and the Conservatory are over. Bruckner is very upset that he is not allowed to play the organ. Attending a recital or a concert (his 4th Symphony will be performed in Brünn) could represent to much excitement for him. The premiere of the 8th Symphony is another similar case.

### WAB 26 : The Bayer-Bruckner duo

**Sunday, 2 April 1893** : Memorable performance in Steyr of the Mass in D minor (**WAB 26**) conducted by « Kapellmeister » Franz Bayer at the old parish church (« Alte Stadtpfarrkirche ») . Bruckner was finally able to play the organ-part.

At a special reception after the performance, the delighted composer paid tribute to conductor and performers for their exemplary preparation of the work.

That same day, Bruckner became honorary member of the Society of Friends of Music (« Gesellschaft der Musikfreunde ») .

### In bed for the next 3 weeks

**Middle of April 1893** : Anton Bruckner is (again) very sick. He has to stay in bed for the next 3 weeks.

### Bruckner gave me hell and tortured me

The reverse side of the successful composer was the ill old man. In Bruckner's last years, it was often difficult to deal with him. Letters between the 2 Schalk brothers provide examples.

**Before Thursday, 23 March 1893** : During the general rehearsal of the Mass in F minor (**WAB 28**) , Bruckner told Theodor Helm that he wanted to assure before God that he had exploited the talent bestowed on him. On the same occasion, Bruckner overly harassed Josef Schalk and there was unanimous indignation. Hans Richter will criticize the Master for his reprehensible behaviour.

**Saturday, 15 April 1893** : Letter from Josef Schalk wrote to his brother Franz :

« Bruckner gave me hell and tortured me in the final rehearsals in such a manner that there was unanimous indignation with him. It really is impossible to accomplish anything for him when he is present. The demon drives him to make the most malicious and cutting remarks. No insinuation, no insult is too low for him when he is irritated. It borders on the miraculous that I came through all these exertions unscathed. Richter, who was also aware of the situation, reprimanded Bruckner for his behaviour and finally said, half jokingly :

“ You should do nothing but write ; you are unbearable when you're not composing ! ” »

### Meet the doctor, Thursday

**Thursday, 20 April 1893** : Pocket calendar entry by Anton Bruckner :

« Thursday, Doctor (Leopold Schrötter ?) . »

### Money, meat and stationery

**Thursday, 25 May 1893** : Letter from Anton Bruckner (Vienna) to his brother Ignaz (St. Florian, near Linz) :

Bruckner sends 7 Florins to Ignaz and thanks him for the meat. Bruckner will soon buy him stationery.

### Philomena Tischler

**Thursday, 25 May 1893** : Letter from Anton Bruckner to Philomena Tischler :

House-keeper « Frau Kathi » Kachelmayr as received the photography of « Fräulein » Tischler. Bruckner is pleased to invite her.

Philomena lives at « Margarethenstraße » Number 26, in Wienden (4th District of Vienna) .

### A lot to talk about

**Saturday, 27 May 1893** : Wilhelm Schmid from Tübingen visits Anton Bruckner.

The composer talks about :

Chicago, Birmingham (?) (about the « Te Deum » project - confusion with the city of Cincinnati ?) and Berlin.

His opponents Eduard Hanslick, Doctor Theodor Billroth and Josef Hellmesberger senior.

Hans Richter, Ludwig Speidel, Johannes Brahms, Hugo Wolf, the Schalk brothers and Viktor Tilgner's bust of him (Bruckner) .

Schmid mentions an article written by Josef Schalk on the 8th Symphony and published in the « Österreichischen Literaturblatt » (15 May 1893) . Bruckner immediately reports the press article to his house-keeper « Frau Kathi » Kachelmayr then leaves to attend a doctorate ceremony.

## Johann Langthaler's horse

**Sunday, 11 June 1893** : Letter from Ignaz Bruckner (St. Florian, near Linz) to his brother Anton (Vienna) :

Name-Day congratulation for June 13th, 1893. Today, the sacrament of confirmation has been celebrated in St. Florian's abbey church. Greetings to house-keeper « Frau Kathi » Kachelmayr. Monastery's « Herr Hofmeister » Johann Langthaler has fallen from his horse.

## Mahler on Brahms and Bruckner

**Summer 1893** : Natalie Bauer-Lechner notes a conversation between Gustav Mahler and his brother Otto :

Gustav considers Johannes Brahms to be more important than Anton Bruckner.

## Mental effort is prohibited

**July 1893** : Bruckner's doctors forbid him any mental effort, including composing.

## Wedding of Karl Almeroth

Anton Bruckner becomes the accomplice of Karl Almeroth when the latter asks the hand of « Fräulein » Elizabeth Pracherstorfer (the daughter of a Master stone-mason, born on February 16, 1871) .

**Monday, 3 July 1893** : Wedding of the couple at the Municipal Evangelical Lutheran Church (« Lutherische Stadtkirche ») in Vienna, located at « Dorotheergasse » Number 18, in the 1st District. Sculptor Viktor Tilgner and wood merchant and land-owner Karl Reder attend as « best man » while Bruckner plays the organ during the ceremony (helped by Franz Urban at the registrations) .

Bruckner improvised on a theme taken from « Helgoland » (**WAB 71**) . He offered the sketch-sheet (with a very shaky signature) as a present to Urban's daughter, Hermine.

After the wedding, Bruckner decided to go to the « Gasthaus zum Riedhof » run by inn-keeper Johann Benedickter, located near the Vienna General Hospital (at the corner of « Wickenburggasse » Number 15 and « Schlöbelgasse » Number 12 (14) , in the District of Josefstadt) to celebrate (alone ?) .

The Almeroths will first live in Steyr at the Villa (the former « Technische Rathaus » or Town Hall) located at « Garstnerstraße » Number 3 (now called : « Leopold Werndl Straße ») .

Later, they will move to Vienna at « Lenaugasse » Number 17, in the 8th District.

### 1893 : Mahler visits Brahms in Ischl

**July 1893** : Mahler pays a first annual visit to Johannes Brahms at his house in Ischl.

### 1893 : Bruckner goes to Bayreuth

**August 1893** : Anton Bruckner is the center of attraction at the Bayreuth Festival.

His arrival is greeted by an enthusiastic crowd composed of musicians and music-lovers. In the most total confusion, the chest containing the sketches of the 9th Symphony is lost. After endless hours of worry, Bruckner finally recuperates it at the police station.

Bruckner will make his daily pilgrimage to the grave of the « Master of all the masters » .

Paul Marsop, a Wagner's disciple and music-critic (author of several essays) , who was once a sworn enemy of Bruckner's music, reports that he saw him approaching the grave with great reverence, joining hands and praying with such fervour that tears began to run down on his face.

Perhaps, the old Bruckner felt that this visit to « Wahnfried » might prove to be his last.

Felix Weingartner recalled being soured to Bruckner at Wagner's grave, shortly after the great composer's death, due to Bruckner relating the success of his latest Symphony, in loud, seemingly disrespectful tones.

Bruckner heard only recently about Wagner's statement :

« Bruckner's thoughts reach as far as Beethoven. »

Doctor Paul Marsop (1826-1925) : German music-editor and critic from Munich. He championed Bruckner's music and praised him in his columns. He worked, « inter alia » , for the « Berliner Tagblatt » .

### Wagner's barber : Bernhard Schnappauf

Bernhard Schnappauf (1852 ? - 1904) was the personal barber and pedicurist of Richard Wagner. He also took care of the Master's abdominal difficulties and feet. His « Salon » was located on « Ochsengasse » , in Bayreuth.

Schnappauf expressed the opinion that the « great Master » would have not died had he been with him to care for his colic. He discounted the fact that death had been caused by a heart-attack by relating that Wagner had been climbing and leaping into the stage flies in his 60's, the very picture of indomitable strength.

(The death-mask of Wagner was taken by the sculptor Weißbrod, in the presence of Paul von Joukowsky and Bernhard

Schnappauf. Cosima and Schnappauf put Franz Liszt's body into the coffin.)

Even after Richard Wagner's death, Anton Bruckner, on each of his visits at Bayreuth, made a point of honour on being shaved by « Herr » Bernhard Schnappauf, the former barber of the Master.

Bruckner once told him about the successes of his 7th Symphony.

Then, he blurted out :

« So, it is true what the dead Master said ! »

« Yes, what did he say ? » , the barber asked.

Bruckner prompted with excitation :

« The Master said that my Symphonies would tell the world something else. »

Schnappauf recalled :

« A jubilant Bruckner was clapping his hands like a child. »

Then, Bruckner added, rejoicing :

« See, when you are shaving me, it's like sitting on a cloud. »

### Ignaz Putz

**Around July-August 1893** : Anton Bruckner stayed in Amstetten. Ignaz Putz, the owner of the local coffee-house, was out of town during that same period.

Putz was a cultivated man, a member of the Municipal Council, and was involved in the cultural life of the town and its surroundings. He held the position of first violin in the orchestra and was also president of the Men's Choral Society (« Männergesangsverein ») .

**Thursday, 10 August 1893** : Letter from Ignaz Putz to Anton Bruckner :

He ask Bruckner to compose a motto for the « Amstettener Liedertafel » .

« Dear “ Herr ” Bruckner !

On behalf of myself and of my bereaved family, I take the liberty of making this most important request. Please.

For the past 13 years, I have been heading the Board of the Men's Choir, which is missing a motto. I therefore dare to ask you, with the greatest of respect, to compose a song that will include this new motto which will remain in the memory of generations to come. We would be most grateful. Since we are due to participate in a Choral Festival at the end of the month, I would be very happy to have it in my possession. »

(Ignaz Putz)

Another letter will follow :

« Recently, “ Herr ” Bruckner, you came to my house when I was unfortunately away from home ! I am very sorry ! But I hope to have the pleasure of meeting you soon, again. I beg you not to be irritated about my request. I humbly offer you, with the utmost respect, the best greetings in my name and in the name of my wife. »

(Ignaz Putz)

We do not have the answer to this last letter but we know that Bruckner never met the demand of the « Amstettener Liedertafel » . Bruckner, who was very sick during that period, had to stay in bed most of the time.

Because :

« The wings of Death threatened to unfold in 1893. »

(August Göllerich junior)

**Thursday, 4 September 1924** : Article entitled « Personal memories of Bruckner » (« Persönliche Erinnerungen an Bruckner ») written by Ignaz Putz in the « Neuen Wiener Tagblatt » .

« Astra »

Anton Bruckner never wrote an Opera nor did he ever write an Oratorio. As much as he was a fan of Richard Wagner's music-dramas, he was uninterested in drama. In 1893, he thought about writing an Opera called « Astra » based on a novel by Gertrud Bollé-Hellmund.

We do not know whether Anton Bruckner ever talked to Hugo Wolf about the Opera he was planning to write. (Was a rhythm from the Finale pulsing in his mind ?) Whether his ideas materialized to the point of an actual project is not known. Maybe, he would never have thought of Opera at all, had it not been for a librettist who asked him to set a text to music.

In 1893, Bruckner received a letter from a certain Gertrud Bollé-Hellmund saying that the ordinary listener could not understand his Symphonies completely, so rich were they in ideas.

She continued :

« Even the well-educated person finds great mystery in them. You may say you are not a composer of Opera, yet, you have the gift for it as surely as Händel, Mozart, Beethoven, and Richard Wagner. In your Symphonies, there are abundant motives for Opera. I could give you a text which, in my opinion, would suit you. It is religious in character. »

Bruckner answered :

« Your magnificent letter shows me you have great genius. I would like to do a dramatic work “ à la Lohengrin ” : Romantic, religious, mysterious, and above all, free from all impurities. »

Aside from the question as to what is impure in itself, there is hardly a subject which art, especially music, cannot ennoble. First of all, music has a peculiar « veiling » quality which can transform a subject. One need not point to an extreme example, such as the Opera « Salome » , which was first rejected because of its « indecent » libretto. Even the opening scene of « Don Juan » might be considered shocking from a moralist's point of view. Yet, who could possibly feel shocked when he hears the words wrapped in Mozart's music ? Bruckner, however, never entertained such thoughts as these when he considered the question of purity. Impurity to him meant anything that might offend the religious feeling of devout Catholics. The Roman Church has good reasons, indeed, to be proud of this son of hers. It was Anton Bruckner's good luck that the negotiations with Mrs. Bollé came to nothing. He was spared the fate of many a composer who is attracted to Opera as though drawn by a magnet, be this realm of music ever so foreign to him. Bruckner had an infallible instinct in everything pertaining to his art.

**Before Tuesday, 5 September 1893** : Letter from Mrs. Gertrud Bollé-Hellmund (pseudonym : Elizabeth Bollé who was presumably a writer) (Berlin) to Anton Bruckner (Steyr) :

Bollé-Hellmund offers Bruckner a libretto (« Astra » , after the « Toteninsel » by Richard Voß) to compose an Opera. If Bruckner accepts her proposition, she will have to send him the manuscript under the pseudonym of a male-writer.

**Tuesday, 5 September 1893** : Letter from Anton Bruckner (Steyr) to Mrs. Gertrud Bollé-Hellmund (Berlin) :

Bruckner is always sick. He has to rest on orders of his doctors. He needs to work on his 9th Symphony for another 2 years. Only then, he would like to think of composing an Opera. He suggests to Bollé-Hellmund a libretto « à la Lohengrin » : Romantic, religious, misterious, and (most important) free of all impurities.

The old Master knew he was engaged in a race against time. Despite the polished tone of his letter, it is unrealistic to believe that one day he would write an Opera.

**After Tuesday, 5 September 1893** : Letter from Mrs. Gertrud Bollé-Hellmund (Berlin) to Anton Bruckner :

Gertrud reacts to Bruckner's proposition.

**Thursday, 21 September 1893** : Letter from « Kapellmeister » Franz Bayer (Steyr) to Mrs. Gertrud Bollé-Hellmund (Berlin) :

Bayer talks about Gertrud's Opera project (« Astra ») . From a medical point-of-view, it is forbidden for Bruckner to make any mental effort.

**After Sunday, 5 May 1895** : Letter from Anton Meißner (Vienna) to Mrs. Gertrud Bollé-Hellmund (Berlin) :

Anton Bruckner was still not healthy, had not worked since December 1894 and had to finish the Finale of the 9th Symphony. She could send the libretto, but the composition could not be considered for the time being.

**Before Saturday 6 July 1895** : Gertrud Bollé-Hellmund sends Anton Bruckner her Opera libretto « Astra » after the novel « Die Toteninsel » by Richard Voß.

**Saturday, 6 July 1895** : Letter from Anton Meißner (Vienna) to Mrs. Gertrud Bollé-Hellmund (Berlin) :

Meißner acknowledges receipt of the libretto of « Astra » and conveys Bruckner's thanks but offers little hope to the idea of making use of it. Bruckner has been living at the Upper-Belvedere since yesterday. The 9th Symphony will still take him a long time. A Catholic libretto (as in the case of Franz Liszt's « Elisabeth » or Pedro Calderón de la Barca) would probably appeal to Bruckner.

Bollé-Hellmund will continue her correspondence, intermittently, with Bruckner.

Doctor Wilhelm Altmann reports in an article published in « The Music » magazine (Volume I, Number 22) dating from 1901 :

« Elizabeth Bollé offered Anton Bruckner the libretto of “ Astra ” which is based on the novel “ Die Toteninsel ” (The Isle of the Dead) by Richard Voß which plunges us into the time of the persecution of Christians in Ancient Rome. »

« Astra » was not Bruckner's first Opera project. At least 2 others are known :

« Ekkehard » , based on the novel by Joseph Victor von Scheffel.

« Die Bürgerreuth » , based on a libretto by Franz Schumann.

According to the composer's demands, each of these projects had to include a hunting-scene and a church-scene with organ playing - and, of course, to be free from any « impurity » !

## Flowers for Irma

**Around Thursday, 7 September 1893** : Letter (presumably a business-card) from Anton Bruckner to Johanna Maria « Irma » Neweklowski :

Bruckner congratulates « Fräulein Irma » on her Name-Day. He also sends flowers.

It is possible that the letter was written at a later date since the Name-Day of « Irma » was celebrated on September 14th, 1893. However, her original first name is Johanna Maria, so that, on September 8th, the proposed dating seems plausible because of the Feast of the Marian names.

**Sunday, 10 September 1893** : Letter from Johanna Maria « Irma » Neweklowski to Anton Bruckner (probably written on September 8th, and only dated on September 10th) :

Thanks for the card received yesterday with the Name-Day greetings and the flowers. For her, it was the most beautiful Name-Day congratulations. « Irma » hopes for the promised visit by Bruckner.

Is the letter dating from September 10th ? Yesterday, the letter had not been delivered due to a mistake by the messenger. Refer to the Name-Day of « Irma » (September 14th) . If the dating is clearly readable, it probably comes from the transcript. Thus, Bruckner's letter of September 7th refers to the Name-Day of « Maria » (September 8th) . first delivery of the reply : September 9th. Final delivery : September 10th. In reference to Irma, one would have to accept a reading error in the dating. Correct dating : 16 September. Bruckner's letter of September 13th written on the Name-Day of « Irma » . 14 September : first delivery of the « thank you » letter on September 15th. Final delivery : September 16th.

## No entries in the pocket calendar

**Monday, 18 September 1893** : Presumably due to illness, Anton Bruckner interrupts noting in his prayer-notebook (until September 30th) .

## Death of Hellmesberger

**Tuesday, 24 October 1893** : Josef Hellmesberger senior dies of pneumonia in Vienna. He was 63 years old.

Hellmesberger retained his functions as director of the Vienna Conservatory and « Kapellmeister » of the Imperial Chapel until shortly before his death.

## Monday university lecture cancelled

**Monday, 30 October 1893** : Doctor Leopold Schrötter makes a medical visit to Anton Bruckner at noon time. The

Monday university lecture is cancelled.

### Severe dyspnea

**Before Monday, 6 November 1893** : Anton Bruckner suffers of severe dyspnea (shortness of breath) .

**Monday, 6 November 1893** : Doctor Leopold Schrötter makes a medical visit to Anton Bruckner during the afternoon. Because he observes a significant improvement in the health of his patient, he allows Bruckner to hold his usual Monday lecture at the University of Vienna - the first one of the 1893-1894 Winter Semester.

### Concert plans for Berlin

**Wednesday, 8 November 1893** : Letter from Anton Bruckner (Vienna) to Siegfried Ochs (Berlin) :

Bruckner had been bed-ridden, but now, he is allowed to get-up again (but Doctor Schrötter was very strict) . Bruckner thanks Ochs for the Berlin performance plans. Besides the « Te Deum » (**WAB 45**) which will be sung by his favourite choir (the Philharmonic Choral Society of Berlin) , he would like to hear the 7th Symphony (**WAB 107**) , which he has never heard since the concerts of March 21, 1886, and February 24, 1889, which have been horribly reviewed in the Vienna « Neue Freie Presse » by music-critic Eduard Hanslick.

### Drafting the will

**Friday, 10 November 1893** : Confined to bed in Vienna for almost the whole year, Anton Bruckner (aged 69) will see his health deteriorating (again) but, this time, in an alarming way. He decides it is now time for him to undertake the drafting of his will.

Originally, Bruckner had appointed his close friend Rudolf Weinwurm (who composed the patriotic Cantata « Germania ») as his executor due to his legal training. His brother Ignaz (Nazi) and his sister Rosalia (« Sali ») will be appointed his legal heirs.

The composer requests that his own patriotic Cantata, « Germanenzug » (**WAB 70**) (who finished second behind « Germania » at the Upper-Austrian - Salzburg Male Chorus Festival in June 1865) , be played in his memory during the funeral ceremonies.

Bruckner will make another special request to the church authorities : his coffin must be wide and his remains exposed (not buried) in the crypt of the abbey church of St. Florian (like former Dean, Jodok (« Jodocus ») Stülz, prelate of the monastery, benevolent protector and friend of Bruckner) , just below the great organ, which since bears his name :

« I demand that my remains be placed in a metal coffin that will be exposed to air (not buried) in the crypt of the

church of St. Florian, under the great organ. »

If refused, Bruckner will ask to be buried at the Steyr Parish Church (« Stadtpfarrkirche ») cemetery, and not at the Central Cemetery (« Zentralfriedhof ») among the musical giants of Vienna.

The request proves to be quite unusual since Bruckner was not an official member of the Clergy. Once approved, people from the monastery will start digging under the church. They will discover to their surprise a historical necropolis dating from the Turkish invasions (site of a battle involving the Huns) , where several thousand skulls and bones will be remove and organize in an elaborate, faintly macabre arrangement (ossuary) before which Bruckner will soon play for eternity !

The composer will leave a clear list of instructions to follow during the embalming procedure (using the newly-discovered formalin) .

Because of his degrading mental state, Bruckner will require the preservation at the Imperial and Royal Court Library (« Hofbibliothek ») of its original scores « for better times » (« für beßerre Zeit ») .

Bruckner will sign the legal papers, place them in an envelope along with the selected autograph manuscripts, then will seal the envelope himself.

### Will

« In the event of my demise, I affect after careful consideration the ensuing last-will instructions :

#### I

I request that my mortal remains be placed in a metal coffin, in the vault under the Monastery Church of the Lateran Rule and, to be sure, under the great organ ; it shall be free-standing, inside the vault, without being buried ; and I, myself, already during my lifetime, have obtained approval for this from the most reverend dignitaries of the above named monastery, the coffin designated to be kept-up by the monastery. My body is also to be interred, of which beloved act of kindness Professor Paltauf has already declared himself to be willing ; and all is arranged (first-class funeral) , thereby, to effect the transport and internment in the place of rest which has been designated by me in St. Florian, in Upper-Austria.

#### II

I prescribe that, to the aforesaid monastery St. Florian, the guarantee of the costs of the up-keep of my sarcophagus, in addition to 4 Holy-Masses ; to be sure, 3 Masses for my birthday, the anniversary of my death, and my Name-Day, and a 4th Mass for my parents and my brothers and sisters, which shall be said each year ; a designated sum of money will be given.

#### III

To my only heirs, my brother Ignaz Bruckner, in St. Florian, and my sister Rosalia Hueber (born Bruckner) , in Vöcklabruck, I convoke equal portions between them. The aforementioned, in particular, lawfully belongs to the heirs ; and, in the publishing contracts, on the part of my publishers, is covered by the stipulated promise of royalties, hopefully more abundant, will be put aside for them in the future because, during my lifetime, I myself have scarcely drawn upon the material returns from my works.

#### IV

I bequeath the original manuscripts of my compositions as follows : the Symphonies numbering 8, until now (the 9th will, as God wishes, soon be finished) , the large Masses, the Quintet, the « Te Deum » , the « 150th Psalm » , and the choral work « Helgoland » - to the Imperial and Royal Court Library in Vienna, directorship of the aforementioned place most kindly to take care of these manuscripts. At the same time, I designate that the firm of Joseph Eberle and Company shall be authorized to borrow, from the Imperial and Royal Court Library, the manuscripts of the compositions they are to publish, for a reasonable time, to take to press for publication. The latter shall be obliged to place, at the disposal of « Messieurs » Joseph Eberle and Company, the aforesaid original manuscripts as a loan for an appropriate amount of time.

#### V

To my servant, Katharina Kachelmeier, in recognition of loyal service for many years, which she has rendered to me, I bequeath the sum of 400 Florins. In the event that she is still in my service at the time of my demise, she shall receive a further 300 Florins, so that by entry of this provision, she receives a total of 700 Florins. I request that this legacy will be paid, immediately upon my death, without any deductions.

#### VI

I appoint Doctor Theodor Reisch, Imperial Legal Advocate in Vienna XIX, Oberdöbling, as my executor, and request the aforementioned to take care of fulfillment of my final wishes. I have prepared the same in the presence of the witnesses signed in their own hand-writing.

Doctor Anton Bruckner, m.p.

Ferdinand Löwe, m.p. , as requested witness

Cyrill Hynais, m.p. , as requested witness

Doctor Theodor Reisch, m.p. , as requested witness »

The burial in St. Florian as the consent of Prelate Ferdinand Moser. The treatment of the corpse (mummification) will be executed by Professor Richard Paltauf.

**Tuesday, 25 September 1894** : Anton Bruckner makes amendments to his will drafted on November 10, 1893.

Doctor Richard Paltauf

The Austrian anatomist, pathologist and bacteriologist Richard Paltauf was born on 9 February 1858 in Judenburg, Styria ; and died on 21 April 1924 in Semmering, Lower-Austria. Richard Paltauf was the brother of Arnold Paltauf (1860-1893) , professor of forensic medicine at the German University in Prague.

In 1880, Paltauf received his medical doctorate at the University of Graz, and, from 1881 to 1883, was an assistant to pathologist Hans Kundrat (1845-1893) in Graz. Afterwards, he remained as Kundrat's assistant at the University of Vienna, where, in 1888, he obtained his habilitation in pathological anatomy. 1892 : Professor in Graz. 1893 : Prosector.

In 1892, he became an associate-professor (« Professor extraordinarius ») of general pathology and pathological histology, and, during the following year, became head of the institute for pathological histology and bacteriology. 1898 : professor at the University of Vienna. 1907-1908 and 1913-1914 : dean of the Faculty of Medicine, University of Vienna.

From 1900 until his death, in 1924, he was a full-professor of general and experimental pathology.

With Anton Weichselbaum (1845-1920) , he was responsible for introducing bacteriology and serology in Vienna. Also, he founded a sero-therapeutical institute as well as an institution for vaccination against rabies. With Carl Sternberg (1872-1935) , he conducted important research of lymphogranulomatosis.

...

Richard Paltauf studied in Graz and received his doctorate there in 1880. From 1881 to 1893, he was assistant to Hans Kundrat (1845-1893) at the chair of pathological anatomy in Graz, and, in 1883, became Kundrat's assistant in Vienna.

Paltauf was habilitated for pathological anatomy at Vienna in 1888, and, in 1892, became associate-professor (« Professor extraordinarius ») of general pathology and pathological histology. In 1893, he took-over the prosectorate at the Imperial-Royal Rudolf Foundation Hospital (« Kaiserlich-Königliche Krankenanstalt Rudolfstiftung ») located on « Böhrgasse » , and, at the same time, became head of the University institute for pathological histology and bacteriology.

In 1898, he became full-professor (« ad personam ordentlicher Professor ») of pathological histology and general pathology, and, from 1900 until his death in 1924, was full-professor (« Professor ordinarius ») for general and experimental pathology.

Paltauf particularly distinguished himself as a pathological anatomist, being a Master of pathological histology. He founded a reputed pathological-anatomical school, with Carl Sternberg investigated the « lymphogranulomatosis » , the tumors of the carotid gland, with Ernst Freund (1863-1946) and Carl Sternberg (1872-1935) worked over the pathology of the blood in « Handbuch der allgemeinen Pathologie » by Krehl-Marchand, the formation of new skin in « Handbuch der Hautkrankheiten » (4 volumes, Vienna (1802-1809)) by Franz Mracek (1848-1908) , with Leo Ritter von Zumbusch (1874-) , later with Gustav Scherber (1874-) findings in « Mycosis fungoides » , and, with Eugen von

Bamberger (1858-1921) , he investigated the osteoplastic carcinoma. He also wrote an outstanding chapter on agglutination in « Handbuch der pathogenen Mikroorganismen » (Jena, 1902-1909) by Wilhelm Kolle (1868-1935) and August Paul von Wassermann (1866-1925) .

Paltauf's greatest achievement, however, was, with Anton Weichselbaum (1845-1920) , the introduction of bacteriology and serology at Vienna. Thanks to him, Vienna had an institution for vaccination against rabies and a sero-therapeutical institute. From 1905, he was head of the State institute for the production of diphtheria serum.

...

Doktor Richard Paltauf, Pathologe : geboren 9. Februar 1858 in Judenburg (Steiermark) ; gestorben 21. April 1924 in Semmering (Niederösterreich) . Bruder des Vorigen ; studiert 1875-1880 an der Universität Graz Medizin, 1880 Doktor der Medizin ; war 1881-1883 Assistent am Pathologischen-anatomischen Institut bei Hans Eppinger senior und Hans Kundrat, dem er 1883 nach Wien folgte. 1888 Privat-Dozent (1892 titel außerordentlicher Professor) , übernahm er nebenamtlich den Aufbau des Pathologischen-anatomischen Institut der Wiener Poliklinik und setzte dort gleichrangig neben den Prosekturbetrieb ein Histologische-bakteriologische Institut 1893 wurde er Prosektor der Krankenanstalt Rudolfstiftung und gleichzeitig Vorstand des Universität Institut für pathologische Histologie und Bakteriologie 1894 gründete er die Schutzimpfungsanstalt gegen Rotz. 1898 wurde Paltauf « ad personam » oder Professor der pathologischen Histologie und allgemeine Pathologie, 1900 oder Professor der allgemeine und experimentellen Pathologie. 1908 etablierte sich diese Disziplin, verbunden mit dem staatlichen Serotherapeutisches Institut, das Paltauf zur Gewinnung von Diphtherieheilserum geschaffen hatte, im neuen Hygieneinst, der Universität ; 1914 General-Stabsarzt auf Kriegsdauer. Paltauf zeichnete sich vor allem auf dem Gebiet der pathologischen Histologie aus, erwarb aber auch durch die Einführung und Weiterentwicklung der Bakteriologie und Serologie in Wien große Verdienste. Er erkannte die Hadernkrankheit als Milzbrand. Das maligne Lymphogranulom trägt den Namen Hodgkin-Paltauf-Sternbergsche Krankheit : nach der Erstbeschreibung durch Hodgkin (1832) erfolgte durch Paltauf und seinen Schüler Sternberg 1897 eine grundlegende Bearbeitung der pathologischen Anatomie dieser Krankheit. Paltauf stand Edmund von Neusser bei dessen Untersuchungen über die Genese der Pellagra als Bakteriologe zur Seite und konnte den Bacillus maidis als Erreger dieser Krankheit ausschließen. 1912 korrektur, 1921 w. Mitglied der Akademie der Wissenschaften in Wien.

...

Als Sohn des Judenburger Bezirksarztes wurde Richard Paltauf am 9. Februar 1858 geboren, absolvierte das Gymnasium in Graz, wandte sich dort den medizinischen Studien zu und wurde am Weihnachtstag des Jahres 1880 zum Doktor der gesamten Heilkunde promoviert. 1892 wurde er in Wien zum Extraordinarius für Pathologische Anatomie ernannt, ein Jahr später übernahm er die Leitung der Prosektur des Rudolfspitals und auch die des Institutes für Pathologische Histologie und Bakteriologie. Es bedarf keiner besonderen Betonung, daß Paltauf in den verschiedenen fachwissenschaftlichen Vereinen, wie der Österreichischen Krebshilfe und vielen anderen eine führende Rolle zufallen mußte. Gewissenhafte Arbeit und Streben nach Wahrheit zeichneten den ernsten und vornehmen Mann aus, der mit diesen seinen Eigenschaften fast durch vier Jahrzehnte die Wiener medizinische Schule und durch diese einen großen Teil der Ärzteschaft Österreichs beeinflusste.

...

Ende des 19. Jahrhunderts tötete der « Würgeengel der Kinder » (die Diphtherie) fast jedes zweite daran erkrankte Kind. Auf der 60. Versammlung Deutscher Naturforscher und Ärzte im Jahr 1894 in Wien berichtete Emil von Behring (1854-1917) über die sensationellen Erfolge seines von ihm entwickelten Heilserums. Mit diesem Diphtherie-Serum konnte erstmals die dramatische, auch « Krupp » genannte Infektion der oberen Atemwege wirksam behandelt werden.

### Bedeutung erkannt

Richard Paltauf (1858-1924), der Prosektor des Rudolf-Spitals in Wien, erkannte sofort die Bedeutung dieser bisher in Österreich nicht verwendeten Heilmethode. Es sei ein « Gebot nicht nur der Humanität, sondern der Staatshygiene diese therapeutische Maßnahme auch in Österreich einzuführen », forderte Paltauf von den zuständigen Ministerien. Im Sommer 1894 hatte er bereits eine Impfanstalt gegen Tollwut eingerichtet und konnte nun dem Ministerium mehr oder weniger aus dem Stegreif Vorschläge für den Aufbau eines Instituts zur Gewinnung von Diphtherie-Heilserum machen. Trotz Geldmangels stellte das Kriegsministerium Paltauf im Kaiserlich und Königlich Tierärzteinstitut Pferde zur Herstellung von Serum zur Verfügung. Bereits am 3. Oktober 1894 begann er hier mit dem Immunisieren des 1. Pferdes. Das Pferd hieß Fanny.

Über die Erzeugung des « so wohltätig wirkenden Diphtherieserums » berichtete der Volksschuldirektor Klemens Dorn im Heimatbuch des 10. Wiener Gemeindebezirkes :

« Die Erzeugung beginnt damit, daß ein Pferd mit kleinen Dosen von Diphtheriegift gegen diese Krankheit immun gemacht wird. Dann wird dem Pferde durch eine Kanüle aus der Halsschlagader eine Menge von etwa sechs Liter Blut abgezogen und durch einen Schlauch in eine Flasche geleitet. Läßt man das Blut dann abstocken, so sondert sich oben eine klare Flüssigkeit aus, das Serum, das hierauf konzentriert, filtriert und auf seinen Heilstoffgehalt untersucht wird. Dann wird das Serum in winzige Glasphiolen gefüllt. Im ganzen werden (im Institut an der Triesterstraße, Anmerkung) etwa sechzig verschiedene Heilstoffe erzeugt, darunter die gegen Cholera, Milzbrand, Pest, Typhus, Starrkrampf und so weiter Gegen die Basedowsche Krankheit wird Serum von Ziegen gewonnen. »

### Unterstützung für das Institut

Unterstützung für die Gründung einer staatlichen Anstalt zur Herstellung von Heilserum gegen Diphtherie bekam Paltauf von Hermann von Widerhofer (1832-1901). Der Vorstand des St. Anna Kinderspitals und I. Universitätsprofessor für Kinderheilkunde in Österreich trat bereits sehr früh für die Serumbehandlung bei Diphtherie ein. Widerhofer, der bedeutendste Pädiater der Monarchie, nützte seinen Einfluß als Leibarzt des Kaiserhauses und überzeugte auch die Politik von Paltaufs Projekt. Das Parlament bewilligte schließlich einen Kredit, und der Wiener Krankenanstaltenfonds beauftragte Paltauf mit der Einrichtung von Instituten zur Heilserengewinnung in der Kaiserliche und Königl. Rudolfstiftung und im Kaiser-Franz-Josefs-Spital.

Da es im Bereich der Rudolfstiftung keinen Platz für den Bau der benötigten Pferdeställe gab, wurden die bereits bestehenden Stallungen im Kaiser-Franz-Josef-Spital dafür verwendet. Hier wurden die Pferde immunisiert und Räume für

die Herstellung von Diphtherietoxin eingerichtet. Bereits am 21. Oktober 1894 konnte das Institut dem St. Anna Kinderspital 20 Flaschen Serum übergeben. Der rasch wachsende Bedarf erforderte aber bald Zubauten und Erweiterungen auf dem Areal des Kaiser-Franz-Josefs-Spitals. Ende 1895 lieferten die 46 Pferde in den Stallungen an der Triesterstraße 9.236 Dosen Diphtherietoxin. Vier Jahre später waren es bereits 41.662. Der Verkauf des Diphtherieserums erfolgte über die Kaiserliche und Königliche Hofapotheke in Wien. In der alten Hofapotheke ist heute das Lipizzaner-Museum untergebracht.

### Großer Bedarf an Seren

Die enorm steigende Nachfrage machte bald einen Neubau an der Triesterstraße notwendig. Fertig gestellt wurde die neue Produktionsanstalt im Jahr 1899. Um die Jahrhundertwende produzierte das Institut auch Tetanustoxin, Seren gegen Strepto-, Staphylo- und Meningokokken, Milzbrand und Rotlaufbakterien. Daneben stellte das staatliche Serotherapeutische Institut auch diagnostische Seren für Thyphus, Cholera und ein Serum zum forensischen Nachweis von Blut her. Ebenfalls durchgeführt wurden hier Immunisierungsversuche mit Pestbakterien. Paltauf berichtete darüber in einer Sitzung der Gesellschaft der Ärzte in Wien. Nach einer schwerwiegenden Komplikation (über die tragischen Laborpestfälle im Jahr 1898 in Wien berichteten wir bereits) in einem anderen Labor mußten die Arbeiten mit Pestbazillen aber eingestellt werden.

Das Heimatbuch des 10. Wiener Gemeindebezirkes informierte den Leser über das Institut an der Triesterstraße so :  
« Es dürfte wohl den wenigsten Favoritnern bekannt sein, daß in dem bescheidenen Gebäude Triesterstraße 50, welches dem ausgedehnten Triester Spital angegliedert ist, eine der größten Gifffabriken Europas sich befindet. Hier werden Reinkulturen der gefährlichen, mikroskopisch kleinen Erreger aller möglichen ansteckenden Krankheiten gezüchtet. (...) Eine eigene Köchin bereitet diesen bösartigen Feinden der Menschheit jene Speisen (Fleischbrühen, Kartoffelscheiben, Nährgelatine) , auf denen sie am besten gedeihen. »

### Export in alle Welt

Aus dieser so unscheinbaren und dabei einzig dastehenden Serumfabrik werden die Erzeugnisse in mehreren hunderttausend Glasphiolen alljährlich in die ganze Welt hinaus versandt. Bezeichnend für den Absatz ist, daß die Etikettierung der Serumfläschchen in sechs Sprachen erfolgt. Einige dieser Glasröhrchen wären imstande, durch ihren Inhalt bei ungeschickter oder böswilliger Verwendung die Einwohner ganzer Städte und Länder hinzumorden. In der fachkundigen Hand des Arztes bringen sie jedoch Heil und Gesundheit für viele Kranke, für die es in früheren Zeiten keine Hilfe gab.

Im Jahr 1908 wurde das Serotherapeutischen Institut mit dem Institut für allgemeine und experimentelle Pathologie im neu errichtete Gebäude des Kaiserliche und Königliche Hygiene Universitätsinstitut in der Kinderspitalgasse 15 zusammengelegt. Die von Paltauf eingeführte Serologie und Bakteriologie führte zu einer Blütezeit der experimentellen Medizin in Wien. Das Serotherapeutische Institut an der Triesterstraße war einer der Pfeiler auf der der klinische Pathologe Paltauf sein, wie Georg Dohm es in seiner Geschichte der Histopathologie nennt, « Königreich der experimentellen Medizin » begründete.

## Cultures of death and politics of corpse supply

### Anatomy in Vienna (1848-1914)

19th Century Vienna is well-known to medical historians as a leading centre of medical research and education, offering easy access to patients and corpses to students from all over the world. This article seeks to explain how this enviable supply with cadavers was achieved, why it provoked so little opposition at a time when Britain and the United States saw widespread protests against dissection, and how it was threatened from mid-Century. To understand permissive Viennese attitudes, we need to place them in a « longue durée » history of death and dissection, and to pay close attention to the city's political geography as it was transformed into a major Imperial capital. The tolerant stance of the Roman Catholic Church, strong links to Southern Europe and the weak position of individuals in the absolutist State all contributed to an idiosyncratic anatomical culture. But as the fame of the Vienna Medical School

peaked in the later 1800's, the increased demand created by rising student numbers combined with intensified interdisciplinary competition to produce a shortfall that professors found increasingly difficult to meet. Around 1900, new religious groups and mass political Parties challenged the long-standing anatomical practice by refusing to supply cadavers and making dissection into an instrument of political struggle. This study of the material pre-conditions for anatomy at one of Europe's most influential medical schools provides a contrast to the dominant Anglo-American histories of death and dissection.

The politics of the transition from the bodies of executed criminals, the main-source of anatomical material in medieval and early modern Europe, to pauper cadavers around 1800 took diverse paths in different countries. (1) In Britain, a period of indiscriminate grave robbing ended with the 1832 Anatomy Act, which gave anatomists almost unrestricted access to the work-house poor, in exchange for not touching the middle- and upper-class dead. (2) In the United States, where the anatomical divide cut along lines not just of class but also of race, violent protests in the turbulent decades around the American Civil War delayed anatomical acts until the end of the 19th Century. (3) Yet, British and American medical students travelled to continental European centres where the transition from the criminal to the pauper body occurred earlier and seemingly more smoothly. In ancien « régime » Paris, the cadavers of paupers who died in hospitals were used extensively in research and education. (4) In 1798, the new Republican government named the « Hôtel-Dieu » and « La Charité » official providers to the medical school and ordered other hospitals to give its needs priority. (5) In the German lands, the economics of free burial provision and the prevailing moral code overcame considerable popular resistance to facilitate a gradual expansion of the pool from which anatomical cadavers were recruited to include unwed mothers, illegitimate children, suicide victims, prisoners, beggars, alms-house inmates and others dependent on municipal funds. (6)

As the leading European centre of clinical education, Paris was from the 1850's succeeded by the capital of the Habsburg Monarchy, Vienna. (7) The General Hospital (« Allgemeines Krankenhaus ») housed thousands of patients in specialist wards and served as the base for University teaching as well as short courses for foreign visitors, which offered clinical instruction on live and dissection on dead bodies. (8) Around 1850, the main Viennese medical journal « Wiener Medizinische Wochenschrift » boasted that the General Hospital alone supplied the medical faculty with 2,000 corpses per year for dissection « for educational purposes », allegedly more than the other German medical schools received altogether. (9) Vienna was an essential stop on the educational tours of foreign, largely American and German, students because it offered easy access to clinical and anatomical « material ». (10) Cadavers were also used as raw material for the production of objects that spread the fame of Viennese anatomy world-wide. Josef Hyrtl's exquisite specimens occupy pride of place in many anatomical and natural history collections. (11) Eduard Pernkopf's anatomical atlas, celebrated for its art but notorious for using the cadavers of victims of the fascist regime in the 1930's and 1940's, was the last in a tradition that went-back to the 19th Century. (12)

This article aims to explain why access to bodies in Vienna was easier and the attitude towards dissection more permissive than in Britain, the United States or even other German States. The most prominent recent literature on corpse supply to 19th Century anatomy has rightly emphasized strong popular opposition towards dissection. (13) This resistance is usually seen as based in deep-seated beliefs about the cadaver that persisted well into the 19th Century and were widely prevalent in popular culture. Yet, anthropologists have shown that, instead of assuming that death

cultures were homogenous Europe-wide, we should take national and regional differences seriously. (14) So, the first section identifies various long-term sources of Viennese attitudes towards death and dissection. An idiosyncratic culture formed under the influence of the Roman Catholic Church and utilitarian absolutist monarchs. The Church and the State continued to play key-roles into the second half of the 19th Century, as I will show for the examples of access to city cadavers and debates about friendly societies and cremation. Within this culture and in contact with Italian centres, from the Middle-Ages, and then Paris, in the 19th Century, medicine was strongly centred on the cadaver as the central teaching and research resource.

The second section, set in the 1850's, shows how the specific disciplinary organization of the Vienna School of Medicine moved the main competition for dissectible cadavers into the faculty, rather than between anatomists and authorities, or the State and the poor. While I focus on normal anatomy, the discipline most closely associated with the practice of dissection, I show that pathological anatomists controlled the distribution of bodies. (15) Clinical and anatomical chairs competed for cadavers for research and to attract students from abroad. The idiosyncratic, highly-fragmented disciplinary world of the Vienna School of Medicine may be explained by the school's status as the central educational institution of the Habsburg Monarchy and part of the largest German-speaking university. The third section describes how, in the 1880's, anatomists recruited government ministers to gain access to cadavers in other cities. The success of this project crucially depended on Vienna's central position in the Imperial railway, cultural and economic networks. To understand how the context of an expanding capital of a multi-ethnic Empire informed anatomical practices, I draw on recent work on science and the city. (16) In history of medicine, studies on the making of public health have explored how scientific expertise both reformed the body and changed the urban environment. (17) Closely related are histories of diseases with a strong cultural impact (such as major epidemics) which historians have used as « sampling probes » to assess social changes. (18) Recently, several studies have shown how specific urban environments shaped particular disciplines. (19) Here, I focus on the single highly-important practice of body supply to anatomy in order to reveal the relevant changes as Vienna was transformed into a major cultural and intellectual metropolis. (20) In addition to the religious culture and communication networks, change encompassed the urban space, population size and composition, and (the subject of the 4th and final section) the rise of anti-Semitism.

This is, then, a study of cultures of death, medical disciplines and a city, but primarily a contribution to histories of 19th Century medical education in anatomy. Studying Vienna, an educational and cultural centre that crucially shaped modern medicine, should help redress the privileging of Anglo-American narratives. While we lack records of corpse supply (« Leichenbücher »), other documents (ministry and faculty reports, newspaper articles and text-books) provide sufficient information to reconstruct trends in the numbers and provenance of cadavers. (21) The resulting account of how anatomy professors secured the material basis for their world-renowned courses, atlases and specimens should complement stories of largely American and German students and doctors in pursuit of knowledge and status. Above all, it suggests that we should not assume that the transition from the criminal to the pauper body was universally contested ; given the number of students who received some training in Vienna, it may not even have been dominant.

### Dissection and cultures of death

In medieval Europe, the first medico-legal and anatomical dissections were performed in North Italian cities around

1300. (22) Bodies were cut open to determine the cause of death, to prepare for embalming, to inspect for stigmata in canonization procedures and to teach students of medicine and surgery. (23) Across Europe, the timing and the extent of dissection depended on local attitudes towards death and the corpse. In this section, I situate the history of anatomical dissection in Vienna within the medical and death culture strongly shaped by Roman Catholicism, cultural connections with Italian centres, and the vision of society advanced by absolutist monarchs.

The historian of dissection in the Italian Renaissance, Katharine Park, proposed the existence of a North-South divide in attitudes towards death and the corpse. (24) For Italians (South), death was a quick and radical separation of the soul from the body, while in England, Germany and France (North), it was perceived as a slow and gradual process. Consequently, in the South, the body became inert almost immediately after death, as opposed to the North where it passed through a liminal period during which it remained semi-animate and in possession of magical powers. These differences, Park argued, strongly influenced the history of anatomical dissection across Europe. (25)

Vienna straddles the imaginary North-South divide. In the late-13th Century, the German house of Habsburg had seized the throne of the Holy Roman Empire and brought Northern burial rituals. (26) After a brief flirtation of the nobility with Protestantism, by the 17th Century, the dynasty and the country settled for Roman Catholicism, strengthened by religious orders imported from Italy. Their legacy was a visually elaborate Baroque culture, with churches adorned with images of death: paintings, wax « tableaux », skeletons and mummified bodies. (27) Some were relics that reputedly exhibited miraculous powers, but their main-role was to remind the people of the transitoriness of life and importance of a good death. Like the pope in Rome, the Habsburgs were embalmed, and then, buried in 3 different places: hearts in the Church of Augustinian Friars (« Augustinerkirche »), intestines in the catacombs of St. Stephen's cathedral (« Stephansdom »), and the rest in the Imperial Vault of the Church of Capuchin Friars (« Kapuzinerkirche »). (28) Every 2 November, All Souls Day, the Vault was opened for the Viennese to view the embalmed royals. (29)

Medical practice and education in Vienna closely followed the example set by the Italian centres where many of the Viennese practitioners were educated. There is evidence that from the mid-16th Century the poor in the Citizens' Hospital (« Bürgerspital ») were autopsied to establish the cause of death. (30) Vienna was the site of the earliest recorded anatomical dissection outside the Mediterranean, preceding cities in today's Germany and Switzerland by almost a Century. (31) In Vienna, anatomies were performed first every several years and from 1537 annually, by a faculty member in the Citizens' Hospital and in the presence of medical students, doctors, apothecaries, surgeons and learned men from the faculty of arts. (32)

It has been suggested that dissection was part of the punishment imposed on those who transgressed social rules. (33) This argument does not hold here, because, if there was more than one candidate, anatomists, not the legal authorities, selected the cadaver. (34) In contrast to the English law, Continental legal theoreticians could draw on the Roman law postulating that « the crime ends with death » (« crimen morte finitur »). (35) In Vienna, dissection was a solemn event in which the key-role was played by a lay brotherhood specialized in the funerals of the executed (« Gottleichnambruderschaft »). Its members consoled the condemned on the way to the execution and, after dissection, buried the remains in consecrated ground. (36) The event ended with Mass attended by the faculty and students. Park, describing the tradition south of the « anatomical divide », argued that the purpose of the Mass, the Christian burial,

and the consolation of the confraternity was to reconcile the criminal with the community. (37) To compare, in Tübingen (a Southern German university town that would become Protestant and so may be seen as a borderline case) , in 1497, the medical faculty prescribed burial and Mass for the soul of the dissected in the presence of students, physicians and surgeons. Yet, by 1763, the ceremony no longer took place, and, when the new cemetery opened in 1829, anatomical cadavers were buried outside its walls. (38) The sometimes founded fear that the body would not be buried after dissection was an important reason for opposition to dissection in many German cities. (39) By contrast, it seems that in Vienna dissected bodies were always buried, at hospital and then at community cemeteries. (40)

In the 17th Century, the Padua- and Leiden-educated medical faculty sought to replace demonstrations with practical, « hands-on » , instruction, so, in 1672, Johann Greißl, « professor anatomicus » , gained permission to dissect the bodies of the deceased in hospitals, because the number of those executed was too small. (41) This unusually early precedent was transformed into a law under the Empress Maria Theresa, at the same time as other German-speaking cities began to recruit pauper patients as anatomical corpses. (42) In 1749, she decreed that bodies of women who died in St. Marx, a lying-in hospital, be delivered to the surgeon who trained mid-wives and their assistants. (43) In the same year, a new order followed, specifying that, because in the previous year, only 3 people were executed, professors of anatomy were authorized to use the bodies of those dying in local hospitals. (44)

Provisions for dissection complied with the utilitarian view of practically and surgically-oriented medical education promoted by Maria Theresa's son and heir, Josef II. (45) In 1784, he founded the General Hospital, hailed as the largest medical institution in Europe. (46) The hospital accommodated thousands of sick poor, whose bodies lay open to inspection, palpation, percussion, auscultation, and, after death, dissection by the medical faculty of the University of Vienna. Josef saw the use of patients' bodies in medical education as a fair re-payment for the free medical care they had received in the hospital. In addition to the smaller and more remote Hospital of Merciful Brothers, the General Hospital would remain the main-supplier of cadavers to the school into the second half of the 19th Century. This centralization worked to the advantage of Vienna's medics, compared to the Parisian institutions that were much larger, well-supplied but geographically scattered and over-crowded. (47)

Historians mention no protests against dissection. This stands in striking contrast to the public response to Josef's attempt to reduce funeral costs by replacing the customary wooden coffins with cheap linen sacks. (48) Public outrage forced the Emperor to revoke the orders enacted in August and September 1784 within 5 months. Josef had more success with the second part of the reform, in which, for sanitary reasons, medieval grave-yards in the walled Inner-City were closed and burials moved to rural settlements just outside greater Vienna. The religious ceremony that remained in the city churches was, thus, physically separated from the act of burial, now bereft of any pomp. The reform created favourable conditions for grave-diggers to trade in bodies and body-parts. (49) Skulls acquired at Viennese suburban cemeteries in the post-reform period became the basis of Franz-Josef Gall's famous collection. (50)

Further reforms were cut short by Josef's premature death, followed by the French Revolution, Napoleonic Wars, 30 years of political and social stagnation post-1815, the failed Revolution of 1848-1849 and the reactionary neo-absolutism of the 1850's. Reforms of burial practices continued in the period of economic growth, after the

establishment of a constitutional monarchy and the Liberal accession to power in 1860. In 1867, the first professional funeral company in Vienna replaced the traditional services of church sextons. (51) Its French name, « Entreprise des pompes funèbres » , promised elegant funerals that appealed to the æsthetic taste and hygienic standards of the new middle-classes. (52)

Immigration and the incorporation of suburban settlements increased the urban population. Yet, many inhabitants could hardly afford even modest burials. Recent immigrants without family graves or community strongholds in the city faced a particularly grave situation when, in the wake of 1873 cholera epidemic, the Ministry of Internal Affairs prohibited long-distance travel of cadavers from the place of death to the burial site. (53) For the Viennese poor, the solution frequently lay in friendly societies. These continued the medieval confraternal tradition of « Leichenbrüderschaften » , community-based citizen associations that covered the hospital and burial costs of their fee-paying members and, as an act of charity, provided for the destitute as well. (54) But in the 1850's, the society of St. Joseph of Arimathæa, named after the Biblical character who buried the body of Christ after crucifixion, instituted a new form of assistance. Not confined to a city-District or parish, it buried persons without family in Vienna. (55) A decent funeral was provided in exchange for the modest monthly membership fee of 10 Kreuzer, (56) while the more distinguished members, clergymen and wealthy noble-women, paid higher-fees and used the society as a vehicle for charitable activity. Importantly, St Joseph of Arimathæa organized and paid for the burial of dissected cadavers from the anatomical institute. Aiming to bring the funerals of dissected remains up to the socially accepted standard, they replaced linen bags, in which the remains had traditionally been buried, with wooden coffins. (57) Between 1857 and its dissolution in 1917, the Arimathæa became such an integral part of anatomy that anatomical cadavers became known as « Arimathæaleichen » (Arimathæa corpses) , in addition to the older names of « Gratisleichen » (free of charge corpses) or « durchgefallene Leichen » (failed corpses) and the official term « Studienleichen » (study corpses) . (58) This integration of a friendly society into anatomy stands in sharp contrast with German cities where such associations provided burials precisely to save the poor from dissection. (59)

Around 1870, the 18th Century cemeteries in the districts beyond the Linie, now integrated into the city, were closed to be replaced with a large, centralized site in the south-eastern plains. (60) The new cemetery was still under discussion when, in the summer of 1873 and in the middle of the World Exhibition in Vienna, a cholera epidemic ignited a debate on how to dispose of cadavers hygienically. At the exhibition, the German innovator Werner Siemens displayed his cremation apparatus, a novelty that rapidly gained supporters throughout Europe who urged its sanitary and utilitarian advantages (61) . The argument that appealed to the Viennese municipal authorities was that cremation saved scarce burial ground. (62) For Liberal newspapers, cremation symbolized progress : chemically equal to putrefaction, it was also much quicker and cleaner, and so more befitting a civilised person. They argued that cremation posed no obstacles to the traditional Christian funeral ritual, yet, the Church disagreed and the new cemetery opened in the autumn of 1874 without cremation facilities. (63) The first European crematorium was erected in Milan in 1876, the first in a German-speaking country in Gotha in 1878, and Britain passed a Cremation Act in 1902. But in Austria, the Church and conservative political Parties firmly opposed cremation. (64) It was legalised only in 1923, after a prolonged struggle and under Social-Democrat rule in the city. (65)

No evidence of how the poor thought about dissection has hitherto been found. So this section attempted to

reconstruct the history of dissecting at the medical faculty in the context of the local culture of death created by a combination of actors and influences : German princes, Padua-educated doctors and the Roman Catholic Church, supported post-Reformation by Italian religious orders. The already favourable atmosphere received a strong boost under the 18th Century absolutist monarchs, for whom the surgical approach suited their vision of medicine, and the use of pauper bodies in medical education their idea of a society founded on utilitarian principles. The Roman Catholic Church and conservative circles did not object to dissection but to failure to bury the body in accordance with the prescribed ritual : with Mass, in consecrated ground, ideally in a wooden coffin. This conclusion is supported first by the unusually strong reaction to « Josephinian coffins » and, second, by the contrast between the strong resistance to cremation and the simultaneous support, through the St. Joseph of Arimathæa society, of anatomical dissection. How far can we generalize the permissive attitude of the Roman Catholic Church ? In Würzburg, a predominantly Roman Catholic city in Bavaria in 1837, the Evangelical Church protested to the Ministry of Internal Affairs against the use of pauper cadavers in anatomy, while the Catholic authorities had no complaints. At the same time, the whole city rose against grave-diggers transporting corpses to the anatomical institute covered with nothing but a piece of white cloth, and the careless attitude of medics towards dissected remains, allegedly discarded in the streets after use. (66) Yet, in the 18th Century, Göttingen protestant pastors supported dissection to save their parishes from paying for the pauper burials, while the Catholic Munich in 1848 saw protests against dissection. (67) More comparative research of « longue durée » anatomical traditions across Europe (especially hitherto less studied Roman Catholic parts) is needed to demonstrate with certainty a confessional (or geographical) divide in the attitudes towards dissection.

From the 1830's, the intellectual leadership of the Vienna School of Medicine was assumed by a group of young clinicians around the pathological anatomist Carl Rokitansky. They would become famous as the « Second Vienna School » (68) and attract a considerable international following. (69) Simultaneously, economic growth, urbanization and the political liberalization of the 1860's and 1870's raised the number of students from the Habsburg Monarchy. Normal and pathological anatomists, general surgeons, ophthalmologists and gynæcologists all requested their share of corpses for research and instruction, so the General Hospital and the smaller and more remote Hospital of Merciful Brothers could no longer fulfil their demands. Such professorial competition over cadavers emerged elsewhere too, as surgery and obstetrics gained independence from anatomy and forensic medicine started to use dissection on a regular basis, but, in Vienna, more participants were involved and the position of pathological anatomy was exceptionally strong. (70) In 1840, William Wilde, a young Irish physician and the future father of playwright Oscar, wrote from Vienna :

« There are many opportunities to gain knowledge in this area (anatomy) as the supply with dissectible bodies is plentiful. » (71)

Yet, in 1852, the professor of anatomy Josef Hyrtl complained to the medical faculty of corpses that he received from the General Hospital that, in 3 months, from 1 October to the second half of December, only 6 of the most wretched women in child-bed, suitable neither for the surgery course, nor for skeleton preparation, nor for other purposes, so that sooner or later anatomical practical exercises will have to be conducted on animal carcasses. (72)

Indeed, the professor, hailed as the best anatomist in the Empire and renowned for his inspiring lectures, was in an awkward position. He was pleased to see his lecture and dissection halls over-filled with both matriculated students

and foreign doctors on their educational tours. At the same time, the institute, which between 1849 and 1886 had no building of its own but was accommodated in make-shift premises, could not cope with the continually growing student population. By the early 1860's, the number of students taking the anatomical course exceeded 300 a year. **(73)** Students normally dissected one cadaver per group of 4 and a variable number of body-parts (extremities, heads and trunks) . The institute had no cold cellar to store the bodies so they were left in the dissection hall over night. Since chemical preservation of cadavers came into general use only at the end of the 19th Century, with the introduction of formaldehyde into anatomical practice, the turn-over had to be quick and dissection limited to the Winter Semester, from October to April. **(74)** Corpses were also used for the preparation of anatomical specimens, which were then displayed in the institute museum as teaching-aids, used in research and exhibited at public exhibitions. Those considered to be of poorer quality were skeletonized by institute attendants and sold to students and doctors for study or for display in their offices.

To increase the number of cadavers, Josef Hyrtl turned to the Ministry of Religion and Education (« Ministerium für Cultus und Unterricht ») . He asked for access to the provincial prison (« Provinzial Strafhaus ») , prison hospital (« Inquisitenspital im Criminalgebäude ») , as well as the hospital in the District of Wieden (« Wiedner-Spital ») , but his petition achieved little success. **(75)** A prolonged correspondence between the Ministry of Religion and Education, the Ministry of Justice and the Ministry of Internal Affairs resulted in full-access only to the « Wiedner-Spital » , which, in the academic year 1852-1853, yielded not more than 3 « unclaimed » bodies. **(76)** The Ministries of Justice and of Internal Affairs were reluctant to agree to the use of prisoners' bodies. **(77)** The unsatisfactory yield at relatively distant suburban hospitals made daily transport economically unviable, so bodies reached anatomy half-decayed. The ideal source was still the General Hospital, around the corner from the anatomical institute. Between 1851 and 1854, it admitted 78,353 patients, of whom 11,458 or 13.4 % died during their stay. **(78)**

But the Master of dead bodies in the General Hospital was the immensely influential professor of pathological anatomy and chief hospital pathologist, Carl Rokitansky (1804-1878) . **(79)** In comparison to other German-speaking universities, pathological anatomy was institutionalized in Vienna unusually early : it rose from an un-salaried prosectorship at the General Hospital (1796) to an extraordinary professorship (1821) . **(80)** From 1818, the prosector performed not just all post-mortems in the hospital, but also, unusually, all forensic autopsies in the city. **(81)** This disciplinary setting helped Rokitansky, full-professor from 1844, make pathological anatomy the axis of clinical research in Vienna and secure its independence not only from the clinic but also from new approaches, such as experimental pathological physiology, cell and tissue research. **(82)** This independent pathological anatomy constructed the sequence of reasoning at autopsy and the understanding of pathological changes inside the body differently from the French school. **(83)** Paris clinicians described and classified diseases as collections of signs and external manifestations of processes in the body, hidden during life but observable on the autopsy table. By contrast, Rokitansky would also start from the corpse, but then, thought in terms of physiological and physical processes in the living body, rather than patients' symptoms and signs. His method was enthusiastically accepted by the circle of young physicians around him, the « Second Vienna School » : most famously, Josef Škoda experimented on cadavers and patients to construct a classification of chest sounds more robust and ultimately more successful than that proposed by Laënnec. **(84)** Post-1848, Rokitansky's power spread from the General Hospital : he became the dean of the medical faculty (1849-1850, 1856-1857, 1859-1860) , the first freely elected university rector (1852-1853) , president of the Society of Physicians (1850-1878) , president of

the Academy of Sciences (1869-1878) , and expert advisor to the Schmerling government of 1863. (85) His influence may be compared only to that of his younger Berlin colleague, Rudolf Virchow.

Rokitansky oversaw all General Hospital as well as all forensic post-mortems in Vienna. (86) But his authority over Viennese cadavers stretched even further than « unclaimed » cadavers in the hospital and victims of accidents, suicides and homicides. A letter kept in the University Archives in Vienna, to my knowledge hitherto un-noticed, shows that Rokitansky enjoyed a secret privilege to claim any body buried in Vienna. That letter was written by Rokitansky to the Ministry of Religion and Education on 15 February 1867, in response to a request from the Government of Saxony, which planned to reform its anatomical legislation and inquired after Austrian experiences. Rokitansky, the government-selected respondent, explained that for him to obtain a part or all of any body buried in Vienna, it sufficed to inform the chief municipal public health official (« Stadtphysikus ») , who would then instruct the grave-digger to bury the body shallowly and, thus, easily accessible for exhumation. In the evening, the institute attendant would collect the desired body or body-part from the grave-yard. There was no danger of protests from the families of the deceased because the grave-diggers were bound by an oath of silence. (87)

This secretive use of cemetery cadavers went-back to the 18th Century separation of the ceremony and the physical burial. Here, it is evident that this was condoned by the city and the State although no trace of a written permission survives. (88) Rokitansky's successors, however, did not enjoy this privilege : when, in the early-20th Century, the neurologist Moritz Benedikt mentioned it at a faculty meeting, professors were surprised and outraged. The only person to remember the privilege was the anatomist Emil Zuckerkandl who briefly worked under Rokitansky in the early-1870's. (89) In the 1850's, however, part of the influence and power that Carl Rokitansky wielded within the medical faculty was due to his command over dissectible bodies. Pathological anatomy enjoyed an enviable position as the first port of call for cadavers. Pathologists dissected the majority of those who died in the General Hospital, but their autopsies were usually limited to diseased parts and often left limbs untouched. These partially dissected bodies, as well as the « whole » bodies that were of no interest to pathologists, were distributed further - not just to anatomy, but also to clinical departments. Strongly influenced by the pathological-anatomical approach, clinical chairs (in particular general surgery, gynæcology with obstetrics, and ophthalmology) also required human corpses for teaching and research.

How many cadavers should each of the interested parties receive ? Provoked by the, in their view, privileged position of anatomy, in the late 1850's, a committee of professors headed by 2 surgeons, Franz Schuh and Johann von Dumreicher, opened an enquiry into the supply of corpses, demanding a fairer distribution. They claimed that anatomy was receiving a disproportionately large number, in some years more than half, of the dissectible corpses. (90) The reproach was potentially dangerous to anatomy, because, according to surgeons, higher-year students profited more from surgical exercises (« Operationsübungen ») than extensive anatomical dissections. And, while general surgery was a major competitor, other smaller and more specialised chairs, such as ophthalmology and obstetrics, requested their share of bodies and body-parts (eyes, heads and pelvises) too. (91)

The enquiry ended with a formal decision to distribute bodies equally between anatomy and the 2 surgical chairs, a third of the available corpses to each ; to exercise strict book-keeping ; and to present records of the comings and

goings of bodies to the medical faculty at the end of each month. The actual impact of this investigation on the supply of bodies was minimal, but it still threatened anatomy. Without bodies, anatomy could not claim the right to organize courses in dissection, and surgeons who had closer connections to hospitals were also in a better position to access the « teaching material » .

Particularly dangerous for anatomy were short, usually 6 week courses organized for wealthy American and German visitors : highly-profitable to clinical lecturers, they encroached upon resources for matriculated Austrian students. (92) In 1865, anatomists complained to the faculty about a surgical resident and former anatomical demonstrator who organised dissection courses at the General Hospital surgical department and diverted available cadavers from the anatomical institute. From the extant sources, it appears that the faculty took no action and that the courses continued to run un-disturbed. (93)

The foundation of a second anatomical department in 1870 introduced changes in the cadaver supply. (94) The senior professor, Josef Hyrtl, refused to share his sources (the General Hospital, Hospital of Merciful Brothers, and Wieden Hospital) with the newly-appointed head of the second department, Carl Langer. Langer's quest for his own suppliers took him into outlying, still largely rural Viennese districts and hospitals founded after 1848 in response to the population growth caused by industrialization and subsequent immigration. Unfortunately for anatomy, they were small and yielded few corpses. In his first report, Langer wrote about the pitiful number and condition of the bodies. For the class of almost 100 students, in the period from 1 October to 18 November, he obtained « one whole and 4 corpses that had previously undergone autopsy » from the Rudolf Hospital (« Rudolfspital ») and « 3 corpses of old women, of which 2 disfigured through ulcers on their backs, thus only one fully-usable » , from the poor-house. (95) He tried his luck with a hospital in the suburb of Sechshaus, southwest of the Linie, founded in 1857 and enlarged in 1867 and 1872 to reach, at the time of Langer's application, 320 beds. (96) This rural community, unused to dealings with anatomists, did not easily come to terms with surrendering their dead for dissection. (97) They assigned great importance to discreet transport of corpses, which was conducted after nightfall in a vehicle that did not look like a hearse. (98)

In the second half of the 1870's, the issue of cadaver supply temporarily faded into the background. After Hyrtl's retirement in 1874, Langer inherited his sources, while Hyrtl's successor to the first chair, Christian August Voigt, was given access to the Military Hospital bodies. (99) Voigt retired in 1878 and the first anatomical chair was not immediately filled, leaving all of the bodies for Langer. While supplying anatomy for the moment did not seem to be a problem, the university « body market » was transforming. Although with the introduction of antiseptics surgeons, the anatomists' chief competitors in the 1850's, were gradually abandoning encounters with dead bodies, short surgical courses on cadavers remained a lucrative field for both surgeons and anatomists. (100) Furthermore, forensic medicine, a field that had been bound with hygiene into « State medicine » (« Staatsmedizin ») , gained independence in 1875. (101) Previously dominated by pathological anatomy, under the new professor Eduard Hoffmann, it became a discipline relying equally on autopsy and on physical and chemical methods of inquiry. Consequently, it claimed corpses for its instruction.

Although it is often assumed that anatomists were the chief or the only « consumers » of dissectible bodies at

medical schools, this section has shown that cadavers constituted research and educational tools for a variety of practices other than anatomical dissection and were in great demand from other departments. The unusually segmented world of Viennese medicine, characteristically dominated by pathological anatomy, offers a particularly persuasive case. Foreign visitors were not a passive and temporary element in the institutional history, but an important factor influencing the internal market in teaching resources. The share that a discipline received can tell us much about its standing within the school's internal hierarchy. The right of anatomists to bodies was not denied, yet, their power was nowhere near Rokitansky's. For that reason, « normal » anatomists had to leave Vienna to find bodies. In 1884, plans to build a new anatomical institute were confirmed and Carl Toldt was appointed to the Second Anatomical Chair, which had been vacant for 6 years. The institute opened in 1886. Toldt and Langer concurred that Vienna could not supply enough corpses to meet the needs of 2 departments. A solution had to be found elsewhere. (102) Other universities were already using the railway to widen « the catchment area » so, as this section will show, the Viennese anatomists started to negotiate with State and local bodies to extend their supply network along the tracks deep into the Empire. (103)

The first stop in the anatomical quest was the General Hospital in the Moravian capital Brünn (Brno) . This growing industrial centre without a medical school of its own seemed a perfect choice. The impact of a long journey on decaying flesh, a major argument against the import of bodies in the earlier period, was now, with the establishment of railway lines between Vienna and Brünn, significantly reduced.

Yet, new problems appeared.

First, the supply of cadavers was uneven through the year. In Vienna, the relative lack of cadavers was particularly critical in the Winter Semester (October to December) , not only because of the increased demand during the main dissection season, but also because of the lower mortality in the period when summer epidemics abated and temperatures were still mild. Unfortunately for anatomists, Brünn shared the same seasonal mortality pattern. Of 111 persons who died in Brünn General Hospital during the dissection season of 1885-1886 (1 October 1885 to 31 March 1886) , only 38 died from the beginning of October to the end of December. (104)

Second, Moravian bodies were expensive. While in Vienna the cost of a « free » corpse was around 1 Florin and 50 Kreuzer (the only substantial expense being the 600 Florin annual lump sum to the funerary company Concordia for the transport of cadavers) , in Brünn the calculation was much more complicated. (105) The railway charged 8 Kreuzer per corpse per kilometre or, for 38 corpses and 144 kilometres, 11 Florins and 52 Kreuzer. After adding the transport costs in Brünn and Vienna, the total rose to 18 Florins and 2 Kreuzer per corpse. In addition, the Brünn hospital prosector had to be rewarded for selecting and preserving corpses with 200 to 300 Florins per year and the attendant received 50 Florins for handling and chemical preservatives. The total cost of 24 florins per body was exorbitant for the Viennese anatomists used to cheap and abundant corpses. To put this in context, the annual budget of each of the 2 departments was 2,000 Florins, from which all of the research and teaching expenses had to be paid. (106)

Third, decaying corpses were a potential public health hazard so they had to be transported in double coffins, enclosed

in wooden chests to prevent the escape of toxic gases. Rapidly decomposing cadavers, as well as bodies of those who had died of an infectious disease, were supposed to be excluded from the transport.

Finally, the authorities could not agree if the « imported » bodies should be buried with the « local » dissected corpses, at the anatomy lot within the Viennese Central Cemetery, or if a new lot should be purchased for non-Viennese cadavers. They furthermore debated who should pay for it and whether or not the bodies should be transported back to Brünn.

The issue of Moravian corpses brought together several administrative bodies, each viewing the anatomical traffic from a different perspective. The Ministry of Religion and Education mediated between universities and the State administrative bodies such as other ministries and the offices of provincial governors : it saw bodies as expensive but vital teaching and learning aids. For the Ministry of Internal Affairs, this was a matter of public safety, as bodies were potential disease carriers travelling between 2 densely populated cities. Finally, the Ministry of Trade, which, at the same time, represented the Imperial and Royal Ferdinand Northern Railway (« Kaiserlich-Königliche Ferdinand Nordbahn ») , saw bodies as importable goods, potentially profitable for the railway but, at the same time, as difficult to fit into existing classifications. (107)

The negotiations over cadavers dragged on for several years. Although the Ministry of Internal Affairs agreed to subsidize sanitary police examinations of corpses in the Brünn General Hospital and the railway acceded to a freight reduction, calculating the price per wagon rather than per body, by 1889, the Moravian plan was still at a standstill. (108) The number of cadavers reaching the Anatomical Institute from Vienna hospitals continued to drop : in 1886, the 2 anatomical chairs together received 845 cadavers ; in 1887, 765 ; and in 1888, 771. (109) At the same time, student numbers and demand continued to increase.

Anatomists attempted to fill the perceived gap in other ways : by obtaining more whole bodies from Wieden Hospital, the Hospital of the Merciful Brothers, and from District physicians in large suburbs during the months of October and November when « the popularity of the course is greatest and the majority of practical examinations in surgery and anatomy take place » . (110) The results were disappointing. (111) Storing bodies collected during summer was not an option because the institute had no facilities for their long-term preservation. New refrigeration technologies were available, but the prohibitive cost of around 20,000 Florins persuaded anatomists, architects and the authorities to settle for the cheaper immersion of body-parts in carbolic acid solution. 2 marble immersion basins cost 2,000 Florins, which approximately equalled the cost of 1 year's cadaver supply from Brünn. (112) But as these basins could hold only parts of bodies or children's corpses, the question of body-supply remained open into the 1890's. (113)

Simultaneously, the quest for cadavers outside Vienna continued. After the Brünn fiasco, it focused on the province of Lower-Austria, in which Vienna is situated. There half of the communities declined to deliver their « unclaimed » bodies to anatomy but the remaining nine (St. Pölten, Mistelbach, Korneuburg, Baden, Oberhollabrun, Waidhofen-an-der-Thaya, Klosterneuburg, Mödling and Melk) promised more than 130 a year. (114) But 2 years later, the number of cadavers was still absolutely and relatively decreasing. In 1914, a report composed by Ferdinand Hochstetter, the second chair after Carl Toldt's retirement, and Julius Tandler, who now held the First Anatomical Chair, described a situation in which

no student in Vienna had the opportunity to dissect the « usual » regions of the body at least once. (115) The consequences, argued the anatomists, were already evident at examinations where students were not capable of fulfilling the requirements. It was not the job of anatomists, they wrote, but of the State to secure enough bodies. Ironically, as a positive example they mentioned the Saxon anatomical law, once modelled after the Viennese experiences.

Unsure if Vienna would supply enough cadavers for the expanding medical school, in their search for new suppliers anatomists, then, ventured far from the city : from the small towns of Lower-Austria, to urban centres with sizeable indigenous populations and no medical schools of their own, such as the Moravian industrial hub Brünn and the North Adriatic port, Trieste. Relying on Vienna's central position in the Imperial transport and intellectual networks, the plan seemed to have a good chance of success. Yet, in the end, it fell victim to the entangled system of State administration, where the import of bodies was situated at the intersection of several ministries' domains, each supporting different interests and none wanting the responsibility. While previously the State guaranteed the success of the anatomical project, now, with its enlarged, slow, bureaucratized apparatus, it risked causing its failure.

### Anatomy and Anti-Semitic Politics

Around 1890, anatomists proposed another way of obtaining more hospital corpses, by replacing the 18th Century anatomical decrees with a modern law. While Maria Theresa's provisions had assumed that hospital patients came almost exclusively from the lowest social strata, new regulations were supposed to suit the situation in which the hospital was the central site of medical treatment for all. To make sure no « candidate » slipped through the cracks of inadequate legislation, the wording had to be precise and collaboration perfect among the various institutions and actors in the supply chain, from junior doctors to grave-diggers. But that, it soon turned-out, was not easily achieved. The economic and social insecurity in the 1880's and 1890's gave rise to ethnic conflicts, most prominently to anti-Semitism, which emerged in the aftermath of the stock-market crash of 1873. It was amidst these tensions, exploited by new mass political Parties vying for supporters, that the cadaver was used as an instrument of political manipulation.

The new regulations, or « Provisional instructions », were first published in 1892, and then, revised in 1898 and 1902. (116) They specified that corpses of those who had died in one of the Viennese State-funded hospitals, for whom no one had paid the church tax (« Stolgebühren ») , or for the coffin, the grave and transport to the cemetery, must be used for dissection, as « Studienleichen » . (117) The provisions excluded those who died of certain contagious diseases. They further stipulated that the body should stay in the hospital mortuary for 48 hours, to give the family the opportunity to pay the fees and collect it.

Implementation, however, encountered difficulties, as manifest from the case of the unemployed coach-man Franz Hubeny, who complained to the director of the Franz-Josef Hospital in Vienna :

« My son, Georg Hubeny, was in the care of the Royal and Imperial Emperor Franz-Josef Hospital in Vienna and died on 25 March 1908. I was informed about his death. The body was autopsied, consecrated, and should have been buried

at the Central Cemetery. I could not pay for the burial or the church-tax since I have been ill and unemployed for months. Instead of the funeral taking place on 27 March 1908, the body allegedly arrived at the cemetery for burial only on 31 March 1908. As I found-out, against my will, the body had been transferred to the anatomical institute to be used for study purposes. I am complaining because the child was used for study purposes against my will and without asking me. » (118)

The municipal authorities forwarded the complaint to the Governor of Lower-Austria and to the Ministry of Religion and Education. The city administration supported Hubeny and accused the 2 administrative bodies of forcing the staffs of Viennese hospitals and the municipal cemetery to lie to patients' families on anatomists' behalf. (119)

« This procedure is wholly unworthy of a modern administration » , complained the city officials « and conflicts with all principles of humanity » . (120)

No one seemed to recall the clandestine arrangements for exhumation of « interesting » corpses that several decades before involved a cross-section of municipal officials, from grave-diggers to the « Stadtphysicus » .

The key-factor to cause the radical change in the morality of the municipal officials was the 1897 accession to power of the first Austrian mass political Party, the Christian-Socials, under the leadership of the charismatic Karl Lueger. (121) Their rhetoric was populist and anti-Semitic and their values conservative. Once in power, their programme focused on improving the living-conditions of the lower-classes, by building affordable housing and improving municipal infrastructure, but their oppositional radicalism survived in the fervent attacks on Jews and intellectuals, now in parliament.

Dissection might have well remained beyond the Christian-Social notice if all denominational groups had contributed equal proportions of cadavers to the medical school. But they did not. The politically and socio-economically tumultuous 1860's and 1870's radically changed the ethnic and religious make-up of the city. (122) Among the numerous immigrants flocking to the capital from all corners of the Empire in search of work and education, one of the largest and arguably the most prominent group were Jews, whose share in the Viennese population increased from 6.6 % in 1869 to 12 % in 1890 (or around 9 % in 1890 if new districts, 11th to 20th, are included in the calculation) . (123) While the new immigrants engaged in trade or business, the second generation chose the route to integration that went through the University, with medicine one of the most popular choices. By the early 1880's, around 55 % of medical students were Jewish. (124)

From the isolation of the Eastern European ghettos, Jews brought to Vienna Centuries-old traditions around important moments in individual life, including death. Burial normally took-place on the day of death and, ideally, before sunset. (125) This rule was based on the belief that the immortal soul continued to linger longer if the body was not covered by earth. Even after burial, the soul remained partly attached to the body for 12 months after death. During this liminal period, the dead still possessed a certain type of consciousness and could even feel the pain of bodily decay. Any interference with the body, such as exhumation, embalming, autopsy or dissection, would further increase the pain, extend this transitional stage, and was thus strictly prohibited.

But with the expansion of civil rights granted to Jews in the Enlightenment and their gradual integration into Central European urban communities, their traditions came into contact, and then, conflict with the dominant culture and burial regulations. (126) The fear of being buried alive that spread through Europe in the 18th and early-19th Centuries extended the interval from death to burial to a minimum of 2 to 3 days. (127) In 1756, Maria Theresa decreed that burial must wait at least 48 hours after death, except in the case of epidemics. (128) This obviously collided with the Jewish custom. Moreover, it was precisely in that period that autopsy and anatomical dissection became part of medical practice, research and education. They conflicted with the traditional tenet of not allowing profit to be derived from the dead body, even if this profit could not be expressed in monetary terms. The 18th and 19th Century rabbinic responsa, written to provide guidance to Jews increasingly inhabiting predominantly Christian communities, permitted autopsy only if it benefited an existing patient, and not if it just contributed to medical knowledge. (129)

In Vienna, Jews were largely spared autopsy and dissection for most of the 19th Century because they were treated in the privately-funded and governed Jewish Hospital. (130) But towards 1900, as their number exceeded 100,000, they were increasingly hospitalized in the State medical institutions, and thus, subject to the same regulations as others. Yet, with the tacit approval of the State authorities, Jewish patients managed to evade these regulations that conflicted with their burial traditions, from the length of the interval between death and burial to dissection.

When the Christian-Socials came to power in Vienna, they not only refused to extend special treatment to Jews, but also used the apparent anatomical inequality in their campaign against the supposed Jewish domination of Viennese medicine. (131) The attack culminated on 20 October 1903, at the Lower-Austrian Diet discussion of the budget of medical institutions. (132) The meeting lasted for days and escalated into accusations against the medical profession, from negligence via malpractice to sacrilege. The Christian-Social politician and Karl Lueger's close friend Leopold Steiner first identified vivisection as an element of the medical curriculum that turned students into inhumane doctors ; a practice not only innately immoral but also capable of making doctors insensitive to patients' suffering. (133) From vivisection, attention quickly moved to human cadavers. The preparation of anatomical and pathological specimens was termed « defilement of the corpse » (« Leichenschändung ») .

The attacks that connected vivisection, dissection and the supposed immorality of the Jews were not entirely new : they built upon the medieval myths of Jewish ritual murders for magical practices. (134) Yet, this time, they accompanied the new form of anti-Jewish stance, racial anti-Semitism, which emerged in the last decades of the 19th Century. (135) The Viennese medical public was appalled by the level of the discussion, although perhaps, more by the ignorance and arrogant anti-intellectualism displayed by Christian-Socials than by their anti-Semitism. (136) Soon, however, it became evident that the goal of the attack, orchestrated simultaneously from the parliamentary benches and the Right-wing press, was not to ban vivisection and dissection, but to exploit them for political purposes : the accusers focused on the use of Jewish bodies for anatomy, spared, in their view, by (implicitly Jewish) hospital managers to the detriment of impoverished Christians.

Karl Lueger said :

« When, at last, Jewish corpses are dissected, perhaps the doctors will then learn still more than they can from dissecting ours ... the medical school in Vienna won world-fame at a time when only Christian professors ... a Škoda, Oppolzer, or however they were called, laid the foundation for the medical school's fame of the University of Vienna. But, as soon as the Jews got in, the fame of this school in Vienna sank low (cry :“ So it is ! ”) and, when the accusation is made that we're opponents of science, then I say no, we're not opponents of science, but we do oppose science being misused merely for the advantage of isolated brutish, dissolute and brutalized individuals. The medical school will only thrive again and the hospitals once more become places of refuge, whether for rich or poor, when the principle (out with the Jews from the university and the hospitals) is enforced, so that we Christians can be humanely treated. (hearty applause) » (137)

The Liberal intelligentsia understood that the main-point of the sweeping attack on Viennese medicine was to attack Jews, as captured in the writing of the Viennese publicist and assimilated Jew, Karl Kraus :

« But the excess of amateurish lack of judgement, which passes itself off as humaneness, had to go further ; after the living the “ beautiful corpse ” had to find the protection of the Christian-Socials, and autopsy, which in the well-known terminology may perhaps be described as “ vivisectionist dealings with corpses ”, was subjected to harsh criticism. It remained incomprehensible why only the poor-house corpses, of which, according to “ Herr ” Steiner's assurance, only “ the forefeet were left ”, should in future remain untouched. It remained unclear whether the horror of medical “ defilement of the corpse ” must lead (if autopsy by the prosecutors of the Institute of Pathological Anatomy will be allowed in important cases) at least to the prohibition of the use of so-to-speak “ healthy ” corpses in normal anatomy. One was already prepared to hear the opinion that the anatomical course in Vienna should in future be conducted without corpses, and it was almost a relief, when, in the end, the whole fuss amounted to 2 Christian-Social agenda items : Jews should, in anatomy, be equal to Christians, that is, they should be dissected just like Christians ; but for this equality, which is granted to them as objects of medical studies, they should lose equality as subjects of medical study and be driven from the university and hospitals. » (138)

Yet, even after the 1903 parliamentary discussion, Jewish bodies remained out of anatomical reach. The persisting « anatomical inequality » was discussed in a report by the chief-pathologist of the new and prestigious Rudolf Hospital, Richard Paltauf. (139) He stated that, in the period from 1901 to 1906, 1,735 out of 7,757 deceased in his hospital, or 22 % , were delivered to anatomy. At the same time, none of the 179 Protestant, 1 Greek and 218 Jewish who died was among this contingent. When families did not provide for the funeral, religious communities buried their members - but, in the case of Roman Catholics and their charitable burial society of St. Joseph von Arimathæa, only after anatomical dissection. Paltauf protested against the supposedly preferential treatment : whilst he did admit the existence of cultural differences, he questioned the right of patients to be treated at the expense of the sickness insurance fund (« Krankenfond ») if unwilling to give their bodies for dissection in the case of death.

To convince the Jewish community to give-up its bodies, the medical faculty recruited Jewish anatomists as negotiators. Both Zuckerkandl and his assistant Tandler belonged to the assimilated, secularized Jewry that had exchanged Jewish traditions for the dominant Christian culture. (140) But, around 1900, Judaism, so easily cast-off just one generation before, was revived by the Viennese journalist Theodor Herzl, whose Zionist movement emerged in response to the

rampant anti-Semitism. (141) As Tandler explained at the meeting that brought together parties involved in provision and use of cadavers, the Viennese Jewish community was divided into 2 main-currents : the old, largely assimilated Liberals and the young Radicals or Zionists. (142) The former would have complied with the requests of the State authorities, but feared that they would anger the latter. One could, proposed Tandler, inform the Jewish community about the death of a Jew only after a certain interval ; that way anatomists would reach the body first. He expected little protest because the majority of those buried at the community expense were new-comers with no family to complain, and furthermore stated that burial customs would pose no obstacle. Yet, Tandler failed to convince. The share of Jewish bodies in the total supply remained low into the 1920's. (143)

In the volatile, tense atmosphere around 1900, dissection became a weapon in political struggle. Although Jewish communities and their traditions had started to integrate into the predominantly Christian society from the late-18th Century, Jewish cadavers remained untouched. The Habsburg dynasty and Imperial administration relied on conservative groups and religious communities to support the old order and the geographical integrity of the country against disruptive nationalists. Moreover, rapid assimilation entailed replacement of Jewish traditions, including burials, with those practised by the Christian majority. But, for the Christian-Socials, funerary customs that placed Christians in an allegedly inferior position were the perfect weapon in the anti-Semitic propaganda. As Kraus accurately noticed, they never intended to ban dissection, but to instrumentalize it for their political goals. Yet, it is important to stress that their attack would not have been possible, indeed would not have found some acceptance even within the Jewish medical community, had it not been for 2 socio-cultural characteristics. One was the long-standing position of dissection as a key-stone of medical training and research. The other was the wide currency of the Enlightenment utilitarian idea that State provided medical treatment should be paid for with one's own (otherwise useless) dead body.

## Conclusion

This article has been about the material basis for Vienna's wide appeal as a medical educational centre in the mid- to late-19th Century. I have argued that, to understand why the supply of cadavers in the heyday of the Vienna School of Medicine was plentiful enough to attract students from all over the world, we need to place it in a « longue durée » history of death and dissection from the late- Middle-Ages. Among German-speaking cities Vienna consistently had the most permissive attitude towards dissection, with the earliest recorded anatomical dissection, annual dissections from the early-16th Century, transition to cadavers of hospital patients several decades before other centres and lack of recorded public dissent until the end of the 19th Century. The comparison with protests against « Josephinian coffins » in 1784, and opposition to cremation, between 1873 and 1923, shows that burial in a coffin and in consecrated ground was more important to the wider-public than whether or not the body had been dissected. That the Roman Catholic authorities supported this stance can be seen from the firm integration of the St. Joseph of Arimathea burial society into the day-to-day operation of the anatomical institute.

How to explain this culture ? It has been argued that Southern Europe, which in the mid-16th Century religious and cultural schism sided with Rome, had a more tolerant attitude to dissection. The case of Vienna seems to confirm this hypothesis, yet, more comparative research into the social history of anatomy Europe-wide is needed before any

definitive statement could be made. The absence of recorded protests against dissection may be attributed to the permissive attitudes but also to the lack of voice of the lower social classes in an absolutist State. Josef's utilitarian management of the General Hospital's patients and Rokitansky's access to the corpses buried in city cemeteries show how cavalierly the State could deal with citizens' bodies. We can thus also understand why, in the changed political environment of the late-19th Century limited dissent emerged. New religious groups and mass political Parties, which gained numbers and influence in the city after the constitutional innovations of the 1860's, challenged the old order and anatomical dissection with it. The increasing weakness of the highly-bureaucratized State is also evident in its failure to complete the project of cadaver transport by railway.

The supply of cadavers, while abundant, hardly met the ever increasing demands created by the school's popularity with domestic and international students. While I started from the claim that Vienna was famous because it was well-supplied with cadavers, I finish by suggesting that the school was well-supplied because it was famous : professors could count on high student numbers to support their repeated applications to ministries controlling the access to hospitals. Many disciplines wanted their share in these both necessary and lucrative teaching tools. Historical studies often blur the distinction between « anatomy » as a discipline and dissection as a practice. This is partly because, today, cadavers are used primarily to teach normal anatomy, and partly because disciplinary development in the United States, Britain, and even France and Germany followed a different route. Early independence and centrality of pathological anatomy as well as the relatively easy rise of new fields to the status of teaching disciplines and finally university chairs place Vienna at the other end of the spectrum from Britain and the United States. In these countries, neither autonomous pathological anatomy nor disciplinary fragmentation may be found in the 19th Century. The disciplinary competitions I described throw into relief the centrality of the cadaver as a teaching and research object through the 19th Century. As 21st Century medical education increasingly moves away from dead bodies as teaching tools, we need to remind ourselves of the various ways they were used and the prominent place they occupied in operating theatres and in lecture halls.

This account complements those provided by historians of medical education who have followed itinerant students. In their memoirs, Vienna, a mandatory stop on medical grand tours, is rarely depicted as more than the picturesque home to the General Hospital, dissection halls, lively « cafés » and theatres. In this article, I have shown that the city was much more than a colourful background. The urban culture and society gave its medicine the distinctive features that would make it renowned and influential world-wide, and their transformation strongly informed the disciplinary development.

(52) The sextons quickly regrouped and founded a second funeral company, Pietät, soon followed by a number of competitors, headed by Concordia (1870) . The latter took-over the transport of corpses to and from the anatomical institute that, until then, had had its own hearse : Österreichisches Staatsarchiv, Allgemeines Verwaltungsarchiv, Unterricht : Allgemeine Reihe (1848-1914) , Universität Wien, Sig. 4 Med. , Anatomisches Institut, Faszikel 808, Zahl 15064 (1882) . In 1907, the Viennese municipal council purchased the « Enterprise des pompes funèbres » and Concordia to merge them into a new Gemeinde Wien-Städtische Bestattungsanstalt. See : Franz Knispel. Bestattungsmuseum Wien, page 9. (n. 48)

(53) Österreichisches Staatsarchiv, Allgemeines Verwaltungsarchiv, Ministerium des Innern, Allgemeine Reihe, 36/8 Leichentransport gen. 1870-1899, Karton 1153, Zahl 1325 (1872) .

(54) In 1856, there were as many as 112 societies for support of the sick with 15,400 members ; 19 burial societies with 186,500 members ; and 34 that combined these 2 services, with 23,900 members. See : Leopold Wittelshöfer. Wiens Heil- und Humanitäts-Anstalten, ihre Geschichte, Organisation und Statistik, L.W. Seidel, Wien (1856) , pages 392-394. In the late-19th Century, many societies of this kind were concentrated in and around the proletarian districts in southwest Vienna : Österreichisches Staatsarchiv, Allgemeines Verwaltungsarchiv, Ministerium des Innern : Allgemeine Reihe (1848-1914) , I/7 Gesamt-Inventar, V. Teil Inventar, Vereinsakten 1870-1899.

(55) St. Josef von Arimathæa Verein. Dreiäiögster Jahres-Bericht des Vereines vom Heiligen Josef von Arimathæa in Wien, für das Jahr vom 1. Jänner bis Ende December 1886, St. Josef von Arimathæa Verein, Wien (1887) .

(56) Until 1892, the currency in the Habsburg Empire was the Florin, which was equal in value to Guildens (or Guilders) . 1 Florin contained 60 Kreuzer. The currency reform of 1892 substituted 1 Florin for 2 Kronen, where 1 Krone contained 100 Heller.

(97) Understanding differences in attitudes towards dissection between rural and urban communities would require more research. It is, however, clear that Viennese anatomists used rural cadavers rarely (this is the only case in this period) not because of protests, but because transporting small numbers of corpses was un-economical.

(98) UA, Dekanatsakten der Medizinischen Fakultät, Zahl 81, 175, 186, 198, 228, 296, 304, 582 (1871-1872) .

### Last university lectures

**Monday, 20 November 1893** : Anton Bruckner holds his Monday lecture at the University of Vienna.

**Monday, 27 November 1893** : University student Ernst Schwanzara reports that Anton Bruckner held his last university lecture for the year 1893. Bruckner will continue his lectures until Monday, 29 October 1894.

From the French music-magazine « Le Ménestrel » :

« On écrit de Vienne qu'une place importante est réservée à la musique dans la distribution des différents cours de l'Université de Vienne. Les étudiants en musique auront par semaine : 3 cours sur le " Classicisme moderne " ; 2 sur le " Chant gégorien " ; 1 sur les " Méthodes nouvelles pour l'étude de l'harmonie " ; 2 " Cours de chant pour les commerçants, avec enseignement des connaissances musicales élémentaires pour le chant d'ensemble " ; 1 cours d' "

Harmonie ». Les chargés de ces différents cours (dont la fréquentation est absolument gratuite) sont choisis parmi les meilleurs théoriciens et musicographes autrichiens ; le vieux professeur Bruckner fera le cours d'harmonie. »

(Vienna : An important place is given to music in the distribution of the various courses at the University of Vienna. Music-students will have weekly : 3 courses on « Modern Classicism » ; 2 on the « Gregorian Chant » ; 1 on the « New methods in studying Harmony » ; 2 « Singing lessons for tradesmen, with teaching of basic musical knowledge for choir signing » ; 1 class of « Harmony » . These different lecturers (whose attendance is absolutely free) are chosen from the best Austrian theorists and musicographers ; the old Professor Bruckner will give the course on harmony.)

### Doctor Schrötter's visits

**Thursday, 30 November 1893** : Doctor Leopold Schrötter makes a medical visit to Anton Bruckner in the morning.

**Friday, 1 December 1893** : Doctor Leopold Schrötter makes a medical visit to Anton Bruckner at noon time. The same day, Bruckner receives a certificate of the consecration of a crucifix.

### Heading for Klosterneuburg

**Before Christmas Eve 1893** : Bruckner's physicians discourage him to go to St. Florian for the holidays. Instead, he heads for Klosterneuburg (on the Danube River, immediately north of Vienna) at the instigation of Josef Kluger, the Provost of the abbey.

**Sunday, 24 December 1893** : Pocket calendar entry by Anton Bruckner :

« Holy Evening »

(No prayers are listed for December 25th and 26th.)

### Ignaz comes to Vienna for the holidays

**End of 1893 - beginning of 1894** : Ignaz Bruckner visited his brother in Vienna.

### A strict nurse for Bruckner

**Tuesday, 2 January 1894** : Letter from Josef Schalk to his brother Franz :  
Bruckner is doing better. Professor Schrötter had appointed a strict nurse. In addition, Ignaz Bruckner from St. Florian is currently in Vienna.

### Doctor Schrötter and the Berlin trip

**Wednesday, 3 January 1894** : Doctor Leopold Schrötter writes :

Bruckner needs to be careful in his physical and psychological activities.

**Wednesday evening** : As part of a journey of several days (Bruckner's second one in the German city) , the old Master wearing his big woolen cloak leaves for Berlin by train. He is accompanied by his supporter Hugo Wolf and art-critic Prince Bojidar Karageorgevitch who also knows the young composer. Bruckner and Wolf will fully enjoy concerts dedicated to their respective music.

Wolf had debated for some time whether he should go to Venice or to Berlin. He finally decided on Berlin, where a concert had been arranged by Siegfried Ochs for the **8 January 1894** at which Wolf's choral ballads, « Der Feuerreiter » and « Elfenlied » were to be given, « Fräulein » de Jong taking the solo-part in the latter work. The previous success in Berlin of Bruckner's « Te Deum » (**WAB 45**) is responsible for its return.

### Prince Bojidar Karageorgevitch

The Serbian artist, art-writer and world-traveller, Prince Bojidar Karageorgevitch was born on 11 January 1862 and died on 2 April 1908 at Versailles, France. He was a member of the Serbian Karađorđević dynasty. He gave singing and drawing lessons, and later, earned his living as an art-critic and translator. He was a contributor to the « Encyclopædia Britannica » , « Le Figaro » , « La Revue de Paris » , « Revue des Revues » , the « Magazine of Art » , and other publications.

During one of his trips abroad, he travelled extensively around India, visiting 38 cities. He wrote a book about his experiences called « Enchanted India » in which he offered an account of the Indian people, their religious rites, and other ceremonies. He also provided detailed descriptions of the Indian landscape and buildings. He also translated works of Leo Tolstoy and Hungarian dramatist Mór Jókai.

Taking an interest in art, he visited Munich, Dresden, and Berlin and spent some months in Italy ; afterwards, he settled at Paris. There, he regularly contributed articles to « Le Figaro » , « La Revue de Paris » , the « Magazine of Art » (Ilya Repin, Jules Bastien-Lepage) , including a biography of Marie Bashkirtseff in the « Encyclopædia Britannica » (11th Edition, Volume III) . Like all journalists, he was drawn to the cabarets of Montmartre, the haunt of artists, writers, poets, philosophers. It was there he met and befriended French stage-actress Sarah Bernhardt, pioneer of modern dance ; Loïe Fuller, French poet and novelist ; and noted orientalist Judith Gautier ; Suzanne Meyer-Zundel ; Hugo Wolf ; painter and illustrator Henri de Toulouse-Lautrec ; and the founder of the « Ballets Russes » , Sergei Diaghilev. Biographer Stevan K. Pavlowitch claims that the Prince was openly gay and had no relationship with women except purely platonic.

In his later years, Prince Karadjordjevitch turned his attention in decoration, and executed panels and medallions for a Paris « atelier » (work-shop) as a designer, sculptor, painter and silver-smith, and often spent time with Georges Lacombe, Émile Bernard, Paul Sérusier and other members of « Les Nabis » . Karageorgevitch's paintings, illustrations, water-colours and silver-smith works were first exhibited in Belgrade in 1908.

As a journalist and a publicist, he advocated the emancipation of all Slavs and Romanians under the Habsburg Monarchy. He also favoured the emancipation of the small States in the south-east of Europe, particularly Serbian lands, from Turkish supremacy. Prince Karadjordjevitich, who is known to a wider circle as a friend of writer Pierre Loti and the great Russian artist Marie Bashkirtseff, published some reminiscences, « La Vie Multiple » , and « Notes sur L'Inde » , both issued posthumously. Marie Bashkirtseff's friend since adolescence, Karadjordjevitich stood by her side during her last days and he was present at her death-bed. She was only 25 when she died, a victim of tuberculosis, in 1884.

On the 20th anniversary of her death, in 1904, Karadjordjevitich would describe Bashkirtseff's last moments in the January edition of « Revue des Revues » :

« Marie rises a bit, releases a soft sigh, the sigh of tiny children when waking, and 2 thick tears roll-down her cheek (...) then, her head falls again into the pillow. »

### The Berlin Trip (1894)

**Thursday, 4 January 1894** : Anton Bruckner stops making entries in his pocket calendar until 13 April 1894.

The « Steyrer Alpen-Boten » Number 1 (on page 4) , the « Deutsches Volksblatt » Number 1798 (on page 7) , Vienna's « Die Presse » Number 3 (on page 11) and « Das Vaterland » Number 3 (on page 6) all report about the trip.

Vienna's « Neue Freie Presse » Number 10548, on page 6 :

« Vienna, January 3rd.

(...)

On **Friday, January 5**, Anton Bruckner, accompanied by his pupil and Prince Bojidar Karageorgievich, will arrive in Berlin to attend a cycle of his works.

On **Saturday, January 6**, his 7th Symphony (**WAB 107**) will be performed by “ Hofkapellmeister ” Karl Muck at the Royal Court Opera House.

On **Sunday, January 8**, the “ Te Deum ” (**WAB 45**) by will be performed by Doctor Siegfried Ochs at the “ Philharmonie ”.

On **Tuesday, January 10**, the String Quartet in F major will be performed.

On **Wednesday, January 11**, a rehearsal of the “ Te Deum ” will take place. »

The morning edition of the « Vossischen Zeitung » Number 4, Section I, announces the **January 8th** concert and the programmed work : the « Te Deum » (**WAB 45**) .

The morning-evening edition of the « Neuen Preußischen Zeitung » Number 4-5 advertises and writes about the performance of the 7th Symphony on the **6th**.

**Between Friday, 5 and Monday, 15 January 1894** : (Berlin)

Anton Bruckner is still engaged in an epistolary relationship with Ida Buhz. He visits Ida and her parents.

The firm Bote & Bock offers to publish Bruckner's works.

Bruckner asks Lilli Wolff, the 4 year old daughter of the German concert-agent, journalist, and impresario Hermann Wolff, about Hans von Bülow's health-condition. (Bülow's death the same year was a bitter blow for Wolff, but he rallied his spirits and set about looking for someone worthy of succeeding Bülow at the helm of the Berlin Philharmonic.)

Very soon after Adolf Hitler came to power in January 1933, it became clear that the days of the concert-agency founded by Hermann Wolff were numbered. Thus, the Nazi government prohibited Bruno Walter from conducting a scheduled concert with the Berlin Philharmonic. Shortly afterwards, Louise Wolff's associate, Erich Sachs, emigrated from Germany, and the firm again came to be known by the old name of « Concert Direction Hermann Wolff » . But already by the end of 1934, Louise had decided to dissolve the agency, since she realized that her daughters, Edith and Lili, on account of their Jewish ancestry, would not be allowed to carry-on their work for the family firm undisturbed. When she announced her decision in April 1935, many famous musicians wrote to Louise to express their sadness over the loss of this institution. A few weeks later, on 25 June 1935, Louise herself died. Edith and Lilli Wolff remained proprietors of the Bechstein Hall built by their father, but the Nazis forced them to remove the busts of Anton Rubinstein and Josef Joachim from the « foyer » (they had been erected there by Hermann Wolff alongside those of Hans von Bülow and Johannes Brahms, to commemorate the 4 great musicians who inaugurated the concert-hall in 1892) . Detectives sent by the « Reichsmusikkammer » ransacked the offices of Edith and Lili in 1936, and carried away many valuable documents (letters, autographs, programme-notes) in which the whole fruitful history of the « Concert Direction Hermann Wolff » was reflected. In 1942, Edith was interned in the concentration camp of Theresienstadt (Terezín) , but, unlike some of her friends who were later deported to Auschwitz, she survived the War.

Richard Strauß, the acting director of the Philharmonic, is determined to propose Bruckner's music to the Berlin public with a series of special concerts to be held at the « Alte Philharmonie » . Strauß plans to begin with Symphony No. 1 (**WAB 101**) .

Bruckner meets conductor and composer August Scharrer.

Bruckner receives Siegfried Ochs and Walter Damrosch at the Hotel « Kaiserhof » .

Count Hochberg, intendant and artistic director of the Court Opera proposes Bruckner to move to Berlin.

**Friday, 5 January 1894** : Bruckner, Wolf and Prince Karageorgevitch arrive at noon in Berlin. They are met at the train-station by Richard Sternfeld, Siegfried Ochs and Karl Muck (Wolf's old associate at Salzburg) who is now stationed in Berlin as a conductor.

Muck accompanies Bruckner to his usual hotel : the « Kaiserhof » .

(Bruckner is said to have brought Muck the score of the 9th Symphony for safe-keeping. This could possibly be the first movement !)

Wolf is the guest of his friend Baron Franz-Josef von Lipperheide at his home on « Potsdamerstraße » .

**Saturday, 6 January 1894 (Epiphany Day)** :

Brief introductory article in the « Vossischen Zeitung » Number 9 (section 1, page 3) about the **January 8th** concert. Hugo Wolf is mentioned but not of Anton Bruckner.

The « Steyrer Alpen-Boten » Number 2, page 4, reports on the Berlin trip.

Short article in the « Steyrer Zeitung » .

**11:00 am** : Main-rehearsal of the 7th Symphony at the Royal Court Opera House with « Hofkapellmeister » Muck.

Short message from Karl Muck to Anton Bruckner written on an official « Kaiserhof » headed letter :

« Dear friend !

I regret not being able to see you. Enclosed are your seat-tickets. Good luck for tonight ! After the concert, do we stay together a little ?

Greeting and hand-shake !

Muck »

Hugo Wolf was introduced by Siegfried Ochs to Ernst Otto Nodnagel, the song-composer, who sincerely admired Wolf, studied his songs attentively, sang them in public for a time, and wrote helpful critical articles upon them. Nodnagel has related how excited Wolf was at the rehearsal, for he felt that a great deal depended on the success of this concert. All went well until « Anakreons Grab » was given ; the singer performed the usual stupid singer's trick of finishing-up on a high-note, and Wolf, says Nodnagel, positively howled with rage.

Evening concert at the Royal Court Opera House under the direction of « Hofkapellmeister » Karl Muck.

On the programme :

Works by Felix Mendelssohn, Anton Bruckner (7th Symphony) , Franz-Josef Haydn and Wolfgang Amadeus Mozart.

Bruckner, wearing a big woolen cloak, receives an enthusiastic acclaim on the part of the audience.

Ida Buhz and Bruckner sit together in a box. Mrs. Gertrud Bollé-Hellmund could not attend due to illness.

Siegfried Ochs told a delightful little story about the old Master's gratitude, which was so heartfelt that he said he would give every woman in the choir a kiss. Bruckner posted himself next to the stairway by which the ladies left the platform and he started kissing them one after the other. After he had demonstrated his thanks 8 or 9 times, he was approached by a girl whose charms had long since withered ...

She was ready to receive her big reward when Bruckner turned abruptly and proclaimed loudly :

« No, this one doesn't appeal to me ! »

Then, Bruckner offered Ochs a 20 Mark gold piece but he refused. Bruckner told him to give the coin to the tympanist.

**Letter 95** from Hugo Wolf (Berlin) to Melanie Köchert (Vienna) :

« To Vienna.

Berlin, on the day of Epiphany, 1894.

Most honoured gracious lady !

My trip went very well. For a while, I even travelled all by myself in the compartment, then with a military officer and, finally, from Dresden on, with an elderly lady. I arrived in Berlin punctually at 1:45 pm, took a first-class carriage to " Potsdamerstraße " Number 38, where I was received most cordially by the house-keeper. The cold weather is considerably worse here than in Vienna. One freezes miserably here. The Lipperheides aren't coming to Berlin until the end of January. I've been given a very attractive bedroom and an elegant salon. After a thorough freshening-up, I went off to visit (Siegfried) Ochs. He lives a few hundred steps away from my lodging on the opposite side of the street. Ochs wasn't at home, but had just gone to the rehearsal of the Philharmonic. I took a carriage immediately, rode-back to my flat, picked-up my scores of the " Feuerreiter " and " Elfenlied " and told the coach-man to drive to the Philharmonic. I arrived there just as (Eugène) d'Albert was conducting his " trash ". I hadn't sat long as a listener in the concert-hall before Ochs came-over to me. Our greeting was extremely cordial. He was over-joyed at my

appearance. “ Fräulein ” Corver was also present ; I conveyed greetings from you and the girls, which she cordially returns. (Richard) Sternfeld was there, too, and extremely pleased to see me. Ochs really is charming. He, himself, is inconsolable about the omission of “ Mignon ”, but thinks I’ll still hear the piece here anyway - i.e. , with orchestra.

Then, the time came for my things, first the “ Feuerreiter ” and, then, the “ Elfenlied ”. Sternfeld, who was following the original score with me, was truly stricken with St. Vitus’ dance in his delight over the effect of the (orchestral) sounds. Although the pieces were only being rehearsed for the first time, it went quite marvelously. I was congratulated from all sides. The chorus is exceptionally well-prepared and the orchestra plays extremely well. The colourful instrumentation and the originality of my sonorities received praise from all around me. The “ Elfenlied ”, too, which simply sparkles and flashes in its instrumental garb, had an electrifying effect.

In short, I’m happy about the enthusiastic cooperation on the part of the conductor as well as the chorus and orchestra personnel. Both pieces were played through a number of times. Incidentally, there will still be rehearsals on Sunday and Monday morning. “ Gesang Margit ” and “ Anakreon ” were not played through, due to lack of time. Tomorrow, I’ll go through “ Margit ” with “ Fräulein ” Corver, who also lives on “ Potsdamerstraße ” ; a tenor is singing “ Anakreon ”. “ Fräulein ” de Jong sings “ absolutely delightfully ” ; you can’t imagine the solo in “ Elfenlied ” performed any better. After the rehearsal, around 6:00 pm, I was invited to supper by Ochs, together with Bruckner, the royal travel companion Karageorgievich, and, unfortunately, also the agent Leßmann (a colossal idiot ! ) ... »

...

Wolf became the guest of Baron Franz-Josef von Lipperheide at « Potsdamerstraße » . He was very pleased with the way « Der Feuerreiter » and « Elfenlied » went at rehearsal the next day ; it was the first time he had heard the works, and he was especially glad to find that the orchestration came-out as he had intended. He was put a little out of tune on learning that the great « Mignon » ballad had been taken-out of the programme, and « Anakreons Grab » and « Margits Gesang » (from « Der Fest auf Solhaug ») substituted for it. It only needed a very little spark to set him on fire when he fell into a mood like this. The spark was not long in coming. The singer took « Margits Gesang » in a rather slow tempo ; in reply to Wolf’s angry protest, Siegfried Ochs, who was conducting, gently pointed-out that he and the singer were merely following Wolf’s own tempo mark, the only effect of which was a still more furious outburst from Wolf. In the end, however, peace and good feeling were restored.

**Sunday, 7 January 1894** : The « Vossische Zeitung » announces the **January 8th** concert and the **January 11th** charity-concert in the presence of the Empress. Advertisement (section 7, page 9) including tomorrow’s programme.

Review of the 7th Symphony in the Berlin « Börsen-Courier » , signed « O.E. » (music-critic Otto Eichberg ?) .

In the morning, Anton Bruckner, Hugo Wolf and Ernst Otto Nodnagel attend the main-rehearsal for tomorrow’s concert (« Te Deum ») .

Bruckner and Wolf have lunch with Karl Muck at his home. Then, the two attend the afternoon concert featuring the

Berlin Philharmonic Choir.

In the evening, Bruckner, Wolf and Prince Karageorgevitch attend the performance of Richard Wagner's « Der fliegende Holländer » at the Royal Court Opera House. Also, the subject of engagement with Ida Buhz took place in the family's circle.

**Monday, 8 January 1894 :**

**Letter 96** from Hugo Wolf (Berlin) to Melanie Köchert (Vienna) :

« ... from the bottom of my heart. “ How nice ”, one wants to say along with Ilse, Hilde, and Irmina. In one volume of his debauched compositions is the dedication : to Hugo Wolf, the great, the would-be-great ; in the other : to the highly-gifted poet of sound Hugo Wolf in respectful admiration. To think that an honest man must put-up with such abuse !

Yesterday, I renewed my acquaintance with “ Kapellmeister ” Muck. We greeted each other most cordially and feel the strongest sympathy for each other. He's acquainted with most of my things and recognizes their value. The performance of Bruckner's 7th Symphony was a masterful accomplishment of Muck. The first 2 movements rather fell by the way-side. Bruckner was only called after the Scherzo and Finale and, then, appeared on the podium at the conclusion as well. Bruckner was very happy about his success. We were invited to Muck's at noon-time yesterday - bad feed but good conversation. In the evening, Bruckner, the prince (Karageorgievich) , and I went to “ fliegender Holländer ”, the 50th anniversary of the first performance. Muck got the seats. The performance was excellent, but the scenery was extraordinary, incomparably more beautiful and effective than in Vienna.

Tonight is the concert. “ Margits Gesang ” went very badly at yesterday's rehearsal. “ Fräulein ” Corver sang uncertainly and also recited very badly. The piece will fall short. “ Anakreon's Grab ” won't have any effect either. But Ochs concerned himself too little with the orchestra. The attacks are sloppy and the detail is binned. I'm very dissatisfied. Not to mention the tenor, who screams-out the tender song to the audience like a bullfighter. “ Elfenlied ” and “ Feuerreiter ” still went the best. I was so depressed at yesterday's rehearsal of “ Margits Gesang ” and “ Anakreon ” that I wanted to leave Berlin on the spot. Bruckner and Muck had their hands full to calm me down and convince me to set foot in the concert-hall again. God knows how it will go tonight.

I hope to prevail upon Lilli Lehmann for a “ Liederabend ” here. Lehmann is a better drawing-card for Berlin than Herzog is. This is the general view. I would be guaranteed a full, completely packed hall if Lehmann participates - i.e. , Lehmann by herself. (Fritz) Mauthner is supposed to convince Lehmann to do this. It will be decided in the next few days. Baroness (Frieda) Lipperheide wrote me such a kind, heartfelt letter from Matzen today that I shed tears over it. Write one like this once too to him who sends sincerest greetings,

Hugo Wolf.

Best greetings to Heinrich and the children. »

Review of the 7th Symphony in the evening edition of the « Vossischen Zeitung » , page 3, signed « n. » :

The work was applauded but Muck seemed to have been hissed.

**8:00 pm** : Second evening concert featuring the Philharmonic Choir under the direction of Siegfried Ochs at the Berlin « Alte Philharmonie » .

On the programme :

Johann Sebastian Bach : Toccata in D minor. Organist : Doctor Heinrich Reimann.

Eugène d'Albert : 6 part chorus « Der Mensch und das Leben » .

Hugo Wolf : « Fest auf Solhaug » , « Anakreons Grab » , « Elfenlied » , « Der Feuerreiter » . Soloist : Anna Corver.

Vicente Martín y Soler : Trio in canon from the Opera « Una cosa rara, ossia Bellezza ed onestà » (A Rare Thing, or Beauty and Honesty) .

Luigi Cherubini : « Blanche de Provence » , chorus arranged for 3 female voices with organ accompaniment.

Anton Bruckner : « Te Deum » for mixed vocal quartet (SATB) , mixed-choir (SATB) , orchestra, and organ « ad libitum » . Soloists : Jeanette de Jong, soprano ; Marie Snyders, alto ; Georg Ritter, tenor ; Bruno Lurgenstein, bass. At the organ : Doctor Heinrich Reimann.

The 24 page programme offers biographical texts on Wolf and Bruckner. Illustrations of the scores are also included. The main-themes of the « Te Deum » are presented in 8-note examples. The text points out the harmonious boldness of the « Æterna fac » and the development of the themes.

Ida Buhz and Bruckner sit together in the same box. Also attending : Richard Sternfeld, Mrs. Gertrud Bollé-Hellmund (and a sick Hans von Bülow ?) .

After Johann Sebastian Bach's D minor Toccata, played by Doctor Reimann, and Eugène d'Albert's 6 part chorus « Der Mensch und das Leben » , came « Anakreons Grab » and « Margits Gesang » . Both the songs fell flat. The 2 choral works, however, were splendidly rendered both by chorus and by orchestra, and received with the greatest enthusiasm ; the « Elfenlied » on which, said Wolf in his letter to Emil Kauffmann, the audience fell like the bear on the honey had to be repeated. There were loud cries for the composer, but he declined to appear ; he had walked away and hidden himself at the back of the hall. He returned to his box when the tumult had subsided, was at once recognized, and had to bow his acknowledgments right and left. Altogether, in spite of the failure of the 2 songs, Wolf had every

reason to be pleased with the results of the concert.

The « Te Deum » (WAB 45) is highly-successful.

Bruckner meets Siegfried Ochs after the concert (Ida is not present) .

The music-critics were mostly very appreciative, and the success of « Elfenlied » caused the publishers Ries and Erler to make Wolf an offer for it. The negotiations with them fell through, but the score was ultimately bought by Fürstner for 300 Marks.

**Letter 97** from Hugo Wolf (Berlin) to Melanie Köchert (Vienna) :

« Berlin, January 8 evening, 1894.

Most honoured gracious lady !

I've come into my flat sad and depressed from an ear-doctor and found your cordial lines and a letter from Selzam, the first lieutenant. The cause of my distress was an ear-doctor Ochs recommended to me, whom I consulted and who, for a consultation of 5 minutes, made me about 20 Marks, let's say 20 Marks lighter. Such a scoundrel ! 20 Marks to clean-out my ears 3 times with warm water ! Have you ever heard of such a thing ? But I have to tell you the whole story from beginning to end. The direct railway coach Vienna - Berlin must have been a particularly ailing one. There was a squeaking and grinding and sawing that simply became unbearable after a while, at least for me. To my horror, I discovered too late that I'd forgotten to bring along cotton wads. Unfortunately (although at the time I considered it fortunate) , it occurred to me that I could use the (bakery) rolls I'd been given as a substitute for the missing cotton wads and I cheerfully stuffed the soft dough of the rolls into my ears. It helped. But the dough in my left ear, on which side I slept, pushed in somewhat too deeply, so that it could no longer be gotten-out with my finger. Meanwhile, since it seemed not to affect my hearing in the least, I consoled myself with the assumption that the remaining little piece wouldn't create any further disturbances, when suddenly today the thing caused me some discomfort. I told Ochs about it and he recommended an ear-doctor by the name of Schwabach. This " filou " (rogue) examined the situation, said it wasn't anything serious, blew water 3 times through a little tube, and impudently demanded 20 Marks. The shock over this left me completely speechless, and sighing. I handed the ear extortionist what he asked for secretly wishing him to all the devils. That damnable roll has cost me a pretty penny.

I won't tell Ochs the story until after the concert, since I'm not going to see him beforehand. The concert begins in an hour. I've invited the Lipperheides' house-keeper (an elderly but very good-hearted spinster) to make use of my second seat. We're also going together to the concert. In the evening after the concert, there's a big party at Ochs's. Bruckner and the prince are going too, of course. Ochs is really a nice fellow. This morning, he told me that he hadn't been able to sleep the whole night because he had learned of my dissatisfaction and had greatly reproached himself. We're again on the best of terms. I visited " Frau " Herzog today, but spoke only with her husband. She would have liked to participate, but the implacable theater manager would not allow it. A shame, just a shame. But must close

now. I have to dress and write in the diary. With warmth and affection from your very best greeting.

Hugo Wolf. »

**Tuesday, 9 January 1894 :**

Telegramm from Anton Bruckner to Doctor Theodor Helm :

Bruckner reports on his Berlin successes.

Article on the « Te Deum » (**WAB 45**) in the Berlin « Börsen-Courier » (by music-critic Otto Eichberg ?) .

A reference to the Berlin performance of the String Quintet (**WAB 112**) is reported in the « Steyrer Zeitung » .

**Letter 98** from Hugo Wolf (Berlin) to Melanie Köchert (Vienna) :

« Berlin, January 9, 1894.

Honoured gracious lady !

My head is still reeling at the moment from the excitement of last evening. I can definitely say that I had a significant success and that the audience received me warmly without any doubt. But, compared to the homage given Bruckner (apart from the orchestral fanfare and laurel wreaths) , I can hardly claim a noteworthy success. The words of the Old Testament kept ringing in my ears : “ Saul slew 1,000, but David more than 10,000. ” As I had correctly suspected from the beginning, I was only there to act as a foil for Bruckner. I’m really too good for that, with all due respect and admiration for Bruckner. Not that I envy Bruckner his success (let him be worshipped like a “ Vitzli-putzli ”) but to saw away forever on second fiddle “ ad majorem Bruckneri gloriam ” (to the greater glory of Bruckner) when I’m used to playing first violin in my own way, I’ve had enough of that forever.

But I owe you a report on the actual concert. So, here goes. “ Margits Gesang ” and “ Anacreons Grab ” got practically no applause. Performances of both pieces were extremely flawed in terms of the orchestra and soloists. The rhythmic accents in “ Margits Gesang ” were executed in a really alarmingly sloppy and wishy-washy manner, making the already mist-enshrouded mood in the character of the piece even more nebulous. “ Anacreons Grab ” was simply hurried through, especially by the singer who couldn’t wait for it to be over. The situation changed abruptly, however, during the performance of “ Elfenlied ”. Orchestra, soloist (de Jong) , and chorus performed at their peak. The effect of the sound was even more crystalline than at the dress-rehearsal, a moonlit kind of atmosphere seemed to hover over everything, and it was easy to imagine hearing the little silver bells of the elves, their dainty laughter, their comical leaps ... in short, it was really wonderful. “ The piece had to be repeated. ” The phantasmagoria of the “ Feuerreiter ” had an even greater effect on the audience. Everyone followed the story in breathless anticipation and broke-out in stormy applause at the end. They wanted the piece played-over again, but since Ochs had left the podium to look for

me in the house, there was no repetition. Meanwhile, the applause went on and on, stopped, then, began again with increased vigour, because they wanted to see the composer above all. But I had entrenched myself un-noticed in the standing-room section and didn't budge an inch. After the applause had died down, I re-appeared at my seat, which Ochs had assigned to me in a balcony loge. I had hardly come into view when the orchestra and chorus began applauding madly. The entire audience stood-up " en masse " and applauded me in the loge. I was completely dumb-founded, but I collected myself and bowed from my loge about a dozen times. And so, the eventful evening came to an end. This morning, I received the following note from the publishing-house Ries & Erler :

" Should the ' Elfenlied ' performed last night not yet be published, and should you be inclined to have our publishing-house do so, we ask that you pay us a visit during the morning hours between 10:00 and 1:00. "

Finally a publisher who is inviting me ! Of course, I'm prepared to sell him the piece, given the offer of a suitable honorarium. I haven't seen any reviews yet. As soon as I get around to it, I'll send you a few. This evening, I'm going to " Tristan " with (Richard) Sternfeld. Muck is conducting an un-cut performance. Tomorrow, I'm going to Mauthner's in Grunewald with Sternfeld.

Sternfeld is my most ardent admirer. He says, " hinterm Berg, hinterm Berg brennt es in der Mühle " (" Der Feuerreiter ") will become a by-word in Berlin. Ochs has assured me he's going to incorporate the " Elfenlied " and " Feuerreiter " into his repertoire.

A visitor's coming and I have to break-off. I'll write again soon. With very best and sincerest wishes to you, Heinrich, and the children. Forever your grateful,

Hugo Wolf. »

Wolf would have liked to have given a concert of his own in Berlin with " Frau " Herzog, but it could not be arranged. He called upon her, and, in the course of the visit, Richard Strauß entered ; he had come to show « Frau » Herzog his latest song. Doctor Heinrich Welti introduced the 2 composers to each other, but no conversation took place between them. Wolf then had hopes of interesting Lilli Lehmann in his work sufficiently to induce her to give a « Liederabend » with him, but as he was informed that it was useless to call on her for this purpose, the idea of the visit was abandoned. No concert being possible in Berlin, Wolf gave himself up to the joys of social inter-course, met all kinds of men and women, behaved as usual like a bear to the mere society people he did not like, and showed himself charming, humorous, and talkative with those he did. A little circle calling itself the « Zwanglosen » had been in the habit of assembling each Friday in a certain « Bierlokal » .

**Monday, 15 January 1894** : Letter from Mrs. Gertrud Bollé-Hellmund to Franz Bayer (9 days after another performance of Bruckner's 7th Symphony in Berlin) :

Gertrud sends to Bayer music-review articles of the Berlin concerts. She says she did not attend the January 6th performance of the 7th Symphony due to illness ; that evening, the hissing was not directed to Bruckner but to Karl

Muck.

She reports the misunderstanding of the Berlin public :

« Bruckner received an enthusiastic response from all pro-Germans. »

The response of the other listeners was not worth mentioning.

There seemed to be a recognition, however, that Bruckner had not attained the position of pre-eminence he deserved :

« I saw ladies weeping because they thought he had reached old age “ without being discovered ”. »

At the end of her letter, Bollé advises Bayer that Bruckner should give-up all his teaching duties and concentrate on composing :

« He still possesses a youthful, almost super-abundant creative power, and under no circumstances should this outpouring be disturbed. Because of this, we want to form a Bruckner Society of understanding Brucknerians. »

Gertrud personally witnessed the success of the « Te Deum » . A sick Hans von Bülow thanked Bruckner with a speech ; Bruckner (who was also a sick man) only responded with gestures. Johann Herbeck should have brought Bruckner's genius closer to the audience. Comments about Hugo Wolf.

**Tuesday, 16 January 1894** : Letter from Mrs. Gertrud Bollé-Hellmund to Anton Bruckner (Berlin) :

Gertrud asks Bruckner if she could come to visit him at the « Kaiserhof » or if he would be able to visit her before leaving.

Bruckner (accompanied by Prince Karageorgevitch ?) leaves Berlin for Vienna - making a stop in Dresden.

### Hugo Wolf Society : 10th anniversary

**Sunday, 21 January 1894** : 10th anniversary of the founding of the Wolf Society. A special evening was made of it, and Hugo Wolf and several ladies were invited. Wolf took some time to come-out of his shell, but, afterwards, was a very merry companion. From 9:00 pm to 1:00 am, says Doctor Ernst Décsey, he was scarcely noticed by anyone ; from 1:00 am to 4:00 am, he was the centre of the gathering.

Among the old Berlin acquaintances whom he met again on this visit was the author Fritz Mauthner. Wolf had been struck with a short novel of his and thought it would make a good I Act Opera. Mauthner, who was by way of being a bit of a musician himself, accommodatingly offered not only to arrange the libretto but to supply Wolf with a number of old Bohemian and other melodies for the Opera, a suggestion which was of course enough to make Wolf

close the subject abruptly.

### At the grave of Heinrich von Kleist

**Wednesday, 24 January 1894** : Just before Hugo Wolf left Berlin, he went with Richard Sternfeld to Wannsee, near Potsdam, to see the grave of one of his favourite poets, the unfortunate Heinrich von Kleist, the author of « Penthesilea » .

**Thursday, 25 January 1894** : Hugo Wolf departed for Darmstadt, where the local « Wagner-Verein » was to hold a Wagner-evening. His travelling companion was Fritz Mauthner.

### Margarethe Boucher

**Before Tuesday, 30 January 1894 (?)** : Anton Bruckner sends a photograph of him to Margarethe Boucher in Berlin.

**Tuesday, 30 January 1894** : Anton Bruckner receives a photograph of Margarethe Boucher from Berlin.

### Death of Theodor Billroth

**Monday, 5 February 1894** :

### Obituary

Theodor Billroth, M.D. - Surgery has lost one of its greatest exponents in the death of Theodor Billroth, professor of surgery in the University of Vienna, which took place at Abbazia, from disease of the heart, on February 5th.

He was born at Bergen in 1829, and graduated in medicine from the University of Berlin in 1852, becoming « Privat-docent » in the same university in 1856. In 1860, he was called to Zürich as professor of clinical surgery, and, in 1867, succeeded Franz Schuh as professor of surgery in Vienna. Here, it was that most of his work was done. Here, he first excised the larynx for cancer. Here, he resected the stomach for the same disease. Students from all parts made pilgrimages to his operating-room to see the Master at work. But not only as an operator was he known ; while perfecting the art, he by no means neglected the science. His « Lectures on surgical pathology » are well-known to English readers, having been published by the Sydenham Society in 1877-1878. His contributions to the literature of general surgery are numerous, the books and papers published by him amounting in all to about 140. He did much work in the hospitals during the Franco-German War, and, ever after, laboured to improve the methods of caring for the wounded. He was also interested in nursing, being the founder of the training-school for nurses in Vienna.

While engaged so continuously in his labours for the relief of suffering humanity, he still had time to cultivate the gentle art of music. Many of his intimates were musicians, and he himself was no mean performer upon the violin. At the time of his death, he was engaged on a work on the physiology of music.

Latterly, his health had become much impaired, and he had been obliged to leave his work and retire to the quiet shores of the Adriatic, there, to search in vain for the health and strength he had lost. There, he passed-away quietly in the 65th year of his age.

His work is his best monument.

### Margarethe wants a reply from Bruckner

**Tuesday, 20 February 1894** : Letter from Margarethe Boucher to Anton Bruckner :

Bruckner had not yet confirmed receiving Margarethe's picture (which occurred on 30 January 1894) . She wants to hear from him.

### Increased honorary fee

**Tuesday, 19 February 1894** : Letter from the Rector of the University of Vienna, Gustav Tschermak von Seysenegg, to the Dean of the Faculty of Philosophy, Theodor Escherich :

On **November 13, 1891**, the Academic Senate had decided to accept the dedication of the 1st Symphony (**WAB 101**) , which Anton Bruckner had recently handed-over. Instead of the remuneration of 800 Florins agreed on November 28, 1880, a request has been made on December 16, 1880, for increasing the annual honorary subsidy to 1,200 Florins. This needs the approval of the Faculty. Waiting for your answer on the Bruckner « dossier » .

**Saturday, 24 February 1894** : Dean Theodor Escherich informs the Teaching Committee of the Faculty of Philosophy that Rector Gustav Tschermak von Seysenegg has proposed an annual honorary subsidy for Anton Bruckner. The decision is unanimously welcomed (Eduard Hanslick was on leave at that time ...) .

**Thursday, 1 March 1894** : The « Linzer Tages-Post » reports that the University of Vienna has applied for a subsidy to Anton Bruckner from the Ministry of Education.

**Friday, 2 March 1894** : Letter from the Dean's Office of the Faculty of Arts to the Academic Senate of the University :

Responding to the February 19th request, Dean Theodor Escherich has informed the Teaching Committee that, starting February 24, 1894, Rector Gustav Tschermak von Seysenegg (1893-1894) will receive an annual honorary grant of 1,200 Florins (instead of the current 800 Florins) for composer Anton Bruckner. This decision was unanimously approved.

Letter from the Lower-Austrian Chancellery addressed to the Ministry of Culture and Education, in reference to the letter dated end of March 1894 (request for a grant of honour from the University of Vienna) :

« Considering the difficult financial condition, the poor health, and the outstanding achievements of the artist (...) The request is warmly granted by the Rectorate. »

### Doctor Theodor Escherich

The German-Austrian pediatrician Theodor Escherich was born on 29 November 1857 in Ansbach, Mittelfranken, Germany ; and died on 15 February 1911 in Vienna, Austria. He was a professor at the universities of Graz and Vienna. He discovered the bacterium *Escherichia coli*, which was named after him in 1919, and determined its properties.

He was the younger son of the Medical District Councillor (« Kreismedizinalrat ») Ferdinand Escherich (1810-1888) , a medical statistician, and his second wife, Maria Sophie Frederike von Stromer, daughter of a Bavarian army colonel. When Theodor Escherich was 5 years old, his mother died, and 5 years later, Ferdinand Escherich moved to Würzburg to take-up his former position as « Kreismedizinalrat » and married his third wife. When Theodor was aged 12, he was sent to the « Stella Matutina » boarding-school run by Jesuits in Feldkirch, Austria, for 3 years. Later, he finished secondary education in Würzburg, where he attended a « Gymnasium » (Classical language high-school) and took his « Abitur » examination in 1876.

After a half-year military service in Straßburg, Escherich took-up his studies of medicine at the University of Würzburg in the Winter Semester of 1876. Later, he attended the universities of Kiel and Berlin, and returned to Würzburg before passing his medical examination with excellence in December 1881.

After an 18 month service in a military hospital in Munich, Escherich returned to Würzburg in 1882 to become second and later first assistant to the internist Carl Jakob Adolf Christian Gerhardt in the medical clinic of the Julius Hospital in Würzburg. Gerhardt became Escherich's doctoral advisor and suggested the topic of his thesis. On 27 October 1882, Escherich was awarded his medical doctorate. In the following 2 years, he attended lectures in Vienna (with Hermann von Widerhofer and Alois Monti) and did bacteriological research work at the St. Anna Children's Clinic. In August 1884, he continued his research work in Munich, where pediatrics had been established as a department of the medical faculty. In October 1884, the Bavarian authorities sent Escherich to Naples to do research work in the actual cholera epidemic. He also travelled to Paris, where he heard lectures by Jean-Martin Charcot, the renowned neurologist. In 1886, after intensive laboratory investigations, Escherich published a monograph on the relationship of intestinal bacteria to the physiology of digestion in the infant. This work, presented to the medical faculty in Munich, and published in 1886 in Stuttgart, « Die Darmbakterien des Säuglings und ihre Beziehungen zur Physiologie der Verdauung » (Enterobacteria of infants and their relation to digestion physiology) was to become his habilitation treatise and established him as the leading bacteriologist in the field of pædiatrics.

It was also the publication where Escherich described a bacterium which he called « bacterium coli commune » and which was later to be called « *Escherichia coli* ». For the next 4 years, Escherich worked as first assistant to Heinrich von Ranke at the Hauner Children Hospital (in honour of August von Hauner, 1811-1884) in Munich.

In 1890, Escherich succeeded Rudolf von Jaksch, who had been called to Prague, as associate-professor (« Professor

extraordinarius ») of pediatrics and director of the St. Anna Children's Clinic in Graz, where he became full-professor (« Professor ordinarius ») 4 years later. While working in Graz, he married Margarethe Pfaundler (1890-1946), daughter of the physicist Leopold Pfaundler. They had a son Leopold (born in 1893), who died at age 10, and a daughter Charlotte (called « Sonny ») (born in 1895), who survived to the 1980's.

Escherich made the Graz Pediatric Hospital one of the best-known institutions in Europe.

In 1902, Escherich succeeded Hermann Widerhofer as full-professor of pediatrics in Vienna, where he directed the St. Anna Children's Hospital (« St.-Anna-Kinderspital »).

Escherich became renowned in 1903 when he founded the Infant Defence Society (« Säuglingsschutz ») and started a high-profile campaign for breast-feeding.

...

The career of Theodor Escherich qualifies him as the first pediatric infectious diseases physician. His landmark bacteriologic studies identified the common colon bacillus (now known as « Escherichia coli »), and he was very committed to pediatrics, serving as chairman of several prominent departments of pediatrics, including the Department of Pediatrics at the University of Vienna and St. Anna's Children's Hospital (« St.-Anna-Kinderspital ») in Vienna, arguably Europe's most prestigious pediatric position.

Until at least the 20th Century, the history of pediatric infectious diseases closely paralleled the history of its parent specialty, pediatrics, because infectious disorders comprised the major causes of childhood morbidity and mortality, as they do in the developing world today. Thus, many early descriptions of childhood illnesses by the ancient Greeks and Romans and by the Arabic physicians of the 10th and 11th Centuries were of tuberculosis, acute exanthems, ear-infections, diphtheria, and helminthic infestations.

Therefore, it may be somewhat arbitrary to identify a specific individual to be considered to be the first « bona fide » pediatric infectious diseases physician.

The son of Doctor Ferdinand Escherich (1810-1880), the district medical officer of health and a noted medical statistician, and his third wife, Maria Sophie Frieder, daughter of a Bavarian army colonel. Doctor Ferdinand Escherich was concerned about high neonatal mortality rates, as well as health-care for the poor, about which Theodor also became concerned. Theodor's mother died when he was 5 years of age, and the family moved to Würzburg, Germany. It is said that Theodor was a prankster and, thus, was sent to the Jesuit school « Stella Matutina » in Feldkirch, Austria. After completing his basic education and a 6 month military service in Straßburg, Austria, Escherich began his medical studies in Würzburg in 1876, and then (as was the German custom), continued his studies in several medical centers, including in Straßburg, Austria, and Berlin, Munich, and Kiel, Germany. In 1881, Escherich qualified to practice medicine with top-grades. After 6 months in the military at the garrison hospital in Munich-Oberwiesenfeld, Germany, Escherich became first assistant to Professor Carl Jakob Adolf Christian Gerhardt (1833-1902) in the Department of

Internal Medicine at the « Juliusspital » in Würzburg in July 1882. Although he was trained as an internist, Gerhardt was very interested in pediatric medicine, serving as editor of the first German « Hand-book of Pediatrics », a 16 volume work published during the period 1877 to 1893. Under Gerhardt's influence, Escherich developed a great interest in pediatrics and, in October 1882, wrote a doctoral thesis, « Marantic Thrombosinosis in Cholera Infantum », under Gerhardt's supervision ; this was Escherich's first publication. In 1883, Escherich published 6 articles on clinical (non-pediatric) topics. During October-November 1884, Gerhardt facilitated Escherich's interest in both pediatrics and the emerging science of bacteriology by selecting him to travel for 2 weeks as a scientific assistant to study the large cholera epidemic in Naples, Italy, with Rudolf Emmerich from Munich. Apparently, Escherich quickly became adept with bacteriologic techniques and readily observed « *Vibrio cholerae* » in fecal samples from affected individuals - more readily, in fact, than the more senior Emmerich. Escherich gave a presentation on cholera in Naples on 3 December 1884 in Munich, and the report was published the same year.

Because pediatrics was not yet fully-developed in Germany, in 1884, Escherich studied for a semester in Vienna, Austria, at the well-respected St. Anna Children's Hospital (« St.-Anna-Kinderspital ») and attended the popular lectures of Hermann von Widerhofer (1832-1901) . Von Widerhofer was the first Chair of Pediatrics at the University of Vienna and a highly-renowned pediatrician who was considered to be the first full-professor (« Professor ordinarius ») of the Diseases of Childhood. St. Anna Children's Hospital, founded in 1837, was the third oldest children's hospital, behind the hospitals in Paris, France, and St. Petersburg, Russia. Escherich's experiences in Vienna convinced him to devote his career to pediatric medicine, and he also began bacteriologic studies of the flora of mother's milk and of intestinal micro-flora at the Vienna Pathological Institute, where Heinrich von Bamberger was director. After the period he spent in Vienna, Escherich attended lectures by Jean Charcot (1825-1893) at the « Salpêtrière » in Paris.

After moving to Munich in August 1884 to obtain his « habilitation » (a post-doctoral qualification required to lecture at a German university) , Escherich focused his research on 3 related issues : defining the normal bacterial flora of the infant intestinal tract and its changes immediately after birth, assessing the role of bacteria in the physiology of digestion, and characterizing the relation of these findings to pathologic conditions in infants.

In Munich, Escherich had access to Max von Pettenkofer's (1818-1901) hygienic institute, Otto von Bollinger's (1843-1909) bacteriology laboratory, Karl von Voit's (1831-1908) physiological institute, and Franz von Soxhlet's (1848-1926) dairy facilities. Escherich learned the very new basic techniques of pure culture and bacterial characterization from Wilhelm Frobenius, a physician who had learned bacteriology from Robert Koch during 3 short visits to Koch's laboratory in Berlin. Frobenius made no other contributions to science, and in 1888, he became a medical missionary in the East-Indies and German East Asian colonies. Escherich knew of only one study involving micro-biologic examination of infant fecal samples (the one by Julius Uffelmann in 1881) and very few such studies involving attempts to cultivate bacteria from fecal samples from adults using Koch's new methods. Escherich demonstrated that meconium was sterile and that bacterial intestinal colonization is attributable to the infant's environment (including milk) within 3 to 24 hours after birth, with a variety of bacteria present by 24 hours (although not as diverse as in adults) . Although Uffelmann observed only 2 different bacteria in infant stool samples microscopically, Escherich isolated 19 different bacteria, including « bacilli » and « cocci » . These included campylobacter and « enterococci » , as well as, probably, « *Bacillus subtilis* » and pseudomonas. Escherich used Christian Gram's new staining technique

and was among several investigators, including Hans Buchner, who developed anaerobic culture methods. In these studies (which were performed over 15 months), Escherich described in detail « *Bacterium coli commune* » (the common colon bacillus now known as « *Escherichia coli* ») and « *Bacterium lactis aërogenes* » (now known as *Klebsiella pneumoniae*). He demonstrated their fermentation characteristics and the nature of the gas produced during fermentation, and he showed that, under anaerobic conditions, growth was totally dependent on carbohydrate fermentation. Breaking with dogma, Escherich concluded that any role of the intestinal flora in nutrition was minor at best.

On 17 December 1884, the 27 year old Escherich lectured in Munich to the Society for Morphology and Physiology about his bacteriologic methods, and on 14 July 1885, he presented his findings on « *B. coli commune* » to the same society in Munich. In 1886, Escherich published his 177 page post-doctoral thesis as a monograph entitled, « The Intestinal Bacteria of the Infant and Their Relation to the Physiology of Digestion ». He acknowledged his clinical training under Karl Gerhardt by noting on the title-page that he was former assistant doctor at the Medical Clinic in Würzburg. This work was also published in « *Fortschritte der Medicin* » and was reprinted in English in « *Reviews of Infectious Diseases* » in 1988 and 1989. These studies clearly established Escherich as the foremost expert on bacteriology in pediatrics.

By March 1886, Escherich resumed his clinical work and became a clinical assistant in Munich at the Children's Polyclinic of the « *Reisingerianum* » and the Hauner Children's Hospital (in honour of August von Hauner, 1811-1884) under Heinrich von Ranke (1830-1909). The following year, he became Lecturer in Pediatrics at the Ludwig-Maximilian University in Munich. Clearly, Escherich was able to balance his scientific studies and his clinical work. Angelo Ballabriga pointed-out that the bacterial era of the study of nutritional disturbances was initiated by Escherich, who recognized that the anatomic doctrine was insufficient to explain many digestive tract disturbances.

In Munich, Escherich continued studies of infant nutrition, identified the hazard of the high sodium content of cow's milk, emphasized the value of breast-feeding, and developed the volumetric system of infant feeding that involved the weighing of infants before and after nursing.

Escherich's most prominent work on infant fecal flora was performed before his 30th birthday. He continued his work in Munich until 1890, and at 33 years of age, he was selected by the Austrian Ministry of Education to succeed Rudolf von Jaksch (1855-1947) as « *Professeur Extraordinaire* » (non-tenured Professor) of Pediatrics and Director of the St. Anna Children's Hospital founded in 1843 in Graz. His years in Graz have been described as his happiest. In 1892, he married Margarete von Pfaundler, daughter of a renowned physicist, and their children Leo and Charlotte-Sonja were born in 1893 and 1895, respectively. Escherich's student and brother-in-law Meinhard von Pfaundler later became Chair of Pediatrics in Graz and, then, Professor of Children's Diseases and Director of the Children's Clinic at the University of Munich. He co-edited a multi-volume text, « *Handbuch der Kinderheilkunde* » (1906). In 1894, Escherich was appointed Professor (Chair) and Examiner at Graz after he declined the professorship in Leipzig, Germany. In this role, Escherich demonstrated remarkable organizational and administrative ability; the Children's Hospital was renovated and modernized, incubator-rooms were created, and laboratories and a lecture-theatre were built - changes that led to massive increases in inpatients and outpatients.

Escherich was also involved in several important research activities during this time, including investigations of the etiology and pathogenesis of diphtheria. By 1893, Escherich and Rudolf Klemensiewicz had demonstrated the presence of diphtheria antitoxin in serum samples from children convalescing from diphtheria. Despite considerable opposition, in 1894, Escherich helped to establish the role of Emil von Behring's diphtheria antitoxin for the treatment of children with diphtheria, and in 1895, he wrote a book on diphtheria and serum therapy. In addition, Escherich described the clinical signs of idiopathic infantile tetany (in 1890), including what has been termed « Escherich's reflex ». This is pouting of the lips after stimulating the labial mucosa by tapping the lips - often called the snout reflex. Escherich concluded that hypo-parathyroidism played a role in tetany, and in 1909, he wrote a monograph on the subject. Continuing his interest in intestinal bacteria, Escherich found that coliforms were associated with acute, contagious intestinal infections in infants, and he described « colicystitis », noting the frequency of isolation of « B. coli commune » from urine samples from symptomatic young girls, thus, recognizing the significance of urinary tract infections. He also studied the cutaneous reaction to tuberculin. Shortly after Wilhelm Roentgen's discovery of X-rays, Escherich obtained funds to purchase an X-ray apparatus.

Escherich's fame as an outstanding teacher, clinician, and researcher attracted several young, brilliant students to pediatrics. Both Clemens von Pirquet (1874-1929), who studied serum sickness and founded and named the field of allergy, and Bela Schick (1877-1967), who developed the Schick test to assess immunity to diphtheria, made outstanding contributions to pediatrics. Both von Pirquet and Schick came to America, the former as Chair of Pediatrics at Johns Hopkins Hospital in Baltimore, Maryland, and the latter as Professor of Pediatrics at Mt. Sinai Medical Center in New York.

In 1902, Escherich's brilliant success in leading the pediatric department at Graz to prominence led him to be nominated unanimously as Chair of Pediatrics at the University of Vienna and Director of the St. Anna Children's Hospital in Vienna, succeeding Hermann von Widerhofer. This was the institution where Escherich studied 20 years earlier, and the position was one of the most prestigious in Europe. In these new roles, Escherich again demonstrated outstanding leadership and administrative abilities, modernizing the hospital and clinics, building laboratories, establishing a school for training nurses in infant care and to provide nursing care for children with tuberculosis, founding an Infant Welfare Society (« Säuglingsschutz »), co-founding the Austrian Society for Children's Research, establishing the Association of Pediatricians in Vienna, and organizing a pediatric advisory service for the obstetrical clinics of Vienna. Escherich pioneered the use of X-rays as a diagnostic tool in children. He was a Master clinician and teacher; he championed the importance of prevention in pediatrics and played an active, supportive role in the research of his pupils and faculty, including both von Pirquet and Schick, who moved with him from Graz. Another well-known student was Ernst Moro (1874-1951), who described the neo-natal reflex, studied cutaneous tuberculin reactions, and discovered « bacillus acidophilus ». Escherich's academic interests in Vienna included scarlet fever, tuberculosis, dysentery, and allergy, and he remained the leading pediatric bacteriologist. In 1904, Escherich was the only European pediatrician invited to address the International Congress of Arts and Sciences (19-25 September) at the St. Louis World's Fair; his presentation was entitled « The Foundations and Aims of Modern Pediatrics ». In 1906, Escherich was named Court Counselor (« Hofrat ») by Emperor Franz-Josef, and he and his wife were invited to dinner at the Court several times. He crusaded to increase awareness of the unacceptably high infant mortality rate in Vienna, and in 1908 (Emperor Franz-Josef's 60th Jubilee Year), he again drew attention to this issue. Escherich's efforts led to

the construction of the Imperial Institute for Maternal and Infant Care. He was far ahead of his time in his interest in the social welfare of children, and he was highly-successful in persuading many socialites to support his important endeavors.

Just a few days before the opening of the new Children's Hospital in Vienna that he had helped to design, Theodor Escherich developed a headache and began to speak in several languages during a visit to the wards ; he died the next day (15 February 1911) of an apparent cerebro-vascular accident at 53 years of age.

The Boston Medical and Surgical Journal obituary of Theodor Escherich included the following :

« He was a contributor to numerous medical periodicals, a member of many learned societies, and was known as a pediatric consultant throughout Europe. His professional reputation was international. His energy for work was tremendous, and his disposition strenuous and masterful. He is described as impulsive, uncommonly strict, strong-willed, faithful, severe with himself but kindly towards others. That the children, his patients, loved him, is evidence that he loved them and, therefore, had a good heart. His career is an admirable example of the life of the German university physician, scientist, and professor. »

He had published 3 books (« The Bacteria of the Intestines of the Infant » , « Diphtheria and Serotherapeutics » , and « Tetany ») and more or less 160 articles. He was the most renowned pediatric pioneer of his era and the preeminent pediatric bacteriologist.

In 1919, Castellani and Chalmers proposed the designation « *Escherichia coli* » . This name was not officially sanctioned as the name of the common colon bacillus discovered by Escherich until 1958.

Another possible candidate for the first pediatric infectious diseases physician. Many early pediatricians demonstrated their interest in infectious diseases, because they comprised the most prevalent and important diseases of children. It is reasonable to consider whether any of these pediatricians had credentials to challenge our proposal that Escherich was the first « bona fide » pediatric infectious diseases physician. The fact that the beginning of Escherich's career occurred at the inception of the science of bacteriology and his acknowledgement as the « premier » bacteriologist among pediatricians of his period provide him with a nearly unique set of qualifications.

Another reasonable candidate is Jacques-Joseph Grancher (1843-1907) , who is considered one of the founders (with Antoine Bernard-Jean Marfan) of modern French pediatrics. Grancher studied medicine in Paris and was well-known for his dissertation on the unitarian theory of tuberculosis (1873) . After studying histology, he was named Director of the Laboratory of Pathological Anatomy and joined the staff at « l'Hôpital Necker » and « l'Hôpital des Enfants Malades » in Paris. Grancher wrote extensively about pulmonary tuberculosis (1872-1890) and received the Lacaze Prize of the French Academy of Medicine in 1880 for that work. From 1881 to 1886, Arnold Netter and Grancher introduced a method to obtain blood-samples aseptically from patients suspected to have endocarditis for culture of the blood-samples. Grancher also wrote a series of reports on isolation and antisepsis (infection control) in « l'Hôpital des Enfants Malades » (1889-1890) , where he, in fact, housed infectious patients with a latticed folding screen around the

bed and introduced surgical gowns and hand-washing for staff. In 1885, Grancher was chosen to succeed Marie-Jules Parrot as the Chair of the Children's Clinic at « l'Hôpital des Enfants Malades », and he also presented lectures on bacteriology from 1885 through 1907.

Grancher became a very close collaborator of Louis Pasteur. In 1885, Grancher assumed medical responsibility for administering Pasteur's experimental rabies vaccine, and Pasteur appointed him to direct the vaccination-centre that was near the « Institut Pasteur ». Grancher vaccinated Joseph Meister, the first patient saved by the vaccine, over 10 days beginning on 4 July 1885. He even received the rabies vaccine series himself after an accidental exposure. On 11 January 1887, Grancher successfully orchestrated the defense of Pasteur's anti-rabies method before the French Academy of Medicine when the safety and efficacy of the method were challenged. He served as the Secretary of the Board of Directors of the « Institut Pasteur » from 1887 through 1900 and joined the editorial board of the « Annals de l'Institut Pasteur » in 1888. Grancher presented his research studies (with Henri Martin) on the immunization of animals against tuberculosis in 1891. Grancher collaborated with Marfan and Jules Comby to publish the massive « Traité des Maladies de l'Enfance » in 5 volumes in 1897, with several later editions. In 1900, Grancher was elected Vice-Chairman and, from 1905 through 1907, was Chairman of the Board of Directors of the « Institut Pasteur » .

A strong case can be made on behalf of Jacques-Joseph Grancher for the designation as the first pediatric infectious diseases physician upon review of his accomplishments in pediatrics and bacteriology. However, by comparison, we believe that Theodor Escherich's superb administrative leadership of several very prominent departments of pediatrics (including the Chair in Vienna, arguably Europe's most prestigious) , his fame as both pediatrician and bacteriologist, his interest in and studies of a wide variety of infectious disorders over several decades, and the prominent ongoing association of his name with one of the most common of all bacteria persuade us that he warrants the designation as the first pediatric infectious diseases physician.

...

Theodor Escherich was a pioneer pædiatrician who devoted his efforts to improving child-care, particularly infant hygiene and nutrition. He was the younger son of « Kreismedizinalrat » Ferdinand Escherich, a medical statistician, and Maria Sophie Frieder, daughter of a Bavarian army colonel. After attending the Jesuit seminary « Stella Matutina » in Feldkirch, Austria, Escherich began his academic and medical education in 1876 at Straßburg. He continued his studies at the universities of Kiel, Berlin, and Würzburg, and qualified at Munich in 1881. In 1882, he became first assistant to the internist Karl Christian Adolf Jakob Gerhardt (1833-1902) in the medical clinic of the Julius Hospital, Würzburg. It was Gerhardt who aroused Escherich's interest in pædiatrics, and maybe also bacteriology, as he sent him as scientific assistant in the 1884 cholera epidemic at Naples.

As Germany lacked the necessary training facilities in pædiatrics, Escherich went to Paris, and then Vienna, where he worked for some months under Hermann Widerhofer (1832-1901) at the St. Anna Children's Hospital. In 1885, he became clinical assistant in Munich at the Children's Polyclinic of the « Reisingerianum » and at the Hauner Children's Hospital (in honour of August von Hauner, 1811-1884) under Heinrich von Ranke (1830-1909) . He became private

lecturer (« Privatdozent ») in pædiatrics at the University of Munich in 1886.

Escherich was soon convinced that bacteriology could solve or illuminate many pædiatric problems, and at Munich, the circumstances were favourable for this approach. Robert Koch's pupil, Wilhelm Frobenius, taught him pure culture techniques and methods of bacterial characterization ; and he had access to Max Josef von Pettenkofer's (1818-1901) hygienic institute, Otto von Bollinger's (1843-1909) bacteriological laboratory, Karl von Voit's (1831-1908) physiological institute, and Franz von Soxhlet's (1848-1926) dairy industry facilities.

In 1886, after intensive laboratory investigations, Escherich published a monograph on the relationship of intestinal bacteria to the physiology of digestion in the infant. This work, « Die Darmbakterien des Säuglings und ihre Beziehungen zur Physiologie der Verdauung » (1886) , established him as the leading bacteriologist in the field of pædiatrics. In 1890, Escherich succeeded Rudolf von Jaksch (1855-1947) as associate-professor (« Professor extraordinarius ») of pædiatrics and director of the Children's Clinic in Graz, where he was promoted to full-professor (« Professor ordinarius ») 4 years later. While working in Graz, his happiest years, he married Margaretha Pfaundler, daughter of the physicist Leopold Pfaundler.

When Hermann Widerhofer died in 1902, Escherich was appointed to his chair in Vienna. In 1903, determined to reduce the capital's infant mortality, Escherich in a pamphlet appealed for support for the women of Vienna. The response was such that, in the following year, he established, with Imperial patronage and civic approval, the Infants' Care Association (« Verein Säuglingsschutz ») . In 1908, the year of Emperor Franz-Josef's (1830-1916 ; 1848-1916) 60th Jubilee, Escherich again drew attention to the inexcusably high national rate of infant mortality. His efforts resulted in eventual construction of the Imperial Institute for Maternal and Infant Care.

The Children's Clinic (« Kinderklinik ») at the St. Anna Hospital built to his plans, was officially dedicated soon afterward. This pioneer pædiatrician, whose name is remembered in « Escherichia coli » , was indefatigable in his work for women and children. Unfortunately, there is no eponymic award for such efforts.

## Works

« Die Darmbakterien des Säuglings » (1886) .

« Diphtherie, Croup, Serumtherapie » (1895) .

## Eponyms

« Escherich's reflex »

« Escherichia »

« Escherichia coli » (E. coli) .

## Honours

**1894** : Honorary member of the Moscow Pediatric Society.

**1905** : Honorary member of the American Pediatric Society.

**1905** : Member of the Academy of Science, St. Louis.

**1906** : Official Imperial and Royal Privy Councillor (« Kaiserlich-königlicher Hofrat ») .

**1906** : Member of the Medical Academy in Rome.

**1909** : Honorary member of the Belgian « Ligue de la Protection de la Première Enfance » .

## Józef Brudziński

Józef Brudziński died December 18th, 1917, at the age of 43. In his short life, he achieved prominence as a pediatrician, neurologist, bacteriologist, and also, as a political figure. In Poland, he is remembered as the first Rector of Warsaw University following its revival after a Century of turmoil (partition of Poland, several uprisings, and World War I) . He was also whole-heartedly involved in organizing several pediatric hospitals in Poland, at the time among the most modern in Europe. His work as a pediatrician on neurological signs in diagnosis of meningitis is widely-known. Medical students all over the world are familiar with the tongue-twister, called Brudziński's sign or reflex, used in the diagnosis of meningitis. Less is known about his contributions to bacteriology and his seminal work on intestinal bacteria. One has to dig deep into the literature of the early 20th Century to gain insight into this equally important work. In online searches, the name Brudziński complicates matters, as the spelling of his name has many variations in the literature : Brudziński, Brudzinske, Brudsinski, etc. The 100th anniversary of his death is an appropriate time to call attention to his largely forgotten early-work that, along with that of a handful of others pioneers, forms the foundation of what we now call probiotic and microbiome research.

Because in partitioned Poland, at the end of 19th Century, there were limited opportunities to study medicine, Brudziński left the country and enrolled in the medical school programs in Dorpat, Estonia (now, Tartu) . The russification of the University and the expulsion of German Faculty, however, led him to move to Moscow University. After graduation in 1897, he continued his education at St. Anna Children's Hospital at the University of Graz, Austria, under Theodor Escherich. Subsequently, he worked at « l'Hôpital des Enfants Malades » in Paris with Jacques-Joseph Grancher, Antoine Marfan, and Victor Henri Hutinel. It is interesting to note that both Escherich and Grancher, a close collaborator of Louis Pasteur, are thought to be the first pediatricians for infectious diseases.

At the end of 19th Century, bacteriologist as a profession, per se, did not exist, but a few scholars, mainly physicians, were engaged in investigations of the micro-flora of human gastro-intestinal tract and its role in health and disease. This work may mark the beginnings of probiotic and microbiome research. Reminiscent of today, there was no shortage

of hype, skepticism and controversies involved.

Theodor Escherich was the discoverer of « *Bacillus coli commune* », later renamed « *Escherichia coli* » in his honour. He is credited with carrying-out the first systematic study of intestinal bacteria (1886). According to one of Escherich's assistants and later a renowned physician, Bela Schick, the bacterial era was inaugurated in pediatrics by Escherich, who had a long-standing interest in bacterial flora of the gastro-intestinal tract. It was believed at the time that bacteria are responsible for decomposition of proteins to harmful putrefaction products that could be absorbed from the bowels into the blood-stream, a form of auto-intoxication. Escherich suggested fighting this condition by the introduction of acid-producing bacteria, first described by Louis Pasteur in 1858, and including carbohydrates to the diet based on a mutual antagonism between the saprophytic intestinal inhabitants and the acid-producing bacteria.

In Escherich's clinic, Brudziński was to test this hypothesis by performing experiments aimed at combating intestinal putrefaction in dyspeptic infants using the acid-producing « *Bacillus lactis aerogenes* » (now, « *Enterobacter aerogenes* »), which was known to ferment sugars with the formation of lactic acid and gas. This organism had previously been found by Escherich to be one of the 2 dominant bacteria in stools of healthy infants (the other being *E. coli*. Note that this was before knowing that the dominant intestinal bacteria are strict anaerobes). Brudziński first examined fetid stools of several dyspeptic infants and found that most grew-out « *Proteus vulgaris* ». He then administered pure cultures of « *Bacillus lactis aerogenes* », which proved successful. The foul smell of the stools subsided, and they regained their natural acidic smell. *Proteus* was now absent. A similar effect was achieved by feeding patients large amounts of milk and sugar. He concluded that the symptoms of auto-intoxication observed in dyspeptic children were due to absorption in the intestine of toxins derived from « *Proteus* ». Brudziński also performed experiments with animals. « *Proteus* » injected under the skin of mice was lethal, while no symptoms were observed if mixed with food of young dogs and kittens. To identify the source of « *Proteus* » found in the stools, Brudziński examined samples of raw and boiled milk for the presence of the bacteria. « *Proteus* » grew only in previously boiled milk, seldom in fresh milk, and never in acidic milk.

### Vienna : Wolf visits Bruckner

**Between Sunday, 11 and Sunday, 18 March 1894** : Hugo Wolf visits Anton Bruckner at the « Hôtel de France » in Vienna. Wolf announces the arrival of singer Frieda Zerny in that same hotel for the 27th.

« I hate the thought of living without you », wrote Wolf in a letter dated **Tuesday, 27 February 1894** to the singer Frieda Zerny (1864-1917), herself a person of broad culture and a talented author in her own right. Wolf's later letters also testify to his passion for her, a passion which was nevertheless on the wane by the time he wrote his last letter to her on **Wednesday, 7 August 1895**, which closes with a distant « I wish you well ».

**Tuesday, 13 March 1894** : Private evening concert of the Wagner academic Society of Vienna. On the programme : songs by Hugo Wolf.

**Monday, 19 March 1894** : Letter from Hugo Wolf to Frieda Zerny :

Zerny is expected in Vienna on **Tuesday, 27 March 1894**. She would stay at the « Hôtel de France », where Anton Bruckner actually lives. (Actually, Bruckner himself made the arrangements.)

**Thursday, 5 April 1894** : Ladies' evening at the Wagner academic Society of Vienna. Hugo Wolf, Hugo Faißt, and Frieda Zerny are present.

#### Berlin : Female journalist Mrs. Sommerfeld

**Before Sunday, 15 April 1894** : Letter from Mrs. A. Sommerfeld (Berlin) to Anton Bruckner (Vienna) :

Mrs. Sommerfeld wants to write a magazine article on Bruckner and asks him for a photograph and an autographed music-score.

#### University of Vienna : Summer Semester (1894)

**May 1894** : Otto Lebwohl enrolls to attend Anton Bruckner's university lectures. The entry will be deleted.

#### Bruckner at a Pentecost celebration

**Monday, 14 May 1894** (Pentecost Monday) : Since Anton Bruckner's health has improved, the doctors allow him to attend a Pentecost celebration. He is carried from his apartment in a chair and goes to Mass at St. Michael Church with his private secretary Anton Meißner.

#### 2 visits by Amelie Klose

**June 1894** : (??) Amelie Klose visits Anton Bruckner twice at his « Heßgasse » flat (« Hôtel de France ») . He plays for her at the piano an excerpt of the Finale of the 9th Symphony (with the « Te Deum » (**WAB 45**) accompanying figure) and talks about moving elsewhere. He shows to her articles of a concert performance (the 7th Symphony ?) in Monte Carlo.

#### The pretty neighbour from « Hôtel de France »

**Wednesday, 13 June 1894** : Letter from Anton Bruckner to his landlord Anton Ölzelt junior :

Name-Day congratulation. Also probably, Name-Day congratulation (verbally or by writing) from Ernestine Korda, his pretty floor-neighbour at the « Hôtel de France » .

**Around Monday, 30 July 1894** (Post-stamp on cover-letter) : Letter from Anton Bruckner to Ernestine Korda :

Name-Day congratulation : « Vienna, July 1894. »

It may be possible to check the post-stamp to determine whether the letter was still in Vienna or in Steyr. As the Name-Day « Ernestine » is celebrated on April 14th, it would be clear whether the addressee had a second first name.

**Thursday, 4 July 1895** : Before leaving for good his « Heßgasse » flat at the « Hôtel de France » , Bruckner says good-bye to Ernestine Korda. He heard she was a bride-to-be in the Mühlviertel ...

### Great soup, Theresia !

**Tuesday, 24 July 1894** : Letter from female restaurant-owner Theresia Högelsberger to Anton Bruckner :

Theresia is pleased that Bruckner has greatly appreciated her home-made « Kremssuppe » (cream soup) yesterday (July 23) at her restaurant.

Doctor Richard Heller remembers Anton Bruckner slurping his soup like a farm-hand grown old in honourable service.

### « Frau Kathi » sends clothes

**Before Tuesday, 31 July 1894** : Letter from Anton Bruckner (Vienna) to his brother Ignaz (St. Florian, near Linz) :

Congratulations on the Name-Day of his brother Ignaz (31 July 1894) . As in the previous year, house-keeper « Frau Kathi » Kachelmayr would send him some clothes that he must not give to others. Greetings to St. Florian's music teacher Karl Aigner and abbey church organist Josef Gruber. Because of the heat-wave in Vienna, Bruckner now stays in Steyr, accompanied by Doctor Alexander von Weißmayr.

**Saturday, 4 August 1894** : Letter from Ignaz Bruckner (St. Florian, near Linz) to his brother Anton (Vienna) :

Thanks from Ignaz for sending clothes and money. Anton would probably come to St. Florian for a few days during August. Ignaz and Karl Aigner also plan to visit Bruckner in Steyr.

### Doctor Alexander Ritter von Weißmayr

Alexander Ritter von Weißmayr : Austrian Professor of Internal Medicine at the Faculty of Medicine, University of Vienna. Director of the St. Pancratius Pulmonary Sanatorium. Director of the Alland Lung Clinic (« Alland Lungenheilstalt ») . He died in Vienna on 10 March 1907.

(In the late-days of World War II, the Alland area saw heavy fighting between the First SS Panzer Corps under the command of General Josef Dietrich and Red Army forces of the 6th Guards Tank Army under Marshal Fyodor Tolbukhin from 4 to 22 April 1945.)

**Mixed Infection in Pulmonary Tuberculosis** by Doctor Alexander von Weißmayr details the results of a bacteriologic

examination of 100 specimens of sputum from 81 patients suffering from pulmonary tuberculosis. The sputum from 35 of the 81 patients revealed the tubercle bacillus alone ; that from 20, the tubercle bacillus and Streptococcus pyogenes ; that from 13, the tubercle bacillus and Staphylococcus pyogenes aureus and albus ; that from 10, the tubercle bacillus, streptococcus, and staphylococcus ; and that from 3, the tubercle bacillus, staphylococcus, and Micrococcus tetragenes. These results show that a number of tuberculous patients suffer from mixed infection. All the secondary infective agents exert a marked influence on the course of pulmonary tuberculosis ; in particular, cavity formation and elevation of the temperature are the direct result of, or are hastened by, such secondary infections. The prognosis is rendered worse by the detection of secondary infections. Patients with such secondary infection are not suitable for sanatorium treatment. Secondary infection may be the cause of laryngeal invasion, in that all laryngeal cases presented secondary infection.

...

Alexander von Weißmayr vertritt den Standpunkt, daß nicht nur im Süden, an den Meeresküsten und im Hochgebirge, sondern überall Orte zu finden sind, die sich für die Behandlung der Schwindsucht eignen, daß also die Lungenschwindsucht dort behandelt werden soll, wo der Kranke später zu leben gezwungen ist. Referent ist zwar der Ansicht, daß den vom Verfasser gestellten Bedingungen : Reinheit der Luft und windmehützte temperirte Lage, in vielen an den südlichen Meeresküsten gelegenen Orten am meisten entsprochen wird, doch muß zugestanden werden, daß mit Rücksicht auf die unbemittelte Bevölkerung und auf die Behandlung in geschloßenen Anstalten die weiteren Schlußfolgerungen des Verfassers durchaus richtig sind. Als Direktor der Heilanstalt Alland ist von Weißmayr in der Lage, auf günstige Erfolge hinzuweisen, welche ihn zu dem Ausspruche berechtigen : Die Tuberculose wird mit der sichersten Aussicht auf Heilung in specialärztlich geleiteten, geschloßenen Heilanstalten behandelt ; jeder Kranke soll die ihm zunächst liegende Anstalt aufsuchen, um bei der Rückkehr nicht durch die Veränderung des Klimas zu leiden. Wir besitzen in Österreich, wo durch von Doktor Leopold Schrötter's unermüdliches Werben und Wirken die Bewegung zur Gründung von Volkshelstätten begonnen hat, leider nur die eine Anstalt in Alland, während Deutschland deren bereits 34 aufweist. Verfasser führt den Nachweis, daß diese Volkshelstätten für die Umgebung nicht gefährlich, vielmehr nützlich sind, schildert die Anlage, Einrichtung, Art der Behandlung, kurz des Leben in der Anstalt, betont ihren erzieherischen Einfluß durch die Ermahnungen und Beispiele der aus der Anstalt Entlassenen. Bei der Aufforderung, die Anstalt sofort bei den allerersten Anfängen der Krankheit aufzusuchen, wird die Tuberculinprobe als diagnostisches Hilfsmittel erwähnt, es folgen statistische Angaben über die günstigen Erfolge verschiedener Heilanstalten auch in Bezug auf Erwerbsthätigkeit.

## Works

Alexander Ritter von Weißmayr und Leopold von Schrötter. Die Tuberculose. (1898)

Zur Klinik der primären Neoplasmen der Pleura. (1897)

Herz und Lunge in ihren pathologischen Wechselbeziehungen. (1898)

Die Lungenschwindsucht, ihre Verhütung, Behandlung und Heilung. In gemeinverständlicher Weise dargestellt. (1901)

## Franz Holzbuber

**Monday, 3 September 1894** : Letter from Franz Holzbuber to Anton Bruckner (Vienna) :

An Upper-Austrian friend hopes that Bruckner will remain in the service of « Frau Musica » so that « your excellent works may continue to fill the musical world with delight and admiration » .

## « Sali » misses her brother

**Presumably around Tuesday, 4 September 1894** (Name-Day of Anton Bruckner) : Letter from Rosalia Hueber (Vöcklabruck) to his brother Anton (Steyr) :

She tells him that his last visit was 4 years ago.

## Bruckner at 70

**Tuesday, 4 September 1894** : Anton Bruckner celebrates his 70th birthday in the town of Steyr. Mayor Johann Redl (accompanied by a delegation of representatives) hands over an official congratulatory letter to the composer.

On the occasion of his birthday, Bruckner was appointed honorary member of the « Steyrer Liedertafel » (see : 12 September 1894) and the Vienna « Schubertbund » .

Even while his opinion of Anton Bruckner's music hardly changed, Johannes Brahms came to recognize certain qualities in the man himself. Thus, he insisted on improving the tone of a formal letter that the « Tonkünstlerverein » intended to present to Bruckner (presumably on his 70th birthday) .

He said to Richard Heuberger in this connection :

« I made several corrections in the text myself. I mentioned the students, Bruckner's popularity, etc. I certainly don't see eye-to-eye with Bruckner in many matters, but he is nevertheless a fellow who is damned serious about what he does and that deserves some respect. »

(Richard Heuberger, 1976 ; page 72.)

In **November 1894**, 2 months after Bruckner's 70th birthday, Hans Richter performed his 2nd Symphony (**WAB 102**) , which had not been heard in the capital since the composer himself conducted the work on **October 26, 1873**, at the closing Symphonic concert of the Vienna International Exhibition. It was another great success but, by now, Bruckner was a very sick man.

## Christine Brezina

**September 1894** : Letter from Christine Brezina (Vienna) to Anton Bruckner (Vienna) :

A Viennese girl writes as « an enthusiastic worshipper of the beloved Master, Anton Bruckner » .

### Cold weather and doctors

**Friday, 7 September 1894** : Letter from Doctor Ottokar from Chiari (Vienna) to Anton Bruckner (Steyr) :

Late Name-Day congratulations.

**Tuesday, 11 September 1894** : Letter from Doctor Leopold Schrötter (Ebensee) to Anton Bruckner (Steyr) :

Bruckner should follow the instructions of Doctor Alexander von Weißmayr and leave Steyr for Vienna as soon as the temperature becomes milder.

**Sunday, 16 September 1894** : Letter from Anton Bruckner (Steyr) to Doctor Leopold Schrötter (Vienna) :

Bruckner thanks Doctor Schrötter for his letter of September 11th. His breath is somewhat improved. Doctor Viktor Klotz (private office : « Sparkassengebäude » , « Stadtplatz » Number 20-22, 2nd Floor) , head-physician at St. Anna's Hospital in Steyr, will take care of him. The cold weather is a topic of discussion. Bruckner would telegraph Doctor Schrötter before leaving Steyr. Greetings to the family. Prelate Ferdinand Moser also telegraphed Bruckner (about his burial place ?) .

**Wednesday, 26 September 1894** : Letter from Anton Bruckner (Steyr) to house-keeper « Frau Kathi » Kachelmayrn (Vienna) :

Bruckner should be back in Vienna on coming Sunday (30 September) by the express-train from Steyr, and he hopes to see her healthy again.

### Doctor Viktor Klotz

Viktor Klotz studied in Transylvania and in Vienna. He worked for many years at the Vienna General Hospital (« Allgemeines Krankenhaus ») and at Doctor Theodor Billroth's clinic as assistant-physician. He went to Jihlava where he was named head-physician of the town's hospital on 25 September 1891. On New Year's Day 1892, he took-over as head-physician the management of the old St. Anna's Hospital in Steyr. He brought the first real medical knowledge and skills to the establishment. He developed an outstanding surgical department under the most difficult conditions. Population growth resulted in an increase of patients - thus, the lack of space became unacceptable. New premises had to be built. The inaction of the city authorities forced Klotz to turn to the public sector. Thanks to the private donations of Therese Praschak and especially beer-brewer businessman Johann Haratzmüller (he invested 200,000 « Kronen » - about 400,000 euros - which represented 25 % of the total cost !), the project of a brand new health-care facility became a reality. The construction took only 3 years. The new « Krankenhaus Steyr » was inaugurated on

18 September 1916, in the middle of World War I. Total cost : 1,000,000 « Kronen » (2,000,000 euros) . Doctor Klotz retired shortly before the opening-day. His accomplishments had spread over almost a quarter of Century.

He co-founded the medical section of the Volunteer Fire Brigade of Steyr and acted as first Corps-Doctor. He was also appointed honorary member.

He was honoured for his long-term implication as health insurance doctor.

He was awarded the Knight's Cross of the Order of Franz-Josef and received the title of Medical Concillor.

He was awarded the Medal from the Red Cross (2nd Class) for his self-sacrificing activity towards the wounded and diseased soldiers during World War I.

Doctor Viktor Klotz died after a long illness, at the age of 73. The whole town of Steyr attended the funeral of this highly-esteemed philanthropist physician.

Today, « Dr.-Klotz-Straße » connects the « Pachergasse » with the « Schönauerstraße » .

### Steyr : St. Anna's Hospital

**1679** : The plague raged in Lower-Austria and threatened to cross the country. Countless lives were lost everywhere.

**1713** : The plague wreaked havoc in Steyr. The municipal authorities bought the « Plautzenhof » to create a centre for the victims (« Pestlazarett ») . Constructor « Herr » Reuß bought the fields which went along with the property. When the epidemic was under control, the establishment converted into a permanent hospital.

**1754** : Town-judge Großbrucker requested permission to add a chapel-house to the « Plautzenhof » Hospital in honour of St. Anna.

**1755** : Architect Hayberger built the chapel. « Herr » Hayberger was also the plan-maker for the town-hall in Steyr. A formal request to erect a small house next to St. Anna's Chapel to accommodate priests was brought before the Bishop of Passau. This is how the « Pfarrstöckl » (a priest's house) came to be built.

**1844** : The town of Steyr formally requested the Austrian Emperor Ferdinand to permit nuns of the Order of the Charitable Sisters of St. Vincent of Paul from Vienna (« Barmherzige Schwestern-Orden ») to move here to take care of the sick at the hospital.

**1848** : St. Anna's Hospital was renovated and enlarged (new capacity : 39 beds) .

**Wednesday, 15 August 1849** : Consecration of the « new » St. Anna's Hospital. An agreement was finally concluded with the Order of the Charitable Sisters - 6 nuns moved to Steyr.

**1860** : The head of St. Anna's Hospital, Karl Aigner, planned an orphanage. Its foundation was laid by Linz Bishop Franz-Josef Rüdiger on June 9th of the same year.

**1894** : The employment figures of the Werndl Arm Factory were on the rise. This had a direct impact on the number of inhabitants in Steyr. The municipal authorities had to legislate on the public access to St. Anna's Hospital.

**1900** : St. Anna's facilities no longer met the needs of the people of Steyr. Director Viktor Klotz sought help from the private sector to erect a brand new hospital.

**1913** : Construction of the new hospital began.

**Monday, 18 September 1916** : Inauguration of the « Krankenhaus Steyr » .

**1918** : The consequences of World War I brought political change in Steyr. Liberals and nationalists have dominated the town for decades.

**1919** : Social-Democrats took power in Steyr. The economic uncertainty of the inter-War period made it increasingly difficult for the nuns of the Order of the Charitable Sisters to fulfill their task at St. Anna's Hospital. Electric lighting was installed.

**1930** : The city of Steyr went through financial difficulties. For this reason, St. Anna's Hospital was handed-over to the State of Upper-Austria.

**1934** : The political confusions of the time did not spare St. Anna's Hospital.

**March 1938** : Adolf Hitler invaded Austria (« Anschluß ») .

**1939** : World War II began. St. Anna's School (which was on the same premises) was turned into a military hospital. The Red Cross nurses were accommodated in the orphanage.

**1944** : Allied bombings began over Steyr.

**1945-1955** : Steyr was occupied by American troops (west of the river Enns) and Russian troops (east of the river Enns) .

### Doctor Hermann G. Klotz

His father and a number of his relatives were physicians - i.e. , Doctor Viktor Klotz from the Steyr Hospital.

Doctor Hermann G. Klotz was born on 21 August 1844 in Saxony and died of bronchial pneumonia on 6 May 1928 in New York. He was 84.

After his graduation from the « Gymnasium » , he began the study of medicine at the University of Leipzig in 1864. A part of his student years were spent at Heidelberg and Würzburg, but he graduated at Leipzig in 1868. While a student at Würzburg, during the War between Prussia and Austria, he served with the Bavarian army and was decorated with the Bavarian Cross.

After graduating at Leipzig, he received an appointment as assistant at the old « Eppendorfer Krankenhaus » at Hamburg. While waiting for this appointment, he served as a surgeon on one of the ships of the Hamburg-American Line. During the Franco-Prussian War, his ship was interned in New York and, while waiting for the cessation of hostilities, he accepted a temporary appointment as resident physician with the German, now the Lenox Hill Hospital. Here, he became acquainted with the late Doctor Edward F. Schwedler, one of the founders of the hospital, and later, became his associate and married his daughter, Marie C. Schwedler. The accident of war thus determined his settling in New York.

Doctor Klotz was closely identified with the German Hospital and Dispensary. At the time of his death, he was the only honorary member of the alumni association of the institution.

He became a member of the New York Dermatological Society in 1887, served twice as its president and, in 1913, was made an honorary member. He was an active member of the American Dermatological Association from 1888 until his death. He was a fellow of the New York Academy of Medicine, and, in recognition of his assistance in establishing the medical library of the Kings County Medical Society, he was made an honorary member of that organization.

Doctor Klotz was interested in dermatology from the beginning of his medical career. He was not a frequent contributor to dermatologic literature, but his publications were thoughtful and were always respected. His outstanding achievement, perhaps, was the promotion of intra-muscular injections of mercury in this country. He was also interested in genito-urinary diseases.

...

Henry H. Morton (1928) :

In the days before cystoscopy and prostatic and kidney surgery had brought about the development of modern urology into a distinct specialty, the universal practice was the combination of skin and venereal diseases, and the death of Doctor Hermann G. Klotz marks the passing of perhaps the last of the well-known dermato-urologists of the former generation. Doctor Klotz was born in a small town of Saxony in 1844 ; studied medicine at Würzburg and Heidelberg and graduated from Leipzig in 1864. In the War of 1866 between Prussia and Austria, he received a decoration from the King of Bavaria (the Bavarian War Cross) for services to the wounded.

His coming to America was a matter of accident, for while awaiting appointment in the « Eppendorfer Krankenhaus » , he took a trip to New York as ship's surgeon on a steamer of the Hamburg-American Line. When the Franco-Prussian War broke-out, his ship was interned, and he took a position as resident physician in the German Hospital (now, Lenox

Hill) . After leaving the German Hospital, he married Miss Marie C. Schwedler, daughter of his former chief, Doctor Schwedler.

In the course of his professional life, he soon developed an interest in dermatology and urology, as these branches were then associated.

He was actively identified with the development of the German Hospital and Dispensary, and particularly interested in developing its medical library which was then housed in the old dispensary building on 2nd Avenue, near 8th Street.

Doctor Klotz became naturalized soon after coming to the United States, and held steadily to his loyalty to this country during the World War, even though his allegiance cut him off from his father's relations in Germany during hostilities. He was a member of The New York Academy of Medicine, served on the Library Committee, and was twice President of the New York Dermatological Society. At the time of his death, he was among the oldest members of the latter society and had attended several meetings during the past year.

My personal recollections of Doctor Klotz are very vivid, and are connected with the 2 outstanding works of his life, namely, endoscopy and the injection of salicylate of mercury in the treatment of syphilis. I shall always remember the kindness and courtesy with which he showed me in his office at East 19th Street, how to use his endoscopic tubes illuminated by a light thrown in by a head-mirror in cases of chronic urethritis. By this means, the urethra could be plainly seen and local lesions such as erosions, open crypts and polypi diagnosed and treated. With the careful and painstaking attention to detail and with absolute honesty which were the striking features of his character, he described and classified completely the lesions as they were to be seen.

On a later occasion when the use of salicylate injections were being first brought to our attention, knowing his interest and experience in this form of treatment, I felt perfectly free to go to him in his clinic in 2nd Avenue, and he there gave me a demonstration of its application and a talk on the uses and dangers of the method.

With the advent of the small electric light-bulbs, Doctor Klotz' endoscope with its less perfect illumination has been superseded, but the knowledge of the disease of the urethra which he had was superior to that which many of us possess today, even with our better illuminated instruments.

The personal contacts of which I have spoken and the history of his life, gives us the clue to his character ; integrity, honesty and fearlessness in standing by his beliefs, united to a careful persistence and meticulous attention to detail, controlled always by strong common sense which showed in his clinical work and in his writing.

Such were the men who laid the foundations of the specialty of urology on which the present generation has built its modern superstructure.

Doctor Hermann Klotz read a critical paper on « Philippon's Proposed Reform of Dermatology » . This paper has already appeared « in extenso » in the « Journal of Cutaneous and Genito-Urinary Diseases » .

Review of Dermatology and Genito-Urinary Diseases : Hermann Klotz : A Plea for the Use of Soluble Preparations of Mercury in the Treatment of Syphilis by Mouth. (Journal of Cutaneous Disorders, volume XXIII, Number 379.)

The writer pleads for a preference of solutions of bichloride of mercury in the internal treatment of syphilis instead of the protoiodide pills. The latter often produce gastric and intestinal disturbances, stomatitis, and cutaneous eruptions. He prescribes the sublimate in solution, in doses of 3 tea-spoonfuls daily, each containing 1/8 to 1/5 of a grain. To make the treatment as little cumbersome as possible, the patient is given a small, flat bottle, containing 3 ounces, sufficient for a week's use. Gastro-intestinal troubles he has not observed ; stomatitis did not occur, for the reason that solutions of bichloride of mercury of a strength of 1:1,000 to 1:2,000 are our best remedy for it. The effects are prompt and especially valuable in preventing relapses.

According to Doctor Hermann Klotz, one of the most easily applied and valuable drugs in dermatology is ichthyol. If applied upon the skin as 25 to 50 % watery solution, it will rapidly dry to an elastic pellicule, which will not crack over the joints, and which can easily be washed-off with soap and water when desired. There is absolutely no soiling of the clothes, and no dressing is necessary where drying is retarded owing to much secretion, as a layer of cotton or some indifferent dusting powder may be used.

...

Doctor Klotz is inclined to believe that suppuration, the so-called stage of eczema impetiginosum, makes its appearance when local septic infection complicates the moist stage. Where the exudation on the surface is not present, or in so moderate a degree that no moist surface is presented (eczema erythematosum, papulosum et squamosum) , the excoriations resulting from scratching afford an equally commodious entrance to all kind of septic material, and in their turn, often actually become the seat of more or less deeply seated suppuration. As long as suppuration exists, a cure is apparently out of the question. This will not be denied even by those who consider eczema as almost always a constitutional disease, produced by some irregularities in the functions of some organ or in the general household of the human body, and who, as a rule, look to internal or constitutional treatment as the most important part of therapeutics. Doctor Klotz says he does not hesitate to declare that carbolic acid is but rarely beneficial in diseases of the skin. Other drugs have taken the place of carbolic acid in antiseptic surgery ; but almost invariably has the effect on the skin been equally disastrous, particularly with corrosive sublimate and iodoform. It seems not improbable that this incongruity of the most popular antiseptic remedies with the skin in its healthy state, as well as in pathological conditions, has been one of the principal factors to prevent the introduction of antiseptic principles into the treatment of eczema. Another cause, Doctor Klotz believes, has been the almost universally accepted doctrine which forbids the use of water in the management of eczema. To obtain favourable results, it would be advisable to begin treatment by careful cleansing, and to apply the antiseptic remedies in the form of solutions instead of the usual ointments, as it is a well-known fact that the antiseptic drugs act much more powerfully in solutions than in combination with oils, grease, and other constituents of ointments. Whenever an impetiginous eczema presents itself for treatment, the first task, Doctor Klotz says, is to disinfect the diseased surface by removing the crusts and all other encumbrances with water and soap, Castile soap being generally preferred ; and afterwards, with a solution of corrosive sublimate, not stronger than one part in 3,000 or 5,000 parts of water. Thereafter, the patients are advised to wash the diseased

portions with this solution morning and evening by means of a pad of absorbent cotton, or a piece of lint or clean cloth (never with a sponge) . In the evening, and if possible in the morning, lint or cotton pads, thoroughly soaked with the solution, are to be applied for one-half to 1 hour, during which time the pads have to be kept constantly moist. Then, the parts are carefully dried, and a mild ointment, generally a 10 % , boric acid vaseline, is rubbed into the skin and, whenever feasible, covered with lint or cotton and a bandage. This treatment is to be continued until a clean surface is presented on the affected parts and all suppuration has ceased, a result mostly obtained in a few days. In children, or in milder cases in grown patients, a 2 to 3 % solution of boric acid takes the place of the corrosive sublimate, combined with the boric acid vaseline. Infants get their daily bath as usual ; on removal from the water, they are washed with the solution of boric acid. Circumscribed patches of eczema, particularly those showing the most aggravated conditions, are kept more or less constantly covered with cotton or lint compresses moistened with the solution, or rubbed and covered with the ointment. The results in such cases have been very satisfactory, and the moist stage of the eczema has been considerably shortened. In cases of very acute inflammation, particularly in eczema of the legs, with or without ulcers, 2 to 4 parts of acetate of lead are added to each 1,000 parts of the boric acid solution, and compresses soaked with it are constantly applied for several days. This combination of boric acid and acetate of lead has recently been recommended by Saalfeld. Patients may be ordered 15 to 20 grammes of the boric acid, and 2 to 5 grammes of acetate of lead, which they are directed to dissolve in 1 quart of boiled water while hot. In private practice, a small quantity of glycerine and alcohol may be added : the substitution of about 1/3 or 1/4 of the water by lime water is of some advantage ; it causes the precipitation of the insoluble portions in the shape of a very fine film. The same applications are made in all cases apparently not infected with purulent substances, where a moist surface exists, either circumscribed with the shape of the original vesicles preserved, or on larger patches. They are continued with as little interruption as possible until the discharge becomes less and the epidermis is rapidly forming a new protecting cover. Even in the dry forms of eczema, particularly in the erythematous ones, the wet applications and the washing with the antiseptic solutions are of great value. Boric acid is the one remedy which is well borne under any circumstances and on all localities ; but under the principles of antiseptis, solutions of other drugs may be substituted, and will produce equally good effects. Thus, ichthyol, 1 or 2 parts in 1,000 ; salicylic acid, resorcin, thymol, permanganate of potassium, tannin, acetate of alumina, even carbolic acid, may be quite as valuable if properly diluted. Doctor Klotz says almost all the modern remedies owe their claims to their antiseptic action, and that their usefulness will increase in proportion with their deleterious effects on pathogenic microbes on the one side, and their non-irritating character towards the skin on the other. If we compare the different methods of treatment advocated by different dermatologists, it will not be difficult to discover in every one distinct traces of antiseptic principles.

### Hugo Wolf and the 9th Symphony

**Saturday, 15 September 1894** : Letter from Hugo Wolf (Traunkirchen) to Anton Bruckner (Steyr) :

Wolf congratulates Bruckner on his recent Name-Day (4 September) . He hopes that his youthful creative power will help the Master, over a long period, to finish his 9th Symphony.

**Sunday, 23 September 1894** : Letter from Anton Bruckner (Steyr) to Hugo Wolf (Berlin) :

Bruckner thanks Wolf for his last letter (September 15th) . Bruckner's illness is, unfortunately, incurable. His health-condition is also very unstable. In the event of a softening of the weather, he would return to Vienna.

« Greatly honoured Master and Colleague !

Your very kind letter pleased me immeasurably ! I thank you from the bottom of my heart for your wishes, which I devotedly return to you in kind ! May God protect you always and lead you along the loveliest, though at the same time most difficult artistic pathway ! My state of health, unfortunately, is incurable ! Sometimes a little better, then worse again ! May you, honourable sir (dearest friend) , remain in good health, and well-disposed toward me, just as I also respect you most devotedly. If bad weather should come, I'll go to Vienna.

In most faithful love and respect,

Your Bruckner

Steyr, September 23, 1894. »

**Letter 135** from Hugo Wolf (Berlin) to Melanie Köchert (Traunkirchen) :

« Matzen, Brixlegg, Tyrol, September the 25th, 1894.

Most honoured lady and friend !

Once again, a clear bright sky, after a string of dreary, rainy days. A fragrant, fresh wind blows over from the Zillertal, which must bring you a thousand greetings from me. How I would have enjoyed spending this morning on my own talking with you ; only the " mistress " wishes me to serve as page on her walks, and so, I must be brief. Your last letter left me in an altogether melancholy mood. If it's any comfort to you, be assured that I sympathize completely with your feelings.

Starting today, I'm going to try to arrange my life here more systematically. Above all, I must make an effort to get to bed as early as possible, in order to take full-advantage of the morning hours, which are mine to spend as I see fit - today's walk is an exception. Up until now, the evening's entertainment has always gone on until 12:00 at night. That mustn't happen anymore. From now on, it's to bed at 10:00 and up at 6:00. I have to think about work again. My hosts will certainly understand this and won't hinder me. I'll discuss the matter with the Baroness (Frieda Lipperheide) on our walk today. About the middle of October, I'm going to travel to Merano in the company of the two of them. Then, there are several excursions I want to make, starting-out from Merano. I often play 4 hand (piano) with the Baroness now. Pleasure from this is quite limited, to be sure, as she plays very badly, but since I can show my gratitude in this way, I'm happy to do it. " Manus manum lavat " (One hand washes the other) . There's nothing else to be done.

Yesterday, late at night, she asked me to play the “ Appassionata ” of Beethoven for her, and, when I finished, she was quite beside herself with delight over my performance. Nothing beats un-demanding people ! More next time. For today, very sincerest greetings from your faithfully devoted,

Hugo Wolf.

Many greetings to Heinrich, children, and Miss Park.

“ Afternoon ”. I’m opening-up the letter again to enclose a note from Bruckner that just arrived for me. The enclosed letter from the aging man brought tears to my eyes. How good it was that I put in my congratulations, even though belatedly. Please return the treasured document to me. I’m planning to compose an extended epistle to the revered man soon.

Along with the Bruckner note, a package also came from (Emil) Kauffmann, a book entitled :“ Ed. Mörike als Gelegenheits-dichter ” (Eduard Mörike as Poet of Occasional Verse) , with countless first printings of Mörike poems and drawings from his own hand. I only glanced through it quickly and discovered delightful things. As soon as I’ve gone through it completely, I’ll send it to you. It will amuse you more than a little. I told the Baroness about my schedule and she agreed to it. So, again, a thousand greetings and all good things. »

**Wednesday, 26 September 1894** : Letter from Hugo Wolf (Berlin) to Ferdinand Löwe (Vienna) :

Wolf says that he received a touching thank you letter from Anton Bruckner.

**Wednesday, 10 October 1894 - Letter 140** from Hugo Wolf (Berlin) to Melanie Köchert (Traunkirchen) :

« Matzen, October 10, 1894.

Most honoured gracious lady !

You will undoubtedly have received my 3 letters. We arrived back in Matzen in good shape last evening. The outing was successful in every respect. The route from Maierhofen to Karlsteg was particularly unique in its way, a wild mountain gorge through which the foaming Ziller rushes. One feels totally insignificant alongside such super-human wilderness and “ grandeur ” as is displayed by nature in the Alpine world. Grinzling was the last stop. From there, I went on alone for an hour into the Floitenthal (Floiten valley) to see the “ Floitenspitze ” (summit) (3,200 metres) . There is an immense glacier surrounding it ; the fog settled-in soon after, unfortunately, so that the view was only a brief one. Nevertheless, I took away a complete impression of the Zillerthal. The most beautiful spot in it, however, remains “ Zell am Ziller ”. Maierhofen lies too far into the mountains. It’s an utterly dismal place.

(Ferdinand) Löwe wrote me today that “ Elfenlied ” and “ Feuerreiter ” will be performed on December 2nd. It would be too foolish for me to go to Berlin now, since 2 pieces of mine and possibly a third will be performed in Vienna.

(Friedrich) Eckstein has most kindly turned-over his room to me. In any case, I'll arrive in Vienna before the 20th, as I'd like not to miss the Bruckner concert. The key herewith.

Maybe (Rudolf von) Larisch will give me his summer-place in Perchtoldsdorf.

Your always faithful Hugo Wolf. »

### Greetings from the Vienna « Tonkünstlerverein »

**October 1894** : Greetings from the Vienna « Tonkünstlerverein » (Association of Composers) to Anton Bruckner.

« You can look back on a long life and think with satisfaction of the recognition and honours you have received for your serious and lofty ambitions. »

The letter dated « Wien im Oktober 1894 » is signed by Johannes Brahms, Richard Heuberger, Ignaz Brüll, Hugo Conrat and others - all names from the anti-Wagnerian faction.

### Not seriously ill but very weakened

**Thursday, 18 October 1894** : Several newspapers (the « Steyrer Alpen-Bote » Number 83, page 3 ; the « Linzer Zeitung » ; the « Linzer Tages-Post » ; the « Wiener Reichspost » Number 240, page 5 ; the « Steyrer Zeitung ») report on Anton Bruckner's health-condition. Based on the relatively favourable prognosis by Doctor Leopold Schrötter, he is not seriously ill but very weakened.

### Fall Semester : First university lecture

**Monday, 29 October 1894** : With the permission of Doctor Leopold Schrötter, Anton Bruckner gives his first university lecture of the Fall Semester. His house-keeper « Frau Kathi » Kachelmayr and his personal secretary Anton Meißner accompany him. In the lecture-hall, Bruckner talks about his illness, accepts the congratulations of everyone, underlines the praise he received from Prince Bojidar Karageorgievich's mother, mentions an article from an American newspaper (from September 21, or January 22, 1894 ?) which reported the performance of his 3rd Symphony in Paris. He also comments on the death of University rector Professor Adolf Exner (victim of a heart-attack on September 10) and physicist, mathematician, and poet Professor Doctor Josef Stefan (on Saturday, 7 January 1893) . It was Stefan who proposed to give Bruckner an honorary Doctorate.

### Schrötter's silver wedding anniversary

Bruckner attended a performance of one of his own works for the last time on January 8, 1894.

**Wednesday, 31 October 1894** : Letter from Anton Bruckner to Doctor Leopold Schrötter von Kristelli :

Bruckner congratulates Professor Schrötter on his silver wedding anniversary.

### Hearing the F minor Mass, again

**Sunday, 4 November 1894** : The performance of the F minor Mass at a « Gesellschaft » concert in Vienna was intended as a 70th birthday celebration and, in fact, was one of Bruckner's last public appearances. His health deteriorated rapidly in mid-November and, although there was a partial recovery, the remaining months of his life were a continual swing between relapse and slight improvement. Bruckner's last words on the Mass are contained in a letter to Siegfried Ochs, the conductor of the Berlin Philharmonic Choir, who had directed 2 very successful performances of the « Te Deum » (WAB 45) , in May 1891 and January 1894, and was now contemplating a possible performance of the Mass :

(Here, Bruckner talks humorously of himself at the third person.)

« Bruckner is getting old and would really like to hear the F minor Mass again ! Please, please ! That would be the high-point of my life. But there are many changes which don't appear in the score. At the D-flat major passage in the “ Credo ” (“ Deum verum de Deo vero ”) full-organ, please ! Spare no stops ! And the cellist should be prominent with a very rich, warm tone at the beginning of the “ Benedictus ”. When shall I hear it ? Please, reply.

In humble admiration and with greetings to the excellent Orchestra, the wonderful choir, and you, their great “ Direktor ”. »

### The last university lectures

Unexpectedly, what seemed a swift recovery, in the fall of 1894, found Anton Bruckner once more ascending the platform at the University of Vienna to resume his lectures on musical theory. Only a few such days of grace were granted. His shattered body by relentless fate, for 2 weeks later, he stood for the last time before his beloved students.

**Monday, 5 November 1894** : Anton Bruckner returns to the University of Vienna to give a farewell lecture ; his farewell to the teaching that had been at once a support, a burden and a vocation. Max Auer gives us a vignette of house-keeper « Frau Kathi » Kachelmayr and his students helping Bruckner as « slowly, and with a heavy heart, he climbed the great stairs for the last time » .

Bruckner looked ill, and the loss of his teeth (due to advanced diabetes) made his profile more pronounced. He complained to the crowded lecture-hall of « water on the chest » , but joked that it was preferable to « water on the brain » , and the eyes were still « friendly, good-natured and spirited » .

Ernst Schwanzara recounts with emotion the words of his revered professor :

« During the last quarter of his course, Bruckner came and sat gently among us on the bench, and said :

“ 3 Movements of my 9th Symphony are already completed, the first 2 are considered final, I still have to settle some details of the third. With this Symphony, I have imposed myself a hard task. I should not have done that because of my advanced age and my health concerns. Especially as it will not be easy to play. The Adagio is the most beautiful I have ever written. It always deeply moves me when I play it on the piano. If I were to die before the completion of my Symphony, then we could give my ' Te Deum ' as a 4th movement. It is my decision. ” »

**Monday, 12 November 1894** : Anton Bruckner gives his last lecture at the University of Vienna. He talks about the state of his work on the 9th Symphony - the Adagio is finished, the « Te Deum » (**WAB 45**) could be used as Finale. Even today, he worked diligently. Climbing the stairs at the University as exhausted Bruckner, resulting in an asthma attack.

### Composing at night

After Anton Bruckner had given-up his activities at the University in 1894, because of ill health, he increasingly lost contact with the world. He would sit at home composing (as he did at his Conservatory office) . He did most of his work in the daytime, but occasionally, he would get-up at night, light 2 candles (no longer using an incandescent lamp since the « Ringtheater » tragedy) , and write-down what he had in mind.

To house-keeper « Frau Kathi » Kachelmayr who remonstrated with him for working at night when his health was so poor, he said :

« One must compose when the right idea comes. »

Sometimes, when Bruckner did not know what to reply, he tried in a naive way to impress her with his status as a composer, shouting :

« Do you know who you are talking to, I am Bruckner ! »

She replied without hesitation :

« And I'm Kathi ! »

End of discussion.

### Missing Hugo Wolf

Bruckner was now surrounded by quietness, so much so that, at times, he longed for company. In particular, he missed his admirer and pupil Hugo Wolf. It was not an intimate friendship which drew the 2 geniuses together. They did not belong to the same generation. But Bruckner loved young Wolf and held his music in high-esteem. Wolf respectfully reciprocated these feelings.

## Death of Josef Hyrtl

**After Tuesday, 17 July 1894 ?** (day of death of Josef Hyrtl) : Anton Bruckner was, by no means, unreflective but thought a great deal about death and an after-life. In a now lost pocket calendar, he wrote-down a sentence of the famous anatomist Josef Hyrtl from the latter's 1864 inaugural address as president of the University of Vienna.

« Is the soul a product of the brain, which functions according to irrefutable organic laws, or is this brain, on the contrary, merely one of those prerequisites, through which the commerce of an immaterial soul with the world is mediated in space ? »

A hermeneutic connection between this quotation from Hyrtl and the 9th Symphony (which Bruckner was composing at the time) cannot be lightly dismissed. In both cases, we can detect existential questioning and wrestling with final statements.

Julius Bistron makes the unnecessary attempt to protect Bruckner from what he calls such a « scientifically based perception of God » . He is of the opinion that Bruckner « only wrote-out the quotation from Hyrtl ... in order to argue against it or to discuss it with other people » . This interpretation would, in fact, stamp Bruckner as narrow-mindedly naive, and he certainly was not that.

Bruckner's circle and later writers have reported, with a mixture of horror and mockery, his touching and kissing the skulls of Ludwig van Beethoven and Franz Schubert at their exhumation ; the attempt to keep the skull of his cousin, Johann Baptist Weiß, who died tragically ; and his efforts to see the body of Emperor Maximilian of Mexico, whom he esteemed. Because of these things, Bruckner has been described as having a tendency to necrophilia, which is utter nonsense. One should think rather of the much greater familiarity with death of an Austrian country child in the 19th Century and of the veneration of relics in the Catholic Church. In this context, a skull could have been nothing unusual or frightening for Bruckner.

## Josef Hyrtl

Josef Hyrtl was a tourist destination in Vienna.

In 1856, the author George Elliot described :

« Another great pleasure we had at Vienna (next after the sight of St. Stephen's and the pictures) was a visit to Hyrtl, the anatomist, who showed us some of his wonderful preparations, showing the vascular and nervous systems in the lungs, liver, kidneys, and intestinal canal of various animals. »

Acknowledging Hyrtl's world-wide fame, he was appointed Rector of the University of Vienna in time for their 500th anniversary, in 1865. He served for that academic year.

Hyrtl retired from the University of Vienna in 1874. His books and specimens had earned him a considerable fortune, and their continued sales allowed him a very comfortable life at his estate in Perchtoldsdorf, near Vienna.

In 1894, a colleague published several anecdotes of Josef Hyrtl's life providing insights on his personality :

« The famous anatomist who has just died at Vienna was always considered an eccentric man because his dress, his manners, and his mode of life differed in some respects from those of other people. It was particularly his time-worn garments that made him conspicuous, and he used in his walks the same soiled blouse which he wore while engaged in his laboratory or in gardening - his favourite hobby. Who would have thought this untidy person to be the world renowned anatomist, and a rich man ? This characteristic of Hyrtl gave frequent occasion to ludicrous incidents at which he himself used to laugh most. »

« A few years back, when he was still in possession of his eye-sight, he was accustomed to walk to Liesing, a charming Viennese suburb, where, in the beer-garden of the brewery, he refreshed himself with a glass of its well-known beverage. One afternoon, he entered the garden and seated himself near a table at which a few merry Viennese burghers were engaged in diminishing the contents of a big dish of stewed fowl. These gentlemen had no idea of the identity of the newly-arrived guest, and after eyeing his simple twill suit came to the conclusion that he must be an inmate of the Liesing asylum for the poor.

A good portion of the dainty meal having been left uneaten, one of the guests called the waiter, saying :

“ Here, give this to that poor man ; let him have a good feed for once. ” which humane proposal was loudly acclaimed by his fellow-revellers.

The waiter, who was a new hand at the brewery, obeyed the command, placing the dish of remnants before the famous savant, who, appreciating the joke, ate a few morsels and, after expressing his thanks, left the garden. A few moments later, 2 waiters carried in a big bowl from which the gilded heads of champagne bottles were protruding.

“ We have ordered no champagne. ”, cried the burghers, and their astonishment may easily be guessed on their being informed that “ the inmate of the local asylum for the poor ” had sent them the champagne as a mark of his gratitude for the stewed fowl, and that the donour was no less a personage than Professor Hyrtl. »

« His sympathy with student life is well-known, and many stories in this connexion are told of him. A Jewish medical student named Jerusalem was being examined, and, in the hall, there was waiting a small crowd of his co-religionists, when Hyrtl came-out from the examination chamber. He was immediately surrounded by the crowd of young students, who asked him the fate of their comrade Jerusalem.

Hyrtl, with a plaintive voice and sympathetically shaking his head, said :

“ Weep, O Israel ; Jerusalem has fallen. ” »

« Once a student was unable to reply to one single question at his examination.

Hyrtl then asked him :

“ Perhaps, you can tell me where you live ? ”

The student named the street, of which Hyrtl professed his ignorance, and said :

“ You see how science is divided : you know nothing of anatomy and I do not know the locality where you live.” »

An anecdote respecting his marriage is worth repeating. It was in the year 1866, when, one day, Hyrtl approached the porter of the Anatomical Institute, Andrew Swetlin by name :

« “ Andrew, have you a prayer-book handy ? ”, asked Professor Hyrtl.

Andrew fetched the book, and Hyrtl went away. An hour later, he returned and handed to the porter the prayer-book.

The porter, unable to suppress his curiosity, asked :

“ You do not need it any more, Sir ? ”

Whereupon Hyrtl replied :

“ No, thanks ; I only needed it for a moment. I have just been at my own wedding. ” »

Hyrtl died in his sleep during the night of July 16-17, 1894, at his estate at Perchtoldsdorf. He had founded an orphanage in Mödling and, since he had no children, made this institution the heir to his fortune. The Museum Mödling includes an exhibit on Hyrtl.

...

The Austrian anatomist Josef Hyrtl was born on 7 December 1810 at Kismarton (now, Eisenstadt) , in Old Hungary ; and died on 17 July 1894.

Hyrtl began his medical studies in Vienna, in 1831, having received his preliminary education in his native town. His parents were poor, and he had to find his own money to pay for the expenses of his medical education. In 1833, while he was still a student, he was named prosector in anatomy, and the preparations which this position required him to make for teaching purposes attracted the attention of professors as well as students. His graduation thesis, « Antiquitates anatomicæ rariores » , was a prophecy of the work to which his life was to be devoted. On graduation, he became Professor Joseph Julius Czermak's assistant (« famulus ») and, later, became also the curator of the

museum. He added valuable treasures to the museum by the preparations which he made for it. As a student, he set-up a little laboratory and dissecting room in his lodgings, and his injections of anatomical material were greatly admired. He took advantage of his post in the museum to give special courses in anatomy to students and in practical anatomy to physicians. These courses were numerous attended.

In 1837, when he was only 26, Hyrtl was offered the professorship of anatomy at the University of Prague and, by his work there, laid the foundation of his great reputation as a teacher of anatomy. There, he completed his well-known text-book of human anatomy, which went through some 20 editions and has been translated into several languages. The chair of anatomy at Vienna fell vacant in 1845. Satisfied with the opportunities for work at Prague, he would not have applied for the post but for the insistence of his friends. He was immediately elected. 5 years later, he published his « Hand-book of Topographic Anatomy » , the first text-book of applied anatomy of its kind ever issued. Before his death, he was to see this department of anatomy become one of the most important portions of the teaching in the medical schools of the world. It was as a teacher that Hyrtl did his great work. Professor Karl von Bardeleben, himself one of the great teachers of the 19th Century, did not hesitate to say that, in this, Hyrtl was unequalled. His fame spread throughout Europe, and he came to be looked upon as the special glory of the University of Vienna. In 1858, he was visited by George Eliot and her partner.

In her journal, she wrote :

« Another great pleasure we had in Vienna (next after the sight of St. Stephen's and the pictures) was a visit to Hyrtl, the anatomist, who showed us some of his wonderful preparations, showing the vascular and nervous systems in the lungs, liver, kidneys, and intestinal canal of various animals. He told us the deeply interesting story of the loss of his fortune in the Vienna Revolution of 1848. He was compelled by the revolutionists to attend on the wounded for 3 days' running. When, at last, he came to his house to change his clothes, he found nothing but 4 bare walls ! His fortune in Government bonds was burned along with the house, as well as all his precious collection of anatomical preparations, etc. He told us that, since that great shock, his nerves have been so susceptible that he sheds tears at the most trifling events, and has a depression of spirits which often keeps him silent for days. He only received a very slight sum from Government in compensation for his loss. »

In 1865, on the occasion of the celebration of the 500th anniversary of the foundation of the university, he was chosen rector in order that, as the most distinguished member of the university, he should represent her on that day. His inaugural address as rector had for its subject « The Materialistic Conception of The Universe of Our Time » .

In this, he argued that there was clear lack of logic in the materialistic view of the world and concluded :

« When I bring all this together, it is impossible for me to understand on what scientific grounds is founded this resurrection of the old materialistic view of the world that had its first great expression from Epicurus and Lucretius. Nothing that I can see justifies it, and there is no reason to think that it will continue to hold domination over men's minds. »

In 1880, there was a magnificent celebration of Hyrtl's 70th birthday, when messages of congratulation were sent to him from all the universities of the world. After retiring from his professorship, he continued to do good work, his last publication being on « Arabic and Hebraic elements in anatomy ». On the morning of 17 July 1894, he was found dead in bed at his estate in Perchtoldsdorf, near Vienna.

His monograph for the reform of anatomical terminology, « Onomatologia Anatomica » (Vienna, 1880) , attracted widespread attention.

...

Josef Hyrtl was born in the Hungarian village of Kismarton (now, Eisenstadt) . When he was 3 years old, the family moved to Vienna, where Joseph became a choir-boy at the Palace Chapel and a student at the State boarding-school. He studied medicine at the University of Vienna and, because of his interest in comparative anatomy, he was appointed prosector at the university, in 1833. A few years later, Hyrtl earned his doctorate with a dissertation on the history of medicine. He emphasized the need for anatomical instruction with a clinical orientation. He considered physiological experiments on animals to be unproductive. In 1837, he was named professor of anatomy at the University of Prague. He returned to Vienna in 1845 to join the faculty at the University of Vienna.

Hyrtl's best-known work was his 1846 « Hand-book of Human Anatomy » , a text-book on anatomical structure and function that contained no illustrations because Hyrtl had provided his students with drawings at each lecture. He was an impressive lecturer with a histrionic approach. It was said that he spoke like the Roman orator Cicero (106 to 43 B.C.) and wrote like the German literary critic Heinrich Heine (1797-1856) . The book emphasized material of most importance to practitioners but also contained entertaining historic and etymological digressions. It underwent 22 editions and was translated into virtually every major language. In 1847, Hyrtl published his « Hand-book of Topographical Anatomy » , which was translated into several languages. He stated that this book introduced topographical anatomy to the German-speaking world and made it an independent discipline. He also published a « Manual of Dissection » and a « Manual on Corrosion Anatomy » .

Hyrtl was an excellent technical anatomist and prosector. He developed a virtual monopoly on the production and sale of special anatomical preparations. His corrosion preparations were made by injecting vessels and bone cavities with a stiffening material and, then, destroying the surrounding soft tissue or bone. He also described the comparative anatomy of the inner-ear, beginning with the mouse and progressing to the elephant. An epitympanic recess, where the head of the « malleus » and the inner-part of the « incus » are located, was given his name : Hyrtl recess. Corrosion specimens of the human labyrinth led to the histological description of the terminal auditory apparatus in the « cochlea » by one of his students, Italian anatomist Alfonso Corti (1822-1876) .

Hyrtl developed and expanded the famous Anatomical Museum at the University of Vienna and was declared the honorary Rector for the 500th anniversary celebration of the university, in 1864. His irascible and ambitious nature isolated him from his professional colleagues, however, and his haughty manner and contempt for physiological experimentation alienated him from other professors. He became embittered and retired in 1874. He spent the next 20

years working on publications in Perchtoldsdorf (near Vienna) . Despite his lack of anatomical discoveries, Hyrtl was considered the most effective teacher of anatomy in the 19th Century.

Hyrtl founded an orphanage in Mödling (about 8 miles southwest of Vienna) and made it the heir to the fortune amassed from the sale of his anatomical preparations and textbooks. He also supported a boarding-school and a church, as well as providing endowments to deserving medical students. His famous collection of 139 human skulls from 22 different countries, his corrosion preparations of various placentas, and an elaborate exhibit of the organs of hearing were given to the Mutter Museum of the College of Physicians of Philadelphia, Pennsylvania.

Hyrtl died in Perchtoldsdorf, on July 14th, 1894, aged of 83. He was honoured on stamps issued by Austria, in 1937 and 1984.

...

Josef Hyrtl earned an international reputation as a technical anatomist. In the mid-19th Century, the field of medicine depended heavily on anatomical discoveries, and Hyrtl's work was key to medical progress. Hyrtl was a lifelong academic, but the money he earned from producing anatomical supplies made him rich.

Hyrtl was born in Kismarton, Hungary, which is now part of Austria, and studied medicine in Vienna, serving as prosector (one who performs dissections for anatomical demonstrations) for the anatomist Joseph Berres. While he was still a student, Hyrtl taught anatomy to practitioners in the community. When he completed his doctorate, in 1835, his dissertation advocated the study of anatomy and clinical instruction, seeing no value in conducting physiological experiments on animals. Hyrtl continued as prosector for another 2 years before accepting an anatomy professorship in Prague. In 1845, Hyrtl returned to teach anatomy at his « alma mater » in Vienna. He was awarded the teaching position that became vacant on the death of his old teacher, Berres. Hyrtl added to the demonstration collections, published frequently on his areas of research and taught applied anatomy to physicians.

Hyrtl published his first book, « Hand-book of Human Anatomy » , in 1846, and, well-received, being translated into all of the major languages and eventually went to 20 editions. Hyrtl reasoned that he had already provided his students with sketches and drawings at every lecture, so the book had no illustrations. The text focused on anatomical structure and function, which were most important to the practitioner.

In 1847, Hyrtl published the widely read « Hand-book of Topographical Anatomy » , which organized the study of anatomy by region of the body. This text introduced topographical anatomy in Germany and established it as a separate discipline.

Hyrtl produced and sold specialized anatomical preparations that were used by scientists and all major anatomical museums. To better study anatomical structure, he used a preparation to inject vessels and bone cavities with a material that made them stiff. He, then, destroyed the adjacent bones or soft tissue. The technique enabled Hyrtl to study comparative anatomy across different species. Hyrtl's primary interest was anatomy, so, he left the study of

tissues to others. In 1860, Hyrtl published a manual on dissection and his text on corrosive anatomy came-out in 1873. In his academic career, Hyrtl also improved and expanded the Anatomical Museum although the work was interrupted by political unrest in the 1850's.

During his tenure in Vienna, Hyrtl grew distant from his colleagues, who complained about his strong ambition and irritability. During the 30 years Hyrtl spent on the Viennese medical faculty, he was never chosen to serve as dean, a reflection on his strained relations with colleagues. In the lecture hall, Hyrtl had a flair for drama and liked to draw together concepts from history, scientific terminology, surgery and physiology. His students enjoyed the unusual approach, and Hyrtl's lectures were always well attended. In the academic year 1864-1865, the year of the university's 500th anniversary, Hyrtl was asked to serve as rector.

Hyrtl was primarily interested in bone structure and the circulation of blood. He wrote about the characteristics of blood vessels in birds and amphibians and how these differed from human veins and arteries. In his comparative anatomy research, Hyrtl looked at patterns in veins, and the structure of the portal vein of the adrenal gland. He was interested in the role of cartilage in the knee, and the design of the hip-joint.

When Hyrtl examined non vascular hearts, his theories about coronary arteries conflicted with those of physiology professor Ernst von Brücke, leading to a bitter dispute. Although Hyrtl's hypotheses were later verified, the conflict wore him down. Hyrtl's comparative anatomy research of the ear led him to a previously unreported muscle of the « incus » which lay in an area which came to be known as Hyrtl's recess.

Hyrtl left the university in 1874, a little ahead of the customary retirement age, and spent the next 20 years writing about the history of anatomical terminology. Through the sale of his anatomic preparations, Hyrtl accumulated a substantial amount of money. After his death in his Perchtoldsdorf Villa, near Vienna, Hyrtl's fortune was given to deserving medical students, an orphanage, a boarding-school, and a church.

...

While a medical student in Vienna, Josef Hyrtl learned methods for anatomical studies that involved injection and corrosion. This consists of injecting blood vessels or other open organs with coloured substances that solidify, then corroding away the organic tissue with acid. What remains is a 3 dimensional replicate of the vessels' networks. Hyrtl's skill at preparing whole organs, and his investigations of the resulting preparations, provided significant insight on the anatomy of humans and other animals. He also produced small injected and corroded specimens for microscopical investigations, which were in high-demand during his lifetime. Hyrtl's sets of microscopical preparations are very rarely encountered today.

Although Brian Bracegirdle, in his « Microscopical Mounts and Mounters » , dismissed Hyrtl's work as having « very little scientific worth » , one can argue that the 3 dimensional injection-corrosion specimens of Hyrtl and others provide an understanding of anatomy that cannot be easily discerned from thin-section preparations.

For example, a contemporary of Hyrtl's noted :

« His preparations, famous for many years, demonstrate by coloured material injected through some of the principal arteries the presence of the microscopic arteries and veins accompanying the lacteal vessels in the minute intestinal papillæ. By the same means, he demonstrated in 1874 the presence of a vascular net in the cornea of the eye, and after many ineffectual attempts, he succeeded in filling the arteries and veins of an infant 8 days old from the umbilical vein with colouring matter so perfectly as to reach and penetrate the minute arteries and veins of both corneæ. »

Josef Hyrtl was born on 7 December 1810, in Kismarton, Hungary (now : Eisenstadt, Austria) . Soon afterward, he and his family moved to Vienna. There, his father played oboe in the Orchestra of Nicholas II, Prince Esterházy. Young Josef became a choir-boy for the Palace Chapel. He also received education at the government boarding-school.

He began studying medicine at the University of Vienna in 1831. While a student, he became a prosector in anatomy, assisting the professor of anatomy, Joseph Berres. This job required Hyrtl to prepare specimens for lectures, etc. , and Berres taught him well. After graduating in 1835, Hyrtl stayed on as prosector with Berres for another 2 years. A London review of Berres' 1836 « Anatomie der Mikroskopischen Gebilde des Menschlichen Körpers » raved about the skills of Berres and Hyrtl in preparing specimens and using the microscope to precisely investigate anatomical structures :

« Without anatomy, there can be no physiology ; this is now an old truth. But it is only comparatively recently that it has become generally acknowledged that there can be no rational account given of the functions of any part until the structure of its tissues is thoroughly known. Who, for example, would attempt to explain the action of the lymphatics in digestion without being familiarly acquainted with the texture of the parts, suitably injected and microscopically examined ? Can the secretions of any membrane, gland, or organ, be even plausibly accounted for, without an accurate demonstration of the parts concerned ? The value of microscopic investigation has long been admitted ; but not universally. The sceptics have always been in the majority : they have refused to believe what they had not themselves an opportunity of seeing ; and, in some instances, they have refused to see what, if acknowledged as real, would overturn their theories. (...) With the compound microscope of Ploßl (an artist whom he praises in the highest-terms) , (Berres) was enabled to appreciate the excellence of these, but, at the same time, to see that they were far from being perfect. (...) His present criterion of the excellence of a preparation suited for microscopical purposes is this - to be able to distinguish the anastomosis of all the vessels even in the minutest twigs, and to discern their perfect detachment or separation from the surrounding organic matter. Every vessel is to be traceable continuously and without interruption through its entire course. How he and his assistant Doctor Hyrtl manage to effect these exquisite preparations is fully-explained. »

In 1837, Hyrtl was appointed professor of anatomy at the University of Prague. His training with Berres, and subsequent refinement of his skills, led to Hyrtl's Classic text-book on human anatomy, « Lehrbuch der Anatomie des Menschen » . It was subsequently republished in over 20 editions and translated into many languages. His injection specimens continued to grow in esteem : an 1842 article stated that « those of Lieberkühn in particular (...) are,

notwithstanding all our modern improvements, some of the finest injections in existence ; they are only equaled by those of our esteemed friend, Professor Hyrtl, of Prague » .

He moved back to Vienna in 1845, to take the late Doctor Berres' position as professor of anatomy at the University of Vienna. Another book destined to be a Classic, « Handbuch der Zergliederungskunst » (Hand-book of Topographic Anatomy) , was published there in 1860. Many other important books and papers followed. Hyrtl's efforts as a teacher and writer had significant impact on the importance of studying anatomy in medical school.

Hyrtl also became a tourist destination. In 1856, the author George Elliot described :

« Another great pleasure we had at Vienna (next after the sight of St. Stephen's and the pictures) was a visit to Hyrtl, the anatomist, who showed us some of his wonderful preparations, showing the vascular and nervous systems in the lungs, liver, kidneys, and intestinal canal of various animals. »

Acknowledging Hyrtl's world-wide fame, he was appointed Rector of the University of Vienna in time for their 500th anniversary, in 1865. He served for that academic year.

For many years, Hyrtl made his injected-corroded specimens available to other investigators. These sales appear to have been largely through private contacts, although he did display at expositions. He earned a Gold Medal at the 1862 London Exposition.

A report of the 1867 Paris Universal Exposition stated :

« The anatomical preparations exhibited by Professor Hyrtl, of Vienna, are (...) remarkable (...) If the manner of preparing them is not entirely new, they are at least prepared with an astonishing skill, parts generally considered inaccessible to the scalpel being beautifully dissected. These pieces are quite worthy of the great reputation of their author. The labyrinths of the ear of different mammiferous animals exhibited by " Herr " Hyrtl are some of the most curious and difficult things the anatomist can prepare. »

After the 1867 Paris Exposition, American « The Medical Record » noted :

« Hyrtl's magnificent anatomical museum has been purchased by an American College for \$ 8,000, it having been offered for sale at the Paris Exposition. Hyrtl is the Professor of Anatomy at Vienna, and, from personal observation, we are prepared to testify to its value. What college has the treasure ? »

The fate of another of Hyrtl's collections is known. In 1874, the Mutter Museum of the College of Physicians of Philadelphia, Pennsylvania, acquired his collection of 139 human skulls.

The museum's description :

« His work was an attempt to counter the claims of phrenologists, who held that cranial features were evidence of intelligence and personality and that racial differences caused anatomical differences. Hyrtl's aim in collecting and studying the skulls was to show that cranial anatomy varied widely in the Caucasian population of Europe. Each skull is mounted on a stand, and many skulls are inscribed with comments about the person's age, place of origin, and cause of death. »

In 1873, Hyrtl published both a catalogue of his available works and a book describing his methods, « Die Corrosions-Anatomie und Ihre Ergebnisse » .

George Huntington, and probably others, lamented that Hyrtl's methods book lacked sufficient detail to replicate his works :

« It is curious to note that the secrecy with which (Frederick) Ruysch surrounded his method of preparing corrosions seems to have been imitated to a greater or less extent by his successors. It is a matter of regret that the information which Hyrtl gives on the composition of the mass in his large work on " Corrosion-Anatomie " is so unsatisfactory. Personally, I look back on much time and material expended in fruitless attempts at following his instructions. In spite of the utmost care, we have found it impossible to obtain even moderately successful permanent corrosions with the mass recommended by him. »

Nonetheless, some details of Hyrtl's methods can be ascertained. He stated that the colours for his « masses » (the waxy substances that are injected) were purchased as fine paint powders from artist supply-shops. Colours were chosen for their visual impact :

A visitor is quoted as declaring :

« Mais ce ne sont pas des préparations anatomiques, ce sont des bijoux. »

(« These are not anatomical preparations - they are jewelry. »)

Hyrtl followed that anecdote with the statement :

« And he was right. »

In the corrosion step, Hyrtl wrote :

« I only use hydro-chloric acid. I have never tried nitric acids, since I do not pre-suppose them from the very beginning, to leave certain colours, like the sulphurides and the carbonic salts, unchanged. Concentrated hydro-chloric acid destroys the parenchymes so quickly that a smaller preparation can be washed-out in 2 to 3 days. If we wait a few more days, very voluminous and hard organs, such as the large animal-livers, will be thoroughly corroded. Only whole parts of the body, which contain many bones, e.g. , heads, feet, hands, take a long time. For very small organs

often already a couple of hours. Whole bodies of fish and amphibians are corroded in much more rapid time than those of warm-blooded animals. »

...

Wolfgang Amadeus Mozart was buried in a common grave. And like most graves of the time, his was eventually cleared to make way for new bodies. Supposedly, the grave-digger at this particular cemetery, St. Marx's in Vienna, was a music-lover who made a note of where Mozart's body was buried. And when the grave was cleared in 1801, he took it as a souvenir.

The skull was later passed around among various Viennese before landing in the hands of famed anatomist Joseph Hyrtl, who attached a red label describing its origin to the top of the cranium. Hyrtl may also have been the one who added a note on the skull's right temporal bone : « musa vetat mori » (the muse prevents death) - a poignant line from Horace.

### Meißner's entry on moving

**December 1894** : Anton Meißner's entry in Anton Bruckner's pocket calendar :

« (Belvedere) Inspector (Eduard) Henrich / Fireman Würfl / Key z. / Former apartment / (Wilhelm von) Wartenegg Custos (curator) » plus floor-plan of an apartment.

### Wilhelm von Wartenegg

The writer, art-historian, art-collector, and military officer, Wilhelm von Wartenegg (pseudonym : Wilhelm Wehm) , was born on 24 June 1839 in Vienna ; and died on 13 October 1914 in Vienna. Wartenegg studied at the Faculty of Philosophy of Vienna University and at the Academy of Fine-Arts. In 1866, as an officer of the Uhlán 4th Regiment, he was part of the military campaign against Bohemia and came to Vienna in 1874 as a lieutenant. There, he was appointed curator of the Imperial Art Gallery at Belvedere Palace in 1878. In 1891, on order of the City of Vienna, he wrote the Festival's official poem celebrating the Centenary of Mozart's death. Wartenegg maintained contact with Franz Grillparzer, after which he was a disciple.

### Works

Sänger von Rizzio, Trauerspiel (1860) .

Maria Stuart von England, Trauerspiel (1871) .

Rosamunde : Trauerspiel in 5 Aufzügen, Druck von Oswald Mutze, Leipzig (1873) .

Andreas Paumkircher : Trauerspiel in 5 Aufzügen, Wien (1878) .

Alt-Österreich : Festspiel für das fünfzigjährige Regierungsjubiläum Seiner Majestät des Kaisers und Königs Franz-Josef I. , Selbstverlag, Wien (1898) .

Erinnerungen an Franz Grillparzer. Fragmente aus tagebuchblättern, C. Konegen, Wien (1901) .

Führer durch die Gemälde-Galerie ... (Wien, Selbstverlag der kunsthistorischen Sammlungen des Allerhöchsten Kaiserhauses, 1892) , also by Kunsthistorisches Museum Wien. Gemäldegalerie, August Schaeffer, and Eduard Engerth.

Führer durch die Gemälde-galerie ... (Wien, Selbstverlage der kunsthistorischen Sammlungen des Allerhöchsten Kaiserhauses, 1896-1904) , also by Kunsthistorisches Museum Wien. Gemäldegalerie, Gustav Glück, and August Schaeffer.

Zudem veröffentlichte er die Lustspiele Der Ring des Opferdingen (1891) und Deklamationen (1879) sowie den Roman Schloß Winikstein (1884) .

### Wolf talks about an upcoming Bruckner concert

**Letter 141** from Hugo Wolf to Melanie Köchert :

« ... The theatrics usually go-on during the noon-day meal, because in bad weather we don't get together during the other hours of the day. I spend my happiest hours at the splendid Bechstein grand-piano, which has few equals, to be sure. (Richard) Sternfeld wrote me that songs of mine are to be sung at the Berlin Wagner Society at the end of the month and asks me to undertake the accompaniment. But I have no desire to do this at all. If the arrangement with (Rudolf von) Larisch works-out, I'll stay in the country and make every effort to provide for myself honestly. Regarding the Bruckner concert, I don't know now whether it's on the 25th or the 28th. You wrote the number so indistinctly that I have to ask you to clear this up for me. Did I write you that " Elfenlied " and " Feuerreiter " will be performed on December 2nd in Vienna ? All the rest, God willing, in Vienna. Many, many greetings to you and all from your always devoted,

Hugo Wolf. »

### The last sacraments for the second time

**Saturday, 8 December 1894** : Dramatic decline of Anton Bruckner's health for several days. Doctors lose hope. Ignaz Bruckner sends a telegraph from St. Florian. The last sacraments are administered to Bruckner for the second time in his life.

**After Sunday, 9 December 1894** (or after 14 December 1894 ?) : Anton Bruckner recovers almost by miracle ! He

explains his (supernatural) improvement by the intercession of Linz Bishop Franz-Josef Rüdiger. (The beatification process of Rüdiger commenced on Thursday, 28 February 1895.)

Finally, doctors will allow him to spend Christmas at the monastery of Klosterneuburg.

Doctor Richard Heller, assistant of Doctor Leopold Schrötter, takes-over Doctor Alexander von Weißmayr for the daily visits.

### Beatification of Franz-Josef Rüdiger

The beatification process of Franz-Josef Rüdiger commenced in the Linz diocese in an informative process that Bishop Franz Maria Doppelbauer inaugurated on 28 February 1895 and later concluded in a solemn Mass held on 15 December 1900. Twin rogatory processes were held both in the Diocese of Rome and the Diocese of Brescia from 13 May 1897 until 2 June 1898 while all of Rüdiger's spiritual writings received the approval of theologians as being in line with Christian doctrine on 1 March 1902. The formal introduction to the cause came under Pope Pius X on 6 December 1905 and the late bishop became titled as a « Servant of God » .

An apostolic process was held in Linz that Doppelbauer opened on 8 November 1906 while the same bishop later closed it on 3 July 1903 ; the Congregation for Rites validated this process in Rome on 8 July 1914. A second apostolic process opened in Linz on 15 December 1926 under Bishop Johannes Maria Gföllner and closed later in 1931 ; this also received C.O.R. validation on 14 January 1853 and an ante-preparatory committee later approved the cause and its continuation on 24 November 1964. The Congregation for the Causes of Saints later validated all previous processes on 7 June 2002 and received the official « Positio » dossier from the postulation in 2002.

Theologians voiced their assent to the cause on 30 May 2008 and the cardinal and bishop members of the C.C.S. also voiced their approval for the cause on 20 January 2009. The confirmation of Rüdiger's model Christian life of heroic virtue allowed for Pope Benedict XVI to name Rüdiger as Venerable on 3 April 2009.

The miracle required for his beatification was investigated and then received validation from the C.C.S. on 7 June 2002. The medical board approved this miracle a decade later on 16 December 2010.

The current postulator for this cause is Doctor Andrea Ambrosi.

### Health reports

**Tuesday, 11 December 1894** : Anton Bruckner continues his prayer records (uninterrupted until April 30, 1895) .

**Thursday, 13 December 1894** : According to a (outdated ?) report by the « Steyrer Alpen-Bote » (Number 99, page 6) , Anton Bruckner's health has worsened.

## Vienna academic Wagner Society : Celebration concert

**Friday, 21 December 1894** : Today's special celebration-concert in honour of Anton Bruckner by the Vienna academic Wagner Society is canceled due to the composer's illness. Planned programme : piano-version of the 7th Symphony (WAB 107) to be played by Ferdinand Löwe ; the « Te Deum » (WAB 45) to be conducted by Josef Schalk with the Society's Choir and members of the Vienna « Schubertbund » .

## The Schmied sisters

**Before Christmas 1894 (?)** : Anton Bruckner goes shopping with house-keeper « Frau Kathi » Kachelmayr and gets to know a young girl who works as a laundress. During this same period, he also was in contact with the 2 Schmied sisters.

## Spending Christmas at Klosterneuburg

Bruckner's recovery allows him to spend Christmas at Klosterneuburg Abbey.

**Sunday, 23 December 1894** : Pocket calendar entry by Anton Bruckner :

« Holy Confession. »

**Monday, 24 December 1894** : Pocket calendar entry by Anton Bruckner :

« Heiliges Sakrament der Buße (Holy Sacrament of Repentance) , die Altar (Communion at the altar) .

l. Öhl. (Sacraments of the Dead) . Vollständig Ablaß (completely drained) . »

**Tuesday, 25 December 1894** : Anton Bruckner is unable to play the organ at Klosterneuburg Abbey on Christmas Day due bad swollen feet.

**Wednesday, 26 December 1894** : Anton Bruckner plays the organ (for the last time in his life) during Holy-Mass at Klosterneuburg Abbey. He plays with difficulty the ending-piece because a faulty organ-pedal which creates a harsh dissonance.

## Pleurisy inflammation

**End of December 1894** : After Anton Bruckner returned from Klosterneuburg to Vienna, he suffers from another pleurisy inflammation. A telegraph is sent to his brother Ignaz, in St. Florian. The second attempt to hold a celebration-concert in his honour by the Vienna academic Wagner Society is also canceled.

Ignaz Bruckner will stay in Vienna for 6 weeks to assist house-keeper « Frau Kathi » Kachelmayr in nursing his brother.

Whether Doctor Richard Heller took care of the sick Bruckner after over-coming this new crisis, or **after December 9th, 1894**, needs to be clarified.

### Preparing to move

Afflicted by many respiratory problems, besides having swollen feet, it had now become a very perilous exercise for Anton Bruckner to go to the Imperial Chapel (« Hofburgkapelle ») to attend religious services. The old man had difficulty climbing the stairs of the « Hôtel de France » .

Bruckner's dependence on his personal secretary and confidant, Anton Meißner, continues to grow.

Assisted by Meißner, he makes a list of valuables (ring, watch-chain, golden box, diamond pin) and notes the addresses of his physician, Doctor Richard Heller, and his executor, Doctor Theodor Reisch.

He orders Meißner to throw all the superfluous papers into the open fire, a rigorous act mainly affecting his early manuscripts. It is the customary act by people when moving to other premises, to get rid of each and everything that is no longer valuable, just to minimise the hassle of toil and moil.

(It appears that Meißner kept a part to himself and gave away various manuscripts after Bruckner's death.)

Bruckner decides to offer, as a gift, a copy of the score of the First Symphony in a « hybrid » version (Linz - Vienna) to his friend Karl (Borromäus) Aigner, music teacher at the monastery of St. Florian.

The score of what was to become the Symphony Number « 0 » , which is supposed to be destroyed, finally ends up in the middle of another pile !

The composer did not seem very happy with the discovery, commenting in several places on the score :

« Not valid » , « Only an essay » , « To be discarded » .

And, on the cover-page, he notes :

« Annullierte » (Ø)

### Another quick recuperation

**Tuesday, 1 January 1895** : Letter from Ignaz Bruckner (Vienna) to Johann Nepomuk Hueber (Vöcklabruck) :

Anton's quick recuperation (again) astonishes his doctors and gives rise to hope. Ignaz must remain in Vienna for some time. New Year Greetings.

**Saturday, 5 January 1895** : The « Linzer Zeitung » reports on Anton Bruckner's health-condition.

#### Paying the lawyer

**Sunday, 13 January 1895** : Pocket calendar entry by Anton Bruckner (from October 1894) :

« On January 13th, 1895, must pay 50 Florins to “ Herr ” Lawyer. (Doctor Theodor Reisch ?) »

#### Karl Almeroth writes an article

**Sunday, 13 January 1895** : The « Steyrer Alpen-Bote » (Number 4) reports on page 2 on the improved state of health of Anton Bruckner. Also, Karl Almeroth signed an article entitled : « Bruckners Himmelfahrt » (Bruckner's Ascension) .

#### Hanslick's Memoirs

**Saturday, 19 January 1895** : The morning-edition of the Munich « Allgemeine Zeitung » (Number 19, page 1f) continues its article (undertaken yesterday) on Eduard Hanslick's Memoirs (« Aus meinem Leben ») . Also, Doctor Theodor Billroth comments on Anton Bruckner.

Hanslick's unpaid lectureship at the University of Vienna led in 1870 to a full-professorship in history and æsthetic of music, and later, to a doctorate « honoris causa » .

Hanslick often served on juries for musical competitions and held a post at the Austrian Ministry of Culture and fulfilled other administrative roles.

He retired after writing his memoirs, but still wrote articles on the most important premieres of the day, up to his death in 1904 in Baden, near Vienna. He always signed his articles under the initials « Ed. H. » .

#### Brahms and Hanslick

Johannes Brahms was personally very fond of Eduard Hanslick. In 1887, they even planned to travel to Italy together but eventually made different arrangements.

Writing to Baroness Helene Heldburg in **January 1895** concerning a possible visit by him and Hanslick to Meiningen that autumn, he praised his friend's good and amiable character and his still vigorous enthusiasm for all things attractive and beautiful, and he assured the Baroness that she would like him very much indeed (in the end, however, ill health prevented Hanslick from accompanying Brahms on the trip) .

To Clara Schumann, Brahms wrote that **August**, in connection with Hanslick's approaching 70th birthday :

« I know few persons for whom I feel as deep affection as I do for him. To be so naturally good, well-intentioned, honest, truly modest, and everything else I know him to be, seems to me very fine and very rare. »

Brahms had a further opportunity to proclaim his warm feelings for Hanslick at a birthday luncheon at Viktor von Miller zu Aichholz's house in Gmunden, on **11 September** of the same year. Greatly moved, he paid tribute, in a short speech, to Hanslick's fine personal and intellectual qualities, and declared that while they by no means saw eye-to-eye on all matters and their interests diverged considerably, he had rarely known a more discerning or excellent man.

According to Richard Heuberger, who was among the guests :

« The 2 men wept as they kissed each other. »

### Mathias Salcher & Söhne

**February 1895** : Bruckner's pocket calendar entries :

Unknown hand-writing : « Doktor Theodor Reisch, " Hauptstraße " Number 5, 19th District. »

Anton Meißner's hand-writing (?) : « Anton Meißner, " große Pfarrgasse " Number 9, 1st floor, 2nd District. »

During the day : « Go to Mathias Salcher & Sons, " Werderthorgasse " Number 2a, 1st District. »

Bruckner's hand-writing : « ad oramus Liszt (/) ? ad oramus (/) ? Bread (/) ? Coffee. » (Dietary request ?)

### The Salcher Family

Die Familie Salcher waren österreichische Industrielle, die zwischen 1858 und 1923 die Harlander Coats in St. Pölten gründeten und leiteten. Heute erinnert neben den vielen Gebäuden, die unter ihrer Führung errichtet worden sind, die Salcherstraße in Harland an ihr Wirken.

**Josef Salcher (senior)** wurde am 20. März 1830 als zweiter Sohn Mathias Salchers in Wien geboren und erlernte die Weberei im väterlichen Betrieb. Er übernahm 1859 die Leitung des Werks in Harland. Josef Salcher galt als Wohltäter, er gründete unter anderem die Schule in Stattersdorf. Er verstarb am 15. November 1889.

**Josef Salcher (junior)** wurde als 1. Sohn Josef Salcher seniors am 31. Dezember 1861 in Brunn bei Pyhra geboren. Er übernahm die kaufmännische Leitung der Betriebe in Harland nach dem Tod seines Vaters. Unter seiner Führung wurde die Georgsspinnerei in Ochsenburg gebaut und die Firma in eine Aktiengesellschaft umgewandelt. Er verstarb am 7. April 1920.

**Carl Salcher** wurde 1863 als der 2. Sohn Josef Salcher seniors geboren. Er übernahm nach dem Tod eines Vaters die technische Leitung des Betriebes. Auf seine Initiative hin wurde die St. Pöltner Straßenbahn gegründet, außerdem war er Bürgermeister von Pyhra. Er hatte mit seiner Frau Laura eine Tochter namens Hedwig, die als letzte der Familie Salcher in Harland lebte. Er verstarb am 21. Dezember 1906.

**Ferdinand Salcher** der 3. Sohn Mathias Salchers gründete in Wagstadt (Österreichisch-Schlesien) einen Zweigbetrieb der « Mathias Salcher & Söhne AG » (MASSAG) zur Herstellung von Knöpfen. Er verstarb am 18. August 1889 in Wagstadt.

**Ferdinand Salcher** übernahm zusammen mit seinen Brüdern von seinem Vater Ferdinand Salcher den Zweigbetrieb der « Mathias Salcher & Söhne AG » (MASSAG) in Wagstadt. Er verstarb 1935 in Wagstadt.

...

Mathias Salcher & Söhne, Kaiserlich-Königliche Privilegierten Steinnuss-, Stoff-, Metallknopf-, Ösen- und Schnallen-Fabriken, mechanische Weberei und Appretur.

Die Anfänge des Betriebs reichen in das Jahr 1828 in dem sich der Canevasweber Mathias Salcher in Wien selbständig machte. Die Weberei beschäftigte bereits 1840 rund 20 Gesellen. 1850 importierte Salcher die 1. Patentknopfmaschinen aus Deutschland. Ebenso führte er 1859 die Erzeugung von Eisengarn auf Kärtchen ein. In diesem Jahr traten die Söhne des Gründers als Gesellschafter bei. In weiterer Folge wurden Fabriken in bei St. Pölten und in Wagstadt, Theresienhof, Ober- und Unter-Stattersdorf. Der dort produzierte Harlander Spulenzwirn entwickelte sich zum Exportschlager. 1893 wurde schließlich noch eine Baumwollspinnerei in Ochsenburg errichtet. Die Zahl der beschäftigten Arbeiter stieg auf 3.000. Das Wiener Stammhaus übersiedelte 1878 von das Warenhaus in der Werdertorgasse 2a. Um die Jahrhundertwende umfaßte die Erzeugung Nähmaschinenzwirn, Eisen- und Baumwollstrickgarn, Knöpfe, Schnallen und Ösen. Dazu gehörte auch der Großhandel mit Kurzwaren aller Art. 1894 wurden die Harlander Fabriken abgetrennt und der schwerpunkt auf den Produktionsstandort Wagstadt verlegt. Als Steinnußknopffabrik waren Mathias Salcher & Söhne der größte Produzent der Welt mit Handelsniederlassungen in Europa und Übersee.

### Mathias Salcher

Mathias Salcher was born on 14 July 1803 in Maria Luggau, Carinthia. The son of a peasant, he learned the art of weaving in Passau and moved to Vienna in 1828, where he founded a company that produced ribbons and braids. From 1840, he also produced silk buttons, employing 20 workers. In 1859, he set-up the first iron yarn factory in Austria (Harland near St. Pölten) and his 3 sons became partners. He died on 14 November 1879 in Vienna.

...

Mathias Salcher, Industrieller : geboren 14. Juli 1803 in Maria Luggau (Kärnten) ; gestorben 14. November 1879 in Wien. Bauernsohn, Vater des Industriellen Rudolf Salcher Großvater des Vorigen und des Industriellen Robert Salcher ; erlernte in Passau die Kanevasweberei und arbeitete dann in Wien als Webergeselle. 1828 machte er sich selbständig

und erzeugte Borten und Bänder. 1840 beschäftigte er bereits circa 20 Gesellen und exportierte nach Lombardo-Venetien und dem Kirchenstaat, 1845 erweiterte er sein Tätigkeitsfeld um die Erzeugung von Seidenknöpfen und importierte 1850 die I. Patentknopfmaschinen. 1859 ließ er in Harland bei St. Pölten die I. Eisengarnfabrik in Österreich errichten und machte seine Söhne Rudolf, Josef und Ferdinand Salcher (1833-1889) zu Gesellschaftern seiner Fa. M. S. & Söhne OHG. 1864 wurden in Wagstadt (Bilovec, österreichische Schlesien) die Kaiserlich-Königliche Privilegierten Steinnuß-, Stoff-, Metallknopf-, Ösen- und Schnallenfabriken, eine mechanische Appretur und Weberei errichtet, die Stoff- und Metallknopfproduktion aus Wien wurde dorthin verlegt. 1866 zog er sich ins Privatleben zurück und überließ die Unternehmensleitung seinen Söhnen. Salcher, durch dessen Initiative aus kleinsten Anfängen ein ansehnliches und leistungsfähiges Unternehmen im Textil- und Zubehörbereich entstanden war, wurde vielfach geehrt und ausgezeichnet.

### Anton Meißner's second job

**February 1895** : Anton Meißner is hired by « Mathias Salcher & Söhne », located at « Werderthorgasse » Number 2a.

In Kreuzen, Anton Bruckner got to know the ribbon, braid, and silk button manufacturer from Vienna Mathias Salcher (1803 in Maria Luggau, Carinthia ; 1879 in Vienna) who kept the bad news from him during his hospitalization.

### Upper-Belvedere : The saga of moving

Hans Richter played a part by pleading with the Imperial family on behalf of Anton Bruckner.

Anton Meißner learns that « vacant » custody apartments are for rent at the Upper-Belvedere.

**Before Tuesday, 19 February 1895** : Anton Meißner learns from Father Heribert Witsch, the Belvedere chaplain, that a larger apartment (the gate-keeper's lodge previously occupied by Imperial curator Wilhelm von Wartenegg) is empty there.

**Tuesday, 19 February 1895** : Letter from Anton Bruckner (written by Anton Meißner) to Archduchess Marie Valérie :

Bruckner had already been received twice by Marie Valérie in audience, and now, he turns to her because of the urgency of the situation. He needs a ground-floor apartment because of his heart-disease and dyspnoea. On behalf of Doctor Leopold Schrötter, he asks for an intercession from Emperor Franz-Josef to leave him one of the free-standing custody apartments available at the Upper-Belvedere Palace.

**After Tuesday, 19 February 1895** : Anton Bruckner sends his request (petition) to his confessor Father Graf which, in turn, gives it to priest and Jesuit, Father Heinrich Josef Maria Abel (the « Men's Apostle of Vienna ») who presents it to Archduchess Marie Valérie.

The Archduchess used the « Kustodenstöckl » for a while before she lived with her second cousin Archduke Franz

Salvator at Lichtenegg Palace (« Schloß Lichtenegg ») . On **11 June 1895**, the couple purchased Wallsee Palace (« Schloß Wallsee ») on the Danube River from its then owner, Alfred, Duke of Saxe-Coburg-Gotha and completely renovated it. When the renovation was finished, a ceremony marking their moving into the new palace was held on **4 September 1897**. There was great celebration of the event in Wallsee due to Valérie's popularity.

The Archduchess was known and loved for her generous involvement in local charitable endeavours. In 1900, she became a patron of the Red Cross, for which she founded hospitals and raised considerable sums of money ; she was also patron of 7 other charities. During World War I, she created a hospital barracks in the castle itself and helped care for the wounded. She was a devout Catholic who also spent much time supporting religious charities and was known to the people as the « Angel of Waldsee » , a region where the ancestors of Anton Bruckner (the Pruckners) lived for Centuries as mere farmers !

In his article, « Bruckner im Belvedere » , Theophil Antonicek explores the documentary material, beginning with Bruckner's letter to the Archduchess Marie Valérie, in **February 1895**, that records his move to accommodation on the Upper-Belvedere, 5 months later.

**Monday, 11 March 1895** : Letter from Baroness Maria Vecsey (Lichtenegg) to Prince Constantin Hohenlohe-Shillingstfürst :

Her Imperial Highness (Marie Valérie) would be very grateful if the enclosed request (for an apartment) from Anton Bruckner (dated February 19th, 1895) would be granted quite soon. The man is hopelessly ill.

**Spring 1895** : Anton Bruckner's relocation to a new apartment is aggravated by pneumonia. Another telegraph is sent to his brother Ignaz in St. Florian summoning him to return to Vienna at once.

At this time of crisis, Doctor Leopold Schrötter comes personally to visit Bruckner (who is often unconscious) .

The Provost of Klosterneuberg Abbey, Josef Kluger, reports that Bruckner lost interest in the fate of his works.

Anton Meißner visits his beloved Master about every 2 days until around midnight. Bruckner tells him about his life.

**Friday, 22 March 1895** : Letter from the Imperial High-Minister to Baroness Maria Vecsey :

An apartment at the Upper-Belvedere or at Hetzendorf Castle will be provided to Anton Bruckner if his current poor health-condition improves.

**Tuesday, 7 May 1895** : Medical statement by Doctor Leopold Schrötter :

Anton Bruckner has recovered. It is now possible for him to be transported to the Upper-Belvedere apartment (the gate-keeper's lodge) .

**Saturday, 11 May 1895** : Doctor Theodor Reisch presents to law firm director Theodor von Westermayer the medical

statement of Doctor Leopold Schrötter (from 7 May 1895) and ask Westermayer to inform Bruckner of the now possible move.

**Wednesday, 15 May 1895** : Physician Leopold Schrötter and lawyer Theodor Reisch, led by Belvedere inspector Eduard Henrich, visit the gate-keeper's lodge on ground-floor (« Kustodenstöckl ») proposed by Anton Meißner. It will be prepared during the following weeks by order of Emperor Franz-Josef.

**Wednesday, 15 May 1895** : Letter from the Imperial High-Minister to the Belvedere inspector (Eduard Henrich ?) :

Anton Bruckner's request (petition) from 19 February 1895 is granted. The gate-keeper's lodge on ground-floor (« Kustodenstöckl ») was initially allocated for the duration of this summer. Verbal authorization by lawyer Theodor Reisch. Signed authorization by Theodor von Westermayer and Viktor Edler von Horsetzky.

**Wednesday, 5 June 1895** : The « Linzer Tages-Post » reports that Anton Bruckner will get an apartment on the Upper-Belvedere. His health-condition has improved somewhat, and he is working on the Finale of his 9th Symphony.

**Tuesday, 2 July 1895** : Letter (postcard) from landlord Anton Ölzelt junior to Anton Bruckner (Vienna) :

Congratulations on the new apartment ... and the “ new owner ” !

The « Deutsche Volksblatt » reports on Bruckner's health-condition and his resettlement at the Upper-Belvedere.

**After Tuesday, 2 July 1895 ?** : Bruckner writes to Josef Kluger, the Provost of Klosterneuberg Abbey.

Letter from Anton Bruckner (Vienna) to landlord Anton Ölzelt junior :

Bruckner asks for an annual grant which is equivalent to the rent of the « Heßgasse » flat (« Hôtel de France ») .

**Thursday, 4 July 1895** : Anton Bruckner moves from his « Heßgasse » flat to the « Kustodenstöckl » , the gate-keeper's lodge besides the Upper-Belvedere Palace (Vienna, 3rd District, « Prinz-Eugenstraße » Number 27 - « Landstraßer Gürtel » Number 1) . This Imperial secondary residence of 9 rooms was the summit of comfort conceivable in Vienna at the time ! (Bruckner always had the chance to come across « good addresses » .)

« Frau Kathi » Kachelmayr is now assisted by her daughter Ludowika Kutschera to help with the nursing care. « Kathi » and the Imperial carrier Theodor Bindtner (who was chosen by Anton Meißner) oversee the operation together. Dina Henrich (wife of Belvedere inspector Eduard Henrich) becomes witness to Bruckner reactions of joy, curiosity and gratitude to Emperor Franz-Josef and Archduchess Marie Valérie.

Before leaving for good his « Heßgasse » flat, Bruckner says good-bye to Ernestine Korda. He heard she was a bride-to-be in the Mühlviertel. His first (platonic !) love, Josefina Lang, is living in Neufelden. The old man had never given-

up the idea of getting married ...

The same day, Belvedere inspector Eduard Henrich reports to the Imperial High-Minister :

Anton Bruckner has now moved into his new apartment, which had previously been inhabited by Imperial curator Wilhelm von Wartenegg.

Franz-Josef will offer this « grace and favour » residence, free of charge, to Anton Bruckner. The Emperor will even have the delicacy of having daily floral ornaments (freshly cut from the garden) prepared to create a radiant atmosphere.

**After Thursday, 4 July 1895 :**

At the request of Doctor Viktor Boller (judge of the Austrian Court of Appeal and president of the Wagner academic Society) , Belvedere inspector Eduard Henrich took care of Bruckner's wishes. The apartment is enriched by a newly-acquired crucifix. Bruckner retains his way of dressing, and his way of life. The favourable location of the lodge he uses for walks with « Frau Kathi » and Anton Meißner in the beautiful French gardens on the Upper-Belvedere, meeting occasionally acquaintances - for example, the sculptor Viktor Tilgner, and conservatory and university student Karl Kobald.

The Emperor always brings fresh flowers in Bruckner's apartment, as reported by « Herr » Director Josef Stritzko from music-publisher Joseph Eberle.

**Sunday, 7 July 1895 :** Letter from Anton Bruckner (Vienna) to « Kapellmeister » friend Franz Bayer (Steyr) :

Bruckner thanks Bayer for his kindness. The fact that Reverend (Johann Evangelist) Aichinger was working again, was to hope for a speedy recovery. On Thursday (July 4, 1895) he, Bruckner, moved to the Upper-Belvedere. He should not travel to Steyr this year (he needed more strength and breath) . Greetings to all friends.

The French music-magazine « Le Ménestrel » published a short article on Anton Bruckner's recovery and his relocation to the Upper-Belvedere.

**Thursday, 11 July 1895 :** Letter from landlord Anton Ölzelt junior to Anton Bruckner :

Ölzelt is honoured to continue to be Bruckner's beloved landlord. He will send directly to him the « interest fee » from his « Heßgasse » flat at « Hôtel de France » .

**Sunday, 14 July 1895 :** The « Steyrer Alpen-Boten » (Volume 41, Number 56, 1895) reports on page 4 :

Anton Bruckner had moved into the new apartment on the Upper-Belvedere and is working on the 9th Symphony. The final draft of the Finale is already designed.

**Monday, 15 July 1895** : The « Linzer Montags-Post » reports that Emperor Franz-Josef provided Anton Bruckner an apartment on the Upper-Belvedere.

**Friday, 9 August 1895** : Letter from the Imperial High-Minister to the Belvedere inspector (Eduard Henrich ?) :

The Upper-Belvedere apartment should be left to Anton Bruckner for as long as he intends to use it.

**Wednesday, 14 August 1895** : The « Neue Zeitschrift für Musik » Number 91 (1895) reports on page 370 :

Anton Bruckner received an Imperial apartment on the Upper-Belvedere, which was announced to him by Archduchess Marie Valérie in person.

Max Graf :

Franz-Josef played an especially beautiful role in the life of Anton Bruckner, who was his Court organist. The Emperor provided funds for the publication of the 3rd and 8th Symphonies of Bruckner. Since the composer was growing old, Franz-Josef gave him a house in the Belvedere Garden. In gratitude for this, Bruckner dedicated his 8th Symphony « to Emperor Franz-Josef » .

### Suicide of the talented brother

Otto Mahler :

Iglau (Jihlava) Primary School for Boys (Number 2-5 « Jostova » Street ; Number 119 « Obere Elkergergasse ») .

1883-1886 : Iglau (Jihlava) German « Gymnasium » (Number 1-109 « Hluboka » Street ; Number 608 « Nonnengaschen ») .

At the age of 15, Otto Mahler (which is 13 years younger than his brother Gustav) was admitted to the Vienna Conservatory but left of his own volition early in 1892. His sister Justine and Natalie Bauer-Lechner kept the news from Gustav, who was furious.

In 1894, Gustav made efforts to find a suitable position for Otto. Posts in neither Bremen nor Leipzig were successful, and, by the end of 1894, the situation was becoming desperate.

By early 1895, Justine was hearing « unpleasant » news :

« Otto is alarmingly thin ; in the course of this, I can't help thinking of Hans Rott, and there one can't do anything. »

**Wednesday, 6 February 1895** : Back in Vienna, Otto, aged 21, whose capriciousness caused Gustav much pain and unneeded expense, and whom Mahler once said was « a man of great talent, far more gifted than I » , commits

suicide by shooting himself in the head with a revolver in the apartment of his and Mahler's friend Nina Spiegler (Nina Lipiner-Hoffmann-Matscheko) .

Otto's motivation remains unknown, though the « *Illustrierte Wiener Extrablatt* » speculated about a « matter of the heart » . According to Gustav's widow Alma, Otto's suicide-note stated that life no longer pleased him, so he « handed back his ticket » .

Gustav's reaction is not recorded in any of his letters.

« I also had a brother who was like me a musician and a composer. A man of great talent, far more gifted than I. He died very young (...) alas (...) alas ! He killed himself in the prime of life. »

(Gustav Mahler in conversation with Czech composer Josef Bohuslav Færster.)

At the time of his death, Otto was in possession of an autograph of the first 3 movements of Anton Bruckner's 3rd Symphony ; this, along with certain of his other effects (including his compositions and, perhaps, Mahler's letters to him) , passed into the hands of his brother Gustav (apparently in a locked trunk that Gustav never opened) , and thence to the collection of his widow Alma. The bulky Bruckner manuscript was one of the very few possessions carried in her back-pack during her daring 1940 escape over the Pyrenees with her third husband, writer Franz Werfel, avoiding Vichy, France, border patrols. The trunk was destroyed when a bomb hit Alma Mahler's house towards the end of the Second World War. According to Alma, Mahler had been afraid to open it.

Otto Mahler's music remains unpublished and is apparently uncatalogued. No recent performances are known ; indeed, the very survival of the scores is currently uncertain.

According to Bruno Walter-Schlesinger, Otto left behind 2 Symphonies, parts of which had been played and « ridiculed » by the public, and an almost-complete third, in addition to lieder : some with orchestra and some with piano. His music vanishes when Alma's house is damaged during the bombing of Vienna in World War II.

It seems entirely possible that Gustav Mahler's support of Bruno Schlesinger, at this time, is a transference of his desire to see Otto succeed, since they are so close in age ; but Mahler doesn't think very highly of Schlesinger's compositions and, so, in his opinion, Schlesinger's abilities are purely recreative. Mahler will also, later, find in Arnold Schönberg a gifted composer of his brother's generation to whom he can provide assistance.

### Mahler conducts Bruckner

**Monday, 18 February 1895** : Gustav Mahler conducts the « Romantic Symphony » (**WAB 104**) during a subscription-concert at the Hamburg « Stadttheater » . It is the first time he ever conducted one of Bruckner's works.

Rumours about Mahler's possible departure from Hamburg were coloured by gossip about his love-affair with the soprano Anna von Mildenburg, who joined the Opera House for the 1895's season.

### Hugo Wolf shooting birds

In the case of Hugo Wolf, a neurasthenic prodromal phase seems likely. While he composed the score of his Opera « Der Corregidor » in 1895, he was extremely sensitive to any noise. It is reported that he shot and killed singing birds (Frank Walker, 1968) . Although Wolf had hoped that his Opera would have been performed in Vienna, Berlin, or Prague, he had to accept that, with the promotion of his good friends in southern Germany, « Der Corregidor » was set on stage in Mannheim. During the rehearsals, he was unpleasant and spoke of the musicians as « idiots one cannot work with » , and wrote to Melanie Köchert that « the whole gang (...) was incapable » . Though the premiere was a success, however, only one further performance followed in Mannheim (Robert Hemried, 1940) .

### Reducing the milk diet

**Around March - April, 1895** : With the improvement of Bruckner's condition, Doctor Viktor Eisenmenger, assistant of Leopold Schrötter, decides to reduce the milk diet. Bruckner is so happy that he even offers the dedication of his 9th Symphony to Eisenmenger.

Bruckner's vital piety changed into existential concern, which required documented control. At the time, the intention of dying was unconsidered.

### Working on « Der Corregidor »

With the success of Engelbert Humperdinck's « Hänsel und Gretel » in December 1894, Hugo Wolf's Opera fever reached a new crisis. Pedro Antonio de Alarcón's short-novel « El sombrero de tres picos » (The three-cornered Hat) began to dominate his mind. He rejected a version prepared by Franz Schaumann, Chairman of the « Wagner-Verein » and enthused instead over the previously despised libretto of « Frau » Rosa Mayreder, entitled « Der Corregidor » . Its merits are disputable ; but this text indubitably now began to fertilize Wolf's long-dormant creative genius. As before, there was a period of winter gestation followed by spring-time labour.

The day before his 35th birthday, Hugo Wolf began the work of composition, the long, arid period of blocked creativity finally over. Early in **April 1895**, he moved to Perchtoldsdorf, again seeking solitude, and threw himself « like a madman » (working daily, from dawn to dusk) into the composition of his first and only completed Opera, moving to the Lipperheide « Château » in Brixlegg in **May** when the Werners returned to their summer-home.

On **April 26, 1896**, Wolf wrote to his friend Judge Oskar Grohe :

« If the work is not definitely to be performed on **May 22** but only on **May 31**, I shall not appear at the premiere. I wish to be notified before **May 12**. »

The demand, so emphatically expressed by Hugo Wolf, that his Opera had to be performed on **May 22** without fail and not a mere 9 days later, is connected to the fact that the birthday of his beloved Richard Wagner fell on **May 22**. Without regard for whether this was compatible with the technical preparations for the premiere of the Opera, Wolf

entrusted his go-between with a dictatorial demand to the director of the Mannheim Theatre that was simply impossible to fulfill. « Der Corregidor » could be staged neither on **May 22** nor even on the date proposed by the theatre (**May 31**), but only on **June 7**. Fortunately, Grohe seems to have recognized that passing on Wolf's completely unjustified demand to the Intendant Bassermann would have led to its certain rejection and, perhaps, even to a serious conflict with the management of the Mannheim Theatre. So, he intervened and managed to pacify the composer who, even then, was no longer in complete control of his senses.

By **July 9**, the whole 4 Act Opera was complete in piano score. In 9 months of feverish work, Wolf composed and orchestrated the entire Opera, which he designated as an « Opera » rather than a « Comic Opera ». The sufferings caused by adulterous passion were not, as he knew to his cost, comic at the core. The Opera was offered, unsuccessfully, to Vienna, Berlin and Prague. Wolf had quarrelled with Schott and, therefore, the score was printed by Karl Heckel in Mannheim - with some help from Grohe.

**Monday, 7 October 1895** : Autograph letter (correspondence-card) from Hugo Wolf sent to his friend and staunch advocate the pianist Doctor Heinrich Potpeschnigg, concerning his first (and only) Opera « Der Corregidor » :

« I have received your package. I shall send you the missing material from the 2nd Act shortly. I am working just now on the instrumentation of the intermezzo - i.e., on the transition to the transformation.

The Association has sent me an agreement form and their Rules. Having read them only with difficulty because of their clumsy style, and having finally worked-out that you have to pay all sorts of percentages and commissions to these people and constantly take on obligations that are out of all proportion to what the Association has to offer, I have decided that I will not be joining that club. Are you familiar with the Rules ? If not, I can send them to you. I still have not heard anything from Muck. That is typical of him !

I have frightfully little time, because the work is demanding so much of me. I had terrible difficulties in the 2nd Act. The Lipperheides are coming today or tomorrow. »

### The first monograph

**Monday, 8 April 1895** : Anton Bruckner receives a copy of his first printed monograph (« Dr. Anton Bruckner. Ein Lebensbild. », Dr. Anton Bruckner : A Biographical Sketch), written by his Vienna University student Franz Brunner. « Dr. Anton Bruckner, Ein Lebensbild », « erlag des Oberösterreichischen Volksbildungsvereins », Linz (1895) ; 43 pages - reprinted : « Österreichische Gesellschaft für Musikwissenschaft », Vienna (1974) .

The monograph contains a poem entitled « Auserkoren » by Karl Teutschmann. For the occasion, the Austrian photographer Camillo Ichzenthaler (born on 10 July 1849 in Linz - working for the « Atelier » of F. Vismara, located on « Altstadt » Number 17, corner of « Klosterstraße », in Linz) as provided a studio picture of Bruckner. (Whether the book was already available at this time is currently unknown.)

**Sunday, 12 May 1895** : Vienna university student Franz Brunner's monograph on Anton Bruckner is officially released in Linz on opening-day of the 50th anniversary celebrations of the foundation of the Liedertafel « Frohsinn » which culminates with the unveiling of a memorial plaque on the side of the old school of Ansfelden (Anton Bruckner's birth place which is now a museum) . But Bruckner is too ill to attend in person. He asks his brother Ignaz (who still lives in St. Florian) to replace him for the occasion. However, the composer will have the delicacy to send an official letter of thanks to the organizing committee.

The inscription reads :

To their honorary member,  
the famous composer  
Doctor Anton Bruckner  
Knight of the Franz-Josef Order,  
Imperial Court organist, lecturer  
at the Imperial University of Vienna,  
Honorary Citizen of Linz,  
born in this house, on September 4th, 1824  
the choral Society « Frohsinn » of Linz  
dedicates this plaque.

**May 1895**

**Sunday, 21 July 1895** : The « Ischler Wochenblatt » Number 29 announces on page 3, supplement 1, that Vienna university student Franz Brunner's small biography (brochure) on Anton Bruckner was released in Linz on May 12th, opening-day of the 50th anniversary celebrations of the foundation of the Liedertafel « Frohsinn » which culminated with the unveiling of a memorial plaque on the side of the old school of Ansfelden.

**Sunday, 1 September 1895** : The « Neue Musikalische Presse » reports that university student Franz Brunner has published in Linz a biographical brochure on the Austrian composer Anton Bruckner.

Also by Brunner :

« Musikleben in Linz » , article published in the « Linzer Tages-Post » (1899) .

« Der Linzer Musikverein in den Jahren 1821-1901 » (1901) .

« Dr. Anton Bruckner » , article published in the « Deutscher Volkskalender » (1915) .

**Meißner stays after midnight**

**Saturday, 13 April 1895** (Holy Saturday) : Anton Meißner visits Anton Bruckner and stays with him after midnight. Bruckner thinks of St. Florian and of the Easter song sung there (probably in connection with the Finale of the 9th

Symphony) .

### The stubborn Bruckner

**Around 14 (Easter Sunday) - 15 (Easter Monday) April 1895** : Doctor Viktor Eisenmenger prevents Anton Bruckner of spending Easter in St. Florian. He is not able to attend the 50th anniversary celebrations of the Liedertafel « Frohsinn » , in Linz.

But because of the improvement of his condition, Eisenmenger allows him to go outside. But Bruckner rejects the offer because he is still not allowed to go to church.

The mayor of Vienna Doctor Raimund Grübl sends to Bruckner several ducats (gold or silver coins) in a case as an Easter present. Bruckner then bought a crucifix in a shop on « Stephansplatz » .

**April - May 1895** : Because of Doctor Viktor Eisenmenger's illness, Doctor Alexander von Weißmayr takes over the medical visits with Anton Bruckner.

### Doctor Viktor Eisenmenger

The Austrian laryngologist Doctor Viktor Eisenmenger was born on 29 January 1864 in Vienna ; and died on 11 December 1932 at the Hera Sanatorium in Vienna (9th District) . He was 67.

Victor Eisenmenger was the son of Emma Singer von Wyszogurska (1841-1907) and August Eisenmenger (1830-1907) , who was an accomplished Austrian painter of portraits and historical subjects and professor at the Academy of Fine-Arts of Vienna. Victor had 2 brothers : Ewald, who became a « Hofrechnungsrat » (civil servant of the financial administration) in the Austro-Hungarian monarchy, and Hugo, who moved to the United States becoming a well-known electrical engineer in New York. He married Anna Hoberg (1874-1944) and had 2 daughters, Anna, who became a talented sculptress, and Hilde, who was an accomplished tennis player. Victor followed his studies in Vienna. He attended the « Akademisches Gymnasium » , one of the oldest secondary schools in Austria. In the academic year of 1881-1882, he began his medical studies at the Faculty of Medicine of the University of Vienna, obtaining his medical degree on February 23, 1889. Between 1889 and 1890, he was Assistant Physician in the 2nd Medical Department of the Vienna General Hospital (« Wiener Allgemeines Krankenhaus ») ; from 1890 to 1893, he worked as Surgical Assistant at the first Surgical Clinic of Professor Eduard Albert (1841-1900) , a Czech surgeon and innovator in orthopaedic surgery. Finally, after 1894-1895, he was appointed Assistant to Professor Leopold Schrötter (1837-1908) , Director of the 3rd Medical Clinic in Vienna, a well-known internist and laryngologist. Eisenmenger became one of his favourite pupils, but, because of his poor health, Schrötter had proposed him for the less rigorous position of personal physician to the Archduke Francis Ferdinand (1863-1914) , who had fallen ill with pulmonary tuberculosis. In 1895, Eisenmenger was appointed « Titular Hofarzt » (titular Court physician) and, 2 years later, « Wirklicher Hofarzt » (real Court physician) to the Archduke. Eisenmenger was elected member of the Society of Physicians in Vienna in 1893, becoming « Hofrat » (Court Councilor) and « Kaiserlich-Königliche Regierungsrat » (Imperial-Royal Senior Government Official) . In December 1901, he gave a lecture on cardiac cirrhosis at a Society meeting that subsequently was published. Eisenmenger

published 8 papers in medical publications between 1893 and 1902 covering tumors of the mouth and pharynx, pseudo-leukemia, and cardio-vascular disorders, the latter including the report that eventually gave birth to Eisenmenger's syndrome. In the late-1920's, he wrote a book describing his observations, travels, and experiences as personal physician to Archduke Francis Ferdinand from 1895 until 1914, when the Archduke and his wife were assassinated in Sarajevo, a prelude to World War I.

## Main Achievements in Medicine

### Pathology

In 1897, an article by Doctor Viktor Eisenmenger entitled « Die angeborenen Defecte der Kammerscheidewand des Herzens » (The congenital ventricular septal defects of the heart) appeared in the « Zeitschrift für Klinische Medizin » (Number 32 Supplement ; pages 1-28) . Here, Eisenmenger described a powerfully built man of 32 years with a history of cyanosis and moderate shortness of breath since childhood. The cyanosis increased considerably with effort. He was able to lead an active life until January 1894, when his dyspnea increased and edema set-in. 7 months later, he was admitted to the hospital with heart-failure. Examination revealed marked cyanosis, clubbing of the fingers and toes, thickening of the distal joints, and poly-cythemia. He improved with rest and digitalis, but collapsed and died suddenly on November 13, following a violent hemoptysis. The clinical diagnosis of ventricular septal defect was based on the systolic murmur and thrill in the third and fourth left inter-spaces. At autopsy, a large ventricular septal defect was present with dextroposition of the aorta, over-riding the ventricular septum, and a dilated right ventricle and plaques in the main pulmonary artery. Eisenmenger interpreted the situation as follows : in a ventricular septal defect, the difference in pressure between the left and right ventricles ensured a left-to-right shunt ; the pulmonary circulation was, therefore, over-filled and the systemic circulation under-filled ; and increased stiffness of the lungs hindered ventilation and congestion hampered gaseous exchange. Cyanosis, however, depended more on the poor systemic circulation. He discussed the « riding aorta » at considerable length and concluded that this was caused neither by a congenital fault of rotation nor by the direction of blood flow through the defect, but that it was a more or less inevitable consequence of the position of the defect itself in relation to the normal anatomy of the parts concerned and was more apparent than real. Eisenmenger was unaware that the shunt was reversed in the case he described so carefully, despite his statement that a rise in pulmonary vascular resistance, for example, from multiple thrombi, would equilibrate the pressures in the 2 circulations and so prevent both shunt and murmur. During the years that followed, the anatomy, physiology, and diagnostic features of the abnormalities described in his report became better understood and increasingly relevant to the practice of cardiology. It was during these years that Eisenmenger's name became eponymously attached to this disorder, in particular thanks to the famous Canadian pathologist Maude Abbott (1869-1940) , who attributed the cyanosis of Eisenmenger's case to a right-to-left shunt through the defect on account of the over-riding aorta and ascribed the systolic murmur to the inter-ventricular shunt. She named the disease « Eisenmenger complex » . However, 50 years of cardiology failed to advance Eisenmenger's description, and the general opinion remained opposed to his belief that the over-riding aorta was irrelevant. It was not until the 1940's that everyone accepted his suggestion that obstruction in the pulmonary vascular bed would raise the pulmonary blood pressure and abolish both the left-to-right shunt and the murmur of uncomplicated ventricular septal defect, if pulmonary hypertension at systemic level with bi-directional shunt was demonstrated.

The part played by pulmonary hypertension may be summarized in Arthur Selzer's (1923-1994) words :

« The most characteristic feature of Eisenmenger's complex is the presence of severe pulmonary hypertension. »

According to the cardiologist Paul Hamilton Wood (1907-1962) , today, we distinguish between (1) Eisenmenger complex, which is a pulmonary hypertension with reversed inter-ventricular shunt, and (2) Eisenmenger syndrome, being pulmonary hypertension due to a high pulmonary vascular resistance with reversed or bi-directional shunt at aorta-pulmonary, ventricular, or atrial level.

...

Doktor Viktor Eisenmenger, österreichischer Laryngologe : geboren 29. Januar 1864 in Wien ; gestorben 11. Dezember 1932 in Wien, 9. Bezirk, Sanatorium Hera (wohnhafte 1, Reitschulgasse Nummer 2 ; Ottakringer Friedhof) .

Viktor Eisenmenger promovierte 1889 an der Universität Wien zum Doktor der Medizin. Nach seinem Studium wurde er als Assistent an der Klinik für Laryngologie sowie an der III. Medizinischen Universitäts-Klinik unter Leopold Schrötter von Kristelli zum Facharzt ausgebildet.

Er war Leibarzt Kaiser Franz-Josefs, der Thronfolger Franz Ferdinand und Kaiser Karl sowie Chef des Hofsanitätswesens. Die von ihm erstmals beschriebene Eisenmenger-Reaktion erhielt seinen Namen. Des Weiteren wurden das Eisenmenger-Syndrom und der Eisenmenger-Komplex nach ihm benannt.

...

Nach Studium an der Universität Wien (Doktor der medicinae universae 1889) wurde Viktor Eisenmenger als Assistent an der Klinik für Laryngologie sowie an der III. Medizinischen Universitäts-Klinik unter Leopold Schrötter von Kristelli ausgebildet. Franz-Josef I. , Thronfolger Franz Ferdinand und Karl I. diente er als Leibarzt und war auch Chef des Hofsanitätswesens. 1897 beschrieb er das heute noch seinen Namen tragende Krankheitsbild (« Eisenmenger-Komplex ») « Die angeborenen Defecte der Kammerscheidewand des Herzens » . (Zeitschrift klinische Medizin Nummer 32 (1897) ; Seite 1ff.)

## Werke

Über die plexiformen Sarkome des harten und weichen Gaumens, in : Deutsche Zeitschrift für Chirurgie, Nummer 39 (1894) .

Über die so genannt pericarditische Pseudoleberzirrhose, in : Wiener Klinische Wochenschrift (1900) ; Seite 249.

Erzherzog Franz Ferdinand. Seinem Andenken gewidmet von seinem Leibarzt, Amalthea Verlag, Zürich, Leipzig, Wien (1930) .

## Franz Marschner's application

**Monday 22 April 1895** : Letter from Joseph Ritter von Karabacek to Anton Bruckner :

Karabacek sends Franz (Ludwig) Marschner's qualification as university lecturer to Bruckner and asks for his opinion.

(Marschner studied counterpoint with Bruckner in Vienna, from 1883 to 1885.)

**Tuesday, 30 April 1895** : Anton Bruckner's hand-written report on Franz Marschner's qualification as university lecturer.

Letter from Anton Bruckner (probably written by his secretary Anton Meißner) to the Office of the Dean of the Faculty of Philosophy of the University of Vienna :

« In response to the question of April 22nd, “ Herr ” Bruckner submits to you the attached report on Franz Marschner's qualification. »

Bruckner concluded that teaching harmony and counterpoint required a much more thorough preparation than demonstrated by Marschner with his 2 proposed musical pieces.

**Wednesday, 15 May 1895** : At a Commission meeting of the Faculty of Philosophy of the University of Vienna, Dean Joseph von Karabacek reads Anton Bruckner's statement (dated April 30th, 1895) . Councilor Heinrich von Zeißberg regrets that Bruckner did not comment the 2 musical pieces submitted by Franz Marschner. Councilor Robert von Zimmermann thinks that Bruckner's letter « does not represent the opinion of an expert ... »

### Franz Ludwig Marschner

The teacher, composer, musician, music theorist and philosophical writer Franz Ludwig Marschner was born on 26 March 1855 in Leitmeritz, Bohemia (Litoměřice, Czech Republic) ; and died on 22 August 1932 in Weißpyhra near Pöggstall, Lower-Austria.

He was the son of school teacher Franz Vinzenz Marschner and the brother of jurist Robert A. Marschner.

Marschner studied history, geography and German philology at the Universities of Prague (Doctorate of Philosophy in 1879) and Vienna (1882) . From 1867 to 1869, he received his musical training at the Prague Academy of Music (« Sophienakademie ») . His teachers there were Karl Leibold, Julius Zeitler (1867-1868) and Josef Lugert (1871-1872) . From 1873 to 1875, he studied at the Prague Organ School under František Zdeněk Skuherský. From 1883 to 1885, he studied counterpoint with Anton Bruckner in Vienna.

From 1878 to 1882, Marschner taught geography and history in a secondary school of Prague. From 1884, he taught German, history and music at the « Kaiserlich-Königliche Civil-Mädchen-Pensionat Wien » (in the 8th District) until his retirement in 1910. (The school was founded in 1786 by Madame Luzac on permission by Emperor Josef II with the purpose of educating girls from the middle-classes to professional teachers. It was a pioneer institution in Austria for its time. It closed in 1919.)

Marschner spent the last years of his life in Weißpyhra near Pöggstall, and also Vienna.

The « Dr. Franz Marschner Association » (« Dr. Franz Marschner-Bund ») was created in Vienna in 1935. The society was devoted to the conservation of his philosophical and musical works. It was dismantled in 1938, the year of the « Anschluß » .

Franz Marschner and Hugo Riemann worked simultaneously (but independently) on a new system of harmony consisting of abbreviated symbols : the tonic, the dominant, the sub-dominant and the parallel.

### Joseph Karabacek

The Austrian Orientalist Joseph Maria Karabacek was born on 20 September 1845 in Graz and died on 9 October 1918 in Vienna. He was a papyrologist and director of the Imperial Library of Vienna.

Karabacek is the son of a soldier, Johann Baptist Karabacek (circa 1800 - 1875) , originally from Iglau, Moravia, and his wife, Johanna Ilwof (1812-18??) from Graz. Joseph Karabacek is married according to the Catholic rite on 24 May 1876 at the « Schottenkirche » (Scottish Church) in Vienna with Karoline Johanna Lang (born on 2 December 1852 in Vienna and died on 23 February 1914 in Vienna) Leopold Lang (1822-1880) , and his wife, Ernestine von Hofmannsthal (1828-1870) , who came from Jewish families converted to Catholicism.

Karabacek attended the « Gymnasium » (Classical lyceum) of Lemberg, then, the one of Temesvar, and finally finished high-school in Vienna, where he passed his maturity (equivalent to the baccalaureate) in 1863. He first studied Law at the « Rudolphina » , and then, in 1866, turned himself towards the studies of Oriental languages. He graduated in 1868, received his empowerment in 1869, at the end of which he became private lecturer (« Privatdozent ») in paleography and numismatics of the Islamic populations at the University of Vienna. In 1874, Karabacek was appointed associate-professor (« Professor extraordinarius ») at the University of Vienna. From 1885 to 1915, he was appointed full-professor (« Professor ordinarius ») at the Chair of History of the Orient and his Auxiliary Sciences.

Theodor Graf, the Viennese antique-dealer, owner of a subsidiary in Cairo, to whom Professor Karabacek financed excavations in the Arsinoe and Heracleopolis Magna archæological sites, acquired the property in 1881-1882 of more than 10,000 papyrus (most of them from the Fayyoun region) . From this point, he spent his life translating and studying them. Archbishop Rainier bought his collection in 1883, enabling Karabacek to study them and to have material support. The Archduke donated his collection in 1899 to Emperor Franz-Josef, who placed them in the Imperial Library of Vienna (« Hofbibliothek ») , of which he named Professor Karabacek at the head. He remained in this position until 1914.

His specialty is Arabic papyrology and especially the thousands of papyri of the collection of which he makes the catalog.

Karabacek received the title of adviser to the Court and was knighted (« von » Karabacek) by decree on 10 April 1904 as director of the Imperial Library (receiving his diploma on 2 February 1905) .

## Mahler and bicycle riding

Gustav Mahler loved to ride his bicycle. He was particularly obsessed with the traveling by « velocipede », in the 1890's, while he was resident in Hamburg, as detailed in his correspondence with music-critic Carl Wilhelm Zinne :

« When will velocipede lessons commence ? » , he wrote to Zinne, on **23 April 1895**.

Thereafter, a series of post-cards details Mahler's excitement at the new fad. Zinne taught him how to ride - no doubt while they discussed the shared interest in Anton Bruckner. Mahler, as ever, wasn't particularly patient, though he clearly relished being on his newly assembled bicycle :

« I'm admired by all and sundry on my bike ! I really do seem to be a born cyclist and shall certainly be appointed “ Geheimrad ” (“ Geheimrat ” means privy councillor, so Mahler is on “ rad ” (bicycle) rather than “ rat ”) once more. I'm at the stage when all horses get out of my way - it's only with bell-ringing that I have trouble. »

LETTER OF AN ENTHUSIASTIC HAMBURGER CYCLIST (Gustav Mahler) TO ANOTHER ONE (Hamburg music-critic, Carl Wilhelm Zinne) :

« Dear friend !

I'm leaving tomorrow evening. If we should not see each other again, let's organize a merry reunion after the Holidays ! I produce the general admiration with my bicycle. I really seem to be born for the wheel. I will definitely be appointed “ Geheimrad ”. So far, all the horses make way but I'm still shy ringing the bell. Occasionally, I accelerate to disperse who or what is in front of me ; it rises my heart beat (I would need a pedometer) . Actually, the ones who stop in the middle of these narrow streets have no consideration for zestful cyclists like me.

Sheers !

Yours faithfully Gustav Mahler on the move - the King of the Road ! »

With all the doom, boom and gloom of the accepted picture of Mahler, it's rather refreshing to think of the composer madly dashing down the lanes in Hamburg, throwing livestock and pedestrians to the curb.

The notes from Gustav Mahler to Wilhelm Zinne can be found in Herta Blaukopf's volume « Mahler's Unknown Letters » , which Richard Stokes translated brilliantly into English.

Carl Wilhelm Zinne (1858-1934) : Critic for the Hamburg Press and school teacher. Friend and supporter of Gustav Mahler in Hamburg, who shared Mahler's love of Bruckner and cycling, visited Bruckner in 1892, at the time of the Vienna Theatre and Music Exhibition. Göllerich-Auer quotes Zinne's own report of his meeting with Bruckner. In the rather bare, modest room, with manuscript paper and scores lying on the piano and harmonium, he sat-down with

Bruckner who « soon asks after “ his beloved Mahler ”, who he appeared to regard very highly. Let him prepare his Symphony - the 7th above all, which to Bruckner himself was the dearest. »

They drank a bottle of red wine, the conversation became more convivial.

« He expressed great joy over the enthusiasm of the Viennese for his works. He was pleased too by the Berliners and the performance of the “ Te Deum ” under Siegfried Ochs, who was probably a Jew, but that doesn't matter ; Mahler is also a Jew but he rails terribly against the Jews. All this in jest, as he was on this day uncommonly cheerful and in the mood for joking. »

### University of Vienna : Summer Semester (1895)

**May 1895** : Students of the Faculty of Philosophy inscribed at Anton Bruckner's university lecture (there names will then be deleted) :

Giacomo Braun, Victor Heinrich Junk, Georg Mihutowicz, Ewald Otto Schallinger and Michael Ursuleac.

### Ludwig Rochlitzer

**1895** : Styrian musician Ludwig Rochlitzer is noticed by Anton Bruckner who suggests to him, after his private hearing, to study music with him in Vienna rather than continue, according to the wish of his father, a legal career.

...

The Austrian composer and lawyer Ludwig Rochlitzer was born on 25 August 1880 in Voitsberg, Styria ; and died on 13 March 1945 in Vienna, 1st District.

During his high-school years in Seitenstetten (1890) , Rochlitzer was conductor of the student band and an organist. He studied law at the University of Graz (Doctor of law in 1903) , and, at the same time, at the School of the Music Society (« Musikverein ») of Styria. From 1902 to 1903, he was the rehearsal pianist of Ernst von Schuch at the Court Opera in Dresden. In 1903, he moved to Vienna. From 1904 to 1907, he studied counterpoint with Karl Nawratil (1836-1914) and completed his legal internship at the Vienna Regional Court. From 1913, Rochlitzer was an independent lawyer in Vienna. During the First World War, he enlisted as a volunteer in the Thirteenth Hussars. He composed songs, but especially Operas and Operettas, premiered in Prague, Vienna and Graz (using his own libretti) . His contrapuntal skill and rich melodies were praised by music-critics. Rochlitzer was on the Executive Board of the « Society of Authors, Composers and Publishers » (« Gesellschaft der Autoren, Komponisten und Musikverleger » , or AKM) from 1926 to 1937. His varied work as a lawyer, especially in representing artists during the Nazi era, repeatedly caused severe distress, as he helped many of his Jewish colleagues from music and literature to flee Austria. He was investigated by the customs office in Vienna, and, on 5 May 1941, by the « Gestapo » . He was suspected of « assisting in the displacement of valuable jewellery abroad and defeating the official act » (Documentation Centre of

Austrian Resistance) . Rochlitzer died as a result of the bombing of Vienna, and the bulk of his musical works was destroyed.

## Stage Works

### Operas

« Marietta » , Opera on a libretto by Ludwig Rochlitzer, published by Joseph W. Stern & Co. (lost) .

« Myrthia » , Opera in 2 Acts on a libretto by Ludwig Rochlitzer (after Felix Dahn's « Ein Kampf um Rom ») , Prague and Graz (1907) .

« Prater Carolus » Opus 1, Opera in 3 Acts on a libretto by Ludwig Rochlitzer (1910) , Prague and Graz (1911) .

### Operettas

« Der erste Kufel » Opus 4, Operetta on a libretto by Wilhelm Otto and Wilhelm Frieser, premiered on 31 January 1914 at the « Carltheater » , Vienna.

« Goldma'del » Opus 2, Operetta on a libretto by Wilhelm Frieser (some acts lost) .

« Liebesheirat » Opus 3, Operetta in 3 Acts by Ludwig Rochlitzer (score lost, text survives) .

### Offering the pedal harmonium

At one point, Anton Bruckner asked Doctor Richard Heller if he would like to have his Matthäus Mauracher (from Salzburg) pedal-harmonium. Doctor Heller refused, saying that it was too important for someone to have in his private possession. So, he refused, but then told this story to his colleague Doctor Leopold Schrötter who immediately went to visit Bruckner to ask if he could then have the instrument.

**May 1895** : Letter from Anton Bruckner to Doctor Leopold Schrötter :

Bruckner asks Doctor Schrötter to accept his pedal harmonium as a souvenir.

Schrötter said yes. Bruckner gave it to him on the spot. When Doctor Richard Heller talked about this incident later, he could only do so with a sauer face.

**Monday, 8 February 1937** : Ernst Schwanzara published in the « Neuen Wiener Journal » the **May 1895** letter from Anton Bruckner to Doctor Leopold Schrötter von Kristelli concerning the pedal harmonium. The article was mistakenly attributed to a certain « Schwengner » .

**Friday, 28 April 1944** : Letter from Ernst Schwanzara to Gertrud Maria Engelhart-Heller, the daughter of Doctor Richard

Heller :

Schwanzara sent an excerpt from his book (which has been printed by the « Musikwissenschaftliche Verlag » ,Vienna) to Gertrud. The topic of the donation of Anton Bruckner's pedal harmonium to Doctor Leopold Schrötter von Kristelli (originally offered to Doctor Richard Heller) was probably addressed. On 8 February 1937, Schwanzara published in the « Neuen Wiener Journal » the letter from Bruckner to Schrötter (dated **May 1895**) . Max Auer was not aware of the existence of this letter and proposed a different version of the story in his own biography on the composer. Doctor Schrötter's visits to Bruckner were recorded in his pocket calendars. Schrötter's daughter Frieda lent the precious notebooks to Ernst Schwanzara.

### Karl Lueger

**May 1895** : In Vienna, Karl Lueger and his anti-semitic Christian-Socialist Party win the elections, setting the stage for a drastic change in Austrian politics that will lead to Lueger's becoming mayor of Vienna and, eventually, to Adolf Hitler's victories.

After the 1895 elections for the Vienna « Gemeinderat » , the Christian-Social Party took political power from the ruling Liberals with 2/3 of the seats and subsequently helped Lueger win the mayoralty. It did however take him 2 more years to prevail against the resistance of Prime-Minister Kasimir Felix Badeni and 3 refusals by Emperor Franz-Josef who allegedly loathed him as a person considering him a dangerous revolutionary. After personal intercession by Pope Leo XIII, his election was finally sanctioned in 1897.

Much of Lueger's popularity stemmed from his appeal to women ; his female followers were variously known as « Lueger's Amazons » , « the Lueger Garde » , or « Lueger Gretls » , and were organised in the Christian-Social Women's League. Although women could not vote, he calculated that they could significantly influence how their men-folk voted, and they also inculcated the Party ideology in their children. To maintain his female following, Lueger remained a bachelor and publicly disavowed any private life, claiming that he was too busy because he belonged totally to « my Viennese » . After his death, there was a scandal when his long-time mistress, Marianne Beskiba, published a tell-all memoir including fac-similes of love-letters from him ; the book provides useful information about his political tactics and how the Party was run.

### Concert in Monaco

**Before Friday, 10 May 1895** : Letter from Duchess Amélie of Bavaria (?) to Anton Bruckner :

Amélie probably inquires about Bruckner's health and reports of a planned concert in Monaco.

**Friday, 10 May 1895** : Letter from Anton Bruckner to Duchess Amélie of Bavaria (?) :

Bruckner thanks Amélie for her letter. Since the performance of the 2nd Symphony on November 25, 1894, he did not leave his apartment. The doctors have given-up. Bruckner received the last sacraments on December 8 and 9, 1894. He

now feels better. He thanks Amélie for interceding with Princess of Monaco (Marie Alice Heine) . Bruckner suggests a performance of the 7th Symphony there.

### Sketching the Finale

**Monday, 13 May 1895** : Josef Schalk is able to tell his brother Franz :

« Bruckner has recovered remarkably and intends to tackle the Finale of the 9th soon. »

**Friday, 24 May 1895** : Immediately after moving at the Upper-Belvedere, Anton Bruckner began to work on the Finale of his 9th Symphony (**WAB 109**) .

In the words of Doctor Richard Heller :

« He threw himself into composing. »

**Saturday, 8 June 1895** : Sketches in particello of the first part (exposition) , quickly followed by further detailing and working on the score (sheet 1A) .

Bruckner tells Doctor Richard Heller that he has dedicated the 7th Symphony to King Ludwig II of Bavaria, and the 8th Symphony to Emperor Franz-Josef, and now, dedicates his ultimate Symphony to « dear God » . To conclude, he proposes the « alleluia » of the second movement of the 8th Symphony. He also plays at the piano some parts to Heller, which have not yet been written-down.

Göllerich-Auer 4/3, page 526 :

« You must understand, I have already dedicated 2 Symphonies to earthly majesties : one to poor King Ludwig as royal patron of the arts, one to our glorious, beloved Emperor (Franz-Josef I.) as the highest earthly majesty that I acknowledge (8th Symphony) , and now, I dedicate to the Majesty of all majesties, to dear God, my last work, in the hope that he will give me time to complete the same. »

**Autumn 1895** : Anton Bruckner makes the decision to add a fugue in the Finale of the 9th Symphony. Second part up to the beginning of the fugue and completion of the instrumentation of the first part (exposition) , including rewriting of specific heavily over-written and adhered sheets. There are indications that Bruckner decided, at this point, to introduce the idea of the fugue, as preliminary sketches of the second part consist of a set of variations on the main thematic motives in its reverse scheme, clearly leading to a non fugato reprise. In the composition process, the second part was finally remoulded, with the fugue concept established. The final scoring extended to the very beginning of the fugue (date in the score on bi-folio 17 : **12 December 1895**) .

**Monday, 16 December 1895** : Finale of the 9th Symphony - Most probably the beginning of the third stage, with

drafting the fugue and its progression (the date is mentioned in the score in Bruckner's hand-writing) . At this time, Bruckner also decided to introduce a new epilogue theme of the fugue and chorale recapitulation, including the significant triplets from the main-theme of the first movement. The work process was maintained until early summer of 1896, with the entire second part scored for strings, and incidental markings for the wind instruments. Sketches for the Coda date from **18 to 23 May**, corresponding with the statement of « Kapellmeister » friend Franz Bayer in the « Steyrer Zeitung » that the composer had (just) completed the sketch of the 9th's Finale (**10 May 1896**) .

**Sunday, 10 May 1896** : An article published in the « Steyrer Zeitung » reports that Anton Bruckner has completely sketched (« vollständig skizziert ») the Finale of his 9th Symphony. But Bruckner will admit to Franz Bayer, his « Kapellmeister » friend and organist at the old Steyr parish church (« Alte Stadtpfarrkirche ») , that he will not achieve his goal. (No global sketch of the last movement will be left behind.)

**May-June 1896** : Finale of the 9th Symphony - Final instrumentation and new parts of the exposition. At that stage, he had already reached the Coda, but sadly much of it got lost. Drafting part of the Coda and final cadenza : (**Tuesday**) **19**, (**Thursday**) **21**, (**Friday**) **22**, (**Saturday**) **23** (this corresponds with **May 1896**) . Bruckner returned to the beginning of the movement, presumably wrote a clean first bi-folio and divided the contents of the second bi-folio into 2 new bi-folios, renumbering all subsequent bi-folios by one higher. Further detailing of the instrumentation must have begun soon, thereafter, revising the development section (date : **14 June 1896**) .

**July 1896** : Although Anton Bruckner recovered from his pneumonia and, as from **mid-July**, started to compose again, it is quite unlikely that he felt vigorous enough to work consistently from mid July onwards. However, the last date in the manuscript, **11 August**, marks a very convincing extension of the beginning of the development section on 2 bi-folios ; the first numbered 13a by Bruckner, the continuing one, yet unnumbered.

It is likely that Bruckner finished the primary stage of the instrumentation in this period, with the main strings, woodwinds and brass lines noted down in his customary short hand-writing. We can distil this from the available bi-folios (including the continuity drafts or « Satzverlaufsentwürfe ») and his method of transferring the sketches directly to the score.

Bruckner had completed the first 3 movements of the 9th Symphony. But nothing is final unless the composer has decided so. The work does not contain his final « imprematur » and it remains far from clear whether he was ultimately satisfied with the music he had put to paper. (Ferdinand Löwe and Josef Schalk will get their hands on copious sketches and manuscripts of the Finale.)

A total number of at least 40 bi-folios containing more than 600 bars of music, must have existed. Both the exposition and large portions of the development section had been fully completed. Bruckner completed 206 (208) fully-instrumented bars and 224 bars with strings and short-hand notes for woodwinds and brass. Furthermore, we have continuity drafts (Satzverlaufsentwürfe) of 122 bars. No such sketches survived of 111 bars, thus the music needed to be construed from both original (68 bars, by sequence, transposition, 1:1 repetition and adaptation) and free material (43 bars) , all together about 17 % of the Finale, or about 4 minutes of music. This all

makes a total of 663 plus 2 optional bars.

Furthermore, sketches have been found to the Coda, long believed lost - a crescendo passage of around 24 measures based on the opening motive and a brief ascending chorale phrase, as well as, most significantly, the movement's concluding 24 measure cadence. Finally, we know from the memoirs of Bruckner's last doctor, Richard Heller, that the Symphony was intended to conclude with a « song of praise » in D major, which Bruckner even played to him on the piano. In other words, although the final double barline cannot be found in the material which survives today, we still have a clear impression of the Finale as a whole. For only very few measures has no music whatsoever of Bruckner's survived.

The Fac-simile Edition also offers the closest approach to Bruckner's overall concept of the Finale, and although they are his last words on paper, we need to realise that they reflect his work in progress without the possibility to conclude it. Nothing in there can, therefore, be considered as final, not even the fully scored and instrumented portions, with passages either boldly over-written or cut, pasted and glued. Thus, we will never be able to grasp whether he had later on revised the Finale, or even the entire work, more or less. We deal with what is left, and it is of no use whatsoever to start speculating about what is not there. However, one should consider that already the surviving material contains numerous revisions and working phases, for instance, the first theme group survived in, at least, 6 different phases. Hence, it seems to be appropriate to assume that Bruckner, at least, came to a more or less « final » structure of the piece as such.

### Josef Schantl's tips : meat and beer !

Letter from hornist Professor Josef Schantl to his pupil Karl Stiegler, giving tips on his first important post at the Royal Theatre in Wiesbaden :

« Vienna, (Wednesday) 15 May 1895.

(...) Conduct your life in a balanced manner. Eat hefty meat and drink beer so that you can develop accordingly and become physically strong.

Always play with “ open tone ”. Evaluate the size of the room where you have to perform. The power and richness of tone, about which the player commands, is to be regulated accordingly (...) »

Schantl engaged himself very much with the restoration and renaissance of the hunting-music repertoire. So, he received many invitations by princes or other nobilities to coach their bands of hunting horn-players, which Schantl followed with great pleasure and energy, getting also the chance for a good hunting-game. Count Hans Wilczek asked him, to write special fanfares for the different bands, which he did. So, he is the real re-creator of the Austrian hunting-music.

...

Professor Josef Schantl was born on 8 February 1842 in Graz, Styria ; and died on 27 April 1902 in Amstetten, Lower-Austria. He was the son of the horn-player Florian Schantl in Graz. Even his grandfather, Franz Xaver Schantl, was a horn-player. 2 of his brothers and his uncle were also horn-players. Schantl began his Orchestra career with the Johann Strauß « Kapelle » (Orchestra) , where he encountered the « Tristan und Isolde » Prelude (first performed by this Orchestra, after the Vienna Court Opera Orchestra had refused it after too many rehearsals. This happened before the Munich world-premiere of the Opera.

Schantl became principal horn-player with the Vienna « Hofoper » and the Vienna Philharmonic from 1 October 1870. He premiered Johannes Brahms 2nd and 3rd Symphonies, Anton Bruckner 3rd and 8th Symphonies, and other important Symphonies with the Vienna Philharmonic.

« Prix » , a Bruckner supporter

**Friday, 17 May 1895 : Letter 163** from Hugo Wolf (« Matzen Schloß ») to Melanie Köchert (Traunkirchen) :

« Matzen Castle, “ recte ” (more accurately) hunter’s cottage,

May 17, 1895

Dear gracious lady !

Many, many thanks for your heartfelt lines, which gave me decidedly more pleasure than the magnificent bouquets of flowers set-up on all the tables to receive me in my pretty rooms. A letter also arrived from Schalk at the same time as your lines, but, of course, I broke open your letter first, so that you were still the first to welcome me in my new home.

Seldom has a train ride passed so pleasantly as this most recent one. I had the clever idea of requesting a 2nd Class compartment and learned only upon boarding the train that no more tickets for third class were available anyway, so great was the demand to Salzburg. There were 5 of us traveling from Vienna to Salzburg. From Salzburg on, I had a half-compartment all to myself as far as Jenbach, but the compartments on either side, 1st and 2nd Class, were almost completely empty, so that there was no disturbance of any kind. The sky cleared, oddly enough, in the Salzkammergut region and, for a good part, of the way Lady Sun accompanied us. The closer the train got to its destination, however, the darker the horizon became. In Saalfelden, it actually began to snow. The cold air made itself felt, despite the closed windows. I spent part of the time during the trip reading Mörike’s letters, the first half of which can be said to be weak and fairly un-interesting. But the other half met with my approval, although I had imagined the letters to be wittier and more original. A certain antiquated tone is all too prominent in them. We “ moderns ” have a different sensibility. I suspect we (Mörike and I) would not have gotten along well after all. I finally took-up the poetry of the “ Corregidor ” in the absence of any other intellectual enjoyment, whereupon, I felt myself wonderfully refreshed and stimulated. I also have to record several hours of sleep, “ nota bene ” just at the time when we were passing through the most beautiful regions. At 9:15 pm, I arrived in Jenbach and was met by the devoted servant Gustav (a valet “ par excellence ”) and delivered to my destination with equipage - i.e. , directly by coach to the hunter’s cottage.

Everything was already prepared. Unfortunately, they forgot to heat the rooms, which didn't happen until this morning. My bedroom is on the second floor. It's magnificently furnished. Nothing but "old" (antique) furniture. A Gothic washstand of huge dimensions. Gothic bed, very comfortable. To be sure no horse-hair pillow, but a firm feather pillow. Of course, "plumeaus" (feather quilts) with silk coverlets and very light-weight. Slept fabulously, but didn't get to bed until 12:00. A cold supper with wine and bottled beer was already set-out when I arrived. I ate it with pleasure. My serving girl, a good-natured Tyrolean, excused herself and I was alone in the midst of the splendour. No one around for miles. I wanted to shout for joy. I got-up at 7:00 am. It was snowing in large regular flakes as it only does in December or January. What a nice surprise! But what to do? My bedroom can't be heated, because it has no stove. But, on the other hand, it was comfortable in my work-room, a rustic room with a huge green tile stove surrounded by a wooden bench on which fox skins lie, which also cover every chair. My work-room on the ground-floor is most charming. 4 small windows to the south, 2 and 2 toward the east. A large square table that stands as firm as a stone-wall replaces the secretary for me. A natural wood ceiling with a cross-beam, white-washed walls. (The bedroom, on the other hand, is completely wood-paneled, which makes it very cozy.) There are benches all around the walls. My writing-desk is placed so that it's flanked on 2 sides by benches. At the moment, I'm looking at the "Rolandsbogen" as the mist is obscuring the view of the Stubai Alps. As for the rest, meadows and woods in splendidly cared-for condition. I spent the morning today arranging, unpacking, and settling in. The piano was moved around, so that I now have better light. It was pushed in front of a wall bench, so that I can use the bench instead of a stool. A small, carved wooden cup-board of marvelous workmanship conceals your picture in its velvet frame. It's my holy of holies. Steins of pewter and ceramic, old pictures, and delicate figurines decorate the ledges. In short, it is more livable, homey, and cozy than my most vivid imagination could have dared to envision.

It is almost noon time. I'm dining in the hunter's cottage until the Baron comes. The new house-keeper, an agreeable little Tyrolean woman too, set the table for me herself. I'm dining in the work-room, since it is the only one that can be heated. A delicious repast, everything most magnificently prepared. It's being served at this very minute.

I'm breaking-off here.

Just gulped-down the "first" course. Odd menu. Turnips with cold Braunschweiger.

I'll wait and see. In the meantime, as no one is coming, I can report that I have a fully-equipped kitchen at my disposal, with all the kitchen utensils. There are great numbers of baking pans and wooden mixing-bowls and whatever all these things are called. And everything shiny, new, and clean. Also, new brooms, whisks, dust-pans, feather dusters of ostrich plumes, and the like in abundance. The vestibules to both my rooms are splendidly appointed and in good taste. A well-filled credenza in the vestibule provides me with everything my heart could ever desire. In short, a real paradise. "Second" course: veal filet with potatoes and red beets. Very tasty. To finish, radishes, butter, cheese. All in plentiful quantity. Have really eaten well. As I just learned, the food is being prepared in my kitchen. I'm surprised that the people have managed to fix such an opulent meal in such a short time. It's just occurred to me that one of the small pocket handkerchiefs could be in the blue trousers intended for "Frau" Moser. Please look and see. 3 of the small pocket handkerchiefs are missing. I'd like to have all of my new suit here, the one I left behind, because the cold is horrendous. I need heavy socks for the knickerbockers in any case. Please get me 2 pairs in a pattern that

pleases you and add it to my account. I'll send you the money from here for the English material and for the socks. Today, it's miserable. Everything covered by thick clouds and mist, and dreadfully cold. I'm taking this letter to Brixlegg so that it will still go-out today. After my return, I'll get-down to business. I hope it'll work. If you hear nothing from me in the next few days, you can assume I'm buried in my work and that I feel my best then. How's my little friend Irmi doing ? Give her my best greetings. **Schalk didn't come on the evening he promised, because he was held-up by Bruckner. He apologized for this in his letter. By the way, the evening at Mayreders passed very pleasantly even without Schalk. Both of " Frau " Mayreder's brothers-in-laws are charming people and fairly musical, especially the one called " Prix ", who is also a friend and admirer of Bruckner.**

And now, I'll close ! Lipperheide is coming to Matzen Sunday or Monday. Rickelt has been off hunting since yesterday afternoon. I don't envy him the pleasure and prefer a warm room to any tallyho. Please put 1 or 2 pairs of thick socks in the package. I brought along only 3 pairs of the heavy kind. And now, thousands, but thousands of sincerest greetings from your always devoted,

Hugo Wolf. »

### Losing his temper

**Around May - June 1895** : Anton Bruckner is terribly upset when Josef Schalk and Doctor Wilhelm Dlauhy (from the « Wagner-Verein ») come to visit him. « Frau Kathi » can only leave his private secretary Anton Meißner in the apartment. Ferdinand Löwe and Hugo Wolf are also dismissed.

Having no more confidence in his close disciples (i.e. , Josef Schalk and Ferdinand Löwe) , Bruckner gave the score of the 3 completed movements of the 9th Symphony for safe-keeping to his faithful friend, conductor Doctor Karl Muck.

When Bruckner received proofs of the published version of his Mass in F minor (**WAB 28**) over a year later (April 1894) , he could no longer pretend « he had not noticed » , as Josef Schalk told his brother Franz in the following month, and the result was a most unholy row :

« Unfortunately, we have had another serious dispute with Bruckner. I was indeed not concerned myself, but unfortunately (Max von) Oberleithner was involved and was publicly insulted, and will now no longer have anything more to do with Bruckner personally. The cause was a sudden outbreak of anger on Bruckner's part that the Mass in F minor, which is now at the printing stage, had been altered without his knowledge. With the greatest impatience, he demanded back the score, which Oberleithner has in his safe-keeping. Fortunately, the printed score has not yet appeared, and one can only hope that in the meantime Bruckner forgets the matter again, otherwise there is going to be a hell of scandal (" einen Höllenskandal ") . He was so upset that he got ill again and let none of us visit him. It is only through Dlauhy (who he did receive) that I found-out he is a bit calmer again, although he is still railing against all of us. It is quite sad, but I have no choice but to avoid his company as well. I really wish you (having the necessary composure) could personally talk to him. What about the holidays ? Won't you come to Vienna for at least a few days ? »

Until Thomas Leibnitz's publication of Josef Schalk's letter, perceptions of this incident had been formed by the account given in Göllerich-Auer, based, long after the event, on the testimony of his house-keeper « Frau Kathi » Kachelmayr :

« As “ Frau Kathi ” tells us, he wanted to hear nothing more of his musical friends, and became very agitated when Josef Schalk and Doctor Wilhelm Dlauhy came to visit him at the “ Heßgasse ”. Although they went there daily to inquire after Bruckner's health, “ Kathi ” was instructed to admit only private secretary Anton Meißner, and not Josef Schalk or Ferdinand Löwe. Even Hugo Wolf was turned away. An indication of how distrustful Bruckner had become towards his best friends is shown by the fact that he gave the score of the 3 completed movements of the 9th Symphony to his faithful friend Doctor Karl Muck for safe-keeping ; they were only returned to Vienna long after the Master's death. »

This passage is the origin of 2 long-standing fallacies that became pillars of the « Old Bruckner » perception. The first is the statement that the scores of the 3 completed movements of the 9th « were only returned to Vienna long after the Master's death » , for regardless of what Bruckner may have given Muck, these manuscripts were among the scores received by the « Hof-Bibliothek » shortly after Bruckner died. The second is the notion of a final break between Bruckner and Josef Schalk, for it is clear that relations were soon restored. By 1 August 1894, Josef was telling Franz that he was planning to visit Bruckner in Steyr on the occasion of his 70th birthday, and, by October, Bruckner was writing to Josef again, asking him to play over the Mass in F minor to conductor Wilhelm Gericke in advance of a « Gesellschaft » concert in November 1894. The brothers' correspondence in connection with the 5th Symphony shows that Josef was visiting Bruckner regularly throughout 1895.

If the relationship was perhaps not quite what it had been, neither were the parties concerned. Bruckner was not well, and his nights out with his students were a thing of the past. Josef Schalk himself was in poor health and would not outlive Bruckner by very long. From this time dates Bruckner's increasing reliance on Anton Meißner, a former Conservatory pupil from 1878-1879, described by Göllerich-Auer as « a devoutly Catholic young man » whom Bruckner had taken to because he stood-out against the prevailing « free-thinking and Liberalism » . Meißner was to become Bruckner's secretary and assistant in his final years, writing letters on his behalf, even to his brother Ignaz, and helping to prepare manuscript pages for the Finale of the 9th by ruling bar lines and adding instrument names. He also entered a list of missing manuscripts into Bruckner's diary (entry for Friday 24 May 1895) that includes both « the original manuscript of the F minor Mass » (« Die Originalpartitur Der F. Messe ») and « the score of the F minor Mass sent for publishing » referred to above, probably Mus. Hs. 6015. The copy score was eventually returned. Paul Hawkshaw reproduces a page of the « Et incarnatus » with marginal comments in the shaky hand-writing of Bruckner's last years - but Bruckner never did recover his « Originalpartitur » .

### Prisoner of his flat

**Sunday, 2 June 1895** (Pentecost Sunday) : Until now, Anton Bruckner has not been able to leave his « Heßgasse » flat since 25 November 1894.

### The consecrated water from the Capuchin Church

**Wednesday, 19 June 1895** : Letter from Anton Bruckner (Vienna) to his sister Rosalia (« Sali ») Hueber (Vöcklabruck) :

Bruckner hopes to recover. He is doing better, but he won't be completely healthy anymore. He gives 5 Florins to Laura (Rosalia's daughter) . The consecrated water is now available from the Capuchin Church (« Kapuzinerkirche ») . Greetings to the brother-in-law (Johann Nepomuk Hueber) and all the relatives. Soon, Bruckner will move to the Upper-Belvedere (gate-keeper's lodge) .

### Bach's excavated skull

**Saturday, 22 June 1895** : Johannes Brahms replies to Richard Heuberger's remark that the profile of Johann Sebastian Bach's (recently ?) excavated skull resembled Anton Bruckner's head, « Unfortunately ! » .

### Return to the milk diet

**After Thursday, 4 July 1895** :

Besides Doctor Richard Heller, medical care is also (less often ?) provided by Doctor Leopold Schrötter and Doctor Alexander von Weißmayr.

Bruckner reports in his dietary regulations that he has to replace beer with milk (again) .

Doctor Heller and Meißner are privileged witnesses of Bruckner's domestic devotions.

### The last flame

**After Thursday, 4 July 1895** : For the last time in his life, Anton Bruckner falls in love with a girl ; her name : Adele (from 4 July 1895 to 14 October 1896) .

### Moritz Sechter visits Bruckner

**After Thursday, 4 July 1895** : Moritz Sechter (a nephew of Simon Sechter) visits Anton Bruckner at the « Kustodenstöckl » . He reports to him the death of Jordan Kajetan Markus who wrote a biography on Sechter. Markus frequently accompanied Bruckner at different Viennese guest-houses.

### Too disturbing for the « Schloßkapelle »

**After Thursday, 4 July 1895** : Anton Bruckner goes regularly to Mass, most of the time celebrated by Father Heribert Witsch in the nearby « Schloßkapelle » . One day, he was asked to pray more quietly and less disturbingly. That is why he decided to go to St. Michael's Church on Sundays.

### The Belvedere Palace Chapel

The Belvedere Palace Chapel is located in the south-eastern corner-tower of the Upper-Belvedere in Vienna. It was designed by the Austrian architect Johann Lukas von Hildebrandt.

The chapel is decorated in red-brownish and stucco marbling with contrasting white walls and gold gildings. The impression evokes the 2 marble-halls in the Upper- and Lower-Belvedere. Hildebrandt used the best available artists for the decoration.

« The Resurrection of Jesus Christ » altar-piece was painted by Neapolitan painter Francesco Solimena over a period of 10 years and completed in 1729. A model of Solimena's altar-piece by Santino Bussi is displayed in the hall next to the chapel. Bussi was also responsible for the jewelry in the remaining halls of the Upper-Belvedere. The sculptures of St. John the Baptist and St. Peter were executed by Domenico Parodi from Genoa.

The ceiling fresco is by Carlo Innocenzo Carlone from northern Italy and depicts God the Father with the Holy-Spirit as a dove surrounded by angels. It was completed in 1723. The fresco figures of God the Father and the Holy-Spirit, along with Jesus Christ in the altar-piece, form a trinity.

Construction of the chapel was completed in 1723. The Palace Chapel was first opened to the public in May 1753. Up to this time, it had been reserved for the daily prayers of Prince Eugene and a select group of eminent individuals made-up of the nobility, artists, and scholars. An Inventory of the Imperial and Royal Palace Chapel in the Belvedere from 1776 lists all the articles required to hold a Holy-Mass. It can, therefore, be assumed with certainty that it was used for ecclesiastical purposes. At the end of WWI, in 1918, and the abdication of the last Emperor of the Habsburg Monarchy, the palace ensemble became State property. While both palaces were severely damaged during World War II, the Belvedere Palace Chapel survived intact.

The chapel initially remained unused, but was returned to its original use under the direction of Hans Aurenhammer. Commemorative Masses were celebrated each year on 2 occasions : on April 21, the anniversary of the death of Prince Eugene of Savoy ; and, on June 28, the anniversary of the death of Archduke Franz Ferdinand of Austria. Hans Aurenhammer's successor as director, Hubert Adolph, initiated regular Sunday Mass in the Palace Chapel that was open to the public. This Mass was conducted on an alternating basis by priests from St. Elisabeth's Church and St. Paul's Church. In addition, Adolph had a small organ fitted in the chapel.

As Federal government property, the chapel is part of the Belvedere's museological collection. As part of an agreement with the Federal government, it is now open every Sunday at mid-day for Catholic Holy-Mass. According to ecclesiastical law, the chapel is situated in the Viennese parish of St. Charles Borromeo.

### St. Michael's Church

St. Michael's Church (« Michaelerkirche ») is one of the oldest churches in Vienna, and also one of its few remaining Romanesque buildings. Dedicated to the Archangel Michael, St. Michael's Church is located at « Michaelerplatz » across from St. Michael's Gate at the « Hofburg » Palace. St. Michael's used to be the parish church of the Imperial Court, when it was called « Zum heiligen Michael » .

Over its long history, spanning more than 8 Centuries, the church has incorporated a medley of architectonic styles. The church is a late-Romanesque, early-Gothic building dating from about 1220-1240. There is a document giving 1221 as the foundation date of the church, but this is most probably a 14th Century forgery. Over time, there have been many alterations, resulting in its present-day aspect, unchanged since 1792.

The interior of the church consists of a nave and 2 aisles that have conserved the ancient Gothic structure. The side-chapels were added later on.

It gives the impression of a robust 3 dimensional building, despite the church's low height. The polygonal apse was replaced in the 14th Century (1327-1340) by an early-Gothic choir with 3 bays. The central and the northern choir chapels were re-fitted in Baroque style.

The high-altar was designed in 1782 by Jean-Baptiste d'Avrange. It is decorated with the monumental stucco alabaster Rococo sculpture Fall of the Angels (1782) by sculptor Karl Georg Merville. It represents a cloud-burst of angels and cherubs, falling from the ceiling towards the ground. It was the last major Baroque work completed in Vienna. The centre-piece of the high-altar is Maria Candida, a Byzantine icon of the Virgin Mary, belonging to the Cretan School of hagiography and named after the former capital (now Heraklion) , displayed as being carried by 2 archangels.

In the northern chapel, the altar-piece « Adoration of the Child » is by Franz Anton Maulbertsch (1754-1755) .

The southern chapel, the « Nikolauskapelle » , has remained unchanged and retains its medieval aspect. Its traceried windows date from the 13th Century. It displays Gothic stone sculptures under a baldachin (St. Catherine and St. Nicholas) (1350) and a wooden crucifix by Hans Schlais (1510-1520) . This chapel was founded by a cook of the duke at about 1350, giving thanks to the Lord for being acquitted of a poisoning case. The triumphal arch between the transept and the choir dates from the 14th Century. Its spandrel is decorated with « The Last Judgment » . The recently rediscovered frescoes from the early-15th Century attest to the high-quality of the art of painting in Vienna in those times. The Baptistry shows us in a niche the wooden statue « Man of Sorrows » (1430) .

The gilded pipe organ (1714) by Johann David Sieber is the largest Baroque organ in Vienna. It was once played by the 17 year old Franz-Josef Haydn in 1749. Mozart's « Requiem » was performed for the first time in this church at a memorial service for the composer on 10 December 1791. As Mozart hadn't finished this work at the time of his death, only the existing part was performed. One of those who attended the « festive funerary honours » was theatre director Emanuel Schikaneder whose libretto was used by Mozart for the « The Magic Flute » .

The present façade was built in 1792 in a neo-Classical style by Ernest Koch, a typical style for the reign of Emperor Josef II. Above the entrance, on top of the pediment, resting on Doric columns by Antonio Beduzzi, stands a group with winged angels and « St. Michael slaying Lucifer » (1725) . These sculptural figures were executed by the Italian sculptor Lorenzo Mattielli, who also sculpted the Hercules figures at the « Hofburg » entrance, just opposite the church. The high polygonal Gothic bell-tower from the 16th Century has become one of the symbols of the Inner-City.

St. Michael's is famous for its « Michaelergruft » , a large crypt located underneath the church. Aristocrats were able

to access their family crypts through marble slabs marked with their coats of arms in the church floor. The coffin of a deceased member of the family could then be lowered directly into the crypt via these marble slabs.

Due to the special climatic conditions and constant temperature in the crypt, more than 4,000 corpses were kept well-preserved. Hundreds of mummified corpses, some still in burial finery or with a wig, are on display, some in open coffins, adorned with flowers or skulls, others decorated with Baroque paintings or with « vanitas » symbols. The most famous among them is Pietro Metastasio (1698-1782) , the most famous writer of Opera librettos of the Baroque era.

Archæological excavations in the « Michaelerplatz » between 1989 and 1991 un-covered among other things the settlement of « Canabæ » associated with the Roman camp at « Vindobona » . This will have consisted primarily of the residences of soldiers' wives and children. The excavation site was made permanently accessible to the public in 1991 ; the design of the presentation is by architect Hans Hollein.

### The executor's address

**Wednesday, 10 July 1895** : Bruckner's pocket calendar entry by an unknow hand-writing (from September 1895) :

« 10 July 1895. Doctor Theodor Reisch - “ Gatterburggasse ” Number 19, Döbling, 19th District, Vienna. Formerly “ Theresienplatz ”. »

### Well but weak

**Friday, 12 July 1895** : Letter from Josef Schalk to his brother Franz :

Yesterday, Josef Schalk visited Bruckner at the Upper-Belvedere. He was looking quite well, though quite weak. Hopefully, the Semmering region will give him some strength.

At the turn of the 19th and 20th Centuries, the better Viennese society discovered the Semmering in Lower-Austria as a nearby summer resort destination.

The « Deutsche Volksblatt » Number 2341 reports on page 2 about Anton Bruckner's health-condition and his relocation to the Upper-Belvedere.

### Doctor George Wolf

**Friday, 12 July 1895** : Letter from « Kapellmeister » friend Franz Bayer (Steyr) to Anton Bruckner (Vienna) :

Bayer is pleased with the improvement of Bruckner's health - as mentioned in the July 7th letter. Greetings from Reverend (Johann Evangelist) Aichinger, who had already started to write a letter to Bruckner from the spa-town of (Bad) Wörishofen, in Bavaria. The water-cure did not help : Aichinger's condition is of concern to Doctor George Wolf.

Aichinger's responsibilities are now entrusted to Gutschik's successor, the newly-created Heuberger Cooperative. Would Bayer be able to visit Bruckner in July ? Everyone would be happy to see Bruckner come to Steyr.

...

From 1855, Sebastian Kneipp was sent to the convent of (Bad) Wörishofen. In addition to his religious ministry, he perfected his therapeutic methods and, in 1880, founded the first bathing establishment there.

Sebastian Kneipp :

« Doctor George Wolf has opened a new establishment in Traunstein. Doctor Wolf is of a quiet, thoughtful and noble character, has studied and practised my whole system in (Bad) Wörishofen for a long time, and I am sure I can highly-recommend this physician to all patients who wish to use my water-cure. Thus, my numerous friends and guests near and far, especially those in Austria, have a favourable opportunity of experiencing the wholesome effects of my water-cure under his direction ; for exactly patients from Austria and Hungary, so far off from here, have visited my own bathing-establishment with great delight, and after returning home have made known my system in grateful remembrance of the results produced by it.

It is a comfort to me to give evidence of the increasing number of physicians favourably disposed towards my system ; by these means the whole will gradually pass-over to professionals, and this will be my greatest consolation. »  
From Sebastian Kneipp's book, « My Water Cure » :

« So sind denn bereits eilf Auflagen von “ Meine Wasserkur ” hinausgegangen in die Welt als Rathgeber und Helfer in Krankheiten und allen verschiedenen Mühseligkeiten des irdischen Lebens, und es gereicht mir zum großen Trost, daß die leidende Menschheit durch das allgemein verbreitete Heilmittel, das “ Wasser ” Hilfe findet. Besonders aber tröstet mich, daß neue Heilanstalten entstanden und entstehen, so daß in den verschiedenen Gegenden die Leidenden nicht zu weit zu reifen haben, um Hilfe durch Wasser-Anwendungen zu bekommen. Das Jordanbad bei Biberach wurde eröffnet ; recht viele Kranke haben sich dorthin gewendet, und die Anstalt hat schon viele recht glückliche Kuren aufzuweisen. Eine 2. Gelegenheit ist geboten in Immenstadt ; auch von dieser Anstalt wird nur Rühmlisches gesagt, und deßhalb ist gute Aussicht für die Zukunft vorhanden, daß sich dieselbe immer weiter entwickeln werde.

Die 3. Wasserheilanstalt wurde eröffnet in Ulm und wird, wie ich schon öfters gehört, sich nach und nach immer weiter entfalten.

In Rosenheim ist auf allgemeines Verlangen der Stadt eine Anstalt nach meinem System kürzlich eröffnet worden, und ich habe bereits gehört von den guten Erfolgen ; denn Herr Doktor Bernhuber war längere Zeit in Wörishofen Badearzt und besitzt ein herrliches Talent für sein Fach. Er ist nicht bloß ein guter Arzt, sondern auch ein vorzüglicher Operateur ; derselbe hat oft erklärt :

“ Mit Wasser werden Krankheiten geheilt, wo andere Mittel keine Hilfe mehr bringen können. ”

Deßhalb hoffe ich mit Grund, daß gerade diese Anstalt sich recht segensreich entwickle.

Herr Doktor Georg Wolf hat in Traunstein, wo schon durch das frühere Bad die nöthigen Gebäude vorhanden sind, eine neue Anstalt eröffnet. Herr Doktor Wolf ist ein ruhiger, besonnener und edler Charakter, hat in Wörishofen durch längere Zeit mein ganzes Heilverfahren gründlich erlernt und eingeübt, und ich glaube, daß ich diesen Arzt mit Recht den Patienten für das Heilverfahren meiner Wasserkur auf's Wärmste empfehlen kann. So haben meine vielen Freunde und Gäste in der Nähe und in der Ferne, namentlich die in Österreich, eine günstige Gelegenheit, die guten Wirkungen meiner Wasserkur unter seiner Leitung kennen zu lernen ; denn gerade Leidende aus Österreich und Ungarn, soweit von hier entfernt, haben mit großer Begeisterung meine hiesige Wasserkur-Anstalt besucht und nach der Heimkehr, in dankbarer Erinnerung an die erzielten Erfolge, mein Heilverfahren weiter vorbreitet.

Wörishofen, den 3. Dezember 1889. Der Verfasser. »

#### Doctor von Weißmayr on vacation

**Saturday, 13 July 1895** : The « Linzer Zeitung » , the « Linzer Tages-Post » and the « Ostdeutschen Rundschau » (Number 189, page 7) report on Anton Bruckner's relocation to the Upper-Belvedere (July 4, 1895) .

Doctor Richard Heller takes-over from Doctor Alexander von Weißmayr (who probably left on vacation) to take care of Anton Bruckner. Heller visits him « every 2 to 3 days » .

#### Doctor Heller writes to his « fiancée »

**Sunday, 14 July 1895** : Letter from Doctor Richard Heller to his « fiancée » , Irma Maria Theresia von Lakrovits :

« (...) Since yesterday, I have also taken the treatment of Bruckner instead of Weißmayr and I must go to the (High-)Belvedere every 2 or 3 days. (...) »

#### 1895 : Mahler visits Brahms in Ischl

**July 1895** : Gustav Mahler makes his second annual visit to Johannes Brahms, at (Bad) Ischl. Brahms has been considering writing a « Cantata Symphony » which, later, transforms into the « Vier ernste Gesänge » (4 Serious Songs) . Mahler takes the waters for a few days.

#### The Monte Carlo project

**Probably before Wednesday, 31 July 1895** : Letter from Archduchess Gisela of Austria to Anton Bruckner :

The Archduchess supports the idea of a Bruckner concert in Monte Carlo (performance of the 7th Symphony ?) . Access to the music-scores must be solved.

**Wednesday, 31 July 1895** : Letter from Anton Bruckner to Duchess Amélie of Bavaria :

Following her advice, Bruckner immediately asked music-publisher Albert J. Gutman, who is out of Vienna, to send the music-scores (of the 7th Symphony ?) to Monte Carlo. Since the beginning of July, Bruckner lives on the Upper-Belvedere, by the grace of the Emperor. He is still not completely healthy.

#### Giving news to his brother

**Wednesday, 31 July 1895** : Letter from Anton Bruckner (Vienna) to his brother Ignaz (St. Florian, near Linz) :

Name-Day congratulations. After moving to the Upper-Belvedere, Bruckner is slowly getting better. « Frau Kathi » Kachelmayr asks Ignaz to give greetings to St. Florian's music teacher Karl Aigner, Prelate Ferdinand Moser, the clergy, the priests, and especially, Bruckner's friend Professor Bernhard Deubler. She also mentions that Archduchess Marie Valérie, Duchess Amélie and the Princess of Monaco (Marie Alice Heine) had often written to Bruckner.

#### Summer without any discomfort

**Around July - August 1895** : Anton Bruckner spent the summer without any discomfort. He often goes-out on his own again, leaving the small sector of the Belvedere.

#### Bruckner plays to Doctor Heller

Anton Bruckner became indifferent to performances of his works on the international scene. He also distanced himself from his friends. He spent most of his time in his arm-chair. Occasionally, he attempted a musical chord on his old « Bösendorfer » grand piano, and then, tried to transcribe it with a trembling hand. All his thoughts were directed at the Finale of the 9th, a movement that evokes distress and existential questioning, and the composer's struggle with the « Almighty God ». Faced with fatality and his extreme state of weakness, he began to work on a transition from the Adagio to the « Te Deum » (WAB 45) .

**Sunday, 25 August 1895** : Doctor Richard Heller writes in his personal diary :

Anton Bruckner has played to me on his Bösendorfer piano the « Te Deum » (WAB 45) accompanying figure of the Finale of the 9th Symphony.

Heller tells how Bruckner « went over to the piano and played me parts of the Symphony with shaking hands, but with undiminished accuracy and strength. I have often regretted the fact that I cannot play or write down music after one hearing because, then, I might be able to give some idea of the end of the 9th Symphony. »

Heller felt sure that the composer « had drawn-up a contract with his “ dear God ”. If “ He ” willed that the Symphony, which was indeed to be a hymn of praise to God, should be finished, “ He ” should give Bruckner the time he needed for his task ; if he died too soon and his musical offering was left incomplete, God had only himself to

blame. »

Bruckner's biographer Max Auer also claimed that he saw a page of the score (either at or near the end of the Finale) in which all the leading themes are « piled on top of each other, as in the Finale of the 8th Symphony » .

In his very sure footed Bruckner biography (« Wege zu Bruckner » , Gustav Bosse Verlag, Regensburg, 1942, 1944, 211 pages) , Peter Raabe quoted Doctor Heller :

« I believe, to be able to clarify some pronouncements from Bruckner, that in his ideas he had to some extent concluded a contract with God. If the dear Lord wanted him to complete the Symphony, which is intended to be a canticle to God, then He must bestow life for as long as is needed ; should he die earlier, then it is God's own fault if He receives an uncompleted work. Devoutness was, by the way, a principal feature of this great genius. He prayed diligently, and even when these prayers sometimes took on very peculiar forms, they were nevertheless deeply felt and piously brought forth. As no one could disturb him when he was at prayer, which he carried-out on his knees before his large crucifix, I had the opportunity several times, standing quietly in the room, to hear his prayers. He praised a number of “ Our Fathers ” and “ Hail Marys ” and closed with a fully freestyle prayer, such as, “ Dear Lord, let me be in good health again soon, look, I need my health so that I can complete the 9th ”. He uttered this last passage in a somewhat impatient manner, closing with a triple “ Amen ”, whereby, on a few occasions, with the 3rd “ Amen ”, he struck against his thighs with both hands, such that one couldn't help but think that he thought to himself :

“ If the dear Lord does not hear that now, then it is not my fault ! ” »

The Symphony was intended to conclude with a « song of praise » in D major, which Bruckner even played to Heller on the piano. But D major had not merely to be arrived at, it had to be won as the culminating act of a comprehensive tonal process. Bruckner had given, in the 5th Symphony, the definitive demonstration of the difference between attaining and confirming a tonic ; but, unfortunately, the connected thinking necessary was the now the hardest thing for him to achieve. We are left with images - Bruckner playing the ending of his Symphony to Heller ; Heller vainly urging Bruckner to write it down ; Bruckner, in one of his brighter moments, playing a « Ländler » for Heller and his wife ; and Heller in his later days in Salzburg (he lived until 1934, 2 years after the first performance of the « Urtext » version of the 9th) with the ending of the 9th locked in the recesses of his memory.

Although the final double barline cannot be found in the material which survives today, we still have a clear impression of the Finale as a whole. For only very few measures has no music whatsoever of Bruckner's survived.

### The annual grant

**Tuesday, 3 September 1895** : Anton Meißner's entry in Bruckner's pocket calendar (from December 1895) :

The annual honorific grant of 400 Florins from the Upper-Austrian Parliament allocated to Anton Bruckner (on 30 October 1890) was handed-over to lawyer Theodor Reisch on September 3, 1895.

**Thursday, 30 October 1890** : 10th Session of the Upper-Austrian Parliament, chaired by Abbot Leonhard Achleuthner (Coordinators : Baron von Puthon, Councilor Karl Heyß) . Bishop of Linz Franz Maria Doppelbauer's request to pay an annual honorific grant of 400 Florins to Anton Bruckner is unanimously accepted.

Telegram to Bruckner :

« TELEGRAM Number 8447 to Imperial organist Anton Bruckner, Vienna (hand-writing : « Heßgaße Number 7 »)

(Stamp on the left : « 30/10 Linz 102 (/) 12 30 (time ?) »)

« To Vienna from Linz. 577 19 (?) 30/10 12.

During today's assembly, the Upper-Austrian Parliament was unanimously pleased to vote an annual honorific grant of 400 Gulden. Doctor (Max) Edlbacher (Lawyer) . »

### Resuming his lectures

**September 1895** : Anton Bruckner announces to the University of Vienna that he will resume his lectures in the Winter Semester 1895-1896. However, on the recommendation of his physicians, he had to abandon this plan later.

Eduard Stummer had inscribed in the Faculty of Philosophy (entry later deleted, again) .

Bruckner's pocket calendar entries (unknown hand-writing) :

Addresses of Doctor Theodor Reisch (with date addition : 10 July 1895) .

Address of Anton Bruckner on the Upper-Belvedere (draft of a future business-card ?) .

**Tuesday, 10 September 1895** : According to the « Deutsche Volksblatt » Number 2401 (page 2) , the « Österreichische Volkszeitung » Number 248 (page 2) (« Neuigkeitsbote ») and the 2 « Kreuzer » edition of the same newspaper (page 4) :

Since Anton Bruckner has recovered from his illness, he will resume his lectures at the University of Vienna.

### Visit of a university student

**Around September - October 1895** : Student Karl Kobald, registered at the University of Vienna since September, visits Anton Bruckner at his Upper-Belvedere apartment.

### Pocket calendar entries

**October 1895** : Bruckner's pocket calendar entries (unknown hand-writing) :

Address of Doctor Richard Heller and Liezent.

Name : Ploteny.

### Bruckner can no longer eat chocolate

**Sunday, 13 October 1895** : The international press reports that Anton Bruckner told a friend who visited him a few days ago that he wanted to complete his 9th Symphony, which he devoted to God, like his « Te Deum » (WAB 45) .

Rehearsals of the String Quintet (WAB 112) are planned to be held in his Upper-Belvedere apartment.

« Anton Bruckner can no longer eat chocolate, and if he leaves his room for a few moments in order to take some fresh air outside in the park, he is confronted with chilliness and has to retreat immediately. And yet, the Master is tireless in composing. He has completed his 9th Symphony up to the Finale, and carries on with the idea of composing a transition-part to his “ Te Deum ” as a conclusion.

The genius man said to a friend who came to visit him a few days ago :

“ I have dedicated the 8th Symphony to my dear Emperor and the 9th Symphony to the dear God in deep reverence, therefore, I should end with a ' Te Deum ', and then, I will lay-down the pen forever. ”

Doctor Leopold Schrötter takes care of the sick Bruckner with self-sacrificing love.

The Bohemian Chamber Music Association will play the String Quartet of the Master during their concerts in Vienna. To make Bruckner happy, the rehearsals will take place in his apartment. »

### The uncle of Ernestine Korda

**Wednesday, 16 October 1895** : The uncle of Ernestine Korda, Anton Albert, visits Anton Bruckner at his Upper-Belvedere apartment in the morning.

### Must see Ernestine again

**Wednesday, 16 October 1895** : Letter from Anton Albert to Ernestine Korda :

« Frau Kathi » Kachelmayr is helped by a « new cleaning lady » . Doctor Leopold Schrötter's assistant, Alexander von Weißmayr, is visiting Bruckner every 2 days (he is here today) . Bruckner is feeling quite well, but for now, he is victim of exudation. He wants to see Ernestine again.

### Leopold Schönchen

**Tuesday, 22 October 1895** : Letter from sculptor Viktor Tilgner to Anton Bruckner :

Artist Leopold Schönchen (1855-1935) was commissioned to paint a portrait of Anton Bruckner in Munich. Archduchess Gisela of Austria wants Bruckner to sit for him. « Frau Kathi » Kachelmayr would make the necessary arrangements.

The painter, graphic artist, and sculptor Leopold Schönchen was born in 1855 in Augsburg, and died in 1935 in Munich. His grave is at the « Nordfriedhof » (Northern Cemetery) . From 1877, he studied with Hermann Baisch at the Academy of Fine-Arts in Munich ; he also studied in Karlsruhe. He worked in Holland, Belgium, England, and Scandinavia - but not in Munich. Some of his paintings are exhibited at the Munich State Gallery. He was married to female painter Beatrice Frederickson.

### Waldeck pays tribute to Bruckner

**Sunday, 27 October 1895** : Letter from Linz organist Karl Waldeck to Anton Bruckner (Vienna) :

Waldeck wrote after the « glorious » performance of the 4th Symphony (**WAB 104**) in Linz, in October 1895 :

« Like me, every discerning listener will be convinced anew that Anton Bruckner is the most powerful of living composers and one of the greatest composers of all time. »

### Ignaz wants to come to Vienna

**Sunday, 27 October 1895** : Letter from Ignaz Bruckner (St. Florian, near Linz) to his brother Anton (Vienna) :

Ignaz wants to learn about his brother's improved health-condition. Ignaz talked to St. Florian's Prelate Ferdinand Moser on his Name-Day. The latter was delighted with the relocation of Bruckner at the Upper-Belvedere. Some choirmen from St. Florian's monastery left for Linz to be part of today's concert. Ignaz will probably come to Vienna only after the New Year since his presence would be too much due to the upcoming rehearsals leading to the performance of the 4th Symphony on January 5. Greetings to « Frau Kathi » .

**Wednesday, 30 October 1895** : Letter from Anton Bruckner (Vienna) to his brother Ignaz (St. Florian, near Linz) :

Anton tells his brother not to come now to Vienna. Bruckner is still suffering. If friends from St. Florian want to write, Ignaz should notify him first. Name-Day greetings (4 November) to Prelate Karl Aigner.

« (...) Do not come now, wait till next year. I am still suffering. Give my respects to the holy Prelate ! (...) If anyone should write, please let me know in advance.

Your brother Anton.

Vienna, 30 October 1895. »

« (...) Komme jetzt nicht, - bis künftiges Jahr. Ich bin noch immer leidend ! Hochwürdigsten Herr Prälaten meinen Respekt ! (...) Sollte jemand schreiben, so melde gleich im Voraus meinen Dank.

Dein Bruder Anton.

Wien, 30. Oktober 1895. »

This poignant letter is concerning his health, stating that he is still suffering and will not be coming before the following year, sending his respects to the clergy and to « Herr » Aigner at St. Florian, sending the latter congratulations on his Name-Day, and expressing his thanks in advance should anyone write.

The letter follows one of 27 October 1895 from the composer's younger brother Ignaz in which the latter informs Bruckner about the performance of his 4th Symphony conducted by Adalbert Schreyer at the « Linzer Redouten-Saal » which is part of the first « Musikverein » Concert of 1896. Mentioned in warm terms here is Bruckner's friend, and sometime copyist, the St. Florian music-teacher Karl Aigner.

1 page, 8vo (20.4 x 12.8 cm) , integral blank, central horizontal fold, Vienna, 30 October 1895, some later pencil annotations, erased, to head of letter, traces of mount to verso of integral.

Ignaz Bruckner was employed as organ blower at the Monastery of St. Florian. He could afford to have a « private organ » . With his savings, he bought that organ (by the firm Mauracher, 1901) which is still used today in the Lady Chapel (annex to the Collegiate Church) .

### Writing to Ernestine Korda

**Wednesday, 30 October 1895** : Letter from Anton Bruckner to Ernestine Korda :

Bruckner thanks Ernestine for her letter. His suffering is less intense.  
He says : « Like a prisoner, I wait for redemption. »

### Bruckner, the godfather

**Thursday, 31 October 1895** : The son of the Almeroth couple is born. His friend Anton Bruckner is chosen as godfather. Hence, the origin of the child's first name : Karl (the father) and Anton (the godfather) . The small family resides in Steyr at « Dukartstraße » Number 11.

**Monday, 25 November 1895** : Karl Almeroth's son, Carl Anton, is baptized at the parish of Maria Treu. « Frau » Tilgner (the wife of sculptor Viktor Tilgner) is the godmother. Due to his bad health-condition, Bruckner the godfather is

replace by Hugo Abbass.

Steyr's hair-dresser : Josef (« Sepp ») Stöger

**Thursday, 3 February 1916** : Article in the « Steyrer Zeitung » reporting on : the « Kränzchen » Men's Choir Society (« Männergesangverein ») ; the legacy from August Riener : a score-sheet from the 9th Symphony (**WAB 109**) ; and the legacy from the local « Friseur » Josef (« Sepp ») Stöger : a rounded frame containing Bruckner's hair.

Bruckner always stopped at Stöger's « salon » when he was in town (visiting him sometimes 3 times a week !).

It is said that Bruckner could not bear the « mechanical » hair-clipper.

He said to Stöger :

« Turn-off that devilish machine ! »

As instructed, Stöger had to use the « regular » scissors to cut every hair almost to the root !

(Upper-Austrian villagers wore their hair very short.)

...

« A member of the Liedertafel “ Frohsinn ” in Linz said Bruckner might possibly have looked like a Cæsar in the later years of his life. At the time he knew him, Bruckner had no such expression at all in his dear, good face. He wore his hair cut so short that many people remembered him as bald. In fact, this habit was very peculiar, for the identifying mark of the musician in those days was his long mane. I remember his haircut impressed me strongly when I met him. Some writers claim he was actually beardless, but in reality he wore a very short moustache, which was almost invisible. These differences in description are very interesting, for they are part of the general uncertainty surrounding his whole personality. »

(Werner Wolff. Anton Bruckner - « Rustic Genius »)

...

When the session was finally over, Stöger took the time to carefully collect the hair of his famous guest.

Bruckner exclaimed :

« What are you doing ??? »

Stöger replied that he was collecting his hair as a souvenir.

Bruckner retorted :

« “ Sö san a Schlaucherl. ” But you are quite right, perhaps a fool would give 100 Guilders for them. »

Stöger put them inside a decorated frame and wrote on the back :

« Ich bestätige mit Ehrenwort und Unterschrift, daß ich diese im Bilde befindlichen Haare von dem ehrwürdigen Haupte des verewigten Meisters der Tonkunst Doktor Anton Bruckner geschnitten habe. »

« I confirm with a word of honour and signature that I have cut the hairs included in this frame from the venerable head of the immortal Master of Music, Doctor Anton Bruckner. »

(Josef Stöger, hair-dresser. Steyr, 10 March 1937.)

Josef (« Sepp ») Stöger was born in Steyr (at « Werndlgasse » Number 5) on 21 January 1869. The son of a factory-worker, he had 2 sisters and 1 brother. Stöger went to the « Volksschule » (Elementary school) located near the Church of St. Michael - his teacher was Ignaz Schmid. After his training and apprenticeship as a hair-dresser with Henry Eidenböck, Stöger traveled to Switzerland. He has been a self-employed « Friseur » in the town of Steyr since 1900. He first established his « salon » on « Direktionsstraße » (« Direktionsberg ») in the « Volksmund » sector ; then, in 1911, in the city-centre at « Zwischenbrücken » Number 1.

Stöger was very much connected to his community and homeland.

He was a member (singer) of the « Kränzchen » Men's Choir Society.

His poetic talent emerged only after the First World War, where he served as a military of inferior quality (« Landsturmmann ») .

He was the author of 2 books : « I bi à da » and « A so san ma » .

He wrote dialect poems based on text by H. Hack.

This gentle and lovable man distinguished himself by a Socratic lifestyle. His charismatic humour attracted many people who opened their hearts.

Many famous Styrian personalities came to his barber-shop :

Painter Adolf Reich ; Steyr painter Jörg Reitter ; painters Götzinger, Konstantin Stoitzner, Jung, Diltsch, Therese Kratky,

Pamperl-Kautsch, and Dworschak.

Styrian poets Albert Bachner, Hermann Landsiedl, Franz Spindler, and Linus Käfer.

Writers Ludwig Huna, Fritz Stüber-Gunther, Viktor Trautzi, and Franz Resl.

Dialect writers Karl Seuffert, Anna Zelenka, Gregor Goldbacher, and Wilhelm Schaumberger.

Music composers Eggermann, Franz Xaver Müller, Josef Brauneis, Karl Seuffert, Wagner-Schönkirch, Franz Wegscheider, Albert Weinschenk, and Wodniansky.

Opera singers Feichtmayr and Sergl.

The Kittel String Quartet.

Singers Otto and Maria Perkonig.

In 1938, the Steyr citizens celebrated Stöger's 70th birthday, although he was just 69.

Josef Stöger died on 30 April 1938. He did not live to see his 70th year ...

### Bruckner's possessions

**November 1895** : Anton Meißner's entry in Bruckner's pocket calendar :

Meißner gives back a black time-clock to someone (Bruckner ?) . He also keeps Bruckner's honorary doctoral ring and a jar full of ducats.

### Doctor Lorenz's address

**December 1895** : Anton Bruckner's pocket calendar entries :

Unknown hand-writing : Address of Doctor Adolf Lorenz.

Anton Meißner's hand-writing : Hand-over of the document from the Upper-Austrian Parliament (31 October 1890) to Doctor Theodor Reisch (on 3 September 1895) .

Anton Bruckner's hand-writing : Payment of 50 Florins to Doctor Alexander von Weißmayr, covering the period from August 1895 to the end of January 1896.

### Berlin : Mahler conducts the « Resurrection »

**Friday, 13 December 1895** : Gustav Mahler conducted the premiere of his 2nd Symphony in Berlin under terribly discouraging circumstances.

First, in order to finance the concert, he had to use his own funds and borrow money from friends. To fill the hall, tickets were given away to musicians and students from the Berlin Conservatory. Some critics refused to attend the concert and, to top it all off, on the day of the concert, Mahler was struck-down by a massive migraine. Nevertheless, he dragged himself to the podium and forced himself to conduct. After the performance, he collapsed in his dressing-room. What happened during the concert was a transcendent moment in musical history. Those in the hall knew they were witnessing a once-in-a-life-time experience of creation.

### Help from Wilhelm Jahn

**Monday, 30 December 1895** : Hugo Wolf calls on Wilhelm Jahn, the director of the Vienna Opera, to personally present the score of his recently completed Opera, « Der Corregidor » . He is told by a bureaucrat that he may not see Jahn and must submit his score in the usual way.

### Sacrament of death in succession

Anton Bruckner repeatedly received the sacrament of death, most recently by the chaplain of the Belvedere Castle, Father Heribert Witsch.

### WAB 109 : Final choir

Rudolf Weinwurm suggests Anton Bruckner to use the German Easter hymn « Christ ist erstanden » (Christ is risen) as a final choir for the 9th Symphony. Bruckner informs choir-Master Franz Schneiderhan (Austrian Culture functionary and member of the Board of directors of the Vienna Men's Choir Society (« Wiener Männergesangsvereins »)) after a rehearsal at the « Musikvereinsaal » .

### Undated New Year greetings

**End of December 1895 (?)** : New Year greetings' letter from Anton Bruckner (Vienna) to his brother Ignaz (St. Florian, near Linz) - cited by Max Auer, and then, Andrea Harrandt :

Based on its lettering, the letter dates more probably from the end of 1893 (or earlier) than the end of 1895.

Perhaps, Anton Bruckner wrote a second New Year greetings' letter as he reports in his letter of August 11, 1896. 3 unanswered letters were sent to his brother Ignaz (however, with a large time intervals !).

### Hans Stadler

**Before 1896 (?)** : Ivory miniature by Hans Stadler (1848-1916) based on a portrait of Anton Bruckner.

Hans (Johann) Stadler was born in 1848 in Bamberg, Germany ; and died in 1916 in Vienna. He is first mentioned as working in Vienna in 1872. Stadler studied at the Academy of Munich (under Georg Hiltensberger) and was also a pupil of Georg Raab at the Vienna Academy. Besides ivory, he also used porcelain for his miniatures. From 1883, he was a member of the « Wiener Künstlerhaus » .

### New Year greetings to Kitzler

Writing from St. Florian, 17 years later, Anton Bruckner sent Otto Kitzler warm greetings for the New Year and thanked him for his offer to conduct the 4th Symphony (**WAB 104**) . Because of his declining health, however, it was unlikely that he would be able to come to the performance. Once again, he referred to himself as « your former pupil » . A few months later, Bruckner supplied Kitzler with further information about his ill health. He mentioned that he had retired from both the « Hofkapelle » and the Conservatory and was no longer allowed to play the organ. As he had to avoid situations which might cause stress, there was a great deal of uncertainty about his travelling to Brno to attend Kitzler's projected performances of the 4th Symphony and « Te Deum » (**WAB 45**) with the « Musikverein » Choir and Orchestra.

### « Now, it's all too late »

**Sunday, 5 January 1896** : It was something of a miracle, but Anton Bruckner remained very frail. The Master attends one of his last Philharmonic concerts at the « Musikverein Großer-Saal » .

5th subscription-concert of the season by the Vienna Philharmonic Orchestra. Hans Richter conducts the « Wiener Philharmoniker » .

Programme :

Wolfgang Amadeus Mozart : Symphony No. 38 in D major, « Prague » (KV 504) .

Richard Strauß : « Till Eulenspiegels lustige Streiche » (Till Eulenspiegel's Merry Pranks) , Symphonic-poem, Opus 28.

Felix Mendelssohn-Bartholdy : « Die Hebriden » (The Hebrides) or « Die Fingalshöhe » (The Fingal's Cave) , Overture, Opus 26.

Anton Bruckner : Symphony No. 4 in E-flat major, « Romantic » , 1878-1880 version (**WAB 104**) .

Music-critic Robert Hirschfeld reported :

Anton Bruckner (who is accompanied by Doctor Leopold Schrötter's assistant, Alexander von Weißmayr) was called to

the podium after the performance of his 4th Symphony.

Bruckner tells music-critic Theodor Helm that he did not understand « Till Eulenspiegel », in spite of the great interest of the work.

Also present in the audience that evening : Rosa Papier and his son Bernhard Paumgartner, August Stradal, Hermann Gætz, Wilhelm Kienzl, Balduin Bricht, Gustav Schönaich, Robert Scheu, Max Kalbeck, and also (presumably) Max Graf and Hugo Wolf.

Bruckner thrived on the warm reception afforded to him by the audience and despite the concern of Doctor Weißmayr, wanted to acknowledge applause between movements from his box and come on the stage at the end.

The 4th Symphony received a great ovation but as Bruckner told August Stradal :

« I'm so very ill. Yes, earlier this success would have gladdened me very much, but now, it's all too late. »

Just a week later, on **Sunday, 12 January 1896**, Bruckner heard his « Te Deum » at one of the « Gesellschaft » concerts. It was the last time he was to hear one of his own works, for there was no question of his being able to travel to Brünn (Brno) to hear Otto Kitzler conduct his 2nd Symphony on **Wednesday, 25 March 1896**.

### Brahms recommends the « Te Deum »

At the end of his life, Johannes Brahms seems to have changed its attitude towards the composer to whom he had opposed for years. In 1895, he urged Richard von Perger, the newly-appointed artistic director of the « Gesellschaft der Musikfreunde », to call on Anton Bruckner and, furthermore, to perform one of his choral works at a concert of the Society.

**Sunday, 12 January 1896** : Second Concert of the year by the « Gesellschaft der Musikfreunde ». For the last time, Anton Bruckner hears one of his own works. The frail old man is carefully transported in the « Musikverein Großer-Saal » to witness the triumph of his « Te Deum » (**WAB 45**) which he called : « the pride of his life ». Also on the programme, 4 choruses by Johannes Brahms (who is also attending) . The conductor : Richard von Perger.

Severe depression and a tendency to religious mania start to appear for Bruckner.

### Vienna academic Wagner Society

Am 2. Februar 1873 behördlich genehmigter Verein, der im Allgemeinen die Förderung der Reformbestrebungen Richard Wagners und im Speziellen die Aufführung von dessen Ring des Nibelungen in Bayreuth / Deutschland im Auge hatte. Obwohl sich bereits 1871 ein Wagner Verein in Wien konstituiert hatte (1876 aufgelöst) , der im Prinzip dieselben Ziele verfolgte, kam es 1872 zu einem Gründungsaufwurf für den Akademischer Wagener-Verein (Gründungsversammlung am 10. November 1872) durch Karl Goldmark, Johann von Herbeck, Otto Dessoff, Johann Hellmesberger senior, Gustav

Schönaich, Josef Standhartner und Josef Lewinsky. Die Vereinsmitglieder rekrutierten sich vor allem aus dem Bürgertum und der Studentenschaft, wobei einige Mitglieder auch in führenden Funktionen in der Gesellschaft der Musikfreunde in Wien beziehungsweise später in der Wiener Konzerthausgesellschaft tätig waren. 1901 zählte man 227 ordentliche, 138 unterstützende und 20 Ehrenmitglieder. Zur Erreichung des Vereinszwecks wurden Konzerte (Bösendorfer-Saal, kleiner Musikvereinssaal), interne Musikabende und Vorträge veranstaltet, 1881 erfolgte die Gründung eines Vereinschors. Nach der erfolgreichen Uraufführung des gesamten Rings (1876) erfolgte (1879) eine Neuorientierung des Vereins samt einer Statutenänderung, 1883 eine weitere Neugestaltung als Zweigverein des in Nürnberg / Deutschland gegründeten Allgemeinen Richard Wagner Vereins. Vermehrt wurden nun auch die Werke Franz Liszts, Anton Bruckners (ab 1879) und Hugo Wolfs (ab 1887-1888) gepflegt, jedoch gelangten vereinzelt auch Kompositionen von Orlando di Lasso und Giovanni Pierluigi da Palestrina sowie aus dem Barock und der Wiener Klassik zur Aufführung. Ab 1898 finden sich weiters Namen wie Richard Strauß, Christian Sinding, Ludwig Thuille, Hans Pfitzner und Joseph Marx auf den Konzertprogrammen. Der Verein konnte in den 1880er Jahren jährlich zwischen 1.100 und 1.600 Florins zur Unterstützung nach Bayreuth senden, später waren es dann meist rund 1.000 Florins. Ab 1884 organisierte man Fahrten zu den Bayreuther Festspielen in Sonderzügen. Der Wiener akademischer Wagner-Verein wurde 1939 durch die nationalsozialistischen Machthaber aufgelöst, sein Vermögen und Archiv ging an die Gesellschaft der Musikfreunde. Als Nachfolgevereinigungen wurden 1951 der Richard Wagner Verband und die Österreichische Gesellschaft der Freunde von Bayreuth ins Leben gerufen, erstere besteht heute (2006) noch.

Als künstlerische Leiter des Wiener akademischer Wagner-Vereins fungierten und andere Felix Mottl (1873-1880), Hans Paumgartner (1880-1881), Eduard Schütt (1881-1887), Josef Schalk (ab 1887) und Ferdinand Foll (um 1902). Prominente Mitglieder des Vereins waren und andere Anton Bruckner (ab 1873, 1885 Ehrenmitglied), Gustav Mahler (1877-1879), Hans Rott (1875-1879), Guido Adler (1873-1885) und Ludwig Bösendorfer (Ehrenmitglied).

Weitere mit Wagner in Verbindung stehende Wiener Vereine des ausgehenden 19. Jahrhunderts waren der Deutsch akademische Verein Walhalla, der aus einer Abspaltung des Wiener akademischer Wagner-Vereins hervorging, antisemitisch ausgerichtet war und bis 1902 bestand, sowie der Neue Richard Wagner-Verein, der 1890 ebenfalls als Zweigverein des Allgemeinen Richard Wagner Vereins gegründet wurde.

...

The first Richard Wagner Society was launched in Mannheim (Germany), in 1871, 1 year after the premiere of the German composer's Opera « Die Walküre », in Munich. The brainchild of Wagner's longtime friend, the music-publisher Emil Heckel, the first Society was a simple, locally-conceived venue for celebrating Wagner's music. In the wake of Wagner's difficulties in securing interest in the public subscription for his future Bayreuth Festival, Heckel suggested to the composer that he sponsor additional Societies to help secure support. Wagner embraced the idea enthusiastically and, by 1872, Societies had been established in Vienna, Berlin, Leipzig and London - the latter founded by Edward Dannreuther (1844-1905), the author of « Richard Wagner : His Tendencies and Theories », published in 1873.

Richard Wagner's dream, as described in a letter written in 1882, was that his Bayreuth Festival would be free for everyone to attend, however, this was never possible because of the extremely high costs to organize and produce it. Nonetheless, based on Wagner's desires, Societies refocused their efforts and began making it possible for promising

talented musicians to attend. Public interest in supporting subscriptions to fund scholarships was initially tepid but, from 1919 forward, the number of Societies increased steadily.

Guido Adler's invocations of chauvinistic rhetoric might be dismissed as a reflection of his youthful involvement with the Reading Society for German Students and the Viennese Academic Wagner Society. After all, his association with these groups preceded the publication of these essays by nearly a decade. The Reading Society was an organization dedicated to advancing an openly « *graffdeutsch* » cultural agenda in deliberate contradistinction to the supra-national vision of Austrian identity cultivated by Habsburg officialdom. The Wagner Society was, likewise, deeply concerned with national questions and with Wagner's contributions to the discourse on German cultural identity, in particular. In its early years, that Society published, in each of its annual reports, a single essay by one of its members addressing an issue of pressing concern for the organization as a whole. And in each of its first 3 years of operation, its featured essay considered Wagner's positions on German cultural nationhood. In its first annual report (1873), the Society published « *Richard Wagner and the National Idea* », in which the future « *Gymnasium* » teacher Adalbert Horowitz recounted Wagner's emerging consciousness of his German heritage during his years in Paris. The report for the following year featured the essay, « *Richard Wagner and German Art* », in which the architect Camillo Sitte argued that Wagner's music-dramas had effected the « *revival* » (« *Wiederbelebung* ») and « *re-awakening* » (« *Erwachen* ») of German art by casting themes and images of German mythology in a modern guise. And, in 1875, Baron Hans von Wolzogen, in « *German Folk Poetry as Foundation for a National Festival* », described Wagner's Bayreuth Festival as a phenomenon equivalent, in its nation-building potential, to the political unification of Germany under Otto von Bismarck.

Wolzogen argued that :

« The Festival is an echo of the victorious period of 1870 and 1871 in that it celebrates and portrays a united and energetic expression of the national spirit (“ *Nationalgeist* ”) and a powerful awareness of its nature and effects. »

Though Guido Adler was not among the authors of the essays published in these reports, he was, as a guiding member of the Society, certainly privy to the discussions from which they arose.

But while we might be tempted to account for Adler's lectures on Mozart, Bach, and Händel, by emphasizing his early associations with a figure like Wolzogen, we must remember that those lectures were written long after he had ceased active participation in both the Reading Society and the Wagner Society.

...

Many Viennese born in the late-1840's and the 1850's were deeply affected by Austria's loss of influence in the German Empire to Prussia in 1866, and they associated this loss with the post-revolutionary Liberal government. The « *völkisch* », German national movement had begun among university students with the establishment in 1871 of the Society of German Students in Vienna (« *Leseverein der deutschen Studenten Wiens* »), a group that based much of its philosophy for the regeneration of German culture on the ideas of Nietzsche and Wagner. The founding of the Vienna academic Wagner Society, 2 years later, strengthened student interest in Wagner's theoretical writings. Their generation shared with Wagner an enthusiasm for the ideas of Schopenhauer, and the Society espoused their belief in

music as the direct expression of the undifferentiated Will. These student groups sparked discussions and ideas that would shape the members' later political and artistic careers.

The Society of German Students was dissolved by the government at the end of 1878 as a danger to the State. At that time, it included not only students but 135 professors, among them 18 Imperial Counselors (« Hofräte ») and 24 members of parliament. Its list of members ranged from music-patron Nikolaus Dumba to budding German nationalist Georg von Schönerer (brother of theatre director Alexandrine von Schönerer). Feelings of German artistic and political nationalism belonged not merely to those of a fringe group or transient students, but rather reached into the upper echelons of Viennese society. During the last year of the Society's existence one of its members, Siegfried Lipiner, gave a lecture, « On the Elements of a Renewal of Religious Ideas in the Present », in which he equated religion with transcendent emotion, and as a show of respect the Society published his speech at its own expense. In 1881, a few of the more artistically inclined former members of the Society of German Students formed their own group, the Saga Society (« Sagengesellschaft »), devoted to German myth and music. Of their members, Lipiner went on to write the libretto to Karl Goldmark's « Merlin » and Richard von Kralik worked throughout the 1880's and 1890's on editions of German sagas and folk-stories of early Christianity.

...

When Richard Wagner reappeared later in Vienna to supervise performances of « Tannhäuser » and « Lohengrin », he was surrounded by admiring crowds wherever he went. « Lohengrin » was already established as a great favourite with the Viennese. However, certain aspects of the performances showed particular respect for Wagner's wishes. They were given without cuts, despite the usual practice in Vienna, and showed an attention to detail which confirmed that Wagner had had a hand in all elements of the production. He also had the benefit of the conductorship of Hans Richter ; the latter had begun his reign at the Vienna Opera with a performance of « Die Meistersinger » earlier that year and was later to conduct the first Bayreuth Festival.

Nevertheless, when Wagner was finally called upon to respond to the public ovations after the last performance, he dismayed his hearers by saying the whole had been a success « as far as the present resources would allow ». This remark aroused much resentment and, indeed, became notorious. His scornful dismissal of the city's artistic capacity undoubtedly spurred on the Viennese critics in their hostility to the Bayreuth Festival in the following year. They answered the composer's slight by implying that he had now created an artificial public which he ruled like an aristocratic despot.

Such judgements could not necessarily be easily dismissed in Vienna, where the critics wielded an unusual amount of power. Wagner himself attributed some of the outcome of his dealings in Vienna in the early 1860's to the influence of Eduard Hanslick, while later both Hugo Wolf and Anton Bruckner knew what it was to suffer from critics' boycotts in Vienna. Wolf attributed some of the critics' influence to the natural indolence of Viennese audiences. Their conservatism was undoubtedly encouraged by the pride with which they might identify Mozart or Beethoven as their composers. This was exploited by certain critics at Wagner's death. The « Neue Freie Presse » pointed-out that while money was being collected for a Wagner memorial, Mozart had not been given such an honour. When Wilhelm Jahn came to conduct the « Faust » Overture in Wagner's memory at a Philharmonic concert on 25 February 1883, the

public responded with a demonstration in Mozart's favour. Afterwards, the critics declared that the « natural » composer Mozart had triumphed over the « unnatural » Wagner.

It was incidents such as this which justified the forming of the Vienna Wagner Society into a « battle unit » against Viennese philistinism.

The Vienna academic Wagner Society (« Wiener Akademischer Wagner-Verein ») was created on **Sunday, 10 November 1872** and was officially confirmed on **Sunday, 2 February 1873** by one of its founders, Guido Adler. Like its model in Germany, it was aimed to promote and disseminate the works of Richard Wagner. (A first Wagner Society appeared in Vienna in 1871 but was dissolved in 1876 - it was one of the oldest registered associations in the world. Karl Goldmark, Johann von Herbeck, Otto Dessoff, Johann Hellmesberger senior, Gustav Schönaich, Josef Standhartner and Josef Lewinsky were members.) . After the second performance of the « Ring des Nibelungen » in 1876, Richard Wagner who worked for a quarter of a Century on the realization of the Bayreuth Festival, personally met the new Viennese members and expressed his gratitude. His concern was now focusing on how to fill the « Festpielhaus » in anticipation of the third performance of the Tetralogy. During the same period, a Wagner Museum was opened in Vienna.

The Vienna academic Wagner Society was founded to help raise funds for the Bayreuth Festival ; it was one of many Wagner Societies that were linked to the work of the Society of Bayreuth Patrons. Written into its statutes was also the general aim « to promote the knowledge and appreciation of Wagner's reforms in music and drama through discussion and performances » .

Baron Hans von Wolzogen emphasized, through the pages of the « Bayreuther Blätter » , the importance of people coming to know and accept the whole of Wagner, writer as well as musician. Thus, although there seemed no particular lack of Wagner performances in Vienna, with Hans Richter ensconced as conductor of the Vienna Opera and Philharmonic concerts, the battle for greater understanding had to continue.

While the Vienna Wagner Society's aims initially coincided with those of Bayreuth, their methods of promoting a sense of Wagner's significance were rather different. Their internal concerts were run essentially as members' evenings without music-critics being invited.

Apart from Wagner's works, the Vienna academic Wagner Society also advocated those of Franz Liszt, Anton Bruckner (from 1879) , and Hugo Wolf (from 1887-1888) . Compositions by Orlando di Lasso and Giovanni Pierluigi da Palestrina, as well as from the Baroque and Viennese Classical music, were also performed. Artistic directors : Felix Mottl (1873-1880) , Hans Paumgartner (1880-1881) , Eduard Schütt (1881-1887) , Josef Schalk (from 1887) , Ferdinand Foll (around 1902) . Prominent members : Gustav Mahler (1877-1879) , Hans Rott (1875-1879) , Guido Adler (1873-1885) and Ludwig Bösendorfer (honorary member) .

Numerous pupils and students of Bruckner belonged to it. In the so-called « Internal Evenings » and weekly meetings of the Society, the first important performances of Bruckner's Symphonic works were performed in arrangements for piano (2 or 4 hands) mostly in the « Bösendorfer-Saal » , or in the small hall of the « Musikverein » . The pianists,

in charge at these events, were : Hans Paumgartner, Felix Mottl, Josef Schalk, Franz Zottmann, and Ferdinand Löwe.

Later, the Society also organized full-performances of the Symphonies in the « Musikvereins-Saal » , under the direction of Hans Richter. Richter ought to be reckoned one of the most outstanding interpreters of Bruckner's music. He was one of the regular conductors at the Bayreuth Festival and conducted all of Bruckner's Symphonies, up to the 5th and 6th, in the composer's lifetime, not only in Vienna but also abroad.

Bruckner himself joined the Society after his return from Bayreuth, in **October 1873**, and remained a member to the end of his life. In **1885**, he was made an honorary member.

From **1884 to 1893**, Doctor Viktor Boller (1853-1904) , a judge of the Austrian Court of Appeal, acted as president of the Vienna academic Wagner Society.

The first performance of Bruckner's 9th Symphony was conducted by Ferdinand Löwe with the Vienna academic Wagner Society and the Vienna Concert Society on **Wednesday, 11 February 1903**.

The Society was dissolved in **1939** by the National-Socialists. Its money and archives were transferred to the « Gesellschaft der Musikfreunde » . But the Society was reactivated in the **1950's**. Some music-scores and manuscripts are now preserved at the City Hall Library.

...

Inquisitiveness and a fascination with the past were the target of Richard Wagner's attacks on Jews, whom he saw as reaching back into history, in order to compensate for a lack of originality. Yet, it was also the steady dominance of Jewish musicologists and thinkers that would further divide the Austro-German house between musical progressives and conservatives. On the one side, there was Eduard Hanslick and Heinrich Schenker, who held to the ideals of Classical sobriety and balance, along with the scholar Guido Adler, who chose to classify Wagner as a conservative, in stark contrast to the prevalent view of the time. The music-critic Robert Hirschfeld, a virtual contemporary of Adler, was seen by many as the leader of Vienna's anti-Mahler press. Nevertheless, Hirschfeld singled-out Anton Bruckner, rather than Johannes Brahms, as the culmination of abstract musical purity. It was the pupils and followers of these scholars and writers who would not only solidify Jewish support for musical tradition, but also provide a basis for progressive thinking. With Karl Goldmark, Robert Hirschfeld, Guido Adler and Julius Korngold, we see the dogmatic lines held by Hanslick rendered meaningless, as a new generation of Jews see in Wagner a composer who was not predominantly an anti-Semite but rather an artist who redefined the purpose of music.

In a lecture delivered to the « Wiener akademischer Wagner-Verein » , Franz Schalk criticized artistic careerism, taking aim at technically proficient but uninspired orchestral performances and at institutions of music education that emphasized mechanical skills at the expense of spiritual understanding :

« It may, after all, have even been an impediment to the appreciation of Bruckner that his music is more German than anything else that we have had, until now, in purely instrumental music. To be sure, not more German than Bach

or Beethoven in so far as their basic character and that of their work is concerned, but more German in the form of expression.

Noting that Richard Wagner had made many Germans conscious of themselves as a people for the first time, Schalk asserted that many others continued to be alienated from the German spirit and concluded that Bruckner's power must seem like shapelessness to them ; his warmth-like childish ingenuousness. For the most un-German thing about us is precisely our artistic activity. To be German means, as our Master splendidly explained : to do a thing for its own sake. »

Schalk dwelt upon Bruckner's « German » artistic idealism ; he did not refer to the « Other » of German. Indeed, the « Wiener akademischer Wagner-Verein » , the original audience for his address, included many Jews. This organization, which Theodor Helm likened, in 1889, to « a miniature Bayreuth for Bruckner » , declined to support the anti-Semitic politics that began to pose a serious threat to Viennese Liberalism, in the 1880's.

According to the critic Josef Stolzinger, the Society went so far as to force-out members like himself « who reminded the directorate whether, in a subtle or blunt manner, that Wagner was an anti-Semite until the end of his life » . Still, a covert anti-Semitism can be discerned in the reviews of so eminent and steadfast an associate as Hans Paumgartner, for as Stolzinger's remark suggests, anti-Semitism was an inevitable part of the Wagnerian world-view. As is well-known, this often took the form of rejecting cultural traits considered « Jewish » , but accepting as « German » Jews who did not exhibit the objectionable traits : an ambiguous formulation that allowed for Jewish Wagnerites.

...

Franz Schalk's article on Anton Bruckner showed that he was prepared to be more flexible in his view of a Wagnerian « school » . He saw the absolute nature of Bruckner's Symphonies as part of Wagner's general spiritual view of music as the « eternal feminine » . There was certainly no question of Schalk not being dedicated to all aspects of Wagner's art, literary and musical. In some ways, his championing of Hugo Wolf alongside Bruckner in the Vienna Wagner Society completed the picture of Wagner's significance, since Wolf's songs followed Wagner in poetic content, though often not in style. The reports of the Society continued to group Bruckner and Wolf together, as examples of Wagner's influence in the complementary spheres of the Symphony and Song. Schalk confirmed that he did not intend to place either composer alongside Wagner himself. Nevertheless, the way each was singled-out for comment and the number of times their works were performed in the Society showed they were deemed worthy of consideration in their own right and not just as part of a group of Wagnerian after-effects.

The frequency with which Wolf's songs were performed in the Vienna Wagner Society aroused particular opposition. A year after regular informal gatherings to hear Wolf perform began in 1887, the music-critic Hans Paumgartner, an influential member of the Society, wrote to the Vienna « Abendpost » complaining that the Society was developing a Wolfian cult and bringing disgrace on Wagner's art. Bayreuth also seemed aware that Wolf's songs might pose some kind of threat. In December 1889, Baron Hans von Wolzogen enthused at great length over Wolf's ability to bring-out the variety and nuances of poetry in his Mörike songs. His enthusiasm continued in the editorial advertisement for the

Goethe songs in January 1890, but he now rebuked those who were calling Wolf the « new Schubert » . The accompanying recommendation to Wagner Societies to use the songs to fill-out their programmes was both an endorsement of Wolf and a reminder of his rightful position, as foil to the Master rather than genius in his own right. From this time, Wolf's name appeared less and less in the « Bayreuther Blätter » , to be overtaken by those of Martin Plüddemann and Hans Sommer, song-composers who showed less bewildering variety in their music and more obvious allegiances to Wagner. In his essay of 1892, Arthur Seidl had placed Wolf within his list of the Wagnerian « school » , but in the years 1898 to 1900, he revised his opinion and tried to show that enthusiasm for Wolf's songs as a Wagnerian product was misplaced.

Schalk was clearly not afraid if his support for Wolf separated him from Bayreuth or other Wagnerians. When it was discovered that the Vienna Wagner Society's statutes did not allow any money to be given to Wolf, since all its resources were to be employed for Bayreuth's purposes, Wolf's supporters formed their own smaller group within the Society. It is not surprising that those who wished to keep the Society's focus upon Wagner began to register their unrest in partisan demonstrations and eventually, in 1890, formed their own « New Vienna Wagner Society » . Yet, more was at stake for Schalk and other Wagnerians than merely the welfare of Hugo Wolf. Schalk saw his policy of promoting Wolf and Bruckner as a way of ensuring that Wagner's significance did not fall into the past, and thus, become part of a new conservatism. He quoted Wagner's own words that the concept of the monumental was antithetical to art. Schalk believed Bruckner and Wolf helped one to see Wagner with the eyes of the present, just as Wagner had given a new perspective to the Classical Masters. They were the confirmation of Wagner's place within history, the sign that he had encouraged a development larger than himself and so gained a true universality.

By placing Wagner within the flow of history, Schalk was opposing not only Vienna's reactionary critics, but also the Bayreuth establishment. For both believed that Wagner's art was a world in itself, even if the former group implied that this world was artificial and must soon die, and the latter that Wagner's world was the only real one and would outlast any other. Most important, Schalk implied that one must reach out beyond Wagner himself in order to perceive his significance, rather than relying upon the composer's own view of his art. Wagner himself spoke of the aim of the artist needing to be completely absorbed into his work, and of true art being part of the irresistible flow of life. This might conflict with the evidence in Bayreuth of his wishing to impose his personal will on all aspects of his creation. However, arguments over which represented the Master's true intentions (the Bayreuth Wagnerians with their emphasis on fixing an internal tradition, or Schalk's more open-view) would intractable he became. Friedrich Eckstein speaks of Schalk and Wolf continuing to spend much time discussing Nietzsche's views of Wagner together, particularly « The Case of Wagner » , which first appeared in 1888. Wolf differed from Schalk in approving Nietzsche's love of Frédéric Chopin and Georges Bizet's « Carmen » , though he would also argue on Wagner's behalf in these debates. The issues for and against the Master never seemed entirely resolved in Wolf's mind, and in his letters Wagnerian and Nietzschean ideas intermingled freely.

A similar mixture of influences was seen in the artistic and philosophical discussions of the famous « Café Griensteidl » , which Wolf frequented from the late 1870's. Here, Wagner was discussed alongside not only Nietzsche, but also topics such as Shelley, Ibsen, neurology, psychiatry, and socialism. Wagner, by no means, ruled in these debates ; some of his « Religion and Kunst » (Religion and art) aroused much disagreement when it appeared in 1880. However, this

circle did not exist in opposition to the Vienna Wagner Society. There was a large overlap between the 2 circles and members of the Society were described as joining in the discussion of « all possible kinds of problems concerning Wagner » .

When the Viennese music-critic Max Graf completed his own survey of the « Wagner-Probleme » at the beginning of the 20th Century, he saw himself as part of a new generation of Wagnerians emerging in Vienna. They were sceptical of the heroic, all-conquering picture of the artist painted by the Wagnerian « old guard » . Though they gave Wagner an apparently more limited role, they were a generation who had actually lived and breathed his music. While first generation Wagnerians, such as Franz Schalk, had to fight to establish Wagner's importance, the new generation was able to take it for granted. They approached his music through their own situation, seeing reflected within it the modernist concerns with sickness and renewal. Graf made a point of stressing the suffering of the heroes in Wagner's music-dramas, as they looked to new worlds but were unable to bring them into being. Wagner became seen as one who had realized the need for a new culture, even if he had not been able to realize it himself. The modernists were primarily concerned with the search for a future after Wagner. However, they created new pictures of his significance in the process, which brought the composer with them into the present. After the incipient struggles of the Vienna Wagner Society, such a generation confirmed that freedom from any narrow loyalty to Wagner helped open the way for his music to become part of a greater history.

### Vienna New Richard Wagner Society

An elaborate wake held by German-national university students in **March 1883** marked the occasion of Richard Wagner's death. Wagner's extreme popularity extended even to those students who did not belong to the Vienna academic Wagner Society, for as Hermann Bahr wrote, « every young person was a Wagnerian then. He was one before he had even heard a single measure of his music. » The closely policed event attracted 4,000 mourners from all ranks of society. German national fervour was inspired by the music performed, such as the battle hymn from the Opera « Rienzi » , « Wach' am Rhein » , and selections from « Tannhäuser » , and by charismatic speakers like Georg von Schönerer and the young Bahr, who was later expelled from the university for his participation in the almost treasonous event. The kind of passionate politics practised by these young men, filled with appeals to cultural patriotism and emotion, marked a deliberate departure from the cooler, more rational methods of their Liberal forefathers.

...

Reception of Richard Wagner's music and, even more, his writings had a direct impact on the volatile brands of mass politics that evolved in the city during the 1880's. 3 parties of lasting importance developed out of the chaotic anti-Liberal movement of that decade : the Right-wing Pan-Germans and Christian-Socials and the Left-wing Social-Democrats. During that decade, leaders or future leaders of all 3 parties belonged to the « Wiener akademischer Richard Wagner-Verein » (Vienna academic Richard Wagner Society) . Adam Wandruszka writes, moreover, that the parties' origins can be traced back « until one finally finds the “ founding fathers ” of all 3 camps (and thus of Austrian Party and domestic history in the 20th Century) gathered together in a single circle around the young Georg

von Schönerer. »

The basic condition that permitted political change was a gradual transition to universal male suffrage that began in 1882, when the vote was extended on the national level to lower middle-class men. But the insurgents succeeded because they refused to accept as a discursive premise the appeals to reason that supported the Liberal world-view. In the late-1870's, Schönerer and his circle came-up with a political style they called the « sharper-key », calculated to excite emotion rather than engage the intellect. Schönerer's youthful followers came from the same middle-class backgrounds as most establishment politicians ; Carl Schorske analyzes their anti-Liberalism as to some extent a rebellion against their fathers' generation. Populism, cultural anti-Semitism, and jingoistic pride in German culture-like that of Liberals, but more extreme-all bolstered and in part inspired by Wagner's legacy, formed the foundation of their program. Because of the ties between Jews and Liberalism, the deliberate arousal of anti-Semitic feelings became the most potent tool in the fight to dislodge the Liberals from power.

An effective anti-Liberal movement began to coalesce in Vienna shortly after lower middle-class men gained the vote at the local level in 1885. The historian John Boyer attributes the changed style of politics to this new class of voters :

« Much of the irrational behaviour which has been imputed to Karl Lueger and other Christian-Social leaders on the basis of their wild rhetoric was actually a commonly understood and accepted system of public discourse current among the particular strata to which the Christian-Socials appealed. »

This does not fully-explain the new political style's origins. Although Lueger, often portrayed as the ultimate pragmatist, habitually resorted to the « sharper-key » to exploit a tense political situation, the earlier group around Schönerer had conceived it. Some of the most prominent members were Jewish and ...

« had long accepted a form of cultural anti-Semitism as part of their " völkisch " reaction against the bourgeois Liberalism of their parents. (...) Since they saw themselves as members of the German " Volk ", even the Jewish members (...) felt it essential to reject what they regarded as Semitic cultural traits. As (George) Mosse observes, the Jew was seen in stereotype as being intellectual and artificial, rootless and alienated from nature. »

Only when the racial cast of Schönerer's anti-Semitism became obvious in the spring of 1883 did these Jewish members break with him. Schönerer's public avowal of racial anti-Semitism virtually coincided with the incident involving University of Vienna's Rector Friedrich Maaßen, in which the Liberal « élite's » own German-nationalist prejudice came to the surface. Shortly thereafter, Schönerer founded his own organ, « Unverfälschte Deutsche Worte » (Unadulterated German Words) , in contra-distinction to the « Deutsche Worte » published by his erstwhile followers.

Schönerer's new scandal sheet offered running commentary on the marked presence of Jews in the city's music life, for example in the « Wiener Tonkünstler-Verein » (Viennese Musicians' Society) . (Johannes Brahms was closely associated with this organization, which formed a kind of Classicist or « Liberal » counterpart to the Vienna academic Wagner Society.)

In 1887, Schönerer's periodical, not a paper given to subtlety, named some members of the « Tonkünstler-Verein » and remarked on how « verjudet » it had become in the year or so of its existence :

« This list of names at the same time shows the complete Jewish domination of art in Vienna, in the conservatory, and in the music-shops. Indeed, the Viennese “ Tonkünstler ” Society should really be called “ Cohnkünstler ” Society. »

The following year, 1888, Schönerer and some of his associates went much further. They physically attacked the staff of the « Neues Wiener Tagblatt » because the paper had issued a premature report of the German « Kaiser's » death. Schönerer's subsequent conviction for the assault led to a 5 year ban on his participation in politics. Following his trial, the government cracked-down on German nationalist groups, which meant that most Pan-Germans put their support for the time being behind Karl Lueger and the emerging Christian-Social Party to bring about the collapse of Viennese Liberalism.

...

While the Vienna academic Wagner Society had ostensibly chosen a non-political stance, the group's report for the year 1891 suggested otherwise. Thanking « the progressive champions for our cause in the Viennese press » , in particular Theodor Helm, the report reiterated the frequently observed connection between Liberal politics and conservative tastes in art. A contradiction was noted, in that the « politically “ most Liberal organs ” believe they must behave in a thoroughly reactionary manner in artistic and especially musical questions, even today » .

A group of young Wagnerites with a number of Jews in prominent positions had, in fact, envisioned and developed the emotional or « sharper-key » style of politics that later became a powerful tool of the anti-Semites. Under Engelbert Pernerstorfer's leadership, these Wagnerian idealists had espoused radical social reform and extreme German nationalism.

Pernerstorfer's circle initially backed Georg Ritter von Schönerer as their representative in Parliament, but that his fanatical anti-Semitism caused many of his followers, including Pernerstorfer himself, in **June 1883**, to fall away. Schönerer eventually lost his right to participate in politics for 5 years after he and some associates assaulted the staff of the « Neues Wiener Tagblatt » , in **1888**, for issuing a premature report of the German « Kaiser's » death. Following Schönerer's disgrace, the government cracked down on German-nationalist groups, and most of the Pan-Germans transferred their support, for the time being, to the candidates of the emerging Christian-Social Party.

At the end of the 1880's, a few members of the Vienna academic Wagner Society left for political and ideological reasons. The Society, which had always included Jewish members, split over the question of anti-Semitism, with Schönerer and his followers forming a separate, explicitly anti-Semitic « New Richard Wagner Society » .

...

**Thursday, 20 March 20 1890** : The founding meeting of the « New Richard Wagner Society » (« Neuer Richard Wagner-Verein ») took place at J. Leber's Beer-Hall just outside the « Ringstraße » . Anton Bruckner was made

honorary member of the new organization. August Göllerich junior, whom the « Deutsches Volksblatt » described as the « intellectual-spiritual creator » (« geistiger Schöpfer ») was named its honorary chairman. Houston Stewart Chamberlain was another honorary member.

The founding members included Georg von Schönerer and music-critics August Göllerich, Josef Stolzing, Camillo Horn, and Hans Puchstein working for 2 new anti-Semitic newspapers, the « Deutsches Volksblatt » and the « Ostdeutsche Rundschau ». Were also present : Emil Maria Steininger, Hubert Steiner, Josef Czerny, Alfred Mortenthaler, Ludwig Eisner, August Püringer, and Josef Reiter. Among other attendees at this celebratory event were official delegations from several of Vienna's student fraternities, the very groups in which racial anti-Semitism had first begun to take hold in Vienna some 10 years earlier. Haller and Josef Reiter played a arrangement for piano 4 hands of the Adagio from Bruckner's String Quintet (**WAB 112**) .

Members of the new organization took an oath to conduct themselves in Wagner's spirit and to associate only with other followers of Wagner and Schönerer. And they accepted extreme German nationalism and anti-Semitism as articles of faith :

« Since Richard Wagner as a nationalistic artist was himself an anti-Semite, every Wagner Society must also be unadulteratedly German, so as not to become a caricature of an artistic association bearing the name Wagner. »

...

The role of Wagnerism in the new parties' origins is better-known than are later developments that show the continuing connections between Wagnerism and Viennese politics. After Wagner's death in 1883, the number of members in the Vienna academic Wagner Society increased dramatically, with many members advocating both active involvement in anti-Liberal politics and the exclusion of Jews from membership. When the Wagner Society finally rejected these proposed measures in **March 1890**, Schönerer and a splinter group of Pan-German sympathizers left to form the « Neuer Richard Wagner-Verein » (New Richard Wagner Society) . According to the music-critic Josef Stolzing, the Vienna academic Wagner Society had forced-out those like himself « who reminded the directorate whether in a subtle or blunt manner that Wagner was an anti-Semite until the end of his life » .

...

It was a simple matter for these young radicals to use Wagner's call for a regeneration of German civilization in the face of the ruinous effect of Jewish-bourgeois materialism as a weapon to wield against Vienna's « debased » musical culture, in which Jews seemed to play an out-sized role. This can be seen in the inaugural issue of the « Ostdeutsche Rundschau », which appeared on **Sunday, 6 April 1890**, and included a brief report on a concert produced by the newly-founded Society that included piano performances of 3 Symphonic-poems by Franz Liszt, as well as Hans Sachs's final number from « Die Meistersinger » and a handful of shorter vocal pieces. After proudly mentioning the large number of bedfellows who had already come together in the « most fervent cultivation of national music », the anonymous author of this notice extended an enthusiastic invitation to all « art-understanding and art-enthused comrades » to join the New Society, which aimed to deliver « an astonishing, joyful, and audaciously liberating of

excommunication of a non-German power that is hostile, in art and life as well as in music, to the Germanic-idealistic world-view » .

The « Deutsches Volksblatt » gave an approving account of the founding of the « Neuer Richard-Wagner-Verein » ; both it and the « Ostdeutsche Rundschau » continued, moreover, to make use of Bruckner's growing fame in their reports on the Society's activities.

In **April 1893**, for instance, the « Deutsches Volksblatt » reported that he might attend a meeting set to feature a performance of his String Quintet (**WAB 112**) and a talk by the notorious Houston Stewart Chamberlain, « on Wagner's Relationship to the Social-Religious Question » :

« The Society looks forward to a large turnout of members and guests, especially since Professor Bruckner himself has held-out the prospect of appearing at the interesting evening, which through the Master's presence might lay claim in more than one respect to being called a Bruckner evening. »

The fact that political radicals had taken-up Bruckner's cause did not pass unnoticed, and it complicated matters for his more moderate supporters. When Bruckner received an honorary Doctorate from the University of Vienna in 1891, Göllerich had been his official biographer for some time. As such, he was an obvious choice to speak at a celebratory gathering of students (« Commers ») on **December 11**. Because Göllerich's outspoken anti-Semitism made him too controversial, the University eventually asked him to withdraw.

Having already prepared a speech, he published it in the « Deutsches Volksblatt » as :

« Anton Bruckner. The formal address by August Göllerich not given at the Bruckner celebration. »

(« Anton Bruckner. Die beim Bruckner-Commers nicht gehaltene Festrede von August Göllerich. »)

Anton Bruckner had for some time been receiving support in the press from Theodor Helm and another music-critic associated with the Vienna academic Wagner Society, Hans Paumgartner (as well as from a third critic, Ludwig Speidel, who had no use for Wagner) . While Helm and Paumgartner, critics for long-established newspapers, couched their reviews of Johannes Brahms in language with anti-Liberal overtones, critics for the new papers borrowed the linguistic innovations of « sharper-key » politics. Indeed, in 1901, Carl Hrubý, a student of Bruckner in the years around 1890, explicitly connected the gains that had finally been made on that composer's behalf to the political changes.

« During the Liberal era, now defunct, one believed (...) that everything must be handled with kid gloves and that in all things one had to maintain the wonderful so-called “ parliamentary tone ”. (...) That has fortunately changed in recent times. »

According to Hrubý, the sober uses of language previously considered appropriate had been inadequate to counter the attacks on Bruckner. As part of the contemporary dialectic of action and reaction, the Liberal critics' reception of

Bruckner had given rise to anti-Liberal reception of Brahms, expressed in the idioms of the new political style.

...

A « Probeblatt » for the « Deutsches Volksblatt » (Saturday, 15 December 1888) included a front-page article that borrowed the title of Wagner's essay « Was ist deutsch ? » and quoted at length from it. Proclaiming that the « Deutsches Volksblatt » was the belated realization of Wagner's wish for a newspaper representing « true Germanness » , the anonymous author articulated a belief that German music could heal modern society's ills, but stressed the extremity of those ills. That this article projecting an attitude of twisted idealism toward music appeared on the very first page of a newspaper later deemed « the most significant German-national, anti-Semitic organ in Austria » underscores the continuing presence of Wagnerism in Viennese politics.

...

It is easy to see why Houston Stewart Chamberlain loved Vienna. His spacious apartment was only a few minutes walk from the wide, tree-lined « Ringstraße » , encircling much of the city-centre and built by special command of Emperor Franz-Josef a few decades before to match the boulevards of Paris. The Court Opera, the grandest building on the « Ring » , offered fine performances that reached stellar heights after the fiercely uncompromising Gustav Mahler became director in 1897.

Theatres, museums and libraries equalled any in the German-speaking world and the ubiquitous coffee-houses offered an ideal combination of club and second home for rich and poor alike. Besides, as Chamberlain gleefully noted to a French friend, the city abounded in pretty women of easy morals. Despite his long-standing ailments and intense intellectual pursuits (not to mention his marriage) , Chamberlain had found time to philander even before his arrival in Vienna. Once there, he became involved in new love-affairs, including a lengthy one with an actress called Lili Petri whom some of his friends thought he might one day marry. But, in the end, it was the attraction of belonging to the Wagner clan that Chamberlain found irresistible.

What Chamberlain most loathed about Vienna is plain too : its Jews. Hitherto his anti-Semitic comments had been intermittent and, despite the influence of Bayreuth, usually marked more by disdain than hatred. In Dresden, he had actually claimed to feel real sympathy for Jews after hearing brutish charges made against them there at a tub-thumping rally. But he soon began to change his tune in fast-growing Vienna, focus of the social and political unrest seething throughout the multi-national Empire. Jews were more visible there than in most German cities, thanks to the often poverty-stricken « Ostjuden » with their distinctive dress and habits who (to the embarrassment of many already-established brethren) streamed in from the east to find work. Moreover, although they made-up less than 1/10 of the population of greater Vienna, Jews already accounted for nearly 1/3 of the students at the university and, in some faculties like medicine, almost a half. They were prominent in music even before Gustav Mahler took-over at the Opera and highly-active in the press and publishing. To the hyper-sensitive, intellectual newcomer from Dresden, the Jewish influence that had seemed an irritation started to loom as a threat.

At first, Chamberlain's growing hostility was directed largely at Jews, not at other groups from all over the Empire that helped people Vienna. He even said he was elated to live amid such a colourful mix of Magyars, Poles, Czechs, Slovaks, Slovenes and the rest. But that feeling gradually changed too. During his long trip on horseback with Anna through the Balkans in 1891, Chamberlain began to be obsessed with race - comparing what he regarded as degenerate Slavs with pure, fair-haired Serbs. He also joined the « Neuer Wagner-Verein » (New Wagner Society) , a group that had broken-away from Vienna's main Wagner Society and which, unlike the parent body, flirted with nationalist politics - even with proto-fascists like Georg von Schönerer, leader of the (Austrian) Empire's pan-Germans. Chamberlain despised Schönerer and had become involved with the « new » Society mainly because the old one had increasingly criticized Cosima's imperious rule in Bayreuth. But the more he came into contact with nationalist circles and observed the Jews and Slavs around him, the more he began to see history in terms of racial conflict - with the Germans the highest-strain, but gravely endangered.

Why did Adolf Hitler make such an impression on the Bayreuth Circle in the early 1920's ? Brigitte Hamann's study of Hitler's early years in Vienna allows us to answer this question with confidence. To begin with, Chamberlain's main-work, « The Foundations of the 19th Century » , was written in Vienna, and its author was connected to factions that exerted potent influence on the young Hitler. Chamberlain was an honorary member of the « Neuer Wagner-Verein » co-founded by Georg von Schönerer, and he stood in close contact with the so-called « Alldeutschen » (Pan-Germans) . Chamberlain's racial anti-Semitism, with its insistence on an incompatibility of Jewish and Aryan principles, exerted impact on a variety of racist movements.

As Hamann writes :

« The mixture of nationalities, which in the Danube monarchy had been normal for Centuries, was now suddenly seen as a threat to one's own community ( " eigene Volkstum " ) , whereby racial supremacy was claimed by the Germans at the expense of other groups. »

### Wolf and the Wagner Society

**Sunday, 8 April 1883** : Concert of the Wagner Society. Hans Richter conducts Ludwig van Beethoven's 9th Symphony.

Hugo Wolf attends the concert. He is also present at the dress-rehearsal of Saturday.

**Friday, 6 July 1883** : Hugo Wolf, Felix Mottl, Gustav Schönaich and other members of the Wagner Society leave Vienna to attend the premiere of « Parsifal » at the Bayreuth Festival on 8 July 1883.

**Wednesday, 13 February 1884** : Concert of the Vienna Wagner Society at the « Bösendorfer-Saal » animated by Baron Hans Paul von Wolzogen.

Programme :

Chorus « In Memory of Richard Wagner » (« Zu Richard Wagner's Gedächtniß ») .

« Grail Celebration » from the 1st Act of the « Parsifal » .

Hugo Wolf writes a music-critic about this evening.

**Monday, 22 December 1884** : Concert of the Vienna Wagner Society at the « Bösendorfer-Saal » .

Ferdinand Löwe plays at the piano the first movement of Bruckner's 4th Symphony (WAB 104) .

Josef Schalk plays at the piano the third movement of Bruckner's 3rd Symphony (WAB 103) .

Löwe and Schalk perform the version for 2 pianos, 4 hands (by Löwe) , of Bruckner's 1st Symphony (WAB 101) .

Richard Hirsch sings a scene from Richard Wagner's « Die Walküre » .

Anton Bruckner receives a laurel wreath entitled « The Master of German music ! » (« Dem Meister deutscher Tonkunst ! ») .

Present at the concert : Doctor Theodor Helm, Emil von Hartmann, Hugo Wolf, Friedrich Eckstein, Franz Zottmann. (In spite of an invitation, Julius Winkler, Baron Seiler and Weiß are absent.)

**February 1889** : The 28 year old Hugo Wolf finishes the 51 songs of the « Gæthe Song-book » . The Wagner Society made amends for its rudeness to him.

**End of March 1889** : The Wagner Society of Vienna gives Hugo Wolf's « Mörike » Lieder a tremendous reception. What he had sworn-off a few weeks earlier, Wolf now embraced once again : vanity and society. Unto another familiar temptation, he cleaved as well. The good weather let the Kocherts use their country villa, in Rinnbach, once more, thus, easing his trysts with the lady of the house.

**Monday, 11 April 1892** : Concert (of the Vienna academic Wagner Society ?) at the « Bösendorfer-Saal » with songs by Hugo Wolf accompanied at the piano by Josef Schalk.

**Thursday, 20 April 1893** : Evening concert of the Wagner academic Society. On the programme, songs by Hugo Wolf.

**Saturday, 6 May 1893** : Evening concert of the Wagner academic Society. On the programme, songs by Hugo Wolf.

**Thursday, 28 November 1895** : Third private music evening of the Vienna academic Wagner Society at the « Bösendorfer-Saal » . On the programme, songs by Hugo Wolf. Also, Ferdinand Löwe will play at the piano the first 3 movements of Bruckner's 5th Symphony.

It is hardly to be wondered at that Hugo Wolf's fame grew very slowly in Vienna, in spite of the fact that nearly a 140 of his songs were now published. The work was too original to attract either the ordinary singer or the ordinary amateur ; and Wolf had made so many enemies for himself by his criticisms that he could hardly expect the official cliques to go-out of their way to help him. Now and then, a song or two of his would appear on some programme or other. Paula von Goldschmidt, for example, the wife of the composer Adalbert von Goldschmidt, an old friend of Wolf's, had given the « Mausfallensprüchlein » at a private musical evening some years before the date at which we have now arrived ; and, in **March 1888**, Rosa Papier had introduced the « Morgentau » and « Zur Ruh, zur Ruh ! » at one of her song-recitals. But it was through the instrumentality of the Vienna « Wagner-Verein » that Wolf's reputation first began to spread. In **November 1888**, « Fräulein » Ellen Forster sang « Der Knabe und das Immlin, Zitronenfalter in April » , and « Er ist's » at one of the musical evenings of the Society. A month later, Josef Schalk arranged a concert at which Ferdinand Jäger sang 9 of the Mörike, Eichendorff, and Gøethe songs, Wolf himself accompanying at the piano. From that time onward, Schalk and Jäger laboured with incessant devotion in his cause, Jäger singing the songs not only at his own concerts but at the recitals of instrumentalists and at the « evenings » of various Societies. It is pleasant to read that, after a number of the Gøethe songs had been given before the Vienna « Gøethe-Verein » in **March 1890**, the members of the Society sent Wolf a letter of thanks for the new illumination his music had given to the poems. Jäger further interested Hans von Wolzogen, the well-known Wagnerian, at that time editor of the « Bayreuther Blätter » , in Wolf's work. He sang a number of the songs to Friedrich Hofmann, a high-official of the Graz « Wagner-Verein » , who was so taken with them that he instantly bought everything that was then published of Wolf's, and arranged for a recital by Jäger before the members of the Society on **Saturday, 12 April 1890**. Doctor Heinrich Potpeschnigg, who later became one of Wolf's best friends, was the accompanist. The success was enormous, many of the songs having to be repeated 3 times.

Schalk not only interested the Vienna « Wagner-Verein » in Wolf, but managed to get the composer to conquer his dislike for publicity and attend some of the meetings of the « Verein » , where he would occasionally play and sing his new songs. But it was not long before a strong party was formed in the « Verein » against Wolf and Schalk. Many of the members no doubt thought that too much fuss was being made of a young and unknown man ; the concert of **Tuesday, 11 December 1888**, of which mention has already been made, scandalized them because it was devoted entirely to Beethoven and Hugo Wolf - a juxtaposition of names which a few solemn noodles were unable to stand. Others perhaps felt that a « Wagner-Verein » , in giving-up so much of its energies to the propaganda of Wolf's work, was rather losing sight of its original mission. Wolf himself was deeply hurt at the opposition to him. He wrote to Schalk, expressing his resolve to have nothing more to do with the public ; henceforth, he will belong more than ever to no one but himself. He will, he says, avoid the « Wagner-Verein » , because an artist like himself, impulsive by nature, is not at home with people who act by rule of reason and logic and do not understand the artist. He will make no attempt to capture the public, which means nothing more than the infamous mob.

« I will be just a private person. Oh, if I were only a cobbler like the incomparable Hans Sachs ! How happy, how cheerful would my life be ! Cobbling on work-days and composing on Sundays in my holiday clothes, simply as a hobby, just for myself and a friend or two - say you, Löwe and Hirsch. Yes ! that would be an existence. You see, dear friend, it is a case of being a philosopher. I am not enough of one to disregard the envy and the machinations of my enemies, but just enough of one to live for myself alone and ignore publicity entirely. Had I not wanted to give public

expression to my gratitude to you and “ Franciscus ” (i.e. , Franz Schalk) ... no power would have got me to publish the Eichendorff songs. Therewith is an end to it once for all. I really do not see why I should worry about the “ Wagner-Verein ”, since the sole ground for enduring vexations and persecutions turns out to be insufficient - I mean material profit. (...) Is it not much better and finer to be loved and understood by a few men than to be heard and reviled by thousands ?

The devil of vanity and ambition will not again lay hold of me by the forelock, you may depend on that. I am not a deranged Mahomet, to spread my things by fire and sword, and not a hair of the head of any of my friends shall be hurt on my account. »

Wolf, accordingly, refuses to have anything more to do with the « Wagner-Verein » .

### The Hugo Wolf Society

Both materially and spiritually, Hugo Wolf was supported by a large circle of friends. In Vienna, his patrons included the Lang, the Köchert, and the Werner families. In Germany, Hugo Faißt, Emil Kauffmann and Oskar Grohe were important friends. Volumes of letters testify to these friendships and offer important insights into the composer's life and work. In particular, the Vienna Academic Wagner Society played an important role in the first performances of Wolf's works ; the Hugo Wolf Society emerged from the Society in **1897** and helped promote Wolf through its publications.

**Thursday, 30 January 1896** : Paul Müller and the Austrian folklorist and Indologist Michael Haberlandt are some of the founding members of the « Hugo Wolf Society of Berlin » (« Hugo Wolf-Verein Berlin ») . Singers everywhere are taking serious notice of his songs. The new association does excellent work in furthering performances of Wolf's songs in Germany as appreciation of Wolf's remarkable gifts as a Master of Lied began to find recognition abroad.

On his 38th birthday, Wolf received many congratulations and telegrams from various places in Europe. But for him, it was too late.

The inaugural concert is staged in hall « B » of the « Architektenhauses » . 2 songs are performed for the first time :

« Gleich und Gleich » to words of Johann Wolfgang von Goethe, and « Das verlassene Mägdlein » to words of Eduard Mörike.

Gustav Schur of the Vienna Academic Wagner Society, along with many other Wagnerians, had supported the founding of a « Hugo Wolf Society of Vienna » (« Hugo Wolf-Verein Wien ») in **1897**. Schur left in protest when these comments appeared at the head of a series of essays on « Der Corregidor » published by the « Hugo Wolf Society » in **1899**. The split was perhaps inevitable. The newly-formed « Wolf-Verein » acknowledged the role which the Wagner Society had played but sought to distance itself from any Wagnerian propaganda. For example, the singer Ferdinand Jäger was

not invited to become a member despite having been so strongly associated with Wolf's music in the past. The new Society felt the Wagnerian style of his performances failed to bring-out the melodic qualities of the songs and distorted the public's view of them.

The « Wolf-Verein » even felt it had to be distanced from the composer himself. His personality always attracted controversy and the Society wished to allow the focus to fall upon his music, to let it speak for itself in all its subtlety. For in the view of Michael Haberlandt, the « Wolf-Verein's » Chairman, Wolf's music never imposed itself on an audience in « flashy effects ». In its « deep inwardness, it holds back like Cordelia and scorns to speak in the open market-place ». Here was a kind of admission that Wolf's music had been steam-rolled by a cause not its own and a plea to listen with a new attentiveness. Yet, the comparisons with Cordelia are perhaps a little over-done. In Song, as in Opera, Wolf was quite prepared to challenge any Wagnerian assumptions openly as well as subtly. And although the genre of the Lied was not always considered of the greatest critical significance at the time, with hindsight one can see that attitudes to song actually played a highly-important role in the make-up of Wagnerian music-drama and its influence. Thus, far from shying away from the main-stream of musical ideas as some have thought, Wolf continued to place himself at the centre, eventually revealing song as a most fertile battle-ground for a critic of Wagner like himself.

**Monday, 22 February 1897** : Exactly 6 years before his death, Hugo Wolf appeared for the last time in public, at a « Liederabend » in Vienna, devoted to his songs. The audience was small but very enthusiastic ; both artistically and financially, Wolf was satisfied with the results of the evening. It was after this concert that his friend Michael Haberlandt suggested to him the founding of a « Hugo Wolf Society » in Vienna to help to bring his work before the public. Haberlandt told him frankly that they would act independently of him, sometimes, indeed, in opposition to him, for he was often his worst enemy - a remark which will evoke a sympathetic response from the bosom of all who know how difficult it is to manage a young musician and to teach him the ways of the world. The plan was soon matured. Meanwhile, on his birthday, **Saturday, 13 March 1897** (the last he was to spend in health) , he played « Der Corrigedor » through on the piano to a little circle of friends ; the « séance » was 3 hours long. Academic Vienna rose in horror at the idea of a « Hugo Wolf Society » , and the Wolf enthusiasts had the usual battle to wage with ignorance and detraction. The Society came triumphantly into being, however, on **Monday, 22 April 1907**. It has done incalculable good to Hugo Wolf's reputation and to music ; it brought-out his songs, grouped in handsome volumes, and so, gave the public a chance of learning for itself, at first hand, how wide and rich and varied was the new kingdom this man had won for the art.

The « Hugo Wolf Society of Vienna » begins on the collecting and systematic sorting of Hugo Wolf's unpublished works as early as **1900**. Most of the works are in print by **1905**, though the publishers in some instances make incisive changes in accordance with the spirit of the time. Some works, such as the « Intermezzo » , the « Scherzo and Finale » , and most of the youthful composer's songs, are not considered worthy of publication.

**Saturday, 20 October 1900** : Gustav Mahler is in Munich for a successful performance of his 2nd Symphony at a « Hugo Wolf Verein » concert.

The smear campaign organized by the Hugo Wolf Society against Gustav Mahler not only considerably strengthened the great-German and anti-Semitic opposition to his work at the Opera, but also leads to Wolf universally going down in history as a martyr, as a victim of the Opera-director Mahler who drove him to insanity. This has always been viewed in the various publications purely from the stand-point of the Wolf party.

...

It was chiefly Hugo Wolf's friends, filled with excessive hatred for Mahler, who strove in words and print to blame him for Wolf's outbreak of madness. Since Wolf was no longer in a position to care for himself after the onset of his brain condition, which was quickly revealed to be paralysis, his friends, having founded the « Hugo Wolf Society » in 1895, in Vienna, paid for his maintenance in an asylum and looked after the interests of his works. The treasurer of the « Hugo Wolf Society », which was closely connected to the Wagner Society, was the well-known jeweller Theodor Köchert at whose Estate, « Puschacher » near Traunkirchen, Wolf had often stayed. Köchert was a radical great-German and anti-Semite who would later exercise a disastrous influence in Republican Austria on the transformation of the Vienna « Concert-Hall Society » (« Mener Konzerthausgesellschaft », of which he was president) into a cleverly disguised illegal Nazi organization. One can imagine the kind of smear campaign that was carried-out on the part of the « Hugo Wolf Society » against Mahler, the Opera director.

Between 1938 and 1945, the Vienna « Konzerthaus » suffered from cultural depletion. Under the destructive pressure of the National-Socialist dictatorship, the « Konzerthaus » became a location abused for propaganda and Nazi (« non-degenerate ») entertainment and was largely deprived of its central cultural content. Many artists had no choice but to emigrate.

...

It was in this spirit of music, renewing its very purpose, that Karl Weigl, Alexander Zemlinsky and Arnold Schönberg founded the Society of Creative Musicians (« Vereinigung schaffender Tonkünstler »), in 1904, with Gustav Mahler as honorary president. In 1907, Mahler would defend Schönberg against hisses and boos at the premiere of the latter's 1st String Quartet, Opus 7, in the « Bösendorfer-Saal », while admitting privately that he was not sure what the music meant.

« Indisposition » or « disease »

**Around January - February 1896** : St. Florian's organist Josef Gruber visits Anton Bruckner, who has just written an apology letter to the Imperial Chancellery about his absence at the Court's ball. Gruber proposes to use the word « indisposition » instead of « disease » .

The last 8 months

**February 1896** : Doctor Richard Heller will take care of Anton Bruckner during the next 8 months.

## Doctor Lorenz prescribes hip baths

The orthopaedic surgeon Doctor Adolf Lorenz, nicknamed the « bloodless surgeon of Vienna », orders Anton Bruckner to take a hip bath each day to treat inflammation. The hip bath is one of the most useful forms of hydro-therapy. As the name suggests, this mode of treatment involves only the hips and the abdominal region below the navel.

Lorenz was most famous for his treatment of congenital dislocation of the hip. He was the father of famed behaviorist Konrad Lorenz (1903-1989) .

## From Natalie Bauer-Lechner : « In Hamburg again »

**Mid-February 1896** : During a visit of Natalie Bauer-Lechner in Hamburg, Gustav Mahler tells her anecdotes on Anton Bruckner composing in the bathroom, his 9th Symphony, and on the mother of Rudolf Krzyzanowski ...

« I felt as if I had never left Hamburg when, with Mahler and Justi, who had met me at the station, I stepped into their friendly home once again.

We spent a quiet evening there together, as Mahler was not conducting. Our talk turned to amusing anecdotes about Bruckner. For instance, there was the time when “ Frau ” Krzyzanowski (1) (whose son Rudolf studied under Bruckner at the Conservatory at the same time as Mahler) (2) visited Bruckner in his bath !

It happened like this :

Bruckner, who had been ill, had to take a daily hip-bath on doctor's orders (\*) . So as to pass the time while sitting in the bath, he used to take music-paper with him and compose. One day, deeply absorbed in this occupation, he was surprised by “ Frau ” Krzyzanowski. She knocked at the door, and was greeted by a friendly “ Come in ! ” Imagine her shock when, on entering, she beheld Bruckner's corpulent figure in the bath, as naked as the good Lord had made him ! The incident did not end there : while she stood as if rooted to the spot, up got Bruckner with a polite greeting and a smile. Dripping, and quite devoid of any kind of covering, he approached the horrified lady - who rushed from the room with a piercing shriek, thus, finally bringing poor Bruckner to himself and to an awareness of his state.

And this had to happen to Bruckner, of all people - Bruckner, who was paralyzed by self-consciousness in the presence of the “ fair sex ” and blushed like a school boy if he so much as looked at or spoke to a woman !

As an instance of Bruckner's incredible modesty and humility, Mahler recounted the following tale. Whenever Mahler visited Bruckner, the old man not only unfailingly accompanied him to the door of the flat when he left, but would then embark on the stairs with him, eventually making his way right down from the third floor to the street-door, insisting upon honouring his guest in this way.

“ Is it true ”, one of us asked, “ that he wanted to dedicate his last symphony to ' the Good Lord ' ? ”

“ It’s quite likely ”, replied Mahler, “ and he would certainly have meant it in all seriousness and good faith - as could be expected, with his simplicity of nature ”. Then, Mahler remembered how Bruckner, already very ill, had said to him on his next-to-last visit :

“ So, dear friend, it's a matter of getting down to things now. I must at least get the 10th (3) finished, or I'll cut a poor figure when I appear before the Good Lord, as I soon shall, and he says to me :

' Well, my boy, why did I give you so much talent, if not to sing to my honour and glory ? But you've done far too little with it ! ' ” »

(1) It is of Hans Rott's mother that Mahler would appear to have related this anecdote to his wife in later years (see : Alma Mahler's Memoirs, page 107) . The present version is the correct one.

(2) Although he had been on terms of quite close friendship with Bruckner, Mahler in fact never studied under him in any formal way. Rudolf Krzyzanowski (1862-1911) was one of Mahler's inner-circle of student friends and appears to have collaborated with him on the piano-duet version of Bruckner's 3rd Symphony, which the composer had entrusted to Mahler, under whose name it was published in 1880.

(3) The reference is enigmatic. Probably Bruckner is referring to his 9th Symphony which remained unfinished at his death.

...

The hip bath is one of the most useful forms of hydro-therapy. As the name suggests, this mode of treatment involves only the hips and the abdominal region below the navel. A special type of tub is used for the purpose. The tub is filled with water in such a way that it covers the hips and reaches upto the navel when the patient sits in it. Generally, 4 to 6 gallons of water are required. If the special tub is not available, a common tub may be used. A support may be placed under one edge to elevate it by 2 or 3 inches. Hip bath is given in cold, hot, neutral or alternate temperatures.

### Cold Hip Bath

The water temperature should be 10°C to 18°C. The duration of the bath is usually 10 minutes, but in specific conditions, it may vary from 1 minute to 30 minutes. If the patient feels cold or is very weak, a hot foot immersion should be given with the cold hip bath.

The patient should rub the abdomen briskly from the navel downwards and across the body with a moderately coarse wet cloth. The legs, feet and upper-part of the body should remain completely dry during and after the bath. The patient should undertake moderate exercise, after the cold hip bath, to warm the body.

A cold hip bath is a routine treatment in most diseases. It relieves constipation, indigestion, obesity and helps the eliminative organs to function properly. It is also helpful in uterine problems like irregular menstruation, chronic uterine infections, pelvic inflammation, piles, hepatic congestion, chronic congestion of the prostate gland, seminal weakness, impotency, sterility, uterine and ovarian displacements, dilation of the stomach and colon, diarrhoea, dysentery, hemorrhage of the bladder and so on. The cold hip bath should not be employed in acute inflammations of the pelvic and abdominal organs, ovaries and in painful contractions of the bladder, rectum or vagina.

### Hot Hip Bath

This bath is generally taken for 8 to 10 minutes at a water temperature of 40°C to 45°C. The bath should start at 40°C. The temperature should be gradually increased to 45°C. No friction should be applied to the abdomen. Before entering the tub, the patient should drink 1 glass of cold water. A cold compress should be placed on the head. A hot hip bath helps to relieve painful menstruation, pain in the pelvic organs, painful urination, inflamed rectum or bladder and painful piles. It also benefits enlarged prostatic gland, painful contractions or spasm of the bladder, sciatica, neuralgia of the ovaries and bladder. A cold shower bath should be taken immediately after the hot hip bath.

Care should be taken to prevent the patient from catching a chill after the bath. The bath should be terminated if the patient feels giddy or complains of excessive pain.

### Neutral Hip Bath

The temperature of the water should be 32°C to 36°C. Here too, friction to the abdomen should be avoided. This bath is generally taken for 20 minutes to an hour. The neutral hip bath helps to relieve all acute and sub-acute inflammatory conditions such as acute catarrh of the bladder and urethra and subacute inflammations in the uterus, ovaries and tubes. It also relieves neuralgia of the fallopian tubes or testicles, painful spasms of the vagina and pruritus of the anus and vulva. Besides, it is a sedative treatment for erotomania in both sexes.

### Alternate Hip Bath

This is also known as revulsive hip bath. The temperature in the hot tub should be 40°C to 45°C and in the cold tub 10°C to 18°C. The patient should alternately sit in the hot tub for 5 minutes, and then, in the cold tub for 3 minutes. The duration of the bath is generally 10 to 20 minutes. The head and neck should be kept cold with a cold compress. The treatment should end with a dash of cold water to the hips.

This bath relieves chronic inflammatory conditions of the pelvic viscera such as salpingitis, ovaritis, cellulitis and various neuralgias of the genito-urinary organs, sciatica and lumbago.

### Doctor Adolf Lorenz

The Austrian orthopaedic surgeon Adolf Lorenz was born on 21 April 1854 in Weidenau, Austrian Silesia (today : Vidnava,

Czech Silesia) ; and died at the age of 92 on 12 February 1946 in Altenberg (town of St. Andrä-Wördern near Vienna) . He was the father of famed behaviorist Konrad Lorenz (1903-1989) .

Lorenz was born to a very ordinary family. His father was a simple inn-keeper and harness-maker. A very bright young man, Lorenz was admitted to the medical school at the University of Vienna at age 20.

The « Vienna Schools of Medicine » were very prestigious, as the first College of Medicine in the world had been established in Vienna in 1365, and, by 1784, a large general teaching hospital was operational. Some of the significant physicians and surgeons that came from the « Vienna Schools of Medicine » included Ignaz Semmelweis (1818-1865) , Theodor Billroth (1829-1894) , and Sigmund Freud (1881-1938) . As with other doctors of that era, Lorenz started growing a beard in medical school and proudly wore it throughout the rest of his life.

Adolf Lorenz graduated at the age of 26. He is remembered for his work with bone deformities. He chose to become a surgeon and was assigned to the second department of surgery in Vienna as the first assistant to professor Eduard Albert (1841-1900) . Unfortunately, within 4 years, during the 1880's, Lorenz developed a severe allergy to the carbolic acid a compound that was routinely and extensively used for asepsis in the operating-rooms ; contact with acid resulted in tremendous skin lesions on his hands. Although the condition prevented him from performing traditional surgical operations, he continued in the medical profession as a « dry surgeon » (as opposed to a « wet surgeon ») , treating patients without cutting into skin or tissue.

Lorenz was one of the founders of the German Society of Orthopædic Surgery in 1901, and, a year later, at the age of 48, he was at the peak of his career and, consequently, was given the nickname « The Bloodless Surgeon of Vienna » . His techniques became known as bloodless surgery, reflecting his non-invasive techniques.

Lorenz developed a huge reputation for his manipulative treatment of club-feet, which he accomplished by essentially stretching or breaking the tendons, ligaments, and epiphyseal plates until the foot was appropriately aligned. Once proper alignment was accomplished, he would apply a cast until the foot healed in that position. He was also involved with the treatment of scoliosis, using pulleys and traction to achieve a correction, and then, applying a cast to maintain the correction. However, he was most famous for his treatment of congenital dislocation of the hip.

He was renowned for his treatment of congenital dislocation of the hip in children. His technique involved putting the patient under light anesthesia, placing the child in a plaster spica cast in abduction, then, using external rotation as the child matured. Also, he added a specialized walking frame to give the patient a measure of mobility.

Tuberculosis was very common in those days, and painful lesions of the spine or other joints were treated by plaster immobilization until the area fused spontaneously and the pain diminished.

Due to his fame in orthopedics, he became acquainted with several dignitaries, including U.S. President Theodore Roosevelt. During his travels in the United States, he gave an inspirational exhibition in Dallas, an exhibition that became a catalyst in the creation of the Texas Baptist Memorial Sanitarium, later known as the Baylor University Medical Center and Baylor Health-Care System.

...

The interest taken by the public in the professional visit to this country of Doctor Adolf Lorenz, of Vienna, is an indication of a great humanitarian interest in this country and a matter of congratulation. Doctor Lorenz was called over by a wealthy American to perform an operation on his little daughter, to correct congenital dislocation of the hip. Having performed this operation (which might more correctly be styled manipulation, since Doctor Lorenz's work is bloodless) , the famous physician has remained in this country giving clinics and treating, as an act of charity, whatever cases have been brought to his attention. Doctor Lorenz was at one time one of the principal exponents of what has been termed the bloody method of treating congenital hip diseases, and the results obtained by Lorenz of Vienna, and Albert Hoffa of Würzburg, made profound sensations in the world of surgery. This method included actual operation, incision, and it was accepted as the best-known to science. But Doctor Lorenz himself became dissatisfied with this « bloody » method, and after the closest investigation and analysis of its results, abandoned it for his now famous bloodless method. This method is described as « the forcible stretching of all the soft parts about the hip, sometimes even to the breaking of the skin (which is rare) , until the head of the bone can be brought to the place where the socket should be. Bandages, plaster of Paris, or other appliances are then used to keep the bone in place, until a socket can form itself about its head.

Doctor Lorenz has been particularly successful with this method of which he is the ablest exponent. The method has been known to medical science for about 10 years and has been used during that time in Europe and America with varying success. The debt which posterity may owe to the patience. Science and skill of this eminent Viennese is scarcely conceivable.

...

Doctor Adolf Lorenz, an internationally famous orthopædic surgeon from Vienna, was the honoured guest at the annual meeting of the American Medical Association held in New Orleans in 1903. This is the story of how Doctor Lorenz' subsequent visit to Dallas became the inspiration for the Texas Baptist Memorial Sanitarium, which developed into Baylor University Medical Center and Baylor Health-Care System.

Texas was a frontier State in the early 1800's. In 1839, an Arkansas lawyer named John Neely Bryan (1810-1877) , who could speak 3 Indian languages, traveled through the area that is now Dallas in hopes of developing a trading-post on the Trinity River. He returned 2 years later to find that the Indians in that region had been relocated by the U.S. government. Therefore, the concept of a trading-post was not reasonable, but he liked the area and decided to settle. He joined with a few people who called themselves « Peters' Colony » . Most of these settlers came from Kentucky when they were each promised 640 acres of land to settle in North Texas. Bryan soon became the mayor of Peters' Colony and, in 1845, named the community « Dallas » after the vice-president of the USA at that time, George Mifflin Dallas.

The year 1845 also saw a surgical milestone when inhalation anesthesia was discovered by Wells and Morton. They demonstrated their discovery in the famous « Ether Dome » at Massachusetts General Hospital in Boston, using a mixture of nitrous oxide and ether, which put a patient to sleep and allowed surgery to be performed painlessly.

A second milestone in surgery (the beginning of antisepsis) occurred during that Century. In 1869, Joseph Lister (1827-1912), professor of surgery at the University of Glasgow in Scotland, noted that there were very few flies and other signs of decomposition around a garbage dump outside of Glasgow where carbolic acid had been sprinkled on top of the waste. He then began to experiment with the use of carbolic acid to sterilize the medium in the operating-room and to sterilize bandages. At that time, post-operative sepsis killed 40 % to 50 % of patients. Soon, carbolic acid spray became a common feature, and surgeons would also dip their hands into solutions of carbolic acid before operating. In 1877, Lister's theory gained acceptance when he successfully wired a broken patella without sepsis. This was one of the first instances in which a closed fracture was converted into an open one, and the patient did well.

A third major medical milestone occurred in 1895 : the discovery of X-rays by William Conrad Roentgen. Roentgen accidentally discovered that rays emitted from his cathode ray generator (and called « X » -rays because they were unknown) could pass through soft tissues and demonstrate the underlying bones on a photographic plate. The first X-ray picture ever taken of a human was that of his wife's hand. For this discovery, Roentgen was awarded the Nobel Prize in Physics in 1901.

In 1850, the population of Dallas was 430, and, by 1860, it was over 2,000. By 1875, the population had soared to over 7,000, boosted by the arrival of 2 railways linking Dallas to St. Louis and Chicago in the north and to Galveston in the south.

Doctor Charles McDaniel Rosser was one of the best and busiest physicians in Dallas in 1900. He conscientiously worked to improve the health care of the citizens of Dallas and was subsequently made officer of health for the city. He was also appointed medical officer for the 2 railways. In 1900, Rosser started a medical school and called it the Medical Department of the University of Dallas. Staff and students combined numbered approximately 73, with 1 female student. Medicine was a popular profession at that time, possibly because it was cheaper to become a doctor than it was to become a farmer. A medical license cost \$ 15, whereas horses, plows, and land cost a great deal more. The training of doctors in the United States was commonly done in small medical schools such as the University of Dallas Medical Department, primarily with books and lectures but with minimal exposure to actual patients. Aspirin, the « wonder drug » at that time, competed with various « tonics » that contained mainly alcohol. 90 % of the physicians had no college education, and fake licenses to practice medicine were not uncommon.

In 1902, with the financial help of some colleagues, Doctor Rosser purchased the 14 room home of Captain W. H. Gaston, which existed close to where Roberts Hospital of Baylor now stands. The old house, which was also known as « Hopkins' Place », was remodeled and used as a teaching hospital for Doctor Rosser's medical college. There were 25 beds and 1 operating-room in this building, and it was named the Good Samaritan Hospital.

Statistics show that, in 1903, the average life expectancy in the nation was only 47 years, and 95 % of births took place at home. The leading causes of death at that time were infections such as pneumonia, influenza, tuberculosis, and diarrhea, along with heart-disease and stroke.

Many problems affected the musculo-skeletal system at that time, and papers presented at the 1903 meeting of the

American Orthopædic Association, then in its 6th year of existence, covered topics such as tuberculosis of bones and joints, club-feet, congenital dislocation of the hip, rickets, polio, osteomyelitis, and trauma. However, since life expectancy was only 47 years, degenerative arthritis was rarely diagnosed and never treated.

In 1903, the sanitary conditions in Dallas were terrible, infant mortality was high, and infectious diseases were rampant. The population of Dallas had grown to 43,000. There were 2 other small hospitals, Parkland and St. Paul's Sanitarium, and neither was connected to a sewage system. It was to improve these poor conditions that Doctor Rosser enacted public health ordinances.

Doctor Edward H. Cary, a colleague of Rosser and a graduate of New York's Bellevue Hospital Medical School, became the second Dean of the medical school in 1903. At that time, Abraham Flexner had been commissioned by the American Medical Association to study the quality of medical education in the United States. The « Flexner Report » of 1910 recommended that all medical schools be affiliated with major universities and emphasized the need to close sub-standard schools. Doctor Cary, having trained in the Northeast and being aware of the advantages of having a medical school associated with a major university, negotiated an affiliation of the University of Dallas Medical Department with Baylor University in Waco. A charter was subsequently granted from the State of Texas on October 16, 1903, and the name of the medical school was changed to « Baylor University College of Medicine ». It was also in 1903, at the American Medical Association annual meeting in New Orleans, that Doctors Rosser and Cary first met Doctor Adolf Lorenz.

Philip Armour, a wealthy meat-packing magnate in Chicago, was concerned about his 12 year old daughter who had a congenital dislocation of the hip. One effort at surgical relocation of the hip had failed. Armour invited Lorenz to come to Chicago to treat his daughter. Lorenz was reluctant because of the age of the girl and the fact that a prior surgical effort had been made, which minimized his opportunity to get a successful reduction. Lorenz' wife, however, convinced him to go while negotiating a huge (for that time) fee of \$ 30,000 (later rumored to be \$ 1 million) .

Consequently, in 1902, Lorenz traveled to Chicago and treated the girl by manipulating her hip and putting her in a plaster cast. This was associated with tremendous publicity, and he was promoted as one of the most distinguished surgeons of the world. He was subsequently invited to meet with President Theodore Roosevelt and other dignitaries of that time.

« Medical Record » (31 January 1903) :

« Doctor Adolf Loren has arrived in Vienna, after tarrying for a while in Liverpool and London and demonstrating the “ bloodless ” treatment of congenital dislocation of the hip to such English surgeons as cared to attend his clinics. There was no triumphal progress there, however, and his reception did not even border on the hysterical. In an interview with a correspondent of the Associated Press, after his return home, Doctor Lorenz commented on his cool treatment in England, which he modestly attributed to a lack of enterprise in the British.

He said :

“ American physicians represent progressiveness while English physicians are extremely conservative. In America, it was difficult to accommodate the doctors and students who desired to attend my clinics, while during my week in London, many of the most eminent surgeons showed no interest in the new methods. And others who were present declared the old way the best. ” »

In 1903, Lorenz returned to the United States, primarily to follow-up on his young patient in Chicago. Advance publicity of his return visit prompted an invitation from the American Medical Association to attend its annual meeting in New Orleans and to demonstrate his techniques. It was such a big event to have a world-renowned surgeon come to the United States at that time that Doctor Rosser and Doctor Cary went to New Orleans to see Lorenz and, if possible, to invite him to visit Dallas. Lorenz informed them that he was not sure that he could go to Dallas because he had a commitment to visit Mexico and to meet its president. However, he did arrive in Dallas on May 20, 1903, with the intention of staying only 2 days. News of his visit brought a huge number of sick and lame patients, who came from all over Texas to be seen and treated by the great man. Lorenz stayed a week and conducted 2 clinics each day at the Good Samaritan Hospital.

At the end of that week, a farewell and thank you dinner was held at the Oriental Hotel, which was the finest hotel in Dallas at that time.

Lorenz continued to work at his clinic in Vienna, he traveled a great deal and came to the United States for yearly visits. For several years, he conducted a clinic in New York with his eldest son, Albert, who also was an orthopædic surgeon.

Professor Lorenz finally trimmed his long, flowing white beard on a trip to India in 1922 when he was 68 years old. In 1923, Lorenz was nominated for the Nobel Prize but apparently lost by one vote. He retired from active practice in 1924. Ironically, his second son, Konrad, won the Nobel Prize in 1973 for his work in ethology.

Adolf Lorenz, the catalyst for the development of Baylor University Medical Center, died in 1946 at the age of 92. Part of his legacy is the Baylor Health-Care System, with 14 hospitals, 8 senior health-centers, 14 affiliated ambulatory surgery centers, and approximately 2,500 beds. The Department of Orthopædics at Baylor is now recognized as one of the top orthopædic centers in the country and is the busiest surgical service in the hospital. It is fitting that an orthopædic surgeon was responsible for the hospital's creation.

...

Adolf Lorenz (geboren 21. April 1854 in Weidenau, Österreichisch-Schlesien ; gestorben 12. Februar 1946 in Altenberg - Gemeinde St. Andrä-Wördern bei Wien) war ein bekannter Orthopäde und Vater des Orthopäden und Schriftstellers Albert Lorenz (1885-1970) und des Verhaltensforschers Konrad Lorenz.

Adolf Lorenz entstammte einfachen Verhältnissen. Sein Vater war ein Sattlermeister und Gastwirt in Weidenau. Die Mutter war eine Bauerntochter. Durch Johann Gregor Ehrlich, einen seiner Onkel, der Benediktiner und später Abt des Stiftes

St. Paul im Lavanttal war, erhielt er die Möglichkeit, das dortige Stiftsgymnasium zu besuchen. Sein Medizinstudium konnte er durch ein kleines Stipendium sowie eine Tätigkeit als Hauslehrer finanzieren. 1884 heiratete er Emma Lecher, Tochter des Chefredakteurs der österreichischen Tageszeitung Die Presse. 1885 wurde der erste Sohn Albert geboren, der später ebenfalls Orthopäde wurde und eine gemeinsame Praxis mit dem Vater betrieb. 1903 wurde sein Sohn Konrad geboren.

Als Chirurg spezialisierte er sich auf die operative Heilung von angeborenen Hüftgelenksverrenkungen und anderen anatomischen Missbildungen. Da es bei diesen Methoden immer wieder zu Todesfällen durch Blutvergiftungen kam, begann er sehr frühzeitig, an alternativen Heilmethoden zu arbeiten, bei denen Streckverbände und Gipsschalungen eingesetzt wurden. Seine Bemühungen, Knochendeformationen durch Geräte zu korrigieren verstärkte er, nachdem ihn eine Allergie gegen Karbolsäure zwang, die Chirurgie aufzugeben. Dank großer und spektakulärer Erfolge mit dieser neu entwickelten Heilmethode war er ab 1902 ein weltbekannter Mediziner. Regelmäßig hielt er sich bis in die 1930er Jahre in den USA auf, wo er vor allem in New York praktizierte.

Die wachsende Bekanntheit ging einher mit großem Wohlstand. Zwanzig Kilometer nordwestlich von Wien ließ er in Altenberg einen Landsitz errichten. Die mondäne Villa, die in einer Stilmischung aus Italienischer Renaissance und Jugendstil gebaut wurde, liegt in einem großzügigen Garten, der einer etwas verwilderten englischen Parkanlage gleicht. In diesem Haus wuchs der zweite Sohn von Adolf und Emma Lorenz auf, Konrad Lorenz, der in diesem Garten eine große Schar von Tieren halten konnte. Dieser Sohn wurde zu einem Zeitpunkt geboren, als Adolf bereits 49 und Emma Lorenz 42 Jahre alt waren. Konrad Lorenz hat in seinen Erinnerungen darauf hingewiesen, auf welchen glücklichen Umständen seine Karriere als Verhaltensforscher basierte.

Während des I. Weltkriegs verlor Adolf Lorenz sein Vermögen, das er in österreichischen Kriegsanleihen investiert hatte. Er praktizierte nach Ende des I. Weltkrieges gemeinsam mit seinem mittlerweile ebenfalls zum Mediziner ausgebildeten Sohn Albert, und andere auch wieder in New York. Auch Konrad Lorenz zwang er, zuerst ein Medizinstudium zu absolvieren, bevor dieser sich seiner eigentlichen Neigung, der Zoologie zuwenden durfte.

Adolf Lorenz ist auf dem Ortsfriedhof in St. Andrä-Wördern in der Familiengruft beigesetzt.

...

Im zwölften Lebensjahr verließ Lorenz mittellos die schles. Heimat, wurde von seinem Onkel, Pater Gregor, Ordenskapitular in der Benediktinerabtei St. Paul (Kärnten), als Sängerknabe untergebracht und erhielt einen Freiplatz im Untergymnasium. Mit 14 Jahren ging er nach Klagenfurt auf das Obergymnasium und verdiente hier seinen Lebensunterhalt durch Nachhilfeunterricht, zeitweilig als Hauslehrer auf einem Gut in Ungarn. Nach der Reifeprüfung zog Lorenz zum Medizinstudium nach Wien, erhielt ein Stipendium und wurde später Demonstrator der Anatomie bei Carl Langer von Edenburg. Nach der Promotion 1880 setzte er seine Ausbildung als « Operationszögling » in der I. Chirurgischen Klinik Dumreichers in Wien fort. Diese wurde nach einem Jahr von Eduard Albert übernommen, dessen berühmtester Schüler Lorenz wurde. Nachdem er bereits zum « Klinischen Assistenten » aufgerückt war, löste der Listersche Carbol spray bei ihm ein therapieresistentes Handekzem aus, das ihm jegliches Operieren verbot. Albert riet dem Lieblingsschüler, es mit der « trockenen Chirurgie » zu versuchen, den Knochen- und Gelenkerkrankungen, deren

Behandlung damals weitgehend ohne Messer und Antisepsis auskam, und die, durch das Aufblühen der Höhlenchirurgie an den Rand gedrängt, sich später als Orthopädie von ihrem Mutterfach löste. Albert übergab ihm sämtliche orthopädischen Fälle seiner Klinik, und gleichzeitig gründete Lorenz eine orthopädische Praxis. 1884 habilitierte er sich für Chirurgie mit einer Arbeit über Skoliose, nachdem er zuvor bereits ausführlich über den Plattfuß geschrieben hatte. Danach begann Lorenz mit dem Aufbau einer « Orthopädischen Klinik » in der alten, unbrauchbar gewordenen Küche des Wiener Allgemeinen Krankenhauses. Eine Bettenstation wurde ihm nicht zugestanden ; heimlich mußte ihm sein Schwager Rudolf Frank auf seiner Abteilung einige Betten für seine schweren unblutigen und bald auch wieder für seine blutigen Operationen zur Verfügung stellen. Lorenz hatte unterdessen seine eigene Antisepsis mit Hilfe einer alkoholischen Lösung entwickelt, die in den Operationssälen noch jahrzehntelang verwendet wurde, nachdem das Carbol wegen seiner Toxizität außer Gebrauch gekommen war. 1889 wurde er zum außerordentlichen Professor für Orthopädische Chirurgie und Leiter dieser Klinik ernannt. Erst wenige Jahre vor dem I. Weltkrieg (er war bereits weltberühmt und 1903 in einem wahren Triumphzug durch den nordamerikanischen Kontinent gereist) gelang ihm die Einrichtung einer regulären klinischen Abteilung mit Bettenstation und Kinderpavillon. Die Errichtung eines orthopädischen Lehrstuhls jedoch haben weder er noch sein Nachfolger Spitzzy erreicht. 1924 trat er siebzigjährig mit dem Titel eines o. Honorarprofessors in den Ruhestand. Er hatte in all seinen Amtsjahren keinerlei Gehalt bezogen und erhielt auch keine Pension ; zur Einrichtung der Klinik hatte er in erheblichem Maß aus eigenen Mitteln beigesteuert. Nach seiner akademischen Entpflichtung begann für Lorenz von neuem eine Zeit harter Arbeit. Als « Ambassador of peace and mercy » reiste er nach USA, um für die amerikanische Nachkriegshilfe an Sach- und Lebensmitteln zu danken, die auch seiner Klinik zugute gekommen war. Nachdem seine 1903 in Illinois erworbene ärztliche Lizenz auf New York übertragen worden war, behandelte er hier orthopädisch Kranke zunächst kostenlos und später gegen geringes Entgelt, von dem er den « Lorenzfonds » gründete, dessen Mittel armen Wiener Kindern und Studenten sowie verarmten Lehrern und Künstlern zugute kamen. Zum eigenen Unterhalt baute er sich eine Privat-Ordination auf und praktizierte seitdem gemeinsam mit seinem Sohn Albert bis zum 83. Lebensjahr regelmäßig das Winterhalbjahr in New York und das Sommerhalbjahr in Wien. Dann erst setzte er sich endgültig zur Ruhe.

Lorenz's Bedeutung für die Entwicklung der deutschen Orthopädie kann kaum überschätzt werden, zumal Albert Hoffa, sein unmittelbarer Zeit- und Weggenosse in Berlin, allzu früh verstarb. Lorenz begriff die Orthopädie als « die Kunst, Krumme gerade und Lahme gehend zu machen » . Sie wurde unter ihm zur Wissenschaft von der Erforschung, Vorbeugung und Behandlung angeborener und erworbener Schäden und Mißbildungen am menschlichen Halte- und Bewegungsapparat. Tiefsinnige Theorien lagen ihm nicht, dafür verdankt ihm die Praxis fast auf jedem Teilgebiet des Faches entscheidende Neuerungen oder Anregungen. Auch war es stets sein Bestreben, notwendige Eingriffe durch schonungsvolles Vorgehen zu entschärfen und, wo möglich, blutige durch unblutige Operationen zu ersetzen. So verwandelte er in der Klumpfußbehandlung das « brisement forcé » der französischen Schule in sein behutsam « modellierendes Redressement » , das den Fuß in mehreren Sitzungen etappenweise ohne Weichteilschädigungen neu formte. Diese Methode übertrug er auch auf die jungen Röhrenknochen bei angeborenen O-Beinen oder X-Beinen, und für hartnäckige Fälle erfand er hier zur Vermeidung einer blutigen Operation die Osteoklasie, das Einbrechen der langen Röhrenknochen am Ort der Wahl, mit Hilfe eines von ihm entwickelten Werkzeugs, des Osteoklasten, um so eine Begradigung zu erzielen. Voraussetzung für den Erfolg solcher Behandlungen bildeten Fixationsverbände in genauer Korrekturstellung, und so wurde die Gipstechnik an seiner Klinik zu einer bis dahin unbekanntem Virtuosität gebracht. Das wiederum befähigte Lorenz, tuberkulös erkrankte Knochen und Gelenke zur Ausheilung in exakten Gipsverbänden

ruhigzustellen. Die Erfolge dabei ermutigten ihn zur Erfindung seines « Reklinations-Gipsbettes », das zunächst zur Behandlung der Wirbel-Tbc gedacht war, später von ihm aber auch bei Wirbelbrüchen und ohne Reklination in der Behandlung der seitlichen Wirbelsäulenverkrümmungen wirksam eingesetzt wurde. Schon früher hatten seine und seines Lehrers Forschungen zur Skolioseentstehung wichtige pathogenetische Fragen aufgeklärt. Doch hatte sein gymnastisches Übungsprogramm nicht nur den Wert, sondern auch die Grenzen solcher Behandlungsformen bei diesem Leiden aufgezeigt, das wie der Schiefhals auch seinem modellierenden Redressement getrotzt hatte. In seinem Bestreben, schwere Eingriffe durch milde zu ersetzen, hatte er hier die konservativen Korrekturmöglichkeiten überschätzt.

Derselbe Grundsatz führte ihn jedoch in der Behandlung der so genannt angeborenen Hüftverrenkung zu Weltruhm. Seine Abmilderung des von Hoffa entwickelten blutigen Einrenkungsverfahrens durch Schonung der Hüftmuskulatur genügte ihm nicht. Schon vor ihm war Gabriel Pravaz (1791-1853) die unblutige Einrenkung geglückt, doch vermochte dieser den eingerenkten Hüftkopf nicht in der Pfanne festzuhalten ; nicht die Reposition, sondern die Retention schien dabei das Hauptproblem zu sein. Lorenz verschaffte sich das anatomische Becken-Bein-Präparat eines Luxationskindes und fand bald den einfachsten Repositionsweg. Um die Retention aber kämpfte er erbittert und entdeckte, daß sie sich nur in der äußersten Abspreizung der Oberschenkel erhalten ließ, die er « Frosch » -oder « Hampelmannstellung » nannte, und die heute seinen Namen trägt. 1895 begann er erfolgreich mit der Anwendung am Patienten und konnte damit unzähligen vom Krüppeltum bedrohten Kindern zu einem normalen Leben verhelfen. Lorenzs « Königsgedanke » kam historisch im richtigen Augenblick, denn die Gipstechnik war weit genug, um eine Fixation in so extremer Stellung über längere Zeit zu gestatten. Vor allem aber entdeckte Röntgen im selben Jahr seine X-Strahlen : Trotz der anfänglichen Unzulänglichkeiten überzeugte die Röntgendiagnostik die vielen Zweifler von der tatsächlichen Einrenkung aller geeigneten jugendlichen Fälle. Gleichzeitig regte diese Lorenz an, für die therapieresistenten, veralteten Luxationen, die zuvor schon von Hoffa (1899) empfohlene « schiefe subtrochantere Osteotomie » als « Bifurkation » zu entwickeln. Zunächst aber lehrte die Röntgenkontrolle die Forderung nach der Früh- und Sofortbehandlung, einer der größten Fortschritte in der Orthopädie, der die weitere Entwicklung der Spreizbehandlung auf der Grundlage von Lorenzs Erkenntnissen einleitete. Welche medizinhistorische Bedeutung ihr zukommt, zeigt sich darin, daß er vorzüglich ihretwegen zum Nobelpreis vorgeschlagen wurde, zu dessen Verleihung ihm nur eine Stimme fehlte.

Diesem Erfolg waren harte Auseinandersetzungen vorangegangen. Denn als Lorenz 1897 auf dem Berliner Chirurgenkongreß seine ersten geheilten Fälle vorstellte, lehnte der Chirurg Franz König das neue Verfahren mit ungewöhnlicher Schroffheit ab. Dieser Streit hat ohne Lorenzs Zutun entscheidend zur Lösung der Orthopädie aus der Chirurgie und der Gründung einer eigenen Fachgesellschaft beigetragen. Lorenz hielt 1944 auf ihrem 36. Kongreß in Wien noch einmal die Eröffnungsansprache, nachdem er zuvor als « Vater » und « Begründer » der deutschen Orthopädie gefeiert worden war.

...

Doktor Albert Lorenz, Orthopäde, Sohn des Adolf Lorenz : geboren 2. September 1885 in Wien ; gestorben 23. Juli 1970 in Wien. Nach dem Studium an der Universität Wien (Doktor der medicinæ universæ 1910) trat Lorenz in die II. Chirurgische Universitätsklinik im Allgemeinen Krankenhaus Wien unter Julius von Hochenegg ein, wo er nach dreijähriger Tätigkeit eine orthopädische Station einzurichten begann. Nach dem I. Weltkrieg konnte die klinische

Tätigkeit nicht fortgesetzt werden, sodaß Lorenz als Privat-assistent seines Vaters weiterarbeitete. 1943 habilitierte er sich für Orthopädie. Erst nach dem 2. Weltkrieg konnte er die orthopädische Station der I. Chirurgischen Universitätsklinik (unter Leopold Schönbauer) übernehmen. 1951 in den Ruhestand versetzt, übte Lorenz weiterhin seine Praxis aus und versah 1953-1959 Dienst im orthopädischen Ambulatorium der Wiener Gebietskrankenkasse (7. Bezirk, Andreasgasse Nummer 11) . Zu seinen Hauptarbeitsgebieten zählten Arbeiten über Amputation und Prothesenversorgung, Schenkelhalsfraktur, Hohlfußdeformität und Pfannendachplastik.

## Genealogie

Vater : Johann, Sattlermeister und Gastwirt in Wien ; Mutter : Agnes, Tochter der Ackerbürgers Ehrlich in Wien ; On Eduard Ehrlich, Chirurg und Arzt in Trofaich (Steiermark) , führte der Jennersche Kuhpockenimpfung mit e. bereits aseptisch hergestellten Lymphe in der Steiermark ein, Johann Ehrlich (Klostername Gregor, 1831-1912) , OSB, Abt der Klosters St. Paul (Kärnten) ; Bruder : N.N. , Chef-Ingenieur der Australische Eisenbahnwerke, Commander der Australische Lokomotivwesen ; verheiratet Wien 1885 Emma (1859-1936) , Tochter der Konrad Lecher (1829-1905) , Schriftsteller, 1. Präsident der Schriftstellerverein « Concordia » in Wien, und der Luise Schwarzer von Heldenstamm ; Schwager Ernst Lecher (gestorben 1926) , Physiker ; Schwägerin Hilda Lecher (verheiratet Rudolf Frank, gestorben 1913, Chirurg) ; 2 Sohn : Albert (1886-1970) , Dozent für Orthopädie in Wien, Nachf ; Konrad Lorenz (geboren 1903 ; gestorben 1989) , Verhaltensphysiologe.

## Erinnerung

Gedenktafel für Adolf und Albert Lorenz in Wien I, Rathausstraße Nummer 21.

Adolf-Lorenz-Gasse in Hietzing (1959) .

Gedenktafel am Haus Rathausstraße (Wien) 21.

## Ida Krzyzanowski-Doxat

According to Gustav Mahler, Rudolf Krzyzanowski's wife, « Frau » Ida Doxat, was a mediocre dramatic soprano at the Weimar Court Opera (until 1904) .

...

Ida Krzyzanowski-Doxat (häufig falschgeschrieben Ida Krzyzanowski-Dorat, geborene Ida Doxat) , österreichische Opernsängerin (Sopran) : geboren 24. Jänner 1867 in Senozec, Krain ; gestorben 8. März 1947 in Graz.

Ida Doxat, die Tochter eines Kaiserlich-Königliche österreichischen Bezirkskommissärs, wurde von Marie Wilt entdeckt. Sie nahm Gesangsunterricht bei Louise Dustmann und begann ihre Bühnenlaufbahn 1889 in Halle, wo sie als « Elisabeth » im « Tannhäuser » debütierte, wirkte 1890 in Elberfeld, von 1891 bis 1895 am Stadttheater in Leipzig, vom September 1896 bis Frühjahr 1898 am Stadttheater in Hamburg und anschließend am Hoftheater in Weimar bis 1904.

Sie galt als ganz vortreffliche Wagnersängerin. So wurde sie eingeladen, bei den Mustervorstellungen in München die « Isolde » und « Senta » zu singen, beteiligte sich am Wagner-Zyklus in Dresden, wo sie die « Brünnhilde » verkörperte, erschien im November 1894 dreimal als Gast am Hofoperntheater in Wien, sowie alljährlich bei den großen Wagnerkonzerten in London.

Die Kritik bezeichnete sie als eine hervorragende Darstellerin auf dem Gebiet hoch-dramatischer Erscheinungen, von besonderer Wahrheit und Tiefe der Empfindung, von glühender Leidenschaft und dabei großer Selbstbeherrschung. Ihre ausdauernden und wohlgebildeten stimmlichen Mittel wurden rühmend hervorgehoben.

Zu ihren Glanzrollen zählten nebst Wagnerrollen auch Giacomo Meyerbeers « Valentine » , wie « Fidelio » , « Donna Anna » , etc.

Die Künstlerin, die infolge ihrer Verdienste zur herzoglichen Kammersängerin ernannt wurde, war verheiratet mit dem Weimarer Hofkapellmeister Rudolf Krzyzanowski.

Seit 1911 lebte sie in Graz, sie starb hochbetagt am 8. März 1947 im Pflegeheim Lamberg, wo sie ihre letzten Lebensjahre verbracht hatte.

### Death of Prince Hohenlohe-Shillingstfürst

**Friday, 14 February 1896** : Death of Chief-Intendant of the « Hofoper » , Prince Constantin Hohenlohe-Shillingstfürst, at the age of 67.

Prince Hohenlohe-Shillingstfürst became honorary member of the « Gesellschaft der Musikfreunde » in 1870.

During the years 1870 to 1875, the Danube River was regulated for the first time, leading to the disappearance of the swamps. Hohenlohe-Shillingstfürst was responsible for transforming the Imperial hunting-reserve into the large « Prater » public park - the site of the Vienna International Exposition of 1873.

He was named honorary curator of the Academy of Fine-Arts in Vienna, and honorary curator of the Austrian Museum of Art and Industry. Along with conductor Johann Herbeck, Hohenlohe-Shillingstfürst engaged in reforming the Imperial Music Chapel (« Hofmusikkapelle ») . Court-organist Anton Bruckner dedicated his « Romantic Symphony » to the Prince.

### Richter visits Bruckner

**Monday, 17 February 1896** : Hans Richter visits Anton Bruckner at the « Kustodenstöckl » . Bruckner plays a part of the Finale of the 9th Symphony at the piano. The conductor offers his collaboration.

**Tuesday, 18 February 1896** : Anton Bruckner tells his university student Franz Brunner that, yesterday (Monday, 17 February) , conductor Hans Richter very much enjoyed the Finale of the 9th Symphony played at the piano. If

necessary, the « Te Deum » (**WAB 45**) could be taken as a conclusion.

Funeral of Prince Constantin Hohenlohe-Shillingstfürst at the church of the Carmelite Monastery (« Karmelitenkloster ») in Döbling. His older brother Prince Clovis is present. Johann Strauß offers his condolences. Anton Bruckner makes Franz Brunner aware of the bell-ring on the occasion of the funeral.

**Wednesday, 19 February 1896** : Imperial organist Rudolf Bibl's « Requiem » is performed at the « Hofmusikkapelle » in memory of Prince Constantin Hohenlohe-Shillingstfürst.

### Another performance of the « Te Deum »

**Monday, 23 March 1896** : Vienna, « Musikverein Großer-Saal » . Gratitude and Charity Concert to fund the Ljubljana Musicians' Society. Matej Hubad conducts the « Wiener Philharmoniker » and the « Glasbena Matica, Chor Laibach » . Soloists : Marián Ševčík, Sophie Chotek sopranos ; Eugenie Hofmann, alto ; Josef Lašek, tenor ; Václav Kliment, bass ; Karl Hoffmeister, organ.

Viktor Kutschera, announcer.

Acknowledgments by Josef Stritar, representing the city of Laibach.

Jacobus Gallus : « Musica noster amor » , Madrigal for 6 part mixed-choir « a cappella » , based on a text by Josef Mantuani.

Anonymous : 6 Slovenian folk-songs arranged by Matej Hubad.

Zdeněk Fibich : « Frühlingsromanze » (Spring Romance) , song for soprano, bass, mixed-choir and orchestra, Opus 23.

Anton Nedvĕd : « Zurück ins Alpenglück » (Back to Alpenglück) , song for « a cappella » choir.

Anton Förster : « Das Liebchen » (The Sweetheart) , song for « a cappella » choir.

Anton Bruckner : « Te Deum » for soloists (SATB) , mixed-choir, orchestra and organ « ad libitum » (1884) (**WAB 45**)

.

### Linz : The « Romantic »

**Wednesday, 25 March 1896** (5:00 pm) : First « Musikverein-Konzert » of 1896 in Linz. Adalbert Schreyer conducts the 4th Symphony by Anton Bruckner at the « Redouten-Saal » . The nice weather brings a good attendance.

Once again, the « Linzer Tages-Post » , the « Linzer Volksblatt » and the « Linzer Zeitung » draw attention to the

concert.

### Kitzler conducts the Second

**Wednesday, 25 March 1896** : Otto Kitzler conducts the 2nd Symphony by Anton Bruckner (**WAB 102**) with the Brünn (Brno) « Musikverein » Orchestra.

« The Symphony in C minor by Bruckner was performed in Brünn. As far as we know, no other work has been given with such success in recent times. »

The concert also featured tenor Felix Oplustil and cellist Lucy Herbert Campbell.

Bruckner was unable to attend the performance but sent a letter of thanks.

### Concert sponsored by the « Schubertbund »

**Wednesday, 25 March 1896** : Vienna, « Musikverein Großer-Saal » . Concert sponsored by the Vienna Schubert Association. Richard Heuberger and Adolf Kirchl conduct the « Wiener Philharmoniker » and the « Wiener Schubertbund » male-choir. Soloists : Olga von Türk-Rohn, soprano ; Hermann Jessen, bass.

Franz Schubert : « Rosamunde » Overture from the melodrama « Die Zauberharfe » (The Magic Harp) (D. 644) .

Franz Schubert : « Gesang der Geister über den Wassern » (Song of the Spirits over the Waters) for double-choir and orchestra (D. 714) .

Anton Bruckner : « Träumen und Wachen » (Dreaming and being awake) , song in A-flat major for tenor and male-choir (**WAB 87**) .

Richard Heuberger : « Nun grüße dich Gott, Frau Minnel ! » (Now you greet God, Mrs. Minnel !) , song for male-choir and orchestra, Opus 31 (1887) .

Franz Mair : « Frühlingsahnung » (Hint of Spring) , song for choir.

Arnold Krug : « Fingal » , Symphonic Cantata for soloists, male-choir and orchestra.

### Bruckner's last public appearance

**Sunday, 29 March 1896** (Palm Sunday) : Annual Charity Concert for the Pension Fund of the « Hofoper » under Hans Richter. Participants : Opera-singers Hans Frei, Karl Grengg, Jane Horwitz, Franz Neidl, Josef Ritter ; « Hofoper » Choir members Anton Fichtinger, Clemens Fochler, Petra Görner, Hellmann, Mayer, Ludwig Weißhappel ; and Curator L. Drapal.

Last public appearance of Anton Bruckner.

Programme :

Luigi Cherubini : Overture to the « Opéra-Comique » « Médée » .

Richard Wagner : Rarely heard Biblical Cantata « Das Liebesmahl der Apostel » (The Feast of Pentecost) , WWV 69, featuring the « Wiener Männergesang-Verein » .

Richard Strauß : « Till Eulenspiegels lustige Streiche » (Till Eulenspiegel's Merry Pranks) , Symphonic-poem, Opus 28.

(This time, Bruckner feels particularly attracted to « Till » .)

Richard Wagner : Pilgrim's Chorus from the Opera « Tannhäuser » featuring the « Wiener Männergesang-Verein » .

Anton Bruckner personally congratulated Hans Richter. He also received the visit of Prince Bojidar Karageorgevitch and William Ritter. Then, the Master was carried away in his arm-chair which had brought him to the concert-hall.

« There was the old Bruckner, who was sitting tired and sick in his arm-chair ! He was so captivated by the witty “ Rondo ” of Strauß's “ Till Eulenspiegels ” that he already attended another performance of the work despite his suffering condition. After the concert, he told music professor Doctor Theodor Helm that he wanted to hear again the delicious “ Humoreske ” since he had not fully-understood it during the last concert (January 5) , although the piece was of great interest to him. »

### Holy Week celebrations

**Beginning of April 1896** : Anton Bruckner takes part in the Holy Week celebrations at St. Michael's Church (« Michaelerkirche ») . « Frau » Kathi must accompany him.

### Signing a student-book

**April 1896** : A piano teacher at the Vienna Conservatory (Julius Epstein ?) asks Anton Bruckner to autograph the student-book of a pianist from Paris. Epstein probably visited Bruckner often and was the only welcomed Conservatory professor at the « Kustodenstöckl » .

### Oberleithner visits Bruckner

**After Easter 1896** : Former student Max von Oberleithner visits Anton Bruckner at the « Kustodenstöckl » .

### Godfather again

**Friday, 10 April 1896** : Anton Bruckner becomes the godfather of Anton Zachhuber, the son of his nephew (2nd degree) Eduard Zachhuber from Wolfers near Steyr. He is represented by his friend « Kapellmeister » Franz Bayer at the parish church's baptismal ceremony.

**Friday, 17 April 1896** : Letter from Anton Bruckner (written by Anton Meißner) (Vienna) to his « Kapellmeister » friend Franz Bayer (Steyr) :

Thanks from Bruckner for the performance in Steyr of the Mass in D minor (**WAB 26**) . He joins 5 ducats. Unfortunately, Bruckner is most of the time in bed. He also thanks Bayer for taking his place as godfather at the baptism of Anton Zachhuber, the son of his nephew (2nd degree) Eduard. He asks Bayer to stop writing letters.

**Wednesday, 22 April 22 1896** : The « Linzer Tages-Post » reports that Anton Bruckner as thanked his « Kapellmeister » friend Franz Bayer for the performance of the Mass in D minor (**WAB 26**) . On 10 April 1896, Bayer replaced him as godfather at the baptism of Zachhuber's son, Anton (the family was closely related to Bruckner's mother, Theresia Helm) .

### Help from Kathi's daughter

**May 1896** : « Frau Kathi » Kachelmayr (who as been unable to leave the « Kustodenstöckl » for a long time) asks her daughter Ludowika Kutschera for help again.

### Praise from Hugo Wolf

**Saturday, 2 May 1896** : Letter from Hugo Wolf to Paul Müller :

Wolf has tremendous respect for the real Masters. Anton Bruckner is the only one, among the living, before whom he should bow.

### Josef Schalk visits Bruckner

**Friday, 8 May 1896** : Josef Schalk visits Anton Bruckner at the « Kustodenstöckl » .

**Saturday, 9 May 1896** : Letter from Josef Schalk to his brother Franz :

Greetings from Anton Bruckner, who I visited yesterday. He was upset, but also look terribly decayed.

### Brahms' liver and pancreas

Johannes Brahms felt fatigue and illness at the end of **May 1896**. He lost weight and had developed jaundice by **July** of that year - the signs of pancreatic carcinoma. The « Second Viennese School of Medicine » was at its heights then,

and Brahms was seen by the best doctors of that time. One of them was Leopold von Schrötter, another was Hermann Nothnagel, a German-born specialist of internal medicine (Sigmund Freud did practice at his department) who had moved from the University Clinic of Jena (Germany) to Vienna to become head of the first medical department. The patient's situation worsened with inter-changing episodes of hunger and nausea, generalized itching, growing immobility and bleeding episodes.

All these are the typical signs of malignant pancreatic disease with worsening chronic liver failure (jaundice, generalized itching, coagulopathy, loss of appetite, nausea) . Unclear episodes of ravenous appetite and concomitant loss of weight at the beginning of the symptoms are suggestive of neuro-endocrine symptoms of Brahms' fatal disease. Liver carcinoma has been mentioned as the musician's cause of death several times. But now, it appears that it was neuro-endocrine pancreatic cancer with liver metastases and liver failure.

Only recently molecular biology (as in many fields of modern medicine) appears to be able to explore the pathology of the disease down to its origins, maybe making effective precision medicine possible in the future. But until now, the death toll has not yet been changed. Johannes Brahms died of pancreatic cancer.

### Doctor Hermann Nothnagel

The German internist Doctor Carl Wilhelm Hermann Nothnagel was born 28 September 1841 in Alt-Lietzegörick (Polish : Stare Łysogórki) , nearby Bärwalde in der Neumark (Polish : Mieszkowice) , Brandenburg ; and died on 7 July 1905 in Vienna.

The son of a pharmacist, Nothnagel studied from 1858 to 1863 under Ludwig Traube, Carl Westphal and Rudolf Virchow at the University of Berlin. From 1865 to 1868, he was an assistant to Ernst Viktor von Leyden at the University of Königsberg (Kaliningrad) where, in 1866, he was habilitated for internal medicine. From 1868 to 1870, he worked as a military physician and lecturer in Berlin, and later, served in the same roles at Breslau (1870-1872) .

In 1872, Nothnagel relocated at the University of Freiburg im Breisgau and, in 1874, was appointed full-professor at the medical clinic in Jena. From 1882 until his death in 1905, he was appointed professor and head-physician of the First Medical Clinic in Vienna. One of his better-known students was Constantin von Economo (1876-1931) . In 1879, he became a member of the « Deutsche Akademie der Naturforscher Leopoldina » .

Doctor Nothnagel made a name for himself particularly through his publications on « angina pectoris » and on the physiology and pathology of the nervous system and the intestines. In 1876, he described the irregular pulse associated with atrial fibrillation. At the time, he referred to this finding as « delirium cordis » . The eponymous « Nothnagel's syndrome » is named after him, a disorder characterized by ipsilateral oculo-motor palsy and contra-lateral cerebellar ataxia.

Nothnagel is interred at the Protestant Cemetery of Matzleinsdorf (top middle vault, Number 109) . In 1922, medical historian Max Neuburger published his biography entitled « Hermann Nothnagel, Leben und Wirken eines deutschen

Klinikers » .

...

Doktor Carl Wilhelm Hermann Nothnagel, deutscher Internist : geboren 28. September 1841 in Alt Lietzegörice in der Mark Brandenburg ; gestorben 7. Juli 1905 in Wien.

Carl Wilhelm Hermann wurde als ältester Sohn des Apothekenbesitzers, sowie späteren Arztes Albert Nothnagel und dessen Frau Ottilie Neider geboren. Er entstammte einem alten Kaufmannshause in Güstebiese. Aus der Ehe der Eltern stammt noch 1 Bruder und 3 Schwestern. Er besuchte die Mittelschule in Königsberg in der Neumark.

Nothnagel studierte von 1858 bis 1863 bei Ludwig Traube, Carl Westphal und Rudolf Virchow an der Universität Berlin. In Berlin promovierte er am 6. August 1863 mit der Arbeit « de variis renum affectionibus, quae nomine " Morbus Bright " vulgo comprehenduntur » und war dann als Unterarzt bei Traubes Klinik an der « La Charité » tätig. Ab 1865 bis 1868 arbeitete er als Assistent von Ernst Viktor von Leyden in Königsberg, wo er 1866 in Innerer Medizin habilitierte. Von 1868 bis 1870 war er als Militärarzt und Dozent in Berlin und in gleicher Funktion von 1870 in Breslau tätig. Auch hier hatte er sich habilitiert und wurde beim Ausbruch des deutsch-französischen Krieges nach Frankreich gezogen, wo er am Militärkrankenhaus in Charlos sur Marne wirkte und im Anschluß an den Feldzug wieder nach Breslau zurückkehrte.

1872 wurde er ordentlicher Professor der Medizin an der Universität Freiburg. Jedoch währte seine dortige Tätigkeit nicht lang. 1874 zog man ihn als Professor der speziellen Pathologie und Therapie an die Universität Jena. Hier wurde er Direktor der medizinische Klinik, man ernannte ihn zum Hofrat und er war im Sommersemester 1881 Rektor der Salana.

1882 wechselte Nothnagel als Professor und Direktor an die I. Mediziner Klinik der Universität Wien. In Wien blieb er bis zu seinem Tode im Jahre 1905. Einer seiner dortigen Schüler war Constantin Economo. Sigmund Freud machte 1882-1883 bei ihm ein sechsmonatiges Praktikum.

Bereits 1879 wurde er in die Deutsche Akademie der Naturforscher Leopoldina aufgenommen. Hermann Nothnagel wurde auf dem Evangelischen Friedhof Matzleinsdorf (Gruft Mitte oben, Nummer 109) in Wien beigesetzt. 1910 wurde ein Denkmal für Hermann Nothnagel im Arkadenhof der Universität Wien enthüllt.

Nothnagel verheiratete sich im 26. Juli 1870 in Breslau mit Marie Teubner (geboren 25. Juni 1848 in Kehl am Rhein ; gestoreben 23. Juli 1880 in Jena) , der Tochter eines Steuerrates in Freistett (Baden) . Er hatte mit ihr 4 Kinder.

### Mayfeld and Richter visit Bruckner

Before the summer began, many people came to see the dying Bruckner before they left for their holidays. The composer was desperately trying to complete the Finale of his 9th Symphony but he was too weak to work for any length of time. Hans Richter was one of his visitors ; he came to announce his intention of performing the 7th Symphony at the opening-concert of the 1896-1897 Season, on November 8. When the conductor saw how the unfinished state of the 9th Symphony was distressing Bruckner, he suggested that the « Te Deum » could be played as its Finale. He need not look far for a precedent for a choral Finale to a 9th Symphony. The old man was grateful for the idea, even if he saw it only as a last resort.

**May - June 1896** : Anton Bruckner receives visit from Moritz von Mayfeld and Hans Richter at the « Kustodenstöckl » . Richter announces that he intends to conduct the 7th Symphony with the « Philharmoniker » during the next season. He advises Bruckner to complete the 9th Symphony with the « Te Deum » (**WAB 45**) .

According to Anton Meißner, Bruckner plans to add the « Te Deum » to the 9th.

Bruckner discusses the details of his funeral with Josef Kluger, the Provost of Klosterneuberg Abbey. Bruckner's health-condition deteriorates. Doctor Alexander von Weißmayr forces him to stay in bed for the next few weeks. Ignaz comes to Vienna to help « Frau Kathi » Kachelmayr.

### Praying more and more

**May - June 1896** : With age, the amount of prayers wrose sharply in Bruckner's note-book. An effort, perhaps, to will away his religious doubts.

### Premiere of « Der Corregidor »

Hugo Wolf's fervid behaviour on the occasion of the Opera's premiere was passionate, arrogant, and therefore unrestrained. It was not as a petitioner that he approached Director (Intendant) Bassermann ; instead (with his friend Judge Oskar Grohe always acting as intermediary) , he insisted on his rights in a way that is truly astounding.

**Sunday, 7 June 1896** : The 4 Act Opera « Der Corregidor » (The Magistrate) is premiered to resounding success at the « Großherzogliches Hof- und Nationaltheater » in Mannheim under the baton of Hugo Röhr with curtain-calls for the composer. But the rehearsals were prolonged and tense because of inaccuracies in the copied parts, Wolf's customary outspoken criticism of the performers, and fluctuations of his own mental state (continuing to be plagued by insomnia)

The German libretto was written by Rosa Mayreder-Obermayer, based on the short-novel « El sombrero de tres picos » (The three-cornered Hat) by Pedro Antonio de Alarcón.

### Cast

Don Eugenio de Zuniga, Corregidor : Hans Rüdiger (« buffo » tenor) .

Juan Lopez, Alcalde : Georg Döring (low-bass) .

Pedro, his secretary : Anton Friedrich Erl (tenor) .

Tonuelo, the usher : Hermann Hildebrandt (bass) .

Repela, the Corregidor's servant : Karl Marx (« buffo » bass) .

Tio Lukas, the miller : Joachim Kromer (baritone) .

A neighbour : ? (tenor) .

Donna Mercedes, the Corregidor's wife : Anna Sorger (soprano) .

Frasquita, the miller's wife : Helene Hohenleiter (mezzo-soprano) .

Duenna, Donna Mercedes's house-keeper : Helene Seubert-Hansen (contralto) .

Manuela, the Alkalde's maid : ? (mezzo-soprano) .

(Gustav Mahler made an arrangement of the Opera's prelude.)

### Synopsis

In and around an unnamed village in Andalusia, in the year 1804. The « corregidor » Don Eugenio de Zuniga has designs on Frasquita, the charming wife of the miller Lukas. Frasquita and Lukas make fun of the old lecher who swears vengeance furiously. He goes to the mayor, informing his wife that he will spend the night in the town-hall. The mayor does him the favour of ordering Lukas there, too, and while he is on the way to the town-hall, Don Eugenio approaches Frasquita undisturbed. But once more, his plan fails. When Frasquita, who does not let herself be bribed by her nephew's appointment as Court secretary, hurries away indignantly, he makes himself comfortable in the miller's bed. Still sure of his success, he orders his servant to get Frasquita back. In the meantime, Lukas has seen through the conspiracy and has escaped from the town-hall. At home, he finds the « corregidor's » clothes in front of the bedroom, believes what he sees and sets out to recoup himself with the « corregidora » for the alleged infidelity of Frasquita. Don Eugenio, who, lacking his own clothes, takes on the miller's ones, is surprised by the returning Frasquita and the judge who are looking for Lukas in the mill. Frasquita senses Lukas's designs, and all hurry to the « corregidor's » house. There, the « corregidora » gives her judge a good talking-to, and the miller and his wife become reconciled and embrace each other.

Nothing would induce Wolf either to sit in the Intendant's box or to wear a coat suitable to the solemnity of the occasion. He donned his usual light summer-suit and sat in the second gallery with Doctor Heinrich Potpeschnigg, where he could see and hear without being seen or disturbed. « Frau » Mayreder and other friends had come to Mannheim for the performance. At the end of the 2nd Act, « Frau » Mayreder made her way up to the second tier and spoke to Wolf, who was lost in « rêverie » ; he started up at the sight of his poetess, and without speaking a word, fell upon her neck with tears of gratitude in his eyes. The performance was a complete success. Wolf was called for by the audience, and after much persuasion on the part of his friends, he stepped upon the stage at the end of the 3rd Act. He refused, however, to accept any of the wreaths except that of the Mannheim « Wagner-Verein » . He received an honorarium of 200 Marks for the work. He does not seem to have given much thought to this until he reached Traunkirchen some days after. So far as he could remember, he had put the money in a drawer in the writing-table in his room at Mannheim ; he telegraphed to the place, but the money was gone, and was never recovered. A friend wished to make the amount good to him, but Wolf refused to accept it.

Only one other performance of the Opera was given, the first having taken place near the end of the season. It was a

failure and Intendant Bassermann dropped it. Hugo Röhr, the conductor, soon afterwards removed to Munich, and 1 or 2 of the singers also left Mannheim, it was all the more difficult to take-up the work again. It was never again performed in Wolf's lifetime. The enthusiasm abated in later performances, with the gradual departure of Wolf's friends and admirers.

The work's charms and failures are usually attributed to the same cause : Wolf was primarily a writer of lieder. The score is full of one pleasing tune after another (including one of his lieder from the « Spanisches Liederbuch » , but they are rather haphazardly joined together. The orchestration, surprisingly, is not as sophisticated as the complex instrumental parts of some of his later songs, such as « Im Frühling » , and, in some moments, even presents a rather pallid imitation of Richard Wagner. As a result, the Opera is too large-scaled for the concert-halls and salons where lieder were played, and not quite substantial enough for an Operatic audience.

### Monthly payment

**Tuesday, 9 June 1896** : Pocket calendar entry by Anton Bruckner :

« June 9, Monthly. » (Presumably a monthly payment for « Frau Kathi » Kachelmayr.)

### Wolf and Margarete Klinckerfuß

**Between Tuesday, 9 and Tuesday, 16 June 1896** : Hugo Wolf (aged 36) is in Stuttgart. He is freshly in love with the 19 year old German pianist Margarete Klinckerfuß (born on 18 October 1877 in Stuttgart ; died on 31 January 1959 in Stuttgart) whose « fiancé » the explorer Johannes Wißemann died in Africa. Hugo and Margarete meet more often at the Stuttgart Hoppenlau Cemetery to console each other. (Hugo suffering from his recent love-affair with singer Frieda Zerny plus the lack of recognition for his works.) After, they returned to the apartment of the Klinckerfuß family in the centre of Stuttgart (« Kanzleistraße » Number 18) . There, to extend the consolation, Hugo proposes Margarete to accompany him in playing his beloved Bruckner : the divine 7th Symphony for piano 4 hands.

« At the heavenly Adagio, he pressed me, quietly kissed my forehead and said :

“ How united we are. We would have played together for a lifetime. ”

Then, he quoted Gœthe's profound poem to “ Frau ” von Stein. »

« In fact, I had done nothing but endeavoured, with utmost devotion, to approach Hugo Wolf's interpretation of Anton Bruckner. His playing was so precise, beautiful and inspired, and so delicate as it appeared in the score, in his rendition of orchestral works so powerful and astonishingly nuanced that, without ever crossing the limit of the beauty of tone on the grand-piano, even the timbres of individual instruments. »

### Ferdinand Löwe writes to Bruckner

**Friday, 12 June 1896** : The gap in Anton Bruckner's prayer-notebook is explained by the fact that the corresponding sheet was subsequently removed from the pocket calendar.

Letter from Ferdinand Löwe to Anton Bruckner : Name-Day greetings.

### University of Vienna : Summer Semester (1896)

Emil Fleisch enrolls as student of the Faculty of Arts.

### Monthly payment

**Saturday, 20 June 1896** : Pocket calendar entry by Anton Bruckner :

« June 20, Monthly. » (Presumably a monthly payment for « Frau Kathi » Kachelmayr.)

### Brahms and the « Resurrection Symphony »

**July 1896** : Johannes Brahms expressed the wish through a mutual friend to become acquainted with the score of Gustav Mahler's 2nd Symphony. This happened a few months before Bruckner's death. According to Ludwig Karpath's memoirs, Brahms' opinion of the Symphony was as follows :

« It is not at all clear to me why Richard Strauß is hailed as the revolutionary in music : I consider that Mahler is the king of these revolutionaries. »

...

It may have been that **July** when Gustav Mahler, recently through Brahms's influence appointed to the Vienna « Hofoper » , made a visit to Ischl that lives in legend - because of a quip, but one that said much about the divide between Brahms's generation and the next.

As they walked along the River Traun, Brahms was singing his familiar refrain : music was going to the devil, after he was dead, it would be finished once and for all.

Suddenly, Mahler took Brahms's arm and gestured excitedly toward the river, exclaiming :

« Look, “ Doktor ”, just look ! »

Brahms said, taking the bait :

« What is it ? »

Mahler said :

« Don't you see ? There goes the last wave ! »

Maybe that got a cheerless chuckle from Brahms.

He said only :

« That's all very fine, but maybe what matters is whether the wave goes into the sea or into a swamp. »

By then, with his usual meticulous care, he had studied the score of Mahler's 2nd Symphony. That work, with its glowing instrumentation and grandiose Brahmsian close, perhaps intrigued him at the same time as it made him shudder. Yet, the second movement, the Scherzo with its juxtaposition of the ecstatic and grotesque, Brahms declared a work of genius - a term he did not use lightly.

But he also said :

« I used to think Richard Strauß was the Chief of the Insurrectionists, but now, I see it's Mahler. »

As Mahler left from that last visit to Ischl, he glanced through the window to have one more look at Brahms. He saw the old man wearily making a sausage and a slice of bread from the stove for his lunch. It all comes to this, Mahler thought.

« Italienisches Liederbuch »

**Summer 1896** : The 36 year old Hugo Wolf completes the 24 songs of his second « Italienisches Liederbuch » (Italian Song-Book) .

Publication of the « Libera me » (WAB 22)

**July 1896** : St. Florian's Prelate Karl Aigner publishes the sacred Motet « Libera me, Domine » (Deliver me, O Lord) No. 2 in F minor (WAB 22) , possibly in anticipation of Anton Bruckner's death.

The « Kustodenstöckl » picture

Photo taken in front of the Upper-Belvedere gate-keeper's lodge : Anton Bruckner (centre) , his brother Ignaz (doorway) , house-keeper « Frau Kathi » (Katherina Kachelmayr) and personal physicians Richard Heller and Leopold Schrötter (back, facing the camera) , and « Kathi's » daughter, Ludowika Kutschera (barely visible behind Doctor Schrötter) .

## Confused

**From early July onwards** : Anton Bruckner's prayer entries in his pocket calendar (which serves as a diary) show clear signs of confusion and difficulty in keeping track of days and dates, relieved by clear moments.

Elisabeth Maier notes that Bruckner's prayer entries from his last months « are of varying clarity they become increasingly confused » .

## Unconscious and delirious

**Thursday, 9 July 1896** : Anton Bruckner faces another attack of pneumonia. He falls unconscious and is delirious for hours. Doctors Schrötter and Weißmayr come to the « Kustodenstöckl » each day. For his part, Doctor Heller visits his patient 3 times a day.

« Frau Kathi » Kachelmayr keeps night vigil beside Bruckner's bed. She is supported by her daughter Ludowika Kutschera - and certainly by Ignaz, for the time being.

## Mahler visits Brahms for the last time

**Friday, 10 to Wednesday, 15 July 1896** : Gustav Mahler visits a sick Johannes Brahms for the last time at (Bad) Ischl. He shows the old Master the score to his 2nd Symphony. Brahms considers its Scherzo to be a work of genius (an opinion he rarely expresses) , and says :

« I now consider Mahler the king of the revolutionaries. »

(As is always the case with Brahms's ambiguous and sarcastic humour, this may be taken as either a compliment or a put-down but, in any case, Brahms states clearly that he recognizes Mahler's superiority over Richard Strauß.)

## Wedding of Josef Schalk

**Sunday, 12 July 1896** : Anton Bruckner attends Mass at St. Michael's Church (« Michaelerkirche ») . Wedding of Josef Schalk.

## Paying Cyrill Hynais

**Monday, 13 July 1896** : Bruckner's pocket calendar entry (unknown hand-writing) :

« 13 July - 20 Gulden paid to “ Herr ” (Cyrill) Hynais. »

## Telegramm to Franz Bayer

**Wednesday, 15 July 1896 (or Thursday, 16 July 1896 ?)** : A telegraph is sent to Franz Bayer :

« Anton Bruckner is dying. »

### Heller and Schrötter meeting

**Thursday, 16 July 1896** : Anton Bruckner is in very bad condition. Doctor Richard Heller comes to visit him 3 times a day. Heller also meets at midday his superior Doctor Leopold Schrötter. In the evening, there is a recovery, so that Bruckner can leave the bed for some time.

The « Steyrer Alpen-Bote » (Number 4) reports on page 3 that Anton Bruckner is seriously ill.

### The last sacraments

**Friday, 17 July 1896 (or Thursday, 16 July 1896 ?)** : Anton Bruckner feels weak in the morning. With the permission of his brother Ignaz (probably on the advice of Father Heribert Witsch, chaplain of Belvedere Castle) , Bruckner is administered the last sacraments (for the third time in his life) .

Doctor Richard Heller reports :

« Bruckner's mental health had also suffered during his last illness - each day, he became more childish and confused. »

Heller meets Bruckner in the morning ; his condition has significantly improved. Heller then goes to meet photographer Fritz Ehrbar. At noon time, Bruckner asks Doctors Heller and Schrötter to leave the bedroom. His condition continues to improve during the day ; for now, Doctor Alexander von Weißmayr stays at the « Kustodenstöckl » . Further improvement in the evening.

According to the testimony of Doctor Richard Heller, 2 or 3 photographs of the composer lying on his brass bed (dressed in his white night jacket) was taken by Fritz Ehrbar.

### Incredibly well

**Saturday, 18 July 1896** : Doctor Richard Heller comes to visit Bruckner 3 times a day. Heller also meets at midday his superior Doctor Leopold Schrötter. Today, Heller finds Anton Bruckner « incredibly well » .

Article in the « Linzer Montags-Post » written by Elimar (Theodor Altwirth) about Anton Bruckner's « well-being » !

One-day gap in Anton Bruckner's pocket calendar (then, again, from 19 July until 3 September 1896) .

About Bruckner's health status :

The evening edition of the « Deutsche Volksblatt » Number 2708 on page 4, the « Illustrierte Wiener Extrablatt » Number 196 on page 4, the « Linzer Volksblatt » , the « Linzer Zeitung » (with reference to yesterday's reports by the Vienna « Neue Freie Presse ») on pages 796 and 797 respectively, and Vienna's « Die Presse » Number 196 on page 3 :

« (Professor Anton Bruckner.)

The state of health of the old composer Anton Bruckner has deteriorated in the last days. Victim of a new cold, Master Bruckner developed a catarrh of the lungs, which gives cause for serious concern with regard to the age of the musician, gave rise to serious anxiety. The sick Professor Bruckner, which is treated by his long-time friend Professor Schrötter, is attended by his brother, and the chaplain who wished that the sick man receives the last sacraments yesterday morning. According to the physicians, Professor Bruckner is at the moment in danger. Professor Bruckner took a good portion of chocolate with the best appetite at dinner. »

The article will be re-printed by « die Ostdeutsche Rundschau » Number 196 at page 3, the « Steyrer Zeitung » , the « Linzer Tages-Post » and the « Welser Anzeiger » Number 29 at page 4.

Article in the « Linzer Montags-Post » Number 29 on page 4 (possibly dated on 18 July 1896) written by Elimar (Theodor Altwirth) about Anton Bruckner's health-condition.

### Infuriated with Doctor Heller

**Sunday, 19 July 1896** : During his morning visit, Doctor Richard Heller mentions that Anton Bruckner is « completely prepared » to face death. Since the weather is very bad, he forbids him to go to church to attend mass. Infuriated, he asks Heller to write him an official testimony (in 2 copies !) guaranteeing his full-freedom. Bruckner will regain control of himself only after obtaining them.

Letter from « Frau Kathi » Kachelmayr to Doctor Karl Lorenz of the « Wiener Akademische Gesangverein » :

Anton Bruckner's health is not good. He is temporarily lost and has little appetite.

Information about Bruckner's health status is provided by the « Steyrer Alpen-Bote » Number 58 at page 3, the « Linzer Zeitung » , the « Reichspost » Number 179 at page 4, the « Steyrer Zeitung » and the « Linzer Tages-Post » .

### A certificate in 2 copies

**Monday, 20 July 1896** : Doctor Richard Heller gives Bruckner the requested certificate :

« As a professor, Doctor Anton Bruckner earned, up to old age, great merit by serving Art. He is entitled to complete freedom as soon he recovers and, altogether, to keep enjoying life to the fullest.

Vienna, 20 July 1896.

Doctor Heller. »

Bruckner's behaviour becomes visibly more childish. He promises Doctor Heller to compose a chorale for him. Thanks to Heller, the composer spends all day asleep, has a good appetite, and is glad that Emperor Franz-Josef has inquired about his condition.

Also a note from an unknown hand-writing (perhaps, Doctor Richard Heller ?) « 20, at noon-time (/) Monday. »

Vienna's « Die Presse » Number 198 on page 2f, reports on Bruckner's state of health :

« (Professor Anton Bruckner.)

Concerning the condition of Anton Bruckner, fortunately, there has been a slight improvement. The old Master was almost all day out of bed, and even after several days of insufficient food, he was able to eat a meaty dish with a good appetite. In the evening, he was quite cheerful, sat at the window, which gave a beautiful view over the gardens of the Belvedere and the city, and spoke again of his compositions still to be completed. In recent days, the Emperor has asked questions about Bruckner's health. »

### Composing the promised chorale

**Tuesday, 21 July 1896** : Anton Bruckner begins to compose for Doctor Richard Heller the promised chorale of the Finale of the 9th Symphony. Several newspapers report on Bruckner's illness, and tell him that Emperor Franz-Josef inquired twice about Bruckner's condition in the last days.

The evening edition of the « Deutsches Volksblatt » Number 2711 on page 4, the « Grazer Tages-Post » , the « Linzer Volksblatt » , 2 articles of the « Linzer Zeitung » , the evening edition of « Die Presse » Number 199 on page 2 :

« (Anton Bruckner.)

The state of health of Professor Bruckner has not changed since yesterday. »

The « Ostdeutsche Rundschau » Number 199 on page 4, and the « Linzer Tages-Post » :

Doctor Richard Heller was no longer able to obtain the signature of Bruckner, even though his brother Ignaz (presumably still in Vienna and, therefore, an eyewitness) and « Frau Kathi » Kachelmayr. were able to testify by proxy.

### The international newspapers

**Wednesday, 22 July 1896** : Reports on Anton Bruckner's illness appear in the international newspapers.

Vienna's « Die Presse » Number 200 on page 3 :

« (Anton Bruckner.)

There has been no significant change in the condition of the sick Professor Bruckner. The patient felt a bit weak yesterday evening. »

**Thursday, 23 July 1896** : Notice about Anton Bruckner's health-condition in the « Linzer Zeitung » .

### Visit from Doctor Heller

**Friday, 24 July 1896** : Doctor Richard Heller makes a visit to Bruckner at the « Kustodenstöckl » .

Vienna's « Die Presse » Number 202 on page 3 reports on Bruckner's condition :

« (Anton Bruckner.)

Yesterday, Bruckner's condition has improved. »

### Surprisingly in good condition

**Saturday, 25 July 1896** : The « Linzer Zeitung » and Vienna's « Die Presse » Number 203 on page 4 report on Bruckner's latest state of health :

« (Anton Bruckner.)

The condition of the aged composer is, according to his physician, a surprisingly good one. The patient accompanies the doctor every day to the door, and even started a composition yesterday. »

**Sunday, 26 July 1896** : An improvement in Anton Bruckner's state of health has been reported by the « Steyrer Alpen-Bote » Number 60 on page 3, the « Linzer Zeitung » and the « Steyrer Zeitung » .

### Dedicating the chorale

**Wednesday, 29 July 1896** : Doctor Richard Heller says to his wife :

Considered as his only friend, Anton Bruckner dedicated Doctor Heller the chorale (of the Finale of the 9th Symphony)

The « Welscher Anzeiger » Number 31 reports on page 5 about the state of health of Anton Bruckner.

### Ignaz's Name-Day

**Thursday, 30 July 1896** : Letter from Anton Bruckner (Vienna) to his brother Ignaz (St. Florian, near Linz) :

Name-Day congratulations (31 July) .

An article on this topic appears in the « Grazer Tages-Post » .

In the meantime, Ignaz must stay in St. Florian (presumably only after July 21st) .

Ignaz was born on July 28, 1833.

**Friday, 31 July 1896** : Pocket calendar entry by Anton Bruckner :

« Ignaz, 31 » (Name-Day)

### Feeling abandoned

**July - August 1896** : Anton Bruckner complains that so few people are taking care of him. His religious fervor has now turned into delirium. He prays for hours, and even asks visitors to join him.

The Master survived the summer, becoming thinner and, in his bed, looking more like a Franciscan monk. Hans Richter and his wife were among visitors during that period, though it was becoming increasingly hard to know how to treat Bruckner, whose mind often wandered.

Visitors at the « Kustodenstöckl » :

The Austrian art-historian and anti-Semite popular nationalist spokesperson Professor Reinhold von Lichtenberg (Lichtenberg published a treatise on the defense of the Bayreuth performance monopoly on « Parsifal » , which was to preserve « ethnic and artistic interests ») , physician Doctor Leopold Schrötter, music-publisher Härtel, conductor Hans Richter, Hugo Wolf (prevented from entering by « Frau Kathi ») , disciples August Stradal and Friedrich Klose, Doctors Franz Schaumann and Karl Lorenz from the « Wiener Akademische Gesangverein » , Imperial organist Rudol Bibl, Josef Gruber from St. Florian, music-publisher Albert J. Gutmann (4 June 1896 ?) , lawyer Theodor Reisch, Bruckner's student Michael Hofbauer, Austrian textile industrialist and patron of the arts Theodor Hämmerle, patron Karl Almeroth from Steyr, Jesuit priest Father Heinrich Josef Maria Abel (the « Men's Apostle of Vienna ») , Conservatory piano teacher

Professor Wilhelm Schenner, and Matthias Salcher.

Anton Bruckner is present « in spirit » during the performance of Richard Wagner's « Götterdämmerung » in Bayreuth.

### Reinhold von Lichtenberg

Baron Reinhold von Lichtenberg, a professor at Berlin University who wrote about « The Homeland of the Aryans » (1913) and made contributions to the « Bayreuther Blätter », reminded « Völkischer Beobachter » readers about the best-known story of Bruckner's child-like enthusiasm.

...

Reinhold Freiherr von Lichtenberg, österreichischer Kunsthistoriker und völkischer Publizist : geboren 15. Dezember 1865 in Fiume ; gestorben 28. Mai 1927 auf Schloß Neubeuern-am-Inn.

Von Lichtenberg war der Sohn des Generals Emil von Lichtenberg. Er studierte Jura in München und Wien. 1887 begann er ein Studium der Kunstgeschichte, der Klassischen Archäologie und des Sanskrit an den Universitäten Wien und Leipzig, wo er 1892 promoviert wurde.

Nach einer Studienreise nach Italien, Griechenland und der Türkei wurde er 1895 Volontär im Kupferstichkabinett in München. 1899 habilitierte er sich an der Technischen Hochschule Karlsruhe. Dort wurde er 1903 zum außerordentlichen Professor ernannt, aber bereits 1905 zu Forschungsreisen beurlaubt und verließ 1908 den Hochschuldienst, um als Privatier zu leben.

1907 bis 1915 war er Herausgeber des Memnon, Zeitschrift für die Kunst- und Kultur-Geschichte des Alten Orients (Bände 1-7) . Zusammen mit dem Begründer des Verbandes gegen die Überhebung des Judentums, Ludwig Müller von Hausen, gab er 1913 eine Schrift zur Verteidigung des Bayreuther Aufführungsmonopols an Richard Wagners « Parsifal » heraus, die « völkische und künstlerische Interessen » bewahren sollte.

Reinhold von Lichtenberg war und andere Mitglied im Verband gegen die Überhebung des Judentums und im Deutschvölkischen Schutz- und Trutzbund.

### Out of bed and composing again

**Saturday, 1 August 1896** : Anton Bruckner is working on the chorale (of the Finale of the 9th Symphony) which he dedicated to Doctor Richard Heller.

A section of the « Katholischen Blätter » and the « Lyra » Volume XIX, Number 21, reports about Anton Bruckner's health :

« From the musical world.

Anton Bruckner's condition has improved somewhat after a recent violent pneumonia, so that the aged musician can stay out of bed and compose again. Hopefully, the 73 year old Master will soon regain strength. »

### Increasing mental confusion and degradation

**Sunday, 2 August 1896** : Sudden worsening in Anton Bruckner's condition. Increasing mental confusion and degradation.

Article of the « Stuttgarter Sängerbundesfest » (without mentioning Anton Bruckner) re-printed in the « Grazer Tages-Post » .

### The nurse is fed-up

**Monday, 3 August 1896** : Anton Bruckner becomes increasingly confused and moody. The employed nurse (Anna Ortner ?) is persuaded to stay only after great insistance.

### Kitzler's final visit

**August 1896** : Conductor Otto Kitzler makes a final visit to Anton Bruckner, his former pupil who studied orchestral forms with him (March 1861 - July 1863) .

### Wolf plays Bruckner

**August 1896** : For a few hours in the afternoon, at Baroness Frieda von Lipperheide's summer castle, « Schloß Matzen » , Hugo Wolf and Doctor Heinrich Potpeschnigg play Bruckner Symphonies at the piano to some friends ; presumably : Hugo Faißt, Doctor Emil Kauffmann, Doctor Rudolf Meyer and Paul Müller.

### Doctor Schrötter back from vacation

**Saturday, 8 August 1896** :

Vienna's « Die Presse » Number 217 on page 3 reports of Anton Bruckner's state of health :

« (Professor Anton Bruckner.)

« Professor Bruckner's condition is satisfactory. It allows him to work on his compositions again. Professor Bruckner spends most of the day out of bed and is already able to welcome in person numerous friends who visit him each day at the Belvedere. Doctor Schrötter who returned to Vienna from his summer holidays yesterday, came to see the aged Master immediately after his arrival. »

### Newspapers' updates

**Sunday, 9 August 1896** : Several newspapers (the « Steyrer Alpen-Bote » Number 64 on page 4, the « Steyrer Zeitung » , and the « Linzer Zeitung ») report that Anton Bruckner's state of health has improved.

#### A photograph for Heller

**Around Monday, 10 August 1896** : Anton Bruckner dedicates with his signature a photograph to Doctor Richard Heller.

#### Ignaz's silence

**Tuesday, 11 August 1896** : Letter from Anton Bruckner (Vienna) to organist Josef Gruber (St. Florian, near Linz) :

Ignaz did not reply to the last 3 letters Bruckner he had sent him. He wants to know from Gruber whether his brother is sick or angry. A few words could be no reason for hostility.

Bruckner writes the (last) date on the score of the Finale of the 9th Symphony.

#### Return of the university lecturer

**Wednesday, 12 August 1896** : Several newspapers (the evening edition of the « Deutschen Volksblatt » Number 2733 on page 4, the « Wiener Fremdenblatt » , and « Die Presse » Number 221 on page 3) announce Anton Bruckner's University lectures for the Winter Semester of 1896-1897 :

« (Professor Bruckner.)

Professor Anton Bruckner, lecturer at the University of Vienna, who was prevented from doing so in the previous year due to illness, has announced for the coming Winter Semester a one and a half hour period on the theory of harmony : 3, 4, and 5 notes, forin with the fundamental steps, figured bass (thoroughbass) notations in the key of major.

A report on Bruckner's health appears in the « Neues Wiener Journal » Number 1006 on page 3.

**Thursday, 13 August 1896** : The news of Anton Bruckner's return as university lecturer is also published in the « Linzer Volksblatt » and the « Linzer Zeitung » .

#### Doctor Heller goes on vacation

**Friday, 14 August 1896** : Doctor Richard Heller says to his wife :

« Bruckner is physically so well that I can go on vacation with peace of mind. »

Anton Bruckner's return as university lecturer is also reported in the « Ostdeutschen Rundschau » Number 223 on page 4 and in the « Welser Anzeiger » Number 33 on page 4.

### Doctor Josef Sorgo

**Saturday, 15 August 1896** : Doctor Richard Heller goes on vacation. He is replaced by Doctor Josef Sorgo until 15 September 1896. Anton Bruckner as « physically quite recovered » .

Anton Bruckner's return as university lecturer is also reported in the « Steyrer Alpen-Boten » Number 66 on page 3 and in the « Steyrer Zeitung » .

...

The Austrian internist and pulmonologist Doctor Josef Sorgo was born on 7 November 1869 Bleiberg (Carinthia) ; and died on 25 January 1950 in Vienna. He was buried at Grinzing Cemetery in an honorary grave (Group 3, Number 36) .

He was the son of a freight forwarder at the service of Prince of Thurn and Taxis. After attending the « Gymnasium » at St. Paul's Abbey and the « Theresianum » in Vienna (« Austernisten-matura ») , Sorgo studied medicine at the University of Vienna from 1888, where he received his doctorate in 1894.

His professional career began in April 1895 as an auxiliary physician in a mental institution in Vienna's 3 District. As early as November 1895 (up to 1899) , he was welcomed as a guest-student at the 3rd Medical Clinic of the General Hospital of Vienna by his formative teacher Doctor Leopold Schrötter von Kristelli, with whom he also worked as an assistant from 1899 to 1902. During this period, Sorgo was intensively concerned with tuberculosis. In 1902, he switched for 6 months as secondary physician to Doctor Edward Lang at the Dermatology Department of the General Hospital (Lang also worked at the 2nd Department of Venereal Disease) , before returning to Doctor Schrötter. Inspired by his teacher, and, on the basis of his internal and laryngological training, Sorgo turned to study tuberculosis, which, at the time, was a national disease in Vienna. After Schrötter had founded from donations the Alland first Tuberculosis Clinic, Sorgo became its director and chief-physician from 1902 to 1919. In 1904, he qualified for internal medicine at the University of Vienna, and became professor in 1915. After the closure (for financial reasons) of the Alland Lung Sanatorium in 1919, Sorgo became provisional Department director. From 1924 to 1933, he was chief-director of the 2nd Medical Department at the Wilhelmine Hospital. He also temporarily directed the Invalidity Institute against tuberculosis at Wilhelminenberg Palace. His department at Wilhelmine Hospital was dissolved due to construction. Sorgo was then transferred to the 3rd Medical Department of Emperor-Franz-Josef Hospital, where he was forced to leave at the end of 1938 (« Anschluß ») . Until 1944, he held his lectures at the University of Vienna, and, until then, he continued his private practice in Vienna. Anton Sattler was among his students.

Josef Sorgo carried-out a prolific research career in its field, which is reflected in more than 80 published articles. He gained notoriety with the creation of Pulmology as an independent sub-type of internal medicine. He is considered the

founder of helio-therapy for laryngeal Tuberculosis, was innovative in the field of physical examination of the lungs, and designed a simple Pneumothorax device. He applied the sunlight to fight tuberculosis of the larynx, which gave impetus to the further development of modern helio-therapy. He also created a new method of breeding tubercle bacilli.

Sorgo was member of the Society of Physicians in Vienna (1897) , honorary member of the Society for Internal Medicine, honorary President of the Department for Diseases of the Respiratory Organs of the Vienna Chamber of Physicians, and Counselor (1936) .

The « Sorgogasse » in Vienna-Hietzing was named after him in 1963.

...

Doctors Josef Sorgo and Béla Schick have indicated the connection between certain definite modifications of mammary glands and pulmonary tuberculosis. This condition as well as Doctor Alexander Fränkel's emphasis on the narrowness of the chest and Rothschild's on the angle of the sternum in pulmonary tuberculosis seem to me, even if not as distinct as my reports, to be founded on the character of segmental inferiority. Only in these cases a segment, not yet diseased, may declare its inferiority, whereas the disease is localized in an adjoining, or nearby segment. I myself have seen 1 sided or 2 sided diminution of the areola, but also have seen retraction of the mamillæ in women who have had to stop nursing because of lack of milk. I have also seen lack of milk when the areola was hairy (in the case of Mrs. Lina T. , whose mother died of carcinoma of the nipple) . (...)

Localization in the apex of the lung is particularly interesting. It may be best explained, in our opinion, by accepting a particular inferiority at this point. Doctor Alexander Fränkel's constriction of the upper thoracic opening, the prominent « angulus ludovica » , the phthisic constitution, the deficient development of the areola of the nipple on the diseased side, emphasized by Doctors Josef Sorgo and Béla Schick are nothing more than peripheral indications of the inferiority of the respiratory organs, and are surely not to be valued etiologically, any more than the diminished exchange of air at the apex. All these signs are not found in phthisis subjects only, but are none the less suspicious factors. The striking size of the lung in phthisis gives emphasis to that factor of growth tendency in inferior organs of which we have already spoken. One cannot avoid a similar impression in watching the growth of giant cells. On the other hand, the part of the tubercle bacilli as well as the social conditions are assured to be determining factors. (...)

Doctors Josef Sorgo and Béla Schick recently pointed-out that with tuberculosis there is often a smaller nipple or a smaller areola on the side of the disease centre, but at times this is true of the other side. We believe that we have indicated the connection and the animation for this. (...)

As regards tuberculosis, to be sure, the proofs of primary inferiority of the lung, or of other attacked organs, seem to be abundantly present. The very appearance of heredity makes this more easily acceptable. Likewise, the frequently typical localization in the lungs, kidneys, joints and brain. As a matter of fact, citations may be quoted which give information in regard to certain arrests of development, as those of Doctors Alexander Fränkel, Josef Sorgo and Béla

Schick's statements which we can without further ado classify with the signs of degeneration which are emphasized later on. (...)

...

Doktor Josef Sorgo, österreichischer Internist und Pulmologe : geboren 7. November 1869 Bleiberg (Kärnten) ; gestorben 25. Januar 1950 in Wien (Friedhof Grinzing, Ehrengrab) .

Sorgo studierte an der Universität Wien, an der er 1894 promovierte. Anschließend war er von 1895 bis 1899 Hospitant an der 3. Medizinischen Klinik im Allgemeinen Krankenhaus bei Leopold Schrötter von Kristelli, bei dem er auch von 1899 bis 1902 als Assistent tätig war. Durch seinen Lehrer angeregt und auf Grund seiner internistischen und laryngologischen Ausbildung wandte sich Sorgo der Erforschung der Tuberkulose zu, die damals eine Volkskrankheit in Wien war. 1904 habilitierte er sich für Innere Medizin und war von 1902 bis 1919 Direktor und Chefarzt an der ersten Tuberkuloseheilstätte Alland, die er auch mitbegründet hatte. Anschließend wurde er von 1919 bis 1924 provisorischer, von 1924 bis 1933 definitiver Abteilungsvorstand der II. Medizinischen Abteilung am Wilhelminenspital. Er leitete auch zeitweise die Invalidenanstalt für Tuberkulose im Schloß Wilhelminenberg und von 1933 bis 1938 die 2. Medizinische Abteilung des Kaiser-Franz-Josef-Spitals.

Sorgo war Mitglied der Gesellschaft der Ärzte in Wien (1897) , Ehrenmitglied der Gesellschaft für Innere Medizin, Ehrenpräsident der Fachgruppe für Erkrankungen der Atmungsorgane der Wiener Ärztekammer und Hofrat. Nach seinem Tode erhielt er ein ehrenhalber gewidmetes Grab auf dem Grinzinger Friedhof (Gruppe 3, Nummer 36) . Die Sorgogasse in Wien-Hietzing wurde 1963 nach ihm benannt.

Josef Sorgo erwarb sich Verdienste um die Schaffung der Pulmologie als einer eigenständigen Unterart der Inneren Medizin. Er wandte die Sonnenlichtbehandlung zur Bekämpfung der Kehlkopftuberkulose an, die den Anstoß zur weiteren Entwicklung der modernen Heliotherapie auch anderer Tuberkuloseherde gab. Zu seinen Schülern zählt Anton Sattler.

...

Josef Sorgo besuchte das Stiftsgymnasium St. Paul und das Theresianum in Wien und studierte anschließend an der Universität Wien Medizin (Doktor der Medizin 1894) . 1895-1899 hospitierte er an der III. Medizinische Universitätsklinik im Wiener Allgemeinen Krankenhaus unter Leopold Schrötter von Kristelli (1837-1908) und fungierte 1899-1902 auch als Assistent an dessen Klinik. Durch Schrötter gleichermaßen internistisch und laryngologisch ausgebildet, galt Sorgos wissenschaftliches Interesse bald der Erforschung der in Wien um 1900 grassierenden Tuberkulose. 1902-1919 leitete er die von ihm mitbegründete erste österreichische Tuberkuloseheilstätte in Alland (Niederösterreich) . 1904 habilitierte sich Sorgo an der Universität Wien für Innere Medizin ; 1915 zum titel außerordentlicher Professor ernannt, war Sorgo zunächst provisorischer, 1924-1933 definitiver Abteilungsvorstand der II. Medizinische Abteilung im Wilhelminenspital der Stadt Wien. Währenddessen leitete er zeitweise auch die Invalidenanstalt für Tuberkulosekranke im Schloß Wilhelminenberg am Rande Wiens und stand schließlich 1934-1938 noch der II. Medizinische Abteilung am Kaisers-Franz-Josef-Spital der Stadt Wien vor. Er leistete einen wesentlichen Beitrag zur

Entwicklung der Pulmologie (Lehre von den Erkrankungen der Lunge und der Bronchien) als neue Subspezialität der Inneren Medizin. Besonders lag ihm neben der Förderung der Heilstättentherapie auch die Propagierung der Tuberkulose-therapie durch Anlegen eines künstlichen Pneumothorax am Herzen sowie die Lichtbehandlung dieses Leidens. Zu seinen bedeutendsten Schülern zählt der Pulmologe Anton Sattler (1899-1989) .

...

Doktor Josef Sorgo, Internist und Pulmologe. Sohn eines Spediteurs in Diensten des Fürsten Thurn und Taxis. Nach Besuch des Stiftsgymnasium St. Paul und des Theresianums in Wien (Externistenmatura) studiert Sorgo ab 1888 Medizin an der Universität Wien ; 1894 Doktor der Medizin Seine berufliche Laufbahn begann Sorgo im April 1895 als Hilfsarzt in einer Nervenheilanstalt in Wien. Bereits im November wechselte er als Hospitant an die 3. medizinischen Klinik des Wiener Allgemeinen Krankenhauses zu Leopold Schrötter von Kristelli, der zu seinem prägenden Lehrer wurde und bei dem Sorgo 1899-1902 als Assistent wirkte. In dieser Zeit befaßte er sich intensiv mit der Tuberkulose. 1902 wechselte Sorgo auf ein halbes Jahr als Sekundararzt an die dermatologische Abteilung, des Allgemeinen Krankenhauses zu Edward Lang, ehe er zu Schrötter von Kristelli zurückkehrte. Gemeinsam mit diesem etablierte er die Pulmologie als eigenen Zweig der Inneren Medizin. Nachdem Schrötter die Lungenheilstätte Alland aus Spendenmitteln gegründet hatte, war Sorgo 1902-1919 deren erster Leiter und zugleich Chefarzt. 1904 Habilitierte für Innere Medizin an der Universität Wien, 1915 Titel außerordentlicher Professor. Nach der aus finanziellen Gründen vorgenommenen Schließung der Lungenheilanstalt Alland (1919) war Sorgo zunächst provisorischer, 1924-1933 def. Abteilung-Vorstand der 2. medizinischen Abteilung im Wiener Wilhelminenspital. Zeitweilig betraute man ihn auch mit der Führung der Tuberkulosestation im Schloß Wilhelminenberg. Aufgrund baul. Veränderung wurde seine Abteilung im Wilhelminenspital aufgelöst und Sorgo auf die 3. medizinische Abteilung des Kaiser-Franz-Josef-Spitals transferiert, wo er Ende 1938 zwangsweise in der Regel versetzt wurde. Bis 1944 hielt er seine Vorlesungen an der Universität Wien, weiters betrieb er bis zuletzt eine Privatpraxis in Wien. Sorgo übte auf seinem Fachgebiet eine rege Forschungstätigkeit aus, die sich in über 80 Fachbeiträgen widerspiegelt. Er gilt als Begründer der Heliotherapie bei Kehlkopf-Tbc, war innovativ auf dem Gebiet der physikalischen Krankenuntersuchung der Lunge, konstruierte ein einfaches Pneumothoraxgerät und entwickelte eine neue Methode der Züchtung von Tuberkelbazillen. Sorgo war ab 1897 Mitglied der Gesellschaft der Ärzte in Wien, Ehrenmitglied der Gesellschaft für innere Medizin und Ehrenpräsident der Fachgruppe für Erkrankungen der Atmungsorgane der Wiener Ärztekammer ; 1936 Hofrat.

...

Tatsächlich liegen Hinweise vor auf Befunde, die gewisse Wachstumshemmungen anschuldigen, wie von Alexander Fränkel, Béla Schick und Josef Sorgo, Befunde, die wir ohne weiteres mit den von uns später hervorgehobenen Degenerationszeichen in eine Reihe stellen können. (...)

Josef Sorgo und Béla Schick haben vor kurzer Zeit gezeigt, daß man bei Tuberkulösen öfters auf der Seite des Herdes eine kleinere Mamma oder einen kleineren Warzenhof findet, zuweilen aber auch auf der entgegengesetzten Seite. (...)

Die Fränkelsche Enge der oberen Thoraxapertur, der vorspringende Angulus Ludovici, der Habitus phthisicus, die von

Josef Sörgo und Béla Schick hervorgehobene geringere Ausbildung des Warzenhofes auf der befallenen Seite stellen nichts anderes vor als periphere Kennzeichen der Minderwertigkeit des Atmungsorganes, sind sicherlich nicht ätiologisch zu verwerten, ebensowenig wie der geringere Luftwechsel in der Spitze. Alle diese Zeichen finden sich nicht nur bei Phthisikern, sind aber jedenfalls ausgiebige Verdachtsmomente. (...)

Wer den Komponisten Anton Bruckner kannte, wird sich erinnern, daß er in der Höhe des Ohrläppchens unter dem Jochbogen einen Naevus sitzen hatte. Ich möchte auch in diesem Falle einen Ausdruck der Gehörs minderwertigkeit erblicken, der sich in segmentaler Anordnung durchgesetzt hat. Die außerordentlich künstlerische Höhe hat Bruckner, wie wahrscheinlich alle großen Komponisten, auf dem Wege der Überwindung seiner Gehörs minderwertigkeit und ihrer Umwandlung in geniales, schöpferisches Hören errungen. (...)

Bevor wir dieses Kapitel schließen, wollen wir einigermaßen den Anschluß an die bestehenden Ergebnisse der Pathologie bewerkstelligen. Wie ich schon mehrmals erwähnt habe, wurde von Béla Schick und Josef Sörgo der Zusammenhang von bestimmten Abänderungen der Brustdrüse und der Lungentuberkulose nachgewiesen. Dieser Befund sowie die Hervorhebungen Fränkels bezüglich der Thoraxenge und Rothschilds bezüglich des Sternalwinkels bei Lungentuberkulose scheinen mir, wenn auch undeutlicher als meine Befunde, im Charakter der segmentalen Minderwertigkeit begründet zu sein. Nur daß in diesen Fällen ein vielleicht noch nicht erkranktes Segment seine Minderwertigkeit deklariert, während sich die Erkrankung in einem der angrenzenden oder nächstgelegenen Segmente lokalisiert. Ich selbst habe einseitige oder doppelseitige Verkleinerung des Warzenhofes, aber auch Verkürzung der Mamillae bei Frauen gesehen, die wegen Mangel an Milch die Stillung aussetzen mußten. Mangel an Milch sah ich auch bei Behaarung des Warzenhofes (Frau Lina T., deren Mutter an Mammakarzinom gestorben war) . (...)

### Genealogie

Vater : Paul Landwirt, Spediteur in Diensten des Fürsten von Thurn und Taxis ; Mutter : Josefine Waldner ; verheiratet 1918 Maria Mitterhuber ; 1 Tochter.

### Doctor Schrötter visits Bruckner

**Sunday, 16 August 1896** : Doctor Leopold Schrötter (who returned from his summer holiday on August 7) visits Anton Bruckner, who is mostly out of bed.

### Able to receive visitors

**Tuesday, 18 August 1896** : Anton Bruckner feels particularly well and is able to receive visitors.

Pocket calendar entry by Anton Bruckner :

« 18, Emperor Franz-Josef. »

### Outside for a short walk

**Thursday, 20 August 1896 (or Wednesday, the 19th)** : For the first time since a long period, Anton Bruckner goes outside for a short walk, accompanied by his attendant. The maximum temperature in Vienna is 19° Celsius (based on the weather report on page 6 in « Die Presse », 21 August 1896) .

**Friday, 21 August 1896** : Vienna's « Die Presse » Number 229 reports on page 4 :

« Viennese Daily News. (undated)

(...) Professor Bruckner has already recovered from his serious illness so far that he was able to take a short walk yesterday, accompanied by his attendant. »

### Improvement

**Saturday, 22 August 1896** : The « Linzer Zeitung » (probably referring to Friday's article in « Die Presse ») reports on the improvement of Anton Bruckner's health-condition.

**Wednesday, 26 August 1896** : Pocket calendar entry by Anton Bruckner :

« 26 (Anna) (Name-Day) 11:30 am. »

**Thursday, 27 August 1896** : The morning edition of the « Deutsche Volksblatt » Number 2747 reports on page 9 about Anton Bruckner's state of health.

### Standing outside by the window

**Around September 1896** : Anton Huber, one of Bruckner's first Conservatory students, makes a short visit to see his old teacher. He is standing outside by a window of the Upper-Belvedere apartment.

### Happy Birthday from Vöcklabruck

**Tuesday, 1 September 1896** : Letter from Gustav Hueber (Vöcklabruck) to Anton Bruckner (Vienna) (as transcribed by Laura Hueber) :

Gustav congratulates Laura's great-uncle for his birthday (4 September) . He is pleased with the newspaper articles which report that Bruckner has recovered and is already taking walks. Greetings from the parents.

### Death of Frieda von Lipperheide

**After Thursday, 3 September 1896** : Hugo Wolf was deeply distressed to hear of the death of Baroness Frieda von Lipperheide (born Gestefeld, in 1840) , who, as he said, had been a second mother to him.

Stopping noting prayers

**Friday, 4 September 1896** : (?) Anton Bruckner stops noting prayers in his pocket calendar (until September 17th) .

**Tuesday, 8 September 1896** : Pocket calendar entry by Anton Bruckner :

« 8 September, Mar. Birthday. » (Name-Day celebration)

« Le Ménestrel » reports

**Sunday, 13 September 1896** : The French music-magazine « Le Ménestrel » reports that Anton Bruckner will resume his harmony lectures at the University of Vienna.

Doctor Heller is back from vacation

**Tuesday, 15 September 1896** : Doctor Richard Heller returns from his summer vacation and assesses Anton Bruckner's « spiritual » state of mind as « down-to-earth » (realistic) . Bruckner spends most of the day sitting in his arm-chair.

Don't let them in !

**September 1896** : Although they went daily to the « Kustodenstöckl » to inquire after Anton Bruckner's health, « Frau Kathi » Kachelmayr was instructed to admit only Anton Meißner, and not Franz Schalk or Franz Grasberger.

No lectures

**September 1896** :

The « Wiener Neue Freie Presse » Number 11518 reports on page 5 :

« Little Chronicle.

Vienna, 16. September. (...)

(Professor Doctor Anton Bruckner.)

Some newspapers recently reported that the old composer would resume his lectures at the University this winter. Unfortunately, this does not correspond to the facts. Anton Bruckner's state of health is slowly improving, but not to

the extent that he would resume his lectures. »

Vienna's « Die Presse » Number 256 reports on page 3 :

« (Professor Doctor Anton Bruckner.)

Professor Bruckner's health has unfortunately not improved, so he will not be able to resume his lectures at the University this winter. »

**Friday, 18 September 1896** : The « Linzer Zeitung » reports that Anton Bruckner's university lectures for this winter are canceled due to physical weakness.

**Saturday, 19 September 1896** : The « Welser Anzeiger » Number 38 reports on page 4 that Anton Bruckner will not resume his university lectures.

#### Nurse Anna Ortner

**Thursday, 17 September 1896** : Starting today, Anna Ortner will work as a nurse at the « Kustodenstöckl » - until Bruckner's death. (Her wages will total 72 Florins.)

#### Noting prayers again

**Friday, 18 September 1896** : (?) Anton Bruckner starts again to note his prayers in his pocket calendar. He will do so on a daily base until October 2.

#### « Friendship »

**Around Sunday, 20 September 1896** : Anton Bruckner talks to his private secretary Anton Meißner about the meaning of the word « friendship » . Meißner was the only one who had served his Master faithfully until the end.

#### Wolf and Bruckner supporters

**Autumn 1896** : The German pianist Margarete Klinckerfuß from Stuttgart gets to know Marchese Silvio Casanova, a student of Franz Liszt. He shares with her the enthusiasm for Hugo Wolf and Anton Bruckner.

#### Mahler and the « Hofoper »

**Autumn 1896** : Gustav Mahler lays the ground-work for his Vienna appointment by a series of letters and personal appeals.

## The Schalk brothers

**Thursday, 24 September 1896** : Letter from Josef Schalk to his brother Franz :

Bruckner's spirit is leaving him. He gets more and more under the spell of religious delusions.

« Our beloved Master Bruckner is now hastening to his end. Since the performance of the Mass, his condition has become steadily worse, and it is a sad thing to see how he suffers you must be prepared that the catastrophe could come at any time. »

« As regards Bruckner, I have very sad news. His mind is disintegrating, and the spectre of religious mania holds him ever faster in its grip. It makes a dreadful impression and, perhaps, a quick end would be the best thing as recovery is out of the question. He is, however, astonishingly tenacious of his bodily health. On my last visit (before the holidays) , he exchanged a few words with me, then, ignoring me completely, he desperately recited the Lord's Prayer, loudly repeating each sentence. It was hard for me to hide my distress, so I crept away. At the moment, I dare not visit him ; I cannot bear it, it is too terrible. Admittedly, there will be better days, but they are impossible to predict. »

Even if Franz Schalk is planning a performance of Bruckner's 5th Symphony, Felix Weingartner and Hans Richter could beat him.

## Katharina Prechal

**Saturday, 26 September 1896** : Katharina Prechal helps with the medical care at the « Kustodenstöckl » . (Her wages will total 32 Florins by October 11th) .

Article on the « 10 Composers of Vienna » in the « Neuen Illustrierten Blatt » of Brünn (Brno) Number 39, on pages 617-619. There is a brief mention of Anton Bruckner (accompanied by a portrait) .

## Improvement

**Sunday, 27 September 1896** : The « Neue Musikalische Presse » announces that Anton Bruckner's health-condition has improved.

## Kathi's plum dumpling

**End of September 1896** : Anton Bruckner is visited by Karl Almeroth (from Steyr) and Adalbert Goldschmidt. He tells them about the dedication of his 9th Symphony to the « dear God » and, since he can no longer finish the Finale, he is seriously thinking of using the « Te Deum » (WAB 45) as a conclusion.

Bruckner mentions that he likes a lot « Frau Kathi's » plum dumpling.

### Wolf's last visit

**September - October 1896** : Hugo Wolf comes to visit Anton Bruckner at « Kustodenstöckl » . But the agonizing Master was no more in full possession of his mental faculties. Approaching his bedroom on tip-toe, Wolf opened the door a few seconds to take a quick look. What he saw was surprising and heart-breaking. He reports about it quite shaken to Rosa Mayreder (the librettist of « Der Corregidor ») who lives nearby.

« Lying in bed, his face was pale and emaciated. His eyes were happily staring at the ceiling. With a transfigured smile, Bruckner was beating time with his index, on music that only him could hear. »

### Rosa Mayreder

The Austrian free-thinker, author, painter, musician and feminist Rosa Mayreder was born on 30 November 1858 in Vienna and died on 19 January 1938 in Vienna. She was the daughter of Franz Arnold Obermayer, a wealthy restaurant-operator and bar-keeper, and his second wife Marie.

Rosa had 12 brothers and sisters and although her conservative father did not believe in the formal education of girls, he allowed her to participate in the Greek and Latin lessons of one of her brothers. She also received private instruction in French, painting and the piano.

In 1881, Rosa married the architect Karl Mayreder, who later became Rector of the Technical University of Vienna. The marriage was harmonious but remained childless. In 1883, Rosa had an abortion and she also had 2 love-affairs, which she describes in detail in her diaries. Karl suffered repeated depressions from 1912 until his death in 1935.

In the circle of women's rights campaigner Marie Lang at the « Schloß Bellevue » in Vienna-Grinzing, Rosa Meyreder met Rudolf Steiner (with whom she entered into a long and extensive correspondence) , Hugo Wolf and Friedrich Eckstein. Rosa formed a warm friendship with Wolf and developed one of her stories as the libretto for his Opera « Der Corregidor » , which was first performed in Mannheim, in 1896. During these years, she published her first novel « Aus meiner Jugend » (From My Youth) . It was also in Lang's circle that Rosa met Marianne Hainisch with whom she worked in the Austrian Women's Association « Allgemeiner Österreichischer Frauenverein » , which was formed in 1902.

Mayreder published 2 influential works, « Zur Kritik der Weiblichkeit » (To Critics of Femininity) (1905, published in English as « A Survey of the Woman Problem » , 1912) and « Geschlecht und Kultur » (Sex and Culture) (1923) . The latter work, which criticized the double-standard and discrimination against women, was translated into English. She also published an autobiography, « Das Haus in der Landskrongasse » (The House in the Countryside) .

During the First World War, Mayreder engaged in the peace-movement and became, in 1919, the chairman of the « Internationale Frauenliga für Frieden und Freiheit » (International Women's League for Peace and Liberty, or IFFF) .

Rosa Mayreder is depicted on the 500 Austrian Schilling bank-note.

...

Although love of the arts consoled many Viennese, it drove others to defiance. Now forgotten, Rosa Mayreder combated therapeutic nihilism by campaigning to improve woman's lot. She ranks as one of the sanest interpreters in her generation, and indeed in any generation, of the role of woman in modern society. The daughter of a wealthy Viennese hotelier, Franz Arnold Obermayer, she grew-up in a large upper-middle-class family, where a girl's education was devoted exclusively to the art of cultivating beauty. She was obliged to wear a corset at age 12, to don shoes that shrank the feet, and to avoid gymnastics for fear of enlarging her hands. It was argued that study would make a girl bald and spoil her figure. Young Rosa pleaded for an education, but to no avail, while her father had to pull strings to get her brother through school. Outraged by favoritism shown to her brothers, she resolved to expand the opportunities available to young women. A painter of talent, she moved in the same artistic circles as Berta Szeps and Alma Mahler-Werfel. Here, she met, and in 1881 married, the architect Karl Mayreder, in whose firm Adolf Loos later served, and who together with Otto Wagner developed between 1893 and 1895 a prize-winning plan for completing the « Ringstraße ». Encouraged by her husband, Rosa founded in 1893 the General Austrian Women's Association (« Allgemeiner Österreichischer Frauenverein »). She protected Hugo Wolf, sheltering him from music-critics and stimulating him in 1895 to set to music her libretto, « Der Corregidor », which she had adapted from the « Three-Cornered Hat » (1874) by Pedro Antonio de Alarcón.

Mayreder displayed exceptional grasp of the woman problem in « Zur Kritik der Weiblichkeit » (Jena, 1905), which won acclaim in English translation under the title « A Survey of the Woman Problem » (London, 1912). Unlike most feminists, Mayreder deplored allowing the accident of sex to mold every attitude. The goal of life, Mayreder insisted, is to cultivate aspects of personality that both sexes share, such as intelligence, charity, and æstheticism. Coining neologisms as cacophonous as those of Otto Weininger, she differentiated 4 ways an individual can relate to sexuality. First, the acrotic person, or sex-patriot, indulges unmitigated sexuality, becoming wholly male like Don Juan or wholly female like Messalina; such expenditure of sexual energy Mayreder labeled centrifugal. Second, the eliastic person strives to attain sexlessness through asceticism, conserving sexual energy in the manner of Christian and Buddhist monks so as to achieve centripetal sexuality. Third, a dyscratic person is one who can achieve neither of the preceding extremes. Unable to accommodate sexuality to other activities, he founders in whatever he undertakes. Psychoanalysis would deem him neurotic. 4th, a synthetic person overcomes conflict between centrifugal and centripetal sexuality. 2 synthetic persons who marry learn to share intellect and emotion without sacrificing sexual fulfillment.

Mayreder did not allow quest for harmony between the sexes to preclude backing women's demands for greater rights. She attributed the woman's movement to industrialization, which was causing the business cycle to impinge on every home-maker. As shop-keepers were forced-out of business and workers laid-off, housewives demanded to understand the forces that so disrupted homes. A second factor in promoting feminism had been athletics, especially the bicycle, which by requiring rapid movements undermined the older ideal of feminine grace. Mayreder contended that the bicycle, in use since 1890, had done more for women's emancipation and for comradeship between the sexes than had the entire feminist movement. Mayreder's approval of sport as an alternative to corsets was shared by many doctors; during the

early 1880's, Doctor Sigmund Freud had to prescribe pills to cure his sedentary « fiancé » of the then common anemia (chlorosis) .

In an essay of 1913 on « Sex and Culture » , Mayreder formulated her conception of woman's duty. Citing Houston Stewart Chamberlain's distinction between external civilization (« Zivilisation ») and inward culture (« Kultur ») , Mayreder held that the responsibilities of motherhood must keep a woman sex-bound, while a man's freedom to transcend sex permits him to build the external order of civilization. But because man lacks inner-restraints imposed by nature, woman must serve as the « measure of all things » . She has a cultural mission to prevent man from losing himself in external activity. If she fails to act as a cultural brake, extemality will reign, spreading cruelty and neglect of emotion. To illustrate masculine thinking unleavened by female compassion, Mayreder cited Weininger's contention that women possess no soul, a doctrine that the church had rejected about 900 AD. To refute Weininger, she pressed to absurdity his notion that every cell bears sexual characteristics : if so, the strongest woman would be weaker than the scrawniest man. To document the futility of men's pretentious to understand women without having consulted them, Mayreder listed some qualities that men have attributed to the opposite-sex :

« There is Lotze saying that the “ female hates analysis ” and, therefore, cannot distinguish the true from the false. There is Lafitte saying that “ the female prefers analysis ”. There is Kingsley calling her “ the only true missionary of civilization ”, and Pope calling her a rake at heart ; Havelock Ellis saying that she cannot work under pressure, and Von Horn saying that in the fulfilling of heavy requirements she puts a man to shame ; Monsieur de Lambert that she plays with love, Krafft-Ebing that her heart is toward Monogamy ; (...) Lombroso that there is “ a half-criminaloid being even in the normal woman ” ; Bachhofen that “ Law is innate in women ”. »

These fatuities constitute, said Mayreder, a subjective fetish that men have devised to flatter themselves. Men's image of an « eternal feminine » is pure wish-fulfillment.

In exposing abuses of sexuality, Mayreder paralleled Doctor Richard von Krafft-Ebing and Doctor Sigmund Freud, whose « Drei Abhandlungen zur Sexualtheorie » (Vienna, 1905) she reviewed favorably in 1906. Disputing the patriarchal psychoanalyst, she implored men and women to cooperate as equals in nurturing non-sexual aspects of personality. By being moderate, she proved more persuasive than the, sexual utopian Christian von Ehrenfels or the anti-sexual fanatic Weininger. By insisting that individuals can fulfill themselves by merging into a larger unit (the couple) , she implemented the faith of Bohemian Reform Catholicism that the good of the whole conditions that of its members. Mayreder epitomized her own ideal of woman as measure of all things, acting as balancewheel for Quixotes like Ehrenfels and Wolf. Although her equanimity may seem bland now that many of her crusades are won, Rosa Mayreder incarnated what was best in the woman-steeped æstheticism of Vienna.

### Outside walks

**October 1896** : On nice days, Anton Bruckner walks regularly for about 15 minutes around the Upper-Belvedere accompanied by « Frau Kathi » Kachelmayr. Sometimes, a cart is used.

### 3-day gap

**Saturday, 3 to Monday, 5 October 1896** : 3 day gap in Anton Bruckner's prayer records.

### Doctor Heller's daughter

**Sunday, 4 October 1896** : The « Neue Wiener Tagblatt » publishes an article written by the daughter of Doctor Heller, Gertrud Maria Engelhart-Heller, entitled :

« Bruckners Arzt erzählt » (Bruckner's Doctor talks)

**Sunday, 4 October 1936** : That same article will be reprinted 40 years later by the « Neue Wiener Tagblatt » in its Sunday edition.

**Tuesday, 13 October 1936 (?)** : The article also appears in the « Neuen Wiener Journal » .

### So long, farewell

**Wednesday, 7 October 1896** : Letter from Anton Bruckner (Vienna) to his brother Ignaz and Prelate Karl Aigner (St. Florian, near Linz) :

Bruckner asks not to send anything anymore, since he cannot return it. He will explain (orally) later.

Farewell greetings : « leb lebe wohl » (so long, farewell) , etc. (with increasing confusion in the lettering and in the text) .

### Visit from Doctor von Weißmayr

**Saturday, 10 October 1896** : Anton Bruckner's last prayer record in his pocket calendar.

Doctor Alexander von Weißmayr makes a medical visit at the « Kustodenstöckl » . Bruckner is still in good shape when Weißmayr leaves.

### Death of Bruckner

**Sunday, 11 October 1896** : At sunrise, Anton Bruckner felt surprisingly well. As usual, he meditated and prayed for a while sitting in his office chair right by the window where he enjoyed the great view. Outside, it was the autumnal gloom. According to his faithful servant, « Frau Kathi » Kachelmayr, the Master did some work at the piano on the Finale of his 9th Symphony. Presumably, his private secretary Anton Meißner heard him play.

Bruckner had some « Schwäbische Brotsuppe » (Swabian bread soup) for lunch, but his appetite was not good.

...

Some substantial soups and stews are essential parts of Swabian food culture. The fact that soups and stews are loved by Swabians lead to the nickname « Subbaschwôb » which means « Soup Swabian » . In gastronomy, they are usually served as an appetizer but in home-cooking they are also famous as a main-dish served with bread.

« Fränkische Brotsuppe » (Franconian bread soup) is a simple soup that mainly consists of stale bread in a meat or sausage broth. Variations exist in many countries, and it is often eaten during Lent.

To prepare the dish the bread is cut into small pieces or, if it is hard, shredded and cooked with onions and spices in a broth. It is also possible to add bacon, egg and cream. Sometimes, it also includes liver sausage or blood sausage. Another common version of the dish is prepared from the broth remaining from the steeping of sausage during home butchering of pigs. The soup is then traditionally seasoned with marjoram.

...

Doctor Josef Sorgo (deputizing for Doctor Richard Heller) arrived right after lunch time. He advised Bruckner against leaving for his daily walk. Outside, it was a bright sunny day, but very windy. The Master did not listen and paced the beautiful French gardens on the Upper-Belvedere. Back to his quarters, the frail old man felt a cold coming on around 3 o'clock. « Frau Kathi » and her daughter Ludowika Kutschera helped him to lay-down in bed. He asked « Kathi » to bring him a cup of tea. Bruckner took 3 sips, then, sunk back on the pillow. Nurse Anna Ortner helped to turn him onto his side. Bruckner took 2 deep breaths and quietly passed away.

As biographer August Göllerich remarked : « his “ Via Dolorosa ” was over » .

Anton Meißner, who had just seen Bruckner shortly before, and Father Heribert Witsch who was nearby the « Schloßkapelle » were immediately brought to the « Kustodenstöckl » by « Kathi's » daughter. In their presence, « Kathi » closed the eyes of the Master. Meißner joined Father Witsch in reciting the « de Profundis » . Meanwhile, « Kathi » telephoned Doctor Heller who arrived half an hour later in company of Leopold Schrötter.

Meißner authorized the « Karlskirche » to sound the bell of the dead. He also informed first lawyer Theodor Reisch, disciple August Stradal (which, in turn, should contact the University of Vienna and the Society of Friends of Music) , Belvedere Inspector Henrich, Doctor Franz Schaumann (president of the Vienna academic Wagner Society) , conductor Hans Richter and Ludwig Speidel about the bad news.

Ignaz Bruckner and Rosalia Hueber will also be informed.

Hans Richter conducted the « Hofkapelle » in the morning in music by Franz-Josef Haydn and Wolfgang Amadeus

Mozart and the latter's « Die Zauberflöte » (only the 11th of his career ...) at the « Hofoper » that evening.

Death was confirmed between 3:10 and 3:30 pm. Cause : heart failure coupled with dropsy. Bruckner was 72 years old, 1 month and 7 days. Then, sculptors Sinsler and Herberger (Haberler) , students of Viktor Tilgner, proceed with the face molding for the realization of a funeral mask.

(A sample of the « Totenmaske » is on display at the « Hamburger Bahnhof » Museum in Berlin.)

A legal autopsy was performed by the director of the Vienna General Hospital, Doctor Karl Böhm-Böhmersheim.

The death register from St. Charles's parish church (1896, folio 197) mentions that Father Josef Gros gave the Last Sacraments (the 4th time for Bruckner !).

According to the daughter of Leopold Hofmeyer, Anna Stumpfoll, her father fell into tears at the moment of receiving the message in Steyr.

One of his admirers said :

« He was divided from his environment with an unavoidable obstacle, he did not go to parties, he had not a group of equal-minded admirers as Schubert - nor friends, nor did he make heroic plans, nor had he Royal admirers like Wagner, nor family like Bach. »

Entry in the repertoire records of the Imperial Music Chapel :

« On the 11th of October, the famous composer Doctor Anton Bruckner died in his 73rd year. It was also Imperial and Royal Court organist. »

By order of Emperor Franz-Josef, the funeral home at the Imperial Palace of the Upper-Belvedere had been decorated of flowers and plants from the Imperial greenhouses : the Richard Wagner Society, the « Wiener Männergesang-Verein » and « Schubertbund » Choral Societies, the Philharmonic, the students of the University of Vienna and several provincial Music Societies had lay wreaths by deputations. And the Vienna Conservatory has floated, in sign of mourning, a black flag atop its monument.

Based on the sincere testimony from friends and family members of the Master, the rumor that the very sick and almost senile composer was unable to organize his ideas made its way. Consequently, his ambitions to complete the Finale of his 9th Symphony was considered unrealistic. The scattered pieces of surviving manuscripts were labeled as « inconsistent ». The entire Symphony was not only unfinished but inherently « unachievable » !

Unfortunately, the almost total dependence of Anton Bruckner towards his private secretary and confidant Anton Meißner (a former student of the Vienna Conservatory from the academic year 1878-1879) increased during the last

years. Meißner is described by August Göllerich and Max Auer as « a very young Catholic man » .

For 3 consecutive days, the body of Bruckner is exposed in his bedroom of the « Kustodenstöckl » , watched by the « pious » Meißner, welcoming families, students and friends who came to pay their last tribute. He strongly encourages them to bring « souvenirs » (i.e. : hand-written pages left on the Master's work-table) ; thus, dispersing « to the 4 winds » his musical testament !

Franz Schalk and Ferdinand Löwe got the opportunity to verify the manuscripts and other papers that Bruckner had left, and they decided that the less important relics (including books) were transferred to Bruckner's sister, Rosalia (« Sali ») Hueber in Vöcklabruck (they were later acquired by Max Auer) . In 1902, a small case also containing part of Bruckner's correspondence was delivered in Linz to Bruckner's beloved biographer, August Göllerich junior. He would return it after use to the St. Florian monastery.

At the first performance in Vienna of Igor Stravinsky's « Sacre du Printemps » , the whole hall changed into a real inferno. People laughed, jeered, mocked, hissed and it looked as if this genial work could not be heard to the end.

A man shouted from the gallery into the tumult to the conductor (it was Franz Schalk) :

« Play Bruckner ! »

Thirty years before, the same man would probably have shouted :

« Play Mozart ! »

...

Since 1921, a commemorative plaque topped with a cameo (profile of Bruckner in relief) , by artist Edi Naumann, adorns the « Kustodenstöckl » , the pavilion of the game-keeper located at « Heugasse » Number 3, the inscription says :

« In this house, Anton Bruckner died on October 11, 1896. »

It is a gift of the Society of Friends of Music, located at « Tuchlauben » Number 12. This is where Bruckner began his musical activities in the capital. (The building no longer exists.)

### Doctor Karl Böhm-Böhmersheim

The military physician and surgeon Doctor Karl Böhm-Böhmersheim was born on 26 October 1827 in Horowitz, Bohemia (now : Hořovice, Czech Republic) ; and died on 27 May 1902 in Mödling. After studying at the University of Vienna, he received in 1851 his doctorate of medicine and surgery. From 1854, Böhm-Böhmersheim worked as

assistant-surgeon and chemistry professor at the « Josephinum » military medical Academy, and from 1859, as professor of theoretical surgery, instrumentation and dentistry. After his habilitation for surgery at the University of Vienna in 1861, Böhm-Böhmersheim was appointed in 1864 associate-professor (« Professor extraordinarius ») for clinical surgery at the « Josephinum », and became an associate-member of the Military Medical Committee. In 1865, he left the military service and took-over the first surgical department of the « Rudolfstiftung » Imperial-Royal Hospital becoming its director in 1870. Böhm-Böhmersheim was the director of the Vienna General Hospital from 1887 to 1896, and was named its Councilor in 1889. For some years, he was also a member of the Supreme Medical Council. Böhm-Böhmersheim was particularly interested in technical questions, particularly in the improvement of hygienic facilities and ventilation systems in hospitals and large public buildings, in Germany and abroad (in Vienna : the « Rudolfstiftung » Hospital, the « Hofoper », the « Hofburgtheater » and the Imperial Museum) . In 1891, he became Karl Edler von Böhm-Böhmersheim.

Doctor Karl Böhm-Böhmersheim received the Order of the Iron Crown (3rd Class) and the Order of Franz-Josef.

### An affected Wolf

Hugo Wolf was much affected by the death of Anton Bruckner. About this time, he finished the music to Robert Reinick's « Morgenlied », which had been begun some time before, though the work of collating the parts of « Der Corregidor » had prevented him from finishing it. His curiously fastidious taste deciding that the term « song » was inapplicable either to the form or the contents of the poem, he altered the title of his setting of it to « Morgenstimmung ». It was his intention to bring-out 2 other songs to words by Reinick : the « Gesellenlied » and the « Skolie », composed in 1888 and 1889 respectively.

### The Bruckner Estate

The record of the Vienna stock-exchange rates for Sunday October 11th, 1896, was attached to the Estate Act for asset evaluation purposes.

**Monday, 12 October 1896** : Lawyer Theodor Reisch arrives at Bruckner's apartment on the Upper-Belvedere, and orders in his capacity of executor of the Last Will that all books and manuscripts be secured and sealed to prevent arbitrary circulation.

Doctor Richard Heller recalls :

« The poor man had scarcely closed his eyes, as the authorized and unauthorized fell upon his Estate like vultures. »

However, it took a further 5 days to draft an Estate report and to deliver, at least, part of the manuscripts to Reisch. All other objects were stored in a wall-cabinet and sealed. Today, there is still no exact inventory description available. In contrast with preliminary drafts and sketches of previous works, the compositional history of Bruckner's last Symphony happens to be well-documented by drafts and, in part, already fully scored fragments. The composer simply

did not live long enough to destroy what he considered no longer needed ! Almost no sketch material survives of most of the Symphonies, only a couple of discarded bi-folios and pages. We have only extant, huge materials of the 8th and 9th Symphonies. However, it may be possible that, already in Bruckner's lifetime, he gave away discarded material for the 9th's Finale, at least, in one case : the 4 discarded score bi-folios found in the Estate of pianist Cyrill Hynais, one of Bruckner's former pupils.

The executor failed to hold the Estate together until all matters were properly settled. Only the scores of main works, which Bruckner had bequeathed to the Court Library in Vienna went there straight away. As a consequence, acquaintances, friends and music societies got their share in this equation at random.

### Formalin embalming of Bruckner

When Anton Bruckner wrote his Last Will on 10 November 1893, he left a comprehensive list of instructions to follow during his embalming with formalin, a technique recently used. He believed in the supernatural (healing) power of the relic, a concept that was prevalent in the Catholic Church at this time.

Bruckner makes a special request to the church authorities : his coffin must be wide and remain exposed (not buried) in the crypt of the abbey church of St. Florian (as former Dean Jodok « Jodocus » Stülz, Prelate of St. Florian, benevolent protector and friend of Bruckner) , just below the great organ, which since bears his name :

« I desire that my remains be placed in a metal coffin that will be exposed to air (not buried) in the crypt of the church of St. Florian , under the great organ. »

The real value of relics lay in their ability to perform miracles. A relic that was an acknowledged fake could become « real » if it performed a miracle or after a trial by ordeal. People believed relics were invested with heavenly powers and that to be close to a relic, or even better, to touch one, would provide a person with spiritual blessings, divine protection, and even a cure from illness. In a world which could seem so uncertain, with wars, disease, and incurable illnesses, religious people often sought the protection which they believed a religious relic could offer. Someone who bought a relic would often carry it on his or her person, to be accessible at all times.

In Catholic theology, sacred relics must not be worshipped, because only God is worshipped and adored. Instead, the veneration given to them was « dulia » .

St. Jerome declared :

« We do not worship, we do not adore, for fear that we should bow down to the creature rather than to the Creator, but we venerate the relics of the martyrs in order the better to adore Him whose martyrs they are. »

The Catholic church divides relics into 3 classes :

**First-Class Relics** : Items directly associated with the events of Christ's life (manger, cross, etc.) or the physical remains of a saint (a bone, a hair, skull, a limb, etc.) . Traditionally, a martyr's relics are often more prized than the relics of other saints. Parts of the saint that were significant to that saint's life are more prized relics. For instance, King St. Stephen of Hungary's right forearm is especially important because of his status as a ruler. A famous theologian's head may be his most important relic. (The head of St. Thomas Aquinas was removed by the monks at the Cistercian abbey at Fossanova where he died.) If a saint did a lot of traveling, then the bones of his feet may be prized. Catholic teaching prohibits relics to be divided up into small, unrecognizable parts if they are to be used in liturgy (i.e. , as in an altar).

**Second-Class Relics** : Items that the saint owned or frequently used, for example, a crucifix, rosary, book, etc. Again, an item more important in the saint's life is thus a more important relic. Sometimes a 2nd Class relic is a part of an item that the saint wore (a shirt, a glove, etc.) and is known as « ex indumentis » (from the clothing) .

**Third-Class Relics** : Any object that is touched to a 1st or 2nd Class relic. Most 3rd Class relics are small pieces of cloth, though in the first millennium oil was popular ; the Monza « ampullæ » contained oil collected from lamps burning before the major sites of Christ's life, and some reliquaries had holes for oil to be poured in and out again. Many people call the cloth touched to the bones of saints « ex brandea » . But « ex brandea » strictly refers to pieces of clothing that were touched to the body or tombs of the apostles. It is a term that is used only for such ; it is not a synonym for a 3rd Class relic.

The sale or disposal by other means of relics without the permission of the Apostolic See is strictly forbidden by canon 1190 of the Code of Canon Law. Relics may not be placed upon the altar for public veneration, as that is reserved for the display of the Blessed Sacrament (host or prosthoma and Eucharistic wine after consecration in the sacrament of the Eucharist) .

Many churches were built along pilgrimage routes. A number in Europe were either founded or rebuilt specifically to enshrine relics (such as San Marco in Venice) , and to welcome and awe the large crowds of pilgrims who came to seek their help. Romanesque buildings developed passage-ways behind the altar to allow for the creation of several smaller chapels designed to house relics. From the exterior, this collection of small rooms is seen as a cluster of delicate, curved roofs at one end of the church, a distinctive feature of many Romanesque churches. Gothic churches featured lofty, recessed porches which provided space statuary and the display of relics.

Historian and philosopher of art Hans Belting observed that in medieval painting, images explained the relic and served as a testament to its authenticity. In *Likeness and Presence*, Belting argued that the cult of relics helped to stimulate the rise of painting in medieval Europe.

Reliquaries are containers used to protect and display relics. While frequently taking the form of caskets, they have many other forms including simulations of the relic encased within (e.g. , a gilded depiction of an arm for a relic consisting of arm bones) . Since the relics themselves were considered valuable, they were enshrined in containers crafted of or covered with gold, silver, gems, and enamel. Ivory was widely used in the Middle-Ages for reliquaries ; its

pure white colour an indication of the holy status of its contents. These objects constituted a major form of artistic production across Europe and Byzantium throughout the Middle-Ages.

### Mummification of Bruckner

**Monday, 12 and / or Tuesday, 13 October 1896** : The corpse of Bruckner is mummified in formalin by Doctor Richard Paltauf. A premiere for a composer.

(Oddly enough, the last person to be mummified in Switzerland will be Czech composer Bohuslav Martinů in 1959.)

Formaldehyde was discovered by the German chemist August Wilhelm von Hofmann in 1867 (1869) . It was determined to be an excellent preservative and became the foundation for modern methods of embalming replacing previous methods. Within a few years, until 1898, 8 of 45 medical schools throughout Europe introduced formaldehyde for preservation purposes. Even at that time, there was discussion about the final concentration, with some authors advocating concentrations as low as 3 % , others demanding 10 % . In addition, the immediate adverse effects were already known : skin irritation, conjunctivitis, irritations of the respiratory system, and headache.

According to an article in the « Basler Woche » newspaper of 17 December 1998, Anton Bruckner's corpse was secretly transported to an anthropological facility in Basil, Switzerland, for restoration. The restoration, performed by Doctor Bruno Kaufmann was done in conjunction with the 100th anniversary of Bruckner's death (1896-1996) .

Mummification used by the Egyptians was a widely-known method which involves the removal of body fluid and wrapping the body in linens. Prior to mummification, Egyptians would lay the body in a shallow pit in the desert and allow the sun to dehydrate the body.

The modern technique of mummification with formalin (an important solution to body preservation) was introduced in 1896 in Switzerland.

The country holds today 20 mummies from medieval times and 100 Egyptian mummies. Many were brought back from the Napoleonic wars by soldiers.

...

From the end of the Middle-Ages up until early modern times, mummy parts were thought to have healing qualities. Mummified limbs were ground down and mixed with honey and wine to form a tonic or poultice, which could be applied to the skin.

At the end of the 18th Century, a Napoleonic expedition to Egypt awakened an interest in the world of the pharaohs. « The export of mummies was outlawed by this time, so traders smuggled severed mummified limbs instead, which were easier to transport » , Kaufmann explained.

These appeared at art-markets and were snapped up by museums and private collectors. Kaufmann believes that it was during this period that the severed hand was acquired by a rich Geneva dynasty, the Bovy and Balland families, who bought the castle of Gruyères in 1848.

On the ground-floor of the dungeon, they set-up a curiosity chamber, where the limb was put on show. The creepy claw now resides in a first floor corridor, and visitors are free to gaze at it for as long as they please. Hopefully, it doesn't carry a curse.

### From the « Kustodenstöckl » to the « Karlskirche »

**Vienna : Wednesday, 14 October 1896 (early afternoon) .**

Anton Bruckner's associations with the Austrian State and the Vienna University meant that full civic and academic honours were accorded him, providing a striking contrast with his humble origins. No expense was spared : the coffin was made of bronze, a glass-walled hearse covered with flowers and wreaths was drawn by 6 black horses, and 2 wagons were required to transport the innumerable floral tributes. The coffin was lifted on to the hearse at 3 o'clock and, after the « Akademischer Gesangverein » had sung Bruckner's « Germanenzug », the « cortège », including the official representatives of the Austrian Government, the Vienna Conservatory, the « Hofoper », the general superintendence of the Imperial Theatres, all Viennese theatres, representatives of the University carrying banners, and choral and other musical Societies such as the « Schubertbund » and the « Akademischer Wagner-Verein » began its solemn progress under a suitably grey sky. The 2 Bruckner's siblings still alive, Rosalia (« Sali ») and Ignaz (« Nazi »), rode in the first carriage.

In the second carriage travelled the acting Mayor of Vienna, Josef Strobach, accompanied by his 2 Deputy counsellors : Karl Lueger (the next Mayor, 1897-1910) and Josef Neumayer (who will replace the fallen Lueger, 1910-1912) followed by other representatives of the municipal Council.

In the third carriage travelled Bruckner's executor, Imperial Legal Advocate Doctor Theodor Reisch. Among the mourners who followed were Brucknerians such as : organist and composer Josef Vockner (1842-1906) ; writers Theodor Helm and August Göllerich, Junior ; various performers, and members of the Gesellschaft der Musikfreunde.

Half an hour after setting-out, the cortège arrived at the Karlskirche, where there was already a large crowd waiting, including all manner of State and Civic dignitaries, senior members of the University, leading arts administrators and musicians, and even 2 inspectors from the fire brigade.

### « Karlskirche » : Funeral ceremony

**Vienna : Wednesday, 14 October 1896 (3:00 pm) .**

The funeral was completely in the hands of the City Council and, to a lesser extent, the academic and musical

institutions of Vienna, so that the composer's relatives, who drop-out of journalistic narrative as soon as they have entered it, could do nothing but simply let it all happen around them.

Those attending included : Rosalia Hueber (1829-1898) and Ignaz Bruckner (1833-1913) , the only surviving siblings of the composer ; conductors Hans Richter, Wilhelm Jahn, Ferdinand Löwe and Richard von Perger ; Josef Vockner who will succeed Bruckner at the Conservatory ; music-writers Theodor Helm and August Göllerich junior ; Mayor Josef Strobach ; Deputy counsellors Karl Lueger and Josef Neumayer ; professor Siegmund Exner, the Rector of the University Leo Reinisch, accompanied by other senior members ; musicians of the « Wiener Hofoper » ; 200 dignitaries from Vienna's musical scene ; members of the « Akademischer Wagner-Verein » , the « Akademischer Gesang-Verein » , the « Gesellschaft der Musikfreunde » , and the « Schubertbund » Music Societies ; leading arts administrators and musicians ; plus numerous professors, colleagues and students.

Resident of a small apartment (with big windows in the living-room) on the 4th floor of a plain stone building at « Karlsgasse » Number 4, next to the looming Baroque dome of the « Karlskirche » , Johannes Brahms, suffering of a fatal pancreas condition, still manage to be late for the ceremony ! He is forced to remain standing in the back, near the closed doors. Not far from him, behind a big pillar, sits (in the twilight) little Bernhard Paumgartner, aged 9, with his mother, Operatic soprano Rosa Papier-Paumgartner, a close friend of Bruckner. The child will see tears dropping on the cheeks of the 63 year old composer who voluntarily distances himself from the crowd. An attendant approaches Brahms and assures being able to find him a place somewhere in the church.

But Brahms, in a sombre mood, seems to mutter something like :

« Ha, whatever. I'll be the next to find myself in a coffin. »

(He will die only a few months after, on April 3, 1897.)

During the solemn blessing of the body, 2 of the most prestigious Viennese Choral Societies were each chosen to performed a specific sacred work.

The « Wiener Männergesang-Verein » Men's Choir sang the « Libera me, Domine » for male-choir and wind intruments (edited by Anton Böhm & Sohn, 1909) composed by Johann Herbeck, a fierce supporter of Bruckner in Vienna since the beginning.

Afterwards, the « Singverein » under its current director, composer Richard von Perger (1854-1911) , provided the only formal musical contribution of the « Gesellschaft der Musikfreunde » : The « Litany for the Feast of All Saints » (« Litanei auf das Fest Go Seelen ») by Franz Schubert (D. 343) , a work dating from 1816 (1st edition of 1831, edited by Breitkopf and Härtel, Leipzig, 1894-1895) based on a libretto written by Johann Georg Jacobi (1740-1814) . As requested in Bruckner's will, the middle-section of his first published work : « Germanenzug » (the Germanic Host) (**WAB 70**) , based on a text by August Silberstein, was also given during the Mass. A secular (patriotic) Cantata in D minor, composed in 1863-1864, for male solo quartet (SATB) , « a cappella » male-choir, and brass-ensemble

(consisting of 2 horns, 4 trumpets, 3 trombones, 3 horns, 1 baritone horn - or euphonium, and 1 bass-tuba) . The performers, for the occasion, are the « Wiener Akademischer Gesangsverein » accompanied by a horn-quartet composed of musicians of the « Hofoper » .

Finally, the renowned Wagnerian Hans Richter conducted the funeral music taken from the Adagio of the 7th Symphony, in a version for harmony (wind instruments arranged for the occasion by the Bruckner disciple, Ferdinand Löwe) . The effect in the vast church was grandiose !

(During the execution of Bruckner's works, the wind-section of the « Hofoper » was not visible to the public.)

The last word was given to a member of the « Akademischer Gesangsverein » , who bade farewell on behalf of the « Gesangsverein » and the student body of the University. The ceremonies ended, at half past 4.

Max Graf :

« While no one accompanied Mozart's coffin to the cemetery, all Vienna was present when Beethoven's was borne to the Währinger Cemetery. The magnificent funeral of a great musician was a great spectacle for the Viennese, and many a composer who, during his lifetime, was fought, obstructed and ridiculed by the people, would be carried to his grave amid the most extravagant pomp. I was present when Bruckner's coffin was blessed at the " Karlskirche ", before, according to his last wish, it was taken to St. Florian to be interred beneath the great organ. From the choir sounded the mournful music of Bruckner's 7th Symphony. Beside the flower-decked coffin, the dark-robed priests were praying, while the university students, whom Bruckner so loved, stood at attention with drawn swords. Near the coffin stood a short peasant who kept looking anxiously about him. This was Bruckner's brother who may well have been amazed at the enormous crowd gathered for the funeral. He resembled Bruckner, but his face was merely that of a peasant while the composer's had radiated a kind of holiness. »

A commemorative plaque donated in 1993 by « Die Gesellschaft der Freunde Wiens » , located at the « Karlskirche » entrance, observes his passing.

It reads :

« Zum Gedenken an Anton Bruckner. In dieser Kirche wurde sein Leichnam am 14 Oktober 1896 unter Teilnahme der Wiener Musikwelt feierlich eingeseignet. »

(In Commemoration of Anton Bruckner. In this church, on October 14, 1896, his body was solemnly consecrated with the participation of the Viennese musical world.)

The « Brucknerstraße » (originally named « Brucknergasse » , on 4 January 1901) is located near the « Karlskirche » .

## From the « Karlskirche » to the « Westbahnhof »

**Wednesday, 14 October 1896 (4:30 pm) :**

Inconsolable and frustrated, Johannes Brahms will leave the Vienna's « Karlskirche » before the ending of the funeral ceremony (« Ha, whatever. I'll be the next to find myself in a coffin. ») to be part of the following procession which will stop at the principal railway station, the « Wien Westbahnhof » (West Station) , where a special train, bound for St. Florian's station (« St. Florians Bahnhof ») , is awaiting the bronze coffin. Member of no official Musical Society, the beloved student of the Master, Hugo Wolf, now aged 36 (who was refused admission inside the church because owning no pre-paid ticket) will probably also join the « cortège » .

Unfortunately, neither Wolf nor Brahms will be aloud to give Bruckner a last and solemn tribute.

Hans Richter could not accompany Bruckner, for that evening, he was conducting Giuseppe Verdi's « La traviata » at the « Hofoper » . But the performance of the 7th Symphony, scheduled for November 8, will be played in memory of its creator.

## St. Florian : Funeral ceremony

**St. Florian : Thursday, 15 October, 1896 (10:00 am) .**

After repeated blessings, a second official funeral ceremony (following the one at the « Karlskirche » in Vienna, the day before) is celebrated at the Collegiate Church of St. Florian's Abbey (and also in several other churches in Austria) .

The Dean of the Monastery, Ferdinand Moser, is accompanied by 60 members of the clergy. A strong delegation composed of representatives from the private sector, politicians from Upper-Austria and from the City of Linz. All the firefighters of St. Florian are present at the ceremony !

According to Bruckner's will (and thanks to the special permission of the prelates of the monastery) , the sarcophagus was placed in the crypt under the great organ. During the impressive burial ceremony, house-organist Josef Gruber (a former student from the Harmony class of the Master at the Vienna Conservatory, in 1887-1888, who became a musical devotee of the Cecilian ideals) improvised on themes from « Parsifal » , the final Opera by Richard Wagner.

The sacred Motet « Libera me, Domine » (Deliver me, O Lord) No. 2 in F minor (composed originally for the inhumation of prelate Michæl Arneth, in March of 1854) (**WAB 22**) was also performed.

As an ultimate tribute to their beloved and famous « Kapellmeister » , now deceased, all members of the Liedertafel (Choral Society) « Frohsinn » of Linz are on site to sing with great emotion Felix Mendelssohn-Bartholdy's 1833 sacred chorus « Beati Mortui in Domino » (Blessed are the Dead) , Opus (posthumous) 115, No. 1. Largely and smoothly homophonic, with occasional simple imitation between basses and tenors or among all 4 parts, this seems to belong as

much to the tradition of the Romantic Chorled as to that of sacred music. Mendelssohn composed it in German, adding the Latin text as an alternative ; in German, that text is « Wie selig sind die Toten » , one of the core texts of Johannes Brahms' « Ein deutsches Requiem » .

Beati mortui in Domino morientes deinceps moriuntur amodo.

Etiam Dicit enim spiritus,  
ut requiescant a laboribus suis  
et opera illorum sequentur ipsos.

...

Blessed are the dead which die in the Lord  
from henceforth : Yea, saith the Spirit,  
that they may rest from their labours ;  
and their works do follow them.

In 1847, the young Bruckner, aged only 23, had the opportunity to hear in Linz the Oratorio « Paulus » (St. Paul) , Opus 36, by Mendelssohn. This was the catalyst for his gradual move towards composition, signaled by performances at St. Florian of his « Requiem » Mass (1849) and his « Magnificat » and « Missa solemnis » in B-flat minor (both in 1854) .

### The aftermath

With the news of Bruckner's death, obituary feuilletons by music-critics, information and reports of the funeral, and publications of condolence messages from important people outside Vienna, the daily papers were involved with Bruckner for between 3 and 6 days. The final word (excluding the resumption of the discussion every time a work by Bruckner was performed) came in the form of a desperate plea published in the « Neue Musikalische Presse » , a plea which, in the light of nearly a Century of belief that the final movement of the 9th Symphony was so fragmentary as to make any thought of reconstruction and completion impossible, appears to have remained largely unanswered :

« This request is directed to all persons who still have original manuscripts from Bruckner in hand and also to those who possess copies of unedited works of the Master : that they allow such manuscripts and copies to be sent to his executor, Doctor Theodor Reisch, Court Advocate, “ Gatterburggasse ” Number 19, Vienna XIX, for the purpose of making possible a complete collection of all Bruckner's works. »

**Sunday, 18 October 1896** : Josef Schalk obtained in concert with legal executor Doctor Theodor Reisch's equation protocol what was left of the manuscripts of the Finale of the 9th to study their context. All other scores, drafts and sketches were, as far as they had not disappeared or given to other people, transferred to the Court Library in Vienna (currently the Austrian National Library) , all in accordance with Bruckner's Last Will.

### « Wiener Salonblatt » : Ferry Bératon

Perhaps, the clearest expression of the significance of youth in the appreciation of Bruckner can be found in the conclusion to the obituary by the young painter Ferry Bératon, published in the « Wiener Salonblatt », a journal which, after the heady days of Hugo Wolf's employment there in the mid-1880's, had become by the late-1890's rather bland, with much anonymous or pseudonymous music-criticism and little controversy.

Nevertheless, Bératon makes the bold claim that :

« The young stood before Bruckner's bier and spoke beautiful words of sorrow. He lives on in the young, who have always faithfully supported him. They will spread his fame abroad. For the young have always understood him. From very early, they felt the wing-beat of the eagle who is now to be sunk into the grave. »

Bératon's claim is, nevertheless, based on fact. It was, after all, to a student, a member of the « Akademischer Gesangverein », that the task of speaking the last « beautiful words of sorrow » was given at Bruckner's funeral. From Bératon's remark, it appears that this officially expressed affection of the student body of the University for Bruckner was indeed genuine. The claim is further corroborated by Max Kalbeck, who complained in his diary after the « Gesellschaft's » performance of Brahms's « German Requiem », on April 1897 :

« There were large spaces in the hall, and the standing-room, which is in the habit of being over-filled at a Bruckner- or Strauß-fest, was just about empty. Even at the funeral, neither the university nor the student body was represented. The “ German nationalists ” celebrate the servile, weak-witted Romeling Bruckner. Modern youth has no time for the greatest German artist. One has to live in such an age ! »

### The Academic Society of Vienna thanks Ferdinand Löwe

**Thursday, 22 October 1896** : Franz Schaumann, the president of the Academic Society of Vienna, writes an official letter of thanks to conductor (and disciple) Ferdinand Löwe for having been part of the funeral of Anton Bruckner at the « Karlskirche » .

### « Schloßkapelle » : Memorial celebration

**Saturday, 24 October 1896** : Ignaz Bruckner expressed his deep gratitude in a « thank you » note (probably dated October 22, 1896) which was published in the « Linzer Volksblatt » .

Chaplain Father Heribert Witsch celebrates Mass in memory of Bruckner in the Imperial « Schloßkapelle » .

### District Court approval

**Thursday, 29 October 1896** : The declaration of succession to the heirs Ignaz Bruckner and Rosalia Hueber, which was

submitted by the legal executor Doctor Theodor Reisch on 27 October 1896, is recognized by the Vienna District Court.

### Richter conducts Bruckner

**Sunday, 8 November 1896** : Vienna, « Musikverein Großer-Saal » . First Subscription Concert of the season by the Vienna Philharmonic Orchestra. Hans Richter conducts the « Wiener Philharmoniker » .

Ludwig van Beethoven : Overture in C major from « Die Weihe des Hauses » (The Consecration of the House) , Opus 124.

Robert Volkmann : Serenade No. 3 in D minor for violoncello and string orchestra, Opus 69. Soloist : Reinhard (Reinhold) Hummer.

Anton Bruckner : Symphony No. 7 in E major (**WAB 107**) .

### A pocket calendar sheet

**Saturday, 28 November 1896** : Private secretary Anton Meißner hands over a pocket calendar sheet dating from 1884 (which contains teaching appointments) to Bruckner's disciple August Stradal (1860-1930) .

### Cleaning the Upper-Belvedere apartment

**End of November 1896** : « Frau Kathi » Kachelmayr cleans the Upper-Belvedere apartment.

### Last payment to « Frau Kathi » and her daughter

**Thursday, 3 December 1896** : « Frau Kathi » Kachelmayer confirms that she received from legal executor Doctor Theodor Reisch the salaries covering the months of October and November 1896 : for herself (30 Florins) , and her daughter Ludowika Kutschera (24 Florins) .

Another receipt concerns a sum of 33 Florins for expenses on Bruckner's death and funeral.

### Kitzler conducts the « Te Deum »

**Saturday, 19 December 1896** : Otto Kitzler conducts the « Te Deum » by Anton Bruckner (**WAB 45**) with the Brünn (Brno) « Musikverein » Orchestra and Choir. The concert-Master is Karl Koretz. At the organ : Andreas Hofmeier.

The soloists : Beatrix Friedländer, a soprano from Vienna, and 3 members of the Brünn « Musikverein » Choir : Aurelie Kaulich, alto ; Felix Oplustil, tenor ; Schmuttermayer (Schmuttermeyer) , bass (replacing Hermann Neuber) .

## Signing the « affidavit »

**Tuesday, 29 December 1896** : Ignaz Bruckner signs in St. Florian the « affidavit of the Estate of Anton Bruckner » , which is also signed by Rosalia Hueber (31 December 1896) and legal executor Doctor Theodor Reisch.

**Wednesday, 30 December 1896** : Letter from Ignaz Bruckner (St. Florian, near Linz) to his sister Rosalia Hueber (Vöcklabruck) :

Today, Ignaz received from Doctor Theodor Reisch the legal documents concerning the Estate of his brother. Since neither the City of Vienna nor the City of Linz showed any interest, the heirs may retain the property.

« One day, this will be of value. »

Rosalia should inherit the bed, the piano, a portrait, and a picture. Also, the golden box, the desk and the arm-chair. Monastery Prelate Karl Aigner would like to have the black time-clock. Gustav Hueber has taken the jewelry.

**Thursday, 31 December 1896** : Rosalia Hueber signed in Vöcklabruck the « affidavit of the Estate of Anton Bruckner » , which was also signed by his brother Ignaz (29 December 1896) and Bruckner's legal executor Doctor Theodor Reisch.

## Doctor Garbe from Mannheim

**Thursday, 31 December 1896** : Doctor Garbe from Mannheim gives Hugo Wolf the score of Bruckner's 7th Symphony.

**Friday, 1 January 1897** : Letter from Hugo Wolf to Oskar Grohé :

Wolf thanks Doctor Garbe for the score of Bruckner's 7th Symphony.

## Josef Tautenhayn

**1896** : Unveiling of a bronze medal (plaquette) by sculptor and medalist Josef Tautenhayn junior, honouring the career of Austrian composer Anton Bruckner (profile based on his last years) .

Rare solid silver uniface portrait plaquette by Johann Josef Tautenhayn junior. Bust-portrait of the composer facing left, inscribed « ÆTAT LXXII / GEB. IV. SEPT. MDCCCXXIV / GEST. XI.OCT.MDCCCIVC » and « ANTON BRUCKNER » . Signed : « Jos. Tautenhayn Jun. » (46.2 mm x 66 mm ; 99.3 gram) . A famous portrait from the year of the composer's death. Johann Josef Tautenhayn was the son of Josef Tautenhayn and a pupil at the « Akademie der Bildenden Künste » in Vienna. He produced medals engraved with the images of Emperor Franz-Josef, Anton Bruckner and Franz Schubert.

...

The Austrian medalist and sculptor Josef (Hermann) Tautenhayn senior was born in 1837 in Vienna and died in 1911. He was the father of Josef (Karl) Tautenhayn junior.

Josef Hermann studied at the Academy (1854-1860) under Carl Radnitzky (1818-1901) and sculpture under Franz Lukas Bauer (1798-1872), then, at the engravers' Academy of the Imperial mint. After his return from a study trip through Italy, France, and England, undertaken in 1869-1872, he was appointed Imperial engraver of coins and medals, and, in 1881, professor at the Academy.

Among a large number of choice medals those commemorating the coronation of Franz-Josef as king of Hungary (1867); the Imperial Silver Wedding (1879); and the bicentennial of the Relief of Vienna from the Turks (1883), are the most noteworthy. His plastic work on a large-scale includes a group of the « Birth of Athens », and statues for the University of Vienna, also statues for the Art-Historical Museum and the Houses of Parliament.

...

Josef Tautenhayn senior, Bildhauer und Medailleur : geboren 5. Mai 1837 in Wieden (Wien), Niederösterreich ; gestorben 1. April 1911 in Wien (Ehrenggrab : Wiener Zentralfriedhof) ; römisch-katholisch. Sohn des Stempelschneiders, Kupferstechers und Graveurs Carl Hermann (Hermann Carl) Tautenhayn (geboren 3. November 1810 in Adorf im Vogtland, Sachsen / Deutschland ; gestorben 19. Juli 1885 in Wien), der um 1830 nach Wien gekommen war und hier einen Betrieb eröffnete (von ihm stammen und andere die frühen österreichische Briefmarken), Bruder des Graveurs Rudolf Tautenhayn (1834-1904), der den väterl. Betrieb weiterführte, Vater von Richard Tautenhayn, des Bildhauers und Medailleurs Josef Tautenhayn junior (geboren 22. September 1868 in Speising (Wien), Niederösterreich ; gestorben 8. Februar 1962 in Wien ; römisch-katholisch), mit dem er in der Literatur manchmal verwechselt wird, von Karl Tautenhayn und Ernst Tautenhayn (beide siehe unten Richard Tautenhayn), des Liedersängers und Beamten Max Tautenhayn (geboren 11. Oktober 1874 in Wien ; gestorben 24. Dezember 1959 ebenda) sowie der Opernsängerin Laura Tautenhayn, verehelicht Kledus (geboren 1. Mai 1870 in Wien ; gestorben 22. Oktober 1927 ebenda), Schwager von Karl Kundmann ; ab 1862 verehelicht mit Eleonore von Duzinkiewicz (geboren 7. Februar 1839 in Tarnów, Galizien / Polen ; gestorben 20. Januar 1932 in Wien). Tautenhayn besuchte ab 1850 die Elementarzeichenschule bei St. Anna, wechselte 1851 an die Akademie der bildenden Künste in die Elementarmodellierschule, wo Karl Radnitzky sein Lehrer wurde, und studium 1853-1859 Bildhauerei unter Franz Bauer ; 1874 Reichel-Preis. Tautenhayn war zeitweise gemäß mit Kundmann im Atelier des Bildhauers Josef Cesar tätig und modellierte außerdem kleinplastik Figuren für die Fa. Mayerhofer & Klinkosch. Daneben lernte er privat das Gravieren, das wirtschaftliche bessere Aussichten versprach. 1859 scheiterte Tautenhayns Bemühung um eine Eleven- und Stipendiatenstelle an der Graveurakademie am Hauptmünzamt, worauf er versuchte, in Dresden bei Ernst Julius Hähnel unterzukommen. Erst 1860 gelang ihm der Eintritt in die Wiener Graveurakademie, wo Josef Daniel Böhm Einfluß auf ihn nahm und er 1862 Münz-Graveur, 1868 Münz- und Medaillegraveur wurde. Im selben Jahr unternahm er mit Karl Costenoble und Anton Paul Wagner eine Italienreise, 1869 fuhr er mit Kundmann erneut nach Italien und wurde im selben Jahr Kammer-Medailleur. 1871 besuchte er mit Anton Scharff Paris und London. 1881-1904 ordentlicher Professor und Leiter der Spezialschule für Graveur- und Medailleurskunst an der Akademie der bildenden Künste (zu seinen Schülern gehörten und andere Rudolf Marschall, Franz Pawlik und Josef Tautenhayn junior). Tautenhayn hatte wesentliche Anteil an der Blüte der Medaillenkunst in der

franzisko-josephinum Ära. Der 1878 durch Josef Carl von Klinkosch in Silber gegossene Kentauren-und-Lapithen-Schild (Kunsthistorie Museum, Modell im Hauptmünzamt, beide Wien) , den Tautenhayn für den Kunsthof schuf, verschaffte ihm auch großplastik Aufträge, vor allem den 1880 begonnenen Giebel des Universitätgebäudes (« Die Geburt der Minerva ») und die zugehörigen Bekrönungsfiguren. In dieser Zeit entstanden daneben vier Statuen für den Herrenhaustrakt des Parlaments, denen 1902 die Figuren der « Gesetzgebenden und Ausübenden Gewalt » des Minerva-Brunnens folgten. Für das Kunsthistorie Museum übernahm Tautenhayn als Spezialist der Manier all'antica und Cesar-Schüler 1878 vier ursprüngliche diesem zugedachte Standbilder griechische und römische Künstler sowie diverse Porträtköpfe. In kleine Auftrag entstanden noch eine Fruchtschale in Silber (1888, ziseliert von Stefan Schwartz) , die Kasette « Die Zeit » in Silber und Elfenbein sowie das Relief « Herakles im Kampf mit den Amazonen » ; weiters lieferte er mehrere Glasschliff-Entwürfe für die Fa. Lobmeyr. Tautenhayn, der mehr als 80 Medaillen (tw. in Zusammenarbeit mit Scharff) fertigte, blieb im staatliche Münzwesen dank seiner zwischen stilisierender Repräsentation und realistik Figurenauffassung ausgleichenden Stilhaltung lange Zeit bestimmend. Seine Werke vereinen klassizistische Typologie mit barock angehauchtem Körpergefühl, im Großformat zeigen sie auch betonte Räumlichkeit. 1861-1863 und wieder ab 1869 war er Mitglied der Genossenschaft der bildenden Künstler Wiens (Künstlerhaus) , ab 1874 Ehrenmitglied der Wiener Akademie der bildenden Künste. 1873 Ritter des Franz Josef-Ordens, erhielt er 1904 den Orden der Eisernen Krone III. Klasse Größere Bestände seiner Arbeiten bewahren das Kunsthistorie Museum und das Hauptmünzamt, beide in Wien.

### Franz Antoine

**Around 1896** : The Austrian painter Franz Antoine completes his oil on canvas of Bruckner. The work is now in the Anton Bruckner Institute Linz (ABIL) . A postcard of the famous portrait was also published at the same time.

**Before Thursday, 8 November 1888 (?)** : Anton Bruckner is sketched (profile drawing) by Franz Antoine during a rehearsal by the « Wagner-Verein » in the « Kleine Musikvereinsaal » .

Franz Antoine : Anton Bruckner, Ölgemälde, undatiert (ABIL) . Der an der Wiener Akademie der bildenden Künste ausgebildete Maler Franz Antoine (1864-1935) war 1878 Privatschüler Anton Bruckners.

Trained at the Vienna Academy of Fine-Arts, the Austrian painter from Vienna, Franz Antoine (1864-1935) , was a private pupil of Anton Bruckner, in 1878. He mainly created paintings of genre scenes, marine themes, as well as photographs of botanical motifs. His oil painting on panel, from 1910, entitled « **The Statue of Liberty** » , in New York, gained fame and became well-known.

### Other Works

« **Farm House with Garden** » or « **Verliebte Wassergeister** » (acrylic on chip-board, from around 1910-1911) :

This charming painting depicts a rural scene in a beautifully densely greened garden with river course. In the foreground, a group of men smoking pipes is gathering under a large tree. In the background is a farmers house with white façade and, further on the left, another house in the shade. The painting is striking in the quality of the rich

realm of shades and light accents.

« **Naked Beauty by a Woodland Stream** » from 1916 (oil on canvas laid down on board - 70 cm x 50 cm) .

« **Mermaids watching sunset** » or « **Gondoliere mit Liebespaar auf dem Meer, im Hinterg** » from 1930 (oil on wood - height : 41 cm x width : 78 cm) .

« **Path on Eichberg near Gloggnitz** » (oil on canvas) .

### Rudolf Klingsbögl

The Austrian painter Rudolf Klingsbögl (1881-1943) , also known as Klingsberg, will make a portrait of Anton Bruckner (before or after his death) after a studio photograph of Josef Löwy dating from 1894.

### Heinrich Schönchen

The Munich painter Heinrich Schönchen (14 April 1861 - 8 May 1933) will make a portrait of Anton Bruckner (before or after his death) after a studio photograph of Josef Löwy dating from 1894.

### Bruckner at the Vienna Museum

**Monday, 4 January 1897** (date of the post-stamp) : Letter from Ignaz Bruckner (St. Florian, near Linz) to his sister Rosalia Hueber (Vöcklabruck) :

The legal executor Doctor Theodor Reisch wrote that a music-publisher had offered a sum of 1,000 Florins. It is probably wise not to accept the proposed offer. Better deals are coming soon.

Portraits and bust of Anton Bruckner are already at the Vienna Museum. The Museum could also pick-up other personal belongings of the composer at St. Florian Abbey.

### Ignaz writes to August Stradal

**Saturday, 30 January 1897** : Letter from Ignaz Bruckner to August Stradal :

« Your High-Master !

In reply to your honoured letter, I would like to inform you of the letter from my blessed brother starting with the inscription “ High-Master ' Herr ' Consistorial Councilor ” which was addressed to the late parish priest of Steyr, Johann Aichinger. During the last few years, my brother was very happy to spend some time there in the summer. At that time, the above-mentioned priest invited him to attend the first performance of the Mass in D major under the

direction of choir-Master (Franz) Bayer (Mass in D minor on April 2, 1893) . My brother gladly accepted the invitation (letter from 31 March 1893) and even played the organ during the performance.

I was very surprised about the reception of 10 Florins for the 2 letters of my brother, which I consider to be too much. I would never ask for anything in return, I only ask you to keep them as a souvenir. Now, I can do nothing else but to express my sincere thanks to you for the amount of money that was sent.

I take your High-Master in high-esteem,

Ignaz Bruckner.

St. Florian, 30. January 1897. »

The envelope to this letter bears in front the following address (written in foreign language by hand, and also in Latin) :

« Your High-Master “ Herr ” August Stradal, Musician from Vienna, 3rd District, “ Heumarkt ” Number 7. »

And the post-stamp :

« ST. FLORIAN (/) IN UPPER-AUSTRIA. »

On the back of the envelope, there is another post-stamp :

« VIENNA (...) (/) ORDERED (/) 1 February 1897 (/) 8-10V. »

### Bruckner immortalized at the Hall of Fame

**Sunday, 11 February 1912** (11:00 am) : To celebrate the 50th anniversary of foundation of the Vienna Academic Choral Society (« Akademische Gesangverein ») , unveiling ceremony of a commemorative plaque located in the reception-hall (« Fest-Saal ») of the main building of the University of Vienna in honour of Anton Bruckner.

The project was initiated by the Professors of the Faculty of Philosophy of the University of Vienna and it was funded by the Choral Society, itself.

Members of the Choir will place a wreath in front of the monument.

Programme :

For the occasion, 2 works by Bruckner are performed by the « Akademische Gesangverein » and a brass-ensemble

from the « Wiener Konzertverein » .

« Mitternacht » (Midnight) (WAB 80) .

Musical director August Göllerich junior pronounces the official speech.

The prologue of Franz Schumann's « Oberlandesgerichtstrat » is recited by the Imperial and Royal actor George Heimers who is an honorary member of the « Wiener Akademischen Gesangverein » .

« Germanenzug » (the Germanic Host) (WAB 70) .

The relief image of the Austrian composer (a profile of the head looking to the left) , previously created by sculptor and medalist Josef Tautenhayn junior (1868-1962) , is now placed on the first tier of a monumental marble tablet made of 2 super-imposed rectangular reddish slabs. A laurel wreath linear border surrounds the upper-plate, on 3 sides, which symbolizes with distinction the Master of St. Florain. The relief can be easily compared with a black-and-white picture taken from the archives of the University of Vienna (by R. Fenzl) : Josef Tautenhayn junior probably decided to represent Bruckner at an advanced age. On the photograph, the Master has a round face, a very short hair-cut, wears a jacket, a shirt and a bowtied. Although the shape of the almost bald head and the shape of the nose show similarities, the composer looks overall much older, which is mainly due to the distinctive forehead wrinkles. (Tautenhayn focuses mainly on the head, giving no details of clothing) .

On the request of the artist and the Choral Society, the memorial is hanged to the wall (by 4 prominent salient metal brackets) in Section 28 (to the right of stairs VII) of the left-passage of arcades (« Arkadenhof ») of the University's main building.

The following inscription is chiseled, in large gilt letters, underneath the portrait :

« Anton Bruckner, Honorary Doctor of the University of Vienna, 1824-1896. “ Non confundar in æternum ”. Academic Choral Society. Vienna. »

« Anton Bruckner. Ehrendoktor der Wiener Universität MDCCCXXIV-MDCCCXCVI (1824-1896) . »

« Non confundar in æternum »

« Ich werde nicht zuschanden werden in Ewigkeit. »

« Akademischer Gesangverein Wien »

The arcaded Court-yard

The imposing University Palace on Vienna's splendid new « Ring », in the immediate vicinity of the parliament, the City Hall, the « Burgtheater » and the Votiv Church, shows that the University was intended to hold an important position in Vienna. The building occupies an area of 161 metres by 133 metres and was originally intended to contain all the faculties.

In 1871, architect Heinrich had studied the older University buildings in Bologna, Padua, Genoa and Rome during a trip to Italy. The arcaded Court (« Arkadenhof ») , modelled on the « Palazzo Farnese » in Rome, was intended by him to be a « Hall of Fame » for the University. The many sculptures and plaques testify to the capacity of scholars who have worked here.

The Court was intended to be a « campo santo » to commemorate renowned University teachers and a recreation area for young people engaged in studies. The first memorial was erected in 1888 to commemorate the lawyer Julius Glaser. Today, there are some 150 sculptures and reliefs of Viennese scholars, and, among them (as the only woman) , is the poet and honorary doctor of the University, Marie von Ebner-Eschenbach. Especially noteworthy is the commemorative group by the sculptor Carl Kundmann (1892) , which is dedicated to the Austrian educational reformers Leo Graf Thun-Hohenstein, Franz Exner, and Hermann Bonitz. There are also remarkable sculptures by such important artists as Franz Xaver Messerschmidt, Caspar Zumbusch, Richard Kauffungen, Josef Tautenhayn junior, and others. The centre of the court-yard has been occupied since 1910 by the Kastalia Fountain (« Kastalia-Brunnen ») , the « Spring of Wisdom » , that was created by Edmund Hellmer. In 1926, it was decreed that a term of 10 years must pass between the death of a scholar and the erection of a memorial in the arcade.

### A moment of silence

**Monday, 15 February 1897** : Meeting of the Academic Choir Society of Vienna in the presence of president Franz Schaumann. On the programme : commemoration of the death of Anton Bruckner. A moment of silence is held. « Herr » Hans Thoruton proposes to play works by Johann Sebastian Bach and Ludwig van Beethoven.

### Declaration of cancellation

**Thursday, 25 March 1897** : Declaration of cancellation from St. Florian by Ignaz Bruckner concerning the promissory note of 29 September 1887.

**Friday, 26 March 1897** : Declaration of cancellation from Vöcklabruck by Rosalia Hueber concerning the promissory note of 29 September 1887.

**Friday, 2 April 1897** (undated) : The legal executor Doctor Theodor Reisch sends the Vienna District Court the declaration of cancellation from Ignaz Bruckner and Rosalia Hueber. The declaration is approved.

### Maintenance of Bruckner's grave

**Saturday, 27 March 1897** : Johann Langthaler confirmed from St. Florian to have received the bequest amount of 4,000 Florins for the maintenance of Anton Bruckner's grave and a fee to celebrate a (annual ?) « Requiem » Mass.

#### Wolf visits the Upper-Belvedere apartment

**Saturday, 17 April 1897** (Holy Saturday) : Paul Müller visits Hugo Wolf in Vienna. They go to visit the apartment of the « Kustodenstöckl » on the Upper-Belvedere. In the afternoon, Wolf plays at the piano the « Romantic » Symphony to Müller.

#### Kathi's inheritance

**Tuesday, 20 April 1897** : The house-keeper Katharina Kachelmayr (« Frau Kathi ») confirms having received the sum of 700 Florins from the Estate of Anton Bruckner.

#### Fulfillment of the will

**Tuesday, 1 June 1897** : The legal executor Doctor Theodor Reisch reports to the Vienna District Court that the fulfillment of the will of Anton Bruckner has been completed.

#### Death of « Sali »

**Thursday, 5 May 1898** : Death of Rosalia (« Sali ») Hueber in Vöcklabruck. She was named in honour of aunt Rosalia Mayrhofer (the sister of Theresia Helm and godmother of Anton Bruckner) .

#### Common grave in St. Florian

**Saturday, 18 May 1901** : The corpse of Anton Bruckner's sister, Maria Anna (« Nanni ») , is transferred from Vienna to St. Florian at the instigation of her living brother, Ignaz.

Inscription on the common-grave for Josefa Wagenbrenner, Maria Anna Bruckner, and Ignaz Bruckner in St. Florian :

Since 18 May 1901  
Fräulein  
Maria Anna Bruckner  
sister of composer Dr. Anton Bruckner,  
born on 27 June 1836 in Ansfelden,  
died on 16 January 1870 in Vienna.  
R. I. P.

« Hier ruhet seit dem 18. Mai 1901 / das Fräulein / Maria Anna Bruckner / Schwester des Tondichters Dr. Anton

Bruckner, / geboren am 27. Juni 1836 zu Ansfelden / gestorben am 16. Jänner 1870 zu Wien. / R. I. P. »

### Death of Ignaz

**Saturday, 4 January 1913** : Ignaz Bruckner dies in St. Florian at 8:15 in the evening. « Domkapellmeister » Franz Xaver Müller writes immediately to biographer August Göllerich junior, « Kapellmeister » Franz Bayer and Bruckner's legal executor Doctor Theodor Reisch.

Inscription on the common grave of Josefa Wagenbrenner, Maria-Anna Bruckner and Ignaz Bruckner in St. Florian :

« Organ-blower / “ Herr ” Ignaz Bruckner / died on 4 January 1913, at 80 years old. »

### Brahms : Final illness

The later years for the composer saw him living a comfortable life. His music, since 1860 anyway, had sold well, and Johannes Brahms, far from flamboyant or excessive, lived a frugal life in his simple apartment. A shrewd investor, Brahms did well in the stock-market. His wealth, however, was rivaled by his generosity, as Brahms often gave money to friends and young musical students.

Brahms' commitment to his craft showed he was a perfectionist. He often destroyed finished pieces he deemed unworthy, including some 20 String Quartets.

Brahms was very gentle during the last months of his life, and touchingly grateful for every attention shown him. His evenings were of necessity passed in his rooms, for he firmly refused all the entreaties of his friends that he would take-up his abode in one or another house. Every evening, at dusk, he used to place himself at the piano, and improvise softly for about half an hour, and when too tired to continue, would sit by the window gazing-out on the familiar scene till long after darkness had set in.

**1887** : Death of Edward Marxsen. Brahms interrupts his summer visit in Hofstetten to visit Clara Schumann in Frankfurt.

**1889** : Adelbert Theodor Edward (« Theo ») Wangemann invites Brahms to make an experimental recording.

**Monday, 2 December 1889** : It was at the Fellingings' flat at « Apostelgasse » Number 2 that the only known sound-recording of Brahms playing the piano was made by Thomas Edison's agent Theo Wangemann. Brahms had reportedly practiced his « Rhapsody », Opus 79/2, for the session but, irritated by the lengthy preparations, he changed his mind and, instead, played a shortened version of the « Hungarian Dance », WoO 1/1, and his own paraphrase of Joseph Strauß's polka mazurka « Die Libelle » (Opus 204) . The Fellingings' « J. B. Streicher & Sohn » grand piano, on which Brahms played on this occasion, has recently been carefully restored by Gert Hecher and is now at the Brahms Museum, in Mürzzuschlag.

**1889** : Brahms is appointed a « Freeman of Hamburg » . From this year onward, he spends his summers in Ischl.

**October 1890** : When Brahms was 57 years old, he decided to give-up composing. He begins « cleaning house » , and destroying incomplete works or abandoned compositions. Nevertheless, he couldn't resist himself from the world of music and compositions and, in his last years before his death, he crafted a number of accredited Masterpieces.

**1891** : Brahms composes the great Clarinet Quintet.

**1892** : Death of Brahms' sister Elise ; death of Elisabeth von Herzogenberg.

**1893** : Death of Hermine Spies.

**Around 1894** : (Photo) Brahms and friends :

Sitting, from left to right : Gustav Walter, Eduard Hanslick, Johannes Brahms, Richard Mühlfeld.

Standing, from left to right : Ignaz Brüll, Anton Door, Josef Gänsbacher, Julius Epstein, Robert Hausmann, Eusebius Mandyczewsky.

**1894** : Brahms crafts the 2 Clarinet Sonatas.

His admiration for the German clarinetist Richard Mühlfeld inspired Brahms to compose the « Clarinet Trio » .

**1895** : Death of Brahms's brother Fritz ; death of Doctor Theodor Billroth. Brahms' last visit to Switzerland.

Few events remain for record in the life of Johannes Brahms nearly to the end of its progress. Of these few, several have the pathetic interest of last visits to dear and familiar places made, so far as appears, without presentiment that they were final.

**Friday, 27 to Sunday, 29 September 1895** : Brahms was present at a 3 days' Festival held in Meiningen. The programmes were devoted to works by Bach, Beethoven, and Brahms (« the Festival of the 3 B's » as it has sometimes been called) . Those of Brahms selected for performance included the « Song of Triumph » ; the 4th Symphony ; the B-flat Pianoforte Concerto, with Eugène d'Albert as pianist ; the Clarinet Sonatas performed by the same artist with Richard Mühlfeld ; some of the Vocal Quartets ; amongst them, the early favourite « Alternative Dance Song » ; and others.

The Festival was an immense success, and the pleasure which the Master derived from the concerts is evident in the following lines written to Steinbach immediately after the last one :

« Dear Friend,

However tempted I may feel, I dare not break in upon your well-deserved rest ; but you shall find my hearty greeting awaiting you on your happy awakening ; how hearty and grateful it is there is no need to tell you in detail. You must have perceived each day that you gave me and all who took part in your splendid Festival, a quite exceptional pleasure. »

Brahms was, of course, a guest at the castle, and he remained on for a few days after the last concert.

**Thursday, 3 October 1895** : Leaving Meiningen, Brahms proceeded to Frankfurt on a flying visit to « Frau » Clara Schumann. Professor Hubert Ferdinand Kufferath of the Brussels Conservatory, with Mr. and Mrs. Edward Speyer, accompanied him on the short journey, and were, by his particular suggestion, invited to spend the evening at « Frau » Schumann's house. Professor Kufferath, a pupil of Felix Mendelssohn at Leipzig and, on a very old footing of intimacy at the Schumanns', had been for more than 20 years on terms of cordial friendship with Brahms also, though the 2 men met but seldom. « Frau » Schumann's daughters, Marie and Eugénie, and Stockhausen, were the only others present. The hours were spent in pleasant chat as between old friends, and music was represented only by a few of Brahms' folk-songs sung by Mrs. Speyer (« Fräulein » Antonia Kufferath) to the Master's accompaniment.

**Friday, 4 October 1895** : Brahms left in the morning, but before his departure, he requested his old friend to play to him. 42 years had passed since Schumann had desired him to play for the first time to her, marking both musicians with inevitable outward signs. The traces of suffering and sorrow had deepened of late on « Frau » Schumann's countenance, but those who were happy enough to listen to her playing at this period, in the privacy of her home, knew that her spirit was still young, and Brahms' last remembrance of the great artist, the remembrance of an old age which had left the poetry of her genius untouched, will have fitly completed the long chain of personal associations begun when Schumann called his wife to rejoice with him in the daring power and Romantic enthusiasm of Johannes' inexperienced youth. When she rose from the piano on that **October** morning, the final link had been added. « Frau » Schumann and Brahms were not to meet again on earth.

One of Brahms' late public appearances was on the occasion of the concert given in the « Börsendorfer » Hall, in Vienna, by Signorina Alice Barbi (now, the Baroness Wolff Homersee) shortly before her marriage. He pleased himself by acting as accompanist to the distinguished cantatrice, whose programme included a number of his songs. He held the « bâton » for the last time on a Vienna platform when he directed the performance of his « Academic Festival » Overture by the students of the Conservatory at the Festival concert given to celebrate the 25th anniversary (1895) of the opening of the present home of the « Gesellschaft der Musikfreunde » .

**Saturday, 19 to Tuesday, 22 October 1895** : A 4 days' Festival to celebrate the inauguration of the new concert-hall at Zürich seems to carry us more than one stage nearer the end. It brought Brahms for the last time to Switzerland to conduct his « Triumphlied » ; a fine close (for as such it may almost be regarded) to a noble career.

Brahms was in over-flowing spirits during the entire Festival, enjoying the concerts, the private gatherings, the meetings with old friends, in a mood of harmless gaiety that recalls the Detmold Ducal Palace days.

« We have seen Brahms and Joachim together again, both in full vigour ; may we not hope for a prolongation of this happy state of things ? » , writes Steiner a few days after the Festival.

Josef Viktor Widmann was, of course, there, and stayed with Brahms at Hegar's house. When he bade the Master farewell on the day after the concert, the 2 friends clasped hands in a final grasp.

**Friday, 10 January 1896** : Brahms officiated for the last time in public at Eugène d'Albert's concert in Berlin conducting his 2 Pianoforte Concertos and the « Academic Festival » Overture, and was received with the usual enthusiasm.

Charles Villiers Stanford speaks of being present at a dinner party given by Joseph Joachim during Brahms' brief visit :

« Joachim, in a few well-chosen words, was asking us not to lose the opportunity of drinking the health of the greatest composer - when, before he could say the name, Brahms started to his feet, glass in hand, and calling-out “ Quite right ; here's to Mozart's health ”, walked round clinking glasses with us all. His old hatred of personal eulogy was never more prettily expressed ... The last vision I had of him was as he sat beside the diminutive form of the aged Menzel, drinking in, like a school boy, every word the great old artist said with an attitude as full of unaffected reverence as of unconscious dignity. »

Of all modern painters, Adolph von Menzel was the most admired by Brahms. He visited him on several occasions, and spoke of him and his works with unfailing enthusiasm.

That the Master had realized a competence some years before his death (more than a competence for one of his extraordinarily simple habits) is generally known. How he regarded it, how he used it, may have been but little suspected outside a small circle. His friend and publisher, the late head of the firm of Simrock, shared his confidence on the subject more than anyone else, for it was often through his agency that Brahms' munificence was applied to its object ; the substantial help, perhaps, of a needy musician, or a promising talent. He contributed more than one large donation to the « Franz Liszt Pensionsverein » of Hamburg, a Society founded by Liszt, in 1840, for the benefit of aged or disabled members of the « Stadt Theater Orchester » . Several authentic stories are told by accidental witnesses of some of his particular acts of generosity. One has been related to the author by the « Landgraf » of Hesse, who was sitting with the Master one morning when a caller appeared with a tale of distress which touched his heart. He listened quietly, asked some questions, then went to his writing-table, and, handing his visitor the entire sum of money towards which he was asked for a contribution, said quietly :

« Take this from me ; I do not need it. I have more money than I want for myself. »

This was his usual formula on such occasions, « I do not need it » , to which was sometimes added :

« If you should ever have it in your power, you can pay me back. »

**End of May 1896** : Brahms returned to Ischl and began again to work on his compositions and to take the long walks that he always enjoyed.

**Monday, 15 June 1896** : Brahms's other break from Ischl that summer was a quick trip to Vienna, for the silver anniversary of Maria and Richard Fellingner. There are photographs of Brahms in the Fellingners' garden during the party. He looks just detectably shrunken and strained. The exhaustion he had felt at Clara Schumann's funeral lingered through the summer.

...

Brahms spent a few days in Vienna with his good friends the Fellingners, who were celebrating their silver wedding anniversary. He is said to have played the 1st and 7th (« Herzlich hut mich erfreuen » , in the original order) of the Chorale Preludes (for organ) for them and for his friend and editor, Eusebius Mandyczewski, who « wondered at their impersonality » .

Maria Fellingner depicted Brahms in a highly-successful relief ; furthermore, she made an amusing statuette showing him holding a cigar, which was based on a photograph she had once taken. This was merely one of a large number of informal photographs she took of Brahms, showing him either by himself or together with other guests of the Fellingners at the so-called « Arenberg Palais » at Number 96 « Landstraße-Hauptstraße » , where they occupied a flat from September 1893 (at first, on the ground-floor and, then, from 1896 upstairs) and where they also had a large garden at their disposal. It is evident from the photographs that Brahms felt very much at ease there ; a particularly charming one shows him with Marie Soldat. (The « Palais » was demolished, in 1958, and replaced by a modern building.)

Copies of some of Maria Fellingner's busts of Brahms were placed on sale, with the proceeds going to the Viennese Brahms Monument Fund.

(Photo) The last photo of Johannes Brahms alive. The famous picture is part of a series of 6 taken by Maria Fellingner in the garden of the Fellingners (Palais Arenberg) , in Vienna's 3rd District.

Maria Fellingner also published collections of her photographs of Brahms in Vienna, in 1900 ; and in a second, enlarged edition at Leipzig, in 1911.

**Wednesday, 24 June 1896** : Returning immediately to Ischl, Brahms spent the next few weeks in his usual fashion, though neither mind nor body really recovered the double shock of « Frau » Schumann's death and of the anxious journey to Bonn.

Brahms was visited by a former pupil, Richard Heuberger, a Viennese choral conductor, music-critic, and Opera composer.

In his diary, Heuberger recorded that on that morning Brahms « played for me his manuscript Chorale Preludes. Splendid pieces ! One, a contrapuntal work, strophe after strophe worked-out fugally ... soon, the chorale enters and, from the developing chorale, a theme in the upper 5th follows through. With all its precision, this work is splendid music. True Brahms ? »

Heuberger here seems to be referring to the first of the 7 Chorale Preludes, indeed, an impressive contrapuntal essay. The manuscript of 3 of the final 4 Chorale Preludes is dated « Juni 96 Ischl » , but these drafts were probably not finished until the very end of the month and seem not to have been actually prepared for publication at that time.

**Sunday, 5 July 1896** : Richard Heuberger visited Brahms again when he noted that « the package (namely the Chorale Preludes) must have already been sent away, for today, Brahms told me he would show me some new compositions » . Unfortunately, Heuberger doesn't say what these were. They might indeed have been more Chorale Preludes, as some assume, but they could also have been some of the folk-song settings Brahms is thought to have also been working on at this time, which were later posthumously published. In either case, they were probably not all new - except, of course, to Heuberger. Despite his return to seeming normalcy after the emotional and physical stress of the trip to Frankfurt and Bonn, Brahms began to feel increasingly unwell and lacking in his usual stamina.

« Brahms' things must have been sent away already, for he has promised to show me new compositions. » says Heuberger's diary.

These were, no doubt, some more Preludes. 11 were found after Brahms' death, the last 4 being written on a different kind of paper from that used for the first 7.

The « Elf Chorale-Vorspiele » (11 Chorale-Preludes) for organ are instrumental movements founded, as their name implies, upon some of the grand old church tunes for which Germany is famous. They are worked in florid counterpoint in a style which may be studied, also, in the Organ Preludes contained in the third volume of the Leipzig Society's edition of Bach's works, and are written with an ease to which no other composer than Brahms has attained in this style since Bach's day. That the great modern Master had studied it, during the years of his retirement in the 50's, before he was in possession of the Society's volumes, seems certain, from the fact that 3 old books of Bach's Chorale-Preludes once belonging to Brahms are still in existence. One, bearing Brahms' pencil autograph, is in manuscript, possibly that of his father or brother ; the others are early published editions.

The majority of the Chorales selected for treatment, in 1896, have death for their subject, and are written in the profoundly serious vein to which we are accustomed in the composer's sacred works. The 4th Prelude, « Herzlich thut mich erfreuen » , is in a somewhat lighter vein than the others, but is, nonetheless, absolutely and distinctly Brahms. One of the most delicately touching is the 8th, « Es ist ein Ros' entsprungen » . « Herzlich thut mir » is the subject of 2 of the movements, « O Welt ich muß dich lassen » of 2, of which one is the 11th and last.

**Summer 1896** : Brahms writes the « 4 Serious Songs » (« Vier ernste Gesänge ») which drew on work from the Hebrew Bible and the New Testament. It was a revealing piece for the composer, damning what was found on earth

and embracing death as a relief from the material world's excesses and pain.

They indicated the bent of the composer's thoughts during his last year of life, and we involuntarily apply to them the words used by Brahms in reference to Robert Schumann's theme. They speak to us « as the message of a spirit about to depart, and we think with reverence and emotion of the glorious man and artist » .

The « 4 Serious Songs » were published in the **summer of 1896** with a dedication to Max Klinger, his personal friend, of whose work, including that inspired by his own compositions, he became a warm admirer, though he at first disliked the painter's « Brahms Fantasie » .

3 of the songs deal grimly with the thought of death (Eccles. iii. 19-22, iv. 1-3 ; Eccus. xli. 1, 2) ; the 4th has for its text St. Paul's beautiful glorification of love (1 Cor. Xiii. 1-3, 12, 13) :

« For that which befalleth the sons of men befalleth beasts ; as the one dieth, so dieth the other, for all is vanity ... »

« Though I spake with the tongues of men and of angels, and had not love, I should be as sounding brass or a tinkling bell ... »

« We see now through a glass, in a dark word, but then face to face. Now, I know it partly, but then I shall know it as I am known. »

« Now, remain faith, hope, love ; but the greatest is love. »

It is certain that Brahms speaks to us in the songs from the depth of his convictions. « Herr Geheimrath Doktor » (Theodor Wilhelm) Engelmann arrived one evening in the course of the summer on a day's visit to Ischl. Brahms called at his hotel at 6 o'clock the next morning, and after breakfast brought his friend back to his rooms, where they spent several hours together. The composer was in delight over some lately-arrived volumes of the complete edition of Franz Schubert's works, then in progress, and could not sufficiently express his joy in their contents.

« See here, » , he said with his energetic enthusiasm, as he pointed to one place after another with beaming face and lightening eyes, « see here, what a splendid fellow he was ! People talk of him as a mere melodist, but look what material he had even in his early works ; look what the melodies are, how they grow. »

By-and-by, taking-up a copy of the « 4 Serious Songs » , he said :

« Have you seen my protest ? I wrote these for my birthday. »

The explanation of these words is that the Master viewed with mistrust, or even dislike, modern efforts to revivify and popularize the services of the Evangelical Church by the introduction of sacred musical works composed for the

purpose, of which those of Heinrich von Herzogenberg may be taken as the type. Brahms, who subscribed to no church dogmas, regarded this tendency as artificial, and therefore as weak and unhealthy, and much as he admired Herzogenberg's powers, he regretted that they were dominated during the last 10 years of his creative activity by his strong ecclesiastical bias. Brahms' love of the Bible and his preference for Scriptural texts was, as we know, not that of what is conventionally called a « pietist » . He spoke in the language of the people's book as a realist who was, at the same time, an idealist. He has so arranged the texts of his « German Requiem » that it would be difficult to construe the work as the embodiment of a definite belief, and he expressly refused to enlarge it into an account of the Passion, Death, and Resurrection of Christ ; and yet, as we have endeavoured to show, it contains the presentiment, the inspiration, of something positive. From Brahms' stand-point, the attempt to go behind the mysteries of life and death, to construct the unspeakable, the unthinkable, into verbal formulæ, is not only pre-doomed to failure, but is almost irreverent. Yet, as we may remember, « he had his faith » , and if anything may be judged of it from the story of his life, the spirit of his works, this faith lay in acceptance of the immutability of truth, the sacredness of life, and the sovereignty of love.

Hermann Deiters writes that the immediate occasion of the composition of the « 4 Serious Songs » was the death of the artist Max Klinger's father, which occurred earlier in the year. The not un-natural assumption that has sometimes been seen in these solemn utterances of the great composer a presentiment of his own fast-approaching end may or may not represent a fact. It has not been accepted by those of his friends amongst whom he passed the last few months of his life, and certainly nothing that is known of his individuality lends likelihood to the notion of his going-out, as it were, to meet the thought of his death. On the other hand, his repeated assertion that the songs had been composed for his own birthday points to the possibility that his mind may have been under the influence of forebodings of which he was, perhaps, but vaguely conscious.

« Yes, Grüber, we are in the front-line now. » , he said to his landlord on hearing of the death of some of the old people in the course of one of his last summers at Ischl.

**July 1896** : One hot day, Brahms walked 8 miles from Ischl to Steg, further than he had intended, then turned around and walked back most of the way. That night, he felt so sick he thought he was going to die ; he passed-out again and again.

Still, he seemed stunned when the young composer Richard Heuberger plucked up courage to confront him, saying his eyes and skin looked yellowish and he must see a doctor. Brahms had rarely visited a doctor in his life, though he had submitted to a dentist to have his upper-teeth pulled and a plate made.

He put-up a brief resistance, then, held his head in his hands and said to Heuberger :

« I'm no hypochondriac. (...) Nobody has told me that I seem to be altered. I thank you from my heart. You know I don't like to have anything to do with doctors, but if it's something serious, it ought to be looked at. But it's annoying (...) the few years one has left to live (...) and to go to the doctor ! »

...

Brahms' friends, observing that he was noticeably jaundiced. The Master admitted that he did not feel well. They finally persuaded him to see a physician. In fact, he saw several.

It had not escaped the notice of Brahms' friends that his ruddy complexion had changed to a yellow colour, and some of them were courageous enough to speak to him about his health, and urge him to consult a doctor. At first, he showed much annoyance when the subject was broached, and turned it off impatiently with the reply that, as he never used a glass, he did not know how he looked. But the uneasiness felt about his condition increased, and he was at length persuaded to seek medical advice in Vienna. The doctor whom he consulted did not issue an alarmist report, but, pronouncing him to be suffering from jaundice, ordered him to Karlsbad for the « cure » .

...

**End of July** : Brahms called on Doctor Heinrich Hertzka, the Director of the cold water health-centre (« Kaltwasserheilanstalt ») in Ischl. He received a diagnosis of jaundice and an order to take a cure of Karlsbad salts. The doctor also placed him on a strict diet.

Brahms asked anxiously :

« But no goulash ? »

Doctor Hertzka :

« Absolutely not ! »

Brahms groaned :

« Really ? »

But added slyly :

« Then, I'm going to tell people I didn't see you till tomorrow, and eat goulash at the Eibenschützes' today - after all, it was cooked especially for me. »

**Thursday, 13 August 1896** : A note written by the composer to « Frau » Caroline contains little sign of his depressed condition. It opens with charming, simple comments on his step-mother's last little budget of home news, urges a tour in Norway and Sweden on Fritz Schnack (« it would give me real pleasure if he would do it, and tell me all about it afterwards ») and ends :

« The summer is not exactly fine, but whoever, like myself, rises early and can go-out walking when he will, may be content and there are innumerable beautiful walks here. I hope you will continue so well and write sometimes to ... Your heartily greeting, Johannes. »

In Ischl, Brahms drank mineral water originating from Karlsbad for 4 consecutive weeks. He was now taking a pause, wondering whether he should go there in **September**. Noting the failure of the cure, Richard Fellingner ordered Brahms (despite his obstinacy) to leave for the spa-centre. Heuberger had also strongly recommended Brahms to go to Karlsbad. Much against his will, the Master, who hated the very idea of waters and cures, and who prided himself on never having been ill in his life, gave-up some pleasant Ischl engagements.

Protesting, he made his reservation in Karlsbad. With his healthy man's habit of seeing illness as a sort of moral failure, Brahms dubbed his condition « my pent-bourgeois jaundice ». Visiting Viktor Miller's villa just before he saw the doctor, Brahms seemed in high-spirits : in a photo, he stands between 2 laughing attractive women, Viktor's wife Olga and their daughter, brandishing his cigar and looking roguish.

For the sake of precaution, however, Doctor Hertzka called in the famous Viennese physician and surgeon, Professor Leopold Schrötter, for the purpose of a consultation. Schrötter reassured Brahms, but told the worried Heuberger, in confidence, that he considered the Master a lost man, his liver being greatly enlarged, and the gall ducts obstructed. Before long, cancer of the liver was plainly apparent, the same dread disease to which Brahms's father had succumbed. Surgeon Leopold Schrötter corresponded with Doctor Hertzka about Brahms's illness, and, on **Friday, 28 August**, Brahms told Heuberger that Schrötter was against his going to Karlsbad because he suspected that jaundice (or hepatitis) was not the sole cause of his illness. But Brahms refused to undergo a joint-examination by the 2 doctors ; instead, he decided to return to Vienna on **Monday, 31 August** to consult Doctor Josef Toelg.

Brahms should not go to Karlsbad, because there might be another cause for his illness apart from jaundice (or hepatitis) ; Brahms had therefore decided to return to Vienna to consult Doctor Toelg « who knows him well and for whom he has a high-regard » .

Toelg had found Brahms' liver to be enlarged, but apparently it was Doctor Grünberger, in Karlsbad, who made the fatal diagnosis of pancreatic cancer - the same disease that had ended Brahms' father's life. It had probably been developing undetected for some time, for the « Merck Manual » , that Classic physician's reference book, states that « jaundice is uncommon early » . Even today, after more than a Century of medical progress, the prognosis for advanced hepatic cancer is still poor.

Brahms duly traveled back to Vienna from Ischl on **Monday, 31 August 1896**.

On **Tuesday, 1 September 1896**, at an evening meal at the « Gasthaus Zur blauen Kugel » restaurant he told a group of friends, Heuberger among them, that he was leaving for Karlsbad the following day (**Wednesday, 2 September 1896**) . The pent-bourgeois jaundice had gotten worse.

On that day, Fellingner wrote to Heuberger that Doctor Toelg regarded Brahms's condition as grave but not incurable, that he attributed it to a disorder of the biliary tract, and that a cure at Karlsbad was likely to be successful.

It is accordingly evident that Brahms must have consulted Toelg on **Tuesday, 1 September 1896**, and that his decision to take the cure at Karlsbad was taken on the latter's advice.

According to Max Kalbeck, however, it was not until the evening of **Thursday, 3 September 1896** that Brahms, feeling poorly, accompanied by faithful Fellingner (who had been at his side during the last few days in Ischl) , took the night-train to Karlsbad from Vienna.

The composer wrote a grateful letter to « Frau » Fellingner :

« I have reason to praise your husband to the skies, and to be grateful to him for his most touching kindness. (...) It meant much to me at that time, and I can hardly tell you how pleasant it was. I do not like to be reminded of my body, and probably I should have stayed in Ischl in sheer sulkiness. »

They arrived at Karlsbad's railway station the next morning. There, they were welcomed by 2 friends of Eduard Hanslick : the young composer « Herr » Emil Seling and parish church « Musikdirektor » Alois Janetschek (which had been entrusted by Hanslick at this position) . Then, the famous pianist, Teodor Leszetycki referred Brahms to the distinguished spa physician Doctor Grünberger.

(Fiction :)

Doctor Grünberger was still making the last entry in his ledger when Brahms erupted through the door.

« “ Herr ” Doktor, I am Johannes Brahms. »

Grünberger, a round man with a round face, stroked his Vandyke beard, looking-up from his ledger, adjusting his round spectacles. Doctor Heinrich Hertzka of Ischl had written to him about Doctor Brahms, the famous composer, a case of jaundice, sent to Karlsbad for the waters, for Grünberger to prescribe a regimen. Brahms's appearance spoke for itself, yellow face, dry skin, dull eyes, brittle white mane, seeming to shrink as he stood in the doorway, hat in hand, clothes too large by 1 size or 2. The receptionist was close behind the intruder, frowning to indicate the patient had rushed past him, ready it seemed to launch into a tirade, but Grünberger held up a finger for silence.

« “ Doktor ” Brahms, I am indeed pleased to meet you, but did we not arrange for me to examine you tomorrow morning in your home ? »

Brahms spoke sharply.

« I am here now. Examine me at once ! »

The voice surprised Grünberger, forceful despite its pitch, despite his appearance, but he noted as well the whites of his eyes, yellow as mustard, panic in his voice.

« Very well, then. »

He turned to the receptionist :

« “ Herr ” Boll, please see that we are not disturbed. »

The young man still frowned ; an ante-room full of patients awaited the doctor ; but he nodded, shutting the door behind him.

Having won his battle Brahms relaxed, his shoulders slumped, and his clothes seemed yet another size too large.

« All of my life, I have avoided Karlsbad like the plague. »

He laughed.

« I have never been ill a day in my life. I have never had much faith in spas and water-cures. It is all in the mind, is it not, “ Herr ” Doktor, whether a man is ill or not ? »

« Sometimes, it is, yes. »

« Most of the time - but I am glad finally to have come. I have my bourgeois illness to thank for bringing me here - and I see that Karlsbad's reputation for sunshine, at least, is not undeserved. »

The doctor smiled.

« Sunshine is, indeed, something we can guarantee. »

He could see his patient talked to comfort himself.

« Well, “ Doktor ” Brahms, shall we get on with it ? »

« At once. »

« Will you sit here ? »

Brahms sat where he indicated, shy as he smiled.

« Now remember, “ Herr ” Doktor, it is your responsibility only to cure me - and not to tell me anything unpleasant. »

The doctor entered into the spirit of the game.

« Of course - but if you say A, you must also say B. It is your responsibility, “ Doktor ” Brahms, is it not, to allow me to cure you ? You must follow my instructions to the letter, must you not ? »

Brahms grinned weakly.

« Of course. »

« Tell me, then, when did you first think something was the matter ? »

He had caught a severe chill on the night of Clara’s funeral, succumbing to the exhaustion of his long journey.

...

(Brahms developed an icterus of increasing intensity together with a considerable enlargement of the liver and loss of weight. Since infectious hepatitis could scarcely come into the question, from the medical point-of-view a neoplasm in the region of the liver as well as cirrhosis of the liver were considered. While hepatic carcinoma is a relatively rare disease in Europe even today and Brahms, on the other hand, had consumed copious quantities of concentrated alcoholic drinks during his lifetime, cirrhosis of the liver is the most probable diagnosis, especially as at the end hemorrhages from esophageal varices and the lower intestinal segments occurred.)

Brahms stayed at the inn owned by « Frau » Anna Seling (Emil's mother) where he was going to take his meals. He particularly liked her well-ordered Viennese-style kitchen. Leszetycki carefully warned Grünberger and Anna of the patient's idiosyncrasies. Hanslick, moreover, saw to it that Emil and Alois were helpful to Brahms in every way. Several of his friends came to visit him : Bertha Faber, Ignaz Brüll, Hans Köbler (a composer and teacher of composition from Budapest, for whom Brahms had a great liking) , and Amalie Nikisch, the wife of the conductor. Finally, Professor Engelmann of Utrecht came to Austria, ostensibly for professional purposes, and went to Karlsbad as a matter of course. When he had examined his friend, the gravity of Brahms's condition was obvious to him. He could not, however, believe that the case was utterly hopeless, and accordingly, a few months later, he sent his son-in-law, an eminent surgeon, from Holland to Vienna for the purpose of a fresh examination.

It may be doubted whether Brahms realized his own condition. He who had always looked on illness as a blemish would be the last to admit that he himself was seriously ill.

The report written to Eduard Hanslick by Doctor Grünberger, after 3 weeks' careful observation, was ominous. There was considerable swelling of the liver, with complete blocking of the gall-passages, and the inevitable results - jaundice,

indigestion, etc. The eminent medical authority could not but regard the condition of his patient as « very serious » .

Soon, Brahms was working at the organ chorale preludes and writing letters to friends in his vacation mode.

To Hanslick :

« I am grateful to my jaundice for having at last brought me to famous Karlsbad. I was at once greeted by glorious weather. (...) What is more, I have an absolutely charming lodging. »

To Josef Viktor Widmann :

« My indisposition need not make you in the least uneasy : it is quite a common place jaundice, which unfortunately has the idiosyncrasy of not wanting to go away. But it has no further significance, as affirmed by the doctors. (...) Besides, I have not had pain or such like for a single day - nor even lost my appetite for a single meal. »

Janetschek took Brahms to the « Stadt Brussels » inn, near the Hirschsprung. Here, during the fine autumn days which succeeded the wet summer, he made himself content, and even wrote cheerful reports to his friends, in which he expressed satisfaction at having been obliged to make the acquaintance of the celebrated watering-place. He was the object of much considerate and respectful attention, which seemed to cheer him ; and Bertha Faber came to be near him, accompanied him in his daily walks, and took tender care of him.

No more definite name was given to the malady on the Master's return to Vienna after some 6 weeks' treatment at Karlsbad, and his request that he should be told « nothing unpleasant » was scrupulously observed.

Heuberger, who had been surprised at Doctor Schrötter's original advice to Brahms, heard the explanation from the Doctor Toelg himself when he happened to meet him in Vienna in **September**. His friend, Schrötter informed him, was doomed :

« For Brahms's illness, there is no Karlsbad. It is of no consequence where he spends his money. »

**October 1896** : Brahms returned to Vienna noticeably weaker but so determined not to be an invalid that, for at least a while, he continued his daily walks, attended concerts, and socialized with his increasingly concerned friends.

Eventually, the walks had to be given-up, but Brahms's loyal friends continued to take him for rides and entertain him in their homes.

Brahms went about as before, dining more frequently, however, with his most intimate friends the Fellingings, Fabers, Millers, Conrats, Straußs and von Hornbostels, and often accepting the offer from one and another of a seat in a box at the « Burg Theater » . He became very testy if asked how he was or if told that he looked better, and answered to every inquiry, « Each day, a little worse. » , but continued in letters to his step-mother and other friends at a

distance to keep-up the fiction that he was suffering from an ordinary jaundice which only needed patience. Those who loved him, however, looked with dismay at the alteration that was taking place in his appearance. The yellow colour, which had been the first striking symptom of his condition, was changing gradually to a darker hue, the bulky figure shrinking to terrible emaciation ; the firm gait was beginning to falter, the head was no longer held erect.

**Tuesday, 20 October 1896** : Some 3 weeks after Brahms's return to Vienna, Richard Heuberger noted in his diary that Doctor Josef Toelg was in favour of operating « if there is still time » .

### Doctor Josef Toelg

The physician Doctor Josef Toelg was born on 27 June 1852 in Brauna (Brunjow) . He graduated from the « Gymnasium » of Komotau (Chomutov) in 1872. He studied at the University of Vienna and, in 1878, he was named the best doctor of its promotion. He became assistant-physician at the Bamberg Clinic until 1885. In 1891, he was appointed primary physician and director of the Imperial-Royal Wilhelmine Hospital (« Kaiserlich-Königliche Wilhelminen-Spital ») of Vienna.

The Wilhelmine Hospital has 2 departments : an internal clinic and a surgical clinic equipped with an operating room. A separate, detached ground-floor building provides a « Secir-Saal » , a guarded corpse-room, a morgue and a laundry-room. The 2 buildings communicate by telephone. The Merciful Sisters work as nurses.

...

Doktor Josef Toelg, Mediciner : geboren 27. Juni 1852 in Brauna, absolvirte 1872 das Gymnasium in Komotau, studierte an der Wiener Universität, woselbst er im Jahre 1878 zum Doctor der gesammten Heilkunde promovirt wurde, war sodann bis 1885 als Assistent an der Klinik Bamberger thätig und wirkt seit 1891 als Primarius und Leiter des Kaiserlich-Königlich Wilhelminen-Spitals.

Das Wilhelminen-Spital besitzt 2 Abtheilungen, eine interne und eine chirurgische, letztere mit einem Operations-Saale. Ein eigenes isolirtes Parterregebäude enthält noch den Secirsaal, das Leichenwächterzimmer, die Leichenkammer und die Waschküche. In den beiden Gebäuden des Spitals, welche telephonisch mit einander verbunden sind, versehen Barmherzige Schwestern den Wartedienst.

Die Stelle eines Directors und des Primararztes der chirurgischen Abtheilung ist gegenwärtig unbesetzt. Primararzt der internen Abtheilung ist Doktor Josef Toelg.

...

**Early December** : A visit to Vienna of Joseph Joachim and his colleagues of the Quartet gave Brahms touching pleasure ; he was with them as much as possible during the day, and generally remained with them, after attending their concerts, until late at night. He continued to take interest in important new compositions, and begged Robert Hausmann to come to his rooms to play him Antonín Dvořák's Violoncello Concerto. He accompanied the entire work

on the piano, and broke into enthusiastic admiration at the end of each movement, exclaiming after the last one :  
« Had I known that such a Violoncello Concerto as that could be written, I would have tried to compose one myself !  
»

...

Brahms' heart was of gold, if ever such existed. He was rough sometimes (often, perhaps) let it be freely granted. The spoiled humours of his last 2 or 3 years have already been noted ; they do not amount to much. He permitted himself deliberately to repulse strangers or slight acquaintances when he felt so disposed ; necessarily, if his time and tranquillity were to be protected. Now and then, he was inconsiderate or blunt to his friends. The concentration of mind, the sacrifice of immediate inclination, the devotion of energy, involved in the fulfilment of the career of genius are often but imperfectly realized even by the friends of a famous man. The great poet, the great painter, the great musician, has his brilliant rewards. He has also his bitter disappointments, and one of the hardest of these (which is especially apportioned to the lot of the creative musician) is the discovery that, as in the case of other princes and sovereigns of the world, his path in life must be solitary. Brahms may sometimes have imagined he had reason for his impoliteness ; more frequently a gruff manner, an awkward joke, was the result of a constitutional want of presence of mind in trifling matters, which frequently caused him to be misunderstood. His real attitude is expressed in a note published after his death by Eduard Hanslick in the « Neue Freie Presse » article from which we have already more than once quoted. Hanslick had sent him a packet of letters to read, and had inadvertently enclosed in it one from a mutual friend which contained a comparison of Beethoven and Brahms. In it were these words :

« He is often offensively rough to his friends like Beethoven, and is as little able as Beethoven was to free himself entirely from the effects of a neglected education. »

Hanslick was very much upset on remembering what he had done, and immediately wrote to Brahms to throw himself on his mercy and beg his silence on the matter. The Master immediately answered :

« Dear Friend,

You need not be in the least uneasy. I scarcely read ... 's letter, but put it back at once into the cover, and only gently shook my head. I am not to say anything to him. Ah, dear friend, that happens, unfortunately, quite of itself in my case ! That one is taken even by old acquaintances and friends for something quite different from what one is (or, apparently, shows one's self in their eyes) is an old experience with me. I remember how I, startled and confounded, formerly kept silence in such cases ; now however, quite calmly and as a matter of course. That will sound harsh or severe to you, good and kind man - yet, I hope not to have wandered too far from Gœthe's saying, " Blessed is he who, without hate, shuts himself from the world. " »

**Tuesday, 22 December 1896 :**

« Frau » Celestina Truxa, whom Brahms amiably called his « house-hostess », traditionally set-up a Christmas tree in

his apartment, at the holiday season, and trimmed it for him. Gifts for her 2 boys were placed under it. She said : « The last Christmas, he was alive, I didn't have the heart to bother him with all that but he stopped me. “ How's this ? I find no Christmas tree in my rooms. ”, he asked abruptly. »

She assured him that there was so much to do, but that it would come.

« Of course I rushed-out, bought a tree, set it up as usual in there, and trimmed it. That Christmas Eve, one hardly noticed the terrible effort he made to cover-up his pain and exhaustion. Not for anything would he have cast a gloom over the children's party. So good and thoughtful was he ! »

Sometimes, sad sequels show us that our invitations and good wishes and intentions are extended not a month too soon.

Brahms' humor could, at times, be very facetious, and one Christmas incident frightened him as much as his 2 little victims. Nearly 50 years afterward, the now-elderly « Frau » Truxa explained it thusly to a visitor (who ultimately wrote a biography of the composer) :

« Just before Christmas, the first year I was at “ Karlsgasse ” Number 4, Brahms found my 2 little boys playing together. He pulled a grievously long face and said : “ Oh, children, I have some sad news for you. The Christ Child has influenza and can't bring you anything this Christmas. Being quite young, the boys took him literally and burst into the most hideous howls of grief and despair. The Master had not meant his little joke to have such a powerful effect, and was greatly embarrassed. He rushed to his rooms for candy. But even that was no good. Then, he came helplessly to me and confessed : “ Look here, ' Frau ' Truxa, now I don't know any more which way to turn. Can you not pacify the children ? Assure them that the Christ Child has already recovered. ” Which I did with great success. »

**Christmas 1896** : Brahms spent Christmas with the Fellingner family, whose photographic hobby has provided us with some of the last images of Brahms.

Brahms not only spent Christmas Eve with the Fellingners, but invited himself to dine with them also on **December 25, 26, and 27 (Friday, Saturday and Sunday)** . « Frau » Fellingner gave him a « secco » , a soft, short coat, as one of her Christmas presents, and it seemed a sort of comfort to him to put it on when he was at the house, where it was kept in readiness for his use, and to sit quietly in the family sitting-rooms without need of exerting himself. After dinner on the 27th, he raised his glass, saying, « To our meeting in the New Year » , but by-and-by added, pointing downwards, « But I shall soon be there. » . He dined again on New Year's Day with the same dear friends, whose joy it was to feel that they were privileged to afford him some solace in his weakness and suffering.

**Friday, 1 and Saturday, 2 January 1897** : The Joachim party returned to Vienna after a tour in the Austrian provinces, and gave 2 concluding concerts in the « Börsendorfer » Hall. Ill as he was, Brahms not only attended both concerts, but came on the morning of the second to Joachim's rooms at the « Hotel Tegethof » to listen to the rehearsal of his G major Quintet, which was in the evening's programme. He derived peculiar pleasure from hearing it. « That is

not a bad piece. » , he said, as though half ignoring that it was his own. The scene which took place after the performance of the work in the evening is remembered with emotion by those who took part in it. It was the final one in the friendship of Brahms and Joachim - a friendship as striking and interesting as any contained in the history of art. Its character may be suggested to the reader's imagination in a few words written to the author by the great musician whose love and recognition Brahms enjoyed from beginning to end of his career :

« He had great pleasure that evening in the G major Quintet. It was touching to see him come before the public to acknowledge the enthusiasm aroused by his work. The tears were in his eyes and he was very weak. The people cheered and cheered endlessly. »

**Sunday, 7 February 1897** : Brahms' state gradually changed for the worse. He dined with the Fellingings in the middle of the day and seemed excited and restless throughout the meal. When it was at an end, he intimated that he wished to be alone with Doctor and « Frau » Fellinging, and, retiring with them, began to speak about his affairs. He desired, he said, to make a new will, but dreaded the necessary formalities to such a degree that he knew not how to resolve to go through them. Would it not be possible to arrange his affairs quietly without having to speak about them with strangers ? Doctor Fellinging said it could be done, and that by the Austrian law things could be so managed that there need not even be witnesses. The Master remained for 4 hours (from 2 till 6 o'clock) with Doctor and « Frau » Fellinging, discussed his affairs in minute detail, and asked Doctor Fellinging to be his curator. He seemed relieved at the end of the conversation, and stayed on with the family, chatting about other topics.

...

It is a measure of the reliance Brahms had come to place on the Fellingings' advice in certain matters that he should have discussed with them at great length, on **Sunday, 7 February 1897**, the terms of a new will he wished to make ; at the same time, he asked Richard Fellinging to act as executor of his estate. Fellinging subsequently drew-up the will in accordance with Brahms's wishes and delivered it to him the following morning, explaining that if Brahms were to write it out himself and date and sign it, it would be recognized as valid under Austrian law. However, Brahms never did this, and only Fellinging's draft was found in his rooms after his death. (This account of what happened is taken from Florence May's Brahms biography and differs somewhat from that given in « Klänge um Brahms » ; but May states that she obtained her information directly from Maria Fellinging.) In the absence of a valid new will, Fellinging, who was duly appointed curator of the estate on **Monday, 5 April 1897**, became embroiled in legal disputes that continued for years after his own death in 1903 and were not finally settled until 1915.

**Monday, 8 February 1897** : In the morning, Doctor Fellinging took to the composer at his rooms, at « Karlsgasse Number 4 » , the copy of a will which he had drawn-out to meet Brahms' expressed desires, and explained to him that he had only to write it out himself, date and sign his name to it, and it would be valid according to Austrian law. Brahms, who was on the point of starting-out to his dinner, expressed himself as glad and relieved, and placed the paper in a drawer of his writing-table ; and Doctor Fellinging, pleased to have cheered him, returned home with the conviction that he would copy it without delay. The Master did not return to the subject at any future meeting with his friends, whilst they, believing the matter to have been finally settled, did not again allude to it.

**February** passed, and Brahms grew continually worse.

Every day, he spent a good deal of time in looking through and destroying old letters and other papers. « It is so sad. » , he would say, when one or other intimate friend called and found him thus employed, his stove filled with ashes.

...

Brahms was ready for another journey to Italy in the spring, but Josef Viktor Widmann was unable to accompany him. Brahms stayed in Vienna.

His final illness, which lasted more than a year, was characterized by jaundice. Although Brahms probably died of pancreatic cancer as researcher Mitchell Margolis concluded, he could also have had hepatic carcinoma. Because of Brahms' extensive lifelong alcohol consumption, he could have had cirrhosis of the liver as a precursor to pancreatic cancer. As quoted by Franz Hermann Franken and Karel B. Absolon :

« He looked terribly miserable. The thin white beard, the withered face, the yellow eyes, the flabby thin body, his clothes hanging like on a hanger. »

Brahms' doctor was quoted to have said :

« After a careful repeated examination and after observation for 3 weeks, I found considerable swelling of the liver with complete obstruction of the biliary ducts. »

Therefore, there is no question that Brahms could have had either primary or metastatic cancer of the liver.

According to Franken and Absolon, Brahms' symptoms and clinical course make a primary liver cancer less likely. The jaundice present from the start is not typical for a primary cancer of the liver. On the other hand, an early obstruction of the common bile duct is usual in cancer of the head of the pancreas. Then, according to Franken and Absolon, Brahms did not die in a hepatic coma, which with liver metastases is fairly common.

It is interesting to note that Brahms had a close friend, Theodor Billroth (1829-1894) , the famous abdominal surgeon. Brahms never excused Billroth for « ... cutting-out an autographed phrase from his A minor String Quartet (an innovative work dedicated to Billroth) . Billroth attached it to Brahms' photograph, framed and hung it in his office » .

Why Billroth did not operate on Brahms or was not consulted for Brahms' jaundice is a mystery to me. Whether Brahms' presumed obstructive sleep apnea had anything to do with his terminal illness, we will never know.

**Sunday, 7 March 1897** : Brahms is able to attend a performance of his 4th Symphony in E minor by the Vienna

Philharmonic conducted by Hans Richter at the « Verein-Saal » . There was a long and tumultuous ovation after each of the 4 movements. Also on the program, Antonín Dvořák's Violoncello Concerto played by Hugo Becker.

Going into the concert-room, Brahms met his old friend Josef Gänsbacher. He said to him :

« Ah, you have been so often to see me, and I cannot go to you, I am so suffering. »

Then, rousing himself a little, went on :

« You will hear a piece to-day, a piece by a man ! » (Dvořák's Concerto) .

The 4th Symphony had never become a favourite work in Vienna. Received with reserve on its first performance, it had not since gained much more from the general public of the city than the respect sure to be accorded there to an important work by Brahms. To-day, however, a storm of applause broke-out at the end of the first movement, not to be quieted until the composer, coming to the front of the « artists' » box in which he was seated, showed himself to the audience. The demonstration was renewed after the second and the third movements, and an extraordinary scene followed the conclusion of the work. The applauding, shouting house, its gaze riveted on the figure standing in the balcony, so familiar and, yet, in present aspect so strange, seemed unable to let him go. Tears ran down his cheeks as he stood there shrunken in form, with lined countenance, strained expression, white hair hanging lank ; and through the audience, there was a feeling as of a stifled sob, for each knew that they were saying farewell. Another outburst of applause and, yet, another ; one more acknowledgment from the Master ; and Brahms and his Vienna had parted for ever.

Brahms appeared after the concert at a luncheon-party given by « Excellenz » Nikolaus Dumba, a distinguished protector of art in Vienna. About 25 gentlemen, chiefly artists and art-lovers, and the ladies of the house were present. Brahms was placed near to several of his intimate friends (Friedrich Epstein, Ilse Conrat, Eduard Hanslick, Josef Gänsbacher, and Eusebius Mandyczewski) but he was not able to remain long. Within a few days, of this date his Ischl landlady received a postcard from him announcing his intention of going to Ischl earlier than usual, and desiring that his rooms might be got ready. The last Opera he heard was his friend Karl Goldmark's « Das Heimchen » ; he entered a theatre for the last time, on March 13th, sitting with Hanslick at the production of Johann Strauß' « Die Göttin der Vernunft » , but was obliged to leave at the end of the 2nd Act, and, much against his will, suffered a friend to accompany him home in a cab.

...

From this time, Brahms grew rapidly worse. He complained that he could no longer remember what he read, but wished for (Julius Hermann) Moritz Busch's « Bismarck » , the last book with which he tried to occupy himself. He soon became unable to take a walk even in a friend's care, and Doktor Viktor von Miller called every day in his carriage to take him to drive in the « Prater » , where the fresh air somewhat revived him. His strength of will remained phenomenal to the last. He dragged himself to a rehearsal of the Roeger-Soldat Quartet party held at «

Frau » Wittgenstein's less than a fortnight before his death, to hear Carl Maria von Weber's Clarinet Quintet with Richard Mühlfeld's co-operation. A performance of the work at Meiningen had particularly pleased him, and its inclusion in the Soldat programme was by his suggestion. In the same week, he paid his last visit to the Fabers, and, whilst ascending the staircase to their flat, nearly fainted with pain. « Herr » Faber revived him, and got him on to the drawing-room sofa, where he sat exhausted, his head on his breast. He was obliged to leave the family dinner-table of some other intimate friends, and, retiring to the next room, sank down in agony. « Frau » Fellingner was ill at this time, and unable to leave her room.

**Saturday, 13 March 1897** : Brahms attends the premiere of Johann Strauß's Operetta « Die Göttin der Vernunft » at the « Theater an der Wien » , but feels too ill to remain until the end. It is his last appearance in public.

**Friday, 19 March 1897** : Brahms' last call of inquiry at « Frau » Fellingner's house.

**Wednesday, 24 March 1897** : « Frau » Door (wife of pianist Anton Door) , who had always been a favourite with him, called to take him a bunch of violets. She was not admitted, but, observing Doctor von Miller's carriage before the house door, waited near the entrance, hoping to see Brahms pass-out. He came down in about half an hour leaning on his friend's arm, and, noticing « Frau » Door, gave her his hand. « I am very ill. » (« Mir geht es sehr schlecht. ») , he answered faintly to her inquiry. He did not go-out again. The next day, Ilse Conrat was admitted, and was sitting talking quietly with him, when Brahms, who was on the sofa smoking, suddenly dropped his head. « There must be something in it. » , he muttered. Conrat gently left the room without disturbing him.

**Thursday, 25 March 1897** : Brahms dines for the last time at the house of Viktor and Olga von Miller zu Aichholz.

**Friday, 26 March 1897** : Brahms is taken to his bed (which he will not leave again) in his Vienna home at « Karlsgasse Number 4 » .

The physician wrote word to « Frau » Fellingner that all chance of moving him was over. Brahms did not leave his bed again. His 2 or 3 closest friends were constantly at his side, whilst his landlady, « Frau » Celestina Truxa, was his faithful and devoted nurse. He spoke little during the last days, and was too weak to notice much of what was passing in his room.

**Monday, 29 March 1897** : Brahms managed to write a few pencil lines from his bed to « Frau » Caroline :

« D.M. For the sake of change, I am lying down a little and cannot, therefore, write comfortably. Otherwise, there is no alteration and as usual, I only need patience.

Affectionately, your Johannes. »

**Tuesday, 30 March 1897** : Heinrich Herzogenberg, who had just sent Brahms a copy of a Piano Quartet dedicated to him, sadly wrote to Joachim that their dear friend was approaching his end.

...

A few more weary days and nights, during which the beloved Master's life ebbed rapidly away.

Brahms's condition reached a critical stage on **Friday, 2 April 1897**. He had suffered a severe intestinal hemorrhage on **Thursday, 25 March** and, in the view of his doctor, Josef Breuer, any further bleeding could precipitate his death. When more such bleeding occurred on the morning of **Friday, 2 April**, Doctor Breuer asked Richard Fellingner to bring Doctor Hermann Nothnagel to Brahms's rooms for a consultation. This was done, however, more in conformity with a well-established practice followed in such situations rather than in the hope of developing a new treatment, for it was clear that the end was near.

Early morning of **Saturday, 3 April 1897**, Brahms had lost consciousness several times in the night and been restored, and had recognised Bertha Faber, who, calling at about 6 o'clock and performing some slight service for him, caught the whispered words, « Du bist ein guter Mensch. » (You are a kind man.) It is now nearly 9 o'clock, and Brahms has fallen asleep. Early messages of inquiry have been answered, and the doctor, who has been at hand during the night, has departed, promising soon to return. The day has begun with the bright spring promise that the Master was wont to greet year after year with joyful welcome ; the sun shines, a soft breeze enters through the open window ; outside, there is a twittering of birds. Near the bed sits the untiring nurse, noticing the signs of the fast-approaching end. A movement from the bed claims her assistance. Brahms has opened his eyes, and tries to raise himself. With « Frau » Truxa's help, he attains a sitting posture, and, looking at her, tries to speak. The lips move, but the tongue has lost its power, and he can only utter an inarticulate sound. Great tears roll down his cheeks ; a last sigh, a last breath, and he sinks back, supported by gentle hands, on to his pillow, rid of his sufferings, passed quietly to his rest.

### Death of Brahms

**Saturday, 3 April 1897** : The Austrian chemical industry magnate Doctor Viktor von Miller zu Aichholz (1845-1910) , whose house was in the vicinity, was the first of the friends to receive intelligence of the Master's decease. He hurried at once to « Karlsgasse » , and was immediately joined by Doctor Fellingner and « Herr » Faber. Many others called during the morning, some of whom were admitted to look at the still features, smoothed by the caress of death into an expression of noble serenity. A sketch was taken by the painter Ludwig Michalek, a mask by Professor Kundemann, a photograph by a private friend. The cause of death was certified, after a medical examination of the remains, as degeneration of the liver. The body, in evening dress, was placed the same afternoon in the coffin, and the room arranged with candelabra containing lighted candles ; on a crimson cushion were displayed the various orders of the deceased composer.

**Saturday, 3 April 1897** : Munich premiere of the 1892 version of Bruckner's 2nd Symphony performed at the « Kaim-Saal » by the « Orchester-Verein » - an amateur ensemble that plays works not yet programmed by professional Orchestras.

### The New York Times

## DEATH OF JOHANNES BRAHMS.

The Famous Pianist and Composer Dead in Vienna After a Long and Painful Illness.

VIENNA, April 3. - Johanne's Brahms, the well-known musical composer, is dead. He had been ill for a long time. He suffered from jaundice last Autumn and went to Karlsbad ; but the cure was ineffective, and he intended to go there again this Summer. The disease developed into cancer of the liver. The patient was able to read almost until he last, and was kept in ignorance of his serious condition.

**Sunday, 4 April 1897** : The arrival began of the flowers, wreaths, crosses, and other floral tributes that transformed the room into a temple of beauty.

On the afternoon, General-Secretary Koch, Doctor Fellingner, and « Herr » Faber met in the dwelling, and searched for a will in the presence of a notary, but only found one written in May, 1891, on 2 sheets of paper, the last of them signed and dated, in the form of a letter to Simrock. This, a legally competent document in its original form, except for the slight omission of the signature on the first sheet of paper (which, under the indisputable circumstances establishing the authenticity of the will, would not have rendered it invalid) had been returned to the Master at his own request by Simrock some time subsequent to the death of his sister, Elise Grund, in 1892. It was found, however, to have been marked by Brahms in pencil, some of the clauses lined-out, whilst notes in the margin indicated designed alterations. These were in exact correspondence with the wishes expressed by Brahms, in February, to Doctor and « Frau » Fellingner, and embodied by Doctor Fellingner in the paper he had delivered into the hands of the composer to be copied by himself and signed. Another search was made the next day, therefore, but it proved fruitless. Only Doctor Fellingner's manuscript was found, and it must be presumed that Brahms had put-off the dreaded task, from day to day, in the hope of feeling more capable of it, until his strength was no longer equal to its fulfilment. Nothing remained, therefore, but to apply to the proper authorities for the nomination of a curator in order that the necessary arrangements might be proceeded with. This was done ; Doctor Fellingner was appointed.

**Monday, 5 April 1897** : On the afternoon, the sitting-room which, with the small inner-room leading from it, contained Brahms library, manuscripts, and other possessions, was formally sealed. The coffin was closed the same day. Brahms will be buried at the Central Cemetery, as Ludwig van Beethoven and Franz Schubert.

### Brahms' funeral

**Saturday, 3 April 1897** : The evening papers announced that Johannes Brahms had breathed his last.

**Sunday, 4 April 1897** : The morning papers took-up the tale and Vienna's florists had cause to believe that they were having a good year. Perhaps, a measure of Brahms's more general popularity, or perhaps, reflecting the superiority of the spring flower supply, it took 5 wagons (as opposed to Anton Bruckner's 2) to carry the wreaths, which numbered more than 200. Unlike Bruckner, who had specified his last resting place in his will and caused his Viennese « cortège » to terminate at the railway station, Brahms left only an un-signed will and no written specifications for the disposal of his remains. This was probably a good thing for his Viennese friends, since, as reported in the « Neue Wiener

Tagblatt » , he had repeatedly expressed a wish to have his body cremated, and this was by no means the local custom. An excuse for a burial, however, was found.

It took this form :

« On the other hand, on the occasion of Billroth's funeral, pointing to the graves of Beethoven and Schubert, he uttered to Max Kalbeck :“ One would rest well here ! ” All these circumstances were discussed in his circle of friends ; finally, it was agreed that Brahms be committed to the ground. As soon as news of the Master's passing reached the Town Hall, the City of Vienna voted him a grave of honour. »

This was not the end of the matter, since it occasioned a lengthy discussion at a specially convened session of the directors of the « Gesellschaft der Musikfreunde » which, in lieu (rather than in spite) of relatives of the deceased, had undertaken to run the funeral. The result of this discussion, that the body would indeed be buried, was reported the next day in the « Neue Wiener Tagblatt » .

The funeral itself was held on **Tuesday, April 6.**

Brahms began his last journey at half past 2, a half hour earlier than Bruckner had begun his. Sealed in a metal coffin and carried in a glass-walled hearse drawn (like Bruckner's) by 6 horses, the body was taken from « Karlsgasse » Number 4 to the nearby « Karlskirche » . Unlike Bruckner, however, Brahms, being nominally protestant, did not go in. Nevertheless, by making this the point where the already enormous « cortège » gathered and marshalled even more persons, the Viennese gave Brahms (and themselves) the next best thing to a service in the Karlskirche. The procession itself included people at the head of Vienna's arts administration, such as the General Intendant, Baron Josef von Bezecny, and Privy Councillor Nikolaus Dumba, composers such as Antonín Dvořák and (much lower down the list) Ignaz Brüll, Eduard Schütt, Richard Heuberger, Hans Köbller, and Anton Růkauf, just about every chamber ensemble, instrumentalist, and singer (including Anton Stermans, whose career was really blossoming, thanks to the « Vier ernste Gesänge ») numerous representatives of major musical institutions outside Vienna, people whose businesses had done well out of Brahms, such as the concert-agents Alexander Rosé and Emil Gutmann, a considerable contingent from the « Gesellschaft der Musikfreunde » , representatives of choral and literary Societies, and a larger contingent of journalists than that noted as being present at Bruckner's funeral : Max Kalbeck, Robert Hirschfeld, Theodor Helm, Gustav Schönaich, and Albert Kauders, not to forget Richard Heuberger who was already listed as a composer. This is not to say that journalists other than Helm were not also at Bruckner's funeral, nor that other journalists than those listed were not present at Brahms's. Their listing, however, seems to imply an « official » presence indicating a larger number of journalists who were close to Brahms, as well as giving some indication of the ranking of journalists in terms of perceived importance. Although the wreath sent by the city of Vienna sat atop the coffin along with the wreath from Brahms's native city of Hamburg, there was not the prominence of city council presence which had characterized Bruckner's funeral. This was very much the day of the « Gesellschaft der Musikfreunde » , Brahms's « family » .

The « cortège » , led by a standard-bearer in old Spanish dress, made its way across the « Karlsplatz » to the «

Gesellschaft's » own buildings, where it made a station so that Brahms could receive the official farewell of the vice-president of the « Gesellschaft » , Doctor Heinrich Billing, and the director of the « Konzervatorium » , Johann Nepomuk Fuchs. The « Gesellschaft's » Choral Society, the « Singverein » , sang Brahms's « Fahr wohl » . After this station, the procession continued through the streets, past the « Hofoper » and, eventually, to the protestant church on « Dorotheergasse » , where government and city dignitaries, including a representative of the Education minister and the 2 vice-Mayors, the musician Otto Franz representing the Duke of Meiningen, Wilhelm Jahn, director of the Court Opera, and the composer Karl Goldmark, awaited its arrival. The papers reported that the church choir sang « Es ist bestimmt in Gottes Rath » by Felix Mendelssohn. This, however, is not correct ; the choir actually sang a Chorale, but the largely Roman Catholic congregation, not knowing it, did not join in. Pastor Zimmermann delivered a panegyric, the « Wiener Männergesangverein » sang Carl Gottlieb Reissiger's « Wanderers Nachtfahrt » , as was its custom on such occasions, and the procession began the final leg of its journey to the « Zentralfriedhof » .

The « cortège » arrived at the cemetery gate at half past 5. Here, the « Gesellschaft der Musikfreunde » , once more, took charge of the proceedings. At the gate, its general secretary, Ludwig Koch, distributed wax candles to 12 men, including Max Kalbeck and Richard Heuberger, who conducted their revered Master to his final resting place, grave Number 27, opposite Ludwig van Beethoven and in the vicinity of Franz Schubert and Johann Herbeck. Brahms's pupil, Richard von Perger, had the last word and the funeral was ended. Subsequent memorials to Brahms will be performed during the concert season.

...

Vienna honoured Brahms, her adopted son, with a funeral procession worthy of royalty, with a host of friends, students, fellow-musicians, and his publisher carrying the funeral torches through the streets, followed by a large crowd of mourners. It began at his residence on the « Karlsplatz » (« Karlsgasse Number 4 ») and crossed the square to the buildings of the « Musikverein » , where members of the « Singverein » stood in the entrance to sing Brahms's own choral work, « Fahr wohl » . Then, it proceeded to the Lutheran Church in the narrow « Dorotheergasse » , near the city-centre, where Pastor Zimmerman conducted the funeral service, which included the reading of the scripture text on which Brahms had based the last movement of the « German Requiem » . Following this, the procession continued-out the long road to the « Zentralfriedhof » in Vienna's Simmering District. In 1888, a special tree-shaded segment, near the main-gate of this large landscaped cemetery, had been set apart for the city's notable musicians, and the remains of Beethoven and Schubert were moved there. There, Brahms also was laid to rest, to be joined, 2 years later, by his old friend Johann Strauß junior, Vienna's beloved « Waltz King » , who is buried next to him. It is a hallowed spot for present-day music-lovers, as the floral offerings on the graves of the many « Musiker » interred there eloquently attest.

...

As soon as the Master's death became known, the offer of an honorary grave was made by the city of Vienna. There was no hesitation in accepting it, but a deliberation was held as to whether the remains should be taken direct to the Central « Friedhof » or should be cremated at Gotha, according to directions contained in the letter to Simrock,

and the ashes only deposited in Vienna. The remembrance of a few words dropped by Brahms himself when speaking of the « sacred spot » which contains the graves of Beethoven and Schubert decided the point. It was felt that he would have chosen to rest in the place selected for him : the particular garden of the « Friedhof » in which the remains of Beethoven and Schubert lie, and which is sacred also to the memory of Mozart.

**Tuesday, 6 April 1897** : « All musical Vienna accompanied the great dead to the grave on the afternoon and a stranger not knowing the man's greatness might have measured it by the number of prominent artists mingling in the great assemblage of the funeral procession, by the celebrated men and women who came from afar to show the last honour to Brahms. »

Till, the hour appointed for the « commencement » of the ceremony, deputations continued to arrive, from various parts of Europe, from the numerous Societies of which the composer had been an honorary member, and telegrams and messages to pour in. At 1 o'clock, a deputation from the Hamburg Senate was admitted to the house to lay a magnificent wreath on the coffin, side by side with that from the Corporation of Vienna.

Wreaths had been sent by :

The Queen of Hanover ; the Duke of Cumberland ; the Princess Marie of Hanover ; Duke George of Saxe-Meiningen ; the Princess Marie of Saxe-Meiningen ; Helene, Baroness von Heldburg ; and innumerable private friends known and unknown to Brahms.

By the Society of Plastic Arts ; Committee of the Opera ; « Gesellschaft » , and other Societies of Vienna ; by the Philharmonic Society ; « Gesellschaft der Musikfreunde » ; Cecilia Society of Hamburg ; by the Royal Academy of Arts, Berlin.

By the various musical Societies of :

Berlin ; Leipzig ; Budapest ; Cologne ; Salzburg ; Mannheim ; Frankfurt ; Jena ; Laubach ; Lemberg ; Graz ; St. Petersburg ; Brussels ; Amsterdam ; Cambridge ; Basle ; Zürich ; and many other towns. 6 cars scarcely sufficed to hold them.

The arrangements of the public funeral with which the city of Vienna honoured the remains of the great composer formed a singular contrast to the simplicity which had marked the daily habits of his life. Details may be read in the journals of the time. The « cortège » , followed by the long train of mourners, started from « Karlsgasse » about half-past 2, and, proceeding to the building of the « Gesellschaft der Musikfreunde » , halted before the principal entrance, where arrangements had been made for a short ceremony, consisting of an address by « Herr Direktor » J. Robert Fuchs, of the Conservatory, and the singing of Brahms' part-song « Fahr'wohl » , for unaccompanied chorus, under the direction of Richard von Perger, conductor of the « Singverein » . The procession then passed on to the Evangelical Church on « Dorotheenstrasse » , where the clergy and choir and several of the city dignitaries were assembled. After the coffin had been carried into the church, the choir sang Felix Mendelssohn's « Es ist bestimmt in Gottes' Rath » (« Volkslied » , Opus 47, No. 4) . The funeral address was delivered by Doctor von Zimmermann, who

especially dwelt on the inspiration derived by the deceased composer's art from the pages of the Bible, on his love for children and the child-like spirit, and on his sympathy with distress.

« Wherever he could bring support to the unknown sufferer, the laborious striver, the helpless, the dying, there, in the man who, in his own habits, was frugal to the verge of parsimony, was found the most eager benefactor. The Master Johannes Brahms is not dead. His spirit has conquered death and has entered into the light and blessed world of the pure harmonies of peace. »

At the entrance to the « Zentralfriedhof » , the coffin was surrounded by personal friends of the deceased composer, carrying lighted wind-torches, and was accompanied by them to the grave.

They were :

Ignaz Brüll ; Antonín Dvořák ; Arthur Faber ; Doctor Richard Fellingner ; Robert Fuchs ; Richard Heuberger ; Max Kalbeck ; Ludwig Koch ; Eusebius Mandyczewski ; Doctor Viktor Ritter von Miller-Aichholz ; Richard von Perger.

At the grave-side, Doctor von Perger spoke a few words of last farewell :

« This sacred place is now to receive the mortal remains of our great contemporary. He who has so enriched and blessed the whole world, what has he been to us musicians ! In the light which streamed from his creative genius, his penetrating art comprehension, we were able to look-up confidently to his incomparable Mastership, to his lofty, unbending artistic intelligence. Amid the countless paths and by-paths which to-day intersect the domain of musical art, we were guided by the torch held high and secure by the hand of her first priest. He has met his worthy spiritual brothers, indeed, for the first time to-day in this resting-place, but he was always a simple, sympathetic friend to his living colleagues in art, in spite of the great distance which raised him above them ; always a helper of uprising talent, a sure and faithful friend in adversity and suffering ... Here, thou restest now, thou blessed of heaven, in this vast, awful world-solitude ; clouds of light float above thee and that of thee which is immortal floats with them through eternal spaces. " Ade Meister Johannes, fahr'wohl, fahr'wohl. " »

Joseph Joachim was in England at the time of Brahms' death, fulfilling long-contracted engagements. Julius Stockhausen, now a man of 73, and not in strong health, was at this period unequal to a hurried and distressing journey from Frankfurt to Vienna.

Memorial performances were given by the « Cecilia Verein, Hamburg » , on April 5th, the day preceding the funeral ; by the « Wiener Gesellschaft » on the 11th ; by the « Beethoven-Haus Verein, Bonn » , in May ; by the Royal High-School for Music, Berlin, in the summer ; and by innumerable musical Societies of Europe and America, during the season 1897-1898. In nearly all instances, the « German Requiem » formed part of such concerts as were orchestral.

A clause in Brahms' will provided that any of his unpublished works found in his rooms after death should be the property of Simrock. There was one Opus only : the 11 Organ Preludes. With them were the arrangements, as

pianoforte duets, of Joachim's 2 Overtures. All 3 works were published in 1902, a delay of 5 years having been caused by difficulties that arose in connection with the will.

Apart from detail, these may be generally stated as follows :

Brahms is said to have left, besides his library, which included valuable autograph musical manuscripts and letters, and a very few personal possessions, about £ 20,000 in investments. In the original will, 3 Societies (the « Liszt Pensions-Verein » of Hamburg ; the « Czerny Verein » ; and the « Gesellschaft der Musikfreunde » of Vienna) were named as the inheritors, subject to the payment of a legacy to the composer's landlady, « Frau » Celestina Truxa, and of 2 life-annuities - one to his step-mother, « Frau » Caroline Brahms, to be continued after her death to her son, Fritz Schnack, for his life ; the other to Brahms' sister, Elise Grund. These would practically account for the time being for the income arising from the investments.

(The Brahms collection in the Archive of the « Gesellschaft der Musikfreunde » is declared part of Unesco World Cultural Heritage in 2005.)

In the absence of any legally valid document, about 20 cousins of various degrees of kinship came forward, in answer to advertisements in the newspapers, as claimants to the property. Litigation ensued, and was protracted through several years. The original process and the first appeal were determined in favour of the Societies ; the second appeal reversed these decisions, and declared the blood relations to be the heirs. To prevent the further expense and delay of another appeal, a compromise was now arrived at by the contending parties, and the general results of the will, the law-processes, and the compromise have been that the blood relations have been recognised as the heirs to all but the library, which is now in the possession of the « Gesellschaft der Musikfreunde » ; that « Frau » Truxa's legacy has been paid ; and that certain sums accepted by the Societies, by which they will ultimately benefit, have been invested, and the income arising from them secured for the payment of the life-annuity to « Herr » Schnack. (« Frau » Caroline Brahms died in the spring of 1902.)

Projects for the erection of memorials to the Master in Hamburg, Vienna, and Meiningen, were set on foot soon after his death. The first to be completed has been that now standing in the « English Garden » at Meiningen, the unveiling of which was made the occasion of a Memorial Festival, in October of 1899. The bust of the Master which it displays is the work of Professor Adolf von Hildebrandt.

The memorial erected at the grave by the heirs, after the final settlement of the property, designed and executed by sculptor « Fräulein » Ilse Conrat, was unveiled on May 7, 1903, the 70th anniversary of Brahms' birth. It consists of a marble bust and pedestal in front of a marble headstone, on which are allegorical figures in bas-relief. (The monument is by Victor Horta.)

Memorial tablets have been placed by the respective municipalities on the houses in which Brahms lived in Vienna, Ischl, and Thun, and the garden of the house at Mürz Zuschlag has been bought by the town and made into a music-garden. A bronze bust of the Master by « Frau » Doctor Fellinger stands in the musicians' pavilion.

A « Brahms-Haus » has been erected by Doctor von Miller-Aichholz in his private grounds at Gmünden, the rooms of which are constructed to the exact dimensions of those occupied by Brahms in Ischl, and furnished with the Ischl furniture as it used to stand. They contain an interesting collection of musical and other autographs of the Master, photographs, programmes, and other mementos.

A Brahms Society has been formed in Vienna for the purpose of collecting and preserving all available mementos in a special museum.

### Doctor Ludwig Boër

The Viennese Doctor Ludwig Boër (1863-1942 ?) frequently treated singers from the « Hofoper » - although he is not mentioned in the official Opera House personnel lists. In addition, he was Gustav Mahler's personal physician and friend.

### Mahler : 2 very bad months

**Wednesday, 19 May 1897** : Mahler made a short trip to Dresden to attend an Opera by Anton Ruckauf, « Die Rosenthalerin » , which was never staged in Vienna. Mahler caught a cold.

**Friday, 21 May 1897** : The infection gradually settled in his throat, forcing him to stay in bed for several days.

**Sunday, 30 May 1897** : Mahler felt worse. The doctor found a second abscess in his throat. A specialist was summoned, and decided to lance it immediately. The pain was so great after the operation that Mahler could not eat or even swallow. That evening, he received an injection of morphine to relieve the pain. He is ordered to stay in bed for 3 days.

**Friday, 11 June 1897** : In Vienna, Mahler is victim of a severe attack of pharyngitis. An abscess in the throat is removed. First week of high-fever. Mahler needs to rest in bed.

Justine Mahler, her sister Emma Marie, Natalie Bauer-Lechner and Elise (the cook) had taken a small house (Villa) for the summer in the town of Kitzbühel, in Tirol, about 800 metres above sea-level. They bathe in the nearby Schwarzsee (Black Lake) . The owner is Doctor Julius Hochenegg (1859-1940) .

Villa Hochenegg was « the most attractive yet of all our summer places » . The view was superb and the climate excellent.

**Monday, 14 June 1897** : Mahler goes on sick leave. He joins his sisters at the Villa Hochenegg.

Gustav Mahler wrote to the Austrian Opera singer (mezzo-soprano) Rosa Papier-Paumgartner about the site :

« We live entirely cut-off from the world. Our little house is so isolated and peaceful on the edge of the forest, and surrounded by meadows, etc. »

### Doctor Julius Hochenegg

The surgeon Doctor Julius Hochenegg was born on 2 August 1859 in Vienna to a family from Tyrol, and died on 11 May 1940 in Vienna, aged 80. He was buried on 15 May 1940 at the Grinzing Cemetery, near Vienna (Grave 3-22) .

Address : Number 4 « Mukenthalerweg » ,Vienna.

Brother of Carl Hochenegg. Julius was educated in Vienna and obtained his doctorate in 1884. He was an apprentice surgeon under Doctor Theodor Billroth (1829-1894) and, from 1886 to 1890, an assistant at the first surgical clinic under Doctor Eduard Albert (1841-1900) . He was habilitated for surgery in 1889 and, in 1891, became head of the department (« Abteilungsvorstand ») at the « Wiener Allgemeine Poliklinik » . In 1894, he was appointed University professor. He was appointed full-professor (« Professor ordinarius ») in 1904.

Doctor Hochenegg was director of the Löw Sanatorium at the time of Gustav Mahler's operation in June 1901.

In 1904, he was at the head of the 2nd Surgical Department of the Vienna General Hospital (University of Vienna) .

From 1904, he improved cancer surgery, founded a radiology department and together with Baron Anton von Eiselsberg established the casualty ward in the first Surgical Department of the Vienna General Hospital.

At the time of his retirement in 1920, Doctor Hochenegg was also at the head of the 2nd Surgical Department of the Vienna General Hospital.

On Thursday, 12 November 1914, his professional career peaked when he was raised to the nobility by Emperor Franz-Josef, becoming Julius von Hochenegg.

On Sunday, 9 May 1915, his only son was killed on the Russian front.

Julius Hochenegg's reputation reached across the Atlantic. This is from « The New York Times » dated 10 May 1908 :

Special Cable, News Section, Page C1, « The New York Times » (245 words) .

May 10, 1908, Sunday.

### ACROMEGALY CURED

Successful Operation Performed by Professor Hochenegg of Vienna.

Berlin, May 9 (Saturday) .

American surgeons, who by the reluctant consent of their European « confrères » are now ranked at the top of their profession, will be interested in the brilliant achievement reported at last week's surgical congress in Berlin by Professor Hochenegg of Vienna.

The professor told how he operated successfully in a case of acromegaly, a disease which causes strange and enormous enlargements of the bones of the hands, feet, and face. The patient on whom the operation was performed was a young girl. She showed the usual symptoms of brain tumours and a marked disturbance of vision. The diagnosis having been confirmed by means of X-rays, Professor Hochenegg moved the girl's nose to one side, cut through the thin floor of the skull, and then, removed the tumour from the hypophysis or gland-like body that is suspended like a cherry from the base of the brain.

The difficulty in reaching the acromegalian tumour is such that surgeons have been rather shy of operating for the disease. It is said too, that none of the operations reported prior to last week was successful ; but the Vienna girl left the hospital 6 weeks after Professor Hochenegg's operation fully-restored to health.

Acromegaly is not infrequently encountered in the United States, but heretofore, the Germans say, it has baffled American surgical skill.

...

Born as the son of a well-to-do lawyer in Vienna, Julius von Hochenegg had a happy childhood. At the age of 16, a chest complaint compelled him to finish his humanistic education in Bozen (Bolzano) in the South Tyrol. After a short interval as a law student, he changed to medicine and qualified in Vienna in 1884, having worked as demonstrator in anatomy in 1882-1883 under Carl Langer, and as a clerk in medicine under Heinrich von Bamberger. Next, he spent a year working at the Institute of Morbid Anatomy under Hans Kundrat and 6 months as a surgical trainee under the gynæcologist Gustav A. Braun (1829-1911) . Eventually, he became surgical trainee to Eduard Albert ; becoming second in 1886, and only 1 month later first assistant to Albert. In 1891, he became head of the surgical department of the Policlinic and administration director of the whole institution. In 1904, Hochenegg succeeded Theodor Billroth's pupil Gussenberger and became a colleague of Anton von Eiselsberg. He had become « Privat-docent » in 1889, Professor « extraordinarius » in 1894 and received the title of an « ordinary » Professor in 1901. He continued the tradition of his teacher Albert in spreading the practical knowledge of surgery not only among surgeons, but also for the need of the general practitioner. A brilliant speaker and instructor, averse to speculation, he became a most popular and successful surgeon, with an enormous private practice, although he was a somewhat cantankerous character. In 1908, he started an urological unit within his clinic. In 1909, he founded, with von Eiselsberg and Ernst Fuchs, the accident units, but an attempt to achieve the same for orthopædic surgery did not meet with the same success.

...

Julius von Hochenegg, österreichischer Mediziner : geboren 2. August 1859 in Wien ; gestorben 11. Mai 1940 ebenda.

Hochenegg studierte in Wien und schloß das Medizinstudium mit der Promotion 1884 ab, 1889 wurde er Dozent für Chirurgie, 1891 Abteilungsvorstand an der Allgemeinen Poliklinik, 1894 Universitätsprofessor für Chirurgie an der Universität Wien und 1904 Vorstand der dortigen II. Chirurgischen Klinik.

Julius Hochenegg wurde am 12. November 1914 von Kaiser Franz-Josef in den Adelsstand erhoben. Er verbesserte die Krebschirurgie, errichtete ein Röntgeninstitut und gründete 1909 mit Anton Eiselsberg die I. Unfallstationen der Welt an der I. und II. Universität-Klinik für Chirurgie im Allgemeinen Krankenhaus Wien. Mit den Ärzten Anton Eiselsberg, Richard Paltauf, Alexander Fränkel, Ludwig Teleky und Josef Winter gründete er am 20. Dezember 1910 die Kaiserlich und Königlich österreichische Gesellschaft für Erforschung und Bekämpfung der Krebskrankheit, die Vorläuferorganisation der Österreichische Krebshilfe.

Im Jahr 1960 wurde in Wien Döbling (19. Bezirk) die Hocheneggasse nach ihm benannt.

Julius Hochenegg stammte aus einer Tiroler Familie. Seine Eltern waren der Hof- und Gerichtsadvokat Johann Baptist Hochenegg (1814-1899) und dessen Ehefrau Cäcilie von Winiwarter (1831-1862). Der Professor Carl Hochenegg (1860-1942) war sein Bruder.

Julius Hochenegg heiratete 1890 in Wien Julie Mauthner von Mauthstein (1863-1942) , die Tochter des Juristen Wilhelm Mauthner von Mauthstein. Sein Sohn starb als Soldat, seine Tochter Johanna heiratete den Professor der Chirurgie Fritz Kaspar (1885-1943) .

...

Julius Hochenegg (1914 von) : geboren 2. August 1859 Wien ; gestorben 11. Mai 1940 Wien 9, Pelikangasse 15 (Grinzinger Friedhof) , Chirurg, Gattin (1890) Julie Mauthner von Mauthstein (1863-1942) , Bruder des Carl Hochenegg, Sohn eines Advokaten. Besuchte das Schottengymnasium und war nach Studium an der Universität Wien (Doktor medicinae universae 1884) zuerst Operationszögling bei Theodor Billroth an der II. Chirurgischen Universitäts-Klinik (Allgemeines Krankenhaus) , dann bei Carl Braun an der I. Universitäts-Frauenklinik und schließlich bei Eduard Albert an der I. Chirurgischen Universitäts-Klinik, wo er 1886 Assistent wurde.

1889 habilitierte er sich, mußte jedoch (entsprechend den damaligen Vorschriften) nach seiner Eheschließung (1890) die Klinik verlassen und wurde 1891 zum Vorstand der II. Chirurgischen Abteilung an der Wiener Allgemeine Poliklinik bestellt (1894 oder andere Professor, 1901 titel o. Professor) , als deren Direktor er später fungierte. 1904 übernahm er nach dem Tod von Carl Gussenbauer als o. Professor die II. Chirurgische Universitäts-Klinik und leitete diese bis 1930. 1909 gründete er mit Alberts Nachfolger Anton von Eiselsberg die Unfallstationen der beiden chirurgischen Universitäts-Kliniken im Allgemeines Krankenhaus, wodurch der institutionelle Grundstein zur akademischen Entwicklung der Unfallchirurgie als neuer Spezialdisziplin gelegt war. Ebenso schuf Hochenegg 1908 an seiner Klinik eine eigene urologische Abteilung. Sein hauptsächliches Arbeitsgebiet war die Abdominalchirurgie, wobei er vor allem bei

Dickdarmkarzinomen neue operative Wege beschritt. Sein besonderes Interesse für Diagnostik und Therapie der Krebserkrankungen führte ihn 1909 zur Gründung der « Österreichischen Gesellschaft zur Erforschung und Bekämpfung der Krebskrankheit » , die sich auch der sozialen Probleme Krebskranker annahm.

Hochenegg war ein außerordentlich geschätzter Lehrer, der unter anderem Paul Albrecht, Lorenz Böhler, Fritz Demmer, Hans Finsterer und Felix Mandl zu seinen Schülern zählte. Zu seinen zahlreichen wissenschaftlichen Veröffentlichungen gehört auch sein « Lehrbuch der speziellen Chirurgie » (2 Bände : 1906-1909 ; 1918-1927) .

Hocheneggasse.

...

Julius Hochenegg hörte zunächst juristische Vorlesungen, wandte sich aber bald der Medizin zu. 1884 wurde er zum doctor medicinæ in Wien promoviert. Noch als Student arbeitete er unter Karl Langer (Anatomie) , Heinrich von Bamberger und Carl Wilhelm Hermann Nothnagel (innere Medizin) , Hans Kundrat (pathologische Anatomie) und Theodor Billroth (II. Chirurgischen Klinik) . Nach seiner Promotion war er Operationszögling in der I. Frauenklinik unter Carl Braun, dann in der I. Chirurgischen Klinik unter Eduard Albert. 1889 wurde er Dozent, 1891 mußte er (wie damals üblich) wegen seiner Eheschließung die Klinik verlassen ; er übernahm 1892 die Leitung der Chirurgischen Abteilung der allgemeinen Poliklinik, 1894 erhielt er den Titel eines außerordentlichen, 1901 den eines ordentlichen Professors, 1904 wurde er zum Vorstand der II Chirurgischen Universitäts-Klinik als Nachfolger Gussenbauers ernannt (1930 emeritiert) .

Hochenegg war ein hervorragender Operateur und ein ausgezeichnete Diagnostiker. Noch als Assistent machte er die I. Choledochotomie. 1890 führte er die I. erfolgreiche Leberresektion wegen eines auf die Leber übergreifenden Gallenblasenkarzinoms durch. Er entfernte 1891 eine durch einen Unfall gequetschte Niere mit Erfolg. Im gleichen Jahr glückte ihm anlässlich einer Kehlkopfxstirpation eine Ösophagoplastik. Eine traumatische Epilepsie vermochte er 1892 durch Exzision der lädierten Rindenpartie zu heilen. Sein Hauptarbeitsgebiet aber war die Dickdarmchirurgie. Er entwickelte die von Salzer im Tierversuch erprobte bilaterale Darmausschaltung bei inoperablen Zoekumtumoren nach vorangegangener Ileokolostomie, um das Karzinom, respektive den entzündlichen Prozeß einer direkten lokalen Therapie zugänglich zu machen und eventuell nach Abklingen der entzündlichen Begleiterscheinungen doch noch operieren zu können. 1888 publizierte er seine Modifikation der 1885 von Kraske angegebenen, aber bis dahin wenig geübten Mastdarmresektion : Er empfahl eine bessere Schnittführung, erleichterte den Zugang durch Entfernung des Steißbeines und eines Teiles des Kreuzbeines, schonte den Schließmuskel nur beim tiefsitzenden Karzinom nicht und trat für die primäre zirkuläre Darmnaht ein. Er zog einen « Anus sacralis » dem von Kraske empfohlenen Anus perinealis vor. 1890 gab er die Durchzugsmethode an, um den Sphinkter zu erhalten, die Gefahr einer Nahtdehiszenz und einer Infektion zu verringern. 1894 machte Hochenegg zum I. Male eine zweizeitige Dickdarmresektion. Eine minutiöse Nachbehandlung sicherte seine Erfolge. Gemeinsam mit Anton von Eiselsberg gründete er zwei den chirurgischen Kliniken angegliederte Unfallstationen, in denen alternierend die Verletzten versorgt wurden. Zu seinen Schülern zählten Paul Albrecht, Lorenz Böhler, Fritz Demmer, Adolf Exner, Hans Finsterer, K. Haslinger, H. Heyrovsky, Fritz Kaspar, H. Lehmann, H. Lorenz, Felix Mandl, L. von Schmarda und H. Steindl.

...

Julius von Hochenegg, Chirurg. Bruder des Vorigen. Studiert an der Universität Wien Medizin, 1884 Doktor der Medizin Nachher Operationszögling bei Theodor Billroth sowie 1886-1890 Assistent an der I. chirurgischen Klinik unter Eduard Albert. 1889 Privat Dozent für Chirurgie an der Universität Wien, 1891 Abteilungsvorstand an der Wiener allgemeinen Poliklinik, 1894 andere Professor und nach Alberts Tod mit der Supplierung der I. chirurgischen Klinik betraut, 1904 o. Professor und als Nachfolger Billroths Vorstand der II. chirurgischen Klinik. Er verbesserte durch Um- und Zubauten die räumlich sehr mangelhafte Klinik, baute Operations-Säle, errichtete ein Röntgeninst, und gründete gemeinsam mit Anton von Eiselsberg die Unfallstation. 1930 im Ruhestand, 1914 nob. Hochenegg, ein hervorragender Lehrer und glänzender Operateur, erwarb sich große Verdienste um die Entwicklung der Krebschirurgie, der er vollkommen neue, erfolgreiche Wege erschloß. Er verfaßte zahlreiche Abhandlung über Leber-, Darm- und Nierenchirurgie und über die Entstehung bösartiger Geschwülste (Hocheneggsches Symptom bei Dickdarmentosen) . Zu seinen Schülern gehörten und andere Lorenz Böhler, Fritz Demmer, Hans Finsterer, Felix Mandl und Fritz Kaspar.

### Genealogie

Vater : Johann Baptist (1814-1899) , Doktor der Rechtswissenschaften, Hof- und Gerichtsadvokat, Sohn des Hausbes. Alois in Graz und des Anna Wiesinger ; Mutter : Cäcilie (1831-1862) , Tochter des Joseph von Winiwarter (1780-1848) , Professor der Rechte (siehe Stintzing-Landsberg) , und des Franziska Holfeld ; Bruder : Carl ; verheiratet Wien 1890 Julie (1863-1942) , Tochter des Doktor der Rechtswissenschaften Wilhelm Mauthner von Mauthstein, Hof- und Gerichtsadvokat und Gemeinderat in Wien, und des Josephine Marschall ; Gv. des Ehefrau Ludwig Wilhelm Mauthner von Mauthstein (1806-1858) , Professor der Medizin, Gründer der I. Wiener Kinderspitale ; 1 Sohn, 1 Tochter Johanna (verheiratet Fritz Kaspar, 1885-1943, Professor der Chirurgie) .

...

**Thursday, 17 June 1897** : An epidemic of scarlet fever broke-out in Kitzbühel. The group decided to abandon the little paradise, especially since Mahler was still very weak. They stopped briefly in Innsbruck before finding a most attractive house, called the Villa Zirmheim in Steinach-am-Brenner, near the « Kurpark » (Spa) . They spend the last 10 days of June there.

**Wednesday, 30 June 1897** : Mahler is victim of a bicycle accident on his way from Gries to Innsbruck.

**Wednesday, 30 June 1897 to Thursday, 15 July 1897** : Convalescence of Mahler after his bicycle accident. His health improved.

**Until Thursday, 1 July 1897** : They had to stay in Innsbruck because the Villa Zirmheim had been booked by a Munich family.

**Mahler : Second operation for hemorrhoids**

**Monday, 6 June 1898** : Mahler, aged 41, is operated for hemorrhoids at the « Rudolfinerhaus » located in the District of Döbling. He takes a leave.

**Friday, 1 July 1898** : Summer vacation at the Villa Artmann in Vahrn. Mahler recovers from the operation. Composition of Lied 8 (« Lied des Verfolgten im Turm ») and 9 (« Wo die schönen Trompeten blasen ») from « Des knaben Wunderhorn » .

### Mahler : Third operation for hemorrhoids

**Sunday, 24 February 1901** :

In the afternoon, Mahler conducts the 6th Philharmonic subscription-concert at the « Gesellschaft der Musikfreunde » .

Programme :

Works of Carl Maria von Weber, Antonín Dvořák, and Bruckner's 5th Symphony (with cuts) .

In the evening, he conducts Mozart's « Die Zauberflöte » at the « Hofoper » .

**Monday, 25 February 1901** : Mahler suffers a severe intestinal hæmorrhage in the evening. The prominent surgeon Doctor Julius Hochenegg (1859-1940) is called upon and manages to stanch the serious bleeding. Hochenegg told him if he would have been there a half hour later, it would have been fatal. The operation was successful.

...

Mahler awakes in the middle of the night, his sheets drenched in blood from a burst hemorrhoid. Justine calls a doctor who puts him in an ice-water bath. When the bleeding persists, he summons a surgeon who, delayed in traffic, tells the patient that « half an hour later, would have been too late » . Professor Julius von Hochenegg is a pupil of Professor Theodor Billroth, a pioneer of abdominal surgery and a friend of Johannes Brahms. He has a rectal ulcer named after him, and students from all over the world.

Hochenegg subjects Mahler to an excruciating procedure, inserting a large instrument into his rectum and probing around until the polyp is found and tied-off. Surgeon and patient are soiled with blood and fecal mucus.

Mahler tells Richard Strauß that he lost 2 and a half litres of blood :

« Hovering on the border between life and death, I wondered whether it would not be better to have done with it at once, since everything must come to that in the end. Beside, the prospect of dying did not frighten me in the least ... and to return to life seemed almost a nuisance. »

He adds :

« I thought my last hour had come. »

How true is that ? Death from hemorrhoids is unusual, and Hochenegg may be scaring him. Nevertheless, Mahler seems to recognize that this is a cross-roads in his life, a moment to assess past achievement and plan a different future. He agrees to go under the knife and is gratified to hear that Emperor Franz-Josef has written to Hochenegg, commanding him to take good care of his Opera director. Prince Montenuovo raises Mahler's salary by 16 % and doubles his expenses allowance.

**Monday, 4 March 1901** : Heartened, Mahler undergoes surgery and, during convalescence, reads a new Bach edition.

He tells Natalie Bauer-Lechner :

« Bach reminds me of those grave-stones that show the dead sleeping with hands folded-over their remains. They seem to hold on to life, even beyond this existence. »

His sepulchral imagery resembles that of the hallucinations of the recovery room, where patients are kept after general anesthesia, a place where the boundaries of life and death can blur in a patient's mind.

**Wednesday, 20 March to Saturday, 6 April 1901** : Mahler goes in convalesce for 2 weeks at a nursing home in Abbazia with the help of his sister Justine and Natalie Bauer-Lechner.

**Early April 1901** : After his return in Vienna, Mahler still experiences recurring symptoms. He is also tired of the complaints which comes from the Orchestra. He decides to cancel the 2 remaining Philharmonic concerts and withdraws his candidacy as conductor of the Vienna Philharmonic for the next season.

**Tuesday, 28 May 1901** : At the board-meeting of the Vienna Philharmonic, the « mediocre » Josef Hellmesberger junior is appointed to succeed the resigning Mahler.

In 3 seasons, Mahler conducted 80 concert including those of relatively unknown composers such as Hermann Gøetz, Wilhelm Kienzl and the Italian Lorenzo Perosi.

**Mahler : Fourth operation for hemorrhoids**

**Tuesday, 4 June 1901** : Doctor Julius Hochenegg must practice at the Løw Sanatorium a new operation to treat Mahler's hemorrhoids.

**Vienna : Løw Sanatorium**

The Lœw Sanatorium is located at Number 20 on « Mariannengasse », in the 9th District - at 15 minutes walk from the Vienna « Hofoper ». It was the biggest private hospital in Vienna.

In their study of Ludwig Wittgenstein's time in Vienna (« Wittgenstein in Vienna : A Biographical Excursion through the City and its History », Vienna and New York), Allan Janik and Hans Veigl give an account of the philosopher's time at the Sanatorium and its « milieu » :

« From the 18th to the 28th of July 1906, “ Ludwig Wittgenstein, student, 17 years old, single ” maintained a legal residence at “ Mariannengasse ” Number 20. The 4 story building still exists. It then stood on grounds enclosing 11,900 square-meters and was, at the time, the largest private hospital in the capital. It had been founded by Doctor Heinrich Lœw in 1859 in the Leopoldstadt, taken-over by his son, Anton (1847-1907), and moved to the 9th District in the vicinity of the General Hospital and the Polyclinic in 1882. In 1894 and 1906, it had been expanded by the architect, Leopold Schöne. It was considered to be one of the leading private hospitals for surgery. From 1907, it was operated under the name “ Wiener Sanatorium ”. It would be forcibly closed in 1939.

Ludwig Wittgenstein landed in the institution shortly after completing his studies at the Linz “ Realschule ”, and before enrolling at the Technical University in Charlottenburg (Berlin). Here, he would undergo his first of a series of hernia operations. Thus, he speaks of such an operation having taken place in July of the previous year in a letter to Bertrand Russell in June 1913. This malady would free him from the obligation of military service. So, he would not have to rally to the flag in 1914.

The Lœw Sanatorium was a place where the well-to-do frequently went to spend their waning days. Private hospitals were part of the elegant life style of the patrician class at that time. They, too, were a part of a life of fashionable luxury. The popular actors, Alexander Girardi and Hansi Niese, the editor of the “ Neues Wiener Tagblatt ” and father of Bertha Zuckerkandl, Moriz Szeps, the leader of the Social-Democratic Party, Viktor Adler, the composer and conductor, Gustav Mahler, passed on here. The celebrated “ Burgtheater ” actor, Josef Kainz did as well :

“ Josef Kainz passed-on in this building in the former Lœw Sanatorium ”, reads the memorial plaque.

Heinrich Benedikt's father was operated upon here. Arthur Schnitzler mentions the place in his note-books in connection with the illness of his wife Olga in 1897, in which he also reports of spending his vacation together with Anton Lœw in Welsberg, in 1907. The 60 year old director of the Sanatorium would himself pass-away shortly thereafter.

At the beginning of August 1918, the pregnant Alma Mahler would be brought to Lœw's Sanatorium, the very place where her husband, Gustav Mahler, had died in May 1911. Franz Werfel would learn that the life of his girl-friend swung in the balance ; his unborn child was also given little chance of surviving. In his last novel that he would begin in his Santa-Barbara exile and finish a few scant days before his death on the 26th of August 1945, “ Star of the Unborn ”, he would describe the situation in the summer of 1918 and Lœw's hospital :

“ The first thing that I see is a white door that I have closed with infinite care behind me as if I could somehow push reality away that way. I have come to this door by a long corridor and have hesitated for the length a couple of long heart-beats before knocking on the door. I am expected. I enter into a silence that is far deeper than the one outside. A stark white room. Lots of flowers. A modest hospital room. The window is open. It is August, 4 o'clock in the afternoon, and the humid air of the metropolis in summer rushes in ... The nurse has re-entered the room. I put on my harmless, lying face. The woman says to me in a soft voice, ' When you entered the room, there was funeral music outside ...' These words permit me to go to the open window and to look outside. A depressing street in the hospital District at whose end trees wither in a little park in late summer. ” »

The Lœw Sanatorium was particularly notable for its treatment of a number of important « fin-de-siècle » figures, including Gustav Mahler and Gustav Klimt, as well as Ludwig Wittgenstein.

## Patients

**Wednesday, 18 July 1906** : Ludwig Wittgenstein. Hernia.

**Monday, 4 March 1901** : Gustav Mahler. Surgery on hemorrhoids.

**Friday, 12 May 1911** : Gustav Mahler. Hospitalization.

**Monday, 15 May 1911** : Gustav Mahler (Room 82) . Death.

**Friday, 2 August 1918** : Alma Mahler gave birth to Martin Carl Johannes Werfel who also likely deceased here.

**Friday, 18 March 1932** : Richard Specht. Death.

Other patients who died at the Sanatorium :

Alexander Girardi, Emil Hertzka, Wilhelm Hesch, Josef Kainz, Rudolf Kaufmann, Ludwig Koch, Josef Loschmidt, Hansi Niese (who died on the transport there) , August Pettenkofen, Arthur Schattenfroh, Julius Scheff, Heinrich Schenker, Moritz Szeps, Ernst Wertheim und Heinrich Winterberg.

## Doctor Anton Lœw

The Jewish physician and art-collector Doctor Anton (Victor) Lœw was born on 20 October 1847 in Pozsony, Hungary (Bratislava, Slovakia) ; and died on 14 September 1907 in Vienna.

Son of Heinrich and Fanny Lœw.

Husband of Sophie Franziska Unger who died in 1933 (aged 79) .

Father of Gertrud Franziska Sophie Gerta von Felsövényi (16 November 1883 - March 1964) .

Brother of Charlotte Lucie Offer, Therese Fürth, Rosa Herschfeld and Arthur Lœw.

Anton Lœw studied medicine like his father, Doctor Heinrich Lœw, who had opened a private health-clinic in 1859 in a modest building located in the « Leopoldstadt » area (2nd District) . In 1874, Anton took-over and expanded the facilities considerably.

Around 1880, Anton bought the water-sanatorium in Purkersdorf (a suburb of Vienna) which he sold after a few years. The actual Sanatorium Purkersdorf was built on the same site in 1904-1905 by architect Josef Hoffmann for industrialist Victor Zuckerkandl - an example of the style of the Viennese Secession in architecture.

In 1882, Doctor Lœw decided to move his father's private clinic into a brand new building located in the 9th District, at Number 20 on « Mariannengasse » .

Designed by architect Leopold Schöne, it consisted in a 4 storey structure based on the late-historical architectural style with giant pilasters rising in the middle and a casted barrel-vault at the entrance in the « foyer » . The site totalized 11,900 square-meters of which 4,550 square-meters were built. Inside, you would find 36 single private bedrooms, 2 operating-rooms on the upper-floor spread over 4 separate areas, an X-ray room, a new gynecological obstetric department headed by Bianca Bienenfeld (the second woman to earned a medical doctorate in Austria) . Also, residential accommodation was offered to 50 sisters of the Congregation of the « Daughters of the Divine Saviour » who were working as nurses.

In 1894 (according to plans by Ludwig Richter) , the number of beds were increased to 90. Then, another expansion project (supervised by Ernst von Gotthilf) made possible the creation in the basement of a gymnasium for boxing, as well as a laboratory for bacteriological and histological examinations. Praised by the Austrian-Hungarian Empire for its size and modernity, the centre was considered one of the most highly-regarded medical institutions in Europe. Daughter Gertrud lived with her family at Number 7 on « Pelikangasse » , between « Alser-Straße » and the Vienna General Hospital (« Allgemeine Krankenhaus ») - right around the corner from the sanatorium. In 1902, when Gustav Klimt painted her, the health-clinic was mentioned in Lehmann's General Housing Gazette of Vienna. It received international awards from Prussia, Russia, Denmark, Serbia, Romania and Japan.

The Lœw family was able to join society's « élite » and give commissions to some of the most important artists of the day. Aside from his daughter's portrait, Anton Lœw also acquired Ferdinand Hodler's « Der Auserwählte » (« Kunstmuseum » , Bern) and Gustav Klimt's « Judith I » (Belvedere Museum, Vienna) . Gertha and her first husband Hans Eisler von Terramare (both serious enthusiasts of the « Jugendstil » æsthetic) engaged the artist Koloman Moser to design their apartment in the « Wiener Werkstätte » style.

In 1905, the Lœw Sanatorium became a corporate company. In 1906, an adjacent house was converted into a spacious apartment complex which was integrated to the clinic. In 1907, 3 additional houses were acquired. A real success story

!

Anton Lœw was named medical director of the Red Cross Society of Austria. He was considered an eminent director and chief-doctor in the organization of hospitals.

After the death of her father on 14 September 1907, Gertrud became the company's main share-holder. It was, then, recalled : « Wiener Sanatorium Doktor Anton Lœw » .

Surgeon Doctor Julius Hochenegg was the director of the Lœw Sanatorium at the time of Gustav Mahler's operation in June 1901.

Doctor Michalik (Mihalic, Mihalik, Mihalicks, Michailitsch) was the resident physicist when Mahler was hospitalized at the Lœw Sanatorium in 1911.

The sanatorium (still under the administration of Gertrud) and the well-known private art-collection of Anton Lœw were confiscated by the 3rd « Reich » when the Nazis took-over power in Austria in 1938 (« Anschluß ») . After World War II, the Lœw family was partly compensated by the Republic of Austria. It was only in January 2011 that the restitution procedure was concluded with the return of some works of art.

Since 1960, the building has been the headquarters of the Austrian Federal Railways (« Österreichische Bundesbahnen » or ÖBB) .

#### Klimt : Portrait of Gertrud Lœw

#### Provenance :

Doctor Anton Lœw, Vienna (commissioned from the artist in 1902) .

Gertha Baruch von Felsőványi (« née » Lœw) , Vienna (by descent from the above) .

Gustav Ucicky, Vienna (acquired around 1941) .

Ursula Ucicky, Vienna (by inheritance from the above in 1961) .

Klimt Foundation, Vienna (a gift of the above in 2013) .

Klimt Foundation and The Heirs of Gertha Felsőványi (ownership settlement agreed between the 2 parties in 2014) .

Gustav Ucicky, is said to be an illegitimate son of Gustav Klimt with one of his models, bought the painting in 1938. He was member of the Nazi Party and a successful film-director. The painting until today has not been restituted.

« Bildnis Gertrud Løw » , painted in 1902, is an extraordinarily beautiful and captivating work from a crucial period in the artist's career. Wreathed in diaphanous folds of gossamer fine white and lilac cloths, the sitter's delicate features are composed into an expression of dreamy repose and gentleness, animated only by points of reflected light in her eyes. Klimt's vertically inclined composition helps to enhance the figure's somnambulant detachment by removing all extraneous details.

Discussing the narrow format and other compositional elements of the present work, Alfred Weidinger comments : « In a way similar to the portrait of Serena Lederer, Klimt here uses a strikingly narrow vertical format for his likeness of the 19 year old girl - except that here the format is even narrower. Along the right-hand side, a portion of her shawl is cut-off by the edge of the picture. This elongates the figure and reduces her distance from the viewer. The narrow format seems to have been inspired by Japanese art. Even the colour accents set by Klimt by means of his signet and the ornament in the area of the upper-left of the picture are reminiscent of Japanese woodblock prints. » A passion for Japanese and Chinese art had gripped European intellectuals since the latter half of the 19th Century. Numerous illustrated journals, exhibitions, recently opened museums and burgeoning private collections fuelled its integration with the avant-garde artistic practises of the day. Klimt's own devotion to Orientalism is evident in a number of works from 1900 onwards, culminating in the boldly experimental inclusion of Asian motifs in his later portraits of Friederike Maria Beer and Elisabeth Lederer.

The symbolist treatment of the female portrait was to be one of Klimt's definitive developments at the start of the 20th Century. The virginal purity of the tonalities and ethereal atmosphere evoked in « Bildnis Gertrud Løw » serve to elevate the work from its primary biographical purpose and engage with allegorical themes of youth and feminine purity.

Quoting from another source, Doris H. Lehmann argues :

« Each of Klimt's female portraits is more than just a representation of his model. As Thomas Zaunschirm has written :

“ Fundamentally, Klimt was less a portraitist than a painter who used female portraits for the purpose of his own allegories. ” »

This effect was achieved in part by the impressionistic brush-work which only loosely defined a sense of space in the picture, and was also due to the lack of topographical reference - a conceit that was a particular feature of Klimt's portraits until the introduction of geometrical forms in the portrait of Ludwig Wittgenstein's sister « Bildnis Margarethe Stonborough-Wittgenstein » of 1905, now in the « Neue Pinakothek » in Munich.

When this portrait was exhibited at the « Kollektiv Ausstellung Gustav Klimt » at the 1903-1904 Secession exhibition, the critic Ludwig Hevesi commented on a group of the artist's most recent works as « 3 or 4 female portraits in all the magical charm of radiant filminess » of Klimt's distinctive brush-work, and admired the present work specifically for the « gauziest lyricism of which the painter's palette is capable » .

A week or so later, Havesi further stated that the « Bildnis Gertrud Løw » possessed certain stylistic distinctions particular to Klimt's latest paintings :

« Take (...) , at the other end of the scale, the very young lady in white from this year, a pure whisper, with 4 stripes of pale lilac silk running the length of her gauzy, crumpled dress. Within the shimmering cascade of the fabric, each stripe meanders this way and that, in a random fashion that conceals the most exquisite painterly plan. »

The fashion-conscious artist (whose « soul-mate » was the designer Emilie Flöge) often incorporated extravagant patterns and geometric designs into his work. However, those who sat for his portraits and may have been actually dressed in the current fashions were often reimagined entirely to the artist's own taste and for allegorical reasons, as Angela Völker explains :

« Gustav Klimt clearly had a preference for pale-coloured dresses. A number of the women he painted are wearing white or pastel shades. This does not necessarily comply with current fashion trends. The softly fluid fabrics, often transparent, of the classical style robes in his early allegories are echoed in the thoroughly different pink and white dresses in his portraits of Sonja Knips, Serena Lederer and Gertrud Løw. Knips' highly-fashionable frilled dress underlines the wearer's girliness, while Serena Lederer's Empire-style " Reformkleid " designed for a body unrestricted by whalebone-corsets, emphasizes the clearly sensual aspect of the wearer. Gertha Felsövänyi wears a close-fitting white dress with broad sleeve flounces and a transparent shawl with a pale blue border. Together with the unusual vertical format of the portrait, the dress underlines the petite stature and fragile complexion of this red-haired woman. »

...

**Wednesday, 5 June 1901** : Mahler spends his summer vacation in his own Villa in Maiernigg located at Number 31.

...

Doctor Gustav Singer, a specialist in intestinal troubles at the Vienna General Hospital, was another physician who treated Mahler in 1901.

### Doctor Gustav Singer

The Austrian internist Doctor Gustav Singer was born on 28 February 1867 in Brno (Brünn) . After concluding his medical studies in Vienna in 1891 with a doctorate, Singer worked as a junior physician at the Vienna General Hospital (« Wiener Allgemeines Krankenhaus ») until 1898. The same year, he qualified to lecture in internal medicine. He became chief-physician at the Empress Elizabeth Hospital in 1903, chief-physician of the first medical department of the Rudolf Foundation Hospital in 1905 - and associate-professor (« Professor extraordinarius ») in 1911. In 1924, he was named a Court councillor. Singer's writings include « Die Reizkörperbehandlung des Diabetes » (1929) . He died on 3 December 1944 in England.

## The illness of Hugo Wolf

Hugo Wolf : Psychosis due to syphilis. Hospitalized.

Neither his letters nor accounts given by friends indicate any mental disturbance in 1896.

One of his closest friends, the sculptor Edmund (von) Hellmer, introduces Hugo Wolf as follows :

« He was of very short stature (154 cm) - broad shoulders, strong and short his neck - almost graceful his small hands and feet. His head slightly bent forward - face and hands coloured like old ivory ... his eyes were dark like black-ink spots and seemed as burning from an inner-fire. »

**End of August 1896** : After a train trip to Graz, Hugo Wolf complained about cinders from the locomotive who had entered his eye by accident. Wolf's friend, the dentist Doctor Heinrich Potpeschnigg, referred him to the ophthalmologist Doctor Elschnigg to treat the conjunctival irritation. The smut was effectively taken-out but the specialist noticed the insensitiveness and rigidity of the pupils. His diagnosis was Argyll-Robertson pupils which indicates that the central nervous system has been affected. Doctor Elschnigg informed Doctor Potpeschnigg about his observation. Wolf, however, was not informed about this finding and its implications.

This abnormality can be regarded as evidence of tabetic changes, a view which is supported by the appearance of tabetic ataxia 9 months later.

## Dentist Heinrich Potpeschnigg,

The dentist, pianist and composer Heinrich Potpeschnigg was born on 1 August 1847 in Graz, and died on 1 September 1932 in Graz. Son of an advocate, grandson of the actress Luise von Holtei (« née » Roge) , he studied medicine at the universities of Graz and Vienna (1869-1870) . He received his doctorate in 1871 (?) . He then worked as a dentist in Graz and devoted himself to music. From 1902 to 1908, he lived in Berlin, undertaking several journeys as an excellent piano accompanist and concert pianist. He became one of Wolf's best friends in his final years. As a composer, Potpeschnigg was influenced by Wolf and Richard Wagner.

## Werke

2 Ländlerfolgen aus der Steiermark.

Nun ist der Tag geschieden (Ritornell) .

## Publikation

Erinnerungen an Anton Bruckner, in : Musica divina (Oktober 1922) .

Konzert-erinnerungen, in : Grazer Tages-Post (9. Oktober 1932) .

...

**Monday, 22 February 1897** : Hugo Wolf's last public concert.

He accompanied his songs (including his early champion « Der Jäger » by Mörike) in a recital at the « Bösendorfer-Saal » in Vienna.

He performed for the first time :

« Daß doch gemalt all deine Reize wären » , « Gesegnet sei, durch den die Welt entstand » , « Hoffärtig seid Ihr, schönes Kind » , « Ihr seid die Allerschönste » , « Und willst du deinen Liebsten sterben sehen » , and « Wer rief dich denn ? » , all to anonymous words (translation : Paul Heyse) .

« Der Scholar » to words of Joseph von Eichendorff, and the first complete performance of « 3 Gedichte » von Robert Reinick.

Wolf was described as having been pale and looking as if he was in another world. Shortly thereafter, he slipped into syphilitic insanity, with only occasional spells of well-being. He left 60 pages of an unfinished Opera, « Manuel Venegas » which he desperately attempted to finish before he lost his mind completely.

In that same month, Wolf first met Michael Haberlandt, who became one of his most active supporters, and the 2 men took an instant liking to each other.

...

**Friday, 12 March 1897** : The Graz « Wagner Verein » gave a concert exclusively devoted to the works of Hugo Wolf.

**Saturday, 13 March 1897** : On his birthday, Hugo Wolf played parts of « Corregidor » to his friends, and was described by Michael Haberlandt as « like a boiling volcano, about to burst into flame, lightnings coming from his head, and sonic felt even the thunder » . (Ernst Décsey)

Wolf had now great hopes of seeing his « Corregidor » produced in Vienna.

**Second half of March 1897** : Hugo Wolf wrote his 4 Michelangelo songs, which are a supreme achievement except for the 4th, which Hugo Wolf himself regarded as inferior to the others.

**End of March - beginning of April** : Hugo Wolf was in a puzzling heavy-laden tiredness, having sleepless nights or troubled by nightmares. (Ernst Décsey)

**Saturday, 3 April 1897** : Creation of the Vienna Secession.

**Friday, 9 April 1897** : Composer Engelbert Humperdinck, aged 42, and « Frau » Humperdinck were struck by Hugo Wolf's shy, changed, irritable conduct in a Vienna restaurant where they met. Wolf changes his seat several times so that he will not be seen by acquaintances.

Engelbert Humperdinck, to whom there is no doubt Wolf was sincerely attached, had paid him a visit on his way to Pesth, where he was to conduct « Hänsel und Gretel » .

The 2 composers and « Frau » Humperdinck, after visiting the museum in the morning, went to take some refreshment. Wolf suddenly exhibited an inexplicable aversion to « Frau » Humperdinck. He shifted his seat several times, giving as his reason that he did not wish to be seen by any of his friends ; he was irritable and ill-humoured.

In the afternoon, Wolf began to play « Der Corregidor » to Humperdinck, his wife, and Richard Wallaschek, the well-known author of « Primitive Music » . He played on for about 2 hours, Humperdinck being greatly delighted with the work.

After hearing the 2nd Act, he and his wife had to leave, having another appointment in the evening. Promising to play the remaining 2 Acts to them on their return from Pesth, Wolf accompanied his guests to their carriage, closed the door of it abruptly, and ran-off without a word of farewell. When Humperdinck returned from Pesth, Wolf was not in Vienna, and the pair never met again.

**Saturday, 10 April 1897** : A letter to Emil Kauffmann, Hugo Wolf makes a virulent attack on Humperdinck as a « composer for street-organs » , and has been considered by some to be so extravagant as to suggest the psychotic. The hyperbolic language is, however, of a type habitual with Wolf, and the letter is orderly and coherent.

**April 1897** : The friends of Wolf had founded the Vienna « Hugo Wolf-Verein » , an association the main-object of which was to spread the recognition of his music, and to relieve the composer of any spade-work in connection with it.

He tells his mother in a letter that the associates already number more than 100. The president was Doctor Michael Haberlandt, Gustos of the Natural History Museum and a lecturer at the Vienna University (one of the later friends of Wolf) , but yielding to none of the others in energy and enthusiasm.

**Thursday, 22 April 1897** : Celebration of the founding of the Vienna « Wolf-Verein » . The composer was not present, but he met his friends afterwards over a glass of beer. Knowing his detestation of anything in the nature of hero-worship, Michael Haberlandt, in proposing the toast of the new Society, had to omit all mention of the name of it ; the grim humour of the situation at last seized upon Wolf, and he laughed till the tears ran down his face.

**Saturday, 8 May 1897** : There is an insolent remark in another letter from Wolf to Emil Kauffmann but, again, nothing

more than could be accounted for by his personality.

**Friday, 14 May 1897** : The Vienna « Hugo Wolf-Verein » meets for the first time and gives a very successful concert.

**Summer 1897** : Gustav Mahler had been appointed chief musical-director of the Vienna Opera. Hugo Wolf, as his letters show, found the performances more interesting than they had been under the old regime. He now goes frequently to the Opera.

Wolf wrote to his friend Hugo Faißt :

« It being possible, since Mahler's appearance at the conductor's desk, for people to venture again into those unhallowed halls. »

Gustav Mahler showed such a liking for « Der Corregidor » that Wolf counted on an early performance of the Opera. It would certainly be produced in the coming season.

He wrote to his mother (Katharina Nußbaumer) on **Friday, 4 June 1897** :

« I have to-day received the definite assurance of the new “ Kapellmeister ” Mahler (an old friend of mine) . He is now all-powerful at the Vienna Opera. He, himself, will rehearse and conduct my work ; this will be all the more agreeable to me as Mahler is more than any other man fitted to enter into my intentions. »

« We recently had the complete tetralogy of “ The Ring of the Nibelung ”, and, for the most part, without cuts - a very rare thing for Vienna. The Vienna performances of Wagner's works will soon rank as models. We have to thank Mahler for it all, who has put an absolute end to the old jog-trot routine. »

The performance was practically settled upon for **January or February 1898**. For reasons not perfectly understood, however, the work was put aside, Anton Rubinstein's « Demon » being given in its place.

**June 1897** : Intended to accompany his friend Michael Haberlandt on a bicycle tour, Hugo Wolf decided to take bicycle-riding lessons for this purpose.

Wolf wrote to his friend Hugo Faißt :

« Being a beginner, I have so far only learnt to know the dark-side of bicycle riding. My poor body is tattooed from bruises I have got in the driving-lessons. However, I will continue facing the divine pleasure which is waiting on me. »

Wolf simply was unable to stay on the bike and suffered numerous falls. He had to be stopped due to severe coordination deficits. The suggestion has been made that this was due to a tabetic ataxia.

**July 1897** : Hugo Wolf was beginning work on « Manuel Venegas » .

**Second week of July** : Hugo Wolf was in the old fever of creation, working morning to night.

**August 1897** : The same state persisted but now observers speak of the familiar traits of his work and talk having become distorted and exaggerated ; he was failing to answer his letters, and trying to support himself on an unusual indulgence in wine.

**Saturday, 18 September 1897** : Hugo Wolf had paid a visit to his former room-mate and friend from the days in the Vienna Conservatory, Gustav Mahler, who had already begun working as the provisional director of the Opera. Both composers had disputed about the plans to produce Wolf's « Der Corregidor » at the Vienna Court Opera which Mahler had previously promised to produce. During the dispute, Mahler finally expressed doubt as to whether the work would be performed in Vienna at all.

Wolf left Mahler raging bitterly and vowing revenge for this disappointment. In this extreme emotional state, Wolf produced the idea that removing the obstacle « Mahler » would lead the way to his so long merited success, his becoming director of the Opera House.

Alma's account on how Mahler reacted to Wolf's behaviour in « imperiously demanding the instant production of “ Corregidor ” » :

Mahler, knowing the work and its defects, made the usual evasions : no singers suited to it, etc. Wolf grew obstreperous and Mahler did not like the look of him. He had a special bell within reach for such occasions.

He pressed it and his man came in with the pre-arranged message :

« The Intendant wishes to see you at once, sir. »

Wolf found himself alone.

He rushed downstairs the Opera House and along the « Ringstraße » . His mind gave way ; he thought he was the Director and on his way home :

« I am Mahler ! I am Mahler ! »

When he arrived at Mahler's flat, at Number 2 on « Auenbruggergasse » , he rang the bell ; and when the servant opened the door, he shouted at her to let him pass - he was the Director. She slammed the door in his face in terror. He ran-down the steps again and into the street.

...

In her memoirs, Alma Mahler gives an account of the last meeting between Mahler and Wolf that, for the first time, is derived from Mahler's information. She claims that Wolf « imperiously demanded the instant production of "Corregidor" » .

Anyone who knew Mahler would realize that he vehemently opposed any outside pressure, particularly any attempt to impose something on him in matters of his directorship. Wolf's friends nevertheless allege that a promise had been made by Mahler to perform « Corregidor » , and, after studying the various letters and sources, even the English biographer of Wolf, Ernest Newman, came to the conclusion that the performance was originally envisaged for **January or February 1898**.

Newman writes :

« For reasons that are not entirely clear, the work was nevertheless set aside, and replaced by Rubinstein's "Dämon" . »

If the true reasons for the postponement of the « Corregidor » performance have not been outwardly explained, one thing is absolutely clear : despite its hypothetical character (« during which Mahler appears to have made some less-than-complimentary remarks about "Corregidor" ») , the previously cited account of the clash between Mahler and Wolf given by Heinrich Werner (official historian of the Hugo Wolf Society) has completely clouded and misrepresented what went on in the director's office, and even such a conscientious and serious musicologist as Ernest Newman could not escape the suggestive influence of this account. The main aim of Werner's account was obviously to conceal the fact that an already mentally disturbed Wolf sought-out the Opera-director Mahler in order to demand in an imperious tone the immediate performance of « Corregidor » . To this end, Werner lets the conversation between Mahler and Wolf begin with an argument over the merits or otherwise of Anton Rubinstein's Opera « Dämon » , which must appear all the more plausible to the reader given the concrete assertion that the score of this work lay open on Mahler's desk. This was supposed to have given the impression first and foremost that Opera-director Mahler imprudently favoured the work of the « foreigner » Rubinstein over the « native » composer Wolf. At the same time, it was difficult to cast doubt on the accuracy of Werner's account given that Rubinstein's Opera « Dämon » was indeed performed by Mahler, and the score, therefore, had to have been in Mahler's office at some point for him to study. Whatever the case, even Newman could not escape the conclusion based on these details and presumptions that « Corregidor » was put to one side, and Rubinstein's « Dämon » performed in its stead.

There is only one small snag. According to the list of new works and new productions under Mahler's directorship compiled by A. J. Weltner, archivist of the Vienna Court Theatre, and published in Richard Specht's Mahler biography, Rubinstein's « Dämon » appears neither under 1897 nor amongst the new works performed in 1898, but was not premiered until 23 October 1899. If, in fact, a postponement of « Corregidor » in favour of « Dämon » took place - as the Hugo Wolf party tried to convince the public in order to confirm that the conversation between Wolf and Mahler began with an argument over the merits or otherwise of the Opera « Dämon » (rather than with Wolf's brusque demand that his Opera « Corregidor » should be put into production « immediately ») - then, this is

tantamount to acknowledging that, by September 1897, Mahler's promise, given in June, to perform « Corregidor » in January or February 1898 was no longer valid and had meanwhile been withdrawn and replaced by an alternative arrangement : « Corregidor » would now figure in the long-term plans for the coming 1899-1900 season. Therefore, all the reproaches of the Hugo Wolf party that Mahler had not kept his promise, given in June 1897, to perform « Corregidor » in the 1898 season, would be completely invalidated.

**September 1897** : The decisive point in Hugo Wolf's illness with the overt outbreak of general paresis.

Wolf (who looked like a ghost) sent a hand-written letter on a sheet of music to his friend Michael Haberlandt :

« Piping hot ! Straight from the frying-pan ! Am beside myself ! Sell me up ! Am blissful ! Raving ! »

Haberlandt became suspicious of this strange letter and decided to see him at his apartment on « Schwindgasse » . Wolf appeared quite deranged and spoke excitedly about his new Opera, « Manuel Venegas » . He sat-down at the piano and played and sang from the fragmentary Opera in a highly-exalted mood, claiming that he had never composed anything so beautiful before. This performance, however, seemed to calm down his spirits and Haberlandt left his friends without anxiety.

...

Hugo Wolf opened the door himself, and Haberlandt was startled by the wildness of his look. Wolf stared blankly at Haberlandt as he made an apology for disturbing him ; then, he took him into the study and immediately began to talk excitedly and confusedly about his new work. Haberlandt was painfully affected, and besought him to take a rest or to go away for a time in order to recover his health ; but Wolf assured him that he had never felt better and had never written anything finer. He sat-down at the piano and played and sang the « Manuel Venegas » fragment with a most impressive look of felicity upon his face. His tears fell upon the piano, and he wiped them from the keys with his sleeve, like a child. The music seemed to soothe him, and Haberlandt went away, concerned for him but not immediately anxious, and with a promise that, on the following Sunday, Wolf would visit him in the country and, if he chose, bring his composition with him.

...

Hugo Wolf continued composing and invited all of his friends on the following Sunday, in order to « play the Opera at Perchtoldsdorf to all the faithful » .

This date was, again, preceded by strange letters such as the one to Melanie Köchert, where he urged her to join the audience for his performance :

« If, on the same day, you don't put-in an appearance, I shall never again set a foot in your house. »

**Saturday, 18 September 1897** : Hugo Wolf met his friend sculptor Edmund (von) Hellmer for lunch at a restaurant. While eating unusually fast, he picked-up the chop he had ordered and simply tore the meat away from the bone, gulping it down like an animal.

Suddenly, he whispered to Hellmer :

« Did you already know I have been named director of the Court Opera ? »

Hellmer first believed Wolf was joking, but Wolf repeated the « news » when Ferdinand Föll, another friend, arrived. (Wolf also said he would make Föll a chorus Master !)

They finally were given a private concert in Wolf's apartment. Then, Wolf drank brotherhood with them and ended-up talking about matters that, under normal circumstances, he would never have discussed openly - his family, his poverty and his relations with women.

**Sunday, 19 September 1897** : Hugo Wolf walked at high-speed through the streets of Vienna in order to find the Wagnerian tenor Hermann Winkelmann in his duty as the new director of the Opera. He aimed at engaging the singer for the same day's concert in Walter Bockmayer's house.

**Friday, 10 September 1897** : Walter Bockmayer had asked Hugo Wolf to come to his house in Mödling, outside Vienna, and had invited some 20 other people to hear the composer play as much as had been written of his new work. The meeting was for the afternoon.

Early in the morning, Wolf went to see his friend the sculptor Edmund Hellmer at his home in Perchtoldsdorf, which he had never entered before ; encountering Hellmer's mother, he represented himself to her as the director of the Vienna Opera. He recited a speech he had composed to the officials of the Opera, in which he finally dismissed the director. Then, he hurried Hellmer off to Michael Haberlandt's house, and forced them both, in spite of their protests, to go to Mauer, where the Opera tenor Hermann Winkelmann lived ; he insisted that Winkelmann was to go at once to Bockmayer's with him to sing the music of « Manuel Venegas » .

He burst into Winkelmann's house with the query :

« Do you know who your new director is ? I am ! I have just been with the Prince and have arranged everything with him. »

For the moment, Winkelmann was inclined to believe him, and was startled to hear what Wolf desired of him. Haberlandt, however, intimated by signs that something was wrong, and Winkelmann went away on the pretext that he had been called to the telephone. The friends managed to get Wolf out of the house, but he was furious with the singer ; if he did not come to Bockmayer's in the afternoon, he said, he would dismiss him.

Wolf's friends took him back to Perchtoldsdorf, where he had something to eat in Haberlandt's house, after which he slept a couple of hours. He had been awake since 3 o'clock that morning, had had no food for 24 hours, and was quite exhausted. Meanwhile, the other friends were told of what had occurred. Wolf's sleep did not, as Haberlandt had hoped, restore him to his normal state of mind ; as soon as he awoke, he was again possessed by the idea that he was director of the Vienna Opera. Still, no one yet suspected the real gravity of the situation. Bockmayer and the others agreed that it would be better to carry-out the original plan for the assembly at his house, since it was feared that a postponement of this would irritate Wolf still further. To Bockmayer's, they accordingly went about 5 o'clock.

Everybody met at 5:00 pm. Here, Wolf's conduct was stranger than ever, he insisted, for instance, on one lady leaving the room because he felt that she was unsympathetic towards him. Yet, when he sat-down and played and sang through the « Manuel Venegas » music, it was all done with perfect clearness and self-command ; some of the passages he repeated and explained.

The moment he rose from the piano, all lucidity vanished, and the crazed side of the poor brain became the Master again. He proclaimed to the audience his nomination as the new director of the Vienna « Hofoper » and that his first legal act would be dismissing from his post Gustav Mahler (but also Winckelmann and others ...) . Mahler had recently turned-down the idea of giving there a performance of « Corregidor » . Then, Wolf began to relate atrocious stories about his house-keeper (concierge) .

Fortunately, Michael Haberlandt had asked Doctor Gorhan from the local hospital to attend the concert as a precaution. Doctor Gorhan diagnosed the outbreak of madness and suggested bringing Wolf to an asylum immediately. They telephoned the private mental hospital of Doctor Wilhelm Svetlin, but got the reply that no inmate could be received in the asylum at night - only in the morning.

Meanwhile, Wolf had become much calmer ; he seated himself at the piano and tried to play Richard Wagner's Prelude to « Die Meistersinger von Nürnberg » , though his memory failed him towards the end and he had to stop.

He was taken into the dining-room, where he ate and drank well. Then, he talked quite lucidly about various episodes of his life, though every now and then, there were renewals of his former aberration.

At 11 o'clock, Ferdinand Föll and Walter Bockmayer accompanied him back to Vienna. He was in a good mood all the time ; but when they reached his house on « Schwindgasse » , he suddenly attacked the concierge with rage. The latter, of course, not understanding the situation, turned on him fiercely ; and a terrible scene ensued, Föll and Bockmayer both being in peril of their own lives in the attempt to separate the men. At last, they got Wolf to his room ; he gradually became more composed, ate some fruit, and, about 2 o'clock in the morning, went to sleep.

**Tuesday, 21 September 1897** : In the morning, Hugo Wolf (aged 37) put-on black clothes, saying he had to go to see the Court Opera « Obersthofmeister » Prince Liechtenstein for the signature of his contract as « new » music-director. Michael Haberlandt, Heinrich Werner and Doctor Gorhan humoured him in the idea : they called a carriage, then went-out with him, and quietly took him instead to the medical establishment of Doctor Wilhelm Svetlin.

His friends lost sight of him, the most conflicting reports as to his condition reaching them now and then.

Hospitalized, Hugo Wolf continued to have delusions, thinking himself at various times to be « Jupiter » controlling the weather, and the director of the asylum, planning to heal Friedrich Nietzsche.

He was given a piano in the sick-room and tried to compose again.

At his home, 50 pages of the 1st Act of « Manuel Venegas » were found, and biographer Frank Walker states that they are fine powerful stuff, showing « no trace of incipient insanity » or any failure or weakening of his creative powers. It is noteworthy that a letter of **Tuesday, 7 September 1897** to Rosa Mayreder, his librettist, though somewhat exaggerated in tone and vague in matter shows no obvious psychotic features, unlike the plainly psychotic letters to Melanie Köchert of a week later. In his letters to Rosa Mayreder, written after **March 1895**, one is struck by his urge towards an increasing intimacy. But the same phenomenon occurred as early as **1881** in the correspondence with Henriette Lang, who seems to have taken exception to it. It seems that this was his way with his female friends. Letters written to male friends from **1895** onwards are in a much more sober style and make no insistent demand for familiarity.

The « Italienische Serenade » , a new work for small orchestra, was intended to be in 3 movements. Only the first one was completed. The full-score of this has been published, arranged by Max Reger. The other 2 movements were to have been an « Intermezzo » and a « Tarantelle » respectively. The manuscript of the second movement contains only 28 bars ; that of the third, written at the beginning of 1899, when Wolf was in Doctor Svetlin's institution, contains about 40 bars. In this movement, he made use of the well-known Neapolitan song « Funiculi, funicula » of Luigi Denza, which had immensely pleased him when he first heard it in August 1896. Richard Strauß used the same melody in his « Aus Italien » , under the impression that it was a genuine Neapolitan folk-song.

### Doctor Wilhelm Svetlin

The Austrian Roman Catholic physician and psychiatrist Doctor Wilhelm Svetlin was born on 5 May 1849 in Vienna and died on 24 August 1914 in Vienna. He was buried at the Hietzing Cemetery (Group 21, Row 1, Number 2) .

The son of a laboratory worker, Svetlin attended the Scots' College (« Schottengymnasium ») located in the 1st District of Vienna. In 1867, he entered the Faculty of Medicine at the University of Vienna. He completed his doctorate in 1873, graduating « first » of his promotion.

From 1874 to 1877, Svetlin was assistant to Doctor Maximilian Leidesdorf at the psychiatric department of the General Hospital of Vienna (« Allgemeine Krankenhaus ») . He, then, practised at the first Psychiatric Clinic of the Provincial Lunatic Asylum of the Crown land of Lower-Austria in Bründlfeld (« Niederösterreichische Landesirrenanstalt am Bründlfeld ») .

Therese Pabst, wife of retired Regiment-physician Doctor Pabst (who practised in Melk until 1829 and, then, moved to

Vienna) , already operated a private lunatic asylum in Melk and continued to do the same in Vienna.

After the death of her husband of cholera, Therese opened her own private lunatic asylum in 1833 in the horse-stables of « Mülker-Bastei » (a bastion of the former Viennese town fortification) , on the basis of a permission obtained in an audience with the Emperor. The need for a mental institution in the town of Erdberg already existed in 1848. So, she decided to move the asylum to the former Rasumowsky Castle located at Number 100 (7) on « Erdberger-Straße » .

After Therese Pabst's death in 1878, « nerve doctors » Zimmermann and Wilhelm Svetlin (with the support of Doctor Theodor Meynert) took-over the management of the private clinic. In 1880, the clinic was renamed : Private Svetlin Sanatorium for nervous and mental disorders (« Privatheilanstalt Svetlin für Nerven- und Gemütskranke ») .

A new street-connection named « Sophienbrückengasse » (today : « Kundmanngasse ») was opened in 1883. Between 1883 and 1884, Zimmermann and Svetlin asked stone-mason Master Eduard Hauser (who used Svetlin's design) to erect a 2 tower building (falsely named the « fool's towers » of Erdberg - « Erdberger Narrenturm ») on « Leonhardgasse » (3rd District of Vienna) - based. It was considered the best private facility of its kind in Vienna at the time. In 1890, builder Eduard Frauenfeld extended the capacity of the clinic to more than 60 patients.

Doctor Svetlin's sanatorium welcomed patients from all over the world.

Among the most famous :

Composer Hugo Wolf (in his case, the success of Svetlin's therapy was moderate) , painter Carl Schuch, writer Karl Wilhelm Meixner, and politician Carl Meißl.

Apparently, it was relatively easy to have someone put in a « mad house » during this period ...

### The Odilon-Girardi affair

Helene Odilon (1864-1939) started as an actress in Chemnitz, but she was contracted by the Court Theatre in Berlin according to the wishes of Emperor Wilhelm I. In 1891, she left for Vienna, where she was soon famous for her wild private life and her erotic radiation. She seemed to have bewitched the town, at least the male part of it. Odilon worked for the « Deutsches Volkstheater » where she starred as « Madame Dubarry » and « Madame Sans-Gêne » . In 1898, Hermann Bahr wrote the part of Lona Ladinsler for her in « Der Star » . She also performed successfully in London and in the United States (1902) .

In 1893, Odilon married the popular actor and comedian in the Vienna of the turn of the Century Alexander Girardi (who also sang as tenor in Operettas) but the marriage was a complete disaster. Odilon continued her numerous love-affairs and Girardi became extremely jealous. At home, Girardi made her listen for hours to parts of his Operetta's and, then, refused to listen to her when she was learning a new part. At one time, Odilon moved-over to the Sacher

Hotel and tried to get rid of Girardi by getting him committed to a clinic.

Without seeing Alexander Girardi in person, the famous Doctor Julius Wagner-Jauregg stated from his neuro-psychiatric clinic in Graz that he was dangerous (irritable and probably unhappy) because of his use of cocaine and should be committed to the mental home of Doctor Wilhelm Svetlin.

Girardi watched from a window of his apartment the arrest of the house-holder who liked to dress and behave exactly like him. Girardi left with the help of a friend to find refuge at the house of the Austrian actress Katharina Schratz (1853-1940). Her intervention with Emperor Franz-Josef (who decided to reform the law) owed Girardi the examination of his mental state by judicially sworn specialists. They finally confirmed his normality.

Girardi made the following remark :

« If you're at Svetlin, you're gone ! »

In 1896, the marriage was formally over.

The dish « Girardirostbraten » (Girardi roast-beef) is named after him - a beef dish heavily covered with bacon and button mushrooms.

At the beginning of the 20th Century, the clinic of Doctor Svetlin provided room for 70 patients. In the south-east wing, there were 5 isolating cells on each floor - with « special facilities » for « restless » patients.

The clinic was managed by Franz Angerer from 1903 to 1925.

In the summer of 2006, the District Council unveiled a memorial plaque on the façade of the house located at Number 3-5 on « Leonhardgasse », which reminds us of Doctor Wilhelm Svetlin's private sanatorium.

In addition to his involvement in private psychiatry, Svetlin co-initiated the Lung Therapy-Center for Tuberculosis Disease (« Heilanstalt für Brustkranke ») in the town of Groisbach (District of Alland), Lower-Austria. He also committed to the care of neglected children.

Responsible for creating a « kindergarten » and 3 local water-sources for the inhabitants of Windischgarsten, Svetlin was named honorary citizen of the town.

Svetlin published numerous case-studies issued from his Private Sanatorium practice (« Die Privatheilstätte für Gemüths Kranke auf dem Erdberge zu Wien » (1884) ; 2. Bericht über die Private Heilanstalt für Gemüths Kranke auf dem Erdberge in Men (1891)) . He also published a Reference Book on institutional psychiatric treatments.

From 1903 to 1910, Regiment-Counselor Wilhelm Svetlin was President of the Children's protection and Siblings'

rescue Association (« Kinderschutz- und Resettungsgeschwister ») ; afterwards, he stayed as Vice-President.

Vice-President of the Alland Hospital Society.

Active member of the Medical Association.

Vice-President (1896-1909) and President (1909-1914) of the Vienna College of Physicians.

Member of the Board of Directors of the Vienna Chamber of Physicians.

President of the Eastern Medical Association.

### Publikation

Die einzige umfangreichere Publikation neben weiteren fast ausschließlich Falldarstellungen ist « Ein Beitrag zur Lehre von der Katalepsie » (in : « Archiv für Psychiatrie und Nervenkrankheiten » , Nummer 8, 1878) .

In seiner Schrift über « Die Frauenfrage und der ärztliche Beruf » (1895) sprach er sich gegen die alleinige Zulassung zum Medizin-studium, jedoch für die Öffnung aller Studium-richtungen für Frauen aus.

...

**Friday, 8 October 1897** : Gustav Mahler was formally appointed to succeed Wilhelm Jahn as the Vienna « Hofoper's » music-director.

His first production in his new office was Bedřich Smetana's Czech nationalist Opera « Dalibor » , with a reconstituted Finale that left the hero Dalibor alive. This production caused anger among the more extreme Viennese German nationalists, who accused Mahler of « fraternising with the anti-dynastic, inferior Czech nation » .

The Austrian author Stefan Zweig, in his memoirs « The World of Yesterday » (1942) , described Mahler's appointment as an example of the Viennese public's general distrust of young artists :

« Once, when an amazing exception occurred and Gustav Mahler was named director of the Court Opera at 38 years old, a frightened murmur and astonishment ran through Vienna, because someone had entrusted the highest institute of art to “ such a young person ” ... This suspicion (that all young people were “ not very reliable ”) ran through all circles at that time. »

Zweig also wrote :

To have seen Gustav Mahler on the street (in Vienna) was an event that one would proudly report to his comrades the next morning as if it were a personal triumph. »

**Wednesday, 10 November 1897** : An « all Wolf » concert is performed at the « Kleine Musikvereins-Saal » . Wolf was ill by now and the concert was organized by Doctor Michael Haberlandt of the « Hugo Wolf-Verein » . According to those music-critics who went, it was well-attended. A review appeared in the « Neue Wiener Tagblatt » , not by Max Kalbeck, however, but by Ludwig Karpath, the substitute employed to gather-up the crumbs under Kalbeck's table. Karpath noticed that the public which had stayed away from Wolf's concerts while he was in good health seemed to flock to the « Wolf-Verein » concerts now he was ill.

His criticism was favourable, but not without reservations :

« The “ Hugo Wolf Society ” (...) had a long series of Wolf's songs performed at its last musical evening. From all these compositions speaks a strong, if limited, talent. Wolf's innate province is that of lyric. There, he moves in flower-strewn fields with the most natural grace and freely flowing melodies, and in the splendid gardens of soft, dewy blossoms, whose noble fragrance blows over from the depths of a poet's heart like a warm breeze. »

It is interesting to note that, with the specifically musical references removed, Karpath's description of Wolf's songs could well apply to Kalbeck's poetry.

Břetislav Lvovský reported the concert, but made little of Wolf's songs but much of what he regarded as an inadequate performance. Otto von Kapff's account was even more brief, but he did manage to describe Wolf as « brilliant in his own way ». Robert Hirschfeld wrote at more length, regarding an evening full of Wolf's songs as too much of what in small doses would be a good thing. He advised the « Wolf-Verein » that, if it really wanted to increase the popularity and audience-exposure of Wolf's songs, it would do better by directing its energy towards lobbying artists (especially, the best singers) to include them in small numbers in their programmes.

Hofrat von Wærz remained unconverted :

« The “ Hugo Wolf Society ”, which according to its own statutes concerns itself with the popularizing of Wolf's compositions, wishes to prepare a treat for the concert-going public, not only its members, but also other people. Admittedly, the latter now disapprove of such “ Lieder ” and songs of the pathologically over-stretched composer, whose peculiarity consists precisely in unsingability, of very substantial difficulties, while the healthy part of Wolf's output needs no patronage at all in order to be bought, successful, and heard with pleasure. »

**Monday, 24 January 1898** : After 4 months in Doctor Wilhelm Svetlin's asylum, Hugo Wolf was discharged with the help of Melanie Köchert. His mental condition had improved to a certain degree but he was unable to work.

« The least mental occupation wearies me. I believe it is all over with me. I do not read, do not make music, do not think ; in a word, I vegetate. »

Wolf was then taken in charge by his sister (who lived in Celje) but he ran away very soon.

For most of the subsequent months, his friends would take him on several short holiday trips in Austria. Melanie and Hugo travelled in Italy. Visiting Trieste, Wolf saw the sea for the first and only time in his life. After his return to Vienna, symptoms of mental derangement manifested themselves in even greater degree.

**Sunday, 6 March 1898** : After his visits to various resorts, Hugo Wolf, aged 37, returns to a new Viennese home on « Mühlgasse » .

**October 1898** : During a stay in Traunkirchen, Hugo Wolf left his apartment one morning tormented by ideas of persecution. His friends, including his mistress Melanie Köchert, searched the vicinity for some time and he was finally found at the edge of a nearby forest, dripping wet. In a half-hearted suicide attempt, Wolf had tried to drown himself in the cold waters of the Traunsee River, but had swum to shore (a parallel with Robert Schumann's case forcibly suggests itself) . Then, he had wandered in the woods ashamed of what he had attempted to do. He was now conscious of the coming doom and was resigned to it. For a time, the Köcherts hoped to nurse him in their own house ; but, before long, signs of paralytic cramp were evident, and now, it was the poor stricken soul himself who asked to be taken into an institution.

Hugo Wolf shared with Robert Schumann and Franz Schubert all the psychological and neurological symptoms that

interfered with their artistic expression, especially in respect to Lied compositions. Wolf left his last Opera, « Manuel Venegas » unfinished, trying desperately to end it before he lost his mind completely ; he also created 3 songs based on the poems of the famous painter and sculptor Michelangelo Buonarroti, and baptized this work « 3 Michelangelo-Lieder » when he realized the coming end of his life. Their titles « Often do I reflect » , « Does my soul feel » and « All that is created must perish » depict the psychological situation of a desperate man :

All that is created must perish,  
everything around us passes away,  
for the time flies and the sun sees  
that everything has an ending -  
thinking, speaking, joy and sorrow.

And our children's children die away  
like night's shadow in the daylight  
or like a mist in a breath of wind.

We also were human beings,  
merry or sad like you.

And now we are lifeless here,  
nothing but dust, as you see.

All that is created must perish,  
everything around passes away.

...

Chiunque nasce a morte arriva  
nel fuggir del tempo ; et'sole  
niuna cosa lascia viva.

Manca il dolce e quel che dole  
e gl'ingegni e le parole ;  
e le nostre antiche prole  
al sole ombre, al vento un fummo.  
Come voi uomini fummo,  
lieti e tristi, come siete ;  
e or siàn, come vedete,  
terra al sol, di vita priva.

Ogni cosa a morte arriva.  
Già fur gli occhi nostri interi  
con la luce in ogni speco ;  
or son voti, orrendi e neri,  
e ciò porta il tempo seco.

...

In contrast to Franz Schubert whose disease began 6 years before his death, both Schumann and Wolf lived much longer after the primary infection. Both reached the stadium of general paresis, while Schubert probably died from meningo-vascular syphilis.

**Tuesday, 4 October 1898** : Hugo Wolf himself asked to be put in a mental home - « Only for God's sake not (Doctor) Svetlin's ! »

A telegram was sent to Michael Haberlandt, who made the needful arrangements with the Lower-Austrian Provincial Asylum (« Niederösterreichische Landesirrenanstalt ») located in the Brünnefeld sector (known for its healing springs) . 2 attendants were sent-down, and Wolf went quietly with them into his living tomb.

Wolf remained in confinement, gradually lapsing into complete irrationality. His memory began to fail. His delusions grew worse. On good days, he could play the piano ; other times, he forgot his own identity and could not pronounce his friends' names when they visited. He experienced paralytic cramps and spreading paralysis.

The costs for Wolf's hospitalization were provided by the « Hugo Wolf-Verein » ; Emperor Franz-Josef also contributed !

In desperation, Wolf wrote to his friends and sister, imploring them to rescue him from the netted (caged) bed. For several weeks, he was allowed no visitors.

**1899** : Melanie Köchert visited and nursed Hugo Wolf 3 times a week at the Lower-Austrian Provincial Asylum. He was able to play Beethoven Symphonies, arranged for 4 hands, with an employee of the hospital, an amateur musician. Although his fingers did not always obey him, he pointed-out every little mistake to his partner.

Wolf's eye-sight got worse, as did his ability to speak.

Occasionally, he would howl :

« If only I was Hugo Wolf. »

**After mid-1899** : Hugo Wolf could make no music at all.

**Early 1900** : Hugo Wolf became manic-depressive again. He feared that he was going to be killed, skinned alive or poisoned. He often had severe paralysis muscle spasms, speech was more and more difficult. He became incontinent.

Conclusive proof that Alma Mahler's account is not only credible but also the only correct and feasible one is shown by new material on the mentally ill Hugo Wolf published by Robert Hernried in the January 1940 and January 1945 issues of the American music-journal « The Musical Quarterly » . For the sake of brevity, we will refer to the second of the 2 studies, which appeared in this journal under the title : « Hugo Wolf's " 4 Operas ". With Unpublished Letters from Hugo Wolf, Rosa Mayreder and Oskar Grohe » . Hernried remarked by way of introduction that, although we regard Wolf's songs above all as the most valuable and characteristic part of his output, he nevertheless clung fanatically to his Operatic plans, the first performance of his Opera « Corregidor » in Mannheim, on 7 June 1896, representing for him the high-point of his compositional career.

**August 1901** : Hugo Wolf was confined to a netted-bed built like a cage, where he stayed until his death.

**Monday, 16 February 1903** : Hugo Wolf caught a cold which moved into his lungs. His body was now too weak to offer any resistance to an affection, though there was still enough sensation left in the nerves for him to suffer agonies from paralytic cramps. It was seen that the end was near, and Michael Haberlandt, Heinrich Werner, and Melanie Köchert watched almost incessantly by his bed. After violent convulsions, death claimed him at age 43. As if to add the last touch of tragedy to his fate, none of them was in the room.

...

Doctor William A. Frosch, medical director of the Payne Whitney Clinic at New York Hospital-Cornell Medical Center, agrees :

« Liszt and Mahler certainly led unusual and flamboyant lives. »

But they were not psychiatrically ill :

« Mahler was neurotic, and haunted by death, but did not have major affective disease. »

Hugo Wolf had not been diagnosed for psychiatric problems until age 36 and he died at age 43 from paresis after several hospitalizations and an attempt to drown himself in the Traunsee River, in Traunkirchen. However, long before his final illness, Wolf was infamous as an un-predictable, irascible man who often snarled at his best friends. He lived in poverty and had to work as a music-critic (one of the nastiest and least reliable who ever lived) but when the manic mood over-took him could churn-out masterly songs dozens at a time.

Doctor Frosch concedes :

« Wolf does appear to have had a pre-existent cyclothymic personality. »

In sum, however, the psychiatrist finds no clear reason to link manic-depressive illness or other major mental disturbance with musical creativity :

« That there is a psychology of musical creativity I do not doubt. That there is a meaning to it, perhaps imputed after the fact, I do not doubt. That there is a pathology to it. I find no compelling evidence. »

...

The mental disease of Hugo Wolf manifested itself in an acute form, the almost manic creative mood was followed by a psychotic frame of mind. The composer's behaviour changed : Hugo Wolf informed the doctors in his anamnesis that he knew he had been infected, which was recorded in his medical file. About a year previous to the outbreak of the mental disease, an ophthalmologist, who had removed a foreign body from his eye, established changes patho-gnomic of lues on his pupil and informed his colleagues in Vienna of his diagnosis, but there was no response.

...

A very full-account of the illness of Hugo Wolf is given in the biography by Frank Walker (1951) , and Ernst Décsey (1919) and Ernest Newman (1907) are also very informative. There can be no doubt that he died, as the physicians of the time considered, of general paresis, and that is also Juda's diagnosis.

A parallel is not infrequently drawn between the medical histories of Robert Schumann and Hugo Wolf, and some authors, such as Russell Brain (1948) , Leibbrand and Balet (1930) and Hecaen (1934) consider that the parallel is much closer than in the final psychosis alone. Thus, Leibbrand and Balet consider that Wolf showed distinct manic-depressive traits, and Hecaen diagnosed a definite manic-depressive psychosis, with circular attacks from the age of 28 to 37. The problem of Wolf's personality will have to be considered in detail in a later paper. There is certainly much to support the view that he was of cyclothymic constitution. But much more than in the case of Schumann, one sees also marked schizoid traits. Moreover, it seems hardly justifiable to regard him as having suffered from a manic-depressive psychosis, when he was never psychiatrically ill or in receipt of psychiatric treatment until the onset of the organic psychosis. The existence of very marked ups and downs of mood in the earlier history, however, makes the problem of deciding just when the general paresis had its onset one of some difficulty. He was a man of very unusual personality, impetuous and whimsical, extremely sensitive and ready to take offence, uncontrolled in his behaviour ; at times, even his most devoted friends found it almost impossible to get on with him. There is, therefore, no well-marked base-line of normality from which to take a departure.

In **1888 and 1889**, he was in one of his up-swings, which in **1891** was succeeded by a severe and lasting state of low-spirits and creative incapacity. At this time, he was suffering from recurrent sore throats, which have been interpreted as the signs of secondary syphilis. Certainly, not all these sore throats were caused by syphilis, since they continued to occur even after admission to the psychiatric hospital.

The years **1892 to 1894** were almost totally barren, and, for the greater part of this time, he was most unhappy and

complaining bitterly of his sterility. These 3 years constitute the longest and severest of his depressive episodes. One might be tempted to regard it as an atypical prodrome of his later organic psychosis, but that closer scrutiny shows that in essentials it was the same as his earlier depressive phases. There may have been contributory factors, for instance his burning desire to write (like Wagner) an Opera, and the failure of his attempts to find a suitable libretto. He may also have suffered from general « malaise » caused by secondary syphilis. Headache, difficulty in concentration, tiredness and irritability, and vague bodily discomforts, are not uncommon during the secondary stage and may also occur in asymptomatic neuro-syphilis (Mayer-Gross et al. (1954)). We have very little information about the course the disease took in his case before the discovery of the Argyll-Robertson phenomenon ; nor do we know anything of how he reacted to it. In the case of Schubert, the syphilitic infection had a most profound and lasting depressive effect (Deutsch (1946) ; Brown (1958)). Wolf's photo taken at about the end of the depressive period shows him markedly aged, sad and bitter (in contrast with the earlier portrait of 1889, also reproduced in Walker's biography) ; but it is still a noble and entirely composed face.

In **January 1895**, his mood improved, and, in April, he started work on « Der Corregidor » . With this, he passed into a lastingly excited and over-active state, so that he completed the Opera in 114 weeks. His mental excitement is described in terms which might suggest the onset of a mental illness ; yet, it was hardly greater than had been shown on earlier occasions. Previously, he had rejected Rosa Mayreder's libretto of « Corregidor » ; but, in January, in a better mood, he changed his mind. We do not think that this change was due to a psychotic failure of judgment. It was his friend Anton Lang who first suggested that he might revise his earlier opinion of it ; and there were others of his musical friends who shared his new enthusiasm. Wolf would not have been the first famous composer to use an inferior libretto. The music of « Corregidor » fully maintains his standards. The relative failure of the work lies in its dramatic weakness : Wolf, it has been said, is the Wagner of songs but not of Operas.

After the composition was completed, he continued to work through the summer on the scoring, and he remained in a cheerful active mood until the following spring. During this time, there is no suggestion of organic nervous disease, or of any change of personality. In the few weeks **between Wednesday, 25 March and Monday, 30 April 1896**, he wrote the entire 24 songs of the « Italienisches Liederbuch » , all of which show his usual mastery. The Italian songs are, indeed, not only one of the peak products of his artistic creation, but, according to Frank Walker (1955) , fully maintain unity of style with the first book of 5 years before.

His good mood was interrupted in the latter **end of May** by a state of apathy, insomnia and dreadful tiredness, from which, however, he improved in June. This set-back is partly explained by the circumstances which accompanied the first performance of « Corregidor » in Mannheim. He was always shy of publicity, and yielded only to repeated requests that he should attend. Moreover, the theatrical atmosphere was quite foreign to him, and he was hopelessly ill-equipped to control orchestral rehearsals. He is reported to have shown listlessness and apathy during the performance of the Opera ; but this can only have been a mask for his anxiety, and is in marked contrast to his joy when singing the Italian songs to intimate friends a few hours earlier, and his « best of humours » in their company when the performance was over. At this time, he left money in a drawer of his hotel room, and, afterwards, forgot and lost it : this is explicable on normal lines by his natural excitement. This and other similar blunders need no pathological explanation as they fit in with his fanatical absorption in artistic problems (see his letters to Melanie

Köchert of April 1895, quoted by Walker) .

Of his last works « Corregidor » , the second book of the Italian song-cycle and, probably, the Michelangelo songs were composed before the onset of the paresis ; while « Manuel Venegas » was the product of a mind which was already pathologically disturbed. However, the psychosis remained in its incipient stage until **September** ; and the work he put into « Manuel Venegas » (and the Michelangelo songs too, if the illness is dated back to include them) quite maintain his old quality. As effects of the illness, one can at best refer to the relative inferiority of the 4th of the Michelangelo songs, and to the fact that he could not complete the 1st Act of « Manuel Venegas » , possibly because psychotic restlessness interfered with concentrated work. During the composition of « Manuel Venegas » , he went, to begin with, into a state of creative excitement entirely similar to his state in previous phases of creative inspiration. There is little evidence that the incipient phase of general paresis acted as a stimulant (as Lange-Eichbaum (1956) has suggested as occurring in other cases) , or that it produced an alteration of style (as suggested by Jaspers (1949) in the initial phase of schizophrenic illness in Hölderlin) , or led to a markedly increased rate of production as in the case of Vincent van Gogh (also suggested by Jaspers) . From the time the patient went into hospital, all that has survived of subsequent compositions is artistically valueless, although scoring is still perfect. He himself realized the lack of worth in the work of his remission and actually destroyed some of it.

The published letters written by Hugo Wolf during his remission **from Wednesday, 26 January to Thursday, 20 October 1898**, are in their form in no way disordered. Most of them are short accounts of minor events, meetings with friends, the weather, excursions, food, and house-work carried-out by himself ! There is no reference to musical work done by him, nor to music in general. Their temper, compared with his pre-psychotic letters, is descriptive and almost un-emotional. Though they do not lack all insight into the change he had undergone, they produce a deadly impression.

### 1896-1903 (Ernest Newman)

Hugo Wolf returned to Vienna towards the end of June 1896, and, shortly afterwards, took possession of the new home in the « Schwindgasse » that the generosity of his friends had provided for him. It was the first time he had had a home of his own, and he was greatly pleased with it. His letters go with the most charming « naïveté » into all kinds of details as to the number and size and arrangement of the rooms. The place was fairly quiet, his work-room and sitting-room looking upon a small garden ; his friend Heinrich Werner lived in the same street, and they could talk to each other across the court-yard from their respective windows. The Mayreders lived only some 500 yards away. « How grateful I am for this blessing » , he writes to Hugo Faißt on the 11th July, « only those can estimate who, like myself, have for half a human life led a nomadic existence » . Each of his friends gave a contribution to the furnishing : Doctor Heinrich Potpeschnigg, a fine writing-table which had once belonged to his grandfather the poet Karl Eduard von Holtei ; « Frau » Melanie Köchert, a splendid Persian carpet and other gifts ; « Frau » Rosa Mayreder, a divan and some pictures for his study. « But you, my honest “ Faischtling ” » , (1) he writes in deep gratitude to Faißt, « you laid the foundation for all these delightful things, for without your secret management I should to-day be in the streets, instead of being well-provided for, on the 4th storey, to which a true heaven's ladder leads-up. Let me kiss and embrace you, dear good man, friend, brother and companion. I can only exclaim with Florestan : “ You will have your reward in a better world ” . »

In August, he went to « Schloß Matzen » again, leaving there on the 16th for Graz with Doctor Potpeschnigg. Here, he began to collate the new orchestral parts of « Der Corregidor » with the full-score. Later on, he subjected the Opera itself to a careful revision, not only changing many of the marks of expression and lightening the instrumentation here and there, but altering the music slightly at 1 or 2 points. The Hanover Opera authorities approached him during his stay at Graz with regard to a performance of the work, but nothing came of the negotiations. On the 3rd September, he was back in Vienna ; a few days afterwards, he was deeply distressed to hear of the death of Baroness Frieda von Lipperheide, who, as he said, had been a second mother to him. In October, he was again much affected by the death of Anton Bruckner. About this time, he finished the music to Robert Reinick's « Morgenlied » , which had been begun some time before, though the work of collating the parts of « Der Corregidor » had prevented him from finishing it. His curiously fastidious taste deciding that the term « song » was inapplicable either to the form or the contents of the poem, he altered the title of his setting of it to « Morgenstimmung » . It was his intention to bring-out 2 other songs to words by Reinick : the « Gesellenlied » and the « Skolie » , composed in 1888 and 1889 respectively.

A recital of his songs that had been planned for Vienna did not take place ; but, on the 30th November, one was a liking for « Der Corregidor » that Wolf counted on an early performance of the Opera. It would certainly be produced in the coming season.

He wrote to his mother on the 4th June 1897 :

« I have to-day received the definite assurance of the new “ Kapellmeister ” Mahler (an old friend of mine) . He is now all-powerful at the Vienna Opera. He himself will rehearse and conduct my work (“ Der Corregidor ”) ; this will be all the more agreeable to me as Mahler is more than any other man fitted to enter into my intentions. »

« We recently had the complete tetralogy of “ The Ring of the Nibelung ”, and, for the most part, without cuts - a very rare thing for Vienna. The Vienna performances of Wagner's works will soon rank as models. We have to thank Mahler for it all, who has put an absolute end to the old jog-trot routine. »

The performance was practically settled upon for January or February 1898. For reasons not perfectly understood, however, the work was put aside, Anton Rubinstein's « Demon » being given in its place.

In March 1897, he had begun work upon a new poet, Michelangelo, 3 of whose sonnets he set to music. Paul Müller had sent him, the previous Christmas, a fine edition of Walter Tomow's translation of the poems. He planned a collection of at least 6 of these. His settings, he wrote to Faißt on the 23rd March, « are really antique, so far as one can be so in modern music. ... I work without intermission like a steam-engine » . These are the last songs that came from his pen. From another letter, it appears that the 4th of the set was actually begun, but Wolf was dissatisfied with it, and only 3 have been published.

At this time, his whole prospects looked brighter than they had ever done. In May 1897, someone (Wolf never knew who it was) settled on him a small annuity of 200 Gulden (about £ 17) . The generous donor was a Mannheim singer, Anna Reiß. Appreciation of his work, too, seemed to be coming at last. In a letter to his old mother of the 4th June 1897, he says that he foresees a rosy future for himself, and hopes that she will live to see the dawn of it. In the

previous April, his friends had founded an association, the Vienna « Hugo Wolf-Verein » . The main-object of which was to spread the recognition of his music, and to relieve the composer of any spade-work in connection with it. He tells his mother, in the letter already quoted from, that the associates already number more than 100. The president was Doctor Michael Haberlandt, Custos of the Natural History Museum and a lecturer at the Vienna University - one of the later friends of Wolf, but yielding to none of the others in energy and enthusiasm. The founding of the « Verein » was formally celebrated on the 22nd April. Wolf was not present, but he met his friends afterwards over a glass of beer. Knowing his detestation of anything in the nature of hero-worship (1) , Haberlandt, in proposing the toast of the new society, had to omit all mention of the name of it ; the grim humour of the situation at last seized upon Wolf, and he laughed till the tears ran down his face. (2)

Besides the Michelangelo songs, the spring of 1897 saw him engaged on a large new work : his second Opera, « Manuel Venegas » . (3) As we have seen, the possibility of an Opera on this novel of Juan Ruiz de Alarcón occurred to him in 1892, but, at that time, he put the idea aside. It came-up again in 1897. He applied to « Frau » Mayreder for a libretto, which she prepared rather against her will, feeling, for one thing, that it would be better for Wolf not to work at a second Opera on a Spanish subject. He was greatly pleased with the libretto at first, but the friends to whom he showed it were less enthusiastic, and gradually succeeded in bringing him round to their view of the inadequacy of it for stage-effect. It was Haberlandt who gave the finishing blow to the text. Wolf was greatly distressed at first, no doubt feeling that there lay before him another long period of anxious search for a libretto, and another epoch of musical sterility. Haberlandt, however, suggested that a good text might be put together by his friend and colleague Doctor Moritz Hørnes. He introduced Hørnes to Wolf ; the poet sketched-out the general plan of the action as he conceived it, and the composer was delighted. Some weeks afterwards, Haberlandt brought him the completed poem. Wolf read it in silence, and was so deeply affected by it that the tears ran down his pale and wasted cheeks. Hørnes made, at his suggestion, 1 or 2 slight alterations that would give freer scope to the composer's need for purely musical development. When the final text reached him at the beginning of July 1897, he was completely satisfied with it ; Shakespeare himself, he told Oskar Grohe in his glee, could not have made a better thing of the novel for him.

He made a short excursion to Traunkirchen ; then, on his return to Vienna, he began work upon the music of « Manuel Venegas » with his usual feverish and unresting ardour. Every physical discomfort was forgotten, every social observance put aside ; visits were neither paid nor received, and correspondence was not answered.

But those who knew him best and had most opportunities for observing him closely were beginning to be anxious about him. Already, there had been occasional slight signs of unusual strangeness in his manner. In the preceding April, Engelbert Humperdinck, to whom there is no doubt Wolf was sincerely attached, had paid him a visit on his way to Pesth, where he was to conduct « Hänsel und Gretel » . The 2 composers and « Frau » Humperdinck, after visiting the museum in the morning, went to take some refreshment. Wolf suddenly exhibited an inexplicable aversion to « Frau » Humperdinck. He shifted his seat several times, giving as his reason that he did not wish to be seen by any of his friends ; he was irritable and ill-humoured. In the afternoon, Wolf began to play « Der Corregidor » to Humperdinck, his wife, and Richard Wallaschek, the well-known author of « Primitive Music » . He played on for about 2 hours, Humperdinck being greatly delighted with the work. After hearing the 2nd Act, he and his wife had to leave,

having another appointment in the evening. Promising to play the remaining 2 Acts to them on their return from Pesth, Wolf accompanied his guests to their carriage, closed the door of it abruptly, and ran-off without a word of farewell. When Humperdinck returned from Pesth, Wolf was not in Vienna, and the pair never met again.

In a letter to Emil Kauffmann, the day after this episode, Wolf writes :

« We had scarcely gone through more than a third of the Opera when his complete lack of interest in it greatly vexed me. Now, I find it on the one hand quite comprehensible that a composer who has enriched the repertoire of all the barrel-organs should have no ear for the better music of another man ; but, on the other hand, it is sad indeed when rambling music-makers of this kind are trumpeted to the world as the ordained successors of Wagner » ... and so on in the same style.

One feels only pity at the outburst ; the man's mind was clearly in an abnormal state of irritation and suspicion.

There were further signs of nervous derangement while he was working at « Manuel Venegas » . His weakened physical system was now hardly equal to the strain of his intense thinking ; and, for the first time in his life, he had recourse to wine to stimulate him during composition when he felt his bodily forces ebbing. On the rare occasions when he called upon his friends, they were struck by the strange uneasiness and excitability of his manner. On the 15th September, Haberlandt received a flying note from him saying that, on the previous day, he had written the whole of Manuel's monologue at one sitting in spite of various interruptions, and bidding Haberlandt to call all the faithful to the standard on the next Sunday, when he would play them as much as he had written of the new Opera. (He wrote a postcard to his friend Walter Bockmayer in the same terms. The hand-writing of this was noticeably deranged.) He followed this up with a couple of sheets of music-paper on which he had jotted-down the theme of Manuel's love for Soledad and part of a duet ; across the first sheet, inter-lined with the music, he had written « Piping hot ! Just out of the pan ! Am beside myself ! Sell me up ! Am happy ! Raving ! » . Haberlandt says he felt a thrill of terror go through him as he read the words, but tried to re-assure himself with the reflection that, when Wolf was composing, he always seemed possessed with a demon that made him unlike a normal man. But his mind was not easy, and, at the risk of annoying Wolf by adding another to the visits which the composer so much resented at that time, he called at his rooms. Wolf opened the door himself, and Haberlandt was startled by the wildness of his look. Wolf stared blankly at Haberlandt as he made an apology for disturbing him ; then, he took him into the study and immediately began to talk excitedly and confusedly about his new work. Haberlandt was painfully affected, and besought him to take a rest or to go away for a time in order to recover his health ; but Wolf assured him that he had never felt better and had never written anything finer. He sat-down at the piano and played and sang the « Manuel Venegas » fragment with a most impressive look of felicity upon his face. His tears fell upon the piano, and he wiped them from the keys with his sleeve, like a child. The music seemed to soothe him, and Haberlandt went away, concerned for him but not immediately anxious, and with a promise that, on the following Sunday, Wolf would visit him in the country and, if he chose, bring his composition with him. A day or so afterwards, dining with a couple of friends, Ferdinand Föll and Edmund (von) Hellmer at a restaurant, Wolf assured them that he was now director of the Vienna Opera and would make Föll a chorus Master. They took it to be a grim joke of his, and thought no more about it ; the real significance of the remark only became clear to them some days later.

Walter Bockmayer had asked Wolf to come on the Sunday, the 10th September 1897, to his house in Mödling, outside Vienna, and had invited some 20 other people to hear the composer play as much as had been written of his new work. The meeting was for the afternoon. Early in the morning, Wolf went to Hellmer's home in Perchtoldsdorf, which he had never entered before ; encountering Hellmer's mother, he represented himself to her as the director of the Vienna Opera. He recited a speech he had composed to the officials of the Opera, in which he finally dismissed the director. Then, he hurried Hellmer off to Haberlandt's house, and forced them both, in spite of their protests, to go to Mauer, where the Opera singer Hermann Winckelmann lived ; he insisted that Winckelmann was to go at once to Bockmayer's with him to sing the music of « Manuel Venegas » .

He burst into Winckelmann's house with the query :

« Do you know who your new director is ? I am ! I have just been with the Prince and have arranged everything with him. »

For the moment, Winckelmann was inclined to believe him, and was startled to hear what Wolf desired of him. Haberlandt, however, intimated by signs that something was wrong, and Winckelmann went away on the pretext that he had been called to the telephone. The friends managed to get Wolf out of the house, but he was furious with the singer ; if he did not come to Bockmayer's in the afternoon, he said, he would dismiss him.

Wolf's friends took him back to Perchtoldsdorf, where he had something to eat in Haberlandt's house, after which he slept a couple of hours. He had been awake since 3 o'clock that morning, had had no food for 24 hours, and was quite exhausted. Meanwhile, the other friends were told of what had occurred. Wolf's sleep did not, as Haberlandt had hoped, restore him to his normal state of mind ; as soon as he awoke, he was again possessed by the idea that he was director of the Vienna Opera. Still, no one yet suspected the real gravity of the situation. Bockmayer and the others agreed that it would be better to carry-out the original plan for the assembly at his house, since it was feared that a postponement of this would irritate Wolf still further. To Bockmayer's, they accordingly went about 5 o'clock. Here, Wolf's conduct was stranger than ever, he insisted, for instance, on one lady leaving the room because he felt that she was un-sympathetic towards him. Yet, when he sat-down and played and sang through the « Manuel Venegas » music, it was all done with perfect clearness and self-command ; some of the passages he repeated and explained. The moment he rose from the piano, all lucidity vanished, and the crazed side of the poor brain became the Master again. He once more maintained that he was the director of the Opera, and that he would dismiss Mahler, Winckelmann and others ; then, he began to relate atrocious stories of his house-porter.

There could now be no doubt of the state of Wolf's mind. Among Bockmayer's guests, as it happened, there was a physician of repute, who declared it to be imperative that Wolf should be placed in an institution without delay. They telephoned to Vienna, but got the reply that no inmate could be received in the asylum at night. Meanwhile, Wolf had become much calmer ; he seated himself at the piano and played the Overture to « Die Meistersinger von Nürnberg » , though his memory failed him towards the end and he had to stop. He was taken into the dining-room, where he ate and drank well. Then, he talked quite lucidly about various episodes of his life, though every now and then, there were renewals of his former aberration. At 11 o'clock, Ferdinand Föll and Bockmayer took him back to

Vienna. He was in a good mood all the time ; but when they reached his house in the « Schwindgasse » , he suddenly attacked the concierge. The latter, of course, not understanding the situation, turned on him fiercely ; and a terrible scene ensued, Föll and Bockmayer both being in peril of their own lives in the attempt to separate the men. At last, they got Wolf to his room ; he gradually became more composed, ate some fruit, and, about 2 o'clock in the morning, went to sleep.

The next day, he put-on black clothes, saying he had to go to the « Hofmeister » and sign the agreement regarding the Opera appointment. Haberlandt, Werner and a physician humoured him in the idea, went-out with him, and quietly took him to the medical establishment of Doctor Wilhelm Svetlin. This was on the 20th September 1897. Then, his friends lost sight of him, the most conflicting reports as to his condition reaching them now and then.

It was at one time rumoured that he was paralyzed, and, at the most, could not live more than a year. The latter diagnosis proved incorrect, but the tendency to paralysis became clearer as time went on. (Doctor Potpeschnigg, it seems, had already suspected something of the kind. About a year before, when Wolf was staying with him in Graz, some cinders from a locomotive entered Wolfs eye. Potpeschnigg took him to a specialist, who noticed the insensitiveness and rigidity of the pupils. He communicated the fact to Potpeschnigg, who, to his great sorrow, recognized in it one of the signs of brain disease.)

The mental disease took one of its most frequent forms, Wolf had delusions in which he believed himself to be various great personages. At times, he thought he was director of the establishment, and meant to take Friedrich Nietzsche and heal him ; at other times, he thought he was Jupiter and could control the weather. It makes piteous reading, but the probability is that he was not unhappy in these delusions, and that he suffered less at this time, both physically and mentally, than in any of the later stages of his disease.

He gradually improved, but with returning health felt a pathetic shyness with regard to the old friends to whom his first derangement had been disclosed. He seemed, as time went on, to be recovering completely, and, before long, was able to work quite collectedly at music. He scored a chorus from « Manuel Venegas » and 2 of his Spanish songs, « Wer sein holdes Lieb verloren » (Emanuel Geibel) and « Wenn du zu den Blumengehst » (Paul Heyse) , turned the « Morgenstimmung » into a « Morgen-hymnus » for chorus and orchestra, took-up the « Italienische Serenade » again, and re-wrote part of the « Penthesilea » , afterwards burning the last-named, however. He read Heinrich von Kleist continually, and thought of another Opera on the subject of the « Prinz von Homburg » .

On the 24th January 1898, he was discharged from the establishment. He now conceived a dread of Vienna, and indeed of Austria, and wished to go anywhere else to live Italy or Switzerland for preference. For 3 days, he stayed with « Frau » Köchert and Doctor Werner ; then, he went with Werner to Graz. After a day's pause there, he went on a tour with Potpeschnigg in southern Styria. Once, he played to his companion the new version of « Penthesilea » . When he came to the passage he had added during his illness, he paused and reflected for a moment, then, angry at the poverty of it, tore the page out and was with difficulty persuaded by Potpeschnigg not to burn it, there and then.

For a little time in February, he wandered about with his sister Modesta, visiting Trieste, Pirano, Lussinpiccolo, Abbazia

and other places. He was still sadly out of tune, and nothing that man or nature could do could give him any joy in life. To Faißt, he wrote on the 2nd February that he had no mind for work, and thought he would never write another note. Music-making of any kind was odious to him ; even his unfinished Opera now pleased him so little that he felt no desire to go on with it.

He concluded :

« Greet for me, your lovely, delightful Swabian country, and take a warm embrace from your worn-out and dismantled Hugo Wolf. »

On the 5th, he wrote to Haberlandt in the same gloomy strain :

« Thanks for your friendly lines, but do not ask for a letter from me. The least mental occupation wearies me. I believe it is all over with me. I do not read, do not make music, do not think ; in a word, I vegetate. This is a true picture of my inner-being. »

There was a proposal from the Marquis della Valle that he should visit Pallanza, but the invitation was for April. On the 12th February, he writes to Faißt, wearily asking if it cannot be arranged for him to go to Pallanza, at once ; any little room where he can be quiet will do for him, for he is tired of wandering about. He begs his friend to forgive him for the brevity of his letter, for nothing now repels him so much as the idea of correspondence ; he can scarcely bring himself to write a single page.

Nowhere could he find rest or happiness. Suddenly abandoning his Italian tour, he paid a flying visit to his home in Windischgrätz. Thence, he went to Salzburg, thought of settling there, changed his mind again, and, on the 8th of March, was back in Vienna, hoping, he wrote to Grohe, that he would be able to resume work at « Manuel Venegas » . In May, he tells Faißt, he means to go to live in Hietzing, outside the city, where he will be near the Schönbrunn Park. He is fatigued after all his wanderings, but, on the whole, feels better. He at first put-up at a small hotel in Vienna ; then, lodgings were found for him in the « Mühlgasse » , his financial needs, both now and later, being looked after by the Vienna « Hugo Wolf-Verein » , aided by some of his old friends. In his new quarters, he began to feel his interest in music reviving ; he improved the ending of the « Vaterland » and revised the Eichendorff songs, rejecting the « Erwartung » , « Die Nacht » and « Das Waldmädchen » from the new volume-edition (« Manuel Venegas ») however, he still could not bring himself to touch, though he discussed the libretto with Doctor Moritz Hørnes. His health probably improved a little about this time. His appetite, he writes to Faißt on the 21st April, is excellent. He contradicts the report that he is moody and un-sociable ; it simply means that he has resolved to keep quietly to himself, a course which his friends have misinterpreted. The justification itself seems a confession ; he was undoubtedly a changed man.

On the 24th May, he went with the Köcherts to Traunkirchen. He gave himself up entirely to the quest of health, doing no work beyond the correction of the proofs of the 3 Michelangelo songs ; the intention of orchestrating them was never carried-out. For a time, he seemed to improve ; he looked ahead and planned to spend the winter near

Gmunden. In October, however, he became decidedly worse. One day, he threw himself into the Traunsee River, intending to drown himself ; but the coldness of the water effected a revulsion of feeling and he swam mechanically back to the shore. He was now conscious of the coming doom and was resigned to it. For a time, the Köcherts hoped to nurse him in their own house ; but, before long, signs of paralytic cramp were evident, and now, it was the poor stricken soul himself who asked to be taken into an institution, only begging pathetically that it might not be Doctor Svetlin's. A telegram was sent to Haberlandt, who made the needful arrangements with the Lower-Austrian Asylum in Vienna. 2 attendants were sent-down, and Wolf went quietly with them into his living tomb. He was destined still to live on for more than 4 years, but he never again entered the outer-world as a free man.

His condition varied from time to time. In the spring of 1899, he was rather better ; he joined in the games of the other inmates, read a little, and, sometimes, received visits. All that was possible was done to make his bed of pain a little lighter. Besides the contributions of the « Wolf-Verein » and of other institutions, the Austrian Emperor Franz-Josef made a yearly grant of 1,200 Kronen, which was paid regularly until the composer's death. A piano was placed in his room ; it happened that one of the officials of the asylum was himself a musician of modern tendencies who knew and admired Wolf's work, and the two often played Anton Bruckner's and other works as piano-duets. Now and then, he was allowed to go to Perchtoldsdorf and other places with an attendant, but his remarks on everything he saw indicated how disturbed his brain had become ; he thought that well-known buildings and scenes had been changed by enchantment, and changed for the worse. Occasionally, he forgot his own identity. On the whole, he was declining steadily, both his memory and his powers of perception growing gradually weaker. One day when Potpeschnigg visited him, at the end of 1899, he found Wolf enclosed in a kind of lattice-bed like a cage. Wolf recognized his friend's voice before he entered the room, and, when he saw him, clasped his hands and begged Potpeschnigg to release him. The attendants let him out for a time ; a pitiful conversation ensued and a no less pitiful parting, Wolf urging his friend to go quickly lest they should imprison him too in that dreadful place.

Early in 1900, the lesions in the nervous system extended. His powers of speech were now affected, but he could still recognize his friends though he could hardly pronounce their names. In August 1901, however, the paralysis spread alarmingly ; all he could do now was to lie in his cage-bed, day and night, refusing nourishment so far as he could, already almost blind and deaf to everything around him. The doctors gave him up at the beginning of 1902, but the heart was quite sound and he still lived on. At last, in February 1903, the deliverance came. On the 16th, he was attacked by an affection of the lungs, to which his body was now too weak to offer any resistance, though there was still enough sensation left in the nerves for him to suffer agonies from paralytic cramps. It was seen that the end was near, and Haberlandt, Werner, and Köchert watched almost incessantly by his bed. But, as if to add the last touch of tragedy to his fate, none of them was in the room when he died. He passed away alone, except for the presence of an attendant, at 3 o'clock in the afternoon of Sunday, the 22nd February 1903.

## Notes

(I) Hugo Wolf was fond of addressing his friends in affectionate diminutives, of which he had a great store at his command.

(1) In one of his letters to Paul Müller, Wolf characteristically begs him not to address him any more as « Meister » .

(2) The « Verein » gave 26 concerts of Wolf's works. It looked after the stricken composer during his illness, and attended to the business side of the publication of his music. It was dissolved early in 1906, its work having been accomplished.

(3) In the early part of 1896, Paul Müller had suggested Prosper Mérimée's « Colomba » to him as a likely subject for an Opera. Wolf's reply was :

« I read it 15 years ago. It is un-composable ; blood-revenge is not an adequate theme for us, Hyperboreans. ... I also know the music to “ Colomba ” [by our own esteemed compatriot Sir Alexander Mackenzie] , dreadful, dry stuff. We, Viennese, say of the Scottish composer, who is sometimes served-up to us in the concert-room, “ ma kennt Sie ”, and, then, pay-out obedient respects. »

### Death of Hugo Wolf

**Sunday, 22 February 1903** : At 3 o'clock in the afternoon, Hugo Wolf, aged 42, died in convulsions alone (except for the presence of an attendant) of what the Victorians called « the wound that will never heal » .

Wolf's medical file, interestingly, disappeared from the private sanatorium of Doctor Wilhelm Svetlin as well as the Lower-Austrian Provincial Asylum (« Niederösterreichische Landesirrenanstalt ») . It is suspected that it had been stolen, probably with the intention of selling it to the person who did not wish to make the medical record public.

In the late-19th Century, calomel, mercurous chloride, a purgative and laxative, was used as an inunction and in tablet form and later as an injection to fight syphilis.

Wolf's death was one of the most protracted, miserable and bitter in the history of music. But, even in the poignancy of his death, Wolf has been transcended by Gustav Mahler. To the 20th Century, it is Mahler's incurable illness (the cancer from which he died in Vienna in 1911) that has become the emblem of Viennese corruption and decline.

**Tuesday, 24 February 1903** : The body of Hugo Wolf was taken from the asylum to a room in the adjoining hospital, where it lay for a time surrounded by flowers and wreaths.

Doctor Ernst Décsey :

« Wolf was not disfigured but his friends were appalled at the sight of him. He looked like a small doll of white wood ; the nose came sharply out of the waxen face ; the delicate hands had become still more delicate ; they were crossed and the fingers hung loose, like the fingers of a white glove. This was all Fate had left of the artist who once bore a whole tone-world in his brain a fragment, a human ruin. »

It was the day of the annual Vienna Carnival. The dead musician was carried to his grave in the « Votivkirche » through decorated streets and past crowds of gay masqueraders. The church was full of musical people of all kinds, friends of Wolf, composers, executants, music-critics, and representatives of many musical institutions.

According to Willi Reich, Alban Berg who witnessed Wolf's burial was « shaken » by his death, indicating the knowledge of the composer and his works.

The Vienna « a cappella » choir, conducted by Eugen Thomas, sang Wolf's « Ergebung », an early setting dating from 1881, of a poem of Eichendorff praying for the pity of Heaven upon poor human-kind. Ferdinand Löwe's arrangement of the Adagio from Anton Bruckner's 7th Symphony for winds and brass was also performed.

When the coffin had been lowered into the grave, Michael Haberlandt (surrounded by members of the Wagner Society, the Wolf Society and the Styrian « Tonkünstler » Society) delivered a brief funeral oration, ending by quoting the poem of physician Doctor Justinus Kerner which Wolf had set to music of the most divine consolation :

Zur Ruh', zur Ruh',  
Ihr müden Glieder !  
Schließt fest euch zu,  
Ihr Augenlider !

Ich bin allein,  
Fort ist die Erde ;  
Nacht muß es sein,  
Daß Licht mir werde ;

O führt mich ganz,  
Ihr innern Mächte !  
Hin zu dem Glanz  
Der tiefsten Nächte.

Fort aus dem Raum  
Der Erdschmerzen  
Durch Nacht und Traum  
Zum Mutterherzen !

Max Graf :

I shall never forget the day, **February 19, 1903**, when we brought the mortal frame of Hugo Wolf to the « Votivkirche » in Vienna. When the priest walked solemnly, with the crucifix and incense, to the door of the church where the coffin had been deposited, intoning the very old Catholic prayers for the dead, from behind the altar a choir began

one of the sacred choruses of Hugo Wolf, « Ergebung » (Submission) . This chorus of the dead composer sounded mysteriously through the Gothic aisles of the church and proclaimed the greatness of the man who, unruly and unrestrained in life, struggling with passionate dark powers in his soul, prayed :

« Be a pitiful judge to us sinners. »

No other composer found more vibrant melodies and harmonies for all the moods of desperation and struggle, no other was more moving and more human in the confession of sin. He was a suffering mortal who prayed, in his sacred songs, for pardon. Heaven rewarded him with fame and immortality.

### Mahler's hand in plaster

**Sunday, 30 August 1903** : Letter from Gustav Mahler to Alma :

« Vienna, 30 August 1903.

My dearest “ Almscherl ”,

Firstly : I'm in despair. All the shops are shut, and even if they weren't, I still wouldn't know what to buy you for your birthday. So, I can only hope you will be happy with my heartfelt wishes for tomorrow instead of an expensive present.

What more can one give, when one has already given oneself ? If you join me for one of our beloved afternoon sprees on the “ Karntnerstraße ”, we can find something nice for you. Is that all right ? I'm already looking forward to it. Now, it's time to catch-up on the news. I'll have to make a big effort not to forget anything.

Yesterday, once (Alfred) Roller had swathed my hand in (Doctor Theodor) Billroth plaster, I wrote your card from the Kahlenberg, then, we took the path you and I have so often trod, my “ Almscherl ”, through the “ Hohe Warte ” to the tram-stop, and from there to the Opera. (...) »

...

**Sunday, 25 October 1903** : Death of Katharina Nußbaumer, Hugo Wolf's mother. She saw the fame of his son securely established, but having also had the pain of witnessing the tragedy of his last years.

The family of Hugo Wolf would receive some 260,000 Marks for the rights to his works.

...

According to Erik Werba, in the year of his death, interest in Hugo Wolf on the part of music-lovers seemed to be on

the rise. He seemed to be accepted into the pantheon of German-Styrian musical heroes with streets named after him and commemorative plaques heaped upon his honour. Plaques were placed on the house in Windischgrätz in which Wolf was born, and on Werner's house in Perchtoldsdorf in which so many of his songs were written.

Streets were named after him in Graz and Mannheim.

Memorial concerts were given in various places.

The songs also began to have a good sale, and many articles on him appeared in the German magazines. Some of the pioneer discussions of his work had been already collected and issued in book-form in 1898, under the title of « Gesammelte Aufsätze über Hugo Wolf » ; a second volume of them appeared in 1899, and a similar collection of essays on « Der Corregidor » in 1900.

Richard Strauß greatly appreciated Hugo Wolf. He wanted to promote a performance of the Opera « Der Corregidor » .

« In any case, I would be pleased if a performance can contribute a bit to bring the name of such an outstanding musician like Wolf into the public. »

**1903** : Publication of the first volume of Doctor Ernst Décsey's biography on Hugo Wolf.

**1903** : Publication of Hugo Wolf's letters to Emil Kauffmann.

**Sunday, 1 March 1903** : 1 week after the composer's death, premiere of « Manuel Venegas » (Opera to words of Doctor Moritz Hørnes after Juan Ruiz de Alarcón) . It is performed in Mannheim at the « Konzert-Saal des Großherzoglichen Hof- und Nationaltheaters » .

**Friday, 28 August 1903** : Gustav Mahler returns to Vienna and, for a few days, stays at the Kahlenberg Hotel.

**October 1903** : « Der Corregidor » was successfully revived in Munich.

**Thursday, 18 February 1904** : Gustav Mahler conducts the Viennese premiere of Hugo Wolf's « Der Corregidor » .

**1904** : Publication of Hugo Wolf's letters to Hugo Faißt.

**Thursday, 20 October 1904** : The body of Hugo Wolf did not lie long in the « Votivkirche » . An artistic monument to the composer, designed by his friend the sculptor Edmund (von) Hellmer, was unveiled in Vienna's Central Cemetery. The remains now repose besides those of Franz Schubert and Ludwig van Beethoven.

Other grave statues by Hellmer : Hans Makart (1889) and Nikolaus Dumba (1903) .

## Edmund von Hellmer

The Austrian sculptor Edmund Ritter von Hellmer (ennobled in 1912) was born on 12 November 1850 in Vienna and died on 9 March 1935 in Vienna. He worked in the styles of Historicism and « Art Nouveau » .

Hellmer studied architecture at the « Polytechnikum » in Vienna. At the same time, he received his first artistic training from his uncle, the sculptor Josef Schönfeld. In 1866, Hellmer decided to study sculpture full-time at the Academy of Fine-Arts in Vienna. While there, he also worked in the studio of Hanns Gasser, who helped him to finance a short stay in Paris. In 1869, at the age of 19, he presented a statue of Prometheus at the International Art Exhibition in Munich. He won a prize that included a scholarship, enabling him to spend almost 2 years in Italy. In 1870, Hellmer returned to Vienna and worked as a free-lance sculptor. In 1879, he was appointed as Professor at the Academy and, from 1882 to 1892, was a member of the Faculty there. Emil Fuchs was one of Hellmer's most prominent students. In 1897, he was one of the founders of the Vienna « Secession » . From 1901 to 1922, he was an associate dean, then a full-dean at the Academy. During the last year of his life, he was confined to a wheel-chair.

## Major works

« Franz-Josef I Gives His People a Constitution » : Pediment at the Austrian Parliament Building (1879) .

Schindler marble monument in the « Stadtpark » in Vienna (1895) .

« Die Macht zu Lande » (The Forces on Land) , marble fountain at the « Hofburg » in Vienna (1897) .

Gœthe bronze monument at the Vienna Opera House on the « Ringstraße » (1900) .

Empress Elisabeth monument in Salzburg (1901) .

Castalia fountain at the University of Vienna (1910) .

Johann Strauß bronze monument with marble reliefs in the « Stadtpark » in Vienna (1921) .

**1905** : Publication of Hugo Wolf's letters to Oskar Grohe.

**Wednesday, 21 March 1906** : Melanie Köchert, confidant, lover and support to Hugo Wolf during his last years, fall into a deep depression. Tortured by her unfaithfulness to her husband Heinrich, she plunged to her death from the 4th floor window of her home located in the neighbourhood of « Neuen Markt » , in Vienna.

## Melanie Köchert

Melanie Köchert was the daughter of business owner Anton Lang. In 1878, she married Heinrich Köchert, co-owner of

the firm A. E. Köchert, Imperial Court Jeweller. Since 1879, she was Hugo Wolf's piano student. The resulting friendship is documented by the correspondence between the two, which is preserved in the manuscript collection of the Vienna Library at Town Hall. The 250 pieces of correspondence form an essential source for the composer's biography. The love was mutual and lasted roughly 20 years, though Melanie remained with her husband and children.

The Köchert family was one of Wolf's most important benefactors. He was frequently their house-guest. Melanie offered him various accommodations in Vienna, and invited him during summer to her country-house in Traunkirchen. As Wolf's biographer Frank Walker put it, Melanie's husband, Heinrich, seems to have recognized that genius is not to be judged by the standards of normality and tolerated the situation.

The whole of Hugo Wolf's life's work, his songs to texts by Eduard Mörike, Joseph von Eichendorff and Johann Wolfgang von Goethe, his Italian and Spanish Song-books, his Michelangelo Poems, none of them would have been possible without the benefaction of Heinrich and Melanie Köchert. He dedicated the manuscripts of his songs to her.

**April 1906** : When the Vienna « Hugo Wolf-Verein » was dissolved, it handed-over to the town the composer's death-mask, his piano, and a few other personal relics. The remainder were given into the custody of the Vienna « Wagner Verein » .

**Thursday, 4 to Monday, 8 October 1906** : An elaborate « Hugo Wolf Festival » , organized by Hugo Faißt and that group of Swabian friends who had done so much for Wolf and his art during his lifetime, was held in Stuttgart.

The first 2 evenings were devoted entirely to the songs, of which 70 were given, drawn from the Mörike, Goethe, Spanish, Italian, Keller, and Eichendorff settings.

On the third evening, a performance was given in the church of Max Reger's arrangement for organ of some of the spiritual songs from Mörike and the « Spanisches Liederbuch » , while the chorus of the Opera House sang the 6 « a cappella » settings of Eichendorff's poems.

The 4th evening was devoted to « Der Corregidor » .

The 5th evening presented a choral and instrumental concert, comprising some of the orchestrated songs, the « Spring Chorus » from « Manuel Venegas » , the « Elfenlied » , the « Feuerreiter » , the « Italienische Serenade » , and « Penthesilea » . So that, unfortunate as Wolf was in his lifetime, posthumous justice has not been so slow-footed in his case as it has been in that of some other musicians. Since the death of Franz Schubert, there is no musician whose premature end has been so truly irreparable a loss to art.

### Death of Eduard Hanslick

In the last year of his life, spa-treatments in Meran and Karlsbad (Karlovy Vary) were not able to improve Eduard Hanslick's bad health conditions which finally resulted in several heart-attacks. He took his last cure at the spa-resort

of Baden, near Vienna, which he had repeatedly visited during the summer since 1869.

Hanslick died at the Clementine House (« Clementinen-Hof ») on **Saturday August 6, 1904**, after 30 hours in the coma. He was 78.

His body remained in Baden until the morning of the funeral on **Tuesday August 9, 1904**.

The funeral procession did not start from his residence but from the building of the « Neue Freie Presse », located in the inner-city at « Fichtegasse » Number 11. He was buried at the « Zentralfriedhof » (Group 18 ; Row 1 ; Number 9) .

Hanslick's much younger Jewish wife, the singer Sophie Wohlmüt (who married him at the age of 19 and survived him by 40 years !) donated a bust of her late-husband (executed by sculptor Viktor Tilgner) which she unveiled in 1913.

What most disturbed Hanslick was the Wagner cult, which was both a political (nationalistic) and an artistic phenomenon. The artistic effects of the cult he clearly believed were reflected in what he regarded as the bad taste of much of Wagner's music (« Effekthascherei » and « Opiumrausch ») .

In his warnings about such a cult, he was, after all, somewhat prescient. Some 3 decades after his death, Cosima Wagner, who embodied and encouraged absolutely the worst aspects of Wagner's character, was being fawned upon by Adolf Hitler at Bayreuth. A few years later, Sophie Wohlmüt was obliged to go underground in Vienna in the last years of the Nazi regime.

Hanslick's death elicited a host of articles of varying tenor, the most favourable originating, of course, in Vienna. For example, both Julius Korngold and Guido Adler published warm and respectful eulogies in the « Neue Freie Presse » .

Korngold concluded :

« In Eduard Hanslick, we bury a proselytizer for music-æsthetic perception, a master of style, an adornment of criticism, a pride of this paper. His name will live on. »

Another eulogist, writing in « Der Kunstwart » of 1904, was not so kind - in fact, was not kind at all :

« And thus, despite the dazzling outer garb (of his writings) , Hanslick represented in reality a low-point of musical judgment. »

Needless to say, the « Bayreuther Blätter » maintained silence over his passing, perhaps less out of hostility than out of a simple lack of concern, a tacit recognition of his irrelevance for that journal's project. It should not surprise us that the press from other parts of Europe and the world did take note of Hanslick's death, given his notoriety.

For example, in New York, which was riding the crest of the wave of the city's Wagner mania, the following passage appeared in an obituary from the « New York Times » :

« He was one of the most bitter opponents of Wagner and one of the last critics to recognize the possibilities of the new style of opera. »

Death may have silenced his voice in the press, may have ceased his editing of « Vom Musikalisch-Schönen » (with the 10th edition of 1902) , but Hanslick's legacy (more accurately expressed, legacies) carried on, with an exponential intensification of the bifurcation. On the one hand, the ideas of « Vom Musikalisch-Schönen » influenced some of the leading figures in early 20th Century Austrian and German musical æsthetics : Arnold Schœnberg, Heinrich Schenker, and Theodor Wiesengrund Adorno. On the other, only one of the collections of Hanslick's criticisms underwent further publications posthumously, « Suite » appearing again in 1910. The next edition of Hanslick's critical writings did not appear until 1947, with Heinrich Kralik's « Aus Eduard Hanslicks Wagner-Kritiken » . The absence of reprints in the first decades of the Century reflects the wide-spread disdain for his critical writings, not for their style but rather their (mis)pronouncements on important figures like Wagner and Anton Bruckner.

Recent research has led to a better understanding of how important his thought was for certain key composers and æstheticians of the period ; his influence on Schœnberg, Schenker, and Adorno has been well-documented. Yet, the esteem that associated thinkers brought to Hanslick's æsthetic work remained largely isolated, considering the ongoing appeal of the « Musik als Ausdruck » ideology - for example, among the epigones of Richard Strauß and the New German School, who continued producing large-scale tone-poems and philosophical systems rooted in program music well into the 20th Century.

That his legacy would eventually become involved in the politics of the Third « Reich » stands to reason : on the one hand, he was Jewish by virtue of his mother ; on the other, he had opposed composers favoured by the Nazis. Needless to say, he received extended treatment in the « Lexikon der Juden in der Musik » by Theo Stengel and Herbert Gerigk. For most of the musical commentators of the Third « Reich » , however, Hanslick simply had not existed - after all, he was a critic, one of the professions of « intellectual piracy » that Josef Gœbbels had replaced with « Kunstbetrachtung » . And Hanslick could more easily be written-out of music history altogether than figures like Mendelssohn and Schœnberg, the omission of whose historical contributions to music was more difficult (although not impossible) because of their importance.

Needless to say, it was in the context of his opposition to the « great » German composers Wagner and Bruckner that Hanslick's name did arise in the music literature from the Nazi period.

Max von Millenkovich-Morold reflects the Party's animosity toward the critic Hanslick when he writes :

« I can attest from long-term personal observation that the Wagner enmity in Austria, and beyond that among the all-German “ intelligentsia ”, was awakened by Hanslick, fed by Hanslick, again and again flogged by Hanslick. »

The vehement Nazi partisan Robert Scherwatzky made clear the reason for Hanslick's opposition to Bruckner :

« Then, however, a hostile, invidious press began to embitter his life. Under the leadership of the totally uncomprehending, maliciously wise-cracking half-Jew Hanslick (...), it viciously tore apart his creations or was simply silent about them. »

These complaints against Hanslick's general antipathy toward the 2 composers were by no means new, but now, they were informed by the racial politics of the Third « Reich », according to which his Jewishness was responsible for Hanslick's critical positions - he had become a racially flawed character incapable of rendering correct judgments. Another Nazi propagandist who drew public attention to Hanslick was Goebbels himself. On the occasion of the International Bruckner Festival in Regensburg in June 1937, the « Reichspropagandaminister » gave a speech to the « Bruckner-Gesellschaft » ; members of the « Reichsmusikkammer » and high-level Nazi functionaries, including Hitler. In this propaganda on behalf of the « Aryan » Bruckner, Goebbels blamed the Jewish element for the composer's difficulties, mentioning Hanslick by name and quoting from one of his reviews (alongside unidentified reviews by Gustav Dömpke) :

« A hostile, journalistic branch of criticism, with its incessant torments, embittered him (Bruckner) to his rich life of work. (...) It is with reluctance and disdain that we turn our attention today to these intellectual carpet-baggers, who in Bruckner's day misused their esteemed station as judges in order to set-down sentences such as this one about his music, whose form-creative innovation they simply could not understand :

“ We truly shudder before the scent of mould that assaults our noses from the discords of this putrefactive counterpoint. ” (Gustav Dömpke) »

Or :

“ It is not impossible that the future belongs to this dream-distorted, hung-over style (' traumverwirten Katzenjammertil ') - a future which, for that reason, we do not envy. ” (Eduard Hanslick) . »

Goebbels also cited the widely disseminated statement « I destroy whomever I wish to destroy », which he put into the mouth of Hanslick during an encounter with Bruckner. Julian Horton effectively situates this speech in the context of Nazi Bruckner « Rezeption », but we can just as easily position it within the Wagnerian critique of Hanslick, which was initiated by Wagner himself and subsequently taken-up by Wilhelm Tappert and carried further by the Bayreuth Circle of Hans von Wolzogen, Houston Stewart Chamberlain, and Carl Friedrich Glasenapp :

« In the battle against the greatest German artist, no means appeared too base and too corrupt. A fictitious letter (arose) from one of the main-camps of poisoned animosity, the Viennese “ Neue Freie Presse ”, the headquarters of “ Herr ” Hanslick. »

Hanslick the aesthetician also came in for severe criticism from the ideologues of the Third « Reich », all the more

because of Wagner's aforementioned critique of « Vom Musikalisch-Schönen » that centered the pamphlet's problems on its author's Judaism. In contrast with the formulation of Wagner's æsthetics as « music as expression » , the system of Hanslick was identified as pure and simple formalism, which helped Nazi writers about music to position him with Jewish creators and their unnatural, « entartete » (degenerate) productions.

Paul Ehlers articulated the differences of the 2 « Weltanschauungen » in the following comparison of Hanslick's book with Friedrich von Hausegger's « Die Musik als Ausdruck » (1887) :

« There the formalistic principle as the embodiment of the nature and effect of music - here, the inner-spirit of the creative artist as the womb and shaping force of music. »

According to this assessment, Hanslick's incomprehension of Wagner and Bruckner resulted from his Jewish, formalist æsthetic system, which led to serious error in his critical judgments.

### Doctor Albert Neisser and Mahler

**End of 1906** : Gustav Mahler undertook 3 more trips abroad, 2 of them to conduct the 3rd Symphony, which continued to amuse interest in Germany. At the instigation of his friend Doctor Albert Neisser, the eminent dermatologist, he had again been invited to Breslau at the end of October.

...

Doctor Albert Neisser was the first cousin of Siegfried Berliner, the father of Arnold, Mahler's close friend from Hamburg days. According to Doda Conrad, son of the soprano Marya Freund (« née » Mimi Henschel in 1876) , Albert Neisser on that occasion introduced the soprano to Mahler, who declined to audition her in Neisser's salon, but asked her to sing an air from « Carmen » on the stage of the Breslau Opera, and, thereafter, sought to discourage her from singing Opera, warning that « there, it is fresco painting, while you prefer miniatures ! » . He steered her toward his own Lieder, which she was soon singing throughout Germany. She sang the « Kindertotenlieder » for their Paris premiere in 1912, and her success was such that she repeated them again during the same season at a Lamoureux concert. In 1914, Marya Freund sang the same cycle under Pierre Monteux in a programme at the « Casino de Paris » which also featured « Le Sacre du printemps » by Stravinsky.

...

Barely 2 weeks after the Vienna concert, Mahler went to Breslau where, thanks to his friend, the famous dermatologist Albert Neisser, he had been invited to conduct his 5th Symphony. As the capital of the German province of Silesia, Breslau had become an important centre of commerce and industry, largely because of its geographical location at a cross-roads between Northern and Southern Europe and, more important still, between the Eastern (Slav) and Western (German) world. Thanks to its prosperity, it had also become a cultural centre, where science and the arts flourished and music occupied a privileged position. Mahler's friend, Albert Neisser, taught at the University in Breslau and exerted

a powerful influence on the musical activities of the city. He had invited Mahler to stay at his home and Mahler had accepted on the following conditions :

« I shall arrive in Breslau early on Sunday. I have one great favour to ask of you : that you neither fetch me at the station nor get-up to let me in at so early an hour. It is crucial to my feeling at ease that my early morning arrival shall disturb no one's sleep, and you have promised me that I would feel at home in your house, and not a " guest ". Therefore, I do ask you to let me make my way to the " Furstenstraße " on my own. There, a servant or chambermaid will let me in and take me to my room, where I shall make myself as presentable as my nature permits. From there, I shall betake myself full of arduous longing to the breakfast room, where I shall help myself to coffee and bread and butter, and await the beginning of events with a cigar and some reading.

So, please, you will be so kind as to take no notice whatever of my arrival, won't you, and just come-down to breakfast at your usual hour ... »

...

Breslau had changed hands several times in the course of its complicated history. Its University, built at the beginning of the 18th Century, had been enlarged, transformed, and re-organized in 1811. Thanks to it, Breslau had become one of the scientific and cultural centres of Europe. Mahler's friend, Arthur Neisser, taught there, and there, he had studied various microbes and discovered that of gonorrhoea. According to Mahler's report in a letter to Alma, the Neissers were « lavish hosts and lived in a superb house » . Arnold Berliner, Mahler's old friend from Hamburg and Arthur Neisser's cousin, had come from Berlin for the performance. Every afternoon, Mahler posed for the artist Fritz Erler who, at Neisser's request, painted his portrait, and later, used it as the basis for an engraving. Erler was well-known in Germany for his interior decoration and for his portraits. His « décors » for the Munich « Künstlerhaus » and collaboration with Georg Fuchs, the celebrated stage-director, had added to his fame. He was a close friend of the Neisser family, had decorated their music-room, and painted several portraits of « Frau » Neisser. His design for the Neissers' music-room had become a famous example of the new style of interior decoration. He adorned the walls with his frescos, and designed all the wood fittings, including the light-fixtures, organ-case, music-stands, seats, door-locks, etc. Mahler must have felt very much at home in this very contemporary « décor » , which surely reminded him of the « Hohe Warte » .

...

**1933** : The « Internationale-Bruckner-Gesellschaft » (IBG) founded the « Musikwissenschaftlicher Verlag » for the express purpose of publishing the Bruckner Complete Edition. Under the general editorship of Robert Haas, plans were also made for a Hugo Wolf complete edition ; « Penthesilea » was given its first critical edition, and the « Scherzo and Finale » and numerous early songs were published for the first time. The War, however, prevented further progress towards a complete edition.

**1939** : In the course of the « aryianization » of objects of cultural value, parts of Hugo Wolf's estate was incorporated

into the municipal collections.

**March 1940** : The Nazi municipal administration would plan a memorial to the composer and organize a large Hugo Wolf exhibition.

**Saturday, 25 September 1943** : A museum dedicated to the memory of Hugo Wolf opens in his birthplace, Windischgrätz. This area will be in dispute between German and Slovene speakers during the collapse of the German resistance in 1945 and everything written in German will be destroyed. Many important items of Wolf memorabilia will be lost.

### 1909 : Gustav, Alma and Eusapia Palladino

The late-19th and early 20th Centuries saw a world-wide upsurge of belief in spiritualism, the ability to contact loved ones after death. In New York City, there were both bizarre private « séances » and organized churches of spiritualists. Spiritualist congregations met in large groups to hear ministers lecture as smaller groups gathered in a circle at the front of the congregation and attempted to contact the spirits of the departed.

Private « séances » were led by drunken mediums like Eusapia Palladino, whom the Mahlers visited in 1909. Alma was already beginning to acquire a fashionable taste for mysticism and theosophy. Palladino wore a peasant's shawl round her head and made dark prophecies about Mahler, claiming that he was in danger. Although they did not know what to make of all this, the « séance » certainly gave them pause for thought. At one point, a mandolin flew through the air and slightly injured Mahler.

Born in Italy in 1845, Palladino manifested psychic experiences at an early age, and was admired and reviled in equal measure. A well-known figure, she held her New York « séances » in rooms on lower-Broadway, next to a squalid bar.

This was a period when theosophy and spiritualism were all the rage - at more or less the same time Baron Schrenck-Notzing was making a similar impression on Thomas Mann in Munich.

Gustav and Alma also toured the opium dens of New York's Chinatown with Gustav Schirmer, the music-publisher.

These mediums were often simply charlatans, more expert at a form of parlour magic than a true connector between the world of the dead and our own world of the living.

...

Eusapia Palladino visited America in 1909 with Hereward Carrington as her manager. Her arrival was accompanied by a veritable campaign in the American popular press, with newspapers such as the « New York Times » and magazines such as the « Cosmopolitan » publishing numerous articles on the Italian medium.

The magician Howard Thurston attended a « séance » and endorsed Palladino's levitation of a table as genuine. However, at a « séance » on 18 December 1909 in New York, the Harvard psychologist Hugo Münsterberg with the help of a hidden man lying under a table, caught her levitating the table with her foot. He had also observed Palladino free her foot from her shoe and use her toes to move a guitar in the « séance » cabinet. Münsterberg also claimed that Palladino moved the curtains from a distance in the room by releasing a jet of air from a rubber bulb that she had in her hand. Daniel Cohen noted that she « was undaunted by Munsterberg's exposure. Her tricks had been exposed many times before, yet, she had prospered » . The exposure was not taken seriously by Palladino's defenders.

In January 1910, a series of « séance » sittings were held at the physics laboratory at Columbia University. Scientists such as Robert W. Wood and Edmund Beecher Wilson attended. The magicians W. S. Davis, J. L. Kellogg, J. W. Sargent and Joseph Rinn were present in the last « séance » sittings in April. They discovered that Palladino had freed her left foot to perform the phenomena. Rinn gave a full account of fraudulent behaviour observed in a « séance » of Palladino.

Milbourne Christopher summarized the exposure :

« Joseph F. Rinn and Warner C. Pyne, clad in black coveralls, had crawled into the dining-room of Columbia professor Herbert G. Lord's house while a Palladino séance was in progress. Positioning themselves under the table, they saw the medium's foot strike a table leg to produce raps. As the table tilted to the right, due to pressure of her right-hand on the surface, they saw her put her left-foot under the left table leg. Pressing down on the table-top with her left-hand and up with her left-foot under the table leg to form a clamp, she lifted her foot and “ levitated ” the table from the floor. »

Palladino was offered \$ 1,000 by Rinn if she could perform a feat in controlled conditions that could not be duplicated by magicians. Palladino eventually agreed to the contest but did not turn-up for it, and instead returned to Italy.

In England, America, France and Germany, Palladino had been caught utilizing tricks. Psychical researchers such as Hereward Carrington who believed some of her phenomena to be genuine, accepted that she would resort to trickery on occasion.

Historian Peter Lamont has written that although Palladino's defenders accepted that she would cheat, they « pointed to the best evidence (where, they argued, fraud had been impossible) , but critics argued that the investigators had simply missed it » .

On the subject of fraud and Palladino, the philosopher and skeptic Paul Kurtz wrote :

« Palladino was caught red-handed in blatant acts of fraud by members of the Society for Psychical Research in Cambridge and by scientific teams at Columbia and Harvard Universities. She was shown to be substituting her hand or foot and using them in darkened seances to move objects so that they appeared to be levitating. Even her

defenders conceded that she cheated, at least some of the time. The problem that puzzles me is this : If one finds sleight-of-hand techniques being used some of the time by such individuals, then why should one accept anything else that is presented by them as genuine ? (...) Skeptics question the first Feilding report because in a subsequent test by Feilding and other tests by scientists, Palladino had been caught cheating. »

### Leyden : Mahler meets Freud

Alma seems to have indicated to Mahler that she did not intend to leave him even if she was rebelling against the reducing of his libido. Nevertheless, he was so shaken by her love-affair with Walter Gropius that he arranged on the spur of the moment to consult with Sigmund Freud and traveled to Leyden, in the Netherlands, in order to do so, less than 1 week before the final rehearsals of the 8th Symphony in Munich were due to begin ; he and Freud talked together for one afternoon, to beneficial effect. Mahler then returned to Alt-Schludersbach.

**Thursday, 25 to Sunday, 28 August 1910** : Gustav Mahler traveled by train to Leyden, in the Netherlands, to consult Doctor Sigmund Freud. During the trip, Mahler sent a number of telegrams to Alma. It was Doctor Richard von Nepalleck who acted as go-between with Mahler and Freud, and arranged the appointment.

Nepalleck and Mahler must have previously talked about Freud (his theories, and methods, and the new science of which Freud was the founder) .

**Friday, 26 August 1910** : Mahler stayed at the « Hotel of the Golden Lion » (« Hôtel du Lion d'Or » ; « Hotel De Gouden Leeuw ») located at Number 24 Bree Street (« Breestraat ») . No hotel receipt survived.

Freud had an analytical discussion with Mahler during a long walk through the town of Leyden which lasted 4 hours. They passed in front of the Academic building (located at Number 73 on Rapenburg Street) , and also went through the « Hortus Botanicus » (« den Vergulden Turk ») .

Mahler told Freud his life history, and, very soon, Freud notices how Mahler, as a child, must have felt very specially linked with his mother, and how this specific link would throw its shadow over the adult composer.

The meeting ended late in the evening.

**Saturday, 27 August 1910** : Mahler was leaving for Vienna again. He was acquainted with the Netherlands because of his very good and friendly contacts with Willem Mengelberg and Alphons Diepenbrock.

...

Sigmund Freud and his wife, his sister-in-law and 2 sons were spending some time at the coastal resort of « Noordzee am Strand » located in the town of « Noordwijk aan Zee » , near Leyden. He was about to leave « Noordwijk aan Zee » for Sicily and, normally, did not interrupt his summer vacations, but Mahler was a famous man. He stayed in the Hotel-Pension of « Noordzee in Noordwijk aan Zee » located at Number 8 Noord Boulevard. Freud had

no particular interest in music and came by tram-car from « Noordwijk aan Zee » to Leyden.

In 1925, Sigmund Freud told his pupil Marie Bonaparte (1882-1962) about the meeting with Gustav Mahler. Her diary makes it obvious that Mahler and Freud immediately understood each other. Mahler was 50 years old and Freud 54. There were similarities in the men's lives. Both spoke German (with regional colouring), had the same social, historical and cultural background from Vienna (Congruence of cognition), both had an international reputation, been in America, studied Philosophy, were fascinated by Fyodor Dostoyevsky and both had a morbid fear of death.

### Appointment

3 appointments were cancelled. Talk about fear and scepticism !

Reasons might have been :

Mahler was ill for a few days with tonsillitis.

He had worried Alma when she had found him unconscious in the middle of the night, working on his 10th Symphony.

The distance Mahler would have to travel.

In the end, Freud put Mahler in front of an ultimatum. He pointed-out that the end of August would be the last chance of meeting, as he would leave for some time to stay in Sicily with Sándor Ferenczi.

Only after this, the meeting could take place.

We can see that Mahler had his reasons for cancelling his appointment with Freud 3 times. Could it have to do with the fact that Mahler, unconsciously, knew all the above ? If Mahler, in his talk with Freud, would be confronted with all these hidden feelings, conflicts and deficiencies, and with the significance composing his music had for him, would he ever have been able to compose another Symphony ? Possibly, Mahler was scared to death that insight into the depths of his soul would make the fountain of his creativity run dry. And, with that, he would have given-up a last unconscious motive in his life, which is the need for immortality. The theme of life and death, and, with that, mourning, is clearly present in Mahler's life. The wish to be immortal, and to mask the pain of all that loss through that. And not just the loss from his early childhood. He never really recovered from the untimely death of his eldest daughter. She was « his » child. By identifying with his music, Mahler was able to have the fantasy of out-living his own death. On top of that : he was also, of course, seriously ill.

### Analysis

Nature : Obsessions (« Zwangsvorstellungen ») and anxiety.

Method : Mahler told his whole life history.

Subject : His marriage.

Situation : He married a younger woman. They could not get along at the time. He was a normal rigorous man, who loved his wife.

Elements : Mother fixation (his mother's first name was Marie as in Alma-Marie Mahler) . When he was young, he heard the quarrels of his parents ; he could not stand it and ran out into the street. There, he heard a barrel-organ playing a simple tune « Ach, du lieber Augustin » . He reproduces in his music as a conjunction of « high-tragedy » and « light amusement » . (This is one of Mahler's most original features ; the change of « tone » and « style » . As from « Sublime » to « Vulgar » .)

The only plausible explanation of Mahler's tragic state of regression is that Alma had become a mother-figure - the loss of whom was unbearable.

The question remains : what Mahler told Freud about the love-affair of Alma with Walter Gropius which was the origin of the current troubles.

### Gustav and Alma

Mahler contacted Freud because of serious relationship problems with his wife Alma, showing among others in potency complaints. Ernest Jones, in his biography of Freud, writes that the 2 men walked through Leyden for 4 hours, in which a kind of psychoanalysis took place. This analytical talk would have had some effect, because the potency complaints disappeared, and the marital relationship supposedly improved. Unfortunately, Mahler died within the next year. Although Mahler was totally uninformed about what psychoanalysis was, Freud said never before to have met anyone who understood so quickly what psychoanalysis was about.

Alma, in her autobiography, writes about the meeting between Freud and Mahler, that Mahler contacted Freud out of fear of losing her. Freud would have told him that he, Mahler, was, in every woman he met, looking for his mother, who was a poor, suffering and anguished woman. A little further in her book, Alma writes that Gustav, when she met him, apart from a few seductions by experienced women, had remained a virgin although he was already 40 years old. She said this was not a coincidence : Mahler was celibate and afraid of « the woman » . « His fear of being “ pulled-down ” was enormous and this is why he avoided life and, therefore, everything female. » By the way, Freud had also said that Alma was looking for her father as a psychological principle in her relationships with men and that, because of this, she would never leave him. Alma's father died when she was 12 years old.

She writes about her father's dying :

« I felt I had lost my mentor, the star that guided me, and no-one but him would have understood that. I was used

to doing most things for him. »

### Mahler's final illness

In 1907, Gustav Mahler's world dramatically changed when he witnessed the death of his young daughter just 5 days after his 47th birthday. His wife's subsequent collapse from exhaustion prompted a visit by the local physician. Doctor Carl Viktor Blumenthal re-assured « Frau » Mahler that her health was fine. Then, as if on whim, he examined the Mæstro, only to discover a heart murmur, becoming the first to discover Mahler's rheumatic valve disease.

Eventually confirmed by the famed Viennese cardiologist Friedrich Kovacs, Mahler's diagnosis, the sounds of which likely meant mitral stenosis and regurgitation, required a strict regimen of rest ; Kovacs even forced Mahler to carry a pedometer to measure (and thus, limit) his exertion. Although typical for that time, these restrictions made Mahler feel like an invalid, filling his brain with thoughts of imminent death.

**Thursday, 11 July 1907** : Maiernigg, south of Klagenfurt. Death of Gustav Mahler's daughter Maria (« Putzi ») .

**Friday, 12 July 1907** : Maiernigg, south of Klagenfurt. Mahler's mother-in-law, Anna Sofie Moll-Schindler-Bergen, suffered a « heart spasm » and his wife Alma fainted. Valvular heart-disease disclosed by Toblach local Doctor Carl Viktor Blumenthal.

Alma Mahler :

« Mahler asked my mother and me to go down to the shore. There, for no apparent reason, she had palpitations of the heart. I bent-down to the lake in order to make a cold compress for her heart. Then, Mahler came-down the path, his face distorted with grief. My eyes wandered-up and, beyond him (and up above me on the road) , I saw them, lifting the coffin into the carriage. I now understood the reason for her sudden heart-attack and for the way he looked. Mahler and I were so distraught, so helpless that (with almost a feeling of happiness) I fainted and was unconscious for a long time.

The doctor came, diagnosed a serious cardiac dysfunction and ordered complete rest ; he failed to understand how I could still walk around with such a heart. Mahler wanted to cheer us up in our mournful room and said :

“ Look here, doctor, don't you want to examine me as well ? My wife is always worrying about my heart. She shall have some good news today. She needs it. ” »

The doctor examined him. He stood-up and looked very serious. Mahler was lying on the sofa, Doctor Blumenthal had knelt-down beside him, and said, almost cheerfully (like most doctors when they diagnose a fatal illness) :

« Well, you've no cause to be proud of a heart like that. »

Regular health checks were totally alien to Mahler's whole nature and, indeed, unusual at this period. It seems likely that, until then, he had consulted doctors only when he was acutely ill. At all events, it is unlikely that he had ever had his heart examined : only auscultation was available at this time, electro-cardiograms and X-ray examinations still lying far in the future.

Alma's comment :

« This verdict marked the beginning of the end for Mahler. »

It reflects her own medical ignorance and represents a completely un-necessary over-dramatization of the actual facts of the case.

Mahler was shattered by Blumenthal's diagnosis. After the initial shock, wiser counsels prevailed. After all, Doctor Blumenthal was only a « country doctor » and his fears may have been exaggerated. Thus, it was decided that Mahler should go to Vienna to consult Professor Friedrich Kovacs, who had treated Alma. An appointment was made, and Mahler left Maiemigg on 17 July, in the company of the neurologist Richard Nepalleck, who had come to Maiemigg to be of service to the bereaved couple.

...

Alma's memoirs (first published in German in 1940) mentioned that the initial diagnosis made by Doctor Blumenthal « marked the beginning of the end » . Yet, it is also important to recognize that this claim was neither new nor original.

In his 1922 « portrait » of the composer, stage-designer Alfred Roller had already made reference to the « severe and disabling » effect that Blumenthal's diagnosis had exerted on the composer. Indeed, Roller goes on to discuss the effect this knowledge had on his walking habits :

« That summer yielded no artistic fruit. He abandoned Maiernigg forever after the death of little Maria-Anna and rented a place in Schluderbach. His mood was one of silent resignation. The long, happy rambles (“ Wanderungen ”) had been replaced by careful little strolls (“ Spaziergänge ”) . An old friend succeeded in restoring his shattered confidence in his physical powers. Mahler tried taking longer walks (“ Spaziergänge ”) and ignored the doctor who had sent him so much into his shell. But there were to be no more route marches (“ Sturmschritt ”) , mountaineering (“ Bergsteigen ”) , rowing or swimming. »

### Doctor Carl Viktor Blumenthal

« Medizine Rat Doktor Carl Blumenthal. Viktring, Karnten, Telefon Klagenfurt 337. »

(Viktring is south of Klagenfurt near Maiernigg.)

General practitioner (1868-1947) .

« Blumenthalgasse » : Street named in Klagenfurt-am-Worthersee after Doctor Carl Viktor Blumenthal.

...

**Thursday, 18 July 1907** : According to Alma Mahler's biography, Doctor Friedrich Kovacs « confirmed the verdict and forbade him mountain ascents, bicycling and swimming ; indeed, he was so blind as to order a course of training (“ Terrainkur ”) to teach him to walk ; first, it was to be 5 minutes, then 10, and so on until he was used to walking (“ Gehen ”) ; and this for a man who was accustomed to violent exercise ! (“ bis man sich ans Gehen gewöhnt ! ”) And Mahler did as he was told. Watch in hand, he accustomed himself to walking - and forgot the life he had lived-up to that fatal hour. »

Alma says further that in that winter, « Mahler was so shattered by the verdict on his heart that he spent the greater part of the day in bed. He got-up only for rehearsals or for the performance if he was conducting » .

And again, to confirm the suspicion that Mahler was made unduly « heart-conscious » by his doctors :

« We avoided strenuous walks owing to the ever-present anxiety about his heart. Once, we knew he had valvular disease, we were afraid of everything. He was always stopping on a walk to feel his own pulse ; and he often asked me to listen to his heart and see whether the beat was clear, or rapid, or calm. I had been alarmed for years by the creaking sound his heart made (it was particularly loud at the second beat) and I had always known that it must be diseased ; he had a pedometer in his pocket. His steps and pulse-beats were numbered and his life was a torment. » According to Alma's unsupported testimony, Kovacs diagnosed a compensated congenital heart valve defect, a formulation which, medically speaking, is difficult to sustain. After all, no doctor at this period could ascertain whether a heart defect was congenital or acquired. If Mahler's defect had been congenital, then, he is unlikely to have reached the age that he did. And if the valvular defect was compensated (and, as we have noted, Mahler had an extraordinary ability to push himself to the very limits of his physical endurance) , then, there could be no question of the beginning of the end, for Mahler had demonstrated with his physical and intellectual exertions that he was fitter than most people of his age - he was 47 when this diagnosis was made.

### Doctor Friedrich Kovacs

The Austrian physician, internist and cardiologist Friedrich Kovacs was born on 16 January 1861 in Vienna and died on 11 February 1931 in Vienna.

In 1885, he studied medicine at the University of Vienna. From 1893, head-physician at the « Franz-Josef-Spital » . From 1900, held the same position at the Vienna General Hospital (« Wiener Allgemeines Krankenhaus ») . A diagnostician and teacher of high repute, specializing in internal medicine, he published a great deal, notably on the pathology of the circulatory system.

Kovacs confirmed Mahler's diagnosis (mitral stenosis and regurgitation) requiring a strict regimen of rest. He even forced Mahler to carry a pedometer to measure (and thus, limit) his exertion. Although typical for that time, these restrictions made Mahler feel like an invalid, filling his brain with thoughts of imminent death.

...

Gustav Mahler returned to Europe in the summer to his composing hut at Toblach, Austria. His delicate health made exercise problematic, which was a source of frustration :

« For many years, I have been used to constant and vigorous exercise - roaming about in the mountains and woods, and then, like a kind of jaunty bandit, bearing home my drafts ... now, I am told to avoid any exertion, keep a constant eye on myself, and not walk much. »

...

Having arrived in Vienna in the afternoon, Mahler sat in the « Café Imperial » , no doubt reading the newspapers, when he met Ludwig Karpath, who told him that he had heard from the best possible sources that Prince Liechtenstein, the Lord Chamberlain himself, had said :

« We will not let Mahler go, we shall not grant him permission to go. »

Later on, he met Carl Moll, dined with Richard Nepalleck, and went for a short walk after dinner, after which he retired to bed at 9, and slept until half past 7 the next morning :

« I feel very well (if Blumenthal hadn't said anything I would already have been roaming about for a long time) and wouldn't have gone to bed before midnight yesterday. So you see, my love, everything has its good side. From now on, I shall make a point of not doing too much, and if I have to stay here (in Vienna) , I shall live and do what Kovacs tells me to do. »

We do not know what the Viennese doctor told Mahler, for the telegram he sent Alma the next day is no longer to be found.

Mahler told Alma that Richard Nepalleck, « whom I like more and more » , had come to see him at the Molls on the same day that he had received Felix Weingartner's letter. Everybody had greeted him « with affection and respect at the Opera » although Wondra and Przystaupinsky were « the only ones who behave marvellously » . « So, everything is going better than we thought. » Mahler dined that evening with the Zuckerkandls in Purkersdorf.

« They were delighted, and Emil cheered-up visibly. His health has also improved over the last few days. Just think, they are following Doctor (Heinrich) Lahmann's diet to the letter and speak very highly of it ; they implore me to do the same. I thought the food excellent. I feel ever so much better here. At any rate, my nervous condition is almost

over ... »

Mahler spent his afternoons in the Molls' garden in the « Hohe Warte » , and, the following day, he sent Alma a postcard from there. Emil Freund, who had come to keep him company, added his signature.

**Tuesday, 27 August 1907** : The Vienna « Neue Freie Presse » published another interview with Mahler in which he explained the underlying reasons for his resignation.

### Doctor Richard von Nepalleck

The physician, neurologist, psychoanalyst and lawyer Doctor Richard von Nepalleck (Nepallek, Nepalek) was born on 26 April 1864 in Vienna ; and died on 31 October 1940 in Vienna.

Richard von Nepalleck was closely linked to Alma Mahler. He came to Maiernigg at the time of Maria-Anna's (« Putzi ») death to comfort and support the afflicted couple.

Alma had chosen Richard von Nepalleck as her « Wahl-Onkel » , together with his brother Wilhelm Friedrich (1862-1924) , Master of Ceremonies at the Court. In 1907, Richard co-signed a letter which Mahler wrote to Alma in the train moving from Klagenfurt to Vienna.

Nepalleck accompanied Mahler to Vienna to consult a heart specialist.

He visited Mahler at the house of Carl Moll (« Hohe Warte ») located at Number 10 on « Wollergasse » , 2nd District of Vienna.

During World War II, Richard von Nepalleck stayed in Vienna (Number 16 on « Lazarethgasse » , 9th District ; Number 41 on « Alserstraße » , 8th District) due to old age.

He was buried on 9 November 1940 in the Simmering's « Feuerhalle » (Grave : 6-3-2-182) .

### Doctor Heinrich Lahmann

The German physician Johann Heinrich Lahmann was born on 30 March 1860 in Bremen, Germany ; and died on 1 June 1905 in Friedrichstal near Radeberg. He was a pioneer of naturopathic medicine.

Lahmann earned his medical doctorate at the University of Heidelberg, and, after graduation, became a general practitioner in Stuttgart. On 1 January 1888, he opened a sanatorium called the « Physiatic Sanatorium » at Weißer Hirsch, outside of Dresden. This institution would eventually become well-known internationally.

Lahmann was influenced by the methods used by Vincenz Priëbnitz (1799-1851) and Johann Schroth (1798-1856) ,

both pioneers in the field of alternative medicine. He eventually turned away from traditional medicine, and was disdainful of drugs and un-natural medications. Lahmann stressed the importance of diet, exercise and fresh air, and was an ardent practitioner of physiotherapy and hydrotherapy.

Lahmann recommended a vegetarian diet of fruits, vegetables, nuts, whole-grain bread and dairy products, and believed in limiting one's intake of table salt and liquor. He developed 5 separate diets for his patients, which included food for diabetics, food for the over-weight, as well as a strictly vegetarian diet. In his 1891 book, « Diätetische Blutentmischung als Grundursache der Krankheiten » , he argued that diseases were ultimately caused by a poor diet, and, therefore, a proper diet was needed to prevent illness. He was also one of the first physicians to recognize the importance of minerals in an individuals' diet, feeling that many foods were mineral deficient.

Lahmann was an advocate of animal rights, refusing to use them in laboratory experiments. He also advocated loose-fitting clothing for all his patients, and recommended both sauna and open-air bathing.

...

One of the most prominent and successful doctors running a sanatorium and health-spa in Weißer Hirsch was Doctor Heinrich Lahmann. He started his business in 1887 and it became so successful, adding many building, baths and exercise facilities and, in a short time, added several (7) villas to his emporium to accommodate the flow of new patients.

One of them, Villa Eschebach, build in 1877 as a summer residence for Dresden industrial, art-collector, patron and one of Dresden's richest inhabitants Carl Eschebach (1842-1905) , he rented from 1887 as his house but, after his untimely death, it is known as « Kurpenzion Donath » .

The villa was used as a hotel for patients of the sanatorium until probably 1918 when it was bought by Dutch Consul Willem van Ameyden van Duym (1857-1917) and his family who owned the house until 1930.

Both Lahmann and Eschebach died in 1905 of complications of the influenza pandemic. Penicillin had yet to be discovered (Fleming, 1928) but it lasted until WWII becoming available as anti-biotic treatment. No sanatorium or naturopathy treatment could save these men.

...

Johann Heinrich Lahmann, deutscher Arzt und Naturheiler : geboren 30. März 1860 in Bremen ; gestorben 1. Juni 1905 auf Gut Friedrichsthal bei Radeberg. Er stand den Gedanken der Lebensreform nahe.

Heinrich Lahmann wurde 1860 als Sohn des Reepschlägers Albert Lahmann und dessen Frau Elisabeth Erichs in Bremen geboren. Nach dem Abitur studierte er erst zwei Jahre lang Technik in Hannover. 1880 wurde er dort Mitglied des Corps Hannovera. Anschließend studierte er Medizin in Greifswald, München, Leipzig und Heidelberg, wo er promoviert

wurde. Zunächst ließ er sich in Stuttgart als praktischer Arzt nieder, wo er seine erste Schrift publizierte mit dem Titel Kritik der Professor Doktor Jägerschen Wollbekleidungslehre, Seelenlehre und Heiltheorie. Darin kritisierte er die Ansichten des Mediziners Gustav Jäger, der eine Reformkleidung aus Wolle als einzig gesunde Kleidung propagierte und auch herstellen ließ. Lahmann plädierte dagegen für Baumwolle vor allem als Unterwäsche und ließ später auch solche unter dem Namen « Doktor Lahmann » von der Fabrik Heinzemann in Reutlingen produzieren. 1922 erteilte er ebenfalls der Firma Lahco im schweizerischen Baden AG « das Recht, die von mir erfundene Unterkleidung anzufertigen » .

1886 bot ihm Johann von Zimmermann die Leitung seiner Naturheilanstalt in Chemnitz an. Doch zerstritten sie sich offenbar innerhalb kurzer Zeit, denn schon 1887 wechselte der Mediziner nach Dresden und eröffnete am 1. Januar 1888 im Dresdner Vorort (heute Stadtteil) Weißer Hirsch ein eigenes Sanatorium unter dem Namen « Physiatisches Sanatorium » im « Frida-Bad », einer 1883 geschlossenen Kuranstalt. Zunächst arbeiteten dort nur zehn Mitarbeiter, doch behandelte er schon im ersten Jahr 385 Kurgäste. Im selben Jahr heiratete Lahmann Pauline Haase (1867-1910) ; aus der Ehe gingen sechs Kinder hervor. Lahmann starb 1905 im Alter von 45 Jahren an einer Herzmuskelentzündung als Folge einer Grippe. Er wurde auf dem Waldfriedhof Weißer Hirsch beigesetzt.

Lahmann hatte sich bereits während seines Studiums mit Naturheilkunde beschäftigt, unter anderem mit den Methoden von Vincenz Prißnitz und Johann Schroth. Er wandte sich ganz von der klassischen Medizin ab und strebte die Schaffung eines einheitlichen alternativen Heilsystems an, das vor allem die Hydrotherapie, die Schwedische Heilgymnastik, Luftbäder und gesunde Ernährung umfassen sollte. Medikamente lehnte er grundsätzlich ab. 1891 veröffentlichte er sein Buch mit dem Titel Die Diätetische Blutentmischung als Grundursache aller Krankheiten. Darin entwickelte er die Theorie, alle Krankheiten seien letztlich durch falsche Ernährung verursacht und folglich auch durch richtige Ernährung zu verhüten.

Er ging davon aus, daß die übliche Kost zu säurereich sei und zu wenig basische Mineralstoffe enthalte, die er « Nährsalze » nannte. Damit war er wohl der erste, der die Bedeutung von Mineralstoffen erkannte ; die Vitamine waren zu dieser Zeit noch nicht entdeckt. 1895 richtete er ein Labor ein, in dem Untersuchungen zum menschlichen Stoffwechsel durchgeführt wurden, die seine Theorien bestätigen sollten. Seine Ernährungstheorie zur « Blutentmischung » und die Empfehlung einer « basenreichen Ernährung » ist heute bei Ernährungswissenschaftlern und Medizinern umstritten, wird aber in der Alternativmedizin nach wie vor als richtig angesehen.

Lahmann empfahl eine überwiegend vegetarische Ernährung, die vor allem aus Salat, Gemüse, Obst und Nüssen bestehen sollte, ergänzt durch Milch und Milchprodukte sowie Vollkornbrot. Fleisch und Genussmittel sollten auf den Sonntag beschränkt bleiben. Im Laufe der Zeit entwickelte er fünf verschiedene Kostformen für seine Patienten : « Normalkost » , rein vegetarische Kost, Kost für Übergewichtige, Schonkost und Kost für Diabetiker. Der Ernährungswissenschaftler Maximilian Bircher-Benner weilte zu einem Informationsaufenthalt bei Lahmann, ehe er sein eigenes Sanatorium in Zürich eröffnete.

Lahmanns Kurkonzept basierte neben der Ernährung auf Wasseranwendungen, so genannten Luftbädern und Bewegung in der freien Natur, also Prinzipien der Abhärtung. Einige Patienten waren in « Lufthütten » untergebracht, auch

verordnete er Liegekuren im Freien. Jeden Morgen trafen sich die Patienten leicht bekleidet zur Gymnastik im Park, die Frauen im « Luftbadehemd », die Männer in kurzen Hosen, und zwar auch im Winter. Zur Abwechslung wurde in dieser Kleidung auch gekegelt, Männer wurden auch zum Holzsägen und Sandschippen angehalten.

Das Sanatorium entwickelte sich zu einer namhaften, international frequentierten Einrichtung. 1893 hatte es erstmals in einem Jahr über 1.000 Patienten, im Todesjahr Lahmanns 1905 waren es knapp 4.000. Bekannte Kurgäste waren in späteren Jahren unter anderem Heinrich George, Heinz Rühmann und Johannes Heesters.

Nach Lahmanns Tod wurde das Haus von der Familie weitergeführt. Von 1920 bis 1924 war Johannes Heinrich Schultz, der das Autogene Training entwickelte, Chefarzt und wissenschaftlicher Leiter des Sanatoriums. Im 2. Weltkrieg diente es als Lazarett.

Von 1946 bis 1992 wurde Lahmanns Sanatorium von der Sowjetarmee genutzt und dabei die Bausubstanz extrem vernachlässigt. Bei der Rückgabe befanden sich einzelne Gebäude in einem ruinösen Zustand. Seit dem Abzug der Roten Armee stand das denkmalgeschützte Lahmann-Sanatorium leer und verfiel zusehends weiter. Anfang 2011 wurde es an die Baywobau verkauft, die es sanierte und mit luxuriösen Eigentumswohnungen versah. Ein prominenter Bewohner des als Doktor Lahmann Park vermarkteten Areals ist seit April 2015 der sächsische Ministerpräsident Stanislaw Tillich.

...

Doktor Johann Heinrich Lahmann war ein deutscher Arzt und Besitzer des gleichnamigen Sanatoriums auf dem Weißen Hirsch.

Als Sohn eines erfolgreichen Bremer Kaufmanns studierte Lahmann zunächst nach erfolgreichem Realgymnasiumabschluß 5 Semester Bauwesen, widmete sich aber schnell der Medizin. Schon während seines Studiums befaßte es sich der Naturheilkunde in all ihren Facetten und mit der vegetarischen Lebensweise. Frisch von der Universität bekam er eine unerhörte Chance - der Mäzen der Naturheilkunde, der Industrielle Johann von Zimmermann, holte Lahmann an seine Naturheilanstalt nach Chemnitz. Jedoch nach anderthalb Jahren in der Einrichtung von Zimmermann war Lahmann Feuer und Flamme für eine eigenes Sanatorium - bei zwei Besuchen in Dresden hatte er sich den Kurort Weißer Hirsch mit seinem Frida-Bad, welches sich ideal für seine Wasserbehandlungen nutzen ließ, auserkoren und konnte somit am 1. Januar 1888 sein « Physiatisches Sanatorium » mit 10 Angestellten eröffnen.

Doktor Heinrich Lahmann zeichnete sich vor allem dadurch aus, daß er seine praktisch gewonnenen Erkenntnisse nicht nur systematisch ordnete, sondern diese auch naturwissenschaftlich begründete. In seinem 1891 erschienen gleichnamigen Buch entwickelte er die Theorie von der « diätetischen Blutentmischung als Grundursache aller Krankheiten ». Dieser heute überholten Auffassung nach führt eine falsche Ernährung zu einer falschen Zusammensetzung des Blutes und damit zu einer falschen Zusammensetzung aller Körpergewebe. Zum Nachweis seiner Auffassung ließ Lahmann in seinem chemisch-physiologischen Laboratorium von Ragnar Berg Untersuchungen zum menschlichen Stoffwechsel, insbesondere dem Mineralstoffwechsel vornehmen. In der säurereichen Nahrung und der daraus folgenden Unterversorgung mit basischen Mineralstoffen (Nährsalzen) sah er eine Hauptursache für Erkrankungen.

Die Erfolge der Lahmannschen Kur, das Sanatorium und die hier geleistete wissenschaftliche Arbeit trugen den Ruf des Weißen Hirsches als Kurort in alle Welt. Diesem hervorragenden Ruf folgten nicht nur Patienten, sondern auch weitere Ärzte nicht nur der Naturheilkunde.

Er verstarb schon in seinem 45. Lebensjahr am 1. Juni 1905 an Influenza durch Überanstrengung des Organismus in seinem Gut Friedrichsthal bei Radeberg. Er wohnte zuletzt in der Lahmannstraße I im damaligen Dresdner Vorort Weißer Hirsch und wurde auf dem Waldfriedhof Weißer Hirsch beerdigt.

Bereits zu den Lebzeiten von Heinrich Lahmann, im Jahr 1903 wurde die bisherige Karlstraße im damaligen Dresdner Vorort Weißer Hirsch, wo Doktor der Medizin Heinrich Lahmann wohnte, zu seinen Ehren und aufgrund seiner Verdienste in Lahmannstraße umbenannt. Zwar erfolgte bereits 1926 eine weitere Umbenennung in Stechgrundstraße, allerdings erfolgte dies aufgrund der Namensgebung des neuen Lahmannringes.

Heinrich Lahmanns heiratete 1888, im Jahr der Eröffnung seines Sanatoriums Louise geborene Haase (geboren 1868 in Stettin, heute Szczecin/Polen ; gestorben 1910 in Dresden) . Sie hatte zuvor als Kinderfräulein in Chemnitz gearbeitet. Louise Lahmann übernahm nach seinem Tod als Inhaberin das « Sanatorium Doktor Lahmann » .

Heinrich und Louise Lahmann hatten zusammen sechs Kinder, und andere :

Hans Heinrich Albert Lahmann (gestorben 1935 in Dresden) , Doktor der Medizin, approbierter Arzt, königlich-sächsischer Militär-Assistenzarzt der Reserve. Er war mit Walburga Lahmann verheiratet und wohnte zuletzt in der Wolfshügelstraße 2.

Hans Heinrich Friedrich Otto Lahmann, Kaufmann. Er wurde später Vorstandsvorsitzender des « Doktor Lahmanns Sanatorium Weißer Hirsch » .

Hans-Heinrich Lahmann, Landwirt (auf Gut Friedrichsthal) , königlich-sächsischer Leutnant der Reserve.

Der Kaufmann Otto Albert Lahmann (gestorben 1914 in Dresden) , der ebenfalls auf dem Weißen Hirsch in der Eschebachstraße 4, später der Hausnummer 11 wohnte, übernahm als Direktor das Lahmannsche Sanatorium. In diesem Amt blieb er bis 1907. Er war mit Maria Eugenia Johanna Lahmann verheiratet.

Die gemeinsamen Kinder waren :

Otto Albert Reiner Lahmann, Kaufmann. Er wohnte zuletzt in der Seidnitzer-Straße 19.

Otilie Erika Erdmuthe Lahmann, Ilse Maria Elisabeth Lahmann. Alle 3 Kinder wohnten anfangs in der Hermann-Prell-Straße 11.

...

Das Lahmann-Sanatorium wurde 1887 vom Arzt Doktor der Medizin Heinrich Lahmann gegründet, als dieser das 1883 in Konkurs gegangene Fridabad des Loschwitzer Bauunternehmers Theodor Lehnert pachtete. Am 1. Januar 1888 ging das Bad offiziell in Lahmanns Besitz über und hieß nun « Doktor Lahmanns psychiatrisches Sanatorium Weißer Hirsch ». Im Mittelpunkt der Behandlung der Patienten stand die gesunde Ernährung, in enger Verbindung mit Bewegung an frischer Luft und regelmäßigen Luftbädern. Außerdem fanden bestimmte psychotherapeutische Maßnahmen statt, die das Gesamtbefinden der Kurgäste verbessern sollten. In einem eigenen chemisch-physiologischen Laboratorium befaßte sich Lahmann auf naturwissenschaftlicher Grundlage mit Fragen des menschlichen Stoffwechsels und entwickelte eigene diätische Produkte und Nahrungsergänzungsmittel. Nach seinem Tod wirkte ab 1909 der schwedische Ernährungsforscher Ragnar Berg für einige Jahre im Sanatorium und entwickelte hier eine bis heute gültige Lebensmitteltabelle zum Mineralstoffhaushalt.

Lahmanns Konzept war ein voller Erfolg, der alljährlich zahlreiche Besucher anzog. Zwischen 1888 und 1913 wuchs deren Zahl von 385 auf über 7.400 an. Bis zum 1. Weltkrieg wurden deshalb neue Kurgebäude errichtet, Wasserleitungen und Dampfheizungsanlagen eingebaut und verschiedene Bade- und Gemeinschaftshäuser eingerichtet. Zur Versorgung seines Sanatoriums erwarb Lahmann 1894 das Gut Friedrichsthal bei Radeberg und ließ hier eine Musterwirtschaft anlegen. Um die Gäste unterbringen zu können, baute beziehungsweise kaufte der Arzt außerdem insgesamt 15 Villen auf dem Weißen Hirsch, darunter die 1905 von Max Herfurt erbaute Villa Urvasi am Lahmannring. Lahmann selbst wohnte bis zu seinem Tod am 1. Juni 1905 in einem repräsentativen Gebäude unmittelbar auf dem Klinikgelände. Diese Villa, Heinrichhof genannt, wurde 1896 gebaut und von Paul Kayser entworfen.

Bis zum 1. Weltkrieg besuchten Gäste aus aller Welt den Kurort am Dresdner Nordrand, bevor der Kriegsausbruch ein abruptes Ende setzte. Zu den berühmten Kurpatienten gehörten neben wohlhabenden Kaufleuten und Militärs auch Mitglieder der Familie der Hohenzollern und der russischen Zarenfamilie, Könige und Fürsten aus Europa, Asien und Ägypten, aber auch Schauspieler, Sänger und Schriftsteller. Über 300 Angestellte sorgten sich um deren Wohl, nahmen medizinische Behandlungen vor und organisierten den Klinikbetrieb. Ab 1914 befand sich hier ein Vereinslazarett des Deutschen Roten Kreuzes.

Nach 1918 gelang es nur mühsam, wieder an die alten Besucherzahlen anzuknüpfen. 1921 wurden das Lahmann-Sanatorium und einige andere private Kureinrichtungen unter Verwaltung der Stadt Dresden zu einem Kurbezirk zusammengefaßt. Dennoch blieb das Lahmann-Sanatorium bis zum 2. Weltkrieg bekanntestes in der Dresdner Umgebung und wurde weiterhin von In- und Ausländern besucht. Als Kurgäste erwähnt werden sollen hier nur der Flugzeugkonstrukteur Hugo Junkers, Reichsminister Doktor Neuhaus, der Schriftsteller Thomas Mann, die Sängerin Claire Waldoff, Operetten-komponist Paul Linke und die UFA-Stars Zarah Leander, Marika Röck, Heinz Rühmann und Willy Birgel.

1940 übernahm die Wehrmacht die Gebäude und richtete hier ein Lazarett mit Genesungsheim für Soldaten ein. 1945 beschlagnahmte die Sowjetarmee den Komplex. Bis 1991 dienten die Gebäude als Sanatorium der sowjetischen Streitkräfte. Obwohl keine grundlegenden Umbauten erfolgten, wurde die historische Bausubstanz in dieser Zeit schwer in Mitleidenschaft gezogen. 1991 verließ die Sowjetarmee die Kurhäuser in ruinösem Zustand. Alle Konzepte zur Reaktivierung des Gebietes, die und andere die Einrichtung eines Seniorenstiftes der Stiftung « Augustinum »

beziehungsweise ein Europäisches Wellness- und Forschungszentrum vorsahen, scheiterten an den hohen Kosten und Auflagen des Denkmalschutzes.

2011 erwarb ein Investor das frühere Sanatorium und will dieses unter weitgehender Erhaltung der vorhandenen Bebauung in den kommenden Jahren zu einem Wohnpark umgestalten. Vorgesehen sind außerdem Arzt- und Therapiepraxen im Eckhaus zur Stechgrundstraße sowie der Bau einer Einfamilienhaussiedlung am Heiderand. Dabei sollen die historischen Gebäude in ihrer Grundsubstanz erhalten bleiben und durch moderne Zutaten behutsam ergänzt werden. An den Entwürfen sind mehrere renommierte Architekturbüros beteiligt. Baubeginn war Mitte 2013.

...

Der Arzt Doktor der Medizin Heinrich Lahmann entdeckte auf einer Reise 1887 das Fridabad im Ort Weißer Hirsch bei Dresden. Er war von der Lage, hoch über dem Elbtal am Rand der Dresdner Heide, so begeistert, daß er alles daran setzte, seinen Traum von einem eigenen Sanatorium zu verwirklichen. Sein Motto « Natura sanat - die Natur heilt » wurde dann von ihm ab 1888, nach dem Kauf des Fridabades, zielstrebig umgesetzt.

Das « Doktor Lahmann's physiatrisches Sanatorium » entwickelte sich zu einem weit über die deutschen Grenzen hinaus bekanntes und geschätztes Sanatorium. Persönlichkeiten aus Wirtschaft, Kunst, Kultur und Politik kamen nach Weißer Hirsch.

Eine rege Bautätigkeit führte zu auch architektonisch besonderen Gebäude, so entstanden das Herrenbad, die Villa Urvasi, der Heinrichhof und vieles andere mehr.

Nach dem 1. Weltkrieg entwickelte sich der Weiße Hirsch, wesentlich bestimmt durch die Sanatoriumsgäste, zu einem « Bohème » -Ort. Viele Künstler gaben sich hier ein Stelldichein. Nach dem 2. Weltkrieg wurde es Lazarett der Sowjetarmee, seit 2012 wird es zu einem Wohngebiet ausgebaut.

...

Heinrich Lahmann, geboren 1860 in Bremen, studierte Ingenieurwissenschaften und später Medizin. Ab 1886 arbeitete er als praktischer Arzt, wurde später an eine Naturheilanstalt in Chemnitz berufen und gründete bereits 1888 ein eigenes Sanatorium am Weißen Hirsch in Dresden, das rasch Weltruhm erlangte. Es wurde von vielen Patienten besucht - so kamen 1906 über 4.000 Kurgäste. Zu ihnen gehörten auch Hochadel, Fürsten und Könige aus Deutschland, die russische Zarenfamilie, Politiker, bedeutende Unternehmer und Künstler wie Flugzeugbauer Hugo Junkers, Reichswirtschaftsminister Doktor Albert Neuhaus, Schriftsteller Thomas Mann, Schauspielerin Marikka Röck, Schauspieler Heinz Rühmann und viele mehr.

Obwohl viele Ärzte seine Methoden studierten (so lernte Max Bircher-Benner bei ihm) und später in ihrer Praxis anwendeten, wurde er von der Ärzteschaft angegriffen und verhöhnt. Heute wissen wir, daß Lahmann Recht hatte, wenn er seinen Patienten frische Luft und Sonne verordnete, Bewegung im Freien, Ruhe, Erholung und eine naturgemäße

Ernährung. Auch wenn seine Ernährungsempfehlungen aus heutiger Sicht einer Korrektur bedürfen, war er seiner Zeit voraus, denn auch heute würden viele Menschen an Gesundheit gewinnen, wenn sie seinen Empfehlungen folgen.

Lahmann forderte Gesundheitserziehung an den Schulen, damit die Kinder frühzeitig lernen, wie sie zu leben haben, um Krankheiten von vornherein zu vermeiden.

...

Heinrich Lahmann : Die Kohlensäurestauung in unserem Körper - Die wichtigste allgemeine Krankheitsursache (1905) , Buschhoven (1986) .

Heinrich Lahmann schickte diese Schrift in einer Auflage von 50.000 Broschüren (!) an Ärzte in Deutschland, Österreich, der Schweiz sowie nach Holland, Skandinavien und Ungarn in der Hoffnung, daß sie sich von der symptombezogenen Heilbehandlung abwenden und der ursachenorientierten zuwenden mögen.

Für Lahmann war die Kohlensäurestauung in den Geweben und im Blut die wichtigste Krankheitsursache. Er empfahl als prophylaktische Therapie besonders intensive Bewegung an frischer Luft, den Aufenthalt in gut gelüfteten Räumen und lockere, nicht beengende Kleider, damit die im Stoffwechsel entstandene Kohlensäure aus den Geweben ins Blut und vom Blut über die Lungen abgeatmet werden kann.

Lahmann begründete seine Theorie damit, daß ein hoher Gehalt an Kohlensäure im Blut und in den Gewebeflüßigkeiten viele basische Mineralien zur Neutralisation erfordern. Diese fehlten dann, um die im Stoffwechsel entstehenden Säuren abzupuffern wie Harnsäure, Phosphorsäure und Schwefelsäure. Aus diesem Grunde sprach er sich für eine basenreiche und säurearme Kost aus, bestehend aus viel Obst, Grünblattsalaten und Gemüse und weniger Fleisch und Eiern.

Wörtlich heißt es zur säurereichen Kost :

« Daß wir darunter zum Beispiel Fleisch verstehen und nicht etwa Obst, ist ja der landläufigen Anschauung zuwider ; aber wir müßen die unverbrennliche Schwefel- und Harnsäure, nicht die leicht verbrennliche Obstsäure fürchten. »

(Seite 19.)

Interessant ist Lahmanns Erkenntnis, daß Fließschnupfen oder Nasenbluten Entgiftungsversuche des Körpers sind. Krampfanfälle führt er auf Fehlernährung zurück, auf zuviel Kochsalz und säurereiche Nahrung. Lahmann erkennt den Schaden, den Alkohol, Nikotin, Kaffee, Tee und Kakao anrichten. Er spricht sich gegen die Vielesserei aus. Zu große Nahrungsmengen (auch von gesunder Kost) überschreiten unsere Verdauungskapazität und führen zu Darmgärung, zu anhaltenden Darmstörungen mit ...

« Alkaliverarmung, in dem die Gärungssäuren im Darm schon Alkalien der Nahrung binden und ungenützt für das Blut zur Ausscheidung bringen. Der Gipfelpunkt der Schwierigkeiten tritt stets ein, wenn die starken Säuren mangels

Alkalideckung zu den Basen greifen, welche integrierende Bestandteile der lebenden Gewebe bilden, einzelne Bausteine aus den Zellen herausreißen und zu ihrer Zerstörung führen. Setzt so die I. Zerstörung eigenen Zellmaterials ein, dann ist der Zellverfall oft überhaupt proklamiert ; denn die Produkte desselben, die Oxybuttersäure, die Acetessigsäure, sie sorgen für schnelle Verarmung des Organismus an Alkali, wodurch immer wieder neuer Eiweiß-, neuer Zellverfall wachgerufen wird. Dieselbe Säureschädigung ... ruft hier den Skorbut und Rachitis, dort spinale Kinderlähmung hervor. Hier haben wir Herzentzündung und dort einen jugendlichen deformierten Gelenkrheumatismus. Hier haben wir Zucker- oder Bright'sche Nierenkrankheit, dort eine Gehirnerweichung oder sonstige Erkrankung des Zentralnervensystems. »

(Seite 25f.)

...

Heinrich Lahmann : Die diätetische Blutentmischung - als Grundursache der Krankheiten, I. Auflage (1894) , Buschhoven (1987) .

Lahmann zeigt, daß wir Menschen wie auch Pflanzen und Tiere ausreichend und in richtiger Komposition Mineralstoffe brauchen. Zu viel Stickstoff (in unserer Ernährung als Protein aufgenommen) zieht Krankheit nach sich.

« Wie die Seuchen unter den falsch ernährten Menschen wüten, so hausen sie unter den falsch ernährten Pflanzen. Dort Diphtherie und Tuberkulose - hier Rüben-, Kartoffel-, Rebenkrankheiten. Was fehlt den Pflanzen ? - Mineralstoffe fehlen ihnen ! »

(Seite 27.)

Ebenso wie den meisten Menschen Mineralstoffe fehlen. Doch nicht anorganische Salze brauchen wir, sondern Mineralstoffe, die im organischen Verbund stehen.

Der Verzehr von Kochsalz ist nach Lahmann einer der größten Ernährungsfehler überhaupt.

« Bei Ernährung mit Fleisch und Brot ohne Salzzusatz scheiden wir in 24 Stunden nicht mehr als 6 bis 8 g Alkalisalze aus. Bei Ernährung mit Kartoffeln und dem entsprechenden Zusatz von Kochsalz werden täglich über 100 g Alkalisalze durch die Nieren getrieben. »

(Seite 55.)

Jedes Nahrungsmittel, das gesalzen wird, laugt aus und verliert seine basischen Mineralien. Lahmann illustriert das an folgendem Beispiel (Seite 53) , wie durch das Salzen von Fleisch die organischen Mineralien mit dem Wasser beziehungsweise der Salzlake verloren gehen :

« Wenn wir schon kochen wollen, sollten wir nach Lahmann kein Kochsalz verwenden oder zumindest sparsam damit

umgehen und auch nicht das Kochwasser wegschütten, denn wir würden sonst kostbare Mineralstoffe verlieren.

Wo viel Käse, Schinken und andere Salzkost und dafür wenig basenbildende Pflanzenkost verzehrt wird, sind Blasen- und Nierensteine verbreitet, weil es im Stoffwechsel an basischen Mineralien fehlt. »

(Seite 71.)

Nach Lahmann sollen wir hauptsächlich nährsalzreiche (sprich mineralstoffreiche) Grünblattsalate, Gemüse und Früchte möglichst roh essen, da diese dann besser zu verdauen sind und die Mineralien in ihrem organischen Verbund richtig ausgenutzt und verwertet werden können. Bei der übrigen Kost sollten wir uns zurückhalten und diese nur als Beikost betrachten : Fleisch, Eier, Milch, Brot, Gebäck, Getreideprodukte, Hülsenfrüchte, Kartoffeln.

« Der Mensch gehört seiner Anlage nach nicht zu den Fleischfressern, sondern zu den Pflanzenfressern und Fruchtfressern. Er gehört auch nicht zu den Körneressern - wozu sich die Menschheit gemacht hat. Der Mensch kann von beiden Dingen, von Fleisch und Körnerfrüchten, essen - darf sie aber nur als Zukost zu wichtigeren Nahrungsmitteln betrachten. »

(Seite 74.)

Den Einwand, daß sich die Armen nicht Früchte, Gemüse und Salate leisten könnten, begegnet er :

« Die Salatunkräuter, die auf jeder Wiese, an jedem Wegrain wachsen, können ungezählten Armen die Stoffe für ihr Blut schaffen, deren sie heute ermangeln. So liefert die Brennessel in ihren jungen Trieben einen Spinat, der besser schmeckt als der in Gärten gezogene. Im zeitigen Frühjahr, wenn der Arme noch keinen grünen Halm bezahlen kann, kann er so gut seinen Spinat essen wie der Bemittelte. »

Lahmann fährt fort :

« Zunächst sind es die gebleichten Frühlingstriebe der Cichorie, die der Butterblume oder des Löwenzahns, die einen hochfeinen Salat geben, den unsere Nachbarn, die Franzosen zu schätzen zu wissen. Das Löffelkraut, die Bachbunze, der Salatwegerich, der Sauerampfer, der Boretsch, der Sauerklee schließen sich an. Ja, das Wiesenschaumkraut wird in den Trieben vor der Blüte als Salat gepriesen. In England und Frankreich wird der Wegsenf gern gegessen. Der gute Heinrich, der sehr häufig ist und an allen Wegrändern und auf Schuttplätzen wächst, liefert gleichfalls einen guten Spinat und Salat. In Italien, wo es dem Volke fast gleich ist, was es genießt, wenn es nur Salat ist, wird auch die Vogelmiere oder Hühnerdarm (*Stellaria media*) benutzt. Und es gibt noch viele Salatunkräuter, die umsonst zu haben sind und an Sonntagen oder freien Nachmittagen eingeheimst werden können, zum Beispiel die gemeine Melde, die überreichlich überall wächst. »

(Seite 239.)

Um die Früchteversorgung für die Armen zu bessern, rät Lahmann den Gemeinden, ...

« jeden Weg mit Obstbäumen zu bepflanzen und nicht zu dulden, daß ein Obstbaum abgehauen wird, ehe ein anderer gepflanzt ist, oder zu sorgen, daß ein Grundbesitzer jedes Jahr seinen Obstbaum pflanze. »

(Seite 240.)

Zur Gesundheitserziehung lesen wir bei Lahmann :

« Ebenso wie wir in den verschiedensten Disziplinen belehrt werden, müßen die heranwachsenden Generationen auch in der Grundlage aller Lebensweisheit - der Lehre von der leiblichen Wohlfahrt unterrichtet werden. Nur so ist eine wirkliche ... Krankheitsverhütung möglich. »

Und er fährt fort :

« Indem leibliches Elend, Krankheit und Siechtum weniger werden, werden auch Ärzte als solche weniger Verwendung finden, das heißt sie werden für die neu zu schaffenden Posten der Gesundheitslehrer und Gesundheitswächter frei. Erst dort kann sich der dem wirklichen Arzte innewohnende ideale Trieb : von Grund aus zu helfen, das heißt zu verhüten, frei entfalten. »

« Wir haben eine Unzahl Ärzte und doch Krankheit und Siechtum in Menge. Es kann nicht eher anders werden, als bis wir (die Ärzte d.R.) Gesundheitslehrer geworden sind, als bis das Publikum in der Schule gelernt hat, daß man durch ... falsche Ernährung krank wird. »

(Seite 244f.)

...

Heinrich Lahmann : Das Luftbad als Heil- und Abhärtungsmittel (1898) , 4. Auflage, Buschhoven (1986) .

Lahmann beklagt, daß so gut wie niemand weiß, wie man zu leben hat, um gesund zu bleiben. Er kritisiert mit dieser Schrift besonders die Naturheilärzte, die mit ihren vielen Wasseranwendungen den geschwächten Patienten die letzte Lebenskraft rauben, denn Wasser leitet im Gegensatz zu Luft die Körperwärme stark ab.

« Ich kenne viele Hunderte von Wasserfanatikern, aber Keinen, der gesund ist. »

Dem falschen Konzept der Kaltwasserbäder, die keine Abhärtung bringen und nur die Lebensenergie vergeuden, setzt er seine Empfehlung entgegen : das Luftbad. Für Lahmann ist reine, frische Luft das Lebenselixier ; möglichst kombiniert mit Licht und Sonne. Man solle soviel wie möglich draußen und dabei möglichst wenig bekleidet sein ; je weniger die Haut bedeckt ist, um so besser. Zu akzeptieren sei gerade soviel Kleidung, daß man in der kalten Jahreszeit nicht friere.

Wem kalt ist, wer zum Frösteln neigt, der müsse sich mehr bewegen und so seinen Stoffwechsel anregen. Lahmann belegt die Wirksamkeit seiner « Luftbad-Kur » mit vielen geheilten Menschen.

Eine enge und dicke Bekleidung sowie überheizte, schlecht gelüftete Zimmer führten zu einer fieberhaften Überhitzung, zum Wärmestau, zu einer Blockierung der Entgiftung über die Haut. Durch Temperaturreize, durch Sonnenlicht und Bewegung an frischer Luft funktionieren Stoffwechsel und Entgiftung besser.

« Es scheint ja ungeheuerlich, daß heutige verzärtelte, in beständiger Erkältungsangst lebende Kulturmenschen in unserem Klima und nun gar zur Winterzeit sich unbedeckt für 5 bis 20 Minuten der Luft und dem Wetter aussetzen können, ohne sich den Tod zu holen. Und nun sollen sie sogar dabei gesunden ?! Ja, das zu verstehen ist dem Durchschnittseuropäer so unmöglich, daß ihn nur das Experiment am eigenen Körper überzeugen wird. Wer einmal die physische und moralische Wirkung des Luftbades im Freien verspürt hat, der fühlt sich leiblich und seelisch gesunder, nein er fühlt sich nicht nur so, sondern er ist es auch. »

(Seite 19.)

Bemerkenswert ist auch Lahmanns Erkenntnis des Zusammenhangs zwischen Freßsucht und der sitzenden Lebensweise in geschlossenen Räumen. Wie oft verfliegt doch der eingebildete Hunger, wenn wir ins Freie gehen.

Lahmanns Kinder mußten « stets abends vor der Essenszeit bis zum Schlafengehen im Zimmer und auf der Diele in Badehöschen turnen und spielen » .

Und weiter unten :

« Wie glühen die vollangezogenen Kinder zum Beispiel im Winter im geheizten Zimmer, wenn sie lebhaft Spiele spielen. Wie aufgereggt werden sie und wie schwer ist das Einschlafen. Beim Luftbad der Kinder kennt man diese Unbequemlichkeit nicht. Und dann der Tieferblickende, der die harmlosen Kinder beiderlei Geschlechts harmlos spielen sieht, sieht er nicht, wie sittliches Bewußtsein oder vielmehr unbewußte Sittlichkeit an Stelle fluchwürdiger Prüderie tritt, sobald der nackte Mensch etwas Selbstverständliches wird. Und dann fast das Wichtigste : Die Eltern sehen wirklich einmal ihre Kinder (nicht nur ihre aus den Kleidern guckenden Köpfe) mit ihren körperlichen Vorzügen und etwaigen Fehlern. »

(Seite 26.)

Der vernünftige Erwachsene wird jede « Gelegenheit suchen, im Sommer im Freien sich der Luft auszusetzen, dort wo man es schicklicher Weise allein kann. » , geschrieben wohlgemerkt bereits 1898.

Als Realist bemerkt Heinrich Lahmann mit Hinweis auf Alexander von Humboldt : eine Wahrheit brauche 200 Jahre bis sie sich durchsetzt. Hundert Jahre sind vorüber. Geben wir uns Mühe, daß es keine weiteren hundert Jahre dauert, bis die Menschen diese Wahrheit erkennen.

In Lahmanns Büchern konnte ich keinen Hinweis finden, daß er irgendein Medikament empfahl. Bei ihm gab es nur eine Therapie : Bewegung, frische Luft, Sonne, Ruhe und Erholung, basenbetonte Ernährung (Obst und Gemüse) ; egal um welche Erkrankung es sich handelte und er war erfolgreich damit und « konnte dem Tode noch manche Beute entreißen » . Lahmann war vor über hundert Jahren weiter als die meisten der heute praktizierenden Ärzte, die sich nicht die Mühe machen, nach den Ursachen der Krankheiten zu suchen.

Zur Medizin bemerkt er :

« Ich halte ... die Medizin für keine Wissenschaft, sondern für eine Kunst, bei der vielerlei Wissen nötig ist, also Hilfswissenschaften gelernt werden müßen. Es ist aber der Fluch der heutigen Medizin, daß sie als Wissenschaft angesehen und als Wissenschaft gelehrt und geübt wird. Sie ist dadurch in der Praxis ein Unding und ihre Jünger sind therapeutisch vielfach geradezu impotent. »

Lahmanns Sanatorium ähnelte eher einem Urlaubsetablisement als einem Krankenhaus. Die Patienten nahmen Sonnenbäder (im Winter in geschützten Glashäusern) , sie kegelten im Freien, spazierten und wanderten in der Dresdner Heide. Kein Wunder, daß bei solch angenehmen Aufenthalt und den hohen Heilquoten die Patienten in Scharen kamen und ein Haus nach dem anderen gebaut werden mußte, um die Patienten unterbringen zu können.

Das Sanatorium steht heute noch. Es wurde von der sowjetischen Garnison als Offizierskrankenhaus viereinhalb Jahrzehnte bis 1990 genutzt. Seitdem steht der Komplex leer. Die heruntergewirtschafteten Häuser sehen traurig aus und sind dem Verfall preisgegeben.

**Thursday, 29 August 1907** : After Gustav Mahler was vaccinated in Vienna, he underwent a cardiac examination by Doctor Franz Hamperl. Diagnose : mitral stenosis, rheumatic valve disease. A fact that Alma does not mention in the main-narrative, although Mahler's letter referring to this meeting is included at the end of the book :

« Yesterday, I had my inoculation. Doctor Hamperl did it, and while he was about it he examined me too, he found a small valvular deficiency which has been entirely compensated for, and thinks nothing of the whole business. He said I could most certainly follow my profession and I should live an absolutely normal life, except that I should avoid over-exerting myself. The strange thing is that he actually said the same as Blumenthal, but his whole manner had something comforting about it. »

Doctor Hamperl's diagnosis had immediate consequences in that it allowed Mahler to ignore the strict instructions laid out by Doctor Kovacs earlier that summer. Indeed, in the same letter, he even engages in some wishful thinking, expressing his desire to « take a hike up the Schneeberg ! »

Letter from Gustav Mahler to Alma :

« Doctor Hamperl found a slight valvular defect, which is entirely compensated, and he makes nothing of the whole affair. He tells me I can certainly carry on my work just as I did before and in general lead a normal life, apart from avoiding over fatigue. »

Heart murmur « loud second sound » .

In other words, only one of the valves between the left-ventricle and the left-ventricle was slightly narrower than normal as a result of changes caused by inflammation, so that its function was somewhat impaired. Possibly, it was a combined mitral defect, meaning that the mitral valve did not close properly and tended to leak, while, at the same time, it did not open sufficiently. In turn, this would lead to coronary insufficiency. But if, in the view of Mahler's doctors, his heart defect was « compensated » , then, this would mean that the body had learnt to cope with a long-standing defect without showing any of the symptoms usually associated with such insufficiency, namely, shortage of breath and swollen legs, neither of which is attested in Mahler's case. Be that as it may, this diagnosis was far from being a death sentence for a man like Mahler who, by contemporary reckoning, had already completed 3 quarters of his life expectancy without apparently suffering from any heart-condition. Today, the heart-valve would probably be replaced, but such an operation was still a distant prospect in Mahler's day. Hamperl's diagnosis also had the advantage of ultimately allowing Mahler to ignore Kovacs's strict instructions to avoid all forms of strenuous exercise, which would have meant a complete change in Mahler's lifestyle.

Above all, the total avoidance of all physical activity beyond the occasional stroll (in other words, a ban on swimming and hiking) briefly turned Mahler into a hypochondriac who kept stopping to check his pulse. For a time, he had followed Kovacs's orders, which admittedly reflected the current state of knowledge, but he soon noticed that his physical fitness was unimpaired and that it was now the lack of physical exercise that was making him ill. He reverted to his former practices, albeit reducing them slightly, and was delighted to discover that they did him the world of good. On more than one occasion, he reassured his friends that he felt as fit as he had done in the past. At least until the autumn of 1910, there can be no question of a serious deterioration in Mahler's health, as one would have expected with someone suffering from a weak heart. In short, Alma's claim that Blumenthal's diagnosis marked the beginning of the end for Mahler is no more than a widow over-dramatizing the situation.

## 1907 : Mahler visits Paris

**Monday, 9 December 1907** : Gustav Mahler arrives in Paris (from Vienna) . He is staying at the « Hôtel Bellevue » which is located at « n° 39, Avenue de l'Opéra » .

**Wednesday, 11 December 1907** : Mahler visits the « Palais Garnier » (Opera House) .

**Thursday, 12 December 1907** : Mahler leaves Paris for New York.

## New York : Hotel « Majestic »

**Saturday, 21 December 1907** : Gustav Mahler arrives in New York and settles in a suite at the Hotel « Majestic » .

Mahler lived on Central Park West and 72nd Street, an intersection that, for some people, instantly brings to mind the famous Dakota building. But Mahler's residence was the building directly across the street. Back then, it was called the Hotel « Majestic » and was originally constructed in 1894 in an opulent style. But by the time the Great Depression came along, the « Majestic » , like many of the old 19th Century New York hotels, had been converted and re-designed as more modest apartment units. Mahler's days at the « Majestic » carry an interesting anecdote. According to his wife Alma, Mahler heard the muffled sound of a beating bass-drum in the street outside their 11th floor window. It was a funeral procession rolling down Central Park West to honour a fallen fire-fighter. Mahler was so moved by the emotional weight of the drumming sound, he incorporated it into the 5th movement of his 10th Symphony which he composed 3 years later.

Henry-Louis de La Grange, in the 4th volume of his epic Mahler biography, summarizes the recollections of one Otto Wantuch, a director of the Hotel « Majestic » , Mahler's first home in New York :

« One winter afternoon, a young man managed to gain access to Mahler's rooms and asked to play him his latest Opera, a work peopled by “ supermen ”. With exemplary patience, Mahler sat him down at the piano, but as the composer presented his score and characters, he grew increasingly nervous. Finally, just as the principal leitmotif was about to repeat itself, Mahler touched him on the shoulder and said, “ Such super-human work demands super-human ears.” He then left the room. Wantuch also recalls an example of Mahler's absent-mindedness : once, he stayed on the subway until 140th Street instead of getting off at 72nd Street. »

(The stations in question no longer exist : the 9th Avenue Elevated came down in 1940. Mahler probably realized that something was amiss when he went around Suicide Curve.)

...

**1908** : Encounter of Alma Mahler with Doctor Joseph Fränkel from New York.

**1908** : Encounter of Alma Mahler with Doctor Joseph Fränkel from New York.

**1908** : Re-encounter of Alma Mahler with Doctor Joseph Fränkel. Meeting with Opera singer Enrico Caruso in New York.

**Saturday, 21 November 1908** : Mahler arrives in New York, where he stays at the « Savoy » Plaza Hotel.

**1909** : Mahler is suffering of fever, tonsillitis, fatigue and over-work.

**1909 : Mahler visits Paris**

**Monday, 19 April 1909** : Mahler arrives in Paris (from Vienna) for a holiday. He is staying at one of Paris's most luxurious hotels, the « Hôtel Majestic » which is located at « n° 19, Avenue Kléber dans le 16e arrondissement » .

The « Majestic » was among the most elegant addresses in Paris and certainly a place to see and be seen !

During his stay in Paris, Mahler attends his first posing session for sculptor Auguste Rodin at his « atelier » of Meudon, Île-de-France.

**Friday, 30 April 1909** : Mahler returns to Vienna.

**June 1909** : Mahler gets anxious at the mere idea of falling ill.

**Friday, 8 October 1909** : Mahler arrives in Paris (from Amsterdam) . He returns at the « Hôtel Majestic » .

Mahler attends his second posing session for Rodin at his « atelier » of Meudon.

**Tuesday, 12 October 1909** : Mahler leaves for New York.

**Paris : « Hôtel Majestic »**

The « Hôtel Majestic » opened in 1908. It served as a field hospital for wounded officers during World War I, staffed largely by British aristocrats. During World War II, it served as the headquarters of the German military high-command in France during the Nazi occupation of Paris. The hotel played a pivotal role in the deportation of Parisian Jews and the 1944 assassination attempt on Adolf Hitler.

...

« Avenue Kléber » , part of Baron Haussmann's rebuilding plan for Paris, was originally known as « Avenue du Roi de Rome » in tribute to Napoléon I's son. In 1864, a rich Russian nobleman named Alexandr Basilewski constructed a palace at « 19, Avenue du Roi de Rome » , designed by architect Clément Parent. Basilewski sold the palace in 1868 to the Duke of Sesto, who re-named it the « Palacio Castilla » . It was bought in behalf of Queen Isabella II of Spain, who had just exiled to Spain following the Glorious Revolution. She continued to live in Paris until her death in 1904.

The property was then acquired by hotel magnate Leonard Tauber after a bidding war that involved the United States government and the King of Belgium. Tauber constructed the luxurious « Hôtel Majestic » on the site, retaining Queen Isabella's bathroom accoutrements, including her marble bath, in the Presidential suite. Designed by Armand Sibien, construction began in 1906 and the hotel opened in December 1908. The hotel was purchased by Henry Devenish Harben for use as a military hospital at the outbreak of World War I in 1914, and served in this capacity for 5 months. It was damaged during its hospital service, and was not renovated and re-opened until 1916. In 1922, it was the site of a famous dinner hosted by Violet and Sydney Schiff and attended by Marcel Proust, Igor Stravinsky and Pablo Picasso (the « dinner party of the Century ») . The first unofficial Chess Olympiad was held at the hotel in 1924. George Gershwin wrote « An American in Paris » while staying at the hotel in 1928.

The hotel was purchased by the French government in 1936 to serve as offices for the Ministry of Defence. It served as the headquarters of the German military high-command in France (« Militärbefehlshaber Frankreich ») , from October 1940 to July 1944, during the occupation of Paris in World War II. During the Nazi Occupation of Paris, staff army officials at the « Majestic » fought fierce battles with the « Gestapo » and the SS over policy, especially with regard to the deportation of Jews to concentration camps, reprisals against French partisans and protection of works of Art in French museums. The « Majestic » became known as a centre of opposition to certain aspects of Adolf Hitler's policies, especially when Carl Heinrich von Stülpnagel took charge of administering the « Militärbefehlshaber Frankreich » .

On May 22, 1942, after the Wannsee conference, an exclusive presentation was made to the higher echelons of the German army at the « Hôtel Majestic » by Reinhard Heydrich, one of the main architects of the Holocaust. He spoke of experiments for the killing of Jews using a specially prepared truck whose exhaust fumes would kill the deportees.

...

**1910** : Mahler is suffering from laryngitis, nervous disintegration and has a strained arm.

**July 1910** : Mahler is suffering of cramp and acute pain in a shoulder blade. Victim of an attack of angina (« Angina pectoris ») in Toblach. Troubled appendectomy. Alma Mahler is also infected.

**Monday, 22 August 1910** : Mahler is victim of a severe attack of angina in Toblach.

**Sunday, 4 September 1910** : Mahler is victim of a severe attack of angina in Munich.

**December 1910** : Mahler is suffering from laryngitis in New York.

**1911** : Mahler is suffering of laryngitis and endocarditis.

**January 1911** : Mahler is annoyed by frequent sore throats in New York.

**February 1911** : Mahler is victim of a attack of pharyngitis (strep throat) in New York.

**Monday, 20 February 1911** : « Savoy » Plaza Hotel, New York. Mahler catches a cold. He wakes-up in the morning with a sore throat and fever (37.8°C) . He is examined by Doctor Joseph Fränkel. Mahler has to stay in bed. The next few days are better, but the fever stayed.

### Doctor Joseph Fränkel

The Austrian-American physician, endocrinologist and a neurologist Doctor Joseph Fränkel was born on 4 July 1867 in Russia and died on 24 April 1920 at his home (Number 101 East 94th Street, New York) . The obituary was written by Doctor Charles L. Dana.

An accounting of the estate of Joseph Fränkel was filed in the Surrogate's Court by Herman B. Baruch, the executor. Doctor Fränkel at the time of his death was the husband of Ganna Walska, now the wife of Harold F. McCormick of Chicago, whose first wife was the daughter of John D. Rockefeller.

Fränkel studied medicine at the University of Vienna, graduating in 1889. Not accepting the rejection of Judaism, he could not practice in Austria, and emigrated to the United States. In 1892 or 1893, he practised in New York. He was an assistant to Doctor Charles L. Dana at the Post-Graduate Hospital and Medical School located at Number 303 East 20th Street. He taught neurology at Cornell University Medical College. He consulted Montefiore hospital patients and, until October 1913, the ones at Bellevue.

Joseph Fränkel was a member of the Academy of Medicine and the New York Neurological Society (chairman in 1905, 1906) . In 1909, together with Joseph Collins, he founded of the Neurological Institute of New York. In 1916, he married Ganna Walska, an Opera singer.

From December 1907 to March 1908, Fränkel met Gustav and Alma Mahler in New York. The friendship consolidated during the second stay in New York, which lasted from November 1908 to April 1909.

...

**Tuesday, 21 February 1911 (8:15 pm)** : 13th regular subscription-concert of the New York Philharmonic Orchestra at Carnegie Hall. Mahler presents an all Italian music program. This will be his final concert. With his health rapidly failing, he will be forced to cancel the remaining 10 concerts in the season.

Program :

Works by Leone Sinigaglia, Felix Mendelssohn-Bartholdy (« Italian » Symphony) , Giuseppe Martucci, Ferruccio Busoni (world-premiere of the « Berceuse élégiaque ») , Marco Enrico Bossi.

Soloist : Ernesto Consolo, piano.

The « New York Times » reports that Busoni attended the concert, sharing a box with conductor Arturo Toscanini. This is confirmed by a letter from Busoni to his wife.

Mahler was suffering from high-fever (40°C / 104°F) due to recurring throat ailment. His friend, Doctor Josef Fränkel, had advised against his appearance. However, the ever conscientious Mahler, who had cancelled performances due to sickness only a few times over his long conducting career, disregarded his doctor's advice and conducted what sadly proved to be his last concert of the season. (He will be forced to abandon the last 10 remaining ones.)

**Wednesday, 22 February 1911** : « Savoy » Plaza Hotel, New York. In the morning, Mahler suffering from a hectic fever cancelled the repeat performances scheduled for February 24th, which only emphasizes the gravity of his illness. First visit of Doctor Emanuel Libman of Mount-Sinai Hospital in New York to Mahler at the request of Doctor Joseph Fränkel.

Libman too found that, in addition to endocarditis, there was also an older, chronic mitral-valve defect with a presystolic-systolic heart murmur. But it must be stressed that this heart defect was not the cause of Mahler's death, even if it was a decisive factor in rendering his heart non-resistant to bacterial infection. We can no longer say whether a healthy heart would have succumbed to such a bacterial attack at a time when there was no known remedy, and yet, it is correct to say that, medically speaking, such a valve defect is classified as a « locus minoris resistentiæ » - a point at which bacterial pathogenics such as the streptococcus that causes endocarditis can settle more readily than in healthy parts of the heart, not least because the inflammation leads to an enlargement of the surfaces that can serve as a colonization area.

Theodore Spiering stepped-in as Mahler's substitute at the first cancelled concert, and continued to replace Mahler during the season's remaining 5 weeks. However, Spiering's name never appeared in the printed programs, which all announce Mahler as conductor, even the improvised extra-concerts (that were not part of the New York Philharmonic season) were scheduled as subscription-concerts. This can only mean that Mahler constantly hoped that he would soon recover his health and resume work with the New York Philharmonic. It is not known whether or not Mahler took an active part in programming the concerts during his illness. The Viennese newspapers did not take any notice of Mahler's illness before March 24th, when the « Neue Freie Presse » announced that Anna Sofie Moll-Schindler-Bergen, Mahler's mother-in-law, had left Vienna for New York in order to support her daughter in looking after Mahler.

### Doctor Emanuel Libman

The American internist Doctor Emanuel Libman was born in 1872 in New York and died in 1946.

He was the son of Fajbal Libman, a prosperous picture-framer who had emigrated from Prussian-Poland in 1865. He studied at the College of Physicians and Surgeons at Columbia University, where he received his doctorate in 1894. He interned at Mount-Sinai Hospital from 1894 to 1896, and then, went abroad for further education in Vienna, Berlin,

Graz, Munich and Prague, making valuable contacts with leaders of European medicine. In Vienna, he worked with the paediatrician Theodor Escherich (1857-1911), of e-coli fame.

Libman was a generalist in an era before specialization. He was legendary for his brusque, dazzlingly fast and unorthodox diagnostic methods. Some attributed his talent to a diagnostic sixth sense. Sceptics said that he was superficial, or merely a good-guesser. A better observer than a listener, he claimed to be able to smell certain diseases, keenly sought the smallest details, and developed a unique method of applying pressure over patient's mastoids to ascertain their pain threshold.

Examination by the famous diagnostician could be harrowing as is illustrated by the following account written in 1939 by the short-story writer and playwright Samuel Nathaniel Behrman (1893-1973) in « The Yorker Magazine » :

« A patient visiting Doctor Libman for the first time is likely to find his method of examination bewildering and incoherent. To go through such an examination is quite worth the price of admission. After he has given you the Libman test, he will jump from one part of the body to another, tapping hard in one place, lightly elsewhere, pulling down eyelids, pressing under ears, running his thumbnail across the chest. His eyes shift everywhere, his movements are jerky, his speech rapid, his questions staccato and continuous, with no time out for answers. It is only when he reaches auscultation that his tempo becomes slightly legato. Then, as like as not, the telephone rings. Someone wants Libman's advice about a student who has been sent to Europe with money from the Emanuel Libman Fellowship Fund, set-up some years ago in his honour by patients and former pupils. " I cannot ", you hear Libman say, " take the responsibility of sending that young man to Istanbul. However, I've been thinking about him. I have a feeling he should go to Vienna. " He returns to his thumb-nailed torso, acquiescent on the sofa, taps and pokes, asks a few more questions without waiting for the answers. The telephone rings again. This time, Doctor Libman only listens. He returns, picks-up a derby, and claps it on his silver-grey head. " Sorry. Have to go to Brooklyn. Very interesting case - suppuration behind the ear. " And he is gone. You get-up to put your shirt on, disturbed by the suspicion that without suppuration behind the ear you are an egregious bore. »

Doctor Libman had many famous patients including Fanny Brice, Sara Bernhardt, Thomas Mann and Albert Einstein.

Einstein sent him an autographed photograph with the inscription :

« To the noble-minded Doctor Libman with the secret-divining eyes. »

Just before Franklin D. Roosevelt's 4th term election in 1944, he remarked to a friend :

« It doesn't matter whether Roosevelt is re-elected or not. He'll die of a cerebral hemorrhage within 6 months. »

When he turned-out to be prophetic, Doctor Libman was asked how he knew ?

He replied :

« I only saw him in the newsreels. But, I've seen that special wasting look many times. He couldn't last 6 months. »

Libman led an eccentric and solitary life. He often worked 20 hours a day, was devoted to his students, and was a stimulating teacher in an era when a flair for the dramatic or flamboyant in teaching style was in vogue. On rounds, he created an atmosphere of excitement and very often of intimidation.

From 1909, he taught clinical medicine at Columbia University.

At Mount-Sinai Hospital, Libman combined his great talents of clinical observation with his pathology skills and made many basic contributions to sub-acute endocarditis, blood culture and blood stream infections. Emanuel Libman almost single-handedly founded the cardiology department at Mount-Sinai. He also was responsible for many important initiatives in medical education throughout the world including at the Hebrew University in Jerusalem.

In 1929, Emanuel Libman donated \$ 10,000 for the funding of a lectureship in the History of Medicine at The Johns Hopkins University School of Medicine. He requested that the lectureship be named in honour of Hideyo Noguchi (1876-1928) . In 1957, he gave to the School of Medicine a sum of \$ 10,000 for the establishment of a lectureship in honour of Doctor Paul Ehrlich.

On the occasion of Libman's 60th birthday, 147 of his former pupils, friends and colleagues, the « élite » of the research world, dedicated a 3 volume anniversary book to him in which each described their own contribution to medical science.

Perhaps, the finest tribute came from his friend, the 1912 Nobel Prize winning scientist Alexis Carrel (1873-1944) who remarked :

« Libman is medicine itself. »

His pupils included Leo Buerger (1879-1943) , Alfred Einstein Cohn (born 1879-1957) , Albert Arthur Epstein (1880-1965) and others.

...

Doctor Emanuel Libman was chief of medical service at New York's Mount-Sinai Hospital, and associate-director of laboratories. Doctor Libman's life paralleled the scientific development of bacteriology, a field to which he contributed significantly. In the days before the compartmentalization of medicine into science and practice, Doctor Libman combined both brilliantly.

Emanuel Libman was something of a maverick and, even in the home he owned and shared with his sister's family at 180 East 64th Street, he was quite private. He took his meals separately, served by his « chauffeur » , and lived chiefly in his well-appointed office on the ground-floor or in his bedroom on the third. He would sometimes meet

there with visiting scientists or occasional guests - but never women. A nephew, Doctor George Engel, speculated that Libman was homosexual in an age when disclosure would have been perilous to his standing. The rare times he entertained, he took guests out to dinner at a favourite restaurant, often the old Lindys ; he was said to be quite a gourmet.

There was also a small laboratory in Libman's home, where he carried-out some of his research. Mount-Sinai was then only 3 blocks away, at 67th and Lexington, and he might be found working there at any hour. Although not as popular as Doctor Joseph Brettauer with the house staff, Libman was highly-respected and held in awe on 3 accounts. First were his scientific accomplishments, despite the fact that Mount-Sinai, then a small and not very famous Jewish hospital, was not yet a teaching and research institution. Second was his astonishing success as a doctor. His patients included both the rich and the famous : Sarah Bernhardt, Queen Maria of Romania, the popular Fanny Brice. Third was Libman's power in the medical community. It was said that if one could become associated with Libman and get in his favour, then one's career (provided one had the capability) would be assured.

...

Doctor Emanuel Libman, already a famous Doctor when he consulted on the Mahler case, became a legendary figure on the New York scene. Although he readily responded to difficult diagnostic problems throughout the city, one had to know someone to see him in his office and his fees set the high-water mark in the community. However, because of his teaching and philanthropic work, he was said to have earned about a quarter of what he might have. Noted for his generativity, he mentored numerous young physicians and paved the way for their further studies in Europe through his reputation and many friendships, often offering financial support. Gifts from grateful patients funded this as well as Libman's numerous philanthropic causes. He was benefactor to such widespread institutions as the Royal College of Physicians in London, the Hebrew University in Palestine, the Tuskegee Institute in Alabama - and, of course, the Mount-Sinai Hospital, his clinical base of operations. Mount-Sinai did not have a medical school at that time and his academic appointment was at the Columbia-Presbyterian School of Medicine.

In 1939, the 67 year old Libman was profiled in the « New Yorker » by S.N. Behrman, who depicted a mercurial and alert man with interests beyond medicine, in music, food, and people. A prodigious letter writer, Libman corresponded with Sarah Bernhardt, Fanny Brice, Albert Einstein, and Thomas Mann, among others. At the time of his death at 74, Doctor Libman was still active as practitioner and teacher.

...

**Thursday, 23 February 1911** : « Savoy » Plaza Hotel, New York. Mahler drinks Metschnikoff Bulgarian milk (yoghurt) .

**Friday, 24 February 1911** : « Savoy » Plaza Hotel, New York. Mahler falls ill with slow endocarditis, initially diagnosed as influenza.

The most probable diagnosis is rheumatic heart-disease with superimposed subacute bacterial endocarditis. Mahler's

mother and, perhaps, siblings had « heart-disease », not further defined. Rheumatic heart-disease notoriously runs in families. Mahler is said by at least 2 biographers to have had « St. Vitus' Dance » in childhood. He had had many bouts of pharyngitis throughout life, some with visible exudate. There were 2 bouts of sudden weakness and « heart-consciousness » that might have been arrhythmia - the dates are uncertain.

A heart murmur, said to denote a « compensated, slight valvular defect » was discovered when he was 47. The fact that it was virtually asymptomatic before that is entirely consistent with rheumatic valvular disease. The character of the murmur we only know from Alma's description ; the alleged « angina » could have been associated with aortic stenosis or with the pulmonary hypertension of mitral stenosis.

**Saturday, 25 February 1911** : « Savoy » Plaza Hotel, New York. Doctor Joseph Fränkel suspected the onset of endocarditis, a heart-disease incurable at the time (streptococcal bacteremia ; intermittent fevers) . He called-in the world-authority from the nearby Mount-Sinai Hospital, Doctor Emanuel Libman, a man of monolithic certainties.

Doctor Libman and Doctor George Baehr met with Mahler for a blood culture.

Fränkel saw from the test results that Mahler was doomed to die. The survival rate in these pre-antibiotic days was almost zero. The patient demanded to be told the truth, then asked to be taken home, to Vienna. Libman suggested he stop-off in Paris to see the Pasteurian bacteriologist, André Chantemesse, who might stall the infection and buy him some extra-time. While the consultation took place, Doctor Fränkel was « making moves » on Alma.

Fränkel was aware of Libman's research into what was then called subacute infective endocarditis, a disease of the lining of the heart and, in particular, the heart valves. Libman had almost single-handedly developed the technique of blood cultures, now a regular feature of medical diagnosis. In this test, blood from the patient is layered on a nutrient gel in petri dishes and incubated. If bacteria are present, the naked eye may detect clumps, but more diagnostic, the microscope will reveal the specific type of bacteria. Doctor Libman first reported his findings in 1906. The year before, he consulted on Mahler ; in 1910, he had refined the technique thoroughly and written extensively on its applications. This was up-to-date medicine and Fränkel wished to leave no stone un-turned. He knew that despite more accurate diagnosis than had ever been possible before, there was as yet no definitive cure for infective endocarditis. Should the microscope confirm the diagnostic impression, Libman would know if palliative treatment existed anywhere. He was a force and a resource in the city and in constant touch with clinicians and investigators throughout the world. Alternatively, if the test was not positive, then perhaps, he could come-up with an alternative diagnosis. Known for his diagnostic acumen, Doctor Libman had the legendary knack for the « Augenblick Diagnose », diagnosis made by simply observing ; frequently, he did so as the patient approached, before even being seated in the consulting-room. Libman was on call for diagnosis in at least 20 hospitals in the metropolitan area.

There was perhaps another reason in the back of Doctor Fränkel's mind for consulting with Libman about Mahler. Doctor Libman had a truly fabulous reputation for his knowledge of outcome in disease, a reputation he enjoyed indulging, particularly the theatrical effect of his expertise. Famously, in 1923, the 51 year old Libman had attended a dinner party at the White House during Warren G. Harding's tenure.

The following day, tongue-in-cheek, he telephoned one of the other guests in Washington, asking :

« Who was that fellow yesterday who is vice-president ? »

« Why, Calvin Coolidge, of course. » came the answer.

It was extremely unusual for Doctor Libman to countenance telling a patient of a fatal diagnosis. It was his rule never to do so, in order not to remove a degree of hope. Revealing a fatal diagnosis also made life more difficult for the clinician. Libman either made an exception for Mahler (as had Freud in consulting with him) or was moved by Mahler's insistence. Libman allowed that a very small percentage of patients improved spontaneously, although this outcome was extremely rare at such an advanced stage.

...

The evidence for endocarditis is presented in non-technical terms in Alma Mahler's biography. The authors are able to give an accurate technical recital of this evidence based on the very detailed recollections of Doctor George Baehr, formerly Chief of Medicine at Mount-Sinai Hospital, who was in 1911 Fellow in Pathology and Bacteriology in Emanuel Libman's laboratory.

Doctor Baehr's vivid account, extracted from his personal communication to us, follows :

« Sometime in February 1911, Doctor Emanuel Libman was called in consultation by Mahler's personal physician, Doctor Joseph Fränkel, to see the famous composer and director. Apparently, Doctor Fränkel had suspected that Mahler's prolonged fever and physical debility might be due to sub-acute bacterial endocarditis and, therefore, called Emanuel Libman, Chief of the first Medical Service and Associate-Director of Laboratories at the Mount-Sinai Hospital, in consultation.

Libman was, at that time, the outstanding authority on the disease. At the time of the consultation, the Mahlers were occupying a suite of rooms at the old " Savoy " Plaza Hotel (or it may have been the " Plaza ") at 5th Avenue and 59th Street, over-looking Central Park. Libman confirmed the diagnosis clinically by finding a loud systolic-presystolic murmur over the " precordium " characteristic of chronic rheumatic mitral disease, a history of prolonged low-grade fever, a palpable spleen, characteristic " petechiæ " on the " conjunctivæ " and skin and slight clubbing of fingers. To confirm the diagnosis bacteriologically, Libman telephoned me to join him at the hotel and bring the paraphernalia and culture media required for a blood culture.

On arrival, I withdrew 20 c. cm. of blood from an arm-vein with syringe and needle, squirted part of it into several bouillon flasks and mixed the remainder with melted agar media which I then poured into sterile Petri dishes. After 4 or 5 days of incubation in the hospital laboratory, the Petri dishes revealed numerous bacterial colonies and all the bouillon flasks were found to show a pure culture of the same organism which was subsequently identified as " streptococcus viridans ".

As this was long before the days of antibiotics, the bacterial findings sealed Mahler's doom. (...) The diagnosis and prognosis were re-confirmed (in Paris) . »

When psychoanalyst and medical educator Doctor George Engel reviewed the life's work of his uncle, Emanuel Libman, he noted something extraordinary : case histories prior to 1899 often began with references to life settings associated with illness and were presumably believed to be connected with its development. Such observations, usually psychological in nature, yielded to the fascination with new scientific methods around the turn of the Century. By the same token, in the absence of medical technology, clinicians depended on the observational data from all 5 senses in determining diagnosis. Above all, they were willing to use their ears to listen not only to the heart sounds but to the story of the patient's illness. Many years later, Libman's assistant, George Baehr, now distinguished professor « emeritus » , recalled vividly his visit to Mahler's bedside. In reciting the case history, true to his traditional medical heritage, he began with the relevant antecedent life events and psychological state of his patient.

« As I understood the history from Doctor Libman, Mahler had lost a daughter from scarlet fever, 3 streptococcus infection of the more acute type. As I understood the history of the case I got from Libman, he became very depressed and rightly or wrongly, that made me believe that his depressive states were due to the memory of this daughter. I also learned that he had been told by his doctor long ago he'd had a heart lesion and that he must not tax it and get rest. So that I didn't know to what degree his depressive states were involved. »

Paradoxically, despite his pursuit of privacy, Libman was well-known as a « raconteur » . He was a great music-lover, mainly Symphonic music, and had his record collection (78 rpm at the time, of course) in his bedroom, as well as the most up-to-date recording equipment. He himself played the piano but would do so only in the living-room, when no one else was occupying it. However, it is doubtful whether he was a devoted concert-goer, hence, any knowledge he may have had about Gustav Mahler probably came from conversation or gossip, and the newspapers.

### Doctor George Baehr

The physician Doctor George Baehr was born on April 1887 in New York and died in 1978 in New York.

Baehr graduated from Columbia University's College of Physicians and Surgeons at the age of 21. He began a rotating internship at The Mount-Sinai Hospital in 1908, studied pathology and experimental pharmacology in Europe, and then, returned to Mount-Sinai. He maintained an affiliation with the Hospital until his death. In his early years, he had an appointment as Associate Pathologist in charge of General Pathology, as well as clinician on the ward staff. He eventually headed the First Medical Service of the Hospital, all while maintaining a busy private practice.

Doctor Baehr made significant research contributions in the areas of collagen disease, hematology, and the adrenal complications of heart-disease. He also was a pioneer in public health, organizing the first group health plan in New York, and, in 1947, he established the Health Insurance Plan (HIP) of New York at the request of his friend and patient, Mayor Fiorello LaGuardia. Baehr served on many government boards and committees at the local, State, and Federal levels, including the New York City Board of Hospitals for 25 years and the State Public Health Council for

more than 35 years. In 1945, the Surgeon General appointed him to the first Health Insurance Plan Scientific Advisory Board.

Baehr served in both World Wars. In World War I, at the age of 30, he was the Commander of Base Hospital Number 3, the Mount-Sinai based hospital unit that was established in France. During their few months of active service abroad, the unit admitted over 9,000 patients, including over 1,000 a day at times. During World War II, Baehr was Chief Medical Officer of the U.S. Office of Civil Defense.

Baehr retired from active service at Mount-Sinai in 1951. After this, he was on Consultant status, and remained actively involved with the Hospital, helping Mount-Sinai to establish a medical school in the 1960's and 1970's. George Baehr received many honours and awards during his lifetime. He died aged 91.

...

Chief of Medicine at Mount-Sinai Hospital and Fellow in Pathology and Bacteriology in Doctor Emanuel Libman's laboratory, New York.

In his 70 year career as a medical educator, clinician, and group health pre-payment plan founder and administrator, bridged the fields of medical care and clinical medicine.

Baehr completed the required 1 year of under-graduate work at Columbia College in 1904 and entered the Columbia College of Physicians and Surgeons, where he received his doctorate in medicine in 1908. After completing an internship and residency in surgery at Mount-Sinai Hospital, he studied pathology, physiology, and bio-chemistry at the Universities of Freiburg and Vienna from 1911 to 1913.

Baehr returned to Mount-Sinai in 1913, where he held a succession of appointments and served as attending physician, director of medicine, and director of clinical research from 1927 to 1950. While at Mount-Sinai, his research contributions covered a wide area and included work in collagen diseases, renal complications of heart-disease, and hematology. He was also a pioneer in the field of continuing medical education.

Baehr became involved in public health during World War I, as a member of the American Red Cross Typhus Fever Commission to the Balkans and the Ukraine in 1915-1916. After America's entry in the War, he served as commander of an army base hospital in France from 1918 to 1919.

In 1931, Baehr established an early experiment in pre-paid medical care at Mount-Sinai, establishing the Consultation Service for People of Moderate Means which provided medical services for a flat fee. Following the election of his long-time friend, Fiorello LaGuardia, as reform mayor of New York in 1933, Baehr acted as mayoral advisor on health and social planning and served on a number of boards. In 1939, LaGuardia and Baehr established an innovative health-care program for residents of the Vladeck Houses, the first low-income City-State housing. By opting to add 1 dollar to their monthly rent, residents could receive physician care for their families in their homes.

On LaGuardia's recommendation, Baehr was appointed Chief Medical Officer for National Civilian Defense in 1941, and on his travels throughout the country, Baehr was able to study existing group practice and pre-payment plans. Baehr brought this knowledge, in 1943, to LaGuardia's Mayor's Committee on Medical Care, which had been created to develop a health services program for the city. When the committee was unable to reach a consensus among 3 proposed health delivery systems : compulsory health insurance, pre-paid group practice, or a fee-for-service indemnity plan with limited benefit coverage, LaGuardia opted for the pre-paid group practice which Baehr espoused. Baehr was then appointed chairman of the Sub-Committee on Plan and Scope.

This sub-committee outlined a group practice pre-payment plan which, 4 years later, provided the basis for the Health Insurance Plan of Greater New York, Inc. (HIP) . In 1945, as physicians were released from military service, Baehr and Doctor Dean Clark began recruiting them for medical group practices in the city, and, with support from several foundations, Baehr and others succeeded in establishing in 1947 the Health Insurance Plan of Greater New York, Inc.

Baehr served as president and medical director of the Health Insurance Plan of Greater New York from 1950 to 1957, during which time the plan struggled successfully, against opposition from organized medicine, to expand its program and to become one of the largest and most effective pre-payment group practice plans in the country. Following his retirement in 1957, Baehr continued to serve the Health Insurance Plan of Greater New York as a special medical consultant.

In addition to his professional appointments and service as an advisor to Mayor LaGuardia, Baehr participated in a variety of State and national medical and public health societies, was a member of the New York State Public Health Council from 1933 to 1975 (chairman 1955-1969) , and was recognized nationally as an influential spokesman for reform of health-care delivery systems.

...

**Friday, 3 March 1911** : « Savoy » Plaza Hotel, New York. Mahler was suffering from intermittent fevers but did not give-up hope. He talked of resuming the concert season, and took a keen interest when one of Alma's compositions was sung at a public recital by soprano Frances Alda.

**Monday, 6 March 1911** : The Guarantors' Committee of the New York Philharmonic votes to end negotiations with its present conductor, Gustav Mahler, under conditions he set forth, and to approach Felix von Weingartner to conduct the Orchestra next season.

**Saturday, 11 March 1911** : Alma Mahler writes for the first time (from New York to Walter Gropius) about the serious nature of Mahler's condition the last 3 weeks.

**Sunday, 19 March 1911** : Still not better. High-temperature. It is decided to stay in America.

**Saturday, 25 March 1911** : Alma finally writes the name of the fatal illness.

**Wednesday, 29 March 1911** : In connection with the weak state of Mahler, Alma writes to Walter Gropius that her return to Europe (on the S.S. George Washington) had to be postponed for a second time.

**Thursday, 30 March 1911** : Alma looks forward to meet Walter Gropius again, « I want you ... »

**Thursday, 30 March 1911** : Anna Sofie Moll-Schindler-Bergen (1857-1938) comes from Europe with the S.S. Mauretania to help her daughter Alma with the patient Mahler.

**Saturday, 8 April 1911** : 6 days after the last planned concert, Mahler left New York and sailed for Europe (Eastbound) on the S.S. Amerika. Ferruccio Busoni was also aboard.

**Saturday, 8 to Sunday, 16 April 1911** : During the whole trip, Busoni takes care of Gustav Mahler.

**Monday, 10 April 1911** : Last picture taken of Gustav Mahler.

**Monday, 10 April 1911** : During the crossing, Mahler's condition will gradually go further backwards.

**Sunday, 16 April 1911** (Palm Sunday) : Arrival in Cherbourg, France. While they go from board, Stefan Zweig takes care of the little Anna (« Gucki ») . The Viennese newspaper journalists urge to see something of Mahler. In the evening, the family go by steam-train from Cherbourg to Paris.

**Monday, 17 April 1911** : The Mahlers arrive in Paris at 5:00 and stay at the « Hôtel Élysée » Palace. Gustav seems to recover from the terrible fever that made him so restless during the crossing. But this was a figment of his imagination caused by the disease itself.

**Tuesday, 18 April 1911** : On his first morning at the « Hôtel Élysée » Palace, Mahler is dressed, shaved and ready for a ride by car. In the evening, he is about to collapse again. When Alma brings Anna to bed in the evening, Mahler gives final instructions to Anna Sofie Moll-Schindler-Bergen : He wants to be buried in Vienna next to his daughter Maria at the Grinzing Cemetery. No fuss and just « Mahler » on the tombstone.

« Any who come to look for me will know who I was and the rest do not need to know. »

**Thursday, 20 April 1911** : Examination of Mahler at the « Hôtel Élysée » Palace by Doctor André Chantemesse. Reconfirmation of endocarditis : streptococcal bacteremia, intermittent fevers, pallor (anemia) , weakness, arthritis and uremia. Prescription of a serum treatment.

### Doctor André Chantemesse

The French Pasteurian bacteriologist André Chantemesse was born on 23 October 1851 in Le Puy-en-Velay, in Haute-Loire, France. From 1880 to 1885, he served as « interne des hôpitaux » in Paris, earning his doctorate in 1884 with

a dissertation on adult tuberculous meningitis titled « Étude sur la méningite tuberculeuse de l'adulte les formes anormales en particulier » . In 1885, he traveled to Berlin to study bacteriology at the laboratory of Robert Koch (1843-1910) .

After his return to Paris, he became associated with the work of Louis Pasteur. In 1886, he began extensive research of typhoid fever. In collaboration with Georges-Fernand Widal (1862-1929) , he studied the ætiology of the disease, and, in 1888, developed an experimental anti-typhoid inoculation. Also with Widal, he isolated the bacillus that was the cause of dysentery, however, the 2 scientists were unable to establish the ætiological link to the disease.

From 1897 to 1903, he was a professor of comparative and experimental pathology in Paris, becoming a member of the « Académie de Médecine » in 1901. In 1904, he became a member of the editorial board of the « Annales de l'Institut Pasteur » . His likeness, together with the rest of the Paris Faculty of Medicine, was included in a 1904 painting by Adrien Barrère. The image was intended to be satirical and the assembled professors give the impression of family butchers.

Chantemesse died of Spanish flu, aged 67, on 25 February 1919 in Paris.

...

**Sunday, 16 April 1911** : Gustav and Alma Mahler arrive in Paris (from New York) . They will stay at the « Hôtel Élysée Palace » on « les Champs-Élysées » .

**Friday, 21 April 1911** : Mahler is taken by car to Docteur Jean-Joseph Defaut's sanatorium for a serum treatment by injection. He stays there for 21 days.

The sanatorium is about an hour walk from the « Hôtel Élysée Palace » .

**Thursday evening, 11 May 1911** : The couple leaves Paris for Vienna on the night-train.

**Paris : « Hôtel Élysée Palace »**

The « Hôtel Élysée Palace » was built in 1898 by architect Georges Chedanne (1861-1940) for the « Compagnie des wagons-lits » (sleeping-cars's Company) . It was the first of the great tourist hotels built on « les Champs-Élysées » . Designed in early-1897, it is one of the first manifestations of the « Art Nouveau » movement in Parisian architecture. The request for a construction permit was made on March 8, 1897, in anticipation of the Universal Exhibition of 1900. The « Élysée Palace » was inaugurated on May 10, 1899, in the presence of the world's « élite » . The hotel is furnished by Sir John Blundell Maple who renews the concept of the Grand Hotel where social life is centered around a huge luxurious lobby. Many services are offered to the « clientèle » : photo-studio, theatre agency, luxury shops, art-gallery (paintings) .

It was in a room of the « Élysée Palace » that Mata-Hari was arrested in 1917 after a police search.

### Docteur Jean-Joseph Defaut

Docteur Jean-Joseph Defaut was born on 7 April 1852 in Confolens, France ; and died in 1929. His private sanatorium was located at Number 50 « avenue du Roule » in Neuilly-sur-Seine, on the outskirts of Paris at the time. From the window, one could see the daffodils in the « Bois de Boulogne » .

...

**Monday, 24 April 1911** : New « communiqué » about the first serum injection.

**Tuesday, 25 April 1911** : Alma writes Walter Gropius to ask him to come to Paris. The situation is still very serious. Alma feels guilt. A letter from Hermann Bahr and friends in Vienna with 26 signatures.

**Wednesday, 26 April 1911** : Justine Mahler arrived from Vienna to take care of her brother. Alma is furious. Justine was on the same train as Bruno Walter. Justine was recovering from a painful operation herself. She spent 2 nights beside Mahler's bed.

**Thursday, 27 April 1911** : The situation appeared to improve since the first injection. Doctor André Chantemesse gave a second serum injection. Less powerful.

**Friday, 28 April 1911** : The situation even more improved, both physical and mentally. Third serum injection given. Temperature rose again, but then, it suddenly dropped. Pulse remained normal.

**Saturday, 29 April 1911** : Mahler regained some appetite.

**Sunday, 30 April 1911** : Blood culture taken by Doctor André Chantemesse. Mahler's condition is very serious.

**Friday, 5 May 1911** : Particularly bad day. Deterioration of the situation. Chantemesse was obliged to reduce the doses of vaccine because of the violence of Mahler's reaction.

**Saturday, 6 May 1911** : Particularly bad day.

**Sunday, 7 May 1911** : Particularly bad day. After a relatively quiet night, Mahler came in the morning in a critical condition. Alma wrote Walter Gropius.

**Monday, 8 May 1911** : In the night, Mahler is given a first injection of morphine.

**Tuesday, 9 May 1911** : First attack of suffocation. Symptoms of Angina. Pain in the heart region and complained of

breathlessness. Streptococcal infection was affecting various parts of the body. Alma cabled Carl Moll in Vienna to ask for a first rate bacteriologist in Vienna. Moll contacted Doctor Franz Chvostek junior (who was in Trieste) . Chvostek went to Paris. Mahler was cheered by the news and the prospect of finally being able to talk to a member of the medical profession in his own language.

### Doctor Franz Chvostek junior

The Austrian internist Franz Chvostek junior was born on 3 October 1864 in Vienna. Son of František Chvostek senior (1835-1884) who was an internist at the Vienna Military Academy in the « Josephinum » . Student Chvostek junior became a member of the Olympia Boy's Academy of Vienna in 1882, and was recognized as an « avid confidant to pro-military students » . As a follower of Georg von Schönenerer, he came into conflict with politically opposed fellow-students. His impending relegation from the University could still be prevented. Chvostek received his doctorate in medicine in 1888. He became assistant to Doctor Heinrich von Bamberger (1822-1888) , Doctor Otto Kahler (1849-1893) , Doctor Edmund von Neusser (1852-1912) , and at Doctor Theodor Meynert's Psychiatric Clinic.

Chvostek received his doctorate in internal medicine in 1894. He was accepted as associate-professor (« extraordinarius ») at the University of Vienna in 1909 - becoming full-professor (« ordinarius ») in 1911.

Professor Chvostek was a determined opponent of women's studies in Austria, and he also violently enforced this in his lectures.

In May 1911, Chvostek was frequently mentioned in daily reports because, at the request of Alma Mahler who was already in Paris, he was drawn to the treatment of her famous husband.

That same year (1911) , Chvostek founded and directed the 4th surgical clinic of Vienna. After Edmund von Neusser's death in 1913, he also inherited the 3rd surgical clinic succeeding to Doctor Norbert Ortner (1865-1935) who then moved to the second surgical clinic.

After World War I, Chvostek joined General Erich Ludendorff's movement within the nationalist and anti-Semitic movement. In the 1920's, his 3rd surgical clinic was already called « Hakenkreuzlerklinik » (Swastika's Clinic) , but no membership of Chvostek is known to the NSDAP.

At the beginning of the Winter Semester of 1931, Chvostek was put on sick leave because of his heart condition. Doctor Hermann Kahler (1891-1951) replaced him at the clinic and at the University.

As early as 1931, Chvostek had retired to his Castle in Groppenstein, Obervellach (Carinthia) .

In March 1932, the Vienna Medical Association criticized Chvostek's political views, which gave rise to sharp commentaries in the papers.

In May 1933, the Ministry of Finance stopped to subsidize Chvostek and, consequently, the 3rd surgical clinic was dissolved.

During the Nazi era, Chvostek was nominated in 1943 for the G ethe Medal for Art and Science, referring to his « always national » attitude.

He died on 17 April 1944 in his Castle in Groppenstein, a few months before being awarded that same G ethe Medal on his 80th birthday.

Doctor Franz Chvostek was an excellent observer. At the same time, he was opposed to over-using laboratory methods. He was generally against the mechanization of medicine.

His most valuable contributions consist in the close links between neurology and internal medicine. He founded modern biology of heredity and the study of genetically inheritable diseases. « Chvostek an emia » (Chvostek's symptom, a type of an emia that accompanies a dysfunction of the pancreas) was named after him.

In 1955, Donaustadt's « Feldgasse » (22nd District) was renamed « Chvostekgasse » in his honour.

In 1974, the Olympia Boy's Academy of Vienna tried to erect a bust in honour of their eminent member, Doctor Chvostek, in the « Arkadenhof » of the University of Vienna. The request was rejected by the Senate of the University considering his lack of importance in the field of medicine.

...

1974 versuchte die Burschenschaft Olympia f ur Chvostek eine B uste im Arkadenhof der Universit t Wien zu errichten. Die Ablehnung des Antrags wurde vom Senat der Universit t mit der mangelnden Bedeutung Chvosteks in seinem Fachgebiet begr ndet.

...

**Wednesday, 10 May 1911** : Second attack of suffocation. Mahler is given oxygen. Doctor Chvostek is leaving Vienna for Paris.

**Thursday, 11 May 1911** : Arrival of Doctor Chvostek at the expected time. Carl Moll is present. Mahler asked Moll for poison because he could not longer tolerate the headaches. Once Mahler saw Chvostek, he was over-taken by the strong desire to be in his homeland. Chvostek greeted Mahler extremely amicable, but told Alma, later in the evening, that there was no hope. Chvostek gave his approval for the trip on the condition that the trip would be undertaken immediately. In the evening, Mahler was taken to the « Gare de l'Est » (East station) to travel by night train to Vienna. With him are Alma, Moll and Chvostek. Newspapers report that Mahler lies on a stretcher. Journalists arrived, according to Alma, on every station in Germany and Austria to the doors of the Orient Express (Paris - Stra burg -

Munich - Vienna) for the latest news. In Salzburg, his situation was reported as « unchanged » . Anna Sofie Moll-Schindler-Bergen and Anna Mahler (« Gucki ») (and Maud Turner ?) left the next day for Vienna (on 12 May 1911) . Doctor Chvostek informed Alma in the train there was no hope.

**Friday, 12 May 1911** : Arrival in Munich at 10:45. Arrival in Salzburg at 13:00. Arrival at the « Westbahnhof » in Vienna at 17:55. The journey went relatively well. The police put-up screens so Mahler can be laid straight and unseen in an ambulance right to the Lœw Sanatorium at « Mariannengasse » Number 20. At the platform, Bruno Walter, Albert Spiegler, Justine Mahler, Arnold Rosé and a few other members of the family. Carl Moll went quickly of the train to shield Mahler from the public gaze. The train corridor was too small and Mahler had to sit on the linked hands of 2 male nurses. With an ambulance to a side-entrance of the Lœw Sanatorium. Arrival at 18:45. Doctor Armin Czinner is present. Doctor Franz Chvostek gave morphine and left the clinic for the night. The room is situated on the ground-floor, over-looking a large garden. Mahler's room, Alma's room and the corridors are filled with flowers. There are also flowers from the Vienna Philharmonic.

### Doctor Armin Czinner

The chief-physician at the Lœw Sanatorium Armin Czinner was born on 12 January 1853 in Sátoraljaújhely (Ujhely) , Hungary ; and died on 1918, aged 65. He was buried at the Old Jewish Cemetery which is part of the « Wiener Zentralfriedhof » (Grave : Section 6 ; Row 4 ; Number 43) .

In 21 April 1884, Czinner married Laura Unger (born on 22 March 1864) in Vienna. They had 3 children : Irene Sophia (1885) ; Anton (1887) ; Marie Jos Nanette (1892) .

...

**Saturday, 13 May 1911** : Mahler felt better in a far more comfortable clinic (Lœw Sanatorium) than the one in France (Docteur Jean-Joseph Defaut's sanatorium at Neuilly-sur-Seine) . Journalists call every 2 hours to the sanatorium for more information. Alma reads a letter from Richard Strauß to Gustav (Strauß promising to conduct the 3rd Symphony in Berlin) . According to Alma, this letter gave Mahler one of his last moments of happiness. The infection is now in the lungs and a knee is swollen. During the afternoon, he felt a little better. At 18:50, Anna (« Gucki ») and Anna Sofie Moll-Schindler-Bergen arrived.

« Be my good girl, my child. » , Mahler tells his « Gucki » while he strokes her head.

Powerful doses of digitalis and caffeine were given to stimulate the heart. Mahler spoke little, but listened carefully. Each evening a few spoonfuls of caviar.

**Sunday, 14 May 1911** : New infection found. Pneumonia. In the afternoon, Mahler is in his bed on the veranda, surrounded by the baskets of flowers.

**Monday, 15 May 1911** : Last sketch book (today ?) . Dozing of for much of the time. Increasing morphine. Bad night.

**Tuesday, 16 May 1911** : Arnold Berliner arrived from Berlin. Only a short reaction. Alma heard Mahler say « My Almschi » a hundred times in a tone of voice that she had never heard before.

When « Gucki » came to his bedside, he put his arm around her :

« Be good, my child. »

During the hours of day-light, Mahler was moved to the second room where the sun shone-in and illuminated the baskets of flowers. His heart-rate was causing extreme concern. There, survives a heart-rending document from the final stage of Mahler's illness. It was probably the last thing he ever wrote and appears on the back of a note in Alma's hand, itself a sheet of paper folded into 4. This note was part of Alma's private collection, but its present whereabouts are unknown. Fortunately, a photograph survived.

At the top of the paper, Alma has written :

« Puls sehr gut. » (Pulse very good.)

To which Mahler has added a reply, in a shaking but still characteristic hand :

« Mir was nur kalt. » (I was just cold.)

« Riesig ! » (Tremendously !)

« Immer Mehr ! » (More and more !)

Beneath this brief dialogue is a drawing traced in a somewhat uncertain hand : From a small circle (a head ?) , a line emerges and passes through another circle identified as « Herz » (heart) . The line then spirals upon itself. Adjacent, the words « die lieben Thierchen » (the dear little beasts - which was Mahler's nickname for the microbes that were slowly killing him) are written under « Herz » . From the centre of the spiral, the line seems to emerge, once again, in a series of directional arrows that follow the line all the way to the bottom of the page, where a small recipient is represented by means of a simple rectangle. Written diagonally beside it, in Alma's firm hand, is the question :

« Was bedeutet diese Sphynx-schnecke ? » (What is the meaning of this sphinx-snail ?)

Mahler's reply, beneath it, is :

« Der Nachttopf. » (The chamber pot.)

« Did he know ? Or not ? » , Alma wondered.

The little animals might also refer to the ants which he kept near his bed. Mahler had been fond of watching their behaviour as a way of passing the time.

**Wednesday, 17 May 1911** : Mahler was calm in the morning. No interest in his surroundings. Temperature : 38°C ; pulse : 130-140. Injection oxygen under the skin to help him breathe. Thunder-storms in the afternoon. Pulse lower in the evening. Coma. One newspaper, the « Wiener Bilder » , published a sketch of Mahler on his death-bed.

Writer Hermann Bahr and composer Alban Berg were keeping watch outside the sanatorium, but there was little news from inside. May 18th would prove to be a long vigil ...

### Death of Mahler

**Thursday, 18 May 1911** : Physician and writer Arthur Schnitzler walks through the garden of the Lœw Sanatorium during lunch-time and meets writer Hermann Bahr who kept an eye on what happened on the street. Alban Berg continues pacing the corridor. Mahler holds a trembling finger over the blanket as if he is conducting.

Alma hears him say :

« Mozartl » (little Mozart)

Carl Moll, Anna Sofie Moll-Schindler-Bergen and Bruno Walter are with him (Room 82) during his last hours.

Alma collapse and is sent to another room (Room 83) :

« I was not allowed into the death chamber. Moll was with him to the last. »

Early in the evening, in the final stage, he is staring and could only with difficulty be persuaded to take a spoonful of milk or tea. His mind was troubled, and he did not answer questions. He only reacted to loud noises. He could not move independently. At 16:00, pulse : 140. By 18:00, pulse could not be counted anymore. Lœw's resident physicist Doctor Michalik (Mihalic, Mihalik, Mihalicks, Michailitsch) administered a further injection of caffeine and morphine, to no avail. In the course of the evening, Mahler gradually became completely unconscious from 18:30. The breathing became erratic. The lungs did not work, in spite of the extra oxygen. He had no longer the strength to swallow to clear his wind-pipe. His pulse was very high. Attempts to give him still some liquid food, came to nothing because he kept his jaws firmly together. Medical practice was limited to injections of caffeine and the oxygen supply. Later, he was given injections of ether and camphor for the affected and cripple lungs. As last attempt, a camphor injection was given at 19:30 and continued oxygen. Despite his unconsciousness, it was still possible to give him a spoonful of soup and some caviar.

At 20:00, Doctor Franz Chvostek came to the bedside. He said there was no hope to keep alive the sick man :

« He is very ill. All symptoms of cripple lungs are there (edema (swelling and fluid retention)) . The patient is completely unconscious. His pulse is 160. His temperature is too high to measure, and the breathing is very quickly. The disease is in the final stages. »

It is a day of storm and rain. Richard Strauß's « Elektra » is played in the Opera, the Orchestra is led by concertmaster Arnold Rosé (brother-in-law of Gustav Mahler) while it thunders. When it is dark, it became a thunder-storm. Rosé runs to the Lœw Sanatorium, drenched in the rain. He is just in time.

Beside Mahler are : his wife Alma, his sister Justine, Arnold Rosé, Carl Moll and Anna Sofie Moll-Schindler-Bergen, Bruno Walter accompanied by his wife.

Also present : Doctor Franz Chvostek junior and Doctor Michalik.

Mahler died at 23:07, aged only 50. Heart-stitch was performed. This was common in 1911 as a result of the fear of being buried alive.

Alma was taken to the house of Carl Moll (« Hohe Warte ») located at Number 10 on « Wollergasse » , in the 2nd District. Only Moll stayed at the sanatorium.

...

Article in the « Wiener Morgenblatt » :

« The night had passed quietly. Mahler was given warm milk and a low dose to aid his sleep. In the morning, he drank coffee and his temperature slowly began to drop. But the end was near and Mahler's lack of response to questions and to the drugs was indication of the advanced stages of kidney, lung and heart failure. Mahler lay with dazed eyes ; one finger was conducting on the quilt.

There was a smile on his lips and twice he said :

“ Mozart ! ”

His eyes were very big. I begged Chvostek to give him a large dose of morphia so that he might feel nothing more. He replied in a loud voice.

I seized his hand :

“ Talk softly, he might hear you. ”

“ He hears nothing now. ” »

Alma's recollections have her customary theatricality, but Bruno Walter was equally dramatic in his description of the « horrible struggle with death » during the composer's final hours.

**Friday, 19 May 1911** : Carl Moll is back at the Lœw Sanatorium at 22:00 to make a death-mask. No autopsy is practised on Mahler. Later, the body, dressed in black, is placed in a heavy glass and metal box in the presence of Moll, Bruno Walter and Wilhelm Legler. 4 men take the coffin on their shoulders and walk through the dark corridor of the clinic, while a 5th lit the corridor with a candle. The hearse was waiting at the side-entrance of the clinic to take the coffin to the small chapel of the Grinzing Cemetery (located in the suburbs of Vienna) where it was placed on a stage flanked by candles.

Alma tells her daughter Anna (« Gucki ») , aged 6, that her father had died. Her sister Maria-Anna (« Putzi ») died 4 year before.

**Saturday, 20 May 1911** : The newspapers in Europe and America are full of the news that Mahler is deceased. In Vienna, the « Neue Freie Presse » publishes Mahler's last wishes and will (put on 27 April 1904) . Alma is, therein, designated as sole legatee and Carl Moll as legal guardian of the children.

### Mahler's funeral

**Monday, 22 May 1911** : At 17:00, the coffin is taken from the Grinzing chapel by 6 bearers of the undertaker to the hearse outside the gates of Grinzing Cemetery, which is pulled by 4 horses. There are many wreaths on the cemetery. On the chest are 2 wreaths : from Alma Mahler and from the family. A priest leads the procession. On both sides of the hearse walk employees of the funeral home with candles.

Alma is not present, as advised by her doctor. « Gucki » stays with her mother.

Brother Alois (Louis) Mahler is not present. In America, no contact.

Behind the hears follows the family :

Sister and brother-in-law : Emma Mahler and Eduard Rosé.

Sister and brother-in-law : Justine Mahler and Arnold Rosé.

Parents-in-law : Carl Moll and Anna Sofie Moll-Schindler-Bergen.

Half-sister of his wife and her husband : Margarethe (« Grete ») Julie Legler-Schindler and Wilhelm Legler.

Alphons Diepenbrock.

Emil Freund.

When the vehicle starts to move, there is for a very short moment some sunshine. The parade runs along the narrow path next to the « An den Langen Lussen » and meanders over the fields, surrounded by high-hedges of greenery and roses on the left, and a potato field on the right. When it seriously starts to rain, it goes over the « Grinzinger Allee » and « Himmelstraße » until the Grinzing parish church is reached. Grinzing parish church is a low Gothic building, which lies between the trees behind a small terrace. Inside, it is small and bare. The Mahler coffin is covered with a cloth and placed before the altar. Hundreds of interested people were already waiting at the church. It was dead quiet. Outside, one could hear the words of the priest. The priest holds a service with blessing. Back from Grinzing parish church to Grinzing cemetery. Leader of the ceremony is chorus-master Peter Fourier Hellband. He will again lead the procession. It starts to rain even harder.

### At Mahler's grave

Behind the hears now are also :

Alfred Roller, Anna Bahr-von Mildenburg, Arnold Schœnberg, Bertha Forster-Lauterer, Bruno Walter, Emil Hertzka, Erich Wolfgang Korngold, Erik Schmedes, Franz Schalk, Friedrich Fritz Lohr, Friedrich Weidemann, Fritz Redlich, Guido Adler, Gustav Klimt, Hendrik (Han Henri) de Booy, Hermann Bahr, Hermine Kittel, Julius Epstein, Laura Hilgermann, Leo Slezak, Paul Hammerschlag, Paul Stefan, Richard Mayr, Richard Specht, Rosa Papier, Georg Maickl, Gerhard von Keußler, Hans Breuer, Hans Gregor, Heinrich Teweles, Karl Luze, Otto von Wiener, Wilhelm Boppen and many journalists.

When the procession came down from the church to again climb later, only the sound of the bell tower was there. Everyone was dressed in black. Despite Mahler's request for sobriety, there were a lot of flowers in the church-yard, some 400 wreaths. The trees moved by the wind. The procession arrived at the open grave and it came to a stop. The silence became even more intense when the coffin was placed in the grave. Immediately afterwards came the dull thud of the earth Carl Moll and Arnold Rosé dropped on the metal box. At that moment there came a sunbeam through the broken clouds.

### Doctor Joseph Fränkel : Obituary

At the time of Doctor Fränkel's death, the Journal made an effort to gather some facts concerning this brilliant neurologist, but without success. It was bruited about that it was against his desires to have any obituary notices, but we have felt that some record of this man's work should be made. We, therefore, reprint a letter of Doctor Charles L.

Dana's which appeared some time after Doctor Fränkel's tragic death - tragic not so much in its external features but as indicative of a soul tragedy which modern analytic methods are uncovering, let us hope for the betterment of the human race.

When, with Claude Bernard, we can all hope that « some day, the physiologist, the philosopher, and the poet can speak the same language and understand one another » - when that day arrives, a true medicine will be born, a medicine which Hawthorne in his Scarlet Letter forecast when he said :

« A physical disease, which we think of as a thing apart and separate, may after all be but a symptom of an illness in the spiritual part of our nature. »

It will take many years for the physiologist to see what the poet sings about, and the crowd (that collection which gets together at the lowest of levels of self-interest) to know what part the « milieu », the personal environment, plays in causing spiritual illness and physical death.

#### To the Editor of the Medical Record

Sir :

The character and career of the late Doctor Joseph Fränkel deserve more than ordinary comment and appraisal. They have received little or none. Yet, not long ago and for a good many years, he had a commanding practice among the most intelligent and wealthy members of this New York community. His success in diagnosis and treatment, his quiet efficiency in securing results, his acuteness of observation and his complete confidence in his methods, impressed his patients and they held him in an almost God-like reverence.

For a good many years, Doctor Fränkel was an associate of mine in dispensary, hospital, and teaching work, and I held him as one of my choicest friends. His social qualities were compelling and unique. He was full of enthusiasms which he clothed with ...
